Side by side with the traditional makes of refrigerator, new brands have rapidly expanded. Some are big household appliance firms which had previously sold not refrigerators but washing machines: Bendix (the Boussac group), Arthur Martin (cookers and heating appliances), and Conord (washing machines). These undertakings already had commercial networks in the household appliance field. On the other hand, firms outside the household appliance market, moved into it via the refrigerator: Frigeavia (a branch of the aeronautical company Sud-Aviation), Frimatic and Royal Corporation, for example. Some of these were financially strong enough to extend their activities to refrigerators without great risk: Bendix, Arthur Martin, Conord (which joined the CEM-Brown-Boveri group) and Frigeavia.

Others took risks. The outstanding example was Frimatic, a private company that expanded its factories to become the largest manufacturer of refrigerators in France (150,000 in 1960) cashing in on the feeling of affluence. While the market was expanding rapidly, all went well. But when a decline set in last year and was accentuated this year, the means gave out: three months ago the firm had to cease production. As Frimatic declined, Royal Corporation, a firm of similar structure, has expanded to become the biggest producer in France.

These meteoric rises and disappearances are one of the outstanding characteristics of the French market. A second is the great number of liaisons between makes. General Motors manufactures for Singer, Thomson for Electrolux, Royal Corporation for the various subsidiary brands sold in department stores.

The demise of Frimatic could set in motion a complete shakeup of the refrigerator industry in France. Claret, principal supplier and hence principal creditor, and also important shareholder (having been partially paid in shares), is taking over Frimatic. Is it doing so simply to reanimate the business and then sell it once it is afloat? Or with the idea of saving some of the money it is owed?

In taking over Frimatic, Claret has become the competitor of its customers. The commercial policy that it inherits requires a strong supply of ready money and continued expansion. Given the present state of competition on the French refrigerator market, will Claret succeed in re-establishing Frimatic without having to discriminate against its other customers for compressor units, some of whom are dangerous rivals of the make that it is trying to refloat? But if it discriminates, will it not drive certain of its customers towards other suppliers of compressors, especially Thomson Houston?

If Claret succeeds in refloating Frimatic, elevating itself to the same level as the three or four other big firms, competition between these may progressively eliminate the makers who do not produce their own compressor units. If it lacks the financial weight to support itself as well as Frimatic, it might come under the control of a big international household appliance enterprise. Finally, Claret may succeed in doing neither the one nor the other and pull out, abandoning its customers to the mercies—and profit—of the other manufacturers.

The problem is further complicated when seen in an international context. It is not so much the fact that General Motors and Thomson Houston are branches of American concerns: long-established in France, these act like French companies. But newcomers from abroad, importers such as Ignis from Italy and Bosch from Germany, or foreign investors such as America's RCA, and Philips, from the Netherlands, may take a hand.

The French administration, which always tries to avoid leaving any sector of the economy entirely under the control of companies whose basic decisions are taken abroad, consistently aided Frimatic and Claret to strengthen their position. Its first protégé has failed: but it may continue the policy. It could try to help Claret alone; the alternative might be attempts to bring that firm closer to the only French manufacturer that enjoys the support of a solid industrial concern (incidentally nationalised!), that is to say to Frigeavia (Sud-Aviation).

Continued from page 294

Communist exports to this country continued to rise in the first nine months of this year despite a further contraction in total imports of tungsten ores and concentrates. Their share of Britain's imports has risen from 16 per cent in 1960 to 17 per cent in 1961 and 27½ per cent so far this year. Russia appears to sell its own ore with a high manganese content, possibly keeping back Chinese ore which it is known to acquire for its own use. China has a selling agency in London, but supplies take about six weeks to arrive compared with a fortnight for Russian ore. But there has been an upsurge in imports of Chinese ore through Czechoslovakia which accounts for most of the recent communist gains in the British market. Wolfram has recently recovered from a low point of about 60s. a long ton unit to 84s. a unit. But demand is spasmodic for wolfram and business has faded once more. Communist sellers are as anxious as any to secure high prices for their exports, and Western production is now low, but the recent history of wolfram has been of rallies followed by renewed weakness.

AMMONIA

A Louder Whisper

WHEN the Dutch government announced earlier this year that large reserves of natural gas had been located in the province of Groningen, it was an open secret that they were much larger than stated. This has been confirmed: the reserves are now said to be 350,000 million cubic metres (equivalent to 450 million tons of coal) or more than twice the original estimate. The government has said that it does not intend to sell this gas cheaply to all customers and that only 25,000 m.cu.m. are being set aside to attract industries to Groningen which would not otherwise have been established there. One use for the gas could be as a raw material for petrochemicals, though the government has laid down that it would not in general be made available cheaply for this purpose. It has now been announced that an ammonia plant is being planned in Groningen.

Two of the largest ammonia producers in Holland, Dutch State Mines and VKF in which Royal Dutch/Shell has a 40 per cent interest began to consider ammonia projects separately last July. More recently they have considered a joint project and have told the Dutch government that they would, in principle, be prepared to put up a plant. They have asked not to be included among the users of the special reserve, perhaps because ammonia production is such an obvious use for the gas that no inducement is required; perhaps, too, because the State Mines and Shell own, with Esso, the groups which discovered and will market the gas—there cannot be much advantage in buying the gas cheaply from themselves.

Dutch State Mines and VKF make a half and a quarter respectively of the country's ammonia production. According to "Nitrogen," this was 455,000 tons a year in 1961-62, of which 230,000 tons was exported. Any new plant must add enormously to this surplus; in order to achieve the necessary economies of scale, it would have to be of more than 150,000 tons a year capacity. Holland is already the best-fertilised country in the world (in terms of units applied per hectare); apart from land reclamation schemes there is little prospect of the market accommodating the new production. A new plant would therefore have to rely on exports, sold ultimately through the nitrogen export cartel, in a world market for nitrogen which is already extremely competitive and likely to become more so. Several companies are considering ammonia plants based on natural gas at sites between Morocco and Kuwait, and are rumoured to be talking of prices that will make the present depressed levels look fat.

DOMESTIC APPLIANCES

Holding Fire

SINCE Prestcold's surprise conversion to Rolls' direct selling methods the rest of the trade has been groping for appropriate counter-action. The retailers, directly threatened, are brandishing a proposed £100,000-worth of collective advertising, which looks a puny defence against the £1,750,000 which Mr Bloom plans to spend next year. It is the attitude of other manufacturers on which the dealers primarily rely: only Hoover has so far come out positively on their side, with a promise of "full co-operation in all aspects of aggressive sales activity"—though it would still rule out price cutting. Hotpoint last spring cut its dealers' margin from 25 to 22½ per cent and might not be sorry to see it forced down still further: at the moment, however, along with other manufacturers, it is sticking by conventional attitudes until the longer term results of the Rolls-Prestcold activities become apparent.

With Prestcold models selling 25-30 per cent cheaper than their equivalents, and an estimated 10,000 of them left in retailers' hands, other refrigerator manufacturers have little hope of pumping more into the still congested pipeline. A notoriously poor summer and the normal autumn withering of interest in refrigerators makes this anyway a poor moment for experiment. The real effects on the trade may not become apparent until next spring, by which time Mr Bloom may have launched his new model.

The seasonal improvement in washing machine sales has been less than was hoped for, though the experience of individual manufacturers varies considerably. Hotpoint is breathing hard down Hoover's neck and Rolls, with its overnight doubling of capacity, is an energetic third. Hotpoint reported greatly improved sales in August and September compared with last year, retail stocks having been thinned with the help of the reduced margin. Nevertheless the total number of machines sold at home by both manufacturers and retailers looks like being lower than in 1961. Exports in the first eight months of the year were worth 23 per cent more than in the same period of 1961, but the European market is tough on profit margins.

GAS TURBINE CARS

Will Chrysler Make It?

CHRYSLER has devoted more effort than any other company to developing a gas turbine that would be suitable for a car: and its experimental vehicle, as demonstrated at Silverstone last week, shows just how much nearer this goal the company has got than any British firm. It has sat down to think how a turbine can be made at a price competitive with a piston engine; concluded that this requires the use of cheaper metals and production techniques than are used for aircraft turbines; and then gone on to look for them. The result has been the discovery of three new alloys: two are based on iron, and though not containing expensive metals like cobalt, titanium and molybdenum, or large quantities of nickel, they are claimed to have the temperature resistance of alloys that do. One of these alloys is used for the combustion chamber and other parts made from sheet metal; the other for the turbine discs. The third alloy is said to acquire some characteristics of a ceramic at high temperatures and to need no lubrication; it is used for the seal between the hot and cold parts of the heat exchanger, in which the exhaust gas heats the air before it enters the combustion chamber.

So far as production techniques are concerned, Chrysler has made an equally startling development: it can cast the axial-flow turbines it uses in one piece, or cast the blades and the ring separately and weld them together. In neither case do the blades need machining. Axial-flow turbines are now produced by stamping out each blade separately, then mounting them on the ring. Chrysler estimates it can make a turbine for £8, compared with £40 by conventional methods; and if production was on a scale comparable to that of piston engines, the cost of the whole unit should be no higher and, eventually, might even be lower.

Improving the performance of the gas turbine is the other problem: it is slow to respond to the accelerator and has a high fuel consumption when running lightly loaded. Here again Chrysler seems to have made notable progress. Using variable-pitch stator blades at the stage before the power turbine has reduced the time lag between opening the throttle and obtaining full power from seven to 1½ seconds, and also improved part-throttle efficiency; and fitting a heat exchanger of 90 per cent efficiency has given a simple engine a fuel consumption comparable to that of a petrol engine—on full load. Chrysler quotes a consumption of 21 mpg at 52 mph, but is chary of giving figures relating to driving in traffic. The gas turbine now seems a commercial possibility for mass-produced cars, where it had previously appeared limited to sports or luxury vehicles. And Chrysler, whose share of the United States market has been falling over the last twelve years, has some incentive to risk launching this novel vehicle. Its smoothness, low maintenance costs, and ability to use a simple transmission and cheap fuels may be enough to establish its appeal even against the American V-eights.

DECIMAL CURRENCY

Pros for the Pound

GOG and Magog, resplendent and aloof at the back of the Guildhall, looked down last Friday on the conference on decimal coinage organized by the Chartered Institute of Secretaries. Their impassive air was reflected in the conference itself. This was no heated debate on whether Britain should or should not go decimal; the speakers accepted from the start the government position that some form of decimal coinage should be adopted unless the Halsbury Committee, due to report its findings early next year, discovers any serious practical or financial obstacles. The committee was not asked specifically to assess the intangible problems of a change in coinage—those of emotion, personal affections and prejudices, tradition and, not least important, the prestige of the pound symbol.

The main problem now is the selection of the most satisfactory coinage system. The 8s. 4d./penny system must be dismissed at once as unpracticable. Its only merit, as Mr A. H. Hughes pointed out in his discussion on the pros and cons of the various possibilities, is the exact transferability of prices at the twopenny breadroll, ninepenny ball-point level of purchase; and this is far outweighed by the inconvenience of converting all larger sums to pence, let alone multiplying by 2.4 every figure now given in pounds. The real contenders are the 10s./cent and the pound/cent system.

Currency and coinage in Britain cannot be a purely domestic affair, with so much of the world's business transacted in pounds sterling. The City has a strong case for retention of the pound; this was presented convincingly by Mr E. P. Jaggard, manager of the chief overseas branch of Martins Bank. Considering practical problems alone, the bother of multiplying by two all sums now in pounds cannot be disregarded. Most important, there would inevitably be some confusion and even cries of "devaluation," however misguided.

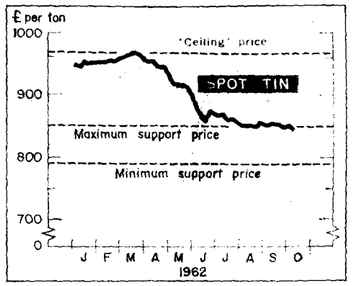
There is perhaps a growing feeling that, not only on the grounds of its indisputable international prestige and reputation, a system based on the pound has much to recommend it. At the practical domestic level the pound-based and 10s.-based systems have much in common. The 10s. system claims slight immediate advantage: greater ease in machine conversions and a smaller "smallest unit." In either case, however, an additional unit would need to be introduced temporarily as a fraction or decimal of the cent (worth either 1.2d. or 2.4d.). And apart from its traditional appeal, the pound may also be the best unit on the purely domestic side. The war and postwar drops in purchasing power have made a big difference here. If the housewife had to choose between the shilling or the pound, it might not be the "bob" which won the day.

TIN

Propped Up

SINCE the end of July, when the International Tin Council's buffer stock manager entered the tin market to stem the drop in prices, he has had to intervene with increasing frequency. As a result, spot tin settled at his upper support price of £850 a ton, while the fear that this price will not be maintained caused forward tin to fall to a discount. A similar stalemate has also occurred in copper, and zinc is thought to have been supported by producers. Three of the four metals traded on the London Metal Exchange have therefore been supported by producers or their agents, who have halted the decline in the price of these metals at a point some 10 per cent above their average in the previous recession year of 1958. Since the beginning of August, when tin was stabilised, the price of all four metals had scarcely altered until this week when the squeeze on readily available supplies caused by producer buying caused a sharp rise in zinc and spot tin which jumped to £856 a ton.

The drop in forward tin was touched off by last week's sale of American stockpile tin below $1.08 a lb. which some dealers had assumed might be the minimum price for successful tenders. However, the average of prices in the three principal world markets for tin was below that level, and the stockpile authorities sold a small quantity of tin at $1.07⅛ a lb to a buyer who pitched his bid up to the world level. The big steel companies are still content to place covering offers well below market prices in the cat and mouse struggle to obtain stockpile tin cheaply. Successive low bids by the important American manufacturers might possibly influence notions about future tin prices, and it will be difficult for tin to



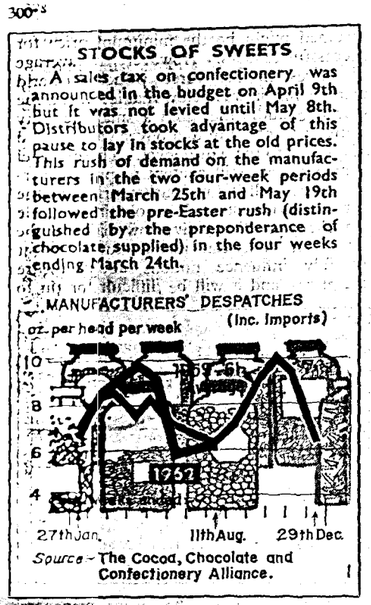
keep clear of the buffer stock managers' price prop so long as American consumers persist in their present policy.

Though stocks of tin have been run down in the first half of this year, demand and supplies in the second half might be nearly in balance. The availability of stockpile tin might be enough to forestall restocking. Production declined and consumption recovered in the first half of 1961 compared with the previous six months, when consumption was particularly weak and stocks of tin rose. Production in Thailand has been expanding steadily since the abolition of export quotas in 1960, but in Malaya output appears to have levelled out after its gradual climb in 1961. The big mining units in Malaya are influenced by potential prices several years ahead, and the sudden reverse in the price of tin might now be taking its toll. Production in Bolivia, Indonesia and the Congo declined after the end of 1961. But total production remained higher than in the corresponding period a year earlier, and since the end of export restrictions, output in the second half of the year has been higher than in the first half, particularly in Nigeria where there is a seasonal fluctuation caused by the high cost of conserving water used in tin mining through the dry season.

MATCHES

The Numbers Game

BRYANT AND MAY has increased its price from 2d. to 2¼d. (including 1d. excise duty) for a box of matches and made a slightly more than proportionate increase in the contents—from 38 to 48. Other members of the British Match Corporation



will soon follow suit. This means that instead of saving on matches, as in the past, the manufacturers are meeting rising costs by saving on boxes, labour and distribution: a more satisfactory solution for the consumer than the reduction in contents which has been the answer so far. The company itself felt that its customers' patience had been tried far enough when, after the surcharge introduced last year, the 40 matches in a box designed for fifty were cut down yet again, to a mingy 36. Only two more were added after the removal of the surcharge. The makers presumably feel free to start the numbers game again should costs continue to rise in the future. Timber and its transport have produced the biggest cost increases for the industry, but Bryant and May refuses to consider making what it regards as an inferior article, the Italian style waxed paper match.

The home market for matches is slowly declining, owing to the use of more permanent lighting devices; the decline was sharper than usual last year, when sales fell from 17.1 million units (of 7,200 matches each, a devious customs device) to 16.1 million. Imports were also affected but at 6.1 units were still the same in quantity, and therefore greater in proportion than they had been four years earlier. One favourite complaint is against the increased quotas permitted to Iron Curtain countries, which account for about a quarter of imports: their matches are said to be sold wholesale at less than the cost of British manufacturers' materials. Now the half-penny increase will give them a retail advantage too, in addition to the extra margin retailers have been able to take.

JUTE

Still Unsettled

JUTE has been chronically unstable because few countries produce the fibre and a volatile textile industry uses it. The main exporter, Pakistan, has in the past attempted to reduce jute acreage to obtain higher prices but has only exacerbated a famine which could have ruined the industry. But the low prices that have prevailed this year could produce a similar *imbalance in future seasons*. The new Pakistan crop is expected to be smaller than in the 1961-62 season, mainly because of reduced sowings, and next season's acreage might be lower still. Export prices are not necessarily reflected in the return to growers and if the new jute laws which came into force in Pakistan last month do no more than maintain internal prices at a level which more closely reflects export price levels they will benefit foreign consumers in the long run.

But currently these new laws are causing confusion. The leftovers of the previous crop can still be purchased below the more vigorously controlled export prices. In the middle of last season export price control was suspended, though minimum prices set for the season were maintained. But these minimums were raised in July, and the Pakistani authorities have reimposed export price control and are now making a determined effort to get higher prices. Jute manufacturers are extremely busy. In Dundee, orders on hand ensure a high level of production for several months ahead. Output has been high since May and is currently back to about the 1960 level. Demand has revived for all jute products. But reduced prices are thought to have induced buyers to replenish their stocks and it is not certain that the recovery will be enduring or that the high price of jute goods in 1960-61 have left no damage. Despite the high output in most jute manufacturing centres, therefore, doubts about the current level of raw jute prices persist. London Jute Association firsts have risen about £7 to £107 a ton since June, and manufacturers are anxious to see how effective the new laws, entailing stiff penalties for selling at less than authorised prices, will prove. There is currently no fear of a shortage of jute though Pakistan will not have a large surplus.

India has authorised the export of 200,000 bales of low-grade jute from last season though it normally has no surplus, but is asking prices equivalent to Pakistan export prices and so far has been largely unsuccessful in finding buyers. India is continuing to run its mills at maximum output though manufacturers' stocks are rising. So far Indian export prices for manufactures have also been maintained at a high level though they might now be lowered. Pakistan has doubled its consumption of jute in its new mills to about 1.6 million bales between 1957 and 1962 and is now breaking into the European market, particularly Germany, in competition with India.

MACHINE TOOLS

Cheapening Tape Control

THE Richmond tape-controlled drilling machine, introduced last month by Midgley and Sutcliffe, is claimed to be the cheapest numerically-controlled machine tool on the market: it sells for under £6,500, while the alternatives are said to cost around £11,000. This reduction in price has been obtained by using components of the standard Richmond drilling machine, itself a simple design, which are already in large-scale production, and adapting to them an existing tape-control unit—the British Airmec. The demand for this machine first arose in another company of the George Cohen group, making cranes: where production is in dozens, the conventional method of preparing a jig for each part that needs to be drilled is slow and costly—and the drill is only in action for about 25 per cent of the time. If it is tape-controlled, no jig is needed, saving the skilled labour used to make it and the investment it represents when stored for the production of further batches of the same part. And the drill can be in action for twice as long.

The attraction of the tape-controlled drill, in return for a cost about £4,000 more than that of a normal drill, is therefore that it saves skilled man-power and other investment where production in small quantities is concerned. The preparation for drilling is reduced to producing the punched tape that controls the drill, something within the abilities of a technician and comparable to the work of a draughtsman designing a jig; setting up the work on the machine requires little skill, and one piece can be put on the platform while another is being drilled. As the control system is non-electronic, the makers claim its maintenance is within the abilities of the average electrician.

SHORTER NOTE

Johannesburg Consolidated has applied to the Treasury for permission to transfer its residence for tax purposes from Britain to South Africa. In 1952 its application was turned down but earlier this year Union Corporation was successful on a similar reapplication.

SAINT-GOBAIN

PARIS

(Glass, Chemicals, Paper, Petroleum, Atomics)

HIGHER GROUP SALES

The Annual General Meeting of Saint-Gobain SA was held on June 29th and the following are details of the report presented by the Board of Directors:

REORGANISATION

Two developments are particularly remarkable:

(1) Saint-Gobain absorbed those subsidiaries which were specialising in the hollow glass industry and which produced ware as separate companies until 1961.

(2) Since January 2, 1962, Société Produits Chimiques Pechiney-Saint-Gobain has been managing the chemical works of Saint-Gobain and of Pechiney.

TURNOVER AND CAPITAL

Turnover of Saint-Gobain's directly controlled units in France, Germany, Italy and Belgium amounted in 1961 to NF 1,214m. This turnover, less taxes and allowing for the alterations which took place in 1961, is about 7 per cent higher than the previous year and the turnover of the glass making units alone rose in 1961 to NF 790m.

The share capital of Saint-Gobain was increased from NF 387,597,075 to NF 521,950,800 in 1961. The capital was further raised to NF 626,340,900 in January, 1962.

Investments in new works amounted to NF 234.5m. and in shares and securities to NF 233.5m. Investments therefore totalled NF 468m. compared with NF 299m. in 1960.

Two new research centres were put into operation in France and two new laboratories were installed in Germany and Italy. Expenditure on research work amounted to NF 66.7m.

GLASS

The greatest increase in sales of polished plate glass took place in Spain, 31 per cent for polished glass and 48 per cent for "SECURIT" glass. The respective increases in France and Italy were 5 and 11 per cent.

As a result of transformation work and the temporary stopping of production units in France, window glass deliveries fell by 3 per cent, whilst production in Germany and Spain remained at about the same level and fell in Italy due to strikes. Important progress was made in cast glass: production rose in Germany by 20 per cent, in Spain by 15 per cent, in France by 12 per cent, in Italy by 10.6 per cent.

Sales of moulded glass also rose appreciably: in Italy by 43 per cent, in Germany by 20 per cent, in France by 8 per cent and in Spain by 9 per cent.

Glass insulation fibres made by the "TEL" process are meeting with increasing success amongst consumers. This welcome is proved by the increase in sales in Benelux of 30 per cent, in Italy of 25 per cent, in Germany of 23 per cent, in Spain of 20 per cent, in Switzerland of 17 per cent and in France of 4 per cent.

The new Isoverbel factory at Etten in Holland came into operation in the spring of 1962.

Exports amounted to 18 per cent of the turnover at the Rantigny works.

Saint-Gobain indirectly acquired a preponderant position in the German Company Grünzweig und Hartmann which is the most important producer of mineral fibres in Europe.

The French members of the Saint-Gobain group in the hollow glass industry increased their deliveries by 5.5 per cent while the Italian bottle works suffered from the effects of strikes during the last 4 months of the year.

REFRACTORIES, TELEVISION

Société Quartz & Silice, in which Saint-Gobain holds 61 per cent of the capital, achieved a turnover 9 per cent higher. Société Electro-Réfractaire, in which Saint-Gobain holds 53 per cent of the capital, raised its turnover by 37 per cent. Exports totalled 71 per cent of all shipments.

In the United States American-Saint-Gobain put into commission in May 1962 its glass works at Kingsport, Tennessee.

Compagnie Française de Télévision (common subsidiary of Saint-Gobain and C.S.F.) continued actively and successfully to develop the Secam television process.

CHEMICALS

Société Produits Chimiques Pechiney-Saint-Gobain, which for the past year has been responsible for the distribution and sales of chemical products made by the two mother companies, achieved an increase of 8 per cent in its turnover, whilst most of the various associated companies which manufacture chemical products made substantial progress.

ATOM, PAPER, PETROL

Société Saint-Gobain Nucléaire developed its activities considerably in research and other work, in particular at Marcoule, et La Hague and at Chinon. This company continues to co-ordinate the construction of the works at Mol in Belgium and to assist a Germany company at Carlsruhe in the construction of high radioactivity laboratories.

The paper-making group of La Cellulose du Pin, in which Saint-Gobain hold 57 per cent of the capital and at whose works at Facture the most important Kraft paper-making machine in France was installed, made remarkable progress and achieved an increase in turnover less taxes of 20 per cent over 1960.

Finally, the Compagnie de Raffinage Shell-Berre in which the subsidiary of Saint-Gobain, the Compagnie des Produits Chimiques et Raffineries de Berre, holds 40 per cent of the capital, refined 8.45m. tons of crude petroleum or 22.8 per cent of the total refined in France. Société de Pétroles Shell-Berre (in which Compagnie des Produits Chimiques et Raffineries de Berre holds 30 per cent of the capital) increased sales by 9 per cent to 5.38m. tons.

NET PROFITS

Net profits for the year 1961 amounted to NF 44,648,733 compared with NF 39,960,266 in 1960.

ANOTHER RECORD YEAR

MR W. A. de VIGIER'S REPORT

The twenty-sixth annual general meeting of Acrow (Engineers) Limited was held on October 15th in London.

Mr W. A. de Vigier (the Chairman) presided and said:

It gives me great pleasure to be able to tell you that during the year under review your Company achieved new records in turnover and profits. Bearing in mind that these were achieved when the U.K. Engineering Industry's output was, to say the least of it, going through a very difficult and in many cases a declining period, our Executives and our staff are to be congratulated on their achievement.

From the accounts you will note that the consolidated trading profit for the year under review amounted to £910,626, an increase of £136,316 on the previous year. A final dividend of 23½ per cent on the Ordinary shares making 48½ per cent for the year is recommended by your Directors.

At a meeting to be held immediately following this one, your Directors will also recommend a bonus issue of one "A" share for every ten Ordinary or "A" Ordinary shares held.

By a determined effort—not without some loss of popularity—your Executives were able, for the first time in years, to hold rising costs. The result of this coupled with an intensive sales drive abroad is manifesting itself in the current financial year—our exports running already at 30 per cent above last year with a good prospect of a further increase.

Our best overseas customers have again been our Associated Companies which continue to make good progress except for Canada where we have decided to close the Works at Orangeville. Negotiations are afoot for Acrow Australia to become a Public Company. This will give our shareholders an opportunity to have a more direct stake in Acrow Australia. With regard to the Common Market, we are strongly placed irrespective of Britain's entry.

STEEL PRICES AND LOSS OF ENGINEERING EXPORTS

The rigid price policy of the British Steel Industry towards the Engineering industry is causing untold harm to British Engineering exports. It seems illogical that British steel producers are prepared to sell unfabricated steel at lower prices to foreign competitors than they are prepared to sell to engineering concerns in this country whose finished products could be exported thus producing more foreign currency and more work at home. Surely it should not be beyond the bounds of human ingenuity to devise a scheme whereby British Engineering Companies exporting finished products could be placed on an equal footing with their competitors abroad. It is incredible when the British Steel Industry is operating at only 75 per cent of its capacity that we should have lost substantial orders as a result of the inflexible price policy of British Steel producers.

To remain a step ahead of our competitors we are constantly striving to bring out new products of advanced design, mainly material and labour saving. There is not one of our fourteen divisions which is not going to bring out something new within the next six months. This has and is entailing your Company in considerable development expenses—a premium well worth paying as an insurance for the future.

During the year under review we suffered the loss of our Director, Brigadier Keith Thorburn, who has been on the Board since we became a Public Company, and whose guidance in the course of the years has helped us so much in our continued growth.

Except for unforeseen circumstances I see no reason why we should not have another record year and maintain at least the present rate of dividend on the increased capital.

The report was adopted and, at the subsequent extraordinary general meeting, the one-for-ten bonus share issue, as recommended, was approved.

THE ENGLISH, SCOTTISH AND AUSTRALIAN BANK

STEADY DEVELOPMENT OF WIDESPREAD ACTIVITIES

The seventieth annual general meeting of The English, Scottish and Australian Bank, Limited will be held on November 7th in London.

The following are extracts from the circulated review of the chairman, **The Hon David F. Brand:**

Australia's economic situation during the year under review has been passing through a period of uncertainty following the Government's restraint of the boom that had developed late in 1960 but the economy now appears to be recovering, even though slowly, aided by the Government's endeavours to inject a measure of growth and vigour to replace the general lack of confidence that had arisen.

Although Common Market negotiations have clouded the outlook, there are no signs of undue pessimism about the outlook generally in Australia. Excessive optimism has been tempered in the past year or two but progressive utilisation and development of natural resources and carefully planned expansion in many fields of national activity are fully expected to add strength to the Australian economy.

The Consolidated Profit and Loss Account shows the Group's profit for the year to be £691,639, the improvement of £164,850 being largely due to the increased earnings of our hire purchase subsidiary, Esanda Ltd., and the profitable operations of our newly formed subsidiary E.S. & A. Savings Bank Ltd., and of E.S. & A. Managed Investments Ltd. (formerly E.S. & A. Federal Trusts Ltd.).

Esanda's result for the year is considered to be satisfactory in view of the continued difficult trading conditions, with business offering being lower than could have been handled, throughout the year.

Our newly formed Savings Bank has been most successful and its results so far have exceeded our expectations.

During the latter half of the financial year, over-the-counter sales of "Scottie Units" were commenced at all offices of the Bank throughout Australia, and this convenient and speedy method of facilitating sales of units in the investment trusts managed by our subsidiary, E.S. & A. Managed Investments, Ltd., proved to be popular with our customers.

The net profit for the E.S. & A. Bank Ltd., itself was £346,216 compared with £356,385 for the previous year. The lower net profit reflects to some degree the effect on a full year's operations of the smaller margin between interest paid on term deposits and interest earned on overdrafts, following the sharp increase in term deposit rates in November, 1960.

From the Bank's profits, an appropriation of £62,000 has been made to cover the Bank's contribution to the Officers' Provident Fund and a further appropriation of £122,500 was made to provide for the interim dividend of 4 per cent., less United Kingdom income tax, paid on May 31, 1962. The Directors now recommend a final dividend of 5 per cent, less tax.

With the various subsidiaries, to which I have referred, the Group is now able to offer its customers a full range of every type of Bank and finance facility, and I look forward to the steady development of all these activities.

SCRIBBANS-KEMP LIMITED

The thirty-fifth annual general meeting of Scribbans-Kemp Limited was held on October 11th in London.

In his circulated statement the chairman, **Mr F. N. Martin, FCA,** said that the year to March 31st last turned out a good deal better than his forecast of a year ago. He was glad to say that the improvement was well maintained in the current year.

Mr Martin continued: A notable contribution to our profits is made by the Sugar Confectionery division. Unfortunately this side of the business fell a victim to the w 15 per cent purchase tax imposed in this yes budget. The effect was immediate and seve but our confectionery business proved resint and adaptable, and a good recovery is alrdy under way, but the tax is bound to affect t profits of the current year.

Mr Martin added that chdate business suffered even more severely, ing relatively high priced products. They foed a substantial proportion of their total buit sales and unfortunately had not so famade much recovery.

Their cake businesses sufferdfrom intense competition but there was a good improvement so far this year.

"Our two recent acquisitions, Budgetts of Bristol and Hughes of Liverpool," said Mr Martin, "both exceeded our expectations."

After commenting on the Group's retail and export trade, Mr Martin said: We should regard an entry by Britain into the Common Market as holding good possibilities for us and we are actively preparing to exploit them.

Mr Martin concluded: We feel we may be confident as regards the future—a confidence which the current year's results so far would appear to justify.

STERLING CABLE COMPANY LIMITED

MR JAMES S. CLARK ON HIGHLY COMPETITIVE CONDITIONS

The fourteenth annual general meeting of Sterling Cable Company Limited was held on October 18th in London, **Mr James S. Clark** (chairman and managing director) presiding.

The following is his circulated address:

Ladies and Gentlemen,

I have pleasure to submit the Report of the Directors and the Accounts of the Company for the year ended March 31, 1962.

The optimistic opinion expressed in November last year on trading results for the year ending March 31, 1962, proved to be fully justified.

THE YEAR'S RESULTS

The Group trading profit, before tax, was £171,455 (1961 £70,468) to which has been added exceptional credits of £10,807 (1961 £2,635). No provision has had to be made in this year's Accounts for United Kingdom Schedule "D" income tax since the Company has undertaken to make certain payments under a subvention agreement, with other members of the A. C. Cossor group, which will have the effect of cancelling out any assessment on Sterling's profits for the year to March 31, 1962.

The only tax charged to the Accounts is an amount of £1,032, under Schedule "A," after which the balance of £181,230 (1961 £40,613) is left for appropriation. Out oiis we have transferred £12,000 to a taxat equalisation reserve, paid £41,828 to other nbers of the Cossor group under the subventicrrangements referred to above, provided £5, for preference share redemptions and £5,9for the preference share dividend.

Your Directors are recommendan ordinary dividend of 7½ per cent less twhich will absorb a further £19,845 which /es £80,650 to be added to the unappprated profit brought forward from last yea The total amount then carried forward next year's account is £159,664.

DEVELOPMENT OF EXPORT RKETS

Our intake of orders continuedı high rate throughout the year and we insed output by more than 20 per cent. ; increase, coupled with greater efficiency, duced the improved trading results now befcou.

Our export turnover has expancn proportion and we fully expect to increais side of our business still further if the pıt negotiations with the Common Marketntries are satisfactorily concluded.

We have provided the cabling sary for a variety of sophisticated process cd projects in various parts of the world and continued experimental work in the field of ja-physics has met with considerable success.ders have been received from many countriesıding the U.S.A.

This is a continuously developndustry; the great chemical undertakings ıe world constantly bombard us with new ials each having characteristics, electrical or mechanical, which indicate an advance on their predecessors. The ability to take advantage of these advances depends on a constant rhythm of research and development which is increasingly expensive. Price and delivery, therefore, are not the only factors in world competition.

We are now undertaking a major plant development and I hope to be able to tell you next year of its successful completion.

CURRENT YEAR'S PROSPECTS

Whilst we have not entirely escaped the effects of the recent credit squeeze, we are quietly optimistic about the results of the current year's trading.

I would like to have reported that our industry had fully recovered from the chaotic conditions of 1959-60. Unfortunately, this is not the case. Profit margins still do not adequately reflect the great amount of effort and expenditure necessary to keep your Company in the forefront of cable making. In fact, certain types of cable in demand in the home market are sold at prices little, if anything, above cost.

I can only express the continued hope that common sense and goodwill will prevail in the long run, and so increase the profitability—greater amounts can then be spent on research and development.

I have great pleasure, once again, in expressing to my colleagues, our staff and operatives, my warm appreciation for the notable way in which they have demonstrated their efficiency and goodwill.

The report and accounts were adopted.

APPOINTMENTS

UNIVERSITY COLLEGE OF RHODESIA AND NYASALAND

Applications are invited for (a) Lectureships or (b) Assistant Lectureships in Economics. Appointments on secondment will be considered. Salary scales: (a) Grade I, £1,880 x £80 — £2,200 p.a.; Grade II, £1,450 x £70 — £1,800 p.a., (b) £1,200 x £50 — £1,350 p.a. Passages to Salisbury for appointee, wife and dependent children on appointment, with allowance for transport of effects. Installation grant of £100 in addition for persons recruited from outside Africa. Superannuation and Medical Aid Schemes. Unfurnished accommodation at rent of 15 per cent. of salary. Assistance given for triennial visits overseas. Detailed applications (six copies) naming three referees by November 16, 1962, to Secretary, Inter-University Council for Higher Education Overseas, 29, Woburn Square, London, W.C.1, from whom further particulars may be obtained.

MAKERERE UNIVERSITY COLLEGE—EAST AFRICA

Applications are invited for a Resident Tutorship in Department of Extra-Mural Studies. Appointee will work initially in Buganda, based on Kampala. Salary scale £1,350-£2,151 p.a., entry point determined by qualifications and experience. F.S.S.U. Child Allowance £50 p.a. per child (maximum £150 p.a.). Passages for appointee and family (up to five adult passages) on appointment, termination and leave (three months every 21 months). Part-furnished quarters at low controlled rental or housing allowance in lieu. Detailed applications (six copies) naming three referees by November 22, 1962, to Secretary, Inter-University Council for Higher Education Overseas, 29 Woburn Square, London, W.C.1, from whom further particulars may be obtained.

UNIVERSITY OF AUCKLAND

NEW ZEALAND

SENIOR LECTURESHIP IN ECONOMICS
SENIOR LECTURESHIP IN ECONOMIC HISTORY

Applications are invited for the above-mentioned posts.

The salary scale is £1,750 rising to £2,000 per annum, commencing salary being determined in accordance with qualifications and experience. An allowance is made towards travel and removal expenses.

Further particulars and information as to the method of application may be obtained from the Secretary, Association of Universities of the British Commonwealth (Branch Office), Marlborough House, Pall Mall, London, S.W.1.

Applications close in New Zealand and London on *November 30, 1962.*

UNIVERSITY OF BELFAST

LECTURESHIP OR ASSISTANT LECTURESHIP IN POLITICAL SCIENCE

The Senate of the Queen's University of Belfast invites applications for a Lectureship or an Assistant Lectureship in Political Science from January 1, 1963, or such later date as may be arranged. For a Lectureship it will be an advantage, but not essential, to have a special interest in Public Administration or the Government of Northern Ireland. Salary scales are £1,150 to £1,950 plus contributory pension rights under the F.S.S.U. for a Lectureship, and £900 x £50 to £1,050 plus F.S.S.U. for an Assistant Lectureship. Initial placing on the salary scale will depend on qualifications and experience. Applications should be received by *November 17, 1962.* Further particulars may be obtained from G. R. Cowie, M.A., LL.B., J.P., Secretary.

UNIVERSITY OF YORK

DEPARTMENT OF ECONOMICS

Applicatio invited for the post of Lecturer in ies, from October, 1963, to assist with radiate and undergraduate teaching pro. Interest in research into problems of finance, fiscal policy and related spec would be an advantage. Salary withiıecturer's scale according to experience alifications.

Four copiapplications, naming three referees, shosent by November 17th to the Registraersity of York, the King's Manor, York whom further details may be obtained.

For furtbointments and other classifiedtisements see pages and 311

UNIVERSOF KHARTOUM

Applicationvited for (i) Senior Lectureship or Lectin English and (ii) Senior Lectureship Ceship in German.

Salary Scales

Senior LecS2,052 x £S75 — £S2,127 p.a.

Lecturer, £: £S75 — £S1,977 p.a.

Generous es payable. Passages for appointee anc on appointment, termination and anm. There is a superannuation scheme. ngements can be made to maintain F.S.icies. Direct appointment on contract nfor five years with possibility of reteecondment welcomed if possible). Led accommodation provided at rent g rates) up to 7½ per cent. of salary.

Applicationspies) detailing qualifications and expnd naming three referees by November , to Registrar, University of Khartoum.er-University Council for Higher Educaseas, 29, Woburn Square, London, W.C

HERTFORD COLLEGE, OXFORD

The College proposes to elect an OFFICIAL FELLOW in ECONOMICS to take up his duties as from October 1, 1963. Applications and enquiries should be addressed to the Principal, and should reach him not later than Friday, November 30, 1962.

MONASH UNIVERSITY

MELBOURNE, AUSTRALIA

Monash University invites applications for appointment to the following positions in the Faculty of Economics and Politics:—

LECTURER OR SENIOR LECTURER IN ECONOMIC HISTORY

The courses offered in Economic History cover Australia, United Kingdom, U.S.A., Asia and Russia. The Faculty is particularly interested in applicants whose field of work includes Russian economic history and growth.

LECTURER OR SENIOR LECTURER IN ECONOMIC STATISTICS

Courses in Economic Statistics are given over all years of the degree and include most aspects of economic statistics.

Salary scales:—

Senior Lecturer: £A2,480-£A3,000 per annum.

Lecturer: £A1,660-£A2,450 per annum, with superannuation provision on the F.S.S.U. basis.

General Conditions of Appointment may be obtained from the Registrar of the University or from the Secretary, Association of the Universities of the British Commonwealth (Branch Office), Marlborough House, Pall Mall, London, S.W.1. Enquiries concerning details of proposed courses should be addressed to Professor D. Cochrane, Dean of the Faculty of Economics and Politics.

Applications close in Australia and London on *November 30, 1962.*

COMPANY AFFAIRS

Apart from very heavy dealings in Forte's shares thLondon stock market has had a quiet and uncertain week. The large amount money tied up in the Forte's issue had some effect on the volume of trading ile company news has given little encouragement to investors. Over the week HE ECONOMIST *indicator fell by 4½ points to 329.7. After consolidating theirecovery last week gilt-edged stocks turned dull except for the long stock Treasy 5½ per cent 2008-12 but prices rose sharply on Thursday afternoon on the ne that the £500 million tap had come to an end. The P & O dividend statemt gave a much needed boost to shipping shares.*

P & O's Dividend Picy

FROM a low point of 17s. 6d. in August the £1 shares of Peninsular and Oriental Steam Navigation had risen to 24s. by the middle of this week, and on Thursday they gained a further 3s. 9d. Optimistic investors who disregarded the slump in profits, the dividend cut and the chairman's gloomy forecast but looked at the group's massive assets (equivalent to 112s. 8d. a share), have been proved right. For shareholders who may have doubted whether even the reduced dividend of 6 per cent could be held there is ample reassurance, for with a maintained 3 per cent. interim comes the forecast of a total dividend of 10 per cent for 1962.

This does not point to the end of the shipping slump; indeed profits for the current year are not expected to cover the expected depreciation charge of around £15 million. Rather it reflects the reinforcement of cash resources as the rebuilding programme nears completion. These resources together with the cash flow should in the directors' view enable P & O to maintain the 10 per cent dividend rate in the foreseeable future without "impairing the ability of the company to compete effectively and profitably in its shipping business when trading conditions improve." This policy, which the directors point out would allow stockholders "more benefit than they have now from the asset backing of their investment," will be welcomed, and it is one that other companies well-endowed with cash but facing similar difficulties might consider following. But if it can be introduced now, was it really necessary to cut the dividend so savagely back in February?

Shareholders are also told that the directors are considering the "profitable development of the company's activities outside shipbuilding where there is scope," but in view of recent speculation about the group's properties it is as well that they make it clear that this is "not a field where any substantial potential exists." The £1 shares, which on the forecast dividend offer a prospective yield of 7½ per cent, are in the view of the directors "substantially undervalued by any criterion except that of current return." Their new dividend polishould help to remedy this. But now thaie initial adjustment to a 10 per cent dend has been made, P & O must be seemply as an income stock. There will bo equity in it until there are clear si of a major revival in shipping.

Shipilding Shares

FACED wit scarcity of new orders and a sharp wth in excess capacity the shipbuildingustry may provide a fruitful field for thowho try to pick out future take-over prcts. This is suggested by this week's by Cammell Laird for its Merseyside shbour, **Grayson Rollo & Clover.** Thgotiations were kept a close secret and Grayson shares were close to their lowat of 2s. 9d. before the bid and improve 3s. 10½d. after it had been announced. e bid by Cammell Laird of one 5s. sh now quoted at par, plus 3s. 6d. in cor every two 2s. 6d. shares in Grayson orth 4s. 3d., compared with a peak of 6s959-60. Then the directors were payinfortably covered dividends of 15 per cut for 1961-62 the payment was cut to er cent and even this meant drawing oerves. As Cammell Laird has forecasaintained dividend of 10 per cent Grayshareholders are offered an increase of hird in dividend income and a cash pnt besides. Moreover, a holding inmmell Laird provides them with a wipread of interests—particularly in steough this is of limited worth at the mor Cammell Laird equity will be dilutedull acceptance will result in an additio14 per cent to its ordinary capital. Ie acquisition should produce economiesugh the merging of the ship-repairing sinesses, particularly as Grayson'syard has recently been extended andernised.

Anotheinder of the depression in shipyards from **R. & W. Hawthorn Leslie** ofside, whose net profits for the year t June were more than halved from £64 to £307,000 even though its shipyard arine engine works have both been "rbly busy." Thanks to the directorsservative dividend policy in more prds years the cut in dividend

has not been sharp and the payment of 20 per cent, against 25 per cent, is covered 1¼ times, against the earlier three to four times. But there must be some doubt whether this lower payment can be maintained in the future and the 10s. shares at 17s. 4½d. yield as much as 11½ per cent.

Decca

THE stock market was mistaken about the outcome of Decca's results for the year to end-March for on Tuesday ahead of the announcement dealers marked the 10s. ordinary shares down by 1s. 6d. and the "A" shares by 1s. They had to revise their opinions swiftly in face of a sharp increase in profits and a higher dividend of 25 per cent. The recent results of Pye and EMI may have raised some doubts; but these companies have a big stake in the depressed markets for television sets and domestic appliances while Decca still appears to be adding to its share in the highly competitive record market. As the table shows, the group's profit margins have risen, even though the results reflect no benefit from the rearrangement of purchase tax in this year's Budget. This could help the current year's margins, for not all the tax reduction was passed on to consumers by the record manufacturers.

Years to March 31	1960 (£'000s)	1961 (£'000s)	1962 (£'000s)
Sales	25,200	24,500	27,600
Trading profit	3,468	3,796	4,482
Depreciation	1,020	1,134	1,209
Interest	246	313	303
Taxation	928	1,083	1,448
Net profit	1,238	1,227	1,482
Ordinary dividend	601	601	643
Ordinary Dividend (%)	$23\frac{1}{2}$	$23\frac{1}{3}$	25
Trading profit/sales	13·8	15·5	16·2
Net profit/sales	4·9	5·0	5·4

Apart from gramophone records, whose total UK sales in the 12 months to end-March for the industry as whole rose from £15.1 million to £16.4 million, it seems likely that Decca's navigator and radar subsidiaries also earned higher profits. Now with the ordinary shares at 77s. and the "A" shares at 76s. 3d. the respective yields are no more than 3⅛ and 3¼ per cent. These are justified by the results but the going, at least in records, is likely to be tougher in the future.

British Electronic

AT last year's annual meeting of British Electronic Industries (formed by the merger of Pye and E. K. Cole two years ago) the chairman, Mr C. O. Stanley, was cautious about the outcome of trading in the year to March 31st last. The actual results came as a shock and if, as Mr Stanley claims, they were "very much in line with those anticipated" shareholders must wonder whether they were given adequate warning. The dividend has been cut from 15 to a nominal 2½ per cent; but this entails drawing on reserves, presumably

because the directors wish to maintain trustee status for the shares. After tax the group made a loss of £155,000, against a net profit of £492,000, while the loss attributable to BEI after payments to minority interests was £290,000, against a profit of £291,000. The depression in the television market is reflected in the fall in Pye's own net profit from £780,000 to £488,000 and in the increase in E. K. Cole's net loss from £438,000 to £768,000. The setback would have been sharper but for profits on BEI's non-domestic interests (which include scientific instruments, electronic equipment and telecommunications). These, Mr Stanley says, were well up to expectations and were more than enough to cover the "usual" dividend, which in 1960-61 absorbed £660,000 net. Income from trade investments (which include Associated Television and British Relay) was higher at £401,000 and the higher overseas tax charge of £227,000 points to profitable trading by some of BEI's overseas subsidiaries.

At the end of March, 1961, the group held over £19 million in stocks and its net bank overdrafts amounted to £8 million. The 1961-62 figures suggest that there has been little change in the level of overdrafts, for bank interest has fallen only slightly from £783,000 to £764,000, while other loan interest has risen sharply from £326,000 to £515,000.

The shock occasioned by these results is softened by the forecast of better prospects, based largely on the Government's decision to go ahead with 625-line television which, says Mr Stanley, has opened up a future of "enormous possibilities." After falling to a new low of 7s. 6d. the 5s. shares have recovered to 9s. to offer the nominal yield of 1½ per cent.

United Drapery Stores

AT 44s. 9d. xd the 5s. shares of United Drapery yield 3.4 per cent, compared with the 4.1 per cent offered by the 10s. shares of Debenhams. United Drapery's lower yield is justified by its superior profit record; while Debenhams' trading profits fell by 2 per cent in the year to end-July, those of United Drapery for the six months to that date rose by 5¼ per cent to £4,902,000. There is also the prospect of a "satisfactory increase" in its full year's profits for, as with Debenhams, the directors report higher sales in August and September. The interim dividend has been maintained at 10 per cent and the favourable forecast enhances the prospect of a higher final payment which was pegged at 20 per cent for 1961-62 in deference to the Chancellor's request for restraint.

Yet the interim results suggest that any increase in dividend may well be at the cost of reducing the earnings cover of 1¾ times. While trading profits rose by 5¼ per cent little of the increase filtered through to net

available earnings which were just over one per cent higher at £2,122,000. The directors say that expenses have continued to rise. Profits were also kept down by a smaller credit from hire purchase provisions and higher depreciation and interest charges. Unfortunately there is no indication with the interim statement whether Whiteley is now making profits again after its reorganisation. In all, there is nothing in these results to suggest that if a bigger final dividend is declared an appreciable rise in the shares would be justified.

Hire Purchase Shares

HAVING made a net loss of £94,000 for the year to end June and cut its dividend in two years from 16 to 5 per cent **Astley Industrial Trust** is looking forward to a "substantial improvement" in the current year. The chairman, Sir Stanley Bell, is "more than hopeful" about this but shareholders may be left wondering about his assertion that Astley has emerged from this period of "disastrous events" with a "clean slate." Sir Stanley puts the blame for the troubles of the past two years on the severe competition which followed the relaxation in controls in 1959, the fall in second hand car prices, difficulties in collecting defaulting accounts through the courts, the Treasury's tardiness in reducing Bank rate and the "greater entry of certain types of customers into consumer credit, particularly of vehicles." This has coincided, Sir Stanley says, with an "irresponsible attitude by increasing numbers of hirers to their obligations under agreements." The courts too come in for their share of blame for "decisions which indicate that however much it might apply to a cash buyer, the rule of *caveat emptor* has no fear for hirers."

Since these dreary results were published the 5s. shares have gained 2s. 3d. to 15s. 3d. xd but this rise has been inspired largely by hopes that if the National Provincial is successful in its bid for the District Bank it will in turn make a bid for Astley, in which District holds a minority interest of about 30 per cent.

Another indication that better things are in store for hire purchase companies has come from the **Charterhouse Group,** on whose profits the hire purchase subsidiary, Charterhouse Credit, has acted as a drag in the last three years. Last year the group paid a single dividend of 6 per cent but the interim dividend for 1962 has been restored to the 1960 level of 4 per cent and a similar final payment is forecast. The directors say that the hire purchase company will make a further loss this year but that it will be "substantially less" than in 1961 and forecast "materially greater profits" for the group as a whole. The prospects of recovery are reflected in the share price of 28s. 1½d., compared with a low point of 21s. earlier this year, to yield 5¼ per cent on the indicated dividend.

International Distillers and Vintners

GILBEY shareholders must be well satisfied with the short-term results of their association with the rapidly growing United Wine Traders group, for the forecasts made by the UWT directors at the time of the bid for Gilbeys have been well beaten. Not that these were conservative, for they pointed to a dividend increase from 60 to 100 per cent and a rise in profits before tax from £675,000 to £1 million. These were based on a full year's profits but the group, newly named International Distillers and Vintners, has brought forward the end of its financial year from June 30th to May 31st. So the latest results for 11 months show that UWT earned a profit of £1.2 million and is paying a dividend of 110 per cent (equivalent to an annual rate of 120 per cent). This reflects UWT's success in association with the Paddington Corporation in selling its J & B Rare whisky, in parts of the United States. It remains to be seen whether a sales campaign in other areas of the United States or in Europe will prove such a roaring success.

By contrast Gilbeys' profits performance is again disappointing, for against a forecast of "slightly in excess of £1 million" for the thirteen months to end January pre-tax profits amounted to £1.1 million in the 17 months to end-May. But the directors say that February to May are always poor trading months for Gilbeys and that £65,000 from the big pre-acquisition element in the profits has been written off. While Gilbeys' profits, which are made largely on gin, remain static they provide a useful base for the profits of the IDV group as a whole and if vodka drinking catches on in this country Smirnoff could perhaps do for Gilbeys what J & B Rare has done for UWT. With the results came the announcement of a massive capitalisation in which each 1s. share is to be written up to 5s. This is to be followed by a one for one scrip issue and the combined operation will raise the issued capital from £799,000 to £7,986,000. Having gained 2s. 9d. to 39s. 6d. the 1s. shares yield 3 per cent.

THE ECONOMIST INDICATOR

THE MONEY MARKET

THE Treasury bill rate fell by a further 1.06d. at the tender on Friday of last week, and at 3⅝ per cent is now ⅞ per cent below Bank rate. Rates for day-to-day loans, however, still tend to open above this, at around 3¾ per cent. The syndicate of discount houses left its previous bid of £99 1s. 11d. unchanged at the tender. And although the bill allotment was cut by £20 million to £230 million, total applications fell by £28 million to £387 million and the market received a quota of 38 per cent compared with the previous week's 37 per cent.

On the final three days of last week and on Monday of this week credit was in fairly free supply and the authorities sold small amounts of bills on each day to mop up the credit surplus. On Tuesday credit conditions changed abruptly, largely as a result of the weekly tax transfers and six or seven houses were forced to borrow a fairly large amount at Bank rate from the Bank of England. The credit shortage persisted on Wednesday, but further borrowing from the Bank was prevented by large special purchases of bills by the authorities.

There has been plenty of short-term money on offer in the local authority mortgage market this week and the seven-day rate has eased from 4¼ to 3⅞ per cent.

APPOINTMENTS

EXCEPTIONAL OPPORTUNITIES FOR YOUNG ACCOUNTANTS AND ECONOMISTS

Qualified Accountants and graduate economists, preferably within the ages 22-28, are offered unusually interesting openings in the finance staffs of Ford of Britain. Opportunities with Ford are exceptional as promotion and salary will depend entirely on merit.

Appointments will be made to both the central finance staff of the Company and to the decentralised financial controllers' offices in the manufacturing, sales and engineering divisions. Prospects are equal in all areas as the Company management development policy ensures that men of ability are detected and advanced as rapidly as their capacity can sustain.

Vacancies cover a wide variety of finance activities including practical cost control in manufacturing plants, accounting procedures and controls, operational accounting, product costing, internal audit, office systems and methods, data processing, budgetary control, profit planning and analysis, cash forecasting and management, capital expenditure analysis and control, price analysis, investment and economic studies.

Applications should be marked "SFT" and addressed to:

P. G. SLIP
RECRUITMENT AND PLACEMENT
FORD MOTOR COMPANY LIMITED
DAGENHAM ESSEX

WOOLWICH POLYTECHNIC

LONDON, S.E.18

Principal: Harold Heywood, D.Sc., Ph.D., A.C.G.I., Wh.Sch., M.I.Mech.E., M.I.Chem.E.

Applications are invited for the post of Lecturer in Government and Political Theory for B.Sc.(Econ.) Degree courses. Applicants should have a good Honours Degree; a Higher Degree and/or research experience are desirable. Salary: £1,600-£1,800 plus London Allowance £45-£60.

Particulars and application form from Clerk to the Governors, to be returned by November 9, 1962.

UNIVERSITY OF READING

DEPARTMENT OF AGRICULTURAL ECONOMICS

Applications are invited for two posts of ASSISTANT RESEARCH ECONOMIST. One post will be concerned with an investigation of changes in the structure of farms and estates, the other with the economics of horticultural production and marketing. The persons appointed should take up their duties at as early a date as can be arranged. Further particulars may be obtained from the Registrar (Room 22, O.R.B.), The University, Reading, by whom applications should be received not later than November 10, 1962.

Group Pensions Officer

RECKITT & COLMAN HOLDINGS LIMITED

wish to appoint a Deputy to their Group Pensions Officer with a view to succession.

The immediate duties will be to assist in supervising the Group's pension schemes, which include both self-administered schemes and schemes operated by insurance companies for employees in all parts of the world.

The man appointed should be conversant with Actuarial reports, with the handling of investments and with the conduct of meetings, and should, preferably, have some professional qualification.

The Company attaches considerable importance to the maintenance of good relations between the Pensions Department and all sections of employees.

PREFERRED AGE—35-40.

The salary offered will be appropriate to the qualifications and experience of the man appointed.

Those interested are asked to address their enquiries to:

The Personnel Adviser,
Reckitt & Colman Holdings Limited,
Dansom Lane, HULL, E. Yks.

MARPLAN LIMITED

Market Research Specialists

We are looking for a graduate to administrate our Statistical Unit. A degree in Statistics, a familiarity with statistical sources and experience of sampling techniques are required. A knowledge or interest in the application of computer techniques in the field of statistical analysis would also be an advantage.

Salary range £1,500 to £2,000 plus, according to qualifications and experience. Please apply in writing to THE GENERAL MANAGER, MARPLAN LIMITED, 2-3 Cursitor Street, London, E.C.4.

THE ECONOMIC RESEARCH INSTITUTE, DUBLIN

Research Officers

Applications are invited for posts on the research staff of The Economic Research Institute. Grades and salaries are as follows:—

RESEARCH OFFICER
Salary £2,200 increasing by £60 to £2,500 p.a.

ASSISTANT RESEARCH OFFICER
Salary £1,250 increasing by £50 to £1,500 p.a.

These posts are pensionable under a Superannuation Scheme similar to FSSU.

Essential qualifications are high academic attainment and experience in applied economic research.

Application Forms may be obtained from The Secretary, The Economic Research Institute, 73 Lower Baggot Street, Dublin 2, Ireland.

STATISTICAL ASSISTANT

The British Oxygen Company has a vacancy for a male statistical assistant, age 25-45, in its head office industrial sales department.

Applicants should have had a good experience of sales budget and statistical work.

Good staff benefits include a pension fund and an excellent dining-room.

Please write, in confidence, to:—

The Personnel Officer (F S005I),
THE BRITISH OXYGEN COMPANY LTD.
Hammersmith House, London, W.6.

VICTORIA UNIVERSITY OF WELLINGTON

New Zealand

LECTURER IN ACCOUNTANCY

Applications are invited for the above-mentioned post. The appointee should have had experience as an accountant in public practice. University training and teaching experience is desirable but not essential.

The salary for a Lecturer will be £1,250 per annum rising to £1,700 per annum, the initial salary being determined according to the qualifications and experience of the appointee.

Approved fares to Wellington will be allowed for the appointee, his wife and his dependent children. In addition actual removal expenses will be allowed within specified limits.

Further particulars and information as to the method of application may be obtained from the Secretary, Association of Universities of the British Commonwealth (Branch Office), Marlborough House, Pall Mall, London, S.W.1.

Applications close in New Zealand and London on *December 1, 1962*.

UNIVERSITY OF KHARTOUM

Applications are invited for (i) Senior Lectureship or Lectureship in Agricultural Economics and (ii) Senior Lectureship or Lectureship in Economics.

Salary Scales:—

Senior Lecturer, £S2,052 x £S75 — £S2,127 p.a.

Lecturer, £S1,077 x £S75 — £S1,977 p.a.

Generous allowances payable. Passages for appointee and family on appointment, termination and annual leave. There is a superannuation scheme, and arrangements can be made to maintain F.S.S.U. policies. Direct appointment on contract normally for five years with possibility of renewal; (secondment welcomed if possible). Unfurnished accommodation provided at rent (excluding rates) up to 7½ per cent. of salary.

Applications (10 copies) detailing qualifications and experience and naming three referees by November 18, 1962, to Registrar, University of Khartoum, c/o Inter-University Council for Higher Education Overseas, 29 Woburn Square, London, W.C.1.

BBC requires News Correspondent to be stationed in Aden, to be responsible for broadcasting and cabling news despatches and similar material to London for use in the BBC's External Services, particularly the Arabic Service. The area to be covered extends from Sudan to Persian Gulf including Somalia and the correspondent will be required to travel frequently within this area. First-class journalistic qualifications essential, preferably with experience of reporting on foreign affairs. Knowledge of Arabic, though not essential, a considerable advantage. Candidates should be able to convey political and economic information in easily understandable terms and to report interestingly on non-political matters. Salary between £1,725 and £2,200 rising by five annual increments to maximum between £2,225 and £2,750 p.a. according to qualifications and experience of selected candidate plus appropriate allowances while in Aden. Requests for application forms enclosing addressed envelope and quoting reference 62.G.405 Ect. should reach Appointments Officer, Broadcasting House, London, W.1, within five days.

HOSPITAL STATISTICIAN required for work within the newly formed Clinical Research Department of the Royal Marsden Hospital and Institute of Cancer Research. Applicants should be graduates, preferably with biological or social medicine background and training in medical statistics. Appointment within the framework of the National Health Service: commencing salary £1,105 rising to £1,345. Appointment for three years in the first place. Duties will include advising clinicians about the statistical treatment of data and carrying out the necessary computing: collaborating in the design and execution of clinical trials, research based on hospital records and the compilation of Hospital Reports. Applications to the House Governor, Royal Marsden Hospital, Fulham Road, S.W.3.

General Manager

ITALY

A General Manager is required for a new Common Market subsidiary of a large U.K. Group which has just been formed in Turin.

This Company will specialise in capital equipment related to the Bulk Materials Handling industry, and applicants will preferably have had good commercial and selling experience in this field. A nucleus of high quality staff covering the sales and technical engineering fields has already been appointed, but the General Manager will be expected to take full and complete responsibility for promoting the future interests of the Company and also for all aspects of the day-to-day administration including purchasing, technical, engineering, office procedures, etc., and will report directly to the Board of Directors.

The applicant will be either an English National with fluent Italian or an Italian National with fluent English, and in either case should have a good knowledge of general Italian business procedures.

Salary by arrangement but not less than £2,500 per annum, and a bonus is contemplated relating to future profits.

Applicants should apply in writing, giving details of age, experience, present position and salary to—

The Secretary,
PRESSOTURN LIMITED,
Leam Terrace, Leamington Spa.

MEDICAL STATISTICIAN

A pharmaceutical company in the London area wishes to engage a full-time experienced Medical Statistician.

The successful applicant will be required to design field trials, analyse the results, and advise doctors within the company on all statistical matters. The scope and design of these trials will be such as to offer a challenge to a person with creative ability who wishes to find a stimulating atmosphere in which new ideas and techniques are encouraged.

Write, in strict confidence, to Staff Manager, Box 1662.

STATISTICS OFFICER

is required for a large Group of

BUILDING CONTRACTORS AND COMPONENT MANUFACTURERS

The man or woman appointed will be responsible for collection and presentation of Marketing and Sales Statistics.

This is a new appointment with excellent prospects of progress.

Essential qualifications:

1. Minimum age 25.
2. Educational background of economics, statistics, marketing, accountancy or building.
3. Three-five years' experience in collection and presentation of marketing or sales statistics.
4. Ability to draw, from data collected, practical conclusions and to explain these to Management at all levels.

Location: West London

Salary entirely dependent on qualifications and experience, but not less than £1,200 p.a.

Confidential applications should be addressed to Urwick, Orr & Partners, Ltd., at 5 Buckingham Palace Gardens, London, S.W.1, who have been asked to advise on this appointment, quoting reference SO/1683 on the envelope.

THE UNIVERSITY OF SOUTHAMPTON

Applications are invited for a research appointment tenable in the Department of Economics, University of Southampton. The successful candidate will be required to work on a project connected with the relative efficiency of industrial enterprises. An appointment may be made at either the Research Assistant or Research Fellow level. Salary will be according to qualifications and experience and within the range £800 to £1,250. Applications (three copies), giving brief curriculum vitae and the names of two referees, should be sent to the Secretary and Registrar, The University, Southampton, before October 31, 1962.

For other appointments see page 303

UNIVERSITY OF YORK

DEPARTMENT OF ECONOMICS

Applications are invited for the post of Lecturer or Assistant Lecturer in Economic History, from October, 1963, to assist with the graduate and undergraduate teaching programme. The person appointed will be expected to teach 19th and 20th century British, European and/or American Economic History. Salary within the Lecturer or Assistant Lecturer's scale according to experience and qualifications.

Four copies of applications, naming three referees, should be sent by November 17th to the Registrar, University of York, the King's Manor, York, from whom further details may be obtained.

ECONOMIST/STATISTICIAN

The Joint Iron Council wishes to appoint an Assistant in the Economics and Statistics Department. This post gives wide opportunity of experience in Applied Economics and is suitable for a graduate of one or two years experience.

A wide salary range commencing at not less than £900 is offered and the level of commencement will depend upon qualifications and experience.

Applications to Economics and Statistics Officer, The Joint Iron Council, 14 Pall Mall, London S.W.1.

BBC invites applications (men only) for a reserve of administrative staff to meet future commitments. Education: preferably University degree (or equivalent). Qualifications, training and at least three years' management or administrative experience at a responsible level in commerce, industry or public service. Age limits: twenty-five to thirty-five. Salary: initially between £1,000 and £1,380, with first permanent post on grade £1,380 rising by five annual increments to £1,780. Good prospects of subsequent promotion. Requests for further particulars and application forms (enclosing addressed envelope and quoting reference 62.G.315. Ect) should reach Appointments Officer, Broadcasting House, London, W.1, within five days.

STANDARD TELEPHONES AND CABLES LIMITED

MANAGER

MARKET RESEARCH

The Components Group, a vigorous and expanding part of the STC organisation, intends to make the above appointment at its headquarters at Foots Cray.

The man selected will report to the Group Marketing Manager and will be responsible for conducting market research within the Group and also in the consumer field. He will work in liaison with the Group's Market Development Manager and with the Company's Market Research Manager.

It is expected that the appointment will progress rapidly in scope and will involve the control of a small staff. A considerable amount of travelling within the U.K. will probably be involved.

Applicants should preferably be Graduates in Economics, with a very good knowledge of market research techniques; they should not be frightened of operating in a highly technical industry.

Foots Cray is a residential district only 13 miles from the centre of London.

The Company operates a wide range of attractive welfare benefits including a NON-CONTRIBUTORY pension scheme.

Write stating experience and qualifications to:-

W. J. YEOMANS, Personnel Manager,
STANDARD TELEPHONES AND CABLES LIMITED
Foots Cray, Sidcup, Kent

THE UNIVERSITY OF MANCHESTER

SIMON FELLOWSHIPS

The University offers a number of Simon Fellowships for advanced study or research in the social sciences. This term is used in a wide sense to include not only Economics, Government, Sociology and Social Anthropology, Economic and Social Statistics, etc., but also fields such as the Organisation of Business, Education, Jurisprudence, Law, Social Administration and Social Medicine. The Fellowships will be tenable normally for one year from October 1st in the academic sessions 1963-64, 1964-65 or 1965-66. Values normally within the range of £1,200-£2,100 (Simon Research Fellowships) or within the range of £2,000-£2,500 (Simon Senior Research Fellowships) according to qualifications and experience. They are not confined to persons with academic experience. Applications, stating the Session in which the Fellowship will be taken up, should be sent by December 15, 1962, to the Registrar, The University, Manchester, 13, from whom further particulars may be obtained, and who will be pleased to answer any enquiries regarding the scope of the Fellowships.

100,000 in 100,000 5% Cumulative Redeemable Preference Shares of £1 each	100.000
2,000.000 in 8,000,000 Ordinary Shares of 5/- each	1.500.000
£2,100,000	£1.600,000

Neither the Company nor any of its subsidiaries has any Mortgages, Debentures, Guarantees (other than in the ordinary course of business) or other loan capital or bank overdrafts outstanding.

The full particulars show (inter alia) that:—

(1) The Company was incorporated in 1945 and on incorporation acquired one of the oldest Lloyd's Insurance Brokerage businesses and a substantial Lloyd's Underwriting Agency carried on by Robt. Bradford & Co. which was established in or before 1820 by Robert Bradford the great grandfather of the present Chairman of the Company. The present Group comprises two Insurance Companies, several Insurance Brokerage businesses, a Reinsurance Brokerage business, two Insurance Underwriting Agency businesses, three Investment Trust Companies, a Property Investment Company, a Property Owning Company, a Reinsurance Company and a Reinsurance and Finance Company. The Insurance Companies undertake all classes of insurance other than life; one Brokerage Company acts as Lloyd's and General Insurance Brokers and the others act as General Insurance Brokers, all on a world wide basis.

(2) Subject to unforeseen circumstances the Directors consider that the profits of the Group for the year ending 31st December, 1962, will not be less than £575,000 before taxation, in which event it would be their intention to pay a second interim or final dividend of 12 per cent. which with the interim dividend already paid would be equivalent to dividends in respect of that year totalling 17% on the present Issued Ordinary Share Capital of £1,500,000. This 17% distribution would be covered 1.68 times. The estimated Group profits before taxation of £575,000 include estimated investment and rental income of £270.000 (£58,988 of which rental income is receivable from other Companies in the Group), which, after deduction of profits tax where applicable, almost covers a dividend of 17 per cent.

(3) The book value of the net assets of the Group at 31st December, 1961, amounted to £2,074,594. A substantial part of the assets consists of quoted investments included at or under cost but the market value of these is considerably higher.

Copies of the Particulars required to be advertised in connection with the application to the Committee of the Liverpool Stock Exchange for permission to deal in and for quotation for the whole of the Issued Share Capital of the Company may be obtained from:—

No trouble in store

COMPUTER SORTS OUT SALES

A. W. Gamage, the famous London store, have their 15,000 weekly sales analysed at a Ferranti Computer Centre. These are divided into four categories—Shop Cash, Shop Enter (for sales on account), Post Cash and Post Enter. The computer also deals with Postage and Hire Purchase, returned goods and erroneous entries.

At the end of each day the computer prints out a daily total for each category, covering about 100 Departments. It also produces an analysis of nett weekly sales by Departments (for post and shop sales), an analysis of weekly sales for trading and non-trading Departments, and calculates commission, at three different rates, for 600 selling assistants, Result: an enormous increase in efficiency.

Computer guidance pays

The case above is only one of many where slashed costs and greater efficiency have resulted from computer guidance. Computers can perform an immense range of tasks with equally immense rapidity. Once properly programmed, they can cut through apparent jungles of information to reach relevant and practical conclusions. And because computers consider every aspect of a problem, every combination of variable factors, decisions based on their guidance are happily free from bias or over-simplification. Computers don't play hunches, but they *can* test them.

However large or small your problem, hired computer time might be able to solve it. There is no need to own a computer—and no need to worry about the technicalities of computing—you can hand your problem to Ferranti and they will do the rest, or they can teach you, in a few hours, a simple "do-it-yourself" programming technique. Why not get in touch with the Computing Service? They will be glad to advise you whether or not you could profit by computer guidance.

Call:—Ferranti Computing Service; LONDON: Museum 5040. Telex 23830. MANCHESTER: East 1301. Telex 66111, or EDINBURGH: Davidson's Mains 2231. Telex 72141.

IPCORN
can give you all these services!

If you intend starting a new industry in Northern or Southern Rhodesia or Nyasaland, or if you want to expand your existing plant, IPCORN (which exists to stimulate industrial growth and development) can give all these advantages.

***ADVICE** Through its excellent relations with Governments, Municipalities and major industries, IPCORN is in a unique position to give impartial advice to prospective investors (particularly from overseas) on such subjects as sites, markets, labour availability, local finance, etc. IPCORN is also able to give technical advice on production, costing, accounting, marketing, etc

***CAPITAL** Subject to certain broad principles, IPCORN will assist in the financing of approved projects. Proposals involving equity or preference participation, fixed or variable interest loans (convertible or otherwise), the underwriting of public issues or a combination of any or all of these will be considered.

***ON THE SPOT NEGOTIATIONS** IPCORN will negotiate on your behalf with Governments, Municipalities or other parties.

***FACTORY PREMISES** If you intend starting an industry in Rhodesia or Nyasaland, IPCORN's associated property company can buy or finance the building of a factory for you . . . to your own specifications . . . and can rent it to you on a long lease for a fair price. If you already have a factory here it can (a) buy it from you . . . thus giving you more working capital . . . and long lease it to you at a fair rental, and (b) rebuild it for you when you want to expand and modernise.

***CONTACT** A. C. Bartrum, General Manager of IPCORN at Bank Chambers 76 Jameson Avenue, P.O. Box 134, Tel. 60830, Salisbury, Southern Rhodesia.

STEAM MAKES WAY FOR BRISTOL SIDDELEY DIESELS

The "new look" for British Railways is taking many forms, not the least of which is the eclipse of the steam engine by the diesel-powered locomotive.

Bristol Siddeley high speed diesels* are playing a major role in this changeover and many of the new locomotives incorporate these powerful, lightweight engines. They require virtually no day-to-day maintenance, they can haul a train at 90 mph and engines in service a ready averaging nearly 500 miles a day. T are factors which are helping British Rail to streamline and speed up their passenger a goods traffic.

*Manufactured in the UK under licence from Maybach-Motorenbau GmbH.

CYCLONE CUBA

If a breathing space has been won in the crisis over Cuba, it cannot mean that Mr Khrushchev is accepting defeat all along the line; at best, there may be a chance now to get negotiations going before he resorts to a counter-blow elsewhere (p. 327).

WASHINGTON is well aware of the dangers of its **Cuban blockade** but feels that this direct confrontation of the Soviet Union in "home waters" is unavoidable (p. 359).

The possibility of a **war economy** has improved the short-term economic outlook, but it has made the long-term one more cloudy than ever (p. 359).

LONDON: Mr Macmillan, rejecting separate initiatives "merely for the sake of appearing to do something," supports the good offices of the United Nations (p. 334).

BERLIN: Fears of Russia moving against the city in earnest have been given encouragement (p. 334).

The blockade is affecting not only arms shipments:—

The United States, with the dollar under strain, may also find itself under some financial constraint (p. 379).

Gold (p. 379), the exchanges (p. 387), the stock markets in London and New York (p. 386), money markets (p. 387), commodities (p. 387), marine insurance and shipping (p. 388) have noticed the changed international atmosphere.

INTERNATIONAL

AFRO-ASIAN MALADIES

India, for all its present problems, has no intention of losing its status by falling back on western support (p. 329). Our correspondent reports India's reaction to the shock of seeing the Chinese advance further into India instead of being thrown out (p. 369).

Yemen's prime minister has the honesty to say that he does not know where to start with reforms, but that diplomatic recognition would be useful—in asking for aid (p. 335). The sweeping changes in Yemen have heightened the **Adenis'** misgivings about joining a South Arabian Federation. **Britain** may have to look at the problem again (p. 336).

The **United Nations** and its members, now tied up in the latest tangle of international crises, can pay little attention to Mr **Tshombe**; **Congo** chaos is possible (p. 335).

King Hassan II of **Morocco**, having maintained so far an exquisite balance between autocracy and liberty, is looking for the next step (p. 370).

Northern Rhodesia's election results will be no guide for the British Government, but the breakdown of the voters' attitudes will provide one (p. 340).

PLANNING PROBLEMS

Europe's Six are trying to handle one thing at a time; they have made an effort to accommodate the proposed associates from **Africa** (p. 339), but are inclined to leave the question of fitting in the **Seven** until after **Britain** joins (p. 339).

Resigned to losing the referendum, the opposition parties seem too hopeful of trouncing President de Gaulle's followers in the **French general election** (p. 369).

Mr Khrushchev cannot keep all **the Kremlin's ghosts** locked up and stay at the top as well (p. 373).

Austria is trying to put its picturesque Alpine farms on sounder economic ground (p. 374).

Czech planning has produced better supplies of household goods, thus giving the people more time to queue for erratic food supplies (p. 375).

France is planning a larger role for its **capital market:** but for its own benefit and not—in spite of an abundance of foreign exchange—for America's balance of payments (p. 382).

Amid all the international difficulties Father Pire's personal university provides for peace and reflection (p. 376).

BEHIND THE LINES

Our Washington correspondent reported on some election campaigns in **the Middle West** before the Cuban crisis (p. 363).

Last week's reduction in required **bank reserves** does not necessarily mean an easing of credit in the United States (p. 364).

Congress has approved stricter controls on the marketing of **medicines** but more reforms are needed (p. 366).

HOME

HERE AND NOW

While waiting for the Godot of a common market—and worrying about Cuba—**Parliament** should set its mind to its large and detailed legislative programme (p. 333).

Ford Motors is engaged in the latest of a series of conflicts that could healthily reshape labour relations in **Britain** (p. 344).

In a refusal to reshape, Britain's biggest **white collar union** has democratically declined to join the Trades Union Congress (p. 336).

HERE AND THERE

The Hall committee on the **Northern Irish economy** disappointingly failed to agree on its main recommendations: but its doubts provide a useful stimulus to thought about **Britain's place in Europe** (p. 331).

Meanwhile, the other **Irish** are worrying about their chances of becoming full members of Europe (p. 339).

There are signs that the use of **atomic energy** may be creeping back into favour. The Dounreay reactor could help this process by urging the Atomic Energy Authority to find ways of using its plutonium (p. 380).

London's planners should start thinking about practical means of ensuring that tall buildings do not end up as sore thumbs (p. 347).

New rules for art exports (p. 340).

HERE TO ETERNITY

The sentencing of **a spy** to 18 years in jail leaves some questions that should be answered—and others that never can be (p. 335).

The renewal of Britain's dying **urban regions** must be a first national priority: and to remodel the techniques of **local planning** could speed the task (p. 336).

There should be second thoughts about cutting back **the Gurkhas** (p. 343).

iNSTANT HOLLaND

A schnappy guide
—just part of the Harwich-Hook service

Land of Dutch courage, inspired by schnapps or Dutch gin. Hence 'double dutch'. The people v. the sea is a permanent fixture which accounts for those boat-like shoes. Goodness knows how they tiptoe through the tulips in them. The Dutch are a peaceful lot . . . sitting beside the Zuyder Zee (mostly not zee any more) . . . or waiting for the Flying Dutchman.

And the most comfortable way to reach Holland—and likewise Germany, Belgium, Scandinavia, Luxembourg—is Harwich-Hook. Your programme's so simple and restful. Just step on the boat at Harwich (the 8.0 p.m. from Liverpool St., London takes you to the quayside). Enjoy a good night's sleep. Wake up at The Hook, where fast trains meet your boat.

THE MOST COMFORTABLE WAY TO TRAVEL TO THE CONTINENT IS

HARWICH HOOK

CONOR O'BRIEN THINKS AGAIN

Last December Conor Cruise O'Brien wrote two articles in the Observer which created sharp controversy. He now says "In the Observer interpretation I went wrong for two reasons." What has made him change his mind? ■ Doctor O'Brien's book "To Katanga and Back" amounts to an important new assessment of the roles played by the United Nations Secretariat and by Hammarskjoeld himself, of whom he says: "He allowed the world to be given an official version which was so phrased as to conceal the reality of what had happened .... These words will make painful reading for Hammarskjoeld's admirers .... I think however that there is no escaping their truth." ■ The first of a series of extracts from this important work appears in the Sunday Telegraph this week.

Certainly not...

Clearly, no one in his senses would use chewing gum at a time and place such as this.

However there are times and places where the use of chewing gum can be most beneficial; in fact its discreet use is a mark of tact and consideration for others as it is a definite aid to oral hygiene.

Doublemint chewing gum is especially made for such people. Its ingredients are carefully selected throughout, even its flavour has been double distilled; in fact, as its name implies, Doublemint is double good and gives you double benefits in many ways.

Try some at the right time and in the right place and see for yourself. E401/2

Your C.I. Man Twenty-Seven Years Ago...

Twenty seven years ago I was part of the Cambridge tennis team, and vied against Oxford. After several years of strenuous activities, both academic and physical, at Cambridge, I joined C.Itoh & Company, one of the world's foremost trading and investment companies in Japan.

Many of C.Itoh's working staff are sent every year to colleges and universities in the various nations of the world to study their economic systems and to widen their horizons in the business field. There are also men from C.Itoh permanently stationed in most of the financial and trading centres of the world—meeting people, studying products and keeping on intimate terms with the markets. These men are experts on international trade, on whom you can always depend.

Whatever your business, consult your C.Itoh office about commodities, markets, or any other problems that may arise in doing business with Japan.

How to have £250 a year not taxed at source

(plus a £150 tax free bonus)

£5,000 WORTH of Defence Bonds (the maximum you're allowed—apart from earlier issues) is a wonderful investment for anybody. You have complete security of capital; it is not subject to market fluctuations and you can withdraw the whole or any part at any time.

A £5,000 holding of Defence Bonds would give you a steady income of £250 a year for seven years, and at the end of that time you'd get a £150 bonus entirely free of U.K. income taxes.

Defence Bond interest is not exempt from income tax but it is paid in full without deduction each half year. Very useful for those who don't pay at the full standard rate, or for trusts, charities etc. not liable for tax.

Defence Bonds are on sale in £5 units and earn 5% interest per annum. They are repayable after 7 years at the rate of £103 for every £100 invested—and this 3% bonus is free of U.K. income taxes.

This is equivalent to a yield of £5.12.6 per cent (gross) per annum to maturity when tax is paid at the present standard rate of 7/9.

5% DEFENCE BONDS

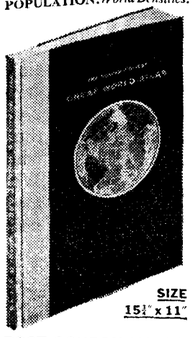
'A new Atlas which suddenly shifts our perspective of space'

—DR. J. BRONOWSKI

Never before has an atlas won such praise as that showered upon the Reader's Digest Great World Atlas. This is a work of the highest scholarship, prepared after long research by experts in many different fields, under the overall direction of Frank Debenham, O.B.E., Emeritus Professor of Geography in the University of Cambridge. This is the finest, most modern atlas now available—including discoveries made as recently as the International Geophysical Year.

'This great work provides an important service in a fascinating form'. Sir John Hunt, the Everest leader.
'This is a new world in atlases . . . on the way to becoming an encyclopaedia.' Sir Julian Huxley.

The first Atlas ever produced with features on all these subjects:
ASTRONOMY: *Outer Space; The Boundless Sky; The Solar System.*
GEOLOGY: *The Earth's Structure; Cross-Section of the Earth.*
OCEANOGRAPHY: *The Ocean Floor.*
ZOOLOGY: *The Spread of Mammals.*
MARINE BIOLOGY: *Life in the Sea.*
AGRICULTURE: *The Frontiers of Cultivation.*
ANTHROPOLOGY & ETHNOLOGY: *The Evolution of Man.*
ORNITHOLOGY: *Bird Migration.*
SOCIOLOGY: *Religions of the World; World's Health.*
ARCHAEOLOGY: *Historic Bible Lands.*
METEOROLOGY: *Patterns of Climate.*
EXPLORATION: *The Great Voyages of Discovery.*
POPULATION: *World Densities.*



SIZE 15½" x 11"

21 pages of Three-dimensional maps

The editors have secured the rights to a revolutionary new process for making relief maps, costing more than £50,000. The result is 21 pages of relief maps showing the world as seen from 100 miles away in space. Mountain ranges, rivers, oceans, forests, all are shown with unsurpassed clarity.

71 pages of superb contour maps

Produced on special copperplate, with each place name engraved by hand, these contour maps took *nine years* to prepare. Towns and cities, rivers and railways can all be found easily, for the colouring is subdued and the text clear and definitive. Together with the relief maps, they complete a revealing picture of the landscape of our Earth.

44 pages of encyclopaedic maps and charts

This section maps the universe from the molten core of the Earth to the sub-zero limits of outer space. Maps and charts showing man's place in the universe, the growth and disappearance of civilizations, migrations, patterns of climate and cultivation, health and food, all these and many more are included. Luxuriously bound in gold-blocked Balacuir, printed in FULL colour throughout, this magnificent atlas includes a 33-page World Index.

Special direct-from-the-publisher offer to readers of this magazine

As a reader of The Economist, you will certainly judge an atlas by the most exacting standards. And you will naturally want to own the best available. We therefore make you this special direct-from-the-publisher offer:

Send no money - Post coupon now

Examine the Great World Atlas—*free*—in the comfort of your home. We invite you to send for a copy now, which we shall be pleased to post to you at our own expense, and *without any obligation to you*. To prove to yourself that the Great World Atlas is superior to all others, you need only compare it, page by page, with *any other atlas*.

DIRECT TO YOU AT 34% OFF!

Because it is offered direct by the publisher, the Reader's Digest Great World Atlas is yours for only 55/-, a saving of £1.9.0 on the published price of £4.4.0; or 5/- down and 5 monthly payments of 11/- (60/- in total). But see it free first! Return if not satisfied.

NO SALESMAN WILL CALL

POST COUPON NOW for free inspection copy of this fine work

To: THE READER'S DIGEST, DEPT. W.A., 7–10 OLD BAILEY, LONDON, E.C.4. Please send me, without obligation, a copy of the GREAT WORLD ATLAS to examine free for 14 days. I understand that, if I decide to buy it, I may do so at a special direct-from-the-publisher price and on easy terms if I wish. (If I decide not to purchase the Atlas, I may return it, in the carton provided, without owing a penny.)

NAME (CAPITALS, PLEASE) .....

ADDRESS (CAPITALS, PLEASE) .....

.....

Offer applies in UK & Eire only. Post in unsealed envelope (2½d stamp). WA-66

"There is no new thing under the sun, dad"

"Ecclesiastes, Son. And you've got the quotation right, too. Out of the mouth of very babes and sucklings . . ."
"Book of Psalms, Dad; and you've got your quotation right as well. Fifteen all"
"Son, where's all this cross-talk taking us?"
"Back a hundred years to 1862, Dad"
"A memorable year, Son, for, amongst other things, the birth of Debussy, the capture of Garibaldi, and the then highest recorded ascent in a balloon"
"And, Dad, for the earliest recorded advertising leaflet of the Patent Plumbago Crucible Company, forerunner of The Morgan Crucible Company. It claimed that they sold crucibles to Mints in Australia, India, France, Russia and elsewhere"
"Quite a performance for those days, Son"
"Yes, Dad; and, what's more, this leaflet was printed in English, French, German, Swedish and Spanish"
"And we're still talking today about the need for English exporters to use the customer's language, Son. Well, well"
"It doesn't end there, Dad. Even in 1862 Morgans converted all their weights and measurements into metric terms for the benefit of those foreign addicts of the decimal system"
"I suppose there's no danger of their getting smug, Son, is there?"
"Hard to say, Dad; but they've reason to be proud of their past achievements, I think"
"Then what of the future, Son?"
"Well, Dad, between 40% and 45% of The Morgan Crucible Group's sales are now outside the U.K., made up of nearly all the products manufactured in the U.K.—carbons, pots, Crusilite elements, refractories, resistors, colloidal dispersions—and of those products manufactured by its overseas subsidiaries; and they aim to keep it that way"
"And does each subsidiary do its own exporting, Son?"
"No, Dad. With two exceptions all the Group's exports are handled by Morganite Exports Limited, who operate through twelve overseas subsidiaries of The Morgan Crucible Company Limited, and over two hundred agents"
"So they cover the world, Son"
"Indeed they do, Dad. And the verdict of the world is conclusive"
"St. Augustine, Son"
"Correct, Dad. Wasn't it also he who prayed: Give me chastity and continency but do not give it yet?"
"Son, I hardly think . . ."
"Don't worry, Dad; I only wanted to say that there's no containing Morganite Exports Limited, and as for being chaste—well it's they who do the chasing"
"Son—you're incorrigible"

With apologies to Harold Wincott

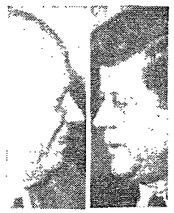
Cyclone Cuba



FOR the moment, though it is impossible to be sure that what is written on Thursday afternoon will continue to be true on Friday morning, the worst dangers that might have flowed immediately from President Kennedy's decision to impose a blockade on Cuba seem to have been averted, or at least put off. The acting secretary-general of the United Nations, speaking for practically every member of that body, has appealed to both the United States and Russia to steer clear of actions that could lead to the shot that would be heard around the world until they have had a chance to talk things over. Mr Khrushchev, in his sensibly worded message to Lord (Bertrand) Russell on Wednesday, has shown a keen awareness of the dangers the world is running, and an apparent willingness to negotiate with Mr Kennedy. So far there has been no clash in the Caribbean between Russian merchant vessels and American warships, and if the sense of Mr Khrushchev's remarks to Lord Russell has been transmitted to the Russian captains there may not be a clash—at least in the Caribbean, at least just yet.

Some Americans, but we hope not Mr Kennedy, may be tempted to interpret these developments in what could well be a dangerously wrong way. They may be persuaded that by forcing a showdown over the shipment of Russian arms to Cuba the United States has publicly and triumphantly made Mr Khrushchev back down ; in other words, that the United States had achieved that decisive victory in the "contest of wills" which the extremists of both East and West have been pursuing, like a will o' the wisp, for years past. If this interpretation were adopted by Mr Kennedy, certain conclusions would inevitably be drawn in Washington. The Americans would decide that they could press ahead with their demand that the Russian missiles already in Cuba must be dismantled, and if necessary enforce their will by military action. They might also reason that, having bent Mr Khrushchev's will over Cuba, they no longer needed to fear a showdown in, say, Berlin, on the principle that one backing down by the Russians would inevitably lead to another.

This could be perilous reasoning. For one thing, the possibility of the fatal spark being struck in the Caribbean has not yet vanished, or even seriously diminished. Mr Khrushchev's feeling that he cannot make a "confession of weakness" (how it twists the heart to hear these identical phrases tripping from American and Russian tongues alike) may yet lead him to try to push a ship or two through the blockade to Cuba ; just as the western powers would probably feel obliged to push a convoy or two up the Berlin autobahn if the Russians imposed a blockade there. There is also the ominous possibility, mentioned by our Washington correspondent on page 359, that the blockade does not mark the end of American plans for action against Dr Castro's island. If Mr Kennedy is really as alarmed as he says he is by the arrival of Russian missiles in Cuba, the reports that he would like to winkle out those that got there before the blockade was imposed may yet receive a grim confirmation.

But let the very best be assumed for events in and around Cuba. Take it that Mr Khrushchev will realise that he does not possess sea and air power enough to maintain his position in the Caribbean, and that he will back down from his commitment to Dr Castro rather than face a conflict on the Americans' home ground. The real weakness of the theory that the Russians, once humiliated, will be twice shy of causing trouble either in the Americas or anywhere else lies

in the metaphor Mr Khrushchev used to Bertrand Russell on Wednesday: "If one tries to mollify a robber by giving him first one's purse, then one's coat, the robber will not become more merciful, will not stop robbing." One can reject this interpretation of the Americans' policy in Cuba, while still recognising the extraordinary similarity between these words and the feelings that led Mr Kennedy to act last Monday night. Neither East nor West, in short, can expect the other to keep on backing down in a series of encounters. If one of the antagonists backs down in one place, it simply increases the chance that he will seek compensation somewhere else.

IF a momentary breathing space has been won, as seems possible, the real conclusion to be drawn is not that Mr Khrushchev is acknowledging a general defeat (he cannot) but that he is now making up his mind whether to negotiate seriously over the whole tangle of issues—Cuba, Berlin, and other matters as well—or to prepare a counter-blow. The aim of those who prefer settlements, even partial and uneasy ones, to showdowns should clearly be to steer the course of events towards the first of these alternatives: negotiation, at whatever level is necessary, involving compromise if need be, before a counter-blow calls forth a counter-counter-blow.

"We cannot give ground to force, for that would be a confession of weakness"; thus Mr Khrushchev to an eminent Belgian interviewer, Mr Raymond Scheyven, in an interview published this week in a range of western European newspapers. Mr Khrushchev was talking in the context of Berlin, where the deployment of physical force favours him. With the challenge transferred to the Caribbean, where it does not favour him, what sensible course can he take but to back down? But, if back down he must, it will involve him in abandoning a chosen ally and willing disciple in circumstances as directly and obviously humiliating as they can be made to be. No point for him, after that, in pursuing the long, laborious dialogue (Thompson and Gromyko; Gromyko and Rusk; Adzhubei and Kennedy; McCloy and Khrushchev; Gromyko and Kennedy) that has been, with all its limitations, the most notable contribution of the Democratic Administration to East-West diplomacy. The theory that represents Mr Khrushchev as needing only to be convinced of American willingness to go to war, and he then will negotiate in earnest, is too facile. Without doubt he has been aware of that willingness for long enough. Being aware of it, he has gone very, very slowly with his own plans for Berlin and east Germany. He is not going to regard undignified defeat in Cuban waters as a promising point of departure for a further attempt at an accommodation with the United States.

CUBA

Aspects of the Cuba Crisis discussed on other pages are . . .

Only with great good luck will the international hunt for a compromise that is now on yield such a point of departure. If it does not, Mr Khrushchev would seem compelled to do something else to restore the balance of humiliation. Where? Mr Kennedy's broadcast clearly anticipated that it might be in west Berlin, to whose "brave people" he gave a particular assurance that American action would meet any move against them. So it may be. Berlin's closeness to the central field of east-west conflict, which is still in Europe, speaks for that possibility; so does the obvious fact that the normal functioning of Berlin under western protection depends not only on communist tolerance but, in various fields of administration and communications, on active communist co-operation. Thus the communists can, if they choose to be resolute and circumspect, render the western position in Berlin difficult (and even, perhaps, humiliating) while still leaving it to the West to take, or to draw back from, the step into war. Some possibilities there are discussed on page 334.

EVENTS may soon show whether Berlin is to be the next point of conflict. But the West cannot take it for granted that it will be; to do so may be to underestimate the fundamental character, in strategic terms, of the issue upon which Mr Kennedy has chosen to throw down the gauntlet. The basic American challenge is contained in Mr Kennedy's assumption, restated in the American resolution before the Security Council and by Mr Adlai Stevenson in submitting it, that a ground-to-ground missile sited with Soviet connivance in the western hemisphere is "offensive" and an intolerable threat, whereas an American-controlled missile sited in the eastern hemisphere is a normal defensive precaution, which the Russians must live with.

The fact that most people in western Europe and North America would heartily concur in both these propositions is not really to the point. The two propositions express, the one the Monroe doctrine of excluding European intervention from the western hemisphere, the other the Truman doctrine, the military containment of Soviet power along the periphery of the communist world. Mr Walter Lippmann wrote on Monday that the United States was not now omnipotent, and could not therefore enforce both doctrines at once, one in each hemisphere. It needs to be remembered that in 1947, when the Truman doctrine was adopted, the monopoly of nuclear weapons, added to its overwhelming economic preponderance, made the United States more nearly omnipotent than any modern power, at any rate, has ever been.

This is so no longer. The Americans still possess preponderant military power, but that is not the same thing; to make their will effective, they have had to resort with increasing frequency to the threat of war. It is not a threat to be used too often in too many places, as the Russians doubtless see. Berlin's best hope of an undisturbed winter may lie in the possibility that the Russians will see in an assault on the system of containment the most appropriate response to this week's enforcement of the American protectorate over the western hemisphere. They may prefer to attack containment where it is weak and extended, somewhere along the southern borders of the Soviet Union from, say, the Bosphorus to Pakistan. This is a region where military and political means might, without great difficulty, be combined and the onus of resort to the ultimate weapons left to the West.

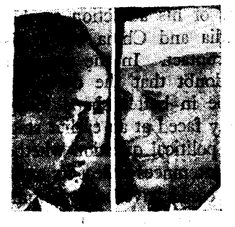
WHAT practicable alternative exists to a spiralling outward from the Caribbean storm centre? If one can be found, it must take the shape of a device that enables the disputants, whose prestige is now as heavily involved as their military interests, to back away from their perilous confrontation without having to eat dirt and with some element at least of reassurance to take the edge off their immediate and most pressing fears.

Whether anything of the kind is possible depends primarily on two questions. First, do the parties mean everything they have said about facing a decisive showdown, or have they really been drawn by miscalculation into more extreme postures than they would have wished? If the latter is the case, their public show of resolution may conceal a real preference for a form of disengagement. Second, can they be spared the appearance of surrender? Neither of the great powers can be expected to yield simply at gunpoint. A less undignified backward bowing can be achieved only by bringing in the element of persuasion by third parties. Mr Kennedy seems committed to maintaining the "quarantine" until UN inspection teams report Cuba clear of nuclear arms; Dr Castro has apparently rejected all idea of international inspection. Are these positions absolute? Might America conceivably accept a control that left Cuba with an armament sufficient to deter an American attack but not capable of devastating the United States? Would Castro really repel an inspectorate that turned out to be manned mainly or wholly by the non-aligned countries with whom he proudly associated himself at the Belgrade conference last year?

Whatever the possibilities, it became clear within a few hours of the onset of Cyclone Cuba that the place to seek them was the United Nations. And there, as on earlier occasions—the Lebanon-Jordan crisis of 1958, which set a somewhat similar problem in disengagement, comes to mind—they are more to be sought in the anxious activity behind the scenes than in the clash of public debate (the interruption of which for a UN Day concert on Wednesday was perhaps all for the best). The likely transfer of the formal proceedings from a Security Council in which Russia can veto any American move, but cannot hope to carry its own proposals, to the 110-member Assembly, in which neither the American nor the Soviet-Cuban case can be expected to win resounding support, will not alter this essential point.

Already the acting secretary-general, U Thant, has offered his personal good offices to the disputants, and has appealed directly to Mr Kennedy and Mr Khrushchev to suspend, respectively, the blockade and the shipping of arms to Cuba, for a period of two weeks that would permit of negotiation. A large group of non-aligned states has been discussing a draft resolution which would ask all parties to do nothing to aggravate matters and to consult with U Thant at once. But as a source of such de-fusing initiatives, effective or not at first shot, the United Nations was never more urgently needed than it is this week. If it did not exist, it would now be necessary to invent it—if there was time.

India's Ring of Troubles



The temptation to gloat over India's present predicament should be resisted

INDIA's difficulty is a beguiling opportunity for some of its critics in the West. The sight of Mr Krishna Menon declaring that "We will fight to the last man and to the last gun" is bound to evoke, if not gibes, at least some dry smiles. In the years when the Atlantic allies were closing ranks against the Soviet military power which they saw threatening western Europe, Mr Nehru's government emerged as the most vocal—and thus, to the allied countries, the most irritating—apostle of non-alignment. Western leaders, preoccupied with evidence of the communist powers' expansionist aims and bad faith, detected a blend of hypocrisy and folly in India's insistence that its relations with those powers were firmly based on the famous *Panch Shila*: the five principles of trustful co-existence that were first framed in the 1954 Tibet agreement between India and China, and later elevated to a near-universal dogma. Now, with the Chinese army relentlessly driving through India's Himalayan defences, various voices are raised to say, in effect, "We told you so."

The Chinese action of the past week is discussed in more detail on page 369. Mr Menon has branded it as "naked and large-scale aggression." It is not the only factor (though it is, of course, much the most serious) in India's present predicament. There is trouble, quite literally, on every side. An exchange of fire has taken place this month across the Pakistan border, where there has also been renewed movement of refugees and expellees. In Kashmir, ominous rifts have appeared in the state government even while the long-delayed trial of the deposed leader, Sheikh Abdullah, recalls old dangers and evokes new murmurs. Raids into Nepal by exile groups that support its imprisoned ex-premier, Mr Koirala, have resulted in counter-raids into India as well as in a sharp worsening of India's relations with King Mahendra's government. Along the Burma border, the "pacification" of the rebellious Nagas has stretched out for seven years in spite of repeated official assurances, only too reminiscent of Algeria, that the revolt had reached its "last quarter of an hour." In the south, the Tamil separatist movement is still making slow but disturbing headway. Mr Nehru's visit to Ceylon this month has not, as some expected, opened a way to the solution of the problem of the large Indian "stateless" community there.

Delhi's troubles are naturally gratifying to Peking, which has gone out of its way to publicise them through broadcasts and press services distributed internationally, and to exacer-

bate them by ostentatious gestures to Nepal and Pakistan. For westerners to find satisfaction in them, on the other hand, would be short-sighted as well as small-minded. Pakistan is allied to the western powers, but their true interest lies in seeing Pakistan and India reconciled with one another, whereas China has every reason to foment ill-will between them and to keep their disputes unresolved. Likewise, the West has no conceivable interest in bad blood between India and Nepal, and its refusal to take sides in their present quarrel, however disappointing to King Mahendra's hopes of getting Britain and America to put pressure on Delhi, has been wise.

WITHOUT any doubt, India has made some serious mistakes. It has mishandled the Nagas tragically, and failed to take due account of Nepalese sensibilities. Faults may be found in plenty, and on both sides, in the tangled record of its feud with Pakistan. Britain's share of responsibility for the creation of the original imbroglio must be frankly admitted by anybody in this country who ventures to comment on the present problem; but, having done that, one may fairly argue that India, as the larger, stabler and better equipped of the two who make this quarrel, has a special obligation to show more than its share of forbearance and generosity.

Has Delhi committed a fatal error, on the other hand, in showing too much forbearance toward China? Many of Mr Nehru's critics, inside India as well as elsewhere, would say so. Now that the prime minister speaks of "five years of continuous aggression," he is receiving embarrassing reminders of his earlier persistence in playing down the threat to India's northern frontier, of his addiction to the theme that friendship between India and China was indissoluble after millennia of peaceful contact. In the purely military sphere, there seems little doubt that the defences of the Himalayan frontier would be in better shape today if the danger had been more frankly faced at an earlier stage. But it is less easy to answer the political question whether India as a whole (and Mr Nehru's utterances reflect its moods quite as much as they shape them) could have been galvanised into vigorous action against the Chinese before they showed their hand as plainly as they are now doing.

Physical geography plays its part here. Faith in the Himalayas as an "impassable" protective barrier long rested on impressive evidence. But the political atmosphere of newly independent India in its first years was surely more important. Inevitably, the most intense suspicion was reserved for anything that smacked of an attempt to undermine the new-won independence by attaching India to western policies. The very creation of Pakistan, although recognised as inevitable by the Congress leadership, was suspect as a possible "divide and still, somehow, rule" gambit; and suspicion deepened when Pakistan was wooed and won over to alliances with the West which some of its leaders plainly regarded less as bulwarks against communist expansion than as devices for strengthening their hand against India. Westerners resented the "holier than thou" of India's disdain for military precautions which they deemed vital. They tended to overlook the fact that the Indians were still involved in the psychological struggle to resist the appeal to "loyalty" that lingered from the days of the British Raj. The circumstances of India's achievement of independence made this struggle a more complex and painful business for them

than it was for, say, the Indonesians or the Burmese.

Each warning against China that came from a western source—and India was given many such warnings—tended, therefore, to set up a contrary reaction. Was not China standing up boldly and impressively against western domination? In India, admiration for the new Peking regime's achievements was not by any means confined to communists and their fellow-travellers. Disenchantment came slowly, for any Indian who returned from China with eye-witness evidence about the darker side of Mao's moon was vulnerable to the charge that he was toadying to western hopes of setting the two great Asian countries against one another. The idea that Indian reluctance to think ill of China has been solely due to sinister machinations perpetrated by Mr Krishna Menon takes no account of this widespread attitude among Indians of many shades of political belief: an attitude of more significance in this context than the Gandhian gospel of non-violence, which, it should be remembered by those inclined to mock India when it defends itself as readily as they would do if it failed to defend itself, was never accepted either by Mr Nehru or by Congress as a whole as an all-embracing philosophy.

THE angry rallying of national sentiment which China's new onslaughts have evoked is a reminder that *ahimsa* is not the only thread in Indian political tradition. Was Peking itself misled by too great a faith in Indian attachment to non-violence? If, as has been suggested, the Chinese aim is now to humiliate India and serve warning that it is foolish for anyone in Asia to oppose himself to Mao's might, it is nevertheless surprising that Peking did not foresee that such a course would stiffen Indian resistance. In the earlier stages of Chinese encroachment in the Himalayas, there were awkward rifts between those Indians who demanded a vigorous response and those who urged caution. Now the ranks have abruptly closed. The crisis should ease Delhi's perennial task of restraining the many forms of separatism that plague the huge country. Already Mr Menon has publicly rated China's offence as much more serious than Pakistan's. Confusion is now confined to the unhappy ranks of the Indian Communist party, whose heightened dilemma has been reflected in Moscow's decision—at least until this week—to spare Soviet newspaper readers the pain of reading about the Himalayan fighting.

Obscure though Peking's aims are, it hardly seems that it can profit China to drive India into such massive anger, and to alienate, in varying degrees, the non-aligned countries as a whole; unless, that is, it is really part of the Chinese plan to expose and discredit India in the eyes of those countries by forcing it into the arms of the western allies. Even if this somewhat far-fetched assumption were valid, there would seem not the slightest hope of such reasoning being proved justified. India's leaders have made it very plain that, while seeking the military equipment they need wherever it is to be found, they are not going to throw themselves into the West's embrace. They have also, be it noted, thanked Mr Khrushchev politely for his suggestion, made last Saturday, about negotiating a settlement with Peking, and firmly restated that there can be no negotiation under duress. India, with all its troubles, is not going to be easily budged from its independent stand.

Split over Ulster

How far does Northern Ireland's unemployment problem spring from the fact that it cannot pursue a more independent economic policy?

THERE are two good reasons why everybody in Britain should pause to consider the economy of Northern Ireland. First, this is a part of the United Kingdom which has had a persisting unemployment rate in the last decade of between 6 and 10½ per cent, and it would be appalling to assume (as in places some of the widely split signatories of the Hall report, Cmnd 1835, come near to assuming) that almost nothing can be done about it. Secondly, Ulster's story is full of economic lessons for Great Britain itself—among other things, lessons about how far economic integration between Britain and Europe should be allowed to go if Britain enters the common market.

The Hall committee (composed of Northern Irish and English civil servants, but with a recently retired Economic Adviser to the British Government as outside chairman) is crystal clear about Ulster's economic disadvantages: they are "remoteness, a small domestic market, and a lack of home supplies of raw materials and fuel." If Ulster is to be competitive with the rest of the United Kingdom, therefore, "other elements of cost (i.e. costs other than those of transport and material, and to some extent costs related to economies of scale) should be lower than they are in Britain." The cost of new capital in Ulster is in fact lower; thanks to the province's extensive schemes of capital assistance (largely subvented by the British taxpayer), businessmen sometimes have to pay less than one-third of the real gross cost of the new investments that they undertake there. But wage rates—which clearly ought to be lower in a country with heavy unemployment—are approximately the same as in Britain though earnings work out 10-20 per cent less. "This is mainly because 80 per cent of the organised workers in Northern Ireland belong to unions based on the mainland," and their wages are often determined under settlements covering the United Kingdom as a whole.

THE committee permits itself a snort of protest at this absurdity, which helps to keep total costs per unit of output in underemployed Ulster so uneconomically high. (The point, incidentally, ought also to be noted by those economists who say that there is no such thing as wage push inflation, and who aver that the only thing that keeps costs high in Britain is excessive demand for labour). But, because all the committee's members have accepted as part of their given terms of reference that the existing degree of economic integration between Ulster and Britain must stay inviolate, the only weapons they can suggest for aiding Ulster are further increases in the subventions already given to it by the British taxpayer. The essence of the Hall report was that some members of the committee (perhaps sometimes the radicals, but probably often merely the Northern Irishmen) kept recommending new ways in which these subventions might be increased, in order to push particular costs in Ulster lower; other members, who now seem to have been supported by the British Government on all matters but one, kept on objecting.

On the six main recommendations fought over in the report, *The Economist* finds itself twice on the side of the objectors, twice on the side of the Northern Irish, and twice uncomfortably on the fence. It may be best to deal with these six specific matters first—before going on to ask the central question, which is whether the existing degree of integration between Northern Ireland and Britain may not be entirely the wrong mixture.

(1) The objectors are probably right to resist the suggestion that there should be a large new subsidy for freight services to and from Northern Ireland; this would favour manufacturers of bulky goods, probably the least economic sort of manufactures for Ulster to encourage. The main disadvantages in the fact that goods have to be transported to and from Ulster's factories "by sea and land rather than by land alone" do not seem to arise simply from heavy freight charges. They "arise mainly from delays, handling and consequent breakages, pilferage and the difficulty of tracing components. Many firms appear to find, in consequence, that they have to maintain larger stocks. . . ." (The more one reads this part of the report, the more one becomes convinced that a Britain-in-Europe should press forward with plans for building a Channel tunnel.)

(2) It was surprising that the committee could not reach united agreement on the need to change Ulster's system of fuel subsidies. Until now the use of coal imported from Britain has been subsidised, while fuel oil (as in Britain) has been taxed. This has discouraged conversion to oil, although—because the transport costs of carrying crude oil to Ulster are approximately the same as of carrying it to Britain—oil "appears to be the more economic fuel" for Ulster's special circumstances. Obviously, if fuel subsidies are to continue at all, it would be in Ulster's interests to subsidise all fuels equally; the British Government has accepted this, and fuel oil is now to get the subsidy too.

(3) The objectors are probably right in opposing any increase in the already massive capital grants which are made available in Northern Ireland to individual firms for re-equipment or new investment. One suggestion before the committee—that firms should be able to claim depreciation allowances on the whole cost of any piece of capital investment, instead of only on the amount contributed by the firm—could have reduced the net cost of an investment undertaken by a new business to less than one-tenth of its gross cost. One doubts if the most economic forms of new industry really would come into Northern Ireland when nine-tenths of the cost of any new investment would be paid by somebody else.

(4) The Northern Ireland representatives on the committee wanted new investors in Ulster to be given an option: instead of taking the capital grants as now, they could opt for a new system under which they might be allowed a "tax holiday" on their profits for up to seven years—provided that the maximum amount of tax remitted was not more than twice the amount of the capital grants for which the firm would otherwise have qualified. The firms that would opt for the new arrangement would presumably be those which considered (rightly or wrongly) that they could establish themselves

quickly in Ulster and make large profits there ; just the sort of investors that Northern Ireland needs. One would have liked the British Government to have probed this suggestion more deeply before apparently concurring with the British members of the committee who (largely because of a protest from the Board of Inland Revenue, which spoke of "difficulties of administration and serious risks of abuse") turned the idea down.

(5) Except for a proposal to step up the housing programme, the committee has recommended against mopping up Northern Ireland's unemployment by an enlarged programme of public works, on two grounds. First "public investment in roads, water and sewerage, hospitals, local authority health and welfare services and education is already proportionately higher than in Great Britain." What this amounts to saying is that the appropriate internal Keynesian policy in Northern Ireland would not be a policy of public works, but might be one of stimulating consumption through monetary expansion and budget deficits ; since Northern Ireland "has no separate currency or central bank" (and also no genuinely independent budgetary system), the report says she cannot undertake such stimulation. Secondly, however, the committee would in any case be opposed to pumping more internal demand into Ulster (by more public works or other means) because "a large part of the additional demand would be spent on increased imports from other countries, especially Great Britain." In the face of this relapse into balance of payments deficit, Northern Ireland would be helpless, since under the present system the country cannot check a rise in "imports by appropriate tariff or exchange rate policies."

The Economist

OCTOBER 25, 1862

A BANK'S TRUE ASSETS

We publish today, in our half-yearly SUPPLEMENT, the accounts of the Joint Stock Banks of the United Kingdom as far as they are made known to the public. The information which they give is very various ;—some tell much and some tell little. . . . The forms of account in banking, if exact and explicit, are necessarily somewhat elaborate, but their essence is very simple. They have only two simple things to state—what money has been in the custody of the bank, and what the bank has done with such money: in technical phraseology, the first is the account of liabilities, and the latter the account of assets. . . . If a reader of bank accounts will bear these remarks in mind, he will be much better able to judge of what he reads than he would otherwise be. But he should also be warned not to place too exclusive a confidence in figures. There is one large item in every bank account, the true nature of which no figures can thoroughly represent. In every account there must be a line on the assets side, "Loans to customers, bills discounted, &c.," and the value of these may be the value at which they are set down, and it may also be *nil*, and it may be anywhere between the two. The goodness of these assets depends entirely on the good judgment and knowledge of business of the managers of the bank, and these no balance sheet can indicate or exhibit. One guide to them is the general estimation of the public: the banks which are thought to be very good generally are very good. But the public is not absolutely unerring. It *has* made great blunders. The best single rule is, that in a bank where the shareholders are respectable and wealthy, the managers will generally be intelligent and capable. Those who have much to lose by a bank's failure, and who are educated enough to know how and why a bank fails, are more likely than others to take the keenest and wisest precautions for its safe management. This principle is not infallible, but it is the best which is applicable to the subject in hand.

(6) There remains the most important proposal which was sponsored by the Northern Irish members of the Hall committee, fully supported by their government. This was the proposal for a wages subsidy:

> A grant of 10s. per week (equivalent to about 4 per cent of the average weekly wages paid to adult employees in manufacturing industry) in respect of all employees in firms qualifying for aid under the Capital Grants to Industry Acts, i.e. to productive industry. The number of workers affected would be approximately 215,000 out of an insured population of 480,000. The cost would be about £5.6 million a year.

The British members of the committee opposed this suggestion, partly on the conventional grounds that it would set an awkward precedent for "other less prosperous regions of the United Kingdom," but with one genuine economic argument which they believed was in Northern Ireland's own interests as well. The main benefit of a wages subsidy would go largely to the old, declining and often labour-intensive industries (like textiles and shipbuilding) on which Northern Ireland is already far too heavily dependent. The objectors suggest that they much prefer schemes for encouraging the development of modern growth industries in which labour costs per unit of output tend to play a less predominant part.

THIS last argument surely brings one to the nub of the matter. A wages subsidy—like a fuel subsidy and a transport subsidy—would really be a scheme for bringing part of the undoubted benefits that Northern Ireland could secure if its currency were devalued to below parity with the British pound sterling ; the trouble is that all these partial subsidies work in a clumsily discriminatory way. And the Hall committee itself admitted that one of the reasons why it refused to recommend a Keynesian restimulation of internal demand within Northern Ireland was because the country could not check any consequent increase in imports by "exchange rate policies" or other means.

There are by now awkwardly strong reasons for believing that the best way out of Northern Ireland's present mess would be to have a separate Northern Ireland pound, and a devalued one. At two stages in its report the Hall committee comes near to admitting this, but then hastily dismisses the idea as one of several possibilities that is not "even theoretically possible for Northern Ireland." "Theoretically impossible" here means politically impossible, given that the present state of union exists. Since Northern Ireland is bearing the burden of an overvalued currency unit as one of its penalties for remaining so fully integrated within the United Kingdom, many observers would say that other parts of the United Kingdom have a duty to help in giving it some aid ; possibly, even, the argument for a wage subsidy in Northern Ireland is one that should now be accepted and put into effect. But the troubling story of Ulster does provide a cautionary tale for other unities like United Europe which are about to be built up from scratch. One of the forms of progress against which a Britain-within-Europe should definitely drag its feet is any idea of precipitate progress towards a common currency between high cost peripheral members of the common market and lower cost centre-of-the-market members. Apart from anything else it is still quite uncertain—until some sort of sense is brought into wages policies here—which sort of a member of Europe the United Kingdom (including Northern Ireland) is itself going to be.

Bills in Prospect

Some points to watch for—and prepare to criticise—in the Government's legislative programme for the coming parliamentary session.

EVEN apart from the Cuban crisis, many question marks hang over the new session of Parliament which the Queen will open next week. One is whether the session will run its ull course. Mr Macmillan might decide to call a general election efore next summer if either (*a*) next month's by-elections swung o unexpectedly far towards the Conservatives that he thought he ould win an early poll ; or if (*b*) France made it clear that it /as going to block further effective negotiations at Brussels until n election had removed the fear that a Labour government might epeal any signature by Mr Macmillan of the Rome Treaty.

Some Labour strategists have argued that there is another way n which Britain's entry into Europe might be blocked until after in election. "The Government," they say, "would not be able o force through during the fag end of this coming session all he complicated legislation that will be needed before Britain can oin Europe, if Labour were to fight the legislation line by line, noving crippling amendments at every point."

This Labour view is almost certainly a delusion. If by late spring it became evident that Britain could join the European common market from, say, January 1, 1964, then this might be made legal by the introduction around next May of one **Common Market Bill** of some seventy clauses ; it might be made up largely of regulations adapted from the Treaty of Rome, with accompanying directives—and might even be in a form, like a Consolidated Fund Bill, where the Opposition's power to move detailed amendments was circumscribed. There would have to be a lot of tidying-up legislation later, but this might conceivably be done in the next session (or the next Parliament ?) when Britain was already inside Europe.

In the early months of the session Parliament will be largely waiting for this Godot of a common market bill. The purpose of this article is to offer some brief but specific advance comments on the earlier bills that appear to be in prospect. The programme announced in the Queen's Speech will include legislation to lay down a **statutory minimum period of notice** for sacked workers and to provide each employee with a **written contract of service.** The sensible course will be for this legislation to come into effect only at some forward date, so that employers and trade unions will have time to make separate arrangements in each industry not less favourable than (in fact, preferably, usually much more generous than) the new minimum rule. The new legislation will be really effective only if it succeeds in spreading fairly generous private redundancy-insurance-schemes throughout industry—in the same way as the Government's "graduated pensions scheme" (a poor scheme in its own right) has partially succeeded in spreading private pension schemes among firms that wished to contract out of it. One point which Parliament should discuss is how far workers who break their contracts—for example, by going on lightning strike before some agreed negotiating procedure has been exhausted—should risk losing their accumulated rights under the new written contracts of service ; it is perfectly reasonable that they should stand to lose them.

The Government is committed to introduce legislation in the new session to implement some of the proposals of the Molony report on **consumer protection.** The right course here would be to go beyond Molony in at least three respects. Instead of just being a generalised propaganda body for consumers, the new Consumer Council should be allowed to undertake prosecutions under the Sale of Goods Acts in the criminal or civil courts. The new **Weights and Measures** legislation should be more brutally specific than Molony recommended (for example, there is not the least reason why manufacturers of packaged products should not be obliged to state on their packets how much the consumer is paying per pound for each product). And the Molony recommendations on **hire purchase** law were an attempt to patch up a system that really needs much more radical reform, by putting hire purchase contracts on a personal loan basis.

AN early bill in the session will be the Government's long-promised Factory Act-type legislation for **shops, offices and other non-industrial premises,** laying down the number of cloakrooms and so forth that employers of white-collar workers must provide. Here the Government should be urged to avoid the age-old trap of first issuing an impossibly draconian preliminary list of suggested requirements that would drive many small employers out of business—and then having to withdraw the more ridiculous of these, amid a loud outcry that it is giving way to vested interests. And backbenchers should oppose "crown privilege" in this matter ; the new office inspectors should be allowed to inspect insanitary government office accommodation, just as much as private office accommodation.

There will be another early Pensions (Increase) Bill to give help to **public service pensioners** (ranging from postmen to retired generals) whose pensions from the state have been eroded by inflation. The accompanying table shows, for some representative groups, how far present-day octogenarians who retired in 1939 fall below their successors who are retiring today ; in terms of the living standard they expected when they retired they are worse treated still, because for the higher ranks (though not for the lower ones) the real value even of today's pensions for the newly retired is below the expected real value of 1939 ones. Most of the men who retired before the great inflation began have slowly died off as the years have passed, but the story has been a sorry one ; the bill should be pushed through quickly and backbenchers should urge that it apply to former colonial service officers as well.

	Pensions paid on retirement in 1939, with purchasing power in terms of 1962 £		Paid in 1962 to those retired in 1939 £	Paid on retirement in 1962 £
Civil servants :—				
Postman	91	(260)	182	289
Clerical Officer	175	(500)	303½	412
Senior Executive Officer	428	(1,222)	624	942
Assistant Secretary	725	(2,855)	1,003½	1,702
Permanent Secretary	1,500	(4,285)	1,989	3,502
Armed Forces :—				
Major (34 years' service)	407½	(1,164)	598	930
Colonel (34 " ")	750	(2,142)	1,037	1,450
General (34 " ")	1,300	(3,714)	1,743	2,800
Teachers :—				
2-year trained assistant	165	(485)	287	518
4-year trained graduate	240	(685½)	392	594
Head, low group school	180	(514)	311	612

A white paper setting down some of the Government's further thinking about the future of television will appear fairly shortly ; but the nature of the Pilkington report has not made it easy to introduce a new **Television Bill** before the 1963-64 session. If the Postmaster-General feels able to take any new step before then he should be urged to authorise an early experiment in pay-as-you-view television. Presumably the parts of the Shawcross report on the **press** which suggested a curb on newspaper magnates' holdings in commercial television could best be implemented in the eventual Television Bill of 1964.

Another proposal in the Shawcross report—for setting up a special court to inquire into proposed newspaper amalgamations—is by itself difficult to sustain. Prior inquiry into major **business mergers** as a whole would be a different matter, but present indications are that the Government is not minded to set up courts for this. However, it is known that the Government has been considering a review of the whole present state of monopolies and restrictive practices legislation; it is frankly impossible—at least within the scope of a short article—to offer crisp suggestions about this until some hard new Government proposals are available for comment.

The nature of the Jenkins report on company law did not make it likely that any new general new company legislation will be introduced this session. **Protection for depositors,** and control over solicitation of deposits by various forms of companies, is probably the most urgent problem here; but this was not looked at by the Jenkins committee in detail.

THE Government should certainly be urged to press forward this session with legislation to prepare the way for election of a Greater London Council and to reorganise the **government of London,** as recommended in the Herbert report of 1960. This is a hot political potato, because Labour is furious at the idea that the GLC (unlike the existing Labour-controlled London County Council) will contain sufficient plush suburban electors in its domain to make it probable that the new council will initially be elected as a Conservative one; while many of the existing Conservative councillors in those plush suburbs are equally furious at the idea that a Greater London Council should have power to initiate some large-scale redevelopment and planning schemes which will be designed to benefit, not so much their existing suburbanites, but Londoners from less fortunate areas. But the Government has a duty to drive forward past the protests of these strange bipartisan bedfellows of obstruction and reaction. (For further discussion, see out note on "Speeding Renewal" on page 336.)

The other bills generally expected to be in prospect will hardly set the Thames at Westminster afire. The Government should introduce new legislation on **water conservation;** here again the emphasis should always be on efficiency, and never merely on the placating of existing interests. This year's row at Winchester may lead to the introduction of a bill about **underground gas storage** (a subject on which the Gas Council should not be blocked, but should be told to behave better). There are said to be two or possibly three technical Scottish bills due to be introduced (where the parliamentary task of the new Secretary of State for Scotland will not be made any easier by the fact that the Conservatives now have no Scottish legal officer in the Commons). Now that the three main international airports—London Airport, Gatwick and Prestwick—are within sight of paying their way as a group, the Ministry of Aviation is expected to present its long-awaited bill to put them under the control of an **independent airport authority,** something that it was, sensibly, unwilling to do while they needed a subsidy. Thus the Government intends to get out of the controversial business of day-to-day airport management; the smaller provincial airports at present run by the Ministry should then either be taken over by local authorities or closed down, although special agency arrangements have been promised for the handful of "social service" airfields (many of them little more than strips of sand in Scotland and the Scilly Isles).

NOTES OF THE WEEK

BRITAIN AND CUBA

England for U Thant

A STUDIED calm, broken only by the cries of youthful demonstrators and the fall and rise of share prices, has been London's ostensible reaction to the sudden Cuban crisis. No British military moves were being made, said the Ministry of Defence on Wednesday. The ineluctable disquiet that a maritime blockade was being imposed in peace time, and that Britain's principal ally, in imposing it, informed but did not consult the British Government, was reflected in the (generally speaking, moderate and unexcited) statement by the Labour party national executive on Wednesday; but its place in Government utterances was marked by silences and omissions, not by words.

Mr Macmillan sustained this reticence when he met the Commons on Thursday for the prorogation. For the American blockade measures he had an excuse and a defence: they were designed to meet a "situation without precedent," and they were "studiously moderate" granted the American contention, which he accepted, that the Russians were turning Cuba into a base for a nuclear attack on the United States. This was a "deliberate adventure" on the Russians' part; and Britain was supporting the American resolution presented to the United Nations Security Council when the blockade was announced.

Beyond this assurance of solidarity with the United States on the substance of its case against Russia, he refused to take up hasty positions. He discouraged any expectation of a British initiative, such as a trip to Washington or an effort to get a summit meeting under way: he would not take an initiative "merely for the sake of appearing to do something." But he reported U Thant's proposals of Wednesday to the House in full, commended the secretary-general's approach, and said that the United Nations was the best instrument to use just now. Of that "crisis of confidence" in the UN that eminent members of the Government were suffering from not long ago there was, this week, no sign; not even a memory.

CUBA AND BERLIN

The Retaliation Cycle

IF Mr Khrushchev decides to retaliate for Cuba at a place and in a manner of his own choosing, and if the place he chooses is Berlin, there are broadly two different things he might do. One would be to slap a blockade of his own around west Berlin. The merit of this, from his point of view, is that it would draw the parallel with Cuba as pointedly as possible. The east Germans, after all, have long complained that the city is used as a base for offensive operations against them, even though these operations are not the military kind the Americans say they fear from Cuba. It would then be open to Mr Khrushchev to offer to lift his blockade if Mr Kennedy lifted his.

The disadvantage of this method of retaliation, on the other hand, is that it would immediately face the Americans with the necessity of deciding whether or not to try to break the Berlin blockade, and (if they tried and failed) whether or not to counter-retaliate with nuclear weapons. It is the all-or-nothing method. The pressure on Mr Khrushchev to choose this method will, however, be increased if the Americans

follow up their blockade of Cuba with a military attack aimed at removing the missiles already in the island—as reports from Washington on Wednesday said they might.

The alternative is for Mr Khrushchev to speed up the signing of his separate peace treaty with east Germany. That this peace treaty is not designed to be a mere formality was confirmed in an interview Mr Khrushchev gave on September 18th to M. Raymond Scheyven, a Belgian member of parliament, details of which were given in the Cologne *Deutsche Zeitung* on Monday. Mr Khrushchev explained that the peace treaty would declare west Berlin to be a "free city," and would "liquidate the Nato military base" there. Some action to enforce these claims can almost certainly be expected to follow the putting of pen to paper on the treaty. But the range of possible actions would be considerably wider than the sudden, all-or-nothing, imposition of a blockade. The communists might start, for instance, with a simple demand that American convoys going to and from Berlin should submit to east German, instead of Russian, inspection.

For the last four years it has been the aim of western diplomacy to persuade Mr Khrushchev to keep on putting off the moment when the West might be obliged to choose between accepting a major humiliation (the surrender of west Berlin, or—for those who regard this as a humiliation—the acknowledgment of east German sovereignty) and beginning military action. But the American action over Cuba may very likely have the contrary effect of hastening this fearsome moment. If Mr Khrushchev is obliged to climb down over Cuba, the chances that he can be persuaded to climb down over Berlin as well are pretty small; each side can perhaps be expected to put up with one serious loss of face, but neither can really expect the other to put up with two. The effect of pushing things to this point might thus be either, in effect, an exchange in which the West would get the worst of the bargain; or war.

CONGO

Chaos is Come Again?

THE slow and patient work done by the United Nations and the Americans in the Congo may all soon crumble to nothing, leaving the country in chaos once again and Katanga a victorious separate entity. The first reason for believing this is the apparent instability of the central government in Leopoldville, where the prime minister, Mr Adoula, seems to feel forced to placate his left wing by not appearing too soft on Mr Tshombe, the leader of Katanga. Thus when Dr Ralph Bunche, of the United Nations, arrived in Leopoldville on October 22nd, he found a belligerent-sounding Mr Adoula, a man apparently unwilling to accept a compromise formula for the patching-up of relations between the central government and Katanga. The truce agreed in north Katanga a week previously had been repudiated and Mr Adoula was explaining that he could not always argue successfully against the more impatient members of his cabinet. Thus there seems to be an increased danger that Mr Adoula's government might founder; no one can say how long it would take to gather together another government from the disparate elements of Congolese politics.

Leopoldville's troubles apart, things seem generally to be working in favour of Mr Tshombe. Most of the United Nations troops in Katanga are Indian, and it cannot be certain that the Indian government will allow them to stay, or fight, while hostilities between India and China continue. Again, by diverting world attention (and United Nations time) from the issue, the Cuban crisis is working for Mr Tshombe. There is a belief abroad—especially in Leopoldville—that the American government is wavering in its determination to bring Mr Tshombe to heel. If this is so, it may be that President Kennedy felt that it would be as much as Washington could do to concentrate on Cuba and its side-effects, without simultaneously putting economic pressure on Katanga against the real wishes of its British and Belgian allies. Finally, a dangerous theory seems to be gaining ground in Britain: that Katanga is best kept under Mr Tshombe in the interests of strengthening "multi-racial" (i.e. white-influenced) government in central and southern Africa. This theory might be exploded by an African nationalist victory at the polls in Northern Rhodesia on October 30th.

For all these reasons the United Nations plan for the Congo, announced by the acting secretary general, U Thant, on August 2nd, has apparently flopped. None of Mr Thant's conditions have been met by Katanga, although his time-limits have run out. The threat to enforce compliance by Katanga by means of economic sanctions has not been carried out. The repercussions may be felt in Leopoldville—and all the Congo—soon.

SPY CASE

Quis Custodiet?

IT is a bit hard on the security services that they always come in for a newspaper drubbing whenever they actually catch a spy. Inevitably, however, the latest case—the sentencing of another Admiralty clerk to 18 years' imprisonment for passing secret information to the Russians—raises many questions, only some of which can be answered satisfactorily by the three-man committee of civil servants which has been set up to inquire into the case. The answerable ones will concern, presumably, the responsibility for any neglect of standard security procedure among those for whom William Vassall worked. The unanswerable ones have been asked by most newspapers, and will also be asked in Parliament: why are the British so complacent that nobody thought twice about a £700 a year clerk, a homosexual who had worked in Moscow, who was living in a Dolphin Square flat where he must have been spending more than £700 a year. To this might perhaps be added a further question: how did it come about that a man of 38, acting as personal assistant to the Deputy Director of Naval Intelligence, with access to important secret documents (and the concomitant burden of responsibility), earned only £700 a year—less than a good typist in the commercial world?

Inevitably, after this case, some influential, if unofficial, quarters, are suggesting again that the present security system—whereby each office takes care of its own arrangements (a system "effective within its limits" according to the Radcliffe committee)—ought to be scrapped and replaced by a centralised system operated by the security service. This would surely be a mistake, not merely because of the dangers of abuse in such a big brother system, but because such remote control would almost certainly be inefficient. Presumably there is some sort of overseer security system in the British Embassy in Moscow; but it was there that this particular tragedy began. Someone ought to give more thought to the strains on junior and clerkly men in uninspiring posts in embassies abroad, where the sometimes rather hierarchical system of embassy friendships, the round of official receptions, routine paperwork and empty strolling among the native population, far from being "the envy of any bachelor in England," is only too liable to lead them to look for excitement and companionship in dangerous places: the beastly story of Vassall's framing and subsequent blackmailing by the Russians shows that the Soviet spy service certainly has thought about those strains, and capitalised on them.

SOUTH ARABIA

Yemen Hopes

YEARS of solitary confinement in the Imam's dungeons have helped Brigadier Sallal, the prime minister of Yemen, to grasp the essential without, it seems, impairing his humour. While his ministers have been attacking Britain, "the real enemy of the Yemeni people," for the tribal skirmishes on the frontier between Yemen and the Aden protectorate, the brigadier has commiserated with London for being stuck with an embarrassing responsibility towards the "merchant" Sherif of Beihan. A month after the coup, Yemen's revolutionary regime seems to be in sufficient control of its territory for Britain to exercise its customary criterion for the recognition of new governments. So far, west Germany is the

only western country to recognise the regime. It would be a pity if the incident on October 22nd, when a Yemeni aircraft bombed a village in Beihan, killing a child, and the subsequent movement into Beihan of troops of the South Arabian Federation army (led by British officers), results in a further delay before Britain decides to recognise that the Yemen revolution has come to stay.

Fighting in the north of Yemen has died down, and Brigadier Sallal has invited foreign correspondents to visit the area—if, that is, they could face the journey. The Yemenis, who now, according to Cairo, have the help of "an effective Egyptian striking force," claim to have scattered the counter-revolutionary reinforcements that came over the frontier from Saudi Arabia. But Imam Mohammed Badr (Prince Hassan gracefully abdicated his claim to the imamate when the evidence showed that his nephew had really risen from the presumed dead) is intent on rallying the loyalist tribes, and Mecca radio relays his messages from "somewhere in Yemen." While it is highly improbable that he will succeed in overturning the new regime, the uncertain security adds to the turbulence of change.

The prime minister does not disguise his bafflement before the towering load of problems facing a reformer in Yemen. When he was asked about his plans at a press conference on October 21st, he replied simply that he did not know where to begin. Diplomatic recognition was needed as a preliminary to asking the western governments for technical aid. He expressed his friendship for Britain and his respect for the present frontiers; it was up to his "brethren in the south," he reiterated, to determine their own destiny.

Aden Doubts

But it is the belief that their destiny is being decided for them that distresses so many of the brigadier's brothers in Aden. A queue of worried men have been arriving in London to put different points of view before the Colonial Secretary. The first to arrive, early this month, were three ministers from the South Arabian Federation. They discussed the implications of the Yemeni revolution but insisted, on their return to Aden, that there could be no going back from the proposed merger between the colony and the federation. They were followed by the colony's minister for education and information, who came to London ostensibly to discuss television but seems to have stayed on to talk about more controversial affairs. Finally, Sir Charles Johnston, the governor of Aden, spent last weekend in consultations with the Colonial Office.

The merger has been accepted by the South Arabian federal council and by Aden's legislative council. It has still to pass through the British Parliament, and it is this process that may provide an opportunity for second thoughts. The issue at stake is not whether British politicians think the merger a good idea (which it basically is) but whether the Adenis themselves should, first, be given a say. The present legislative council is not, because of boycotts and a restricted franchise, representative; the elections that were due in December have been strategically postponed for a year. It is this suspicion of fast practice that, more than anything else, led to the wave of disturbances and strikes in the colony, and has made several Aden ministers, who formerly supported federation, uneasy about the consequences.

These doubts have been greatly augmented by the changes in Yemen. The revolutionary ideas blowing out of San'a have freshened Aden's aspirations for self-determination—and independence. If a referendum about the merger, on its present terms, were now held in Aden colony, it would certainly be turned down. This might seem lamentable to the planners who recognise the wisdom of joining the port with its hinterland. But, in the long run, it would be more of a calamity to force a federation on an unwilling Aden. The British Government has already had sad experience of unpopular federations—and also of the futility of maintaining military bases in a country once it has become hostile to British interests.

NALGO

Keeping Out

The National and Local Government Officers' Association, in defiance of the quietly confident forecasts of its leaders, has voted against affiliation to the Trades Union Congress. To the simple question—to join or not to join—put to them by their executive, 117,312 members voted No and 111,489 voted Yes; over three quarters of the total membership of around 296,000 took part in the ballot. So the largest white collar union in the country is to remain on its own; and the chances that such other middle-class bodies as the National Union of Teachers will join the TUC are diminished. This is a pity—not just because the TUC will be weaker without the white collar men; there are plenty of people who don't want a stronger TUC—but because the arrival within the TUC of the cool-headed, modern-minded, adequately paid men who lead these unions could do a great deal to help the TUC to bring itself up to date.

The most surprising thing about the vote, however, is the extent to which the leaders of Nalgo were wrong about their members' mood. Four times since 1946 the union's membership has been asked to vote on this issue. Each time, as expected, the pro-TUC vote has risen. It was expected that the recent influx of new members, and the (supposedly general) white collar resentment against the pay pause, would be enough this time to conquer the town hall men's fear that the TUC is damagingly linked with the Labour party. (At this year's congress at Blackpool the white collar unions within the TUC secured the adoption of a resolution emphasising that affiliation did not involve a party attachment; they objected unsuccessfully to part of an important resolution which called for the return of a Labour government, but there was never any suggestion that they need be bound by this). It is now apparent that even in unions as well run as Nalgo there can be significant differences between the leaders and the militants on the one hand and the solid and much more conservative rank-and-file on the other. In this case, they may have been too conservative; but it is at least a welcome example that the decision was reached by a genuine poll, in which there was participation by so high a proportion of the members.

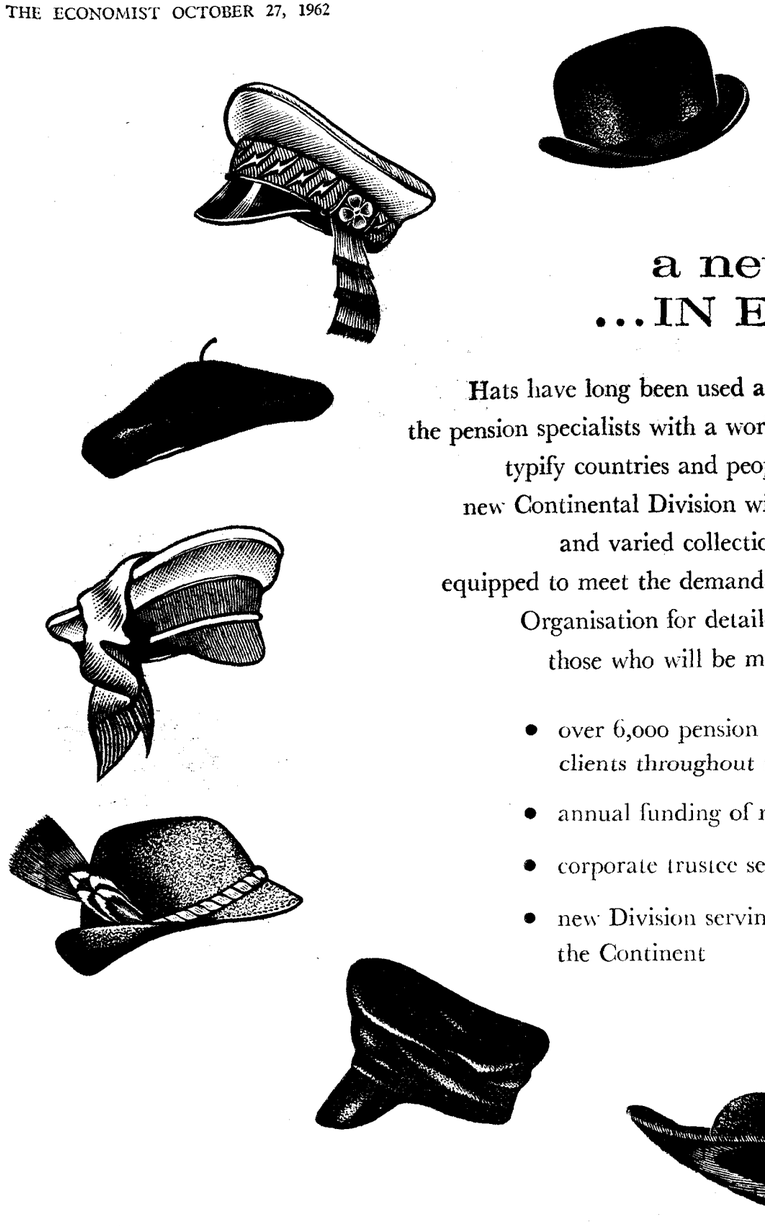
TOWN PLANNING

Speeding Renewal

How and how fast should the blighted parts of Britain's cities be renovated or cleared? Speaking to the Town and Country Planning Association's conference this week, Sir Keith Joseph again promised that the pace of slum clearance (currently about 60,000 dwellings a year in England and Wales) would soon be doubled or even trebled in the areas of greatest need. But the Minister of Housing also recognised that there are two million obsolescent dwellings over 100 years old not covered by the present clearance programme, with another two million dwellings over 70 years old also deteriorating fast. Only a small proportion of these old houses are receiving the palliative of improvement grants, and it seems all too probable that the Ministry's current researches into housing conditions are going to show that slums are developing faster than they are being demolished.

Only a much faster rate of housing replacement — probably something like 200,000 dwellings a year—can prevent the vast legacy of late Victorian housing from continuing well into the twenty-first century; and this is something that an affluent society ought surely not to contemplate. Sir Keith's present intentions do not go beyond considering what form redevelopment might eventually take in the obsolescent near-slum areas (the Fulhams, Hackneys and Islingtons and their more widespread northern equivalents). But the right ideas, legislation, and machinery for dealing with them ought to be produced quickly.

This is a peculiarly tough problem since most of the redevelopment in these areas will inevitably fall to local authorities and will be extremely expensive. Yet it ought to be possible to get private developers to play an increasing part also if—and it is a crucial if—the present dreary environment (the clogged shopping arteries, monotonous street patterns, absence of trees, grass, or



a new hat
...IN EUROPE

Hats have long been used as a symbol by Noble Lowndes, the pension specialists with a world-wide coverage, because they typify countries and people. The establishment of their new Continental Division will add more hats to their large and varied collection. This new Division has been equipped to meet the demands which will be made upon the Organisation for detailed knowledge and guidance by those who will be moving into European countries.

- over 6,000 pension schemes already installed for clients throughout the world
- annual funding of more than £25,000,000
- corporate trustee services available
- new Division serving those interested in the Continent

CHUNU8

Every spare minute for the next year, Brian Block's mind will be on renting a flat, buying furniture, getting the things you need to set up house. He's just got engaged.

He'll be settling down near Luton, not far from the hat factory where he'll be manager some day. A skilled worker—who's *really* on his way up!

And, like a third of the people in Britain, he reads the Mirror.

The Mirror has nearly 15 million readers—almost SEVEN MILLION are skilled workers and their families! Never before have they earned such good money, and nowadays there's often more than one earner in the family.

You'll do your best business with them because, like Brian, they have the biggest needs, and the most spare cash.

You reach them—at the lowest cost per thousand —when you advertise in *their* paper.

DAILY MIRROR

THE MIRROR GOES WHERE THE MONEY IS

playgrounds) is simultaneously reshaped. To prepare the way for this vast task two steps are necessary. One is the reintroduction of Exchequer grants for the comprehensive redevelopment of blighted areas—excluding, however, city centre schemes which should not need support. (In America one of the very few Federal grants to cities is for urban renewal—a just recognition of the importance of this task and of its unequal incidence.) The second necessary step is for local authorities to be large enough to be capable of initiating large redevelopment schemes and of redistributing population over a fairly wide area to minimise "overspill." The Minister hopes that current local government reorganisation plans will have this effect—but they will do so only if the new Greater London and Tyneside bodies are given powers enough (a point of much doubt), and if Manchester and Merseyside get similar treatment.

And Renewing Plans

THE town planners' conference also heard from Mr Lewis Keeble and others a dreary tale of effort wasted on ineffective and outdated local plans. Ironically the liveliest local councils (Bedford is an example) seem to push through their redevelopment schemes without the benefit—or burden—of a statutory planning scheme at all. The reasons are twofold. First, a detailed formal plan crystallises opposition and blights property values in ways that can be avoided if the local authority skilfully feels its way. Secondly, the Ministry of Housing takes so long to approve those plans that must be produced (the local development plans) that the quinquennial review becomes due before the plan takes effect—thus increasing uncertainty and putting a premium (from the local authority's view) upon uninformative plans.

The standard ministerial defence is that it is better to get the plans right than to be in a hurry; but with conditions changing fairly fast, and plans anyhow needing review, this defence is not at all persuasive. It is time that the ministry cut down its function of approving plans—and that of hearing planning appeals also—to the volume of work which it can efficiently and expeditiously handle. If this means giving more discretion on some matters to local authorities, the risk should be taken. But still more important is a new inquiry into what kind of plans are really most useful. Some of the present ones seem pointless, abstract exercises—while important creative tasks like redevelopment get too little planning.

EUROPE

Time and the Seven

THE European Free Trade Association has been many things to the British—a stick to beat the Six, a club of loyal friends, at times of late an awkward obligation. Recently it has been assuming another characteristic, that of a source of anti-common market rumours about the intentions of Britain and the Six. The Six, it has been said, are becoming increasingly reluctant to accommodate even Denmark and Norway as full members; the British, so talk has had it in Brussels and London, have no intention of honouring their obligation to the Efta countries.

The meeting of ministers from the seven countries, which took place in Oslo on Monday, had the task of sitting firmly on the rumours. They had evidently not been taken seriously by the ministers themselves. But public opinion in some of the small countries was in need of reassurance.

Fortunately there is no need to interpret the odd airing of doubts as evidence that the Six are in fact opposed to membership for Denmark and Norway. The "neutral" countries have all along posed tricky problems. And many influential minds on the Continent are exercised by the problem of fitting a large number of countries into a European political union. But none of this implies that membership of the Economic Community is to be limited to the Six and Britain.

The Six, however, are in no hurry to tie up the negotiations with Britain's small friends. They have their hands full, as it is, working out the manifold implications for their policies of British membership. Then, once the British negotiation is complete, a good deal more time will be needed to sort out the problems of the Seven. The time factor could make trouble for Mr Macmillan when he comes to put the common market terms to the country. He may not wish to wait so long. Efta countries might in the end get better terms in negotiation with a community of which Britain is a member, than they could if Britain holds back. But the Conservative party, and British opinion generally, will want to see the terms for Efta sewn up before Britain joins.

EUROPE AND AFRICA

Outward Bound

MANY African and Asian politicians speak of the European common market as a rich white man's club designed to keep the poor coloured nations poor. This is an unfortunate image, as Mr Spaak, the Belgian foreign minister, probably reminded the ministers of the six common market countries in Brussels on Wednesday. Mr Spaak's talk to the ministers came in the middle of negotiations between the 18 (mainly African) countries associated with the common market, and the Six themselves, on the vexed question of how generous Europe is prepared to be.

Mr Spaak was, it seems, effective. Negotiations between the Six and the 18 ended in an atmosphere of some bitterness in July, when the offer of aid made by the Six fell somewhat short of the demands made by the underdeveloped countries. When the negotiations began again on Tuesday, it seemed that they would once again get nowhere. But after Mr Spaak's address the European offer was raised by $30 million to $730 million; this did not meet the original African demand for $810 million, but it was at any rate accepted. Mr Spaak was not the only comfort in Brussels: the new chairman of the 18, Mr Gustav Anguille, of Gabon, was far more conciliatory than his predecessor had been in July.

Will this happy new atmosphere last? The present time-table for signing the new terms-of-association agreement includes talks in November and, hopefully, lays down mid-December as the date for initialling. Even so, the agreement will probably not be in working order by January 1st when the present agreement lapses; the present agreement may have to be extended. What happens next may depend partly upon how outward-looking the Six now decide to be. It was agreed in principle on Wednesday that the common market countries shall be given tariff preferences in the associated states, but the details of this agreement were left vague—partly to mollify those African ministers who protested that they thought there were no strings attached to the giving of $730 million of aid. Mr Spaak may have to speak again.

IRISH REPUBLIC

Ireland into Europe?

Our correspondent in Dublin reports:

IT must be many years since the deliberations of the Conservative party were followed with such interest in Ireland. But after the decision at Llandudno, it is now being assumed here that the United Kingdom will join the European common market. The next question, then, is whether Ireland will also be admitted, and on what terms. Mr Lemass has made a round of the capitals of the Six, beginning with the Benelux

EIU Quarterly Economic Reviews covering 57 countries or groups of countries

CHILE Once again a payments crisis has arisen as soon as the economy begins expanding at a reasonable rate. The Review analyses the events leading up to the devaluation and points to the likely effects on development, investment and trade.

countries and ending with General de Gaulle and Dr Adenauer. His statements have been optimistic; in some people's view, a great deal more optimistic than can be justified by reports from Brussels which suggest that association might be as much as the Republic can hope for. Association might be better than nothing, but it would be accepted with disappointment. The present mood is set towards a total acceptance of the Treaty of Rome, on which there are probably fewer mental reservations in Ireland than anywhere else. It would be a great pity if this outward-looking spirit were to be rebuffed; and if the Irish application for full membership were to be rejected, not so much on its demerits as on account of the community's policy towards the smaller states.

On the economic front, the year has seen a continued advance, though the pace has not been as rapid as in the recent past. The economy has not had any luck with the weather; there have been four bad harvests in the last five years and better weather came too late this year. The cattle trade, although it has recently improved, has been running below last year's level. Much the same is true of the tourist season. On the other hand, industrial production continues to grow. The trade figures for the first three quarters of the year are not as good as those for 1961, but they are a great deal better than was feared. Exports are down by £6 million to £127 million, which reflects lower cattle exports; imports are up by £3 million to £199 million; but external assets have again increased, which must reflect continued foreign investment. There is nothing in this situation to weaken confidence.

It will be interesting to see if Mr Lemass will now proceed to an overall reduction in tariffs as a token of Ireland's ability to live in the common market. Hitherto, he has refrained from any such step (apart from the proposed relaxations in favour of Northern Ireland producers) lest it would not be taken into account after admission. That danger remains; but there seems a lot to be said for an initial reduction soon. It might be a good ploy to use at Brussels; and it would certainly bring home to Irish producers that the time of excessive protection is running out.

ART SALES

Bottomless Pool?

THE latest hornet's nest in the field of art exports was stirred up by the case of the Rubens modello. This painting, which belonged to Earl Spencer, was offered, at a price unstated, to three public collections. One of them, the National Gallery of Scotland, wished to buy it; but failed to get the necessary Treasury support. The dealers, acting for the owner, then found a private American collector prepared to pay £70,000 for it. They applied for an export licence. The matter was referred to the reviewing committee on the exports of works of art which recommended the withholding of an export licence (as it did in only three other cases last year), in order to give the National Gallery of Scotland another chance to hammer at the Treasury doors. This was of no avail and eventually the picture crossed the Atlantic, but only after a great deal of inconvenience had been caused to all concerned.

This incident has provoked the reviewing committee to recommend in its latest annual report that, in future in similar circumstances, its opinion should be called for as soon as Treasury support is being sought. If such support is not forthcoming, no objection should be raised to an export licence within the following twelve months. This seems sensible enough. The committee's more contentious recommendation is that a fund of £1,000,000 should be set aside by the Treasury to finance grants, where necessary, for purchasing works within the export control. This fund might be expected to last "for not less than three years," but the committee thinks that it should be replenished automatically when it falls below £500,000. Almost simultaneously, the Government announced that the reviewing committee, with four co-opted members, would look into the procedure governing the sale for export of major works of art by public or semi-public bodies. The whole set of rules, therefore, seems in the melting pot.

Before any Government should even consider making available a largish reserve pool, it should demand answers to at least three questions. How many works of art are there in this country outside public collections on which there is widespread agreement that it would be wicked to let them go? What are the important gaps in the nation's combined collections? Is it impossible for the galleries to raise some money for the proposed fund themselves, by selling pictures by artists who are over-represented in their collections? The standing committee on museums and galleries is due to report this year on the provincial collections. This should form the basis of a wider assessment. The easy persuasion of the argument that art is such a limited commodity that it must be bought as available should not prevent some sensible stock-taking.

NORTHERN RHODESIA

Counting Heads

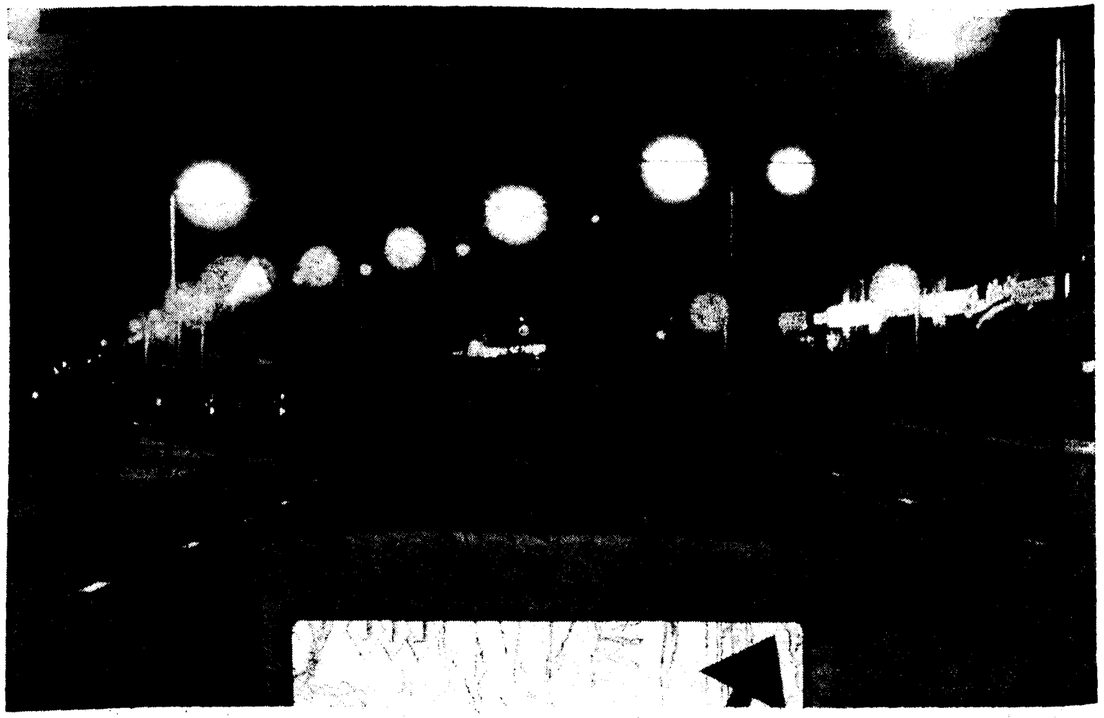
ON October 30th the four main parties in Northern Rhodesia will fight an election under one of the most complicated constitutions ever cooked up. The complications are so vast that it is worth saying now—before the election is held—that only a count of actual votes won by each faction will mean anything afterwards. The seats won will, of course, dictate which party or combination of parties is called upon to form a new government; but unless the new government can demonstrate, by count-

LAPORTE

LAPORTE STANDS FOR PROGRESS IN THE CHEMICAL INDUSTRY

We are living in a world of change, a world in which technological and scientific advancement is imperative. In the chemical industry Laporte meets this challenge by putting great emphasis on the importance of research and development and upholds the belief that Laporte's most valuable raw material is its people. ***Laporte Industries Limited, Hanover House, Hanover Square, London W.1.***

LAPORTE



60 MILES OF COPPER ALLOY HEAT THE HAMMERSMITH FLYOVER

How to keep traffic moving safely along icy roads is a major problem. The new way to solve it is under-road heating. And London's Hammersmith flyover is a spectacular example of the technique in action. The whole half-mile of this key road section is weather-proofed by sixty miles of electric heating cables laid under the road surface. These cables have copper alloy conductors.

Why copper? Because copper alloys produce the high resistance materials which are essential for heating large outdoor surfaces such as roads and sports grounds. And because of their high copper content these alloys can be easily drawn into cables thinner than a cigarette with a ductility which enables contractors to handle them without fear of breakage. The lighting of the flyover depends on copper too—as does every other road-lighting system in the country. Pure copper's electrical conductivity makes it the first-choice metal. Even the cars that use the flyover depend on copper, for their wiring and their radiators. Copper doesn't rust and has excellent thermal conductivity. No teething troubles with copper! No other metal is so adaptable to advanced techniques—and so reliable. It keeps teething troubles to a minimum and makes service and maintenance easier. Copper is often the most economical as well as the most technically satisfying answer.

COPPER-THE FIRST CHOICE METAL OF THE MODERN AGE

The British Non-Ferrous Metals Federation
[illegible] Street, London, W2

ing heads, that it has a solid basis of support in the country, then its tenure of office is certain to be exceedingly brief.

The first figures to look for, then, are those that will show whether or not the African nationalist voters are united. If an overwhelming majority of African votes are won by Mr Kenneth Kaunda's United National Independence Party (Unip) then the British Government will plainly have to set Unip on the short road to office and responsibility so successfully traversed by Dr Banda's Malawi party in Nyasaland. But if a large minority, or a majority, of African votes are cast for the opposition African National Congress, the next move will be far harder to decide. The ANC is closely allied to Mr Tshombe of Katanga: an ANC-governed Northern Rhodesia might link its fortunes with Katanga's. This would cause disunity within Northern Rhodesia (since many Africans there oppose Mr Tshombe) and it would call down the curses of the African and Asian world.

The ANC maintains close relations with Sir Roy Welensky's United Federal Party—and the two parties are each leaving certain seats to the other. Because of the complexity of the constitution this could lead to a substantial block of ANC-UFP seats in the new legislative council. If the two parties governed jointly, they might ally Northern Rhodesia with Katanga: this would be especially dangerous if an ANC-UFP government were not supported by a majority of Northern Rhodesians of all races.

The figures to look for next are those that might (computers aside), show white nationalist feeling. If, as is expected, most whites vote UFP (or, where instructed, ANC) it will mean that white resistance to genuine African nationalist control will continue for as long as possible. If there are many votes cast for the extreme right-wing fringe parties, it will mean that this resistance may be tougher than is expected; if the white-led Liberal party or, miraculously, Unip, won many white votes the opposite might be expected. These figures should enable the British Government to see how easy or difficult it will be to push ahead with the conclusions based on the first figures—those that show African thinking.

Finally, most votes are sure to be cast against the continued existence of the federation of Rhodesia and Nyasaland—since only the UFP is for the federation. On this point, the British Government should find clear guidance on October 30th. But no decisions should be made by talking to any shaky government that might scrape in through the opportunities of a fancy franchise. In such an event, a better constitution ought to be brought in and Northern Rhodesia allowed to try again.

GURKHAS

Whitehall Kukri?

In spite of Mr Profumo's assurances to his questioners in the House of Commons last May—that no hasty action would be taken, nor any "tampering" done, with the future of the British Brigade of Gurkhas—it is now fairly certain that Sir John Smyth's fears of a 50 per cent cut in the brigade's strength were not unfounded. Mr Thorneycroft is said to have approved a plan for the elimination of four of the eight Gurkha battalions at present serving—mainly in Malaysia—with the British Army.

Why? Two of the reasons being suggested sound too silly to be true. One is the Treasury's alleged disturbance over the drain of the brigade on foreign exchange; even Whitehall must know that the greatest of Britain's external problems is not its balance of payments with Nepal, and that it would hardly be an obvious economy to maintain expensive British soldiers in many places abroad when cheaper Gurkhas were available. The other is the suggestion that now the army has got more British recruits some senior officers might prefer to dispense with the Brigade of Gurkhas altogether, in order to stop anybody suggesting instead that there should be any further amalgamations of Britain's too numerous home infantry regiments. At a time when many British infantry battalions are still below operational strength, and when some national service conscripts are still being kept in the army for longer than originally intended, this sort of insular thinking would be inexcusable.

There are two other arguments that may have more substance. There can be some doubt about where Gurkhas could best be

stationed when Britain's rapidly-diminishing commitments in South-East Asia finally disappear. There is an acknowledged difficulty in using Gurkhas in action against other brown or black men in the Middle East or Africa; there would be even stickier implications in using them against white men in a black country, if Britain ever had to come to that. There is the further possibility that the Gurkhas, among the world's finest foot-soldiers in the type of war the world has known heretofore, may not have quite the same stature in the electronic and mechanical jungle of the nuclear army as they did in more familiar forests. But, if and when any decision to wield the Whitehall kukri is announced, Parliament should certainly be ready to question it hard.

Fords in the Frying Pan

FROM OUR SPECIAL CORRESPONDENT

THE dreary landscape of Dagenham—one of the most depressing, even though prosperous, industrial suburbs in the country—has been the setting this week for a dreary conflict between Ford Motors and a persistent group of their 32,000 workers. Most reports of the action, as always in these unofficial strikes that plague the motor industry, have necessarily been wildly inconclusive: journalists, hanging wearily about outside strike meetings from which they were excluded, have heard wafting over the wall such gems of shop-stewardry as an appeal "to stand by the fundamental principle that we meet again on Thursday at two." But the atmosphere, despite all the irrelevancies, has been unusually decisive. This looks like a fight to the finish.

Fords have announced that, if the men do not go back to work, part of the plant will have to close—with the rather doubtful implication that export work can just as well be done in Germany. The company has also announced that the labour force will in any case need to be cut as a result of the strike. The strikers' leaders, on the other hand, proclaim their intention not to start work again until the left-wing shop steward, Mr Francis—whose sacking, after he had called an unauthorised meeting on factory premises, sparked off the dispute—is taken back on the payroll. They also demand that the national officials of their unions, who, on October 12th, reached a new agreement with the company, come down to Dagenham and explain just what that agreement said. One influential steward, hoarse from addressing a meeting of around 1,000 men—some of them strikers, some idle because of the strike—assured your correspondent that he had not seen a national official of his union (the Amalgamated Engineering Union) for six months.

The essence of the new agreement was to grant a pay rise of around 3½ per cent (the average manual worker at Fords gets over £20 a week: this award will cost £1½ million a year, which the company said it could not afford) in exchange for a promise of union co-operation to reduce manpower inefficiencies at Fords. In the eyes of both the company and the official unions such co-operation must include an endeavour to eliminate the petty unofficial strikes that have notoriously beset the Dagenham plant; on average, there has again this year been a petty stoppage of some sort every other day. The meeting which led to the sacking of Mr Francis was held to consider a switch of men on the production line making the Classic car, where there had for some weeks been dissatisfaction with the men's performance. The meeting was not, as the company originally seemed to claim, in working hours, but in the lunch break; it was unconstitutional for being held inside the plant itself. The stewards understandably claim that the only convenient way of getting their members together is during breaks in work. Outsiders may comment that one of the most ridiculous aspects of the system which divides responsibility for negotiations at Fords between 22 unions is that there is no "official" provision enabling all those who work in a particular workshop to discuss its special problems.

The strike leaders claim that the sacking of Mr Francis is a direct consequence of the agreement of October 12th; they see the new efficiency drive as a direct attack on their now traditional powers to call a strike at the drop of a hat; and they take the company's warning that it will not take everybody back afterwards as a threat to "victimise" the militants by getting them out of the plant. They are probably dead right on all counts: the difference in emphasis being that all these things might well be regarded as beneficial both by the company and by the more sensible of the national union leaders (as well, perhaps, as by at least some of the workers).

In fact this disruption falls too patly into a pattern for outsiders not to indulge in some speculations about it. The motor show, taking place this week and last, is a favourite period for shop stewards to try to twist the industry's arm: with new orders and fixed delivery dates, the companies are especially vulnerable at this time. Since the show began last week there have been small strikes at the British Motor Corporation, at an important Birmingham component plant, and even at Vauxhall's, where there had not been a stoppage for 25 years. There are suspicions that these troubles have been co-ordinated by somebody somewhere. On the employers' side the likelihood of collusion in resistance is even greater. Last year at motor show time the Rootes Group bravely stuck out through a wildly expensive three-month strike at one of their plants in north London: Pressed Steel, who make bodies for several large car manufacturers, have also stood firm against a disruptive strike. Outside the motor industry, both the Steel Company of Wales and Richard Thomas and Baldwins have ridden out uprisings that, a few years ago, might have won their inflationary effect almost without comment.

THE official trade unions, too, have—with varying degrees of determination—failed to give comfort to their members when they have acted unconstitutionally. The unions at Fords are going farther; when the new agreement was announced, they also revealed that contact between the local shop stewards and the national union officials is to be greatly strengthened—and that the stewards are to be drawn into the stream of official company-union contacts by regular meetings with executives. (It is, of course, fantastic that nobody ever did this before: and it is equally absurd that the unions' joint negotiating committee declared itself unable to issue proper credentials to the stewards as that remains a job for the individual unions.)

This week's battle, then, may be seen as a last throw by the left-wing stewards to keep their old status, unanswerable to anyone. According to the company only 1,500 men have directly followed them (6,000 men are also not working, but because the strike has deprived them of their jobs). Some meetings called by the strike leaders have collapsed through lack of support; attempts to spread the strike to other parts of the plant have failed; and the mood even of those strikers who have attended meetings has seemed to be one of waiting to see which way the cat jumps.

MEET JOHN MARVIN

We have a new Editor. His name is John Marvin. In all probability you will already have met him, perhaps without knowing it. Either in the financial columns of the Daily Telegraph, or in the City pages of the Economist or—perhaps in the editorial chair of the Financial Mail of Johannesburg.

Under John Marvin the Investors Chronicle will be even more the weekly financial newspaper for intelligent advice and sound information.

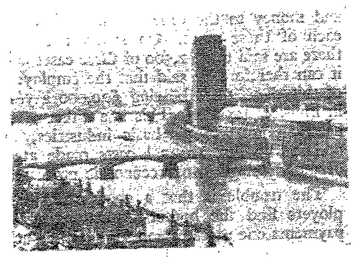
Building High

FROM OUR SPECIAL CORRESPONDENT



LONDON has acquired a skyful of surprises. The 380-foot Vickers building leaps boldly up-river from Westminster and, from Piccadilly, looms ghostlike behind St James's Palace. The Hilton Hotel at Hyde Park corner, Thorn House in St Martin's Lane, Portland House near Victoria Station unexpectedly demand attention from a multitude of unlikely places in central London. These beanstalk phenomena, natural growths from the decision to free London from the sixty-year-old 100-foot ceiling which cramped ground space and deadened the skyline—and from the desire of big business for a prestige position in the capital—are bound to shock. The thing that matters is that they should do so dramatically but not painfully, and, to ensure this, their total effect on the townscape should not come as an unforeseen surprise to the people whose hands, however loosely, govern London planning.

The rules about plot ratios prevent a new building in London having more floor space than the site previously possessed, apart from the awkward 10 per cent cubic addition permitted to offices by the famous Third Schedule to the 1947 Town and Country Planning Act. The higher a building goes the slimmer it must get and the more space, light and air it can have around it—all excellent reasons for preferring it to a squat dense block. The planners' question with regard to high buildings has become not "if" but "where": above all it is a problem of siting.

The London County Council recognised this in its high buildings policy adopted in 1956. In July of this year, after it had become painfully obvious that some irreparable howlers had got through (though over two, Portland House and the Hilton, the LCC was overruled by the Government), the policy was revised and reinforced, but mainly on negative lines. What has emerged is an attitude perhaps more non-committal than was in fact intended; but it is important to ask whether, in view of the practical, financial and political forces which generally work against the best possible solution, the planners should not have the courage to arm themselves with the strongest weapons within their grasp.

The LCC still believes that it is best to consider applications for high buildings—of which it has received 500 and approved 250 since 1956, though only 8 over 200 feet have so far been permitted in the central area—on their individual merits, against a set of stock principles. These refer to the appearance and amenities of the immediate neighbourhood, the relationship to other tall buildings and to buildings of interest and merit, and the effect on views from the open spaces which are such an important part of London's character. A tall building, being looked at more than most, should be more than usually worth looking at. LCC officials, who do daily penance at the sight of their outsize neighbour and ground tenant, Shell Centre, now stipulate that the design and finish of a high building should be of "exceptionally high standard" instead of merely "sufficiently high quality."

IT remains to be seen how ruthlessly buildings will be judged in future. Total rejection of an application for a high building on grounds of appearance alone is so far unknown. Alterations are often demanded, but it is anyway doubtful how much any number of aesthetically well-qualified committees can do to a design that is not on the right lines to begin with (Castrol House, much improved at committee stage, was amenable). The best way for the LCC to encourage the sort of high buildings which it will be a pleasure to look at is to make it clear that it is not, on principle, against building into the sky. This, unfortunately, is not the tenor of the revised policy, which puts the onus on the developer to prove "substantial advantages to the public interest" from a high building before it can be preferred to one of conventional height.

Again, though the LCC was probably right to avoid a rigid system of height zoning, more suitable for smaller cities of unified character like Oxford, there seems no adequate reason for its refusal to adopt the proposal of the Royal Fine Arts Commission that it should indicate areas in which high buildings would be encouraged, or at least give examples of such areas. Though it may have been anxious to avoid stirring up protests, or to introduce yet another distorting factor into property values, this is surely shirking the duty of a planning authority by failing to give potential builders a legitimate and effort-saving piece of guidance—which in time might have the effect of producing at least some high buildings in the right places.

On the defensive side, one suggestion recently put forward by Mr Tim Rock, in a talk to the Town and Country Planning Association, is that certain parts of London, considered of national rather than local importance, should be declared Areas of Special Control in which proposals for high buildings would be treated with particular care—to be preserved from the wrong new buildings and embellished with the right ones. One way of determining these areas in central London might be simply the tourist's eye view—from picture-postcard viewpoints such as the Mall, and Westminster, Waterloo and the Serpentine bridges, the eye's area of vision would determine the region of control. This would, for example, take into account such unexpected effects as the overshadowing of Buckingham Palace by the proposed 280 to 400 foot buildings on Knightsbridge Green, or the distractingly uncomfortable effect on the view of St Paul's from Waterloo Bridge by the high slab to be erected in Paternoster Row by no other people than the Church Commissioners themselves—a building whose good manners were considered in relation only to the immediate precinct of the cathedral.

Finally, all available tools should be used to obtain an accurate idea at an early stage of the effects, near and far, of proposed high buildings. Sections of at least certain key areas should be prepared. The fiasco of the Shell site balloon, which refused to stay put at the proposed height, should not bring into disrepute this simple and cheap planning aid. Far from cheap, but in the long run invaluable, as has been proved in Prague and other cities, would be a scale model of the whole central area into which models of new schemes could be fitted—the LCC is already doing this for certain districts. No practical and positive aid should be ignored: sore thumbs cannot be converted into sights for sore eyes simply by feeling hurt about them.

LETTERS

Cuba

SIR—As an American "obsessed by Cuba" (your issue of October 6th) permit me to challenge your comments. Firstly, your posture hardly qualifies you as an "outsider." Aside from the controversial aspect of British shipowners engaging in the Soviet/Cuban trade, your Commonwealth partners have aggressively sought and obtained, and hope to maintain, a goodly percentage of the US sugar quota formerly supplied by Cuba. Canada has adopted an "all that the traffic will bear" attitude in dealing with the "Red Little Island." Needless to say all these dealings come on top of heavy exports of agricultural surplus by Canada and Australia to Red China.

But the fact that you are heavily "inside" does not enable you to ignore the facts on Cuba, which is an armed camp where 6 million people are living under a wave of terror. Neighbour is turned against neighbour, child against parent, religion is ridiculed. Illiteracy is abolished in order to indoctrinate the people against the western world and its traditional values. Thousands are imprisoned without recourse to judicial proceedings. In essence all human liberties have been suppressed. How to restore their freedom is the primary problem. How to prevent this system from spreading its philosophy is a secondary but important problem. That their intention is to do just this has been echoed by Castro *et al* many times. Raul Castro on September 13th of this year stated, "The question of Cuba . . . is not a strictly Cuban question . . . it is a vital question to 200 million Indo-American brothers. Today more than ever we have blind faith in the victory of our cause, first in Cuba and later throughout the world, because the happy moment for humanity undoubtedly must come."

Yes, we are "obsessed," obsessed with the burning desire to return freedom to our Cuban neighbours. This is the same freedom for which our soldiers are dying in Laos and for which so many of your countrymen died in preventing the world conquest of Hitler. We will not repeat the mistakes, in the Caribbean, that enabled Russia to devour eastern Europe.

In proving, before it is too late, that we are champions of the free world it is, I am sure, the hope of every American, that our English ally will rally around us with that fervent spirit that enabled the allies to emerge victorious in the second world war.—Yours faithfully, ROGER A. COE

Flushing, N.Y.

Common Market

SIR—It would be presumptuous of me to cross swords with Mr Douglas Jay in economic argument, although I am bound to say that I find it difficult to follow his reasoning that because our exports to the Six have been rising they will not continue to do so as tariffs and other obstacles are reduced.

I write, however, to support from my own knowledge of the electrical industry your contention that we have large potential gains in the export of modern sophisticated products. It is in the newer and growing sectors of the electrical industry that Britain clearly stands to gain from membership of the common market, in particular domestic appliances and electronic equipment which rely on quantity production and mass consumption and are closely associated with rising standards of living.

These large mass markets are on our doorstep; they will not be subject to violent fluctuations, such as changes in purchase tax or import duties and the rising incomes in Europe will give us a chance to plan large scale production and secure benefits of scale far beyond those available outside Europe.

Of course, there will be two-way traffic, but through rationalisation and specialisation this could well prove one of the long-term benefits of the common market. As I see it the important thing is to be ready to get off the mark quickly and the only way to do this is for industry to assume that we are going in and prepare accordingly.—Yours faithfully,

STANLEY STEWARD

Director, British Electrical and Allied Manufacturers' Association

London, WC2

Maintenance Orders

SIR—I would like to raise a small matter which has wider implications.

Some people lead rather untidy lives, and as a result find themselves in court and are landed either with a maintenance order to pay so much a week to their wife, or with an affiliation order to pay so much a week to the mother of their child. Not unexpectedly they are not very good about paying these amounts regularly, and soon accumulate arrears. They are then brought back into court and find themselves in the end facing the alternative of paying up or going to prison. Sending people to prison is remarkably expensive. The direct, marginal costs are high enough as the food bill for a prisoner is about £5 a week, but the full rolled up cost of sending somebody to prison for a week must be well over £200. It is typical that we don't know what the full cost is. It has, however, been sufficiently high, and the whole situation was sufficiently untidy for a sensible piece of legislation to be put through in 1958—the Maintenance Orders Act.

Under this a magistrate's clerk can order an employer to pay directly to him, and so to the woman, any excess of a man's earnings over an assessed minimum, and this system is now in full swing. From many points of view it is a most sensible thing to do as deductions at source are an effective method of collection, but it puts the work of running the welfare state on to the employer, who is allowed to deduct an additional 6d. from the man's earnings for each payment to cover his costs. As, however, he has to pay 2d. on his cheque and 3d. for the stamp sending the letter, he is in fact paying an extra 5d. tax and getting only 1d. for his work. My estimate is it costs an employer at least 4s. a week in work to deduct these payments, and the employer is therefore being taxed in kind and money to the tune of 4s. a week for each of these cases. On south Tees-side there are said to be 2,500 of these cases and it can therefore be said that the employers of this district are bearing £20,000 a year in invisible taxation. This is a direct overhead on the nation's basic industries, an addition to our national costs made at a very early stage in our economic processes.

The trouble is that a good many employers find the bother of making these payments one more reason for sacking such a man. This means that both the families for which he is responsible end up on national assistance, and so once more up go the national costs. It would be a refreshing and surprising change if there was somebody in the Treasury or anywhere in the system who had the wit to see that the sensible course is to pay employers five shillings a week for doing the state's job, thus giving them a small incentive to keep on these people. There is the small matter that everybody would probably be happier that way.

The essence of this letter is that there is apparently nobody in the whole of our system who is responsible for the national cost of any act of government, the fully rolled up national cost of what we do, and in fact there appears to be nobody in the Treasury with the sort of mind that understands that we have in fact got a national cost system and that what matters in any costing system are the side effects. The result of any discussions with a ministry is the impression that they neither know or nor are interested in what other ministries do, and in particular with the work they place on industry.—Yours faithfully,

Saltburn-by-Sea, Yorks. N. CHARLTON

Off Limits

SIR—I very much doubt whether there is such a word as "demarcationism" (page 1182, September 29th) and if you have invented it you ought to be bloody well ashamed of yourself.—Yours faithfully,

Prestbury, Cheshire W. G. BATTERSBY

THE BEST ADVICE IS FREE WHEN

INDUSTRY GOES

Firms who come to Shell-Mex and B.P. Ltd for fuel oils don't have to carry the can—we are quite happy to do it for them. We will, in fact, make it easy for them to enjoy the well-known advantages of oil—lower labour costs, cleanliness, quick response and perfect control—by providing a Technical Service that is available from initial survey through combustion efficiency testing to staff guidance on maintenance. Which is a sound reason why—when industry goes for oil, industry comes to Shell-Mex and B.P. Ltd.

Hot Metal

SIR—Having read with interest and appreciation your article on the future of the printing trade I would like to take issue with you on one point alone, namely your statement that automation of typesetting "has for its end the use of unskilled labour." I think this is wrong on two grounds, firstly because typographic skill will have a valuable part to play in automated typesetting and secondly because the unionised labour which prints and finishes the product cannot be expected to collaborate in the brusque elimination of their old-time colleagues from a developing field of typesetting.

What is urgently needed to allow the printing trade to take its place creditably alongside contemporary industry is that skilled union labour will be given the opportunity and will accept the obligation to produce competitively against all comers even though in doing this established practice and craft methods must be discarded.—Yours faithfully, ADAM MAITLAND
St. Clement's Press, E.C.4

Adenauer and Erhard

SIR—In your issue of October 6th (page 29) you publish an article on the question of Dr Adenauer's probable successor in the course of which you state that Dr Adenauer himself initiated the programme for budgetary retrenchment, thereby once again successfully out-manœuvring Herr Erhard. This does not fully coincide with the facts: what actually happened was that Dr Adenauer had resisted pressure in his cabinet on this very issue as long as possible but had in the end been out-manœuvred himself by the leaders of the group pressing for budgetary retrenchment: Herr Erhard and Herr Starke. This is one of the rare instances where he has been successfully forced to do something against his will by anyone within or outside his party.

What then happened was merely a political trick employed by Dr Adenauer to cover up his defeat. Finding himself alone in opposition, he suddenly turned about and claimed to have championed the measure all along. Your report is probably founded on this incorrect statement.— Yours faithfully, KONRAD VON MOLKE
Munich

Dutch Courage

SIR—May I contribute to the mutual understanding of the nations and sum up for your readers the expressions of the Dutch language in which the word English is used in a special, perhaps unpleasant, sense.

"To write an English letter" means "to take a nap"; "English done" is "underdone" (not cooked, baked enough); "done with the English turnscrew" is said when a screw has been driven in with a hammer; "English disease" means the rickets; the expression nowadays not often heard: "he talks English" echoes time immemorial: "he is very rich."—Yours faithfully,
Arnhem, Holland G. VAN WOERKOM

BOOKS

Not to the Aid of His Party

Aneurin Bevan. Volume 1: *1897-1945*
By Michael Foot.
MacGibbon and Kee. 536 pages. 45s.

MR MICHAEL FOOT has written a tribute in a polemic. The tribute, deeply felt, finely said, and sensitively (and uncommonly) restrained, is to Aneurin Bevan himself; the polemic is against, not the Tories, but the Labour party. Mr Foot can write so well about Mr Bevan because for a generation they thought alike: the workers and the unemployed were let down before the war not so much by Ramsay MacDonald and the other Labour deserters to the National coalition as by all the other Labour leaders who stayed but would not fight for them; the anti-fascist cause before the war was undermined not so much by the inevitable reluctance of the "reactionaries" in power as by the weak-kneed compromises of the "progressive" Opposition itself; the indispensable function of parliamentary criticism during the war fell upon Mr Bevan and a handful of others because the Labour leaders were only too willing captives of the Coalition. No doubt the next volume of this remarkable and dramatically readable biography will stick to the same thesis and go on to show that the Labour government of 1945-1951 itself sapped its own strength, and sacrificed Mr Bevan, for the same reason: that Labour had not the courage of Mr Bevan's (and Mr Foot's) convictions.

Aneurin Bevan died tragically too soon. His career had no climax. The riddle remains whether he could have become both a successful politician, which he never was, and a statesman. "It remains therefore," he said eighteen years ago, "for British Labour to show the way." His theme was—Europe: "an organic federation of the western European nations, like France, Holland, Belgium, Italy, Spain, the Scandinavian nations along with a sane Germany and Austria, and a progressive Britain, is the only solution likely to lay the foundation for peace and prosperity in Europe." Would he then now be backing Mr Macmillan as only five years ago he bravely and bluntly backed Mr Gaitskell on the bomb?

The answer, presumably, is No. The key to his European prophecy is the word "progressive." The purpose of his federation was to prevent western Europe from becoming "a ground of contention between Russia on the one side and American and British capitalism on the other"; and "America and Britain, with their present policy of reaction, will be unable to bring it about." He would have applied the same test between "progressive" and "reactionary" to western Europe's present rulers. It is the test that he applied to Baldwin and Chamberlain in the thirties when he was unwilling to trust them with the arms they needed to have (and were themselves too slow to get) to stand, as he demanded, against Hitler and Mussolini.

In fact, Aneurin Bevan trusted nobody in authority, in his own party any more than anywhere else. He was born to be, and bent upon being, the voice crying truth in the wilderness. His pride in thought and talk as he educated himself was to pluck his own answer from everything that came his way, and to put it into his own vivid words. He minted his ideas for himself, and wore them always with a difference. And to him other people's ideas, and policies, were mostly secondhand—and so secondrate. More often than not, as Mr Foot fairly shows, his intuition and insight did touch the right spot, in economics or industrial relations or foreign affairs or even the concentration of force in war; most often he stopped there, fastidiously sure of the rightness of his diagnosis but unable, or unwilling, to devise or press successfully upon others a prescription that would work. By the test of a politician, which is to get things done by persuading others to do them, he fell far short of his great gifts; and his life had no last chapter, as Winston Churchill's has had, to bring in a late harvest.

It is not by any means enough to explain Aneurin Bevan's sad short-fall, as Mr Foot seems to do, simply by blaming the stupidity and envy of the Labour establishment. Even among the so-called Bevanites after the war he was not a Bevanite; he was, in politics, a lone wolf, not by his choosing but by his style—or, as Mr Foot might insist, by principle. Personally, he was gregarious and truly civilised, the best of good friends, magnanimous and gay, hating and worrying about the discord with his colleagues. Politically, he was a puritan, who did not think it possible he might, in the bowels of Christ, be mistaken.

Yet the seeds of greatness were surely there in this astonishing and astonishingly courageous man: the biggest man in his party, usually a nuisance but never squalid. It will be Mr Foot's next task, when he lights up Aneurin Bevan's last truncated fifteen years in his second volume, to look again at the great expectations that were dashed. There was a moment, at the Brighton conference in 1957, when Mr Bevan seemed

to believe that he had found his statesman's mission at the centre, not on the fringes, of his party and the nation ; to save the peace as Labour's next foreign secretary. But his life flickered out too soon—and Labour never came back. If Mr Foot can give us the fourth and fifth acts of this political tragedy with the sweep and depth of understanding of these first three from boyhood and the pits (all admirably told) to Parliament and office, the work will match the man it is about.

Our Fathers' War

The First Battle of the Marne
By Robert B. Asprey.
Weidenfeld and Nicolson. 224 pages. 21s.

1916: *Year of Decision*
By James Cameron.
Oldbourne. 240 pages. 18s.

1918: *The Last Act*
By Barrie Pitt.
Cassell. 332 pages. 30s.

IT is now as fashionable to write about the first world war as the second. The fashion is easier to date—Mr Alan Moorehead was the pioneer in "Gallipoli"—than to explain. It may be that today's strategic stalemate has made us more conscious and more willing to analyse yesterday's military deadlock. It may simply be part of the vogue of military history, which is more exciting and more dramatic to read than political history, and that publishers and authors alike, sensing that until more papers are published there is little fresh or startling to say about the 1939-45 war, have turned to the more richly documented years, 1914-18. Even here, not all the evidence is published ; but there is plenty of material to permit reconstruction, and enough time has elapsed to allow the sons to indulge in judgment on their fathers. There were more than enough casualties to arouse emotion ; enough squabbles between the brass and the frocks to create drama ; and enough stupidities to license virulence or irony.

We can now, in fact, kick the stones away and see the life, some of it exceedingly unpleasant, beneath them. In time the second world war may be similarly exposed, and the Tizard-Cherwell conflict suggests that we may not like everything that we will then see. Nevertheless, the feeling that the politicians and the military conducted themselves more honourably and intelligently in 1939-45—that, indeed, the war was better managed—than in 1914-18 is inescapable. Set against the number of deaths they caused, there is something mean, petty and blindly self-seeking in the manner in which men in command then conducted themselves. But in 1914-18 the problems associated with a world at war—co-operation between allies, the relationship between political direction and military execution, and the permissible area of political and economic freedom—were new. Our fathers may have fumbled the problems badly ; but we need to mix sympathy in with the condemnations.

None of these three authors lacks sympathy or ability. Yet none of their books is really illuminating. The book on the Marne is interesting simply because it has been written by a young American and because it attempts to rehabilitate Joffre. Unfortunately, it is unconvincing. One might just forgive the silly slip that describes the Lebel rifle as muzzle-loading ; but when a mass of evidence about the genesis of the battle is ignored, and when that which is paraded is twisted to present a case rather than to support it logically or conclusively, forgiveness is stretched to breaking-point.

Mr Cameron writes easily, fluently and almost lightly about that terrible year when Britain's great volunteer army was slaughtered on the Somme. The year is seen, as it were, across the Cabinet table. But the balance of the book is odd. Little is said about the military operations ; the guns in France are the rumbling bass in the background. Nothing new, apart from a few stray anecdotes, is said about the political conflict in Whitehall. Too much space is devoted to political trivia and too little to answering the question why men behaved as they did. This is a quick, facile and inconsequential sketch in water colours.

Mr Pitt is more plodding—a carpenter fashioning a utilitarian chest of drawers. His is the most useful book of the three. He says little about the political or strategic direction of the last year of the war, contenting himself with a detailed description of the operations on the Western Front. The first part of the book where he has some sensible, though not particularly fresh, things to say about morale and where he analyses the German offensive in March with great skill, is better than the latter part where the sudden German collapse seems almost to bewilder him.

The sense of bewilderment is compounded by the notions he entertains about some of the field commanders. He admires Pétain's common sense, but so much so that he ignores the streak of pessimism that in 1918 came close to defeatism. He sees the charlatan in Foch and scorns his displays of rhetorical fireworks, but, in doing so, misses the part that Foch's will and energy played in keeping the attack going. He sees the toughness and ambition in Haig but not the man who was armoured against the world by a sense of aristocratic, egotistical rectitude. Mr Pitt, indeed, avoids judging this mixture of solidity and limited intelligence by describing Haig as an "enigma." He admires Ludendorff, but never properly answers the question why Ludendorff's nerve cracked in August. In the spring, Haig's did not and neither, for all his agonised fumblings, did Joffre's in 1914. This may simply represent the difference between a staff-trained, hair-triggered mind and those which were essentially duller but, at the point of crisis, more stable. Mr Pitt's and the other books would have gained had they recognised that these men were not heroes and titans—but neither were they knaves and fools.

Contrast in Black and White

The Economics of the Political Parties
By Seymour E. Harris.
The Macmillan Company, New York. 53s. 416 pages.

THE professor of economics at Harvard is also adviser to President Kennedy, and his topic is the differences in economic approach of Mr Kennedy and Mr Eisenhower. And Professor Harris's own approach to this topic is rather like that of the old-fashioned Western film, or "horse opera." That is to say, there are only "goodies" and "baddies." By his simple casting system, Eisenhower is the dim-wit, Nixon and Mr George Humphrey the bad men, and Kennedy the hero.

Professor Harris is a Keynesian and the Republican Party is not. Republican Party economic policy therefore merits such adverbs as absurd, nonsensical, tragically mistaken, and fearful. The Democrats on the other hand are the party of the strong President and the adequate

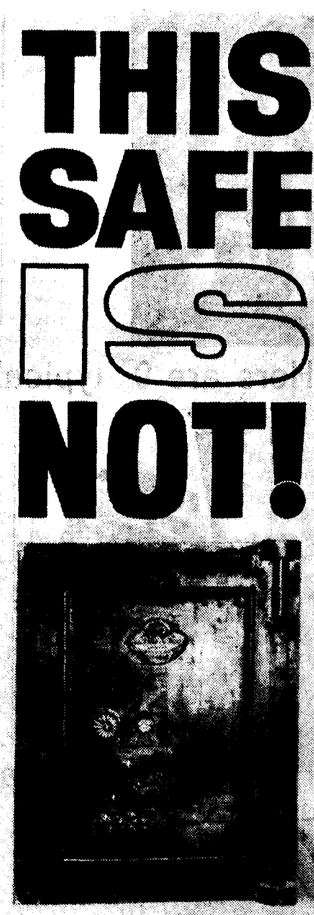
Why Remy Martin has no stars on its label

No brandy of lesser quality than Fine Champagne V.S.O.P. Cognac is permitted to bear the Remy Martin label. Hence no grading by stars. The question does not arise. All you need remember is to ask for Remy Martin. In return you enjoy a superior cognac of liqueur quality. For Remy Martin *make nothing less good*. In a word, Remy Martin cater for the one man in a hundred who prefers to compliment his palate—and his guests—with brandy as good as Fine Champagne V.S.O.P. Just ask for Remy Martin.

PRIDE OF COGNAC

REMY MARTIN

THIS SAFE IS NOT!



For security this safe is absolutely useless. It was made a long time ago and today's cracksman will open it in minutes. To replace this kind of obsolete equipment Chubb have produced a safe that gives you real security.

The Chubb Standard TDR Safe gives all-round protection. It contains a material developed by the Chubb research team after exhaustive study of modern safe-breakers' methods. **It combats force, explosives, drilling and blowtorch.**

How old is *your* safe? Does it give you this kind of protection? If you would like to know more about the Chubb TDR, write to us—right away.

budget, the party that will mobilise all weapons to deal with a recession, stimulate growth, and provide maximum employment and minimum unemployment. And Mr Kennedy correspondingly is politically astute and in all other ways highly intelligent, while Mr Eisenhower is merely the dupe and tool of the businessmen.

Professor Harris makes some telling points in support of his thesis. The Eisenhower Administration not only practised thrift by stealth, fearing to boast of it lest this led to demands for looser purse-strings; it also kept budget expenditures from rising very much by using trust funds to which less public attention was paid. In much of this, Professor Harris seems to detect the hand of Mr George Humphrey, President Eisenhower's first Secretary of the Treasury. (By contrast, Mr Dillon, though a Republican, is hailed by Professor Harris as promising to become "the Alexander Hamilton of the twentieth century".) Mr Nixon "persistently" voted against or opposed advances in housing, health, social security and education.

Towards the end of a long book, Professor Harris concedes that the 1960 platform of the Republican party was a little more enlightened than all this would suggest, but explains the change as reflecting the views of Mr Nelson Rockefeller, whom he regards as being practically a Democrat anyhow; and, despite it, he concludes that the Republicans "accept a philosophy of individual selfishness, and suppose that in some mysterious way this will assure the national welfare." Mr Eisenhower is described as veiling the cynicism of business self-interest with his own moralism; but Mr Kennedy is excused from being a good economist (in the event that after all he spends too little) because after all he has to think of Congress.

Perhaps the only thing that Republicans would agree with is Professor Harris's prediction that the real test for Mr Kennedy would come in 1962 and would be his success or failure in bringing unemployment down to four per cent. Prediction can indeed be hazardous when given semi-permanency in cold print: his book reveals Professor Harris as apparently still thinking that Mr Eisenhower was "completely misinformed on the United States missile lag because his staff had given him an incomplete picture of the crisis."

A Group at Work

Autonomous Group Functioning: *An Exploration in Behaviour Theory and Measurement*

By P. G. Herbst.
Tavistock Publications. 279 pages. 36s.

THE starting point for this book was a group of miners who formed into a team to take over completely the various operations involved in mining at the coal face. (This was known as composite working.) There were no fixed jobs or rules, and the men organise themselves to cope with the tasks involved. Wages were not paid individually, but to the team, on the negotiated price per ton of coal which the team were able to produce. During the three months that the men worked as a group the author, Dr Herbst, was able to study them intensively.

The first short section of the book summarises his findings. These saw, for example, that while the group had worked extremely well under a variety of difficult conditions, the arrival of a new member had very adverse results; all performance rates declined, and the output rate sank to a low level. According to Dr Herbst this was because the main energies of the group were concerned in absorbing the new member. News that the team might not be able to continue working together in the same way for a further three months again had an adverse effect; absenteeism went up immediately and technical hitches increased. As was to be expected the advantages of team work showed themselves in the very good results the group achieved. But the author was concerned to probe deeper than usual, and one very interesting point to emerge was connected with stress—defined as any external event or object that interfered with the purposes of the group. He found that while stress tended to interfere with many of the characteristics of the group that normally contributed to high output, the actual rate of output was higher under conditions of stress than under conditions of minimum interference. This runs completely counter to many theories of industrial psychology, which advocate a reduction of any kind of interference to the lowest level possible. Dr Herbst suggests that the reason for this increase in output is to be found in the fact that the group compensates for the disturbance by an all-round increase in activity.

Certainly today, when so many of the satisfactions from craftsmanship have vanished, and so much of work is mere routine—a means of buying leisure—the more we can learn of the ways production can be stepped up by increasing the involvement of the men the better, and studies that reveal the unexpected confirm that simple common sense is not enough. However, Dr Herbst's main aim was not simply to outline his findings but rather to discuss in theoretical terms the various ways of handling and analysing the data that such a study provides, and the main body of the book is taken up with just this. The book is therefore rather hard going, and is not really suitable as bedtime reading for the go-ahead managing director who likes to keep up to date with developments in industrial psychology. This is a pity, for in between the formulae some very valuable points are made. Unfortunately, social scientists, eager to demonstrate their scientific pedigree, are often tempted to concentrate too much on improving their tools of enquiry and thus sacrifice all their findings to this end; whereas in the long run it is the facts not the formulae that will prove to be more valuable.

Stalin and the French Communist Party 1941-1947

By ALFRED J. RIEBER

A detailed and documented book which analyses the relationship between official policy and the activities and statements of a powerful Communist party outside the Soviet sphere. **60s. net**

Revolution in Hungary

By PAUL ZINNER

A study in human courage, partially based on interviews with Hungarian refugees, which reveals the background and actual chronology of the tragic, ruthlessly suppressed rebellion in 1956. **48s. net**

Yugoslavia in Crisis 1934-1941

By J. B. HOPTNER

A swiftly paced, suspense-filled investigation of the period between the murder of King Alexander in 1934, and the collapse of the regency and young King Peter's flight before the Nazi invasion in 1941. **52s. net**

Spain and the Great Powers 1936-1941

By DANTE A. PUZZO

This book analyses the complex of men and forces that contributed to the violent overthrow of the Spanish Republic and the emergence of Spain as an Axis satellite. **60s. net**

The First Partition of Poland

By HERBERT H. KAPLAN

The first full-length study of the first partition of Poland (1773) that has appeared in a century. In its preparation the author has used diplomatic sources and hitherto untapped archival materials in Poland, as well as documents in British and Austrian archives. December **40s. net**

Europe at Sixes and Sevens

Writer by Trade

William Hazlitt

By Herschel Baker.
Harvard University Press. London: *Oxford University Press.* 544 pages. 60s.

WRITING was Hazlitt's trade; he never thought of it as his chosen vocation. He would rather have been a painter or a philosopher, but showed no great aptitude in either of these directions, and instead produced enough journalism, political and literary, to provide twenty-one volumes in the centenary edition of his collected works. He had no exalted opinion of his own work, though he rightly prided himself on being no hack, hypocrite or timeserver. His reputation as a critic does not now stand high and, though he was a good essayist, belles lettres are at present out of favour; but to anyone interested in English Romanticism he is a fascinating figure, and Mr Herschel Baker has written a very good book about him.

The life story, so full of frustrations, is unfolded against a carefully studied panorama of the events and ideas that formed Hazlitt's mind, and of the men—writers and artists in particular— whom he knew. This comprehensive method has resulted in some repetitiousness, for Mr Baker sometimes draws on later writings to illuminate an earlier phase, and then treats them in greater detail when he comes to assess them in their chronological place. By the time we reach the final retrospective summary, we have already encountered most of the author's critical comments on Hazlitt. But he writes without pedantry, and his energy carries us along. He is good on the dissenting, radical background that determined Hazlitt's uncompromising and opinionated temper; good, too, in his analysis of the principles underlying his art-criticism. Mr Baker does not attempt to make the man less disagreeable than he appeared to most of his contemporaries, but he succeeds in conveying his extraordinary capacity to feel and convey enthusiasm:

> The secret of his power as critic was his plastic, supple mind that, as it were, went out to meet experience. He thought that a sympathetic identification with the objects of perception was the ripest kind of knowledge, and that 'feeling', rather than the constructs of discursive reason, was the highest kind of truth.

This book, American in origin, is beautifully produced, but a few minor errors of fact might be noted: Wisbech is consistently misspelt, Burleigh House is not in Leicestershire, and it was not the Samaritan but the publican who prayed, "Lord, be merciful to me, a sinner."

1984 and all that

From Utopia to Nightmare

By Chad Walsh.
Bles. 191 pages. 15s.

THIS entertaining book springs from a set of lectures, and retains the light touch of a witty man's spoken word. But the subject is serious, and so is Professor Walsh, who is a lifelong protestant theologian as well as a literary critic. However, his protestantism is so liberal that one does not have to share his religious views to profit by his book. His problem is this: from Plato onwards, men have written utopias; but towards the end last century, and still more in this, they have tended to run out and the most noteworthy books written within this framework have been dystopias, showing utopias gone wrong. The prime English examples are "Brave New World" and "Nineteen Eighty-Four."

What does this signify? Professor Walsh goes into the question at some depth, without adding very much to what one had already guessed: that we now have many of the material trappings of earlier utopias without seeing any perfection of human nature; that the events of this century have given a harsh blow to the concept of moral progress by human effort; and that Freud has undermined the easy hope of growing rationality. This theme is well developed, with enough but (thanks to Professor Walsh's restraint) not too many examples from the ample literature of Utopia. A very readable book.

Chinese Facts

Contemporary China IV: *1959-60*

Edited by E. Stuart Kirby.

Hong Kong University Press. London: *Oxford University Press.* 379 pages. 37s. 6d.

AN annual review of contemporary China by experts is welcome in the hope that it will provide much information and some informal conclusions. As far as one can generalise about a collection of separate papers, the leading theme of "Contemporary China IV" is the food problem and agricultural production. Sources of information are scanty and diverse, and a lot of deciphering and processing must be done before even such basic economic and social studies as make up "Contemporary China" can be presented. For readers expecting such prepared but at the same time very detailed information here is a copious bibliography, a day-by-day chronology of events between January 1 1959 and June 30 1960, and for the first time in "Contemporary China" a section of seven tables of statistics covering the period 1958-59. These are divided into absolute and relative figures. It is gratifying to have, but difficult and brave to give, absolute figures, albeit with gaps, when official Mainland figures are nearly always relative. The sources quoted are *People's Daily, China Reconstructs,* New China News Agency, and the Government Report on the final state accounts for 1958 and the draft budget for 1959.

For more analysed information there are the papers, and introducing the statistical tables is a reprint of the report on the draft 1960 National Economic Plan by Li Fu-ch'un, Chairman of the State Planning Commission. An increasing concern with agriculture can be discerned in it and a tendency to play down the importance of industry and to stress its role in supporting agricultural production. According to Li Fu-ch'un, it is normal for the pattern of economic development in China to be U-shaped, going from balance to imbalance, to balance, and the period covered was at a point of imbalance. There was a food shortage; in relation to this, in a very informative paper, T. C. Lee discusses the problems of deciding the ratio of land given to producing for consumption to that given to producing for industry. In another paper K. Lee more dramatically describes how people had to eat less than before (this is a bit open to doubt) so that consumer products could be exported in order to balance industrial imports. Both make the interesting point that industrial production was found to depend directly on the previous year's harvest.

These are valuable papers and it is therefore a pity to find among and sometimes in them emotionally heightened comments or one-sided articles on subjects that are well known to be, to say the least, controversial.

OTHER BOOKS

THE IDEA OF PRE-HISTORY. By Glyn Daniel. 171 pages. THE GREEKS. Edited by H. Lloyd-Jones. 274 pages. ECONOMIC PHILOSOPHY. By Joan Robinson. 150 pages. All at 15s. *Watts.* The New Thinker's Library.

This small new hard covered series by highbrows for middlebrows is supervised by Mr Raymond Williams. Part of the contents of these first three titles is salvaged from lectures and broadcasts already delivered.

THE AUTOBIOGRAPHY OF THOMAS WHYTHORNE. *Modern Spelling edition.* Edited by J. M. Osborn. *Oxford University Press.* 257 pages. 30s.

This is an edition in modern spelling of the autobiography of Thomas Whythorne, Elizabethan poet and musician, which was published in its original spelling last year. It is claimed to be the earliest autobiography in the English language.

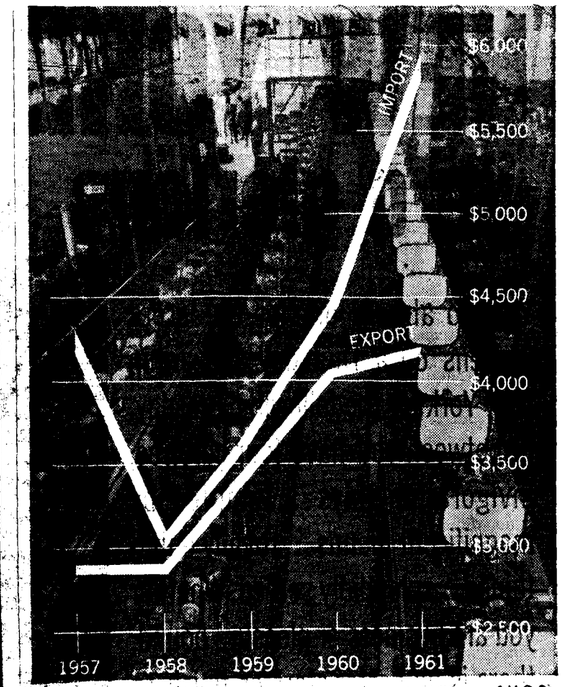
CONGO MY COUNTRY. By Patrice Lumumba.

This book, which was reviewed in our issue of September 29, is published by Pall Mall Press with Barrie and Rockliff.

HENRY II: *The Vanquished King.* By John T. Appleby. *Bell.* 367 pages. 35s.

It is a pity that for most people Henry II is the man who ordered the murder of Becket. This incident, although good theatrical material, is peripheral to the main achievements of Henry's reign, which are his work as an administrator and "the creation of the Common Law and its Courts." It is therefore unfortunate that Mr Appleby announces in his preface that Henry's legal reforms are so far-reaching that "a biography . . . is hardly the place for a detailed examination of his great enactments. . . ." so the reader is referred to Pollock and Maitland. Since Mr Appleby describes English law before Henry's reign as "little more than a set of tribal customs," perhaps this is just as well; but it does not make for an authoritative stimulating biography.

There is so much contemporary material on Henry that it would be impossible to write an uninteresting book. Mr Appleby has at least gathered together the facts in a readable if oversimplified form. But with a reign as vital as this one, it is a pity not to have something more.



Japan's imports-exports (in millions of U.S.$)

How to buy and sell in the billion dollar Japanese market

One way is to open your own office in Tokyo staffed with 3,000 experts on Japan's industries, commerce and foreign trade. In effect this is what you get when you deal with Japan's largest general trading company, Mitsubishi Shoji of Tokyo. From its head office with 100 branches and associates throughout the world, Mitsubishi Shoji helped 5,000 overseas firms do $1,100,000,000 worth of import-export business in Japan last year. Mitsubishi Shoji handles everything from consumer goods to heavy industrial equipment. Long association with other Mitsubishi enterprises (30 of Japan's largest corporations) gives you a priceless advantage when either buying or selling in the Japanese market. Put Mitsubishi Shoji's proven ability to work for your firm. For complete information write:

AMERICAN SURVEY

AMERICAN SURVEY is prepared partly in the United States, partly in London. Those items which are written in the United States carry an indication to that effect, all others are the work of the editorial staff in London.

Confrontation in the Caribbean

WASHINGTON, DC

NEITHER talk about a summit meeting between President Kennedy and Mr Khrushchev nor the latter's amiable assurances to Lord Russell seem likely to divert the United States from its insistence that Russian missile installations in Cuba must be dismantled speedily and satisfactorily. An American invasion of Cuba primarily for this purpose remains a distinct possibility in the future even though the President is reported to have rejected sharply Senator Russell's demand for an immediate invasion, made when congressional leaders were rushed back to Washington last Monday from their electioneering to be briefed on the Cuban situation. Proposals such as U Thant's suggested compromise—that the United States should lift the blockade and the Soviet Union should agree to dispatch no more "offensive" weapons to Cuba—are highly unlikely to be entertained by the American Administration before November 7th, when the election will be safely over, and after that they are sure to be rejected unless they are accompanied by arrangements for inspection of the sort which Dr Castro has already refused to consider. Rigorous inspection will also certainly be attached, as a condition of American acceptance, to any proposal for dismantling North Atlantic Treaty Organisation installations, say in Turkey, in return for the abandonment of its Soviet missiles by Cuba.

Mr Khrushchev's motives for placing in Cuba the missiles which he appears to have withheld from other satellite countries remain alarmingly obscure. Mr Kennedy's motives for acting and speaking as he did this week seem clearer but have been criticised, notably by Mr Walter Lippmann who argues that the President should have warned Mr Gromyko of what was coming when he saw him last week and thus have given the Russians a chance to withdraw without publicity. Mr Kennedy has been very aware of the danger of tumbling into a Berlin bunker through stubbing his toe on an obsession with Cuba. In September he said that Cuba was not a military threat and this month he rebuked sternly those calling for action that would lead to war. But he listed six specific factors which could make him change his mind:—

If the Guantanamo base were threatened;
If passage of the Panama Canal were threatened;
If American activities at the Canaveral missile testing station were interfered with;
If lives of American citizens in the United States were threatened;
If force were used or threatened by Cuba against any country in the western hemisphere;
If Cuba attempted to become an offensive military base for Russia.

What has perturbed the Administration greatly is that in its view Mr Khrushchev has pressed every one of these six panic buttons, particularly the last, and has done so apparently quite deliberately in the full knowledge that the move was bound to be detected.

When Mr Kennedy had to eat his September words, he chose to do so against the black velvet curtains of a sudden grave national emergency, the exact nature of which was kept secret until the President announced it on a stage which was ablaze with tension and excitement. Even though the crisis means that neither the President nor members of his Cabinet will take any further direct part in the election campaign, the drama was certainly played for its maximum effect on a domestic political situation in which Mr Kennedy's alleged "softness" on Cuba had become an important factor. With a mixture of relief that at last something has been done against both Dr Castro and the Russians and doubtful hope that this may not mean war, the country has of course rallied overwhelmingly behind the President. The voters are now probably disposed to show their approval by sending Democrats back to Washington. But the Republicans seem far from disposed to permit the President to get the political jump on them over Cuba when they thought that there they had it on him. General Eisenhower has indicated that bipartisan support for the President in this crisis abroad does not involve the abandonment of all political criticism at home.

Mr Kennedy warned Americans to expect weary months of tests of will-power and patience rather than atomic annihilation. The United States may find itself trying simultaneously to enforce one blockade while attempting to break another, for trouble over Berlin is by no means ruled out. Some people even speculate that Cuba is Mr Khrushchev's mousetrap and that the missiles there are cheese supplied precisely to strengthen the Russian hand in Berlin. On this reading of the situation an American invasion of Cuba would not necessarily disconcert Mr Khrushchev; rather it would give him a welcome chance of exploiting American "provocation" in the Caribbean. The Administration's view seems to be that in Cuba Mr Khrushchev grasped a golden opportunity to improve his inferior ability to deliver a nuclear strike against the United States. As this is a field in which Washington has announced that it will never accept parity, it was decided to grapple with this Caribbean bid to close the Russian missile gap by a direct confrontation between the United States and the Soviet Union rather than by a "proxy war" with Cuba.

Economy Blown Off Course

NEW YORK

PRESIDENT KENNEDY'S blockade of Cuba brings with it the possibility of a war economy, complete with controls over wages, prices and production, something which had not entered into the calculations of economic forecasters. They are taking refuge in the standard claim that all bets are off should there be a war and that the Cuban crunch has the same effect. Previous crises in the cold war have served frequently to salvage the reputation of economic prophets; last year, for example, the deterioration in the Berlin situation produced a sizeable increase in military outlays which helped to accelerate the recovery. But there is no telling what lies ahead now and any shift in government spending beyond the normal range needed to deal with a normal crisis—a Suez or a Berlin, for example—would upset even the most flexible forecast.

The Cuban "quarantine" is the latest shock to an economy which has already been subjected to a series of rude surprises this year. But, unlike the dispute with the steel companies and the crash on the stock market, ultimately it should not have a depressing effect. In fact it should bring to a fairly early end the pause which has spread through the economy for the third time in twelve months. Everyone has had a finger in the air tryin

to determine whether the winds that followed the lull would be fair or foul. The Administration's own forecasters were predicting that the rise would be resumed once more, although they added that a tax cut would be needed to sustain this more favourable climate. Washington's official optimism, however, has been met with scepticism elsewhere. On Wall Street the general expectation was that the present lull would be followed by a storm—and most businessmen and economists were inclined to agree. Forecasts made last week by the Business Council, a government-sponsored group of top corporate executives, and at a business outlook conference at the University of Pittsburgh suggested that the blow would be exceedingly mild, but a growing number of economists had been veering to the view that the coming decline would be the most severe of the postwar era.

Now, increased expenditures on defence may well help to stimulate activity but any sizeable addition to government outlays will probably end all hopes for the tax cut which has been considered essential if any improvement is to be maintained. The government, which had hoped for a small surplus in the Budget for the current fiscal year, is already facing a deficit of at least $6 billion. Indeed, the President's warning that sacrifices are in order may mean a rise in taxes; the Secretary of the Treasury advised this during the Berlin crisis last year. On the other hand, a war-like economy would mean the end of the sluggishness in the rate of growth which has been afflicting the economy for the past several years—though this is hardly, to say the least, a desirable way of dealing with this problem.

BUT in fact, the economy might have come out of the pause with renewed momentum in any case, even though most economists did not regard this as likely. Their generally sombre mood did not actually represent a worsening of sentiment. Their gloom was even more pronounced, at least in private, just after the hurricane which swept through Wall Street in May and June. Many who had voiced the standard forecast, which was for a rise throughout the year, as well as the Administration's economists, who took a super-standard position, shifted then to the view that a recession was on the horizon and that only a tax cut could forestall it. No tax cut was voted, yet economic activity managed to advance without it. Admittedly, the pace slowed down and at present the upward movement is almost imperceptible but the performance since the stock market crash has not been unimpressive, considering the buffeting which that gave to the confidence of both businessmen and consumers. As a result, the forecasters had recovered some of their poise and before the Cuban crisis they were conceding that a downturn might not be coming immediately even though the economic indicators were showing the advance signals of a recession.

In justice to the forecasters the economic currents have been extremely tricky and hard to chart. The lull is most obvious on the surface. It is evident, for instance, in the sluggish rise in gross national product, which between June and September showed the smallest quarterly increase since the recovery began in early 1961. The lull is also apparent in the Federal Reserve Board's index of industrial production and in the stability of personal incomes. Unemployment, stuck at 5.8 per cent of the labour force, is another sign of stagnation. But many of the currents seem to be flowing in opposite directions. In September, for example, new construction showed a gain but there was a decline in the number of new houses started. Retail sales dropped for the second month in a row yet hire purchase buying registered a big increase. Manufacturers' sales of hard goods held steady but new orders rose and average hours worked increased for the first time since April, while average hourly earnings in manufacturing climbed back to their old peak. The reception accorded to the 1963 automobiles has been unexpectedly good; in the first ten days of October sales established a new record for the period.

Business activity, then, is not robust but neither can it be considered feeble. Certainly the yardsticks do not support the claim made in some circles that a recession has already begun; industrial production has not declined as yet, as it did in the lulls of September, 1961, and January, 1962. If the expansion is in fact topping out, there is nothing in the way of hard fact to suggest that the ensuing decline will be prolonged or steep. Such predictions are clearly based on factors which are not susceptible to measurement and suggest that the black clouds of pessimism which appeared during the summer have not lifted entirely. Those who have been predicting dire days ahead are going by feel rather than by fact.

However, it has not been possible to dismiss these forebodings, if only because the uncertain and quixotic economic climate has induced businessmen and consumers to take an extremely cautious attitude. Pessimists can also point to some other disquieting symptoms, particularly the softness in prices in most basic industries. This is evidence of intensified competition and excessive industrial capacity which would normally disappear with an acceleration in business activity. But if controls of any kind are now decided upon there may well be a run on goods and on production lines. There is thus a possibility of an immediate rise in purchases, at all levels, but no provisions will be made for long-term needs until the extent of the crisis is clear.

Before Cuba erupted businessmen seemed to be preparing to brave the elements. Stocks of goods had been trimmed back so far that any rise in demand would have triggered an expansion in purchases and corporations were planning to increase their capital outlays. Evidently businessmen who had been lukewarm towards the Administration's schemes for encouraging such spending with revised depreciation allowances and tax credits were having second thoughts. Apparently they felt that, even though excess capacity existed, the need to cut costs and maintain a competitive position demanded increased investment in new plant and equipment. Profits might not be all that had been hoped for, yet they were sufficient to support an expansion in capital expenditures. In fact corporations were generating a very high level of internal earnings

LIFE SELLS FOR BALLANTINE'S

From the producers of Ballantine's Scotch Whisky come these comments on their use of LIFE International and LIFE En Español:

"*Pride of product is one of the great stimuli of industry, inducing thinking executives to greater efforts! We at Ballantine's think this way and we are happy to proclaim our wares around the world thoughtfully, occasionally amusingly we hope—and always sincerely. LIFE seems to us to be a medium which matches our own product—genuine and lively—and in which we are proud to make regular appearances.*

"*It is doubtful if there is an article in international commerce so universally found as Scotch Whisky and, as everyone knows, there are no bad Scotches - some are better! Ballantine's are proud to claim to be in the latter category, and proud to appear in LIFE which is of great merit for those who wish to sell to the discerning.*"

And Ballantine's know how to *reach* "the discerning"—for that describes the readers of the International Editions of LIFE. Business and community leaders everywhere turn to its pages regularly to know what is being said and done, advertised and sold. This gives LIFE its great selling power.

LIFE can sell for you, too. For more information about LIFE International and its advertising edition for Europe, as well as LIFE's Spanish language editions for Latin America—write to Robert H. Garey, European Advertising Director, TIME & LIFE Building, New Bond Street, London W.1.

and if they kept to their spending plans then a recession was neither imminent nor inevitable.

This was the official view in Washington before the Cuban crisis. The Administration had not seen fit to press for the powerful and overt stimulus of a general reduction in taxes, largely because Congress would not accept this, but it had been furnishing some fairly substantial tonics. The tax credits and new depreciation allowances seemed to be having some effect. In addition, government spending had been stepped up by a modest amount and this, combined with the failure of tax revenues to come up to earlier estimates, had produced a deficit in the Budget. This may not provide any new momentum but it will serve to cushion any decline. The same can be said of the central bank's monetary policy, which has been designed to keep credit readily available. Its latest move in reducing the reserves which commercial banks are required to hold (discussed on page 364) is not necessarily a move towards still easier money but psychologically it implies that, if there is any shift, it will be in that direction. Moreover, the pledge that there would be a tax cut next year was beginning to be taken seriously even though there was plenty of room for doubt about what Congress would do on this score.

But now it is doubtful whether the Administration will ever press for the tax cut and the economic outlook is anyone's guess. The short-term prospects have improved but the long-term outlook is murkier than ever. For the country needs a major change in fiscal policy in the form of lower taxes to assure a powerful and prolonged upturn. Economic activity may increase as a result of this week's events, but it will be the sort of upsurge which will add to problems rather than resolve them.

Midwestern Circuit

Our Washington correspondent, who has been travelling in the Middle West, reports on the climate of opinion there before President Kennedy moved to blockade Cuba.

I—Communist Bogies

MILWAUKEE, WISCONSIN

THE people of the Middle West have always tended to distrust the Easterners, those city slickers with smooth tongues who inhabit the seaboard which faces and trades with Europe. Now, inflamed by Cuba—for when it comes to communism the area is the reverse of isolationist—many mid-westerners seem to fear that President Kennedy is showing his true colours as an effete Bostonian appeaser. Communism and Cuba are playing a part in the politics of Wisconsin and Minnesota and in both states are producing a fine, confused brew.

McCarthyism may be dead in Wisconsin, its birthplace, but still it refuses to lie down. The Democratic Governor, Mr Gaylord Nelson, recently felt impelled to go to the defence of Mr Wilbur Renk, a moderate Republican who had hoped to run for Governor. Mr Renk was defeated for the nomination after 15,000 copies of a circular hinting that he was supported by local communists were quietly inserted one Sunday by persons unknown behind the windscreen wipers of the parked cars of churchgoers. Mr Renk lost, by 50,000 votes, to Mr Philip Kuehn, who says that he will not decline the support of members of the extremist right-wing John Birch Society who want to vote for him for Governor next month. Mr Kuehn's Democratic opponent is Mr John Reynolds, a liberal who would like to see taxes in Wisconsin bear more hardly on the rich and less heavily on the poor because he believes that lack of purchasing power is what is wrong with capitalistic society. He also calls Wisconsin Republicans the most fanatically right-wing group in the nation.

Governor Nelson is not seeking re-election, preferring to run for the Senate against Senator Wiley. Senator Wiley, a Republican who is 78 and has been in the United States Senate almost a quarter of a century, has called Mr Nelson "a nitwit" who tells "damned lies." Mr Wiley was angry because it was suggested that his campaign managers had asked doctors in Wisconsin to contribute $50,000 to show their appreciation of his vote against governmental hospital insurance for the elderly. The doctors' organisation did not deny that it was prepared to be grateful to the Senator to at least that amount.

But it is communists who really rouse Senator Wiley. He claims that Wisconsin is full of communists, who have succeeded in infiltrating everywhere, including chambers of commerce. And he warns that it is no good expecting resistance to them to come from Washington, because "things are pretty foggy down there too". Wisconsin has to watch out for itself. In spite of these opinions, Senator Wiley is not, in the view of Americans for Conservative Action, a completely reliable anti-communist. This right-wing group says that he has "slipped substantially away" from constitutional conservatism and now has a rating of only 33 out of a possible 100. This puts him below Wisconsin's other Senator, Mr Proxmire, who is a Democrat. Senator Wiley is expected, however, to beat Mr Nelson, even if only narrowly.

In neighbouring Minnesota the leading anti-communist, Mr Walter Judd, the Republican Congressman from Minneapolis, is also expected to win, though in his case also the race will probably be close. Mr Judd's Democratic opponent, Mr Fraser, a strong supporter of the President's welfare plans, has Mr Kennedy's endorsement. But Mr Judd has received encouraging words not only from Senator Javits, a liberal Republican, but also from Senator Dodd, a conservative Democrat, and even from the Secretary of State, Mr Dean Rusk, who praised him warmly as a "workhorse for us on foreign policy." Mr Judd is the key Republican on the Foreign Affairs Committee of the House of Representatives and has very strong views on Cuba, which he says represents a state of affairs "worse than Pearl Harbour." A former medical missionary in China, where he was imprisoned by the communists and set free by the Japanese, he claims that his experience constitutes "unique preparation for this moment of crisis." More dubiously, he has hailed as a "kindred spirit" Mr Fred Schwarz, the crude evangelistic fervour of whose "Anti-communist Crusade" only promotes sales resistance in most people. But such extravagances do not much dilute the respect and affection in which Mr Judd is held and even the drastic redrawing of his electoral district which the Democrats imposed on the Republican Congressman is not expected to give Mr Fraser victory.

II—States in Stalemate

DETROIT, MICHIGAN

IT takes only a few minutes to fly over Lake Erie from Detroit, in Michigan, to Cleveland, in Ohio. In next month's elections, the Republicans hope to capture the Governorships of those two important adjacent states in America's industrial heartland. The Republicans already control both the State Legislatures and both the Democratic Governors complain bitterly that nearly all their legislative proposals are stalled by relentless Republican obstruction. Now the Republicans are suggesting to voters grown weary of these stalemates that the way to break them is to put in Republican Governors whose policies the State Legislatures will support, not thwart. The Democrats beg the voters not to compound a felony but instead to support efforts to put an end to the over-weighting of rural votes which gives the Republicans their political stranglehold on both states; it is said, for instance, that in Michigan the cows outvote the people. But the Democratic voice tends to sound either muffled or too shrill. In Ohio the Democratic party is so riven with factions that it can scarcely be said to exist as a statewide entity. In Michigan it is suspected of being a dog that is wagged by its trade union tail.

Detroit's big labour vote is being sought energetically by Mr George Romney, the motor-car manufacturer whose compact reply to the challenge of small foreign cars began a new fashion in American automobiles. Mr Romney has pursued this labour vote fearlessly, even into trade union rallies. That he should do so indicates a startling change from the quite recent times when the motor industry refused to recognize the trade unions, bloody gun battles were fought at factory gates and union organisers like Mr Walter Reuther and his brother Victor were attacked by hired assassins. Mr Romney offers to create new jobs for Michigan and to wipe out the state's deficit of about $75 million by deploying the qualities of dynamic leadership which transformed the American Motors Corporation (of which he was president) from a money-losing company into one which pays bonuses to its workers. If he is elected Governor of Michigan next month in place of Mr John Swainson, the Democrat who is running for re-election, Mr Romney is expected to turn his masterful gaze more ardently towards the White House. The recapture of the Governorship of a state where labour is powerful by a Republican businessman, after fourteen years of Democratic rule, would be a serious blow to the Administration. Mr Romney's election could also be the signal for fresh tensions in a state which is a cockpit for powerful trade unions and powerful industrialists.

The Democrats suspect Mr Romney of having some very reactionary ideas despite his professions that he is a moderate who dislikes Big Business as well as Big Labour. These suspicions distress Mr Romney, who was a Mormon missionary in his youth and still prays ostentatiously for divine guidance before making difficult decisions. He protests that he really meant nothing serious when he called former President Truman a socialistic fellow-traveller, wondered aloud about the "Americanism" of a leading Michigan Democrat and said that communists had held important positions in the Democratic party and in Democratic Administrations.

The Republican candidate for Governor of Ohio, Mr James Rhodes, has made a Churchillian pledge that "as Governor I do not intend to preside over the decline and fall of Ohio". Like Mr Romney in Michigan, he too says that if elected he will supply new,

A Diversity of Democrats

dynamic leadership and create more jobs. He has put the Democrats and the Democratic Governor, Mr DiSalle, on the defensive. They have tried to suggest that Mr Rhodes, who is State Auditor, borrowed Republican campaign funds for personal purposes and that therefore his income-tax returns ought to be investigated, but this has failed to divert public attention from a scandal apparently involving state-run liquor stores and Democratic officials. The Democrats are also suffering from self-inflicted wounds sustained when three factions were locked in a death struggle over who was to be nominated as Mayor of Cleveland in place of Mr Anthony Celebrezze, President Kennedy's new Secretary of Health, Education and Welfare. The acting Mayor, Mr Ralph Locher, won but some of his disgruntled opponents are talking of throwing their support to the Republican.

The only Democrat in next month's election in Ohio whose success is regarded as assured is Senator Frank Lausche. As a leading Democrat and probably Ohio's best known politician Mr Lausche has President Kennedy's personal endorsement, even though he has opposed publicly almost every Kennedy proposal except federal hospital insurance for the elderly. When Ohio University students demanded tougher action over Cuba, Governor DiSalle could only murmur that nobody should criticise the Administration without knowing all the facts. But Senator Lausche is just as full-blooded as the students in his demand for sterner deeds and fewer words; even his Republican opponent, Mr Briley, is said to have commented that Senator Lausche behaves as if Dr Castro were sailing up Lake Erie.

Nautilus Torpedoed?

THE proposed sale to France of a Nautilus atomic-powered submarine represents a last attempt to head the French away from large-scale production of atomic weapons and of the enriched uranium needed for this purpose; presumably the uranium to fuel the submarine was included in the bargain. The offer, which President Eisenhower tried to make four years ago, is almost certainly too late but it was hoped that it would improve relations with the French; these have been soured by American reluctance to help France to become even a token member of the atomic club. Incidentally the sale would provide a useful offset to the $250 million a year which defence costs in France add to the deficit in the American balance of payments. All these hopes have now been jeopardised by Mr Holifield, the chairman of Congress's Joint Committee on Atomic Energy, who has not only repeated his long-standing opposition to any proliferation of atomic weapons but has also given gratuitous offence by his remarks about unstable countries which cannot be trusted to keep atomic secrets.

Under American law such a transfer requires congressional assets, but it had been understood that this would be forthcoming for an early model such as the Nautilus which carries no ballistic missiles. It now appears that not only Mr Holifield but also other members of the committee are either flatly opposed to the sale or sceptical about it; Senator Anderson, for example, fears that the transfer might set a precedent for sales to other countries as they reach France's state of nuclear knowledge. If the President certifies that no unreasonable risk is involved—as he must under the law if the sale is to go through—Congress may yet give him the benefit of the doubt. But evidently this will be done grudgingly and probably only after lengthy delay. The proposal must be presented to the committee while Congress is in session—which it will not be until January unless the President recalls the legislators—and must then lie before Congress for sixty days unless this provision of the law is waived.

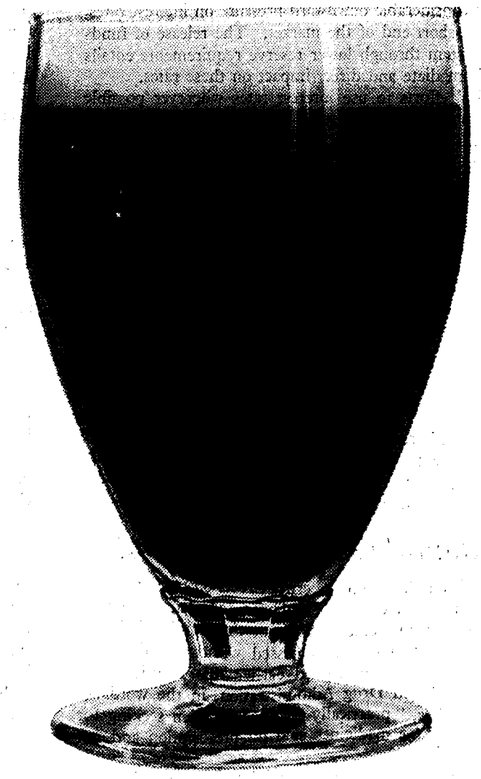
Monetary Tightrope

AGAINST a backdrop of sluggish domestic economic activity and continued concern over the deficit in America's international balance of payments, the Federal Reserve Board has announced a reduction in the reserves which banks belonging to the Federal Reserve System are required to hold against savings and time deposits. The reserve requirements represent a specified percentage of customers' deposits which the banks must hold in cash or on deposit with the Federal Reserve System. The reduction, to 4 per cent from 5, will release funds sufficient to back an expansion of $4.6 billion in bank credit. In practice, however, most of the easing of bank positions produced initially by the cut

GOOD FOR YOU

"... for those who are not necessarily ill but are out of sorts, Guinness' stout regularly appears to improve their sense of well being and helps them to face up to the problems of modern life. I myself feel that Guinness is an excellent drink for all occasions and often enjoy a drink of it particularly at the end of a long and tiring day." M.B., F.R.C.S.

The Doctor who wrote this letter has given us special permission to publish it.

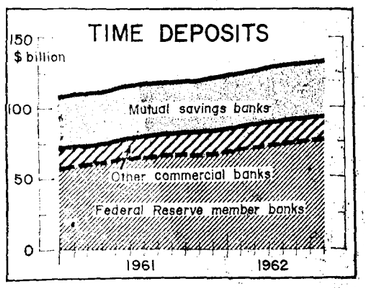


will probably be offset during coming weeks by reduced purchases of government securities in the open market by the Federal Reserve authorities. Indeed, the central bank made it quite clear that the measure was intended not as a further relaxation of its already easy monetary policy but as a "technical adjustment" to enable the banks to meet the heavy seasonal demands for credit in the weeks before Christmas. The easing may prove more psychological than real.

The monetary managers in the United States usually act to meet bulging seasonal demands for credit by stepping up their open-market purchases of government securities. Their decision at this juncture to lower reserve requirements instead was dictated by several considerations. One was the desire to relieve pressures on the banks caused by the rapid growth of savings and time deposits since last January, when the ceiling was raised on the interest which could be paid on these deposits. Another may have been the opportunity to move towards the eventual elimination of reserve requirements against these deposits—a reform strongly urged by many experts. Clearly, however, the controlling factor guiding the board's decision was its concern over the country's balance of payments difficulties.

Throughout the 1960-61 recession and the subsequent painful recovery the United States authorities have striven to pump a ready supply of loanable funds into the domestic economy and, at the same time, to prevent a decline in short-term interest rates which could induce an outflow of funds to overseas money markets. For this dual purpose the lowering of reserve requirements is an attractive weapon. Substantial purchases of government securities by the Federal Reserve System in the open market have tended in the past to place considerable downward pressure on interest rates, particularly at the short end of the market. The release of funds to the banking system through lower reserve requirements entails no comparable immediate and direct impact on these rates.

The authorities' efforts to use interest rates wherever possible to stem American losses of gold were highlighted further by the signing into law last Monday of a Bill exempting the time deposits of foreign governments and international institutions in United States banks from federal ceilings on interest rates for three years. With the major New York banks setting the pace, rates offered are expected to rise substantially on deposits of 90 days or less—to a range of 2¾-3 per cent from the range permitted under the suspended ceilings of 1-2½ per cent. Little change is anticipated on longer deposits.



Thalidomide's Silver Lining

THALIDOMIDE is a sedative but its cruel effects on unborn babies woke the United States up to the need for stricter controls over the flood of new medicines. Without thalidomide it is unlikely that the Bill which Congress passed without a dissenting vote and which the President signed earlier this month would have given the Food and Drug Administration, in the words of one of its own officials, "practically all we have been seeking for years"—though only for medicines sold on prescription and not for all of them.

The new amendments to the Food and Drug Act provide that no new medicine can be put on the market without the affirmative approval of the FDA; manufacturers must show that it is both safe and effective. Up to now sales have followed automatically unless the FDA found a medicine unsafe. Moreover, the FDA can require the withdrawal of any medicine which it considers hazardous without going through the long and difficult business of proving this conclusively. Manufacturers and packagers must register and will be subject to more effective inspection to ensure purity and quality; batch-by-batch testing will be required for all antibiotics for human use, not just a handful of them as in the past. The generic name of medicines must be printed on their labels and a summary of their possible adverse effects must be included in all advertising aimed at doctors. None of these provisions are a guarantee that there will never be a repetition of the thalidomide case, but even before the law was passed the FDA was drawing up fresh regulations to govern the testing of new medicines on animals and on human beings.

The FDA may be well satisfied with its new powers but many critics are far from satisfied with the FDA or with the way in which it may use them. The industry, though it feels that it can "live with" the new law—particularly now that it contains nothing about reducing the prices of medicines—fears that the emphasis on safety may inhibit the development of new drugs. In Congress, which is about to undertake two parallel investigations of the FDA, one under Senator Humphrey and one under Mr Fountain, the fear is much more that the FDA lacks the vigour and the scientific competence and integrity which it ought to have. Long ago in hearings before the Kefauver subcommittee it was alleged that officials of the agency fraternise too much with the industry which they are supposed to regulate; Mr Larrick, its head, is under fire for failing to set a sufficiently high and effective standard of supervision. Partly, of course, this is due to the enormous growth, in the past decade, of the field which the FDA polices. But a year ago a committee of outside experts was appointed to determine what reforms are needed; its report—said to be highly critical—is expected at any moment.

Bomb-shell for Democrats

FROM A CORRESPONDENT IN MARYLAND

ON October 10th President Kennedy came to Baltimore to urge the election of all the Democrats running for statewide office and for Congress in Maryland. Six days later a federal grand jury indicted one of those thus endorsed, Representative Johnson, on charges of conspiracy and illegally accepting $24,918 to influence a case of postal fraud involving savings-and-loan associations, which correspond to Britain's building societies. Also charged in what is billed as the first simultaneous indictment of two members of Congress are Representative Boykin of Alabama, Mr Kenneth Edlin, a Florida financier who has just served a prison sentence for postal fraud in his savings-and-loan operation, and one of his business associates. Mr Boykin, who is not standing for re-election, was charged just as he was leaving to receive a medal from grateful constituents at a $25-a-plate dinner.

Until this bomb burst most Marylanders, unlike the national commentators, had believed that the Democrats would do well in the state, if only because the Republicans had assembled a team largely devoid of popular appeal. Those who know the web-footed rustics who make up the bulk of Mr Johnson's constituents on the Eastern Shore still say that his troubles need not cost him his seat. The case cannot come to trial before Election Day and too many of his supporters live on the borderline of illegality, ranging from the pirating of oysters to violation of the federal game laws, to find an indictment very shocking. Moreover, the Democrat is "one of ours" while his opponent, Mr Roger Morton, the brother of Senator Morton of Kentucky, has lived on the Eastern Shore for only ten years.

But the urban areas of Maryland may be more squeamish. Recently the savings-and-loans scandals which made Maryland notorious have seemed to be pretty much of a dead issue. Now they are very much alive again and old charges are being revived to stand beside the new ones. The voters are being reminded that other prominent Democrats who have not yet appeared in court were nevertheless deeply involved in dubious aspects of the savings-and-loan industry and that some of them are up for election again. Doubts generated by Mr Johnson's indictment may rub off, not only on this group of politicians, but also on Maryland's Democratic candidates as a whole. In the larger aspect, the presidential habit of blanket endorsement of party candidates, already considered of questionable efficacy, is called further in question by Mr Kennedy's support of Mr Johnson. If the charges are proven, they might burn holes in the presidential coattails on which minor candidates often ride to victory.

All's Fair in Seattle

FOR reasons which became clear on Monday night, President Kennedy could not visit Seattle, as he had planned to do, to turn over to a non-profit corporation the star attraction of its World's Fair, the beautiful and exciting Science Pavilion provided by the federal government. But this disappointment aside, the fair closed its six-month run in a blaze of congratulations, all the greater because of the doubts which were once felt over whether Seattle was capable of mounting a successful enterprise of this kind. It is the only World's Fair in the United States to have made money since the one in Chicago in 1933-34; about 10 million people visited the Century 21 exposition, about a million more than were needed to make it a financial success.

Shopkeepers, hotels and restaurants benefited; so did other nearby attractions like national parks. But the real reward for those who worked so hard on the fair is that it brought many people to the Pacific North-west for the first time and that it leaves the city of Seattle not only the science exhibit—said to be the finest in the world—but also a whole complex of civic buildings: an opera-house, a theatre, a display hall and a coliseum, in addition, it seems, to the monorail which carried visitors to the fair ground from the centre of Seattle. The privately owned 600-foot-high space needle, with a restaurant on top and wonderful views of the mountains and Puget Sound, will also remain and so will part of the British Pavilion, which is to be used as a civic museum. It is no wonder that other places have been impressed and have been seeking Seattle's secret; even New York City, which is planning a much more ambitious fair for 1964, is interested.

The prospect of endowing Seattle with a civic centre was the main reason why the city and the State of Washington invested about $25 million in the enterprise. Like all fairs, it had its tawdry side but these sideshows seem to have done conspicuously badly. The great attractions were the space needle and the Science Pavilion. This, which includes the Boeing Spacearium, is now leased to the Pacific Science Centre Foundation and will continue to enthrall and educate even the non-scientifically minded. It is also hoped to use it for meetings of scientists and educators from all over the world.

Mournful Numbers

FROM A CORRESPONDENT IN SAN FRANCISCO

SINCE 1958 the American Telephone and Telegraph Company has been quietly substituting figures for the letters in telephone numbers all over the country—MUrrayhill yielding to 68, YUkon to 98. The purpose of All-Number Calling (ANC) is to postpone the day, which was just around the corner in such centres of telecommunication as New York City, when existing telephone areas would have to be split up because all possible permutations of the two-letter, five-number designation were exhausted. At first, this gradual revolution proceeded without incident. The citizens of Wichita Falls, Texas, did not contest the loss of their old exchanges four years ago and some 21 million of the country's 79 million telephones have since given up their letters peaceably. But this year there have been rumblings in the press, even *Time*, no radical journal, calling ANC "a numerological nightmare." And when "the numbers explosion" reached San Francisco, where the poetry of life is cherished beyond anything possible in Texas, protests took an organised form: the Anti-Digit Dialing League embarked on the congenial task of badgering the world's biggest corporation, AT & T (28 & 8, as perhaps it should now be called).

The League grew from a small notice in the classified advertisements of a San Francisco newspaper, which invited the public to voice its feelings about ANC—if it had any. Over 3,500 people had and ADDL was soon launched as a non-profit-making corporation. The League has had a friendly press. Even the *New York Times* gave its editorial blessing, predicting that an Anti-Digit Dialing Party would eventually capture the White House unless the telephone company could find a way to restore HYacinth and MAgnolia to the country. Such strong feelings seem to puzzle AT & T; one official said sadly: "The arguments these people use are not logical, they're emotional." The opposition is not wholly sentimental, however. ADDL's psychologists assert that seven numbers are harder to remember than two letters plus five numbers; the State of California introduced letter-number combinations on its motor-car licence plates for just this reason.

The company responds that people cannot spell HYacinth or even YUkon and also that, while it is more difficult to remember an unbroken series of numbers for a long time, it is easier to learn it for the few moments required to get from the telephone book to the telephone. The company also appears to be using a subtle form of brainwashing, removing from directories all but the first two letters of the names of its old exchanges; the inquiries operator no longer says that a number begins "YUkon," but only that it is "Y-U," etc. No estimates are available of the company's expenditure in fighting ADDL-minded critics but, since the defence has included full-page advertisements in leading newspapers and vast mailings to telephone subscribers, the cost must be considerable.

The California State Public Utilities Commission has entered the fray by announcing an investigation "into the rates, tolls, rules, charges, operations, practices, contracts, services and facilities of the Pacific Telephone and Telegraph Company." The League intends to testify before the commission and the issue will probably be referred to the Federal Communications Commission in Washington as a national question. If the FCC hears AT & T versus ADDL, the cause of alphabetism will at least enjoy a Götterdämmerung before numbers prevail and we head for 1-9-8-4.

BRIEF BOOKLETS . . .

have been produced jointly by The Economist and The Economist Intelligence Unit to present the essential facts behind important current topics. Each takes about one hour to read. Here are the first three titles in this new series:

Brief 1 RHODESIA: BRITAIN'S DEEP SOUTH by Joe Rogaly
2 MONEY FOR GROWTH by Fred Hirsch
3 LABOUR IN BRITAIN AND THE STX by Val Schur

Each booklet costs 2/6d. (or U.S. $0.40) post free for remittance with order from:

The world's most complete automation plan...

WHEN Richard Thomas & Baldwins Limited first envisaged the new Spencer Works, they decided that it must be "not the least obsolete, but the most modern steel plant in the world." (*This statement sums up an interesting problem; namely, that even if the latest conventional techniques were used, the plant could well be ten years out of date before it was finished.*) The Company therefore decided to make several bold and carefully calculated decisions involving new and exciting equipment and techniques.

Elliott-Automation was commissioned to draw up a plan for the complete automation of all processes. These are certainly the most advanced automation proposals yet prepared by anyone ... anywhere ... for any plant. The decision so far taken to go ahead with the three interlinking computers now being installed to cover scheduling, ingot slab and hot mill slab control, in itself represents a tremendous step forward in automation practice.

Industry, and the entire country, owes a debt of gratitude to Mr. Henry F. Spencer and to Richard Thomas & Baldwins Limited for a far-sighted decision which has enormously advanced the development of automation technology in this country.

THE WORLD OVERSEAS

Plain Tales from the Hills

FROM OUR CORRESPONDENT IN INDIA

WHEN the fog cleared, the Chinese were right there behind it. It is now evident that the Indian government had massively miscalculated Chinese strength and determination on the northern border. What seemed signs of alarm in Peking were only signs that China took the Indian military efforts seriously enough to feel that they must be smashed.

Smashed they have been. At this writing it is still uncertain whether the Chinese objectives extend beyond that. In Ladakh, the Chinese have already overrun most of the advanced posts pushed forward by the Indians during the spring and summer; but they are not yet beyond what they claim is their territory. In the North East Frontier Agency (NEFA), at the western end, the Chinese attack has reached slightly beyond their version of the McMahon line, some four miles south of the Thagla ridge, which the Indians say is the line. The Chinese have also violated the line near the Burma tri-junction in the east. In this area an attempt by the Chinese to occupy the full extent of their claims would bring them almost to the Brahmaputra valley, which could only end in full scale war.

The Chinese attack was heavily supported with trucks and artillery and, in the Pangong lake area of Ladakh, even with tanks. The crisis found the Indian defence machine, which was ready enough for this summer's policy of forward probing, materially and to some extent mentally unprepared for major operations. The defence minister, Mr Krishna Menon, explained the Chinese artillery superiority in NEFA by saying that this was a war "for which the Chinese had prepared for a long time." What, one wondered, had the Indian defence ministry been doing? A still more remarkable reminder of the days of *panch shila* was the statement of an official spokesman on Monday, which is worth quoting verbatim: "I categorically state here that no air force aircraft of an offensive type has flown in this area. It is only transport planes which are being used." Before he spoke, two such peaceable Indian planes—helicopters for evacuating casualties—had already been shot down.

Even before these statements were made, some of Mr Menon's habitual critics had seized on some unwise phrases in a speech to charge him with being less determined than he ought to be. But the general feeling in India is that the time for recriminations is past. The last few days have seen a massive and moving rallying of the nation round its leaders. Opposition politicians have promised full support. The Congress chief minister of Orissa has suggested an all-party government. Workers have pledged higher production and no strikes. Five hundred Bihar youths sent a pledge signed in blood to work for the defence of India. The only division is in the Communist party of India, which is split from top to bottom. After long argument, the Communists had achieved a facing-both-ways resolution on the Chinese attack. Important nationalist sections of the party at once denounced it outright.

Mr Nehru's broadcast on Monday caught the national mood in displaying complete determination to defeat "the greatest menace that has come to us since independence." India must abandon the slow moving methods of peacetime, he said, and "build up our military strength by all means at our disposal." He called on the people to prepare for a long struggle. It was a sad speech too. As Mr Nehru recounted India's efforts to live peacefully with China, it was evident that whatever illusions he may have had about Chinese intentions have been irretrievably destroyed.

His speech contained two important statements of policy. India would not abandon the third five-year plan or reduce any important element of it, Mr Nehru said; nor would it give up the policy of non-alignment. Economists here are frankly sceptical about the first of these objectives. Resources to beat the Chinese have to be diverted from somewhere. Unless there is substantial extra foreign aid, where can these resources come from except from development expenditure? The economy has no great reservoir of consumer goods production. The government might, of course, lay hands on private gold hoards. Gold prices have risen sharply as investors got out of shares into something more solid.

As for non-alignment, this is credible enough. Mr Nehru argued that is was the best possible way of meeting the crisis. The Russians are being pressed to exercise a restraining influence on China, and it is feared that open acceptance of western help might make this impossible. But there are signs of some public rethinking.

United They Fall?

FROM OUR PARIS CORRESPONDENT

AT midnight this Sunday, October 28th, the day of the referendum on constitutional reform, the lists will be closed for November's general election. The two battles are obviously linked. The political parties, half-resigned to a victory for General de Gaulle in the plebiscite, are already thinking of sweet revenge at next month's polls, where they hope to massacre the faithful troops of the gaullist party, the UNR. They may be rejoicing too soon; it may be the parties themselves that are massacred.

Why did all the parties unite to oppose the general on the difficult issue of whether future presidents should be elected by popular vote? When a former admirer, like M. Paul Reynaud, or a once useful servant, like M. Mollet, turns against the French president there can be no question of spite or mere tactical error. The answer is that the political leaders have grasped the fact that in the "guided democracy" envisaged by General de Gaulle there will be no place for political parties unless they follow the UNR rule of unconditional obedience. The manner in which the general has run his campaign has confirmed their view that his objective is to subjugate parliament and vanquish the traditional parties.

So the parties came to the aid of parliament. Once they had

united in defence, the non-communist leaders insisted on the common denominator of opposition to gaullist foreign policy on the ground that it was too nationalist both in Europe and in the Atlantic alliance. In the sixty minutes of radio time allocated to all the parties on Monday and Tuesday (the president, his defeated ministers and their juniors can use the radio and television at will until polling day), five out of the six party spokesmen pleaded emphatically for *non*. This determination at the top is echoed with a vigour that varies according to party and region.

Starting from the Right, the conservative Independents can be subdivided into three unequal groups. One small group seeks revenge for the general's betrayal of his *Algérie Française* pledges. The largest section is stirred, as is M. Reynaud, by a mixture of parliamentary instinct and a conviction that the Atlantic alliance must be fostered. The third group of these conservatives, looking forward to the new regime and an alliance with the UNR, ignores the party whip. As is natural, the conservative ministers in M. Pompidou's government belong to this last faction.

The MRP (Christian Democratic party) has found the referendum issue particularly awkward. Many Christian Democrats favour some sort of presidential system. When there was talk of a vice-president, M. Pflimlin, the last prime minister of the Fourth Republic, was strongly tipped for the job (possibly as a reward for services rendered in May, 1958). It was only the way in which the general has organised his scheme as an anti-parliamentary campaign, together with pressure from their younger members, that drove the MRP into opposition. In the constituencies of former gaullist ministers, such as M. Pflimlin and M. Maurice Schuman, the local parties have chosen neutrality, and tell their supporters to vote how they will.

Other parties are less divided. The Radicals are now in their element. It is no accident that the most moving defender of parliamentary institutions has been their spokesman and the president of the senate, M. Monnerville. M. Mollet is driving his Socialists into battle. He is already busy forming electoral alliances with the Right and the Centre, worried as he is lest the logic of the anti-gaullist struggle lead his troops into electoral alliances with the Communists.

Such a left-wing coalition, with a minimum common platform, had been proposed by the Parti Socialiste Unifié. This small party, founded by former Socialists, Communists and Mendèsistes, has in M. Mendès-France an almost awkwardly eminent member but, as yet, little electoral following in the country. Its proposal, rejected by M. Mollet, never had any chance of success. The Communists are, at this stage, parading in republican, nationalist and moderate clothing. They turn the other cheek after each new slap by M. Mollet, thinking, apparently, that the referendum, followed by next month's elections, offers them a splendid chance to escape from political isolation.

All the parties are intent on the electoral battle. They have not tried to offset the government's radio advantage by holding mass meetings but have relied on leaflets, on personal canvassing and on the influence of local leaders. By these methods they hope to undo the damage of their almost certain defeat in the referendum. But the damage could be heavy. Everything seems to be working against the parties: the fact that the general's personal position is at issue, General de Gaulle's prestige (undisputed by his opponents), the parties' lack of a programme; even the Cuban crisis can now be used as an argument in favour of stability. The very width of the coalition is a disadvantage. It is idle to argue that the 1958 constitution had also been sponsored by a strange alliance that ranged from Massu (or Soustelle) to Mollet. The pre-referendum confusion does not help the electors to grasp that neither M. Mollet's merits nor the general's resistance record are the issue, but rather the future of France's parliamentary institutions.

Previous Referendum Results

Morocco the Eclectic

FROM OUR SPECIAL CORRESPONDENT

IN Rabat's modern shopping centre a large car parks itself neatly and its driver, a veiled woman, glides impersonally into the street. In any other Arab state this woman would either not drive a car or, if she did, would unveil herself. But not in Morocco. This is a country with a talent for having its cake and eating it, taking what suits it best from every possible world.

In a continent of young republics Morocco upholds a three hundred year old dynasty. Its young king, Hassan II, is brisk, direct, modern-minded. But the ritual of his court has lost little of the colour that the early Alaouites gave it. He still rules as an absolute monarch, with neither constitution or parliament. Yet probably nowhere in any other Arab country is there greater liberty of political expression. Opposition is conducted openly. Parties and press are free. There are no political prisoners. Though the throne draws strength from a sizeable, well-disciplined army, the soldiers do not meddle in politics. In most of the larger towns the mayors belong to the UNFP (*l'union nationale des forces populaires*, the main opposition party), a consequence of municipal elections held freely two years ago. From a huge Casablanca skyscraper the UMT (*l'union marocaine du travail*) operates one of Africa's largest trade union movements. The communists, although alone in having their party suppressed, still jog along and issue their news sheets openly. Even the Istiqlal (government party) press frowns primly from time to time on corruption among officials, while that of the opposition has almost exhausted its expletives—not excluding dark comparisons with revolutionary Yemen—in attacking "autocratic rule."

Some complacent members of the government are inclined to think that this balance between two extremes—autocracy and liberty—is something exquisitely Moroccan, which, having been artfully arrived at, should not be departed from. But the king himself is aware that the sun will not stand still for him. Freedom without opportunity cannot be sustained for long. The Algerians are setting new fashions in social and political deportment. And he has, anyhow, promised Morocco a constitution by New Year, 1963.

This promise may not be ill-timed. Discussion of the constitution ranges far and wide in Morocco, but the swelling tide of expectation is not running against the throne. In the rank and file of all parties plain men, who yesterday were absolute monarchists or absolute republicans, are striking their hearts and declaring themselves "constitutional monarchists." A constitution, cheerfully given, might thus reinforce the monarchy. The problem is less how to give it than how to make it acceptable.

The king is reputed to have a constitution ready made. But the UNFP are indignant at the prospect of being offered an article straight off the palace peg. They point to Algeria, where an elected constituent assembly is tailoring a constitution, and say they want one like that one—with the hall mark "made by the people." That

WHY TIE UP CAPITAL IN A COPIER?

You don't buy the Xerox 914—you just pay for the copies it makes

A good office copier costs a fair sum of money. But there's no need to dip into your company's capital to pay for it. The best copier in the world, the Xerox* 914 Copier, comes to you on loan. You pay only for the copies you use—very reasonable too. And you profit from the very large sums spent in developing this most advanced machine.

Uses ordinary writing paper. The Xerox 914 Copier works by xerography, a revolutionary process that needs no sensitised materials, negatives or fluid developers. It makes copies on ordinary writing paper. And you save money again because every Xerox copy is perfect—there are no dud copies. Every copy is automatically right—no exposure adjustment is needed. Merely choose the number of copies you want, press a button and the machine delivers automatically.

Copies everything. The Xerox 914 Copier copies everything, type, ink, pencil, all colours, and reproduces them in clearest black and white. Nothing is left out. You can copy any kind of document, or from bound books or even 3-dimensional objects.

See for yourself. The Xerox 914 Copier is so different from any other copier that you need to see it at work to realise its enormous scope. The Xerox 914 Copier is no toy. So we can't bring it to you to demonstrate. But a telephone call to your Rank Xerox office will enable us to give a demonstration of this amazing machine in action at any of the branch offices shown below.

*XEROX IS A REGISTERED NAME OF RANK XEROX LTD.

Algeria's single list elections did not represent all the people does not at all dismay them. Mr ben Bella, they say, will be nobody in two years time.

Many people believe that Morocco's genius for compromise will find a way out of what seems a procedural wrangle. Some argue that if, as hoped, the ready-made constitution provides for free parliamentary elections, the parliament so elected can gradually amend any clauses of the constitution it does not like. These terms are of course all relative. Nobody is under the illusion that anywhere in Africa today free institutions can flourish without some manipulation. But constitutional government is seen by most Moroccans as a necessary status symbol, and any sort of parliament as better than none.

KEEPING up with the Algerians poses new social problems, not least that Algeria bases its whole revolutionary ethic on land reform. Agrarian reform does figure in the Moroccan government's plans for developing the country and for providing its underemployed population with a future livelihood. But hitherto industrial expansion has been given much greater prominence. The Istiqlal is credited with wanting to concentrate on industry, while the UNFP carries the banner for land reform. But these distinctions are becoming a trifle blurred. After scoring a notable success with his pet scheme, the *promotion nationale*, by which many unemployed peasants have been set to work, clearing land, planting trees and building roads and dams, each group in its own district, the king appears to be ready to accelerate land settlement plans.

This is bound to be a long story in a country where 40 per cent of the rural families are landless. (The rural population numbers roughly eight million out of Morocco's total of nearly twelve million, and the total is increasing by 300,000 a year.) The government has earmarked more than four million acres of land for setting up peasant co-operatives and this will affect the big French estates, which occupy more than a million acres of the richest land. Because they are so beautifully farmed and do at least employ peasant labour, the Moroccan government has hesitated to disturb them; it has repossessed itself of only 50,000 acres. But new entrenchments are foreseen. Wherever dispossession becomes necessary Morocco will look to France to facilitate the compensation of any outgoing Frenchmen. Since this will be small beer compared with what France is committed to do in Algeria, under the Evian agreements, such assistance is not likely to be grudged.

Although Morocco leans heavily on France economically, a galaxy of foreign interests is reflected in the aid it is getting and in its industrial growth. The United States outstrips France in the value of its loans and relief grants. Russia sends shiploads of arms, but nobody knows where they go. Only the twelve Migs, delivered two years ago with thirty Russian instructors, have been seen in public again. The Chinese have been a disappointment; they tried to introduce tea-growing, but gave up with the first setback, and have been criticised for not persevering; Moroccans drink a lot of tea. Both western and eastern undertakings are active in Morocco's industrial programme, which calls for much foreign investment. Morocco has the mineral wealth, the world's biggest phosphate deposits, and the best roads, ports and airfields in all north Africa. But it lacks the money and the experts.

Foreign firms team up with BEPI (*bureau d'études et de participations industrielles*) to form joint companies. France and the United States are prominent in by far the biggest enterprise, a chemical complex based on phosphates. And the United States and Italy are in projects already in full swing (oil refinery, car assembly, tyre making). Britain is coming in to manufacture tractors. Poland got the contract for machinery for a sugar factory, for which the World Bank will finance the new sugar-beet cultivation. A Russian study for a shipyard in the bay of Tangier, overlooking Gibraltar, has had a mixed reception. Morocco would like impoverished Tangier to pick up some ship repair work, but wants to avoid enterprises with political overtones.

Amidst all this foreign activity, France provides the main key to progress in sending out men with the know-how to Morocco's government departments—19,000 technicians (9,000 of them teachers)—and missions to the army and air force. It is largely upon their loyal service and readiness to teach Moroccans to take over from them reasonably quickly that a happy future depends. Some Moroccans are anxious lest in this generous French forcing house, they lose some of their Arab identity. This seems extremely unlikely. Few nations possess a more pronounced national character or less interrupted traditions; and their talent for taking what suits them, and quietly discarding what does not, shows no sign of running dry.

Ghosts in the Kremlin

"As long as Stalin's heirs are on earth it will seem to me that Stalin is still in his mausoleum."
Yevtushenko in *Pravda*, October 21, 1962.

HALF-TRUTHS will not last; or so the Russians are finding in their efforts to rewrite Soviet history, leaving out the most obvious Stalinist falsehoods, yet providing a version that would not undermine the present leadership or the party monolith. But one truth and another are links in a chain and in this case it is the good coins that drive bad ones out. The issue of *Pravda* which contained Mr Yevtushenko's anti-Stalinist poem also had a lengthy article on the party's seventh congress, held in 1918. This article coincides with the publication of the stenographic report of the seventh congress. The *Pravda* writers maintain that the Soviet regime was saved at the time of the Brest-Litovsk negotiations by wise, stern leadership from Lenin, in the face of Trotsky's treachery, the "factional activity" of left-wing Communists and Stalin's own "wavering." This condemnation of factions and of their "hysterical" outbursts is understandable. A Russian reader of the verbatim report is bound to contrast the lively controversies of Lenin's time with the rule of unanimity prevailing under Mr Khrushchev.

Until quite recently the posthumous rehabilitation of Stalin's victims was limited to two groups. Marshals, such as Tukhachevsky and Blucher, were rehabilitated first, probably under military pressure at a time when Marshal Zhukov was still influential. The other group consisted of good Stalinists, like Kossior and Chubar, who had served their master as faithfully as Mr Khrushchev or Mr Malenkov did; yet he had them executed. Towards Stalin's true opponents the official attitude has been more ambiguous. It was his method of eliminating rivals, not the fact of their elimination, that was being condemned.

On October 17th, however, the Moscow correspondent of the Jugoslav newspaper *Politika* revealed that last summer, without

Problems of Alpine Farming

FROM OUR CORRESPONDENT IN VIENNA

A THREE-DAY conference on alpine agriculture opens at Vienna on November 7th with delegations from Austria, Switzerland, Germany, Italy, and France, which supplies the chairman, Professor Zépède. These delegations form the alpine subsection of the *Conféderation européenne d'agriculture*, which meets every two years or so under the auspices of the Food and Agriculture Organisation to exchange information and, where possible, to co-ordinate policy.

The chronically defensive position of the alpine farmer, living from generation to generation only very little above subsistence level, has led to a gradual withdrawal from the highlands, which the governments concerned wish to stem. The following review of the problems as they apply to Austria is also, in many ways, relevant to the whole alpine area.

About half the population of Austria earns its living on 432,000 farms, about a third of them alpine or sub-alpine. An average mountain farmer will own, say, 25 acres of productive land plus 50 acres of standing timber. If he owns no forest land he will usually have annually accruing timber rights, and will own an alpine pasture or have grazing rights. Clearly, to talk of an "average" farmer is deceptive. There are those who own 80 or more head of cattle, and there are the subsistence holdings that provide grazing for no more than six cows, a couple of heifers and a pig. All are in varying degrees menaced by the forces of nature: avalanches, torrents, floods, landslides, hail and drought. They are placed at a disadvantage by their distance from the markets, by inaccessibility (particularly to mechanised transport), by dilapidation of buildings and the impracticability, where electric power is available, of carrying mechanisation beyond a certain point. There is the ominously increasing shortage of labour, and the old-time market for certain handicrafts (copper or wooden kitchenware) has gone. This gloomy scene, so far removed from the romantic idea of the gay, yodelling peasantry, provokes the question: why keep up the unequal struggle? In view of the labour shortage in all areas, why pump money into marginal undertakings?

The Austrian ministry of agriculture and forestry gives these answers:

1. Austria's greatest asset is its forests. More than half the total forest area is shared out among the farming community, who not only work on their own ground but provide the main labour force in the mountain forest areas. It is vital for the smallholder to find local employment at times when his farm work slackens off, and equally important to the national interest that he should be available. Imported labour housed in temporary barracks is not suited to Austrian forestry practice which avoids large-scale felling.

2. The tourist trade today calls for an alternative to crowded, noisy resorts. There is a growing demand for quiet and seclusion, for accommodation in farms and small inns in the setting of normal country life. The artificiality of a luxury hotel dumped down in an alpine desert would be a negation of this contemporary trend.

3. Alpine stockbreeding is a vital factor in the maintenance of high quality in the lowlands. Some 373,000 head of cattle spend on an average 100 days a year on the high pastures, in addition to 14,000 horses, 243,000 sheep, 36,000 goats and 24,000 pigs. It is calculated that these pastures, lying between the tree line and the perpetual snow, enable the highland farmers to keep in all about 130,000 more animals than they could if confined to their home ground. Life at a high altitude means a harsh climate with minimal protection, rarefied air and alpine sun rays. These combine to produce a tough, self-sufficient, fertile and long-living breed of cattle with a high resistance to disease. Similarly, the mountains provide healthy areas for disease-free potato cultivation.

4. Owing to labour shortage, lowland farmers are slowly abandoning milk production and concentrating on crops, such as cereals or beet.

The ministry's policy may be summarised as follows:

Road and track building: wherever possible all farms are to be rendered accessible by mechanised vehicles. This has first priority. **Mechanisation:** there are still 14,000 alpine farms, mostly on the highest levels, without electricity. Where electricity is available, cable lifts have been built, and ploughing, hoeing, transport of manure and fertilisers are, to a large extent, carried out by means of rope winches. It will not be long before electricity has been brought to all but the most remote farms. Road-building and electrification are financed by the federal, *Land* and local governments jointly.

Amalgamation of land: separate plots of land, often far distant from the farmhouse and from one another, are gradually being reallocated on a majority agreement basis among the farmers themselves. For this a simple majority is enough. **Reafforestation** of under-productive land is being undertaken and will provide the owner with a valuable asset instead of poor grazing. The ministry hope to induce the state forest authority to relinquish certain small areas to individual farmers to prop up their holdings.

A complete **Land Register** of all alpine farms, which will facilitate the work of the ministry and the farmers' unions, is at last nearing completion. This is already paying for itself as vague estimates give way to exact statistics, and policy can be better co-ordinated and waste avoided. Since 1953, **milk transport costs** have been pooled so as to secure equal profits for all irrespective of distance between producer and market. **Tariffs** protect the farmer against cheap imported cattle food and beasts. A high and increasing percentage of young farmers attend **agricultural schools:** the ministry claim to have proved that the profit earned on a farm is in direct ratio to the educational level of the farmer.

Housing: the smaller, picturesque but often squalid farmhouses are disappearing fast; the larger ones built of stone or stone-and-timber will, one hopes, remain. Owners of these highland farms are being encouraged to modernise their buildings in order to take in visitors.

This modernisation on all sectors of the farm is being done by means of grants and loans. Loans, at three per cent and repayable over ten years, are available to farmers whose means of subsistence is reasonably well established. A man who can show that, though capable and hard-working, he is struggling against great odds can now receive a grant of up to 60 per cent of the capital investment required to put his farm on its feet. "In the end," said a ministry official, "you're up against one unknown quantity: the man himself."

any publicity, the families of some men sentenced at the great Moscow trials of the nineteen-thirties were informed of their posthumous rehabilitation. True, this surreptitious rehabilitation refers to the criminal charges and not to the political reproaches against these men—Bukharin, Rykov, Tomsky, Pyatakov and Radek. Of these, Nikolai Bukharin is the most famous. Lenin, in his testament, described him as the party's "favourite" and a most valuable theoretician despite "scholastic" tendencies. At the time of Brest-Litovsk, towards the end of the first world war, he was one of the leaders of the so-called left Communists who rejected the German peace in the name of socialist ideals and in the hope of a European revolution. When that revolution failed to materialise and Russia started to "build socialism in a single land," Bukharin became a leader of the right wing, preaching slow industrialisation and advocating concessions for the peasants. (The dialectical causes of this seemingly strange conversion are explained in Mr Deutscher's biography of Trotsky.)

It is in this second role, as the protector of the peasants, that Bukharin is best known. Together with Alexey Rykov, who had succeeded Lenin as head of government, and Mikhail Tomsky, who led the trade unions, he was Stalin's indispensable ally in the Politbureau until the start of collectivisation. Then came defeat and disgrace. Their recantations bought them breathing space, but no more. Only Tomsky, by committing suicide, escaped Vyshinsky's prosecution and the firing squad.

Bukharin and his allies represented the Right in the struggle with Stalin. Through Yuri Pyatakov, one of the organisers of Soviet heavy industry, and Karl Radek, the most brilliant and biting of Communist pamphleteers, the finger of history points Trotsky's way. The time may yet come for a revision of his case. Indeed, the documents now being published make it increasingly difficult to play down the part played in Soviet history by either Trotsky or the Bolshevik old guard. It is not only a question of the men themselves. The issues discussed—the pace of industrialisation, the attitude towards the peasants, the amount of freedom to be allowed within the party—though altered by circumstances, are more topical than ever.

Since the anti-party group was eliminated in 1957, and attacked ever since, the Soviet public has never heard the case for the defence, only its parody presented by the prosecution. Learning from documents about these past controversies, the new Soviet generation will ask questions about the present. No wonder, in these circumstances, that rehabilitations are carried out surreptitiously and that the documents are accompanied by a host of explanations.

"We have thrown Stalin out of the mausoleum, but how shall we sever him from his heirs," writes Yevtushenko. Mr Khrushchev's anti-Stalinist supporters are becoming awkwardly radical. They are demanding the rapid elimination of the vestiges of Stalinism and, by the same token, the rehabilitation of the victims. *Le mort saisit le vif*, say French jurists to explain the continuity of the legal personality in inheritance. In the Kremlin the ghosts of Stalin's victims are haunting his living heirs, forcing their hand and threatening the party structure.

Czech Economic Strains

BY A CORRESPONDENT LATELY IN CZECHOSLOVAKIA

THE scene is Brno, Czechoslovakia's second largest town. The time, an unusually warm day at the end of September. A green lorry draws up in front of a shop and unloads three sacks of potatoes on to the street. Before the manager has time to deal with the delivery, a group of casual passers-by has already formed a disciplined queue. Barely five minutes' walk away, what is proudly claimed to be the leading international engineering fair in Europe is in full swing. Visitors are admiring the impressive array of Czech machinery in the spacious halls, and in the improvised offices businessmen from around the world are daily concluding deals to the value of millions of pounds.

Those two scenes are in many respects characteristic of present-day Czechoslovakia. Shortages, particularly of meat, but also of dairy products, and bottlenecks in the supplies of a wide range of consumer goods, are being felt throughout a country that is still regarded by western visitors as the shopwindow of the Soviet block, and by jealous Communist neighbours as the "bourgeois in the socialist family of equals." Long queues form in the early morning outside every butcher and every greengrocer in many villages and in nearly every town; but there is plenty of meat in the better restaurants. Despite the irritating scarcities, the 14 million Czechs and Slovaks live considerably better and have incomparably more consumer goods, particularly of durables, than the people in any other Soviet block country. But while the Hungarians and the Poles have some tangible proofs that their (admittedly, lower) standard of living is steadily rising, the Czechs have not. The angry official outbursts against the "schnitzel patriots," who compare the relative prewar prosperity of their country with the present state of affairs, and the Czechs' blunt criticism of the unpopular party leadership to foreigners, suggest that ordinary people are becoming increasingly fed up with the persistent economic difficulties.

MANY political jokes and remarks made to this correspondent reflect the opinion of the non-Communist majority that the economy has been overstrained by the lavish handing out of aid to the underdeveloped countries. As the manager of a large hotel put it to me: "Our trouble is that we are giving those countries too much too quickly. But this is the policy of our government, and we can do nothing about it. . . ." Popular bitterness has been heightened by western broadcasts. According to American calculations, the Czech contribution to Soviet block aid schemes amounts to $47 a head, or three times as much as the comparable Soviet figure in the period up to December, 1960. Even so, excessive foreign aid alone could hardly have plunged this highly developed country into its worst postwar economic crisis.

One gets the impression that structural disproportions are causing the economy to strain at the seams. The government's recent decision to abandon the current five-year plan, due to end in 1965, and after an interim one-year plan to embark on a seven-year plan for 1964-70, was really a confession of the gravity of the crisis. Lagging farm output is undoubtedly one of the major factors in what Mr Simunek, the deputy premier now in charge of his country's contribution to the economic integration of the Soviet block, has recently described as "the circle of mutually dependent problems." Whereas consumption of food, particularly of meat, has sharply risen since the war, agricultural production during the past four years has failed to show any progress; in fact, it is believed to be lower than it was twenty-five years ago. The relative stagnation of agriculture stems from disproportionately small investments compared with the other branches of the economy, the uneconomic price structure and ruthless collectivisation. The results of peasant hostility and the lack of incentives can be seen in the latest statistics; during the first three-quarters of this year planned deliveries of meat fell short by 20,000 tons, of poultry by 3,000 tons, of eggs by 163 million and of milk by 55 million gallons. With plenty of jobs available in industry, and collective farm incomes reaching less than half of industrial wages, it is difficult to see how the large-scale migration to the towns

can be halted and the level of agricultural development raised to that of industry by 1970, as is required by the central committee's directives for the forthcoming party congress.

As it is, food imports last year were nearly a fifth of all imports and cost the state some £130 million (at the official rate of 20 crowns to the £). They are likely to be substantially higher this year. The heavy strain on the balance of payments is made worse by serious shortcomings in such key industries as metallurgy, heavy engineering and building. Czechoslovakia, for all its limited home market, is still producing a range of engineering products that cover perhaps 70 or 80 per cent of the varieties contained in the world's engineering assortment. But about 30 per cent of its miscellaneous engineering products are manufactured on the basis of blueprints ten years old. The industrial growth rate dropped from an average of 11 per cent in the years 1958-60 to 8.9 per cent last year, and to the equivalent in the first half of 1962 of an annual rate of only 6.7 per cent, though the plan originally projected a target of 9.4 per cent for this year. Productivity also shows a marked tendency to fall off. Instead of the planned 7 to 8 per cent, it has risen by a mere 3.2 per cent this year.

As a result of "loose" planning, continued production of obsolete models and wild investments by local authorities, large funds are frozen in accumulated stocks and big unfinished investment projects. Meanwhile, despite the acute labour shortage, the ponderous bureaucratic apparatus encourages labour hoarding and stimulates the senseless drive for "global fulfilment" of the planning targets, regardless of damage to quality—which, this year, is expected to cause a loss of £20 million in metallurgical rejects.

Several important external factors have also combined to aggravate the country's economic plight. Military expenditures are said to have been raised considerably since the beginning of 1962. Trade with China has abruptly fallen from £70 million in 1960 to an estimated £20 million this year; this makes necessary some painful adjustments in imports. Finally, the economic rivalry and lack of co-operation within the Council for Mutual Economic Aid have had widely felt repercussions in Czechoslovakia.

Father Pire's University

BY A CORRESPONDENT

ARMED with his Nobel prize award of £28,000, Father Dominique Pire has planted on the banks of the Meuse in his home town of Huy, in Belgium, the nucleus of what he hopes will be a "University of Peace." Some two hundred students from all parts of the world came there to attend courses in the past summer.

Father Pire is a Belgian Dominican monk, based on the monastery of La Sarte at Huy, who for the last fifteen years has been establishing "European villages"; he now has seven of these in various parts of the continent. He populates them with "unwanted" refugees, whom he calls the discards of life. Hundreds of people are now happily settled in these villages, and he returned not long ago from Pakistan, where a similar movement is starting.

In his office at Huy, Father Pire's files are packed with names of such people. He comes down from the monastery every day to deal with correspondence from all over the world. Now that his "European villages" are a going concern, and have developed a local community life, he is specialising in establishing contacts between individuals through correspondence. He seeks by these letters to break down the isolation of lonely people, and to open up what he calls a "fraternal dialogue."

Out of this experience in dealing with people of all races and religions—which won him the Nobel Prize in 1958—Father Pire has come to his idea of a "University of Peace" where young people can learn to understand one another's point of view. He claims that, in dealing with different kinds of people, he has learned to respect a basic humanity in everyone, and that this is relevant to the problem of international relations. Claiming that it is easy to rouse people and governments to relieve physical suffering (he gets a steady flow of money and materials to assist his refugee work), he is now concerned with the "fraternal dialogue" in men's minds.

Father Pire's university is a very modest affair that has so far been paid for out of his Nobel prize money. It is a simple quadrilateral of glass and concrete, still unfinished and only partly furnished, with rooms for 80 students. The first set of buildings is called the Gandhi International Centre; the second may well be named after Albert Schweitzer, for these two men have been the dominant influences in Father Pire's life. He does not count himself as an orthodox pacifist. Everything he does must be "pro-human." "I fight against barriers, against prejudices and stereotyped social ideas. I am not interested in converting people to Roman Catholicism. My aim is to build a bridge of light and love across the turbulent waters of imperialism, anti-imperialism and racial hatred."

This spirit he hopes to encourage in the students who come for fortnightly courses under his guidance. The students are fed, but must otherwise pay their own way. Lecturers from different parts of Europe teach history, geography, economics and philosophy. To look at the summer programme is, at first glance, to see a familiar enough assembly of world problems. It might be any summer school of world citizenship. But Father Pire hopes that his students will carry on the "fraternal dialogue" of good will when they get home. He expects them to do things that unite people rather than things that divide them; he sits an Arab alongside an Israeli, a black African alongside a white one.

This approach is symbolised by the drawing on the letter paper Father Pire uses. It is a globe cleft into two sections, with a heart at the centre; the phrase he uses is "heart open to the world." Father Pire is impressed by the idealism of young Asians and has invited many of them to Huy this summer. He has avoided anti-communists as much as anti-nuclear campaigners, saying that he is not anti-anything, just pro-human. He makes no great claims for his little embryo-university, and he is aware that many may come sceptically, or for fun. But from the letters he has received, as the result of last year's initial course, he hopes that in the next ten years he can encourage some hundreds of young people to understand his approach to the problem of peace.

THE BUSINESS WORLD

Twenty Billion Dollar Question

BUSINESS reactions to the Cuban crisis have been bewildered rather than considered, for the good reason that no considered view is possible. The ultimate uncertainty of the nuclear age, parodoxically, itself removes the rationale of panic of the kind which accompanied the threat of less cataclysmic war. Some investors still respond instinctively to the standard maxim at such times of "Go liquid, go home"; but far more have simply sat tight and sensibly refused to embark on fanciful hypothetical prognostications which would have little relevance even if they turned out right. Thus while the immediate impact of the crisis on the stock markets, the exchange markets and the commodity markets was quite sharp, it produced no speculative spiral; and by Wednesday afternoon the markets were already showing signs of steadying.

At one point, however, the disturbance has been considerably more serious. There has been large switching out of paper money and paper securities into gold—gold coins by the smaller fry and gold bars by the rich. Sterling has been affected by these movements, as it always is; but this time sterling is not in the front line. The big movements have been out of the mark, and the dollar itself. Demand for gold on the London market on Tuesday was estimated in some quarters at 20 tons or more (roughly the same in millions of dollars), and it looked as large again on Wednesday. Buying on this scale probably exceeds even that of the gold rush exactly two years ago. But the market now is under strict control, so that instead of soaring as it did then to over $40 an ounce in a market devoid of sellers, the gold price has risen only gently, from $35.13 to $35.20, as the Bank of England has been a ready supplier at prices of its choosing. So far, therefore, central banking co-operation has withstood the strain without any outward sign of difficulty. This is a considerable tribute to the improved co-operation of recent years, which was designed to meet just such tests as this. On Thursday, moreover, speculative activity ceased abruptly, as the prospect of a diplomatic solution to the crisis improved. Market operators were waiting on the sidelines, their eyes fixed firmly on the Russian ships reported to have changed course.

But the real test could still lie ahead. What has happened so far is that the Bank of England, and perhaps other European central banks under the gold pool arrangement for controlling the London market, have been meeting the demands of private buyers by selling them gold in exchange for dollars. The big question, which so far as is known the gold pool agreement has never faced, is what these central banks will do with the dollars if the speculative movement into gold does not fairly quickly reverse itself. The "gold pool" was originally believed to be of the order of $250 million when it was set up in the early months of this year. It was soon increased by some quiet purchases of gold in the markets, particularly when Canada was selling; then it was drawn on quite heavily to meet the speculative wave that followed the Wall Street crack after the end of May; and, just possibly, it may have been rebuilt in a small way in the quieter markets that have prevailed since President Kennedy's assurance via Telstar in late July. But if the pool could run to or near extinction earlier in the summer, it is plainly still less adequate to cope with the pressures that could continue to bear on the dollar now, if on the one hand the Cuba blockade simply maintains tension or if it adds a continuing burden to United States defence expenditure, and so to its balance of payments.

If the stability of the exchange structure is to be defended, therefore, new international defences for the dollar may be needed. And the broad effect they have to take seems pretty clear—agreement, in one form or another, among European central banks not to present for conversion into gold in New York the dollars they are taking from their private citizens. Moves for an agreement of this kind, perhaps embodying standard ratios for the holding of gold, dollars and other currencies in national reserves, had already been mooted before. Mr Roosa's schemes for extending the area of *ad hoc* financial co-operation now become urgent. Under the pressure of immediate events, there can be little doubt that the western central banks will rally round; and the European members of the Paris Club would no doubt do their part to enable the United States to draw up to its whole quota of $4,125 million from the International Monetary Fund if the need were to arise. But if they are to secure the co-operation they want and need, the United States authorities must revise some of their ideas. Defence of the dollar has this year been emotionally charged with a kind of "go it alone" nationalism that now becomes harder to sustain. It is

DOLLAR BALANCE SHEET

		Other holdings	2,540
Total	16,560	Total	19,014
IMF Quota	4,125		

* Short-term dollar balances classed by holder and excluding international institutions.

ironical that a mere month ago Mr Maudling's scheme for international deposits in an IMF mutual currency account, which would in fact admirably serve the dollar's present need, was received with such aloofness by American officials. Now, if they are to induce other countries to hold more dollars than they really want for any length of time, they may well be brought directly to the question of a value guarantee on those balances, so that the helpful creditor is not faced to carry the whole risk.

The United States, for the first time, stands exposed internationally on the political and financial fronts at the same time. The two can, as Britain well knows, interact. Sir Anthony Eden himself judged that perhaps the biggest single influence forcing his cease-fire at Suez was pressure on the pound. The parallel with the Americans' position over Cuba is not close—on the one side the reserve backing for the dollar is itself much stronger, and on the other the reactions of other western countries to their unilateral action is nothing like so hostile. But some financial constraint exists; and to secure the financial support that it needs, the United States cannot be indifferent to the reasonable demands which its supporters make upon it for consultation and co-operation, financial as well as political. In their own interests, the American authorities need to make more gestures in this direction. And they must never show signs of losing patience. Any suggestion that the pressures of policy in the Caribbean might be made the occasion for a gold embargo—and such suggestions are already being bandied about in the markets—have to be immediately quashed. And that means providing convincing alternative arrangements by which pressure on gold, if it grows, is to be met.

Calder Hall to Dounreay

There are signs—small but unmistakable—that atomic energy is coming back into favour

IT is some considerable time since Sir Christopher Hinton, atomic knight turned chairman of the Central Electricity Generating Board, made one of his redoubtable and justly dreaded attacks on the economics of nuclear power stations. In Europe, proposals for experimental atomic plants that have been gathering dust have been taken down from the shelves. Contracts are being discussed in Asia, not only in India but also in Pakistan. The heads of international atomic agencies report a quickening of interest in the countries under their purview. Euratom is beginning to flex its muscles. . . .

This slow thaw is inspired by nothing so firm (or so fallible) as a favourable re-assessment of nuclear power economics. It seems to draw much of its inspiration from an uneasy feeling among electricity producers about the long-run price stability of other fuels. An electricity producer designing a station now has to consider its costs for the 20-30 years that begin in, say, four years' time. He knows indigenous coal prices are likely to rise; he may be unsure about American coal prices if he accepts American forecasts about demand there, even on the best assumptions about freight rates. Oil, today, can be imported much cheaper than American coal; but no company will yet make contracts over as long a term as power station operators might desire, even while short-term forecasts suggest the oil surplus will remain for quite a long time yet. And with OPEC breathing down the oil companies' necks, their customers may well reckon that for the seventies the safest bet is that oil prices will move up into line with those of imported coal.

What does this imply for the generating costs of a fossil-fuel-powered generating station built now? In these circumstances, atomic power seems worth a second look. It is still not competitive if it is measured by the performance of Bradwell or Berkeley in this country and Dresden or Yankee in the United States. Bradwell and Berkeley, for example, look like producing electricity for 1d. a unit against ½d. for a good coal-fired station. But this is not the comparison that counts. What matters is the accumulating evidence that suggests that engineers are getting better at building atomic power stations. This is being proved true in Britain, where ten atomic power contracts have been or are being placed, all for the same natural uranium, Calder Hall type of power station but each showing engineering improvement on its predecessor. And some of these improvements are of major importance, as in the change from steel to concrete pressure vessels. It is also being proved true in the United States, where the equally simple boiling water reactor developed by General Electric has emerged as the only other potentially commercial system of nuclear power, and is gaining great popularity in Europe. The engineering "stretch" being shown by both designs is encouraging and exciting, but the message is that such rewards are open only to those who build atomic power stations and are prepared to learn from their mistakes. This accounts for a tendency among potential customers, particularly in highly industrialised countries, to be less affected by guesses about costs—which can be made very much to taste—and more interested in potentialities for development.

This change of view is not likely to lead to a spate of nuclear power programmes on the British scale—not unless the oil-producing countries strike attitudes that really worry Western markets about the prospective price of imported fuel. But if it leads, as well it might, to a gentle increase in nuclear power station construction across the world and in western Europe in particular, it will expose one of the fundamental weaknesses of nuclear power, as it has been developed so far. This is the fact that engineers, and indeed the scientists whose work precedes theirs, can still offer what is at best only half a nuclear programme.

ALL atomic power stations built today, with the single exception of the Canadian system, produce some plutonium as a by-product. During its life in the reactor, this plutonium ages and becomes partly non-fissile: it is therefore unusable for weapons. But it could be immensely valuable as an atomic fuel—were there any reactor system capable of exploiting its potentiality. No such system now exists; nor is there any certainty that one will be developed. This is why the once-sizeable credit allowed for the by-product value of plutonium in calculating the cost of atomic electricity has since been reduced to a point where it makes a barely significant difference to these cost estimates. So long as any atomic power network is producing plutonium and failing to use it, therefore, it is in the position of oil wells that burn off their natural gas—wasting what could be a golden egg.

The reasons why plutonium is so intractable a fuel compared with uranium are still imperfectly understood. It may be that scientists at the Atomic Energy Authority and all over the world are to be blamed for insufficient effort to tame this man-made material which does not appear in nature and to combine it with uranium as a fuel for present-day nuclear power stations. The Calder Hall type of station does in fact consume a good deal of plutonium as it is produced, and the Canadians are attempting to develop this characteristic to a stage where anything still contained in the spent fuel that comes out of their heavy water reactor will not be worth recovering. This is one feature that makes the Canadian line of atomic development so interesting. But most scientists would answer that only one type of nuclear reactor is suited to use plutonium; this is the "fast breeder," a system on which much work has been done all over the world and of which the biggest working version has been built by the Atomic Energy Authority at Dounreay.

THIS, without doubt, is the most important project the authority has tackled since the last concrete was poured at Calder Hall; and it is many times more difficult and dangerous. Nearly eight years of work have been needed to bring the Dounreay experimental reactor up to power. Design changes put back the date when it could start operating by about eighteen months, and it has taken three years since then to coax and coddle this malevolent little installation from the point of just ticking over up to half-power, giving 30 megawatts of heat (and a bonus of 3 megawatts of electricity as some compensation for past bad behaviour), against its designed capacity of 60 megawatts. The authority has spent £25 million on this reactor and its ancillary services, and is now contemplating another £20 million on a power station prototype.

There are those who see Dounreay as the AEA's biggest folly. But to argue this is to overlook the blunt fact that between 20 and 30 tons of by-product plutonium will have been stockpiled at Britain's nuclear power stations by 1970 and will continue to accumulate from then on at the rate of 5 tons a year—more if more nuclear stations are built. The need to find a way of using plutonium is more acute for Britain and the authority than it is for other countries less heavily committed to nuclear power. The AEA would be open to censure were it not seeking the answer. If one could find a way of using this plutonium, it would do the work of 6½ to 10 million tons of coal, and would be worth between £30 and £50 million.

The next stage will be to incorporate the lessons already learnt at Dounreay (which still works on uranium) in a pilot power station; the present reactor is too small and its design would be wrong for this purpose. But here the AEA's task is complicated by the pace of development on the generating side of the electricity industry. A reactor is basically a special kind of furnace providing heat to raise steam; and although the electricity industry is prepared to tolerate sub-standard steam and generating sets of low thermal efficiency in its present nuclear power stations, it will not do so indefinitely. Nuclear power stations of the 1970s will need to work with the same size of set and the same steam conditions as coal- or oil-fired stations if they are to be competitive.

WHAT size will this be? The answer that the Generating Board has given to the Dounreay designers is startling. The CEGB has advised them to think in terms of reactors that can be matched to 750 megawatt generating sets using steam under super-critical temperature and pressure. This is the kind of advice that evokes a long, low whistle from anyone contemplating the engineering problems of producing a generating set of this size, although it is in line with the trends of the past few years, which have seen generating sets jump in size from a standard 60 megawatts to 500 megawatts. It is also 50 per cent bigger than the 500 megawatt set that the AEA had had in mind as the commercial target for a plutonium-burning power station, and it raises new doubts about the right size of pilot power station that should be built if its results are to be extrapolated safely to a monster 750 megawatt installation. The answer comes out somewhere between 100 and 200 megawatts of electrical output, the equivalent of quite a big modern power station. An undertaking of this size is very different from the AEA's previously modest experiments in electricity generation; and it may well be asked whether the AEA should embark on the generation of electricity on this scale.

But what is the alternative? This is no easy experiment; reports that the Russians are cutting back their work on similar systems suggest the great technical difficulties—and the cost. No other country except the United States has

DOUNREAY DEFINED

The terms **"fast"** and **"breeder"** apply to two different features of the reactor. The first defines the speed of the neutron particles that cause fission: **"fast"** neutrons travelling at up to 14 million metres a second, much the same as the speed at which they burst from the atom, are specially suited for use with plutonium, as distinct from the **"slow"** neutrons of present-day reactors which are deliberately moderated to speeds of not much more than 2,000 metres a second, by the vast quantities of graphite or water put into the reactor for this purpose.

The term **"breeder"** indicates that there is a substantial balance of these neutrons in hand to produce fresh fuel. All reactors manufacture some new fuel while they are running; only the **"breeder"** does this at a faster rate than it is running down its own fuel charge. So Dounreay, over time, would convert, and burn a far greater proportion of the basic uranium ore that is the starting point for all forms of nuclear power than any other system known.

tackled fast breeder design on this scale, and it cannot be seriously suggested that the CEGB could order a fast breeder power station now without going through the pilot stage proposed by the Authority.

The AEA is aiming at a commercially attractive system that could be built for about £70 a kilowatt and would need, in the authority's view, to generate electricity at something less than 0.4d. a unit to be competitive. An initial inventory of 4 tons of plutonium would be required for each 750 megawatt station, including fuel in the pipe-line, which would for some years be provided by the first chain of nuclear stations. By the time these were approaching the end of their useful life, the fast breeders would be producing sufficient extra fuel from their "breeding" operations to provide the initial charge for successive reactors. This is the original British view of nuclear power and still, economically, the most promising. The two types of reactor are complementary—more, they are interdependent. Generation from plutonium may be only a dream. But if it is, Britain will be left with the hind legs of a nuclear programme.

France in Search of a Capital Market

France is planning a larger role for its capital market —but French industry, not America's balance of payments, is the intended beneficiary

FROM A PARIS CORRESPONDENT

WITHIN a few days two official reports have discreetly attracted the attention of specialists to changes in the financial structure in France that are called for in order to maintain the expansion of the French economy. The first of these is the "Economic and Financial Report," which underlies the draft budget for 1963. The second, still confidential, is the report on the execution of the Plan, reviewing the final stages of the third plan (1958-61) and tracing the inception of the fourth (1962-1965).

In the two texts the necessity for "an extension of the *circuits financiers*" (*vide* report on the plan) in order to satisfy "the strong increase in the need for long-term capital loans" (*vide* draft budget) is brought out in very similar terms. There is nothing astonishing in this, since these reviews are drawn up by the same high officials of the *Comptabilité Nationale*, of the Treasury and of the Plan, and all three come under the authority of the finance ministry.

But the coincidence of these remarks has attracted the attention of informed observers—all the more since M. Giscard d'Estaing in a farewell statement to the press after the fall of the Pompidou government slipped in a sybilline remark on the desirability of reform of the capital market.

Why so much persistence, combined with so much discretion, in setting out facts or announcing plans? The answer is not simple; but shortly it is that while the force of events may necessitate an extension of the financial markets, neither the outgoing government nor any of its experts have laid down the internal means of doing so, or foreseen its external repercussions. Hence their discretion over a development which appears to them inevitable.

The pressure to extend the capital market in France, it must be said at the risk of offending the partisans of classical liberalism, does not rest on doctrinal reasons. If Paris currently favours a "return to the past" in the financial field, it is from the pressure of necessity and because international economic competition, as well as budgetary limitations, leave no choice.

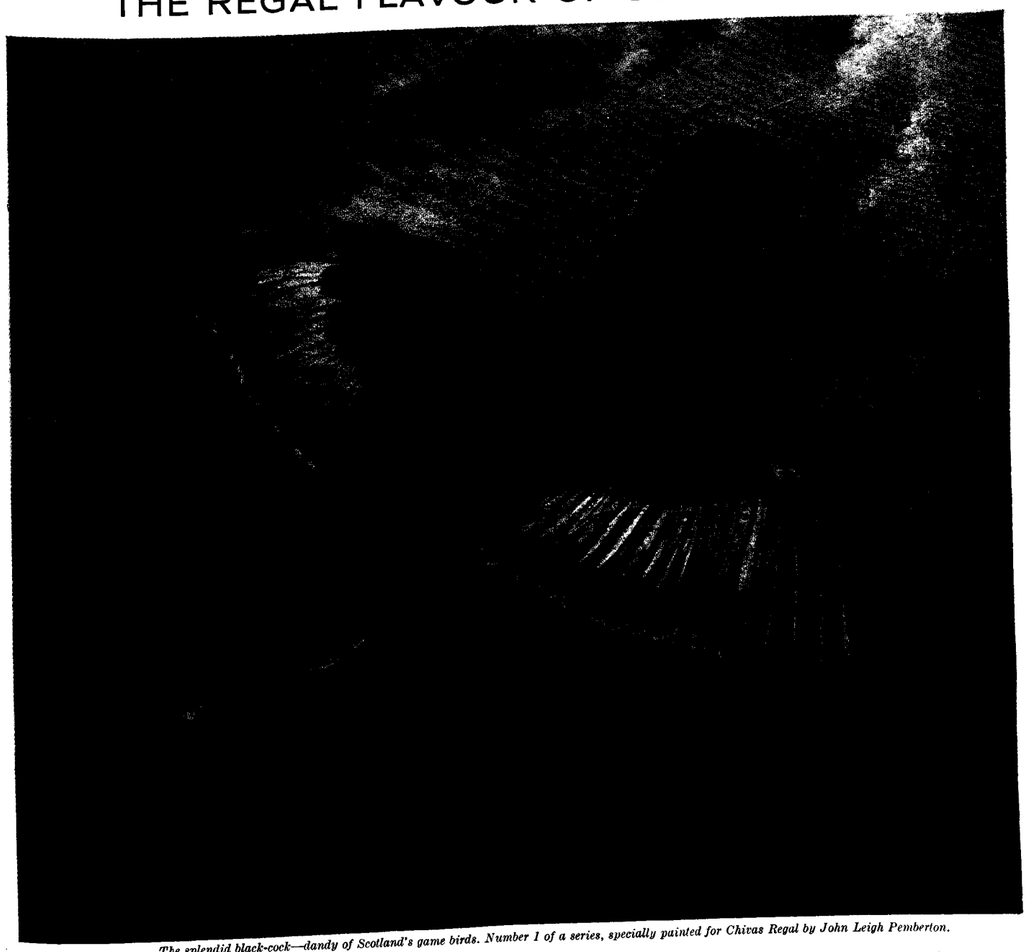
Since the war, investment in French business has for the most part been supplied either internally, by reinvestment of profits, or by official credits. Self financing has generally represented much more than half of business investment and sometimes more than three-quarters. In this respect rising prices, long supported by the inflationary climate, constituted a powerful source and stimulant. The remaining investment funds came, essentially, from state loans—directly through the budget or indirectly through specialised public institutions such as the *Crédit National*, the important *Caisse des Dépôts et Consignations*, and the *Crédit Hôtelier*. This concern, indeed, formed the origin and objective of the French plans after the war: to furnish to the sectors accorded priority the financial means for reconstruction and later for their development. Shortly after the liberation, these public or semi-public loans represented the greater part of the reconstruction resources of undertakings; their share in total business investment has been decreasing ever since.

Now both sources of finance are drying up. Internal financing is suffering from world competition, reinforced by the common market: industrial prices are virtually static while costs are rising, because of increasing wages (at the annual rate of some 9 per cent over the last three years) and of the increasing cost of servicing previous loans. As a result the savings of enterprises actually diminished in 1961, and this year have increased only by 3.5 per cent, at constant prices, against an annual rate of growth in the whole economy of 5.6 per cent.

At the same time, for budgetary reasons, the state is reducing its own investment loans to business enterprises. Unable to finance everything at once—the nuclear striking force and the salaries of civil servants, farmers' subsidies and aid to different forms of investment—it has settled on priority for strictly public investment (such as schools, hospitals, roads, cheap housing . . .) which has meant smaller aid for business investment and even for nationalised industries. In 1962 and 1963, for example, budgetary aid to nationalised undertakings such as coalmines, railways and airports will be lower; and even more severe cuts will be applied to budgetary support for private firms.

Hence these undertakings will have to find elsewhere the capital they require to expand according to the Plan (a national growth of 24 per cent over the next four years). Last year issues of shares provided firms with less than 9 per cent of their investment resources, and fixed interest obligations even less. Including medium-term credits obtained here and there from banking institutions, the financial markets furnished less

THE REGAL FLAVOUR OF SCOTLAND...



The splendid black-cock—dandy of Scotland's game birds. Number 1 of a series, specially painted for Chivas Regal by John Leigh Pemberton.

THE SCENT OF HEATHER . . . the swift flight of the black-cock over the guns. The flavour of such exciting moments is the flavour of Scotland—and so is the splendid taste of Chivas Regal Scotch Whisky. More than a century-and-a-half of tradition shapes the making of Chivas Regal—a skilful blend of Scotland's finest grain and malt whiskies, matured for 12 years before bottling.

Such a superb whisky costs more, naturally. Discerning people gladly pay more. For here you taste the glory of the Prince of Whiskies—that magnificent something extra that's the regal flavour of Scotland.

By appointment to Her Majesty The Queen. Purveyors of Provisions and Scotch Whisky. CHIVAS BROS. LTD., of Aberdeen. Established since 1801.

than a fifth of the capital necessary for business development. This share must now be increased, as the previous sources of finance are drying up.

Dollars too precious . . .

SIMULTANEOUSLY, a similar pressure for a wider capital market arises from the abundance of foreign exchange in France. Formerly so short of dollars, France is now overflowing with them—with $1 billion in dollar balances in addition to $2½ billion of gold. And this is in spite of large-scale repayments of foreign loans; $500 million has already been repaid since the beginning of the year, $475 million in advance.

Everything points to the likelihood that this influx of foreign exchange will continue. The French balance of payments has shown a surplus of the order of $50 million during the first six months of 1962, and it is expected that, in view of the excellent balance of trade, the excess over the year will exceed $1,000 million. Since, however, France's foreign debts now amount to no more than $1,170 million (38 per cent of what they were four years ago), there is no longer much scope for major foreign repayments. What, then, is to be done with all these dollars?

It is not only abroad that this question has been put: France, too, is beginning to wonder about the answer. In a widely noted paragraph of its recent report on France, the Organisation for Economic Co-operation and Development declared:

> The restoring of an important role to the capital market would, moreover, provide greater opportunities for foreign borrowers and enable France once again to play its part as a major developed country in the international financing of investment.

This appears, *a priori*, an attractive idea, since it would reconcile the need of French industry for a more extensive capital market with the wish of other countries to have access to France's external reserves.

. . . to be lightly spent

IT would, however, be wrong to imagine that such a scheme will rapidly come to pass. There are three main obstacles:

(1) It is considered in Paris that the accumulated store of external reserves is still relatively small compared to the American and German reserves: 3.5 billion dollars against, respectively, 16 and 6.5. For a country whose imports—without even counting those of the rest of the franc zone—reach some 6 billion dollars a year, this represents a relatively moderate margin of safety. Though there may be no cause for alarm, neither is there any reason for throwing the dollars out of the window. The "hot money" argument (300 million dollars, it is said in Paris, might disappear at any minute) is there to calm the enthusiasm of the optimists.

(2) A political motive works in the same direction. M. Giscard d'Estaing came back from the meeting of the International Monetary Fund convinced that a prosperous country could make itself heard in international bodies. Why, then, deprive oneself of such an asset so long as the policy of international prestige, dear to the heart of General de Gaulle, requires of French ministers that they make their mark in international counsels? After all, the success of M. Baumgartner, who last year managed to impose his terms on the international agreement finally signed in Paris, proves the efficacy of this technique; better, therefore, to speak of the money one has and promise to lend it in case of need, than risk losing it immediately through the play of a capital market open to all comers.

(3) Finally, and again in the same direction, the *patronat* invokes a commercial argument. France must employ its dollars where they will bring most profit. Repayment of foreign debts, in this view of the industrialist, is not very useful. To risk letting foreigners borrow France's money on a free market is still less so; the loss of investments made before 1914 in Russia is nowhere forgotten. Business opinion advocates, rather, a drive for direct and selective capital exports. France should pick countries where an important commercial effort would be profitable; and it should then utilise its monetary reserves on market research, guarantees of export credits, and public and semi-public loans to responsible organisations in these countries. On this point the industrialists fall in with the wishes of the planners who prefer concerted and concentrated commercial initiatives to the hazards of the market.

All these considerations, although not necessarily admitted in public, make the government reticent about allowing foreigners free access to the French capital market. For the last two years the procedure for both the entry and export of capital has been slightly eased; but there has been no question of altering the general policy of control.

Priorities for the Surplus

FRANCE will proceed only slowly along the road towards liberalisation of capital movements which it is obliged by its common market obligations to take. The only political consideration that might induce a large-scale export of capital would be a direct call for help from the United States or from Britain; but these two countries are now in better financial health.

The order of priorities for the utilisation of the French monetary reserves at the present juncture, as seen in Paris, is more or less as follows:

(a) To continue to repay foreign debts—in advance, if need be—in such a way as to economise on interest payments and, above all, to aid the United States, France's principal creditor.

(b) To participate in international agreements (such as the Paris lenders' club, or the "Argentine club") providing for concerted action to deal with disruptive movements of capital or with the threatened breakdown of certain economies; participation in such agreements is less costly in foreign exchange than direct aid.

(c) To invest capital, in a prudent and selective manner, in countries chosen for the value of the outlets they offer the French economy; the present exhibition in Mexico, after that of Moscow, illustrates this technique. France has indeed just arranged a credit of $150 million to build up Mexico's petrochemical industry.

(d) If surplus funds remain, to allow French reserves of gold and foreign exchange to increase moderately.

In these conditions, how is the government's resolve to create the extensive capital market which French industry needs to be reconciled with the caution that exists about opening the market for external use? Plainly, by maintaining the separation of the market accessible to French borrowers from that open to foreigners.

The French capital market will certainly [illegible] The means will include less resort to loan[illegible] strongest fiscal encouragement to saving; simplification of their strategic and lending procedures. BUSINESS NOTES

Markets all over the world have been dominated by the Cuban crisis this week. On Tuesday, when fears were at their height, market movements were violent, though in most centres still short of panic. Subsequently, as the danger of a conflagration seemed to recede a little, the markets regained their poise. Even so, by the end of the week markets remain tender and sensitive to hour-to-hour changes in the political confrontation.

STOCK MARKETS

Well Short of Panic

In London the stock market showed the classic reaction to an international crisis—a sharp initial fall in prices on Monday and Tuesday, a calmer period of reflection on Wednesday followed by a recovery when the international dangers seemed to ebb a little on Thursday. The speed of the decline earlier in the week when in two days the *Financial Times* ordinary share index tumbled by 13.7 points to 264.4 was partly exaggerated and was out of proportion to the volume of selling. The jobbers cut their prices and widened their quotations right at the outset; but nevertheless, the pressure of small selling persisted, particularly on Tuesday. The falls were widespread but oil shares were among the weakest; while the threat in India rather than Cuba sparked off some heavy selling of Indian Tea shares. At the end of last week equities had been looking much steadier although there seemed little incentive for an upward movement in prices. But as a result of this week's falls *The Economist* indicator over the week to Wednesday was 16.2 points down at 313.5. However, some investors take the view that price levels are already discounting bad news and even before Thursday's rally there had been some "cheap" buying of equities. Others who feel that the fall has been overdone have been taking out "call" options to be exercised in three months' time.

But it has been the gilt-edged market which had risen so strongly before, that has proved particularly vulnerable to the Cuban crisis. Investors were quick to close speculative positions, which had been numerous, and foreign investors in particular unloaded their stocks. On Tuesday prices fell by over 2 points, and by Wednesday medium dated stocks showed losses of up to 3 points on the week and War Loan was 2¼ points down at 59. Thursday saw some recovery. Cuba apart, it was apparent that gilt-edged prices were likely to come under pressure, for the end of the long dated "tap" in Treasury 5½ per cent 2008-12 touched off, as it happened, substantial profit taking sales. The authorities showed no haste to support the market at first on Monday and Tuesday, but later in the day they were prepared to take stock at lower prices. Some of the main speculative positions had been built up in corporation loans and prices fell sharply. The weak market left almost all of the £2 million new Belfast issue with the underwriters. Even in a better market its terms seemed no more than adequate and only 99 applications were received for £112,500 of stock. Issued at 98 with a 5½ per cent coupon the stock opened on Thursday at 2 discount, and closed at 1½.

The European bourses, like London, have been very much the mirror of Wall Street and only Belgium failed to touch a new 1962 low this week. After last week's rally, prices in Germany fell sharply again in response to new fears about Berlin. In Italy the easing of local credit restrictions softened the blow while in France, where business was very quiet, the impact of Cuba was slight. All these markets, however, showed good gains on Thursday.

Wall Street's New Spur?

A New York correspondent cables:

The Cuban crisis ended Wall Street's doldrums with a bang, generating a huge increase in trading volume and big gyrations in prices. The mounting tension on Monday saw the Dow Jones average break through what technicians considered a resistance level at 570, which touched off a wave of selling with the volume reaching 5,600,000 shares. On Tuesday, selling increased, particularly at the close and the Dow Jones index fell over 10 points to 558, with 6,100,000 shares changing hands.

Wednesday's market churned wildly until the last few minutes when a mighty wave of buying, including short covering, took place after the first reports of Mr Khrushchev's readiness to talk. The Dow Jones index jumped over 18 points to 576 and the volume increased to 6,700,000 shares. Weary brokers who had been largely idle for the past few months seemed to think that the revival will continue with considerable buying if Russian ships do not test the blockade—but that a new wave of selling must be expected if they make the challenge. There are still enough uncertainties to justify Thursday's mixed opening.

Although the averages regained on Wednesday all the ground lost in the previous two sessions, the complexion of the market has shifted radically. Oil, chemical, and consumer stocks (including those in the leisure field) were hard hit and recovered only part of their losses. Hard goods issues associated with military spending, like aircraft, missiles and machinery fared well. So did railroad stocks, on hopes of benefit from increased military movements. The depressed steel stocks were also supported as beneficiaries of any advance in military procurement—even Bethlehem and US Steel, though they are expected to cut their dividends. Commodity futures which had been all but dormant attracted renewed interest and a speculative rush ensued for sugar company shares. On the other hand utility issues, including American Telephone, declined steeply, since they might be subject to new taxes and a clamp-down on rate increases if wartime mobilisation should take place.

Institutions which have been shifting partially into fixed income securities were evidently sellers on balance during the first two days, particularly of consumer goods stocks. But individuals were back in the market in volume for the first time since the spring, some forced in because of margin calls and some anxious for liquidity. Technically the market was in a very strong position after Monday's drop since a big short position already existed but fear of a shooting war brought more selling and short selling. The Wednesday rebound was sparked by short covering but it also embraced institutional purchases of issues that had come within their buying range and individual purchases aiming at a quick profit.

Plenty of money is available for investment but there is a good deal of hesitation about making commitments, both on the part of individuals and institutions. Certainly the immediate reaction to the crisis was to dump equities but the quick turnabout suggests that equities may come back into fashion much faster than had been expected recently on Wall Street. The crisis has ended Wall Street's private recession and it could become the spur, as it was during the Korean war, to a new rise in stocks.

EXCHANGES

Sterling Stays Neutral

Seen from the City of London, the outstanding feature of this international crisis has been the mildness of its impact on sterling. It has sometimes seemed in the past that sterling is plagued to bear the burden of any and every international upheaval; it is not so long ago since alarums over Berlin brought the strange accompaniment of sales of pounds in favour of marks. But the impact of a political upheaval on the currency markets, it is now clear, does depend a good deal on the underlying, ex-crisis, influences: what the crisis mainly does is to exacerbate these. That is why, this time, the two main subjects of attack have been the mark and the dollar. The effect on sterling may have been no worse than neutral—there are no signs that the Exchange Equalisation Account lost any dollars on balance on Tuesday and Wednesday. The recipients of the flight money were reduced to those hard core repositories in times of trouble, gold and the Swiss franc. The movement into Switzerland was to a substantial extent out of Germany, and the mark also weakened sharply against the dollar itself to 4.01, the lowest rate since revaluation in March, 1961. But the dollar was being sold against other Continental currencies, as well as against gold. The rate in Switzerland quickly fell to the intervention point of 4.31½. On Thursday, however, came the first signs of an ebbing of the movement out of dollars, which were in demand both in Switzerland and Holland.

This has been an appropriate week for the announcement of two further additions to extensions of American credit arrangements—though both remain on a distinctly modest scale. In Switzerland the United States Treasury has taken loans in Swiss francs equivalent to $73 million from the Swiss Confederation and the Swiss National Bank, for terms of five to fifteen months. These credits, which are distinctive because they are not on a swap basis, are for more than three months and are straight loans in local currency (thus disposing of any complications on exchange guarantees) are presumably designed partly to deal with the maturing of the three months swap arrangement made between the Federal Reserve System with the Swiss National Bank and Bank for International Settlements in July. The Federal Reserve was reported to have drawn $110 million of the $200 million available, but before the latest strain began it had already succeeded in accumulating part of the Swiss francs needed for repayment. The new credit will clearly not be sufficient to repay the remainder and cope with any large new strains. Secondly, the Federal Reserve has now arranged one of its standard $50 million three months swap arrangements in Italy, where the US Treasury had already been active on its own account and had taken up a credit line of $150 million in lire with the Italian Exchange Office. The dollar has nonetheless remained almost continuously at its support point against the lira.

MONEY MARKET

Bill Rate Rises

Pressure on the dollar has led to strong demand for Euro-dollars, as speculators seek to take short positions in dollars by borrowing them and switching the proceeds into gold or Swiss francs. Equally, offers of Euro-dollars have tended to dry up, and rates in London have hardened by ⅛ to ¼ per cent, taking the seven-day rate to 3½ per cent and the three months rate to 4⅛ per cent. No parallel rise has taken place in lending rates on external account sterling quoted in Paris, which have rather edged down a shade, to 4⅜ per cent on three months term.

Nor, although a crisis usually sends hot money spread around the world scuttling home, was there any such rush out of London in the two days after the announcement of the blockade. In the local authority loan market, foreign banks withdrew some small amounts, which were easily replaced by domestic money. The seven-day rate hardened by ⅛ per cent to 4 per cent, but this was put down to end of month influences rather than to foreign withdrawals. Rates for mortgages up to 10 years at 5¼ per cent are still below the Public Works Loan Board rates, even though these were cut for the fifth time this year at the end of last week. Rates on loans up to 15 years were cut by a full ⅜ per cent to 5⅝ per cent, and on longer loans by ¼ per cent to 6⅛ per cent. However, the sharp turn in the gilt-edged market has now narrowed the differential between gilt-edged yields and local loans.

Lombard Street itself felt no constraint from the international crisis. It took a full day for the activity in other London markets to work through to the money market; and on Wednesday the previous day's selling of gilt-edged and equities produced a surplus of credit which continued into Thursday. Rates on call loans by clearing banks fell to the minimum of 3½ per cent, while outside funds were offered at as little as 1 per cent in some instances.

The Treasury bill rate, by coincidence, had already begun to move up at the tender before the Cuban flare-up. The syndicate of discount houses recognised that there was little chance of a further reduction of Bank rate in the near future and reduced the common bid by 8d. to £99 1s. 3d. per cent, so that the Treasury bill rate rose sharply by ⅛ per cent to just under 3¾ per cent. With its average money cost at around 3⅜ per cent the market is once more earning a profit on bills, though it has suffered some sharp reverses in bond values from this week's setback. Even so the bond book must still look good. While the international situation remains tense any reduction in Bank rate is clearly less likely, and a rise cannot be ruled out. The feeling in mid-week was that the Treasury bill rate would again rise on Friday.

COMMODITIES

No Blaze

Commodities have been living so long with their own worries that they seem to have lost their quickness of response to crisis. Certainly, the blockade announcement put commodities better but did not set the markets ablaze, as the table below shows:

	Jan. 2nd	Oct. 18th	Oct. 23rd	Oct. 25th
Copper	£229	£234	£236	£234
Tin	£947	£857½	£862	£860
Wolfram	104/–	80/–	80/–	80/–
Zinc	£72	£67	£69	£68
Sugar	£21½	£27	£29	£29½
Rubber	24d	23½d	24½d	24d
Jute	£128	£107	£107	£107

Metals as a group show the strongest gains, which is natural given their strategic importance; but only copper, which has been so long depressed, shows any advance over the beginning of the year. Other commodities have responded even more calmly. But sugar, with its special Caribbean connection, has risen by £2 10s. to £29 10s. All commodities after showing an entirely predictable panic increase on the day after the ultimatum, were quickly checked as

speculators took their profits and hed edgy down, though markets have ...ew days of the and erratic. ... threat of full-scale

Compared with ...g, this week's reactions Korean war, ...ered by the present sur- war sent most commodities. When the have ...ar began commodities were scarce. ...read, tin and zinc more than doubled ...r price; rubber increased by more than three times. Suez was on a smaller scale, and less likely to lead to a world war. And the succession of little crises since have moved the markets so little that perhaps only the threat of a total war could jerk them out of their preoccupation with surpluses and stockpiles.

SHIPPING

Freight Rates Unaffected

THE "quarantine" had no immediate effect on tramp shipping freight rates. Nor was any to be expected, so long as the cargoes affected are purely military, for arms and missiles would not be carried except in Russian flag ships. In the longer term a tense political and quasi-military situation could lead to a build up of stocks of food and raw materials as happened in the Korean war and the Suez Canal crisis. A sharp rise in commodities could be followed by a sympathetic rise in freight rates, but the large cushion of laid-up tonnage will tend to minimise any increase in voyage rates. Any general effect on freight rates would probably first be noted in an increase in long-term time charter rates.

Certain British shipping firms have ships on charter to Russia, notably Mr Mavroleon's London and Overseas Freighters, some of whose tankers have been used to move Soviet oil to Cuba. Other British ships have been trading to and from Cuba during the year. There is little likelihood that any of these, including the freighters on long-term charter to the Russians, will have been used to move "offensive military equipment." But if the American ban were widened to include materials of strategic importance, oil could easily become involved. And all these vessels will be affected by the other restrictions on shipping to Cuba that the United States has lately been discussing with other shipowning nations.

Marine insurers' reaction to the blockade was swift and involved an amendment by the war risks rating committee of the Institute of London Underwriters to the war and strike, riot and civil commotion shipping risk schedules for Cuba. Until now the basic rate for cover on Cuban cargoes has been 9d. per £100 but now the rate is "held covered," which means that there is no fixed rate, and that ships will have to negotiate rates independently.

THE ECONOMY

Employment Dips

THE most up-to-date economic indicator of what is happening in Britain's economy shows that unemployment rose more between mid-September and mid-October than between any other monthly unemployment counts since the upward drift started in June, 1961. In the five weeks to October 15th the number wholly unemployed rose by 48,000 although the usual seasonal increase is only about 26,000. Vacancies have continued to get fewer and the seasonally adjusted series showed that by October there were five unemployed for every two jobs on offer.

Although unemployment in Britain has been rising almost continuously since the middle of last year, apart from seasonal fluctuations there has not been much change in the figures of people actually employed. Gradual expansion of the working population, that is to say, has been largely offsetting the increase in numbers unemployed. It is much less easy to allow for seasonal variations in employment than in unemployment, owing to revision of the basic figures, which are estimates. But it looks as if there was a small dip in employment at the end of last year; and between August and September it may have gone down more than seasonally again. At any rate, between mid-August and mid-September the numbers employed fell by 20,000; and for the first time this year there were fewer people employed than a year before. In manufacturing industries

THE MANPOWER SITUATION
(Employment, Thousands)

	Nos. at mid-Sept., 1962	Change since end-Sept., 1961
Engineering and electrical goods	2,172	− 9
Vehicles	888	−13
Metal manufacture	603	−26
Shipbuilding & marine engineering	230	−13
Metal goods	563	− 7
Chemicals	526	−10
Textiles	811	−29
Clothing and footwear	588	+ 1
Food, drink and tobacco	858	+11
Other manufactures	1,672	+ 2
Agriculture, forestry, fishing	950	− 7
Mining and quarrying	708	−18
Construction	1,626	+ 3
Gas, electricity and water	390	+ 7
Transport and communication	1,683	− 7
Distributive trades	3,332	+ 3
Financial, professional, etc., services	5,165	+89
National and local government	1,283	+11
TOTAL civil employment	24,048	−12

as a group, the decrease over the twelve months was 93,000 or 1 per cent. This was nearly balanced by the increase in employment in the financial, professional, scientific and miscellaneous group of service industries.

BANK CREDIT

Freedom's Prize

BANK advances have responded immediately to the ending of official credit restraint. In the four weeks to mid-October —a period for which there has been no clear seasonal trend in recent years—net advances rose by £44 million, compared with a fall of £34 million in September and £3¼ million in August. The October period covered both the release of a further £75 million of special deposits and, on October 3rd, the end of the remaining restraints on bank lending. Since the latest figures cover only two weeks of freedom they seem to confirm that there were a number of proposals on the banks' books merely waiting for the removal of the restraint on property, personal, and hire purchase lending. Whether or not this rise in borrowing also contained a significant industrial element is less clear, but the banks hint that engineering had been prominent among the new borrowers. However there is no clear reason why industrial borrowing should suddenly revive when it has been free of restraint since last May.

LONDON CLEARING BANKS
OCTOBER 17, 1962

	£ mn.	%	Changes on: Month £ mn.	Year £ mn.

(To State Boards)	58		+ 3	− 4

* Excluding all items in transit, except ratio of advances to deposits; all other ratios are of gross deposits.

After the previous release of special deposits in May the banks became heavy buyers of gilt-edged, taking up £74 million in the five weeks to mid-June. This time the banks once more entered the gilt-edged market in strength and took up a further £84 million. A good part of this increase was certainly in the new issue of Treasury 4 per cent 1965 stock which was oversubscribed at the beginning of this month. The ratio of investments to gross deposits is now 17.1 per cent compared with a low point of 13.9 per cent in July 1961.

The rise in both advances and investments was sufficient to reduce the liquidity ratio slightly, from 33.7 per cent in September to 33.5 per cent. The banks feel that, although this figure is well below last October's 35 per cent, it is nonetheless about right for this time of the year. The Westminster has been particularly active this month, accounting for a quarter of the total

Caerphilly Castle was built in 1267 by Gilbert de Clare. This large and extremely strong castle was equipped with the most elaborate defence system of any fortress in Britain, and was so scientifically constructed that it was impregnable. It was the fore-runner of the concentric type of castle known as the "Edwardian".

Symbol of Security

Over the centuries the castle has represented strength and security to those dependent upon its protection. In modern times the Alliance castle symbolises the same qualities which are just as important now as in the past.

With almost a century and a half of experience in insurance the Alliance offers you an extensive service, expert advice on your individual needs, and prompt and generous settlement of your insurance claims.

Bankers to the Government in: ADEN · KENYA · UGANDA · ZANZIBAR

increase in investments and nearly half of the rise in advances. As a result its liquidity ratio at 31.2 per cent is the lowest of all the clearing banks.

OVERSEAS TRADE

The Largest Market

THE full figures for Britain's trade in September issued this week show that half of the increase of £16 million since August in exports (seasonally adjusted) went to the sterling area, mainly to New Zealand and India. Over the full third quarter, however, exports to the sterling area were 4½ per cent lower than a year earlier. Exports to the Common Market, in spite of another slight decrease in September, were still 21 per cent higher than last year in the whole third quarter and exports to all Western European countries were up 15 per cent. A notable landmark was that for the first time, over a full quarter, exports to Western Europe exceeded those to the sterling area.

On a commodity classification, the recovery in exports in September was due mainly to increased deliveries of road vehicles, bringing the third quarter average up to the level so far maintained this year and well up on last year. Machinery and instruments also made a good recovery in September and the third quarter total maintained the high level reached in the second quarter. In this category during the last six months office machinery (£17 million) and machine tools (£21 million) show impressive increases over last year. Deliveries of ships and aircraft have been as erratic as usual. After a rise in the second quarter these fell again, bringing the nine months' total for ships to £28 million compared with the exceptionally high total of £73 million in the first nine months of 1961, and for aircraft to £31 million compared with £49 million.

One of the most notable features of the third quarter was the increase in exports of refined oil: in the first six months their value was 13 per cent above the same period in 1961, in the first nine months it was up 26 per cent. Most of this increase went to the Netherlands and West Germany; comparing the first nine months of 1962 with 1961, exports of fuel to these two countries have more than doubled. At the same time, there has been a matching increase in imports of fuel, particularly crude oil from Kuwait.

Total imports in September were valued at £376 million, seasonally adjusted, £11 million lower than in August. Food imports have been at a high level for most of the year but now appear to be past their peak. The seasonally adjusted value in September of £128 million for food, beverages and tobacco was £10 million lower than in August.

Imports of basic materials, having been falling in value since their peak at the beginning of 1961, rose slightly in the third quarter. The value of goods imported for further processing has also remained well below the first quarter of 1961, but in the last two quarters it has started rising again. Manufacturers ran down their stocks of materials and fuels in the last quarter of 1961 and the first half of this year. The rise in imports of industrial materials may be a portent of the figures, yet to be published, of stocks at the end of September.

MOTORS

Better for the Big Two

CAR production in September was twelve per cent higher than in August, reaching 26,390 a week, which made it 30 per cent higher than a year before. The British Motor Corporation and Ford both made more cars: Ford's output had been affected by a strike in August, but September was a strike-free month for this company, so that it was able to increase production by about 1,400 a week—half the total increase. BMC's output seems to have risen rather more than Ford's, perhaps as much as 2,000 a week; the smaller companies would seem to have cut production—notably Rootes, which went onto a four-day week in October, and Vauxhall, which was changing its six-cylinder range. The reason for the contrast in fortune presented by the bigger companies is, for Ford, simply the Cortina; with the launching date September 22nd, it was anxious to make as many as possible last month—and indeed still is. Only a part of BMC's increase in output, however, seems attributable to the introduction of the 1100; there was also a rise in output across the whole range, as the company sought to increase stocks that were, for some models, inadequate at the end of the summer, and to meet export demand.

Exports recovered from the holiday slump in August, but they remained about ten per cent below the level they had maintained during the first seven months of the year. Europe continued to be the best market, with shipments to the United States and Canada falling slightly as a result of the disappointing sales there this year. Orders reported from the Motor Show this year for next year's shipments to America are generally smaller than last year's—which in many cases have proved greater than demand justified and so have not been fully taken up. But with sales in Europe continuing high if unprofitable, and likely to be stimulated by the new small cars, the industry is more confident about its prospects abroad than at home. The total for this year should not be very far behind the 570,000 exported in 1960.

HIRE PURCHASE

Looking for Trouble

THE members of the Finance Houses Association have decided to modify their voluntary "Code of Practice" by reducing the minimum deposit they accept on new car business from 25 to 20 per cent. There is, however, a proviso: [illegible] deposit will be available only for the more trustworthy customers. This means that for these people the FHA rules are now the same as the statutory minimum—20 per cent down and 36 months to pay.

The reason given by the FHA for this relaxation is that many members found that they were turning away customers who, while of "outstanding creditworthiness," could not find the necessary 25 per cent for the deposit. There seems little doubt that the move is designed to improve the competitive position of members as against non-members—the smaller finance houses and self financing motor dealers—who are reported to be increasing their share of a market that has conspicuously failed to expand despite the many predictions to the contrary.

With the losses and lessons of the past in mind there are a number of questions that the FHA members ought now to be asking themselves. How do they intend to discover who is and who is not a first class credit risk while their proposal forms are still as sketchy as ever and their credit rating service is still in its infancy? As it is, the people on whom they do have credit information will probably be trading in an old model, worth a good deal more than 25 per cent of the purchase price of a new car. Paradoxically about the only guide that the finance houses have to a customer's creditworthiness is the size of the deposit he is willing to put down. Equally, now that the banks have relaxed their squeeze on personal loans, anyone who is "exceptionally creditworthy" can probably get the money he needs at a lower rate of interest from his bank. Even so, are the FHA members sure that they will be able to confine this lower deposit to selective cases? Dealers are not going to like losing potential customers because they are forced to say: "Sorry, but your creditworthiness will not permit a 20 per cent deposit," knowing full well that the customer will go down the road and get the very terms he has just been denied. But most important of all, if on past experience the FHA was right in deciding that 25 per cent was the lowest possible deposit compatible with safety, then the smaller companies taking business on 20 per cent deposits are heading for trouble. So why join them?

This is not to deny that finance houses ought to be selective in their dealings with hirers, basing terms and charges on the client's credit rating. They should be; but they cannot hope to be, with any success, until they have established an efficient credit rating system. Until then the big national companies will always be undercut by the small local companies with an intimate knowledge of the area in which they operate, and the big companies should not try playing a game the smaller companies are likely to win.

flying 70 miles up, at staggering speeds . . . but headed for its destination with pin-point accuracy. For this is an airliner of tomorrow, non-stop to Tokyo in a smooth 90 minutes. Aircraft on the drawing board today will tomorrow be switchbacking in and out of the earth's atmosphere. For them, conventional navigation methods will not be accurate enough. *For them, tomorrow's answer is Inertial Navigation.* Ferranti are currently working on this project—and already a prototype has been successfully flight-tested. Three ultra-sensitive instruments register movement—sideways, forwards, up or down. They're housed in one small cylinder, with miraculously precise gyroscopes to keep them level with the earth . . . entirely self-contained, unaffected by any outside influence. And a computer translates their signals into exact navigational information . . . even at orbital speeds.

Ferranti, in fact, know exactly where they're going in the air. Airpass, for example, is theirs—the astounding tracking, guiding, hunting, aiming system that squats in the nose cone of R.A.F. fighters. Advanced helicopter instruments are theirs. Apollo, the computer that will control Prestwick Airport's entire transatlantic traffic, is theirs. And these are only a few of Ferranti's contributions to the times we fly in. For Ferranti, tomorrow is very much a matter of the moment.

COTTON

Advice on Parting

Good advice is something the cotton industry never lacks, even if it seems able to resist it as well as a silicone-proofed (cotton) raincoat can repel rain. Lord Rochdale, who has just ended five years of proffering good advice in his capacity as chairman of the Cotton Board, gave the industry a parting homily at the board's annual conference last Sunday. The industry should, he told it, be concentrated into fewer, vertically-integrated firms, so that the producing sections should be in close enough contact with the customer to be better able to influence or adapt themselves to changes in demand—and to avoid some of the present violent fluctuations caused by adjustments to stocks. What Imperial Chemical Industries thought would be good for it should be good for the cotton industry, too. But vertical integration, successful though it has proved in some cases, is only a means of increasing resilience, not of ending the bumps ; and it places a greater strain on management, probably Lancashire's weakest point. It would give the greatest benefit to the industry if it brought in some new, commercially-hot blood from the consumer end of the business.

Re-equipment is what the industry has most been urged and bribed into doing, and Lord Rochdale was able to report that the final total of applications for aid under the Government's present scheme has reached £116 million, much more than expected—though actual outlay has so far been only £18.3 million, and if the equipment is to be installed before the scheme ends in July, 1964, it might already be too late to place orders. So the Government's commitment in subsidy may prove substantially less than the £29 million that an investment of £116 million would involve.

Fear of imports is the excuse the industry has offered for postponing re-equipment, just as it has been used to justify most other weaknesses it shows. Lord Rochdale does not feel much sympathy for this attitude: he told the industry that those who predicted the destruction of the industry by a flood of imports were themselves contributing to its downfall, and that such activities put cotton in a needlessly unfavourable public light. But the complaint of uncertainty at least no longer holds, until the end of 1965 ; the Government has assured the industry that if Pakistan continues to refuse to limit its exports voluntarily, it will impose a limit on them similar to that accepted by India and Hong Kong. Imports from these three countries will continue to be subject to the present ceilings for cloth and made-up goods, while yarn imports cannot exceed those in 1961.

AIR UNION

General de Gaulle Votes 'Yes'

Paris

General de Gaulle has finally handed down his decision. After long months of doubt and hesitation, the French government has agreed to France's joining "Air Union." Air France and the private French airline TAI-UAT will be joining the Belgian airline Sabena, the German Lufthansa, and the Italian Alitalia airlines. These four, all of whom supported the Air Union idea from the beginning, have decided to pool their receipts and their running expenses, and pursue a common commercial policy. And, most important, they have decided to allocate shares in traffic on the basis, not of current business, but on forecasts for 1970, in order to allow for growth of the "junior" associates, Alitalia and Lufthansa.

In finally giving the green light, the French Government has introduced an important "European" modification in the initial scheme ; it has stipulated that what began as a purely commercial organisation shall be fitted into a political framework—that is to say, a body that will contain representatives not only of the airlines but also of the member states. The necessary diplomatic negotiations to set up this quasi-Civil Aeronautics Board are not likely to cause difficulties and Air Union may therefore see the light of day in a few months' time.

It may come as a surprise that since Air France was to play a leading role, and since the institution of Air Union was in line with the French "European idea" it has taken four years to put this scheme into effect and that the most obstinate objections have come from the French government. In fact, these hesitations have sprung from two sources. First, Air Union has been opposed by those who sincerely fear that so powerful a group will override the individual states and dictate a European air transport policy which will take no account of other obligations. The creation of the European "CAB" stipulated by France is designed to appease these doubts.

But it does not see that this political argument played anything like so large a part in holding up agreement as quarrels between Air France and the French private airlines.

France's air transport network is divided between internal, North African, and purely international traffic in varying proportions and with unequal commitments and obligations. On internal flights, the creation of a joint company by Air France and the railways, with a monopoly of scheduled air services, has solved possible friction between them. All that is left for the private airlines is charter work. Over the rest of the network, however, Air France and the private airlines (TAI and UAT who have since merged), meet and compete with varying success. Air France, the national carrier, is obliged to undertake commercially unprofitable services with North Africa and in the world at large, while TAI-UAT, on the contrary, can limit its network to commercially attractive routes.

Participation in Air Union seems to have been a way for French private interests to buy a share in Air France's traffic. Agreement seems finally to be taking shape on an allocation which will exclude TAI-UAT from the international scheduled traffic and bar Air France (at least partially) from traffic with or within North Africa. In short, thanks to Air Union, private airlines have swopped uncertain routes for an established network.

It is true that there is no guarantee that the French flag will long retain the African monopoly. It is also true that the losses Air France will sustain from giving up these routes will be offset by the better general distribution of business which its entry into Air Union should afford.

DRUGS

End of the Road

Distillers can be shedding few tears over the sale of its drug- and antibiotics-making subsidiary, Distillers Biochemicals (DCBL), to Eli Lilly, the American drug company. Not because of the difficulties which thalidomide caused for the company—though that must be hard to bear—but because it was a poor investment for Distillers and would almost certainly have become worse. DCBL's main products are antibiotics based on penicillin and streptomycin, both of which it makes ; it also makes vitamins, animal feedstuffs supplements and a small number of other drugs. Eli Lilly has been established in the UK since 1934, mainly as a compounder of ethical drugs. The acquisition, if approved by the Treasury, will give it antibiotics manufacturing facilities and research laboratories.

It is becoming increasingly hard these days for small drug companies to survive. While they may valiantly spend large proportions of their incomes on research, the amount of money (hence the amount of research carried out) must be small, and the chances of discovering commercially-successful drugs and fully exploiting them even smaller. Eli Lilly spent £8 million on research last year ; Distillers spent £2½ million, of which only a small part was on drugs. On this count alone, DCBL might be a candidate for swift extinction unless it carried a steady line of proprietary medicines—which it does not—or managed

to get a licence for some vital new one. It did, but what it got was thalidomide.

It was doomed twice over: it was too small, and it made the wrong products. Distillers went into drug-making in 1945 at the invitation of the Ministry of Supply. Its experience of fermentation processes made it an obvious choice to run the penicillin factory at Speke which, in 1947, it bought. Later it made streptomycin, by a similar process, and these have remained its two main products. By the mid-fifties penicillin manufacturers, their numbers enormously swelled, were in trouble: in 1947 the price of penicillin was 13s. 4d. a mega unit, 4s. 4d. in 1950, and 1s. 9d. in 1954. At the moment it is 1s. 0½d. DCBL contributed less than 1 per cent to Distillers' profits last year. It is unlikely that it will be much missed.

GREEK BONDS

Prodigal's Return

THE agreement between the Greek Government and the Foreign Bondholders Protective Council of the United States on Greece's pre-war dollar debts should mark the prelude to a settlement with other debtors—and, one must hope, the end of a vexatious question that has often proved more of an embarrassment to the British and American Governments than to the Greeks themselves. Until last week Greece was the only non-communist country not to have reached some agreement with the holders of its pre-war external debts. This put Greece completely out of court as far as the World Bank was concerned, and although a number of individual countries relented and advanced money to Greece—the common market countries agreed in 1961 to advance $125 million over five years—the British Government has stood firm and last July refused to join a Greek aid consortium set up by the Organisation for Economic Co-operation and Development.

The Greek Government stopped payment on its external bonds, amounting to about £70 million ($190 million) of which perhaps half is thought to be held by Greek residents, in April 1941, and the accumulated interest payments now stand at around £80 million. The agreement with American holders covers $36 million, or 19 per cent of the total external debt. The actual issues involved are the 7 per cent Refugee Loan, 1924, the 6 per cent Gold Stabilisation and Refugee Loan, 1928, and the 4 per cent (formerly 8 per cent) Waterworks Gold Loan, 1925. Under the New York agreement, the face value of the bonds remains intact but the gold clause provision has been abolished. Interest repayments will begin next year starting at 2 per cent on the 6 per cent bond, 2.35 per cent on the 7 per cent bond, and 1.34 per cent on the 4 per cent bond. The rates will increase gradually to reach a maximum of 3 per cent on the 6 and 7 per cent bonds and 2 per cent on the 4 per cent bond by 1967. About $51 million of the $55 million of interest arrears on the dollar loans will be annulled and the balance capitalised on the surrender of dividend coupons for the years up to 1962. The holder of a $1,000 7 per cent bond, for example, will receive an additional bond of $136.

The bonds will no longer carry a fixed maturity but will be redeemed through a sinking fund over 42 to 45 years. The sinking fund may be used either to purchase bonds in the market or to redeem them at par. At the moment this is a temporary agreement and the Greek Government has the right to convert it to a final settlement any time before July 1, 1967. If other holders of Greek external bonds manage to negotiate more favourable terms, then such terms will be extended to the dollar bonds.

It is laudable that the Greek Government should wish to rehabilitate its international credit standing but the method used was not the best and fairest. Such negotiations ought to be on a multilateral basis with all debtors. Sterling bonds, amounting to some £55 million, form just under 80 per cent of the pre-war external debt, and although relations between Greece and Britain were erupting over Cyprus when negotiations with the Americans first began five years ago, there was little excuse for not bringing in British bondholders at a later stage. As it is, the Council of Foreign Bondholders now expects to be presented with a *fait accompli* with little chance of negotiation.

It so happens that on this occasion it may not matter too much since the terms are much the same as the British Council of Foreign Bondholders had been expecting for some time. However many investors were expecting something a little more generous and their announcement brought a sharp fall in the price of Greek bonds in London. Anyone getting ready to howl in protest at the terms should remember, however, that the Greek Government has decided to settle its domestic public debt at a mere 5 per cent of its nominal value.

GERMANY

Herr Krages Baulked

Düsseldorf

HAS the tide turned against Hermann W. Krages, the timber merchant of Bremen who, up to now, has enjoyed the reputation of being one of Germany's most successful stock exchange speculators?

With good instinct and boundless optimism Herr Krages began, soon after the German currency reform of 1948, to buy shares at a time when the shadow of dismantling and decartelisation still hung over German industry, when everybody else preferred to hoard goods, and when shares were sold at ridiculously low quotations. The steady rise of all shares in the [illegible] showered enormous profits on him, which remained exempt from any taxation owing to the German system that makes profits from speculation tax free if the shares remain for at least six months in one portfolio. But the dream of his life, to enter the charmed circle of the captains of German heavy industry on the Ruhr, was not fulfilled. In a series of lawsuits he fought in vain against this closed circle which, often by legally doubtful amendments to company statutes, foiled his attempts to get control of one of Germany's biggest concerns, the Gelsenkirchner Bergwerks AG.

Krages therefore shifted [illegible] interest to other sectors of the stock market. But the steady slump on the stock exchange in recent months seems to have brought him into difficulties. It was known that his share portfolio was considerably burdened by bank credits which, in May, 1962, were estimated at about DM 200 million. So every time sales on the exchange became hectic, rumour had it that Krages had to sell to reduce his obligations—usually followed by a *dementi* from him. But in the course of last week, he admitted having parted with two big packets, his shares in Chemieverwaltung and of Gelsenkirchner Bergwerks. The Dresdner Bank's name appeared as buyer.

But the more details of this transaction that became known, the gloomier the picture became for Krages. In the summer of 1960, Chemieverwaltung stood at 1,100; but Krages had to sell at 225, the lowest quotation for many years. So it can hardly be denied that Krages had to sell under pressure and that the Dresdner Bank, as his main creditor, was in a position to turn the screws somewhat.

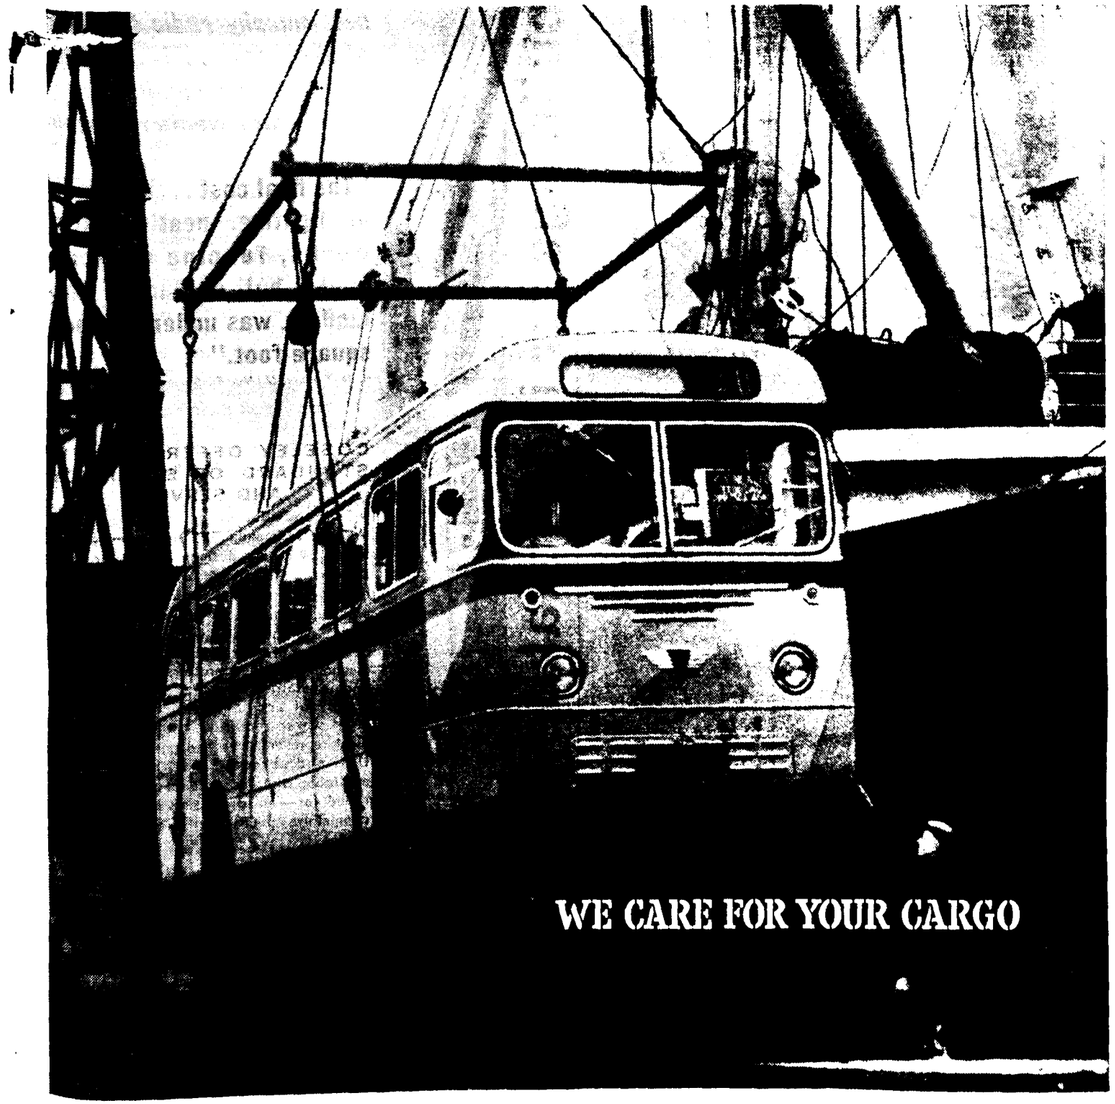
The Krages case is certainly no second Schlieker case. The timber merchant is far from being ruined, and his personal fortune still enjoys a rather high estimate. But another of Germany's most sensational success stories in the field of the "economic miracle" has run into an anti-climax.

AIR FARES

End in Sight

Chandler, Arizona

THERE were signs, as this issue of *The Economist* went to press, that the international meeting on air fares was about to end, unhappily and inconclusively. The private vendetta that Pan American and the Scandinavian SAS have been conducting against Icelandic Airlines, a non-member of the International Air Transport Association which runs cut-price piston engined services across the Atlantic, may yet win North Atlantic passengers a reprieve from the proposed 5 per cent increase in return fares, simply because at least three other North Atlantic airlines refuse to go along with the Pan American-SAS proposal for an "open



Any more fares please?—
well, not just yet, but this bus was one of a large consignment built in this country and safely delivered by Harrisons in Trinidad.

EXPAND WITH COSELEY BUILDINGS . . . AND SAVE

ie., uncontrolled, rate for piston powered aircraft on this route. Should these two airlines feel strongly enough about Icelandic competition to throw the book at IATA, an interesting situation could develop. A failure to reach unanimous agreement on any set of routes means, theoretically, that all existing agreements lapse and airlines are free to charge what fares they like. In practice, governments step in to freeze rates at whatever happens to be their existing level, as the airlines well know when they try this ploy. But if PAA and SAS promised to restrict the free-for-all to piston aircraft, might they this time get away with it? It looks very much as if they intend to try, unless the IATA Director General, Sir William Hildred, can find an acceptable compromise formula.

Not all Sir William's diplomacy has been able to get agreement on freight rates. In spite of the tremendous boost given to freight traffic by the new low rates introduced last year, airlines are still stubbornly pressing for an increase. Discussions at Arizona have suggested an increase of about 2s 2d a kilo on the present rate of 15s 9d a kilo for small shipments between London and New York, with progressively smaller increases for larger consignments, tailing off to an extra 2d a kilo on half-ton loads. But airlines like Air France were protesting with such vehemence during the week that "breakpoints [for large consignments] were still too high and rates too low generally" that the only certain fact to emerge from Arizona is that freight rates will go up, leaving a second conference to decide by how much.

REFRIGERATORS

France Seeks a Safeguard

TURMOIL in the French refrigerator market, discussed in an article in *The Economist* last week, has now reached a stage where the French government is considering the "isolation" of its internal market from the European common market as a whole. This would be possible under an article of the Treaty of Rome which permits such a safeguarding escape clause from common market obligations where imports are accepted to be leading to a "substantial disruption" of any country's home market and industry.

France's main complaint seems to be against Italy, from which large numbers of refrigerators have of late been imported, some of them to be sold under French trade marks. The industry appears to have persuaded the government that these imports now amount to dumping; the government is investigating this, and may seek to invoke the relevant article of the treaty.

Refrigerators are not the only products that France argues are nowadays being sold in its home market by foreign firms at lower prices than these producers sell them at home. France is already complaining about British steel exports at low prices, and apprehensive about the possible inroads of British coal when Britain joins the European Coal-Steel community. Industrial countries everywhere are encountering the fact that for highly-capitalised industries in markets enjoying some degree of protection dumping, to some degree, becomes entirely logical behaviour. Everybody does it; it is only when higher tariffs in one country than another make it difficult for the dumped-upon to retaliate that the protests and calls for government action begin.

ENGINEERING

Flattening Out

THE engineering industries saw a slight increase in orders from the home market during July and August compared with the earlier part of this year, but export orders were rather lower. Home orders remained four per cent lower than a year before; with export orders down by about one per cent, there was a fall of three per cent in the total orders received. Deliveries continue to be higher than last year, though the increase was less than two per cent: exports were eight per cent higher, but deliveries to the home market were unchanged. The result was that the industry's order book continued the slow if unsteady decline that has lasted since May 1961, when the boom in home orders passed its peak; it is now two per cent smaller than in April this year, but as big as it was last January. So the investment recession seems, so far as the engineering industries are concerned, to be proceeding in slow motion. And the cushion of orders on hand still seems fat enough to maintain output at its present level for some time to come.

WAGES

Regional Differentials

FOUR weeks ago in these columns some new figures were discussed of men's actual wage earnings in individual industries region by region. The Ministry of Labour has now combined the results to produce figures of average regional earnings. The table shows that in April this year in manufacturing industries as a whole men in the

London and South-Eastern region earned about £2 10s. a week more than those in Scotland and over £4 a week more than those in Northern Ireland.

SHIPBUILDING

Touching Bottom

THE British shipbuilding industry can hardly see demand fall lower than it did in the third quarter of this year: the orders it received amounted to only 34,000 tons, compared with launchings of 307,000 tons, and orders for 160,000 tons in the same quarter of 1961. Though the order book of British shipyards still totals 2,147,000 tons, it has dropped 650,000 tons in the past year, and according to the Shipbuilding Conference some yards now have no orders and others are working on their last contracts. Only 840,000 tons of the total order book remains to be started, with 798,000 tons on the berths and 526,000 tons fitting out. So if the present rate of ordering continues the industry will come virtually to a standstill during the next year or so. And with the demand for shipping remaining so depressed, there seems little prospect that shipowners will feel inclined to order heavily, least of all from a country with a reputation for slower building than most of its rivals.

One attempt to meet these objections to building in Britain has already been made by Swan Hunter, which introduced its first standardised 10,000/12-000-ton freighter last summer and has now followed it with a standard bulk carrier of 22,000 tons. Cammell Laird is working on similar lines but more ambitiously: it now offers six standard designs, ranging from a 3,150-ton short-distance freighter to 56,000/57,000-ton tankers and bulk carriers. Its prices for these ships will, it says, be substantially lower than those for a custom-built vessel and comparable to those quoted by Japanese shipyards, while buyers will be offered up to ten years in which to pay. Bold measures like these, made possible by modernising shipyards, should at least allow British companies to fight for a share of the business available; but when there is so little to get, in the short run the fight may avail them little. Swan Hunter has received no orders for its standard freighter, though many shipowners have shown their interest in it.

CHEMICALS

Optimism in Spain

ONE *firm* plan has at last emerged from the tangle of rumour that surrounds INI's (Instituto Nacional de Industria) refinery project at Puertollano. ICI has agreed with the Spanish oil organisation, Empresa Nacional Calvo Sotelo, and Sociedad Anonima Cros to form a company to make and sell polythene. A plant will be built at Puertollano to make 30,000 tons a year of low density polythene, using an ICI process; the ethylene feedstock will be supplied from Calvo Sotelo's olefines plant.

Alcudia, the new joint company, is by no means the only company with foreign interests considering investment in chemicals in Spain: Philips Petroleum is also planning to make petrochemicals with Calvo Sotelo at Puertollano; INI is said to have signed an agreement with Montecatini to make a range of petrochemicals which includes polythene and polypropylene; Dow Chemicals has formed a company with the chemical firm, Unquinesa, also to make plastics and other petrochemicals.

These projects have more than their products in common: they have a profound optimism, as the market in Spain for the suggested products hardly yet exists. They include several products suffering most from the present conditions of world oversupply and it seems unlikely that production on the scale suggested for some of them would be economic—even less so without tariff protection.

SHORTER NOTES

New "commercial" policies (as opposed to "national interest" policies) issued by the Export Credits Guarantee Department in the third quarter of 1962 amounted to £221 million—a new peak and 16 per cent up on the same quarter last year. Of this total some £45.8 million was for policies involving more than six months' credit. So far the Department has issued two Financial Guarantees but sixteen more have been approved in principle.

*

Manufacturers' home deliveries of television sets improved sharply in August from the extremely low level of the previous four months. The total of 115,000 was the highest monthly figure since December, but the year's total deliveries up to the end of August were still 22 per cent below those for the same period of 1961.

*

Norwich Union and its subsidiary, Scottish Union and National Insurance, are withdrawing their companies from active business in the United States and the business will be transferred to one of the Continental Insurance companies.

*

Brick production and deliveries in September were slightly lower than a year earlier, allowing for seasonal factors, while cement production, at 1,151 tons, was 3 per cent higher (seasonally adjusted) and home deliveries nearly 5 per cent higher than in September, 1961.

*

Vickers has announced that its development programme on hovercraft will continue, following the experimental service operated last summer from Wallasey to Rhyl. The mechanical troubles with the engines lay in their bearings, and most cancellations because of bad weather were caused by westerly winds producing large waves in the open sea part of the route. The trials proved that a hovercraft can operate off crowded beaches and cross rutted sandbanks; but Vickers emphasises that ferry services will account for only a small proportion of likely hovercraft services. They should find their main uses over land or rivers where normal transport is not now available.

*

The Royal Bank of Scotland is to raise £6.9 million by a rights issue of one new share of 72s. 6d. for every five shares held. The shares now stand at 85s. 6d. to make the rights worth 2s.

*

In the article "French Refrigerators Boil Over," in last week's issue, the Compagnie Francaise Thomson-Houston was inaccurately described as belonging to the American Thomson-Houston group. In fact, this is an entirely independent French-owned company.

*

The new Bank Leumi "A" shares offered in the four-for-five rights issue have a subscription price of about 6s. for UK residents after taking into account the premium on investment dollars. The new shares now stand at a premium of 2s. 6d.

*

The Treasury has given permission for Dominion Tar and Chemical Company of Canada to make a share exchange offer for Hendon Paper Works of Canada. Until now the Treasury has always insisted on cash for bids from overseas companies.

ENI

ENTE NAZIONALE IDROCARBURI - ROME

Laying the Central Europe Pipeline, about 1,000 kilometres long, which will link Genoa with the Po Valley, Switzerland and southern Germany. This pipeline, with a flow capacity of 18 million tons, will double the volume of traffic in the port of Genoa.

OPERATIONS IN THE 1961-62 FINANCIAL YEAR

Exploration and production.—AGIP MINERARIA and its associated companies engaged intensively in oil and gas exploration and development in Italy and abroad, employing, amongst other equipment, 62 drilling rigs and 5 offshore drilling platforms. A total of 308,789 metres was drilled in Italy and 145 wells were completed, 66 of them exploratory. Besides this 6,667·9 million cu. metres of natural gas were produced in Italy, representing 97·2% of the country's output, plus 558,177 tons of liquid and liquefiable hydrocarbons. There were fresh discoveries of natural gas in Basilicata, Sicily and the Po Valley. Operations abroad were very active in the exploration areas in Morocco, Tunisia, Libya, Egypt, Sudan, Somalia and Iran, and oil was struck in Libya. A preliminary agreement was signed in the United Arab Republic, where in 1961 COPE's output of crude from its Sinai fields was about 2½ million tons, for exploration concessions in the Nile Delta and Khalique-el-Zeit areas. Agreement was reached in Iran for the commercial exploitation of the field brought to light in the Persian Gulf which is expected to yield some 2 million tons of crude oil per annum from 1963 on. An extensive exploration area was obtained in Nigeria.

Transport.—The natural gas pipeline network in Italy was 4,557 kms long at the end of 1961. Towards the south SNAM started building a trunk line in Apulia, with branches to Bari and Monopoli, and also began planning the pipeline through Abruzzo, with branches to Terni and Rome, in the central regions. The first stretches of the Central Europe Pipeline were laid in the Po plain and Switzerland. The Group's fleet was expanded. Three turbo tankers of 49,000 dwt went into service in 1961 and two motor tankers were launched early in 1962. When the building programme is complete ENI's fleet will have a tonnage of 470,000 dwt altogether.

Refining.—In Italy, work began on ANIC's refinery at S. Nazzaro de'Burgondi (Pavia), with a throughput capacity of 4 million tons of crude oil per annum, and IROM's refinery at Porto Marghera (Venice) was extended. Abroad, SAMIR's refinery at Mohammedia (Morocco) was completed and the refineries at Ingolstadt (Germany), Bizerta (Tunisia) and Tema (Ghana) were started. The refineries in which the ENI group holds an interest processed 6·5 million tons of crude in 1961, yielding 6·1 million tons of products.

Marketing.—AGIP added to its number of roadside filling stations and considerably expanded its sales of all products. Compared with 1960 the growth was 30·4% for gasoline, 16·2% for gas oil, 19·7% for fuel oil and 30·9% for lubricants. Sales by AGIP's associates in Europe made steady progress in Austria, Germany, and Switzerland, and are just about to start in England. In Africa, business proceeded in Libya, Ethiopia and Somalia and began in Morocco, Tunisia and Sudan. Filling stations

were built in Ghana, Kenya, Tanganyika and Uganda and new petroleum products sales companies were set up on the Ivory Coast, in Togo, Dahomey, Nigeria, and Cameroun. Agipgas (liquefied petroleum gas) sales rose in Italy (+7·1% compared with 1960) as well as in other countries such as Argentina, Greece and Lebanon.

Petrochemicals.—In July, 1961, ANIC began the work of building a petroleum chemicals plant at Pisticci (Matera) to make plastics intermediates, solvents and synthetic textile fibres. Output of rubber and fertilizers in the Ravenna plant, and of carbon black and polyvinyl chloride by ANIC's associates, reached a high level. ANIC GELA continued building the petrochemicals plant at Gela (Caltanissetta), and the first production lines will start in 1962. Early in the year a majority holding was acquired in LANEROSSI enabling, by this integration of ANIC's activities with textile manufacture and marketing, the synthetic fibres from the Pisticci plant to be usefully employed.

Nuclear energy.—AGIP NUCLEARE, in conjunction with the Italian Nuclear Energy Committee, continued with the programme for irradiating uranium alloy samples in the Ispra reactor, with building a 30 thermal MW organic-moderated prototype reactor, and with studies on gas-graphite reactors. Work began on building an "Argonaut" research reactor at Bologna University. The construction of the Latina nuclear power plant reached a very advanced stage. SOMIREN continued its search for radioactive minerals in Italy.

Engineering — Design — Erection.—NUOVO PIGNONE's output of equipment for the oil and petrochemical industry went ahead and many orders were received from abroad. The Vibo Valentia (Catanzaro) works is in the completion stage and will soon be in operation. The PIGNONE SUD factory at Bari is already working. FUCINE MERIDIONALI, formed at Bari by NUOVO PIGNONE and Finanziaria Breda jointly, will turn out iron and steel and special alloys. Besides the work SNAM PROGETTI and SAIPEM carried out in Italy designing and erecting refineries, petrochemical plants and nuclear power stations, they also developed foreign projects and, among them, the Aigle refinery in Switzerland, the Bizerta refinery in Tunisia, the Tema refinery in Ghana, the oil pipeline connecting Nahorkatiya and Barauni, with branches going to Calcutta and New Delhi, in India, development wells drilled for the state-owned corporation Yacimientos Petroliferos Fiscales in Argentina (410 wells completed by the end of 1961) and the gas pipeline from Santa Cruz to Buenos Aires, 1,700 kms long ordered by Gas del Estado from the SAIPEM-Siderexport consortium.

Personnel.—The number of employees in ENI and the Group companies rose from 24,060 at the end of 1960 to 47,804 at 31st December, 1961.

LONDON MERCHANT SECURITIES LIMITED

The following are extracts from the Directors' Report and Mr Max Rayne's circulated Review of the Ninetieth Annual General Meeting of the Company.

CONTINUED PROGRESS: The successful development of the Company's interests has continued during the year under review and substantial increases in both net income and asset values are again recorded.

SCRIP ISSUE: It is proposed to apply a portion of the reserve to paying up in full 3,600,000 new Ordinary Shares of 5s. each, to be allocated to shareholders as a free scrip issue in the proportion of one new share for every three held.

DIVIDEND: A dividend of 10 per cent is recommended on the capital as increased by the previous scrip issue of one share for each two held.

PROPERTY DEVELOPMENTS: Yet another happy association has been achieved in the conclusion of the arrangements with the New River Company Limited. There are encouraging possibilities of other joint undertakings—both in the United Kingdom and overseas—while our existing property companies continue successfully to develop and extend their activities. The completion and revaluation of property now under construction will produce further substantial revenue and capital increments.

THE INVERGORDON DISTILLERS LIMITED: It is estimated that a total of 2,850,000 proof gallons will be produced during the calendar year 1962 and firm orders for the whole of this output have already been received. The steadily increasing demand for Invergordon Scotch Grain Whisky has necessitated expansion of the distillery and steps have been taken to increase production capacity to 120,000 proof gallons per week. Although the initial pioneering operations resulted in a deficit for the period under review, the current year's activities and future prospects provide ample grounds for confidence.

ARMSTRONG EQUIPMENT LIMITED

The twenty-seventh annual general meeting of Armstrong Equipment Limited was held on October 22nd in London, **Mr William Armstrong, BSc, AMIMechE, AFRAeS** (Chairman and Managing Director), presiding.

The following is an extract from his circulated statement:

It is pleasing to report that the Consolidated Profit shows a considerable increase as compared with last year (£461,000 against £354,000) and in view of this your Directors feel justified in proposing a Dividend of 27½ per cent. Further, it is proposed to capitalise the bulk of the Share Premium Account by means of a one-for-two Bonus Issue.

Besides the growing activity of our Overseas Companies, our direct Exports of Shock Absorbers and other Equipment continue to increase with particularly gratifying results and prospects in Europe both in the Six and the Seven. Our Licensees in France continue to manufacture a record volume of our Shock Absorbers under licence and in India production is on the increase, although this is clearly a long term market.

Both our British Factories at Beverley and York are very fully occupied and it looks as though this situation will continue for the rest of the financial year and the foreseeable future.

Overall I feel that the present situation both at Home and Overseas gives grounds for confidence in the future.

The report was adopted and the Bonus Issue approved.

PIFCO HOLDINGS

FURTHER PROGRESS

The fiftieth annual general meeting of Pifco Holdings Limited was held on October 23rd in London, **Mr A. D. Webber,** chairman and managing director, presiding.

The following is an extract from his circulated statement for the year ended April 30, 1962:

Despite the many difficulties of the past year, I am happy to report further progress in turnover and trading profits.

In my previous review I referred to the problem of a continued rise in costs and intensive competition in the field of Electrical Appliances. We have endeavoured to avoid price increases and, with very few exceptions, we have achieved this. We have relied on increased turnover to maintain our level of profitability.

The Group Profit for the year before providing for Taxation amounted to £255,051 as compared with £253,128 for the preceding year, which I trust you will agree with me is a satisfactory result. The liquid position of the Company is strong and adequate for all requirements. Your Board recommends a final dividend of 12½ per cent less income tax which makes a total of 20 per cent for the year.

No doubt you will expect an indication of the outlook for your Company in the current year. It is difficult to forecast in present conditions with so many factors which are outside our control, but turnover and profits to date show no contraction, and the order book is at a satisfactory level.

We have an attractive range of Electrical Appliances for the home and its popularity is based on technical excellence, good presentation and popular prices.

The report and accounts were adopted.

The Shareholders' Meeting decided:

– to allocate Lire 800 millions to «Reserve Fund»;

– to allocate Lire 75 millions to devaluation of the item «Investments»;

– to allocate Lire 150 millions to securities devaluation fund;

– to pay a dividend of 9% on capital, i.e. Lire 900 per share, encashable from 24th October 1962.

CAWOODS HOLDINGS LIMITED

The fortieth Annual General Meeting was held on October 19th in Leeds; **Mr E. W. Towler,** the Chairman, presiding.

The following is an extract from his circulated Statement:

The Group Trading Profit for the year under review is £653,320 (£274,078), after Depreciation £248,889 (£193,832). Capital and Reserves increased from £1,688,971 to £2,354,197; the net current assets amount to £1,248,657. The Directors recommend a dividend of 2s., less Income Tax, per Stock Unit.

The record Group Profits included a full year's profit from the Heaton and Thrutchley Groups, and record profits from our quarrying group.

Opencast and coal tonnage to steelworks was down, as well as our exports to Scandinavia as a result of competition from oil and low Polish and Russian coal prices. Our Skelton Grange Power Station contract for coal by barge is now running satisfactorily.

In the inland industrial distributive trade, competition from oil has intensified, and is expected to increase. Despite the efforts of the N.C.B., with whom we collaborate to the full, the demand for oil continues to increase, and our Group profits are now steadily benefiting from the national organisation we have developed, primarily to sell and deliver Regent Fuel Oils; also from the Thrutchley Group who are Esso Authorised Distributors.

On quarrying, the Essex Group showed record outputs and profits; developments continue in association with Ready Mixed Concrete Limited.

The Blackwall Lane Block Works last year produced and sold good outputs at reduced margins.

Plans for the development of Mulberry Wharf on general wharfage are being considered in view of its proximity to the Purfleet tunnel; the kiln at the high duty refractory grog works at Mulberry is to be extended, though profitable operation is not expected to be attained for some time yet.

Group profits, so far this year, compare favourably with the corresponding period of last year, and subject to unforeseen developments, it is anticipated that we shall be able to recommend next year the distribution in dividend of at least the same aggregate amount as this year.

An Extraordinary General Meeting held immediately after the Annual General Meeting approved the capitalisation of £750,000 of the Reserves, and the allotment of Three Ordinary Shares of 5s. each for every Two Ordinary Stock Units now held.

GRAFTON INDUSTRIAL SECURITIES LIMITED

YEAR OF SATISFACTORY PROGRESS

The Annual General Meeting of the Company was held on October 18th in London.

The following are extracts from the Report and Accounts and the statement by the Chairman, **Mr. Gordon Heynes, C.A.** for the year ended June 30, 1962.

	1962	1961	1960	1959
	£	£	£	£
Group Profit before Tax	**124,179**	**122,076**	**63,126**	**88,090**

In his statement the chairman said that the year 1961-62 had been one of satisfactory progress. Emphasis continued to be on improved methods, the introduction of new lines and increased turnover.

Reporting on the subsidiaries' activities he said that Quicktho Engineering Limited, after a period of uncertainty, had emerged with a considerably increased profit. The order book was showing a very satisfactory upswing with a number of substantial contracts under active negotiation.

Peak Engineering Company Limited had had a highly successful year, quite contrary to the general trend of the section of the engineering industry in which it operated. Turnover was an all-time record and although profit margins had been lower a very satisfactory net profit resulted.

Air Engine Services Limited earned a record profit and the board had every confidence that the company would continue to produce good profits.

Concluding his statement, the chairman anticipated that the general trend of progress would continue in 1962-63. Long term prospects, he said, continued to be excellent and the financial position was strong.

Copies of the full accounts are obtainable from the Secretary, 5 Grafton Street, London, W.1.

Binding Cases

Binding cases for The Economist *are available from* Easibind Ltd. *The cases are in stiff, dark blue cloth covers, and are gilt-lettered on the spine; they provide an extremely effective and firm binding and will hold 13 issues of the normal edition together with the quarterly Index, or 26 issues of the air edition with two quarterly Indexes. The year can be stamped on the spine. The cost per case, post free throughout the world, is 17/6. Orders, stating requirements clearly and enclosing a remittance, should be sent,* **not** *to* The Economist, *but to—*

EASIBIND Ltd.

84 Newman St., London, W.1

EDUCATION AND COURSES

EXPERT POSTAL TUITION

for Examinations—B.Sc.(Econ.), Law, Accountancy, Costing, Secretarial, Civil Service, Management, Export, Commercial, General Certificate of Education, etc. Also many practical (non-examination) courses in business subjects.—Write today for free prospectus and/or advice, mentioning examination or subjects in which interested, to the Secretary (G9/2),

METROPOLITAN COLLEGE, ST. ALBANS

or call at 30 Queen Victoria Street, London, E.C.4. Established 1910.

A CAREER IN PUBLIC RELATIONS

Comprehensive eight-week instructional courses beginning in February and April, 1963. Details from Secretary, London School of Public Relations, 57 Duke Street, London, W.1.

TUITION FOR B.Sc. ECONOMICS

Wolsey Hall (Est. 1894) provides Postal Courses in a wide range of subjects for the two examinations for London Univ. B.Sc.Econ. (three, if entrance is included) at moderate fees. 1,437 Wolsey Hall students passed London University B.Sc. Economics Exams., 1950-60. Tuition also for G.C.E., Law, Statistical, other exams.—Prospectus (mention examination) from E. W. Shaw Fletcher, C.B.E., LL.B., Director of Studies, Dept. P.17.

WOLSEY HALL, OXFORD

A Course in INTER-PERSONAL and INTER-GROUP RELATIONS

Tuesdays, 5.30-8.30 p.m., January 15-July 9, 1963

The conference is intended for men and women in positions of leadership in industry and commerce. Its aim is to provide understanding of inter-personal and inter-group processes.

Every member will participate in a Study Group and an Application Group, and will take part in an Inter-Group Exercise. All groups will have the services of a staff consultant. There will be a series of lectures and other plenary sessions open to all members.

Fee for Course, 75 gns.

A prospectus may be obtained from

The Course Secretary, TAVISTOCK INSTITUTE OF HUMAN RELATIONS, 3 Devonshire Street, London, W.1

FRENCH

CORRESPONDENCE COURSES

(1) Cours de Langue et de Civilisation Françaises.
(2) Basic French for Conversation.
(3) Translation Courses.

Lesson-by-lesson coaching by French teachers. Easy payments. Send for prospectus.—Mentor, 11, Charing Cross Road, London W.C.2.

SECRETARIAT. Training for Women, especially university graduates, and older students: six-month and intensive 14-week courses.—Write Principal, Davies's, 158 Holland Park Avenue, W.11. PARK 4654.

THE COMMON MARKET

Week-end Course November 23-25th. Somerset Residential College for Adult Education. Speakers: Roger Falk, W. Russell Lewis, George Wyndham. Fee £3 7s. Full details from The Warden, Dillington House, Ilminster.

BUSINESS AND PERSONAL

EXPORT OPPORTUNITIES brought to your desk by Export Service Bulletin thrice weekly, 10 gns. annually. Specimen copy from Board of Trade (K), Hillgate House, 35, Old Bailey, London, E.C.4.

A FOREIGN LANGUAGE in a few months for yourself or your staff, with the easy ASSIMIL way. You **assimilate** the language and acquire the accent naturally **by listening** to the living language on gramophone records with an illustrated book to guide you. Preliminary and Complete Courses in French, German, Italian, Russian and Spanish. A Pitman follow-on course available for technical and commercial expressions. Details from ASSIMIL, 79, Farncombe, Godalming, Surrey.

EUROPE

English Company with surplus resources in Germany, including a factory on the Rhine with space, services and capital available, would like to participate jointly in new manufacturing projects.

Companies considering extending their interests to Germany are invited to write to Box 1665.

APPOINTMENT REQUIRED

COMMON MARKET and Japan. Experienced trader/economist, B.Com., A.C.I.S., fluent German, adequate French, wishes to return to commerce after short spell in public employment. Min. salary £2,000 p.a.—Write Box 1664.

APPOINTMENTS

THE ROYAL COLLEGE OF NURSING

Applications are invited for post of ASSISTANT SECRETARY in Labour Relations Department. Applicants should hold a qualification in law, economics or industrial relations, and preferably have administrative experience.

Salary scale, £950-£1,200 (5 x £40+1 x £50), starting point according to experience; the post is superannuable. Particulars and application form from General Secretary, Royal College of Nursing, Henrietta Place, Cavendish Square, London, W.1. Closing date for applications, November 12, 1962.

UNIVERSITY COLLEGE OF RHODESIA AND NYASALAND

DIRECTOR, RHODES-LIVINGSTONE INSTITUTE

Applications are invited for post of Director of Rhodes-Livingstone Institute, Lusaka, Northern Rhodesia. Appointee will be of professorial status and full-time member of the College staff, but will be stationed in Lusaka. He will be the responsible administrative officer at the Institute, and will be expected to direct staff research activities, plan further research and generally stimulate social and economic research in Central Africa. Sound academic training in one of the social sciences and broad interest in the others essential. Salary scale: £2,700 x £100—£3,000 p.a. Passages to Salisbury for appointee, wife and dependent children on appointment, with allowance for transport of effects. Installation grant of £100 in addition for persons recruited from outside Africa. Superannuation and Medical Aid Schemes. Partly furnished accommodation at rent of 15 per cent of salary. Overseas passage for appointee every second year. Detailed applications (eight copies) naming three referees, by November 26, 1962, to Secretary, Inter-University Council for Higher Education Overseas, 29 Woburn Square, London, W.C.1, from whom further particulars may be obtained.

HERTFORD COLLEGE, OXFORD

The College proposes to elect an OFFICIAL FELLOW in ECONOMICS to take up his duties as from October 1, 1963. Applications and enquiries should be addressed to the Principal, and should reach him not later than Friday, November 30, 1962.

AUSTRALIAN NATIONAL UNIVERSITY

INSTITUTE OF ADVANCED STUDIES

Applications are invited for the CHAIR OF POLITICAL SCIENCE within the Research School of Social Sciences, Institute of Advanced Studies. The Chair has become vacant by the death of Professor L. C. Webb. Salary of the Chair is at present £A4,700. Reasonable travel and removal expenses are payable. One year's study leave, with travel allowance, will be granted after each three years' service. Financial provision is also made for field work.

The Professor will be Head of the Department of Political Science. It will be his duty to conduct and to organise research within his Department, and to supervise the work of a small number of post-graduate students proceeding to the Ph.D. degree. The establishment of the Department consists at present of the Professor, two Readers, one Fellow, three Research Fellows and three Research Assistants. Research recently in progress within the Department includes work on political institutions and movements, political theory, comparative political studies and public administration. The University does not wish to prescribe in advance the field of work of the new Head of the Department. There is a separate Department of Political Science in the School of General Studies within the University, and a Department of International Relations within the Research School of Pacific Studies.

Further particulars should be obtained from the Secretary, Association of Universities of the British Commonwealth (Branch Office), Marlborough House, Pall Mall, London, S.W.1.

Applications close in Australia and London on *December 31, 1962*. Notwithstanding this advertisement, the University retains the right to fill the Chair by invitation at any stage.

VICTORIA UNIVERSITY OF WELLINGTON

New Zealand

SENIOR LECTURER OR LECTURER IN COMMERCIAL LAW

Applications are invited for the above-mentioned appointment in the Department of Accountancy. Although his primary responsibilities will be in this Department, the appointee will become a member of, and may have some teaching duties in, the Faculty of Law. Experience of law practice is a necessary qualification: university training and teaching experience is desirable but not essential.

The salary for a Senior Lecturer will be £1,750 per annum rising to £2,000 per annum and for a Lecturer £1,250 rising to £1,700 per annum. The initial salary will be determined according to the qualifications and experience of the appointee.

Approved fares to Wellington will be allowed for the appointee, his wife and his dependent children. In addition, actual removal expenses will be allowed within specified limits.

Further particulars and information as to the method of application may be obtained from the Secretary, Association of Universities of the British Commonwealth (Branch Office), Marlborough House, Pall Mall, London, S.W.1.

Applications close in New Zealand and London on *December 1, 1962*.

BRADFORD INSTITUTE OF TECHNOLOGY

DEPARTMENT OF INDUSTRIAL ADMINISTRATION

Applications are invited from Social Science or Economics Graduates for the post of RESEARCH ASSISTANT IN THE DEPARTMENT OF INDUSTRIAL ADMINISTRATION to participate in a projected Social-Economic Survey of the Yorkshire Industrial Area.

Salary Scale for honours graduates, £770-£1,490. Initial salary according to training and experience.

For other appointments see pages 409 and 410

VICTORIA UNIVERSITY OF WELLINGTON

New Zealand

LECTURER IN SOCIOLOGY

Applications are invited for the above-mentioned post. Applicants must be graduates in Sociology. Knowledge and interests in a specialised field, such as demography or small group theory, could be an additional advantage.

The salary will be £1,250 per annum rising to £1,700 per annum. The initial salary will be determined according to the qualifications and experience of the appointee.

Approved fares to Wellington will be allowed for the appointee, his wife and his dependent children. In addition, actual removal expenses will be allowed within specified limits.

Further particulars and information as to the method of application may be obtained from the Secretary, Association of Universities of the British Commonwealth (Branch Office), Marlborough House, Pall Mall, London, S.W.1.

Applications close in New Zealand and London on *November 30, 1962*.

COMPANY AFFAIRS

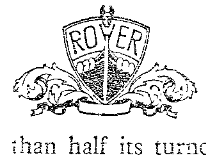
In the London stock market this week prices fell sharply in reaction to the Cuban crisis. The falls were the sharpest since the Wall Street slump last May. All sections of the market were affected but selling was particularly heavy in the gilt-edged market and on Tuesday losses ranged up to 2¼. Among equities oil shares showed heavy falls; over the week to Wednesday The Economist *indicator fell by 16.2 points to 313.5. On Thursday, following Wall Street's sharp rally and with signs of some easing of international tension, prices in London showed a general advance.*

Plessey

THE sharp fall in the price of Plessey shares this year followed board room disputes after the death of the chairman, Sir Allen Clark, who had been the driving force behind Plessey's recent impressive record of growth. These resulted in the resignation of three long serving directors and their replacement by Lord Kilmuir, Mr Harold Watkinson and Field Marshal Lord Harding. These resignations raised some doubts about the group's trading results although the new chairman, Sir Harold Wernher, who was the chairman of Ericsson Telephone when it and Automatic Telephone merged with Plessey a year ago, said that the clash was one of "personalities and not of policies."

The results for the year to June 30th, which include eight months profits from the two telephone subsidiaries, are certainly up to best expectations, for profits before tax are £6½ million compared with £4 million for 1960-61. In a full year, Automatic Telephone and Ericsson were expected to add about £2 million to gross profits and clearly Plessey's wide spread of interests in telecommunications and electronics has helped it to weather the recession in the television and domestic appliances trades for which it supplies many components. The results also suggest that economies in production and research resulting from the merger of the telephone companies may already have played their part. The dividend of 15 per cent is as forecast at the time of the merger and for original Plessey shareholders this compares with the equivalent of 12¾ per cent. Now at 38s. 6d. against a 1962 peak of 49s. 1½d. the 10s. shares yield just under 4 per cent.

Rover



ROVER not only makes cars; it builds the specialised commercial vehicle, the Land-Rover, which accounts for more than half its turnover. This does much to explain the unexpectedly good profits earned by the company for the year ending August 4th. Trading profits fell less than £200,000, to £2,826,000; an increase of £315,000 in depreciation was offset by a sharp fall in the tax charge from £1,007,000 to £603,000, to leave net profit only £119,000 down at £1,071,000. The maintained dividend of 9½d. a share is still more than twice covered by earnings thanks to tax relief resulting from the present high rate of capital spending.

The company has made substantial changes to its car range for the current year, improving the performance of the 3-litre, which must be its biggest seller, to compete better with the Jaguar; but it still relies on the basically thirteen-year-old 95 and 110 for the lower-priced section of its range. Rover's expansion programme will greatly increase its capacity for making cars as well as Land-Rovers, and new models will be needed to fill it. So the longer-term outlook for the company depends on the success it may achieve with new designs, as well as its ability to continue to fight off the British Motor Corporation in the go-anywhere vehicle market—two factors which add some uncertainties to the prospects of what seems for the moment a share with a stable dividend; at 14s. it yields 5.6 per cent.

Brooke Bond

DESPITE the qualification of the Brooke Bond directors, their decision last April to maintain the interim dividend on the capital as increased by a one-for-five scrip issue had been generally regarded as an indication that the final payment would also be unchanged. In fact the tax free dividend has been set at 2½d. against 2¾d. per share on the smaller capital so that the total dividend for the year to June 30th has been raised from the equivalent of 3⅓d. to 3¾d. a share. In face of an increase of 30 per cent in gross profits to £5,231,000 (or of 38 per cent if allowance is made for non-recurring items) this may seem a niggling decision, but in fact a sharp rise in the tax charge (which takes 59 per cent of gross profits) has caused the increase in profits to evaporate at the net level where profits were £100,000 lower at £2,073,000. The rise in British tax from £541,000 to £1,406,000 was particularly sharp, largely as a result of bigger remittances from overseas subsidiaries and exceptional expenses and losses not allowable.

But the unusually high tax charge should not be allowed to mask an impressive trading performance. The group's turnover was £6 million higher at £113½ million, mainly due to bigger sales of packet teas at home and overseas. This has been backed up by excellent crops from Brooke Bond's plantations interests (although Doom Dooma profits have not had a material effect on group profits) while margins on packet teas have improved as a result of adequate supplies at "satisfactory prices." Although there seems little scope for increased consumption of tea in the home market (where Brooke Bond continues to improve its sales presumably at the expense of other merchants) there is clearly ample potential for expansion in overseas markets, but this is fairly well discounted in the 4½ per cent yield offered by the 5s. "B" shares at 11s. 6d.

Carreras

AT 5s. 7½d. the 2s. 6d. "B" shares of Carreras yield 4¾ per cent, well below the yields on Gallaher and Imperial Tobacco and clearly postulating a further swing towards filter tip cigarettes which now account for 90 per cent of Carreras' production for the home market. In the year to June 30th its sales of filter cigarettes increased by 20 per cent, gross profits rose from £2.6 million to £2.9 million and the ordinary dividend was raised from 9 to 11 per cent. Statistics in the Carreras report suggest that there may indeed be scope for higher consumption of tipped cigarettes here for their share of the home market is no higher than 25 per cent, compared with 55 per cent in the United States, 75 per cent in Australia and 85 per cent in South Africa. Exports, too, were higher last year and the Basildon plant accounted for about 40 per cent of all British cigarettes sold abroad, compared with 30 per cent in 1960-61.

Further extensions are now planned at Basildon and new factories are to be built in Northern Ireland and Jamaica. This could mean calling on the shareholders for fresh funds, for stocks had risen by £2 million to £13½ million at the end of June and net overdrafts were £2¼ million higher at £5¼ million; the net cash flow is running at about £1¼ million. The chairman, Mr J. H. Hansard, looks for continued progress, although competition will remain severe; sales of the new Piccadilly tipped brand are going well and the introduction of this 3s. 10d. range should give Carreras another opportunity in the expected expansion of the filter cigarette business.

Tootal

SHAREHOLDERS in Tootal, whose 1961-62 dividend has been cut from 10 to 7½ per cent, will find little consolation in the statement of their chairman, Mr T. A. Fairclough. Following the sharp fall in pre-tax profits from £570,000 to £234,000 in the year to end June, he now warns shareholders that the difficulties, particularly in the textile trade, are "ever more intense" and that the first few months of the current financial year compare unfavourably with conditions of a year ago. This suggests that Tootal may be strained to maintain even this lower rate of dividend which was only covered in the past year by virtue of a very low tax charge arising from allowances in respect of new machinery. On a normal tax charge earnings for 1961-62 would have been no more than 4½ per cent.

Apart from the well-known difficulties of the cotton textile trade which made their full impact on Tootal's earnings, heavy expenditure has also been incurred in launching the new Tootal shirt in a highly competitive market. Exports fell sharply and the combination of reduced turnover and lower prices involved much writing down of stocks which still stood at £4.7 million at the end of June. Tootal's policy is to reduce its stocks and improve its liquid resources: the balance sheet now shows a net overdraft of over £400,000. The group has derived little benefit from diversification outside the textile industry, for the plastics division made a loss while the paper subsidiary, Yates Duxbury, showed lower profits. Here too the immediate outlook shows no sign of improvement and for any consolation shareholders must look to possible benefits from Tootal's new "no need to iron" process. At 17s. 7½d., their lowest level for some years, the £1 shares yield just under 8½ per cent.

Daily Mirror

THE Daily Mirror group has a large stake in the Sunday Pictorial and terms for a complete merger of the two newspaper groups are being examined by the merchant banks, S. G. Warburg and J. Henry Schroder Wagg. Earlier this month the Sunday Pictorial raised its interim dividend and it was no surprise when the Daily Mirror followed suit, raising its payment from 5 to 6 per cent. While the trading profits of the Sunday Pictorial fell slightly in the six months to end-August those of the Daily Mirror rose from £5.2 million to £5.7 million. But like the Pictorial there was also a sharp increase in income from trade investments, which doubled to £1.4 million primarily as a result of its holding in Albert E. Reed, so that profits before tax at £6.9 million were 21 per cent higher.

The directors say that profits were helped by "more buoyant" advertising in the newspaper field and by benefits arising from the merger of women's magazines. But they do not expect such good results for the second half of the year when group spending on publicity for its magazines is particularly heavy. Thus, trading profits for the six months to end February are expected to be close to the level of £3.9 million for the corresponding period in 1961-62, which would mean a fall of over 30 per cent in profits over the two half-years. Nevertheless, earnings for the full year should show a useful increase and the increased interim suggests that a total payment of 18 per cent against 15 per cent is possible. On this basis the 5s. shares at 12s. 4½d. would yield just over 7½ per cent but it seems likely that before the final payment is due a merger between the Daily Mirror and the Sunday Pictorial will have been arranged.

Wall Paper Manufacturers

ALTHOUGH the results from Wall Paper Manufacturers prove to be a little better than the directors indicated in their interim statement they are still unimpressive. Attributable profits before tax for the year to end-June amounted to £5,657,000 against £5,160,000, but, after a substantially higher tax charge, net profits were only £40,000 higher at £2,506,000. The dividend of 17 per cent compares with the equivalent of 16½ per cent. In these comparisons, moreover, the profits of 1960-61 were sharply affected by the two-year cycle of decorators' pattern books and it was hoped that the past year would bring a much stronger demand for wallpaper as in 1959-60 when profits before tax amounted to £6,078,000 and net profits to £2,724,000. In addition, the latest profits include a full year's earnings from the two major paint and wallpaper manufacturers, K. L. Holdings and Smith and Walton, acquired early in 1961 and which together in 1959-60 made pre-tax profits of £975,000. Finally, last year's £10 million rights issue should have resulted in a considerable saving in interest charges.

It would seem, however, that the gain in profits resulting from these factors has been partially offset by the increasing pressure on margins, particularly in the group's paint and paper divisions. There is little sign of any slackening in competition in either of these industries and with profits again likely to suffer from customers reducing their wallpaper stocks the immediate outlook is unexciting. The 5s. shares are down from 24s. 6d. to 18s. 7½d. but still yield only 4½ per cent on the twice covered dividend.

Robeco

THE net asset value of Robeco shares had fallen from Fl 252 at the end of December to Fl 206½ at the beginning of June and at October 1st it stood at Fl 197. This reflects the general weakness in world stock markets over that period and particularly in Wall Street for in 1961 this big Dutch investment trust had been building up its dollar portfolio and American stocks now represent about 35 per cent of its total holdings. In recent months it has been buying South Africa gold shares again and its purchases in this field amounted to £2½ million between June and October. The managers say that they have returned to them (the previous holding of Africa shares had been sold by early 1961) partly on account of their attractive yields and partly as a hedge against "a possible change in currency relationships."

British companies now account for just under 5 per cent of Robeco's portfolio and investors who are thinking that the shares of Marks and Spencer are beginning to look attractive at their current price will endorse its recent purchase of 20,000 "A" shares. At the current price of £20 the Fl 50 shares yield just over 4½ per cent and their attraction to English investors is primarily as a means of obtaining a stake in common market securities.

Starkey, Knight and Ford

THE bid by Whitbread for Starkey, Knight & Ford is the fourth it has made in the past eleven months for a company already under its "umbrella." Based at Bridgwater, Starkey has about 430 houses in the West country, an area where Whitbread is well represented, and the merger is expected to provide opportunities for rationalisation. With Whitbread "A" at 32s. its offer of five "A" shares for each of Starkey's 465,000 £1 ordinary shares is worth about 160s. which is close to their pre bid price but nevertheless the shares are being valued on an earnings yield of under 6 per cent. Both the Starkey 6 per cent cumulative and non cumulative preference stock have voting rights and for every £100 of these stocks Whitbread is offering £112 10s. and £110 respectively of its 6 per cent third preference stock. The bid is recommended by the directors who with Whitbread hold more than one third of the votes which should ensure its success. However, few of the ordinary shareholders are likely to oppose an offer which will bring them a 50 per cent increase in income.

THE MONEY MARKET

THE flare-up over Cuba had little direct effect on the London money market although the increase in liquidity produced very easy market conditions on Wednesday and the authorities sold a large number of bills to absorb the surplus credit. At the Treasury bill tender on Friday of last week, before the blockade was announced, the syndicate of discount houses reduced its bid by 8d. to £99 1s. 3d. and the the Treasury bill rate rose by ⅛ per cent to £3 14s. 8.22d. per cent. This trend is expected to be repeated at this Friday's tender. With its money costing, on average, 3⅝ per cent the market is once more earning a profit on its new bills. Total applications rose by £10 million to £397 million and the market received a quota of 38 per cent, the same as in the previous week.

Foreign banks withdrew small amounts from the local authority loan market this week, but these were easily replaced from domestic sources. However the seven day rate, on end-of-month influences, did harden slightly by ⅛ to 4 per cent. The supply of Euro-dollar deposits tended to dry-up on the Cuban news, and with many dealers keen to go short of dollars, the rates hardened by ⅛ to ¼ per cent.

(7) 25,000 workers had wage cuts in November, 1961, but over the whole of 1961 no worker had a net decrease. (8) Index of building costs. (9) Average for second quarter. (10) Using the revised retail price index based on January, 1962=100: September, 101·5. (11) Revised figures from 1961. (12) Average for third quarter.

British Transport Commission

Economist

Applications are invited for a senior post in the Economics Division of the Finance Department. The successful candidate will probably be aged between 30 and 40 and have a good academic qualification in economics and statistics. His judgment will have matured from practical experience of management problems, preferably in a large and diverse organisation, while retaining a critical and imaginative approach. In particular he should have experience of some or all of the following management activities: price policy, investment decisions, receipts and expenses budgets, collation and assessment of market data of all kinds. The ability to write and talk about management problems without recourse to economic jargon is important. A fluent knowledge of French or German would be an advantage.

The qualifications and experience of the selected candidate will determine the starting salary, which will be between £2,000 and £3,000 a year.

Contributory Superannuation scheme, certain travel facilities, medical examination.

Applications stating age, present salary, qualifications and experience to

Director of Establishment, British Transport Commission, 222 Marylebone Road, London NW1 within 14 days.

CIVIL SERVICE COMMISSION, DUBLIN

VACANCIES OF INTEREST TO UNIVERSITY GRADUATES AND OTHERS

A competition for 4 posts as ADMINISTRATIVE OFFICER will be held, commencing with the written examination on December 4, 1962. The competition is open to men and women who, on November 1, 1962, were 20 years and under 26 years and

(a) who hold a FIRST OR SECOND CLASS HONOURS UNIVERSITY DEGREE or an equivalent qualification, or

(b) who have passed a degree examination with FIRST OR SECOND CLASS HONOURS (these candidates will have to have their degrees conferred later); or

(c) who are ESTABLISHED CIVIL SERVANTS with certain service.

Pay: £800 rising to £1,265 (woman or unmarried man) or £1,580 (married man). Plus children's allowances.

Prospects: Promotion guaranteed after 7 years if certified suitable.

Tests: Essay, Précis and Interview. Qualifying test in Irish.

Intending candidates should write to Civil Service Commission, 45, Upper O'Connell Street, Dublin, 1. The latest time for the acceptance of completed application forms is 5 p.m. on November 13, 1962.

A further competition will be held in the Autumn of 1963. Details will be announced in due course.

For other appointments see pages 402 and 410

D.S.I.R.

ROAD RESEARCH LABORATORY, Harmondsworth, Middlesex

requires ASSISTANT EXPERIMENTAL OFFICERS or EXPERIMENTAL OFFICERS in the Tropical Section.

DUTIES: Research in the fields of TRAFFIC ENGINEERING and TRANSPORT ECONOMICS in developing countries normally involving visits to countries in tropical and sub-tropical regions (usual Foreign Service Allowances).

QUALIFICATIONS: A degree in a science subject, engineering, economics (if with some scientific qualification) or mathematics, and an interest in the life and economy of tropical countries.

SALARY (NATIONAL): Assistant Experimental Officer, £671 (at age 22), £833 (age 26 or over), £1,022; Experimental Officer (minimum age 26), £1,130-£1,389.

The Laboratory will be moving to new accommodation at Crowthorne, Berks., in about four years' time. A London Weighting of £35-£50 is payable on the above salaries at Harmondsworth, but not at Crowthorne.

Application forms from Director at above address quoting RRL. 40 BCF. Closing date: November 26, 1962. (5)

UNIVERSITY OF ABERDEEN

DEPARTMENT OF POLITICAL ECONOMY

Applications are invited for the post of LECTURER. Salary on scale £1,150-£1,950, with placing according to qualifications and experience. F.S.S.U., child allowance and removal allowance.

Further particulars should be obtained from the Secretary, The University, Aberdeen, with whom applications (eight copies) should be lodged not later than November 19, 1962.

FINANCIAL CONTROLLER

Important United Kingdom subsidiary of large and progressive American manufacturing company requires controller who will be based in Scotland. Initially he will be required to administer the various departments of the finance division. This post is a responsible one, carrying excellent prospects of early advancement in the management of the company, and only applicants of outstanding qualifications and personality will be considered. Starting salary not less than £3,000 per annum. Reply, giving full details and present salary, to Box 1663.

IBM

needs a SCIENTIST or ENGINEER

with experience in the application of computers to industrial control systems and general scientific problems.

He will be expected to assess the total market requirements in these areas and to consider products under development and their effectiveness. His work will directly affect new products developed by the company and will involve liaison with laboratories and planning staffs in the U.K. and overseas. Contact with potential customers will also be required.

This is a highly responsible post and applications are invited from those with experience in this field, with a degree or professional qualification, able to work on their own initiative in the planning and carrying through of projects.

This post carries a high salary and presents opportunity for advancement.

Please write to Mr. W. M. R. Jeffreys, Manager of Personnel Selection, IBM United Kingdom Limited, 101 Wigmore Street, London W.1, quoting reference HO/EC/529.

RTB

OPERATIONAL RESEARCH

Several of our senior staff have recently been appointed to management posts in the Company. To meet the strong demands of O.R. studies of policy and planning, control systems and general operations, some of them at the new Spencer Works, we are recruiting to all levels.

— For those with O.R. experience —

ASSISTANT MANAGER for Research, Education and Methods

Our widening areas of O.R. application and the development of methods and techniques now require the appointment of a senior man to look after education within the Department, to provide a high level of technical guidance for project teams, and to carry out research. High academic achievement must be coupled with good practical O.R. experience.

ASSISTANT MANAGER, Projects

We need a man to take charge of an O.R. team of about 10 men being built up for a large integrated steelworks. He should have at least 4 years' O.R. experience and a total post-graduate experience of about 10 years.

SENIOR PROJECT LEADERS, and PROJECT LEADERS

We need men with several years' post-graduate experience, including 3-5 years in O.R., capable of leading large and medium size project teams. (Preferred age range 25-32.)

These vacancies will particularly appeal to O.R. men looking for an opportunity to apply their ability and experience in a most favourable environment.

— For those without O.R. experience —

(or with 1 or 2 years in O.R.)

PROJECT STAFF

We invite applications from men with good honours degrees in Science subjects and with some post-graduate experience.

We are particularly looking for PHYSICISTS, MATHEMATICAL ECONOMISTS and MATHEMATICAL STATISTICIANS. These are needed for such work as the development of economic analogues for company planning and of adaptive process control systems respectively. They would be appointed at a level appropriate to their experience.

Many first class scientists, after successful work in their own disciplines, have transferred to the broader field of O.R. with excellent results. They find the work intellectually challenging and its practical applications stimulating.

The Department is based mainly in Monmouthshire amid a unique combination of the Welsh mountains, the Usk and Wye Valleys and the Bristol Channel. Cardiff and Bristol are within easy reach and London is only 2½ hours away by train.

All staff attend university short courses from time to time as part of their training, and one or two are selected each year for one-year post-graduate courses.

Competitive salaries will be offered.

For fuller details of the Department and its activities, of the vacancies and of careers in O.R. generally, please write to:—

The Manager, Operational Research Department,
RICHARD THOMAS & BALDWINS LIMITED,
33/34 Commercial Street, Newport, Mon.

UNIVERSITY OF ST. ANDREWS

Applications are invited for the post of LECTURER in MODERN SOCIAL AND ECONOMIC HISTORY in QUEEN'S COLLEGE, DUNDEE. Present salary scale: £1,150 x £50 to £1,500 x £75 to £1,950 (efficiency bar, £1,500). Placing according to qualifications and experience. *F.S.S.U., family allowance, grant* towards furniture removal expenses. Applications (*six copies*), *containing* the names of three referees, to be lodged not later than November 23, 1962, **with the Secretary of the University at Queen's College, Dundee, from whom further** particulars may be obtained.

UNIVERSITY COLLEGE OF NORTH WALES BANGOR

Applications are invited for the post of LECTURER in AGRICULTURAL ECONOMICS in *the Department of Agriculture.*

The person appointed will be required to take over existing courses and develop new courses in his subject. He should have a degree in Agricultural Economics or in Economics or Agriculture with post-graduate experience in Agricultural Economics.

The salary scale is £1,150 x £50—£1,500 x £75—1,950 and in addition there are F.S.S.U. benefits and family allowances.

Two copies of the application should reach the Registrar, from whom further particulars may be obtained, NOT LATER THAN NOVEMBER 19, 1962.

VACANCY FOR A

STATISTICIAN

In the Central Statistics Office, Dublin. Salary Scales: (A) women and unmarried men £800 x £17—£1,270 x £41—£1,603 and (B) married men £800 x £60—£1,580 x £48—£1,835. Higher entry salary in certain circumstances up to £1,129 on Scale A and £1,220 on Scale B. Special increment after eight years' service: Up to £182 on Scale A and £210 on Scale B, subject to certain conditions. **Maximum Age Limit:** 35 years, with an extension in certain circumstances. ***Essential:*** (i) First or Second Class Honours Degree (or equivalent) in Mathematics or Mathematical Physics or Mathematical Statistics; or (ii) First or Second Class Honours Degree (or equivalent) in Economics with aptitude for Mathematics; or (iii) First or Second Class Honours Degree (or equivalent) with aptitude for Mathematics and adequate experience in practical statistical work.

Note: A person awaiting conferring of his degree will be admitted.

Application forms, etc., from Secretary, Civil Service Commission, 45 Upper O'Connell Street, Dublin, 1. **Latest time for receiving completed application forms: 5 p.m. on NOVEMBER 14, 1962.**

KODAK LIMITED

have a vacancy in their

OPERATIONAL RESEARCH DEPARTMENT

at Harrow

Applications are invited from men between 30 and 45 with direct experience in the development of planning and control projects. Preference will be given to candidates with wide knowledge of, and considerable interest in, systems analysis, mathematical statistics *and economics. The position can be* classified as permanent, progressive and pensionable. Commencing salary according to qualifications *and* experience.

Write full details to
Personnel Department (TRW)
KODAK LIMITED (FACTORIES),
Wealdstone, Harrow, Middlesex

THE UNIVERSITY OF LEEDS

DEPARTMENT OF SOCIAL STUDIES, GRANADA TV RESEARCH UNIT

Applications are invited for appointment to the Granada Television **Research** Fellowship recently held by the late Dr. J. Trenaman. The Fellowship, which will be tenable from as early a date as can be arranged, will be of a value of between £1,500 and £2,500 a year, and will be for a period of up to five years in the first instance. The Fellow will be expected to undertake research into the public impact of television over as wide an area of enquiry as *practicable.* The *Granada* TV Research Unit at present includes a Research Assistant and a Clerk, and provision has been made for the *payment of additional expenses arising in the* course of the research. Applications (three copies), stating date of birth, qualifications and experience, together with the names of three referees, should reach the Registrar, The University, Leeds 2 (from whom further particulars may be obtained) not later than 19th November, 1962.

UNIVERSITY OF EDINBURGH

DEPARTMENT OF SOCIAL ANTHROPOLOGY: LECTURER OR ASSISTANT LECTURER

Applications are invited for the post of LECTURER or ASSISTANT LECTURER *in the* Department of Social Anthropology. Salary Scales: Lecturer £1,150 x £50 to £1,350. Bar: £1,400 x £50 to £1,500 x £75 to £1,950 per annum. Assistant Lecturer £900 x £50 to £1,050 per annum. Placement on the scales will be according to qualifications and experience. The posts are subject to superannuation, and family allowance is payable where applicable.

The successful candidate will be expected to take up duty on January 1, 1963.

Candidates should have conducted research in some aspect of modern society in addition to possessing qualifications in either Social *Anthropology or Sociology.*

Further particulars may be obtained from the undersigned with whom applications (six copies), giving particulars of qualifications, including publications, and the names of two referees, should be lodged not later than November 14, 1962.

CHARLES H. STEWART,
Secretary to the University.

September, 1962.

Another Worthwhile Job

available for an

ECONOMIST

interested in a career as a lecturer and tutor to adult students attending full-time, sandwich, revision and part-time courses for intermediate and final professional and diploma examinations to start on January 7, 1963.

Salary range on appointment as Assistant Lecturer Grade B from £815 to £1,730 according to age, qualification and experience.

Candidates with appropriate educational and business experience could be considered for Lecturer scale from £1,645 to £1,860.

Application forms and further particulars from the Principal.

(HE.4/C/2507/10)
Balham & Tooting College of Commerce, Tooting Broadway, S.W.17

PEP INVITES applications for the post of RESEARCH ASSISTANT to undertake economic analysis for a study of Attitudes in British Industry. Applicants should be under 30 and have a good honours degree in Economics or a related subject. Salary according to experience. Apply: Director, PEP, 16 Queen Anne's Gate, London, S.W.1, in writing.

UNIVERSITY OF BIRMINGHAM

DEPARTMENT OF ECONOMICS AND INSTITUTIONS OF THE U.S.S.R.

Applications are invited for a Research Associateship £750-£1,000 or Senior Research Associateship (£1,000-£1,350) in the Department of Economics and Institutions of the U.S.S.R. Candidates should have a knowledge of Russian, and a University degree or experience in research in any field of social science. The duties will be to handle the collection of research material and to assist with the Department's research work. The initial appointment will be made in the range £750-£1,150.

Applications (2 copies), naming two referees, should be sent by November 17, 1962, to the Assistant Registrar (Commerce and Social Science), The University, Birmingham, 15, from whom further particulars can be obtained.

For further appointments and other classified advertisements see pages 402 and 409

AUSTRALIA

THE UNIVERSITY OF NEW SOUTH WALES

Applications are invited for appointment to the position of

SENIOR LECTURER OR LECTURER IN ECONOMICS
NEWCASTLE UNIVERSITY COLLEGE

Salary: Senior Lecturer, £A2,592 range £A3,042 per annum.
Lecturer, £A1,772 range £A2,477 per annum.

Commencing salary according to qualifications and experience. These salaries are under review.

Applicants for appointment as Senior Lecturer should have a higher degree and lecturing or research experience. For appointment as Lecturer, applicants should have a good honours degree. Special interest in economic statistics would be particularly valuable.

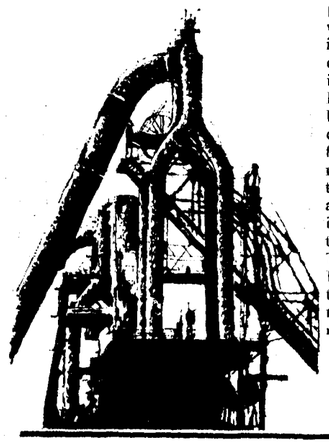
THE UNION BANK OF SWITZERLAND HAS CORRESPONDENTS ALL OVER THE WORLD

We are the Financial Backbone of Japanese Industries.



Our Bank specializes in supplying leading industries with long-term capital and is authorized to issue bank debentures for this purpose in accordance with the Long-Term Credit Bank Law. In addition, we operate various businesses facilitating long-term financing such as guaranteeing loans from domestic and foreign banks and acting as trustee in connection with secured bonds. Through such activities our Bank plays a vital role in the development of Japanese industries.

HERE'S HOW TO MAKE A
SUCCESS
OF YOUR
NEXT LUNCHEON

Let's assume that you are an efficient man, accustomed to getting value for money. As a specialist in your own field, you expect equal expertise in others. How, then, would you ensure the success of your next luncheon? You would do well to choose the Connaught Rooms, which is not an hotel but an establishment which specialises in banqueting, and is situated in the very heart of London. There you have the choice of several rooms, separately or in suites, for the entertainment of any number of guests—from 8 to 800. Whatever you ask for . . . soup with snow eggs . . . closed circuit TV . . . you get, quickly and with pleasure. And the reasonable cost will surprise you.

Connaught Rooms will arrange and organise everything exactly as you want it. A word from you will bring immediate action. Helpful suggestions, advice and estimates are equally forthcoming.

Please remember that luncheons are only one aspect of the service available. Contact Connaught Rooms regarding your next function —whatever it may be.

INVESTING IN JAPAN HOW TO BEGIN

It's a well established point that investments in Japan are good investments. Phrases like "exceptional growth" and "high yield" are used daily during discussions about the stock market in Japan. But, how can you get started in an investment programme in Japan?

Just three simple steps:

1. Send us a power of attorney to satisfy the government requirement.
2. Write out a letter of purchase.
3. Send a cheque in the same currency in which you would like to repatriate your investment.

Three simple steps to becoming one of the growing number of investors in Japan. There are other details regarding taxes, dividends, sales and other transactions. We can't explain them all here, so we've prepared a pamphlet, "How to Invest in Japanese Securities", which covers them. It contains up-to-date information concerning the recent changes in the investment laws in Japan.

To receive your free copy of this pamphlet, send your name and address to Nomura Securities. There is no obligation, of course.

The Importance of Good Counselling

The present trend of moderation in the phenomenal growth of the Japanese economy is attributed to the Government's policy of controlled capital investments. In portfolio management, proper counselling is just as important, if not more so, during this period of readjustment. Nikko . . . adviser to the U.S. Japan Fund . . . offers you complete data on Japanese stocks gained through experience and comprehensive research. Your nearest Nikko office will be pleased to give you up-to-date market information.

Like the proverbial ability of the Englishman to adapt himself to the vagaries of the English weather, Kellogg can, by drawing on their vast pool of scientific and technological knowledge, adapt themselves to meet the varied demands of complex plant construction in all parts of the world.

Kellogg's adaptability has applied itself successfully to such diversified projects as Copper Refineries and Paper Mills, Steel plants, and of course, oil refineries and petrochemical plants.

If you are considering adding to, or adapting your plant to meet new production requirements, add the Kellogg organisation to your staff. Better still, let the entire resources of the world wide Kellogg International Corporation take over, bringing with them their coordinated engineering-procurement-construction service and the technical knowledge of their laboratories in America.

Whatever your production expansion problems are, Kellogg would like to show you how today's technology can be applied to your company's advantage.

Write for the booklet—"On the Job With Kellogg International Corporation".

Share the FORTUNE

Most leading businessmen the world over have the Fortune habit. They read it every month. Along with the thousands of copies of Fortune which cross the seas every month to the world's business communities, from Adelaide to Zurich and from Manchester to Manila, there could also be one for you.

Fortune is the great management magazine of enterprise, for men at the top—and men on the way up. These men find this American magazine useful and important because of its unique brand of journalism.

The Art of Authority Fortune's editors have earned the privilege of asking for a company's unpublished balance sheets and sales figures, and of discussing with that company's officers what problems the figures reflect and what outlook they portend. This privilege is the result of years of authoritative reporting, of deeply thorough research and of expert insight into the workings of economic machinery.

Stories of Success and Failure A year of Fortune amounts to a post-graduate course in business administration, and to an exciting record of current business history as well. History was written in these recent corporation stories which were high among the favorites of European executives: The Private Strategy of Bethlehem Steel...General Dynamics—How a Great Corporation Got Out of Control... Daimler-Benz: Quality Uber Alles...It's a New Kind of Ford Motor Company...Pan American: Peril and Opportunity... Alcoa Strikes Back.

Use and Misuse of Power As course material in business administration, Fortune's studies of how management problems get solved are unmatched. Many of these have also received acclaim among European readers. Among their favorites: The Great Electrical Conspiracy... How Companies Pirate Managers...The New Power of Financial Executives...The Distribution Upheaval.

Accurate Economic Forecasts Businessmen find Fortune's forecasting in the Business Roundup section of specific help in their business and personal investment decisions. These forecasts have correctly predicted major turns in the U.S. economy since 1950.

Monthly Features In every issue of Fortune you will find Business Around the Globe, Businessmen in the News, stories on personal investment opportunities, features on sales, marketing, technology, science and new products and processes.

Worldwide Coverage Fortune is written by some of the most talented business journalists in the world, backed by the worldwide facilities of the publishers of Time and Life.

Subscribe to FORTUNE and Receive Free the 500 Corporation Directory

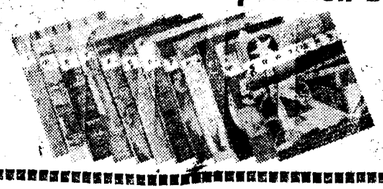
Did you know that you can have Fortune delivered to your home or office every month just by using a coupon? And did you know that this greater convenience will also save you money?

HOW TO SUBSCRIBE This offer saves you 30% of what it would cost you to go out and buy 12 issues separately. (For prices, see list under the coupon.) To share the Fortune habit, just fill in and mail the coupon to the appropriate address listed, or hand it to your news agent or bookseller. In addition to one year of Fortune at this special introductory rate, you will receive a free bonus (see below).

If you prefer, send no money. We can bill you later.

MAIL THE COUPON NOW You will receive at no additional charge a copy of Fortune's famous Directory of the World's Largest Corporations for 1962. This extraordinary document lists the 100 largest industrial companies outside the U. S., the 500 largest U. S. manufacturing companies and the top 250 U. S. commercial banks, life insurance, merchandising, transportation and utility companies.

This directory, the unique authority for this information, enables you to compare your company's performance with the world's leading companies—in sales, assets, net profits, number of employees.



FORTUNE

Please send me FORTUNE for one year at the special introductory rate which saves me 30% of the cost of 12 issues bought singly, plus my free copy of the 500 Corporation Directory.

The Economist this Week November 3, 1962

CUBA

The Fright of Our Lives

One view of the cold war is that it is lamentable, abnormal, and perilous, but likely to ease eventually when the Russians learn that it is in their interest to behave. Another assumes a life-and-death, annihilate-or-be-annihilated struggle. Last week's events make the second view plausible ; but, in fact, things are not so simple (p. 431).

The Fright of Their Lives?

Soviet policy may often be, like other people's policies, very largely the creature of circumstance. The next set of circumstances will not necessarily favour the West (p. 432).

The Fight for Its Life

The **Cuban revolution's** ability to survive will continue to depend on the strength of the Soviet disposition and determination to give it economic backing (p. 434).

Survival Notes:

The *gold* and *foreign exchange* markets weathered the storm smoothly (p. 501).

The *stock markets* weathered the storm, but not smoothly (p. 500).

The *money market* faces a problem (p. 501).

EUROPE

EUROPE AS ONE

The latest uncomfortable round of common market negotiations, including the explosive issue of farmers and their incomes, contains a complex of dangers; the real ones must be sorted out from the scarecrows (p. 435).

The managers of **the European commission** in Brussels are anxious to appear as tough with British farmers as European farmers think Britain is being with them (p. 447).

The European proposals on monetary policy deserve to be introduced to Mr Maudling's ideas on world finance : the two could have a lot to talk about. Inside Europe, the purists of the commission plump for central planning, whatever name they may give it (p. 495).

EUROPE AS MANY

. . . France

General de Gaulle's little victory in the referendum on Sunday does not give him the new lease of power he was expecting ; rather it raises doubts about his future (p. 446).

The **steel industry** is worried about the dangers of over-expansion: and its leaders are determined that Britain, once in Europe, should abide strictly by the strict community rules for steel (p. 497).

With an eye to the coming elections the government has pushed up **minimum wages** (p. 509).

. . . Germany

The **Gestapo-like swoop** on the proprietor, editor, and several staff members of the iconoclastic magazine *Der Spiegel* has raised fears within Germany about the frailty of democracy in that country—fears expressed by the trade unionists' unwillingness to allow the government to take emergency powers of any kind (p. 442 and p. 451).

The **coal mines** are not getting the federal aid they were promised to pay their workers more (p. 505).

. . . Italy

Signor Mattei's death will have large repercussions in Italian politics—and even larger ones in **international oil** (p. 499).

THE REST

DEMOCRATIC TARGET

The Cuban crisis has given the American congressional elections—voting is next Tuesday, November 6th—a much-needed focus and it has improved the already hopeful prospects of the Democrats. This and other aspects of the campaign in various parts of the country are dealt with in a special election survey beginning on page 455.

DEMOCRATIC ASSISTANCE

By coming swiftly to **India's** aid in its "undeclared war" with China, the West, which has attached no strings to its help, is fostering genuine friendship (p. 437).

Some other supposed friends of India are behaving oddly (p. 437).

DEMOCRATIC TIDE

The sweep of events will not allow Sir Edgar Whitehead the fifteen years he wants to spend improving his black **Southern Rhodesians** before opening the door to their authority (p. 439).

In **Northern Rhodesia,** the elections on Tuesday were marred by the racial approach of the white **United Federal Party's** campaign (p. 451). What can be done, by quicker educational reforms and a more adaptable constitution, to face the future popular facts there? (p. 440).

and in Britain

The most interesting new **Government thinking** is not for Parliament at all (p. 437).

Mr Brown and Mr Wilson join battle for the **deputy** leadership of the **Labour Party** (p. 438).

A new direction for the **national health services** is proposed by those who work in them (p. 442).

A new **teaching machine** is winning acceptance from education authorities—and from teachers, who could find it their strongest ally yet (p. 467).

The **new towns** have proved their financial, as well as their undoubted social, success (p. 443).

and Scotland

The government may at last be coming to make special arrangements for subsidising **transport in the Highlands** (p. 440).

The honourable crafts of **the music hall** have, in the non-sassenach north, survived the English innovations of nudity and bankruptcy (p. 468).

Detailed contents on page 431

GO FASTER · ARRIVE FRESHER · BACK SOONER

THAT'S THE BIG speed-up!

Now winter services take up the speed-up. The new faster *trains, saving over an hour between* Edinburgh and King's Cross, go into winter service. Journeys are shorter, more comfortable. King's Cross to Edinburgh and the main intermediate stations—it's the winter speed-up.

New locos—new track New powerful diesel locomotives have made these new timetables possible. New long welded track gives you a smoother ride at over 60 mph for mile after mile. And up-to-date carriages and restaurant cars add comfort to your journey.

How many trains? The speed-up affects most main line trains on the routes from King's Cross, giving you not only a better, faster journey but a wider choice of trains. For example, three trains each way make the daily journey between *London* and Edinburgh in less than 6 hrs. 20 mins.

KING'S CROSS—SHEFFIELD—LEEDS				
7.45 a.m.	7.20 p.m.	King's Cross	10.5 a.m.	8.42 p.m.
10.30 a.m.	10.5 p.m.	Sheffield	7.20 a.m.	5.42 p.m.
7.15 a.m.	5.25 p.m.	King's Cross	10.30 a.m.	8.42 p.m.

Everyday AMF solves fascinating problems with unique products

Two very ordinary unrelated items. And yet when you put AMF in the picture they have much in common. Both have benefited from AMF's versatility in the field of research, engineering and manufacturing. Take the egg. Hens lay eggs when it's light. So the longer *it's light the more eggs will be laid.* AMF Paragon makes time switches for industry. They even make time switches that control poultry house lighting! With these automatic timers chickens get up earlier, have longer 'daytime' to lay more eggs and the poultryman can stay in bed a little later. Everybody's happier. And the button? *AMF makes an* automatic button stitching machine that duplicates the most skilled hand stitching — only better, more economically — and almost three times faster. Stepping up production is every day work for AMF machinery. In many lands, in many fields, problems are being solved with unique products—thanks to AMF International.

These are the problems

Irradiation Sterilisation is the new answer for hygiene

Effective sterilisation of raw materials and other industrial merchandise medical and otherwise, has always been difficult and found to cost a nation more than almost anyone imagined.

This is largely because sterilisation has had to rely entirely on the human element, and has had to be carried out before packaging, thus wasting highly skilled hands on what should properly be a mere routine. To this problem one answer is supplied by Vickers-Armstrongs: sterilisation in bulk by exposure to the cobalt-60 radio-isotope.

Advantages are great. Plant offered by Vickers-Armstrongs is completely mechanised and thus economical in man-power. Your sealed packaged goods to be sterilised are conveyed through the plant and emerge on the conveyor with all their contents surgically sterile and with no risk of re-infection.

Because neither heat nor steam is involved, most materials unsuitable for sterilisation by to-day's normal methods present no kind of difficulty and are unharmed. Designed in conjunction with the U.K.A.E.A. Radiation Laboratories at Wantage, Vickers-Armstrongs plants are planned for throughputs of 2,000; 6,000 to 25,000; and 90,000 lb. a week, assuming a density in the packs of 6-30 lb. per cubic foot. Operation of the plant is simple, straightforward and completely safe to use and there is no residual radioactivity.

As a contribution to world health, Vickers-Armstrongs are ready to undertake design studies for particular applications of their plant with interested governments and organisations.

Putting the small man in the picture

Who says TV advertising is only for the big boys? A 15-second weekend spot reaching 570,000 viewers in the London area can cost as little as £50; a 15-second weekday spot reaching 769,000 Midlands viewers, as little as £85. And with guarantee and series discounts, the shrewd buyer can build a really substantial TV schedule on a very limited budget indeed. What's more, to reach 1,000 noting viewers on TV costs only half as much as in the national press.

For further information about TV advertising on a limited budget, write to Patrick Henry, ATV, 17 Great Cumberland Place, London W1, for a reprint of an article—Putting the small man in the picture—recently published by ATV

THE CITY OF STEEL SELLS TO THE ARGENTINE

The Argentine Republic, seventh largest country in the world, is the most southerly on the South American continent. Its climate and geography range in character from the Mediterranean type areas of the north to the Norwegian fjord-like scenery of the south. There are over 22 million inhabitants, more than 6 million of them living in the capital, Buenos Aires.

Argentina's most important exports are the products of cattle rearing and agriculture—meat, wool and hides, wheat and maize. Britain is her chief export market for these commodities, in 1961 approximately £75 million worth being sold here.

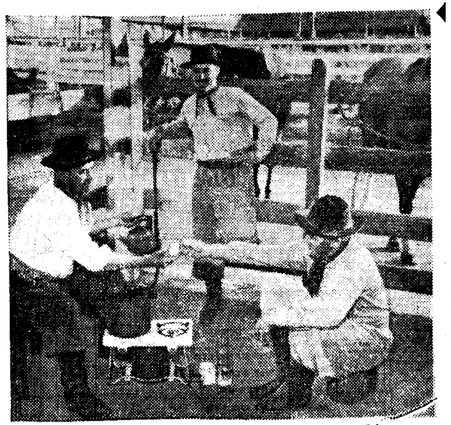
In return Argentina imports from the United Kingdom. The Steel Company of Wales is one of the British companies represented in this extensive market.

Last year the total of world exports from 'The City of Steel,' the vast steelworks at Port Talbot, was over £34 million, accounting for 54.7% of Britain's sheet steel and 72.8% of her tinplate exports. These figures were achieved in the face of heavy competition.

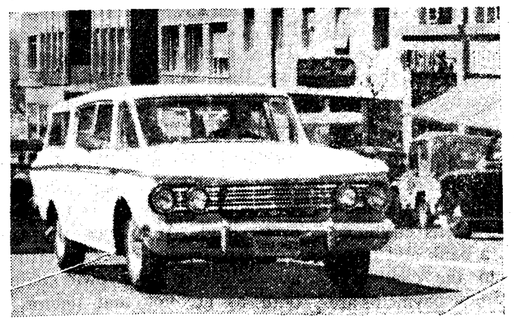
"Gauchos," the men who handle the great cattle herds, in typical costume

CORNED BEEF ON THE HOOF The Argentines exported 84,546 tons of canned meat in the first eleven months of last year. Here are some of their cattle en route to a beef packing station. Much of the meat is canned in tinplate made by The Steel Company of Wales—the biggest single supplier of tinplate to the Argentine.

COLD COMFORTS Argentine housewives enjoy the benefits of the country's large electrical appliance industry. Several companies making refrigerators in the Argentine are importers of sheet steel from The Steel Company of Wales.



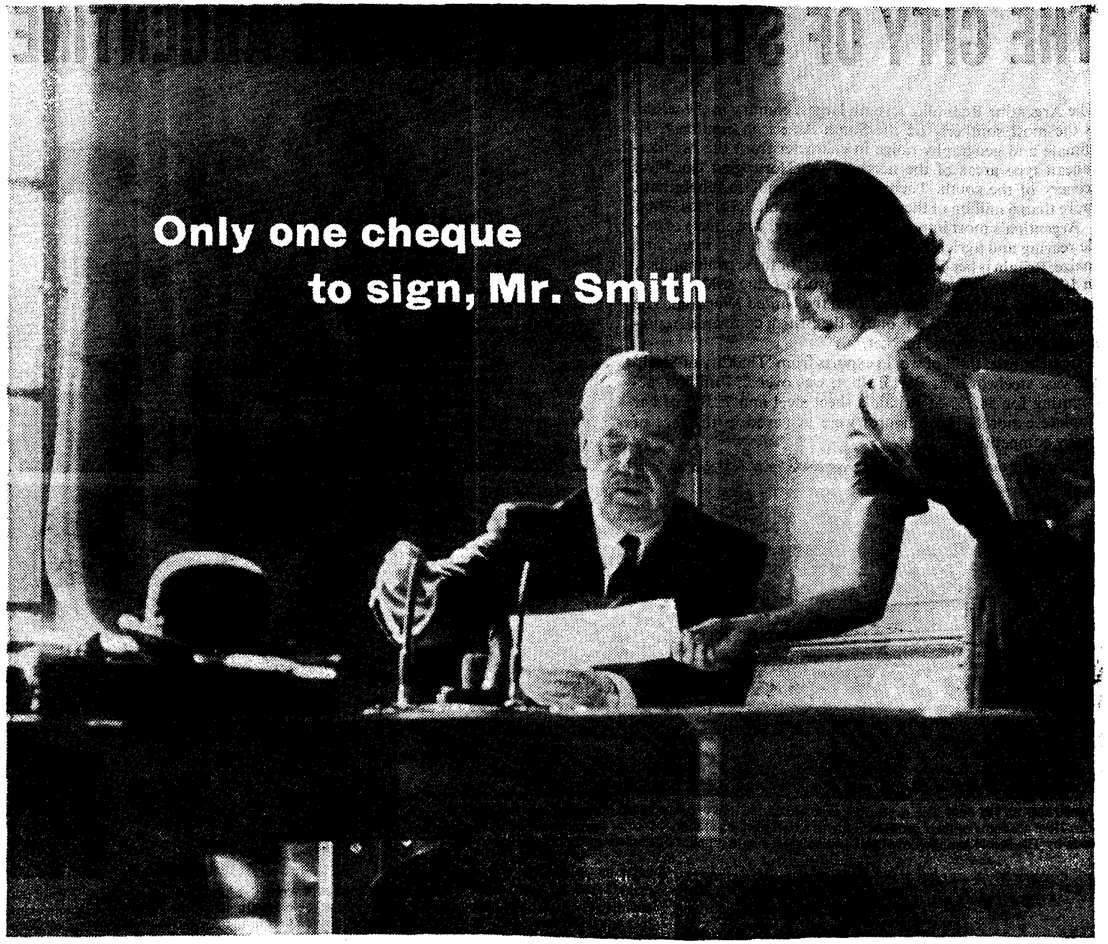
BREW UP—ARGENTINE WAY Cowboys make *mate*, the special tea of the country. They use a gas heater made by Longvie S.A. and a pot and kettle from Capea. Both companies are importers of sheet steel from Port Talbot.



STREET SCENE This Rambler station wagon, on the Calle Cordoba, one of the main streets in downtown Buenos Aires, is one of the cars produced by Industria Kaiser Argentina using sheet steel from Port Talbot.

Steel for the World from Wales

THE STEEL COMPANY OF WALES LIMITED



More and more companies are today sending with their invoices the special slips which characterise the Credit Transfer service. In so doing, they are helping both themselves and their customers.

THE COMPANY WITH ACCOUNTS TO RENDER... relieves its staff of the need to handle a multitude of incoming cheques. Payments by its customers are made through a bank and transferred promptly to the company's account. Details of these payments are supplied regularly to the company by its bankers.

THE COMPANY WITH ACCOUNTS TO PAY... simply completes the Credit Transfer slips as they are received, lists them and sends them to its bank with a single cheque to cover the total involved.

As the use of Credit Transfers grows, 'only one cheque to sign' will become a commonplace in companies of every kind. And since the Credit Transfer service offers worthwhile advantages to your own company, both as creditor and debtor, you should ask your bank about Credit Transfers today.

After Cuba

FOREIGN policy has been likened to a game of chess—wrongly, as Mr Hamilton Fish Armstrong points out in the fortieth anniversary number of *Foreign Affairs*, looking back on the whole dizzy period in which the United States has learnt to live with the responsibilities of world power. "There is no fixed book of rules to say that a certain move will be successful or that a contrary one will fail." The board is a patch of fluid afloat on the waters of time; the pieces, the vehicles of power, change their attributes without proper notice; and no contestant ever sees all of the board.

From many quarters, in the past twelve days, the Russians have been bitterly upbraided for the stealth of their action in deceitfully setting up missile bases on Cuba (as if it were in the rules that such an action should be advertised). What we must all hope is that they are upbraiding themselves mercilessly for the folly of it. Once they had done it and been found out, their position was irretrievably weak. Mr Kennedy, in the tense six days that began with his broadcast on October 22nd and ended last Sunday with Mr Khrushchev's promise to withdraw the offending weapons—"Both you and I understand what kind of weapons they are"—from Cuba, was playing from strength.

He played his hand as a strong hand should be played: the bid called exactly, the moves unhesitating, the objective, once stated, adhered to. Some people hoped, and many more in the world feared, that he would try to exceed his bid, perhaps by allowing the blockade of Cuba to become indiscriminate, perhaps by a direct blow to overthrow the Castro regime. Statements coming out of Washington last weekend did suggest that direct action against Cuba was very close. In the last phase of the crisis the pace was becoming hot, and the hours precious: as Mr Kennedy wrote to Mr Khrushchev last Sunday when it ended, "You and I . . . were aware that developments were approaching a point where events could have become unmanageable."

Perhaps only this can explain the astonishing speed and (within the limits of the matter at issue) the completeness of the Russian retreat. Mr Kennedy thereupon showed that he knew not only how far to go, but precisely where to stop. His acceptance of Mr Khrushchev's retreat was unreserved and handsome. His conditional offers made the day before—to call off the blockade, and to give assurances against an invasion of Cuba were at once reaffirmed as "firm undertakings." There was not a touch of the intoxication that confuses success with victory, not a sound, in this final moment, from the demon of generalisation who tempted Woodrow Wilson and Franklin Roosevelt. The Russian retreat from the western hemisphere was made as easy as it could, in the circumstances of an essentially brutal confrontation of material force, be made.

Mr Kennedy's Administration has, indeed, of its own choice taken on a restrictive commitment, not to invade Cuba, which it was far from accepting a few months ago when the placing of Russian strategic weapons there had not been thought of. Nothing short of a lethal military threat could have justified the invasion, but there was reason to fear that it might be undertaken in a bout of ideological spring-cleaning. The United States is right to have renounced it, and the allies, who never [illegible] an assault upon Cuba a reasonable way for the United States to use its power, can be reassured. It is for all of us to acknowledge that the promise can be, in the prevailing American political climate, an irksome one to have made, and to give unstinted credit for it.

These considerations matter if the United States and its western allies are to end up, after the Cuba crisis, understanding each other better, not worse, than before. By and large, people in western Europe have been watching to see not only that the United States succeeded in what it set out to do (and they are heartily glad for the success) but also to see what use the Americans would make of their success, once achieved. Here, too, President Kennedy showed a swift awareness of what was at stake. Sunday night's reports from Washington already indicated that he saw the outcome of the crisis as an honourable accommodation, not as a great victory; and that one conclusion that might have been feared—namely, that the only way to deal with Moscow is to be tough all the way—was being rejected.

The point is a sensitive one in American relations with, among others, Britain, for there is a latent difference. It is not merely that the British have never seen Cuba as a very important country about which they ought to concern themselves acutely. Nor is it merely that they do not find it odd or unusual that a country should have a hostile neighbour separated by no more than 90 miles of water; they have often had hostile neighbours much closer. (Thus the emotional quality of American feeling about Cuba, a feeling that arises from the special way in which Cuba has been interwoven with the history of America's national emergence as a great power, leaves them untouched.)

A DIFFERENCE does exist, in a more general way, and if only potentially, about the way the conflict with the Soviet Union should be conducted, because there are different attitudes about what the conflict is. As a matter of fact both attitudes are to be found in each country. Very often, and especially at moments of drama or high tension, both can be found in one individual, struggling for mastery. But it is probably true that the instinctive and typical attitude of the British is that the cold war is a temporary, unfortunate, and abnormal thing. After the last war, the feeling runs, the Soviet Union behaved intolerably badly and forced the West to organise itself in resistance; thus Nato, the doctrine of containment, and the West's emergency military effort were born. The problem, we tend to suppose, is basically to get the Russians to accept proper standards of international behaviour; and when they see that it is in their interest to do so, it should be possible for defence and diplomacy together to return to normal, and for a more pacific relationship to be restored.

But there is, of course, an opposite attitude, which, by and large, has provided for many years the assumptions of American political, diplomatic, and military life. Perhaps the different attitude comes most naturally to the people who are most actively engaged in the struggle and who live with the fearful responsibility for its success or failure. By this reckoning, the cold war is a life and death struggle, in which the defeat of the antagonist—by his unconditional surrender—is the only alternative to one's own extinction; and it is assumed that that is how the antagonist, too, looks at it. Obviously if one holds this view of world relations it is easier to think that if the antagonist is faced with the threat of force and compelled to back down, then the situation has been improved. It is much easier, too, to convince oneself that force is the only argument he understands. On the face of it, last week's events can be taken to confirm this second view. The moral might be drawn that if Mr Khrushchev is confronted with force again he will, once more, back down; and that if he is offered concessions he will interpret them as weakness and start using his elbows again.

In fact, as Mr Kennedy himself plainly appreciates, the actual outlook for western policy is much more complicated. Cuba and the Caribbean are places where the strategic factors are heavily stacked against the Russians. Perhaps if they had been ready, whether psychologically or materially, to enter a world war, then the choice of arena would not greatly have mattered. It is evident that, whether physically or psychologically, they were not ready for that. That being so, they did not have to consider a choice of advantage, between retreat and hanging on to the dubious asset of being able to threaten the United States from Cuban soil: they merely had the choice between retreat and defeat. Retreat was obviously the preferable course. The only room for surprise was in the celerity and openness with which Mr Khrushchev took it.

None of this tells us much about what the Russians will do in another place and in other circumstances. The next clash may happen somewhere where they are better placed to stand their ground without risking general war, or in a place where they feel that their vital interests are so engaged (as they were not in Cuba) that the risk of general war will have to be faced. They may be drawing the conclusion that the arena for the next clash must be more carefully chosen, so that they are not caught at a local disadvantage; or that it had better be deferred altogether until they are better prepared for war, and that therefore they must lie low and get on with rearmament. There is even a third possible conclusion for them—that it is worth while to explore seriously what negotiation will do to make both these courses unnecessary. Mr Khrushchev, who has never yet been seen to commit himself irrevocably to any single course of action, is perfectly capable of acting on two, or all, of these conclusions concurrently. Certainly the West will have to be prepared for all three.

Soviet Brinkmanship

Why did the Russians do it?

NEITHER an idiot nor a devil, Mr Khrushchev has extricated himself, with the loss of a certain amount of skin, from a position that proved untenably brinkmanlike. Although the air is ironically full of tributes to his restraint and magnanimity in ordering the removal of the Soviet rockets that he had put into Cuba, a defensive note has already been struck in the commentaries of the Moscow press. *Izvestia,* on Tuesday, was concerned to explain that the pull-out was the only course of wisdom. It did not identify the critics whom it was clearly addressing. But Peking was notably not in the front rank of those capitals of the communist world that hastened to hail Mr Khrushchev's decision; and the Chinese press and Albanian radio tersely cited verdicts in western newspapers that American diplomacy had won a "victory." Neither Mr Kennedy's wise refusal to boast of a victory, nor the barrage of loyal tributes to Mr Khrushchev's "highly humane and noble step" (to quote a Bulgarian commentator), can wholly cleanse the Soviet leader of the taint of retreat under duress.

It seems clear enough why he had to sound the retreat so precipitately, and at such a cost. He expected, not later than the beginning of this week, a direct American assault on Cuba. Whether the assault would be limited to the destruction of the still uncompleted rocket bases, or extended to amount to a bid to shatter the whole Castro regime, made little difference to Mr Khrushchev. In either case, he would be revealed as having no means of saving his Cuban protégé except by taking on the United States directly in full-scale nuclear war. His diplomatic advisers may have warned him that Russia would sustain a grave loss of international influence if, in such circumstances, it sat back while Dr Castro was punished for entrusting his fate to it. His military advisers must have reminded him that Russia has nothing like the first-strike capacity required to cripple America by a surprise attack and avert massive retaliation upon Russia itself. His political colleagues doubtless expressed doubts about the willingness of the Soviet public (or, rather, of its effectively articulate sectors) to face obliteration for the sake of a marginal stake in Cuba. He had to cut his losses quickly, before they mounted.

But if these perspectives could become so clear and cogent last week, were they not discernible in Moscow at an earlier stage? The question how Mr Khrushchev came to find himself on the brink is less easily answered than that of his motives in pulling back from it.

In any analysis of this kind, it is wise to begin by discounting extremes. One extreme hypothesis, which underlies some western reactions to Soviet moves, depicts Russia as being simply and uninhibitedly devoted to "giving trouble" wherever in the world there are possibilities of doing so. If one follows this approach, there is no need to look for subtlety or even logic in Soviet tactics, and the prescribed counter to them is simple too—a sturdy poke in the nose. At the other extreme is the assumption that the Russians ("the world's finest chess players") invariably work out all the conceivable implications of any action before taking it, and are tirelessly engaged in laying traps of diabolical ingenuity to ensnare the innocent West. Neither of these schools makes allowance for the possibility that Soviet policy may often be, like other people's policies, very largely the creature of circumstance.

In this case, Mr Khrushchev may have felt impelled by some fairly powerful considerations to take the very obviously risky step of sending rockets to Cuba. He was not only publicly and solemnly committed to underwriting Dr Castro, but also under some necessity to show his own activists (not to mention the Chinese) that his proclaimed faith in peaceful co-existence did not really imply any flabbiness in prosecuting the world struggle for the triumph of communism. There may have been a convergence upon him of two groups of military lobbyists, one concerned particularly with the fate of Cuba, the other more with the whole Soviet strategic posture.

The argument about the extent to which the placing of rockets in Cuba would transform the general American-Soviet nuclear equation is a complex and still controversial one. The argument centred on the defence of Cuba itself may have been couched in simpler terms. Rockets in Cuba would make it possible to deter, or respond to, an American attack on the island with purely local means—that is, without invoking intercontinental nuclear hostilities; at the least, the agony of deciding whether to enlarge the struggle into an intercontinental one would be laid upon the United States.

All depended, of course, on getting the rockets set up for firing with the least possible delay. Hence, presumably, the absence of any attempt to camouflage them; speed was essential, and it may have been assumed that no camouflage could effectively prevent American intelligence detecting the hectic construction work on the launching sites. It is hard to accept the suggestion that there was a deliberate intention to catch Washington's eye, for it was precisely while construction was incomplete that the whole project ran the greatest risk of foundering.

DID Moscow assess the risks correctly, yet feel constrained to take them, or did it seriously underestimate them? Probably there was a real and grave miscalculation about the speed and skill of Mr Kennedy's inevitable reaction. The Russians may have counted on securing a period of grace while Washington dithered wretchedly between the alternatives, both abhorrent, of inaction and invasion; a period that would suffice to complete the installations and transform the military equation. The President chose, instead, to launch at once a coldly modulated design of deploying maximum force while resorting to minimum bloodshed. Inside four days this forced Mr Khrushchev to go into reverse; his still unpublished message to Mr Kennedy on October 26th appears to have incorporated an offer to remove his rockets from Cuba without any such *quid pro quo* as the removal of American rockets from Turkey, and his ineffective Turkish bid the next day—coolly ignored by Mr Kennedy in his half of the exchange of messages—looked like a mere smoke-cloud, possibly intended to obscure the naked realities of the situation to the eyes of watchers inside the Soviet world as much as to watchers outside it.

How successfully the new American promise not to attack Cuba can now be presented as a worth-while, if residuary, achievement of the Soviet adventure is hard to assess. Peking calls it a "hoax"; but Mr Khrushchev has grasped it with both hands and publicly declared that it is in itself enough to remove all reason for the installing of Soviet missiles in Cuba. Dr Castro does not seem to agree; his conditions, stated on Sunday, and discussed in the immediately following article, have been presented in the Chinese press as "absolutely necessary," but have been played down in Russia. The Soviet press greeted them with nothing more than "understanding." Moscow has an obvious motive for not concentrating attention on them, since they cast doubt on the validity of the one item that Mr Khrushchev can claim to have salvaged from his venture. Nor have Soviet commentators seemed in any hurry to take up the argument that the Cuba crisis has enabled Moscow to broach the general question of liquidating military bases in foreign countries.

Whether or not Russia's aims in its hazardous Cuban sally included the strengthening of its bargaining position over other bases, or over Berlin, the present outcome of the affair

Appointments, Business and Personal notices, and other Classified Advertisements: pages 518 and 525

has evidently forced Moscow at least to pause and take stock of the newly revealed limitations to its field of manœuvre. Such a stocktaking could, however, yield a decision to concentrate the next effort on an area in which Russia would be playing on its "home ground"—and in which it would be the American nuclear deterrent, not the Soviet one, whose credibility would be under test.

Castro's Morning After

How does he keep afloat now ?

At the height of the "Cuban crisis," no Cuban voice was heard or listened for. The island's identity vanished behind the storm. But as people blink their way back into the light, it is relevant to wonder in what shape Dr Fidel Castro and his men have survived the diplomatic battering that has been going on over their heads.

The mortification of the Cuban leaders at being demonstrably passed over while the decisions that mattered were being made has been taken for granted, perhaps too glibly. Certainly there is more than a smack of frustrated self-assertion in Dr Castro's brandishing of a set of new and, in the context, unrealistic conditions at a time when all, bar this sort of shouting, seems to be over. But face can be lost and won again, words eaten and forgotten, faster and more easily than logical minds suppose. The analogy with Egypt's victorious emergence from the Suez Canal crisis of 1956 is worth a tentative probe. Although the circumstances were very different, both leaders were powerless to control the events that thundered around them. Yet President Nasser was able to emerge not only with honour but with triumph. The Cuban government is bound to deplore the fact that Russia's readiness to go to war to defend its foothold in the western hemisphere has been tested and shot down ; on the other hand, only the suicidally bent would have welcomed a war that must, in the first instance, have obliterated their own country. It could even come to pass that, in some parts of the world, Dr Castro's name and Mr Khrushchev's may yet be bracketed as the twin super-statesmen who saved the world for another day.

Exerting authority in speech if not in action, Dr Castro has said he is not prepared to go back to the situation that existed before the bases were erected—and detected. His position has, in fact, changed in two respects. Through the Kennedy-Khrushchev exchange, he has been given an assurance that the United States will not, if the bases are dismantled, invade Cuba. Dr Castro's immediate reaction was cynical. He argued that the assurance was worthless unless a number of conditions were fulfilled—the most unlikely of which was the evacuation of the American naval base at Guantanamo. His other demands, without being unreasonable in themselves—an end to the economic blockade and to the subversion and pirate attacks organised from United States soil—are untimely. While Dr Castro is clearly unable to stop the Russians taking their weapons away again, he has been able to make it awkward for the United Nations to send the inspectors that Russia and America have agreed upon. U Thant, who spent Tuesday and Wednesday in Havana with a group of advisers carefully selected for their nationalities, failed to leave any of them behind, as he had intended. Mr Mikoyan, who on Thursday was on his way to Cuba, may be able to persuade Dr Castro that the time, and mood, are not propitious for bargaining hard with the United Nations as well as defying the United States.

The desire to raise his own voice above the din encouraged Dr Castro to make his unseasonable demands. If this were all, his face-saving act of bravado could be given its fling and ignored. But there is a more serious reason for Cuban disquiet. The siege mentality that has developed inside Cuba is not something that can be dispelled at a puff of reassurance. The Cubans have grown convinced that the United States intended in one way or another to attempt the overthrow of their regime, and this conviction (reinforced by the warlike noises that have, in recent weeks, been blown across that famous 90 miles of water) will not quickly subside. That the Cubans should have welcomed the possession of nuclear deterrents (even if they were not, as Mr Khrushchev soothingly said, allowed to handle them) is, perhaps, as understandable as it is intolerable. The understanding, and the overwhelming dismay, would be the same if Israel, another country that sees itself under constant threat of annihilation, were to acquire a similar power of retaliation. From the Cuban point of view, the technically "offensive" weapons were defensive ; where the Cubans made their mistake was in thinking that their point of view mattered.

A horrified reaction to the spread of nuclear weapons is not, by itself, a sign of slavish obedience to the rules of the cold war. The unanimous backing that the Latin American countries gave to President Kennedy's action was not necessarily the great swerve in opinion that it has been made out to be. Those governments whose tactics for self-preservation have become linked to their hopes for Castro's downfall were stalwart in their support, even, in some cases, proffering their ships or their ports in the American cause. The governments, notably Brazil, Mexico and Bolivia, whose attitude in the Cuban-American dispute more closely reflects Latin American opinion, tried to express their total (and entirely genuine) disapproval of the presence of nuclear weapons in Cuba without endorsing the principle that the United States would be right to use armed force to get rid of them. In the muddle of a hastily called meeting of the Organisation of American States on October 23rd this entailed the paradoxical business of supporting a whole resolution with one breath, and abstaining on one of its sections with the next. A stern letter from President Lopez Mateos of Mexico to Dr Castro, and Brazil's restatement of its plan for zones free of nuclear weapons in Latin America and Africa, suggest the strength with which these two governments believe Fidel Castro to have grossly misjudged the lengths to which he can carry his defence.

But the Castroist, and communist, opposition in Latin America has been able to interpret the OAS vote as evidence of their governments' subservience to the voice and will of the United States. The Latin American governments can play at an independent foreign policy, so runs their argument, but on any issue that fundamentally matters to the United States they are at once brought to heel. There is, of course, something in this ; power is power, as even Mr Khrushchev, off his home ground, has had to recognise. The consequent wave of left-wing protest is believed to be very much more serious than the newspaper reports would suggest. The blowing up of four power stations belonging to the Creole Petroleum Corporation in Venezuela (an impetuous act of destruction that recalls Syria's reaction to the Suez Canal crisis) was a major incident, but not an isolated one. In Chile, where the left-wing parties are well organised and full of fire, riots are believed to have ended with many casualties.

This freedom, or lack of freedom, of Latin American countries to pursue an independent foreign policy marks the second change in Dr Castro's position. The Cuban prime minister has had brusquely brought home to him the confines within which he can operate. The Cubans have to live with the knowledge that, although they have been thrown out of the Latin American system of treaties, consultations and economic co-operation, they still have to abide by some of the rules governing international action. One limit beyond which it is neither safe nor possible to defy the United States has been defined.

The corollary to this restriction on foreign policy might, in a less agitated world, be the more pacific acceptance of Dr Castro's domestic policy. But the United States Administration has been at pains to stress that the deal it has made to get rid of the bases has not made it any more resigned than it was before to the existence of a communist state in the western hemisphere. So the battle goes on, even if the major weapons of attack are barred. When the talk of deterrents and invasion has died down, the Cuban revolution's ability to survive will depend, as before, on the strength of the Soviet determination to give it economic backing. Mr Mikoyan's journey to Cuba suggests that Russia's quick-footed retreat from a grossly miscalculated military move will be matched by an energetic advance on the economic front. If this is so, Cuba's leaders may be able, soon, to throw off the hangover from an unwise and reckless night.

Dangerous Corner

The exceedingly disappointing negotiations in Brussels last week are discussed on page 447 of this issue : the exceedingly important new memorandum on European Economic policy from the European Commission on page 495. The article below discusses the attitude Britain's negotiators should take at this dangerous juncture

In the latest round of negotiations at Brussels Mr Heath and his team were faced by an attitude from the Six that seemed to be compounded of three elements. First, they faced (or, equally important, felt that they faced) a situation in which some of the Six's negotiators assumed, from the enthusiasm for Europe shown at the Conservative party conference, that Britain was now prepared to go in at any price. Secondly, and allied to this, they felt that some international civil servants in the European Commission had become more awkwardly doctrinaire in their negotiating attitude ; there seems to be an increased determination at the commission to make Britain observe the Rome Treaty meticulously, perhaps partly because at this stage it thinks it can force us to do more easily than it can force its own members. Thirdly, Mr Heath's team was made increasingly aware of an argument used by some of Britain's best friends at Brussels. Things are now moving so fast towards a new integration and reshaping of economic policies in Europe, they were told, that it is important for Britain to get into the market quickly ; the shape of these newly integrated policies will be decided by the widest common denominator of agreement between existing members of the community, and in order to become a part of that common denominator Britain should be ready to cut some short corners in the remaining negotiations before entry—instead of going on to argue about peripheral matters so interminably that we miss this moving bus.

There is a great deal in this last argument ; but so there is in the British Government's increasingly determined argument that it must not—indeed cannot—beat a constant retreat in the remaining bouts of bargaining before entry. In the atmosphere after Llandudno, the Six must not now think that it can win every trial of strength. Somewhere between the difficulties set by these two opposing arguments, Mr Heath needs to take a very tricky stand.

The important point—and the one that needs careful re-emphasis this week—is surely that Britain should never allow its attitude towards any supposed trial of bargaining strength to become an emotional one, but should always see that it is a closely reasoned and practically based one: what is needed, as each problem arises, is a clear differentiation between the camels which we should not swallow, and the gnats which we should not be too furiously straining at.

Throughout this debate on Europe, the cloud that has been shaped most like a large camel has been the fear that economic and monetary policies in Europe might become so integrated that we could lose our powers of independent anti-cyclical action: that shortly after entering Europe we might find ourselves obliged to solve *any* balance of payments difficulties by an unnecessarily harsh degree of deflation or stagnation, at some central authority's behest. Inevitably, this fear has been raised again by the memorandum on a proposed "programme for action" in 1962-65, which was submitted this week to the European Council of Ministers by the civil servants on the European Commission, and which is discussed on page 495.

It would be wrong to exaggerate this danger. Many of the commission's ideas fit in fairly well with *The Economist's* own expansionary ones. Moreover, these immense if tentative new proposals—for progress towards a common monetary policy, a more common planning policy, a swifter dismantling of intra-European tariffs, for some changes in taxation policy and company law and transport policy and capital market policy—are not going to slide through the mesh of the six common market governments themselves in anything like a matter of months ; if they were, Britain would need to worry actively about the present lack of an opportunity to participate in the discussions which will influence how they turn out.

The commissariat camel, when all is said an' done
'E's a devil an' a ostrich an' a orphan child in one.

But it would be unfortunate for Britain if it did not, in the end, get a share in the exorcising of any devilment it finds in these proposals, in mitigating any ostrich-like qualities it espies in them, and in acting as one of the orphan child's guiding foster-parents.

The European Commission is under pressures of its own which have impelled it to lose no time in bringing forward these proposals; yet it should recognise that many people would be aggrieved to see too much haste to implement them in advance of Britain's entry. The implication for Britain is even plainer. In order to be able to participate in discussions about these proposals, it should press through the remaining negotiations as quickly as possible; certainly, the argument that it would be "just as easy to join Europe in two years' time as now" stands revealed as one of the silliest of all the statements made by some politicians during the summer silly season.

THE next question raised by the past week is whether the Six's new proposals on agriculture (which are discussed with proper asperity on page 447) are another camel that we should not swallow, or one of the gnats at which we should not strain. It is beguilingly easy to make a case for saying that they are the latter. The disagreement last week was not about the ultimate aims of United Europe's agricultural system after 1970, but about the transitional arrangements to be followed by Britain until 1970 (or until 1971 or 1972, if Mr Heath succeeds in his aim of stretching out Britain's transitional period that far). The British team and the Six in effect came to dangerous loggerheads about which of two ramshackle temporary systems Britain should adopt directly after entering the market, before beginning immediately to paper this temporary system off anyway and throwing it in the wastepaper basket within six or seven years.

Again, the main agricultural point that Britain was supposed to be plugging in these negotiations was that Europe should not coddle its farmers so excessively that the community would become self-sufficient in food, thus leaving no room for imports of more economically-produced food from the Commonwealth and elsewhere. In so far as the Six had a respectable reason for objecting to Mr Heath's proposals of last week, it was because they might in some respects coddle Britain's farmers too much, and thus set up further political pressures from European farm lobbies for the Six to feather-bed their producers a bit more too.

Possibly, too, there is some element of exaggeration in the British Government's protests about the "administrative impossibility" of moving suddenly from the present deficiency payments system to something like the system proposed by the Six in (presumably) about twelve months' time, before going on to a third and entirely different system in 1970 or thereabouts. Civil servants often do overstate the difficulties of doing a complicated job of work; and one of the Six's suggestions against which Britain has reacted most sharply—namely, that we could reintroduce a complex mechanism of consumer subsidies in order to mitigate the effect of the Six's proposals in raising the British cost of living by perhaps up to 3 or 4 per cent—was clumsily supposed to be designed to help us.

There ought to be some scope for a compromise whereby market prices here might rise more quickly than Mr Heath wished, albeit more slowly than the Six last week asked for, thus allowing the burden to be taken on to the cost of living without consumer subsidies being introduced at all. Nevertheless, it plainly was unreasonable that the Six last week should ask Britain to go through awkwardly large convulsions of policy in order to fit in with a European agricultural system which they themselves have not yet really got working anyway. When this disgruntled thought is added to resentment at the way in which France last week entered sudden reservations about last summer's promise of special treatment for New Zealand, and to disappointment at the niggling answer given to Mr Heath's requests for particular tariff concessions for India and Pakistan (see page 447 again) the British team's exasperation was entirely understandable.

To Britain, the thing to say now is that it would be wise to keep this exasperation under control. There is, in spite of the Brussels setback, a fund of goodwill to be drawn on; witness Signor Piccioni's insistence, in the Italian chamber of deputies on Tuesday, on the paramount importance of helping Britain to get in. There are three really indispensable things that the Government needs to secure during the last rounds at the negotiations. First, Britain should somehow be allowed a say in the new bout of economic policy-making in Europe now being set afoot. Secondly, as a matter of honour, Mr Heath is bound to insist on reasonably generous treatment to New Zealand and to Britain's partners of the European Free Trade Association. Thirdly, as a matter of hard economics, he needs to urge that the Commonwealth countries in Africa which have so foolishly rejected association with the common market should still be given many of the benefits that they would otherwise have secured from it; if the 70 million people in underdeveloped countries who were originally offered association could still be permitted rights of free entry for their produce into Europe, this would provide the best possible assurance that Europe in future years would have no incentive to be timidly protectionist towards imports from other underdeveloped countries either.

If concessions could be secured on these major fronts, it really would not be sensible to worry overmuch about the duty on carpets or coir mats, and it might even be sensible not to strain too hard at the gnat of the Six's suggested interim agricultural absurdity.

To the Six, the things that need to be said are more stark. Many candid friends of Europe in this country—including ourselves—are afraid that the Six's attitude last week may mean that the Brussels negotiations might be seriously obstructed when other and more vitally important matters are reached. Nobody in Europe should underestimate the agonising reappraisal which the British Government might still make if this happened, nor should anyone in Brussels suppose that Mr Heath last week was merely striking attitudes in advance of the coming clutch of partly rural by-elections. The present Government can honestly be acquitted of any desire to play politics in these negotiations; indeed the only effect that politics are having just now is that the Government is finding it convenient to tone down public expression of its private resentment at last week's disappointments, for fear that Mr Gaitskell should say "I told you so." The negotiations have now reached a dangerous corner.

NOTES OF THE WEEK

INDIA AND CHINA

The War That Is On

"UNDECLARED war" is now a fair enough description of the extraordinary state of relations between India and China. The Indian government has announced more than 2,000 casualties in the Himalayan fighting and has proclaimed a national emergency; but diplomatic relations had not been broken off at the time of writing. The Peking government continues to proclaim itself devoted to the cause of peace and of unity between Asian countries, while publicly instructing its army commanders (somewhat retrospectively) that they need no longer have inhibitions about advancing south of the McMahon line.

While Indian Communist leaders line up, red-faced, behind their government in condemning Chinese aggression (an attitude which, according to the British Communist party's political committee, is one of "fantastic hypocrisy"), the Chinese leaders depict the fighting as caused solely by unprovoked Indian violations of their borders. It is odd that, in spite of this posture of injured innocence, Peking has been staging mass indignation rallies this week, not about the supposed invasion of its own territory, but about Cuba. It is less odd that India once more voted this week (as did Britain) for the transfer to Peking of the Chinese seat in the UN. India again explained (as Britain did) that it simply wanted to see China represented by the government that actually rules it—and whose continued exclusion from the UN does not make it any easier to induce it to behave less belligerently.

Reports on Wednesday suggested an easing of the Chinese pressure which had forced India to give up the roadhead at Towang, just east of Bhutan; and the Indian command was said to be more confident of holding the invaders now that their line of communications had become strained by their rapid advance. Whether or not the check was a true one, it came too late to save Mr Krishna Menon. On Wednesday Mr Nehru took the defence ministry into his own overfull hands. Mr Menon retained his cabinet seat and the post of minister of defence production—a post which may give him scope, against the background of military emergency, for scarifying the "private sector"; but his forced departure, in the tattered garb of an Ethelred the Unready, from the defence ministry, the principal base which he had been using for his own political advancement, indicates a real shift in the balance of power among the potential successors to Mr Nehru.

Public anger at the revelations of his ministry's inadequate preparedness has spurred the Indian government's desperate search for defence supplies throughout the western world. Credit should be given to the American, British, Canadian and other governments that have not only responded swiftly to these urgent approaches but have made it clear that they will not try to exploit India's need by tying strings on to their help. That this is the way to foster real friendship, as opposed to securing an uneasy lien on a client state, has already been underlined by appreciative comments in the Indian press.

Ambivalent Attitudes

INDIANS have been quick to note the contrast between the ready response they have met in the West, and the evasions and tokens of malice that their hour of trial has evoked among some of their neighbours and supposed friends. Moscow's ambivalent stand, although predictable enough in view of the severe embarrassment the Sino-Indian conflict has caused Mr Khrushchev, has lost it a visible amount of ground in India (and hardly gained it any in Peking).

Some Soviet military supplies have continued to come through the pipeline; but the promised Mig aircraft suddenly seem a long way off, and Indian pilots have been recalled from Mig training courses in Russia. Bitter things are already being said in India about the fence-straddling attitudes of some of the other "non-aligned" governments that India associated itself with at last year's Belgrade conference. Several of these have contented themselves with appeals to India and China to negotiate a settlement—appeals which, like the Soviet one, are too close to China's proposal for negotiations without any real withdrawal of troops to be acceptable to Indian opinion. Marshal Tito in particular seems to have got the worst of both worlds, by appearing offensively partial to Chinese eyes and offensively impartial to Indian ones. And Indians will be bound to ask why President Nkrumah went out of his way, on Wednesday, to deliver a needless attack on Mr Macmillan for voicing sympathy with India.

Some of these ambivalent attitudes seem blended out of sheer indifference, timid (and improbably effective) propitiation of the Chinese dragon, and malice toward India. The element of malice, however, is not confined to the non-aligned. It has emerged, more openly if more understandably, in some Pakistani reactions. The Karachi press has tended to publicise the Chinese version of the fighting and to gloat over India's tribulations. (Undoubtedly, if the Chinese attack had happened to be aimed at Pakistan, certain Indian newspapers would have revelled in a similar gloat; the folly is equally unjustifiable either way round.) Some of the first reported Pakistani responses to the British and American appeals for timely restraint and reassurance on the Indo-Pakistani "front" were hardly calculated to strengthen confidence in Pakistan's will to make sacrifices in order to stave off the communist threat from the north—the threat that inspired the alliances of which it is a member. But a more constructive, if not too explicit, posture may yet be hoped for in Pakistan.

PARLIAMENT

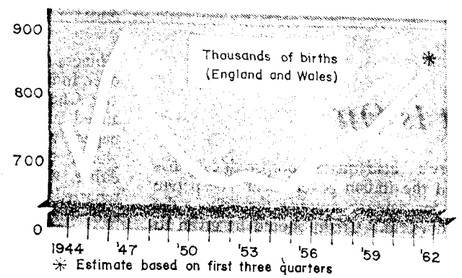
Back Again

THE glittering splendour of the state opening of Parliament by the Queen did something to soothe the wounded feelings of members of both Houses, who felt that in the recent Cuban crisis Parliament in general and the Government in particular had been able to contribute little. During most of the week that has been called the most dangerous in the history of mankind, Parliament had sat in recess; but perhaps, in view of the things that some members would have been saying last week, it is a mercy for some reputations that it did.

Obviously, the common market, on which a two-day debate has been arranged for next week, must be expected to lie in the centre of controversy this session; but so far few MPs have woken up to the fact of how ticklish the latest stage of the Brussels negotiations was. At the moment a more immediately explosive issue on the Tory benches actually looks like being Rhodesia. Among cabinet ministers, Mr Butler may therefore have most at stake. Up to now, as Minister for Central Africa, he has been able to win many golden opinions, but some time during the session he will have to do something, and could become as much a focus of controversy as was Mr Iain Macleod. The minister with least to lose is probably Mr Heath, who may come to be regarded as the deserved hero of the party whatever happens at Brussels. The minister with most to gain could be Mr Maudling if he extends the Conservative recovery by a vigorous policy of economic expansion. But is he going to do so? At present, the Tory rank and file are refreshed and reinvigorated by their holidays. The friendly messages of the latest opinion polls and the tonic air of Llandudno have done much to revivify the failing spirits of last July. The new euphoria could, however, soon be dis-

Another Bulge—or Steady Rise?

Unless there is a sudden change in the current quarter, about 840,000 babies will be born this year in England and Wales, the highest level since 1947. The persistent increase in the birth-rate has caught out the demographers once again. With the 1961 figures to go on, their population forecasts assume 820,000 births between mid-1961 and mid-1962 and an average of just over 800,000 until 1967.



sipated by a setback in the common market negotiations, or in the by-elections which are now to take place on November 22nd. Cynics will remember the élan generated by the Brighton conference of 1961, and the disasters which nevertheless overtook the party within a few months.

The Opposition does not seem to have been inspired by its own Brighton conference; and indeed a slight reaction seems to have set in against Mr Gaitskell's extremist anti-market line. Now that the cheering of the frenzied delegates has died away, the pro-Europeans are seen to be not quite the negligible factor they may have appeared at Brighton. Mr Gaitskell himself seems to have been distracted by Cuba from his anti-market obsession; and this, together with the hardening of the attitude of the pro-Europeans, means that the wording of the official opposition amendment to the Government common market motion, which is to be debated next week, may be ambiguous enough to enable everybody in the party to vote for it. But the shape of this session of Parliament is still principally dependent on events in Brussels. They may well be such that a session which has opened quietly will end with a bang.

LABOUR PARTY

Who's for Deputy?

MR WILSON'S decision to oppose Mr Brown for the post of deputy leader of the Labour party is in itself convincing evidence that his chances of success are not negligible. Only one thing is needed to be elected deputy leader of the party—a majority of the votes of Labour Members of Parliament—and Mr Wilson presumably would not have stuck out his neck if his canvassing had suggested that he would get a drubbing. He can rely on a solid vote from the 70 members of Labour's left wing, which will be augmented by the ballots of the not inconsiderable number of members whom Mr Brown has irritated or been rude to on one occasion or another. Mr Brown has also been weakened by the trivial incident of his contract with the *Daily Mirror*, by his clash with Mr Gaitskell over the common market, and by the fact that some middle-of-the-road Labour MPs want their organisation to be run by an astute fox instead of an elephant.

Against this, and against Mr Wilson's studied flexibility, Mr Brown can oppose courage, steadfastness, loyalty and inherent likeableness. His strength of character, which came out again in his Brighton speech on the common market (where incidentally he showed an adroitness which few had suspected him to be capable of), should appeal to the solid block of trade union MPs, despite a few anticipated defections. These members are not keen on the establishment of Messrs Gaitskell and Wilson as a donnish dyarchy leading the party; to them Mr Brown's basic strength is that he is rooted in the trade union movement and looks it, whereas Mr Wilson looks and sounds middle class despite his proudly proclaimed proletarian origins.

Furthermore Mr Wilson's election would place some strains on Labour's unity. The MPs who could hardly bear to have him as crown prince are generally precisely those pro-European MPs who are not at present feeling very loyal to the leadership. This point cannot be lost on Mr Gaitskell, who is nowadays very touchy about the obvious fact that his own recent speeches helped to put Mr Brown in his present plight, and who for personal reasons is indebted to Mr Brown but for the same reasons hardly indebted to Mr Wilson. Moreover Mr Gaitskell cannot really feel happy about the sort of Labour party that would emerge if Mr Wilson were first in line for the succession, and if anything physical or political were then to happen to himself. Perhaps the most comfortable result from Mr Gaitskell's point of view, though he is at present officially staying neutral, would be the re-election of Mr Brown with a smallish majority. But between now and Thursday of next week, when the ballot will be completed, one or other bandwagon could start to roll.

The Economist

NOVEMBER 1, 1862

THE PRACTICE OF BLOCKADE

English statesmen have long held a most decisive and distinct opinion as to the maritime law which was most for the interest of England. Our ships have long been first upon the ocean, and we have constantly and energetically supported those rules of war which enlarged the ascendancy of a superior fleet. . . . On this point Mr Cobden takes issue. He says,—'The interest of England now, if not formerly, is that the rules of maritime warfare should be relaxed as much as they can be. We are the nation which has the greatest imports and the greatest exports—which is most dependent upon foreign commerce. . . .' But the discussion of what is for our interest does not settle the international question. . . . There can be little question, or rather none at all, that the enforcement of a blockade is among the most effectual of hostile acts; it tends more to bring a war to a conclusion than any other act. . . . Whatever may be our interests or our wishes, we cannot expect that so great an instrument of war will be soon or easily relinquished by the world at large. . . . Nor would it be dignified in England to ask for a change of international law merely because her interests have changed; she would weaken her influence by selfish arguments as much as by selfish policy. It is true that the present state of the world suggests the reconsideration of many parts of international law, and that the effect of war on commerce is precisely the point at which the new influences are most potent, and where reconsideration is especially requisite. We think that the present time is one which should especially suggest a more full and careful consideration of *limits* within which a blockade is endurable by neutrals than any previous period. . . . In actual life, the limits must be vague, for they are so throughout international law, and indeed in all politics whatever. The limits of tyranny, the limits of liberty, the precise details of a *casus belli*, are all matters of which no mathematical definition is possible, and of which a judgment must be formed at the moment by the parties interested as well as they can. Similarly, we think it should be laid down as a canon of international law that as soon as a blockade becomes vitally dangerous to a neutral, as soon as it threatens the fundamental well-being of the body politic, the neutral is justified in breaking the blockade by the supreme duty of self-preservation; and that it is for the neutral to judge when this limit is passed or reached. The elements of judgment are vague, and the result of the deliberation is of the first magnitude; but a great nation passes its life in the consideration and decision of questions both important and undefined.

LEGISLATION

No Surprises

THE fifteen bills mentioned in the Queen's Speech comprised two that will be politically controversial (on television, after a white paper in two or three weeks' time, and on London local government); seven that are worthily social and had been long forecast (written contracts of employment, consumer council, weights and measures, shops and offices, water conservation, child care, increase in public service pensions); two that were not forecast here last week (the Colonial Development Corporation is rightly to be allowed to lend to independent ex-colonies now that so few dependent colonies are left; and the Government needs additional money to keep up its grants for farm development); one bill about Malaysia and three about Scotland (on criminal justice, local authority grants and education). The programme is thus being kept sufficiently trimmed (nothing about underground gas storage, no new measures of company law) to make room for a common market bill or bills some time in 1963 if Mr Heath's negotiations succeed. While waiting for something to sprout from Brussels, Parliament will be chewing over a modest, if nourishing, diet of suet pudding.

Perhaps the two most interesting features of the Government's new programme, as announced on Tuesday, have nothing to do with legislation. Mr Enoch Powell, at the Ministry of Health, is to bring out a ten-year plan for the development of local health and welfare services to match his ten-year hospital development plan; and Mr Geoffrey Rippon, at the Ministry of Works, is to take over responsibility for the future of Government building operations, complete with a new Director of Research and Development charged to try to spur the whole building industry into what another minister has called an impending "breakthrough in building techniques" by prefabrication of larger components in the factories. This last development has some affinity with the ideas of those Labour [illegible]rists who have said that individual nationalised firms in inefficient industries could act as pacemakers for new industrial techniques. Governments of all hues have had a large section of the building industry under contract to the public sector for many years, but they have not hitherto inspired prodigies of efficiency in it.

PENSIONS BILL

Still Behind

THE first major bill to be published straight after the Queen's Speech was the Pensions (Increase) Bill, the sixth of its kind that has been necessary since the end of the war to keep public service pensions panting desperately after rises in the cost of living. Just under 500,000 retired civil servants, local government officials, teachers and policemen will benefit this time; when corresponding increases are given to 112,000 retired regulars from the armed forces the cost of the measure in a full year will be £22.1 million, of which £5 million will bear on local authorities. Two features of the bill are particularly welcome. A graduated scale of increases, ranging from 2 per cent to 12 per cent, gives most help to pensions awarded before April, 1956; in addition, since the worst-off are those who are most elderly, the 70-year-olds in this category will get a flat-rate age benefit of £20. Secondly, the bill provides for British-paid supplements to certain pensioners of colonial and ex-colonial governments, subject to residence qualifications. The Secretary for Technical Co-operation is to determine what these supplements should be, over and above any increases granted by the overseas governments themselves, to bring these pensions into line with equivalent British rates. This is an entirely sensible, and overdue, gesture to a small group of people who have been particularly badly hit in the past.

If there is criticism of the bill it will be because it is not sufficiently heavily weighted in favour of those who retired in the 1930s and 1940s when (as explained in *The Economist* of October 27th, page 333) there were legitimate expectations of a distinctly more comfortable retirement than most of the recipients have experienced in the past decade, and when, especially in the lower grades, there were fewer opportunities for individuals to make reasonable extra provision for themselves in their old age. The additional £55 a year now given to the £295 pension of a clerical officer aged over 70 who retired in 1948 is only one example of how meagre, in terms of present-day wage rates, these new increases are to couples eking out an existence. The least that Parliament can now do is to give this relief promptly, so that the first bonuses can be paid out soon after January 1st.

SOUTHERN RHODESIA

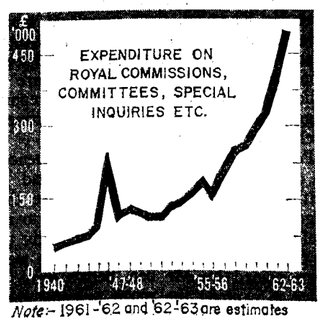
Brave Sir Edgar

WHEN it comes to Southern Rhodesia, it is sometimes hard to tell on which side of the looking-glass one is standing. Speaking as "the distinguished representative of the United Kingdom," the prime minister of Southern Rhodesia, Sir Edgar Whitehead, defended his country's policies before the trusteeship committee of the United Nations on Tuesday. But Sir Edgar does not represent the United Kingdom; if he did, the British Government would presumably be in a position to control how Southern Rhodesia is run, and this is a thing both he and the British Government tirelessly repeat cannot be done. Nor is it clear how Sir Edgar can simultaneously deny the UN the right to interest itself in Southern Rhodesia and appear before the UN to defend the policies of the Southern Rhodesian government.

Such confusing reflections are perhaps best left alone. There are still two principal questions for the British Government to answer. The first is, should Britain intervene in Southern Rhodesia?—the second, can it? Sir Edgar's speech to the trusteeship committee seems to give the answer "no" to both questions. But is this right? Like many African politicians, Sir Edgar talks well; like most of them he makes sense only in a world seen through his eyes. In such a world it would be possible to keep

ROYAL COMMISSIONS

The estimated cost of Royal Commissions, committees and special inquiries in 1962-63 is £494,000. Of this £100,000 has been set aside for "Ned" and £57,000 for the Civil Service Pay Research Unit. Annual expenditure has quadrupled in the last ten years. The early peak in the chart reflects the high cost (about £200,000 spent mainly in 1945-46) of the Commission on Population which sat from 1945-49. By 1955-56 the Commission on Awards to Inventors was completed: £7-9,000 had been spent on this annually since 1949.



Note:- 1961-62 and 62-63 are estimates

DIVISION OF 1960-61 EXPENDITURE

	%
Ancient Monuments, etc.	37
Royal Fine Arts	3
Scottish Savings	30
Civil Service Pay Research Unit	16
Council on Prices, Productivity and Incomes	1
Commission on the Police	4
Treasury Pool of Shorthand Writers	6
Other	3

COSTS OF RECENT COMMISSIONS

	£
Commission on the Press	40,190
Pilkington Committee on Broadcasting	45,450
Radcliffe Committee on Monetary Reform	18,000
Commission on the Police	49,370
Rochdale Committee on the Docks	8,899
Molony Committee on Consumer Protection	4,561

the peace in Southern Rhodesia for long enough to permit the gradual absorption of moderate black politicians into the white Establishment, which they could then take over. This, Sir Edgar rightly feels, would keep Southern Rhodesia's economy in its present modern, progressive shape.

The real weakness of this view is that the time Sir Edgar wants before blacks rule Southern Rhodesia (15 years) is simply not available. A British Conservative MP, Mr Humphry Berkeley (with whom most Tories are, on this issue, out of step), has recognised this and in a speech on October 28th regretted having voted for the present Southern Rhodesian constitution, since it "is wholly inadequate to meet the aspirations of even the most moderate of the African nationalists." This would probably be so even if Sir Edgar's self-defence were made to seem more realistic by a massive expansion of secondary education designed to get more than a handful of Africans qualified to vote on the upper roll. Sir Edgar may well move in such a direction—and even widen the franchise qualifications themselves—if he wins the elections on December 14th.

For this reason the British Government may be wise not to do anything between now and the elections that might frighten white voters away from Sir Edgar. But after that, every opportunity to press Sir Edgar on should be used. This is the only possible policy while Britain continues to carry the can at the United Nations for policies made in Salisbury. The alternative, to give Southern Rhodesia independence under white control, would earn the disapproval of most of the world. Suspending the constitution and cancelling the elections, as the United Nations General Assembly urged (by 81 votes to 2) on Wednesday might produce violent white resistance. To do nothing at all might result in bloodshed between Africans and Europeans in Southern Rhodesia. The minister for central Africa, Mr Butler, might do worse than fly to Salisbury around Christmas to initiate talks between Sir Edgar and the African nationalists. Perhaps U Thant will step through the looking glass with him.

NORTHERN RHODESIA

Still a Colony

On Thursday morning the results of the elections held in Northern Rhodesia on Tuesday were incomplete, but it was possible to draw two early conclusions. The first is that an overwhelming majority of Northern Rhodesia's voters clearly want their country taken out of the federation of Rhodesia and Nyasaland. Virtually all the white voters supported the United Federal party, which wants the federation to carry on, but virtually all the other voters supported parties opposed to the existence of the federation. The UFP's 30,000 white voters are heavily outnumbered by the 100,000 non-white voters. This verdict against federation accords with the verdict of the Nyasaland electorate. The British Government has repeatedly promised that it will not do anything in central Africa against the popular will: it is now more clear than ever that this will dictates the break-up of the federation.

The second conclusion is that Northern Rhodesia needs a new constitution, and very soon. The present constitution, designed to produce something like a stalemate between black and white political parties, seemed on Thursday morning to have done just that. The whites stuck together: the early results gave the UFP 13 of the 15 upper roll seats, with two to be declared. The blacks voted solidly for nationalist parties; the first results gave the United National Independence party 11 of the 15 lower roll seats, with 3 to the African National Congress and one result to come.

The third section of the results, in the "national" seats (to be decided by arithmetic) were expected late on Thursday. The new legislative council will at any rate not reflect the massive popular vote given to the Unip, the major African nationalist party which, fancy franchises apart, should have been the clear victor.

The next constitution must be designed to allow the party with the most support to win the elections. This can be done; unlike Southern Rhodesia, Northern Rhodesia is still a colony, under the direct control of the British Government. Even in setting up a government under the present constitution the Governor of Northern Rhodesia can instruct the six civil servant members of the legislative council to vote with the party of his choice; he can also nominate as many extra members as he pleases. What he does do should be guided not by the results of a cooked constitution, but by the clear expression of the majority will.

ALGERIA

American Rift

One casualty (one hopes, not fatal) of the Cuban crisis last week was the Algerian-American discussions about American aid to Algeria. These began after Mr ben Bella had visited President Kennedy (October 15th) and were suspended on October 23rd. The Algerians seem to think that Mr Khemisti, their impulsive young foreign minister, who was in the United States with the Algerian economic delegation, broke off the talks as a gesture of solidarity with Cuba. But American reports suggest that it was the State Department itself that decided to pack in.

Possibly the Americans were influenced in this by the difficulty they had in getting a positive Algerian assurance that Algeria would not lend its airfields to refuelling any Russian aircraft that might try to fly arms to Cuba. They had, as well, been pained by Mr ben Bella's want of grace in capping the warm welcome their president gave him by a riotous trip to Havana (October 17th). To embrace Dr Castro was one thing; but to out-Castro Castro, as he did, in shouting down all things American, on the brink of an international crisis in which no other unaligned country quite so fervently sided with Cuba, showed a lack of common sense. In such matters Mr ben Bella might learn something about discretion from his exemplar, President Nasser. Egypt's president spoke only for peace when the Cuban crisis blew up; he takes buckets of American aid (mostly wheat for his hungry people) without losing an inch of his stature as a revolutionary neutralist.

For Algeria to forfeit American aid would be a serious matter. Already since its independence Algeria has received, through various American agencies, relief that is reckoned, all told, to have been feeding more than two million Algerians a day. A programme of aid for the future, as envisaged in the New York talks, was also to be helpful politically in giving Algeria some fallback from its reluctant dependence on France. The alternative—to use the communists as a third economic force—is not seen by many Algerians as promising to be effective. Eastern help tends to be too irregular unless (and often, even if) a country lists over and takes the whole communist treatment. But that is another story. Even Algeria's extreme Left would hesitate to lose its freedom of choice.

HIGHLAND TRANSPORT

One Authority?

Transport in the Scottish Highlands is more heavily subsidised than anywhere else in the country. Few, if any, stretches of railway north of Aberdeen and Perth pay their way; some of the routes, particularly to the west coast, were plainly sited in the wrong places from the outset. British European Airways are said to have lost over £500,000 in their operations to the islands last year. MacBraynes steamer services now cost the taxpayer £260,000 a year, and the Orkney and Shetland boats another £30,000. If the new and energetic Secretary of State for Scotland, Mr Noble, is to come to terms with Lord Douglas of Kirtleside—and, even more, to persuade Dr Beeching to keep some of his Highland lines open for social reasons—he will need to produce some bright ideas very shortly. He may be helped by the findings of the latest Highland transport inquiry, which are expected to be published by the middle of this month.

Plainly the island air routes would lose much less money if they were run as "bush services" (which in reality they are) without the full complement of administrative, servicing and fire brigade staffs that are now employed. If BEA cannot bring itself to operate in this way there is a strong case for giving the franchise to a company that will. But how best can subsidies be apportioned between air, rail and rural bus services? There are signs that the old idea of a Highland transport authority, with executive powers, may be finding official

in a changing world

Imagine carrying the early wireless set round the golf course. Quite a handicap. Compare today's transistor radio.
Why *transistor* radio? Transistors do the work of valves. Not only are they a fraction of the size—they use far less current, so that batteries and other components can be miniaturised. A big step forward from early 'portables'.
Mullard developments in the design and manufacture of transistors helped to put the radio set in our pockets. Today Mullard produce transistors by the million—high performance, precision made devices for an enormous variety of applications. Could you benefit from our transistor know-how?

REMEMBER POPPY DAY

Mullard products in transistor radio sets include:
TRANSISTORS • GERMANIUM DIODES
"FERROXCUBE" AERIALS & H.F. CORES
"TICONAL" LOUDSPEAKER MAGNETS

favour again. Its initial authorisation should preferably be for not more than seven years, after which the redistribution of the population and the further growth of private transport could produce a new situation in some areas. The authority should not be a pressure group for more subsidies, but should be given a certain annual sum from the outset; and then told to try to cut this sum down each year by seeking the most economic way of running a cohesive transport system throughout the region. The bulk of the authority's funds would have to come under the Scottish Office vote, but the principle of some local contribution from rates (which the Jack committee recommended for rural buses) ought not to be lost sight of. Since the crofting counties depend heavily on the equalisation grant to run their affairs at all, any new burden on their ratepayers would be almost non-existent. But the need, particularly in better-off regions, is to bring home to everyone exactly what this kind of social service costs. That is what the establishment of an authority of this kind would do.

GERMANY

Mirror on the Wall

OUR Bonn correspondent outlines on page 452 the facts of the judicial and police action unleashed in the night of October 26th against the weekly *Der Spiegel* ("The Mirror"). A good deal in this affair is still obscure: all the same, it does seem that there is a looking-glass here in which the west German state can learn something about itself. *Der Spiegel* is the kind of tough, unsqueamish paper that would cause any government frequent discomfort. However, since its life to date has virtually coincided with the long reign of Dr Adenauer and of the Christian Democratic Union, it is they who have most reason to hate and fear it. There have been exposures, scandals, malicious titbits, embarrassing lawsuits, ruthless criticism, and in at least one case that of the defence minister, Herr Strauss, a sustained campaign of vilification.

One need not defend all the paper's methods and mannerisms to want to see it treated fairly in the disputes that arise between it and the west German authorities. Last week saw its offices seized in a night raid just as it was going to press, on a complaint against matter published 18 days earlier. The files and the photographic library, instruments on which an illustrated weekly depends heavily for its editorial production, are under sequestration while security officers comb through them—for what? There were attempts to pre-censor next week's issue. The suspicion arises that one object of the operation was to force the paper to stop publication; if it has failed, this is largely because of the warm-hearted way the Hamburg press has rallied round and helped. The owner, Herr Augstein, and several of his senior staff have been kept under arrest; one of them—at whose request?—was picked up on holiday in Spain. All this seems pointless from any judicial point of view.

Who ordered these actions, and who decided the arbitrary and oppressive manner in which they were carried out? The answers affect the nature of coalition government in west Germany, since it turns out that in two ministries that were concerned (the federal ministry of justice, and the North Rhine-Westphalia ministry of the interior) a Free Democrat minister was kept in the dark, while his Christian Democrat state secretary was told. They also affect the nature of the federal form of government. Police powers in west Germany are supposed to rest with the *Länder*: what say, one would like to know, has the *Land* government of Hamburg had in the use of its police in an action ordered from Karlsruhe and, as it seems, politically inspired from Bonn?

Taxes for Britain

the impact of the Common Market

How will British taxes change if we join the Common Market? Will income tax be reduced and taxes on spending increased? What kind of indirect taxes will the Common Market adopt? Should the man in employment be allowed more deductions for expenses? Why is a reform of company taxation needed? These are some of the issues dealt with in a new 40-page booklet written for the non-expert in taxation; it deals with both the changes that entry into the Common Market will probably bring about and those which are desirable in any case.

JAPAN AND CHINA

Just a Little More

MR TAKASAKI, an influential figure in Japanese politics and formerly minister of international trade, has been expected in Peking this week with a semi-official trade delegation. Nostalgic Japanese will think of the "good old days" of flourishing Sino-Japanese trade and all that; Japanese socialists will hope for closer links with kindred Chinese souls and a chance of jabbing at less kindred American ones; many politicians, especially in America, will find little joy in either prospect. But, when looked at a little more closely, both the hopes and the fears about Sino-Japanese relations crawl back towards the less spectacular mean.

Since the 1958 fiasco, when China broke off trade mainly over the question of Japan's not granting diplomatic recognition, Peking has come to realise that as yet it cannot compensate Japan for antagonising the United States and Formosa—two of Japan's good customers—in this sensitive matter. In addition, the Chinese need credit. On September 19th Marshal Chen Yi, China's foreign minister, went so far as to say that Peking "fully realises Japan cannot sever relations immediately with Nationalist China."

Recently such leading figures in Japanese government circles as Mr Yoshida, Mr Kishi and Mr Ikeda (the present prime minister) have come to favour trade with China. Britain, Germany, Italy and Australia—which are also America's allies—have been expanding their trade with China, in part by granting credit. To the Japanese, China at present is neither a promising nor a reliable market, but times may change and the Japanese have no wish to be left out.

The proposals Mr Takasaki prepared for Peking carefully avoid the question of diplomatic recognition. Trade, he will suggest, should be carried out under a five year barter arrangement which would allow the Chinese to make small deferred payments, but trade must balance by the end of the period. Japan will offer iron, steel, agricultural equipment and vehicles. Ammonium sulphate fertiliser had to be removed from the list when Nationalist China threatened to cancel large orders of this fertiliser if it was offered to the communists on deferred terms—which are not given to the Nationalists. Since Peking insists on barter terms but has little to offer besides soya beans, iron ore and a little coking coal, Japanese officials do not expect trade to rise above $200 million a year, which is about double the current figure and about equal to Japan's trade with Formosa and the Soviet Union. With Japan's foreign trade now totalling about $9,500 million a year, the proposed agreement with China hardly seems a frightening prospect.

HEALTH SERVICES

Administrative Upheaval?

THE national health service, as is emphasised in a report* out this week, is only a part of a huge web of services concerned with the health of the people. In addition to the Ministry of Health and the Scottish health department, nine other Government departments provide health services of one kind or another; and the national health service itself is divided among three administrative spheres. These are the local executive councils, which are agents of the Ministry of Health and are responsible for the running of the general medical services; the hospital boards; and the local authorities, which are responsible for social, preventive and environmental services.

The new report comes from the Medical Services Review Committee, set up by the royal colleges of Great Britain, the Society of Medical Officers of Health, the College of General Practitioners and the British Medical Association. It was thus a

* A Review of the Medical Services in Great Britain. *Social Assay*. 18s.

thoroughly professional body and, as is only to be expected, the professional point of view and the importance of professional representation are emphasised throughout. But though there is nothing revolutionary in the report's recommendations about the "terms and conditions of service" of individual practitioners—the capitation fee is, for instance, regarded as the least undesirable form of paying family doctors—it does come out with some fairly radical proposals for reorganising the whole structure of administration of health services in the country.

Briefly, the Porritt committee suggests that as far as possible responsibility for the various health services should be concentrated in one Government department and that the Minister of Health should always be a member of the Cabinet. Lower down, it recommends the establishment of area health boards, directly responsible to the Minister of Health, which through subsidiary councils should organise the three existing sections of the national health service and the occupational health services in industry and commerce. Doctors, and all other health service workers, would be under contract with this one authority. The report is rather vague both on the size of the areas the boards would be responsible for and on how they would be constituted; pilot schemes should be started to determine the best size.

But in any case is there any chance that any government would even consider such an upheaval of organisation? Now that local government boundaries are under review, the present is perhaps as favourable as any for putting the plan forward. On the other hand, as was mentioned in the Queen's Speech, the local health authorities are to produce their ten-year plans for community services this year, and these are expected to promote integration with the hospital and general medical services less drastically than would be involved by the Porritt committee's proposals.

BRIEF BOOKLETS . . .

have been produced jointly by The Economist and The Economist Intelligence Unit to present the essential facts behind important current topics. Each takes about one hour to read. Here are the first three titles in this new series:

NEW TOWNS

In the Black

THE record of the dozen new towns in England and Wales in 1961-62 should encourage Sir Keith Joseph to push on with creating more of them in the 1960s. Most of them are now not merely a social, but also a reasonable financial success. Nine of the existing new town corporations showed a surplus on their general revenue accounts for the year ended March 31st, amounting to a total of £725,000 (to which the two major successes, Stevenage and Harlow, contributed over two-thirds). The three others showed a total deficit of £165,000 for the year; the chief strugglers are Basildon, which has found the clearance of a rural slum domain unduly costly, and Peterlee in the Durham coalfield.

Despite rents that are considerably higher than most local authorities', the new towns in the south have become pockets of industrial affluence. Bracknell reports a serious problem over car parking and garage facilities, which the postwar planners had not anticipated. Harlow has now employed a large private contractor to build (without Government subsidy) three-bedroom semi-detacheds for renting at £4 a week—an interesting experiment which will deserve to be very closely watched. Sir Keith should be exploring how best to associate private enterprise on a bigger scale in building better houses for rent in the next new towns.

It is a healthy sign that a previous minister's remarks on "new town blues" have drawn vehement and substantiated denials from the spot. Leisure facilities have been greatly improved, and, despite sociological criticism of the breaking up of working-class families, Hemel Hempstead roundly claims that "whole clans have re-established themselves" in their new surroundings. The main worry of a town like Crawley (with 80 per cent of its population under the age of 44) is how to expand to cope with the next generation of newmarrieds. This factor, and the emergence of the family car in town centres, suggest that to tack on more overspill to existing towns, as the Ministry has been hinting, would be much less satisfactory than starting afresh on new sites—provided the operation is planned from the start in keeping with the motor age and modern income levels.

CORRECTION

In the table included in the leading article "Bills in Prospect" of last week, the 1962 purchasing power of the pension of £725 paid to an assistant secretary in 1939 should have read £2,070; not £2,855. The 1962 purchasing power of the £165 paid, in 1939, to a two-year trained teacher, is £471; not £485.

THE WORLD OVERSEAS

Defeat in Victory

FROM OUR PARIS CORRESPONDENT

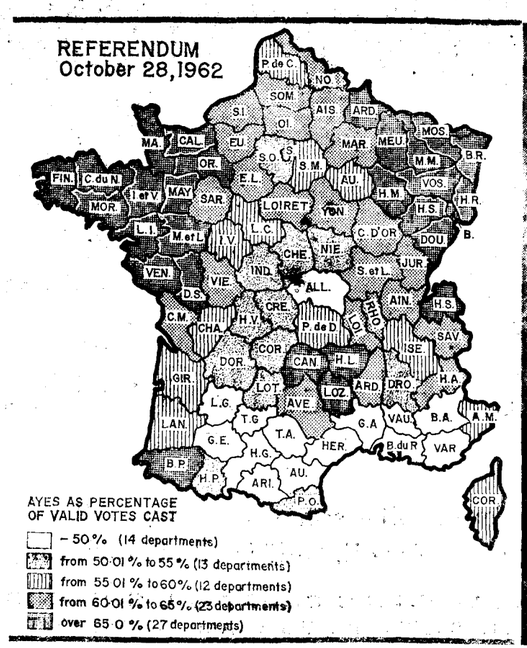
GENERAL DE GAULLE'S blitzkrieg against parliament did not come off. The political parties, as was expected, lost the day on Sunday. But General de Gaulle did not gain the conclusive victory that was to decide the conflict once for all. The judgment of Paris is that he has won the referendum but lost the plebiscite. 61.76 per cent of valid votes cast is, by normal French standards, quite a comfortable majority. The constitutional amendment proposing that future presidents should be elected by direct universal suffrage has thus been approved by the French electorate. The method of presidential election, however, was to have been merely a convenient ground on which to stamp out the revival of the political parties, shatter their attempt at a coalition and so prove that the French people want to be ruled by their "guide" and not by parliament and party politicians.

Despite the general's pressing appeals for a massive vote, echoed by the state's propaganda machine, and despite his threat to resign should support for him prove lukewarm, the number of abstentions rose from 15.1 per cent in 1958 to 22.75 per cent, and the gaullist vote slumped from 17.7 million to 12.8 million. (This comparison with the 1958 constitutional referendum is the fairest one.) Until polling day, inspired voices were swearing that the president would resign if he did not obtain the votes of at least half of the total electorate. But he polled only 46.21 per cent of those entitled to vote. Courtiers' pledges are not binding; they serve, however, as an indicator that the results fell short of official expectations and played havoc with gaullist strategy.

The strategy is fairly obvious. On Sunday, as soon as the count ended, M. Frey, the minister of the interior, putting a good face on a disappointing outcome, produced the arithmetic that, in the original plan, was to have proved devastating. The "noes" had collected seven million votes, or 38.24 per cent of the votes cast. After attributing about 20 per cent to the Communists and a fraction to the diehards of French Algeria, the minister left less than 15 per cent to be shared among the other parties, ranging from M. Pinay's conservatives to M. Mollet's socialists. There is an element of truth in this arithmetic. (The other gaullist argument, about the influence of the Algerian refugees, must be dismissed outright. Their 250,000 or so votes were drowned in an electorate of 27.6 million.)

But for the calculation to have been really effective, the "yes" vote should have been bigger. The political parties are bound to do much better in the general election on November 18th and 25th than they did in this personal popularity vote. They can also claim that, in addition to swelling the number of "noes," they contributed to the increase in abstentions and therefore to the drop in the gaullist vote. The purpose of the whole operation was to show that the nation, following its guide, was almost entirely united in its condemnation of the parliamentary parties. The outcome is to show that Gaul stands, politically and geographically, divided.

The classical distinction between stagnating France south of the Loire, and expanding France north of it, is not quite adequate to explain the geographical distribution of the votes. Brittany, where the "yes" vote was massive, is not an area of dynamic expansion. Indeed, what happened in Brittany suggests the other explanation, the social and historical one. The Breton West, and the East bordering on Germany, are the two regions where the plebiscite was really triumphant. They are also traditionally conservative areas, where the influence of the church is great. The South, on the other hand, which provided 13 of the 14 departments where the noes had a majority, is anti-clerical, has radical roots and a



Popular Front tradition. This re-emergence of the *Midi Rouge* confirms the general impression that the anti-gaullist opposition is backed, predominantly, by the Left.

Conservative and Catholic (or Popular Republican) politicians, whose strongholds are in the northern half of France, either avoided taking sides or were deserted by a great number of their traditional supporters. The drop in the gaullist vote, though general, was uneven. In the smart districts of the capital the ayes still had a very comfortable majority. In the Red Belt of Paris they were reduced to a minority. Similar examples could be multiplied. The only partial exception to this rule lies in the industrial region of northern France. There, the general gained a fairly comfortable victory in areas where communists and socialists combined have a majority. Yet this is a region where the gaullist movement has been strong in the past, where television is now widespread and where communists and socialists have been feuding bitterly for years.

The general election has suddenly regained significance. The parties, defeated on points at the referendum, expect to make a come-back. Short of a miracle, the faithful battalions of the general's UNR will not return to the chamber in anything like their 1958 strength. The objective of the referendum was to prevent the election of a hostile chamber—or, more exactly, to render parliamentary opposition irrelevant.

His original, ambitious, plan of campaign having failed, how will the general adapt his strategy? Though he ruled out resignation on Wednesday, the things he can do are many. One would be to take a more active part in the electoral campaign, in an effort to transform Sunday's ayes into a parliamentary majority. The venture would be risky. The electoral arena is familiar to the parties, and the semi-success of the referendum could be turned into decisive defeat. The general is more likely to carry on campaigning by proxy. On Tuesday the faithful M. André Malraux, now minister of culture, launched the Association for the Fifth Republic, which is to distribute certificates of good gaullist behaviour to candidates, and not just UNR ones. Logic should drive the government to seek the support of understanding conservatives and M. Pflimlin's wing of the Popular Republicans. The climate is favourable for such a reconciliation. The reddish colour of the "no" vote is worrying the leaders of the anti-gaullist coalition, and fear of a Popular Front favours the idea of appeasement even among M. Mollet's socialist entourage. Coalition, however, means compromise; and it is concessions to the parties that the general wanted to avoid. Still, he may resign himself to a temporary truce and, though with greater reluctance, bargain with the politicians—as he bargained with the officers in Algeria—until a more opportune moment comes to strike.

There is no doubt that General de Gaulle has still many weapons in his arsenal. To resign and get re-elected by universal suffrage, at a good moment, is the most obvious. He can argue that his relative failure on Sunday would not affect his prospects in such an election. But, for the moment, the general is tasting the bitter fruit of his limited victory. Sunday's vote was to have given him a new lease of power. In practice, it has given rise to doubts about his future.

SYRIA
LEBANON
JORDAN

EIU Quarterly Economic Reviews covering 57 countries or groups of countries

The Arab League and Yemeni crises have had important repercussions in the Levant. The latest Quarterly analyses these and the economic policy changes in Syria and Lebanon revealed by their new budgets. Syria's excellent export outlook, Lebanon's declining transit trade, and Jordan's aid prospects are examined against the background of their 1962/3 development programmes.

Brussels Seismograph

FROM OUR BRUSSELS CORRESPONDENT

OBSERVERS of Mr Heath during his visits to Brussels have established their own seismic register of how the common market negotiations are going by seeing how much the Lord Privy Seal's shoulders shake when he laughs. Last Saturday, October 27th, the shoulders were notably still, and the laughs notably absent, as Mr Heath reported the clashes between himself and the Six, this time over questions of India and Pakistan, and British agriculture, in the previous three days of negotiation.

The present dispute on agriculture exclusively concerns the transition period. Both sides agree that by the end of that period Britain will fully adopt the European Community's common agricultural policy. But the British wish to taper off their present system of deficiency payments during the transition period, while the Six wish them to abandon it immediately on entry, on the ground that to retain it would give the British farmer a price guarantee for a few years that his continental counterpart does not enjoy. They fear strong demands from their own farming lobbies for something like the British system, in preference to the community's newly adopted plan which exposes the farmer to some degree of market fluctuations—although on one main item, cereals, a guarantee is provided by the device of the "intervention" price, below which farm prices are not allowed to fall.

What the Six propose for Britain is that in cases where the British guaranteed price is below the community price—that is, chiefly in cereals—it should rise to the lowest community level (from around £20 to around £32 per ton) immediately on Britain's entry. Where it is above the community level it should move down gradually to the community price, the gradualness being assured if necessary by tapering subsidies to the producer. In both instances the price to the consumer would move gradually upwards to the community market price, the gradualness in this case being ensured by tapering subsidies to the consumer.

Neat as this blueprint may be, the British have dismissed it as totally unrealistic. It would mean changing a system which the British Government is pledged to continue throughout its present mandate. It would mean administering a new, complex and unfamiliar system during a short period before changing again to the permanent one. It might have quick repercussions on Commonwealth trade, and it would cause lack of confidence among farmers because their guarantees would be cut earlier than they expected (even though it is likely that they would not need them). Above all, it would mean forcing on the farmer, on Parliament, on the civil service and on the general public an upheaval that in scale would be far beyond anything required of the six common market countries, and for which the British firmly say they do not see the necessity. In terms of the purely material interests of the British farmer, one can see the possibilities in the Six's proposals. The common market's economists claim, probably correctly, that under their scheme the British farmer would do as

well as at present. But the Six can fairly be blamed for ignoring political and psychological realities in their presentation of their case. They appeared genuinely surprised last week at the strength of Mr Heath's reaction. There is already some sign that they are willing to modify their blueprint, though the going will not be easy when Mr Heath returns to Brussels on November 15th.

The Six's lack of awareness of how their proposals appear to onlookers was illustrated also in the discussions on India and Pakistan. Three elements of the Asian question had been settled in August, when the community proposed that the present 18 per cent duty on tea should be abolished, that Britain should only gradually apply the common external tariff on textiles and other exports and, above all, that comprehensive trade agreements should be worked out between India and Pakistan and the enlarged community. Last week the Six refused the request for a delay in Britain's application of the tariff for a "reasonable period" while the agreement is being negotiated. Moreover, they rejected Mr Heath's plea for the abolition of tariffs on industrial products important to India and Pakistan. All they offered were small reductions in the present high tariff levels—for instance, 28 per cent instead of 32 per cent on carpets.

THIS is a niggardly offer. The Six justify it on several grounds. They say that nil tariffs might give unfair advantages to British industry, and that each item in question is of special interest to some member country: the Belgian carpet industry, for example, is now in dire straits because of its recent loss of sales on the American market, and cannot afford new rivalry from a low-cost country. Moreover, they remind India and Pakistan that not only will the common external tariff be lowered in the next round of tariff negotiations with the United States, but that a further reduction is envisaged as part of the comprehensive trade agreement which is to begin within three months of Britain's entry. There is little doubt that the Six are aware of the economic and political problems of India and Pakistan and sincerely intend to help. The present arrangement is meant to be no more than an entracte played out against the backdrop of the Treaty of Rome, filling the interval between British entry and the comprehensive trade agreements. But their attitude is tinged, too, with lingering memories of the still quite recent days when they themselves were on the breadline, at the receiving end of aid. They need a little time to play themselves into the role of the rich man with the rich man's responsibilities. They should not be surprised if, while they are earnestly studying their parts for the next act, they are criticised for the slightly skinflint figure they cut in this one.

The other news on the common market front this week is the publication of the EEC commission's action programme, a 125-page document in which the word *communautaire*—unloved by General de Gaulle and the French Academy—occurs sixty-three times. With some caution and occasional deliberate vagueness, the document sets out the goals of common policy for the second four-year stage of the common market under eleven headings that range from energy to development aid, from monetary policy to administration and finance. It points out that the European community represents not merely a customs union nor even an economic union, but "a political union in the economic and social fields."

The programme's timing, coming as it does during a sticky phase of negotiations with Britain, may seem somewhat tactless; British officials in Brussels apparently found copies hard to come by, and those only in French. But it would probably be a mistake to see the commission's programme as a move to force the pace on Britain. The passage last January to stage two of the transition period means that common action, and therefore the role of the commission, begin to come more to the fore. The six governments had asked the commission for a programme of proposed work. Last month, in Strasbourg, it was criticised by the European parliament for not having taken the initiative more often in filling out the framework of the Treaty of Rome.

More than this, however, the commission and other community circles have been growing aware that progress towards economic union has been slow on matters that, unlike tariff-cutting, are not likely to offer quick material returns. The action programme is no doubt intended to stimulate a real start on the more difficult parts of the treaty while the community still enjoys the euphoria of its early success. The common transport and energy policies are proving tricky; so are cartel questions, in which so far a multitude of firms appear to be dragging their feet about complying with regulations, hoping that the commission's administrative resources will be insufficient to find them out. Clearly the commission is wary of leading too fast where governments and powerful organisations are slow to follow it; the unhappy experience of the Coal and Steel Community's High Authority over the coal crisis is too recent for that.

The power of the communal institutions is in fact now facing its first big practical test, in the application of the agricultural regulations begun at the end of July. German, Belgian and French farmers have already made public protests. This probably helps to explain the commission's stand on the British agricultural question; no doubt it is anxious to show itself prepared to be as tough with the British farmer as the Community farmers imagine it is being with them.

Samson at the UN

FROM A SPECIAL CORRESPONDENT AT THE UNITED NATIONS

MR MIKOYAN has hastened to Havana either to sweeten Dr Castro's pill by assurances of continued Soviet economic aid, or to bolster the Cuban ruler in some different fashion. Meanwhile, despite U Thant's assurance that he was "reliably informed" during his visit to Havana that the dismantling of the Soviet missiles and installations was in progress and would be completed by Friday, Mr Kennedy has been under fire from angry or apprehensive Congressmen, and other Americans, demanding to know what Dr Castro and the Russians are really up to and how much they may get away with after all. At the United Nations, Mr Kuznetzov, whose appearances usually signal fairer Soviet weather, has been busily attempting to allay American suspicions with amiable words, and has also had kind words for the Indians.

However, the United Nations appears to some Americans as a Delilah of whom a United States that has just successfully flexed its muscles ought to be afraid. Uncle Samson, in their view, must resist all attempts to lull him to sleep, especially eschewing protracted slumber-inducing discussions such as have characterised former armistices and arms withdrawals in which communist states were involved. These Americans would regard as much too sanguine the UN estimate that the entire job of removing and shipping out the missiles could be done in three weeks at the comparatively trifling cost of $250,000. They believe that dismantling and removal is only half of the necessary total operation. The other half ought be a painstaking scrutiny of the entire island on the ground and from the air, undertaken, if desired, by neutrals, but ensuring beyond all doubt that no missiles had been hidden away. They add that the Russians ought to be made to pay for this more thorough and costly operation since the Russians put the missiles there in the first place. Other questions calculated to give headaches to politicians as well as to international lawyers may be raised before this exercise is over, concerning, for instance,

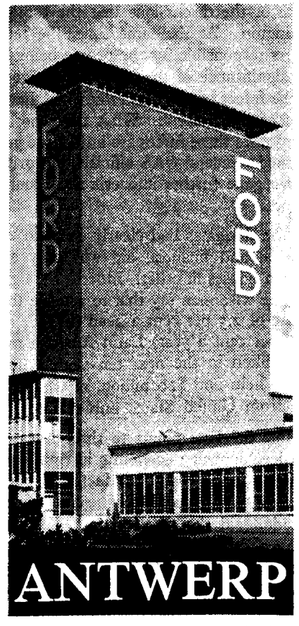
Why Ford has had plants in Antwerp for almost 40 years.



Henry Ford decided on Antwerp as location for a plant in 1922 — and the reasons for his decision still apply.

Geography played a big part in causing Mr. Ford to choose Antwerp as the site for an assembly plant nearly four decades ago. Antwerp is ideally situated to reach the whole West European Market. Within a 200-mile radius from Antwerp there are a hundred million well-paid consumers... a market equal to over one half the entire U.S.A. What's more, the unsurpassed port facilities enjoyed in Antwerp greatly simplify the shipment of parts and materials.

An efficient labor supply. Companies like Ford have good reason to consider the intelligent hard-working qualities of the Antwerp labor force when deciding where to locate plants and offices. Productivity and quality, in terms of work done per dollar spent, is better in Belgium than in any other European country.

A friendly business climate. Formalities are few for setting up a business in Antwerp. Foreign firms are treated exactly like local ones. New enterprises may qualify for special tax concessions, low-interest loans, and specially-priced plant locations.

Industrial sites — tailor made. Antwerp is unique in the amount of land it has available for industrial purposes — over 2000 acres. These sites have easy access to inland waterways, highways, railroad spurs, and docks for ocean vessels.

Information?
Just write to the General Management of the Port, Antwerp, Belgium.

YOUR KEY TO THE EUROPEAN COMMON MARKET

Cuba's sovereignty and UN assurances of its security that would be binding on the United States. Long-range missiles are undoubtedly offensive weapons, but what of Soviet military jets?

All Americans are agreed that the first imperative is to get the Soviet missiles out of Cuba; but behind that there would appear to be considerably less unanimity. Some Americans favour casting the whole problem "into the UN," but others dread this course. Those in favour now see some hope of a breakthrough on such vital matters as an agreement to end atomic tests, disarmament by inspection, and a ban on the proliferation of nuclear weapons. They feel that Mr Khrushchev, if properly managed, might be induced to boast to his people about having successfully initiated the "disencirclement" of Russia by a deal with the United States on bases, instead of being moved, if handled less carefully, to take a tough line about Berlin. This school of thought positively desires Mr Khrushchev to come to the United Nations and bask in the approval of the world as the great peacemaker—a part, incidentally, which about seventy per cent of all delegates at the UN would this week be prepared to concede to him. This very admiration of Mr Khrushchev, which it views as shallow and unthinking, is of course one reason why the opposing school of thought is distrustful of the United Nations.

There are also two schools of thought about Dr Castro among highly placed Americans. None admire him, all detest him. Nevertheless some feel that what they think must surely be his bitter disenchantment with Russia may proffer an opportunity to try, even now, to reverse the policy of shoving him even deeper into the Soviet embrace. Alternatively, they hope that Dr Castro himself might now be brought down by the deep Latin American sense of nationalism that his becoming a despised Soviet dupe must have outraged. There is even speculation that Dr Castro or another might in time be induced, like earlier revolutionaries in Mexico, to engage in discussions about compensation for confiscated American properties in Cuba. But in all this the greatest enigma remains not Cuba but Russia, and, until Russian intentions are clearer, the Cuban question must remain a cliffhanger.

Latin Alliance in the Rain

FROM OUR CORRESPONDENT IN MEXICO

THE Cuban crisis burst like a cold morning shower over the heads of the finance ministers of 18 Latin American countries and the United States who had gathered at Mexico City for a six-day meeting that began on October 22nd. They had come, as members of the Inter-American Economic and Social Council, to review the first year of the Alliance for Progress and plan for the future. Cuba, expelled from the Organisation of American States, was absent; Bolivia, which has been boycotting OAS activities because of a frontier dispute with Chile, attended the last session.

President Kennedy's dramatic broadcast announcing a "quarantine" of Cuba came during the first session and not unnaturally proved a far stronger attraction to most of the delegates than any of the opening speakers. The next day Mr Douglas Dillon, the chief United States delegate, was recalled to Washington. He was rapidly followed by the senior American newspaper correspondents who had been sent to Mexico to cover a meeting regarded as crucial to the alliance. The conference was overshadowed by the threat of war, and much of the enthusiasm, generated during the previous three weeks of talks between economic experts, evaporated.

The effect of President Kennedy's action on the conference is worth recording because of what had been expected of this particular meeting. The confident excitement that existed when the charter of Punta del Este was signed in August, 1961, has long dissolved into cynicism. As many delegates pointed out, the alliance has been misunderstood in both North and South America. People in the United States tended to think that though the taxpayers' money was to be distributed in larger quantities than ever before, a new way had been found of bringing prosperity and democracy quickly to Latin America and so stopping the spread of communism. Latin Americans, if they did not actually oppose the alliance, saw it, to quote one report, "not in its true perspective as a multilateral co-operative effort in which self-help plays the main role, but as a vast plan of aid by the United States." It was hoped that last week's conference would clear up what the alliance really stood for, and re-kindle the drive and enthusiasm that had been seeping away. The hope was that it should have as much impact as the original Punta del Este conference itself. So it was bad luck that the wind was so effectively taken out of its sails right at the start.

ALL the same, something was achieved. Probably the best work was done by the experts who met on October 1st and broke up before the Cuban crisis. It took them a week to warm up, but they then surprised themselves and everyone else by indulging in some frank self-criticism almost unprecedented for Latin American government representatives. Mr Teodoro Moscoso, the co-ordinator of the alliance and acting chief of the United States delegation later described this as one of the most hopeful aspects of the conference.

Their frankness was probably induced by an unusually outspoken report produced by the "nine wise men", a panel appointed to review the past year and make recommendations for the future. The report openly admitted that the alliance's call for peaceful revolution and reform "is looked upon with scepticism and incredulity by broad sectors of the Latin American population" because of their past relations with the United States. It also boldly criticised "the nature of the discussions that the foreign aid act provoked" in Washington. At the same time, the report holds Latin American leaders responsible for the people being "unaware of the revolutionary significance of the alliance," and admits that in many countries "the forces opposed to reform . . . have initiated a powerful campaign of resistance". What the report does not specify is that in many cases these forces are in fact the government of the country concerned. Several OAS officials said privately that the report should have gone further and criticised countries, and governments, by name.

However, most of the delegates had clearly come to understand that American technical and financial aid was only a guide to help them put their own houses in order. Indeed, the figures speak for themselves: the nine wise men say that to achieve the planned annual income increase of 2.5 per cent a head (in face of a population increase of 2.6 per cent a year) Latin America must invest something like $150 billion in the next ten years. The United States has promised to help find $20 billion, of which about half is expected to come from United States public funds.

The charter of Punta del Este points to three lines of action: economic and social development; economic integration; and the stabilisation of the price of basic export products. Export earnings are, perhaps, the key to the whole problem. The chief Brazilian delegate, Dr Celso Furtado, said that Brazil has had to increase its volume of exports by a quarter during the past decade just to maintain the level of its imports. The new international coffee agreement, signed in August, has therefore been warmly welcomed, but there was sharp criticism of the United States for reducing the subsidised prices of its sugar imports. Much concern was also expressed at the favoured treatment of African and Asian competitors in the European Common Market—a problem which, it was pointed out, would become much worse if Britain joined.

The conference passed many sensible, practical resolutions on streamlining the alliance machinery, improving consultation, encouraging private enterprise and launching a vast publicity campaign. But the kernel of the problem is that time is being wasted while the alliance beats against the wall of anti-Yanqui nationalism and the resistance of the privileged few. Nationalism, as Dr Furtado pointed out, is closely tied to the forces demanding change in Latin America. The alliance has yet to find out how to prove to the ordinary Latin American that the United States is with these forces, and not against them.

Special Powers and the Spiegel *case*

FROM OUR BONN CORRESPONDENT

THE suspicion that the roots of German democracy may still be perilously frail is as widespread in Germany as elsewhere. Assembled at Hanover last week for its triennial conference, the west German trade union federation declared itself opposed to legislation that would invest the government with special powers in a national emergency. War, and an attempted communist coup, are the disturbing possibilities uppermost these days in the west German mind. But who, it was serenely asked under the threatening clouds then spreading from Cuba to Berlin, could be sure that the government of some evil day might not use its special powers to suppress the trade unions? One delegate raised an unintended laugh by anticipating that an alarming drop in exports might provide a wicked Chancellor with just the excuse he would be looking for.

In the world outside the smoke-filled conference hall there was much shaking of heads over the intransigent trade unionists' old-fashioned fears. But only until, scarcely 48 hours later, the federal public prosecutor's office at Karlsruhe came unwittingly to their support. On the night of Friday, October 26th, acting on orders from Karlsruhe, the security police sealed and began to search the offices of the weekly news magazine *Der Spiegel* in Hamburg and Bonn; they arrested the proprietor and editor-in-chief, Herr Rudolf Augstein, along with several members of his staff, and ransacked their homes down even to the mattresses on the children's beds. In a hotel at Torremolinos, near Malaga, in the early hours of Saturday morning, Spanish policemen, acting on a nod from Germany, arrested Herr Conrad Ahlers, one of the magazine's assistant editors, who with his wife had just arrived on holiday there. Still more remarkable, the minister of justice, Herr Stammberger, was not informed about these goings-on in his bailiwick until the following Monday. Herr Stammberger is a Free Democrat. The state secretary in his ministry, Herr Walter Strauss, who is a Christian Democrat, did know, but he did not tell his chief. On Wednesday the minister tendered his resignation to Dr Adenauer, who had still, on Thursday, to decide what answer to make. Herr Stammberger was encouraged in his action by his party leaders, who were all the more incensed because the Free Democratic minister of the interior of North Rhine-Westphalia (who is ultimately responsible for action taken by the Bonn police) had also been kept in the dark by a Christian Democratic state secretary.

This Gestapo-like swoop had been made, Karlsruhe explained, because *Der Spiegel* had published reports "in which important questions of national defence had been handled in such a way as to endanger the existence of the federal republic and the security and the freedom of the German people." Subsequent official statements indicate that the issue of the magazine that had given particular offence was that dated October 10th (and actually put on sale on October 8th); and the authorities were investigating whether the magazine had received any of its information from officers in the ministry of defence. In the course of a characteristically rambling article on General Foertsch, inspector-general of the Bundeswehr, *Der Spiegel* of October 10th discussed the findings of the inquest into the exercise "Fallex 62" carried out by the Nato forces last September. According to *Der Spiegel*, such chaos had been caused by a simulated Soviet nuclear attack that normal communications were almost wholly disrupted, the medical services unable to cope with the casualties and the proud new Bundeswehr had earned no better a Nato "efficiency rating" than "fit for defence in limited circumstances" (the lowest rating of four). The Russians, the magazine conjectured, could have reached the Rhine with ease within their own estimate of seven days. The arrested men, except for one or two since released, were evidently chosen as bearing some responsibility for this painful article.

All this week the government has been subjected to a barrage of angry public questioning about the *Spiegel* affair. It is not that anyone is surprised to hear that this professionally iconoclastic magazine is in trouble again. It is the circumstances of its latest skirmish with authority that have excited so much concern and earned *Der Spiegel* an unaccustomed sympathy. These circumstances disquietingly recall a former arbitrary resort to force to break opposition, and the penalty the German people paid for failing to resist it. It is being asked how this nocturnal police swoop could have been necessary 18 days after the offending publication; and whether the continuing police obstruction on the magazine's premises is not tantamount to a censorship. Above all, it is being asked whether it was purely a coincidence that the law struck at *Der Spiegel* only 24 hours after the Bundestag had exonerated Herr Strauss from charges of seeking advantage for himself and some of his friends out of building contracts for the American forces in Germany. *Der Spiegel* first brought these charges against Herr Strauss, and hammered away at them week after week. Was this the defence minister's, or the government's, revenge? If not Herr Strauss, who inspired the public prosecutor's office to act against the minister's most troublesome political adversary? Unhappily for the authorities, public confidence in the federal judicial organs has not recovered from the disclosure in July that the chief federal prosecutor appointed in April, Herr Fränkl, had been an eminent judicial accomplice of the Nazi regime. (Herr Fränkl has since been retired. A successor has not yet been appointed.)

It was in this unpropitious atmosphere of public misgiving, and with none of these questions satisfactorily answered, that the cabinet approved on Wednesday a bundle of draft laws to invest the Bonn government with special powers in the event of a national emergency. Some of these laws—relating mainly to civil defence—will go through parliament virtually unopposed. But the heart of the legislation, the law that would authorise the government to rule to some extent by decree, entails a constitutional change and consequently the approval of two-thirds of the Bundestag; this the government cannot take for granted. Until last week the Social Democrats seemed to be ready to give the government conditional support. They have learnt since that a majority of trade unionists (the voting at Hanover was 276 to 138) expect them to oppose letting the government have emergency powers of any kind. The *Spiegel* case has aggravated their dilemma.

Fuzzy-Wuzzies in Northern Rhodesia

FROM OUR CORRESPONDENT IN CENTRAL AFRICA

CELEBRATION in Northern Rhodesia of the ninth anniversary of the Federation of Rhodesia and Nyasaland was a little perfunctory. Last Monday, at the capital's main hotel, the federal minister of posts stood up at a sundowner party with a conspicuous number of army officers and simply asked everyone to " drink to the federal state." Farther north, at the railway town of Broken Hill, Sir Roy Welensky reminded an eve-of-poll election meeting that Britain had created the federation. Earlier the director of elections of the United National Independence Party (Unip), Mr Nalumnio Mundia, observed the anniversary by telling a press conference that his party would regard the total votes in Tuesday's elections as a referendum, and that if a majority of the 100,000 African and 30,000 European voters supported Unip or the Liberals it would be taken as a mandate to break up the federation.

Sir Roy's United Federal Party (UFP) has fought hard to prevent the continued existence of federation from being debated as a central issue. The party has produced some statistics in favour of federation ; but the UFP manifesto prefers to counter-attack rather than defend, and it praises the federation as " a rampart against pan-Africanism." It gives warning that " if the link with Southern Rhodesia is severed Northern Rhodesia will become the pawn of the pan-African movement, to be pushed hither and thither until chaos and anarchy finally engulf her."

This is the measure of the UFP's understanding of what is happening further north. It has nevertheless proved effective in frightening European voters with its frequent references to " the evil forces of barbarism " and " the savage fist pounding at the door." Pan-Africanism by UFP definition means extreme racialism, preventive detention acts (" the last straw," said Sir Roy, presumably forgetting that Southern Rhodesia has one of its own), repressive legislation against trade unions (this to alarm the Copperbelt white miners), intimidation of opposition parties and swift debasement of European standards. UFP speakers have traced the advance of pan-Africanism from Ghana through Tanganyika to Unip headquarters and claimed that it is mostly financed by " their masters in Moscow." For weeks they have sounded the bugle call to muster all the whites into a tight little square to face the charge of the modern fuzzy-wuzzies.

Throughout the two years of lobbying and crisis here and at Westminster which ended with this twice-amended constitution being reluctantly accepted by all, Mr Macleod and Mr Maudling both tried to make it impossible for a party to win without gaining substantial support from both European and African voters. They realised that nearly all the 15 upper roll seats would go to the UFP on European votes, and that nearly all the 15 lower roll seats would be filled by Unip with purely African support. They therefore devised a most complicated set of percentage qualifications for candidates for the 14 " national " seats. As a result returning officers have been struggling with seven different types of ballot paper and forms which make common market calculations look elementary.

They have, however, failed to use the device of " national " seats for the purpose that was claimed for it, to bring the races together. The UFP candidates, realising that they would never on their own gain the qualifying minimum of 10 per cent of African votes cast, determined that Unip should lose the chance of gaining the equivalent number of European votes. They attacked Unip as a party of thugs, arsonists and intimidators. All propaganda stops were pulled out in a concentrated campaign of vilification. It included leaflet raids over mining townships, smear posters flatly stating " Unip burns schools," and pamphlets published under the name of a maverick African politician putting together the dozen most immoderate statements Unip leaders have made in four years. The pamphlet's title is " You have been Warned." A platoon of UFP leaders marched up from Southern Rhodesia in support and the former federal finance minister said that any European who voted for Unip would be " a traitor to his brethren."

Against this assault, the attempts by Mr Kenneth Kaunda, the Unip president, to reassure European voters have not had the success they deserve. Mr Kaunda spent most of the six-week campaign patiently trying to remove European misconceptions. He answered abusive questions with grave courtesy. He explained that the party's funds came not from Moscow but from unobjectionable sources such as Sweden and a committee headed by a Tory peer, Lord Hemingford. Each time the murder of Mrs Burton was recalled he apologised deeply for the Unip men who ran wild two years ago. He promised that the mines would not be nationalised, that trade union rights would be respected, and that as far as pan-Africanism was concerned he would always put the interests of Northern Rhodesia first. He attracted large and attentive European audiences and had them laughing and sometimes clapping. But with the UFP alarmism buzzing in their ears few, it seems, could bring themselves to shake his hand or accept his nationalism.

MR KAUNDA has suffered as well from a failure to reach agreement with Sir John Moffat's Liberal party. The Liberals demanded a clear run in the national seats in return for joining with Unip in a coalition government. Unip wanted the Liberals to disband and accept two or three safe seats for their leaders. The two parties ended by fighting each other in nearly every seat and dividing the progressive European support between them. They have few policy differences beyond where to build new railways, and at what age to start school integration. But the Liberals insist there must be a further period of transition while more African leaders get government experience under Liberal tutelage. When Unip rejected this paternalism the Liberals joined the UFP in dubbing Unip a party of extremists that needed purging. It looks like a sad end to the Liberal party. During the past 20 months, three Liberal leaders have been in the government, and quiet reforms in African agriculture and education have been introduced. The Liberals might have been useful as junior partners to Unip in a government charged with more dynamism.

It may now take six weeks to form a new government. The UFP leaders reached polling day on Tuesday confident of winning several national seats because of the arrangement they had made with the faltering African National Congress led by Mr Harry Nkumbula. Few believe that their present alliance will carry these parties, so fundamentally opposed over the federal issue, into a lasting government coalition. The alliance is hailed by its supporters as an example of racial harmony. But most Northern Rhodesians see it as a survival pact.

The gloom of watching the white UFP and the multi-racial Liberals spurn the chance of racial harmony has been lightened only by Mr Kaunda's model restraint and by the patience of nearly all his supporters, who have been calm under what they see as heavy provocation. They have clung to calmness in the hopes of being rewarded with an African majority government (one step short of internal self-government), an early end to federation, and a chance to secure for the 3 million Africans some of the revenues from the mines. Mr Kaunda has promised to accept the election results whatever government they produce ; but his supporters may yet feel differently.

"The United States will not devalue its dollar . . . ."
" . . . the dollar is a good investment and as good as gold."
President John F. Kennedy, Telstar news conference, July 23, 1962

Q—Mr. President, the United States has reportedly invited Japan and other industrialized countries to invest in the building of plants in this country. Would you explain the thinking behind that, sir, and does it imply also that we are discouraging U.S. investment overseas in plants?

THE PRESIDENT: As you know, the United States investment overseas has been very heavy. In fact, it has been one of the matters which, of course, affects our balance of payments. Over the long run it does not, over the immediate run it does. We are anxious to have others invest in the United States, and particularly to invest in those areas where there may be higher unemployment, so this program is being operated through the Department of Commerce.

AMERICAN SURVEY

AMERICAN SURVEY is prepared partly in the United States, partly in London. Those items which are written in the United States carry an indication to that effect, all others are the work of the editorial staff in London.

Cuba on the Ballot

WASHINGTON, DC

THE crisis over Cuba had much the same effect on the American electoral scene as a howling sandstorm has on a particularly dull desert. The drearily flat and lifeless landscape was suddenly transformed into topsy-turvy confusion. Candidates and their campaign managers were tumbled head over heels, like desert travellers whose cosy tents have been ripped apart and who find themselves bowling briskly along the ground, following their scattered and wind-propelled baggage into the heart of the storm. The air is still filled with sand but there is hope that nothing more lethal will be flying about when the elections are held next Tuesday. With due allowance for the obscurity of the view, it looks as if Mr Kennedy's dramatic course on Cuba will pull into the polling booths numbers of voters who might otherwise have sat this election out; and as if most of them will use their votes to support the President.

This likelihood raised questions in some suspicious minds about the timing of Mr Kennedy's Cuban move. But only the Republican congressional campaign committee and a few others dared to speculate aloud that the entire crisis had somehow been manufactured with an electoral victory for the Democrats in mind. The theory has no support from either fact or logic. The Democrats were in little danger and had no need to build up a scare about menacing foreign missiles; there was little chance of the Republicans gaining control over the House of Representatives and none that they would win the Senate.

On the other hand, it seems doubtful whether the crisis has altered the normal shape of mid-term congressional elections, when the Presidency is not itself at stake, enough to enable the majority (Democratic) party to increase the number of seats which it now holds. Even if the total vote is larger than was expected before the Cuban crisis and even if most of the extra votes are Democratic ones, the Republicans still look like doing well in some important states. They may capture the Governorships in Michigan and Ohio, and perhaps in Pennsylvania and California, and may increase their already comfortable majority in New York. Nevertheless, the Democrats are almost certain to retain their ample leads in both houses of Congress. Should the Democrats lose some seats, these are more likely to be vacated by liberal Democrats who support almost all President Kennedy's policies warmly than by conservative southern Democrats who, with varying degrees of stubbornness or fervour, have opposed nearly every domestic reform that Mr Kennedy stands for. It will be surprising if the crisis enables the President to achieve his object, expressed long before Cuba became a really burning issue, of getting enough "pro-Kennedy" Democrats elected to the Eighty-eighth Congress to ensure passage of some of his deeply cherished measures.

Until Mr Khrushchev bounced on-stage in his familiar part of father of lies and author of evils, the election had failed to produce an issue. The Democrats, including Mr Kennedy, sounded less than convincing to many voters when they insisted that only Republicans stood in the way of giving the country improved welfare, better education and more jobs. A Republican speaker in California unconsciously expressed a truth of wider application when he declared that the people who said that they did not like Mr Nixon but could not explain why ought rather to say that they did not like Mr Nixon's opponent, Mr Brown, and could say why. Confronted for the most part by totally uninspired candidates, the voters were tempted to show distaste, not admiration.

At the same time, what seemed at first sight to be good issues tended disconcertingly to sputter and fizzle like damp squibs. The Billy Sol Estes case, of which at one time the Republicans entertained high hopes as a first-class farming scandal embarrassing to the Administration, was regretfully put aside once it seemed clear that its roots were firmly planted in the soil of the Eisenhower years. A lot of money was lost on the stock exchange when share prices fell, but much of it belonged to Republicans who will vote against the Administration anyway. Grumbles about high taxes are endemic but voters appear sceptical about promises by either party to alleviate their tax burden and almost certainly the Cuban affair has deepened this scepticism.

The Republicans played for all it was worth their criticism of President Kennedy's earlier handling of Dr Castro. But opinion polls showed that the public was dubious about the merits of direct action. People knew what they would like done about Cuba but did not want to pay the price of a Korean-type war, still less of a world war. When Mr Kennedy revealed that the Russians had put missiles into Cuba, which the Republicans had long alleged was the case, his prompt response turned to cheers the boos which otherwise might have greeted his about-face.

Mr Kennedy's handling of this crisis took most of the stuffing out of General Eisenhower's attack on his "dreary record." On the other hand, Democrats like Senator Clark of Pennsylvania, who stoutly supported Mr Kennedy's former stand and dismissed Republican warnings over Cuba as scaremongering, seem to be having a harder time living it down. (Former Senator Pepper, running for a congressional seat in Florida, ducked out from under his awkward reputation as a flaming liberal by calling cannily for an air and sea blockade of Cuba before the President produced his quarantine.) Naturally Republicans like Senators Keating of New York, Capehart of Indiana and Dirksen of Illinois, who had talked most about a build-up of missiles in Cuba, feel vindicated. Perhaps the only politically-conscious part of the United States which has remained relatively unaffected by the events in the Caribbean is Massachusetts. The spell cast on voters there by the President's brother, Mr Edward Kennedy, who is seeking a seat in the Senate, has continued to hold them in thrall regardless apparently of anything happening elsewhere.

CUBA apart, the parties have been battling mainly for the votes of the suburbs and of the farming mid-West. The Democrats hold the cities and the South firmly. Suburbanites, with $25,000 homes and swimming pools, often vote Democratic nevertheless because in spite of affluence they feel themselves to be "little people" in need of protection from the government. But businessmen, most of whom also live in suburbs, generally vote Republican because they are against "big government"; many of them think, also, that Mr Kennedy acted too sluggishly over Cuba. The midwestern farmers, although dissatisfied with the Administration's farming programmes and inclined therefore to stay with

the Republican party, are a dwindling band of voters, because of the growth of the cities of the plains. The most talked-about tenth of the American nation, the Negroes, must weigh what the Administration has done for Mr Meredith in Mississippi, and what it wants to do for old people with medicare, against heavy unemployment among Negroes and the job discriminations practised against them by trade unions whose white leaders are almost entirely Democratic.

The Administration's much discussed proposal for financing hospital care for the elderly through social security payments seems to have left most voters curiously untouched. But this may be less because they dislike the proposal than because they seem thoroughly bored with almost all the candidates, many of whom have been risking vocal rupture amid an immense unflattering indifference. Their loudest shouts have been devoted to shrill charges and counter-charges about whose hand has been found in the till. They were therefore caught on the wrong foot when the real issue of the election, and one in which voters were prepared to take considerable interest, suddenly became the firmness of the hand which holds the tiller.

The sad truth is that from Massachusetts to Texas, and from coast to coast, the general standard of candidates is deplorably low. Such candidates are known in the trade as "turkeys." There have been times in these elections when the sum of all their campaigns has sounded like one vast gobble. A mass of mediocrity has been leavened here and there by such energetic exceptions as Mr Romney and Mr Scranton, the Republican candidates for the Governorships of Michigan and Pennsylvania. But by proving the rule such instances serve merely to cast cheerless light on the status of politicians in the United States. Mr Romney is a gifted amateur in politics. He and Mr Scranton are wealthy, successful businessmen. Most successful American businessmen prefer to have nothing to do with politics apart perhaps from buying themselves a politician.

For the Democrats the best hope of gaining seats seems to lie in California. For the Republicans, New York holds out similar promise. But in both places the parties' hopes have sprung largely from more or less unashamed gerrymandering. This year's mid-term elections may turn out to be the dullest as well as the costliest in recent American history. The Democrats hope to reap an extra harvest from the voters' response to the President's act of leadership which the Republicans could only support. But the new Congress seems only too likely to resemble in almost every unsatisfactory particular the one that ended before Cuba became a Soviet base.

The 1962 Elections

Polling Day—Tuesday, November 6th

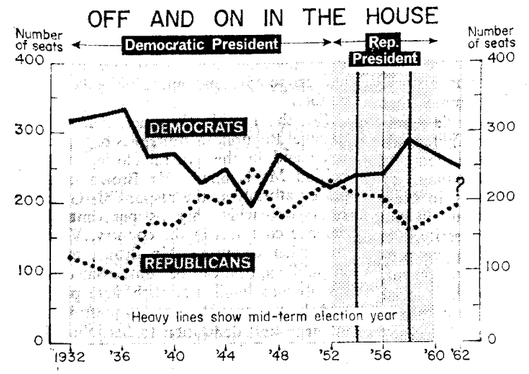
THE most sensational—and the most unlikely—thing that could happen next Tuesday would be for the Republicans to gain the 44 additional seats which they need to control the House of Representatives. In fact, if they pick up as many as a dozen or so (when losses have been set off against gains) they will be doing well and the prestige of the President and his party will suffer. On the other hand, the Democrats will be happy if they do no more than retain their present majority of 89 and will count it a real victory if they show a net gain of only a very few seats. This is because the party in power normally loses strength in off-year elections in which the Presidency itself is not at stake.

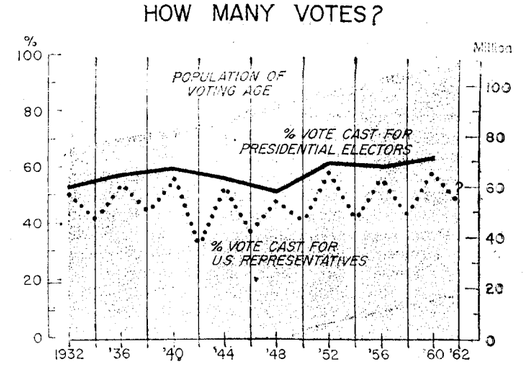
The Democrats are particularly likely to be affected in this way because the number of voters going to the polls falls off when there is no presidential contest to stimulate interest and a high proportion of those who cannot be bothered to cast their ballots come from the poorer, less educated classes which vote Democratic if they vote at all. This year there are about 110 million people in America of voting age—over 18 in Georgia and Kentucky, over 19 in Alaska, over 20 in Hawaii, over 21 everywhere else—but it is estimated that only some 83,500,000 are actually qualified to vote; the rest are aliens, criminals, lunatics or have failed to satisfy state requirements regarding length of residence, registration and so forth. One of the main purposes of the energetic campaign, unprecedented for a President in an off-year, with which Mr Kennedy was blanketing the country was to shake Democratic voters out of their apathy. Now that all election speeches by the President and by the members of his Cabinet have been called off because of the emergency over Cuba, Democratic candidates may suffer. On the other hand, they may benefit from the desire of the voters to support the President in this crisis.

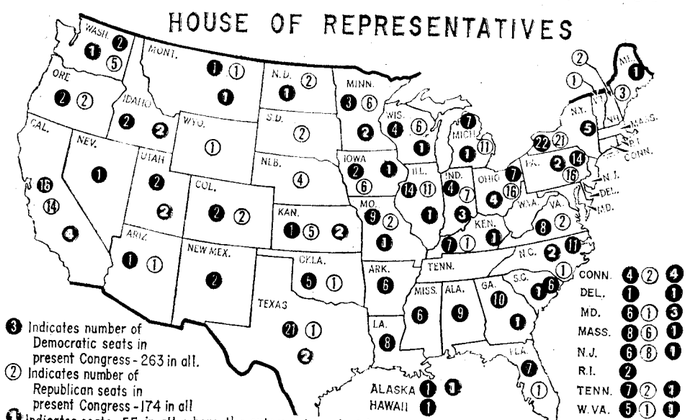
The most recent—and semi-final—survey by Dr Gallup showed 56 per cent of the people who are "most likely" to vote supporting Democratic candidates. This is only slightly less than the percentage which actually voted for Democrats in 1958, the last off-year election, giving that party a majority of 152 in the House of Representatives. The Democrats' best chance of picking up seats in the House this year are in California and Florida in the new constituencies which have been added as a result of increases in population—and where the new boundaries have been drawn by Democratic majorities in the State Legislatures to favour their own party. The Republicans, however, may win the new seat in Texas and their hopes are even higher in Michigan, where the inability of the Republican Legislature to agree with the Democratic Governor on how to redistrict the state has resulted in candidates for the new seat running "at large"—that is, being chosen by a state-wide vote. The Republican contender, Mr Bentley, is an extreme and extremely rich conservative who has long been demanding a blockade of Cuba, an idea which has been castigated as warlike by his opponent, a well-known professional Democrat, Mr Neil Staebler. Now the President, whom Mr Staebler supports so whole-heartedly, has probably ensured that his opponent will win.

In the Senate the Republicans would have to gain 15 seats to obtain a majority and there is no chance of this; indeed they will do well if they manage to avoid a net loss. The Republican incumbent, Senator Thruston Morton, is being particularly hard-pressed in Kentucky by a liberal Democrat, the Lieutenant Governor, Mr Wilson Wyatt. The Democrats may also pick up an unexpected seat in New Hampshire, where a bitter internal quarrel has divided the Republican party. Few independent observers now give the Republican, Mr George Cabot Lodge, any chance of beating the President's brother, who has fought a competent, expensive and well-organised campaign, in Massachusetts. But just possibly Mr Van Zandt may be pulled ahead of Senator Clark in Pennsylvania by the coat-tails of the Republican gubernatorial candidate, Mr Scranton, should the latter do exceptionally well, as he may, against the Democratic Mr Dilworth.

It is in the gubernatorial contests that the Republican prospects are brightest—although the squabble in New Hampshire may mean an unnecessary loss there. If, as is very possible, California, Ohio, Michigan and Pennsylvania, all of which now have Democratic Governors, are won by the Republicans, they will then control all the leading industrial states—the Republican Governor of New York, Mr Rockefeller, is sure of re-election—and these will be the key states in the 1964 presidential contest. Moreover, one of these gubernatorial candidates will probably be the Republican nominee for the Presidency in two years' time.



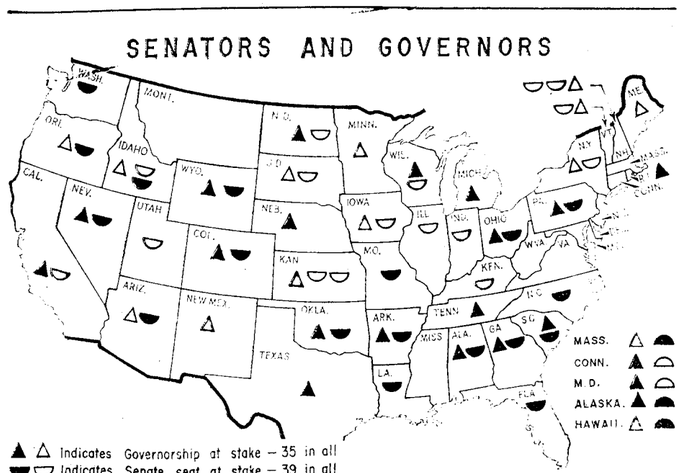




3 Indicates number of Democratic seats in present Congress - 263 in all.
2 Indicates number of Republican seats in present Congress - 174 in all
1 Indicates seats, 55 in all, where the outcome is anybody's guess, according to *Congressional Quarterly*. There are 184 seats which are safely Democratic, 44 which lean towards the Democrats, 38 which lean towards the Republicans and 114 which are safely Republican.

The total number of seats in the House of Representatives to be chosen this autumn reverts to 435 and they have been reapportioned among the states to allow for the changes in population which were revealed by the 1960 census. Nine states gain seats, sixteen lose them, as shown on the list below :—

Alabama	−1	Kansas	−1	Nebraska	−1
Arizona	+1	Kentucky	−1	New Jersey	+1
Arkansas	−2	Maine	−1	New York	−2
California	+8	Maryland	+1	North Carolina	−1
Florida	+4	Massachusetts	−2	Ohio	−1
Hawaii	+1	Michigan	+1	Pennsylvania	−3
Illinois	−1	Minnesota	−1	Texas	+1
Iowa	−1	Mississippi	−1	West Virginia	−1
		Missouri	−1		



▲ △ Indicates Governorship at stake — 35 in all
◒ ◓ Indicates Senate seat at stake — 39 in all
Solid symbol shows that incumbent is a Democrat, hollow symbol that he is a Republican.
Red symbol indicates that the outcome of the race is anybody's guess, according to *Congressional Quarterly*. Its latest assessments are shown below :—

	Governors	Senators

Duel to the Death

FROM A CORRESPONDENT IN CALIFORNIA

WHATEVER else the Cuban crisis may do to Californian politics this year, it has already propelled Senator Kuchel, the Republican whip, safely back to his Washington post. Once his summons came on October 22nd and he flew off in a naval aircraft to join other congressional leaders in a presidential briefing at the White House, his victory in next week's election over Mr Richard Richards, a State Senator who is a protégé of the leftish California Democratic Council, was assured. No such conclusive assistance towards re-election has come to the Democratic Governor, Mr Edmund (Pat) Brown. His campaign against the former Vice President of the United States, Mr Richard Nixon, was to have received a final boost from President Kennedy whose scheduled visit to California last week was cancelled because of the Cuban situation. The boost was needed to get out the vote, particularly in southern California where 40 per cent of the electorate lives.

Without the stimulus of a presidential visit, to match the lift given to Mr Nixon by former President Eisenhower's appearances on his behalf, California's Democrats are on their own. Their problem in the last days of the campaign is to mobilise their party's vote in support of the President, with the particular object of winning as many as possible of the eight new congressional seats allotted to California this year. If they can succeed in this, they expect also to be able to hold Governor Brown's Democratic support and to win for him many of the independents who comprise an important part of the electorate in the state.

All Californian elections are characterised by the lack of strong party discipline. Nevertheless numbers are important. There are now 7,531,211 registered voters; of these 4,289,997 are nominally Democrats and 3,002,038 Republicans. The perennial problem of Republican candidates in California is that they must hold their own party's voters and must attract bipartisan support in addition. Senator Kuchel is the one remaining legatee of the bipartisan tradition established in California by Chief Justice Warren when he was Republican Governor. Mr Nixon, who won over Mr Kennedy in California in 1960 by 35,000 votes, has also proved his ability to attract Democratic votes in large numbers.

The sharply altered focus of political interest away from state issues and towards Washington has distracted Californians from one of the most apathetic and least edifying campaigns in their history. It became plain early in the summer that personalities rather than issues would dominate the contest for Governor. California's problems today are those of expansion; its growing population is approaching 17 million, and it is about to outstrip New York as the most important state in the Union. With its great prosperity, its balanced budget and its progressive programmes for statewide water development, increased educational facilities and social welfare all provided by the joint efforts during the last four years of Governor Brown and a bi-partisan group in the State Legislature, it has been difficult for the Republicans to find anything to argue about.

Therefore Mr Nixon has been challenging Mr Brown's own competence, his choice of staff, his "extravagance" and finally his alleged "softness on communism." Mr Nixon's plea has been that he could run the state better than Mr Brown on less money and with abler assistants. The Republican candidate has promised to save $50 million by eliminating abuses in the welfare system, economising on state buildings and reducing the size of the state bureaucracy.

Mr Nixon has also revived the old question of communism in California, suggesting that it should be dealt with more positively through legislation and through explanatory courses in the schools. He has not called Mr Brown, who is a devout Roman Catholic, a communist; he has simply indicated that the Governor is not countering communism aggressively enough.

Even here, however, it has been difficult for Mr Nixon to separate what he would do from what he would not do. Thus he is in agreement with Mr Brown that a proposed amendment to the State Constitution, to be voted on next week, which would empower a grand jury, the attorney-general or any federal marshal to designate individuals and organisations as communist without legal process, is unconstitutional and self-defeating. Similarly Mr Nixon has condemned the excesses of the reactionary John Birch Society. In taking a rational stand on extremism, however, he has alienated the extreme element in his party in California.

To win conservative and right-wing support Mr Nixon has again accepted the services of the controversial strategist of past Republican campaigns, Mr Murray Chotiner of Los Angeles, and a familiar pattern has developed of attack by innuendo against the state's Democratic officials. This was capped recently by a series of apparently faked photographs showing Governor Brown, for example, in an attitude of deference to Mr Khrushchev. Democratic efforts to involve Mr Nixon in a loan given to his brother by a defence contractor in the past did nothing to elevate the tone of the campaign.

Mercifully, all of this diversionary sniping has now been drowned out by events. Mr Nixon hastened to make a long television statement supporting the President on Cuba and reminding Californians that he himself had proposed a quarantine publicly in September.

But the President's action deprived the national Republican strategists of the Cuban issue and in the general closing of ranks behind Mr Kennedy Mr Brown takes his place naturally as the responsible Governor of a state which has 25 per cent of the defence contracts in the country. What the somewhat colourless Mr Brown may lack in public appeal can be compensated for by his obvious familiarity with state problems and the fact that there is no question of his integrity and dedication to his job. If Mr Brown is not a great asset to his party at least his victory on Tuesday would be the key to saving California for the Democrats in 1964 and a death blow to Mr Nixon's hopes of a presidential future.

Candide for Governor

NEW YORK

IT would be understandable if Mr Robert Morgenthau should succumb to the paranoiac delusion that the entire Cuban crisis has been staged in order to relieve the Democrats of the embarrassments of his forlorn campaign for the Governorship of New York. For now President Kennedy and Vice President Johnson have been freed from their promise to return to New York before the election to do better by the gentle Candide to whom the Panglosses of the New York Democratic party have assigned the most hopeless of all political tasks, that of trying to unseat Mr Nelson Rockefeller, the present Republican Governor. Moreover, as a Morgenthau campaign aide lamented, "our candidate has been pushed off the front pages." In his place appeared reassurances by Governor Rockefeller that the state's civil defence programme was ready to shelter New Yorkers of all parties in the event of a nuclear attack.

The enormous pity and fascination with which New Yorkers have followed Mr Morgenthau's daily humiliations is not the sort of publicity which Democratic leaders crave. During the President's visit to New York on Columbus Day much fun was made of the contrast between the wan

choose IRELAND

FOR YOUR NEW EXPORT FACTORY

The incentives Ireland offers to new manufacturers who export include non-repayable cash grants amounting to a substantial proportion of fixed assets. There is no income tax, no profits tax, for ten years on profits from new industrial exports from Ireland – and taxation is at reduced rates for the following five years. For manufacturers interested in air freight, there are premises for rental at Shannon Free Airport, together with 21-year tax exemption.

And Ireland has yet another asset to offer: a plentiful supply of workers. Here's what Mr. E. J. Power, General Manager of the Irish Dunlop Co. Ltd., which has 27 years' manufacturing experience in Cork, says about the quality of Irish labour: "Irish workers are adaptable, efficient, and quick to learn the special skills required by modern machinery. Our company now employs approximately 1,500 hourly-paid personnel at Cork factory and their rating compares favourably with other Dunlop factories throughout the world. Indeed, in recent years Irish operators, supervisors, and executives have been given temporary assignments in overseas countries for the purpose of training local workers".

In the last three years more than a hundred firms – mostly British – and making anything from woven glass fabrics to industrial thermometers – have begun production in Ireland. For full information on what Ireland can offer *your* industry, please get in touch with Mr. Gerard MacCarthy, representative of the Industrial Development Authority. You can reach him through the Irish Embassy, 17 Grosvenor Place, London, S.W.1. (BELgravia 2171).

Or write for two informative booklets to:

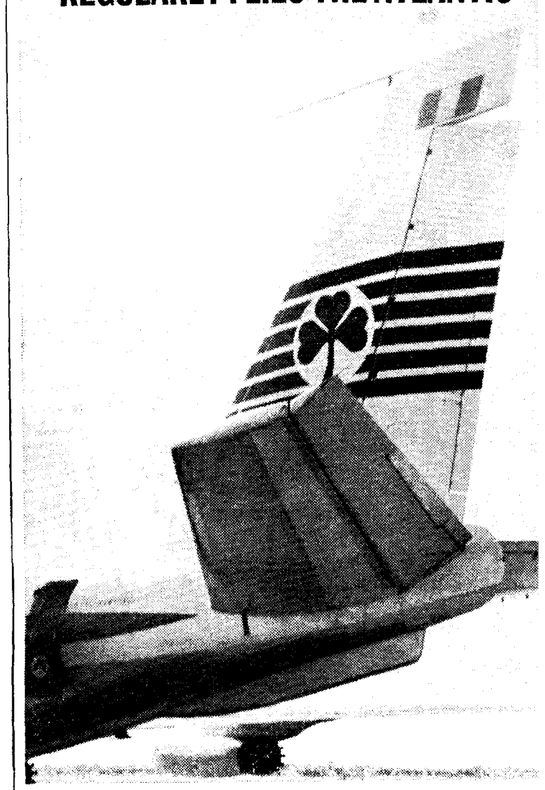
A QUESTION TO EVERYONE WHO REGULARLY FLIES THE ATLANTIC



Can you make the mileage shorter and sweeter too

Yes! By Aer Lingus—Irish International Airlines. Catching transatlantic jet need not mean hours of cross country journeyin in the wrong direction. Aer Lingus flies *direct* from the maj airport nearest you, to connect at Dublin with the daily Boei jet to New York and Boston.

Not only is this far more practical, it is also more of a pleasure. *At Dublin* take a breath of fresh air, and enjoy a meal in the most famous airport restaurant in Europe. *At Shannon* stop off at the Duty Free shopping centre. Here the nicest things from Ireland and the rest of the world are all gathered under one roof and sold for a song. *In the air* you will discover that the Golden Shamrock menu and wine list are the finest that ever got off the ground.

Your travel agent will give you f details of all Aer Lingus services fr the airports listed here, and of the co necting flights to New York or Bost

Check your home town against this list of Aer Lingus take-off points in Britain.

This baby CAN started a new trend in child nutrition

Heinz strained baby foods in cans are sold in hundreds of millions every year all over Britain. Nutritionally, they are excellent. Even the most careful mother cannot prepare purer, safer foods in her own kitchen.

WHY HEINZ USE CANS

Reason number one—cost. Heinz believe they have a duty to the housewife in offering her baby foods that are pure, safe, nutritious, *and* at the lowest possible price. Cans help keep costs down as can be seen, dramatically, from a price increase of *only 2d. in 25 years!*

WHY CANS LEAD

Safety is vital. Heinz like cans because they are safe in the factory, in transit, in the shop, in the home. Another reason is that new standards are always being set—of safety, hygiene control, higher food values. This partnership with Metal Box in constant, forward-thinking research is helping to keep Heinz's lead in baby foods.

THE RETAILER'S-EYE VIEW

Nearly half Britain's food shops sell canned baby foods. In supermarkets alone, canned baby foods are big business. Since it is estimated that, by 1965, 4 out of 5 women will shop in supermarkets, let us hear Mr. Sydney Ingram, Chairman of the Anthony Jackson chain. He says: "We make a special feature of these canned baby foods. We encourage women to take 3 or 6 at a time, because they need the variety, and these little cans are light to carry. Our displays are moving 25,000 cans a week!"

CHILD NUTRITION

Child nutrition is a joint interest of Heinz and Metal Box. Together, they plan far ahead with new ways to improve productivity, food standards and consumer benefits. Metal Box, for instance, have introduced an extra safety factor—a new high-velocity cold-air cooling system for cans emerging from the sterilisers. They also clean all baby food cans before delivery. These are but a few of the services Metal Box offer every customer. They are ahead in food technology, engineering, design and research. With all this, cans are often the cheapest way to pack food products. Could cans improve *your* product?

METAL BOX

THE METAL BOX COMPANY LTD, 37 BAKER STREET, W.1

novice and the President who, flushed with the exhilaration of his return to campaigning, found himself smiling more often at a more photogenic co-star, Governor Rockefeller. Vice President Johnson was widely credited with political shrewdness when, during his visit to New York, he failed to emerge from his hotel room to accompany Mr Morgenthau, who was waiting in the corridor, on a tour of Harlem; Mr Johnson explained later that there had been a misunderstanding. Local Democratic leaders themselves have been unable to muster the conventional enthusiasm when trying to introduce Mr Morgenthau whose nomination was preceded by intra-party warfare.

The delusions of health which enliven consumptives in the final acts of Italian operas seem to have kept Mr Morgenthau going. He believes that he has a chance of winning—even though Mr Rockefeller, in 1958 when he was relatively unknown, defeated Mr Averell Harriman by nearly 600,000 votes. Mr Morgenthau thinks (and even the *New York Times*, which supports Mr Rockefeller, admits) that the Governor's refusal to debate with the Democratic candidate on the grounds that he is unfamiliar with state issues may seem arrogant to voters. Mr Morgenthau is even more hopeful that the electorate will not relish Mr Rockefeller's scarcely veiled ambition to be something more important than Governor. Mr Morganthau has even gone so far as to imitate the campaign techniques of his rival who, with his surprisingly earthy New York accent and rugged good looks, thrives on mingling with crowds. One day Mr Morgenthau shook hands for 14 hours, from Harlem to Chinatown—a feat which even his most idealistic admirers, such as former Governor Lehman, fear may be damagingly out of character.

Supporters of Mr Morgenthau have clung to a more scientific shred of hope: the same polling organisation which guided President Kennedy, Mr Edward Kennedy and New York's Mayor Wagner to their respective successes has maintained that the Democratic candidate's election is not impossible. Yet it has been clear that the party's leaders, especially the President, have not exerted themselves fully for the man who laid down his job as federal attorney on their behalf. One public speech by Mr Kennedy urging Mr Morgenthau's election would have been infinitely more valuable than the two-minute television commercials which were prefabricated during the President's visit to New York.

Now, while the Democrats' hope of diminishing, if not demolishing, Mr Rockefeller before the Republican national convention of 1964 has been almost obliterated, they will at least be spared too strong an identification with the candidate who, according to less beneficent psephologists, may lose an election by one million votes.

West of the Mississippi

In the western half of the country broad economic issues lie beneath the surface sound and fury of individual contests. In the farming states the great question is how to maintain agricultural income without excessive regimentation. Elsewhere the problem is how best to develop the resources and diversify the economies of the arid mountain states and of Texas, where a real two-party system is struggling to emerge. Washington may be far-off but its largesse—and its interference —are central issues in the elections.

Republican Harvest?

FROM A CORRESPONDENT IN MINNESOTA

THIS is no year to be campaigning as a Kennedy liberal in the farm states—and, in fact, few Democrats are. Mr Nixon did well in these states in 1960 and the Republicans made big gains in the House of Representatives. In Minnesota, Wisconsin, Iowa, Kansas, Nebraska, South Dakota and North Dakota the events of the past two years have generally reinforced the Republican position. The redistricting which followed the 1960 census cost these states four seats in Congress and has left the area with an underlying feeling of alienation from a national government attuned to the growing importance of the urban areas.

In the past two years right-wing groups have also been active to some extent in Wisconsin and Minnesota and to a great degree in Nebraska and North Dakota. They have been attacking the federal government as increasingly bureaucratic and urging the people to "work out their own solutions" to their problems. So has former President Eisenhower. "You do it!" he exhorted in Minneapolis in October. "Take back your faith in yourself—don't let one man make your decisions for you."

Nowhere does this feeling show up more clearly than in the reaction to the "supply management" concepts embodied in the original Kennedy farm plan. This proposal, with its prospect of permanent controls over the production of wheat and feed grains and, for the first time, of dairy products, was opposed by every Republican from the area but one. Iowa's Democratic Congressman, Mr Neal Smith, voted against the Administration's proposal and Mr E. B. Smith, the capable professor who is running against the incumbent Republican, Mr Hickenlooper, for the state's Senate seat, is less than enthusiastic about it.

In North Dakota, where the Farm Bureau is small but aggressive, it has been arguing persuasively that the principal effect of the federal wheat programme has been to reduce the state's ability to produce its natural speciality; this year farmers in North Dakota approved the marketing quotas through which the programme is implemented by the smallest margin ever. In the country as a whole the referendum barely managed to get the required two-thirds approval. Turkey growers, who are especially strong in Minnesota, soundly defeated

a proposed federal marketing scheme advocated by the Department of Agriculture. Finally, the movement this summer to withhold farm commodities from the market is seen as an important indication of the farmers' basic uncertainty about the new supply management concepts and of their willingness to look for long-range solutions to their price problems which do not depend on the government.

All over the area, the farm programme is being debated more in terms of "regimentation" and "controls" than in terms of its effect on prices and farm income. A key test will come in the huge new district in western Kansas, where a first-term Republican, Representative Dole, is using this line of attack in his close race with Mr Breeding, the Democratic chairman of the House agriculture subcommittee on wheat and a defender of the Kennedy programme.

Only two Senate races are drawing much attention: that in South Dakota, where Mr George McGovern, the former director of Food for Peace, is opposing the Republican appointed to fill the vacancy created by the death of Senator Francis Case; and that in Wisconsin, where the Democratic Governor, Mr Gaylord Nelson, is running strongly against a veteran Republican, Senator Alexander Wiley. Mr McGovern, who represented the eastern and more urban half of South Dakota in the House from 1957 to 1961, has been closely identified with the Kennedy Administration. The President has come to the state to speak for him but Mr McGovern has an uphill fight. Governor Nelson had been thought to be a little ahead in Wisconsin until the Cuban crisis but this called attention to Mr Wiley's position as the senior Republican member of the Foreign Relations Committee and also mercifully forced the 78-year-old Senator to suspend his embarrassingly inept campaign appearances and return to Washington. The race is now a toss-up.

No important shift is foreseen in the area's balance of Republicans and Democrats in the House of Representatives. The seven Congressmen from North Dakota, South Dakota and Nebraska—all Republicans and all solidly conservative—seem virtually assured of re-election with one

possible exception. The only race of really national interest is taking place in Minnesota between Representative Judd, a veteran Republican, and a highly-regarded state legislator, Mr Donald Fraser. Mr Judd, who felt himself badly treated by a redrawing of constituencies which gave him the normally Democratic northern half of the city of Minneapolis in order to create a safe suburban district for an attractive first-term Republican, announced at first that he would not run again. He is back, however, barn-storming with the same evangelistic style he displayed as keynoter of the 1960 Republican convention. Mr Fraser, who planned a campaign centred on domestic issues and particularly on the Administration's medical care Bill which Mr Judd, a physician, opposed, has found the ground slipping away under his feet with the public's concentration on Cuba.

The races for Governor are dominated by local issues: taxes in Wisconsin, liquor in Iowa, the problems of the depressed iron ranges in Minnesota, an administrative scandal in Kansas. Republicans may well take control in North Dakota and Nebraska, where Democratic Governors won in 1960 against unusually weak Republican candidates in normally Republican states. In Nebraska, particularly, Mr Fred Seaton, a former White House assistant and Secretary of the Interior during the Eisenhower Administration, is given a good chance.

How the West is Won

FROM A CORRESPONDENT IN COLORADO

The eight mountain states are a region which wears no party's permanent brand. Twice it voted overwhelmingly for Mr Eisenhower and in 1960 it supported Mr Nixon. Mr Kennedy squeaked through only in Nevada and New Mexico. Yet twelve of the area's sixteen Senators and nine of its sixteen members of the House of Representatives are Democrats. On the other hand five of the eight Governors are Republican. Six Governorships are at stake this year, three of which are held by each party; seven Senate seats, five of them now Democratic; and all the present House seats —of which nine are held by Democrats— plus a new one in Arizona.

In years when the Senate is closely divided, which it is not at present, Senate contests in the mountain states are usually hard-fought. Each party's command thinks the region, with its small state populations, as a hunting-ground for Senate seats on the cheap. The eight big states, which cover nearly 900,000 square miles, contain only 7 million people in all, or less than half as many as California alone. Yet they elect sixteen of the country's hundred senators. In the House, however, their fifteen, soon to be seventeen, Representatives are lost in the total of 435.

The basic politics of the mountain states can be understood best in terms of a love-hate relationship with the federal government. Of their 900,000 square miles two-thirds are either owned outright by the federal government or are controlled by it as Indian or military reservations. The Secretaries of the Interior and of Agriculture, who administer most of this vast domain, are more potent than any elected officials. Without the billions of federal dollars poured into land reclamation projects during the past sixty years, the region would still be largely desert but there remains a feeling of frustration, particularly over the slow growth of local industries.

Normally election campaigns consist of boasts by those in office of what they have been able to get out of Washington for the state without sacrificing its freedom and of claims by the outs that they can do better on both counts. It would be a bold—and losing—candidate who came out against federal aid. Indeed some of these states like to keep a Senator of each party in Washington building up his influence, so that the state's interests will be safeguarded whichever party is in power there. For example, Senator Goldwater of Arizona, a Republican, constantly inveighs against big government and high federal taxes and spending but Arizona's Democratic Senator, Mr Hayden, is sure to be re-elected because he can continue to get nice things for the state.

In Colorado Senator Carroll and Governor McNichols, both Democrats, benefit because they did so much to persuade Congress to authorise the $170 million Frying Pan water project for Colorado. The state receives far more in federal spending than it returns in federal income taxes. Yet Mr Dominick, a freshman Congressman running against Mr Carroll, says that if Colorado could retain half of what it pays in federal income taxes, it could have a "fantastic boom." Since its income has grown by 13 per cent in two years, outdistancing every state but California and Arizona, Democrats want to know what more Mr Dominick expects.

Mr McNichols, a "darned good Governor" according to *Time* magazine, has been in office six years and is opposed by a political novice, Mr Love, who uses his name as his main slogan. But Mr McNichols is suffering from that exposure to fiercely fought local issues which makes the political life-expectancy of Governors so much shorter than that of Congressmen and Senators. Nevertheless he should win, if only narrowly. Another Democrat, Representative Aspinall, is being blamed by zealots all over the country for strangling a Bill to preserve part of America's wilderness. But this is a help to him with his own constitutents, who want new industries, not the chance to wait on "dudes" in new recreational areas. This is also a key issue in Utah where Governor Clyde and Senator Bennett, both Republicans, are expected to win. Both oppose the creation of a huge new national park in south-eastern Utah. In Wyoming this sort of issue is also potent, along with others promising well for the Republicans. If the Democrats are to lose a Governorship and a Senator, Wyoming is the most likely place. But they may also lose a Senate seat in Idaho. In Nevada both the Democratic incumbents are expected to be re-elected.

New Mexico, like Montana, has no senatorial contest but its senatorial circumstances figure, a trifle morbidly, in its hot race for the Governorship. Both Senator Chavez and Senator Anderson are in ill health and New Mexicans speculate frankly that the next Governor may be able to appoint successors to one or both. According to one observer the loss of two Senators of experience and seniority might result in a cut of 20 per cent in federal expenditures in New Mexico.

Phoenix Infrequent

FROM A CORRESPONDENT LATELY IN ARIZONA

In Arizona small and active groups to left and to right would like to astonish the world by a new departure and their candidates reflect this. But the incumbents, whether Democratic or Republican, are on the whole the sort of prudent persons whom prudent persons like and they will probably be re-elected. Although Arizona's most famous politician is Senator Goldwater, the darling of the Republican Right who is not up for re-election this year, the state's political tradition is Democratic. The venerable incarnation of that tradition is the senior Senator, Mr Carl Hayden. He has been in Congress since Arizona became a state in 1912 and in the Senate since 1927. By now he has amassed more seniority than any other Senator.

During that period, they say in Washington, where Senator Hayden figures less on the floor than he does in committee, "he has smiled his way through more money than any man in history." Arizona receives nearly $1 billion a year from the federal treasury, more than twice what it pays in federal taxes. The results are plainly depicted on the Senator's campaign poster, which shows him beaming over a landscape full of dams, roads, schools and irrigation ditches, under the simple slogan "Carl Hayden—Arizona's Greatest Asset!" It is difficult for his right-wing opponent, Mr Mecham, to counter this straightforward and fairly truthful appeal to self-interest. He has spent a lot of money and his slogan runs: "Your future is *his* concern"—a not very tactful allusion to Senator Hayden's eighty-five years. But Arizonans, it is felt, know when they are well off—even though many of them were either under age or not Arizonans at the last election (the state's population has been swollen by young people coming in to work in the new industries and by old ones coming to enjoy the warm winters).

Rather more doubtful is the outcome of the race for the Governorship. Mr Fannin, the incumbent who is a moderate Republican, has been challenged with unexpected vigour by the Democratic candidate, Mr Goddard, a businessman and lawyer of liberal views from Tucson. Mr Goddard's campaign has at least alarmed the Republicans into most strenuous efforts to defeat him. They are weakened by two new factors of untried strength in the state's politics. The first is a challenge to the hitherto dominant, right wing press tandem, the *Arizona Republic* and the *Phoenix Gazette,* which are owned by Mr Eugene Pulliam, a fervent conservative. Their new rival, the *Arizona Journal,* is devoted single-mindedly to the defeat of Senator Goldwater, Mr Pulliam, and all they stand for. The Republicans' other weakness is the property tax, which is now higher than ever before in the state's history, and hurts particularly the numerous class of small householders. This tax is the only issue to have excited the electorate in an otherwise quiet campaign. But public placidity is such that the hopes of liberals and of the John Birch Society alike seem certain to be dashed. In Haydenland no avatar.

New Star in Texas

FROM A CORRESPONDENT IN HOUSTON

There must have been times, during his long weeks of hard campaigning, when Mr John Connally has wished that he could run for Governor of Texas as a Democrat without being challenged to defend President Kennedy at every crossroad. But his Republican opponent, Mr Cox, an aggressive conservative wedded to the far-right philosophy of Senator Barry Goldwater, never lets Mr Connally off. Although a Governor has no power to deal with such national issues, Mr Cox has campaigned against high federal spending, "no-win" foreign policy and other familiar targets of the far right. Recalling his opponent's service in the Kennedy Administration as Secretary of the Navy (1961-62) and his long association with the Vice President, Mr Lyndon Johnson, Mr Cox has tagged Mr Connally repeatedly as little better than a New Frontier socialist. In conservative Texas it looked for a time as though these tactics would pay off. But suddenly Mr Connally appears to be home, now that President Kennedy is doing something about Cuba.

Nevertheless Mr Cox can lose this election and still, in a sense, emerge the winner. Republicans in Texas have a double mission. To elect candidates, they must have a party. Far-seeing strategists among them, who have worked hard in precincts—wards in Britain —and on county committees for several years, assign a slight priority to party-building. Although President Eisenhower carried Texas twice, although Mr Nixon lost it in 1960 by a scant 46,233 votes out of 2,289,631 and although Texas sends a Republican Senator (Mr Tower) and a Republican Representative (Mr Alger, from Dallas) to Congress, votes cast for Republican candidates have generally been expressions of protest, not of loyalty. The Republican chiefs, most of them ex-Democrats like Mr Cox, believe with missionary fervour that they can make membership in the party acceptable in the westernmost state of the Confederacy. They have worked effectively, enlisting housewives, young business executives, professional people and a smattering of Democratic relics fond of the ancient

Texan tradition of being against—almost anything.

In this long-range effort, Mr Cox's part is to be a rallying-point. He talks emotionally of national issues, because local issues revolve around such prosaic matters as creating a favourable climate for new industry, badly-needed in a state whose lopsided economy has depended too long on oil, cattle, cotton and timber, and the pressing need to put vitality into the educational system, too long preoccupied with winning football games, the rudiments of farming and comfortable mediocrity.

While Mr Cox bellows about the national debt and intrigue at the United Nations ("Get the US out of the UN and the UN out of the US", his followers chant) Mr Connally slogs patiently along stressing the needs of Texas. He points to the promise that it will occupy a place in the space-age, exemplified by the National Aeronautics and Space Administration's Manned Space Flight Centre in Houston. He stresses the need for better staff, higher standards and more academic freedom in Texas's sometimes excellent but usually just average colleges and universities. He promises to reform the ungainly and inefficient State Constitution. He is determined to run the state government with crisp efficiency, drawing on a lifetime of political experience and on tough administrative ability to prod a balky and notoriously corrupt Legislature into constructive action.

There are still wide open spaces, diamond-studded oil millionaires and laconic cowboys in Texas, but the state has shaken loose from its legend. Well over 60 per cent of its 9.5 million people live in cities. In Dallas, Houston, Fort Worth and San Antonio the problems of an industrial economy and its concentrated population are like those faced by cities everywhere. Yearning for the departed days of rugged individualism, when there was no meddling government, sounds delightful on a campaigner's platform. The day after the election, it makes less sense, whoever wins.

Mr Connally knows this. He is speaking on the issues and although he is careful to preserve his credentials as a moderate conservative, he will win most of the considerable labour, Negro and Latin American vote in Texas. Party machinery in the rural counties is overwhelmingly in the hands of his supporters. All of Texas's 21 Democratic Representatives in Congress are for him. So are practically all state office-holders—usually men of standing and influence in their home communities.

The result, when Texas votes on November 6th, still hinges on factors that cannot be predicted accurately. There is a hard core of about 450,000 Republican votes. Should the turnout on election day prove light, because of bad weather or because voters have been beaten into apathy by the barrage of propaganda from both sides on television, radio and hoardings, Mr Connally would suffer. In addition if President Kennedy meets an unexpected reverse in his get-tough foreign policy, Texas's large colony of warhawks would revenge themselves on Mr Connally. Otherwise a million to a million and a half voters will give Mr Connally a comfortable majority next Tuesday and with it the prospect of a promising political career.

Questions of Colour

I—SOUTHERN POINTERS

Among cities in the deep South, Atlanta, Georgia, is outstandingly enlightened but this year, under the impact of court decisions on the proper size of electoral constituencies, it is being positively sensational. It is already certain that a new district created in Atlanta is to send a Negro to the State Senate for the first time in over fifty years. In the Republican primary to choose a candidate for the district, whose population is mainly coloured, a Negro was unopposed and in the Democratic primary another Negro far outdistanced three white candidates.

Reapportionment, as it is called, has already cost the seat of Atlanta's conservative and arch-segregationist Congressman, Mr Davis, long a reactionary force on the government of the District of Columbia. He lost the Democratic nomination last month to Mr Weltner, a moderate progressive—something which would not have happened if Georgia's old county-unit rule had still been in force. Twice before Mr Davis had failed to win a popular majority but had been saved by the state's unfair method of counting the votes. The 40,000 or so Negroes who vote in Atlanta turned out in force to retire Mr Davis. The question is whether they will stick with Mr Weltner next week or back the Republican as they usually have in Atlanta. He is Mr

O'Callaghan, who is giving Atlantans the thrill of their first really close two-party race. As neither man is a segregationist and Mr Weltner will vote for President Kennedy's social programme in Washington the Democrats may win most of the Negro vote; Georgia's "big mules"—the financial interests—seem likely to support the Republican.

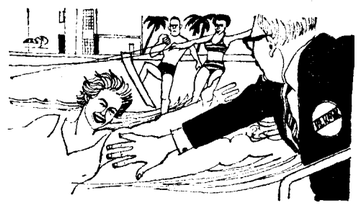
Representative Davis's seat is one of the eight which the Republicans hope to add to the nine which they already hold in the southern and border states. But one of these nine is in danger nearby in the south-western corner of North Carolina. Here Representative Jonas was swept in on the Eisenhower tide of 1952 and his extreme conservatism has been very popular with the growing business community of Charlotte. But when North Carolina lost a seat after the 1960 census the State Assembly rearranged the districts so that Mr Jonas is having to fight for survival against another incumbent, Mr Kitchin. Mr Kitchin makes much of being a Democrat, but the truth is that he is only slightly less conservative than Mr Jonas. The voters of Charlotte have a choice but it is one of labels rather than of substance. The 10,000 or so Negro voters in the district may, however, decide that the Democratic label has some value.

II—PINEAPPLE POLL

WHILE the world's attention has been riveted on Cuba, in the islands several thousand miles from the other coast of the United States Hawaiians have been conducting a freewheeling senatorial campaign in the best American style. Standing for the Republicans is Mr Benjamin F. Dillingham II, the epitome of the moderately conservative, solid businessman. Mr Dillingham springs from a well-known civic-minded family, one of the islands' oldest and wealthiest—with extensive interests in the state's construction industry and a variety of other enterprises. And he is proud of it.

> I want to reinvest some of the privileges, some of the advantages that we have had. I want to build and I want to serve. I have a tradition—a family tradition—to uphold.

Although a newcomer to the national scene, Mr Dillingham has been active in Hawaiian politics since 1946 and in that period he never lost an election. But now his time may have come. Ranked against him on the Democratic side is a much more flamboyant figure—38-year-old Representative Daniel K. Inouye, a much-decorated war hero, leader of Hawaii's important Japanese-American constituency and the most popular vote-getter in the state. He was elected Hawaii's first Representative in the United States Congress in 1959 by the largest vote ever cast for a candidate in the islands and was re-elected in 1960 by still more votes, 74.4 per cent of the total.



Well aware of the odds against him, Mr Dillingham has tackled this election venture with a thoroughly business-like approach—complete with heavy financial backing and the expert guidance of the Californian public relations firm, Whitaker & Baxter, which is something of a household word among American political managers. Mr Dillingham's campaign has centred on attacking Mr Inouye as a "rubber stamp" for President Kennedy. Singled out for special attention has been the Representative's support of the Trade Expansion Act—which Mr Dillingham contends could hurt the islands' pineapple trade—and of the President's programme for "medicare" for old people. This line of attack met with only lukewarm response from the voters during the early weeks of the campaign and now seems likely to backfire completely. The Cuban crisis has made the label of being a "Kennedy man" easier than ever to wear.

Prodigal Son

FROM A CORRESPONDENT IN CONNECTICUT

NEITHER the visits of President Kennedy and General Eisenhower nor all the glory of the autumn foliage have been able to save the campaign in Connecticut from a certain dullness. The trouble seems to lie both in personalities and in issues—or the lack of them. The Democrats have been in power in the state for eight years but have committed no sins major enough to warrant a general house-cleaning. Taxes have gone up but both Democrats and Republicans voted for the rise. "Turn the rascals out" can be a slogan for almost any election but this time no striking rascality has appeared.

As for the personalities, they suffer on both sides from the cult of the inoffensive "nice guy." The top posts to be fought for are major ones—the Governorship, one senatorial seat, all six seats in the House of Representatives—but the characters in the fights are most of them minor. At present the two senatorial places are divided between the parties but the Republican incumbent, Mr Prescott Bush, decided not to stand for re-election and the Democrats would like to capture his seat.

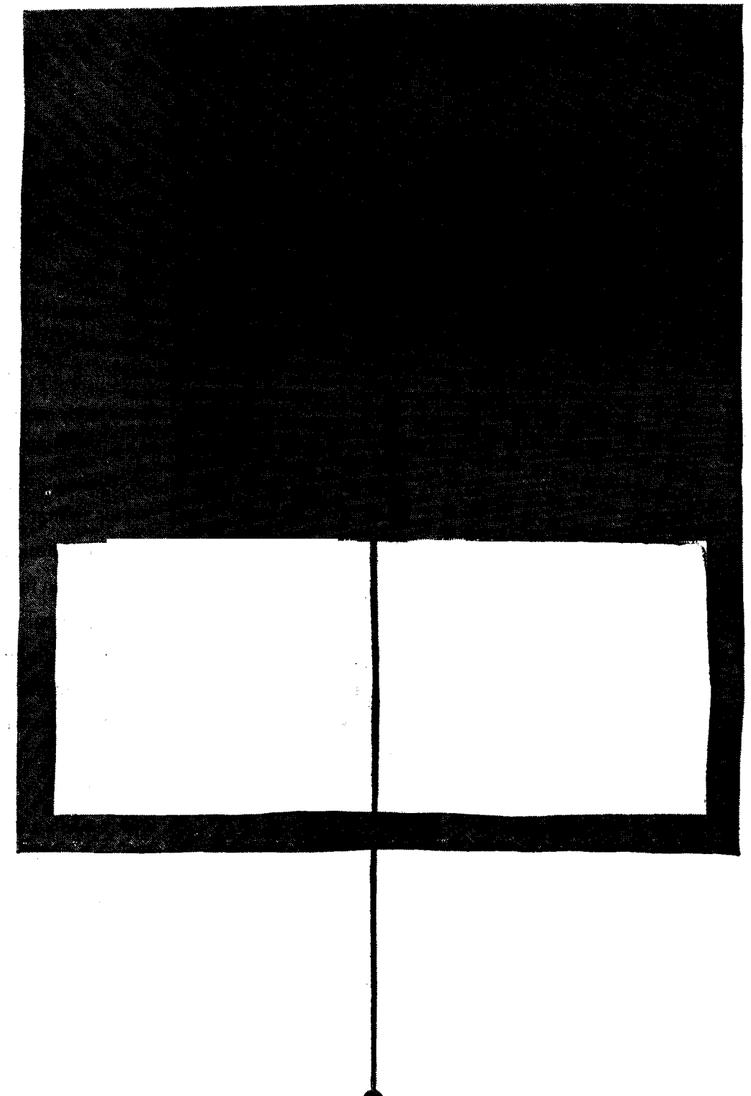
Composed as it is of busy industrial cities with heavy foreign populations which tend to vote Democratic and quiet rural regions which traditionally vote Republican, Connecticut is one of those states which stay securely in the pocket of neither party. Its registered voters are distributed almost evenly between the two, with the Democrats having a slight edge at the moment. But there are 400,000 unregistered voters who hold the balance of power.

In the Governorship, the Democratic incumbent, Mr John Dempsey, would like to succeed himself. He is opposed by Mr John Alsop, the quiet brother of two famous columnists who has long been a power behind the scenes in the Republican party. He has never before run for public office but Mr Alsop is quoted as feeling that his services to the party merit his election; whether enough voters agree with him remains to be seen. Mr Abraham Ribicoff, President Kennedy's first Secretary of Health, Education and Welfare, has come back from Washington for the Senate race but this would be livelier if the Republicans had not passed over Mr John Lodge, also a former Governor of Connecticut and recently Ambassador to Spain.

Mr Lodge, who has both charm and wit, made it known that he would be willing to run either for the Governorship or for the Senate, but the Republican powers declined both offers in favour of two rather mousey individuals with small experience in winning votes and less claim to personal fame. The common explanation is that after his return from Madrid Mr Lodge kept acting like an ambassador rather than a politician and failed to win a preliminary election in his own town.

After carrying his state for Mr Kennedy in 1960 Mr Ribicoff, who had been regarded as an excellent Governor, resigned to take a Cabinet post—a gesture attributed to devotion to the President and the Democratic party. But once in Washington he is said to have expected appointment to the Supreme Court (a job for which he had few visible qualifications), to have criticised the composition of his own department without taking effective steps to correct its deficiencies and to have made ill-advised speeches on education. How far his influence with Mr Kennedy has faded and whether he would do better as a politician in Congress than as an administrator are subjects of debate. However, two resignations from major posts in rapid succession make Democratic leaders question what it is that Mr Ribicoff really wants, or thinks he can get, and causes people to wonder how much of this in-and-out process the voters will approve.

Mr Ribicoff's opponent is Mr Horace Seely-Brown, who has served three terms in the House of Representatives and whose most important campaign gesture thus far has been the handing out of pot-holders to his feminine admirers, or rather those whom he hopes will admire him enough to vote for him.

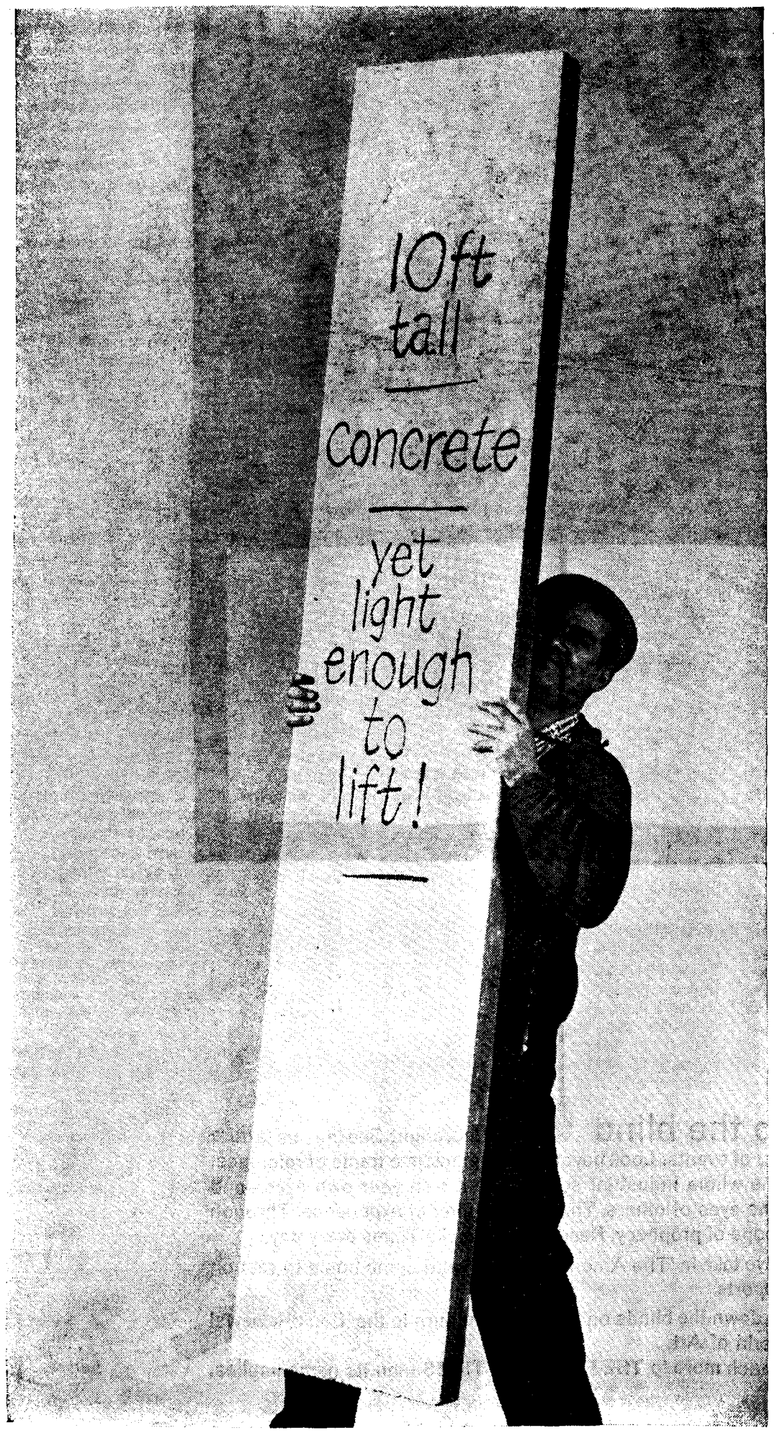


Let up the blind Let in more light. See the true texture and quality of events. Look beyond your immediate frame of reference. Take in the whole industrial scene. See it with your own eyes—and through the eyes of others. Through the filter of experience. Through the periscope of prophecy. Read The Financial Times every day.

Let your eye take in 'The American Scene' and come home to rest on the law reports.

Then pull down the blinds on business and turn to the 'Book Reviews' or the World of Art.

There's much more to **THE FINANCIAL TIMES** than its name implies.



This is Durox Aerated Concrete. Not simply a new building material, but one which allows of new building methods. Take Durox wall panels, for instance. They are, as you can see, amazingly light; but also remarkably strong. They are easy to handle and simple and fast to erect. They are assembled without mortar so that there is no drying-out period. Their surface is so smooth that they can be papered or painted direct without rendering. And they make electrical installations simple—because you can screw, nail, bore, grout or saw Durox as easily as wood. With ordinary tools. Durox wall units are storey-high, 1'6" wide and from 3" to 9" thick. They are all reinforced—standard reinforcement for non-load-bearing panels and designed according to specific requirements for load-bearing.

DUROX

Durox Aerated Concrete is distributed through the various depots of Hall & Co. Ltd., Croydon. Details, specifications and performance figures from Durox Building Units Ltd., Chantry House, Eccleston Street, London, S.W.1. Telephone: Sloane 7122.

Magister ex Machina

FROM A CORRESPONDENT

GONE are the days when the art of school-teaching depended on the teacher's prowess with chalk and talk. There is now a wealth of mechanical, visual and aural aids on the market for any school or local education authority which cares and can afford to buy them. Well-handled teaching aids can stimulate learning, turning the good teacher into a first-class one and improving the standard of the mediocre. The epidiascope, wireless, television set and tape recorder are commonplace in many schools, notably those run by LEAs. The independent schools still attach rather less weight to such aids, perhaps out of conservatism, but more because their highly-qualified graduate staff have to follow rigid examination curricula which may not correspond to the BBC and ITV schools broadcasts. However, the BBC, with an eye on the acute shortage of graduate mathematicians, has introduced a series of experimental television programmes with direct teaching for sixth form specialists.

Apart from this latest innovation, most visual and aural aids are meant merely to assist the teacher. They are used by him, or in his presence, and have not been designed to replace him. But this summer the first British "teaching machine" has come on the market, rejoicing in the name of the "Grundytutor." The manufacturers, International Tutor Machines, claim that their machines could provide the answer to the shortage of teachers.

The Grundytutor is about the size and shape of a small television set, with a flat ground glass screen. Various subjects are recorded on standard 35 mm. microfilm. At the flick of a switch the screen lights up and a particular problem is explained and discussed. Then a question is asked and several answers are listed. One of these is selected by pressing one of ten buttons. The student is then told if his answer is correct; if so he receives more information and a further choice of answers; if not he is told why his answer is wrong and he presses the "return" button which gives him another opportunity to select the right answer from the original frame. The large number of available alternatives minimises guesswork, one of the usual snags of "multiple choice" questioning. The machine follows what is called the "intrinsic system," i.e., it will teach the same subject differently to students of different levels of intelligence. It gives the poorer pupils more explanation by means of "remedial subsequences," which are brought into play when answers are incorrectly selected. Brighter children are led directly to more advanced levels. The quality of the "teaching" obviously depends on the standard of the microfilm programme. The great advantage of the machine is that it takes account of the individual, each pupil learning at his optimum rate. A boon for any supervising teacher is the elimination of much marking by means of an "error-counter."

The concept of programmed learning was evolved in the United States and the machine is similar to American models already on sale in this country. The price, however, is approximately half that of its competitors. The cost of a single machine is £230; discounts of up to 20 per cent are given according to the numbers bought; machines may also be hired. Nonetheless, the cost of a class full of 30 such machines could be a formidable £5,520 with the 20 per cent discount.

Each machine is infinitely adaptable. All subjects ranging from algebra to zoology can be programmed. It can teach at every level from primary schools to universities; all that is required is that the pupil should be able to read.

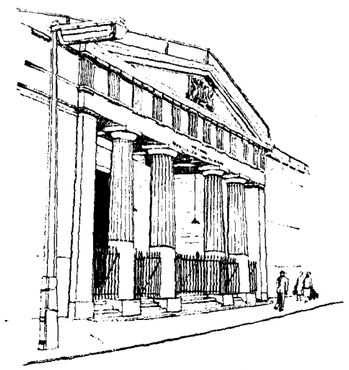
British interest in teaching machines is quickening. The Ministry of Education has recently given a three-year grant to examine the value of machines in the teaching of mathematics. A new department at Sheffield university is now doing research into programmed learning. Enfield college of technology has bought 10 machines for research. Bulk orders for the Grundytutor have been received from LEAs as well as orders for small quantities for trial periods. It is significant that the most vigorous and expanding sector of education, the colleges of technology, has been quickest off the mark.

One of the Grundytutor's chief selling points is that its use can mean an economy in teachers who are in such short supply at the moment. (Shortage of places at training colleges caused 1,000 qualified girls to be turned away this year.) The machines could undoubtedly help in sixth forms where the pupils are keen to learn, in schools where there is a staff shortage and in small rural all-age schools where the teacher has several groups of children of different abilities and ages in one class. Even in a well-staffed school it could be of great use for senior pupils who wish to study subjects outside the normal school syllabus, or for children who have missed work by absence.

So far the teachers' reaction has been cautious but not unsympathetic. There has been no outcry that this incipient automation is the beginning of common room redundancy. After all, staff will be needed to mind the machines as well as the children. Though it is claimed that "the Grundytutor has no human failings" (certainly it never tires and can teach morning, afternoon and evening classes all through the week), it nevertheless lacks some human assets. It certainly cannot wield the cane on rebels in the "D" stream; it may be infinitely patient yet it cannot be sympathetic; though it may interest the pupil it will rarely inspire him or realise when he is getting tired.

The programme in a machine is certainly more interesting than its equivalent in book form, though its gimmick may soon pall. Initially the novelty of the machine will assist learning. (With television in the evening and a teaching machine in the daytime children may rapidly get tired of looking at boxes.) Used sensibly it can relieve the teacher of large classes of much drudgery and repetitive work and allow him to concentrate on individual pupils, and it may fill some gaps in sixth form staff and syllabuses. Like every machine, the Grundytutor is capable of development and refinement; one looks forward to the time when it will get a voice.

Hard Bargain in Exeter



WHEN that most prolific and diligent of town planners, Thomas Sharp, devised a new shape for the shattered city of Exeter after the late unpleasantness, he may have had some hope that at least the main theme of his grand design would be realised in the works ultimately carried through by the city council; and if that hope has not been wholly disappointed, it takes a nicely discriminating eye to distinguish the desired formal grace among the brash new-town brick, dingy Victorian stucco and genuinely delightful mediaeval and Georgian jumble of what could have been a lovely city on the Exe. City councils are less often inspired by idealism than by practical compromise, and the new portion of the town centre is a mess, a grave decline from the tremendous solidity of the mediaeval and the delicacy of the Georgian, and hardly an improvement on the Victorian.

Perhaps it is this air of bathos which has inspired in many Exeter people a passionate attachment to the prime example of Victoriana there, the Higher Market, due for early demolition in the interests of the development of the block of near-derelict old building in which it stands: champions of truth and beauty have sprung to the side of pure commercial interests in defence of this monstrous neo-classical façade and squalid arcade which, from a distance—supposing the intervening blocks of building (which include the university) were razed—might look like the Parthenon. Much strength has been invoked on the preservers' side: a petition which failed to soften the city council's heart carried 9,000 signatures; nevertheless the market closed for the last time (for the second time in its history) at the end of September.

The Higher Market developed out of the old pannier market, and was built in the Greek style in the early years of the last century. By the beginning of this century it had developed into a collection of shops under a roof, and so remained until the twenties, when part of it was carved out to make a civic hall. The remaining shops carried on, paying a low rent for what were, perhaps, not bad premises. When a new civic hall was planned, in 1935, the Exeter Corporation Act empowered the city to demolish the market and the surrounding land and building it had acquired, and this was almost accomplished: in 1938 the traders were transferred to the modernised Lower Market, a quarter-mile away, without much fuss.

The war stopped plans for demolition—fortunately, as it turned out, because in 1942 the Lower Market was burnt out and the traders had to be transferred back to the Higher Market as an emergency shopping centre. After the war the traders, joined by several small branches of great multiple stores, continued to enjoy the low rent and rates of the Higher Market, not minding that it was grey, dirty, an anomaly in the centre of a crowded city and a thorn in the flesh of the city council, who were rebuilding the Lower Market after their fashion. On its completion this year, the traders were given notice to quit the Higher Market and to rent their stalls (at a considerably increased rate) in the Lower Market. They complained: the Lower Market was too small, too expensive, too out of the way, bad all round (which last judgment would probably be echoed by most critics). The Civic Society joined battle: the Higher Market was a splendid heritage, useful, delightful to see and a unique example of neo-classical fake. Power was lent to these thrusts by the inability of the new market to accommodate eight of the traders who had enjoyed the facilities of the old one.

Once the move had been accomplished, it might have been expected that the row would die down. It has not: indeed, it has become one of the sharpest and bitterest controversies in the south west. Delaying actions have been instituted and overcome. The Conservative-dominated council has found its Liberal members taking the delayers' side, and there is a strong whiff in the bland Devon air of the fuses burning down to the next explosive—this time the contention of the preservers that the Higher Market is protected by a Royal Charter, and can be closed only by act of Parliament. To this the council has not replied, resting its case on its own parliamentary activities of 1935, and maintaining strict silence in the presence of strangers together with a security check on other sources of solid information about the controversy that would do credit to the Admiralty.

This mystifying tendency to sealed lips, or bluster, at mention of the affair is, possibly, assumed in the hope that it will eventually be forgotten by the most committed of the council's opponents. Its effect is to stir in the mind of the dispassionate questioner the suspicion that something is being hidden—a suspicion no doubt unfounded—and to make him examine more carefully the testimony of the common Exonian in the letters column of the local paper. Alas, there is nothing there: his first impression was the right one, confirmed by every subsequent look at the Higher Market's façade. It is an eyesore; it ought to come down, and its neighbouring dilapidations with it; it is a pity the new market is no better an example of Britain in the sixties than it is, but it cannot fail to be better than the old one. Now it can only be hoped that the new civic development which will replace the Higher Market will fill some of the capacious room for improvement left by the phantom ugliness of what rebuilding has already covered the scars of war.

Last of the Halls

FROM A THEATRICAL CORRESPONDENT

APART from the Leeds City Varieties, music hall in England is dead, and even at Leeds, straight music hall is confined to television broadcasts; for weekly stage consumption it has to be laced with a couple of nudes. But in five Scottish towns as many fullblooded, rorty music halls are still going strong, just as if Archie Rice had never keened variety's wake. Moreover, these are inland towns. On the Scottish coast there are summer shows at such tiny places as Girvan, North Berwick, and Montrose—while Southport, one of England's major resorts, did not have a single live show this summer.

There are two sorts of theatre in Scotland, the English theatre and the Scottish. The English theatre is represented by Scottish bridgeheads of the two major English circuits, Moss Empires and Howard and Wyndham. After its returns dwindled and dwindled, Moss finally sold their Edinburgh Empire to Mecca, who plan a future for it of bingo and horsey-horsey. Their other Empire at Glasgow started to become a problem, wrinkling up its nose at stock English variety stars, and even reacting violently to attempts to feed it with nudes and pop singers. This summer, business rocketed back with a tartan show headed by Andy Stewart, the little Scots comic, who, like

The brave new world of Borgo a Mozzano

You saw the name first on a small painted sign just off the main road. But to visit the hamlets and farms which make up the commune of Borgo a Mozzano, you left the main road to drive along narrower ones, which finally petered out into mule tracks. Somewhere along these roads the twentieth century also petered out. And, staring down into a valley dotted with a thousand tiny farms, you looked upon a way of life that had been unchanged for centuries.

How do you change a way of life?

For Borgo a Mozzano in the hills of Tuscany was typical of farming communities in many parts of the world. Cut off from modern techniques by lack of roads and their own attitude to change, the people lived at subsistence level—expecting little from the land, obtaining even less. Their standards of living remained low.

Shell Italiana decided to experiment by sending an agronomist into Borgo a Mozzano—a young man chosen as much for his patient, approachable manner as for his agricultural knowledge.

His task was a difficult one; he would study the farmers and their methods to see whether his knowledge could help them; then came the much harder job of persuading them that the new techniques were better and economically possible.

Ask the 'dottore'

It was a long job, and the first changes were small. The young man persuaded them to grow hybrid maize which gave them a fourfold yield increase; advised them on the treatment of their olive trees, and the fermentation of their wine. After these successes, the villagers named him 'the doctor' and brought their problems to him.

Borgo a Mozzano was the prototype; today, young agronomists are granted scholarships to study there. They drive along the roads the villagers have built from mule tracks, inspect the new crops, and taste the wine.

And the people? They are proud of themselves as they pose grandly for 'the doctor' and his camera. It was *they* who made the decisions, stood the costs and achieved the results—for the 'dottore' was wise enough only to *suggest* what could be done.

Now farming communities all over the world are learning from Borgo a Mozzano. And Shell have proved their point; that the best way to help a community is to give it the faith and knowledge to help itself.

YOU CAN BE SURE OF SHELL

Harry Lauder before him, has sung rather than clowned his way into Scottish hearts at home and in exile.

Unfortunately, "A Scottish Soldier" seems to have fought too late to save the Glasgow Empire from the property developers. No doubt, when the Empire closes, some other theatre in the city will be glad to grab Stewart, perhaps the Alhambra. For Scottish variety has been a splendid aid to Howard and Wyndham, who own the major straight theatres in Edinburgh and Glasgow. Both the Glasgow Alhambra and the Edinburgh Kings play expensive and popular Scottish pantomimes for three or four months, and then spectacular shows called "Five Past Eight" throughout the summer. This relieves the bookers for most of the year of the necessity of finding attractions that will not offend the social taboos of Scottish playgoers. You can't be too careful if you're an upper middle class Scottish theatregoer; it's fine enough laughing at Jack Milroy now he's a star at the Edinburgh Kings, but it would never do to admit seeing him, much less laughing at him, seven years before at the Edinburgh Palladium.

Edinburgh Palladium, Dundee Palace, Glasgow Pavilion and Aberdeen Tivoli are all defiantly working-class theatres. Their packed, smoky auditoriums are cheerful anachronisms from the time of Collins', Islington, and Attercliffe Palace. And they show no sign of dying. Ayr Gaiety did, indeed, burn down a few years ago, but it was promptly and expensively rebuilt, at a time when most English music-hall proprietors would have given anything for their bricks and mortar conveniently to catch alight.

The Glasgow Metropole, which gave Howard and Wyndham Jimmy Logan, but hung on to the rest of his large family, was also recently burnt. It did not prove possible to rebuild it, but Mr Alex Frutin, the proprietor, promptly bought the Empress, another variety theatre which had just been involved in a surprising, expensive and wholly abortive attempt to establish an arts centre. Mr Frutin has modernised the building, rechristened it the New Metropole, and opens it this autumn with a show headed by Gracie Clarke, a sort of Glaswegian Hylda Baker. Imagine the London headlines if somebody reopened the Camberwell Palace.

All the shows on this circuit are built round comedy stars who would be unintelligible south of Carlisle: Clarke and Murray, Lex Maclean, Dave Willis, Johnny Victory, Alec Finlay, Johnny Beattie. The north of England and London have also thrown up their comedy stars of strong local appeal, but neither Frank Randle nor Frank E. Franks could save the northern halls, and the Met., Edgware Road, is silent in spite of Max Miller. In these Scottish theatres, English artists are accepted in the supporting cast mainly as instrumentalists of specialities, but on the rare occasions when an English touring revue has essayed a week on its own, it has died, swiftly and surely, on its feet.

Touring weeks are rare, because the Scottish shows stay eight or ten weeks, with a change of programme weekly, which saves the management on fares, cartage, and printing, but runs the artists hard on material. This type of resident revue hardly existed in England, apart from the last days of strip, when Pauline Penny reigned at Birmingham's Aston Hippodrome and the theatre was retitled "La Maison de Striptease." Mr Andrew Foley, manager of Aberdeen's Tivoli, which has mid-Victorian cherubs painted on its domed ceiling, says that one reason his theatre has survived is because it has never played a nude.

The management's saving of travelling costs is more than outweighed by their large companies and the heavy production expenditure. When "Grin And Bare It" and "Taking Off Tonight" were doing their last rounds, putting up the shutters at Halifax and Wigan, their casts were often only eleven including chorus, and they played against drapes that would pack into two baskets on Saturday night. The Scottish shows have casts of twenty, and, if they want to take you to a Highland glen, they have a scenic artist to do it with cloths, cuts, and wings, and they seldom think twice about throwing in a waterfall and a troop of pipers.

SCOTTISH producers cannot resist tartans, and it is the producers who have saved these theatres. The English No. 2 revue was thrown together by the principal comic and the manager in a week's sketchy rehearsals, and it then toured for a year. The Scottish resident shows, unsophisticated though they may be, at least show the ever-present touch of a producer's hand. The artists are rehearsing every day under direction. They also learn versatility. The rock'n'roll groups have to speak lines in the sketches, and have learned how to move in ensembles. Sometimes they have even learned how to sing.

The audiences range from apprentices, to whom the vocal groups are a concession, to middle-aged working folk with their wives, and it is to them that the comedy is angled. The sketches are a saga of Scots working-class domestic comedy, a sort of Glasgow Andy Capp, etched with a dry wit that contrasts sharply with the unashamedly sentimental patriotism of production scenes entitled "Hail Caledonia" or "The Star Of Rabbie Burns." Johnny Victory, whose father was Harry Lauder's chauffeur and who has recently bought Lauder's Rolls-Royce, is not ashamed to finish his own spot speaking sentimental monologues with homely moralising, backed by the orchestra.

MUSICALLY, when the shows are not "Whae-haeing," they are American —about the period of Gershwin. In four out of five productions this summer, your correspondent saw vocalists finish their acts with "Sonny Boy." Both musically and choreographically they owe a lot to the American musical films of the thirties, as though the producers had soaked up their ideas sitting through endless prewar, unemployed matinees in the cheaper Gorbals cinemas.

Scotland is still probably more attuned to the thirties than the rest of Britain. The affluent society and its status symbols are not so much in evidence there, while rising unemployment figures are. This may be one reason why artists and audiences are obstinately locked together, perpetuating an old, individual, and perhaps even nationalistic, tradition of entertainment.

The middle-class straight theatre audience is equally set in its ways. Just as Mannofield and Morningside look askance at the Tivoli and the Palladium, they are equally confident that Aberdonian trawlermen will hesitate to set foot in Her Majesty's and Edinburgh keelies will keep out of the Lyceum. The middle class is not anxious to find the working classes sitting beside it; and on the stage it prefers a lounge hall in Sussex to the kitchen sink.

What with the Royal Court playwrights and these new actors, who won't wear ties, from Salford, it is becoming increasingly difficult to find plays for non-festival Edinburgh. Even Agatha Christie is too much every week. So it may be as well that the Lyceum, the city's principal play theatre, has been sold by Howard and Wyndham and is to come down. Even if it survived, it would be no use Mr Arnold Wesker looking there for his vital new working-class audience. The Scottish working classes know their place—round the corner at the Palladium. Wesker against tartan blackcloths twice-nightly—there's a thought for Centre 42.

Super-Powers

SIR—The first three articles in your issue of October 20th show such excellent judgment that it comes as something of a shock later to read the review of two books on nuclear armaments and the letter on Cuba from an Englishman in New York who appears "more American than the Americans." Both of them, though on widely different subjects, reflect the super-power bias which vitiates so much contemporary writing on international affairs by western authors. Your reviewer shows extraordinary misjudgment in asserting that:

> To make peace reasonably stable it is necessary for the nuclear super-powers to work towards a mutual understanding . . . to use their unrivalled strength to keep the rest of the world in order.

This sort of illusion comes partly from an undue specialisation on "strategic studies," which, in the main, assume that armed power is the only form of power that exists, and partly from lack of direct and prolonged experience of the worlds of Asia, Africa, and Latin America, the emergence of which to international political consciousness is the outstanding development of our time. Your reviewer's and Mr Strachey's proposals for a new Holy—or some would say Unholy—Alliance to maintain the *status quo* would clash head on with the immensely powerful demand of the emerging and reawakening peoples for the same degree of political independence as the western peoples claim, and would substitute for the old "cold war" a new cold war between the two superpowers, with such satellites as they could intimidate, and the rest of the world. This is not the road to world peace. Events in the few days since October 20th confirm that it is the super-powers and not the smaller powers that must be "kept in order" if world peace is to be preserved. This country's interests lie in strengthening its links with Europe and the emerging and reawakening countries, while loosening without severing its links with the United States. International peace will never be achieved by setting up an international aristocracy, particularly when it consists of the two most imperialistic powers in the world.—Yours faithfully, E. F. PENROSE
London, SW1

Cuba

SIR—When you suggest that a Cuban defeat for Khrushchev must entail his insistence on victory elsewhere, I believe you distort Soviet reality. Surely the Soviet leader will insist only if you and enough others tell him that he has a sort of right openly to win a piece on the chessboard in exchange for the one he nearly sneaked down his sleeve?

The trouble about so much European (but fortunately less American) analysis of Soviet behaviour is that it is forever attributing to *homo sovieticus* the qualities of *homo occidentalis*, the latter dated somewhere around 1912. Thus Khrushchev and his colleagues can be humiliated, lose their self-respect and suffer other outraged feelings. This, of course, is what the Russians, who have always been excellent spies and diplomats, would have us believe. To this end they contrive little "leaks" such as Khrushchev's remark to his recent Belgian interviewer which you quote: "We cannot give ground to force, for that would be a confession of weakness." But the Soviet leader's climb-down Note to Kennedy on Cuba is itself evidence of a total inconsistency and opportunism, with its smarmy acknowledgments of the American case and "dumping" of his whole Cuban policy.

It is certainly true that the Soviet Union has its own vital interests, of which one is the maintenance of its key European ally, the east German republic. But let us not assume that, in Soviet eyes, this can *only* be served by the takeover of Berlin. Nor must we allow ourselves to be talked (for instance by the unaligned countries who very naturally dislike the prospect of extermination without representation) into withdrawing from Berlin on the ground that the Russians now deserve a good turn for having behaved so well. To do this in Europe would be to waste President Kennedy's magnificent week.

Connected, moreover, with the "prestige-theory" of Soviet international relations is the strange Anglo-English belief that Khrushchev must be *preserved* as the "best Soviet Prime Minister we've got." He is nothing of the kind, for the reason that there is no such thing. After last week it would be very nice indeed if he fell and if the Party again went into flux. Stability is what we want at this stage of the cold war, but political diarrhoea should be our objective within the Soviet Union.—Yours faithfully, CHARLES JANSON
London, SW3

Planning for Traffic

SIR—"How is the traffic flow to be related to (road) capacity?" you ask in your thoughtful article of October 20th. Road space is a scarce resource and the obvious answer of an economist to your question is that an effort should be made to relate flow to capacity by making a charge for the use of congested road space. A number of charging methods have been proposed in addition to those requiring electronic apparatus; these include differential fuel taxes, meters on vehicles and licences to enter congested areas. Each of the methods proposed so far has advantages and disadvantages, and it is impossible without detailed technical investigation to determine which method—if any—would be appropriate in any particular situation.

You suggest that a satisfactory answer might be found in charging for parking. There is obviously a strong case for raising parking charges (both on and off the street) to the point at which the full costs—including rental costs—are paid for by the users. But in really congested areas these measures would not in themselves bring traffic flow into balance with road capacity, because under congested conditions vehicles are not charged enough for the use of road space (they pay their own costs but not the costs imposed by their presence on the rest of the traffic). The logic of your proposals would require vehicles to pay a tax on parking, i.e. to pay *more* than the costs of providing parking facilities. Such a tax would favour through traffic at the expense of stopping traffic and would also be very unjust to those who park but cause no congestion —residents who use their cars only at night, for example. In the context of the road-rail problem, any policy of encouraging through traffic at the expense of local traffic would be undesirable, to say the least. If your proposals were applied in London, traffic to the docks (for example) would receive additional encouragement to go by lorry rather than by rail.

The fundamental weakness in the proposal to control traffic flow by restricting parking facilities is in the assumption that the amount of parking space in a city can determine the traffic flow on its roads. Not all vehicles using city roads also park in the city, and success in forcing some vehicles off the road system by parking restrictions would *in itself* make the area more attractive to through traffic.

If you wish to restrict the consumption of whisky you should tax whisky. A tax on whisky glasses might deter the fastidious but would merely drive others straight to the bottle.—Yours faithfully, G. J. ROTH
University of Cambridge

Distributive Variables

SIR—Your handsome review (September 29th) of the book "Distribution in Great Britain and North America" by Margaret Hall, John Knapp and myself, raised a point of wide technical interest, and I would like to carry the discussion further.

In the book we studied the patterns of variation of several variables important in distribution in different parts of the United States, Canada and Great Britain, such as size of shop. We attempted to relate these variables to the environment in which the distributive system has to operate in each region, at least so far as this environment can be expressed by such quantities as income per head and rate of growth of population. Your reviewer states that there is an obvious case for multiple regression (the "normal" method) and criticises us for relegating "this powerful instrument" to an appendix. Instead our main analysis relied on three-dimensional models, and we have taken

much trouble in trying to represent these effectively in the book.

In practice many people working on industrial or economic problems, have become dissatisfied with simple equation fitting (which your reviewer has in mind when he refers to multiple regression) as the sole method of analysing or presenting data. For one thing, towns or regions cannot necessarily be described adequately by two or three variables. The investigator must have a way of keeping note of the behaviour of individual regions, so that he can check from his general knowledge of such regions that the variation explained by one set of variables could not equally well be explained by others.

Nor is the description of trends always simple. We cannot assume all trends are straight lines or planes: many in the data we analysed could not be. But what functional form should then be fitted? How confident should we be that some simple algebraic function fits the whole range of the data? This point was especially important in our analysis, since conditions in Britain only partly overlap with those in North America, so that the comparison might be very sensitive to the type of equation fitted.

The method we used, which presents the data in a comprehensive yet analytic way, allows the reader to take account of these difficulties, where the equation fitting approach, in its present stage of development, tends to conceal them. There are times when the simple approach is the more scientific one. I urge your reviewer to try out both methods next time he carries out this type of investigation—I think he will gain much more insight into his subject than by using only the methods he advocates.—Yours faithfully, CHRISTOPHER WINSTEN

Imperial College,
London, SW7

Common Market

SIR—Mr Stanley Steward, in replying last week to my letter expressing scepticism about large-scale economies in the common market, says that at any rate Britain stands to gain "clearly" in the "newer and growing sectors of the electrical industry," particularly "domestic appliances and electronic equipment which rely on quantity production. . . ."

I would not profess to know more about Mr Steward's own industry than he does. But "The Times Review of Industry" for August says this: "The electronics industry differs from most others in that knowledge and production capabilities can be the same for the small man as the big; they depend on skills and do not always demand expensive plant or a large volume of raw and finished materials. . . . Contrary to general economic tendencies, whereby as an industry progresses, it tends to concentrate into larger and larger units, the electronics business (where mergers and take-overs are just as common as anywhere else) still seems to have more firms in it every year."

In both the US and UK there are a large number of small but successful electronic firms. Serious doubt thus exists even about this small relic of the argument from economies of scale which *The Economist* advances as the main economic case for the UK joining the EEC. So far from being "clear," this whole argument is at best very uncertain and debatable. It comes nowhere near to being sufficiently firm or clear to support sweeping conclusions about the whole political and economic future of the UK and Commonwealth.—Yours faithfully,

DOUGLAS JAY

House of Commons, SW1

Gurkhas

SIR—Your cautionary note last week on the proposal to reduce the Gurkha infantry in the British Army rightly stresses the military value of this outstanding arm. Top quality "in-fighting" infantry are exceedingly difficult to find and to train. The Gurkha is born into this tradition. If any reduction is to be made in our Gurkha contingent, it should be in the other arms and services. These, if returned to their country will readily find employment, particularly the sappers and MT drivers, and will be of value in its development.

There is another factor, a pressing one at this time. In 1947, when in India, I wrote regarding the probable Chinese attack on India's north-east frontier after we had left: "Disgruntled, frustrated by India and deserted by Britain, a confused Nepal can produce for India a frontier problem . . . which in times of war would lead to the collapse of India, and her division between Communist China and Russia. . . . India has a few years to spare but only a few" to prepare her frontier defence. Our Gurkha contingent is the symbol of our link with Nepal, and of the sympathy by which we can influence her attitude. Monarchic or democratic, this is no time to incur her resentment by sending disbanded infantry back to her to kick their heels in the mountain villages where live the most stable element in her country.—Yours faithfully,

Falmouth, Cornwall F. S. TUKER

Southern Rhodesia

SIR—Your correspondent (*The Economist* October 6th) refers to "people whose only experience of Sir Edgar's festival is a not so mock battle with their white partners turning the 25-pounders on them." Perhaps he will reveal the occasion on which artillery fire has been directed against Africans in Southern Rhodesia—or perhaps he will admit that he has been guilty of a deliberate and malicious attempt to create a totally false impression.—Yours faithfully,

NORREYS DAVIS

Kitwe, Northern Rhodesia

[There is no suggestion that these unsuitable weapons have been used. Our correspondent was being metaphorical, not malicious; we much regret the misleading impression given to some readers.]

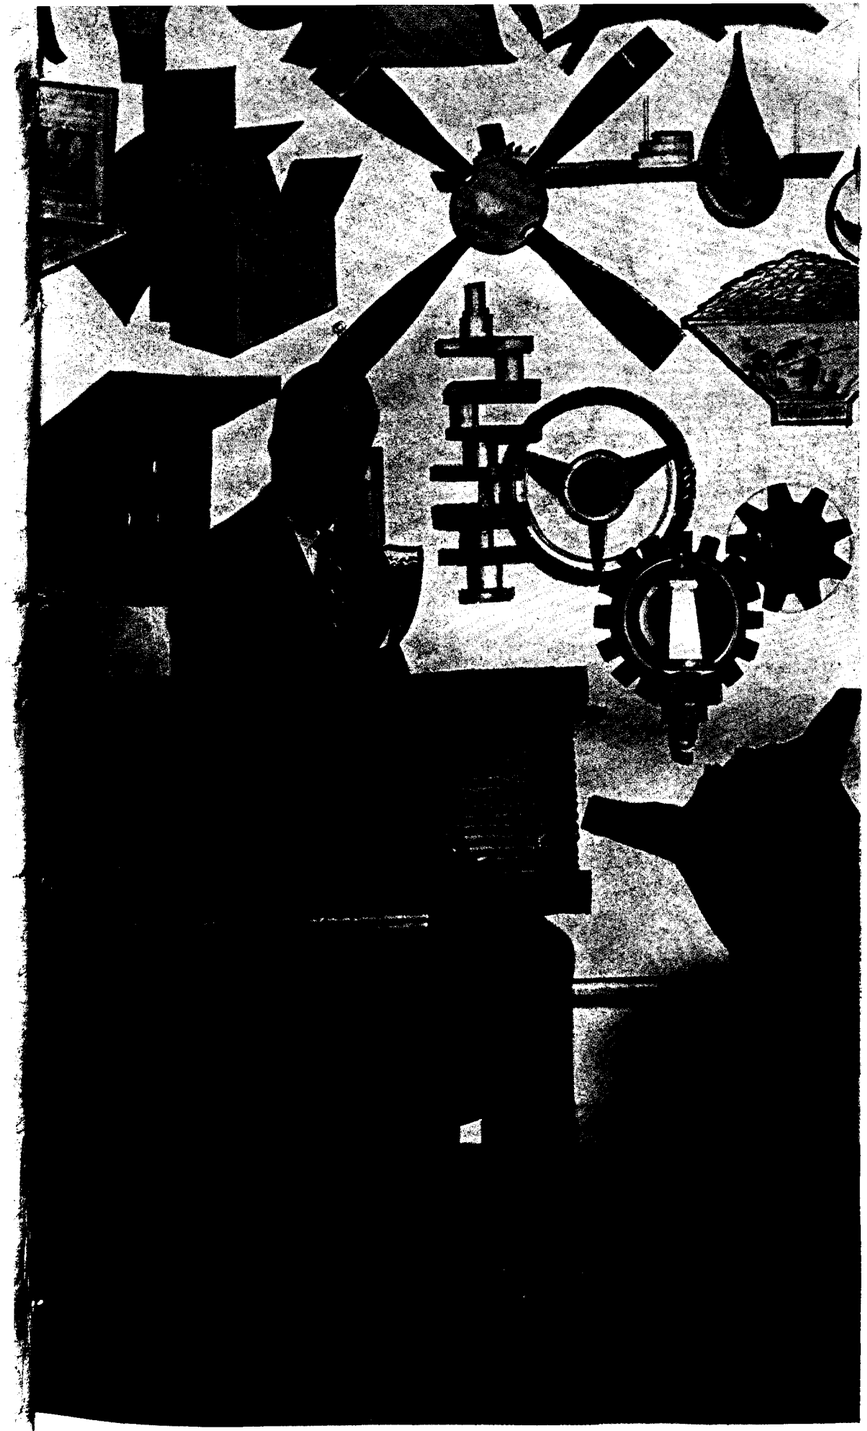
University Expansion

SIR—You state in your Notes of the Week of October 6th that those of us who are affronted by the current makeshift suggestions for university expansion have not grasped what a crash programme for higher education means. Many of us in the universities are less impressed by the so-called programmes than we are disturbed by the prospect of the crash that will inevitably follow if they are implemented.

For the last decade and a half the universities of this country have already been living through a period of chronic expansion, in which the much publicised academic calm and seclusion have become things of the past. To the continued accompaniment of building noises off, increasing numbers of students have had to be taught, often in over-crowded lecture rooms and laboratories, while immense demands have been made on the time of academic staff in preparing detailed plans for further expansion which they are then compelled to scrap and replace because the hoped-for funds are not available. Now, after we have grown weary of warning those concerned of the impending crisis, and dispirited by the endless postponement of our carefully laid plans both for teaching and research, we have the crowning frustration of being told that it is high time we gave up our non-existent leisure and worked as hard as other men do, to educate the unfortunate offspring of a generation to which many of ourselves also belong.

The statement that research and teaching go hand in hand has become a cliché, but it is none the less true on that account, and any further diminution of the time available for the former will result in a catastrophic decline in both. No doubt there is some dilettante research, but it represents a small if unavoidable price to pay for the freedom without which sound research cannot flourish, and the answer to poor research is not less research but more good research. Likewise there are some lecture rooms which are never full, but these are rarely in the subjects for which the demand is greatest, and I can hardly believe that *The Economist* is advocating either the direction of students into subjects which they do not wish to study, or the closing down as uneconomic of the few but academically no less valuable departments which still have vacant places. The critical problem in further expansion is shortage not of lecture rooms but of staff, and any gains which might conceivably be made by forcing two shifts of students through alternative halves of an extended academic year would be more than offset by the exodus of staff, who simply could not continue to do proper university work if they were to be immediately bundled out of their departments every time the end of term whistle had blown.—Yours faithfully,

The University, Sheffield C. A. FISHER



If your business is Import-Export talk to the people at Chase Manhattan

The ins and outs of international trad are the special world of Senior Vice Presi dent Herbert P. Patterson, who has de voted the past thirteen years exclusively t the international side of banking.

During this time his many world-wid assignments have given him a broad an practical, on-the-scene understanding o the financing and servicing of imports an exports.

To businessmen in world trade Her Patterson's familiarity with commoditie and key people in commodity markets ca be extremely helpful. So, too, can Chas Manhattan's many overseas branches, rep resentatives and correspondents aroun the world.

Why not talk to the people at Chas Manhattan about your import-expor needs. Simply write to: International De partment, The Chase Manhattan Bank 1 Chase Manhattan Plaza, New York 15 or the Branch in the city nearest you.

On Penguin Island

How political an animal is the Penguin? An earnestly, trustingly, bemusedly radical one, by all the signs. The Penguin Special, that bright but in the past invariably undernourished-looking member of the flock, has now grown stouter, glossier and distinctly more numerous, befitting the comfortable suburban life of the Span flat and *Panorama* belt. Or so it seems. The most avidly awaited Penguin Special is certainly a decent sociological study of Penguin Books. From superficial observation the Penguin culture now appears essentially well found (despite the mortgage), anxiously in the swim (did not the Liberal revival begin with "Lady Chatterley"?), and still restless enough in all those open-plan living-spaces to exercise a sporadic social conscience. There must be a whole folklore yearning to be uncovered here. Perhaps it is the Penguin Special, tucked into the Twickenham-bound briefcase, which provides the last furtive link that the renegade Bruddersford grammar school lads retain with their working-class past on the other side of the nylon curtain. Perhaps there really were floating voters in Surbiton and Didsbury and Solihull who doggedly read through "The Conservative Case", "The Labour Case" and "The Liberal Case" before going to the polls in 1959. (Query: Will Penguins invite Mr Roy Jenkins to write "The Labour Case" again?) Perhaps this is really Penguin Island that we live in after all.

But if it is Penguin Island it is all the more important that we should be alert to what the Emperor Penguins are trying to tell us. When they start a series (as they have just done) on "Britain in the Sixties" it may well be that their idea of Britain is not ours. There is no harm at all in that; just as there is no harm in, say, Mr Eric Wigham writing a separate Penguin Special called "What's Wrong with the Unions?" that may not wholly coincide with Mr Frank Cousins's opinions, or Mr Edward Behr writing another on the Algerian war that many Frenchmen would still get very angry about. But a series, any series, invites questions (as even the Oxford History of Modern Europe discovered) about its purpose, about the way it tackles the issues, about the effect that is meant to be created, even about the seriousness with which it is intended to be taken at all. Emperor Penguins are such amiable birds that they will not take this amiss. For the first four books of "Britain in the Sixties" are a peculiarly opinionated bunch.

Thus Mr Raymond Williams on "Communications" is very properly aware of the danger inherent in monopoly control of the mass media; he warns us against the influence of advertising; he gives as lucid an explanation of why the *News Chronicle* folded as any witness before the Shawcross Commission. He is also a born controller, a super-Pilkingtonian, a believer in the rule of committees as the best answer to every harsh fact. All this is well-intentioned; in some quarters it is a highly fashionable expression of opinion; but as an indication of "the lines along which reforms are required" (as the Emperor Penguins put it) this is rather less than half of the argument. It was entirely predictable that a commentator of Mr Williams's intellectual persuasion should reach such conclusions. The question is whether this is quite the best way to present the issues of the 1960s in a professedly popular form. Is the series an educative or a political one? If Mr Gollancz were the publisher the dialectics might be more acceptable, simply because they would be less covert.

Or read Mr Ronald Fletcher on "The Family and Marriage." This is a very sprightly taking-to-task of the fuddy-duddies (religious and high Tory) who blame current criminality and what is to fuddy-duddies immorality on the decline of family standards. Mr Fletcher invites all good Hammond men and true to consider what could possibly be the standards of rural and industrialised working-class families of the early nineteenth century. It is a familiar left-wing, and in its context a valid, argument. But it is certainly not the whole story: the conventional morality of British life today is not simply an unwanted hangover from the Victorian

bourgeoisie. But then Mr Fletcher is not a "committed Christian," and he has, in fact, precious little time for Christian (or Jewish) ideas of marriage and morality. One doubts, however, whether every Penguin sociologist, however uncommitted religiously, would so lightly dismiss the impact of these ideas on our present society. Given Mr Fletcher's approach it may be logical for him to support the view that

> petitions for divorce should be clearly distinguished, and differently treated, in accordance with whether or not the marriage is childless. If there are no children to a marriage, there seems no reason why divorce should not be by mutual consent . . . But when there are children to the marriage, the parents are responsible for the fulfilment of duties to their children whatever may have happened to their own personal relationship, and it is arguable that divorce here should be made very difficult indeed.

This is perilously close to allowing the state of marriage to become, in itself, a light obligation, increasingly lightly entered into. One assumes, of course, a continuing desire among the majority of couples to secure some official recognition that they have in fact embarked on a marital relationship; but for Mr Fletcher's judges it will be biological chance (more than intention) that really ties the knot. On this criterion it is not too difficult to foresee a state of affairs in which easier divorce, for the children's sake, would be socially preferable to Mr Fletcher's slamming of the prison doors. Are Penguin Island marriages to be merely a few words to see people over the weekend?

Life on the island is clearly a matter of enthusiasms. Mr John Vaizey's "Education for Tomorrow" (reviewed in *The Economist* of May 12, 1962) is the work of a convinced and highly knowledgeable expansionist, who is content to present his case here with the blunt strokes of the propagandist. Although one can readily agree with Mr Vaizey in desiring a greater proportion of the national income to be devoted to education, is writing at a propaganda level the real purpose of the exercise? Penguin Specials outside the series still manage to avoid it.

Mr Stanley Alderson's "Housing" is in many ways the most acute and enthusiastically radical of the four. He wants, as his own peroration puts it,

> to abolish subsidised rents; abolish rent control; restore Schedule A to its full value; introduce a complicated new system of housing allowances; impose regional authorities on the local authorities; deprofessionalise the architects; professionalise the estate agents; and nationalise the building societies.

It is a mixed, if occasionally promising, field. The most dubious horse in the ring is, naturally, the "complicated new system of housing allowances." Although Mr Alderson's preference is to push the Labour party into this particular saddle, his plan is almost visibly non-political since no party could be persuaded to implement it. But it is put forward for what it is: a way to get rid of anomalies, to encourage much more building for rent and to underwrite the renovation of the Victorian cities by disholder (or at least to "every householder earning below a certain income") to the tune of £3,000 each—with incentives for stepping up the householder's contribution as well. It is pre-eminently a book to start discussion. Mr Alderson is candid enough to admit that he would rather people voted on other issues than his housing plan. They very probably will.

One does not know how the series will be continued, how many other portfolios will be revealed and who the next Penguin Ministers will be. Could there conceivably be a Leader of the Opposition as well (or is that left to reviewers?), or a Treasury spokesman, or an advocate for economic union with Pelicanland? (Mr Jenkins might oblige there.) As of now the island is simply full of noises, some of them pretty rum ones.

For Sea Passengers Only

Three-Dimensioned Darkness

By L. Lee.

Allen and Unwin. 157 pages. 25s.

Do not be deceived by Captain Lee's poker-faced tour round the flight deck into thinking this is just another account of My Life As A Pilot. It is a quite devastating book not recommended for nervous air passengers, with a scorpion's sting that could easily be missed by quick, too casual reading. Watch an airline captain pad down the cabin with a facile smile and wary eyes and then read what his job involves, in terms of technical skill, physical strain, pay, mental worry about early retirement, and vulnerability to others' incompetence (and his own). And then understand, possibly for the first time, why air accidents happen—on take-off, on landing, en route into a mountain. Captain Lee has had long, lonely hours to ponder these things; his thoughts have been distilled to such a point of dryness that the first impression, like the first sip of a Martini, is flat—until the reaction sets in.

It is not often that the technician's view of aviation gets heard, be he crew member, engineer or air traffic controller; indeed Captain Lee says bluntly that because air traffic controllers are civil servants censorship is exercised in this country on any serious discussion of a good many vital questions affecting the lives of those who fly. The points he makes are valid, serious and deserve, if not an answer, then at least close reading by those who plan aviation policy and run airlines. It is a pity, therefore, that he should have omitted one important subject, the handling qualities of modern airliners. Perhaps this would have been stretching the tolerance of his employers, British Overseas Airways Corporation, too far. Unlike at least one pilot who landed at the wrong airport, Captain Lee is probably not yet in the market for a farm. But a few more books of this kind, showing

Ireland's Two Nations

Brendan Behan's Island

West Briton

By Brian Inglis.

Faber. 223 pages. 25s.

The Northern Ireland Problem

By Denis P. Barritt and Charles F. Carter.

Oxford University Press. 170 pages. 25s.

For sheer literary productivity there is nobody to beat the Irish. Of course they are very interesting people who inhabit a very interesting country; and they have no tiresome doubts on this score. It is fair to add that the rest of us agree with them. Books by Irishmen about Ireland are among the staples of English publishers. Mr Behan's volume, in fact, gives somewhat the impression of being a publisher's creation. There are ample jolly songs to fill a page or two, some of them original Behan and others traditional bar-room stuff; there are what would appear to be tape-recorded descriptions of various towns in Ireland (or rather of bars in various towns in Ireland); there is one exquisite short story, "The Confirmation Suit." And there are pages of spare drawings by Mr Paul Hogarth that by themselves (although the photographic reproduction does not entirely do justice to the originals) make this a remarkable 25-shilling Christmas present.

Mr Behan, of course, has his profitable Irish vein which sells well in Britain. The Irish middle classes, he says: "will say, as they have said of me, that I write to please English audiences—when they'd stand on their hands to please any English audience themselves." But Mr Behan is far more than a mere ham. On Irish politics, he has some penetratingly left-wing things to say. For him, the "tweedy frugalities of Eamon de Valera" won Irish freedom only to subject the country to a greater bondage.

The national revolution in Ireland was accompanied by no political revolution: Mr Behan's heart-cry is: "If only Jim Larkin [the labour leader] had learnt Irish—or Collins [the political liberator] had studied Leninism!" Whether in Northern Ireland or in the Republic: "they could swap governments and nobody would notice the change—none of the workers would, at any rate." Within this frame of reference Mr Behan is understandably impatient with the religious feuding that has so effectively split down the middle any chance of creating in either of the two Irelands a proletarian political mass movement such as the Labour party used to be in Britain. A member by origin of the working class of Dublin, he fails to recognise that in a peasant society the urban working class is a minority just about as small as that which he castigates as the Anglo-Irish Horse-Protestants. Which is where Mr Inglis

Off the Falls Road, Belfast

managerial class left behind by the British in the Republic—that he sprang.

Mr Inglis's origins, along the bay from Dublin in the respectable golfing suburb of Malahide, lay as far from those of most Irishmen as do those of the average Nairobi businessman's son from a Kenyan African: the Paddies and Bridies with whom he came into contact were servants, by definition loyal, incompetent and "amusing". From this environment, under the benign influence of a job on the *Irish Times*, Mr Inglis escaped; in order to assert a new identity he plunged into politics, seeking a niche where he could be accepted as an individual Irishman and not as a member of a community all too often regarded as alien. But the niche never opened to receive him.

Socialism could not provide the place: faced with the opposition of the hierarchy "To have advocated nationalisation would have damned us irrevocably, but there was little incentive to do so, as there was little left to nationalise". Eventually Mr Inglis came to recognise his place as an inside outsider: "what the Irish needed was . . . sharp reminders that countries, like individuals, cannot continue to live indefinitely in the past". This task, finally, became too much. For lack of a cause, and for a monthly cheque, Fleet Street's gain was Ireland's loss. But it is not a melancholy book: Mr Inglis knows how to place his characters. His fear about the talented Mr Behan was that "he would succumb to the occupational disease of his kind in Dublin—gregariousness".

After these two passionately involved southern Irishmen it is something of a jolt to come up against two non-Irish Quakers looking compassionately from outside at Ulster. But their choice of title itself proves, if proof were needed, that they are discussing the same country. For any other

be trouble enough ; but the problem here is quite different—and is probably regarded by most Ulstermen as the main one facing their province. Mr Barritt and Mr Carter were commissioned by the Irish Association to make a study of religious conflict in the six northern counties. This they have done with charity and diligence: everything from allegations of gerrymandering to the absurdities of discrimination in sport, is duly listed.

Their one fault, as befits Quakers—and, more justly, as befits men setting out to smooth out conflicts rather than to stir them up—is that they find a disinterested motive for everything. Mr Behan says that "in money matters there are very few Northerners who are off their heads". It is, indeed, in the cause of healthy economic self-interest that most progress is likely to be made towards doing away with the strange bigotry (on both sides) described by Mr Barritt and Mr Carter—and with the heritage of religio-social conflict described by Mr Inglis. Could the common market bring together what Christianity has put asunder?

James Finds Himself

Henry James: *The Conquest of London 1870-1883*

By Leon Edel.
Hart-Davis. 528 pages. 63s.

BETWEEN the publication in 1953 of "The Untried Years", the first volume of his biography of Henry James, and this second volume of a projected four, Leon Edel delivered a most interesting series of lectures at the University of Toronto, published as "Literary Biography" (*Hart-Davis,* 1957). These lectures not only expounded his thesis that anyone who writes the life of a writer should himself be literary critic as well as historian ; they revealed some of the peculiar difficulties confronting the biographer of Henry James, who so much disliked the idea of his private life being ransacked that he deliberately wove webs of mystification to perplex future investigators. The thousands of letters, preserved by his correspondents and read by Professor Edel, are often masterpieces of commentary, exquisitely phrased ; but they are the utterances of an exceptionally cautious man—one who never gave himself away except unconsciously or through the alchemy of his art. Nevertheless, the life of Henry James is copiously documented ; for his whole literary output—travel essays, criticism, fiction—is as essential to Leon Edel as the factual records and the letters by means of which his movements may be traced. He is an absolutely first-rate biographer, exemplifying in his practice all that his theories demand. He knows all the Jamesian material inside out, and has the critical imagination to relate actual experience to fictional reconstruction ; to recognise the transmutation of people met, places seen, episodes observed, into the fabric of the novels and stories.

Since Henry James knew no other lasting, driving passion than that of literary creativity, it is extremely valuable to be shown the interrelation of his inner and outer lives. The years recorded in this volume have great interest as a social chronicle. We see James in Paris, getting to know Turgenev ; in London, quickly establishing himself as a diner-out, theatre-goer, club-man ; revisiting Italy ; and all the time writing with tireless energy, determined to win fame and fortune too. But Professor Edel never loses sight of the way in which experience modified James's character and vision ; it is the significance to the artist of his various encounters that is so brilliantly brought out in this volume. The narrative is handled with great skill and elegance. An unwieldy mass of material has been so thoroughly assimilated, so tactfully and beautifully arranged, that Henry James himself would surely have commended his biographer's style.

Readers of the first volume, remembering the tension of Henry's home life and his hypochondriacal tendencies while he was still too closely attached to his family, will be struck by his normality, once he could plan his own independent career. Not that he ever seems to have overcome his fears of being passionately involved with another human being. His devoted, dominating mother had much to answer for. But his unwillingness to entangle himself as a man may have enabled him to observe women, young and old, with an unusually fruitful kind of detachment, for his novels abound in sensitive studies of women, delightful, intelligent, innocent, formidable, all extraordinarily alive.

The Henry James pictured here is an active, ambitious man, who easily endeared himself to his associates ; an artist to whom social success was invaluable, because it provided him with the material he needed for his cosmopolitan novels.

The Complete Tales of Henry James.

Volume 3, 1873-1875 ; Volume 4, 1876-1882

404 pages and 522 pages. 35s. each.

Simultaneously with the second volume of Professor Edel's biography of James, the publishers have brought out the next two volumes of the "Complete Tales", which are edited and introduced by Professor Edel. This publishing venture was universally praised when the first two volumes appeared last April. All one can now do is to welcome this instalment, out in time for Christmas, and to call attention to the fact that volume 4 contains "Daisy Miller", the story of "the American girl" confronted with Europe, "the tale", says Professor Edel, "with which James established his enduring fame".

Looking for a Home

Paid Servant

By E. R. Braithwaite.
The Bodley Head. 219 pages. 15s.

THIS looks a simple book ; but it is deceptively simple, and it is so easily written that the reader may overlook the important questions raised by Mr Braithwaite's narrative. After nearly nine years' experience as a teacher, which he described in "To Sir, With Love", Mr Braithwaite was seconded to the London County Council's department of child welfare, to help with the problems of immigrant families and especially with the fostering or adoption of illegitimate or unwanted coloured children ; this book describes his work among them.

His secondment raises the first question. Mr Braithwaite is a Negro, from British Guiana, and was therefore regarded as particularly well fitted to deal with coloured immigrants. It is quite clear from this book that he was indeed well fitted to undertake the task, but he himself insists that colour should be irrelevant to successful casework among immigrants. He argues convincingly that they should not be singled out by having a Negro to look after them ; white welfare workers ought to be able to adjust themselves to do the work equally well. Mr Braithwaite believes that

> there was never any special need in Britain for black Welfare Officers, any more than there is a special need for black judges, bank clerks, fishermen or policemen, or doctors.

His book nevertheless shows that, however sympathetic, welfare workers regard their coloured clients as a special problem ; they have an underlying prejudice that becomes apparent when the placing of a coloured child in a white family is being considered.

Secondly, the book reveals all the difficulties that beaucracy makes for itself, even with the best will in the world, when it comes to finding a child a foster or adoptive home—or even returning him to his own. All the red tape is, of course, manufactured in the interests of the child, but there could hardly be a clearer instance of the best being the enemy of the good than in the official adoption of children. Do the parents want to adopt a little girl of four to replace a loved daughter who has died? They may be regarded as obsessed with grief and therefore unstable. But if, being white, they say they would like a coloured child, that, too, may be regarded as neurotic—or at least distinctly odd. And then, when a satisfactory (in official eyes) fostering family is found, it may live in the area of another authority, with a different scale of maintenance payments ; while the high-ups argue this out, the child languishes in a children's home. Incidentally, Mr Braithwaite also raises the important question whether maintenance payments should be so low as to ensure that the foster parents are altruistic and not profit-seeking ; he considers that this principle prevents many admirable people from taking in a child.

Lastly, the book raises the tricky question of involvement. Social workers are trained to remain detached from their clients, and not to get emotionally involved with them, whereas Mr Braithwaite found himself "caring". Possibly this was one of the reasons for his successful handling of intractable cases ; yet he himself shows how unfortunate can be the consequences when a "house mother" becomes too fond of a small child. Mr Braithwaite, however, is certainly right in regarding his clients as human beings, not cases, and in preferring the concept of service to officialdom. No one surely can question this.

High, Low and Middle

English Country Life 1780-1830

By E. W. Bovill.
Oxford University Press. 278 pages. 30s.

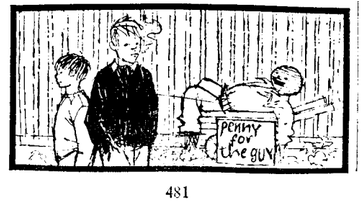
John Constable's Correspondence: *The Family at East Bergholt 1807-1837*

Edited by R. B. Beckett.
HM Stationery Office. 342 pages. 45s.

MR BOVILL'S delightful book follows his own taste, which is sporting, humane and rather conservative. His methods are descriptive, not statistical. Nor does he try to be comprehensive ; he describes his book as "a mosaic of fragmental studies sufficiently related to give in broad outline a picture of English country life between 1780 and 1830." This, with one important exception, is a fair enough description, if one accepts his deliberate omission of economic history and agricultural technique, as subjects that have been fully studied elsewhere.

He starts with an excellent description of the effects of enclosure, first on the landscape and then on men. From the miseries of the peasantry he switches to the squires and the aristocracy, how they ran their houses, and what happened below stairs. So much for introduction ; then he comes to his main topics: the rise and fall of coaching (a fascinating account, which all non-experts should read if they want to make full sense of the writings of the time) and the development of shooting and hunting.

Shooting is an unhappy story. The miseries of the Game Laws rested on the survival of barbarous laws which the eighteenth century would hardly have passed for itself and which were not grossly oppressive in the old days of unorganised shooting, with primitive guns, over largely unenclosed land. But they were there to hand ; and their full weight was felt when



SCHOOL LEAVERS

their aspirations and expectations

THELMA VENESS. Are the young ambitious? What do they want of life today? An enquiry among several hundred boys and girls at school has resulted in this fascinating book. The investigators were initially interested in attitudes towards jobs, but a wider picture emerges, too, of teenage hopes and fears about marriage, religion and leisure. *Introduction by C. A. Mace.* 25s

Masters of Indecision

GEORGE K. YOUNG. A study of recent British policy-making—and disastrous policy misjudgments—this is a book that slashes into the undergrowth of political double-talk. George K. Young is a former Foreign Office Under-Secretary, a Scot, who is not afraid to speak his own mind. **'No one could read this book with total agreement, and hardly anyone with total disagreement. No one could read it without some profit.'** —*Daily Telegraph.* 21s

RATIONALISM IN POLITICS

MICHAEL OAKESHOTT splendidly refutes the vulgar notion that political philosophy is dead: his book is an outstanding contribution to the literature of that Conservative tradition which he himself has done much to vitalise for the present generation. **'There is a lightness and ease about his prose which make even his more difficult arguments a pleasure to follow.'**—*The Times.* 35s

GORDON RICHDALE
THE SUNLIT YEARS
A memorable success story . . . the autobiography of one of the leaders of South African industry. 25s

shooting habits changed, guns were improved and the massive battue was developed at a time when farmers were bringing more and more land under the plough and the peasants needed game for food more than ever before. Foxhunting is as pleasant a story as shooting is barbarous: the latter was based on a tradition of exclusive rights enforced by penal laws; the former on co-operation, subscription, a reliance on consent in the absence of legal right and (for the times) a singular absence of class exclusivity.

As one reads Mr Bovill's book, one feels more and more the weight of a curious omission. His rural scene is populated by wealthy landowners and impoverished peasants, with a few farmers and shopkeepers in the background. Where is the rural middle class? The answer is given in Constable's correspondence, which has been edited by Mr Beckett, with admirable narrative and notes, for the Suffolk Records Society and published jointly by them and the Historical Manuscripts Commission. The title is a little misleading. The letters given are nearly all to Constable from his family, with very few of his own; and they are wholly confined to family news and gossip from East Bergholt, since the selection is designed to illustrate middle-class life in rural Suffolk. Constable's family were fairly well off millers, educated worthy, pious and affectionate; high tories; related to the clergy, the services and London merchants. A visitor said of Constable's brother "still the miller, yet a gentleman," and that is fair. It was a solid and admirable society, contented with its place and untroubled by class feelings: the people in between, at that time, did not look underdone and harassed. Their main fault was a constant worry about money, and particularly about legacies. With appearances to keep up and so much bankering for security in an economically unsettled period, small wonder that so many of them did not manage to get married. One understands why the nineteenth century abounded with bachelors and spinsters, as did the Constable family. The letters are good, dull reading. There is not a moment of excitement, but, the farther one goes, the more they grow on one.

The Wicked Lowlanders

The Trial of Patrick Sellar

By Ian Grimble.

Routledge and Kegan Paul. 184 pages. 28s.

PATRICK SELLAR was the Scottish factor (agent, to use the English term) of the Marquess of Stafford and his wife Elizabeth, Countess of Sutherland. In 1816 Sellar was tried in Edinburgh for the culpable homicide of an old woman during the eviction of the Countess's tenants from Strathnaver in the north of the county. He was acquitted by a court which, according to Mr Ian Grimble, was misdirected by the judge and packed with anti-Celtic east coast landowners.

Mr Grimble's book is neither an account of the trial nor a history of the Sutherland evictions (the author has not, for instance, examined the relevant documents in Dunrobin Castle). It is rather a vivid presentation of certain "high-lights" of the brutal clearances effected in the second and third decades of the nineteenth century by the "Great Lady of Sutherland" and her fabulously rich English husband (later the first duke). Mr Grimble, in telling, acidulated style, gives the reader the views of the champions of the oppressed clansmen: for instance, General Stewart of Garth, who published his classic work on the Highlands in 1822; a Mr Thomas Bakewell, one of the Duke's Staffordshire neighbours; the Swiss social scientist, Sismondi, and, in the United States, Harriet Beecher Stowe. (Mr Grimble mentions Karl Marx's interest in the Sutherland evictions, but for some reason—perhaps a Celtic aversion to bad prose—does not quote the passage in "Capital" in which the Red Prussian really goes to town.)

The book, which is introduced by Mr Eric Linklater, manifestly tries to revive a sense of horror and indignation at the actions or inaction of a pair of absentee metropolitan landowners who could allow the forcible displacement of their own clansmen. In this it succeeds very well. But, above all, the story is a vehement indictment of the Lowland Scot who, in the author's view, always plotted steadily against the surviving speakers of the Celtic languages. The two factors, Sellar and his successor, James Loch, are for him symbols of this bullying conquest of Gaeldom, as much as deceitful *arrivistes*, who preached the gospel of agricultural progress while practising what was virtually theft of land and livestock.

What, however, perhaps puts Mr Grimble's work in a better intellectual perspective is his own final remark. "Sellar, Loch and the Countess-Duchess appear at this distance in time as the end-products of a long historical process, whatever their private motives may have been." That gradual process (the absorption of Gaels by Lowlanders) should, surely, at least have been sketched into a book which sentences almost the whole northern Establishment of 1816, proprietors, factors, officials and ministers of the Kirk, to ignominy as a bunch of unutterable sycophants and quislings. But then so cautious an approach would have spoilt Mr Grimble's fun. As it is, he has given us, as it were, a first-class film script, magnificent material for a Wild Northern; but one in which the bad men always win.

Blood Saves Ground

The Price of Glory

By Alistair Horne.

Macmillan. 382 *pages.* 35s.

ONE of the adages of infantry training in the last war was "sweat saves blood, brains save sweat." The lesson of the Great War, in which a cynic might say "blood saved ground," had been learnt, and in the whole of the battle of El Alamein the British army suffered 13,500 casualties, compared with nearly 60,000 on the first day of the battle of the Somme alone. But it was at Verdun even more than on the Somme that the self-defeating policy of attrition went mad. Started deliberately by Falkenhayn to bleed France white, it became a matter of honour and pride for France to defend every inch of the "sacred soil." How blind can men be? Every yard of soil, pitted with shell holes and threshed by machine gun fire, cost lives and the more lives that were lost the more it became a point of honour not to cede ground and more men were hurried forward to be ripped to shreds by gunfire.

The German army lost nearly as heavily as the French, not least because Falkenhayn wavered indecisively at the moments of crisis, and because at his elbow was an *éminence grise*, Knobelsdorf, who was obsessed with the idea of attrition and nothing but attrition. Verdun was not taken and, if one is cold blooded enough to forget its horrors, this was a drawn battle. But in a sense never anticipated by Falkenhayn, whose frustrated purpose was to knock the French army out of the war for good, the battle did bleed France white. Because of the French system of rotation, more Frenchmen experienced the terrors of this one battle than of any other. They carried its physical and mental scars for the rest of their days. It led directly to the mutinies in 1917 and more than any other battle opened the running wound in French morale that led to the defeat in 1940. Time may have diminished its furies, but the consequences of its heroic glories linger on; as Mr Horne so rightly says, Dien Bien Phu began a "fatal symbol" of the honour of the French army, because it was still conscious of its stand at Verdun, and it is something more than verbal coincidence that one of the slogans of the colonels of Algiers was "De Gaulle ne passera pas."

All this and more is captured in one of the most brilliant books that has been written about the Great War in the last few years. Recent books on that war have often failed because the writers lack the imagination and sympathy to relive the feelings and emotions of the time. They are too much concerned with attacking or defending reputations to see and to understand. Mr Horne joins the notable and honourable exceptions. The narrative moves easily from the details of fighting in this trench or that fort to the political and strategic arguments (or lack of them) at headquarters. The intrigues, the weaknesses and the follies are exposed: but the whole of the book is shot through with compassion, not simply for the *poilus* in their agony but for the generals grappling with a fury that was too big for them to control. The judgments on these men, which, Mr Horne frankly and modestly admits, tally closely with those passed by Captain Liddell Hart thirty odd years ago, are sound and fair. The great virtues of Pétain, for instance, are exposed but in such a way as to reveal the seeds of self-destruction within them; the clue of the man lies in a phrase of Serrigny's quoted by Mr Horne: "You think too much about the French and not enough about France." There was a feeling of love and compassion in this austere man for his fellow countrymen (though not for other nations) which Verdun and the mutinies brought to the surface. It is just that we should be reminded of it, and that the tragedy of a battle can have fatal consequences for a nation as well as individuals, by a man so understanding as Mr Horne. His is a book of skill and insight.

The Bakers of the Nile

The Albert N'Yanza

By Samuel White Baker.

Sidgwick and Jackson. 616 pages. 4 guineas for the two volumes.

Now we want in the same style, not perhaps Speke's own inferior works on the discovery of the Nile's sources, but "The Albert N'Yanza" by Samuel White Baker who, indefatigably and with his indomitable wife, sewed the story up.

WITH this plea, *The Economist* ended its welcome for the publication just a year ago of a handsome reproduction of Richard Burton's "Lake Regions of Central Africa," and here now is the equally welcome and handsome response. Alan Moorehead, whose lucid and lively pen, sense of history and adventure, and feeling for places and people have been largely responsible for the rediscovery of those discoverers on the Nile, calls Baker's 96-year-old story "the most readable of explorers' books."

Here is Allan Quatermain in his broad-brimmed hat setting forth into the jungles with a young and lively girl by his side, and they face every hazard with marvellous determination.

Or, in Baker's own words, "I must beseech my fair readers to reflect that the pilgrim's wife followed him, weary and footsore, through all his difficulties, led, not by choice, but by devotion; and that in times of misery and sickness her tender care saved his life and prospered the expedition." The two of them made Africa their home as they travelled, and the expedition did indeed prosper: at the end, Baker "had imported something new into the Central African scene; he had made it comprehensible."

GOVERNMENT AND INDUSTRY IN BRITAIN
J. W. Grove
A general introduction in which the author surveys the economic position in Britain at the threshold of the 1960's. He argues that the growth of state intervention in industry is as much due to historic and economic events as to party ideologies.

Forty Years On

The Autobiography of Margot Asquith

Edited and with an Introduction by Mark Bonham Carter.

Eyre and Spottiswoode. 379 pages. 30s.

NOWADAYS, England expects the telly interviewer to peel the protective clothing off living celebrities, but the habit was not common when these memoirs were first published forty years ago. The King set the tone when he remarked, on learning that Mrs Asquith was about to be serialised in *The Sunday Times*, that "people who write books ought to be shut up." He could and did rebuke a Field Marshal (Haig in 1919) for publishing war memoirs, but he had no hold on the wife of an ex-Prime Minister. So controversy raged with, on the one side, *The Times* chastening the author not merely for indiscretion but for "vanity and self-love," and, on the other, Privy Councillors applauding her style and the historical value of her work; C. F. G. Masterman called it "a book not 'of the day,' or the week, but for the centuries." It lives up to his verdict, for this is its third major rendering.

The first was published in 1920 and 1922, and caused the furore; the second came out in 1936 when, as a Penguin—two volumes, unabridged, at 6d. each—it was real value for money and was lapped up by the generation now in its fifties that was too young to have tasted the original savour. Mr Bonham Carter, who is Margot Asquith's step-grandson, cannot add more than a touch or two—mostly nursery memories—to a well-known portrait, and, as in 1936, the chief interest of a reprint lies in the impact that it will make on readers too young to remember its predecessor.

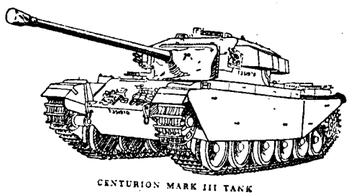
In order to produce a single volume of reasonable size and price, Mr Bonham Carter has sensibly cut chunks of the political comment; even the Concise Dictionary of National Biography finds room to say that Margot—"unteachable and splendid"—was politically a "potential liability," and in this field her impassioned judgments do not make history. But as a social and human document her book is as alive as ever. Even readers who deplore the enamelled splendour of the high society in which she lived must enjoy the warmth and vigour of the Tennant home; the give and take between the sisters never palls. Of equally permanent interest are the terse, unflagging comments on great men of the day; the context in which Balfour's detachment is "insolent," Hartington "gives a great wheezy guffaw at all the right things" or Jowett describes his love as "violent . . . very violent" is well worth thirty shillings, and the only drawback to an autobiography that is everlastingly important and funny is that, being a self-portrait, it does not do justice to one of its author's chief gifts, which was for repartee. Margot Asquith, full to the brim with certain brands of good sense, knew that the wit who repeats his or her own brilliant remarks does not live for ever.

Words and Things

Oxford Illustrated Dictionary

Edited by J. Coulson, C. T. Carr, L. Hutchinson and D. Eagle (text) and H. M. Petter (illustrations).

Oxford University Press. 1,000 pages. 50s.



CENTURION MARK III TANK

THE supplement to the 13-volume Oxford English Dictionary is still being compiled. In the meantime, as a sort of curtain-raiser, the publishers have produced a new volume, half dictionary and half encyclopædia, illustrated with some 1,700 drawings. As a dictionary, the volume is based upon the vocabulary of the Concise Oxford Dictionary, though with new definitions and additions. "Disinflation," for instance, appears for the first time and is defined as "policy designed to remove or offset the inflationary elements in a country's economic situation without incurring the bad effects of DEFLATION." On the whole, however, economics and statistics are not very well represented; as might be expected in an Oxford publication, the dictionary is not so strong on the science side as on the arts—those mysterious chemicals DNA and RNA, for instance, which perhaps contain the very stuff of life, are omitted. The whole common market complex is also virtually ignored. OEEC is there, but it has now been displaced by OECD; this would, of course, allow the compilers to retort that this example shows the dangers of being too up to date—a word can be superseded while the dictionary is in the press.

They have, in any case, given us a great deal to be thankful for. Famous men and places appear—Gretna Green gets an inch and a half of text; and wherever an explanation requires an illustration, it has been given one (see example above). Appendices give such varied information as Roman and Holy Roman Emperors, Presidents of the United States, Popes, Prime Ministers, Kings and Queens of England, counties and county towns, the states of America and their capitals, the chemical elements, British and metric systems of weights and measures. And all for fifty shillings.

Camera Portrait

Renoir, My Father

By Jean Renoir.

Collins. 416 pages. 36s.

TO anyone familiar with Jean Renoir's films, it will come as no surprise that this portrait of his father is full of warmth and sympathy. Nor that the author's own personality is felt throughout: the camera goes backwards and forwards in time; no scene is allowed to become stale before it is replaced; nor is the hero allowed to occupy the centre of the stage all the time. The result is spontaneity, gaiety and tenderness.

Jean Renoir was wounded in the first world war, as a result of which he spent some considerable time alone with his father in Paris, where "as a fair exchange for my war stories, Renoir entertained me with recollections of his youth." The father's reminiscences a few years before his death in 1919 at the age of seventy-eight and the son's impressions of him—left, curiously, in cold storage for nearly half a century—are set down in a way best described by this quotation from the book: "In Renoir's words, the most trifling recollections were as important as the revelation of his deepest feelings. This led to a certain disorder in his reminiscences, which I shall try to respect here." The result offends sometimes in literary style, lapses occasionally into repetitiveness, but is never boring.

There is not much new, however, for the art historian. The mystery of a change in a style of painting lies in the fact that artists adopt it simultaneously, but separately, before they come together to influence each other. A point seems to be reached in the development of art when change seems inevitable. The way Renoir painted was the way he felt it necessary to paint. "'One is merely a cork,' he said; 'You must let yourself go along like a cork in the current of a stream'." A purpose in life was foreign to his nature; he was no intellect but revelled in the triumph of instinct over reason. "He looked at the world with continual astonishment" his son writes. He thought it unnecessary to explain art. "'You don't talk about paintings: you look at them'." Nevertheless, he did express views and contradictory views at that. His reactions, according to his son, depended on the people he happened to be with, just as he was torn between subjectivism and objectivism, between Ingres and Monet. His "cork theory" allowed him to change his technique in painting whenever he felt like it and to turn from Impressionist landscape painting to more fashionable portraiture, which gave him a more comfortable living than some of his contemporaries.

There are no delights for scandalmongers in this book, no horror other than that conjured up by the crippling arthritis of the painter's later years, years in which he nevertheless continued to paint masterpieces, including the Louvre's "Les Grandes Baignaises." Nor is this a typical film concept of an artist. Renoir was a more orderly man and had a more sober enthusiasm for life than might be supposed: he believed, for instance, in the ritual of meals, kept his palette and brushes scrupulously clean, and enjoyed the rich and cultivated world without feeling envy for it. There are many details, however, for biographers to fall on: for instance, this record contradicts another biographer's statement that, unlike Corot, Renoir never touched up or overpainted a fake picture ascribed to him.

But, for the most part, this is an intimate family story, relating the turbulence and neighbourliness of life in Paris flats, Saturday evening pot-au-feu dinners, comforting warm days in the Midi and the painter's reliance on his wife with the "cat-like" face, identifiable now throughout the world as the Renoir face. A sentimental tribute, yes, but an enjoyable one.

Oliver Lyttelton Remembers

The Memoirs of Lord Chandos

The Bodley Head. 462 pages. 36s.

OLIVER LYTTELTON was one of the remarkable group of men whom Mr Churchill brought into office from outside political life in the critical days of 1940—the group that included Beaverbrook, John Anderson, Bevin, Woolton, Leathers. He held his own easily in that company. He brought to the diverse public offices which he held—President of the Board of Trade, Minister of State in Cairo, Minister of Production during the war, Colonial Secretary in 1951-1954—outstanding gifts of experience, intelligence and competence. He moved easily in the worlds of fashion, sport and business. He was an aristocrat; Eton, Cambridge and the Guards were the forcing ground; he married a duke's daughter. He had shown superb physical courage in the war of 1914-1918; he was to show equal moral courage at critical moments during the second world war and in his period as Colonial Secretary. He had had a long and successful business career in the highly competitive world of non-ferrous metals ("I took you up out of some bucket shop in the City a few weeks ago, and what can you know about politics or public opinion?" Mr Churchill was to say in exasperation at the prospect of clothes rationing). As a Minister he never really caught the note, or the ear, of the House of Commons. But to problems of policy and administration he brought not only a long, disenchanted, intuitive knowledge of markets and men, but also qualities of high intelligence, (he was not a friend of Keynes for nothing) resolution, resilience, and also an infectious gaiety and insouciance that enlivened many a dreary meeting and dark hour. He could fairly say at the end of his public life: "I have done the State some service, and they know it".

How much more will they know of it, and of Oliver Lyttelton, from these

BODLEY HEAD

memoirs? The answer must, unhappily, be somewhat qualified: the book does not measure up to the man. It is ill-balanced and uneven in quality, with patches of poor and perfunctory writing, which reveal the onset of boredom and scarcely transcend the level of journalistic gossip. There are only rare traces of the imaginative perception and artistic sensitivity which, as his friends know, are to be found co-existing with the worldly wisdom and the hard high spirits. The judgments on men and affairs—there is a separate chapter on Churchill, and sketches of Eden, Bevin and John Anderson—are always shrewd and penetrating as far as they go. But they lack subtlety and depth.

Nevertheless the book is never dull, commands respect, and gives pleasure. There are three vivid and remarkable chapters describing life as a Guards officer at the front during almost the duration of the 1914-1918 war. The passages about the period which the author spent as Minister of State in the Middle East, and about his relations with General de Gaulle, though they break no new ground, have a refreshing candour. The defence of his policies as Colonial Secretary, especially the almost desperate measures needed to restore order in Malaya and Kenya, and to bring about the beginnings of federation in Nigeria, reveals a certain innate lack of imagination, but is nevertheless a timely reminder of the extraordinarily difficult problems that preceded the "wind of change", and the courage and hardihood needed to deal with them. And the book has both flashes of admirable insight and an authentic flavour of someone who, whatever his burdens and responsibilities, has never cared to "look too good or talk too wise" and who has never been able to resist a good story or a joke. Fortunately he has not tried to do so at all in this book. It is full of them, and the best are very good indeed.

Stature Regained

Newman: Light in Winter
By Meriol Trevor.
Macmillan. 673 pages. 50s.

THE first volume of this biography was rightly praised by the reviewers. This second volume is still better. It elevates the whole work into a biography of distinction, at once readable and profound.

The first volume left Newman at his lowest point, the sordid Achilli trial. This takes him through all the frustrations to his recovery of national stature by the publication of the "Apologia pro vita sua," and at last to the serene and secure grace and influence of the Cardinalate and his dying years. With the aid of the archives we are taken behind the scenes in the pathetic waste of his time in the university at Dublin; his denunciation to Rome as a heretic; the depressed years when he was filled with self-pity and yearned nostalgically (but not religiously) after his former Anglican friends; the fight with Kingsley, which turned him into a figure of such reputation that he could stand up to Manning and the Roman Curia combined; the battle for an Oxford education for Catholics, which he lost to Manning, and the battle for the Cardinal's hat, which his friends won against Manning—narrow, parochial, ecclesiastical controversies in one sense, yet at the European level part of an agonising contest to prevent the Roman Catholic Church of the nineteenth century putting itself altogether out of the running in the struggle for educated minds. The strength of the book is in its portrait. It shows Newman's fascinating personality in a new depth of light and shadow, the public figure in an intimate background of private life, of holidays and friendships and priestly duty. No previous writer has penetrated so near to Newman's soul.

Such a book, which will be influential, deserves serious criticism. Miss Trevor is no pious hagiographer, she discloses the evidence of warts, she holds back nothing. But it is a question whether that sympathy and understanding may not also have led her to be less than fair to Newman's enemies. She talks about the "legend" of his sensitiveness. But his prickliness peeps out from many pages; he spent hours listing hostile acts against himself, brooding over slights real or imagined; he had a sense, though not a complex, of schemers at work, plotting against him. The truth is that Newman could be exceedingly thorny if he took offence, and that he easily took offence. A bigger man would have brushed off the hornets and the gadflies and gone his way. But then a bigger man would have accepted Kingsley's poor apology and shrugged him off with contempt, and the "Apologia" would have been lost to history and to literature.

Kingsley accused him of playing with words, and wrongly thought him therefore dishonest. Newman convinced the world of his honesty, and Miss Trevor therefore acquits him of playing with words. It is one of the tangles in Newman that his undoubted integrity was accompanied by a habit of juggling with arguments, a habit that in anyone else would be called sophistry. Just before the definition of papal infallibility, his famous private letter, denouncing Manning's party as "an aggressive and insolent faction," was leaked in Rome. The letter appeared erroneously as "an insolent and aggressive faction": and Newman promptly wrote to the press denying that he had used the published phrase. He afterwards explained that when he looked at the draft of the letter he had not observed the phrase in it. Miss Trevor accepts the explanation, perhaps rightly. But there is something about Newman's attitude to occasion a qualm whether the incident was as wholly naive as he claimed.

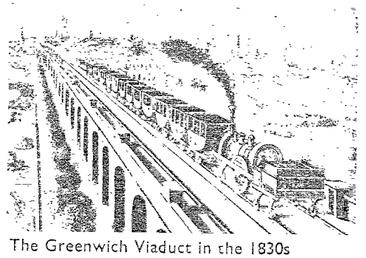
It will therefore not be wise to regard this book as a perfectly fair account of Newman's critics, from Manning and Faber downwards. But as the portrait of a man, of a Victorian, and of an English Catholic priest, it is brilliant.

Web of Steel

London Railways
By Edwin Course.
Batsford. 280 pages. 35s.

NOW that most of the news about railways is of shutting down, pulling up, and redundancy, it is a pleasant change to read a book about railway building and of extensions, additions and expansion—even though financial problems loomed up then. Mr Course's book is for enthusiasts, and it is immensely detailed in its description of track layouts and of the historical reasons for the complex "tangles" at New Cross and Battersea.

But even for the inexpert the book, which has plenty of illustrations and plans, provides much enjoyment. There is a splendid description of the building of the viaduct to Deptford and its gas-lit boulevards alongside. *The Times* of March 12, 1835, stated that "the number of people who paid 1d. each to walk on the footpath of the London and Greenwich Railway on Sunday last amounted to upwards of 3,000." The modern commuter, who daily travels along the now vastly widened viaduct, vainly trying to read, would find his journey far more interesting if he soaked himself in the



The Greenwich Viaduct in the 1830s

history of the line, but he will not find any explanation of why, to this day, the bottleneck over Southwark market has never been eliminated.

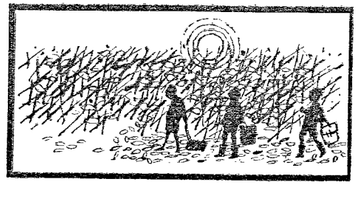
Others, rolling down that steep hill from the river into Victoria, can ponder the luck of their ancestors who, a hundred years ago, were able to arrive there on broad gauge lines from Southall via Kensington and Clapham Junction or from Barnet via King's Cross, Farringdon and Brixton. (The tube lines naturally do not count as proper railways, and there is therefore little about them in this devoted book.) There must still be a lot of nephews who like trains. This would be a meaty book for them, and the uncles could then borrow it back.

Between Wars

The Familiar Faces
By David Garnett
Chatto & Windus. 236 pages. 25s.

THE third volume of Mr Garnett's autobiography runs from the early twenties to the first months of the war: it starts when he is established in life as an author and father of a family, and ends with the death of his first wife in 1940. There are two themes; one is the brilliance and achievement of the intellectual life of England during that much-maligned period, and most of all during the twenties; the other is a series of deaths, many premature, which narrowed the circle of his friends during the thirties, a period made still more painful for him by the slow advance of his wife's cancer; all this against the blackening political horizon. Hence the title—"All, all are gone, the old familiar faces"—and hence a list, at the beginning of the book, of dates of deaths.

To anyone who lived through these years, the whole book is fascinating; but the earlier part, devoted to happiness and success, is largely anecdotal and will probably not say much to a younger generation,



though an exception must be made for a fascinating passage on George Moore. The later part, where the scene is more sombre, counts for more. It is a generous book, with more said in praise than in criticism, and with a constant sense of loss from those who died too soon. Lytton Strachey is singled out as one whose intelligent sanity, if he had survived, might have influenced for good a whole generation that lacked that particular impulse. There is a very interesting passage on T. E. Lawrence: Mr Garnett has done so much for his memory that it is well to be reminded that he came to know Lawrence late and never counted him among his close friends. There is much about some men and women of talent who are beginning to be forgotten, but revive in Mr Garnett's words, such as the Tomlin brothers, Carrington, Dorothy Edwards and Julian Bell.

The person about whom least is said is Mr Garnett, except on the plane of chronicle. This is a pity, but perhaps inevitable. In his first volume he had a wonderful picaresque story to tell; his second showed the development in wartime of a not wholly likeable young man; his third shows a mature man who accepts a greater measure of discretion as he approaches the present, a novelist, book-seller and journalist who is not caught up in history during this period and who has rather little (though that interesting) to say about his writing. He appears as the good-mannered friend of many who does not impose and only half reveals himself. But whatever he writes, as always, is good reading.

Autumn Books

Industry, Income and Investment
F. W. G. Benemy
The author shows in this book that economics can be interesting and simple to understand. For this reason it will make an immediate appeal to students and general readers. By the author of *Whitehall-Townhall* (2nd imp.) 18s.

An Introduction to Industrial Administration
F. R. J. Jervis and W. F. Frank

MACMILLAN

Flower of Cities All

London Perceived

By V. S. Pritchett and Evelyn Hofer

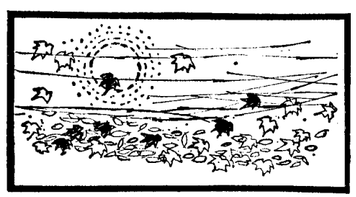
Chatto & Windus and *Heinemann.* 110 pages and 119 photographs. £4 4s.

At first sight the collaboration over this book between an English literary critic and a foreign photographer seems strange. In fact, the mixture is quite right. A stranger brings a fresh eye to a Londoner's too familiar scene, and can see and record the qualities peculiar to his city: the bricks, the plane trees, the pubs and the muffled misty thin light of a winter's afternoon. And London as we know it now, still so predominantly made up of eighteenth and nineteenth century buildings, can be better perceived and fully comprehended if one listens to what writers—Johnson, Defoe, Pepys, Dickens and many more—have had to say of it and of life in it.

Mr Pritchett has been ambitious; he has tried not only to catch the essential flavour of London but has also set himself the daunting task of capturing and setting down the characteristics of the Londoner himself. In chapters on the river, the City, the eighteenth century, Westminster and the Victorians he adroitly avoids the labels of a tourist, historian, architectural critic and spokesman for the British Travel and Holidays Association. His account is learned and, at the same time, easy flowing and very readable. The picture of the Londoner, however, is dated. It might have been true forty or even thirty years ago, but Mr Pritchett's quarry has now well-nigh vanished. The welfare state, affluence, television, suburban sprawl and slum clearance in the inner suburbs have made the Londoner archaic. The Billingsgate porter in that funny hat, the bowler-hatted City gent in that Victorian pub, and the waterman may all borrow garden tools from each other on a Sunday morning in Welling, and there is little to distinguish them from their cousins in Birmingham, Basingstoke or Bedford. The individual savour of an inhabitant of the Elephant district who had never in her life been across the river—not a rarity thirty years ago—must by now have evaporated.

Miss Hofer's pictures are delightful and capture the atmosphere of the Town. They are all full page and sometimes double page, and a fair quota are in delicate colour. They complement and often illustrate Mr Pritchett's discourse, which flows along on the opposite page. Many of them are genre portraits of policemen, market-porters, apprentices, ticket-collectors, and customers of pubs, but there are few that illustrate ordinary life or the ordinary Londoner in office, cinema, restaurant, shop or bus.

The book is lavishly produced, as befits the price. Only two errors spring to notice. Surely the hotel in Gravesend is named after Clarendon not Clarence, and can it be that in one paragraph Mr Pritchett has confused Caxton Hall with the Central Hall, Westminster?



A Champion Editor

Problems of an Editor

By Linton Andrews.

Oxford University Press. 191 pages. 25s.

Yorkshire cricket lore is spicy with stories of Robinson and Rhodes thumbing the pitch during the tea interval, in order to tell their amateur captain when to declare the innings closed and put the other side at most disadvantage with the bat. Sir Linton Andrews, who edited famous Yorkshire papers for more than a generation, is Robinson, Rhodes and the captain at one and the same time—with just the difference that he has always been a professional himself.

This book, in its modest, reflective, knowledgeable and experienced way, is both the apotheosis of the golden age of good provincial newspapermanship and the right, shrewd "commonplace book" for all aspiring journalists as well as for editors. Sir Linton, before he retired two years ago, became chairman of the newspaper industry's own much less potent MCC, the Press Council, and has his own sympathetic but still principled views about the way in which the modern press is going; but the chief virtue of him and of his book is that he sees as a single professional—and vocational—whole the entire process of making and editing a newspaper, from reporting and sub-editing to presentation and propriety in the choice, display and policy-making of its news and opinions.

He says little that is new, but much that is true, from a lifetime of honest, skilled and (if the word can be allowed nowadays) dedicated work. Sir Linton does not pretend to be a prophet, and his views about current trends in the press are characteristically fair and tentative. It could be, however, that his book may be remembered precisely for a prophesy, perhaps hardly intended: "It would not surprise me", he writes, "if in the near future we had in London a Labour evening paper". Is he pointing to one, perhaps the only possibly profitable, escape from Mr King's promise to keep the *Daily Herald* going? At any rate prophecy apart—and Sir Linton would not claim the mantle—this is a book that most journalists and many newspaper readers will like to read.

One Race, One Man, One Leader

Three Continents

By Field Marshal Montgomery.

Collins. 256 pages. 25s.

"There is but one race under Heaven which could stand between the western world and destruction [if a world war broke out] . . . the Anglo-Saxon people. It is the conquering race of the earth . . . Would it not be a glorious task for a man of our race so to unite the Anglo-Saxon peoples that they stand as a solid barrier of invincible manhood before which the flood of barbarism would dash itself to pieces like cloud-waves against the granite summits of eternal hills? . . . May Heaven aid us to find the man to carry it out". Such is Lord Montgomery's conclusion.

His earlier remark that "President Kennedy may well prove to be the leader we need in the West" is misleading. In later chapters it becomes clear that Mr Kennedy will not do. For one thing, Lord Montgomery has not met him. The President has not attained the same state of grace as the other Top People assembled in these pages, the message of which might be summed up, using Mr David Low's formula, as: "Gad, Sir, Lords Mao, Nehru, Verwoerd, Castro, Somoza and Diefenbaker are right".

Only Mr Albert Luthuli, of all those questioned, is found wanting. He is not on Top. He "claims to be a Zulu Chief"; but Lord Montgomery, no fool, checks up with the Paramount Chief of Zululand and learns from this high source that Mr Luthuli is no true African leader.

When one moves in a world of paramount chiefs, the quest for political truth becomes a fairly simple matter. Truth is revealed at the summit and brought down in tablet form. What if some rumour from among the grubbers at lower levels reaches Lord Montgomery's ears, say, about a rift between Russia and China? The Top People of Peking deny it; and "one would have to go to Moscow for a quiet talk with Mr Khrushchev to get at the truth". As for the "somewhat confused situation on the China-India frontier", the confidant of both Mao and Nehru would be ill-mannered to say more than that "this will need to be cleared up before the 2 nations can be said to be the best of friends".

Compliments flow both ways at these lofty levels. The field marshal finds all his hosts honest, sincere and likeable. Mao tells him: "You are very enlightened". Lord Home writes him "a very nice letter of thanks". General Ydigoras and his Guatemalans hail him as Britain's only real gentleman, and as a hero of Ireland's struggle for independence to boot.

Although "it is captaincy that counts", and Lord Montgomery does not shrink from informing a rather bashful Mao that "the all-important person was the leader; the people didn't always know what was best for them", the masses are not completely ignored. They are disposed of in crisp summaries. Africans are "indolent", and those in South Africa are "contented with their lot". "All Chinese" are heavy cigarette smokers. More universally still, we are told that it "must be realised" that

> wherever one goes in the world one finds people of all races and colours desperately anxious to see things develop in the way they want.

The West, having had "17 years with no aim", is now at last presented with a simple twofold political aim: to make friends with China, and to get all armed forces back to their homelands, "without weakening the defence posture of the Western Alliance". It "need have no fear" of the growing power of China. It must urge India, Australia and all the countries between them to form "a solid block against military aggression or Communist intrigue." "There will be no difficulty" in securing absolute freedom for West Berlin once the Oder-Neisse line and the East German government are recognised. "We must withdraw our army from Germany at once". Nato must be made into "a true alliance". Western political unity is "the first fundamental need". Britain must not get "entangled in the political systems of Europe". American air force precautions against surprise attack are "the greatest obstacle towards the reduction of tension". Britain's Bomber Command "*must maintain a high state of preparedness; if Russia thought she could hit us without our being able to hit back, we would be open to all sorts of pressures!*" (the italics are Lord Montgomery's).

Outside Europe, "the whole Commonwealth must be closely allied with the United States; that is fundamental". The under-developed countries must be urged "to follow the neutral course which all their instincts urge them to take". "India is needed in the Western camp". Pakistan's allotted role is to weld the Arabs into a "non-aligned group". "Africa is essential to Europe and to the Western alliance". Communism, which has contributed little to "the landslide in Africa", must be kept out of Africa by the joint efforts of "the Arab block in the north, and of the Republic in the south". "Nothing will satisfy the African but control of his own political life and destiny". The United States is much to blame for having caused "the decline of the Dutch, French and British Empires, which should all have been stabilising influences". "The Commonwealth is destined to be the corner stone of the free world. But alas! it is not what it used to be when I was a boy".

Right. That's clear enough, isn't it? Any questions?

The Great Bore

The Tunnel Under the Channel

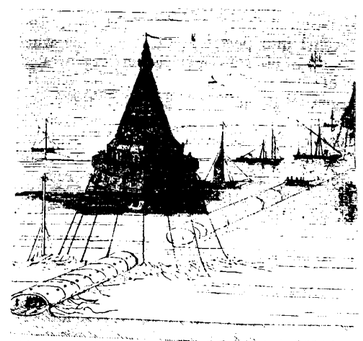
By Thomas Whiteside.

Hart-Davis. 133 pages. 16s.

Cheerfully adding the bard to the long list of signatories to the petition it published in 1882 against the evil undersea works of Sir Edward Watkin, the greatest and most practical exponent of the dream which has obsessed unEnglishmen for a century and a half, *Nineteenth Century* solemnly sang:

> . . . the silver sea,
> Which serves it in the office of a wall
> Or as a moat defensive to a house,
> Against the envy of less happier lands;

and most of the nineteenth century sang with it. The embryonic Channel Tunnel died of the petition, Sir Garnet Wolseley and the Board of Trade; and has been resuscitated in the minds of men only briefly and intermittently since. But times change: it is quite an English thing, now, to be a European; and there is room for hope in the never-failing breasts of protunnellers that the near future will see their dream realised—and if the hope is somewhat tempered by the extraordinary generosity demanded of French and British governments for that realisation, it is correspondingly raised by the vociferous opposition of certain military men, happily retired, to whom the violation of England's maidenhead (to paraphrase Lord Randolph Churchill) is anathema as black and fatal as the common market itself. Mr Whiteside is an American and is therefore unaffected by passions which ran as high, in their day, as those of the current European debate; his neutral history of this fascinating and not unfantastic project is clear, amusing and instructive—and perhaps a little shaming to the closed insular mind which has damned its fellows for so long to the horrors of the channel sea-passage.



Hector Horeau's tunnel scheme of 1851

The Glory of Persia

Iran: *Parthians and Sassanians*

By Roman Ghirshman. Translated by Stuart Gilbert and James Emmons. Edited by André Malraux and Georges Salles.

Thames and Hudson. 347 pages. £6 15s.

As the science of archaeology develops, so the technique of dating becomes more precise and generates a new inquiry: how far was the art and literature of each region indigenous, and how far derived under the influence of conqueror or trader. This magnificent book deals with a period well within the range of recorded history, but is a model for all study of the influence of one civilisation upon another.

Roman Ghirshman is a French archaeologist famous for field-work in western and central Asia and, in recent years, in Persia. English readers know him for his Penguin "Iran," and English travellers for his personal kindness to the passing visitor to his sites, where he is a byword for making the past live again.

In this book, he first surveys the five and a half centuries that separate Alexander's conquests from the rise of the Sassanids—the people whose arts most people envisage when they think of Persia. During this lapse of time the Parthians, more vigorous than the overstretched Greeks and Macedonians on the high plateau of Iran, drove a wedge between the Greek kingdom of the Selucids in the west and the Greek kingdom of Bactria in the east, and reintroduced pure Iranian art forms; but, living in amity with Greek colonies in their midst, they did so under Greek influence. The Sassanid dynasty, with its greater artists, therefore "came into power at the very time when the art of Iran was being regenerated, achieving stability and harking back to the racial tradition." So that when the Sassanians, chiefly through the medium of the Islamic conquests, came to disseminate Iranian art forms as far west as Ravenna and Germigny-sur-Loire, and as far east as Japan, the art they spread was of Greco-Iranian descent.

As one expects from an expensive art book, the letterpress and the superb illustrations are beautifully mated, so that the book informs mind and eye without any unnecessary turning back and forth. It is so lavishly illustrated, and some of the illustrations from private collections are so rare, that it is not dear at its price. Its third part consists of a glossarial index that is useful in any context, and the list of illustrations includes—a valuable asset—many indications of the size of the object photographed. Many of the plates are in colour, which is of special advantage in the section on textiles that was prepared with the help of the French mediaevalist, Madame Clemence Duprat. Professor Ghirshman pays suitable tribute not only to her but also to the many fellow archaeologists—notably Schlumberger and Rostovtzeff—who have helped him to his conclusions.

Queen of the Iceni

The Rebellion of Boudicca

By Donald Dudley and Graham Webster

Routledge and Kegan Paul. 179 pages. 28s.

BOADICEA, queen of the ancient British tribe of the Iceni, is known to most of us only as a half-legendary figure who fought the Romans in a war chariot. This book sets out to tell the story of the historical Boudicca, and to assess the significance of her rebellion in AD 60 in the light of the extensive studies in Romano-British history which have been carried out in the last fifty years.

Only brief accounts of the revolt are given by Tacitus and the less reliable Dio Cassius. The authors have therefore had to look beyond British horizons for their accounts of Roman colonial government and military organisation, which put their story in its proper perspective. The tale they tell is of a disaster resulting from a conquest pressed too far too rapidly, and without sufficient attention to local conditions. The Romans had started as the friends of the Iceni, but lost their allegiance through their high-handed behaviour and their hostility towards the British religious leaders, the druids. The harsh taxation of the Roman procurator roused fierce resentment; and the pre-occupation of the Roman military governor with his campaign in Wales gave Boudicca her chance. In the summer of AD 60 she rose at the head of a great confederation of southern British tribes. Colchester and London were sacked, and only good fortune and the tenacity of the Roman commander, Suetonius Paulinus, saved the situation.

This is a workmanlike account of the first hazardous years of Roman occupation in Britain. Its authors have paid special attention to recent archaeological discoveries, and have included some excellent illustrations and maps. They have successfully put the story of Boudicca into its historical context, without losing touch with the drama of the events of AD 60.

Second Instalment

Last Letters to a Friend

By Rose Macaulay.

Collins. 288 pages. 25s.

OPINIONS were sharply divided among readers and reviewers about the publication, last year, of letters from Rose Macaulay to Father Hamilton Johnson, a distant cousin and a Cowley Father, to whom she wrote intimately on spiritual and other matters at the time when she resumed the full practice of her religion. Some deplored what looked like a breach of trust or, at least, a lapse of good taste. Others thought that the letters, themselves wise as well as witty, would be helpful to other people seeking the way back into the Church or doubtful about its value. Others again, for love of Rose Macaulay, were happy to have anything that she had written.

This second instalment will do nothing to move the objectors from their standpoint, for though these letters are in no way embarrassing, they are essentially meant for the eyes of one particular friend. The exchange of churchy chit-chat and comments about Latin collects no doubt was a source of pleasure to both correspondents; but the parochialism discernible in the earlier letters is more marked here, especially in the tone of impatient contempt whenever the Church of Rome is mentioned. Though the period covered includes the journey to Turkey which foreshadowed "The Towers of Trebizond", the travel letters are sketchy, and the others have little value either as literature or as Anglican propaganda.

Sicilian Legacy

Two Stories and a Memory

By Giuseppe di Lampedusa. Translated by Archibald Colquhoun.

Collins with *Harvill Press.* 128 pages. 18s.

ANY further writings, however fragmentary, by the author of "The Leopard" are bound to be eagerly awaited and sympathetically received. And although this small book would have made its mark without any advance publicity it gains an added fascination from the light it throws on the background of the Prince of Lampedusa. Early in the memoir, "Places of my Infancy," Don Giuseppe remarks how much he would like to emulate Stendhal's "remarkable attempt" in "Henri Brulard," "to sweep away accumulated memories and reach the essence." Most readers will feel that he has succeeded.

Don Giuseppe's success is of course principally due to his skilful craftsmanship as a writer (and the book is excellently translated into English). But it is also due partly to the fact that he was a boy who loved solitude and "liked the company of things more than of people," so that the gardens, rooms, furnishings and so on of his childhood homes were particularly well imprinted on his memory; and partly because the destruction during the war of the old Palazzo Lampedusa in Palermo, which he loved "with utter abandon" and which he never ceased to mourn bitterly, gave to his writing a sort of nostalgic vividness that it might not otherwise have had.

Don Giuseppe also describes the vast house (about a hundred rooms) at Santa Margherita Belice, which was his family's favourite country house. The house was "a kind of eighteenth century Pompeii, all miraculously preserved intact." The author describes the house, the garden, the church, where every Sunday the family heard mass "without excessive fervour," the theatre and its visiting players, the neighbours and his parents' social round with an adult sophistication that is repeatedly shot through with revealing and

JOHN MURRAY

A Dictionary of Modern History 1789-1945

A. W. PALMER

"This dictionary is lucid and concise. Ranging from the Babeuf conspiracy to the battle of Slivnitza; from the Treaty of Waitangi to Tsu Hai and the Loi Falloux, it will be useful both to students and the general public. It is thorough, well planned and compact, and can be strongly recommended."

TIMES LITERARY SUPPLEMENT.

30s.

The Foundations of Education

W. F. CONNELL

and members of the Staff of the Department of Education, University of Sydney

A comprehensive study of the teaching profession in all its aspects; the pupils, the social setting, the subject to be taught and the teachers themselves. Useful summaries and bibliographies make this book an invaluable work of reference. 35s.

Scientists of the Industrial Revolution

J. G. CROWTHER

The author looks at the men behind the scientists, examining their achievements in relation to their environment and their individual characters. James Watt, Henry Cavendish, Joseph Priestley and Joseph Black stand at the centre of an important revolution and what they and their colleagues achieved and why and how they did so, are brilliantly shown. Illustrated 35s.

CRESSET

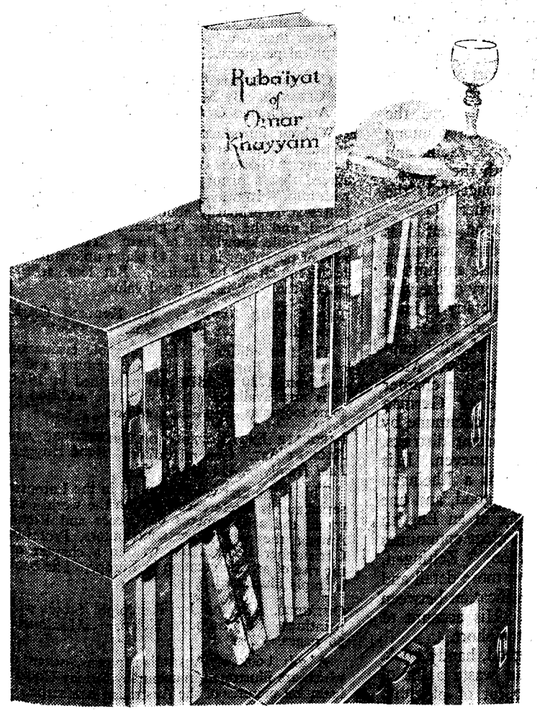
The IRONSIDE DIARIES 1937-1940

Out Thursday

With all the immediacy, frankness and authenticity of a personal, day-to-day diary here is a revealing account of the crucial years which led up to Dunkirk by Field-Marshal Lord Ironside, who became CIGS for the first 9 months of the war and who later organised the defence of Britain as C-in-C Home Forces. 434 *pages, epilogue, appendices, index,* 21 *photos.,* 8 *maps,* 35s.

CONSTABLE

publishers of Barbara Tuchman's "August 1914"



Come, fill the case...

Breadless, wineless, sadly songless in an unpoetic wilderness known as "the doghouse." Such poetic justice may well descend upon that dream-filled head of yours. For if you scatter your quatrains to the four corners of the living-room, don't feign surprise when you're hauled onto the carpet—Persian or otherwise—and faced with a wife waxing anything but lyrical. The gist of her few-thousand-word sermon being: "The proper place for books is a bookcase." Who can deny it?

Minty have specialised for years in making superb bookcases that house your many-splendoured books in dust-free distinction behind very elegant sliding glass doors. Easy on the eye—and the pocket—they allow you to go your merry way reading books, buying books, for Minty bookcases are sectional and may be started for as little as £12.19.0—on deferred terms if you prefer.

Only at the Minty Centres shown below can you see and buy Minty bookcases (and furniture). The Centres are so placed that Minty furniture is within reasonably easy reach of most people. If, however, for any reason you can't call, Minty will be glad to send you a catalogue and particulars of post ordering. Write to Dept. E.23 Minty Ltd., 44-45 High St., Oxford.

amusing glimpses of the things that struck him as a child. There was, for instance, the "nasty surprise" that he had had one day in the garden when he crushed the bright berries of a castor-oil shrub, not realising what they were, and "recognised upon the air the smell of the oil that, at that happy age, was the only real shadow on my life."

The two stories, one complete in itself, the other the opening chapter of an unfinished novel, although not as distinguished as the memoir, make one hope that some more of this strange, withdrawn Sicilian aristocrat's manuscripts may yet be discovered at the back of some desk.

Distorted Record

Roman Women

By J. P. V. D. Balsdon.

The Bodley Head. 351 pages. 30s.

MR BALSDON says that there is no work of deep scholarship in any language on this obviously attractive subject, and no work of any kind—including books of *haute vulgarisation*, such as this—which covers so wide a range. This last is perhaps not so surprising, since Mr Balsdon has really given us two books in one. The first is an account of the part played by women in the history of Rome, from the foundation to the end of the Empire; and the second is a general description of women's life in the Roman world.

The main fact about Roman women is that they were never negligible. Their social functions changed enormously over the history of Rome, but they never seriously overlapped with those of men—there was no feminist movement, and no one suggested that they should have the vote. But they were not kept in purdah; they were trained to be strong-minded; no one after Cato suggested that they could be kept in subjection. Therefore they make a real subject for Mr Balsdon. His trouble lies—as he emphasised—in the distorted nature of his evidence. There were never many women authors in Rome with fragmentary and negligible exceptions, no literary evidence survives except from the pen of males; and those who had most to say about women—Ovid, Martial, Tacitus and Juvenal—were little better than caricaturists; but Tacitus and Juvenal at least were writers of such brilliance that at critical points Mr Balsdon, quite rightly, can do no better than hand the theme over to them, and then correct the record as best he can.

The book, within its inevitable limits, is a success. The historical section is necessarily bitty, and at its best when Tacitus has command. It is a series of stories of historically important, therefore untypical, women. The descriptive part is interesting and informative, but leaves one astonished to see how little we know of the ordinary Roman woman.

Worry about Wine

German Wines and Vines

By Alfred Langenbach.

Vista Books. 190 pages. 30s.

BOOKS about wine, leaving aside technical treatises, tend to be of three kinds; the bibulous-poetic, the thinly-disguised advertisement, and the book about wine. Mr Langenbach's book belongs to this third, useful category. An elder of the trade, he has put his business on one side to set down the kind of facts and judgment on German wines that the young men now coming into the trade need to know, so that they do not, in their desire to be helpful, tell the customer a lot of nonsense, or get laughed at by the grower and come home with the wrong stuff.

German wine is not a big industry but it is an exceedingly complex study, perhaps the most complex of all. Whether it will remain, in area or production, even as big as it is looks doubtful. Only high quality can justify such high-cost production: but the quality, in this northern zone, fluctuates wildly from one pocket of land to the next and from one year to another, so that the output over a period of years is bound to contain a large quantity of commonplace stuff which, one would suppose, must sooner or later be driven out of commerce by bulk wine grown more easily in more southerly parts of the European common market. Germans of a certain age have a taste for their Riesling even when it is sour, and are not going to give it up for *aligoté*. But if the young prove less faithful and the market for the commonplace part of the output shrinks, can the industry keep going on its high-quality wine alone? Here the question becomes serious indeed, for among the best growths of the Rhine, Main, and Moselle are to be found (with the greatest respect to everybody else concerned) the finest white wines grown anywhere.

Mr Langenbach touches upon, but does not lose himself in, these dark economic problems. He offers a modest amount of geography, a good deal of history of the vine in Germany, enough simple botany to indicate the difference between one vine and another, and a good account of what happens in the vineyard and the cellar. Most useful to most readers will be his chapter explaining the nomenclature of German wines and his detailed survey, commune by commune, of the most important districts. Here the amount of detail is uneven. It is plain that Mr Langenbach is a Rheingau man. On the Moselle he is good, and one appreciates his tribute (rare in an English book) to Piesport, but the great communes below Bernkastel—Wehlen, Zeltingen, Erden and Uerzig—deserve more detail and more of an attempt at classification between one growth and another. His account of Franconia is sketchy and too short.

All the same, this is a good, handy book. People who buy wine can waste a lot of money or they can get a lot of pleasure. To buy poor German wine in England has not much point; you can get wine cheaper, and no poorer, from countries with more sun. But you can waste just as much money by snobbish buying; there is an automatic cult of special growth labels like Spätlese and Auslese, words that should be used with reticence, while Beerenauslese and so on, showpieces made in tiny quantities, are really best forgotten about.

Age is another pointless cult where German wine is concerned; the year matters, how long ago it was does not, provided it is not so long ago that the wine will be dead. The English worry too much about what food they are going to drink the stuff with; it is best drunk with itself, slowly, and without too many people about. These and other preconceptions, misconceptions, and irrelevancies mean money wasted and pleasure lost. Mr Langenbach provides in digestible form the basic data for an understanding of German wine.

OTHER AUTUMN BOOKS

HISTORY: CIVILISATION FROM ITS BEGINNINGS. Edited by Alan Bullock. *Macdonald.* 366 pages. 50s.

A good book in a good series, telling the tale again of civilised men in their successive communities, with the proper new-fashioned marriage of simple text and attractive pictures and a better than usual sense of historical and geographical perspective.

A CONCISE HISTORY OF PAINTING FROM GIOTTO TO CEZANNE. By Michael Levey. The World of Art. *Thames & Hudson.* 324 pages. 35s.

Without introduction, theories or frills, the assistant keeper at London's National Gallery begins: "Giotto's contemporaries would have agreed that a history of painting should begin with him." Informative but informal, this excellent text is primarily about the paintings illustrated, and the reader is given the benefit of a considerable knowledge of them. The faithfulness of the colour in the 549 plates unfortunately leaves much to be desired. But look at the price: the book is still good value.

THE GOTHIC REVIVAL. By Kenneth Clark. *John Murray.* 248 pages. 25s.

The first edition of this enjoyable evaluation of taste in England during the century and a half from 1720 to 1870 was published in 1928. It is now available again, with the addition of some footnotes, in its third edition.

LAROUSSE ENCYCLOPEDIA OF PREHISTORIC AND ANCIENT ART. General Editor: René Huyghe. *Paul Hamlyn.* 414 pages. 63s.

This is the first volume on art in the Larousse series and is a reference book on the world's art up to the achievements of Greece and Rome. Among the twenty-five contributors, Professor Christopher Hawkes has written a chapter on the rise of artistic creation in Europe. The book is amply illustrated.

OUTRIDER. Poems by Randolph Stow with paintings by Sidney Nolan. *Macdonald.* 56 pages. 25s.

A gift book of Australian poems, seven of which are illustrated in colour by Sidney Nolan's haunting pictures of the Australian landscape.

EXPORT FINANCE? This *man has £1,000,000,000 to offer

Time was when the manufacturer who wished to export his products had to give credit himself—either borrowing for the purpose or using his own sometimes limited capital. But not any more. Today, he calls in the *man from the Amstel Club who arranges the credits his customer requires. He himself keeps his capital and receives immediate payment in full, allowing his exports to flow. The Amstel Club is a consortium of 13 leading financial institutions, with combined capital resources of £1,000,000,000 which provides specialised services in the field of export finance. There's a member in every country of 'The Six,' 'The Seven' and in the USA.

How the Amstel Club works. It's simplicity itself. If you want to sell capital goods abroad, you simply contact your national Amstel Club member. He immediately gets in touch with his fellow member in the country to which you wish to export and the credit required by your customer *is arranged in his own country*.

It costs you nothing. It is simple and quick. You are informed as soon as your customer's credit needs have been met, and you are free to ship your goods.

In the case of products normally sold on instalment credit terms—such as cars and consumer durables—the Amstel Club will work out a comprehensive stocking and retail instalment plan for your distributors or concessionaires.

Your Amstel Club member will be happy to discuss with you the various ways in which he can help. He has behind him the resources and experience of every member of the club. You will find his name below.

THE BUSINESS WORLD

Nineteen Sixty Seven

THIS week's issue of *The Economist* attempts to assess, in no fewer than three separate places, the significance of the "programme of action" proposed by the European Economic Community's Commission in Brussels for consideration by the Council of Ministers. For reasons suggested by our common market correspondent in Brussels, the programme is surprisingly early and comprehensive—and it gathers up the proposition that economic programming by the Six (" planning " not yet being a received word) argues the existence of a degree of political integration that needs no further emphasis. There are embarrassments for a candidate for entry, as Britain is, in the discovery that extensions of the EEC rules and objectives are being pursued much more vigorously than are the immediate conditions for British entry under the existing rules—a leading article on page 435 looks at some of the implications for our negotiation. It is true that what the Brussels commission proposes will by no means be either promptly or automatically endorsed by the ministers of the still sovereign six governments ; but the recommendations of such an international administrative élite (even though they rest considerably on the views of M. Robert Marjolin, who may soon be leaving Brussels for French politics) must be treated with the seriousness of, say, a British White Paper. It is imperative to know what is proposed, and to take some measure of the consequences, for the Six and indeed (one still very much hopes) for a Seven with Britain in.

One Money for the Six?

THE programme falls into two main parts—monetary policy, which would have wide international repercussions, and planning and fiscal measures to secure expansion, more exclusively the concern of the Six. On monetary policy, the commission's views are as conclusive as is their judgment about political integration. Monetary policy no longer exerts its former directive power over the economy, though it can be a factor in economic equilibrium as a brake against inflation. But the European common market, having achieved economic integration, will evidently call for fixed rates of exchange (within narrow tolerances) among all the member currencies ; individual devaluation would wreck the community's worried efforts to secure an agricultural common market. And fixed exchange rates, properly fortified, provide the essentials of a monetary union, since one community currency is then as well esteemed as any other. True, says the commission, all six are members of the international monetary system, but the " programme of action " prefers not to discuss the merits of this—" it is no exaggeration to say that it exhibits a certain fragility." It claims, indeed, that the emergence of a European reserve currency would contribute materially to international monetary co-operation and to the reform of the present system.

A monetary gap has long been apparent in the Treaty of Rome ; a common commercial policy was more or less spelled out but never a common monetary policy. Britain entering the community would profoundly affect the factors in the European monetary equation, but the commission is convinced that its proposals thereby lose none of their significance and importance. It wants to get ahead fast with building up the authority of the monetary committee of the Six.

In summary form, the monetary policy proposals are these:

(i) Common market central bankers should meet, for the specific monetary purposes of the community and for the discussion of general monetary problems viewed from the angle of the Six, in a council of central bank governors of the Six. The meetings of the Bank for International Settlements in the past have been most advantageous, but now it is a question of a monetary policy for the Six.

(ii) This would embrace advance discussion of all important monetary decisions affecting monetary creation, interest rates, minimum reserves, advances by central banks to governments and modifications of exchange rates (" which one cannot exclude completely during the transition period "). All this, the commission admits, would be most delicate, but not, it thinks, impossible to keep secure.

(iii) The building up of a system of prior consultation by the middle of next year could develop into a system of recommendation, telling member countries what they ought to decide to do—as the monetary committee of the Six in some sense now does.

(iv) In external monetary policy, the commission adopts the view of the monetary committee, that before a member country seeks assistance from the International Monetary Fund, there should be consultation within the European community. In general, the commission thinks that a common attitude should be defined in all important decisions, involving members of the Six or outsiders, that come before the international institutions. It also argues for the harmonising of policy by central banks responsible for reserve currencies.

(v) An inter-governmental agreement should lay down the mutual aid that each member country would be ready to provide, with escape arrangements for any committed member which itself ran into difficulty. These credits should represent a given proportion of gold and currency reserves held by the central bank in each community country, with due regard for the requirements of each member country for international liquidity.

(vi) As these objectives are progressively secured, such capital

movements as are now prohibited or limited should be freed.

None of this, the commission avers, is inimical to the right of member governments and central banks to choose (after the appropriate consultations) the policies that best serve their own national interest. But these new arrangements and procedures will take matters beyond the stage of co-ordination and into centralised direction of decision. In short, what is here proposed is the creation of a monetary union by the Six—at the remarkably early third stage of the common market's development. It conceives that ministers of finance of the Six, joined in council, would decide on their own budgets and their financing, together with the community budget. And the central bank governors could become the central organ of a federal central bank system serving the Six.

Here one has in outline the biggest monetary venture since the creation of America's Federal Reserve system. One can have plenty of reservations about the (still academic) proposals—the inward-looking character of the exercise ; the failure to spell out the potential relations of a third reserve currency with the other two ; the possibilities of abounding argument between the central bankers (who are well equipped to fight their own governments on occasion) and the commission, which tends to regard them as another species of high-ranking public servant whose purpose can be bent to serve community interests. But there is also a great deal to support—a new pooling of reserves, even if a localised one ; a new opportunity for making monetary policy serve economic ends as a workhorse *in esse,* not as a longstop *in posse*. Certainly, it will not come to pass just as the commission has laid it down, any more than Mr Maudling's Washington initiative in the wider monetary field is likely to be accepted in its present outline. Sometime, somewhere, the two ought to be introduced and get on speaking terms. There is a lot to talk about.

What, No Planning?

Inside Europe, the commission plumps for centrally co-ordinated planning of the economies, until such time as these cease to be plural and become one economy. And it sees this central co-ordination—which it calls "programmation" because some of its member governments bridle at the term "planning"—as its own job. What it has in mind, though developing from studies and consultation already started, goes well beyond anything specifically envisaged in the Treaty of Rome. But this, like the common monetary policy, the commission justifies as fulfilling the spirit of the treaty—"progress from the opening of markets to the fusion of public responsibilities in economic matters within the Community."

It divides these economic responsibilities between policies concerned with economic development, both short and long-term, and those concerned with the structure of the economy. This, the commission admits, is not a perfectly logical division—but more useful in action, it thinks, than the usual division between short- and long-term planning.

Brussels has already begun upon policy for the short- and long-term development of the European economies. It produces annual economic forecasts ; carries out regular *konjunktur* (i.e. FBI-style) surveys on the same basis for five of the six countries ; has made some specific recommendations to certain governments and some general recommendations to all six about policies to avert a recession ; and is studying the techniques of economic management used in the different economic ministries. In particular, it has also this autumn begun to receive from the governments draft "economic budgets" (in uniform national accounting terms) for the coming year, and is planning the "confrontation" of these.

Where does the commission go from here ? First, it says, it will push all of the above somewhat farther : in particular, making its *konjunktur* surveys more detailed on industrialists' investment intentions and consumers' expectations of demand, and "perfecting its draft economic budgets to the point where one can talk of a single economic budget for the whole Community." It is also planning to complement the memorandum that it recently sent to governments about anti-recession policy with one on the avoidance of excessive "tensions" on the labour market during period of rapid growth.

But going beyond what it has already begun, the Commission proposes to

- reinforce the anti-cyclical weapons at the disposal of governments ;
- reinforce "global" forecasts with forecasts for major sectors of the economy ;
- improve co-ordination of policy between authorities who affect the economy—national, regional, and local ; and
- reduce delays in preparing, approving, and carrying through measures of short-term economic policy.

These intentions, here and there, go deep into what member governments might consider their national business. The objective is to go deeper, towards a Community economic policy where national policies mainly affect the draft economic budgets, and where each autumn consultation between the commission and the members' economic ministries on the content and the potential effects of these budgets throws up any "corrections that it may be advisable to apply to them." This co-ordination of short-term economic management would eventually be supplemented by a similar procedure regarding national budgets of public revenue and expenditure (i.e. the traditional half of an annual budget as we have it in Britain). This would enable the commission "to penetrate deeper into the play of economic mechanisms and eventually to act on them more effectively."

So much for day-to-day running of the economies, or later, the one economy. But it is for the longer term that the commission really takes to "programmation." Before mid-1963, it will put to the EEC Council of Ministers detailed proposals for this. Broadly, it envisages

- putting national forecasts together into a long-term perspective (on the lines that one committee under M. Pierre Uri has already followed in forecasts for the community up to 1970);
- "confronting" (EEC's favourite activity) the plans and long-term forecasts of member states ;
- preparing the "technical and political bases of a consolidated policy."

The first consolidated long-term programme would be for 1964-68, or any other period that member states and others that may be in by then may decide. It would be concerned with

- the desirable and possible course of economic activity, in terms of growth of national product ;
- long-term projections of state and other public revenues ("only indicative, and not trenching upon the sovereign power of parliaments to vote credits and impose taxes each year . . .")
- forecasts of development of national and community "domestic product" by the main sectors (leaving more detailed breakdowns till later) ;
- tentative forecasting of the manpower balance as between major sectors of the economies ;
- forecasts of the supply of finance available for private investment (within which the pattern is expected to shift in coming years); and
- forecasts of the external balance of trade of the Community as a whole with the outside world, globally and by regions.

The commission also wants to discuss with governments ideas on incomes policy, and to link this with a study of prices in parts of the economy where perfect competition does not obtain, or a few big companies have "dominant positions." It would expect to discuss all this "programmation" with the vested interests concerned, and in the European Parliament.

By "structural policy" the commission means what in Britain would be generally described as development area policy. It wants to set up three working parties ; one to study the acceleration of development in backward, peripheral regions ; a second to think of measures to restore "dynamism" to areas where industries are in decline ; the third to study financial incentives to favour regional development, taking care that these do not conflict with EEC's policy towards competition. It is also proposing some specific case studies of particular areas affected by such structural problems ; will take note of regional development needs in formulating its policies on agriculture, transport, and energy ; and will prepare "manpower balances" for the major socio-economic regions of Europe to facilitate not too painful movement of resources.

These are the outlines of what the commission has not described in any detail before. They are linked, in its programme of action, with the acceleration of the dismantling of the remaining restrictions on trade within the common market—all to be complete by 1967. The commission also lays emphasis upon the development of a common transport policy already in train) ; of an energy policy (where it blandly repeats all the proposals that the ECSC council of ministers practically threw out a month ago) ; and above all of a policy towards competition (where in the field of mergers and dominant positions it explains its policy more than ever before, and shows a notable emphasis upon the scrutiny of administered prices).

All these details—work for a myriad of Eurocrats—follow from a conviction that progress towards an economic union is at the same time progress towards political union :

> It is contrary to reality to consider that there is on the one side the "economic"—which can be brought into common within the framework of the Community—and on the other side the "political," for which a similar task remains to be accomplished in essence through a "political union."

There, impatiently, speaks Professor Hallstein—to Britain as well as to some of his present member governments. The commission's programme, deliberately, is presented at a time when

> other states, too, who are seeking to participate in the common task or to attach themselves to it more or less organically, can legitimately ask to know more precisely what the realisation of the economic union prescribed by the Treaty means, and in what forms and over what timetable this must be done if the Treaty is to be correctly implemented according to its letter and its spirit.

So now we know.

Steely Gaze from France

Our Special Correspondent has taken a look at French Steel and makes some British comparisions

At the moment the French steel industry is working at about 90 per cent of its annual capacity of 19 million metric tons. With surplus capacity for heavy plates, wire rods and flat products emerging throughout Europe, the days of high summer left for the French steel industry are numbered. In comparison with the British industry, working at 75-80 per cent of capacity, French steel is still earning a comfortable margin of profit. But while the latest phase of steel development in Britain is virtually complete, French steelmakers still face heavy further commitments in their fourth steel plan, which is designed to raise capacity to 24½ million metric tons by 1965. They are not sure they can find the capital to finance this ; nor are they confident that once installed the capacity will be kept busy enough to service that capital.

The fourth steel plan was based on the assumption that a rise of 7 per cent in steel production would be needed to sustain a growth of 5½ per cent per annum in France's gross national product. But even the most optimistic of the planners recognised that not all of the 24½ million metric tons could be fully employed in 1965 ; steel expansion, anywhere, has to go up in steps. Home demand, the industry has calculated, may reach between 18 and 19 million metric tons in 1965 while some imports will be replaced by domestic production. At a press conference last week M. Jacques Ferry, the vice-president and delegate general of the French steel federation, spoke in terms of an output of steel of between 22 and 23½ million metric tons in 1965 (between 90 and 95 per cent of the planned capacity), but he has been known to speak of an output under "average trading conditions" of just over 21 million metric tons (85 per cent of capacity). Even that estimate could be optimistic. First, if all the investment plans within ECSC come to fruition, the Six should have something like 98 million metric tons of steel capacity by the end of 1965—between 5 and 10 million tons more than the generally expected level of demand. Secondly, this plan will raise the proportion of French capacity devoted to flat products, where the emerging surplus may be largest, from about 45 to 50 per cent. Thirdly, the plan envisages the net export of about 3 million metric tons of French steel in 1965 against 1¼ million tons in 1961. French steel prices were raised in August, but they are still below those in other ECSC countries, and the Lorraine producers hope to retain a competitive edge in their traditional export markets.

This may not be so easy if Britain joins the common market. One executive director of Sollac, the co-operative strip mill in Lorraine, put it that without Britain the emerging surplus might disappear by 1966 and with Britain by 1967. But even on such sanguine assumptions, someone in the French steel industry will feel the pinch in the next few years. The first will almost certainly be the older re-rolling mills; the second could easily be the most spectacular item in the fourth plan—the steelworks being built on the sand dunes of Dunkirk by Usinor. This is the Spencer works of France, with much the same ambitions and problems. By the middle of next year it will have a capacity of 1½ million metric tons, but the plating mill and the hot strip mill are being built to absorb far greater tonnages. (Usinor talks of 6½ million metric tons, eventually; Spencer has talked of 6-8 million long tons: both are eventual aspirations.) In the meantime, these heavily capitalised mills have to be run in and to gain a share of the European market for flat steel: it will take some time for either to be employed fully enough to produce an adequate return on their capital outlays (NF 150 milliard, as against £150 million). The Dunkirk works are built on a site shaped like a pistol. This pistol, which in a sense is aimed at Dagenham, may hang fire for some years.

THERE may have to be some postponements and deferments in the fourth plan, but it cannot, M. Ferry says, be "modified in substance." The French steel industry is too heavily committed to this plan to pull back now, though it may already entertain less starry-eyed visions of expansion after 1965 than it once did. The rigidities of a plan that was much of its own making are beginning to box the industry in.

DEVELOPMENT FINANCE
(NF million)

Ancillary investments	45	50	60	75	90
Liquid resources	160	150	340	350	—220
Total	1,215	1,294	1,596	1,905	2,097

The basic problem is financial. Profit margins are not sufficient to generate enough finance to give the programme the internal support it needs. As a result, the total of fixed interest debt as a proportion of turnover has risen above the "safety limit" of 45 per cent; it amounted to 51 per cent at the end of 1961 and will probably be not less than 60 per cent by the end of this year. Moreover, the amounts lent by the state to the industry (at rates known to be below the market's) are dwindling. The industry has to rely more and more on direct loans from the capital market (which, though the interest rates are not swingeing, carry capital repayment clauses that impose an onerous burden on the industry). And the industry, with its traditions of family ownership, is unwilling to widen its narrow equity base much further—even if the stock market (where the yield on Usinor is as low as 1.9 per cent) were prepared to take up the risk.

On prices and costs there is as little room for manœuvre as in capital finance. Having just secured an increase in prices, the French steelmakers are naturally reluctant to press for another one; they would probably get a dusty answer from the French government if they did. And clearly the Lorraine exporting producers do not wish to lose the competitive advantage of about 7 per cent that the present level of prices gives them. On costs, the new plants are technically efficient, but they need a big throughput to carry the burden of fixed costs. *Faute de mieux*, the French steel industry is therefore concentrating its fire upon the price of coal. British steelmakers who complain about Dunkirk's access to cheap American coal, for example, do not all realise that these imports are controlled by quota and moreover brought in by a state importing agency, ATIC, which resells the imported coal to the steelmakers at domestic prices. The French, like the British, envy the Italian steel industry, which gets imported coal as cheap as it can buy it. French steelmakers argue that a low tariff on coal imports (one or two per cent) would be preferable to the present system—particularly if the National Coal Board became an active exporter after Britain joined the common market. Cheap American or British coal might, for example, make all the difference to the tidewater works at Dunkirk. But these pleas are unlikely to make much headway against the equally loud cries for protection from the French coal industry.

In these circumstances, it is not surprising that the minds of the French steelmasters are running in well-worn protectionist grooves. Given the "unsafe" burden of debt, they must at the very least preserve their current profit margins. To protect these they must safeguard current prices and projected levels of domestic consumption and exports from outside interlopers. Their immediate concern is with British exports, but they are also keeping a wary eye on Austria and even Japan. The burden of their complaint is that while the British market enjoys the protection of tariffs averaging between 10 and 14 per cent, the external tariff of the common market averages between 6 and 8 per cent, so that they cannot make retaliatory raids on the British market. They admit that the tonnages of plate, sheet and tinplate sold by British concerns (where, they say, the merchants are simply aliases for the steel companies) are only marginal, but they argue that these sales are already threatening the current level of prices within the ECSC.

Their first concern with Britain's application for entry into the common market is therefore equality of tariffs within the shortest possible time: any suggestion from the British side that the transitional period should be as long as two or three years is likely to receive a cold welcome. Their second has to be inferred from the recent statement by the president of the French steel federation, M. René Damien:

> Speaking generally, other countries will without doubt follow Great Britain in requesting membership. It will be proper to consider these requests with care. It would be wrong that new members should increase the imbalance within the common market between production and consumption capacity.

One way of interpreting this, perhaps the only way, is to assume that the French steel industry would not welcome a form of association with the other countries of EFTA which brought, say, Austrian steel within the common external tariff.

These objectives are precise enough, but behind them seems to lie a twilight zone of French aspirations which the phrases of M. Jacques Ferry last week did nothing to illuminate. He will be talking to the British Iron and Steel Federation later in November and then the "confrontation," to use one of his favourite words, may be harder and more precise than it was with the visiting band of British journalists. To them, he said that he viewed "with sympathy the expansion of the club," but only if the British sat down at the same table "dressed as we are."

This is one theme favouring British entry that crops up quite often in Paris conversation—that it might be better to have Britain in a situation where it would at least have to observe club rules. The French industry is already "concerned and sometimes irritated" about the "too pushing spirit" displayed by some British exporters; M. Ferry left the hint hanging in the air that unless Britain played the game according to the rule book of the ECSC (as interpreted by the French steel industry) she would not be welcome. He also returned, more than once, to the need for "disciplined prices" and "disciplined markets" and to the theme that there were "limits in competition" which must not be exceeded. These are familiar concepts in many French industries. If all that M. Ferry meant by these phrases was that Britain should abide by the conditions imposed by the ECSC treaty on such matters as basing point pricing and the publication of transport charges, then there is little room for misgiving. If they meant, bluntly, a cartel, that would raise more misgivings among journalists than among British steelmakers; it is not only France that has established positions to defend. In fact, as other members of the common market have already found, the words probably mean something in between: something any Frenchman can define in that language of limpid purity from which only the meaning seems sometimes to have been distilled out, but which the crude foreigner can interpret as "Damn you, Jacques. . . ."

ENI minus Mattei

JUST how great or how sinister a man Enrico Mattei was will long remain the subject of passionate debate: put him in somewhere between Deterding and Kreuger (who in the postwar world, remember, might never have needed, or been allowed, to fail). But it is difficult to think of any other man in world oil or in Italy, the areas where Mattei cast the longest shadow, whose abrupt subtraction from the scene might make as much difference to either.

Ente Nazionali Idrocarburi, the nationalised gas-and-oil complex whose initials Mattei wrote in a fine Italian hand across a wider map than Italy's, enjoyed under him several carefree years as a maverick, *épatant les bourgeois* of the world oil industry. But clouds of responsibility were visibly beginning to gather about it, even before the comprehensiveness of the (literally) "global" deal that Mattei was discussing with the Standard Oil Company of New Jersey began to leak out, after his death last weekend. Jersey was not the first of the major oil groups to seek, *sub rosa*, an accommodation with ENI. But it habitually carries a longer spoon than most; it is the most coldly realistic and least conservative of what Mattei called the "Seven Sisters" when seeking its ultimate advantage; and it was prepared to throw more into the bargain.

It would be fascinating but futile to speculate about the quids pro quo of that deal; whether even Mattei's lieutenants knew all of what was in the air with him seems uncertain. The prospect of a working agreement between Jersey and Mattei in a world oil market in which both, for different reasons, might have favoured more open price competition, might have suited other major companies more than the working arrangement he had with the Russians; but in other ways the prospect could have made their blood run cold. But fascinating or frightening, that deal was with Mattei: it was Mattei who breathed the fire from the ENI brand image. Would Jersey bother to offer the same deal to an ENI run by anyone else?

And who else is in the running? Businessman, bureaucrat, or politician? In Rome this week, the guessing was that while the Government decided who might pick up this largest of hot potatoes, it would leave in Professor Marcello Boldrini, vice-president of ENI, as interim incumbent. From Italian business, one name mentioned as a possibility is Vincenzo Cazzaniga, chairman of Esso Standard Italiana, who was a personal friend though a business rival of Mattei. But the implication of a takeover by international oil might be hard to dispel from such an appointment; and it is difficult to think of many other Italian businessmen of remotely requisite calibre who would ideologically be prepared to step across into nationalised management. For a non-political appointment, the name of Professor Pietro Sette has been mooted. He is chairman of Breda Finanziara and a member of the ENI board, and recently negotiated two 50-50 agreements between Breda and ENI; Professor Sette is said to have been Mattei's own choice for the succession, in one of those "Lenin's testaments" that are inevitably conjured out of the air at times like this.

Only one of the political names that have been mooted—that of Ferrari Aggradi, a former minister of state shares—seems more than an aspiration: he is perhaps the favourite candidate of any. This is not the only appointment of its kind to be made: ENEL, the new nationalised electricity concern, will need a boss too, and the two appointments will provide another issue for conflict between the Dorothean, moderate section of the Christian Democrats and the left. Mattei before his death, oddly enough, is said to have been putting his weight behind the moderate wing and against the Fanfani government. The elections next spring would have coincided with the time when his own appointment came to be renewed; and he was said to favour a much weaker, more centrist Christian Democrat government. Though himself a man of the left centre, he reckoned that a strong left-centre government, with an articulated planning programme, might automatically have limited his own freedom of initiative (*sc.* arbitrary power).

Mattei's death thus politically reduces the opposition to Fanfani and the group of planners associated with his "opening to the left" government, Moro, Riccardo Lombardi, and la Malfa. ENI had already clashed with la Malfa's planning

ambitions ; now its future structure and disposition may be largely in his hands. If so, it seems unlikely that the wholesale break-up of the widely-diversified group some have prophesied (which indeed may have encouraged the appetites of the Milan Bourse on Monday as much as the *détente* over Cuba) will come to pass. La Malfa had already argued with Mattei that some of ENI's foreign ventures (for example, refining in Argentina) might be cut back in order to concentrate its investment at home and reduce Italian exports of capital. But these planners, the socialist Riccardo Lombardi in particular, have no wish to cut down ENI's political drive, its contacts with Russia (in spite of American diplomatic pressure), or its penetration of African markets ; or to see it reduced at home to a gutless state enterprise like the old IRI. Some hiving off of certain extraneous economic (or uneconomic) interests that ENI acquired or sprouted during the Mattei era—for example, nuclear power and perhaps some of the group's engineering interests—might be logical too.

Whoever takes on the management of the gas and oil complex will inherit some problems, national and international. Gas output from the Po valley—which provided the original profit base of ENI expansion—has passed its peak ; nor have the fields found elsewhere in Italy sufficient reserves to support much further growth. ENI's contract with Russia, at a very cheap though not necessarily an uneconomic price for Russia, runs out in 1965, and though there is provision for renewal, a lesser man than Mattei might not politically be able to renew it. (Jersey would no doubt be ready to supply—but at the terms, comparable to those of the Russians, that Mattei would probably have been able to exact ?). ENI's needs for crude oil are mounting ; and on its own new production in the Persian Gulf it is committed to make do with a profit margin much smaller than its competitors there are presently left with.

The balance of advantage in the world oil market between bargaining for crude at arm's length, developing one's own, and entering complex arrangements for supplies with companies that compete with ENI elsewhere, is growing trickier. Mattei still seemed to relish it ; by nature he could keep more balls in the air than most men. Not all men of calibre have the same zest, or are driven by such a daemon. His like, as the prototype of the nationalised boss with fire in his belly, we may see again ; but not all in all.

BUSINESS NOTES

STOCK MARKETS

On the Rebound

STOCK markets throughout the world greeted the Russian promise to withdraw from Cuba with a burst of enthusiasm on Monday in which the advances in equity prices were almost as dramatic as the earlier falls. British, German and other Continental exchanges did not wait for Wall Street before marking prices up ; indeed, only the Paris bourse remained quiet, but then it had the implications of the referendum to assess and it had been the least perturbed of all the stock markets in the earlier crisis. Given the sudden relaxation in tension, the recovery was predictable; but the gasp of relief, like that of a swimmer breaking surface, was violent, and it was not long before the markets were taking steadier and deeper breaths. In London jobbers admitted that Monday's rises were out of all proportion to the amount of stock changing hands. Markets soon sobered down and prices became little more than steady, and in a few instances turned down ; on the German bourses, for example, the effect of profit taking was accentuated by doubts about steel dividends and in Zurich the optimism which characterised the sharp rise on Monday quickly faded.

In London the initial rise in gilt-edged prices was as strong as that in equities (where the rally in oil shares, which earlier had been knocked off balance by the crisis, was extended on Mr John Loudon's forecast of a net income of £200 million for the Royal Dutch/Shell group this year). Both markets reacted a little on Tuesday, moved ahead again on Wednesday and became listless on Thursday. The day-to-day gyrations in gilt-edged prices have been particularly marked and this has served to emphasise the fact that the steady buying of the funds over the last few months has been accompanied by a good deal of short-term speculative activity. With *The Economist* indicator up to 330.2 (against 313.5 a week earlier) and the *Financial Times* index at 276.4 (against 263.7), equity prices are almost exactly where they stood before the Cuban crisis broke. The market, having suffered a political upset, is confronted with the same set of economic realities that has held equity prices in check for many months while its vulnerability to the political turns has been exposed for all to see. One crisis has passed. That is all.

Wall Street Looks at Yields

A correspondent cables:

WALL STREET took the expected dividend cut by US Steel in its stride and fresh buying sustained the advance in equities which began in the middle of last week at the first hint that the Cuban crisis might be resolved. In the week to Wednesday's close the Dow Jones average gained over 31 points to 590, or nearly 6 per cent, and brokers report that the interest in equities has not evaporated. The cut in US Steel's dividend was offset by the impressive earnings reported by General Motors, by the news of excellent automobile sales in October and by other indications that the economy is still far from a recession. Sentiment appears to be growing in the stock market that a downturn in business activity can be avoided and though selling for tax purposes may be heavy it may well take the form of switching into other securities rather than outright sales for cash.

Consideration of current and prospective earnings led to a smart advance in automobile and space issues and some of the electronic stocks were supported, largely however by professional traders. But, as hopes of tax cuts gained fresh currency, utilities, which are generally regarded as "peace" stocks, also improved. Figures for the third quarter show that most mutual funds did more selling than buying of stocks but other institutions are now interested by the attractive yields offered by many issues. Republic Steel, for instance, yields over 7 per cent on its reduced dividend while many other equities, with good past earnings records, are selling at less than 15 times current earnings and offering yields of 4½ per cent or more. These include the stocks of machinery and equipment makers, which have been in the doldrums since the fall in May and which appear to be discounting a decline in production next year. Wall Street hopes that the war scare is over and that the renewal of confidence may lead to higher prices over the next few weeks.

GOLD AND EXCHANGES

As You Were

THE gold and the foreign exchange markets were quick to regain their equilibrium on Monday after Mr Khrushchev's Sunday message had turned everything to sunshine. The price of gold in London fell by 2¼ cents to $35.15⅝ at the Monday morning fixing and eventually closed at $35.13½—fractionally below the price on the Friday ten days before the blockade had been announced. The decline continued on Tuesday and gold closed at $35.12 on Wednesday, some 8 cents below the Cuba week peak. Sales of gold in London on the Tuesday and Wednesday of that week are now estimated at an enormous $50 million ; so far very little has returned.

It is a characteristic of gold that although enormous quantities are bought at times of crisis, it tends to stick with the buyers long after the original reason for buying has passed—these are disappointed bulls, but perhaps with better reason for holding on than some of their kind. At the same time while there is no forward gold market in London, many continental banks will buy gold spot for a customer who wants delivery in three months' time, charging the customer a commission and the cost of financing the operation. Decisions about this gold will not be made until late-January.

The reaction of the foreign exchange markets on Monday was to put the previous week's movements into reverse ; the US dollar and the D mark recovered and the Swiss franc weakened. These movements were short-lived, however, and by Wednesday the dollar was back down to 4.3160 against the Swiss franc after recovering to 4.3180, while the D mark fell from 4.0085 against the dollar to 4.0140. This pressure on the D mark was evident some weeks before the Cuban crisis, and is as much due to misgivings about Germany's economic future, despite reserves that still amount to well over $6,000 million, as to fears about Berlin. On the reverse side of the coin sterling has sailed through the Cuban crisis without an apparent ill effect—which must have gratified both the Treasury and the Bank of England since an international crisis usually puts sterling under heavy pressure whether or not it is directly involved.

The remarkable thing about the whole crisis is how little these markets were actually affected. The price of gold rose but its advance was minimal compared with the $40 an ounce reached in October, 1960. The reaction of the exchanges was far from wild and the movement of hot money was a bagatelle compared to the vast upheaval at the time of the revaluation of the D mark and guilder in March, 1961. The way in which the markets have weathered this particular storm says much for the measures of international financial co-operation that grew directly from these two earlier crises.

MONEY MARKET

Cuba's Bill Rate

THE collapse of the Cuban crisis has presented the money market with something of a problem. The reaction of the discount houses to the crisis was to argue that an early cut in Bank rate was most unlikely, and at the Treasury bill tender on Friday last week they pushed the bill rate up by a further ⅛ per cent to 3⅞ per cent—restoring the rate to a level last touched at the beginning of August. At 3⅞ per cent the bill rate is now on a more reasonable footing with 4½ per cent Bank rate, and the market, with its money averaging 3⅝ per cent, is once more making a useful margin on its bills. The problem now, with something like international calm restored, is to make some guess at the future of Bank rate and then act accordingly. The commercial banks continue to show a healthy appetite for bills and the discount market, their sole supplier, cannot afford to lose too many bills to outside bidders in the weeks ahead. Needless to say the market is once again trying to talk itself into believing that a cut in Bank rate is not too far away.

The rates for Euro-dollar deposits in London have remained firm this week, with the seven-day rate at 3½ per cent and the three months rate at 4⅛ per cent. Although the end of the crisis has increased the amounts on offer, demand has been reinforced by a new Italian banking regulation which now allows Italian banks to borrow abroad for domestic purposes.

RAILWAYS

Fighting Hopes

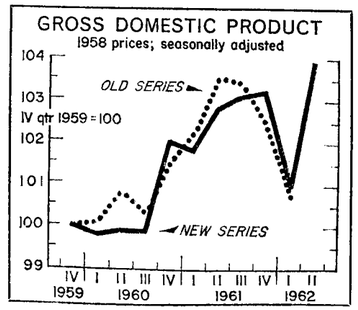
THERE is nothing half-hearted about British Railways when it comes to market research: to find out where the potential freight traffic lies, it has approached all the bigger users of transport in the country. This survey, carried out by the railways' district offices, has shown that 90 million tons of goods which are physically suitable for carriage by rail are now being carried by road ; and, as one might have guessed, most of this traffic is carried on the roads that parallel the busier railway lines. So the survey does not bring any hope of reprieve for those railways that were marked with ominously thin lines in the set of maps that British Railways distributed to show the course of present freight traffic. The lines that now carry most traffic will therefore carry any of the 90 million tons that the railways are able to win back from the roads—and they probably have enough spare capacity to do it.

Dr Beeching has given some indication of the means that he proposes to use to persuade shippers that rail transport will suit them best. Goods trains made up of flat cars, carrying detachable containers, will run to a regular schedule between the big towns, so that goods can be delivered without shunting and at a predictable time. The containers would be simply picked off the train and delivered to their destination on a railway lorry—or the customer's own lorry. Alternatively, trains could be operated for one company, painted in its livery as its lorries are now ; or trains could be chartered to companies, as a ship might be. If half the 90 million tons could be won, Dr Beeching estimates it would add £100 million to the railways' revenue. By supplying the speed and some of the incidental attractions of road transport, the railways may give themselves some more attraction to shippers ; but price remains to be considered, and if rates have to be published under the common market regulations, the railways can hardly gain an advantage over the road hauliers—these same draft regulations would make the use of company-owned lorries even more attractive than it is today. All these proposals for new types of goods train are literally futuristic: they depend on the construction of new rolling stock, the containers it is to carry, and the special lorries that will deliver them.

THE ECONOMY

Who Knows?

ACCORDING to the latest statistical findings of Great George Street, the British economy was going it quite fast in the spring of this year. The gross domestic product (at constant 1958 prices and seasonally adjusted) which had fallen by 2 per cent between the fourth quarter of 1961 and the first quarter of this year, "rose appreciably" in the second quarter. Reckoning from the expenditure side of the accounts, the rise is put at nearly 3 per cent, but it would be silly to stake much on this figure. The accompanying chart



shows the extent of the revisions in this series since its previous appearance in *Economic Trends*: the former expansion in the first half of 1960 has disappeared and so has any decline last year. Apart from the threat of revision, an income assessment suggests a smaller change in the gross domestic product between the two quarters: moreover, industrial production, which accounts for about half the total, rose only 2 per cent, according to the official index.

After correcting its seasonal adjustment

of spending on durable goods, following the lead given by the National Institute of Economic and Social Research, the Central Statistical Office reckons that total personal consumption rose by "more than 1 per cent" in the second quarter. This was despite the decline in retail trade, the extra spending being heavily concentrated on drink, cars and services. This was the largest quarterly increase in consumption since the end of 1959; the table shows, however, that in the two and a half years since then, the total increase is estimated at only just over 3 per cent, the same as the annual increase assumed in Ned's five-year plan.

	2nd qtr., 1962 £ mn.[s]	Change from 4th qtr., 1959 £ mn.[s]	Change from 4th qtr., 1959 %
Consumers' expenditure	4,211	+135	+ 3·3
Public current expenditure	1,058	+111	+11·7
Gross fixed capital formation	1,108	+103	+10·2
Increase in stocks and work in progress	25	− 75	...
Exports	1,358	+ 92	+ 7·3
Final expenditure	7,760	+366	+ 4·9
Less:—			
Imports	1,421	+130	+10·1
Adjustment to factor cost	770	+ 28	...
Gross domestic product	5,569	+208	+ 3·9

[s] At 1958 prices and seasonally adjusted.

The recent rise in consumption has been accompanied by an increase in borrowing from banks and on hire purchase. But the rise in personal disposable income seems to have accelerated in the second quarter of the year; in money terms, it was then 5.5 per cent above the first quarter of 1961 while spending was 6 per cent higher.

According to the figuring, total fixed investment, if it changed at all, rose slightly in the second quarter. Also the bottom point of the stock cycle seems to have been passed with the recorded figures showing a rise between the first and second quarter. But, because of the recovery in output, the level of stocks at the end of the second quarter is believed to have been lower in relation to the gross domestic product than in either of the two previous quarters.

NET BOOK AGREEMENT

Tradition in Triumph

THE Publishers Association had an irresistible moral weapon in their defence of the net book agreement in the Restrictive Practices Court: the cause of culture as opposed to crude commercial values. They won the case largely because nobody questioned effectively the relevance of this juxtaposition to the particular issue of price maintenance in the book trade. Giving judgement, Mr Justice Buckley said, "Inevitably we think the effects [of price freedom] would be most severe in the higher reaches of literature". He based his view on the acceptance of evidence—much of it necessarily speculative—that the exposure of stockholding booksellers to competition would create conditions of fear and uncertainty that would inevitably lead to smaller publishers' orders (particularly pre-publication orders) and reduced output, higher retail margins, and hence both higher prices and a smaller choice for the public.

Both sides were in agreement that the main effect of the publishers' joint undertaking to enforce their present individual right to maintain prices was to preserve stockholding retail bookshops from the possibility of price warfare. (Textbooks are not published with fixed prices, so educational booksellers would not be affected.) The Registrar's case was that booksellers have no unique claim to this type of protection, which does not in itself produce "specific and substantial benefits or advantages" to the public. The publishers' defence was to underline the exclusive power of a well-stocked bookshop to bring to the public's eye the huge variety of titles—which, because of their individuality, nearly all need to be seen to be bought—and to paint what certainly looked an alarming picture of the fate of "pedigree bookselling" in conditions of price freedom.

The lack of precise information of the most relevant kind—such as the proportion of turnover of the most broadly-based stockholding bookshops represented by the kind of books on which price-cutting might be expected—made it possible for the defence to lean heavily on a group of impressive and dedicated witnesses whose businesses, one suspects, were representative of only the top 10 per cent of the estimated 500 stockholding booksellers in the country. Cream of the cream by literary standards and often by efficiency as well, the character, service and trade of such shops could surely be expected to survive irrespective of price maintenance so long as there was a literary public to support them. With them would survive "the higher reaches of literature" so long as there were publishers who still preserved literary as well as commercial criteria—a balance which this business has always had to maintain and which would not vanish simply because of possible changes in selling and distribution patterns.

Need for Experiment

THE bookshops that might have been expected to disappear in the absence of the net book agreement might well nearly all have been those which even in present conditions are hanging on by the skin of their teeth and providing extremely ineffective outlets for publishers. There is however one serious threat to otherwise self-sufficient booksellers that price freedom could be expected to bring: the removal of such local library business as they handle through the ability of big library suppliers to compete in offering better terms than the 10 per cent discount at present fixed by agreement with the publishers.

Some good local bookshops depend on the library trade for a large proportion of turnover (19 per cent was an example given in court). No doubt, if booksellers chose, some of this business, at least, could be replaced through offering discounts to the public on sales above a certain value and quantity. But it is probably right to regard the library trade as the most important single benefit of the net book agreement to booksellers. The judge in his summary did not think that the gain to the libraries of lower discounts on books would constitute greater "public advantage" than the status quo, since he regarded such a change as inseparable from a situation in which publishers were under constant pressure from both booksellers and library suppliers to increase trade margins, which would in turn contribute to higher prices being paid by both libraries and public.

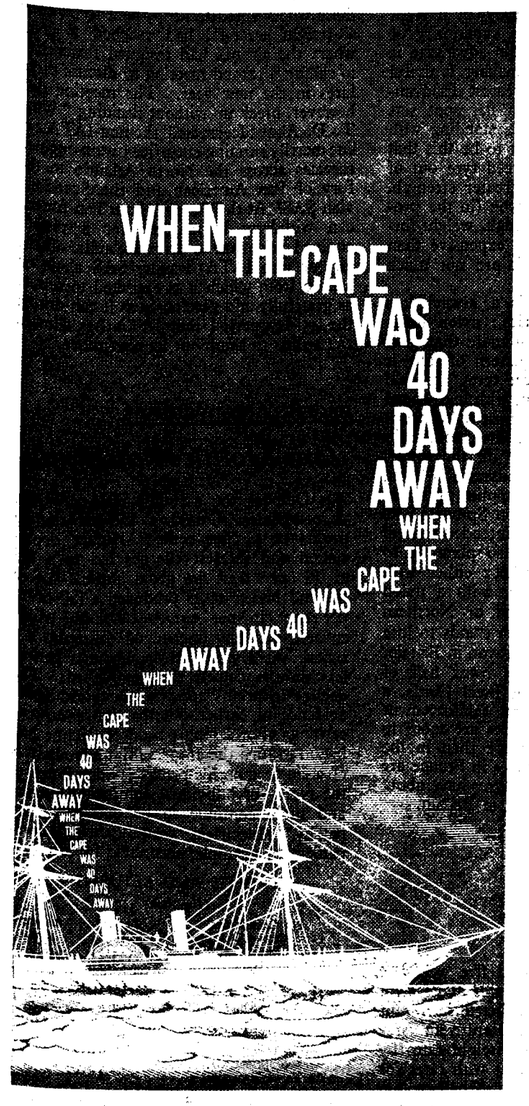
This argument ignores the fact that publishers are always under pressure to increase booksellers' margins, and indeed are doing so all the time. On the basis of evidence from Canada and the "apprehensions" of other witnesses, the Court also discounted the possibility that price competition would stimulate the sales of certain books sufficiently to keep down the general level of prices on all books. Fortunately, as Mr Justice Buckley pointed out, there is nothing in the net book agreement which in itself prevents publishers from finding new methods of selling books, or indeed obliges them to publish any book at a net price or keep one as a net book if they do not want to. Though traditional methods have been vindicated, for at least as long as resale price maintenance lasts, it is to be hoped that the book trade will not in future regard them as adequate.

MANMADE FIBRES

Plus . . .

BRITISH NYLON SPINNERS announced last week that it is planning "very substantial" expansion of its production of nylon yarn and staple fibre. The company has given no indication of the amount of fibre involved, nor has it said how much it will cost. Even if it had, comparison with the company's fixed assets—currently valued at just over £40 million—would give no clue to the size of expansion, since it will mostly take the form of modifications to existing plant, and new machinery, mainly for ancillary processes, to match increased spinning output. A substantial expansion in capacity will be achieved without heavy investment. ICI, which supplies the nylon polymer, will build up new nylon capacity to match the increased capacity. Again, this is to be achieved by modifying and extending existing plant, mostly at Wilton, at a cost of several million pounds. The extensions are expected to be in operation by the end of 1964.

No mention is made of plans to spin Nylon 6. (At present BNS only spins Nylon 66, supplied by ICI.) Yet one of the features of the ICI/Courtaulds battle was the argument about which company had the better process for making caprolactam, the raw material for Nylon 6. Presumably the main market in Britain for the capro-



IN 1862, when it took forty days to reach the Cape, the Standard Bank opened its first branch in Africa. A century later the Bank has over 900 offices throughout South, Central and East Africa. Behind this network is a forward-looking organisation making full use of new business techniques, and able to provide accurate and comprehensive advice promptly on all aspects of trade in the areas which it serves.

120ft span transporter bridge

Mitchells Handle Materials FAST at Newcastle, South Africa

Mitchells associates, Mitchell Engineering (Proprietary) Ltd, Johannesburg, supplied and erected this 120ft span transporter bridge for African Metals Corporation Ltd, at Newcastle, Natal. This transporter—one of the largest of its kind in South Africa, is used to off-load and reclaim iron ore, dolomite and coke at a designed rate of 450 tons per hour. Total length of travel for the whole process is 900ft. Mitchells have installed mechanical handling plants in Australia, Canada, India, Pakistan, Nigeria, New Zealand, Belgium, Turkey and Greece.

The group is also active in the fields of boiler design, cableways and ropeways, wagon handling, transporters and conveyors, cranes, mills, ship loading plant and nuclear power.

MITCHELL

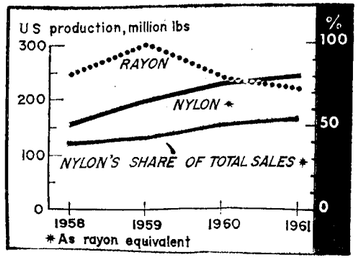
MITCHELL ENGINEERING GROUP LTD · ONE BEDFORD SQUARE · LONDON

lactam plants which both companies announced (and later postponed) would have been BNS. Perhaps it decided that it need not go to the expense of spinning Nylon 6, in spite of the wide acceptance of this fibre on the Continent. Its advantages over Nylon 66 are not obvious and in at least one field —tyre cords—Nylon 66 is thought to be superior. The increase in demand for nylon which BNS is expecting has partly arrived already: it has been rationing its customers since the beginning of the year. A bigger increase would follow if Britain joins the Common Market. Increased production is needed to provide yarn for existing textile end-uses, such as stockings and warp-knit fabrics, but even more for new uses. Here the three most important are knitted outer wear, which can be expected to benefit from increased sales of "casual" clothes; carpets, in which the use of blended yarns (nylon/wool or nylon/wool/rayon) has suddenly won acceptance; and tyre cord, sales of which are expected to be 50 per cent higher this year than last.

. . . ça Change

DU PONT, the American chemical giant, has announced its intention of giving up the manufacture of rayon, all of which it sells as tyre cord. Du Pont began manufacture of rayon tyre cord at Buffalo in 1920, and introduced new products and techniques, the result of its research, which led to the general use of rayon in tyres. Until it decided to switch over to nylon, Du Pont was the largest producer of rayon cord in America, and held 40 per cent of the market. In 1955 the Buffalo plant was closed; another was closed in 1961; and the present announcement marks the end of a process of orderly withdrawal to a stronger position. Du Pont makes 60 per cent of the nylon tyre cord sold in the USA.

Nylon has been sold vigorously, both by its producers and by tyre manufacturers, for which it has provided a selling-point. For technical reasons it is used in all aircraft and "off the road" earth-mover tyres; 40 per cent of American trucks are sold with nylon tyres; and 70 per cent of tyres bought as replacements for motor cars are nylon. But the largest market, as original equipment with new cars, has so far resisted all sales efforts. The chart below shows how nylon has gained in America at the expense of rayon.



Advantages are claimed by both sides and tests have shown the superiority of each. Probably nylon's main advantage is its greater heat stability, making it useful in high speed tyres. Its greatest disadvantage is "flat-spotting": a flat spot sets into the tyre when it cools standing with weight on it. It is thought to be this that has kept the nylon-reinforced tyre out of Detroit. Because of its greater strength, less nylon is used than rayon (in the proportion of 5 : 8) and although, weight-for-weight, nylon is far more expensive than rayon, tyres made with it are not much more expensive.

In Britain, the market is, as always, less developed than in America: nylon holds about 10 per cent, against more than half in the USA. Also, the pattern of sales is different. Most nylon car tyres are sold here as original equipment with high speed cars (about 5 per cent); most nylon truck tyres are sold as replacements; and, as in America, all aircraft and "off the road" tyres are nylon. Further advance is being held back by the limited supplies presently available from British Nylon Spinners; its new expansions are partly intended to deal with this. Du Pont is also planning to enter the European market; either with exports from the USA or with a nylon plant, probably in Holland or Northern Ireland. Courtauld's, which stands to lose most from a switch out of rayon in Britain, has hedged against it: it owns half of BNS and 80 per cent of Steel Cords, a company that makes metal reinforcement for tyres. Steel-corded tyres are more to be reckoned with in Europe than in the USA: a third of all the tyres in France are made with steel, and these tyres have about a fifth of the truck market in Britain.

AIR FARES

Settled

THE airlines have ended five weeks of bargaining about air fares and freight rates along the lines predicted in recent issues of *The Economist*. Return air fares go up five per cent, basic freight rates by between 13 and 14 per cent with rates for bulk consignments of above half a ton rising in some cases by nearly 20 per cent. There are sweeteners, designed to attract the marginal traveller and the marginal freight; for example, something approaching the special holiday fare concessions that have boosted European air traffic are beginning to spread round the world in an attempt to get holidaymakers out of charter aircraft and into the empty seats on scheduled services. In freight, special bulk discounts are to be given to special types of cargo. The unexpected last-minute agreement on cargo rates was, in fact, the surprise of the conference. Deadlock between those who wanted to cut bulk discounts for loads of more than half a ton because these were eating into ordinary freight traffic and

those who wanted to keep them to fill their all-freight aircraft, had reached a point where the airlines had resigned themselves to calling a second meeting to discuss cargo fares in the new year. The meeting did, however, break up without deciding "What To Do About Icelandic," the non-IATA airline merrily running cut-price piston-engined services across the North Atlantic to the fury of Pan American and the Scandinavian SAS. At the eleventh hour Pan American withdrew its request for a piston-engined price war to drive Icelandic off the air (or into IATA) leaving SAS alone on a limb from which it is expected to retreat as gratefully and graciously as it can during the 45-day period that IATA has allowed the airline to think out its next move.

PROFITS AND DIVIDENDS

One Month's Patchwork

IN October the accounts of 110 public companies showed a fall in trading profits of 3¼ per cent. Higher depreciation and interest charges led to a fall of 8¼ per cent in gross profits before tax and higher taxes produced a fall of 16 per cent in net equity earnings, which covered virtually unchanged dividends 1.7 times. As a whole, the companies earned less on the capital they employed. The decline in profits appears to contradict the evidence of earlier months that industrial earnings after a long period of decline had begun to turn the corner. But any analysis of a single month's profits is very much at the mercy of individual companies' results and these continue to be extraordinarily patchy. Electrical manufacturing companies, for example, accounted for nearly a

PROFITS AND RETURNS

(£ million)

111 Companies reporting in October	Previous year	Latest year

quarter of the profits collated in October and here the higher earnings of Decca and British Relay more than offset the fall in profits reported by British Electronics. Property companies (including Capital and Counties and Hallmark) and engineering concerns (including Fairey and Stothert and Pitt) also reported higher profits. But textile profits (including those of Tootal and Calico Printers) were lower and more surprisingly so were those of the building group (which in October included Pickford Holland and Phoenix Timber) and of the food group (which included Union International). Investors can draw no firm conclusions from such a patchwork, except the continuing need for caution and selectivity.

THE RUHR

No Money for Coal

Düsseldorf

ANXIETIES of German coalmining in the Ruhr have often been a point of debate in German political life. The Christian Democratic Union this summer fought the elections for the Diet of North Rhine Westphalia partly with a slogan: to rescue German coal and to rescue the jobs of German miners from the dread competition of the international flood of oil. So when, just before the elections, the miners demanded a wage increase of 6 to 8 per cent—a demand which had no justification whatever in the economic situation of German coalmining—they were in a disagreeable impasse. This impasse, however, was solved by a generous promise by the Federal Government and by the Government of North Rhine Westphalia to contribute DM 200 million to the costs of this wage increase in the form of a special contribution to the miners' insurance fund.

Now, four months later, it appears that this promise has not been honoured. After a rather prolonged tussle the Government of North Rhine Westphalia last week refused to bear its share of the burden. The argument that major settlements in the field of economic policy are the responsibility of the Federal Government and that a financial contribution of a Land Government would create a bad example is valid in itself. But did not the Land Government itself create this bad example by dragging the coal question into the election struggle and promising the miners their wage increase?

To make things worse, the press service of the Social Democrat Party was able, recently, to publish a letter which Herr Blank, Federal Minister of Labour, had written to Herr Burckhardt, Chairman of the Mine Owners' Federation at the end of June. This letter contained a clear promise to shoulder the wage increase in the form mentioned above. But, pending the dispute with Düsseldorf (seat of the North Rhine Westphalian Government), the Federal Government too, so far, has paid not a D-Mark. It is no wonder that the mine-owners are asking whether they have not been the dupes of Bonn, manœuvred into shouldering a load that they cannot really carry unaided.

CURRENCY BOARDS

Keeping In Step

AS Africa grows to independence the currency boards of colonial days, automatically issuing and redeeming local currency on demand against sterling, no longer fit its needs. The East African Currency Board has been quick to meet these changing needs; by shedding the rigidity of the old style board it now provides the countries it serves—Aden, Kenya,

Tanganyika, Uganda, and Zanzibar—with the necessary rudiments of a central banking mechanism. The member countries continue to enjoy the advantage of a single currency, and the two independent states, Tanganyika and Uganda, have avoided the expensive business of setting up their own central banks.

Two years ago the board left London to settle in Nairobi, and representatives of the member countries, with the Bank of England as technical adviser on the side line, now make up the board. In its dealings with member countries the board treats each member as a shareholder according to the amount of currency it has in circulation. This formula applies to the sharing of the board's profits, to capital distributions, and also in the fixing of each government's share of the fiduciary issue. Until recently the board could hold only sterling securities; now it can hold local securities up to a total of £EA20 million. The board acquires local securities either by direct subscription, by purchase in the market, or by the rediscount of Treasury bills. The board's rediscount rate for local treasury bills is ½ per cent above the local tender rate which in turn is always ⅛ per cent below the London Treasury bill rate—the charge on the issue of local currency being ⅛ per cent.

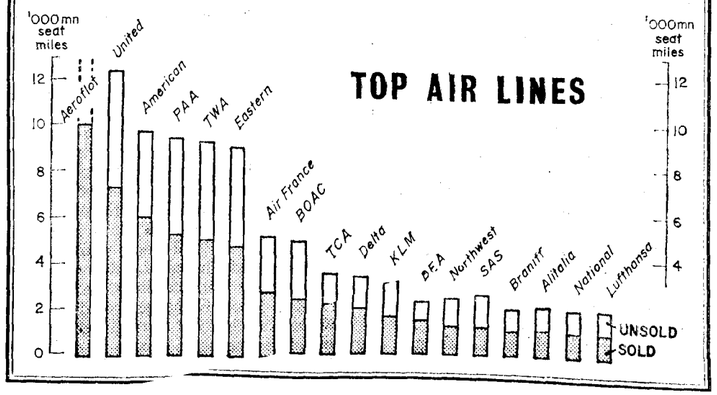
To ensure the adequate financing of export crops over peak harvest periods the board now lends for crop finance by the discount of commercial bills and by advances against security. The rates charged in both cases are at present 5½ per cent. The crop finance bill provides a useful addition to local money market securities, and to strengthen the local market the board insists on a larger margin for sterling securities when making advances than for local securities. Since May the board has been acting as a banker's bank by maintaining accounts for the commercial banks.

Aviation's Big League, 1961

FIGURES released in Moscow give for the first time some indication of how Iron Curtain airlines rank besides those of the West. Aeroflot emerges as unquestionably the biggest air carrier in the world, with nearly 50 per cent more traffic than the biggest of the American giants, United. Only the proposed Pan American-TWA merger could beat Aeroflot for size. The Russian figures do not give the capacity of the airline, as distinct from the proportion of seats that it managed to fill last year, but returns for its 93 members published by the International Air Transport Association do and an attempt has been made to show their ratio of full (shaded) to empty (white) seats on the chart.

On average, any airline that failed to sell at least 55 per cent of its seats was in for a bad time. In the big league, this included such giants as TWA, Eastern, Air France, BOAC, KLM, Northwest, the Scandinavian SAS (less than 50 per cent sold) Alitalia, National and Lufthansa—ten out of the 18 top names included in the table. It does not automatically follow that airlines selling more of their capacity managed to make a profit; BEA, with passenger loads of more than 63 per cent did not and Swissair, which sold only 51 per cent, did not come too badly out of the year. Freight is now beginning to play an important part in deciding an airline's profitability and big jets need to carry a ton of freight on each flight to break even. But of IATA's 93 members, 21, including the national airlines of India, Austria, Belgium, the Scandinavian countries and the United Arab Republic, filled less than half their seat capacity—a record that is bad for them and bad for aviation.

Of the 3,319 aircraft and helicopters owned by IATA members, 572 were jet and 234 of these were built by Boeing; another 604 were turbo-prop, 299 of them Viscounts. But the DC3 remains the most widely used of them all, accounting for one-sixth of the IATA-owned fleet with 568 in service.



This has greatly reduced the physical movement of cash and the commercial banks can now keep less in their vaults. So far the board has been able to carry out its new tasks without being seriously hampered by existing regulations ; but if it is to continue to develop its activities then it will need additional powers.

STEEL OF WALES

£25 Million Debenture Offer

THE Iron and Steel Holding and Realisation Agency is to sell the £25 million 5¾ per cent second debenture of the Steel Company of Wales to the public next week. This will leave ISHRA's cupboard practically bare, apart from the ordinary shares of Richard Thomas and Baldwins; but their sale is precluded by industrial, as well as political, uncertainties. The Steel of Wales stock is a second debenture (£40 million of a 5½ per cent first debenture was included in ISHRA's massive sale of steel prior charges in March 1961) and it has an unusually wide spread of redemption dates from 1964 to 1987 ; an attractive yield was called for and this confronts ISHRA with a big capital loss on the operation. With the issue price at £88½ (spread over in three instalments with the last one not due until July 1963) the offer should be fully subscribed, for it offers a running yield of £6 9s. 9d. per cent and a gross redemption yield to 1987 of £6 15s. per cent. The proceeds of the offer will amount to £22,125,000, against ISHRA's book cost of £27,025,000. ISHRA's remaining interest in Steel of Wales is an £18 million loan repayable by the company by the end of 1964.

With the offer came the announcement of a good but not unexpected recovery in the profits of Steel of Wales in the six months to end-September. Before all charges these amounted to £11 million, compared with £7½ million in the first half of the year when they were badly hit by the bricklayers' strike. After depreciation of £9 million but before interest and tax charges, profits for the full year are expected to be about £9.5 million, compared with £14.9 million for 1960-61 which, in turn, was sharply below the £22.3 million of 1959-60. Though the new strip mills of Colvilles and Richard Thomas and Baldwins have intensified competition in sheet products it can reasonably be assumed that profits are now running at a higher annual rate for Steel of Wales, which, together with John Summers, stood to gain most from last February's price increases.

Productivity (Sic)

DEFINITIONS of productivity are often highly misleading, as Mr M. Seaman, head of the Department of Industrial Engineering and Management at Loughborough College of Advanced Technology pointed out to the Institution of Production Engineers at their conference this week. To give 'a true understanding of the approach to modern negotiations and training,' Mr Seaman gave his definitions as follows:

1. '*Productivity is proportional to the level of Industrial Engineering and Applied Management multiplied by the capital power in production and services per operator of the population.*

2. '*Productivity acceleration is proportionate to investment in education and training and in research and development, multiplied by the level of industrial engineering and applied management multiplied by a capital power in production and service equipment per operator of the population.*

3. '*The maximum level of applied Industrial Engineering and Management is equal to the greatest product of technical and applied engineering management times the diversity of high level skills per head of the population.*'

Mr Seaman and people like him want a national drive for 1,000 students to study this sort of thing.

STOCK EXCHANGE

A Loose Federation

THE committee set up last March to consider the possibility of merging the various stock exchanges in this country has recommended that there should be a federation of the London, Associated and Provincial Exchanges under the control of an executive committee. This is one step forward in the fulfilment of proposals for a National Stock Exchange made by the chairman of the London Stock Exchange in March. It seems clear that in its deliberations the committee has found at least sufficient support for the idea of a National Stock Exchange to encourage it to suggest that some more formal grouping in which matters of common interest can be discussed should be established.

Among the important subjects that have to be thrashed out are members' qualifications, advertising, compensation funds and listing requirements. On all these the various exchanges have strong and sometimes conflicting views and it remains to be seen whether agreement can be reached. But the questions that are likely to prove the most difficult are dealings and commissions. In the provinces fears have been expressed that the main result of any complete merger would be more business for the London jobbers. While it is unlikely that dealings in local stocks would have to be channelled through London under any scheme for a National Stock Exchange the London Stock Exchange would probably dig in its heels about dealings between provincial exchanges in stocks in which the dealing price is effectively made in London. The federation may fail, in fact, to produce a complete merger, but it will be able to do useful work in establishing more uniform practices throughout the country.

SYNTHETIC RUBBER

Native Polybutadiene

THE plant that International Synthetic Rubber is building at Grangemouth will be the first to produce polybutadiene in Britain. This synthetic rubber is already being produced on a big scale in the United States, where there is capacity for about 120,000 tons, and in France and Italy. ISR has been importing it from Firestone's French plant for over a year, and other American-owned producers have been importing direct. The new plant, which will have the relatively modest capacity of 10,000 tons a year and cost £2 million, is intended to allow the company better to exploit the British market. The type of polybutadiene to be produced will be that developed by Firestone and sold under the trade name of Diene. Firestone claims that the molecular structure of its product gives greater resilience at low temperatures and allows a greater degree of oil-extension—that is, it can be diluted more with oil—and ISR's experience makes it back these claims.

Polybutadiene had been expected to find its main use in truck tyres, where its resemblance to natural rubber—especially its low heat build-up when flexed—would make it a suitable material. But unexpected technical problems have delayed its use here, and car tyres are now the biggest market. American and British companies still differ about its advantages for car tyres, however ; where the former are adopting a mixture of polybutadiene and the old standard synthetic, styrene-butadiene rubber, for car treads—Goodyear and Firestone are already using it in their British-made car tyres—on the grounds that it gives longer tread life. British tyre makers still maintain that polybutadiene gives little advantage under normal conditions. They prefer to use high-hysteresis forms of SBR in the tread to give a better grip on wet roads. It also has an advantage on price ; SBR now costs 21d. a lb. in Britain, while polybutadiene costs 24.85d. And while both prices may well fall, the margin may not widen much ; according to Mr W. E. Cake of the United States Rubber Company, the price needed in America to give a 10 per cent return on capital is 23.8 cents a lb. for SBR and 26 cents for polybutadiene—though this is a rather smaller difference than British manufacturers would expect.

The small capacity of ISR's plant seems a recognition of the over-capacity for polybutadiene that is likely to appear in the world over the next year or two—so that a large part of British requirements will continue to be met by imports. Shell has already postponed its plan to make the competing synthetic, polyisoprene, at its Carrington plant, and will rely for supplies on

THIS IS THE EAST...

Economic development in Asia is bringing higher living standards to these young people and to the vast population of that continent. Demand for an ever increasing range of merchandise is steadily rising. If you are interested in trade with these expanding markets, you are invited to avail yourself of the banking and information services of The Chartered Bank and its subsidiary, The Eastern Bank Limited. The combined organisation of the two banks comprises one hundred branches in twenty-seven territories extending from the Eastern Mediterranean to the Pacific Ocean.

Associated Banks: Allahabad Bank Ltd. (Incorporated in India) · The Irano British Bank (Incorporated in Iran)

without air conditioning...

will it soon be obsolete?

Build the advantages of air conditioning into your new building and you make sure it will maintain its 'newness' for years. With the present worldwide trend toward air conditioning, a new building that doesn't include this advantage faces an uncertain future in the property market of the next few decades.

As air conditioning becomes more widespread, your workers, customers, guests will come to demand the quieter, cleaner atmosphere it affords. By adding air conditioning you're protecting a huge investment at small additional cost. It's an outlay you can't afford *not* to make.

Air conditioning provides automatic all-the-year-round control of temperature, humidity, air movement and air cleanliness. And the economical time to install it is now, at planning stage. Ask your architect to show you how much it can add to the value of your property.

CONTROLS BY HONEYWELL—international experts on every aspect of air conditioning—are an important part of the systems in these recently completed buildings:

- **A.E.I. Ltd, Lincoln**
- **B.O.A.C. Air Terminal, London**
- **Commercial Union Assurance Company, Exeter**
- **Imperial Hotel, Torquay**

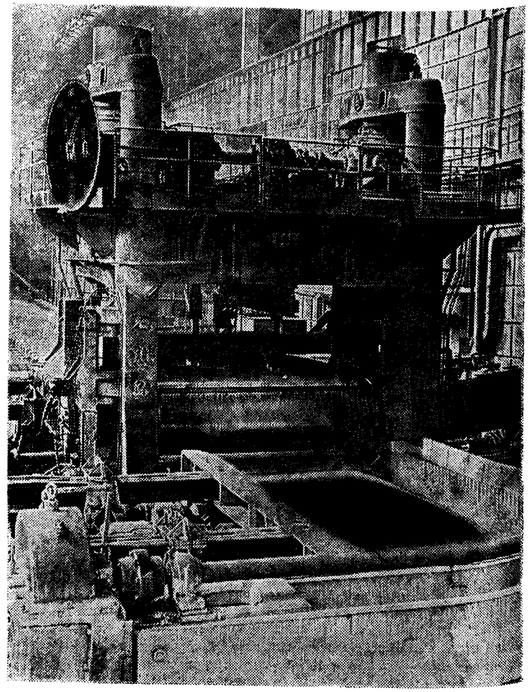
IRON & STEEL MANUFACTURING MACHINERY from IHI

where a century of integrity is your assurance of quality



IHI's many-sided activities include the manufacture of all kinds of machinery used in the production of iron and steel—blast furnaces, rolling mills, slabbing and blooming mills, tube mills, cranes, etc. The quality of these products is guaranteed by IHI's century of experience and its long-standing policy of complete after-service. Increasing exports of IHI steel mill equipment abroad indicate widespread recognition of this engineering capability. For example, Brazil's Usinas Siderúrgicas Minas Gerais S.A. is now equipped with blast furnaces, a rolling mill, and other equipment from IHI.

Besides iron and steel processing machinery, IHI manufactures ships, engines, boilers, and heavy machinery for use in the chemical, construction, power generating, and mining industries. Brochures outlining IHI's capabilities and our informative "IHI Letter" will be sent on request.

IHI ISHIKAWAJIMA-HARIMA HEAVY INDUSTRIES

Ishikawajima-Harima Heavy Industries Co., Ltd.

Head Office: Ohte-machi, Chiyoda-ku, Tokyo, Japan. Cables: IHICO TOKYO. **London Representative Office:** 5-7, Houndsditch, London, E.C. 3, England. Tel. Avenue 6351. its American plants and that about to start production at Pernis, in Holland. And though tyres will probably be the biggest users of ISR's polybutadiene, it will have other uses as a rubber. It will also replace SBR in a big non-rubber application, reinforcing polystyrene to produce the high-impact varieties of this plastic.

GRAMOPHONE RECORDS

Hits Missed

SUMMED up as a business in which manufacturers have been increasing the value of their sales at twice the percentage rate of their output, the gramophone record business might sound to be contentedly reducing its stocks. This appearance is deceptive; it is true that one major cause of this, the expansion of the long-playing market through "cheap editions," is welcome to manufacturers such as Decca and Philips who, in contrast to EMI, went early and strongly into this field. But the other side of the story, the unexpectedly steep slump in demand for 45 rpm "pop" records in the first half of this year, is still a serious cause of worry to the industry, even though the recovery which is already well in evidence may prove to be equally steep.

Up to the end of August the 20 per cent increase in production of long-playing records accounted for virtually all the growth in output compared with the same period of 1961, but the increase in new titles, including short-playing pops, was undiminished. This, as in book publishing, is the trade's main problem—sharpened by the feverish urge to make the utmost out of the notoriously faddy and unpredictable teenage market which it has created. Most pop records are over-produced from the start, since few are successful but any of them might be, and manufacturers and dealers would rather risk waste than be caught hopping. Recording fees, promotion and distribution costs, and stocks do not therefore diminish in proportion to sales or even to total output.

Nothing is likely to change the fluctuating nature of the demand for short-playing popular records, nor make much difference to the dependence of the industry on these for probably well over half its total sales. Nobody now expects great rewards from stereo, which has proved to have mainly specialist appeal—though it has added to stock problems. Lower-priced LPs, both popular and classical, have certainly helped to stabilise as well as expand the market as a whole; possibly 60 per cent of all 33⅓ rpm records sold are now "cheap"—when compared with the retail price of 38s. (including 45 per cent purchase tax and 33⅓ per cent retail margin), still regarded as standard for a full size LP. The comparison itself is still regarded by the industry as a means of boosting low-cost re-issues, and while content to take lower profit margins on these it remains defensive towards the too-numerous full-priced LPs on which large recording fees have been paid. Yet would the public object to a smaller choice if this was a means of bringing down the prices of all records?

SPAIN

The importance of Being a Debtor

Madrid

THE ELMA (Argentine) shipbuilding tender, so much coveted by all big shipyards of the world before Spain took it from under their noses, is still hanging fire, at least in some aspects. It has been reported before that the German yards tendering were too expensive, that British yards failed because of the price in spite of favourable credit facilities, while Japanese shipbuilders were the cheapest, but not flexible enough in credit terms. Finally, in any case, the entire $50 million order ($42 million for 11 freighters and the rest for ancillary material) went to Spain, which had not put in the lowest bid (Japan was cheaper), but which offered the chance of a final liquidation of a 15-year-old wheat debt under the Franco-Peron Agreement of which some $17 million was still outstanding. So in mid-August the contract was signed, allotting the construction of the 11 freighters to the Spanish Shipbuilders' Union group with the proviso that the financial problems of the payment would be thrashed out between the two Governments within sixty days.

The first indication that everything was not plain sailing was a Buenos Aires announcement that looked very much officially inspired and which listed all Argentina's claims with the utmost frankness. These claims included the liquidation of the Franco-Peron debt, as well as the much older "Chadoypf" claims (from the time when Count Guadalhorce had built the Buenos Aires Underground, some of the shares of which were in Spanish hands), the Chade-Segba arrangement, payment for Underground carriages ordered in Spain, and a change from bilateral to multilateral trade. In fact, all the issues pending between Madrid and Buenos Aires were listed as linked with the shipbuilding deal. Any global settlement of these would have proved a formidable task.

For such a task, two months would have proved extremely short, even if full use had been made of them. But for some undisclosed reason both sides allowed things to drag. Even the Argentine Embassy in Madrid seems to have been taken by surprise when the list of claims was published; but all insistence on the urgency of sending a Spanish mission to Buenos Aires or an Argentine mission coming to Spain proved useless. It was not before the first days of October that the Spanish shipbuilding group sent its secretary to Buenos Aires, just one week before the two-month period reserved for financial discussions was due to expire.

Slow motion on the Argentine side may not be surprising in a country beset with serious political problems. On the Spanish side it would seem that the government itself has been divided on the issue. The departments most interested in exports and industrial development were very much in favour of accepting Argentine suggestions (although not without some minor modifications) so as not to lose so big an order. Financial departments, however, wondered whether such an order—based on the liquidation of old debts which would force the Madrid Government to finance the deal to a very large extent without much attractive foreign exchange—would not prove a price-boosting and inflationary factor; and wondered about the wisdom of exchanging the comfortable long-term position of a debtor for the equally long-term, but much less comfortable, situation of a creditor.

On October 16th—deadline day—a high official of the Spanish Government left for Buenos Aires to ask for an extension of the two months' negotiation term. If Argentina agrees to it, this will probably open another period of stubborn haggling over a complicated financial arrangement.

FRANCE

Pulling Up Wages

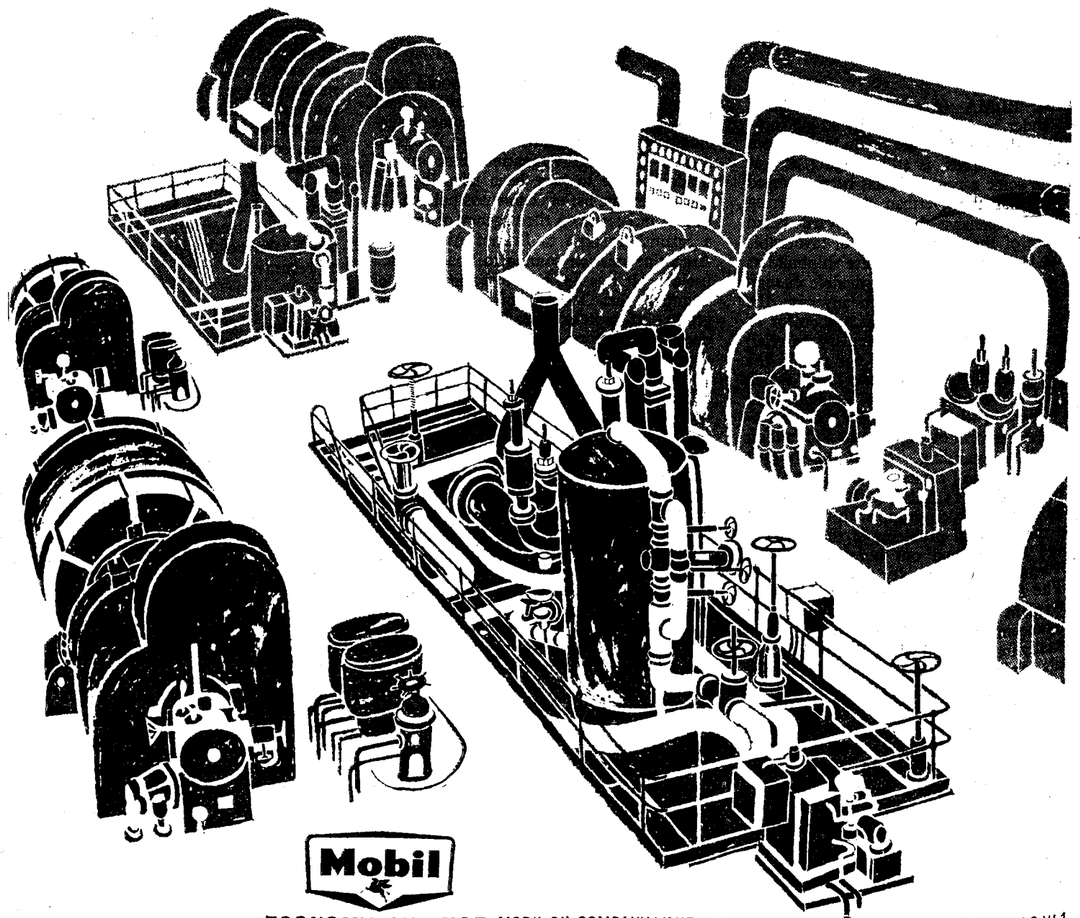
Paris

OVER the coming two months the French Government will introduce a series of social measures. The nearness of the legislative elections has clearly influenced events. On 1st November the minimum wage is to be raised by 4.5 per cent and, in Paris, will reach NF 1.80 an hour; as, at the same time, statutory deductions from wages in the provinces are being reduced, the minimum wage will, in most cases, be effectively raised by 5 per cent or more. This amount is exceptional; an increase of this size has only taken place once before, in January 1959, when it was intended to cushion the effect on the lower income groups of the devaluation of the franc. This time the French government is adding to the statutory increase of 1.7 per cent to compensate for the price rise this summer a further increase of about 3 per cent, as an anticipatory bonus on the expansion of the French economy (expected to be some 5.6 per cent in 1962). Never, until now, has the government conceded to the lower income groups such a right to share in the fruits of economic expansion. On 1st November, equally, family

Mobil Economy Service helps Richard Thomas and Baldwins

Oil & Steel

In the steel industry, Mobil Oil Company has long held a unique place: not only are we the biggest supplier of high quality lubricants to this industry, we have pioneered planned lubrication; saved our customers many thousands of pounds by introducing Mobil Economy Service; helped to set up special lubrication departments; and even trained our customers' resident lubrication engineers. The opening of Spencer Works, the largest and newest strip mill in Europe, recalls the first strip mill opened in this country—in 1937, also by Richard Thomas and Baldwins. During the intervening quarter-century, we have become a major supplier of lubricants to RTB, and they have become our biggest customer in the steel industry. All round the world, Mobil lubricants help industry to run more smoothly.



Mobil

ECONOMY SERVICE MOBIL OIL COMPANY LIMITED · CAXTON HOUSE · WESTMINSTER · LONDON S.W.1

allowances will be increased, effectively, by around 5 per cent. On January 1st, major salary increases will be introduced for civil servants and employees of nationalised industries. Finally, old people will receive a 10 per cent increase in their pensions, and widows will have their social security rights extended.

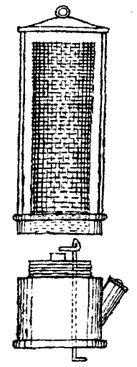
The cost of these reforms has not yet been worked out. But it is certainly to be reckoned in thousands of millions of new francs. The measures for civil servants and employees of nationalised industries alone will exceed 1,400 million francs. It is extremely likely, also, that the rise in the minimum wage, intended not to deprive the lower income groups of the benefits of expansion, will speed up the rate of wage increases, which in France currently amounts to more than 9 per cent per year. Employers are indeed anxious not to compress the income hierarchy, and to give the managerial grades—backbone of France's socio-capitalist structure—an increasingly favoured position compared with the lower income groups. The Government's decision, therefore, may well result in bringing the annual rate of wage increases next year up to 12 per cent or more.

These increases, at the same time, largely compensate a sharp rise in the prices of consumer goods this year (5.2 per cent from September, 1961). The unions, indeed, find them quite inadequate; they wanted increases of 30 per cent for the minimum wage, 6 per cent more for employees of nationalised industries, and 3 per cent more for civil servants. But they are accepting the present increases with good grace.

SAFETY IN MINES

The Lamp Still Burns

WHATEVER technical progress may have been made in the coal mines in the last 150 years, the invention of Sir Humphrey Davy is still a part of the miner's daily life. Though he relies on a battery-powered electric lamp for light, it is still the old safety lamp with which the mine deputy has a statutory obligation to check the presence of fire damp in a pit. So the impovement of the lamp for this duty is still a concern of the Safety in Mines Research Establishment; and in its report for 1961 the research laboratory describes modifications that it has been testing to make the lamp a more efficient means of disovering layers of gas near the roof of a mine. The lamp acts as a detector of methane because a "cap" forms on the flame when it is present, and an experienced miner can judge the approximate concentration of gas present from the character of this "cap." But it is obviously impossible to draw air into a normal lamp from above it, so the top six inches of air space in a mine cannot be tested.



The modifications to the lamps are all designed to test this layer of air: either by drawing air from it directly into the lamp, by arranging the air inlet at the top or fitting a "schnorkel" tube to draw air from above the lamp to the flame; or by using a rubber bulb to obtain a sample of gas from near the roof which can then be injected into the lamp—a technique suggested by Sir William Garforth in 1883. The world of modern science is beginning to catch up on detecting gas, however; the SMRE is developing an electrical gadget called a pellistor that can detect small quantities of gas. This consists of a heating coil embedded in a pellet; if the composition of the gas around the pellet changes, so does the temperature inside the pellet. This alters the resistance of the coil, which can be measured and indicates the changes in the composition of the gas. Pellistors are to be tested as gas-detector alarms on electrical machinery, but for the present, at least, the lamp will still be borne by the mine deputy.

PLASTICS

Toxic Boxes

MOST plastics are virtually inert, but some of the substances that are mixed into them to alter their properties are highly poisonous. This would only be a problem for those who make a habit of eating plastics if it were not that food can leach these chemicals out of them. To control this hazard several countries on the Continent have brought in legislation that severely, and in some cases perhaps unnecessarily, restricts the plastics industry. The second report of the toxicity sub-

Payments Sophistication

In their constant quest for refinements the Government's statisticians have for the first time placed the current account of the balance of payments on a seasonally adjusted basis. The intention is to assist in determining the underlying trend in the balance of payments by eliminating seasonal factors.

The figures suggest, comparing the last two columns of the table, that seasonal factors are favourable for the United Kingdom current account in the first half of the year and unfavourable in the second. The unadjusted figures indicate that the bulk of the improvement in Britain's current balance over the eighteen months to July 1962 occurred in the first half of 1962. The adjusted figures, however, suggest that the big improvement in fact occurred in the second half of 1961—the current balance rose by £97 million—and that the improvement in the first half of 1962 had lost some of its force with an increase of only £36 million. This half-yearly seasonal variation is mainly in invisible transactions, with the payment of the interest on the North American loans at the end of the year being the dominant factor. Seasonal influences on imports and exports in the first two quarters are about the same; both are seasonally high. In the third and fourth quarters the seasonal differences in trade cancel out; exports are seasonally low in the third quarter by some £25 million, but they pick this up in the Christmas quarter.

The statisticians issue a word of warning with these new figures. The seasonal adjustments are derived from series of payments figures that cover only a short run of years. They will improve as the series become longer, but at the moment these new figures should be interpreted with caution and treated as subsidiary to the unadjusted figures.

committee of the British Plastics Federation approaches this problem by seeking to establish standards of toxicity in plastics.

In this report, tests have been suggested which will measure the quantity of chemicals leached out by food; methods of analysis are given in detail. The toxicity of 214 chemicals commonly used in plastics manufacture is listed in "toxicity factors": from 1,000 for the least toxic to 2 for the most. The factors are intended for use with data on the amount of the chemical that might be extracted by food, to arrive at a "toxicity quotient," which must be below 10 if the plastic is to be used in contact with foodstuffs. None of the most commonly-used plastics, such as polythene, are toxic; and those substances which are toxic are used in small proportions and, for the most part, are resistant enough to leaching to make them less dangerous than the factor alone suggests.

The system provides manufacturers with standards against which to compare their products. Another committee is considering the situation on the Continent, where the difference in standards between the countries, and the increase in trade between them, makes agreement to cover the whole of Europe an urgent matter.

FUEL DEMAND

Think of a (Big) Number

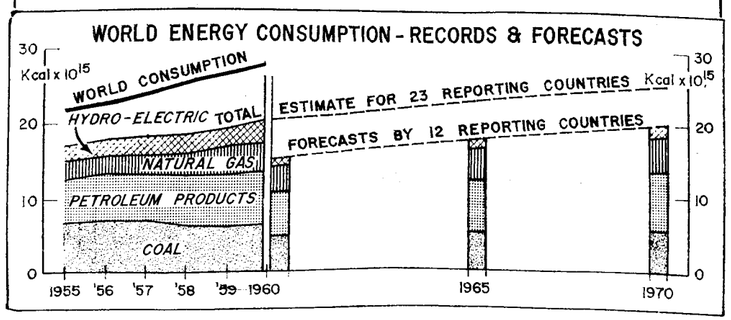
MAKING long-term forecasts about energy demand is less fashionable nowadays than it was some years ago. Only 28 of the 59 nations represented at the World Power Conference that began in Melbourne this week offered reports to the conference on the development of their own energy market and resources (covering perhaps half of world consumption); and of the 28 only 21 offered firm forecasts for the future.

The attached chart, prepared by the general reporter to the conference on this subject, shows how the forecasts for 1965 and 1970 of some of these forward-looking countries' forecasts add up, and rates their figures up to cover the other countries that provided detailed figures of what had been happening. But the reporter did not deduce from this any forecasts for world consumption of energy. Experience over the last decade has shown that the countries that do not go in for elaborate energy balances and forecasts—many of them underdeveloped—have been those in which demand has grown fastest.

Between 1955 and 1960, it appears, there was an annual growth of about 5 per cent in world energy consumption, but of only about 3 per cent in the 28 countries reporting on this at Melbourne; consumption among the rest grew much faster. Now they are forecasting a 3 per cent rate to continue during the period 1960-70; although some of these countries use most refined methods of energy forecasting, the aggregate result, in 1962 as in 1960, comes out not much different from straight extrapolation.

The World Power Conference expresses its estimates of energy consumption in calories; this is a logical shift from the old "coal equivalent" tonnage, but means mighty big figures. The figuring has to be in thousands of kilocalories x 10^{12}, or if one prefers it, kilocalories x 10^{15}. Energy statisticians are sorely in need of some new names for big numbers.

Between 1955 and 1960, on this reporting, there was a big shift in the pattern of different fuels used commercially; coal's share fell from nearly 40 per cent to under 30 per cent, while that of oil and natural gas rose significantly. But from 1960 to 1970 the forecasters are expecting less change; they show coal's share dropping from about 28 to about 26 per cent, oil's remaining stable at just over 40 per cent, and natural gas rising only from nearly 23 to nearly 24 per cent. This sample of forecasting countries—the ones who gave figures for both 1965 and 1970—is a small and probably biased one. But their figuring does raise the question whether the 1955-1960 switch was a once-for-all one—and now largely completed?



SHORTER NOTE

The Minister of Aviation has ordered an investigation into the financial affairs of the British Overseas Airways Corporation to be carried out by a company of chartered accountants who will report back to the ministry. The corporation itself is already employing two teams of management consultants.

*

Guest Keen and Nettlefolds has made an offer worth £6 million for the shares of Acton Bolt, which is controlled by S. Pearson Industries. A full acceptance of the offer (and more than an 80 per cent acceptance is already assured) will involve the payment of £357,000 in cash and the issue of 1,666,000 shares which at the current price of 67s. 9d. are worth £5,640,000.

*

In sharply contrasting results from the furniture industry Harris Lebus made a net loss for the year to July 13th and passed its dividend while Phillips Furnishing Stores achieved an advance in trading profits from £216,000 to £352,000 in the year to June 30th and has declared a dividend of 5 per cent—its first payment since 1957-58.

*

Amoniaco Espanol, a newly-formed company owned by Esso and Spanish interests, is to build a nitrogen fertiliser plant at Malaga. The plant is scheduled for completion in 1964 and will be built by the M. W. Kellogg company of New York. It will produce a variety of nitrogenous fertilisers based on ammonia from a 110,000 tons-a-year plant. The ICI steam-reforming process will be used to provide synthesis gas for the ammonia plant.

*

Investors will have an opportunity next week to take a stake in a new growth industry, betting shops, with the placing of 300,000 2s. shares in Mark Lane (Turf Accountants) which has shops in Dagenham and other parts of south-east Essex. About 200,000 shares will be available in the market at 2s. 7½d. each, to yield 9½ per cent.

More financial and insurance companies

direct their advertising to Latin America

in Visión/Visão than in any other magazine

Visión

Bankers and insurance firms play a vital role in the fast-growing industrialization of Latin America, in its business and its commerce. Their services are ever present from the very beginning: from the leasing of land, through the construction of the plant and installation of machinery and equipment. Once in operation, the firm cannot exist without the services of banking and insurance for working capital, purchasing, trade credit financing and investments. And besides promoting their branches and representatives to local industrialists, modern international bankers use Visión and Visão to encourage correspondent banks to use their facilities overseas. That's why Latin America's largest newsmagazines consistently carry the most financial and insurance advertising.

A YEAR OF SUCCESS

SIR ISAAC WOLFSON, BART., Chairman and Managing Director

THE GREAT UNIVERSAL STORES LIMITED

in his Statement for the year ended 31st March, 1962, said:

FINANCIAL RESULTS FOR THE YEAR. The trading profit, with other income, is in excess of £30 million, and the profit of £27½ million before taxation shows an increase of £1½ million, or nearly 6 per cent.

Without enlarging unduly on the problems which faced the business community in 1961/62, it will have been apparent that there was less buoyancy in the economy than previously. What amounted to two Budgets were considered necessary and these introduced fiscal changes which were intended to, and did, affect the level of public spending. It is therefore all the more satisfactory that our profits were not merely maintained but increased above the previous high levels.

DIVIDENDS, APPROPRIATION AND SCRIP ISSUE. We have decided to recommend a final dividend on the Ordinary and "A" Ordinary stock of 27½ per cent., less tax, for the year ended 31st March, 1962. This, with the 12½ per cent. already paid makes a total dividend of 40 per cent., less tax, for the year compared with 37½ per cent., less tax, declared for the previous year.

After this and the Preference Dividends nearly £8½ million is retained in the business. The Ordinary Dividend is therefore covered some 2.5 times by the net distributable revenue and some 2.1 times by the net profit for the year.

A scrip issue will be made by way of capitalisation of reserves of one new "A" Ordinary Share of 5/-d. for every three Ordinary or "A" Ordinary Stock Units of 5/-d. held.

EXECUTIVE AND STAFF. I take this opportunity of expressing my warmest thanks to all members of the Board, executive and staff for their loyalty and splendid efforts during the year.

CURRENT TRADING AND CONCLUSION. The first four months' trading is comparable with the previous year, and I am hopeful that the profits for this year will be as satisfactory as the year under review. Demand inflation is now over and we must do everything in our power to contain cost inflation, which would inevitably reduce profits standards.

No one would be foolish enough in this uncertain age to face the period ahead without some concern, but my confidence in the country and my hope for economic expansion with stability give me implicit faith in the future.

Harrisons & Crosfield, Limited

PROFIT & DIVIDEND: Year ended June 30, 1962.
The profit before tax was £95,571 compared with £98,526 for 1960/61. A dividend of 25 per cent is recommended (25 per cent including special bonus).

RUBBER CROPS & PRICES:

1961/62	3,605,300 lb.	21.24d. per lb. net.
1960/61	3,273,900 lb.	23.51d. per lb. net.

CURRENT FINANCIAL YEAR: Estimated crop is 4,109,000 lb. and programme provides for 172 acres replanting.

Annual General Meeting 12 noon Wednesday, November 28, 1962.

H. A. SAUNDERS LIMITED

(Car Distributors)

The twenty-seventh Annual General Meeting of H. A. Saunders Limited was held on October 30th in London. **Mr G. W. Saunders** (the chairman) presided and, in the course of his speech, said:

I am this year placed in a very difficult position. Firstly, I must report on a set of accounts which reflect a very good year's trading, during which profits have been made comparable to the preceding years, and more than adequate to give cover for the Ordinary Dividend. Secondly I have the less pleasant duty of advising Shareholders that the current unsettled business conditions have had an adverse effect on the retail moror trade. We have, however, not been altogether unsuccessful in our efforts during the first half of the current year.

The Austin Motor Company are now producing an unexcelled range of vehicles both in the private and commercial field, and it is our deliberate policy to stock a comprehensive selection of these and other B.M.C. models at all our depots.

Referring to the company's 50 per cent shareholding in Bristol Tractors Limited, the chairman said that a wholly owned subsidiary, Bristol Saunders Sales Limited, had been formed to increase the sales of Bristol Tractors both in the United Kingdom and throughout the World. Another wholly owned subsidiary, Bristol Saunders S.A.R.L., had also been formed in France to promote particularly the sales of machines in the Common Market area. In the first five months' trading a small profit had been made. The report was adopted.

"Saunders for your Austin."

THE TAP & DIE CORPORATION LIMITED

Salient points from the Statement of the Chairman, Mr. D. C. N. Lloyd-Lowles, at the Annual General Meeting on 25th October, 1962.

★ The year ended on 31st May, 1962, marks a definite stage in the growth of the Corporation. We have broadened the base of our business by completing the acquisition of the machine tool division of Smart & Brown at Biggleswade. I believe this has been an exceptionally good buy and results since acquisition have much encouraged us.

★ Whilst turnover in taps and dies again showed an increase and our total sales were higher, demand from the home market was lower. Exports, however, took up much of the slack.

★ Profits showed an increase from £827,181 to £854,096, or over 3%. We are very much beginning to feel our strength as a single unit and I see no reason to doubt a prosperous future.

★ Current trading shows the same trends as last year, but, given any reasonable improvement in the general economic and political situation, we would expect to maintain our profits.

★ We recommend a final dividend of 12½%, as last year, with a virtually unchanged cover on the increased capital.

REX TRUEFORM CLOTHING COMPANY

A VERY SATISFACTORY RESULT

The twenty-fifth annual general meeting of Rex Trueform Clothing Company Limited was held on October 31st at Salt River, Cape, Mr **Bernard J. Shub** (Chairman) presiding.

The following are extracts from his circulated statement:

The Group's trading profit for the financial year ended June 30, 1962, amounted to R540,811, which compares with R532,039 in 1961. This is again a very satisfactory result in view of the difficult trading conditions experienced during the year under review. The demand for the Group's products has continued to grow, and substantially higher sales in both the domestic and export markets have assisted in offsetting price increases in certain raw materials and partly absorbing the gradual rise in operational costs. We have furthermore, almost without exception, held our selling-price levels with the effect that such higher costs have not been passed on to our distributors and thus to the general public.

The Group's manufacturing units are working to capacity and at this stage orders for forward delivery indicate that this high level of production will continue. The financial requirements of the expanded volume of business necessitate a conservative dividend policy and the Directors have therefore recommended an unchanged dividend on the Ordinary and "A" Ordinary shares, namely 12½ per cent.

During the last few years there has undoubtedly been a pause in the rate of development of Commerce and Industry, nevertheless we share the confidence expressed by members of the Government as well as many industrialists and financiers that there is now scope and justification for an upsurge of economic activity.

CENTRALISATION OF OPERATIONS

The Company acquired an important site in Victoria Road, Salt River, which will enable it to extend its main factory building and thus to centralise and consolidate its manufacturing and administrative operations. This new building should be completed by the end of 1963, and the additional space will provide scope for meeting the demand for our internationally-known products, and will also enable us to render an even better service to customers everywhere.

The estimated total cost of the building extension programme is R460,000, and negotiations are under way to finance this project by means of a new issue of debentures, ranking *pari passu* with the existing debentures.

From the final accounts you will notice that an amount of R200,000 is transferred to General Reserve which now stands at R800,000. Also, an amount of R7,463 is transferred to the Plant, Vehicles & Equipment Replacement Reserve. In effect the entire Plant, Machinery, Vehicles, Fixtures and Fittings and Office Equipment, which cost R645,055, now stand in the accounts at R1.

The Company's development of the factory at Coatbridge, Scotland, is progressing satisfactorily, and there is a gradually growing acceptability in the United Kingdom for products bearing the Rex Trueform brand name. The Group's exports from the Republic have increased, and we are continuing to foster this development by all the means at our disposal.

The report and accounts were adopted.

EAST ASIATIC RUBBER ESTATES

The thirty-ninth annual general meeting of East Asiatic Rubber Estates, Limited was held on October 25th in London, **Mr H. T. Karsten** (the chairman) presiding.

The following is an extract from his circulated statement:

Although the crop for the past year fell short of the 1960-61 output by less than 1 per cent, sale proceeds were reduced by over £103,000 or some 5d. per lb., i.e. about 20 per cent. Some reduction in production cost has been achieved, and this, together with the lower export duties and the lower taxation provision, has held the total decline in earnings to some £31,000.

A further 535 acres were replanted during the past year and including the 540 acres scheduled and partly replanted during the present year, the total replacement of old seedling rubber will by the end of this year amount to some

64 per cent of the total planted area of our estates. For the present year our estimate is again some 4,610,000 lbs.

Commenting on the further decline in the price of natural rubber during the past year, the chairman said: this decline is, of course, mainly due to the increasing competition by the synthetic rubber industry. It is generally believed that values may drift still further, and though this possibility cannot be overlooked I am not too pessimistic as we are undoubtedly getting near the competitive level with synthetic rubber.

The report was adopted and a total dividend of 10 per cent approved.

SEAPORT (SELANGOR) RUBBER ESTATE

RECORD CROP

The annual general meeting of Seaport (Selangor) Rubber Estate, Ltd., will be held on November 22nd at 1-4, Great Tower Street, London, E.C.

The following is an extract from the circulated statement of the chairman, **Mr J. A. Clubb, MM, MSM:**

Our crop of 1,142,000 lb. exceeded last year's by 38,000 lb. and is the largest harvested by the Company. It represented a yield per mature acre of almost 900 lb. Having received during the year the fourth and final instalment of anti-inflationary cess amounting to £926, against £2,777 refunded in the previous year, and having set aside this year a larger sum for depreciation in keeping with present-day replacement costs, the profit after taxation was £32,260 (£39,327). From the balance available £865 has been transferred to Capital General Reserve and £8,699, equivalent to the year's replanting expenditure, to Replacement of Planted Areas Reserve. A dividend of 20 per cent less tax is recommended, the same as last year. We had the opportunity during the year of participating in a promising oil palm development project in North Borneo which I am glad to report has made a good start. Our total commitment is £50,000 and a balance of £37,500 remains to be called over the next four or five years.

In May this year we received notification that most of Seaport estate might be required by Government in connection with the new Kuala Lumpur airport. This does not necessarily mean that all or even part of the area concerned will be acquired and definite information is still awaited. During the year Government acquired an additional 13 acres for extending the airport approach road, making a total of 53 acres for which compensation has been received. Since the end of the year a further 11 acres, mostly old rubber, has been acquired for a similar purpose.

No further mining has been done on Seaport by Petaling Tin. Application has, however, been made to Government for renewal of the mining lease covering 94 acres which expires in October 1963. Your Board will pursue at an appropriate time the Company's application to Government for re-conversion to agricultural title of land held under mining lease.

The crop for the current year should be approximately the same as for the year just closed. For the three months to September 1962, 265,000 lb. has been harvested, compared with 321,000 lb. for the similar period in 1961. With some steadiness in the rubber price presently indicated Seaport should be able to report satisfactory results for the current year.

HALLMARK SECURITIES LIMITED

The Annual General Meeting of the Company was held on October 30th in London. The following are extracts from the statement by the Chairman, **Mr. Sidney Bloch,** circulated with the Accounts.

GROUP PROFITS INCREASED

The Group Profits (gross) amounted to £873,389 (*£721,564*). This substantial increase has been largely offset by increased interest charges. Net Profits (after Tax and minority interests) are £313,456 (*£288,227*).

FINAL DIVIDEND AND SPECIAL PAYMENT

The Final Dividend is to be 37½ per cent less tax (compared with forecast of 30 per cent) and makes a total for the year of 67½ per cent (*60 per cent*). In addition a special payment of 7½ per cent less tax is proposed to redeem the implied promise made last year that the final dividend would have been higher but for the Chancellor's plea for restraint.

BONUS ISSUE: ONE FOR ONE ORDINARY

Bonus issue proposed of one share for each Ordinary held. Estimates of profits for the current year are satisfactory, and in the absence of unforeseen circumstances, your Board expects to recommend dividends of not less than 33¾ per cent (less tax) on the Ordinary Share Capital as increased by the proposed Bonus Issue.

ASSETS, PROFITS AND DIVIDENDS

Total Assets exceed £10 million for the first time.

Figures for last five years are:—

	Total Group Assets	Profits after Tax	Ordinary Capital	Gross Dividend Distributed
1958	£1,900,000	£2,500	£67,028	—
1959	£4,500,000	£117,000	£69,528	£77,000
1960	£4,300,000	£137,000	£214,966	£115,000
1961	£6,300,000	£288,000	£287,579	*£198,000
1962	£10,300,000	£313,000	£347,970	*£235,000

*The special payment of 7½ per cent now being paid is included in the 1961 figure and is excluded from the figure for 1962. The increase in Gross Dividend for 1962 is equal to 18.2 per cent.

HOUSING

Sales of houses numbered 536 against 508 in 1961 and profits were also ahead of last year. There has been some slowing down in house sales during the summer due to high interest rates, restraint on demand generally and to difficulty of obtaining mortgages. With mortgages now easier to obtain there are definite signs of an upturn in demand. In recent weeks the Group's sales have been most encouraging.

SUBSIDIARIES

Barking Brassware Co. Ltd. maintained a full order book for the whole year and has again made a useful contribution to profits. Twentieth Century Banking Corporation Ltd. experienced heavy demand for funds and is operating on a sound and profitable basis. E. E. Reed & Co. (Builders) Ltd. (a housing subsidiary) is expanding its activities in the area west of London.

REVALUATIONS

Revaluations of developments to be retained will be undertaken when appropriate, but only of properties which are let and revenue-producing. A substantial surplus will, from time to time, arise as a result of these revaluations.

DIRECTORS

Sidney Bloch (*Chairman*)
Herbert Ashworth (*General Manager*)
P. N. Bower — I. R. Crammond
A. C. Draycott, F.R.I.C.S., F.A.I. — J. Hamilton
R. W. Matthews, F.C.A. (*Secretary*)

Registered Office: 26/27, Regency Square, Brighton, Sussex.

ISSUED CAPITAL

222,000 6½ per cent Cumulative Preference Shares of £1 each.
6,959,405 Ordinary Shares of 1/- each.
Ordinary dividend for the year to April 30, 1962:
67½ per cent (less income tax).
Ordinary Share price at October 30, 1962: 22/-.

ALEX. LAWRIE & COMPANY

The thirty-eighth annual general meeting of Alex. Lawrie & Company, Limited, was held on October 31st in London, **Mr G. W. Gemmell** (the chairman) presiding.

The following is an extract from his circulated statement:

In my preliminary report in August last I said that for the Group, with the exception of the East Africa interest, the year had been a satisfactory one.

The Parent Company were able to increase their net profit to £107,463, against £105,088 and as a result, notwithstanding the loss incurred by our East African subsidiary, in view of the Group's strong reserve position and general future prospects, we feel justified in recommending a final dividend of 7½ per cent, making a total of 12½ per cent for the year, the same as for 1961.

Regarding the Consolidated Accounts, the results from the year's trading show a less satisfactory picture than was presented in 1961 and this is entirely due to a reappraisal of the situation in which our East African subsidiary, Kettles-Roy & Tysons, find themselves due to deteriorating trading conditions in Kenya, Uganda and Tanganyika.

I would report, however, that for some time now we have been adopting a policy of shaping to size to meet the current potential. Our obligations have accordingly been reduced and this has resulted in the Parent Company recovering a considerable amount of the cash advanced to the subsidiary in the form of Bills; the position therefore in this respect is now much healthier.

The report was adopted.

SECOND BROADMOUNT TRUST LIMITED

CONTINUED GROWTH OF EARNINGS

The thirty-fourth annual general meeting was held recently in London. The following are extracts from the remarks of the Chairman, **Mr E. B. Montesole, JP.**

The death of our late colleague Mr G. R. Hall Caine, CBE, is recorded with deep regret; he will be greatly missed by all those who worked with him.

Gross receipts show an increase of £1,787 to £76,623 and after deducting expenses and taxation and certain non-recurring items, net revenue is £44,175 compared with £43,194. Dividends, totalling 25 per cent, or 3d. per Ordinary 1s. Share, are recommended. We have had to contend with a standstill in the dividends received from most concerns while a few have not fully maintained their distributions.

A valuation of the investments at September 14, 1962, amounted to £1,715,906 compared with a book value of £526,453. The character and class of these remain as before and consist mainly of carefully selected equities.

We are proposing to make a further free issue of ordinary shares in the proportion of one for ten ordinary shares. The Directors hope to be able to recommend maintenance of the interim dividend of 8 1/3 per cent and a final dividend of 16 2/3 per cent, both less income tax, on the increased Ordinary Capital for the year to September 14, 1963. The report was adopted.

CAPITAL & COUNTIES PROPERTY COMPANY

The twenty-eighth Annual General Meeting of Capital & Counties Property Company Limited was held on October 29th at St. Ermin's Hotel, Caxton Street, London, S.W.1, **Mr. Leslie Marler, OBE, TD,** chairman and managing director, presiding.

The following is an extract from his statement which had been circulated with the report and accounts to April 30, 1962:

Once again I have to report a record year of continued expansion and profit. Our rental income has increased from £1,202,404 to £1,491,279, our net profits after tax from £306,367 to £351,835 with a resultant increase in dividend and a carry forward of £249,871 against £157,581 brought in.

A Public Enquiry in connection with our Knightsbridge Green Development was held in April of this year by the Minister of Housing and Local Government. The result has not yet been published, but we have received a letter dated September 17, 1962, informing us that there is every likelihood that the Minister's decision would be issued within the next two months.

You will have observed that we have recently acquired properties which have been valued at just under £4m. More than half these properties have been acquired in connection with our long-term programme of redevelopment. It is, however, part of our policy to build up a substantial reserve of developable areas and as a result of this we are now able to programme for at least the next ten years. If any justification of this policy were needed, it is only necessary to consider the extremely high prices which are being paid today for immediately developable sites; prices which, in our opinion, leave little or no room for profit: we do not intend to enter contests of this nature.

The successful share issue made in June which raised £3,400,000 discharged the Bank overdrafts and will enable your Company to take advantage of any suitable opportunities to increase our reserve of developable areas. To this end a number of negotiations are now in hand in various quarters which could result in a very large increase indeed in our development programme over the years and ensure us a continually expanding supply of sites of the highest quality.

The report and accounts were adopted.

PRETORIA PORTLAND CEMENT COMPANY LIMITED

(Incorporated in the Republic of South Africa)

The sixty-seventh Ordinary general meeting of shareholders will be held in Johannesburg on November 23, 1962.

The following is an extract from the circulated Statement by the Chairman, **Mr T. Reekie,** dated October 5, 1962.

The quiet conditions in the building and construction industries as reflected by the sale of cement continued with, however, evidence of some slight improvement during the last few months. The tonnage sold by the Company showed a small increase compared with last year. Despatches of Portland Blastfurnace Cement, however, increased substantially at the expense of Portland Cement, and this was a factor resulting in the profit for the year before taxation being R218,042 lower than that of the previous year.

Your Company has taken appropriate action to produce and market Portland Blastfurnace Cement, the sales of which have increased materially during the last few years, due principally to its lower selling price. It is by no means certain, however, that it will be possible to maintain indefinitely in favour of Portland Blastfurnace Cement the existing price differential. The advent of large tonnages of granulated slag for use in cement manufacture has a direct bearing on the scale of output of your Company's basic commodity, Portland Cement clinker. The major portion of the investment in cement producing plants is associated with the manufacture of clinker, and both cost of production and profitability are dependent largely on the volume of production and sale of clinker in the form of Portland Cement. With the expansion of the South African steel industry, larger quantities of slag will be produced, but while it may be considered desirable to market this by-product for use in cementitious material, there are, clearly, limits to the extent to which granulated slag can be absorbed by this market. The increased demand for Portland Blastfurnace Cement has necessitated substantial capital expenditure on our part.

The profit of Eastern Province Cement Company Limited, showed an increase compared with the previous year's figure due to a small increase in sales. Sales by the Cape Portland Cement Company Limited for the year were slightly below last year's level. Trading conditions in the Federation of Rhodesia and Nyasaland continue to be extremely unsettled, which has resulted in the Premier Portland Cement Company (Rhodesia) Limited operating at a lower sales level than in the previous year. The two companies manufacturing pre-mixed concrete in Johannesburg, in which your Company has a small financial interest, are in production, and this product is becoming increasingly popular.

IMMEDIATE OUTLOOK

Building plans passed do not indicate that a substantial increase in the demand for cement for building purposes can be expected. It is reasonable to expect that our overall tonnage of sales this year will be maintained at about the same level as last year. The new rail tariffs introduced on September 1st, together with the increases in price of coal and wages, will adversely affect the trading profit should selling prices remain unchanged.

THE JHANZIE TEA ASSOCIATION

The eighty-fifth annual general meeting of The Jhanzie Tea Association, Limited, was held on October 26th in London, **Mr G. A. Rainey** (the chairman) presiding.

The following is an extract from his circulated statement:

I am glad to be able to report a much better result for 1961 than those recorded in the recent past, the revenue profit of £148,849 being the highest achieved since 1956. This has been brought about by the satisfactory prices obtained at the auctions and an improvement in outturn of some 500,000 lbs. without, I would like to add, any ill effect on the quality of the teas; the increase in revenue expenditure was mainly attributable to the increase in crop. All your gardens returned higher crops, and it is reassuring to see that Boisahabi, owing to its greater outturn, has made a small profit. Seleng, regrettably, shows a loss, although considerably less than for the previous year.

Total profit, after taxation, is £92,327. Your Board recommends a final dividend of 7½ per cent making 10 per cent free of tax for the year, compared with 5 per cent for last year.

Having reported that good progress had been made in the clearing and preparation of virgin land, some of which had already been planted out, the chairman continued:

According to latest reports received from India prospects for the 1962 season are encouraging, particularly as both Seleng and Boisahabi are ahead of their 1961 outturn.

The report was adopted.

EDUCATION: BUSINESS AND PERSONAL

MERSEY DOCKS AND HARBOUR BOARD

PORT OF LIVERPOOL

INQUIRY

MASTER PORTERAGE

The Mersey Docks and Harbour Board have set up a Sub-Committee to consider in the light of present-day conditions all aspects of Master Porterage and related matters.

Any interested party wishing to submit evidence to the Sub-Committee is invited to do so in writing by December 31, 1962.

Communications to be sent to the Secretary, Master Porterage Sub-Committee, Mersey Docks and Harbour Board, Liverpool, 3.

Dock Office,
Liverpool.
October 31, 1962.

A FOREIGN LANGUAGE in a few months for yourself or your staff, with the easy ASSIMIL way. You assimilate the language and acquire the accent naturally by listening to the living language on gramophone records with an illustrated book to guide you. Preliminary and Complete Courses in French, German, Italian, Russian and Spanish. A Pitman follow-on course available for technical and commercial expressions.—Details from ASSIMIL, 79, Farncombe, Godalming, Surrey.

DIRECTORS needing able office staff (m. and f.).—Consult Stella Fisher Bureau, 436 Strand, W.C.2. TEMple Bar 0644.

FIRMS required who wish to open Branches or Factories, etc., in Israel, with a view to having a central position to export. Every support given.—Apply, Box 1644.

UNIVERSITY OF LONDON: The Stamp Memorial Lecture, entitled "Some Thoughts on Central Banking," will be delivered by The Rt. Hon. Lord Cobbold at 5.30 p.m. on Tuesday, November 13th, at the University of London, Senate House, W.C.1.
ADMISSION FREE, WITHOUT TICKET.
JAMES HENDERSON,
Academic Registrar.

THE ROYAL BANK OF CANADA.
DIVIDEND No. 301 and BONUS.
Notice is hereby given that a DIVIDEND of 90 cents per share upon the paid-up capital stock of this Bank has been declared for the current quarter and a bonus of 25 cents per share for the year ending November 30th, and both will be PAYABLE at the Bank and its branches on and after December 1, 1962, to Shareholders of record at the close of business on October 31, 1962.
By Order of the Board,
C. B. NEAPOLE,
General Manager.
October 25, 1962.

THE CHARTERED INSTITUTE OF SECRETARIES

Employers requiring the services of Chartered Secretaries to fill secretarial and similar executive posts are invited to communicate with the Secretary of the Institute (Dept. Ex. 14 New Bridge Street, London, E.C.4.

THE HUDSON'S BAY OIL & GAS COMPANY LIMITED

Hudson's Bay Oil & Gas Company, Limited and its subsidiaries had net income of $7,217,000 or 41 cents per share, for the first nine months of 1962 compared with $5,187,000 or 29 cents per share, earned in the comparable period of 1961. The company's nine month net income established a record for the first three-quarters of any year and it was 39.1 per cent. higher than the net earnings for the comparable period of last year, Wayne E. Glenn, President, said the Company's net income for the third quarter of this year was $3,157,000 or 18 cents per share, an increase of 50.5 per cent. over the $2,097,000 or 12 cents per share earned in the third quarter of last year. Gross operating income increased by $1,970,000 or 29 per cent., reflecting a continuation of record sales volumes and higher average selling prices. Total expenses were up 22.4 per cent. with almost two thirds of the increase due to greater exploration activities. Mr. Glenn said the Company's production of crude oil and natural gas liquids averaged 30,834 barrels per day for the third quarter of 1962, an increase of 3,655 barrels per day or 13.4 per cent. over production for the same period of 1961. Sales of natural gas averaged 84.4 million cubic feet per day, an increase of 27.8 million cubic feet per day or 49.1 per cent. Operation of the new West Whitecourt natural gas processing plant was a major factor in both of these increases. The Company's exploration and development drilling activities continued at a higher rate than in the prior year. During the third quarter 39 gross or 28.2 net wells were completed. This represented an increase of three gross or 7.3 net wells over the number completed during the same period of 1961. In its exploratory drilling programme the Company participated in the completion of one gross or 1.0 net oil well; two gross or 1.5 net natural gas wells and six gross or 3.8 net dry holes. The development drilling programme resulted in the completion of 15.6 net oil wells and 3.3 net natural gas wells.

DOMINION OF CANADA THREE-AND-A-QUARTER PER CENT. REGISTERED STOCK, 1956-63.
For the purpose of preparing the Interest Warrants due January 1, 1963, the BALANCES will be STRUCK at the close of business on December 1, 1962, after which date the Stock will be transferred ex-dividend.
For the Bank of Montreal, Financial Agents of the Government of Canada, in London.
JOHN H. F. TURNER,
Manager.
47 Threadneedle Street, E.C.2.
November 1, 1962.

EXPERT POSTAL TUITION

for Examinations—B.Sc.(Econ.). Law, Accountancy, Costing, Secretarial, Civil Service, Management, Export, Commercial, General Certificate of Education, etc. Also many practical (non-examination) courses in business subjects.—Write today for free prospectus and/or advice, mentioning examination or subjects in which interested, to the Secretary (G9/2),
METROPOLITAN COLLEGE, ST. ALBANS
or call at 30 Queen Victoria Street, London, E.C.4. Established 1910.

A CAREER IN PUBLIC RELATIONS

Comprehensive eight-week instructional courses beginning in February and April 1963. Details from Secretary, London School of Public Relations, 57 Duke Street, London, W.1.

FRENCH
CORRESPONDENCE COURSES
(1) Cours de Langue et de Civilisation Françaises.
(2) Basic French for Conversation.
(3) Translation Courses.
Lesson-by-lesson coaching by French teachers. Easy payments. Send for prospectus.—Mentor, 11 Charing Cross Road, London, W.C.2.

TUITION FOR B.Sc. ECONOMICS

Wolsey Hall (Est. 1894) provides Postal Courses in a wide range of subjects for the two examinations for London Univ. B.Sc.(Econ.) (three, if entrance is included) at moderate fees. 1,431 Wolsey Hall students passed London University B.Sc. Economics Exams., 1950-60. Tuition also for G.C.E., Law, Statistical, other exams.—Prospectus (mention examination) from E. W. Shaw Fletcher, C.B.E., LL.B., Director of Studies, Dept. P.17.
WOLSEY HALL, OXFORD

APPOINTMENTS

THE EDINBURGH & EAST OF SCOTLAND COLLEGE OF AGRICULTURE

Applications are invited for the post of ASSISTANT ADVISORY OFFICER, FARM BUILDINGS. Salary Grade IV, £718-£993. The appointment is pensionable.
Candidates should hold a Degree in Agriculture or Agricultural Economics or Economics or equivalent qualifications. Experience of, or especial interest in Work Study and the planning and use of farm buildings is desirable. Particulars and application forms may be obtained from the Secretary, The Edinburgh School of Agriculture, West Mains Road, Edinburgh, 9, with whom applications should be lodged within two weeks of this advertisement.
J. A. JOHNSTON,
Secretary.

WATFORD COLLEGE OF TECHNOLOGY

HEMPSTEAD ROAD, WATFORD, HERTS.
Required January 1st, LECTURER to teach LAW, ACCOUNTANCY and ECONOMICS to intermediate professional standard. Opportunities exist for more advanced work. Candidates should possess a degree or good professional qualifications with preferably teaching or good industrial experience.
Salary scale £1,600 x £40 — £1,800.
Application forms, returnable by November 12th and further details from the Registrar.

VICTORIA UNIVERSITY OF WELLINGTON
NEW ZEALAND
LECTURER IN PUBLIC ADMINISTRATION

Applications are invited for the above-mentioned post.
Lecturing in Public Administration within the School covers a wide range. Experience in one or more of the following fields would be desirable: organisation theory and practice; the history of administration; the behaviour of administrative groups; financial administration; local government administration; decision-making theory; the behaviour of pressure groups. Knowledge of and interest in comparative administration and/or the New Zealand administrative system, though not essential, would be an advantage.
The salary of a lecturer will be £1,250 per annum rising by annual increments of £75 to £1,700 per annum. The initial salary will be determined according to the qualifications and experience of the appointee.
Approved fares to Wellington will be allowed for the appointee, his wife and his dependent children. In addition actual removal expenses will be allowed within certain limits.
Further particulars and information as to the method of application may be obtained from the Secretary, Association of Universities of the British Commonwealth (Branch Office), Marlborough House, Pall Mall, London, S.W.1.
Applications close in New Zealand and London, on *December 1, 1962.*

LEADING firm of Stockbrokers requires experienced INVESTMENT STATISTICIAN preferably, but not necessarily, with professional or academic qualifications. Good prospects and working conditions.—Write, giving details of age, qualifications, experience and previous employment, to Box TE.159, c/o Hanway House, Clark's Place, E.C.2.

ECONOMICS and STATISTICS

Department of Marketing Consulting Company requires staff (male or female) for work involving statistical and economics research in a wide and varying range of industries and countries, and work on Clients' sales statistics.

Graduates preferred, but some relevant experience and aptitude and liking for figures more important than formal qualifications. Starting salary dependent on experience and qualifications, up to about £1,000.

Apply with full details to
MARKETING DEVELOPMENT CO. LTD., 12 Grosvenor Place, London, S.W.1.

UNESTABLISHED DISTRICT COMMISSIONERS
NATIONAL SAVINGS COMMITTEE

Several vacancies, mainly in the Provinces, for men or women with knowledge of economics, organising ability, preferably with experience of public speaking and voluntary organisations. University education an advantage. National salary £806 on entry (age 25 and over) rising to £1,487. Possible establishment later. Application forms from Manager (PE.59/B), Professional and Executive Register, Ministry of Labour, Atlantic House, Farringdon Street, London, E.C.4. Closing date for completed application forms December 3, 1962.

THE UNIVERSITY OF SHEFFIELD

Applications are invited for a post of LECTURER in ACCOUNTANCY to begin duties as soon as possible. Initial salary according to qualifications and experience on the scale £1,150 x £50 — £1,500 x £75 — £1,950, with F.S.S.U. provision and family allowance. A grant towards removal expenses will be made. Further particulars may be obtained from the Registrar, to whom application (four copies) should be sent by November 24, 1962.

For other appointments see page 525

AUSTRALIAN NATIONAL UNIVERSITY
INSTITUTE OF ADVANCED STUDIES
RESEARCH FELLOWSHIP IN GEOGRAPHY

Applications are invited for appointment as Research Fellow in the Department of Geography, Research School of Pacific Studies.
The present staff of the Department consists of: Professor O. H. K. Spate; Mr. J. N. Jennings, Reader in Geomorphology; Dr. H. C. Brookfield, Reader in Social Geography; Dr. Donald Walker, Reader in Biogeography; Dr. G. J. R. Linge, Fellow; Dr. R. G. Robbins, Research Fellow.
It is desired to strengthen the Department on the economic side, more especially in respect to quantitative techniques as applied to urban geography or the geography of transport, communications or industrial location.
The Research Fellow will be expected to supervise students working for post-graduate degrees and to carry out original research, preferably in the aspects indicated above; members of the Department's staff are encouraged to carry out their own research projects rather than to fit into a pre-conceived programme, though there may be a limited amount of assigned work.
The salary range for Research Fellows is £A1,656-£2,450 per annum (annual increments of £75; initial salary will depend on qualifications and experience. Appointment is for three years with possible extension to a maximum of five years. Superannuation is on the F.S.S.U. pattern. Reasonable travel expenses are paid and assistance with housing is provided.
Further particulars should be obtained from the Secretary, Association of Universities of the British Commonwealth (Branch Office), Marlborough House, Pall Mall, London, S.W.1.
Applications close in Australia and London on *November 30, 1962.*

BENGUELA RAILWAY COMPANY

The following preliminary traffic results for the first nine months of 1962 compared with the first nine months of 1961 have been issued.

Kilometres run	1962 Tons	1962 Escudos	1961 Tons	1961 Escudos
Passenger Traffic:				
Journeys	—	12,075,000	—	9,307,000

Net Operating Receipts		193,093,000		210,336,000

Tanganyika Concessions Limited owns all the Debentures and 90 per cent of the equity of the Benguela Railway.

COMPANY AFFAIRS

With the easing of tension over Cuba, prices of both equities and gilt-edged have made a good recovery in the London stock market. In equities the falls have been fully recovered and with a jump of 16.7 *points to* 330.3 The Economist *indicator is now just above its level of October 17th before the crisis began. The recovery in gilt-edged has not been so complete and the* Financial Times *index at Wednesday's close was* 85.23 *compared with the pre-crisis level of* 86.90. *Among equities Courtaulds and Tube Investments achieved good rises after their results were published.*

Courtaulds

IT is all so different from a year ago. Then Courtaulds cut its interim dividend by 1d. to 9d. a share and reported a fall of £2 million in its gross profits for the half year. Now a year and many profit forecasts later, the directors have set the interim dividend at 1s. 1d., this time a penny more than was generally expected, and have announced profits which justify the directors' confident predictions that were so vital in staving off ICI's takeover bid earlier this year. As the table shows, Courtaulds' trading profit in the six months to September 30th has risen by 70 per cent compared with the same six months in 1961, though sales were barely 7 per cent higher. Compared with the six months to March 31st last sales were slightly lower but profits were 25 per cent higher.

These figures provide a full answer to those who had doubts about the extent of the benefits to be gained, particularly in viscose, from rationalisation policies and the integration of British Enka, which was acquired last November. The directors say that "cost reductions from rationalisation and better efficiencies" have been a major factor. But the improvement in profits has not been confined to viscose. Celanese and packaging are other divisions that are clearly gaining from a vigorous policy of rationalisation. It seems clear however that the paint division has found the going hard, while the poor summer weather cannot have helped the textile trade.

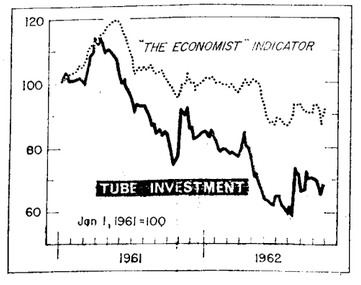
Six months to	Sept. 30, 1961 £'000s	March 31, 1962 £'000s	Sept. 30, 1962 £'000s
Sales	83,451	89,881	89,425
Trading profit	6,218	7,939	10,522
Investment income	1,368	2,181	1,950
Gross profit	7,586	10,120	12,472
Loan interest	—	—	1,385
Tax	3,135	4,265	4,619
Minority interest	385	338	591
Net attributable profit	4,066	5,517	5,877
Trading profit/sales	*7·5%*	*8·8%*	*11·8%*

For the full year the directors have forecast gross profits of £23 million but they now believe that this figure will be exceeded and if profits are no higher in the second half-year than in the first gross profits will be close to £25 million. On this basis equity earnings will be close to 23 per cent, which suggests that a higher dividend than the 13 per cent already forecast is possible. If the final dividend is maintained at 1s. 9d. a share the total payment would be 2s. 10d. a share (or 14½ per cent). This may not be too optimistic an assumption and on this basis the £1 shares, which gained 3s. 7½d. to 50s. 9d. on these results, yield 5½ per cent. ICI must be pleased with its investment.

Tube Investments

AS the chart shows the £1 shares of Tube Investments have fallen more steeply than the other shares included in *The Economist* Indicator in the last eighteen months. This accurately reflects the many difficulties facing the group in the past year, particularly in the aluminium, iron and steel cycle and electrical divisions. The interim statement in May was gloomy but the big earnings cover precluded a reduction in the dividend from 14 per cent.

Trading profits for the year to end July fell by over £5 million from £27.2 million to £22.1 million, with those of the British Aluminium group falling from £4.7 million to £2.8 million and those of Raleigh Industries from £1.8 million to £1.3 million. Higher depreciation and interest charges together with £548,000 charged against the "expense of concentration of production" left gross profits almost 25 per cent down at £15.9 million. Net profits (excluding tax and other credits) fell from £9.1 million to £7.3 million. A year ago the chairman, Sir Ivan Stedeford, forecast that results would not be "signicantly different" from those of 1950-60, when net profits amounted to £8.1 million. If account is taken of the exceptional charge, his estimate is seen to be not too wide of the mark.



Indeed the results were better than had been generally expected and the £1 shares were marked up by 3s. 6d. to 52s. 9d. They reflect in part the reorganisation and the rationalisation of the cycle and aluminium divisions, which should now be better placed to meet competition. The separate figures for British Aluminium and Raleigh Industries show the extent of the setback in these divisions. Most of the exceptional charge stemmed from Raleigh and as a result it showed a pre-tax loss of £101,000. On the electrical side TI should be enjoying better markets for its "Creda" products while the profits of the steelmaking companies should at least benefit in the current year from the price increases made in the Spring. Shareholders will hope that in his valedictory statement Sir Ivan will hold out better prospects for the future. A year ago he said that economic circumstances were not those "which might be expected to herald another record year." The same holds good in 1962-63 and it will need an expanding economy to lift TI's profits much above their present level. But the £1 shares, yielding 5.3 per cent, covered 2.4 times, hold out some scope for recovery at the first signs of more buoyancy in the economy.

Fisons

HAVING braced themselves for an expected fall of £1,250,000 in Fisons' pre-tax profits, it must have come as a pleasant surprise to shareholders that the fall in profits was somewhat less than the directors had forecast. In fact profits in the year to June 30th fell by £897,000 to £2,710,000. The "modest reduction" in the final dividend is indeed just that—a cut of one point from 7 to 6 per cent to make a total dividend of 10 per cent, against 11 per cent. The reasons for the fall in profits are well known; a drop in sales of compound fertilisers, price reductions and the effects of Fisons' "bargain basement" sales in the previous year.

The extracts from the group's balance sheet issued with the preliminary statement suggest that the day when Fisons will have to come to the market for new funds cannot be far away. In two years liquid holdings have been run down from £8¾ million to under £1½ million and with Fisons now going ahead on plans to spend £9.4 million on its new hydrogen products plant at Immingham commitments amount to £11¼ million. Such capital expenditure, even if spread over a number of years, is hardly likely to be covered by the cash flow, which amounted to £2.6 million in 1961-62. The £1 shares at 31s. 6d. stand at only about half their 1961 peak of 61s. 3d. and now yield 6.4 per cent.

Pressed Steel

HAVING cut the total dividend from 30 to 5 per cent for 1961, the directors of Pressed Steel have now passed the interim dividend for 1962. In 1961, the group made a net loss of nearly £2.7 million but at the time of its announcement the directors explained that the group had returned to profitable trading in the first quarter of this year. They now say that the hopes that they then expressed have not been fulfilled and that the profitable trading conditions then being experienced "have been affected by a falling off in business since mid-July and subsequent short-time working in the motor car body division." No appreciable improvement is expected before the new year. The Prestcold refrigerator division has had a "poor selling season" though the directors expect a "steady improvement" in the performance of this division following the agreement with Rolls Razor. The contribution of the railway wagon division is, reflecting a low volume of business, "relatively small" and there has again been considerable development expenditure on the range of Beagle aircraft. In all, the results for this year should be better than those for 1961 though the directors say they will still be "disappointing." If all this means is that Pressed Steel will make a smaller loss than it did last year there seems to be no point in anticipating any immediate recovery in the 5s. shares, now standing at 13s.

British Electronic Industries

A NET loss of £155,000, an unchanged bank overdraft of nearly £8½ million and a reduction in the ordinary dividend from 15 per cent to a nominal 2½ per cent, paid out of reserves, for the year to March 31st would not, it might be supposed, provide any grounds for confidence. Yet the chairman of British Electronic Industries, Mr C. O. Stanley, manages to be as ebullient as ever. The first reason for his confidence, which he describes as "more solidly based" than it was a year ago, is that while a big loss was made on television receivers both by Pye and Ekco the group's non-domestic interests, which include scientific instruments, electronic equipment and telecommunications, continued to earn satisfactory profits. Moreover, overseas subsidiaries, notably in Australia, did well and the income from trade investments (which include Associated Television and British Relay) was higher. Secondly, the group now has complete executive control of Ekco. The first sign of this new policy is the re-organisation of Ekco's factory at Southend. Thirdly, the decision to introduce 625-line television in this country opens up, in Mr Stanley's opinion, "enormous possibilities" for the television manufacturers.

Eventually, Mr Stanley says, every old television set will have to be replaced by a new one. BEI may have surplus capacity on its hands for some time. How much will it have to be reduced and what effect will this have on profits in the next year or so? How much in stocks of nearly £19 million represents 405-line-only television sets? And when sales expand again, may not the group have a financing problem on its hands? Mr Stanley's statement does not provide any answer to these questions, which are all pertinent to any consideration of the current price of 9s. 9d. for the 5s. shares and the nominal yield of 1.3 per cent.

Hawthorn Leslie

THE outlook for Britain's shipbuilders is bleak indeed. It is put squarely before the shareholders of the Tyneside shipbuilders, R. and W. Hawthorn Leslie, by the chairman, Sir Robin Rowell:

> Under the present circumstances, the prospects of profitable trading for the company are not bright and I can only forecast a period of diminishing profits.

In the longer term however Sir Robin believes that older ships will have to be replaced by more modern vessels. In many cases these will be bigger and more specialised so that initially only a few will be ordered but it is his view that "in the end there must be an ever increasing demand for this type of replacement tonnage." He describes British prices as now being fully competitive with unsubsidised shipyards overseas but subsidies he says are depriving British builders of orders which would normally be placed here by foreign shipowners.

Hawthorn Leslie had ploughed back a substantial proportion of its profits in its more fruitful years, distributing rather less than one third of available earnings. This has prompted the directors in the latest year, when profits were more than halved, to reduce the dividend by only 5 points from 25 to 20 per cent. Their view is that in the lean years shareholders should derive some benefit from reserves built up in more prosperous times. The 10s. shares stand at 16s. 3d. to yield 12¼ per cent. While shareholders seem certain to receive a "fair distribution" in the lean years ahead, the price reflects doubts whether this policy will be like that of P. & O. or whether the dividend each year will bear some relation to the company's trading experience.

Simms Motor and Birmid

THAT the suppliers of the motor industry are experiencing mixed trading conditions is shown by the results of these two companies. While **Birmid Industries** is able to report that its net profit for the year to July 31st was £17,000 higher at £1,377,177 and to leave its ordinary dividend unchanged at 20 per cent, **Simms Motor & Electronics** has halved its interim dividend from 5 to 2½ per cent, and reports that "the deterioration in profitability and general trading conditions . . . has continued." The two companies have in fact nothing in common except supplying the motor industry, and even here their markets are not identical, for Birmid sells to car and lorry makers, while Simms mostly supplies the commercial side of the industry. Birmid's main products are metal castings or forgings, mostly in light alloys; while Simms's most important product is fuel injection and electrical equipment for diesel engines.

In June, the chairman of Simms, Mr G. E. Liardet, told shareholders that the sharp fall in profits for 1961 resulted from reduced sales by Simms itself. When Simms is faced by competition from Lucas and its subsidiary CAV, also a maker of fuel injection equipment for diesel engines, Mr Liardet's remarks about the Government appearing to condone the domination of whole industries by vast organisations to the detriment of small or medium-sized firms take on a special significance. And it is probably competition from this quarter, combined with the fall in commercial vehicle production this year, that accounts for the present gloomy outlook.

By contrast Birmid's results were better than expected in view of the cautious tone of the interim statement when the directors reported "fairly well maintained" sales, lower profit margins and little sign of improvement in the remaining months of the year. In the event gross profits were just over 5 per cent lower at £2,852,000, but as a result of the smaller tax charge earnings were fractionally higher at 47¼ per cent, to cover the maintained 20 per cent dividend 2.4 times. The £1 shares have been marked up by 5s. 6d. to 71s., to yield 5.6 per cent. The 5s. shares of Simms are close to their low point at 13s. 6d. This compares with a 1961 peak of 32s. 4½d. after allowing for the one for six rights issue at 21s. 6d. per share made in May last year.

EXCHEQUER RETURNS

For the week ended October 27, 1962, there was an "above-line" deficit (after allowing for sinking funds) of £38,283,000 compared with a surplus of £3,072,000 in the previous week and a deficit of £24,852,000 in the corresponding period of last year. There was a net expenditure "below-line" of £24,852,000 leaving a total cumulative deficit to date of £596,544,000 compared with £708,687,000 in 1961–62.

THE MONEY MARKET

THE discount market's reaction to the Cuban crisis was to reduce its agreed bid at the Treasury bill tender on Friday of last week by 7d. to £99 os. 8d., arguing that the crisis made an early reduction in Bank rate unlikely. The outsiders reduced their bids by a fraction more than this and the bill rate rose by ⅛ per cent, for the second week in succession, to £3 17s. 2.03d. per cent. At the same time, applications fell by £15 million to £382 million and the market's quota was 46 per cent compared with 38 per cent a week earlier. The market must now decide whether the end of the crisis also means the return of the possibility of a Bank rate cut. A wrong decision could mean low bill quotas.

Credit conditions changed abruptly this week. On two days last week the authorities sold very large numbers of bills to absorb the surplus credit; on Monday and Tuesday of this week the market's books were balanced only after very large bill purchases by the authorities.

Rates in the local authority market hardened to 4¼ per cent for seven-day loans but then eased to around 4 per cent following an inflow of money mainly from the building societies and merchant banks.

APPOINTMENTS

BROWN & POLSON

PRODUCTION PLANNING

Brown and Polson Limited, a part of an international group of industrial chemical and food manufacturers, requires an Assistant to the Group Production Planner at its Industrial Group Plant at Manchester, which is expanding its production.

The successful applicant will control a small production scheduling team which is responsible for the overall production of the Manchester Plant.

Candidates should be Graduates in the 21-25 age range with a knowledge of mathematics or statistics to at least G.C.E. Advanced level, which they should be capable of applying to production planning problems after a training period. It is also desirable that they should have an appreciation of industrial organisation gained from either practical experience or academic study. Preference will be given to applicants who have had experience of similar work in a continuous production chemical processing industry but this is not essential as a comprehensive training programme will be arranged to suit the needs of the successful candidate.

A good commencing salary will be paid and in addition the Company operate an attractive Profit Payment Scheme, Contributory Pension and Free Life Assurance.

Applications in writing, which will be dealt with in the strictest confidence, giving details of age, qualifications and experience, should be addressed to:

Personnel Adviser, Brown and Polson Limited, Trafford Park, Manchester 17.

NABISCO FOODS LIMITED

Welwyn Garden City, Herts.

invites applications for the position of

RESEARCH OFFICER

to be responsible to the New Products Manager for the direction and supervision of all research appertaining to the marketing of existing and new products.
Ideal candidate will have at least three years' market and consumer research experience including product testing, motivation research and pre- and post-testing of advertisements. He will be looking for a progressive career in industry and be equipped in personality and temperament to become a vital part of a young management team occupied with the task of widening and diversifying the Company's range of products.
Applicants invited to write, stating age, educational background, qualifications, experience, present position and present salary, to DIRECTOR OF PERSONNEL.

NATIONAL UNION OF BANK EMPLOYEES

Applications are invited for the appointment of Assistant General Secretary, National Union of Bank Employees. Commencing remuneration not less than £1,425 per annum.

Candidates should apply in writing before November 25, 1962, to the General Secretary, National Union of Bank Employees, 28 Old Queen Street, Westminster, London, S.W.1, and mark "AGS" on the top left-hand corner of the envelope.

For further appointments and other classified advertisements see page 518

STANDARD TELEPHONES AND CABLES LIMITED

MARKET RESEARCH

An Assistant is required by our Private Communications Equipment Division, with a minimum educational standard up to "A" Level and with a fairly good knowledge of economics, to undertake the full range of techniques associated with market research.

Some commercial experience would be most useful and a technical background would be desirable, although this need not necessarily be formal. A knowledge of the structure of industry, together with some experience of statistical and survey techniques, is essential.

The Division is located at Footscray, a pleasant residential district, only 13 miles from central London.

The Company operates a wide range of benefits, including a NON-CONTRIBUTORY Pension Scheme.

Apply, stating qualifications, experience and salary, to
W. J. YEOMANS, Personnel Manager,
Standard Telephones and Cables Limited,
Private Communications Equipment Division,
Footscray, Sidcup, Kent.

UNIVERSITY OF KEELE

Applications are invited for the post of Lecturer or Assistant Lecturer in Economics. Appointment to commence January 1, 1963, if possible. Salary in scale £1,150 x £50 — £1,500 x £75 — £1,950 p.a. (Efficiency Bar at £1,450) (Lecturer), or £900 x £50 — £1,050 p.a. (Assistant Lecturer), with F.S.S.U. and children's allowances. Applications should reach the Registrar, The University, Keele, Staffs., from whom further particulars and application forms may be obtained, not later than November 24, 1962.

AUSTRALIA (NEW SOUTH WALES)

THE NEWCASTLE INDUSTRIAL PROMOTION PANEL

invites applications for the position of

RESEARCH OFFICER

recently established by the Panel.
Recent graduates in Economics or Commerce or Arts, majoring in economics, will be considered for the position which will be for three years, subject to extension by negotiation.
The commencing salary is £A2,000 per annum.
The officer will work under the supervision of the Director of Research of the Hunter Valley Research Foundation and will be located at the Foundation's Research Centre in Newcastle. Through the Director of Research and the Town Clerk of Newcastle, he will be responsible to the Newcastle Industrial Promotion Panel.
The Industrial Promotion Panel is conducting a vigorous campaign to attract new industries to the Newcastle Region and to stimulate economic activity. Contact with a wide range of interested bodies has already been established.
Duties will include the collection, analysis and publication of data relating to the Newcastle Region of New South Wales, the presentation of industry studies and the investigation and analysis of costs and other factors bearing on the establishment of new industries in the Region.
Further particulars are available from:
The Town Clerk (Secretary to the Panel), Box 489F, P.O.,
Newcastle, 2N, N.S.W., Australia,
with whom applications close on November 30, 1962.

THE PIG INDUSTRY

DEVELOPMENT AUTHORITY

invite applications from graduates for a post as

STATISTICIAN / BIOMETRICIAN

Practical experience of statistical methods related to nutritional and genetic experiments with animals and experience with a Punch Card installation would be an advantage. The person appointed will be based on the London office. Commencing salary according to age, experience and qualifications on the scale £1,700 x £75 — £2,400. A contributory pension scheme is in operation.

Application forms, available from Establishment Officers,
15 Ridgmount Street, London, W.C.1, should be returned by November 24, 1962.

THE UNIVERSITY OF MANCHESTER

SIMON FELLOWSHIPS

The University offers a number of Simon Fellowships for advanced study or research in the social sciences. This term is used in a wide sense to include not only Economics, Government, Sociology and Social Anthropology, Economic and Social Statistics, etc., but also fields such as the Organisation of Business, Education, Jurisprudence, Law, Social Administration and Social Medicine. The Fellowships will be tenable normally for one year from October 1st in the academic sessions 1963-64, 1964-65 or 1965-66. Values normally within the range of £1,200-£2,100 (Simon Research Fellowships), or within the range of £2,000-£2,500 (Simon Senior Research Fellowships), according to qualifications and experience. They are not confined to persons with academic experience. Applications, stating the Session in which the Fellowship will be taken up, should be sent by December 15, 1962, to the Registrar, The University, Manchester, 13, from whom further particulars may be obtained, and who will be pleased to answer any enquiries regarding the scope of the Fellowships.

BRADFORD INSTITUTE OF TECHNOLOGY

DEPARTMENT OF INDUSTRIAL ADMINISTRATION

Applications are invited for the post of Lecturer or Senior Lecturer from graduates in engineering, or economics who have had managerial experience in industry. The selected candidate will be required to assist in the teaching of students in courses leading to the Post-Graduate Diploma in Management Studies and to Diplomas in Technology.
Salary scales:
LECTURER £1,600-£1,800 p.a.
SENIOR LECTURER £1,800-£2,000 p.a.
Further details and application forms, to be returned by November 24th, from the Registrar, Bradford Institute of Technology, Bradford, 7.

INVESTMENT ANALYST

The Joint Pension Fund of B.E.A. and B.O.A.C. requires an Investment Analyst in its Investment Department to assist in the management of Stock Exchange portfolio of investments. Duties will cover consideration of industrial trends and analysis of technical and financial data relating to companies.

Applicants should be under 30, preferably with an Honours degree in Economics and have ability to interpret statistical accounting and economic information.

Salary dependent upon age and qualifications but will be not less than £1,000 per annum. Extensive welfare facilities are available.

Applications to Secretary, The Airways Corporations Joint Pension Scheme, Kershaw House, Great West Road, Hounslow, Middlesex.

Managing Directors

The choice of a whisky to send to your fellow-directors or clients at Christmas time is often not an easy one. There are many fine whiskies on the market, but specially recommended is a rather more exclusive than average blend, the Grand Macnish. This light de luxe whisky retains the true flavour of the Highland malt whiskies, and has a delicate quality which once tasted is never forgotten. Available from your wine merchant. In decanter bottles packed in presentation boxes.

Sole agents in England and Wales:

GROWING HAND IN HAND WITH JAPANESE INDUSTRY

Japan's industrial growth in the past decade has been phenomenal. In fact, it has been one of the fastest in the world. And behind this phenomenon the major role played by the Nippon Kangyo Bank cannot be overlooked. Ever since we were established 65 years ago we have grown hand in hand with Japanese industry. The history of Japan's industrial and commercial growth is the history of NKB. Choose us as your bank in Japan. You'll be glad you made the right choice.

Japan's Commercial Bank

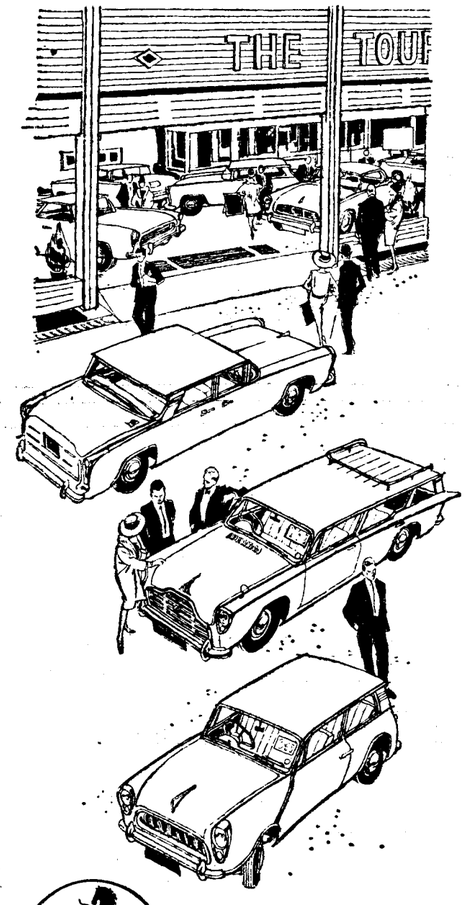
A two-way finance service that makes it easier...



to sell

To the established motor trader, large or small, Lloyds & Scottish offers a first-class hire purchase service backed by ample resources and 40 years' experience in helping dealers to develop their business on sound and profitable lines.

This service is up-to-date in every detail—from an unusually simple agreement form (only one signature, no 6d. stamp, no carbon paper) to generous pre-settlement terms, with a Credit Voucher for your customer. A modern computer installation means quick, accurate figure work.

Dealers are notified as contracts are completed and a letter of appreciation is sent to the hirer; the aim being always to satisfy each customer so that he will want to come back to you for his *next* car. Credit life insurance is available to customers, and dealers are offered a variety of facilities—e.g. for extension of premises, or for stocking.

to buy

The family that needs a car—or the firm that needs a fleet—will receive equally prompt and friendly service from Lloyds & Scottish to finance the purchase in the most convenient way. With the backing of two great banks, Lloyds & Scottish can well offer competitive terms and consideration for special circumstances.

If your present car has reached a certain age, it may pay you to change it before expensive repairs are needed. Lloyds & Scottish help by making it possible to buy the car of your choice at the right moment.

The agreement is simple and straightforward; various methods of instalment payments can be arranged; and if you wish, life insurance (a wise precaution) can be included at nominal cost. When you are thinking of changing your car, simply tell the dealer that you would like the hire purchase arranged through Lloyds & Scottish.

Backed by two great banks

Lloyds & Scottish has a capital of £15,000,000 and assets exceeding £100,000,000. It has the financial backing of Lloyds Bank and National Commercial Bank of Scotland. Through its network of local offices in over 80 large towns it provides a comprehensive service covering all forms of hire purchase, and it has established a reputation for efficient and courteous service to all its customers. Enquiries are welcomed at any branch, or may be sent to the address below.

THE OIL INDUSTRY TOMORROW

This book contains an account of the Proceedings of the 1962 Summer Meeting of The Institute of Petroleum. The purpose of the meeting was to try to assess the progress and changes that are likely in world oil industry during the next fifteen years. The papers discussed cover supply, refining, transportation, marketing, as well as the importance of the changing social patterns in both producing and marketing countries.

The six papers (all by authors from senior oil company management), together with the discussions, provide an authoritative estimate of future trends in the growth of the oil industry. The book will be of great value to all interested in the important part which the industry will play in national and world economies over the forthcoming ten or twenty years.

160 Pages **Price 45s. post free** *Illustrated*

Obtainable from

The Institute of Petroleum
61, New Cavendish St., London, W.1.

A copper seal used more than 4 centuries ago. This seal was used by Toyotomi Hideyoshi, Japanese military leader (1536-1598) during his rule for most important documents. On it are engraved verses from an ancient poem which signify good fortune and longevity and contain the word Tokai ( ); hence the name of the Tokai Bank.

Ever since its establishment this bank has enjoyed continued growth and prosperity. Today it is one of the leading banks in Japan with 176 branch offices strategically located and staffed with more than 9,000 employees—many of them experts in the field of foreign trade. With this nation-wide network of branches, Tokai Bank is in a position to offer unrivalled service to whoever trades with Japan.

The Importance of Good Counselling

The present trend of moderation in the phenomenal growth of the Japanese economy is attributed to the Government's policy of controlled capital investments. In portfolio management, proper counselling is just as important, if not more so, during this period of readjustment. Nikko . . . adviser to the U.S. Japan Fund . . . offers you complete data on Japanese stocks gained through experience and comprehensive research. Your nearest Nikko office will be pleased to give you up-to-date market information.

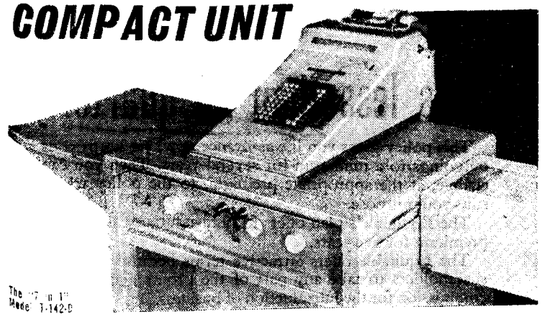
COMPLETE CHEQUE CONTROL IN ONE COMPACT UNIT



New Protectograph Control Centre Unit writes, signs, dates, lists, adds, counts and controls cheques in a single operation at speeds of up to 1,500 per hour.

This new Control Centre Unit Model T142D, for the first time, does the work of seven different business machines in one completely controlled unit . . . accurately, safely and quickly. It handles accounts payable, dividends, payrolls —in fact all disbursements—speedily and easily. Built-in controls give complete security, even with an unskilled operator, relieving top executives of the drudgery of cheque signing and checking. A demonstration will convince you—

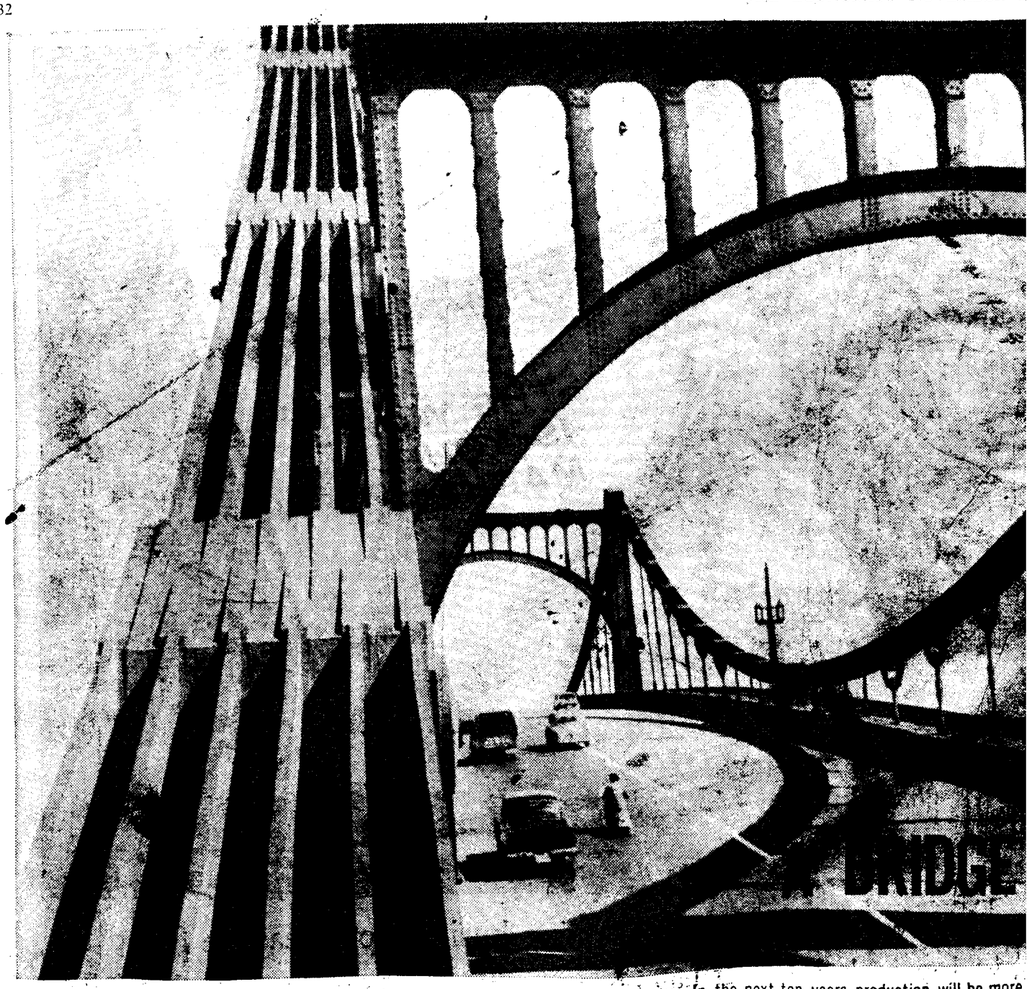
. . when we were thinking of doing business overseas we found this booklet most helpful. It has been produced by our bank and is full of information about the things we wanted to know such as exchange control, shipping documents, credit and insurance. It is well worth asking for a copy of this new edition at your local branch of Martins Bank. Information and advice on exporting matters are available from all their branches, who can call upon the special facilities of their Information Department at Head Office.

Martins Bank

Martins Bank Limited.

... Second Class Mail, Post Office Dept., Ottawa. Printed in England by St. Clements Press, Ltd., London, E.C.4. Published by The Economist ... Whitehall 1611 ... Business ... this issue £2 ...



It carries ox-carts and ores, food and freight cars, trucks and trade. It spans rivers and gorges ... even centuries. It brings people together, their aspirations closer.

Bridges must be strong, for they carry the hopes of nations. Bridges must be durable, for they must link today's plans with the realities of tomorrow. Yet, bridges must be light enough not to weigh heavily on the meagre resources of emerging nations.

Fuji Iron & Steel Company makes beams, wire rods, and plates for bridges. In fiscal 1961* Fuji made 1.5 million tons of them. But this still isn't enough. In the next five years Japan and the other democratic nations of Asia will need over 3,000 bridges using tremendous amounts of steel. They will need countless tons of plates and shapes and other steel construction materials. These needs are urgent; and providing for these big job.

Steel production Steel Company, one of the world's largest iron steel producers, is ready for the job. Its furnaces and In fiscal 1961* turned out 4.5 million tons of pig iron, of steel ingots, and some 4 million tons of steel products. In the next ten years production will be more than doubled by the addition of new blast furnaces, LD converters, rolling mills, and coating lines ... a giant step to catch up with the fast-growing demand.

Bridges bring progress, and where progress requires steel, Fuji Iron & Steel Company spans the world with better products.

PRODUCTS: bars, shapes, sheet pilings, wire rods, rails, hoops, plates, hot rolled sheets and coils, cold rolled sheets and coils, galvanised sheets, tinkotes, tin plates, sectional poles, culvert pipes, light gauge shapes and chemical by-products.

*Fiscal year is from April 1 to March 31 of the following year.

You can always ***trust*** *a steel product ... if it has*

HOME

FIREWORK MUSIC

A cracker under the economy: Mr Maudling's Guy Fawkes unbudget is a welcome if lopsided *feu de joie*. Industry may be better disposed to investment expenditure; engineering will be given an all-round boost; but so far there has been no sign of fire in Throgmorton Street (pp. 543, 589).

Damp squib: The membership and terms of reference of the **National Incomes Commission** promises no explosion (p. 545).

SQUIBS AND ROCKETS

Mr. Galbraith, former Civil Lord of the Admiralty, has been hunted from the Government—although his published correspondence with the **spying Admiralty clerk,** William Vassall, is totally innocuous (p. 550).

Dr Beeching's offer of a six per cent pay rise to his **railwaymen,** far from defusing an explosive situation, will only fuel their resentment at his economies (p. 550).

Both sides in the endemic **strife at Fords** have contributed to the friction which has again flared into a strike (p. 550).

A recommendation to merge two **Scottish** electricity boards has, wrongly, incensed those Highlanders who looked on one of them as a social security service (p. 559).

An outline scheme for compensating **victims of violent crime** is to be welcomed, and ought to be acted upon (p. 555).

The shrinking cycle industry thought a **better bicycle** could not be built—but a new miniature may prove them wrong (p. 601).

SOMETHING FOR THE GUYS

The Anglo-Japanese trade treaty is likely to show a firm resistance to the extreme demands of the **wool industry** (p. 593).

Unemployment is rising most seriously in areas where it has always been a problem, and from which the drift to the crowded south-east begins; the old answers to this question no longer work; a more purposeful approach to regeneration has to be found (p. 558).

The expected **clash on Europe** did not develop in Parliament, and the situation simmers as before: as before, too, the real sparks were struck in Brussels (p. 549).

The spate of by-elections has offered quick release from their service to dissatisfied soldiers (p. 552).

Shop and office workers will achieve parity with their industrial colleagues under a new bill to protect them (p. 552).

Estate agents plan to band themselves together by statute—which could too easily be too restrictive (p. 555).

Sir Isaac Wolfson and Mr Bloom face each other across the washing machines (p. 599).

Merchant bankers buy up trade debts—at a price (p. 600).

Public investment has a strong tendency to grow at any time: now it is particularly welcome (p. 595).

Mr George Brown is still the most acceptable deputy leader that Labour's got (p. 557).

INTERNATIONAL

Onward and Upward

Mr Khrushchev's position after Cuba is worth watching, and is being watched—by the Chinese, the Americans and the Russians themselves (p. 547).

• **Dr Castro** has some stake in the game too, and is betting heavily on a weak hand (p. 549).

• But those who know how close we all came to war two weeks ago are hoping for an end to such games (p. 549).

• But the great game continues; the latest report on the east-west **missile race** (valid for only one year) is on p. 557

The **European common market** carefully goes its own way, now with a new tax proposal for the Six that would mark another step towards political unity if adopted (p. 551).

Dr Banda and **Nyasaland,** in their inimitable way, move closer to independence, somehow retaining their cheerful nonconformist regard for the individual and human rights (p. 572).

"Working party Three" of the Organisation for Economic Co-operation and Development plans to reconcile **growth** and **financial stability,** as America urges financial co-operation on the continental countries (p. 594).

Central Africa offers little hope for anyone pursuing a centre position. The problem may be an African one, but the burden and the responsibility will rest with Westminster (p. 556).

Racing Backwards

India now acknowledges that its conflict with China may be long and difficult. It raises some illuminating questions for Asians and Africans on the subject of **non-alignment** (p. 545).

Mr Nehru on the home front is encountering a peculiar blend of Indian strife and unity (p. 571).

The high risks of east European political life seem to have cost **Bulgaria** a prime minister (p. 555).

Australia, aware that neighbours may menace her one day, is thinking of increasing her defence budget (p. 574).

British Guiana continues to race against itself (p. 556).

Yemen has become not only a battleground but a playing field as well for a number of its Near Eastern big brothers (p. 555).

Standing Still Rapidly

This week the American voters registered approval for President Kennedy's programme but with qualifications—and Cuba seems to have had little effect on their decisions (p. 563.)

The American Administration is maintaining an attitude of vigilant caution towards **Cuba** in particular and the **Russians** in general (p. 564). To facilitate this it has been restricting **access to the news** (p. 568).

The American **balance of payments** did not fare very well in the third quarter (p. 566).

Nor did the American **steel industry** (p. 568).

Secret of the first shoe that's as comfortable as a bare foot

Whether you're planning a new process, a new product, or improvements to an old one, success can depend on your finding a new raw material. A most promising source may lie among the different types of Polysar* synthetic rubbers, produced by the Polymer Corporation Limited.

For instance, there's never been a shoe that could really compete in comfort with walking barefoot—not until a newly developed process using Polysar SS-250 Flake made it possible. It produces a shoe with a microcellular sole moulded directly to the shoe upper. It's light. It's cool because it breathes. It's more flexible, more resilient. It's soft and at the same time tough. The result—a shoe that's as cosy as an extra skin.

Polysar SS-250 Flake is just one of the 40 types of synthetic rubber produced by the Polymer Corporation Limited. Within the world-wide Polymer organization there is a representative nearby, ready to advise you. A letter to the Marketing Division, Polymer Corporation Limited, Sarnia, Canada, will put him in touch with you.

Plastics for the Space Age

Plastics that meet the unprecedented requirements of rocket and satellite applications are one of the many products of Budd's subsidiary, Continental-Diamond Fibre. Budd laminated and molded plastics are successfully meeting world-wide demands for strength, lightness, heat resistance and electrical insulation that can be fully satisfied by no other materials. Other Budd plastics—in the form of sheets, rods, tubes and tapes—have wide industrial application, make possible important product improvements, and substantially reduce production costs. Pioneering in plastics closely complements Budd's developments in engineering . . . metallurgy . . . tooling . . . welding . . . research . . . testing and production for international industry. These diversified activities help place Budd high among the world's 250 largest industrial concerns. For information about Budd plastics, write The Budd Company, International Division, Philadelphia 32, Pa., U.S.A.

Many Budd high quality laminated plastics are also produced by Budd's French subsidiary, La Fibre Diamond, 72 Rue du Landy, La Plaine St. Denis (Seine) France

HERE'S HOW TO MAKE A
SUCCESS
OF YOUR
NEXT LUNCHEON

Let's assume that you are an efficient man, accustomed to getting value for money. As a specialist in your own field, you expect equal expertise in others. How, then, would you ensure the success of your next luncheon? You would do well to choose the Connaught Rooms, which is not an hotel but an establishment which specialises in banqueting, and is situated in the very heart of London. There you have the choice of several rooms, separately or in suites, for the entertainment of any number of guests—from 8 to 800. Whatever you ask for . . . soup with snow eggs . . . closed circuit TV . . . you get, quickly and with pleasure. And the reasonable cost will surprise you.

Connaught Rooms will arrange and organise everything exactly as you want it. A word from you will bring immediate action. Helpful suggestions, advice and estimates are equally forthcoming.

Please remember that luncheons are only one aspect of the service available. Contact Connaught Rooms regarding your next function —whatever it may be.

Man on the right lines

pleases by finding fault. A high wind is blowing in the Highlands. Two wires on the overhead transmission line begin to dance . . . and touch. There is a flash and a burn. This transient fault can be overcome—but it cannot be repaired until it has been looked for over the line's entire length. In rugged, mountainous country, and often in cruel weather conditions, the linesman must be out making laborious tests for mile after mile — and often week after week.

Ferranti have now found a way to make fault finding easier. With their Line Fault Locator, the maintenance engineer can detect the position of faults on high voltage transmission lines without leaving the substation. This is done by pulse reflection, the principle used in radar. The fault can be traced down to a short section of line, and quickly repaired so that the line is out of operation for the minimum time.

Our own day owes much to Ferranti's pioneer work in electricity. Transformers and summation meters for the Kariba Dam and the Niagara Falls Power Project . . . the world's largest generator transformers for the British National Grid . . . Ferranti have made them all. In the air and at sea, their research into electronics has made transport faster and safer. Atlas, the world's most advanced super-speed computer, comes from Ferranti. And Ferranti are leading the way into tomorrow.

VOLUME CCV - NUMBER 6220

A Not So Little Budget

THE least apposite description of Mr Maudling's activities this autumn is to say that he has introduced a little budget ; in two rather untidy dollops, produced within almost exactly a month, he has in fact introduced a pretty big one. Following his £112 million worth of measures announced at the Mansion House banquet on October 4th (£42 million to postwar creditors, £70 million on to public investment but spread over eighteen months), the Chancellor of the Exchequer has now taken between £55 and £60 million a year off motor car purchase tax and has permitted bigger allowances and speedier write-offs for new investment in a way that will eventually (some time in the second half of the 1960s) cost the Exchequer a full £100 million or more a year. The effect of these capital allowances in propping up private investment next year is extremely difficult to guess, but in the later months of 1963 at least most past experience suggests that it could be quite noticeable. The net "reflationary" impact in 1963 of the Mansion House and Guy Fawkes day measures combined could therefore possibly be something around £200 million: the equivalent, say, of having introduced an autumn budget and lopped a full shilling off the standard rate of income tax. Next only to Mr Amory's pre-election budget in 1959 and to Dr Dalton's immediate postwar budget of 1945, this could in fact be called—with only a little verbal cheating—the third largest sudden injection of tax reliefs in British fiscal history.

The next questions to ask, therefore, are whether Mr Maudling has given away too much or still too little, and whether he has distributed his reliefs in the right way. The best yardstick of his scope for adding to demand is presumably to be found in the National Economic Development Council's recent programme for 4 per cent annual growth between 1961 and 1966. This programme in effect suggested—although Mr Maudling barely mentioned poor Ned on Monday—that the total of real demand exerted upon British production ought to be pushed between £1,150 million and £2,000 million higher next year than it has been allowed to reach this year. A rise of £1,150 million would be required to achieve 4 per cent growth between 1962 and 1963 ; a rise of nearly £2,000 million would be required to achieve 4 per cent annual growth for the whole period between 1961 and 1963, and thus make up for the short fall of growth in 1962 itself. Even when allowance is made for the rise in consumption that already seems to be in train—and for the multiplier effect of Mr Maudling's new measures themselves—most economists would calculate that the growth of demand in 1963 still looks like being only somewhere around the smaller of these figures, and certainly well below the larger of them.

The Chancellor can therefore be accused of releasing too much total demand only by those who believe that Ned's aspirations are all nonsense anyway ; or by those who argue that there are some special factors relating to manpower costs, imports, exports or the general trend of the world economy which make it inappropriate to start expansion rolling straight away. It is difficult to see what these special factors can be. The argument that a "shortage of man-power" makes it impossible to increase production has now begun to lose much of its force ; indeed there is increasing evidence that there was some mis-reading of how much force it ever had. British industry installed a lot of labour-saving machinery during the investment boom of 1959-61, but then emolliently proceeded not to save labour, with the result that by the middle

1961—just at the time when Mr Selwyn Lloyd's advisers were saying that he must slow down production because of a grave shortage of manpower—most factories' labour forces were in reality overmanned. That is why in Britain, as earlier in America, this year's rise in production has so far been achieved by an increase in productivity, not by an increase in employment; with the bulge of more school-leavers becoming available, unemployment figures have therefore been moderately rising. Similarly, it is difficult to ascribe the continuing rise in wage costs to an excessive demand for labour, especially as the biggest wage offer this autumn (Dr Beeching's 6 per cent to the railwaymen) has just come in an industry which is desperately trying to get rid of a surplus supply of it. The railway offer and the disappointing watering down of the terms of reference of the National Incomes Commission (discussed in the following article) give cause for concern that Britain is once again entering a period of attempted expansion without having devised a wages policy, but they are not in themselves convincing arguments against re-expansion itself.

Another cause for worry is that there may well be a sharp rise in imports as demand re-expands, because stocks of imported raw materials are currently low; but the short-term burden of import restocking is one that would have to be shouldered some time anyway, and there is no obvious reason for preferring later to sooner. The Government's previous argument that any increase in home demand would be likely to divert goods from exports has now been stood rather breathlessly on its head: on Monday Mr Maudling said that one of his main reasons for increasing home demand for cars was his belief that this would help car exports by enabling "the industry to strengthen even further its competitive position abroad."

It is right to regard the new argument with as much suspicion as the old. The real truth is surely that, while a depressed level of general profitability may inhibit firms from taking risks in searching for new export outlets, a sudden large burst of new home demand can sometimes cause them to divert goods from existing ones. Possibly (but not certainly) the very large boost now to be given to domestic car sales may have this latter effect on the motor industry—which would provide a just criticism of the way in which Mr Maudling has concentrated his reliefs so heavily on this one special case, but not of the total amount of added demand that he has generated.

Finally, some cautious people will say that it is risky to increase home demand just now because demand in America and Europe may be going to slow down; these are the apostles of what Mr Selwyn Lloyd called last April a policy of "laying a foundation for sound growth," which turned out to mean introducing a deflationary budget just as the world was teetering along the approach road towards a real danger of recession. One much prefers Mr Maudling's prescription of trying to persuade all the big industrial countries to re-stimulate their demand together; he will be urging this strongly at the Organisation for Economic Co-operation and Development meeting in Paris at the end of this month. After that, it may even be right for him to try to reflate the British economy still further: either by further reductions in indirect taxation in January when Christmas shopping is over; or else in next April's budget (although, now that the promise about capital allowances has been added to the promise about ending Schedule A, that budget is already the most heavily mortgaged one in history).

All in all, therefore, Mr Maudling cannot easily be accused of having gone forward too fast. Indeed, it may be a fairer criticism to say that he is still proceeding too spasmodically step by step, although the degree of slack he has inherited is at present permitting each step to be in the nature of a pretty large leap. The direction of the reliefs he has chosen is a different matter. This question is discussed in detail on pages 589 to 592. Only two general points will be made here.

FIRST, the increases in investment allowances that he has granted have the disadvantage, as a fiscal weapon, of looking pretty makeshift; they will do nothing to dispel businessmen's present assumption that tax allowances for investment are likely to go on being as changeable as a chameleon (or as the Chancellorship). They also have the disadvantage, as a stimulatory device, that nobody can really be sure after what time interval they will induce their main effect. They may serve to increase investment next year, as Mr Maudling hopes; or their real effect may be delayed until much later, perhaps even until after business confidence has been restored by a (still very hypothetical) Conservative victory at the next general election—which may not be at all the time when a great new upsurge in investment will be needed. There is by now increasing reason for doubting the familiar economic assumption that special temporary inducements or disincentives to more investment are a sensible way of dealing with downturns or upturns in the economy. Mr Maudling would have done better to seize this opportunity to put tax allowances for investment on a more settled-looking if more generous and radical new basis; in particular, he need not really have been so scared of the so-called "costs" of allowing industry to take its depreciation allowances as and when it chooses. Thereafter the way would have been cleared to rest future anti-cyclical policy more specifically on measures to revive or restrain consumption, which can generally be expected to work much more quickly and smoothly.

Secondly, the particular reliefs for consumption that Mr Maudling has chosen really do look rather odd. If he had been drawing up a genuine budget, with an estimated £100 million to give away to consumers for the coming year, nobody would really suppose that he would have decided to give it all to 60-63 year old men and 55-58 year old women (as in the Mansion House speech) and (as in this week's speech) to people who happen to want to buy motor cars. He would have chosen his mixture for consumers from a much wider field, including both direct and indirect taxation. No doubt part of Mr Maudling's explanation would be that he was not introducing a genuine budget. But why didn't he? It is not really a very good excuse to say that the need to get Parliament to enact a small-scale additional Finance Bill would have disrupted the rest of the legislative timetable; there were several measures in the Queen's Speech that could easily have been pushed further back in the queue.

It is hard not to suspect that the real reason was that Mr Maudling had already publicly stated that he did not expect to introduce an autumn budget, at a time when he was still trying to persuade the Treasury that he was not really going to be a too radical new broom. Mr Maudling's difficulty from the outset is that his job has been to reverse the policies of his predecessor, while all the time pretending that he was not doing so. From this polite pretence has sprung both the untidy timing of his successive dollops of measures, and their frankly rather lop-sided effect. The engine thereby seems to have been restarted with an awkward splutter rather than a smooth and purposeful hum.

No Help from Nic?

Mr Geoffrey Lawrence

THE membership and terms of reference of the National Incomes Commission are extremely disappointing. To assist Mr Lawrence, QC, who is to be Nic's chairman, the Treasury has appointed a professor of industrial relations with extensive previous experience as chairman of several wages councils and as a member of the old industrial disputes tribunal (that is to say, a leading figure in precisely the old sorts of arbitration body whose modes of thinking the new system was originally supposed to reverse); *plus* a chartered accountant who has recently retired from long-standing service as a full-time member of the London Transport Executive (that is to say, from precisely the body that has been most widely criticised for its retreats before trade union pressure—as witness its agreement in this last week that labour-saving Routemaster buses should not be allowed to save labour); *plus* a solicitor who has been secretary of the association of municipal corporations (where he must have got used to public salaries chasing arbitrationally after private salaries) for the last eighteen years. It is no disrespect to these distinguished and seasoned sexagenarians to apprehend that for them to become the spokesmen for a revolutionary new policy of determinedly resisting inflation-by-arbitration would involve a rough departure from the dutiful habits of thinking of a lifetime.

Moreover, their terms of reference specifically discourage them from making any such departure. The Government has apparently abandoned any intention of asking Nic to comment on any wage claims while negotiations on them are still in progress, unless the parties involved specifically agree. Sometimes the Government will ask the parties to be kind enough so to agree, but it will have no power to say that Nic must have a right of immediate free speech if the unions concerned object. When an inflationary settlement has been reached, the Government will be able to ask Nic to say retrospectively how frightful it was; but even this right will not apply to inflationary settlements that have been reached through arbitration—which seems to destroy most of the limited potential usefulness of this sort of post-dated critique. Finally, the Government will be able to ask Nic to pronounce in advance on the wage claims of workers in the public service (but not in the nationalised industries), and even here only on those claims that are not referred to other forms of arbitration.

In making its *ex cathedra* or other pronouncements, Nic will be adjured to look to two of the right criteria—namely, to the "manpower needs" of the industry concerned and to the guiding light of the "long-term rate of increase in national production." It is also asked to tell the Government whenever it thinks that profits are going too high, and to advise it in those circumstances to raise profits tax. But an additional and separate factor to which it is told to pay regard in judging any wage award is "the desirability of paying a fair reward for the work concerned." It is precisely this reasonable-sounding principle that has been the main breeding ground of arbitrational wage inflation in recent years. It has almost invariably been taken to mean that people in industries and areas where more workers are not needed must be given the same wage increase as people in industries and areas where more workers are needed. The industries that do need more workers have then had to raise their wages further to restore the previous labour-attracting differential. It is thus that cost inflation (and the recurrent need to stop industrial expansion) gets set in train.

At a moment when Mr Maudling is rightly starting to re-expand the economy, it is depressing news that these terms of reference to Nic and the latest wage offer on the railways (see page 550) suggest that the whole idea of a coherent national incomes policy has been abandoned. Once again we drive off with an accelerator and a brake, but it has been regarded as politically and administratively too difficult to have a steering wheel as well.

India Invaded

China's push south must force some hard rethinking upon others as well as upon the Indians

"THIS is no longer a border issue with small skirmishes on the mountains, but an invasion of our country," said Mr Nehru on November 2nd. On this one point, Chinese and Indians are agreed. The Peking press writes of "India's invasion of China" (and of "close blood bonds between the Indian expansionists and the British imperialists"). The Chinese premier, Mr Chou En-lai, said on November 4th that India was buying arms in order to "launch a new large-scale attack," and defiantly proclaimed that, if India was bent on using force, China would not succumb to it. True, in the Chinese version there is an odd absence of the usual accompaniments of a tale of unprovoked and ruthless aggression. Peking has published no photographs of refugees driven from their homes by advancing Indian "aggressors." Organised indignation in China is still curiously concentrated on the perils that threaten Cuba, half a

world away, rather than on those that have, allegedly, actually materialised on China's own soil. Nor has Peking troubled to provide any serious explanation why India should have decided to carry fire and sword into peace-loving China. No doubt these deficiencies will be made good in due time.

In outline, the stages of development of what is now a war in all but name are already reasonably clear. Although China has for years maintained theoretical claims to very large areas —roughly the size of Britain—at both ends of its frontier with India, and to smaller areas north-east of Delhi, its physical encroachment on Indian territory had, until last month, been on a large scale only in north-east Kashmir. There, in the desolate tundra area in Ladakh known as Aksai Chin, between the Karakoram and Kunlun ranges, the Chinese built their now famous military road, running for a hundred miles across territory to which India had a long-established claim dating from pre-British treaties. The fact that it took the Indian government several years to find out what the Chinese had been up to in this remote, empty corner lent a certain plausibility to China's case: clearly, Aksai Chin was not being effectively administered, or even patrolled, by India. But Indian indignation was fired by the deceptions that China had practised (Mr Chou had repeatedly reassured Mr Nehru that the maps published in Peking showing these areas as Chinese were nothing to worry about, they would be revised).

When Indian patrols probing toward Aksai Chin found their way barred by a chain of strong Chinese military posts, the gloves began to come off. Shots rattled between patrolling parties in the vast silences of Ladakh; diplomatic notes of increasing sharpness rattled between Delhi and Peking. Indian opinion rallied to the simple, if impracticable, slogan "Throw the Chinese out." Peking talked no more of revising maps, and its studied reticence suggested that it too had a simple, but unspoken, slogan: "What I have I hold."

At this stage it was arguable that China's only serious interest was the Aksai Chin road, which is of real military value to it as a means of moving troops and supplies from bases in Sinkiang into troubled Tibet. Such local pressures as China applied further east along the 2,000-mile frontier were, then, merely reminders to India that it had better renounce the lost areas of Ladakh if it wanted its other borders to be left in peace. Certainly Peking gave several indications that, if Delhi would back down over Ladakh, the Chinese claims at the Assam end of the frontier would be quietly abandoned—as the related claims on Burma were dropped in 1960.

It is difficult, however, to explain the scale of China's present activities as still being aimed only at inducing India to leave Aksai Chin alone. China's army is the largest in the world, and the phalanx of marshals in Peking is doubtless as formidable a lobby as its counterpart in Moscow. But are the military top brass so unchallenged in China that their wish to secure a useful but secondary line of communications should have swung their country's foreign policy on to a course that is having a cathartic impact not only on India but also on world opinion?

True, the Chinese depict themselves, and to some degree perhaps even regard themselves, as merely reacting to the limited but vigorous attempts that the Indian army made during the spring and summer to turn back their glacier-like encroachments in Ladakh. When, in early September, the Chinese began to move at the Bhutan end of the McMahon line, it seemed conceivable that they only meant to show India that they, too, could make trouble. But in October came the heavier onslaughts that have brought the Chinese to Towang, at the Bhutan end of the line, and Walong at the Burma end; and the pause that followed has been broken, as our correspondent in India notes on page 571, by news of fresh movements in Ladakh that indicate an advance by the Chinese across the line they themselves claim as the border.

It is their attack in the extreme east that now has the most menacing look, although it is still on a small scale. Winter must make campaigning virtually unthinkable in bleak and lofty Ladakh, where, moreover, the main Himalaya range still lies between the Chinese forces and the Indian plains. The threat to the Brahmaputra valley, and particularly to the oilfields around Digboi, is much more direct. Already the Chinese spearheads here are over the main range and penetrating into areas which, although wild and sparsely inhabited, are not a mere desolation like Aksai Chin. Fear of a Chinese bid to seize the whole of Assam—which in past centuries has experienced other Chinese invasions—and thus to encircle Burma and drive a wedge between India and south-east Asia, has gripped many Indian minds. Assam is not easily defensible, and its valley could become a trap for its defenders.

Whether or not the Chinese have thus enlarged their aims, their new action has forced not only Indians but people in many other countries to think urgently about the implications of invasion. First reactions, which in general were pretty crude, have been followed by second thoughts. In the non-aligned Afro-Asian world, news of the sharper conflict at first set off a number of naive appeals to India and China to kiss and make friends. This suited Peking, which naturally was willing to start the bargaining from the position of "actual control" of territory; equally naturally, it annoyed Delhi, which feels it is already making a big enough concession by offering to negotiate if the Chinese retire only to their positions of early September. But Indians have been heartened by subsequently receiving warm assurances of support and sympathy from such figures as President Makarios, the prime ministers of Malaya and Nigeria, and nationalist leaders in East Africa (where Mr Kenyatta's parliamentary secretary, Dr Kiano, has commented that "China will lose whatever sympathy she might have gained in Africa"). President Nasser, who began by taking a formally "neutral" but in effect pro-Chinese stand, has shifted in India's favour; only Dr Nkrumah has clung to the pro-Peking limb that he had unaccountably crawled out on to.

Some commentators have been quick to announce the death of non-alignment; not only as a policy for India, but as a force in the world. They argue that the Cuban and Himalayan conflicts have been two simultaneous and clinching demonstrations of the use of naked power, in utter contempt of "uncommitted opinion." There is no doubt that some who claimed too much for "moral pressure" have been sobered. There is equally little doubt that China's actions have destroyed the already wan prospect of Asian-African solidarity on a "Bandung" basis—that is, of a common front between non-aligned and communist states. If India had found no backing among the other non-aligned countries represented at last year's Belgrade conference, the Belgrade grouping would also have been destroyed, for without India it would count for little in the world; and then it might indeed have been time to speak of non-alignment as dead. To do so now would be premature.

Non-alignment may, indeed, emerge purified and toughened from the experience. The real casualty in the Himalayan fighting has been the communist powers' attempt to use the non-aligned as a weapon against the West. Russia's successive veerings, first to a stand distinctly favouring Peking, then back to a thoroughly uncommitted one, may or may not reflect the impact and ebb of the Cuban crisis, but they certainly show how embarrassing the whole India-China clash is to Mr Khrushchev as well as to the luckless Indian Communist party. On the other hand, Pakistan's predictable but unhelpful attempts to exploit India's difficulty have not embellished the image of western-orientated alliances in Asian and African eyes. The ousting from office of Mr Krishna Menon, who on Wednesday was forced to quit even his residual position as minister of defence production, may make for better prospects of some accommodation between India and Pakistan; but at present it seems that the older Kashmir quarrel still bars the way to any closing of ranks against the new intruder in that area.

For the Chinese and their friends, it is now an obvious gambit (indeed, the only one open) to depict India as having thrown itself into the West's arms, sacrificing Mr Menon to appease the "imperialists" and letting itself become a pawn in a plot to set Asian against Asian. The only thing lacking about this argument is some connection with fact. It is only too painfully obvious that India neither sought war, nor even got ready for it; that it turned to the West for arms only when dire necessity left it with no alternative; and that the United States and its allies have—so far—been as scrupulous in taking no advantage of India's need as they have been ready to help meet it.

The challenge to them now is to continue on a well-chosen course. When the first shock of crisis is over, it may be less easy to hold western policy steady on this line. One can hear in the mind's ear the coming rumbles of complaint at the idea of continuing to lend power to Mr Nehru's elbow without exacting some political price. Delhi is now bracing itself for a long struggle. If it does prove a long one, there will be need for some more searching rethinking about the role of non-alignment in world affairs—not only in India, not only in Asia and Africa, but in the West too.

Khrushchev after Cuba

Are Mr Khrushchev's colleagues and friends awarding him the dove, or the umbrella?

Cloaked in the mantle of saviour of the peace, Mr Khrushchev has presided this week over Moscow's celebrations of the 45th anniversary of the October revolution. Signs suggest that this has not been the serene, triumphant occasion that Soviet propaganda would have it. It was preceded by the hurried visits of the east European leaders (Mr Novotny, Mr Gomulka, Herr Ulbricht, Mr Zhivkov, and last of all Mr Kadar) for urgent bilateral talks. Mr Mikoyan, the chief Soviet diplomatic and commercial traveller, was away in Havana, trying to obtain Dr Castro's blessing for Mr Khrushchev's deal with Mr Kennedy over Cuba. In Moscow, the aged, disgraced and often humiliated Marshal Voroshilov had to be picked from the dustbin of history to proclaim in *Pravda* mankind's gratitude to Mr Khrushchev for his performance. The Soviet press would not need to harp on the theme of success if there were no critics in the Soviet Union to judge Mr Khrushchev's exercise in brinkmanship as a failure; the sterner ones would award Mr Khrushchev not the dove of peace, but the umbrella of appeasement.

That the Cuban crisis has divided the communist world, and will continue to do so, is obvious enough. The events of October in the Caribbean have brought out with the greatest possible drama all the crucial points of division that have marked the communist world during the last three years. These divisions are summed up, for the sake of simplicity, as the Sino-Soviet controversy about coexistence. Mr Khrushchev's version, after his escapade of putting nuclear arms into Cuba, is still, and perhaps more soberly, that since the only alternative lies in nuclear suicide, it is necessary to coexist with the Americans. To come to terms with them on, for instance, disarmament would release scarce economic resources within the communist block. This coexistence need not, in his view, be static. The ultimate victory of communism will be assured by its superior rate of growth; it can expect to spread to the underdeveloped countries undisturbed under the protection of the nuclear stalemate; and the Cuban adventure, frustrated though it was, shows that all the time strategic advantage will be seized where it can be got.

Ever since the failure of the Paris summit meeting in May, 1960, Mr Khrushchev has been compelled to put an increasingly dynamic interpretation on his doctrine. Far from shifting resources to civilian use, he has in fact reversed the downward trend in the defence budget and spent more both on nuclear and on conventional forces. The Soviet public has experienced the consequences of this action through such unpleasant measures, introduced this year, as putting up the prices of meat and butter and postponing the abolition of income tax.

Mr Khrushchev also had to yield ground on the subject of communist action in the uncommitted third of the world. At each successive intra-communist compromise, he had to attack the United States more violently as the "international gendarme" and to pledge increasing communist support for revolutionary movements of Asia, Africa and Latin America. By such concessions to the critics he was able to preserve the practical essential, the right to seek a dialogue with the American President. For a time Cuba served Mr Khrushchev as an invaluable argument in the internal communist controversy. Dr Castro was the living proof that the policy of

coexistence did not prevent communism from spreading up to the very frontiers of the United States.

How much in the Cuban rocket bid was preconceived design, how much miscalculation and improvisation, to what extent Mr Khrushchev acted under pressure and to what extent of his own accord, are still altogether uncertain. The Soviet leader's various voltes-face between October 26th and 28th led even the Soviet press into embarrassing discrepancies. The crisis was too swift and too sudden, the decision too important for Mr Khrushchev to have brought the cumbersome central committee into play. He must, on the other hand, have consulted the party presidium ; and he will have used the permanent staff of the central committee, which carries out party policy under the supervision of the secretariat, to inform himself of the general mood, including the mood of the soldiers.

The Russians have now to assess the consequences of the Cuban peace. A perusal of the Soviet press shows along what lines they can best be construed in Mr Khrushchev's favour. He did not give in (the construction runs) on the essential question of Cuba's independence: on the contrary, he has won for the Cubans an official American pledge not to invade. At the same time, he claims the gratitude of mankind for preserving it from nuclear disaster. These were the kind of claims made for him by Mr Kosygin in his moderately phrased speech on Tuesday. If he believes in the existence of this fund of gratitude, one may expect him to try to exploit it: perhaps using the forum of the United Nations Assembly, where, borrowing arguments from the American book, he might plead once more for the abolition of all missile bases on foreign soil. But he may prefer not to stir up more controversy in public so long as the chance exists of useful talks with President Kennedy on disarmament, Berlin, and other matters ; and, rightly or wrongly, he may think that this chance has been improved. On this theory the Cuba crisis may not mark the bankruptcy of the Khrushchev line at all ; it could inaugurate his vindication.

There are plenty of communist voices to question this hopeful view. When Peking protests loudly that Dr Castro is right, and the American pledge no more than a scrap of paper, it is Mr Khrushchev who is being attacked. The Peking communists have seized on this opportunity to represent themselves, to the detriment of Russia, as the true and foremost friend of brave foreign revolutionaries under imperialist threat. The pro-Cuba demonstrations in Peking were organised in a big way and sustained long after the crisis was, in Moscow's version, past ; tens of thousands of people marched past the Cuban embassy in Peking on three successive days last weekend. The *People's Daily*, on October 31st, called the American promise not to invade Cuba "nothing but a hoax." This is the persistent theme of Chinese comment, and the direct antithesis of the Russian claim that Mr Khrushchev, in getting Mr Kennedy's assurance, has done well for the Cubans.

ECHOES of the Chinese dissent are audible at many points in eastern Europe, and the rapid succession of communist leaders' visits to Moscow may be connected with the misgivings that have been aroused. Popular relief is all very fine ; but these leaders will be wanting to know whether the Soviet nuclear deterrent has not lost something of its credibility,

both in the minds of uncommitted governments and in the eyes of Washington. Criticism on these lines has had no encouragement from Mr Kennedy, but a good deal from the American press. In Moscow there will be Russian advocates of conventional forces to plead for money on the ground that nuclear weapons will never be used. The nuclear lobby will be demanding funds to rehabilitate Marshal Malinovsky's reiterated, but now hollow, boasts of Russia's superior striking power. (The Marshal sounded more subdued in his anniversary utterance on Wednesday.) Both groups may press for a showdown on more favourable ground to redress the balance and restore the credibility of the Soviet military machine. The fact that Mr Khrushchev thought it worth while to seek Marshal Voroshilov's sanction suggests a genuine anxiety in the Kremlin about a potential alliance between discontented generals and sympathisers of the "anti-party" group.

A TEMPORARY coalition between the soldiers and the pro-Chinese wing would not be so absurd ; it has always been the gist of the Chinese accusation that, in cultivating its own garden, Moscow fails in its revolutionary task in the world and, secondly, that a deal with the United States can be, at best, an unholy alliance for the preservation of the *status quo*. A strong attack on dogmatists in the latest issue of the international communist journal *Problems of Peace and Socialism* is one indicator of the argument that evidently goes on. This was published on November 4th ; though presumably written before the Cuban crisis, it suggests that opposition to a peaceful accommodation with the west has not been silenced. The article complains that, although the dogmatists do not oppose peaceful coexistence in principle, as soon as "concrete actions" for peace are needed they begin "moaning" about a "retreat from principles" and "fear of capitalism."

Naturally, Mr Khrushchev need not yield to the pressure on his left (if that is the right word for it), any more than Mr Kennedy is at the mercy of his right. He may even seize this crisis as an occasion to show the Chinese that their scattered European supporters carry no weight. But the days have gone when criticism within the communist block could be wholly silenced. Dr Castro is not falling into line without a murmur, as a satellite would have done in the good old days. Mr Khrushchev admitted to journalists on Wednesday that, unlike the Russians, the Cubans do not trust the American pledges. Should they prove right, he added, it would mean war.

Peking will see to it that its point of view remains articulate. The criticisms will not be too hard to handle if the Cuba settlement does work out fairly well from Dr Castro's point of view, if coexistence prospers and the Khrushchev line pays dividends, particularly economic dividends at home. But should Dr Castro fall, should the United States overplay its present strong hand, or should the east-west tension build up again, then the least that could happen to Mr Khrushchev would be a radical, and enforced, change of line. It is to that extent, oddly enough, in President Kennedy's hands whether the Soviet leader can turn his miscalculated risk into a success, or whether the Caribbean adventure marks the end, if not of Mr Khrushchev, then of the policies, or at any rate, attitudes associated with his name.

NOTES OF THE WEEK

CUBA

Please, Fidel

BACK from the brink himself, Mr Khrushchev can scarcely relish the sight of Dr Castro still waggling his toes over the edge. On Thursday afternoon, six days after Mr Anastas Mikoyan arrived in Havana to begin the coaxing of Castro, the Cuban leader had still not been eased back on to solid ground. It had, indeed, been agreed that the United States could count departing missiles on ships that had left Cuba, and that the International Red Cross could inspect ships heading for Cuba to make sure that no more missiles were going in. But the undertakings Mr Khrushchev has made to Mr Kennedy (and which, according to one report, he repeated through Mr Kuznetsov, his special representative in the United States, on Sunday) go further than this. Mr Khrushchev said in his letter of October 28th that "representatives of the United Nations may verify the dismantling"

Good-bye Missiles?

of those weapons "which you call offensive." This left it up to the Americans to decide what they thought was offensive ; they have included the twenty or so Il-28 light bombers that reached the island before the blockade was screwed down.

Dr Castro, however, trying to salvage something from the wreck of his nuclear alliance with Russia, was still clinging on Thursday to the five demands he had put to Mr Kennedy. There is no call to be piously shocked about this ; Dr Castro would obviously like to get a guarantee, not just against outright invasion, but also against all the other measures by which his regime might be weakened or subverted. Whether he can really hold out for such a guarantee is another matter. Mr Mikoyan, mindful of the explicit promises made by Mr Khrushchev, and of the fact that Russian ships have already turned back from one blockade, is unlikely to risk another—doubtless a stiffer one this time, covering, say, shipments of oil as well as weapons—in the dim hope that the Americans will politely agree to evacuate Guantánamo. It is even less likely that he is drawing things out while missiles and bombers are stuffed into Cuban caves, to pop out again later when the Americans are not looking.

The risk Dr Castro is taking is that, if he refuses to be inspected at all, he will forfeit even the American promise not to invade. Perhaps Mr Mikoyan and Dr Castro are still hoping to get President Kennedy to agree to some minimal condition for UN inspection: for instance, an undertaking that the United States will not train anti-Castro guerrillas on its territory. This would be a pretty limited sort of promise ; it might be worth making, and accepting, if it got UN inspectors into Cuba without the complications that would be involved in further American action.

How Close It Was

ONE very good reason why Mr Kennedy and Mr Khrushchev may choose to tie up the loose ends of the Cuban affair as amicably as possible is their knowledge of just how close to war they were two weeks ago. There is evidence that the progressive mobilisation of each side's nuclear striking forces came fairly close to the point at which it might have been judged better to send them into action than to hold them back. The Strategic Air Command—the force of 1,500-odd long-range bombers that carries the bulk of American nuclear weapons—normally keeps half of its planes on the runways ready to take off at fifteen minutes' notice, and a handful up in the air on "airborne alert." It is now reported that, during the crisis, the number on airborne alert was increased, and virtually all the rest were put at 15-minute readiness. Some were dispersed to civil airfields to improve their chances of escaping a surprise attack.

These American measures were undoubtedly precautionary ; their purpose was to guard SAC against the possibility of a Russian first strike, and there is no evidence that the United States was planning to strike first itself. But Mr Khrushchev, who must certainly have known of these preparations, was not to know for certain what their purpose was ; nor can he have been sure what, for example, Mr Kennedy's Polaris submarines were up to. If he had panicked, he might have ordered his own nuclear forces into action for fear that they were about to be destroyed on the ground. Even short of this, however, he must have felt obliged to heighten his own state of readiness. These Russian moves, in turn, might well have pushed the Americans a stage further. For instance, any sign that the Russian missiles in Cuba (against which the United States has no real radar coverage) were being prepared for firing might have precipitated a pre-emptive strike against them, which could well have been mistaken for the outbreak of general war. In 1914 the mobilisation machinery of the powers, once set in motion, carried Europe inexorably, perhaps unnecessarily, to its fate. Today's machinery of nuclear mobilisation works in hours and minutes, not days ; two weeks ago it began clanking before, praise be, it was stopped.

PARLIAMENT

Commons on the Market

BY the end of the first day of this week's common market debate it was clear that this parliamentary occasion would not produce the long-awaited crunch between Government and Opposition. Indeed the whole debate so far has been befogged by the political manœuvres of both parties. The Government is intent on playing it cool. However much Llandudno may have braced Ministers at home, it has been something of a liability for them in Brussels, where the impression has been created that the highest authority in the Tory party has instructed the Prime Minister to get into Europe and not to count the cost. In opening the debate, Mr Heath had the difficult task of disabusing the Brussels delegates of this illusion, while at the same time showing himself warmly sympathetic to community aims. He acquitted himself admirably, once again showing himself complete master of his brief and even displaying some emotion when he came to deal with Mr Gaitskell's Brighton speech. Several times he sharply rebuked the Leader of the Opposition, principally for his refusal to recognise the magnitude of some of the concessions that the Government has obtained for other Commonwealth countries. Mr Heath also made it plain, in the nicest possible way, that the Government had no intention of accepting the Six's demand for an immediate abolition of agricultural deficiency payments on Britain's entering the market, and that he still intends to obtain real and detailed guarantees for New Zealand. These are the only two points on which it now seems that

a major revolt could be mounted within the Tory party.

For his part Mr Gaitskell has somewhat modified the tone of voice in which he speaks about the common market, although his basic position remains unchanged. For an Opposition party the form of words adopted in their amendment is not unreasonable, namely to welcome Britain's entry into the common market but to claim that Labour could have got more satisfactory terms. Unfortunately Mr Gaitskell paid only the most parenthetical lip service to the European ideal, and concentrated most of his speech on demanding concessions from the Six (sometimes sweeping ones, sometimes pettifogging ones) which he must know are unobtainable.

Basically, despite the verbal camouflage, the position of the two major parties remains unaltered. The Government is still determined to take Britain into the market at the earliest possible moment, provided the terms it can get are in any way tolerable. Short of some miraculous intervention, these terms will not be acceptable to the Leader of the Opposition, who will range his party against British entry. There will be dissidents on both sides, but to judge by the mood of the Commons this week they will be in a small minority on whichever side of the House they are found.

VASSALL INQUIRY

Ships or Sealing Wax?

THE published letters that passed between Mr Thomas Galbraith, the former Civil Lord of the Admiralty, and the spy William Vassall proved to be so laughably innocuous that those Labour MPs and newspapers who set up the hullabaloo over their existence are now under the strongest of moral obligations to explain and, where necessary, excuse their own behaviour.

Now that Mr Galbraith has seen fit to give them his head on a platter, his interpretation of honourable conduct appears visibly superior to theirs. The inquiry into the Vassall case has not gone far enough for any final conclusions to be drawn by outsiders about the state of security within the Admiralty at the time in question. Whatever may yet have to be said about that, the McCarthyite hounding of an individual minister (who has not even had a chance, so far, to give his evidence to the inquiry) on so insubstantial a basis as has now emerged runs clear contrary to the conduct of parliamentary or public life. Heaven forbid that any man's notes to his clerk on office carpets, crockery, paper clips and the North Pole should be deemed evidence of a questionable relationship. Mr Galbraith may be thought to have suffered a socially pressing and plausible junior colleague, which was how Vassall struck other officials at the Admiralty, too gladly (is that such a fault for a junior minister?), but to read any neglect of state security into these trivial missives is ridiculous. It seems an unnecessary sacrifice.

RAIL PAY

The Old Story

THE British Transport Commission's decision on Wednesday to bump up their offer to the railway unions by one per cent, to a total of six per cent, followed the script of an old familiar story. On Monday Dr Beeching had offered 5 per cent —which should already be enough to make some redundant railwaymen even keener to keep the jobs which it is vital that they be persuaded to leave. Of course, this offer (following an earlier 3 per cent rise for railwaymen last April) made nonsense of the Government's wages policy; of course, when making any wage offer at this time, Dr Beeching should have insisted on regional differentiation between the areas where railway labour is scarce and those where it is in large surplus; of course, the idea is moonshine that, in gratitude for his pay offer, the railway unions will also co-operate in accepting his axe. Still, in the tactical confusion surrounding the present struggle for the rational reorganisation of the railways, these absurdities were hastily allowed to pass.

The rail unions followed up with one of their ritual war-dances and claims for even more—designed, it seemed to outside observers, more to placate their militant executive members than actually to get even more. This was promptly followed by Wednesday's further concession, bringing the total cost of the wage increase to £18 million a year as opposed to Monday's £15 million. The commission added, dubiously, that this need not lead directly to fare increases.

The background to all this was a promise from the Treasury to stand £10 million worth of extra pay out of taxation: the rest is supposed to be found through savings in operating costs. So it would seem that an extra £3 million worth of losses will have to be eliminated as a result of Wednesday's settlement, which presumably means that the unions, in exchange for their rise, should be asked please to agree to the sacking of yet more railwaymen yet faster. One absolute need, however, is for proper compensation to be paid to those sacked; and thanks to Wednesday's decision there is now £3 million less to give them. It is a strange way to run down a railway.

But it is no stranger than the position into which London Transport have got themselves with their new large buses. They are now to be put on the road with no reduction in the frequency of services, and with no extra pay for the staffs who are to operate them, as a result of the refusal of the Transport and General Workers' Union to accept that their introduction should lead to economies which would be shared with the drivers and conductors. Is Ned Ludd really dead, or does he still live on in nationalised transport?

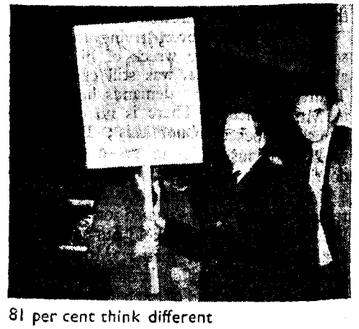
FORD STRIKE

Whose Past Record?

ON Monday, just as Mr Maudling was making his tax cuts on cars, it was announced that at the end of next week all Ford motor workers at Dagenham would be called out on official strike. On Wednesday, a National Opinion Poll in the *Daily Mail* reported that 81 per cent of the population of Dagenham—which must include very many Ford workers and their wives—disapproved of the unions' call. The issue at stake is the re-employment of seventy people, including twelve shop stewards, who have been listed by the company as "troublemakers." The trade unions insist that all those laid off during the unofficial strike that ended last week should be taken back—with the sole exception for the time being of Mr William Francis (the shop steward whose dismissal led to last week's strike). Mr Joe O'Hagan, acting chairman of the committee of the 22 unions represented at Fords, has claimed that if men are to be sacked for misconduct (and nobody could deny that there has been misconduct at Dagenham) it should be done for particular actions: "I do not think there is any court of justice in the world which can condemn a man on his past record."

But condemnation for past records is precisely the verdict that many people would pass on all concerned in this dispute. The company stands condemned (at least until its latest firm stand) for letting anarchy thrive, and for failing to improve its supervisory standards in the days when car profits were money for old rope. The 22 unions with members in Fords stand condemned for failing, over the years, even to try to bring the shop-floor representatives in the Dagenham plant into the mainstream of official discussions with the management. And many of the men threatened with the sack have a dreadful record of (often politically inspired) disruption.

It would be absurd if the unions failed to see that their interests and those of the company lie together here (even if they make some angry noises to dispel the effect of this truth on their militants). Fortunately it looks as though wisdom may be creeping in, through the delaying tactics of the Amalgamated Engineering Union towards



81 per cent think different

the strike. Even before the opinion poll, it cannot have failed to penetrate some of the more sensible union leaders that the real rank and file workers at Fords—which does not mean the rank and file as defined by the shop stewards—had grown heartily sick of recent disruption. For this reason it is at least possible that an official strike call is one that, for once, a good many of them might ignore. After the way in which their members voted against a national strike on their wage claim earlier this year, the AEU cannot relish the prospect of another rebuff from the increasing number of their members who are gradually acquiring a more middle class outlook along with their middle class living standards.

EUROPE

Tax Turnover

WITH or without the presence of Great Britain, the political integration of the European Economic Community in the field of economic policy continues to be debated and advanced among the Six themselves. The publication last week of the European Commission's programme of action, urging long-range economic planning and a common European monetary policy, was bound to antagonise west Germany's leading exponent of the free and open market system, its minister of economics, Herr Erhard. Indeed the very next day (November 1st) in Paris he attacked the system "of the French planners." If the French (and, by inference, the French vice-president of the European Commission, M. Marjolin, now electioneering in another role at Moulins) believe that their economic recovery is the product of judicious planning, so Dr Erhard is convinced that west Germany owes its recovery to the free market economy which he instituted in Germany some thirteen years ago.

Without pausing to take up the argument, the commission followed up its action programme with a proposal submitted to the Council of Ministers on November 5th calling for the harmonisation of turnover taxes in the common market countries. The proposal aims at an eventual single system of tax in this field, one very like the added value tax now in operation in France. Its primary intention is to eliminate the discriminatory effects of the varied systems of sales or turnover tax now used in the common market countries. But its wider and deeper implications are equally clear. Taxes affect national budgeting as well as national policy; if the economic programmes and budgets of the member states are to be aligned with a central, or community, economic policy, then these taxes need to be aligned as well.

One expects to hear not only from Dr Erhard on this proposal, but also from the industrial interests in the common market. The cumulative system of turnover tax (which exists in one form or another in most of the countries) offers an advantage to the large, vertically integrated corporation. By contrast, the added value system not only distributes the share of the tax more equally, according to the factor of risk involved in production, but also provides a rather sharp check against tax evasion, since each industry will check, in its self-interest, on the tax paid in the earlier stages of production.

It is a major proposal on the part of the commission, and will mean another large and concrete step in the direction of political integration via the route of economic

The Economist

NOVEMBER 8 1862

EUROPE'S SICK MAN

We are tired of urging that the very same policy of resistance to foreign intervention which induces us to oppose the aggression of Russia, should induce us to abstain sedulously from interfering ourselves between the Suzerain and the dependency. Our principle is, that nations know their own political wrongs and wants the best,—that no external Government has any right to prejudge them. The only possible exception to this rule is in a case like that of Mexico, where the native population seems unable to establish anything like a salutary Government,—a case which we ought always to regard as mere possibility till it is proved to be a fact. But in the case of the Turkish dependencies there is another unanswerable reason for not strengthening Turkey against the effects of their possible imbecility,—that no Government they could form for themselves could well be more utterly powerless to maintain itself than the Porte. There may be a *show* of plausible reason in sacrificing arbitrary liberty for the sake of Government,—but to do so for the sake of the mere appearance of Government,—the sceptre without the power to wield it, is indeed a work of supererogation. Lord Russell would say, we suppose, that the Turkish Government must be propped up, not so much for any good purpose it effects in the Sclavonic and Rouman dependencies, but to prevent a general scramble. . . . "Wherever the carcass is, there shall the eagles be gathered together," and if we want to avoid a new war between France, Austria, and Russia, we must do our best to prolong the life of the present sick tenant of the throne. Now, in answer to this, we assert that as regards the Christian dependencies of Turkey this policy is necessarily temporary and makeshift;—next, that the example which we are setting of authoritatively regulating the relations of the Porte with its disaffected subjects is the worst possible preparation for restraining France, Austria, and Russia from more active intervention whenever the crisis may come;—lastly, that considered as a mere question of time, then, if the crisis be ripe or nearly ripe now, there could not be a more favourable moment for effectually barring the interference of any of the great Powers.

policy. It is also a proposal that requires a unanimous vote on the part of the Council of Ministers. This is another example of the kind of far-reaching decision that the British will want to have a share in making —and therefore another reason, one of many, why the Six as well as the British should try to get the negotiations for Britain's entry over soon.

JAPAN

Consider Europe

PERHAPS later than most of his countrymen, Mr Ikeda, the Japanese prime minister, feels that the time has come to call in the old world to redress Japan's dependence on the new; his present round of the common market capitals and London is to make sure that Europe does not forget Japan.

Mr Ikeda said on October 30th, before he left for Europe, that Japan's policy of looking only to the United States was "lopsided." This lopsidedness in questions of defence and diplomacy has made political life very difficult for Mr Ikeda's Liberal-Conservative party; his idea of looking to Europe seems to have met with the approval of the Japanese Socialists, who usually disagree with the government as a matter of principle. From the point of view of trade, America has been a large customer, taking about a quarter of Japan's exports; but with the American market offering Japan little future promise, there has been an incentive to look elsewhere. While trade has expanded with Russia, and Mr Takasaki has been making "good progress" in his talks in Peking, the Japanese realise that the prosperous markets of western Europe offer greater promise for Japan's new and sophisticated technical products. Although the Six and Britain together take about 9 per cent of Japan's trade, the volume would be much larger, Mr Ikeda says, if these countries would not use Article 35 of the General Agreement on Tariffs and Trade to restrict Japanese exports by means of quotas. But the Japanese are also worried that the common market's tariffs are liable to restrict access to this lucrative market. To improve their negotiating position they have been liberalising their own import restrictions—although their "90 per cent liberalisation" is a long way from being all that it seems. The west Germans, who have a favourable balance of trade with Japan, have shown sympathy for the Japanese case. The Japanese rely on Britain's entry into the common market to make western European trade policies more liberal.

Explorer in Europe

The problems of a European country trading with Japan have been reflected in the six years of intermittent, and at times hard, negotiating for the Anglo-Japanese trade treaty which Mr Ikeda is expected to sign on November 14th (and which is discussed further on page 593). Britain has been unwilling to renounce the protection of Article 35 of GATT until there is some guarantee that Japanese exports will not be subsidised (because this undermines British competition with Japanese goods in the markets of third countries) and that each country's "sensitive" products can be protected against disruptive competition. This has been the subject of hard bargaining and many producers in both Japan and Britain will believe themselves let down when they find that their products are not on the list.

OFFICES BILL

Mod Cons

THE new Offices, Shops and Railway Premises Bill has so far become a subject for only mildly gleeful comment in this nation of over seven million office and shop workers. But it will probably lead to loud complaints in time, both from employers who think it goes too far, and from critics who will complain that some of the Government's proposals fall short of the minima that interested organisations had demanded. Thus the 40 sq. ft. of floor area that is to be every office worker's right seems to include furniture and fittings, which can be quite solid occupiers of space; the clause may not be the total safeguard (or prodigious demand for lebensraum?) that some people have supposed it to be. There may also be some dispute over the required minimum temperature, after the first hour, of 60 deg. Fahr.; there have been champions of 65 deg. (It is certainly surprising that when the Meteorological Office is converting the country to think in Centigrade a new bill should now lay down the law exclusively in Fahrenheit.) Probably the heating clause, backed by the compulsory provision of thermometers on each office floor, is the one that will cause managements most trouble. Strikes in excessively cold factories are not unusual; office workers can henceforth invoke full statutory protection.

The provisions about drinking water may also shake some leisurely managements, even in otherwise good premises; the bill declares that when drinking water "is delivered otherwise than in a jet from which persons can conveniently drink" (not just a running tap) there must be a supply either of paper cups, to be thrown away or of other vessels which can be rinsed in drinking water. It is in providing this kind of facility that British premises are too often at fault, even when other expensive efforts have been made to improve on Bob Cratchett's surroundings. The basic sanitary provisions are obviously welcome: there is very little to be proud of in the folklore which proclaims that so many successful firms began with a bucket in the basement. Equally welcome is the decision that most parts of the bill should apply to Government offices as well as to private ones. The overcrowding provisions are to become effective five years after the bill is passed: some parliamentary critics may argue that this should be reduced to three years at the most, but those who do cannot sensibly protest at the same time that too many new offices (and not enough new houses) are being built.

SERVICE CANDIDATES

Elections, Release for

SEVEN private soldiers and airmen have applied for release to fight at this month's parliamentary by-elections (four of them at Chippenham alone)—a sudden burgeoning of political ambition in the barrack room that has struck Mr Macleod as "rather ingenious" and brasshats as distinctly reprehensible. These men, however, are only following their officers' lead; three officers stood at by-elections earlier this year, at least two of them with no apparent policy except to get themselves out of the army. Any soldier who is over 21, not a peer of the realm and has not been guilty of corrupt electoral practice in the past can use this system of cancelling his long-term regular engagement with the colours—provided he can also raise the required by-election deposit of £150.

There are nice calculations of advantage involved. Officers do not buy themselves out: they are normally allowed to resign their commissions. Those, however, who have been to Sandhurst or gone on certain senior courses have had to give an undertaking that they would not resign for five years thereafter. If they then change their minds, a quickening of the political pulse may be a useful argument to put to the colonel. Other ranks have no prescriptive right to buy themselves out once the standard three-month option (£20) for recruits has passed; but buying-out is allowed on compassionate grounds, the scale of self-purchase varying with the amount the services have invested in each individual in terms of training and past pay. Most other ranks can still expect to get out for something under £150, although the figure is usually enough to deter them (or any prospective employer) from taking the step without good reason. But highly-skilled service tradesmen. who may have signed on for nine or twelve years, might be asked to stump up as much as £250, the agreed all-service maximum. For them parliamentary candidacy is obviously more economic, besides the universal advantage of immediate release—within a matter of days or weeks—to mount the hustings. Any incidental expenses (e.g., a personal appearance in the constituency to hand in nomination papers) can probably be offset by television performance fees.

If this dodge really catches on, the obvious course for the services is to give men unpaid leave to fight any by-election campaign, but to introduce legislation saying that only if they actually become MPs will their contract with the army be cancelled. The idea of having even a communist candidate at an election who is still in essence a Private Smith, not just a Mr Smith, might give some army traditionalists the willies; but it need not worry anybody else.

SOUTH AFRICA

Call for a Boycott

ON Tuesday the United Nations Assembly recommended (by 67 votes to 16, with 23 abstentions) that all member states should break off diplomatic relations with South Africa, and apply economic sanctions against it. This was one of the rare cases in which the African and Asian states lined up almost solidly, and with very few supporters apart from the Soviet block. The effect of the resolution is thus doubtful, since most of the states supporting it either have already severed commercial and other ties with South Africa, or scarcely trade with it anyway. But it is significant that there was much more support than last year, when the Africans could not even rally the Asians to a boycott resolution.

Britain's position in regard to a boycott of South Africa is obviously unique, if only in that a boycott would cost Britain more than any other participating state; an export market worth £150 million a year, and investments worth £1,000 million, would be jeopardised. Supporters of the boycott proposal would, of course, argue that this is also a reason why British participation is crucial, since it would hurt Dr Verwoerd's regime more than anything else could. They would also dismiss the Government's argument that the African population would suffer most, pointing to the fact that it is from the political leaders of that population that the call for a boycott has repeatedly come.

Any nation, such as Britain, that relies on world-wide trade is rightly reluctant to take part in politically directed boycotts; the British have shown a similar reluctance when urged to cut off trade with communist states. Why should South Africa be made an exception? One answer given is that its particular offence of racial oppression is now almost universally condemned as no other political system is. Ultimately, the decision must take account of the horrid prospect of a revolution in South Africa in which the black insurgents might be armed and backed by the communist powers, the whites by the West. Sales of arms to South Africa might well be the first link that will have to be cut; it is a link that the United States has already cut.

NUMBER 2 OF A SERIES

FUNDAMENTAL RESEARCH: ANOTHER REASON WHY TRUST IN PHILIPS IS WORLD-WIDE.

WHY TRUST IN PHILIPS IS WORLD-WIDE

One of the responsibilities that a World Federation of Industries such as Philips must face, is to develop new and useful products. More than 3,000 Philips researchers in many countries work to this end. Their achievements are evident in every Philips product. Scientific inquiry in Philips laboratories progresses in a hundred different directions at once; it is a key to Philips' present solidity and to its future. The world-wide awareness of these facts is one reason which inspires confidence in Philips.

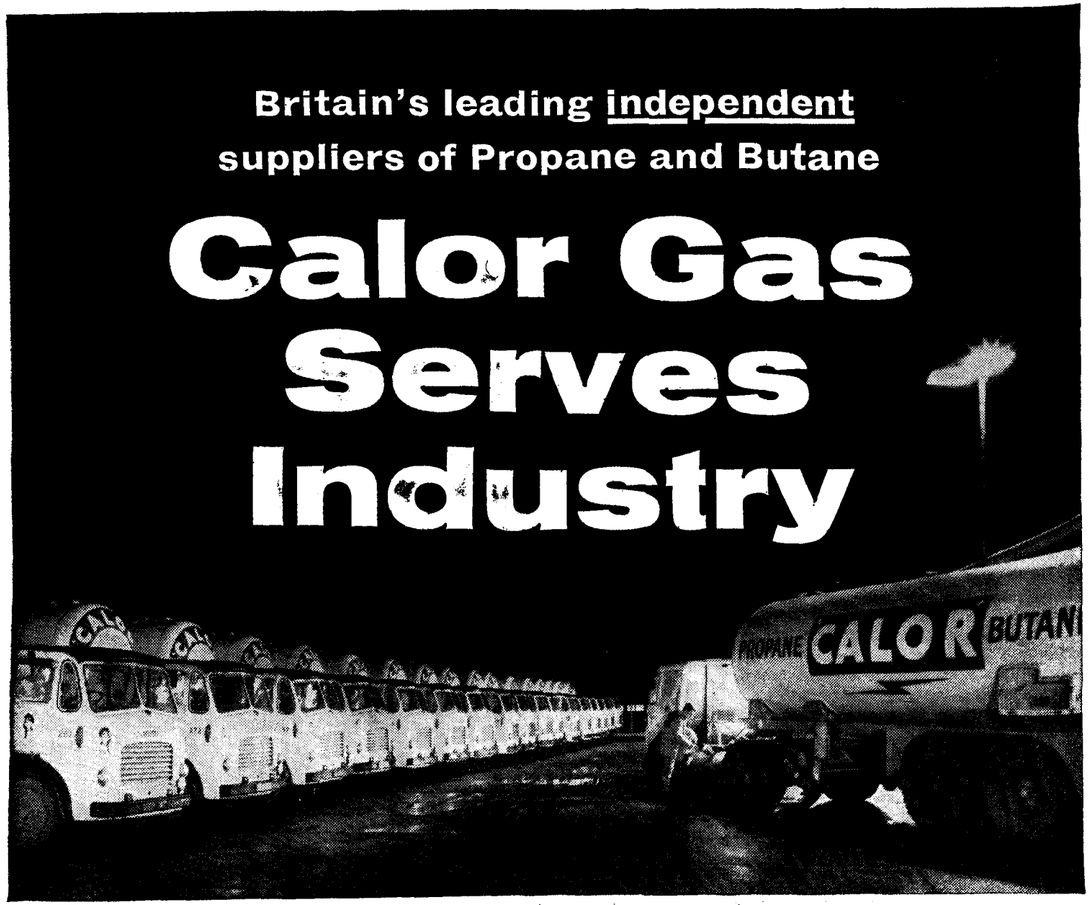
suppliers of Propane and Butane

Calor Gas Serves Industry



Calor Gas has the largest L.P. Gas Road-Tanker Fleet in the world and the widest research and service facilities in Europe!

NO MATTER WHERE YOU ARE, You can depend on Calor Gas to serve you on the spot. Seven modern filling stations, and transport depots sited near major oil refineries throughout the country, ensure that the full, specialist facilities of Calor Gas Service are never more than a short, speedy journey from Calor customers. Calor Propane and Calor Butane are the modern, mobile, clean-burning industrial gases that fuel every kind of industrial process with new efficiency and economy. Calor Gas supplies them to you in cylinders or to bulk storage tanks on site. Calor Gas Storage Tank Hire Purchase Plan enables customers to own their own storage tanks and qualify for the lower customer-storage buying rates.

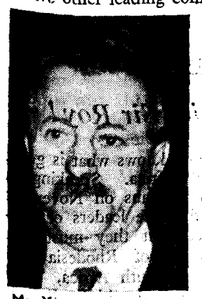
BULGARIA

Mr Zhivkov on Top

EVEN prime ministers, in communist countries, have slight hope of political survival if they get on the wrong side of a more powerful party boss. Even so, when Mr Zhivkov, the party secretary, announced at the Bulgarian party congress in Sofia last Monday that Mr Anton Yugov had been expelled from the central committee and dismissed as prime minister, the assembled delegates must have felt that their congress had started with a bang.

Five other leading communists were also sacked from the central committee and from their jobs. They included Mr Georgi Tsankov, who was minister of the interior from his appointment in 1951 by Bulgaria's "little Stalin," Mr Vulko Chervenkov, until last March when he had to give up this key post for a deputy premiership. Mr Chervenkov himself received the harshest treatment; he was expelled from the party as well as from the central committee, thus completing his long slide from power which began six years ago. It has always been suspected that Mr Chervenkov was struggling hard to keep his footing on the slippery slope; this was confirmed on Monday by Mr Zhivkov when he said that Mr Chervenkov, had "stubbornly opposed" the party's efforts to eliminate the personality cult.



Mr Yugov: no room at the top

Significantly, most of the disgraced men have at some time held high office in the ministry of the interior; all of them are accused of "flagrantly violating socialist legality." An outsider might consider that on that count there is not much to choose between them and their accuser. But evidently Mr Zhivkov had the sense to realise that he would get the edge over his rivals if he gained Mr Khrushchev's backing. In this he seems to have succeeded; during his visit to Sofia last May, Mr Khrushchev treated the Bulgarian leader with marked friendliness. Whether the decision to push out Mr Yugov was sudden or premeditated—and it may be significant that his successor was not announced on Monday—it clearly has Russian approval. Mr Zhivkov himself paid a flying visit to Moscow last week, and on Tuesday Mr Suslov, in his address as chief Soviet delegate to the Bulgarian congress, referred to the "capable leadership of Todor Zhivkov." He also promised "substantial Soviet help" for Bulgaria's new 20-year economic plan. The regime is faced with mounting economic difficulties, and this promise, if implemented, should help to reconcile disapproving Bulgarian communists to Mr Zhivkov's success in the internal struggle for power.

YEMEN

Big Brothers Take Over

SELECT your smoke cloud and believe what you will of the fighting in Yemen. Jordan and Saudi Arabia—and Israel—speak of heavy Egyptian losses; Cairo laments the death of 3,000 Arab soldiers dispatched to Yemen by Kings Saud and Hussein. The Yemeni republicans talk of carrying the battle into Saudi territory; the Saudi and Jordanian governments have invited foreign correspondents to see for themselves that the Imam is still fighting fit. Only two things seem sure: that fighting still goes on in northern Yemen and that the Yemeni forces—republican and loyalist—have become overshadowed by their respective protectors. Saudi Arabia's decision on Tuesday to cut off diplomatic relations with the United Arab Republic underlines the point (although the fact that, up till now, the two countries maintained official relations is almost as odd as the diplomatic link between India and China).

Probably the fighting has gone beyond the plans of either protector. If so, there should be a chance that the appeal for peace, made by President Kudsi of Syria on Tuesday, will have some effect. But Egypt, having rushed to the aid of the Yemeni revolution, is clearly determined to leave its impress. The reshuffling of Brigadier Sallal's government is, perhaps, the first sign of Egyptian influence. The brigadier has made himself president as well as prime minister; several army officers have been brought into the cabinet; the former foreign minister, a Ba'athist, has been sent off to represent the revolutionary government at the United Nations. But Brigadier Sallal's acceptance of Cairo's advice is unlikely to be limitless; the Egyptians are not the most tactful of advisers.

The Saudis, meanwhile, have made their own gesture to show that they are catching up. On the same day as he broke with Egypt, the prime minister, Prince Faisal, promised to do away with slavery and to introduce some form of representative government. Mecca radio has also started putting out feelers that might lead to the resumption of diplomatic relations with Britain, broken off in 1956. This is to be welcomed in itself. But it would be a pity if the chance to renew relations with Saudi Arabia delayed even further British recognition of Yemen's republican regime. The regime may change again, but the British Government would be in an invidious position if it started insisting on hard-as-rock evidence of stability among the shifting loyalties of the Arab south.

ESTATE AGENTS

Restrictive Register?

PARLIAMENT should be urged to look somewhat quizzically at the proposed Estate Agents (Registration) Bill. This will not be a popular thing to say. "Buying and selling a house," declares a memorandum issued by the main professional organisations who are sponsoring the bill, "is for many people the most important financial transaction of their lives." A good estate agent ought to be able to give advice to his clients on "(among other things) valuation, building construction, rating, taxation, rent control, tenancies, mortgages, contracts, compulsory purchase, and town and country planning." Their bill therefore seeks to forbid estate agents to practise unless their names are entered upon a statutory register. This register would be policed by a representative council of the most respectable people in the profession. The council would require that new entrants to the profession should pass certain examinations; it would draw up a code of rules about "touting and advertising"; and it would be empowered to strike off any estate agents who had been found guilty of fraud or unprofessional conduct.

All of this sounds fine—but MPs who are asked to sponsor this private bill should pause to consider the difference between a statutory monopoly and a sensible voluntary professional organisation. Nobody could have any objection to a voluntary body which demanded that all its members must possess certain qualifications, and which provided positive baits to persuade wise purchasers to deal only with them (such as setting up a compensation fund to relieve any losses suffered by clients defrauded by registered—but not by unregistered—estate agents). But a statutory body of estate agents, unlike a voluntary one, would obviously have to start by allowing in everybody who is practising already; Parliament would not dare to say that thousands of unqualified estate agents up and down the country should be obliged promptly to pack up shop (which is why the sponsors of this bill do not suggest that). Moreover, a professional body of this kind nearly always goes on to impose restraints on competition in price as well as in advertising; and the Restrictive Practices Court is not allowed to inquire into restraints imposed by statutory monopolies or by associations engaged in the sale of services (as distinct from in the sale of goods). Would the bill's sponsors agree that—as a special case—all rules formulated by the proposed council that related to the suppression of competition would require to be justified before the Restrictive Practices Court? If so, one might be inclined to favour this measure; otherwise, not.

CRIMES OF VIOLENCE

Compensation for Victims

COMPENSATION for victims of crimes of violence is the subject of continuing public debate. A valuable contribution to the discussion has now been made by the report of the Justice committee which was formed last October under the chairmanship of Lord Longford to consider the whole matter. (Stevens: 7s. 6d.) It proposes that

a Crimes of Violence Compensation Board should travel the country, like judges on circuit, hearing claims ; ordinary court procedure, it says, would be too slow and cumbersome, and victims might be deterred from applying to a court for fear of the expense involved. The board, states the report, should have a legally qualified chairman, a doctor, and a J.P. (including one woman) as members. The schedule of offences to which compensation would apply should include some sexual offences, but exclude motoring offences resulting in injury (since these are already covered by compulsory insurance). The advantage of a schedule is that it could be adjusted as the board gathers experience.

In assessing the actual amount of compensation to be paid to crime victims, the report is eminently practical. It rejects common law damages, or benefits under the Industrial Injuries Scheme, as being inappropriate ; instead it wants to see a special scheme based on the needs of the victim and the nature of his injuries. First aid benefit should be available straightaway, to be followed by reviewable weekly payments for loss of earnings, based on the principle of reparation not subsistence. For non-gainfully employed victims there should be lump sum compensation. Dependants of the victim would also be able to make claims. The committee estimates that the cost of its scheme would be about £1,250,000 a year, responsibility for which would be assumed by the state, although the criminal should also be required to contribute. It emphasises, however, that this payment from the criminal should be made only if economically practicable and only to the extent that it would not impede his rehabilitation. This report deserves a warm welcome. The Government, taking it into account, should now come forward with proposals of its own.

BRITISH GUIANA

Sticks on the Bonfire

HOWEVER keenly the British Government may look forward to the day when British Guiana, with its racial animosities and impossible geography, becomes independent Guyana, the flags for independence have had to be put back in store. After two weeks of sour squabbling, the British Guiana independence conference in London broke up on Tuesday without making even a dent in the problems that obstruct the country's advance from a self-governing colony to full independence. A thoroughly dismal outlook is faintly illuminated by the chance that the Colonial Secretary's threat to impose a solution on the colony if, " after an interval," the three political leaders fail to produce a plan of their own may push the Guianese politicians towards some form of compromise. As things are, an imposed solution could be a match dropped on a bundle of fireworks.

At all pre-independence conferences, minority groups have struggled for more constitutional safeguards than they have been able to get. The trouble with British Guiana, as at the Zanzibar conference earlier this year, is that the political divisions are so evenly matched that the weaker faction cannot be safely overruled. The issues are straightforward. Dr Cheddi Jagan, the prime minister, wants to maintain the present electoral system of single-member constituencies, not to hold elections before independence, and to lower the voting age from 21 to 18. The two opposition leaders want to change to proportional representation, elections before independence, and to keep the voting age as it is. Dr Jagan's proposals would keep him in power; the opposition's proposals would probably turn him out.

Dr Jagan in power has been an unlucky leader, not a bad one. The riots in Georgetown last February showed how vulnerable he was. The two opposition leaders, Mr Burnham, the African leader who once supported Dr Jagan, and the tub-thumping Mr d'Aguiar, who heads a middle-class faction including most of the Portuguese in the colony, have been able to create a bonfire of racial and political suspicions. Of British Guiana's half-million people, about half are Indian and about a third African, and voting is roughly along racial lines. This is a bad beginning for a unified state but not insuperable (Trinidad, after all, is faced with the same sort of situation). What makes it much more incendiary is Dr Jagan's persistent marxist talk which can, and has, been turned by people like Mr d'Aguiar into the imminent threat of a communist take-over.

An unfair consequence of the failure of the talks is that the British Government is bound to come under fire for having let Dr Jagan down because he is some sort of communist. Dr Jagan himself has already blamed the Government for the breakdown. Certainly the United States will not shed any tears at the postponement of independence. But the British, this time, have not been exploiting a colony's divisions ; the desire for a decent withdrawal from a difficult colony is, and should continue to be, their prime motive.

CENTRAL AFRICA

Well Said, Sir Roy!

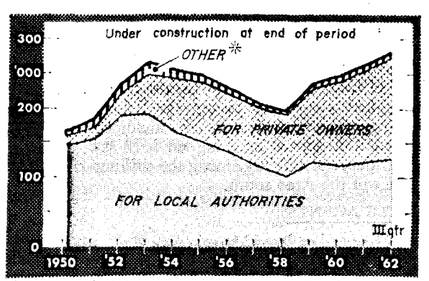
SIR ROY WELENSKY knows what is going on in central Africa. Speaking in Pretoria to South Africans on November 2nd, he asserted that the leaders of pan-Africanism believed that they must first crack the Federation of Rhodesia and Nyasaland to get at South Africa, " and they are busy trying to do this." But all was not lost. If South Africa, the federation, Angola and Mozambique could survive the present surge of the pan-Africanist movement for the next three to five years, " then we will have saved southern Africa from its evil consequences." This was no idle boast, said Sir Roy. Pan-Africanism was largely a force of words and propaganda ; it had neither budget nor army except what it could extract from the United Nations by dint of propaganda. Its only cement was the desire to rid Africa of the white man and all he stood for.

The balance of power between the southern whites and the blacks to the north will be decisively affected by decisions that must be made in London by Mr Butler, as minister for central Africa, during the winter. On Monday Dr Banda, of Nyasaland, will come to Marlborough House to ask for internal self-government (which he is almost certain to get) and a date for independence outside the federation (which he has been all but promised, but may not get). This is the first pan-Africanist crack at the federation ; its likely effects on Nyasaland are discussed on page 572.

By-elections will be held on December 10th in the ten " national " constituencies in Northern Rhodesia which could not be filled at the elections on October 30th because neither race could muster the support of a tenth of the voters of the opposite race. So far Sir Roy's white voters have given his party one more seat than Mr Kenneth Kaunda's black voters have given him. Sir Roy described this in South Africa as a rejection of the " extremists." In fact the 80 per cent of votes cast against keeping Northern Rhodesia in the federation is almost as overwhelming as the 95 per

Houses for Whom?

" Despite all that has been done," the Minister of Housing and Local Government told the Commons, " we still have a large and continuing housing task in front of us." One of the Minister's new concerns is to urge local authorities " to step up their pace." In the short run, he promises " at least some increased building next year and more the year after."



* Housing associations and government departments

England and Wales

sent of votes Dr Banda won on the same issue in Nyasaland ; Mr Butler can no more keep Northern Rhodesia in the federation against its will, without breaking repeated British Government promises, than he can Nyasaland. If he puts a white government in power in Northern Rhodesia by instructing his officials to support Sir Roy's party, he will be coming down on the white side in the continental struggle Sir Roy describes. Whatever happens on December 10th, Mr Butler should announce an immediate new constitutional conference for Northern Rhodesia, designed to eradicate fancy franchises.

Southern Rhodesia, on the other hand, is best left alone until its (predominantly white) voters have safely returned Sir Edgar Whitehead's government on December 14th; unless they do, the chances of coming to terms with the " force of words and propaganda," by some newly-devised transitional arrangements, will be even less than they are now. Finally, since the federation cannot last, Mr Butler might as well clarify things now by saying that what was put together at Westminster will be pulled apart at Westminster.

EAST-WEST

Your Gap, Comrade

FOUR years ago it was the Americans who were nervous about a " missile gap ". They feared that by the early nineteen-sixties (that is, now) the Russians would have won a dangerous, perhaps even fatal, lead in intercontinental missiles—some people said a lead of three to one, others of ten to one. As things turned out, the fear was groundless, for the two countries would still be roughly equal in these weapons even if President Eisenhower, and later President Kennedy, had not ordered American production to be increased. But increased it was ; with the result that in the last year the missile gap has gone skittering like the bubble in a spirit level to Mr Khrushchev's end of the balance.

The latest annual review of the east-west military balance by the Institute for Strategic Studies, out this week,* shows how rapidly the gap has moved. At the beginning of this year the estimates gave the United States 63 intercontinental missiles, against the Russians' 50 or so. Early next year the Americans are expected to have getting on for 500, against the Russians' 75 or so. The gap probably widens further if one counts the nine American Polaris-carrying submarines now in service, with sixteen missiles apiece, since the Russians have lagged behind the United States in developing missiles that could be fired from under water.

Since Russians are human, there were doubtless worriers in Moscow who insisted that these figures (and the overwhelming American superiority in long-range bombers) made it essential to plug the gap with Cuban bases. The attempt failed, and Mr Khrushchev is stuck with his inferiority. Next year he will have a chance to restore the balance when a new, smaller and altogether handier intercontinental missile is expected to come into service in the Soviet Union. But can he spare the funds that the Americans are lavishing on their favourites, the Minuteman and the Polaris ? There may be a moral in this for both sides. With missiles, as with the sheets on the matrimonial bed, it is almost as bad to get too much on one's own side as too little. The result is liable to be heavings on the other side, a testy grab for equality, and general bad temper in the grey dawn.

Taxes for Britain

the impact of the Common Market

How will British taxes change if we join the Common Market? Will income tax be reduced and taxes on spending increased? What kind of indirect taxes will the Common Market adopt? Should the man in employment be allowed more deductions for expenses? Why is a reform of company taxation needed? These are some of the issues dealt with in a new 40-page booklet written for the non-expert in taxation; it deals with both the changes that entry into the Common Market will probably bring about and those which are desirable in any case.

NEW SCIENCE

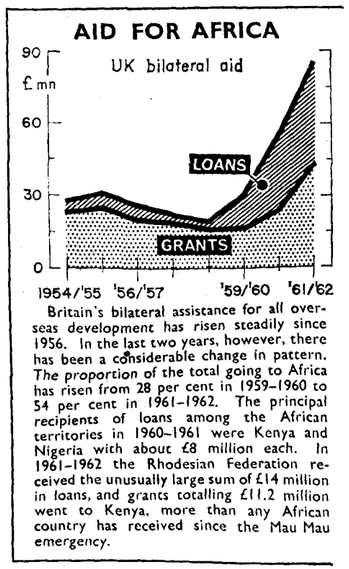
Practitioner of Ideas

THE journalist, it was said by one editor of *The Economist*, thinking particularly of the weekly kind, should aspire only to be " the general practitioner of ideas ", interpreting " the scientist to the public " and " the public to the scientist ". Percy Cudlipp, who died on Monday aged only 57, had edited both the *Evening Standard* and the *Daily Herald*, but his brightest feat of editing, and the one in which he rightly took largest pride, was his last. This was the successful establishment of the *New Scientist*, most contemporary of weekly journals in its attempt to communicate to a wider readership the sort of scientific happenings and ideas that mould the world today. Percy Cudlipp, who was a patient, gay, civilised man of character, could get this translation done so well—and he was always saying himself how far his new paper had still to go—because, though no scientist, he was one of the few best of a generation's journalists.

LABOUR PARTY

Mr Brown's Victory

MR BROWN'S re-election as deputy Leader of the Opposition by 133 votes to 103, is a triumph against considerable odds, many of which were self-imposed. It also has some political significance. First it preserves the balance in the party between the trade union and intellectual wings, a precarious equilibrium which Mr Wilson's election would have to some degree upset. It also maintains the *status quo* in the present struggle between Labour's pro- and anti-Europeans. Mr Brown's election certainly does not mean that the Labour party will now turn round and come down in favour of British entry, but it should affect the form which any final opposition to the market will take. Secondly, there is little doubt that more floating voters would have been alienated by a Labour party which had Mr Wilson in the second seat of power than by one which still has Mr Brown. Mr Wilson has lately made great efforts to widen his support within the parliamentary Labour party from the left to include stalwarts of the centre and the right ; he had not succeeded in doing the same thing in the country, where he is still generally regarded by too many people as being too much of an ambitious politician to be as successful as his shrewd wit and high intellectual qualities could easily make.



Britain's bilateral assistance for all overseas development has risen steadily since 1956. In the last two years, however, there has been a considerable change in pattern. The proportion of the total going to Africa has risen from 28 per cent in 1959–1960 to 54 per cent in 1961–1962. The principal recipients of loans among the African territories in 1960–1961 were Kenya and Nigeria with about £8 million each. In 1961–1962 the Rhodesian Federation received the unusually large sum of £14 million in loans, and grants totalling £11.2 million went to Kenya, more than any African country has received since the Mau Mau emergency.

Merseyside goes to town

Guiding the Drift

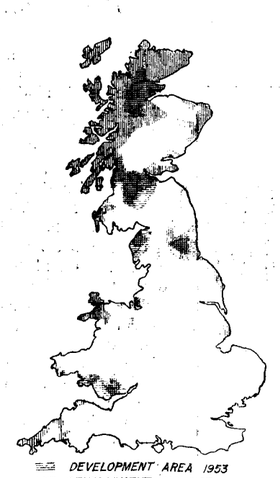
THE autumn's bout of unemployment—the figure has now crept up over the half-million mark—is having one completely predictable effect: those areas which, since the war, have persistently lagged behind the rest of the country in its bumpy ride towards affluence are lagging still further. The Labour party, in Monday's censure motion in the Commons, rightly stressed this: but the Government's omission to reply (save by indirection) to this criticism does not mean that they are not thinking about the matter. It has at long last become clear that something far more audacious is needed than the piecemeal subsidisation of the existing Local Employment Act or the building (announced on Thursday by the President of the Board of Trade) of a few ready-made speculative factories in the north-east and in Scotland. Equally, something far more audacious is needed than the old nostrums, still trotted out by some Labour stalwarts, of direction of industry and subsidies for worn-out occupations.

What is now beginning to be thought out is a whole new attack on the problem of how to diminish the gap between Britain's new extremes; the extreme of congestion and high-cost inefficiency in the vast conurbations (which means, in fact, London and Birmingham) and the opposite extreme of sluggish inefficiency in the cities that once, with cotton and coal, shipbuilding and railways, provided the nation with its industrial sinews. The question sprawls across all the disciplines of politics, economics, geography, administration and everything else: a good new pamphlet* written for Political and Economic Planning by Mr Michael Chisholm usefully pursues some of these lines of attack towards three minimum objectives: limiting the biggest conurbations, promoting growth outside them by encouraging the development of large urban centres and, thirdly, reducing pockets of unemployment either by bringing new industry into them or by encouraging long-distance commuting (surely not a good aim), or by emigration.

On the straightforward question of reducing unemployment—which has obstinately persisted in afflicting the same regions for a very long time—it is as well to face these alternatives squarely. This profoundly emotional subject bedevils all advanced economies, with a bitterness that grows proportionately greater with the age of a country's industrial development (the Borinage and West Virginia make Fife's coal crisis look puny). And it is something that will quite inevitably recur again and again: when a more rational form of personal transport than the internal combustion private car is invented, Coventry will need to see how Lancashire has gone about getting out of cotton. If an area has developed because coal is there, or because its harbour was well placed to catch the trade winds, the cost of maintaining its position after its objective advantage has become a historical, rather than an economic, fact, becomes too high. Migration is the only answer. Mr Chisholm observes that the claims of some areas of high unemployment to offer "social capital" in the form of housing, schools and so on, is often false: "A great deal of this social 'capital' has outlived its time and is, in fact, often a liability." This sentence should be graved on the soft hearts of those pleading for Fife coal (despite the new project for a power station there), for the Hartlepools, for parts of Merseyside.

Migration within Britain, of course, is an accomplished fact—mainly in the form of the famous "drift" into the south-east. In the past ten years the population of England south of a line from the Humber to (roughly) Shrewsbury grew by 1,969,000, including a net immigration of 713,000: north of this line, and in Scotland and Wales the population grew by only 427,000, thanks to a net emigration of 612,000 people. And the reconversion of "declining" areas into new activities (including the shift off the land) is a far faster process than is often thought. This may be checked by the present lack of employment: but the period 1959 to 1961 was not particularly brilliant either from the growth point of view. But from 1959 to 1961, to take Scotland as an example, the labour force in agriculture, forestry and fishing went down from 103.9 thousand to 98.2. All forms of mining declined from 101.5 thousand to 89.3. But all engineering and electrical trades (in the Standard Industrial Classification) increased from 146.8 to 167.6 thousand: within this group of trades the manufacture of productive equipment employed 97 thousand people in 1959 and 109.9 thousand in 1961. Not just drift but healthy reconversion is going on, helped by the Board of Trade's development aid.

There are two remarks to make here: one is that far too much internal migration—not undesirable in itself—is towards one bit of the country. The other is that the reconversion of declining areas, while far more rapid than is often realised, is yet not nearly rapid enough. The Local Employment Act (under which the spending of £75 million has been authorised since 1960) is itself partly to blame for this. Despite some grumbles—notably from the north-east, where they say they have only had £438,000 of aid—there is not nearly enough dissatisfaction with this misconceived piece of legislation. The idea behind it is to draw lines round those pockets where unemployment is over 4½ per cent (or where it is likely to be soon, as at Darlington, where the railway workshops are to close). Not only may this concentrate its administrators' attention on small towns where the percentage is high but the numbers low: it also prevents them from having a true regard, with the best will in the world, for encouraging potential growth points that may be only half an hour's journey away—or for the genuine possibility that an area's period of usefulness may be at an end.



What is needed is something far more purposeful in the way of a choice of priorities for spending: the Government's new decision to speed up the road-building programme in the north-east of England is worth more than a great deal of direct aid to industry as far as the prospects of long-term growth are concerned (and thus for the chances of attracting a really worthwhile investor). For the job of renewing the non-prosperous conurbations, the first hope lies with the Local Government Commission and its attitude to urban counties: only with a central power will Tyneside or the Manchester or Liverpool built-up areas be able to take that long, hard look at themselves—and then perhaps to ask the Government for what they really need. For the opposite task of trimming the prosperous conurbations to size, two things are needed—a fiscal power to control office employment, and, if necessary, a more general local tax on employment designed both to push firms out and to finance new regional authorities like the Greater London Council.

For the rest, the aim must be to guide those prevented from drifting into the south-east—and perhaps some of those persuaded to drift out of it—into places where it is actually beneficial to themselves to go. New towns are, perhaps, the ideal answer: expanded towns could be as good if the problems of reconversion are adequately approached (the Ministry of Housing is now to see whether Ipswich, Peterborough and Worcester are suitable candidates for doubling in size). But most growth points are still basically London- or Birmingham-centred towns—and they will become more so when a Channel bridge or tunnel weights the south-east even more heavily towards prosperity. The course for future success must be in developing new centres of urban economic attraction, rather than in attempting to shore up the old, disfigured as they are by a century's backlog of heavy industry and cheapjack housing. It is a good sign that the brightest agencies in the declining areas have already alerted themselves to take advantage of those sections of the Treaty of Rome that assist regional development.

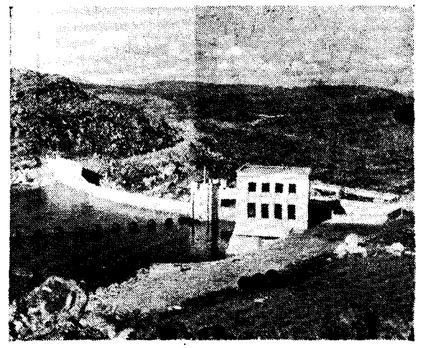
Highland Revolt?



FROM OUR SPECIAL CORRESPONDENT

THE North of Scotland Hydro-Electric Board has become so prized in the Highlands that its primary purpose, in its champions' eyes, has long been changed from the generation of electricity to the provision of social welfare throughout the crofting counties. The recommendation by the Mackenzie committee, in its report on Electricity in Scotland (Cmnd 1859), that the board should now be merged with the South of Scotland Electricity Board, which was hived off from the British Electricity Authority in 1955, has set up loud warnings (in the Gaelic and Liberal tongues) of impending disaster.

Not all of this need be taken too seriously south of Inverness. The committee has, in fact, deliberately softened the blow both by declaring "economically acceptable" the addition of 400 megawatts to the hydro system by 1975 (which is not very much out of line with what the North board wanted) and by recommending an interest-free loan of £8 million to the new joint board chiefly to provide submarine cables to carry power from the mainland to the major island groups—except Shetland.

It will be difficult for the Secretary of State for Scotland (even for one whose estates saw a private pioneering development of hydro power) to reject the Mackenzie advice on a merger; since Mr Noble has little or no chance of introducing legislation in this session he may be content to keep his own council until the fiery cross has burned out. The North board has managed its affairs with considerable success (connecting with over 92 per cent of all potential consumers in a scattered population covering one-quarter of the land area of Britain) and, considering the original local resistance to its dams and power lines, has earned remarkable popularity; its compensation to landowners has rarely been less than handsome.

But at the heart of the North board's balance sheet lies its ability to sell surplus power to the South board—which the South is obliged to buy, sometimes even when it could be using its own existing generating capacity. The Mackenzie committee calculates that in the six years 1956-61 there was a combined saving of £3 million in generating costs under this arrangement, but at the expense of the South having to pay the North £3.4 million more than it would have cost to produce the same power in thermal stations in the South.

The committee says acidly (and rightly) that control and dispatching staffs in the two regions should be able to take export-import decisions solely on the economic merits of each case, without looking over their shoulders at the rival managements behind them. It comes down firmly in favour of future economies of scale (neither South nor North has the incentive under the present system to instal the large new sets of 550 megawatts now being constructed for the Central Electricity Board in England). It believes it would be quite wrong, and a serious disadvantage to Scotland as a whole, to have duplicate nuclear planning and operational staffs in the two regions. And although the committee's major task has been to produce a formula for assessing the comparative costs of future hydro and thermal stations, it points out that, without a merger, any comparison would be seriously prejudiced by the very fact that it would have to be made across system boundaries.

Highland feelings prompt much less cogent arguments. The hydro board's power is not cheap, but for years its very promise has sustained local hopes of attracting new industry—a development which, except for the aluminium complex at Fort William, has never materialised. Great popular emphasis has always been placed on the board's "social clause," but the North board itself puts its total expenditure under this head at no more than £300,000 since it began in 1943. Its real value to the Highlands has been in giving light and heat to the countryside (at a capital expenditure of £200 million) and paying out £50 million in wages. The needs of the region in the next decade would quite certainly be better

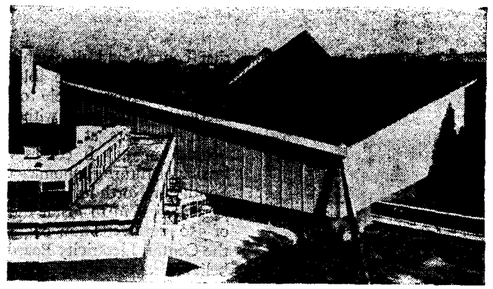
Appointments, Business and Personal notices and other Classified Advertisements pages 612, 620 and 621

served now by expenditure on other services, particularly communications.

For the South of Scotland, now painfully engaged in rejuvenating its industrial structure, the report has a much more important message. It says that Scotland will need to double its electricity supply by 1975, and that a decision on a new thermal station of up to 2,500 megawatts in the South is urgent. It appears to have been half convinced by the National Coal Board that the Fife and Clackmannan pits can supply the coal for this, giving permanent employment to 10,000 miners. But here, too, it is Scotland's misfortune that this will not be cheap coal; at present transport costs make the carriage of coal from the nearest high-productivity field—Yorkshire—look uneconomic. But, as the committee points out, the increased prices now charged by the Scottish division of the NCB are required to cover only its production costs: the capital charge on the Scottish pits is carried by the more economic fields, including Yorkshire.

Imperialism Rehoused

FROM OUR SPECIAL CORRESPONDENT



While the fevered finishing touches were being put to the inside of the Commonwealth Institute's new building a few days before the Queen opened it on Tuesday, the sprightly, but homely, figure of Mr Henry Moore could be seen following the labyrinth of coloured signposts to the art gallery, for all the world as if he were enjoying a treasure hunt. At the end of the trail, in the place of honour in the centre of the gallery, stands the latest of Mr Moore's works to be seen in London, a massive standing bronze figure, over nine feet high, on which he started work last year. Crying out for the open, demanding to be set against the sky and resentful at having been taken from Mr Moore's garden, the majestic, enigmatic figure only draws attention, alas, to the badly overcrowded display of this inaugural exhibition and takes the eye up irresistibly to the fussy, coffered, top-lighting system which, with all due respect to Unilevers who paid for it, has not come off as has the plastic-sheeted ceiling in the new Queen's Gallery.

Apart from Moore, the only British artists represented in this selection of contemporary paintings and sculpture from twenty-four Commonwealth nations are Victor Pasmore, by two constructions, and Graham Sutherland, by two oils. For the rest, Australia is poorly represented and there is little from the older dominions to give particular delight; the charm is in some of the simpler art of countries like Nigeria and Trinidad. But, for the most part, it seems a pity that the exhibits obscure the best feature of this gallery: the panoramic view of Holland Park from its northern window.

The art gallery, however, is only a small part of the new building, which has as well an enormous exhibition hall with dark blue walls, an office block, restaurant, cinema and library. If some of the design seems a mistake, if it is not great architecture, nevertheless hats off to something new, to the hyperbolic sweep of the roof to this blue and white concrete building which at least strikes a challenging note in the High Street, Kensington, and is a marked change from the previous quarters behind the Albert Hall. The institute is, after all, mainly for young people, and not just for sophisticates. Founded in 1893 as the Imperial Institute, this body does a great deal of educational work and it would be an unimaginative schoolchild or student who did not react to Mr James Gardner's arrangements in the main hall of the colourful exhibits of some Commonwealth products.

Who pays for it all? The institute is financially dependent on an endowment fund and on grants from the British Treasury and other Commonwealth governments. The Exchequer paid some £220,000 for the lease of the new site, about £850,000 on the new premises and its fittings, and its annual grant for running expenses is currently £110,000. Commonwealth countries and private donors contributed some £200,000 towards the new building.

The executive with 9 years training behind it

Powerfully and economically, the two tail-mounted Bristol Siddeley Viper 20 turbojets propel the DH 125 executive aircraft at 500 mph. Reliability is an inherent feature of Viper engines. That is why they have been used in training aircraft for the past 9 years.

Inside the DH 125 there is a wide choice of luxury furnishings. The interior can be arranged as a spacious boardroom, an office, or as a miniature airliner with accommodation for 8 people. For Company use the DH 125 brings all the comfort and performance of a modern jet airliner, with the added advantage of complete independence to go anywhere at any time.

Do you use a roundabout... or a rotary?

The difference may be slight... but even small distinctions in language and in customs can assume importance, when people in Great Britain do business with people in the United States.

The Chase Manhattan Bank, with the largest network of correspondent banks in the U.S., naturally has close familiarity with American trade practices and usages —and with the ways in which they differ *among* the fifty states. And after more than seventy years in London, too, The Chase Manhattan is equally familiar with British ways. This understanding of customs on both sides of the Atlantic can be very useful to you in your dealings with the States.

Indeed, The Chase Manhattan can be of service to you almost anywhere you do business. Its network of more than 51,000 correspondent banks, branches and representatives' offices all over the globe can provide you with every type of modern banking service, promptly, efficiently, and on a personal, *localized* basis.

When you do business anywhere abroad... it will help to talk with the people at The Chase Manhattan, in either of the London Branches.

AMERICAN SURVEY

AMERICAN SURVEY is prepared partly in the United States, partly in London. Those items which are written in the United States carry an indication to that effect, all others are the work of the editorial staff in London.

Half Steam Ahead

WASHINGTON, DC

WHILE Mr Nixon, apparently embittered by his defeat in the battle for the Governorship of California, was upbraiding newspapermen for being unfair to him, President Kennedy at the other end of the country was declaring himself heartened by the results of Tuesday's election. They showed what he called a clear net gain in support for his programme. The verdict of the voters is probably not a full endorsement for that programme but it is certainly not a condemnation of it. Perhaps the Eighty-eighth Congress will permit Mr Kennedy to proceed with it at at least half steam. As the fingers of one hand are more than sufficient for counting either the Democratic losses in the House of Representatives or the Democratic gains in the Senate, there may not seem much to cheer about even though this means that the Democrats retain their 60 per cent of the seats in the House and over 60 per cent of the seats in the Senate. But in mid-term elections, in which the Presidency is not at stake, it has become normal for the President's party to lose seven or eight Senate seats rather than gain any and to lose between thirty and forty House seats. This comparison is a truer measure of the Democrats' victory in this election.

The poll was much heavier than usual for mid-term elections. Bravely the voters endured exasperations such as those in Maryland where there were seventy-four names on the ballot and where they were also required to render their opinions on a change in a county charter, five proposed amendments to the State Constitution and five important referenda. The evidence suggests that such local issues and not Cuba, not Mississippi and not even television coverage or the candidates' "talkathons" were the deciding factors in many or even most districts.

Developments in Cuba did not prevent Senators Clark and Church winning in Pennsylvania and Idaho, although events in the Caribbean seemed to make their earlier pronouncements, scoffing at any need for a blockade or anything like it, look foolish. Conversely Cuba did not keep Senator Capehart or Representative Judd from losing, though both had loudly demanded some such action as President Kennedy was finally forced to take. Mr Judd, the leading Republican spokesman in the House on foreign policy, was beaten by a young Minnesotan State Senator, Mr Fraser, who is an ardently pro-Kennedy liberal Democrat. A similar candidate in Indiana, Mr Bayh, beat Senator Capehart.

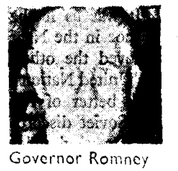
The federal government's intervention on behalf of a Negro, Mr Meredith, at the University of Mississippi did not snatch victory from southern Democratic Senators. Mr Fulbright of Arkansas and Mr Olin Johnston of South Carolina are safely back in Washington. But it may have helped to defeat Mr Wyatt, Mr Adlai Stevenson's former campaign manager, who was challenging the Republican Senator Morton in Kentucky, and may also have been responsible for Senator Hill's narrow squeak in Alabama. Senator Monroney of Oklahoma retained his seat but his state elected the first Republican Governor in its history and in Florida, Kentucky, Texas and Tennessee the Republicans picked up seats in the House of Representatives. Of the sixty-four candidates whom they put up in the South fifty-two were defeated but the South seems less solid than ever before, though the Republicans who won there are of course as conservative as the Democrats whom they replace.

The Democrats did least well with State Governorships. While they retain about twice as many as the Republicans have, their gains in states like New Hampshire, Vermont, Iowa and New Mexico scarcely balance the Republicans' gains in Pennsylvania, Michigan and Ohio or even in Colorado and Wyoming. The voters of Pennsylvania and Michigan made the difference between narrow victory and certain defeat for Mr Kennedy in 1960 and their recapture is significant for the Republicans who have had a majority in Congress for only four years since 1932 and have not held even half the Governorships since the first half of the nineteen-fifties. The Republican victories in the industrial and heavily populated states of the heartland might well form a sound foundation for their party's resurgence in 1964.

To achieve this the Republicans would probably have to find a better platform. But as a first step towards this they have at least got rid of some of their old men of the sea like Senators Wiley and Capehart. Even Mr Nixon's eclipse serves to clear the air, although Governor Rockefeller now has two new rivals for his presidential ambitions in the new Governors of Michigan and Pennsylvania, Messrs Romney and Scranton—and did not himself win as resounding a victory in New York as he had hoped. But what is significant is that all three are liberal Republicans, or claim to be, and America's mood is more liberal-conservative than ultra-conservative; the elections bruised the right-wing extremists heavily and though Mr Nixon strained every mental and facial muscle to appear as a broad-minded and even jovial anti-communist non-reactionary, apparently he left on the voters' retinas only the image of an inquisitorial scowl.

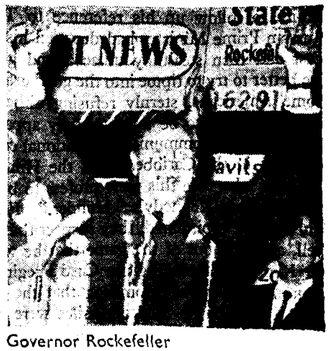
Too many hidden events lie between now and 1964 to make prognostication remotely possible. Republican gains in industrial states with large labour and Negro votes do not mean that the Republicans are well on their way to recapturing the Presidency in two or even six years. Nevertheless these Republican gains compel the Democrats to reflect. Currently the trade unions are somewhat lukewarm towards the Democratic party, for failing to get through Congress some of the things that labour wants passed.

Republicans for 1964



Governor Romney

Governor Scranton



Governor Rockefeller

This was not exactly Mr Kennedy's fault but measures, such as tax revision, which he hopes to get through Congress next year may add to labour's disillusion.

New men like Mr Fraser in the House of Representatives and Mr McGovern of South Dakota in the Senate will strengthen the Democratic liberals in Congress but Mr Kennedy still has his saurians, especially among the chairmen of committees. Such cherished Kennedy policies as health care for old people and aid to education may scrape through Congress next year but there is no certainty about that. Basically the conflict is over even broader and bolder programmes for encouraging growth at home and progress abroad. To achieve these the Administration's supporters want more "standby" authority for the President—and power to plan over longer periods than congressional sessions or annual budgets allow. Such proposals are viewed with horror by the Republicans as being socialism and an unhealthy concentration of political power. But liberal Democrats regard such steps as essential if America is to stay ahead in the race with Russia in an evolving world as well as in outer space. Such basic issues were not really to the fore in this week's elections—though General Eisenhower tried to suggest that they ought to have been. They probably will not come to the fore until late in the Eighty-eighth Congress's two-year life, if at all. What, however, may be attempted next year is some lubricating and renovating of Congress's creaking machinery. Long-winded Senators could be curtailed with advantage; so could the excessive powers of committee chairmen. In this task Democrats could well join hands with Republicans for able men in both parties are thinking along such lines.

Caution over Cuba

WASHINGTON, DC

BOLD Jim Hawkins has compelled the pirates to strike their colours. The flag bearing the skull and crossbones has been hauled down. The pirate chief, displaying unwonted meekness, not only has offered no resistance, but also appears willing and even eager to help to sail the vessel into safer waters. Can it really be true, or must there be a catch somewhere? Is a knife hidden in a coil of rope on the deck, well within the crafty old pirate's reach? Until Jim has some assurance that he knows the right answers to these questions, it behoves him to stay on the alert.

Such, given an acquaintance with the plot of Robert Louis Stevenson's "Treasure Island," would be a typical American view of the international situation in the wake of the Cuban cyclone. Americans have applauded the resolution that was shown by their President but they cannot help worrying about what may yet ensue. They strain their eyes around a still darkened horizon and wonder where the next blow may fall. Berlin, or somewhere now quite unsuspected? They remain perplexed by Mr Khrushchev's failure to follow up his reference to Turkey. It was as if the Russian Prime Minister had dropped his famous shoe in the Near East and then stealthily unlaced and gently removed the other, the better to try to tiptoe into the good graces of the United Nations. Some Americans, sternly refusing either to think better of Mr Khrushchev or to be impressed by apparent Sino-Soviet discord, simply see the communist international conspiracy at work double-jointedly in the Caribbean and the Himalayas.

Those who take this view profess to be perturbed by what they call President Kennedy's "blunder." Far from thinking that Mr Khrushchev capitulated, they suspect that he may have done rather well, after all, out of the game that he was playing. They accuse Mr Kennedy of offering the Castro regime what is in effect a life insurance policy, by promising that the United States would not invade Cuba if the Soviet missiles were dismantled and removed. This offer is interpreted as letting Mr Khrushchev have something for nothing, since he would still have his missiles and Dr Castro, his puppet, would still be in power in Cuba. Mr Kennedy's guarantee would be a net gain to Mr Khrushchev.

The argument does not overlook entirely the fact that Mr Khrushchev has further weakened Dr Castro's ties with the other Latin American countries. The President of Mexico, Mr Mateos, and the Brazilian left-wing (and anti-American) leader, Mr Brizola, censured Dr Castro severely for permitting himself to become a Soviet puppet and for allowing the dreaded instruments of nuclear war into the hemisphere. But the Americans who are criticising Mr Kennedy are really not much impressed by Latin American opinion. What they favoured was an American invasion of Cuba, or at least an American-sponsored (and this time adequately supported) "War of National Liberation," the sort of thing which Mr Khrushchev himself favours. But this one would have been aimed against him for a change.

Americans who thought that an invasion for the purpose of overthrowing Dr Castro and freeing Cuba from communism would have been morally all right, but who shrank from the risks and the inevitable loss of life that it would have entailed, believe on the whole that President Kennedy chose a wiser course. But some doubts have succeeded in creeping into their minds also. Patently they have not enjoyed such ironies as the United States seeming to hope that communist influence in Cuba would prove strong enough to make Dr Castro obey Mr Mikoyan—assuming that the latter's intention was to try to get him to be reasonable. There has been uneasiness about Russian hints that the United States ought to reciprocate the "reasonableness" of Mr Khrushchev by making concessions to Dr Castro, for instance by removing from Cuba the recently strengthened American base of Guantanamo.

Conscious of its critics, but more conscious of its enormous responsibilities, the American Administration is exercising a two-edged caution. At one edge it is backing away from suggestions that it managed to secure a Soviet capitulation. Mr Kennedy is a resolute man but he shows no disposition to beat his chest and claim to have triumphed over Mr Khrushchev. No member of the President's close-knit inner team appears to be giving any encouragement to such notions as that now it is America's turn to get tough.

The other edge of the Administration's caution is a sensitive awareness that the United States and the world are not yet out of the wood. Total failure to secure verification of the removal of missiles from Cuba would return the United States to its taut mood of a fortnight ago, when it did not really expect to receive satisfactory assurances and was ready to act accordingly. Since the missile sites have been dismantled, such total failure seems unlikely. But if the United States decides to accept something short of inspection of the sites, this will agitate the Administration's critics further. Many Americans fret about the possibility that missiles may be dismantled but hidden away in caves for later use. Such fears are increased by the frantic haste with which Soviet ships are embarking missiles to avoid inspection of them.

NEVERTHELESS, the Administration seems to be fairly confident that it knows what arms there are in Cuba and that it can check how many are removed. Part of this confidence derives from the steadily maintained surveillance from the air. But this has its inconveniences, dangers and contradictions. More American fliers may be shot down and yet the United States has said that it has no objections to Cuba possessing surface-to-air missiles for defence—though it wants removed the Ilyushin "28" bombers, which are subsonic but have a radius of action of 700 to 800 miles and could carry nuclear weapons. Air surveillance infringes Cuban sovereignty and seems to revive the doctrine, which President Eisenhower abandoned, that flights over other countries were undertaken by American U-2 aircraft for the defence of the free world.

Chicago's Oldest Bank Now Serves You in London, Too

Address: 58/60 Moorgate, London, E.C. 2

Now in London—just as in Chicago—Continental offers a complete range of commercial and international banking services. The members of our London staff have been selected for their experience in both fields. You'll find them equipped to serve you well.

CONTINENTAL ILLINOIS NATIONAL BANK
AND TRUST COMPANY OF CHICAGO

Why Remy Martin has no stars on its label

No brandy of lesser quality than Fine Champagne V.S.O.P. Cognac is permitted to bear the Remy Martin label. Hence no grading by stars. The question does not arise. All you need remember is to ask for Remy Martin. In return you enjoy a superior cognac of liqueur quality. For Remy Martin *make nothing less good*. In a word, Remy Martin cater for the one man in a hundred who prefers to compliment his palate—and his guests—with brandy as good as Fine Champagne V.S.O.P. Just ask for Remy Martin.

PRIDE OF COGNAC

REMY MARTIN

(The American flights over Cuba have the approval of the Organisation of American States.)

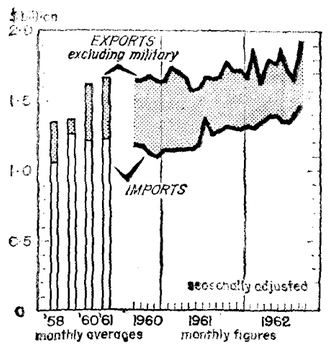
Amid such continuing uncertainties, it is something to be able to affirm that Mr Macmillan and the British Government, if not Lord Altrincham and the *Guardian*, are high in American esteem. Britons in Washington have been warmly thanked by taxi-drivers for Britain's decision to stand by the United States over Cuba, in spite of having been let down by the United States during the Suez crisis. This heightened American esteem does not, however, extend to all members of the Commonwealth, nor to the United Nations. Mr Nkrumah's self-advertising antics in the name of peace are viewed with scorn. Mr Nehru is being helped but is seen as a victim of his own self-confessed folly. It is also noted that, while Mr Kennedy and Mr Khrushchev quickly achieved a dialogue, U Thant was snubbed by Dr Castro.

The consequence may be to encourage the United States to walk with its closest and most like-minded allies without bothering much if the Afro-Asians and other neutrals criticise the direction as all wrong. There are American fears that Mr Khrushchev, playing his new part as the saviour of world peace, may try to move in Berlin, not with naked power, but by the tactic of the responsible, level-headed, modest thin slice and that this "salami" approach may provoke the unaligned countries to emotional support of Russia and to tearful appeals to match Soviet moderation with western concessions. The official American position on Berlin is that the Administration is ready for any action that may be required of it. The Administration is probably heartened by the official British response on Cuba; there had been American doubts about British resoluteness over Berlin, despite British reassurances.

The broad hope is that, if the brink is now in the past and not round the next bend, significant break-throughs may be achieved in the fields of agreements on atomic testing, disarmament and non-aggression pacts. But this is still only a hope. Even if the Cuban problem is settled, the series of nuclear tests in the atmosphere which the United States has now concluded apparently reinvigorated the scientists and produced shiny new notions about how to pack more power into fewer nuclear pounds. Such developments increase the pressure for further tests even though President Kennedy promised in his broadcast on Sunday that the United States would devote its best efforts to concluding a treaty which would free the world from them.

Deficit Behind Schedule

THE optimistic predictions of the Kennedy Administration that the deficit on America's external payments would drop by 40 per cent from 1961 to only $1.5 billion this year have been badly upset by a dramatic increase in the estimated deficit in the third quarter—a jump which raised the seasonally-adjusted gap for January-September to an annual rate of $1.9 billion from one of $1.4 billion in the first six months of the year. While disappointed by these figures, however, Treasury officials declare themselves confident that the deficit for 1962 as a whole will be held to $2 billion and that by the close of 1963 America will be out of the international red altogether.



* Under new statistical procedures September imports are estimated to be 2 per cent higher than they would have been under the old ones.

Much of the deterioration in the United States balance of payments during the third quarter was due to special factors. Most important were the measures adopted by Canada and Japan to combat their own difficulties; these measures must have contributed significantly to the decline in American exports during July and August. While exports recovered strongly in September—when they were probably stepped up to some extent because of the maritime strike which was threatened for October—they remained below their high levels of the first half of the year. On the other side of the balance, imports continued to rise in response to the recovery in the domestic economy. As a result, the surplus in the trading account on a seasonally-adjusted basis dropped in the third quarter to $4.8 billion from $5.1 billion in the second quarter. The total deficit for the third quarter was also swelled by the reversal of inflows of speculative capital from Canada and by the continued record level of American economic aid abroad.

While there is little hope of any significant improvement in the trade figures in the fourth quarter, Administration officials look forward to a smaller deficit on the total calculation as a result of scheduled repayments of debt, possibly more prepayments and some reduction in outflows of private capital. To counteract the recent widening of differentials in short-term interest rates in favour of London and other overseas money markets, this week the Treasury is marketing a special $1 billion issue of bills. At the same time, the Administration has asked foreign governments to try to make borrowing abroad less essential and attractive to their nationals. The French government, under a residual currency-control regulation, is reported to have dissuaded a number of French firms from planned borrowings in New York.

Looking ahead to 1963, Washington officials expect a resurgence of exports. This expectation is based on rosy assumptions about the prospects for continued growth in Europe, recovery and the relaxation of special restrictions in Canada and Japan and the success of export promotion measures at home. Officials also hope that accelerated economic growth in the United States will attract more capital from abroad and discourage outflows of investment funds from America. However, as President Kennedy's top economic adviser, Mr Heller, pointed out this week, measures to stimulate America's flagging domestic market are likely to worsen the country's payments position in the short run by boosting imports even more. Nevertheless, with the dollar continuing to show amazing strength in the markets, it is to be hoped that the Administration will not put the American economy in a straitjacket for the sake of being precisely on schedule in its battle to eliminate the deficit in the balance of payments.

BRIEF BOOKLETS . . .

have been produced jointly by The Economist and The Economist Intelligence Unit to present the essential facts behind important current topics. Each takes about one hour to read. Here are the first three titles in this new series:

Brief 1 **RHODESIA: BRITAIN'S DEEP SOUTH** by Joe Rogaly
2 **MONEY FOR GROWTH** by Fred Hirsch
3 **LABOUR IN BRITAIN AND THE SIX** by Val Schur

Each booklet costs 2/6d. (or U.S. $0.40) post free for remittance with order from:
PUBLICATIONS DEPT., THE ECONOMIST
22 RYDER STREET, LONDON S.W.1. WHI 1511
(Personal callers to 193 Regent Street, please)

Three Rs—and Two

FROM A CORRESPONDENT IN SAN FRANCISCO

As if the political races and no less than twenty-four propositions for the voters to decide were not enough, Californians have been concerned this autumn with an absorbing battle—the first for seventeen years—for the office of State Superintendent of Public Instruction, a non-party post. The two contenders were Dr Ralph Richardson, Associate Professor of Speech at the University of California at Los Angeles, and Dr Max Rafferty, former superintendent of schools in a suburb of Los Angeles. Both favour a renewed emphasis upon academic subjects, frankly and clearly delineated as such, to replace such modern hybrids as "language arts" or "social studies." To the professional educators, who would have preferred a third candidate, Dr Richardson appeared to be a lay outsider, while Dr Rafferty was suspect as the author of "Suffer, Little Children," a book which preached a return to "the three Rs" with intemperate invective that sent chills down many spines besides those of the educators. But they supported Dr Richardson, as the more moderate.

If victory this week had depended upon approval by educational organisations, Dr Richardson would not have had to lift a finger; he was backed by nearly all of them. But this support, while valuable, had its price. Dr Richardson was now open to the charge of being "the pedagogues' candidate." Paradoxically, Dr Rafferty coupled this accusation with criticism of his opponent's lack of orthodox experience in the schools. Indeed, during the campaign Dr Rafferty talked a bit less ferociously about the professional educationists. In debates before large crowds all over the state, Dr Richardson quoted from his opponent's earlier pronouncements to show his extremist and reactionary tendencies; Dr Rafferty then looked pained, deprecated "quotation out of context" and implied that "Suffer, Little Children" was mostly written a long time ago—though it came out in April, nicely timed for the campaign for nominations to the post.

Each man charged the other with political partisanship. Dr Rafferty attacked "togetherness and democratic socializing" and stressed his opponent's ties with the Democratic party—he served for a time as Planning and Research Secretary to Governor Brown. Dr Rafferty also appealed to conservative dislike of federal aid to education, which his opponent favours. Dr Richardson retaliated by pointing to his Republican rival's associations with well-known members of the extreme right-wing John Birch Society and to some of his rather ominous statements about the need to indoctrinate children with Americanism and with hatred for "the filthy menace of communist corruption." Whoever has won, policy-making will remain in the hands of the State Board of Education and local autonomy will probably remain considerable. But the importance of the Superintendent's post will be increased by the mere fact of its having been sought so strenuously this autumn.

Invisible Empire

FROM A CORRESPONDENT IN ANNAPOLIS

A DRIVE of twenty minutes from Washington reveals gambling without parallel except in Nevada. Bars, eating places and shops resound with the crash and tinkle of gambling machines, known locally as slots. Housewives in curlers play them on their way to market, schoolchildren risk their lunch money during break and ratings from naval bases swarm in on pay days. Tourists and lorry drivers have a flutter as they travel Route 301 and day trippers from Washington flock to the casinos on the Chesapeake and Potomac beaches. Slot machine gambling is legal under local option in four counties of southern Maryland, whose reputation as "Little Nevada" has become a political issue.

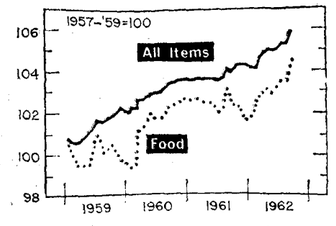
Maryland has an odd tradition that counties may obtain exemption from state laws, though not from state taxes, and until recently most politicians accepted the theory that gambling (including gigantic bingo parlours) was an issue for the counties alone to deal with. This theory has been reinforced powerfully by the willingness of slot machine interests to provide cash for any and all political campaigns—contributions which are the harder to trace because no one knows what the annual take of the slots really is. The federal government licenses 5,700 machines in the four counties as well as another 3,600 machines elsewhere in Maryland which are illegal under state law. At the most conservative estimate, Maryland's machines take in $48 million a year.

The gambling question entered the campaign last spring as one of the chief talking points of a Democratic candidate for Governor, Mr David Hume. An eccentric liberal without organised backing, Mr Hume ran a good third to two familiar figures in the primary at which Democrats chose their nominees and with the aid of civic groups came second in the slot machine counties. His vote was large enough to make his support useful to the incumbent Governor Tawes who, after prodding by Mr Hume, publicly changed his mind about slots being a purely local concern and promised to work for their abolition.

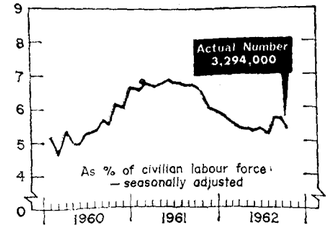
There will be resistance, for county officials maintain that revenues from slot machines, totalling about $400,000 a year, are important to county budgets while small businesses, from grocery shops to barber shops, which have machines on the premises split the take with the proprietors. Critics of the slots, including churchmen of all creeds, say that gambling siphons off money which could be used more productively, that its moral influence is bad, that slots bring undesirable people into the counties and that the profits all too frequently are used to corrupt public officials. Maryland, unlike Nevada, has no state supervision of gambling.

Now that Mr Tawes has been re-elected, the stage is set for a first-class legislative fight against the "invisible empire." The pro-slot forces are trying, as a diversionary move, to link horse-race betting with the anti-gambling drive; this is certain to cause a furore in a racing state. Unlimited money is available to back the slots in the Legislature and may do much to offset the work of a special committee appointed to recommend the best way of eliminating gambling machines. Mr Hume's supporters may have provided the reform vote which Mr Tawes thought he needed to win; whether Mr Tawes in turn can deliver the reforms is another matter.

CONSUMER PRICES



UNEMPLOYMENT



At first sight the chart on the left suggests that the United States is sickening for a bout of inflation and the one on the right that it is recovering from its chronic unemployment. Neither suggestion is true, according to the official diagnosis. While the cost of living went up in September by more than in any month since early in 1958, this was due mainly to a temporary increase in meat prices. While the decline in unemployment in October was greater than expected for that month and the number of people out of work was the smallest for three years, much of the improvement was because many potential members of the labour force, particularly women, had given up looking for jobs altogether. The rate of unemployment is still uncomfortably high and is likely to remain so during the coming months.

Printed to Fit?

A TWELVE-MEMBER "executive committee"* of the five-member National Security Council met at least once a day during the Cuban crisis to advise the President. This "inner group" has been in existence for months but it was made official on October 23rd. Its deliberations were kept absolutely secret, something which is unusual in Washington and which helped the United States to astonish Mr Khrushchev and to keep control of events in the President's hands. Understandably, Mr Kennedy himself held no press conferences during the crisis; unfortunately, before it began, he had not held one for over a month, the result no doubt of the pressure of weekend election campaigning.

All this added up to a feeling of frustration on the part of the press but this did not burst into flames until the information officer of the Defence Department, Mr Sylvester, chose to comment in a few ill-chosen words. In the kind of world we live in, he said, news generated by the actions of the government becomes "part of the weaponry"; it was important that the press should speak with one voice; and the results justified the means. This looked like a sinister inversion of "all the news that's fit to print"—the famous slogan of the *New York Times*—and the newspapers rushed into battle, many of them charging that they had been used deliberately to misinform the public as part of the scheme for misleading the Russians. This charge is not easy to substantiate.

Some officials who talked, in the days just before the President announced the blockade, about the missiles in Cuba being purely defensive did not, it seems, know the truth themselves though others, it seems, did. Some journalists feel that their attention was drawn ostentatiously to the possibility of an invasion of Cuba or of a bombing of the missile-sites to produce headlines which would put the screws on Mr Khrushchev. The reach of the missiles in Cuba may have been exaggerated. Mr Sylvester himself insists that there was no distortion of the truth but simply consideration of timing and effect. Mr James Reston, who takes a drier and more realistic view than most of his colleagues and even than his own paper, the *New York Times*, thinks that never have journalists been told so much about delicate matters. Even so, this was not perhaps the ideal moment for the Departments of Defence and of State to announce new controls, however innocuous, over the outflow of news, including the requirement that officials who speak to journalists must report the fact. The whole issue will be given an airing in January by a congressional subcommittee which conducts a running fight—largely successful—with government departments over their information policies.

No Profit in Steel

THE news that the huge United States Steel Corporation had reduced its quarterly dividend—to 50 cents a share from 75 cents—for the first time since 1938 and that even so earnings between June and September had fallen short of this payment by 12 cents a share brought to a climax the gloom in this basic industry. Several of the other leading steel firms have also cut their dividends and only one—the Inland Steel Company—earned enough in the quarter to cover its payments to shareholders. Output has now gone up a little but it is still running stubbornly around 60 per cent of capacity and there is little prospect of any substantial improvement. With automobile production booming the motor industry's long-heralded increase in demand shows signs of materialising at last but now this will be offset by the seasonal declines in demand for steel from the food processing and construction industries.

Even so steel companies are still spending money on expanding and modernising their facilities, feeling that only thus can they reduce costs, meet competition and increase profits. They are in effect making the shareholders pay for these capital outlays since the President refused to allow them to be covered by higher prices. It is thought that in present circumstances the Administration would be less opposed to price increases than it was last spring but in present circumstances the companies are hardly able to raise prices. Indeed, the tendency is to lower them, particularly for stainless steel. And on the west coast the local producer, the Kaiser Steel Corporation, always a maverick, has cut all its prices by an average of $12 a ton; thus practically eliminating the historic differential for the region west of the Rocky Mountains. Other companies which sell there are being forced either to follow suit, by absorbing freight costs, for example, or to withdraw from this market.

Kaiser was able to cut its prices because its modern facilities keep its costs low and its excuses were that it wanted to encourage the expansion of steel-using industries on the west coast and to meet foreign competition which, in its case, is mainly from Japan. Eastern companies are trying another method of dealing with imports of steel, which were equal to nearly 6 per cent of American output last year. Six firms have filed a formal complaint with the Treasury that the anti-dumping laws are being violated by foreign producers of wire rods and they have let it be known that this complaint may be extended to other imported products.

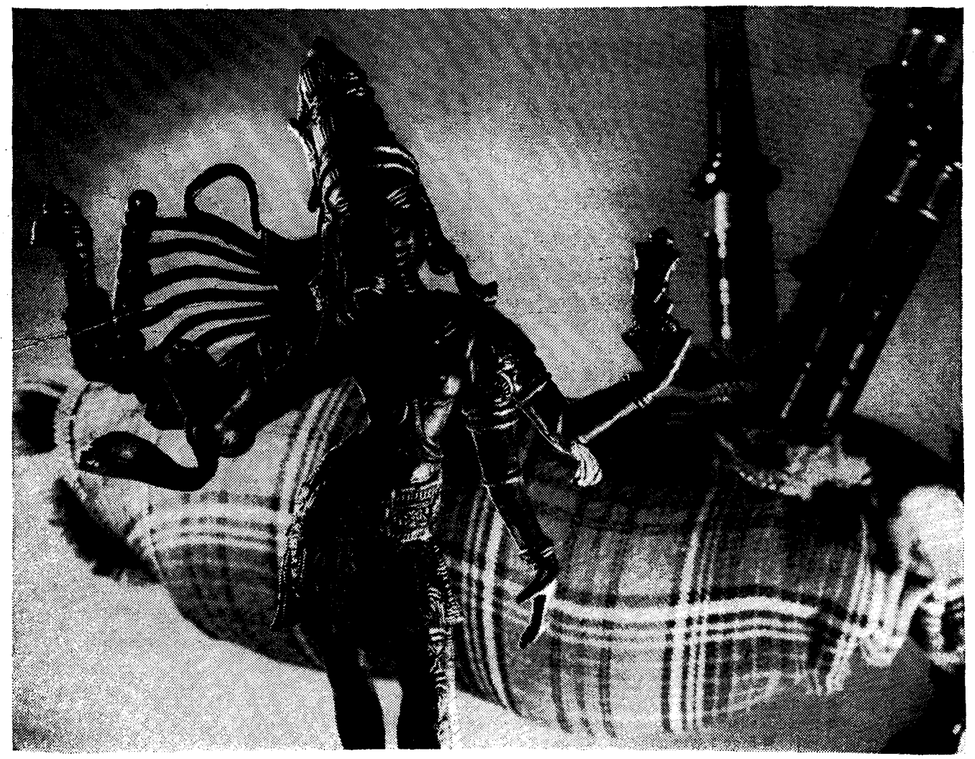
New York without the News

ALTHOUGH the *New York Daily News*, with a daily circulation of about 2 million, the largest in the country, was closed last week by a strike, New Yorkers have not had to do without the news entirely. The Newspaper Guild, the journalists' trade union, chose to strike only against the *News* when its contracts with the seven major dailies expired on October 31st partly because labour relations there have been the most bitter; the *News* does not, for example, automatically deduct union dues from pay-packets as the other papers do. Moreover, it is financially one of the strongest and gains wrested from the *News* can then be demanded from the weaker brethren. The Guild is anxious to give no excuse for a general lock-out which would be costly to its members; it made no objection to the printing of the *News* (a shadow of its former self, with no advertising) on other presses but this lasted only one day.

The publishers of the other papers, which include the *New York Times* and the *Herald Tribune*, are almost certainly relieved that this restraint absolves them from implementing their "strike one, strike all" agreement. But what they say is that they are postponing "joint action" in deference to the intervention in the dispute of Mr Wirtz, the Secretary of Labour. This is the first time since he took office on September 1st that he has intervened personally to settle a strike and his announced intention was to do so far less frequently than his predecessor, Mr Goldberg. But it is no secret that the White House has been extremely concerned lest there might be a general suspension of publication which would have left 8 million New Yorkers without the written word about the international crisis and the election campaign. Four years ago the newspapers shut down for nineteen days. This cost them about $25 million in advertising and circulation—another good reason for hesitating in the bumper pre-Christmas season for advertising. Several of the papers could not afford a repetition. Finally it is not certain that a general lock-out would be approved by the courts and by the National Labour Relations Board. The board is still considering whether the lock-out in 1958 was illegal, as the trial examiner concluded recently that it was.

* Its members are the Secretaries of State and of Defence, Vice President Johnson (all of whom are statutory members of the NSC), Mr Robert Kennedy, the Attorney General, General Taylor, the chairman of the Joint Chiefs of Staff, Mr Ball, the Under Secretary of State, Mr Gilpatric, the Deputy Secretary of Defence, and two of the President's assistants, Mr Sorenson and, last but not least, Mr McGeorge Bundy.

Highland fling in North-East India



When the occasion calls for celebrations at Gomia, in the Indian state of Bihar, Scottish reels sometimes alternate with stately classical dances. For this remote tract of jungle, where leopards prowl and the summer shade temperature reaches a shimmering 110°F., contains India's first blasting explosives factory—designed and set in operation by experts from I.C.I.'s explosives factories in Scotland, who have helped to train the Indian operatives.

The factory provides India with the explosives she needs to blast tunnels and harbours out of solid rock, to excavate reservoirs and to win coal, iron ore and gold from the earth. Built by I.C.I. in partnership with the Government of India, it is the latest expression of a policy that has already fostered the production of blasting explosives in Africa, to serve the great goldfields; in Australia, to provide the blasting power for mineral mining and ambitious hydro-electric schemes; in Canada to make possible such projects as the St. Lawrence Seaway. I.C.I. technicians with a lifetime's experience of explosives manufacture are playing a notable part in a world where the power of industrial explosives can open up new vistas of prosperity.

The influence of I.C.I. research and production is felt today in every corner of the globe

THE WORLD OVERSEAS

Indian Strife and Unity

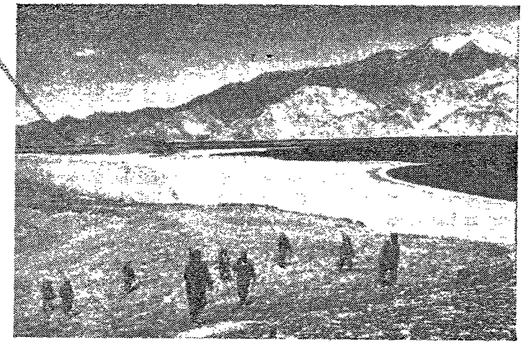
FROM OUR CORRESPONDENT IN INDIA

A combination of Mr Nehru's loyalty and Mr Krishna Menon's vanity threatened this week to fog the singleminded sense of purpose that the Chinese invasion had thrust upon India. Mr Menon's retention of the defence production portfolio and of a Cabinet seat had already dismayed those who believed he had proved his incompetence for either. They were roused to fury when on November 1st, the day after his first demotion, he flew to the North East Frontier headquarters at Tezpur and declared that "nothing is changed." By this week, the savage press and political battle that had been momentarily quelled by his removal was raging again. While conservative papers called for his total banishment from office, the Bombay *Free Press Journal*, for instance, thundered against "the threat from the Right," charging right-wingers with exploiting the crisis to discredit Mr Nehru's policies of socialism and non-alignment. They were "as much anti-national as the communists" it said.

The Communist party of India, flaunting new patriotic plumage, joined the fray. Public and party pressure and, still more, tactical necessity had forced the Communists to come off the fence last week with an outspoken resolution denouncing the Chinese as aggressors, upholding the validity of the McMahon line, refuting Chinese charges against Mr Nehru as an imperialist agent, and even approving the import of arms on commercial terms "from any country." The resolution also charged the Chinese with strengthening right-wing reactionary parties in India. This line was enthusiastically adopted by local party units. The cries of "Save India" that rent the air were almost matched by cries of "Save socialism," "Save non-alignment," and "Save Krishna Menon." But on Wednesday Mr Menon went.

There is a danger now that three weeks of unity may break up into a party dogfight. The Communists' attempt to gain admission to the new all-party National Defence Council and local citizens' councils are also already arousing anguished protests from the right wing. Yet the curious thing to an outsider is not how much political capital the rightists have tried to make, but how little. There is no serious attack on the planned economy, and surprisingly little in responsible quarters—the public is less restrained—on non-alignment. The "threat from the Right" looks suspiciously like an Aunt Sally invented by the Left.

National purpose is also clouded by uncertainty over Chinese motives. The virtual lull in the fighting in the North East Frontier Agency (NEFA) has been interpreted as a pause by the Chinese to regroup and bring up supplies over the roadless territory that now lies behind their spearheads before the next attack. But is it? Perhaps their aim now is political, to offer a *quid pro quo* in NEFA in exchange for recognition of their claims in Ladakh. No one knows, and most probably no one is intended to know. The Chinese offer to withdraw twenty kilometres from "the line of actual control" had been left deliberately vague as to the meaning of the quoted phrase. The psychological effect of the sudden pause just as the Indian public had braced itself for war has been unsettling. Long memories are recalling Hitler's tactics before the war.



On patrol in Ladakh

These tactics have been only partly successful, however. New Delhi's revelation on Monday that Daulatbeg Oldi, the post at the foot of the Karakoram Pass, had been abandoned "several days" earlier, cleared up the last doubt whether the Chinese were prepared to stick within their claims in Ladakh. This strategic post, whose capture opens the way for the Chinese to their claims also in Pakistan-occupied Kashmir, is acknowledged even by Peking to be on Indian soil. Coming after several days of little news from the front, the announcement hardened wavering public opinion. Simultaneously confidence has been tremendously boosted by the arrival of British and American arms.

These concrete proofs of friendship have also led to an astonishing wave of pro-western and particularly pro-British sentiment. The newspapers are full of reports of the generous British attitude and the comparative absence of cold war-ism and "we told you so." Mr Macmillan's masterly snub to President Nkrumah was also welcomed. At the same time, reports from the non-aligned capitals are better than they were. President Nasser now seems to have reached a position near to that of New Delhi. Other African countries and some Asian ones seem to be swinging India's way. The waiflike feeling that was evident here in the first few days of the crisis is vanishing.

On the home front, donations to the national defence fund are still pouring in. There is to be rifle training for all able-bodied men in border areas, and civil defence schemes in several frontier states. The work of recasting the third five-year plan is beginning, though there is still little public evidence of any realisation in New Delhi just how much is involved. The only gloom has been in the stock markets. The Bombay market, which sets the lead for the others, panicked on Monday and was closed after forty minutes of plummeting prices. It was to reconsider the position on Friday. There was gloom also among gold smugglers after the finance minister's announcement of gold bonds, subscriptions to which would be valued at the international price of gold. He also forecast measures to make the selling of smuggled gold impossible. Internal gold prices, which are more than double the international price, promptly fell ten and in some centres twenty per cent.

Dr Adenauer Sweeps Up

FROM OUR BONN CORRESPONDENT

IT looks as though the affair of *Der Spiegel* is in for a long run, possibly to the edification of the principal players and the German public, certainly to the aggrandisement of the magazine's circulation and sundry lawyers' earnings. The minister of justice, Herr Stammberger—his face saved by the dismissal of his presumptuous state secretary, Herr Walter Strauss—has initiated an inquiry into the circumstances of the police action launched without his knowledge against the magazine on the night of Friday, October 26th. These are still so opaque, and apparently so many persons would like them kept so, that the investigation will probably take a long time. So will the digging of the public prosecutor's office into the files seized in *Der Spiegel's* offices at Hamburg and Bonn. And, should it then come to a treason trial before the supreme court at Karlsruhe, it would be one fought at every stage.

It has been fortunate for Dr Adenauer that the trip he intended to make to Washington this week was postponed at President Kennedy's request until November 14th. The postponement has given the Chancellor an opportunity to give his mind to the latest little local difficulties, particularly to the ruffled feathers of his political allies, the Free Democrats, who already before the slight of the *Spiegel* affair had been complaining that their views on social and financial legislation were being largely disregarded. In order to keep his disjointed coalition glued together, with himself still functioning as head, the Chancellor has placated the Free Democrats for the time being by seeming to discipline two Christian Democratic state secretaries.

Herr Walter Strauss was relieved this week of his work at the ministry of justice just when, after thirteen years in the same post, he was looking forward anyway to an agreeable transfer in the near future to European duties. Herr Volkmar Hopf, of the ministry of defence, was sent simultaneously on indefinite leave —in the course of which he can be expected to toy fondly with the idea of following the example of his predecessor, Herr Rust, who preferred the consolations of a job in industry to the vicissitudes of a state secretaryship under so exacting and controversial a chief as Herr Franz-Josef Strauss. Yet neither of the dislodged state secretaries is merely a scapegoat. Both self-admittedly ignored their obligation to the departmental minister responsible to parliament and the electorate. Their fall from grace, gentle as it has been, may discourage others prone to exploit the possibilities of government by civil servant—from Herr Globke, the powerful state secretary at the chancellery, downward.

The government spokesman in Bonn, Herr von Hase, and the legal authorities at Karlsruhe reiterated testily this week that there was ample *prima facie* evidence to justify the authorities' stern pounce on *Der Spiegel*. In the Bundestag on Wednesday, Dr Adenauer anticipated a conviction by remarking, "We are faced with an abyss of treason in the country when a publication practises it systematically for the sake of gain." At the time of writing, the proprietor and editor of the magazine, Herr Rudolf Augstein, was still in custody, along with four members of his staff. So was Colonel Adolf Wicht, a Bundeswehr intelligence officer, who, Karlsruhe alleged on Tuesday, had warned *Der Spiegel* on October 18th that trouble was brewing. No one had yet been granted bail.

The parallel inquiries of the opposition (which includes the surviving members of the staff of *Der Spiegel*) are naturally being concentrated on the part that may have been played in the affair by the defence minister, Herr Strauss. After the mauling he has received from the magazine over the past two years, Herr Strauss's personal interest in its muzzling is so great that he cannot but be suspected of active connivance. Even should he be officially cleared of this charge, enough suspicion will linger in the mind of the German public to dim still further his once bright hopes of eventually becoming Chancellor.

Banda Bomb

FROM OUR CORRESPONDENT IN CENTRAL AFRICA

THE pattern is clearly set for Dr Banda's Nyasaland, whose next constitution will be debated at Marlborough House from Monday. Having controlled the legislative council for a year and the executive council for six months, his Malawi Congress party is reasonably demanding internal self-government and a promise of a date for complete independence. The party sees no need for another conference before independence. At the same time Dr Banda is asking Mr Butler as minister for central Africa for "independence from the federation" (of Rhodesia and Nyasaland).

Mr Butler should have little difficulty in granting the first two wishes. The country is as united behind Malawi as it was when the electorate gave it 95 per cent of the votes in the elections in August, 1961; indeed, more so, since the white planters and traders who shuddered then at the thought of an African majority have since been cheered by the realisation that life continues pleasantly in the lovely hills. Full internal self-government involves the replacement of the last three official ministers, and Britain may argue that the finance minister should remain even if the chief secretary and attorney-general go. This would be desirable, Mr Butler may suggest, both because Malawi has recently tragically lost Mr Dunduzu Chisiza, who had been marked out for the post since his days in political prison, and because Britain is likely for several years to buttress the budget, to judge from this year's estimated recurrent deficit of £1.5 million. But Dr Banda can retort that Mr Gichuru became Kenya's finance minister when prospects there were bleaker, and that there will be time to groom Mr Chisiza's replacement, Mr John Tembo, before the constitution takes effect with elections in, say, April.

It is the third request, for "independence from the federation," which will test Mr Butler's dexterity with his constitutional wand. The United Federal party delegates will correctly point out that the conference being concerned with the territory's advance and nothing broader, the issue of federation should not be discussed. Probably Mr Butler will observe this point to the letter and confine the conference proper to territorial matters, while still satisfying Dr Banda by issuing, during the period of the conference, a statement about how and when Nyasaland might secede from the Rhodesias. This matter, after all, requires no more discussion. Mr Butler has read the report of his trio of private advisers on the consequences of Nyasa secession, and all the delegates have

be fighting side by side with its allies in fulfilment of its treaty obligations. The government rejected the idea of trying to develop a capacity to fight alone.

This fact has been stated from time to time in parliament, but bland ministerial language makes no impact, and the public did not take it in. It came as a shock to learn of the extent of Indonesia's military build-up, including the delivery of a 19,200 ton cruiser of the Sverdlov class and the promise of another. It should not have been a shock, for the news has been trickling through for about four years; but it has taken on a new and sinister significance now that Indonesia is to share a frontier in New Guinea with Australia. Until recently, in Australian eyes, Indonesia was a nation of poor struggling "boongs" (a slang word which in its narrowest sense is applied to the natives of New Guinea), a people to whom Australia in Christian charity gives locomotives and tractors. Now suddenly it has the aspect of a potential enemy equipped with weapons of a quantity and modernity which Australia has considered beyond its own means.

The growing anxiety on this score has been canalised in a series of six well-informed articles in the *Sydney Morning Herald*. These raise doubts about the Anzus treaty between the United States, Australia, and New Zealand, which has lulled Australia's fears since the decline of British power in south-east Asia. There seems no doubt that if there were an Asian invasion of the Australian mainland (the potential invaders in the minds of the signatories in 1951 were the Japanese), the United States would come to Australia's aid. But can anyone imagine such an invasion taking place unless the United States and Britain had a nuclear war on their hands and so were unable to help? In any case American willingness to divert resources to Australia would depend on Australia's having earned that help by its own contribution to the common cause of resisting communism in south-east Asia; and Mr Dean Rusk, during a visit to this country in May, made it clear that he did not think that Australia was doing enough. It has not escaped the notice of Americans that whereas they themselves are spending 11 per cent of their gross national product on defence and Britain is spending 6 per cent, Australia is spending a mere 2.8 per cent.

As for the possibility of an Indonesian attempt, by infiltration rather than invasion, to take over east New Guinea, the affair of west New Guinea has left no doubt how the Americans feel about supporting a white colonial power. The prospect is perhaps that in due course there will arise in east New Guinea an indigenous movement, supported from across the border, demanding that the Australians go. It would be fantasy to suppose that the Anzus treaty, which was designed to still Australian fears about a "soft" peace treaty with Japan, could be invoked to put down a movement of this kind.

The conclusion to be drawn is that American help would be forthcoming neither in the only conceivable circumstances in which the Australian mainland would be invaded, nor in the only conceivable circumstances in which Australian New Guinea would be in jeopardy. There has thus been a marked spread of opinion, which was evident on both sides of the House of Representatives in last month's defence debate, that Australia ought to be better able to defend its territory alone. But the new three-year programme announced on October 24th, provides for an expenditure of only £A650 million over the three years—hardly any increase in terms of constant prices, and none at all in expenditure per head.

The government's dilemma is easy to understand. With a majority of two it does not want the odium of putting taxes up. Still less does it wish to seem to be arming against Indonesia. The minister of defence, Mr Townley, tried to make his little programme sound like a substantial increase without actually being one. Unhappily it will take more than words to allay the anxieties that have been aroused.

The Gimo at 75

FROM OUR FAR EAST CORRESPONDENT

CHIANG KAI-SHEK, the durable and brooding exile on Formosa, was 75 on October 31st. He seems to be in good health and to have recovered briskly from a recent prostate operation. He delivered the customary speech on October 10th, the "Double Tenth" anniversary, with his accustomed verve and the usual pledges of a return to the mainland, but he did not stand in the glaring sun for the traditional two-hour military parade, which, for whatever reason, was sensibly cancelled this year.

His presidential reception was notable for the long procession of ebony delegates from those new African states that, refusing to conform to communist hopes for a docile Afro-Asian front, have bestowed diplomatic recognition on the Nationalist cause. Hard invasion prospects—despite the hoarse and habitual certitude of the garrison leaders—droop and moulder as limply as ever. But the Nationalist seat at the United Nations never looked safer. All Taipeh's official black limousines are gratefully whisking the government's beaming black friends on VIP errands, escorted under strange and brilliant national flags by motor-cycle outriders. With President Kennedy's support reaffirmed, the Indian frontier war is also serving to reinforce this ebullient diplomatic mood.

Durable exiles

Economically, Formosa has been thriving under the fertilising influence of American aid, which, in military and non-military form, has totalled a munificent $3,000 million in the last 13 years. Land reform was a spectacular success, and the industrial growth rate has been averaging approximately 14 per cent a year. But population is increasing at a headlong bat of 3.5 per cent a year, food has to be imported, and a crushing proportion of the secret national budget—probably $200 million a year—is devoted to the huge idle military machine.

Then, to the irritation of the Americans and the despondency of the able Nationalist planners, the Generalissimo decided to celebrate his 75th birthday year by slapping heavy surtaxes on all incomes in order to squeeze an additional $62.5 million into his "invasion" reserves by July next year. As a result, the economics minister, Mr Yang Chi-tseng, has given a warning that vital foreign investment is slackening, that unemployment is increasing and that the trade deficit for the past six months was $73 million—or nearly $15 million more than the aggregate of American private investment which has so far been attracted to the island.

This economic drift has had sharp and poignant interest for Washington, which wants to persuade Chiang to cut back military spending and is also changing the basis of aid from charitable handouts to low-interest loans. Hence the importance of President Kennedy's appointment of a strong and salty ambassador, Admiral Alan Kirk, to Taipeh. No Chinese invasion-peddler can try to pull rank on Ambassador Kirk, who covered the Normandy landings; no Chinese traditionalist can try to pull age on him because he is only a vigorous two years younger than the "Gimo."

Speculation that 1962 would be the year of decision for Chiang because of his 75th anniversary, and rumours that that decision might take the shape of a suicidal landing and a committed ally's plea for American succour, have all proved unfounded. Crafty General Park was able to hoodwink the trusting American commanders with his sneak coup in Korea, but, even if Chiang had reached a point of desperation, the secret training of attack troops and the clandestine assembly of landing craft for a reckless sally across the Formosa straits would be out of the question.

Medical opinion expects that, in the continuing *status quo*, the austere living "Gimo," at 75, should still outlive his 65-year-old vice-president, the more human Chen Cheng. Chiang's logical and lineal successor, even if not in name at the outset, will in normal circumstances be his elder son, General Chiang Ching-kuo, who runs the secret police and directs the oriental cloak-and-dagger war against Peking. As chairman of the vocational assistance commission for retired servicemen and director of the Chinese youth anti-communist and national salvation corps, Ching-kuo also controls both the past and future generations of Chinese in exile. He is tough and intelligent; he is Russian-trained and has a Russian wife. Judicious Americans see no valid reason to believe that he would try to make a deal with Peking, at the sacrifice of American support. On the contrary, they think that if his personal ambitions are strong, they will tend to lead him to direct Chinese Nationalist policy to building up a Formosan state independent of China.

Turkey's Radical Plan

FROM OUR CORRESPONDENT IN ANKARA

TURKEY'S five-year plan has now been laid before the Grand National Assembly. In outline, the plan seems full of enlightened ideas, and has the approval of most of the western experts who have studied it. But drastic reforms, and in particular tax reform, will be needed if Turkey is to afford its own share of financing the plan. The issue at stake is whether the carrying out of these reforms would endanger the life of the shaky coalition government—and might even threaten the whole concept of a parliamentary regime.

There was an uneasy curtain-raiser at the end of September, when the four top men on the state planning board, the organisation that drew up the plan, resigned in a body after differences with the government. They did not say publicly why they did it, but, in fact, everybody knew. They had resigned because the government had declined to accept their recommendations for financing the plan, and for the reorganisation of the Turkish administration. Many people concluded from these resignations that the government had already decided to water the plan down. As drafted, the plan admitted a gap in domestic financing of about £48 million for the first year (1963), and estimated that this gap would rise to some £88 million by 1967, the last of the first five years. (Three five-year plans are envisaged.) The only way this gap could be closed, stated the plan, was by levying substantial new taxes, in particular an agricultural tax. It also demanded a drastic reorganisation of the sector of industry run by the state, which has been losing money for years, and said flatly that without this reorganisation the plan could not reach its declared target of economic growth, 7 per cent a year.

The question of an agricultural tax has been constantly debated. It is peculiar to Turkey that, though the country is still primarily an agricultural one, no farmers, however rich, pay any income tax at all. The immensely wealthy cotton magnates of the Cilician plain, the richest area of Turkey, not only evade the little tax levied on the production of their mills, they pay no tax, even in theory, on their extensive plantations. There are reckoned to be at least half a million farmers in Turkey with gross incomes of more than £2,000 a year who pay no income tax at all. Politically this issue is explosive. The rich and the feudal acquired tremendous influence during the Menderes era, when the government depended on their support. The new parliament has not yet proved very different. These same powerful interests survived the military coup of 1960 almost untouched, and retain a firm grasp on all of the five political parties represented in parliament. Many of the deputies, from all parties, are themselves big farmers or come from wealthy landed families.

The five-year plan has a strong left-wing bias. It lays down that the "improvement of the distribution of incomes is one of the major long-term targets . . . in compliance with the principles of social justice." It envisages "a comprehensive social security system" with a health service apparently modelled on the British, and urges the importance of cheap housing, birth control (delicately referred to as "population policy"), universal education, land reform, and tax reform. This is strong stuff, though few impartial observers would not agree that it is exactly what Turkey needs. But it is difficult to see the present regime putting it through.

THE immediate and crucial problem is the tax reform needed to finance even the first year of the plan. During the discussions between the government and the four planners who resigned it became clear that the prime minster, Mr Ismet Inönü, was not prepared to endanger his coalition by bringing up the question of tax reform now. The detailed financial proposals of the planners were therefore taken out of the body of the plan and reduced to the level of a few pious wishes. The whole Turkish responsibility for financing was left in the air, dependent on a tax reform bill to be introduced at some unspecified time in the future.

This is an unsatisfactory situation for the nine nations of the aid consortium (composed of the United States, Canada, Britain and the six common market countries). The plan laid down that Turkey was to provide 14 per cent of its gross national product from internal resources towards the plan. In foreign aid for the plan, Turkey had asked for about four per cent of its GNP, and had also asked for money to cover the servicing of its vast foreign debt, interest on which amounted to more than $115 million this year. The consortium agreed to this in principle provided the Turks ensured their own share of the finance for the plan. It is unlikely that the consortium countries will agree to make up for what the Turks themselves do not produce; they are more likely to scale down their assistance in proportion.

The only vigorous reformers among the 637 members of the two-chamber parliament are the twenty-two former officers of the military junta (now kicking their heels impatiently in the senate), plus a handful of young radicals on the left wing of the Republican People's party. In the government itself, Mr Inönü, at 80, can hardly be expected to become a crusading reformer, while the chief deputy prime minister in charge of the plan, the minister of finance, and the minister of industry—three key ministers in the plan's implementation—are all well known for their extremely conservative views. In effect, a right-wing government and parliament is oddly saddled with a left-wing programme.

Turks believing in reform are to be found outside government and parliament, among the young, the intellectuals, and, especially among the younger officers in the armed forces. The plan, being fairly general and non-controversial, is expected to be voted through parliament, and even in its early stages should do something to help the commercial stagnation and unemployment that afflict Turkey. Trouble will come when such radical measures as tax and land reform are brought up, and there will be an increasing tendency during the resulting crises for outside influences to be exerted on parliament.

Cuba

SIR—You observe in your American Survey on October 27th that "the drama was certainly played for its maximum effect on a domestic political situation" relating to Mr Kennedy's alleged "softness" on Cuba.

Clearly you have for some time grossly misjudged the nature of the military threat to the United States and Latin America—hence to the West—posed by the Russian-Cuban relationship.

Whether your misreading of this situation is attributable, as Hans J. Morgenthau declares in the current (November) issue of *Commentary* to a "stubborn refusal to look unpleasant facts in the face" typical of that "which dominated British political thinking in the 30s" or whether its explanation lies elsewhere is beside the point.

The particular mischief of your approach is that having apparently ruled out the possibility that you could have been wrong in your conclusion that the presence of Russian troops and weapons was without military significance and that President Kennedy could have been alerting his countrymen to what he sincerely believed to be a clear and present danger requiring immediate action, you fell back upon a somewhat cynical and superficial analysis of American policy: that a significant factor in its determination was the coming November 7th elections.

Little that happens in our very political American society, from a change of coiffure by the President's wife to the welfare of household pets (remember Fala?), does not have some political consequence or implication. To say this is quite different from your suggestion that President Kennedy handled this crisis, with its potential for nuclear catastrophe, with an eye to the gains it might yield in a by-election in which he is not even a candidate.

There comes a point where this kind of cynicism verges on the brink of irresponsibility. One hopes *The Economist* will forgo this brand of brinkmanship.—Yours faithfully, MAURICE S. SPANBOCK
New York

★

SIR—May I, as an Englishman living in New York, comment on Mr Coe's letter (October 27th) on Cuba? He repeats an assertion which is quite common here—that all six million Cubans are slaves to Castro's regime. I wonder what his authority is for this statement? It flies in the face of the reports of most journalists who have been in Cuba recently.

The pretence that Americans are "obsessed with the burning desire to return freedom to our Cuban neighbours" is another of the spectacularly silly notions currently held. *Return* freedom? Which freedom is this? That of the Spanish rule, or the American trusteeship, or the Batista regime? And where was this "burning desire" when Batista was imprisoning, torturing and killing Cubans by the thousand, in short when he was creating the conditions which nurtured Castro?

What the majority of honourable Americans want to do in Cuba is to sweep it clean of communism. What happens after that is not a matter for widespread thought here.

I wonder if it really shocks Mr Coe to know that there are anti-Castroites who are suspicious of American motives? What these people fear is what a minority of unscrupulous Americans desire: that Cuba shall become again a centre for highly profitable business activities, and that a coveted gambling and vice empire be rebuilt. That's what we shall be "returning" to the Cubans. I hope and trust that, allowed a choice, they will turn it down and find true freedom through their own efforts.—Yours faithfully, PAUL M. GARDNER
New York

Urban Counties

SIR—The case for the creation of urban counties over the conglomeration of towns in the Merseyside and Manchester areas is, at the very least, a strong one. Your correspondent, in common with the recent report to the Liberal party on local government, rightly stresses the need for one unified planning authority in conurbations capable of dealing comprehensively with the location of industry, new roads and, one would hope, the creation of new towns to accommodate over-spill. The stimulus of something less tangible than government subsidy yet in the long run more creative is certainly needed to relieve the unemployment, congestion and the slums of northern towns. The desperate housing need, in particular, has for too long depended upon unimaginative advice, lack of initiative and the vacillations of rigid political rule.

Yet the conflict remains between economic arguments for larger authorities and democratic arguments for small. If one believes in the right of a body of electors to determine their own level of government, when is it right for a higher form of government to interfere with that determination? What emphasis does the Boundary Commission really place upon the desires of local electors and how much on arguments of efficiency usually measured, sometimes mistakenly, by size?

The electors of smaller county boroughs will gain little by "two tier" government in terms of the personal services. They will distinctly lose electorally for there is a duplication both of representation and of administrative responsibility. If, in order to solve the problems of the impersonal service, "two tier" government is right in great urban areas, then it is surely essential that the second tier is given the greatest degree of devolution both in the control of policy and administration; the first tier reserving only extremely limited overall executive powers and exercising no administrative duties. It is also essential that the second tier be as small as efficiency permits yet as large as community interest allows. New boroughs of 200,000 population and upwards may satisfy the former but rarely the latter. Locality tradition and geographical situation are not unimportant. Intimacy between elected and elector is a worthy ideal in a democracy. Wards of not more than 7,000 enable councillors to be approached easily and in which their personality and personal calibre can be judged.—Yours faithfully, PETER HOWELL WILLIAMS
Liverpool 2

Dresdner Bank

SIR—In your issue of October 27th (page 394) you published an article under the heading "Herr Krages Baulked" in the course of which you report "... that Krages had to sell under pressure and that the Dresdner Bank, as his main creditor, was in a position to turn the screws somewhat."

We would like to draw your attention to the fact that the Dresdner Bank neither granted credit to nor maintained an account relationship with Mr Krages. We are sorry to note that obviously incorrect information has led you to draw a conclusion unwarrantable in the light of the actual facts.—Yours faithfully, ERNST MATTHIENSEN
HERBERT HENZEL
Frankfurt Dresdner Bank AG

Fife

His colleague, the Secretary of State for Scotland, is still committed to imposing further costs on industry through unnecessary tolls at the new Forth road bridge. Is this a continuation of "stop-and-go" by other means?—Yours faithfully,
J. MCWILLIAM
Convener,
Crossgates Fife County Council

Municipal Finance

SIR—Your note on the capital financing of Dutch municipalities was most interesting and demonstrated the ways in which a central government went to the help of its municipal partners when it found it necessary to place some restrictions on their short-term borrowings.

Cities in the United States of America also receive favourable treatment for raising loans for approved capital purposes in that their bonds are free of Federal and State income tax. This makes their bonds a much sought-after security by the large investor. Cities are able to offer substantial amounts for tender and the whole amount is usually taken up by a single finance house which may re-sell to the public. This results not only in a favourable rate of interest, so that "first-class" cities like San Francisco and Philadelphia pay a shade over an average of 3 per cent for bonds with lives up to 20 years, but the costs of issue are kept to a minimum.

A reformed Public Works Loan Board could do much to help local authorities to deal with their capital developments, all of which have some measure of approval from the central government.—Yours faithfully,

Civic Hall, Leeds — H. HAYHOW, City Treasurer

Tourist Attractions

SIR—Your article on the British tourist industry (October 20th) raises the familiar complaint about the lack of rooms with private baths in hotels in this country. One wonders why our hoteliers do not discover the shower, which is about all that American tourists would want, anyway.

I was recently in what I assume is one of Glasgow's best hotels. There was an agonising lack of toilets, and, at great distances, an occasional vast hall which contained two compartments with baths (each bath, let alone the compartment, about the size of a bathroom in a suburban semi-detached house), and, leading to them, a vestibule or anteroom which could have taken a double bed. This seemed an extravagant use of space, when a shower could have been installed in the corner of each bedroom without cramping the occupants at all.

The price of a room in this hotel, with breakfast, was of the order of £3 a night. For £1 or 30s. in Germany and Italy a shower, and often a private toilet, is standard. And the result is certainly more refreshing than the effect of being boiled in a badly-ventilated bathroom.—Yours faithfully,

REGINALD E. DUNSTAN

New Barnet, Herts.

The Church and Suicide

SIR—Referring to your issue of October 6th I assume the victim of a murderer, or of a homicidal car-driver, is deemed to have died "by the will of God" and allowed the full privileges of Christian burial. It was, by supposition, God's will that the hand of the murderer or car-driver was not stayed.

Will an appropriate authority explain why it is not equally God's will that the hand of the suicide is not stayed?—Yours faithfully,

Rottingdean, Sussex — L. PATRICK

BOOKS

Lone Wolf

Smuts: *The Sanguine Years, 1870-1919.* By W. K. Hancock.

Cambridge University Press. 631 pages. 52s. 6d.

THIS is a book to which many have been looking forward for some time, and they will find themselves, one fancies, at once very well served yet curiously dissatisfied. Control of his sources, a capital sense of architecture, a wide, almost unique, historical range and a hardwrought gift for clear, sometimes vivid exposition, together with a disciplined imaginative insight, all these have marked Sir Keith Hancock's writings since his earliest books, and may be seen most especially in his masterly "Survey of British Commonwealth Affairs." Yet somehow he seems to have failed to capture the essence of Smuts, who has carried his inscrutability successfully beyond the grave. Others come alive more readily: Wolstenholme, Smuts's Cambridge tutor; or John X. Merriman, who may appear to lose the battle in correspondence with Smuts but who captures the reader's heart in a way Smuts himself somehow fails to do; or Olive Schreiner, Emily Hobhouse, that exasperatingly excitable saint, and above all, Botha. But Isie Krige, whom Smuts married, and Smuts himself do not reach out of the book towards us in the same glow. One comes to feel that this is a study not of J. C. Smuts growing from lonely prig to world statesman by way of Cambridge, Commando and Cabinet, so much as an account of "Old Global" (as he was called in the United Nations at the end of his long life of prodigious public service) when young—if he ever was young for very long.

Sir Keith once or twice reminds us that he is writing biography not history and spells out for us in our ignorance the difference between them; even so, the book is, in essence, another history, another and most masterly survey of British Commonwealth affairs with Smuts as its centre-piece. There is perhaps in humaneness an arrogance which can either slip into a sort of superiority, a snobbery of the soul, or, in the greatest, deepen by way of magnanimity into selfless compassion. Perhaps neither subject nor therefore author quite attains to that level of greatness. Again, more than once and for extended periods Smuts became perforce, and one guesses enjoyably, a man of action. Perhaps the author is not quite able to catch or give us the feel of this aspect of him. We all remember him as "General" Smuts but we had better go back (as Sir Keith himself has wisely done) to Deneys Reitz to get the tang of Smuts in the saddle.

Botha told him, no doubt in jest (since he knew of his East African command), that "you and I know you are no general," but it is evident that Smuts thought he was, toyed with Lloyd George's suggestion of the Palestine command (as we know from L. S. Amery) and even offered himself in command of the American armies in France, an astonishing piece of imperceptive arrogance for one confessedly aware from his own bitterest experiences of the touchiness of national prestige. This demand for action, to be back literally in the saddle, is maybe an underestimated aspect of the story. Is it true, one wonders, that "despite his ardour in the field, grand strategy was his true bent"?

All this said—that the book in a way misses, does not quite come off—there is still very much to be grateful for, not only in the fullness of the account, its tremendous expository passages, but in certain substantial contributions to history itself: over the Gandhi controversy, for example, or, more particularly, the creation of the Royal Air Force. And it makes clear, what one had often suspected, that Smuts did not have the knack of getting people alongside each other, perhaps because he could not get alongside them readily himself—save in writing to good women. His aim to improve racial (by which he meant Anglo-Boer) relations in South Africa was not matched in the end by a significantly personal contribution to the problem, since to the Afrikaaner he would seem to have been got at by the old enemy and to those of English stock too "slim" for them to know where they were with him. As for the relations between white and black and "native policy," it was clearly Smuts himself who made the amendment to the peace terms presented by Milner and Kitchener that was to prevent Africans from receiving the franchise in the Transvaal and the Free State and ultimately therefore in the Union, which Smuts strove so hard and so subtly to bring about. The legacy of the sanguine years is today's Republic.

Imagine this extraordinary ex-enemy being brought into the war counsels of Great Britain in 1917; yet he stays warily away from Milner or more obviously from Lloyd George's insidious breakfasts. He preferred Quakers and Asquithians, but he remained a lone wolf with everybody, and though willing, sometimes lavish, with advice by way of memoranda, nevertheless kept his cards close to his chest (some of them maybe in case he saw them himself). Even his letters to his wife have a curious tucked-up reticence; perhaps she knew him well enough, despite his long absences, to be able to read (as we cannot) between the lines.

Of such a clever man it is difficult not to suppose that he usually knew what he was doing, and, as one example, his anguish about the Versailles Treaty must be taken alongside the vindictive addition to reparations that emerged from his own draughtsmanship. "I only wish," Patrick Duncan had written to Lady Selborne in 1908, "I thought that his fine sentiments were more intimately hitched on to the springs which govern his actions. They do sometimes get turned on but they spend much of their time in the cupboard of his soul." Or, as Sir Keith puts it, "Smuts himself had a passionate heart but he also had a cool head"; moreover, "he was temperamentally attracted to the centres of power."

Professor Hancock implies that his book cannot be regarded as definitive. In the sense that we now penetrate into Smuts with the fullest understanding, maybe not; but as a superb account (superbly produced) of his life and times it is surely destined for endurance.

Murder in Marylebone

The Cato Street Conspiracy

By John Stanhope.

Cape. 190 pages. 18s.

TO most of us the Cato Street Conspiracy is merely something on which we had to write in an O-Level examination a brief note stating the what, when, where, and why of it. Indeed, in outline, the affair is simple enough. The conspirators were about to leave their headquarters, a hired stable, to kill the Cabinet, burn the Mansion House, seize the Tower, and unleash the dogs of loot, when they were surprised by a detachment of Footguards and a body of Bow Street officers, one of whom was killed. This was, in the words of the caption of Cruikshank's colourful cartoon, "on the memorable night of the 23d. of Febry. 1820." The stable still exists and the street is still Cato—though for a short time the Borough of Marylebone apologetically renamed it Horace "at the inhabitants' own request."

Why the Sikes-like ruffians "faithfully represented" by Cruickshank, and immortalised in portraits and autographed "last words" collected by their solicitor Mr Harmer, concocted such criminal folly, and how they were trapped, tried and executed is told by Mr Stanhope in a story that would do credit to a seasoned crime reporter. The conspiracy was an inconsequent epilogue to the years of unrest between Waterloo and Peterloo; and though its leaders persuaded themselves that it would ignite a revolution, they refused to see that the bloody antics of the yeomanry at Peterloo had convinced the clear sighted champions of Parliamentary Reform that their cause could be won only by patiently organised propaganda, not by the oratorical inflammation of mass meetings of Luddites and Blankereers.

The political and social isolation of the Cato Street *sans-culottes* was much more complete than Mr Stanhope's picture suggests. Their feeble attempts to enlist provincial support had failed (notably in Manchester) long before "the memorable night." Their leader Thistlewood, self-appointed head of the "Provisional Government" which was to replace the defunct Cabinet, was a bankrupt whose failures in military and civil life only strengthened his belief in his mission to restore the Golden Age in England by starting a Reign of Terror on approved French lines—"the People" would rise in London and the North as soon as heads appeared on pikes Indeed, the ramshackle armoury in the stable-loft included a large knife with which Ings, an unemployed butcher, was to remove those of the Ministers, and a bag for him to carry them in. Yet it is clear that, despite Thistlewood's rhetoric, the fanaticism of the "Jacobin" Watsons, and the ferocity of Ings, most of the "Committee of Public Safety" hoped for little more than pillage.

The atmosphere in Cato Street was not conducive to cool, well-concealed planning. In fact the conspiracy was betrayed by carelessness before the arrest, as well as by the sudden scruples of those who turned King's evidence afterwards. The author's criticisms, supported by new proof of the Government's use of spies (invariably said by the accused to be *agents provocateurs*) is historically exciting, but judicially almost irrelevant; for no informer was needed to clinch the case against these miserable men whose wild talk of "vengeance on tyrants" had ended in the panic-inspired murder of a policeman.

Britain Under Pressure

British Foreign Policy: *The Process of Readjustment, 1945-1961*

By F. S. Northedge.

Allen and Unwin. 341 pages. 38s. cloth, 25s. paperbound.

DR NORTHEDGE says of the period reviewed in this valuable book that it "may be the last in which she [Britain] could be described as having an independent foreign policy." There is a touch of sadness in this opening judgment as well as in the last sentence of the book:

> Britain would return to Europe, of which she had geographically once formed a part and from which, in the past at least, had come much sorrow and little joy.

One would imagine from this that Britain's connection with the European continent had really been confined to the occasional bout of warfare with, in between, the blissful enjoyment of freedom of action in the wide open spaces of the world. It is a somewhat stylised view of British history, and implies a special British concept of what independence means. The unexpected thing is that Dr Northedge does not allow it materially to hamper or distort his analysis of these sixteen years of British foreign policy from the end of the war to the application to join the European common market.

He does allow it to limit his scope, in the sense that Britain's relations with India, say, or South Africa, or Cyprus, are disregarded as falling outside the scope of foreign relations. This may not make for logical completeness, but it is a not inconvenient way of limiting the subject matter; and one of the great merits of the book is that the plethora of events is treated selectively, a specific theme being picked out as representative for each phase, so that there is a continuity of argument as well as, roughly, of chronology.

Each phase of the analysis, in one way or another, teaches much the same thing: that Britain's external actions through this period have been squeezed inexorably into patterns never wholly of British choosing, by forces beyond the control of the men who were trying to shape foreign policy. Those men were "independent" in the sense that it was perfectly open to them to behave, for as long as they could get away with it, as if those forces did not exist. They could press on with the dismantling of German industry (a folly for which Dr Northedge gives the British and the Americans too little discredit) for a while after the cold war had broken out. They could give up the Indian Empire, and doggedly go on building Naafi shops and married families' quarters as if the imperial military system still existed. Some colonies were given up

Chambers's Encyclopædia

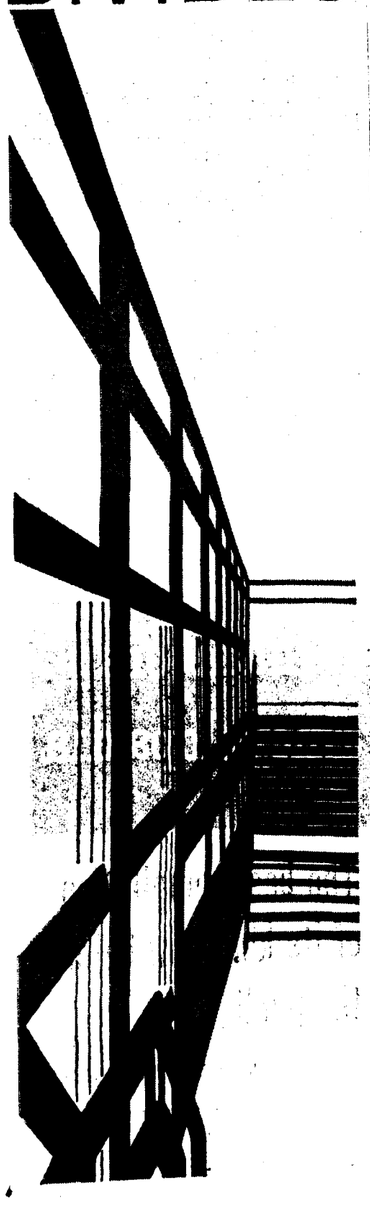
DIVIDES



with a light heart; others, as if picked blindfold with pins off the map, fought for bitterly. Dr Northedge's sixteen years of British foreign policy are full of patient and ingenious adaptation to the importunate pressures of the day, but, naturally enough, they are not free from attempts to prevent what had happened from happening. An independent country can try this on if it chooses; the Suez intervention, which Dr Northedge condemns, was a reaction against the existing facts.

National attitudes are rarely quite as constant as we imagine them to be. Britain's attitude to Europe has still not finished being tempered. One does not know what will come out at the end: for the moment, it is pleasant to be reminded of Mr Attlee, in 1939, saying "Europe must federate or perish," or of Mr Crossman and Mr Michael Foot, eight years later, leading the *Keep Left* rebels into combat for European unity against Ernest Bevin. Dr Northedge is illuminating about the perplexities of the British on this subject and the way their European attitudes have gradually been brought face to face with the facts. Why the present Government made its choice to try to enter Europe is brought out with lucidity and comprehension. How, and even when, the choice was made is, by contrast, left more obscure than is strictly necessary. Dr Northedge seems to put the decision in 1961, when it was announced and made formal. But it must be apparent in retrospect that the intention was formed not later than the summer of 1960. The Commons debate of July 25, 1960; Mr Macmillan's reshuffle of his Government two days later, which first put Mr Heath in charge of Britain's relations with the European communities; and Mr Macmillan's dramatic reconciliation with Dr Adenauer on the following August 10th—all point the same way.

Persian Spells

World War in Iran

By Clarmont Skrine.

Constable. 291 pages. 42s.

In contrast to ancient Persia, or modern Egypt, modern Persia is the subject of few or no good books. This account of the involuntary part played by the Persians in two world wars is therefore specially interesting and valuable; though a personal record, it amounts to a work of reference as its author has an eye to western Asia as a whole, and interlards his own narrative with adequate summaries of events elsewhere.

Sir Clarmont Skrine was a servant of the Government of India. For more than a century before the Indian Independence Act of 1947, that government shared with London responsibility for British policy in Persia, handling the eastern half of the country while London handled the western half and the capital. Now and then this odd arrangement led to inter-British friction, but often it worked well enough thanks to the commonsense of the officials on the spot. For decades, however, British behaviour in the eastern half was tinged with more panache than that in the west; consuls trotted about their business with an escort of Central India Horse lancers. Neither end took much notice of Persian nationalism, or the dismay with which the Persian constitutionalists had received the Anglo-Russian partition of their country into spheres of influence in 1907, and according to Skrine, British consular officials of the day shared the illiberal attitude:

> I must regretfully admit that at this stage in my career I had little sympathy with Persian aspirations to modernity and regarded them, if anything, with disfavour.

But he changed with the times. The bulk of the book covers two shortish periods of his life, separated by a gap of a quarter of a century; the first was a term of service at Kerman from 1916 to 1918, the second a spell as Consul-General at Meshed from 1942 to 1945. By the latter period, Skrine, whatever his personal preference for the good old days, was aghast at the selfishness and short-sight of a Persian aristocracy and bureaucracy that spent its time planning how to turn shortages and rationing to its own account; he was also aware that the nation would have had better chance to get rid of such social scourges had it not had to expend so much thought and energy on evading the pressures exercised by Great Britain and Russia. His account of his dealings with what he calls "the Gang," and of the successive failures of "anti-gangsters" who continue to fail to this day, is at the same time sympathetic to limitations imposed on Persia from outside, and severe on the lassitude that causes Persians to blame all their troubles on other people. In the interval between his two spells of service, Persia too had changed, but chiefly in physical matters such as communications. There was not, in 1945, much evidence of change in other respects.

The book is very well written. Accounts of terrifying storms and exquisite gardens, bandits waiting at narrow corners and hoaxes perpetrated upon the author are all given with gusto. So are strange errands such as that on which he escorted Reza Shah into exile, or crossed the Iron Curtain (which was then, in the Turcoman SSR, a strip of ploughed earth stretching out of sight on either hand); he walked backwards so as to worry the next visiting inspector of Soviet security. A jaunty and discerning author also deserves praise for nearly forty superb photographs, all of which he took. Between them, they suggest not only the climate and the physical features of the country, but also the character and preoccupations of its inhabitants whether rich or poor, friendly or fanatical. The most affectionate is one of the Persian nobleman to whom the book is dedicated, who is caught in his garden against a background of larkspur and cascading roses, and who happens to be the father of Persia's present Prime Minister.

Finer Air

English Literature in the Earlier Seventeenth Century 1600-1660
(*2nd Edition revised*)

By Douglas Bush

Oxford University Press. 689 pages. 45s.

For the last fifty years, no period in English literature has had so much scholarly and critical attention focused on it as the first six decades of the seventeenth century. Professor Douglas Bush's volume, one of the finest in the Oxford History of English Literature, originally came out in 1945. It does not deal with the drama, but even on non-dramatic topics there has been such a steady flow of books, articles and essays that the once admirable bibliographies have become inadequate. These have now been overhauled and expanded, and a few minor authors earn for the first time an individual bibliography. But of more interest to the general reader are the alterations and expansions in the critical text. The chapters on the metaphysical poets and on Milton have, not unexpectedly, come in for considerable revision. Donne the preacher gets fuller treatment than before, Carew is given more attention, and everywhere there are signs of vigilant awareness of what has recently been published in this field.

The longer perspective has added wisdom and assurance to what was already a remarkably fine survey; and though Professor Bush does not now make invidious contrasts (as he occasionally did before) between the literature of his period and that of the inter-war years, there will be many to agree with his final comment that modern lovers of the earlier seventeenth century "can at least live part of their lives in a finer air than their own."

The Soldier Politicians

The Role of the Military in Underdeveloped Countries

Edited by John J. Johnson.

Princeton University Press. London: *Oxford University Press.* 435 pages. 68s.

One of the most striking—and in some respects, depressing—developments of the past few years has been the proliferation of military regimes from Asia Minor to the Far East. Depression is indeed the natural reaction of the affluent and reasonably well governed Westerner, who deplores the failure of civilian politics. One source of consolation is that in nearly all cases—whether in Turkey or in Burma, in the Sudan or in South Korea or in Pakistan—the high army officers who seized power did so in the name of progress and in a spirit of disgust at the politicians' capacity for corruption. But depression returns with the thought that armies, once in, are hard to dislodge. True, General Ne Win of Burma kept the promise he made after his coup in 1958 to return power to the civilians; but this year he staged a second coup and this time made no promises. Being arbitrary, military rule tends to be self-perpetuating.

This valuable and timely symposium looks at the problem of soldier politicians both from general and from specific viewpoints. In an introductory article, Edward Shils draws attention to the phenomenon of military power in static societies without a martial tradition and of its absence in nations, such as Germany, that are usually regarded as militaristic. Although this is a useful generalisation, the origin and practice of military power are diverse and vary greatly in Latin America, the Middle East and South-East Asia, and in individual countries in each area. In Latin America, as John J. Johnson points out, militarism "is a cultural residue of the wars of independence (1810-1825) and the subsequent civil disorders." In the Arab countries, the military has tended to rush in to fill a political vacuum and hasten the advent of modern statehood (Israel, which is only in some respects an underdeveloped country, has managed to keep government in the hands of civilians, despite constant pressure on its borders). In Pakistan and South-East Asia, the manifest failure of the politicians to safeguard law and order—and control expenditure—has provided a powerful excuse for military intervention (though Siam's *coups d'état* are more akin to Latin America's).

One of the most interesting contributions in a collection of high merit is that of Guy J. Pauker, on the role of the military in Indonesia. Professor Pauker caused a stir some years ago by arguing that the army in certain countries—including Indonesia—was a progressive force and would probably, in the right circumstances, rule better than the civilians. In this contribution, however, he withdraws, in effect, his confidence in Indonesia's soldiers, perhaps because they failed to seize power when it might have done some good. For better or worse, however, the soldiers who did seize power elsewhere seem in for a long stay.

OTHER BOOKS

THE PLANETS. By Patrick Moore. *Eyre and Spottiswoode.* 198 pages. 21s.

Indefatigable Mr Moore recast his earlier Guide to the earth's solar companions and added new material. Of the latter an appendix telling amateur astronomers what to look for is as excitingly new as the rest. It is a most useful book, whether you can get access to a telescope or not. The tables and illustrations are good value, and the writing is clear.

THE REVOLUTIONS OF ANCIENT ROME. By F. R. Cowell. *Thames and Hudson.* 228 pages. 21s.

The author of the Penguin "Cicero and the Roman Republic" and Batsford's "Everyday Life in Ancient Rome" here usefully concentrates on the persistent revolutionary strain in Roman politics down to the decline and fall. Dr Cowell, a former British civil servant, draws intriguing comparisons and contrasts with more modern politics, and performs miracles of compression without obscurity. He emphasises the Romans' bequest of respect for a rule of law to modern Europe and America, and ably traces its eclipse in the later empire. Good homework for angry young—or old—moderns.

Steel
UNITES

Steel divides—quickly and easily. Simple division, by the spool, by the roll, by the module, by the mile. Divide without obscuring, or screen completely. Take your choice.

Steel unites too, with the strongest possible bonds, in hundreds of ingenious forms from safety pins, to tie beams. Weld it, rivet it, bolt it, clip it or even forge the union.

THE BUSINESS WORLD

Mr Maudling's Measures

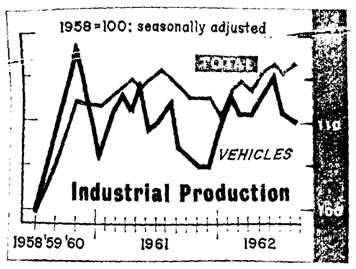
FIVE weeks ago at the Mansion House dinner the new Chancellor of the Exchequer announced reflationary stimulants decidedly weaker than most people, guided by the usual official noises, had been led to expect. Last Monday he produced a second instalment that in turn surprised most people—and not least his predecessor who bought a car that very morning—by its size and scope. What happened in October to change Mr Maudling's mind? In the domestic economy, only one significant thing: the rise in unemployment in October to 2¼ per cent, seasonally adjusted, bringing the prospect of a rise in total numbers out of work at the new year seasonal peak towards 600,000. Externally, the Chancellor may also have seen a new reason for greater venturesomeness in Dr Per Jacobsson's public pleas for more expansionary policies in the western world; and he may even have been encouraged by the slight improvement in the September trade figures, following the poorer July-August returns which prompted caution at the Mansion House. Finally, as an explanation of this bigger and surprising second dose, is the sheer passage of time, making it politically easier for the new Chancellor's natural predilections to be translated into policy.

Such seems to be the rather complicated rationale of an untidy and, as it has turned out, confusing episode in economic management. Mr Maudling went out of his way to present his changes as definitive ones. He professes his dislike of using tax investment rules as a cyclical regulator (having done it just this once more); while the reduced purchase tax rate of 25 per cent for cars seems "reasonable treatment for them in the long term." But the Chancellor's analysis does not suggest that official intervention in the economy will henceforth diminish: indeed if, as he in effect implied, the economy has really to be kept within the range of 2-2¼ per cent unemployment (the remnants of the Paish doctrine at one end of the scale and the supposed political limits on the other?) then the alteration of stop and go might have to become still more frequent. Since, quite sensibly, Mr Maudling declined to use the surviving general regulator invented by Mr Selwyn Lloyd—under which changes have to be made at a uniform scale in indirect taxes that are themselves disparate and discriminatory—he may still have to introduce his own. Mr Maudling need not look far. If he is really to make good his hopes of avoiding past disruptions to particular industries and yet keep the economy within the narrow tolerances he has set, the only effective instrument may be a regulation of disposable incomes, through variations in employees' insurance contributions. To maintain growth in a way that is commercially possible for Britain may need as much political courage as to prevent it.

For the immediate months ahead, meanwhile, Mr Maudling may now have set the economy on the hoped-for 4 per cent escalator. The latest economic prognosis by the National Institute of Economic and Social Research, which went to press immediately before the Chancellor announced his new plans, estimated that the economy was then running at a rate of expansion of around 3 per cent a year; now the Chancellor has given a further push towards the 4 per cent target. That target, from a position of definite under-employment, ought not to be difficult to reach. The real test will come at a more awkward stage of the trade cycle, and it is for then that Mr Maudling ought now to be shaping new and bolder instruments.

MR MAUDLING's particular contribution so far, apart from hastening the timetable of re-expansion, has been to move away from the global financial control which was fashionable in the fifties, and to act instead (which is much more his own personal intellectual style) at specific selected points. The new words that are being repeated in the Treasury, suitably reorganised for the new approach, are "real resources." It is this approach that has encouraged the expansion of public investment in areas of particular underemployment, such as north-east England and the Celtic fringes; in the same way, and most commendably, the Chancellor has laid aside any political or financially traditionalist inhibitions and has taken the brakes off public investment as a whole. This, as detailed figures on page 595 show, is now scheduled to rise by 7¾ per cent in the current financial year and by some 10 per cent in 1963-64: under a Conservative government, unexpectedly, public investment—and in particular social investment—has become the most strongly expansionary force in the economy. Mr Maudling would also like, guardedly, to apply the "real resources" criterion to overseas aid and to export credits—to offer, beyond the help that Britain can afford in free or nearly free money, specific products such as ships that could clearly be produced without strain.

In his general fiscal changes announced on Monday the Chancellor would also claim to have been properly selective, rejecting the general boost to consumption because of the reasonable strength of retail trade, but concentrating instead on the weak spots, investment and car sales. At this last point, however, there are grounds for criticising the Chancellor as



having turned the selectivity clock back too far. Certainly, help for the car industry was the easiest way of giving a general boost to engineering as a whole. But help on this scale, reducing the duty to less than half the rate of 55 per cent from which it had already been reduced in April? The hard-pressed television and radio industry, left unhelped at 45 per cent, has reason to feel aggrieved. It may fear in particular a further postponement of public buying in advance of the next budget—presumably not before April. There must be doubts, too, about so sudden and so large an alleviation of the tax on new cars. On the one hand, manufacturers who have succeeded in pushing up their share of world export markets from 18 per cent in the first half of 1961 to 25 per cent in recent months, largely by selling at a loss, could temporarily face too large temptations from a so much more profitable home market. One wonders, too, whether the Government has adequately considered—as with its new emphasis on real resources and indirect costs it clearly should—the longer-term implications of a sudden cheapening in the cost of motoring in Britain. These include not only heavy costs in congestion and roadbuilding but also still greater dependence on a single, and now awkwardly seasonal industry.

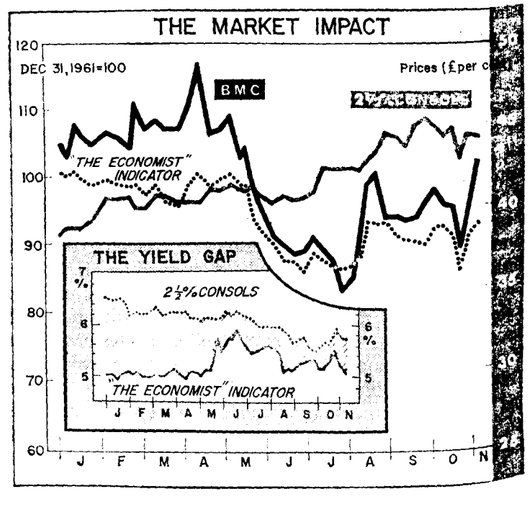
Stimulus from Capital Allowances

STIMULUS, said Mr Maudling on Monday, should be of a nature that can endure and directed especially towards investment. Without overrating the effect of Government action in encouraging manufacturing industry to invest more when it is not making good money on much of its recent investment, Mr Maudling is presenting a package that will immediately set industry's mind thinking more favourably about new expenditures and will powerfully increase them as soon as expansion and improved profits come within prospect. The Chancellor clearly recognised the difference between working with and against the tide in stimulating investment and his changes in capital allowances have, as he demanded, a more permanent look than earlier action in this field.

So Mr Maudling is seeking to modernise the capital allowances—a complicated job for the next Finance Bill, but one that he is anticipating for capital expenditure on new assets "due and payable" after November 5th. He looked at the system (which the Swedes have used) of giving businessmen complete choice when to take the tax allowances—all in the first year if they wished—and though "much struck" with it rejected it on the argument that it might cost the Revenue £700 million in the first year, on which the fairest thing to say is that the figure is almost certainly excessive and the argument irrelevant. So Mr Maudling decided against venturesomeness and came down for an increase in the investment allowances, and a revision of the annual depreciation rates.

Mr Maudling was anxious to rebut the criticism that investment allowances (as distinct from initial allowances) constitute a subsidy for new capital expenditures. But the criticism cannot be escaped and, without pursuing pedantry to outrageous point, it is relevant to the ambition that one used to credit to conservative Chancellors to reform the whole basis of corporate taxation. Profits tax and investment subsidies may be reconcilable by some far-out fiscal theorists, but the simple facts are that the one reduces and the other increases industry's cash flow and that increases in profits tax were made in conservative budgets in 1960 and 1961. The Royal Commission on Taxation said of investment allowances that "in the result some part of the profit is absolutely exempted from taxation." This part is now increased by raising the investment allowances for plant and machinery from 20 per cent to 30 per cent and for industrial buildings from 10 per cent to 15 per cent. The cost to the Revenue will emerge only slowly—£8 million in 1963-64 and £50 million in 1964-65, with a further increase thereafter depending on the level of investment. The result of this change is that industry will be given 10s. 9d. in the £ on £30 of every £100 it spends on new plant; in other words it will buy £100 of new assets for £83 17s. 6d. In the case of buildings and plant for research, the whole of the expenditure will be dealt with in the first year, by allowing such assets to be written off 100 per cent with the benefit of the increased 30 per cent investment allowances on top. This specific encouragement to research may cost £4 million in the first full year, but Mr Maudling will be happy if the cost goes higher.

Whatever may be said for or against the system of investment allowances, there is no doubt that Mr Maudling was on altogether firmer ground in his projected revision of the annual depreciation rates, the broad intention of which is



to reduce substantially, and in some cases by more than half, the nominal working lives of industrial plant, some of which extend up to 45 years. For many industrial plant staples, including engines and electric motors, the annual rates are 5 or 7½ per cent, and they have always been regarded as wear and tear allowances related as closely as may be to physical, not necessarily economic, lives of particular items of plant. Mr Maudling promises a minimum annual allowance on the reducing balance of 15 per cent (equivalent to 12 per cent on a straight line basis); it follows that the total tax allowances in Year I will be 55 per cent, 30 per cent investment allowance, 10 per cent initial allowance, and 15 per cent annual allowance. By the end of five years, 91 per cent of the investment will have been allowed for tax; in 10 years, 113 per cent; and after 14 years only 10 per cent will remain to be set against tax.

The cost of this change, which applies only to new plant and machinery bought from November 6th, in the first year (1963-64) will be small; in the second year £15 million; and in "some years' time" £55 million. This change is as far-reaching, and could prove more enduring, than the increase that the Chancellor has made in the investment allowance. Annual allowances have had a notably permanent (too permanent) look about them; raising them is entirely justified but they will not be open, in all probability, to any sporadic or general changes for some time after next year's revision. These changes mean that on the example above the full cost of new plant may in future be set against untaxed profits in seven years; under the old system, with investment allowance of 20 per cent, initial allowance 10 per cent and annual allowance, say, 5 per cent this would have taken 30 years, and 15 years on a 10 per cent wear and tear allowance.

Over time, these changes are capable of having a powerful effect; indeed, boardroom discussion of new projects in coming months will be increasingly swayed by Mr Maudling's promises. Their impact effect will give immediate assistance to industry's cash flow and in a short space of time a big increase in the interest-free revolving fund that the Exchequer provides to industry in the form of these allowances. Greater determination to root out old equipment and replace it with new at a 16 per cent discount is to be expected even on the part of those who have hitherto been sluggish in exploring the potential savings in prime costs from installing new plant. And those industrialists who look at net margins after charging depreciation and tax will feel that Mr Maudling has given them something important to go for.

Special Favour for the Car Industry

PURCHASE tax cut to 25 per cent was more than the motor industry had dared to hope from Mr Maudling; now it is trying to estimate the extent of its good fortune. Early guesses are that home sales next year might be between 900,000 and one million, compared with rather under 800,000 this year and 745,000 in 1961—an abrupt increase, but less startling if one takes the 805,000 sold in 1960 as the starting point for the 10 per cent annual increase that some forecasters in the industry were then hoping for, and using to justify the expansion schemes that are now nearly finished. The fall in sales last year and this year is thought to show that many car owners have postponed replacement because used car prices have fallen; now new car prices have dropped by 12 per cent the industry hopes that they will be tempted to buy—even though the value of their old cars will have fallen yet again.

The size of the increase in demand for new cars really depends on whether car owners are influenced more by the drop in the value of their present car or by the fall in new car prices. The fall in used car values will not be sharper than the fall in new car prices; most big dealers seem to have marked down their one- or two-year-old cars by 10-12 per cent, though the prices realised at one auction held by Southern Counties Car Auctions on Tuesday showed a maximum fall of about 10 per cent on nearly-new cars, fading away until the prices of the oldest cars were virtually unaffected. Prices of one- and two-year-old cars had already fallen by 7 to 15 per cent between January and October this year. Prices of older cars had fallen by around five per cent. So the gap between new and used prices seems to have narrowed, especially for the owner of a five-year-old car. And, more fundamentally, the cost of cars has fallen in relation to that of other goods; so they have more attracting power over consumer's expenditure than at any time since 1939.

If buyers were to calculate the effect of the tax cut in a strictly economic manner, they would find that they were saved the difference between the fall in the price of their car and that of a new car—which, taking a new car costing £800 and a fall of 10 per cent in used car prices, would mean a saving of £36 to the owner of a one-year-old car. But even if prices do settle down with a fall of no more than 10 per cent, dealers may well lower their part-exchange allowances by more than this if there is a sharp rise in demand: their profits on new car sales have been sorely squeezed this year between falling used car prices and the stronger bargaining position of the new car buyer when he knows his custom is urgently wanted. Manufacturers will also want to raise their own prices, for the British Moror Corporation will not be alone in showing lower profits for this year. The remarkable prescience shown by Ford on Monday makes it the admiration and envy of the industry. Higher profits in the home market, makers argue, should allow them to subsidise exports better, as they maintain the Germans can.

Though there may thus be opportunity to raise prices, higher output should reduce costs—or at least help to prevent them rising yet more as the expansion plans bear fruit in new capacity, delayed though their completion has been. The industry was operating at rather less than 70 per cent of its capacity of about 1,900,000 cars a year in September, and output fell a little in October—apart from the Ford strike. By the end of next year capacity could have risen by more than 40 per cent, so even if home sales reached one million and exports 650,000, the industry would be working at only 60 per cent of capacity by then—so having good reason to slow the pace of expansion, and to export all it can. The only bottleneck that might delay a rapid increase in production is labour—in its application to work as well as possible shortages—but with the slack winter season just starting, the industry should have a breathing space in which to build up output.

The size of the purchase tax cut brings a double benefit to the industry; there is now little reason for buyers to fear a substantial cut in price as a result of the budget, so the annual wait for the budget will no longer accentuate the tendency to buy in the summer. Next year the buying rush may well start in January (since the habit of valuing cars by year of registration still dies hard). As the industry has got nearly what it has so long been demanding, a sales tax comparable to that applying in the common market countries—the rate in France is about 28 per cent, in Germany about 15 per cent, and in Italy about 12 per cent—there is little chance that the tax will be cut again. In Britain cars are now taxed equally with domestic appliances with only radio and television sets now regarded by the Treasury as justifiably taxed at 45 per cent like that other mark of human vanity, cosmetics. Perhaps their makers should migrate to Scotland.

Two Cheers in the Stock Market

ARE equity prices on the turn at last? This was the first question asked in the stock market on Tuesday morning. The answer after three days' cogitation was favourable. Late on Monday, the immediate response to the cut in purchase tax on cars was, predictably enough, a sharp rise in motor shares but the initial gains were not fully held on the following days. Dealers admitted that the effect of the changes in depreciation allowances upon individual shares was difficult to gauge but they could not be anything but pleased with measures designed to encourage more investment by British industry. Hence much of the buying on Tuesday was concentrated upon engineering, steel and other capital goods shares that are likely to benefit from any increase in private capital formation—as well as directly from the more generous capital allowances. Motor component shares and such blue chips as ICI and ICT were also bought. But this activity was not maintained on Wednesday when prices drifted down a little. Then the market was jerked away from contemplation of what Mr Maudling's measures might mean for the future to the present-day reality that John Summers, often rated in the stock market as the strongest of the steel companies, is to work short time. On Thursday, however, equities rose again, so that while *The Economist* indicator gained 6.2 points to 336.4 in the week to Wednesday's close, the *Financial Times* index rose by 9.8 points to 285.3 in the four days' trading to the close on Thursday.

These are useful gains and the stock market, having recovered from the Cuban setback and having been encouraged by the tone and content of Mr Maudling's speech, is now more confident than it was only a few days ago. But Mr Maudling has not set Throgmorton Street on fire—as yet. It takes time for the implications of any change in Government policies to be absorbed by the stock markets and it is asking too much of investors, with the economy prosperous but not progressive, to throw off habits of caution and reserve overnight. Nevertheless, there is more reason for hope.

In the United States, talk about the prospect of a recession has diminished for a time and Wall Street, where the Dow Jones average advanced to 615 on Wednesday, is more confident. At home, the Chancellor's measures show that the Government is in earnest in its endeavours to inject more growth into the economy, and hopes to do so without damage to the balance of payments and sterling and suggest that if production and unemployment worsen in the winter the Government will be prepared to take further counter-measures.

How much farther the Government will be prepared to go in monetary policies is still a matter of debate. Part of special deposits have already been released and interest rates have been brought down. An early reduction in Bank rate is surely less likely, not more, after the Chancellor's unexpectedly large stimulus in other ways. The authorities will hardly want to lower their exetrnal defences at this time—and Lord Cromer himself spoke at the Mansion House of Britain's short-term rates being compatible with other countries'. More likely than a Bank rate move is still another, and final, release of special deposits, which Mr Maudling said specifically would be granted if necessary—and bank advances may clearly rise more rapidly now.

Faster, and just possibly a little risky, expansion could not be expected to boost gilt-edged, which thrive rather on obstacles to growth. Not surprisingly, therefore, the gilt-edged market, having taken a bad knock during the Cuban crisis, has remained quiet. But on Thursday prices moved up again. A reasonably firm tone in the gilt-edged market, even if it is not accompanied by the sharp rises that characterised dealings in the autumn, could be of some help to equities in the winter months. Investors may well wait for definite signs that production and capital expenditures are picking up again before going back to equities in any great number. And having learnt about the fallacy of automatic growth the hard way they are unlikely to buy equities with blind abandon. All that Mr Maudling may have done this week is to prompt the question in investors' minds whether it is still wise to stay on the sidelines or whether it would be better to give some consideration to a cautious and selective policy of buying equities again. If that has happened, then, after many months of uncertainty and even, on occasions, despondency, a significant shift in thinking has taken place.

British Wool on the Defensive

The industry's vital interests will be fully protected—*Mr. Macmillan*. The interests of the industry are indivisible—*Mr Birkenshaw* chairman of the Wool Textile Delegation

AFTER a six-year odyssey, officials are almost home and dry with a commercial treaty between Britain and Japan. Hitherto a straitjacket of annual quotas has encumbered trade between the two countries, except for items that have been accorded specific permission for free entry. Moreover, a relatively limited range of merchandise was covered even by these arrangements. It follows that this severe restraint of trade cannot be lifted without causing a certain alarm and despondency, and nowhere has this been more vocal than in the Bradford wool industry. One would not get the impression from all this noise that slipping off the quotas is likely in fact to be a decorous, if not timorous, business. It is expected that the new agreement, due for signature next Wednesday, will arrange for quotas on a long list of "sensitive" items, which both parties will retain as a pretext for protection if unfettered trade between them were to cause—or be thought to cause—real hurt to a vital interest. In the formal terminology of the General Agreement on Tariffs and Trade, Britain will stop discriminating against Japan under Article 35 of that code and the net effect of the changeover should be considerably to enlarge trade between the two countries. Japanese goods will enter Britain on a "most favoured nation" basis, lifting them at one heave out of the restrictive rut of a quota system most used, and most useful, for regulating trade with communist countries into a status approaching parity with established members of the Western trading club.

Many manufacturers are welcoming the opportunity to expand their exports that the Anglo-Japanese trade treaty should offer. The vocal hostility mounted by the British wool textile industry should not be allowed to drown the cheers for a good liberal arrangement that the Japanese themselves seem intent on making work. It seems extreme for a single industry, even of wool's past pre-eminence, to throw itself under the hooves of the inevitable. To struggle stubbornly to impose conditions on Japan can only have the purpose of frustrating all attempts to get a treaty; it has erupted in slanging of the Government by spokesmen for the wool industry and rejoinders from the Board of Trade as caustic as the proprieties permit.

In fact, the treaty is likely to show that the wool industry has been rebuffed and its extreme demands brushed aside. Imports of some wool textiles from Japan are likely to be controlled after the treaty is signed, but not all. In 1961, total imports of wool tops represented only one per cent of British output and yarn imports amounted to a mere two per cent of home production; but Britain exported nearly £6 million of tops and yarns to Japan last year. These categories are expected to be freed from control. Cloth is expected to be on the "sensitive" list—and therefore remain controlled—under the treaty. One would never discern through the Yorkshire fog that last year Japan was this country's fourth largest market for wool cloth.

In 1961, imports of wool cloth represented about 8 per cent of British production, but none came from Japan. Not until this year were Japanese wool textiles allowed to enter Britain, with a quota of £150,000 for Japanese wool yarns and piece goods—no more than a token, or perhaps a deliberate pipe opener. Even this tiny quota caused a furore when it was granted, which stole some of the thunder from the far bigger fuss the wool industry is mounting against signing a full treaty with Japan. But the industry takes its stand of total intransigence on a point of principle that has nothing to do with the quantities involved. It maintains that Japanese competition is unfair, not because Japan's exports are cheap but because Japanese exporters enjoy special incentives. It alleges that Japanese exporters are unfairly encouraged by cheap export finance; by exceptionally high profit levels in their home market; by tax remissions on export profits (which Japan is ready to drop, though not until 1964); and by linking the proportion of his machinery that each manufacturer is permitted to use to his export performance. The alleged power of the large Japanese corporations to control the volume of imports is a source of unease. And Japanese exporters still stoop occasionally to petty deceits such as attaching misleading labels to their merchandise.

British wool interests contend that all imports of Japanese wool textiles should be controlled until the practices to which they take exception are modified, when, they claim, they would have no further objections to free competition from Japanese manufacturers. In the meantime, they demand that no part of the industry should be exposed to "unfair" competition because, they assert, there is such a high degree of interdependence within it. In this way, they have developed a remarkable doctrine that the interests of the industry are indivisible, which gives comfort to those who believe that the slightest chink in its armour could let through a mortal blow.

The British Government does not agree that such all-embracing protection is necessary: if it did, it would not have wasted its time on negotiating a treaty, for Japan could not accept such conditions. If Japanese competition "disrupts" any business interest it is possible to invoke a safeguard in the treaty which permits the re-imposition of quotas. Even this does not ease the suspicions of the wool manufacturers, for they doubt the effectiveness of such provisions, even though in the context of international commercial treaties they appear to afford a quite exceptional safeguard. The industry does not, in fact, expect a crushing burst of imports following the scrapping of controls; it expects a stealthy, though to it no less deadly, infiltration. Japan has shown obvious willingness to co-operate should trading difficulties arise, but Bradford is quite unable to trust this co-operative spirit.

IN part, the intense opposition to the Anglo-Japanese trade treaty is a reflection of the severe reverse that British wool has suffered in the United States as a result of the inroads

made by Japanese exporters into what used to be a predominant British market. And apart from Japanese competition in the American market, British exporters complain of the crippling American import tariff which, with the additional duty on the raw wool content, amounts to nearly 50 per cent of the value of some articles. British exporters, whose specialised trade, they say, is no menace to American producers, have been hit by this sharp American defence against Japanese imports.

The reaction of the British wool industry to Japanese imports is inevitably affected too by the increasing protection granted to domestic manufacturers in many markets and by the founding of new industries based on domestic raw wool, particularly in the Commonwealth countries. This has tilted the British industry into greater dependence on its home market. British wool goods abroad retain immense prestige, but against all the hindrances to trade, prestige cannot guarantee the large export market that is essential. Despite reverses abroad, British manufacturers have so far been virtually unscarred by international competition in their home market apart from the recent upsurge in imports of cheap woollen cloth from Italy. It regards its home market as a priceless asset, particularly if Britain enters the European common market, and not one to risk for no certain advantage.

British wool is in better shape than its protests might suggest and the industry would certainly profit from assured access to a large and prosperous common market. It has paid for extensive re-equipment out of its own purse and shows every intention of taking full advantage of innovations that are revolutionising wool processing machinery that had remained largely unaltered for a century. The expensiveness of wool, the high cost of machinery and the high output required to run much of it efficiently make established wool textile manufacturers less vulnerable to competition from developing countries than manufacturers of most other textiles.

That does not mean that the British industry has been allowed to put on excess fat. The multiple tailors, for example, have proved a hard taskmaster for one section of the trade, and close prices demanded at each stage of manufacture have kept most of the many branches of the industry on their toes. Joining the European common market will probably cause increased pressure on margins as the area of competition widens. Already the cosy prosperity that enfolded wool textiles after the war has worn thin. A new awareness of styling and of sales promotion have brought about a considerable shake-up within the industry backed by significant changes in its structure. Since the 1959-60 textile boom ended, profits of wool companies have been falling persistently and this has accelerated the regrouping within the industry. The pace is likely to be quickened by an influx of Japanese wool textiles. Life is not going to be easy for Bradford; but surely it has not lost the will to live efficiently.

The West's Self-Confidence

Paris

No very optimistic impression emanated from the simultaneous meetings being held this week at the Château de la Muette in Paris by the Economic Policy Committee (comprising the 20 countries of the Organisation for Economic Co-operation and Development) and of the sub-committee on monetary policy, the more compact "Working Party Three," where only the nine principal member countries are represented. It is becoming apparent that the expansion target set a year ago by the twenty—to increase their gross national product by one half in ten years' time—has little chance of being attained at the present rate of progress. Several experts spoke, indeed, of the risks of a fairly generalised deflation in 1963—and notably the American delegates, who echoed Mr Jacobsson's recent warnings. But adherence to the objective fixed a year ago appears all the more indispensable since, as everyone is convinced since Cuba, it is in the economic field that the East-West match is to be played out.

How, then, are the two elements of growth and financial stability to be reconciled? By aiding the countries chiefly menaced by stagnation—particularly the United States—to master their financial difficulties without having recourse to the classical deflationary measures. This is the point stressed by the American delegation, in asking the continental countries to increase their efforts in economic and financial co-operation with the United States and Britain. In particular, the Americans asked France to open up its capital market. To this the French delegate replied on the lines indicated in these columns two weeks ago—that at the present time France's external reserves, as also the insufficiency of its savings and the relative height of its interest rates, hardly permitted it to comply rapidly with the American request.

Nevertheless it is expected that the communiqué to be submitted to the twenty OECD Ministers on November 27th will insist on the need for this indispensable co-operation. No doubt it will underline the responsibilities of the European countries as much in the battle for the defence of the dollar and of the pound (with delicate points for clarification on their attitude towards purchases of gold) as in the programme of aid for under-developed countries. It will probably also recall the resolution of the European countries to practise a firmly expansionist policy if the risk of recession were to materialise. Here is a reflection of the views dear to the European Commission in Brussels.

Will the positive role which a moderate budgetary deficit can play in stimulating expansion be brought up in this connection? Certain indications seem to suggest that the American administration would not be sorry to be persuaded to employ a technique which has proved a success in so many European countries, but which Congressmen across the Atlantic still view with suspicion. It is not yet known what will come of this idea.

In any case it is likely that the communiqué being prepared for the ministerial meeting on the 27th must proclaim the West's self-confidence. It is considered that this document should underline the recovery in the American and British balance of payments and point to the fact that the risks of inflation have decreased in many OECD countries. Is it possible to be more optimistic? The difficulties reported above, as well as the persistent disagreements in monetary matters, make this improbable.

ENI

Mattei's Real Successor

Rome

The Italian government has acted quickly in appointing the succession to Enrico Mattei. Professor Marcello Boldrini and Dr Eugenio Cefis are the new president and vice-president of ENI. The first is a mild, elderly professor of statistics who has been vice-president of ENI since its foundation. The second is a forty-two-year-old businessman with all the toughness and aggressiveness that get a man to the top of the executive ladder in his early thirties. Dr Cefis will be the real boss of ENI. Until a year ago he had been closely associated with Mattei—the connection goes back to partisan days—and in the capacity of deputy manager of the four main groups of ENI industries he was virtually Mattei's "Foreign Minister." He negotiated ENI's deals with the Soviet and Chinese governments and the contract with Argentina. He represented Mattei on ceremonial occasions like the anniversary of the Communist revolution in Peking. On the home front he handled Mattei's latest sortie into textiles which brought 15,000 more workers under ENI's roof. When he left ENI to direct a big private business, some said he had quarrelled with Mattei, others that he believed the politicians would never allow him to take on the succession. The motives that have induced the government to recall him are hard to pierce, but it is known that his nomination was canvassed by the Prime Minister against other candidates. The government asserts that its choice of Professor Boldrini and Dr Cefis is meant to stress its determination to carry on Mattei's policies and programme. Continuity is the watchword at ENI, but in fact some adjustment will be necessary; Mattei himself would have had to trim his sails pretty soon.

By and large, it is safe to assume that the government will maintain all, or nearly all, Mattei's commitments in Africa. The policy of buying Soviet crude, so long as the price is attractive, also corresponds to a fundamental Italian political directive. But the government would probably be happy to hive off some of ENI's more outlying commitments such as the venture in Argentina which it is thought might land Italy with some bad debts. Payments difficulties had always been the practical limitation on Mattei's expansion.

Despite the long association of Dr Cefis with ENI, the Italian business world has always looked on him as one of its own. Partly, but not wholly, for this reason his appointment has been favourably received in Italian oil circles, which take it to imply that in future there will be little or no direct political interference with ENI and that men of talent and capacity inside the group will have more scope and responsibility. This does not mean that the Italian representatives of the big oil companies expect a softening of ENI's attitude towards them in the near future. But in the long run it may be expected that Dr Cefis will work for a *modus vivendi* with the companies on terms which Mattei himself would probably have considered advantageous for his group.

TURNOVER TAXES

Brussels Chooses TVA

Paris

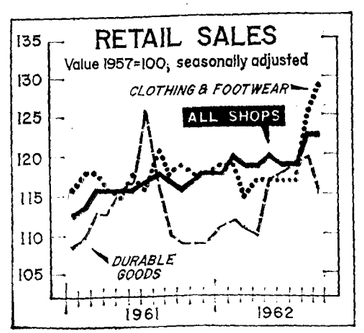
Another important memorandum has been made public by the European Economic Commission in Brussels, for submission to the Council of Ministers. It is concerned to bring about, within a few years, a big step to fiscal unity in the common market. With the progressive abolition of internal tariffs between the Six, the differing fiscal structures in the member countries will increasingly influence the location of industry; and in order to obviate this artificial distortion of competitive conditions, the Commission in Brussels proposes, as a first stage, to abolish the cumulative indirect taxes (*taxes en cascade*) which are levied flatly at each point of sale. Such taxes, which are used in Germany and elsewhere, penalise specialised enterprises, encourage mergers into giant integrated units and, for exports, give rise to arbitrary and complicated rebates. The commission urges, as expected, that these taxes should be replaced by the *taxe à la valeur ajoutée* (tax on added value) of the kind applied in France. Taxes on retail business, with no effect on external trade, would be left unchanged.

The first move to integration would be for all member countries to adopt this form of turnover tax. At a later stage, the procedures for applying these taxes would be harmonised; finally, the actual rates would be unified. It is thought that this scheme will give rise to long discussions. The French, in particular, have reservations, even though it is their scheme that is being adopted.

CONSUMER SPENDING

September Promise

September was just as good a month for retailers as a whole as August had been. The clothing traders did even better, with 5 per cent more business than in September last year. But they were helped by bright weather, bringing fashion-conscious buyers into their stores, and clothes-buying seems to have quietened down considerably since. Among other trades, sales of both food and durables seem to have slackened a little in September, after taking seasonal factors into account. The credit business of household goods shops also fell away a little in September, which suggests that the stimulus given on June 5th by the reduction in minimum deposits had lost some of its force.



Outside retail trade, the hire purchase statistics show that new credit extended by finance houses, a large part of which is for cars, fell a little more in September than might be expected seasonally. Nevertheless, there was a marked increase compared with last year in new credit for both new and used cars. In October, according to Hire Purchase Information, the level of car business improved and contracts for new cars, at 13,901 were half as many again as in October, 1961. What conclusion should be drawn is not easy to judge because the seasonal pattern of car sales has recently been changing. According to the estimates of the National Institute, for neither cars nor household appliances was there any significant further expansion in sales in the third quarter. However, helped by the buoyancy in clothing sales, the volume of consumer spending as a whole in these months is thought to have been about half of one per cent more than in the previous quarter and not quite 2 per cent more than in the last quarter of 1961.

PUBLIC INVESTMENT

The New Upsurge

It would be nice to think that the sharp increase in public investment in the current financial year that is now expected over 1961-62—an increase of 7¾ per cent which at constant prices would come down to perhaps 6 per cent—was the swift result of the Government's sensible decision to remove the brakes of 1961 and take advantage of the present slack in the economy. Actually only £15 million, or less than one per cent, is expected to result from the recent relaxation, which set in motion additional work to a total of £70 million. The fact is that public investment has a strong tendency to grow at any stage of the cycle; at this stage the tendency is a welcome one.

Almost the whole of this year's expected increase, which is set out with admirable clarity in the annual white paper (Cmnd 1849), is in "public service investment," rather than in investment by nationalised industries and public corporations. This year's big increases are for roads—up 23 per cent—and for education, hospitals, housing, water and sewerage, and the miscellaneous category, from prisons to police stations. Indeed every single category of this social investment is up this year. In

the commercial public sector, by contrast, the usual big rise in electricity is partly offset by a futher substantial drop in investment by the Transport Commission.

Next financial year, 1963-64, public investment will be stepped up still further, by a rate of up to 10 per cent in real terms; the government will try to concentrate the additional building investment on "those parts of the country where the pressure on resources is least." This period is expected to see a further run-down in investment in railways, and also some reduction in atomic energy and coal; but the post office and the

air corporations are now expected to increase their investment—while electricity could jump by a further 20 per cent to over £500 million if a much needed strengthening of distribution facilities goes through. In social investment another big increase is projected for housing, which is receiving so much political attention now, and a large proportionate increase for investment in hospitals, which at £78 million compares with £43 million three years earlier. In sum, total social investment on the white paper valuation will be £1,095 million next year, just two-fifths larger than three years before—though the real rate of increase would be about a third. Investment by the corporations, which in 1960-61 was £85 million larger than social investment in total, is expected next year to be £60-130 million smaller.

GOLD AND EXCHANGES

Gold Falls Further

THE gold and exchange markets have now fully regained their pre-Cuba surface calm, which is not to say that the episode has had no effect on the markets' deeper anxieties. This week the dollar has weakened no further on the continent, except in Germany, where the dollar has fallen from its recent peak of 4.01½ to 4.00¼. But this strengthening of the mark is believed to have been entirely the result of intervention by the Bundesbank, which may have used large amounts of dollars for the purpose; paradoxically, its return for the latest return shows an inflow of foreign exchange of $22½ million in the week to October 31st, but this presumably reflects a switching of dollars from the hands of the commercial banks as former swap arrangements are run off.

Gold has continued to fall, to $35.09¼ an ounce in mid-week—actually 4 cents below its level on the eve of the Cuba crisis. The fall in prices in India, reported in a later note, is believed to have been partly responsible. In any case, the market ignored last week's fall of $40 million in the United States gold stock, carrying it below $16,000 million, and also this week's indications that the net monetary deficit for 1962 may after all reach $2,000 million—the American authorities were earlier talking about $1-1½ billion. Meanwhile, one aspect of Mr Roosa's hints of further extensions of monetary co-operation is coming into the light—the funding of some short term, three months borrowings into credits of up to fifteen months maturity. The first move on these lines was taken in Switzerland, and it has now been repeated for a United States $150 million credit in Italy.

Sterling, meanwhile, is holding up well. In October, the reserves rose by £11 million, and for once there were no large distorting influences, making this the best true increase since May—when seasonal influences were still favourable. The repayment by Canada of half the $100 million stabilisation credit granted by the Bank of England in June apparently had no effect on the figures as the credit, unusually, was not deducted from Britain's reserves at all. Canada has also repaid half the $250 million loan from the Federal Reserve. At the same time it has credited half the loan of $250 million raised on the New York market, as well as obtaining some $30 million in advance debt payment by Holland. Canada's reserves in October rose by $169 million to $2,614 million, and without the official transactions would have risen by a further $20 million

DRUG TESTS

A Watching Brief

THE Minister of Health announced on Tuesday that close thought is being given to the idea of an expert body to watch out for reports of toxic effects from new drugs. The special committee set up to inquire into ways of avoiding another thalidomide disaster has told the Minister that laboratory tests (which include tests on animals) must remain the responsibility of the individual manufacturer and that it is "neither desirable nor practicable" to transfer this kind of testing to a central agency. Mr Powell has accepted this view. But the committee then goes on to explain that however careful laboratory tests may be, drugs that are safe on animals are not necessarily safe for man—or may be safe for some people and not for others.

Any danger in apparently harmless compounds comes to light only with time and unhappy accident; alternatively, some drugs known to be harmful have a real medical value when they cure illnesses so grave that their toxic side-effects are acceptable. What is needed, said the committee, is a body that can hold the scales between these two extremes—to keep a continuous watch on evidence of toxic effects, particularly from new and relatively untried drugs, and warn doctors about them. It is now thinking how such a body should be organised. Some would argue that the Ministry should go further than this, and consider turning this advisory body into a reporting and collating centre to which doctors would automatically send information about odd and unexpected side-effects noticed in their patients. Such an organisation would not have prevented thalidomide babies from being born, but it might have meant fewer than 385 of them.

BOAC

Mr Amery and the Airlines

THE terms used by the Minister of Aviation on Tuesday night (when he asked Parliament to extend the borrowing powers of the two air corporations) to describe the plight of the British Overseas Airways Corporation leave little doubt that time is running out for the corporation's present management and that Mr Amery means and intends to get action. Mr Corbett, the accountant whom he appointed in July to investigate BOAC's affairs, is expected to complete his report by the spring; "Once I have the facts," said the Minister, "I can get down to the business of trying to decide what should be done." In the meantime, Mr Amery specifically rejected a number of claims made by the chairman of BOAC in his annual report, among them one that pressure from the government was a contributory factor to the corporation's deplorable financial showing. He accused the management of ignoring, over a period of years, the fact that its own commercial policy was shortening the active life of a large part of its fleet and that provision should be made for this when calculating the rate of depreciation. He rejected Sir Matthew Slattery's plea to be allowed to write off the corporation's accumulated capital losses. "I sympathise with him. I have

often felt the same way when I have reckoned up the interest charges on my overdraft but I cannot see any good reason why the corporation should be specially exempted from the servicing of its borrowed capital. This is a charge which every other business has to meet."

Finally, he put his finger on the corporation's basic weakness, the fact that it has not only lost a great deal of money in the past, but is also continuing to lose substantial sums on its day to day operations. "This is, in my view, much the most serious side of the picture, because it arises not so much from decisions taken many years ago as from current policies and it also casts a long shadow into the future."

It is a long time since the House of Commons has heard the performance of a nationalised industry described by a responsible minister in such cold terms. British European Airways is also expected to make the disconcertingly large loss of £4 million this year, but Mr Amery was prepared to accept BEA's estimate that by the following year the airline should again be out of the red. He is unlikely in his present mood to listen to anything BOAC has to say until he has Mr Corbett's report. This is not a happy state for the airline to be in and its effect on morale can be imagined; but an accumulated deficit of £67 million and a loss on current account of £21 million is not a happy state for any business to find itself in, and the corporation must take what comfort it can from the knowledge that the Ministry has at last—and almost as late as BOAC itself—become alive to the seriousness of the situation.

STEEL PRICES

How Should They Be Fixed?

THE Iron and Steel Federation has become bolder in its campaign against the methods employed by the Iron and Steel Board to set prices since the latter's director moved into the wider sphere of planning, and it has now moved into the medium of public debate. Last week it published an article in the *Steel Review* in which it argued that the effects of the present recession in demand could be met with more equanimity by the steel producers "if the pricing policy of the Iron and Steel Board had been sufficiently flexible to allow them to lay up a store of 'fat' in good times. If the industry has to adjust all its other arrangements to cope with a return to wider fluctuations in the course of trade, there appears no reason why pricing policy should be excluded from such overhaul." To which the Iron and Steel Board replied by arguing that the nine biggest steel companies since de-vesting had increased their assets value by £250 million more than the new capital they raised on the market—and that this increase must therefore have come from retained profits, or "fat," that its prices allowed the companies to store.

Desirable though flexibility in pricing may be, one wonders whether the Steel Federation would like to see prices fall in times of low demand as well as rising when demand is high. And does it consider whether the alternative to prices set by the board might have been competition, that unfamiliar state, which would probably mean lower prices now even if it had allowed higher prices in the past? Its arguments all lead to a system of pricing that guarantees profits, which only a monopoly can have—and this industry, which has many of the attributes of monopoly, might do worse than submit to a board that is charged with the duty of supervising its prices, and keep to private rather than public argument.

AIRCRAFT ORDERS

BAC's Three Dozen

ONE bright little star shines through the generally discouraging cloud that blankets the British aircraft industry—the slow but steady sale of the British Aircraft Corporation's short-range One-Eleven jet. The seventh order (for three) was signed last weekend; all but one of the customers are foreign airlines, the fact that sales total only 36 shows that they are predominently small buyers. But with the market for big aircraft saturated (and those already sold, flying half-empty) the only designs expected to sell in quantity for the next few years are medium to short-range aircraft to replace Viscounts, Convairs and other hang-overs from the golden, propeller-driven 1950s.

The interest of foreign airlines at this formative stage in the aircraft's development could make BAC's fortunes. British manufacturers have suffered, commercially, in the past from working closely for the British air corporations whose requirements were not always those of an international market. The discipline of manufacturing from the outset for foreign—and particularly American—customers, who are accustomed to take a hand in the actual aircraft design, could teach the British Aircraft Corporation a lesson that can be learnt in no other way. The best thing that could happen to the One-Eleven from this point of view would be an order for at least 12 machines from one of the really big United States airlines. If BAC continues to have the market for this class of jet to itself, as, surprisingly, it has to date, this could yet happen.

WASHING MACHINES

Prices and Profits

ROLLS RAZOR'S interim results confirm that Mr Bloom has been selling his washing machines profitably as well as cheaply. On the 59 guinea model his cash profit must be as great and often much greater than that retained by other manufacturers on considerably more expensive models sold through retailers. The growing tendency to reduce retail margins—Hotpoint is no longer alone here—gives some room for manufacturers to breathe more freely if they wish. But it is hard to foresee much in the way of profit margins for anyone seeking to meet Rolls Razor on its own ground of the under-60 guinea twin tub machine, with heater, through the usual channels of distribution.

There is growing acceptance in the trade of the view (which has some market research support) that Rolls machines and methods appeal primarily to working-class households, and are tapping a market quite distinct from that of the more luxurious and expensive automatic models. It is belief in the continued growth potential of the cheap market that has encouraged Great Universal Stores to undercut Mr Bloom with a scaled-down model of an existing twin tub machine—made by Acme and sold jointly in GUS outlets under the Challenge mark—that will cost 57 guineas. Acme will also sell at the same price through other retail outlets, at a 25 per cent margin. The 15 guinea saving on the existing model has been achieved partly by the use of a simpler agitator and other minor modifications, but the maker's margin has been pared severely too. Similar profit reductions can be expected from English Electric and AEI-Hotpoint, who are also being lured by the "utility" market to make cheaper models which will be introduced shortly: prices are likely to be under 60 guineas.

How far can manufacturers alone meet the demands of the cheap end of the market? At present they are committed to a more whole-hearted defence of traditional retailing than most of them wish for, just at a time when many small retail outlets are drying up and resale price maintenance is increasingly regarded as a burden rather than an asset to manufacturers. There are grumbles about the Area Electricity Boards, who insist on maintained prices for all the makes they stock. An indication of the way the bigger manufacturers are thinking is the fact that English Electric has also been having talks with GUS about the marketing of its washing machines. The GUS group sells domestic appliances not only through its 650 shops but also by direct mail; door to door salesmen/hire purchase collectors, too, will be carrying washing machine brochures. The company will probably adopt Mr Bloom's method of sending a model for demonstration when asked.

Direct selling is more difficult for large and heavy automatic machines, but makers are becoming aware of another kind of threat at this end of the market. This is the enormous variety of fully automatic Italian machines, with no ready outlet at home, which without duty could be very competitive indeed. At least two of the main makes have already found distributors in this country. With the example of the French refrigerator industry before them, British

washing machine makers realise they may not have long to prepare for some really heavy competition against their most advanced products.

INDIA

Bonds for Bangles

INDIA'S foreign exchange reserves now total 93 crores, or $195 million. They have never been lower, and amount to no more than five weeks' imports. Even with the addition of the Reserve Bank's statutory gold holding, equivalent to $247 million, this is no adequate bedrock on which to face the invading Chinese.

The paradox is that while India is starved of gold and foreign exchange, its citizens may conceivably have 100 million ounces of gold, worth $3,500 million at the official price, tucked away in safe deposits or fastened on the wrists and ankles of their wives. The pressing aim of Mr Morarji Desai, the finance minister, is to get some of this gold into the official reserves. This week he announced an issue of bonds, in exchange for gold, the gold being valued at the international price of Rs.53.58 per 10 grams. The bonds carry interest of 6½ per cent for 15 years; they will be exempt from both wealth tax and capital gains tax—holding gold is a standard way of tax dodging in India; and no questions will be asked about the origin of the gold.

But the internal market price of gold in India has been over twice the international price; and the fact that the bonds are repayable in cash and not, as was at first supposed, in gold, must surely mean that any applications for these gold bonds, if they can be called that, will rest solely on a patriotic response in the present crisis. The authorities, however, may not have said their last word. The sharp fall in the gold price from Rs.119 per 10 grams to Rs.105 after the announcement of the bond issue is a sign that gold dealers are worried about the possibility of further official moves—possibly some form of confiscation, once the application lists close next February. But even this fear seems unlikely to bring in the gold on such unrealistic terms.

EIU QUARTERLY ECONOMIC REVIEWS
COVERING 57 COUNTRIES
OR GROUPS OF COUNTRIES

CANADA The government's latest legislative proposals designed to promote the economy's resilience are considered against the changing backcloth of Canada's external economic relationships. The exchange reserves' swift recovery from June's crisis, and the beneficial effects of devaluation and additional import duties have temporarily brightened the economic outlook, but the Review sounds a cautionary note for 1963.

DISCOUNTING DEBTS

Factoring-Minus

AN increasing number of London's merchant bankers are financing the sale of manufactured goods at home and for export by buying trade debts. They have modernised that oldest of professions, invoice discounting. Wm. Brandt's Sons, S. Japhet, Hambros, and M. Samuel are already in the field; now Philip Hill, Higginson, Erlangers has entered by purchasing from Guardian Insurance a controlling interest in London Bridge Finance, a small company that for the last three years has been developing a new system that is somewhere between factoring and invoice discounting. It is called "undisclosed non-recourse finance."

This, broadly, is the financial side of factoring stripped of the sales accounting element. Nowadays this type of financing is always without recourse against the seller—that is what distinguishes it from invoice discounting—but the advertised advantage of this new system is that it is "undisclosed" to the buyer. The manufacturer, instead of selling goods directly to his customer, first sells them, for cash, to London Bridge Finance; and then, acting as the agent of the finance company, he resells the goods on credit to the buyer. The manufacturer then collects the payments for the goods on behalf of London Bridge Finance. The fact that the buyer never knows that there is a financial intermediary between him and the seller, it is argued, prevents any possible loss of goodwill from the suggestion of straitened finances.

A more persuasive advantage of the scheme may be its concentration on finance rather than on a sales accounting service. In factoring proper the finance is provided by the purchase, at a discount, of invoices rather than of the actual goods, and the factor also takes the manufacturer's sales accounting and debt collecting off his hands. The main emphasis in factoring is, indeed, on this second part of the operation. While it is impossible to get finance from a factor without the service, it is possible to have the service without the finance. Factors admit, however, that most of their prospective clients are usually more interested in the finance than the accounting services. This is what the Philip Hill group will now be providing. It might pay factoring firms to start mixing this new idea with their existing business.

Obviously this new scheme will be cheaper than factoring proper; it offers less. London Bridge Finance says that the cost of borrowing "will rarely be greater than 10 per cent per annum and may be as little as 7 per cent." A full factoring service would probably cost a manufacturer somewhere between 12 and 15 per cent per annum. Neither service is cheap.

FRANCE

Surplus Unchecked

Paris

THE surplus in the French balance of payments shows little sign of diminishing. In the second quarter the basic surplus reached $330 million, up from $248 million in the first quarter, though a little below the surplus of $351 million in April-June of 1961. Once again the main strength has been in the trade balance; and there has been a further orientation of French trade to other countries of the common market, which in the second quarter provided 42.1 per cent of French imports and took 46 per cent of French exports. At the same time, partly as a result of official action to offset the impact of the strong current surplus on the exchanges and the reserves, the balance of capital movements swung into deficit, of $40 million in the second quarter, compared with a surplus of $68 million a year before. This turn-round results not only from the official prepayments of foreign debt but also from a big rise in purchases by French investors of foreign securities, from $7 million to $66 million, though the fall on Wall Street involved a nominal disinvestment of $37 million.

The latest figures show that the rise in France's gold and exchange reserves is also continuing; an increase of $86 million in October took them to $3,616 million.

SWITZERLAND

Absorbing the Cuban Wave

Geneva

THE sharp but temporary pressure on the dollar in Switzerland in the week of the Cuban crisis appears to have been taken up largely by special credit arrangements, new and existing ones. The speculative movement was the largest since the revaluation of the mark in March, 1961. In two days the Swiss National Bank had to take $60 million from the market, and the amount would have been larger but for the dollars used by private operators to buy gold. The National Bank remained in close contact with the American authorities and it was decided to use the swap agreements of July, 1962, which had been renewed in mid-October for a further three months.

These agreements, involving the Bank for International Settlements as well as the Swiss central bank, provide for maximum credits of $200 million. It seems that a net $90 million had been taken up when the Cuban crisis broke—$50 million with the Swiss National Bank and $40 million, net of repayments, with the BIS. The Swiss National Bank has now used the agreement to swap (in effect to guarantee) $30 million of its new offtake from the market. At the same time, the bank has made a new swap arrangement with the BIS—of Swiss francs against gold. The amount of gold it has got from the BIS has been kept secret, but is thought to be around $20 million. This purchase refinances a sale of gold by the Swiss National Bank to the United States, which in turn was made against Swiss francs which the United States Treasury acquired in mid-October by two borrowing operations in Switzerland.

The first borrowing involved a total of 220 million francs or $51 million in American Treasury bonds denominated in Swiss francs and issued to the Swiss Confederation. But this was needed largely to meet maturities already held by the Swiss Confederation (in dollar bonds secured by swap operations against Swiss francs or gold); the effect of this operation was to extend the debt to January and March of 1964. At the same time, however, the Swiss National Bank passed on to the American Treasury just over half the 400 million Swiss francs that it had drained from the Swiss market in October, 1960. The Swiss authorities, since they pay their own banks interest at 1.2 per cent on these frozen deposits, were glad of the opportunity to earn 2 per cent on Certificates of Indebtedness of the US Treasury, again denominated in Swiss francs, and maturing in April and July of 1963. As the Swiss National Bank is not allowed by its statutes to have foreign treasury paper of more than three months' maturity, the certificates have been made redeemable at two days' notice. Through these various credits and special operations, the impact of the "Cuban wave" on the Swiss market has been almost entirely neutralised: the statement of the Swiss National Bank for the week to October 31st showed no change in its gold reserve and a rise of only $6½ million in its holdings of foreign exchanges.

CYCLE SHOW

Miniaturisation

EVERYTHING is shrinking about the cycle and motor cycle industry: after falling production come the miniature models. The novelties of the industry's show that opens at Earl's Court on Saturday are the fairy-cycle-like Moulton bicycle and the 50 cc and 75 cc motor cycles from the Birmingham Small Arms group. The Moulton, with its 16 in. wheels, is startling, for the bicycle has remained essentially unchanged this century. It is claimed to be far more comfortable than a conventional bicycle because it has springs—rubber, as one would expect when its designer and manufacturer, Mr Alex Moulton, also designed the springing system of the BMC Minis and the Morris 1100. As the springing allows the tyres to be inflated hard without giving an uncomfortable ride, the rolling resistance is said to be reduced, while the smaller wheels are also said to give quicker acceleration. They provide a lower centre of gravity and take up less space, so bigger carriers can be fitted. The bicycle is being made by a company formed by Mr Moulton with private finance, Moulton Bicycles, which is building a factory in Bradford-on-Avon. Cycle manufacture is largely a matter of assembling bought-out parts, so when an innovator does appear it is not difficult for him to go it alone if established makers prove unreceptive to new ideas. The Moulton's price, £26, makes it more costly than conventional machines. It adds one to the manufacturers in an industry that consists of Tube Investments—owning Raleigh—and a few small makers of sports bicycles or machines for sale by chains like Halfords.

The baby motor cycles from BSA, the 50 cc Ariel Pixie and 75 cc BSA Beagle, are the first British entries in a market that is now dominated by the Japanese—whose biggest manufacturer, Honda, is showing its 50 cc motor cycles in London for the first time, and is planning to market them on a big scale in Britain. These tiny machines, which have four-stroke overhead-valve engines instead of the two-stroke units used on most small motor cycles and scooters, bring back the qualities of lightness and economy to the motor cycle, which it had largely lost in its development since the war; and, to judge from the popularity of the small Japanese machines, these are qualities that many buyers still want. It is a market rather similar to that for scooters, but there is still something about a motor cycle that gives it a distinct appeal. And the price of these machines is lower than that of even the smaller scooters; the Ariel costs £79 10s. and the BSA £92 10s., so they come between the price of a moped and a scooter—while having nearly the performance of the latter and the economy of the former.

ARGENTINA

Fifty-Fifty

THE Paris Club of Argentina's creditors has finally agreed to refinance half of the $270 million of official and private commercial supplier's credits due for repayment in 1963 and 1964. The Argentine delegation had hoped to get the whole debt rephased. The refinancing will take the form of direct governmental loans totalling $135 million granted to Argentina by its principal west European creditors on the understanding that the foreign exchange received is supplied to the Argentine debtors due to make repayments. The loan will be repayable between 1965 and 1970 and Britain's share will amount to £8-£10 million. The detailed terms of the agreement are subject to bilateral negotiations between Argentina and the creditors involved. This is the first time that this particular group of debts has been the subject of a refinancing agreement. The Americans have responded to the agreement by offering to refinance $72 million of similar debts due from Argentina to the Export-Import Bank in 1963-64.

The Paris Club has also agreed to extend from 1963 to 1966 the due date for $15 million of the Argentine debts consolidated under agreements made in 1957 and 1961; Britain's share of this amounts to £875,000. The whole arrangement is dependent on the International Monetary Fund approving the progress of Argentina's latest economic plan and the release of the third $25 million of the $100 million standing credit granted in June.

TELEVISION ADVERTISING

Reappraisals

THE slowing down in the rate of spending on television advertising which has been apparent throughout this year was in fact even greater in the third quarter than the available statistics suggest, owing to increased use of the "guaranteed audience rates" offered from July up to early September. Associated-Rediffusion and Granada, the two biggest programme companies, rely most on this space-filling technique. Although more space was sold by both of them in the usually slack month of August than in the normally busier month of September this is no guide to the amount of revenue actually collected. The present state of demand for television time does not suggest, either, that most advertising budgets for this medium have done much

more than mark time in recent months compared with the same period of last year.

Scepticism about the value for money of A.B.C.'s rates, reflected in the company's consistently lower bookings this year, evidently continues to blunt advertisers' keenness. The 11 per cent tax has certainly encouraged questioning, if nothing else, though no new answers about the value of their medium are yet available from the contractors, who have appointed a market research firm to conduct "aided recall" interviews to supplement the TAM figures.

Most research into the effectiveness of media is carried out by advertising agencies or companies associated with them, and where part of a client's service a fee is generally charged. More and more of this work is being required just at a time when the agencies' 15 per cent commission on space booked is being effectively reduced by the payment of television tax without any corresponding increase in advertising budgets. It is no new thing for an agency to be put in the position of recommending action which cuts its own commission, the hopeful view always being that a satisfied client will eventually come back for more. But at a time when total advertising expenditure is slowing down it becomes difficult to sustain this attitude: the present difficulties through which many agencies are passing may indeed encourage a reappraisal of their system of remuneration.

SUGAR AND LEAD

Two in Harmony

Two important commodities, sugar and lead, whose respective international supervisory bodies have proved not quite up to preserving the balance between demand and supplies appear to have struggled through to better things. Last month the international lead and zinc study group did not consider curtailment of production of either metal in 1963; moreover, it dropped its customary spring meeting so that the market will have no study group to lean on for the next year. In fact, the curtailments agreed at the March meeting of the study group for this year had at last brought about an improvement in the lead surplus. These curbs, together with the remarkable expansion (for a year of depression like 1962) of 5 per cent in lead consumption and the absorption of about 25,000 tons of metal by the American stockpile caused an apparent shortfall in production of about 75,000 tons below demand this year.

Though consumption is not expected to rise as rapidly next year as in 1962, the study group believes that supply and demand in the first half of 1963 will be in approximate balance. Spot lead started the year at the depressed price of £60 a ton, and fell to £50 before recovering to its current price of £53⅛ a ton. The steep drop in the price of lead has, no doubt, hastened the restoration of equilibrium between production and demand, though the move towards greater protectionism, as in Germany, which it has sparked off might bring more problems for lead in the future.

After export controls through the International Sugar Agreement were suspended at the end of 1961, sugar dropped to below £20 a ton in the free market. Because of the high degree of protection enjoyed by many sugar producers and the limited impact that lower world prices have on consumption, this year's low prices can have had little to do with the estimated close balance between supplies of sugar next year and world requirements. Following the earlier recovery the Cuban crisis did in fact push the price of sugar back to its 1961 peak of about £30 a ton and so far only £1 of that gain has been given up.

The expected fall in sugar production is mainly fortuitous. Though European sugar-beet crops have recently improved, output in western European countries is still expected to fall about 500,000 tons short of last season's level. The Cuban crop next year will probably be relatively small. Transactions within the communist block might explain the apparent reduction in requirements of the free market in 1963 reported at last week's meeting of the International Sugar Council. Free market requirements in 1963 are estimated to be 11,523,000 metric tons, compared with a revised estimate made last March of 11,815,000 tons for 1962. Estimated requirements by the United States from foreign sources were also reduced from 4,015,000 tons in 1962 to 3,630,000 tons for 1963. The council discussed the negotiation of a 1963 International Sugar Agreement to succeed the largely inoperative 1958 agreement after its expiry at the end of next year, and agreed that the matter should be further discussed at its next meeting.

COMPANY REPORTS

Designed To Inform

COMPANY reports and accounts are far less dreary to read than they once were. The annual awards by *The Accountant* have helped to raise standards and there are many pressures on a company, from inside and outside, to project itself to the world. The big companies, conscious of the importance of public relations, have led the way, as is shown in a display of company reports and accounts in a "British Printing" exhibition now at the Design Centre.

Forty-five reports, chosen by the organisers "on the basis of excellence of graphic design and presentation coupled with a high standard of printing," cover a wide range of industries with the paper industry, with four representatives, the most prominent. Most of these reports have been prepared for a wider audience than shareholders. A growing number of companies distribute their reports to employees and to politicians and public. They are well designed and packed with information. Most of those on view include a 5 or 10 year record, a breakdown of profits among various divisions, an analysis of sales, a list of subsidiaries and the geographical location of factories and plant. Such companies are not afraid of saying a good deal more about themselves, their profits and their products than the law requires. The laggards might find this exhibition both instructive and challenging.

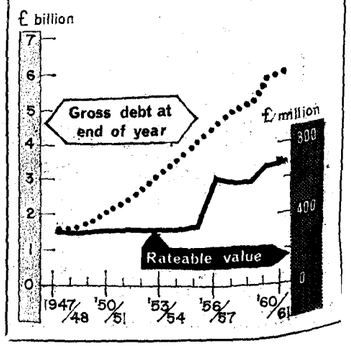
STOCK EXCHANGE

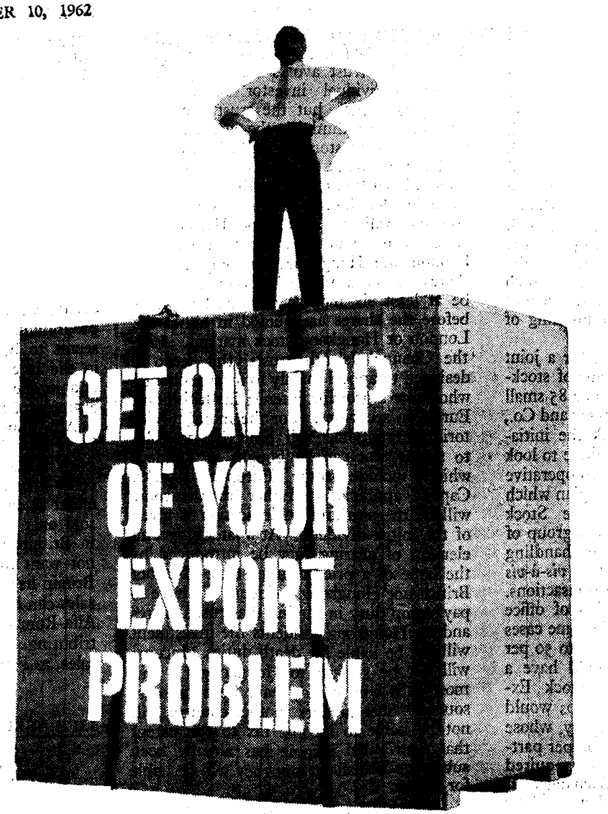
Brokers United

AT the moment the stock exchanges of this country are buzzing with ideas of amalgamation, federation and closer co-operation. Following the recommendation that there should be a federation of the London, Associated and Provincial Exchanges under the control of an executive committee, the chairman of the London Stock Exchange, Lord Ritchie of Dundee, has shed some light on how this is to be set up and what matters might fall within the province of the executive committee. The secretaries of the three exchanges have been instructed to produce a plan for a federation for discussion at the next meeting of the joint committee on December 6th. In a letter to members of the London Stock Exchange Lord Ritchie suggests that the powers of the executive committee might

LOCAL RATES and LOCAL DEBTS (England and Wales)

The enormous growth in local authority debt over the past decade pinpoints the painfully slow growth in rateable values over the same period. There is a limit to the extent that authorities can force up their poundages on rateable values. Next April the new valuations, the first on domestic property since 1939, come into operation; they should allow local authorities to bring the different elements in their revenue into better balance.





E.C.G.D. COVERS YOU AGAINST LOSSES IN TRICKY MARKETS

Expanding your exports often means tackling a new and insecure market. But ECGD gives security, for it knows conditions in *every* overseas market. Most likely the Department has dossiers on your new buyers too—and if not knows just where to cable for information. And ECGD does more than see that your trade outlook is healthy—it insures your enterprise against such major risks as default in payment for goods, sterling shortages, import cuts, war, and a lot more. Are you out to expand overseas sales? ECGD is at hand to help—to back you (more cheaply than ever before) so that you can press ahead with single-minded confidence. Insured business is sound business. ECGD makes helpful bank managers even more helpful. Get in touch with ECGD straight away.

cover such matters as a common standard of requirements for quotation and possibly membership, the administration of compensation funds and public relations. The chairman says that it is thought that these powers might gradually be extended. Speaking to members of the Cardiff Stock Exchange on Monday he reiterated the need for the various exchanges to have a uniform standard of practice and to "speak with one voice." This could, Lord Ritchie suggested, lead to "the extension of the scope of the share and loan department" and to the "central clearing of securities." Such matters will have to be taken into account when a start is made on the rebuilding of the "House" next year.

In London meanwhile a plan for a joint service company for smaller firms of stockbrokers has been circulated to some 85 small broking firms by Longman, Towsey and Co., a four-partner firm which took the initiative in the setting up of a committee to look into the possibility of some co-operative effort to reduce overheads. The plan which has the outline approval of the Stock Exchange Council would enable a group of brokers to act independently in handling their clients' affairs but as one firm *vis-à-vis* other member firms in settling transactions. It provides for the centralisation of office work involved in dealings and in some cases the savings in costs would amount to 50 per cent. The group of firms would have a corporate membership of the Stock Exchange and the various partnerships would be members of the service company, whose resources would amount to £5,000 per partner—the margin of solvency now required under the rules of the Stock Exchange. It remains to be seen whether there will be sufficient response to the scheme to enable it to be put into practice; but the economies could clearly be substantial.

COMMONWEALTH TRUSTS

South and East

THIS year the merchant banks have been particularly active in launching new investment trusts, most of them well received by investors keen to buy management. This week brings two more. The British Australian Investment Trust is managed by Samuel Montagu, with the Development Finance Corporation in Australia as its investment advisers. This is a specialist trust almost entirely concerned with shares in Australian registered companies or companies with their principal trading interests "down under." The offer of six million 5s. shares at par is opportune, for the Australian economy shows signs of expanding again after the easing of the credit restrictions imposed in 1960-61. With firm applications already accepted for 4 million shares the offer was oversubscribed on Thursday. So far Australian share prices have responded cautiously and the Sydney share index stands at 293.3, against this year's high of 325.0 and a peak of 348.5 in 1960 before the index fell sharply to 267.7. The 5s. shares offer the modest prospective yield of 3½ per cent. An investment in the trust avoids the complexities for the individual investor of claiming double tax relief, but the trust's low net UK rate must diminish the attractions of the shares to investors paying little or no tax.

Hambros Bank is sponsoring Victoria International Investment, with its registered office in Hongkong. An offer for sale of 999,498 ordinary shares of HK$8 each (10s.) at par will be made next week in London and Hongkong, but only 200,000 shares will be available in London. It will be at least six months and maybe a year before the shares are quoted in either the London or Hongkong stock markets. Like the Channel Islands trusts, this trust is designed to appeal mainly to local residents, who show a growing interest in British and European securities. For the moment Victoria International will limit its portfolio to shares that can be bought in London, which include some European stocks. Capital appreciation rather than income will be the aim and no indication is given of the initial dividend. At a later stage, an element of gearing may be introduced by the issue of a prior charge stock. Neither British nor Hongkong residents will have to pay stamp duty in buying the trust's shares and for Hongkong residents the investment will not be liable for death duties. Income will not be subject to Hongkong tax but most of it will already have been taxed at source. Shareholders in this country will not be liable to income tax to the extent that distributed income has already been subject to British tax but they will be liable for surtax.

CARS IN ITALY

Importers' Festa

THE Italian car market is the fastest growing of any of the car manufacturing countries of Europe. It absorbed 381,000 cars in the first eight months of this year, 26 per cent more than a year before. But this vitality attracts rival manufacturers, and the sales of foreign cars have risen by 150 per cent to account for 14 per cent of total sales. Despite the 40 per cent import duty that they have to pay, British Ford has been the most successful importer; the 12,000 cars it sold up to the end of August put it just ahead of Volkswagen, and well ahead of the third biggest importer, Simca, which sold nearly 7,000. Ford accounts for nearly all British imports, selling 7,500 Anglias and 4,500 Classics; but 10,000 Austin A40s assembled by Innocenti were also sold, though they count as Italian-built. Rootes has now arranged for the Milan coachbuilders, Touring Superleggera, to assemble the Super Minx as a means of reducing costs in Italy. And Standard-Triumph International has made Ducati, the engineering firm, its distributor for Italy.

The competition from importers is hardly welcomed by the Italian industry, especially when cars are so obviously being sold far below net home prices as the British Fords are. But Fiat has not suffered any fall in sales, retaining 67 per cent of the market—though its decision to give the old 1100 a facelift and a 1,221 cc engine, while cutting £17 off the price, looks like a counter to competition from the Anglia and Volkswagen. Fiat has also taken £30 off the price of the 1500. With its total output running at 3,200 vehicles a year, close to its capacity of 3,500, Fiat will soon have to decide whether to set a second expansion programme in train. At the moment it seems to be following a policy of caution in the face of strong competition at home and in the rest of Europe, and it has the example of the British industry before it.

Alfa-Romeo and Lancia seem to have been the chief sufferers from the rise in imports; the former's sales fell by 22 per cent—mostly the Dauphines it assembles under licence from Renault—while Lancia sold only two per cent more. Italian sales in Britain are still insignificant; Fiat does not want to launch a big sales drive until Britain has entered the common market and sales can be made on a profitable basis. But Alfa-Romeo has recently set up its own distributing company for Britain to help its sales, as Fiat and Lancia had done long ago.

LIFE ASSURANCE

Pensions Surge Ahead

PENSION schemes and the group life benefits that are associated with many of them made the running in last year's new records of the life assurance offices. The rate of increase of new sums assured by individual policies in the ordinary branch was the lowest since 1957. Industrial branch new business, on the other hand, continued to rise. New sums assured at home and abroad in 1961 totalled £3,190 million, up by 17 per cent; this included £415 million industrial life assurance, compared with £396 million in 1960. Annual premium income from new policies—a more meaningful yardstick—amounted to £137 million last year, compared with £121 million in 1960 and £124 million in 1939.

Last year's big increase in assured pensions was stimulated by the introduction of graduated state pensions. Any misgivings about the impact of the extended state scheme upon this important part of the life offices' business have proved groundless and they have been hard pressed with the modernising of existing schemes and the establishing of new ones. Self-employed (Millard Tucker) pension policies have continued to sell slowly. Only 18,800 of these policies were issued last year, compared with 21,300 in 1960 and nearly 50,000 in 1957, the first full year after the long overdue concessions in the 1956 Finance Act.

EMPLOYEES' BENEFITS

TOTAL LIFE OFFICE INVESTMENTS

	1957 %	1958 %	1959 %	1960 %	1961 %
Mortgages	15½	15½	15½	16	17
Gilt-edged	28	26½	25	24	22½
Other fixed interest	22	21	21	20½	20
Equities	17½	19	20½	22	22½
Real property, ground rents and other investments	17	18	18	17½	18

Aggregate life and annuity funds rose in 1961 by £521 million to £6,163 million, of which industrial life assurance accounted for £1,488 million. The stake in equities rose less rapidly than in earlier years—to 22½ per cent of total invested assets—but life office holdings now represent about one-tenth of the total ordinary share capital of British companies. The proportion of life office assets in gilt-edged stocks fell faster than ever. It remains to be seen whether the sharp set-back in equities last spring and the recent boom in the gilt-edged market are affecting life office investment policy.

LIGHTWEIGHT CANS

Thick and Thin

METAL BOX is using tinplate reduced by a third in thickness and weight to make cheaper cans. Though still in the stage of development and of experiment by canners, it is clear that bulk prices can be reduced sufficiently to make at least a marginal difference to canners' rising costs—only last April Metal Box raised its prices for ordinary cans by nearly 5 per cent—if not enough to lower the price of a single tin to the consumer. One large customer is, for instance, buying lightweight tins about 2 per cent cheaper than the conventional article.

The Steel Company of Wales makes the light tinplate—the only English company to do so, though Richard Thomas and Baldwins has produced it experimentally in the past. Steel of Wales uses conventional methods of tinplate manufacture, simply rolling out the steel base, which makes up nearly all the weight, 33⅓ per cent thinner and adding the usual amount of tin coating. They are able to prevent a corresponding reduction in the rigidity of the tinplate partly with the help of their new continuous annealing plant, which fines the grain of the metal, but the resulting product is still an awkward one to handle, more likely to bend and buckle in sheet form than the thicker plate or to become distorted when being made into cans. Until or unless these problems can be overcome this means higher wastage and handling costs, which partly explains why prices do not fall in proportion to the reduction in steel used per sheet. Metal Box and its customers are still being very cautious, possibly overcautious, about its substitution for thick tinplate for most normal uses; playing safe, they are at present mainly talking in terms of using the thin material for the ends of cans only except in small sizes, though the future would seem to lie more with a can strengthened by corrugation.

It looks as though it will take some time for light tinplate to gain the wide acceptance here that it has in the United States, where by the end of this year it may comprise one-fifth of tinplate deliveries. The steel industry there has gone into it much more wholeheartedly, partly because of competition from aluminium. By re-rolling the plated steel—the double-reduction process—leading American producers are making "thin tin" two-thirds or even one-third the thickness of SCOW's lightweight product.

SHORTER NOTES

After nearly thirteen years as senior government broker Mr W. J. H. de W. Mullens is to step down from this post at the end of the year. He will be succeeded by Mr P. A. Daniell, who has throughout been at Mr Mullens's side as second government broker. The firm of Mullens & Co., with which the Daniell family has long been associated, has acted as broker to the National Debt Commissioners since the eighteenth century, and now also acts for the government and the Bank of England.

★

The Tongaat consortium of sugar companies has acquired more than 50 per cent of the voting shares of Sir J. L. Hulett and Sons and this seems to be the end of South Africa's biggest take-over battle. It began with rival bids for Natal Estates, which Huletts now controls. The consortium's offer of 1.50 Rands for Hulett preference and 4 Rands for Hulett ordinary will be made unconditional.

★

The Government has appointed a committee under the chairmanship of Sir Harold Banwell, "to consider the practices adopted for the placing and management of contracts for building and civil engineering work, and to make recommendations with a view to promoting efficiency and economy." This carries out the recommendation made by Sir Harold Emmerson in his study of organisation in the building industry for the Minister of Works published earlier this year. It has also been announced that the Minister of Public Building and Works will be responsible for co-ordinating all Government building research with the help of Sir Donald Gibson as Director General of Research and Development; and that the Building Research Station is to undertake a three-year study into the skills needed in modern building operations.

★

Bristol Street Motors, one of the biggest main Ford dealers, has offered four 4s. shares for every five 5s. shares in Car Mart. With Bristol Street shares at 22s. 6d. the bid is worth 18s. against a pre bid price of 13s. 3d. and values Car Mart at over £2 million.

COMPANY MEETINGS

LORAINE GOLD MINES, LIMITED

(Incorporated in the Republic of South Africa)

CHAIRMAN'S REVIEW

A copy of this review by **Mr B. L. Bernstein** *on the company's operations for the year ended September* 30, 1962, *will be posted to members on or about November* 8, 1962. *The full report and audited accounts will be circulated to members on or about January* 3, 1963.

During the year under review underground development was concentrated mainly on Elsburg reef north and south of No. 3 shaft, and exploration by means of underground prospecting holes was started to obtain more information about the Basal reef. I propose to deal with the various aspects of operations at your mine under separate headings.

ELSBURG REEF BETWEEN NO. 2 AND NO. 3 SHAFTS

Within the area about 85 per cent of the haulage and crosscut grid required to exploit all zones of the Elsburg reef has been completed. About 1,000 feet on the 54th main haulage and about 4,000 feet on the 56th haulage (the bottom level) still have to be advanced northwards to bring them both to the limits of their usefulness, at a position which is expected to be about 1,000 feet north of borehole TV.2. Main haulages on the 50th level have been connected. Development to reef overlying this grid is now proceeding on all levels and reef development in the form of raises and winzes is taking place on all zones of Elsburg reef where promise of payability exists.

An analysis of the sampling results of the progressive footage on the various zones of the Elsburg reef between the two shafts was given to shareholders at the annual general meeting last March. This information is now brought up to date as at the end of September, 1962, in the following tabulation, from which it is clear that the EA (or top) zone continues to be the zone of predominant economic importance:—

Zone	Footage Sampled	Payable Footage	Percentage Payable	Channel width inches	Inch-Dwt.
EA	34,905	22,270	63·8	33·9	771
EB	1,635	1,220	74·6	38·1	914
EC	410	190	46·3	37·5	530
ED	3,860	2,055	53·2	29·5	630
Totals and averages	40,810	25,735	63·1	33·8	765

In the area between the two shafts the EA zone carries consistent payability over the full strike length of 15,000 feet, with the exception of some 3,000 feet in the vicinity of borehole TV.2, where the reef is poorly developed. The 12,000 feet of consistent values includes from one to five, and on average two, payable reefs, which can be stoped independently. Exploration to date has indicated that reefs in the EB zone carry high values in limited areas within 2,000 feet of No. 3 shaft. Beyond that point this zone is of little economic interest. Present information also indicates that no economic importance can be attached to reefs in the EC zone and that payability in the ED zone appears to be confined to the southern half of the area.

Occurrences of composite reefs in the EA zone and of a succession of superimposed payable bands in the EB zone, to which reference has previously been made, have proved in all areas so far developed to be of a sporadic nature and confined to comparatively small blocks of faulted ground.

With regard to the extent of payability in an east to west direction, work done during the year continues to indicate that the eastern limit of payability does approximate to the axis of the syncline (or trough formation) and that little or no value is located in the east limb. It will be remembered that the western boundary of the syncline is formed by the sub-outcrop of the Elsburg reefs against the overlying Ventersdorp conglomerates parallel to the axis of the syncline.

It is probable that Elsburg reef between No. 2 and No. 3 shafts will virtually be fully explored by the end of 1963, although considerable reef development will still remain to be done to facilitate the exploitation of small blocks of ground in severely faulted areas. In many instances, as a result of the prevalence of strike faulting, reef raises in a north to south direction, as well as in an east to west direction, are required.

ELSBURG REEFS SOUTH OF NO. 3 SHAFT

Satisfactory progress has been made with the main exploratory headings being advanced on the 48th level, which at the end of September, 1962, had reached a position about 6,000 feet south of No. 3 shaft, over halfway between the shaft and the southern boundary. It was in one of these headings that the notable record was achieved of advancing a single end 2,317 feet during the month of May, 1962. Delays have since occurred due to the intersection of water bearing fissures. These headings are planned to help evaluate the prospects of the southern area of the mine and are positioned to give access to the overlying EA zone of the Elsburg reef. It has, therefore, been possible to obtain a limited amount of reef development in this zone for sampling. Up to the end of September, 1962, 850 feet were sampled and 70.6 per cent. proved payable at an average value of 572 inch dwt. These results are confined to reefs of the EA zone developed from several cross-cuts within a distance of 3,000 feet south of the shaft. At 4,700 feet south over a distance of 40 feet a highly payable reef intersection was obtained in the 48th south haulage and at 4,800 feet south payable reef was intersected in the EA zone in an underground borehole. Both these results were published in quarterly reports. No payability in development or in underground borehole intersections has so far been encountered in the lower Elsburg zones (i.e., the B, C and D zones) south of the shaft. However, only half the distance to the southern boundary has been covered and in surface borehole ERK.1 on the boundary high values were obtained in the ED zone, about 150 feet below the 48th level horizon.

Although the east-west dimension of payable areas on the EA zone measured on the plane of the reef tends to decrease in a southerly direction, the volume of mineable tonnage per foot of strike to be expected from this zone in the area so far entered by the 48th level south haulages approximates to that found north of No. 3 shaft. The width from east to west, south of the shaft, varies from 400 to 700 feet, as compared with widths of 500 to 1,000 feet between No. 2 and No. 3 shafts.

It is expected that the 48th haulage can be advanced to the southern boundary within the next twelve months. The 50th level has been advanced 1,200 feet south of the shaft and the 46th haulage south, which was stopped temporarily at 2,300 feet south of the shaft, will be continued to provide a return airway for stopes above the 48th level. Haulages south on the lower levels must await further structural information, to be obtained in due course from drilling on the 48th level haulage. Stoping south of No. 3 shaft is unlikely to be required before the end of 1963.

LIMITATIONS OF PAYABLE TONNAGE ON ELSBURG REEFS

At last year's annual general meeting I had occasion to remind shareholders that limitations of tonnage on Elsburg reef could well prove to be the salient factor in assessing the mine's life. Development since then has served to confirm this warning. Although the value of last year's pay development on Elsburg reef, compared with the previous year, increased from 838 inch-dwt to 882 inch-dwt, the percentage payability dropped from 67.9 to 58.5 per cent. It must further be remembered that Elsburg reef development during both years has been selective to the extent that it has been largely confined to the EA zone, which of necessity has to be mined ahead of the lower zones. The contribution to total pay tonnage made by the lower Elsburg zones has so far been comparatively small and no worthwhile extension of payability to the east of the synclinal axis has been found. Shareholders will appreciate that the only information available concerning the most southerly 6,000 feet of the lease area is that derived from surface drilling, and that when the southern boundary is reached on the 48th level it will be possible to obtain a more complete picture of the total tonnage potential on the Elsburg reef.

BASAL AND OTHER REEFS

Arising from the need to supplement Elsburg reef tonnage, the investigation of Basal reef, which could be mined from the existing shaft system, has been started. Results have so far been disappointing. Exploratory drilling from the 54th and 56th levels has shown that, although

Basal reef is present above the 56th level horizon about 1,500 feet west of No. 3 shaft, dipping almost vertically in conformity with the steeply dipping Elsburg reefs, it is too poorly developed to warrant cross-cutting to reef from either 54th or 56th haulage. The area so far tested on these horizons extends for 3,000 feet north of No. 3 shaft. Specialised drilling for valuation of Basal reef below the 56th level has been done with the object of supplementing information obtained from the original surface boreholes which intersected payable Basal reef in the vicinity of No. 3 shaft at depths of about 6,500 feet. Basal reef intersections, which have not been very encouraging so far, have been obtained at various depths extending up the western limb of the syncline. Results to date of this drilling, which is not yet completed, have been published.

Of greater economic importance at present are the improved prospects for continuing to mine significant tonnages of "B" reef from the No. 2 shaft area. Last year I told shareholders that, following an increase of available stoping face on Elsburg reef, tonnage drawn from "B" reef stoping would reduce towards the end of this year to about 25 per cent of the tonnage milled. The figure for September, 1962, was 25.4 per cent, but the grade of ore stoped, which was expected to decline, has increased during the year from 4.9 dwts to 5.9 dwts. During the same period the value of total reef development on "B" reef, amounting to 2,660 feet, has increased from 287 to 371 inch-dwt. These results are considered to be sufficiently encouraging to warrant extending "B" reef development at No. 2 shaft from the 52nd level downwards to the 57th level, a distance of about 1,240 feet on the plane of the reef. The existing No. 2 sub-incline shaft is being deepened and equipped to serve the 57th level and the rate of development on "B" reef is being increased to about 1,200 feet per month in order to maintain the present rate of stoping.

STOPING, RECOVERY GRADE AND ORE RESERVES

A position has now been reached where the mine's current stoping requirements from Elsburg reef are being met. Throughout the year the mill operated to capacity and, compared with last year, tonnage milled increased by 13,000 tons. Recovery grade increased during the year under review from 5.43 dwts to 7.22 dwts. The steady increase in recovery grade over the past two years results from a continuous transfer of stope tonnage, initially from Basal reef, and later from "B" reef, to the Elsburg reef. This upward trend can be expected to level off now that the proportion drawn from Elsburg reef is becoming stabilised at about 75 per cent of the total tonnage milled. However, some further increase in grade can be anticipated during the first half of the current year, while progressively increasing tonnages are being drawn from new ore reserves created by last year's development which was above average value.

At September 30, 1962, the total ore reserve was 2,055,000 tons at an average value of 9.81 dwts per ton, a net increase of about 700,000 tons and 0.58 dwts over the corresponding figures for the previous year. Elsburg reef comprises 77 per cent of the total reserve at a value of 10.85 dwts compared with 6.31 dwts for "B" reef. In total some 1,300,000 tons of ore reserve have been created during the year and the total development footage advanced was 91,500 feet of which some 24,000 feet of development was of an exploratory nature south of No. 3 shaft and as such has not yet contributed to ore reserves.

VENTILATION

The problem of providing adequate ventilation facilities for stoping the central area between No. 2 and No. 3 shafts south of the Weltevreden fault has previously been mentioned as a factor limiting the scale of operations in the area. This limitation is now being removed by the provision of an underground refrigeration plant sited at No. 3 shaft to utilise the large volume of return air available in the shaft for transferring heat to surface. Chilled water will be carried in insulated pipes to any area underground where cooling is required and used in heat exchangers to cool hot intake air for immediate use in adjacent stopes. One refrigeration unit, rated at 350 ice tons capacity, will be commissioned at the end of December, 1962, and an identical second unit three months later. The capital cost of the installation, including two units, is estimated at R320,000.

Such a cooling system has the virtue of extreme flexibility and can readily be switched to serve the area south of No. 3 shaft in due course. Indeed, it is calculated that, if the area of payability between No. 3 shaft and the southern boundary continues to be confined to a relatively narrow strip of ground, and provided that the mine's present production rate is not increased, the addition of two or three further refrigeration units of No. 3 shaft would enable the whole area to the boundary (12,000 feet south) to be mined without the assistance of another shaft for ventilation purposes.

As I have previously stated, a decision regarding a new shaft must await further development work south of No. 3 shaft. Development to date has not yet established that a sufficient volume of pay tonnage exists in the southern area at elevations which will warrant the expense of a further shaft, nor has sufficient evidence accumulated of increased mineable tonnage to justify an increase in the present rate of production.

WATER

The intersection of underground water has not seriously affected operations, although some delay has been occasioned in development ends advancing south. It has been found preferable to allow water bearing fissures encountered in cover holes to drain themselves rather than to resort to cementation. This results in a fluctuating pumping load, but the daily average pumped to surface has only been 1.45 million gallons this year compared with 0.85 million gallons per day last year.

WASTE SORTING

The rate of manual surface sorting has been kept at about 15 per cent of ore sent for milling. Tests conducted at a pilot plant on the Hartebeestfontein Mine have indicated that radiometric sorting of Loraine ore is feasible and that compared with manual sorting an extra 5 to 10 per cent of waste can be discarded at a slightly reduced discard value. However, the economics of radiometric sorting are such that the capital expenditure involved can not be recommended at this stage.

FINANCIAL MATTERS

Working costs have shown an upward trend during the past year, increasing from R7.08 per ton milled in the first quarter to R7.30 in the last quarter, a rise of about 3 per cent. It is estimated that this rate of increase will continue throughout the current year. Among the increases anticipated in working costs are railage rates and additional contributions to the employee pension funds amounting to approximately 10 cents per ton milled. Due to an increase in the amount of development found necessary to replace depletion caused by current stoping, there will be an increase in the proportion of development footage chargeable to working costs, which in turn will raise working costs by about a further 20 cents per ton milled. There will be an equivalent reduction in the development footage charged against capital.

Capital expenditure during the financial year totalled R2,061,746, approximately half of which was spent on underground development. During the year ending September 30, 1963, capital expenditure is estimated at R2,000,000, including the main items of underground development, refrigeration and electric power supply and the contributions towards the capital cost of joint uranium plants.

The unaudited accounts show that working profit from gold production was R1,989,252 for the financial year compared with R353,633 in the previous year, and that profit from uranium amounted to R854,091 compared with the last year's figure of R810,613. The combined working profit of R2,843,343, together with non-mining income of R62,032, is sufficient to provide for all capital expenditure, interest charges of R361,808, building society loan repayments of R12,772, the first of four annual instalments amounting to R273,314 in redemption of the 6 per cent Registered Unsecured Notes, and to meet the deficit of R174,317 from last year, leaving an unappropriated balance of R21,418.

More detailed information on the results obtained during the year will be given in the Technical Adviser's Report, which will be sent to members, together with the Directors' Report and Audited Accounts, in January, 1963.

Binding Cases

Binding cases for THE ECONOMIST *are available from* EASIBIND LTD. *The cases are in stiff, dark blue cloth covers, and are gilt-lettered on the spine; they provide an extremely effective and firm binding and will hold* 13 *issues of the normal edition together with the quarterly Index, or* 26 *issues of the air edition with two quarterly Indexes. The year can be stamped on the spine. The cost per case, post free throughout the world, is* 12/6. *Orders, stating requirements clearly and enclosing a remittance, should be sent,* **not** *to* THE ECONOMIST, *but to—*

HARRISONS & CROSFIELD, LIMITED

MR J. F. E. GILCHRIST'S REVIEW OF WIDESPREAD INTERESTS

The Annual General Meeting of Harrisons & Crosfield, Ltd., will be held on December 5th in London.

The following are extracts from the circulated Statement of **Mr J. F. E. Gilchrist, OBE**, the Chairman.

The Group Profits for the year, after charging £886,091 for taxation, amounted to £685,820, a reduction of £23,772 compared with the previous year. The Directors recommend a Final Dividend of 13 per cent on the Deferred Ordinary Stock making 16 per cent for the year, an increase of 1 per cent.

A feature of the year has been the slow but almost unbroken decline in the price of most raw materials. The reduction in the purchasing power of producing countries has increased competition for the reduced business offering, and margins have been under attack all over the world. Activity throughout the Group continued high, and turnover at some £65 million, exclusive of sales of produce of the Plantation Companies for whom we act, represented a higher volume at rather lower prices than 1961. Our operations being international tend to reflect prosperity or otherwise on a world basis, improved conditions in one sector counterbalancing difficulties elsewhere.

The Company does not seek diversification for its own sake, but where business can be extended in directions which integrate well with existing lines we are always interested.

Wilkinson Rubber Linatex Limited again show record sales and profits. Home sales were slightly lower, but more than offset by a rise of no less than 50 per cent in exports to Europe and other overseas markets.

TEA

Production and Prices.—The tea market can usually be relied on to do the unexpected and 1961 was no exception. By the end of November crops from the main producing countries outside China were some 112 million lb. ahead of those at the same time in 1960, and with the expectation of over-supply, prices declined. Early this year, however, it became apparent that the excess production was being well absorbed, particularly in North India where a good proportion of the increase was in the form of Dust for internal consumption, and also that pipe-lines, denuded through the reduced supplies of the previous year, were capable of absorbing increased quantities. In London, prices in the early months of the year showed a material recovery. Even so, the London average for all tea sold from July 1, 1961 to June 30, 1962 was a little more than 4¼d. per lb. lower than during the corresponding period of 1960/61.

Record crops were harvested during 1961, totalling 1,658 million lb. Excess of supply over absorption was only 28 million lb., a small figure in relation to the total production.

In Calcutta, assisted by support from Russia, the average price of all tea sold to date this Season is substantially above last year, though the improvement has been confined to Assam and Darjeeling, all the other districts showing a decline.

The better Assam teas have also received strong support in London and some high prices have been registered though there have been ample supplies of plainer sorts to be used as "fillers" and the total average price in London for the first nine months was slightly lower than last year.

In Ceylon the average price to end September is 3d. or so per lb. below last year. The best of the teas produced in the quality period sold well and in some cases record levels were established.

Consumption.—Imports into the United Kingdom for domestic consumption remain at about 500 million lb. The off-take in the U.S.A. and Canada showed little change from that of the previous year, and with Russia also taking approximately the same amount, 45 million lb., there appears to have been little change in consumption in the main markets of the world.

Prospects.—The pattern of production for the first nine months of 1962 has changed with a reported total of 1,015 million lb., 4 million lb. less than in 1961. With North India and Pakistan, owing to inclement weather conditions, showing a fall of 30 million lb., only in South India, Ceylon and East Africa are crops going ahead. It appears unlikely that the shortfall in North India and Pakistan will be made up, but as it is virtually counterbalanced by the increased production in other countries, the total available is likely to be about the same as last year. The urgent problem remains that of expanding existing markets or finding new markets for the increased total which will undoubtedly be forthcoming in the future.

The internal market in India is at present apparently well supplied, and though the market there is capable of almost unlimited expansion, the policy of the Government of India is still directed firmly to the encouragement of exports.

Now the future is clouded by the Chinese aggression.

RUBBER

In the long term there is a general consensus of opinion that increasing demand for all rubbers over, say, the next decade is so promising that although synthetic, which has spare capacity, may take much of it, every pound of natural will be absorbed at a competitive price. That price may well be governed by the production cost of the new stereo rubbers, especially as the American stockpile will be eager to take advantage of any upward movements. The task remains unchanged and the Natural Rubber Industry must depend on itself. So long as we have an unrivalled material at a fighting price, we can face the future, but there must be no relenting on production and research. Higher yielding trees and better quality rubber at a cheaper price, backed by basic research, will enable any challenge to be faced from any quarter.

PROSPECTS

In a business such as ours and operating as we do in so many parts of the world, forecasting is always hazardous. There are too many incalculables. The picture today is that the results for the early months of the current year are broadly in line with the corresponding period last year.

THE BRITISH LINEN BANK

Statement to Stockholders by the Governor, Lord Airlie

The Right Honourable The Earl of Airlie, KT, Governor of the Bank, has circulated a Statement with the Accounts of which the following is an extract:

Notwithstanding the less buoyant conditions of the economy there has been no diminution in the demand for the Bank's services and, despite lower average rates of interest and continuously rising overhead costs, profits have run at the previous year's level. The year has therefore been another one of successful achievement.

The net profit is £424,132 and, with the sum of £275,653 brought forward from last year, there is now available for distribution £699,785. Of this, the sum of £76,563 has already been utilised in payment of an interim dividend at the rate of 10 per cent less tax and it is now proposed to declare a similar dividend, making an unchanged rate of 20 per cent less tax, for the year. Allocations of £130,000 and £100,000, as before, are being made to Staff Pension Fund and Contingencies Account respectively and there is left in the Profit and Loss Account a surplus of £316,660—an increase of £41,007.

It will be observed from the Balance Sheet that the Reserve Fund has been increased to £3 million. This has been done in pursuance of your Directors' previously expressed intention to augment the published funds of the proprietors as opportunity offers.

In line with the general run of monetary statistics, our Notes in Circulation at £14.57 million show a small decrease.

Deposits at £95,015,000 are up by £1¼ million. While it is gratifying that we can report yet another increase, the rate of expansion falls short of that shown in the previous year, despite the fact that the number of our account-holders continues to increase satisfactorily.

Turning to the Assets side of the Balance Sheet, it will be observed that liquid items—consisting of cash, cheques on other banks in course of collection, short money and bills discounted—aggregate £34,890,000, giving a ratio of 31.8 per cent to the combined total of our Deposits and Notes in Circulation.

A reduction of just over £3 million in the value of our holdings of British Government securities, now standing in our books at £23,549,000, reflects realisations necessitated by the rise in our Advances. The market value of these investments is in excess of the book figure. Advances which continue to be very well spread have increased by £4.85 million to £50,798,000 and now represent 46.35 per cent of liabilities to the public in the shape of Deposits and Notes.

The only other item in the Balance Sheet calling for comment is the reduction of £400,000 in the Special Deposit with the Bank of England. Since September 30th last a further repayment has been made leaving £500,000 outstanding. I need scarcely say that we welcome these releases of Special Deposits. Combined with the recent removal of official restrictions upon our lending policy, they will give us somewhat greater scope to take advantage of the opportunities and to meet the challenges of the year upon which we have just entered.

We have pleasure in announcing the formation of

COBALT DEVELOPMENT INSTITUTE

The Cobalt Development Institute held its seventh Annual Meeting in Brussels on October 23, 1962, under the chairmanship of **Mr J. H. Lascelles,** Resident Director of Rhodesian Selection Trust, Ltd.

The members unanimously approved the report on the activities and the financial management in 1961 of the executive organisation of the Institute, the "Centre d'Information du Cobalt" (C.I.C.), whose head office is in Brussels and whose branch offices are located in the United States, Great Britain and Germany.

The results obtained in C.I.C.-sponsored research in the first half of 1962 and the research programme for 1963 were then commented by Mr V. Van Vinckenroy, Managing Director of C.I.C., and extensively discussed by the Assembly. Items of particular interest were: the industrial tests on the new heat- and wear-resisting cobalt-base alloy UMCo-50, tests which, this year, led to the recognition of the alloy's superiority in several applications, including parts for heat-treating facilities in the steel industry, and to its definite adoption by one large Belgian steelworks; the progress made in the research on the catalytic combustion of automobile exhaust gases, a problem that is still unsolved and in which cobalt oxide may well play an important part; the increased effort in applied research on cobalt-containing permanent magnet materials, which will counterbalance the termination, in December, 1962, of the three-year fundamental investigation on the magnetic properties of cobalt ionic compounds. The more important findings in the latter research formed the subject of a publication recently issued by C.I.C. The volume, which was widely circulated to interested persons and organisations, has met with very favourable comments.

After approving the budget proposal for 1963, the Assembly proceeded to elect its board for another two-year period. Dr H. Schackmann, outgoing Vice-Chairman and President of the Board of Duisburger Kupferhütte, was elected Chairman; Mr Ch. Piedboeuf, a Manager of Union Minière du Haut-Katanga, was re-elected as Vice-Chairman, the second Vice-Chairmanship being conferred upon Mr H. G. May, Liaison Engineer at Rhokana Corporation, Ltd.

Fisons big capital programme to reduce costs and expand turnover

Continuing increase in exports

Sir Clavering Fison

The following is an extract from the Statement by the Chairman, Sir Clavering Fison, which has been circulated with the Report and Accounts for the year ended 30th June 1962.

Group sales were £54,512,000 against £54,576,000 last year and profit before taxation was £2,710,000 compared with £3,607,000. The net profit after tax was £1,504,000 against £1,860,000. This result is somewhat better than the reduction in profit forecast at the time the interim dividend was announced in May.

Since the end of the financial year the Board have authorised capital expenditure of £9,350,000 which provides for the erection of nitrogen product plants and for considerable extension of phosphoric acid capacity at Immingham. As a result, our current capital commitments are of the order of £12 million. We expect to carry out this programme from the cash flow of the business supplemented by short-term finance, which has already been arranged.

Fertilizers

Trading conditions in the fertilizer industry have been difficult, sales of compound fertilizers were lower than in the previous year, and this has resulted in lower profits. Certain costs beyond our control continue to rise, whilst fertilizer prices have been reduced progressively over a period of years, and indeed have been further reduced in the current year.

After an extensive survey of the world nitrogen market, we have now concluded a long-term agreement with ICI for supplies of ammonia. ICI will manufacture additional ammonia in the UK to meet the expanding requirements of both companies. Each company will maintain its complete independence and will continue to operate and compete as before.

Chemicals and Other Interests

The progress made by Fisons Pest Control Limited during the past few years continued, and record sales and considerably increased profits were achieved both in the UK and overseas. Benger Laboratories Limited had a satisfactory year, and improved its position against a background of intensifying competition. Genatosan Limited experienced continuing heavy competition in the fields of the two major proprietaries, 'Sanatogen' and 'Sebbix' shampoo. Trading profits of Whiffen & Sons Limited were a little above last year's and exports are now 39 per cent of turnover.

Fisons Overseas

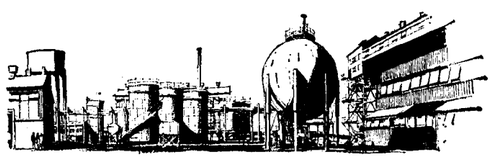
Overseas sales have increased and our investment interests abroad have prospered. In addition, important steps have been taken in the consolidation of these interests, particularly in South Africa and India, which should lead to growth, largely self-generated, in the years to come.

Exports expanded by 36 per cent, and this strong upward trend is continuing. In Europe, progress has been made despite tariff disadvantages and increasingly competitive conditions.

The Future

While the considerable benefits from the fertilizer projects at Immingham will not begin to flow until the year 1964-65, we can look forward in the meantime to benefits upon the completion of other capital projects, including the modernisation of our granulating plants, which will provide significant reductions in costs.

Sir Clavering Fison, who has been Chairman since 1929, will retire after the Annual General Meeting this month, and will be succeeded by Lord Netherthorpe.



THE JOKAI (ASSAM) TEA

The eighty-second annual general meeting of The Jokai (Assam) Tea Company, Limited was held on November 2nd in London, **Mr G. A. Rainey** (the Chairman) presiding.

The following is an extract from his circulated statement:

I am glad to report that results have proved better than forecast in the interim statement sent to you in February. Though the revenue profit was some £146,000 less than that attained in 1960, it exceeded the 1959 figure by £69,000, and I think the season's working can be considered satisfactory.

Prices realised in both the London and Calcutta markets compare unfavourably with 1960, but, owing to the unusual firmness of the markets from January onwards, they improved towards the end of the season and the final averages were better than anticipated.

When the 1960 adjustment, the investment income and interest are added to the revenue profit and the provision for taxation is deducted, it will be seen that there remains a profit, after taxation, of £380,470, compared with £499,410 last year. Transfers have been made to the Renewals and Replacements Account, Development Rebate Reserve and General Reserve, totalling £202,200, and your Board recommend a total dividend of 13 per cent for the year, free of tax.

Following a record last season, crop prospects for 1962 also appear good. It is however too early in the season to make a forecast with any certainty.

I am able to report that British African Tea Estates Ltd. has experienced another good year.

The report was adopted.

BROOKE BOND & CO. LTD

extracts from the statement dated 24th October, 1962, of the Chairman

Mr. JOHN BROOKE

circulated to Shareholders on November 7th, with the Report and Accounts for the year to June 30, 1962.

Group Net Profit after tax for the year to June 30, 1962, is £2,146,144. Last year it was £2,210,825. Group profit before tax is a record £5,231,031. Last year's profit before tax was £4,061,878. Reasons for improved profits were:

(*a*) sales rose by £6m. to £113½m.;
(*b*) from our tea-growing companies came the most bountiful harvest ever gathered.
(*c*) stable tea market prices enabled our selling forces at home and abroad to earn more profits.

The unusually high tax provisions in relation to profits this year were due to:

(*a*) increased rates of taxation on profits in the U.K., East Africa and India.
(*b*) exceptional expenses and losses not allowable for tax purposes, including adjustment of £163,829 for unrealised profit on inter-company trading.
(*c*) larger dividends from overseas subsidiaries, causing an increase in tax compared with last year of £105,000.

U.K. Sales brought home the main share of the increased turnover of £6m. in the face of a static market and against doughty competitors. We continue to expand our trade with the multiple shops, whilst in no way neglecting the independent grocer, who is still the mainstay of our business. Young and old alike are taking a keen interest in our picture cards (one in every packet of Brooke Bond Tea and two in every tin of Coffee). Our picture card albums, selling now in millions a year, help to spread a knowledge of Natural History.

Overseas Sales companies also had a rewarding year. Brooke Bond India continues to gain trade in a rapidly expanding internal tea market. India is fortunate in having this splendid local outlet for her tea-growing industry, and the healthiest backing for a big export trade is a large and flourishing home consumption of the same commodity.

Packing and Transport sides of the business have matched the rising sales, and we have benefited from a full year's working of the new tea factory at Redbourn. We started two medium-sized building projects—one the rebuilding of the last of the bomb-damaged sections of our London factory, and the other a further 45,000 sq. ft. extension to our original tea warehouse at Manchester.

Tea Plantations A record crop. Brooke Bond tea bushes have seldom enjoyed such favourable treatment from the 'forces of nature,' though they are accustomed to being tended with consistent care by the hand of man.

Development of new areas continues in India and in East Africa. Despite the uncertainties caused by Britain unburdening herself of colonial responsibility, Africans continue to work well in all the jobs they undertake for us. We are giving positions of responsibility to more Africans with rewarding results. British members of our East Africa Staff and their wives have shown outstanding spirit and adaptability in weathering pre-Independence difficulties. Opportunities for promotion are being firmly grasped by people who understand that a profitable group of Tea estates will depend largely on European management with African support for a great many years to come.

Prospects This year we have again got away to a flying start with continued impetus from good sales and good crops. With cautious optimism we may hope for a good year, but we do not expect a bumper one (we never do).

It is well known by now that profits do not accrue evenly in the Tea Trade. In this country, we have held our packet prices unchanged since May, 1957, and have taken our chance for profits on the 'ups and downs' of the Tea markets.

Brooke Bond & Co. Ltd

ANGLO-ASIAN RUBBER PLANTATIONS LIMITED

MR P. B. L. COGHLAN'S REVIEW

The twenty-eighth Annual General Meeting of Anglo-Asian Rubber Plantations Limited will be held on November 13th in The Queen's Room, The Baltic Mercantile & Shipping Exchange Limited, 14-20, St. Mary Axe, London, E.C.3.

In his circulated Review, the Chairman (**Mr P. B. L. Coghlan**) comments on the Accounts for the year ended March 31, 1962. During this period, the price of rubber had continued to fall and a difficult position could have arisen for the Company but for large-scale reorganisation carried out during recent years. This had enabled the Company to achieve a reduction in costs which, combined with a marked increase in output, had helped to offset the fall in price.

A further step in reorganisation had been taken by sales, since March 31, 1962, of old rubber areas for a price of over £75,000. The proceeds from these sales were being used to boost the Company's modernisation programme and, with further sales of old rubber now contemplated, it was hoped to accelerate replanting. In the meantime, the centralisation of the Company's Estates, resulting from policies carried through in recent years, was assisting towards efficient administration and economic working. Mr Coghlan continues:

"Earlier this year I paid a visit to the Company's properties in Malaya and was able to make a thorough inspection of each Estate. I can say, without hesitation, that great strides have been made in the last few years and that, with very few exceptions, the young replantings are growing well and are in first class order. Some of the clonal seedling areas are coming into production at only five years after planting and show promise of excellent yields. With the large areas of replantings now coming into bearing, the Company is steadily regaining its position as one of the leading rubber producers."

Copy for the insertion of Company Meeting reports must reach this office not later than Wednesday of each week and should be addressed to:

The Company Meetings Department,
The Economist,
22 Ryder Street, S.W.1.

BERALT TIN AND WOLFRAM

SIR CHRISTOPHER BULLOCK ON THE DUMPING OF TUNGSTEN CONCENTRATES FROM BEHIND THE IRON CURTAIN AND ITS DANGERS

The thirty-fourth Annual General Meeting of Beralt Tin and Wolfram, Limited, was held on November 6th in London. **Sir Christopher Ll. Bullock, KCB, CBE,** the chairman, presided and, in the course of his speech, said:

A number of factors have contributed to the present unsatisfactory situation in the wolfram market. Supply and demand do not yet seem to be in balance, due largely to increased production by the Communist or Sino-Soviet bloc, and in particular by Russia, China, and North Korea. According to estimates by the United States Bureau of Mines, in 1957 those three countries produced the equivalent of just under 28,000 short tons of 60 per cent concentrates. For 1961 the corresponding estimate is 38,500 short tons—an increase of 10,500 tons. As a result, whilst in 1957 the free world's share of total world production was 58 per cent, by 1961 it had fallen to 48 per cent.

Now, if the Sino-Soviet bloc was in a position to absorb its increased production, the impact on the market would not, in my opinion, have been serious; but, unfortunately, this appears very far from being the case. It has been reported that in 1961 the U.S.S.R. took no less than 18,300 metric tons of tungsten concentrates from China. With Russia's domestic production estimated at 11,000 tons in that year, it is clear that she must have had a large surplus of which to dispose, whether of her own or Chinese concentrates; and this surplus has, in fact, been pressed on the markets of Free Europe, either directly or indirectly, for the most part at substantial discounts—on occasion as much as 7s. 6d. per unit. Perhaps I may illustrate by some further figures the extent to which, as a result of these Russian and other Sino-Soviet offerings, Europe has been increasingly permeated by supplies of tungsten from these sources.

In the case of the United Kingdom, imports into this country from the Sino-Soviet bloc have risen very steeply as follows:

(Figures in long tons)

(1) Period	(2) Imports from Sino-Soviet bloc	(3) Total imports from all sources	(4) Column (2) as percentage of (3)
1957	5	4,692	0·1%
1958	110	4,886	2·2%
1959	268	5,238	5·1%
1960	1,078	6,797	15·9%
1961	1,221	6,658	18·3%
1962 (first half)	989	3,108	31·8%

So much for the United Kingdom. But the tonnage imported into certain other European countries this side of the Iron Curtain in recent years is, in total, substantially larger. It appears that these countries took over 4,000 metric tons from the U.S.S.R. alone in 1961, which represented about 40 per cent of their total imports. Allowing for their imports from Iron Curtain countries other than the U.S.S.R., and the United Kingdom imports in 1961 given in the Table, it seems reasonable to assume a total of at least 6,000 metric tons of Sino-Soviet tungsten concentrates imported into Free Europe last year, much more than enough to upset the whole balance of the market as it stood a few years ago. And this 6,000 tons might easily be an under-estimate. In my opinion the continuing growth of these communist imports into Free Europe (including the United Kingdom) has been the most serious single factor in the weakness of the market, and it is fraught with grave future dangers.

THE DANGERS INVOLVED

What countries have been the victims of this glut of tungsten supplies from the Sino-Soviet bloc and its repercussions on the market? Countries such as Argentina, Australia, Bolivia, Brazil, Burma, Peru, Portugal, South Korea, Spain, Thailand and even Uganda. Mine after mine throughout the Free World has been compelled to close down or is carrying on under very grave difficulties.

You will see that it is fellow-members of the Commonwealth such as Australia, and our friends and allies (some of them members of N.A.T.O. or S.E.A.T.O.) and the neutrals who have been allowed to go to the wall. Many of them are poor countries which were already struggling against serious economic difficulties. This state of affairs seems to me (to say the least) highly anomalous, particularly when it is borne in mind that tungsten remains an important *strategic* material, e.g., for rockets and other missiles, armour-plate and armour-piercing shells.

How long is this situation to be allowed to continue and (it might well be) go from bad to worse until Free Europe becomes almost wholly dependent on the Communist world for its tungsten? It seems to me that there is a strong *prima facie* case for Free Europe to consider, for example, import restrictions by way of the fixing of quotas for supplies from the Iron Curtain countries. And it is greatly to be hoped that the wolfram-producing countries will consult together with a view to joint action. There have recently been indications of some first tentative steps in this direction.

The reports and accounts were adopted.

THE PERAK RIVER HYDRO-ELECTRIC POWER COMPANY

CONTINUING INCREASE IN DEMAND

WORK ON NEW PLANT INSTALLATIONS COMMENCED

The thirty-sixth annual general meeting of The Perak River Hydro-Electric Power Company, Limited, was held on November 7th, in London, **Mr Hugh G. Balfour** (the Chairman) presiding.

The following is an extract from his circulated statement:

The demand for electric power in the Company's concession area continued to increase during the year ended July 31, 1962, although at a slower pace than in the previous financial year when the tin export control regulations under the International Tin Agreement were ended. The total number of units generated during the year to July 31, 1962, was 537 million compared with just over 480 million in the previous year, an increase of 12 per cent, while the maximum system peak load was 87.3 mW. as compared with 81 mW.

All the Company's generating plant and equipment continued to operate satisfactorily during the year. The transmission systems serving Tapah and Prah are being converted from 22 kV to 66 kV and considerable extension and replacement work on substations is in hand to deal with the increasing demand for electric power. In addition to bulk supplies of electricity given to our Subsidiary Company mentioned below, the Company supplies 37 tin mining dredges, and 206 gravel pump mines, while town, village and sundry consumers supplied directly by the Company now number 117.

NEW GENERATING SETS

During the year the necessary authorisations were received from the Malayan authorities for the installation of the Malim Nawar Power Station of the two new generating sets, each of 20 mW capacity, and three 130,000 lb. per hour boiler units, with ancillary plant, to which I referred last year. Orders have been placed with British manufacturing firms, and satisfactory arrangements have been entered into for financing the purchase of the new plant out of the Company's own resources on extended credit terms. Work on the site has commenced and the new plant is expected to be operating in the first half of 1964. The total cost of the new 40 mW extensions, including the considerable capital expenditure in Malaya on foundations, new buildings, substation modifications and reinforcement of the distribution system will amount to some £3 million, or about 25 million Malayan dollars, over the next five years.

SUBSIDIARY'S OPERATIONS

The subsidiary, The Kinta Electrical Distribution Company, Limited, sold 21,293,584 units during the year ended July 31, 1962, which was about 5 per cent more than in 1961, but the gross profit of £87,236 showed a decrease of nearly 4 per cent due to higher costs. Consumers number 33,968 compared with 31,729 previously, excluding consumers in the twelve Government villages which the Company also supplies. The Company operates 16 small diesel power stations, and 122 substations which take a bulk supply from the Parent Company. The Government of the Federation of Malaya has instituted, and is actively supporting, a vigorous programme of rural electrification under its

second Five Year Plan, in which the Kinta Company is co-operating fully in its area of supply. By the end of the calendar year 1962, 45 projects for rural electrification will have been completed, and the estimates prepared for 1963 cover an enlarged programme with expenditure of upwards of £250,000, which includes substantial grants from Government.

THE ACCOUNTS

The total revenue for the year was £2,047,403 which is £206,366 or about 10 per cent more than in the previous year. Malayan operating expenses, including the charge for depreciation, total £1,237,280 as compared with £1,107,480, some 10 per cent higher than last year which reflects the increasing load on our system. Your Directors recommend the payment to the Ordinary Shareholders of a final dividend of 11 per cent requiring £147,383 net, making a total distribution on the Ordinary Share Capital of 15 per cent (the same as last year).

The Balance Sheet at July 31, 1962, again reflects a strong liquid position, excess of current assets over current liabilities and provisions (including £354,000 set aside for Malayan taxation in 1963) being £1,164,540, an increase of £146,401 over the previous year. In view of our heavy capital commitments over the next few years to which I have referred, it is essential for substantial sums to be retained by the Company against these liabilities and future contingencies. Capital commitments as at July 31st last were estimated at £2,400,000.

The report and accounts were adopted.

SUN REAL ESTATES

CONTINUED GROWTH ENVISAGED

The annual general meeting of Sun Real Estates Limited was held on November 2nd in London, **Mr John Gaul** (the Chairman) presiding.

In the course of his circulated statement the Chairman referred to the Debenture Finance which had been arranged during the year and said it would be apparent that there was no benefit in the accounts under review from the money raised by the Debenture Issue although Interest has been paid.

He continued : One complete year's Interest due to the Debenture Holders would have been £22,750 but since that money could not be turned into income producing (and thus dividend producing) revenue simultaneously, I so arranged that the total sum of £350,000 was paid in three instalments and thus—for the year ended March 31, 1962—the Interest payable was reduced to £15,021. Since the gap has progressively closed over recent years between the cost of borrowed long-term funds on the one hand, and the net income procurable from ready-made property investment purchases, we were obliged in common with the majority of other property investment Companies to move into the field of pure development, i.e., the purchase of building sites and arranging for income producing buildings to be erected thereon.

I hope you will share my considerable gratification that the new Debenture Interest charge for the past trading year was almost exactly equalled by the increased income procured by your Board by our usual process of re-negotiating tenants' leases in those cases where the reversion fell in, and we thus emerge with practically the same income available for dividend purposes, even after taking into account the increased profits tax payable. It automatically follows that the results for the current year will be increased by (a) the employment of most of the Debenture funds in income producing buildings which, by March, 1963, will be practically finished and (b) the reversionary increases which will be available for the equity holders and not needed to service the Debenture Stock. Indeed, important further reversions have accrued already in the current trading year thus adding to the preceding two items.

To maintain the pattern of increasing dividends I propose—this year only and as an exceptional gesture—to waive the final dividend on 467,985 Ordinary shares in my control. The sum saved thereby when added to last year's carry forward produces an additional availability of 10 per cent, half of which, with your approval, I propose to add to the dividend ordinarily available, thus making a total for the year of 60 per cent and the other half to be carried forward so that next year (for the reasons set out above) we may all look forward to a further appreciable increase.

The report was adopted.

JOHN I. THORNYCROFT & CO., LIMITED

"IMMENSELY STRONG FACTORS"

MR JOHN W. THORNYCROFT'S STATEMENT

The sixty-first Annual General Meeting of John I. Thornycroft & Co., Ltd., will be held on November 28th in London.

The following are extracts from the Statement by **Mr John W. Thornycroft, CBE, MINA, MIMechE,** Chairman and Managing Director, circulated with the report and accounts:

There is no doubt that your Company is now facing a double challenge, firstly that imposed by the social and economic problems of industry in the world today, but particularly in Southampton, and secondly by the strong indication of the increased importance that the coming years may bring to Southampton as a major commercial port.

Your Company, as my statement has, I hope, made clear, is endeavouring to provide itself with the finest tools and facilities. We already have first class management, highly qualified technical staff, and first class skilled workmen.

What remains is to weld these immensely strong factors into an organisation that will be unequalled in the Port of Southampton, or even the whole country.

This will require skill and knowledge and a great effort in co-operation at all levels, including of course the most important, the leaders of organised labour.

If we fail in our combined efforts then not only will the very large sums of money that are being spent to improve the facilities and equipment of our Yards be wasted, but the future will indeed be bleak and even the natural advantages of Southampton will be of no avail.

If, however, by combined effort we are able to make our prices competitive, still earn a proper margin of profit, and still keep our high standard of workmanship, the future will be set fair, and the prices will be long term continuity of employment, and the opportunities to improve even further our equipment and facilities.

EDUCATION : BUSINESS AND PERSONAL

DIPLOMA IN ADVANCED STUDIES IN MANAGEMENT
at the
COLLEGE OF ADVANCED TECHNOLOGY, BIRMINGHAM
Duration : 6 months full time.
Commencing : 7th January, 1963.
Entry Qualifications : Minimum age 26 years. Degree, Dip.Tech. or professional qualification. Diploma in Management Studies or evidence of some formal tuition in management studies to satisfy the Head of the Department. Exceptionally, mature entrants may provide evidence of experience in the main areas of management activity as an alternative.
Fees : tuition 60 guineas.
Residential accommodation can be arranged.
Further details may be obtained from the Head of Department of Industrial Administration, College of Advanced Technology, Gosta Green, Birmingham 4.

THE RUSSIAN LANGUAGE
An intensive course in the Russian Language will be held at Hughes Hall, Cambridge, from January 19 to March 15, 1963, under the auspices of the University Department of Slavonic Studies and the Board of Extra-mural Studies. The course is intended both for those who are already engaged in teaching Russian but wish to teach it at a more advanced level, and for those who wish to take it up with a view to teaching it from the beginning with a view to learning the language to G.C.E. "O" level. In addition the course will be of value to managers and others in industries that have trade relations with the U.S.S.R. and who wish, therefore, to acquire a working knowledge of Russian.
Application forms and details may be had from the Secretary, Board of Extra-Mural Studies, Stuart House, Mill Lane, Cambridge.

A CAREER IN PUBLIC RELATIONS
Comprehensive eight-week instructional courses beginning in February and April, 1963. Details from Secretary, London School of Public Relations, 57 Duke Street, London, W.1.

EXPERT POSTAL TUITION
for Examinations—B.Sc.(Econ.), Law, Accountancy, Costing, Secretarial, Civil Service, Management, Export, Commercial, General Certificate of Education, etc. Also many practical (non-examination) courses in business subjects.—Write today for free prospectus and/or advice, mentioning examination or subjects in which interested, to the Secretary (G9/2).

METROPOLITAN COLLEGE, ST. ALBANS
or call at 30 Queen Victoria Street, London, E.C.4. Established 1910.

SECRETARIAL Training for Women, especially university graduates, and older students ; six-month and intensive 14-week courses.—Write Principal, Davies's, 158, Holland Park Avenue, W.11. PARK 3654.

A FOREIGN LANGUAGE in a few months for yourself or your staff, with the easy ASSIMIL way. You assimilate the language and acquire the accent naturally by listening to the living language on gramophone records with an illustrated book to guide you. Preliminary and Complete Courses in French, German, Italian, Russian and Spanish. A Pitman follow-on course available for technical and commercial expressions.—Details from ASSIMIL, 79, Farncombe, Godalming, Surrey.

B.Sc.(ECON.)
LONDON UNIVERSITY
U.C.C., founded in 1887, successfully prepares students for this Degree (obtainable without residence), which is a valuable qualification for those seeking executive appointments in commerce or industry, government or municipal posts.—Prospectus, giving details of Courses for other London Degrees, G.C.E., Law Exams., etc., from Registrar, University Correspondence College, 60 Burlington House, Cambridge.

CONSULTANT STATISTICIAN, extending his private practice, invites inquiries from firms. Box 1060.

EXPORT OPPORTUNITIES brought to your desk by Export Service Bulletin, thrice weekly, 10 gns. annually. Specimen copy from Board of Trade (K), Hillgate House, 35, Old Bailey, London, E.C.4.

FURNISHED HOUSE, 4 bedrooms, 3 reception, delightful garden. Four minutes main line Marylebone, 25 miles London. 14 gns. per week, 15 months or longer. Beaconsfield 1847.—Box 1061.

TAXATION AND THE COMMON MARKET. Two-day conference on problems of taxation in relation to the Common Market to be held on November 22-23, at the Connaught Rooms, London, W.C.2.—Further details from The Secretary, Federal Trust, 10, Wyndham Place, London, W.1. PADdington 6670.

TYPEWRITERS ? Large selection of Portables from as little as 17 Gns. Many machines £££ below list price. Full guarantee. Part exchanges and H.P. terms.—Typewriter & Office Services, Ltd., 38, The Broadway, Hampstead, N.W.

APPOINTMENT REQUIRED

SWISS, resident in Switzerland, 30, Economist, with university study, banking experience. Very good background, experience in the food-metal and textiles trade. Technical minded, speaking fluently German, French, English, Italian and interested in broadcasting, is looking for a position as Assistant to the Manager in cultural organisation or industry.—Write details to Box 1066.

APPOINTMENTS

UNESTABLISHED DISTRICT COMMISSIONERS
NATIONAL SAVINGS COMMITTEE
Several vacancies, mainly in the Provinces, for men or women with knowledge of economics, organising ability, preferably with experience of public speaking and voluntary organisations. University education an advantage. National salary £806 on entry (age 25 and over) rising to £1,487. Possible establishment later. Application forms from Manager (PE.5980), Professional and Executive Register, Ministry of Labour, Atlantic House, Farringdon Street, London, E.C.4. Closing date for completed application forms December 3, 1962.

THE UNIVERSITY OF SHEFFIELD
Applications are invited for a post of LECTURER in ACCOUNTANCY to begin duties as soon as possible. Initial salary according to qualifications and experience on the scale £1,150 x £50—£1,500 x £75—£1,950, with F.S.S.U. provision and family allowance. A grant towards removal expenses will be made. Further particulars may be obtained from the Registrar, to whom applications (four copies) should be sent by November 24, 1962.

COMPANY AFFAIRS

In the London stock market sentiment has been helped by Mr Maudling's measures and The Economist *indicator rose by a further 6.2 points to 336.4, its highest level since mid-August. Motor shares were the centre of attraction along with those of motor component manufacturers and car distributors. Sheet steel, electrical, engineering and rental companies were also well to the fore. Prices marked time on Wednesday but then moved further ahead on Thursday when "Shell" Transport touched a new 1962 peak following its third quarter's results.*

BMC

THE British Motor Corporation did better than the pessimists had expected in the year to end-July ; though trading profits fell by more than a third to £10,083,000, the company has maintained the dividend at 20 per cent (covered by earnings of only 12¼ per cent) by drawing on the dividend equalisation fund. But this is quite a sorry enough performance for a company that made nearly £32 million two years ago and is in the middle of a costly expansion scheme. To meet the dividend out of reserves is more understandable when the cut in purchase tax holds out the hope of more profitable trading next year, but it must weaken the company's liquid reserves at a time when many other calls are being made upon them.

Production last year totalled 600,000 vehicles, almost the same as in 1960-61, though a change in works' holidays meant three fewer working weeks in the year. But this is still a disappointing result as the company had got through the winter with little short-time working and output represents only about 75 per cent of capacity. Production was disrupted abnormally by model changes last autumn, and partly as a result of strikes it did not rise as quickly as the company had hoped in the summer. Higher utilisation of capacity, as the company may be able to attain next year, should help to make for higher profits, as will the introduction of the Morris 1100 ; but the price increases announced last month are hardly big enough to make a substantial difference and the commissioning of new plant will add substantially to capacity. Shareholders in BMC look like having to be patient for a return to really big profits, for their directors seem to be following a long-term plan to make the company dominant in the British motor industry—and to get sales high enough to justify the expansion in capacity. At 15s. 4½d. the 5s. shares yield 6½ per cent.

S. Smith and Sons

WITH the motor and aircraft industries as its main customers S. Smith and Sons has found the going hard and in successive years its gross profits have fallen from £4,191,000 through £2,660,000 to £2,226,000. The latest fall of almost 17 per cent in the year to August 4th is no worse than expected in view of the warning last May of profits "materially less" than the £3 million forecast by the chairman in November, 1961. As expected the dividend is maintained at 20 per cent, but it is now covered only 1.6 times and the 4s. shares at 14s. 6d. yield 5½ per cent. Earlier this year they touched 12s., only half their 1961 peak, and it remains to be seen whether the chairman's statement with the full accounts will suggest that the present price of the shares takes too gloomy a view of future prospects. Clearly the Chancellor's measures should boost sales of motor components by the company ; but much will continue to depend upon the state of its order book for aircraft instruments, sales of which in 1961-62 were expected to exceed the earlier peak level of 1958-59. Bigger sales of clocks and watches—a side of the business that looks vulnerable if Britain joins the common market—were also expected. In all, S. Smith's sales rose by over £2 million to £40½ million, but the sharp fall in profits clearly shows how strong the pressure on margins has been.

Royal Dutch/Shell

AFTER about three years of neglect, oil shares are steadily coming back into favour. Because of the low net UK rate of tax of the oil giants, the attractions of the shares for gross funds are small. But the yields may be attractive to private investors who did not stuff their portfolios with shares in the oil rush in 1957 and 1958. Royal Dutch/Shell and other companies have cut back their investment programmes and are therefore prepared to pursue more generous distribution policies. In the nine months to end-September, for example, Royal Dutch/Shell's capital expenditures amounted to £256.4 million (against £268.8 million in the comparative period of 1961) and on September 30th its liquid holdings amounted to £475.9 million (against £413.1 million a year earlier). "Shell" Transport has already raised its interim and the smallest total payment that can be expected this year is 1s. 4d. tax free (against 1s. 3d.) and guesses that it may amount to 1s. 6d. tax free may not be all that wide of the mark. On the first assumption the 5s. shares at 37s. 10½d. yield 5.7 per cent and on the second 6.5 per cent. With possibly even bigger dividends to come in future years, such yields cannot be ignored.

SALES AND INCOME
(£ million)

	1961 Quarter (iii)	1962 Quarter (i)	1962 Quarter (ii)	1962 Quarter (iii)
Sales :—				
Including duties	715·6	721·9	741·8	760·5
Excluding duties	498·0	531·5	525·8	530·0
Gross income	82·5	95·7	95·3	99·4
Net income	43·9	47·9	47·3	50·1
Gross income/sales*	16·5	18·0	18·1	18·8
Net income/sales*	8·8	9·0	9·2	9·5

* After deducting sales taxes, excise duties, etc. from turnover.

The accompanying table shows that a further improvement in margins took place in the third quarter and there has been another rise in the volume of sales. As Mr J. H. Loudon explained to the New York Society of Security Analysts, the potential over-supply of oil has not yet disappeared, tankers are still in surplus, newcomers are adding to the pressure of competition and Russian oil is a continuing threat. But demand for oil is still growing and the giants have pruned their operating costs as well as their capital programmes. And there are signs of a firmer tendency in oil prices. All this led Mr Loudon to predict that the group's net income this year could "well be around £200 million." As it amounted to £146½ million in the first nine months, an excellent fourth quarter appears to be assured for the group.

Fisons

IN spite of indications to the contrary, Fisons sees no need to come to the market for new funds to enable it to carry out its investment programme. Capital commitments at £12 million are dauntingly large compared with the cash flow, amounting to £2.3 million in 1961-62, and liquid assets have been reduced to less than £1½ million. But the company has been advised that it will be able to meet its commitments out of the cash flow, supplemented only by short-term loans. The most obvious result of this decision, as far as it affects shareholders, is that Fisons can be expected to follow a conservative dividend policy over the next few years.

Sir Clavering Fison gives in his statement the reasons for the discrepancy between the

	1958 £ mil.	1959 £ mil.	1960 £ mil.	1961 £ mil.	1962 £ mil.
Sales	41·7	40·9	45·6	48·3	48·0

Dividend yield : 6·2%. Equal to 11·1 years' earnings.

drop in profits of £1¼ million forecast in May and the actual fall of £900,000: the food and fertiliser companies did what was expected of them—that is, not very well—but the other companies did far better—particularly Fisons Pest Control which benefited from weather conditions favourable to its business. Commenting on the results of the first four months of this financial year, the chairman says that they "do not compare unfavourably" with last year's results. But two-thirds of the company's turnover is still accounted for by sales of fertilisers and by far the greater part of its new investment is in fertiliser plant; about 80 per cent of current capital commitments is accounted for by the nitrogen products plant at Immingham alone. No improvement in profits from fertiliser sales is expected in the immediate future and the new plants thus seem to have a defensive nature. But they may be necessary if Fisons is to hold on to its share of the market in the face of threatened overcapacity and the improved economies resulting from new techniques. Clearly, Fisons will have to make a determined effort in overseas markets to produce any dramatic improvement in its profits.

Wall Paper Manufacturers

THE report and accounts of Wall Paper Manufacturers are well illustrated and presented and, up to a point, informative. They include a ten year profit record and a breakdown of shareholdings, which shows that, as a result of the share split earlier this year, the number of ordinary shareholders has risen sharply from 8,000 to 14,300. But the chairman's statement leaves many questions unanswered. Mr Ivan C. Sanderson fails to explain in detail, for example, where the advance in profits in 1961-62 came from. Would it not be possible to give some breakdown of profits for the trading divisions so as to establish their relative importance?

In the year to end-June the group's pre-tax profits rose from £5.2 million to £5.8 million and presumably some of the improvement resulted from a full year's contribution from the two new acquisitions—K.L. Holdings, which had an "excellent year," and Smith and Walton, which earned only a "modest" profit. In wall paper, new biennial pattern books were introduced early this year and Mr Sanderson reports a record volume of trade. The paint division has been hit by over-production and severe competition and WPM's retail outlets had a less profitable year as a number of shops were being modernised.

In the immediate future Mr Sanderson expects "very competitive conditions" in the wallpaper business and "insufficient profitability" in the paper making division. But there are signs that the paint industry is beginning to shed some of its excess capacity and Mr Sanderson detects a spreading of the "do it yourself" movement into the higher income groups (which could help the retail outlets). On balance, however, the prospects suggest that the 5s. shares are more fairly valued at the current level of 18s. 9d. xd to yield 4½ per cent than they were earlier this year when they stood at 24s. 6d.

The Week's Interim Results

THE mixed interim results published this week have generally been in line with stock market expectations. The biggest surprise would have come had the interim payments of Unilever, been increased, but following the decline in profits disclosed by the half yearly statement in August the NV dividend has been left at Fl. 1.60 (8 per cent). The equivalent dividend under the equalisation agreement for Limited is 5.70 pence, exactly 9½ per cent. The corresponding payment last year was equivalent to 9.47 per cent and the rounding up results from a slight variation in the rate of exchange between the £ and the Dutch guilder.

Marks and Spencer.—This company's unchanged interim dividend of 15 per cent coincided with the Board of Trade's figures of retail sales for September, maintained at the high level of August. Demand has been particularly strong for clothing and footwear and this must have played a part in the increase of 4.7 per cent from £84¼ million to £88¼ million in Marks and Spencer's sales in the six months to end September. It compares with an increase of 6 per cent in sales in the first half of the financial year to March and an increase of 3½ per cent for the year as a whole. Once again the interim statement says nothing about profits, but the sales figure suggests that Marks and Spencer is withstanding keen competition. Profits will probably be higher this year but perhaps not so well up as sales. Scope for major improvement in Marks and Spencer's profit margins is limited, for most of the growth is coming from the expanding food section, where margins are usually lower than on clothing.

Paper Companies.—After the gloomy statement from Bowater Paper in September, little cheer was expected from the other papermakers. But ordinary shareholders in Wiggins Teape and Spicers are likely to get the same dividend and those in Albert E. Reed perhaps a slightly higher payment following the one-for-twenty scrip issue in compensation to the voting ordinary shareholders for votes for the "A" shareholders. One result will be that Reed will not become a subsidiary of the combined Daily Mirror-Sunday Pictorial group (the terms of this merger are still awaited). The voting power in Reed controlled by the Daily Mirror and the Sunday Pictorial will be reduced from just over 50 per cent to 43 per cent, effective control still but without the necessity

REED'S SALES AND PROFITS

Six months to	(£'000s) Sept., 1961	March, 1962	Sept., 1962
Net sales	47,339	47,685	45,539
Trading profit	5,355	6,435	5,801
Depreciation	2,081	1,945	2,090
Tax	1,471	2,164	1,795
Net profit	1,803	2,326	1,916
Trading profit/sales	% *11·3*	% *13·5*	% *12·7*

of consolidating Reed's results with those of the Daily Mirror and the Sunday Pictorial combined. The interim results are surprisingly good for while sales in the six months to end-September fell from £47.3 million to £45.5 million trading profits rose from £5.4 million to £5.7 million and net profits from £1.8 million to £1.9 million. The devaluation of the Canadian dollar exaggerates the fall in the value of sales and, consequently, the improvement in profit margins, but Reed's economy measures at home must have been important in adding to profits.

Much of the improvement in Reed's profits probably took place in the three months to end-September, for Wiggins Teape, in the six months to end-June showed a fall in profits before tax and depreciation, but after a much higher interest charge, by 12½ per cent, from £2.6 million to £2.2 million; but profits in the three months to end-September are above those for the same period in 1961, and total profits for 1962 are likely to be below those for 1961.

In Spicers the merchanting and mill agency divisions, rather than paper making, are the biggest earners. Falling demand for paper products here and in Australia has hit profits. After a 7 per cent fall in pre-tax profits in 1961, profits in the first six months of 1962, at £405,000, were 10 per cent lower than those for the first half of 1961. An unchanged dividend seems assured but the directors say that the expected recovery in trade in the second half of the year has been slow.

De La Rue.—These interim figures confirm the good impression made by the first quarter's results, though the directors again emphasise that comparisons between individual quarters can be misleading since they may be influenced by the completion of big contracts or by the costing of a series of lean contracts. Profits in the second quarter

were below those for the corresponding period in 1961 but this was more than offset by the sharp increase in profits recorded in the first quarter. Moreover there is a seasonal element in the figures; this can probably be attributed to the Thomas Potterton group which makes gas and oil fired heaters for which demand rises in the second half of the year.

DE LA RUE'S SALES AND PROFITS

	28 weeks ended Oct. 14, 1961 (£000's)	24 weeks ended Mar. 31, 1962 (£000's)	28 weeks ended Oct. 13, 1962 (£000's)
Sales	10,408	11,501	12,338
Gross profit	1,005	1,594	1,124
Net profit	281	551	404
Gross profit/sales	*9·7%*	*13·9%*	*9·1%*

Growing interest in newer types of heating should now be helping Potterton and in his statement in July the chairman, Mr B. C. Westall, expected Potterton profits to begin to climb again. The group's total sales at home rose by 16 per cent in the first half of 1962-63 but once again it is the group's overseas business that makes the greatest strides with sales up by 27 per cent to £4 million. There is no improvement in gross margins; profits of the Formica subsidiary must still be feeling the effects of the depression in the furniture trade and this is reflected in a further fall in profits attributable to minority holders (which include American Cyanamid with a 40 per cent stake in Formica). But the directors expect the final results to show a "reasonable increase" over those for 1961-62.

Rolls Razor.—The interim report from Rolls Razor follows an unprecedented statement from the company's brokers, offering an "authoritative denial of rumours affecting Rolls Razor." The brokers said:

> We are glad to be able to tell our clients that the chairman of Rolls Razor (Mr Reader Harris, MP), the chairman of Pressed Steel (Mr Alex Abel Smith) and the chairman of Drages (Sir Isaac Wolfson) authorise us to say that Rolls Razor has operated and is operating successfully, that it is entirely solvent, that all its creditors are being and have been paid in the normal way, and that all its salesmen are, and always have been, expressly forbidden to attempt switch selling.

This statement might have come better from the company itself but, together with this week's interim statement, it may help to arrest further sharp fluctuations in the shares. The interim dividend is 40 per cent (against a forecast of 30 per cent) and the directors' forecast of the total for 1962 is revised from 80 to 100 per cent. The managing director, Mr John Bloom, who owns about 2 million of the 5 million shares, has waived his interim dividend. Trading results for the first ten months of the year indicate that the full year's profits will "materially exceed" the prospectus forecast of £650,000 made in May. The directors disclose that the agreement with General Guarantee Corporation (a subsidiary of Drages) provides for hire purchase credit facilities of up to £10 million. This agreement is in the form of a 10-year contract with five year's notice of cancellation. Rolls Razor's prospects in the war with other washing machine and refrigerator manufacturers are discussed in an earlier Business Note.

Simon Engineering.—On Monday, when Mr Maudling announced measures to stimulate private capital investment, Simon Engineering made its own commentary on the state of trade among the capital goods producers by cutting its interim dividend from 10 per cent to 7½ per cent. The group's business largely depends on the investment plans of the coal, steel, chemical, electricity and food industries; the recession through which some of these industries have been passing has slowed down or postponed their investment programmes, and so affected Simon's flow of work, making trading progressively more difficult. The final dividend will be considered in the light of the profits for 1962 (which are likely to be much lower than those for 1961) and prospects as they appear next April. The Chancellor's measures may brighten the outlook for Simon Engineering to some degree. In 1961 the total dividend of 27½ per cent was covered by earnings of nearly 50 per cent.

Firth Cleveland.—This industrial holding company has also cut its interim dividend. In June the chairman expected this year's profits at least to be equal to those of 1961 (which were below those for 1960) but with the cut in the interim from 12 to 8 per cent the directors now say that "even the 1961 profits will not be maintained in 1962." The trade of the group's principal engineering companies has, apparently, "held up reasonably well" but the steel and retail subsidiaries have been affected by rising unemployment and short time working in the motor and other industries they serve. Profits of the radio and television retail subsidiary, Broadmead, have also been affected by the sharp increase in the rental business which has had the effect of pushing up the depreciation charge. The 1961 dividend of 32 per cent was barely covered by earnings of 37 per cent, so there is little doubt that the final will have to be cut—if, like the interim, by a third, the total payment for 1962 will be 21½ per cent.

Butlin's.—There is nothing slow about the growth of catering for leisure and Butlin's is to issue a £4 million debenture next month to finance further extensions. It has forecast a rise of more than £2½ million—nearly 25 per cent—in gross revenue for 1962. A new camp at Minehead has helped to bring about this sharp improvement in business but some part of it must go in higher costs. The directors seem to take a cautious view; raising the interim dividend from 15 to 25 per cent, they forecast a final of "not less than 50 per cent." This could be consistent with a reduction of 5 per cent in the final payment and a total of 75 per cent against 70 per cent for 1961. The stock market was disappointed but when the directors decide the final next June they will have a shrewd idea of the trend of bookings for 1963. Might it not be better for Butlin's and other holiday camp companies to close their financial years in September to coincide with the end of the holidays season?

Norvic Shoe

THE past year has been difficult for shoemakers and retailers in contrast with the two preceding years of boom. The poor weather in the spring and summer affected buying of new fashion lines and retailers were left with substantial stocks on their hands, sometimes of shoes that had gone right out of fashion.

Despite these difficulties Norvic added nearly two per cent to its sales in the year to June 30th but higher costs (including purchase tax increases that had to be absorbed for a time) left trading profits almost 6½ per cent lower at £587,000. The dividend has been maintained at 15 per cent after the one for five rights issue but it is now covered only 1.4 times and the 5s. shares at 11s. are close to their low for the year and yield 6¾ per cent. The price compares with the rights issue price of 12s. and a peak this year of 15s. 7½d. There is thus some scope for recovery in the shares. The latest Board of Trade figures show a good improvement in sales of footwear in August and September and the chairman of Norvic, Mr W. A. Royce, confirms that trade has improved and that retail stocks are now much lower.

Norvic's profits in the current year will include the results of the B.G. Group in South Africa. Earlier Norvic had a 17 per cent stake in this company but in March this was hastily increased to a controlling interest of 63 per cent after it was learnt that another company had taken an option on a substantial block of shares. Its pre-tax profits last year amounted to £113,000 and plans are in hand for the erection of a new tannery, which will treble production when it is completed in 1964.

THE MONEY MARKET

THE Treasury bill rate fell slightly at the tender on Friday of last week, by 2.55d. to 76s. 11.48d. per cent, after rising by a full 5s. over the two previous weeks. The syndicate of discount houses raised its bid at this tender by 1d. to £99 0s. 9d., but its allotment of the 91-day bills on offer fell to 32 per cent compared with the previous week's 46 per cent. The offer was £40 million lower at £200 million but total applications were only £18 million lower at £364 million. Also on offer were the first £60 million of the seasonal 63-day bills of which the market received an allotment of 66 per cent.

On the first three days of this week credit was very short and the authorities made large special bill purchases on each day to relieve the pressure. On Monday, however, this help was insufficient and two or three houses borrowed a very small amount from the Bank of England at Bank rate.

The United States Treasury bill rate rose sharply this week from 2.689 to 2.841. The cost of three months' forward cover remains at $\frac{1}{16}$ per cent, so that there is still an arbitrage margin of just over $\frac{1}{2}$ per cent on a covered swap from US to British Treasury bills.

(4) Number registered as unemployed expressed as a percentage of the estimated number of employees. (5) Excluding school-leavers. (6) Deliveries. (7) Great Britain. (8) Excluding all screening losses normally amounting to around 5,000 tons a week. (9) Average for third quarter. (10) England and Wales. (11) Generation for public supply. (12) Total available at gas works. (13) Average for second quarter. (14) On 1948 Standard Industrial Classification; later figures on 1958 classification. (15) Also including metal manufacture. (16) Average for fourth quarter.

APPOINTMENTS

Investment Management

• FINANCIAL Institution in Scotland, with an extensive and varied investment portfolio comprising Stock Exchange securities, properties and mortgages approaching in value £200,000,000, seeks an administrator to head its Investment Department.

• THE successful applicant will be responsible for the supervision of the staff and the department's activities generally, and in particular for submission of proposals to a Committee and for the implementation of decisions.

• PREVIOUS similar experience is essential.

• AGE about 45 and salary up to about £4,000 p.a. Provision exists for back-service credits on joining the Non-Contributory Staff Pension Scheme.

Write in confidence to us as the company's advisers.
Nothing will be disclosed without permission.
Letters should be addressed to M. J. Graham-Jones.

JOHN TYZACK & PARTNERS LTD

10 HALLAM STREET · LONDON W1

MINISTRY OF TRANSPORT

The Ministry of Transport is shortly setting up two Road Accident Investigation Teams, one based in Birmingham and the other in Southampton. Applications are invited for the posts of Heads of these teams.

Each team will consist of five or six people and its task will be to study road accidents in its area (Warwickshire and Hampshire), to consider remedial techniques and, in conjunction with local authorities, to promote proposals for dealing with accidents and to assess results. Much of the work is likely to be experimental, and successful results may be applied for the national benefit. The Heads must possess imagination, drive, a real interest in road safety, the *ability to deal with practical problems* and a talent for organisation. They will be expected to reside within their areas.

The appointments will be unestablished (i.e. non-pensionable) and will be for a period of two years with the possibility of an extension. The salary will be in the range £2,000-£2,500.

Applications and enquiries should be addressed to the *Establishment Staffing Division*, Ministry of Transport, Room 8/170, St. Christopher House, Southwark Street, London, S.E.1, not later than November 21, 1962.

GRAMPIAN HOLDINGS LTD.

Market Research and Marketing Consulting

Appointments are being made in the above field within the internal management consultancy organisation of this fast-growing diversified holding company. The work, mainly based on London office, entails projects for subsidiary companies involving market surveys, forecasting, budgeting, and sales planning and covers consumer and industrial products.

Applicants, preferably in their twenties, should have some or all of the following qualifications: relevant university or professional background, relevant operating or consultancy experience, knowledge of statistics or O.R. There are excellent prospects of advancement both within the team and to management positions in the subsidiaries.

Full details should be sent to Mr. A. S. Ninian, Grampian Holdings, Ltd., 1 Newton Place, Glasgow, C.3.

MIDDLESEX COUNTY COUNCIL

EDUCATION COMMITTEE
EALING TECHNICAL COLLEGE
St. Mary's Road, Ealing, W.5.
Principal: Dr. O. G. Pickard, B.Sc.(Econ.), M.Com., F.I.O.M.

Applications are invited for two appointments in the MARKETING Division of the School of Business: (1) Assistant Lecturer Grade B. (2) Research Assistant. Applicants should have had good experience in the marketing field and have specialist knowledge of some branch of marketing or market research. They should be graduates. Permission will be given to undertake a reasonable amount of private consultancy work.

Salaries within the range £915-£1,642 p.a. according to qualifications, training and experience.

Further particulars and forms of application, returnable by November 24, 1962, may be obtained from the Principal.

C. E. GURR, M.Sc., Ph.D.,
Chief Education Officer

NATIONAL FOUNDATION FOR EDUCATIONAL RESEARCH IN ENGLAND AND WALES

RESEARCH OFFICERS (TWO). Applications are invited from graduates for two positions in a research team being set up to investigate *Streaming in the Primary School.*

For one post, a person with experience in psychometrics is required. For the other post *an educational psychologist interested in* non-cognitive aspects of education is desired. One of these two posts will be senior to the other and will be regarded as that of the team leader.

Salary within scale *£1,100 x 50—£1,450.*

ASSISTANT RESEARCH OFFICER. A vacancy also exists for an Assistant Research *Officer, part of whose time will be spent in the* development of tests and part on statistical analysis in connection with the above project. A graduate, with good psychometric and statistical background is sought. Teaching experience an advantage.

Salary within scale *£750 x 50—£1,000.*

For further details and forms, write to NFER, 79 Wimpole Street, London, W.1 (by 20th November, 1962).

UNIVERSITY OF EDINBURGH

DEPARTMENT OF
SOCIAL ANTHROPOLOGY
LECTURER or ASSISTANT LECTURER

Applications are invited for the post of LECTURER or ASSISTANT LECTURER in the Department of Social Anthropology. Salary Scales: Lecturer £1,150 x £50 to £1,350. Bar: £1,400 x £50 to £1,500 x £75 to £1,950 per annum; Assistant Lecturer £900 x £50 to £1,050 per annum. Placement on the scales will be according to qualifications and experience. The posts are subject to superannuation, and family allowance is payable where applicable.

Candidates should have conducted research in some aspect of modern society in addition to possessing qualifications in either Social Anthropology or Sociology.

Further particulars may be obtained from the undersigned, with whom applications (six copies), giving particulars of qualifications, including publications, and the names of two referees, should be lodged with the undersigned not later than 14th December, 1962. (Extended date).

CHARLES H. STEWART,
Secretary to the University.
September, 1962

Applications close in Australia and London on *31st January, 1963.*

COST ANALYSTS

Opportunities with attractive prospects are offered in Ford of Britain to Cost and Budget Analysts who have had practical experience in an engineering industry. These are challenging and rewarding positions which will make substantial contributions towards the high state of efficiency necessary for competition in the expanding automobile markets of the world. Promotion and salary will depend on merit alone and opportunities will not be limited to the finance activity.

The vacancies are in the *Controllers' Offices of the four* Manufacturing Divisions of the Company (Assembly; Metal Stamping and Body; Chassis, Transmission and Engine; Hot Metal) and are at two levels. For the senior *vacancies the upper age limit is 35 and minimum require*ments are a second class honours degree or an accounting or engineering qualification plus G.C.E. 'A' level. For other positions the upper age limit is 30 and minimum requirements are an accounting or engineering qualification (intermediate only acceptable in some cases) plus G.C.E. 'O' level in five subjects. No applicants will be considered who do not meet these requirements.

Brief details of experience, qualifications and age should be addressed (with envelope marked *CA*) to:

**P G SLIP
Recruitment and *Placement*
Ford Motor Company Limited
Dagenham, Essex**

General Management

• A MAJOR CITY GROUP engaged in all aspects of providing finance for industry and having interests in a wide variety of industrial undertakings, wishes to add to its staff a general management executive having a production engineering background.

• THREE roles are involved: surveying and reporting on companies seeking association with the group; representing the group as a Director on the Boards of companies in which it has interests; advising on problems of a production engineering nature in associated companies generally.

• PREFERENCE is for a public school man with a university degree or equivalent who has had executive or consultancy experience in production management since qualifying professionally in engineering.

• AGE preferably between 29 and 35. Salary will start between £2,000 and £3,000 p.a.

Write in confidence to us as the group's advisers.
Nothing will be disclosed without permission.
Letters should be addressed to M. J. Graham-Jones.

JOHN TYZACK & PARTNERS LTD

10 HALLAM STREET · LONDON W1

BBC requires PRODUCTION ASSISTANT for Women's Programmes, Television (London). Duties will include studio and film direction, assistance in programme administration and contribution to programme formulation and content (particularly the programme "Perspective"). Proven ability in television and film camera direction and developed visual imagination essential, together with wide intellectual appreciation of, and interest in, human affairs. Salary in range £1,575 to £2,000. Requests for application forms (enclosing addressed envelope and quoting reference 62.G.450 Ect.) should reach Appointments Officer, Broadcasting House, London, W.1, within five days.

BBC requires Television Talks Producer in Manchester, to produce varying types of talks, documentary and magazine programmes. This demands imaginative origination of ideas in visual terms, practical ability to execute them effectively and at speed, creative use of variety of visual material including film, sound editorial judgment and mastery of techniques of television production. Salary rises to a maximum of £2,475 per annum.—Requests for application forms (enclosing addressed envelope and quoting reference 62.G.446 Ect.) should reach Appointments Officer, Broadcasting House, London, W.1, within five days.

UNIVERSITY OF BIRMINGHAM

FACULTY OF COMMERCE AND SOCIAL SCIENCE

Applications are invited for a Research Associateship (£750-£1,000) or Research Fellowship (£900-£1,000) attached to the West Midlands Social and Political Research Unit. The initial duties will include analysis of special data from the 1961 Census. Some experience of statistical methods used in the social sciences is essential. Applications (2 copies), naming two referees, should be sent by November 17, 1962, to the Assistant Registrar (Commerce and Social Science), The University, Birmingham, 15, from whom further particulars can be obtained.

THE UNIVERSITY OF MANCHESTER

Applications are invited for a RESEARCH WORKER IN SOCIAL ADMINISTRATION. The successful applicant will work on a research project in the field of hospital administration, sponsored by the Ministry of Health. The appointment is for one year and experience in health-care research would be an additional qualification. Salary within the range £900 to £1,250 per annum, initial salary according to qualifications and experience, with membership of Children's Allowance Scheme. Applications should be sent not later than 30th November, 1962, to the Registrar, the University, Manchester 13, from whom further particulars and forms of application may be obtained.

STANDARD TELEPHONES AND CABLES LIMITED

MARKET RESEARCH

An Assistant is required by our Private Communications Equipment Division, with a minimum educational standard up to "A" Level and with a fairly good knowledge of economics, to undertake the full range of techniques associated with market research.

Some commercial experience would be most useful and a technical background would be desirable, although this need not necessarily be formal. A knowledge of the structure of industry, together with some experience of statistical and survey techniques, is essential.

The Division is located at Footscray, a pleasant residential district, only 13 miles from central London.

The Company operates a wide range of benefits, including a NON-CONTRIBUTORY Pension Scheme.

Apply, stating qualifications, experience and salary, to
W. J. YEOMANS, Personnel Manager,
Standard Telephones and Cables Limited,
Private Communications Equipment Division,
Footscray, Sidcup, Kent.

For further appointments and other classified advertisements see pages 612 and 620

UNIVERSITY OF SINGAPORE

Applications are invited for three posts of (i) Lecturer or (ii) Assistant Lecturer in Political Science. Salary scales: (i) £1,148 x 49—£1,442/1,540 x 56—£1,820 per annum (ii) £1,001 x 49—£1,099 per annum. Entry point according to qualifications and experience. Allowances: expatriation in range £260-£308 per annum, cost of living (temporary) in range £210-£560 per annum. Passages for appointee, wife and children not exceeding 12 years. Partly furnished house/flat at reasonable rent. Provident Fund Scheme.—Detailed applications (eight copies) naming three referees by December 15, 1962, to Secretary, Inter-University Council for Higher Education Overseas, 29 Woburn Square, London, W.C.1, from whom further particulars may be obtained.

ECONOMIC CONSULTANTS LIMITED

Have a vacancy for a

JUNIOR ECONOMIST, with probably a couple years' experience in an economic department or institute, or in industry, since graduating.

The chief requirements are a high level of intelligence, adaptability and accuracy, but a first or good second-class degree in Economics or related subject is also needed. The work is varied, testing and full of headaches: any member of the staff is expected before long to carry through a complete study (with guidance where helpful) to a final report and conclusions. Conditions are pleasant and reasonably informal. Full non-contributory pension scheme.

Please write, enclosing personal history, to W. F. Luttrell, Managing Director, Economic Consultants Limited, 3 and 4 Clement's Inn, Strand, London, W.C.2.

What will happen if Britain disarms?

THE ECONOMIC EFFECTS OF DISARMAMENT

By The Economist Intelligence Unit
Sponsored by the United World Trust
To be published in January 1963

How would disarmament affect the United Kingdom economy?
Which industries depend on defence spending?
In which parts of the country is defence employment greatest?
How could spending on defence be replaced?
What effects could disarmament have on consumers' incomes, the social services, aid to developing countries, investment? This is the most detailed study to have been made of the effects of disarmament on the United Kingdom economy.

SUBSCRIPTIONS TO THE ECONOMIST

Annual Postal Subscription by ordinary mail, UK and Canada £4 . 10; elsewhere overseas £5

By air see below

Subscriptions to many countries can be sent either by direct second-class airmail or in bulk by air freight for onward posting from central distribution points. Airmail is invariably more expensive but usually quicker by about 24/48 hours. Where only one service is shown this is because the alternative is either not available or not recommended.

DO YOU KNOW

that this bit of flex could be shockingly expensive?

VULCAN KNOW The condition of an electrical installation can only be determined by making thorough tests. The expert who knows how to verify the soundness of the insulation, to check the effectiveness of earthing systems, switch polarity, and switchgear, is the Vulcan Engineer Surveyor.

The regular annual inspection of your electrical installation is the greatest safeguard against the hazards of shock and fire. This inspection and protection is what Vulcan provide. It is a specialist's job.

Equipped with the finest modern instruments, the knowledge, and the experience, Vulcan are the specialists. That's why insurance brokers know that safety first is Vulcan first.

May we send you FREE 'Vulcan'—a journal for all users of plant and machinery with reports of accidents and safety hints. Write to us.

An extra specialist Vulcan Service!
We were the first insurance company to offer industry Non-Destructive Flaw Detection by Ultrasonics, Radiography, or Magnetics. This extra specialist service is now available to *all* industry—whether Vulcan insured or not. Write to us for complete details.

Vulcan ARE SPECIALISTS

THE VULCAN
BOILER & GENERAL INSURANCE CO. LTD.
DEPT. 17, 67 KING STREET, MANCHESTER 2

* *The safety of any electrical installation depends on the soundness of the earth conductors, the insulation, the wiring itself. Nothing is more ill-used than electric flex. A break at any point, and you're in for serious trouble. Many times before now, the most innocent-looking flex has hidden away such a fault. Fire, costly damage, sometimes loss of life, have been the direct result.*

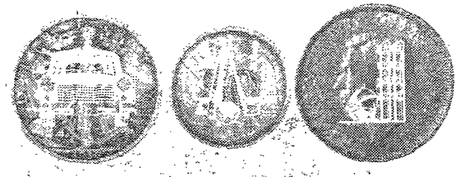
Are you worried enough without reading The Guardian?

THINK how nice it would be — not to *stop* worrying (you must worry occasionally) but to know that the things you worry about are worth it. That's where The Guardian comes in. In every sphere of current affairs you can have accurate, factual reporting and unprejudiced comment to help you make up your *own* mind about what's right or wrong in the world. And you get this unbiased approach in The Guardian. It's for people who want to *know*—people who want to think for themselves. That's why more and more people are turning to The Guardian.

The Guardian has more than doubled its circulation over the last ten years

THE GUARDIAN
for lively minds

Link up with the bustling Japanese economy



More than 2000 firms in countries all over the world have made technological, manufacturing, marketing, and other types of industrial agreements with Japanese companies. With fewer restrictions nowadays on the flow of capital and technical know-how across national boundaries, more and more companies are discovering the advantages of such tie-ups. The Industrial Bank of Japan has been intimately associated with every major Japanese industry for 60 years and is well qualified to act as go-between in effecting attractive contracts in all lines of business. Inquiries are invited.

THE REGULAR SERVICE YOU CAN RELY ON

No trouble in store

COMPUTER SORTS OUT SALES

A. W. Gamage, the famous London store, have their 15,000 weekly sales analysed at a Ferranti Computer Centre. These are divided into four categories—Shop Cash, Shop Enter (for sales on account), Post Cash and Post Enter. The computer also deals with Postage and Hire Purchase, returned goods and erroneous entries.

At the end of each day the computer prints out a daily total for each category, covering about 100 Departments. It also produces an analysis of nett weekly sales by Departments (for post and shop sales), an analysis of weekly sales for trading and non-trading Departments, and calculates commission, at three different rates, for 600 selling assistants. Result: an enormous increase in efficiency.

Computer guidance pays

The case above is only one of many where slashed costs and greater efficiency have resulted from computer guidance. Computers can perform an immense range of tasks with equally immense rapidity. Once properly programmed, they can cut through apparent jungles of information to reach relevant and practical conclusions. And because computers consider every aspect of a problem, every combination of variable factors, decisions based on their guidance are happily free from bias or over-simplification. Computers don't play hunches, but they *can* test them.

However large or small your problem, hired computer time might be able to solve it. There is no need to own a computer—and no need to worry about the technicalities of computing—you can hand your problem to Ferranti and they will do the rest, or they can teach you, in a few hours, a simple "do-it-yourself" programming technique. Why not get in touch with the Computing Service? They will be glad to advise you whether or not you could profit by computer guidance.

Call:—Ferranti Computing Service; LONDON: Museum 5040. Telex 23830. MANCHESTER: East 1301. Telex 66111, or EDINBURGH: Davidson's Mains 2231. Telex 72141.

WHAT IS A FELLMONGER?

Photo by courtesy of Barrow, Hepburn & Gale Ltd.

A worthy quiznaster question?

When supplying a pump for dealing with **Sodium Sulphide**/Lime Paste we knew a good deal about pumping the paste, but a little puzzled about Fellmongers. But there is the Mono Pump tucked away on a machine for fellmongers who prepare woolled sheepskins. Only one of the many, many duties performed by Mono Pumps on many machines, in many factories, on many processes—commonplace or outlandish.

The **MONO** pump

BRITAIN

MINISTERS AFTER RIGHTEOUSNESS

The Prime Minister's decision to appoint a judicial tribunal to deal with the ramifications of the Admiralty spy case looked only deftly like retreat before the Opposition attack; now Admiralty, Opposition and the press are in much the same boat (p. 642).

The Board of Trade has learnt little, and forgotten nothing, in the past century: **shoppers** need real protection from the shabby artifices of vendors and not the meretricious gestures promised in the draft Weights and Measures Bill (p. 693).

Of the five **by-elections** to be decided next Thursday, two, at **Woodside** and Norfolk Central, are of special interest (p. 683): new rules for their coverage by television seem to be restrictive for restriction's sake (p. 656).

A recent Board of Trade decision about a **monopoly** is hard to justify on the evidence available (p. 698).

THE POOR IN SPIRIT

The **aged poor** have not yet benefited from a change in the emphasis of welfare from institutions to the community (p. 684).

Members of Parliament are not overrewarded: there is no case for denying them their post-ministerial directorships—or, provided it is not on their own inflationary terms, their claim to a pay rise (p. 648).

Dr Beeching's magnanimity to his **railwaymen** is already having its foreseeably overgenerous effect outside the railways (p. 647).

The death of a beneficial marketing council has followed on **horticulturists'** apathy towards it: the replacement they have suggested should be rejected (p. 656).

THE PEACEMAKERS

Ford workers have, at the last moment, drawn back from the brink of their conflict with the management, and there is some hope of future co-existence: but both sides will have to work hard (p. 647).

Objections to open trading with **Japan** have been overruled by the Government (p. 705).

Mere size is no advantage in the world of **motor traders**: which makes it difficult to understand the enthusiasm behind recent take-over bids (p. 706).

SUFFER LITTLE CHILDREN

The Liège acquittal of a mother who killed her **drug-deformed baby** raises grave problems of morals and law for Britain (and other countries) no less than for Belgium (p. 643).

The Lord Chancellor has knocked on its infant head a notably healthy proposal for a British **ombudsman** (p. 653).

The Government's **Children and Young Persons Bill** incorporates some desirable reforms, but omits others no less urgent if rather more contentious (p. 653).

The new university of Warwick, welcome in itself, will add to the staffing troubles of the less fashionable **universities**: and a flat 30 per cent general pay rise, as demanded by university teachers, will not help the most needy (p. 648).

THE WORLD

OF MARX AND EMPIRE

The view of the world that has made China a threat to India shows a remarkable continuity with China's imperial past (p. 641).

● While China and India struggle in the Himayalas, **Pakistan** takes on a curious look of non-alignment and India that of a bulwark against communism (p. 647).

● **Inside China** it seems that a group of planners may have quietly triumphed over a group of doctrinaires (p. 648).

Eastern Europe's communist leaders have different views of how to sail in a wind of change (p. 644).

The **Cuba** question has *not* been settled finally for Mr Khrushchev, or for Mr Kennedy (p. 646).

Russian sales of gold have helped to relieve the drain on the western gold pool (p. 701).

OF PLEBS AND CAESARS

If President de Gaulle is not provided with an obedient assembly in the **French elections** (first round on Sunday) a long political battle is likely. Our Paris correspondent illustrates from the present electioneering in the French provinces the problems facing the parties (p. 669).

Austria's coalition government may well be disrupted by the results of the next election (p. 677).

Yemen's revolution has become an international affair; and Britain is once again getting cast in the role of reactionary (p. 645). With revolution next door, **Saudi Arabia's** king has no wish to be called Canute; he is allowing the breezes of change to stir a little (p. 670).

Italy's new economic clothes are being planned to have a discreet socialist cut (p. 677). Italy's central bank is doing its part in arranging the supply of **finance** for the country's **expansion** (p. 696).

Agricultural politics make the going at **Brussels** uphill (p. 646).

Fear of the wind of change has made for hysteria in **South Africa** where liberalism has become confused with communism (p. 674).

OF AUGURS AND ORACLES

In spite of Britain's squib in Nevada, the noise of nuclear tests is temporarily dying down. Disarmament's post-Cuba setting is giving encouragement to some unorthodox ideas (p. 639).

With the elections over, **the United States** is realising that there has been *no real change* either abroad or at home—particularly the latter (p.658).

Dr Adenauer, now in Washington, has allowed himself just a flicker of mobility about Berlin (p. 673).

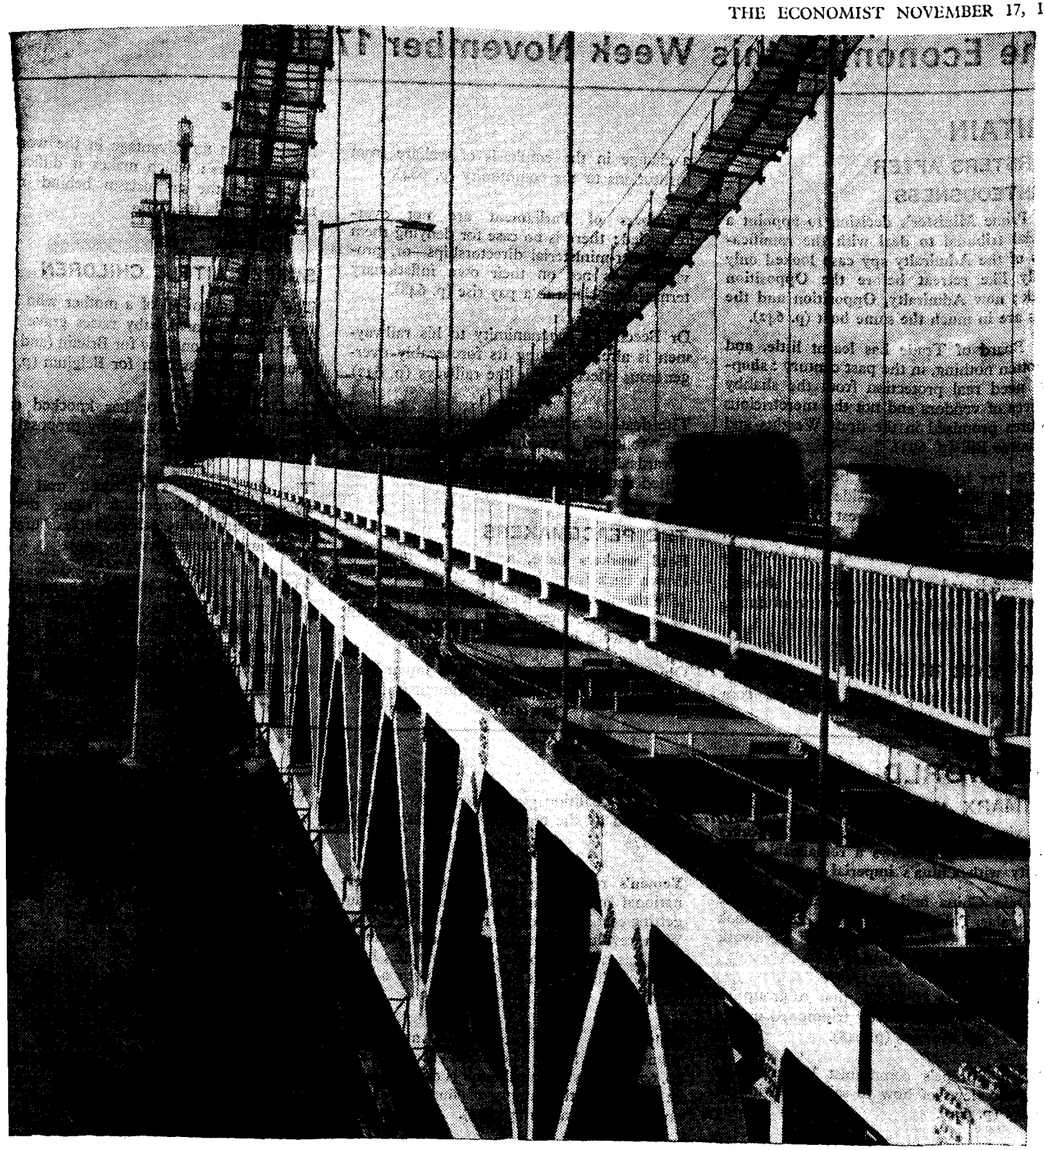
Bechuanaland has asserted its right to grant asylum to those discontented with South Africa (p. 650).

Mr Tshombé [illegible] the United Nations are preparing for [illegible] pleasant eventualities (p. 653). Mr Conor O'Brien's book on his part in **Katanga** is reviewed on page 687.

In America: The Republican challenge in the South may make the Democrats there more conservative (p. 660). Negroes did well in the elections and are doing well in the government also (p. 660). The latest statistics make it clear that if a recession is coming at all it is not coming yet (p. 660). The deficit in the Budget is expanding because the economy is not (p. 662).

Washington's supersonic airport (p. 665).

Detailed contents on page 639



TAMAR ROAD BRIDGE • PLYMOUTH

This impressive suspension bridge is now open to traffic. The 33 ft. wide roadway is suspended 130 ft. above the River Tamar on 250 ft. high main towers which carry the 1,100 ft. central span and 374 ft. side spans.

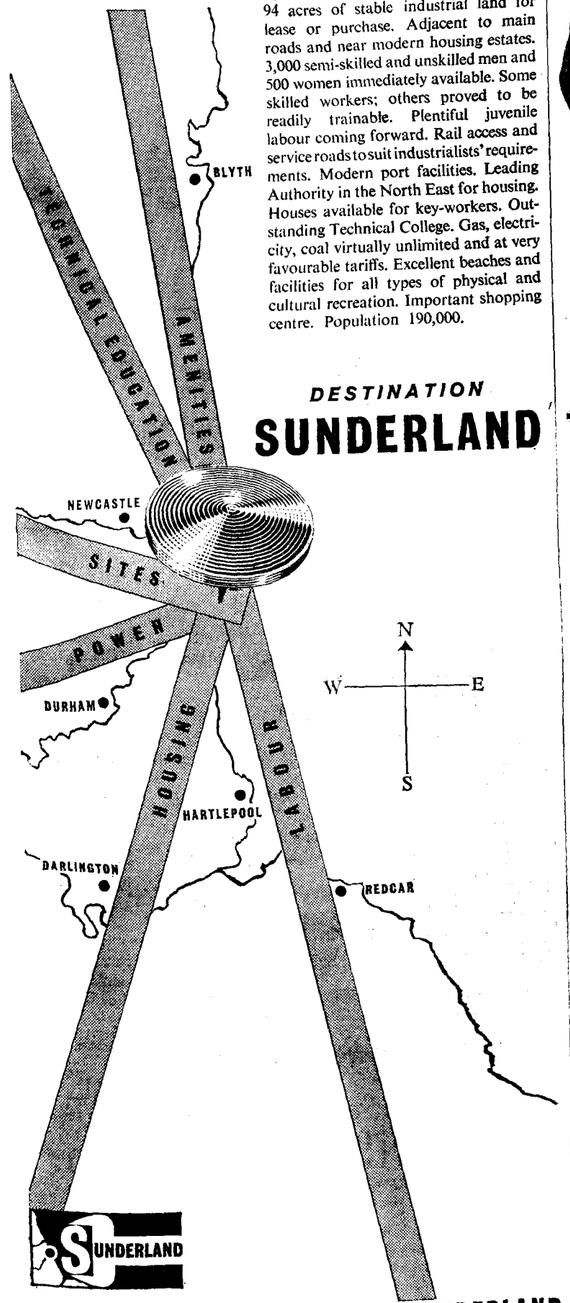
Completed in two years this is another tribute to Cleveland engineering skill.

Consulting Engineers: Messrs. Mott, Hay & Anderson.

CLEVELAND

THE CLEVELAND BRIDGE & ENGINEERING CO. LTD. DARLINGTON, ENGLAND.

INDUSTRY ON THE MOVE



94 acres of stable industrial land for lease or purchase. Adjacent to main roads and near modern housing estates. 3,000 semi-skilled and unskilled men and 500 women immediately available. Some skilled workers; others proved to be readily trainable. Plentiful juvenile labour coming forward. Rail access and service roads to suit industrialists' requirements. Modern port facilities. Leading Authority in the North East for housing. Houses available for key-workers. Outstanding Technical College. Gas, electricity, coal virtually unlimited and at very favourable tariffs. Excellent beaches and facilities for all types of physical and cultural recreation. Important shopping centre. Population 190,000.

"I've been thinking about the Gap, dad"

"The balance of payments again, Son?"
"No, Dad. This time it's the gap between research results and their industrial application."
"The thoughts of youth are long, long thoughts, Son."
"The gap's a long one too, Dad; and M. R. & D. are trying to close it even though it won't yield to scientific treatment; you see, it's largely a problem of human shortcomings, Dad."
"Tell me more, Gamaliel."
"Oh! come off it, Dad. All right then, it's a mixture of human reluctance to change, communication barriers between differing disciplines, the fact that the nation's intelligence distribution is fixed and that more ideas can be generated by research than there are executives to commercialise them . . ."
"Son, you've been working really hard these holidays. All those long words and pregnant thoughts . . ."
"Dad, you seem to forget that I've been a vacation student at Morganite Research & Development Limited."
"Well, Son, they've certainly indoctrinated you, haven't they?"
"By the time, Dad, you've been introduced to solid state physics chemistry, micromeritics, anisotropic materials . . ."
"Anne who, Son?"
"Anisotropic, Dad; Greek for whiskers."
"Cave Old Squirt, Son!"
"And they've shown you how comprehensive their activities ar mental and applied research, materials development, engineering, chemical and structural analysis, physical experimental engineering, instrumentation, recording . . ."
"I should say they got you taped all right, Son."
"Very funny, Dad. Well, just to finish the play-back, they've own Library, deal with patents and trade marks; translations; abs indexing and retrieval of data from all sources . . ."
"They're all set to bridge the gap, then, Son."
"Yes, Dad. You remember the fifth proposition of Euclid Volume
"Er—just, Son. *Pons asinorum* it was called in my day. The asso ideas is hardly flattering to your holiday employers, though, So
"Oh! but it is, Dad. It was Euclid who built the bridge—he was r
"So that, Son, leaves you, it seems, Q.E.D."

THE CITY OF STEEL SELLS TO SWEDEN

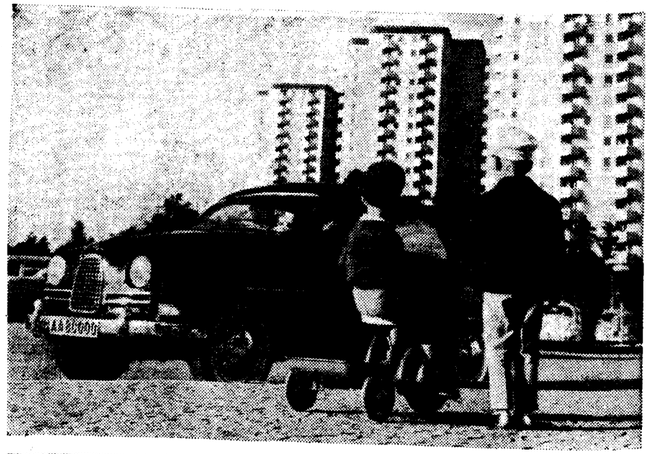
Sweden has the highest living standards in Europe and a population of 7½ million to enjoy them. The country extends for nearly a thousand miles, from the fertile plains of Skåne in the south to well above the Arctic Circle, where the sun shines all through the night during the summer. Nearly 100,000 lakes cover 8.6% of the land area.

The nation's prosperity stems from her important natural resources—forests, iron ore, water power and on Swedish industry which includes engineering, shipbuilding, chemicals, textiles and food. Agriculture accounts for 4% of the gross national product and only 9% of the country is arable.

Sweden imports materials for her industrial manufactured goods from other countries. Sheet steel and tinplate from 'The City of Steel,' the great works of The Steel Company of Wales at Port Talbot, are among her British imports.

Last year this Company's direct exports to countries all over the world, including Sweden, amounted to £34 million. This included 54.7% of Britain's sheet steel and 72.8% of her tinplate exports. These figures were achieved in the face of heavy competition.

Stockholm Town Hall on Lake Mälaren ▶



NATION ON WHEELS Every second family with children has a car. Perhaps a Saab, seen above in the new town of Farsta, or a Volvo. Below, is the Volvo 122S. Both Swedish car firms import high-quality sheet steel from The Steel Company of Wales. ▼

STEEL ON THE UNDERGROUND Stockholm's Tunnelbana is the world's latest underground system. A new line is being constructed. Most of the coaches have been built by A.B. Svenska Jarnvagsverkstaderna using sheet steel from Port Talbot.

YOUNG OUTLOOK One p.m.—and these Stockholm high-school girls gather in the Kungsträdgården cafe for a midday break. Their favourite beverage is coffee. Much of the coffee used in the catering trade and in Swedish homes is packed in cans manufactured by A.B. Plåtmanufactur. The Steel Company of Wales supplies tinplate to them.

Efficient Filing Cabinets for efficient offices

One, two, three, four or special low-height five drawer cabinets... all opening and closing with quiet confidence. Foolscap or quarto, with or without locks, and all with chromium-plated fittings. Cabinets with 24" or 28" front-to-back measurements, with suspended filing rails or space-saving compressor plates, and even with concealed safes cleverly built into them. This is the range of Harvey and Harvey-Milner Filing Cabinets, matchlessly made to high engineering standards. Our booklet number 3 will tell you all about them.

Certainly not...

Clearly, no one in his senses would use chewing gum at a time and place such as this.

However there are times and places where the use of chewing gum can be most beneficial; in fact its discreet use is a mark of tact and consideration for others as it is a definite aid to oral hygiene.

Doublemint chewing gum is especially made for such people. Its ingredients are carefully selected throughout, even its flavour has been double distilled; in fact, as its name implies, **Doublemint is double** good and gives you double benefits in many ways.

Try some at the right time and in the right place **and see for yourself.**

Why Kofi Asare moved house

Kofi Asare grew up in the quiet Ghanaian fishing village of Tema; going out in the boat every day with his father and brothers. Until two years ago he lived in a reed hut—like the rest of the villagers. But today, Kofi is a man with a promising future! With the building of the new £27,000,000 harbour at Tema (Africa's largest man-made port) his whole way of life has changed. Kofi now lives in a house in the new township of 40,000 people, and works as a leading hand on one of the modern fishing vessels operating out of Tema. His children attend a new primary school and his wife shops in modern surroundings. Ghana's Tema harbour has brought a new standard of living to Kofi and to thousands of others like him.

Atlas Copco compressed air equipment and Sandvik Coromant drill steels and bits were used extensively in the construction of the harbour and its connecting roadways. Tema harbour is only one of the many large engineering projects in which Atlas Copco and Sandvik Coromant equipment have played an important role. Group Headquarters: Atlas Copco AB, Stockholm 1, Sweden.

Fizzle and Ferment

BOTH Mr Thorneycroft's announcement, on Monday, of one more British nuclear test, and the Opposition's sharp reaction, may have betrayed a touch of anglocentricity. Although the end of the present Soviet and American series of tests does now seem to be in sight, it is questionable whether the fitting in, among their last fizzlings, of a single British squib is of the intrinsic importance claimed for it by either side. Its muffled echo from a hole underneath Nevada may not even be the very last noise before the expected big hush. True, whatever the motivation for the Minister of Defence's strange timing of the announcement, the decision to incur international odium at this moment, for the sake of some refinement of an "independent" British nuclear arm whose value is increasingly doubtful, does not suggest the clearest grasp of this country's real interests. But most probably the world will little note nor long remember this footnote to the resounding statement of Soviet and American nuclear power that has deafened it this year.

What the world is watching for is agreement on a test ban between the two nuclear super-powers, now that they seem near to the end of their spectacular 1962 season and have been given, by the Cuba crisis, not only a salutarily alarming view of the nuclear abyss but also some refreshingly new angles from which to view it. The air is full of assumptions that, with or without a formal treaty, the nuclear powers are likely to observe the deadline of January 1st, now formally set in the United Nations Assembly resolution of November 6th, as a full stop to testing. But a real full stop, as opposed to a mere few dots indicating the natural pause while the national nuclear lobbies argue their case for further series of tests and then prepare for them, still seems a highly uncertain prospect. The UN resolution was admittedly carried "unanimously" by a show of hands, with no contrary votes. Nobody, however, likes to go out of his way to vote against the cessation of what the majority clearly regards as sin. The significant thing about this particular vote was that all four nuclear powers were among the 21 states that abstained. The coolness of the western powers was the more noteworthy because the sponsors of the resolution—mainly non-aligned states—had incorporated in it an Anglo-American clause requiring "assurances for effective detection and identification of seismic events by an international scientific commission," as a condition for suspending underground tests.

The Russians have now brought into the open, after privately canvassing since early September, the ingenious "black box" proposal which they see as a means of giving the West some satisfaction on the seismic front without having to face the, to them, spine-chilling prospect of a few "neutral" scientists occasionally entering Soviet territory to report on borderline cases of unidentifiable tremors. Basically this idea, which emerged during the last "Pugwash" talks among scientists in London, is that recording instruments should be sealed in containers under the eyes of a mixed group of scientists at some "neutral" world centre, then taken away to agreed places in the countries concerned by their own officials, and periodically brought back to the centre for general inspection. The Russians claim that "forgery" would be impossible; a seismograph's record would clearly show, they say, whether it had really been operating at the place it was earmarked for. There are snags. One is the time-lag: "black box" evidence would not be available until the boxes came back to be

another is the question, unanswered by the Russians, of what happens if the "black box" instruments do record a dubious "event," the nature of which can be cleared up only by the same on-site inspection that Russia abominates. But the idea merits thrashing out by experts. So far, the Russians have refused to let them thrash together: a refusal that casts doubt on the sincerity of their new enthusiasm for the idea.

The "small gap" which, as the Prime Minister said at Guildhall on Monday, has still to be bridged to get agreement on a full test ban, is thus now entirely a problem of verification, and a minimal one at that. The western governments have progressively and drastically planed down their verification requirements, but have as yet found no answering Soviet readiness to relax even fractionally Russia's clam-tight and seemingly pathological secretiveness. In this respect nuclear tests provide a true sample of the broader problem of disarmament on a more general scale. When Mr Macmillan said on October 30th that the Cuban crisis had at least led Russia to "acceptance of the principle of independent verification," he was, unfortunately, making an empty claim. Russia has often accepted the principle; it is the practice that it rejects.

The record of the Cuba affair exemplifies this neatly. Mr Khrushchev felt free to agree with Mr Kennedy on October 28th "that representatives of the UN may verify the dismantling of these weapons" (the Soviet nuclear rockets at Cuban bases). In practice, Dr Castro flatly rejected any UN inspection on Cuban soil. Nor has the idea of co-opting Red Cross observers borne any fruit yet. If Washington is now prepared to express its confidence (a confidence not shared by such vocal sceptics as Dr Adenauer) that Russia has indeed removed the rockets, this is partly the result of the American navy dancing a slow minuet round eastbound Soviet ships whose skippers coyly unveiled only the tips of their cylindrical deck cargoes; partly the product of American "sky spying," of the very kind that Mr Khrushchev found outrageous enough to justify the torpedoing of the 1960 "summit" talks, but for which he now has good reason to be grateful.

BUT the Cuban clash has encouraged a more general ferment of ideas in the disarmament field (a ferment which may account for Dr Adenauer's reluctance to be convinced about the Cuba rockets). A project which Brazil had been canvassing for some time, for the barring of all nuclear arms from Latin America, has won wider support and is now before the UN Assembly in the form of a resolution. This in turn has helped to re-open the question of other "nuclear-free zones." (The African states secured an Assembly resolution last year urging that their continent be treated as such a zone.) The Rapacki plan, which would bar nuclear arms from Germany and its immediate neighbours in the east, is sufficiently back in the air to evoke parliamentary questions about it; these drew a firm rebuttal from Mr Heath on Monday. Less precise, but perhaps of more immediate significance are the indications of new American thinking about some sort of self-denying ordinance in regard to the spread of nuclear weapons. One widely circulated version of what is projected has it that a "bargain"—implicit rather than explicit—is now shaping up between America and Russia, the hard core of which would be an undertaking by both sides not to introduce nuclear arms into any more geographical areas, or let control over them pass into any more hands. On the Soviet side, this implies the refusal of such arms to China; on the American, it would be understood that the Thor and Jupiter missiles now poised in Britain, Italy and Turkey, which will soon rate as obsolescent, will not be replaced as they "run down," and that the American nuclear arms in Europe will stay under American control. President Kennedy is said to be asking Dr Adenauer, in Washington this week, to add a pledge not to seek such weapons from anyone to Bonn's existing promise not to make any itself. There is enough self-interest in these items to make the notion of an implicit bargain plausible, whatever the public, and no doubt literally veracious, denials may say.

Upsetting though this kind of talk may be to those who prefer to think of their "nuclear stalemate" as something comfortably rigid and unchanging, and unsatisfactory as it may seem to disarmament whole-hoggers, whether of the unilateral or multilateral persuasion, it is undoubtedly going to circulate pretty widely in weeks to come. It cannot be unwelcome to the many governments, of both alliances and of neither, that see the future darkened by the continuing spread of nuclear arms. In Cuba, it would seem, so far as the present evidence goes, this spread was for the first time halted—by desperate measures—and indeed actually turned back. On the Himalayas, China has simultaneously provided a timely cue for thought about the dark perspectives that would (will?) be opened up by Peking's emergence as a nuclear power. Is there not a fruitful element of common interest here, which at the very least may inject fresh life into the 17-nation disarmament talks suspended at Geneva in September and now about to resumed?

The Economist

NOVEMBER 15, 1862

GOVERNMENT AND INDUSTRY

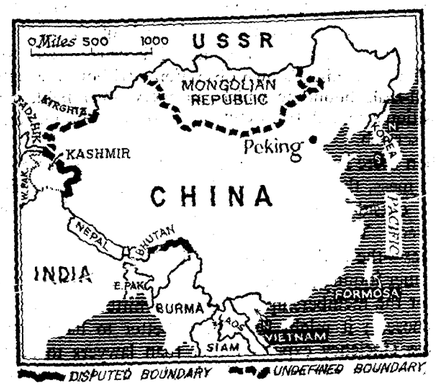
The Frenchman wants to be governed; he expects from the State much more than the wildest of English demagogues would think of asking from it, and in return he submits to and even welcomes an amount of interference which would drive Englishmen to the verge of rebellion. The interference of the Administration is constantly invoked to redress this trade grievance, or to prevent this or that mischievous error; the Administration comes to the *rescue*, and acting as only it can act, by the institution of fixed and rigid rules, it remedies the evil in hand, at the cost of imposing fetters which permanently inconvenience a whole trade; prevent the improvement of its processes, increase its expenses, diminish its production, and so cripple the manufacturer or the merchant as to give him an irresistible claim for protection against his unfettered foreign competitor,—a protection for which the consumer must pay. We know how earnestly in this country the assailants of each of the Excise duties on manufactures pressed the argument that the return to the Exchequer bore no proportion to the loss entailed on the producer by the fetters imposed on him in order to protect the revenue; we know how fully, in some cases, that argument has been borne out by the rapid development of those branches of industry which have been relieved from Excise duties. . . . When we remember that until recently the price of meat in Paris was regulated by law; that to this day the rate of interest which may be charged on mortgage is limited by law; that the thickness of boiler plates is determined by law; that not a foundry can be established without an official permission, we wonder not that the trade of France progresses less rapidly, but that it makes any progress whatever, and we begin to understand how formidable might be the rivalry of our French competitors, if they were but freed from the cruel kindness of their Government, and allowed "a *fair* field *and no favour*."

A Dragon with Memories

China's view of its position in the world, now being appraised in Peking with a flock of ambassadors recalled for consultation, could threaten others besides India—but not yet

THE dragon breathing fire across the Himalayan passes is potentially a hydra-headed, many-limbed beast with claws and nostrils in reserve for use elsewhere It is not necessarily, however, as indiscriminate a danger as might be thought on reading the chronology of communist China's "thirteen years of aggressive activity" lately issued by the United States Information Service. Nor is the fact that China happens to be under communist rule as relevant as many suppose (though communism does indeed add an extra dimension to the Chinese problem); Generalissimo Chiang Kai-shek's government in Formosa has reminded the world that though he disapproves of the methods used by the Chinese communists, he no more accepts the McMahon Line, or any other frontier disputed by China's present rulers, than they do.

Plenty of evidence suggests that, when it comes to drawing China's frontiers on the map, Mao Tse-tung and his colleagues are Chinese first and communists second. What is



obscure is just what, in the minds of the men in Peking, China's frontiers are. Any number of definitions could find support in China's long history. Imperial China at its greatest included not only Tibet but also most of what is now Vietnam; Korea was a Chinese possession before it was a Japanese colony; the Mongols, like the Manchus, were outer "barbarians," to be subdued and civilised by the Han Chinese. Some authorities, such as Professor G. P. Fitzgerald, hold that deep in his heart every Chinese believes that any territory that was once ruled by China remains for ever Chinese. A more extreme theory argues that any country or people that once absorbed Chinese culture is residually Chinese—a concept that would embrace Japan but exclude Tibet.

Probably all these competitive ideas co-exist in the minds of Chinese leaders, whether they sit in Peking or in Taipeh. But it does not follow that all will be acted upon in the foreseeable future, or at all. In certain important senses, China is still feeling its way in foreign affairs. Traditionally, the mere idea of relations with foreign powers has been alien to Chinese thought. The Chinese have had a foreign ministry only since 1901, when they set one up under British pressure. China's relations with non-Chinese peoples used to be handled by an unimportant branch of the ministry of court duties, charged with determining whether gifts offered by vassal states were worthy of the Emperor's attention. China was the Middle Kingdom, whose natural tendency was to expand outward as the troublesome barbarians on its fringes were subdued; should the barbarians turn the tables and advance into China, as the Manchus did, then nothing was lost, for China would inevitably absorb them.

THE imperialist pressures of the nineteenth century, especially Britain's, dented China's ethnocentric image without entirely shattering it. The Chinese, as practical people, were forced to acknowledge the existence of other centres of power; as superior people, they resented—not without reason—the humiliations that were inflicted on them. The expansion of Tsarist power into Siberia and the rise of Japan provided other lessons, such as the view that China ought never to quarrel simultaneously with the land power to the north and west, and with the sea power to the east.

These ideas and events are highly relevant to the present conduct of foreign affairs in Peking. When the Chinese communists came to power in 1949, they faced the problem of recovering their unredeemed territories: Outer Mongolia and Tibet, Hongkong and Formosa. All, including Outer Mongolia, which had been a republic under Soviet protection since 1924, were regarded as integral parts of China. On grounds of realism, Tibet was the only one that could be taken back with impunity, and it was. The time had not come to get the British out of Hongkong; Formosa was saved, first by the inadequacy of communist China's sea and air power, and later by President Truman's decision to protect the Chinese Nationalist government. Outer Mongolia was saved by Mao's decision to "lean" to the Soviet side in the world power struggle and by China's reluctance to take on a continental power (Russia) and a sea power (America) at the same time.

It would be delusive, however, for the Russians—or the Mongolians—to imagine that the Chinese communists have abandoned their claim to what is now the People's Republic of Mongolia. They did recognise the republic's "independent status" in an exchange of notes accompanying the Sino-Soviet treaty of 1950, but the frontier between Outer Mongolia and China's own Inner Mongolia has never been demarcated to Peking's satisfaction. Indeed, Peking's maps have shown varying areas of the Mongolian Republic—according to the date and the degree of pressure exerted by Moscow—as Chinese. Nor do the Soviet maps of the region where China meets Afghanistan, Soviet Tadzhikistan and Kirghizia coincide with China's, even now.

The Sino-Soviet quarrel about tactics and ideology has brought Peking dangerously close to the prospect all Chinese must want to avoid—that of having a continental enemy as

well as a maritime one. In one way the military attack on India would have made sense if it had forced Mr Khrushchev to come off on Peking's side of his precarious neutral perch between Peking and Delhi. There is no sign of this happening, and the Chinese are showing anger that it has not. All the same, it would be wrong to suppose that the Chinese leaders will press their latent claims on border regions under Soviet rule or protection, at least in the near future. India is fair game ; Russia is not, as yet.

Perhaps the most reasonable assumption to make about China's foreign policy in the present phase is that those who make it want to use communism as a weapon to restore China to its historic place as the centre of the world. This is far from saying that their communism is insincere ; indeed, their doctrinal challenge to Moscow is consistent both with sincerity and with the view that Peking is, or ought to be, the natural leader of the block. It is also a fair assumption that the Chinese leadership will continue, whenever it seems expedient, to "take back" territory that was once China's. So long as countries like Vietnam and Korea remain at least partly in amenable hands, they are unlikely to be attacked, though this situation could change if the anti-communist side in either country gained the upper hand.

China's population problem may also, in the further future, present a danger to its neighbours. For the present, however, there are plenty of empty spaces within China's present boundaries, to be pioneered and made productive. In the light of China's economic problems, the notion that the Chinese would like to take over all India—whose problems are painfully similar—seems grotesque. If and when *Lebensraum* does become an issue, the choice will lie rather between the underpopulated Soviet Far East and the fertile rice bowls of south-east Asia. Chinese expansion would then take on a different pattern ; but that time still looks remote.

Tribunal of Honour

The issues before the new Radcliffe inquiry

THE Vassall spy case is now *sub judice* on the issues of fact concerning the behaviour of individual ministers, civil servants and naval officers during the period of Vassall's activities, and the behaviour of other politicians and newspapermen after it. This is the right sort of tribunal to deal with the buzz of rumour and allegation which had arisen: an inquiry at which witnesses can be put on oath, and sued for perjury if they tell untruths. The journalist's principle of professional secrecy in protection of sources really does not apply to sources of stories suggesting *sotto voce* that somebody or other may perhaps be a homosexual traitor. It was obvious from the Prime Minister's demeanour on Wednesday that he personally believed that he was now hitting back against a campaign of innuendo ; it was equally obvious when the Labour benches sent up their jubilant shout on Tuesday, after Mr Macmillan had announced the supercession of the civil servants' inquiry, that they had curiously little foresight that this must be what he hoped to do.

Mr Macmillan now means to have brought into the full light of day both the alleged dinner conversation of a leading journalist on November 8th spreading a story which if repeated would be bound to force an action for criminal slander, and the report in the *Daily Express* of November 9th that the presence of another spy (eventually found to be Vassall) in the Admiralty was known to the First Lord and his service chiefs after the Portland case 18 months ago. What has happened overnight, to Labour's surprising consternation, is that the hounders of Lord Carrington and Mr Galbraith are being constrained to justify themselves no less than the Admiralty is—and ought to be.

Mr Gaitskell's answer on Wednesday was that if the Prime Minister had set up the kind of inquiry that Labour wanted there would have been no rumours or innuendoes at all. This is a total misunderstanding of what should be the criterion for deciding the precise form of any specific inquiry into security (or other) matters. Security is a subject on which outsiders always have an itch to pontificate at great length, but—although newspapers and opposition spokesmen never admit this—necessarily, as a rule, without any real background knowledge whatever. Because the security services have to work in secret, they are the one branch of the civil service whose organisation and management it is usually right to leave to the Prime Minister's own discretion—without the righteous and full-scale hounding which, in every other field, it is the Opposition's first duty to engage in to keep the Government up to scratch.

When there is clear evidence that the whole security system is in a mess, then it may be right for the Prime Minister to call in outside experts to advise on how it should be reorganised. That, in effect, was the purpose of two earlier inquiries—the Radcliffe inquiry this year and (to some extent) the Romer inquiry last year. One can have legitimate doubts whether the membership of those committees was necessarily well chosen ; it might have been better to have appointed business efficiency experts rather than lawyers to advise on what was primarily an organisational task. But the Government accepted these committees' reports ; and it really does not seem very sensible to say that Britain's security arrangements should be overhauled every time a spy is actually caught. The Prime Minister's decision after the Vassall case —to ask three eminent civil servants to find out for him what actually happened, and to promise that he would thereafter "exercise any responsibility that falls to me"—seemed therefore, up to this week, to be *prima facie* right. What has still to come from the Labour party and the newspapers who took up the case are the substantial grounds on which they judged the decision to be wrong. The press will strongly object to disclosure. But—provided always that whichever party comes best out of the inquiry does not go on trumpeting that this proves that its opponents are always rogues—it was obviously the right action for Mr Macmillan to take. It is for this reason that both political parties and (still more) journalists and (still more) any retailers of private gossip will be, in effect, on a trial of honour before this new tribunal.

The Mercy Killers

The acquittals at Liège raise grave legal and moral problems

THE Vandeput case, in which a mother, her doctor, and others were acquitted of murder after she had killed her eight-day-old thalidomide daughter, born without arms, became front page news all over Europe. Certain features of the case were peculiar to Belgium. Under Belgian law, a verdict of guilty would have required a minimum sentence of three years' imprisonment, with only the possibility of a royal pardon. And the wild scenes of popular rejoicing which greeted the acquittal owed at least something to the militant battle between the Roman Catholic Church and anti-clericalism which is one of Belgium's (and especially Liège's) favourite forms of political engagement. But there is not the least doubt that if some British mother, in the same tragic position as Mrs Vandeput, were to seek the same solution to her problem, she would attract much of the same popular sympathy. Already some newspapers which have dared to express a sense of apprehension over this have been inundated with protests that they are making a "plea for the preservation of any monstrosity, repugnant alike to emotion and reason." The verdict at Liège, they are being told, is a resounding victory for common sense.

It is therefore important to start thinking about what public attitudes should be if the same thing were to happen here. The basic medical facts to remember are that each year in England and Wales many thousands of deformed babies are born ; in 1961 congenital malformations of one sort or another resulted in 3,973 deaths of children under the age of five, and they disabled very many more. Each year about 1,000 mongol babies and another 1,000 spastics are born. By contrast, in the two and a half years between 1960 and August, 1962, the number of surviving babies who were born deformed in England and Wales after their mothers may have taken thalidomide during their pregnacy was 302. They included 244 of the 652 living babies born in this period with congenitally defective limbs, and 146 of the 232 cases of this type with really gross deformities—the heartrending ones, looking in photographs like broken dolls.

The thalidomide horror is therefore only a relatively small part of a continuing problem. Moreover, it is not a part that is likely to be relevant to any future deformed birth in this country. Because the drug was withdrawn from circulation a year ago, no thalidomide babies should have been born in Britain after August of this year. If Mrs Vandeput's action is imitated here, it will presumably be by some mother whose baby's deformity will not be due to thalidomide. That does not mean that the deformity need necessarily be any the less horrible for that, but it does re-emphasise the point that the killer will herself be deciding what form of deformity is intolerable. To approve of mercy-killing under such circumstances would be to approve a transfer of the right to decide between life and death, which is allowed only to the state under the most rigid conditions, to private individuals with no limiting conditions at all.

The second basic fact to note is a legal one. In Britain, in the circumstances of the Liège case, the charge against Madame Vandeput would be more likely to have been infanticide than murder ; since there would then have been no legal question of a murder having been committed, her accomplices would also have been charged with aiding and abetting infanticide. Infanticide is a modern felony, created by statute in 1922, after a series of cases in which mothers had been sentenced to death for killing their children, but had then naturally and rightly been reprieved. The 1922 Act provides that if a woman puts to death her newly born child (later extended to mean child under a year old), at a time when the balance of her mind was disturbed from the effect of giving birth to the child, she should be punished as if she had committed manslaughter. Sentence for manslaughter is within the discretion of the judge. If the killing of the child is done by someone other than the mother, a charge of murder has to be brought. On such a charge, however, the jury can always return a verdict of manslaughter. In 1960 an English officer, Major George Johnson, killed his three-year-old mongol son. He was acquitted of murder, but found guilty of manslaughter, and sentenced to twelve months' imprisonment.

To a large extent, therefore, the answer to the question "what would happen if there were a Vandeput case in Britain ?" is that Britain has had a recent Vandeput case: just over two years ago, in the tragedy of Major Johnson's mongol son. But because the word thalidomide had barely been heard of, the case did not arouse worldwide attention. There must be, and always will be, the most desperate sympathy for any parent who finds himself or herself in this position. It is easy to say emotionally that there are certain sorts of baby who could not possibly lead a normal life. But the medical truth is that experience has shown that even the most grossly deformed babies of the thalidomide sort—those that have at least two limbs missing—can achieve a considerable amount of independence, provided training in the use of artificial limbs is started early enough and coincides with the child's normal process of development. (The main question here is whether the provision of artificial limbs in this country, sheltered as it has been by the monopoly given by the health service, has kept up to date. A former pioneer of limb provision in this country—the firm of Desoutter—had to give up in 1948 because it could not carry on on the Ministry of Health's terms.)

If, in the wave of emotion after the Vandeput acquittal, there were soon to be another mercy killing case in Britain, nobody would want to see the killers vindictively pursued. Conviction by the law and a light or suspended sentence would be the desirable solution in the first place. But the fact should also be faced, and the unpopular opinion restated by all who have not been overawed by the awful word "monster": were the practice of killing deformed children at birth to spread, penalties which were rather more than nominal should once again have to be enforced. Nobody can possibly tell, in the present state of medical knowledge, which human being is necessarily always going to be unhappy.

Neighbours in Central Europe

Communist rulers in Europe find different ways of meeting the winds of change

JUST a year after the whole communist world was startled by the 22nd Soviet party congress, the communist parties of eastern Europe are entering on a round of congresses which should reflect their own considered response to the proceedings in Moscow. The Bulgarian inquest has just ended; the Hungarian congress will open on Tuesday, and the Czechoslovak one is due to begin early next month. The Bulgarian congress seems to have been an unusually lively affair; not only did the delegates witness the abrupt and unexpected dismissal of their prime minister, Mr Yugov, by his rival, Mr Zhivkov, but also the blunt strictures of the Chinese delegate, both on Mr Zhivkov for his attitude towards the Albanians and on Mr Khrushchev for his handling of the Cuban crisis, brought into the congress hall resounding echoes of Peking's quarrel with Moscow.

The Hungarian and Czech party congresses, less preoccupied with a crude struggle for power and presumably less immediately involved in the emotions aroused by the Cuban crisis, are unlikely to produce such fireworks. They may, however, shed more illumination on the differing trends in the communist world. The customary soul-searching, inquest-holding and general cerebration that precede communist party congresses have shown clearly enough that both Mr Kadar in Budapest and Mr Novotny in Prague are meeting some opposition to the line that each wants to follow. These are not identical. While Mr Novotny is criticised by some of his party members for getting stuck in the same old groove, Mr Kadar has upset some of his by showing what they consider a dangerous predilection for innovation and change. These different policies result from different personal and national characteristics and from the different ways in which the two regimes have developed.

The Czech communists have ignored, as much as they dared, the winds of change that have been swirling through the communist world ever since the 20th Soviet party congress nearly nine years ago. There has been no break in continuity between the present regime and its origins under Stalin's colleague, President Gottwald—whose body, incidentally, was belatedly removed from its mausoleum last month. Some of those persecuted during Gottwald's rule have been quietly rehabilitated, but not Rudolf Slansky, the most important victim. Writers and artists have been kept on a short rein. Access to dangerous western thoughts has been closely guarded. A relative material prosperity has helped to reconcile the Czechs to their circumscribed situation. And when economic difficulties arise—there have been persistent food shortages all this year, and the current five-year plan has had to be scrapped—Mr Novotny's instinct, on the political front, seems to be to turn inward and to concentrate on turning the party into a better and more efficient instrument for pushing Czechoslovakia along the road towards full-blown communism.

The Hungarian regime was rendered different by the cathartic experience of the 1956 revolt. Although that revolt was crushed, its influence persists. In obscure and subtle ways it has coloured the outlook of the Kadar regime and led it to try, more obviously than any other east European communist regime, to reach a genuine, mutually acceptable *modus vivendi* with the people over whom it rules. All this year Mr Kadar has been pushing the slogan that all who are not against us are with us. He has been insisting that party membership carries no special privileges, that communist and non-communist must learn to get on together, that all jobs, except specifically party ones, must be open to everybody on the basis of efficiency first, and that although they have a one-party system, the communists "have to work as if there were twenty parties, and elections every day."

THE new Czech and Hungarian party statutes, which have, it seems, occasioned some quite lively debates in each country, provide interesting clues to the way the wind is blowing inside each party. Both are modelled on the Soviet party statutes adopted last year after the 22nd Soviet party congress, but the Hungarian statutes keep more clearly to the spirit of the Soviet ones. Their tendency is to make it easier both to get rid of unsatisfactory party officials and to increase the inflow of new blood into the party administration. The Czech statutes, on the other hand, restrict the possibilities of influencing, or changing, the membership of party posts by popular processes; there is no mention of secret elections as in the Soviet and Hungarian statutes; the chances of new men attaining positions of influence and power inside the party are curtailed rather than strengthened.

For Mr Novotny the question of establishing any real *rapport* between party and people does not enter seriously into his calculations. He evidently believes that no basic changes of policy are required; if a little more flexibility and realism are needed, especially in economic matters, that is all the more reason for strengthening discipline inside the party so that nobody is led astray. Since he is against change, he is naturally against making it easier for those disillusioned with the present leadership, who may want to branch out in new and more liberal directions, to gain positions of influence inside the party. That these people not only exist, but have been troublesome during the pre-congress discussions, is clear from press comment and the statements of party leaders. Some party members seem to have been a little unnerved by the country's economic difficulties and their effect on the public. They are denounced as "egotistic, individualistic careerists and wavering elements, people who are red on the surface but white inside."

Whether this dissatisfaction has enough hold in the top leadership to threaten Mr Novotny is not clear. But the rumours of his imminent downfall current during the summer have not, so far, been borne out. His most dangerous rival was disposed of in April, when Mr Rudolf Barak, the former minister of the interior, was convicted of embezzlement and sent to prison for fifteen years. In dealing with his party opponents, Mr Novotny has some way to go before catching up with Mr Kadar's comparatively civilised methods.

When the Hungarian communist party was re-formed after the 1956 revolt, it naturally lacked attraction for many of the better-type, more intelligent and more flexible communists. In recent months Mr Kadar has been gradually getting rid of some of those whose habits of mind, or past associations with the Rakosi regime, stultify his efforts to give the party a new and more attractive image. He obviously wants to attract into the party the sort of people who will sympathise with his ideas, and who may themselves perhaps be regarded more favourably by the country as a whole. The expulsion from the Hungarian party in August of Mr Rakosi himself and of his collaborator Mr Ernö Gerö was primarily symbolic, since neither had more than a very remote chance of staging a comeback.

Whether the expulsion of Mr Marosan, Mr Kadar's chief colleague, from all his party offices (but not from the party itself) which was announced on October 14th, fits into the same pattern, is not clear. A former Social Democrat and a very unpopular figure, Mr Marosan's equivocal and devious career has been distinguished chiefly for its successful opportunism. What seems certain is that, for one reason or another, he openly disagreed with Mr Kadar. His downfall suggests that Mr Kadar feels strong enough to brook no opposition to his chosen policy; it will certainly have been well-received by the general public. Naturally enough, however, Mr Kadar's ideas have not been warmly welcomed by everyone inside the party. In the opinion of many party members, too high a price can be paid for popularity and efficiency—particularly if the price includes transferring one's own comfortable job to less deserving hands.

This analysis offers no moral. Nor is it intended to suggest that, while Mr Novotny is bent on consolidating a regime that has little use for liberalisation, Mr Kadar's policies will end by transforming Hungary into a bourgeois social democracy. It is much more complicated. The Czech communists, ruling over an advanced, western, bourgeois people, are already disturbed and influenced by the general loosening-up of the communist world. But the process of loosening up inside Czechoslovakia may be slow and gradual. In Hungary, Mr Kadar's efforts to popularise his regime are bound to be circumscribed by his determination not to jeopardise either his own dominance in the party or the party's dominance in the country. One suspects that his efforts to get on better terms with them are regarded by the Hungarian people with a certain detached, cynical and wary amusement. A general amnesty for those imprisoned after the 1956 revolt might make them take him more seriously, but, even after six years, Mr Kadar might find it hard to get the remaining diehards in his party to go as far as that.

Behind the well-drilled proceedings of the party conferences it should be possible to detect some hints of how far and how fast these two central European rulers consider it judicious to pursue their differing tacks. Although there does not seem all that much to choose between the Bulgarian contenders for power, some people have interpreted Mr Yugov's downfall as a sign that Mr Khrushchev intends to push for more liberalisation throughout eastern Europe. If this is true, then Mr Novotny may be the next to trim his sails; while Mr Kadar may be able to hoist some more canvas.

Crowded Arabia

Yemen's revolution has become an international affair

YEMEN, a few weeks ago, was as peripheral to the Arab world as Cuba, a few years ago, was to the Latin Americans. Now Yemen has lurched after Cuba to the centre of the stage. True, this is an analogy that can be nibbled away until only its bones remain. But when Arabs, as well as Latin Americans, examine these bones they come up against the fundamental issue of whether a violent upheaval of the social structure is the most effective, or the most destructive, pathway to a more modern way of life. Neither Cuba nor Yemen is tackling its problems in isolation; the heavyweights from outside have been swung into dangerous confrontation with one another. The Cuban revolution has drawn the world powers into its conundrums; Yemen's infant revolt is, as yet, an exclusively Arab affair. But the belligerent participation of the United Arab Republic on the republican side, and of Saudi Arabia and Jordan on the royalist side, increases the likelihood of the Yemeni battle spilling over into the Arabian peninsula—and further. The evangelist character of revolutions makes them hard to put in quarantine.

Alive and smiling: Imam Mohammed Badr with supporters

The political commitment of Egypt, Saudi Arabia and Jordan in the Yemeni revolution is not weakened by the fact that their military commitment has probably been exaggerated. None of the participants cares to admit that it is fighting Yemenis; for this reason Cairo and San'a speak of Arab "mercenaries," while Mecca, Amman and the Imam Mohammed claim formidable "Egyptian" losses. So far as sense can be made out of a situation that all the principal performers are trying to keep fuzzy, Egypt has come to the aid of the Yemeni republicans with pilots, paratroop and commando units, probably some thousands in all, while the Saudis and Jordanians are giving the Imam some limited logistical support, but, in the main, the money that might tempt independent-minded Yemeni tribesmen to his side. The complicating factor is the suspect loyalty of national armies in the Arab world. The notable example of this was the defection of the chief of the Jordanian air force to Cairo on Tuesday. But Cairo, too, is vulnerable. Its soldiers are battling on unfamiliar terrain against guerrilla fighters more committed, and more ready with the knife, than themselves. Egyptians tend to join their army in the expectation of regular

meals, not of encounters with throat-cutting Yemenis.

It is improbable that the poorly armed and ill-organised royalist tribesmen can make effective headway against the republicans with their military, and political, advantages. On the other hand, it is bound to take time before the republicans can dislodge the royalists from their strongholds. The main danger for the new Yemeni government is less the continued fighting inside Yemen than the possibility, now increasing, that President Sallal may be tempted to over-extend his revolution. When he first took over, the revolutionary leader said, with resounding good sense, that he had quite enough to worry about in his own country without looking for trouble outside. As the fighting became less of a local affair, his pragmatic approach began to disappear behind the new-found zeal of a missionary. To what extent Cairo's hand can be detected is a matter of guesswork, but by November 12th President Sallal was declaring the formation of a Republic of the Arabian Peninsula, and heralding a "holy march" of liberation.

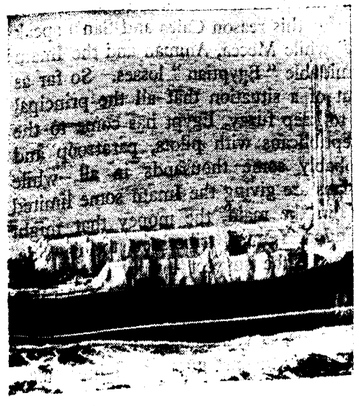
Against this background, the British Government has reaffirmed its determination to carry on with the unpopular merger between Aden colony and the Federation of South Arabia. The Government's reasoning is that the union of port and hinterland is in the true interests of the people of Aden, and if the Adenis were not being intimidated from outside, they would recognise this for themselves. Given the volatile state of south Arabia, this is a curiously rash judgment. President Sallal's liberating aspirations now stretch north to Saudi Arabia, south and east to Aden. Having waited in vain for "ageing and tattered Britain" to recognise the new Yemeni government, the president is turning instead to the friends he knows, "headed by the Soviet Union and the UAR." The pieces are falling into a wearily familiar pattern: on the one side, Russia, Egypt and "progress"; on the other, the Arab monarchies, Britain and "reaction." The sad thing is that immediately after the San'a revolution, it looked as if Britain's position in the pattern might have been more comfortable, and more up to date.

NOTES OF THE WEEK

CUBA

Cui Bono?

MR KHRUSHCHEV, it is pretty clear by now, does not want to carry out to the full the undertaking he gave to Mr Kennedy on October 28th. This said that the Russian weapons in Cuba "which you call offensive" should be dismantled under the eye of United Nations representatives. But that was at another time, the Russians are now arguing, and anyway the wench is dead: the missiles have left, and it is claimed that the undertaking never applied to the IL-28 bombers on the island, the removal of which was said on Thursday to be subject to a number of conditions unacceptable to the Americans. The proposal submitted to U Thant on Tuesday by the Russian and Cuban representatives at the United Nations apparently assumes that dismantling is no longer a live issue; the Russo-Cuban plan is reported to provide merely for some kind of watching brief to be held by a group of neutral ambassadors in Havana. The Americans, who want an assurance that Cuba is now militarily inoffensive, are unlikely to regard the ambassadors as sufficiently eagle-eyed.



Missiles go home

Mr Kennedy's problem is whether the exaction of the unfulfilled portion of Mr Khrushchev's undertaking is important enough to justify the action that will be needed to bring it about. The Department of Defence is satisfied (unlike Dr Adenauer) that the 42 sheathed objects seen on Russian ships leaving Cuba are in fact the missiles that were photographed on the island. Neither the IL-28 bombers that remain, nor the handful of undetected missiles that might just conceivably have been stowed in Cuban caves, can be represented as a decisive threat to American security. The United States has made no objection, after all, to the Russian fighters on the island, some of which could in theory be fitted with A-bombs.

Doubtless the Americans feel some residual anxiety. If Mr Kennedy decides that it is really essential to know exactly what arms Cuba does, and does not, possess, he can almost certainly force Dr Castro to accept inspectors by means of a selective blockade of the island's fuel and, perhaps, food imports. Whether or not he does so turns in the end on his judgment of Mr Khrushchev's position. The Russian leader, by pulling out his missiles, has accepted one defeat in Cuba, at the cost of laying himself open to attack from his opponents in the communist world. If another defeat were forced upon him, who would gain most?

COMMON MARKET

Politics of Agriculture

POLITICS, in common market terms, is the art of the economically possible. France's part in the negotiations between Britain and the Six is a case in point. It is not so much that France has decided to "humiliate us" and "kick us around," as Lord Boothby exclaimed with some heat in explaining his startling letter published in *The Times* on November 12th.

Rather, France seems to have convinced the council of ministers in Brussels of the need to unite, and present a solid front, in their negotiations with Mr Heath. The result tends to be, on each subject, an opposition aligned on the position of the most intransigent member. This is why, as the negotiations began again on Thursday in Brussels, there was little reason to expect a sharp break in policy or principle from either side.

All this may be part of the French "game", but the action is motivated by something more tangible than mere anti-British sentiment. France, as the major agricultural producer in the common market, is resigned to lower customs barriers and an open market for industrial goods; but only in return for the security of a highly-protected farm programme. Indeed the irony is that, as the Six move away from restrictions in industrial trade, their agricultural arrangements get more protectionist.

France's protection rests with the controversial European Agricultural Guidance and Guarantee Fund, the kitty produced by the levies that are imposed on farm imports from outside the common market. Up to now, most of these levies go into the national treasuries; a sixth is allocated to the agricultural fund at the end of this year, a third at the end of next year, and a half the year after. The net effect will be first, to support the protected price system for farm products within the community, and second, to assist farm exports with subsidies, when necessary; which is to say when surplus produce must compete against the international market price. The programme itself has run into opposition among the Six (particularly on the part of Germany and Holland) and still requires parliamentary ratification by all six members.

In fact the impasse is a familiarly national one. Agricultural programmes in industrial countries are usually no more than partial successes. Through one or another elaborate scheme of subsidies the state attempts to redress the existing balance of economic power, adverse to agriculture, within the country. The French are attempting to adjust such a balance in the European community before it has been struck. They need an ally; they cannot afford another strong industrial opponent. For Britain to state its position (beyond accepting, as it has done, the general terms of the financial regulation) before it is a member of the community may be rash and undiplomatic. But it looks as though the art of the economically possible will have to be practised in some way or other if the negotiations are to move ahead.

RAILWAY PAY

The Beeching Inflation

THE unhappy repercussions that were to be expected from last week's 6 per cent increase in railwaymen's pay have begun already. All railway workshop employees—the precise people whose superfluity caused a one day strike on the railways last month—were on Tuesday given a 6 per cent increase as well. These men are represented not by the three railway unions but by the conglomeration of craft and general unions within the Confederation of Shipbuilding and Engineering Unions—who now find that the basic pay of their members in railway workshops is higher than that in the engineering industry generally. It is true that average earnings in railway workshops are still below those in engineering: wage drift has for long protected British industry from the wilder excesses of illogic that could flow from national wage bargains. But this 6 per cent will do its substantial bit to close the desirable earnings gap between industries into which labour should be moving and an industry from which it should be drifting away.

Even more serious is the prospect that this uncovenantedly large rise for one section of their membership may push the shipbuilding and engineering unions into submitting another general wage claim. This they had, exceptionally, decided not to do this year. The more level-headed union leaders had decided that their immediate aim should be to secure increases for certain grades, and in particular to eliminate some of the absurdly low nominal rates of pay at the bottom of the scale, without shoving up those at the top. As these bottom rates are paid to very few of their employees—to the people who sweep out the floor of their factories and so on—the employers had seemed reasonably ready to accept this. The danger now is that the hand of those trade unionists who would prefer to put in the usual inflationary claim for all engineering workers will be strengthened; and that the chance of reforming the whole wages structure will thus be lost.

The next unhappy result, no doubt, will be a wage claim by London Transport busmen to match the 6 per cent that the underground train staffs, following other railway staffs, are likely to get this Friday. It could be hard for London Transport—after the example set by so exalted a personage as the chairman of the British Transport Commission—then to refuse this rise, even to men who have behaved so impossibly as the busmen did over the introduction of modern buses. Dr Beeching's chummy decision to raise his railwaymen's wages may once again be going to drag the whole economy into a familiar inflationary morass.

FORD STRIKE

Blind Man's Brink

THE leaders of the unions which were to have called an official strike at Fords this weekend have now sensibly and quickly backed away from a situation which had become both dangerous and absurd for them. The company still stands by its right to sack the famous seventy "trouble-makers" (with perhaps now some latitude for discussion of individual cases). Officially, the unions still stand by their principle of "no victimisation", but they have been persuaded by their strongest leaders, Mr Cousins and Mr Jack Cooper, not to back their stand with force at this stage. Their decision could mark another important milestone in the slow story of the advance towards modernity in British trade union attitudes. The unions knew perfectly well that the old trade union battlecry of "no victimisation" has not gained the sympathy of most of their own members, when it was applied to shop stewards who have acted as disruptively as those at Dagenham; there was even some danger that an official strike call might have been only partly supported, thus exposing the true weakness of trade union militancy at Dagenham. The unladylike anti-strike demonstrations by Dagenham ladies this week were, however comical, indicative of a real unwillingness to face a seemingly interminable loss of wages just before the Christmas shopping spree, merely for the sake of the beautiful eyes of some thoroughly unpopular shop stewards.

The best outcome now would be if talks between unions and management over the sacked seventy were to drag on until most of them have found jobs elsewhere: there is no sign at all of unemployment in Thames-side Essex. The company has played at brinkman's buff with the astuteness of a Kennedy—thus doing something to redeem its past record of ghastly dithering over labour relations. No doubt the Chancellor's reduction of purchase tax on cars will make it yet more anxious to get things moving again. But the really vital need now is for the unions, which have faced and flinched away from the prospect of a long strike in support of men who have done their best to undermine the unions' own position, to bang into shape their own unwieldy and impersonal organisation at Fords. There are no precedents for the tide of local resentment which seemed to be mounting against them in the past few weeks—which means that there is also no precedent that should keep the Trades Union Congress itself from lending an Olympian helping hand in this task of co-ordination between 22 of its constituent unions.

INDIA AND PAKISTAN

Which is Which?

A LIST was published in Delhi a week ago of more than forty countries whose governments had by that time condemned China's attack on India and offered India their sympathy and support. The omissions were interesting. Among Commonwealth countries, South Africa and Ghana were conspicuous absentees. Jordan was the only Arab country on the list. It was not, in fact, a complete list. Ireland, for instance, was omitted, although Mr Lemass had taken India's part in no uncertain terms in the Dail three days earlier. But among the omissions that were not accidental were the names of all India's immediate neighbours except Ceylon.

The reticences of Burma and Afghanistan may be sufficiently explained by the natural prudence of small countries that are China's direct neighbours. In the case of Nepal, there is the further factor of the tense relations between Delhi and Katmandu arising from the Nepalese emigrés' activities from Indian territory against King Mahendra's government. There remains the very special case of Pakistan. Other Asian states that are allied with the West—Persia, Siam, the Philippines—have declared for India in the present conflict. Pakistan has broken ranks with its fellow-members of the Seato and Cento groups in this matter, and has even induced Turkey to hold back arms of American origin that it was on the point of passing on to India.

Distinctions should be made between the attitudes of Pakistan's newspapers, most of which have revelled openly in India's woes and all but cheered the Chinese invaders

on; of certain of its political figures, who have hastened to urge that Pakistan should bluntly exploit India's difficulties by insisting on self-determination for Kashmir as the price for benevolent neutrality; and of more responsible leaders, who have stressed arguments that deserve serious attention. One such argument is the prospect that, if and when the Chinese are dealt with, India may be left with a new wealth of modern arms supplied by the West and may then loom over Pakistan more hugely than ever.

But all these attitudes have in common a striking disregard for the fact that Pakistan is pledged by its alliances to resist any southward pressure by the communist powers to the north. Pakistani emotions, not in themselves hard to understand, have created a paradoxical appearance that the two feuding neighbours of the subcontinent have switched roles. While the Peking press gloatingly (and, even in these circumstances, oddly) claims that "India's policy of non-alignment is nearing bankruptcy," Pakistanis seem to be wallowing happily in the new joys of—surely there is no better word for it?—non-alignment.

CHINA

Away from the Wall

PEKING'S economic horizon looks a little brighter this year; so China's leaders, who have had their backs to the wall during three years of calamitous harvests, are hoping once more to get the country moving along the road to sustained economic growth. This time, however, expansion is to be achieved not by a great leap forward, using millions of men and women toiling without modern equipment, but by backing muscle power with machines and thought.

The *People's Daily* announced on November 9th the appointment of seven new deputy chairmen to the State Planning Commission. The paper also outlined a new farming programme, based on the realisation that agriculture must have the benefit of machines and scientific research if China is ever to feed its population or build up a food surplus for buying industrial equipment abroad. The new programme brings together many strands of policy that have been evolving during the last couple of years, when China's leaders have been compelled to fend off disaster with policies of "readjustment" and "consolidation." At the end of last year Mr Po I-po, the chairman of the state economic council, talked at length of the need to mechanise agriculture. Mr Chou En-lai, the prime minister, followed this lead at the National People's Congress in March when he gave agriculture priority over light industry and even over heavy industry.

Although the change has been gradual, it can hardly have pleased Mr Mao Tse-tung and Mr Liu Shao-chi, the main exponents of the great leap forward. The return to careful planning is in a way a triumph for Mr Chou En-lai and his plan-minded associates. And yet they have by no means been given a free hand; in fact, the new appointments suggest a careful balancing of points of view, resulting from hard bargaining in the politburo. The planning commission is still headed by Mr Li Fu-chun, a talented planner from the politburo who criticised the great leap forward and kept his job. His commission's importance has been increased by the placing on it of seven politburo members as deputy chairmen. Three of these new deputy chairmen supported the great leap forward. But it is probably more than coincidence that the other four (including Mr Po I-po, one of the politburo's top planners, and Mr Yang Ying-chieh, who was dismissed from the planning commission in 1959) criticised the "blind advance" that was unsuccessfully attempted in 1958.

MPS' PAY

Jobs and Rewards

ANYBODY who goes into the business of politics at present must expect a relatively poor salary, frantic insecurity, no severance pay and only a bare pension. If, in addition, those who have reached ministerial rank were not allowed to take up jobs in outside industry after they retired, there could be a real diminution in the number of able men willing to accept office in any government. That is the short answer to those who have complained because some of the senior ministers who left the cabinet last July have since then accepted directorships in firms which have had some Government contracts. In one's more suspicious flights of imagination, one can see dangers in this stocking of boardrooms (or, equally, of other industrial jobs such as advisory posts) by men who have exercised ruling power in Whitehall. But in practice there is not the slightest sign that either the anticipation of future jobs by current ministers, or supposed pressures along the old boy network by ex-ministers, have affected the placing of a single Government contract, and in these circumstances the nation would lose more by imposing new restrictions than by trusting to the high standards of honour which still prevail.

Having said this in defence of ex-top politicians' standards of life, it may seem a bit hard to object to one feature of the pay claim for ordinary backbenchers that has just been submitted to the Prime Minister by a group of all party MPs (but mainly Labour and Liberal ones). It is time that MPs were given a rise above their present £1,750 a year (£750 of it tax-free). But it is not time to support the revived idea that their pay should now be carefully equated with that of an assistant secretary in the civil service (present salary scale £2,650 to £3,350 a year), and should rise automatically thereafter whenever civil service pay increases. MPs like this suggestion because it would save them in future from the embarrassment of asking for and justifying pay increases. That is precisely why other people should object to it. The whole aim of the Government's incomes policy for ordinary workers is supposed to be to get away from the doctrine of "fair comparability," and to get back to the principle of supply and demand. The case for giving MPs more money is that the quality of candidates for Parliament may suffer unless emoluments are raised; the state of supply and demand for civil servants of assistant secretary standard has nothing to do with the matter, and it would be another small surrender to inflationary thinking to pretend that it has.

UNIVERSITIES

The Needy

THE new University of Warwick (at Coventry) made a slightly belated bow on Tuesday with the appointment of Mr J. B. Butterworth, bursar of New College, Oxford, as its vice-chancellor. A development appeal, £1 million of which will be for halls of residence, is to be launched early next year. Warwick will aim at the

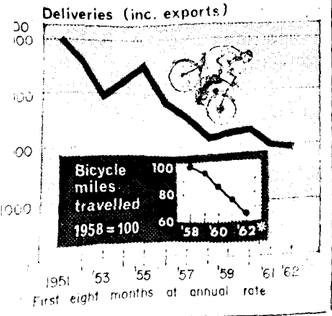
e target for growth as the university of undergraduates after ten
s. One of its most promising innovations
be a graduate school in management
dies. Like the other new universities,
rwick should have little difficulty in
acting teaching staff of the calibre that
vants. The real problem is that every
ght new institution (and there will be
re after the Robbins committee on higher
ication has reported) increases the head-
es of the older and rather duller civic
versities, where expansion is jeopardised
a shortage of good staff, particularly of
ior and assistant lecturers.

The University Grants Committee, in its
ort for 1960-61 (Cmnd 1855), has just raised the alarm over this general shortage of staff, most noticeably in the pure and applied sciences. The accompanying chart shows that, while the ratio of students to staff in arts faculties has improved since 1938-39, in the sciences it has deteriorated by some 37 per cent. (The greatly improved ratios for medicine, dentistry and veterinary science reflect the rise in full-time staff during this period, and are exceptional.) The need to encourage recruitment to the old-fashionable universities (Leeds is one of the few that has owned up to its difficulties) and to reinforce the growing points of science and technology should be paramount in the Government's response to the 2½ per cent pay claim submitted to the

Coventry

THE DOWNHILL RUN

The downward trend in British pedal cycle production seems unlikely to be reversed this year. Even steeper has been the decline in the use of bicycles. If the present rate continues, by 1970 the distance travelled by bicycle will be less than a quarter that of 1958.



UGC by the Association of University Teachers.

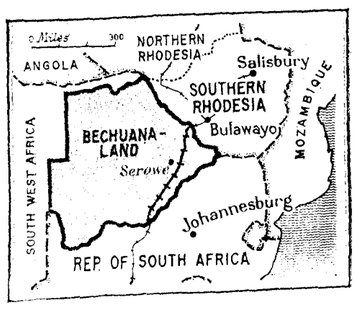
The Dons' Claim

In making this claim for a 30 per cent rise, the Association of University Teachers has taken particular exception to the rises of up to 33 per cent given to technical college teachers last year, because their scale is related to the Burnham agreement, while similar university grades got a flat rise of only 3 per cent. But the biggest single problem in the rapid expansion of all education from the sixth form upwards is going to be the deployment of a severely limited number of people to cover the growth points where they are most needed. If it is contended (so far without convincing statistical evidence) that there has been a massive drift from university teaching, the remedy is, first, to apply the highest, discriminatory increases in precisely those grades and faculties where competition from the outside world is most evident; and, secondly, to allow particular universities which have most difficulty in attracting staff (because they are in less exciting surroundings) a block sum out of which they should pay discriminatorily higher salaries than other universities to lecturers in faculties which they wish to make their specialty. The wrong course is to tie, as the AUT wants, all university salaries to those of civil service grades. This is pre-eminently a case (like the MPs discussed above) for the Government to apply a rational wages policy.

BECHUANALAND

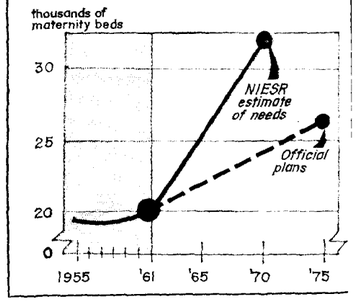
Rescue Operation

In southern Africa, the British Government must of necessity tread warily, but it is not always necessary to be timid. It is an area in which the South African, Portuguese, and Rhodesian federal governments command the real economic and military power, while the black African states to the north, tenuously linked in spirit to the three protectorates of Basutoland, Swaziland, and Bechuanaland, represent the force that desires nothing less than to overthrow the white power.



HOW MANY HOSPITAL BABIES?

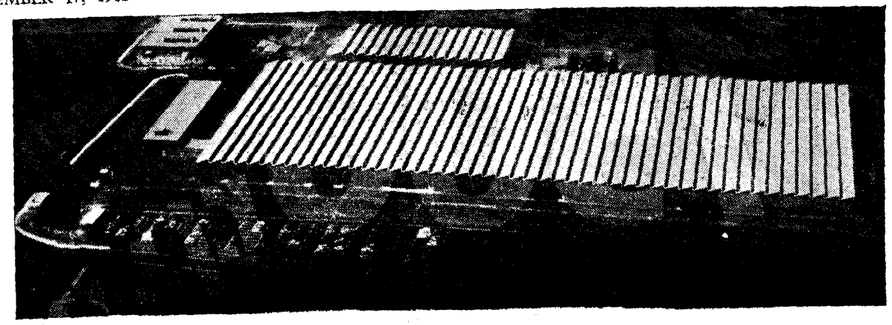
New hospital building aims at increasing the number of maternity beds in England and Wales by nearly a third, or about 6,500, between 1960 and 1975. An article in the current "National Institute Economic Review" suggests that a more appropriate target might be an increase of nearly 60 per cent, or 12,000, by 1970. This forecast assumes a much higher birth rate in 1970 than the official estimates and an increase in the proportion of births in national health service hospitals from the present 60 per cent to some 80–85 per cent (which may, of course, be an over-assessment).



On November 7th, acting with a certain amount of courage, one of the weakest and most vulnerable of the protectorates, Bechuanaland, took advantage of the fact that the railway linking South Africa to Southern Rhodesia passes through Bechuanaland territory. Protectorate police rescued three non-white South Africans from a train in which they were being taken in handcuffs and leg chains, from Southern Rhodesia to South Africa. The men had left South Africa without passports to take up bursaries in America; the Southern Rhodesians had put them in jail and were sending them back to the Republic, where on November 7th, Mr Nelson Mandela was sentenced to two years' imprisonment for escaping without a passport. The protectorate government's action had an immediate effect. On November 9th a further batch of prisoners, this time 28 students on their way to Tanganyika, free of handcuffs and leg-chains, were sent through Bechuanaland without escort. They declined to use up their tickets to Mafeking, in South Africa, and got off in the protectorate. The Bechuanaland government, in permitting them to do so, thus rightly upheld the principle usually (if not always) defended by British Governments.

This sort of action ought to acquire merit for the British Government—not least at the United Nations, where Major Patrick Wall, Britain's delegate on the trusteeship committee, has been having a hard time. Major Wall said on Monday that apartheid as practised in South Africa was "morally abominable, intellectually grotesque, and spiritually indefensible." The effect of this statement was spoiled for most of his audience by the defence of British sales of arms to South Africa that followed it.

AT EVERY MOMENT SOMEWHERE IN THE WORLD TAYLOR WOODROW IS SHAPING THE FUTURE



...and now the Common Market!

For British companies considering development in Western Europe, or Continental companies planning development in Britain, the Tayplan offers facilities which save months of work and worry. Tayplanning is the 'all-in' Taylor Woodrow service that takes care of every aspect of a new project, from design and finding a suitable site to completion ready for immediate occupation and operation. A typical example of Tayplanning is the new 300,000 sq. ft. Ferodo factory at Caernarvon, illustrated above, where production commenced within 12 months of the first briefing meeting between client and Taylor Woodrow. Tayplanning is the ultimate in teamwork—the complete co-ordination of skill, experience and resources to ensure the utmost speed and economy consistent with quality construction to the client's own high standards. We welcome an opportunity of discussing with you and your consultants how Tayplanning would facilitate your Common Market plans *right from the start.*

Arcon

SIMPLIFIED CONSTRUCTION SPEEDS NEW PROJECTS

One great factor in the speedy completion of the Ferodo factory was the use of 'Arcon' steel-framed buildings. 'Arcon' buildings constitute the world's most advanced high-efficiency construction technique — they *have been* used with success in 120 countries. 'Arcon' buildings make fullest use of standardized factory-made components and modern assembly line techniques, ensuring 'on schedule' deliveries and speedier erection. They are the products of the Arcon Group, of which the sponsor members are Imperial Chemical Industries Ltd., Stewarts and Lloyds Ltd., The United Steel Companies Ltd., Henry Hope and Sons Ltd., Turner and Newall Ltd., and Taylor Woodrow (Arcon) Limited.

High speed bearings on Boiler Feed pumps create lubricating problems. Weir solved them for their Turbo-Pump Units by developing a bearing lubricated by water instead of oil.

This bearing increases reliability, cuts down maintenance, reduces size and weight, and facilitates the design of a compact high-performance unit. It is one example among many of engineering progress accomplished by Weir.

CONGO

Tired Tragedy

REHEARSALS for the next Congo upheaval are in full swing. On Monday United Nations officials in Leopoldville published "fairly reliable" reports that south Katanga bombers had dropped about 70 bombs in north Katanga: the reports came from national army units (which oppose south Katanga) stationed in north Katanga. Mr Tshombe's man in New York was reported as saying on Tuesday that he had telephoned Mr Tshombe and that the bombing had in fact taken place. The United Nations officials said that the UN was ready to "react immediately" to any Katangese air offensive; the south Katangese themselves must have reflected that UN capacity to do this is dwindling. since the Indian forces are to be called home to fight the Chinese and the first to go will probably be airmen. And, according to all reports, between 20 and 50 new aeroplanes have been bought by Mr Tshombe's government this year, with an equal number of white pilots and technicians to run them. It is also reported that several hundred paid white soldiers have been recruited; these, it seems, pose as technical workers, while sitting in Elisabethville waiting for war to break out.

By Thursday no war had broken out, but the familiar song and dance routine was being heard. Mr George McGhee, United States under-secretary of state, saw the Foreign Secretary, Lord Home. in London on Wednesday; he flew to Brussels on Thursday morning and was planning to fly to the Congo next. Mr McGhee's travels make the pressure now being applied by U Thant, acting secretary-general of the United Nations, seem credible. U Thant's admonitory letters to both Mr Tshombe and the Congo prime minister, Mr Adoula, called for replies by Thursday. The implication is that if Mr Tshombe goes on refusing to move towards Congolese unity, economic sanctions will be applied against Katanga. This refrain has been heard before, but Mr McGhee's trip seems like a fresh attempt by the American government to round up support in Brussels and London for the sanctions plan. If Mr Tshombe thinks this he will, by his past performance, at least make a gesture of giving way.

It now seems that if Mr Tshombe did fall into line the Congo might be put on its feet again fairly rapidly: one report suggests that the country has not run down so badly in the two years since independence as has been imagined.

CHILDREN'S BILL

Protection, Procedure, Parents

THE Government's new Children and Young Persons Bill is one of those casserole measures into which bits and pieces of recommendations from various reports are dropped to provide a dish that gives general satisfaction without being in the least exciting. Most of it is based on the report of the Ingleby committee, which appeared two years ago. But it omits the most far-reaching, and also most contentious, of that committee's recommendations: that the minimum age of criminal responsibility should be raised from eight to twelve; and that a child under that age who commits an offence, and all children now deemed to be in need of "care or protection" or "beyond control," should be brought before the court as being in need of "protection or discipline." The new bill leaves the age of responsibility untouched, which is a pity; but it assimilates the present criteria for court proceedings, when the child is not charged with an offence, into one phrase—"*in need of care or control*"—and, following the Ingleby committee's proposal, abolishes the parent's power to bring a child to court as being beyond control. Instead, the parent will have to ask the local authority to bring the proceedings; if it refuses the parent can then apply to the court for an order directing it to do so, but the child will not be present at the hearing of the application. All this is very laudably intended to prevent a child from hearing his parent publicly reject him.

But clearly it would be better still if things were not allowed to come to this pass. Thus the first clause of the bill puts into effect the committee's recommendation that local authorities should be obliged to undertake casework, and if necessary give assistance *in kind* "or, *in exceptional circumstances. in cash*," to prevent a child being taken into care or brought before a court as in need of care or control. *This means* that they can pay a family's rent rather than allow it to be evicted, broken up and the children taken into care. It is to be hoped that local councillors will realise how much cheaper it is to do so.

Other clauses require both parents to attend a juvenile court when their child is charged with an offence; increase the maxi*mum* fine a magistrate can impose in a cruelty to children case from £25 to £100; and, in committal proceedings in a magistrate's court relating to a sexual offence, provide for the evidence of a child under 13 to be given in writing unless the defence object. The second part of the bill also aims at protecting the child by reducing the hours when he can be employed and by tightening up the restrictions on child actors and entertainers. It should be noted that if the first clause here goes through, a newspaper boy will not be allowed to start his round before 7 a.m., so that many people will not have their papers delivered before they leave for work.

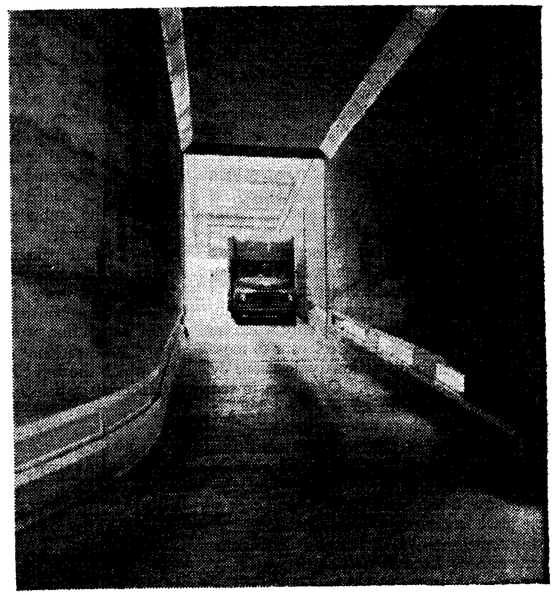
Heating Advisory Department
BICC Limited 21 Bloomsbury Street London WC1

HAMMERSMITH FLYOVER is a vital half-mile section of London's western highway. BICC heating cables were installed to eliminate ice formation.



LEX SELFRIDGE GARAGE RAMP is heated to ensure good wheel traction for the heavily laden delivery vans.

Electric road-heating cables are being used increasingly to combat winter hazards to traffic on vital sections of highways, flyovers, underpasses and vehicle ramps.
Automatic energy control restricts operation to times of hazardous weather conditions and to the availability of off-peak electricity. This is an attractive proposition.
"Road Heating"—a BICC film on heating the Hammersmith Flyover, is freely available to those interested. Requests should be made to the Film Librarian at the address below. Further technical information may be obtained by submitting the coupon on the opposite page.

BICC HEATING CABLES

BRITISH INSULATED CALLENDER'S CABLES LIMITED 21 Bloomsbury Street London WC1

British branch of the International Commission of Jurists, that Britain needs an equivalent to the Scandinavian Ombudsman, comes as no surprise. *Justice* has immediately struck back with a memorandum (prepared in intelligent anticipation) countering government objections, and has circulated it to all MPs.

The Lord Chancellor's first point, which has a certain magnificent complacency. is that the private citizen can always obtain redress of any grievance without an ombudsman poking his nose into state papers. Few people will share this opinion. Of the traditional means of redress, recourse to the courts is expensive, uncertain, adopted by the ordinary man only when he is really desperate, and not relevant to most grievances against discretionary decisions by the bureaucracy anyway. Questions in the House are limited in effectiveness by the pressure on the short time available and by the enthusiasm or pertinacity of the individual Member of Parliament, which is a very variable quantity. Debates on the adjournment are even more limited ; they take place late at night when most MPs and many representatives of the press have gone home to bed. Lord Dilhorne's next point—that an ombudsman would supplant MPs—is flatly contrary to the Whyatt report's recommendation that, at first, reference of complaints to the ombudsman should be made only by MPs. Furthermore the ombudsman would be able to help MPs in their investigation of grievances by providing facilities for research (including research into ministerial files) which the ordinary private member cannot possess.

Ministerial responsibility, the third argument invoked by the Lord Chancellor, also has no relevance to the issue. Ministers' constitutional responsibility for the policy and actions of their civil servants would not be altered in any way. They would still have to answer to Parliament. Indeed the informal investigations of the ombudsman, keeping MPs informed about dubious administrative practices and penetrating the iron curtain which often exists between MPs and ministries, would make it much more effective. The ombudsman, as the *Justice* memorandum points out, would be concerned with maladministration, " exactly the class of acts for which the full rigour of the doctrine of ministerial responsibility is relaxed."

HORTICULTURE

Farm Follies

THE fruit, flower and vegetable industry does more complaining, more vocally, about the lack of official aid than any other comparable business. Its grievances should receive less sympathetic attention after the events of the past two weeks. The Horticultural Marketing Council was set up in May, 1960, to bring together growers, wholesalers (including importers) and retailers in an attempt to improve the notoriously chaotic marketing and distribution of fruit. vegetables and flowers. It was given £250.000 for its first three years' work. After that it was supposed to finance itself by a system of charges on the industry. It prepared a scheme for raising £114,000 from retailers, about the same from wholesalers, and £74,000 a year from growers. Each section of the industry, however, has now failed to agree to produce the cash, so the HMC is to close down.

This is a pity. The council was not to be one of those statutory marketing boards that have introduced so many rigidities into Britain's heavily subsidised farming industry: its main function was to carry out research into matters such as packaging, grading, freezing and the mechanics of selling. Under its aegis had been set up the Fruit Traffic Organisation. which could have helped to improve efficiency both in markets and at the docks for foreign fruit. It will, indeed, leave a legacy of technical reports and studies that could be valuable either to a successor body or to specialist firms in the industry. Those in whose interests this was done have declined to provide such services for themselves, perhaps because they cannot see where their individual profit might lie, or perhaps because they do not want any even moderately efficient eyes looking at themselves. The HMC certainly cannot be replaced by the National Farmers' Union's new horticultural marketing plan—which is unlikely either to secure the co-operation of the distributive side of the industry, or to be specially keen on keeping prices down. Cynics will say that the industry had just one valid reason for not wanting a real research organisation: the first fact that real research would reveal is that the British climate is not suitable for growing many of the fruits, vegetables and flowers that, under massive tariff or other protection, are in fact grown here. The final absurdity will be if Britain's entry into Europe is held up by lengthy efforts to secure uneconomic safeguards for an industry as ripe for contraction as this one.

TV AT ELECTIONS

Wait For It

THE Home Secretary's new rules on how television cameras may (or rather, may not) cover the count at parliamentary elections adhere strictly to the mumbo-jumbo concept of what actually happens when votes are totted up. It is reasonable enough to ensure that undue heat or glare from television lights should not impede the counters, and even that revealing shots of individual ballot papers should be forbidden (although the revelation to the viewers would merely be of a wholly uninformative voter's number). But what possible damage is done by a shot of the running count, which shows how the candidates are placed at any one time ? The polling stations are already closed ; no one can change his vote ; nothing the camera does can alter the result. There is no magic about it. Yet the illusion persists in some anti-democratic minds that it was positively wrong for viewers to spot the way the Orpington count was going before the returning officer had had his brief moment of publicity. In (admittedly bigger) counts in America it is regular practice for announcements to be made on the state of the voting, the audience being assumed to be sophisticated enough to be told. The Home Secretary's veto is part and parcel of the unnatural suspicion with which paternalists regard anything to do with the telly. By contrast, Tuesday's suggestion by Mr Kenneth Adam, director of BBC television, that if permission could be got to provide a televised version of " Today in Parliament," the BBC's second channel would be the place for it, is at least a passing glance in the right direction.

The 'QUEEN ELIZABETH'
(The world's largest liner)
your cruising hotel
in NEW YORK and SUNNY NASSAU

This is the first-ever opportunity to combine the pleasure of winter cruising in the sun with the delight of sailing in the world's largest liner. On February 14, 1963, the QUEEN ELIZABETH leaves Southampton for New York; she arrives there on February 19, you can then use the ship as your hotel for two days whilst you see something of New York. Then on February 21 you leave New York for the warm sun of Nassau. Again using the QUEEN ELIZABETH as your hotel you can stay two full days in Nassau in the ship, arriving at New York on February 26. You can also arrange for a longer visit to bask in the Bahamas sun: details of connecting sailings as below.

CRUISE SAILINGS

From New York, February 21, February 28, March 6.
Rates for 5-day Cruise from £66.
Rates between New York-Nassau or Nassau-New York for passengers travelling Cunard across the Atlantic—half the cruise rate for the accommodation occupied.

CONNECTING SAILINGS

QUEEN ELIZABETH
From Southampton and Cherbourg on February 14.
From New York on March 13.
Atlantic Rates (Half-round trip):
First Class from £138, Cabin Class from £84, Tourist Class from £64 10s. EXCURSION FARES based on 25 per cent. reduction from normal one-way Cabin and Tourist Class rates and allowing 30 days aboard, excluding days of arrival and departure from New York, are available. Minimum half-round trip Atlantic rates: Cabin £70, Tourist £53 10s.
There are also regular Cunard Eagle Jet Flights between Nassau and London (via Bermuda).

CUNARD
REGULAR SAILINGS FROM SOUTHAMPTON AND LIVERPOOL
TO USA AND CANADA

Consult your local agent or CUNARD LINE, Cunard Building, Liverpool, 3 (Liverpool CENtral 9201); 15 Lower Regent Street, London, S.W.1 (WHitehall 7890); 88 Leadenhall Street, London, E.C.3 (AVEnue 3010).

AMERICAN SURVEY

AMERICAN SURVEY is prepared partly in the United States, partly in London. Those items which are written in the United States carry an indication to that effect, all others are the work of the editorial staff in London.

Back to the Daily Round

WASHINGTON, DC

AFTER the tension over Cuba and the excitement of the elections, the United States returns to the comparative tedium of normal life rather in the spirit of a man going back to his work after a weekend spent partly in hunting house breakers and partly at the races. There is a feeling that the world will never be quite the same again, if only because of the disappearance from active politics of Mr Nixon. But there is also a surprised and reproachful feeling that not much has been changed: the blind date with Armageddon did not have to be kept after all, but the cold war seems very likely to go on as before. At home the old, familiar, nagging problems of persistent unemployment, racial discrimination, juvenile crime and farm surpluses still await solutions. After the new Congress meets in January, it will doubtless have to turn its attention to most if not all of these once again, no matter what Mr Khrushchev, Dr Castro and the Chinese may then be doing.

The United States is like a householder who, with nerves still tingling from a narrow escape from death in a motor smash, sits down to a deskful of correspondence and bills and tries to force himself to attend to these and other domestic chores. A study of the shape of the new Congress does not alleviate this let-down feeling much. The Democrats are perfectly entitled in the light of precedents to call their tiny net loss in the House of Representatives and their small net gain in the Senate a victory over the Republicans. But the real brake on the President's programme in Congress is not a heavily outnumbered Republican opposition; it is the existence of a huge Democratic tail which drags the dog to a standstill, especially when the Republicans add their weight to it.

Of the 259 Democratic Representatives who will take their seats in the Eighty-eighth Congress, almost a hundred will be from the southern states. The South, which inhibits the Democrats from being as progressive in some vital matters as they would like to be, is a temptation to the Republicans to stay more conservative than the reality of the general situation might otherwise dictate. Bold Democrats toy with the idea that it might be all to the good if Republican gains in the South went far enough to rid Congress of some obstructionist chairmen of important committees, provided that the Republicans remained the political underdogs in the country as a whole. But more nervous Democrats wonder if this year's strengthening of the Republicans' southern beachhead may not mark the onset of an erosion which could in time transform the Democrats into the minority party.

The continued prominence of the southern influence on the Democratic party in Congress, and the replacement of some reactionary southern Democrats by some even more reactionary Republicans, has been offset to a limited extent by an influx of more broad-minded Democrats and by the ascendancy of moderate-seeming Republicans over the more iron-sided, or Goldwater, wing of their party. These men appear to be more attuned to the modern America of suburbs and supermarkets than are either southern negrophobes or rugged individualists from Arizona. Mr Nixon, over whose political head and angry protests the water of this election closed with perhaps deceptive finality, was the archetypal small-town American. The America of Main Street and Babbitry now seems to be passing along with the rural America whose twin symbols were an angular model T Ford and a plough; the symbol of suburban America is the sleek compact motor car. Suburbia is not Utopia and, like voters everywhere, American voters tend to want contradictory things—more public amenities but also fewer and lower taxes, for example. This human longing for the humanly unattainable apparently accounted for the fate of almost a dozen State Governors, both Democrats and Republicans, who paid the penalty of dismissal for failing to keep taxes down, while providing more but not enough schools and roads and trying, but not always with success, to reduce unemployment.

The biggest problem of the United States, everyone seems agreed, is its sluggish economic growth. But, in the eyes of some people at least, President Kennedy is likely to be damned more if he increases the public debt and the cost of government than if he fails to get the economy moving again. The rate of unemployment has not been as low as 4 per cent of the labour force for nearly six years and in that period the gross national product has grown by only 2¼ per cent a year—and it looks like slowing down still further in 1963. President Kennedy's economic advisers would like to try to improve the situation by a tax cut but powerful voices may be raised against this unless it is accompanied by cuts in government spending. Moreover, less affluent Americans grumble that lower federal income taxes will not help them much; they are affected mainly by state and local taxes. These cannot, however, be lowered without impairing the quality of education, which is provided locally, and plunging the states into even deeper financial waters than those in which many of them are drowning already.

Democrats incline to interpret the election results as a defeat

On the occasion of Mrs Roosevelt's 70th birthday in 1954

for the American Medical Association in its tug-of-war with the Administration over financing the hospital bills of elderly Americans through social security payments. It is said that the battle over "medicare" brought the defeats of Republicans who supported the doctors' opposition to the plan. Consequently, and with bland disregard of the awkward fact that some very influential Democrats were just as against it as was any Republican, it is hoped to get some form of the plan through both chambers of Congress in the session which starts in January. Mr Kennedy is also anxious to get Congress to allow the federal government to give more financial help to locally administered educational systems. A severe shortage is looming of doctors and dentists and of scientific workers as well as the long-standing shortage of ordinary classrooms for normal instruction. The link between juvenile unemployment, juvenile crime and juveniles who drop out before finishing school is obvious. Yet in both sessions of the last Congress federal aid to education was defeated not by anyone's stinginess but by Roman Catholics and southern Baptists and others who objected to the legislation on religious and constitutional grounds which were understood perfectly by theologians and lawyers even if not by over-crowded school children or under-paid school teachers.

President Kennedy does not need to seek the approval of Congress to put an end to racial discrimination in much of the country's housing. All that is required is his signature and this "stroke of the pen" which has been promised for so long may be forthcoming before the new Congress assembles. But Negroes are also discriminated against in colleges, polling-booths and jobs and, if persistent unemployment did not affect whites as well as Negroes the race problem would probably be regarded as the biggest issue in the United States. Southern Democrats are unlikely, however, to alter their well-known attitude. Those who are chairmen of congressional committees will probably be more conservative than ever, to demonstrate to the South that they, rather than conservative Republicans, are its best (and last) hope of blocking dreaded change.

The new Democratic and Republican moderates in Congress cannot oust racial and economic reactionaries from the committees because the general rule is that newcomers take their places at the foot of the table while survivors from the previous Congress move up to more senior positions. What Republicans might do, however

AFTER THE ELECTIONS

	Democrats	Republicans
House of Representatives*	259 (loss of 4)	176 (gain of 2)
Senate	68 (gain of 4)	32 (loss of 4)
State Governors	34 (no net change)	16

* There are 435 seats in the Eighty-eighth Congress, two less than in its predecessor.

As a result of the 1960 census states marked **o** have gained a seat or seats in the House of Representatives this year, states marked **x** have lost one or more; this explains the large changes in representation in states such as California, Florida, New York, Pennsylvania, etc.

‡ *Indicates results which are still in doubt.*

—which is not to say that they will—is to store up credit for themselves by working to get measures like medical care for the aged and aid to education passed in suitably amended form, instead of opposing them flatly. And both Democrats and Republicans might support proposed reforms of congressional procedure such as compelling committees to disgorge Bills to the floor by putting a twenty-one-day limit on the Rules Committee's power of withholding them or by requiring that petitions for their discharge need be signed by only 150 Representatives rather than the 218 which are required now. It has even been proposed that chairmen of committees should retire when they reach seventy (which would eliminate three powerful Senators at once) or be chosen not by seniority but by secret ballot (which might eliminate at least three more). But admirers of President Kennedy may have to wait until his second term of office for his programme to be implemented properly, if not until the inevitable day when the reapportionment of voting districts ends the present grip on modern America of dwindling groups of obsolescent farmers, cowboys and cotton growers.

South by Another Name

FOR the first time since 1954 the Republicans gained congressional seats in the thirteen southern states in last week's elections—five of them, bringing their total to 14 out of 119 in the region—and thus confirmed that the two-party system in the South had emerged from its lengthy infancy into at least the crawling stage. But the real significance of this is not so much that the South is going Republican as that it is staying conservative—particularly on racial matters.

The clearest illustration was in Alabama ; there was no Republican victory there but a right-wing Republican came within a sensationally few thousand votes of unseating Senator Lister Hill, a respected and well-established liberal (for the South) who has usually supported President Kennedy—although not, of course, when the federal government intervened on behalf of the Negro, Mr Meredith, at the University of Mississippi. The Republicans did win the Governorship of Oklahoma, for the first time in the state's history, again with a conservative candidate—although he was helped by the voters' discontent with the way in which the Democrats had been running the state and by divisions in the Democratic party. The Republican Senator Morton held his Kentucky seat easily against what had looked like a very strong attack from Mr Wilson Wyatt, who had the full backing of the Kennedy Administration ; so had Representative Burke who was beaten by a right-wing Republican, Mr Snyder, in the same state. Most of the other Republican gains in congressional contests in the South were also at the expense of liberals—in the new Cape Canaveral constituency in Florida, in Tennessee and in Texas (although there the Democratic incumbent was linked to the Estes scandal). The fifth gain, in North Carolina, was partly, if not entirely, because the boundaries of the district had been redrawn in order to put more Democrats into the neighbouring district, to secure the defeat of a Republican incumbent there—an attempt which failed.

Throughout the South Republican candidates did better than ever before and they scored in contests for State Legislatures and local government posts—winning two seats in the Georgia Senate, for example. The chief reason for this was that the party worked harder than ever before. But another factor was resentment against interference, notably on behalf of Negroes, from the Democratic Administration in Washington in what are considered to be purely state affairs. While this development of a genuine political challenge in the South is healthy in itself, it may have the unhealthy effect of encouraging southern Democrats, both in and out of Congress, to accentuate their reactionary approach to national issues.

Negroes for the Jobs

LAST week the four Negroes in the House of Representatives were joined by a fifth, from California—the first to be elected from a constituency west of the Mississippi. A number of Negroes also did well in local races, two of them winning elections for state offices in New England. Most Negroes, however, will be even more inclined to celebrate a ceremony which is due to take place at the White House this week ; about 100 of the 131 trade unions affiliated to the American Federation of Labour and Congress of Industrial Organisations are to sign pledges not to practice or to tolerate racial discrimination in jobs. They represent a large majority of the labour group's 13.5 million members and some of the unions are strong in the South.

This is a voluntary pledge—a companion-piece to the pressure being applied to employers by the President's Committee on Equal Employment Opportunity—but the labour movement, which disowned discrimination in theory in 1890, has had the National Association for the Advancement of Coloured People breathing down its neck with increasing force in the past year or two. Recently the NAACP has been trying to deprive certain trade union branches of their legal right to represent workers because the branches are alleged to discriminate against Negroes ; some trade unions and their employers have been haled into court. Mr Hill, the white labour secretary of the NAACP, says openly that certain of the skilled craft unions are the greatest existing bar to Negro progress. He and Mr Meany, the head of the AFL-CIO, are now on shouting, rather than speaking, terms. Privately Mr Meany must wish that he had taken a bold stand for Negro rights years ago ; today, with so many white trade unionists, with many years of seniority, out of work, justice for the Negro will not be easy to command.

Where government contractors are concerned the President's Committee has powers which it lacks over trade unions, but in general it has preferred persuasion, particularly where it is a matter not so much of ending outright discrimination but of encouraging an active search for Negroes qualified to hold responsible posts. The Administration has given an admirable lead. Postmasters who refuse to promote Negroes have been disciplined ; there is a continuing drive to find able Negroes better places in the civil service. Just this autumn a Negro was appointed to the Federal Trade Commission—though his youth and lack of experience in its complicated work make it doubtful whether he was the best man for the job. It is a growing complaint that qualified Negroes are hard to find—a result, of course, of inferior educational opportunities and long exclusion from the middle and higher ranks of business and administration. Ironically, in some of the states which have gone the farthest to bar racial discrimination, it is illegal to advertise for a Negro or even to request one from an employment agency. In the past the federal government itself, out of the best motives, has forbidden the race of its employees to be recorded and it is now having trouble finding those Negroes who may deserve promotion but have been passed over.

Recession Put Off

NEW YORK

THE American economy has faltered more than once this year but its upward climb has yet to be stopped. Indeed, the latest readings of the economic barometers cast fresh doubt on forecasts of impending recession. In October there was an improvement in the figures for both employment and unemployment while retail sales went up by 2 per cent over September, largely because of the record demand for new automobiles. Another answer to those who forecast a decline is contained in the latest McGraw-Hill survey of corporate plans for spending on new plant

and equipment, which reveals that such investment is scheduled to climb by 3 per cent from this year's estimated total of $37.16 billion to $38.15 billion in 1963. Admittedly, this is a very moderate increase, but usually advance plans for investment, whether for adding to outlays or for cutting them back, underestimate the actual trend so there is a good chance that the increase will be more substantial in the end. The current survey was taken before the Cuban crisis, which seems to have had an encouraging effect, at least psychologically; even so, McGraw-Hill's findings reflect an improvement over the last government survey, taken after the Wall Street crash. In reporting that businessmen were planning no change in their plans for 1962, that survey implied that a downturn was probable in 1963.

It is evident that corporations are being influenced by the new tax credit for capital spending and by the more liberal depreciation allowances now available, as well as by the need to modernise their facilities. According to the McGraw-Hill survey, industry is operating at 83 per cent of capacity; this is a little above the level of a year earlier but no better than the level which prevailed at the beginning of this year. Meanwhile, industrial production has increased by about 5 per cent, which indicates that productivity has been rising. The emphasis on the need to improve productivity is apparent from a new compilation of spending on automated equipment; in 1963 this will account for 19 per cent of manufacturers' capital outlays compared with 12 per cent in 1959. Even though existing capacity is still not being used as fully as they would like, manufacturers are modernising their plant in order to hold on to or to improve their competitive positions. The steel industry, for example, is suffering from shrinking profits and stagnant output, yet it plans to increase its investment by 13 per cent in 1963.

Industry expects a rise of 4 per cent in the total volume of sales in 1963, without taking into account the possibility of stimulating reductions in taxes. Retail trade is already doing well and can be expected to continue rising through the balance of the year. This strength in consumer demand will influence those corporations which are still undecided about their future spending. It should also lead to an increase in stocks which are now at comparatively low levels. So, if businessmen stick to their plans, the recession will probably continue to be postponed.

Deficit Brought On

THE economy may still be expanding but it is still not expanding as fast as the Administration expected at the beginning of the year. Then the gross national product for 1962 was put at $567 billion; now it is estimated at only $554 billion. This means that corporate profits and personal incomes will both be substantially less than was forecast last January. This means, in turn, that tax revenues will be much lower in the 1963 fiscal year than was calculated when the Budget was first presented. Expenditures, on the other hand, will be about $1.2 billion higher, partly because of emergency public works to spur the economy but mainly because Congress delayed increases in postal charges and refused to deal as drastically as the President had hoped with farm surpluses. The Cuban crisis has cost about $100 million so far, but this has not brought any net increase in outlays because it has been set off against the sum allowed for the civil defence programme which has now been shelved—for this year at least.

As a result of all this, the deficit on the administrative or conventional Budget when the current fiscal year ends next June is likely to be the second largest in peace time; the 1959 deficit was over $12 billion. Substantial deficits also appear when the national accounts are calculated by the other methods shown in the chart; these give a clearer idea of the immediate impact which government transactions have on the economy. Under present conditions, with that economy needing encouragement, the Administration is not at all concerned about this deficit. Unfortunately, members of Congress are always concerned about a deficit and this one is likely to confirm their reluctance to reduce taxes without compensatory reductions in government spending. The Administration has repeated its pledge to ask the new Congress for tax cuts, to be accompanied by tax reforms.

Since the reforms are sure to be controversial, it has been suggested, by the Secretary of Commerce and others who think that the immediate stimulus of lower taxes is needed to counter recessionary tendencies, that the tax cut should not wait for the reforms. But both are needed to put the economy on a soundly expanding basis and neither the Treasury nor the Congressmen who will be responsible for the measure are willing to separate them. It is now reported, however, that both reductions and reforms may be introduced in one package but by stages, with the first reductions, which will affect both corporate and income taxes, being implemented before the first reforms.

Beyond the Political Fringe

IN last week's mixed bag of electoral results one major point was clearly underlined—the American voters' distaste for political extremists. The right wing had a particularly discouraging round. True, the more conventional brand of hard-core conservatives, while bemoaning the loss of such right-minded servants as California's Mr Nixon, Indiana's Senator Capehart and Minnesota's Representative Judd, also scored some gains. A prime target of

LIFE SELLS FOR SHERATON

William Morton, Vice-President and Director of Advertising of Sheraton Hotels writes:—

"A big problem with any international advertiser is, how do you talk to the world? In our case the problem is, how do you talk directly to those persons who are international travellers—and how do you do it with the least possible waste in both circulation and money?

"We, at Sheraton Hotels, find that LIFE International and LIFE En Español give us excellent coverage in their respective areas.

"LIFE International helps us reach a good cross-section of our world market. They let us speak directly to people who travel. LIFE En Español reaches the growing Latin American travel market and allows us to tell the Sheraton story effectively in this important part of the world."

LIFE can sell for you, too. For more information about LIFE International, its advertising edition for Europe, as well as LIFE's Spanish language editions for Latin America—write to Robert H. Garey, European Advertising Director, Time & Life Building, New Bond Street, London W.1.

tractors out of this world

SPACE SHRINKS as man expands his explorations, and the ubiquitous tractor is readied for work on other planets. The problems that lie ahead are dramatically unknown, but you can be sure that the vast research and experimental resources of the David Brown Tractor Group are geared to meet them. Taking shape on their drawing boards are tractors that will be—literally—out of this world; tractors that, one day, will manoeuvre on alien surfaces as they set about the exploration and development of other worlds.

The power that converts the visions of David Brown into realities is British *Coal*. The ramifications of the group are enormous. It cannot be swayed by fashion or fancy in the choice of its vital fuel. David Brown chooses—and goes on choosing—coal. Coal, because coal gives the greatest heat for the lowest cost. Coal, because coal, burned the modern way, is smokeless. Coal, because coal is the British fuel and we have an almost inexhaustible supply of it within our own shores.

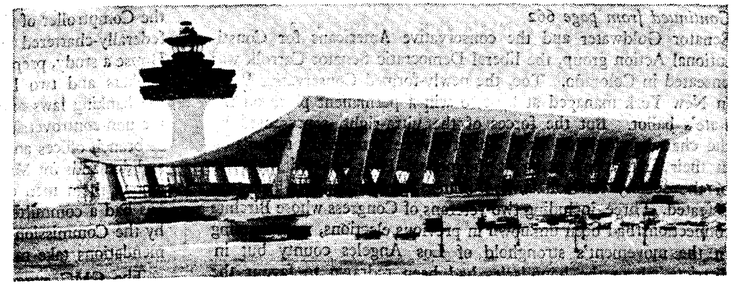
For the best of business reasons, David Brown—like so many other companies of vigour and vision—plans its future on coal.

DAVID BROWN PLANS ITS FUTURE ON COAL

ISSUED BY THE NATIONAL COAL BOARD

Supersonic Gateway

FROM A SPECIAL CORRESPONDENT

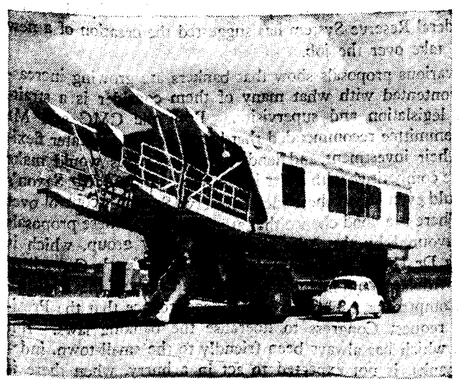


THIS weekend a giant mobile lounge, freshly washed and shined for the occasion, is scheduled to lumber heavily away from its dock at John Foster Dulles International Airport and to drive slowly out to the aircraft parking area. There, with thousands of excited visitors and dignitaries watching, it is to mate for the first time with a waiting commercial jet airliner. This unique and long-awaited ceremony will signal the opening of the world's largest and newest supersonic airport and the first designed specifically for the jet age.

On hand for the happy occasion will be the President of the United States and a host of lesser officials, foreign and domestic, as well as a crush of citizens from nearby Maryland, Virginia and the District of Columbia. For most of those expected to be present, as well as for everyone in the world of commercial aviation, the opening of Dulles International will climax more than ten years of disagreement and controversy over both the location and the design of what its backers say will be the most efficient and possibly the most attractive airport ever built to accommodate the slowest of propeller-driven aircraft as well as the fastest of supersonics.

Dulles Airport, at Chantilly, Virginia, has absorbed more than a hundred million dollars and nearly three million square yards of concrete. It is still a matter of some wonder, even to those most directly involved, that Congress was persuaded to open the purse-strings so wide for such a controversial project. Both states' rights and big spending were involved, yet hardly a Congressman raised his voice during the decade of steadily rising estimates of the total cost.

One possible reason for the smooth passage of most of the appropriation bills for the airport is the fact that a large part of the Dulles money has gone into the home constituency of Senator Byrd, the powerful and conservative chairman of the Senate Finance Committee. Usually an implacable foe of all federal plans for large-scale spending, Senator Byrd has co-operated warmly with the planners of the airport, even though he would have preferred to have it named after Virginia's great soldier, General Marshall—a suggestion personally rejected by President Eisenhower. Nor has Senator Byrd, or any of the other great dissenters in Congress, taken objection to the fact that Dulles International frankly represents a federal experiment in an area of responsibility which until now has been reserved almost exclusively to the states and municipalities.



It is true that Maryland's congressional delegation is still bitter because Baltimore's Friendship Airport, which can be reached more quickly from Washington than Dulles International, was not enlarged and rebuilt instead. This type of criticism is not hard to shrug off. Less easy to answer are those critics who demand to know why not one airline has yet indicated its willingness to build a hangar at Dulles—there would not be any there if Congress had not belatedly appropriated an additional $3.4 million to put up a utility-type building where aircraft can at least be brought under shelter for emergency repairs. And so far there is no answer at all to the criticism that, although Dulles International is to be a "showcase" port of entry for distinguished visitors who come by air, adequate provision for customs and immigration inspection seems to have been a secondary consideration in the design of the terminal.

In most other respects, the building undeniably represents a spectacular breakthrough in airport design. If all goes as planned, the traveller at Dulles will have only a few steps to walk between his taxicab or car and his aircraft seat. The 25 or more mobile lounges—five will be in service for the opening of the airport—are, as the name implies, more than just oddly-shaped, special purpose buses. They are an integral part of the plan and are designed to take the place of the awkward, finger-like passageways which stretch ever more inconveniently outward from every other modern-day air terminal where the number of passengers continues steadily to surpass the expectations of the designer.

The mobile lounges will not only provide transport for passengers between the terminal and the parked aircraft but will also serve as waiting rooms. At the time the flight is scheduled to depart, the doors will close and the passengers aboard will be taken out to their aircraft. Just what will happen if a flight is delayed for several hours has not been determined. In the beginning, at least, none of the fourteen airlines which have agreed to start commercial services at Dulles on Monday, November 19th, will have waiting rooms of their own.

It costs about $25 a minute to taxi a modern jet transport and in the long run it will be much more economical to carry the passenger out to his aircraft than to taxi it in to meet the passengers. Furthermore, it is safer to keep all aircraft parked well away from the terminal. Arguments like this have, for the moment, silenced most critics.

The great glass-sided, concrete-roofed terminal building—it looks like no other structure on this earth—is the brain-child of the late Eero Saarinen, who also designed the striking new building for Trans World Airlines at New York's Idlewild Airport. Because of their break with tradition, Saarinen's designs are unusually difficult to build by commonly accepted methods of construction. This often causes contractors to curse and to pay penalties for late completion, but so far the results have been worth it.

The contractors at Dulles have another story. First they had the problem of pouring the soaring concrete roof which covers the main hall of the terminal; this is 150 feet wide and 600 feet long. There are no interior columns; the roof is supported on two rows of massive, temple-like piers, 65 feet high on the approach side and 40 feet high on the field side. With the great curved roof in place, the next feat was to hang the glass walls, each pane of which is larger than the roof of a small house. Like many other man-made wonders of the world before it, Dulles International took a little longer to build than was originally planned but now the mobile lounges are champing at the bit and the great commercial jets, although they are not so eager, are ready to take off.

Continued from page 662

Senator Goldwater and the conservative Americans for Constitutional Action group, the liberal Democratic Senator Carroll, was unseated in Colorado. Too, the newly-formed Conservative Party in New York managed at least to win a permanent place on the state's ballot. But the forces of the ultra-right, represented by the chauvinistic John Birch Society, were completely repudiated in their first open testing at the polls. Four avowed members of the society ran for United States Representative. All were defeated. Three, including two veterans of Congress whose Birchite connections had been unknown in previous elections, were running in the movement's stronghold of Los Angeles county but in districts where the boundaries had been redrawn to favour the Democrats.

At the other extreme were the so-called "peace" candidates for Congress. This group, a comparatively new phenomenon on the American political scene, had only one common attribute—the support of various peace organisations. The candidates came from all parties and represented a wide range of opinion. Perhaps the purest of them was Mr Stuart Hughes, a professor of history at Harvard University who ran as an independent against Mr George Lodge and Mr Edward Kennedy in the Massachusetts senatorial contest. Mr Hughes advocated the creation of a zone of military disengagement in Central Europe, the immediate cessation of nuclear testing, the gradual abandonment of overseas bases and the participation of Red China in disarmament negotiations. This was hardly a platform designed to be popular with the average voter—especially after the Cuban crisis broke. In the event, Mr Hughes polled only 3 per cent of the vote in the state.

However, Mr Hughes and other similar outspoken challengers for congressional seats did not expect to be elected. They ran, and were supported by the peace organisations, primarily in order to gain a wider audience for their opinions. Serious contenders for seats, particularly the twelve incumbents backed by the peace movement, had not generally sought nor necessarily agreed to the movement's support; they were far more conventional in their views. Indeed, many of them took no specific stand on the issues of disarmament and nuclear testing and some were acutely embarrassed by the "peace" label. Of the fourteen candidates elected from the field of thirty supported by the peace groups, eleven were sitting members of Congress and only in one of these cases had the "peace" issue loomed large in the campaign. Moreover, among the three newcomers to Congress were Mr George Brown, Jr, who was pitted against one of the Californian Birchites, and the former director of the Food for Peace programme, Mr George McGovern, whose narrow victory in the South Dakota senatorial race is still being contested.

Bankers in Strait-Jackets

FROM A SPECIAL CORRESPONDENT

EFFORTS to modernise America's banking laws are gathering steam but so is the opposition to any change. Traditionally, it has taken a crisis to bring about reforms in the banking system. The National Banking Act was passed during the Civil War, the Federal Reserve Act, setting up a central bank, stemmed from the money panic of 1907 and the major overhaul of the nineteen-thirties from the great crash. The present drive, which is spear-headed by the major metropolitan banks, has no such origin. It is generated by a growing feeling that commercial banks are losing out to other types of financial institutions which are much less hampered by rules and regulations and that only a major liberalisation of the banking laws can restore the competitive position of the banks.

The advocates of change have found a champion in Mr Saxon, the Comptroller of the Currency, who is responsible for regulating federally-chartered banks. Recently he delivered to the White House a study, prepared by a hand-picked committee of twenty-two bankers and two lawyers, which calls for wholesale changes in the banking laws and regulations. Some of the recommendations are non-controversial but others, touching on such explosive issues as branch offices and supervision, have aroused a storm of protests and demands for Mr Saxon's resignation. But he has his defenders, among them men of prominence. Moreover, the Administration has had a committee studying the report submitted two years ago by the Commission on Money and Credit and Mr Saxon's recommendations take much the same line as the commission did.

The CMC suggested that branch offices should be permitted inside "market areas," a suggestion which would involve weakening state regulation by crossing state lines. Mr Saxon's committee was less revolutionary; it recommended that federally-chartered banks be permitted initially to operate branches within 25 miles of their headquarters but not across state lines. But even such a limited expansion would be a marked change. At present all branch banking is regulated by the individual states, many of which prohibit branches altogether. In Illinois, for example, Chicago's banks are confined to one office. Under the proposals of the Saxon committee, national banks would not be able to establish branch offices for two years after the enactment of the 25-mile proposal. This delay would allow the states time to change their laws in order to give the same privilege to state-chartered banks.

This is not a plan which all bankers welcome. In fact, most of the country's small, so-called independent banks, which have been fighting against the growth of branch offices and bank holding companies, are up in arms. They have not been able to stop the trend towards fewer banks and more banking offices but they are not prepared to assist it. At the annual convention of the American Bankers Association, in which the independent banks are in the majority, Mr Saxon's recommendations, especially those dealing with branching, were attacked as a threat to the country's dual banking system under which state-chartered and federally-chartered banks exist side by side with supervision on both levels of government. But branching was not the only target. Criticism was also hurled at the suggestion that all supervision and regulation of national banks be vested in the Treasury. As matters stand now, this responsibility is split up between the Federal Reserve System, the Federal Deposit Insurance Corporation and the Comptroller, who operates under the Treasury. The differences of opinion among these agencies, particularly on questions of mergers and holding companies, have led a good many people to suggest that control should be lodged in one body. The CMC, for example, recommended that the Federal Reserve Board should be given complete jurisdiction over the supervision of banks and a Governor of the Federal Reserve System has suggested the creation of a new agency to take over the job.

These various proposals show that bankers are growing increasingly discontented with what many of them consider is a strait-jacket of legislation and supervision. Both the CMC and Mr Saxon's committee recommended that banks be given greater flexibility in their investment and lending policies; this would make them more competitive with other institutions. Indeed, Mr Saxon's group would even lessen the Federal Reserve System's control over credit. There is a good chance that at least some of these proposals will be favoured by the Administration's study group, which is headed by Dr Heller, the chairman of the President's Council of Economic Advisers, and includes both the Secretary of the Treasury and the Comptroller. There is also a good chance that the President will request Congress to liberalise the banking laws. But Congress, which has always been friendly to the small-town, independent banks, is not expected to act in a hurry, when there is no crisis.

without air conditioning...

will it soon be obsolete?

What's the biggest single change in building construction worldwide in recent years? Many builders agree it's the general trend toward *air conditioning*. The cleaner, quieter, more healthful atmosphere of air-conditioned buildings is now preferred by workers, customers, guests the world over. If you want your new building to retain its desirability in the competitive decades ahead, give it all the advantages of air conditioning. You'll be protecting a huge investment at small additional cost.

Air conditioning means automatic all-the-year-round control of temperature, humidity, air movement and air cleanliness. And the economical time to install it is now, at planning stage. Ask your architect to give you the benefit of his knowledge and experience in this area.

CONTROLS BY HONEYWELL—international experts on every aspect of air conditioning—are an important part of the systems in these recently completed buildings:—

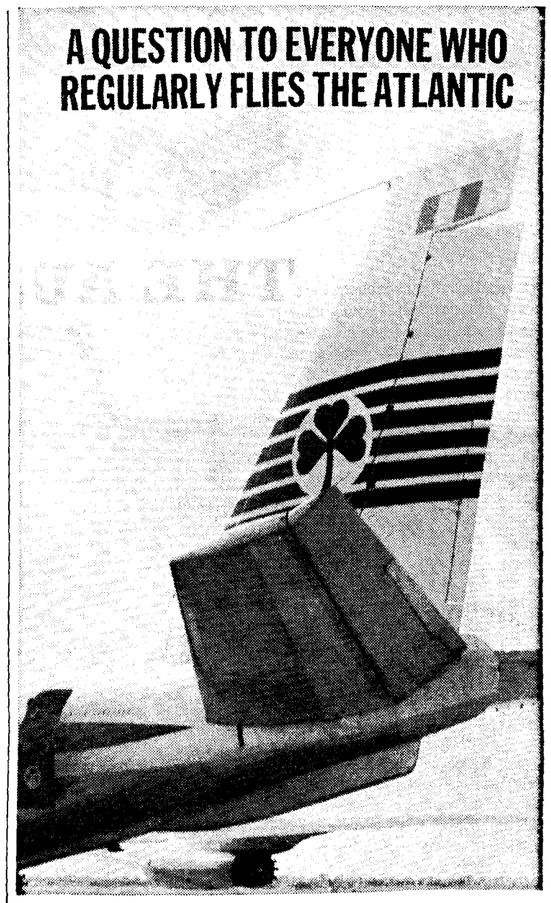
A QUESTION TO EVERYONE WHO REGULARLY FLIES THE ATLANTIC



Can you make the mileage shorter and sweeter too?

Yes! By Aer Lingus—Irish International Airlines. Catching a transatlantic jet need not mean hours of cross country journeying in the wrong direction. Aer Lingus flies *direct* from the major airport nearest you, to connect at Dublin with the daily Boeing jet to New York and Boston.

Not only is this far more practical, it is also more of a pleasure. *At Dublin* take a breath of fresh air, and enjoy a meal in the most famous airport restaurant in Europe. *At Shannon* stop off at the Duty Free shopping centre. Here the nicest things from Ireland and the rest of the world are all gathered under one roof and sold for a song. *In the air* you will discover that the Golden Shamrock menu and wine list are the finest that ever got off the ground.

Your travel agent will give you full details of all Aer Lingus services from the airports listed here, and of the connecting flights to New York or Boston.

Check your home town against this list of Aer Lingus take-off points in Britain.

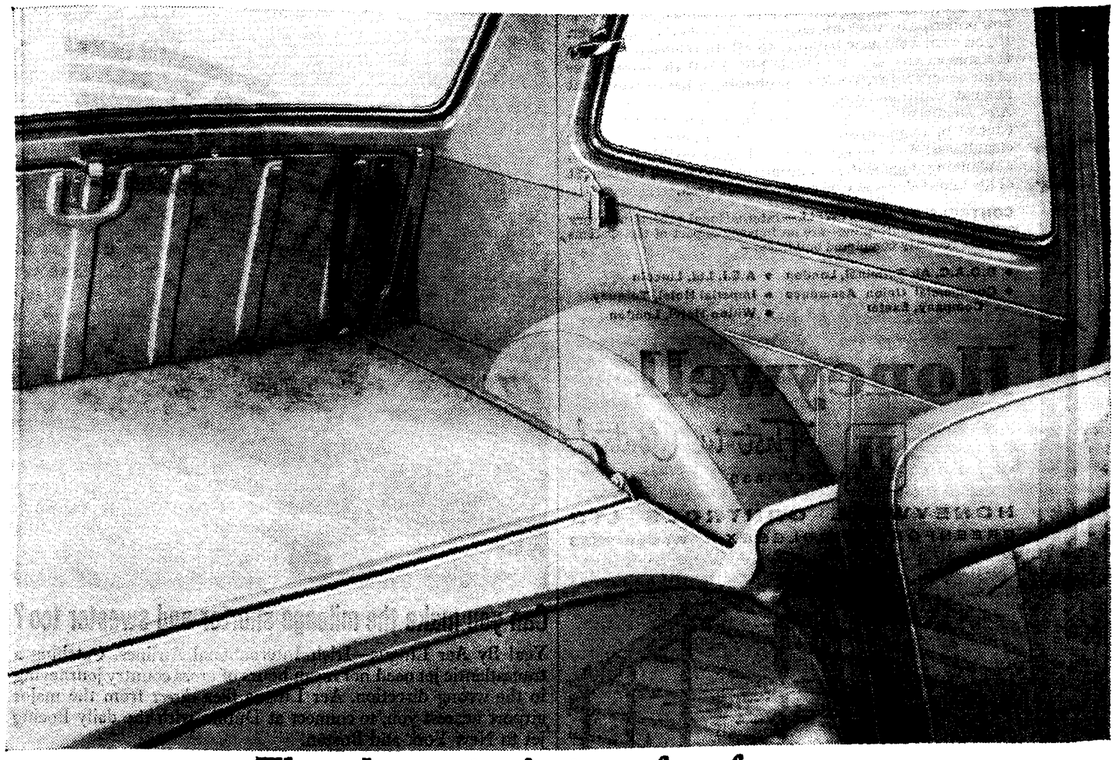
THE AUSTIN A40

By Appointment to Her Majesty The Queen Motor Car Manufacturers The Austin Motor Company Limited

Backed by BMC 12-month warranty and BMC service



The shape isn't just for fun...
it gives you space you can double

THIS MAKES SENSE

It's a distinctive shape, the A 40. But not just to be different. That shape was designed for the best and simplest of reasons: it makes sense! Look inside. You get more than just four-up comfort. Get inside and move the fully folding back seat down and there's extra space for a mountain of luggage. And that's not all. With the back seat up, you get a normal-sized boot that's *inside* the car. Perfect for carrycot or sudden-shower picnics. Then feel the performance; make friends with the fuel gauge; and check the price; £460 plus £96.7.11 P.T. It makes sense to invest yourself with an Austin A 40.

THE WORLD OVERSEAS

Around the French Hustings

FROM OUR PARIS CORRESPONDENT

An obedient parliament, or a crisis. This was the choice offered by General de Gaulle to the French voters in his broadcast on November 7th, in which he condemned all the "parties of yesteryear." Yet everybody knows that, even if the gaullist UNR keeps all its 180 seats after the two-round elections this Sunday (November 18th) and on November 25th, it will not have a majority in the new assembly. It will be obliged, therefore, to seek alliances. The opposition is in no better shape. The *cartel des non* is crumbling in many constituencies, and the electorate's fears of a new Popular Front may wreck it altogether. The voters who this Sunday will have to choose from among nearly 2,300 candidates in 465 single-member constituencies (there are, in addition, 17 overseas seats) will be settling only the first round in a battle that is as crucial as it is confused. The following notes from your correspondent's campaign diary are merely an attempt to illustrate through particular instances some of the general problems involved.

Marseilles in the Rain

Marseilles claims to be the capital of the *non*, or the largest town in France in which the gaullist vote was in a minority in last month's referendum. Together with its neighbouring region (the *Bouches du Rhône*), Marseilles accounts for eleven constituencies. In 1958 four of them elected conservative members, three chose Socialists, while the remaining four were divided between Communists and the UNR. But in the triangular battles of that year the Right was united and the Left divided. Now the climate is different. The referendum of October 28th divided the Right, whereas on the Left the Communists, at least, are likely to stand down between the two rounds of the election in favour of those Socialists who have a chance of success. Co-operating in this way, the two parties could collect nine or ten of the seats in the area.

It poured with rain throughout last week in sunny Marseilles. This did not dampen the election campaign. True, older inhabitants, recalling epic prewar battles, when gunfire provided background music, think that all is quiet in these television days. But the life of a candidate is still far from tranquil, and the best way to observe this is to follow M. Gaston Defferre, the Socialist leader and mayor of Marseilles, on one of his twice-daily rounds of his constituency. Guided by his local supporters, M. Defferre embarks on a hand-shaking tour of a given district. A garage, a shoeshop, a hairdressing saloon. Occasional questions about a council flat or a traffic light in front of a school. Smiling, relaxed, the mayor answers politely and then is whisked off to shake some more hands. No bistro must be left out. Luckily for the candidate, it is now all right for him to drink mineral water at the bar. (There was a time when some people did all their campaigning on *pastis*, explains M. Defferre, thus conjuring up a terrifying vision of *delirium tremens* among southern deputies.) A day filled with such a round is not enough. There is still an ex-servicemen's ceremony to be attended and an enthusiastic meeting of the local party branch to be addressed.

M. Defferre has been mayor of Marseilles for nearly ten years now. From that vantage point he has expanded the Socialist party machine and extended the party's influence. He won the town hall with the support of right-wing councillors, rejecting the Communists and forcing them into opposition. Yet for the current parliamentary election there has never been any question of extending M. Mollet's deal with the conservatives here. The man who is the obstacle to such a deal in Marseilles is the wealthy shipowner, M. Jean Fraissinet. This passionate supporter of French Algeria, who is now an anti-gaullist, loves a straight fight. In private he pours unprintable scorn upon his conservative colleagues who came to terms with the Socialists in the town hall. He would prefer a straight division between "marxist" and "nationalist" parties. And since he owns—to use his own terms—the only "non-marxist" paper in the town, he carries a great deal of weight in conservative councils.

Curiously enough, a political division on classical lines may cost M. Fraissinet his seat. In 1958 Communists and Socialists together polled more than he did, and the Communists are, this time, almost certain to switch their votes to the Socialist candidate in the second round. The votes of Algerian refugees, however, may redress the balance. True, you will now look in vain in Marseilles for arrogant and aggressive *pieds noirs*. The most turbulent among them were quickly taught that it was safer to keep quiet in this tough town. Marseilles has absorbed all sorts of minorities—Corsican and Armenian, Greek and Italian—and is ready to swallow the North African contingent. Once they are absorbed, it is hoped on the Left that the Algerians will vote according to their generally rather low position in the social scale. But, in the meantime, their 5,000 or so votes concentrated in M. Fraissinet's constituency could tip the scales in his favour.

Against this must be set the presence this time of a gaullist competitor. To oppose the advocate of French Algeria the UNR picked, symbolically, M. le Tac, a faithful gaullist supporter who was wounded by the Secret Army. How many votes will he get? In 1947 the gaullist tide swept the town. But in 1958 the UNR did not recapture the former strongholds of the old gaullist Rally of the French People. It is now bound to lose at least one of its two seats in the region. But, here as elsewhere, the big unknown is whether the general's exhortations, and the ayes in the referendum, can be translated into votes for the UNR.

Last but not least are the Communists, who have always been a power in this area. In 1958 the general mood and the switch from proportional representation to single-member constituencies cost them both votes and seats. They expect to recover some of the lost ground on Sunday and to come top in the first ballot in about five constituencies. Elsewhere, they will stand down between rounds in favour of the Socialist candidates, hoping for reciprocal favours in the other seats. After fifteen years of bitter feuds between the two parties, the Communists consider that the present truce is going to produce results, and hope that it may even lead to a Popular Front. Did not M. Mollet himself, the most anti-Communist of men, suggest publicly that in a few constituencies Socialists might have to vote for Communists in order to ward off the immediate gaullist danger?

Floaters in Normandy

One contest in Normandy may be symptomatic. M. Mendès-France, swept out of his seat by the gaullist tide in 1958, deliberately picked the neighbouring constituency of Evreux to face an outgoing minister, the conservative M. Jean de Broglie.

In this predominantly rural area one may have to travel far in search of a candidate. St Georges-le-Motel, where M. de Broglie was expected on the evening that your correspondent visited it, has scarcely more than 300 voters. Its classroom serves all sorts of civic purposes. On this occasion it had a polling booth at one end, the statue of Marianne at the other and a poster showing which apples are good for cider on the wall. Four pawky Normans, not revealing their political colour, and as many journalists, waited patiently until they learnt that the minister had got lost on the way.

M. Mendès-France is undoubtedly a greater attraction. Later that evening, at Gravigny, which has more than a thousand voters, some 200 people attended his meeting. Without going into local politics, he lectured his audience on two subjects. On Algeria, he recalled that he had been dubbed a traitor for suggesting negotiations in 1958. His critics were finally compelled to negotiate, unfortunately much too late. But the war, he said, was now out of the way, and the key problem was to keep up economic expansion and decide on the distribution of the national cake. M. Mendès-France thought that democratic planning, instead of wasting money on an illusory nuclear striking force and allowing windfall profits to speculators on the Bourse, would produce material benefits for the mass of the population. The audience was clearly impressed, the potential hecklers overawed.

Drawing power is not the same thing as voting strength. With the radical mayor of Evreux as his substitute (substitutes are the constitutional device to avoid by-elections), M. Mendès-France should get a majority in the town itself. But there are all the rural areas, and the fact that the constituency answered Yes in the referendum. A victory for the former prime minister, like his defeat in 1958, would indicate an important shift in the floating vote.

Judgment of Paris

Parisians are fickle, and their moods affect the political colouring of the country. Greater Paris has fifty-five constituencies, and anybody willing to spend his evenings travelling from one school to another can hear spokesmen representing all the colours in the political rainbow. There are the ultras, who left the gaullist bandwagon when it changed its direction away from a French Algeria. There are traditional conservatives and gaullists of two kinds, dressed either in the classical UNR uniform or in a pinkish disguise. There are Christian Democrats (MRP), Radicals and two brands of Socialists. Finally, the Communists have a candidate in every constituency, but it is in the red belt of Paris (where last time they won half of their ten seats in the Assembly) that the Communists really hope to make gains. The UNR, triumphant in 1958, obtained 33 seats in the Paris area. How many will it keep?

Twisting Dicey

M. Debré, surrounded by M. Pompidou's ministers, was chosen to present the UNR to the press on Tuesday. His programme can be summed up briefly: economic expansion, social progress and national firmness. One must add the essential—fidelity to General de Gaulle. Far from rejecting the charge of unconditional support, M. Debré turned it into a democratic virtue, quoting Anglo-Saxon precedents. Does not discipline reign among British MPs? Is it not the duty of General de Gaulle, the effective head of government, to intervene in the electoral battle in order to get a majority in the Assembly? The English analogy was rather confusing. Transplanted to Britain, M. Debré's version might read as follows: If the Tories win, all is fine. If they lose, Macmillan remains in office and the problem is what to do with parliament. The eminent expert on constitutions has somewhat misread his Dicey.

But the serious question is whether the general will get his parliamentary majority. The UNR, like any party of yesteryear, will have to make electoral pacts between ballots. On Monday, having studied the results, the party strategists will start making their bargains. A week later they will know whether the bargains have been respected by the voters, and the general will see whether he has an obedient Assembly. If not, it will be merely the beginning of a long struggle.

King Saud and the Waves

FROM OUR MIDDLE EAST CORRESPONDENT

By courtesy of Kings Hussein and Saud, foreign correspondents, including your own, have penetrated about five miles into Yemeni territory fringing the Saudi Arabian frontier and have been able to establish four facts. Imam Mohammed Badr is alive, in excellent health, and receives from his adherents homage as enthusiastic as that paid to President Abdullah Sallal in San'a. In no quarter of Saudi Arabia is there any zest for a military showdown with the Egyptian troops in Yemen. An exhausting day spent searching the area between the Saudi seaport of Jizan and the Yemeni border failed to unearth a single soldier belonging to the Saudi or Jordanian regular armies; the Yemeni forces themselves seemed to have no aircraft or armoured vehicles and only a meagre quantity of automatic weapons. Finally, an aircraft piloted, it seems, by Egyptians last week scattered bombs in open country around Saudi villages in the Muwassam district.

In again: Prince Faisal

Until the military situation in Yemen becomes clearer, the most interesting aspect of the fighting is its impact on the Arab world as a whole. In Saudi Arabia, the repercussions have been widespread. The emergence of a revolutionary republican regime in Yemen led directly to the formation of a new Saudi government, led by Prince Faisal. Twice in the days immediately following the overthrow of the Imam, field guns were posted outside the royal palace in Riyadh. Apart from these less important signs of jitters, events in San'a brought to light the differences between King Saud and the eight non-royal members of his former government. Six of them signed a memorandum to the king (it is believed that the other two subscribed to the document but were away from Riyadh when it was signed) in which they deprecated the overt support being given to the imamate. According to report, some of the dissident ministers went so far as to advocate the recognition of the Yemeni republic. They also opposed the recent efforts to tighten the bonds between Saudi Arabia and Jordan on the ground that such a policy would identify their country too closely with Arab monarchism and so restrict its freedom of manoeuvre in its relations with the Arab republics.

As has happened before, Prince Faisal was called in to straighten

Tomorrow's veterans . . .

The Chelsea Royal Hospital is probably one of the earliest forms of a group pension provision. It looks after the veterans of 'yesterday'. Today, it is both necessary and desirable to make provision for those in your employ, the veterans of tomorrow. Their long service, their dignity and self-respect need such consideration. So do their dependants. So does the reputation of the company concerned. The other factor of vital importance is to employ *experts* in pension planning. Noble Lowndes, world specialists, provide this service. They devise and service pension schemes, which makes it easy for you to have the right kind of scheme, however large, however small.

* *The Noble Lowndes organisation has already installed over 6,000 pension schemes (for companies both large and small), representing an annual funding of more than £25,000,000. To solve any pension scheme problem—group, 'top hat' or 'contracting out' of the national scheme—write or telephone the address below.*

UNITED GLASS

UNITED GLASS LTD., LEICESTER HOUSE, LEICESTER SQUARE, W.C.2

things out. It is believed that before agreeing to the king's request, he insisted on full powers or nothing ; if this is true, he presumably got the authority he asked for. He has certainly been disturbed by President Nasser's attitude both before and after the Yemeni revolution. It was he who broke off diplomatic relations with Cairo after the Egyptian raid on Muwassam. Yet the tone of delicate mockery (a brand of humour all his own) in which he answered questions on the subject of possible Saudi assistance to the Imam suggests that he will do everything possible to avoid war. "Saudi help for the imam depends on a request from the imam. No request for such help has been received." This statement by the prince was later confirmed by the imam himself.

Prince Faisal's new government looks impressive. Together with his uncle, Prince Musaid, and his two half-brothers, Fahd and Sultan, he controls the offices of prime minister, foreign affairs, finance, the interior and defence. Prince Musaid, although conservative by nature, knows that the administration of the country needs a drastic overhaul. He was able to learn this at first hand as former head of the appeals commission (a sort of Saudi ombudsman). Fahd and Sultan add to their strong personalities an enviable family background which they have not neglected to cultivate. Their mother was a Sudairi lady, and the Sudairis are one of the most powerful aristocratic houses in Nejd. Another of their full brothers, Salman, is in the running for one of two important governorates: either the Hejaz, or the eastern province containing the oilfields.

IN preparation for these changes, an important part was played by a group of elder statesmen, including the king's uncles, Abdullah and Musaid ; Hafiz Wahba, the much respected former ambassador to London and now on Aramco's board of directors ; and Mohammed Surur, a former finance minister who was dismissed at the beginning of Prince Faisal's austerity campaign in 1958 but who has since adroitly regained a position of great influence behind the scenes.

These shifts reflect the changes in the Saudi power complex. The upshot was a remarkable policy statement issued by Prince Faisal's government a week after it took office. Perhaps the most far-reaching proposals in this statement concerned the powers of the public morality committees which stem from a theocratic concept of the state in which religious duties are interwoven with the functions of the police. The formidably named "Association for the Promotion of Good and the Prevention of Evil" is financed by the government and has wide authority to kill joy in Arabia. It employs an army of investigators and maintains its own prisons for the detention of those offending against the moral laws. Thus, in the case of a traffic accident it is a toss-up whether the police will act on the ground of an infringement of the road safety regulation, or the morality committee will act on the ground that the driver was drunk. Successive governments have reduced the power of the "religious police" by cutting down the association's budget. But Prince Faisal apparently aims at a clear distinction between the police and those responsible for moral observances by instituting a supreme council for judiciary, a modern ministry of justice, and an office of the public prosecutor. In this may be seen the hand of Fahd, determined as minister of the interior to end encroachments on police authority, and of Musaid, whose knowledge of the abuses must be unrivalled in Saudi Arabia. It is said that the deciding factor was the influence exerted in the same cause by the impeccably devout Mohammed Surur.

Prince Faisal's policy statement contains other important departures from previous practice. An industrial bank and an agricultural credit bank are to be established with capital derived from retroactive Aramco payments that are now being negotiated. It is expected that they will help to break through the wall of prejudice against interest on money which is based on the Koranic condemnation of usury and which seriously hinders financial dealings. Furthermore, slavery is now formally abolished. Earlier governments have restricted slave-holding by forbidding the import, purchase and sale of slaves. But this is the first time that the mere ownership of slaves has been declared illegal. It is not difficult to see behind this move another echo of the Yemeni revolutionaries, one of whose first acts was to free all the slaves throughout the country.

Der Alte Moves Again

FROM OUR BONN CORRESPONDENT

DR ADENAUER set off for Washington on Tuesday (he is due back on Saturday morning) in what must have seemed to him a diabolical conspiracy of gloomy circumstances. The insidious November damp was the least of his troubles. Behind him for the time being, yet casting a long shadow ahead, lay the shifty bungling of the state action against the weekly *Der Spiegel*. No one can yet say exactly how much this bewildering episode will eventually cost the Adenauer regime. But the Christian Democrats paid a first instalment last Sunday, when they lost four seats —the fruit of nearly 83,000 votes—in the Hesse assembly, thus presenting the Social Democrats there with an absolute majority. At the beginning of this week the party leaders in the Bundestag agreed informally to try to keep the *Spiegel* case as decently covered as possible while the Chancellor was in the United States. They were wasting their time. It is still the dominant topic throughout the country. And the newspapers have been diligently reporting the many manifestations of transatlantic solicitude for the state of German democracy. Even though one of the five arrested journalists, Herr Jacobi, was released on Tuesday, Dr Adenauer knew he could expect some awkward questions in the United States.

But, much more to the Chancellor's disquiet, there lay ahead the hazards of the encounter with Mr Kennedy. The American President, Dr Adenauer was being repeatedly reminded before he set off, was no longer the same man since the Cuban showdown. He had tasted the handy-packed oats of going it alone, and had liked them. Indeed, was it any longer quite appropriate for western watchers to identify "satellites" only in the eastern sky ? The wishes of the German Chancellor might now be abruptly disregarded were he to continue to obstruct the United States' attempt to reach an agreement with the Soviet Union about the future of Berlin. He would be wise, it was being urged, to respond to the State Department's request for some positive suggestions from Bonn for easing the spell of tension that began with Mr Khrushchev's cushioned ultimatum in November, 1958. The nudging and prodding, it seems, came as straightly from Herr Schröder, the foreign minister, as it did from the political commentators.

Elasticity and suppleness thus being the order of the day, Dr Adenauer had called in the American correspondents in Bonn on the eve of his flight in order to display his sinews. Somehow the show failed to convince. The Chancellor could not resist falling into his habitual posture of diviner of Soviet duplicity, and he even threw in some advice to the Pentagon on the proper evaluation of photographs taken from the air. His one gesture of pliability miscarried because he revealed that he did not expect his promise of it to be put to the test. His gesture took the form of a declaration of readiness to approve the plan for setting up an international authority to control access to Berlin by road and air by way of east Germany. Although he did not recall the fact, Dr Adenauer had opposed this project when it was mooted by the Americans in the spring. It envisages a thirteen-voice authority composed of one representative each of the United States

the Soviet Union, Sweden, Switzerland, Austria, west Germany, east Germany, west Berlin and east Berlin. In the spring Dr Adenauer had objected that this would mean an international boost for the east German regime. Now he denied such a consequence, and suggested that greater freedom might be obtained for the east German population at the price of letting their masters have a larger say on the approaches to Berlin. (They already control the railway and canal traffic, as well as civil traffic on the roads.) All this sounded reasonably well until the Chancellor added that the Russians had taken no interest in the American proposal and were unlikely to do so. Yet he had displayed at least a flicker of mobility—and unwittingly given another hint that the unaccommodating policies of more than ten years may be about to be superseded.

Dr Adenauer had intended to take Herr Krone with him to Washington, along with Herr Schröder, the foreign minister. Herr Krone, formerly leader of the Christian Democrats in the Bundestag, is a minister without portfolio who has been given a watching brief on Berlin affairs. He is also generally regarded as the man whom Dr Adenauer would like to step into his shoes next autumn. At the last moment Dr Adenauer decided to leave Herr Krone behind to cope with the animosities kindled within the coalition by the blunderings over *Der Spiegel*. At the same time, Dr Adenauer instructed the ministers of justice, defence, foreign affairs and the interior to clear up the prevailing confusion about the events that led up to the action taken against the magazine. Since the ministries concerned have been wrangling with each other from the start, it seems most unlikely that a satisfactory report can be produced very soon.

The Social Democrats reckon they have enough evidence in the meantime to justify bringing a motion before the Bundestag demanding the resignation of Herr Franz-Josef Strauss, the defence minister, long the chief target of *Der Spiegel's* attacks. The pith of their case is that at Nuremberg on November 4th Herr Strauss declared, "I have nothing to do with the affair—quite literally nothing," and in the Bundestag on November 9th admitted that it was in consequence of a telephone call made by himself to the German military attaché in Madrid that *Der Spiegel's* defence correspondent, Herr Ahlers, had been arrested in Malaga in the early hours of October 27th.

Der Spiegel is, of course, hugely enjoying the immense pother it has created. This week's issue contains two articles written in prison by the publisher, Herr Augstein (one under the pen name of Fritz Pfeil). It reproduces columns of sympathetic international press comment and bulges with advertisements.

Hysteria in South Africa

FROM OUR CORRESPONDENT IN JOHANNESBURG

ARGUING about politics with a stranger in a Pretoria bar one evening recently, a young man—who subsequently said he was a member of the Dutch Reformed Church—defended the right of Anglican bishops to criticise such government actions as house arrest. This evidently proved too much for one of the bystanders, who promptly informed the police that the young man was "criticising the government" and "making a nuisance of himself." The police thought a breach of the peace was threatened and went to investigate. After argument the young man was taken to the police station, where he says he was asked several political questions. Finally, he was allowed to leave.

This seemingly trivial incident would not be worth reporting were it not symptomatic of the deplorable, though mild, form of anti-communist hysteria that has developed in South Africa. Although the Communist party has been outlawed for twelve years, the government has decided that the recent wave of sabotage—there have been 19 incidents in two months—was conducted by communists. Whenever there is an anti-government act, someone in authority professes to see the hidden hand of communism, and the stage has now been reached where criticism of the powers-that-be is, in unsophisticated minds, equated with communism.

What is even more serious is the open declaration of war on liberalism by cabinet ministers; from platform to platform, they aver that liberalism is the forerunner of communism and in many cases is doing its work. With the aid of the state radio, the government is going to inordinate lengths to "prove" that seemingly harmless and innocent bodies and individuals are doing communism's dirty work and must be fought and outlawed. Liberalism is sometimes more dangerous than communism, said one minister. The result is a new drive against anyone with radical views, and the invocation of the Sabotage Act to put persons under "house arrest" and to prevent political demonstrations. The war on the English-language press has been intensified and the minister of justice has publicly warned a Johannesburg daily newspaper that it is playing with fire and will get into trouble if it keeps on espousing the liberal cause. The newspaper hit back hard.

The stock reply of the vast majority of writers to the charge that South Africa is becoming dangerously like Ghana or prewar Italy in its lack of concern with the rule of law, is that "normal democratic processes" are inadequate to deal with present-day undermining forces. Hence the attempt to lay all the blame on communism and the refusal to concede that the present wave of sabotage and the political unrest among the non-whites is due to frustration and the government's blank refusal to give the politically sophisticated an outlet for their anger.

THE government has become so nervous about letting non-whites express political views that it has banned until next year all demonstrations that are concerned with any trial or judicial sentence. And concern increases with every attempt at sabotage. When the office of a cabinet minister in Pretoria was shattered a university teacher went on record as favouring the summary execution of saboteurs. The minister of justice, Mr B. J. Vorster, who was himself interned during the second world war because he belonged to an anti-war (that is, anti-British) organisation, and who is emerging today as the strong-arm man of the administration, warned all and sundry, including the ultra-respectable United party, of the dire consequences of overstepping the government's idea of what is legitimate. Even Anglican bishops—and the archbishop of Capetown—have not escaped ministerial wrath, because the Bishop of Pretoria protested against the principle of house arrest whereby men and women are sentenced without trial or indictment to live in certain areas for a period of up to five years.

It would be wrong, however, to believe that this tightening of the screws is giving many whites sleepless nights. Dr Verwoerd has probably never had so much support from the English-speaking section of white South Africa. Oddly enough, it is inside his own party that the prime minister is meeting with some resistance. Some of his followers believe that the government is doing too much for the non-whites and is neglecting the whites. The failure of the economy to boom, the existence of agricultural surpluses and a very serious drought have combined to produce "disillusionment" in some Afrikaner Nationalist hearts.

Gradually, however, it seems to be dawning on some whites that the best hope of expanding the economy is to develop the internal market by raising the wages of non-white workers. Recent newspaper surveys, which have angered the government but stirred the public conscience quite hearteningly, have revealed a deplorable degree of malnutrition, if not of starvation, among rural Africans in certain areas. And a survey of the living standards of urban

Xerography: a space age revolution

RITCHIE CALDER reports on a discovery as momentous as printing or photography, already bringing dramatic improvements in business efficiency.

The Greeks had a couple of words for it: *xeros*, meaning "dry" and *graphos*, meaning "writing". But the combination "xerography" (pronounced "zer-ography") belongs not at all to the past. It is a Space Age word.

It can be the sign-manual of Telstar; a greetings card from the dark side of the Moon, or a wish-you-were-here from Venus. It can ignore Time and put on paper a first-hand account of great galaxies colliding in the immensities of Space 400,000,000 years ago. It can be the fingerprint of Interpol; a personal facsimile of the rarest book in the British Museum; the printed-circuit of a vest-pocket transistor-set; or, more prosaically, the invoice for household goods from the multiple store in the High Street.

COSMIC COLLISION in the depths of space. Or an invoice for a multiple store. Xerography can record both. Quickly and permanently — on ordinary writing paper.

Anything which can reflect light-waves, or be expressed as an electric signal, or reveal itself by X-rays – all this can be indelibly recorded on ordinary paper by xerography.

How it all began

The easiest way to grasp the meaning of xerography is to go back to the beginning – to Chester Carlson.

Carlson is a physics graduate turned patent lawyer. The delays in getting patent drawings and specifications reproduced encouraged him to try inventing a new copying method. He decided to concentrate on electrostatics.

Most of us know "static" as the comb we rubbed at school to pick up paper or the hair which stands on end when vigorously brushed. What Carlson set out to do was to attract particles of graphite (the "lead" of a pencil) on to paper in a pattern as sharp as a type-letter or the lines of a drawing.

On October 22nd, 1938, in a room behind a beauty parlour in Astoria, Long Island, he made xerography a fact.

Carlson rubbed a cotton handkerchief over a sulphur-coated aluminium plate to create the static electricity and exposed the plate under a positive transparency. Then the image was transferred to a piece of paper, which was dusted with powdered ink and heated to make the impression permanent.

Twenty-one firms in succession rejected the idea. Then he was given a hearing by Battelle Memorial Institute, a research organisation in Ohio. They undertook further research to refine the process.

In addition to perfecting a selenium-coated plate, giving greater speed and definition, Battelle undertook the promotion of the invention.

Success comes – almost accidentally

In 1946, the thirty-six-year-old president of the Haloid Corporation, Joseph Chamberlain Wilson, saw its possibilities. He made a deal with Battelle Institute and Carlson, and went ahead to commercialise a still-unproven process.

Early results were not very convincing. When the first commercial machine for hand-operated xerography came "off the line" in 1950, it was not a compact piece of office equipment. It was saved by the almost-accidental recognition that it could make offset masters for an office-litho process – a cheap and fast alternative to photolitho, the masterplate taking only three minutes to make.

This was enough to produce a commercial return, while the Haloid "Xerox" was being developed as a fully automatic system. Streamlined and designed for compactness, it was still a massive affair, as big as an executive desk and weighing 6 cwts. But because of its advantages, xerography is capturing a growing share of office copying. Already it is responsible for 1 in 4 copies made in America. And here in Britain, Rank-Xerox, associated with the Xerox Corporation since 1956, continues to expand dramatically.

How xerography works

Xerography has many similarities to photography, but no negative is formed and the entire process is dry.

A metal sheet, coated with selenium, is charged with static electricity, which makes it "photosensitive". Over-exposure to light will discharge, or remove, the static – just as the inadvertent unrolling of a photographic film would blacken it. But if the plate is put in a camera, the static will be selectively removed. Details which are exposed to light will be discharged, while dark parts will remain charged. Thus, the image has been invisibly recorded.

In the modern fully-automatic process, which takes only a matter of seconds, all that is necessary is to lay the subject to be copied – the office document, the priceless book or the engineer's drawing–on a glass screen intensively floodlit. An arrangement of lenses and prisms camera-projects it on to the plate.

The charged image is then "swooshed" with graphite. This has been made resinous, so that, when transferred to paper and heat-treated it remains a fixture, completing the permanent image, so perfect that it is indistinguishable from the original.

Xerography can employ microfilm, so that large engineering drawings can be reduced to a microfilmed inset on filing cards. Stacks of these cards can be fed into the Copyflo Xerox machine and copied on to a continuous roll, at twenty feet a minute. The microfilm of a 300-page book can be accurately reproduced in five minutes.

But the Xerox device which has had the biggest impact on business efficiency is the Xerox 914 Office Copier. (The number 914 describes the size of the print, 9 inches by 14 inches, which it can produce.) This press-button machine can make single or multiple copies, at a rate of 360 per hour, of anything visual one presents to it. It copies pen, pencil or any colour with equal clarity, and delivers the results within seconds on any kind of ordinary paper.

Industry and commerce are discovering the enormous scope of xerography, and hardly a day goes by without some new use appearing for this revolutionary Space Age discovery.

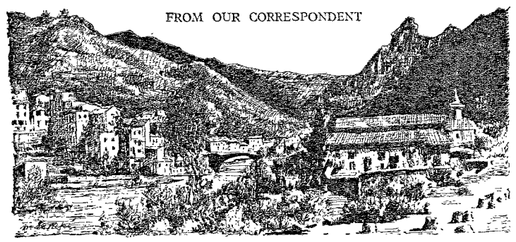
five the commission includes twelve ministers (Signor La Malfa as budget minister is president), the governor of the Bank of Italy, and the secretaries of the three trade union federations. The presidents of the Confederations of Industry and Agriculture lead the "opposition" and are supported by a group of economists who disapprove the principle of a coercive plan. Within this framework the real work of preparation is being done by Professor Saraceno and a number of experts who already have considerable experience of planning for such bodies as the Cassa per il Mezzogiorno, the regional governments of Sicily and Sardinia, and so forth.

The planning commission has already approved the aims of the plan as set forth by Professor Saraceno. These are, to keep up the present growth rate; to correct territorial, sectional and social unbalance; and to guide public and private spending towards social ends. It has also agreed that the plan must be conceived in two periods: a long term to cover the ten years at the end of which Italy will have completed its present cycle of transformation, and a shorter, five-year period to coincide with the life of the next parliament. Investment plans will have to be made for the short period, during which, the planners hope, parliament will learn to think in terms of big and complex issues, to avoid detail and to co-ordinate local or particular interests in a general programme at regional and national levels. The commission, which has set up five working groups to deal with agriculture, industry, public finance, foreign trade and the structure of domestic spending, is enjoined to submit its first report in February. Meanwhile, before this parliament dies, the government has to prepare and rush through its bills defining the method of electing and financing the regional governments, and a bill to transform the budget ministry into a ministry for planning. At the same time Senator Medici is at work preparing a plan for the reform of the administration.

There is no doctrinaire prejudice behind all this planning. It is almost a sartorial necessity. Italy is bursting at the seams. The suit tailored for it by the Piedmontese monarchy no longer fits. There is bound to be a discreet socialist cut to the new clothes. Signor Nenni's proposal that the four centre-left parties should agree to work together all through the next parliament for the promotion of a common programme may provide the political framework for Signor La Malfa's five year plan. No one thinks it can be put across without trouble. On the home front the business world is already in a suspicious mood and going slowly with its investments. In their relations with the rest of western Europe, the planners may find that their ideas clash with the interests of some of Italy's partners in the common market.

Pyrenean Paradise

FROM OUR CORRESPONDENT



SPANIARDS generally work so hard, for such appalling hours, that it is a relief to find a community whose way of life accords with our lazy northern myth about Spain. At Gerri, in the central Pyrenees, siesting and sitting in the shade really are major occupations. The sun does most of the work. The population lends a hand from time to time—but only for a few hours a day, and only in summer.

The shortest way to Gerri from the north is over the Col de la Bonaigua (6,000 feet). Beyond the col, the rough road winds first across a hillside as bleak as Dartmoor, then down through fragrant pinewoods that flash and quiver with cascading streams, finally along a valley lined with meadows and orchards. Briefly the valley becomes a gorge, then widens to form a basin luxuriant with both northern and Mediterranean vegetation. Here, glowing brightly in the sun on the right bank of the river, is Gerri.

"Gerri is a foretaste of paradise," said an old man who was sitting on the slender single-arch bridge that spans the river here. "If you want a fruit, you simply reach out your hand." He plucked a fig from the tree that grows happily from a crack in the stonework in the middle of the bridge. "Whenever you want trout for supper you just take them from the river. The climate is good and life is easy. Few people need to work more than three or four hours a day."

"Ours was the first Pyrenean valley to get rid of the Moors," another man explained. "This is our reward. Immediately the last Moor left, the spring began to flow."

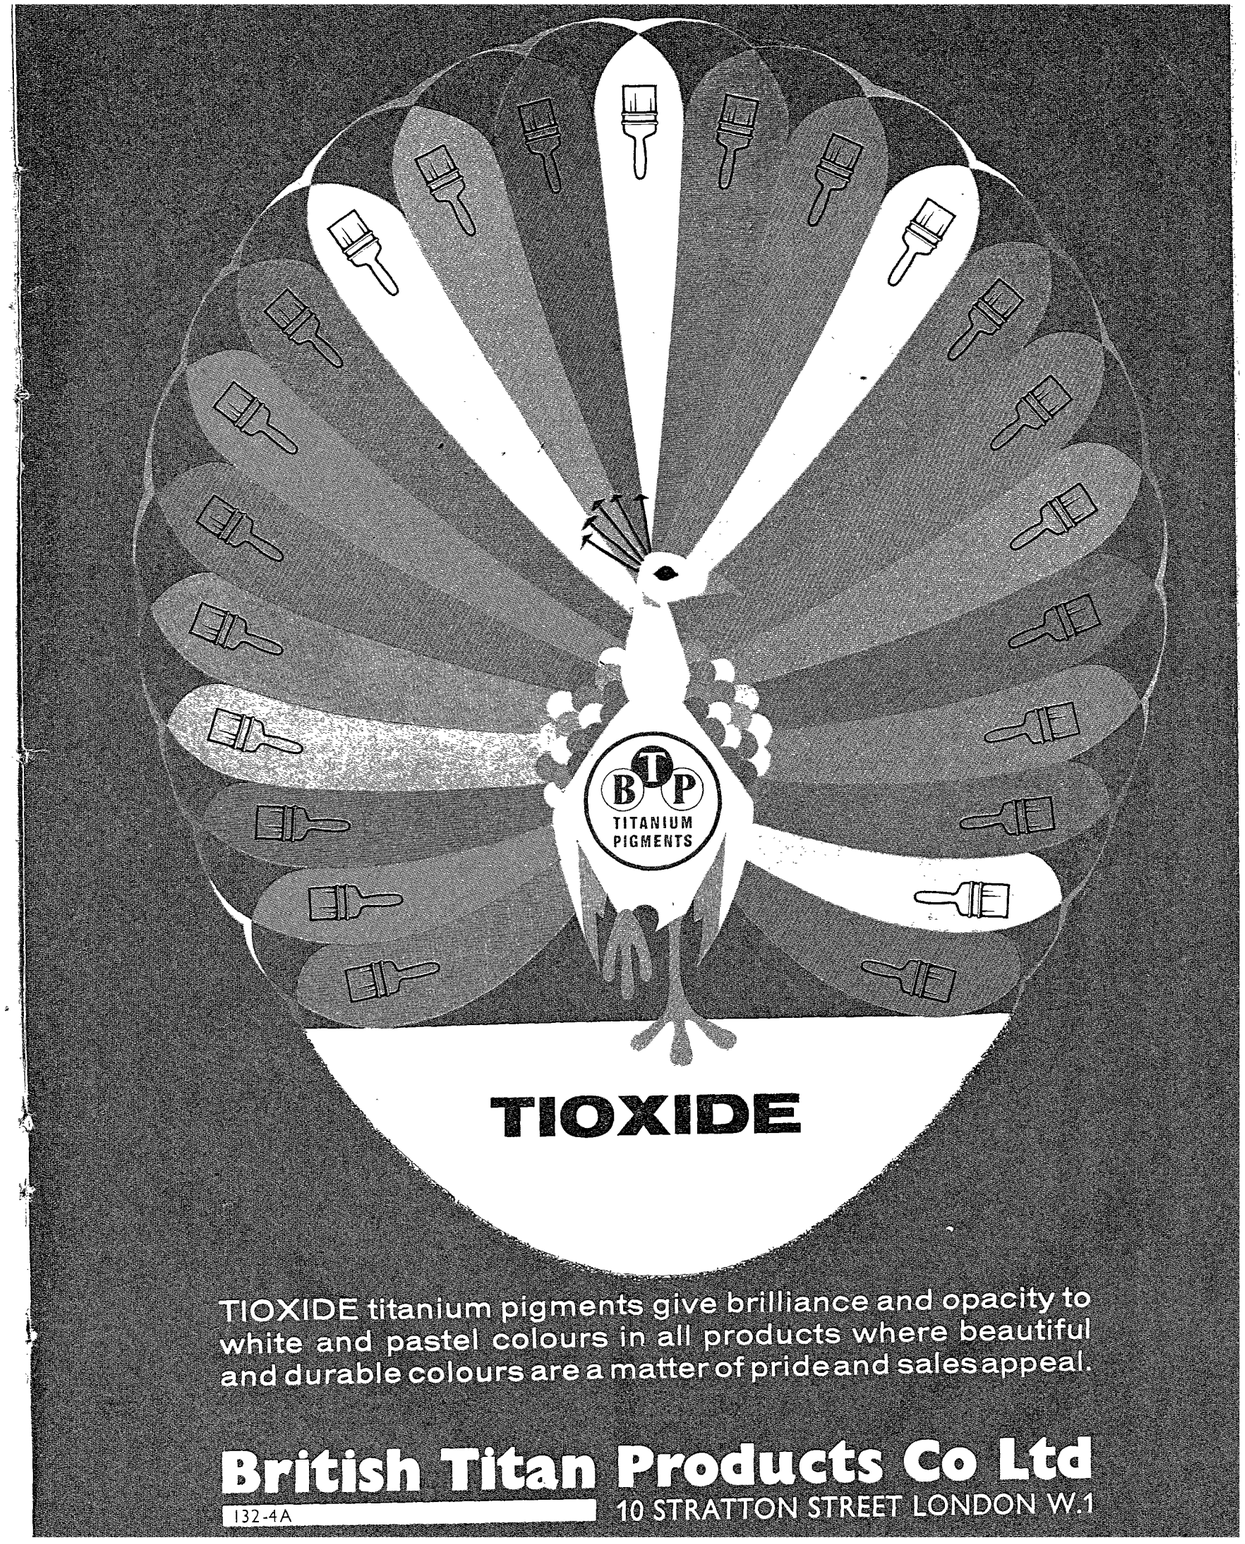
The spring is a saline stream which gushes out of the mountain side on the edge of the village. Hollowed-out tree trunks distribute its waters to some 600 *salinas*—rectangular salt-pans whose average surface is about 30 square yards. Within three or four days the water has evaporated, the crystallised salt has been swept into dazzling little pyramids and removed, and the *salinas* can be refilled. In an average summer Gerri produces in this carefree way 2,000 tons of salt.

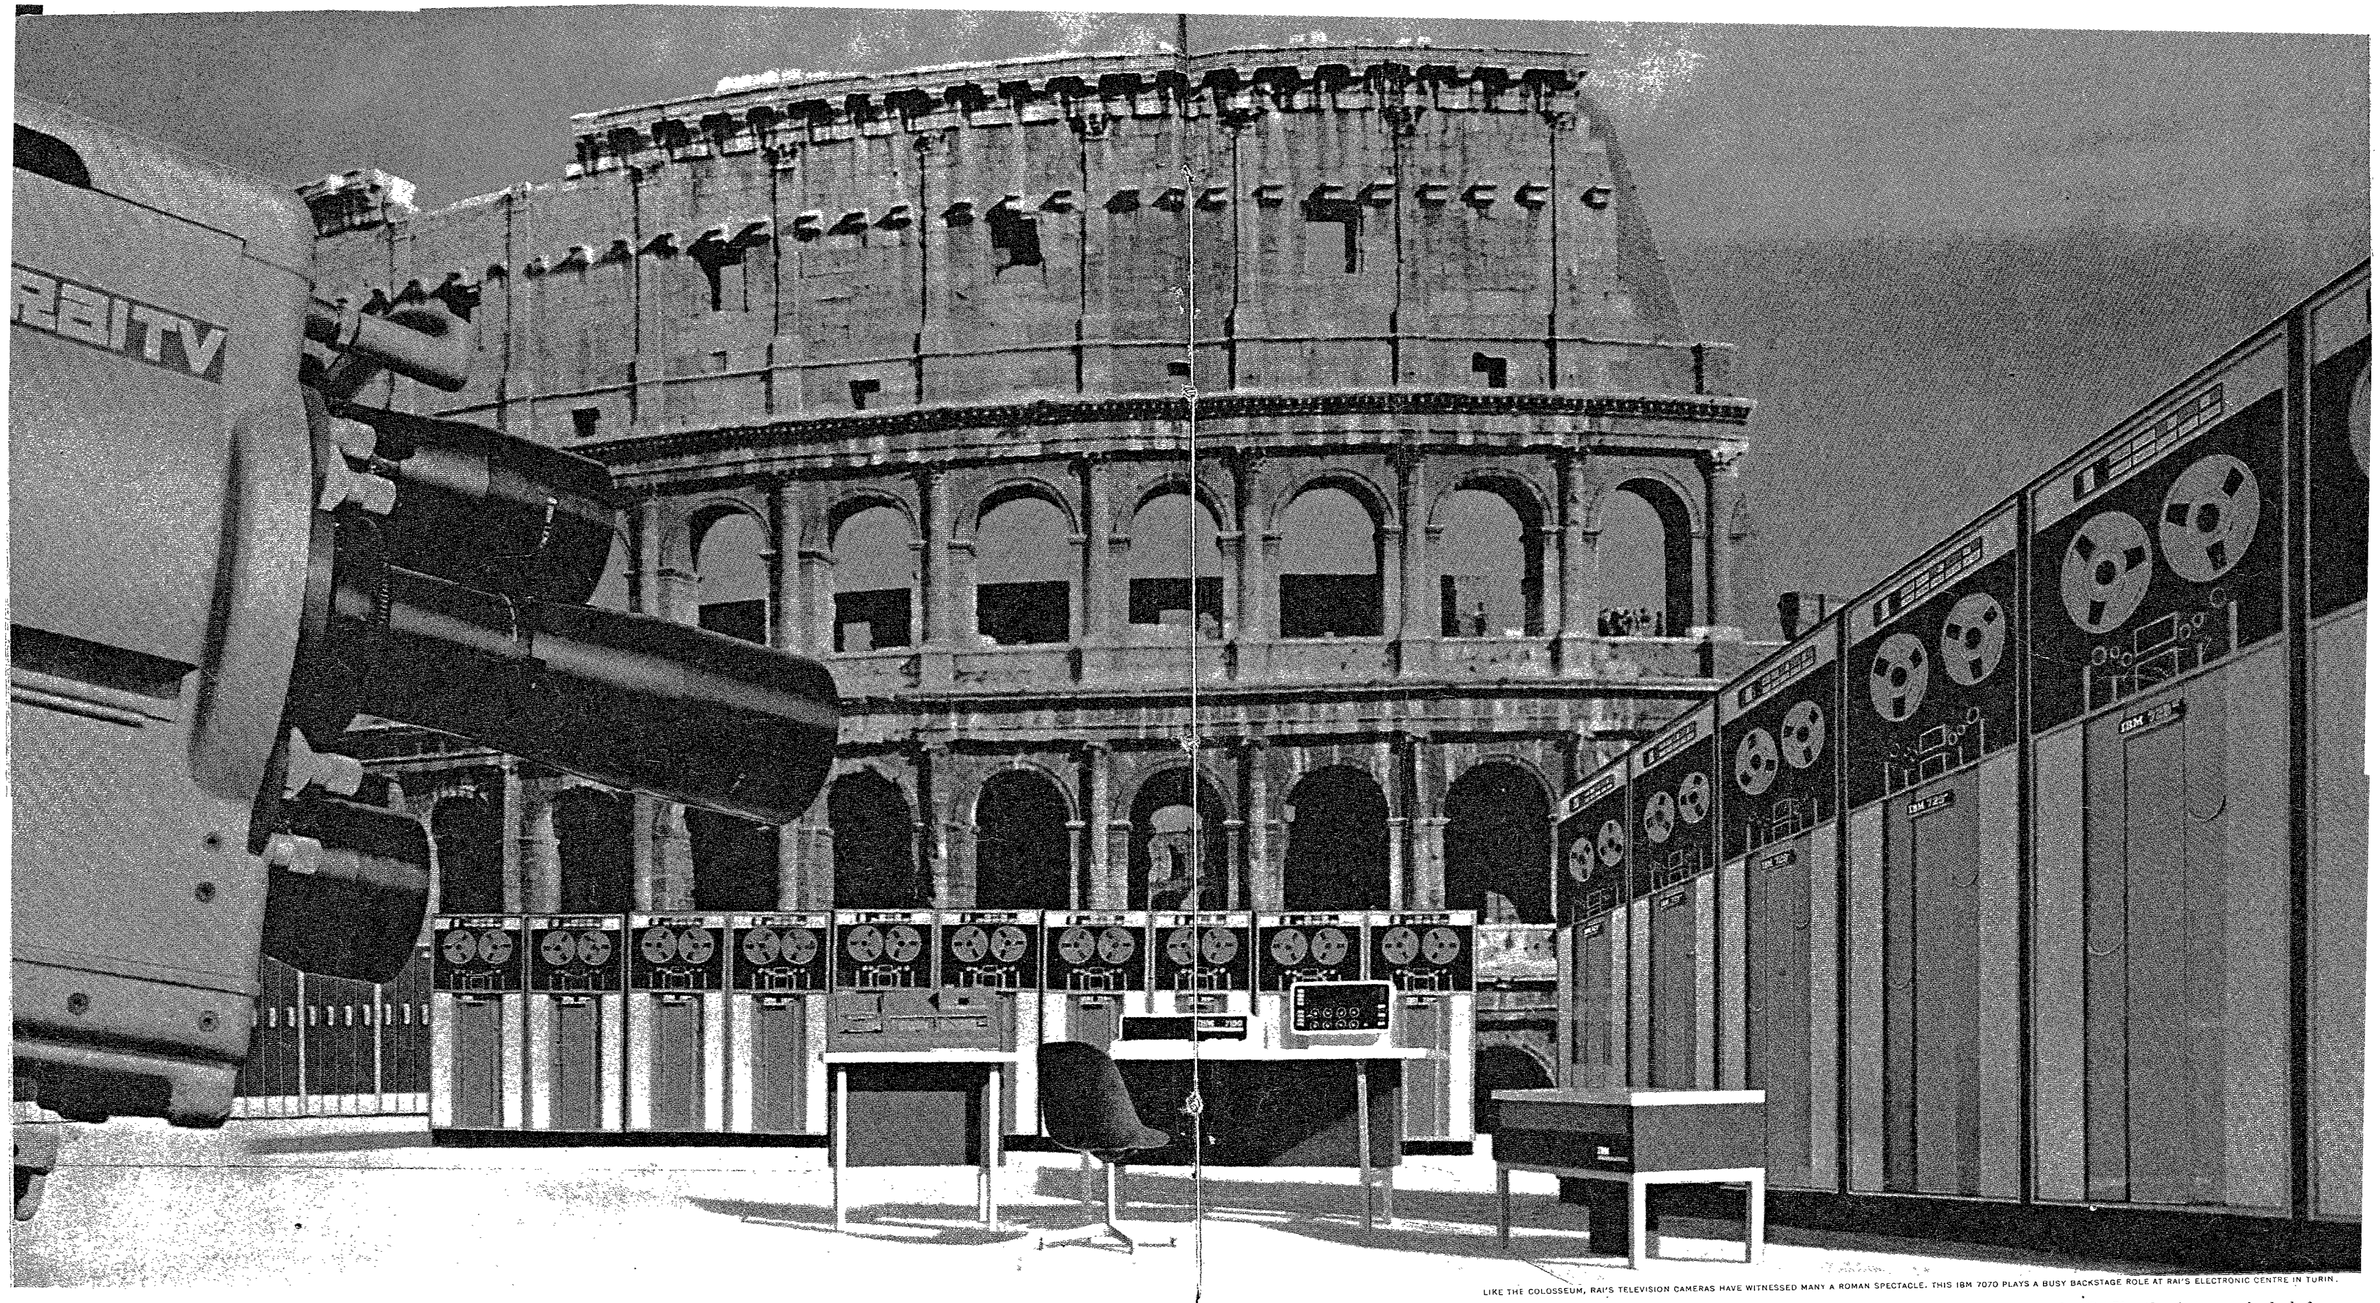
The *salinas* are privately owned—by about half the village's sixty families—but their output must be delivered at once to an ancient co-operative whose seat is the *Almacén de la Sal*, a beautiful salt-encrusted building, reputedly 800 years old, in the main square. The *Almacén* houses modern grinding and packing machinery (the salt is marketed in neat polythene bags), and a cinema, and most families have at least one wage-earner employed there.

There are storms, even in paradise. On the river bank opposite Gerri slumbers a tiny monastery, a jewel of Catalan Romanesque. "During the civil war it was damaged by the Reds," a villager said. He looked around and added: "Of course, the monks let the Nationalists store arms in several of these monasteries, in preparation for the uprising, so . . . ." He shrugged.

And now, though as yet no bigger than a Dutchman's hand, another storm is on the horizon. Booming Barcelona, 130 miles away, is ravenous for electric power. One way to increase the supply would be to build a dam across the Collegats gorge, one of the loveliest in the Pyrenees, a few miles south of Gerri, and flood the whole valley. Four charming Dutch geologists are now encamped in the gorge, chipping at the red and brown rock and asking one another whether it could stand the strain.

The people of Gerri are not alarmed. With the usual innocence of the over-privileged they assume that whatever corner of Spain they are evacuated to will provide them with as easy a living as Gerri—though one man, who has seen something of the outside world, said: "Surely they won't expect us to work on the land." His wife was more concerned about the salt. "You will never persuade me that they intend to let all this good salt run to waste," she said. "It's the purest salt in Spain—*es natural*. . . ." Her goitre quivered with pride.





LIKE THE COLOSSEUM, RAI'S TELEVISION CAMERAS HAVE WITNESSED MANY A ROMAN SPECTACLE. THIS IBM 7070 PLAYS A BUSY BACKSTAGE ROLE AT RAI'S ELECTRONIC CENTRE IN TURIN.

Backstage with IBM at a Roman spectacle

When Emperor Vespasian built an amphitheatre to hold 50,000 of his spectacle-loving countrymen, Romans so marvelled at its size that they called it the "Colosseum." Nineteen centuries later, Italians still love a good show, but today millions have better seats than even the Emperor had. The TV cameras of RAI give all Italy close-ups of spectacles from the roaring Mille Miglia to opening night at La Scala.

RAI—Radiotelevisione Italiana—is largely supported by licence fees for radio and TV sets. Behind the scenes, an IBM computer keeps track of the licences—over 9 million of them.

Besides radio and television networks, RAI's other interests include four symphonic orchestras, a magazine, a school over TV, and television centres in several cities. For all these, the IBM computer helps with payrolls, keeps books, handles real-estate records, and controls inventories.

Doing these things, the IBM data processing system saves RAI money at a rate that might amaze even the thrifty Vespasian. Master administrator that he was—Vespasian put the Empire's finances on sound footing—the venerable Roman would surely have only one reaction: Thumbs Up!

Wobbly Woodside

FROM A CORRESPONDENT IN GLASGOW

THE seat that Labour most confidently expects to win in next Thursday's five by-elections is Woodside, in the inner west end of Glasgow. Woodside has been narrowly Unionist (i.e. Tory) in all four general elections since the constituency was carved out in 1950 ; now, however, the opinion polls and a systematic Labour canvass point to Labour's raising its Scottish strength to 39 seats against the Government's 31 (with Mr Grimond odd man out in the north isles). But with six candidates nominated, equalling the modern Scottish record at Camlachie in 1948, it is occasionally difficult to see the wood for the trees.

Woodside is distinctly mixed socially. It has solid, stone-built Victorian houses (often flatted) for those of Glasgow's better-off who still keep within a 5d. bus ride of town ; the next constituency westwards, Mr Tam Galbraith's Hillhead, is equally Victorian and much more solidly Tory. But Woodside, particularly where it shades off into the Labour stronghold of Maryhill, has plenty of slum tenements that give it housing densities of up to 119 persons to the acre, Glasgow's worst. It also harbours, on Gilmorehill, Glasgow's first university and thus claims a good chunk of the city's intelligentsia with left-of-centre leanings.

There are 42,119 electors on the register. In 1959 there were 2,500 more, and many of those who have gone are slum-dwellers who have been rehoused. This is one of the straws at which Mr Norman Glen, the Unionist who is defending the majority of 2,084 left him by the new Lord Justice-Clerk, Mr Grant, is clutching. The other is the class loyalty of habitual Unionists in a Scottish

NEXT THURSDAY'S BY-ELECTIONS

	Per cent of vote in 1959			Swing neeeded by Labour per cent
	Conservative	Labour	Liberal	
Chippenham	52·1	31·0	16·9	10·6
South Dorset	49·8	34·7	15·5	7·6
Central Norfolk	50·4	34·8	14·8	7·8
South Northants	57·0	43·0	—	7·0
Glasgow Woodside	49·3	43·1	7·6	3·1

The average swing secured by Labour in by-elections so far this year has been 7·5 per cent. All three major parties are fighting all five seats this time ; besides being worried by the appearance of a Liberal in South Northants (which had no Liberal candidate last time), the Tories will have special anti-common market candidates against them in South Dorset and Central Norfolk.

seat that has little outward resemblance to Orpington. Mr Glen himself, a Glasgow businessman who is making his fifth attempt to enter the Commons (one of them as a Liberal), is not the most dynamic of candidates that the Unionists could have chosen. His job (and he is industrious about it) is to fight off the Liberal, Mr Jack House, who in turn has to fight off the Scottish Nationalist, Mr Alan Niven. Between them, Mr Grant's middle-class majority is highly likely to disappear.

The Liberal, Mr House, is a journalist, broadcaster and professional Glaswegian. He believes in thumping Liberalism's Home Rule platform, and is plainly chasing the Nationalist vote which multiplied noticeably at the West Lothian and Bridgeton by-elections. Mr Niven, politically a pretty green 27, seems incapable of translating to Woodside (which is not exactly heathery seat) the sort of performance put up elsewhere by his party. Even so, the Liberals are going to be worried by him.

Labour is brimful of genuine confidence that all the national and local factors (particularly unemployment) are going its way. Its candidate, Mr Neil Carmichael, is the son of Bridgeton's former MP, Mr James Carmichael, for long a stalwart of the Independent Labour Party. He is avowedly unilateralist, and was the original nominee of the local constituency party, which got into hot water over the heckling of Mr Gaitskell last May Day.

This, if briskly exploited, could still be the chink in Labour's impressive armour, for Mr Carmichael has yet to discover a platform maturity commensurate with his political upbringing. In this sense, the hullabaloo over the British nuclear test may not be unwelcome to the Unionists ; that is, if Lord Home's views on the intelligentsia are shared by the older Woodside electorate. As a unilateralist, however, Mr Carmichael does not expect to drop much to the two left-wing fringe candidates, Mr Robert Vallar of the Socialist Party of Great Britain and the inveterate Glaswegian-Cockney Independent, Mr Guy Aldred. Mr Vallar declares that he will certainly trounce Mr Aldred—and they can be safely left to settle it between them with a tiny handful of votes apiece.

The Norfolk Test

FROM OUR SPECIAL CORRESPONDENT

No greater horror could be imagined by Norfolk Tories than to lose, or even to be rattled in, the Central constituency. It is (with a Tory majority of 6,787 in 1959) the least unsafe seat in a county of distinctly marginal ones, two of which Labour holds by its fingernails. It is also an agricultural constituency with enough large arable farms (rather different from South-West England) to be able to regard entry into the common market with some equanimity. If the Tory candidate, Mr Ian Gilmour, the proprietor of the *Spectator*, were to be upset there, the spectre of a farmers' revolt would really haunt the manors and granges of sitting Tory members. Last spring or summer, this is just the sort of constituency that might have fallen (only a 7.8 per cent swing to Labour is needed to take it). But by now Mr Gilmour's supporters think that he is unlikely to stumble.

One reason is that the only vocal anti-European feeling in the countryside comes from the horticulturists, especially the men with 20 acres or less who grow (under glass) tomatoes and flowers for the local market, and who have been feeling the European pinch already. They complain of Dutch boats arriving in East Anglian ports (a much bigger insult than invading Covent Garden) and stare stonily at the Liberal, Mr Maxwell Goode, when he tells them that prime English produce has excellent prospects in snobbish, whisky-drinking households on the continent. The Tories among these small men are not going to vote Liberal, and even Labour's anti-market image will be less than disastrous to Mr Gilmour because a good many horticulturists already vote Labour anyway.

Central Norfolk is not really as rural a seat as it looks. Just under half the electorate lives in five parishes on the northern outskirts of Norwich: the population in these housing estates has either left the land or has come in from outside the county to get comparatively good wages (in a low-cost area) in the service trades and the agriculture-based industries that have grown up since the war. These people are town-orientated, and feel themselves several steps removed from the common market issue ; they seem a mixture of traditional uprooted Tory and habitual uprooted Labour, and offer little prospect of the surburban volatility that the Liberals have been hoping for.

Though your correspondent heard occasional Conservative mutterings that Mr Gilmour is an outsider, this was equally true of his

predecessor, Mr Collard, an aircraft manufacturer. Mr Gilmour tells his audiences that things will be even harder for British agriculture if British industry is shut out of Europe; his hearers would like him to voice more openly their own private conviction that Europe will at least shut out Commonwealth producers and, still more, dumpers from Scandinavia and the other side of the iron curtain. The Liberal, Mr Goode, is a Norfolk farmer himself, but not one who has been on the best of terms with the National Farmers' Union. Sir Frank Medlicott, the former Conservative and Liberal member for the constituency who is campaigning for Mr Goode, could conceivably remind his audiences that Mr Gilmour was just as much anti-Suez as he was. The anti-common market candidate, Mr Kenneth Colman (Independent Liberal), should do little more than the similar candidate in West Derbyshire in June. One big farmer told your correspondent in some anguish that the Labour candidate, Mr Geoffrey Bennett, had struck his neighbours as the best man of the lot, but that they were still not changing their vote.

Mr Bennett and the National Union of Agricultural Workers are firmly against entering Europe on the existing terms: although the union has an 85 per cent membership in Norfolk (compared with a national average of little over 30 per cent) and is the basis of every Labour campaign in the county, it seems to have held few branch meetings in the constituency (except to elect local secretaries) in recent years and its political message tends to come through thinly in the outlying parishes. Any threat to Mr Gilmour looks as mild as the rolling autumn landscape. One ex-serviceman has paid in his £150 deposit and will duly lose it.

The Last of Life

THERE they still stand, fifteen years after the National Assistance Bill proudly proclaimed that "the existing poor law shall cease to have effect," those vast Victorian institutions for the provision of indoor relief for the poor. "The workhouse is to go," said Mr Aneurin Bevan, introducing the bill. "We have determined that the right way to approach this problem is to give the welfare authorities . . . the power to establish separate Homes. . . . If we have an institution too large, we might have a reproduction of the workhouse atmosphere . . . and all the regimentation and the rules that have to be obeyed . . ."

Not only are the workhouses, or at least many of them, still standing, even if renamed; Mr Peter Townsend shows us in his survey* of residential institutions and homes for the aged that the atmosphere may persist as well. Old people are persuaded, often against their wishes, to enter an institution because to the welfare authorities that seems the easiest solution to everybody's problems. Once in they may be stripped of all dignity as well as most of their possessions; they have no privacy in sleeping, taking a bath—or rather in being bathed—or even in going to the lavatory. There they sit round the walls ("Even if you arrange the chairs haphazardly in the centre of the room," said a chief welfare officer to Mr Townsend, "they get pushed back to the walls") bored, apathetic, depressed, utterly lonely. It is small wonder that they soon begin to show signs of the deterioration that is used to justify the need for providing residential care.

Not all of the institutional provision is deplorable. Those in charge are sometimes immensely tolerant of bizarre, confused, and often aggressive, behaviour in their aged residents. But when Mr Townsend drew up a standard against which to measure the different types of residential care—a standard partly objective (physical facilities), partly subjective (sympathy, absence of restrictions)—he found that the old institution comes off badly. None of his sample of 39 was classed as better than "poor," and eight were classed as "bad." The best showing was made by homes run by voluntary bodies, followed by those run for profit —nearly half of which, however, were "poor," "very poor" or "bad"—and then by the local authority postwar homes.

As a result of the break-up of the poor law, culminating in the National Assistance Act, these postwar homes were supposed eventually to replace the institutions as public provision of accommodation for the old. By January, 1960, there were over a thousand of them in England and Wales, and between them they have nearly as many beds as the institutions. Physically, they are usually a great improvement. They are often converted large houses in pleasant grounds; numbers are smaller; there are shared bedrooms rather than dormitories. But they tend to be on the outskirts of towns, far from the busy hum of men, which most of their residents would prefer to flower beds and lawns. (An old man once said that fields "take such a long time to grow.") And although the old people themselves are carefully selected for these homes, it is nevertheless rare for them to develop any sort of community life. Few friendships are formed, and a large minority becomes socially isolated.

IT is Mr Townsend's contention that this uprooting of old people from their familiar surroundings should stop. Drawing up a measure to assess their capacity for looking after themselves, he found that nearly a half of a sample of new residents in institutions, and 60 per cent of those in local authority homes, had only a slight incapacity for self-care—though he does not perhaps allow sufficiently for day-to-day variations in the old. Ought local authorities, therefore, not to expand far more purposefully their domiciliary services so that old people, and handicapped younger people who now find their way into institutions, can remain at home? Instead of the large institutions, which Mr Townsend says should be given a definite date for closing down, and even instead of the postwar home, he proposes much more "sheltered housing," groups of flatlets with some communal rooms and a trained, resident housekeeper.

There would, of course, still be a need for some residential accommodation for old people with special disabilities. In London, for instance, a former institution is now virtually a hospital for the chronic sick, although it is run by the county welfare

HOMES AND RESIDENTS

*[illegible] of the population of pensionable age.

*"The Last Refuge." By Peter Townsend. *Routledge.* 552 pages. 60s.

authority and ranks as Part III accommodation under the National Assistance Act. Mr Townsend proposes that accommodation of this sort should become the responsibility of the hospital management committees, which should also take over the provision of short-stay homes for emergency cases and short illnesses. Logically, there is much to commend this proposal. It would put an end to the load-shedding that sometimes goes on between hospital and welfare accommodation and which may mean upheaval, and consequent distress, to the old. But in practice the division can be justified. Just because they are residential institutions in name, those in charge of them—at least the best of them—can allow their infirm and disabled old people more freedom in wandering about the place than a hospital might care to.

But in his main argument Mr Townsend is absolutely right. The whole emphasis in social care in recent years has changed from the institution to the community. Small children, it has been found, do not thrive in an institution; long-stay hospital patients become institutionalised. Ought not the emphasis to change for old people as well, instead of expecting them to put out new roots in wholly unnatural surroundings? The local authorities are now completing their ten-year plans for health and welfare services for presentation in the new year. It is a great pity that they have not first had the benefit of the radical and humane approach provided in this book.

Taken at the Flood

FIGURES quoted by Mr R. B. Davidson, the adviser to the Jamaica Migrant Services in London, for Commonwealth immigration and emigration since the inception of the Immigrants Act in July tend to support a theory long held by this journal, if not by the framers and supporters of the Act, that Commonwealth citizens come to Britain when, and only when, they are confident of an upswing in the sectors of the economy which most affect them, that is, that they do not come here for kicks—in either sense. July and August saw a net emigration of Commonwealth citizens of 1,596, the largest single consignments in grand totals of 88,364 inwards and 89,960 outwards being of Canadians rather than the bogey men of the Caribbean, who came quite a long way down the list, after Australia, India, New Zealand, Nigeria and Pakistan. Of voucher holders (10,192 were issued to 14,499 applicants) those with jobs awaiting them were in most cases the smallest proportion, and those on "quota" the largest. But the Caribbean excluding Jamaica produced 46 per cent in the "job" category; and Canada and Australia more than half in the "skill" category. Most vouchers were issued to India and Pakistan (from which it must be assumed that most white Commonwealth exiles were only tourists). In September the picture changed radically: there was a net immigration of 7,644, the largest single net increases being from India (1,648) and Nigeria (1,281), with net losses only to Canada and New Zealand. The net influx of Caribbean immigrants was about 1,250, most of whom seem to have been women and children joining their husbands. The timing allows a month for to affect embarkations: if the theory of close Commonwealth study of the British economy is correct, there should be a sharp rise in the net influx in December (climatic dissuasion apart) on the strength of Mr Maudling's non-budget.

BOOKS

Famine

The Great Hunger

By Cecil Woodham-Smith.

Hamish Hamilton. 510 pages. 30s.

IT is still impossible to read the grim narrative of events in Ireland between the first failure of the potato crop in 1845 and the year of abortive revolution, 1848, without being moved and shocked. The human tragedy was so great, the attempt to relieve it so inadequate and misconceived. Grim though the narrative is, "the reality," as one English relief officer put it, "in most cases far exceeded description." Mrs Woodham-Smith is the kind of historian, sensitive and meticulous, who can re-create the sense of muddle and horror. Just because she is so dispassionate in her handling of evidence, she evokes the maximum compassion for the victims of a situation that lay completely beyond their control. She describes their plight largely through the words of contemporary witnesses. "When we entered [illegible] village," wrote W. E. Forster, who in the fullness of time was to be known not as a philanthropist but as "Buckshot" Forster.

> our first question was, how many deaths? "The hunger is upon us" was everywhere the cry, and, involuntarily, we found ourselves regarding this hunger as we should an epidemic, looking upon starvation as a disease.

Philanthropy was quite inadequate to check the progress of the disease of starvation. So too was orthodox political economy. Mrs Woodham-Smith talks too generally of "*laissez faire*," ignoring crucial differences between political economists, the differences which were recently dissected with great skill by Dr Black. She is right, however, to emphasise the absurdly narrow and doctrinaire economic views of Charles Edward Trevelyan, who regulated and pontificated, sometimes sanctimoniously as well as ineptly, from his vantage point as Assistant Secretary of the Treasury. Trevelyan felt that it was his duty not only to protect the British taxpayer but also to prevent any of his subordinates in Ireland—or any other British officials—from using their own independent judgment to suggest emergency policies. He withheld food when food was most needed, cared nothing about whether people who were starving could not afford to buy it, trusted Irish corn dealers to behave as properly as the ideal economic men of political economy textbooks, refused to sanction improvement schemes to assist Irish agriculture, and suspended public works operations when the need for them was most acute.

Insofar as there is a single villain in Mrs Woodham-Smith's pages, it is Trevelyan, whose appealing portrait she uses as an ironical illustration alongside her sharply drawn character sketch of him. She says too little, however, of his dealings with ministers to determine exactly to what extent they were influenced by him, and she admits, sometimes with chapter and verse, that his doctrinaire views were often shared by them. Both he and they were desperately anxious not to confuse the epidemic problems of famine in Ireland with the endemic problem of Irish distress. They felt that relief in the long run, like relief to the English poor, would do more harm than good. They were so afraid, therefore, of being too good to Ireland in a period of emergency that they ceased, almost from the start, to be good at all. It is as easy to collect an anthology of admonitions about economic policy as it is to assemble the statistics of hunger and disease. "You run the risk of paralysing all private enterprise and having this country on you for an

vying for the Latin American market in Visión

The opportunity of Latin America is felt around the world. Manufacturers of watches and diesels, producers of lenses and liquors, transports of the land, sea and air, refiners of petroleum and chemicals, builders of roads and factories – all aim their advertising directly at this fast growing major market. The medium they choose: Visión, the largest news-magazine in Latin America. Would you like to see a copy?

indefinite number of years," Trevelyan told his main agent on the spot. "It is quite impossible for Government to support 4,000,000 people." "If the Irish once find out that there are any circumstances in which they can get free government grants . . . we shall have a system of mendicancy such as the world never saw."

There was a logic behind such statements which gripped Trevelyan and his colleagues just as it had gripped the framers of the Poor Law of 1834. It is curious that Mrs Woodham-Smith, who is so vivid in her detail, does not fit what happened in Ireland into a bigger frame. There are no references to Malthus, "less eligibility," or Carlyle's "secrets known to all rat catchers." Nor does she compare the political movement of discontent, which failed to capitalise on empty stomachs, with the Chartist disturbances which made England also a centre of grim and often futile misunderstanding during the same period. Her main source of English public opinion is *The Times*. There would have been more light and shadow in a wider selection of sources.

Where she is always illuminating, however, is on those innumerable questions where psychology was at least as important as economics. The export of food from Ireland throughout the whole period of crisis, for example, was of little economic importance but of great psychological significance. The mass migration from Ireland, which in the long run was as important a feature of the famine as the holocaust of life, was to transplant not only people but memories as well to a new world. The English learned nothing. The famine rather reinforced prejudice. The Whig tradition of English historiography conveniently left most of the facts on one side.

Undiplomatic Candour

To Katanga and Back: *A UN Case History*

By Conor Cruise O'Brien.
Hutchinson. 382 pages. 35s.

DR O'BRIEN has been described by members of Parliament (safe behind the screen of their privilege) as a "filibustering braggard" and a "bloodthirsty Dublin corner boy". His book on his experiences in Katanga last year reveals him—fairly enough—as a rather unusually thoughtful career diplomat, plagued by an imp of untimely candour (characteristically, he calls himself "a bit of a blurter") by a keen sense of humour, and by somewhat strong reactions to cruelty and hypocrisy. These qualities, however damaging in the career he has now abandoned, would make his book compellingly readable, even if it did not have the distinctive interest of being a personal account of a recent international episode that is still bathed in obscurity—an account written by one of the central characters in the action, who happens to be also a fine writer.

Another of the book's distinctions is the way it has already been gleefully hailed by the very people who, a year ago, chose to depict Dr O'Brien as at best unreliable and at worst unbelievable, but who are now eager to cite his words as holy writ; more precisely, only those of his words that can be used to discredit the United Nations and thus to improve the "image" of that strange portent of our time, the Katanga secession. It is perhaps worth mentioning, for the benefit of those who may have been given a rather selective idea of the book, that it is not devoted to an "exposure of the UN". The greater part of it is an incisive analysis, backed by a wealth of direct evidence, of the true nature of Tshombe's Katanga.

Dr O'Brien does not mince words. The "Independent State of Katanga," he argues, is a "European enterprise of mystification"—"fundamentally, South Africa with a thin but expensive black screen". Its state apparatus

> was designed mainly for the protection of European lives and property, and the actions committed by its agents, including murder and arson, are directed to the same ends.

Dr O'Brien records in detail, and with something near to admiration, the successive devices, all ingenious though at times contradictory, used to sustain this unlikely but lucrative edifice in the face of a world ostensibly agreed on the proposition that the whole Congo is an independent African republic. Though one or two of his statements can be challenged, there remains enough that is unchallengeable to show that this is one of the least savoury chapters in the story of European rule in Africa.

This book will not end the controversy about where responsibility lies either for the initiation of the UN actions in Katanga in August and September last year, or for the way those actions were brought to a fumbling halt. When Dr O'Brien speculates on what may have been in Mr Hammarskjöld's mind—and knowledge—and what pressure may have been brought to bear on the secretary-general, the effect is to give his opinions much more weight than they are worth.

But he does point out that he is speculating. He frankly records his own errors. On occasion he accepts in full responsibility that might be laid across more than one pair of shoulders. He is curiously at one with his fiercest critics in dwelling on the disputed distinction between "ending" the secessionist regime and removing its foreign props. His account ought to stop all but the most doggedly dogmatic commentators from speaking any more of "O'Brien's war." But his own interpretation of the events of August and September 1961—that the United Nations, after long months of fruitless endeavour to complete the reunion of the Congo by persuasion, attempted decisive action against the "enterprise of mystification", and was frustrated partly by the shortcomings of an improvised international mechanism, partly by intense British pressure—remains obscure as well as controversial. It will not be cleared up until the more reticent actors in this drama, in London, Salisbury and Elisabethville as well as in New York, acquire a touch of Dr O'Brien's undiplomatic candour.

Labour's Liberal

The Conservative Enemy: *A Programme of Radical Reform for the 1960's*

By C. A. R. Crosland.
Cape. 251 pages. 30s.

MR TONY CROSLAND is a modern-minded progressive who has stayed in the Labour party instead of becoming a Conservative cabinet minister or a Liberal television star or even an independent weekly journalist. Many people who share his general outlook, but not his party allegiance, may therefore read this book with the feeling that there, but for the grace of not having become too closely involved in Labour politics just after the war, went they. What forms of realistic radicalism may people of this type have lost by keeping outside the Labour party, and what forms of realism and radicalism has Mr Crosland lost through still belonging to it?

The sort of 1945 radical who has drifted outside the Labour party may find his intellectual conscience stirred by three passages in this book: the attack on inequality in inherited wealth as distinct from in earned income (Mr Crosland puts forward a convincing case for a general gifts tax, to counter the farce of avoidable death duties, and for an annual tax on capital wealth); the argument that snobbery in our society still needs to be fought by a large scale reform in the educational system (Mr Crosland would enforce a major democratisation of the public schools); and the argument that since Labour's present pretty absurd plan for the nationalisation of any land as soon as it becomes scheduled for building or rebuilding has admitted "practical difficulties," the best alternative might conceivably be the nationalisation of all land.

The last two reforms, if reforms they be, would not be considered in the near future by a Conservative government (as a matter of fact, they would not be enacted by an early Gaitskell government either). The first of them, gifts taxes and wealth taxes, might well be the next piece of clothes in Labour's cupboard for progressive Tories to steal. But, even if the Tories do not soon commit this last larceny, they have run away with a lot of the rest of Mr Crosland's wardrobe already; and it is this that must have provided Mr Crosland with one of his major difficulties in writing his book, a difficulty which he attempts to solve by saying repetitiously that it could never have happened.

For, from his own side of the fence, Mr Crosland departs from radicalism and realism in two important ways. First, like so many other Labour MPs, he shudders away from most forms of radicalism and reform that would really annoy the trade union movement. Secondly, he departs from realism because on almost every second page he feels compelled to shout reassurance at himself that the Conservatives are congenitally incapable of adopting policies which everybody knows that they have really been adopting—with surprising apparent willingness for years. This happens frequently in his exposition, but two not untypical examples are worth mentioning. In Chapter Nine, we are told that one thing that "no Tory could accept"—but which Labour most certainly should accept—is "an abatement of national sovereignty, in the long run in favour of world government, in the short run in favour of Europe—even at the cost of loosening Commonwealth links." In Chapter Twelve, we are told the same thing about the urgent need for "a radical (and politically unpopular) change in the administrative framework" of local government, in favour of larger regional authorities. As the two main controversies in the present session of Parliament will be Labour's opposition to Tory sponsorship of the common market and of the Greater London Council, these arguments are really a bit thick.

In part these oddities arise because much of this book is a reprint of essays which Mr Crosland has published in *Encounter* and elsewhere over the past two or three years, and which he has been too honest to re-edit drastically as circumstances have dramatically altered cases. But in sadly larger part the thump of incongruity that reverberates through the political parts of this economically sensible testament has another basic cause: Mr Crosland set out to write a book on The Conservative Enemy at a time when the enemy was all too frequently changing sides to become a Labour one. He cannot think what to do about this, but Labour's difficulty is that in the last four general elections a deserting army of other middle-of-the-road voters have decided that they often can.

Pretender's Mother

Mary of Modena

By Carola Oman.
