MARY OF MODENA is one of the least known but most charming of the Queens of England. Her period of glory was brief, and was followed by long years of exile and disappointment. She became the second wife of James II in 1673 at the age of fifteen, and from that moment was caught up in the dilemma that resulted from her husband's conversion to Roman Catholicism. Miss Oman spends no time on the complicated political events which had such disastrous consequences for the Queen, and her biography is concerned solely with the Queen herself and her personal relationships. This is probably the most satisfactory way to treat Mary of Modena, for she was only indirectly concerned with the major events of her time, and her great merit lies in the charm of her character and the love she felt for her husband. James, through her eyes, is a very different figure from the ineffectual ruler of the academic historian.

Miss Oman's account is swift-moving and full of vidid detail: the Queen in labour in a bedroom crowded with official witnesses of the birth, begging her husband to shield her face with his periwig to give her the illusion of privacy; James prostrated with violent nose-bleeding when his kingdom was at stake; the ghastly weeks in London when, deserted by friends and betrayed by his daughters, the king was persuaded to abandon his kingdom and fly to France; and the hardly credible scene when James's vivacious mistress, Catherine Sedley, appeared at the court of his successor and greeted the new queen with the words "Why so haughty, Madam? If I broke one commandment with your father, you have broken another."

The second part of the book deals with Mary in exile in France, and it is a measure of its merit as a biography that interest is sustained right to the end of the Queen's life. During her years of exile she seems to grow in stature rather than diminish, and Miss Oman shines a new and more sympathetic light on the principal characters of the Jacobite court.

To James's opponents, however, she is less understanding. Anne and her sister, Mary of Orange, do not come out of the story well. In the face of overwhelming evidence, they tried to discredit the legitimacy of their half-brother, Mary even going so far as to send Anne a long questionnaire on the circumstances of the birth. Miss Oman at least disposes conclusively of the warming-pan story; yet both sisters faced a real difficulty, shared by the rest of England, between their loyalty to James and the protection of the Anglican Settlement.

The book is illustrated with a number of little-known portraits, including a superb one of the Queen in a riding habit by Verelst. This may not be an epoch-making biography, but, like its subject, it is an elegant and finished one.

The Ancient West

The Greeks in the West

By A. G. Woodhead.

Thames & Hudson. 243 pages. 30s.

THIS is one of the admirable series of "Ancient Peoples and Places," and follows the usual pattern: 48 pages of plates, a number of line-drawings, and a scholarly text tied in to the illustrations, so that primacy is given to the visible remains. Mr Woodhead has a difficult task, since he is confined to Sicily and Magna Graecia, and his books should be read with the corresponding volume by Mr R. M. Cook on mainland Greece. The history and arts of the two are so intertwined that it is hard to separate them; all too often Mr Woodhead has to say that the western products are rather provincial versions of the main stream; and in the intellectual fields of literature, history and philosophy he is mainly dealing with lost authors. He interprets his terms of reference severely: where, for once, he has in Theocritus a major author whose text survives and who for most people is synonymous with ancient Sicily, he dismisses him in one sentence and banishes him from the index because he emigrated to Alexandria.

But, given the necessary limitations of the book, it is most informative and well designed. It is not easy reading, particularly where art and architecture are concerned, since Mr Woodhead has crammed as much information as possible into a short text. He covers myth and history with admirable clarity (wisely leaving the tragedy of the Sicilian expedition to Thucydides). His last and most interesting chapter picks out those elements in Greek culture which are strictly western. On the whole the record is not very impressive compared with that of the mainland. Politically, the development of the polis in Sicily was even more disastrous than in Greece; art and architecture, though far above anything else in the western world, were a trifle provincial, with honourable exceptions, of which the early coins were the finest; the philosophers and rhetoricians were great and influential but—so far as one can judge from secondhand evidence—rather on the odd side, at least to modern minds; Theocritus emigrated; and we are left with one undoubted genius of lasting memory in Archimedes, whom the Romans killed at the sunset of Greece in the West. But, as Mr Woodhead reminds us, it was from the Western that the Romans first drew their Greek culture and passed it on to us.

Analysis of Nationalism

Process of Independence

By Fatma Mansur

Routledge. 221 pages. 25s.

IN many Asian and African countries the parliamentary rule inherited from the West has been overthrown or emasculated within the first decade after independence. This hardly draws a sigh from western opinion nowadays; instead there is a cliché ready for use: it was too much to hope that democracy could work in such immature countries and in any case the ending of poverty is what matters and that will be better managed by a brisk dictatorship.

It is time that western thinking moved away from some of these ill-founded assumptions. Miss Mansur's pioneering sociological study can therefore be welcomed as a workmanlike attempt to analyse the political forces that have grown up and the role they play in these countries. The first question that needs answering is not so much what colonial rule did—which we know well enough—but what its impact was in the society as a whole. Across the raw countryside of the past the imperial rulers drove their excellent roads, flanked by waterworks, government offices and the like, but beyond that there were great areas left untouched. What impact did western rule have on these areas of the old society and how are these areas now influencing the old western highways?

Miss Mansur begins by defining two kinds of elite that existed when the West blundered in. There was a cultural elite of religious men and scholars that had authority but no sovereignty. And there was the political elite of the rulers that had both sovereignty and authority. When western rule ended the sovereignty of this class its authority still survived. From these families the first sons were sent away for western education (Harrow has its distinguished old boy; has Eton an Asian nationalist to its credit?) and they became the nationalist leaders, not, as is often assumed, the professional middle class produced by western education. These lawyers, teachers and unemployed arts men were commonly supporters, but not the leaders, of nationalism. However much western rulers disowned any aim of destroying old religious or cultural traditions, the western education they introduced had the effect of undermining them.

Miss Mansur's comparative analysis of India, Pakistan, Indonesia, Ghana and Nigeria is inevitably more thorough in tracing the growth of nationalist parties than in following events since independence. In Pakistan and Ghana these events have overtaken her and Pakistan might be thought a doubtful member of this company in any case. But she admirably makes the case for studying the political and social situation in which these westernised elites find themselves. That is the key to the future of these countries and her book, besides being well-informed, has the natural sympathy arising from her Turkish origin.

Crazes and Cults

Theory of Collective Behaviour

By Neil J. Smelser.

Routledge & Kegan Paul. 447 pages. 45s.

THROUGHOUT history there have been episodes of mass behaviour, from the South Sea Bubble to the Twist, which seem on the face of it inexplicable. Professor Smelser has set himself the task of studying such events, not from the point of view of individual psychology, but from the sociological conditions that underly their occurrence. His aim is to provide the answers to three big questions: why do such collective episodes occur where they do, when they do, and in the ways that they do? His method is to apply sociological principles to the comparative material that is available. The result is a good example of how the sociological approach to a subject can begin to create order where there appears to be none. For example, Professor Smelser demonstrates convincingly that panics, crazes, financial booms do not occur at random. They are virtually non-existent in simple traditional societies, and very common in highly sophisticated societies like the American. What is more there are certain places, like Los Angeles and Detroit, which are particularly prone to these collective outbursts. His discussion of some of the big movements of the past is certainly illuminating. In particular, his step by step analysis of the great crash on the American stock market reveals again and again how real leadership and directive from the right sources could have saved the situation.

Unfortunately his conclusions are not very novel, and do not really provide the answers to the questions that were his point of departure. For instance, it is already generally accepted that in the field of fashion the more widely a particular style is adopted the less valuable it becomes to the wearer; or that in the absence of clear leadership the chance of an ambiguous situation resulting in a panic is fairly high. After all, as he himself points out, the Nazi leaders were only too well aware of this.

In fact the search for "social causes" is still an elusive one, and many sociologists end up by doing nothing more than to substitute one set of descriptions for another. This is not to belittle Professor Smelser's achievement; he has gathered together a great deal of information under one roof, and the descriptions themselves have obvious value. Indeed there are some people who might be slightly relieved that the "breakthrough" has not yet occurred. There is little evidence to show that mankind is in any sense ready to handle an understanding of why things happen for the common good, and not simply to manipulate it for individual ends. Perhaps every sociologist who is searching for "causes" and "answers" should keep a copy of "Nineteen Eighty Four" on his desk.

LETTERS

Letter from the Editor

The Economist never has enough space to print all the worthwhile letters that are sent in by readers. This is a pity for two reasons. It discourages people from writing; and the points made by our readers are not brought to the attention of those for whom they are often intended—the politicians, managers, civil servants and so on who may read us. All too often letters are not printed simply because they are too long, including the length taken up by throat-clearing sentences at their beginning.

Of course, many letters will always deserve to be printed in full. Naturally, any reader who wishes to see his letter printed either in full or not at all will always be welcome to say so. But, for the rest, the Editor asks permission from now on to prune readers' letters as sternly as contributions from his own staff, by cutting out of them what is not essential to their argument—and in some weeks introducing a condensed "points from letters" feature at the end of this section, picking out individual points from letters that would otherwise not get in. Our object is, within our limited space, to give readers' views, pruned but undistorted, as much prominence as possible. We now hope that even more of them will write.

Guiding the Drift

SIR—While in complete agreement with much of last week's article, particularly your comments on the importance of road development in north-east England, I feel that you deprecate too readily the "shoring up of the old, disfigured centres." Whatever may be happening to old basic industries like coal and shipbuilding—which in the north-east at least are being rapidly streamlined to meet changing needs—there is nothing in the "drift" to the south-east to indicate that what you call the "lagging" areas will not continue to bear the brunt of Britain's essential heavy engineering and steel-making activities. More than 75 per cent of Britain's steel-making capacity is in Scotland, Wales and that part of England north of your line from the Humber to Shrewsbury.

It is of no encouragement to the efforts of the north to help itself when, as soon as world trading conditions combine with a Government "brake" on expansion to produce unemployment in heavy industry, the heavy industrial areas are branded as declining and out of date. The north-east has not "persistently lagged behind the rest of the country in its ride towards affluence". Sales in our shops, per head of population, increased by 54 per cent between 1950 and 1957, compared with only 50 per cent in Britain as a whole. And recent years have seen considerable physical changes in environment, both in factory and town centre.

I suggest that an examination of the booming industries in the south-east would show that most of them fall into two categories—those like electronics which have developed around London for reasons which are more technical than economic; and those which, seeking to meet the domestic needs of affluent society, have chosen to site themselves in the middle of the biggest market.

Unless the south-east is prepared to shoulder Britain's heavy industry as well—and this is surely impossible, for reasons of space alone—the traditional heavy industrial areas must be made more economically stable through a greater leavening of light manufacturing. If this is achieved, the so-called "non-prosperous conurbations" can be safely left to speed up the steps they are already taking to bring themselves into line with modern needs.

The answer, as you indicate, is "a far more purposeful choice of priorities", and we are hoping that the Government's latest decision on roads is a sign of this. Before this decision, we could only foresee repetitions of our experience with the Tyne Tunnel, which was put off for 15 years after the passing of the necessary legislation in 1946.

Finally, a statistical point. The £438,000 which you mention as the north-east's share of Government aid under the Local Employment Act, 1960, relates in fact to the national figure of £18,588,000 in loans and grants approved during the year ended March 31, 1962, and not to the larger sum of £75 million which you give as the total authorised so far under the act. Nevertheless, the point remains that, at least until the Chancellor's latest amount, the proportion of aid so far devoted to the north-east has been disgracefully low.—Yours faithfully,

GEORGE CHETWYND
Director,
North East Development Council
Newcastle-upon-Tyne

SIR—Your article of November 10th divides the country too neatly into a prosperous expanding area south of a line from the Humber to Shrewsbury and an area north of this line which is less prosperous and from which the population is drifting. The position is not really so black and white; or at any rate is not so completely white in the area south of the line. Lands End to the north of Gloucester—a distance of 250 miles—is treated as one region in the preparation of Government statistics but it is really two different areas. Gloucestershire and around Bristol is expanding but in the western end of the peninsula, except on the South Devon coast where retired people have settled, there has been unemployment and underemployment and a steady drift away of population. In the centre of the area is the City of Plymouth which has already done all you say the towns of the north should do—rebuilt the centre on modern and attractive lines, cleared the slums, housed more than half of its school children in schools built since the war and attracted new factories making a diversity of goods. Furthermore, there are any number of small towns in the area which need an economic blood transfusion. Surely this is the kind of area in which economic growth can and should be encouraged.—Yours faithfully,

S. LLOYD JONES
Town Clerk
Plymouth

Railways

SIR—I am sorry to see that you still regard "reductions in railway staff" as synonymous with "sackings". During three years, 1958-60, the National Coal Board axed 120,000 jobs, from 710,000 to 590,000, but only 18,400 were "dismissed and redundant". The remainder of the cut was managed by natural wastage and redeployment. Since a colliery closure may mean 200-500 jobs gone at a blow the railways should be able to do better. Such redeployment is cheaper than sacking. It saves redundancy payments: it saves unemployment payments: it saves railway skills for the railways; and it saves the time of the 30,000 youngsters who must otherwise be recruited into vacant posts in a declining industry.

Nobody can tell, before they try, how many sackings such deployment might save. In the coal board's experience, voluntary wastage actually increased as total manpower dropped, so anything might happen.

The great drawbacks of this scheme are that it does no harm either to management or to men, and that it sounds so simple. It would now need singular courage on either side to confess that deployment is possible.—Yours faithfully,

R. M. DODWELL
London, SW5

[It was because it may delay this process of natural wastage that *The Economist* criticised last week's railway pay rise: it is to aid the process of redeployment that *The Economist* would like to see regional differentials in railway pay.]

PENNY-A-MILER

TRIDENT—A NEW CONCEPT IN LOW-COST JET TRAVEL

Hawker Siddeley Aviation's new de Havilland Trident is the world's most advanced short-haul jetliner. It is also one of the cheapest to run. In fact, with a full load of economy class passengers the Trident has a direct operating cost of less than a penny per passenger mile on route lengths of about 800 miles. This is a startling advance in low-cost jet operation.

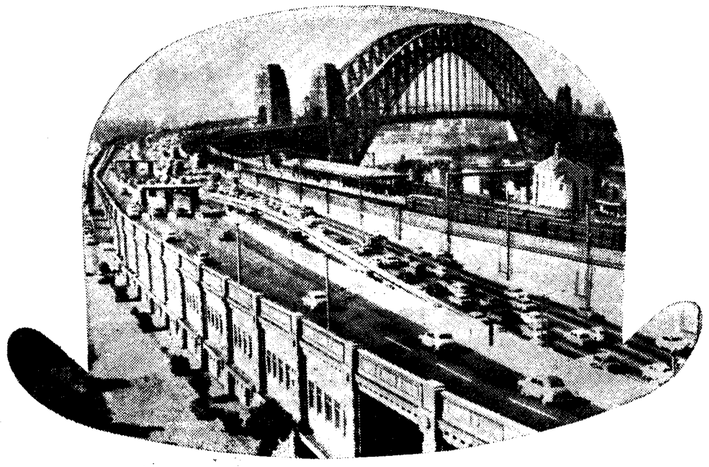
In other ways, too, the Trident is ahead of its time. It is the world's first aircraft built from the beginning for eventual automatic landing to ensure complete safety even in the worst flying conditions. Three rear-mounted Rolls-Royce Spey by-pass jet engines provide the power to carry up to 101 passengers at 600 m.p.h. in quiet comfort; having the engines at the tail eliminates most of the noise and vibration. 24 Tridents have been ordered by BEA (the first of these is due to go into BEA service in the summer of 1963) and two for Kuwait Airways.

The Trident typifies the forward outlook of all the companies that make up Hawker Siddeley Group which produces other brilliant aircraft like the Vulcan, Argosy and revolutionary vertical take-off strike fighter, the P.1127. With aircraft such as these, the Hawker Siddeley Group is making an impressive contribution to the security of the Free World and to aviation progress everywhere.

HAWKER SIDDELEY GROUP

32 Duke Street, St. James's, London, S.W.1.

PLANNING BUSINESS DOWN UNDER?



The Bank of New South Wales
will put you in the picture

The Bank of New South Wales can't exactly draw everything out of the hat for you, but if you're planning business Down Under you couldn't gain a clearer picture of current Australian and New Zealand situations than from us.
We've been in Australasia since 1817. We were the first bank there; we still are. Today we have over 1,150 offices throughout Australia, New Zealand, Fiji, Papua and New Guinea all providing key services, many of which are special to the Bank of New South Wales.
We find customers take their hats off to our initiative and sense of judgment. We doff ours to them too, of course. There's mutual interest and respect between the 'Wales' and our customers.

A MERCHANT BANK AT WORK

Acceptance Credits and Home Trade

The use of acceptance credits as a means of financing overseas trade is well-known: for many years acceptance credits have also been used to finance the movement of goods between supplier and manufacturer or merchant in the home market. For example, many leading engineering concerns find this method convenient to finance their purchases of steel and its conversion into machinery.
We can provide these short-term self liquidating credits. They are complementary to cash overdrafts and are often used by progressive businesses wishing to expand and increase their profit-earning capacity.

THE BUSINESS WORLD

Who is Protecting Whom?

When the government produced its first post-Moloney legislation designed specifically to protect consumers yet another re-draft of the ill-fated Weights and Measures Bill, debated by the House of Commons last Monday, the cognoscenti sighed "third time lucky" as they prepared to thumb through its 66 clauses and innumerable sub-clauses—which define such fine points as how to sell vanilla pods and the size of a "nip" in a pub (three choices of measure, none of them applicable to brandy). It is 102 years since Parliament last legislated on this subject, and twelve years since a government committee pointed out that shopping methods had somewhat changed during the intervening century; the government has had two unsuccessful tries since then to put a new Weights and Measures Bill through Parliament. Is the third and latest draft an improvement on its predecessors? Is it !**X*!.

If this bill is a harbinger of the government's attitude to one of the admitted gaps in the Welfare State, the protection of shoppers, then it suggests that the Board of Trade into whose province the subject falls has learnt nothing and forgotten nothing. It encourages suspicions that when it comes to take action, the government will embrace the worst and ignore the best of Moloney. It suggests that whenever industry says a measure is difficult to introduce and disturbing to trade, the statement will be accepted at its face value. If this seems a harsh judgment, one can only argue that a government must be judged by its works. By the yardstick of the latest Weights and Measures Bill, its works are uninspiring and flaccid. To suggest, as Lord Derwent did, that the private bill is a suitable means of reforming the hire purchase law comes oddly after the Government's curt dismissal of a private member's bill last December.

The present bill would have been a splendid and imaginative piece of legislation in the 1930s; it would have passed muster as late as the early 1950s; but it is simply not in tune with the supermarkets and the pre-packaging of the 1960s. On the credit side, it closes many of the gaps dealing with goods sold by measure rather than weight, and with the equipment for measuring and counting them. The bill would make it compulsory—a revolution, this, in British retailing—to tell shoppers either in writing or by word of mouth, how much they were buying. Why, then, did its authors stop with the job three-quarters done? Why, to take the biggest weakness of the current draft, do they intend to allow so many packaged goods to be sold by gross rather than net weight?

It may not seem so important that the bill permits just over an eighth of an ounce in every so-called pound of butter or fat to consist of wrapping paper—until the average family's fat consumption is added up over the year. It might pay thrifty housewives to insist on unwrapped butter which must be sold by net weight. But is a so-called "pound of strawberries" made up of just over 14 ounces of fruit and just under two ounces of container quite such a laughing matter? Between these two extremes lie a whole range of goods that the bill would allow to be sold by gross weight when prepacked, a mighty expensive way of buying waste paper. Local authority inspectors cannot see why, if industry in the United States, that home of automation and pre-packaging, can adapt its canning, wrapping, filling, counting and packaging machines to the legal requirement to sell by net weight, industry in Britain cannot do likewise.

These may sound small issues, but straws like these decide whether the balance tips in favour of the supplier or the shopper. Is this properly appreciated? The enthusiasm with which the Moloney Committee's suggestion for a Consumer Council has been taken up on all sides suggests that it is not. There is no harm in having a Consumer Council to speak for the interests of shoppers: if one existed today, the Weights and Measures Bill would no doubt have been a more satisfactory measure. The danger lies in thinking that once the big, positive gesture has been made, and the Council established as the government has announced it will be, shoppers and shopkeepers will live happily ever after, in amity and fair trading. They will not, unless the Council, which Moloney foresaw as a high-level, policy-forming body and not a forum for complaints, gets to work on the niggling details and administrative regulations which decide whether or not traders can drive a coach and horses through loopholes in the substantial body of legislation for the consumer's protection that is already on the Statute book. But it does not need a Consumer Council to say what these loopholes are.

There are two quite separate arguments involved. One is the need for shoppers to know what they are buying and whether it will do what they want. The other is the provision of some form of redress when it does not. On balance, the government is better out of the first of these two. Into it enter all those disputes about standard sizes, descriptive labels, washing and dry-cleaning instructions which as the Moloney

been times in these elections when the sum of all their campaigns has sounded like one vast gobble. A mass of mediocrity has been leavened here and there by such energetic exceptions as Mr Romney and Mr Scranton, the Republican candidates for the Governorships of Michigan and Pennsylvania. But by proving the rule such instances serve merely to cast cheerless light on the status of politicians in the United States. Mr Romney is a gifted amateur in politics. He and Mr Scranton are wealthy, successful businessmen. Most successful American businessmen prefer to have nothing to do with politics apart perhaps from buying themselves a politician.

thoroughly bored with almost all the candidates, many of whom have been risking vocal rupture amid an immense unflattering indifference. Their loudest shouts have been devoted to shrill charges and counter-charges about whose hand has been found in the till. They were therefore caught on the wrong foot when the real issue of the election, and one in which voters were prepared to take considerable interest, suddenly became the firmness of the hand which holds the tiller.

The sad truth is that from Massachusetts to Texas, and from coast to coast, the general standard of candidates is deplorably low. Such candidates are known in the trade as "turkeys." There have

been times in these elections when the sum of all their campaigns has sounded like one vast gobble. A mass of mediocrity has been leavened here and there by such energetic exceptions as Mr Romney and Mr Scranton, the Republican candidates for the Governorships of Michigan and Pennsylvania. But by proving the rule such instances serve merely to cast cheerless light on the status of politicians in the United States. Mr Romney is a gifted amateur in politics. He and Mr Scranton are wealthy, successful businessmen. Most successful American businessmen prefer to have nothing to do with politics apart perhaps from buying themselves a politician.

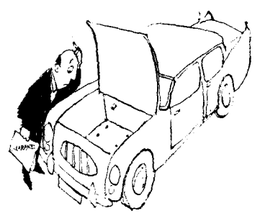
For the Democrats the best hope of gaining seats seems to lie in California. For the Republicans, New York holds out similar promise. But in both places the parties' hopes have sprung largely from more or less unashamed gerrymandering. This year's mid-term elections may turn out to be the dullest as well as the costliest in recent American history. The Democrats hope to reap

of small type, have not been brought, and the standards of trading are that much the poorer for it.

The Moloney Committee specifically stated that the proposed Consumer Council should stay aloof from squabbles of this kind, adding loftily that it did not "wish to deter anybody [some private-enterprise consumer organisation, presumably] from supporting a consumer claim that it thinks ought to be brought to court. We doubt if such bodies would themselves be deterred from supporting a *bona fide* consumer claim to court by any fear of retribution under the largely obsolete law of maintenance." But it is precisely this law which Moloney dismisses as "largely obsolete" that has deterred organisations from bringing test cases. Some clarification by the government seems to be needed here.

A little clear thinking is also required on the subject of unsatisfactory services, be they meals, laundries, car repairs or, as in a case before the Court of Appeal last week, hotels. Is the Court of Appeal the right place to decide whether a room can be called a "double room" when it measures only 15 ft. by 8 ft. 6 in. ? In this case, an aggrieved Mr Murray Wallman had refused to accept such a room from the Sandbanks Hotel in Bournemouth and the appeal judges, while deciding the case against him, also went out of their way to sympathise with him and to comment tartly on the hotel.



One of the best pieces of work done recently by Shopper's Guide was a comparison of the service offered and the charge made by several large London garages for putting right two simple, standard defects in a car in otherwise good condition.

The motor agents themselves take disputes about repairs seriously enough to have started their own voluntary arbitration scheme. If this should work in any way satisfactorily, it might put a stop to the defeatist attitude, endorsed surprisingly and unexpectedly by the Moloney Committee, that nothing can be done to protect consumers from bad service, as distinct from bad goods. Something can be done ; there can be provision for arbitration in case of disputes ; and it should not be beyond the wit of man to see that obviously frivolous complaints are detected early on.

THE real bones of the case for consumer protection tend to get lost sight of amongst the arguments of those who, on the one hand, want to do people's shopping for them and those who, on the other, believe that if the consumer is given an inch, he will deafen everyone within earshot with querulous and unjustified complaints (Moloney appears to subscribe to this second view). Shoppers are, in the main, quiet simple people prepared to learn from their mistakes. But there are, and there always will be, occasions when they are provoked, tricked or tried beyond normal endurance, and then it is up to the government to see that they have some means of redress, in the interests of simple justice and in the interests of fair trading generally. It is not so very difficult to see that the law leans a little in their direction ; it needs a few simple reforms of an uncontroversial character and certainly does not need a statutory Consumer Council. If the government throws this in for good measure, so much the better. But if it offers the Council without the reforms, it is offering jam with no bread to put it on.

Europe in the Medium Run

"PROJECTION is not planning: it does not set up imperative targets, either for the whole economy or for the different business sectors ; it is not even forecasting, in the strict sense. . . . The main object of the exercise is to clarify economic policies and the actions of the interests concerned, in such a way that these policies and actions may bring about more favourable results".

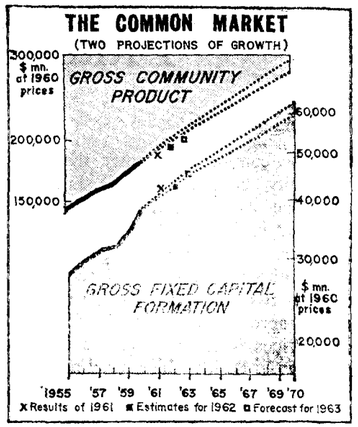
Insisting on yet another fine distinction within the behaviour of forward-looking economists, the report on development perspectives for the European Economic Community between 1960 and 1970 that was released in Brussels last week is nevertheless likely to be used as a yardstick against which economic performance in the common market will from now on be measured. The first five-year perspectives which Sir Robert Shone's office of the National Economic Development Council has outlined and will soon be presenting, in a similar way, do not strictly add up to a plan. The formal qualifications, for both these exercises, will no doubt be rather generally ignored. But like Sir Robert Shone the group that prepared this EEC study, headed by M. Pierre Uri, may not mind too much if their essays in analysis and persuasion do ginger up economic policies and action.

This report, which the group presented to the European Commission in June, is the first part of its exercise ; it chooses the working hypotheses about the future supply of labour and of productivity upon which future development of the gross national product in these countries will depend, and breaks projections of total GNP down into the main sectors of demand. The working party is now engaged upon further breakdowns of these projections, and of the investment and employment foreseen, as between twelve branches of industrial activity and five categories of services.

Two alternative projections are set out in the present study, one assuming a growth of gross community product for the Six put together averaging about 4¾ per cent per year between 1960 and 1970, and a slightly less optimistic hypothesis of growth at 4.3 per cent per year. This community average masks a range of national growth rates varying from 3.85 per cent for Belgium to 5.85 per cent for Italy. It is based upon the assumption of a growth in the labour force for the Community as a whole of only 7 per cent over the ten-year period. But this smallish rise in available manpower, the working party reckons, could reasonably be supplemented during the period by an increase of 50 per cent in national output per person employed, which means an average increase of 4.1 per cent per year in productivity.

Such projections for EEC, which imply increases of 53 to 59 per cent from 1960 to 1970, are not out of line with the objective adopted in 1961 by OECD of a 50 per cent increase in the total national products of its 20 member countries. In 1961 and 1962 the European countries within OECD will probably have kept up to the average of about 4.1 per cent a year needed to achieve this, but the United States, representing 60 per cent of the total GNPs of the OECD countries, will have fallen well below it, pulling down the average. The common market countries, so far, are not much out of line with the Uri projections.

More detailed figuring out of these projections suggests (for the higher EEC projection) a growth from 1960 to 1970 of 34 per cent in public consumption ; of 68.5 per cent in gross fixed capital formation, which would thus rise from 21.2 per cent of gross community product in 1960 to 22.4 per cent in 1970 ; and of 66.8 per cent in total private consumption expenditure, or 59 per cent in consumption per head. This is a comparatively happy outlook for the private consumer, in comparison with the projections that Sir Robert Shone's office has had to make for the next five years, in which private consumption is shown to rise sensibly less than the gross domestic product. But that is the difference between continuing a high rate of growth in a group of economies where investment is already high, and achieving one in an economy where we have to pull investment up by our bootstraps.



—And in the Short

MEDIUM-RUN projections of the possible such as the Uri group's naturally have to exclude the effects of short-run fluctuations in the economies of Europe and the rest of the world. A month ago, some distinguished international economists were telling the world economy to be careful lest it should soon move towards recession not only in the United States but in the much more ebullient European economies. Since then, partly as a reaction but also as an assertion of more genuine confidence, the emphasis has shifted. National economic counsellors assembled at OECD in Paris last week, for example, were clearly more ready to consider the possibility of recession, or the need for expansionary policies to avoid it, than most of them had been a year before ; but they were also concerned to emphasise that recession isn't imminent, and that in Europe at any rate the prospect is of continued, though slower, growth.

Confidence inside the European Six, in particular, is quite reasonably derived from some renewed momentum in their economies—though exports and fixed investment, the two sectors where growth is most noticeably lagging, are perhaps the hardest of all to re-stimulate.

The most rapid rate of progress is shown by **Italy**, but this has slowed down in 1962. To the slackening in the rate of increase in investments and exports is added the unsteadiness brought about by the nationalisation of electricity and the expected transition to a planned economy. But the government reckons that gross national product may still show an increase of nearly 6.5 per cent in 1962 and some 6 per cent in 1963.

For **France**, the economic report accompanying the budget forecast a rise of 6 per cent in gross internal production in 1963. This would be higher than in 1962, when the increase, in real terms, is put at about 4.8 per cent. The optimistic forecast for 1963 is based on the prospect of a considerable increase in the number of persons employed and also on a more rapid increase in exports.

The **German** authorities, in their draft budget for 1963, anticipated a rise of about 4 per cent in the gross national product in 1963, a continuation of the rate of progress recorded in 1962. The 1963 budget was still designed to check the rise in wages and prices ; but there is a danger that it could slow down economic activity further.

For the Benelux countries the gross national product may rise by some 2.5 to 3 per cent in 1963. In **Belgium** internal demand is rising only moderately.

The **Netherlands** Central Planbureau forecasts a rise of 4 per cent in the gross national product for 1963, following an increase of 2.5 per cent in 1962. The Dutch expect a larger supply of young people on the labour market. But on the demand front, their assumption rests on a forecast of an increase in exports of some 7 per cent. Such an increase appears difficult.

The budget forecasts show that the two groups of countries have a different conception of future economic developments, as of the principal aims of their economic policy. In France and Italy, the pursuit of expansion dominates the other objectives ; in Germany and the Benelux countries this is still subordinate to the desire for stability.

Financing Italy's Expansion

BY OUR SPECIAL CORRESPONDENT IN ITALY

THE continental country that shows the least equanimity about an economic slow-down is also the country that has notched up the most spectacular increases in output in the past three years—Italy. Italy to-day, under its vigorous and ambitious government of the Centre-Left, is committed to a sustained economic expansion, which is the only basis on which the government's big programme of social improvement can be financed. (Our Rome correspondent discusses the new economic planning commission on page 677.) Besides this special need for expansion, Italy also has a special advantage—its continued, though reduced, margin over the rest of Europe in both the level of average personal consumption and in potential additions to labour supply, now confined almost entirely to the south but still of considerable significance. Finally, Italy shares at the same time the general continental affluence in foreign exchange. It has, in short, the necessary reserve both domestically and externally to permit a forced draught of reflationary demand. And if, as is not yet certain, the slowing down of industrial expansion in the spring and summer turns out to be more than a temporary slackening, then the Italian authorities seem prepared to give a boost of their own, whether this is needed to replace domestic demand (investment has been rising less rapidly) or demand from a less buoyant world market.

Partly to prepare for this eventuality, and more generally to improve their techniques of economic control, the Italian authorities have this month introduced important reforms on their financial market. By extending and strengthening the Italian capital market these reforms meet a general European need, and will presumably be welcome to Mr Dillon; but their particular significance is to provide a vital financial plank for the next phases of Italian economic development, a phase in which the public sector is destined to play an increasing role. The Italian central bank, by putting its influence and expertise behind this reform, and by acting as one of the few bridges between the confident politicians of Rome and the hostile businessmen of Milan, is playing a perhaps indispensable part in Italy's quiet revolution.

The central aims of the new financial moves are to maintain the expansionary credit policy through which Dr Carli, governor of the Bank of Italy, has successfully primed the Italian economy in the recent past; and to give special support to the public bond market through which the rising volume of public investment will be financed. The central bank now sees the need for a new source of expanding credit and banking liquidity, since the two main previous sources have been drying up. On the one hand the surplus on the balance of payments has recently, through official policy, been largely offset, both in its impact on Italy's external reserves and on its internal liquidity, and the surplus is in any case expected to run down. At the same time the budget deficit, the second source of domestic liquidity, has never turned out as large as projected, as the pace of the Italian boom continually produced an unintended buoyancy in revenue and check on expenditure. The upshot has been that, after its receipts from bill and bond issues, the Treasury accumulated a growing hoard in its balance at the Bank of Italy, now totalling 460 billion lire, and to this extent has sucked liquidity out of the Italian economy and exerted an unwanted deflationary influence. The Italian central bank—uniquely in the world?—is thus positively in favour of an increase in government expenditure, though it adds its warning that the pace should not be too fast and that the programmes for roads, railways, schools, hospitals, the south and the rest cannot all be achieved at once.

THE particular technical innovation through which these and other wider purposes will be served is the introduction of monthly tenders for Treasury bills. Hitherto, the Treasury has made available an open tap in its bill issue: the banks or anyone else could take up as many bills as they chose, at the fixed 3½ per cent Bank rate. In practice this meant that more money was pumped into the Treasury than it could use, and created the idle balance at the central bank. Now, beginning this month, the tap has been closed, and the Treasury will instead offer fixed amounts at monthly tenders, open only to banks and other credit institutions. The banks will still be granted a full allotment at a fixed rate of 3½ per cent for the amounts necessary to meet their compulsory deposits in Treasury bills, of 12½ per cent of their total deposits; but the remainder of the bill issue will be sold on a tender basis, at a premium above the basic issue price. The allocations will be made not on the London basis of the varying rates put in by successful tenderers but, more favourably for the market, at a single uniform rate of the lowest successful bid.

In connection with this reform, the banks will no longer be able to switch freely between cash and Treasury bills—the former global liquidity ratio of 22½ per cent has now been split into 10 per cent cash and 12½ per cent bills—and they will no longer have an automatic outlet for surplus funds. Instead, they will be obliged to seek a return on these funds in the open market, including the bond market. In this way, Dr Carli hopes to achieve his aim of channelling part of the liquidity of the money market into the capital market—an objective which might profitably be pursued with equal vigour in other continental countries, and Germany in particular. Dr Carli does not fall into the pre-Keynesian trap of suggesting that because a large part of the country's high savings flow into the banks as deposits they are not "available" as long-term savings for the capital market: he is taking steps to break the artificial institutional barrier and make them available.

The beginning of a true market in money and bills also permits the introduction of official open market operations, which the Italian authorities intend to use. They are not, moreover, confining them to "bills only." Official intervention may also extend to the bond market; and here this intervention may be designed to influence rates as well as credit volume. The significance of this, in the present context, is that the Italian authorities would be prepared if necessary to support the bond market against another undue "political" fall. The market was badly affected earlier in the year by the general feeling against the government as well as by the specific act of nationalising the electricity companies, adding to the potential supply of bonds. In recent weeks the market has looked a little better, and now the prospect of support from the authorities as well as the banks could be sufficient in itself to maintain a better mood. Certainly the authorities do not aim to operate on any very extensive scale.

A THIRD strand in this month's financial measures has been to grant renewed freedom for Italian banks to use the proceeds of funds borrowed abroad—basically in the Euro-dollar market—for internal financing. This move, too, helps to reinforce domestic liquidity, and it has been deliberately timed to coincide with the creation of a flexible domestic money market. For this will itself set up automatic brakes against excessive borrowing abroad, by reducing rates on the domestic market. Even now foreign borrowing is only marginally worthwhile for Italian banks. So the Italian authorities have felt able to break their segregation from the international market, at the same time as combating the segregation between their own money and capital markets.

Although this new freedom has involved some additional inflow of funds into Italy it is not intended to entail a permanent strengthening for the external reserves. While the Italian authorities have dropped one of the offsets for their basic surplus—offsets which have kept the reserves roughly steady at around $3¼ billion for a year and more—they expect the surplus itself to contract a little. In the first nine months of this year, admittedly, it had not yet done so—the surplus on current account reached $312 million, compared with $285 million a year before. But the net inflow of capital has been reduced, as a result partly of the developing programme of Italian external loans, though also of some flight of Italian funds to Switzerland, now largely reversed. But exports so far this year have continued to rise faster than imports—by 17.7 per cent against 15.6 per cent. Dr Carli, like every central bank governor in the world, is concerned about the effect of wage pressure on Italy's competitiveness, and also on the narrowing of profit margins and erosion of internal investment funds, and he has drawn attention to the implications in clear but reasoned terms. At this point, his emphasis is distinctly different from that of the government, which to some extent is looking favourably at the other side of the coin, at the redistribution of income from shareholders to wage earners. Dr Carli's cautionary voice may be heeded—not least because he is at one with the government in its underlying aim of maintaining the momentum of total demand.

BUSINESS NOTES

OVERSEAS TRADE

Exports Up, Imports Too

OCTOBER'S export figures are a pleasant surprise; they are a record and were well received in the foreign exchange market. But the import figures are a reminder that it is the balance that matters. The relatively poor export performance in the third quarter checked the monthly rise which had proceeded through the first six months of the year, though export orders continued to rise. Now exports are if anything ahead of forecasts again; at £336 million, on a seasonally adjusted basis, they are nearly 10 per cent above the average for 1961. Imports rose from £376 million in September to £393 million in October. This does not look like a temporary jump that can be ignored. If anything it now appears that it was the September fall that was temporary; the average import bill for the latest four months is £387 million. This is some 5 per cent above the average for the second quarter; and an uncomfortably high figure if the full pressure of stock rebuilding has still to come.

*Provisional

The crude trade gap, measuring imports cif and exports fob, widened slightly in October to £44 million, but was better than the average for the whole of the third quarter of £53 million. On true payments this still marks a small deficit in the trade account, though invisible income, which has recently been rising, almost certainly pulls the whole current account into surplus.

STOCK MARKETS

Moving Higher

FURTHER reflections in the London stock market on Mr Maudling's measures to stimulate the economy, the hints that other moves might if necessary be made before the budget, and the rally on Wall Street have led to an increase in the volume of business and a good rise in equity prices. There was a little profit taking at the end of the account, which coincided with the announcement of a cut in Rolls-Royce's interim dividend. But the pause was only momentary and, helped by good results from GKN and Joseph Lucas, industrial equities continued their advance after the week-end. Engineering and building shares attracted buying and so did such blue chips as ICI and Turner and Newall, but confidence in the future was still not strong enough, for example, to trigger off a sharp rise in steel stocks. As a result, *The Economist* indicator gained 9 points to 345.4 in the week to Wednesday's close, and the *Financial Times* index 8.9 points to 291.1.

Both indices are thus above the levels recorded just before the collapse in prices on Wall Street at the end of May, and it can be said that had it not been for the strong rally on Wall Street in the last fortnight Mr Maudling's measures would not have produced such a strong rise in British equities. Rightly or wrongly, Wall Street is now more optimistic about the prospects for the American economy and, if this confidence is not misplaced, the British market can argue that this gives the British government more latitude for its reflationary policies. The tone on the German bourses, as

is discussed in a later note, is also more confident, even though the small rise that has taken place has immediately prompted some profit taking. Elsewhere on the Continent the rise in Wall Street has not led to a really strong advance in equities.

The neglect of gilt-edged stocks in the British market, where prices have eased slightly, is the natural consequence of the renewal of interest in equities and of the more expansionary business climate. The failure of the £25 million offer by ISHRA of the 5¼ per cent second debenture, 1964-87, in Steel of Wales at 88½ was, however, due to special factors. Since the issue of other steel prior charges last year the investor's appetite for such stocks has been blunted and the wide spread of this debenture's redemption dates did not appeal to the institutions. As sub-underwriters many of them have had to absorb the 62 per cent of the stock that was left unsold, and in the circumstances they may not be too dissatisfied with an opening discount of ¼ and a current discount of a full point.

Wall Street's Strength

New York

WALL STREET is surprised and pleased by the extent and duration of the rally. It has been sustained for well over a fortnight, broken only by momentary bouts of profit taking. On Wednesday the Dow Jones average rose to 630, over 70 points, or 13 per cent, above last month's low and it is now at its highest point since the collapse in prices in May. Traders and small investors who had retired to the sidelines in the summer and autumn are now coming back into the market and some brokers, who earlier had resigned themselves to a lean Christmas and had expected a low volume of trading to persist for some time, have swung to the opposite extreme and think that a new boom may be in the making.

So far however most of the buying has been institutional, coming from the banks, pension funds and insurance companies that feel that equity yields compare attractively with fixed interest bonds. They seem to be persuaded that if a recession occurs it will in any case be short and mild. Indeed, with a big budgetary deficit assured and tax cuts promised, there is a growing feeling that a recession may be avoided, and cyclical issues such as steel and machinery equities are sharing in the advance. But the latest phase of the rally has been marked by an absence of selectivity, which suggests that investors are anxious to participate while the going is good. Those who had expected tax selling to check the advance are now saying that the Dow Jones average may climb to 650 before any serious resistance is encountered and that it could go higher still if more private investors come into the market. The rises have been most pronounced in the standard blue chips, automobile stocks and oil shares but railroad, electronic and other stocks that have been in the doldrums have also been bought.

MONOPOLIES

Square One

ON Tuesday, Mr Erroll, President of the Board of Trade, told the House of Commons that the British Oxygen Company has been released from some of the restrictions imposed on its pricing and contracts 4½ years ago. These followed the Monopolies Commission report in 1956 in which BOC was found to have obtained a monopoly of the supply of acetylene and oxygen and to have used it to charge excessive prices. In 1958 the Government announced that it would not, as the commission had recommended, regulate BOC's prices and profits. Instead, after discussions with the Board of Trade, BOC gave certain undertakings on contract terms, pricing policy and future attempts to maintain its dominance of the British market. It agreed to publish a scale of prices for oxygen and acetylene that would apply to all users, whatever their sizes, and to offer contracts for no more than a year. It is from these two undertakings, as they affect large customers (i.e., taking more than 12,000 cubic feet a year), that BOC has been released.

Since the commission's report there have been considerable changes in the industry. "Tonnage" oxygen capacity has grown hugely, from 200 tons a day in 1958 to 3,900 tons a day in 1962. Air Products, a subsidiary of an American company, has established itself as a new supplier of liquid and bottled oxygen. Air Products is not bound by BOC's undertakings and is free to offer long-term contracts against prices which BOC must publish. But, even with this advantage, it has by no means made a clean sweep of the market: BOC's share (excluding tonnage oxygen) has only fallen from 98 per cent at the time of the report to 95 per cent now. In other words BOC dominates the market today only trivially less than it did 7 years ago.

Perhaps the Board of Trade freed BOC from its undertakings out of a love of fair play. But it is an odd sort of fair play that gives back to the giant of the industry the power to use a pricing system whose abuses had been specifically condemned in the Monopolies Commission's report. Surely the aim of legislation against monopolies is to reduce the advantage of any monopolist over its small competitors? And would it not have been "fairer," also, to have accepted evidence from the other supplier?

STEEL OUTPUT

Picking Up

CONSUMPTION of steel in British industry in the third quarter of this year appears to have been about 4 per cent more than in the second, though it is not yet back to the level of the third quarter of 1961, and still about 6 per cent below the peak rates of 1960. Estimates of this improvement are based upon the rate of steel deliveries and the consumers' and merchants' census of stocks, which for the third quarter are reported still to have been falling, though at a lower rate than before.

In October crude steel output, too, was at its highest rate this year, 430,500 ingot tons a week, but the rate of capacity working in the industry was still only at about 75½ per cent; new capacity coming onto the books during the month rose more than actual output. The industry is naturally pleased about Mr Maudling's "little budget"; this should certainly keep the strip mills busy, as they already are compared with the rest of the industry. It will take a long time for any stimulus for private investment to work through into steel demand for plant and machinery, but to the extent that new factories or building are concerned steel demand comes early in new installations. Moreover, some of the increases in public investment mean a sizable demand for steel, though most of those that do will have been known in advance, with orders perhaps already on the books.

COMMON MARKET AND GRAIN

Irregulations

WHEN the European Economic Community's regulation establishing a common policy for cereals came into operation at the beginning of August, confusion reigned for a time in the European grain business. Its implementation had been postponed for a month, giving officials and grain merchants an unexpected month's grace; nevertheless, many were confused by the complexity of the new regime. But the majority seem to have found their feet quickly enough; now a common complaint by dealers is that they spend their time exploring loopholes while officials spend theirs plugging leaks.

But the official machinery has also proved fallible. For two days some hapless Belgian official forgot to publish the import levy on sorghum. This slip naturally produced a big business in duty-free sorghum. More serious was a flaw in the system which cut off all exports of French wheat to west Germany for two months, because under the regulations wheat could be offered from third countries at a contractual price, while no machinery existed for offering wheat from another member of the community on the same basis. Dealers claim that but for the coincidence of an incoming harvest in importing countries with the implementation of Regulation 19, considerable dislocation would have resulted. However, if only because they did not know how the new regulations would affect trade, importers stocked up before they came into force. The subsequent drop in Canadian exports to the common market cannot, therefore, be entirely attributed to the working of Regulation 19.

But Canada is meeting increasing competition from subsidised exports of French

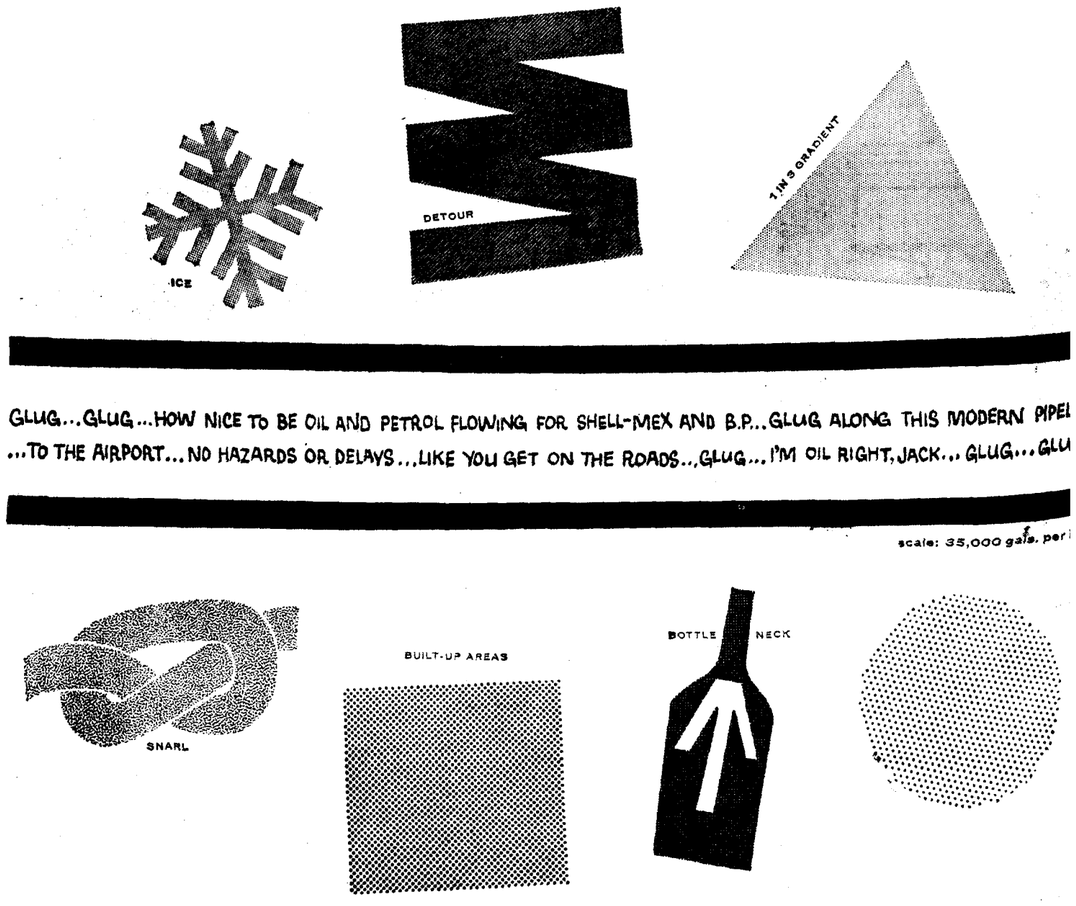
QUIET FLOWS THE FUEL



How Shell-Mex and B.P. made pipe-dreams come true

It's not just the oil that appreciates travelling by pipeline. Traffic congestion is eased. Deliveries can be stepped up on demand. There need be no chance of delays from bad weather. So, of course, it was our ambition to pipe fuel to London Airport instead of sending it all by road.

But it's not as easy as you think to build a pipeline (see Hansard). We had to route this one (from the depot at Walton-on-Thames) to avoid crossing any land likely for development. We had to arrange to complete the section under Kempton Racecourse with all the turf replaced in the fortnight between the September and October meetings. And to lay the section under the Thames at Rivermead Island in cold November without interfering with regattas.

When it was finally completed in 1960, we were able to deliver 35,000 gallons of fuel an hour direct to two storage points on the airfield. We also eliminated all possibilities of delay from ice, snow, wind, rain, fog. And as air traffic increases, so we are able to step up supplies to match.

SHELL-MEX AND B.P. LTD
PIPE-UP FOR PIPELINES

wheat in other markets. In particular, France has been active in the communist markets, which seem likely customers for the world's surplus wheat. After the sharp decline in wheat stocks following last season's poor harvests, production is now very much on the upgrade again. Each month, estimates of this season's out-turn have mounted. Russia, China and western Europe expect bigger crops and now a new production peak is likely to be reached. The new crop will also be of relatively poorer quality so that competition between suppliers will be unusually keen.

The high hopes which had been entertained of further curbing American production have also had to be deferred because of the dilution of the Administration's restriction programme by Congress. The surplus problem is therefore likely to remain acute, and that will sharpen France's dispute with its EEC partners over financing the export of common market surpluses (reported on page 646). There is also a headache in store for British grain merchants should Britain accept this common agricultural policy. Dutch grain merchants, whose domestic arrangements were formerly most like the new EEC regulations, have so far proved most adept at coping with them. By extension of this example, British merchants, who are at present the least encumbered by regulations of any, will probably have to sit up many hours with a wet towel around their heads before they can compete with continental colleagues.

BUILDING SOCIETIES

Down in the New Year?

THE Government would like mortgage rates to come down and the pressures on the Building Societies Association to reduce the recommended rate on mortgages from 6½ to 6 per cent and on shares from 3¾ to 3½ per cent, tax paid, are strong. So far the association has dug its heels in but it is difficult to believe that, if the money continues to flow in at its current rate, it will be able to resist these pressures much

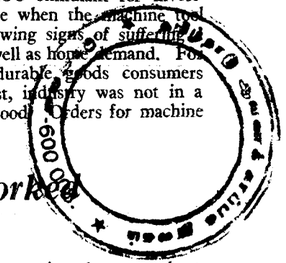
with 1961, the inflow of new savings has been strong but as the table shows it was slightly less strong in the third quarter of this year than it was in the second. The apparent increase in the net inflow of the Halifax between the second and third quarters is entirely due to the fact that half-yearly interest is paid in the second quarter. Mortgage repayments continue to rise and so do new advances. In one or two areas, notably Scotland, the societies are not finding it easy to secure suitable mortgage business but in London and the South East the demand for mortgages remains high. In general, the bulletin of the Building Societies Association says that the demand for mortgages "continues unabated" and this week the chairman of the association, Mr John Dunham, gave a strong hint that the societies may soon offer bigger mortgages (thus reducing the owner-occupier's cash deposit) and longer periods of repayment.

MACHINE TOOLS

Depression Averted?

MR MAUDLING'S stimulant for investment came when the machine tool industry was showing signs of suffering a fall in export as well as home demand. For however many durable goods consumers bought in August, industry was not in a similar buying mood. Orders for machine



GOLD

How the Pool Has Worked

A continental correspondent writes:

IT was not only in the political sphere that Russia proved unexpectedly helpful in the Cuba crisis of three weeks ago. The international gold market, which had suffered a violent upheaval from the Cuba flare-up, was immediately calmed not only by the political accommodation itself but also by some equally remarkable large sales of Russian gold. On the Tuesday and Wednesday of the crisis private buying of gold in London reached $45-50 million, and this sum had to be provided by the concerted "gold pool" of Europe's central banks. But at the end of the same week the pool partly replenished itself by buying a substantial amount of Russian gold, believed to be about 20 tons (roughly the same in millions of dollars).

It is now possible to give a reasonably detailed picture of the working of this secret gold pool. Contrary to many impressions, it is not near exhaustion. The pool was set up in December, 1961, by the leading European central banks. Each country was given a quota for the amount of gold it was willing to put into the pool against dollars; the individual quotas are impossible to establish but the total commitment, as generally known, is $250 million. The pool which is managed by the Bank of England, was completed last spring by complementary arrangements for purchases in the market. These are normally confined to supplies from Russia or from private sellers; newly mined gold from South Africa is left to be taken up by the Bank of England in the usual way, a practice which has occasionally caused some resentment among continental members of the pool.

At the end of each month, the net balance of the pool, between the month's sales and purchases, is communicated to members, and the deficit or surplus is then divided between them according to their quotas. At the end of March, the pool had a deficit of $13 million. But at the end of June (helped by the gold sales from Canada's reserves?) the pool had repurchased sufficient gold to have a stock of $46 million. The subsequent speculation against the dollar quickly involved a loss of around $100 million, for at July 20th there was a net deficit of $50 million. At this point the United States itself appears to have put $35 million into the pool. This was in line with the general arrangement that the pool should not bear the whole strain of a general wave of mistrust against the dollar.

So at the end of July the pool had a net deficit of $15 million. In August, there was a further deficit of about $12 million, even though the pool now found opportunities to purchase gold again in London. The cumulative deficit at end-August was thus about $27 million, which was divided up in the usual way among the participants, each of them supplying gold to the Bank of England against dollars. In September there was a further deficit of $20 million. In October, the net result of the large sales to private hoarders as balanced by the purchases from Russia was a deficit of $35 million for the month. The upshot is a cumulative deficit in the pool of something over $80 million. Gross sales by the pool on the London market have, as explained above, been notably higher. But the pool's periodic replenishment, from Russian and American as well as from ordinary market sources, has left the bulk of the $250 million still available for use.

tools from the home market were 31 per cent lower than they had been a year before, while export orders fell by 34 per cent. Home orders had been down on last year by 29 per cent in the first eight months of the year, so there was little change here—except that the switch of many industries' holidays from August to July this year might have meant that more orders would have been placed in August. Export business, however, had been 10 per cent above last year's level in the first eight months of the year, so the August orders went against the trend: though one month, and a holiday one, is never an infallible guide, it is a danger sign. At the end of the month the industry's order book was 13 per cent smaller than a year before; at £103 million it still represents about a year's production.

INTERNATIONAL LIQUIDITY

Stamp II, Triffin II

MR MAXWELL STAMP has now put forward a revised version of his plan for combining a solution to world payments stresses and inadequate aid programmes. When he first put forward this plan two years ago, he now says*, he felt the unorthodox proposal had "at best one chance in ten" of being adopted. Mr Stamp ventures no odds on the current version, which has been tailored to meet some of the practical criticisms but is still strong meat for Mr Stamp's fellow bankers. The essence of the Stamp Plan was and is the creation of special certificates of the International Monetary Fund to be granted in aid to under-developed countries, which could pass them on to the supplying countries in exchange for their national currencies. Mr Stamp's main modifications are

A more modest start—an issue of $2 billion rather than $3 billion.
A limit on the amount of certificates a country needs to accept, equal to its IMF quota.
Provision for a country to opt out of the scheme completely—which would mean asking that contracts arising from the aid funds should not be placed with its manufacturers.
Provision for the IMF to redeem the certificates from its own resources in certain cases.
Channelling of the certificates through the International Development Association, so that they would be lent (for fifty years) rather than given away. Mr Stamp also says that IDA would pay over to the Fund interest received on its loans, but so far these have been interest-free.

The special virtue of the Stamp scheme is that it goes straight to the heart of the wider object of international financial reform, which is to provide the means for larger overseas aid and fuller use of the west's productive capacity. The most serious aspect of the current payments situation is that while the unbalance between the main countries is much smaller than before, most countries are still very sensitive to letting their payments balances deteriorate and their reserves fall, and are accordingly hesitant in taking on commitments of overseas aid—which if taken on by all industrial countries together would have very little effect on their reserves or payments balances.

But in cutting the corners to a simple scheme of "just print it," Mr Stamp is still almost certainly giving the traditionalists more than they will swallow. For those who flinch from creating new international money, especially if it is "unbacked" by other liquid assets, his scheme is less acceptable than the other runners in the field. These now include, besides Mr Maudling's plan for a limited centralising of sterling and dollar balances in IMF deposits and Mr Roosa's plan or expedients for bilateral arrangements for the dollar, continental ideas for standard ratios of gold and credit in countries' reserves.

This scheme was first put forward by Dr Posthuma of the Netherlands Bank, and has now been taken up by Professor Triffin, who is a consultant to the European Economic Commission. At a meeting of the Round Table on European questions at Basle last weekend Professor Triffin said that such a scheme would be considered by the monetary committee of EEC, with an initial portion of 25 to 30 per cent in credit, perhaps later rising to 40-50 per cent. Within this credit portion would be included both special credits (whether through IMF, "mutual aid" in the common market or deposits in the Bank for International Settlements) and ordinary key currency balances.

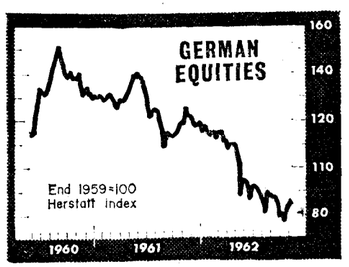
GERMAN STOCKS

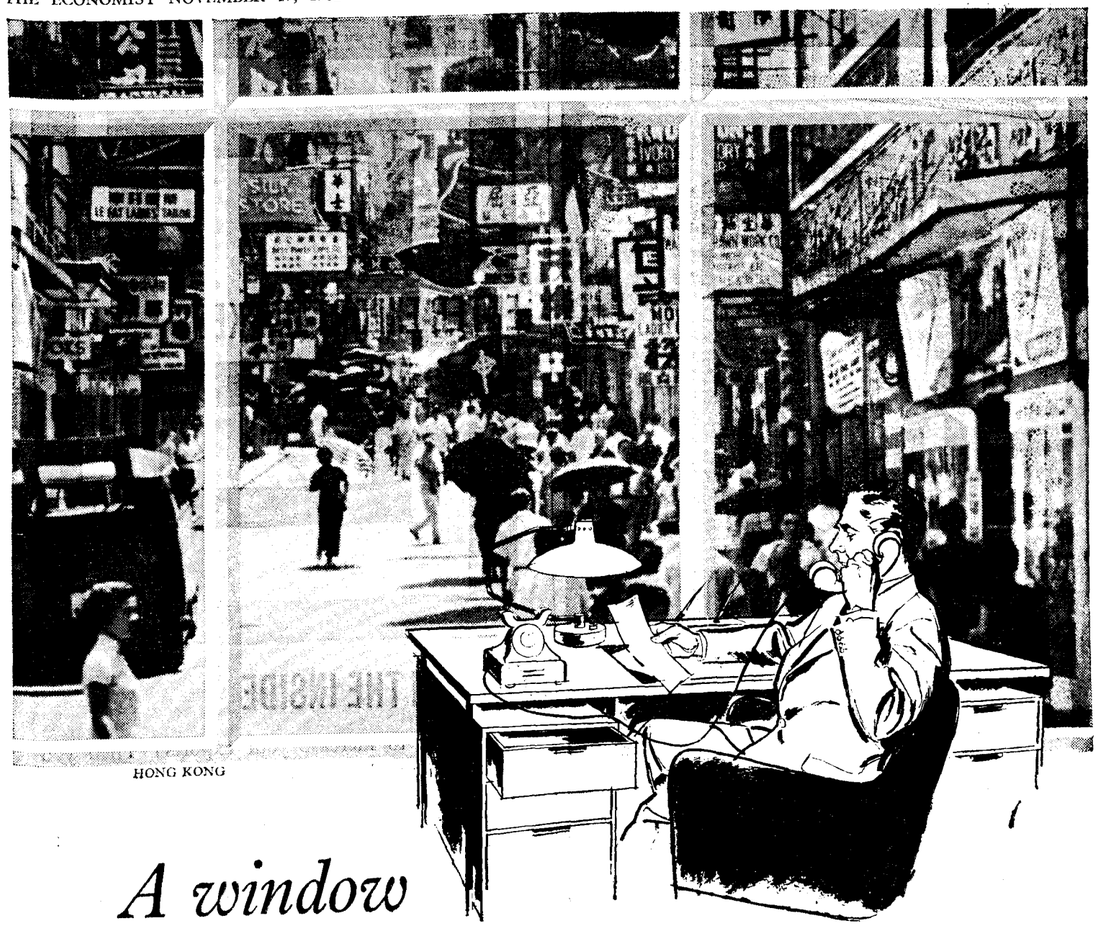
Past the Bottom?

RECENTLY, *a Frankfurt correspondent writes*, the atmosphere in the German stock markets has been more optimistic than for many months. After a long period of lethargy, the market is gradually returning to more normal conditions. Turnover is rising and the public's attitude towards equities is slightly less reserved. The much discussed "Spiegel" affair has not disturbed this more friendly climate, nor have the still not entirely assuaged fears about new Russian moves in Berlin. Economic prospects



are not viewed with any great optimism, but it is thought that current stock market prices already discount a moderate recession. But equities are not being bought indiscriminately and investors are paying more attention to the prospects for particular industries and companies.

It is against this background that dealings in the shares of two German unit trusts have begun in London. S. Japhet has sponsored their introduction and in a survey of the West German economy it has pointed out that while no rapid recovery in German stock prices can be expected the fall that has already taken place has been very sharp, and that current yields on some German equities do not compare unfavourably with those in the United States, Britain and other EEC countries. It has to be noted, however, that while the average yield on German equities is just over 3½ per cent, the average yield on leading British equities is around 5 per cent. The first of these two trusts is Adiropa, a small trust which has its investments spread throughout Europe. At the end of June about 21 per cent of its funds was invested in Germany, 7 per cent in Belgium, 10 per cent in France, 8 per cent in Britain, 10 per cent in Italy, 8 per cent in Holland, 9 per cent in Austria, 7 per cent in Switzerland, 3 per cent in Sweden, 2 per cent in Spain and about 15 per cent was held in cash. The units are quoted at 97s. 9d.-103s. 3d., giving a yield of about 5¼ per cent. The yield on the second trust, Fondak, is higher, amounting to 7¼ per cent on the current quotation of 63s. 6d.—66s. But this trust invests all its funds in German shares and makes a practice of distributing part of its realised capital gains. Presumably, this trust will find it more difficult to realise capital profits in the future than it has in the past.



HONG KONG

A window opening on the World

This is the Hongkong Bank Group, operating as it does through the East and Middle East, with offices in New York, San Francisco, Los Angeles, Paris and Hamburg.

This integrated Group of Banks can provide complete banking facilities through its own branches and through agency arrangements with a network of correspondent banks.

ENTER EXPORT MARKETS

—FROM THE INSIDE

You want to increase your exports? Then you should know about International Export Services Co. Limited.

IES is a company offering a unique service to British manufacturers by assessing and working in world markets on their behalf. Its scope includes basic research, distribution planning, sales promotion and advice on finance for export development.

Not only will IES provide you with a tailor-made programme but it will also work with you to implement it. In this way it relieves you of much of the worry normally encountered. And it ensures that you enter export markets in a truly professional and experienced manner — saving unnecessary expense and gaining a keen competitive edge from the outset.

May we suggest you phone or write today for an explanatory brochure to

attractive, not only because it brings the resources of two powerful industries to bear on a project that will need all their combined skill, but because it could contribute so much, politically, to Anglo-French good relations. But such amity can have been bought at too high a price.

What costing is possible at this stage suggests that the project, for a long and a short range version of a basic airliner built to fly at around twice the speed of sound (say 1,500 miles an hour) must cost £150 million, divided between the two countries. A 25 per cent allowance for contingencies, which seems reasonable under the circumstances, would suggest that it is sensible to budget in round terms of £200 million, spread over the ten years that it would take to develop and deliver the aircraft. This sum, big though it is, would be no reason for arguing against the supersonic airliner if there were some grounds for hoping that it would find acceptance among the airlines. *The Economist* has consistently argued that this aspect has been equally consistently ignored by the sponsors of the Anglo-French project, and by the British sponsors more than the French because the medium-range aircraft that the French propose to build does make slightly better commercial sense than the long-range British version.

Technical reasons for questioning whether the aircraft will sell in the numbers required to justify this kind of investment were spelled out in the issue of September 8th. Sufficient to say now that the fear that an aircraft flying at twice the speed of sound (and structurally incapable of flying faster) would be made out of date within five to eight years by American designs with a built-in ability to fly, ultimately, at three times the speed of sound is enough to make the airlines hold back. There is plenty of evidence that the aircraft is what the industry would like to build; has anyone ever demonstrated that it is what the market wants?

CENTRAL BANKS' ROLE

Seen in Retrospect

THE working philosophy of a governor of the Bank of England has a public interest even after he has retired, and Lord Cobbold will command a wide audience for the Stamp Memorial Lecture he delivered on Tuesday*. The ex-governor opened out his views on the place and task of a central bank, which are not unfamiliar in essence but have not hitherto been spelled out so fully. Lord Cobbold argues strongly for an approach independent of government not only on operational matters but also on policy. Lord Cobbold sees the rationale of this in a division of responsibility between Treasury and central bank corresponding to the public and private sectors: the central bank "forms its judgments from a market and economic point of view," the government has to give bigger attention to politics. Provided that sufficient weight is attached to the "and economic" in the central bank's assessment this formulation may not be unacceptable—though there can be different views about how far the central bank should identify itself with the private sector and the City *per se*.

But one may agree unreservedly with Lord Cobbold's wise and clear views on ultimate responsibility, which lead him to find a definite value in the existence of the statutory directive which provides, for a central bank unable to accept a government decision, an intermediary position between abject surrender and wholesale resignations from the Court. The device could hardly be used often; and "argument never reached that point in my time."

On the giving of public information, Lord Cobbold hedges. He pours scorn on the old "atmosphere of mystery and mumbo-jumbo," and applauds the more forthcoming approach taken by most central banks in the past ten years. But in this field "there will naturally and properly be variations in different countries reflecting the different formal responsibilities imposed on government and central bank respectively by statute or by usage." Finally, on staffing, Lord Cobbold lays due stress on the necessity of operational efficiency and puts sensible emphasis on "continuous integration of operational staff with people who have the time and the background for more basic thought." Rightly, the Bank has been on guard against economic advisers who "write memoranda to each other in an ivory tower." The Bank is now clearly on the right path, towards the integration of more economic expertise. An outsider may still wonder whether the pace is fast enough. Has the Bank, to take one example, made any study of the justification on abstract economic terms of the institutional framework of the London money market in

ANGLO-JAPANESE TRADE

Safeguards for Home Industries

THE most-favoured-nation treatment which Britain and Japan will extend to each other under the treaty of commerce signed on Wednesday will be qualified in several major respects. The overriding—and perhaps over-emphasised—safeguard is the blanket authorisation for either party to restrict the import of any product when its own producers of similar or competitive products are threatened with disruption. If no agreement on restrictions can be reached, the injured party can act unilaterally. The second important safeguard is contained in the "sensitive" list of items which will continue to be controlled after the new trade treaty is ratified. This list is in turn split into several categories:

1. *Sensitive items under voluntary export control.* Where it has the machinery for doing so, the Japanese Government prefers to exercise the necessary control over exports. The items which will be covered by this voluntary restraint are mainly textile products or radio and television apparatus and parts. Expanding quotas for these products have been agreed for the next three years and it is intended to enlarge them in subsequent years. Silk fabrics remaining controlled and radio and television equipment will be released from voluntary limitation at the end of 1965.

2. *Sensitive items under import control.* Where it is not possible for Japan to regulate exports in accordance with the agreement, imports will be controlled by Britain. Most of the goods covered in this way will be released from control at various dates ranging forward to the end of 1967, but domestic pottery and ceramic toys which figure on this list will then be transferred to the voluntary list.

3. *Items to be placed on the sensitive list.* Other products can be added to the sensitive list. From the manner in which the list has been compiled scientific and precision instruments appear one of the categories likely to be added to this list.

SOME PRODUCTS AFFECTED

Japanese exports to Britain	Prev. quota £'000	1963* £'000	1964 £'000	1965 £'000	Liberalisation date
Voluntary export control:					
Cotton yarn	Nil	Nil	Nil	Nil	...
Cotton fabrics ('000 sq. yds.)	†	5,500	6,000	7,000	...
Manmade fibre yarn	†	25	25	25	...
Manmade fibre fabrics ('000 sq. yds.)	†	3,000	3,600	4,200	...
Woven wool fabrics ('000 sq. yds.)	†	400	500	600	...
Transistor radios and television sets	500	725	1,200	1,800	1.1.66
Import Control:					
Sewing machines and parts	250	350	600	...	1.1.65
Binoculars and parts	60	100	200	...	1.1.65
Toys and games	550	700	950	1,275	1.1.65 to 1.1.68
Pottery	150	200	250	300	...

* Annual rate. † No comparable figures.

The treaty of commerce, which will run for six years, will not be ratified until next spring. Interim quotas have therefore been fixed for the intervening period (the previous quotas covered the year to September last). For this period Britain has taken seven items off quotas, including watches worth more than £5 and non-transistorised radio, television and gramophone apparatus. Twelve quotas mainly on goods already placed on the sensitive list have been raised. The remainder continue in force until the ratification of the treaty. Japan will increase quotas for imports from Britain of machine tools pending full liberalisation. The wool cloth quota will be doubled to £7 million, and the whisky and motor quotas substantially increased. The Japanese prime minister claims that British exports to Japan might rise by 20 to 25 per cent after the first year of the treaty's operation. Britain's exports to Japan were £33 million in the first nine months of this year.

present conditions? In other words, are the Bank's traditional, and in themselves highly efficient, instruments and practices under continual critical question? But if more could be done, it would be churlish not to acknowledge the start that was made under the leadership of Lord Cobbold.

WATER SUPPLIES

Circuitous Wanderer

LIKE any good dramatist, the government has prepared the entrance of its water resources bill with a seemingly endless succession of reports and memoranda so that, when the draft was published last week, it was certain to be welcomed. The bill follows the ideas sketched out in April's White Paper and, like it, broadly gives effect to the recommendations of the Proudman report. A new central authority, the Water Resources Board, is to be set up to co-ordinate the conservation activities of 26 new river boards. These will replace the existing 32 river boards (excluding the Thames and Lee Rivers) and will be responsible for groups of river basins.

The regrouping of river boards and widening of their responsibilities continues the advance, begun with the 1945 Water Act, from completely unco-ordinated exploitation of water resources. Since 1956 the number of water undertakings has been reduced from more than 1,000 to less than 650. Each river authority will be responsible in its area for husbanding its water: conserving, redistributing and augmenting supplies and securing its proper use. It will also inherit from the river boards the responsibility for management of water resources: land drainage, fisheries and prevention of pollution. The authorities will have between 21 and 31 members (a few large ones will have more) with a bare majority appointed by local authorities. They will issue licences to water users, existing as well as the new, and by this means will allocate supplies. The responsibilities of statutory undertakings will remain unaltered.

The most sweeping change suggested in the Bill is in the central board whose duty will be to consider for England and Wales as a whole what action need be taken for conserving, redistributing and otherwise augmenting water resources. Because the government compromised, perhaps unavoidably, with the recommendations of the Proudman report by allowing regional interests full, and dominating, representation in the river authorities, those bodies may be too unwieldy to be fully effective. The effectiveness of the new legislation will largely depend therefore on the liveliness and ability of the central board, and its willingness to use its powers. It can carry out research and can advise the Minister of Housing and Local Government and the river authorities what actions need to be taken. It is to be hoped that the government will appoint a strong central board whose advice will be heeded.

UNIT TRUSTS

Another Good Month

ONE surprising feature of this year's uncertainty in the stock markets has been the success of the unit trust movement in attracting new investors. Helped by four block offers the trusts sold just over £4 million of units in October and bought back £1 million of units, to make the net investment £3 million. This was slightly less than September's figure of £3.5 million but, taking into account the market's jitters about Cuba, this is a satisfactory result. It compares with a net investment of £1.9 million in October 1961. Sales of units so far in 1962 amount to £35.4 million, against repurchases of £9.2 million; the net investment of £26.2 million for the first ten months compares with £3.9 million in the corresponding period of 1961.

The results suggest that unitholders are becoming increasingly aware of the long-term advantages of unit trust investment. They do not appear to sell out at the first sign of a fall in the markets. Indeed, repurchases this year represent only 3.7 per cent of the average value of the total funds invested. This compares with 5.6

MOTOR TRADE

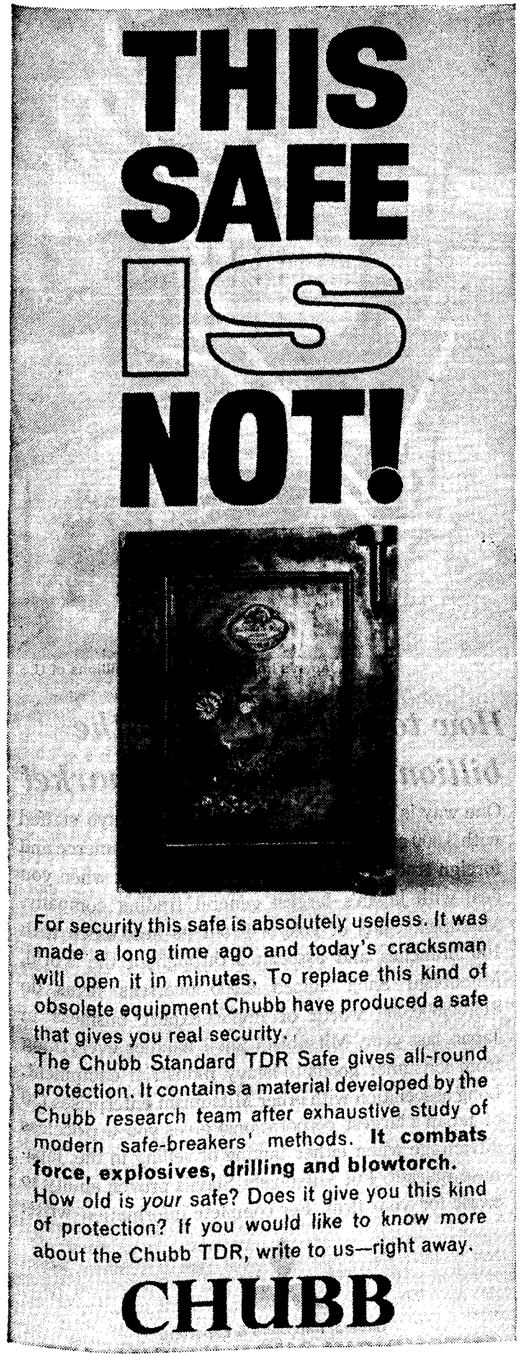
Virtues in Bigness?

BRISTOL STREET MOTORS' bid for Car Mart and rumours of a possible rival bid from the Kennings group shows that the motor trade has feelings of togetherness. But how much scope is there for economies of scale in a business where the size of the individual unit, the garage, is bound to be limited, and the bigger firms are simply those made up of the largest number of separate units? The only saleable commodities on which an enlarged business can expect extra discounts are petrol and some accessories, with the former much the more important. Petrol may form between 20 and 25 per cent of a big company's turnover, and an extra penny a gallon makes an important difference to profits if total sales approach, say, two million gallons. But the sale of new and used cars and the repair of old ones will often account for more than half of a company's turnover. There is no extra gain in margins from selling more, as manufacturers give no extra discount to their bigger dealers—apart from the extra four or five per cent that distributors or main dealers get.

The biggest problem in making profits out of car sales in the more competitive conditions of the last two years has been to avoid over-generous part-exchange allowances, without losing trade as a result; and then disposing of the used cars at a good price. These are largely matters that depend on the ability of the individual salesman, though he will obviously be affected by the attitude of his superiors. Here the only advantages that a large firm may have arise when it is selling used cars, and then it is a matter of the size of the individual branches rather than the size of the business as a whole. To sell used cars successfully the stock needs to be at least 30 vehicles, and cars should not be held in stock for more than a month. Garages that are too small to achieve this rate of selling have to dispose of cars they get in part-exchange to other traders, and so have less chance to make a profit. The extent to which profitability can vary is demonstrated by the higher profits earned in the last two years by Bristol Street and Kennings and the smaller profits earned by Car Mart. Bigger firms do have one potential advantage: they can finance their own hire purchase, a highly profitable exercise if they avoid bad debts.

Repairs are a part of the business that depends largely on the efficiency of the man on the spot and the bigger firm with many branches has a more difficult problem of supervision than the smaller one. Here size may well be at a positive disadvantage; and there is little or no benefit from having bigger branches, for size in a workshop adds to the problem of control over the individual mechanics. Only if modern diagnostic equipment is used to save labour—and reduce reliance on its judgment—is the big garage likely to match the efficiency of the small workshop.

There is therefore no inescapable logic forcing the motor trade into bigger units; but both Bristol Street and Kennings, as successful organisations, might well feel that they could make Car Mart more profitable. Last year Bristol Street earned 40 per cent on its shareholders' capital, Kennings about 20 cent and Car Mart 15 per cent. Car Mart has a strong basis for trade in the London area as a distributor for Austin and as a main dealer for Ford. But its narrow geographical spread may be a disadvantage, particularly as London is traditionally the most volatile sector of the car market. Its properties may be worth more than their book values, and it would give both Bristol Street and Kennings a stake in London that they now lack. Its assets would strengthen the balance sheet of Bristol Street, which has fixed assets worth £255,000 compared to Car Mart's £1,652,000. This contrast suggests that Bristol Street's bid is based more on the profit record than on asset values. But Kennings, with fixed assets of £4,762,000, may be better placed to win if a take-over battle develops.



For security this safe is absolutely useless. It was made a long time ago and today's cracksman will open it in minutes. To replace this kind of obsolete equipment Chubb have produced a safe that gives you real security.
The Chubb Standard TDR Safe gives all-round protection. It contains a material developed by the Chubb research team after exhaustive study of modern safe-breakers' methods. **It combats force, explosives, drilling and blowtorch.**
How old is *your* safe? Does it give you this kind of protection? If you would like to know more about the Chubb TDR, write to us—right away.

BIG THINGS ARE HAPPENING IN AUSTRALIA

This is the kind of skyline you'll see in many Australian cities today. Australia's increasingly rapid rate of building—factories, offices and homes—*is just one of the many signs* of this country's great development. The signs are everywhere in this land that combines enterprise with financial soundness, economic growth and stable government.
Figures show just how large Australia now looms on the international trade scene. Australia is the world's largest producer of lead, wool, lamb and mutton; the third largest producer of zinc; fourth in gold production. Steel production figures are climbing swiftly and Australian steel is being produced at the lowest cost in the world. Exports and imports are soaring to new records. Figure after figure proves that Australia is one of the world's greatest producing and trading nations.

More and more businessmen—traders investors and manufacturers—ar realising the tremendous potenti of Australia. Each Qantas flight int Australia brings more of these me —keen to see and decide for them selves how much Australia offers Already many of these men hav opened a rich new market for the products, invested heavily in Aus tralian companies and the develop ment of Australia's natural resou ces, started Australian branches c their own companies, and negotia ed important deals for the purchas of *Australian primary commoditie* and manufactured goods.
Come to Australia and see for you self. Qantas 707 V-Jets—fastest jet in round-world service—will fly yo to Australia in a matter of hours. O your way you'll enjoy your first tast of the unique Australian combina tion of friendliness and efficienc that you'll find everywhere in Aus tralia—a happy start to a happy stay
Your Travel Agent or Qantas wi show you how easy it is to fly there how little extra it costs to includ Australia in a round-world itinerar Qantas Empire Airways Ltd., corn Piccadilly and Old Bond Stree London, W.1. Tel: MAYfair 9200.

Japan's imports-exports (in millions of U.S.$)

How to buy and sell in the billion dollar Japanese market

One way is to open your own office in Tokyo staffed with 3,000 experts on Japan's industries, commerce and foreign trade. In effect this is what you get when you deal with Japan's largest general trading company, Mitsubishi Shoji of Tokyo. From its head office with 100 branches and associates throughout the world, Mitsubishi Shoji helped 5,000 overseas firms do $1,100,000,000 worth of import-export business in Japan last year. Mitsubishi Shoji handles everything from consumer goods to heavy industrial equipment. Long association with other Mitsubishi enterprises (30 of Japan's largest corporations) gives you a priceless advantage when either buying or selling in the Japanese market. Put Mitsubishi Shoji's proven ability to work for your firm. For complete information write:

per cent for the first ten months of both 1960 and 1961. They also see the advantages in the spread of risks and in expert management. The indications are that November will be another active month, for already block offers by two trusts specialising in bank and insurance shares—Bank Insurance Units in the Save and Prosper Group and Natbifs in the National group—have brought in about £2 million. The Commonwealth Unit Trust Fund has also made a special offer of units this week. But a good deal of the growth this year has been achieved without block offers—in the three summer months of June, July and August sales amounted to £6.7 million without a single block offer—and the growing number of unitholders making regular purchases of units through savings schemes should make for a more stable pattern of investment in the future.

WALLPAPER

Wall Game

THE biggest manufacturer of wallpaper, Wall Paper Manufacturers, makes one of the best-selling decorative paints, Walpamur. And now the biggest manufacturer of decorative paints, ICI, is to make wallpaper. The intention was clearly signalled when ICI bought two wallpaper companies, Within's and Rochdale Wallpaper, nearly two years ago. So clear did this signal seem that it was noisily assumed in the City at the beginning of the year that ICI would shortly be making a bid for WPM, a rumour only killed by repeated denials. The announcement of ICI's plans last week shows how much more modest its ambitions are. It is to spend £2 million on equipping the Orb Mill at Oldham to make over 10 million rolls of paper annually. The mill will make a complete range of papers, excluding only specialities such as hand-blocked papers.

The wallpaper market is completely dominated by WPM, which holds about 90 per cent (and is currently being looked at by the Monopolies Commission). The small manufacturers making up the balance, perhaps half a dozen, mainly offer specialty papers or cater for local trade. ICI's new mill will make only a small difference to this market: it will represent an increase of total manufacturing capacity in Britain of about 7 per cent. WPM has ten mills as big as, or bigger than, the Orb Mill and one being built in Darwin which will be almost twice as big.

It may not be in ICI's interest to try to cut too much of a swathe through the wallpaper market. It may have won for itself the position of the largest maker of decorative paints in Britain, but only after a hard battle in an extremely competitive market. Wallpaper sales have grown faster than paint sales in the last six years, and, because of WPM's dominance, the growth has been relatively smooth. Use of the two products is complementary and more often than not they are sold in the same place. Thus ICI has a double inducement to dip into a growing market with which it is already well acquainted—but cautiously.

RAILWAYS

Iron Road to Closures?

BRITISH RAILWAYS' new article of faith, that to close the 50 per cent of its lines that carry 7½ per cent of the traffic is the road to profitability, came in for questioning by Mr D. L. Munby in a paper* he read to the Manchester Statistical Society this week. He points out that though half the costs of track maintenance, signalling and running stations would have amounted to £98 million in 1961, the tracks and stations that are little used in fact account for much less than half the total cost and the savings from closure would therefore not approach this figure. A reduction of a sixth in train operating costs and in the maintenance costs of rolling stock, on the other hand, would save £50 million a year. Train miles have not been falling as fast as the traffic carried, so Mr Munby suggests that efforts to improve the efficiency with which goods are carried might pay bigger dividends than closing lines. And so might improving the use of staff in stations, rather than closing them down; labour in stations is the biggest item among those forming track costs, accounting for 12 per cent of the total. When the deficit is so vast, however, one might suggest that every means of reducing costs is needed.

Mr Munby has come to challenge Dr Beeching through his conclusion that the track costs of British Railways are not so big a part of total costs as is often assumed, if capital charges are limited to new investment since the modernisation plan started in 1955. Though this assumption can be questioned, British Railways are now in such a position, with the existing system a free gift from the Government; so it is the basis on which it will be basing policy. In this situation, Mr Munby shows that the picture of a railway system as an expensive road over which goods can be transported at little direct cost is an illusion. The track and stations accounted for 36 per cent of British Railways' total costs in 1961, excluding depreciation and interest. Train operating costs were only slightly smaller, at 34 per cent; the other big item, the maintenance of rolling stock, accounted for 22 per cent. So more than half the costs of railways vary with the traffic carried.

Mr Munby goes on to calculate a notional figure for the "track costs" of road trans-

* "Road and Rail Track Costs."

PATENTS

DCL—SIR Tussle

Milan

No one has any idea when a full hearing will be held on the patents lawsuit filed early last spring in Milan by Distillers of London against SIR (Società Italiana Resina) of Milan. Under Italy's dilatory legal system and court procedure, the controversy could drag on for months in Milan's Civil Court. Distillers have charged that SIR's process for producing phenol infringes ten out of eleven Distillers' Italian patents for making it from cumene. But since this complaint was filed, legal activity in the case has been limited to SIR's rejoinder that the Distillers' patents are worthless.

This action against SIR is intended to stop the Italian company from producing phenol from cumene, if the court decides that the patents violated are so comprehensive that SIR has in effect no patent rights of its own. For the moment, DCL's charges are limited to a general citation with no claim for damages.

The Italian company has been producing phenol from cumene in a plant that came on stream at Solbiate Olona near Milan in 1958. It is also engaged in a joint venture with Gulf Oil (51 per cent SIR-49 per cent Gulf) to build and operate a proposed £17 million petrochemical complex, including a 70,000 tons-a-year phenol-acetone plant, at Porto Torres in Sardinia. SIR says that it has developed its own phenol-from-cumene process, which has been registered in Italy and other countries including the United States. In fact, SIR has given American rights to its process to Universal Oil Products, which in turn granted licences to Texas City Refining Co., and Clark Oil & Refining Co. of Milwaukee under the trade name of "Unisir" earlier this year. The two American companies are building phenol-from-cumene plants using this process, scheduled to go on stream early next year.

In Sardinia the SIR/Gulf complex will produce, apart from phenol and acetone, over 150,000 tons a year of assorted petrochemical products, including high and low pressure polyethylene, caprolactam, dodecylbenzene, ethanol tetramer, styrene, urea and ammonium sulphate from light naphtha, benzol and pyrites. The SIR group will provide most of the raw materials, with Gulf supplying the light naphtha and cumene. The processes to be used will be partly SIR's own and partly American. The SIR chemical group will absorb part of the production, while Italy's expanding market and Europe are expected to pick up the balance. This complex, however, is still in the project stage pending approval by the European Investment Bank who would finance 70 per cent of the investment.

port. Apportioning the total annual expenditure on roads and traffic control of some £250 million between freight and passenger traffic according to the amount of road space that they occupy, he reckons that the cost per ton-mile of freight carried is little lower than that for railway freight if station costs are excluded—though if they are added, railway track costs are nearly twice as high. For passenger traffic, however, the cost of roads is little more than a third of that of railways, even if station costs are excluded. So here, Mr Munby concludes, road transport has the greatest advantage, and railways should cut down on passenger traffic. But does not passenger traffic pay if the passengers do not use too many stations?

LOCAL AUTHORITY DEBT

The Reasons: Official

THREE months ago the probable results of private talks between the Treasury and local authority representatives on the temporary borrowing of the local authorities were outlined in these columns. In the Mansion House speech last month the Chancellor confirmed that reform would involve making it easier for the local authorities to draw on the Exchequer for part of their borrowing needs. Now Mr Edward du Cann, Economic Secretary to the Treasury, in a speech to the Institute of Municipal Treasurers and Accountants, has given the official reason for the disquiet over local authority temporary borrowing. Reform is necessary; but it ought to be for the right reasons.

Mr du Cann offers three reasons. First, he argues that the short term borrowing of the local authorities interferes with official control of the banking system; that to the extent that this debt replaces Treasury bills in the hands of non-bank holders, the supply of Treasury bills going to the banks increases, allowing them to lend more. But there seems to be a fallacy here. The re-opening of the Exchequer to local authorities will not in itself affect the volume of Treasury bills in bank hands. True, non-bank holders may again hold more Treasury bills rather than local authority deposits. But in this measure the local authorities will presumably need to get alternative finance from the Treasury—which will ordinarily involve more Treasury bills in total. And funding sales by the Government will be no easier then than now.

Secondly, says Mr du Cann, the "artificially high" rates paid by local authorities attract overseas funds that may be unwelcome to the Government, and might even force it "to reduce Bank rate below a level that would otherwise be desirable" to discourage the inward movement of funds. But surely London as an international financial centre can readily absorb such an inflow, or if it prefers, isolate it. And if the rates paid by local authorities are artificially high, that is in part because of the artificial barrier between this market and the traditional money market of the banks and discount houses. The main reason why the banks and the discount houses do not hold short term debt of local authorities is because it is not negotiable, and is not acceptable as security at the Bank of England.

At the end of his speech Mr du Cann gets on to firmer ground. The size of this short term debt is considered, in the Radcliffe context of "total liquidity," a potential threat to attempts by the Government to squeeze spending. It can be turned into cash without loss, so that holders are "insulated from the impact of a credit squeeze." This, together with the particular problems of small local treasurers, is largely why a modest reform is necessary. The Government must be careful how wide it opens the Exchequer purse to the local authorities; if it is opened too wide it may obscure the need for reform in the London money market itself.

TEA

Calm Nerves

DEFYING the normal seasonal pattern, the price of tea has been advancing strongly, though buyers have not broken ranks to bid up prices recklessly. Chinese troops within 100 miles of the rich Assam tea gardens are not, however, responsible for the steady rise in prices. The requisition of vehicles and mobilisation of transport for the defence of India is not thought likely to interfere seriously with the supply of tea. But there is a strike of steamboat crews in progress over which nationality should man the boats, which has cut the supply line at the point where it passes through Pakistan. About 140,000 chests of tea a week are shipped by river to Calcutta at this time of the year, half of them destined for the London market. But a further 70,000 chests a week are moved by road or rail. Even so, the strike which has held up supplies since the first week in October is a serious threat.

But production of tea has also lagged unexpectedly this year. Up to July, production this year was running ahead of the 1961 level. But by October, output in North India and Pakistan had fallen behind last year's production; the North Indian crop is 25 million lb down and Pakistan has been forced to halve its export quota to 5 million lb. The decline has been practically made up elsewhere in quantity, but not in quality. Bidding has therefore been keen for quality tea over the past few weeks, though because of the normal seasonal deterioration in quality the average price realised in London for North Indian teas has no more than held its own.

However, tea of similar quality has been gaining about 1d. or 2d. a lb a week, and as always in times of impending shortage, plain tea has recovered quite sharply. The big British blenders are reluctant to chase prices higher because they do not wish to run the risk and inconvenience of raising the prices of their packets. They also hold comfortable stocks; stocks held in bonded warehouses are 16 million lb higher than a year ago at 136 million lb. The quantity of tea afloat at the beginning of the month is also 29 million lb greater though the quantity about to be landed, but not yet in warehouses, was 9 million lb lower than a year earlier. But the threatened interruption of supplies when the market is barely in balance seems to have sparked off a mild precautionary buying movement.

SHORTER NOTES

Canada has this week lowered its Bank rate by a full point to 4 per cent. This follows two earlier reductions of ½ per cent each. There was an immediate reaction in the exchange markets, where Canadian dollars came on offer and the rate against the US dollar fell from 92.88½ to 92.78, its lowest point since mid-August.

★

A European patent office is proposed in a draft convention drawn up by members of the common market. European patents and individual national patents will exist side by side for some time after the convention is ratified. Some points have not yet been settled; it is hoped to submit a final draft for signature in about a year's time.

★

The European Coal and Steel Community, which last borrowed in New York, much to Mr Dillon's chagrin, is now to float three loans in Europe. The loans, for the equivalent of $25 million, will be floated in Belgium, Holland and Switzerland.

★

South African import controls are to be further relaxed in 1963. The 1963 allocations will be 110 per cent of the 1959-60 average, compared with 100 per cent. in 1962, for capital goods, and 45 per cent for consumer goods against 40 per cent this year. South Africa's foreign exchange reserves now stand at R.455, equivalent to about six months' imports.

Chairman's Statement: RHODESIAN ANGLO AMERICAN LIMITED
Incorporated in Northern Rhodesia

Integrated Labour Force on the Copperbelt Established

SUSTAINED PROGRAMME OF EXPANSION IN MINING AND EXPLORATION

The following is from the statement by the Chairman, **Mr H. F. Oppenheimer,** which has been circulated to members with the Annual Report and Accounts:

Political uncertainty has this year continued to be the dominating factor in the Federation. Although the Federal economy in the circumstances has shown reasonable growth and resilience, it has not advanced as I think it would have if the pattern of political progress had been clearly established. It is difficult to comment usefully on the political situation at the time of writing, as the result of the polling in the Northern Rhodesian election under the new Constitution is not yet known, the Nyasaland Conference is due to start on November 12th, and an election under the new Southern Rhodesia Constitution will be held on December 14th. The outcome of these three events will vitally affect the future of the Federation.

For some years I have expressed the confidence that there are the qualities among the people of these Territories which can lead to the establishment of genuinely non-racial relationships. This I still believe, and in spite of almost continuous external criticism, particularly of Southern Rhodesia, the progress in the year has been considerable. We have shown our faith in the future by a sustained programme of expansion in our mining operations, by continuing widespread and expensive exploration for minerals in Central Africa, and by adding substantially to investments outside our main mining sphere. Virtually all the interests of Rhodesian Anglo American are within the Federation.

PROFITS AND INVESTMENTS

Our Company's results for the year under review were very much in line with the previous year. The profit for the year of £7,318,677 before tax was, in fact, slightly higher. It reflects a saving of £116,000 in interest from the surrender of loan stock in payment for shares taken up under option rights, and a net reduction of £51,000 in our income from investments mainly owing to reduced dividends from Bancroft and Broken Hill. It was necessary in this year's accounts to make the relatively large tax provision, compared with previous years, of £119,960 as a result of changes in the Federal tax laws.

During the financial year 497,543 options to subscribe for shares at 80s. were exercised, and our issued share capital thus increased by £248,771 and the share premium account by £1,741,401. Almost all these options were exercised by the surrender of loan stock, and the amount of stock outstanding at June, 1962, was reduced to £1,963,855. After the exercise of further options since the end of the year 331,318 remain outstanding and rights in respect of them expire in March of next year.

Our investments showed a net increase of £1,809,490, after writing off £159,737 mostly in respect of interests in prospecting companies. The largest single new investment was a loan of £500,000 to the Federal Government, which forms part of loans totalling £5.1m. being made over a period of twelve years by companies in the Anglo American Corporation Group in Rhodesia, to assist and accelerate the development of the Federation's resources particularly in the rural economy. In view of the Group's special responsibilities in Northern Rhodesia at least £2m. is to be spent there. In addition to following up our investments in the Rhodesia Broken Hill and Bancroft mines, we have taken an important interest in the development of the Southern Rhodesian lowveld by acquiring a shareholding at a cost of £287,500 in Hippo Valley Estates, with an option to take up further shares by October, 1964.

We have this year transferred £1.5m. to General Reserve which now stands at £10.75m. and we have recommended a final dividend of 6s. per stock unit which with the interim dividend of 2s. maintained our total dividend at 8s. for the year. Our net current assets at the year end amounted to £4.3m. and so we remain well placed to follow up investments and to continue to play our part in the economic development of the country.

COPPER PRICE

Throughout the financial year the copper producing companies of the Anglo American Corporation Group continued their policy of withholding about 10 per cent of planned production from the market. In July of this year these companies and the Rhodesian Selection Trust Group of companies decided to increase the cuts in production or sales to a total of 15 per cent. These cuts, together with cuts by a number of producers in other parts of the world, have been an important factor in keeping the cash price on the London Metal Exchange stable at about £234 per ton for the last nine months. As in the past, we shall decide according to prevailing circumstances whether to withhold copper from the market or to cut production.

The amount spent on fixed assets by the copper companies of the Anglo American Corporation Group during the past year amounted to £4.72m. At Nchanga the major extensions to the surface plant are progressing well. Rhokana continued with the development and equipment of a sub-vertical shaft at Mindola and of the South Orebody shaft. From our holdings in these two companies we derive the most important part of our revenue. Both companies had satisfactory years and maintained their dividends.

At Bancroft work continued on sinking the No. 3 shaft and, when this is connected with No. 1 shaft and the area dewatered, it is hoped to increase annual production to about 63,000 tons of copper. The company had another difficult year. Mill head grade dropped by 0.23 per cent to 3.59 per cent and this, together with the loss of output resulting from the three weeks' strike of the Northern Rhodesia African Mineworkers' Trade Union which took place in May, reduced primary production by about 7,000 tons. At the same time costs arose because of the use of increased pumping capacity to intensify the dewatering programme. To assist in financing the capital programme £1.3m. was appropriated from profits, and the dividend was halved.

LABOUR RELATIONS

This has been an extremely important year in the field of labour relations in Northern Rhodesia. In July the mining companies of our Group, together with those of the Rhodesian Selection Trust Group, reached a settlement in the long-protracted negotiations with the Northern Rhodesia African Mineworkers' Trade Union on wages and related matters arising from the proposals for advancement of African employees in the industry. This closed a remarkable chapter which opened with the first agreement on advancement reached in 1955 with the Northern Rhodesia Mine Workers' Union, and has now after many difficulties resulted in a uniform wage structure for the industry's entire

labour force, in place of the traditional dual system.

The agreement with the Northern Rhodesia African Mineworkers' Trade Union provided for an increase in basic wages at a flat rate of 1s. 6d. per shift and improvements in the conditions relating to shift differential and leave. It incorporates also, other than in the event of a major economic upheaval, a standstill agreement on wages until January 31, 1964.

This settlement was followed in September, after a further period of negotiations, by agreement between the companies and the Mines African Staff Association, which provided increases for staff employees particularly in the lower categories. Shift differential and leave were also adjusted, and a standstill until March 31, 1964, was accepted.

There is thus the foundation of a period of freedom from industrial disputes on wage demands. This should give us the opportunity we need to concentrate our attention on the problems of reorganisation necessitated by the establishment within our industry of an integrated labour force. These cannot be tackled energetically and objectively except in conditions of harmony and confidence. We should now be able to move away from the distinction inherent in the past industrial history of Northern Rhodesia, between employees of European and of African origin. We must progressively come to think and act in relation to our employees on grounds of skill, job content and responsibility alone.

EDUCATION AND TRAINING

The Copperbelt has become one of the world's major mining centres, capable of producing 625,000 tons of copper a year, equivalent to about 13¼ per cent of world output. To keep this industry competitive with other producers—particularly in view of the fact that it is situated some 1,500 miles from the nearest seaport—requires continuous improvement in mining and metallurgical techniques applicable to local conditions. This demands substantial numbers of highly qualified men, many with degrees or technical qualifications, backed up by a supervisory staff of whom the majority have completed at least normal secondary schooling. The proportion of the total strength of our employees who have been to secondary school is still very small, and the majority have had little formal education. At present there is a very wide gap in the educational standards of the different sections of the community in Northern Rhodesia. We are doing all we can to bridge this gap on the Copperbelt but it is clear that for many years the industry must look mainly to Europeans for the technical qualifications it needs.

It is our policy to provide all our employees with the best opportunity to develop their talents and skills. The education and training programmes in which we are involved with the rest of the industry are therefore of great significance. The Northern Rhodesia Educational Trust, established by the copper mining companies in 1960, has already ensured by the provision of £2m. towards classroom and other facilities that thousands of children are at primary schools, and many hundreds of secondary schools who would not otherwise have secured places. Similarly there is to be an expansion of technical, vocational, commercial and adult education on a non-racial basis in Northern Rhodesia as a result of a comprehensive survey which has been carried out in this field.

Copies of the annual report and accounts are available from 40, Holborn Viaduct, E.C.1.

RHOKANA CORPORATION LIMITED

(Incorporated in Northern Rhodesia)

STABILITY OF COPPER PRICE IN 1962

IMPORTANCE OF INVESTMENT INCOME

The following is from the review by **Mr H. F. Oppenheimer,** the chairman, which has been circulated to members with the annual report and accounts:

Operations at Rhokana were satisfactory notwithstanding the three weeks' strike by the Northern Rhodesian African Mineworkers' Trade Union in May. As a result of an improvement in metallurgical recovery combined with a reduction in stock-piled concentrate tonnage, primary production of copper for the year was expected to total about 113,000 long tons, in spite of a small reduction in the milling rate, but the strike limited the total output to 106,428 long tons compared with 110,168 long tons in 1960-61.

OPERATING RESULTS

The total tonnage sold for the year was 102,680 long tons compared with 99,696 long tons the previous year. The average price realised for electro copper was £232 per ton, an increase of £1 on the average for 1960-61. The additional revenue derived from the higher tonnage and price was however largely offset by a small increase in normal working costs and an expenditure of £0.28m. attributable to the strike. The operating profit for the year amounted to £9.62m. and after providing £3.48m. for taxation, the net operating profit was £6.14m. compared with £6.09m. last year.

Including income from investments of £4.6m., the total net profit for the year was £10.74m. The directors have appropriated £1.5m. for capital expenditure, placed £0.75m. to general reserve and recommend a final dividend of 5s. 6d. (net) per unit of ordinary and "A" stock, which together with the interim dividend of 1s. 6d., gives the same total distribution of 7s. (net) per unit as in the previous two years.

INVESTMENT INCOME

Our investment income is at present mainly derived from a 33.6 per cent holding in Nchanga Consolidated Copper Mines Limited, which with an annual output approaching 200,000 long tons of copper is the second largest producer in the world, and from a 26.56 per cent interest in Mufulira Copper Mines Limited, a Rhodesian Selection Trust Group company which this year completed the major expansion scheme designed to increase its annual output to 150,000 long tons. The increase of 1s. 2.4d. in the recent final dividend for the year ended June 30, 1962, of 3s. 7.2d. (net) per share recommended by the Mufulira board is an indication of the improved income which may be expected from this source in future.

Approximately £1.25m. has so far accrued in dividends from Bancroft Mines Limited, which is currently engaged on a major capital programme aimed at increasing its annual output to about 63,000 long tons of copper. Bancroft has had to face severe operating difficulties in its short life. These are still considerable and it appears unlikely that our income from this source will increase until the present expansion programme is completed.

During the year under review Chibuluma Mines Limited, a company in the Rhodesian Selection Trust Group which started producing in 1956, paid the final instalment of a £5m. loan from the United States Government. Now that this obligation has been met we can expect to receive a return on our 26.68 per cent holding in Chibuluma.

PLANS FOR CHAMBISHI

We also have important interests in three other companies of the Rhodesian Selection Trust Group, Baluba Mines Limited, Chambishi Mines Limited and Chisangwa Mines Limited, which have so far been engaged in prospecting large areas adjacent to the existing Northern Rhodesia copper mines. Earlier this year the directors of Chambishi announced plans to bring the mine into production at the rate of 25,000 long tons per annum by 1967 at an estimated cost of £6.6m. We have undertaken to provide over the next five years £1.76m., our pro-rata share of the estimated cost, and we will thereby maintain our 26.68 per cent interest in Chambishi.

In December, 1961, we undertook to provide up to £1.45m. of loans totalling £5.1m. by the Anglo American Corporation Group in Rhodesia to assist in the rural development of the Federation, of which a minimum of £2m. is to be spent in Northern Rhodesia in view of the Group's special responsibilities to and interests in the Territory. We have so far advanced £0.43m. of these rural development loans and the balance is to be provided in annual instalments over the next 11 years.

COPPER MARKET

The policy announced in October, 1960, of withholding 10 per cent of total planned production from the market was maintained until July 1, 1962, when the copper mines of the Anglo American Corporation Group decided to increase their production and/or sales cuts by a further 5 per cent. Cuts have also been announced by certain other producers and these measures, taking into account losses in production through strikes in North and South America, the Federation and elsewhere, should serve to restore the balance between supply and demand.

During the year the stability of the cash price for electrolytic copper on the London Metal Exchange has been a significant feature. We believe that this stability is welcomed by producers and consumers alike and is in the best interests of copper generally. I am confident that world copper consumption will continue to increase and we are well placed to take advantage of any upturn in demand.

Copies of the annual report and accounts are obtainable from 40, Holborn Viaduct, E.C.1.

CARRERAS LIMITED

RESULTS SHOW A FURTHER IMPROVEMENT

SATISFACTORY PROGRESS AT HOME AND OVERSEAS

MR JOHN H. HANSARD ON PLANS FOR GROUP'S CONTINUED EXPANSION

The fifty-eighth Annual General Meeting of Carreras Limited was held on November 13th at Basildon, Essex, **Mr John H. Hansard** (the Chairman) presiding.

The following is his statement which had been circulated with the report and accounts:

Before dealing with the review of the Company's affairs, I wish to record a tribute to the late Sir Edward Baron who died in June this year.

Sir Edward had been associated with the Company for over 50 years, and for almost half this period he was Chairman and Managing Director and under his leadership the Company enjoyed many years of prosperity, especially during the immediate post-war period. He will long be remembered for his interest in promoting the welfare of the Company's employees.

DIRECTORATE

In April this year, Mr C. A. C. Bulpitt was appointed Assistant Managing Director of Carreras, with particular responsibility for Administration and Production.

Since the last General Meeting, Mr D. C. Owers resigned from office as a Director of the Company and Managing Director of Rothmans of Pall Mall Limited on returning to South Africa to take up an important appointment in the Group with which Carreras is associated. I would like to thank Mr Owers for his services to the Company and to wish him success in his new appointment.

During the year a number of senior managers were made Divisional Directors in your Company, and I feel you would like me both to congratulate them and thank them for the particular contributions they are making in the Company's affairs. I refer specifically to—

Mr J. McCoy	Chairman, Murray, Sons and Company Limited
Mr M. J. Oosthuizen	General Manager, Rothmans of Pall Mall Limited
Mr L. E. Breffit	Production
Mr C. R. L. Matchett	Leaf Tobacco
Mr R. C. N. Oliver	Overseas and Export
Mr G. A. Phipps	Distribution
Mr L. A. H. Sarl	Administration
Mr R. C. Wickenden	Finance
Mr P. H. M. Wilson	Advertising

ACCOUNTS

This year we are able to revert to the normal practice of presenting the Directors' Report and Accounts at the Annual General Meeting. Following the change made in 1959 in the Company's accounting date from October 31 to June 30, we have had to hold Extraordinary General Meetings for the last two years.

The accounts before you show a further improvement in your Company's affairs and I am pleased to report that all the principal members of the Group have contributed increased earnings. This has been a creditable achievement in view of vigorous competitive activity.

The Group Profit before taxation amounted to £2,938,868, an increase of £331,116 on the previous year, or 12½ per cent. Your Directors have recommended a final dividend on the Ordinary and 'B' Ordinary shares of 8 per cent less income tax, which with the interim dividend paid on June 30, 1962, will make a total of 11 per cent less income tax for the year. The dividend is more than twice covered and compares with a total of 9 per cent less income tax for the year to June 30, 1961, and 8 per cent less income tax for the preceding year. Shareholders will note from the Directors' Report that a further appropriation has been made to the Development Reserve and that the unappropriated balance carried forward by the Company has again increased.

THE YEAR'S TRADING

Home Trade: The promotion of your Company's leading brands was intensified and sales of Guards Filter cigarettes in particular, retailing at 3s. 6d. for 20, made significant progress.

In May this year Piccadilly Filter de Luxe was introduced in London and the Home Counties and since the end of the financial year its distribution has been extended further. This new brand, retailing at 3s. 10d. for 20, has been most favourably received by the consumer and the trade.

The position of Rothmans of Pall Mall Limited as market leaders in both King Size and mentholated filter cigarettes was strengthened during the year. This Company, which it will be recalled joined the Carreras Group in 1960-61, continued its forceful promotional activity and secured increased profits. The sales of Rothmans' brands and of the American Cigarette Company's Peter Stuyvesant King Size Filter cigarettes account for over 70 per cent of the market in the 4s. 6d. Filter price class.

Other new brands of filter cigarettes have been introduced to meet the continuing changes in popular taste among the smoking public.

Murray, Sons and Company Limited of Belfast has also enjoyed another successful year. The demand for its leading brands of pipe tobacco in the United Kingdom has shown an encouraging increase.

Overseas Business: Your Company's export trade has again been well maintained in spite of some difficulties in certain markets which were due to conditions beyond our control.

Sales of Craven 'A' and of Craven 'A' Filter cigarettes remained prominent in the markets to which they are exported, while Piccadilly No. 1 enjoyed increased sales.

The Company's manufacturing units in Fiji and Malta have had a successful year and they hold 60 per cent and 50 per cent respectively of those markets. Arrangements were also made for the local manufacture of your Company's brands in Cyprus and these have made a promising start.

As a commencement to operations in the Caribbean area a new company, Carreras of Jamaica Limited, has been incorporated with an authorised share capital of £500,000 and it is proposed to make an offer to the Jamaican public to take up 50 per cent of the issued capital.

A site has been acquired near Kingston and plans for a single storey, modern, air conditioned factory are in an advanced stage. The necessary plant and machinery has been ordered and production is planned to commence in 1963.

It is felt that there are reasonable grounds for confidence that this new venture will show a satisfactory profit return to your Company.

REPUBLIC OF IRELAND

Your Company's associate, P. J. Carroll and Company, Limited, has once again strengthened its position in the Irish cigarette market and it has had a record year in profits. In order to raise additional funds for the continuing expansion of the business, P. J. Carroll and Company, Limited, has recently made a rights issue of new Ordinary capital and your Company has subscribed for its rights under the issue. Your Board views with confidence the prospects of this additional investment.

SMOKING AND HEALTH

In view of the publicity given to the Report of The Royal College of Physicians we circulated to Shareholders in April a statement concerning the policy of our Group on the subject of smoking and health.

Since this statement was circulated to all Shareholders I will not repeat what was said. We did, however, state our intention to extend our own research work into tobacco chemistry and filtration and in this connection I am pleased to inform members that Dr A. J. Lindsey, PhD, DSc, MIEE, FRIC, who in recent years has been the Head of the Chemistry Department at Sir John Cass College, has accepted an appointment as Director of Research in our Manufacturing Division.

FUTURE PROSPECTS

In order to provide facilities for the continuing expansion of the Group's business in the United Kingdom and general export markets, further extensions to the Basildon factory are being planned on adjoining land. Your Board is also planning to establish a further modern factory in Northern Ireland.

Your Board intends to continue its policy of steady expansion particularly in the growing field of filter cigarettes as I outlined last year. Your Company has the most modern premises and plant, the necessary resources and technical skill and a young, highly trained management team. Competitive activity will no doubt remain severe but I nonetheless believe that, in the absence of unforeseen circumstances beyond our control, your Company will be able to continue to show progress.

In conclusion I would again like to record my appreciation and thanks on your behalf to our Bankers, Legal Advisers and Auditors for their services to the Company. Finally, I wish to thank the Directors, Managers and all employees of the Company and its subsidiaries for another splendid effort during the past year. All concerned have worked together with loyalty and enthusiasm which augurs well for the future prospects of the business.

The report and accounts were adopted.

TUBE INVESTMENTS LIMITED

CONDITIONING FOR THE FUTURE

BIG TUBE-MAKING DEVELOPMENTS: ENGINEERING EXPORTS UP

Lower earnings at much the same level as those before the previous year's all-time record in 1960-61 were reported by **Sir Ivan Stedeford, GBE,** Chairman of Tube Investments Limited, in his annual review posted to stockholders yesterday (November 15th). The following is an extract from the full text:

When TI's year started in August, 1961, he said, the momentum of trade had been dropping for some months, a trend later aggravated by the Government's deflationary measures. The official relaxations which followed were welcome, but they had little effect in stimulating business. So *mild a tonic* was no substitute for the effective shot in the arm the economy needed. Were the risks of the merest degree of expansion a more formidable enemy than suffering the full costs of retarding industrial progress for so long? During the period under review the home demand on industry, according to TI's experience, remained practically stagnant; the resulting reduction in sales increased costs and narrowed margins; this weakness at home coincided with mounting competition overseas, and export business, though maintained in turnover and volume, became less profitable.

The year had, as a consequence, been one of reduced profits but, in the circumstances, the results were not unsatisfactory. He had mentioned last year that net earnings were expected to be close to those of two years ago, when the Ordinary dividend was increased to 14 per cent. Events had shown this to be about right. The net available profit—excluding £260,000 on the sale of two factories as part of the concentration schemes but involving non-recurring revenue expenditure of over £540,000—was £7,973,751 compared with £8,100,000 two years ago. Contrasted with the record results of the year before, the figures showed a reduction of just over £1¼ million. The Board recommended, therefore, a final dividend of 7 per cent on the Ordinary stock, making 14 per cent for the year. This dividend was covered 2¼ times.

Group trading profits before tax, and after depreciation of £6.3 million, were just under £16 million, compared with the record of nearly £21 million the year before. Nearly £2 million of this reduction represented the fall in the earnings of the British Aluminium Group. Pre-tax trading profits of the main TI Group (excluding British Aluminium), after depreciation of £4,747,578, were £14,511,801, a reduction of approximately £3.2 million on the previous year, or around 18 per cent on a turnover down by only 7 per cent. The principal cause was the under-employment of expensive plants designed for high volume outputs.

FINANCING DEVELOPMENTS

TI's development schemes were proceeding well. Capital expenditure—excluding the British Aluminium Group, whose financial requirements were arranged independently—amounted to £14 million. This had reduced the main TI Group's liquidity, although at the year end it was still strong with quick assets exceeding £18 million. During the current year as the new Park Gate Steel Works approached completion and other importants projects were carried forward, TI might begin to draw upon the facilities arranged with its Bankers; this borrowing was likely to reach its peak about the end of 1963. With the maintenance of a strong cash flow, which in the year under review amounted to approximately £9 million, TI should recover a comfortable degree of liquidity not very long after these major schemes were completed, without raising further capital.

The Aluminium Division, in common with most companies in the industry continued to suffer the consequences of a large excess of world production capacity, created initially in the early and mid-fifties following the Korean War. Its existence was masked by the cyclic character of demand which reached an unusually high peak in 1960 and had led practically all the experts to forecast a continuing increase in demand. The forecasts had been confounded; in fact, the rate of growth of demand went seriously down following 1960. The Aluminium Division's hard and disappointing year offered no surprises; a substantial fall in trading profits was expected. Those of the British Aluminium Group (excluding Canadian British Aluminium) fell by a further £2 million to £1.3 million.

Venesta Foils Limited, the share capital of which was acquired by Reynolds TI Aluminium in 1960, had been formed into two separate companies—Aluminium Foils Limited, to take over assets in the United Kingdom, and India Foils Limited, to acquire and operate assets in India. This rearrangement provided Reynolds Metals with a 51 per cent interest in Aluminium Foils Limited. India Foils Limited remained a subsidiary of Reynolds TI Aluminium, controlled by TI through its 51 per cent interest in that company. This Indian undertaking had had a successful year.

NEW TUBE COMPANY

The Steel Tube Division encountered lively competition at home and overseas in the wake of a weakened demand. While sales fell by no more than 10 per cent, margins narrowed further, and profits were down by 20 per cent compared with the previous year's all time record. The installation of the £3 million second Assel Mill at Desford, near Leicester, was completed in the spring and had doubled TI's capacity for making specialised heavy duty tubes in alloy and other steels. Already 25 per cent of total output was being exported.

Operations had recently started for the continuous production of general purpose seamless precision tubes in carbon steels. It held promise of producing tubes of markedly higher quality at lower relative costs. TI had spent some £3 million in the past three years on modernising, re-equipping and co-ordinating its facilities for making and marketing stainless steel tubes. The final step had been the formation of TI Stainless Tubes Limited to control the Division's stainless tube activities, which already accounted for some 10 per cent in value of TI's total tube business. Export markets already took about 40 per cent of output. Subject to a satisfactory agreement with the Board of Trade it was proposed to set down a modern, low production cost plant for making TI's famous "Truwel" electric resistance welded tubing at Washington, Co. Durham. The bulk of its steel strip requirements would come from Park Gate's new steel works.

The Cycle Division had passed through one of the most difficult years in its history. With the bad trading at home, and some export markets closed entirely or severely restricted, turnover fell by about 12½ per cent. These conditions accentuated the need for the rationalisation of the Division following the acquisition of Raleigh Industries, and this work progressed well. It had been a costly and painful operation, but was now nearing completion. The aim had been to reduce to efficient proportions the prodigal excess capacity of the industry. The final stages should soon be reached, and TI's U.K. bicycle interests restored once again on a good firm basis.

The cost of the operations was a significant factor in reducing the Division's results to negligible proportions. New lines were being introduced. Should the U.K. become a member of the Common Market, the Cycle Division was well positioned to seize the opportunities this would offer.

STEEL PROGRESS

The doldrums in which the steel industry had been for so long again governed the returns of the Iron & Steel Division. Profits, after depreciation, fell by 22 per cent on a value of sales only 7 per cent less. The value of exports was maintained but at reduced margins. The increased costs of raw material, fuel and labour, coupled with the drop in sales, mainly accounted for the fall in profits. When the long-delayed price increases were authorised, the adjustments permitted for the steels TI made were too little to match the additional costs, and too late to help the year's results. It was puzzling to know by what principle the Iron & Steel Board determined new prices for the different steels. A reasonable basis would be for the benefits to be spread evenly throughout the industry, and not for some sections to be less fortunate than others, as TI found itself to be.

The £32 million steel works at The Park Gate Iron & Steel Company at Rotherham was taking recognisable shape, and should be fully operational in 1964. It would then be possible to speed up the co-ordination of the existing steel plants at Round Oak and Park Gate for more economical operations.

The Engineering Division stood up well to the times of adversity which were fairly general in the capital goods industry. High levels of activity were maintained for most of the year. Turnover increased by 30 per cent, but it exceeded the value of order intake in the same period. This weakened demand at a time of rising costs, narrowed margins, and, despite the Division's record results, profits were hardly commensurate with the increase in sales. Exports increased by some 36 per cent.

With the completion of the extensions at Robertsons of Bedford, TI would dispose of an integrated engineering organisation, able to offer a comprehensive and competitive service in capital goods the world over. The General Division had had a record year, with all companies doing well.

The year was not altogether a happy one for the Electrical Division. On the appliance side, the difficulties were too well known to require comment in explanation of a profitless year. The Division, fortunately, had replanned its appliance production programmes in time to avoid building up large stocks of finished products.

By the turn of TI's year, and thanks to a partial easing of official restrictions, demand for Creda appliances began to expand again, but this was too late to help the results. Sales of Creda space heaters and water heaters were well maintained, the Centrepiece electric fire being particularly successful. TI had acquired the share capital of Russell Hobbs Limited, a leading maker of small electrical applicances, particularly high quality automatic kettles and coffee percolators.

The results of the industrial side of the Division were encouraging. The Simplex cubicle switchgear and automatic control gear, and the flameproof and industrial lighting equipment, all made good progress, as did Power Centre Company's overhead bus-bar system and cable trunking. Gowshall Limited, now a major supplier of road signs and motor-way equipment, further increased its share of a market which for the present remains restricted.

Demand fell away generally in overseas markets, with the exception of the Common Market. Intake of orders at £39 million, including those of British Aluminium, was down by 7 per cent, although shipments were slightly higher than last year's total. Sales to the Soviet bloc were negligible. TI's exports to Europe and the USA represented nearly 50 per cent of the total. These markets continued to grow in importance.

TI's manufacturing interests overseas improved their total contribution to the Group's results. Trading at TI of India suffered some downturn and, with increased raw material prices, costs rose, with a corresponding, but not serious, fall in profits. Standard Tube and TI Limited, in Canada, matched up to the difficult times and improved again on their year's results. TI's companies in South Africa benefited by the improved trading conditions.

IMMEDIATE OUTLOOK

It was not possible to predict with any precision the probable results of the current year. When the Government announced on November 5th its latest measures for reviving the economy, over three months of TI's year had passed with trading conditions, if anything, more difficult than a year before. The general outlook now was undoubtedly more promising. The new concessions should go some way towards stimulating industrial activity, but they would take time to generate it. They were unlikely to bear their full impact on capital investment until industry could see, with reasonable confidence, that it would be able to sell what could already be produced by the existing costly modern mass producing plants which had been underemployed now for some time.

On the other hand, the Government's proposals offered early and not unsubstantial financial benefits to those companies which, like TI, were already heavily engaged in carrying out costly capital development programmes. The time when these improved investment allowances would be garnered depends upon circumstances. It did not follow that in every case, they would necessarily be reflected in the accounts for the year in which the expenditure was incurred.

TI covered a wide range of metal, engineering and durable consumer products, and he was sure, was well placed to share fully in any improvement in trade generally which these new measures, and any other circumstances, might generate. It might be some time before any upturn in demand became effective in the form of additional despatches from the factories.

Concluding, Sir Ivan said: "This is the last time I shall have the privilege of addressing you as Chairman. A heartening feature of my retirement is that my colleague, Lord Plowden, will succeed me, although I regret, personally, that this happens at a time when industry is confronted with exceptional difficulties. I am sure that he will quickly gain your confidence, as he has that of his co-directors and the many executives who make TI what it is today. I rest content that, my job done, I leave TI in good firm hands, and that we shall see it grow in strength and stature."

BLYVOORUITZICHT GOLD MINING COMPANY, LIMITED

(Incorporated in the Republic of South Africa)

The twenty-fifth Ordinary General Meeting of shareholders will be held in Johannesburg on November 20, 1962.

The following is an extract from the circulated review of the affairs of the Company by the Chairman, **Mr T. Reekie,** dated November 1, 1962.

WORKING RESULTS

In general, the tempo of the previous year's operations was well maintained. The ore mined and hoisted to surface, and the tonnage milled in the reduction works were the highest ever achieved by the mine, and the gold produced, in spite of a small falling off in the yield, was also a record for the Company.

Due, however, to the slightly lower average price received for gold, and to the fractional increase in working expenditure brought about by the higher scale of operations, the profit from gold production at R15,749,060 failed by R216,324 to reach the previous year's record.

Though the effect of the doubling of the remaining period during which the Company has contracted to supply uranium, and the resultant spread out of the sales allocation from December 31, 1963, the former expiry date, to the end of 1966, was reflected in the reduced profit from uranium oxide sold and sulphuric acid produced, it is expected that over the full extended period the Company will benefit financially by the revised uranium arrangements.

DEVELOPMENT

With the virtual completion of the considerable "off-reef" work undertaken in the previous year to link the new No. 4 Shaft with the existing workings, the ratio of advance on the Carbon Leader Reef compared with that "off-reef" was restored to the 1959-60 proportions.

SUB-INCLINE SHAFTS

The "A" series of four sub-incline shafts were completed during the year.

Work on the various layouts of all four of the "B" sub-inclines progressed satisfactorily and preliminary sinking operations were commenced during the year in B1 Sub-incline Shaft. At October 31, 1962, the shaft had been sunk 263 feet.

No. 4 VERTICAL CIRCULAR SHAFT

The unstable and brecciated water-bearing zone proved more extensive than could reasonably have been expected and considerable delays occurred in the sinking programme. The shaft had, however, passed through this zone and at October 31st had reached a depth of 4,983 feet, a point within 60 feet of its final depth of 5,043 feet, and an accurate holing was made with the 6th level haulages.

Advantage was taken of the delays in shaft sinking to proceed with work which was not scheduled to be done at that stage.

In the press announcement of February 18, 1959, it was indicated that the estimated cost of No. 4 Shaft during the 4½ years to the final commissioning in June, 1963, would be R5,440,000 but the 1959 estimate will be exceeded by an amount of approximately R2,560,000.

ACCOUNTS

The total profit for the year was R17,563,154 of which taxation and mineral lease consideration absorbed R8,478,237 or 48.2 per cent leaving R9,084,917 for the repayment of the capital portion of the uranium loans, current expenditure on mining assets and trade investments, and for dividends.

These appropriations totalled R9,967,523 after allowing for the interest-free loan of R670,000 made available through the Atomic Energy Board, and it was accordingly necessary to draw on the balance of the Income and Expenditure Account to the extent of the shortfall, thereby reducing this account from R5,531,851 at the previous year-end to R4,649,245 at June 30, 1962. The Revenue Reserves totalling R5,054,199 plus the small unexpended balance of the uranium and acid loans of R20,401, were represented by net current assets of R5,074,600. Of the aggregate loans obtained to construct the uranium and acid plants, the capital sum remaining to be repaid was R2,494,477.

Of the R3,183,036 spent on Capital Account during the year, R2,270,522 was spent in connection with No. 4 Shaft; R448,008 was spent on the "B" series of sub-incline shafts; and the remainder on the reduction works, underground power distribution, the completion of the "A" series of sub-inclines, and sundry surface improvements. In the current year, provision has been made for an expenditure of R3,500,000 allocated as to R1,600,000 to No. 4 Shaft and its ancillary requirements; R700,000 to the "B" sub-inclines; R300,000 to improvements to the reduction works; and R900,000 to other surface and underground requirements.

Copy for the insertion of Company Meeting reports must reach this office not later than Wednesday of each week and should be addressed to:

The Company Meetings Department,

The Economist,

22 Ryder Street, S.W.1.

O.K. BAZAARS (1929) LIMITED

(Incorporated in the Republic of South Africa)

LARGER DIVIDEND

SALES VOLUME STILL INCREASING

The thirty-third Annual General Meeting of O.K. Bazaars (1929) Limited will be held on December 7th at Johannesburg.

The following are extracts from the Report of the Directors for the year ended June 30, 1962, to be submitted to the shareholders at the meeting:

CAPITAL AND RESERVES

The authorised and issued share capital of the Company remain unaltered. The Capital Reserve of the Holding Company has been increased by R1,053,819 and the General Reserves in two subsidiary companies have been increased by R144,791.

PROFIT AND APPROPRIATION

The Consolidated net profit for the year attributable to shareholders of O.K. Bazaars (1929) Limited is R4,040,943 as compared with R3,912,307 for the previous year, from which appropriations have been made as shown below:

		1962	1961
Consolidated net profit after tax for the year attributable to shareholders		R4,040,943	R3,912,307
Dividends of Holding Company:			
On Preference Shares	150.800		
On Ordinary Shares:			
Interim of 5 cents per share paid 31st July, 1962	450,987		
Proposed Final Dividend of 15 cents per share	1,352,961		
	1,803,948	1,954,748	1,729,255
Retained in the Business:			
Amount appropriated to Reserves	1,144,791	1,138,170	
Amount unappropriated	941,404	1,044,882	
	2,086,195	2,183,052	
		R4,040,943	R3,912,307

DIVIDENDS

The directors recommend the payment of a final dividend of 15 cents per share to holders of Ordinary, "A" Ordinary and "B" Ordinary Shares, which, with the Interim dividend of 5 cents per share, makes 20 cents per share for the year. This is an increase on last year when the Company paid 17½ cents per share on the Equity Share Capital.

DIRECTORS

Mr Michael Miller and Mr Sam Cohen relinquished, at their request, their appointments as Joint Managing Directors, which they have held since the inception of the Company. The Board is pleased to announce the appointment as Managing Directors of their sons, Mr Stanley Cohen and Mr Leonard M. Miller, who have given long service to the Company and have been directors since 1947. Mr Michael Miller and Mr Sam Cohen will remain on the Board as full-time Directors and will continue to alternate annually as Chairman and Deputy Chairman.

The Board is confident that shareholders will join with it in recording the appreciation of the individual efforts of Messrs Michael Miller and Sam Cohen which have resulted in the growth and development of the Company from its small beginnings to the largest chain of stores in the distributive trade in Southern Africa.

GENERAL

There has been an increase in the volume of sales in the year under review and this trend has been maintained during the current year to date. The normal rate of increases in salaries and wages was further increased as a result of the introduction of the new *Wage Determination* in October, 1961; the total wage bill for the year was R10,456,000. Due to the increase in stock turn rate, the value of stock at the end of the financial year notwithstanding the increase in the volume of sales was R15,635,660 compared with R17,531,385 the previous year.

DEVELOPMENT

A branch at Waterfalls, Salisbury, was opened during the year and extensions to five stores were completed. Since the close of the financial year new branches have been opened at Highlands Centre (Johannesburg), Valhalla (Pretoria) and Primrose (Germiston) and a branch will shortly be opened at Gezina (Pretoria). New stores at Claremont (Cape) and Pietermaritzburg (Natal) were opened on August 23, 1962, and September 20, 1962, respectively, to replace the old branches at those centres which were inadequate for the Company's trading. For the same reason, the building of a new store at Vereeniging has already commenced. The branch trading as C.T.C. Bazaars Pretoria is being substantially enlarged. Further expansion is in the planning stage.

ELMO STORES LIMITED

On September 13, 1962, shareholders were advised that the company had purchased a 75 per cent interest in Elmo Stores Limited at a cost of R825,000. Elmo Stores Limited, a private company registered in the United Kingdom, has a share capital of £100,000 (R200,000) divided into 100,000 shares of £1 each. The book value of its net assets is R364,272. The purchase consideration is in line with amounts paid in the United Kingdom for acquiring control of a company with growth potential. The investigating accountants, Messrs Thomson McLintock & Co., London, are of the opinion that the consideration paid is fair and reasonable.

Elmo Stores Limited at present operates twelve self-service and supermarket stores and a wholesale grocery business. It will open a further ten stores in the near future and intends continuing this expansion programme, for which purpose funds have been made available. The management of Elmo Stores Limited will continue under its Chairman and Managing Director, Mr M. H. Vanger, and its present directors, and our Managing Directors, Messrs Stanley Cohen and Leonard M. Miller, have joined the Board.

It is the intention to take every opportunity to promote the sale of South African products in the United Kingdom by reason of this new interest.

UNSECURED LOAN STOCK

The directors accepted the offer of a loan of R2,000,000 and issued Unsecured Loan Stock bearing interest at the rate of 6¾ per cent per annum. The Stock Issue consists of two tranches, one of R500,000 at par and one of R1,500,000 at 98½ per cent. R250,000 of the first tranche and R750,000 of the second tranche were received on July 2, 1962, and the balance will be received on July 1, 1963. The first tranche of R500,000 is redeemable only during the period June 30, 1965, to June 30, 1969, and the second tranche of R1,500,000 is redeemable only during the period June 30, 1970, to June 30, 1979.

STAFF

The Board again wishes to acknowledge the good services of the staff and the important part played by them in the satisfactory progress made by the Company. As in previous years a cash bonus will be paid to the staff, and the Board has decided to award bursaries to be known as the "Michael Miller Bursary" to selected dependants of employees for University education tenable at any University in the Republic or in the Federation of Rhodesia and Nyasaland.

The following statistics are given for the information of shareholders:

	1958	1959	1960	1961	1962
Preference capital	R2,680,000	R2,680,000	R2,680,000	R2,680,000	R2,680,000
Ordinary capital (see note below)	1,688,000	2,254,000	2,254,000	4,510,000	4,510,000
Reserves and unappropriated profits	19,900,000	25,000,000	26,592,000	26,523,000	28,609,000
Capital employed	R24,268,000	R29,934,000	R31,526,000	R33,713,000	R35,799,000
Net operating profits after tax	2,342,000	2,824,000	3,264,000	3,744,000	4,016,000
Earnings yield on capital employed	9·65%	9·43%	10·35%	11·11%	11·22%
Preference dividends paid	150,000	150,000	150,000	150,000	150,000
Profits attributable to ordinary shareholders	2,192,000	2,674,000	3,114,000	3,594,000	3,866,000
Dividends to ordinary shareholders:					
Amount	1,056,000	1,410,000	1,522,000	1,578,000	1,804,000
Per share (see note below)	31¼ cents	31¼ cents	33¾ cents	*17½ cents	*20 cents
Profits retained	1,136,000	1,264,000	1,592,000	2,016,000	2,062,000

* *The Ordinary Share Capital was doubled by a Capitalisation Issue during the year ended June 30th, 1961.*

SARMA

(Stores and Supermarkets)

(BRUSSELS)

The Annual General Meeting of SARMA took place on October 16, 1962, under the chairmanship of **Baron Paul de Sadeleer.** M. Jacques Dansette, Managing Director, was present. The following details have been taken from the report and from the statements by the chairman, and by M. Georges Wolff, Chairman of SARMA-CONGO.

REVIEW

SARMA was formed in 1928 and now operates stores in Belgium and in the Congo. The Company belongs to the *RIMPU (Réunion Internationale des Magasins Populaires et Utilitaires)* which groups the principal "Prix Unique" (single price) shops on the mainland of Europe: *Monoprix* in France, *La Standa* in Italy, *Kaufhalle* in Germany, *Hema* in Holland, *Turitz* in Sweden, *Schous Fabrieker* in Denmark and *Grant* in the United States. As a result SARMA has been able to obtain certain exclusive rights in the European Common Market area.

During the year 1961-62, the turnover of SARMA exceeded that of the previous year despite the unfavourable economic climate. Two new branches were opened during the first half of the year and on June 1, 1962, the 37th branch was opened in Belgium. The first results of this branch have been encouraging. The department of associated companies (département des affiliés) made good progress. SARMA-CONGO made an increased profit of C.Frs. 30,934,380 compared to C.Frs. 22,510,046 in 1960. SARMA was one of the founder members of Société Anonyme Super-Marchés, SARMA-NOPRI in which SARMA owns 40 per cent of the capital. The objective of this company is to exploit a new form of distribution known as integral self-service. As early as December, 1961, three supermarkets were put into service in Belgium and several new sales points will be opened shortly.

On the occasion of the 35th anniversary of SARMA, an important programme has been drawn up for 1963. Moreover, in the spring of next year, the next meeting will be held of the members of RIMPU when SARMA will be the host to its foreign associates.

CAPITAL, PROFIT AND DIVIDEND

In accordance with the decision of the Extraordinary General Meeting held on November 7, 1961, the capital was raised to B.Frs. 302,400,000. The capital of the Company is now composed of 96,000 "old" shares entitling the holders to dividend for the periods before and after January 1, 1962, and 48,000 "new" shares entitling the holders to dividend for the period beginning January 1, 1962.

Net profit for the year amounted to B.Frs. 132,158,404 compared to B.Frs. 130,523,023 in 1960. After allowances for depreciation and various payments to reserves, it is recommended that a gross dividend of B.Frs. 337 (net B.Frs. 236) be paid on each of the 96,000 "old" shares and B.Frs. 274.50 (net B.Frs. 192) on each of the 48,000 "new" shares.

The report, the accounts, and the proposals put forward by the Board were adopted.

THE WALMSLEY (BURY) GROUP

(Manufacturers of Pulp and Paper Making Machinery and Equipment)

A YEAR OF GREAT ACTIVITY

The thirtieth annual general meeting of the Walmsley (Bury) Group Limited will be held on December 7th at Bury.

The following is an extract from the circulated statement of the chairman, **Mr Percy Holland, CBE.**

The year ended June 30, 1962, has been a year of great activity within the Walmsley Group of companies. The works at Bolton was completed, and from the central foundry there the output of castings to feed the engineering works at Bury and Wigan has progressively increased. The facilities for the machining of cylinders from 4-feet up to 16-feet diameter, have also been brought into full operation.

Further developments on the engineering side in the Bury and Wigan works were also put in hand. These consisted of conversion to other uses of the foundry buildings vacated by the transfer of their operations to Bolton, and of the construction of new buildings largely to speed up the pre-erection of our paper-making machines and ancillary units before despatch.

It is pleasing to record an increase of over 30 per cent in turnover and an improvement in the financial results for 1962 as compared with 1961. The increase in profit before charging taxation is by no means commensurate with the substantial increase in turnover. This is due to the reduced profit margins resulting from keen international competition.

The consolidated profit for the year ended June 30, 1962, is £748,607 as compared with last year's figure of £691,589. After charging taxation which takes account of relief from taxation of £213,817 in respect of investment and initial allowances, the profit becomes £549,009 against £454,898 for the previous year. We are proposing a final dividend of 10 per cent on the ordinary share capital:—this, with the interim of 2½ per cent, makes a total for the year of 12½ per cent less tax.

Walmsleys (Australia) Proprietary Limited, our sales and service company in Melbourne, has continued energetically throughout the year to forward our interests in Australia and New Zealand.

Our order book is satisfactory, even if at a level rather lower than the record level reported last year. Over 70 per cent of the orders in process are for export to 28 countries as far apart as Canada and the USSR and Norway and New Zealand.

Either directly or in association with Beloit International Corporation, we are constantly quoting for new projects worldwide, either for paper or board machines as such, or for complete or "turnkey" projects including the full engineering of the scheme.

The addition to the Group's manufacturing capacity and facilities which I have outlined, in conjunction with first-class design which is constantly under examination, excellent workmanship and keenness at all levels, should, I am sure, well fit your company for the competitive days ahead.

WANKIE COLLIERY COMPANY LIMITED

(Incorporated in Southern Rhodesia)

MANY FACTORS MADE 1962 A DIFFICULT YEAR

The following is from a statement by **Mr P. H. A. Brownrigg, DSO, OBE,** the chairman, which has been circulated to members with the annual report and accounts:

It is with great sorrow that I have to record *the death in July of Colonel the* **Lord Robins, KBE, DSO.** Lord Robins was the senior director of the Company, having been on the board since Wankie's head office was transferred to Rhodesia 10 years ago.

As members will know, the productive capacity of Wankie was expanded during the years 1953 to 1956 at the request of Government to an annual output of 5 million tons. In fact, this output has not yet been required, the highest sales being 3,945,378 tons in 1957. The chief factor in the shortfall has been the advent of Kariba power, which we estimate has now reduced our coal sales by 1,250,000 tons a year. At the same time the increased use of diesel engines by the railways and the slower rate of economic growth in the country have caused sales to fall below our earlier estimates.

DROP IN SALES

Last year in my statement I said that we expected a further drop in coal sales this year. The decline from 3,418,934 tons in the year ended August 31, 1961, to 2,901,264 tons this year was larger than anticipated. The main reasons for this fall—apart from increased Kariba power, as expected—were the unrest in the Congo which led to a suspension of all despatches of coal and coke to our customers in Katanga for several weeks; the three weeks' strike of members of the Northern Rhodesia African Mineworkers' Trade Union on the Copperbelt in May; and finally, towards the end of the year, an undue shortage of railway trucks which meant a loss of sales of about 60,000 tons. This shortage of trucks, arising mainly from exceptional exports of maize, also meant that we were unable to tender for an export order from overseas, one of the first opportunities in this field we have had for several years.

NEW COAL PRICE

I also warned last year of a probable increase in the "deficiency revenue" due to the Company under the Price Agreement following on our arrangement with Government to maintain the average selling price at 20s. per ton for the third year in succession. By the year end this deficiency amounted in fact to £159,843. This, and the general tendency of all costs to rise, has necessitated an increase in the Notified Average Selling Price of coal from 20s. per ton to 22s. per ton with effect from November 1, 1962, the first price increase since 1959. The new price represents an increase of only 10 per cent over a three-year period, which compares favourably with most other commodities. It is in fact not high enough to enable the Company to recover the accrued "deficiency revenue" over one year to which in terms of the Agreement it is entitled: but we have been anxious in the general interest of the country to restrict the increase to as low a figure as possible. If our estimates of gradually increasing sales over the next few years are realised, and if there are no exceptio[illegible]

increases in costs beyond what we have estimated, we hope to be able to maintain this price for two or three years and to recover the total revenue due to us over that period. Increased reasonable to say that if sales could be increased by upwards of 500,000 tons per annum, we might well be able to reduce the price below the new figure.

TRADING PROFIT

The trading profit for the year of £986,381 reflects the lower level of sales, but has been compensated to some extent by increased income from investments. The total profit for the year before taxation, but after all charges, was £1,181,143, compared with £1,532,373 the previous year. After providing a net amount of £340,000 for taxation, and appropriating £265,000 to general reserve, it has again been

COMP[illegible] to declare dividends of 1s. 3d. a share post tax. Dividends this year have been declared as a gross amount, from which federal tax and territorial surcharge have been deducted.

Our investment income, which this year reached £333,299, is an important factor in enabling us to maintain our present dividend distribution at a time when coal sales have been at such a low level. Over the years we have been able to use portion of our reserves to assist substantially in railway development, and to invest not only in Government stocks, but also in Rhodesian equities which are allied to our business. During this year we have increased our holdings in Nchanga and Rhokana to 106,250 and 125,200 units of stock respectively.

POWER

One of the more important ancillary services operated by the Company is the generation and supply of electric power, not only for our own colliery requirements, but also for local consumers in the Wankie area whom we are already supplying. The regional demand is expected to increase over the next few years, and this has occasioned a review of the generating and supply arrangements for the whole area. Our own security of supply we should be able to ensure for some time to come at no great cost.

We are conscious of the need to maintain under continuous review the requirements and conditions of service of our labour force at the collieries, and on the 1st July of this year all our African employees received a 5 per cent increase in wages.

Copies of the annual report and accounts are obtainable from 40, *Holborn Viaduct, E.C.*1.

PETER BROTHERHOOD LIMITED

LARGER SALES AND PROFIT

IMPROVING OPERATING EFFICIENCY

WORKING TO FULL CAPACITY

MR WILLIAM THOMPSON'S SPEECH

The fifty-fifth Annual General Meeting of Peter Brotherhood, Ltd., was held on November 13th at Winchester House, Old Broad Street, London, EC, **Mr William Thompson, MIPE,** chairman, presiding.

The secretary, Mr Joseph Gerrard, having read the notice convening the meeting and the report of the auditors,

The Chairman said: Gentlemen, I have much pleasure in reporting a Profit for the year amounting to £481,408, but before dealing with this item I should like, with your permission, to refer very briefly to the Accounts. From the Balance Sheet, on the Assets side you will observe that there has been an increase since last year in the book value of Fixed Assets of £95,285, which is mainly accounted for by the increase in the value of Plant and Machinery.

With the competition and opportunities of the Common Market in prospect, we are continually concentrating on improvement in operating efficiency and during the past two years new Machine Tools and Plant costing over £300,000 have been installed. This item is being kept constantly under review by your directors to enable us to be in a position to meet any challenge that may lie ahead.

CAPITAL COMMITMENTS

It is not anticipated, however, that expenditure will continue at so high a level. Capital Commitments at March 31, 1962 amounted to £49,000, but as further orders have since been placed to the value of £14,000, the amount of new plant due for delivery during the year to March 31, 1963 stands, at present, at £63,000.

The Stores and Work in Progress at 2[illegible]21 exceeds the 1961 figure by £525,071. This increase £45,130 is accounted for by additional General Stores, the balance of £479,941 being due to the increase in Work in Progress.

I should like to point out that in a business of this type, manufacturing a very comprehensive range of specialised products, a variation of this figure must be expected year by year.

Debtors and Prepayments at £719,543 show an increase of £52,817 over last year's figure of £666,726, while Tax Reserve Certificates and Balances at Bankers and In Hand show a diminution of £147,582. The reduction of the latter item is largely accounted for by the additional Work in Progress referred to above.

EXCESS OF CURRENT ASSETS

The other item of interest is the value of Current Assets, at £2,302,832, against Current Liabilities of £907,583, an excess of Current Assets over Current Liabilities of £1,395,249.

If you will now kindly refer to the Liabilities side of the Balance Sheet, you will notice that we have taken to Capital Reserve a sum of £40,000. This relates to an agreement with an Indian Company in which we have undertaken to provide technical know-how for the manufacture of Brotherhood Steam Turbines in India and the whole of the agreed sale price has been credited to this special Capital Reserve account.

PROFIT AND DIVIDEND

The Profit of £481,408 before taxation, mentioned in my opening paragraph, compares with £421,120 in 1960/1961, an increase of 14.3 per cent. This is a reflection of the additional output to which I referred last year, and as the actual Sales have increased by 12.4 per cent, it will be seen that there is a slight improvement in the Profit ratio. After providing £238,000 for taxation, the net amount available for distribution and allocation is £243,408, against £208,320 last year.

The Dividend has been considered by your Board and it has been decided to recommend the payment of a Final Dividend of 20 per cent, less tax, making, with the 5 per cent, less tax, Interim Dividend already paid, a total of 25 per cent, less tax, on the Ordinary Capital for the year. This final dividend, together with the interim and preference dividends, absorbs £166,340. Your Board further recommend that the sum of £75,000 be allocated to General Reserve and the balance of £2,068 to Surplus, bringing this figure to a total of £186,263.

THE OUTLOOK

Turning now to the future I am pleased to be able to report that our factory is still working to full capacity and that during the first half of the current year, 1962/63, deliveries show an increase over the corresponding period of last year. Your Directors are confident that this improvement will continue for the remainder of the year, with a consequent increase in Profit.

At this point it should be mentioned that during the next few months we shall be completing some very large contracts. These orders have not only enabled us to keep our plant in full production, but have also necessitated subcontracting some work in order to maintain our delivery programme. The value of orders received during the past twelve months indicates that, on the completion of these particularly large contracts, the amount of work in hand will be somewhat below the level of recent years. Every effort is being made to reduce the deficit in orders, and although I have every confidence in our future prosperity it does not appear likely that the very satisfactory results forecast for the year to March 31, 1963, will be maintained in the following year.

Finally, my Directors and I offer our sincere thanks to the staff and workpeople for their efforts on behalf of the Company and express the hope for a continuation of the amicable relationship which has existed between the management and workers for so many years.

The report and accounts were unanimously adopted and the proposed dividend was approved; the retiring director, Mr Eric Smyth, MEng, was re-elected and the remuneration of the auditors, Messrs Whinney, Smith & Whinney, was fixed.

The proceedings terminated with a vote of thanks to the chairman, directors and staff.

PICKFORD, HOLLAND & CO.

The annual general meeting of Pickford, Holland & Co., Limited, was held on November 12th at Sheffield, **Mr Ronald Steel** (the chairman), presiding.

In the course of his circulated statement, the chairman referred to the losses amounting to some £62,000, sustained in writing down stocks of high priced imported magnesite, the contracts for which were obligations entered into earlier to maintain the high level of production which appertained during previous periods. Mr Steel continued:

Therefore, the figure that must be considered in comparing this year's profit on manufacturing with our past and future results is £176,000; this represents a very serious fall from last year's record of £468,000.

As regards our sales during the year under review the official steel production figures show that for the twelve months ended June 30 last year this country's ingot production was 24,135,000 tons and for the same months a year later it was 20,495,000 tons a decrease of 15 per cent: add to this the fact that our customers had built up substantial stocks of our products which they have been using this year and you will realise that a substantial fall in our sales was inevitable.

However, I hope that the steel industry in this country has now reached its lowest level of activity; its stocks of bricks have certainly been reduced and, unless we have a fall in raw material prices, which would entail another writing down in stocks, we can confidently hope that our sales, and consequently our profits, will be improved during the current financial year: your Directors therefore propose to pay a final dividend of 10 per cent, making a total distribution for the year of 12½ per cent.

The report was adopted.

EDUCATION: BUSINESS AND PERSONAL

EXPERT POSTAL TUITION

for Examinations—B.Sc.(Econ.), Law, Accountancy, Co-ting., Secretarial, Civil Service, Management, Export, Commercial, General Certificate of Education, etc. Also many practical (non-examination) courses in business subjects.—Write today for free prospectus and/or advice, mentioning examination or subjects in which interested, to the Secretary (G9/2),

METROPOLITAN COLLEGE ST. ALBANS

or call at 30 Queen Victoria Street, London, E.C.4. Established 1910.

TUITION FOR B.Sc. ECONOMICS

Wolsey Hall (Est. 1894) provides Postal Courses in a wide range of subjects for the two examinations for London Univ. B.Sc.(Econ.) Degree, if entrance is included at moderate fees. 1,431 Wolsey Hall students passed London University B.Sc. Economics Exams., 1950-60. Tuition also for G.C.E., Law, Statistical, other exams.—Prospectus (mention examination) from C. W. Shaw Fletcher, C.B.E., LL.B., Director of Studies, Dept. P.17,

WOLSEY HALL, OXFORD

A FOREIGN LANGUAGE in a few months for yourself or your staff, with the easy ASSIMIL way. You assimilate the language and acquire the accent naturally by Assimilng to the living language on gramophone records with an illustrated book to guide you. Preliminary and Complete Courses in French, German, Italian, Russian and Spanish. A Pitman follow-on course available for technical and commercial expressions.—Details from ASSIMIL, 79, Farncombe, Godalming, Surrey.

DIRECTORS needing able office staff (m. and f.).—Consult Stella Bisset Bureau, 436 Strand, W.C.2. TEMple Bar 6644.

DO KENNEDY AND HIS BRAINS TRUST "PLAY DIPLOMACY OUT OF HOURS"? Very possibly: this new game of international intrigue is facing America's wits from coast to coast . . . and now DIPLOMACY'S over here. From leading stationers and toyshops or 2 gns. post free (payable to Intellectual Diversions) from Dept. 9E, 11 Regent Square, W.C.1.

EXPORT OPPORTUNITIES brought to your desk by Export Service Bulletin, thrice weekly, 10 gns. annually. Specimen copy from Board of Trade (K), Hillgate House, 35, Old Bailey, London, E.C.4.

WANTED: Cum. vols. of "English Cat. of Books"; "Cumulative Book Index"; "Illustrated London News" after 1895; "Nature"; Brit. Mus. Subject Index"; "Brit. National Bibliography"; "London Library Cat."; "Annual Register" after 1863; "Times" Indexes; and learned/scientific journals, trans., procs., etc. H. Pordes, 138 New Cavendish Street, London, W.1. STILL AVAILABLE from Stour, East Bergholt, Suffolk—a few copies of publications by Randolph S. Churchill: An Open Letter to Bishop Fulton Sheen (1s. 3d.); Private Lives (1s. 3d.); What I said about the Press (10s.). All post free.

TYPEWRITERS? Large selection of Portables from as little as 17 Gns. Many machines £££ below list price. Full guarantee. Part exchanges and H.P. terms.—Typewriter & Office Services, Ltd., 58, The Broadway, Hammersmith, W.6.

UNIVERSITY OF LONDON: A lecture entitled "The Economics of Newspapers" will be delivered by Mr. W. B. Reddaway (Cambridge) at 5 p.m. on November 27th at the London School of Economics and Political Science, Houghton Street, Aldwych, W.C.2. ADMISSION FREE, WITHOUT TICKET. James Henderson, Academic Registrar.

UNIVERSITY OF LONDON: A lecture entitled "Ancient Gnosis and Modern Politics" will be delivered by Professor E. Voegelin (Munich) at 5 p.m. on November 22nd at the London School of Economics and Political Science, Houghton Street, Aldwych, W.C.2. ADMISSION FREE, WITHOUT TICKET. James Henderson, Academic Registrar.

NORANDA MINES LIMITED

DIVIDEND NOTICE

NOTICE is hereby given that a quarterly dividend of thirty cents (30¢) per share, Canadian funds, has been declared by the Directors of Noranda Mines, Limited, payable December 14, 1962, to Shareholders of record November 16, 1962.

By Order of the Board.

C. H. WINDELER, *Secretary*

Toronto, Ontario
November 8, 1962.

APPOINTMENTS

NUFFIELD COLLEGE (OXFORD)

RESEARCH FELLOWSHIP

Applications are invited from men or women graduates who wish to undertake research in Economics; Politics; Sociology; recent Economic and Social History and Political History; Industrial Relations; African Studies; Public and Social Administration; International and Public Law or other branches of the Social Studies. The appointment will normally be for two or three years. The stipend will be according to age. Further particulars may be obtained from the Warden. Applications should reach him not later than January 8, 1963.

THE UNIVERSITY OF MANCHESTER

EXTRA-MURAL DEPARTMENT

Applications are invited for the post of RESIDENT STAFF TUTOR in North-east Lancashire (Blackburn, Burnley and district). Applicants should have a good honours degree in one of the subjects normally taught in W.E.A. classes and previous experience in adult education. Salary scale per annum: £900 to £1,950. Membership of F.S.S.U. and Children Allowances scheme. Initial salary according to qualifications and experience. Duties to commence as soon as possible. Applications should be sent not later than November 30, 1962, to the Registrar, the University, Manchester, 13, from whom further particulars and forms of application may be obtained.

THE LONDON SCHOOL OF ECONOMICS AND POLITICAL SCIENCE

Applications are invited from graduates in economics or other of the social sciences for appointment to an assistant lectureship in Industrial Relations. Salary scale £900 x £50-£1,050 a year plus £60 a year London Allowance, with superannuation benefits and family allowances. In assessing the starting salary, consideration will be given to age and experience.

Applications, with the names of three referees, should be received not later than December 11, 1962, by The Secretary, London School of Economics and Political Science, Houghton Street, Aldwych, London, W.C.2, from whom further particulars may be obtained.

BRIGHTON EDUCATION COMMITTEE

BRIGHTON TECHNICAL COLLEGE

LECTURER IN GOVERNMENT SUBJECTS required from January 1, 1963, or as soon after as possible. Subsidiary teaching to include either Economics, Social or Economic History, or Statistics. Salary scale £1,600 to £1,800 per annum.

Further particulars and application forms from the undersigned, to be returned to the Principal, Brighton Technical College, Coombe Road, Brighton 7, within ten days of the date of this advertisement.—W. G. Stone, Director of Education, 54 Old Steine, Brighton.

I.C.C. COLLEGE FOR THE DISTRIBUTIVE TRADES

Applications are invited from suitably qualified men or women for the appointment of HEAD OF DEPARTMENT OF MERCHANDISING AND MANAGEMENT at this College (Grade III). The appointment, which would date from January 1, 1963, or as soon thereafter as possible, would carry a salary of £2,050 rising by increments of £60 per annum to £2,230 plus London Allowance (£45 or £60 as appropriate). The conditions and benefits of the Teachers' Superannuation Act will apply to this post. Further details of this appointment and an application form, which should be returned by December 3, 1962, may be obtained from the Secretary of the College (HE4/H/2798/11), 107 Charing Cross Road, London, W.C.2.

BRADFORD INSTITUTE OF TECHNOLOGY

HEAD OF DEPARTMENT OF SOCIAL SCIENCES

Applications are invited for the above post, at a present salary scale within the range £2,410-£2,850 according to qualifications and experience.

The extension of work within the field of the Social Sciences has made desirable the creation of this new Department which will be primarily concerned with the development of undergraduate and post-graduate courses and research in such fields as Economics, Sociology, Psychology, History and Government. The expansion of this Department is part of the planned development of the Institute as a college of advanced technology, and it is anticipated that there will be many opportunities for research.

Applicants should have appropriate academic and industrial qualifications and experience.

Further particulars of the appointment and forms of application, may be obtained from the Registrar, Department 53/J, Bradford Institute of Technology, Bradford, 7.

THE UNIVERSITY OF MANCHESTER

SIMON FELLOWSHIPS

The University offers a number of Simon Fellowships for advanced study or research in the social sciences. This term is used in a wide sense to include not only Economics, Government, Sociology and Social Anthropology, Economic and Social Statistics, etc., but also fields such as the Organisation of Business, Education, Jurisprudence, Law, Social Administration and Social Medicine. The Fellowships will be tenable normally for one year from October 1st in the academic sessions 1963-64, 1964-65 or 1965-66. Values normally within the range £1,200-£1,800 (Simon Research Fellowships), or within the range of £2,000-£2,500 (Simon Senior Research Fellowships), according to qualifications and experience. They are not confined to persons with academic experience. Applications, stating the Session in which the Fellowship will be taken up, should be sent by December 15, 1962, to the Registrar, The University, Manchester, 13, from whom further particulars may be obtained, and who will be pleased to answer any enquiries regarding the scope of the Fellowships.

VICTORIA UNIVERSITY OF WELLINGTON

NEW ZEALAND

SENIOR LECTURER OR LECTURER IN ECONOMICS OR ECONOMIC HISTORY

Applications are invited for the above mentioned post. The Council would hope to attract an applicant who has special qualifications in Economic History and/or Economic Growth, and has a particular interest in Asia and/or the Pacific. It should be made clear, however, that applications will be considered from persons who are qualified in other branches of Economic History or Economics.

The salary for a Senior Lecturer will be £1,750 per annum, rising by two annual increments of £100 and one increment of £50 to £2,000 per annum. The salary for a Lecturer will be £1,250 per annum, rising by steps of £75 per annum to a maximum of £1,700 per annum. The initial salary will be determined according to qualifications and experience of the appointee.

Approved fares to Wellington will be allowed for the appointee, his wife and his dependent children. In addition, actual removal expenses will be allowed within certain limits.

Further particulars and information as to the method of application may be obtained from the Secretary, Association of Universities of the British Commonwealth (Branch Office), Marlborough House, Pall Mall, London, S.W.1.

Applications close in London and New Zealand on *January 9, 1963.*

THE LONDON SCHOOL OF ECONOMICS AND POLITICAL SCIENCE

Applications are invited for appointment to an assistant lectureship in the department of Social Science and Administration. Applicants should hold a qualification in Social Administration, Economics, Sociology, or Philosophy. Some experience of social work or research would also be an advantage. Salary scale £900 x £50-£1,050 a year plus £60 a year London Allowance, with superannuation benefits and family allowances. In assessing the starting salary, consideration will be given to age and experience.

Applications, with the names of three referees, should be received not later than November 30, 1962, by the Secretary, London School of Economics and Political Science, Houghton Street, Aldwych, London, W.C.2, from whom further particulars may be obtained.

FORESTRY COMMISSION requires a temporary ASSISTANT RESEARCH OFFICER in LONDON.

DUTIES: To assist with the provision of ECONOMIC DATA for its SALES DEPARTMENT, including the preparation of SHORT TERM APPRECIATIONS OF TIMBER MARKETING PROSPECTS, work in connection with the SUPPLY AND DEMAND OF WOOD PRODUCTS and the general collection, analysis and INTERPRETATION OF ECONOMIC DATA.

QUALIFICATIONS: Honours degree in Economics (or in Forest Economics) and some knowledge of statistical methods. A successful candidate will be required to become familiar with the preparation of data for a digital computer.

SALARY (London): from £812 to £1,331 by fifteen annual increments. Applications giving qualifications and experience to Forestry Commission, 25 Savile Row, London, W.1.

Closing date for receipt of applications: December 3, 1962.

UNIVERSITY COLLEGE OF RHODESIA AND NYASALAND

Applications are invited for (a) Lectureship or (b) Assistant Lectureship in Government. Appointment on Secondment considered. Salary scales: (a) Grade I £1,880 x £80-£2,200 per annum. Grade II £1,450 x £70-£1,800 per annum. (b) £1,200 x £50-£1,350 per annum. Passages to Salisbury for appointee, wife and dependent children on appointment, with allowance for transport of effects. Installation grant of £100 in addition for persons recruited from outside Africa. Superannuation and Medical Aid Schemes. Unfurnished accommodation at rent of 15 per cent salary. Assistance given for triennial visits overseas. Detailed applications (6 copies) naming 3 referees by December 30, 1962, to Secretary, Inter-University Council for Higher Education Overseas, 29, Woburn Square, London, W.C.1, from whom further particulars may be obtained.

For other appointments see pages 727 and 728

THE UNIVERSITY OF MANCHESTER

HALLSWORTH RESEARCH FELLOWSHIPS

Applications are invited for the above Research Fellowships for advanced work in the field of Political Economy (including Business and Public Administration). The value of the Fellowships will normally be within the range £900-£1,900 per annum, according to experience and qualifications. Regulations governing the award of the Fellowships may be obtained from the Registrar, the University, Manchester 13, to whom applications should be sent not later than December 31, 1962.

THE UNIVERSITY OF MANCHESTER

Applications are invited for the full-time post of ASSISTANT in the Research Section of the Faculty of Economic and Social Studies. The person appointed will be expected to have research interests in the fields of Social Services and Social Policies such as Health and Hospital Administration, Mental Health, Care of the Aged, Housing, etc. The vacancy is in either Grade II (which carries the status of Assistant Lecturer) or Grade III. The salary scales are as follows:—Grade II—£900 to £1,050 per annum; Grade III—£750 to £800 per annum. Duties to commence February 1, 1963, or as soon as possible thereafter. Applications should be sent not later than December 15, 1962, to the Registrar, the University, Manchester 13, from whom further particulars and forms of application may be obtained.

COMPANY AFFAIRS

The London Stock Market has enjoyed another good week and The Economist *indicator, gaining 9 points to 345.4, is back to its level before the slump at the end of May. The yield is now below 5 per cent for the first time since mid-April but this owes something to the lower interim dividend announced by Rolls-Royce. More encouraging news from Guest Keen led to some good gains in engineering shares. Building shares have also been firm. These sections moved further ahead on Thursday when steel shares responded to better output figures. With attention concentrated on equities, gilt-edged prices have slipped back.*

How Much Recovery in TI?

THE stock market puts Tube Investments among the recovery stocks and since the preliminary announcement revealed a smaller fall in profits than at one time had been feared and an unchanged dividend of 14 per cent for the year to end-July the £1 shares have risen from 49s. 3d. to 59s. 3d., to yield 4.7 per cent, covered 2½ times. In his valedictory statement, Sir Ivan Stedeford explains what happened in the past year, removes the fear that TI might have to raise fresh capital to finance its capital developments and indicates that while the outlook is more promising than it was it will be some time before any expansion in industrial activity is reflected in bigger sales. If investors are looking for recovery in TI they must look towards the trading results in 1963-64 rather than those in 1962-63.

The Past Year.—TI had its "full share of the endemic ills which assailed the economy" and its gross profits fell from about £21 million to £16 million, with nearly £2 million of the reduction being attributable to British Aluminium. Excluding British Aluminium, the group's sales fell by 7 per cent but profits fell by 18 per cent as "expensive plants designed for high volume outputs" were under-employed. The steel division maintained operations for nearly the whole of the year without reducing shift-working, but selling prices were too low to produce "a reasonable profit." The steel tube, engineering and general divisions "withstood the adverse pressures well" but by the end of the year the balance of orders on hand had fallen.

The sales of the steel tube division, which is "the very essence of TI," fell by 10 per cent but margins contracted and profits fell by 20 per cent. Here the development programme, notably in stainless steel tubes, is well advanced. The sales of the cycle division, where a "prodigal excess capacity" is being reduced, fell by 12½ per cent, and profits, because of reorganisation costs, were negligible. Sales of the iron and steel division, where the development of Park Gate is now taking "recognisable shape," fell by 7 per cent and profits fell by 22 per cent, as the price increases were "too little to match the additional costs and too late to help the year's results." Aluminium had a "hard and disappointing year" and British Aluminium cut its dividend. In the engineering division, sales rose by 30 per cent but margins were narrower and profits "were hardly commensurate with the increase in sales." In the electrical division, results on the industrial side were encouraging but in appliances it was a "profitless year," the expansion in demand for Creda products coming too late to help the 1961-62 results. In overseas markets demand fell away except in the common market.

Development finance.—Capital expenditure in 1961-62 amounted to £14 million (excluding British Aluminium, whose financial requirements are arranged independently) but TI was left with £18 million in quick assets. The group will have to borrow from the banks and these borrowings will reach their peak at the end of next year. But, given a reasonably strong cash flow (amounting to £9 million in 1961-62), "a comfortable degree of liquidity" should be quickly regained "without raising further capital."

The future.—In the first three months of the current year trading conditions have been "if anything more difficult than a year ago." The Government's new measures make the outlook more promising but "they are unlikely to bear their full impact on capital investment until industry can see, with reasonable confidence, that it will be able to sell what can already be produced by the existing costly modern mass producing plants which have been under-employed now for some time." The concessions on depreciation allowances will offer "early and not unsubstantial financial benefits" to companies like TI heavily engaged in capital development, but these will not necessarily be reflected in the accounts for the year in which the expenditures are incurred. TI should share in any improvement in trade but "it may be some time before any upturn in demand becomes effective in the form of additional despatches from the factories."

Thos. W. Ward

MUCH of the wide range of Thos. W. Ward's activities is concerned with merchanting and this makes its fortunes closely dependent on those of the industries it serves. In the year to June 30th its turnover fell by 10 per cent to £47.1 million and its trading profits by 14½ per cent to £2.9 million and for an explanation of these disappointing results one need look no further than the fact that 48 per cent of Ward's interests is bound up with the steel industry and another 12 per cent is affected by the policies of the British Transport Commission and the National Coal Board.

Mr H. W. Secker, the chairman, says that the end of the de-stocking movement in steel does not yet appear to be in sight and this has put a brake on its scrap and shipbreaking activities. Elsewhere in the group only Ketton Portland Cement appears to have added to its profits. Its capacity has been increased and the outlook is bright but as there is a big minority interest in Ketton the extent to which higher profits from cement can offset the decline in profits from heavy engineering is limited. In all, therefore, Mr Secker does not hold out much hope of an improvement in profits in the current year. But the group is still spending heavily on capital account: £2.2 million was spent in 1961-62 and £1.4 million is already committed. As a result net liquid assets have been reduced from just under £2 million to £1.4 million. They seem unlikely to fall much further as the net cash flow is running at about £1.4 million. At 60s. the £1 shares are close to their net asset value and yield 4.6 per cent on the maintained dividend of 13¾ per cent. Even more perhaps than those of TI, the fortunes of Thos. W. Ward depend upon the degree that Mr Maudling's latest proposals will stimulate capital investment.

Daily Mirror—Sunday Pictorial

THE biggest problem facing the merchant bankers, S. G. Warburg and J. Henry Schroder Wagg, who were called in to advise on a merger of the Daily Mirror and Sunday Pictorial was the crossholdings of ordinary shares. The Mirror holds 26 per cent of the Pictorial's equity and the Pictorial 10 per cent of the Mirror's equity. The bankers have put up a simple solution, in suggesting that a new holding company should be formed in which only the public holders of the two companies will receive shares. The crossholdings will thus be eliminated. For Mirror shareholders the exchange is on a one for one basis while Pictorial shareholders will receive five shares in the so far unnamed holding company for every three 5s. units held; the equity of the new company will be £34.2 million split into 136.6 million shares of 5s. each.

The Pictorial units which stood at 19s. 6d. before news of the terms were announced have since risen to 22s. 10½d. while the Mirror shares have risen slightly to 13s. 9½d. and yield 6½ per cent on the forecast of an 18 per cent dividend for the new company. This represents an increase of 3 points over the 15 per cent paid for 1961-62 and for Pictorial shareholders the prospective dividend has been raised from 20 to 27½ per cent for the current year and to 30 per cent on the basis of a full year's payment. But the elimination of the crossholdings and the consolidation of various jointly owned interests will improve earnings per share so that the cover of 1.6 times will be virtually maintained on the bigger dividend even if profits are no higher than they were in 1961-62. In fact, both companies have reported higher profits for the first half of the current year and thus bigger earnings are in sight for the holding company. Later on some economies should result from the reorganisation of the group's structure which will include the consolidation of preference, debenture and loan stock issues.

Electric and Musical Industries

RESULTS of Electric and Musical Industries as it is now constituted mask the progress made by the older divisions of EMI, for, apart from Capitol Records and Morphy Richards, profits established a new record. Since its acquisition in 1955, Capitol Records has paid for itself three times or more but last year its profits virtually disappeared with the breakdown of resale price maintenance in the United States when discount stores refused to put records on display unless there was a discount of 40 to 50 per cent on the list price. The record war coincided moreover with Capitol's hasty entry into electronics. There may be some connection between EMI's poor performance in the United States last year (which is in sharp contrast to the records division in this country) and the fall in American shareholdings in EMI from 28 per cent to 18½ per cent; three years ago Americans held 45 per cent of the shares.

Now the outlook for Capitol is brighter and this week the chairman, Sir Joseph Lockwood, said that Capitol's results for the first quarter of the current year were "much better." In the other trouble spot, the domestic appliance business, there is not the same short-term confidence for in refrigerators, which are Morphy Richard's principal product, sales absorb only about half the capacity. Morphy Richards did well to add to its share of the market and to raise turnover to £14 million but it still failed to make a profit. Sir Joseph sees no likelihood of substantial profits unless the industry is rationalised still more and overseas markets are developed further. Morphy Richards is now building up a useful export business in the United States where its small refrigerators are in demand as second fridges.

In electronic equipment, which accounts for the main part of EMI's business in this country, sales and profits both reached new peaks. An important step here was the merger of EMI's business computer interests with ICT: in another field agreement has been reached with Philips to build a new factory to meet the growing demand for magnetic tapes. The Pilkington report's recommendations on 625 line and colour television hold out the prospects of substantial new business in studio and transmission equipment, of which EMI is a leading producer.

The diversity of EMI's products and the markets which is serves suggests that it should share fully in any revival in economic growth. A geographical breakdown of sales shows that this country accounted for £40.5 million, the rest of Europe for £12.9 million, the Western Hemisphere for £19.2 million and the rest of the world for £10 million. Records still account for about 40 per cent of sales, industrial electronic equipment for about 25 per cent and domestic appliances and domestic electronic equipment for about 15 per cent each. Recently the 10s. shares have edged up from their low point of 32s. and now at 38s. 6d. yield 4½ per cent. Although the receipt of £3¼ million in new capital from Switzerland has had little effect on the group's overdrafts the directors do not intend to come to the market for new funds so that the shares offer scope for a limited recovery.

From the Midlands

MOST of the news coming from companies in Birmingham and Coventry has been depressing. In view of this area's dependence upon the motor and allied trades this is not surprising but, even so, the latest batch of results from the Midlands has contained some pleasant surprises.

Rootes Motors.—The switch from a trading profit of £2,911,000 to a loss of £891,000 should come as no surprise to the shareholders of Rootes Motors after the numerous warnings they have received from the chairman during the year. The decision to maintain the ordinary dividend at 4 per cent is, however, surprising in these circumstances. The company held over £6 million in cash at the end of July, 1961, but its loss, amounting to £1,553,000 after depreciation and tax adjustments, and the cost of its new factory in Scotland must have strained these resources since then. The directors may feel more optimistic about trading prospects now that purchase tax has been cut. But until its small car is launched next summer the outlook for the company is still rather cloudy. And after that it may appear even more uncertain, for the company looks like meeting the British Motor Corporation and Ford head-on in the small car market.

Joseph Lucas.—The results from its fellow giant among electrical component manufacturers, S. Smith and Sons (England), could hardly have inspired any confidence among investors about the trading results of Joseph Lucas. Yet its trading profits in the year to July 31st rose from £9.2 million to £9.9 million and with sales only "marginally" above the £122.3 million recorded in 1960-61 the company's aim of a "reasonable" profit margin has been achieved beyond all expectations. After a higher depreciation charge, gross profits were 7½ per cent higher at £7.3 million; this compares with a fall in profits of almost 17 per cent reported by S. Smith in the face of an increase of 5 per cent in sales. Such a wide disparity may prompt questions about the respective qualities of the two managements but presumably it owes something to the widening range and geographical spread of Lucas's manufacturing activities. It has a secure foothold in the Commonwealth and more recently it has begun to build up its interests in the Continent (which are to be financed by a £10 million debenture issue in this country and by a £4.2 million medium term loan in Switzerland early next year). The dividend has been maintained at 13¾ per cent, covered 2½ times, and as the cut in purchase tax should help the component makers as well as the motor manufacturers, shareholders may not be over optimistic in looking for a bigger payment in the current year. But they should note that 4,000 workers at the Lucas factories have been put on short time working this week as a result of a seasonal fall in demand from the motor industry.

Birmingham Small Arms.—With a cut in the final dividend the total payment by BSA for the year to end July has been reduced from 11¾ per cent to 10 per cent. This came as something of a shock for in May the directors, though they forecast that profits would be halved, still hoped that the dividend would be maintained if some evidence of an improvement in trade appeared in the later months. Their decision suggests that this has not occurred. With over half of the group's turnover accounted for by the motor cycle and steel companies the fall in gross profits from £2.9 million to £1.5 million is no bigger than had been expected. Indeed it would seem likely that the bulk of the profits has been earned by the group's machine tool interests, which include Churchill Machine Tool. The present high yield seems to discount most of the short term uncertainties.

Debenhams

Founded 1791

As much of the meat of Mr John Bedford's statement was published in the preliminary statement the full accounts do not provide much evidence for a revision of the rather lustreless view that the market takes of the 10s. shares, which at 46s. 6d. now yield 4.1 per cent on the maintained dividend of 19⅛ per cent, covered 1¼ times. But some points emerge that shareholders should not ignore. Of immediate significance is his statement that there has been a "considerable improvement" in sales in recent months, that the initial venture into the field of chain stores has proved "satisfactory" and that the reorganisation of the food division is proceeding. Moreover, the rights issue in September, 1961, has strengthened the finances of the group; about £3 million has been absorbed in capital expenditure and the remaining £1½ million is held in liquid form.

This money will be absorbed fairly quickly as Debenhams is still building and modernising stores both in London and the provinces. At the moment, many of these developments are producing no return; indeed because of the cost of interest they involve the group in a current loss. But once they are completed they will add to profits, as will the acquisitions of relatively small stores in the Guildford and Stockton areas. Hopes for the future should, in fact, be pinned upon the profitable trading of the new and modernised stores rather than on development plans for two sites which cannot by Mr Bedford's reckoning be productive for between three and five years.

Penn Elastic

BIGGER corsetry sales in recent years have resulted in a sharp increase in the profits of Penn Elastic, one of the few elastic fabric manufacturers in this country. Since Penn Elastic became a public company early in 1960 its pre-tax profits have risen from £274,000 through £416,000 to £629,000 in the year to June 30th last. This compares with a forecast of not less than £500,000 made at the time of the acquisition of Luke Turner, manufacturers of narrow elastics, in July, 1961. Sales seem to have expanded faster than was then anticipated and this has more than compensated for lower profit margins. The acquisition strained the group's liquid resources and £250,000 was borrowed at an interest rate of 3½ per cent above Bank rate. The loan was repayable over five years but the balance sheet suggests that half the sum had been repaid at June 30th when loans and overdrafts of £435,000 overshadowed liquid assets of only £60,000.

This forms the background to the one for five rights issue at 15s. a share to raise just over £400,000. The old 5s. shares at 35s. 6d. ex rights yield 3.9 per cent on the forecast of a maintained dividend of 27½ per cent. Their low return reflects the sharp rise in price this year but in view of its bank debts Penn has followed a conservative dividend policy and the earnings yield is as high as 10¾ per cent. This is not unattractive in view of the group's prospects both in Britain and overseas, particularly in Germany where in April it bought out the minority interest in its subsidiary. For the first four months of the current year the chairman, Mr R. F. Daniel, reports that sales and profits are above those for the previous year even though the changeover from rubber to spandex threads has led to a feeling of uncertainty in the elastic and corset trades in this country. But the group's wide geographical spread of activities has tended to counter balance this and Mr Daniel says that it is not unreasonable to hope that profits will be greater than those for 1961-62.

Mixed Interims

THIS week's three big interim statements have had a mixed reception in the stock market but they all suggest that Mr Maudling was wise not to postpone his plans to stimulate the economy much longer.

Rolls-Royce.—There seemed little chance of anything but a depressing statement from this company. So it has proved, with the interim dividend cut from 5 to 2 per cent. Again this was no great surprise, as the final for 1961 had been cut from 8½ to 3 per cent. Presumably the total dividend for 1962 will be 5 per cent. There is certainly nothing in the interim statement to encourage shareholders to look for more. In the first half of the year sales revenue fell from £59 million to £51 million and for the whole year it is expected to fall from £123 million to £105 million. Deliveries of aero engines and spares have declined and there has been no revival in Rolls' motor business. At £95 million, orders have hardly changed since the end of 1961. Employees suffer equally with shareholders, for the labour force of 45,500 at the end of September was 12½ per cent smaller than at the end of 1961 and for the first time in forty years those remaining on the pay roll will not receive a Christmas bonus payment. But these and other economies will take some time before they are fully reflected in the accounts and profits this year will be below those for 1961.

Guest Keen & Nettlefolds.—The £1 shares in GKN have gained 7s. 4½d. since an unchanged interim dividend of 5 per cent was announced and the forecast made that profits, after providing for an extra £1 million in depreciation, will "not differ materially from those of 1961." Presumably the Acton Bolt acquisition will play some part in this result. Even so, this is a notable achievement, for in this country the group's steel and engineering companies are still feeling the pinch. Abroad, particularly in Australia, it has however been a very different story; in 1961 the profits of overseas companies fell from £7.4 million to £4.6 million (with John Lysaght's profits alone falling from £5 million to £2.4 million) but now these companies are making a good recovery.

Metal Industries.—A rise in this company's profits from £1,183,000 to £1,254,000 in the six months to end September must be regarded as a satisfactory result. But with a maintained interim dividend of 6 per cent the chairman, Sir Charles Westlake, reiterates an earlier warning that profits in the second half of the current year are unlikely to reach the level of the first six months. While the electrical companies in the group have generally earned slightly higher profits, as they began the year with full order books, many of the non electrical companies, whose activities include engineering, steel construction, shipbreaking salvage and scrap recovery, began the year with smaller order books and are now finding it difficult to maintain turnover and profits. The group should feel some indirect benefit from Mr Maudling's latest measures but any new orders are unlikely to influence the current year's results.

But the group has now transformed its overdraft into a "healthy credit balance" and a total dividend of 15 per cent for the fourth successive year seems to be assured.

EXCHEQUER RETURNS

For the week ended November 10, 1962, there was an "above-line" surplus (after allowing for sinking funds) of £56,608,000 compared with a surplus of £27,960,000 in the previous week and a surplus of £53,801,000 in the corresponding period of last year. There was a net expenditure "below-line" of £8,325,000 leaving a total cumulative deficit to date of £563,983,000 compared with £676,771,000 in 1961-62.

THE MONEY MARKET

THE authorities do not want to see the Treasury bill rate fall too quickly at present. They made their position clear this week by forcing the discount market to borrow at Bank rate on Monday and Tuesday. When bidding for bills the market always trys to balance official wishes with its own need for bills; hitherto the competition for bills has been so strong that the market has been concentrating on getting enough bills to satisfy the appetite of its customers, the clearing banks.

At the Treasury bill tender on Friday of last week the syndicate of discount houses raised its bid for the £200 million 91-day bills on offer by a further 3d to £99 1s 0d; the average rate of discount fell by 11.73d to 7s 11.75d per cent, and the market received the low quota of 31 per cent. The market's quota of 71 per cent for the £60 million 63-day bills on offer brought its overall quota to around 40 per cent—the same as in the previous week. There is now just over ⅛ per cent difference between the current bill rate and the market's average borrowing costs; if the decline in the bill rate continues at its present pace the market's running margin on new bills will soon disappear once more.

APPOINTMENTS

UNIVERSITY OF ADELAIDE

APPOINTMENT OF PROFESSORS AND LIBRARIAN AT BEDFORD PARK

Applications are invited for the following initial appointments to the University of Adelaide at Bedford Park:

LIBRARIAN

School of Language and Literature:
PROFESSOR OF ENGLISH

School of Social Sciences:
PROFESSOR OF HISTORY
PROFESSOR OF ECONOMICS

School of Physical Sciences:
PROFESSOR OF PHYSICS
PROFESSOR OF CHEMISTRY

Applications for professors in the School of Biological Sciences will be sought later.

Salary for each position is £A4,250 a year with superannuation on the F.S.S.U. basis.

Beginning in 1966 the work of the University will proceed on two separate sites. The University's work at the new Bedford Park site, 6½ miles south of the city of Adelaide, South Australia, will be organised in the four Schools listed above. Subject to the University Council, the academic work will be under the control of the Bedford Park academic staff, who will be encouraged to develop an individual structure of courses, to foster new developments and to design new syllabuses. Full degree work in the four Schools will begin with first-year courses in 1966, and second and third year courses will be added in succeeding years. Facilities for some honours and postgraduate work will be available from the outset.

By negotiation with the successful candidates, three professors will be asked to take up duty in the second half of 1963 and the others early in 1964. The University's purpose in making these early appointments is to enable the professors to assist in the planning of the academic structure and organisation and to consult with the architects on the detailed planning of the academic buildings.

The Librarian will be expected to take up duty at the earliest possible date so that the ordering and cataloguing of books may begin. It is planned to open the Bedford Park Library with 60,000 volumes. The Librarian, who will be independent of the Barr Smith Library in the University at North Terrace, will be expected to advise on the system of classification to be used and to assist in the detailed planning of the library building.

Enrolments are expected to be about 500 in 1966, rising to about 2,000 in 1970.

A statement giving fuller information about the development of the four Schools at Bedford Park and setting out conditions of appointment may be obtained from the Registrar of the University or from the Secretary, The Association of Universities of the British Commonwealth (Branch Office), Marlborough House, Pall Mall, London, S.W.1.

Applications in duplicate should reach the Registrar, University of Adelaide, North Terrace, Adelaide, South Australia, not later than *January* 16, 1963.

Assistant to General Manager

• AN ESTABLISHED company with a world-wide reputation for quality is expanding. It is a part of a large group of companies with international interests, and situated in the East Midlands. It makes high precision products in batch quantities.

• THIS new appointment is for a man to understudy the General Manager in all aspects of the business with a view to subsequent promotion.

• HE must have a broad education, preferably be a graduate in Economics, Law or kindred subjects and have practical experience in engineering and management. He must also have a keen sense of marketing possibilities. He will be prepared to travel and so a command of some European languages is desirable.

• HIS age will be 35 to 40 and the salary will be negotiated around £3,250.

Write to us as the company's advisers.
Nothing will be disclosed to the company without permission.
Letters should be addressed to A. G. Cole.

JOHN TYZACK & PARTNERS LTD
10 HALLAM STREET · LONDON W1

BP requires at its Head Office in London two ASSISTANTS for posts in the Economics and Information Sections of its Planning Division. Applicants, aged 25-30, should have a good degree in economics and ability to handle statistical material. Some experience in applied economics, market analysis and forecasting also desirable. Salary according to age and experience. Non contributory Pension Fund. Assisted House Purchase Scheme. Removal expenses and settling-in allowance payable in certain cases. Luncheon club.—Write, giving full particulars, quoting reference H 5967, to Box 7454, c/o Hanway House, Clark's Place, E.C.2.

British Technical Assistance

PAKISTAN

The Pakistan Industrial Credit and Investment Corporation, an industrial development bank, requires an Investment Banker to manage its investment portfolio. Experience in financial appraisal of industrial projects an advantage. Period of appointment two years. Terms subject to negotiation. Salary and allowances payable by British Government under Colombo Plan arrangements.

Write in confidence to Director of Recruitment, Department of Technical Co-operation, Sanctuary Buildings, Great Smith Street, S.W.1 quoting RC 284/112/01.

THE ROYAL COLLEGE OF SCIENCE AND TECHNOLOGY, GLASGOW.

FACULTY OF INDUSTRIAL AND SOCIAL STUDIES

Applications are invited for posts of
LECTURER and
ASSISTANT LECTURER
in the Department of
INDUSTRIAL ECONOMICS
in the new Faculty of Industrial and Social Studies. The appointments will begin on a date to be arranged but not later than October 1, 1963. Salary scales: Assistant Lecturer—£990 x £50-£1,050; Lecturer—£1,150 x £50-£1,500 x £75-£1,950, initial salary according to qualifications and experience. Membership of F.S.S.U. and Children's Allowance Scheme. Further particulars may be obtained from the Secretary, with whom applications should be lodged not later than December 21, 1962.

BOROUGH POLYTECHNIC

Borough Road, London, S.E.1.
Principal: James E. Garside, M.Sc.Tech., Ph.D., F.R.I.C., F.I.M., F.Inst.F.

DIVISION OF LIBERAL STUDIES
Head of Division:
J. Burnett, M.A., LL.B., Ph.D.

The Governors invite applications for the following appointment on the academic staff of the Polytechnic.

ASSISTANT LECTURER (GRADE B)

Candidates should be graduates in Economics, History, Sociology or related disciplines and have had appropriate teaching experience. Experience in industry or commerce would be an added qualification. Teaching duties will include Dip. Tech. and similar courses. The work of the Division offers opportunities for experimentation in teaching methods; research will be encouraged.

Salary Scale:—

£770 per annum by annual increments to £1,350 plus allowances for training qualifications and experience, together with the "London Allowance" of £45 or £60 according to age. Candidates may be placed at any point on the scale according to qualifications, age, teaching and/or industrial experience.

Further particulars and Application Form, which should be returned as soon as possible, ... from the undersigned.

[illegible]

BRADFORD INSTITUTE OF TECHNOLOGY

HEAD OF DEPARTMENT OF MANAGEMENT AND ADMINISTRATION

Applications are invited for the above post, at a present salary scale within the range £2,410-£2,850, according to qualifications and experience.

The creation of this new Department is an integral part of the planned development of the Institute as a college of advanced technology. The Department will be responsible for the development of undergraduate courses in Industrial Administration and post-graduate courses in Management studies. Research is strongly encouraged, and Industrial consultancy is permitted.

Applicants should have appropriate academic and industrial qualifications and experience. The ability to direct new development in education and research in management will be the main criterion for the appointment.

Further particulars of the appointment and forms of application, may be obtained from the Registrar, Department 54/J, Bradford Institute of Technology, Bradford, 7.

BBC requires a HEAD OF FRENCH LANGUAGE SERVICES (British subject), a senior executive position in charge of broadcasting output of 4 hours per day to metropolitan France and French-speaking Africa. Responsibilities are wide, not only in the field of broadcasting to these territories, but also in giving advice on their political and cultural life to the BBC's External Services generally. In addition, the holder of the post must have aptitude for controlling a large Department, containing many foreign nationals. Knowledge of the countries to which the broadcasts are directed is essential, together with an interest in current affairs and familiarity with political and cultural developments in France and Africa. Applicants must have keen programme sense, sound political judgment and good working knowledge of French; ability to make written contributions to the output is desirable. Starting salary between £2,650 and £2,910 according to qualifications, with prospects of rising to £3,300. Requests for application forms (enclosing addressed envelope and quoting reference 62.G.465 Ect.) should reach Appointments Officer, Broadcasting House, London, W.1, within five days.

TUTORS. A leading correspondence College requires tutors for courses in Economics, commercial and professional subjects. Place of residence unimportant. Brief replies, stating qualifications and subjects to Box 1668, c/o The Economist, 22 Ryder Street, St. James's, London, S.W.1.

CAMBRIDGE UNIVERSITY

LECTURESHIPS OR ASSISTANT LECTURESHIPS IN THE FACULTY OF ECONOMICS AND POLITICS

The Faculty of Economics and Politics invite applications for four vacant posts, of which not more than two may be University Lectureships and the remainder will be University Assistant Lectureships.

The successful candidate for one of these posts will be expected to teach and specialise primarily in the Modern Economic History of the United Kingdom or other countries.

For a second post preference will be given to candidates who wish to teach and specialise in the economics of under-developed countries.

While, for another of the posts, preference may be given to a candidate who has a special interest in banking and finance, applications are invited from candidates whose interests lie in any field of economics.

Further information can be obtained from the Secretary of the Appointments Committee, Faculty of Economics, Sidgwick Avenue, Cambridge, to whom eight copies of the completed application must be sent by December 20, 1962.

For other appointments see pages 719 and 728

The Electricity Council

PRINCIPAL ASSISTANT ECONOMIST

Applications are invited for the superannuable appointment of a PRINCIPAL ASSISTANT ECONOMIST in the Commercial and Development Department at Headquarters in London.

The successful applicant will be responsible for:

Statistical and economic information services, including information on the economics of power in other countries;

economic forecasts in the fields affecting the Electricity Supply Industry;

the formulation of long and short term estimates of electricity requirements;

and will be required to co-operate in developing the Industry's cost, market and user research.

Candidates for the post should preferably have an honours degree in economics and a sound knowledge of modern statistical techniques.

• **Salary within £2,735-£3,430 per annum inclusive.**

Applications stating age, present position, and salary, giving full details of qualifications and experience should be forwarded to the Assistant Secretary (Establishments), The Electricity Council, Winsley Street, W.1, not later than November 30, 1962. Quote ref. ECO 205.

Group Economist

• C. & J. CLARK LTD. of Street, Somerset, require a business economist. His (or her) primary role will be to advise and assist the Chairman and Managing Director. The appointment should lead to an executive career in this expanding group of companies.

• SHOEMAKING is the main business of C. & J. Clark Ltd. and its subsidiaries but the scope of the appointment extends to allied activities at home and abroad including all aspects of wholesaling and retailing.

• EXPERIENCE in applied economics and statistics is essential. It could have been gained in any of many contexts—the City, industry, government, academic research, economic journalism, etc. The emphasis is on applied statistics and examination of trading conditions rather than on market research. (Experience of the boot and shoe industry is not essential.)

• MINIMUM formal qualification is 2nd class honours degree in Economics (or equivalent).

• SALARY probably starting between £2,000 and £2,500. Age range preferred 27 to 33.

Write in confidence to us as the company's advisers.
Nothing will be disclosed without permission.
Letters should be addressed to M. J. Graham-Jones.

AUSTRALIA

Commonwealth Scientific and Industrial Research Organisation

DIVISION OF BUILDING RESEARCH

RESEARCH LEADER

(Building Operations and Economics)

The Division of Building Research is about to undertake the study of the application of scientific methods to the whole range of problems associated with building operations and economics and, as a first step, applications are invited for appointment of the research leader of the group. Applicants should have at least an Honours Degree, and an established research reputation, with experience in Operational Research.

The appointee will initially spend some six months at the Building Research Station in England, where this type of research has been developed, to obtain training and experience. He will then, in consultation with senior officers of the Division, plan and implement a research programme and ultimately build up a supporting team.

SALARY : Dependent upon qualifications and experience within the range:

£A3,011—£A3,511 per annum.

Promotion within C.S.I.R.O. is by merit and may ultimately go beyond the upper limit of the scale within which the original appointment is made.

Fares paid for the appointee and his dependent family and return fares to point of origin will be allowed for an appointee, who by mutual arrangement accepts appointment for a fixed term. Further particulars of conditions supplied on application to:

Mr. P. F. Butler, Chief Scientific Liaison Officer, Australian Scientific Liaison Office, Africa House, Kingsway, London, W.C.2.

to whom applications (quoting Appointment No.: 390/303) should be addressed by the *29th December*, 1962.

THE NATIONAL INSTITUTE OF ECONOMIC AND SOCIAL RESEARCH will have a vacancy early in 1963 for a Research Officer (salary scale: £1,350 x £50-£1,800) or an Assistant Research Officer (salary scale: £850 x £50-£1,050), with U.S.S.U. and family allowances. Initial appointment for one or two years, to work on the growth prospects of the British economy. Candidates should have a good degree in economics, with statistics. Applications, with curriculum vitae and names of two referees, to the Secretary at 2 Dean Trench Street, Smith Square, London, S.W.1. by December 14th.

LINCOLN COLLEGE
UNIVERSITY OF CANTERBURY
New Zealand

AGRICULTURAL ECONOMICS RESEARCH UNIT

The Department of Scientific and Industrial Research has established at Lincoln College a Research Unit in Agricultural Economics under the direction of Professor B. P. Philpott, Head of the Department of Agricultural Economics.

Applications are called for initial appointments to the following positions:

(a) SENIOR RESEARCH OFFICER OR RESEARCH OFFICER to work in fields relating to agricultural production economics.
(b) SENIOR RESEARCH OFFICER OR RESEARCH OFFICER to work in fields related to the marketing of New Zealand agricultural products.
(c) RESEARCH OFFICER to work in the field of interindustry studies with special reference to the agricultural sector.
(d) RESEARCH ASSISTANT to work in the field of land use and land development with special reference to agriculture and forestry.

Qualifications for
(a) and (b) A degree in economics or agricultural economics, or mathematics with some knowledge of economics, and experience in economic research.
(c) A degree in economics or agricultural economics with some experience in social accounting or econometrics.
(d) A degree in agriculture with agricultural economics or farm management, or in economics with some knowledge of agriculture.

Salaries :

Senior Research Officer	£1,750-£2,250
Research Officer	£1,250-£1,700
Research Assistant	Up to £1,200

Conditions of appointment and further details are available from the Secretary, Association of Universities of the British Commonwealth (Branch Office), Marlborough House, Pall Mall, London, S.W.1.

Applications close in New Zealand and London on January 31, 1963.

ECONOMIST

Qualified ECONOMIST, age up to 35, with industrial/commercial experience required by major Oil Company in London. The selected candidate will be responsible for the economic aspects of a small specialist advisory group. Previous experience of Oil Producing Company work would be an advantage. Pensionable post. Salary in accordance with age and experience. Please write in detail quoting No. E/47 to Box No. E.381 c/o Charles Barker & Sons Limited, 20, Cannon Street, London, E.C.4.

For further appointments and other classified advertisements see pages 719 and 727

The Electricity Council

RESEARCH ASSISTANT

(ECONOMIC STUDIES)

Applications are invited for the superannuable appointment of a

SECOND ASSISTANT ENGINEER

to act as Research Assistant for economic and cost studies in the Commercial and Development Department at Headquarters in London.

The successful candidate should preferably have a degree in Economics, with Statistics as a special subject, and will be required to organise and control economic and cost studies arising from a wide range of commercial problems in a rapidly expanding industry. Some knowledge of modern methods of data processing, and the ability to draft reports in outline would be helpful.

• **Salary within £1,540-£2,070 p.a. inclusive.**

Applications stating age, present position and salary, and giving full details of qualifications and experience should be forwarded to the Assistant Secretary (Establishments), The Electricity Council, Winsley Street, W.1, by November 30, 1962—Quote Ref. ECO/206.

'INTERUNIE'

N.V. INTERNATIONALE BELEGGINGS UNIE

Summary of the Second Interim Report for 1962

The issued capital increased from Fls.80,449,000 as of June 30 to Fls.84,219,000 as of October 15. Net assets (investments taken at market) increased from approx. Fls.260,000,000 to approx. Fls. 276,000,000 and the value per share, including duties, etc., from Fls.169.50 to Fls.172.

Our investment policy during the period under review has mainly consisted of making purchases in the oil industry, public utilities, banking and insurance, and in the food section.

Partly as a result of these purchases our interest in financial institutions now stands at 12.3 per cent, that in public utilities at 12.3 per cent and that in the oil industry at 11.5 per cent.

With regard to the geographical spread it may be observed that European investments, excluding Holland, now comprise 14.7 per cent of total net assets (56.8 per cent including Holland), whilst 33.1 per cent is invested in U.S.A. and Canadian securities.

In our previous interim report we already remarked that income from stock dividends, etc., has been decreasing; so far this is still the case.

For full information and copies of the Interim Report please write to:

N.V. INTERNATIONALE BELEGGINGS UNIE 'INTERUNIE'
P.O. BOX 617, THE HAGUE, HOLLAND
or to
Philip Hill, Higginson, Erlangers Limited., 34, Moorgate, London, E.C.2.

Managing Directors

The choice of a whisky to send to your fellow-directors or clients at Christmas time is often not an easy one. There are many fine whiskies on the market, but specially recommended is a rather more exclusive than average blend, the Grand Macnish. This light de luxe whisky retains the true flavour of the Highland malt whiskies, and has a delicate quality which once tasted is never forgotten. Available from your wine merchant. In decanter bottles packed in presentation boxes.

hat Reed do for housewives and swinging sisters

Reed Paper Group make more paper packaging—wrapping paper, cartons and cases—than any other manufacturer in Britain.

Think of a product. Soap . . . an electric iron . . . flour . . . tomato ketchup . . . cigarettes . . . a refrigerator. We make packaging for them all. In fact you'll have to look round the house high and low to find many things that aren't packaged.

Our business continues overseas. Coffee and soups and cosmetics are packaged by the Reed Group's partners in Italy. Shoes and cameras and whisky are packaged by Reed in Australia. (In Canada and New Zealand we are important in newsprint—but that's a different story).

LISZT TO TWIST

Today music too comes pre-packaged. We supply the packs for record-playing equipment made by B.S.R., Ekco, Ferguson, Pye and many others. And in Australia we supply sleeves for gramophone records . . . for everything from Liszt to Twist.

INTERNATIONAL

MEN OF PEACE

The Chinese, having won more than they probably want to keep, are in an admirable position to bargain with the Indians—and to say "I told you so" to the Russians (p. 744).

This Chinese lesson for the Soviet Union is being driven home with theological fervour (p. 747).

Mr Khrushchev, meanwhile, has drawn up an economic balance sheet of the last four years (p. 781).

Mr Nehru's problem is changed, but not removed, by this outbreak of Chinese peace (p. 777).

Mr Khrushchev and Mr Kennedy continue, with impeccable courtesy, to see eye to eye over the **Cuban crisis** (p. 747). While the **United Nations** appears to want to talk about anything rather than Cuba—or India and China—some laurels should be handed to the acting secretary-general (p. 776).

Mr. Malcolm MacDonald may be a better troubleshooter in **Kenya than** Sir **Patrick** Renison was; the pity may be that he did not take over sooner (p. 750)

OLD MEN SEE VISIONS

The general in **France**, the doctor in **Germany**, move in their own mysterious ways. But for the British to decide that they are bad company would be a self-destructive act of political snobbery (p. 741).

General de Gaulle's victory at the elections may give him an obedient parliament but in the end it may be the French communists who are grateful (p. 778).

Dr Adenauer has been given a fortnight's grace to try to repair the damage of the *Spiegel* affair (p. 778).

Lord Avon recalls, in his memoirs, how often he thought and said the right things—the reader remarks how often the wrong things happened (p. 760).

YOUNG MEN DREAM DREAMS

The **common market** negotiators talk about tinned salmon—and think about political union (p. 747). Some of the disagreements between the **Six** themselves are now out in the open (p. 748). A senior British economist **advocates world free trade**, or simply British free trade, as an **alternative** to entry to the common market (p. 753).

In **Mississippi**, the struggle between President Kennedy and the Governor drags on (p. 768).

Our special correspondent, on a second visit to Canada, finds that although Canadians, after a summer of financial and political crisis, are certain that profound changes are needed in their economic policy, they are far from certain what these changes should be (p. 787-p. 790).

At least the **Canadian** government is feeling a lot better than it did during the humiliating days six months ago (p. 782).

King Hassan of **Morocco** has been pushed towards a constitution sooner than he meant (p. 753).

MEN AND MONEY

The more the **United States foreign aid** agency changes, the more it stays the same (p. 767). In **foreign trade** it is now the United States that appeals to tradition (p. 768).

A row is brewing in **Gatt** between the underdeveloped countries and the rest (p. 845).

The American automobile industry is booming (p. 771).

Funds are being raised for at least seventy **cultural centres** in the United States (p. 772).

HOME

BIG BUILD-UP

London's Local Government Bill is an earnest of the intention to refurbish Britain's city administrations: but it too timidly shirks the need for a real reform on the road to true regional planning (p. 745).

A vastly more efficient **construction industry** is needed for the rebuilding of Britain: nothing could achieve this so well as new co-operation between its chaotic and dissident parts (p. 785).

The 531 **town clerks** of English and Welsh boroughs are truly admirable people: but will they be the right people in the coming struggle for urban renewal? (p. 757).

The **regional development councils** in the United Kingdom's depressed areas provide in embryo information and experience for the regional authorities of the future (p. 758).

SMALL SHOW-DOWN

Thursday's five by-elections will at last show whether the opinion polls have been right in showing a Tory recovery from last summer's low—and as a result could determine Government policy both on a general election and on the common market (p. 742).

This session's crop of **private members' bills** is headed by three Labour men's proposals, the best of which is Mr Abse's divorce reform; some Tory private members, though lower down the list, may benefit from Government support (p. 748).

A Home Office committee is to examine **jury service**—with a special look at the shortage of women jurors (p. 749).

Freed by last year's legislation, gambling is said to take up over £1,000 million a year: even though there is an unpopular economic argument that this is a form of saving, a good deal of it should be immediately taxed away (p. 750).

Gratifying as it may seem, the **National Coal Board** is seen in Europe as a dangerous low-cost rival to continental producers (p. 838).

The cause of compensation for **redundant workers**—and of a national jobs insurance scheme—is acquiring new supporters every day (p. 754).

The problems of **hire purchase** businesses have moved from the home to the overseas front (p. 838).

Salt Sticks in Colombia, Salt Water in Ceylon— It's all in a day's work for versatile AMF machinery!

It is only a few years since the people of Colombia and other countries of Latin America began to depart from their centuries-old custom of eating only hand-baked bread and began enjoying bread, rolls and other bakery goods made by machinery. This change was brought about by AMF. Today, AMF makes bakery equipment on four continents, sells it in over 35 countries. And in any country where there's a fresh water shortage, low-cost, efficient AMF water desalinating machines can make salt or brackish water potable and useful industry. Baking and water purification are but two areas in the v field that AMF products cover. In many lands, new departures take place every day—thanks to AMF International.

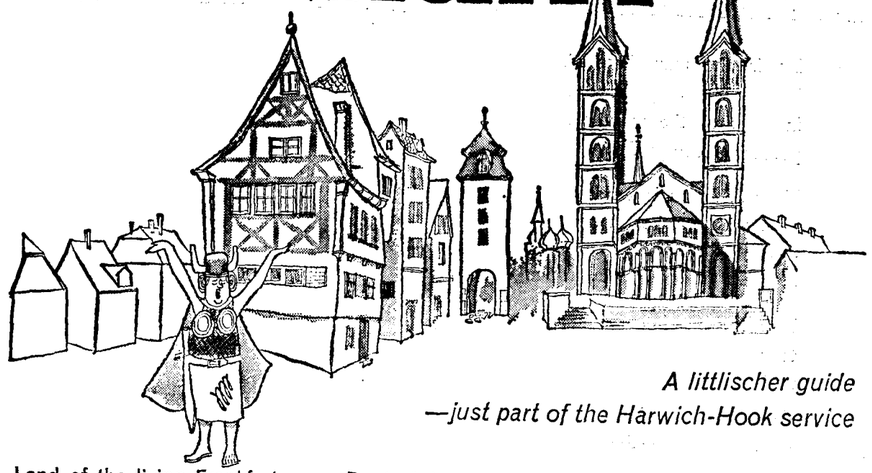
INSTANT GERMANY



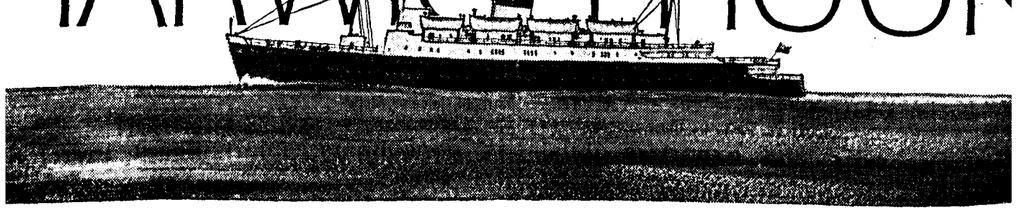
A littlischer guide
—just part of the Harwich-Hook service

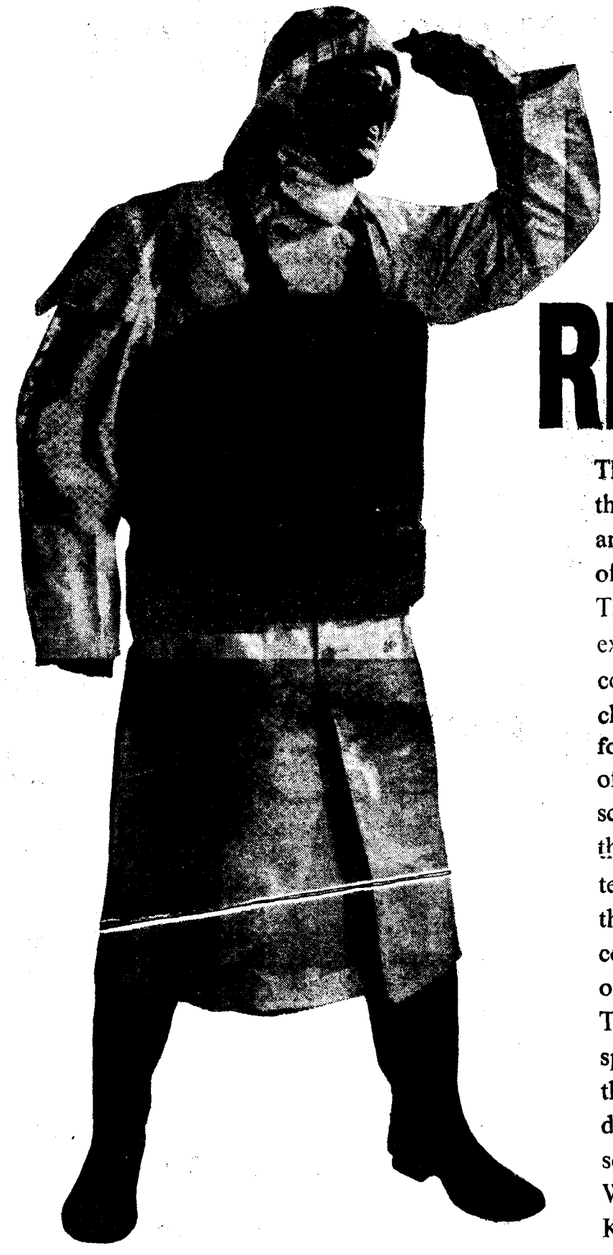
Land of the living Frankfurter . . . Deutsch is just a matter of runningyourwordstogether . . . the Rhine runs everywhere . . . through Cologne (for the eau) . . . through Industrial Rhineland . . . Wagner's Rhineland, gloom and woe in the outsizes . . . through cities where measles are milder and bangers bigger.

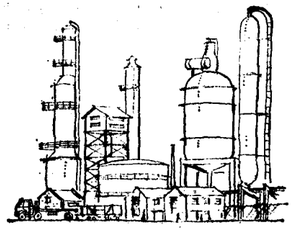
And the most comfortable way to reach Germany—and likewise Holland, Belgium, Scandinavia, Luxembourg—is Harwich-Hook. Your programme's so simple and restful. Just step on the boat at Harwich (the 8 p.m. from Liverpool Street, London takes you to the quayside). Enjoy a good night's sleep. Wake up at The Hook, where fast trains meet your boat.

THE MOST COMFORTABLE WAY TO TRAVEL TO THE CONTINENT

HARWICH HOOK







RELIABILITY

The Kellogg International Corporation has, over the many years of service in plant engineering and construction, earned, like the lifeboatmen of the R.N.L.I., a reputation for reliability.

This reputation is international, earned in the execution of process plants such as oil and copper refineries, steel, pulp and paper mills, chemical and petrochemical plants, and is **founded on the sound, coordinated application of scientific knowledge by the engineers and scientists of the Kellogg organization. How well they understand and apply their vast pool of technological knowledge is demonstrated by the successful operation of the many industrial complexes designed and built by the Kellogg organization all over the world.**

The men at Kellogg House, the organization's spacious new headquarters in London, welcome the opportunity to show you how their coordinated engineering-procurement-construction service can work for you.

Write for the booklet "On the Job With Kellogg International Corporation."

VOLUME CCV - NUMBER 6222

Franco-German Uncertainties

EVENTS in west Germany and in France this week have given the British food for thought about the political future in the great states of western Europe with which Britain is seeking partnership in the common market. Lord Boothby may have had his tongue in his cheek when he wrote to *The Times* on November 11th that Britain ought to break off the negotiations for entry into the common market because, he said, General de Gaulle's unconstitutional actions, and the behaviour of the Adenauer government in the *Spiegel* case, showed that neither France nor west Germany was a democracy "in the sense that we understand the term." He quickly explained that he had written this to give Mr Heath a bit of backing in his talks at Brussels. In short, it was the stickiness of the French and Germans in negotiation, more than their domestic political errors, that had incensed him. Poor Mr Heath can hardly take the Boothby line; he will not get better terms for newsprint and pigmeat by pointing out to the French and Germans how much their political habits leave to be desired.

All the same, the British are very much concerned with whether France and west Germany are democracies or not, and with what their political future may be. To take France first, British feelings about General de Gaulle's rule have always been mixed. On the one hand, because of his record and his qualities, the general is personally respected in this country, and even widely admired, as was clearly shown by the reception he got when he visited London in 1960. On the other, the manner in which the Fourth Republic was brought down in 1958 made a disagreeable impression. The British dislike anything that looks like an authoritarian form of government; they have not noticed any great friendliness to themselves in French government attitudes since the general took over; and they like to feel that they know where a country is going.

What has happened in France in October and November has not given them any cause for encouragement. In calling for his referendum in October General de Gaulle ostentatiously overrode the constitution and forced the traditional republican parties to challenge him. He appeared bent on breaking those parties, who represent the entire middle belt of French politics between his own UNR and the communists. He has since virtually confirmed that this was his intention, notably in his election broadcast on November 7th, when he declared that the referendum had made plain "that the parties of the past, even when a common professional passion unites them for a moment, do not represent the nation."

Plainly he thought this an excellent thing to prove; one would have preferred him, to the extent that it may have been true, to devote some of his prestige and his power to changing it for the better. As things have turned out (and so far as the first ballot can be conclusive), it does seem that he has had a resounding success in changing things for the worse. The general's own party has had a triumph; the communists have recovered some of their lost voting strength; between these two, the traditional republican parties have been squeezed dry. Thus General de Gaulle seems assured of a clear run of some years of immunity from any serious danger that his actions may be questioned by parliament. But what is parliament's future, with those parties reduced to impotence? What assurance does France have of the future continuity of its government? Gaullist rule is peculiar in combining personal rule with civilised

manners and a civilised treatment of the individual. In short, it reflects the general's personal qualities; but who knows what qualities it will reflect when he is gone? In choosing, quite unnecessarily, to crush the only possible alternative, he is shouldering a heavy responsibility.

West German politics in recent weeks have presented a picture not less baffling, and more unsavoury. Since October 26th, the date of the police raid on the Hamburg weekly, *Der Spiegel*, questioning and probing by politicians and journalists have brought out one deplorable aspect after another of the system of government that has grown up in the thirteen years of Dr Adenauer's dominance. They have not brought out who decided to take this action, or on what grounds, or, except patchily, through what channels the decision was communicated and carried out. The ministers concerned have made a shifty impression under public questioning—some because they had something to hide, others because they do not seem to have known what was going on under their nominal authority.

In the end, the spotlight having settled on the person of the defence minister, Herr Strauss, the Free Democrats on Monday withdrew their ministers from the government to enforce a cabinet reshuffle in which, they hope, Herr Strauss will disappear. No hope has yet been voiced that Dr Adenauer, too, will disappear, but two leading men of Dr Adenauer's own party, Herr Dufhues and Herr Krone, themselves declared last Sunday that the government must be reconstructed in order that public confidence might be restored. Indeed it must; but the things that have been shown to be wrong are bigger than a mere reshuffle will cure. If the ministers cannot answer for what their ministries do, then parliament is not in a position to control the executive; and the German Federal Republic is enjoying not responsible government, but merely the facade of it.

Much to the credit of the west German public, these implications of the *Spiegel* case have not been overlooked. There is no sign of a complacent surrendering of authority to a monarch, as in France; but then, west Germany has no de Gaulle. What can be heard is an uneasy questioning by the Germans, whether the Bonn Republic is, after all, any sounder or stronger in itself than the Weimar Republic was. To put the question is not to provide the answer. The shock to German opinion may have come in time, and may do good. For the moment, it is enough to record that the Bonn edifice, in its constitutional and parliamentary aspects, has shown premature signs of dry-rot; that the Germans are well aware of these signs and find them alarming; but that the disease is more easily diagnosed than cured.

WHAT Britain can do about any of this is limited. It is right to be uneasy, but wrong to act the pharisee; the British have had more luck, in the sense of an immensely more continuous development of their political institutions, but there are times when even those institutions look to be in need of brushing up. Least of all can the British afford to draw the conclusion that they would rid themselves of anxiety by withdrawing from Europe. They could conclude, for what good that does, that they ought to have gone in much earlier. But basically, the decision to seek entry into the common market is a recognition of an existing inextricable involvement of interests—of the fact that the country's future cannot be separated from the course of western Europe's affairs. Britain, if it were now to break away, would not get rid of the involvement, but would merely deprive itself of a voice in what is to happen next.

Bogeys for By-Elections

How to interpret Thursday's results from five British constituencies

BY the time this issue of *The Economist* reaches readers' hands the results of Thursday's five by-elections will be blazoned across the newspaper headlines. Politicians of all parties will be drawing conclusions for their future action (possibly often wrong ones) from the trends in public opinion that they are supposed to show. It is therefore worthwhile, even in a paper that has inconveniently to go to press before Thursday's polls are closed, to look at the bogey scores against which these results should be judged.

The probability is that any Conservative recovery on Thursday may tend to be underestimated in most newspapers this weekend, because most people still have not realised from what a very deep mess the Conservatives were starting. The accidents of the calendar nowadays tend to confine the by-election season in Britain to two brief periods a year, this present one in November and the other in March-July. In the last season, between March and July of this year, there were twelve by-elections. The swings recorded were big enough to suggest that all five Conservative seats contested on Thursday might conceivably have been in danger, if the by-elections in them had been fought then.

The emphasis here should admittedly be on the word "conceivably." The most revealing figure to look for in any by-election—maddening though this may seem to those who abhor to hear the romance of democracy reduced to arid statistical terms—is still the net swing from Conservative to Labour. This can be worked out by taking half the difference between the change since 1959 in the Conservatives' percentage share of the vote and the change in Labour's. For example, if the Conservatives' share of the vote in any constituency falls by 11 per cent and Labour's by 4 per cent, the net swing in that constituency is half of 7 per cent, which is 3½ per cent. This example has been chosen here because it is a useful figure to keep in mind when assessing the current state of Britain's political pulse. It happens that an average net nationwide swing of 3½ per cent at the next general election would be the minimum swing likely to be required by Labour in order to return to power.

In only two of the twelve by-elections between last March and July was the net swing to Labour kept down below this 3½ per cent minimum; these were in coalmining Pontefract and Welsh rural Montgomeryshire, where even by 1959 there had not been so very many Conservative votes left to float away from the Government anyway. In two more of last season's twelve by-elections (Stockton and Lincoln) the net swing to Labour was around 5 per cent. In three others (Orpington, North-east Leicester, and West Derbyshire) it was between 6 and 7 per cent. In the other five (East and West Middlesbrough, North Derby, West Lothian, North Blackpool) it was between 9 and 13 per cent. The average net swing to Labour in these twelve seats was just over 7½ per cent; if one excludes Pontefract and Montgomeryshire as special cases, it was just over 8½ per cent.

THIS last figure, if repeated this week, would have sufficed to deliver four of Thursday's five seats into Labour's hands. The easiest of the five seats for Labour was obviously Glasgow Woodside, where the Opposition needed a swing of only 3.1 per cent in order to win; in unemployment-affected Glasgow on Thursday nearly everybody was expecting the anti-Tory swing to be near to the top of the March-July range (that is, between 9 and 13 per cent). The second easiest seat for the Opposition seemed to be South Northamptonshire, where Labour needed a swing of exactly 7 per cent to win and where, alone among those five seats, there was a new Liberal appearance (i.e. there was no Liberal candidate in 1959); seats with new Liberal appearances are still generally expected to show an above-average swing against the Tories (although perhaps less so nowadays than formerly). In two other of Thursday's seats, South Dorset and Central Norfolk, Labour needed swings of 7.6 and 7.8 per cent respectively. In South Dorset the Tories were at first seriously embarrassed by the appearance of an independent anti-common market Tory, supported by the retiring and recently ennobled former Tory MP (although one has become increasingly doubtful whether it is the Tories whom that sort of independent now hurts most); in Norfolk there has seemed to be an above-average swing away from the Tories for some years. This sort of arithmetic would have left only Chippenham apparently outside Mr Gaitskell's potential grasp; and Chippenham might be sufficiently middle-class and sufficiently far enough west to be seriously threatened by the Liberals. While Labour would need a 10.6 per cent swing from the Tories to win Chippenham, the Liberals would need a 17.6 per cent swing from them to win it; in the three apparently relevant by-elections between last March and last July (i.e. excluding Montgomery but also excluding seats with new Liberal appearances), the average net swing from Conservative to Liberal was 20 per cent.

It follows that, if the Conservatives were to save Thursday's five faggots from burning, they had to rely on one of two things: first, the possibility that there has been a general swing back of opinion to them in the country as a whole since July; secondly, the possibility that, even if there has been no such general swing, the approach towards a pre-general election period might make mildly disgruntled Tories less ready to treat by-elections as an opportunity for casting protest votes and more ready to vote as if they were choosing the government of the day. Throughout most of the March-July period, when Labour was marking up average net swings of between 7½ and 8½ per cent, the public opinion polls were suggesting that, in answer to the question: "How would you vote in a general election tomorrow?," there had been nationwide swings to Labour of only between 4 and 6 per cent. It is quite reasonable to suppose that some Conservatives were more prepared to vote against their party in a by-election at that time than they would have been in a poll to elect a government.

The evidence of what has been happening since July is confusing. In August and to some extent in September, the Gallup polls in the *Daily Telegraph* suggested that the Tories might actually be losing still more ground relative to Labour across the country. Then, in late October and early November—as Mr Gaitskell's Brighton speech against the common market polarised the difference between the main parties—both this Gallup poll and the National Opinion Poll in the *Daily Mail* reported some signs of a sharp Tory recovery; by the beginning of this month both these polls were indicating the net nationwide swing from Tory to Labour since 1959 at only between 3 and 4 per cent (which might not even be enough to win Labour a general election). But by last weekend the Gallup poll in the *Sunday Telegraph* was suggesting that this might have been only a temporary aberration; it was once again putting Labour's lead in the country at a rather higher figure than it had reported during most of the last by-election season between March and July.

Interestingly, however, Gallup's sample polls in the by-election constituencies themselves have not made quite such gloomy reading for the Tories, in England at least. Gallup's last poll, in the *Daily Telegraph* on Thursday, foresaw a very large (nearly 12 per cent) swing against the Conservatives at Glasgow Woodside, but thought that South Northants and Central Norfolk should be narrowly held by the Government (with swings up to 6½ per cent against it), and South Dorset and Chippenham more securely held (with adverse swings of just under 3½ per cent and 5 per cent, respectively). These would be below the swings that the Tories would have had to expect in July, although not sufficiently far below them to give Mr Macmillan much chance of winning an early general election. The National Opinion Poll in the *Daily Mail* this week forecast that there would be the same sort of huge swing against the Conservatives in Glasgow, but again a very significantly smaller one in South Dorset and South Northants (just over 3½ per cent and just over 1 per cent, respectively). For what they are worth, analyses of local council by-elections last month had also suggested a Conservative recovery since July in England, although not at that time quite as big a one as the National Opinion Poll has this week seemed to presage.

BY now the reader will know. One's presumption on Thursday afternoon had to be that the swing against the Conservatives in urban Scotland would probably still be at or above 10 per cent; if so, in order to win an early general election the Conservatives would have to keep the average swing in England down to just below 3 (not merely below 3½) per cent. One difficulty about using Thursday's results as a yardstick is that they will have provided no evidence whether or not there may still be large, Scottish-style swings in progress against the Tories in north-east England (where there are a few marginal Tory seats) and in Lancashire (where there are quite a lot). But perhaps two rough judgments can be made.

If the average net swings to Labour from the Tories in Thursday's four English by-elections are still around or above 5 per cent, then Mr Gaitskell would still be overwhelmingly likely to win an early general election. The guess must be

that, in that event, the Government's main determination would be not to grant him an early election. The Tories' intended strategy would then probably be to press forward with the Brussels negotiations in the hope of achieving Britain's entry into Europe, by January 1, 1964, but without any intention of calling the next general election until the last possible date—in October, 1964.

If Thursday's by-elections have gone better than this for the Government—and, in particular, if the average net swing to Labour in the four English by-elections does prove to have been brought down below about 3½ or 3 per cent—then the Tories' intended strategy would probably be very different. They might then try to complete the Brussels negotiations by next July, announce that ratification will not take place until January, 1964, but work on the assumption that they can successfully hold a general election on the market issue in October, 1963, between Britain's provisional signature at Brussels and its ratification. That is why this batch of by-elections might be peculiarly important; they will not only throw an interesting light on what has been happening to British public opinion in the last few months, but will probably also sharply affect the British Government's intended political strategy for the months immediately ahead. On Labour's side of the fence they may also be taken—perhaps misleadingly—as indicating whether Mr Gaitskell's line on the common market is an election-winner or an election-loser.

Mao the Moderate

They came, they conquered, they go back. Why?

Inscrutably oriental to the end, the Chinese troops who have been chasing outmanœuvred Indians down Himilayan slopes for the past month politely halted on Wednesday, applied their safety catches, and offered to withdraw from some—though not all—of the ground they are holding. This was a surprise, since there seemed to be no military reason why the "frontier guards" whose "defensive actions" (this is Chinese terminology) have carried them deep into India's North-East Frontier Agency should have been obliged to stop just yet. Some pessimists, indeed, not all of them within sound of the guns, had assumed that the Chinese were ready to keep going until they reached the Ceylon straits. In fact, it has never made sense to believe that Mr Mao Tse-tung was embarking on an attempt to occupy the Indian sub-continent. But it did make sense to fear that the Chinese would keep going at the eastern end of the border until they had occupied all the territory they claimed as theirs, and, more, had established a stranglehold on the Brahmaputra river, thus cutting off Assam from India. That they have apparently refrained from doing so calls for an explanation.

The explanation that is going to be offered by some people is that Russia and China co-ordinated their sorties into Cuba and India, and now, having been faced by resolute opponents, have circumspectly co-ordinated their withdrawals. On this interpretation, the simultaneous news on Tuesday night that the Chinese were reining back in the Himalayas, and the Russians were pulling their Ilyushin bombers out of Cuba, was evidence that the communists had been forced to let peace break out all over. It is true that the pretty substantial operation mounted by the Chinese army on the Indian border must have been prepared at about the same time as Mr Khrushchev was preparing to slip his missiles and bombers into Cuba. Nevertheless, this interpretation is much too simple. It ignores the fact that on Tuesday night the Chinese had not been obliged to halt by equal or superior military force (though they might have been later, and further south); it also ignores the rich contempt expressed by the Peking *People's Daily* and *Red Flag* as recently as November 15th and 16th for communist leaders—no names, no pack drill—who flinch from the risk of war.

The real explanation, which is probably quite complex, has to start from the details of the steps proposed by Peking this week. These were precisely what Mr Chou En-lai proposed to Mr Nehru on October 24th, just after the really fierce fighting broke out, and what the Chinese had offered earlier. They include a non-man's-land 25 miles wide, centred on the "line of actual control" as it stood three years ago. At the eastern end of the border, in the North-East Frontier Agency, this line runs more or less along what the Indians claim to be the frontier; at the western end, in Ladakh, it runs more or less along what the Chinese claim to be the frontier.

In other words, the Indians are being offered the right to reoccupy the eastern piece of disputed territory at the price of letting the Chinese hold on to the western piece—minus, in each case, a strip of no-man's-land. This suggests that the primary Chinese objective was what the more cautious commentators always said it was, namely, to win acceptance of their squatters' rights in the barren Ladakh plateau, across which they have built a road connecting Sinkiang with Tibet, by putting pressure on the Indians at the other end of the line. When Mr Krishna Menon prodded them with patrols in Ladakh, they let fly a left hook in the North-East Frontier Agency, incidentally knocking Mr Menon clean out of office.

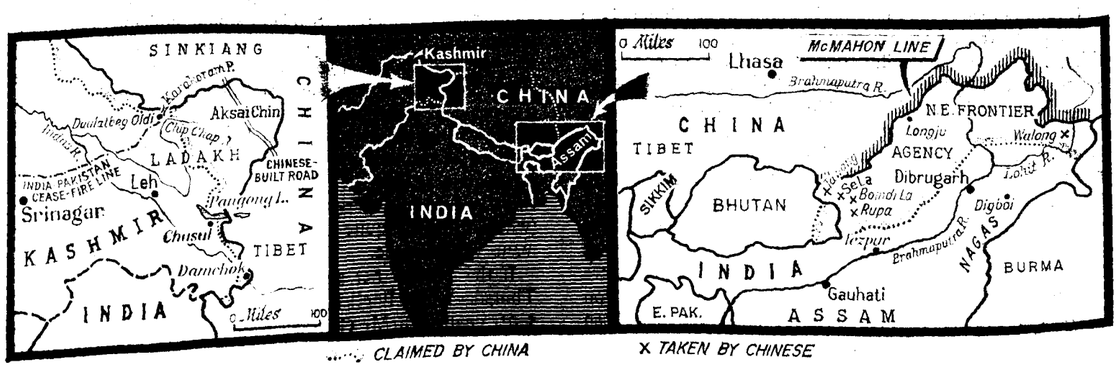
And yet this explanation, neat though it is, does not quite solve the whole puzzle. The Chinese, after all, were already in control of their coveted Ladakh. Why could they not simply have sat tight, and given India a bloody nose if and when it tried to retake the empty plateau? Why, if they felt it necessary to rattle the Indians at the other end of the border, did the rattling have to be quite so savage—and so expensive of China's strained resources? And why was the transition from advance to withdrawal so remarkably abrupt?

It may be that Peking had a secondary objective, which it was prepared to abandon if things did not go its way. This secondary objective would have been to demonstrate to Mr Khrushchev, and the other "revisionists" of the communist world, that the best way to treat bourgeois neutralists like Mr Nehru is to bully them, not give them aid. The Chinese may have hoped that Mr Nehru would knuckle under when he saw the casualty lists, or be replaced by somebody more pliant. In the event, however, Mr Nehru refused to knuckle under; Indian public opinion rallied round, and so did the western powers; and even Mr Khrushchev, after a brief wobble, declined to take the Chinese point. There have been suggestions, indeed, that Moscow put a good deal of pressure on Peking to stop brawling. At this stage, sensing his isolation, Mr Mao Tse-tung may have decided to settle for his more moderate and limited primary objective.

All this is speculation about things past. The next decision, whether or not to accept the Chinese terms, is one for Mr Nehru, and one does not envy him. It can be argued that a chunk of desolate territory in Ladakh, which the Indians have claimed but barely (so far as one can see) set foot on, is a fair price to pay for regaining the stretch of the North-East Frontier Agency that they have just lost—particularly as, pending negotiations, the Indians are being asked merely to accept the Chinese position in Ladakh *de facto*. But this would involve Mr Nehru in accepting, under duress, an exchange which he rejected only a month ago. His chances of subsequently arguing or fighting the Chinese army out of Ladakh must now be reckoned pretty slender; and he would be harried by the memory of that—quite possibly repeatable—left hook towards the Brahmaputra. The decisive consideration may be the obvious unpreparedness, in weapons, tactics and leadership, of the Indian forces on the frontier. If time is needed to put the Indian Army right, time may have to be bought by concessions, maybe only temporary but maybe not, in Ladakh.

Mr Nehru's chief concern, and that of most of the rest of the world, is how deep Mr Mao Tse-tung's current policy of relative moderation goes. The Chinese have shown this week that they are capable of defining a limited objective and stopping when they reach it. If their main concern is really with Ladakh, and if Mr Khrushchev can really put pressure on them to stay moderate, India may feel an easing of the strain.

But one has doubts. It is an uncomfortable thought that Chinese governments, both communist and pre-communist, have had a nasty habit of wanting to fill out what they believe to be the true boundaries of China whenever a respite from famine, internal chaos and external preoccupations has given them a chance to do so. Mr Mao Tse-tung's government has "filled out" Tibet, and the Ladakh bulge. There are other claims on India—not to mention some suspicious vagueness about the Mongolian boundary to the north. It cannot be assumed, because China has offered to regurgitate parts of India's north-eastern territories, that its appetite is satisfied.



..... CLAIMED BY CHINA X TAKEN BY CHINESE

London 1962—and 1982

The new London Government Bill deserves to be attacked, but for precisely the opposite reasons from those which most of its critics will deploy

The jurisdiction of local government in Britain is still determined in the countryside by the travelling pace of the medieval horse, and in London and the bigger county boroughs by the economic range of the Victorian horse-tram. The London Government Bill, published on Thursday, is an earnest, like the work of the local government commissions on Tyneside and Tees-side especially, that the patchwork of antiquated and inefficient authorities must eventually give way to a system that really works. Unfortunatly, it is only a relatively small earnest. The bill is going to be bitterly attacked by the Labour party (which dislikes the break-up of the old Labour-controlled London County Council) and by Conservative suburban councillors (who dislike the impingement upon their own councils' autonomy), on the grounds that it unnecessarily disrupts the existing local government system in London. But the real grounds for criticism of the bill are precisely the reverse of this. Sir Keith Joseph's bill can perhaps be accepted, with reservations, as a step part-way in the right direction. But modern-minded people had better realise now that it will almost certainly have to be rewritten within a comparatively short time: when it is recognised that in reality it does not "disrupt"—which means radically reform—the local government system in London at all sufficiently.

There is always apoplexy among aldermen and local councillors when the label of inadequacy or inefficiency is tied to worthy administrative areas which, from the London County Council to the extraordinary entity of Rutland, are threatened with mergers or extinction. It can be readily conceded that the LCC and Rutland, neither of them accustomed to hiding its light under a bushel, are probably as good as most at doing the local authority jobs of forty years ago. But the essential aim and object of all reforming plans now should be to clear the ground for an administrative

structure that can cope at one level with the needs of the individual (the true level for borough or district council work) and, on a broader plane (the plane which, in future, should be tackled by regionalised local government), with the problems of a rapidly evolving urban community.

Moreover, a major bill like this one should have been designed not merely to deal with this evolving society, but also to look forward to the society that will have evolved in twenty years' time—a society more populous, more mobile, more commuter-minded, more self-sufficient and geographically more spread out from the older conurbations than it has even begun to be today.

The main advance made by the London Government Bill is that it recognises, after generations of ministers had shirked recognising anything of the kind, that London is now, as the Herbert commission discovered, a continuously built-up area with a population of over 8 million, and no longer (as Lord Longford, the LCC and Tory aldermen in Surrey persist in believing) a clearly defined locality of only 3½ million people clustered round the City of Westminster. The first, and entirely welcome, assumption of the bill is that these 8 million Londoners happen to have common interests, especially in matters like town and country planning, overspill housing, and traffic and highways; and that authority for these should therefore rest in a Greater London Council—which should come into being in the autumn of 1964.

The second main argument of the bill, however, is that more local interests (in which the bill includes ordinary housing, education and the personal health and welfare services) should be run by 32 amalgamated boroughs, each corresponding as far as possible in a two-tier system to the most efficient of nineteeth-century administrative concepts, the county borough. There has admittedly been one sensible modification of this second argument. Because education has been tightly integrated in the LCC's area, it would be ridiculous to parcel it out hurriedly among the inexperienced new boroughs. Sir Keith Joseph's predecessor, Dr Hill, decided in May to keep the old LCC's central educational authority intact for the first five years of the new boroughs' existence.

But it is this second argument that will almost certainly have to be further modified as time goes, quickly, by. The one sort of Opposition argument that should be heard with respect during the debates on the bill will be when Labour complains that various departments of the old LCC, say the architect's department and (after a time) the education department, are going to be broken up and their work devolved on to smaller authorities' patchwork departments which will be less efficient. But the real solution, which both political parties have ignored, is that more of these departments' work should have been taken over by a larger authority, that is, by the new GLC. The more closely one reads this bill, the more one becomes convinced that the GLC is woefully unlikely to possess the full authority or the prestige that it will need to sort out London's communal problems. Every time the GLC disagrees with a borough on housing densities (a very real issue in the outlying suburbs with space to spare) it will have probably to wait on a ministerial verdict—a time-wasting process that will probably all too often be resolved, not by the merits of the case, but by some administrative or even politically motivated compromise. The same trouble will crop up over planning. It is true that on main roads the Government has realistically accepted the Herbert commission's argument for a single traffic authority, but planning powers even here are unlikely to be sufficient. Finally, having gone beyond the Herbert commission in creating large and pretty powerful new boroughs (as a sop to the aldermen), the Government has tried to justify itself by giving the suburban boroughs complete authority for education. They are unlikely to be big enough to organise it imaginatively. The bill certainly ought to be amended, in everyone's interest, to give the GLC co-ordinating powers over higher education at the very least. Preferably it should have been given much wider powers than that.

IDEALLY, while many of the effective powers given to the boroughs should have been given to the GLC, the co-ordinating powers that in fact have been given to the GLC should have been given to a body which should have extended over a much wider area still. Some time within the next generation steps will almost certainly have to be taken towards far greater co-ordination, under a body with the GLC's powers, throughout the entire region that is really centred on London—i.e. throughout south-east England as a whole. It would have been wise, even if immensely bold, to take these steps now. The parochial critics of the bill swear that co-ordination is already achieved by the Standing Conference on Greater London Planning (composed of representatives of nine county councils and three county boroughs). So, they say, why not leave the LCC and Middlesex alone as two councils among others? The truth is that (as even a casual conciliar acquaintance with, say, overspill operations should have borne in upon the resisters) this splendid south-east *des patries* is blatantly incapable of effectively guiding and regulating the growth of the region even in the next decade. It is certainly not effective regional administration as Britain will need to experience it in future.

In reform of local government right across the country, the primary aim of both the congested south and the underdeveloped north and west of Britain should now be to give themselves the administrative structure, and the sheer physical and financial scope, to be able to rehouse their populations, to construct their modern transport networks (essential to attract new industry to the north), to develop planning ideas like the radial city and, indeed, to build the six new Birminghams (or, preferably, 60 new Northamptons) which the natural population increase, by itself, will thrust upon this country in twenty years' time. This is the true extent of the radical change that must come, and to which the London bill—which will still leave far too many regional planning decisions to be taken by small boroughs' clerks—is only a very limited contribution. The debate on the bill, if it does nothing else, will pinpoint those who want a country that can run itself properly, and those who stick instinctively to the parish pump and the municipal horse trough. But what a pity that the first assault on the latter has not been more bravely planned.

NOTES OF THE WEEK

CUBA

How the Crisis Crumbled

ON Tuesday, four weeks and a day after he had revealed the beginning of the Cuban crisis, President Kennedy again appeared on television, at his news conference, to say that it was all over, or almost. A neat bargain had been struck. In return for a promise from Mr Khrushchev to get his Ilyushin bombers out of Cuba within the next month (and to allow them to be counted as they go), the United States had decided to lift its naval blockade of the island. The heat of the affair had subsided long ago when Mr Khrushchev agreed to remove his missiles, but the sour worry of secret and awkward negotiations dragged on until it was dispersed this week by these puffs of good will.

True, a number of loose ends still remain. The United States is still insisting on full satisfaction before giving any formal pledge not to invade Cuba. Mr Kennedy's condition was that an arrangement should be made through the United Nations to inspect the removal of "offensive" weapons from Cuba and to make sure that no more were introduced. While Mr Kennedy seems prepared to accept Mr Khrushchev's word (supported by aerial photography) that the weapons are either out or on the way out, Dr Castro's refusal to accept any form of UN inspection gives the United States a fairly respectable reason for modifying its pledge and continuing the overflights. At his press conference Mr Kennedy repeated the statement he made in the pre-crisis days of September that "we shall neither initiate nor permit aggression in this hemisphere." The rattled Cuban government is not likely to be calmed by this.

Tactfully, Dr Castro was allowed to precede Mr Khrushchev in giving way about the bombers. On Monday, U Thant, the acting secretary-general of the United Nations, received a letter from the Cuban prime minister in which he said he had no objection if the Soviet government took away its "antiquated" property. It is much harder for the Cubans to accept the continuance of American air reconnaissance over their country, but Dr Castro will probably not be so foolish as to act on his earlier threat to shoot down American reconnaissance aircraft.

With the passing of the nuclear storm, there is a growing feeling among some Latin Americans that the calm should be used first, to get some general ban on nuclear weapons in the region and second, to attempt a less acid relationship with Cuba. There is even the belief that Dr Castro's government, after its shaking, might be more amenable. But President Kennedy made it plain on Tuesday that his thoughts are not directed towards any sort of *détente*.

CHINA AND RUSSIA

By Marx Anointed?

ACCORDING to Peking, the Russian bear has come to love its comfort far too much; it is fit for a bourgeois zoo, but never for leading the world through the necessary revolution to communism. Even before the Cuban crisis and the Chinese lunge into India—which served to remind Mr Khrushchev of Mr Mao Tse-tung's dictum that "power grows from the barrel of a gun"—the theoreticians of Moscow and Peking were disputing the sacred texts of Marx, Lenin and the Moscow declarations of 1957 and 1960 as keenly as medieval theologians. Since Cuba, the dispute has grown hotter.

In the current number of *Red Flag*, the Chinese probe deep into their differences with the Soviet Union. They argue that the purity of the revolutionary spirit of Marxism-Leninism is at stake. Had the revisionists (that is, Mr Khrushchev) not been "awed" by the superficial power of the Americans, the Cuban crisis would have yielded a victory, not a defeat. The Russians, though not by name, are portrayed as pacifists prepared to sacrifice the interests of the communist revolution in underdeveloped countries if their own security is threatened. The journal also reminds communists under Russia's influence that the "doctrinaire" attempt to make the Chinese "apply mechanically" the experience of others has "caused exceptionally serious losses to the Chinese revolution."

Pravda countered all this with the Russian case in a page-long article by Mr Ponomarev, a party secretary and a leading theorist, on November 17th. Mr Ponomarev argued that the Albanians talked about peaceful coexistence but were hypocrites because they had pushed humanity towards a thermonuclear war. (If this sounds odd, read "Chinese" for "Albanians.") In addition, the Chinese were indirectly accused of being against the "peaceful normalisation of international problems, different forms of transition to socialism, and the struggle for disarmament." The Russians seem to have no intention of changing their attitude towards the Chinese. Perhaps they feel that they can still turn the economic screws enough to keep China in order.

Meanwhile there has been a direct confrontation of the two points of view at the Hungarian party congress. Mr Wu Hsiu-chan, the chief Chinese delegate, who a fortnight ago had to come to the defence of his Albanian friends at the Bulgarian party congress, found himself playing the same part in Budapest this week, after heavy (and heavily applauded) attacks on the Albanians by Mr Kadar and by the Soviet delegate, Mr Kuusinen. Perhaps Mr Wu's next appearance will be at the imminent Czechoslovak party congress.

COMMON MARKET

In Search of an Author

BY now the meetings between the Six and Mr Heath have begun to resemble a play by Pirandello. In the centre of the stage, clustered around the massive Belgian woodwork of the conference table, sit the ministers and their aides. The tariff charts, the careful agricultural statistics, the detailed policy papers, the fine points with the pencilled query in the margin, all of these constitute the action of the play. Indeed its significance cannot be denied, for out of this drama will emerge an economic reality that will affect the British sheep farmer as readily as it will the French motor car worker.

And so one pays close attention to the surface (though significant) reality of the Brussels stage during the last meeting of the ministers: a general agreement to leave the common market's door open to the African Commonwealth countries that have rejected association; compromises and general agreement on some processed foods from Australia, Canada and New Zealand; the tabling of decisions on important controversial issues—including duty cuts and tariff quotas on dried and canned fruit and salmon. It is all somehow as reassuring as it is, by now, tedious.

And yet beneath the surface dialogue of the play, the actors (as well as the audience) sense another reality, one whose purpose and implications are less clear. There is, to be sure, an understanding that what is resolved in Brussels between Britain and the Six impinges upon the rest of the world. Angry sounds to that effect could be heard on Monday from Paris, where the American Secretary of Agriculture, Mr Orville Freeman, spoke out at a meeting of the Organisation for Economic Co-operation and Development against restrictive agricultural policies in the European community. There have also been candid suggestions from the west Germans to the effect that any associated states recognising east Germany should be denied the privileges of association. And, more explicitly, there was Herr Hallstein's address to the Nato parliamentarians on November 12th, when he said,

What is emerging . . . is not just an economic union. Rather it is a political union, so far limited to the economic and social fields.

When that political union will flesh out, and what form it will assume—in foreign, defence or monetary policies, the redistribution of national income, educational and cultural programmes—is unclear at the moment. But that it really is the culminating point of the drama and the resolution of the repertory in Brussels seems to be quietly understood by all those vitally concerned in the action. It is this reality, much more than the obvious (and important) one concerned with nil tariffs and temperate foodstuffs, that imparts a genuine sense of excitement and history to the proceedings.

The Six Grasp a Nettle

AT Mr Heath's request, the prickly question of the agricultural finance regulations was brought up again during last week's ministerial talks in Brussels, though not between the Six and himself. The Six are again grasping this particular nettle among themselves, and the disagreements within them, latent since their own farm agreement of January 14th, are now in the open.

As explained in *The Economist* last week (page 646), the January regulations gave community agricultural producers—chiefly France—the considerable advantage of selling their surpluses on the world market, with aid from the Community kitty replacing national subsidies from 1970 onwards. Part of the community's funds is to come from the full proceeds of the levies on farm produce bought from non-member countries by community agricultural importers—chiefly Germany. But this last point, though agreed in principle by the Six (and by Britain) has not yet been ratified, and France wishes to make the commitment legally irrevocable for Germany, as for Britain, by including the point in the British membership treaty, which must be ratified by everybody.

Other countries, however, do not feel the same urgency about ratification. Germany and the Netherlands have pointed out that agricultural levies form only part of the total contribution to the community fund, which, according to Article 201 of the Rome Treaty, may raise its revenue also from the common customs tariff. Germany claims, with some reason, that these concrete amounts can only be estimated nearer 1970 when the common agricultural policy is in fuller swing—especially as the community price level for cereals, the key factor in setting the size of the levies, will not be known until next summer. Only later, according to Germany, can the whole picture be seen and a judgment made on whether some members risk paying grossly unfair amounts into the common till.

France agreed last week that the question of an equitable sharing of the financial burden should be studied, though it is more likely that "equity" will be differently interpreted in Paris and Bonn. In the meantime the commission is to study the question, and to give its advice on December 3rd and 4th. For its part, the commission appears to be thoroughly anxious to find a speedy compromise within the framework of the January agreement. Although it gave advantages to France, the commission favoured this agreement because it marked the imperfect beginning of a genuinely common agricultural policy with a community-earned communal fund. Above all, it fears that the January settlement may be thrown back into the melting pot—a major setback for the Six and probably also for the British negotiations.

Mr Heath himself does not return to Brussels until December 10th. But Britain's interest in the outcome is obvious, particularly as, in August, M. Couve de Murville threatened to repudiate the tentative agreement on temperate foodstuffs if he did not receive satisfaction on the question of the financial regulations.

The Economist

NOVEMBER 22, 1862

THE GAROTTERS

LONDON suffers bitterly from the garotters, and is half inclined to revenge itself by smothering the official life out of the Director of English Convict Prisons, Sir Joshua Jebb. No man feels quite safe alone in the streets after dark,—and as it is impossible to revenge yourself for a state of insecurity on the possible criminals who inspire the awe,—the many who naturally resent the *idea* of sudden seizure from behind, of convulsive chokings, and loss of property, and perhaps health or life, and the few who resent the actual violence and depredation and who have lost sight of their criminal, unite to lavish opprobrium on the chief of our convict-treating executive. This is perhaps rather hard on Sir Joshua, since, no doubt, London necks might be in considerable peril, especially in November fogs, without any fault whatever on his part, and even though crime were diminishing rapidly in England. The immediate fault probably lies more with the police system than with our policy towards criminals. And if it could be shown that the criminal class is really diminishing, or even not increasing, no doubt Sir Joshua Jebb might be absolved from all responsibility for this kind of crime, though not from the charge that he omits to do much which he might do to diminish it. . . . The great charge against the English system is, that it is so exceedingly badly organised as to lose sight of criminals once discharged entirely,—and it is, in fact, well known that the convicts discharged form a most important nucleus of the class committed to county prisons,—not only educating many of them who are apprehended and committed for minor offences, but themselves, under new names and unrecognised by the police, constituting no small portion of the number of offenders. If the proper machinery were at work to identify any man who had once been discharged from a convict prison, wherever again he might turn up, there would be far fewer of these summarily punished offences, numbers of which are committed by men who would be committed for trial and convicted as hardened offenders, if they were recognised.

PRIVATE MEMBERS' BILLS

Wasted Opportunities

BECAUSE of the pressure on parliamentary time, only seven or eight of the twenty MPs who are lucky in the ballot for private members' bills generally have any real chance of seeing their measures reach the statute book. This year, by coincidence, Labour MPs drew the first three places in the ballot, followed by an unbroken succession of Conservatives. Two of these three Labour MPs seem to have thrown away their opportunity of being successful legislators by sponsoring measures that are either far too complicated or far too blatantly political to be properly dealt with under private members' procedure.

Mr Howell, at the top of the list, is to introduce an ambitious bill that would enable leaseholders of residential property to buy its freehold as of right. It is admittedly rather better drafted than most amateur proposals for leasehold enfranchisement. While envisaging that the price for the freehold should *prima facie* be not more than twenty-five times the ground rent, it seeks to confer a wide discretion on the county courts to fix a higher price for it should the conditions warrant. Matters which the court would have to take into account in fixing the price for the freehold are the date of the original granting of the lease, the actual ground rent, the length of the unexpired term, the way in which the tenant has maintained or improved the property, and any change in money values between the granting of the lease and service by the lessee of his intention to buy the freehold. Six months' notice of this intention would have to be given and there would be no right of purchase if the lease had less than five years to run. Mr Howell has had the aid of Sir Frank Soskice in drafting his bill, but this is pre-eminently the sort of complicated and controversial measure that really cannot be handled successfully by a private member. It is interesting mainly as a preview of the sort of legislation that a Labour government might introduce.

Mr Lipton, third on the list, is to introduce a bill which proposes (with some justification) that widowed mothers should not have any deductions made from their pensions when they earn extra money by going out to work; and which would increase from £3 10s. to £4 10s. a week the money that widows without children are allowed to earn before deductions from their pensions are made. But Mr Lipton's bill then goes on to some blatant electioneering by proposing that the pension of the "ten shilling widow" should be doubled. These are women who were entitled to their ten shillings a week pension from pre-Beveridge days, but were rightly not made eligible for extra widows' pensions (as distinct from other social insurance benefits) after these reforms, because they were both sufficiently young and sufficiently unencumbered with children to earn their living in the normal way. There is no more reason for giving an extra ten shillings a week to them than there would be for giving an extra ten shillings a week to all spinsters.

Grounds for Divorce

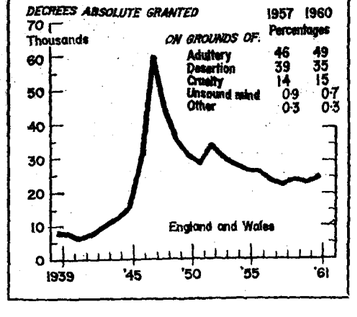
IN second place on the list of private members' bills. Mr Abse's proposed divorce bill is good as far as it goes. One of its objects is to make reconciliation easier. At present, a divorce cannot be granted on grounds of desertion if during the desertion period of three years the husband and wife live together even for a short time in an attempt at reconciliation that does not succeed: the three years then have to start over again. In line with a proposal of the royal commission on divorce, Mr Abse's bill would allow them to live together for a month. Another—but more controversial—proposal goes near to the heart of the matter. Mr Abse suggests that, even if there is no "matrimonial offence," a marriage that has broken down so irretrievably that the parties have been living apart for seven years should be dissoluble on the petition of either.

The most sensible basis for divorce law would surely be that the courts could dissolve any marriage if they felt convinced that it had irretrievably broken down; but that otherwise divorces should not be granted at all, instead of being easily arrangeable between consenting parties merely by the husband spending a sordid weekend in Brighton. This was the reform suggested by Lord Walker in his dissenting note to the report of the royal commission on divorce. Mr Abse's suggestion, by departing from the present idea of divorces based almost wholly on "matrimonial offences," might be a worthwhile step towards eventually establishing this sort of system.

There is one other point that should be recommended to his attention. At present divorces on the ground of incurable insanity—the one clear permitted departure from the doctrine of the matrimonial offence—are becoming much harder to obtain. Even if the law's stipulation of five years' continuous care and treatment is fulfilled, which is rare in these days of informal admission to hospital, it is increasingly unusual for a person to be deemed "incurably of unsound mind." Yet the mental illness may still be serious enough to cause a complete breakdown of the marriage, usually because of the delusions it produces. In these circumstances, the other party's only recourse at present is to petition for divorce on the grounds of cruelty. Then, however, he or she may be countered by the McNaughten rules, which have been held to be a good defence to a cruelty allegation. Thus, a person can be found mad enough not to know that he was being cruel or that his cruelty was wrong, but not mad enough for a spouse to obtain a divorce on the ground of insanity. This is something Mr Abse might well look at—always provided that we have to continue to put up with the present law and cannot adopt *in toto* Lord Walker's sensible principle.

DIVORCE

The ups and downs in the number of divorces partly reflect changes in legislation (e.g. the Matrimonial Causes Act of 1937; the Legal Aid and Advice Act of 1949 and later changes in the income limits under it) and partly the upheaval in married life caused by the war. As regards grounds for divorce, there is no clear difference between the sexes in adultery and desertion, but cruelty occurs mainly in decrees granted to the wife.



Conservative Also Rans

BELOW these three Labour MPs' bills, a succession of Convervative MPs are to introduce measures that may well have departmental backing. Mr Speir, who drew fourth place in the ballot, is sponsoring a bill which would increase the powers of local authorities to spend money on projects and schemes that at the moment require the sanction of the Minister of Local Government. The main effect of the bill would be to streamline procedure, and to allow the equivalent of up to a 1d. rate to be spent on items mentioned in an attached schedule. Most of them will probably be sensible. Mr Cooke is sponsoring a bill to provide further protection for the surroundings of historic buildings. It provides that where any planning decision has to be taken within half a mile of a building scheduled as Grade I, the owner of the building must be informed of the development proposals, and that his views must be submitted with others to the Ministry of Local Government to be taken into account when a decision is taken. Miss Vickers proposes some worthy improvements in the guardianship of infants.

Mr Biggs-Davison, seventh in the list, is introducing a minor bill to regularise the practice of consular officers in the United Kingdom in administering oaths and performing other legal duties on behalf of their countries. This practice is recognised by treaty but at present has no statutory authority. Sir Harry Legge-Bourke, eighth in the list, is introducing the bill to provide for the compulsory statutory registration of estate agents which was discussed—and criticised—in *The Economist* of November 10th. It could far too easily become a charter for estate agents' restrictive practices. Mr Alan Brown has a worthwhile-sounding bill which proposes to give the Ministry of Health power to control the standards of private nursing homes by regulation. Sir Charles Mott-Radclyffe proposes to make the redemption of certain corn rents a simpler operation, and Mr Henry Price, eleventh in the list, wants to impose further limitations on the discharge of oil sludge into the sea. This is already regulated by an Act of 1955; but the present bill, which commands wide support in the House, would strengthen its provisions.

THE LAW

Juries Up to Date?

THE announcement by the Home Secretary that he intends to appoint a departmental committee to review "a number of general questions" regarding jury service, including the representation of women, is welcome. Such an inquiry has not taken place for half a century, and there are a number of anomalies and anachronisms

connected with this venerable institution which could profitably be swept away. The qualifications for jury service in Britain owe more to the 1820s than the 1960s. To be a juror a man must be either a £10 freeholder, a £20 long leaseholder, a householder in the valuation list of £30 in London and Middlesex (or £20 elsewhere), or occupy a house with not less than fifteen windows. In the past, this property qualification has given juries a distinctly middle class tinge, but the rise in property values has enabled many working class people to serve on juries. When the new valuation list comes into force next year the number of potential jurymen will be greatly expanded, and the property qualification will have become more irrelevant than ever. It will still, however, limit the number of women eligible for jury service. More men than women occupy property, and accordingly most jurors—generally nine or ten out of each twelve—are men.

Jury service is one of the last survivals of the medieval principle of compulsory public office, and over the years a large number of exemptions have been established. Practising barristers, peers, MPs, veterinary surgeons, the staff of the Inland Revenue and clergymen are exempted; lunatics are disqualified, and people with urgent business excuses are sometimes let off. In the past jurymen were expected to give their services for nothing; this could involve them in heavy financial loss. Now, under the Juries Acts of 1949 and 1954, payment is made for jury service. Anyone who is summoned and attends the court, whether he actually serves or not, is entitled to draw travelling and subsistence allowances, and to receive compensation for loss of earnings or for additional expenses up to a limit of £1 for four hours or £2 for a longer period in one day.

A reasonable reform would be to abolish the property qualification and make all those on the electoral roll liable for jury service. A simple literacy test should be required. At present, inability to read or write is not a disqualification; but if it comes to light it is frequently (and fortunately) taken as an excuse for non-service in cases where jurors might have to study documents. In place of the vested interests of certain professions who have exemption as of right, a more flexible rule of wider application should be introduced, excusing those from jury service who show good cause why they should not serve.

UNITED STATES OF AMERICA

EIU Quarterly Economic Reviews covering 57 countries or groups of countries.

The Review draws together the threads now weaving a brighter backcloth for business activity in the short term. But it warns that sustained economic health next year still rests uncomfortably on the success of the proposed tax cut in Congress. Trends in overseas trade and payments—among them the trade expansion act and recent reinforcement of dollar defences—are also examined.

KENYA

Stitch in Time

SOME time before the Colonial Secretary, Mr Sandys, intended to tell the world about it, a leakage in the *East African Standard* of November 17th revealed to all that the Governor of Kenya, Sir Patrick Renison, had resigned—an action, Sir Patrick explained on the 21st, not of his own choosing. With all due respect to Sir Patrick, a pleasant man and a perfectly competent administrator, the main criticism that can be made of Mr Sandys's action is that it has come so late. The new governor, Mr Malcolm MacDonald, may possibly turn out the kind of experienced troubleshooter Kenya needs; this need has already existed unfilled for too long. In a somewhat petulant statement on Sunday night Mr Sandys admitted that his predecessor, Mr Maudling, had decided upon replacing Sir Patrick "in the final stage of Kenya's advance to independence"; Mr Sandys apparently thinks that "the turn of the year would be the appropriate time" to change governor.

Governor going

But why not right now? Why not six months ago? Sir Patrick has proved himself a good rule-book governor, but what Kenya needs is a skilled negotiator able to get in the thick of it and try to bring enough of Kenya's politicians together to form a stable government before independence. That is to say, he must do what the United Nations set out to do in the Congo—but now, not after the collapse.

The British Government is proving unnecessarily slow in other ways. The Kenya constitutional conference in April ended with a framework constitution and a coalition government. The constitutional details were to be filled in, after inter-party consultation, by July 31st this year; the Kenya African politicians have themselves to blame for the fact that they have not yet been settled. But the British Government took on the task of appointing five commissions to decide on regional and constituency boundaries, income and expenditure, and the secessionist demands of the Somalis in the Northern Frontier District. It has been known all along that these decisions must be made before elections can be held ("autumn elections" was the catchphrase last spring), yet the NFD commission was not in operation until the middle of October. Is Sir Patrick or the Colonial Office in London to blame for these delays? None of the commissions has yet reported.

Because of the delays Mr Sandys seems to favour elections in June (independence cannot then be far behind), but almost everyone in Kenya wants them sooner, and Mr Jomo Kenyatta sooner than that. Elections too soon might mean making errors due to haste, but elections delayed might increase the danger of violence from impatient youth-wingers, as well as prolong the jittery run-down in the economy. Perhaps Mr MacDonald can sort some of Mr Sandys's problems out.

GAMBLING

Rien Ne Va Plus?

AFTER just over a year of operation, the Betting and Gaming Act is now coming under fire from all the expected places, as well as from some unexpected ones. It is obvious from common observation that betting shops have proved to be a booming business, and that the newly-legal device of setting up "non-profit-making" clubs has enabled some people to make lush ancillary profits out of staging poor man's bingo and rich man's *chemin de fer*. It is probable that gambling turnover in this country has increased substantially; although all statistics of this turnover are wildly suspect, some people think that the increase has been by more than one quarter, to over £1,000 million a year. This is idle money, the argument runs, ten times as much as the country spends on much worthier objects, providing nothing and producing nothing, and corrupting the honour and pattern of life of formerly diligent Britons.

Off the street

Idle the money may be, but it would be wrong to think that it could be diverted to anything more useful by, for instance, revoking the Act and driving gaming back under the counter and on to the street corner; when it is under the counter its moral effect (for example, in inducing rival

A high-speed propeller under test in Vosper's Cavitation Tunnel at Portsmouth

This revolution is above the water

When HMS "Brave Borderer" was commissioned in 1960 it meant that a revolutionary form of marine power unit had been accepted. Her three Bristol Siddeley lightweight Proteus gas turbines had completed three years of intensive trials with the Royal Navy and passed with flying colours.

Now the way was open to build faster, more compact vessels because the Marine Proteus packs more horsepower per cubic foot of space than any other marine engine. It also has the additional advantage of being able to produce full power within two minutes of a cold start over a wide range of climatic conditions.

This Bristol Siddeley marine engine has now been ordered by the navies of Britain, Germany, Denmark, Sweden, Italy and the United States—for a range of vessels from patrol boats to hydrofoils.

For larger ships, such as frigates and destroyers, Bristol Siddeley have now developed the Marine Olympus. Although giving five times the power of the Proteus, the Marine Olympus has the same compactness and quick starting characteristics.

Bristol Siddeley Engines Limited, Central Office: Mercury House, 195 Knightsbridge, London SW7. Power Division: PO Box 17, Coventry. Aero-Engine Division: PO Box 3, Filton, Bristol.

gangs of street bookmakers to stick knives into each other) may be thought to be somewhat worse. Moreover, the supposed £1,000 million a year is not pre-empting anything like £1,000 million a year of real resources; it is, in fact, almost a form of saving (in the sense of not being a consumption of resources) for the nation, whatever the punter may think on his shirtless way home. As to its corrupting effect on the honour of Englishmen, the bingo parlour is not a very inspiring development of the mid-twentieth century; but one doubts whether the moral tone of the country would be greatly improved by legislating it away.

The right thing to do now is surely to tax off the cream of this boom instead. There is nothing to stop the Government from taking a house percentage from the kitty every time it passes—either by a turnover tax on betting or by heavy annual licensing fees for everybody who operates any form of gambling establishment. Special taxes are already imposed on pool and tote betting, and on bookmakers at greyhound racing tracks; next April Mr Maudling should certainly impose similar taxes on other branches of the industry as well.

MOROCCO

Constitutional Clash

Morocco's opposition party, the Union Nationale des Forces Populaires, announced on November 15th that it would boycott the constitutional referendum that King Hassan is to hold on December 7th. The UNFP demands that the constitution should be made by a constituent assembly, not handed out from the palace—as has been done. Spurred by his fear of Algeria's contagious socialism, the king took the country by surprise in proclaiming his constitution a month earlier than expected. Its existence was announced on November 6th and its outlines made known last Sunday.

The design for parliamentary government is Gaullist. Like President de Gaulle, the king presides at cabinet meetings and has power to dissolve parliament. He may also seek popular mandates by referendum, provided the question at issue has first been debated in parliament. Such powers, until they are used, are hard for the man in the street to judge. The one simple fact that the simple voter will cherish is that the chamber of representatives is to be freely elected; and that free parliamentary elections are promised without delay.

The king moved quickly when he had to abandon his hope of coaxing the UNFP to combine with the Istiqlal (government) party to give the constitution a backing. These hopes were not entirely unfounded. Some members of the opposition believed that to co-operate now would strengthen their own hands later. Only three weeks ago the UNFP's mild Mr Boutaleb joined the government as under-secretary for information. Such key men as Mr Balafrej of the Istiqlal, and Mr Bouabid of the UNFP, are known to have been at odds with extremists in their parties. The obstacle was Mr ben Barka, who never swerves from his goal of becoming first president of a Moroccan republic. His claim that the motor-car accident in which he was injured last Saturday was engineered by a police car with intent to kill him would be difficult to prove in a country whose road accident rate is so high. But his party is making much of it. The sparks are bound to fly in the referendum campaign, beginning now.

FREE TRADE

Alternatives to Europe?

Professor James Meade, the professor of political economy at Cambridge, is sometimes cited by anti-marketeers as perhaps the senior British professor of economics who is in some way "against the common market." In a new 5,000 word prologue to a revised version* of his Hobart paper on the subject he has now made his position a bit more clear. On political grounds, he is what might be called a liberal nostalgic for the Commonwealth. On economic grounds he agrees that, while "the purely static calculus of commercial gain and loss is probably very evenly balanced," the dynamic effects—the "free trade advantages of specialisation, large-scale markets and a competitive spur to efficiency on a very substantial scale"—could tilt the short-term balance of advantage for Britain itself in favour of going in.

But Professor Meade's long-term aim is to see "the formation of a huge free-trade community by the highly-developed, industrialised countries of the free enterprise world"—a community that would impose no tariffs at all on imports from anybody. He sees a "very strong case" for saying that British entry into the Six might be one way of enabling us to work slowly (very slowly) towards this idea; but he believes increasingly that the final terms that we will be able to get at Brussels "may well fall far short" of those that we need to ensure that the EEC will in fact work in this way. He therefore pleads that Britain should be considering two other possible alternatives.

One of these is that Britain, together with the Commonwealth and EFTA countries, should take the lead in proposing multilateral trade negotiations through GATT, designed to try to advance towards free-trading policies by all the developed countries of the world. He does not devote very much space to this alternative, and most people will believe that present Commonwealth attitudes would make it unrealistic to do so. His second alternative, which he thinks that Britain should "consider very seriously" if we fail to get into EEC, is a unilateral advance towards free trade by Britain itself. He would like a Britain going flat out for economic expan-

sion, with virtually complete free-trade policies on nineteenth century lines, with the balance of payments protected by an initial devaluation of sterling (and thereafter by floating exchange rates), as well as by "a really effective policy of restraint for money wage rates" (made morally more justifiable by higher taxes on owners of property). Specifically included in his free-trade policies would be a repeal of the 1957 Agricultural Act, so as to "impose some moderate upper limit" on the amount of subsidies paid to British farmers. If Britain fails to get into the EEC, these will be the right sorts of policy to urge on British politicians; but they are singularly unlikely to be the sorts of policy that we will in fact get.

REDUNDANCY

Paying for the Sack

THE cause of a national redundancy payments scheme—which *The Economist* has been pleading for some years—has now gathered to itself a group of fervent apostles. The latest and one of the most thoughtful of these was Mr Iain M. Stewart, at the Industrial Co-Partnership Association last Tuesday. Mr Stewart's basic argument is the right one: that by paying people adequately for becoming unemployed it should be possible to achieve at once a social objective—by removing the stigma of the sack, the stopped hire-purchase payments, and the traditional misery of the unemployed state—and at the same time to increase industrial efficiency.

The most ridiculous of Britain's economic dilemmas is a shortage of labour for the expanding trades, existing alongside a surplus of labour in many traditional occupations. Even in some industries that pass for efficient in Britain, foreign observers are often stunned at the number of people who simply do not have enough to occupy their time. This is due (as well as to plain managerial incompetence) to the fact that "good" employers are plain scared of losing their reputation as such—even of facing a strike—if they lay off unneeded workers. Only by taking the fear out of unemployment can this reaction to increased efficiency and mechanisation be avoided.

Mr Stewart proposes a national scheme for redundancy payments and re-training, financed by a payroll tax (and perhaps also by workers' contributions). This trust, he suggests, should be partly administered by the Trades Union Congress, in order to give union leaders an active part in ensuring that their own members shift jobs. The trust would be matched by the establishment of a contract of service between all workpeople and their employers (perhaps along the lines of the Government's present thoughts), and by the imposition on companies of an obligation to keep their employees informed of changing policies. Some parts of this plan are obviously embryonic and half-formed: but the more people are persuaded to think about it the better. It would seem that the current of opinion both in big business and in the big unions is already swinging towards a progressive view on redundancy pay: while the British Employers' Confederation and the TUC seem to have listened with interest on Wednesday to the Minister of Labour's sound views on training. As ever the opposition—or the ignorance—stems from the small firms and small unions that occupy positions of such importance in the associations of both sides. Perhaps, if they are told often enough, they will come to realise that it is precisely themselves who have most to gain from such a scheme.

SHAW'S ALPHABET

Ploys Unpleasant?

FIVE years after the court judgment which deprived the Public Trustee of most of the money left in his care by George Bernard Shaw for the revolution of the English written language, the old playwright's desired alphabet, 48 letters long, has been published. Together with it has appeared a Penguin edition of *Androcles and the Lion**

* The Shaw Alphabet Edition of Androcles and the Lion. *Penguin Books*. 3s. 6d.

transliterated from the Roman to what will become known as the Shavian. Much is claimed for it; it is said that it will reduce the space required for printing, is quicker to read and write and avoids the commonest difficulties of normal English spelling; it will save money, advance child reading by an appreciable time and generally make life easier all round.

Double lines = between pairs show the relative height of Talls, Deeps, and Shorts. Wherever possible, finish letters rightwards; those starred * will be written upwards.

Tall Deep			Short Short		
peep	𐑐 = 𐑚	bib	if	𐑦 = 𐑭	eat
tot	𐑑 = 𐑛	dead	egg	𐑧 = 𐑮	age
kick	𐑒 = 𐑜	gag	ash*	𐑨 = 𐑩	ice
fee	𐑓 = 𐑝	vow	ado*	𐑸 = 𐑳	up

Unfortunately, of these claims, only the first, the saving in space, can be supported. It is acknowledged that Shavian could never replace Roman, only supplement it, gradually coming to take a more and more important part over the course of generations. During the change-over, books would have to be printed in both Shavian and Roman types, which hardly looks like a saving of money; children would have to be taught both alphabets (with their strikingly different main and ancillary characteristics) in order to be able to use books published before Shavian, which hardly looks like a saving of time; and it is partly phonetic, with no standard spelling, which would mean (supposing the continuing lack of a British equivalent of L'Académie Française) widely differing images between differing dialect-speakers of the same word—which hardly looks like avoiding the pitfalls created by the absurdly complicated way in which words in the English language are now spelt. If, however, the new style were taken up by a coterie of enthusiasts, it could just serve a useful purpose as the forerunner of the smaller reform which some day—for logic's sake—has got to come.

Perrier au naturel

Dine with a gourmet—and a bottle of Perrier stands next to the wine. For Perrier, taken by itself, enhances the enjoyment of any perfectly planned meal.

(Frankly, if you dine with a gourmand, Perrier will be there too. Perrier civilises a rich repast, enlivening one that's too long, alleviating one that's too heavy.)

Go anywhere and you'll find Perrier being used as a mix—with whisky or cognac or blanc ordinaire. Perrier, after all, is the finest table water money can buy. The purest sparkling water in the world.

HOME REPORT

Members of the editorial staff and local correspondents report on the life and happenings in and around Britain

Town Clerks or City Managers?

FROM OUR SPECIAL CORRESPONDENT

URBAN redevelopment is the new fashion. All over Britain large towns are seeking space to put their surplus population, to redevelop their slums; small towns are looking for people to man the new factories that should bring them a fair share of prosperity; shopkeeping communities are trying to give a better service (as car ownership grows, the competition is more than ever between rival shopping centres, rather than between rival shops within a centre). And everyone is battling with the traffic that all this generates. Almost 300 large urban authorities—over a third of all those in Britain with a population of over 50,000—are at least thinking about how to redevelop their town centres away from the familiar Victorian pattern of the High Street, where traffic, shops, Fords and schoolchildren so incongruously mix. And at the centre of each one of these schemes stands a small group of people to whom—perhaps because of their own immaculate self-effacement—far too little attention has been paid. There are 431 town clerks in England and Wales—which means clerks to local authorities with the dignity of county boroughs (83 authorities), metropolitan boroughs (29 authorities) and just plain boroughs, and with populations between 5,000-minus and 600,000-plus. (There are also, of course, many more clerks to county, urban or rural district councils.) But the first comprehensive study of who town clerks are and what they do is published this week.*

The town clerk's job has grown up, in typically English fashion, very very slowly since its vague origins in the fourteenth century. Bewigged at civic functions, the clerk must often appear a less important figure than the gold-chained mayor behind whom he walks—and just as overlaid by the weight of tradition as the worthy shopkeeper or trade unionist who for his year symbolises the city's pride. But, like so many seemingly ancient British traditions, those of the town clerk's office had their true beginnings in the cities of the later nineteenth century. Only in 1929, after a royal commission, was the clerk's civic place truly delimited—and it is still changing fast. Amid a mass of information—and sometimes concealed amid an excess of generalities—Mr Headrick makes a sturdy case for saying that it is not changing fast enough. Above all he points out that, in borough councils with no strong ruling party, and with no strongly dominating personality, "the consistent overall policy, the integrated programme for borough or city improvement, is not there." The unscholarly observer can venture to add that, in such boroughs, strong town clerks have sometimes most notably overcome the deficiency.

The town clerk's job is, of course, a fiendishly hard one. He is cabinet secretary, but infinitely more exposed to local political conflicts and the sniping of the local press than any national government servant. He is the council's policy co-ordinator (both between the various urban services and between urban and national officialdoms), a mine of information for the councillors—and often, one must gratefully record, for visiting journalists—and the senior legal officer of his council. This last responsibility is, in order of traditional priority, the most important that a town clerk holds; and it is from this fact that stem the grounds for such criticisms as one can make of the system of appointing town clerks.

Basically, they are solicitors, who have come up through a local government legal department: outside London all clerks of boroughs with over 60,000 population are solicitors. This means two things: that brilliant local government officers in other departments have next to no chance of getting the top job, and that most town clerks have had a training which (however well they may succeed in surmounting its limitations) is depressingly narrow. This may soon improve. Since the democratisation and expansion of the universities, and the granting of greater concessions to graduates by the Law Society, far more solicitors are now passing through university: Mr Headrick shows that a far higher proportion of those now on the ladder to town clerkships are graduates than is the case with the present incumbents. There is, of course, a strong case for putting the highest local government position in the hands of the man who takes legal responsibility for the council's orders, who must prepare its case for presentation both before the courts and before government inquiries, and who will prepare any bill that a local authority may wish to present to parliament. But there is now a vital case for securing as town clerks the best administrators, rather than the best lawyers: as the executive and constructive side of planning falls more and more heavily and urgently on local authorities, the argument strengthens for separating the functions of the chief legal officer and the chief executive of a council.

Town Clerks' Professions

	per cent
Solicitors:	82.4
Barristers:	2.9
Accountants:	3.9
Others:	12.1

The non-solicitors form a majority of town clerks only in the 86 boroughs with less than 10,000 population: they appear again with 22 per cent of clerkships of metropolitan (London) boroughs. 64 per cent of town clerks began in local government as assistant solicitors (juniors in a town clerk's department). 35 per cent of town clerks have university degrees: all but 1 per cent of these are solicitors.

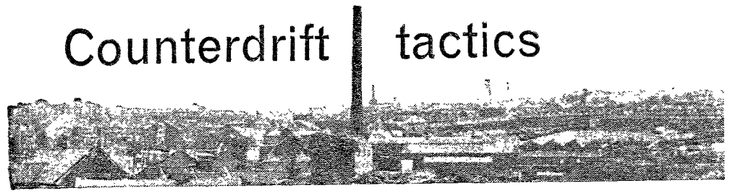
So far, the present system works rather better in practice than in theory. No doubt there are dud town clerks: but, despite its members' professional blandness, they are sufficiently competitive to ensure that a dud extremely rarely gets to the top—where, of course, the rewards of status are immense. A leading citizen at thirty-eight (the average age on appointment), called Sir by a swarm of junior officers, hob-nobbing with the local councillor-ladyship (or, according to taste, with the local councillor-trade unionist), the clerk's eminence in his own bailiwick is godlike. The money is good, too (Mr Headrick's book is out of date here: there was a 12½ per cent salary increase in October, 1960). In a borough of under 10,000 people the town clerk starts at £1,040 a year: but at 60,000 population the ceiling is £5,175, and various registration, election and other legal fees can add another £1,000 in a lucky year.

But it may well be the pleasures (and high responsibilities)

* The Town Clerk in English Local Government, by T. E. Headrick. Allen and Unwin. 220 pages. 25s.

of the life that are the great reward. Town clerks in even a small authority will practically never contemplate a subordinate job, however much more highly paid, elsewhere: indeed there seems to be a trend, contrary to economic rules, to move to pleasanter jobs against the direct draw of cash rewards (a casual acquaintance with the town clerks of some middle-sized, expanding, southern towns suggests that these, and not the highly-paid masters of some murky northern city's vast machine, are the top talents of the profession). If this is so, town clerks are accurately reflecting the values of their society and, by the administrative talents of the best of them, accentuating that southward drift which is more fully dealt with below. Which, for a radical, makes it tempting to suggest that the time has come when professional managers, rather than gentlemanly lawyers, would be the ideal chief executives for the city of the future.

Counterdrift tactics



THE latest figures for the issue of industrial development certificates only confirm statistically what has been apparent to the naked eye during the past financial year. The drift to the south-east of firms and workers continues: of all development, the London area alone had the largest share, with 7.1 million square feet, well ahead of the northern region, with 5.3 million: and even that was appreciably better than Wales, whose additional industrial floor space for the whole principality was less than 2 million square feet. The Government's decision now to initiate a comprehensive survey of development trends is nonetheless welcome for being puny in relation to the tidal force of the flow into the "coffin."

One of the suggestions to be explored in terms of the survey is that new areas of industrial concentration should be developed, offering facilities and attractions in adequate rivalry to the south-east. The Government has come rather late on to this scene, but has still managed to achieve prominent public utterance of a line which has been pursued more self-effacingly by less official bodies for 20 or 30 years. Possibly the development associations which have for so long been trying to achieve just this result will not mind being upstaged, if only because it will show that notice is at last being taken of them. With one exception, that of Northern Ireland, they have all along worked without the sort of co-operation which might, by now, have made some impression on their unemployment and denudation had it been forthcoming.

There are, as far as can be discovered, eight of these associations operating in Britain from, roughly, the development districts as defined in June: Scotland, the north-east, north, mid and south Wales, Merseyside, the south-west and Northern Ireland. Each has its own problems, peculiar to itself, but they share certain obstacles to their proper advance into that legendary state of affluence of which the south-east is the pattern. All of them are areas that once prospered on primary industries, now declining. All of them suffer more or less from transport inadequacies. All of them suffer from the gearing of the whole economy to its most flourishing part, so that measures designed merely to contain inflation may result, for them, in real hardship.

In their organisation the associations are similar: a small permanent staff will be backed by the membership and subscriptions of a large number of industrialists, trade unionists, bankers, local authorities, chambers of commerce, other corporate bodies and individuals. They are non-political, or perhaps non-partisan. What pressure they muster must be exerted through MPs and through what doors may be found open in the civil service—notably the Board of Trade which, though it has no mechanism for arranging liaison or co-ordination between the various development councils, is anxious to take note of their opinion (backed as it is by a vast reservoir of voluntary expertise) when matters affecting industrial development in their areas arise. This fund of experience and advice is the strongest weapon in the councils' armouries, putting at their disposal the kind of information about their regions which would otherwise require intensive research on a scale quite outside the scope of their incomes (all of which comes from subscriptions and is, considering their assumed responsibility, extremely low: in no case does it exceed £100,000, and in most of them promotion, research and administration are carried out on budgets which would not satisfy the household needs of a Top Person in London).

The specific task of a development council is, broadly, to stop the drift and then to reverse it. This means initially the expansion of existing industry, if it is not patently dying on its feet (and not all the councils are as realistic in this respect as they might be).

Ideally it involves information, practical aid (in the form of planning rather than cash), the capture of new markets (there are increasingly frequent safaris to North America, Scandinavia and western Europe) and the smoothing away of the social obstacles which movement from declining old to expanding newer industries involves. Secondly it means the persuasion, by every means short of blackmail or physical force, of the reluctant businessman away from his Mayfair office to see for himself the advantages in terms of labour, sites, rates and (less positively) services, which most of the regions undoubtedly possess over the south-east: like the job applicant without paper qualifications but with plenty of talent, once they get as far as the interview stage they are often successful. All of this is uphill work: Scotland, for instance, must find an extra 40,000 jobs a year—15,000 to absorb its new and unemployed labour and 25,000 for the men who are being laid off from mines and shipyards.

The reconversion of the regions is, in fact, going ahead at a much better pace than is generally acknowledged: Northern Ireland has managed to persuade 180 new firms into the country since 1946, many of them American (and the Scots have made a specialty of Americans, too). But the Northern Irish Development Council is in the advantageous position of being a department of government, financed by direct grant (£40,000 a year) and able to get an answer within days to questions about the amount of grant available for the setting up of a new factory which in Great Britain may take months of percolation through the Board of Trade and its off-shoots. Yet others, notably the North East Development Council under the driving enthusiasm of Mr George Chetwynd, do very well for themselves, cajoling from the Board of Trade cash for grants, loans, the erection of advance factories; and themselves providing continuing service to the new investor. There is increasing competition between regions for the industries seeking fresh fields, with complaints of Irish body-snatching from some British regions; under Westminster's dispensation approved loans and grants amounted to £18.5 million in 1960 compared with the £9 to £9.5 million spent annually in the same way by the Northern Ireland government.

Whether the country can continue to depend on the goodwill of bodies such as these is a question easily answered: it cannot, if only because the major policy decisions affecting the unfortunate regions (such as railway closures, delays in road-building, refusal to impose differential fiscal measures on varying regions) are all made in London. Even the Scots (and to a lesser extent the Welsh) who have ministers and civil servants of their own say that the last word invariably rests in Whitehall.

LETTERS

Consumer Protection

SIR—I quite agree with your remark (November 17th) that "The strength of current . . . legislation about short weight . . . lies in the efforts that local authorities put into enforcing it." The future of the weights and measures inspectorate is far more important than the cluster of individual rules in the Weights and Measures Bill dealing with methods of selling vanilla pods and single toffee apples.

The role of the inspectorate should be increased. Already many weights and measures inspectors are taking action under the Merchandise Marks Acts. This practice should be extended throughout the country. At the same time I would like to see the inspectorate given specific power to bring cases under the Sale of Goods Act (1893) or to "maintain" important cases under this act that have been started by aggrieved consumers. These changes would transform the weights and measures inspectorate into a local consumer protection service, which is what it should be. Incidentally this bill provides an admirable opportunity for changing the name of the inspectorate so that it is officially known as the Local Consumer Protection Service. "Weights and Measures" has an awfully dull sound.

I wonder, however, whether you are right to give so much importance to a proposed law to stop private guarantees depriving a shopper of his rights under the Sale of Goods Act. I contemplated trying to introduce this sort of bill in the last session. I turned to another aspect of consumer protection when I received legal advice that signing one of these private guarantees presented by manufacturers or traders would not in fact stop an angry and determined shopper from getting the protection given by this act. I was advised that this vital point has never been tested in the High Court in the 69 years that this law has been on the statute books.—Yours faithfully,

PHILIP GOODHART

House of Commons, SW1

Cuba

SIR—Week by week you entertain your readers with a survey of world affairs and advise the rulers and statesmen of other lands as to the course they should pursue in the difficulties with which they are confronted. But is there any check on what you previously said on the same subject?

Under the heading 'Cyclone Cuba' on October 10th *The Economist* referred to the dangers which might ensue if the Americans concluded that they had won a decisive victory in the 'contest of wills' and proceeded:—

> If this interpretation were adopted by Mr Kennedy, certain conclusions would inevitably be drawn in Washington. The Americans would decide that they could press ahead with their demand that the Russian missiles already in Cuba must be dismantled, and if necessary enforce their will by military action. . . .
>
> If Mr Kennedy is really as alarmed as he says he is by the arrival of Russian missiles in Cuba, the reports that he would like to winkle out those that got there before the blockade was imposed may yet receive a grim confirmation.

Well, is that not exactly the line taken by Mr Kennedy? Did he not demand, under threat of action, the removal of the missiles already in Cuba? It would thus seem that Mr Kennedy took a course which *The Economist* plainly regarded as perilous; but what does it say of him in its publication of the following week (November 3rd).

> He [Mr Kennedy] played his hand as a strong hand should be played: the bid called exactly, the moves unhesitating, the objective, once stated, adhered to. . . . Mr Kennedy thereupon showed that he knew not only how far to go, but precisely where to stop.

Of course nothing succeeds like success and this may explain much in the philosophy of *The Economist*, but the reader is left to meditate on a further passage in the same issue:

> But face can be lost and won again, words eaten and forgotten, faster and more easily than logical minds suppose.

The Economist should know!—Yours faithfully,

JOHN TONKYN

Pietermaritzburg

Railways

SIR—Your observations on the "not so little budget" included a timely warning against relying too much for a general economic revival on an "awkwardly seasonal industry" and against ignoring the implications, in terms of "real resources" and indirect costs, of a sudden cheapening of the cost of motoring. Much underemployed industrial capacity and labour, including railway and workshop labour, might be usefully redeployed by a sustained policy of main line electrification. The traffic density graphs produced by Dr Beeching show that a high proportion of those railway lines which will form the backbone of our country's future railway network carry, or can be made to carry, traffic of a density which makes electric traction an attractive economic proposition.

Diesel traction—although greatly superior to steam—does not provide the speedy acceleration, flexibility in traffic and high cruising speeds which are rapidly making inter-station speeds in the 70-80 mph range the standard of performance on the electrified lines of the Continent. Large-scale rail electrification over some 10 years would help to solve various redundancy problems; it would also broaden our industrial basis and thus help our exports. A high proportion of our freight traffic could travel in goods trains hauled by electric locomotives during night time, when the marginal cost of electric power is low.—Your faithfully,

Henley RALF BONWIT

Teaching Machines

SIR—The "Grundytutor", produced by International Tutor Machines, bears a striking external resemblance to the AutoTutor Mark II of US Industries, Inc., (Home Report, November 3rd). However the Grundytutor is not sold at half price; it costs £230, and the British-made AutoTutor Mark II £295. For it, US Industries have completed more than 25,000 frames of instruction in a variety of subjects of general interest, ranging from electronics and computer programming to English grammar and contract bridge. A 7,500-frame course on mathematics for "O" level is now being evaluated.—Yours faithfully,

W. S. MCD. MITCHELL

London, W1 US Industries

India Invaded

SIR—In your article of November 10th (page 546) you say: "Fear of a Chinese bid to seize the whole of Assam—which in past centuries has experienced other Chinese invasions—etc." When?

It is true that China moved an army of 70,000 men over 2,000 miles into Nepal about 150 years ago, through Tibet, and defeated the Gurkhas at Tengri Maidan. But history reveals no incursion into Assam. Early in the 13th century the country was overrun by the Ahoms, a Shan people of the Tai race. In 1253 the valley was invaded by the Moghuls, and in 1337 once again under Mahomed Tughlak, when they planned to invade China, though the monsoon successfully defeated both sides. Early in the 19th century the Burmese captured Assam, and it was from their clutches that the British rescued the country in 1826. But I think there are no grounds at all for attributing any of the sufferings of the unfortunate Assamese through the centuries to the Chinese until the present year.—Yours faithfully,

STEPHEN DEWAR

Dorchester

To the Editor

SIR—Your letter from the Editor does not really explain why you consider that the opinions of your readers are worth only one

page in an edition of over a hundred. This is a very low proportion, far smaller than that of most other serious newspapers and magazines.

Why? Surely the extra cost of one or two more pages devoted to your readers' views would not be prohibitive? If it is, why not charge those companies, to whose appalling dull annual reports you regularly give eight or more pages, a little extra for the privilege of boring us to tears, and use the extra income to pay the cost of publishing more letters?

I am sure that it is not just a minority of your readers who would prefer you to print more letters. By all means prune them of excessive verbiage ; most of them could do with the sub-editor's red pen. Prune this one if you wish. But please, could you not allocate more room to letters to the Editor, at the expense of other items if this is the only way?—Yours faithfully, L. YOUNG
London, NW4

Points

THE main cause of our objections to the uncontrolled entry of Japanese wool products under the new Commercial Treaty (November 10th) is the dual pricing practised by the large Japanese trading corporations. The Japanese can flood a market with subsidised goods at prices with which Western manufacturers cannot hope to compete. In the United States this led directly to defensive measures. Even Hongkong, where wage rates are lower than Japanese levels, had to call for the suspension of imports of Japanese worsted yarn. G. E. BIRKENSHAW, Chairman, The Wool Textile Delegation, *Bradford*

★

PLEASE note (November 17th) that South Africa is not now a Commonwealth country. SYDNEY D. BAILEY, *London, N2*

★

YOU criticise the Legge-Bourke Bill on estate agents (November 10th) but those who have been the victims of unqualified estate agents would gladly take the risk of some restrictive practices on the part of those that remained, more particularly if as part of the operation there was an upgrading of standards of conduct generally. *Caveat emptor* is a harsh doctrine in a case where the average purchaser is only in the market once or twice in his life. J. P. H. WALTON
London, SW20

★

IN discussing the British tourist industry (October 20th) you omit the obsolete methods of treating man's best companion: the dog. The British law provides for dogs to submit to a long period of quarantine prior to having a chance of moving about in your country. It is for this reason that we are forced for our family holiday to fall back on Italy, Austria, Germany, France, Spain, etc., continental countries which offer access without any delay even to our tail-wagging companion. R. WITSCHI
Basel

★

YOU state (page 218, October 20th) that Nelson Mandela's lawyer was not allowed to defend him when his trial was moved from Johannesburg to Pretoria. This is not true. He was, but Mandela decided at the last minute to defend himself, although his lawyer was sitting in the court. ARNIM KOCH, *Paarl, Cape*

Unless correspondents specify to the contrary, the Editor reserves the right to prune individual letters to fit the space available.

BOOKS

The Surrealist Thirties

The Eden Memoirs : *Facing the Dictators*
By the Earl of Avon.
Cassell. 659 pages. 42s.

LORD AVON'S second volume does not, like his first, come hot upon the event ; there is not the same curiosity value to force us to read it ; but it is a more important contribution to the history of our time. For practical purposes the period covered is from 1931 to 1938, during which time he was continuously at the Foreign Office in successively more eminent capacities until, as Foreign Secretary, he resigned—either because he differed with Neville Chamberlain about policy (which he certainly did) or because Chamberlain made it impossible for him to continue as Foreign Secretary without loss of self-respect (which Chamberlain certainly did, too).

The book is well documented, orderly and meticulous, written for the most part in the manner of an official dispatch. Passion either is absent, or is injected retrospectively. It is all painful. Those were the years when Europe turned aside from its future and took the plunge into self-destruction, when Britain backed away from decision after decision until it was left alone and desperate.

We may as well remember them just now, when Europe, or the western part of it, is attempting a fresh start. One does not suppose that Lord Avon likes Mr Macmillan's attempt to enter the common market, or that in any event he will think the terms, when they come, acceptable. But in those days Mr Eden was the European in British foreign politics. He was the League of Nations man. The League was, as the United Nations has never been, a European institution, conducted by Europeans for the advancement of European security. The League Council was in effect a quarterly meeting of the foreign ministers of the European powers ; it was Eden's chief, Sir Samuel Hoare (Lord Templewood), who spoke of the League as "the main bridge betwen the United Kingdom and the Continent."

To be taken through it all again is like one of those middle-aged dreams when one is back at school or at the university, knowing better in an abstract way than one did, but inescapably repeating all the ghastly floaters of childhood. There is Mr Eden thinking and saying the right things, making as if to do the right things ; but the right results never ensue, the stream of action seeps away into the sand, the conflicts of principle grow inconclusive and irrelevant and are lost to view. What exactly was it, in the Abyssinian affair, that Hoare had to resign about? Not two months before, Hoare had gone off to Geneva and had made a splendid speech to the Assembly, containing that lapidary statement:

> The League stands, and my country stands with it, for the collective maintenance of the Covenant in its entirety, and particularly for steady and collective resistance to all acts of unprovoked aggression.

Lord Avon found the firm language of this speech a puzzle, and finds it a puzzle still. Hoare, when he came to write his memoirs, was still a bit baffled that the speech had been such a success. He could never see that there was anything in it that he had not said before, several times, without waking the House of Commons up. But the occasion was special, the audience was different, and the world was listening intently. Only, of course, it made no difference to the actual European situation ; the diplomatic problem for the British Government remained as it had been, to agree its actions with M. Laval and such other sparse associates as it could find. Those actions did not amount to any more than they would have done if the speech had never been made (as it might not have been, one may guess, if Mr Baldwin had been in the habit of paying attention to foreign affairs).

A few weeks after, Hoare made his Abyssinian deal with M. Laval, and came to grief. His speech had said things that ordinary people could understand and wanted to hear. Now the reality was different ; and, what was worse, Hoare was on holiday in Switzerland when he should have been in London explaining himself ; worse still, he broke his nose skating. Mr Eden thereupon became Foreign Secretary.

Eden's first term as Foreign Secretary saw a not dissimilar dreamlike sequence repeated with the Spanish Civil War and the bearing down of overwhelming German pressure on Austria. Again the right processes of thought were gone through, and the right things said ; but the actions rarely followed (two notable exceptions, each in a limited field, were the Montreux and Nyon conventions). Why not ? Perhaps there was nothing to be done. Perhaps a clue is to be found in Mr Eden's interview (his first for three months) with Mr Baldwin in October, 1936. Eden tried to explain about the Spanish war ; Baldwin listened absently and answered: "Have you had any letters about the King ? " (that is, about Edward VIII and Mrs Simpson). The country was going through a bout of self-absorption ; foreign relations were a bore.

Mr Eden's relations were more sharply polarised with Mussolini than with Hitler ; it seems to have been the Italian, more than the German, who provided him with the prototype for his drama with Nasser twenty years later. In retrospect, we can see that Mussolini was not the success that, at the time of the Spanish war, he appeared to be. But in Spain he did choose his side and back it, and it won. Lord Avon records that he, at the outbreak of the civil war, had "no political sympathy with either side," but

> From the early months of 1937, if I had had to choose, I would have preferred a Government victory.

Whether he had to choose or not, he did not do so, but went through the surrealist performance of non-intervention while the Italians and Germans backed their fancy. By a final irony, it was non-intervention that dragged him into the battle of wills with Mussolini that Chamberlain found intolerable. Eden did not want talks to start with Mussolini while the Italian troops remained in Spain. By the time he resigned, refusing to accept Chamberlain's ideas of personal diplomacy, Hitler was poised to take Austria, and the European balance of power was about to tilt sharply in favour of Nazi Germany. Vienna fell within a month of Eden's resignation ; after that, what Mussolini did or did not do was of merely local and tactical interest.

A macabre sidelight, provided by Mr Eden's kissing-hands interview with King George V after Hoare's fall, may as well be repeated. The King related what passed when Hoare handed in his seals of office:

> I said to your predecessor: "You know what they're saying, no more coals to Newcastle, no more Hoares to Paris." The fellow didn't even laugh.

Contrary to report, this is not the only joke in the book. There are others on pages 122, 139 and 283.

Father and Son

The Nehrus : *Motilal and Jawaharlal*
By B. R. Nanda.
Allen and Unwin. 357 pages. 30s.

MR NANDA, a careful historian, writes well. His book on the Nehrus is illuminating and a must for students of twentieth century India. Those who blame the Kashmir Question on Nehru's Kashmiri origin will be surprised to discover that the Nehrus left Kashmir in 1716. Those who wonder why Gandhi chose Jawaharlal Nehru as his heir although he felt that he was "going too fast", and that the "difference between us is so vast and radical that there seems to be no meeting ground between us," will find the answer to their question in Motilal's letter to the Mahatma in which the elder Nehru urges that his son be made Congress President because "the revolt of youth has become an accomplished fact ; . . . this would indicate that the need of the hour is the head of Gandhi and the voice of Jawaharlal."

The political background against which the evolution of the characters of the two Nehrus takes place is painted in careful, simple, masterly and complete strokes so that even the uninitiated can feel the compulsion of events and the crises of conscience. The elder Nehru, who loved Britain, was by nature a flamboyantly proud Rao Bahadur, honoured to be invited at Viceregal tables. The younger Nehru felt so British that he did not have to "love" Britain ; he only judged it and saw no justification for Viceroys any more. A clash between father and son was inevitable. The father wrote to warn his son to stay well away from the Majlis or any "native Club" at Cambridge ; the son accused his father of being "immoderately moderate".

Mr Nanda brings young Nehru to life better than any of his biographers ; he has, thanks to hitherto unpublished letters and reminiscences, conjured up Nehru at Harrow and Cambridge to the extent of making him a real young man instead of the remote silhouette so faint that it fails to impress except by its loneliness. Young Nehru is not the goody-goody bent upon self-education and politics he was to become later in gaol, where he enjoyed his sabbatical rest so much that his father wrote to him in disgust:

> I was pained to find that, instead of affording you any relief my visit had the effect of disturbing the even tenor of your happy gaol life. Please do not bother about me at all. I am as happy outside the gaol as you are in it.

Mr Nanda's Motilal has the spontaneous panache of the self-made grand seigneur, who celebrates his daughter's birthday in a German watering resort by inviting 400 unknown schoolgirls to tea and on his deathbed warns his sorrowing family not to pray for him "because he had made his own way in this world and hoped to do so in the next as well." Asked what Motilal's greatest quality was Gandhi once said "Love of his son, for his love of India was derived from his love for Jawaharlal."

Motilal's conversion was not easy ; indeed, love of his son would not have been sufficient had it not been for British blunders. Mr Nanda analyses those blunders one by one. And it was the arrest of the Ali brothers, and not the shooting at Jallianwalla Bhag, which marked the point of no return for Motilal Nehru.

The book ends with Motilal's life. One can only hope there will be a sequel. So far nothing that has been written about Jawaharlal Nehru has been so penetrating and scholarly. It is a pity, however, that discretion, for it could not have been ignorance, should have made Mr Nanda dismiss as an unsuccessful journalist Sayed Hussein, whom Mrs Naidu used to call the "real father of Pakistan."

Merchants' Services

The Rise of the English Shipping Industry
By Ralph Davis.
Macmillan. 436 pages. 50s.

THIS is a valuable book. One would like to use the reviewer's cliché and say that it is an important addition to the literature of the subject. But the truth is that Mr Davis has written a unique survey of the shipping industry in the seventeenth and eighteenth centuries. As he says,

> Hardly anyone has ever attempted to examine the practical functioning of the shipping industry before modern times, and the material reasons for its growth.

The Victorian shipowner W. F. Lindsay tried to do it a hundred years ago. Since then the interest in economic history has produced innumerable articles in specialised periodicals, of which Mr Davis himself has written some of the most valuable, and most of which are usefully listed here. Particular trades and some of the ports have been studied, and there was a time when it looked as if Professor Northcote Parkinson would provide the general maritime history so badly needed, but he found a wider interest in laying down the Law.

The particular value of this book is its firm basis on the records of the High Court of Admiralty, the Port Books, the Seamen's Sixpences registers and the like. Until the General Register of Shipping in 1786, statistics are hard to come by, except by such indirect means. Few business records have survived from those centuries. Shipbuilders built by eye and dispensed with models or plans. It is therefore exceptionally difficult to trace the pattern of such an important and widespread economic activity.

It is an error to suppose that the people of this country had the salt in their blood. Even at the end of the Tudor epoch there was only a small amount of shipping, performing limited services, except in the fisheries. The Dutch then seized the initiative with the invention of the *fluyt*, until in the second half of the seventeenth century we discern the rise of Tyneside. Exactly

what sort of ship was responsible for this growth it is hard to say: Mr Davis suggests the pink or snow as a new general trader, though the distinction between the tramp and the liner was then unknown. Whatever the reason, whereas the population of the kingdom only doubled, shipping increased seven-fold and maritime trade was chiefly responsible for the growth of London, where about a quarter of the inhabitants were in some way connected with the port. A sequence of wars slowed up the advance, until the pace quickened in the middle of the eighteenth century with larger ships, wider colonial trade, and more labour-saving devices, which reduced the size of the crew and hence lowered the cost of freight. When the transition came from carrying natural products such as coal and corn to Europe to the export of manufactured goods to all parts of the world, the industry was flourishing, and it is at this point, on the eve of the industrial revolution and of British maritime supremacy, that this survey ends.

British sea power has always depended on a strong fighting fleet and a flourishing merchant marine. It was from the latter that warships were largely manned in the days of impressment, and it was therefore to encourage it that successive governments pursued a strongly protectionist policy. The industry may have suffered in time of war from the chartering of its ships and the conscription of its crews, but it benefited by the wider markets thus won. Gone were the days when every voyage was an adventure in every sense of the word. By 1775, when a third of British shipping was American built and the industry faced ruin by the revolt of the American colonies, sufficient advance had been made in other parts of the world to give the impression of an industry settling down to an unromantic but gainful routine.

Dilemmas

Discord and Collaboration

By Arnold Wolfers.
John Hopkins Press. London: *Oxford University Press.* 300 pages. 48s.

WRITINGS on the theory of international relations are of ill-repute in this country, and deservedly so. They would seem to consist either of attempts to denature the subject so that it ceases to be an affair of individual men or communities making agonising choices, but becomes instead a meaningless minuet of abstract concepts, or, on the other hand, particularly in America, a set of mathematical or quasi-mathematical formulæ that obliterate the distinctions between one set of concrete circumstances and another. From such charges the writings of Professor Wolfers are happily exempt. Perhaps because he had a distinguished career in Europe before arriving in the United States, and perhaps because he has always insisted on the close contact between the academic student and the practitioner, Professor Wolfers has consistently upheld a role for theory that makes it an adjunct to action and to the understanding of events.

The present volume of essays, many of them new and all linked together by a common concern, provides a very useful introduction to the whole subject of international relations as an academic discipline. He avoids both the neo-realism of those who see nothing but a Hobbesian world of competing states and the neo-medievalism of those who overlook the role of the state altogether in favour of communities and ideas transcending national boundaries. Similarly, he shows the degree to which even the most realistic of statesmen are caught in the necessity of making moral choices.

But although these essays are not to be taken as a commentary on the passing scene, they do bring one to certain conclusions about certain dilemmas, dilemmas that are specifically American but are not without relevance for America's allies. For one thing, Professor Wolfers's views about the nature of international tension makes him very hesitant about the priorities accorded to disarmament in some people's strategy for peace. Still more important and unusual is his insistence that collective defence and collective security are not the same thing, and may even be inimical to each other. In other words, the United States' commitment to a "collective security" interpretation of the charter of the United Nations means that it may, in pursuit of this objective, weaken its ties with countries whose co-operation it requires for collective defence.

He therefore finds himself—and this without specific mention of the Congo—on the side of those who emphasise the mediatory and conciliatory functions of the United Nations rather than those who wish to see an enhancement of its coercive aspects.

Some professionals in international relations may suspect anyone whose writings have so much formal grace of being a lightweight. But pendantry and depth do not necessarily go together. One essay from Professor Wolfers is worth the whole output of some university departments.

O'Neill in Prose

O'Neill

By Arthur and Barbara Gelb.
Cape. 990 pages. 50s.

THIS is an excessively detailed, undiscriminating biography of the American playwright that succeeds in spite of itself. The authors (Mr Gelb is a reporter in the theatre department of *The New York Times*) have laboured some six years on their biography of Eugene O'Neill, and in the process they have ferreted out every human being whose life even remotely touched O'Neill's. They have dug back in the files and dusted off the old reviews of his plays; they have assembled material so as to convey, inchoately, an impression of the American stage shortly before O'Neill helped create a new American theatre; and, particularly, they have traced the lines of his life and matched the actual characters and events with those figures he dramatised in his plays. Indeed the authors become so carried away with this last task that at times they sound as though they were chiding O'Neill for changing a date or for falsifying the true nature of a character in *Long Day's Journey Into Night*.

Certainly it is the responsibility of any serious biographer to undertake thorough research into the life and period of his subject. One assumes this has been done. However, Mr and Mrs Gelb appear to have halted at this point. There seems to be no selection, on their part, from among the details; no arranging of the events in anything other than a chronological order; no assimilation of the material. All of this results in an absence of viewpoint, a gap where perceptive critical intelligence should operate. In short, we are presented with the material of O'Neill's life, but no biography. (Unhappily, the absence of imagination is reflected in the language; it is truly a book without style.)

And yet the book has a certain fascination. For O'Neill's life was as compelling as it was doomed. The family character sounds as cursed as a Greek legend. A drug addict for a mother; a famous nineteenth-century actor for a father; an alcoholic, defeated elderbrother; these were the props and main characters in O'Neill's own family drama. His life and the lives of his three children (one, a famous Greek scholar and translator, committed suicide shortly after he turned forty; the other son, by another marriage, became a drug addict and lives in relative poverty in the eastern part of the United States; his youngest child, Oona, married Charlie Chaplin, a man more than forty years her senior) seem to have borne more than their share of the family tradition.

It is this grotesque history, as well as his importance as an American playwright, which make the book worth reading. Today it is all too clear that even his great plays (*Mourning Becomes Electra, Desire Under the Elms, The Emperor Jones, Strange Interlude, The Iceman Cometh, Long Day's Journey Into Night*) were often cluttered with banal ideas and embarrassing, artistic nonsense. None of these somehow mitigates his stature as the major writer of the American theatre. He was perhaps the only tragedian that country has produced; and it would appear he wrenched that tragic vision from the pain and anguish of his own life (and character). Perhaps his greatest failing as a playwright was his inability to find an adequate language that could portray that vision. His biographers certainly have failed to find a language and a style to portray that life.

The Wide Vision

The Grand Design

By Joseph Kraft.
Harper and Row, New York. London: *Hamish Hamilton.* 122 pages. 21s.

PRESIDENT KENNEDY'S Trade Bill seems to have passed through Congress substantially unscathed—in marked contrast to so much of his programme. At the same time the United States has continued in its zealous encouragement of the European common market and Britain's participation in it. There is a seeming paradox in this determination of the American Establishment to liberalise trade in defiance of powerfully organised American pressure groups and to build up a European power block that could challenge American hegemony. Anyone who wants a simple exposition of the logic behind these policies cannot do better than read Mr Kraft's book.

The author, a free-lance journalist who was one of the President's campaign speechwriters, is deeply involved in the New Frontier and he manages to convey, in a way that no outsider could, the slightly roseate vision that has inspired Mr Kennedy's Grand Design of Atlantic Partnership between a rejuvenated America and a united Europe. Lowered tariffs and international commodity agreements, combined with the consolidation of the Six and their new recruits, are seen as a panacea for the weaknesses of the West—in particular for the American balance of payments difficulties, for the need of the underdeveloped countries for aid and trade, and even for the domestic economic and social problems of the United States.

This is an informed, wide-ranging, and optimistic *exposé*. It was written earlier in the year as ammunition for the summer's battle in Washington. It was read in the highest quarters and received considerable critical acclaim. Although the immediate battle has been won, it is still very timely reading in Europe. Its theme will, on the whole, commend itself to observers here, though they will be sceptical of the *simpliste* nature of some of its assumptions and solutions. It reflects a generous and imaginative view of the world scene, an American large-mindedness that stands in sharp contrast to the parochialism of much recent British argument over trade and politics.

Diplomacy 1860-70

Bismarck, the Hohenzollern Candidacy, and the Origins of the Franco-German War of 1870.

By Lawrence D. Steefel.

Harvard University Press: London, *Oxford University Press.* 292 pages. 52s.

IN 1862 Bismarck sat next to Disraeli at dinner at the Russian embassy in London. Later in the evening Disraeli said to Saburov, of the Russian embassy:

> What an extraordinary man Bismarck is! He meets me for the first time and he tells me all he is going to do. He will attack Denmark in order to get possession of Schleswig-Holstein; he will put Austria out of the German Confederation; and then he will attack France—an extraordinary man!

The story was accepted by the official biographers of Disraeli, and was vouched for by Saburov himself. It is a major impediment to all historians who—in the modern fashion—would depict Bismarck as the brilliant opportunist, grasping all eventualities that could be made to serve his own ends but never sure long in advance what would have to be done. Mr Alan Taylor dismissed the story (without evidence) as "perhaps manufactured later, like many of Bismarck's own." Professor Steefel neglects it entirely.

Apart from the origins of war in 1914, few themes of diplomatic history have attracted more intensive investigation than Bismarckian diplomacy of the 1860s. Professor Steefel has been able to use all the scraps of evidence that have come to hand since R. H. Lord (another American historian) in 1924 published his masterly analysis of the documents from the German archives. Only five years ago the "secret file" of relevant documents, denied to Lord, was published by Georges Bonnin. The net result is to prove that Bismarck deliberately promoted the candidature of the liberal Catholic Prince Leopold of Hohenzollern for the vacant Spanish throne; that he did so actively from at least the end of February 1870; and that he was not taken by surprise by violent French reactions to the news of the revived candidature at the beginning of July, 1870. When, on July 19th, he received the formal declaration of war by France, he knew that his ruse six days earlier, of editing and publishing the Ems telegram, had succeeded. He had his war: France was technically the aggressor; he was reasonably sure he could win it.

What remains in doubt is how long before that he had wanted and engineered a war

with France, and with what motives he first pressed Leopold's candidature. Professor Steefel comes as near to giving a final answer as we are likely to get for a long time. But his verdict is still somewhat inconclusive. His book is a model of its kind. It deals with its specific theme lucidly and in meticulously phrased English. It is not of excessive length. It rests on exact scholarship and refined judgments. It includes a dash of that spice beloved of all diplomatic research—arguments based on split-second timing of the despatch and receipt of telegrams. Whatever conclusions can be reached by microscopic examination of documentary evidence are here achieved; no evidence is squeezed to yield more certainty than it can offer. Bismarck comes out of it as more nimbly opportunistic than he later pretended.

Professor Steefel, in short, clears up all the issues that can reasonably be clarified by this close-up focus. As a veteran diplomatic historian, whose admirable parallel examination of the Schleswig-Holstein question appeared thirty years ago, he is well fitted to do it. But can the final judgment exclude a long-range verdict on Bismarckian diplomacy as a whole, and on the nature of German unification ? The events of 1870-71 seem more decisively than ever, in retrospect, the dawn of contemporary Europe. The war so wantonly begun, with its prelude of petty dynastic rivalries, inaugurated a new era of national wars that is still with us. Bismarck, if not the master-builder he liked to pose as being, had remarkable insight into the changing character of states and of warfare, and saw the new importance of mass belligerency. The man who edited the Ems telegram was improvising ; but his improvisation rested on a profound understanding of the tide of history.

Diary in Defeat

The Ironside Diaries, 1937-40

Edited by R. Macleod and Dennis Kelly.
Constable. 434 pages. 35s.

PITCHFORKED into a job he did not want. General Ironside was not a successful Chief of the Imperial General Staff. He was one of the victims of Britain's lack of preparation for war, and the defeats in Norway and France brought his career, after a brief and not especially distinguished spell of service as Commander of the Home Forces, to an end. Whether he would have been more successful in the field than, say, Gort was can never be fully resolved ; but a reading of his diaries does not inspire any great confidence in his abilities. The diaries are edited with proper care. The editors do not put their own gloss on the record, as has happened with more distinguished soldiers ; these are the entries that Ironside wrote, expunged of some of the detail that still might wound.

But one wonders if their publication was really necessary. They add nothing that is new to the history of defeat in 1940 ; and, though this might have been the editors' intention, they do not enhance Ironside's reputation. They reveal him as an alert and intelligent man but one who appears to have reacted to events from day to day, almost hour to hour, and who does not seem to have tried to impose himself and his views upon them. In that, he lacked the essential attribute of a commander ; and towards the end of the diaries, when he saw the world as he knew it (and his career with it) crumbling around him, a disturbing, almost hysterical, note creeps into some of the entries. It is possible to sympathise with his plight without questioning in any way the decision to put him on the retired list. There is the stuff of tragedy in the events that the diaries chronicle but not in the man.

Turning to the Evidence

The Historical Revolution

By F. Smith Fussner.
Routledge & Kegan Paul. 376 pages. 45s.

"HISTORY", wrote Gibbon, "is for the philosophic spirit what gambling was for the Marquis de Dangeau. He saw a system, relationships and an order there, where others saw only the caprices of fortune." The revolution in historical writing in England which made this approach possible occurred, Professor Fussner argues, between 1580 and 1640. His learned and stimulating book shows how new seas were charted by men exploring the past. A new sense of historical development was supported by refined techniques of scholarship; and historians were as daring and revolutionary in their field as were Galileo and his fellow scientists in theirs.

The foundation of this achievement was the great manuscript collections. Elizabeth's reign saw Archbishop Parker arrest the dispersal of monastic records, while Lord Burghley, Camden and Stowe formed private collections. The next century saw Sir Thomas Bodley founding his library and Sir Robert Cotton establishing his great depository, which surpassed all others in richness, discrimination and professional cataloguing. Private collections were the more important since consultation of state papers required the payment of fees, warrants or influence ; and the valuable legacy of Sir Henry Wotton's papers was neglected by the State Paper Office until the nineteenth century. Of the public records Professor Fussner observes that "the cats that caught the mice and rats were themselves sometimes coffined in paper".

It was the break with Rome and the political struggles under the early Stuarts that stimulated a search for weapons in the arsenal of history. This might have produced merely an antiquarian accumulation of precedents and purely partisan writing ; but instead there developed scholarship of the highest order and an intellectual concern with interpretation. The Elizabethan Society of Antiquaries was the first learned society in England with a formal membership attempting co-operative research. But it lacked a clear programme of inquiry and was too fearful both of conjectures and of the risks involved in any "discourse of things present" to survive beyond the early years of James I's reign. Nevertheless from its members came those who inaugurated the historical revolution. Spelman in his comparative study of feudalism made a major contribution to the explanation of social and political structures. Camden sought to apply standards of impartiality to the study of recent history, seeing war and policy as the great subjects and ecclesiastical history as part of the seamless web.

The age produced other great historians. Stowe celebrated the greatness of London, while Raleigh was the moralising historian whose tracing of the chain of Providence made his "History of the World" a best seller influential in forming political opinions. Bacon's achievement, in the writing of history as in politics, had a flaw: he stressed the importance of the individual, but he lacked the training in the handling of evidence. Far greater was Selden, whose "History of Tithes," though stemming from current controversy, showed a powerful and precise scholarship which mercilessly revealed medieval forgeries and exposed the chasm between faith and reason.

Historians will welcome Professor Fussner's book both as a complement to Professor Douglas's "English Scholars, 1660-1730," and as an important contribution to the intellectual history of the sixteenth and seventeenth centuries, a field of inquiry which is now attracting so much interest. They will be awed by the problems that faced their predecessors and humbled by these earlier achievements. And they will be interested in the account of Sir Robert Cotton, a cautionary tale of a scholar who both used and misused his learning for political ends and who sought other rewards besides the academic.

OTHER BOOKS

FREE RESERVES AND THE MONEY SUPPLY. By A. James Meigs. *University of Chicago Press.* 133 pages. 32s.

It is generally supposed in the United States that the size of the "free reserves" of commercial banks which are members of the Federal Reserve System show whether bank deposits are likely to expand or contract. Dr Meigs replaces this notion by the idea that whether or not bank deposits will expand depends on the relation between actual and desired free reserves. He argues that the desired level of free reserves depends mainly upon relative interest rates and a seasonal factor. These propositions are tested econometrically, with excellent results. There are few books on banking that combine originality, theoretical rigour, institutional knowledge and sophisticated statistical research techniques in the way this book does.

SUPPLIES ARE NO PROBLEM WHEN

INDUSTRY GOES

SHELL-MEX AND B.P. LTD

SHELL INDUSTRIAL FUELS BP

The Management of firms who come to Shell-Mex and B.P. Ltd for fuel oils are not weighed down with problems of supply. They benefit from the outstanding advantages of oil—lower labour costs, cleanliness in storage and use, quick response and perfect control—backed by a Technical Service that includes prompt deliveries to even the remotest factories. Which is probably one more reason why—when industry goes for oil, industry comes to Shell-Mex and B.P. Ltd.

Cellulose d'Aquitaine (St. Gaudens) was designed to produce 140 tons per day of bleached paper grade pulp. In two years of operation, production has increased to 220 tons per day without changes in major equipment.

How P&W tapped a new source of pulp and built France a mill that exceeds 150% of guaranteed production

When France sought to lessen pulp imports and improve its economy, The Parsons & Whittemore-Lyddon Organization experimented with the previously untried but locally-abundant beech wood of the Pyrenees.

The Organization's Project Division first conducted a thorough analysis and trial pulping to determine the suitability of beech wood as a raw material. Having established the feasibility of the project, Parsons & Whittemore undertook full responsibility for design and construction of Cellulose d'Aquitaine—France's first pre-hydrolysis kraft pulp mill.

Today Cellulose d'Aquitaine furnishes more than 40% of the highest-quality bleached hardwood market pulp being produced in France and more than 24% of all types of pulp produced by the country's market pulp mills. The mill has further demonstrated its capability for producing nitrating grades of cellulose. Another "package contract" has been signed for the construction of a similar bleached market pulp mill in d'Ardennes, Belgium.

As one of the world's largest groups serving the pulp and paper industry exclusively, The Parsons & Whittemore Organization's 625 engineers and technicians are prepared to assist any country that has locally-abundant trees, grasses or agricultural waste fibers—and desires to improve its economy by establishing a paper industry. The Organization is currently engaged in more than three dozen projects, involving the use of fourteen different agricultural fibers and a total capital investment of US$450,000,000.

For full information on our services, write for a copy of "Growing with the Paper Industry Since 1853."

AMERICAN SURVEY

AMERICAN SURVEY is prepared partly in the United States, partly in London. Those items which are written in the United States carry an indication to that effect, all others are the work of the editorial staff in London.

AID in Need of Aid

WASHINGTON, DC

Mr Passman: *Some of us live with this thing year after year, whereas able directors, such as yourself, come and go. . . .*

Mr Hamilton: *That is one of the reasons so many people throughout the country are confused about the foreign aid programme.*

THE President's need to find, as soon as possible, a successor to Mr Fowler Hamilton, Director of the Agency for International Development, imbues with new and melancholy interest the above exchange, which occurred less than six months ago. Mr Hamilton was appearing before the congressional subcommittee which recommends what funds Congress should allot for the assistance of other countries. Mr Passman, a member of the House of Representatives for fifteen years, is the subcommittee's chairman and had held that post for eight years. Mr Hamilton had then held his for only nine months. He failed to persuade the Appropriations Committee to allocate to his agency the funds which Mr Kennedy had requested for it; subsequently he was made to feel that he had lost the President's confidence. Understandably his offer to resign followed and it was accepted.

Mr Hamilton's successor may prove luckier than he was. But much is bound to depend on the view of AID which is taken by an increasingly critical Congress. Mr Passman scored a considerable personal triumph again this year, when the $4.96 billion which President Kennedy had requested was cut down by Congress to $3.93 billion. If AID manages to get along on this budget, this will merely prove to Mr Passman's fellow Congressmen and to other Americans that Mr Passman's constant criticisms of the programme as extravagant were well-founded. Meanwhile, the speedy fulfilment of his prophetic hint about Mr Hamilton is not likely to restore the tottering morale of the foreign aid organisation, which now operates within the Department of State. Mr Hamilton was its ninth head in eleven years, suggesting a rate of mortality surpassing that of Henry the Eighth's wives. And it is said that each year the agency suffers a turnover of 28 per cent in its staff.

From time to time the agency adopts another alias, in an apparent attempt to shrug off past mistakes, but this does not necessarily mean that it acquires a new identity. When Mr Hamilton was appointed last September the organisation was about to undergo one of its periodic rebirths. It died as the International Co-operation Administration. This afforded an opportunity to get rid of some of the 6,300 employees who, because of rules safeguarding the tenure of civil servants, might otherwise have proved difficult to dislodge. Then it came to life again as AID. Its world-wide functions were reorganised on a more strictly geographical basis, under four regional administrators.

In spite of those alterations, unusually widespread praise greeted Mr Chester Bowles, President Kennedy's special adviser on African, Asian and Latin American affairs, when he suggested recently that there was need for a more coherent pattern of aid, in order to remove continuing uncertainty about what it hoped to achieve and how. Mr Bowles proposed that foreign aid should be divorced from inherited political commitments, that the highest priority should be assigned to countries which are making a genuine effort to help themselves and which stand a good chance of achieving progress and that elsewhere internal reforms, where needed, should be made a condition of continued help. Some countries, which have neither the ability nor the will to put their houses in order, would go to the end of the queue. Such "selectivity" has been endorsed by AID, though it is not to be practiced widely until next year. An even more sceptical approach has been advocated by Professor Hans Morgenthau, who argues that relatively few countries are able to profit from foreign aid in any real sense and that in other cases such international help should be regarded realistically as an arm of foreign policy.

The distinctive contribution of Mr Hamilton, a New York lawyer with a record of public service as a wartime economic administrator, was to have been "Operation Tycoon." The ICA, after being renamed, was to have been revitalised by volunteers from the business world, who would bring to the task the drive and the ability to make swift, tough decisions which professional civil servants notoriously lack. But Mr Hamilton found few businessmen ready to follow his example of incurring heavy financial sacrifices in order to serve the country. He did help to recruit some extremely able men. But his chief prize, a vice president of a big soapmaking firm who was appointed Mr Hamilton's deputy, left AID after only a few weeks and took a job with the National Aeronautics and Space Administration. As a result of "Operation Tycoon" erstwhile manufacturers of dog-food and businessmen from Kalamazoo are serving today as heads of foreign aid missions in exotic Far Eastern posts. But 72 of the 247 officials of the former ICA who were discharged have been rehired by AID and it cannot be said that the organisation is operating in a manner markedly different from that which prevailed under its previous labels and administrators.

Mr Passman has gone abroad to see for himself what is being done with the money that Congress voted last year. Each year he questions expenditures closely, from those for the Republic of China all the way to those for Peru. He does so in a fashion which causes some people to admire his stubborn courage, but which provokes others into comparing him with a prosecutor in an Iraqi People's Court or Judge Jeffreys on one of his bad mornings. The hearings of his subcommittee are enlivened by his dark references to "the people downtown," meaning the Department of State and the White House, and by his ruthless dissection of wriggling officials attempting to justify what he makes no bones about calling the wasteful misuse of the American taxpayers' money.

MR PASSMAN denies that he wants to destroy the foreign aid programme but affirms that he is trying to contain it. His policy of containment is directed against alleged abuses such as under-developed countries employing AID funds to conserve earned dollars with which they then proceed to acquire gold (and gold beds) and AID dollars being spent on the development of nationalised enterprises which were expropriated from American companies. His opinions are shared by a large and increasing number of Representatives and Senators. The foreign aid programme gets bipartisan support. But last month even a cut of 3 per cent, or just over a billion dollars, in the amount of money requested failed to mollify fifty Democratic and fifty-eight Republican Representatives, who voted against the appropriation Bill

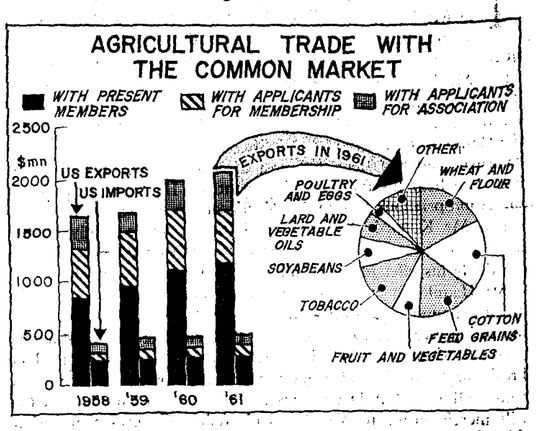
whether or not to accept the Chinese terms, is one for Mr Nehru, and one does not envy him. It can be argued that a chunk of desolate territory in Ladakh, which the Indians have claimed but barely (so far as one can see) set foot on, is a fair price to pay for regaining the stretch of the North-East Frontier Agency that they have just lost—particularly as, pending negotiations, the Indians are being asked merely to accept the Chinese position in Ladakh *de facto*. But this would involve Mr Nehru in accepting, under duress, an exchange which he rejected only a month ago. His chances of subsequently arguing or fighting the Chinese army out of Ladakh must now be reckoned pretty slender ; and he would be harried by the memory of that—quite possibly repeatable—left hook towards the Brahmaputra. The decisive consideration may be the obvious unpreparedness, in weapons, tactics and leadership, of the Indian forces on the frontier. If time is needed to put the Indian Army right, time may have to be bought by concessions, maybe only temporary but maybe not, in Ladakh.

Mr Nehru's chief concern, and that of most of the rest of the world, is how deep Mr Mao Tse-tung's current policy of relative moderation goes. The Chinese have shown this week that they are capable of defining a limited objective and stopping when they reach it. If their main concern is really with Ladakh, and if Mr Khrushchev can really put pressure on them to stay moderate, India may feel an easing of the strain.

But one has doubts. It is an uncomfortable thought that Chinese governments, both communist and pre-communist, have had a nasty habit of wanting to fill out what they believe to be the true boundaries of China whenever a respite from famine, internal chaos and external preoccupations has given them a chance to do so. Mr Mao Tse-tung's government has "filled out" Tibet, and the Ladakh bulge. There are other claims on India—not to mention some suspicious vagueness about the Mongolian boundary to the north. It cannot be assumed, because China has offered to regurgitate parts of India's north-eastern territories, that its appetite is satisfied.

munity. As a leading advocate of Atlantic partnership he is all for bringing Britain and other new members into this common market. As a strong believer in expanding trade he shares Washington's fears of the restrictive tendencies of the present members.

Those fears were expressed most forcefully and threateningly last weekend in Brussels and Paris by Mr Freeman, the Secretary of Agriculture, speaking perhaps rather more on behalf of the politically-powerful American farmer than of the Administration, but certainly hoping to check the present European menace to American agricultural exports. His most pressing complaint is against the new European import fees on poultry ; while American exports of chicken and turkey are not large, nearly two-thirds are to present and potential members of the common market, particularly to Germany, with the annual value at $59 million in 1961 compared with $3 million in 1957. Potentially more serious are the levies to be fixed next year on imports of wheat, flour and feed grains ; not only do a substantial proportion of these important American export commodities go to Europe but they are also sold there for dollars while elsewhere sales are mainly for local currencies or under barter agreements.



Nothing underlines more sharply the changing relationship between the United States and Europe than that it was Mr Freeman who appealed against upsetting traditional patterns of trade and M. Pisani of France who objected to Europe being blamed for the world's agricultural troubles. Mr Freeman sees a remedy for some of these in international commodity agreements. Meanwhile, however, while he complains about variable levies and uncertain quota arrangements, he is ready to accept an ordinary duty, provided it is moderate and fixed, and to ask Congress for reciprocal relaxations in American restrictions on agricultural imports.

government system in London. But the real grounds for criticism of the bill are precisely the reverse of this. Sir Keith Joseph's bill can perhaps be accepted, with reservations, as a step part-way in the right direction. But modern-minded people had better realise now that it will almost certainly have to be rewritten within a comparatively short time: when it is recognised that in reality it does not "disrupt"—which means radically reform—the local government system in London at all sufficiently.

There is always apoplexy among aldermen and local councillors when the label of inadequacy or inefficiency is tied to worthy administrative areas which, from the London County Council to the extraordinary entity of Rutland, are threatened with mergers or extinction. It can be readily conceded that the LCC and Rutland, neither of them accustomed to hiding its light under a bushel, are probably as good as most at doing the local authority jobs of forty years ago. But the essential aim and object of all reforming plans now should be to clear the ground for an administrative

What Next in Mississippi?

In Oxford, Mississippi, Mr Meredith, the Negro who was admitted in September to the all-white university, is still attending classes under the watchful eyes of federal marshals and 500 federal troops. There are a few welcome signs that Mississippians are neither as uncivilised nor as spineless as they appeared at first. The university, which invited fresh troubles by dealing too leniently with students involved in the September rioting, summoned up the courage to expel four who were found to have weapons in their rooms. Some of the staff, strengthened by the knowledge that the university is almost certain to lose its academic credentials if any of them are discharged, have been patrolling the grounds to nip any violence in the bud and have spoken out courageously.

World-wide economic trends delivered to your desk

If you were a client of the First National City Bank you would receive a first class international banking service. But First National City pride themselves on providing their clients with many valuable *extra* services.

One important example of these extra services is the Monthly Economic Letter. This is a round-up of world-wide business and economic conditions with special reference to the United States; information of great value to any British businessman who is interested in expanding his export trade.

The Monthly Economic Letter, published in four languages, goes not only to the bank's clients, but is also sent to the influential leaders of public and business opinion all over the world, with more than two hundred and fifty thousand copies being distributed every month.

MANY OTHER SERVICES. Clients of first National City can call on many other services too. For instance, letters of introduction can be arranged to the manager of any overseas branch or correspondent—a valuable passport to local business and local trading conditions.

There are travelers' checks, up-to-date credit information on any foreign company, and with eighty-four branches in twenty-nine countries there are many other ways in which First National City can help.

If you would like to benefit from the services that First National City provides, contact the bank at 117 Old Broad Street, E.C.2 (London Wall 1221) or 17 Bruton Street, W.1 (Mayfair 6600).

HERE'S HOW TO MAKE A SUCCESS OF YOUR NEXT LUNCHEON

Let's assume that you are an efficient man, accustomed to getting value for money. As a specialist in your own field, you expect equal expertise in others. How, then, would you ensure the success of your next luncheon? You would do well to choose the Connaught Rooms, which is not an hotel but an establishment which specialises in banqueting, and is situated in the very heart of London. There you have the choice of several rooms, separately or in suites, for the entertainment of any number of guests—from 8 to 800. Whatever you ask for . . . soup with snow eggs . . . closed circuit TV . . . you get, quickly and with pleasure. And the reasonable cost will surprise you.

Connaught Rooms will arrange and organise everything exactly as you want it. A word from you will bring immediate action. Helpful suggestions, advice and estimates are equally forthcoming.

Please remember that luncheons are only one aspect of the service available. Contact Connaught Rooms regarding your next function —whatever it may be.

A handful of white students actually had supper with Mr Meredith, though when they went back to their rooms they found them wrecked by hooligans. But it seems all too likely that Mr Meredith will need a guard as long as he stays at the university ; given the strain of his daily life this may not be very long.

So far Governor Barnett has refused to order state officials to take the responsibility for maintaining order. This is the main reason why the Department of Justice feels that the Governor has not wholly purged the civil contempt of court of which he was held guilty weeks ago, even though he has abandoned overt defiance. Obviously the federal authorities cannot contemplate with equanimity the prospect of having to provide a guard at every university and school in Mississippi which is forced to admit Negroes. Last week the federal court of appeals in New Orleans, which has postponed the question of whether the Governor is to be punished for civil contempt, took a new tack. It asked the Department of Justice to bring charges of criminal contempt against Mr Barnett and the Lieutenant Governor. Such criminal charges are brought when it is a question of punishment for defying a court's orders ; an action for civil contempt aims at inducing compliance.

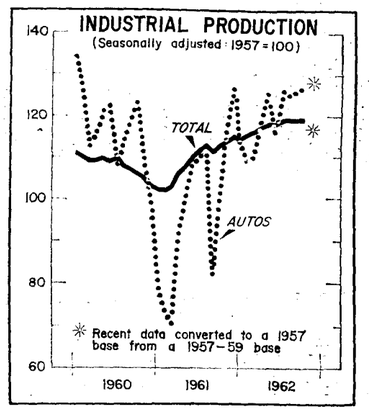
To convict on a charge of criminal contempt guilt must be proved beyond a shadow of doubt ; the defendant enjoys every procedural safeguard. Such a trial provides an opportunity, however, for the Administration to put all the evidence on record including, perhaps, proof that the Governor, by withdrawing state troops from the university, bears some responsibility for the blood shed in September. Last week a state grand jury decided that the chief federal marshal was to blame—a conclusion which makes it a matter of some importance whether Governor Barnett is tried, as he may demand to be, by jury in Mississippi. The chief marshal, Mr McShane, who was acting in his federal capacity, is certain to be tried in a federal court where the charges are likely to be dismissed without even reaching a jury.

Top Gear for Autos

As the Governor-elect of Michigan, Mr George Romney, leaves the American Motors Corporation to apply his enormous energy and imagination to bringing more jobs and financial order to his state, the company which he pulled out of the red continues to prosper. Providing Mr Romney with a farewell pat on the back, the directors of American Motors announced last week that the firm had recorded sharply increased earnings in the year which ended in September, a bounty to be directly shared by all concerned. Shareholders are to receive an extra dividend and the corporation's 27,000 production workers will enjoy the first fruits of the pace-setting profit-sharing plan negotiated with the United Automobile Workers in August, 1961. (White collar employees also have a similar scheme.)

Under the profit-sharing plan—one of the few in a major American manufacturing company and unique in the motor industry—production workers will receive $9.8 million this year. One-third of the total will go into purchases of shares for the accounts of employees, an average of 7.3 shares, worth about $129, a worker. The remaining two-thirds will be used to cover increased "fringe" benefits for employees and to set up reserves for future outlays on such benefits. From the management's point of view this is money well spent. Officials of the company credit the incentives for cutting costs which are implicit in the plan with savings which should exceed $6 million a year—the result of improved productivity and the workers' willingness to forgo certain minor benefits which they used to receive.

American Motors prefers to term its profit-sharing plan "progress sharing." And, indeed, this is an apt euphemism for the entire motor industry at present. After a somewhat sluggish summer, the autumn upturn in automobile sales, sparked by the introduction of the 1963 models, has shown unexpected strength. Sales in October reached a phenomenal all-time high of 728,000 units and early reports indicate that they remain buoyant this month—although the Thanksgiving holiday and a strike at one of the General Motors Corporation's plants preclude a repetition of last month's performance. Jubilant officials of the Chrysler Corporation are predicting that total sales of all makes of cars in 1962 will top seven million for the first time since 1955. This forecast is made more plausible by the unusually large increase since July in consumers' plans for purchasing new cars, reported in the latest quarterly survey of buying intentions on behalf of the Federal Reserve Board.



Almost all motor firms are sharing in the upturn. And it is an especially lucrative one, for the trend of recent years away from the larger, more lavishly equipped models towards the economical compacts seems to have been reversed this year. The Chrysler Corporation's success in capturing a larger share of the market during recent weeks owes a great deal to the appeal of its restyled, larger, 1963 Plymouths and Dodges. The only company still in deep water is the Studebaker Corporation, which announced production cutbacks and layoffs last week. In contrast, General Motors, American Motors, Chrysler and the Ford Company all raised their output schedules. For the fourth quarter as a whole automobile production may well exceed two million units—a record matched only three times in the past—and impart a further upward push to other key sectors of America's stalled economy, particularly to the steel industry.

Television's Hiss Case

While the President was fending off, good-humouredly but firmly, the complaints of the press that its freedom had been infringed during the Cuban crisis, a parallel storm was raging over television's right to be free of censorship by private sponsors. It blew up when the American Broadcasting Company, in presenting a commentary called "The Political Obituary of Richard Nixon," allotted two of the thirty minutes to Mr Alger Hiss, the official of the State Department whom Mr Nixon helped to send to prison as a perjurer—and who in turn helped to launch Mr Nixon on his political career. This sensational nugget had been advertised widely in advance and four local television stations refused to carry the programme ; during the broadcast angry telegrams flooded in, many of them from ex-servicemen's organisations ; afterwards two advertisers attempted—without success—to cancel their contracts with the network for sponsored programmes.

Luckily the vice president of ABC in charge of news is Mr James Hagerty, who used to be President Eisenhower's press secretary ; he is a man who can hardly be accused of sympathy either with communism or with Mr Hiss. Whether or not it was in good taste to give Mr Hiss a chance to kick his old enemy when he was

down, Mr Hagerty was right to denounce any interference with editorial control over the news and over comments on it. He has received strong support within the industry and even from President Kennedy.

Mr Nixon may feel "*Et Tu, Brute*"; television has long been the Vice President's chosen political weapon. But he has maintained a dignified reserve. He learned his lesson early this month; his bitter outburst against the bias of the press on the morning of his defeat for the Governorship in California discomfited his friends, delighted his enemies and made it seem likely that he would not be asked to break his promise not to stand for public office again. During his campaign in California Mr Nixon looked to the screen to redress the balance against him. He sought eagerly for a face-to-face meeting on television with Governor Brown whom he felt, quite rightly, would not be the formidable adversary Mr Kennedy proved to be in 1960. Mr Nixon also conducted seven "telethons"—one of them lasted five hours—at which he answered questions telephoned in by viewers. But this very dependence on television may have been a sign of weakness. Since 1960 many candidates have sought to debate with their opponents on television but, by and large, it is the under-dogs and the unknown who have been the most enthusiastic. Safely established figures were likely to reply as did Senator Dirksen who, when asked why he would not meet Mr Yates on television, said simply: "Why should I?"

No Space for the Union Shop

Most of the firms in the western aerospace industry, which supplies the government with much of its space equipment and many of its missiles, surrendered in September to the Administration's insistence that a strike would be an intolerable blow to the country. After the President warned the companies that they would be to blame for any stoppage, they agreed to permit their workers to vote on whether they wanted a union shop, the real bone of contention. Under this arrangement all workers who are hired must join the union within thirty days to keep their jobs. Such a provision would be particularly valuable to the trade unions involved because of the rapid turn-over of labour at the plants; they have to keep on recruiting hard just to stay in the same place. The Boeing Company, which manufactures the Minuteman missile, where a strike has been put off until January, has also agreed to a vote on the union shop, although this is not to be binding.

But the Lockheed Aircraft Corporation, the largest of all and the maker of the Polaris Missile, has remained adamant and on Sunday the International Association of Machinists, which has twice postponed strike deadlines, voted to walk out next Tuesday. Negotiations are being resumed this week and the Department of Defence has renewed the pressure on the firm by hinting that if the strike takes place it may look for alternative suppliers for missiles. A stoppage at Lockheed might face the President with the problem of whether to invoke the emergency provisions of the Taft-Hartley Act (which might only postpone a strike for eighty days), to try to seize the company, as the machinists have suggested, or to devise yet some other means of keeping the men at work. Lockheed insists that it is only anti-compulsion, not anti-union, but its real fear seems to be that a vote on the union shop might set a precedent for settling all labour matters by a vote of the workers.

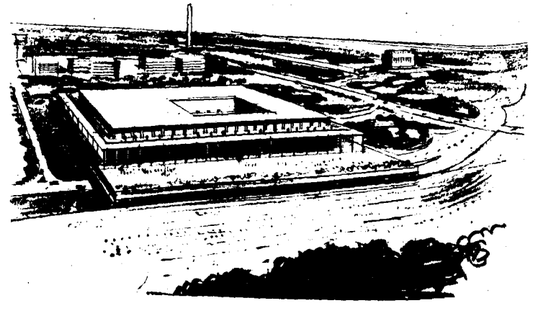
Lockheed's obstinacy is all the more surprising in view of the fact that at three other firms the two-thirds vote for the union shop which was required under the recommendations of the President's special board did not materialise, though a majority favoured it in each case. Even though the firms are in southern California—a stronghold of the open shop—the IAM and the United Automobile Workers, the other trade union involved, were shocked by the outcome. At one company about 85 per cent of the workers belonged to a union; at the two others more than half were union members. It is understandable that once non-union workers had received their guarantee of increased wages they might baulk at having to pay $60 or more a year in union dues, but some trade unionists either voted against the union shop or abstained. No doubt the unions were over-confident; in the past votes on the union shop have been so overwhelmingly in favour of it that Congress eliminated the general requirement for such a vote. The high turn-over at these particular plants and the fact that more and more of the workers are technicians and salaried employees militated against the unions; so did the uncertainty of jobs in an industry which is dependent on government contracts.

Capital Culture

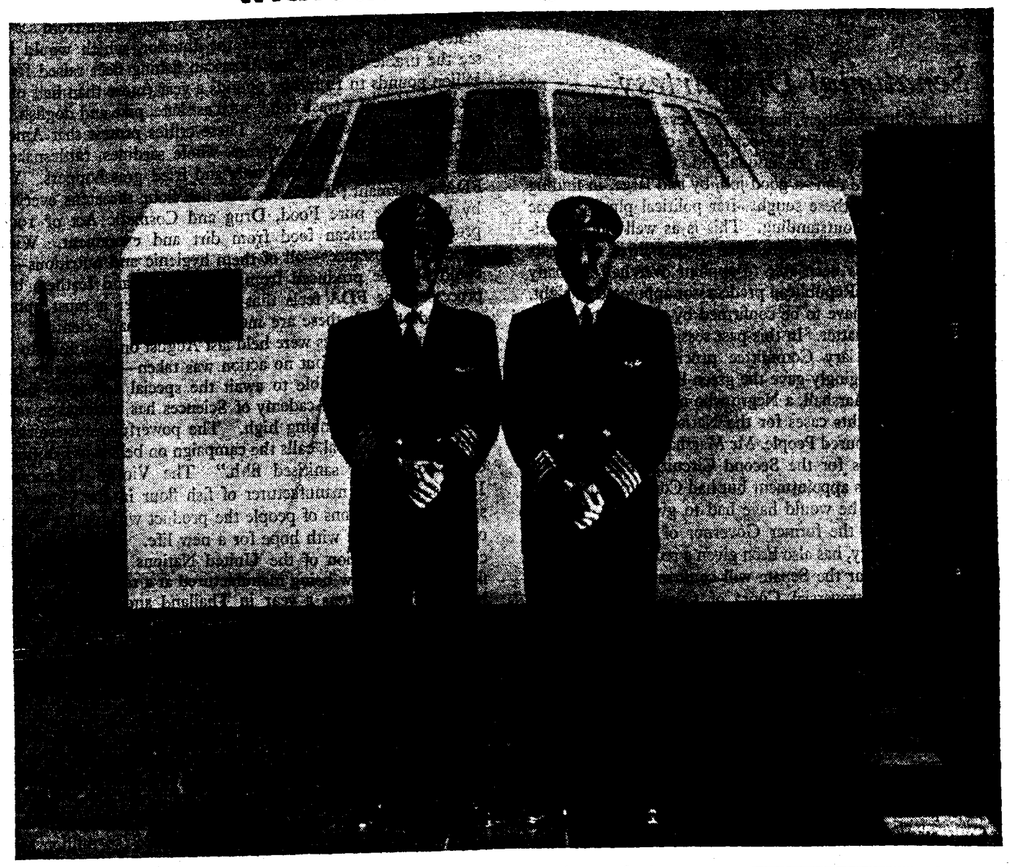
Next week is National Cultural Centre Week in the United States, to raise interest in and money for the seventy or so such centres, on varying scales of size and complexity but all containing a theatre of some sort, which are now being built or planned throughout the country. The most ambitious are New York's Lincoln Centre, which opened its first concert hall two months ago, Los Angeles's Music Centre for the Performing Arts, with its largest unit, the Memorial Pavilion seating 3,254 people, now being built, and the National Cultural Centre in Washington, DC, which is the immediate reason for next week's special concentration of attention. This will culminate on Thursday night with a two-hour Pageant of the Arts, featuring among many other stars Mr Pablo Casals, Mr Benny Goodman, Mr Robert Frost and Mr Van Cliburn, to be transmitted all across the country by closed-circuit television to $100-a-plate dinners—there are 5,500 seats at this price in Washington's own Armoury—and other less costly gatherings. The proceeds will be shared between some individual local cultural enterprise and the National Cultural Centre which is intended to serve the whole country.

The affair will start the drive, led by Mrs Kennedy and Mrs Eisenhower, to raise the $30 million now needed for this undertaking which began in 1958 as a $75 million project. Congress presented most of the land but, in the American tradition of keeping the arts free from government control, is not providing any money. Even in its more economical form the centre will have a theatre, an opera house and a concert hall, all under one roof which can itself be used for band performances and other large gatherings. The building is designed by Mr Edward Stone, surrounded by trees and gardens, on the edge of the Potomac River, with car parks underneath.

Those, including President Kennedy, who feared that the Lincoln Memorial nearby might be dwarfed, have been reassured but there are still critics who contend that such a centre should be in the commercial heart of the city, where it could be reached on foot and by public transport, with offices and restaurants in the neigh-



PIA pilots can perfect an Idlewild touchdown without leaving this room



PIA's plane-without-wings reproduces with complete accuracy any flight route in the world, combined with the most unnerving alerts and emergencies the instructor can think of. That is why a PIA captain, before taking over a new route, can 'fly' over any part of it a number of times, and under some very awkward simulated weather conditions. A pilot new to Idlewild, for instance, probably the world's busiest airport, might have 'landed' there perfectly over and over again before even leaving Karachi. And the trainer has another use, equally important. All PIA aircrew take a compulsory refresher-course every six months. Even a senior captain must fly thousands of miles a year on this machine, however many hundreds of thousands he may have logged in the air.

This kind of perfectionism – which puts two full rated captains on every PIA international jet flight – has also given PIA an unmatched record for punctuality. Last year it brought them 63% more passengers and 41% higher profits than ever before. Not many airlines can prove in figures that they're great people to fly with.

See your Travel Agent or consult us: 45 Piccadilly, London W.1. Tel: REGent 5544. PIA offices in these UK cities: Birmingham (Midland 1900), Glasgow (City 3235), Leeds (21188), Manchester (Blackfriars 7346). All cables: Pakintair.

bourhood, bringing new life to a decaying core instead of rising in beautiful isolation surrounded by super-highways. However that may be, when the centre is finished, during 1965, it is hoped, it will provide the large theatre and concert hall, adequate for first-class performances, which Washington has lacked and will put on a firm basis the long overdue development of the performing arts in the national capital.

Senatorial Discourtesy

THOUGH the Administration has chosen seven federal judges whom the American Bar Association's committee on the federal judiciary considers to be unqualified, the Department of Justice is thought to have done a good job, by and large, in finding deserving Democrats for these sought-after political plums. Some of its choices have been outstanding. This is as well since President Kennedy, because of the creation of seventy-three new seats on the federal bench, has been able to appoint over half as many judges in two years as his Republican predecessor appointed in eight. Once chosen, nominees have to be confirmed by the Senate, which is not always a routine matter. In this past session the Southerners ensconced on the Judiciary Committee procrastinated for nine months before they grudgingly gave the green light to the appointment of Mr Thurgood Marshall, a Negro who made a great reputation by winning civil rights cases for the National Association for the Advancement of Coloured People. Mr Marshall had been sitting on the Court of Appeals for the Second Circuit, which includes New York, under a recess appointment but had Congress adjourned without confirming him he would have had to give up.

Mr Lindsay Almond, the former Governor of Virginia, whom Congress left high and dry, has also been given a recess appointment in the hope that next year the Senate will confirm him as a judge on the usually non-controversial Court of Customs and Patent Appeals. Mr Almond's main trouble is that as Governor of Virginia he faced the realities of racial integration and kept the schools open. Thus he won the enmity of Senator Byrd, Virginia's political boss. In practice a candidate for a judgeship must have the support of Senators from his own state; it would be "discourteous" for the Senate to override their objections. Mr Almond's other trouble is that as a moderate, who still prefers racial segregation, he lacks the political support which can be mobilised for a Negro judge. President Kennedy has also selected the first woman Negro judge to be given a presidential nomination; she is now sitting on the Juvenile Court of Washington, DC, a city which is more than half Negro. For years Congress, fearing the appointment of a Negro, refused to authorise the two additional judges sought for the swamped Juvenile Court.

Though the Senate passed Mr Almond by, it accepted, in the end without a dissenting vote, Mr Kennedy's most controversial appointment: that of Judge Irving Ben Cooper, whom the ABA and other lawyers' associations had found unqualified, both by reason of temperament and lack of experience, to sit on the federal bench.

Loaves and Fishes

NEW YORK

WHETHER a substance with the unpalatable name of "fish flour" is fit for Americans to eat is a battle which has assumed all the trappings of a holy war. Passionate advocates, who have gulped handfuls of the odourless, tasteless flour in front of congressional committees, say that it is the cheap food additive needed to cure the vast protein deficiencies of much of the world's population; it would also cure the economic depression of fishing ports in New England and northern California. The virtues of fish flour are its protein content of 80 per cent and its low retail price of 15 cents a pound. Its drawback is its origin, the whole fish—eyes, tail, fins, bones and stomach contents. To the federal Food and Drug Administration, this constitutes filth and, as such, is ruled out for American consumption.

Since Americans can scarcely ship abroad a food which they themselves are not allowed to eat, the FDA ruling has raised a storm of protest from potential manufacturers, Congressmen from sea-faring states and the Department of the Interior, which would like to see the usable catch of the American fishing fleet raised from 5.2 billion pounds to 12 billion pounds a year (more than half of every catch consists of "trash fish," such as skate, pike and dogfish, which must now be thrown away). These critics protest that Americans happily consume clams, oysters, whole sardines, rattlesnake meat and even chocolate-covered ants and fried grasshoppers. Yet the FDA is adamant; it believes that fish flour threatens every canon by which the pure Food, Drug and Cosmetic Act of 1906 has protected American food from dirt and excrement. With the variety of substances—all of them hygienic and nutritious—which could now be produced from hooves, tails and feathers by new processes, the FDA feels that more than ever it must uphold its standards though these are more aesthetic than scientific.

Emotional hearings were held last August on four Bills to amend the pure food laws, but no action was taken—presumably because it was thought sensible to await the special report on fish flour which the National Academy of Sciences has undertaken to make. Feelings are still running high. The powerful midwestern wheat lobby, sensing a rival, calls the campaign on behalf of fish flour "an effort to legalise sanitised filth." The VioBin Corporation of Illinois, the only manufacturer of fish flour in the United States, says that for millions of people the product will replace the misery of chronic hunger with hope for a new life. The Food and Agriculture Organisation of the United Nations strongly favours fish flour, which is now being manufactured at a rate of 100 tons a year in Sweden, 300 tons a year in Thailand and at least 500 tons a year in Morocco. Ironically, the FAO finds one of the chief attractions of fish flour to be its acceptability to a wide variety of cultures—except, apparently, that of the United States.

Sunset for Billie Sol

TWO weeks ago in Tyler, Texas, the non-existent fertiliser tanks out of which Mr Billie Sol Estes made some $26 million brought him an eight-year prison sentence. Last week the financial wizard who was once thought to be worth $150 million and who had influential friends in both political parties had to file a pauper's oath to obtain legal aid. His known assets were sold in September for $7 million but most of his creditors will get only 15 cents on the dollar; the lion's share goes to the Commercial Solvents Corporation which provided fertiliser for tanks which did exist.

In addition to his conviction on charges of swindling brought by the state Mr Estes has been indicted on a number of counts by a federal grand jury and, with Commercial Solvents, is to stand trial in another state court on charges that they conspired to monopolise the fertiliser market in West Texas. So far he has not appeared before either of the congressional committees investigating the friendly relations with officials of two Administrations which, it is alleged, enabled him to become a power in the storage of government grain and the illegal owner of cotton allotments. His appearance was postponed to enable him to have a fair trial. The Senate's investigating subcommittee still means to hear him, but with his conviction and the realisation, even before election day, that neither political party was likely to make political hay out of the case, Washington's interest in it has exaporated. However, the Department of Agriculture is reorganising its procedures as a result of the unflattering light cast on them by the scandal.

THE SHORTEST DISTANCE BETWEEN YOUR FACTORY AND THE DOCKS IS 2 STRAIGHT LINES

London Midland offers an important priority service to British exporters *Export Express. Export Express* links selected docks by rail overnight t factories in major industrial centres of the London Midland networ between London, the Midlands, North and North West. **For full wagon and container loads the assurance to exporters is: at your factor today, at ship's side tomorrow.** Safe. Sure. In all weathers. No extr cost. No red tape. No anxiety. Priority for export goods on trains runnin to timetable. Today, tomorrow, all through the working week. If you ar concerned with shipping goods abroad, *Export Express* can take a gre load of freight problems off your mind. Ask your nearest Londo Midland Station Master or Goods Agent for the latest details of th service. London enquiries ring AVEnue 7535.

LONDON MIDLAND RAILWAY'S EXPORT EXPRESS

THE WORLD OVERSEAS

The UN's Thanksgiving

FROM OUR SPECIAL CORRESPONDENT

THANKSGIVING DAY being merely a local affair, it is usually observed only halfheartedly by the United Nations. If the world organisation celebrated all the holidays of all its 110 members it would enjoy a year-round repose. On Thursday a quota of work was therefore on the programme of both the assembly and the secretariat. The concept of thanksgiving nevertheless unquestionably pervaded the air as 110 flags came down at dusk on Wednesday, the floodlights came on, and the tailfins of the huge black car whisking the expressionless Mr Zorin out of the United Nations gate nearly cut your correspondent's short visit even shorter.

The gloves that had been so lately and so alarmingly off certainly seemed to most Thanksgiving Day observers at the United Nations back on again with mink-lined softness. Admittedly it was not clear whether a true handshake could be achieved while wearing such urbane mitts. But it was nice to hear the Russians making appreciative noises about the discreet phrasing and firmly unboastful character of President Kennedy's statements on Tuesday, and westerners lauding Mr Mikoyan's skill in twisting Dr Castro's arm without generating such heat as to singe his beard.

The giving of thanks about the Chinese announcement of a Himalayan cease fire was deferred by virtually all here until more might be seen both of Peking's actions and of Delhi's reactions. But the Cuban gift horse was not to be looked too closely in the mouth. As in the case of the earlier removal of intermediate rockets, it was understood that American warships would sidle up to Soviet ships carying home the Ilyushin bombers which Dr Castro had so suddenly found to be "antiquated," and merely take polite peeps at the cargo. The word was that they would somehow arrange with the Russians to be in the right neighbourhood—a phrase evocative of your friendly neighbourhood fleet.

Did all this have anything to do with the United Nations? If one looks only at the formal proceedings (which is of course all one is supposed to look at) the answer is that it did not. The Security Council was quick to get under the bed during the Cuba crisis week, and unlike everybody else it has not come out again yet. Somebody mildly remarked today that perhaps the council might in due time at least meet to hold a requiem mass for the departed crisis. For the rest, the regular assembly proceedings ground steadily on through bad times and this week's better days alike without visible connection with Cuban downs and ups. The assembly's plenary debates are at present a spiritual safari through the vast perspectives opened up by last month's 500-page report on a few out of the vestigial British Empire's still richly filled treasure house of dependent territories. On Wednesday, as a divertissement, the assembly broke off to devote the afternoon to confirming a resolution already acclaimed in committee of the whole, by 97 votes to nil, urging the disarmament talkers to return to Geneva and to talk on.

Meanwhile the first political committee was wrangling whether to debate outer space or Korea first, although the sole value of a debate on either would seem to be as a time-filler while it is decided whether and when to turn to the more fruitful topic of nuclear-free zones, one of the items freshly revived by the Cuba clash. The other political committee was in the sands of Oman; the only oasis relieving its verbal expanse was the Cuban delegate's indignation when the inimitable Mr Shukairy of Saudi Arabia equated the British bases in Oman with somebody else's bases in Cuba. The British representative, though doubtless just as convinced that a distinction between the two was crucial, passed up the opportunity of demonstrating solidarity with Cuba on this point. The economic committee, which was trying to debate five separate items in parallel, at times seemed as if it would have found map-reading easier in the deserts of Oman.

Most delegates in fact seemed very ready to leave the United Nations role in the Cuban affair in other hands; the hands of the quiet little Burmese who sits up aloft on the top floor of the secretariat tower and who was host at lunch on Tuesday to Messrs McCloy, Stevenson, Kuznetsov and Zorin. U Thant has been the United Nations' only visible link with the Cuban question since the Security Council faded away like a Cheshire cat, not even leaving him a resolution to work under. Although it is not easy to define exactly what effect his activity has yet had, hardened professionals here swear that his performance has been as effective and his timing—a crucial element—as precise as Mr Hammarskjöld's ever were; some would say, still better.

The mere existence of the United Nations building here in New York has facilitated contact on an equal, and also on an amiably social, basis between American and Soviet highrankers. Moreover, while they have now got well embarked on these direct dialogues, the atmosphere between Havana and Washington is not yet attuned to anything of the kind. Dr Castro's well advised technique of addressing himself to U Thant is thus a decidedly practical literary form. On Monday night it enabled him to maintain his dignity by referring to American policy in vigorous terms without compelling Mr Kennedy to retort at his Tuesday press conference. Likewise Dr Castro's consent to the removal of the bombers was thus made public in diplomatic language without his having to address himself to either of the great powers in a manner that could have seemed unacceptably humiliating.

But the assumptions that the United Nations would naturally prove a source of some reassuring presence in Cuba have been premature. Even the modest idea of a presence comprising the non-aligned diplomats in Havana was never a starter. By a now set tradition, a United Nations presence can be inserted in a vacuum area with a view to checking the inrush of powers; or sent to reassure a little state that fears bigger neighbours. It cannot be installed in circumstances suggesting that a big chap has foisted it on a little fellow. What does seem still conceivable is some device for reassurance and reciprocal inhibition on a multilateral—one hears it termed a Caribbean—basis. (Both Dr Castro's letters to U Thant this week stressed his total rejection of anything "unilateral.") And that brings one round perhaps to the broader question of zones free of nuclear arms, or at least subject to some limitations on arms. Back in fact to the United Nations again, and quite probably to some revamped version of the Brazilian nuclear-free zone project, now on a handy shelf. At the moment Mr Rapacki has, perhaps tactfully, absented himself, but the Swedes, fondling dog-eared copies of last year's Unden plan, are just as tactfully present.

Underlying all the talk of a possible use of the United Nations mechanisms in active form there remains, however, the again emerging doubt about the future of its executive. Not surprisingly, U Thant is still playing hard to keep. Maybe it would not even satisfy him if the Russians ceremonially burnt their sacred troika before his eyes and walked barefoot over the hot ashes. He is expected to hold out not only for a completely free hand but also for a back free of the weary load of the Congo. Thus it is not wholly irrelevant to the chances of moving from the Cuba issue to wider arrangements in the arms and disarmament field that a strong American Congo team from the State Department was today up on the top floor of the secretariat tower, talking some kind of Congo turkey on Thanksgiving eve.

Delhi Fore and Aft

FROM OUR CORRESPONDENT IN INDIA

THE Chinese "peace plan" fell like a bomb on an Indian public reeling from weeks of earlier disasters. Psychologically the offer was brilliantly timed—but still not good enough. The first reaction here was deep suspicion. Shorn of its details, the offer of a ceasefire from midnight on Wednesday, and of a withdrawal starting on December 1st to positions twenty kilometres north of the McMahon line, in effect repeated proposals already rejected by New Delhi, though at a time when the Indian position was far better than it is today. It was feared that if not pure psychological warfare, the offer might be a military ruse to gain time for the extended Chinese advance columns to consolidate—though the shattered Indian defences must have stood to benefit even more. New Delhi stalled for a day, saying that it would give the proposal full consideration when it had officially received it. But Mr Nehru firmly reiterated the Indian position that there could be no negotiations until the *status quo* before September 8th was restored. At the time of writing on Thursday the government was waiting to see what the Chinese did next before making up its mind.

The week had brought Indians the worst news since the Chinese invasion began. The fall of the Se La pass last Sunday, November 18th, and of Bomdi La on Monday opened the gateway to the Assam plains. Se La ridge, some 14,000 feet high, was the last major mountain barrier between the Chinese and the Brahmaputra. The Indians had determined to hold the invaders at the pass. This they did, only to find themselves outflanked by a heavy Chinese column which came unobserved through another pass and cut the road behind them near Bomdi La, thirty miles south-east. Within twenty-four hours the Bomdi La headquarters of the Kameng division of the North-East Frontier Agency (NEFA) had fallen. By Tuesday a large Indian force, isolated and unsupplied, was trying to fight its way back from Se La while a single range of hills stood between the Chinese and Tezpur on the Brahmaputra just forty crow-flying miles away. It was the same story in the eastern tip of NEFA, where the capture of Walong in the Lohit river valley and the subsequent rapid advance down the valley threatened to bring the Chinese to the upper end of the Assam plain, threatening for a start the Digboi oilfield. By Wednesday night the Chinese army overlooked the plains of Assam.

The Chinese blows once again smashed Indian illusions that the situation was either militarily or politically stable. The lull after the first major attack had persuaded some here both that the invaders were being held and that their objectives were limited to taking a little of the NEFA to offer as a bargaining counter for Ladakh. The massive and well prepared attack (the Chinese reportedly built in three weeks a road from the McMahon line to Tawang which the Indians had not built in as many years) suggested that they were quite prepared to occupy their entire claims in the north-east—virtually the whole of NEFA—or more. By the time of the ceasefire deadline the advance troops were already at the limit of the Chinese claim above Tezpur and in the Lohit valley. Until the real intention of the ceasefire offer is known, the long-term aims of the Chinese are best left to the highly-paid Pekinologists whose absurdities to date include suggestions that the real object of the Chinese was the removal of the pro-Russian Mr Krishna Menon or the replacement of their dependence on Russian oil by oil from Digboi, presumably piped over the 15,000 foot mountain range.

In New Delhi the cobwebs were at last blowing away. The prime minister spoke repeatedly of "war," and he stated on Monday that India was trying to get "all possible help" from friendly countries with "no limitation of any kind." His personal letter to President Kennedy requesting urgent and massive arms aid bore a very different tone from the delicate concern for non-alignment evident in the first requests when the crisis broke. The possibility that aid might yet include foreign troops was by no means as remote as it had been a week before.

The government still seems more sure, however, of what it would like to do than of how to do it. There is no sense of vigorous central direction. The measures so far taken to mobilise the economy seem weak, though the new broom of Mr T. T. Krishnamachari, armed with wide powers to co-ordinate production in all sectors, may soon start sweeping in earnest. In other fields action sometimes seems more panicky than strong. The unofficial censorship already operating cuts out information which might indeed help the enemy if it had not already been freely published in western papers. The government proposes to supplement it by the revival of the British-invented system of demanding a heavy "security deposit" from papers that break the unformulated rules, the deposit being forfeited at the second offence—an admirable way of suppressing a basically hostile press but an absurd one for regulating papers that are not less patriotic, though they may be less all-wise, than the government. The right-wing papers had already been warned to lay off political attacks on Menonism. Official war news has been doled out 24 hours late and, till the latest stark reverses, consisted largely of obvious whistling to keep Indian spirits up.

Politically, Mr Nehru's fatal vacillation over Mr Krishna Menon is having dangerous results. Though the streets and papers are full of exhortations to rally round Jawaharlal, the comparison with Neville Chamberlain can be heard uncomfortably often, not least among influential members of Congress. Whatever justice that comparison may have, there is no conceivable Churchill waiting in the wings, and although Mr Nehru's personal power and prestige among his colleagues have fallen, most of them know this. More

On the Se La pass

Indians than is healthy are beginning to think of Mr Nehru as no more than, shall we say, the best prime minister they have got. But even now, such is the state of Indian feeling, a firm rejection of the ceasefire could transform Mr Nehru's image overnight.

Ultimatum for the Chancellor

FROM OUR BONN CORRESPONDENT

WITH general assent, Dr Adenauer has been given some fourteen days in which to repair his own and his government's damaged authority. The ultimatum has come from all sides but the Bavarian Right. Last Sunday, November 18th, the managing chairman of the Christian Democratic Union, Herr Dufhues, painfully surprised his chief (and co-chairman) by publicly declaring that the party, "along with the entire population," expected the Chancellor "to act and govern."

The government, Herr Dufhues stipulated, must be so reorganised as to restore public confidence in its ability to lead. Herr Krone, one of the party's four deputy chairmen and the closest to Dr Adenauer of his ministers, uttered a loud amen. On Monday the five Free Democrats in Dr Adenauer's coalition cabinet resigned. On Tuesday the Christian Democrat and Christian Socialist ministers followed suit by formally placing their portfolios at the Chancellor's disposal. They did so, it was officially explained, at the prompting of Herr Strauss, the compromised defence minister, and Herr Dufhues, the party's chosen spur and conscience since the Dortmund conference in June. But neither Herr Schröder, the foreign minister, who was in Bangkok, nor Herr Lemmer, the minister for all-German questions, who was in Berlin, had been consulted. Herr Erhard, the economics minister, who was in Strasbourg, had agreed by telephone.

Having effected their five ministers' demonstrative gesture, the Free Democrats' executive committee and parliamentary party then assembled for electioneering purposes in Nuremberg; they declared that "the exigencies of the world situation, and the situation of our divided fatherland and its divided capital city," called for a government "which, free from personal embarrassments, serves only the weal of the nation. A reorganisation of the federal government is therefore necessary." Naturally the Social Democrats at once reinforced the demand for change. But they, uninhibited—as are the Christian Democrats and the Free Democrats—by the allegiances of the elections on Sunday (November 25th) for a new Bavarian state parliament, have made no bones about calling expressly for the dismissal of the cabinet's arch-Bavarian, Herr Franz-Josef Strauss, whose private war with the news magazine *Der Spiegel*, the motives of it and the methods employed, have precipitated a million doubts concerning the health and manners of the state. Nor have they hesitated to protest that the Free Democrats have up to now shied away from voicing their own and the majority of the public's deepened conviction that a change at the top of Dr Adenauer's government is painfully overdue. Dr Adenauer seems to be ready to sacrifice his defence minister, but determined to stick it out himself for another year.

The champions of cabinet renewal now seem reconciled to waiting for satisfaction until after December 5th, when President Lübke returns from his trip to Pakistan, Siam and India. Presidential approval is required for ministerial changes. In the meantime the five Free Democrat ministers—finance, justice, refugees, overseas aid and federal property—are continuing to carry out routine duties but are not attending cabinet meetings.

And in the meantime the Bavarians will be choosing a new *Land* parliament, expressing by ballot their feelings about Herr Strauss, Dr Adenauer and kindred issues. Herr Strauss is the chairman of the Christian Social Union (the Bavarian counterpart of the Christian Democratic Union), which won 45.6 per cent of the votes cast in the last Landtag election in 1958, and which has since ruled Bavaria with Free Democrat help. The Social Democrats, who emerged as the strongest party in Bavaria after the Landtag election of 1950, and are still the ruling party in such important Bavarian municipalities as Munich, Nuremberg and Regensburg, are hoping to improve their fortunes handsomely on Sunday. Their success—largely a consequence of the *Spiegel* affair—in the elections to the Landtag of Hesse on November 2nd, when they won an absolute majority for the first time, has greatly fortified their hopes. The Free Democrats, apparently, are reckoning that through having staged a show of resistance to Dr Adenauer *without specifically demanding either his head or Herr Strauss's*, they have been wooing the Bavarians with as much dash as the party's limited prospects allow. When the result of tomorrow's polling in Bavaria is known, the Chancellor will be able to plan his next moves. Since the Christian Democratic Union itself, strictly so called, holds only 192 of the 499 seats in the Bundestag, Dr Adenauer depends for his majority on the affiliated Bavarian Christian Socialists, with 50 seats, and the Free Democrats with 67. Tomorrow's vote should help him to judge how warranted the Social Democrats are in demanding the all-party government which neither the Christian Democrats nor the Free Democrats want.

France's Great Divide

FROM OUR PARIS CORRESPONDENT

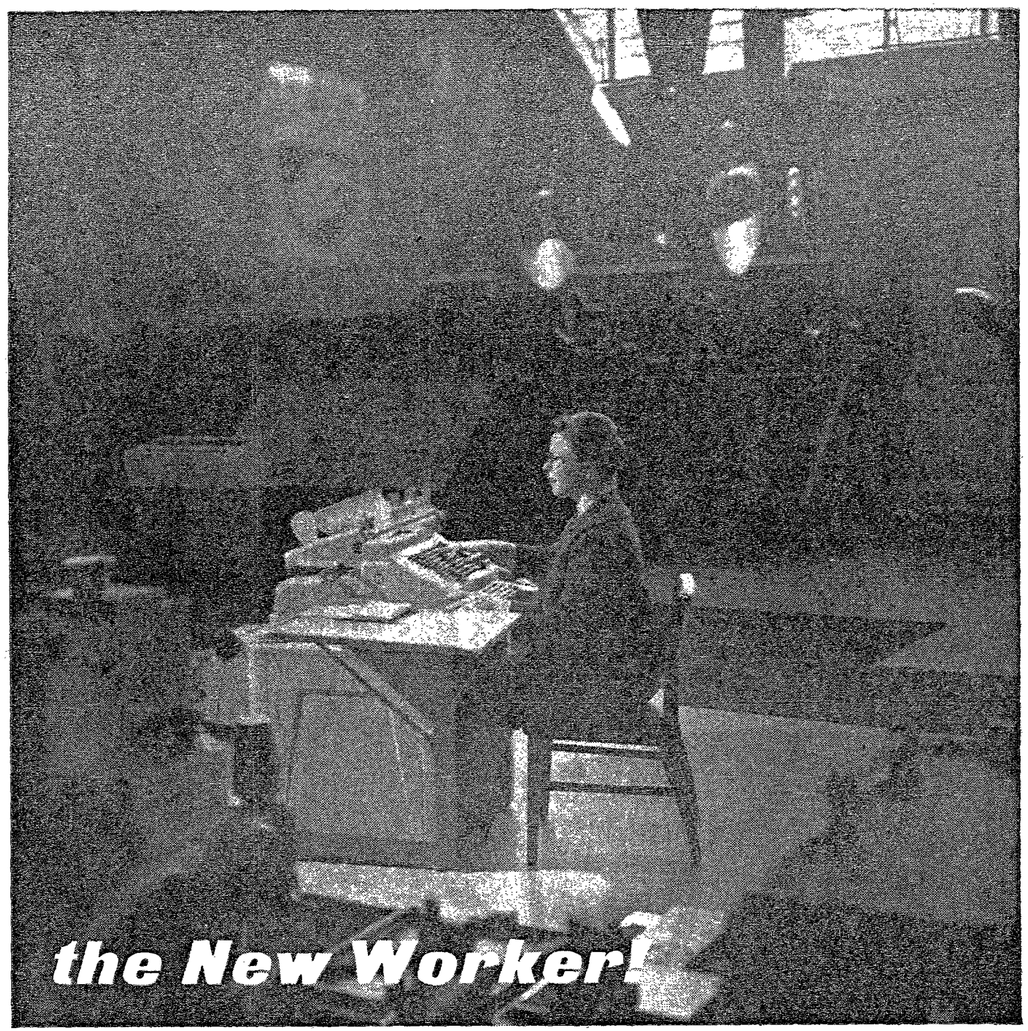
"Tomorrow in France there will be the Communists, ourselves and nothing"—*M. André Malraux, Oct. 1947*

LAST Sunday's first round in the parliamentary elections saw the French voters sacrifice the third (that is, the traditional Republican) force on the altar of Gaullism. General de Gaulle is now quite likely to get the obedient parliament of his choice. His strategy, based on the impact a referendum would have on the ensuing elections, has proved successful, after all, despite his only mediocre success in last month's referendum. True, if the voting in the referendum is compared with the voting in the elections, the traditional parties recovered a great many votes; but not as many as they, and everybody, expected. The proper comparison is with the parliamentary elections of 1958; and on that basis they lost two million votes to the neo-Gaullist UNR. About as many Frenchmen simply dodged the contradiction between their assent to General de Gaulle and their party allegiance by staying at home (thus bringing the total of abstentions to more than 31 per cent, the highest since 1881). It is equally true that only half of those who had voted for the general were logical enough to vote for the general's party. Yet, with close to six million votes, the UNR finds itself in a commanding position on the eve of the second ballot. Should the trend be reaffirmed tomorrow, the UNR —together with those Conservatives who accepted from M. Malraux the label of good Gaullist behaviour—may muster an absolute majority in the new Assembly. The general has taken his revenge on the third force, which had kept him at Colombey for over a decade and was now attempting revival as the *cartel des non*.

VOTES IN FRENCH ELECTION

Parties	Votes, 1962	Per cent	Votes, 1958	Per cent
Communist party	3,992,431	21·78	3,870,184	18 9
PSU, etc.	449,743	2·45	356,081	1·8
Socialist party (SFIO)	2,319,662	12·65	3,176,557	15 5
Radicals and Centre Left	1,384,998	7·56	1,710,710	8·3
UNR	5,847,403	31·90	3,589,362	17·5
MRP	1,635,452	8·92	2,408,370	11·7
Conservatives (Indépendents)	2,458,988	13·42	4,112,191	20 1
Extreme Right	241,309	1·32	1,268,922	6 2

Last Sunday did not see a swing to the Right. That had taken place in 1958; on this occasion, the switch of votes has occurred, essentially, within the Conservative half. The Bonapartist Right, as M. Mitterrand put it, has swallowed the Republican Right. The



Shirley Woodgate types out the order acknowledgement form—and that's that. Electric, electronic and hydraulic gadgets of all kinds take over and do the rest. They handle the material, sort it, machine it, weld it, inspect it, finish it, store it . . . and then type out the shipping advice form.

That's how it is at Fisher & Ludlow's demonstration plant in Tipton, just outside Birmingham. And that's how it will be in a lot of factories in the future.

Less and less manual labour. More and more call for highly skilled technicians.

Shirley is one of the New Workers. Skilled and well paid. A Mirror reader, too.

Today, the Mirror has nearly fifteen million readers. Almost *seven million* of them are skilled workers and their families! And their numbers are growing.

You'll do your best business with them. Now and in the years ahead. Their earnings are always rising . . . they always have the most spare cash.

You reach them—at the lowest overall cost—when you advertise in *their* paper.

referendum results made it plain that the Conservative leaders could not carry their troops along against the general. They paid the penalty in the election. Offered the choice between the stamped Gaullist commodity and an ambiguous package that had had a Gaullist wrapper in 1958 but had now been hastily given a Republican cover, many Frenchmen showed no hesitation.

Right-wing extremists like M. Lepen and M. Lacoste-Lareymondie were deserted by the bulk of their supporters. But so were such liberal Conservatives as M. Paul Reynaud. Any Gaullist could do the trick. M. le Tac, completely unknown in Marseilles, managed—without any campaign, simply on the basis of his Gaullist credentials—to outstrip M. Fraissinet, the local right-wing star. The strongholds of the MRP in the traditional conservative areas of eastern and western France have been shaken. The Independents may well lose all their twelve seats in Paris, leaving the city entirely to the UNR (but not its suburbs, where the Communist party is showing gains).

Politicians who climbed on the Gaullist band-wagon in 1958—indeed, who helped to set it moving—and thought that they would be able to jump off unscathed, have been proved wrong. Even the Socialists are licking their wounds. In fact, the only party to weather last Sunday's Gaullist storm was the Communist. With 22 per cent of the total vote, it has actually emerged reinforced. Taking into account the fact that single member constituencies are less favourable to the Communists than proportional representation, the Communist electoral strength is now probably as great as in the last days of the Fourth Republic. In the course of this week it has been busy making use of this strength to overcome its notorious weakness, which is its isolation, offering its, in fact, sorely needed services to help the others resist the Gaullist wave.

In this respect the biggest Communist success has been to reach an agreement with the Socialists in their strongholds of the Nord and Pas-de-Calais, on the basis that each party withdraws its candidate where the other is in a better position to defeat the UNR. These are only the two most spectacular pacts. Throughout the country Communists have been standing down—not always on the basis of reciprocity—for Socialists or Radicals. In some cases they have even stood down for candidates who had polled less votes on the first ballot but who seemed, nevertheless, to have a better chance of victory.

The polarisation that has now happened on the right of French politics and the emergence of a Gaullist party likely to gain the majority have naturally made openings for the Communists at the other end of the spectrum. Thus the general's triumph has been a tragedy for M. Mollet, his former faithful assistant. The Socialist leader, fearing a Gaullist victory, uttered the warning before the first ballot that Socialist voters might, in a few cases, have to vote for a Communist. To keep it to a few cases, he pinned his hopes on the *cartel des non*, the alliance with the Radicals, Christian Democrats (MRP) and Conservatives. But the Third Force, workable at the level of leaders and deputies, bewilders and repels the voter. M. Mollet and M. Reynaud may arrange, but the voters will not follow. The scope for left-wing deals between the two ballots has grown beyond the number originally contemplated.

Nobody will suspect M. Mollet of favouring anything like a Popular Front. Nobody will doubt him when he says that he seeks merely an electoral pact, based on the priority of dangers. But such is the logic, and the irony, of history that polarisation on the right conjures up unity of action on the left, and that M. Mollet may turn out to have been its architect. It is doubtful whether the hastily made deals will actually work tomorrow. Socialist voters, raised for fifteen years on an anti-Communist diet, are likely to prove less disciplined than the Communists in switching their votes. M. Mollet's Conservative and MRP allies may recoil into Gaullist arms before the spectre of the Popular Front.

The immediate question is whether the UNR and its coupon-bearing friends will get more than 240 seats, or the absolute majority in the new Assembly. If so, General de Gaulle will be able to rule undisturbed, with the UNR running the Assembly for him. If it falls short of that majority and needs, say, MRP support to form a government, the general may yet meet with some checks on the more contentious points of his European and Atlantic policies. That question will be answered this weekend, when the 369 remaining seats are filled. The other question, that will remain open, for a while, is whether the 1962 elections will be remembered simply as the moment of Gaullist triumph, or perhaps also as the start of a move towards unity on the French left, bringing with it the end of isolation for the French Communists.

Mr Khrushchev Reorganises

NEARLY all the eight pages of last Tuesday's *Pravda* were taken up by the speech which, on the previous day, Mr Khrushchev had read for over five hours at the opening session of the Soviet party's central committee. One would search in vain throughout the lengthy text for an explanation of the Cuban venture or of the crisis now shaking the communist world. A plenary session, attended not only by the 400 or so full and associate members of the committee, but by a host of industrial and agricultural experts as well, was scarcely the most suitable place.

In public, Mr Khrushchev spoke about economic matters. He foreshadowed a spectacular tightening of party control over the economic life of the country. But domestic economics and foreign policy are inseparable. It is the failure of Soviet foreign policy to release resources at home that has made economic reform more urgent. Economic success is what Mr Khrushchev needs to justify his criticised policy of co-existence. Drawing up a balance-sheet of the last four years, the Soviet leader as usual mixed praise with criticism. He attacked the traditional evils of red tape, inefficiency and too frequent job-changing, but claimed nevertheless that in the last four years Soviet industrial production has not only reached but exceeded the targets set in the current plan (1959-65). On closer scrutiny the progress is significantly uneven. Heavy industry exceeded its objective by six per cent, light industry by only two per cent. Because of agricultural failures, the increase in retail trade turnover, on Mr Khrushchev's own reckoning, was only one per cent higher than planned. On agriculture, too, the Soviet leader could only produce a mixed bag of news. Although this year's grain crop, at 147 million tons, has finally topped the previous record of 1958, the yield per acre is still much too low. Production lags behind planned targets. If the grain harvest was fairly good this year, it was poor for cotton and very bad for potatoes.

The strains caused by increased expenditure on defence have in recent months given rise to a fascinating discussion in the Soviet press about the best means of increasing productivity and the quality of output. The revision of wholesale prices was not the only subject involved. Suggestions were made that, within the broad framework of a general plan, profitability should become the main criterion. Directors of firms, instead of being crippled by controls, should be given a maximum of autonomy ; the interest of labour should be enlisted in the working of the enterprise through profit-sharing schemes ; and so on. The debate was echoed in eastern Europe, particularly in Poland, since with the growing integration of the block what happens in Moscow is of vital interest to all. (Mr Khrushchev, incidentally, revealed that the prime ministers and party secretaries of the countries belonging to the Council for Mutual Economic Aid (Comecon) will soon meet to debate a common plan for the block.)

In the West, this discussion in Russia has aroused speculation about an impending radical reform of the Soviet planning system.

Mr Khrushchev did not confirm these rumours, at least not in the expected direction. He paid lip-service to profitability and to the lessons to be learnt from western experience. But he decided that before embarking on any radical departures, it was safer to tighten party control. Stalin, he argued, stayed hidden behind the walls of the Kremlin. Leaders and party members alike have now to take a direct part in the economic battle. They must be turned into inspectors of the administration, into overseers of production and planning.

In order to achieve this, Mr Khrushchev proposes to split the party into two, from top to bottom, on functional lines. From the local and regional level to the very heart of the party in Moscow, the party committees are to be divided into industrial and agricultural branches. Thus, at the party headquarters in Moscow there is to be an industrial as well as a farming overlord. The scheme still has many gaps. What will be the relationship between the farming and industrial wings, and between both of them and the existing economic organs? The Gosplan, which up to now has dealt with current planning, is to turn its attention to the elaboration of long-term blueprints. (The fate of the special council hitherto fulfilling that function is unknown.) Current planning will now be the province of a new body, the Soviet of the National Economy, which is to be put at the head of the regional economic councils (or *Sovnarkhozy*).

The shape of the new organisation is not yet clear, but the present tendency does not seem to be towards greater autonomy. The *Sovnarkhozy*, created in 1957 in an attempt to decentralise, are now to be reduced in numbers (from 67 to 22 in the Russian republic and from 14 to 7 in the Ukraine). The party is to increase its hold over both the administration and management.

The discussion about economic management was not without its strains. The shake-up of the party that is implicit in Mr Khrushchev's proposals provides an opportunity for rewarding the victorious wing and downgrading opponents. But at this point the economic debate borders on the ideological and strategic conflict that is now being fought out. The current session of the central committee may still bring surprises. Next month's meeting of the Supreme Soviet will also provide the occasion for a reshuffle. Plenty of signs suggest that Russia, and possibly the Soviet block as a whole, is on the eve of some major changes.

Canada's Leaking Dyke

FROM OUR CORRESPONDENT IN CANADA

THE Diefenbaker government is living, like the legendary little Dutch boy, under the protection of a precarious and leaking dyke, trusting that either the Social Credit or the New Democratic group will thrust a finger into every hole the Liberals can make. Yet the suspense and excitement that marked the first few weeks of this badly divided Parliament have subsided. The public, which never pays half as much attention to the House of Commons as the members imagine, has relapsed into something approaching its usual indifference, convinced that there will not be an election until the spring, and not wanting one without some clearer sign that a new election would provide a more decisive result than the one held last June.

This acceptance of what one reporter called "government at the edge of the abyss" derives both from the improved financial and business climate and also from the pattern into which the politicians' performance has fallen. The satisfactory growth of the exchange reserves, which depended until the end of September largely on the reverse flow of speculative funds, has been confirmed by what Mr Rasminsky, the governor of the Bank of Canada, dared two weeks ago to call "the resumption of sizeable long-term capital inflows." The relief of the business and financial community has grown into something more like confidence, which in turn has been increased by a moderate but definite change in central bank policy towards greater monetary ease. It seemed impossible last June that such a degree of cheer and confidence could be restored so soon.

More unpredictably, the federal government's financial position looks healthy. Unless the inflow of capital requires an unexpectedly heavy flow of cash into the exchange fund, the government's cash requirements look like being covered for some time to come by a very large sale of Canadian savings bonds. Between December 1st and January 1st, $615 million of government bonds fall due, but the market believes that about half of them are already held by the Bank of Canada. If the budgetary outlook were as rosy as the cash position, the finance minister, Mr George Nowlan, would have few short-term worries. But the budget which is promised early in the New Year will be extraordinarily difficult to devise. Most of the cuts that were made as part of the emergency measures of June 24th were achieved by deferment rather than permanent economies, and probably the major part will have to be restored next year. To return to a budget deficit of $750 million which Mr Fleming proposed last April would be damaging both politically and financially; yet it does not look as though the increase in national product next year will yield enough revenue to cut it much below that. But any increase in the tax take will have unfavourable effects economically and politically. Economic policy, as the Bank of Canada has openly proclaimed, should be expansionist so far as the exchange position permits. Political considerations compel Mr Nowlan to regard his first budget as being possibly his last and to make it as sweet as he can for the electors.

This is on the assumption that the two smaller parties keep the government in power into the new year; the assumption is by no means sure. It depends first on Mr Thompson's ability to prevent his Quebec deputy, Mr Real Caouette, from swinging the 26 Social Credit members from Quebec against the government. Their attitude will largely depend on how they interpret the results of the provincial election in Quebec on November 14th. The Social Credit party did not participate in the provincial election, but the opposition party, *L'Union Nationale,* now led by Mr Daniel Johnson in place of the late Maurice Duplessis, had counted on picking up a good many votes from discontented Social Creditors. In the result, the provincial Liberals led by Mr Jean Lesage came back triumphantly with an increased majority, and many observers, including especially the federal Liberals, conclude that the Social Credit threat is waning rather than waxing. Whether they are right or not, this belief has certainly confirmed the Liberals' determination to bring on an election whenever they can.

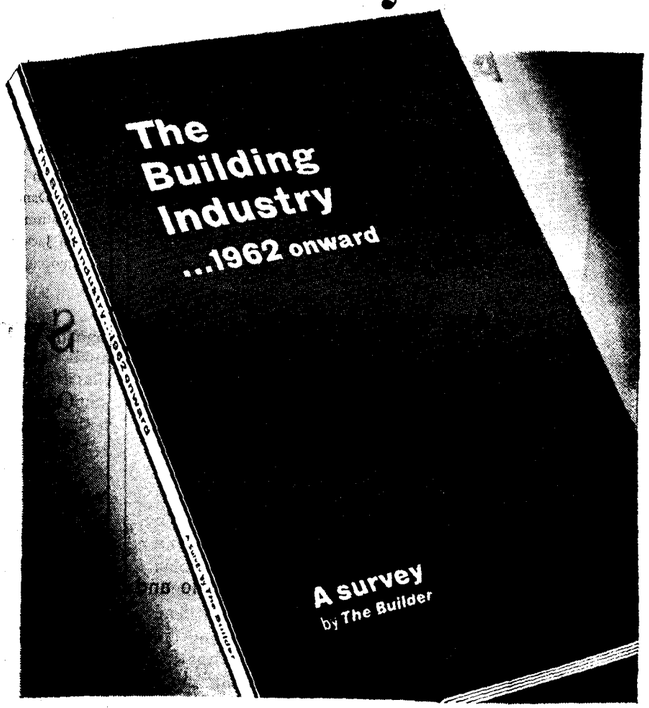
But it is not enough for the Liberals to get Social Credit support against the government unless the 19 members from the New Democratic party (whose leader, Mr T. C. Douglas, has now won a by-election seat) at least abstain from voting. They tried this rather embarrassingly when they supported a Social Credit amendment to a supply motion calling for "debt free money." The manœuvre established once and for all that Mr Pearson and his followers are genuinely trying to defeat the government, not merely shadow boxing. But it also showed that Mr Douglas and his followers are just as determined not to, and though they are the smallest party in the House they have the last word.

It looks, therefore, as though Mr Nowlan will have to face the unenviable job of presenting a budget in January. Moreover, if he is ingenious enough, and if the business and financial outlook is still as hopeful four months hence, the Conservatives might come out of the next election better than the last. They have learned a good deal since their humiliation last June. The changes in August have greatly improved the cabinet. The exchange crisis has compelled ministers to rely on sober official advice. The Diefenbaker government for the first time appears to be more devoted to government than to Diefenbaker, and the results so far have strengthened the government party as well as the country.

The most authoritative, comprehensive

survey *of the* Building Industry

ever made...



THE BUILDING INDUSTRY—the most rapidly expanding of Britain's major industries—faces a vastly increased programme of work over the next 20 years.

Is it equipped to handle the foreseeable demands of both the private and public sectors? To what extent can industrialised systems reduce the overload on labour and materials? Can the industry plan ahead whilst subject to the undermining of its stability by "stop : go" economic policies? Can client and architect and the professional and executive sides of building find effective means of communication and co-operation? Can building societies develop from being a restrictive influence on housing techniques? Can the industry meet the challenges of the Common Market?

These and the many other questions which affect those who build and those who use the building industry are answered in *'The Building Industry—1962 Onward'*. Based on a nation-wide study and right up to the moment, this survey by 'The Builder' analyses the many problems facing the industry and makes trenchant recommendations.

If you are in any way concerned with the Building Industry you need to study this report—*immediately*. It is just published and is of specially close concern to: all in Government and local authority service with influence in Building Industry matters
building owners
property owners and developers
building material producers
industrialists
investors
building and civil engineering contractors and subcontractors
quantity surveyors
architects
civil engineers
architectural, engineering and building school lecturers and administrators

LONDON and MANCHESTER
ASSURANCE COMPANY LIMITED

Finsbury Square, London, E.C.2.

A HOME-SERVICE INSURANCE OFFICE

Eilean Donan Castle, Ross-shire, built 1220 as a defence against the Danes. A stronghold of Highland chieftains, its turbulent history continued until 1719, when an English man-o'-war bombarded its Jacobite garrison. After their expulsion the castle remained unoccupied until its restoration 40 years ago.

Symbol of Security

Over the centuries the castle has represented strength and security to those dependent upon its protection. In modern times the Alliance castle symbolises the same qualities which are just as important now as in the past.

With almost a century and a half of experience in insurance the Alliance offers you an extensive service, expert advice on your individual needs, and prompt and generous settlement of your insurance claims.

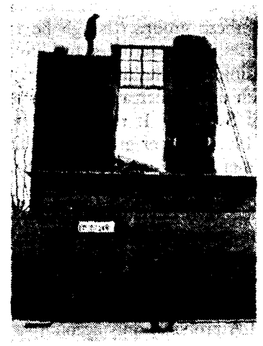
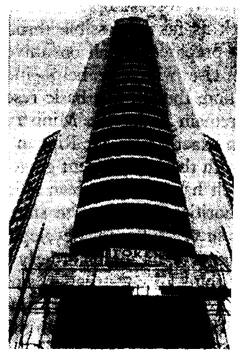
THE BUSINESS WORLD

Putting the Builder's House in Order





INSIDE the sprawling, ill-co-ordinated body of the building industry there might just be an upright clean-limbed giant struggling to get out. But, we are told, for the short-sightedness of clients, the lack of realism of architects, the plodding conventionalism of builders, the cussedness of sub-contractors, the impracticality of manufacturers . . . but indeed for human nature this giant could have been set free years ago.

No industry, perhaps, suffers so much from human failures of communication as does this one, with its notorious diffusion of responsibilities and its fragmentation of resources among tens of thousands of firms, many of them one-man concerns and only half a dozen of them employing more than 5,000 people. But changes of heart to a large extent mean changes of rules, procedures and standards. The main question about construction in Britain is whether these imprisoning details can be hacked away fast enough to release the extra productivity needed. A survey* published this week suggests that the average annual demand for building work between 1965 and 1970 may reach £3,700-£4,300 million (reckoned at 1961 prices), or 30-50 per cent more than the £2,845 million spent on construction last year. This estimate, which is not set out in any detail, seems to be based on estimates of future "need" for different kinds of constructional work that the authors have been able to assemble from specialised sources, and may itself therefore be hopeful. But however large the rise in effective demand may turn out to be, one thing is fairly clear: the industry cannot count on much extra manpower, and it needs a rapid rise in productivity. Radical technical advance—the complete bathroom units dangling from giant cranes—cannot play its economic part in the process until organisational changes are made at all stages.

Plenty of people, particularly in government departments concerned with building, have been saying this for a long time. Their views were accepted in general terms in the official Emmerson report† published in April; and are impressively endorsed, with detailed chapter and verse collected from all sections of the industry, in *The Builder*'s survey, which gives an up-to-date anatomical survey of the whole twitching monster. Its main recommendations support those of the "logical school" who have practical experience of the advantages of standardised techniques and streamlined procedures.

This school is best personified in Sir Donald Gibson, recently appointed as director-general of research and development to the Minister of Public Building and Works. His job is to push the whole public authority building programme, which currently accounts for about 50 per cent of total construction work in Britain, into rational modernity, and so to guide the entire building industry along the same path. Three directors have this week been appointed under him to work in the fields of development, building management, and research and information—the broad categories into which his new department's programme will fall. But it will also be engaged on the important primary task of piecing together a picture of the entire resources and potential of the industry on which a realistic planning of public building can be based. The close association of Mr Rippon's ministry with "the central planning machinery" should make it possible to provide what in Sir Donald Gibson's view and in the opinion of the authors of *The Builder* survey is the prerequisite to steady development of this industry: a guaranteed basic programme of work, apart from the more marginal public projects which alone would be trimmed in times of recession. Sudden decisions to cut back public investment plans—as, for instance, in 1957—have made contractors cramped and hesitant in their approach at times when the logic of new techniques was calling for more outlay on capital equipment, and for less dependence on the casual labour force which has been a traditional shock absorber.

Division of powers and interests within this industry has

* "The Building Industry—1962 onwards." A survey prepared for The Builder Ltd., by O. W. Roskill, industrial consultants. 155 pp. price £7 7s.

† Survey of Problems Before the Construction Industries. Ministry of Works. 1s. 6d.

meant that integrated research into design, construction and materials has been almost entirely left to government or local authority development groups on the postwar Hertfordshire school building model, out of which followed the setting up of the CLASP consortium. Believers in its principles of cost limits, modular co-ordination, prefabrication, joint bulk-buying, simplified contract procedures, and close co-operation between architect, builder and supplier, are now to be found in the more progressive local building authorities and the architectural departments of Ministries. The hospital service has its own development group and the idea has begun to spread to local authority housing, in Yorkshire and Sheffield for example. Sir Donald Gibson is determined to work as far as possible through these groups, though he is also prepared to call on universities, manufacturers and anyone else who can help—including the Building Research Station, though this basic research unit rather anomalously is to remain under the Ministry of Science. It remains to be seen exactly how Mr Rippon and his "ginger group" will fit in with the independent gingering of the Ministry of Housing, which has set up its own office in Manchester to advise local authorities who want to start their own development teams. But successful as the development group idea has been proved to be as a means of orderly innovation, its influence on the total bulk of construction work is as yet minute, and cannot be expected to spread fast. Even the much-publicised CLASP and its companion SCOLA probably only account for about 10 per cent of the annual expenditure on school building.

SPEED of construction is the tangible advantage of prefabricated building methods, but the problem facing both government developers and the owners or licensees of the various proprietary systems is to demonstrate how costs as well as time can be cut on really big scale projects. For most local authorities this would require some degree of co-operation to build up such big orders, but it is hard for them to commit themselves to co-operation on the basis of "once-off" projects that look alarmingly dear when costed up by the quantity surveyor. Some of the biggest individual authorities—London, Birmingham, Leeds, Coventry—are using proprietary precast concrete systems to build high flats in large enough numbers—at least 500 at a time—to be "comparable" in cost with conventional methods (which nowadays often means a combination of prefabricated and on-site work) but nobody is prepared to go beyond that cautious adjective. Nor can any manufacturer of "industrialised," or factory-made, systems offer a cheap enough product without the backing of these large local authority orders. But one effect of this will certainly be to make the contractor for a proprietary system or the manufacturer of components for any "custom built" system, much more dependent on its chief public clients than at present—and vice-versa. The danger of this was illustrated earlier this year when the company supplying structural frames for schools to CLASP, SCOLA and Hertfordshire, went into liquidation. That sort of risk, however, is exactly what could be reduced or eliminated with greater security in forward planning.

Fortunately there is a great deal of rationalisation implicit in the idea of contractors' consortiums, which can and should be pushed wherever possible, and many efficiency measures that the industry itself could introduce without waiting for a change of heart from its more hide-bound clients. Pooling of resources should not be limited to the buying side of the market. Architect/engineer partnerships are still rare but they offer big possibilities; contracting combinations of the kind generally found only in foreign tenders are undoubtedly useful on large schemes; even the nowadays slightly suspect "package deals" have some obvious organisational advantages. With the increased fragmentation of work among sub-contractors—due partly to the shortage of skilled men working for main contractors and to the increased complexity of services, particularly in high buildings—site control nowadays requires a more masterly mind than it generally gets.

Students of British contracting now recommend the abandonment by local authorities as wasteful, of the open competitive tendering system, to which many cling in a rather nervous desire to demonstrate impartiality and to produce the lowest possible price regardless of other factors—efficiency and suitability of methods—which may also affect costs. The alternatives—inviting tenders from a selected list or negotiating contracts with particular builders—cut down or eliminate the wasteful element in competitive tendering which is reckoned by the authors of *The Builder* Survey to cost the construction industry about £30 million a year. They also point out that new techniques or particular skills or types of equipment offered by a contractor nowadays make it profitable for all concerned if he is called in as early as possible in the design stage. One would like to see a wider application in public contracts of the methods used at the War Office, in which the contractor is asked to tender on a skeleton design, on the understanding that if successful he will be given similar contracts over the next eighteen months to be costed on the same basis.

TIDYING up of planning procedures to speed land acquisition, and of miscellaneous interpretation of bye-laws which, on things like room-heights, make any general standardisation impossible—these are things about which the government must act if it cannot first reason local authorities into uniformity. The Ministry of Housing will soon be producing its recommendations (on the principle already advocated by the RIBA among others) for the adoption of the four-inch, or more strictly ten-centimetre, module for industrialised building; one of the main tasks to be undertaken at the Ministry of Public Building and Works will be the extension of this to a system of preferred dimensions for all components and fittings, whether for industrialised or conventional building. This is an extremely complicated task, particularly for housing, but it must be carried through as soon as possible to give manufacturers a sure lead. Once a wide range of accurately interchangeable components is available a good deal of the expense incurred in any present "closed" prefabricated system, in each of which the parts are designed with reference only to that system, may be avoided. Everyone should benefit from cutting down on needlessly wide ranges of sizes. In time the supply of adaptable but related prefabricated components should give the small builder a valuable entry into a field which is at present dominated by large firms; the spread of plant hire may also make this possible.

The aim of all this must be to produce buildings that not only go up faster and more cheaply than before but are more suited to the needs of those who use them. Last year only 5 per cent of the Building Research Station's expenditure was devoted to "user needs." Work study in hospitals, and social surveys by the Ministry of Housing (into things like the number of power points needed by a family) are just a beginning of the much closer relation of design to function. As yet nobody can come near measuring the complex of physical, physiological and psychological factors according to which the performance of a building should be judged.

Canada after the Storm

Our Special Correspondent who set down his forebodings about the Canadian economy eighteen months ago has lately paid another visit to the Dominion. In the following articles he attempts to disentangle the confused threads of relief and doubt in Canadian thinking after a summer of monetary and political crisis. Canadians are certain that profound changes are needed in economic policy. But they are not certain what these changes should be; and our correspondent's own leanings would not secure universal assent among seriously thinking Canadians. Our Ottawa correspondent has some additional comments on page 782.

For this Relief . . .

ALREADY one senses that the cathartic experience of June's crisis surmounted has lost much of its power to rally Canadian economic thinking towards new courses of decision. The feeling was fine while it lasted, but the recovery from the impact of crisis has perhaps been too rapid for Canada's good. Between the end of March and June 24th—when Mr Diefenbaker announced emergency measures a week after he had been put back in office without a majority—Canada lost $600 million of reserves. By June 30th the reserves had been increased by over $700 million to $1,809 million largely by drawings from the International Monetary Fund and by the credit arrangements with the Federal Reserve and the Bank of England. By the end of October, after a series of fairly impressive monthly increases, the reserves were up to $2,614 million. Successive reductions have brought down the Canadian Bank rate fixed at 6 per cent in June to 4 per cent, after a somewhat startling cut of 1 per cent last week. Half of the $250 million loan arranged in New York was paid in during October; and half of the two arrangements with the Federal Reserve ($250 million) and the Bank of England ($100 million) have been relinquished.

All this undoubtedly looks good on paper—but to a British eye, hardened by experience in distinguishing between transient and permanent improvement, perhaps too good to be entirely trusted. What led to the drain of foreign exchange resources during the early summer was the widespread doubt about where the Canadian dollar would be stabilised—a doubt by no means removed by the fixing of the rate at 92½ US cents to the Canadian dollar in May. The June measures buttressed the rate in the nick of time and with the easing of suspicion about the Canadian dollar it now looks fairly firmly established at the new fixed parity, and indeed may be somewhat undervalued for the time being. But a fixed exchange rate involves the acceptance of new disciplines, including the need for bigger reserves. Intense argument is already building up about whether to stay fixed or to float again; but if a fixed rate is, certainly for the time being, an international necessity, the need for more reserves argues itself.

Yet one's impression is that the post-crisis euphoria has gone further than is healthy for Canada. The inflow of foreign exchange could easily be discouraged—by trying to set interest rates too low, for example, or by the renewal of menacing noises against American capital, of which there are already signs, little more than a month since the Canadian government itself was borrowing in New York. It may well be that Canada's merchandise trade this year will be in rough balance, but that is nothing; last year there was a surplus on trade account, yet a round billion dollars was needed to balance the current account, and that has been the average figure for nine years—to be made good by capital inflow, mainly from the United States. Under no conceivable set of circumstances can Canada quickly rid itself of dependence on new inflows of American capital. The country would plunge to economic disaster without it (that was the fatal weakness of the self-sufficiency policy that Mr Coyne argued when he was governor of the Bank of Canada). At the same time, the extent of this dependence has become thoroughly unnerving to Canadians who are neither xenophobic in their politics or illiberal in their economics; it must be inimical to Canada's long-term interests, to say nothing of her ambitions of economic independence, that its borrowing last year was equivalent to half its imports of consumer goods.

The Search for Political Answers

IT may be that Bay Street bankers in Toronto hold such views as these more strongly than do other Canadians. But they are in fact widely shared and they are prompting a new search for answers, ranging from those that are stuffily inappropriate for a Canada to which sound growth is all-important to the extreme "go it regardless" ideas that put growth way ahead of any other consideration, and the external value of the currency last. But the search is at present utterly frustrated by the impasse of Canadian politics. Right answers would be difficult enough to find if there were a clearly responsible majority, whether Conservative or Liberal, in Ottawa's House of Commons. But Mr Diefenbaker is a prisoner of the Social Credit party, whose 26 members from Quebec, led by Mr Real Caouette, are busy quarrelling with the party's leader from the west, Mr Robert Thompson. If Mr Caouette could have controlled his followers three

weeks ago he could have brought the Diefenbaker government down and forced an election in January. The Liberals seem cynical enough for anything, provided it leads to an early election—even to arguing that important parts of Social Credit economics are to be found in the Liberal platform. But behind this opportunism lies a conviction that the political instability which Canada is now having to endure must be ended by enduring the further uncertainty of another election—and if this leads to foreigners renewing their doubts about the Canadian dollar or to squawks from the people who found the $10 million to fight the last election, that, the Liberals seem to be saying, is just too bad. They sit working out their psephological cat's-cradles—"If we could win ten more seats, if Social Credit could be defeated by people shocked at putting them in last May, if the New Democratic party could win ten seats. . . ."

It is always risky to translate provincial politics into federal terms. Mr Lesage last week won for the Liberals in Quebec an increased majority after a snap election to take privately-owned power companies into public ownership (not, one would think, the most exciting of issues, particularly since Mr Lesage has committed himself to the principle of arbitral compensation, whereas the word for Mr Bennett in British Columbia was arbitrary). About the one consoling thing in this result is the further waning of the secessionist pro-French and anti-everything else Union Nationale party. There are Liberals, smarting under the loss of Quebec in the last federal election, who hope to bring back Mr Lesage into federal politics. One suspects that this is not how Mr Lesage views his political future. Undoubtedly the Liberals need leaders not merely capable of engaging public respect (which Mr Lester Pearson and Mr Walter Gordon most certainly are) but with all the power of personal projection and with the capacity for slogging politics that Canadian voters revel in. There is no comfort for Mr Diefenbaker in what happened in Quebec last week; but there is not a great deal for Mr Pearson either. And the present government could survive for some considerable time yet, provided that it does not go so far as to provoke the *Creditistes* into opposition. The spectacle of Ottawa politics, dominated by a couple of dozen political illiterates led by a man of frightening passion, is at present far from engaging.

Ottawa's Preoccupations

AMONG the ministers and ministries in Ottawa, one has to expect optimism, but there are thinking men among the politicians who now hold uneasy power, as well as the other sort. One must regard Mr George Nowlan as a good exchange for Mr Donald Fleming at the Ministry of Finance (and the same must be said for the collateral exchange of Mr Louis Rasminsky for Mr James Coyne as governor of the Bank of Canada). They spend an hour a week together, which is an hour more than used to happen. Mr Nowlan recognises the dangers for Canada in having to rely, as in the past, on massive capital inflows to cover over-large current deficits; they cannot be reduced overnight—some net import of capital will clearly be needed for a good time to come, but neither can a basic improvement be secured by restrictive measures, such as the import surcharges introduced in June. Ministers reiterate that they will be lifted as soon as the balance of payments and the size of the reserves permit, and some earnest of these intentions is to be seen in the minor withdrawals that the Canadian government has made. But one has to question coupling devaluation in a double dose with the surcharges. A dollar at 92½ US cents seems on the cheap side in relation to Canadian costs and should not need the supplementary protection of import surcharges that range between 5 and 15 per cent on just over $3 billion of imports. Certainly, the Americans are becoming increasingly restive about them, and the longer they are retained the greater is the likelihood that Canada's internal costs will rise (there are already signs of this happening).

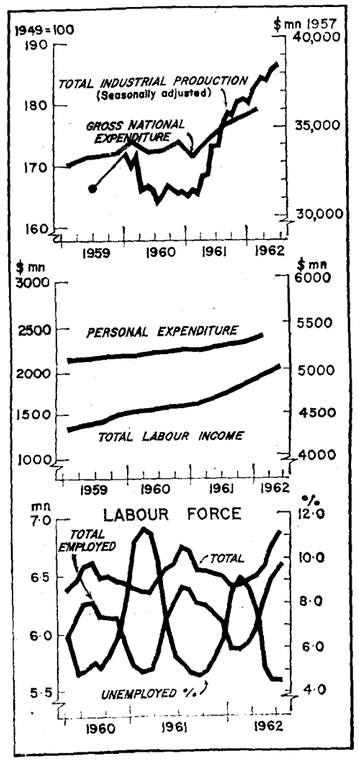
Similarly, the budget deficit (after much had been made of a paper improvement to make the crisis measures "take") is rising towards the spring figure of $750 million. Messiness is characteristic of most budgeting, and not least of Canada's; Mr Nowlan is presently concerned with the statutory implementation of Mr Fleming's incentive cuts of last April and he will be fiscally (though not necessarily politically?) incapable of expansionary budgeting by across the board tax reductions when he comes to frame next year's budget from the basis of this year's deficit. His problem is to cover the inevitable increases in expenditure (some merely deferred this summer) by tax increases that do not frustrate expansion; but it is a widely held belief in Canada (recently signalised by the appointment of a Royal Commission to study the matter) that the Canadian tax structure impedes expansion. Mr Nowlan has inherited some disagreeable tasks, but he might deal fairly swiftly with the more ridiculous gimmicks in the present corporation and sales taxes.

Yet the very people who argue for tax cuts and oppose the removal of the surcharges are a good deal less vocal about the effect of devaluation on Canada's external trade. It is still too early to measure with any certainty in the trade figures, and the Canadian resource industries are being notably circumspect in not offering serious price competition in the American market to take advantage of the new rate (fears of retaliation from American lumber and oil industries are ever present). But a newsprint producer selling at $US192 a ton brought home $Can.125 when the Canadian dollar was at 105 US cents; now he brings home $Can.145—an improvement of 16 per cent in local currency terms which must cover his increased costs so far. Similarly, the new rate (double-banked by the surcharges) is encouraging a good deal of import saving. But perhaps the most direct effect will be felt, not until next year, in the balance of tourist expenditures north and south of the border.

Through a Glass Darkly

AT present, all seems confused and little resolved after Canada's crisis. For this the treacherously unstable balance of political forces must take much of the blame; real leadership will have to wait for some kind of stable majority at Ottawa. Long before Canada is out of the wood, the predictable campaigns against "tight money" are having their effect—and their collateral effects on the reserves now remain to be seen. Within the last fortnight Professor Scott Gordon of Carleton University (it was he who led the remarkable academic campaign against Mr Coyne two years ago) has been arguing in the *Financial Times* of Montreal that the Canadian dollar is now so strong that expansionary domestic policies are necessary to support the stability of the rate. "The immediate need," he says, "is obviously to rescind the emergency measures instituted in June. These were designed to deal with a crisis of confidence and a speculative attack on the dollar. These problems have now been surmounted and the retention of the measures is no longer justified." Professor Scott Gordon includes in this the rescinding of the foreign credits. All this done, "we should move over strongly to the expansion tack in our economic policy . . . with an air of confidence and determination."

Victory over the exchange problem has been won, and Canada now has freedom to pursue domestic expansion. That is the argument. Professor Harry Johnson, of the University of Chicago and born a Canadian, has recently told a Toronto audience that Canada should return to a floating foreign exchange rate, follow an expansionary monetary policy, and cut tariffs. (He also had some tough things to say about insistence on the "spurious problem" of increasing American domination of the Canadian economy—"a piece of hypocrisy perpetuated by commercial greed aiming to exploit the Canadian inferiority complex under the guise of patriotism.") There is a world of difference between views such as these and the contention of a leading Canadian bank that "in the present circumtances the only unchallengeable stand is a balanced national budget and a balance on current account transactions in our international payments, with indeed a surplus on both accounts." Nothing is more certain in the present circumstances than that neither achievement is possible, and if either were, the consequences for Canadian progress towards a new and secure prosperity would not be agreeable. Britain is not the only country where the extremes of orthodoxy and new orthodoxy have to be resolved. But it does seem a little odd to the outsider that the Canadian "anti-stagnation" school has not forborne to wait even six months before advocating the complete reversal of the June policies. Expansion in the first six months of this year did not in itself produced the June crisis; but the facts of the crisis and its aftermath can hardly be ignored in the phasing of a determined drive towards expansion as if all were now safe.



Which Way Now?

WITH the reappearance of a sizeable flow of long-term capital into Canada and the build-up of the exchange reserves, the Bank of Canada last week decided that "greater weight could in the present circumstances be given to other factors"—in other words cheaper money. There are cynics who suggest that last week's reduction in Bank rate by a whole point to 4 per cent may have been politically inspired. The Social Credit party has threatened to vote against the government or to abstain on motions of confidence unless the government ends "austerity." And government spokesmen outside Parliament have been condemning the chartered banks for maintaining "tight money." Although the governor of the Bank of Canada last week said all the right things about protecting the external value of the dollar and about the need for improvement in Canada's underlying international payments through a better balance of external transactions in goods and services, his warning has not allayed the fear that a new crisis might be on the way.

All friends of Canada will hope that this does not come. But first there has to be an effective national purpose translated into workable political terms. Perhaps that is impossible too, for the Liberals are not far behind the Conservatives when it comes to election promises and the disciplines of an honest political programme could hardly fail to encourage Canada's tiresome crackpot politicians. But screaming for growth, as though there were no such things as a world outside Canada, is just foolish at this stage of the country's convalescence. How much growth can there be without external markets, capital from abroad, and imported techniques? Take all these away and you leave nineteen million people to enjoy the full life on lumber, wheat and fish. The argument has an absurd end but it begins from painful uncertainties in the Canadian mind caused by the waning Commonwealth and the growing United States; the inferiority complex to which Professor Johnson has referred must be recognised as a powerful political force.

It is certainly inhibiting the kind of all-party and all-Canadian objective examination of Canada's economic and industrial structure. Cheap money does nothing to help this, for the needs are of a long term kind—structure is the word, not a bigger head of steam in the present economy. There is a great deal that is sound in the Canadian economic structure. One has had to wait a long time for the fulfilment of the Paley and Gordon reports; when world demand for primary commodities does expand to meet existing capacity, what other countries than Canada will be better placed to supply lumber, newsprint, aluminium and wheat? But the process of waiting has meant that there is no possibility in the next several years of a Canadian boom based on a new expansion of the resource industries—indeed, once set up, these are not labour absorbing. Some custom-built engineering and electronic products are already competitive in the United States over a stiff tariff. There is hope of "Bladenising" some Canadian

import duties so that, say, American-owned automobile plants in Canada can obtain a drawback of import duties on American parts to the extent that these are balanced by Canadian-made components exported to the United States (the aluminium engine block plant at Beauharnois owned by General Motors has remarkably low costs and on level terms could fill the whole American market). There must be more industrial concentration to secure longer runs, and better education of Canadian labour and management. But there are good judges who argue that Canada suffers from less structural unemployment than is commonly supposed and that a 6 per cent seasonally corrected rate, giving 400,000 registered unemployed, is not repugnant to the facts of Canada's geography and economy. (The emerging population bulge is a different and formidable question, which can only be answered by a much improved export performance by manufacturing industry.)

An Opportunity to Grasp

THIS discussion leads to the exciting and crucial possibilities that have opened for Canada from the American Trade Expansion Act. The new Act offers the chances of escape from a market of eighteen million to one of five hundred million customers at the price of abandoning the "National Policy" of high protection which has been the foundation of Canadian industrial policy since 1879. Such an idea is fighting talk in Canada, for this policy is firmly bound to Canadian ideas of political independence; even without importing the slightest element of nationalist prejudice, a change of this profound order of importance is bound to perplex both Canadians and Canadiens, conscious of losing the past benefits of the Commonwealth link and of losing more with Britain inside Europe. Their understandable fear in this situation is to be thrown unprotected into the American orbit, losing both economic and political independence in the process. Only in the last three months has it become possible to see a workable alternative to a declining insular economy. There is now the chance of expansion in a communal market embracing Europe and the Atlantic Basin—at an international price.

The broad terms of the Trade Expansion Act empower the President to make tariff cuts in three categories: the halving of tariffs in reciprocal negotiations with other countries; reduction to zero of American tariffs of 5 per cent or less; and negotiation to zero of American tariffs on items in which the United States and the European Economic Community *cum Britain* account for 80 per cent of free world exports. The potential advantages to Canada under such a non- or low-tariff regime surely need no emphasis; yet the staggering thing is that the Canadian authorities have had no meaningful discussion with the Americans about it all until quite recently. All told, trade worth over a billion dollars (not counting raw materials entering the United States duty free) is involved. And the further advantage to Canada, when the Act is purposefully applied, is that the tariff cuts that America makes will be generalised by collateral bargains with the EEC (with Britain in it) and with Japan, giving Canada wider openings there.

This, indeed, is not something for nothing. The price is that high protection for Canadian industry will have to be cut or even cut out. Protection (up to 25 per cent, with surcharges now added) is something to which Canadian industry has been clinging for nearly a century, and industrial spokesmen make no bones about their fears of effective competition. The fact is that in many ranges of manufacture, though with some exceptions, Canadian costs are too high, as they are likely to be in a small and highly protected market. The expansion that Canada needs for growth and employment is not in the resource industries (for these the American market is more or less open and secure) but in manufacture, including the further processing of raw materials that now leave Canada in the primary stage.

Some far-sighted officials in Ottawa can see a possible timetable for an effective negotiation to put Canada in a new international economic setting, with minimal risk to its political independence. The present negotiation between the United Kingdom and the EEC will be concluded by next spring. The United States will start its tariff bargaining through Gatt. When these discussions are well established, the international conference that Mr Diefenbaker has called for (now given some real content after the passage of the Trade Expansion Act) could be held, bringing in "similarly situated" countries like Japan. And eventually—in 1964 with luck?—a conference under United Nations auspices could bring together all the problems of development, multilateral aid, and commodity schemes. It is a formidable agenda, and an exciting one.

The question for Canada is whether it can respond to this grand challenge. The problems of economic and industrial adjustment would be formidable—as they will be for every other country. The alternative is slow growth, or no growth; the further limitation of opportunities for the increasing population of Canada to live independently, securely and well; the increasing magnetism of the United States for able and educated Canadians; and diminishing political influence as economic insulation grows. But a realist must recognise that there is no present springboard from which Canada can make such an historic jump. The political groundwork has not even been started and the time is short. That is why the resolving of the present political stalemate will first be necessary. If the present government tries for the lowest kind of popularity, by easier economic policies and by stealing the *Creditistes* trousers, in the hope of prolonging its days in office, it will do Canada and the Canadian people a monstrous disservice. An election must come soon. One must hope that it will face realities, for out of it could come new horizons for Canada and real opportunities for Canadians.

Business Notes appear in this issue on page 835, immediately following the survey of international banking. This week's important company news occupies four pages, 858 to 861.

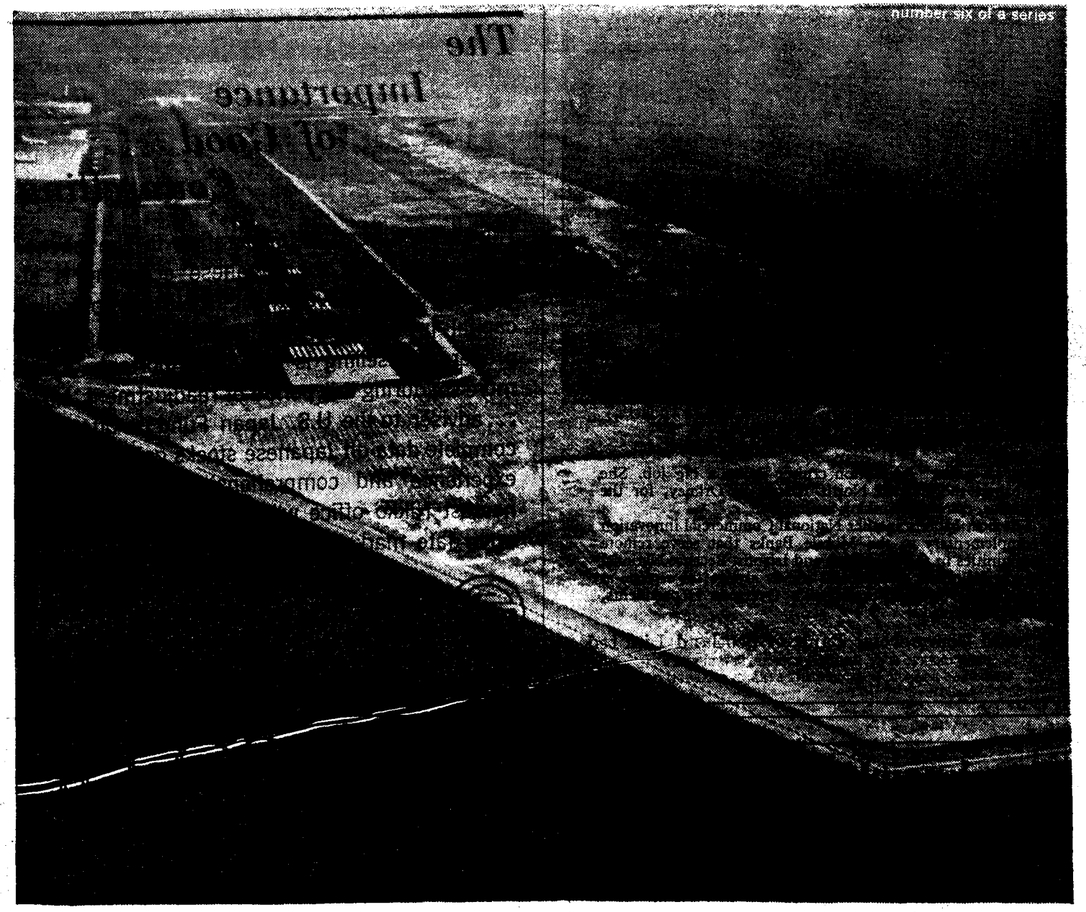
WHAT A BIG BANK!

It is, indeed. Even bigger than young Joseph here might suspect. To the newly independent countries of Africa—and to those which are now following their lead—this fact has come to mean a great deal. For through all the years of awakening Barclays D.C.O. has remained constant, serving its territories as it has always served them in the past. At a time when such countries need financial stability and commercial expertise, it is good that the D.C.O. exists. Good not only for the people of Africa, but for the people of every other territory with which the D.C.O. is linked. And for every British businessman who has an eye to trading with them.

If you want advice about trade with Africa, the Mediterranean or the Caribbean, ask Barclays first. Write to our Intelligence Dept. at 54 Lombard Street, London, E.C.3.

Barclays Bank D.C.O. *Britain's Largest Overseas Bank*



HOW A NATION GROWS

Airport project will speed up international traffic

Tokyo's Haneda International Airport, the busiest in the Far East, is being expanded at a cost of ¥8,300,000,000. Hydraulic dredges are reclaiming land from Tokyo Bay for a new 3150 metre jet runway. New boarding aprons and expansion of the terminal building will greatly increase efficiency. Here is a tangible symbol of confidence in Japan's economic future. It is only one of many major civil engineering projects throughout the country that will expedite the flow of goods and people and contribute to Japan's economic growth.

The growth rate of Japan's economy in the past few years has attracted astute investors throughout the world. Despite the present period of business adjustment, the long-term outlook is favourable. But the securities market has become more selective, and to make the best investments you need accurate data, careful analyses, and the kind of expert advice Yamaichi has the skill and experience to give. More than 110 Yamaichi offices throughout Japan are in constant touch with every segment of the economy, and 50 research specialists are continuously analysing domestic and international trends that influence the Japanese market. Our services and a wide range of publications on investing in Japan are available on request, without obligation.

Banking afloat

"OTTER BANK". A 6½-ton cruiser doing a big job. She brings the isolated North Islands of Orkney, for the first time, complete banking facilities.

The boat bank is another National Commercial innovation – complementary to the Mobile Banks that serve remote communities in the Highlands and Islands. Because National Commercial Bank of Scotland stands always for *service*–at home, and, through the Bank's Overseas Departments, around the world.

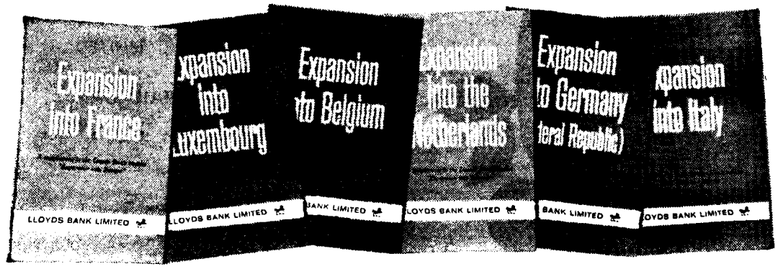
Here is a new booklet—with six country-by-country supplements—to help in the better understanding of two complex subjects: the changes now taking place in Common Market Europe, and the likely effects for Britain if she joins.

All seven booklets have been specially prepared by Lloyds Bank for all who are interested in Britain's future.

And all seven are available now at any branch of the Bank—quite free, whether you happen to be a customer or not.



Supplements: France, Luxembourg, Belgium, Netherlands, Germany (Federal Republic), Italy

LLOYDS BANK LIMITED

HEAD OFFICE: 71 LOMBARD STREET, E.C.3

Banks as well as other businesses are having to adjust themselves to harder and more competitive times. Their deposits are no longer swollen automatically by inflation and by neglected bond markets; their loans are no longer so unquestionably secure. And if direct competition between commercial banks themselves is still kept within gentlemanly limits, competition from other financial institutions is constantly growing. Meanwhile the techniques of everyday banking are being revolutionised by the electronic computer. Across the world, bankers are having to find the answers to old headaches and new challenges. How are they coping?

British Banks' Second Wind

FOR the second time since the war British bankers are in sole charge of their tills; they are again free to lend as they wish. How are they going to use this freedom? Their previous period of freedom ended, admittedly, in fresh restraint and regressive control through special deposits and, in mid-1961, renewed official requests. There are some bankers today who argue that this experience gives warning against any new excess of zeal, lest forceful lending policies merely hasten the return of official control. It is a caution to be resisted. The commercial banks have continued to lose a good deal of ground to their rivals—the merchant banks, the foreign banks in London, the finance houses and the trustee savings banks—and they must use all the opportunities they have to get it back. As for the monetary authorities, it has long been clear that they have an interest of their own in not whittling down the one section of the credit market over which they exert a real control.

Individually, Britain's commercial bankers are far from complacent. In the first period of freedom after 1958 they transformed the popular impression of banking by expanding their lending at an extraordinary rate; and they enjoyed the experience. But this time there are much smaller opportunities to increase lending. In mid-1958 advances of the eleven London clearing banks were 30 per cent of gross deposits while investments were 33 per cent. Three years later advances were 48.8 per cent of deposits and investments only 13.9 per cent. In money terms advances of the clearing banks rose by 75 per cent over that period; but deposits rose by only 10 per cent. The experience of the five Scottish banks was much the same. In the past twelve months the banks have to a small extent rebuilt their investment portfolios, and they are now 17.1 per cent of deposits, but the scope for switching investments into advances in the big way that allowed the banks to duck the problem of finding new deposits in 1958 is now passed.

In 1958 the pent-up demand for advances was enormous; this time some bankers wonder if they will be able to lend new resources, should they manage to get them. They are probably being too pessimistic. Certainly the opportunities will not be so great as in 1958, but in the banking period to mid-October, covering the first two weeks of freedom, net advances of the clearing banks rose by £44 million, and since then the Chancellor of the Exchequer has announced a second round of his reflationary measures, which by quickening expansion in industry will presumably call forth a good deal of extra demand for bank finance.

Nor should the banks have undue difficulty in finding the necessary resources to meet any immediate demand for advances arising from Mr Maudling's stimulants. The switching of recently acquired gilt-edged securities into advances could produce around £200 million, without taking the ratio of advances to deposits beyond the high-point of 49 per cent reached in mid-1961. There is still £75 million in special deposits, which Mr Maudling has expressed himself prepared to release if necessary. And the Government's intention of reopening the Public Works Loan Board to local authority borrowing, together with the big rise now scheduled for public investment, of no less than 10 per cent in 1963-64, could mean a substantial increase in the Treasury bill issue and in the banks' credit base. For the time being, the necessary resources for increased lending may be available. But if the banks wish to safeguard their growth in the long run, they must give continued thought to new ways of increasing their deposits.

Deposits—An American Example

MANY British bankers still argue that there is nothing to be gained from competing for deposits; that deposits are fixed by the base of cash and liquid assets made available by the Government, and that competition among the banks would merely result in their paying more for the same fixed pool of deposits. The limitation of this argument is that the banks themselves can influence the share of the available liquid assets that get into their hands. So long as the public continues to buy Treasury bills, tax reserve certificates, gilt-edged securities, and to invest in national savings, the Government's residual financing needs, and therefore the Treasury bills and call money that form the banks' credit base, will be reduced. There are, in other words, leaks in the pool of liquid assets potentially available to the banks; and to stop or diminish the leaks the banks must, at carefully selected points, make their deposit rates competitive with the Government's own interest rates.

The banks pay 2 per cent below Bank rate for their deposit accounts. At present the banks' rate of 2½ per cent for this money at seven days' notice compares with a rate of just over 3¾ per cent on Treasury bills, 4 per cent on seven day money with a local authority, and between 4½ and 5 per cent on deposits in the special investment departments of the trustee savings banks. The banks' fear that if they attempt to compete with these rates they will be forced into the very costly exercise of paying higher rates for all of their deposits. Indeed the American banks, which now pay 4 per cent for term deposits of over twelve months have encountered just this problem in the past year; and a correspondent reports in the following article that to balance the outlay on these deposits the banks have had to make higher yielding, but riskier, loans.

However, American banks have also found a more acceptable expedient, which avoids paying high rates right across the board. They have, in effect, created their own money market paper. American banks now issue Certificates of Deposit maturing in three months and immediately negotiable. There is a flourishing market in these certificates in New York, and by competing with Treasury bills they offer corporation treasurers alternative employment for surplus balances. British banks might well consider following this lead.

Another way in which the banks can increase their deposits, though not necessarily a cheaper one, is by spreading the banking habit. Much has already been done in this direction—the credit

transfer system is now working at full steam—but some banks still have doubts about the merits of any major efforts to attract the wage-earner's business. The costs involved are enormous—from reconstruction and extension of existing branches, from additions to suburban branches, and above all from extending hours of opening.

So far the Midland Bank has led the way in the drive for retail banking with personal loans and personal cheque books ; the other clearing banks have often preferred to attract new custom for their existing services through persuasive advertising and, on occasions, lower charges. The Midland has also been thrustful in physical expansion. In 1961 it opened sixty new branches, and since then branches have been opening at the rate of one a week. The Midland feels that these moves have paid off. Personal loans have not been free of bad debts, but this has not approached the hire purchase experience, and has still been easily absorbed by the additional profit margin on this type of loan. Other banks are more sceptical about the merits of these moves. Barclays, the largest of the banks and the Midland's particular rival, has not chased these customers with the same vigour. Yet in the years from 1958 to the end of 1961 its deposits grew at twice the rate of the Midland's. And since then the Midland's deposits have barely changed, while Barclays' have continued to rise.

Anything that can be set off against the expense of attempting to attract new customers is obviously welcome. The banks can work in two directions. The installation of electronic equipment to handle the increasing flow of paper work is now well under way. In the short run it may well prove expensive ; but over the long run it should reduce costs. At the same time, while the banks are opening new branches they are perhaps not defraying the cost of this operation by developing the potential of their existing branch sites as fully as they might. Banks cannot be expected to know much about property development ; that is all the more reason for them to form links with specialised companies that do.

But perhaps the best way of meeting additional costs is to refashion lending policies. Profitability will suffer if expensive deposits are not used to their full advantage. The banks have already gone some way in this direction ; they took on medium term loans for export finance as a concession at a flat rate of 5½ per cent—a rate which does not look so low now that other rates have fallen—and term loans to farmers at 2 per cent over Bank rate are now fairly common. But other lending rates are still too rigid. Rates on advances, by agreement among the banks, are fixed at between ½ to 1½ per cent over Bank rate, and only a few very large firms get the lower rate.

So there is a multitude of credit risks squeezed within a ½ per cent rate margin. In the past banks have argued that a borrower is either a good risk or he is not, and that there are no shades between the two. Those borrowers who just manage to squeeze past the gates therefore get their credit very cheap, while the borrower who is just shut out has to leap the gap between the banks' relatively low rates and the rates of other financial institutions like hire purchase finance companies. The banks ought to take advantage of this gap by extending the spread of their rates to accommodate various shades of risks, rather than charge a rate fixed beforehand by the bankers in committee.

This failure of the banks to compete in the field of price often leads to widespread criticism. The banks agree on all their rates ; what competition there is appears on the fringe, in the services they offer, the branches they build, and in the booklets they put out. In August two of the big seven clearing banks, the National Provincial and the District Bank, announced that they intended to merge, and the question was immediately raised whether this meant more or less competition. The bankers argued that mergers in industry had brought new difficulties for medium sized banks. Thus the District Bank had 10 per cent of its loans outstanding with one customer. The public's reaction is to assume that the fewer the banks the less is the competition—and the more this impression grows, the bigger will be the pressure for outside control.

In Britain the bankers' biggest problem is, perhaps, themselves in committee. Individually most of the bankers have come to realise the problems that their banks face: deposits that are declining in relation to national income, the loss of business to rival institutions, the need to overhaul both borrowing and lending rates, and the need to open the banks to a new group of customers. But unfortunately none of them is often willing to make a first, isolated move in tackling these problems ; with rare but blissful exceptions, everything must first be agreed collectively.

America: Commercial Banks Fight Back

FROM A NEW YORK CORRESPONDENT

American commercial bankers have in the past year made a major effort to check and reverse the encroachments made on their preserve by other financial institutions in the postwar years as a whole. The fight has so far been successful, but costly. For the task is a big one. The banking structure in the United States in the years since the second world war has increased still further in diversity. Indeed, the wonder is that the American people somehow manage to keep all the different competing institutions sorted out.

Deposits are accepted in the United States by four different kinds of institution—commercial banks, savings and loan associations savings banks, and credit unions. They are all a repository for savings, but from that point on the differences begin to outweigh the similarities. The institutions other than commercial banks each have their own speciality—and these have all been in great demand in the sharp expansion of the country's postwar economy. The 6,400 savings and loan associations, for example, invest chiefly in home mortgages and have played a major role in financing the growth of home ownership in the United States. Similarly, the 512 mutual savings banks, located in 18 states chiefly in the north east of the country, invest principally in mortgages as well as high-grade corporate and government securities. By contrast, the nation's 21,000 credit unions, found for the most part in company plants and offices, mainly supply short-term consumer loans to members.

Beside these "speciality shops" of finance, the commercial banks serve as financial "department stores." The 14,000 commercial banks in the United States provide practically all the services of specialised institutions, together with their basic banking service to trade and industry and their unique facilities for "demand" or checking deposits.

Yet, the commercial banks, despite their versatility and their long lead, have lost considerable ground in the postwar years to competing institutions. The story of banking in the United States today necessarily centres on the reawakening of this sleepy giant to the realities of the modern age. From 1945 through 1961, as can be seen on the chart, the total checking and savings deposits in United States commercial banks increased by 65 per cent to

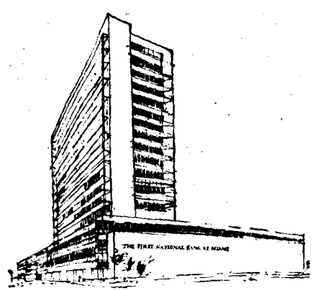
nearly $250 billion. But in the same period, savings in mutual savings banks rose by 150 per cent to about $40 billion, while those in savings and loan associations jumped by no less than 860 per cent to about $71 billion. Credit unions showed the most spectacular rise of all, by more than 13 fold $5.7 billion.

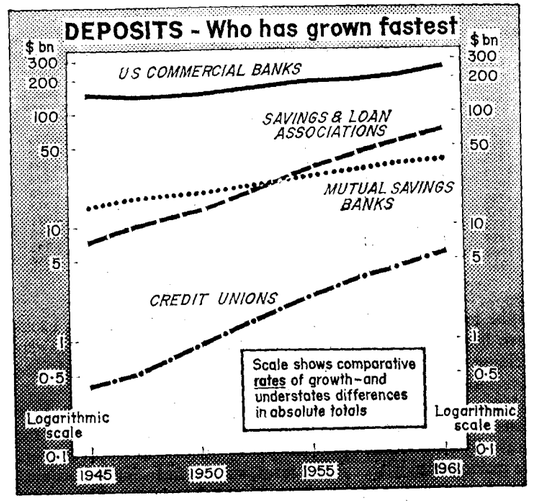
There are any number of reasons, to be sure, to explain the sharply disparate growth rates of deposit-type financial institutions, but essentially they boil down to two main considerations—differences in Federal and State laws and regulations governing the various institutions, and differences in attitude of the governed. Significantly, savings and loan associations and credit unions, which have shown the most marked gains, are subject to less onerous regulatory restrictions than commercial banks. Savings and loan concerns, for example, have considerable leeway in determining rates of return paid to savers, while the savings interest rates paid by commercial banks are closely controlled by Federal and State banking authorities. But an important influence, too, is that because savings and loan associations and credit unions have developed largely since the war, their operators have tended to be conspicuously less hidebound than commercial bankers in competing for business.

Thus, the savings and loan industry through high-powered nationwide programmes of ingenious advertising and friendly contemporary styled banking houses has succeeded in projecting a sympathetic picture to the public at large. Most big-city banks in recent years have been adopting similar techniques. But despite a growing proliferation of breezy bank ads, of modernistic banking offices and imaginative promotions, the stereotype of the commercial banker as a glassy-eyed "stuffed shirt" persists, often justifiably so, over most of the land.

At the same time that the commercial banks' share of the "retail" banking market has been pared by the heightened activities of rival lenders (including a burgeoning personal loan industry), still other forces have been cutting into the "wholesale" services which banks provide for their big corporate customers. One of the strong conventions of commercial banking in the United States is that business borrowers must leave on deposit in non-interest-bearing checking accounts an amount equal to about 20 per cent of a loan. Banks, of course, look to these deposits as part of their raw material on the basis of which they can make more interest-earning loans. While many corporate customers in years gone by were satisfied to maintain deposits well over the required 20 per cent compensatory balance, the present era of quickening financial sophistication finds most corporate treasurers severely limiting non-productive checking balances ; they invest any excess amount in short-term Treasury bills and in other money-market paper, currently yielding about 3 per cent—although the banks' new certificates of deposit have to some extent countered this trend.

The massive shifts of deposits from commercial banking coffers





into thrift institutions, credit unions and the money market have not made life any easier for the money managers of the Federal Reserve System. The Federal Reserve regulates the amount of credit in the economy through the commercial banks. This continuing discrimination, implicit in subjecting commercial banks alone to official control, is regarded as having been a key factor behind the decision of Federal regulatory authorities late last year to help counteract the trend by permitting commercial banks to pay higher interest rates on savings and time deposits. From the beginning of this year, the Federal ceiling on such rates was boosted from a former flat 3 per cent limit to 3½ per cent on all savings-type deposits and to 4 per cent on those left undisturbed for at least a year.

Competitive Deposits—Risky Loans?

Most large banks promptly raised their interest payments under the new ceilings, with quick but not unexpected results. In the first ten months of 1962, savings-type deposits in 356 weekly reporting Federal Reserve member banks located in 106 cities jumped by a remarkable 18 per cent. Savings and loan associations, which usually pay more for savings than commercial banks, also increased their rates, but generally not as much as the banks ; as a result, savings in these associations so far this year have increased only by about 8 per cent. The commercial banks pushed up their rates at a time when it was widely expected that the then expanding economic activity would justify a further increase in interest charges for loans, thus helping to defray the higher costs of savings deposits. These expectations proved too optimistic, with the result that the rapid build-up of these savings accounts has added heavily to costs, and has squeezed bank profits.

Thus burdened, banks have been pressing to put the money profitably to work in a variety of ways. Many larger banks for the first time are engaged in a full-scale programme of residential mortgage lending ; these banks have hitherto limited their real estate financing mainly to temporary construction loans which could be readily repaid out of the proceeds of a permanent mortgage, usually taken by an insurance company. Bankers are also striving increasingly to channel costly savings into instalment consumer loans, which because of their rapid turnover, earn banks a handsome return of from 9 to 15 per cent a year. The scope for such lending has however been restricted, because Americans this year have been

AMERICAN BANKS AND BRANCHES, 1951–1961

1960	13,999	125	132	5	− 5	11,106	+868
1961	13,959	114	138	6	− 40	12,043	+937

loathe to add appreciably to instalment debt. As a result, banks have been obliged to put considerable savings sums into lower-yielding investments, largely securities of Federal, state and local governments.

Various stratagems are being used by American banks to bolster loans to businesses. Some business credits are being granted for unusually long terms, up to ten years; in some instances bankers are making frankly speculative loans, such as financing the acquisition of a company even though the client borrowing for this purpose cannot honestly predict just how he intends to pay back the loan. Though the sharp rise in the cost of deposits this year has without a doubt pushed banks into bolder, and sometimes riskier, loans and investments, American bankers are not inexperienced at developing loan schemes aimed at soaking up surplus money. During the 1957-58 recession in the US economy, for instance, a number of banks offered what were then revolutionary kinds of consumer lending plans calculated to increase individuals' borrowing.

The programmes are of two principal types—check credit and credit cards. With check credit, a consumer arranges a "line of credit"—a maximum amount he can borrow. He then borrows the money as he needs it, simply by writing checks and making periodic repayments. When a bank issues a consumer a credit card, the consumer can charge his purchases at a number of stores and receive a single bill from the bank. Though some banks in the past year or so have discontinued credit cards as unprofitable, still "jazzier" consumer credit plans—including a variety of programmes providing for long-term financing of children's college educations—have become a stock in trade of US banks.

Inventing new packaged loan services is only one method used by banks to boost business and profits. Since the early fifties, as the population in the United States has shifted increasingly from the cities into the suburbs, many banks have mounted a more direct assault on the objective by increasing the number of banking outlets. The pattern of branch banking operations differs in various states. In California, for example, where statewide banking is permitted by law, the Bank of America, which with deposits of over $11 billion is the largest in the world, operates more than 700 branches. At the other extreme, Chicago's giant First National Bank and Continental Illinois National Bank & Trust Co. each have only a single location; Illinois is one of five US states that flatly bar any bank branches. Some twenty-five states permit branching on a limited scale and twenty allow it state-wide.

In the face of such limitations, commercial banking over the past decade has still added substantially to its physical plant. This has been done principally through the opening of new branches and to a lesser extent through the acquisition of existing banks which are then converted into branches. Much less frequently, banking has been expanded through the establishment of new banks. As noted in the accompanying table, from 1955 to 1961 the number of banks had declined by 2 per cent to 13,959, but the number of branches was up a thumping 60 per cent to 12,043.

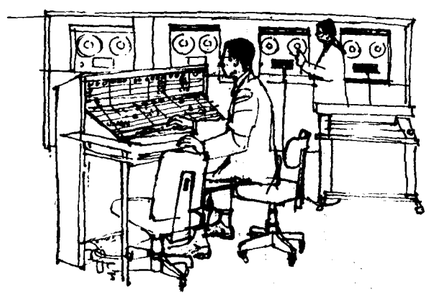
Another influence behind banking's expansion drive is the accelerating growth of automation, bringing an attendant rise in initial operating costs which can best be tempered through a greater volume of operations. The installation of costly electronic devices picked up momentum among American banks in 1960 after the banking, office equipment and printing industries settled on a standardised method of encoding checks and other bank documents to permit them to be handled by automated gear. According to a recent industry survey, American banks this year are geared to handle more than 68 per cent of an estimated 14 billion checks via electronic processing.

Freedom to Branch?

COMMERCIAL bankers in the United States, who have thus been striving through their own devices to solve some of their nettling problems, have lately been cheered by the chances of receiving a massive lift from regulatory quarters. Recently, an advisory committee of the US Comptroller of Currency, Mr James Saxon, submitted a report to President Kennedy proposing no less than 84 recommendations for modernising the US banking structure. Several proposals seek specifically to broaden banks' lending policies, such as permitting longer term mortgages, which would allow banks to compete more freely with savings and loans associations. And one key proposal has stirred considerable controversy among commercial bankers themselves: to let Federally chartered "national" banks set up branches within a 25-mile radius of their main office, even if state law forbids branch banking.

There are in the United States some 4,500 national banks supervised by the Comptroller of Currency, a Treasury official, alongside some 8,900 banks that are chartered and regulated by the various states. Under present Federal law, "national" banks must conform to the branch banking practices in the states; executives of state banks, not surprisingly, vehemently oppose any law change that would upset this balance. But even so, they welcome the bulk of the Saxon committee's proposals to liberalise national banks' practices on the ground that Federal enactment of such changes would force the legislatures of their home states to follow suit, with corresponding freedom for state-licensed institutions.

In any case, the Saxon committee's proposals will first be sifted by a high-level White House committee headed by Mr Walter Heller, chairman of the President's Council of Economic Advisers. The committee is making a broad study of what recommendations the Kennedy Administration might make to Congress for changing the rules governing financial institutions generally. It is highly problematical that the politically-loaded branching proposal will get by the Heller group. But the furore the report has raised to date has stirred so intense a reappraisal of the nation's banking system that many bankers feel that only good can come of it.



Any businessman affected by developments on the Continent, especially if he is considering the establishment of closer links with the expanding European market, will find "Bridging the Channel" of practical help. This straightforward and up-to-date booklet has been compiled by the

PANEL FOR EUROPEAN TRADE

set up by the Midland Bank to assist businessmen in developing European markets. Copies may be obtained from any branch of the Bank, or direct from Overseas Branch.

Fiercer Competition in Germany

FROM A FRANKFURT CORRESPONDENT

GERMAN banks, like the German economy as a whole, were swept ahead at an unprecedented pace by the miracle years of the nineteen-fifties. Now they face more testing circumstances, and in some ways have already been confronted with the unfavourable back-wash of over-expansion. True, the banks have not suffered direct losses from troubles of the Schlieker and Krages type. But the more difficult business climate has put a check to automatic and easy growth. It is not surprising, therefore, to find competition becoming more acute in various branches of banking—and in particular in the attraction of bank deposits.

A symptom of this struggle exists in the differences of opinion prevailing between the commercial banks and the publicly owned savings banks on the level of interest on savings deposits. The savings banks favour higher interest rates on savings because they consider the disparity between these and interest rates on the capital market to be too great. The commercial banks, on the contrary, want interest rates on savings to retain their traditional place in the interest structure. They fear that a change would bring about a weakening of the still delicate capital market, and intensify the difficulties of finding finance for long-term industrial investment. Moreover, it is probable that higher interest rates for savings would promote a switching of time deposits at commercial banks into the higher yielding savings accounts. So far, the savings banks have been unable to strike out on their own because credit institutions in the Federal Republic are not free to fix their own interest rates. They must apply those fixed by the official banking supervisory bodies in conformity with the prevailing discount rate of the Bundesbank and the recommendations of the banking and savings banks associations. The savings banks are now trying to abolish the link between interest rates for savings and the discount rate, and to make them more flexible. Since neither the Bundesbank nor the banking supervisory body—the Federal Control Bureau for Credit Transactions—appear particularly to favour these projects for reform, they are unlikely to meet with success.

A further competitor for the commercial banks' deposits, though rather less important than the savings banks, is the state postal cheque account service. Its competition extends only to deposits payable on demand, since postal cheque offices do not accept time deposits; nor, in Germany, do they pay their clients any interest. But, despite these limitations, many more people in Germany have a postal cheque account than a bank account. This itself creates some cumulative advantages, since postal cheques are the more convenient instrument for making payments to people without commercial bank accounts—and also, indeed, to those who possess neither a bank nor a postal cheque account, or whose account is not known to the payer.

The commercial banks have indeed so many advantages to offer their depositors in other respects that they do not regard the postal cheque service as a serious rival to them. None the less the banks are making considerable efforts to attract new clients, and particularly to interest the small man in keeping a bank account. The most important move in this direction may well be the creation of so-called "salary accounts" (*Gehaltskonten*) for the employees of larger undertakings. Agreements are made with firms, usually

clients of the bank, to remit the wages and salaries of their employees into accounts opened for them by the bank. In this way the traditional wage packet is coming to be replaced by a credit advice note—a procedure which, in Germany, has up to now been customary only for highly placed salary earners with large incomes. Payment of salaries in this way brings considerable economies to firms, and they are therefore eager to avail themselves of it. The bank, for its part, gains contact with new sections of the population. In this way the bank account, which in Germany was regarded only a few years ago as the prerogative of the wealthy, is on the way to becoming a facility for all.

Few Defaults on Personal Loans

IT is not only as a depositor that the small man's banking custom is being sought but also as a credit customer. Nearly all German banks have adopted the practice of granting unsecured personal credits to private individuals—a form of credit which was virtually unknown a few years back. Today, anyone can apply at any bank counter for personal credit of up to DM.2,000 (£178) and immediately obtain it in the form of cash, without having to do much more than state his references and income. Such credits are not tied to specific purposes and the borrowers are free to use them as they wish. Another variety of small-scale lending comprises larger amounts up to DM.6,000. Here formalities are a little more stringent, and some security may be necessary, but the procedure is still much simpler than for ordinary credits. These are earmarked for specific purposes and are intended to be used mainly in the acquisition of machinery and the like.

Up to now, the new forms of small credit have proved very successful. There have been hardly any defaults, and thanks to the simple but adequate procedure involved, this new branch of business has proved profitable. On the other hand, the commercial banks have taken hardly any part in financing hire purchase. This is carried on by special institutions, though some of these are closely related to the banks.

The banks' search for new groups of clients also finds expression in the opening up, in recent years, of numerous new branches, not only in the business centres of large cities but also and especially in purely residential areas and in small towns. This trend was set off four years ago by the annulment of a regulation which had limited permits from the competent authorities for the opening

of banks or branches only to cases where a "need" could be established. It is not certain that all the branches that have meantime been opened are economically justifiable. Although it is difficult to obtain reliable data, there is little doubt that many of these branches are unremunerative, and will need some time to reach a profitable state.

Staff Shortage Eases—With the Bourse

UNTIL recently the extension of the branch network exacerbated the acute shortage of banking staff. But this had other causes besides, such as the general growth in banking business, movement into other spheres of activity, and reductions in working hours. The problem has now eased a little. The technical aids adopted by a growing number of banks, including the growing use of electronic computers for book keeping and other work, are making themselves increasingly felt. Furthermore, the banks' personnel departments are more anxious now to lower costs and are accordingly devoting more attention to the efficient employment of their staff. The days when unneeded staff were taken on "in reserve", as it were, appear to be past. Finally, the decline on the stock exchange has also made some contribution to lessening the staff shortage. During the boom years many banks had made generous extensions in the staffing as well as the technical facilities of their important stock exchange departments, in the belief that an era of investment for the masses was at hand. But the new public which in those days took an active part in the stock market has now been well sobered by the decline—not least in the shares of the banks themselves. Playing the market has lost its lure. Reduced activity in securities has duly produced surplus staff in the banks' stock exchange departments, available for transfer to other sectors.

Some new banks, mostly small ones, have been founded in West Germany in recent years. So far as may be judged, they have developed satisfactorily without encroaching noticeably on the business opportunities of existing banks. The new establishments have usually succeeded in opening up new business opportunities for themselves, partly by gaining the custom of aspiring young businesses and growing along with them, partly by inducing potential customers to join them as founders.

Insolvencies, But No Mergers

FROM time to time however there have been cases of bank insolvencies, and these have exclusively involved the smaller establishments. In such cases the other banks have usually rallied round to give financial support, so that the smaller depositors, at least, have mostly been saved from suffering too much loss. Even so, these insolvencies have given added impetus to those who favour the creation of a deposit insurance system on the American model. But the banks as a whole are opposed to such a course: they prefer, in the event of possible future insolvencies, to continue protecting the stricken depositors by *ad hoc* support.

A sign of the soundness of German banking and particularly of the prosperity of the numerous small and medium sized institutions, is the virtual absence of bank mergers. Evidently each bank is viable on its own. Nor have the German banks shown any desire for too close links with institutions in other countries. In spite of the new tasks and opportunities which the common market will provide, no moves have been made to forge closer links with foreign banks: relations are confined to relatively loose forms of co-operation in the daily course of business. So far, restraint is also being exercised in the creation of foreign agencies. But this policy may well change as the economic integration of Europe progresses. In particular, if Britain gets into the common market German bankers may no longer continue to absent themselves from London, which is universally seen as the financial centre of an economically united Europe.

French Banking Stands Its Ground

FROM A PARIS CORRESPONDENT

THREE main features distinguish recent developments in French banking—the stability of its structure in the face of the creation of the European common market; the remarkable abundance of its liquid assets, whose accumulation in turn increases the banks' own credits; and lastly, the feebleness of the efforts made to interest foreign countries in French capital, in spite of the apparent liberalism displayed by recent measures.

The first of these fundamental features is the lack of change in French banking. Whilst the European common market has caused numerous French industries to be transformed by concentration, specialisation or strangulation, the banking sector has remained aloof from the general European metamorphosis. Not only has the application of the Rome Treaty resulted in no invasion of the French market by foreign banks, but French banks have themselves continued to develop as if nothing had happened since 1959. The most they have done is to agree to take part—on the professional plane—in the formation of a European association designed to furnish a "representative body" for the discussion of banking matters with the European Commission; and to co-operate with foreign banks in (rather limited) joint studies and research, though not all have gone even so far. This is the only visible effect of the Rome Treaty.

The first reason for this lack of response is that banking was already a very international activity before the creation of the common market. All the larger French banks had foreign correspondents with whom regular two-way contacts are maintained; these links have simply been strengthened. Secondly, the extremely dense network of bank branches—public and private—all over France virtually excludes the setting up of competing establishments. No need, then, to erect formal obstacles to the establish-

Kredietbank, Brussels

THIS IS THE EAST . . .

Economic development in Asia is bringing higher living standards to these young people and to the vast population of that continent. Demand for an ever increasing range of merchandise is steadily rising. If you are interested in trade with these expanding markets, you are invited to avail yourself of the banking and information services of The Chartered Bank and its subsidiary, The Eastern Bank Limited. The combined organisation of the two banks comprises one hundred branches in twenty-seven territories extending from the Eastern Mediterranean to the Pacific Ocean.

ment of foreign banks in France: they have no intention of coming.

Discreet Competition and Concentration

Nor has the Rome Treaty upset the French banking system by outlawing the identical interest rates applied uniformly by the banks (½ to 1 per cent, for example, for demand deposits, 2½ per cent for one-year deposits, 3¼ per cent for two-year deposits and so forth). These are, unmistakably, infractions of the principle of competition, the Treaty's "golden rule." But the common market has not become effective here: firstly, because the agreements forbidden by article 85 of the Treaty are agreements between enterprises, whereas the French practice is the result of a public regulation of the National Credit Council; secondly, because the French authorities are convinced that Brussels will never abolish a regulation which is intended to avoid the dangers of unrestrained banking competition.

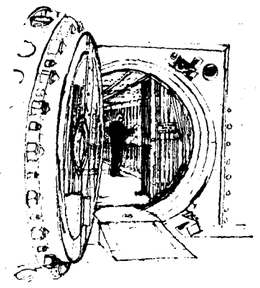
So the French banking system continues on its way as if the common market did not exist. It is not devoid of competition; it concentrates on the quality of the service rendered to clients, on the amiability and accessibility of bank clerks and of the local branch managers; on the intimacy of relations between banks and businesses; and, most recently, on a judicious use of advertising campaigns.

Certainly one must not exaggerate the harshness of competition between banks, which remains very discreet. But it does exist: the Conseil National du Credit has revealed that within fifteen years, 30 per cent of French and foreign banks in France had disappeared as separate entities, three-quarters of them through mergers with larger banks. During the same period, furthermore, about forty banks which have remained juridically autonomous have come under the control of more powerful establishments. This process of concentration is continuing, but discreetly.

The State's Dual Role

It is estimated that at present the four big nationalised banks and the two largest private deposit banks between them receive about 75 per cent of French demand deposits. But it must be added that these demand deposits are only just over half the size of the deposits received by public or publicly controlled bodies (savings banks, post office savings banks, together with privately subscribed short-term Treasury bills). This demonstrates how great a part of the French banking system is already concentrated in the hands of public authority.

The public sector intervenes not only in the accumulation of funds. It is also vigorously active—and this is the second characteristic feature of French banking in recent years—in the utilisation of these funds. The large surplus in the French balance of payments, constant over the last three years, has given rise to a



considerable abundance of liquidity. This has been swollen first by the rise in the living standards of Frenchmen—particularly of the well-to-do, who are the big users of the commercial banks; and secondly by repatriation of overseas investments, particularly from Algeria and Morocco.

How is it that this abundance of capital has not set off the monetary inflation which had previously beset France? The reasons are linked to the evolution of the French banking system. At the beginning of 1961, the state introduced a reserve coefficient which makes it obligatory for banks to maintain a constant proportion between certain of their liquid assets (cash in hand, accounts with the Post Office or at the Bank of France, Treasury bills, medium term bills of exchange) and their deposits. This reserve requirement is variable; at the moment it stands at 32 per cent.

This arrangement, coupled with the lowering of the minimum ratio (*plancher*) of Treasury bills which banks are obliged to hold, has had a double effect. On the one hand it has obliged banks to retain in their portfolios a greater proportion of their securities, and this has "frozen" a part of their credit potential. On the other hand it has led banks, whose chances of rediscounting with the central bank have been reduced, to retain a very considerable proportion of their medium-term bills, which have replaced Treasury bills in their portfolio.

This movement is very clearly reflected in the French credit trend. In 1961, credits financed by the banks themselves increased by 30 per cent (NF 10,000 million), whereas credits rediscounted by the Bank of France diminished by 4 per cent (590 million francs). This trend has apparently increased in momentum this year.

But while the reserve coefficient prevents banks from easily rediscounting their bills with the Bank of France, it does not hinder them from using the large deposits they receive for granting extensive credits. Over the last three years the short-term credits granted by banks have increased at the rate of 17 to 20 per cent annually, whilst the national product for its part has increased by less than 10 per cent (in nominal value).

This steep rate of credit expansion—which the monetary authorities regard with anxiety—would certainly be accelerated if the banks did not observe a certain prudence at the request of the monetary authorities. It is clear that a change has come about in this sphere. The state, by the weight of its own banking sector, as well as by the authority of its advice in credit matters, sometimes reinforced by sanctions, now strongly influences the attitude of the private banks. This influence does not, perhaps, extend as far as advocates of a more *dirigiste* credit system would wish; but the results attained are not negligible.

Finally, the attitude of the public itself has changed, and higher liquid balances are held, so that part of the additional credit is not spent. Not that there has been a change of clientèle: the savings of the working class and small shopkeepers still faithfully go to the *Caisses d'epargne* (whose interest payments are tax exempt, with a limit on permitted deposits) and the post office savings accounts, while large savings and business funds go to the banks; to the extent that current liquid assets are mainly the result of foreign business transactions and of repatriated capital, it is mainly the banks that benefit. But the public as a whole has become accustomed to a higher proportion of liquidity; this is a proof of confidence in the stability of the franc. The rise in the standard of living also encourages this trend: people must maintain greater cash reserves in order to cope with increased expenses. The state has indeed tried to direct these liquid reserves to a twofold use: towards long-term investments and, secondly, on the financial market, to the acquisition of ordinary shares rather than of debentures. But up to now this objective has been attained with only partial success.

In spite of state action to reduce, by stages, the interest rates on short-term deposits (reductions of ½ to 1 per cent have been made on Treasury bills, and of ¼ to ½ per cent on bank and savings bank deposits) in order to make long-term investments more attractive, without raising the interest on them, has not set off so large a move as was hoped. For mainly fiscal reasons the public continues to avoid such investments. Undoubtedly it would be necessary to increase still further the difference between short-term and long-term rates in order to change the public's attitude.

The state's second measure has had more success: increases in capital by companies are becoming more frequent—this being one of the objectives of the Fourth Plan. But many companies still hesitate to increase their capital, either for fear of losing majority control of their equity or because they consider the present fiscal charges for share issues too burdensome.

THE lack of interest in external financial relations is less worrying to the French authorities. Undeniably an effort has been made lately to facilitate these relations. Not only have the banks, on their own account, intensified their links with their foreign correspondents and increased the number of business transactions carried out jointly (with foreign banks in France, or in their own countries); but the public regulations have been modified in order to facilitate transactions in both directions on the financial market.

Numerous foreign securities—American, German, Dutch and others—have come into the Paris Bourse; contact has been made with foreign firms seeking capital on the French market. But up to now these efforts have not had any important results. In the first place, the French public has for decades been unaccustomed to foreign securities; meanwhile it has become acquainted with the outstanding French stocks and has more confidence in them since the franc has reacquired its international prestige. Secondly, French legislation, while not discriminating against foreign borrowers, who are subject to the same regulations as French borrowers, nevertheless maintains a high level of financial charges which appears to discourage foreign borrowers, who can find their capital more economically in Holland, Switzerland or even Germany. This apparent liberalism, therefore, disguises the real intention, which is to avoid making access to the French capital market too easy for foreigners.

Conversely, the acquisition by Frenchmen of foreign securities and capital has received more encouragement. French residents can borrow abroad, without preliminary authorisation, up to 200 million new francs, on the condition that these loans do not exceed five years and that interest rates are not higher than 5 per cent. Furthermore, loan authorisations are granted for transactions on a larger scale: the company constructing the southern European pipeline, for example, has been able to borrow large sums in several European countries and in the United States.

The acquisition of foreign securities abroad has been facilitated by the abolition of the *devise-titre*, equivalent to investment dollars in Britain. This now enables Frenchmen freely to acquire foreign securities without any difficulty in obtaining the currency necessary for their purchase. But, at a time when the financial prestige of France is as high as that of foreign countries, this relaxation has not brought about any rush for foreign securities by French buyers.

New Freedom in Australia?

FROM A MELBOURNE CORRESPONDENT

THE past year has been perhaps the most eventful for Australian banks since the attempt to nationalise them was finally defeated some twelve years ago. The banks have made more notable progress in diversifying their business into new fields; they have introduced a five-day week and a new basis of charges for services rendered; and important changes have been made in official credit policy. All this has occurred against a background of a rapidly recovering economy and continued branch expansion which probably maintains Australia's claim to be among the most overbanked countries in the world. Thus eleven million Australians are serviced by some 4,500 branches of fifteen trading banks and thirteen savings banks.

The highlight of recent events was the comprehensive policy statement announced by the Federal Treasurer in mid-April. In the heat of the moment, this statement was acclaimed as a major set of new freedoms for the banks, which were formally acknowledged to have the right to participate in the growth of the economy and to compete more evenly in the financial sector. Some of this enthusiasm may now have waned following an apparent difference of opinion about credit policy, and a marked hesitancy in the active use of interest rates.

The new government policy covered three main fields. Some minor changes in overdraft and deposit rates of interest were included but a more significant departure was that the government pronounced its intention to vary the maximum overdraft rate when general changes in interest rates were required. Slow progress is thus being made towards some form of Bank rate, on the English which would clearly signify variations in monetary policy. [illegible] change was the rationalisation of the Treasury bill market; the old Treasury bills and seasonal Treasury notes were merged into Treasury notes, which carry market rates of interest and are freely available to the banks and the public. Finally, the measures included a scheme for term loans and alterations to minimum liquidity ratios.

The new interest rate policy was wholly consistent with the general tendency of recent years as the government has slowly begun to use interest rates in a way that helps rather than hinders other monetary and fiscal policies. This should be seen in perspective; interest rates are not, and do not seem likely to be, a major weapon of policy in Australia. There are, however, some situations where they can be of marginal importance in smoothing out fluctuations and channelling resources in the desired way.

Trading Banks Fight Back

THERE has since been evidence of a decided reluctance to alter bank interest rates and government bond rates on new issues. Admittedly the Reserve Bank has altered the interest rate and maximum term of fixed deposits accepted by the banks no less than three times in less than six months but those were minor moves with the prevailing tide rather than policy moves. The Australian banks before the second world war made extensive use of fixed deposits, which were competitive and accounted for large proportions of total deposits. However, rigid controls over these rates and conditions reduced the proportion of deposits bearing interest to only 19 per cent of total deposits in 1953 and also allowed all kinds of other financial institutions to attract funds by offering more acceptable interest rates and terms. At the end of 1960 approval was

GORDON L. WILLIAMS, Manager

given to a much higher rate of interest on the banks' term deposits and the response was a rise of some 60 per cent in such deposits in only two years. In September this year, deposits bearing interest accounted for 37 per cent of total deposits.

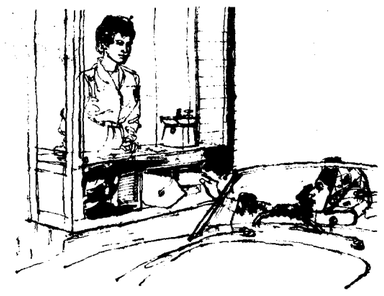
There has also been a notable increase in savings bank deposits. These are currently running at nearly £A170 per head; indeed there are nine operative savings accounts for every ten persons in Australia. Before 1956, the savings bank field was the preserve of the Commonwealth Bank, in conjunction with the post office, and of state institutions in the three southern states. In that year however three of the major banks entered the savings bank field with wholly owned subsidiaries and, using modern aggressive methods and extensive promotion campaigns, gained deposits, totalling £A291 million in only five years. This represented nearly 19 per cent of total savings deposits. In the last year the four remaining major banks have formed savings subsidiaries, thus materially increasing the competition and, at the same time, raising several interesting policy questions.

These policy questions arise because savings and trading banks operate under separate licences with markedly different patterns of investment laid down by the government. To the public, however, there is little, if any, distinction between the two organisations. A customer can have both a cheque account and a savings account at the same branch and can avail himself freely of all the ancillary services. It is easy to make transfers between different types of accounts—savings, cheque or even term deposits, which makes the relative interest rates an important influence and materially heightens the direct competition between rates paid on savings and term deposits.

Some bankers are now asking whether it is any longer meaningful to differentiate between deposits accepted by savings or trading banks. In other words, is there any point in maintaining the fiction of savings funds being more stable (and thus available for investment in medium-long term fields) especially when deposits can be so easily interchanged? And is the difference important enough to maintain the practice of forcing savings funds into government bonds (accounting for 70 per cent) and into the socially important long-term housing loans, while keeping trading bank loans essentially in short term fluctuating forms?

From HP to Unit Trusts

THIS widespread entry of the trading banks into savings banking is not their only move towards greater diversification and thus greater competition with fringe organisations. Diversification has been carried a long way, and well established facilities include travel departments, hire purchase connections, registrar and nominee departments, unit trust services (including management) and investments in various investment banks and short-term money market dealers. Recent moves have included firstly, a more direct part



in the management of hire purchase subsidiaries by at least two of the banks following unsatisfactory profit results; secondly, the taking of an equity interest in factoring companies by two banks; and, finally, a new term loan scheme applying to all the large banks.

The term loan proposal is a fairly radical departure from lending policies as dictated by the central bank. In the past, medium and long-term credit was provided by a variety of institutions including the banks; but, as central bank policy increasingly forced the banks out of this field, a range of investment banks and a government development bank arose to fill the growing needs in this sector. Now a special scheme has been established which involves the banks placing some £A55 million in a special account at the central bank to be drawn on as loans are made. The loans are granted in the main for periods of three to eight years and cover needs of primary and secondary producers as well as exporters.

Second Thoughts on Special Deposits

THE introduction of term loans was accompanied by a change in minimum liquidity ratios. Australia has the rather dubious honour of being the pioneer of special deposits. So it is interesting to note that Australia is moving away from this system at a time when European countries are experimenting with it. However sophisticated the Australian system may now appear, in practice it has certain anomalies. It may be conveniently divided into at least three different parts. The basis is a statutory reserve deposit system supposedly varied only in accordance with basic changes in credit policy as distinct from day to day seasonal changes. This ratio is currently 11.5 per cent and such deposits earn only 15s per cent. Then comes the working ratio of cash, Treasury notes and government securities—the so-called LGS ratio. The banks have voluntarily agreed not to let this ratio fall below 18 per cent, and the margin above this minimum fluctuates both seasonally and secularly. Changes in this ratio are most infrequent and, so far, have been only upward. It is significant to note, however, that there are important liquid assets rather illogically excluded from the LGS ratio, *viz* money at call on the short-term money market and unused term loan funds (which become LGS assets as soon as they are drawn upon). In contrast with English practice, government bonds are included as liquid items in Australia.

As part of the official reflation measures of 1961, the banks were exhorted to expand advances and, despite the fact that overdraft limits grew considerably, actual overdrafts increased fairly slowly. There was thus an increasing unused margin of limits which could, under some circumstances, strain liquidity if they were utilised. However by the second half of 1962 recovery was complete and the economy began to move forward at a pace which showed signs of straining resources. One example of this strain was the large rise in imports in the second and third quarters of 1962; another was a tightening of liquidity in the banking system.

It came as a shock to some bankers when the central bank announced at the end of October that it was increasing the statutory reserve deposit ratio by one per cent, and stressed at the same time that this did not signal a change in credit policy. It would be normal for such changes to be absorbed bythe LGS margin and one can only speculate on the meaning of this confusing manoeuvre, which was promptly and publicly challenged by Australia's oldest and largest bank. If one agrees that the state of the economy demanded an early move to tighten liquidity then why not announce the move as a change in credit policy? Perhaps it can be explained as a wish to signal a change in credit well in advance without damaging the badly shaken confidence of businessmen generally. Last year's failure to reduce overdraft interest rates when the opportunity presented itself has left little room for manoeuvre in interest rate policy, at least in the upward direction.

Canadian Banks Feel the Pinch

FROM A TORONTO CORRESPONDENT

CANADA has eight chartered banks with five thousand branches scattered across a vast continent. Geography is their natural enemy; but a 6 per cent ceiling on lending rates is their particular problem. They hope that a growing population will help counter the first and that next year's report of the Royal Commission on Banking and Finance will be the beginning of the end of the second.

This ceiling on lending rates was originally set at 7 per cent, but was reduced to 6 per cent in the 1944 revision of the Bank Act at a time when there was widespread concern about the possibilities of a serious deflation after the war. Up to the mid-1950s the 6 per cent ceiling had little practical impact on the banks, since interest rates generally were well below this level. In the late 1950s, however, Canadian interest rates rose sharply, and in August, 1959, the rate on three-months Treasury bills climbed above 6 per cent, creating a situation in which it was theoretically possible to borrow from the banks at 6 per cent, invest in short-term government securities and make a profit. Although the bill rate did not remain at the 6 per cent level for long, interest rates in general have remained high enough in the past few years to keep up the demand for bank credit at rates between 5½ and 6 per cent. In 1962 the prime lending rate of the banks was raised to the 6 per cent limit for the first time, leaving them no margin to differentiate between the risks and costs of different loans.

Not Allowed to Compete

THE rise in interest rates in the mid-1950s seriously restricted the competitive position of the banks in relation to more specialised financial institutions. Previously eclipsed by the enormous financial strength of the chartered banks, these now began to grow rapidly. Unencumbered by the regulations of the Bank Act, these financial intermediaries have been able to lend and therefore to remunerate depositors, at rates significantly above those of the banks. So the banks have been losing business and deposits to a number of institutions—credit unions (a kind of "friendly society" bank), trust companies, and small loan companies. The banks have been unable to counter this encroachment by a drive to spread the banking habit. The habit has already spread: at the latest count there was roughly one bank account for every Canadian over fifteen.

The banks' most serious rival, however, is the government itself. Each autumn a new issue of government savings bonds appears and bites deep into the banks' deposits. The latest issue carried interest at 5 per cent compared with 3 per cent on bank savings accounts; and the bonds can be redeemed at any time at par. It is true that the banks act as agents for the sale of these bonds and get a handsome commission for the work, but this does not make up for the lost deposits.

Hamstrung by the Bank Act, the banks have had to compete by extending their range of services. In addition to several kinds of individual savings deposits, banks pay premium rates, of from 4-4¼ per cent, for fixed-term deposits of substantial size; and one bank has introduced term notes—marketable instruments with maturities from one to six years, which are directly competitive with notes sold by trust companies and other institutions. On the lending side, Canadian banks began in 1958 to offer special consumer instalment loans for a wide variety of purposes. The loans are usually unsecured, and carry rates of interest which are effectively higher than the banks' rates on their secured loans, but are still considerably below the rates charged by instalment finance companies. This type of business has expanded rapidly, and in a relatively prosperous environment (*pace* the setbacks to economic growth) there have been very few bad debts so far. The banks are also beginning to extend their hours of opening in shopping centres where there are trust-company offices. The banks compete aggressively in the services they offer to business customers, and they are also competing increasingly in the development of foreign business, offering services in continental Europe and Japan as well as in the international money markets of New York and London.

Competition among the banks themselves is also limited to the provision of increased services—the banks agree on interest rates and use a standard scale of charges. As the country develops there is a constant pressure to open new branches, and both the population drift to the suburbs and the growth of new frontier communities have encouraged a great increase in branch openings. Under pressure of competition new branches are established well before they can be expected to pay their way. Nor are rising costs easily offset by increased productivity, because branches are so widely scattered.

Although the banks are gradually introducing automatic methods such as electronic cheque-sorting, there is a limit to the usefulness of such techniques. A small, remote branch must be staffed, equipped and heated in much the same way as a busy downtown one. Large quantities of paper must continue to travel back and forth across the country. The delays caused by such travel, and by Canadian winter weather, must be allowed for in analysing the cash position and managing the day-to-day affairs of a Canadian bank. Cheques written in Vancouver or in Newfoundland can take two weeks to reach Toronto during the Christmas rush. The distance between head office and branches probably tends to make lending policies less flexible and responsive to changing conditions than they might otherwise be.

Waiting for Porter

CANADIAN bankers are now wondering how far their immediate problems will be solved—or exacerbated—by the Royal Commission on Banking and Finance. Its terms of reference are very broad, but one of its specific tasks is to make recommendations on the decennial revision of the Bank Act, due to take place in June 1964. The Bank Act is a comprehensive piece of legislation which regulates virtually every phase of banking in Canada. It has been an important protection for depositors as well as a restriction on the banks themselves. Apart from the question of the interest rate ceiling, another provision of the Act to be discussed by the Commission is the general prohibition on mortgage lending (there

are a few exceptions, the most important being mortgages guaranteed under the National Housing Act). Although this prohibition is a factor inhibiting bank competition, the banks have mixed feelings about the desirability of going into mortgage lending in a general way, arguing on occasion that longer-term risk assets have no place in the portfolio of a commercial bank. A further question the Commission may want to ask is whether the chartered banks are doing enough to meet the needs of small business and to facilitate the " structural adjustments " now faced by Canadian industry.

Fluctuations in monetary policy in recent years have posed recurring problems for Canadian banks, especially of course during periods of tight money in 1956-57, 1959 and 1962. Direct government controls on credit have not been used in Canada to any extent, so that a policy of monetary restraint obliges the banks themselves to ration credit, a difficult and painful process. Since only bank credit can be directly controlled by the monetary authorities (through the cash reserve requirements imposed by the Bank Act) it follows that as other financial institutions develop, bank credit must be controlled more and more severely in order to achieve the same control of total liquidity in the economy.

Moreover, it is not only in its control of the supply of money that monetary policy in Canada falls especially heavily on the banks. Late in 1955 the Bank of Canada asked the chartered banks to restrict their lending capacity by building up " secondary " reserves of Treasury bills and money-market loans. Liquid reserves must now consist of cash amounting to at least 8 per cent of Canadian dollar deposit liabilities, and of Treasury bills and day-to-day loans which together with cash must total at least 15 per cent of deposits. Many bankers regard these requirements as excessive, arguing that a 5 per cent cash ratio would be enough ; and some suggest that the monetary control could be achieved without any statutory cash reserve. It has been argued at the same time that the banks' own need for liquidity calls for holdings of short-term assets beyond the required level, so that the secondary reserve requirement is superfluous. Thus in the past few years the cash ratio has tended to remain very close to the legal minimum of 8 per cent, whereas secondary reserves have for much of the time maintained total liquid assets at around 16 -18 per cent, rather than the minimum 15 per cent. This is probably accounted for by the fear of sudden changes in monetary policy: since 1955 the banks have three times had to sell large quantities of government bonds on a falling market in the face of heavy demand for credit and of tight central bank restraint.

Special problems for Canadian banks were also created by the balance of payments crisis. Uncertainty in the exchange market for the Canadian dollar led in a variety of ways to a sharp increase in the demand for bank loans in the spring and summer of 1962. When the Bank rate, which had floated at one quarter of one per cent above the Treasury bill rate since 1956, was suddenly raised and anchored at 6 per cent in June, the banks found themselves in a tight-money situation created by external circumstances and not reflecting demand conditions in the domestic economy. (It should be noted, however, that the banks had been arguing strongly for a return to the fixed " signal " Bank rate for some time, and they welcomed the new principle, though not the fact.) The recent improvement in exchange reserves, however, has brought reductions of the Bank rate in three steps to 4 per cent, together with a slight easing in bank cash reserves. These moves have now created a monetary climate more appropriate to the mild business recession which is generally expected in Canada this winter.

Relations between the central bank and the chartered banks have been improving quietly since Mr Rasminsky became Governor of the Bank of Canada just over a year ago. The difficult monetary operations of the past summer were handled in a way which did not exacerbate the unsettled political situation, and the return to a fixed Bank rate which is used to signal changes in official policy has restored a sense of direction to the financial community.

Now at the end of 1962, in a somewhat calmer climate than they have experienced of late, the banks have settled down to wait for the report of the Porter Commission and the 1964 revision of the Bank Act. The banks' own brief to the Commission is due to be presented next January. The brief to be submitted by the Bank of Canada has already been distributed, but is regarded in banking circles as disappointingly non-committal. Perhaps this was inevitable in view of the rather stormy financial weather which Canada has just passed through.

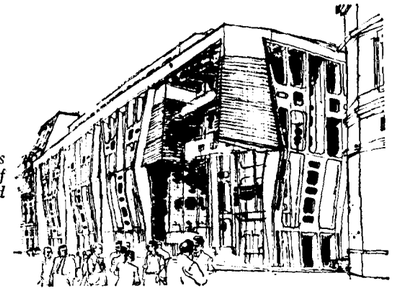
Control by Agreement in Holland

FROM AN AMSTERDAM CORRESPONDENT

A GALAXY of one hundred and fourteen commercial banks does not prevent Dutch banking from being more akin to British practice than to that of its continental neighbours. The Netherlands has its " Big Four "—the Amsterdamsche Bank, the Nederlandsche Handel-Maatschappij, the Rotterdamsche Bank, and the Twentsche Bank—holding 60 per cent of total deposits. Capital and reserves, as in Britain, are a small proportion of total assets, while something like two-thirds of deposits are in current accounts. The Dutch banks, unlike the German banks and the French *banques d'affaires*, do not as yet hold large blocks of shares in industrial concerns ; the emphasis in lending, as in Britain, is on formally self-liquidating transactions, and the loans are arranged on an overdraft basis—a system many other continental bankers find strange.

In the last decade the Dutch banks have been on the receiving end of a variety of experiments in credit control ; adjusting to the changes has been a major problem. The system of control that has evolved is considerably wider than in Britain. Holland's 11½ million people enjoy the services of an enormous range of 2,633 agricultural banks, controlled by their own two central banks ; 265 general savings banks ; 67 stockbroking firms ; and 114 commercial banks. All the credit institutions are controlled under the " Act on the Supervision of the Credit System " of 1952. By extending their influence to all these institutions, Dutch authorities have grasped a nettle from which monetary authorities in other countries have mostly shrunk.

The Act of Supervision gives the Government broad powers to control credit and to safeguard the solvency and liquidity of the credit institutions. The Netherlands Bank acts as the Government's agent in the administration of the Act. The bank laid down mini-



Buenos Aires office, Bank of London and South America

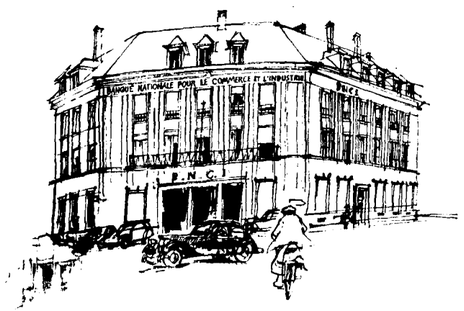
quate solvency and liquidity ratios for the banks in 1954. Complying with these directives has caused the commercial banks no problems until now—though the sharp increase in lending since 1958 has whittled the cushion of liquid assets above these ratios down to their minimum.

This Act makes central bank control in Holland appear formal and legalistic, but a series of gentlemen's agreements, concluded between the Netherlands Bank and the commercial banks since 1954, have placed control on a more informal footing and pushed the specific provisions of the Act into the background. The gentlemen's agreements have necessitated constant consultation between the central bank and the credit institutions, which Dutch bankers appreciate. Relations between the Netherlands Bank and Holland's commercial bankers are now very close indeed.

In 1954, confronted with a situation of excessive liquidity in the banking system, and therefore the danger of inflationary financing, the Government and the central bank in a joint effort took action in two ways—firstly, by funding Fl.1,200 million out of the Fl.3,000 million Government short-term debt held by the banks in 8- 10- and 12-year Treasury certificates and secondly by concluding a gentlemen's agreement with the 32 representative commercial banks, and with the central organisations of the agricultural banks, on obligatory cash reserves to be held at the central bank. Since early 1960 the cash reserve ratio, which is fixed month by month, has been changed no less than eleven times—the ratio varying from 5 per cent to 10 per cent. In October 1962 the obligatory cash reserves with the Bank amounted to Fl.462 million.

New Lending Control

UNTIL 1958 the growth in lending to the private sector lagged behind national income. Since that year, however, the volume of domestic bank lending has increased much faster than national income, despite the funding operation which skimmed-off about Fl.1,650 million in excess liquidity. The expansion in lending was so rapid that the central bank introduced in June, 1961 an arrangement, already agreed upon in principle by the credit institutions in 1960, for moderating the expansion of domestic lending, provisionally up to the end of 1962. When the monthly returns lodged with the bank reveal that lending by a bank has exceeded a certain rate, based on the average increase in previous months, then that bank must make an interest free deposit with the central bank amounting to up to the full amount of the excess lending ; fixed term lendings with an average life of at least two years being excluded from this control. Consequently no absolute ceiling has been imposed on domestic lending, but nevertheless the sanctions on exceeding the standards make lending unattractive when it is officially unwelcome. In September penalty deposits amounts of Fl.62 million had to be lodged with the Netherlands Bank ; in October the banks had once more fallen in line with official wishes. The gentlemen's agreements on the control of lending and on minimum cash ratios, subject to a 15 per cent maximum, now form



the hard core of credit control in Holland. Limited in their domestic lending, the commercial banks have given increased attention to foreign private business. Foreign lending, other than money market transactions, increased from Fl.618 million in 1956 to Fl.1,937 million in 1961. This lending is welcomed by the authorities, since it helps to neutralise Holland's balance of payments surplus.

Struggle for Deposits

The combination of the burst in new lending since 1958 and official efforts to reduce bank liquidity has now faced the banks with growing competition for deposits, not only amongst themselves but also with the agricultural banks, whose deposits now total Fl.5,950 million, and the postal cheque and giro transfer system. In the battle for local deposits the commercial banks have been losing ground ; their share in total deposits fell from 48.8 per cent in 1951 to 43.6 per cent in 1961. Although the banks' own credit transfer system is extremely efficient, the postal cheque and giro system is a major competitor of the banks ; at the end of 1961 this Government institution had 813,000 accounts and Fl.2,063 million non-interest bearing deposits, compared with deposits of Fl.12,790 million with the commercial banks. The commercial banks have also lost deposits to the agricultural banks, which have been vigorously soliciting non-agricultural business.

One of the big four made history in 1954 by offering 8-year 3 per cent deposit certificates. In the same year one of the Dutch overseas banks introduced savings accounts. Since then most of the commercial banks have followed this lead and now actively solicit savings accounts. The move has been highly successful : savings deposits with commercial banks and affiliated savings banks totalled up to Fl.1,273 million at the end of 1961 compared with only Fl.60 million in 1956 ; they now represent 12 per cent of all savings deposits. The nature of these deposits, however, differs noticeably from those received by the specialised savings banks : thus the average balances in the commercial banks are much higher (by more than five times). The rate of turnover is somewhat higher too, and a relatively large percentage of the drawings represents purchases of securities.

Search for New Investments

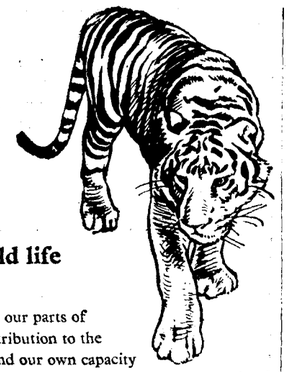
THE large influx of savings deposits, costing from 3¼ to 4 per cent necessitated the finding of corresponding high yielding investments. As a result there has been a large increase in capital market investments, in participations in hire purchase and industrial finance companies, and medium-term lending, which has facilitated the growth of Dutch industry. Industrial production has grown by nearly 70 per cent in ten years ; and it shows an increasing diversity. This expansion has brought with it a multiplicity of capital requirements for small and medium-sized industries which are as yet unable to call on the share market or the capital market in general. The larger commercial banks have been quick to meet these requirements by medium-term lending. On the whole commercial banks have not embarked on mortgage business ; however, one or two banks have entered, through affiliated companies, the field of property finance and ship mortgages.

In consumer credit too the banks have demonstrated their willingness to meet new needs. Almost all the larger banks have affiliated hire purchase finance companies, which, however, rely mainly on the capital market for finance, as the parent banks provide only temporary bridging loans. Consequently total engagements of the banks in hire purchase amounted to no more than Fl.141 million at the end of 1961. The banks also grant direct personal loans, but demand here has lagged behind expectations.

Yet Dutch banks do not lack the resources for retail banking.

Panthera Tigris

(the Tiger)



represents India in our gallery of wild life

But it is not only for their fauna that our parts of the world are remarkable. Their contribution to the trade of the world increases yearly and our own capacity to serve them increases too. In the last ten years, the resources of National and Grindlays Bank Limited, which incorporate the Eastern Branches of Lloyds Bank Limited, have risen from £170 million to £250 million. The number of branches operating in countries overseas has increased from 50 to 170 Unrivalled banking facilities are therefore available for all who trade or travel in the countries served by the Bank.

Middle East Commerce —
a big future ahead

More factories, roads, dams, bridges, irrigation canals, airports— big new projects are being started in Aden, Bahrain, Gaza, Iraq, Jordan, Lebanon, Libya, Morocco, Nigeria, Qatar, Saudi Arabia, Sudan, Syria and Tunisia.

The Arab Bank was established in this area in 1930 and has since then been playing a vital role in its economic development. Its fully paid up capital of £5,500,000 is larger than that of any other bank in the Middle East and North Africa. The branches of the Arab Bank are distributed among the most important business centres throughout the Arab world.

The Arab Bank can serve your interests in the best possible way. It is happy to give you useful information, introductions and all types of banking service.

Capital and Reserves	£10,500,000

True, the rate of increase in the number of bank branches in Holland is slowing down. But the network of branches is already dense and the cost of operating branches is continuously rising. The big four had a network of 814 branches at the end of 1961 (583 in 1945), the three branch banks in the second rank (in size) having 237 branches. New branches have been opened in the new residential areas and shopping centres and also in quite a number of so-called problem areas in the southern and northern provinces, where the Government is successfully promoting and facilitating the establishment of new industrial enterprises. Finally many new branches of the larger banks were the outcome of the absorption of local and regional banks. A series of amalgamations in the fifties reduced the number of registered banks from 137 to 114—the number of independent banks however being much lower.

Between the end of 1956 and of 1961 the domestic lending of the representative commercial banks rose much faster, by 63 per cent, than internal deposits, which rose by 42 per cent. In much the same way as in Britain, advances could be financed at the expense of liquidity. But from now on the banks, in order to sustain their growth, will be more dependent on new deposits. Between 1956 and 1961 share capital and reserves rose by only 37 per cent and consequently the ratio between capital and reserves and deposits of the 32 representative commercial banks dipped from 13.5 per cent in 1956 to 11.9 per cent in 1961. Three banks out of the big four group have not called on the share market for 28 years or more; only De Twentsche Bank has surprised its shareholders, with a rights-issue in 1962. Banks in the second echelon, however, have been regular callers on the share market since 1956. The big banks strengthened their reserve positions rather by withholding large parts of the net profits and also by disclosing hidden reserves built up in the past. Notwithstanding soaring costs and fierce competition for deposits, the earning power of the banks has moved steadily upwards since 1957, which has enabled them not only to strengthen their reserve positions but also to make handsome distributions to their shareholders.

Italy—Credit into Capital

FROM A ROME CORRESPONDENT

In the last few months the pace of Italian expansion has begun to slow down somewhat from the extraordinary pace of 1959-61, which in turn followed some slow-down in 1958. For the past year economic development in Italy has entered a new phase, characterised by a notable increase in labour costs, as wages have risen still faster than productivity. The upshot has been, as in many other countries, a paring of profit margins which has cut into the resources available for financing expansion from internal funds. Because the capacity of the capital market is small, firms have accordingly been obliged to increase considerably their demands for bank credit.

The Italian banking system has been able to meet these new demands efficiently because it is sustained by a monetary policy which, in the absence of bottlenecks in the labour market and of worries about the balance of payments, seeks to maintain the pace of economic growth. This expansionary monetary policy has been directed at two points—maintaining the liquidity of the money market and, further, promoting the transfer of funds to the capital market. This has helped to break down some of the unnecessarily sharp distinctions made by Italian institutions between short-term credit and longer-term credit, and has made more credit available for the creation of fixed capital.

New Liquidity Controls

In these circumstances the introduction of a classical instrument to control liquidity will be very important for Italy. The new measure permits official operations in the open market and incorporates a new and more flexible system for the issue of Treasury bills. The innovation, which is being made this month, was foreshadowed by the Governor of the Bank of Italy, Dr Carli, in his annual report issued a few months ago. Dr Carli pointed out that, under the existing system there was no relationship between the issue of Treasury bills and the cash needs of the Treasury: the bills were issued on tap even if the proceeds simply swelled the Treasury's balance at the central bank. The new system of monthly issues in limited quantity should stimulate the banks, in a period of abundant liquidity, to put their funds into other channels. The adoption of this system of tender issues of bills, which is new for Italy and which it is hoped to extend to other public securities, may lead to an intensification of the use of other instruments of general control on banking liquidity.

In Italy, as in other countries, the authorities can regulate the liquidity of the banking system by calling for compulsory reserves in accounts at the central bank (which are interest-bearing) or in Treasury bills, as well as by altering the official discount rate. But adjustments of the Bank rate in Italy are rare. The last variation was in June, 1958, when the rate was lowered from the level of 4 per cent which had prevailed since 1950 to the present 3½ per cent. And adjustments of reserve requirements are quite exceptional. The only change since 1947 has been a reduction, last January, from 25 per cent of net deposits in each bank to 22½ per cent.

Hitherto the liquidity in the banks has been mainly regulated by selective rather than general measures. The central bank has put funds at the disposal of individual banks in a number of ways—rediscounts of commercial and agricultural bills; more often, advances against government bonds or state guaranteed securities. Most important of all have been operations in foreign exchange.

Three main means have been used by the authorities here to inject or withdraw liquidity in lire into (or from) the money market:

buying or selling foreign currency from or to the banks in exchange for lire through the Italian Exchange Office (*Ufficio Italiano dei Cambi*);
conceding advances in foreign currency;
authorising the banks to utilise credits of foreign banks, or obliging them to balance their position abroad by buying or selling foreign exchange against lire through the Exchange Office.

Bank of India—manager's office

The potential range of credit control is very extensive in Italy. The Banking Act of 1936 considers the collection of savings and the exercise of credit matters of public interest and puts all concerns that exercise both functions under the control of the monetary authorities. This control, which is under a special inter-ministerial committee, is exercised through the central bank. The banks require its permission to set up with a given capital; they require permission to open new branches. The central bank determines the ratio between capital funds and total deposits; the issue of shares and bonds and the placing of shares or bonds issued by other concerns; the proportional distribution of investments; and the limits of credit facilities. Finally it supervises the fusion or liquidation of banks.

The law empowers the monetary authorities to introduce quantitative and qualitative controls on the activity of banks, particularly of commercial banks. Investments in real estate require prior authorisation, which is usually given only for buildings used by the bank itself—and Italian bank buildings have always been noteworthy for their presumptuous and spurious style. Official permission is also needed for holdings of shares, usually allowed only in companies that are either created and subsidised by the State or are set up for purposes of public interest, or of a financial character. Otherwise, holdings of shares are usually limited to the quantity necessary for normal buying and selling transactions performed by the banks on behalf of their clients. Regulations on credits include a limit on the amount conceded to a single borrower to a maximum of one-fifth of the capital funds of each bank.

Unlike money markets in English speaking countries, the Italian money market is a narrow one. It is practically confined to the commercial and savings banks. There are no organisations like the merchant banks, acceptance and discount houses, finance companies and the like. The basis of banking specialisation in Italy is the distinction, made by the Banking Act, between commercial and savings banks on the one hand which collect short-term deposits and, on the other, banks which may collect only medium and long-term deposits. Short-term credit, formally up to twelve months, is thus separated from medium-term and long-term credit, and particularly from industrial credit. These longer credits are in general granted by special credit institutions. The commercial and savings banks in particular are excluded from certain sectors in which even some of the most orthodox commercial bankers in other countries participate—including the financing of medium-term credits for export.

The practice of using formally short-term loans, granted in the form of overdrafts, to finance stocks, plant and the like, has become fairly common in the Italian banking system, particularly since the last war. This practice has been spread by lively competition between the banks and has tended to operate to the advantage of the biggest customers. A more concrete and openly recognised form of integration between short-term and longer-term credits exists in Italy in the "sections" set up in some commercial and savings banks for the purpose of granting special longer-term credits.

Public Control, Independent Management

PERHAPS the most salient feature of the Italian banking system is that all these official controls are being enacted over banks that are largely owned by the state in any case. The present Centre-Left government has no intention of extending public ownership of the Italian banking system, which is already well advanced. Over two-thirds of total deposits are administered in the public banks. Among these, however, there are very few to whose capital the state has contributed directly, though they include the Banca Nazionale del Lavoro, the largest bank in Italy. More important are indirect interests in the three

* Fully owned state banks, including Banca Nazionale del Lavoro, which state has a partial interest. ‡ March. † Banks in

"banks of national interest"—Banca Commerciale, Credito Italiano, Banco di Roma—and the Banco di Santo Spirito, whose capital is almost entirely owned by the state holding company, IRI. The other banks to whose capital the state contributes indirectly are public corporations and foundations such as the remaining Public Law Institutes and the savings banks. Only among the ordinary credit banks, which hold little over a fifth of total deposits, are privately controlled concerns to be found.

But the extent of public ownership has not caused interference in technical management or influenced competition between the banks. Competition, in fact, has constantly tended to increase. Immediately after the war, and even more between 1950 and 1953, competition extended to interest rates, but in 1954 most interest rates and charges were regulated by a gentlemen's agreement freely accepted by the banks and renewed from year to year. Competition has therefore tended to become concentrated in operations and services not regulated by the agreement. In practice, not all the banks that have subscribed to the agreement respect it in the same way. In periods of abundant liquidity competition in rates is achieved by a wider differentiation of maximum credit rates and by widening the range of clients to whom prime rates are offered. Recent developments have increased the points of friction and of contact between banks of different size. For instance, many medium sized banks and savings banks have greatly increased their standing and are able today to serve even very large concerns.

The development of new banking services has been noteworthy in the field of foreign trade. The banks, especially the big banks, are also active in security transactions, buying and selling on the stock exchange on behalf of clients, and placing new issues. The extension of these services has often influenced the development of the banks' profits and has helped to compensate for the reduction of the margin between the interest on deposits (in Italy even current accounts earn interest) and that on loans. This margin has been almost halved since the exceptional levels of 1947-8.

There has been a noteworthy decentralisation of branches and agencies: since the war the authorities have encouraged banks to open new branches in places where banking services were scarce. This encouragement has gone mainly to local and inter-regional banks and the trend has been to limit the further expansion of the main national banks. In spite of this there is still a notable concentration of resources and credits. Thus the four largest banks (Banca Nazionale del Lavoro, Banca Commerciale, Credito Italiano, Banco di Roma) which operate over the whole country, and which at the end of 1961 had only 10 per cent of the operating bank counters, disposed of over one-fourth of bank deposits and nearly one-third of total credits.

A copper seal used more than 4 centuries ago. This seal was used by Toyotomi Hideyoshi, Japanese military leader (1536-1598) during his rule for most important documents. On it are engraved verses from an ancient poem which signify good fortune and longevity, and contain the words Tokai (東海); hence the name of the Tokai Bank.

Ever since its establishment this bank has enjoyed continued growth and prosperity. Today it is one of the leading banks in Japan with 176 branch offices strategically located and staffed with more than 9,000 employees — many of them experts of foreign trade. With this nationwide network of branches, Tokai Bank is in a position to offer unrivalled service to whoever trades with Japan.

AT YOUR SERVICE

FOR EVERY KIND OF BANKING BUSINESS

We know Australia

Yes, we know Australia and so we should, for probably nowhere else is a bank so closely integrated with every phase of life in the country it serves. Throughout Australia, the Territory of Papua and New Guinea, and in the British Solomon Islands, there are branches of the Commonwealth Trading Bank. Our knowledge of these areas is, in consequence, extensive, first hand and up-to-date. That knowledge, and our complete range of banking services, we place at the disposal of all who may find them helpful. Your enquiries are invited.

STATE BANK OF INDIA

India's largest commercial bank was constituted on the 1st July 1955 for the purpose of taking over the undertaking of Imperial Bank of India, which was established in 1921.

The Imperial Bank of India was formed by the amalgamation of three Presidency Banks, viz. the Bank of Bengal (established in 1806), the Bank of Bombay (established in 1840) and the Bank of Madras (established in 1843) so that the origin of the Bank dates back to 1806.

The following eight State-associated banks have become subsidiaries of the State Bank of India recently:

1 State Bank of Bikaner
2 State Bank of Hyderabad
3 State Bank of Indore
4 State Bank of Jaipur
5 State Bank of Mysore
6 State Bank of Patiala
7 State Bank of Saurashtra
8 State Bank of Travancore

The latest position of the capital structure, deposits and number of offices of the Bank and its subsidiaries is as under:

(Rs. Million)

AS ON 31st DEC. 1961	STATE BANK OF INDIA	SUBSIDIARIES	TOTAL
Paid-up Capital	56.3	49.5	105.8
Reserves	82.0	24.0	106.0
Deposits	5,313.3	1,272.3	6,585.6
Total number of offices	954	490	1,444

The Bank undertakes all types of commercial banking business, including Foreign Exchange, Bills, Letters of Credit, Executor and Trustee business, Income-tax returns and Claims, Deferred Payment Guarantees, Packing Credits, Travellers' Cheques, etc.

THE BANK'S LONDON OFFICE and other foreign offices, linked to a wide network of offices in India of its own and its subsidiaries, supplemented by extensive correspondents throughout the world, offer unrivalled service.

Link up with the bustling Japanese economy

More than 2000 firms in countries all over the world have made technological, manufacturing, marketing, and other types of industrial agreements with Japanese companies. With fewer restrictions nowadays on the flow of capital and technical know-how across national boundaries, more and more companies are discovering the advantages of such tie-ups. The Industrial Bank of Japan has been intimately associated with every major Japanese industry for 60 years and is well qualified to act as go-between in effecting attractive contracts in all lines of business. Inquiries are invited.

A prospect of progress

The developing countries of Latin America offer rewarding prospects especially to the exporter of capital goods. However, expert assistance is vital in dealing with the many formalities which abound. Consult our International Department Representatives. Their advice, based on detailed knowledge of local conditions, will prove invaluable.

Our branches and those of our associates – the Bank of London & Montreal and Balfour, Williamson & Co. – cover the whole of South and Central America. Through them, accurate market information reaches our International Department. The help and information which we are thus able to supply to business and industry includes the following:

Individual market reports · Tariffs and payments
Import and export regulations, including licensing and prior deposits · Transfer of funds
Names of agents · Financing

BUSINESS NOTES

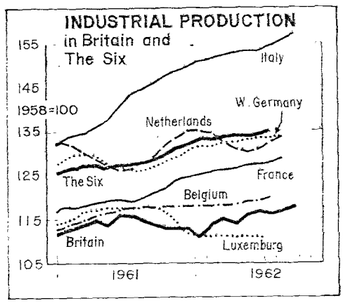
THE ECONOMIES

Third Quarter Upturn

SINCE the Central Statistical Office has now revised downward its June index of industrial production from 118 (1958 = 100) to 117, the provisional figure of 118 published this week for September hits the year's "high"; but there was probably not much between the levels of output in the two months, and the index has in fact risen only two points since May. The upturn in the third quarter here has not been as pronounced as the European Economic Commission (on scrappier indications) thinks the Six may have scored.

The commission believes that this upturn —shown in indices that lag somewhat behind Britain's—was partly due to larger seasonal influences than usual, so that the ordinary seasonal corrections it uses have not damped these out. It has not been as quick to put an optimistic gloss on these fragmentary figures as some of the individual governments have been, for example at OECD sessions; it comments that "the new speed-up in growth is probably in part a process of making up leeway and to this extent it will probably only be temporary."

The profile of production increase in Britain over the last two years remains very different from that in the Six. These continental countries, apart from the Benelux area, can show a far more impressive year-to-year rise than industry can here, because they all notched up much better increases in output during 1961. Since the beginning of this year, Britain's performance compares much better as the rate of increase among the Six has generally slackened somewhat while Britain's, during the first half of the year, notably quickened. Since then the increase has been slower, though the latest indications of demand—retail trade figures and home engineering orders—also suggest an upturn. But the expansion is still only taking up the slack in the economy. The latest count of unemployment showed the largest monthly increase since the upward drift started in June, 1961. In the four weeks to November 12th the numbers wholly unemployed rose by nearly 42,000, although the normal seasonal increase is only about 18,000. And there were then eight people out of work for every three jobs notified as vacant. This must have some connection with less avid hoarding of labour.



The European community, however, is still six countries, presently enjoying quite different fortunes. In Italy the production index still shows a better rise than anywhere else in the common market; but not at last year's rate, and the Italians are among the least complacent of the Six regarding continued expansion. Both Belgium and the Netherlands have shown resumed growth in the second and third quarters of 1962; the first has become more competitive in its exports to the rest of the community, and in the second the natural increase in population is making more labour available. In Germany, however, says the Commission "even the consumer market seems to be settling down to a slower pace."

In France the trend of expansion has not really altered much: marked increases in metals and chemical production slightly accelerated the rate of industrial growth during the summer, and official forecasts for the year, of a 5½ per cent in national income, have been revised fractionally upwards. If one applies a three-monthly moving average to smooth out minor month-to-month fluctuations, France's industrial trend is steady—and growing at an impressive 7 per cent per year.

IN THE MARKETS

Chinese Blacks and Whites

As the tea gardens in Assam were directly threatened by the Chinese advance, the big fall in Indian tea shares and their equally sharp recovery after the Chinese announced a cease fire were entirely logical. But the fluctuations were due as much to a deliberate widening of prices by jobbers as to the actual volume of dealings. As a natural converse, Ceylon and Southern Indian tea shares were bought. They continued to rise after the cease-fire announcement as some investors, uncertain about the reaction of the Indian government to the Chinese proposals, hedged their bets. The shares of Burmah Oil, which has a direct interest in the Digboi oilfields, also moved sharply.

Elsewhere in the market, nerves rather than logic appear to have dictated price movements. Reason might suggest that had the Sino-Indian dispute developed into a conventional war on the Korean pattern increased defence spending and other expansionary tendencies would have led to a rise in equities and, possibly, commodity prices. But the market was so seized of the dangers of war in any form that the initial reaction both in Wall Street and Throgmorton Street was to mark prices down and then up again after the cease fire announcement. As a result the Dow Jones average, having fallen to 626 on Monday, had recovered to 637 on Wednesday, when Wall Street was also cheered by a further easing of the Cuban tensions. Wall Street's recovery and the announcement of higher industrial production in Britain in September reinforced the effect of the cease fire proposals in the London market, where on Wednesday the gain of 4 points to 293.6 in the *Financial Times* index cancelled out all but 1.2 points of the loss registered by the index in the two previous days. Over the week to Wednesday's close *The Economist* indicator made a gain of 3.3 points to 345.7 and equity prices continued to move ahead on Thursday.

Gilt-edged stocks, which were dull before the week-end, shared in the general recovery in the middle of this week. Some investors clearly thought that last week's fall had been too abrupt and came back into the market to buy long dated and undated stocks. The strength of sterling was one encouragement and investors may have noticed that while activity in gold increased a little before the Chinese offered their cease fire, business remained moderate.

PROTECTING DEPOSITORS

Better Late than Never

THE Government has at last produced a bill to regulate companies which solicit unsecured loans and deposits from the public. This very necessary amendment to company law was first promised in 1959; the Government's failure to fulfil that promise until now has been indefensible. There are many small investors who might still have their savings intact had the Government blocked this major loophole when it first appeared. The purpose of the Protection of Depositors Bill, published as this issue went to press, is to restrict the issue of advertisements inviting the public to invest money by way of deposit, and to secure a greater measure of public control over companies using such money. Its terms will be examined here in detail next week.

GOLD POOL

The Individual Quotas

A continental correspondent writes:

To complete the picture of the structure and working of the central banking gold pool given in these columns last week on page 701, here are the individual quotas for each country. These quotas set the cumulative limit of the net amount of gold each central bank is willing to put into the central pool. As indicated last week, the cumulative deficit at the end of October was $82 million.

Quotas of—	$ million
United States	135
Germany	30
Britain	25
France	25
Italy	25
Switzerland	10
Belgium	10
Netherlands	10
Switzerland	10
Total	270

The notable features of these quotas are first, that the precise total is $270 million rather than the round $250 million which has been mentioned hitherto; and secondly, that the United States is not only a full member of the pool but provides exactly half of it. Thus an element—a 50 per cent element—of the former direct "gold bridge" between the Federal Reserve and the London market is built in to the gold pool mechanism itself; and European countries have so far provided no more than a net $40 million from their gold reserves, and are committed to a maximum of $135 million.

In addition, as noted last week, the pool arrangements also provide for special sales of gold to the pool by the United States when the dollar is under speculative attack. Thus in three weeks of July such speculation necessitated sales of $100 million from the pool and the United States made a special contribution of $35 million. This left $65 million to be found by the pool members. Since the United States itself has a half interest in the pool it also had to finance half this pool deficit of $65 million; thus the total strain on its reserves (if a pool settlement had taken place at that moment) would have been $67½ million ($35 million plus half of $65 million) leaving only one-third of the $100 million to be financed from the gold reserves of the European pool members.

FUTURE OF EMA

Britain against the Guarantee

It is now clear from information leaking out in continental centres that a major hitch has been encountered in recent Paris discussions on the renewal of the European Monetary Agreement for a further year beyond the end of 1962. The argument is basically between Britain and the continental members of EMA and it concerns the built-in dollar guarantees. Britain is opposing them, on technical and tactical grounds which are understandable in isolation; but its stand has not helped its wider aim of sowing support for the Maudling proposals on international payments, which themselves involve the more far-reaching guarantee, in terms of gold.

The European Monetary Agreement was negotiated in 1955 as an eventual successor to the European Payments Union, for implementation on the advent of market convertibility, which came three years later, at the end of 1958. The exchange guarantee was not given directly, but was, and is, implicit in that part of the agreement providing for monthly settlements of balances at fixed exchange rates. At the time of the original EMA negotiations the British representatives questioned the need for any such supplement to the market mechanism. The compromise solution then adopted was to embody facilities for such settlements, but to fix these settlements at the extreme points—the most unfavourable extreme points—of the permitted margins of market fluctuation, viz. $2.78-2.82 for sterling. But while this ensured that the settlements mechanism would not be used in normal times, it did provide the assurance that whatever happened to exchange parities, balances in European currencies held by central banks in EMA could always be converted at the end of a month at the lower margin of the existing dollar rate.

This effective dollar guarantee of sterling balances happened to prove very useful in the context of the special Basle credits of 1961, though no doubt special arrangements could otherwise have been contrived. Nonetheless Britain's representative on EMA was already pressing for the guarantee to be dropped in last year's discussions for the 1962 renewal; and this year Britain's resistance has stiffened. It is based on two main considerations. First, a guarantee in terms of dollars, however natural it may have seemed in 1955, seems inappropriate now—to-day it is rather the dollar that needs to be guaranteed in terms of the Swiss franc. Secondly, the Bank of England has for some time encountered complaints from sterling area countries, and particularly Australia and New Zealand, who resent the granting of more favourable treatment to European balances in London than to their own. It seems that Britain agreed to ask for the suppression of the guarantee as part of a *quid pro quo* for the Commonwealth in the general bargaining on the common market. It may be that British officials also feel that since overseas sterling area countries will themselves lose some relative financial advantage if Britain goes into the common market, it may be particularly necessary to remove an apparent discrimination against them.

To and Fro in Paris

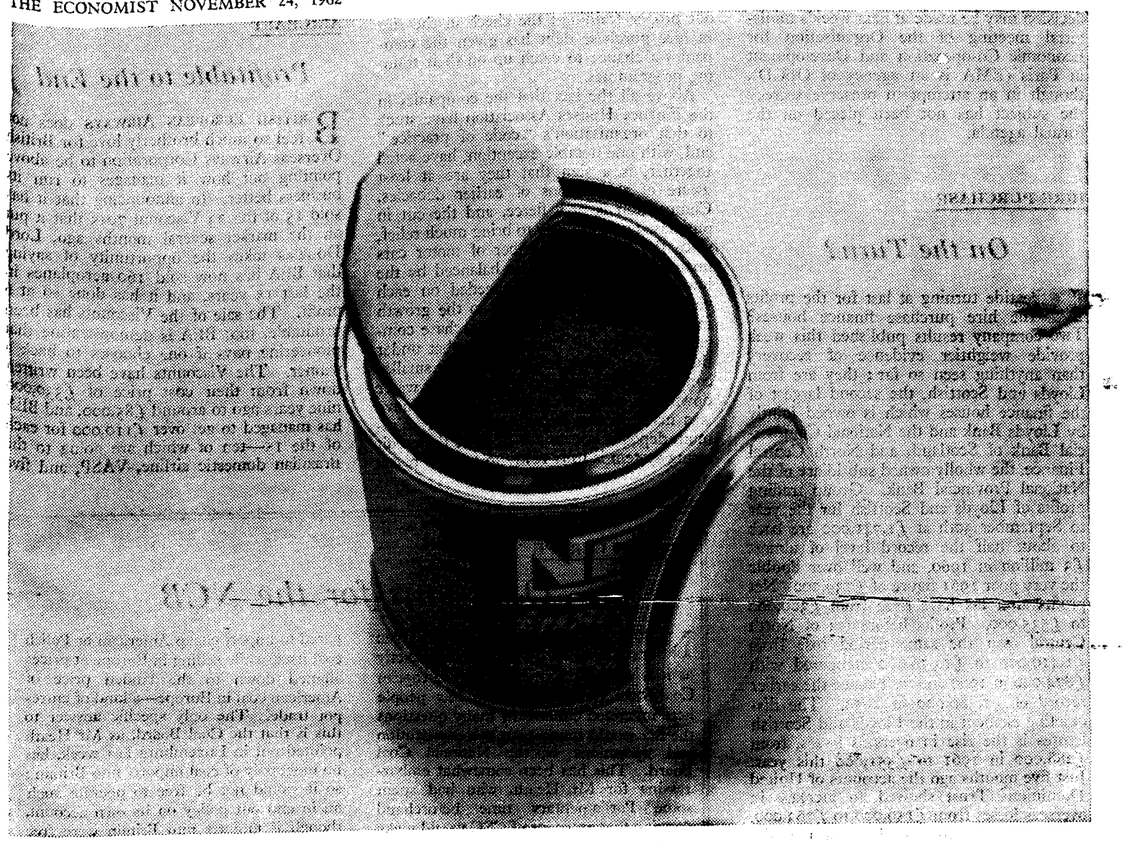
The reaction of the board of management of the EMA to the British proposition a few weeks ago was very sharp, according to continental accounts, and the proposition was unanimously rejected. France was angry and said bluntly that Britain had to choose between Europe and the Commonwealth. The other continental countries were also strongly opposed to the total abolition of the exchange guarantee. A compromise was then worked out by Mr C. de Strycker of Belgium, according to which only "sight balances" would qualify for the exchange guarantee. After some time, the British director, Mr L. Petch of the Treasury (who is himself a vice-chairman of the board of management), agreed to this proposition but only for an amount of $2-2½ million. The continental members again rejected this "funny" proposition, which covered only one per cent of the sterling balances held by European central banks. Some central banks hold large amounts of sterling (for example Spain) and the total is around £250 million.

The British delegate then made another proposal: Britain would give an exchange guarantee in the event of an emergency, that is when sterling was under strong pressure. This proposition also was rejected, and the other member countries pointed out that what matters is that the guarantee exists and not that it might exist. Any decision to help sterling by taking it off the market has to be taken immediately, and a conditional exchange guarantee would in this view actually impede the smooth working of the system.

So no compromise was reached and the future of the EMA remains in the balance. There are now three theoretical possibilities:

1. For Britain to leave EMA at the end of the year. But it seems inconceivable that Britain should leave EMA on a question of exchange guarantees at the same time as it proposes a (limited) generalisation of guarantees—gold guarantees—in the Maudling plan. It is clear that a withdrawal by Britain would mean the end of the EMA and probably the creation of a new and closer agreement between the countries of the common market. This would indeed fit oddly with Britain's approach to the Six in Brussels.
2. For all the member countries to agree to terminate the agreement, with the same consequences.
3. A compromise under which the guarantees would apply only to so-called sight deposits, but for a "fair amount," which means for an amount in accordance with the balances held by all members.

This seems the most likely solution. A



This CAN holds a new sensation for instant coffee users

How two industrial giants laboured to retain one of the most elusive aromas in the world—the fragrance of freshly roasted coffee—in this can of new Nescafé.

It took more than 10 years of difficult and costly research to perfect the new aroma-rich Nescafé. For the aroma of freshly roasted coffee is elusive and intangible, even though it is a large part of the enjoyment.

Canning an aroma is not easy. (Metal Box, who make the 1-oz. and best-selling 2-oz. cans, say this is the understatement of the year.) Especially when the can will be in constant use, must open and close easily, and, above all, must be produced cheaply, in vast quantities, at high speeds.

Air is the problem . . . New, airtight cans were specially designed for Nescafé, and have heavy-duty aluminium-foil protection, cushion-seamed into the top, wrinkle-free and capable of being packed under 13" of vacuum. They are 5-part containers, made to be opened 30-40 times during a short life. And since Nescafé prices have not increased, cost is all-important.

. . . but speed is the answer. Metal Box's solution was to simplify production and get high speeds. It took months of testing, rejigging and headache to achieve a tough, airtight, cheap little can that runs at *600 a minute* off the only machines in Europe capable of such speed. With all its sophistication, the new can only costs a few shillings a thousand more than its simpler, non-airtight predecessor.

What's in it for the consumer? Aroma, needless to say. The new olfactory sensation will help to keep Nescafé in its position as brand leader in a highly competitive market. A growing market, too, for demand is increasing by 20% a year, and there are already over 12 million cups of Nescafé drunk every day. It's well worth 10 years of work, and thousands of pounds invested in research and development, catering for the instant coffee drinkers of today.

Metal Box were consulted at a very early stage by Nestlé, themselves international canning experts. But smaller, and even more complex, problems get the same service. Metal Box, with all their size and resources, place their design, engineering and research skills at the disposal of anyone selling food. Could they help you with *your* product?

METAL BOX

THE METAL BOX COMPANY LTD • 37 BAKER ST • W1

decision may be made at next week's ministerial meeting of the Organisation for Economic Co-operation and Development in Paris (EMA is an agency of OECD), though in an attempt to preserve secrecy the subject has not been placed on the formal agenda.

HIRE PURCHASE

On the Turn?

Is the tide turning at last for the profits of the hire purchase finance houses? Two company results published this week provide weightier evidence of recovery than anything seen so far; they are from Lloyds and Scottish, the second largest of the finance houses which is owned jointly by Lloyds Bank and the National Commercial Bank of Scotland, and North Central Finance, the wholly owned subsidiary of the National Provincial Bank. Group trading profits of Lloyds and Scottish for the year to September 30th at £1,741,000 are back to about half the record level of almost £3 million in 1960, and well over double the very poor 1961 figure of £739,000. Net profits after tax have risen from £309,000 to £535,000. Profits before tax of North Central over the same period rose from £1,410,000 to £1,976,000 compared with £874,000 in 1960 and well above the earlier record of £1,580,000 in 1959. The disquieting element in the Lloyds and Scottish figures is the rise in overseas losses, from £288,000 in 1961 to £551,000 this year. Just five months ago the accounts of United Dominions Trust showed an increase in overseas losses from £159,000 to £763,000. It may be that the problems of the hire purchase industry have now shifted from the home to the overseas front, and that the better profit performances will come from the companies without overseas interests, like North Central Finance, or from those like Lombard Banking which have got rid of the weaker parts of their overseas holdings.

The finance houses have certainly been earning better current margins in the past year; the question has been whether these would be sufficient to offset what remained of the bad debts of 1958-60. True, business was at a lower level than in 1961 in the case of Lloyds and Scottish, but borrowing costs in the year to September 30th were somewhat lower than in the two preceding years. The finance houses now enjoy the favourable conjuncture of fairly cheap borrowing to finance relatively high yielding instalment loans, made before Bank rate had fallen to its present level. Equally the credit rating system, although still only embryonic outside the Birmingham area, must now be showing some positive benefits. And hire purchase managers themselves are being more selective. When hire purchase debt was increasing by leaps and bounds, hastily recruited managers were often pushed into new branch offices without proper training; the check in the rise in hire purchase debt has given the companies a chance to catch up on their training programmes.

Above all the fact that the companies in the Finance Houses Association have stuck to that organisation's "code of practice" and, with one notable exception, have acted together, is a sign that they are at least aware of the lessons of earlier debacles. Competition is now fierce, and the cut in purchase tax is unlikely to bring much relief, since the increased number of motor cars financed is expected to be balanced by the lower amount of finance needed on each vehicle. The present threat to the growth in the profits of the big hire purchase companies with public quotations is that under the pressure of competition from the smaller companies they will be persuaded to water down this code of practice—a first move was made in the selective paring of minimum deposits last month—before the credit rating system is fully ready to take its place.

AIRCRAFT

Profitable to the End

British European Airways does not feel so much brotherly love for British Overseas Airways Corporation to be above pointing out how it manages to run its business better. In announcing that it has sold 15 of the 23 Viscount 701s that it put on the market several months ago, Lord Douglas takes the opportunity of saying that BEA has now sold 160 aeroplanes in the last 15 years, and it has done so at a profit. The sale of the Viscounts has been profitable, too; BEA is demonstrating that pioneering pays if one chooses to back a winner. The Viscounts have been written down from their cost price of £330,000 nine years ago to around £85,000, and BEA has managed to get over £110,000 for each of the 15—ten of which are going to the Brazilian domestic airline, VASP, and five

COAL IN EUROPE

Questions for the NCB

Nobody ever imagined that the Iron and Steel Board could survive exactly as it is once Britain joined the European Coal-Steel Community; but few people here imagined either how many questions the Six would raise about the constitution and operations of the National Coal Board. This has been somewhat embarrassing for Mr Heath, who had spent some Parliamentary time beforehand denying that entry into ECSC would make much difference to the nationalised British coal industry; but it follows logically from the provisions of the Treaty of Paris and the apprehension that continental collieries feel about British coal as a competitor.

In Luxemburg this week British negotiators had to meet a barrage of questions about costs in the British mining industry, which like other British industries has a sizeable proportion of its social charges carried through the budget and not through its own accounts. This in theory, at any rate, could reduce the labour costs that show in its accounting by comparison with the impact of labour costs carried wholly by German, French and Belgian coal companies. Mr Heath succeeded in getting the whole question of such costs and charges considered in detail before any conclusions are reached upon it.

Two questions that British visitors have been asked in Paris and Bonn respectively about the export policy of the National Coal Board may illustrate the underlying fears. One is the already expressed French fear that Britain might be prepared to import cheap American or Polish coal itself while selling in Europe at prices aligned down to the landed price of American coal in Europe—a kind of entrepot trade. The only specific answer to this is that the Coal Board, as Mr Heath pointed out in Luxemburg last week, has no monopoly of coal imports into Britain; so it would not be free to operate such an in and out policy on its own account, though if imports into Britain were free for its present coastal customers there might be some temptation for the board to sell cheaply abroad rather than not sell at home.

The second, from Germany, is whether the Coal Board, at some future time, may not go through a capital reconstruction and be forgiven some of its capital charges, as the railways have been and BOAC would like to be. That, Bonn argues, might favour it artificially in competition with private coalowners in the Community. At present, of course, the Coal Board is charged interest on all its capital whether it is making profits or not, while coalowners abroad may or may not pay dividends on their ordinary capital (and may or may not write down assets that have lost earning power). The point is an interesting one; it illustrates both the difficulty of talking about fair competition between nationalised and privately-owned units in the same "community industry." But in the House of Commons this week it was stated that the Minister of Power and the Coal Board, after considering the idea of capital reconstruction, have firmly turned it down for the time being.

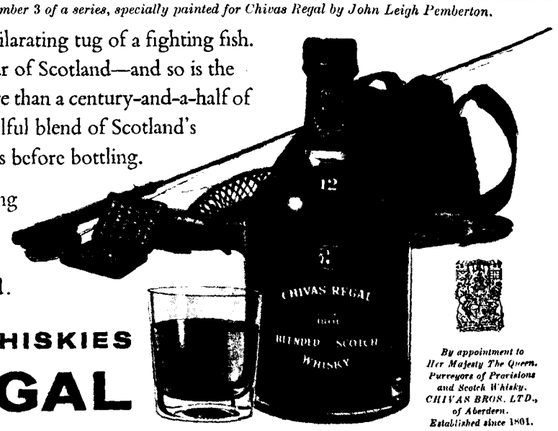
THE REGAL FLAVOUR OF SCOTLAND...

The golden trout, gleaming Scottish game fish. Number 3 of a series, specially painted for Chivas Regal by John Leigh Pemberton.

THE FLICK OF A FLY ACROSS A DEEP POOL . . . the exhilarating tug of a fighting fish. The flavour of such exciting moments is the flavour of Scotland—and so is the splendid taste of Chivas Regal Scotch Whisky. More than a century-and-a-half of tradition shapes the making of Chivas Regal—a skilful blend of Scotland's finest grain and malt whiskies, matured for 12 years before bottling.

Such a superb whisky costs more, naturally. Discerning people gladly pay more. For here you taste the glory of the Prince of Whiskies—that magnificent something extra that's the regal flavour of Scotland.



By appointment to Her Majesty The Queen. Purveyors of Provisions and Scotch Whisky. CHIVAS BROS. LTD., of Aberdeen. Established since 1801.

to Cambrian, the British independent in which BEA holds 33 per cent of the ordinary shares.

The Viscount is a relative newcomer to the second-hand aeroplane market, and BEA's batch of 23 was a big fleet to offer, when there are only about 40 for sale in the world: but most airlines to operate used aeroplanes have relied on piston-engined machines like the DC3, Viking and DC4 and DC6, and the chance to go modern with turbine-powered aircraft must appeal to those companies that can afford aeroplanes costing over £100,000 each. If they have the capital, the Viscount offers lower operating costs ; that BEA should so far have sold few to British independents shows how parlous their financial state generally remains. And those airlines that cann. buy modern equipment will find it increasingly difficult to get business in competition with those that can.

GATWICK AIRPORT

Misty Future

Most things about the history of Gatwick contain a streak of the irrational ; British European Airways' decision to move all its services to London Airport—if the Minister of Aviation agrees—seems one of the more rational ones. BEA argues that it will save £250,000 a year if it uses one airport, and so avoids the complications produced by having its maintenance facilities at London Airport, to which aeroplanes have to be flown empty from Gatwick. Indeed BEA has had to be persuaded to make even its present limited use of Gatwick, though it was among the public advocates of the aerodrome's construction—against many objections on planning and economic grounds. Since it was built Gatwick has never made a profit ; the loss has recently been around £1 million a year, with revenue less than half the day to day running costs. Last summer BEA provided about 17 per cent of airline traffic, so its move might add another £100,000 or so to the loss.

The trouble with Gatwick is that it has no real appeal to a big operator when it is used so little that passengers will usually have to go on to London Airport if they want to change planes. The limitation of the runway length to 6,000 feet that is inherent in the site means that long-distance airliners cannot take off there, though they can land. The concept of an aerodrome as an alternative rather than a supplement to London Airport was the main error—based on over-optimistic assumptions about the weather at Gatwick, a low-lying fog and frost trap.

An aerodrome that takes only aeroplanes that cannot land at London Airport will obviously not pay, so the Ministry has had its long and losing battle to force airlines to use Gatwick regularly. It is unlikely to admit defeat with BEA without a struggle, just when it was planning to spend another £4 million. If it relies on the airlines that will go willingly—and British United, which still operates many inclusive tours, is the only scheduled airline to have established itself at Gatwick—it will have a long and probably unending struggle to make it pay. But how can it force a publicly-owned airline to lose money to help it out of its own mistakes ?

OVERSEAS TRADE

Pleasing Patterns

The Board of Trade has published figures for world trade, exports of manufactures from the chief producing countries and indices for production in OECD countries and Japan in the first six months of this year. The detailed British trade returns for October were also issued this week and from this compendium of facts encouraging conclusions can be drawn. After running unchecked from the second quarter of 1960, the rapid expansion in world trade (excluding communist block exports) was halted in the final quarter of last year. The halt resulted from a drop in the value of exports by primary producers which continued to hold down total world exports in the first three months of 1962.

Primary producers' imports were unchanged between the third and final quarters of 1961. They dropped in the first three months of this year, though the steady rise in trade between the industrial countries continued. However, imports by primary producers from industrial countries recovered in the second quarter and the re-expansion in world trade during this period appears to be confirmed by a steep rise in exports of manufactures in the June quarter. But complete figures for the primary producers' trade in this quarter are not yet available.

Industrial production in OECD countries and Japan continued to rise at a rate of 8 per cent a year in the first half of 1962, a similar rate of growth to that recorded in the last three quarters of 1961. Total imports by industrial countries did not increase between the last quarter of 1961 and the second quarter of 1962, though trade between industrial countries was expanding. Stocks appear to have been reduced considerably in relation to the prevailing level of output in industrial countries which is put provisionally at 150 in the second quarter (1953 = 100) compared with an average of 140 in 1961. Some recovery in primary producers' exports is therefore overdue.

After lagging in the first quarter, Britain's exports of manufactures rose more strongly than those of Germany and France in the second quarter of this year compared with a year earlier. The relative improvement appears to owe little to the recovery of imports by primary producers because British exports to the sterling area fell by about 3 per cent in this period. In fact the recent recovery in exports to the overseas sterling area appears to be running out of steam. There has been no further increase in the past three months, confirming fears that the expansion in primary producers' imports in the second quarter might not continue, though the Board of Trade believes that the trend in British exports to the sterling area is still slightly upwards. Exports to western Europe are the strongest element in the expansion of Britain's exports, though in the past three months the improvement has occurred in exports to EFTA countries while there has been no further improvement in shipments to EEC countries. Last months' record exports rested, however, to a large extent on a sharp recovery in exports to a miscellaneous group of countries including non-sterling primary producers and Japan.

ITALY

Dividends Tax—and Liquidity Boost

Rome

Investors in Italian shares will soon be taxed on their dividends at source, provided the chamber of deputies approves a bill sent to it by the senate. The bill provides for a withholding tax of 15 per cent to be deducted from dividends in lieu of personal surtax. Thus the impost is not strictly a new one. But Italians have not been in the habit of including share dividends in their annual tax returns, even though Italian shares are on a registered and not a bearer basis. So the withholding tax is expected to yield substantial additional revenue, which will be used to finance an increase in teachers' pay. Italian shareholders who can show that their personal rate of tax is below 15 per cent will be able to claim rebates of tax, and foreign investors should be able to claim relief under double taxation agreements. In order to discourage avoidance of the tax through capitalisation of reserves in bonus issues these will also be subject to tax, and the widespread distributions of scrip should diminish. One welcome effect of the tax for the bourses should be a revival of forward dealings, since the former tiresome obligation to register these periodically has now been removed.

In any case the adverse effect of the tax on market sentiment seems to have been more than offset by another round of measures taken by the Italian Treasury at the end of last week to expand credit and to push more funds into the capital market, in line with the new policy discussed in these columns last week. The government has decided to repay 192 billion (milliard) lire of nine year Treasury bonds when they mature at the end of this year. At the same time, the banks are to replace a small amount of their Treasury bills deposited with the Bank of Italy with medium and long-term government bonds. In a related move to keep down interest rates in the money market in order to encourage the channelling of funds into the capital market, the Italian authorities

have set a ceiling, at the Treasury bill rate, on interest rates paid by banks on deposits from other banks. Although inter-bank deposits have been officially discouraged since the end of the war, they grew to 1,150 billion lire at the end of 1961. Because such deposits were not recognised formally they were exempt from interest rate regulations, and the big banks out-bid each other in competition for the funds of the many small banks and financial institutions, thus exerting a general upward pull on money rates and at the same time concentrating the granting of credits still more among the large banks. The new measure is officially designed to encourage the smaller banks to put funds into medium-term securities and so to the productive sector.

SHIPPING

Buying British

THE P & O Group has successfully concluded an agreement with Texaco Panama for the time charter of four large oil tankers, and as a result it is to place contracts totalling £11 million with British shipyards. Four ships will be built—three of 55,000 and one of 85,000 dwt—but the names of the shipyards that are to build them have not yet been announced. The tankers will be operated by P & O, and will carry crude to the new Regent refinery at Pembroke. They will be delivered to Texaco in 1964-65 from when the time charters will extend for ten years. P & O said that the contracts were awarded in the face of "stiff competition" from other British operators.

The stiff competition in the tanker trade has been showing signs of easing in the past year. But this contract is a sign that any slackening will not much help owners of small, old tankers, many of which have had to be laid up. And the circumstances that favour big, new tankers favour size and efficiency in other sectors of shipping. Court Line recently sold five of its nine tramps to India for £1.2 million and is prepared to sell two of the four that remain. It is now seeking long term charters for bulk carriers and intends to build big ships for the charters. The chairman, Mr J. P. Philipps attributed the need to sell the ships to a "catastrophic" fall in freight rates and increased operating expenses. The company is looking into many fields, including oil, for its charters and is thinking in terms of ships of about 80,000 tons.

GERMAN COAL

Black Flags on the Ruhr

Düsseldorf

ACADEMIC discussion about the energy problem in Germany took on a note of drama last week-end. With black flags—the traditional symbol of revolutionary unrest and discontent ever since the early thirties—more than 2,000 miners marched through the streets of Recklinghausen, one of the main mining towns of the Ruhr.

They were out to protest against the intention of the Ewald Kohle company (owned by the Federal Government) to restrict production in its "König Ludwig" pits. The demonstration was not, of course, spontaneous but had been carefully planned and staged by the miners' union. The union's boss, Heinrich Gutermuth, in a mass meeting afterwards, directed bitter attacks against the Federal Government in general and Dr Erhard in particular—attacks which were accompanied by angry cries of "Resign" and even "Hang him."

Herr Gutermuth was on good ground when he proposed some detailed measures that might soften the hardships of all pit closures. He demanded that before any new closure the eleven "working Saturdays" should be abolished—shifts are still worked on Saturdays when another day in the week is a public holiday. By that measure, Gutermuth estimates, coal production could be reduced by five million tons a year without any noticeable hardship. Moreover, he again demanded a reduction of the pensionable age for miners working below ground from 60 to 55 years—this would immediately reduce the number of faceworkers by 15,000, and so relieve the labour market. As the special social position of miners is generally recognised in principle, these demands can be regarded as not unreasonable in themselves.

But he was on less solid ground, however, when he accused the Federal Government of having no "energy conception" at all. Certainly the big problem of maintaining the free play of supply and demand in the energy sector, while maintaining coal as a national source of wealth, has not really been tackled, still less solved, by the Government. The talks which took place last Tuesday in the Ministry of Economics with representatives of coal and oil are still wrapped in a cloud of mystery and there is still no indication of the detailed measures promised in the Bundestag debate of May 16th, which should help to maintain coal production "at about the present level." But one of the measures forecast in May, the rationalisation of production, has been tackled meanwhile by the mining companies themselves, without public help; and it is in the course of this rationalisation that measures like those in Recklinghausen had to be carried through. And the miners' union seems to be opposing just those measures which, by general consent, cannot be avoided if German coal is to be put on any sound economic basis.

MAIL ORDER

GUS At Large

GREAT Universal Stores has made its first foray on to the Continent by buying, for £270,000, a 75 per cent interest in a leading Dutch mail order firm, N.V. Wehkamp's Fabriekskantoor. This move was foreshadowed two months ago in the chairman's annual statement, when Sir Isaac Wolfson said that it would give GUS a "strong foothold" on the continent. The firm was formed in 1955 by Mr. G. H. Wehkamp, who will remain on the board as managing director: it operates from a large modern warehouse in North Holland and has been expanding rapidly. GUS intends to introduce a number of British lines as soon as possible and, if Britain enters the common market, a section of the GUS mail order catalogue will be added to Wehkamp's. GUS is confident that the acquisition will provide it with a "firm and profitable" foundation for the development of its mail order activities in Europe. Mr Wehkamp will have the help of GUS's mail order management and the benefit of its "energetic interest" in the new company.

GUS is not the only company looking for mail order openings on the Continent. The two American giants in this field, Sears Roebuck and Montgomery Ward, are reported to be searching for what GUS has found—a foothold in an expanding market. The mail order business is less developed on the Continent than in Britain or the USA. Where it is advanced, in Germany particularly, there is little room for improvement except on the British or American pattern of rationalisation into larger units. While Germany has over 2,000 mail order houses, France has only two or three of any size and GUS has been reported as moving into this market by taking an interest in the mail order side of the Printemps chain of shops. Holland lies between these extremes and Wehkamp must be a palatable buy—a good, small firm in a developed, but not saturated, market.

CAR MART

Kennings' Counter Bid

SHAREHOLDERS in Car Mart must be grateful to Bristol Street Motors for setting off the bidding for their company. The counter bid from Kennings now values their shares at 25s. 6d., compared with a low point of 11s. 3d. this year and 13s. 3d. before Bristol Street offered 18s. 6d. The offer from Kennings tries to minimise the addition to its equity; for every five ordinary shares in Car Mart it offers two 5s. ordinary shares and two £1 cumulative preference shares plus 40s. in cash. The Car Mart directors are recommending shareholders to accept the bid; they forecast that profits for 1962 will be about £250,000 before allowing for a loss of £35,000 on stocks, and they will pay a total dividend of 20 per cent, against 22½ per cent. Kennings hopes at least to maintain its dividend at 20 per cent for 1962-63.

If the bid goes through, Ford will buy Car Mart's subsidiary Dagenham Motors, a Ford main dealer in the London area, for £1¼ million in cash. Car Mart's directors realise that it is desirable to dispose of this

DEFENCE BONDS

pay 5%

with 3% tax-free bonus after 7 years

Defence Bonds

- Earn 5% interest per annum.
- Are repayable after only 7 years, at the rate of £103 for every £100 invested.
- Earn this 3% bonus U.K. income tax free.
- Do not have income tax on interest earned deducted at source.
- May be cashed before maturity.

IN SEVEN YEARS

5% Defence Bonds yield the equivalent of

£5.12.6

per cent (gross) per annum if you pay tax at the present standard rate of 7/9

5% DEFENCE BONDS are on sale in £5 units and you can now hold £5,000 worth

(exclusive of holdings of earlier issues)

Full details can be had from your bank manager, stockbroker, or from your local Savings Committee, Post Office or Trustee Savings Bank.

Issued by the National Savings Committee, London, S.W.7

Foreign service—outside London

More of the trade of the free world is financed in sterling than in any other way, and it is natural that London should be the centre through which Britain's foreign trade is carried on. But for many years we in Barclays have provided, in provincial centres as well as in the City, a full overseas service for customers and others interested in foreign trade; and our experience has shown us how useful local expert advice can be. Plans are well in hand to open more of these foreign branches outside London; meanwhile our Foreign Managers at Birmingham, Bradford, Liverpool and Manchester and, of course, in London, are well equipped to discuss the problems of export and import finance, either in their offices or, if it suits you, in yours. Do *you* need their help?

London: Chief Foreign Branch, 168 Fenchurch Street, EC3
West End Foreign Branch, 1 Pall Mall East, SW1
Birmingham: 61 Colmore Row
Bradford: 25 Kirkgate

company, as selling two rival makes may involve some embarrassment; and Ford might not like to have its cars handled by what will be the biggest BMC dealer in the country. If it buys Dagenham Motors, Ford will invite the present executive directors to stay in office and, like Rootes, it will then have its own retailer.

DOMESTIC APPLIANCES

Doing Better

COMPETITION seems to have had a tonic effect on the market for washing machines; deliveries in the third quarter of this year were worth nearly 30 per cent more than a year before, while those of refrigerators and most other appliances remained pretty depressed. But it was the export side that rose most sharply—to 70 per cent above the 1961 level, even if this still means less than 20 per cent of all business—and Mr Bloom has only recently visited France to develop this side of his activities. The home market took over 20 per cent more machines than last year, when sales were depressed by the "little budget" in July; but the biggest increase came in September this year, when deliveries last year had reached their peak. Retailers do not seem to have been put off stocking up with machines for the autumn selling season by fears of competition from direct selling; and only Hoover had by then launched its low-priced machines to meet competition from Rolls. Hotpoint introduced its 64 guinea machine this week. Of the other major appliances, deliveries of vacuum cleaners rose five per cent and those of cookers were unchanged. It is a static market in cookers that Hotpoint has decided to re-enter. But electric heating goes on prospering, especially in radiators and tubular-type heaters.

Imports of all sorts of appliances have remained surprisingly steady at around £2,300,000 for this quarter over the last three years; but there was a big fall in imports of refrigerators after 1960, though trade in washing machines has dropped little—most refrigerators come from Italy and washing machines from Holland. Electric heaters are the booming import—perhaps a reflection of design standards. Though the British industry is comparable in size at least to that of other European countries, they are all eclipsed by the Japanese—their production of over two million washing machines and refrigerators is more than double that in Britain. Fortunately for the British industry, transport costs might be rather high.

GATT

Whose Trade Conference?

Geneva

AT the closing meetings of its 20th session in Geneva last week, the General Agreement on Tariffs and Trade did not take the General Assembly's decision in New York to hold a United Nations conference on trade and development late in 1963 lying down. This conference had been agreed on in the Economic and Social Council meetings this summer in Geneva, and was planned to be held in 1964. But when some 30 under-developed countries submitted a resolution to the general assembly to put the date forward to 1963, Gatt felt censured. Its secretary general, Mr Wyndham White, took up the challenge and asked those under-developed contracting parties who had signed the New York resolution whether this meant dissatisfaction with Gatt's efforts to help the trade of the less-developed countries, and whether the work of the committee dealing with the expansion of trade of these countries should be discontinued. Delegates from Africa and Asia were taken by surprise; consternation was followed by the buzzing of teleprinters as obviously the trade and foreign ministries of these countries seemed to have been out of step.

Within hours kind words for Gatt were coming in. But things are not the same any more, and a feeling of urgency now seems to inspire Gatt's programme. After all, the items on the United Nations conference on trade and development have long been on the agenda of Gatt. Three years' painstaking work by experts had led to the identification of practices that are most objectionable to the trade of the under-developed countries and thirty-five trade ministers last year had pledged themselves to do everything to remove them. The present malaise is the consequence of the gap existing between intent and performance.

Gatt's growing membership of less-developed countries means that these will soon have a voting majority and they are dissatisfied with what the organisation has done (as distinct from said) so far on such subjects. For the first time these nations have met frequently as a closed group and discussed joint policy. They realise, of course, that with 63 per cent of world trade in the hands of the western industrial countries, of which nearly a third represents imports from the non-industrial areas, only 6 per cent of world trade among themselves and 1 per cent with the communist countries, all the trumps are in the hands of the countries who said in New York that they would not participate in the world trade conference of 1963. These countries—Britain, the United States, and some of the Six—have plans of thei own.

It was therefore decided not only to hold another ministers' meeting in Geneva early in 1963, but also to put on the agenda a most ambitious "time-table" solution (promises without dates attached to them no longer work) which has been proposed by eighteen of the less-developed countries. This is a seven-point programme which foresees:

An immediate standstill agreement on tariff or non-tariff barriers erected against the export trade of less-developed countries;
The removal of quantitative restrictions on imports from these countries within a period of one year or in hardship cases at latest by December 31, 1965;
Duty-free entry to tropical products (ending preferences in these goods);
Elimination of customs tariffs on primary products originating in less-developed countries;
The reduction or elimination of tariff barriers to exports of semi-processed and processed products of at least 50 per cent over the next three years; and
The progressive reduction of internal charges and revenue duties on goods from less-developed countries with a view to their elimination by December 31, 1965.

An agenda for this meeting will be prepared by the Gatt council within a few months and trade ministers could meet as soon as April of next year giving their response to the double challenge—from the under-developed world and from the United Nations.

MOTORS

Still Waiting

CAR production fell about 12 per cent between September and October to a rate of 23,197 a week. About a third of the fall was accounted for by Ford's strike at the end of the month; the rest represents the industry's preparation for winter. BMC reduced output by rather more than 1,000 a week, though increasing that of the Morris 1100, while the other companies all seem to have trimmed production too. Production is still about 25 per cent higher than it was a year ago, however; and though demand at

Monetary Regulators of Europe

THE Treaty of Rome charges the monetary committee of the Community to formulate opinions for submission to member states on their monetary policy; and before long, as envisaged in the action programme proposed by the Commission and discussed in these columns three weeks ago, these "opinions" will become "recommendations," and perhaps more. Already, in the words of another monetary document published in Brussels this week and prepared by the monetary committee itself*, "these opinions contain the essential elements of the possible recommendations . . ."; but (as could hardly be disputed) these recommendations have the greater practical weight "if they take account of the actual conditions and possibilities" of monetary policy in the several countries. One has to know what one is talking about.

So the members of the monetary committee, who spend most of their time as officials of their own central banks or treasuries, first undertook the compilation of this detailed report outlining the instruments of monetary policy and the background financial structure in the six countries, prefaced by a comparative discussion looking at the six countries together.

This descriptive material is highly valuable in itself—there is certainly nothing else like it between two covers. And, while the report does not attempt to delve too deeply into policy questions, and seeks no parallel with the Radcliffe report in this sphere, it is by no means devoid of policy implications; it allows itself a few quiet comments and qualified recommendations; and others are implicit in the analysis itself.

The differences in monetary techniques among the Six are, on the whole, not major ones; and they have become somewhat less in recent years and the monetary committee sees no need for them to be harmonised competely.

Monetary Authorities. Relationships between central banks and governments are in each case laid down by statute; but, as the report wisely notes, these relationships are more complex than they formally appear. The German Bundesbank has perhaps the greatest formal independence, with its specific task (of which many aggrieved German bankers are now reminding it) of "safeguarding the currency." In France, monetary control is spread over an intricate web of different institutions, but the report notes that the governor of the Bank of France has his place in most of them. In Italy, the overriding body on monetary policy is an inter-ministerial committee. In Holland, there are detailed provisions for ministerial directions to the central bank—but the bank exercises a weighty influence in practice. In Belgium, there is some real decentralisation as open market operations are undertaken by the important *Fonds des rentes*.

"Structural Conditions." Monetary policy, as will be familiar to English readers, is closely confined by the impact of external trading and financial relations. Thanks partly to the Euro-dollar, there is not much scope for variations in money market rates throughout Europe now. France and Italy have notably greater freedom than other common market countries (or Britain) in this respect since their foreign economic relations are of relatively smaller importance—and, further, this relative insulation has been enhanced by a less liberal official policy on the inflow and outflow of capital. Differences in the relative importance of liquid assets in the domestic economies, in so far as they can be roughly assessed, are surprisingly small—though Belgium stands out as a country in which currency and coin remain more important in the money supply than bank deposits. The banking structure ranges from the all-purpose banks of Germany to the English-style deposit banks of the Netherlands and the specialised institutions of France and Italy which leave much medium-term and long-term credit business to state or public institutions.

Bank rate policy. Refinancing of credits by the central bank at a special rate and often subject to quantitative limits is practised in each country, through either rediscounts of bills, or loans on security of bills or bonds. Everywhere, too, it is backed by other weapons, but its importance varies. In France the banks make permanent use of rediscounts, which extend to the important medium-term credits; though in the past year or so the banks have been financing rather more of their credits themselves, and this move has brought France a little closer in line with other countries. France, and Belgium, also apply selective discount rates, which favour export paper; and selectiveness is still more important in official guidance of the distribution of credit. In each country changes in Bank rate are followed fairly closely by changes in market rates; the report judges that these have their effect in restraining and stimulating business as desired, but chiefly because Bank rate is at the same time a signal of official policy.

Open Market Operations. Official operations in securities to regulate credit and liquidity are notably less widespread and less effective in the Six than in the Anglo Saxon countries. Operations by the Bank of France are limited by statute to short-dated securities; and the development of a money market is inhibited by the central banks' large credits to the commercial banks, through which all variations in liquidity needs tend to be absorbed. Belgium is the only country of the Six where open market policy extends to long-term securities—though, since the report went to press, the authorities in Italy have announced their intention of entering this sphere. The German Bundesbank has been active in open market operations in bills, but these operations are solely between the central bank and the commercial banks, and, in the absence of participation by outside investors, they have an effect only on rates—fixed by the Bundesbank itself—and not on the amount of liquidity left to the banks. In Holland, by contrast, the market is larger and wider, and open market operations have their effect on bank liquidity—though they are still confined to the short-term market. The report points specifically to the greater powers of control that would follow both from a broadening of money markets through the participation of non-bank investors and from operations in long-term securities.

Direct Liquidity Controls. In default of such regulation of liquidity through the market, the main regulator has in practice been the freezing of bank funds in reserve ratios, together with some use of rediscount ceilings. A newer weapon, fashioned by Germany and followed to some extent by Italy, is official facilities for forward swaps, which provide some small insulation for domestic money rates from international influences. On the form of reserve ratios, the report expresses a slight favour for *réserves classiques* in the form of minimum liquidity ratios and compulsory deposits with the central bank, rather than minimum investments in securities of the state—a system which can defeat its purpose if it makes the state more spendthrift. But the report recognises that the system has not had this effect in the past three years in France. In practice, both Belgium and France have recently moved rather nearer the practice of other members of the Six in this sphere too.

home is following the usual seasonal pattern, this means that October was quite a good month. The motor show, and more particularly new models, gave their usual stimulus to sales; Ford came close to its previous record for home sales, thanks to the Cortina. The cut in purchase tax has yet to produce any marked improvement in demand; this is not entirely surprising, for anyone deciding to buy a car now is likely to want to postpone delivery until the new year. But the industry is becoming slightly more cautious in estimating the increase in demand it can expect next year, and it does not seem to be planning to raise output yet.

Exports rose slightly in October to 47,256. More cars went to most of the important European markets, Australasia and the United States, but there was a sharp fall in shipments to Canada—where the higher prices of imported cars are hitting their sales. Exports of commercial vehicles increased too, and for the first time this year were higher than they had been a year before. Production was the same as in September and slightly lower than a year before. With the new models coming on the market at such competitive prices in Europe, the prospects for car exports should be as good as the prosperity of Europe will permit.

NATURAL RUBBER

Rubber Riddle

ONE telling charge formerly levelled at natural rubber by manufacturers, who have turned increasingly to synthetics, was that there was not enough of it. But for the past three years the talk has been of surpluses and projections into the future suggest a downward tilt in prices. Some rubber growers seem to have been worried by this into a frame of mind where they snatch at low prices for forward sales where they would normally hold back. Manufacturers had good reason to allow their stocks to fall in relation to their output apart from the assurance of adequate supplies. Until Cuba, buyers were growing increasingly insensitive to political crises. The introduction of stereo rubbers reduced their dependence on natural rubber for some purposes, and stockpile releases gave additional assurance as well as causing persistent fears that the rate of disposals might be accelerated. The strong pressure on manufacturers to reduce stocks whenever safe to do so combined with the sapping of producers' confidence produced the listless market earlier this year which failed to respond less vigorously than normal to the relative scarcity of readily available supplies earlier in the year.

RUBBER ESTIMATES*

('000 long tons)

Natural rubber	Provisional estimate	Second estimate	Third estimate
1961 :—			
Production	...	2,035	2,018
Consumption	...	2,037	2,050
Stockpile sales	...	30	32
Apparent surplus	...	28	Nil
1962 :—			
Production	2,063	2,145	2,110
Consumption	2,040	2,130	2,190
Stockpile sales	...	70	66
Apparent surplus	...	85	Nil
1963 :—			
Production	2,220		
Consumption	2,175		
Stockpile sales	66		
Apparent surplus	111		

* Source: International Rubber Study Group.

But at that time exaggerated fears of an economic crash of 1929 dimensions were also widespread, motor production in the United States was not showing the exuberance it now displays and synthetics appeared to be making exceptional progress at the expense of natural rubber. However, with the invasion of India cleared up this week—at least to the markets' satisfaction—rubber at 23⅞d. a lb for supplies of spot still showed a steady underlying improvement since the dip to 21⅛d. in August. For reasons peculiar to itself, the rubber market is exceptionally sensitive to purchases in Singapore by China. A recent spate of buying by China after a lapse of nearly two years has helped to push up prices.

The International Rubber Study Group has confirmed the markets' appreciation of the natural rubber balance by revising its estimate of a surplus of natural rubber in 1962 into a small shortfall of 14,000 tons after taking into account stockpile releases of 66,000 tons. The study group's original forecast of a surplus in 1961 was also a misjudgement. The study group is again provisionally forecasting a surplus for 1963, but it suffers from the common defect of international bodies of its kind that its members' estimates might be suspected but not suitably corrected. It can have only the haziest notion of likely communist demand, which has helped to swallow the anticipated surpluses, and also has indefinite quantities of released stockpile rubber to contend with.

SHORTER NOTES

The Chancellor of the Exchequer promised in a parliamentary answer this week to "review the whole purchase tax structure" in his April budget—a promise which some people have interpreted as portending a further compression of the range of rates, and notably a general reduction of the top 45 per cent rate from which cars were released on November 5th.

★

Production of man-made fibres reached a new peak in October. Home demand showed a seasonal expansion and exports, particularly of filament yarns to Europe and communist countries, remained strong. Output of both filament yarns and staple fibre set new records; total production rose to 57½ million lb in October, a rise of 5 million lb compared with a year earlier. Production in the first 10 months of 1962 was 511 million lb, against 468 million lb in the corresponding period of 1961.

★

The Restrictive Practices Court has said that the members of the Permanent Magnet Association need not, after all, allow the Registrar of Restrictive Practices access to their records and give him annual details of trading profit and capital employed in making magnets. These were to have been conditions of keeping their price agreement, as ruled by the court last June.

★

Austria, which has so far received loans amounting to $91 million from the World Bank and also has $7½ million outstanding with the International Monetary Fund, has agreed to the World Bank making two dollar bond issues totalling $10 million in Austria. This is the bank's first borrowing in Austria and the first non-schilling issue to be publicly offered in the Austrian market since 1930.

British Hydrocarbon Chemicals, the joint BP/Distillers company, is to increase the capacity of its phenol plant at Grangemouth by 7,000 tons a year, from 13,000 tons. The increase will be brought about by improvements to the process and plant modifications. Phenol from the plant, the only one in Britain to use Distiller's cumene process, is marketed by Distillers.

★

The placing has been arranged for £2.7 million of 5¼ per cent debenture 1980-85 in the Alliance Trust Group. For the £2 million debenture of the Alliance Trust, payments are split as to £25 on November 30th and £63 on February 28th. For the £700,000 of the Second Alliance debenture a single call will be made on November 30th.

★

World consumption of wool fell 3 per cent in the third quarter of this year compared with a year earlier. Adjusted for holidays, wool usage in ten leading wool consuming countries also fell by 3 per cent between the second and third quarters of 1962. The biggest falls occurred in Britain, Japan and Australia.

COMPANY MEETINGS

ROOTES MOTORS LIMITED

SEVERE REPERCUSSIONS FROM LONG UNOFFICIAL STRIKE

LORD ROOTES ON WELCOME PURCHASE TAX REDUCTION

The forty-fourth Annual General Meeting of Rootes Motors Limited will be held on December 14th in London.

The following is the circulated statement of the chairman, **Lord Rootes :**

I regret to have to present to shareholders the Accounts showing such an unfortunate loss for the year ended July 31, 1962. The chief contributory factor was the long unofficial strike, with which we were faced during the year. This will not, of course, be news to shareholders and I would remind them of my comments in my Statement last year as to its financial effect; also of the Notice issued by the Board when paying the dividend on the preference shares in August last.

Apart from the direct effect on both our Home and Overseas Companies during the period of over three months of virtually complete closure, there were also the consequential losses inevitable during the process of re-establishing full production. Unfortunately during that time we encountered considerable difficulties, particularly at one of our major suppliers. To some extent this situation was aggravated by labour disputes not connected with ourselves. As a result, we were unable to produce at a rate sufficient to take full advantage of the pent up demand for our products.

It will be realised from what I have said that the financial repercussions, both direct and indirect, of this major strike were very severe. We, as a board however, are strongly of the opinion that the action we took as a matter of fundamental principle was correct. We have endeavoured to encourage the best relations with our workpeople and on their part we feel they have responded. Nevertheless, from the point of view of our industry, we can only express regret that effective discipline by the Trade Unions of their members has not yet been established particularly in the avoidance of unofficial strikes. Such discipline would be in the interests not only of competitive efficiency but also of the Trade Unions and employees hemselves.

The Board wishes to record its very sincere hanks to our suppliers and dealers everywhere or their efforts and encouragement so generously iven during and after this difficult period, parcularly as it is realised that they too suffered nancially and otherwise.

In spite of the difficulties I have referred to, e produced during the last seven months of e financial year more units for both the Home d Overseas markets than in the same period the previous year, and, in the case of exports, I am glad to say these were over 20 per cent higher.

OVERSEAS

So far as our own Overseas Companies are concerned, notwithstanding the absence of deliveries from the U.K. over such a long period, results, whilst inevitably disappointing, improved in certain territories, particularly in Australia, where we were able to take partial advantage of the more favourable trading conditions.

Strenuous efforts continue in establishing our business in Europe on a wider basis and, whilst the cost of these developments is at present high in relation to sales volume, steady progress is being made. We are confident that the sales of our products will greatly increase once the present political and economic uncertainties between the U.K. and certain of these countries are satisfactorily resolved.

In export markets generally the position is becoming increasingly competitive, and will continue to do so whether or not this country enters the Common Market. In these circumstances, any increases in our manufacturing costs are extremely critical. During the year under review, whilst it is true that the pace of inflation has been to some extent arrested, we in our industry have been affected by a recent national wage increase and a number of other increases in direct and indirect costs.

ACTIVITIES IN SCOTLAND

The extension of our manufacturing activities in Scotland is progressing well. The completion of buildings and the installation of plant and equipment are proceeding according to schedule, and we hope to announce the new model well before the end of this financial year.

It should be noted that the Accounts for the past year contain substantial charges connected with the development of this car and this expenditure will be an even greater burden during the current year to July 31, 1963. Subsequently, this model will, we are confident, not only become a contributor to earnings, but will greatly strengthen our dealer organisation throughout the world.

The large additions to the Fixed Assets shown in the Consolidated Balance Sheet also reflect our activities in Scotland and the assets of new subsidiary companies acquired during the year, as referred to in the Directors' Report.

The results for the year under review give rise to a substantial recovery of United Kingdom taxation, which has resulted from subvention payments between Companies in the Group.

The Directors have carefully considered the payment of a dividend on the Ordinary and "A" Ordinary shares and, in all the circumstances, propose that a dividend of 4 per cent, less income tax should be paid, this being adequately covered by the reserves of the Company.

CURRENT PROSPECTS

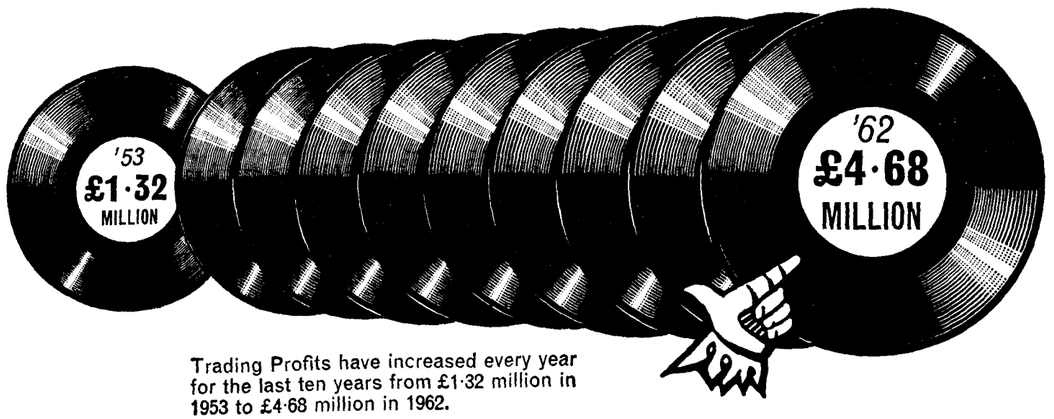
So far as the prospects for the current year are concerned, I would be wrong if I did not sound a word of caution. We have an excellent range of both cars and trucks; we are satisfied they are technically of a high order, can stand up to world conditions, and are of the best standards of quality, reliability and safety. We are well established in a great many markets of the world. However, owing to the highly competitive nature of the motor business, margins are small. In export markets, demand generally is good, but not as buoyant as we would wish. Undoubtedly, a general livening of international markets and a return to confidence would be welcome.

Two weeks ago I should have said that conditions at home were similar, as sales had recently been somewhat disappointing. However, on November 5th the Government announced a major reduction in purchase tax. It is early days to judge, but there are already signs of considerable improvement. Unless some major recession occurs, this will mean better employment at home and, as our manufacturing capacity becomes more fully employed, an improvement in our competitive position in export markets.

I do hope the lesson has been learned that taxation of the motor car industry and its products had been carried to the point where the industry was being gradually throttled out of competitive existence. Yet its welfare is not only of great importance to our country's economy, since it is the greatest contributor to the nation's export income, but it profoundly affects the welfare of a host of other industries.

Until recently, the British motor manufacturer has been operating at a great disadvantage compared with his main competitors overseas by reason of the artificial restriction of the home market. Even now, the motor car is still in a high grade of purchase tax and the rate here is considerably higher than that of our main competitor—Germany. However, this relaxation in purchase tax is an important step in the right direction, for which we are most grateful to the Chancellor of the Exchequer.

Finally, I would like to thank our staff and employees for their loyalty and support during a most difficult period.

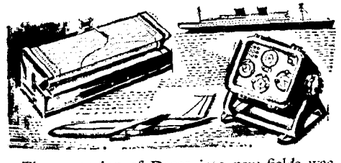


Trading Profits have increased every year for the last ten years from £1·32 million in 1953 to £4·68 million in 1962.

A decade of records

Sir Edward Lewis (Chairman) at the Annual General Meeting of Decca Limited:

Since the last meeting the name of the company has been changed to Decca Limited, a holding Company with three main operating subsidiaries, The Decca Record Company Limited, The Decca Navigator Company Limited and Decca Radar Limited. Formed in 1929, just before the great slump, the Company survived the deluge and during the thirties the foundations of the great record business you own today were laid.



The expansion of Decca into new fields was effected by a process of evolution and not as the result of take-overs. This I believe to be one of the reasons for our strength.

The balance from Trading account amounts to £4,683,000 and shows an increase of £680,000 over that of the previous year.

Profit before taxation amounts to £2,930,000 an increase of £620,000 over that of the previous year. After charging £1,447,000 for taxation (last year £1,060,000) the Net Profit amounts to £1,482,000 an increase of £233,000.

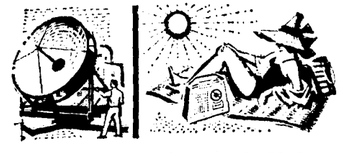
These results, which are easily the best in the Company's history will, I am sure, be regarded as most satisfactory particularly as they were achieved in a year in which trading conditions were not in general particularly bright. Over the years we have benefited from the process of evolution to which I have referred. At no period have all sections shown improved results at the same time. But year by year in the aggregate the consolidated profits have increased. So it was last year, Radio and Television that had suffered severely in the slump of the previous year made a substantial recovery.

Consolidated turnover for the year to March 1962 at £27,600,000 compared with £24,500,000. Exports at £8,230,000 were over one million pounds greater than those of the previous year amounting once more to about 30% of the total sales.

We are recommending a Final Dividend of 1·9d less tax making a total for the year of 2·6d per share less tax, an increase of 2d per share on the previous year.

No striking change took place in the record business during the year under review. We have fully maintained our pre-eminent position in the recording art.

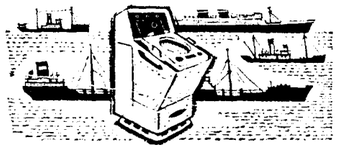
We are still handicapped by being assessed at the top rate of purchase tax. We see no justification for our industry alone in the entertainment field being singled out for this onerous taxation, particularly when its great contribution towards the cultural life of the country is considered.



The year was a good one for the Navigator division. The steady expansion of the Marine business continued. Over 7,500 ships had been equipped with the Decca Navigator or contracted for. The net increase on the year of some 900 ships is particularly satisfactory in view of the depressed state of shipping.

We have continued our efforts to expand the use of the systems in the air.

Decca Radar also increased its turnover. Orders for marine fittings totalled more than 1,250 of which 85% were for export.



Since the close of the year business has continued at a very satisfactory rate. Total orders for Marine Radar have now reached nearly 13,000 of which True Motion orders account for 1,000 and River Radar about 650. Sales of defence radar in the United Kingdom and throughout the world expanded and we have been entrusted with a very substantial number of major military and civil aviation projects.

We are continuing our efforts to increase efficiency for it is only by such means together with increased turnover that we can hope to meet competition and provide the large sums necessary for research and development.

Although the record business in this country currently is not as buoyant as it has been and though television continues in the doldrums we anticipate another satisfactory year's trading. We continue as in the past to use all our endeavours to maintain our record of progress and we face the future with confidence.

The report and accounts were adopted.

DECCA HELPS SO MANY PEOPLE...IN SO MANY WAYS

RESPONSIBILITIES IN A CHANGING AFRICA

R.S.T. GROUP CHAIRMAN LOOKS TO THE FUTURE

Sir Ronald L. Prain, O.B.E., Chairman of the R.S.T. Group of Companies, in his annual statement to shareholders dated October 18, stated:

The year which ended on June 30 last was a significant one for the R.S.T. Group for three reasons, namely: the merger between the Rhodesian Selection Trust and Roan Antelope companies; the announcement of the decision to open up the Chambishi mine; and the completion of the expansion scheme at Mufulira.

The reasons which led the directors of R.S.T. and Roan Antelope to recommend the merger were fully set out in a circular last January, so I will not repeat them here. I would, however, stress that the merger has not only consolidated the community of interest within the group, but has strengthened the financial position of the group as a whole and has opened up a potential which I am certain could not have been achieved in any other way in today's circumstances. It will enable former shareholders of the Roan Antelope company, now in voluntary liquidation, to participate in the growth of R.S.T. which now controls all our producing mines and undeveloped properties.

The merger was approved by holders of 99.7 per cent of the R.S.T. shares voted and 97.8 per cent of the Roan shares voted, and I should like to take this opportunity to express the thanks of the directors to the shareholders of both companies for this support which enabled the merger to be put into effect as from March.

It may be of interest to record that shareholders in R.S.T. now number approximately 42,000.

In May we announced our decision to develop the Chambishi mine to produce at the rate of 25,000 long tons of copper per annum in 1967, with smaller tonnages becoming available before then. I have more to say about Chambishi later, but should like to mention here that this development represents the first fruits of the R.S.T./Roan Antelope merger.

The Mufulira expansion scheme which was completed in the past year is one of the major expansion projects undertaken in the copper producing industry in recent years, increasing the capacity of Mufulira from 100,000 to 150,000 tons of copper a year, the benefits of which are already beginning to be felt.

Throughout the year the group operated at a rate of production which was voluntarily curtailed to 90 per cent of capacity, the reasons for which I explained at some length last year. Production of copper from the group's three mines on this basis was 209,176 tons, compared with 202,041 tons in the previous year.

The fact that our total production was some 7,000 tons more than in the previous year was due to basing our production rate on the higher capacity, although during the previous year the 10 per cent curtailment was in effect for only nine months.

Since the end of the financial year we have felt it desirable in the interests of the world copper industry to increase our voluntary curtailment by a further five per cent. Further restrictions have also been announced by other world producers, some by cutting production and others by withholding copper from the market.

Group results

The consolidated profit for the year, before taxation, amounted to £12.35 million. In giving effect to the merger, the accounts show for the first time the combined results of all the companies in the group. Because of this the figure of £7.74 million for the previous year is not comparable as it is exclusive of the profits of the Roan company for that year which were, of course, reported separately to the then shareholders of that company. Of the above-mentioned profit, £11.37 million was accounted for by profits on sales of copper, and the balance of £980,000 came from net interest and net sundry revenue.

Development of Chambishi orebody

The decision of the board of Chambishi to proceed with the development of this orebody was announced on May 21 and the announcement was circulated to shareholders. I should, however, here repeat the salient details of this project and the reasons which have led us to proceed with this development at this time.

The mine, whose published ore reserves are 35 million short tons at an average grade of 3.37 per cent copper, will be started as an open pit from which will be extracted ores first of oxide, and then of sulphide, mineralisation. Capital cost of development is estimated at £7.5 million of which about £1 million has already been spent in past years on geological investigations. The additional capital will be subscribed by the existing shareholders of the Chambishi company and in the case of R.S.T. the money is expected to be found from its internal resources.

The factors which we have had to take into account in considering Chambishi are fundamentally the same as those which confronted us in 1956 when we decided on the Mufulira extension, namely the outlook for the copper market, the political development of the country in which we operate, and the provision of finance.

On the first of these we continue to have confidence in the development of the copper market on a world basis, and I should like to take this opportunity of repeating what I have said elsewhere, that this is essentially a long view, and is quite irrespective of short-term fluctuations which may develop from time to time in the industry. We also have confidence in the orderly development of the country. The position in regard to the provision of finance is very different from what it was in 1956. Overseas investors are more cautious, to the point in fact of being unwilling for the moment to invest fresh capital in this part of the world, and it is only the greater flexibility which the merger of the Roan Antelope and R.S.T. companies has given to the entire group that has enabled us to proceed with the development of the Chambishi mine.

The development of Chambishi has been placed under the management of the Chibuluma company. In the past the interests of Chambishi have been under the supervision of R.S.T. Mine Services and I would like to pay tribute to that organisation for the efficient geological work and engineering studies which it has carried out over the years.

By the end of September the Chambishi site had been cleared of all bush and timber in preparation for the open pit.

Copper market

The price of copper was steady throughout the year. On the London Metal Exchange the variation between high and low was £15 per ton compared with a range of £44 in the previous year, and £70 in the year before that. The actual range was between £222 and £237 per ton. During the latter part of the year and up to the time of writing the price was virtually unchanged at £234 per ton, while in the U.S.A. the producers' prices since May, 1961 and up to the time of writing were unchanged at 31 cents per lb.

Since my statement of a year ago all the major free world producers, and some minor producers, have announced varying degrees of voluntary curtailment, either of mine production or sales. I calculate that the sum of these curtailments is at present about 300,000 tons per annum. As I have mentioned elsewhere, in the case of our group we have since July last increased our production curtailment rate from 10 to 15 per cent. These curtailments have of course been made in order to establish a better balance between supply and demand, in the same way as has been done on several occasions since the last war when production capacity has temporarily outrun consumption.

The imbalance which would occur without these curtailments arises more from the great increase in the productive capacity of the free world copper mines, on which I remarked in my statement last year, than from any marked fall in consumption. This capacity has risen in the last five years from about 3.3 million short tons to nearly 4.5 million short tons per annum, an increase which is without parallel in the history of the copper market. As I mentioned a year ago this era of expansion is now coming to an end.

"...we must be ready to accept change in its widest sense—change in our political and economic environment, change in our attitudes towards the traditions of the past and the requirements of the future. If we are ready to do so, and I believe our actions over the years bear witness to this, we can, I believe, look forward to the continued healthy expansion of the Northern Rhodesian mining industry..." Sir Ronald Prain, Chairman

It is important, however, to note that production in any one year, even without curtailment, is unlikely to match capacity figures which are calculated on the assumption of uninterrupted production which is unattainable in practice due to factors such as strikes.

Demand for primary copper from free world mines during the same five-year period also rose dramatically from a level of about 3 million tons to just under 4 million tons per annum, representing the most spectacular increase in copper usage in the history of the industry. Copper consumption in 1962 has been running at approximately the same rate as in 1961, and has been in excess of the equivalent period in 1960. Since the war the growth rate of consumption has averaged over 4 per cent per annum, and if this rate is continued it will require before long the full productive capacity of the mines to which I have referred.

It is difficult at the moment to say whether the current curtailments have achieved the desired result in terms of a statistical balance between supply and demand, as statistics on this point take some time to accumulate and estimates can be affected by involuntary interruptions to production on account of strikes, etc. During the past year several strikes were experienced at various producing centres. The position is therefore always one which can change at short notice, and has to be kept constantly under review.

Future stability will therefore depend largely on the willingness of producers to continue to adjust their primary outputs to the pattern of consumption. At the moment it is particularly difficult to predict the latter owing to uncertainty as to the general business outlook in the western world. Should the business climate improve, copper consumption might be expected to resume its growth rate, and in this respect consumers may be reassured that the copper producing industry obviously has the capacity to increase production rapidly to match any immediate increase in consumption.

As regards price levels, shareholders may recollect that I have never attempted to make short-term forecasts. I have over the years tried to take the long view and to disregard short-term fluctuations. My assessment of the future of the industry is based essentially on long-term relationships between supply and demand and the reasonableness of prices in relation to substitute materials. Whatever difficulties there may be in assessing the immediate outlook there is no reason to doubt the long-term growth of the industry.

Should the United Kingdom join the European Economic Community, there should be no particular problems caused thereby to producers or consumers of unwrought copper from whatever source, because for many years there have been no duties or tariffs applied on copper of this type entering the United Kingdom or Europe.

Federation of Rhodesia and Nyasaland

After summarising the political situation in the Federation, and pointing out the certainty of major changes, Sir Ronald continued:

Whatever these changes may be, however, as I have indicated in my statements of recent years, we regard our job as that of producing copper with the maximum efficiency under Central African conditions, and in doing so we must continue to bear in mind the many interests to which we are ultimately responsible. These interests include those of our shareholders, the government of our country, our employees and local communities who depend on our enterprise, the customers whom we supply, and the future growth and prosperity of the copper industry as a whole.

The interpretation of these responsibilities involves a constant re-assessment in which one factor emerges clearly, namely that we must be ready to accept change in its widest sense—change in our political and economic environment, change in our attitudes towards the traditions of the past and the requirements of the future. If we are ready to do so, and I believe our actions over the years bear witness to this, we can, I believe, look forward to the continued healthy expansion of the Northern Rhodesian mining industry under conditions where such health and expansion will remain the first consideration of government in the interests of all the people of this country.

These are extracts from the annual statement of the Chairman of the R.S.T. Group of Companies, Sir Ronald L. Prain, to shareholders, dated October 18. Copies of the full statement and annual report can be obtained from Selection Trust Limited, Rhodesian Department, Mason's Avenue, Coleman Street, London, EC2.

THE RHODESIAN SELECTION TRUST GROUP OF COMPANIES

Incorporated in Northern Rhodesia, Southern Rhodesia and Bechuanaland Protectorate.

THE BIRMINGHAM SMALL ARMS COMPANY

STEPS TO COMBAT DIFFICULT TRADING CONDITIONS

MR ERIC TURNER ON GROUP'S PROBLEMS

The one hundred and first annual general meeting of The Birmingham Small Arms Company Limited will be held on December 13th in Birmingham.

The following is an extract from the circulated statement of the Chairman, **Mr Eric Turner:**

During the past year several parts of the Group experienced exceptionally difficult trading conditions, with the result that there was a serious fall in profits compared with the previous year. The Motor Cycle Division, which in recent years has been the largest and most profitable in the Group, had to contend with unprecedented difficulties and consequently showed the biggest reduction. The profits of other divisions were also below expectations, either because of general pressure on profit margins or, in some cases, because of considerable reductions in turnover.

As forecast in May, the Group profit before taxation, of £1,504,357 was little more than half the previous year's figure of £2,932,745. Despite a substantially increased turnover in the Machine Tools Division, the turnover of the Group as a whole fell by 11 per cent and this was the principal cause of the heavy fall in profits.

TURNOVER ANALYSIS

The proportions of total turnover attributable to each of the Group's main activities during the year and the previous year were as follows:

	1962	1961
Motor Cycles and Scooters	26%	37%
Machine Tools and Small Tools ...	35%	26%
Steel (Jessop-Saville Limited)	18%	19%
Small Arms, General Engineering and Metal Components.....	21%	18%
	100%	100%

REVIEW OF ACTIVITIES

Motor Cycles and Scooters: The motor cycle and scooter industry suffered from a reduction in sales to the home market which proved to be much more severe than expected. A combination of many unfavourable factors operating simultaneously posed exceptional problems for manufacturers and dealers alike. Consequently, and in spite of export business being fairly well maintained, the profits of the Motor Cycle Division were small. Our three motor cycle companies, however (Ariel Motors Limited, B.S.A. Motor Cycles Limited and Triumph Engineering Company Limited), maintained their share of the total turnover of the industry, so that no ground was lost to competitors.

Machine Tools and Small Tools: We commenced the year with orders in hand considerably in excess of all previous levels. Our machine tool companies made strenuous efforts to increase production quickly in order to meet customers' requirements, but a shortage of skilled labour in the early part of the year necessitated somewhat uneconomic working and extensive sub-contracting. Although the output for the year was easily a record, we did not, therefore, derive the full benefit of the increase in turnover.

The virtual completion of the motor industry's latest phase of expansion and re-equipment, together with the recession and uncertainty in engineering generally, has caused a sharp decline in new orders from the home market during recent months and the curve is still downward. On the other hand, I am happy to report that substantial export business has been obtained, although additional selling expenses reduce profit margins. But even in export markets the first signs of falling demand are apparent.

In spite of the inherent difficulties of the machine tool industry, it is to the Machine Tools Division that we must look for part of our future expansion. Considerable sums of money have been spent on vigorous programmes of research and development, and we shall shortly be commencing the production of several new models in our main machine tools factories. We are determined that the importance of our machine tool activities shall steadily grow.

Jessop-Saville Steel and Small Tools: Jessop-Saville Limited has been affected by the serious recession suffered by the British steel industry, as a result of which most companies have been working at three-quarters capacity or less for many months. As yet there is no sign of any improvement in the demand for steel, and short-time working, which is already fairly extensive, seems, if anything, likely to grow because the backlog of orders which helped last year's output has now largely disappeared.

Export business has been well maintained but at very narrow profit margins. It is evident that until business confidence is regained and engineering production rises once more no worthwhile improvement in the demand for steel as a whole can be expected, although of course it is hoped that the economic measures just announced will help in these directions.

Jessop-Saville (Small Tools) Limited made a satisfactory contribution to the profits of the Group, although it had to fight hard to maintain turnover. The company is now very well equipped to take advantage of any improvement in trading conditions.

General Engineering: During the year a General Engineering Division was formed, with the object of co-ordinating the activities of companies engaged in this field and of obtaining new business to make use of the surplus capacity which nearly all of them possess. A number of fresh activities are under consideration and it is hoped that new products will gradually be added to the present range.

Metal Components Division: This division, which is the smallest division in the Group, was formed at the same time as the General Engineering Division and with similar objects.

PROSPECTS OF THE GROUP

At present the Group is facing two main problems. Firstly, there is a shortage of orders in some of our larger and long-established activities, and secondly there is an urgent need for new fields of endeavour or products to make full use of our skills and facilities.

In machine tools, motor cycles and steel, which together account for four-fifths of the Group turnover, the order book is either still falling or remaining fairly constant at low levels. This statement is being written immediately after the announcement of the changes in motor car purchase tax and investment allowances. It is therefore too early to say what effect these concessions will have on Group trading during the rest of the year.

It is abundantly clear, however, that the motor cycle division will derive no benefit at all. Although the motor cycle industry is, of course, much smaller than the motor-car industry it is even more in need of a stimulus in the home market. It is becoming increasingly difficult to remain competitive overseas owing to the reduced volume of home sales. Last year nearly two-fifths of the Division's output was exported but it is most unlikely that this praiseworthy achievement can be maintained unless there is a revival in the domestic market.

There is every reason to hope that the machine tool and steel divisions will eventually benefit from the changes but there is always a time lag and in any case the engineering industry as a whole has substantial surplus capacity. Consequently, it may well be that any improvements in the next few months will be marginal and that increased profitability of the Group must come from greater efficiency rather than a marked expansion of output.

Some of the companies in the remaining divisions, General Engineering and Metal Components, undoubtedly have scope for expansion, but several of them are bound to remain relatively small because of the nature of their business and the others cannot quickly grow to a size comparable with that of the main old-established companies in the Group. Moreover, it cannot be denied that in present trading conditions the lack of a government arms contract is a serious blow, particularly now that the present period of acute international tension has highlighted the need for modern small arms.

In my review of last year's activities, various references were made to the establishment of completely new products or spheres of activity. Some, such as central heating work, electrical equipment and hydrostatic drives, have already been started, and others will follow this year and in succeeding years. It must, however, be recognised that in the early stages of a new product or activity, profits tend to be reduced by the need to write off development and pre-production expenditure.

At the time of writing, only the figures for the first two months of the new financial year are available, and these show some deterioration compared with the same period last year. However, I still hope that the figures for the full year will be a little better than those now before you, but in the circumstances which I have outlined it would be unrealistic to expect a rapid recovery in profits. In these uncertain times, it is difficult to look still further ahead. Nevertheless, given a reasonable degree of national prosperity, I believe that the steps we are taking will produce a progressive improvement in our results.

COURT LINE LIMITED

CHANGING TREND IN TRAMP SHIPPING OPERATIONS

DRASTIC REORGANISATION IN COMPOSITION OF FLEET

THE HON J. P. PHILIPPS ON BOARD'S FUTURE PLANS

The thirty-third annual general meeting of Court Line Limited will be held on December 19th in London.

The following is the statement by the Chairman, **The Hon. J. P. Philipps, TD,** which has been circulated with the report and accounts:

Ladies and Gentlemen, Early in September, reports of the sale of our five oldest vessels to an Indian Company were released in India and since then various further rumours have appeared in the Press. Unfortunately, I and my colleagues were not in a position to confirm or deny these rumours for the simple reason that, although broad agreement had been reached, the necessary government and other approvals had not been received. In fact, it was only on November 16th that the final documents were signed and the first vessel handed over.

TRADING CONDITIONS

The catastrophic fall in freight rates over the last nine months, coupled with ever increasing operating expenses, has resulted in the world total of laid-up dry cargo tonnage increasing from 569,500 tons gross in December, 1961, to 2,726,000 tons gross at the end of October, 1962. This latter figure unfortunately includes our "Dorington Court" and "Errington Court," for which we are unable to find any remunerative employment at the present time. In the same period the Chamber of Shipping Freight Index fell from 101.2 to 78.4 at the end of July, which was the lowest figure reached since the index was started in 1948.

A number of contributory factors have led to the present situation, but we are nevertheless faced with the fact that part of our fleet is having difficulty in competing with the super tramp of 12,000 to 15,000 tons deadweight, having speeds of up to 17 knots, and the bulk carrier of 15,000 tons deadweight upwards.

Both of these are vastly more economical carriers per ton mile than the 10,000-ton deadweight tramp vessel, and tend to drive freights down to a level at which the smaller ships cannot make a profit. Great strides are also being made at the major bulk cargo loading and discharging terminals to enlarge the existing facilities so that even larger vessels with greater draughts and overall dimensions can be handled. All this points to a changing trend in tramp shipping operations and we must move with the times even if this means a drastic reorganisation in the composition of our fleet.

FLEET CHANGES

With this very much in mind we purchased, as I told you last March, a 22,000-ton deadweight bulk carrier, and renamed her "Cressington Court." We have now carried our plans a stage further by selling the five following vessels:—

"Barrington Court" ... } "Framlington Court" ...	Built 1952
"Geddington Court" ... } "Hannington Court" ...	Built 1954
"Jevington Court"	Built 1956

They have been sold at a price which, in total, exceeds their written-down value on credit terms extended over ten years with interest in addition. The buyers are an Indian company called Jayanti Shipping (Private) Limited, who intend to use the ships in preferential Indian trades. Owing to the Indian balance of payment situation, it has been necessary for the purchase price and interest to be made available from sources outside India. In order to achieve this, it is one of the terms of sale that Jayanti should discharge a mortgage on a tanker they own called "Adi Jayanti" and thereby release the hire money under a time charter from Shell Transport & Trading Company for assignment to us as part of the security for the purchase price and interest due on the five vessels. To complete the transaction, it has been necessary for us to take over this mortgage and we, in turn, have had to borrow £1,300,000 from our Bankers. This latter loan is repayable over five years.

The effect of this transaction as regards future profits is to substitute in place of the potential liability of maintaining and depreciating five vessels which are unlikely to be able to trade at a profit in the foreseeable future, a positive net interest income before taxation of approximately £90,000 per annum for the next ten years. Even more important in the minds of your Board is the generation by these means of over £2,000,000 of cash over the next ten years which will be available for the purchase of modern vessels to match the new pattern of trade.

NEW VENTURE

I must also tell you of a further development. It is no longer the policy of your Board to place periodic replacement orders in the hope that employment will materialise when the new ships are delivered. In the past this policy has been justified but we believe that trade has now become so very much more specialised that a prudent tramp ship owner should now seek his trade, secure long-term employment and then build the most efficient and most economical unit to provide the particular service required.

With this end in view, your Company has purchased a 51 per cent interest in a private company called Malcolm Ore Carriers Limited. This company has the services of Mr V. N. Malcolm who has a wide experience of the bulk-carrying business generally, with particular emphasis on ore trades. We are very pleased that Mr Malcolm has accepted our invitation to join the Board of Court Line Limited. While the particular object of Malcolm Ore Carriers Limited is to pursue and investigate all long-term bulk-carrying opportunities it is also envisaged that in future some partnership vessels might be built, with Court Line contributing 51 per cent of the capital cost of construction and the other shareholders of Malcolm Ore Carriers the remaining 49 per cent.

THE ACCOUNTS

I will now turn to the Accounts for the year ended June 30, 1962, and I would draw your attention to the words at the top of the Profit and Loss Account—"Operating Deficit on Voyages Completed at June 30, 1962." In previous years when we had practically all our fleet fixed on long-term charters we adopted the system of only including in our Profit and Loss Account the profit on voyages which were actually completed in the year under review by the ships discharging in a United Kingdom or near Continental port where the crew had to be paid off. This practice worked very well in normal times, but since the termination of these charters and the catastrophic fall in the freight market this system has produced an operating loss in the Accounts now before you. If, however, we had now changed our practice and taken *pro rata* profits up to the end of June on those voyages which had not been completed on the basis mentioned above, there would in fact have been an operating surplus. This surplus will now, however, be carried forward into the Profit and Loss Account of the ensuing year. This means that no credit has been taken for any profits earned by the two new acquisitions—m.v. "ARLINGTON COURT" and m.v. "CRESSINGTON COURT." In these circumstances, and having regard to the strength of the Company's Reserves, your Board feel justified in declaring a dividend of 5 per cent, less income tax, out of the profits carried forward in previous years.

Finally, I would like to refer to the new Articles of Association which are recommended for adoption, and in particular to the Clause about the Directors' Borrowing Powers. In our present Articles these powers are limited to the "nominal amount of the authorised share capital" which is £2,000,000. The type of vessel that your Board are intending to build in future will cost at today's prices anything between £1,500,000 and £4,000,000, most of which will have to be borrowed against the security of the charters to be arranged. For this reason, your Board consider it essential that, in accordance with modern practice, the limit should be increased and should fluctuate in proportion to the issued capital and reserves of the Company. If these new Articles are adopted, the limit calculated on the figures appearing in the Balance Sheet now before you would amount to approximately £7,000,000.

This has been a very difficult year and I feel sure you would wish me to conclude by thanking all our staff, both ashore and afloat, for the hard work they have put in and the part they have played in helping to keep the f[illegible]

ULTRAMAR COMPANY LIMITED

SUBSTANTIAL PROGRESS OF INTEGRATION PLANS

SIR EDWIN HERBERT'S REVIEW

The twenty-sixth annual general meeting of ıtramar Company Limited was held on ɔvember 15th in London.

Sir Edwin Herbert, KBE (the Chairman), preıded and, in the course of his speech, said:

In Venezuela the average oil production tributable to Caracas Petroleum for the first lf of 1962 was 11,805 barrels per day, comred with 13,121 barrels per day for 1961. ıracas Petroleum's share of gas sales for the st half of 1962 was 36,827,000 cubic feet per y compared with 37,043,000 cubic feet per day r 1961 which was a record.

Canpet, the Western Canadian Company in ıich we have a 50 per cent interest, has conıued to make good progress. Oil production r the first half of 1962 was 1,209 barrels per y, which compares with 1,056 barrels per y in 1961. For the third quarter of 1962 erage oil production rose to a new high of 327 barrels per day. The drilling programme r 1961 was most successful and has been ntinued into 1962.

Investment in the production side of the roup has necessarily had to be restricted cause of the need to use available funds in veloping marketing and refining interests ring the transitional stage. It will, however, necessary to be more active in future years securing production.

MARKETING AND REFINING COMPANIES

Golden Eagle of California incurred a net loss after depreciation in 1961 of $886,000. As a result of economies, improvements in product prices, changes in selling policy and an increase in the crude oil import quota starting July 1st last, the company has made a net profit of $230,000 for the first nine months of 1962.

In Canada the Newfoundland Refinery went on stream on December 1st last and has operated satisfactorily from that date onwards. Storage terminals are being completed at various points in the Provinces of Newfoundland and Quebec and the marketing organisation is being built up in those provinces. For the first half of 1962 sales of products averaged about 8,000 barrels per day. New business recently acquired and an acceleration of gasoline station construction indicate that sales of products should rise significantly towards the end of 1962 and that the increase should continue through 1963. We expect to see an appreciable cash flow from these operations within a year or two.

In Panama, instead of building a separate refinery at Portobelo, we have arranged to acquire an interest in the Payardi Refinery built by Refineria Panama S.A. We shall acquire a one-third interest in Refineria Panama S.A., paying for that interest during the years 1964-1968. We are confident that the terms of payment, which include an allowance for part of the past expenditures in respect of Portobelo, will permit us to meet the cost of purchase out of operating surpluses of those years. In the meantime, substantial quantities of CPSA's Venezuelan crude are being refined at the Payardi Refinery. The Payardi Refinery appears to have excellent prospects and we are pleased to be in partnership with Continental Oil Company and National Bulk Carriers.

CHANGE IN GROUP POSITION

Only about three years ago we were interested solely in the producing end of the industry. Today the Group has a present refining capacity of approximately 28,000 barrels per day and a present products market, which is expanding, of approximately 35,000 barrels per day. There is now no need to sell Caracas Petroleum's Venezuelan crude to outside interests.

I think you will agree that this is a remarkable change to have been brought about in three years. I believe that we can look for a substantial cash flow from the various operations as a result of the integration that has been achieved. We expect an appreciable improvement in the trading position for the second half of 1962 but it is in 1963 that we expect to begin to reap the reward of the new investments that have been made.

The acquisition of the refining and marketing interests in Canada, California and Panama have involved an outlay of some £8 million. The money has been raised largely by loans. In addition there have been normal banking facilities covering the growing inventories and receivables of the Group.

These developments have been a strain on the resources of the group which made it inadvisable to pay a Capital Surplus Distribution this year. Furthermore, we are reviewing the various interests of the group to see whether some interests which are not essential to the present integrated plan might not be realised. Our plans for dealing with such interests may take some time to develop and as an interim measure we are discussing with bankers to the group the question of bridging loans to refund some short term debts of the Operating Companies and provide additional working capital.

The report and accounts were adopted.

SMITHS exports to the world

In his annual statement to shareholders, Mr. Ralph Gordon-Smith describes Smiths' overseas organisation and also draws attention to the following tables showing the direction and extent of Smiths' exports from the United Kingdom in 1961/62.

Division	Direct Export Sales £000	Estimated Indirect Export Sales £000	TOTAL £000
Motor Accessory	860	4,360	5,220
Aviation	1,350	850	2,200
Clock & Watch	1,100	140	1,240
Kelvin Hughes (marine)	1,450	100	1,550
Spark Plug & Ceramics	980	50	1,030
Industrial	220	560	780
TOTALS	£5,960	£6,060	£12,020
Totals as % of Smiths' (U.K. companies) sales.	15%	15%	30%

TOTALS ANALYSED

	Smiths Export Sales %	U.K. National 1961 Exports of Manufactures %
E.E.C.	24	16
E.F.T.A.	15	12
North America	17	13
C'wealth (exc. Canada & S. Africa)	22	31
Others	22	28

A copy of the 1962 Report and Accounts, which includes the Chairman's Statement and a Product Review, may be obtained from the Secretary.

SMITHS — S. SMITH & SONS (ENGLAND) LTD., LONDON, N.W.2

SOLAR INDUSTRIES LIMITED

The Fifty-sixth Annual General Meeting of Solar Industries Limited was held on November 16th in Glasgow. In his Statement circulated with the Annual Report and Accounts for the year ended 31st March, 1962, the Chairman and Joint Managing Director, MR R. K. CALDER, reported profits, before tax, of £445,634. Final Dividend was 12½%, less tax, making 17½% for the year. Overall Group output was slightly higher than in the previous year.

Commenting on the Group's activities, Mr Calder said:—

HOME:

The Foundry Division: "Aluminium Bronze Co. Ltd. and Trent Foundries Ltd. showed heavy falls in output—some 20 per cent down—and profits suffered even more severely. There has been a reasonable measure of recovery in the current year".

The Burnley Group: "Burnley Aircraft Products Ltd. maintained both output and earnings and further progress is being made in the current year. Universal Boilers & Engineering Co. Ltd. made notable progress. Additional production facilities are already under strain as current output is running some 50 per cent up on the previous year. Solar Weld Languepin Ltd. again disappointed and a further small loss was incurred. While sales improved substantially, development and production costs were disproportionately high".

Atkinson's of Clitheroe Ltd. (formerly Atkinson's Agricultural Appliances Ltd.): ". . . Output last year was unchanged . . . profit margins were reduced . . . however, in the current year, output and profits show further expansion and the forward position is satisfactory".

The Plating Division: "The Verichrome Companies together with the Irco Company showed an overall reduction in output and earnings. The current year reflects a reasonable degree of recovery".

Scottish Aluminium Ware Ltd. (manufacturers of 'Luxaflex' Venetian Blinds): ". . . again turned in record sales and profits".

The Draftex Group: "Coventry came close to holding output at the previous year's level, and in the current year has gone still further ahead."

EUROPE:

The German Draftex Company: "made further major advances in both output and earnings and in the current year—assisted by new lines of activity—output has almost doubled. I am hopeful that ways and means will be found in the near future to enable us further to extend our foothold in Europe, where our initial efforts have been so rewarding and where, I am confident, we can both extend and develop our activities still further."

CANADA:

"Turnover dropped by 20 per cent, but in the current year the Canadian Company has been operating at a profit level which, in the circumstances, is not unreasonable. The forward position is not discouraging. New products are being introduced."

BONUS ISSUE:

"It is proposed to issue 800,000 new Ordinary shares of 5s. each, credited as fully paid, in the proportion of one new share for each four Ordinary shares held."

THE FUTURE:

"We have a number of new projects under review and we are also looking for additional means to co-ordinate and expand the activities of the Group, both by direct development and the acquisition of other concerns which fit into Group structure. I have every confidence that, with active and progressive management, the Group can look forward to further major progress. The trading results for the first half of this year show significant advances, both in output and profits, not only over last year, but also over the year 1960-61 which was itself a record year.

"I would feel—unless unforeseen circumstances arise—that we should have another record year, in which event an increase in the effective rate of dividend could reasonably be envisaged on the share capital as now to be increased."

Copies of the Annual Report and Accounts may be obtained on application to the Registered Office of the Company, 123, Hope Street, Glasgow, C2.

COZENS & SUTCLIFFE (HOLDINGS)

MR FRANCIS BULLIMORE ON GROUP'S POTENTIALITIES

The twenty-first annual general meeting of Cozens & Sutcliffe (Holdings) Limited was held on November 16th in London, **Mr Francis G. Bullimore** (the chairman) presiding.

In the course of his circulated statement, Mr Bullimore referred to the loss sustained by the Group in August last by the enforced retirement through ill-health of the former Chairman, Mr H. V. Cozens.

Mr Bullimore continued: In common with many other concerns throughout the country, your Group did not experience such a successful year as was thought probable some twelve months ago and this was in large part due to the financial restrictions which the Government imposed on industry and the effect these measures had on capital equipment investment. Some substantial contracts in the constructional and equipment divisions, involving the Company in initial and preparatory expenses, had to be held back, but I am glad to report that these have now come forward and that the benefit will be felt in the forthcoming year. As is well known, conditions in the electrical and radio industries continued to be affected by credit restrictions and delays were also experienced in the marketing of the Redler Mobile Crane.

The trading profit for the year ended on June 30, 1962, of £130,815 compares with £213,065 for 1960/61.

Since the end of your Company's financial year, trading conditions have improved.

GROUP'S ACTIVITIES

Cozens & Sutcliffe, Ltd. (Constructional Engineering and Plant Hire): The trading results for the year have not been so satisfactory as had been hoped. In my opinion prospects for the future are more promising.

A. S. Duran & Co. Ltd. and R. J. S. Services Ltd. (Electrical and Radio Industry Wholesale Distributors): It cannot be said that the year has proved a satisfactory one, but I am reasonably confident of 1962/63 and hope to be able to give you an improved picture in a year's time.

Redler Industries Ltd. and Subsidiaries with Associated Company, H. J. H. King & Co. Ltd. (Mechanical Handling Plant Manufacturers). The total value of Group orders on hand is greater than at this time last year and I have every reason to believe that turnover will be maintained.

Commenting on future prospects Mr Bullimore said: "We are now well based to exploit the potentialities of our organisation. The total value of orders on hand is greater than at this time last year. It must be borne in mind that a business such as ours is dependent on a liberal Government attitude towards capital investment so necessary to maintain industry in a fully efficient and competitive condition. This attitude has not been forthcoming in the past year but there are signs that the new Chancellor is now moving in the right direction and I am confident that the Company's activities can be maintained on as profitable a basis as formerly."

The report was adopted and the total dividend of 30 per cent for the year to June 30, 1962, was approved.

HARMONY GOLD MINING COMPANY LIMITED

(Incorporated in the Republic of South Africa)

The twelfth Ordinary General Meeting of shareholders will be held in Johannesburg on November 26, 1962.

The following is an extract from the circulated review of the affairs of the Company by the Chairman, **Mr P. H. Anderson,** dated November 10, 1962.

RESULTS OF OPERATIONS

The tonnage milled during the year under review was the highest yet attained and averaged 196,400 tons per month. The sale of 397 claims to Virginia Orange Free State Gold Mining Company Limited thus did not, as was originally anticipated, prevent the Company from maintaining a milling rate of the order of 200,000 tons per month. This is an achievement which reflects credit on the Manager and Staff at the mine. The average yield during the year was 8.100 dwt. per ton milled, which gave a total working revenue from gold of R23,903,239. Working expenditure totalled R14,766,127 thus leaving a working profit from gold of R9,137,112. The profit from uranium, pyrite and sulphuric acid was R,3,757,353, giving a total working profit for the year under review of R12,894,465.

FINANCE

Lease consideration was not payable to the Government during the year, but the Company will become liable for such payments as from the current quarter.

DEVELOPMENT

Current development northwards from No. 2 Shaft has revealed faulting, which makes it necessary to continue with a high development rate in order to provide sufficient length of stope faces for maintenance of the present milling rate. The values so far obtained by the regular pattern of diamond drilling from the footwall haulages and by a small amount of reef development in the 2B incline area have on the whole been disappointing and are below average. In order to accelerate the opening up of the north-eastern portion of the property, it has been decided, with the permission of the Virginia Company, to drive 8 haulage northwards through Area "A." The work is being done independently of the Virginia workings and at Harmony's expense. This haulage will link up with the development from the haulages north of No. 2 Shaft. The area to the south of No. 2 Shaft will be exploited by 2A incline and a conveyor.

Development south from No. 3 Shaft continued in spite of some delay as a result of encountering a fairly heavy water zone. No. 17 footwall haulage made good progress and is now some 2,600 feet from the Merriespruit boundary. Although zones of elevated footwall were encountered in this area, some satisfactory values were obtained. Good progress has been made in the sinking of 3A and 3B inclines from 17 haulage south of No. 3 Shaft to 25 level and 27 level, respectively. These inclines will expedite the exploration of the mine to the west of No. 3 Shaft.

URANIUM

915,804 lb. of uranium oxide were recovered, [illegible] 858,000 lb. were sold. At the end of

the financial year some 333,000 tons of uranium-bearing slime had been accumulated for treatment at some future time. It was decided during the year to create a Uranium Profit Equalisation Reserve in order to stabilise uranium profits.

DISTRIBUTION TO SHAREHOLDERS

In addition to Dividends Nos. 11 and 12, a total of R1,080,000 was paid to shareholders in the form of a return of capital.

Dividend No. 13 of 14 cents per share and Reduction of Share Premium No. 3 of 3 cents per share were declared on September 13, 1962, payable to shareholders registered in the books of the Company on September 29, 1962. Both the dividend and the reduction were paid to shareholders a few days ago.

It has been possible to maintain the dividend rate at 14 cents per share. As a result of the extension of the Company's uranium contracts from 1965 to 1970, and as the Company is now liable for taxation and lease consideration, it is unlikely that the present rate of dividend can be maintained for more than another year.

THE ROVER COMPANY

PROGRESS OF EXPANSION SCHEME

The sixty-seventh annual general meeting of The Rover Company Limited will be held on December 13th in Solihull.

In the course of his circulated review, **Mr M. F. C. Wilks** states:

Trading conditions during the year under review have not been easy. The home market has been far from buoyant, and competition in export markets has become more intense. Despite this our turnover was only marginally below the record achieved last year. Lower profit margins have, to a certain extent, been offset by economies achieved by improving the efficiency of our organisation, but the overall result is a reduced trading profit.

During the year we have made arrangements for the assembly and partial manufacture of our products in Nigeria, Turkey, Ghana and Costa Rica and have commenced work on the construction of a factory in Salisbury, Southern Rhodesia. In addition, we have recently announced the setting up of a marketing company in Western Germany.

Our new range of car models—the "95," "110," 3 Litre and Coupe, have been very well received both by the Press and at Earls Court. At the Commercial Vehicle Show we announced an entirely new model to our famous range of Land-Rovers—the forward control Land-Rover, with a 30 cwt. carrying capacity. In addition, a twelve seater model was introduced during the year.

Work on our Gas Turbine car is proceeding satisfactorily.

Considerable progress has been made with our expansion scheme, the main portion of which is due for completion in the first part of 1963. The buildings at Cardiff and Solihull are nearly finished, and the new plant is in course of being installed.

During the current year we shall be completing our expansion programme. We believe that when our plans come to fruition, we can look to the increasing business and profit that will stem from this.

THE IRISH GLASS BOTTLE COMPANY

(Manufacturers of Glass Containers)

The thirtieth annual general meeting of The Irish Glass Bottle Company Limited was held on November 20th in Dublin. The following is an extract from the circulated statement of **Mr Joseph McGrath** (the chairman).

For the year ended June 26, 1962, there was a modest increase of approximately £22,000 in the net profit earned. While this increase is attributable in part to an increase in sales, there is no doubt that the principal factor contributing to the maintenance and slight improvement of the profit position is the increased production and greater efficiency resulting from the major plant conversion which was completed at the beginning of the year. This is the more noteworthy in view of the very high increase in costs in other directions.

The chairman then referred to the serious burden imposed on the Company by increased wages and other concessions which had to be granted to employees during the year. The Board were reluctant to do anything which would adversely affect the favourable sales trend of the past two years and had therefore provisionally decided to increase prices by only 2½ per cent and thus to recover from customers a part only of the increased costs.

Having commented on the satisfactory progress of the Company's joint venture with the Metal Box Company Limited in the plastic packaging industry in Eire, Mr McGrath reported that the subsidiary company, Waterford Glass Limited, had increased both its sales and profits.

The report was adopted.

TEA CORPORATION

LARGER CROP

The annual general meeting of the Tea Corporation, Limited, was held on November 15th in London, **Mr A. A. Estall,** chairman, presiding.

The following are extracts from his circulated review:

The Season's total crop of 1,829,432 lbs. made tea exceeded the 1960-61 figure of 1,736,063 lbs. by 93,369 lbs., and includes the manufacture of 15,409 lbs. bought leaf compared with 26,272 lbs. last year. Estate crop harvested totalled 1,814,023 lbs., equal to an average of 892 lbs. per acre, which shows an increase of 104,232 lbs. over the 1960-61 crops of 1,709,791 lbs.

Crops from the rubber areas continue to decrease owing to the age of the trees. The crop for the year was 55,890 lbs. compared with 65,025 lbs. for last year.

During the season tea prices were generally lower than in 1960, and as a consequence the profit at £18,047 is slightly below last year's figure of £20,527, notwithstanding the appreciable increase in crop.

Ceylon taxation amounts to £15,000, which represents 83 per cent of the profits earned. The Ceylon Exchange Control regulation which prohibits a dividend in excess of the profits remaining after current taxation continues in operation; therefore your Directors are only able to recommend a dividend at the rate of 3 per cent.

The report and accounts were adopted.

INDUSTRIAL DEVELOPMENT CORPORATION OF SOUTH AFRICA, LIMITED

SUMMARY OF ANNUAL REPORT

The twenty-third Ordinary General Meeting of the Industrial Development Corporation was held in Johannesburg on November 21, 1962. The following are the main points made by the Chairman of the Corporation, **Dr H. J. van Eck,** in his annual Statement.

Operating profits before tax and transfers to reserves, amounted to R2,036,000 or R867,000 more than the 1961 figure. The maiden preference dividend paid by Sasol accounted for approximately 83 per cent of this increase. After year end transfers the General and Contingency Reserves now stood at R8 million and R778,264 respectively. Investments increased by R7,132,893 to R143,987,000. Recoupments in terms of financing agreements (excluding Sasol and Foskor) aggregated R2,657,300 bringing total repayments since 1940 to nearly R43 million. New commitments to a total value of R49,637,000 were entered into during the year. Of the 54 approved applications to which this related, 14 with an aggregate value of R3,973,000 came from Companies with which the Corporation had been associated for some years and 12 were for capital amounts of R25,000 or less.

The Corporation's recently announced Export Credit Finance Scheme was designed to ensure that no South African manufacturer was precluded through lack of funds from quoting for the manufacture and supply of capital goods and equipment on credit. The interest rate on the facilities offered by the Corporation was unlikely to exceed the prime commercial overdraft rate.

In order to give the public an opportunity to participate in successful projects in which the IDC had investments the Corporation had formed Industrial Selections Limited and had subscribed in cash for the full issued share capital of R4 million which the Company had applied to the purchase of industrial shares from the IDC's portfolio. The IDC's offer to the public of 1 million Industrial Selection shares at R1.25 per share closed oversubscribed on October 30, 1962. Industrial Selections dividend policy would be to maintain annual declarations at approximately 80 per cent of its profits.

The local manufacture of synthetic rubber now appeared economically feasible and a contract for the design, construction and initial operation of the plant had been awarded by the Synthetic Rubber Company (Pty) Limited, whose shareholders represented South African financial and consumer interests, to the Polymer Corporation of Canada which had appointed the Fluor Company of Los Angeles as its Prime Contractor.

Copy for the insertion of Company Meeting reports must reach this office not later than Wednesday of each week and should be addressed to:

The Company Meetings Department,
The Economist,
22 Ryder Street, S.W.1.

The IDC had underwritten the project and would act as the Company's Managers. Construction was expected to begin in January, 1963, on a site selected near the Sasol oil from coal plant from which the Company's main raw materials would be derived.

The Corporation's major interests including Sasol, Foskor, Fine Wool Products, The Good Hope Textile Corporation and Saiccor were all engaged in extensive capital expenditure programmes. A number of new investments in textile projects had been added to the IDC's portfolio and arrangements had recently been concluded with the Cyril Lord organisation of the United Kingdom for the establishment of a factory near East London to produce poplins. The total capital which would be employed in this undertaking, including working capital, would be between R4.5 and R5 million.

The Corporation's commitment for Border Area Development on June 30, 1962, amounted to R4,835,000 which related to projects on the IDC's Industrial Estate at Hammarsdale, and in the Border Areas of Rustenburg, Ladysmith, Natal and Rosslyn to the north of Pretoria. The Corporation had purchased 20 acres of land to establish a second industrial estate in the Rosslyn area.

JOHN WALLACE & SONS

PERIOD OF CONSIDERABLE EXPANSION

The thirty-eighth annual general meeting of John Wallace & Sons Limited was held on November 20th in Glasgow, **Mr Charles Kemp** (chairman and managing director) presiding.

The following is an extract from his circulated statement:

The Accounts for the year ended March 31, 1962, show a net profit before Taxation of £408,952 as compared with £295,033 for the previous year. Your Directors recommend a final dividend of 12½ per cent on the Ordinary Shares, making 25 per cent for the year as against 20 per cent for 1960-61.

Shortly before the end of our financial year, your Company acquired the whole of the share capitals of Edmiston Brown & Co. Ltd. and The Clarmac Engineering Co. Ltd. With funds of these companies which were surplus to requirements your Board acquired the share capital of Veevers & Hensman Ltd., which your Board is satisfied will operate to considerable advantage with Claridge, Lewis & Jordan Ltd., and of W. E. Ginder Ltd., whose activities are confidently expected to reinforce the development of Maurice Lipkin & Co. Ltd.

The Group Trading Profit before deducting Directors' Emoluments, Depreciation, Bank Interest and other expenses amounted to £503,420 (£338,197). The Net Profit for the Year (after charging Taxation) applicable to the Group was £214,484 (£165,839).

CONCENTRATION IN TWO MAIN AREAS

Referring to a plan to bring about closer co-ordination between the various subsidiaries, which he described as of far-reaching importance, Mr Kemp said:

At the outset the two most important regional groups will be based on Glasgow and Manchester, contributing between them over 80 per cent of the profits of John Wallace & Sons Ltd. At a later stage, if desired, further regional grouping can follow in London and Birmingham through the acquisition of further businesses in those areas. No such development, however, is immediately envisaged.

Glasgow: The advantage of operating a number of companies of a somewhat diverse nature in close proximity one to the other and within easy reach of Head Office, has been fully proved. Of our Scottish companies six have their works and main offices in Glasgow, and through co-operation at director level an efficient and integrated group is already in being.

Manchester—New Acquisitions: It is in what I may term the Manchester area that your Board's plan to concentrate interests in a regional group will now take shape.

Contracts have been entered into for the acquisition of the whole of the share capital of Polarcold Ltd. and its wholly-owned subsidiary, Tropical Packers (Cheshire) Ltd., and your Company expects shortly to exchange contracts for the purchase of the whole of the issued share capital of Brierley & Kershaw Ltd. and its wholly-owned subsidiary, Crawford Machinery Co. Ltd. To these may in turn be added controlling interests in two further companies now under negotiation. By the pooling of manufacturing, technical and other resources this group of engineering companies will be in a position to tender for contracts which, as separate entities, they would be unable to undertake.

PROSPECTS

An all-round improvement is indicated from the results of our subsidiaries to date. It is possible that the profits of one of our subsidiaries may suffer some reduction through having undertaken contracts in a new field, which may at the outset turn out to be unremunerative. Weather conditions also have affected to some degree the sale of agricultural implements.

Shareholders will not expect me to forecast the results likely to be disclosed in the Accounts to March 31, 1963, nor would I venture so to do, but I feel that I am on safe ground in anticipating that they will have no occasion for disappointment when the time comes. Your Directors have every confidence that the present rate of dividend on the Ordinary Shares will be at least maintained.

Taking the longer-term view I am, I feel, on much firmer ground. With our present widespread interests, John Wallace & Sons Ltd. is infinitely stronger than it has ever been in the past. Given, therefore, normal trading conditions and no serious setback in the National economy, I firmly believe that your Company will grow from strength to strength—a belief which is shared by all my colleagues.

We cannot, of course, expect that the rate of growth will be as fast in the next few years as it has been over the past three. But bearing in mind, as I do, the positive steps taken to improve and enlarge our factories, our plans for expansion and concentration of subsidiaries in regional areas, and above all the efficiency and enthusiasm of those responsible for the management of the individual companies, there is no reason why the upward curve should not continue.

The report was adopted.

COMPANY AFFAIRS

The dominating factor in the London stock market this week has been the ino-Indian clash. With the Chinese advance gaining momentum, prices at the eginning of the week were marked down in most sections. The sharpest falls ere among Assam tea shares and other companies directly affected such as urmah Oil and Brooke Bond. On China's cease-fire order these shares ebounded sharply but the relief in the market brought all-round gains and over ie week to Wednesday's close The Economist *indicator gained 3.3 points to* 48.7. *Gilt-edged, which were a weak market at the end of last week, shared t the recovery.*

Not Much Acceleration?

HE price of expansion is a theme com- mon to the chairmen's statements of C and Rootes. Both companies are near- the end of their big schemes, which olved setting up new factories in Scot- l and Wales for BMC and in Scotland r for Rootes. Production has already un at BMC's new factories, but Rootes not start-up in Scotland until the new r. Mr George Harriman of BMC says : the fall of £5 million in the company's ling profit was "inseparable from the or changes that were made without sation of production and the preparatory k necessary if we are to compete in the hly competitive world markets of the ire." Turnover last year was unchanged £311 million, but small cars and com- rcial vehicles represented a bigger pro- tion of the total and trucks and tractors maller one. The demand for trucks and ctors fell and the transfer of their pro- tion to Scotland added to costs, so that fit margins were doubly squeezed.

Production of Minis in the year amounted 183,000, only 40,000 fewer than had n made in the previous two years ; that the Minor 1000 was still 73,000, some 000 higher than that of the A40. The 00-1,600 cc B series models accounted 160,000. The company's share of home market was higher than a year ore—44.6 per cent of the British makers' es in the first six months of this r, compared with 41.2 per cent a year ore. But its share seems to have been ver at the end of this period than at the ginning. The share of the market in light mmercial vehicles was slightly smaller, wever, at 47.9 per cent. Output of dium-sized vans fell from 40,000 to 000, largely as the result of a fire at the Morris Commercial factory. The company's share of British car exports also fell, from 40 per cent to 32 per cent.

Strikes were another problem common to BMC and Rootes; both lost about 45,000 vehicles from them, but while this was only 15 per cent of BMC's output of 600,000, it represented nearly a third of Rootes's: it made about 135,000 vehicles, some 25,000 fewer than the year before. After its own strike was over, however, Rootes suffered further losses in production because one of its chief suppliers was unable to meet its requirements ; so the financial losses of the strike were multiplied. But in the seven months to the end of July last, Lord Rootes says that the company made more vehicles than in the same period of last year ; exports alone were 20 per cent higher. One factor adding to costs was the development of the new small car which will be manufactured at the Scottish factory ; these costs will be even higher this year, and though the car will be announced "well before" the end of the current financial year, it is unlikely that it will make any contribution to profits in 1962-63. Building up production in a new factory with a raw labour force is, as BMC knows, an expensive process.

The development scheme has left Rootes with more cash on hand than might have been expected. Cash balances amount to over £5 million and the company has now received £2,300,000 of its loan of £5,760,000 from the Board of Trade. This is additional to the factory costing £4 million being built by the Board of Trade for a Rootes subsidiary. Repayments on the loan do not begin until 1964, but payments by Rootes for the factory, spread over 15 years, will begin when it starts production. Moreover, against the cash balance, the group has a bank overdraft of nearly £3 million and acceptance credits of £4,350,000. In all, its short-term debts rose by £3¾ million over the year. BMC's balance sheet reveals an unexplained rise in long-term liabilities, payable 1962-72, from £5.8 million to £14 million which has helped to finance a rise in net fixed assets from £55.8 million to £67 million and in liquid assets from £18 million to £20.2 million. But almost £18 million was due to be paid in purchase tax on July 31st, three days after the end of the financial year. Outstanding capital contracts amount to £8.8 million, against £16 million.

Neither Mr Harriman nor Lord Rootes commit themselves far on immediate prospects. The cut in purchase tax, Lord Rootes says, has already produced signs of a considerable improvement in home sales, but "it is early days to judge." Mr Harriman is confident that BMC can be the pacemaker for the industry. BMC's output is now higher than a year ago, and should rise further in the new year. Higher prices should have done a little to improve margins ; but the increase in output comes from the Minis and the 1100, and though the latter should be a profitable car, margins on Minis are probably still small. The bigger B series cars seems to be declining in popularity, possibly as a result of the introduction of the 1100 and Cortina, and a fall in their production may cut into profits. Their replacement begins to look due. Rootes faces a worse problem with its old Minx, whose sales are hit directly by the 1100 and Cortina ; and when the Apex appears in the summer it will have to sell it in direct competition with the well-established Minis —the price of which it is unlikely to match. So the immediate prospect for both companies is of no really strong advance in profits—unless the rise in domestic demand is big enough to permit significant increases in prices as well as higher output.

Rover

ROVER, whose gross profits fell from £2,050,000 to £1,423,000 in the year to August 4th last, is in the midst of an ambitious expansion programme, and its accounts show the result: net cash assets have fallen by nearly £6.3 million to £220,000 and net fixed assets have risen by £4.4 million to £9.4 million. The expansion programme will be completed in the current year and this will involve a further increase in depreciation and other charges before the factories come into full production. The chairman, Mr Maurice Wilks, says that "under the circumstances, it is difficult to make a reliable forecast as to the current year's results." As the maintained dividend of 9½d. per 5s. share was covered twice by earnings in 1961-62, shareholders may feel reasonably confident that it will again be left unchanged. But this is clearly a transitional year—as it is for the company's range of cars.

The completion of the expansion scheme will presumably bring with it the replacement of the older models in the Rover range by the new medium-sized car with which the company hopes to add to its share of the car market by making a Rover less of a luxury. It will do so just at the time when Ford at least is extending the appeal of its range upwards. But the success of the Zodiac confirms the impression that increasing affluence is making this a growing market ; and it is one in which a name counts for a great deal. So Rover should be well placed to compete with the bigger firms—if it can produce a car with enough customer-appeal.

BSA

IN the year to July 31st last the turnover of the BSA group fell by 11 per cent, despite higher sales by the machine tool division which now includes Churchill Machine Tool. Gross profits were practically halved from £2,933,000 to £1,504,000, and the ordinary dividend was cut from 11¾ to 10 per cent. Capital expenditure fell but will rise again, possibly to £1¼ million or more, in the current year and the net bank overdraft has already risen from £435,000 to £830,000. The recession in the motor cycle industry (where BSA held on to its share of a smaller market) and the steel industry and hence the growing importance of machine tools to the group is reflected in the following breakdown of turnover between the divisions:

	1960-61	1961-62
Motor cycles and scooters ...	37%	26%
Machine tools	26%	35%
Steel	19%	18%
Small arms, engineering etc.	18%	21%

Plainly this was a bad year for BSA and the chairman, Mr Eric Turner, is none too hopeful about the immediate future. Profits in the first two months of the current financial year were lower than in the same period in 1961, when the machine tool division was working through a record order book, and though Mr Turner hopes that the full year's profits will be "a little better" than those in 1961-62 he says "it would be unrealistic to expect a rapid recovery." Orders for machine tools, motor cycles and steel are "either still falling or remaining fairly constant at low levels." The motor cycle division will "derive no benefit at all" from the changes in purchase tax on cars and investment allowances and unless there is a revival in the domestic market it will be difficult to remain competitive abroad and to repeat the 1961-62 performance of exporting two fifths of the output. The machine tool and steel divisions may ultimately benefit from an improvement in economic activity but there is substantial surplus capacity in the engineering industry and any increase in profits will be "marginal" and will have to come from greater efficiency rather than from a marked expansion in output. The general engineering and metal component subsidiaries have "scope for expansion" but many of them are bound to remain small because of the nature of their business. Finally, the lack of a government arms contract is "a serious blow." At the moment, therefore, the stock market which prices the 10s shares at 12s 9d to yield 7.8 per cent, covered 1.4 times, has no grounds for revising its view.

Motor Components

ALL three of the companies whose accounts are discussed below should benefit to some extent from any rise in vehicle sales generated by the cut in purchase tax. Since the end of July, when they drew up their accounts, their trade and prospects have brightened a little. But Wilmot-Breeden, which has maintained its interim dividend, talks of "severe effects" on the current year's profits and the promised final dividend no longer looks assured.

S. Smith and Sons.—Though the sales of this manufacturer of instruments and accessories for the motor and aviation industries were 5 per cent higher at £40½ million in the year to end-July, its gross profits were nearly 17 per cent lower at £2,226,000. The directors attribute much of the blame to a fall or postponement in orders from the aircraft industry. Stocks have risen (from £9½ million to £11½ million) and the group had to pay £1½ million in acquiring Lodge Plugs. As a result, the bank overdraft has jumped from £1¼ million to over £4¾ million and the company is now preparing to issue a debenture stock.

The issue will be made against the background of slightly higher profits. They were higher in the second half of the financial year than in the first and sales and earnings continued to improve in the first three months of the current year. The motor accessory division is budgeting for higher sales on the basis of a forecast of "a slight rise in the total output of vehicles" but the directors say it is too early to judge whether the cut in purchase tax will give sales an additional boost. The aviation division should benefit from deliveries deferred in 1961-62 and sales of appliance controls and sparking plugs should also rise. The expected rise in output will not however provide much benefit to those factories which are working well below normal capacity. The directors therefore expect profits to be better than in 1961-62 and, if the sales forecasts are achieved, to be close to those in 1960-61 when they amounted to £2,660,000. Unlike Joseph Lucas, S. Smith is not investing in local manufacturing facilities in Europe in anticipation of Britain's entry into the EEC and is continuing to pin its hopes on direct and indirect exports from this country.

Birmid Industries. — This company specialises in light alloy castings for the motor and aircraft industries and its gross income in the year to July 31st fell by nearly 9 per cent from £3,000,000 to £2,850,000. Since then, there has been a slight improvement in demand but the factories are by no means fully occupied. The chairman, Lord Exeter, says, that the technical and production efficiency of the manufacturing subsidiaries is "quite competitive" with the majority of similar businesses on the Continent but, apart from one or two specialised products, foreseeable future demand does not warrant any further large scale expansion in manufacturing facilities. Money will however continue to be spent on replacing and improving existing facilities. The company is extraordinarily well endowed with liquid resources. Indeed, some would argue that the £5,800,000 held in liquid form is excessive in relation to a balance sheet total of £20,900,000.

	Ord. earnings % Previous	Ord. earnings % Latest	Ord. dividend % Previous	Ord. dividend % Latest	Price Nov. 22	Yield %
S. Smith	37·3	29·8	20·0	20·0	15/6	5·2
Birmid	45·8	47·2	20·0	20·0	78/-	5·1
Duport	29·2	14·7	13·3	6·0	6/9	4·4

Duport.—Motor components form only a part of this company's trade, which includes steel, castings, furniture and electrical goods. None of the divisions did at all well in the year to end-July and gross profits slumped by 60 per cent, from £2 million to just over £750,000 and the dividend was cut from 13⅓ to 6 per cent. The group with a bank overdraft of over £900,000 needs more permanent finance but, clearly the time is not propitious for a new issue. Profits have improved in the last three months but though the engineering division should do better in the current year the group's dependence on its iron and steel division appears to rule out any strong recovery in profits in the immediate future.

Glaxo

THE continuing need to provide for research and development explains the high dividend cover on such a pharmaceutical stock as Glaxo. Despite the occasional calls made on resources by such factors as the exchange loss in Brazil in the year to June 30th last, Glaxo has preserved a high degree of liquidity and this has enabled the directors to pursue a progressive though not especially bold dividend policy. Thus, the dividend was raised from 15 to 16 per cent even though trading profits fell slightly in 1961-62 in the face of an increase of 5 per cent in turnover. The knowledge that the directors could afford to distribute more if they so wished keeps the yield on the 10s shares low. Their price has picked up in the last few weeks because there are signs that Glaxo's margins have improved and that its trade is continuing to grow.

Glaxo's margins were higher in the second half of the financial year than the first half because technical improvements in some processes resulted in lower production costs. Here, as the chairman, Sir Harry Jephcott, explains, research "resulting in new products, improved manufacturing processes and reduced costs" plays a notable part as competition largely frustrates any ambition to raise prices. The full benefit from lower costs on some pharmaceuticals should appear in the current financial year, which should be no less profitable than 1961-62 and which, Sir Harry hints, might produce slightly better profits. Here the growth in sales of fowl pest vaccine and of a more palatable sedative drug should play their part in the home market. But the growth of sales overseas is as important to Glaxo as another increase in domestic sales. It has been building up local manufacturing facilities and its overseas sales continue to rise. Britain's entry into the EEC may provide greater opportunities for the sale of drugs and antibiotics in bulk but it will not, in Sir Harry's view, immediately afford greater scope for the sale of proprietary pharmaceuticals. Even so, Britain's entry should add in some small measure to Glaxo's European business. Though Glaxo's profits may suffer occasional setbacks, as indeed they did in 1961-62, the long term outlook remains favourable.

Confidence in Copper

SHAREHOLDERS are well provided with the facts about the operations of the Rhodesian copper companies and now that the price of copper is fixed and the level of output or sales is geared to a given proportion of known capacity, they have a clearer picture of earnings than ever before. But the annual reports of the two big Rhodesian copper groups afford the chairmen of Rhodesian Selection Trust and Rhodesian Anglo American an opportunity to discuss the more intangible factors which decisively influence the current price of copper shares.

Sir Ronald Prain of RST and Mr Harry Oppenheimer of Rhoanglo answer the first major question—the political future of Northern Rhodesia—more emphatically by their actions than by their words. RST is to develop the Chambishi orebody at a cost of £6½ million over and above the £1 million already spent on surveying this field. RST will thus sustain its rapid postwar growth after, apparently, carefully reviewing the political risks.

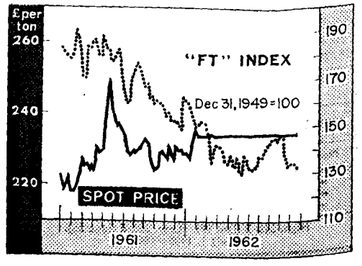
The Rhoanglo group holds about 30 per cent of the capital of Chambishi, and it has decided to subscribe its full share of the cost of the new venture which should produce 25,000 tons of copper by 1967. Rhoanglo's faith in the future of Central Africa is also apparent in the maintenance of the costly programme of exploration and in its spread of investments outside mining in the Rhodesian Federation.

Investors do not however altogether share the confidence that Sir Ronald and Mr Oppenheimer have in the future political stability of Central Africa. On favourable assumptions, the Chambishi venture might yield a profit before tax of about 30 per cent in 1967. But at the current prices of 28s. 6d for RST and 55s. for Rhoanglo, the respective yields are 14.7 and 14.5 per cent, after deducting Rhodesian taxes of 8s. in the £. Sir Ronald Prain admits that investors are now so cautious as to be unwilling for the moment to invest fresh capital in Rhodesia. It was to facilitate new developments such as Chambishi that this year's merger between Roan Antelope and RST was arranged.

The two chairmen are equally confident about the future of copper, though when the growth in consumption of copper is resumed it may not pick up again to the average rate of growth of 4 per cent per annum recorded since the end of the war. Sir Ronald estimates that restrictions on output or sales are currently holding 300,000 tons of copper a year off the market. If the growth in consumption lags, that gap will not be quickly closed. Output curbs have already run for two years in Rhodesia, which is probably longer than producers had expected. The Anglo American group stocked up heavily with copper in the first year of restrictions so as to avoid production cuts but the reports of Rhokana and Bancroft show no significant addition to these stocks in the year to June 30th last. But the copperbelt strike in May was responsible for an unscheduled cut in Rhokana's production and Bancroft has been unable to reach its production target. Mr Oppenheimer says that Bancroft's number one shaft cannot sustain its present rate of extraction and that the future of this disappointing venture lies with its number three shaft which has already been sunk to 1,100 feet. At 6s. 10½d., Bancroft has been one of the weakest of the Rhodesian mining shares in the past few months.

On the future price of copper, which producers have fixed at £234 a ton for cash supplies in London, the two chairmen are more guarded. Mr Oppenheimer claims that price stability is a boon to consumers and producers alike. Sir Ronald reiterates his view that the price of copper should be "reasonable" in relation to substitute materials in the long run. He implies that the current price is reasonable but strikes a cautious note in referring to "the difficulties in assessing the immediate outlook." Largely because of the rise in production following completion of the Mufulira West extension, RST's profit at £2,831,000 in the first quarter to end-September was £218,000 higher than a year earlier. The full report revealed that Mufulira's production costs fell by about £11 a ton in 1961-62 and this helped to raise the profits of RST (excluding Roan Antelope) from £7,742,000 to £12,352,000. RST was thus able to pay a total gross dividend of 7s. per share, against a forecast of 6s. at the time of the Roan merger. In the Rhoanglo group, Rhokana's gross profit fell slightly from £14,376,000 to £14,222,000 but Rhoanglo's own profits before tax rose from £32,132,000 to £32,615,000, and its dividend was maintained at 8s. a share, net of Rhodesian tax. Both groups will benefit from the maiden dividend likely to be paid this year by Chibuluma.

COPPER AND SHARE PRICES



Ultramar

ULTRAMAR is still the oil stock for speculators. This was again demonstrated this week when the price of the 10s. units jumped from the depressed level of 21s. 3d. to 26s. 3d. on the encouraging statement made by the chairman, Sir Edwin Herbert, on the progress made by the company in the "period of transition." Three years ago Ultramar was interested solely in production and when its contracts ran out it was faced with the problem of selling Venezuelan oil in markets overshadowed by a world wide surplus. Ultramar therefore had to build up refining and marketing facilities from scratch. Production and drilling in Venezuela have been curtailed though income from "royalty companies" has been well maintained. Production in Canada is rising and adding to the cash flow. In the future, the group's cash flow will be invested partly in further production and exploration, partly in purchases of crude oil at "attractive prices" from other producers and partly in the further development of refining and marketing interests. Ultramar has invested in refineries in California, Panama and Canada and now has no need to sell Venezuelan crude to outside interests. The loss made by the California refinery has been turned into a profit; sales from the Canadian refinery should increase significantly in the near future; and the Panama refinery has, Sir Edwin believes, "excellent prospects."

As a result, the directors expect an appreciable improvement in trading results in the second half of this year and next year. The developments cost Ultramar about £8 million and though part of a bank loan has now been repaid the strain on financial resources is still apparent. Some part of the development plans may be trimmed and the group is hoping to arrange bridging finance with its bankers. Ultramar raised £3¼ million on a 7 per cent convertible loan stock in 1960; the stock now stands at £80, setting the conversion price at the next date at £2 per 10s. ordinary unit. The loan stock is finally redeemable in 1978 and Sir Edwin still hopes to carry through the integration programme without making any further appeals to the capital market. In all, Ultramar is stronger than it was but it is still faced with the problems confronting a small independent, particularly in marketing, when it competes with the giants.

Wiggins Teape

EARLY in 1961 a link was forged between Wiggins Teape and British American Tobacco, when Millbank Paper was set up to extend the paper making interests of the two companies. Millbank was previously controlled by BAT and Wiggins Teape transferred to it certain assets in Britain, Australia, India and South Africa in exchange for a 50 per cent stake. One of Millbank's principal products is cigarette tissue which is sold to BAT companies and to other cigarette manufacturers. A vigorous expansion programme is under way and Wiggins Teape's share of the funds was being met by the allotment of 1,800,000 £1 shares to BAT at 60s. a share to be called up as required by Wiggins Teape until January, 1964.

The two companies have now agreed that Millbank should become a wholly owned subsidiary of Wiggins Teape—the two might otherwise have been in competition in certain overseas markets. This will remove the snags of a dual controlled company and the possibility that the area trading agreements operated between Millbank and Wiggins Teape would be contrary to the provisions of the Rome Treaty should Britain join the common market. BAT will sell its half-stake in Millbank for 3,537,613 shares in Wiggins Teape and will subscribe for a further 1,253,333 ordinary shares at 60s. each to cover its agreed share of Millbank's outstanding capital commitments as the funds are required. In all BAT will hold 30.37 per cent of Wiggins Teape's enlarged ordinary capital of £21.7 million.

Shareholders who are being asked to approve a deal that gives BAT virtual control of the company may wonder why the association with BAT did not take this form originally. But they will obtain a clearer picture of the profitability of the group as a whole for as Millbank was an associate company Wiggins Teape consolidated only its share of Millbank's dividends, amounting to £470,000 gross, in its 1961 accounts. In fact, Millbank's gross income amounted to £1.9 million last year. Then, earnings covered the Wiggins Teape 14 per cent dividend 1¾ times; a similar payment has been forecast for the current year, though the new shares will not rank for the 4 per cent interim, but profits are not expected to reach the 1961 level. At 56s. 9d. the £1 shares yield 4.9 per cent.

Ups and Downs

TWO of the three big companies which issued interim statements in the last few days are in the "super growth" class and their yields are minimal. The third, Beecham, had a similar rating a year or so ago but recent results have made investors think again.

Beecham Group.—At the recent meeting the chairman, Mr H. G. Lazell, told shareholders that sales for the first quarter were 5 per cent up on the previous year; the table shows that for the six months to September they were only 1¼ per cent higher at £28.9 million. The slowing down in the growth in sales probably stems largely from the 15 per cent tax on soft drinks and confectionery, which account for more than half Beecham's home sales. Moreover the past summer was no help to sales of soft drinks and margins are still below the levels of a year ago. Shareholders must wait until May for evidence of the steady improvement in margins which Mr Lazell expects to result from an examination of Beecham's operating methods.

BEECHAM'S SALES AND PROFITS

Six months to	Sept. 30, 1961 (£000's)	Mar. 31, 1962 (£000's)	Sept. 30, 1962 (£000's)
Sales	28,569	30,062	28,922
Gross income	3,996	3,516	3,757
Taxation	1,885	1,586	1,780
Net income	2,104	1,922	1,970
	%	%	%
Gross income/sales	14·0	11·7	13·0
Net income/sales	7·4	6·4	6·8

Elliott-Automation.—In 1961-62 the directors of Elliott-Automation followed a policy of dividend restraint leaving the interim unchanged and raising the final dividend by only one point, to make 14 per cent. Shareholders can look for a bigger increase this year for the interim dividend is raised from 5 to 6 per cent and the directors say that orders received and deliveries are substantially ahead of the corresponding figures in 1961 and that profits show a similar rise. In the electronics field, expenditure on capital equipment is heavy and a sharply rising turnover involves big increases in working capital. After issuing £2 million debenture stock in July, the directors are now to issue £1½ million of cumulative preference shares—something of a rarity these days. The shares, which it is believed will carry a 7 per cent coupon, will be placed through Philip Hill, Higginson, Erlangers and Hambros Bank. The demand for automation equipment is expanding rapidly and in view of the highly technical nature of the group's activities the board is being reconstituted to bring in more senior executives from within the group. Four of them are to succeed four of the present non-executive directors and from January 1st Sir Leon Bagrit, the managing director, is to succeed Mr Rudolph de Trafford as chairman.

Tesco Stores.—Following the one for five scrip issue the interim dividend has been raised from the equivalent of 8½ to 11 per cent and this has aroused speculation about the total dividend for 1962-63. Earlier the directors had forecast 22½ per cent but the size of the latest increase and the confident view of the directors about trading prospects for this supermarket group suggests that 25 per cent may not be too optimistic. Such a payment would raise the yield to 2½ per cent. The chairman, Mr J. E. Cohen, says that the increase in the interim dividend indicates improved trading results and an optimistic view of the future in supermarket business and in credit drapery, where the reorganisation of Harrow Stores Watford has now been completed.

THE MONEY MARKET

THE discount market, expecting a low outside application for bills at the Treasury bill tender on Friday of last week, left its bid for the £200 million 91-day bills unchanged at £99 1s 0d. The market's tactics were based on the low application for bills thirteen weeks previously. As it turned out total applications fell sharply by £39 million to £328 million, and the market received a quota of 41 per cent compared with the previous week's 31 per cent. The average rate of discount for these bills fell fractionally by 0.66d to 75s 11.09d per cent. The market received 63 per cent of its application for the £60 million 63-day bills on offer which brought its average quota for both types of bills to around 46 per cent.

Credit has been fairly short in Lombard Street this week. The authorities have not, however, forced the market to borrow at Bank rate, but have met its credit needs by the special purchase of bills.

The cost of three months' forward cover on the dollar rose sharply this week by $\frac{3}{16}$ to $\frac{5}{8}$ per cent. At the same time the New York bill rate rose from 2.80l to 2.833 per cent so that the arbitrage margin on a covered swap from US to British Treasury bills fell to just over $\frac{1}{4}$ per cent.

APPOINTMENTS

Economic Intelligence in a GROWTH INDUSTRY

We wish to appoint a lady or gentleman as Economic Intelligence Officer at our Head Office in Wembley.

A degree in Economics is desirable but not essential. The selected candidate will have had several years' experience in a similar capacity in industry and will possess a sound knowledge of official and other statistical sources. Knowledge of the electrical or electronic industries would be an advantage, but no hesitation need be felt by those who do not know these industries but are prepared to understand them.

Please write stating education, experience, age and salary to:—

Mr. L. S. Hind, Personnel Manager,
G.E.C. (ELECTRONICS) LTD.
Union Works, East Lane, Wembley, Middx.

MINISTRY OF EDUCATION
ASSISTANT COST ACCOUNTANTS

Two pensionable posts in London for men or women with suitable professional experience and qualifications. Age: normally at least 35. Duties involve investigating and analysing unit costs in education services and helping education authorities to increase efficiency and economy. Inner London salary scale (interim) £1,360 — £1,812. Promotion prospects. Write Civil Service Commission, Burlington Gardens, London, W.1, for application form, quoting 5602/02. Closing date December 19, 1962. (1).

WOLVERHAMPTON AND STAFFORDSHIRE COLLEGE OF TECHNOLOGY
DEPARTMENT OF MANAGEMENT AND BUSINESS STUDIES

Applications are invited for a post of RESEARCH ASSISTANT. Candidates should have a good general education, preferably with G.C.E. "A" Level Mathematics. Experience in industry or commerce desirable. An interest in business problems essential.

Duties are to assist academic staff in investigations and research projects in the fields of Industrial Relations, Marketing, Accounting, Data Processing and Ergonomics.

Facilities offered for part-time studies leading to a professional qualification or degree.

Salary scale: £630 x £30 to £690.

Write for application form and further particulars to The Principal, Wulfrana Street, Wolverhampton. Applications to be returned by December 14th.

NUFFIELD COLLEGE
(OXFORD)
RESEARCH FELLOWSHIP

Applications are invited from men or women graduates who wish to undertake research in Economics; Politics; Sociology; recent Economic and Social History and Political History; Industrial Relations; African Studies; Public and Social Administration; International and Public Law or other branches of the Social Studies. The appointment will normally be for two or three years. The stipend will be according to age. Further particulars may be obtained from the Warden. Applications should reach him not later than January 8, 1963.

RESEARCH IN ECONOMICS AND FINANCE

HOUBLON-NORMAN AWARDS

THE TRUSTEES OF THE HOUBLON-NORMAN FUND invite applications for FELLOWSHIPS or GRANTS in aid of RESEARCH into the working of industry and finance in Great Britain and elsewhere and the economic conditions affecting them.

FELLOWSHIPS, which are intended for experienced research workers, are awarded for full-time research for one year, which may be renewed for a second year. GRANTS are awarded for either full-time or part-time work. The amount of the awards, which will take effect from October 1, 1963, will depend upon the circumstances of the candidate and the probable expenses of his work.

Applicants must be British subjects normally resident in the United Kingdom. The Trustees are prepared to relax this rule only in exceptional circumstances.

Forms of application, which may be obtained from the Secretary of the Fund, c/o Bank of England, London, E.C.2, should be returned not later than March 1, 1963.

NOTTINGHAM AND DISTRICT TECHNICAL COLLEGE
BURTON STREET, NOTTINGHAM
Principal: D. A. R. Clark, M.Sc.Tech., M.I.Mech.E.

Applications are invited for the post of SENIOR LECTURER IN ECONOMICS.

Staff are expected to conduct research work. Consultancy work is allowed.

Salary in accordance with the Burnham Technical Scale: £1,800 x £50 — £2,000 per annum. A salary above the minimum may be paid in approved cases.

Further particulars and form of application may be obtained from the Principal, to whom completed forms should be returned not later than December 8, 1962.

TUTORS. A leading correspondence College requires tutors for courses in Economics, commercial and professional subjects. Place of residence unimportant. Brief replies, stating qualifications and subjects to Box 1068, c/o The Economist, 22 Ryder Street, St. James's, London, S.W.1.

LANCASHIRE COUNTY COUNCIL

RESEARCH ASSISTANT required in the Planning Department at PRESTON. Commencing salary according to qualifications and experience within the range £670–£1,360 per annum.

Applicants should possess a good honours degree in economics, geography, sociology or related subjects and should be interested in problems of industry, population and housing.

Disturbance allowances and removal expenses.

Application of £125 will be granted in approved cases.

Applications, giving age, qualifications, present appointment, experience and two referees, to the County Planning Officer (W), East Cliff County Offices, Preston, by December 4, 1962.

THE UNIVERSITY OF MANCHESTER

Applications are invited for the post of COURSE ORGANISER in the School of Management and Administration to develop a programme of courses for executives and administrators, which is to be instituted by the University. The post will be for one year in the first instance, with the possibility of renewal. Preference will be given to candidates who are interested in developing research in this field. Salary scale according to qualifications and experience. Membership of the F.S.S.U. and Children's Allowance Scheme. Applications should be sent not later than December 20, 1962, to the Registrar, the University, Manchester 13, from whom further particulars and forms of application may be obtained.

THE UNIVERSITY OF MANCHESTER

Applications are invited for the post of LECTURER IN GOVERNMENT (with special reference to international politics). Salary scale £1,150 to £1,950 per annum, initial salary according to qualifications and experience. Membership of F.S.S.U. and Children's Allowance Scheme. Applications should be sent, not later than January 15, 1963, to the Registrar, the University, Manchester 13, from whom further particulars and forms of application may be obtained.

Group Economist

- C. & J. CLARK LTD. of Street, Somerset, require a business economist. His (or her) primary role will be to advise and assist the Chairman and Managing Director. The appointment should lead to an executive career in this expanding group of companies.
- SHOEMAKING is the main business of C. & J. Clark Ltd. and its subsidiaries but the scope of the appointment extends to allied activities at home and abroad including all aspects of wholesaling and retailing.
- EXPERIENCE in applied economics and statistics is essential. It could have been gained in any of many contexts—the City, industry, government, academic research, economic journalism, etc. The emphasis is on applied statistics and examination of trading conditions rather than on market research. (Experience of the boot and shoe industry is not essential.)
- MINIMUM formal qualification is 2nd class honours degree in Economics (or equivalent).
- SALARY probably starting between £2,000 and £2,500. Age range preferred 27 to 33.

Write in confidence to us as the company's advisers. Nothing will be disclosed without permission. Letters should be addressed to M. J. Graham-Jones.

JOHN TYZACK & PARTNERS LTD
10 HALLAM STREET · LONDON W1

BIRMINGHAM (CITY OF) EDUCATION COMMITTEE

COLLEGE OF COMMERCE

APPOINTMENT OF PRINCIPAL

Applications are invited for the appointment of PRINCIPAL of the City of Birmingham College of Commerce, to commence duty on September 1, 1963, or as soon as possible thereafter. The salary scale is £2,750 x £70 (2) x £60 — £2,950 per annum.

Candidates should have high academic qualifications and wide experience including, if possible, teaching and commercial or industrial experience.

Application forms and details of the post may be obtained from the undersigned, to whom completed forms must be returned not later than Monday, December 10, 1962.

E. L. RUSSELL,
Chief Education Officer.

Education Office (Room 315),
Margaret Street, Birmingham, 3.

UNIVERSITY OF MELBOURNE
DEPARTMENT OF ECONOMICS

Applications are invited for the positions of SENIOR LECTURER and LECTURER IN ECONOMICS.

Qualifications in labour economics, microeconomics and economic statistics would be desirable but applications would be welcomed from candidates with other interests.

The salary range for a Senior Lecturer is £A2,450 x £A100 to £A3,000 per annum and for a Lecturer £A1,650 x £A105 to £A2,250 per annum. Commencing salaries will be fixed according to qualifications and experience.

Conditions of appointment and further information may be obtained from the Secretary, Association of Universities of the British Commonwealth (Branch Office), Marlborough House, Pall Mall, London, S.W.1.

Applications close in Australia and London on December 31, 1962.

MALTA COLLEGE OF ARTS, SCIENCE AND TECHNOLOGY

Applications are invited for a LECTURER IN COMMERCE to develop studies and teach a selection from ECONOMICS and GEOGRAPHY OF TRADE, ACCOUNTANCY, INDUSTRIAL MANAGEMENT.

QUALIFICATIONS: Good degree. Some years' teaching experience in a major institution of Further Education plus industrial experience desirable.

The selected candidate will be required to take on duties as soon as may be possible, and may be required to teach some of the subjects enumerated at all levels.

SALARY: The salary offered is that of BURNHAM SCALE FOR LECTURERS PLUS 30 PER CENT. Appointments are on contract terms for a period of three years.

Free passages to Malta will be provided for the successful candidate, his wife and children not exceeding five passages in all on first appointment, and free passages back to the U.K. on satisfactory completion of engagement. Children to be under 18 years, unmarried and dependent on the appointee. Free quarters are not provided but furnished flats at a reasonable rent are available.

LEAVE: Three and a half days for each completed month of service which can be aggregated at the end of contract plus Twenty-eight days' leave per year to be taken normally during the Long Vacation.

APPLICATIONS (SIX COPIES), giving age, qualifications, experience and names of three referees, should be sent to THE COUNCIL FOR TECHNICAL EDUCATION AND TRAINING FOR OVERSEAS COUNTRIES, 12 Lincoln's Inn Fields, London, W.C.2, by 12th DECEMBER, 1962.

For other appointments see page 866

The Electricity Council

SENIOR STATISTICAL ASSISTANT

Applications are invited for the superannuable appointment of a SENIOR STATISTICAL ASSISTANT in the Commercial and Development Department at Headquarters in London.

The successful candidate, who should have a sound knowledge of data-processing and some experience in a statistical office coupled with ability in statistics or mathematics, will be required to assist in the Load and Cost Research Section with the carrying out of surveys in electricity consumers from questionnaire-drafting to the preparation of final tabulations. The desirable qualifications would be the Intermediate Examination of the Institute of Statisticians.

● ***Salary within £1,120-£1,340 p.a. inclusive, according to qualifications and experience.***

Applications, stating age, present position and salary, and giving full details of qualifications and experience, should be forwarded to the Assistant Secretary (Establishments), The Electricity Council, Winsley Street, W.1, by November 30, 1962. Quote ref.: ECO207.

Personnel and Industrial Relations

- EXPANSION on an international scale by an outstandingly successful engineering company provides one of those rare opportunities for a Group Personnel appointment right at the top.
- THE company leads in its field of medium engineering. It now employs about 8,000 people at four plants in Britain. There are also six plants already operating abroad.
- SCOPE in this new appointment will extend to all matters which affect directly the management of people and of industrial relations both at home and overseas. As the Group's senior executive in this aspect of business, his responsibility will be direct to the managing director.
- EXPERIENCE must provide proof of achievement in a senior job of this kind. Emphasis is placed on proved capacity to solve problems of deploying and developing managerial manpower on a global basis.
- SALARY starting between £3,500 and £5,000 p.a.

Write in confidence to us as the company's advisers. Nothing will be disclosed without permission. Letters should be addressed to M. J. Graham-Jones.

JOHN TYZACK & PARTNERS LTD

10 HALLAM STREET · LONDON W1

BIRMINGHAM CHAMBER OF COMMERCE

Applications are invited for the post of Assistant Secretary (male). Personality, tact, educational background and ability to write clearly and to express ideas well are important. Preference will be given to graduates in arts, commerce, economics or law, or to persons with professional qualifications or suitable administrative experience. Commencing salary £1,000-£1,250 according to qualifications and experience. Good prospects. Contributory pension scheme.

Applications, marked "Confidential," giving full personal details, should be sent to the Secretary, Birmingham Chamber of Commerce, P.O. Box 360, 75 Harborne Road, Birmingham 15. *Applications* should be received by December 7th.

UNIVERSITY OF QUEENSLAND

LECTURER IN PUBLIC ADMINISTRATION

The University invites applications for the position of Lecturer in Public Administration. Applicants should have a good honours degree in Government, Political Science, Public Administration or some related field, preferably *with research and/or* public service experience. The Public Administration section of the Department of History and Political Science has developed a strong interest in a number of special fields including organisational theory, budgeting, public policy and administration in under-developed areas.

The salary range for Lecturer is £A1,830 x £A90 (6) x £A80 (1) — £A2,450.

The successful applicant will be entitled to F.S.S.U. type Superannuation, Housing Assistance, Study Leave and Travel Grants.

Additional information on the conditions of appointment, staffing and activities of the Department, together with application forms will be supplied upon request to the Secretary, Association of Universities of the British Commonwealth, 36 Marlborough *House, Pall Mall,* London, S.W.1. Applications close in London and Brisbane *on December 28, 1962.*

UNIVERSITY OF ALBERTA CALGARY

FACULTY OF ARTS AND SCIENCE

Applications are invited for senior positions in the following departments:—

GEOGRAPHY.
MODERN LANGUAGES.
POLITICAL ECONOMY.
SOCIOLOGY.
PSYCHOLOGY (Bio-Statistics).
PHILOSOPHY.

Salary ranges: Associate ($9,000-$11,700). Professor ($12,000 and up).

The University of Alberta, Calgary, is situated in a city of over 250,000 people in the foothills of the Canadian Rockies. It is the second campus of the University of Alberta and offers full degree programmes. Enrolment in 1963-64, about 2,200.

Inquiries should be addressed to:—

THE DEAN,
Faculty of Arts and Science,
University of Alberta, Calgary,
Calgary, Alberta,
Canada.

WORK STUDY

A major industrial group wishes to appoint a man to the existing section which is responsible for training Work Study practitioners and for maintaining in them a high, uniform and acceptable standard of professional competence. Courses are also mounted for all levels of management.

The position will involve the design and execution of courses in a wide field of associated subjects, from fundamentals to advanced techniques. Consequently, a broad background is necessary, which must include considerable non-academic experience. Indeed, actual teaching experience is not essential, but evidence of capability in this respect will be required. A degree would be a distinct advantage. There may later be opportunities for laboratory and development work. The section is based near London.

The age envisaged is about 30, and the starting salary will not be less than £1,500 per annum.

Candidates should send brief details, in complete confidence, to Box 1671.

For other appointments see page 865

AUSTRALIAN NATIONAL UNIVERSITY

INSTITUTE OF ADVANCED STUDIES

RESEARCH SCHOOL OF SOCIAL SCIENCES

DEPARTMENT OF SOCIOLOGY

Applications are invited for the *position of* RESEARCH FELLOW in the Department of Sociology. An appointment as Research Fellow is *normally* for three years—with the possibility of extension to a maximum of five years—but a shorter term may be considered. The Acting Head of the Department is Professor W. D. Borrie.

This is a new Department in the School, and a major objective is the development of research into contemporary aspects of Australian society, and comparative studies, with particular reference to such questions as urbanisation, social and occupational stratification and mobility, the structure and function of social *institutions,* and the professions. Currently the department has a special interest in studying some of the major issues associated with the rapid growth of universities in Australia.

The greater part of the successful applicant's time will be available *for his own research,* but he will be expected to assist in the supervision of post-graduate students and in seminars.

The appointment will be in the range £A1,656-£A2,450. Reasonable appointment expenses will be *paid for the successful* applicant and his family.

Further details should be obtained from the Secretary, Association of Universities of the British Commonwealth (Branch Office), Marlborough House, *Pall Mall, London,* S.W.1.

Applications close in Australia and London on January 2, *1963.*

CANADA

SOCIAL INSURANCE ECONOMIST

Up to $10,300 per annum.

A unique opportunity for a Professionally experienced Economist with the

UNEMPLOYMENT INSURANCE COMMISSION, OTTAWA, CANADA

RESPONSIBILITIES INCLUDE RESEARCH AND ANALYTICAL STUDIES ON SOCIAL INSURANCE POLICIES OF CANADA AND OTHER COUNTRIES

For further details and application forms contact Competition 62-2018,

NATIONAL EMPLOYMENT SERVICE OF CANADA, 38, Grosvenor Street, London, W.1.

THE UNIVERSITY OF MANCHESTER

Applications are invited for the full-time post of ASSISTANT in the Research Section of the Faculty of Economic and Social Studies. The person appointed will be expected to have research interests in the fields of Social Services and Social Policies such as Health and Hospital Administration, Mental Health, Care of the Aged, Housing, etc. The vacancy is in either Grade II (which carries the status of Assistant Lecturer) or Grade III. The salary scales are as follows:—Grade II—£900 to £1,050 per annum; *Grade III—£750 to £800 per annum.* Duties to commence February 1, 1963, or as soon as possible thereafter. Applications should be sent not later than December 15, 1962, to the Registrar, the University, Manchester 13, *from whom further particulars* and forms of application may be obtained.

UNIVERSITY OF GLASGOW

LECTURESHIP IN POLITICS

Applications are invited for a Lectureship in Politics, tenable from October 1, 1963, or from such earlier date as may be arranged. Teaching duties mainly in the field of political institutions. It is hoped to appoint a person of some experience, who could be *given a measure* of responsibility for organising the teaching in this field. Salary scale: £1,150-£1,950 per annum. Initial salary according to experience and qualifications. F.S.S.U. and family allowance benefits.

Applications (6 copies) should be lodged, not later than December 28, 1962, with the undersigned, *from* whom further particulars may be obtained.

ROBT. T. HUTCHESON,
Secretary of University Court.

NEW COLLEGE, OXFORD

New College will shortly elect a Bursar to succeed Mr. J. B. Butterworth. The Bursar will be a Fellow of the College. Applications should be sent to the Warden, New College, Oxford, from whom further particulars may be obtained. The closing date for applications is December 31, 1962.

PARIS: BI-LINGUAL ENGLISH/FRENCH PRIVATE SECRETARY aged 21-28 required for Paris Head Office of *French* manufacturing concern (part of British international group) as English Secretary to senior French official. Minimum Shorthand speeds: English 100 w.p.m., French 80 w.p.m. Preference for those having lived for a time in a French-speaking country.—Apply Box 1670.

THE UNIVERSITY COLLEGE DAR ES SALAAM

Applications are invited for first *Professorship* of Economics. Appointment to commence preferably summer 1963, teaching to begin July, 1964. Post carries responsibility for planning new syllabus in Economics and sharing in *development* of Faculty of *Social* Studies. Salary £2,600 p.a. Expatriate allowance £300 p.a. Permanent or Contract terms (contract terms carrying 10 per cent. gratuity). F.S.S.U. Education allowance: £150 p.a. for first child, £175 p.a. for second child, £200 p.a. for third child. Housing at subsidised rental. Passages for appointee and family (up to five adult passages) on appointment, termination and leave (three months every 21 months). Detailed applications (8 copies) naming three referees by December 30, 1962, to Secretary, Inter-University Council for Higher Education Overseas, 29 Woburn Square, London, W.C.1, from whom further particulars may be obtained.

EDUCATION: BUSINESS AND PERSONAL

EXPERT POSTAL TUITION

for examinations—B.Sc.(Econ.), Law, Accountancy, Costing, Secretarial, Civil Service, Management, Export, Commercial, General Certificate of Education, etc. Also many practical (non-examination) *courses in business* subjects.—Write today for free prospectus and/or advice, mentioning examination or *subjects* in which interested, to the Secretary (OW/2),

METROPOLITAN COLLEGE, ST. ALBANS

or call at 30 Queen Victoria Street, London, E.C.4. Established 1910.

A FOREIGN LANGUAGE in a few months for yourself or your staff, with the easy ASSIMIL way. You *assimilate* the language and acquire the accent naturally by *listening* to the living language on gramophone records *with an* illustrated book to guide you. FURNITURE New Day Furnishing Stores Limited now operates 91 furniture shops, and although there were 105 shops two years ago overall results have substantially improved during the same period, because most of the shops closed were unproductive and some of their turnover has been replaced by acquiring a few larger units working profitably.

FOOD The severe price cutting in food mentioned in the interim report continued to affect Blower Brothers Limited throughout the year and the trading profits suffered in consequence. There are now three supermarkets and one self service shop in operation. Four more are well forward in the development programme and will be coming into operation at intervals in the next 12 to 18 months.

RADIO & TELEVISION Although business in radio and television was not buoyant the sales and the rental income of both Tates Radio Co. Limited and Carling & Wright (Leeds) Limited were higher than in the previous year, as were the profits. The installation and maintenance company Tates Electronic Services Limited due to heavily increased costs combined with a general demand for lower charges produced lower profits.

HARDWARE Edmund R. Goodrich Limited increased their turnover in hardware substantially but rising expenses as well as development costs slightly reduced profits. Up to date 11 new branches have been opened and two closed, the total now being 68. There seems little doubt that when the development expenses have been absorbed and the new branches are well established, this subsidiary should be able to show good results from its progressive policy of expansion. Edmund R. Goodrich (Northern) Limited have up to date acquired 14 branches in the north.

PETROL FILLING STATIONS As an initial experiment the group has acquired 10 petrol filling stations. A separate management team is being built up to enable further expansion to be undertaken when it is considered appropriate to do so.

FUTURE PROSPECTS In spite of the general upward trend in expenses of all kinds, overheads are being kept under control, and owing to the reduction in bank rate the saving in interest will be substantial. But in these days of international tension who can say what will happen to the economy of this country and more particularly its shopkeepers so long as wars and rumours of wars are uppermost in people's minds? Shareholders may rely on the managements and staffs to do everything in their power to maintain the group's business in good shape in the portentous days which may lie ahead.

WHY INVEST IN JAPAN NOW?

Because conditions right now are the best that they have been for some time. Consider the facts. The Japanese stock market is now improving after a decline over several months. Restrictions on foreign investors have been substantially eased. The Japanese economy is in a strong position, resulting from a surplus of international balance of payments. And, there are other factors, all of which indicate a policy of easy credit from the government. These will favourably affect the economy and the stock market.

When should *you* invest in the Japanese stock market? We think right now is a good time.

We would also like to help you know more about *how* to invest. It's not difficult, but we want to be sure that you have all of the facts concerning the recent changes in investment laws. There are many details about investing which concern taxes, dividends, sales and other transactions. Our booklet, "How to Invest in Japanese Securities", has been written to help *you* to know more about the market *before* you begin . . . or expand in . . . an investment programme in Japan.

To receive your free copy of this valuable pamphlet, send your name and address to Nomura Securities. There is no obligation, of course.

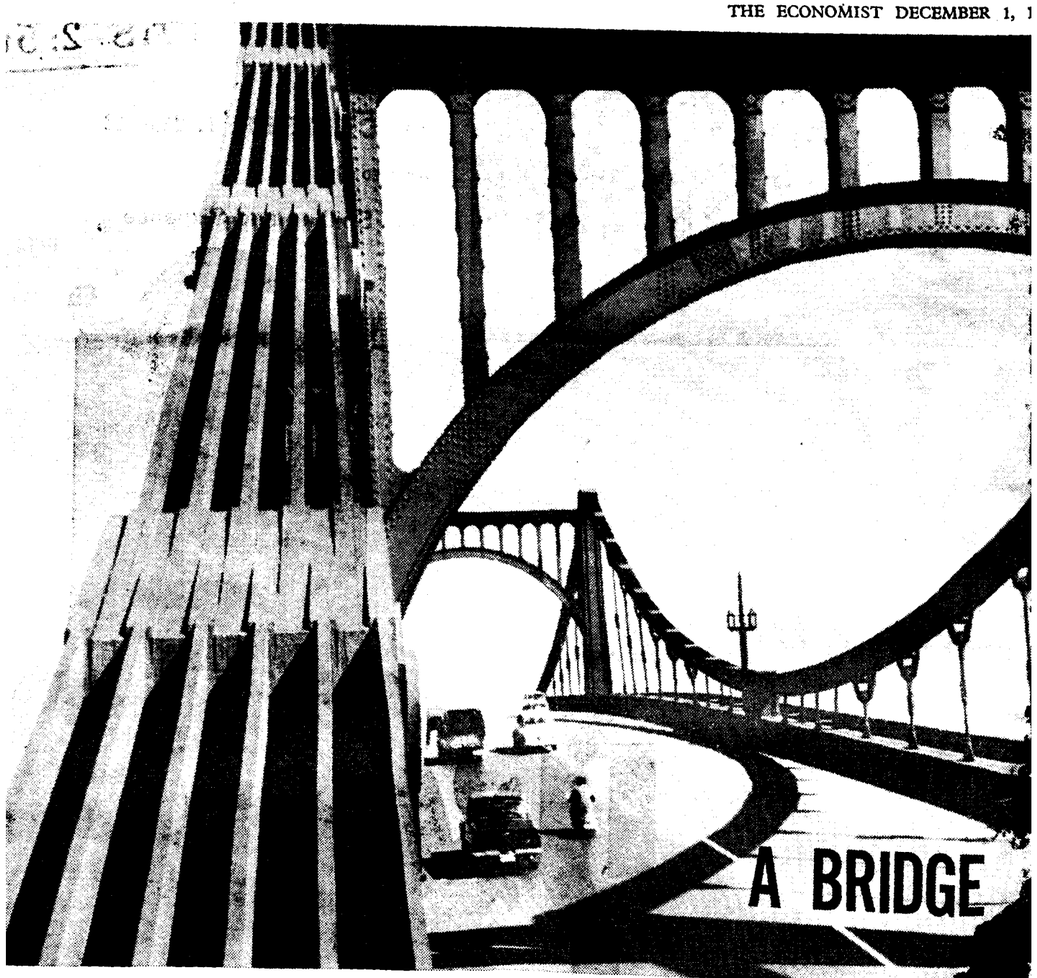
Guide to contents : see ov



It carries ox-carts and ores, food and freight cars, trucks and trade. It spans rivers and gorges ... even centuries. It brings people together, their aspirations closer.

Bridges must be strong, for they carry the hopes of nations. Bridges must be durable, for they must link today's plans with the realities of tomorrow. Yet, bridges must be light enough not to weigh heavily on the meagre resources of emerging nations.

Fuji Iron & Steel Company makes beams, wire rods, and plates for bridges. In fiscal 1961* Fuji made 1.5 million tons of them. But this still isn't enough. In the next five years, Japan and the other democratic nations of Asia will need over 3,000 bridges using tremendous amounts of steel. They will need countless tons of plates and shapes and other steel construction materials. These needs are urgent; and providing for these needs is a big job.

Fuji Iron & Steel Company, one of the world's largest iron and steel producers, is ready for the job. Its furnaces and mills in fiscal 1961* turned out 4.5 million tons of pig iron, 5 million tons of steel ingots, and some 4 million tons of steel products. In the next ten years production will be more than doubled by the addition of new blast furnaces, LD converters, rolling mills, and coating lines ... a giant step to catch up with the fast-growing demand.

Bridges bring progress, and where progress requires steel, Fuji Iron & Steel Company spans the world with better products.

PRODUCTS: bars, shapes, sheet pilings, wire rods, rails, hoops, plates, hot rolled sheets and coils, cold rolled sheets and coils, galvanised sheets, zinkotes, tin plates, sectional poles, culvert pipes, light gauge shapes and chemical by-products.

*Fiscal year is from April 1 to March 31 of the following year.

You can always ***trust*** *a steel product ... if it has* ⓢ

THE WORLD

BENEATH THE UMBRELLA

Beside the nuclear cloud: questions of war and peace:

It is pleasant to assume that just because the world did not blow itself up about Cuba a month ago it is now too shocked to allow further crises to develop. Sadly, this may not be true. The diplomatic mood is usefully circumspect, but the world conflict will take a long time to resolve itself (p. 885).

• **Mr Mikoyan's** talks in the United States have disproved again the notion that peace is geographically divisible (p. 891).

• The **American Administration** is still on guard against the Russians, but not militantly so (p. 901).

• What can **Mr Nehru** do now? (p. 914).

• **President Ayub Khan** of Pakistan and **Mr Duncan Sandys** both seem to know (p. 892).

Rainy-day reading: Don Quixote Zorin tilts at US "rockets in Spain"—and What Happened After That (p. 921).

OUT IN THE RAIN

Common market, commonwealth, and commonpoverty:

Italy honestly wants to bring Britain in to sit by the warm common market glow—but it might do more about opening the door (p. 888).

Europe: Dr Erhard's views about the vices of planning ran into a storm at Strasbourg (p. 897).

Trinidad has rejected Britains *pourboire* (p. 896).

SUNSHINE AND SHOWERS

International business:

Atlantic World: Some blunt—but welcome—advice has been given by the Organisation for Economic Co-operation and Development to the government of the United States (p. 935).

France: The chances of fulfilling the Gaullist election promise of expansion without inflation are slim (p. 914).

Germany: Unless the explosive growth in fuel oil sales is voluntarily restrained, controls might have to be imposed—even if they go against the grain (p. 938).

Common market: A draft convention on European patents can raise some problems for **British** manufacturers (p. 949).

Switzerland is prepared to put some chips into the international financial pool but is not ready to be formally associated with the International Monetary Fund (p. 942).

HEAVY WEATHER

International monkey business:

In **Central Africa** black politicians are learning the European arts of compromise—and double-dealing (p. 889).

In **France,** General de Gaulle, who never did bother much about parliament, now has no need to bother at all (p. 914).

—But **Algeria** is still a bother (p. 913).

In **Germany,** Dr Adenauer is striving to calm the storm surrounding his government (p. 918).

OUTLOOK FAIR

American matters:

Mr. David Bell's new appointment improves the congressional prospects for **foreign aid** but worsens those for tax reduction (p. 902).

The President's order banning **racial discrimination** in government-insured housing does not go as far as many people would like (p. 904).

Atomic energy celebrates its twentieth birthday with some hope of becoming an economic proposition by its thirtieth (p. 902).

In New York an imaginative but expensive new approach to **juvenile delinquency** is being mobilised (p. 907).

Unemployment is really more serious in the United States than in Europe (p. 908).

BRITAIN

MUCH TOO LITTLE

Last week's by-election results need rigorous appraisal by both Government and Opposition: Labour's best hopes do not lie in harping on the serious shabbiness of north Britain; and the intervention of anti-common-marketeers (of either party) is not in itself a real threat to the Government.

• In counting their chickens for a revival the Tories are less inclined to rely on the **Prime Minister's** personality than they were in 1958-59 (p. 887).

• The dimensions of the **Tories'** discomfiture are a measure of the continuing tide of feeling against them (p. 891).

• Meanwhile the **Labour Party's fever,** which threatened it with a fatal convulsion, has somewhat abated (p. 892).

With a powerful competitor aloft and two other contenders for the small jet market, the **British Trident** will have a job to make a big noise in the sky (p. 945).

MUCH TOO MUCH

The **6 per cent wage increase** for railwaymen has begun to have its wider fall-out: and a similar award to **post office** engineers (without reference to poor NIC) will help to blow up Mr Maudling's efforts (p. 892).

The Ford company's chairman has set about the **builders of Merseyside,** with some justification—if not as much as he has claimed (p. 898).

One in four of potential **university entrants** could not find a place this year: which is to say that traditionalist obstructions to the places' multiplication must be overcome (p. 897).

MUCH APPRECIATED

The intention of the **Protection of Depositors Bill** is to open investors' eyes to the risks they run—but not necessarily to protect them from their own blindness (p. 937).

New means are being sought—and one has perhaps been found—of fitting **mentally sick people** back into industrial society (p. 922).

A private member's Bill encourages the campaign towards simpler **stock transfers** (p. 952).

MUCH OF A MUCHNESS

Moves towards official economic co-operation between the **two parts of Ireland,** thought to have foundered on the obduracy of Ulster Unionists, may be refloated (p. 923), but British co-operation with an Irish sugar industry has raised a controversy (p. 950).

The "new realism" of the **Campaign for Nuclear Disarmament** turns out to be roughly everybody else's old realism with added confusion (p. 898).

A recent case has drawn attention to the anachronistic but still legally valid advantages of being high-born (p. 895).

Detailed contents on page 885

A word to Top Management

These are highly sophisticated days in the business world. Marketing and advertising are playing increasingly important roles. In direct consequence, more and more companies are seeking methods of assessing their advertising and selling in accurate, objective terms.

We at ATV have built up a series of services to help advertisers in the Midlands to make the most of that area's tremendous sales potential. These include objective advice on media selection, facilities for checking the sales effectiveness of your commercials, and help with point-of-sale promotion and merchandising.

The latest ATV service, starting in January 1963, is the unique ATV Consumer Audit. Continuous weekly research in 1,000 Midlands homes will give detailed information on 30 main product groups, including food and drink, toiletry and household products. The monthly reports will show total purchases brand by brand, repeat purchasing patterns, brand shares of market, studies of special offers, etc. Thus, you no longer have to guess how your product (and the competition) is doing . . . you can actually know if you use ATV Midlands. An ATV exclusive, the Consumer Audit is, like all other services to ATV Midlands advertisers, absolutely free.

By now your agency will have discussed with your advertising department how best to take advantage of the highly economical time-buying possible in the Midlands on ATV in 1963. We believe that some of the above facilities—especially the ATV Consumer Audit—could also be of interest to your sales people, and that you, as top management, would do well to ensure that your company benefits from the excellent after-sales and ancillary services that we provide to advertisers on ATV Midlands weekdays.

If you would like to discuss any points arising from this announcement, or to receive a comprehensive brochure on the ATV Consumer Audit, just write or telephone A. K. G. Spencer, General Sales Manager, ATV Midlands, 17 Great Cumberland Place, London W1. Telephone: AMBassador 8040.

MIDLANDS ATV WEEKDAYS

DO YOUR BUGWATCHING WITH AN

ASAHI PENTAX

Watching a praying mantis through the razor-sharp lens of an Asahi Pentax camera may be so absorbing that you'll forget to release the shutter! For with an Asahi Pentax, you see exactly what the film will see — in sharp focus, with exact composition and completely controlled depth of field.

Mantes, praying or otherwise, and most other insects, like to pose for Asahi Pentax pictures. (Birds, animals, and flowers do, too.) For any type of photography, you'll find a world of pleasure in the versatility and dependability of an Asahi Pentax.

Distributed in U.K. by
THE RANK ORGANISATION, Cine & Photographic Division, 37-41 Mortimer Street, London, W.1.

Certainly not..

Clearly, no one in his senses would use chewing gum at a time and place such as this.

However there are times and places where the use of chewing gum can be most beneficial; in fact its discreet use is a mark of tact and consideration for others as it is a definite aid to oral hygiene.

Doublemint chewing gum is especially made for such people. Its ingredients are carefully selected throughout, even its flavour has been double distilled; in fact, as its name implies, Doublemint is double good and gives you double benefits in many ways.

Try some at the right time and in the right place and see for yourself.

WARDS' PLANT flourishes on most contractors' sites

Wards sell and hire all types of contractors' plant. Much of it is manufactured within the Wards organisation—Smiths' excavators and cranes, for instance. All Wards' customers have the benefit of on-the-spot service from a country-wide network of maintenance depots. Through their Contractors' Plant department, Wards are in at the beginning of many industrial projects: and they often play a major part throughout the life of the enterprise, so wide is Wards' service to industry.

THE ECONOMIST DECEMBER 1, 1962

THAT'S THE BIG speed-up!

Now winter services take up the speed-up. The new faster trains, saving over an hour between Edinburgh and King's Cross, go into winter service. Journeys are shorter, more comfortable. King's Cross to Edinburgh and the main intermediate stations—it's the winter speed-up.

New locos—new track New powerful diesel locomotives have made these new timetables possible. New long welded track gives you a smoother ride at over 60 mph for mile after mile. And up-to-date carriages and restaurant cars add comfort to your journey.

How many trains? The speed-up affects most main line trains on the routes from King's Cross, giving you not only a better, faster journey but a wider choice of trains. For example, three trains each way make the daily journey between London and Edinburgh in less than 6 hrs. 20 mins.

KING'S CROSS—NEWCASTLE—EDINBURGH

King's Cross	8.0 a.m.	10.0 a.m.	4.0 p.m.
Newcastle	12.16 p.m.	2.1 p.m.	8.1 p.m.

FASTER ALL ALONG THE LINE

KING'S CROSS-EDINBURGH

SHEFFIELD · LEEDS · NEWCASTLE

BRITISH RAILWAYS

100,000,000 ton miles of cargo flown in first half of 1962! More than any other airline has flown in a year!

100,000 transatlantic cargo flights—a record recently set by Pan Am, a milestone unmatched by any other airline!

63 Jets a week from Europe to the U.S.A.—more than any other airline. And each Jet offers 4 tons' cargo capacity!

12 all-cargo Clippers a week to the U.S.A. from Europe—with 17 tons' capacity each and room enough for almost any outsized shipment.

21 European cities have nonstop or direct Jets to the U.S.A. with Pan Am—no reloading en route. Only Pan Am serves so many.

15 U.S. cities served direct from Europe by Jet—no other airline flies direct from Europe to so many U.S. cities.

364 times a day a Pan Am Jet lands or takes off somewhere 'round the world.

114 cities around the world are served by Pan Am Clipper Cargo.

1,357 full-time professionals are on Pan Am's cargo staff—more than on any other airline.

4,138 buyers and sellers have been introduced and begun new trade through Pan Am's exclusive (and free) World-Wide Marketing Service.

10 kinds of lightweight Pan Am containers to make your shipping easier, faster, safer.

Only Pan Am offers you so many money-making advantages. Take advantage of them! Call your helpful Cargo Agent, Freight Forwarder or Pan Am.

Clipper, Trade-Mark, Reg. U.S. Pat. Off.

it all adds up to: PAN AM WORLD'S LARGEST AIR CARGO CARRIER WORLD'S MOST EXPERIENCED AIRLINE

THE CITY OF STEEL SELLS TO NEW ZEALAND

The Commonwealth country of New Zealand is in area only slightly larger than Britain. It has a population of 2,372,000 including 160,000 Maoris. The principal city is Auckland, with 423,000 people, but the capital is Wellington, on the southern coast of the North Island and therefore approximately in the centre of the country. About 49% of the land of the two islands is agricultural and the country's main exports are wool, meat, butter and cheese. New Zealand produces a tenth of the world's wool and for every one inhabitant there are 20 sheep.

Britain is New Zealand's chief market; 56% of her exports was sent here in 1960. In return Britain exports machinery, metals and manufactures, vehicles, textiles and chemicals to New Zealand and is her largest supplier.

The Steel Company of Wales is active in the New Zealand market. In 1961 the total of *world* exports from 'The City of Steel,' the vast steelworks at Port Talbot on the Welsh coast, was over £34 million. This included 54.7% of Britain's sheet steel and 72.8% of her tinplate exports. These figures were achieved in the face of heavy competition.

Cattle droving in Arawhata Valley, South Westland

PEA HARVEST From late November until the end of February—the New Zealand summer—an army of workers in three round-the-clock shifts gathers the pea harvest. This crop, near Hastings, is destined for the plant of J. Wattie Canneries Ltd. who are users of tinplate manufactured by The Steel Company of Wales.

WATER POWER HARNESSED The 90,000 kilowatt Karapiro dam project is one of a chain designed to improve New Zealand's hydro-power output. New Zealanders use an average of 22% more electricity per head than the British. The Steel Company of Wales supplies New Zealand with electrical sheet steel for use in power and distribution transformers.

PAINT TEST Paint samples manufactured by Taubmans Ltd. of Wellington are tested by an employee on an outdoor surface. The cans containing the paint are manufactured by Alex Harvey and Sons (Wellington) Ltd. from tinplate supplied by The Steel Company of Wales.

COOKER LINE These modern electric cookers are being assembled and tested in a plant at Christchurch, South Island. Domestic appliances, such as refrigerators and cookers, that are made in New Zealand, use considerable quantities of sheet steel supplied by 'The City of Steel.'

YOUR C.I. MAN KNOWS HIS BUSINESS... AND PROBABLY YOURS AS WELL

He is the man from C.Itoh, world-wide trading and investment company. There is one permanently stationed in most of the world's major capitals. His job: develop potentials into profits.

Your C.I. man is a trading expert. He is at the source and knows his market—trends, cost factors, customs, banking, market conditions—the know-how that is essential in a field as complex as international trade.

Talk to him about commodities, any commodity, and he'll tell you all you need to know to buy, ship or sell steel, cotton, rubber, wheat, oil, chemicals and you name it ... machines and equipment, too. C.Itoh handles thousands of commodities every day, all supervised by a practised team of experts.

Whatever your business, importing, exporting or cooperative ventures, contact your nearest C.I. man. He is a man who knows his business.

Chemicals from Widnes

... and Henry Yeoman's headache

CHEMICAL COMPANIES · INTERNATIONAL ENTERPRISE ·

Healthy type, Henry Yeoman. Even so, he gets an occasional headache. And then, like so many of us, he reaches for an aspirin. Helen, his wife, swears by Paracetamol—an equally effective analgesic tablet acceptable to even the most delicate stomach. But either way, a headache in the Yeoman household means chemicals from Widnes.

You see W. J. Bush & Co. Ltd.—one of the companies of the A & W Group—makes both Henry's aspirin and Helen's Paracetamol . . . literally by the ton! This is another of the many ways in which A & W plays an everyday part in the lives of millions of people all over the world.

VOLUME CCV - NUMBER 6223

The New Climate

THERE is nothing like a good scare to make a man take a rosy view of life. To judge from some recent comments, the fact that the world did not blow itself up about Cuba a month ago has sharply improved the chances that it will refrain from blowing itself up about anything else. Mr Nikolai Polyanov, who writes about international affairs in *Izvestia*, said on November 24th that the end of the Cuban crisis might mark the beginning of the end of other problems. In the same week, Mr Harlan Cleveland, an American assistant Secretary of State who sometimes seems to have the job of trying out new concepts for President Kennedy, talked of a "watershed" dividing the old pre-Cuban landscape from the new country opening up ahead ; and Lord Home said the day was drawing nearer when Russia would recognise its community of interest with the western nations. Mr Kennedy and Mr Macmillan, meeting in the Bahamas on December 19th, will have to weigh the theory that the events of the last few weeks have been a blessing in heavy disguise: a crisis, perhaps, to end crises.

Were they ? It is true that several people have learned a useful lesson this October and November. The United States has learned that, if it catches Mr Khrushchev far from home with his conventional trousers down, he is likely to back warily away without resorting to nuclear mayhem ; those who were not at all sure that he would do this can indeed salute the coolness of Mr Kennedy's judgment. Mr Khrushchev himself has undoubtedly made a note not to get caught again in a situation where he is left with no choice except atomic war or backing down. And, while the United States and Russia have been redrawing the limits of their power, a far bloodier clash on the other side of the world has been forcing the Indians to redefine the limits of non-alignment.

Obviously things are not going to be quite the same again. But one suspects that the watershed that has been crossed (to go on with Mr Cleveland's image) is not a dramatic Himalayan divide, separating harsh mountains above from comfortable plains below, so much as one of those barely perceptible Pennine-style watersheds where the ups and downs on one side look—for a time, at least—remarkably like the ups and downs on the other. In other words, it is going to be a mistake to expect any very great or sudden shift in policy or alignment on anybody's part. The most that can sensibly be hoped for in the immediate future is that some of the fairly cheering things that were already beginning to happen before the United States Navy forced Mr Khrushchev's missiles out of Cuba, or the Chinese burst into north-eastern India, will be given a helping push on their way.

Two general points are worth making about the post-crisis world. The first is that the really important relationship to keep an eye on will continue to be that between Russia and the United States. Doubtless the Indians, and some of their friends in the uncommitted world, are feeling pretty disillusioned about China, but it is simply not realistic to expect this disillusionment to produce a headlong rush out of the camp of non-alignment. If only because Mr Nehru wants help from as many sources as possible, he is bound to keep one hand stretched out in Russia's direction as the other hand tries to ward China off. The western governments understand this well enough ; but it is possible that western, and particularly American, public opinion will get restless as western arms go on flowing into India, and India stays stubbornly neutral in every quarrel

except its own. It will have to be explained that there are compelling reasons why the present three-way division of world, among western, communist and uncommitted ions, is unlikely to be upset by any startling changes of giance in the West's favour.

The second general point is that the relationship between ssia and the United States, which is still the heart of the tter, has not been fundamentally changed in the last uple of months. The two sides have had a horrid shock finding themselves on the brink of war, and have learned nething about the techniques for scrambling back from brink. Mr Mikoyan's visit to Mr Kennedy this week ows that they want to keep these techniques in good ctice. But neither side has had any reason to change its imate of the other's aims in life (as Mr Nehru has with ina). Right or wrong, their deep-rooted suspicions remain ; l as long as they remain, there will be no meeting of nds on the really major points at issue.

This is why Mr Polyanov's suggestion in *Izvestia* that neral disarmament is a subject on which "agreement uld be reached speedily" wrings out a wry smile. Nothing t has happened in Cuba suggests that Mr Khrushchev uddenly willing to let international inspectors pore over ther Russia, or that the West has given up its insistence t disarmament will be meaningless unless they do. It is ally unlikely that Russia is about to give birth to a wholly w policy for central Europe. There were some minor nges of emphasis in the statement on the German question ch the east German government published in *Neues utschland* on November 23rd. These suggest that Mr rushchev will probably go easy on Berlin for the time ng ; they do not suggest that he has anything more radical nind.

WHAT does this leave ? It leaves those matters on which America and Russia have a common interest in coming an agreement—and on which they may now actually be rred to agree by their traumatic Cuban experience. The ious candidate is a nuclear test ban. The two super- ers have been banging away since the spring so heartily , according to some accounts, their scientists have several s' data-processing work ahead of them in the laboratories. difference about on-site inspection has gradually been owed, by the improvement of listening instruments, to oint where, if those co-operative sounds from Moscow ly mean anything, a treaty may at last be within reach. l the nuclear field is rich in other areas where Americans Russians may be happy to reach limited (and in some s tacit) agreements. Their shared desire to prevent the ad of atomic weapons going any further may lead them hink about formal nuclear-free zones (in the Caribbean, instance ?) and, more informally, about arrangements pulling back these weapons from the central European t line.

the coming months were to bring even an approach n agreement on these points, there would be no cause niff disdainfully. When President Kennedy came to just under two years ago he picked out a nuclear test and a settlement in Laos as his two tests of Russian erativeness. If he gets a test ban treaty, both these itions will have been satisfied (rather later than he

intended them to be, admittedly) ; in addition, he may also turn out to have won a respite, perhaps only temporary but perhaps not, from the pressure Mr Khrushchev has been putting on Berlin since Thanksgiving Day four years ago. This would not be a bad two years' work. Nevertheless, it falls a long way short of the larger hopes that have been circulating since the euphoric day when the Russian missiles were pulled out of Cuba. These hopes range from the expectation that Mr Khrushchev is about to call a general truce in the East-West struggle, to the wild-eyed dream that he will fairly soon discover that he prefers capitalist Americans to stalinist Chinese.

NOT just yet, not just yet, one must regretfully say. To understand why such hopes are still totally unrealistic, it is necessary to appreciate what would have to happen before they could be fulfilled. It is sometimes suggested that when Russia gets at loggerheads with the West—over Berlin, say, or Cuba—it is because Mr Khrushchev has simply decided to "cause trouble." On this theory, he starts international crises at times and places of his own choosing for the purely offensive purpose of frightening and dividing his opponents. If this were really the case, a single decision by Mr Khrushchev could cause the flow of crises to be turned off at the Kremlin stopcock.

But this theory really will not stand up. Of course Mr Khrushchev is delighted when his opponents get frightened and divided. But another reason why he gets embroiled in rows with the West is that he wants to defend what he conceives to be the Soviet Union's vital interests. In the case of Berlin, these interests were to save the client regime in east Germany from collapse ; in Cuba, one guesses, he wanted in addition to redress the missile balance by putting some medium-range rockets on the island.

In other words, East-West crises arise from real clashes of interest, not from Luciferic raids on what would otherwise be a world-wide Garden of Eden. But this means that Mr Khrushchev is not entirely free to sound a general truce in the cold war even if he wanted to. He is, to a certain extent, a prisoner of the national and ideological interests he champions ; of the people in the Soviet Union who would attack him if he failed to champion those interests properly ; and of communists outside Russia who would claim that they could do the job better. Mr Mao Tse-tung already makes it plain that he thinks Mr Khrushchev a pretty poor fellow for defining his interests in too defensive a way. The fact that very similar considerations apply to the leaders of the West merely makes things more complicated. There is no unilateral way to guarantee peace.

It is possible to imagine two developments that might cause these considerations to lose some of their importance for Mr Khrushchev. One would be for the Soviet Union to grow so plumply comfortable, as its national wealth increases, that its zeal for championing its interests along the frontiers of the free world (and for trying to expand those frontiers) would wane away. The other would be for China's conduct to become so outrageously unbearable that the Russians decided upon an armistice with the West in order to concentrate on the greater threat from the east. It is quite possible that the first of these developments will occur one day, and just

conceivable that the second will. But neither will happen yet awhile. Mr Khrushchev may well get extremely impatient with the Chinese ; but from impatience, and an occasional turn of the economic screw, it is a very long step indeed to giving them up as a bad job and turning westwards.

Thus, it is likely that the Soviet Union and the non-communist world are going to find themselves at odds about various subjects for some time to come. The real significance of the Cuban crisis is not that it has altered this prospect, but that Mr Kennedy and Mr Khrushchev have rediscovered for themselves in the most nerve-tingling way the simple truth that Marshal Bulganin and Mr Eisenhower lit upon at Geneva in 1955: that these arguments have got to be kept short of war. The leaders of 1962 seem to have gone a stage further, by starting to set up the machinery of consultation and informal negotiation by which they may be able to prolong the peace. In this sense, and nothing grander, Cuba may have changed the weather.

The Continuing Drift

Last week's by-elections suggest that the floating vote is still adrift from the Government in every part of Britain

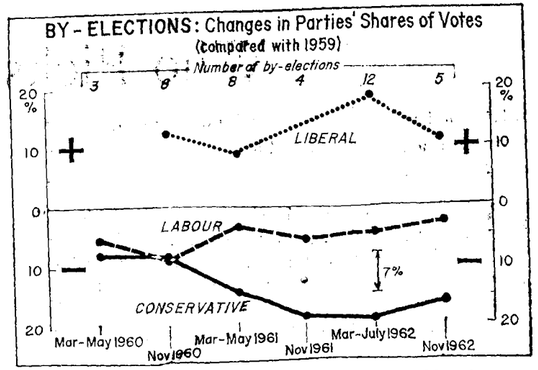
IN last week's five by-elections the average net swing from Conservative to Labour was 6.9 per cent ; repeated in a general election this would return Mr Gaitskell to power with a majority of around 110 in the House. In the twelve previous by-elections between last March and July the average net swing to Labour had been just over 7½ per cent, which would have sufficed to give Mr Gaitskell a general election majority of about 130. The so-called Conservative "recovery" since the summer was as wafer-thin as that.

The results in the different constituencies are discussed in more detail on page 891. But the really astonishing thing was once again how few regional or local differences there were. In each of these five widely scattered constituencies, between 25 and 40 out of every hundred people who had voted Conservative in 1959 seem to have drifted away to vote for some available non-socialist alternative this time. In four out of the five seats, a smaller proportion of the people who had previously voted Labour (about one out of ten on average) did the same thing—or else stayed away from the polls in sufficient numbers to have the same net effect.

It is easy to overstate the lessons of these sorts of figures, but they do provide the best available measuring stick of current political trends ; and it is extraordinary how many politicians seem intent on grasping the wrong end of it, preferring to talk about what ought to be happening instead of what actually is. For example, many people (including some Labour strategists) are still saying that Labour's main hopes for a great advance at the next general election lie north of the line from the Humber to the Mersey ; Labour, it is said, can best hope to prosper if it constantly stresses in its propaganda how shabby and dirty and relatively ill-favoured the North is. One has always doubted the attractions of this argument (either in the North or the South), but up to last week it was based on most people's expectation that much the biggest net swing to Labour last Thursday would be in unemployment-affected Glasgow Woodside. In the event, the net swing there was the second smallest of the five. No doubt special factors (such as a Glasgow fog and a unilateralist candidate) helped to keep down the Labour vote in this constituency ; but the fact that Labour captured many floating voters in Scotland and Lancashire in 1959 does tend to mean that it now has rather fewer natural floaters left there on whom to draw. Certainly, the Conservatives would be wise to conclude that at the next election they will face the possibility of as many damaging desertions in the prosperous South as anywhere else in the country.

Again, it is being widely said that after South Dorset—where the Tories lost a seat to Labour because of the intervention of Sir Piers Debenham as an anti-common market independent—Mr Macmillan must fear that similar interventions could cost him a large number of otherwise safe Tory seats up and down the country. But in fact (see page 891) the figures at South Dorset strongly suggest that Sir Piers drew the majority of his votes from former Tories who would otherwise have given their vague protest votes to the Liberals, illogical though this may seem ; the best statistical guess one can make is that Sir Piers's intervention may have increased the net swing from Tory to Labour at South Dorset by about 2 per cent and reduced the net swing from Tory to Liberal by perhaps about the same margin.

At any given level of public opinion, there are generally between 30 and 40 Tory seats which might go to Labour with a net additional swing of 2 per cent (it is a pure coincidence that South Dorset was one of them). On the other side of the fence, there are a smaller number of Tory seats



The chart above shows the average gain (by the Liberals) and average loss (by Conservatives and Labour) in each of the six separate "by-election seasons" since 1959. The Liberals' averages are struck only for by-elections in seats that they also contested in 1959. The Conservatives would be likely to lose power at the next election if their "gap" below Labour, as shown on this chart, remained higher than 7 per cent ; last week the average gap was 13.8 per cent.

which might be saved from going to the Liberals by the appearance of an alternative outlet for part of the protest vote. If at the next election candidates with Sir Piers's peculiar advantages and stature did in fact appear, with awkward precision, in all of these relatively few seats, the net effect would be mildly damaging to the Conservatives. But it is moonshine to suppose that they will locate their interventions with such devilishly well-judged cunning. After South Dorset one does not now believe that the intervention of anti-common market candidates will determine the fate of more than two or three seats at the next election, if indeed of that.

THE real problems for the Tories are at once less specific and therefore probably more difficult. There is no evidence from these by-elections that a rebellious army of impoverished northerners or anti-marketeers or white collar workers or any other easily definable group is indignantly on the march. What does seem to be happening is that a broad band of middle of the road voters right across the country is still on the drift. There is a general feeling that a change of Government would be no bad thing, even although the Labour Government that would then actually come to office on a minority vote is not the one that many of the floaters really appear to want. This, in short, seems to be a swing occasioned not so much by resentment as by boredom and by the normal swing of the pendulum against established authority.

There are several ways in which the Conservatives might recover the 3 per cent or so swing that they need before the general election. A first way would be if the Labour party, or organisations regarded as attached to it, stirred up more active public resentment against itself. One is coming to think that the swing against Labour which was reported by both public opinion polls last month—and which the Gallup poll had correctly reported had been wiped out before last week—owed less to Llandudno than to the unpopularity of the railway and Dagenham strikes. Probably all three parties could—but do not—draw interesting implications for trade union policy from that.

A second possible source of major Tory recovery would be if Mr Maudling really managed to infuse dynamic growth into the economy, and if voters then decided that they dare not risk "letting Labour ruin it"; perhaps the biggest tactical mistake the government has made this autumn, apart from its retreat on railway wages, was in not formally calling Mr Maudling's autumn budget a budget, and excitedly advertising it as such. The third and biggest catalyst could, of course, be if Britain joined the common market, if voters began to realise what this meant, and if Mr Gaitskell's continued opposition to it made him seem the opponent of all change; but at the moment, while Mr Heath appears to the ordinary man to be still haggling about Europe's terms for kangaroo meat, the Brussels negotiations are paradoxically one of boredom's biggest temporary allies.

In general, therefore—despite their mounting gloom—the Conservatives may still have almost as much scope for recovery as they did at the same stage of the last Parliament. But in one particular respect they should now expect to be more cramped. A card which they probably cannot hope any longer to play is that of excessive personal veneration for Mr Macmillan. When Labour scoffed at Supermac and Mr MacWonder, just before the 1959 election, it illogically built up a picture of a man whom the ordinary voter began to regard as exceptionally wise, cunning, deep and shrewd; one might even say that it was the Opposition's own clumsiness which at that time put into him the valuable electoral mickey that has since been extracted (perhaps equally unfairly) by such satires as "Beyond the Fringe." To say that Mr Macmillan is now somewhat less of a major personal electoral asset for the Conservatives is a long way from saying that the rest of the Cabinet will now persuade him to take his peerage and depart; but one suspects that he will no longer be in as complete control of the Government's strategy and aims in the next twelve months as he would have been if last week's by-elections had not gone so badly for his party. And that, in itself, could represent an important change in the balance of personal power through which Britain is governed, and might select to be governed in future. The main responsibility for any recovery by the Conservatives now probably lies with Mr Maudling and Mr Heath.

Who Picks the Music?

Italy's good will towards British entry into the common market is undeniable; why is it not more effective?

NOT a day too soon, Mr Heath entertained his Italian opposite number, Signor Colombo, at Chequers last weekend. There were talks about the difficulties in the way of British entry into the common market, and on Sunday afternoon a visit to Oxford, where Mr Heath played the New College organ for his guest. Signor Colombo, the minister of industry and commerce, represents Italy at ministerial meetings in the Brussels negotiations. With him were Signor Cattani, a European pioneer who now presides over what used to be the Fouchet six-power committee on political union; and Signor Ducci, the top Italian official delegate in Brussels. No group of people could be better equipped to answer the riddle of how it is that the Italian professions of anxiety to get Britain into the common market find so little visible expression in action on the Brussels field of battle.

Among the latest of these professions was Signor Saragat's in his speech to the Social Democratic party congress on November 22nd. Signor Preti, the minister for foreign trade, told a meeting in London on November 19th that, in this matter, "the goodwill of the Italian government is very, very big." Signor Piccioni, the foreign minister, addressing the chamber of deputies on October 30th, came out strongly to the same effect. Signor Fanfani, the prime minister, and Signor Colombo share these views.

The sad thing is that when it comes to the matters that Signor Colombo discussed with Mr Heath last weekend—the usual lot: pigmeat, dried fruit, zinc, aluminium, newsprint, agricultural deficiency payments, and the financial

regulation for trade in agricultural products—these sentiments, however warm, however firm, have so far made little difference. Why? The answer, freely given by the Italians as well as by other members of the Six, is that unity is the first law of the Six in any dealings with a third party. Unless the Six have a common position, they point out, the negotiations with Britain cannot make progress; and if even the suspicion arises that one country is taking a line of its own, then the common position is never reached.

What this boils down to is that the Italians, loyal to the treaty and loyal to their friends, hesitate to give the required shove to the negotiating position of the Six for fear of rocking the boat. It is an intelligible attitude, and the Italians are not alone in it. But it does seem to mean that the common market position, once taken up, is going to be hard to shift as the negotiations near their final stage and the last craggy peaks of the really intractable questions are isolated one by one. Signor Colombo, like other leaders on the common market side, still expects an agreement in time for British membership to take effect on January 1st, 1964. Before that result is to be reached, there may be a moment when the Italians at Brussels, and not only in Rome, may have to give practical effect to their view that the European community will benefit by enlargement. The British have been culpably slow to grasp the fact that Italy is an important country nowadays. The Italians are being even slower; one consequence of importance is that unpleasantness has to be faced, when necessary, to ensure that one's view is heeded.

Art of the Impossible

Black nationalists in central Africa are learning to play politics the white man's way, with some unexpected results

ON the evening of Sunday, November 18th, Mr Kenneth Kaunda, president of the Pan-African Freedom Movement for East, Central and Southern Africa (Pafmecsa) sat and supped with the arch-enemy of pan-Africanism, Mr Moise Tshombe of Katanga. Mr Kaunda was beckoned to the meeting at Kitwe by the newest recruit to Pafmecsa, the former "traitor" to pan-Africanism, Mr Harry Nkumbula. The meeting took place for the best of political reasons. At the Northern Rhodesian elections of October 22nd, with their fancy franchises, Mr Kaunda won 20,000 more votes than all other parties combined, but only 14 out of 34 seats.

Partly because of an electoral arrangement with Pafmecsa's arch-arch enemies, Sir Roy Welensky's United Federal Party, Mr Nkumbula won 5 seats, leaving him holding the balance between the UFP (15 seats) and Mr Kaunda's party. With eleven by-elections to be held on December 10th, Mr Kaunda, like everyone else, has been bidding for Mr Nkumbula's support. Mr Nkumbula, who relies for his party funds partly on Mr Tshombe, arranged the Kitwe meeting. Will he now go ahead and double-cross the UFP supporters who gave him votes and funds in the hope of an Nkumbula-UFP coalition that would keep Mr Kaunda out? On Tuesday he said in London (where he has come to demand a new constitution) that, in effect, he will.

This kind of machination, familiar enough in Europe, is something new out of Central Africa. Until now African politics has largely been a matter of standing firm and shouting for more. British governments, anxious to withdraw, have usually proved willing enough to placate the men to whom they have agreed to hand over power. The job of putting black men in charge where white men ruled before has also been done for many blacks by the departing British.

But Northern Rhodesia's peculiar constitution has given Sir Roy Welensky's white followers the prospect of a slightly longer lease of life; the possible support forthcoming from across the border in Katanga has given added hope. At first sight it might seem that Mr Kaunda, who appears to his friends outside as an innocent idealist, might be crushed between the adept hands of Mr Tshombe, Mr Nkumbula, and Sir Roy Welensky. But Mr Kaunda has the overwhelming majority of Northern Rhodesia's Africans on his side; his goal is being kept before his eyes by the return to prominence of two radical members of his party; and, anyway, he has been learning in a hard school for many years.

For his part Mr Nkumbula has been urged by many of his own followers, and by the chiefs in Northern Rhodesia, to go Mr Kaunda's way and not Sir Roy Welensky's. At the same time Mr Tshombe's anomalous position once again looks precarious. The scarcely veiled warning to him issued jointly by the United States and Belgian governments on Tuesday was only one of several ominous portents. The faintly insane way in which the white air force that fights under his banner (if not his orders) has been peppering the loyal (that is, the larger) part of the Katanga province not only suggests desperation; it has also helped the United Nations command in the Congo to garner in ground and air reinforcements, some of them from "aligned" countries such as Norway. True, the *Union Minière*, the company that meets Mr Tshombe's own steep bills for his white military help, was quick to deny on November 24th a report indicating that it had at last seen the red light; and his backers' hopes of succeeding in continued delaying tactics were simultaneously raised by the wobbling motions of Mr McGhee, the American under-Secretary of State, along the London-Brussels-Washington orbit. But now UN and American impatience with Mr Tshombe, fears for the survival of Mr Adoula's Congo government, concern to secure U Thant for a longer term as UN secretary-general, and the exhaustion of the UN's financial resources for the Congo operation, all seem to be nearing a climax together: a conjuncture rich in meaning, which contributes to the present unusual fluidity of central African politics.

Here is the situation into which the British minister for central Africa, Mr Butler, must project himself in the months ahead. He must make several important decisions during that time. He is still master of Northern Rhodesia, which remains a colony under a governor's rule. If he allows a white government based upon a minority of votes to take control of the protectorate, he will increase the danger of a violent African outbreak or, just conceivably, of a joint

attempt on the part of Sir Roy's men and Mr Nkumbula to link the territory with Katanga. But if he puts Mr Kaunda's Africans into the government by directing his officials in the legislative council to vote that way, then the whites may resist with force. He will be saved if a firm deal between Mr Kaunda and Mr Nkumbula is worked out (as it apparently has been) and stuck to (as it has yet to be). If not, his best course would be to govern for a spell directly through the governor, scrap the present bizarre constitution, and start all over again working out a constitution as free as possible of fancy franchises.

Similarly, in Nyasaland, Mr Butler is faced with several choices complicated by a new-found political sophistication on the part of the Africans. In this case, however, the complications may be working in Mr Butler's favour. Dr Banda, leader of the Malawi government of Nyasaland, has shown himself willing to deal with the Portuguese in the interest of keeping his railway outlet through Portuguese-held Mozambique open after independence. The Rhodesian federal government controls the railway company, and Dr Banda (surprising though it would be) may eventually be forced to deal with Sir Roy Welensky himself.

Dr Banda's habit of facing realities led him to hold back demands for secession from the federation during the Nyasaland constitutional conference that ended in London on November 23rd. The constitution worked out at the conference will take Nyasaland to the stage immediately before independence. But Dr Banda has agreed that this can be done in two steps—the first (giving him a cabinet and making him prime minister) to be carried out next February and the second (putting the rest of the constitution into effect) as soon after as the drafters can finish their work. More significantly, Dr Banda has agreed to leave some important reserve powers over finance and the police in the Governor's hands; he has accepted a bill of rights; and he has promised to keep the Colonial Office man in his post as finance minister until a Nyasalander can be trained to replace him. All this amounts to a recognition of the need for compromise if Nyasaland is to win a subsidy from the British Government for the years that must intervene between divorce from the federation and independent viability.

In Southern Rhodesia, where skilful politics are needed most of all, the Africans might well learn the lessons of what is happening in the northern territory. To be plain, where the white opponent is firmly entrenched in power, shouting and intransigence may prove to be a longer and bloodier way of getting him out than political accommodation and manœuvre. The man who must learn this lesson, Mr Joshua Nkomo, is unfortunately still in detention in Southern Rhodesia. But the future is not altogether dark: a lot depends upon Mr Butler.

Mr Butler's first task is to do nothing, and to keep on doing nothing, until the elections of December 14th are safely past. Interference before then might well stampede the white voters towards support of a right wing pro-apartheid party. It is likely that the prime minister of Southern Rhodesia, Sir Edgar Whitehead, will win: his victory ought then to be cheered. For there can be no doubt that Sir Edgar has put an exceedingly courageous policy before his white voters: sweeping away all colour restriction and envisaging power for (admittedly, well-trained) blacks after fifteen years. After the elections Mr Butler's task will be to persuade Sir Edgar to cut down this period drastically.

He might fly out to Southern Rhodesia and try to bring Sir Edgar Whitehead and Mr Nkomo together again; if he persuades Sir Edgar to make some constitutional gestures in the African direction, Mr Nkomo should, matching Sir Edgar's boldness, accept and fight new elections; if necessary, he could keep up the agitation outside parliament as well. The alternatives for Mr Butler are to do nothing (which might lead to a bloody racial war in Southern Rhodesia); to override the complete home rule that has been granted to white Southern Rhodesians by the Westminster parliament (which could even lead to British soldiers shooting it out with their Rhodesian cousins); or to ditch the whole problem by granting Southern Rhodesia its independence under white government. This last alternative is tempting in a situation where Britain takes the blame for Southern Rhodesian actions over which it has no control and little influence; it would, however, be both wrong in principle and inexpedient.

Finally, Mr Butler has to decide how and when to allow the break-up of the Federation of Rhodesia and Nyasaland. He ought to try his best to keep as many economic links as he can; here the new-found political sophistication of Mr Kaunda and Dr Banda might, if it lasts, be a help. By letting federation go he will be destroying a powerful white state and putting Nyasaland (black), Northern Rhodesia (unpredictable), and Southern Rhodesia (currently white) in its place. What other course is there? Southern Rhodesian whites, who have the power on the spot, would not let him hand the whole federation to a black nationalist government; to keep the federation intact, in white hands, is now impossible; and even a white-managed combination of the two Rhodesias, without Nyasaland, would not work for very long.

NOVEMBER 29, 1862

PARLIAMENT AND EXPENDITURE

"The Public Departments are at the present day almost without the old incentives to corrupt expenditure, and without the old opportunities for that expenditure if they were so inclined; but they are under very strong temptations to *uncorrupt* expenditure to which former epochs afforded no type or parallel. The very public spirit of the Departments which was so wanting in old times, and which is no characteristic of the present, of itself tends to expense. A zealous man wishes for improvement, and for one improvement which saves money, there are a hundred which cost money. The natural and legitimate object of ambition in a public servant is to improve *the efficiency* of the Department of which he is a member, and by far the greater number of augmentations of efficiency are augmentations of expense likewise. "What you gain in power you lose in time" is a principle of mechanics, and what you gain in power you lose in money may almost be made a principle of politics. If, then, a Department has, by an accidental surplus on vote A a sum of money which it can devote to object B, we fear it will so devote it. In the present state of science, with so many plausible improvements in the destructive arts pressing upon the attention of our Military Departments, it is a strong temptation to use, in that natural and pleasant manner, any little money which comes to hand. . . . From the nature of such things, the Executive—the Cabinet—call it which you will, must have a licence to spend money to meet unexpected military events. The main function of Parliament in such matters, therefore, is to choose a good Executive. They may watch them carefully, but watchfulness on these subordinate matters is not really effectual. The true business of Parliament is not to *manage* such matters, but to *choose* good managers. . . . .

NOTES OF THE WEEK

CUBA PLUS

The Man Who Came to Dinner

Tanned by three weeks in the Cuban sun, but visibly worn by his long exertions there, Mr Mikoyan reached New York on Monday in time for a dinner party in U Thant's office suite that left him and his fellow guests, Mr Stevenson and Mr McCloy, in a genial but not very communicative mood. By Thursday Mr Mikoyan was in Washington, closeted with President Kennedy. Both of them had indicated that they thought this an opportunity of exchanging views on subjects that would not be confined to the affairs of one Caribbean island. A leading article on page 885 is concerned with these wider themes. But meanwhile the American-Soviet contacts on the highish level of Messrs Stevenson, McCloy and Kuznetsov have continued. In name and form, these have been limited to the topic of Cuba. In practice, they have tended to disprove once again the notion that peace is geographically divisible.

The stated American objective in these talks is to make sure that Cuba is stripped of "offensive" Soviet weapons and kept stripped. But the United States is already aware that Dr Castro will not—indeed, in terms of hard political reality, cannot—agree to his country being subjected to any purely unilateral form of surveillance. The stated Soviet purpose is to secure for Dr Castro reassurances, in deed as well as word, against any future action by the United States to topple him. But the Russians for their part are aware that Mr Kennedy is in no position—despite his present strength in the context of domestic politics—to give a public assurance that Cuba is now "safe for communism." Thus, on both sides there is an emergent awareness—still unacknowledged, and only reluctantly referred to, even in parentheses—that there can be no neat tidying up of the Cuba situation except in the framework of something geographically larger. How far this geography may go, in the event, is still quite undecided and clearly the subject of bargaining yet to come. While the Cubans start from the initial (and obviously unrealisable) claim that some parts of the continental United States should be brought under inspection if there is to be any inspection at all, the Americans are in no mood to agree to inspection even of their Guantánamo base—and, although it is a useless, costly, and politically noxious property, there is no present possibility whatever of their extricating themselves from it.

The ripples from Cuba may therefore widen out further than is yet appreciated before they die away. Ready to hand, whenever the principal parties care to reach for it, is the Brazilian project of designating the whole of Latin America as a zone to be kept free of nuclear weapons—which implies some kind of multilateral inspection to ensure that it is so kept. UN debate on this project, and on Cuba's own proposals to amend it so as to embrace United States-controlled areas (such as the Panama Canal zone), was postponed indefinitely on November 19th with a striking unanimity which in part reflected the irritation of other Latin American countries at not having been adequately consulted by the sponsors. If the UN Assembly gets back to this item before Christmas, will the discussion of "nuclear-freedom" be limited even to Latin America?

BY-ELECTIONS

Even Tide

In last week's five by-elections the average net swing from Conservative to Labour was 6.9 per cent (which did not compare at all badly with the much-maligned Gallup poll's national forecast of 6½ per cent). The most remarkable fact was that the tide flowed so evenly across the country. The highest net swing to Labour was 8.4 per cent at South Dorset, one of the two seats which Labour gained by a narrow margin. Probably this swing would have been down to between 6 and 7 per cent had the anti-common market Sir Piers Debenham not intervened and secured 12.3 per cent of the poll. If most of Sir Piers's votes had come from the Tories, one would have expected—to judge from the average swing, elsewhere in the country—a bigger Labour majority. But, as our table shows, a main feature of South Dorset was that the Liberals did less well there than elsewhere; in fact, the rise in their share of the vote was exactly 8 per cent lower than their average rise in the other four constituencies, while the fall in the Conservatives' share was just over 2 per cent greater. The exact calculation of these averages (which include South Northants, where there was no Liberal candidate in 1959) is open to dispute; but all the evidence must suggest that Sir Piers illogically drew most, though not all, of his votes from the Liberals.

The second highest net swing from Conservative to Labour was 7.5 per cent at Central Norfolk, which the Conservatives held by a whisker of 220 votes. This was the seat where the Liberals made their second smallest advance (there was, again, an anti-common market candidate in the field, but he got only 2½ per cent of the vote). It was also the only seat of the five where Labour's share of the vote actually increased compared with 1959. But there have been signs for some time of a long-term Labour advance in Norfolk, perhaps partly because, as older rural traditionalists die out, the newer agricultural labourers on its large farms are steadily becoming more like ordinary industrial workers in their outlook.

The net swing between the main parties at Chippenham (6.7 per cent) was near to the five seats' average. The Conservative victor retained 13,439 votes, which was 1,588 more than the second place Liberal; but at the next general election some of the 10,633 Chippenhampsters who voted Labour last week might well go over to Mr Grimond, in order to put the Tory out. This is probably now a very unsafe Tory seat indeed.

Swing to Fudge

Although Labour duly captured Glasgow Woodside, it was surprisingly with the second lowest net swing (only 6 per cent) in all the five by-elections. No doubt this low swing was partly explained by the foggy weather on polling day, which generally tends to cause more abstentions among apathetic Labour voters than among Tory ones; but this result casts increasing doubt on the argument that it is in unemployment-affected Scotland that the Tories will have most to fear next time. Glasgow Woodside is one of the seats that Labour would normally have to expect to win if it were to secure any sort of majority in the

CHANGES IN PER CENT SHARE OF VOTE SINCE 1959

	Conservative	Labour	Liberal	Other	Net swing from Con. to Lab.
South Dorset	−18·0	−1·2	+6·2	13·0*†	+8·4
Glasgow Woodside	−19·2	−7·0	+14·1	12·1*†	+6·1
Chippenham	−15·3	−1·9	+15·6	1·6*	+6·7
Central Norfolk	−12·7	+2·2	+7·7	2·8*	+7·5
South Northants	−15·8	−4·4	19·3*	0·9*	+5·7

* Indicates no equivalent candidate in 1959. † Includes 12·3 per cent for Anti-Common Market candidate at S. Dorset, and 11·1 per cent for Scottish Nationalist at Glasgow–Woodside.

next Parliament, so it is noteworthy that its hold on the seat still looks distinctly marginal. The victorious Mr Carmichael got 36 per cent of the vote, compared with the Conservatives' 30 per cent and with 33 per cent for the Liberal and the Scottish Nationalist combined.

The Conservatives held on to South Northants with a net swing from them to Labour of only 5.7 per cent despite the fact that this was the one seat which had had no Liberal candidate in 1959. A new Liberal appearance nowadays picks up the votes of (a) the sort of people who voted Liberal in other constituencies in 1959 (who included almost as many former Labour voters as Conservative ones), plus (b) the sort of people who have been drifting towards the Liberals since 1959 (overwhelmingly ex-Conservatives). That may be why Liberal interventions in constituencies which Liberals did not fight in 1959 now seem to be bringing less benefit to Labour than Liberal advances in constituencies which they did fight then; this is a striking reversal of the situation in the last Parliament.

Finally, more than 1,300 of the 172,000 people who went to the polls in all five constituencies last week thought it worth while to use their votes to try (unsuccessfully) to save the deposits of ingenious ex-service column dodgers. Where more than one ex-service candidate offered himself, the highest vote went to the one whose name appeared first on the ballot paper, by dint of the rule of alphabetical order. One of the candidates who thus attracted 82 votes in South Dorset was a certain Mr Fudge. The Tories may be excused for seeing something symbolic in that.

LABOUR PARTY

Domestic Calm

After the excitements of the contest for the deputy leadership, and the good cheer from last week's by-elections, the Labour party seems now to be in one of its rare periods of domestic calm. The division that threatened the party over the common market now looks less imminent. Fundamentally Mr Gaitskell's attitude to Europe has not altered, but—thanks partly to Mr Carron and Mr Gunter—there has been a shift of emphasis and a change of tone.

It is true that this shift of emphasis may not seem very apparent in the next few months. Mr Gaitskell will still show no mercy in his questioning each time Mr Heath comes back from Brussels. He will harry the Government for what he will call its failure to redeem its pledges, perhaps with particular emphasis in the near future on pledges to EFTA countries (an emphasis which, incidentally, may prove to be something of a political mistake). When the final terms are known, the Labour leader will almost certainly reject them and demand an immediate general election. If this demand is not granted, he will come under strong pressure to announce in advance that a future Labour government would repudiate Britain's accession to the community. But it is now a little less likely that Mr Gaitskell would yield to this pressure than it seemed to be when he was making his Brighton speech. The dangers of such a course, and the revulsion which it might arise in the country, seem now to be a little bit further in the forefront of Mr Gaitskell's mind.

Meanwhile, the general sense of cosy satisfaction within the parliamentary party is shown by the results of last week's voting by Labour MPs for elections to the shadow cabinet. All twelve sitting members were re-elected, with a comfortable gap of 32 votes between Mr Lee in the twelfth place and his nearest contender. Mr Wilson dropped from first to third place, which may have been personally irritating—but has no particular political significance. Mr Callaghan moved to the top, which is a sign that he now has fewer personal enemies in the party. The strength of the Left remains constant at around seventy Labour MPs; they concentrated their votes on Mr Crossman and Mr Greenwood, who got exactly 74 votes each. It would be tempting to read some significance for the common market issue from the fact that Mr Jay, one of its most determined opponents, was the runner-up for the shadow cabinet with 88 votes. But, against that, the 68 votes for Mr Roy Jenkins showed the bedrock support on the pro-European side.

WAGES

Why Six?

The current round of 6 per cent wage increases which began on the railways—and then spread, inevitably, to practically everyone connected with the railways—had already, even before last week, begun to arouse emulatory noises from engineers, busmen, power workers and dockers. Now it has been given a further fillip because the Post Office Engineering Union has got between 5 and 6 per cent from the Civil Service Arbitration Tribunal, its second increase this year. The post office's top offer had been 3 per cent, in line with the Government's guiding light; the union had asked for varying amounts—based on the sacrosanct principle of "fair comparison" with workers in similar jobs—averaging around 13 per cent. The tribunal, as always, gave no reason for its award. One is therefore left to speculate in what proportions its motives may have been a combination of "splitting the difference," "fair comparison" and the need to pay men more for skills that are in short supply and hot demand.

This last, of course, is the only tenable argument. The civil service tribunal's decision on Tuesday to give 13 per cent to telecommunication technical officers at airports can probably be justified by it. But, in the absence of any statement that this was the motive for post office engineers, their 6 per cent is too great a coincidence to be ignored by other trade union claimants who, because of the mystery that surrounds the motives for arbitrators' decisions, can now pretend that this is the "fair" pattern for this winter's wage settlements. If this pattern is established, it is likely to be disastrous. Once again, the period of economic re-expansion which Mr Maudling is trying to set afoot is likely to run into cost inflation; once again, re-expansion is then likely to have to be slowed down.

The tragedy is that this sort of pace-setting award in the post office is precisely the sort that ought logically to have been submitted to the National Incomes Commission for a proper examination. But under the diluted terms of reference eventually provided for NIC earlier this month, arbitrators' decisions—one of the main engines of inflation in postwar Britain—remain uniquely irreversible, inexplicable and un-appealable. Looking at them is one of the things that NIC may not do. After all the sweat and anguish of the pay pause, it is almost incredible that the Government should thus have chucked down the drain the opportunities to instal a national incomes policy which it once appeared to have won.

PAKISTAN

Talks in Time?

Mr Duncan Sandys's swift shuttling between Delhi and Rawalpindi this week gave promise, as *The Economist* went to press on Thursday, of success in facilitating talks between India and Pakistan aimed at bridging the differences that had yawned between them the more perilously under the impact of China's border thrusts.

Emotions have been running high in Pakistan lately, and not entirely without cause. Many of the politicians are dissatisfied with the president's new constitution, which still considerably restricts their activities; there has also been a growing tendency towards neutralism in East Pakistan. But the real grievance has been the thought that by giving aid to India, Britain and the United States had weakened Pakistan's position in its quarrel with India over Kashmir—the focus of their foreign policy. Well aware of this mood, President Ayub Khan opened the national assembly's emergency session last week by choosing his words to give emotional satisfaction while not committing himself to unrealistic policies. Pakistan, the president said, should seek more friendly relations with China. This dig at the Indians was appreciated, as one might expect; but Pakistan genuinely needs to come to terms with China, and now is a good time as the Chinese are trying to impress the world with their "reasonableness."

Next, the president offered a continuous assessment of defensive pacts with western

in a changing world

Imagine carrying the early wireless set round the golf course. Quite a handicap. Compare today's transistor radio.
Why *transistor* radio? Transistors do the work of valves. Not only are they a fraction of the size—they use far less current, so that batteries and other components can be miniaturised. A big step forward from early 'portables'.
Mullard developments in the design and manufacture of transistors helped to put the radio set in our pockets. Today Mullard produce transistors by the million—high performance, precision made devices for an enormous variety of applications. Could you benefit from our transistor know-how?

PLEASE HELP SPASTICS

Mullard products in transistor radio sets include:
TRANSISTORS • GERMANIUM DIODES
"FERROXCUBE" AERIALS & H.F. CORES
"TICONAL" LOUDSPEAKER MAGNETS

countries. He could hardly avoid saying this. Pakistan belongs both to CENTO and to SEATO (mainly to get military aid to strengthen its hand against the Indians in Kashmir) and now loudly complains that Britain and America are neglecting an ally's interests. Finally, the president united his audience with the creed of no friendship with India until justice is done in Kashmir.

When the president left, the Assembly gave vent to its feelings. First of all the Americans were held responsible for western aid to India. On November 23rd, the minister of information, Mr Shah, called the agreement of 1951 (whereby the United States could give arms to India) "secret and conspiratorial." The point was dropped when he was told that copies of the agreement could be bought in Washington for ten cents. The spotlight of criticism then settled on Britain. Politicians were heard to describe Mr Averell Harriman as a member of Mr Sandys's delegation (the British minister arrived in Pakistan from India on Tuesday, the American assistant secretary of state on Wednesday).

Undiscouraged by hearing some of these tirades, Mr Sandys plunged on Wednesday into a day-long private talk with the president, armed with a draft for an announcement of new Indo-Pakistani negotiations. He had already secured Mr Nehru's assent to this draft during his stay in Delhi. Enough progress was made on Wednesday to enable Mr Sandys to fly back to Delhi next morning for a further round with the Indian prime minister. One gap in particular had still to be closed, it seemed; while Mr Nehru envisaged talks on various contentious issues, President Ayub Khan sought to focus attention on Kashmir alone. But there already seemed an encouraging difference between the intransigence expressed in Rawalpindi's public debates and the practical diplomacy of the Pakistani president.

COMMUNIST BLOCK

Mr Kadar's Congress

AFTER the dramatic goings-on in Sofia three weeks ago, the proceedings of the Hungarian party congress last week seemed distinctly tame. For Mr Kadar and his friends, however, this was something to feel happy about; it meant that they had managed their affairs more adroitly and with more sophistication than the Bulgarians had

The attempt to close the yawning gap between party and people (based on a direct reversal of Rakosi's slogan "He who is not with us is against us") begun by Mr Kadar just a year ago, has met with plenty of misgivings and criticism within the party. But Mr Kadar has gradually pushed most (but not all) of the doubters and critics out of positions of influence and power. His speeches at last week's congress suggest that he now feels confident about his position and his policies. He declared that the personality cult had been eliminated, "once and for all"; that (*pace* the Chinese) "it is better for our people if the heat of the class struggle abates"; that 95 per cent of those imprisoned after the 1956 revolt had been released. Encouraged by a newly elected politburo and central committee in which the new faces (not very many of them) belong to his own men, Mr Kadar evidently feels secure enough to treat his opponents with magnanimity. Mr Istvan Friss and Mr Karoly Kiss for instance, were re-elected to the central committee; both had had close connections with the Rakosi regime and both had been demoted earlier this year.

The congress, however, was not entirely without its excitements. These were provided by the direct clash between the Chinese delegate, Mr Wu Hsiu-chuan, and virtually all the rest. Mr Wu's complaints about the public attacks on Albania (i.e., China) during the congress, were at once bluntly dismissed by Mr Gyula Kallai. Among the lesser guest delegates there were a sprinkling of direct references to China. Mr Wu in fact spoke on the whole rather less uncompromisingly than at Sofia; but this may simply have been the sensitive Chinese comrade's attempt to impress an audience that he realised was overwhelmingly hostile. Whether the Chinese were genuinely impressed by the direct and mollifying appeal to consider other points of view, made by Mr Kadar in his final speech, remains to be seen.

Mr Kuusinen's Slip?

ONE small episode at the Hungarian party congress throws an intriguing light on the battle of views about Cuba that is now going on in the communist world. The chief Soviet delegate, Mr Kuusinen, castigated Mr Khrushchev's critics on November 21st in the following terms:

> Certain people, far removed from revolutionary Cuba—I have in mind the Albanian leaders—are now making a hue and cry to the effect that one should have acted quite differently. . . . God only knows to what extent these "courageous" talkers have been able to learn the great teachings of Marx and Lenin. (Laughter, animation in the hall.) But in any case they should know the elementary thing . . . namely the resolute struggle waged by Lenin against left-wing communists—for example on the conclusion of the Treaty of Brest-Litovsk. The revolutionary phraseology of the left-wing bawlers was regarded by Lenin as dangerous and harmful to the revolutionary movement. . . .

Mr Khrushchev's conduct of the Cuban affair has been hailed in Moscow as a success. But Lenin's Brest-Litovsk policy was always considered as, at best, a realistic and temporary admission of defeat. Mr Kuusinen (age 81) is old enough to know this. Did he just make a slip of the tongue in Budapest last week? If he did, it was a revealing sign of the perturbation created in Moscow by the Cuban argument.

SOVIET UNION

Mr Khrushchev's Reshuffle

MR KHRUSHCHEV'S overhaul of the Soviet economic machinery has brought about a major reshuffle in the communist leadership. The primary purpose of the reform is to tighten party control, and its first beneficiary is the party secretariat. With its membership raised from eight to twelve, it now forms a sort of inner party cabinet. Two of its new members, Mr V. I. Polyakov and Mr A. P. Rudakov, have been put in charge, respectively, of the party apparatus in agriculture and in industry. Another secretary—Mr N. I. Shelepin, successively head of the Komsomol and of the security services—is appointed chairman of the new control commission, whose scope will now extend over both the party and the state apparatus. The new body entrusted with current planning, the Soviet of the National Economy, is to be headed by Mr V. E. Dymshyts, who has hitherto exercised the same function as chairman of the Gosplan.

These are only some of the numerous changes and promotions. It is more difficult to determine who has been downgraded. Mr Dmitri Polyansky, removed from the premiership of the Russian Republic to be one of the many deputy prime ministers in the Soviet government, is the most obvious of the doubtful cases. As for the others, it may be inferred that they are slipping simply because they have been by-passed in the promotion list. This may well apply to Mr A. Kosygin, the chief economic manager in the government, or even to the party's main ideologist, Mr Mikhail Suslov, despite the fact that only last week, on his sixtieth birthday, he was awarded the title of Hero of Soviet Labour. But it will be possible to check such guesses only when it is clear what the functions of the new organs are, and what the relationship is between the enlarged secretariat, the party presidium and the government.

It is now confirmed that on November 23rd, the last day of the central committee's session, Mr Khrushchev delivered a second, and hitherto secret, speech. Rumour has it that he spoke on literature and once again violently condemned the reign of informers that prevailed during the Stalin era. It would be surprising if he had not spoken on the same occasion about the Cuban crisis and its lessons. When the inside story of the communist controversy on this subject is disclosed, the Soviet reshuffle, too, may make more sense.

LAW

Privileged Peers

LORD MOWBRAY'S successful plea that it would be breach of privilege and contempt of Parliament for the High Court to order an issue of a writ of attachment

against him has rightly raised some radicals' hackles. Lord Hailsham has promised that the Government will now examine the rather recondite questions involved. Two separate points need attention here, the privileges of peers as peers, and the privileges of Members of Parliament as such, whichever House they belong to.

Members of Parliament do not enjoy any privilege of freedom from arrest in criminal cases, but they are free from arrest in civil cases while Parliament is sitting (and also for a period of forty days before and after each session—presumably to enable members to reach their constituencies, and peers their seats, free from molestation). There seems to be no good reason for retaining this freedom from the normal processes of law even in civil cases, and it could well quietly be done away with. Certainly it was never intended to protect a peer from answering a charge that he had not complied with a court order to hand over some personal property of his estranged wife, which was the issue in Lord Mowbray's case last week. Another point raised last week was that by common law " the person of a peer is sacred and inviolable at all times " ; that is why it was not open to the court to issue a writ against Lord Mowbray leaving over the question of execution until forty days after the House of Lords had risen. This common law privilege should logically be abolished as well.

Other customary privileges of peers are harmless and picturesque, and should be left as they are. Peers have a right of audience with the sovereign, while others have to wait for a summons to the royal presence ; but this right is never now exercised. Peers can also wear their hats

Lord Mowbray: inviolable

(or coronets) in court, a right which was in fact claimed by Lord Egmont in 1902 when he was arraigned on a charge of being drunk in Piccadilly ; it should be retained, as rather fun. The right to trial by his peers instead of by ordinary jury no longer exists, having been abolished in 1948 ; it was invoked as recently as 1936 by Lord de Clifford when he faced a charge of manslaughter. Peers are still exempted from jury service ; any change here should be part of a wider reform of the general conditions of jury service. Plainly, nobody is harmed by a peer's right to be hanged with a silken halter, or his privilege of killing two of the Queen's deer should he come across any when on his way to an audience with her. Lord Kingsale and Lord Forester have the additional right of being allowed to remain covered in the Queen's presence, but presumably *noblesse oblige*. The Duke of Atholl has the most curious privileges of all. He has a right to have his own private army, but this is balanced (in order not to encourage others ?) by a privilege of being hanged from a gallows thirty feet higher than anyone else's.

TRISTAN DA CUNHA

Ile joyeuse?

Most of the islanders of Tristan da Cunha have never made any secret of their desire to return to a storm-bound and volcano-threatened existence in preference to putting up with the alien charity on which they fumblingly pursue their lives here. In the face of their conviction that the island is once again habitable, even if on stringent terms, the Colonial Office has accepted the full implications of paternalism and offered to let them go, noting the while its reluctance to believe that all of them can really have been so badly impressed by the welfare state. Some of the islanders, it maintains, do not wish to return to the subsistence economy which the volcanic damage will impose on a resettled Tristan; and it is proposed to conduct a secret ballot to discover these objectors while sparing them the obloquy of their elders in the authoritarian tradition of the island. Such a ballot, however well-intentioned, would be likely to mark a new departure in fatuity.

Obviously those young refugees who want to remain in Britain should be allowed to do so and, if necessary, encouraged to make their wishes explicit; but it is a little naive to imagine that the remedy of the ballot box can relevantly be applied to this basically non-democratic situation. If those who wish to stay are reluctant to flout parental wishes or intentions openly, will they be less reluctant to do it by voting in a constituency in which, with only 250 electors, everyone must have a pretty good knowledge of where the division lies? Will the elders be less hurt for being told the decision of younger islanders by the Colonial Office rather than by the young islanders? Will, in fact, the ballot be anything more than a sop to official consciences? If interference there must be, it would be better kept to the minimum of persuading the elders that new facts have to be faced. But why should there be interference? Why not leave these put-upon people alone, to sort out their problems themselves?

TRINIDAD

If You Tip, Tip High

After a profitable two months in western Europe, the mental satisfaction must have been greater than the financial wrench when Dr Eric Williams, the prime minister of Trinidad and Tobago, turned down Britain's parting tip. The custom has grown up that the British Government shakes the hand of each departing colony, leaving a little something in the palm. The new states, building their hopes on economic development, inevitably feel that they are being given much too little. Tanganyika complained lustily, and got a small increase. Jamaica ruefully but politely accepted what it felt to be a wholly inadequate amount. Dr Williams, who had asked for a loan of £5 million to be spent on a badly needed housing programme, was offered a credit of £1 million for British goods and services, together with the unspent portion of the old Colonial Development and Welfare Fund (about £250,000) and a gift of the four Viscount aircraft that the Trinidad airline at present has on loan. This offer has been rejected.

" Britain has no policy in the West Indies and has had none for the last 20 years," remarked Dr Williams with the simplicity of one repeating a truism. Others, with less charity, have commented that it is Britain's policy to get out of the West Indies as cheaply as it can. Compared with its neighbours, Trinidad is well off : it has a manageable population, profitable oilfields and a trade network independent of Britain. Dr Williams would counter this argument by saying that he is not asking for philanthropy but for investment. And he has found this investment easier to raise from the common market countries than from Britain.

Dr Williams has been frustrated in his dealings with the European Economic Community by his dependence on the tortuous process of Britain's entry and the future

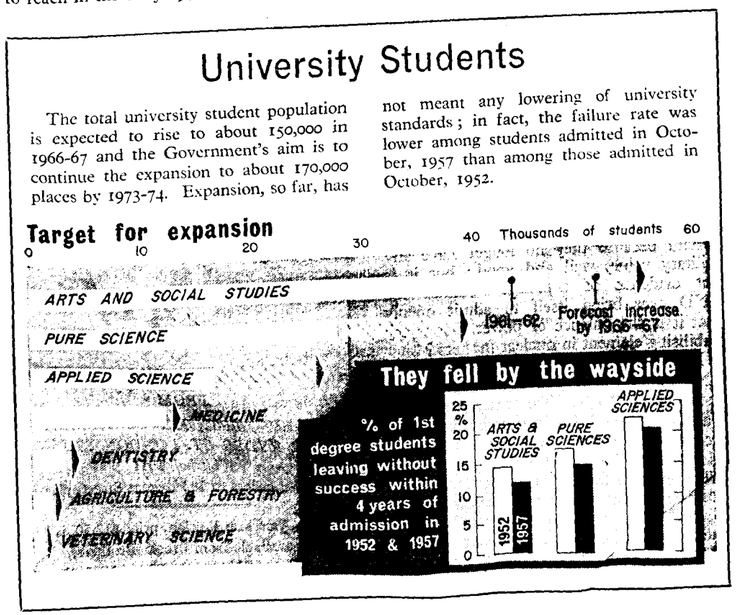
position of the Commonwealth (" common wealth for Britain, common poverty for Trinidad," is his characteristic comment on this institution). Despite the diplomatic difficulties, he has already circulated a memorandum to Dr Hallstein and the governments of the Six on Trinidad's position as an oil producer and refiner. With European business concerns, as opposed to governments, he has been able to push ahead. The west Germans have responded enthusiastically; firms in Holland, Belgium, Switzerland and Italy have expressed interest. If all goes as Dr Williams plans, some half-dozen commercial firms will form a consortium to put their money in Trinidad's development. With these fine hopes up his sleeve, the fun of a rude gesture to the British must have seemed worth while.

UNIVERSITIES

Rejected One Quarter

It is the invariable complaint of restrictionist dons that the pressure of suitable candidates for university places has been greatly exaggerated. Now, however, the Association of University Teachers has produced its own figures, the result of a questionnaire sent round a sample of English and Welsh schools. They show that this year one in four of eligible sixth formers (24 per cent of boys and 30 per cent of girls) who wanted to go to a university have failed to get in. The actual number of rejects with minimum entrance qualifications turned up by the inquiry was 5,289, or nearly enough to fill two new universities of the size that Brighton and York expect to reach in the early 1970s. To answer the usual argument that some of these marginal applicants would have been better fitted to apply to what are said to be less exacting branches of higher education, such as technical colleges and teachers' training colleges (where 2,000 qualified girls are estimated to have been refused places), the AUT has delved deeper: it has discovered that 2,318 of the rejects had average marks in two or more " A " level papers at least 10 above the pass level. These are hardly marginal candidates anywhere.

This is an intolerable waste of talent, and one that is bound to grow as the present bulge of 15 and 16 year olds moves on towards the doors of the universities, and as the number of children staying on to the sixth forms increases. At this level of achievement the maintenance of formal differences in status between universities and, say, the colleges of advanced technology has become a piece of arrant nonsense—designed mainly to create an inferiority complex in those who go to the latter for the sake of maintaining a superiority complex in those who teach in the former. The success of Glasgow's Royal College of Science and Technology in securing full degree-giving status as a second university in one city has been at least a sign that prejudice can be breached—and the Robbins committee on higher education should be girding its loins to grant university status to other " second institutions," especially in London and Manchester. This is only a beginning: second universities (with, where necessary, a doubling up in facilities and staff) will have to become commonplace in other big cities in Britain. These dons who cling to the contention that " more university students means worse university students " should study the chart on this page, which shows that there has been a clearly diminishing number of university drop-outs (despite deliberately competitive standards for second-year entry in some science faculties) during the student expansion of the 1950s.



COMMON MARKET

Erhard versus Centralism

The meetings at Strasbourg of the European Parliament have a mock grandeur about them. That the debates resound with high purpose to slight effect is less the fault of the legislators than a characteristic of the European Community's political structure.

Last week's annual parliamentary debate with the Council of Ministers was a particularly grand occasion, heightened by the presence of Dr Erhard, the west German minister of economics. Addressing a packed house and gallery on November 20th, Dr Erhard launched an attack on the increasing tendency toward centralisation in the European Commission, the community's executive body. Specifically he opposed the recent action programme which the committee headed by M. Marjolin had prepared for the commission. What was implied in such a programme, he argued, was not only the amalgamation of six economies into one, but also a close-knit federal union with a strong central power. Dr Erhard preferred a " federally organised Europe in which the various countries and people can live their lives according to their own ideals."

Predictably, Professor Hallstein, the president of the European Commission, took up the gauntlet for the community, and replied that although the commission was not seeking to establish a totalitarian state federation required a central executive body.

The parliamentarians seem to have been caught in the middle. As committed Europeans, they tend to believe in economic planning. In fact they can see no other way of getting the European economies to merge, and a majority would support the action programme. At the same time, they resent the commission's freedom from parliamentary control, albeit for reasons that differ considerably from those advanced by Dr Erhard. Indeed, the following day they suggested that the common market's legislature should be elected by direct universal voting and should have some share in the shaping of policy. But this seems a pious hope.

For the moment, the parliamentarians are allied with the commission against Dr Erhard. But no one knows just what would happen should the German economic minister succeed Dr Adenauer and—not, in German politics, an automatic consequence—put his ideas into practice. General de Gaulle in Paris, insisting on political and military independence for France,

Erhard in Bonn, holding aloft the flag of *laisser faire*—these are thoughts to keep the Eurocrats in Brussels awake at night, wondering how to lock these two countries into the community.

FORDS

The Halewood Story

THE Ford Motor Company, in the person of its chairman, has launched into yet another battle with "troublemakers" before its apparently victorious Battle of Dagenham is completely over. This time the men in question are not Ford employees, but work for the eighty-odd contractors who are building the company's new giant factory at Halewood—a suburb that stands in much the same depressing relationship to Liverpool as Dagenham does to London. The Halewood plant should ultimately employ eight or nine thousand men in depressed Merseyside, and a future extension could employ 2,500 others. Sir Patrick Hennessy is understandably exasperated that work there is six months behind schedule, and threatened on Monday that the extension may now never be built. He claimed that 81,000 working days had been lost there through unofficial strikes in the two years since work began, which would work out at 40 days lost per man. The main contractors claim that they can only trace 29,450 lost days (although even this would be bad enough); and loyal Liverpudlians insist that difficulties with the site, and contractors' errors, have also caused delays.

Sir Patrick also gave the characteristically Fordish impression that he thought the whole labour problem was inspired by communists. As always, this is a very partial truth. There are other problems at Halewood which fertilise the soil for the various sects of Marxists who have always flourished along the Mersey, and whose appearance in such a major project as this is not entirely surprising.

Before new jobs can be provided in Britain's underemployed regions, the construction industry must build and provide with services the factories in which men are to work. A modern plant almost always needs the services of a host of specialist subcontractors; their teams will be working far from head office, and dealing with dozens of small specialist craft unions, which may also often have no experienced (or intelligent) local official. Significantly the main contracting firm at Halewood has had very little labour trouble, and the latest issue of the Transport and General Workers' monthly magazine contains a glowing account of co-operation on the site. It is between the small specialised firms and the small craft unions that most of the recent trouble has arisen—both are perhaps more concerned with techniques than with labour relations. Perhaps regional development associations could set up advisory bodies of employers and trade unionists to help iron out such squabbles, and to knock particular troublemakers on the head. But for as long as the building industry continues its system of casual hiring, men will have an interest in spinning out the time a job takes, and in getting as much cash as they can grab while it lasts. This, sadly, is likely to be especially true in areas where work is scarce, and where new factories are therefore most urgently needed. It is not just the techniques of the building industry that need a hard examination.

NUCLEAR DISARMERS

Second Thoughts

THE promised new realism served up by Canon Collins's Campaign for Nuclear Disarmament on Tuesday turned out to be a curious mixture. The CND says the Cuban crisis has called into question the whole concept of nuclear deterrence. But does the Canon really believe, from the course the crisis took, that the prospect of nuclear war had other than a powerful pacificatory effect on both the Mr Ks? The CND says that the Russians were wrong to put nuclear weapons into Cuba, but the Americans were equally wrong in stopping them. This is impartially carried to a familiar illogicality. The CND says that the Americans and Russians have shown themselves to be so irresponsible that Britain ought to get out of the arms race altogether. There are good arguments why Britain should not sink any more money in its own bomb, but this is the least convincing of them.

The CND can do nothing about the American and Russian nucleus. If it gets pleasure in clapping its hands when the Americans dismantle their Thors in Britain because they no longer have any military value, well and good; but it is not evidence of a policy. Cannot the CND ever bring itself to admit openly that it is the balance of power that is the stabilising element in nuclear matters?

It is even less evidence of policy for the CND to swell its ragbag of neutralism with such tags as "a test ban treaty *now*" and "a solution to the Berlin problem involving free access to east and west Berlin with adequate reinforced (sic) UN guarantees." What on earth does it imagine everyone else has been trying to achieve these past years? The CND's announcement that it is joining the campaign for these and similar "limited ends" cannot be counted at all a powerful or persuasive reinforcement.

The Economist Diary

A happy mixture of all the ingredients necessary to ensure the smooth running of a busy man's day.

A week's appointments at an opening; a book that lies open flat on the desk

*

A diary lay-out specially designed for use at Board level

*

72 pages of facts and figures covering the world; 32 pages of maps

*

All information easily found by means of handy thumb-indexes

*

A memorandum book, an appointments register, and a complete reference book

*

Bound throughout in red leather; title blocked in gold. Size 10" x 8"

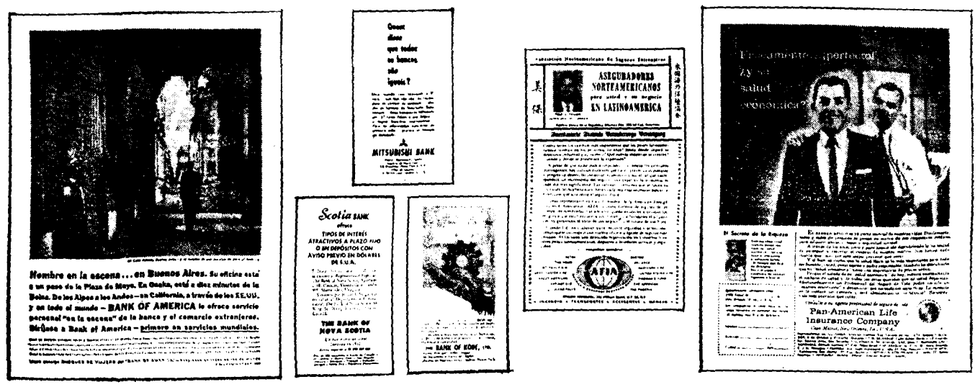
S for Sabena

A Caravelle approaches Stockholm; on its tail the famous long S insignia of Sabena. Sabena services to Stockholm, the northern extreme of a 92,000 mile network linking 100 cities in 37 countries, began in 1936 with an 18-seater Savoia Marchetti S-73. Today 80 passengers at a time are flown, via Copenhagen, to Stockholm's Arlanda Airport. There a massive Air BP fueller waits on the apron. Passengers are disembarked, hoses connected, pumps started. Long before the last passenger clears Customs, Air BP's part in getting the busy jetliner 'turned round' is done.

Fast flying SABENA *... fast fuelling* AIR BP

More financial and insurance companies

direct their advertising to Latin America



in Visión/Visão than in any other magazine

Visión

Bankers and insurance firms play a vital role in the fast-growing industrialization of Latin America, in its business and its commerce. Their services are ever present from the very beginning: from the leasing of land, through the construction of the plant and installation of machinery and equipment. Once in operation, the firm cannot exist without the services of banking and insurance for working capital, purchasing, trade credit financing and investments. And besides promoting their branches and representatives to local industrialists, modern international bankers use Visión and Visão to encourage correspondent banks to use their facilities overseas. That's why Latin America's largest newsmagazines consistently carry the most financial and insurance advertising.

AMERICAN SURVEY

AMERICAN SURVEY is prepared partly in the United States, partly in London. Those items which are written in the United States carry an indication to that effect, all others are the work of the editorial staff in London.

No More Brinkmanship?

WASHINGTON, DC

WHATEVER else Mr Mikoyan reports to Mr Khrushchev about his talks with Mr Kennedy, the President must have conveyed that the United States has never felt less like a paper tiger. But, to speak in an American rather than a Chinese idiom, it has never felt more like talking softly while carrying a big stick. All the deterioration now seems to be in relations between China and Russia, not between the latter and America. Mindful of its strength and of the world's peril, the United States continues to steer a careful course between irresolution and imprudence. But it is held that Mr Khrushchev must not be permitted to run off with a consolation peace prize under false pretences, by scoring points with his olive branches while the American eagle still brandishes its arrows.

The Secretary of State, Mr Dean Rusk, said last week that the world might be on the front edge of significant events. With this in mind the Administration has been referring to the Russians in terms so polite that some harder-nosed Americans chafe. It is leaning over backwards in order to avoid the least imputation that it is dizzy with success over Cuba. Anxiously it emphasises its full awareness that bold methods worked there because of special circumstances. Cuba is in home waters and the Russians, once they were found out, were over a barrel. There is heavy emphasis on the extreme unlikelihood of such methods being applied in Berlin. They might, of course, have to be applied but the exercise is not to be repeated if it can be avoided. Brinkmanship, in brief, is abhorrent.

It is admitted, in fact, that America's victory over the Soviet missiles and bombers in Cuba has created a danger of the loser trying to stage and win a return match. It is argued that Moscow might decide under cover of a *détente* to build up its force of nuclear submarines and its "hard" missiles, in order to negotiate from the traditional position of strength in the event of another confrontation. This might be arming to parley or it might be where we all came in and would all go out—but not necessarily. The Secretary of Defence is credited this week in a published interview with the cheery theory that a more stable balance of terror, with Russia less inferior in missiles than it is now, might make both a "first strike" against the United States and another adventure like the Cuban affair less appealing to the Russians. Americans are clearly in a sunny frame of mind when their top defence man can contemplate with equanimity and even optimism a reduction in his country's advantage in missiles.

The reasons are obvious. Whatever Mr Khrushchev's future intentions may be, he is being kept out of mischief at present by his need to straighten out his Chinese and other perplexities. A deepening schizophrenia lays its hold on the communist parties of the world, including the Indian communist party. In Brazil some left-wing elements are busily abusing Chinese policy as Trotskyist, while others applaud Mr Mao Tse-tung and accuse Mr Khrushchev of being an appeaser of the *bourgeoisie*. Such phenomena greatly hearten public opinion in America, where blood pressure has long been kept high by a rich red diet of news and views depicting the Chinese and Russian leaders as diabolically shrewd, twin-minded masters of a monolithic international conspiracy.

Yet in fact the Administration's hopes are modest and its prevailing mood is one of caution. A genuine *détente* between Russia and the United States would presumably increase the crack between Moscow and Peking. Hitherto the Russians have tried to paper this over and the Chinese to widen it. Such a development may be too much to expect. It is felt, however, that the Russians might agree to some quicker means of dialogue between the world's two life-or-death arbiters: in the desperate hours of last month Mr Kennedy and Mr Khrushchev had to resort to press statements and wireless broadcasts because diplomatic channels took too long. It is also hoped, though more faintly, to reach some kind of agreement with Russia about atomic testing. There might then be a prospect of a little disarmament, if only by the elimination of some weapons which are in over-supply and rapidly becoming obsolete.

IN Cuba, in Europe and in the East the Administration sees almost as many dangers as opportunities. Some Americans continue to dislike the President's conditional pledge not to invade Cuba; they hope that, as the Russians have not fully carried out their part of the bargain, the pledge can be forgotten. In fact, however, and not for sentimental reasons, invasion is unattractive to the Administration. The tiger does not wish to eat the goat.

But the United States is still anxious to have inspection on the ground in Cuba, with at least one eye on Dr Castro's "fishing port" which the Russians promised to build. It is felt that this might harbour Soviet submarines. So the United States would probably feel happier if there were a United Nations "presence" in the Caribbean, even if this involved inspection beyond Cuba. Incidentally, such inspection might serve to restrain Dr Castro from trying to play the part of a Marxist Bolivar. Few Americans, even those who have been least hostile towards him, think that there is more than a very remote chance of Dr Castro becoming a Latin American version of Mr Sekou Touré, turning back to the west from the Russian sphere of influence.

The most interesting thing about Berlin, it is being said, is that last month nothing happened there. Nor is Mr Khrushchev now expected to try to spring any surprises there for some time. But the tooth still aches. Certain fillings have been proposed but no appointment has been arranged with the dentist. When last heard from by Mr Rusk, Mr Gromyko still wanted the tooth pulled. As President Kennedy has made clear, the Americans are aware that the Russians need reassuring about the presence of nuclear weapons in Germany, but do not quite know how best to reassure them.

The United States still feels that one way to get nuclear weapons out or pulled back would be to put in more, and more diversified, conventional weapons as well as more soldiers to man them. America remains outwardly helpful but inwardly sceptical about the military usefulness or practicability of having in European hands the class of missiles that Mr Khrushchev put into Cuba. But the long-term American dream continues to be, as it has been for a year and more, the creation by Europeans of a politically

and militarily united western Europe. Such a Europe, it is believed, would be strong enough to face the Soviet Union and could outgrow it. It might also take the edge off Russia's fear of the Germans by turning them, post-Adenauer, into good, Macmillanish Europeans. But it seems that a united Europe, capable as it were of diluting the Germans, must on no account be diluted by European neutrals. Mr Macmillan may have to discuss this once more, as well as other common market problems, when he sees President Kennedy later this month.

The Administration's mood regarding India is again one of circumspection, for an India that improbably decided to become a staunch ally would need an enormous amount of military bolstering. For this and other reasons, the United States is anxious not to shove ahead of Britain and the Commonwealth in any race to succour India. Congress is unlikely to oppose giving military aid to any country that is fighting a communist one. Nevertheless, Mr Nehru has never been an exuberant admirer of the American way of life and Americans find Pakistanis more congenial. The *New York Times* has argued significantly that American policy should aim at obtaining an Indian initiative to work for a settlement with Pakistan over Kashmir, perhaps with American aid to India as an incentive. Mr Harriman, the Assistant Secretary of State for Far Eastern Affairs, seems to have been working along these lines during his visit to Delhi this week.

In short, the Administration expects the world to go on being an unstable place in which conflicts of all kinds, with the possible exception of nuclear ones, will continue to occur. In such a world, however, there is now greater confidence that the western, not the Soviet, system will prevail, while it is felt that there is at least a chance of a sober reappraisal by the Russians. Mr Khrushchev's domestic and foreign troubles have not led to the formation in the United States of a "Save Khrushchev" party. But neither do they tempt those in authority to pursue bear-baiting as a winter sport. President Kennedy's cool and wary politeness is that of the fencer who steps back but stays on guard.

AID's Gain, Budget's Loss

After some delay Mr David Bell has been nominated, as was expected in the beginning, to be the new Administrator of the Agency for International Development. The delay may have been because the President, still needing Mr Bell as head of the Bureau of the Budget, was hoping to find someone else able enough, tough enough and sympathetic enough, both to the White House and to Congress, to be capable of saving foreign aid's life. If anyone can do that Mr Bell is the man, for what the agency needs is just what he gave the Bureau of the Budget—a new approach to its purpose and an effective reorganisation—and he is adept at charming Congressmen.

But foreign aid's gain is the Budget Bureau's loss, particularly at a time when its function of striking a balance between the Treasury's estimates of revenue and other departments' demands for funds is particularly vital. Mr Kermit Gordon, Mr Bell's successor, comes from the President's Council of Economic Advisers convinced that a substantial cut in taxation is essential as soon as Congress reassembles in January. Most other members of the Administration, including the Secretary of the Treasury, now share this conviction which is also being endorsed by leaders of business as well as of labour. But it is doubtful whether Mr Gordon, with a less powerful personality than Mr Bell's, can crack down as successfully on the demands of defence and other agencies for more money. Mr Bell is staying at the Bureau until the end of the year, to see the 1964 Budget through its final draft, but even so Mr Gordon's appointment increases the prospect that government spending, and therefore the deficit in the national accounts, may become excessive.

This in turn will increase Congress's reluctance to allow taxes to be reduced—although it will be decreased by the encouragement for both higher spending and lower taxes which is coming from Europe. The head of the Organisation for Economic Co-operation and Development made it clear that both were envisaged in "the action to stimulate demand" in the United States which was recommended in the final *communiqué* after this week's meetings in Paris. Thus congressional opponents of deficit financing will find it more difficult to argue that such expansive policies will renew European fears of an American inflation and so threaten the health of the dollar. On the other hand, the improved economic outlook, with a recession no longer regarded as probable in the early part of 1963, makes tax reduction seem less urgent to Congress, although not to the Administration. It advocates cuts more as an indispensable means of bringing the national output up to its potential level and fostering long-term growth than as an immediate stimulus for the sluggish economy.

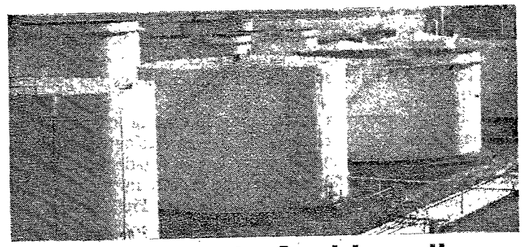
Atomic Birthday Party

The Atomic Energy Commission is celebrating the twentieth anniversary of the first controlled release of nuclear energy with promises of presents—although most of them will not be delivered for another ten years—for everyone concerned in the civilian, and far from flourishing, side of the industry—uranium producers, power companies and even coal miners. Gifts for all these groups are contained in a report to the President, made at his request; there is little new in it but it may revive interest, both in the Administration and in Congress, in the lagging programme for developing peaceful commercial uses for atomic energy.

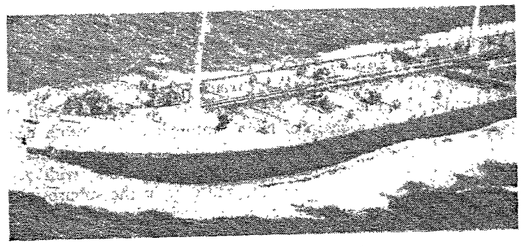
For the producers of uranium, dependent on sales to the government which were guaranteed only until 1966, there is an extension of the AEC's contracts until 1970, although with deliveries spread out and at lower prices. After that the commission expects private demand for uranium to fill the gap. Indeed, the AEC foresees an eventual shortage of uranium and wants for this reason to step up the experimental work on advanced "breeder" reactors which produce more fuel than they consume. Between 1964 and 1976 it proposes that the government should finance the construction of seven or eight "true breeders" and "advanced converters," which produce more fissile material than the present reactors (although not as much as they actually use) and which can fill the gap until true breeders are generally available and, it is hoped, economically profitable. During the twelve-year period the AEC also advocates that private utility companies should build, with government help, about a dozen conventional reactors with capacities of 400 megawatts or so, twice as big as the ones now in use.

By the nineteen-seventies, the commission calculates, the costs of producing atomic energy should have been reduced enough to make it competitive with fossil fuels all over the United States; already it is near to becoming so in areas, such as New England and California, where coal and oil are expensive. By the turn of the century half of the electricity used in the United States will come from atomic generators, according to the AEC's forecast. Since the total demand for electricity will have increased tenfold, this should not damage producers of other fuels. In any case reserves of these minerals are limited and it is important that they should be conserved for uses for which atomic energy is not suitable—supplying power for some kinds of transport, for example—or for purposes other than generating electricity; the chemical industry, in particular, needs coal and petroleum as its raw materials.

Mitsui's Minister of Shipping



transports Arabian oil



in Japanese tankers

Mitsui arranges the land, sea and air transport of thousands of different commodities daily. That means Mitsui can get you more advantageous quotations for chartering, insurance, warehousing, etc. And Mitsui service is fast. Mitsui shipping representatives know the latest clearance practices, harbor conditions, demands for shipping space and other factors which influence the movement of goods so your orders have smooth sailing from depot to destination.

Located the world over, the Mitsui Ministers are experts in virtually every active phase of international commerce, industry and finance. Whatever your field—import, export or cooperative investment—you can put the whole Mitsui organization on the job by merely contacting your nearest Mitsui representative or writing us at the address below. You'll find, as thousands of businessmen have, that it makes sense to talk first to Mitsui.

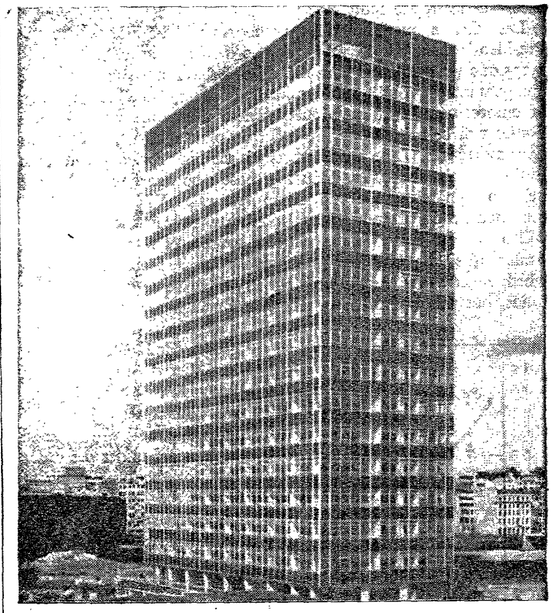
AT EVERY MOMENT SOMEWHERE IN THE WORLD TAYLOR WOODROW IS SHAPING THE FUTURE...

TEAMWORK ROUND THE CLOCK



...AND NOW THE COMMON MARKET!

For British companies considering development in Western Europe, or Continental companies planning development in Britain, the Tayplan offers a service that saves months of work and worry. Tayplanning takes care of every aspect of a new project, from design and finding a suitable site to completion ready for immediate occupation and operation. We welcome an opportunity of discussing with you and your consultants how Tayplanning would facilitate your expansion plans *right from the start.*

LEE HOUSE, CITY OF LONDON

This £1 million project, completed well ahead of schedule, is yet another example of how Taylor Woodrow teamwork and advanced construction techniques ensure the utmost speed and economy consistent with quality construction to the client's own high standards.

CLIENTS: Metropolitan & Provincial Properties Ltd., who hold the building lease from Centrovincial Estates Ltd.
ARCHITECTS: Bernard Gold & Partners.
CONSULTING ARCHITECT: Mr. A. J. Shickle, Dip. Arch., A.R.I.B.A., of Campbell Jones & Sons.

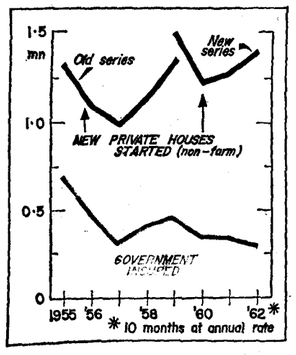
Foot in Housing's Door

LAST week the shoe dropped at last: President Kennedy issued his long-delayed order banning racial discrimination in new housing built with the aid of federal grants, loans or guarantees of mortgages. Inevitably the South was displeased but by waiting until Congress had adjourned Mr Kennedy had ensured that his legislative programme did not suffer; by waiting until after the election he safeguarded pro-Administration Democrats in the South from reprisals and himself from accusations of playing politics with the Negro vote. The move provoked more grumbling than alarm from builders and estate agents, who had known since 1960 that Mr Kennedy meant to end the federal government's part in perpetuating racial discrimination in housing. Many builders and landlords in the North already operate under local laws which, in theory at least, are more sweeping than the federal order.

Less than a quarter of all new houses will be affected by the President's ban. Last year 327,000 houses out of a total of 1,275,000 were financed with the aid of federal mortgage insurance and guarantees. But it seems unlikely, because of the heavy burden of enforcement, that individual owners who want to sell their houses will be covered by the order no matter how they financed their mortgages. The main targets are the big property developers in the suburbs and cities, including those who benefit from federal help in slum clearance and urban renewal. Violations will be punished by loss of grants, loans and mortgage insurance. Builders will be able to resort to conventional sources of mortgage money, banks and savings and loan associations (that is, building societies), which in any case supply the industry with three-quarters of its funds, but this will make houses dearer and harder to sell. The Civil Rights Commission recommended originally that banks and other lending institutions whose deposits are guaranteed by the federal government should be brought under the order but, for the time being at least, the Administration has held its hand.



Experience in the cities and states with "fair housing" regulations shows that relatively few Negroes have made use of them; those who do are almost invariably the more sophisticated and highly-educated. Poorer Negroes tend to cling to the segregated areas which they know; in any case, three-quarters of all Negro families have incomes too low to qualify them for government insurance of a mortgage. But for those with enough money who are prepared to put up with insults and to pin down evasive landlords the order provides a sharp new weapon.

—Even in the Suburbs

WASHINGTON, DC

NOW that a federal breach has been made in the wall of American *apartheid* builders may take more interest in the evidence that profits are to be made from offering homes to all comers irrespective of race. Negroes are said to spend $1 billion a year on motor cars but only 6 per cent of the Negroes in the North own homes, though to do so is an integral part of the American dream. Six years ago the Donbar Development Corporation took the bold step of building "inter-racial" suburban houses at Westbury, in Long Lsland; it has also put up some near Philadelphia. Most of the purchasers are in fact Negroes, who up to now have been excluded as a rule from desirable suburbs. The fact that Donbar has not had to foreclose on a single Negro buyer has dented the belief that Negroes are bad risks; the firm says that it now has no difficulty in arranging loans from banks.

In Westbury the white residents have not only accepted the Negroes but have actually helped to fight off a proposed rezoning plan which would have had the effect of introducing *de facto* racial segregation into the local schools; half of the children in them are now Negroes. The Donbar company is now putting up 500 inter-racial homes in suburban Washington. For a down payment of $700 ($300 in the case of ex-servicemen) anyone, including a Negro, can move into a three-bedroom, centrally-heated house costing $15,650. Monthly payments of a little over $100 are spread over 30 years through the use of federal loans and guarantees of mortgages.

Donbar also proposes to create an inter-racial country club in Maryland, near the notorious Route 40 where coloured people have been refused even a cup of coffee by segregationist restaurant-owners. The firm already operates two such country clubs in New Jersey, one near Atlantic City and one near Philadelphia, called Sandale I and Sandale II. The clubs' charter members include two bishops, Mr Thurgood Marshall, the new federal appellate judge, and Mr Duke Ellington, the jazz composer and band-leader. The clubs provide golf, swimming, tennis, riding and even shooting; the proposed club in Maryland is to have a yacht basin. Donbar also offers to sell members plots of land on which they can build homes to use at weekends and when they retire.

Another part of the American dream is to take a winter holiday in Florida. Donbar has opened one hotel at Miami Beach and proposes to create a chain of motels throughout the South which will cater to Negro travellers and holiday-makers. And it has laid out an inter-racial cemetery at Tappan, New York, with 7,500 plots. Negroes may not only live and play in the suburbs along with whites, they may now be buried alongside them as well.

Let the People Say

THE 51 million or so Americans who went to the polls in November—a record turnout, for a non-presidential year, of 47 per cent of those of voting age—had a great deal to decide beside who should be their Governors and members of Congress. Almost every state passed some burning problem to the people, whether it concerned representation, Sunday closing laws for shops, the outlawing of gambling or the legalisation of sales of liquor by the drink. Some of the issues on the ballot, printed in fine type and abominable jargon, were trivial, but in other instances they were of the first importance.

In California, for example, the voters rejected by a majority of 3 to 2 an amendment to the State Constitution which would have made organisations subversive at the mere declaration of a grand jury or federal officer or judge. In three counties surrounding San Francisco, to take another instance, a $792 million bond issue squeaked through—for a system of suburban railways to syphon traffic off the roads—though it will cost the average householder about $27 a year more in taxes. California accounted for over half of the nearly $2 billion in bond issues which were approved; elsewhere, particularly in small communities, the voters were not so lavish, though St Louis, after years of talk, decided to borrow $95 million to clean sewage from the Mississippi River.

Status Seekers in the Slums

NEW YORK

THAT heavy air of violence which distinguishes the slums of New York makes them a suitable, if formidable, training ground for recruits to the United States Peace Corps; indeed, the creation of a domestic corps is now being discussed seriously. The challenge is at last being treated with an antidote which matches its intensity. Mobilisation for Youth, a massive, expensive and unorthodox social experiment opened its doors recently in Manhattan's classic slum, the Lower East Side. Over the next three years it will devote a staff of 300 people and at least $14 million to the demonstration of its thesis that the cause of juvenile delinquency is the seeking of status when no status is available and that the cure is to expand opportunities for work and education.

The project is considered to be the first systematic attack on crime among young people. Its costs are being shared by President Kennedy's Committee on Juvenile Delinquency, the National Institute of Mental Health, the Ford Foundation and the City of New York. The latter's contribution of $1 million is particularly unbegrudged in the light of the $90 million which it must spend each year to deal with delinquency.

Almost as revolutionary as the size of MFY's budget (which may be increased if Congress extends the life of the Presidential Committee from three to five years) is its theoretical basis. This is derived from Emile Durkheim rather than from Freud and holds that the reason why the Lower East Side produces the highest rates of delinquency in New York City (63 delinquents out of every 1,000 youths) is because its immigrant population is overwhelmed by its isolation from society, rather than by the sum of its neuroses.

This new approach involves a reversal of the existing tendency of social workers to concentrate on psychiatric case-work at the expense of social reform. MFY's staff argues that psychiatry is a middle-class prerogative and will remain one until its practitioners find techniques for reaching the unreflective and inarticulate. Instead the cure to be tested will be large-scale practical programmes to bridge the gap between the lower-class, largely Spanish-speaking, culture of the people in the district and the middle-class environment of employers, police, shops and schools.

The object of all this attention is an L-shaped neighbourhood on the East River south of Fourteenth Street, the traditional stopping-place of New York's newest immigrants. In earlier days, when the population was three times the present 100,000, the social problems among the homogeneous waves of Italians and Jewish immigrants were largely those of poverty and overcrowding. Today, with a tense mixture of backgrounds among the new arrivals—Puerto Ricans now comprise 26 per cent of the population (50 per cent of the school children) and Negroes 8 per cent—the problems are crime and narcotics. Unemployment is high and the many unmarried mothers who head households actually provide, with their public assistance grants, an element of economic stability. Gangs still flourish, bearing pathetically arrogant names—Cadillacs, Centurions, Dragons, Young Lords—yet many of these have turned from the fierce street warfare which characterised the nineteen-fifties to the taking of drugs. This has only raised the level of crime and violence, as addicts are said to need $100 a week to supply their needs, a sum which they are ill-equipped to obtain by honest means.

MFY's first programme, started on October 15th, is directed towards the unemployability of the neighbourhood's young people between the ages of 16 to 21; this is no doubt the harshest reality facing them Early school leavers and unskilled, they may hardly be able to speak, let alone read, English. What MFY proposes to do is to serve as the necessary first employer, offering all the trappings of the working world: jobs, in building maintenance, electrical repair, food preparation and clerical work; time clocks; and wages, at 75 cents an hour, which will be paid by a cheque to be cashed at a local bank. It will also offer what the real employer cannot: endless patience, repeated instruction, tolerance of unreliability and of violent emotions and a short working day.

When young people are ready to venture outside this shelter (and the staff is prepared for this to take as long as six months) they will be placed as apprentices in television repair shops, hospitals, restaurants and wherever jobs that provide training can be found. The employers will be asked to keep them for three months, paying one-half of a $1.25 an hour wage; MFY will pay the rest. Afterwards, the project's staff will help the youths to find permanent jobs or, better still, to return to school. For the first year of the work programme, $1 million has been allocated, yet even this may not be enough. The enrolment during the year was expected to be 1,000, but three days after a sign was hung out, advertising "Youth Jobs Service" in English and Spanish, 100 young people had come to apply.

Improving the opportunities for education may be more difficult. The cultural gap between the city's essentially middle-class school system and its slum-dwelling pupils is enormous; in one school it is estimated that 80 per cent of the teachers' time is devoted to keeping order. In response, MFY has designed an extremely delicate project, that of arranging for the area's school teachers (who tend to live elsewhere in better districts) to visit their pupils' parents in their homes. The teachers have protested, fearing for their personal safety. Privately, MFY's workers declare that this fear is an exact measure of the hostility between teachers and pupils; publicly, they have promised to accompany the teachers on their forays into housing projects and tenements. Among its other imaginative gestures, the project is hiring representatives from the Negro and Puerto Rican communities to work as consultants with local school authorities.

IN the great number of other programmes which it is putting in motion MFY urges the adoption of "lower-class styles." It will establish coffee bars which boast West Indian music and decoration. It will set up in vacant shops "neighbourhood helping centres" to assist the residents in facing everything from the problems of marriage to those of shopping. Special efforts will be made to rehabilitate young drug addicts (with little hope for success, incidentally) and young offenders released from detention homes. Most unorthodox of all will be the encouragement of political organisations and protest movements among ethnic groups. Puerto Ricans, especially, are felt to have much to learn from the experience of the Italians who, as new immigrants, shielded themselves from oppression, and what one MFY leader bitterly called "arbitrary arrest," by the skilful use of New York's political machinery.

If these methods of attacking juvenile delinquency work, they may be imitated all over the country, in spite of their costliness This is particularly true of the work programmes. Last spring Congress approved a Manpower and Development Training Act to begin to deal with the problem of training the unskilled worker and Washington is acutely aware that 7,500,000 young people will try to enter the labour force in this decade without having completed secondary school. Moreover, several other cities—Los Angeles, Chicago and Detroit, for example—are preparing to ask the Presidential Committee on Delinquency for funds for projects similar to Mobilisation for Youth. Certainly New Yorkers will be waiting anxiously to see whether MFY can slow down the seemingly inexorable spread of delinquency. The Lower East Side is far from being the only trouble spot.

Continued from page 904

In thirteen states there were questions on the ballot relating to the great underlying issue of whether city-dwellers and suburbanites should be more fairly represented in State Legislatures where rural conservatives have long held sway. In the states of Washington and California (where suspicion of Los Angeles runs deep) moves toward reform were rejected. Mississippi and Florida also turned thumbs down on proposed changes but in these states it was the city voters who led the opposition; like Oliver Twist, they wanted more. Tennesse has approved a constitutional convention on what is called "re-map." Another problem which has grown with the mobility of Americans is that many are disfranchised when they move to another state. Arizona, Colorado, Idaho, Kentucky and North Carolina all made it easier for newcomers to vote in presidential elections.

Metropolitan government—the absorption into new, larger and more efficient units of cities and their suburbs—suffered defeats in St Louis, Missouri, and Memphis, Tennessee, even though fleeing criminals, river pollution and traffic problems halt for no local government boundary. In the case of St Louis, an alteration to the State Constitution was involved and so voters all over Missouri were polled. But the result would have been no different if only those affected had voted, as they did in Memphis. Elected officials tended to oppose the change, which is not surprising; around St Louis over a hundred little governmental units would have disappeared.

Juggling with the Jobless

SPARKED off by an accusation in the *Reader's Digest* in September, 1961, that the Administration had inflated unemployment figures on purpose during the recent recession in order to get support for huge programmes of government spending, a good deal of political dust was raised before President Kennedy appointed a committee, under the chairmanship of Professor Gordon of the University of California, to look into the whole problem of measuring employment and unemployment. Ten months of fairly intensive study produced from the six non-official experts a 412-page report* which should confound all the critics. Briefly, it finds any charge of partiality quite unwarranted and describes the American system of manpower statistics as the most comprehensive in the world—but nevertheless suggests a long list of improvements.

Americans can no longer hope that their unemployment is high simply because of the way it is measured. When the 1960 national statistics of seven other industrial countries were adjusted, as far as possible, to American concepts, the rate of unemployment as a percentage of the labour force in the United States was exceeded only in Canada and was much more than twice as high as in any of the other countries except Italy.

COMPARATIVE UNEMPLOYMENT IN 1960
Rate as percentage of labour force

	Unadjusted	Adjusted to US Definitions
Canada	7·0	7·0
United States	5·6	5·6
Italy	7·9	4·3
Great Britain	1·6	2·4
France	1·1	1·9
Sweden (1961)	1·2	1·5
Japan	1·0	1·1
Germany (F.R.)	1·2	1·0

Not all countries underestimate unemployment by American standards. The German rate had to be trimmed slightly and the Italian rate nearly halved to make them comparable. Britain, however, was among the four countries whose rate was pushed up. The British government is now seriously concerned about the largest November count of unemployment since 1940, although it amounted to no more than a 2.4 per cent rate. Although adjustment to American standards may not be the same today as it was in 1960, it is probable that the British are worrying about an American-defined rate of a little over 3 per cent. There are areas in Britain where unemployment equals or exceeds the American average, but for the country as a whole it is probably still only about two-thirds.

BEFORE diving into this report, it would have been hard to credit that unemployment could be such a slippery concept. Of the seven countries compared in the table, three—the United States, Canada and Japan—currently determine their unemployment rates by direct sample inquiries, the other four from labour office records of varying comprehensiveness. In Britain, for instance, although unemployment insurance is widespread, the one-day-a-month count of the numbers registered at labour exchanges excludes many who would be caught in the American count. The incentives to register in Britain are either to obtain unemployment benefit or to get the help of the Ministry of Labour in obtaining another job. But there are various classes of people, chiefly married women who have opted out of the insurance scheme and teenagers straight from school, who have little incentive to register as long as jobs are plentiful. On the other hand, because the British count is taken only on a single day, it includes some people who, having worked for even an hour in the preceding week, would be omitted from the American count.

The Gordon committee believes in the American system of taking a household survey, but would like to see the sample (at present 35,000 families a month) increased substantially, perhaps tenfold, and the questions sharpened up to avoid the ambiguities which now exist, without doubt. Instead of leaving it largely to the respondent to decide whether he, or a member of his family, is "looking for work" (although, on the face of it, who should know better?), the committee suggests that the person should state that he has actually tested the job market within some reasonable period, say 45 days. Obviously the committee has been influenced by a special survey made in August, 1955, which discovered one million people in the United States not included among the unemployed who had wanted work and had taken steps to look for a job within the past two months. Undoubtedly, this number included many youngsters who had only sought a temporary job at the beginning of the summer; nevertheless, the committee has pulled out a worrying, if not entirely convincing, finding.

Even after all the dust has been settled, it is impossible not to feel rather baffled. "You should say what you mean," the March Hare rebuked Alice; but what is meant by "looking for work" in a modern society in which the work-or-starve principle does not apply? The British concept of unemployment seems more of a distress signal, the better social indicator of the need for work, the American one the better economic indicator of the potential extra labour that could be drawn in at any moment, although in both countries there must be a hard core of well-nigh "unemployables."

The measurement of employment and the seasonal adjustment of manpower statistics also came under review. British officials fight shy of seasonally-adjusted persons; the Gordon committee believes that adjusted series are the more useful, but infers that the Labour Department's present technical methods of producing them could do with a good overhaul. Research, research, and more research is the committee's cry and funds are to be sought for this in the forthcoming fiscal year. Meanwhile the Department of Labour has already begun to act on some of the committee's recommendations.

GUIDED TO TOUCHDOWN BY CIRCUITS PRINTED IN COPPER

Today's aircraft landing aids—and the radar systems which are their eyes—have their nerve systems printed in copper. For today the printed circuit has taken over from the web of wiring you saw inside any kind of "wireless" apparatus not long ago. In a printed circuit the conductors are etched out of a sheet of very thin copper foil (bonded to an insulating board) to give an exact reproduction of the master diagram. The copper foil is only about one-thousandth of an inch thick. And it is because copper can be of these fine dimensions and still be an effective conductor of electricity that printed circuits can be coupled with miniature components to pack into the size of a matchbox equipment which previously needed to be of at least shoe-box dimensions. The application of printed circuits covers the whole field of electronics—from domestic radio and television to mammoth computers, from automatic control units to toy trains. But this is only one application of copper today. The aircraft's instruments rely on copper components . . . copper cables link the vast pattern of airfield lights . . . and in the airport buildings copper provides the plumbing systems. With its many special qualities, copper lends itself to so many modern techniques—and is usually the most economical as well as the most technically satisfying answer.

Redeal for Discounters?

THE top brass of the General Motors Corporation was in Los Angeles last week for the opening of an anti-trust suit—expected to go on for three or four months—against the corporation, four of its officers and three of its franchised Chevrolet dealers. They are accused under the Sherman Act of conspiring to suppress competition by preventing other Chevrolet dealers in southern California from selling motor cars to automobile discount houses. The Department of Justice seeks to forbid any interference of this kind all over the country, as well as to punish the defendants in this particular case. The government insists that it is not attacking the system of franchise dealers as such but many feel that, if GM loses, big changes will be inevitable in the way cars and other products are sold.

At present each dealer has the exclusive right to sell a particular car—sometimes more than one—in a particular territory; he provides skilled servicing and spare parts in return and makes good on the manufacturer's guarantee which now runs for two years. The dealer has been approved by the manufacturer and often has invested substantial sums in facilities and stock. Automobile discount houses began to flourish in southern California about four years ago when sales were slow and dealers were glad to dispose of some of their cars at little or no profit. The discount house provides no servicing, will not make good on a guarantee and often carries little stock. Its prices are low because it has few overhead charges to meet, but a skilled bargainer can often do as well from a franchised dealer; not everyone, however, is eager to haggle or good at it. Many automobile discount houses have gone out of business in southern California since 1960, when they sold about 2,000 Chevrolets, worth about $5 million, compared with total sales in the area of about $250 million. But they are popping up in Texas, St Louis and Chicago.

GM insists that it is concerned about the discounters' inability to provide adequate servicing and maintenance, but presumably the company is also aware of the threat to its network of dealers—the envy of the industry—and the risk of price wars conducted by discounters with no stake in any particular car. GM maintains that it did no more than "express its views" on sales by its dealers to discount houses. But the Department of Justice doubts whether this, by itself, would have halted the practice within a week—as happened in 1960. It insists that the case is a classic one of restraint of trade and that the only issue is the right of people to buy cars where they like.

Tuna Round the World

FROM A CORRESPONDENT IN CALIFORNIA

A FEW years ago it would have been easy to write off both the Van Camp Sea Food Company of Long Beach, California, the largest canner of tuna fish in the world, and the American tuna fish industry as decaying enterprises being driven off the ocean by Japanese competition and by labour troubles. Now both are thriving at home and preparing busily to win new markets abroad. Van Camp is expanding from operations strategically located all around the globe, a world-wide development of fishing and packing facilities which was dictated by the hard facts of economics.

The American tuna fishing industry, heavily concentrated on the West Coast, had almost priced itself out of existence a few years ago. The packing companies were faced with a situation in which the owners of tuna boats and their crews, operating out of Long Beach and San Diego, were united in a policy of insisting on prices for their catch higher than those on the world market and divided against each other as to how the proceeds of their joint enterprise were to be allocated between management and labour respectively. Disputes were frequent and protracted. Meanwhile the Japanese tuna industry was able to land fish at West Coast ports, in both raw and processed form, at prices Van Camp and other American firms could not match.

Since then the situation has improved as a result of limitations on imports. But basically the Van Camp Company has worked out its own salvation by operating in places where the rates of pay to boat owners, crews and cannery workers enable the firm to compete. The company now has fishing stations and packing plants in American Samoa, Puerto Rico and Ecuador and additional fish receiving stations in Sierra Leone, Senegal and the Ivory Coast. At its stations abroad Van Camp has aided nationals of the different countries to set up as independent fishermen, advancing them loans to buy boats which are repaid out of the proceeds of the catch.

On this global basis Van Camp has prospered greatly in recent years. Sales of its branded Chicken-of-the-Sea and White Star tuna fish were estimated at some $70 million last year, an increase of 15 per cent over the previous year. Profits were also substantially higher and the outlook is for even better results. The consumption of tuna fish in the United States is rising at a rate of 7.5 per cent a year (much faster than the population) and this trend shows no sign of levelling off. The company also does a substantial business in by-products, including the sale of a new pet food which has been very well received by the public. In July, a fresh enterprise was started by the purchase of four Peruvian companies converting anchovies into fish meal. Van Camp has also been thinking of entering the European market, believing that the potential consumption of tuna fish there is considerably more than current effective demand. The company calculates that tuna canned at its Ecuador plant could be competitive with the Japanese and Peruvian products which are already established firmly in western Europe.

The chief centre of interest, however, remains the fast-expanding American market. By going global Van Camp has ensured a year-round supply of raw material for its main packing plant at Long Beach, with a degree of price stability now that it draws on several sources which was never possible so long as fish were being caught only in near-by Pacific waters. In addition, the competition from abroad has resulted in greater harmony and stability in the operations of the company's local fishing fleet. Incidentally, in spite of the expansion overseas, about 50 per cent of all the raw materials processed by the company is still landed by vessels flying the American flag.

SHORTER NOTES

The new US Commissioner of Education is to be Mr Francis Keppel, the dean of Harvard's Graduate School of Education. Mr Keppel is such a catch that, to get him, it is thought that the Administration must have promised to make this thankless post more powerful and more attractive. It pays only $20,000 a year and the agency is largely a statistical and service one at present, but with more authority the capable Mr Keppel may help to push federal aid for education through Congress and may provide the educational leadership which, in theory, the office dispenses.

* * *

The United States is short of money—at least of cents, nickels, dimes and quarters. They are always scarce during the Christmas shopping season but the spread of sales taxes and vending machines, added to the growth of the population, has made the demand greater than ever. The supply, however, is inelastic; Congress refused the Treasury a supplemental appropriation to increase it, even though coining money is profitable. The Philadelphia mint does a good deal of coining for foreign countries, particularly the new ones in Africa.

THE WORLD OVERSEAS

An Algerian in Paris

BY OUR SPECIAL CORRESPONDENT

IN preparation for his talks this week in Paris, Mr Khemisti, Algeria's foreign minister, described in Algiers last Saturday his government's attitude towards the Evian agreements. Addressing the national assembly, he went through the rights and the wrongs of the agreements one by one. In brief, they were not found fault with in any substantial way, except that French bases and nuclear installations were held to be "incompatible" with Algerian neutrality.

This was to be expected. Mr Benbella's own ideas about bases were expressed when he went to Cuba and joined Dr Castro in denouncing the American base at Guantánamo. He was later dismayed to find that the jolly Cubans had got themselves stuck with a Russian nuclear base over which they had no control. His immediate reaction was to declare that he would not tolerate nuclear tests in the Sahara. For this he can hardly be blamed. The one useful moral issue on which all neutral countries combine is their abhorrence of nuclear warfare; and since the Cuban debacle their sense of righteousness has grown. Algeria would now be counted as seriously letting the side down if it lent itself to nuclear explosions. The French cannot be unaware of this; and they do have alternative testing sites in preparation in the Pacific and Indian oceans.

The question of bases—the great Mers-el-Kebir naval base and its satellites—is more provocative, for it touches French national interests on the raw. It may be that the Algerians, having flashed their disapproval, will not press the issue too hotly—not so long, at least, as the Americans retain Guantánamo. To agitate now would certainly be injudicious. Mr Khemisti goes to Paris on behalf of a near-ruined country which is more—not less— in need of French assistance that it was when the Evian accords were made a few months back.

Both he and Mr Benbella have rather ambiguously said that the Evian agreements must be made "to conform to reality." Yet what is reality when applied to them? The reality from the French point of view is that much that warranted these agreements has already gone by the board. France's huge financial commitment—£200 million a year for technical aid and development over the next three years—was intended in part to cushion Algeria's one million Europeans against the onrush of revolutionary socialism. Now three-quarters of that million are gone. The French nationals in Algeria today number only a few hundred more than those to be found in Morocco. Morocco gets only a tenth of the aid promised to Algeria.

CONVERSELY, the Algerians are confronted with an unforeseen physical reality: the departure of the Europeans has left them with much more leeway for pressing on with socialism. Two million acres of the best agricultural land have been abandoned. So have some hundreds of factories. The Algerian government has already frozen these assets and put them in the care of "workers' committees." In theory the measures are provisional. In practice it is hard to imagine that there will be any going back from these first stealthy steps towards state control—not, at least, where they touch on the land.

It is therefore France, not Algeria, that must think again about Evian. For the French are now virtually asked to help in advancing the social revolution that they formerly hoped to retard. This, perhaps, is not out of the question. For a western power to support honest socialism in Africa might prove to be more rewarding than shoring up sheikhs in Arabia, as Britain still has to do. What France is concerned to know is how far and how fast this revolution is going, and what prospects it offers to the 200,000 Europeans who have stayed in Algeria.

In a statement to the press last week, Mr Benbella tried to answer their questions by outlining his socialist programme. Large agricultural properties will not be parcelled out among the peasants. Instead they will be run by the state, the peasants to be housed upon them and to work for wages. The government will take over some marketing. Mines and power are to be nationalised with the large exception of Sahara oil and gas, which will remain, as decided at Evian, in the hands of their European companies and worked on a fifty-fifty basis. The government will part-own some industries, but a large private sector will remain. On the face of it, Europeans will be debarred from the land but will be welcomed in commerce and industry. This would be reassuring if there were any certainty that what Mr Benbella says today will apply tomorrow, and that he can carry his quite sensible programme out.

UNHAPPILY nothing is certain today in Algeria. The most real of all its realities is that it is still nearly prostrate from the terrible blows that were dealt it by the Secret Army Organisation (OAS), the flight of key Europeans and the anarchy that prevailed when the Algerian leaders quarrelled. In spite of the return now of 12,000 teachers from France, the hasty recruitment of some thousands of new French technicians and the fact that France, since July, has been meeting all the bills for Algeria's general maintenance (about £700,000 a day), recovery is nowhere in sight. As one of the few civic centres where normality has been restored, Algiers is an ivory tower from which remote ministers issue their doctrinaire statements to a populace dazed by unemployment and hunger. In most other parts of the country—except possibly Kabylia, habitually self-reliant—public services barely function. With the tax machinery broken down, taxes have simply been going uncollected. Many people in Oran and the west are on the verge of starvation. There is little national cohesion. As a nation-wide binding force the National Liberation Front has all but melted away. The government has far to go before it can even be said to be in control of the country, let alone in a position to get socialist enterprises going.

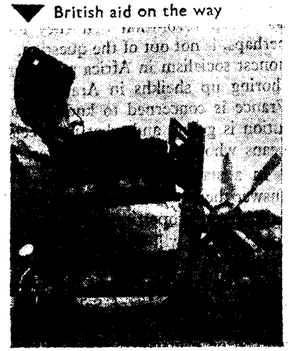
All the more reason for hoping that Mr Khemisti in Paris will put his case wisely and well. In the long run other countries may take part in Algeria's regeneration. But at present there is a vacuum, which Mr Benbella has admitted could be "difficult to fill" should Algeria's "close ties" with France not be maintained.

Delhi at Wit's End

FROM OUR CORRESPONDENT IN INDIA

▲ Mr Chavan (defence minister) with Mr Harriman

▼ British aid on the way



WHAT would you do if . . .? Mr Nehru has not been envied this week, sitting in his chair and facing the appalling decision: How to respond to the Chinese cease-fire statement? New Delhi's initial reaction had been easy and sensible: to take grateful advantage of the cease-fire to seek clarifications and to send no official answer at all. But as December 1st, the scheduled date for the beginning of the Chinese withdrawal, drew nearer the future course of action had to be fixed. The Chinese had unilaterally ceased fire, but they were under no obligation to carry out a unilateral withdrawal. According to the precise wording of the Chinese statement of November 21st, even if India did not make any positive response, China would "take the initiative to carry out" its measures. How far did that initiative extend? The Chinese had also threatened to start fighting again if Indian troops advanced to the "line of actual control." Suppose they did withdraw, were Indian troops to take the risk of pushing forward or not; and if so, how far?

As the days went by, a qualified rejection looked probable. Indian spokesmen stuck to Mr Nehru's snap response that India adhered to its plan for the restoration of the position obtaining before September 8th, and elaborated New Delhi's objections to the Chinese line of actual control of November 7, 1959. They maintained that the Chinese, by claiming that the line in Ladakh "coincided in the main with the traditional and customary line," were in fact pushing it miles ahead of what they actually held three years ago, and even ahead of what they held before their attack in October. The Indians also objected strongly to the Chinese statement that while the troops withdrew 20 kilometres from the line of control, "civil police" checkposts would be set up in the demilitarised zone on the Chinese side of the line. Just what are civil police?

Yet while high-powered missions flew abroad to explain India's objections to the Chinese plan to the non-aligned countries of Africa and Asia, all but the most bellicose knew that the decision was indeed an appalling one. To seek a renewal of the fighting is to risk, at worst, general war in a country whose civil population has not the faintest conception of what modern war means. Maybe this is only remotely probable. Unofficially, New Delhi is working on the theory that Chinese aims are limited to Ladakh—though no one has yet explained why China should have launched a minor war to force legal recognition of what it already held perfectly comfortably anyway. But, at best, renewed fighting now must almost certainly mean renewed defeats. New Delhi might declare boldly that the Chinese could not dictate victor's terms. But the fact remains—and it has sunk in during the cease-fire lull—that they have won a smashing victory. A helicopter located and retrieved the divisional commander, wandering with his staff like Brutus at Philippi, who a few days earlier had confidently told correspondents, who were enquiring about the danger that the Se La Pass might be outflanked, that the Chinese could not come through the Himalayas as if they were on a paved road. But thousands of his men were still lost in the jungles and ravines. Most of the limited artillery that the Indians had in the North East Frontier Agency (NEFA) is now in Chinese hands. Even after a renewed build-up, Assam remains strategically indefensible. And there is no guarantee that the Chinese would be so forbearing a second time. Even now their army commanders may be feeling like the paratroops ordered out of the Suez Canal zone in 1956.

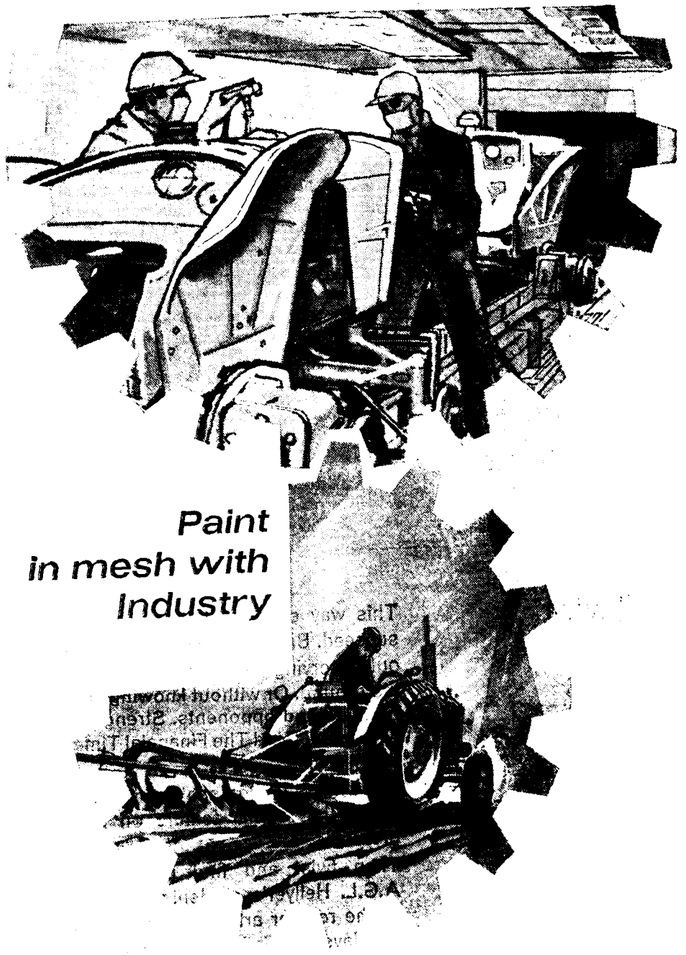
Obviously war, whether general or even limited, would be tragic for India; it might also be disastrous. But what alternative is less dangerous? Here Mr Nehru has to consider two issues: India's future and his own. The latter is not just a question of personal ambition or pride. If New Delhi were to decide that India's long-term interests demanded peace even at a price, Mr Nehru is the only man who could hope to carry the country with him on this policy; and even he would need enormous skill to do it. At this moment he would fail; and with him, parliamentary democracy might also fail. Any calculation of a "realistic" answer to the Chinese must take this into account. Explicitly to accept the Chinese offer right now would not be realistic. In the present state of opinion it would be both meaningless and hazardous. In the longer term, can India afford to leave the Chinese in possession of their claims in Ladakh? So long as the Chinese are out of NEFA the military answer is that they can. The political answer is much less sure.

New Delhi is therefore in a real dilemma, or rather two dilemmas: what to do, and how to do it. And if, as now seems probable, it intends to be tough, the Chinese have a still more devastating peace bomb in their armoury. Suppose they turn round now, blandly accept India's proposal of a return to the position before September 8th, and add: "Now let us talk"? This might solve the puzzle of how to do it, but only if New Delhi could bring itself to accept that the way out of the first dilemma is to seek peace; and that is the difficulty.

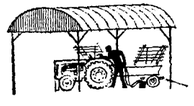
France's New Outlook

FROM OUR PARIS CORRESPONDENT

LAST Sunday's parliamentary elections in France confirmed and amplified the verdict of the first ballot on the preceding Sunday, November 18th. First among victims of the massacre comes the traditional French Right, now swallowed up by the neo-gaullist UNR. The traditional conservative party (the Independents) has almost vanished from the new Assembly. A score of its deputies survived the storm under the protection of the gaullist coupon. Headed by the general's ministers, and notably by M. Valéry Giscard D'Estaing, they are now busy regrouping under the new title of Independent Republicans. As for the non-gaullist Independents, the second party in the previous Assembly, they do not now have the thirty seats necessary to form a parliamentary group. The Catholic MRP, the second victim of the poll, has only just gained the required number of deputies. Swollen by this transfer of seats, the neo-gaullist UNR is only some eight seats short of the 242 needed for an absolute majority. Together with



AGRICULTURE



The costly machinery essential to modern farming operates through all seasons, with long periods when maintenance is not possible. It has to be protected against corrosion which, accelerated by chemical fertilizers, does greater damage than fair wear and tear. That is why leading manufacturers paint their machines with agricultural finishes specially developed by **ROBT. INGHAM CLARK**—finishes unsurpassed for durability and "weatherability."
After the harvest, wise farmers reap dividends from sound maintenance with **RIC** agricultural refinishing paints.

Twist

This way or that? Either way may succeed. But neither succeeds without observing the rules and knowing the ground. Or without knowing your partners and opponents. Strengthen your hand. Read The Financial Times every day.

See what other companies are doing. Study the regular feature on legal problems.

Then twist and find pleasure in A.G.L. Hellyer's gardening column, or the regular article on Travel and Holidays. There's much more to **THE FINANCIAL TIMES** than its name implies.

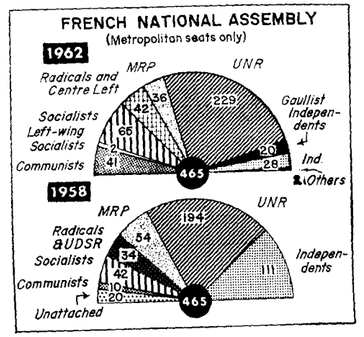
the Independent Republicans and a few other deputies elected on the gaullist ticket, it will command a comfortable majority. General de Gaulle, who never did bother very much about parliament, will not need to bother at all.

The fact that the UNR, on its own, did not succeed in getting some 300 seats is the result of what may have been the most significant feature of the second ballot: the surprising success of the left-wing alliances. This relative success on the left is surprising because, after 15 years of bitter struggle between them, the Communists and Socialists did not enter into an open alliance, but merely improvised an electoral pact. The Communists made the deal in public, and wholeheartedly; the Socialists accepted it with reluctance and shamefacedly. M. Jules Moch, in Hérault, was the only Socialist to speak at a Communist electoral meeting. And yet in most constituencies where only a single left-wing candidate faced the gaullist candidate in the second ballot, this candidate usually polled the bulk of the votes that had been cast in the first ballot for the Communist, Socialist and sometimes Radical candidates together. True, when the candidate was a Communist, the second total, as a rule, did not quite equal the first. But to understand what a revolution this change represents, it is enough to recall that when a Socialist candidate stood down between ballots in 1958 the bulk of his votes usually went to the UNR. The immediate effect of last week's improvised Popular Front was to double the (admittedly modest) number of left-wing deputies in the Assembly. More significant is that the Communists have ceased to be the untouchables of the French political game.

THE Communist-Socialist alliance did not, however, reserve the electoral trend. General de Gaulle has won the obedient Assembly of his choice. M. Pompidou succeeds himself, and will continue to carry out the general's orders with a reshuffled team. The government is assured of a comfortable majority. Such Gaullist policies as like the national nuclear force and the *Europe des patries* have nothing to fear from the opposition. The importance of the change, however, should not be exaggerated. Throughout the life of the Fifth Republic, General de Gaulle has not been induced to change a single major plan by any fear of parliamentary opposition. The last Assembly had a potential majority opposed to the general's European and Atlantic views, but that majority never dared to strike. True, had the UNR been defeated in this month's election, the general would have been obliged to find a method of cowing a recalcitrant Assembly. His electoral triumph has spared him this unpleasant task.

For the moment, nothing essential is changed in the Fifth Republic. But the emergence in France of a party with what amounts, practically speaking, to a parliamentary majority, has raised so many conflicting comments that it may be of some use to set this month's startling electoral results in a historical perspective. Much sophisticated argument is being deployed to explain in terms of sociological change the unprecedented success of the UNR, which, on November 18th, polled nearly a third of all the votes cast. The flaw in this argumentation is that the success is not, in fact, unprecedented. Shortly after its creation, the Gaullist Rally obtained about 38 per cent of the poll in the municipal elections of October, 1947. (The actual percentage is debatable: the new party could not then put up candidates in all the small villages and its share was, therefore, calculated on the basis of municipal councils of more than ten thousand inhabitants.) Since the Communists were stronger then than they are now, the parties between the two extremes—for whom the term "third force" was coined at the time—had no more support in the country than their recent heir, the ephemeral *cartel des non*. Unlike the *cartel*, however, they were in power and could dictate the rules of the game. Remaining deaf to all gaullist appeals for a general election, they waited. By the time the election was held, in 1951, the gaullist wave was half spent. In the general election of 1956 it had vanished. It required the *coup* of May, 1958, to bring it back to life and power.

Other lessons are to be found in this historical parallel. Under the Fourth Republic, elections used to be held in large constituencies of several members and on the principle of proportional representation. (If it had been used on November 18th this system would have given about 150 seats to the UNR and about 100 to the Communists.) But in 1951, to ensure its survival, the third force added a clause, called the *apparentement*. This provided that if a party, *or a coalition of parties*, obtained more than half the votes in a constituency it pocketed all the seats. Thus, Socialists, Radicals and Catholics could vote each for their own party and yet their votes could be pooled. This was the only possible electoral device to keep together a heterogenous coalition.



(1) Seventeen overseas seats are omitted.
(2) The Gaullist Independents have since gained some adherents from the Independents.

It was idle to expect that when General de Gaulle came to power he would establish rules favouring his opponents. This time, in single member constituencies, the *cartel des non* (grouping Conservatives and Socialists, Catholics and Radicals) was reduced to the awkward alternative of putting up a single candidate, and losing votes, or putting up several, none of whom was likely to come out on top. It tried both methods with equal lack of success. True, its combined poll in the first ballot was slightly higher than that of the UNR. The cartel, however, was doomed to collapse. M. Mollet, sensing the mood of his troops, announced, in an attempt to prevent a gaullist victory, that the Socialists would in some cases vote for Communists. This was enough to frighten his middle-class partners. In the second ballot, when most people voted against communism or against gaullism, the independents and the MRP were deserted by their troops, while the Socialists and, to a lesser extent, the Radicals were saved by communist support. The third force was squeezed out, while the French voters divided on the whole on classic lines between the Left and the Right.

Under the Third Republic the alternation between right and left functioned through coalitions. The fact that the UNR, on its own, has nearly captured the majority of seats in the Assembly has encouraged suggestions that France is moving towards a British system of politics. But two points must be made at once. One is that the UNR is not an ordinary party. It is a government-backed machine for producing deputies willing to sign a blank cheque for General de Gaulle. Not knowing what the general will do next, it can hardly elaborate a programme (the gaullist deputies elected in 1958 on the platform of French Algeria have learnt this through bitter experience). Since General de Gaulle is no more likely to share power with his own party than with any other, it is far from certain that the UNR can survive him as the Conservative party of France.

But while the UNR lasts it raises the problem of the opposition. The "third force" may regroup in parliament. It knows that under the present rules it has no chance of getting a mandate in

the country. A governmental majority implies, almost requires, the existence of an alternative in opposition. The ease with which millions of Frenchmen have voted on "popular front" lines proves that they have, instinctively, grasped the mechanism. In France, however, as soon as the problem of a balance between left and right is raised, the problem of the place of the Communists in politics is raised too.

The government can, and will, deepen the differences between the Socialists and the Communists by staging a foreign affairs debate. The Socialist leadership is as Atlantic as the Communist party is pro-Soviet. Yet for the next few years the trend, or lack of it, towards a popular front in the country will be more affected by the government's economic and social policy than by foreign policy. The course of the parliamentary battles is predictable. But outside parliament there are many unknown factors. Will the Socialists revert to a systematic anti-communist line? Will the trade unions remain as divided as ever? Through his very success in uniting the French Right, General de Gaulle has made the unity of the Left a central question.

Bonn and the Strauss Question

FROM OUR BONN CORRESPONDENT

DR ADENAUER has spent the week trying, with diminishing public sympathy and growing parliamentary impatience, to reorganise his government. The task had looked rather easier last weekend than it did on Monday morning. On Monday the exigencies of party politics and self-survival, if scarcely of good will, impelled the Chancellor to telephone his congratulations to Herr Franz-Josef Strauss, the controversial defence minister. Herr Strauss has been the coalition cabinet's biggest personal liability since the state, croaking "treason!" lumbered into action against *Der Spiegel* on the night of October 26th, all unbeknown to the minister of justice, who is a Free Democrat. Yet Herr Strauss is also chairman of the Christian Social Union; and the party had emerged from last Sunday's *Landtag* elections with, for the first time, an absolute majority in the Bavarian state parliament, having won 108 of the 204 seats.

Dr Adenauer, who likes to keep things neat and simple—and usually succeeds more than most people—is now caught in a bewilderingly complicated and increasingly unprepossessing domestic political tangle. His own party, the Christian Democratic Union, which holds only 192 of the 499 seats in the Bundestag at Bonn, rules—somewhat desultorily these days—with the indispensable help both of the Bavarian-rooted Christian Social Union, which has 50 seats, and of the Free Democrats, who have 67. The Free Democrats are insisting that they cannot serve in the same cabinet with Herr Strauss, the minister in whom Dr Adenauer's Bavarian allies have just passed a thundering vote of confidence. Nor can Dr Adenauer have been emboldened to disregard the Free Democrats with his customary disdain by learning that 54 per cent of the persons questioned in a recent public opinion poll wanted Herr Strauss to go, and only 31 per cent thought he should stay. (A further 12 per cent could not make up their minds, and an otherworldly 3 per cent had no idea what all the fuss was about.)

The question everybody is asking is whether Herr Strauss may not now obligingly relieve the embarrassment, and rescue the coalition, by resigning voluntarily and unequivocally, the bitterness of the sacrifice assuaged by the well-founded hope of a return to power after a seemly interval. On Tuesday Herr Strauss reaffirmed that he had formally put his portfolio at the Chancellor's disposal, like the rest of the members of the cabinet. But that did not necessarily mean that he and his Bavarian following had renounced great expectations. Nor, at the time of writing, was Herr Strauss telling what it did mean. Dr Adenauer, it is believed, at first proposed that Herr Strauss should take over the leadership of the Christian Democrats and the Christian Socialists in the Bundestag, and was toying with the idea of giving Herr von Brentano, who is the present parliamentary leader, either the ministry of justice or a new ministry for European affairs. But it was altogether unlikely that the Christian Democrat deputies, for all their record of sheepishness, would accept such a headstrong bellwether as *der Franz-Josef*. Herr Dufhues, the engaging chairman of the Christian Democratic Union, quickly told Dr Adenauer, his co-chairman, that this solution would not do. And, if he means what he says, Herr von Brentano, who was formerly foreign minister, does not want to return to the cabinet.

der Franz-Joseph

By Wednesday the west German newspapers were publishing photographs of Herr Strauss with a happier grin on his broad face than had been seen for a long time. One of Herr Strauss's sharper ploys has been to indicate publicly that the Chancellor knew in advance just as much as he himself knew about the pending action against *Der Spiegel*. Dr Adenauer has so far ignored this allegation which implies that if the defence minister should go on account of his responsibility for the *Spiegel* affair, the Chancellor, too, should go. But it has been widely reproduced and noted; and it has aggravated the general dissatisfaction with the Chancellor's shifty muddling and apparent contempt for public opinion. In his radio and television broadcast on November 23rd Dr Adenauer almost wholly ignored the disconcerting issues that were on his audience's mind: his own anticipation at question time in the Bundestag, for instance, of a verdict of treason against some of *Der Spiegel's* staff and informants, the weird inter-ministerial contradictions, the rumour that the offending article in the magazine was a fruit of rivalry between two west German intelligence services, or perhaps of intrigue within Nato. He disregarded altogether the widely publicised misgivings of 144 university professors concerning the health of democracy in west Germany. Indeed, Dr Adenauer still does not seem to have grasped what all the excitement is about.

But the old man's complacency does not come from lack of prodding. Once more this week the Christian Democrat leaders openly urged Dr Adenauer to form a new coalition government as quickly as possible, in terms that left him free to negotiate with the Free Democrats and the Social Democrats. They added, in a statement for public consumption, a demand for "stability and continuity," having explained in private that they now expected him to make it clear who should take over the Chancellorship next year, and that the majority would like his successor to be Herr Erhard. At the same time they set up a small committee, including Herr Strauss, to advise Dr Adenauer in making his dispositions. Dr Adenauer will receive no help from the Social Democrats. They, having won an absolute majority in the Hesse state parliament on November 11th, and having increased last Sunday their representation in the Bavarian state parliament from 65 seats to 79, are in no mood to prejudice their record by associating them-

THIS TUBE HAS A
DRAWN WELDED LOOK
—AND IS
ALL THE BETTER FOR IT

Always on the look-out for ways of making tubes of greater precision at smaller cost, Accles & Pollock have spent a lot of time perfecting the technique of cold-drawing welded tubes – with that precise result. It's still as true as ever it was that the manufacturer who takes his problems to Accles & Pollock usually comes away with a smile replacing his previous drawn welded look – and a better answer into the bargain.

Why not get in touch with Accles & Pollock Limited, Oldbury, Birmingham or at least write for a booklet?

Why Remy Martin
has no stars on its label

No brandy of lesser quality than Fine Champagne V.S.O.P. Cognac is permitted to bear the Remy Martin label. Hence no grading by stars. The question does not arise. All you need remember is to ask for Remy Martin. In return you enjoy a superior cognac of liqueur quality. For Remy Martin *make nothing less good*. In a word, Remy Martin cater for the one man in a hundred who prefers to compliment his palate—and his guests—with brandy as good as Fine Champagne V.S.O.P. Just ask for Remy Martin.

PRIDE OF COGNAC

CEMENT PLANTS from IHI

where a century of integrity is your assurance of quality

IHI's many-sided activities include the manufacture of both wet-process and dry-process cement plants and components. IHI's research has resulted in lowered production costs and improved quality. The quality of IHI's cement plant equipment is guaranteed by a century of heavy-industrial experience and a long-standing policy of complete after-service. IHI-made cement plants are at work in many places throughout Japan, playing an important part in the booming construction industry.

Besides cement plants, IHI builds ships and manufactures cranes, prime movers, boilers, and heavy machinery for use in the steel, chemical, construction, power generating, and mining industries. Brochures outlining IHI's capabilities and our informative "IHI Letter" will be sent on request.

Could you work with records like these?

Lose vital papers and your business could be ruined. Yet many firms rely on ordinary steel cabinets, or out-of-date fire-resisting safes . . . which become fiery ovens in even a small blaze. In what kind of equipment are *your* vital records housed?

Chubb fire-resisting equipment has proved itself time and again. Saving hundreds of thousands of pounds—and vital records—for our clients all over the world. The latest Chubb equipment includes cabinets for every purpose, all insulated with protecting materials that will not deteriorate with age. It has been stringently tested in simulated conditions of extreme heat and collapsing buildings. And has been certified by distinguished, independent scientists and engineers.

Chubb have produced an invaluable booklet, 'A Matter of Time', that delves deeply into the whys and wherefores of fire resistance. While you think of it, ask your secretary to write for a copy today. There is, of course, no obligation at all.

selves with the last unhappy compromises of the Adenauer era. Dr Adenauer must somehow placate the Free Democrats if his regime is not to end abruptly through the Bundestag withdrawing its confidence in favour of another Chancellor—a prospect that is already being talked and written about.

Rockets in Spain?

FROM OUR SPECIAL CORRESPONDENT

When Mr Zorin told the United Nations Political Committee recently that the United States government had installed secret rocket bases in Spain, he was only making public what many Spaniards have been saying in private for months. More helpful than Mr Zorin, communists and right-wingers alike in three or four Spanish provinces will inform the inquirer, with impressive unanimity, precisely where the American rocket bases are. One,

they say, is near Rosas, at the northern end of the Costa Brava; another is at Elizondo, in the Baztán valley, thirty miles inland from Irún; and the main base is just outside Saragossa. These details are presumably gleaned from the communist "Free Spain" radio or *Mundo Obrero*, for none of one's informants has ever actually seen these rockets, though some of them have a cousin whose nephew's brother-in-law (a bright lad who knows a launching-pad when he sees one) used to mix cement for the Americans.

Neither the Costa Brava, visited annually by several million tourists, nor the valley or Baztán, overrun with ramblers and smugglers, would seem to offer the ideal site for top-secret installations. But Mr Zorin had done his stint, and the free press had to do its. Dutifully, one set out to investigate.

The rocket-sites at both Rosas and Elizondo turned out to be US Air Force radar stations covering the approaches to Saragossa. Their purpose is to identify all aircraft approaching their sector of Spain, and they may call for fighter interception of doubtful aircraft. Two other radar stations, American officers said helpfully, form part of the same mission: one at Inoges, near Saragossa, the other on Mallorca. All are controlled from Saragossa.

Clearly, the Saragossa base was the crucial one. But here, too, the site seemed unsuitable for ballistic skulduggery. The base is overlooked by hills from which a Soviet agent with binoculars might observe everything that occurs in it, from rocketry to adultery. Soviet agents without binoculars need not despair; all they have to do is walk in. For whereas the British and French, in their base-building days, used to enghetto themselves within floodlit barbed-wire entanglements that were at once an insult and a challenge to every indigenous passer-by, the Americans have cut costs and gained goodwill by abstaining from erecting even a single-strand fence. As always, trust is rewarded: there is no pilfering. Shepherds occasionally wander in to conduct their incredulous flocks on a tour of what are probably the greenest lawns in Aragon —"but who cares? It's good for the grass."

The road into the base is guarded by an alert young man armed with a pencil. His office has a board beside it reading, in English and Spanish: "Peace is our profession." Sightseers who don't speak English are waved in. At the sound of English he reaches for a log-book.

"What outfit you with, brother?"

"I'm a journalist."

"Then I don't have to write you down?"

"I don't think so. Do you know where I might find Captain Brady?"

"Don't ask me, brother. I'm new here. Why don't you just drive in and look around?"

So one drives in and admires the magnificent educational complex (toddlers to freshmen), the housing, the supermarket, the leggy young ladies in the bowling alley, the *filet mignon* in the mess, the compulsory Spanish lessons, the smooth, calm professionalism of it all.

There are 4,000 Americans (including dependents) at Saragossa; 136 families live on the base, 220 in an off-base village and about 670 in town. Salaries to one thousand Spanish civilian employees (36 million pesetas annually), payments to local contractors (another 36 million) and off-base private purchases (180 million) pump nearly five million dollars a year into the economy of Saragossa, but as most of the food eaten on the base is imported, and urban rents are controlled, the cost of living in the city has not been affected: it has in fact risen less than in the rest of Spain since 1958.

Conversation with Spaniards and Americans leaves no doubt that relations between them are harmonious. ("There's never been any trouble here like the limeys have with their Barbarian Army of the Rhine—er, you're not a Scotsman by any chance?") When, last June, the United States army held a "Spanish-American friendship day," 75,000 Saragossans—25 per cent of the total population of the city—took the day off (it was a workday) and made the ten-mile trip out to the base by truck, taxi, bicycle and donkey. American medical and firefighting services respond promptly whenever asked for assistance, and every unit has adopted a local orphanage or charity. The only discordant note is sounded by the small Protestant minority in the population of Saragossa. These Spanish protestants are not allowed to run charities or even to hold public services, but they had hoped for private social contact with their American co-religionists. Yet even the chaplains of the base have cold-shouldered them studiously. Is the interdiction, they ask, imposed by Washington?

The military business of the base—one remembers, guiltily, that this was what one came for—is to be found at the back of the golf club (open to all ranks), just beyond the main service station. One may inspect a gaggle of B-47 bombers (range 4,000 miles). Their crews and machines spend only three weeks in Spain; but during the whole of that time they can be airborne within 15 minutes. The bombers are flanked by one American squadron of F-102 fighters and one Spanish squadron of F-86s. Officially, to save General Franco's ex-nationalist face, this is a Spanish base and the Stars and Stripes is never flown; the ten-year agreement granting America military facilities in Spain expires in September, 1963, but both governments favour its renewal.

No rockets are visible. Admittedly, at the press of a button, the greens on the golf course may well hinge open to reveal ICBMs, though it is hard to imagine the golf-club committee standing for that. Back in Saragossa, Don J, an old-school falangist, laid out on his deck a crude sketch-map of the base showing a sinister pattern of launching-sites, each one with the right layout of feeder roads and service buildings. Reproduced in *The Economist*, it would provoke an international crisis. On reflection, one realised that the launching-pads were, in fact, car-parks. "But do ordinary American troops really have so many cars?" asked Don J. Indeed they do—and, scandalously, most of their cars are Opels and Volkswagens. British car exporters appear to know as little about America's Spanish bases as Mr Zorin. . . . But that is another story.

Wards into Workshops

FROM OUR SPECIAL CORRESPONDENT

EVERY year, on the average, about 2,000 patients who have been in mental hospitals for five years or longer are discharged back into the community. How do they fare when they have to pick up the threads of independence again, with the security of the hospital left behind?

If they can keep a job half the battle will have been won, and it is in order to restore a patient's capacity to work that many mental hospitals have in recent years been starting what is called industrial therapy. This is to be distinguished from occupational therapy, which involves carpentry, making felt animals, tea cosies, rugs, basket work, and so on, under the direction of enthusiastic young women in starched green overalls. Patients on industrial therapy may make soft toys too—there is a mental hospital near London which has a regular contract to turn out dozens of nylon teddy bears a week, stuffing them, sewing them up and firmly fixing in the eyes. But these teddy bears are made for an outside firm with an established home and export market. They are not exhibited for chance sales on the hospital's "open day."

Occupational therapy still has an important place in a mental hospital's regime. Nowadays, when an increasing number of patients come in for six weeks or less, it helps to fill the long hospital day and to overcome their social isolation. But these short-stay patients will not usually have lost the habit of work by the time they are well enough to be discharged. It is the long-term patients, who have had their whole lives organised by the hospital for years, often indeed for all their adult life, that benefit most from industrial therapy.

More and more mental hospitals (about two-thirds of them today, compared with 1 per cent in 1957) are now turning wards into workshops by starting industrial therapy units, and the regional boards for industry are encouraging local firms to place contracts with them. One advantage, for the firms themselves, is that they can get a lot of simple, repetitive jobs done that their own workers, particularly if skilled or semi-skilled, may object to or find boring. For instance, a mental hospital has had a contract for painting the stitches on gloves, a finicky job, which a glovemaker is only too glad to shed. The advantage for the patients is that they are working in something like factory conditions, sometimes even clocking in, and are earning up to £2 a week.

For a variety of reasons a patient's earnings are not allowed to rise above this figure. Below it he can retain his sickness benefit, and he also avoids the obligation to pay national insurance contributions, a tiresome complication when potential earnings may fluctuate about the £2 level from week to week. Another reason is that it is important to ensure that a patient does not find himself worse off on discharge. To begin with at least, many patients will not earn very much outside the hospital, and they will have to find their own board and lodging; if they were to make, say, £3 to £4 all found in the hospital, they might prefer to stay there. But the work is done on piece rates, and the firms placing the contracts pay the hospital the rate for the job. The earnings limit thus means that the hospital accumulates a surplus fund. The Ministry of Health takes 10 per cent of the value of all contracts as a contribution towards overheads, and the balance is used on such things as additional equipment for the workshops and amenities, and to have a fund to supplement the earnings of patients who, because of illness or lack of suitable work, make very little in any particular week.

There is, of course, no limit on earnings when patients take up a regular job outside the hospital, returning to the hospital each night and paying for their board and lodging. That is usually the last stage in rehabilitation. Bristol has an intermediate stage. Associated with the mental hospitals in the area is the Industrial Therapy Organisation (Bristol) Ltd. It has its own factory, where patients do jobs like assembling ball pens before moving on to work in an ordinary factory, a "sheltered workshop" for patients whose disability prevents them from working in ordinary conditions, and a direct trading component in the form of a car washing unit. Another experiment has been tried for about a year in the Birmingham region. Here, at St Wulstan's, Malvern, a wartime American psychiatric hospital has been turned into an industrial therapy unit for, at present, about 200 patients selected from all the mental hospitals of the region. Every patient has been in hospital for at least two years, some perhaps for fifteen years or more, one continuously for thirty-four. The hospital's patients are, in fact, drawn from what is still the most distressing sight in a mental hospital—the hard core of chronic cases, indifferent, inert and intangible. But the contrast between the new arrivals, who are started off on extremely simple tasks like sorting needles, and those who have been regularly working for several weeks is marked.

THE advantage of a central unit like the one at Malvern is that the whole hospital can be geared to industrial therapy whereas in an ordinary mental hospital it may have to be fitted in to the general organisation. Thus, clinical treatment can be arranged outside working hours, and non-working hours can be, and at Malvern as a matter of policy are, as unregimented and informal as in ordinary life—even tidy beds and cubicles are not insisted on.

A difficulty is that a special hospital like this is dependent for its very existence on a steady supply of contract work from outside firms. Most hospitals could, in fact, do with more, and more varied, work; the ones that come off best seem to be those on the fringe of big cities with a lot of light industry round about. If the work is to be had, industrial therapy is likely to expand; the labour is there and the premises, and charge nurses can be turned into supervisors. Bexley Hospital, near London, has stepped up the value of its contract work from about £33 a head a year to over £50—and the taxpayer is saved 11s. 6d. a week on each working patient's pocket money. Last year the value of the goods and services supplied by the ablebodied labour available in English prisons was £44 a head. Need one point the moral?

Inter-Irish Co-operation

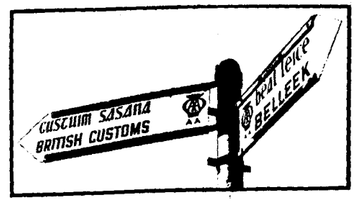
FROM A CORRESPONDENT IN BELFAST

IN Belfast just over a month ago the Home Secretary—his department is responsible for Northern Ireland affairs—said he thought the Stormont government should make contact with the government of the Irish Republic and see how far they could both co-operate in the interests of the economic development of the whole island. Mr Brooke was obviously influenced by the decision of the government in Dublin to reduce or abolish tariffs on a number of Northern Irish products exported to the Republic. But politicians, both Unionist and Labour, in Northern Ireland have taken little notice of Mr Brooke's advice. Some have interpreted his remarks as an attempt to "sell-out" Northern Ireland's constitutional position and tie the province economically to Republican Ireland, although he made it quite clear that he thought Ulster's economic relations with the rest of Ireland could be improved without endangering the "constitutional position."

Most Unionists are suspicious of any moves to bring the economies of Northern Ireland and of the Republic into closer contact with each other. Government leaders like Mr Brian Faulkner of the Ministry of Home Affairs (the Ulster Home Office) and his predecessor Colonel (now Judge) W. W. B. Topping have argued that economic integration with the South would hinder rather than help the economy of the North. Three years ago when Mr Lemass, prime minister of the Republic, put forward a plan for an all-Ireland free trade area Lord Brookeborough, his northern counterpart, rejected it. He did later say that he had no objection to private concerns making arrangements with the Republic but trade would not, so far as he was concerned, be talked about at government level.

Under Mr Lemass's proposed arrangement goods manufactured in Northern Ireland but not those of British origin would be allowed into the Republic duty free. This discrimination against British goods was another reason for Lord Brookeborough's rejection of the plan. However attractive the offer may have looked to manufacturers and traders in Northern Ireland the government feared it contained political implications not to their advantage.

WITHIN the past month, however, there have been slight signs of a change in Unionist outlook. Capt. L. P. S. Orr, who represents South Down in the Westminster Parliament, said in the course of an Ulster Television programme on November 10th that he was in favour of more economic co-operation. A few days earlier Mr Harry West, Northern Ireland's Minister of Agriculture, announced that he would be planting an experimental 200 acres of sugar beet which would be processed by the state-sponsored sugar company in the Republic. The agreement in this case has been made at government level between Mr West and General Costello, chairman of the sugar company; the company has also recently concluded a fantastically complex agreement whereby the British Government, to exclude non-Commonwealth sugar from British markets, appears to be subsidising it to a hefty tune each year.



Irish farmers, of course, are inclined to ignore the border when it comes to their economic interests. Ulster's stock farmers depend on the cross-border trade in young beef cattle which, after a short stay in Ulster, qualify for British subsidies. The strict anti-tuberculosis regulations now in force in Northern Ireland have set this trade back a little: but the Republic is fast declaring tracts of land to be free from the disease. Cross-border cattle imports are worth some £10 million a year, nearly half of all Northern Ireland's imports from the south. Last summer the Ulster Farmers' Union and the National Farmers' Association in the Republic, anticipating similar problems if both parts of the country join the European Economic Community, formed a joint consultative committee which meets alternately in Belfast and in Dublin.

Water also provides a common interest as well as a border. For upwards of 12 years both governments have been running as a joint responsibility the fisheries at Lough Foyle, between County Donegall in the Republic and County Derry in Northern Ireland. The Foyle Fisheries Commission reports annually to both parliaments on the same day and its chairman and secretary rotate annually so that both governments take turns at being represented in these positions. The drainage of the Erne Valley and the building of the southern Electricity Supply Board's power station at Cathleen Falls near where the Erne flows into Donegal Bay was made possible some twelve years ago by the co-operation of the two governments.

ON the lower administrative level of schools and the fire service, there is also cross-border co-operation. Many children cross the border daily from the Republic into Northern Ireland or the other way to save the trouble and expense of having to travel many miles to the nearest school provided by their own authorities. Police and customs officers on the border work together more closely than they admit.

Those who believe that there is a future in the extension of Irish economic co-operation say that the first step should be the setting up of an inter-government commission to examine how far such co-operation could be carried. Obvious opportunities for co-operation lie in the development of tourism as an all-Ireland industry and in the investigation of foreign markets for Irish agricultural produce. (This may be one of the things the farmers' consultative committee studies.) There is scope for an all-Ireland system of transport and for joint government enterprise in an undeveloped industry like fishing or in creating a power grid that would serve both parts of the country more economically than the present two systems. All this could be done without endangering the "constitutional position" of Northern Ireland. After all the 1920 Government of Ireland Act emphasised that North and South would be both responsible for safeguarding the railways, then privately owned, and provided for a Council of Ireland which would bring both governments together on matters of mutual concern.

Farm Follies

SIR—In your article of November 17th you infer that horticulture is heavily subsidised. That is, of course, quite incorrect; horticulture is only marginally subsidised. You go on to be somewhat scathing about massive protection. Such protection as exists for horticulture is, in fact, far less massive than that applied to a great many sections of industry in this country.

I doubt whether you would find even one objective cynic who would support the reason that you have given for not wanting a real research organisation. The fact of the matter is that the National Farmers Union's proposals do afford an opportunity for development, both of markets and marketing. It is also a fact that the union itself was the principal sponsor of marketing research with the studies it made of apple and pear marketing and of tomato marketing, and it was, too, the sponsor of intensive investigation into markets on the Continent. The truth is that marketing development in an era of changing conditions inevitably is more likely to come from producers. Even the most superficial examination of marketing development that has taken place, in, for example, the realm of home-grown apple marketing, should prove this point.

It is, nevertheless, highly desirable that in this changing pattern of marketing the developments that are taking place should be fully appreciated by the other sections of the industry, and therefore there is great value in the consultative organisation which has now been established between the three sections—producers, wholesalers and retailers.

For my own part, I firmly believe in the union's four main proposals:—

(1) The undertaking of an overall examination into our horticultural markets and their future requirements, as a matter of urgency.

(2) The establishment of grower groups capable of producing in larger quantities a standardised product and supplying that product where it is needed.

(3) The establishment under the Industrial Organisation and Development Act, 1947, of an organisation which can undertake publicity for British produce as a minimum service, and can as a maximum service perform many other useful marketing functions.

(4) The establishment, already effected, of a consultative and co-ordinating body for the bringing together of the three sections of an industry that deals with some £160 million a year farm gate turnover.

These four proposals, which in their formulation have taken into account an intensive study of what is happening in Europe, represent in fact a realistic opportunity for development in the marketing of a series of products which because of their very nature have presented great problems for many years,—Yours faithfully, E. H. GARDENER
Chairman, Central Horticultural
London, SW1 Committee, NFU

[It is good to know that Mr Gardener wishes, in these ways, to improve the efficiency of the garden produce industry. It is a shame that, by refusing to support the Horticultural Marketing Council, market gardeners, wholesalers and retailers have shown their unwillingness to do so. This is what *The Economist* said on November 17th.]

Hard Bargain in Exeter

SIR—Your correspondent (November 3rd) makes some valid points, but is misleading about the importance of the Higher Market, which he dismisses as "a monstrous neo-classical facade and squalid arcade", as a fake and an eyesore. One hardly recognises from this description a building which is listed by the Ministry of Housing and Local Government as Grade 2. Since there are only ten buildings in the whole city with the rank of Grade 1, the Higher Market clearly stands high in the estimation of those qualified to judge fine architecture. As to its being squalid, it has belonged since it was built to the city council, which is therefore entirely responsible for its filthy state. It is an old trick to let a building get into a dirty or even a dangerous condition and then to demand its demolition. The building could be cleaned and transformed into arcades of small shops for the small traders who will obviously have no other place to lay their heads in the so-called "golden heart" of the new Exeter.—Yours faithfully, W. G. HOSKINS
All Souls College, Oxford

Net Book Agreement

SIR—Your correspondent, in his zeal to oppose the Net Book Agreement has overlooked one factor: the reluctance of booksellers to have constant arguments about prices added to an already over-long working day. If the Net Book Agreement was abolished many of us would leave the trade and advise friends and their children to stay away from it. There is, after all, a human factor in bookselling to be considered.—Yours faithfully, GERTI KVERGIC
London, WC2

Points

YOUR proposal (November 24th) that post secondary education should be a function of the Greater London Authority is a point which the Liberals have tried to persuade the Government to adopt for some time. If this and similar amendments were made it would be possible for many of the proposed new boroughs to be less vast with considerable advantage both to councillors and electors. I am surprised that you refrained from commenting on the timidity of the Government for failing to abolish the aldermanic system root and branch, and for its unwelcome proposal to end annual elections for the boroughs. Annual elections contribute a great deal to civic consciousness. PETER H. BILLENNESS, Vice-Chairman, Liberal Party Local Government Committee.

THE refusal of Her Majesty's Government to appoint an ombudsman or alternatively to set up a parliamentary body, in order to deal with individual grievances which sometimes arise as the result of quasi-judicial decisions is disappointing. The Government cannot reasonably aver on the one hand that the citizen has the right of access to his MP and on the other hand block this "right of way" with the overloaded legislative machine. This society's experience is that some MPs may sometimes not be quite so vigilant as other members. If it is held that an ombudsman would not fit easily within our constitution, then an alternative should be found. Reform is needed, as much for the sake of MPs, officials and civil servants, as for the individual.—LILIAN HARDERN, Society for Individual Freedom, *London, W1*

I RECEIVE several hundred letters, invoices, delivery notes and statements a month. Most letters from business firms are typed on quarto paper (10 in by 8 in), 6mo, 8vo, and some A4 (11¾ in by 8¼ in). Invoices vary from 5 in by 5 in to 13 in by 16 in. Statements and delivery notes vary almost as much. If only *all* these could be standardised at A4 size as is the case in nearly all countries in Europe, or even at 10 in by 8 in, the amount of paper used might increase slightly, but the savings in man (and woman) hours would amount to millions of hours a year. CHRISTOPHER FOSS, *London, W1*

HUNDREDS of millions of pounds are spent in developing arms in order to achieve military superiority over potential enemies. If such superiority, obtained at so great a cost, is nullified by confidential information being handed over to our rivals, it follows that this expenditure is to a large extent wasted. The costs of the first class of security are so high that parsimony regarding the second is foolish in the extreme. With a Security Service independent of other departments, and using every known checking device, espionage can be prevented. By comparison, what was said by this or that individual in connection with the Vassall case, is a triviality of negligible importance. H. A. WILLIAMSON, *Lymington, Hants.*

PLEASE do not prune this letter. TYRRELL BURGESS, *London, SW10*

BOOKS

Radicalism and Rationalism

(The first of these two books has been reviewed by a member of the Labour party; the second by an active worker for the Liberals.)

Radical Alternative: *Studies in Liberalism by the Oxford Liberal Group*
Edited by George Watson.
Eyre and Spottiswoode. 194 pages. 21s.

The New Radicalism
By Bryan Magee.
Secker and Warburg. 238 pages. 25s.

OXFORD UNIVERSITY has so often and so unfairly been described as the home of lost causes that the publication of this volume of essays is bound to excite an unusually topical degree of curiosity. Have we here the herald of a new and glorious daybreak or merely a false dawn? Could these essays, in terms of intellectual content and hard political dividends, achieve for the Liberal party what the Fabian Essays and Mr Butler's charters accomplished for the Labour and Conservative parties?

Like the output of other political intelligentsia, this work cannot be viewed on the basis of academic standards alone; it must be evaluated in terms of the political movement whose philosophy it claims to express. The test is of course not an easy one. Some readers may query how far these are six valuable but essentially separate dissertations, or whether there is a genuinely unifying theme running through them. If the authors come back claiming that modern liberalism is basically a method rather than a corpus of ideology, then an even more difficult and topical question arises: how far the methodology and principles of liberalism are already the property of the two major parties?

For the reader who seeks an answer to the questions "Has the Liberal party a future?" and "What are the obstacles to its progress?" this is, even by token of its very omissions, a useful book. Both Mr McCallum in his introduction, and Mr Bonham Carter, one of the contributors, in effect take issue with the established parties because they are the mouthpieces of the past—outmoded social traditions or groupings. They fail, to this reviewer's mind, to point the alternative; after all, Gladstonian Liberalism atrophied not through loss of dogma—Liberalism had some fine thinkers in the 1920s—but through erosion of its social base in the working and business classes. Conversely, a Democratic Party continues to thrive in the United States precisely because it has its own social basis. If only one of the contributors had tried to spell out the implications, in terms of political philosophy, of the Orpington "Révolution des clercs".

On its own, each essay has much to commend it. Mr Bonham Carter argues cogently for a reform of Parliament, to make British democracy more real. Mr Wiles prefers an individualist to a collectivist reply to the communist cold-war economy, but gives comfort to the left by in fact taking Labour's position on, say, Pilkington, the press and advertising. Mr Eltis's "Growth without Inflation" would certainly command the support of Sir Robert Shone and Mr Crosland. It might even please Mr Maudling and Mr Cousins. Many Labour educationists would agree with Mr Peterson's plea for more resources for education and a change in accepted patterns. The sentiments of Mr Ian E. Bush's "Policy for Science," if a trifle shrill, would no doubt be echoed by most members of that crusading but Establishment body, the Parliamentary and Scientific Committee. Lastly, Mr Deighton, in "The World Setting," makes a powerful political case for Britain's membership of the common market, which has a special relevance in the light of current tension between Russia and America.

To return: do these useful studies add up to a unified case for Liberalism? How far do the Liberals suffer both from being all things to all men, or having their (best) clothes, as in a previous century, stolen by the other parties? Time will provide an answer; meanwhile, each reader must judge for himself.

SIR ISAIAH BERLIN once spoke, in reference to another public figure, of the "dark instinctive rationalism of the blood"; it might have been Mr Magee. He holds passionately, on any issue you care to name, a considered moderate position. He must be the most dogmatic of all reasonable men.

Mr Magee was recently a Labour candidate, and has come to dislike very intensely his party's left wing. His object is to convert the Labour party into Liberals, thus crushing the Liberals. His views seem to differ at no point except this one from those of Mr Grimond. Not surprisingly, then, he refers to the Liberal party just three times, and only *en passant*—no doubt the very mention of the word gives him some discomfort. So he states his position as if it were only his own, and concentrates his fire on everyone else.

This book is a brilliant pamphlet. Particularly admirable is the ideological consistency of the whole, the constant and successful appeal to a few clearly stated first principles. The key is the supremacy of reason, from which it can be inferred, for instance, that we must scrap the tyranny of words, which have no existence independent of our use of them (so do not be flummoxed if a party colleague tells you you are not socialist, or left); that you cannot arrive at truth or progress without criticism, therefore you must have democracy (which becomes *ipso facto* more important than nationalisation, and more efficient than communism); you can not validly refute other people's value judgments (so ITV and advertising are all right if people like them). A philosopher (Keble, Greats) by training, Mr Magee puts himself squarely in the tradition of Socrates, Hume, Voltaire, Bertrand Russell and above all Karl Popper: all people who inferred from the same belief in reason the same brand of heuristic, humanistic radicalism.

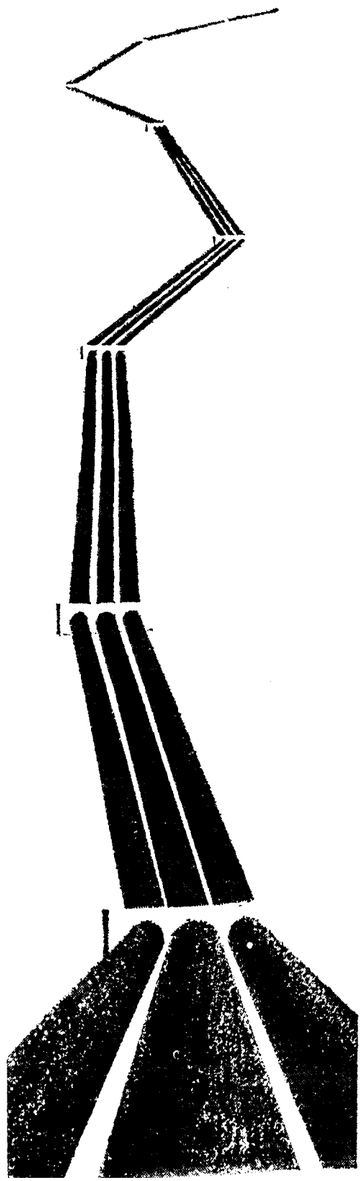
Mainly however the book is another "Labour Party with the lid off". On the traditionalists he is magnificently scornful and exact, in innumerable passages of cruel analysis that are a delight to read and will never be forgiven. Of the left-of-centre neo-opportunists he has much less to say, but what he does is again personal and unforgivable. These are all people near enough to his own position for him to understand: it is when we move farther left that we meet his principal fault—he lacks empathy and does not even know that he lacks it. He can write off the CND as if there were no real problems. He dismisses the New Left case against ITV and advertising with the ease of one missing the main point: that it is the broadcaster and advertiser who establishes the individual's value judgments for him.

His self-confidence and dogmatism betray him still more deeply when it comes to communism. Mr Magee almost reasons this movement out of existence—its success does not accord with his principles. How bad a guide he is here can be shown by three points almost at random. "Not one single newly independent country has gone Communist": formally true, but might it not have been decent to mention Cuba? Or "there is nothing remotely comparable with scientific discovery itself" in the Soviet lead in rocket technology. There speaks the Greats mind. Or again, the striving for full communism is not merely undesirable but pre-scientific: all Utopias are impossible. Certainly that is what Professor Popper thinks, but it looks as if history will belie him this once.

Facing right, Mr Magee deals faithfully with the Conservative party, in conventional terms. More interesting is his absolutely just complaint that Mr Gaitskell is not a radical; witness his reluctance to support Mr Wedgwood Benn. Mr Gaitskell and his circle are what might be called Moderate Managers, and this is not the author's cup of tea. For he, to repeat, is moderate in a more dogmatic, libertarian and proletarian tradition that has hitherto had no place in the party of his choice.

In any case he must surely, with this

Steel
IS MILES



squib, have excluded himself from promotion. The book is indeed exactly what the Labour party needs. Every member should read it and try to learn from it: it is packed with excellent advice. But if formic acid cures rheumatism, the bee still dies.

Excess

Prohibition

By Andrew Sinclair.

Faber. 508 pages. 42s.

"PROHIBITION," a contemporary chronicler observed, satisfied "three tremendous popular passions, the passion of the prohibitionists for law, the passion of the drinking classes for drink, and the passion of the largest and best organised smuggling trade that has ever existed for money." Such satisfactions had to be paid for; some of the items on the bill were the 400 murders a year in Cook County, Illinois, an estimated $136 million a year of protection money paid to racketeers in the same area alone, an addition of $40 million a year to the salaries of doctors for writing medical prescriptions for whiskey. A full accounting would involve an examination of the whole of American life, public and private, in the 1920s, so swiftly and pervasively did Prohibition permeate every aspect of society.

This is the first problem which anyone who is going to write about Prohibition has to solve, and this is perhaps why no one before Mr Sinclair has attempted it. Isolated portions have been well told, but to pull together the story of the revolution, the politics of enactment and enforcement, the rise and triumph of the repeal movement—this is Mr Sinclair's considerable achievement. He has not always maintained perfect standards of relevance, we could trade the thumbnail sketches of presidents we know of old in return for a little more information on such king-makers as Wayne B. Wheeler and Bishop Cannon. But in general Mr Sinclair has skilfully combined the broad brush and the sharp pencil. He has avoided the snare which the subject spreads before all comers, the knowing wink, the Menckenian sneer, the continuously implied cameraderie of the wets. He is at pains to be fair, to recognise that the drys had a case and that the counter-revolutionaries were as capable of intolerance and cant as their opponents. His sub-title is "The Era of Excess."

The unifying theme which Mr Sinclair employs to order the rich and disparate phenomena of the Prohibition era is the clash between the country and the city, between agriculture and industry, between the Protestant, Anglo-Saxon, agrarian dream and the urban, Roman Catholic, immigrant reality, between the old America and the new. Thus at one end his theme shades into the story of the Know-Nothings and the Klan, at the other into the New Deal and the New Frontier. It is probable that nothing less embracing will account for such an astonishing aberration as the Eighteenth Amendment, and Mr Sinclair, drawing to the full on the Hofstadter analysis of American Progressivism, makes out a generally convincing case.

Yet some doubt persists. Why did Prohibition come when it did? Why did the countryside wait so long to hit back and, after waiting, hit so hard? Has not the hysteria, the insecurity, the positive vindictiveness of Prohibition got at least as much to do with America's new relations with the world outside as with the break-up of a Jeffersonian world within? Is not Prohibition linked at least as much with isolationism as with rural puritanism? Is it not Europe that the "noble experiment" was trying to keep out, as much as Rum and Rome?

Egyptian Nationalism

Founders of Modern Egypt

By Mary Rowlatt.

Asia Publishing House, London. 194 pages. 35s.

MISS MARY ROWLATT, child and great-great-grandchild of families who made their living in Egypt, wrote in 1956 a delightful book based on family papers. Now she has turned historian and attempted a more ambitious task. She has set out to introduce the English common reader to a neglected subject—the reason why Egyptian nationalism is so much more mature and authoritative than that of the other Arabic-speaking states. The answer is simple: it is deeper rooted because it germinated earlier in indigenous minds. This book describes its origins in educational and military circles—at the hands of Sheikh Mohammed Abdu in the one, and of Arabi Pasha in the other. Miss Rowlatt's research in English has been wide, in Arabic less so, and she is much happier in her handling of the soldier (whose impact on Britain was immense) than when writing of the most important thinker that modern Egypt has produced (whose renown spread only in limited English circles). Her account of Arabi's movement and the British bombardment of Alexandria in 1882 is fast-moving and full of interesting contemporary observations from the Egyptian end, though sketchy about the dilemma that faced a British liberal government.

Her simple style, well suited to descriptions of things that you can touch or see, adapts less well to accounts of thought and policy, and she does less than justice to the depth of Mohammed Abdu's mind; he is never seen grappling with the problem that was his biggest contribution to modern Egyptian thinking—a differentiation between what was essential and unchanging in Islamic theology and practice, and what was human innovation that could and should change with the times. None of this could she tackle without explaining more than she does about the essence of Islam as a way of life. Her book is too expensive for its size and content, but it is sympathetic to the modern Egyptian's indigenous development—a subect too rarely dealt with by British writers.

New Spain

Mexico

By Michael D. Coe.

Thames & Hudson. 244 pages. 30s.

A History of Mexico

By H. B. Parkes.

Eyre and Spottiswoode. 402 pages. 42s.

Mexico: *Revolution to Evolution 1940-1960*

By Howard F. Cline.

Oxford University Press for the Royal Institute of International Affairs. 389 pages. 42s.

CORTÉS told his Emperor that he had called Mexico "New Spain" because of its extraordinary likeness to the Old. To the visitor today the most striking feature of the country "south of the border" is its Iberianism, Europeanism, Catholicism, compared with the standardised materialism of *Norteamericanos*. Few people realise that its population is growing at one of the fastest rates in the world. It has doubled in a generation, largely because of high legitimate and illegitimate birth-rates, rapidly improved survival rates and the expansion of education and other services to conquer disease. The City of Mexico itself has grown from one million to 5 million inhabitants in the same generation, owing to the usual trek to cities from countryside in less developed but rapidly industrialising lands. This has brought terrible housing and other social problems.

Maize is still "the tyrant," normally sufficing for the everlasting pit-a-pat of hands slapping tortillas throughout the country, but often failing because of drought. An almost perpetual azure sky, punctuated by slow black vultures, looks down on the oldest buildings in the New World alongside the most daring new buildings in the whole world; on a riot of flowers alongside deserts and dry *barrancas*; on a people nearly 80 per cent *mestizos*, 20 per cent Indian, and but 2 per cent creoles or native (and immigrant) white; and on vast petro-chemical plants and factories not far from Neolithic agriculture.

One-fifth of modern Mexicans derive in direct descent and pure Indian blood from pre-Columbian peoples. The traveller today, as in Greece or Egypt, is more likely to be impressed by the singular, massive, monumental and always artistic ruins of the ancient inhabitants than by the cosmopolitan products of the moderns. Dr Coe's book, in the "Ancient Peoples and Places" series, is a fair introduction to the complex, isolated cultures of ancient Mexico—less, however, the fascinating but wide-roving culture of the Mayas in the borderlands of Yucatán, Guatemala and Honduras. The author justifies this disappointing omission by its complexity and his lack of space. Presumably another volume in this enterprising series will be devoted to the Mayan lands. But in view of his own studies of early connections between Middle and South America, and of the still unsolved riddle of the early Olmecs and other cultures along the Gulf's southern coasts adjacent to the Mayan lands, his entitling of his book "Mexico" in such a series deprives the unwitting reader of essential material. On the other hand the book is well up to the form of the series in up-to-dateness, easy style, excellent line-drawings, index and bibliography. It is a handsome volume of necessary, but pleasantly assimilated, knowledge about the Mexican heritage.

The other two books differ from, but complement, each other. Professor Parkes's history was originally published in 1938 in the United States, then republished there; this is its first English edition, and it has been fully revised and a lot of new matter added. Its sweep is from archaeology to current problems, and though it is not literally correct to claim (as its dust-jacket does) that it is "the only single volume history of Mexico available in English", it is hard to imagine any better book as an introduction to the country. Its weakness is its omission of economic issues—it was perhaps inevitable, though economic history has been more influential on Mexican politics than elsewhere—but that omission is made good by Dr Cline's work. This is introduced by a short historical perspective, but then launches into the deep waters of the Revolutionary Party and its problems during the past two decades in which Mexico's modernisation has streaked ahead. Well-nigh every fact and figure needed to understand those problems is in Dr Cline's many tables or appendices, and he gives excellent diagrams and maps. The work is a mine of information and should be invaluable to any intending visitor, especially business men. Both books have model bibliographies and indices; both these aids are badly needed for the study of Mexico; and both publishers and authors deserve congratulation on providing such timely material for understanding an increasingly important, influential country. One reader's regret about both books is their inability to convey, by word or plates, the extraordinary and imposing beauty of the land. For that, the reader, having done his homework, must go there. He will not want to come away quickly.

Dissolution of an Empire

Great Britain and Austria-Hungary during the First World War

By Harry Hanak.

Oxford University Press. 318 pages. 42s.

THE dismemberment of the Habsburg Empire into its racial groupings after 1918 resulted indirectly from the long-run trend of opinion in favour of nationalism and self-determination—both among the

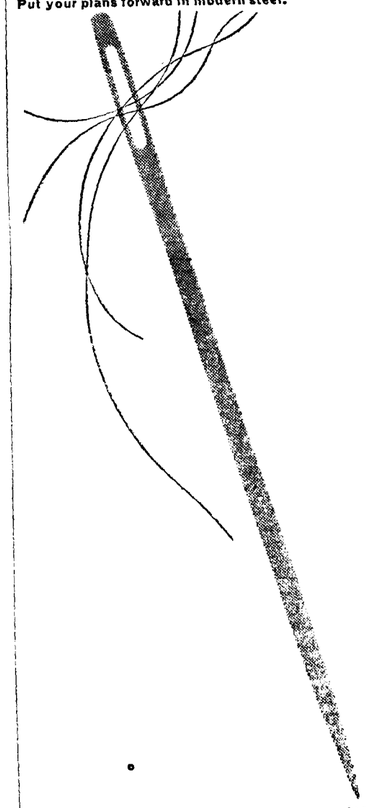
Steel
IS MICRONS

Steel goes wherever you want it to go. Now it is miles of pipeline, a man-made river of the desert in which flows water or gas or oil.

Versatile steel is what you want it to be. Now it is a precision capillary tube with an internal diameter of 2.5 microns—one ten thousandth part of an inch. So small that a thousand tubes could be threaded through the eye of a darning needle. This is the versatility of modern steel.

In new forms, with greater strength, more resistance to corrosion, more colourful finish, it is freely available.

Put your plans forward in modern steel.



You know where you are with

subject races and in the victorious western powers—since the middle of the nineteenth century. It can hardy be doubted that if men were deciding the fate of a defeated Austria-Hungary today, fifty years later, they would see no more merit in breaking it up than Bismarck had seen fifty years earlier. Even during the first world war it was only slowly and late that they came to accept this solution. Among the subject nationalities the dissolution of the Empire, as opposed to an expanded Serbia and Italy or a greater degree of autonomy for the regions, was not demanded before 1917 except by a few individual exiles. In the western countries it was the same. Not till the spring and early summer of 1918 did the British and American governments include dismemberment among their war aims. What was deciding the issue was the tide of events, the slow failure of the central powers in the war. If there had been a negotiated peace the Habsburgs would have survived—for how long is another question. If Germany had been victorious *Mitteleuropa* would have been established.

The movement of British public opinion between 1914 and 1918 on what to do about the Habsburg Empire after the war, the subject of Mr Hanak's book, is an especially intricate problem because of this tyranny of events over an issue in which most people were in any case unversed and uninterested. The book is most nearly satisfactory, as is to be expected, when it is analysing the views of the few extremists on each side who knew dogmatically from the outset what they believed and who consequently never wavered from their nostrums: of Wickham Steed and R. W. Seton-Watson and their associates, who regarded the Habsburg monarchy as the agent of German expansion and who were convinced that its component races would act as a barrier to Germany by living happily together as independent states, and thus demanded total victory over Germany and the dismemberment of Austria-Hungary; and of the Radicals of the UDC and the *Cambridge Magazine*, who opposed any programme for breaking up the Empire on the grounds that Germany was no more imperialist than any other great power (except Russia), that Western European civilisation could be saved only by a negotiated peace, and that a reformed Austria-Hungary was the only counterweight to Russian expansion.

On the other hand, Mr Hanak is far less successful in assessing the influence of these extremists upon government and opinion. He has put students in his debt by combing through the vast out-pourings of the wartime press, but he presents his findings with little regard for chronology or for any other kind of arrangement—with endless repetitions and unnecessary confusions piled up in consequence upon unavoidable uncertainty—and with no semblance of style. Nor is this the only mark of a pedestrian book. It is often difficult to judge where the author's summaries of newspapers end and his own judgments begin. From time to time, however, he adds to a paraphrase a gloss. The radicals were "entirely ignorant" about Austria-Hungary or "intensely insular." Norman Angell's opposition to dismemberment, on the ground that the proliferation of petty states would be a retrograde step from the point of view of international order, was "the strangest argument ever put forward for the preservation of any empire." Such comments reveal his own position to be *parti pris* and thus incompatible with a rounded historical reconstruction.

Peculiar Institution

Lincoln and the Negro

By Benjamin Quarles.

Oxford University Press. 286 pages. 45s.

THIS is a worthwhile book on a little explored subject. Most scholars of Americana know that Lincoln's views against negro slavery did not crystallise until during the decade before his presidency: that is, during the 1850s, when he was in his forties. Even when he was president and before the war between the states broke out he was trying to find a way out of the narrowing impasse between the Southerners' "peculiar institution" (unaltered) and outright abolition as demanded by the extreme Northerners. He never wanted the Negroes to remain, as in fact they did, a permanent racial minority of less privileged citizens in the United States. Accordingly, and surprisingly to many students of Lincoln's development, his progress to the proclamation of emancipation—in the war which had begun—was that of a man being edged backwards inch by inch into an inescapable position. He desperately tried "colonisation": settling them in given areas reserved for them—something ominously relevant to British and other ex-colonial powers today. The American slaves feared that Lincoln's colonisation efforts might succeed: they did not want to live in reservations; still less did they want to be deported. Indeed, Lincoln's legalistic mind went so far as to allow slaveowners compensation for emancipation in the District of Columbia: he really appreciated the hottest arguments on both sides, and saw the slave as real property, forcible deprivation of which demanded compensation.

In the event, formalities and legalisms were brushed aside by war. There were no fewer than 186,000 negro soldiers of the Union: for many reasons most of them never saw combat, but they wore the uniform and did their work. It is hard for us today to realise what a ferment individual liberties could cause a century ago, when in Boston the celebrations of emancipation by Lincoln's proclamation brought to the platform Longfellow, Oliver Wendell Holmes, Charles Eliot Norton, John Greenleaf Whittier, Edward Everett Hale, Francis Parkman and Emerson—and, weeping at the crowd's calls, Harriet Beecher Stowe. Readers of this full, fair, straightforward, comprehensive book will wonder that the tune of the Americans' national anthem is an eighteenth century English gentlemen's drinking-song and not the more characterful "Battle Hymn of the Republic." Europeans today are apt to overlook Americans' old-line, republican (small "r"), radical (ditto) passion for personal freedoms. This work is a scholarly corrective.

Last Wilderness

The Lonely Land

By Sigurd F. Olson.

Alfred Knopf, New York. 284 pages. $4.50.

VOYAGERS from the St Lawrence in their canoe "brigades" used the complex maze of northern waterways as early as the eighteenth century to establish fur trade routes right across British North America and into the far north-west. Plying their paddles, toiling over portages and shooting tumultuous rapids, they laid the economic foundations of modern Canada. Travelling from three or four in the morning till dark, paddling, polling or tracking their heavy freight canoes loaded with trade goods or furs, covering the weary miles of portage between watersheds or round rapids, which even they could not "run" with at least two 90-pound "pieces" on their backs, they have left a tradition of invincible endurance, consummate skill and cheerful gaiety, their paddles keeping time to the rhythm of old French songs.

A group of modern *voyageurs* have been recapitulating, summer by summer, sections of the traditional eighteenth and early nineteenth century routes. This book is an account of one such journey from Isle-a-la-Crosse in northern Saskatchewan at the height of land between the Hudson Bay and Arctic drainage systems, down the Churchill River, across Frog Portage and so by the Sturgeon-Weir River to the Saskatchewan River and Cumberland House. In this vast, unpeopled land six men in three canoes relived the experiences of such early fur-trader explorers as Alex-

EIU QUARTERLY ECONOMIC REVIEWS COVERING 57 COUNTRIES OR GROUPS OF COUNTRIES

Out next week:

TURKEY With political stability not yet assured, Turkey has embarked on an ambitious five-year plan. The review analyses the targets set and examines possible sources of finance. Implications of the plan for imports are discussed with particular reference to Turkey's new importance as a market for capital goods, particularly in the key sectors of mining, petroleum and agriculture.

munity-earned communal fund. Above all, it fears that the January settlement may be thrown back into the melting pot—a major setback for the Six and probably also for the British negotiations.

Mr Heath himself does not return to Brussels until December 10th. But Britain's interest in the outcome is obvious, particularly as, in August, M. Couve de Murville threatened to repudiate the tentative agreement on temperate foodstuffs if he did not receive satisfaction on the question of the financial regulations.

PRIVATE MEMBERS' BILLS

Wasted Opportunities

BECAUSE of the pressure on parliamentary time, only seven or eight of the twenty MPs who are lucky in the ballot for private members' bills generally have any real chance of seeing their measures reach the statute book. This year, by coincidence, Labour MPs drew the first three places in the ballot, followed by an unbroken succession of Conservatives. Two of these three Labour MPs seem to have thrown away their opportunity of being successful legislators by sponsoring measures that are either far too complicated or far too blatantly political to be properly dealt with under private members' procedure.

Mr Howell, at the top of the list, is to introduce an ambitious bill that would enable leaseholders of residential property to buy its freehold as of right. It is admittedly rather better drafted than most amateur proposals for leasehold enfranchisement. While envisaging that the price for the freehold should *prima facie* be not more than twenty-five times the ground rent, it seeks to confer a wide discretion on the county courts to fix a higher price for it should the conditions warrant. Matters which the court would have to take into account in fixing the price for the freehold are the date of the original granting of the lease, the actual ground rent, the length of the unexpired term, the way in which the tenant has maintained or improved the property, and any change in money values between the granting of the lease and service by the lessee of his intention to buy the freehold. Six months' notice of this intention would have to be given and there would be no right of purchase if the lease had less than five years to run. Mr Howell has had the aid of Sir Frank Soskice in drafting his bill, but this is pre-eminently the sort of complicated and controversial measure that really cannot be handled successfully by a private member. It is interesting mainly as a preview of the sort of legislation that a Labour government might introduce.

Mr Lipton, third on the list, is to introduce a bill which proposes (with some justification) that widowed mothers should not have any deductions made from their pensions when they earn extra money by

Paperback Selection

A feature of the autumn's vast output of paperbacks was the reissue by *Thames and Hudson*, a firm usually associated with the more pricey range of the book trade, of three of their art books. All previously published in the last few years, they are now available at about half the original price.

Below is a guide to some of the paperbacks received by this journal in recent weeks :

Anthropology and Archæology :

THE GOLDEN BOUGH : A Study in Magic and Religion. (Abridged in one volume). By J. G. Frazer. 982 pages. 10s. 6d. (St. Martin's Library). *Macmillan.*

SONS OF THE SHAKING EARTH : The People of Mexico and Guatemala—Their Land, History and Culture. By Eric Wolf. 302 pages. 10s. 6d. (Phoenix). *University of Chicago Press.*

Art, Architecture, etc.:

THE SOCIAL HISTORY OF ART No. 1. (4 vols.). By Arnold Hauser. 286 pages. 10s. each. *Routledge.*

ENGLISH CASTLES. By R. Allen Brown. 207 pages. 5s. THE ENGLISH ABBEY. By F. H. Crossley. 192 pages. 5s. *Batsford.*

ARTISTIC THEORY IN ITALY, 1450-1600. By Anthony Blunt. 176 pages. 5s. *Oxford University Press.*

IMPRESSIONIST PAINTINGS IN THE LOUVRE. By Germain Bazin. 320 pages. (357 plates, 101 in colour). 18s. THE HERMITAGE. By Pierre Descargues. 320 pages. (335 plates, 127 in colour). 18s. A CONCISE HISTORY OF MODERN PAINTING. By Herbert Read. 376 pages. (485 plates, 100 in colour). 18s. (World of Art series). *Thames and Hudson.*

THE BUSINESS WORLD

OECD: Committed to Growth?

PROCLAIMING the need for doing, and offering concerted support for doing, what the American Administration was already committed to doing anyway, cannot be called an exciting exercise, even for the Organisation for Economic Co-operation and Development. Only a few years ago, however, it might have been politically impossible for any Administration to approve a joint communique telling it bluntly

> In the United States there is unemployed labour and unutilised capacity. There is a clear need for action to stimulate demand.

Exhortation from an international body may now be rather convenient for the American government, which wants to get its tax cuts through without alarming "sound budget" stalwarts at home too much. But it says something for the staid, workaday business of economic co-operation which OECD represents that such exhortation to the most important economy in the world should now be taken as natural, let alone welcome.

The United States contributes 60 per cent of the total production of the 20 OECD countries*; upon it, therefore, depend any hopes of fulfilling OECD's ambitions for economic growth in the sixties. In order to achieve the 50 per cent growth from 1960 to 1970 which these countries accepted as a "target" at last year's ministerial council meetings, the United States was set a bogey of 4.4 per cent annual growth in gross national product in a report that this week's ministerial council has decided to publish. That is not as stiff as it might sound; over the next decade the United States can count on an annual growth of close on 2 per cent in its working population alone, and in terms of productivity what OECD expects of Europe may be a good deal harder to achieve. But the bogey is nearly twice as high as the United States managed between 1955 and 1960, and its performance in 1960-62, though better, is below the trend hoped for it. This bogey, moreover, is no more than the United States will need to hold its unemployment rate down to 4 per cent, which whatever the differences in figuring is not exactly what Europe calls full employment.

BRITAIN, it need hardly be said, is in no situation to lecture here; we are below trend too (with an average growth of 2.1 per cent in 1960-62 against a bogey of 3.3 per cent). Nor is the OECD communique issued by ministers this week a lecture even to these major laggards. It notes the "substantial improvement in the international competitive position in the United States, in Canada, and in the United Kingdom," which "will contribute increasingly to a better balance in international payments." In Europe, it notes too, prices and costs have been rising; and it says the need there is for halting the rise "without restrictive policies which might arrest sound economic expansion."

Officials of these countries, in the working party report on policies for growth, are blunter:

> Acceleration of United States growth and the solution of problems arising in other countries will not come about without new policies.

So far as the whole of OECD is concerned, they put the accent firmly on maintaining "adequate levels and rates of increase" in demand. Without this, they say, full employment cannot be maintained; and without full employment rapid growth cannot be expected to occur. Growth that is otherwise possible can be frustrated either by "inadequate demand for the fruits of production or inability to avoid continual increases in prices." And only after full employment is achieved, they feel, can "policies directed more specifically

* The Six; the Seven; the United States and Canada; plus Greece, Iceland, Ireland, Spain, Turkey. Yugoslavia sends observers; Japan is associated with the OECD's Development Aid Committee.

* 1960 and 1961 data include Saar.

to stimulate investment have their full effects." This may be true in the coming ten years: it was not in the last. Less than full employment, in the sense of a reservoir of labour economically or politically eager to seek new jobs, was associated with high investment and rapid growth on the Continent. Full employment did not lead to particularly high investment in Britain, as against say Germany. The working party's emphasis on business confidence as a positive element promoting private investment—confidence in ability to export, as well as in a growing home market—is more convincing.

Over the ten-year run with which OECD is concerned, in any case, these experts do not think the rates of growth envisaged would involve sharp increases in the share of investment in national expenditure in any of the five major industrial countries in the table on page 936: in Germany, the share may well fall. (The investment problem, for the industrial powers of Continental Europe, may rather be that of developing adequate capital markets and financial mechanisms to ensure the financing of a continuing proportion of investment.) It is only in Britain, moreover, that even this bogey rate of growth (3.3 per cent annually as against NED's 4 per cent) would involve a slower growth in real consumption than in GNP as a whole.

For Europe, the ministerial communique records a more general problem: how to stop prices and costs rising " without restrictive policies which might arrest sound economic expansion." And the rather general interest expressed by ministers, as well as in another working party report, in developing " adequate incomes policies " impressed and somewhat encouraged the British delegation: NIC has understanding foreign friends, at least. The working party report on " Policies for Price Stability " sets out the several national approaches to this same question of influencing the growth of incomes in democratic economies, most of them tentative and none so far reliably successful. The official experts accept the need for simplicity in the advice that governments should offer on wage and salary negotiation; they admit that the link to a single figure of national productivity has its weaknesses, but argue that questions of relative pay between industries, as indeed those of the distribution of income in general, ought where necessary to be specifically taken account of by the governments concerned. Moreover,

> . . . the need to provide guidance for non-wage incomes is likely to require governments to go further than most of them have so far done in developing views about the distribution of primary (factor) income also.

But NIC gets advice as well as encouragement. There was emphasis from Scandinavia, and from France, on the need to associate the interests involved, notably trade unions, with the formulation of national objectives for incomes over any given period, so that they are not merely asked to adjust their wage bargaining to some figure handed down from above. The working party notes that in Sweden and in Holland, where experience of incomes policies is longest, both governments generally relate wages and salaries in the public sector to what has happened in private business, not the other way round: " attempts to ensure that wage guidance is followed throughout the economy which rely solely upon setting a good example in the public sector run the risk not merely of being ineffective, but also of creating serious embarrassments for the governments concerned."

FROM the corridors of the Chateau de la Muette, no journalist can hope to judge the nuances of speeches that he has not heard delivered. Ministers and officials who have heard them are on such occasions honour bound to be encouraged. Certainly no controversies seem to have broken the placid surface of this ministerial council; Mr George Ball put what Mr Freeman had said about common market agricultural policy much more diplomatically this time, and the American emphasis on opening markets for developing countries as well as offering them aid was phrased so as to evoke affirmative echoes rather than to imply anyone was not doing anything they ought to. Some officials felt that the confidence European countries expressed about their short-term economic prospects was expressed in a more balanced way than in the preliminary meeting, when the governments were reacting rather sharply to what M. Marjolin of the European Commission had (not in fact quite) been saying. The communique, after all, recorded agreement " that should the need to take expansionary measures arise later on, it would be important for member countries to act quickly and in concert," and the working party report suggested that governments needed to develop wider public understanding of the economic virtues, on occasion, of deficit financing. Dr Per Jacobssen, benevolent and owlish, is after all said to have told OECD that he had confidence that its members would act in time, and that it had displayed the best international economic co-operation that he had seen for thirty years (since 1932?). So who is anybody else to remain uneasy?

Protection for Depositors

SURELY no one now doubts the need for the Protection of Depositors bill awaiting its second reading in Parliament; too many investors have lost their savings because they were dazzled by the high returns offered by companies that were never willing to prove their worth by a glimpse of their balance sheets, and often continued taking deposits long after they had become insolvent. The gap in existing legislation that has allowed these companies to play fast and loose with other people's money without ever lifting the cover on their operations is something of a legal accident: existing legislation through the Prevention of Fraud Acts was enacted largely before advertising for deposits became widespread.

There are now something like 1,200 hire purchase finance houses in Britain, even excluding the retailers who finance only their own business. True, only thirty to forty HP companies advertise for deposits, but these few hold the bulk of the £375 million of total finance house deposits; and nearly all the other companies are empowered by their articles to solicit deposits from the public should they wish to do so. In addition, an increasing number of companies in a range of trades from property development to pig breeding are financing themselves in this way. Indeed, virtually every new company of any kind that is formed nowadays takes the power under its articles of association to borrow on deposits.

There were two ways in which the Government could have tackled this problem. A system of compulsory registration that laid down minimum statutory ratios of liquid assets to deposits and of risk capital to borrowings was one way, parallel to that chosen for building societies. Building societies, however, are a fairly homogeneous group and do not operate for profit; the companies which this act would have to control are a diverse collection of traders, all of them very much motivated by the pursuit of profit. Statutory regulations of business practice would hardly afford protection against the determined rogue, but would certainly hinder the honest majority in the legitimate pursuit of business.

The alternative, and the one the Government has sensibly decided to incorporate into the present bill, is that all companies advertising for deposits should give fuller information, over and above the demands of the Companies Act of 1948; so that the depositor, if he so wishes, can gauge the risk he is taking, and so that the authorities can intervene more promptly in a case of fraud. In essence companies will not be allowed to advertise for deposits unless the advertisement complies with Board of Trade regulations to be made under the new act, and unless they supply both the Registrar of Companies and the board with up-to-date audited annual accounts and half-yearly interim accounts. The board has the power to make what regulations it thinks necessary on the content of these advertisements and on the form and content of the accounts. It also has fairly wide powers to petition for the winding-up of a company covered by the act, to demand any books or papers it feels are necessary to obtaining a true picture of a company's financial position, and to obtain a warrant to enter and search a company's premises. Private companies that invite deposits will lose many of the privileges they enjoy under the Companies Act. And finally, companies must supply a copy of their latest accounts to each new depositor.

This confers seemingly wide discretionary power on the

The Proposed Regulations

Advertisements

Companies will be able to advertise for deposits only if they have first complied with the Board of Trade's regulations or if they have been exempted. Companies with exemption are banks (i.e., the one hundred and seven banking and discount houses on the Board of Trade's confidential list of banking institutions qualifying for the privilege of maintaining hidden reserves under the Companies Act); building societies; savings banks; industrial and provident societies; and local authorities. The board may also exempt other classes of institutions; these are not likely to include any group or association of hire purchase companies.

No exempt private company will be allowed to seek deposits from the public: private companies that wish to do so will lose their exemption privileges under the Companies Act and in certain ways will be required to follow the conditions imposed on public companies.

Accounts

Before an advertisement for deposits may be issued a company must present an audited balance sheet not more than fifteen months old, and a profit and loss account covering a period of at least six months up to the date of this last balance sheet. If this audited balance sheet is more than nine months old then the company must also furnish an interim balance sheet and profit and loss account covering a period of not less than six months after the balance sheet date. Once a company has fulfilled these conditions and issued its advertisement it must continue to present its accounts regularly to the registrar and the board. This means that half yearly profit figures will in future be available for most of the large finance houses, and the accounts of many of the smaller companies will be on view for the first time.

Administration

A company may cease to be subject to the accounting requirements in the following circumstances:

- If it has not advertised for fifteen months and has repaid all deposits to the public;
- If for three years after giving notice to the board of its intention to withdraw it has not advertised and has repaid all moneys taken on deposit prior to the date of giving notice to the board. The company may continue to take deposits without prejudice during the three years.

The act will come into operation six months after the date of passing. Companies that have advertised within six months of the appointed day, or have advertised during the previous three years and have held deposits in the last three months, will have to present their accounts to the registrar and the board in the same way as a company wishing to start advertising.

A deposit-taking company may be wound up by the Board of Trade under the following circumstances:

- If it defaults;
- if it is able to honour demands for repayment only by obtaining additional deposits;
- if its liabilities exceed its assets;
- if it has failed to deliver proper accounts at the proper time;
- or if the board is unable to ascertain the company's financial position.

In all these cases the company may be wound up by the court on a petition from the board. If a company fails to produce its accounts on the due date the court may, on the application of the registrar or the board, prohibit the acceptance of further deposits until the accounts are delivered.

reoccupy the eastern piece of disputed territory at the price of letting the Chinese hold on to the western piece—minus, in each case, a strip of no-man's-land. This suggests that the primary Chinese objective was what the more cautious commentators always said it was, namely, to win acceptance of their squatters' rights in the barren Ladakh plateau, across which they have built a road connecting Sinkiang with Tibet, by putting pressure on the Indians at the other end of the line. When Mr Krishna Menon prodded them with patrols in Ladakh, they let fly a left hook in the North-East Frontier Agency, incidentally knocking Mr Menon clean out of office.

And yet this explanation, neat though it is, does not quite solve the whole puzzle. The Chinese, after all, were already in control of their coveted Ladakh. Why could they not simply have sat tight, and given India a bloody nose if and when it tried to retake the empty plateau? Why, if they felt it necessary to rattle the Indians at the other end of the border, did the rattling have to be quite so savage—and so expensive of China's strained resources? And why was the transition from advance to withdrawal so remarkably abrupt?

It may be that Peking had a secondary objective, which it was prepared to abandon if things did not go its way. This secondary objective would have been to demonstrate to Mr Khrushchev, and the other "revisionists" of the communist world, that the best way to treat bourgeois neutralists like Mr Nehru is to bully them, not give them aid. The Chinese may have hoped that Mr Nehru would knuckle under when he saw the casualty lists, or be replaced by somebody more pliant. In the event, however, Mr Nehru refused to knuckle under; Indian public opinion rallied round, and so did the western powers; and even Mr Khrushchev, after a brief wobble, declined to take the Chinese point. There have been suggestions, indeed, that Moscow put a good deal of pressure on Peking to stop brawling. At this stage, sensing his isolation, Mr Mao Tse-tung may have decided to settle for his more moderate and limited primary objective.

All this is speculation about things past. The next decision,

Another limitation in the bill is that a company need provide accounts only after a deposit has been made, and not before. The reason for this limitation is obviously a practical one; the really big business in placing deposits is done by telephone between the companies, and the banks and money brokers. Business would come to a standstill if every deposit had to be preceded by the delivery of a set of accounts to the depositor. Presumably one of the board's first jobs when this bill is passed will be to make sure that each advertisement for deposits carries the offer to supply accounts on request—as the advertisements of the big hire purchase companies do already.

A nice problem of interpretation will be to decide just what is and what is not an advertisement inviting deposits. It seems likely that business transacted by telephone alone without supporting circulars will not constitute an advertisement, nor will business done by word of mouth. This may exclude from the bill the very big hire purchase companies and at the same time the great bulk of small companies that draw their finance from friends and relatives. The purpose of the bill would be defeated if the administrative mechanism became cluttered with hundreds of small companies. Common sense suggests that an advertisement must be an invitation to the public in general, and it may be that all those hire purchase finance companies that place "banker" after their name will find themselves embraced by the Act. Whether or not the word banker amounts to an invitation to make a deposit will be for the courts to decide, but there must be many companies already wondering if the respectability supposed to be conferred by this designation will now be worth the inconvenience it may bring.

This bill is sensibly flexible. It contains the necessary elements of control without sitting on the companies; and in a sphere such as this a heavy dependence on delegated legislation can hardly be avoided. While this legislation should have been introduced years ago, it has at the same time apparently benefited from the long deliberation that delay has allowed. It should serve as a guide to unit trust legislation. The board has not made the mistake of twisting the clauses to cover every contingency, and while the activities of the pig breeders will be controlled, the casino operators, who act only as the agent of the depositor to gamble his money, will remain outside the bill. The board feels, reasonably, that its job is to protect the investor, not the gambler.

GERMANY'S ENERGY MARKET—I

Our Turn Tomorrow?

There is always apoplexy among aldermen and local councillors when the label of inadequacy or inefficiency is tied to worthy administrative areas which, from the London County Council to the extraordinary entity of Rutland, are threatened with mergers or extinction. It can be readily conceded that the LCC and Rutland, neither of them accustomed to hiding its light under a bushel, are probably as good as most at doing the local authority jobs of forty years ago. But the essential aim and object of all reforming plans now should be to clear the ground for an administrative

Dr Erhard can induce some voluntary restraint upon the almost explosive growth of black oil sales in Germany, politically he could be forced to curb it with government controls.

On the face of it, his attempts at persuasion have now completely failed. In May this year, the Bundestag passed a resolution calling on the Minister to seek to achieve a voluntary reduction in the expansion of refining capacity planned between now and 1966; and failing this, to achieve the same end by one official means or another. In July, oil refiners operating in Germany gave him a figure of 71.6 million

metric tons a year as the minimum capacity that they would consider essential by the end of 1966 (against 46.3 million tons now) to cope with the growth of oil demand, allowing for a production in that year of just under 60 million tons and 4-5 million tons of imports. The Minister asked them to reduce this capacity figure by about five million tons a year. At the end of September the German affiliates of the Esso, Shell and British Petroleum groups wrote to him explaining why they were not prepared to reduce their own figures further; and at the end of October, the German refiners' trade association sent him a formal refusal, affirming that their previous minimum figure—in practice, fractionally raised to 72.6 million tons—was irreducible.

Against Dr Erhard's reluctance to interfere further in Germany's fairly free energy market, there is ranged the whole Ruhr lobby, coal-owners and trade unionists alike, with considerable right-wing support as well as that of the Social Democratic party, and also, it would appear, with the ear of Dr Adenauer. Unless Dr Erhard has found some new way to prevail upon the oil refiners—and there are signs at home and abroad that he is not yet taking "No" for an answer—he might not be able to avoid putting some kind of controls on oil expansion.

THE switch to oil as a general fuel began later in Germany than in most other industrialised nations of Europe, but when it came it came with a rush. Until 1953 Germany used well under a million tons of light and heavy fuel oils a year, less than one per cent of its total energy consumption; then the surge began. Since then the rate of increase in consumption of these black oils has seldom dropped below 30-35 per cent each year. In 1961 their consumption reached 18.2 million tons, or 12.9 per cent of German energy consumption; this year again it could be up by a third. As a proportion of total energy consumption in the country, German sales of fuel oil in 1961 still ranked lower than in any other country of the common market, though higher than the proportion in Britain; but its sustained rate of growth was higher than most, and its price competition, until recently, more bitter. Moreover, in southern Germany, where until now sheer geography has made oil prices less competitive with coal, refineries at the end of the crude pipelines are now opening fresh fields for fuel oil to conquer.

Behind an excise tax of DM.25 a ton on heavy fuel oil, and an import duty of DM.20 on imported coal (which is effectively prohibitive, apart from the duty-free quota of about seven million tons a year for traditional importing areas such as north-west Germany), German coal sales have fallen more sharply than in France, though not as sharply as in Britain or Belgium. But they are going on down, unlike those in the other coal-producing countries; and the effect on output has been concentrated on the Ruhr. Total coal consumption in 1961 was about 123 million tons, against 127 million tons in the postwar peak of 1956, but the 1961 figure included about 10 million tons for the Saar area, included in Germany since 1960. Solid fuel's share of total energy consumption, with the upsurge of fuel oil consumption, dropped from about 89 per cent in 1953 to 71 per cent in 1961 (and inclusion of the Saar again tends to bolster up the share of coal). But coal sales may be down by another 3-4 million tons this year; and the coal figure that matters politically in Germany is that Ruhr coal production, from a capacity of perhaps 145 million tons a year, is down to about 115 million tons.

All the open measures of protection for German coal are formally temporary, and due for review during the next six months; at the end of 1963, too, the present import duty on crude oil, which protects high-cost German oil production, is due to be abolished, under a special protocol to the Treaty of Rome. So far as coal is concerned, nobody has the least doubt that the duty on imported coal will be continued after it lapses at the end of this year, or that the excise tax on fuel oil, which would lapse at the end of April, 1963, will be renewed (a few people on the two sides have hopes or fears that it might go up). Apart from the protection that this tax gives coal, the DM.400 million that it now raises each year, with a built-in increase along with the growth of fuel oil consumption, has become too important to the budget to let go lightly; different ministers have different ideas about what to do with the money, but none wants to do without it. It seems likely to be renewed for four or five years; the oil industry's hopes that it might be made "degressive" (i.e. declining in rate each year) seem unlikely to come true.

Abolition of the duty on crude oil (effectively DM.80 per ton) will be necessary to bring Germany, in one step, into line with the nil duty on crude oil in the common external tariff of the EEC. Since German crude, on the average, costs considerably more than imported crude can be landed at, very little internal production could survive bereft of all protection; at least, exploration to develop reserves as they are run down would no longer be worth while. Under the treaty, the German government would be allowed to subsidise local oil production unconditionally for two years, and after that with the approval of its common market partners; it is now discussing ways and means with the local oil producers. These include some of the affiliates of the international groups, as well as independent German oil companies—some of which are interested in coal, too.

RUHR coalowners look with envy at what they consider the comfortable position of the National Coal Board (though to English eyes their political influence appears stronger, since Lord Robens and the National Union of Mineworkers have no particular pull in the Conservative party). Britain's own cutback in the mines has been larger than theirs—down by 30 million tons a year and 130,000 men since 1957—but it is true that coal imports have been effectively banned and that competition in the fuel oil market has not pushed the discounts down as far here. There is no marked fear in Germany about British coal imports, though the Ruhr envies the Coal Board its one selling organisation for all the country's pits. It is acknowledged that the entry of Britain into the Coal-Steel Community would probably shift the balance of fully competitive coal tonnage in the community; but the coalowners are less interested in that than in seeking a weighty ally to defeat the liberal ideas about energy imports voiced by the European Economic Commission in Brussels. Entry into the Community, however, must mean that eventually the British fuel market will become as open as Europe's (however open that is). During the next few years, certainly, competition in the market for oil products of all kinds seems likely to intensify in Britain; so the Coal Board may soon have to meet the degree of competition that the Ruhr has already.

BUSINESS NOTES

SPECIAL DEPOSITS

All Back

RELEASE of the last £81 million in special deposits frozen at the Bank of England was announced on Thursday. Thus the whole of the three-stage release, from the peak ratios of 3 per cent for the clearing banks and 1½ per cent for the Scottish banks, has been achieved within six months, while Bank rate has been kept steady at 4½ per cent. This has been the right choice of action; the authorities now show a little more recognition of the support that relatively high interest rates can give the balance of payments in a continuing way and not only in short-term crises. And the Bank of England was never very enamoured of its new weapon of special deposits; it was sensitive to criticism of the arbitrary impact on the banks concerned; and it was anxious to show that the deposits were not being impounded for the duration. Equally, however, it is not suggesting now that the special deposits will never be recalled.

This final release has been prompted by the sluggishness of bank lending shown in the November statements. While this is attributable to lack of public demand rather than lack of bank resources, bank liquidity is far from flush and it was clearly anomalous to squeeze it down at a time that official policy was set wholly for reflation. In the domestic economy there are still no signs that the several and not inconsiderable injections from both the Treasury and the Bank have been dangerously excessive; while externally sterling has been firm and the gold figures for November should be good.

BANK CREDIT

Advances Peter Out

INDUSTRIAL borrowing from the banks still shows no sign of reviving; the increase in net advances of the London clearing banks in the five weeks to November 22nd of only £19 million, including an increase of £6 million to nationalised industries, is unquestionably disappointing. In October, when the remaining restraints on lending were removed, advances rose by £44 million. It seemed then that the rise might be swollen by finance for property projects and personal loans that had been approved in principle and were merely awaiting the Chancellor's go ahead. This month's slackening tends to confirm this, especially as the banks have indicated that the rise is mainly in personal and professional loans and loans to retailers. The pick up in engineering borrowing, hinted at last month, seems to have petered out.

Despite the small scale of the rise in advances the banks were net sellers of gilt-edged during this banking period, for the first time since March. Total market investments fell by a net £14 million. Lloyds sold £5 million and the Westminster £13 million. This sale by the Westminster contrasts with purchases in the two previous months amounting to £31 million, which was needed to lift its liquidity ratio from 31.2 to 32.5 per cent. The aggregate liquidity ratio for all the banks has fallen a further two decimal places to 33.3 per cent, though Thursday's release of special deposits will put a full point back. It is still possible that banks may be pressed against the minimum of 30 per cent in the new year. But they can now assume that in one way or another the authorities will see them through—by absorbing gilt-edged from them or by reducing still further the pressure of their funding sales. The limitation on advances over the months ahead is likely to be demand not supply.

THE BANK FIGURES
November 22, 1962
London Clearing Banks

	£ mn.	%	Changes on Month £ mn.	Changes on Year £ mn.
Gross deposits	7,743		−10	+292

Advances*	3,491	46·8	+19	+261
(to State Boards)	66		+ 6	− 7
Scottish Banks†				
Gross deposits	831		− 2	+ 2
Liquid assets	303	31·9	− 9	− 16
Investments	224	23·5	− 2	− 16
Advances	343	42·1	+17	+ 49

* Excluding all items in transit, except ratio of advances to deposits; all other ratios are of gross deposits. † All ratios are of gross deposits and notes.

By contrast with the experience of the London clearing banks this month, the advances of the Scottish banks rose spectacularly, by £17 million. This is nearly as much in absolute terms as the rise for the clearing banks and signifies a rise of more than 4 per cent. It is equivalent proportionately to about £150 million in the advances of the London clearing banks. The Scottish banks give no reason for this movement, and it may be no more than the counterpart of the equally sharp fall in advances last month of £19 million.

MANPOWER

Fewer at Work

AFTER last week's worst November unemployment total for 22 years, the Ministry of Labour records this week that in October, for the second month running, total employment was lower than it had been a year before. If the trend is looked at more closely by applying the seasonal corrections of the National Institute of Economic and Social Research, it seems that in the first two quarters of this year, employment was rather lower than during the last quarter of 1961, recovered in July but fell over the next three months by some 0.3 per cent. Seasonal adjustment of these figures is only rough, but employment seems

UNEMPLOYMENT RATES AMONG MEN
(Percentages)

Regions	November 1961	November 1962
Northern	3·2	5·4
Scotland	3·5	4·9
Wales	2·9	3·8
North Western	2·2	3·4
Midland	2·1	2·8
East and West Ridings	1·4	2·4
South Western	1·8	2·4
Eastern and Southern	1·6	2·0
North Midland	1·2	1·8
London and South East	1·3	1·8

to have taken a downward course. The hard facts are that in October there were some 60,000 fewer people in civilian employment than a year ago (100,000 fewer in manufacturing industries alone) and 145,000 more people "wholly" unemployed. The latter comparison was increased to 156,000 in November.

This situation may be awkward for the government and the trade unions, but it cannot have taken them by surprise. Production has been rising, but only modestly; capacity has risen much more. When the Federation of British Industries took its last sounding of business opinion early in October, two-thirds of firms, the same proportion as four months before, were working below capacity and in more than one out of three of these the amount of unused

capacity had risen, and in only one out of six had it fallen. Only one in ten firms mentioned skilled labour as a factor likely to limit output compared with one in four a year before. It is not surprising that employers are less keen on hoarding labour; the FBI itself was bold enough to couple the better use of labour with a high level of investment as essentials for the future success of the economy.

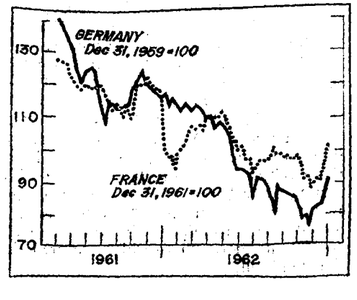
By American standards, as discussed on page 908, the November rate of unemployment of 2.4 per cent in Britain is still low. If it were evenly spread there would be much less to worry about. But in the Northern region, which is now the worst affected, the rate among men has risen above what any economist would think reasonable. And in the development districts as a whole, the rate (for all workers) was 5.4 per cent even by October, and as much as 11.5 per cent in Milford Haven and Pembroke Dock, 7.5 per cent in south-east Tyneside and 6.9 per cent in north Lanarkshire.

STOCK MARKETS

A Turn for the Better

DESPITE the upsets of Cuba and the Sino-Indian struggle, investors have for the last month been displaying more confidence in equities than at any time since the Wall Street crash at the end of May. The key factor is the prospect for the American economy next year and here views are more optimistic than they were only a few weeks ago. As a direct result equities on Wall Street, with only minor interruptions for profit taking, have advanced over the last five weeks carrying the Dow Jones average up by over 90 points to break through 650. Volume of business has expanded but the buying has come largely from institutional and some overseas investors rather than from private investors and mutual funds in the United States. A technical correction is thought to be likely but, apparently, there is no fear on Wall Street of a serious or prolonged decline. Record car sales, higher retail sales, price increases and better than expected corporate earnings have helped to sustain the advance, in which blue chip issues have scored the biggest gains.

Without this advance on Wall Street, it is difficult to believe that the British and Continental markets would have behaved so well in recent weeks. In Britain, the government's measures have helped to reinforce investors' confidence and despite the by-election results equities have remained firm this week with the *Financial Times* index hovering around 295-296 and *The Economist* indicator gaining 6.2 points to 354.9 in the week to Wednesday's close. With interest concentrated upon equities the gilt-edged market has remained quiet, but mid-week buying was encouraged by the prospect, confirmed on Thursday, that the remaining special deposits would be released to the banks. Investors have also noted the quickening flow of new issues; for example, three loan issues by Butlins, Dalgety and New Zealand Loan and Associated British Maltsters, amounting in all to £8¼ million, were announced on Wednesday.



As the chart shows, equities in Germany and France have been rising strongly. Buying on the French bourse was encouraged by the Gaullist success in the general election though after last week's strong advance, the bourse has had to absorb some profit taking this week. The reawakening of interest in German equities has taken place despite the continuing governmental crisis, but the chance of a clash over Berlin is now reckoned by investors to be less likely. But as in France, the rise has been interrupted by profit taking.

The more confident mood among investors is tinged with the reasonable scepticism that the economies of the western world are not out of the wood yet. British investors cannot ignore the unemployment figures nor the amount of unused capacity in the capital goods industries while German investors are still worried by the pressure on profit margins. And even if the spectre of economic recession has waned, many are still concerned about the rate of economic recovery and growth that will be achieved next year. The latest rise in equities may be justified but a further headlong advance would be another matter.

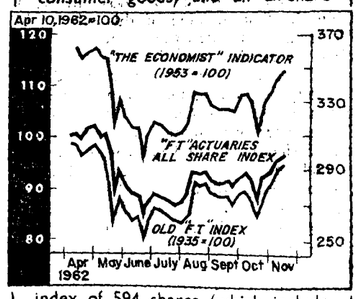
PUBLIC INVESTMENT

A Regulator?

THE debate in the House of Commons last Tuesday added little to what had already been said on the Government's plans to increase public investment in the White Paper published earlier last month. The £70 million or so that the Central Electricity Generating Board wants to spend in 1963-64 on strengthening the distribution system are still "under discussion," as is the investment programme of the Post Office. So the official estimate for public investment in 1962-63 remains £1,930 million and for 1963-64 £2,060 million, compared with £1,790 million in 1961-62—with the proviso that they are likely to rise next year. Mr Boyd-Carpenter, Chief Secretary to the Treasury, explained that the Government has not fallen into the old trap of imagining that an increase in future public investment can act as a remedy for an existing recession: that it has authorised an extra £70 million of public service investment was, he explained, simply because it was possible to spend this much on short-term projects. About £15 million will be spent this year and £40 million in 1963-64—still hardly a quick-acting remedy. But it seems that the Treasury expects the slackness in private sector investment will last into 1964, and this opportunity should be taken to increase spending in the public sector. This seems rather like using public investment

NEW SHARE INDICES

FOR over thirty years the Actuaries Investment Index has charted movements in stock market prices. But since the war it has been a monthly index and the need for a daily indicator as comprehensive and as capable of sub-division as the Actuaries series was clear. This is now provided by the new FT-Actuaries indices, which completely replace the Actuaries Investment series. The new indices cover 693 securities, divided into 50 sub-sections. The two principal equity indices are one of 500 industrial shares (which are broken down into three main divisions: capital goods; durable consumer goods; and other consumer goods) and an all-share



index of 594 shares (which include financial stocks as well). Arithmetical averages of price relatives (weighted by market capitalisation) are used and the base date has been fixed on April 10, 1962, the day on which the capital gains tax was introduced. The *Financial Times* daily index of 30 ordinary shares will still be published and, as the chart shows, neither it nor *The Economist* indicator have moved, in the short term at least, very differently from their bigger and more elaborate new brother. Investors now have a proliferation of indices to choose from; but, as the use of the Dow Jones average across the Atlantic demonstrates, old favourites die hard.

as a regulator; what can be done quickly is not necessarily what needs doing most.

The Post Office's hope of being able to spend more than the forecast of £139 million in 1963-64—compared with £123 million this year—might, one suspects, be connected with its reported desire to raise charges for parcels and telephone calls. Its biggest investment programme now is for the extension of the automatic telephone system, which was intended to reduce costs by saving labour. Charges for telephone services were increased only a year ago; if it turned out that the Post Office wanted to make another, one would have to assume that the present charges are based on a miscalculation of costs—or that the Post Office have become over-enthusiastic about financing investment from its own resources, and does not want to borrow more from the Treasury.

SWITZERLAND AND IMF

All Help Short of Membership

A Swiss correspondent writes:

AGREEMENT in principle was reached in Berne at the end of last week on co-operation by Switzerland with the Paris (Lenders') Club of the International Monetary Fund. Swiss participation in these special stabilisation credits was envisaged from the first mooting of this scheme in Vienna in September, *1961*; and a few days after the conclusion of the Paris agreement a little under a year ago Switzerland was formally asked to join. In principle the Swiss answer was not negative; but the Berne government immediately pointed out that Switzerland could not co-operate as a formal member of the club, because Switzerland is still disinclined to become a member of the Fund. The basic reason is that the authorities do not want their franc to become an international currency in the same way as the pound or the dollar. Switzerland wants to retain control over the utilisation of the Swiss francs that come into foreign hands—which, as a member of IMF, it would not. And Switzerland feared that entry into the Paris club would be considered by its people as entry into IMF by the back door.

So the Swiss government, in co-operation with the National Bank, prepared a project which was presented to Dr Per Jacobsson when he came to Berne for a first talk last April. Some important difference of opinion appeared, because Dr Jacobsson wanted the Swiss contribution to be granted through the IMF, which in turn would have distributed the Swiss francs to the borrowers in the Paris club. This was refused by Switzerland, as it would have involved the loss of control over destination of the credits. Dr Jacobsson also asked Switzerland to make a loan in gold to the IMF, with which the IMF could purchase foreign currencies; and he wanted the amount of the Swiss contribution to be $300 million, whilst Switzerland had always said it would not go above $200 million.

The Swiss authorities therefore rejected these proposals but prepared a compromise under which, in order to avoid hurting the susceptibility of the IMF, it would be associated with the Swiss participation. The broad lines of this second project were accepted by Dr Jacobsson on his visit to Berne last week. Under this project:

1. A general agreement (*accord-cadre*) is to be concluded between the IMF and the Swiss Confederation in the form of an exchange of letters, indicating that Switzerland is willing to co-operate in the scheme of the Paris club. But the details and the conditions of this participation would be settled in bilateral agreement, first of all with the United States and Britain. So Switzerland will retain control of the amounts put at the disposal of Paris club member countries.
2. The agreement, which would be a kind of stand-by agreement, would provide that a Swiss contribution could be of three kinds:
   (a) swap operations
   (b) loans in Swiss francs
   (c) loans in gold.
3. These contributions would be made on a reciprocal basis. This condition is not very important for Switzerland, but was inserted at the wish of the United States, which does not want the agreement to give the impression that Switzerland needs to "help" the dollar.
4. The maximum amount of the Swiss contribution would not go beyond $200 million.

The broad lines of this project have still to be accepted by the Swiss government and the IMF; if they are not, a third meeting will be necessary. Eventually the project will have to be put before the Swiss Parliament in the form of a bill. So this addition to the Paris club will not be ready for use for at least six months.

EUROPEAN MONETARY AGREEMENT

Diplomacy, Treasury Style

THE British Treasury has won its technical battle over the European Monetary Agreement; whether this paper victory will serve the wider interests in international finance which the Chancellor of the Exchequer is himself pursuing is another matter. Broad agreement was reached at a meeting of the managing board in Paris on Monday, on the eve of the ministerial meeting of OECD, for a limitation of the effective dollar guarantees to five per cent of official holdings, covering a mere £11 million of sterling balances. While this represents an advance on the previous British offer of one per cent which was rejected by continental countries as derisory, it is still little more than nominal and covers far less than normal working balances. Effectively, therefore, the whole of Part II of the European Monetary Agreement on central settlements, which British officials disliked from the start, will lose its residual significance; what remains, in Part I, is a mechanism for making credits to needy members which so far has been used only for small amounts for Greece, Turkey, Spain and Iceland. This amendment of EMA, which has been agreed only for the next year, will be arranged through an exchange of letters modifying Part II of the agreement, though some formal approvals have still to be obtained. At the same time, to make it clear that special support for sterling and other countries would still be guaranteed as in the past, the amending clauses will incorporate some statement about provisions for mutual support, which might effectively bring the mechanism of the 1961 Basle credits within EMA itself.

British officials, at any rate, are satisfied that there is no basic conflict in their recent stand against these dollar guarantees and the proposal for gold guarantees in the Maudling plan. The currency balances held by members of the European Monetary Agreement, they point out, are ordinary holdings of an international reserve currency: all such holdings are not guaranteed, so why should some be? The Chancellor's proposed mutual currency account in the International Monetary Fund, on the other hand, is an attempt to create a new internationally acceptable reserve currency in the hands of an international institution, and like all IMF holdings it would have an automatic gold guarantee of gold value.

But the test of these fine distinctions is not whether they can be logically justified by Treasury officials fighting the battles of 1955 and 1962 at the same time: the test lies in their reception by the people who have to be convinced. And the continental financial officials involved in the argument have seen Britain's action as a backward step in international financial co-operation, in the light of which the forward jump proposed by the Maudling plan looks either hypocritical or frivolous. Why, they ask, all this fuss about a guarantee in dollars which, in the dollar's present straits, is unlikely ever to be a liability?

The continental reaction cannot be put down to misunderstanding alone. The Maudling plan did mark a new departure in British external financial policy, and therefore did demand some adjustments in other, peripheral aspects of that policy. The row in EMA has shown that this was not done, and that the distinction between "existing" and "additional" balances in the Maudling plan itself makes sense only to its authors. Did Mr Maudling really intend that the financial discussions in Paris this week should be totally concerned with sorting out a barren dispute devoid of any real moment? If the Chancellor is still serious about his initiative he would do well to get it more thoroughly accepted in London itself.

How to blend the best sherry in the world

It's easy. Hop on the next plane to Spain. Head south for Jerez. Settle in comfortably, and stay for a hundred and sixty years. Meantime pick up all the sherry lore you can. You'll find then, if you don't know already, that Harveys Bristol Cream is considered by the experts to be the best sherry ever blended.

But to blend it, even if you learn as much as Harveys know already, you'll need certain venerable and distinguished old sherries. And it is only fair to warn you that Harveys have earmarked the supplies of these for a very long time to come.

But don't be discouraged. Persevere. With luck, patience, and unlimited funds you may, about the year A.D. 2120, turn out a fairly creditable sherry. Even then it won't be acclaimed overnight as the world's best sherry; the fame of Harveys Bristol Cream has been built up over decades.

In fact, unless you're an incorrigible do-it-yourselfer, it might be easier simply to give in and enjoy the real thing. Harveys Bristol Cream costs 25/6 a bottle. And Harveys are happy to do all the hard work for you.

HARVEYS BRISTOL CREAM

AIRLINERS

Supersonic Signature

THE Minister of Aviation, Mr Amery, has now signed the agreement for the production of a supersonic airliner by Britain and France. The reasons why this project seems unwise have already been stated in *The Economist;* now Britain is committed to spending £75 to £85 million, on the Minister's estimate—and he would have to admit that no estimate can be firm in so risky a project as this—in the hope that the British and French aircraft industries will be able to win the lead in the supersonic airliner market. If the decision was not taken now, the Minister believes that Britain would lose all hope of maintaining its place as a maker of long-range airliners. The British share of the project, as already reported, will be the construction of the prototype of the long-range version of the airliner; that of the medium-range version will be built in France. About 40 per cent of the development work on the airframe will be done in Britain, and 66 per cent of that on the engine—the Bristol Olympus. Total expenditure will be shared equally, and be controlled by a board of officials representing the two Ministries of Aviation—which will supervise the management committee of the British and French companies concerned. Their share of the expenditure will be "appropriate," but this apparently means a small part of the whole.

British Overseas Airways Corporation and Air France will be "associated" with the project from the start. So far as BOAC is concerned, this means that it will first say what sort of aeroplane it wants—in those details not yet settled; then if when the characteristics of the aeroplane are established they meet BOAC's requirements, it will place an initial order for some of the aeroplanes. But because the nationalised airline does not believe it can decide whether the machine will prove economic until flight tests begin in 1966, the Government has agreed to underwrite BOAC's commitments; so if BOAC then decides that it does not want to buy the aeroplane after all, the Government will repay all its expenditure on progress payments and development work, which might amount to £10 million. It will then have some pretty unsaleable and very expensive aeroplanes on its hands; but when it is risking so much to help the British aircraft industry, this is only a small part of the whole curious operation.

War of Small Jets

Our Special Correspondent cables:

THE rain stopped and the clouds broke over Seattle on Tuesday morning in time for the Boeing company to roll its small jet 727 airliner out into the cold sunshine for the last adjustments before its first flight in the new year. The weather matched the company's mood. During the weekend, Boeing had lost a major military contract to Convair and faces the virtual shut-down of one of its largest factories. But the new airliner represents a guarantee that whatever else may happen, Boeing will continue to be the major and perhaps ultimately the only manufacturer of civil aircraft in the United States for the rest of the decade. The medium sized, medium range 727 promises to take up the slack created by the rundown in orders for big jets, which has already brought the jet factories of Douglas to a virtual stand-still. Boeing has swept the board by selling the 727 to all four big domestic airlines in the United States, the first time for years that they have chosen identical equipment. To date, 131 have been sold, approximately half the sale required to break even.

The initial success of the 727 has a bearing on the fortunes of the British aircraft industry. Ignoring small differences in size and engineering, the 727 and the de Havilland Trident are virtually identical, from their three tail mounted engines to the markets they are intended to serve and the approximate dates within months when they are expected in service. The only customer for the Trident so far is BEA with 24 on order; Boeing, which must export to reach its break-even figure, has already begun to make inroads into the overseas market.

It is estimated that there is a world market for at least one thousand smallish jets of various types but the lion's share may divide between Boeing, with its sights set on 40 per cent of the total, and the British Aircraft Corporation's 111 jet designed for rather shorter ranges. This would leave the Trident and the French Caravelle to battle for the remainder. If this seems to underrate the Trident's chances and overrate those of the 111, it can only be said that de Havilland is fighting a world established manufacturer with a product not so noticeably different in performance that it can easily tip the scales, while the 111 is on the verge of a major breakthrough in the United States market with negotiations well advanced for the sale of 25 to the world's second biggest airline outside the iron curtain, American Airlines. If this sale takes place, the 111 will be airborne.

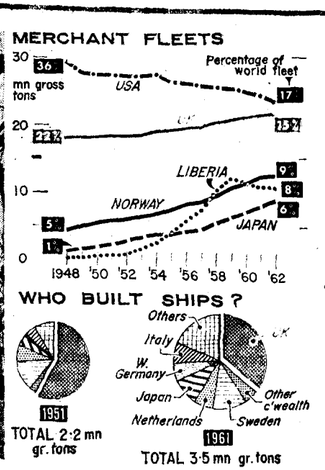
PIPELINES

Competing to Lay

THE Government will find itself faced with competing claims when it comes to decide who should build and operate the first oil pipeline to be constructed under the Pipelines Bill. The two oil groups that own most of British refining capacity, Shell-Mex and BP and Esso, have announced that they want to build a pipeline—in conjunction with the other major oil companies operating in Britain—from London to Merseyside. This is also the route along which Trunk Pipelines, an independent group set up to develop pipelines, wants to build a pipeline, to operate as a common carrier. The purpose of the bill was to prevent duplication in this new means of transport, so the Minister of Power will have to choose.

Esso is already building a pipeline from Fawley to London Airport, while Shell-Mex and BP had planned a pipeline from Shellhaven on the Thames to St Albans. Their proposed new pipeline would link these pipelines to Birmingham, Northampton and Nottingham as well as having local branches along the route. From the North-West a smaller diameter pipeline from the Shell refinery at Stanlow (Ellesmere Port in Cheshire) will join the new line from the South-East.

Two years ago Trunk Pipelines Ltd. wanted to build a pipeline from Canvey Island to London Airport. Later Shell-Mex and BP announced their plans for a pipeline from Shell-Haven to St Albans, and



Britain's Shipping Decline

Britain's share of the world's shipping fleet and of ship construction has been falling steadily for the past ten years. But the drop in the American fleet has been even more dramatic—if rather misleading, for many American-owned ships have been transferred to the Panamanian or Liberian flag and help to account for the rising number of ships under these "flags of convenience." While the world fleet continues to grow, the rate has slowed down in the last two years.

Trunk Pipelines extended its project to run to Ellesmere Port. Both plans were shelved while the general legislation was going through Parliament. Though neither Shell-Mex and BP nor Esso were willing to say that they would use the Trunk Pipeline facilities, some other companies were said to have sent it "letters of intent." The line was to be a "common carrier." The smaller distributors in UK include Petrofina, Total, Regent, Gulf, Jet, Agip, Mobil and others. Mobil has a refinery, and Regent is building one; but Petrofina may rely on their expanded Belgian plant, while Total, Agip and Jet also buy in Europe and Gulf soon will have a refinery in Denmark. The chances of Trunk Pipelines, which is about to conclude its deal for the use of British Transport Commission land along the canals for laying a pipeline, are considerably weakened by the fact that Regent, Petrofina and Mobil are participating in the new pipeline organisation as well as the big marketers here, who have natural interests in not letting too many newcomers in. Will the Government give the licence to build a pipeline to these established users, or will it prefer to let a common carrier operate a service that will be open to all who wish to transport oil?

The Contract Signed

A CONTRACT for the supply of a large part of a steelworks to Yugoslavia has now been awarded to Davy and United Engineering and the Wellman Smith Owen

COMMON MARKET TAXES

Harmonising What?

AMONG the complex of reports that have been prepared in Brussels this autumn on further ambitious moves to financial integration is that of a committee of professors set up to investigate the practical requirements of harmonising the common market's taxes. The committee's report is expected to be published only towards the end of the year; but in London last week Professor Neumark, the German chairman of the committee, spoke freely on this subject at a conference arranged by the Federal Trust for Education and Research and by the United Kingdom branch of the International Fiscal Association. Professor Neumark, in line with the current fashion in Brussels, has no inhibitions about extending his recommendations well beyond the areas singled out for harmonisation in the Rome Treaty. Undoubtedly, the centralist tendencies of his report will not fully survive the scrutiny of the member countries. Yet the tenor of such thinking is an increasingly important practical influence in tax policies in European countries, including Britain even before it has actually joined the common market. From now on, every important tax change considered by the Chancellor of the Exchequer and his advisers will first be set against the general test of whether it moves towards or away from what seems likely to emerge as the European norm.

The immediate problem is over the different coverage and different methods of indirect taxation, which, as the Rome Treaty had to recognise, can themselves lead to artificial distortions in trade within a tariff-free community. Ideally, if fiscal frontiers within the community are to be abolished entirely, the federal purists argue that the present system of applying taxes on goods according to their destination (i.e. allowing tax rebates on exports and raising levies on imports) must be replaced by the "origin principle," under which the tax of the country of manufacture is applied wherever the goods are finally sold within the community. The application of this principle, however, would make differences in rates of indirect taxes in the several member states a still more serious distorting influence on production and trade; and then, as Professor Neumark openly states, "the only possible expedient seems to be a complete harmonisation of indirect taxation."

THIS is almost certainly more than national governments will or should at present be prepared to concede for the formal satisfaction of seeing the abolition of fiscal frontiers (which because of the need to control entry from outside the community could still not mean the abolition of customs frontiers). So a move to the "destination principle" remains in the future. But the Council of Ministers is now considering a proposed directive of the Commission for harmonising the form of turnover taxes (still on the destination principle) and, after 1970, beginning to harmonise the actual rates.

The form of tax chosen is the French-type tax on added value (TVA). This can still be complemented by a sales tax at the retail stage, provided, in Professor Neumark's words, the level of this is kept "rather moderate." For this reason he rules out the British purchase tax, which anyway "can be considered a collection of special excise duties rather than a general turnover tax." Some British tax experts, and not only those in Customs and Excise, are now manifesting some nostalgic regrets for this unloved tax, which has the one great advantage of easing administrative collection—there are 60,000 collecting points in Britain, while 300,000 might be needed to collect the same revenue from a TVA tax. A single stage tax at the pre-retail stage—that is broadly the purchase tax unified to a single-rate—was in fact among the three possibilities put forward by the experts' committee to the European Commission, and some critics allege that this was passed over with inadequate consideration.

The Rome Treaty restricted itself more or less to indirect taxes; but the compartments cannot be kept divided. As Professor Alan Peacock, now of the University of York, pointed out in a provocative opening address to last week's conference, changing the tax structure at one point immediately necessitates adjustments at others, whether to maintain revenue or to appease the injured. Thus the crude rule of thumb for Britain of increasing indirect taxes to the relief of direct taxes could, Professor Peacock points out, result in irresistible pressure for larger social services to compensate the worse off, and so have the paradoxical result of increasing the tax burden as a whole.

NOR can one assume that the existing balance of direct and indirect taxes on the continent is a permanent one or even a chosen one; in Italy and France it is largely the result of an inability to collect direct taxes, and both these countries have for years been girding themselves for a serious tax reform—which in some ways would move them closer to the British structure. Certainly many of the proposals made by Professor Neumark are well in line with progressive opinion in Britain itself. They include abolition of stamp duties; partial replacement of inheritance duties by a personal tax on wealth of say one per cent a year (Professor Neumark believes that Britain's entry into the common market will have to be followed by a "noticeable lowering" of its estate duty); harmonising of special excise duties and abolishing the minor duties on matches and the rest; and introduction of a special uniform corporation tax of say 50 per cent with a reduced rate of up to 25 per cent on distributed profits. All this is a useful spur to reforms that have been considered too complacently in national treasuries. But it need be no more than a spur. For many years yet tax harmonisation in Europe can and should be kept within distinct limits, so that the taxes can continue to reflect the real differences in national conditions that are bound to remain. If Brussels is really worried about distortions of competition it would do well, as Professor Peacock suggested, to turn its mind more closely to purchasing policies of official agencies—on which there is precious little sign of common market competition at all.

An independent report on

ALUMINIUM

The aluminium industry is buoyant and there is considerable capacity for expansion. But a number of factors are causing concern, particularly the terms on which this Country may enter the Common Market.

In this most recent of a series of enquiries into raw materials and their prospects, our Intelligence Department explores the background and development of aluminium and discusses the numerous problems of price, production, and markets. For an appraisal of aluminium today, and a realistic estimate of its place in industry tomorrow, investors and businessmen will find this report invaluable. Copies of the Report can be obtained from:

Engineering Corporation. Worth £28 million, it is dependent on the arrangement of a loan for £20 million, which is now being negotiated by Lazards on behalf of six banks and the Insurance Export Finance Company. This loan is the first fruit of the recent efforts to bring banks and insurance companies into the market for long-term export finance. The contract covers the supply of steelmaking and rolling equipment —Wellman Smith Owen will make the former, while Davy and United will make the plate and strip rolling mills—these latter will cost about £14 million. But Davy and United (which has also got a £4 million contract in Rumania) says that winning the contract does not mean an end to its present problems; it will still have to cut its labour force, for the contract will take five years to complete, and the immediate home market for steel plant at present looks pretty well flat.

SHIPPING

Trying to Regulate Tonnage

Judged from the tone of a statement issued after a meeting in London of tramp shipowners of 15 different nationalities on Tuesday, the chances of starting an international tramp tonnage stabilisation scheme are rather better than before. The idea of attempting to stabilise the supply of dry-cargo tramp tonnage in accordance with fluctuations in demand, thus preventing freight rates from dropping to ruinously low levels, was considered by the International Chamber of Shipping as long ago as 1958, in the early stages of what has proved to be a long recession. In 1959 the International Tonnage Stabilisation Association was formed, and a provisional scheme was drafted, to compensate owners of laid-up tonnage by means of a levy on the freight rates paid to ships still operating. The object was to relate tonnage available to the volume of traffic moving, at the same time leaving individual owners freedom of action to co-operate at whatever they regarded as economic freight rates. Thus owners would receive some encouragement to take surplus tonnage off the market at an early stage in the cycle, and keep it off the market until conditions improved. The scheme would also have permitted compensation payments to be made for tonnage broken up for scrap, thereby encouraging owners to remove uneconomic ships from the market. No mention has been made, however, of any method of controlling the ordering of new tonnage.

Some British and many Scandinavian tramp shipowners, however, could not be persuaded to co-operate, preferring, apparently, the doctrine of the survival of the fittest and the scheme went on to the shelf. The continuance of the slump for a further two years seems to have caused second thoughts, and it has now been agreed that steps should be taken to revive the Inter-

PATENTS

Draft for European Patents

The Brussels Commission has published a draft convention outlining a new system of European patents which would at first run parallel to, and might later eclipse existing patent systems in member countries. Other interested parties, including Britain, can make representations about the new system, but they will need to move with haste to reach conclusions on the complex issues raised by the proposed European patent law in time to influence its shape. Views of EEC members and other interested parties will be heard next autumn when a final version will be agreed. The timetable thus means that objections must be submitted by next spring, and if none are submitted tacit acceptance would be inferred, making it difficult for Britain to challenge the convention if it later joined the European Economic Community.

The new convention does not attempt to harmonise existing laws. A new supranational patent office will be set up with its own law and a European Patent Court established. The language in which the patent application is framed will be used throughout the processes leading to the granting of the patent though the claims contained in the patent specification will be published in English, French and German.

The European patent would be effective in all countries which are contracting parties to the convention. The national courts would be responsible for its enforcement, but they would not be competent to question the validity of the patent. An invention must be "absolutely" novel to obtain a European patent. That is, it must not previously have been available to the public by use or by written or oral description. European patents will be granted initially in provisional form. A provisional patent would be readily obtained providing the specification conforms to rules set out in the convention and is backed by a search for novelty made by an approved search organisation. The specification will be published along with the result of the search for novelty, but the specification need not be amended to include only the parts of the invention that appear novel in view of the search. A final, examined European patent must be sought within five years.

Though the draft convention is remarkably detailed, some important points have been left open. The position of nationals of states which are not contracting parties is not clear. The intended future relation between existing national patent offices and the new body is also unclear. However, it seems clear that the owner of a European and a national patent for the same invention will not be able to enforce both against an infringer.

If Britain eventually becomes a contracting party to the European patent convention, British industry is likely to be affected to a greater degree than is commonly realised. British manufacturers might have to share the inconvenience of having to file patents farther from home. A more serious difficulty for some British manufacturers might be that patents affecting them could be published in French or German. Though the patent claims will be published in English as well as the original language, in most cases it will not be sufficient to read the claims of the patent specification to understand the full significance of the patent. On the Continent, patent claims are sometimes loosely worded, and British manufacturers might be unsure whether they were entitled to market a new product without infringing patent specifications originating in French or German.

A further potential difficulty is that from the published details of the result of the search for novelty it will not be easy to foresee what form the claims of a European patent will take. Third parties can apply to have the provisional patent of a rival examined before the five years' grace in which to apply for a full patent is completed. But this assurance might be of limited practical value. The criterion of "absolute" novelty which takes account of prior oral descriptions might also prove a stumbling block as traditional British practice in the grant of patents is concerned only with matters made publicly available in Great Britain. Alleged oral descriptions overseas and in an unfamiliar language might prove difficult to refute. The haste of the EEC countries to frame a new patent convention presumably reflects the realisation that the national patent laws might be used to frustrate the liberalisation of trade between member countries.

INDEX

The Index to *The Economist* is published quarterly. The subscription rate is 10/- a year; single copies are priced at 2/6 each. The Index to Volume CCIV (July to September 1962) is available from:

The Publisher, 22 Ryder Street St. James's, London, S.W.1

national Tonnage Stabilisation Association. International co-operation is, of course, an essential element of the scheme; and this is not easy to secure in such a widespread field of interest and national and private competition. It was achieved before the war in the shape of an international tanker owners' pool, but in those days the sea transport of oil was a much more limited field, there being a comparatively small number of tanker owners, including the shippers (the oil companies) themselves.

The new scheme would be concerned with all dry-cargo vessels of 5,000 tons deadweight and over, involving many owners of all nationalities under all the principal maritime flags, and concerned with the carriage of all kinds of bulk cargo. A further complication today is the tanker invasion of the grain trades; and many other developments, too, out of the control of tramp shipowners themselves, are having a depressing effect on freight rates. Nevertheless, this may not prevent owners from taking what steps they can to get out of the mercy of shippers.

SUGAR

Bitter Sweet

THE working of the Commonwealth Sugar Agreement was incomprehensible to the layman before the Irish got into the act. Now Eire is to be given rights akin to those enjoyed by Commonwealth producers and a befuddling barney has ensued between the Irish recipients of this favour and established Commonwealth sugar interests. The tonnage of sugar involved is a mere 10,000 tons, and the potential benefit to the Irish sugar industry next year is puny—£150,000 according to the Minister of Agriculture's estimate and as little as £75,000 at the current price of sugar. But the complications are something different. The British Sugar Board is to be empowered to buy refined sugar from Eire at £50 a ton and sell it back £10 a ton above the yearly average of the London free market price for raw sugar. Exports of refined Irish sugar to the United Kingdom will be limited to 10,500 tons a year, but exports of products containing sugar will continue to be unrestricted. The agreement bars the re-export of non-Commonwealth sugar in any form to the United Kingdom.

The unexpectedly sharp recovery in the price of sugar from below £20 a ton in January to £32½ a ton and the swift absorption of cheap supplies has put sugar producers and refiners in a far happier frame of mind, but the extreme reaction of the British refiners to the Irish sugar guarantee partly reflects the bitter taste still left by cut-throat competition resulting from the sugar glut. Through an alleged Irish manoeuvre known as "the three card trick," cut-price Polish and other foreign sugar has slipped under the net protecting Commonwealth supplies into Northern Ireland; but this inconvenient loophole has been quickly plugged.

Eire contends that the levy on sugar consumption in the United Kingdom, through which the higher payments to Commonwealth producers are financed, means that Eire subsidises its competitors. Mr Soames implied that it was to offset the latest increase in this levy (amounting to at least £150,000 a year on Irish exports to this country) that the new arrangements for Irish sugar were agreed. The same argument is valid for all non-Commonwealth suppliers, but whatever its merits it undoubtedly helped to smooth the way for the recent Anglo-Irish trade talks, and the Minister's reply suggests that the prospective establishment of a sugar beet growing industry in Northern Ireland might be facilitated by the agreement.

EXCHANGES

Sterling Balances Fall

OVERSEAS countries' holdings of sterling fell by £70 million in the third quarter of this year, to £3,459 million. This is the weak season for the overseas sterling area, and the decline in its balances by £24 million may not necessarily indicate a change of trend—at £2,665 million on September 30th these balances are still £66 million above their level a year earlier. But there has also been a further decline, of £46 million, in balances of non-sterling countries, and at £794 million these are now nearly £100 million below their level at end-September, 1961, by when most of the balances lent under the Basle arrangements had been paid off. Movements in these official, and incomplete, figures of overseas sterling holdings have on occasion been clearly misleading—notably in the first quarter of this year when the holdings of non-sterling countries were shown to have fallen while all other evidence showed foreign money to be streaming into London. The movement for the third quarter, however—which has to be adjusted for an artificial reduction of £18 million as a result of putting the mutual swap arrangement with the United States on a stand-by basis—was broadly in line with the market indications of some small withdrawals, partly as a result of the sharp fall in rates in the local authority mortgage market.

So these figures tend to confirm that the firmness of sterling through its period of seasonal weakness has resulted from a strengthening of the underlying payments balance rather than support from short term funds. And now that adverse seasonal pressures are lessening, demand for sterling has edged up the rate, to $2.80⅝ earlier this week, and has also brought dollars into the reserves. The exchange markets generally are comfortably stable at the moment, and are enjoying the unusual and welcome conjuncture of peace without quiet.

SHOPPING

More Ways to Cut Prices

"ONE-STOP SHOPPING," operated on comparatively low margins, is the declared aim of more and more of the chain stores operating in town centres, as it is also the banner of avowed discount stores.

IN 1862, when it took forty days to reach the Cape, the Standard Bank opened its first branch in Africa. A century later the Bank has over 900 offices throughout South, Central and East Africa. Behind this network is a forward-looking organisation making full use of new business techniques, and able to provide accurate and comprehensive advice promptly on all aspects of trade in the areas which it serves.

THE STANDARD BANK
100 YEARS IN AFRICA

HEAD OFFICE: 10 CLEMENTS LANE, LONDON EC4. OTHER LONDON OFFICES: 63 LONDON WALL EC2, 9 NORTHUMBERLAND AVENUE WC2 AND 117 PARK LANE W1.

This week Anthony Jackson's Foodfare, one of the smaller (in numbers of shops) supermarket, chains, has announced a £1 million development programme which includes not only the opening of several more large supermarkets but also the introduction of comprehensive "economy stores" in central positions in large towns, with at least 20,000 square feet for selling "anything you can carry away." The term "discount store" has been avoided partly because the company think it has a shoddy image: prices of all types of branded goods will nevertheless be cut wherever possible, though Jackson's seeks no battles with price maintenance. Outside the food department, however, self-selection, on the Marks and Spencer pattern, will be used more than self-service. This will cut costs where existing department stores are being converted—as in Leicester, where from next April Jackson's form of low-priced selling will be in direct competition with Tesco's existing discount store.

Shortage of cheap sites has helped to slow the expansion of out and out discounting—stores with this label still number only about fifteen. Nevertheless the full-scale introduction of a form of discount store that has been widely adopted in the United States is planned by Bordergate Properties (in which City Business Properties has a large interest), whose chairman and managing director, Mr Jeffrey Rose, created the successful Grandways discount store in Leeds. The first of a series of about ten Bordergate stores will open in Rotherham, Yorkshire, in the new year: within it the different self-service departments for groceries, meat, soft goods, hardware, electrical goods and other lines will be leased to concessionaires with experience in each of these fields. Each will be directly responsible for its own buying and selling, but Bordergate will guide general policy within the store on methods of price-cutting and on retail methods such as layout and display. Some of the concessionaires will be retailers but others will be manufacturers or wholesalers. Mr Rose believes that there is an untapped store of experience among wholesalers that could be of great value in this type of joint operation—though he admits to having had considerable difficulty in finding the right kind of operator.

Self-service department stores run by licensees—though not on discount lines—are also reported as the intention of the newly formed British subsidiary of GEM International, the American "closed door" (members only) discount group.

Car Prices in Europe

The prices of the new range of small European cars that appeared this autumn have by now been fixed in most markets; and, as the table shows, their prices have been set close together in the "open" markets of Belgium, Denmark and Switzerland—and also in Italy, where foreign manufacturers are making so big an assault on the market. Both British Motor Corporation and Ford are pricing their new cars in accordance with market conditions rather than with the cost of production, leaving little if any margin for profit but placing themselves in a position that should allow a big increase in sales—if servicing facilities are good enough to give potential buyers confidence. Setting the price of the Cortina below that of the Taunus 12M may well make it the more popular of the two. All the new cars are close enough to the Volkswagen to be competitive; it would be surprising if its sales did not begin to fall now that it has so many attractive competitors.

Selling prices in each country; European prices converted at official rates of exchange.

statistics of minting, to speculation on the end of the halfpenny, and to an explanation of why the mint is no longer striking Maria Theresa thalers, that ubiquitous medium of exchange of the Red Sea. The mint struck 836 million coins in 1961, exceeding the 1959 record by 127 million. It continues to increase its profitable overseas business and in 1961, 64 per cent of the coins struck were for overseas governments. Last year Mr James paid homage to the passing farthing; this year he is hurrying the halfpenny into its grave. "The halfpenny is nearing its end," says Mr James. Indeed one hopes so; when it goes a minor obstacle to decimalisation will go with it.

ROYAL MINT

Halfpenny Requiem

THE lively pen of Mr J. H. James, deputy master of the mint, has rallied all who wish to see Britain's coins and coinage reformed. But the Committee of Enquiry on Decimal Currency which should soon be reporting has deprived him of his best subject. In a potted history of decimalisation, included in the mint's ninety-second annual report, he does, however, allow himself a couple of digs at Britain's numismatic conservatism. For the rest Mr James sticks this year to the dry

SHARE TRANSFERS

Hopes of Success

IT is now two years since proposals for a simpler transfer system were put forward by a committee including, among others, representatives of the Stock Exchange, the Bank of England and the clearing banks. At the Conservative party conference in October, 1961, Mr Anthony Barber, then Economic and now Financial Secretary to the Treasury, said that the Government was already considering what legislation might be involved in the adoption of such proposals. Now, as he did a year ago, Mr Graham Page, MP, has brought forward a private member's bill on stock transfers. Last year its chances of success were small but Mr Page hoped that the bill would spur the Government into action. This year the chances are brighter, now that the report of the Jenkins committee is out of the way. Mr Page's new bill, which has not yet been published, is believed to have the backing of the numerous government departments involved and its aim is to put the recommendations of the advisory committee of the Stock Exchange into effect. The committee's principal proposals were that only one transfer form would have to be signed by the seller even if the holding had to be split among a number of buyers; that the signature need no longer be witnessed; and that the buyer would not have to sign the form at all.

NEW ISSUES

Problems of Placings

THE introduction of the capital gains tax was expected to curtail the activities of stags and other investors in the new issue market severely. It has not done so and its effect, with investors in newly-issued shares holding on for six months instead of taking a quick profit, has been to narrow the market in new issues and to make the price fluctuations more violent. This is particularly true for placings, where in any case only a few shares pass through the jobbers' hands. Shares in Robert Bradford, the Lloyds insurance broker, were placed for example in October at 17s., rose to 27s. 6d. on the opening day and now stand at

50s. 6d. Similarly the shares of Mark Lane (Turf Accountant) placed at 2s. 7½d. opened at 4s. 3d. touched 10s. 6d. and now stand at 8s. 1½d., looking a bigger gamble than backing an outsider. And this week Photopia and Bronx Engineering have both doubled their placing prices of 9s. 10½d. and 6s. respectively.

The Stock Exchange Council allows placings only as a concession in special cases where the company is very small and the demand for the shares appears to be limited. Clearly it cannot be pleased with the big premiums that many of the recently issued shares command and it may be less ready to grant this concession in the future. Some of the blame must be laid with the issuing houses in setting the issue price too low and there seems to be scope for a more extended trial of offers by tender. At present the Council requires at least 25 per cent of the equity to be placed and a quarter of these shares to be made available to the market. These are minimum requirements and sometimes it will demand a greater proportion. But are they high enough? For debentures only 20 per cent of the stock in issue has to be placed and a fifth of that proportion has to be made available to the market. Private investors have often had difficulty in securing stock once the issue had been advertised. An attempt to tackle this problem was made in the recent debenture issue by Redland (Holdings) and a wider market was, in fact, created as a result of a plan under which jobbers took up half their requirements before the advertisement and were given the right to call up the other half until the day after the issue. This plan requires the active co-operation of the sub-underwriting institutions in releasing the stock if the jobbers make the call.

SCOTTISH BANKING

Squeeze on Profits

IN just over a month the profits season for the bulk of the banks begins; this week Mr Ian Macdonald, in his annual report as chairman of the National Commercial Bank of Scotland has provided some analysis of its performance. Disclosed profits for the year to October 27th rose from £1,368,000 to £1,400,000, but this small increase was more than covered by the increased dividend from the bank's hire purchase interest in Lloyds and Scottish Finance. Mr Macdonald points out that although the average volume of advances has increased and the yield on the bank's portfolio of gilt-edged has improved, these improvements in earnings have been balanced by reduction in lending rates on advances and by the continued rise in costs. Similar influences have been at work in banking south of the border.

Mr Macdonald is disappointed by the small rise in deposits; he is likely to remain so unless the Scottish banks do something more positive than merely complaining about the "unfair" competition of the trustee savings banks. The National Commercial has indeed started advertising on television and now runs a boat bank round the Orkney Islands. But these no more than scratch the surface of the problem. Individually Scotland's bankers know some of the answers to their problems, but they are tied by a rigid tradition of collective action that in the end amounts to inaction. In 1954 the National Commercial cracked this collective façade by moving into hire purchase; since then it has enjoyed the label "progressive." The bank could now do banking in general a great service by once more striking out on its own.

AUSTRALIAN MOTOR INDUSTRY

Still an Infant?

THE Australian motor industry is one of the biggest creations of an infant industry behind tariff walls; and despite the present boom in the local car market, it is now agitating for more compulsion on importers to use locally-made parts. This comes after the publication of a study of the industry by the Australian Department of Trade, which shows that its turnover in 1960-61 was £A133 million, and that 61 per cent of the parts used in Australian-assembled cars were locally made. It also reported that there were few gaps in the range of parts produced in Australia; sealed-beam headlamps were the most significant omission among local products. The present agitation against the import of parts, however, appears to be based on the argument that these are being allowed in at low duties where the parts concerned have not been made at all in Australia or where production is still small. The BMC Minis, which have many parts unique to them, and the Chrysler Valiant are two models complained of as having a low local content; and Ford is attracting opposition to its reported plans to import many parts of the Cortina.

The Australian government will have to decide just how far it can go to help local industry at the expense of the consumer. Since Australian steel is the cheapest in the world, there is already one incentive to make parts locally quite apart from the protective legislation. One might think that the parts industry was growing big enough to be no longer an infant: the arguments for "infant industry" protection would seem more compelling if the infants could ever be persuaded they had grown up.

SHORTER NOTES

In compliance with new regulations, Consolidated African Selection Trust is to sell half the diamonds produced by its Sierra Leone subsidiary through the De Beers marketing agency. After 1960, when a former contract expired, CAST arranged to sell these diamonds privately, but from August, 1961, when the government of Sierra Leone cancelled CAST's export licence, these private sales had to be completed from stocks of diamonds held in Britain. Newly-mined diamonds were allowed to accumulate in Sierra Leone. The first sales under new marketing regulations are already under negotiation.

★

Sir Basil Smallpeice, managing director of British Overseas Airways Corporation, wrote in BOAC News last week that the corporation's load factor was 2½ per cent lower in the first half of the current financial year than it was a year before. The chances of a recovery in profits therefore seem to be disappearing.

★

The Bank of Japan has cut its rediscount rate from 6.93 to 6.57 per cent. This is the second cut in two months. At the end of October reserves were $1,805 million, some $300 million above the low point in the third quarter of last year. The Bank of Japan has also begun to repay the $200 million borrowed a year ago from three US commercial banks, and will start to repay next year the $125 million borrowed earlier this year under guarantee of the Export-Import Bank.

South Africa has cut its Bank rate from 4 to 3½ per cent; a reduction in bank overdraft rates by an equal amount to 5½ is expected soon, although building society mortgage rates are likely to remain unchanged at 6 per cent.

★

Iceland, as a member of the sterling area, is to raise £2 million in London with a 6½ per cent 1983-88 Sterling stock issue, at 97½. This is Iceland's second stock issue in London since the war.

★

British European Airways and the seven independent airlines that operate scheduled services within Britain have applied to the Air Transport Licensing Board for permission to increase fares by from 1s. to 4s. in the pound. The £3 3s. off-peak fares to Scotland, however, would not be affected.

COMPANY MEETINGS

NATIONAL COMMERCIAL BANK OF SCOTLAND LIMITED

A YEAR OF COMPARATIVE TRANQUILLITY

GRADUAL REDUCTION OF CREDIT RESTRAINTS

STRONG ACTION HAS DESIRED RESULTS

MR IAN W. MACDONALD ON SCOTLAND'S ECONOMY

The fourth Annual General Meeting of the National Commercial Bank of Scotland, Ltd, will be held on December 20th in Edinburgh.

The following is the Statement by **Mr Ian W. Macdonald, C.A.,** Chairman of the Board, which has been circulated with the report and accounts:

Since my previous statement to shareholders the British Banks have experienced a year of comparative tranquillity. The severe credit restraints imposed in 1960-61 have gradually been modified with successive reductions in bank rate, a partial return of Special Deposits and the removal of all official restrictions on bank lending. Once the remainder of the Special Deposits (1 per cent from the Clearing Banks and ½ per cent from the Scottish Banks) has been repaid the most recent monetary cycle will be virtually completed and it is therefore possible to assess in retrospect the effect of these measures. It is evident that the strong monetary action taken had the desired short-term external results. Sterling was made attractive not only by reason of high interest rates, but also by generating renewed world confidence in the British Government's determination to take the steps necessary to restore economic balance. One may presume that similar action on some future occasion would again be successful provided the British economy is basically healthy.

INFLUENCE OF SPECIAL DEPOSITS

It is less easy to assess the influences on the domestic economy. It would seem however that the purely monetary measures—high interest rates and credit restraint—do not bite so severely as might have been expected, and further it is extremely doubtful whether the Special Deposits at levels of 1 per cent to 3 per cent had much direct influence on bank lending. It is not possible to say that this new braking mechanism has been either a success or a failure, since the brakes were never really tested. It is of course well recognised from experience in other countries where compulsory reserve schemes are in force that such a device can and does influence bank lending and, assuming that Special Deposits are now regarded as an essential feature of British monetary policy, it is perhaps unfortunate that the authorities did not take this recent opportunity of making an adequate test of a powerful control. Had this been done some valuable lessons might have been learned. As it was the authorities not only shied away from a "biting" test but were remarkably slow in admitting that the testing time was finished.

The inflationary signals had all but disappeared by the Spring of 1962 but the first return of Special Deposits was not made until May and even then it was stressed that only a slight relaxation of bank lending was possible. A further stage in this somewhat illogical progression was reached in September when all restraints on bank lending were removed but the Special Deposits were not fully repaid, and indeed still remain at 1 per cent and ½ per cent! Meanwhile the Chancellor of the Exchequer has recognised that the economy is lethargic and needs stimulants—as evidenced by his recent decisions on postwar credits, public investment, purchase tax on cars and investment allowances. The point in this which must be somewhat disturbing to bankers is the seeming reluctance of the authorities to allow and encourage them to play their full part in the reflationary stage of the economic cycle.

It does however seem doubtful whether British industry will do more than mark time until the major question of our entry into the Common Market is resolved. While this vital question is under negotiation there is much forward planning by industry but little forward action. There is also in the background the shadow of a possible world recession in trade, all of which creates a climate of uncertainty for private industrial investors.

SCOTTISH ECONOMY

The Scottish economy unfortunately has not improved during 1962. The factors of undue dependence on shipbuilding, coal mining and heavy industry generally have all moved adversely and the present situation is probably less favourable than at any time since the war. It seems likely that further contraction in coal mining and rail transport is inevitable and that the speed of diversification may for some time be less than the rate of deterioration. On the other hand, I do not agree with the prophets of gloom who cannot visualise a balanced future for the Scottish economy.

On the bright side, it is clear that two of our important industries, agriculture and tourism, are forging ahead most satisfactorily, although neither is a large employer of labour. Indeed in agriculture the steadily growing productivity has been achieved with an overall reduction in the total labour force. Similarly the increasing distillation of whisky generates income rather than jobs. Nonetheless these growing industries are important elements in the economic balance sheet of Scotland. There is, however, a serious and major problem in the industrial field. It can be simply expressed as one of finding new jobs for old jobs. In a mechanised age this problem exists to a greater or lesser degree in all industrialised countries, but it is probably more acute in Scotland which traditionally and to this day relies on industries with a relatively large labour content in the end products.

There is increasing evidence that the Government recognises not only the nature of the problem but also its urgency. It would, however, be wrong to think that government action can do more than encourage and perhaps speed up the movement towards the restoration of balance. In any free economy, enterprise and action must come from within and there is ample evidence of Scottish initiative, as witness in particular the continuing efforts of The Scottish Council (Development and Industry).

EARNING CAPACITY

Turning to the Bank's affairs as reflected in the accounts, we now have a clearer picture of our earning capacity during a year when our resources were deployed in satisfactory proportions between Investments and Advances. We have also had the opportunity of measuring more closely the influence on our profits of variations in interest rates. During the past year these rates have continuously moved downwards and such a movement has an adverse effect on our earnings. Moreover costs have continued to rise against us. On the other hand, the average volume of Advances has increased and there has also been a satisfactory improvement in the yield we obtain on our portfolio of Government investments. We have also received rather more by way of dividend from our hire purchase associate, Lloyds & Scottish Limited. Overall our Net Profit at £1.4 million is slightly up on the previous year.

Out of the year's Profit the Board has allocated £200,000 to Revenue Reserve, £250,000 to Officers' Pension Fund and £15,000 to the Widows' and Orphans' Fund. Interim dividends at the fixed rates on the Preference Shares and at 7½ per cent on the Ordinary Shares have been declared and paid (less income tax). It is now recommended that the usual final dividends on the Preference Shares and a final dividend on the Ordinary Shares of 9 per cent (making 16½ per cent for the year), less income tax, be paid. These dividends are the same as for the previous year.

GROWTH OF DEPOSITS

The Balance Sheet shows that the Deposits at £232 million have increased by some £4 million. While any increase in Deposits is satisfactory, there is not as yet any real evidence of a significant upward trend. From internal figures showing categories of Deposits we know that the smaller personal balances on Current or Savings Accounts are more or less keeping pace with the growing volume of money, whereas business Deposits have tended to sag, as might be expected during a period when industry was relying increasingly on Bank Advances and many individual firms had moved out of the category of depositors into the category of borrowers.

In these circumstances it is all the more necessary for us to be deposit conscious and in that connection we recently launched a television advertising campaign, designed particularly to try to bring the man in the street into the Bank. Also in a narrower area we had a real launching —that of a Boat Bank to ply between and serve a number of the Orkney Islands. In spite of abnormally boisterous summer weather, the Boat Bank's sailing schedule was well maintained and we have had many appreciative comments from customers, old and new, in these outlying islands.

LOANS AND ADVANCES INCREASED

Reverting again to the Balance Sheet, our Loans and Advances to customers show a marked increase at £119 million compared with £108 million. This rise is proportionately greater than that experienced in recent months by the Clearing Banks, but it is not inconsistent with the experience of Scottish Banks generally. An analysis of our Advances shows that the bulk of the increase related to the business categories and reflected the support which we have given to development and investment projects, particularly those in the engineering and heavy industries. We know from experience that the funding of these projects, either from internal or external sources, may take some time to complete and meanwhile the total of such advances will rise until a revolving stage has been reached. There is also every likelihood that when the hoped-for revival in shipbuilding comes about this will be associated with lengthy credit terms, which is the current pattern in that industry, and as a Bank we shall be expected to play a further part in financing these medium-term projects.

Our holdings of British Government Securities have fallen from £52 million to £46.5 million. The process of realisation to finance growing Advances has continued. Our portfolio is presently confined to loans with fixed redemption dates, all within a ten year period and having a market value in excess of the amount shown in the Balance Sheet. As regards other balance sheet items and relationships, there is little change in our Liquid Assets which stand at approximately 35 per cent of our Liabilities to the Public by way of Deposits and Notes in Circulation. The slight fall in the Note Issue has no particular significance but does indicate that the volume of money in use in Scotland has not expanded during the year.

BANK PREMISES

We continue to incur relatively heavy capital expenditure on Bank offices. Much of this emanates as a consequence of the merger. A large extension to our Head Office building is nearing completion and will enable us to bring together all of the central departments, some of which have been housed in our George Street Office. A section of this Head Office extension will be used as the Electronic Computer Centre. We have already made considerable strides towards the centralised processing of our customers' Accounts. We hope by mid-1963 to have something like 25 per cent of all customers' Current Accounts handled by the computer installation, in addition to a wide variety of other transactions.

The merging of neighbouring Branches has also involved the Bank in considerable outlay in extending and improving existing premises to accommodate the combined staff. Against this we have been able to sell a number of surplus properties at prices which show a considerable margin over book values and we are increasingly getting the revenue benefits from larger and more economic units.

HIRE PURCHASE GROUP

As regards the affairs of our hire purchase associate, Lloyds & Scottish Limited, I am glad to report that this group, through energetic and effective management, has turned the corner following the severe setback which afflicted all hire purchase companies from 1960 onwards. Shareholders will shortly receive a copy of the Lloyds & Scottish Accounts for the year to September 30, 1962, and in my statement as Chairman of that group I describe in more detail the progress which has been made.

Towards the end of the year Sir John M. Duncanson intimated his resignation, for health reasons, from the Board. He was elected as a Director of The Commercial Bank of Scotland in 1949 and we are indeed sorry to lose the benefit of his advice and friendly counsel.

There has been no slackening in the demand for the many and varied services offered by the Bank and we know that our Staff has been fully and effectively occupied in all branches and departments. I take this opportunity of expressing on behalf of the Shareholders and the Board our thanks to the General Manager and to all Officers and Staff for the high standard of their services.

INDUSTRIAL FINANCE AND INVESTMENT CORPORATION

HIRE-PURCHASE SUBSIDIARIES REORGANISED

MR J. N. BUCHANAN'S STATEMENT

The thirty-seventh Annual General Meeting of The Industrial and Finance Investment Corporation, Ltd., will be held on December 19th at Winchester House, Old Broad Street, London, E.C.

The following is the statement by the chairman, **Mr J. N. Buchanan, DSO, MC,** which has been circulated with the report and accounts:

I must first refer to the sad loss which the Company has sustained by the sudden death of Mr R. F. Norland last July. Mr Norland joined the Company on its incorporation in 1925 and became Managing Director in 1938. Recently he had not enjoyed good health and already before his death had communicated to the Board his intention of retiring. I should like to express our deep sympathy with his widow and family.

Since our last meeting a thorough reorganisation has been carried out of our hire-purchase subsidiaries. At one time we had a controlling interest in six companies. Two of these, at Colchester and Exeter, progressed slowly, confining themselves to local business, and have made satisfactory profits. The other four expanded far too quickly and were responsible for the large losses disclosed in these accounts.

RESULT OF REORGANISATION

As a result of the reorganisation three of these four companies are no longer trading. The business of the fourth has been drastically curtailed and its management taken over by Mr G. E. J. Gawthorn, the Managing Director of our Exeter subsidiary, which has made a bigger profit each year since we have been interested in it.

We have now, therefore, three hire-purchase subsidiaries, doing only local business. Two have consistently made profits and I see no reason why the third, with its activities restricted to local business, should not do likewise. The effect of the reorganisation is reflected in the accounts in the large reduction in outstanding hire-purchase debtors and bank overdrafts. This reduction is still continuing.

When bad hire-purchase business has been done it is frequently many months before its extent becomes apparent and a reasonably accurate assessment of the loss can be made. The losses shown in the accounts arose almost wholly on business done before June 30, 1961. In view of this and the great reduction in our hire-purchase interests, your Board think that these are exceptional losses which may, therefore, be partially made good out of reserves. The provision for losses made in the accounts of the subsidiaries was based on a reassessment of all hire-purchase debts at September 30, 1962. We have thought it prudent, however, to make a further special reserve of £100,000.

VALUATION OF INVESTMENTS

With regard to our Investments which comprise the greater part of the Group's assets, it is gratifying to report that they have stood their ground remarkably well. The aggregate value of Quoted Investments held by the Investment Trusts and Finance Companies at June 30, 1962, was £3,332,000, compared with £3,818,000 at the beginning of the year. At first sight it may appear that this performance is only marginally better than that of the F.T. Index, which during the year declined from 322.0 to 268.5 (a fall of 16½ per cent), but almost the whole of the difference in the valuation is accounted for by sales of Quoted Investments during the year, the proceeds of which exceeded the cost of purchases during the same period by £409,000. This is reflected in the Consolidated Balance Sheet, from which you will see that we have repaid Short-Term Loans of £250,000, and have increased our Short-Term Deposits to £250,000 available for investment as opportunity arises.

Included in the Finance Business were two public Offers for Sale during the year, of the shares of Imry Property Holdings Limited (through our subsidiary, Dawnay, Day & Co. Limited) and of Reed and Mallik Limited, Civil Engineering Contractors. We have continued to be active in the field of arranging long-term finance for substantial property companies; such arrangements were concluded during the year on behalf of The Stock Conversion & Investment Trust Limited and, since the end of the year, for Regional Properties Limited.

DIRECTORS' REMUNERATION

Accompanying the Accounts is a Notice convening an Extraordinary General Meeting to take place immediately after the forthcoming Annual General Meeting to consider a Resolution to alter the Directors' Remuneration.

At present under the Articles of Association of the Company the Directors are entitled to £550 per annum each (£825 per annum in the case of the Chairman), and to a further sum calculated by reference to the excess of profits over the amount required to pay the Preference Dividend and an amount equal to a dividend of 5 per cent on the Ordinary Shares. It is now recommended that the Directors' Remuneration should be limited to £750 per annum in the case of the Chairman and £500 per annum in the case of each other Director.

THE WALL PAPER MANUFACTURERS LIMITED

Group's increased profitability and financial strength

MR. IVAN C. SANDERSON REVIEWS GROUP'S WIDESPREAD AND DIVERSE ACTIVITIES

The 63rd Annual General Meeting of the Company was held on the 28th November in Manchester. The following is an extract from the Statement by the Chairman, Mr. Ivan C. Sanderson, circulated with the Report and Accounts:

ACCOUNTS

The Group Profit before taxation amounts to £5,789,000 compared with £5,223,000 for the previous year, an increase of almost 11%. Taxation at £3,151,000 absorbs 54% of the profit.

K. L. HOLDINGS

K. L. Holdings have had an excellent year as wallpaper manufacturers and on their merchanting side.

SMITH & WALTON

The Smith & Walton businesses have made a modest profit: their contribution will grow as the benefits of integration accrue.

WALLPAPER DIVISION

In the early part of this year all our wallpaper factories which cater for the wholesale trade issued new books with the usual currency of two years. These new papers have been very well received and the Company enjoyed a record volume of trade from this new merchandise. A design from Palladio was again chosen for an award by the Design Centre this year.

PAINT DIVISION

The Walpamur Company is one of the largest paint manufacturers in the United Kingdom and has traded, since the first small beginning in 1906, exclusively in quality paints. Because Walpamur is so strong, it can afford to spend the very large amounts of money on research without which, in these days, no national paint concern can keep its place in the industry. During the recent recession in trade, there has been over-production in the paint industry and severe competition in margins but the Division has never debased quality. It is hoped that we are now coming into a period of expansion when this policy will enable the Division to increase its turnover materially.

PAPER DIVISION

The Division includes the papermaking plants devoted to making the base paper for our wallpaper fabtories, together with two other mills which are largely engaged in general papermaking. Good results have been achieved despite plentiful supply and competitive conditions in the trade as a whole. The Board has sanctioned the expenditure of £2 million for the erection of a central power station in Darwen to feed paper mills, together with Walpamur and the Potter wallpaper mill (the biggest in the Group) and other plants, with steam by pipeline and electricity by cable. This venture is scheduled to commence working during 1964.

SANDERSON DIVISION

Sanderson House in Berners Street is the headquarters of Sanderson administration. This Division controls the Sanderson wallpaper factory at Perivale and a vertical organisation which feeds its grey cloth and gum medium to its fabries factory. These fabrics and wallpapers are distributed at wholesale level by the Division at home and world-wide. In addition, Sanderson and their subsidiary businesses everywhere buy fine fabrics and wallpapers from the best makers at home and overseas in order to offer a complete range to their customers. A slight drop in sales of fabrics on the home market has been offset by increased exports of wallpapers and fabrics; this in spite of import restrictions in some countries overseas.

RETAIL DIVISION

It has been a year of high activity but less profitable than the year before on account of the necessity to modernise a great many of our recently acquired properties.

RESEARCH DIVISION

We started operating from our new headquarters in Wilmslow, Cheshire, in August of this year. We are now in very commodious buildings and can house our research engineers, our chemists and our physicists all under one roof.

JAMES FERGUSON & SONS

This subsidiary had a very successful year, maintaining its reputation for quality and its service to customers.

EXPORT TRADE

We do an important export trade as a Group in furnishing fabrics, wallpaper and in paint and to a lesser degree in powdered mica and in plastic powders. As time goes on it is necessary to give our customers more and more service in the way of stocking facilities and showrooms. This year we have been very active in establishing such premises in Australia, and in making further progress with retail outlets overseas.

FUTURE PROSPECTS

We must anticipate very competitive conditions on the wallpaper side of our industry. This is nothing new, and we look forward with confidence. Our distribution interests enable the public to receive our merchandise as inexpensively as possible. There are signs, which I hope will not prove ephemeral, that the paint industry is at last shaking itself free from some of its difficulties which are connected with over supply in relation to demand. The Paint Division is poised to benefit from an expansion in the cycle of trade. We have been temporarily halted in our paint manufacturing expansion overseas on account of political uncertainties. The Paper Division has spent a lot of money in modernising for high speed quality work. We expect to make and sell more paper to our wallpaper mills and to our customers. I expect the Sanderson Division to improve its position both at home and abroad through the combination of saving in expenses, stemming from capital expenditure, and a planned improvement in control. I am optimistic in the matter of our retail outlets on account of the improved results which flow from better shopkeeping in all its aspects. James Ferguson has started the year well and I expect this tendency to continue.

The Report and Accounts were adopted.

At an Extraordinary General Meeting immediately after the Annual General Meeting, new Articles of Association were adopted.

The Chairman announced that whereas in the past the Company had charged 2/6d. for the Registration of Transfers and Probates, in future no charge will be made.

COMPARATIVE FIGURES 1953 to 1962

Year ended 30th June	Group Profit before Taxation	Taxation	Net Dividends paid to Shareholders	Cash Flow (Profit Retained in Business plus Depreciation)	Group Net Assets	Additions to Fixed Assets in the Year
	£	£	£	£	£	£
1953	2,722,464	1,510,867	316,140	1,270,257	15,970,244	469,181
1954	3,229,587	1,689,260	409,129	1,485,698	17,207,255	337,484
1955	3,044,292	1,810,108	524,635	1,179,697	18,137,977	967,741
1956	3,739,338	2,166,069	621,845	1,360,925	20,120,929	2,514,539
1957	3,586,044	2,013,069	621,845	1,410,220	21,250,654	1,275,739
1958	4,032,148	2,329,318	670,374	1,680,619	22,598,184	1,505,089
1959	4,750,443	2,427,281	765,339	2,185,723	24,372,519	2,191,463
1960	6,198,714	3,353,002	920,872	2,796,211	26,837,440	4,495,009
1961	5,223,051	2,693,348	1,156,503	2,588,887	28,963,677	8,637,812
1962	5,789,560	3,150,712	1,265,086	2,974,036	40,005,219	2,829,198

MERLIMAU PEGOH

The fifty-third annual general meeting of Merlimau Pegoh, Limited, will be held on December 19th in London.

The following is an extract from the review of the Chairman, **Mr T. H. Miller,** for the year to March 31, 1962:

The results, after allowing for taxation of £136,750 have enabled a total dividend of 17½ per cent to be declared.

Market prices for natural rubber were considerably lower than in the previous year—the average spot London price for No. 1 R.S.S. for the year under review was some 5d. per lb. down at just over 2s. 0½d. per lb.

Total output of rubber amounted to 13,631,000 lbs. as compared with 12,178,800 lbs. for the previous year. Immature areas coming into bearing and increasing yields from other young areas contributed to the increase in output. The increase in crop is being maintained and output for the first six months to the end of September, 1962 amounted to 7,006,000 lbs. as against 6,627,000 lbs. for the corresponding period last year.

During the year we replanted 893 acres with rubber and 86 acres with oil palms.

The average spot London price for No. 1 R.S.S. for the six months to the end of September was approximately 1s. 10½d. per lb., which is almost 2d. per lb. lower than the average for the year under review. Fortunately the effects of any reduction in profit margins as a result of lower prices should be alleviated to some extent by the increase in output.

STOTHERT & PITT, LIMITED

The seventy-ninth annual general meeting of Stothert & Pitt, Limited was held on November 15th at Bath.

Mr R. A. Riddles, CBE (the chairman), presided and, in the course of his speech, said:

All Departments were fully employed and the volume of work during the year was the highest yet achieved, but increased competition has affected earnings.

Aggregate gross trading profit for the year before providing £432,270 for taxation and £127,669 for depreciation amounted to £995,681 as compared with £860,034 in the previous year.

You will appreciate that in these days of strong competition, continual technical development, though expensive, is vital and you will be pleased to know that we are very alive to this and are introducing a steady flow of new and improved models of the types of equipment which we produce. In this connection I would particularly mention a new Builders' Tower Crane which we believe is the only one of British design being manufactured in this country.

I feel that our policy of diversification and expansion was soundly based and has proved beneficial during a most difficult trading period. We are constantly reviewing the possibilities of diversification, but strictly within the perimeter of our own field and capacity to manufacture.

The report was adopted and a total distribution of 20 per cent approved.

REGIS PROPERTY COMPANY

REVENUE INCREASED

The twenty-fourth annual general meeting of Regis Property Company, Ltd., was held on November 27th in London, **Sir Aynsley Bridgland, CBE,** chairman, presiding.

The following are extracts from his circulated statement:

Last year I made reference to the increase in net property revenue from £629,224 in 1960 to £751,738. Today there has been a further increase in revenue to £845,603—a rise of £93,865. The net profit after tax and administration charges has only risen by £15,030—viz. from £207,345 to £222,375. The gross revenue this current year already shows an increase of 4.6 per cent over last year, and for the reason I gave last year should tend to rise substantially for some years to come.

I think, therefore, that we have every reason to expect increased net profits, but shareholders should be warned that the rate of growth of our gross rentals cannot be strictly related to the rate of growth of net income. So many different factors can arise that any calculations on this basis can be most misleading. Our future progress must depend partly on increased rents in respect of our present portfolio. We have had the benefit of increased rentals only to a modest degree since 1945/50, on the one hand because of the limitations of the Rent Restriction Acts on the flats and on the other because of the long leases on most of our offices. Rent restriction is still with us to the extent of 497 flats, but the old leases on our office properties are now commencing to lapse. Costs of maintaining properties have constantly risen since the war and are still doing so, and there is little chance of saving money in that field.

EXPANSION PROSPECTS

Our progress must also depend on the general level of interest rates which affect both our present net rentals and our future developments. We have felt that expansion of our portfolio by the use of money at high rates of interest would not in the long run be profitable. There are signs that interest rates are now falling, and as the result of the policy we have followed we shall be in a very strong competitive position to expand to the benefit of both our shareholders and our tenants.

We now propose to bring our capital more into relation with our assets by capitalising £3,300,000 of our reserves by an issue of one for one to existing shareholders. This will still leave us over £6,000,000 in capital reserves.

At an extraordinary meeting which will immediately follow our annual general meeting it will be proposed that the authorised capital be increased to £10,000,000, leaving £2,800,000 unissued for further expansion. We have no immediate intention of issuing the balance of the authorised capital but we must have room to manoeuvre.

At the same time it is proposed to reduce the Ordinary shares to 5s. units to facilitate market dealings in the shares.

The report was adopted and at the subsequent extraordinary general meeting the capital proposals were approved.

Groupement de l'Industrie Sidérurgique
Paris, France

G.I.S.

(Iron and Steel Finance)

The Annual General Meeting of G.I.S. was held in Paris on June 30, 1962, and the following are details of the report presented by the Board of Directors:

FRENCH STEEL INDUSTRY

The true consumption of steel in France allowing for movement in stocks increased during the year 1961 by about 5 per cent. Efforts to maintain exports at the level of 1960 despite sharp competition from foreign producers were crowned with success. The progress made by the French steel industry in 1960 to 1961 (+ 1.7 per cent) was higher than the average rate for the six countries of the European Coal and Steel Community (+ 0.6 per cent), while production in the United States fell by 0.8 per cent and in Great Britain by 9.3 per cent.

Expenses on works carried out totalled NF. 1,950m., an increase of 55.4 per cent over those of 1960 and 93.1 per cent over those of 1959.

On December 31, 1961, loans from public sources amounted to no more than 39.3 per cent (compared with 42.7 per cent at the end of 1960), of long and medium term debts of the industry, and debenture loans (individual or collective through the G.I.S.) amounted to 54.26 per cent (compared with 53.35 per cent at the end of 1960).

G.I.S. GUARANTEES AND LOAN

Total loans guaranteed by the Group fell by almost 10 per cent, from NF. 182,039,308.18 at the end of 1960 to NF. 164,344,342.04 on December 31, 1961, due to gradual repayment of existing loans.

A ninth Debenture loan was issued in October, 1961. Its proceeds were shared by 17 companies, each receiving an amount between NF. 6 and 80m. Repayment over 23 years begins only in the third year. Repayments will be made at three rates ranging from 115 to 125 per cent. Although this loan was appreciably higher than that of the previous year (NF. 450m. compared to 340m.) it was nevertheless covered without any difficulty in the same period, which proved the favour amongst the investing public of the issues of the G.I.S.

CAPITAL, PROFIT AND DIVIDEND

The capital of the G.I.S. was increased to NF. 127,500,000.

After payment of company taxes, profits amounted to NF. 2,404,595.82. After crediting the legal reserve with 5 per cent, the profit available for distribution amounted to NF. 2,284,366.02. It was proposed to distribute a dividend of NF. 1 gross (NF. 0.76 net) per old share issued on December 31, 1961, and to carry forward NF. 34,366.02.

The report, the accounts, and the proposals put forward by the Board of Directors were accepted unanimously.

SOCIETE ANONYME METALLURGIQUE
D'ESPERANCE-LONGDOZ
BELGIUM

The Annual General Meeting of the SOCIETE METALLURGIQUE D'ESPERANCE-LONGDOZ was held on October 23rd, and the following is a summary of the report presented by the Board of Directors.

The Company succeeded in overcoming the problems due to the lowest level of prices for iron and steel products since the last war. If the iron and steel masters of Europe really want to moderate the effects of the surplus of capacity over demand, they must harmonise more closely their investment and other policies and activities. This requirement led S.A. METALLURGIQUE D'ESPERANCE LONGDOZ to join in the setting up of *Allegheny Longdoz* for stainless steel sheet. Similarly, agreements have been made with nearby works to operate an electrolytic tinning line belonging to one of them. The Company hopes soon to make a similar agreement for galvanised sheet.

IRON AND STEEL

S.A. METALLURGIQUE D'ESPERANCE LONGDOZ produced a total for the year of much more than 700,000 tons of billets for the first time. Output of cold and hot-rolled sheet rose, especially from the hot strip mill. It took in 784,912 ingot tons, including 732,989 ingot tons of E.L. steel, 36,186 ingot tons of steel bought from other producers, and 15,737 tons of worked sheets. By September, 1961, a fourth stand was added to the tandem mill which was widened to 1,600 mm. In October, 1961, the annealing plant for expanded coils for special qualities was commissioned. The new skin-pass four-high mill and the shearing plant for 1,500 mm. sheet commissioned in 1961, are operating satisfactorily.

The autumn 1961 recovery in sales was due partly to the rebuilding of stocks by merchants. By the end of 1961 the Company's order book, especially for the E.E.C., had risen markedly. The improvement continued for the rest of the Company's year, thanks particularly to the recovery in the European motor-vehicles industry. The recovery on export markets was strengthened by massive Russian orders for worked rolled products. During the first few months of 1962, orders, especially from the European Coal and Steel Community countries, continued to overhaul deliveries. Thus, the Company despatched 630,000 tons of iron and steel products during the year, or 65,000 tons more than in the previous year. Although prices remained at a very low level within the E.C.S.C., they rose in other countries from 114 dollars a ton, the lowest level on record, to 128 dollars a ton. Progress and prospects for tinplate and zinc or zinc electroplated sheet are satisfactory. Sales of coal (at 1,427,237 tons), mostly to other divisions of the Company, exceeded production by 69,304 tons.

The capital was increased during the year by B.Frs.479m. and the Company raised an additional loan of $3m. from the High Authority of the Coal and Steel Community.

After deduction of depreciation (B.Frs. 538,937,077), financial overheads, workers housing fund and taxation and contingencies reserve contributions, the profit available for distribution was B.Frs.82,580,645. It was accordingly proposed to distribute a net dividend of B.Frs.200 per share, amounting to B.Frs.76,800,000 and to credit the reserves with B.Frs.5,780,645.

CRYSTALATE (HOLDINGS)

The Annual General Meeting of Crystalate (Holdings) Limited was held on November 27th in London, **Mr Jack Lesser,** chairman and managing director, presiding.

The following is an extract from his circulated review of the year to March 31, 1962:

The Consolidated Profit and Loss Account shows a profit of £80,083 as compared with £120,911 and Group Net Profits after taxation are £46,578 as compared with £55,645. The Directors recommend a dividend of 12½ per cent, less Income Tax, on the Ordinary Shares. The Consolidated Balance Sheet continues to show a sound financial position.

Notwithstanding the fact that in September, 1961, there were already signs of a fall in national industrial requirements the "Orders in Hand" position of the manufacturing companies, Crystalate (Mouldings), Ebonestos Industries and Mica Products, was quite satisfactory. Subsequently, new business became scarcer and before the close of the period under review, the value of our output began to exceed the value of orders being obtained. Additionally the increasing rise in costs has had to be absorbed and although in some sections output was higher than the previous year the overall profit margin was lower. In the last month there has been a more heartening inward flow of orders. Your Group enjoys a very strong asset and financial reserve position. Members can have confidence that the present trading recession can only be an enforced temporary halt in our forward progress and expansion.

The report and accounts were adopted.

CRAIGIELEA RUBBER PLANTATIONS

The thirty-seventh annual general meeting of Craigielea Rubber Plantations Limited will be held on December 19th in London.

The following is an extract from the circulated review of the chairman, **Mr T. H. Miller.**

The results, after allowing for taxation and replanting have enabled a dividend of 10 per cent to be declared.

The total crop for the year under review amounted to 5,601,000 lbs. as against 5,251,000 lbs. for the previous year. It is pleasing to report that the increase in crop is being maintained and that the output for the first six months to the end of September, 1962, amounted to 2,771,000 lbs. as against 2,737,000 lbs. for the same period last year.

We replanted 657 acres of rubber during the year under review and we are dealing with approximately 400 acres this year.

The average spot London price for No. 1 R.S.S. for the six months to the end of September was approximately 1s. 10½d. per lb. which is almost 2d. per lb. lower than the average for the year under review. It seems likely that we will finish the year with a lower average price for our rubber than that which we received last year.

Whilst there may be increasing competition from synthetic rubbers, it is felt that the prospects for the natural rubber producing industry have many encouraging features.

Settled labour conditions and the stable Government in Malaya are a continued source of confidence to producers.

Welcome easing of purchase tax and home restrictions

B.M.C. ready to meet world-wide trend to smaller cars

Mr George Harriman in his annual statement to B.M.C. shareholders made the following points:—

B.M.C.'s programme of expansion, decided upon three years ago with new and advanced designs in prospect, sprang from confidence that B.M.C. products would continue to increase their popularity both at home and overseas. The revolutionary 'Minis' recognised the progressive and world-wide trend towards smaller cars and production of them last year reached a new high figure at 182,864. Production of the new Morris '1100' and M.G. '1100' is increasing to meet a very healthy order book.

Recent improvements in the 'B' range saloon cars have been followed by a new range of Austin-Healey and M.G. sports cars giving new impetus to B.M.C.'s competitive strength at home and abroad.

New B.M.C. factories—at Llanelly producing sub-assemblies, the domestic equipment factory at Kirkby and the commercial vehicle factory at Bathgate are progressively relieving the parent plants of many production operations to enable concentration on greater 'Mini' and '1100' output without prejudice to the other popular models.

The new Morris '1100'

The recent relaxations of credit and the progressive reductions in Bank Rate and Purchase Tax are welcome, for our continuing export effort depends as much as ever on a strong home market.

THE BRITISH MOTOR CORPORATION

THE INDIAN IRON & STEEL COMPANY, LIMITED
(Incorporated under the Indian Companies Act 1913)

TARIFF COMMISSION'S REPORT AND GOVERNMENT'S DECISION

The Annual General Meeting of The Indian Iron & Steel Company, Limited, will be held on December 11th in Calcutta.

The following is an extract from the statement by the Chairman, **Sir Biren Mookerjee,** which has been issued to the shareholders for the year ended March 31, 1962:

The production of iron for the year at 1,187,397 tonnes and of steel ingots at 934,498 tonnes shows a small increase over the previous year. Yet in fact the rate of production remained more or less the same in the two years.

This apparent anomaly is due to the fact that there was a railway strike last year during which period there was a stoppage of all raw material coming into the works. As stocks of coal had run down to only four days' requirements, it left no alternative other than to carefully damp down all the four blast furnaces one by one as well as to reduce the input of coal into the coke ovens just to maintain sufficient heat to prevent damage to those plants. This calculated shut down last year, carried out under careful scientific observations by Works' executive experts, resulted in a computed total loss in production of some 27,000 tonnes of ingot steel. It will be seen, therefore, that while this year's production shows an increase over last year of 20,339 tonnes, it is in fact on the basis of actual rate of production less by some 6,000 tonnes.

DIFFICULTIES OF ACHIEVING PRODUCTION TARGETS

In this connection I would like to emphasise, that ever since the new blast furnace and melting shop expansions were completed some time round about the middle of 1959, every effort has been made to go all out to reach the rated capacity of iron and steel production. But we failed each year to achieve this owing to the poor quality of raw material and particularly in the case of coal, a quality almost unusable. Added to these difficulties there was the ever persistent irregularity of transport. How then in the face of these insurmountable difficulties can Government insist that 100 per cent production is to be maintained? Steel qua steel may be made at the cost of quality. Is that then what the Government desire, a sacrifice in quality and a mass rolling of unrequired sections of steel for the sake of production records?

RETENTION PRICE OF STEEL

In my statement last year I made reference to the Tariff Commission's enquiry in connection with the fixation of the retention price of steel effective from April 1, 1960. The Tariff Commission submitted its report to the Government in April, 1962, and it was not until September 7, 1962, that the Government's decision on this important matter was announced in Parliament according to which steel retention prices were increased by Rs. 10.50 per tonne on an assumed product mix basis commencing from April 1, 1960, as against the Tariff Commission's recommendations of an increase of Rs. 38 per tonne over the provisional increase announced by Government in February, 1961.

Apart from the fact of Government's rejection of the Tariff Commission's deliberations and conclusions it has come to an ad hoc decision totally divorced from the conditions specially laid down in 1953 for the calculation of retention prices of steel, after taking into consideration repayment of loans to Government and the World Bank (International Bank for Reconstruction and Development), maintenance of regular dividend and putting into reserve statutorily or otherwise sufficient sums in order to enable the Company to remain healthy and to continue to increase production and achieve expansion out of its own resources as and when the country needed extra steel. It now appears from Government's latest announcement in the papers that the Tariff Commission's sins are that it arrived at its conclusions according to these formulae and conditions laid down by Government earlier and according to which your Board of Directors agreed to accept loans on your behalf for the expansion schemes. If now these conditions and formulae for calculating retention prices are changed for the worse, as has been announced recently, there is little or no hope of further expansions to your plant.

It is my sincere suggestion that the matter should be reconsidered and given a second thought by Government. It must also be remembered that when vital issues of this nature are referred by Government to an independent semi-judicial and expert body like the Tariff Commission, its recommendations should not be flouted in the manner in which it has been done in this case, as it is bound to undermine confidence in the private sector and definitely make foreign aid participation very doubtful.

NEED FOR MAXIMUM INCENTIVE

It can be safely vouched and nobody will deny the special position and importance of the steel industry in our country, particularly in an era of expanding economy based on rapid industrialisation. Contribution made by this Industry in the past, specially in the field of saving foreign exchange is very considerable. Is it not a matter of elementary economics that the benefit of maximum possible incentive should be extended to the industry to allow it not only to exist, but to function and produce on as high and efficient a level as is possible? Why then deny it a healthy climate all round to earn a reasonable return on the capital employed, which is largely being ploughed back from profits and maintain an increasing output, thereby enhancing the growth of national wealth?

TOLEDO WOODHEAD SPRINGS
(Spring and Lockwasher Manufacturers)

A VERY SUCCESSFUL YEAR

The twenty-fourth annual general meeting of Toledo Woodhead Springs Limited will be held on December 19th at Coronation Works, Aycliffe, Co. Durham.

In his Letter to the Shareholders accompanying the Report and Annual Accounts 1961-62, **Mr Frank Woodhead** states:

Our main business, that of manufacturing suspension springs, is closely tied with the fortunes of the motor car and commercial vehicle industries.

The year under review showed a recovery of the motor car industry at home from the depression of the previous year; trading conditions were, therefore, reasonably satisfactory but were marred by unsettled labour relations within the industry. In spite of this your Company's trading results have been, I think, very successful. The total group trading profit this year before charging depreciation is £165,186, which is little short of our best results to date.

Seasonal quietness reduced our deliveries to the vehicle manufacturers in the early part of the year but for the remainder of the year our productive facilities were operated to capacity.

During the year our efforts, to increase our export of suspension springs were successful, in fact, our exports for the year under review rose to a record level.

We do not lack confidence in our ability to make the most of the opportunities that lie ahead and with the group results which show an improvement upon last year, the Board have pleasure in recommending a final dividend of 12½ per cent making a total distribution of 20 per cent for its year.

ALSTONS LIMITED
PRECIS OF PRESIDENT'S REVIEW

At the Annual General Meeting held on November 20th the Directors' Report and Annual Audited Accounts for the fiscal year ended June 30, 1962, were adopted.

The Profits of the Company after taxation, write-offs and transfer to reserves totalled $748,678. Preference and Ordinary Dividends absorbed $475,537, leaving $273,141 to be carried forward.

A resolution was passed for the payment of final dividend of 10 per cent (less tax) in addition to interim dividend of 6 per cent (less tax) paid in April.

The Consolidated Group Accounts revealed profit (after taxation and write-offs) of $1,049,312 of which profits attributable to shareholders of Alstons Limited (after adjustments and transfers to reserves) totalled $740,339. Capital and Revenue Reserves totalled $5,392,742 by comparison with $4,651,817 at June 30, 1961.

Resulting from the take-over bid in July, 1961 by Caroni Limited for share capital of Woodford Lodge Estates Limited, a capital gain of $379,551 on disposal of the Company's shareholding was realised.

Caribbean Development Co. Ltd., maintained payment of a 25 per cent Ordinary Dividend, although the trading profits were considerably less than those of the previous year due to general trade depression which affected trading business of the territory.

The subsidiary Brewing Company in Grenada made a small profit while the Brewing Company in St Kitts made a small loss.

With the exception of Styrotex (Caribbean) Ltd., and Metal Products Ltd. which incurred losses, all the other subsidiary companies maintained satisfactory results. Tugs & Lighters Ltd. maintained its rate of dividend on the increased issued capital.

The President referred to the sad loss that the Group suffered by the death of Sir Gerald Wight, who retired in 1961 as a Director, but who had been appointed as a consultant of the Parent Company.

KAMUNTING TIN DREDGING

IMPROVED RESULTS

MR ADDINSELL'S STATEMENT

he forty-ninth annual general meeting of iunting Tin Dredging Limited was held on ember 27th at 55-61, Moorgate, London, 2, **Mr J. Addinsell** (the Chairman) presiding.

he following is the Chairman's statement the year ended March 31, 1962, which had ı circulated with the report and accounts and taken as read:

ince our General Meeting last year Douglas Waring, CBE, has accepted an in- ion to join the Board. His very considerable vledge of the tin industry, particularly in ion to Malaya where he lived and worked nany years, will, I am sure, be of the greatest : to your Company.

ıe total production in Malaya and Thailand 1,444 tons concentrate against 1,592 tons year, when it will be remembered that we in addition the benefit of sales of minehead is totalling 269 tons.

ıe output for the year was achieved notwith- ding the fact that, as I reported in my statement to shareholders, our No. 6 dredge lalaya ceased productive operations on the ta Taiping area on September 12, 1961. average price realised for sales was equiva- to £912 per ton of metal against £775 per or 1960-61.

ACCOUNTS

ıe profit for the year was £398,750 com- d with £364,210 last year. Taxation takes 2,000 and we have transferred £5,137 to tingencies Reserve and in addition have :d to this Reserve the proceeds from the sale ır No. 4 dredge. The interim dividend paid March 9, 1962, absorbed £51,201 and your ctors now recommend a final dividend of per cent which will take £153,604. The remaining to be added to our Carry For- l is accordingly £26,808 and brings this e up to £117,934.

ıe Contingencies and Transfer of Dredges rves now stand at a total of £637,500, which ld ensure that we have sufficient funds to the heavy expenditure we are now ring on the transfer of the two Malayan ges.

aring the year the Malayan Government d the Company's contributions to the first Buffer Stock, together with our share of the surplus, amounting in all to £131,900 and since the close of the year we have received from the Thai Government our contributions and surplus amounting to some £58,000. Meanwhile, contributions are still being collected from the Company in respect of the second Buffer Stock.

The No. 5 dredge in Malaya ceased productive operations on June 21, 1962. This dredge was kept working in low value ground as long as possible but when it became uneconomic to continue dredging arrangements were made for its dismantling and transfer to the Company's Eastern Tailings Area. This operation will take about 12 months to complete and the dredge should therefore be ready to start work on this area fairly early in the second half of 1963. The reconstruction of the No. 6 dredge on the Taiping Rubber Company's Area continues and this, the Company's largest unit, should be ready to start working the area about the middle of 1963.

THE OUTLOOK

Shareholders have been frequently warned that the dredges transfer programme must necessarily have its effect on our output and profits for the year ending March 31, 1963, and dividends must likewise be affected, but your Board will consider at the appropriate time what dividends can be paid taking into account the carry forward on Profit and Loss Account and the liquid resources available.

Meanwhile we should be encouraged by the prospect of both our Malayan dredges being back in production in their reconstructed form during the latter half of 1963, and I am pleased to report that work on these dredges and on the new properties in which they will operate is well up to schedule.

The task of dismantling, transferring and rebuilding a large dredge is one which involves very considerable planning and hard work and I should like our General Managers, Anglo-Oriental (Malaya) Limited, to know that we fully appreciate the work they are doing and accordingly to them, and to the staff, the labour force and all who have contributed to the Company's well-being and its future, I offer once again our grateful thanks.

As the result of an amendment to the Companies Act, 1948, the Company was enabled in July of this year to open a branch register in Malaya for the benefit of shareholders in that country and Members were informed of this arrangement by circular dated June 27, 1962.

The report and accounts were unanimously adopted.

METROPOLITAN ESTATE AND PROPERTY CORPORATION

The following are extracts from the Report and Accounts for the year ended September 30, 962, which contained the Statement of the Chairman, **Mr. R. J. Dickinson.**

BRITISH ELECTRONIC INDUSTRIES LIMITED

SUBSTANTIALLY IMPROVED CURRENT TRADING

"OUR FUTURE SHOULD BE A VERY BRIGHT ONE"

The second annual general meeting of British Electronic Industries Limited was held on November 22nd in London, **Mr C. O. Stanley, CBE, LLD, FCGI** (the Chairman), presiding.

The following is an extract from his circulated statement:

Despite the severe cut in dividends and the fall in profits, my confidence in the future of the business and its return to a satisfactory dividend-paying situation is not only greater but more solidly based than it was this time last year.

There are two reasons for this, both of great importance to every shareholder. The first is the decision taken by the Government to introduce 625 instead of 405-lines as the British standard of television. The second is that we now have complete executive control of the Ekco business.

I have already said to our shareholders that the very existence of the television business has been dependent upon the Government taking the right decision on the 625-line issue. Now, with this decision, a future full of enormous possibilities has been opened up.

Britain is to have a new television standard and there is a huge population which will demand any new television service.

The Chairman then reviewed the Group's widespread interests at home and abroad and, in dealing with the trading results, said: Aggregate profits from our activities in telecommunications, scientific instruments, telephones and other non-domestic products and from our subsidiaries in Australia and New Zealand exceeded £2,000,000, which, together with more than £400,000 from trade investments, were sufficient to cover debenture and other interest, preference dividends and the 15 per cent dividend which we paid last year on the Ordinary Shares.

Having regard to these results it is very regrettable that there has as yet been no revival in the domestic television industry and heavy losses were incurred in 1961-62. Considerable reorganisation and consolidation have been carried out to eliminate the losses arising from over capacity and overhead expenses have been severely cut. The benefits from these actions are beginning to have an improving effect on the trading prospects for 1962-63, but it is imperative that we retain our ability to increase production and be ready for the expansion of business expected when 625-line transmissions commence.

CHAIRMAN'S ADDITIONAL REMARKS

Addressing the Meeting, the Chairman said:

We have examined very carefully our trading situation up to the end of October after seven months of the year have elapsed, and our figures to that date indicate a net profit several hundred thousand pounds higher than the figures at the same time last year.

If our figures continue to show the same trend as has taken place this year, we should, by the end of our financial year, be in a position

to make a substantial increase in our rate of dividend.

Our figures for the revaluation of land, buildings, plant and machinery are now completed and show an increase in these valuations over the book values of nearly seven million pounds.

We have completed in the last few months a cross-licensing agreement between your Company and the Radio Corporation of America and also a similar agreement with the Western Electric Company. In this business the cost of research and development can become a very heavy burden and we hope that these two agreements will make available to your Company the benefits of great research expenditure undertaken by these companies and at the same time effect economies in our own research and development expenditure.

The recent increase in the Investment Allowance should help those sections of our business which are engaged in the manufacture and sale of capital goods, which, today, represent a substantial part of our business.

The Government's policy regarding the commencement of one new television network is now known and in 1964 the new Service will cover London, Birmingham, Manchester and the North, while, in the following year, a further new eight or nine stations will go on the air. This opens up not only a very large market for the sale of television sets but, in addition, a market for the new transmission and link equipment which will be required to establish the new system across the country.

Although our industry has had a rather long wait for the signal to go ahead, we can now say that at last we know our future should be a very bright one.

The report was adopted and an Ordinary dividend of 2½ per cent approved.

W. & C. FRENCH LIMITED

The annual general meeting of W. & C. French Limited was held on November 27th in London, **Mr Charles S. French** (the chairman) presiding.

The following is an extract from his circulated statement:

The Accounts for the year ended March 31 last show a marked improvement. The Gross Trading Profit has increased from £71,133 to £722,108, an increase of £650,975. This increase has been derived from contracting work only slightly greater in volume than in the preceding year and despite a further loss of £174,050 on the Crossness contract. The Net Profit for the year before taxation amounts to £177,501 as compared with a loss last year of £290,714. The Directors are recommending a dividend of 6½ per cent on the Ordinary and 'A' Ordinary Share Capital.

Contracting work progressed well throughout the year and a higher proportion of our contracts than ever before showed a satisfactory margin of profit. The L.C.C. Crossness contract operated at a loss throughout the year and continues to do so, but on a much reduced scale. The Directors are satisfied that any further losses on this contract, which will be substantially completed next year, will not have a material impact on the overall trading results.

The value of contracts on hand exceeds that for the preceding year, progress has been good throughout the summer months and preliminary figures show a satisfactory level of profit. Given average working conditions there is every reason to expect that the level of profit will at least be maintained and possibly improved upon.

The report was adopted.

SUNGEI BAHRU RUBBER

The thirtieth annual general meeting of The Sungei Bahru Rubber Estates, Limited, was held on November 27th in London, **Mr J. R. Tannock** (the chairman) presiding.

The following is an extract from his circulated statement:

The increase in the rubber crop of 90,000 lbs. over that for the previous year has gone a long way towards off-setting the fall of nearly 2d. per lb. in the price realised for the commodity and the resulting group profit of £61,844 compared with £69,800 for 1960-61 can, I think, be considered most satisfactory.

We are now beginning to reap the benefits of the replanting which has been carried out during the last decade. The over-all yield per acre for the year was 902 lbs., compared with 828 lbs. for 1960-61 and 772 lbs. for the previous year. The crop for the first three months of the current year shows an increase of 99,000 lbs. over the corresponding period under review, and I am hopeful that the crop for the year will exceed 2,000,000 lbs. for the first time.

Associated Companies: Clarke's of Stillington Limited, the firm of Steel Stockists in which we have a large interest, has had a disappointing year. Scotia Investments Limited operates a Holiday Camp in East Cornwall, through its wholly owned subsidiary—Seaton Valley Co. Limited. We have a substantial interest in this venture, and I am happy to report that the Camp has had a most successful season.

The report was adopted and a dividend of 10 per cent approved.

S. SIMPSON LIMITED

(Manufacturers of DAKS Clothing)

The twenty-ninth Annual General Meeting of S. Simpson Limited was held on November 22nd in London.

Dr S. L. Simpson, the chairman, presided.

The following is an extract from his statement:

The further wage increases during the year and some increase in overhead costs, together with the maintenance of selling prices, were responsible for the slight decrease in profit, which was minimised by increased efficiency drives.

Our Export trade has not progressed in all markets owing to special circumstances affecting some countries. Canada has been particularly disappointing owing to the continuation of the recession, revaluation of the Canadian dollar and import duties increased to 32½ per cent. In Australia, our bookings for 1962/3 have improved and our orders continue to represent a considerable proportion of imported high quality men's clothing. Manufacturing under licence in South Africa has gone through teething troubles, and a recent visit of one of our executives should lead to satisfactory progress. Our sales in the United States have again resumed an upward trend and, given general trade expansion, our trade in U.S.A. should make further advances. Our progress in Europe is noteworthy, and during the past five years there has been a steady increase in sales. This favourable trend should be considerably accelerated if the United Kingdom joins the Common Market.

SUSTAINED DEMAND

The sustained demand for DAKS clothing in the Home Market is indeed gratifying and we have combined with our Retailers in many successful promotion schemes throughout the country, such as the successful Carnation and Clubman schemes. There is no doubt that the name DAKS is synonymous with high quality clothing of modern design and made from the finest cloths in the world with superb craftsmanship. This tradition, which dates from the foundation of S. Simpson Ltd. in 1894 by a Master Craftsman, is the basis of our leadership in the clothing world. In accordance with this, the pace of training operations for the recent extension in Larkhall is based on quality and not quantity, and is in keeping with our plans for the steadily progressive utilisation of the supplementary capacity.

Your wholly owned Subsidiary Company, Simpson (Piccadilly) Limited, has had another successful year, with an increase in the number of customers being served. The reduction from 500 dollars to 100 dollars in the allowance given to visitors from the United States, under the American Government's Customs Regulations, continues to have some adverse effect upon trading in our Export Department, but new customers from all parts of the world discover Simpson's Piccadilly. There is widespread appreciation of the special character and quality of the goods our unique Store offers. Our Women's Department continues to lead Fashion Trends and DAKS skirts and DAKS sleekers are very much in demand. The decision to introduce one-way traffic into part of Piccadilly had the effect of making the road outside the main entrance resemble a racing track for several hours in the day. In the early days this one-way route undoubtedly had an adverse effect upon trading, particularly during spells of bad weather, but fortunately this is no longer the case.

C.L.R.P. INVESTMENT TRUST

LARGER DISTRIBUTION

The thirty-second Annual General Meeting of C.L.R.P. Investment Trust Limited was held on November 28th in London, **Mr H. D. Curry,** Chairman and Managing Director, presiding.

The following is an extract from his circulated statement for the year to August 31, 1962:

Owing to the 40 per cent increase in ordinary capital by the rights issue at par in July, 1961, few items in the revenue account for 1962 can readily be compared with the previous year.

One way of comparing the recommended ordinary dividend of 15½ per cent for the year under review with 1961 would be to say it is equal to 20 per cent on the capital before the issue, i.e. an increase of 1 per cent and permits 4 per cent on the £250,000 of new ordinary capital. The total distribution on preference and ordinary capital this year absorbs 76.82 per cent of net revenue as against 74.32 per cent last year.

The purchase of all the shares in an Australian Property Company called Noani Court Pty. Ltd. should prove a remunerative investment.

The net asset value of the ordinary 5s. stock units at August 31 last was 20s. 3d. At a price of 17s. 9d. the earnings yield on the 5s. ordinary stock units is 5.9 per cent and the dividend yield 4.3 per cent.

The report was adopted and the proposed re-conversion of the ordinary stock into shares was approved.

COMPANY AFFAIRS

In the London stock market prices stood up well at the end of last week to the by-election results. This week equity prices, helped by the sustained rally on Wall Street, moved ahead again and over the week to Wednesday's close The Economist *indicator gained 6.2 points to 354.9. After a brisk start to the account on Monday business has been relatively quiet. Following the encouraging statement from Combined English Mills cotton textiles shares scored good gains but the sharpest gains once again came in new issues.*

Halfway Stage

THE number of companies adding a few words of comment and profit figures to their interim dividend announcements is growing. The Jenkins committee blessed this practice without, however, insisting that it should be made obligatory—reasonably, for seasonal factors can play ducks and drakes with half yearly profits. But for those companies where the passage of the seasons is less important, efforts to keep shareholders informed at a shorter interval of time than twelve months are welcome. They can on occasions force the stock market to revise its opinions.

Great Universal Stores.—The interim dividend has been rounded up from the equivalent of 9¾ to 10 per cent. The smallest total dividend that shareholders can expect for 1962-63 is 30 per cent and, judging by the results for the six months to September 30th, it could well be higher. Sales, including those on hire purchase, have risen and gross profits have advanced £12.6 million to £13.3 million and net equity earnings from £5.3 million to £5.7 million. GUS's mail order business has continued to do well and in a difficult period its furniture and radio and television divisions have added to their sales.

Metal Box.—The main feature of the six months' trading to end September was a substantial improvement in demand at home where sales rose from £34 million to £38.9 million. On the other hand sales overseas at £14.3 million although higher than a year ago were below those in the six months to March 31st and profit margins on overseas sales fell further. In all trading profits for the group rose by 9 per cent from £4.3 million to £4.7 million. The directors do not expect any further increase in home demand in the second half of the year although they say that home sales and profits should be higher than they were in the six months to end March, 1962. Overseas profits are expected to remain at the level of last year. The interim dividend is maintained at 5 per cent; last year's full payment of 12 per cent was covered twice.

Allied Ironfounders.—Two years of falling profits and a cut from 20 to 15 per cent in the 1961-62 dividend had shaken the faith of investors in Allied Ironfounders, which includes the "Aga" range of products among the goods it sells to the building trades and householders. The directors are still cautious for in the face of a gross profit of £1,400,000, against £1,100,000, in the seven months to October 31st they have left the interim unchanged at its reduced level of 5 per cent on the grounds that the rate of improvement in profits may not be maintained over the rest of the financial year. But it looks as if the corner has been turned and that an early restoration of the dividend to 20 per cent may now be possible.

Berry's Electric Magicoal.—In contrast, it looks as if the days of exceptionally rapid growth for this manufacturer of electric fires are over—at least for the time being. The chairman suggested something of the sort in his last statement and it now appears that sales, while still high, are not matching the record figures of 1961-62 and a fall in profits is expected. Allowing for the one-for-two scrip issue, the interim dividend at 6½ per cent is effectively unchanged. The possibility that the 1961-62 rate of 45 per cent would be maintained on the increased capital now looks remote.

British Plaster Board.—Though this company's interim dividend has been left unchanged at 4 per cent. it is possible that the total for 1962-63 will be higher than the 12½ per cent paid for 1961-62. This is suggested by the increase in gross profits from £1,721,000 to £1,833,000 in the six months to end-September and by the statements that the demand for building materials at home has been maintained at a high level and that BPB's business overseas continues to make progress. The snag is that BPB will have more ordinary capital to service, for, as a result of an agreement to exchange technical information with United States Gypsum, the latter company will acquire a 15 per cent equity interest in BPB at 24s. 7½d. per share. This will cost US Gypsum about £4.1 million (thus putting BPB well in funds again) and in return BPB will spend nearly $700,000 in acquiring 10,000 shares in US Gypsum. Shareholders have to agree to this deal. There is no reason for opposing it.

Prices and Yields

	1962 High	1962 Low	Div. %	Price, Nov. 29	Yield %
Allied Ironfounders (£1)	60/6	33/9	15	59/9xd	5·0
Berry's Magicoal (5/-)	52/6	37/6	30	36/7½	4·1
Br. Plaster Board (10/-)	29/6	20/10½	12½	29/11½xd	4·3
G U S 'A' (5/-)	48/9	38/4½	30	47/-	3·2
Metal Box (£1)	85/6	67/-	12	73/9	3·3

Combined English Mills

COTTON textile shares have been much brighter this week following the statement of Sir Cuthbert Clegg, the chairman of Combined English Mills. In the year to September 30th a net profit of £465,000 was translated into a net loss of £115,000; but although the dividend has been cut from 6 to 4 per cent, the volume of sales has tended to improve recently. Until midsummer the increase was too small to arrest the decline in margins, and the results would have been much worse if production had not been concentrated into fewer units working longer hours, and extensive re-equipment and modernisation put in hand. Since the summer demand has picked up sufficiently to make it possible to refuse unprofitable business. Sir Cuthbert adds that present indications are that manufacturers' stocks are falling and that many weaving and hosiery firms are fully employed and delivering all their production.

For several months there have been suggestions in the industry that the worst of the recession was over, but investors may be too optimistic if they are expecting the recovery to be as sharp as that which followed the 1959-60 recession when the trading profits of Combined English jumped from £119,000 to £806,000. Since then Commonwealth imports have continued to rise. Sir Cuthbert argues that public confidence in the industry would be strengthened if it accepted that considerable imports of cheap cloth were here to stay. As these ceilings have already been fixed by the Government until 1965, he says "we must carve out a market which takes these imports into consideration." The £1 shares have gained 1s. 10½d. this week to 10s. 3d. to yield 7¾ per cent. Last year they touched 17s. 7½d.; their net asset value is 42s.

Joseph Lucas

HOW did Joseph Lucas achieve such good results last year? The accompanying table shows an improvement in profit margins and the chairman, Sir Bertram Waring, attributes this partly to higher selling prices for some Lucas products but primarily to economies now being achieved in the vehicle equipment business through improved designs and better manufacturing. The rapid development of the group's overseas business both in direct exports and in local manufacture overseas is allied to both.

Last year about £4½ million was spent on factories at home and overseas and some £3½ million on investments in other companies (including the purchase of a 40 per cent interest in Ducellier et Cie, the largest motor electrical component manufacturer in France). At the end of July bank overdrafts were nearly £4 million higher at £5.2 million and have risen further since then. Short-term debts will be eliminated by a £4 million bond issue in Switzerland and a £10 million debenture issue in this country and enough cash will be available to meet future expenditures, already reflected in capital commitments of £3.4 million.

Years to July 31	1960 £000's	1961 £000's	1962 £000's
Sales	122,600	123,200	124,700
Trading profit	10,746	9,489	10,221
Gross profit	8,073	6,741	7,272
Net profit	2,923	2,368	2,480
	%	%	%
Ordinary dividend	13¾	13¾	13¾
Trading profit/sales	8·8	7·7	8·2
Net profit/sales	2·4	1·9	2·0

Capital spending on this scale is being made with the "exciting" prospect of Britain's entry into the common market very much in mind. Joseph Lucas is certainly one of the companies that would gain from this. Sir Bertram welcomes the cut in purchase tax on cars on the grounds that a vigorous export business in vehicles can only be sustained by a healthy home market. The stock market is optimistic about Joseph Lucas's prospects. At 74s. 6d. the £1 shares yield 3¼ per cent on the unchanged dividend of 13¾ per cent, compared with nearly 5 per cent a year ago. An increase in the dividend in the current year is clearly discounted.

Plessey

SHAREHOLDERS in Plessey, somewhat bewildered by the turn of events in the company in the last few months and by the fluctuations in the shares, have received this week a full explanation in the first and last statement of the caretaker chairman, Sir Harold Wernher, who will be succeeded by Lord Kilmuir at the end of the year. The major happenings were the mergers with Automatic Telephone and Electric and Ericsson Telephone in October, 1961, and the death of the chairman, Sir Allen Clark, on the last day of the financial year, June 30th. This was followed by a difference of opinion in the boardroom about executive appointments and policy, after which three directors retired and Field Marshal Lord Harding, Mr Harold Watkinson and the chairman elect were appointed to the board. The fees of the directors are to be raised from £250 to £2,000, but the directors' total emoluments are likely to be substantially reduced from the exceptional level of £474,000 in 1961-62, of which £260,000 represented the contractual commission of 4 per cent on pre-tax profits paid to the late chairman.

Profits before tax at £6½ million were higher than had been generally expected. The profits of the original Plessey business improved despite the difficulties of the television and domestic appliance industries to which it supplies many components. The company is now reaping the benefits of the policy of diversification into electronics and allied fields. Garrard Engineering also enjoyed a more profitable year and it has a peak order book for its record players and changers. On the telephone side, Automatic Telephone made a loss in 1961 but has since made a good recovery. The improvement in profits in the telephone group and elsewhere is expected to continue as integration proceeds. Moreover, the current year will include a full year's profits from the new telephone companies compared with eight months in 1961-62.

The balance sheet reveals a sharp fall in liquid resources to £10.4 million as a result of the acquisitions and other additions to fixed assets. There is now also a bank overdraft of £6.3 million. At 44s. 9d. the shares are about 30 per cent above this year's low and yield 3.4 per cent on the dividend as raised from the equivalent of 12¾ to 15 per cent—a return which appears to look well beyond the immediate benefits of rationalisation within the group.

Associated British Foods

OVER the past decade earnings of Associated British Foods have risen 2½ times while dividends have risen from the equivalent of 3¼ per cent to 22½ per cent. This record of growth helps to explain the low yield of 2¼ per cent now offered by the 1s. shares at 9s. 8½d. xd.—in the last two years the yield has been as low as two per cent. But will comparable growth be possible in the future? When a group grows as big and as rapidly as Associated British Foods further growth becomes less easy to achieve, and expansion of assets and sales does not always lead to bigger profit margins.

This is illustrated in the Associated British Foods report by the experience of the Howardsgate retail grocery division—this includes Fine Fare—which has been involved in a rapid expansion of supermarkets. The cost of opening 80 such stores last year is reflected in a fall in this division's pre tax profits from £863,000 to £529,000, which the chairman, Mr Garfield Weston, says is "a small price indeed to pay for the future prosperity of the company." This has the necessary sound of confidence, since a further 100 supermarkets will probably be opened in the current year. Moreover the published figures may not reflect the full cost for they carry an auditors' qualification in respect of trade creditors of £5.7 million and stocks of £1.9 million, arising from accounting difficulties associated with the pace of expansion; if these two items have to be adjusted, the auditors say, a "material effect" might follow for the amount shown as profit. In all ABF's sales rose by £20 million to £183 million and pre tax profits from £8.7 million to £9.3 million but if the method for calculating the depreciation charge had not been changed profits would have been £8.8 million. The bakery division remains the mainstay of the business and Mr Weston says that there are signs that decline in national consumption of flour products has been halted. The group's biscuit companies increased their share of the market and the 15 per cent purchase tax imposed in the last Budget has not adversely affected sales.

Since the end of the financial year ABF has sold the Neilson ice cream business to J. Lyons; the sum is undisclosed but it will help to finance expansion elsewhere, notably in flour milling and in Europe and Australia and New Zealand. Capital commitments at the year end amounted to £5½ million but during the year £6 million was raised by a debenture issue and almost £4 million by a rights issue. The cash flow is now close to £8 million, comfortable for meeting development costs, and £A5 million is being raised locally in Australia.

Handley Page

THE death of Sir Frederick Handley Page last Easter led to a good deal of activity in Handley Page shares on renewed hopes of a take-over. These have not materialised so far and the shares slumped sharply a week ago on the results for 1961, which showed a net loss of £828,000 against a net profit of £190,000. Shareholders were told when eleven months of the financial year had passed that results should be at least up to those of 1960. The loss arises largely from writing off all research and development expenditure and tooling costs on the Herald and all excess costs on producing the first batch due to be completed early next year. The Herald has been priced on the basis of average costs with quantity production and the write off suggests that the gap between the break-even point of 80 or 90 planes and actual orders is still wide. The write-off relieves future years of any such charge and a clear slate for the Herald may point to better profits in future.

But, apart from the Herald, profits were falling last year and in cutting the dividend from 15 per cent, which has been paid each year since 1954, to 5 per cent the directors say that they have taken into account "the likely results for the current year." The directors should give a definite indication of current profits in the full report. In the meantime the 5s. shares show a net loss of 2s. and at 10s 10½d. yield 2½ per cent. The net asset value of the shares still must be higher than the market price but the latter is sustained only by the possibility of a bid.

THE MONEY MARKET

THE syndicate of discount houses caught the outside bidders on the wrong foot at the Treasury bill tender on Friday of last week by raising its bid for the 91-day bills on offer by 4d. (a reduction of 1s. 4d. per cent in the annual rate) to £99 1s. 4d. The average rate of discount fell by only 1s. 2.06d. to £3 14s. 9.03d. per cent and the market received a very satisfactory 60 per cent of its application compared with 41 per cent in the previous week. Total applications for the £210 million 91-day bills rose by £30 million to £358 million. The market received 86 per cent of its application for the £50 million 63-day bills on offer which brought its average quota to around 65 per cent compared with 46 per cent a week earlier.

Credit was more or less adequate on the final three days of last week and again on Monday of this week. On Tuesday, money was tight and the authorities took the opportunity of indicating mild displeasure with the previous Friday's cut in the bill rate. The authorities gave the market a very large amount of help by special purchases of bills but not enough to prevent two or three houses going to the Bank of England for a small amount at Bank rate.

PA APPOINTMENTS DIVISION

MANAGEMENT STUDIES — Lecturer

Sundridge Park Management Centre, near Bromley, Kent, is sponsored by Personnel Administration Limited and provides residential courses for senior executives in all branches of management. A requirement has now arisen for an additional lecturer in sales and marketing management, to be selected from university graduates, preferably in economics, who are aged about 30-36 and who have had experience in market analysis, market research or technical sales. For a man with these qualifications and with an inclination for a semi-academic life, an attractive career is offered in delightful surroundings, with a starting salary of around £2,000 a year and good pension and life assurance arrangements.

(Ref. 841/FJB/EC)

Applicants should forward brief details, quoting the reference number, to :—

Personnel Administration Limited, Appointments Division, 2, Albert Gate, London, S.W.1.

FORMICA LIMITED

a member of the De La Rue Group

require an

ECONOMIST

for the Commercial Development Department. Necessary qualifications are a good Degree in Economics, plus at least two years' experience in sales, marketing, or market research in industrial products. In addition, candidates must have the ability to plan research, carry out field work and write up the results lucidly with the minimum of supervision. The Department is concerned with business forecasting, and the investigation, development and marketing of new products and applications.

Write (quoting reference number R.7220), stating age, education, experience and salary, to:

Assistant Personnel Officer,
FORMICA LIMITED, De La Rue House,
84-86 Regent Street, London, W.1.

OPERATIONAL RESEARCH

A major manufacturing company requires an experienced

OPERATIONAL RESEARCH SPECIALIST

to head a new section. He will be expected to lead and develop the application of operational research techniques in production, research and commercial activities.

A salary of about £3,000 per annum is offered immediately and prospects are good for a man of high quality.

Applicants should send a summary of qualifications and experience to Box 1673.

BOARD OF TRADE require an **ADVISORY OFFICER** to be based on **GLASGOW** to visit firms who have applied for financial assistance under the Local Employment Act, 1960. Applicants should have a good general industrial background and their experience should have qualified them to inspect undertakings applying for assistance under the Act and to report on their organisation, management, production methods and equipment. This post is unestablished, and the successful candidate will be appointed, in the first place, for a period of two years. Starting pay will be assessed according to qualifications and experience within the range £1,834-£2,250. Applications, giving date of birth, education, qualifications and experience, to Manager (PL. 660D), Ministry of Labour, Professional & Executive Register, Atlantic House, Farringdon Street, London, E.C.4. Only candidates selected for interview will be advised.

WILLIAMSON DIAMONDS LIMITED

(Incorporated in Tanganyika)

INVITES APPLICATIONS FROM QUALIFIED ACCOUNTANTS FOR THE POSITION OF ASSISTANT SECRETARY

The Company is a substantial producer of Gem and Industrial Diamonds and operates in Tanganyika at Mwadui, a self-contained township of some 5,000 inhabitants situated 4,000 feet above sea level and enjoying an ideal climate.

The Assistant Secretary is required to help the Company Secretary generally in discharging responsibility for all Administrative Departments of the Mine including the usual secretarial and accounting functions. His duties will, therefore, be unusually varied, and will include a close and constant interest in the training and progress of junior staff.

The total emoluments of this post will be initially not less than £3,000 p.a., and conditions of employment also include the provision, free of charge, of :—

(i) Accommodation, including hard furniture.

(ii) Leave and return passages to UK for the employee and his family every 12-18 months.

(iii) Baggage allowance.

(iv) Comprehensive medical facilities.

The Company maintains a first class Elementary School, and there are generous allowances for Secondary education. A wide range of sporting and recreational facilities, including golf and sailing, are available.

Applicants should be married, preferably between 30 and 35 years of age, and have had some years post-qualifying experience of responsibility in industry or the profession. An agreeable and adaptable personality would be a distinct advantage, provided this is not offered as a substitute for other qualities.

Applications, in writing, giving full details of education, experience, qualifications, age and marital status, should be submitted not later than December 31st, to :—

J. A. Pateman, Esq. (Dept. C),
Williamson Diamonds Limited,
Chichester House,
278-282 High Holborn,
London, W.C.1

UNIVERSITY OF GLASGOW

ASSISTANTSHIP IN MATHEMATICS

Applications are invited for an Assistantship in Mathematics. Salary scale: £900-£1,050 per annum. Initial salary according to experience and qualifications. F.S.S.U. and family allowance benefits.

Applications (three copies) should be lodged, not later than January 31, 1963, with the undersigned, from whom further particulars may be obtained.

ROBT. T. HUTCHESON,
Secretary of University Court.

THE UNIVERSITY OF WARWICK

APPOINTMENT OF REGISTRAR

Applications are invited for the post of REGISTRAR at the University of Warwick, which is to be established at Coventry. The Registrar will be the senior administrative officer of the University under the Vice-Chancellor and candidates must have had recent experience in University administration.

The salary will be not less than £2,600 per annum, together with the usual superannuation and family allowance benefits.

Applications, together with the names of three persons to whom reference can be made, should be sent by December 31, 1962, to the Vice-Chancellor, the University of Warwick, c/o the Town Clerk, Council Offices, Coventry, from whom further particulars may be obtained.

THE UNIVERSITY OF MANCHESTER

Applications are invited for the post of COURSE ORGANISER in the School of Management and Administration, to develop a programme of courses for executives and administrators, which is to be instituted by the University. The post will be for one year in the first instance, with the possibility of renewal. Preference will be given to candidates who are interested in developing research in this field. Salary scale per annum: £1,925-£2,325. Initial salary according to qualifications and experience. Membership of the F.S.S.U. and Children's Allowance Scheme. Applications should be sent not later than December 20, 1962, to the Registrar, the University, Manchester 13, from whom further particulars and forms of application may be obtained.

SENIOR INVESTMENT MANAGER and consultant required. Substantial salary and participation offered. Highest qualifications and references essential. All replies treated in strictest confidence.—Write Box H724 c/o Streets, 110 Old Broad Street, E.C.2.

DATA PROCESSING

BP has a career appointment in its Data Processing Development Team for an Honours graduate Physics/Mathematics, widely experienced in operating and programming computers and associated communications equipment. In addition to its responsibilities in Head Office, the team liaises with overseas companies on selection of data processing techniques and equipment. Conditions of employment are commensurate with the importance of this appointment. Applicants aged 30 to 40 should write, giving full details quoting reference H.5983 to Box 7163, c/o Hanway House, Clark's Place, E.C.2.

GOVERNMENT OF UGANDA

ECONOMIC ADVISER

Applications are invited for the above post in the Ministry of Economic Affairs. He will be required to advise the Government on economic policy, including fiscal and financial matters, and as head of the Economic Planning Branch to co-operate with an administrative unit in the preparation of long-term and annual development programmes. Candidates, who must be UK citizens and preferably over 40, should have a good degree in Economics and several years' relevant experience. Appointment will be on contract with gratuity for one tour of 21-27 months in the first instance. Salary, £2,800 p.a., plus £825 p.a. overseas addition. Free passages, generous leave, local income tax.

Apply, in first instance, with summary of personal particulars, to the Director of Recruitment, Department of Technical Co-operation, Sanctuary Buildings, Great Smith Street, London, S.W.1, from whom fuller details may be obtained. Please quote reference number A3/RC 323/153/02 and state full name.

UNIVERSITY OF SINGAPORE

Applications are invited for a Senior Lectureship in each of the following subjects:—

ECONOMICS.

MEDICAL STATISTICS in Department of Social Medicine and Public Health.

Salary scales: *medical* £2,128 p.a.; *non-medical* £1,750 x £70 — £2,100 p.a. Entry point determined by qualifications and experience. Allowances: expatriation £308 p.a., cost of living (temporary) in range £210 — £560 p.a. Passages for appointee, wife and children not exceeding 12 years. Partly furnished house/flat at reasonable rent. Provident Fund Scheme. Detailed applications (8 copies) naming three referees by December 31, 1962, to Secretary, Inter-University Council for Higher Education Overseas, 29 Woburn Square, London, W.C.1, from whom further particulars may be obtained.

CENTRAL ELECTRICITY GENERATING BOARD

STATISTICIAN

required in the

RESEARCH & DEVELOPMENT DEPARTMENT

which is located in new well-equipped laboratories on the southern outskirts of Manchester. The working environment is extremely pleasant with good working conditions and amenities.

Salary within range £1,565—£2,145 p.a. Superannuable.

To advise on the construction of experiments, patterns of sampling and the interpretation of experimental or operational data so as to enable the maximum amount of significant knowledge to be extracted from data obtained. Candidates must possess a Degree in Mathematics and either be Associates of the Institute of Statistics or hold a post-Graduate Diploma.

Apply, giving full details and quoting names of two referees (previous and, if possible, present employer) to Director of Labour and Welfare, Central Electricity Generating Board, 825, Wilmslow Road, Manchester, 20, by 10th December, 1962. Please quote vacancy No. E.149/558/S.

UNIVERSITY OF SYDNEY

LECTURESHIP IN GEOGRAPHY

Applications are invited for the position of Lecturer in Geography. Candidates should have research experience in socio-economic geography, for preference in South-east Asia or Melanesia, with special reference to the geography of subsistence economies. Training in history and/or economic history would also be an advantage.

The salary for a Lecturer is within the range £A1,730 x £105—£2,435 per annum, plus cost of living adjustments (at present £A44 p.a.) and will be subject to deductions under the State Superannuation Act. The commencing salary will be fixed according to the qualifications and experience of the successful applicant.

Under the Staff Members' Housing Scheme, in cases approved by the University and its Bankers, married men may be assisted by loans to purchase a house.

Further particulars and information as to the method of application should be obtained from the Secretary, Association of Universities of the British Commonwealth (Branch Office), Marlborough House, Pall Mall, London, S.W.1.

Applications close in London and Australia on *January 25, 1963.*

CENTRAL ELECTRICITY GENERATING BOARD

SOUTHERN PROJECT GROUP

Assistant (Contracts)

Applications are invited for the post of Assistant in the Contracts Officer's Department at the Headquarters of the Southern Project Group, Finchley, London, N.3.

The salary will be within the range £971 to £1,095 per annum according to qualifications and experience.

The Group is responsible for the construction of nuclear and conventional power stations in Southern England. The successful applicant will be required to assist in the examination of the commercial aspects of the tenders for the necessary plant, civil engineering and building contracts, and to carry out general commercial duties.

The post would be suitable for a young man or woman of some commercial experience, but not necessarily in this field. This is not a specialist post, and, while not essential, a University degree or some professional qualification in accountancy, law or branch of engineering would be an advantage.

Applications, stating age, qualifications, experience, present position and salary, should be forwarded to the Administrative Officer, Central Electricity Generating Board, Southern Project Group, Squires Lane, Finchley, London, N.3, to arrive not later than Wednesday, December 12, 1962. Envelopes should be marked "Confidential—ref. S/62/44."

H. H. GOTT,
Chief Project Engineer.

THE THOMSON ORGANISATION LTD

BIRMINGHAM (CITY OF) EDUCATION COMMITTEE

COLLEGE OF COMMERCE

APPOINTMENT OF PRINCIPAL

Applications are invited for the appointment of PRINCIPAL of the City of Birmingham College of Commerce, to commence duty on September 1, 1963, or as soon as possible thereafter. The salary scale is £2,750 x £70 (2) x £60—£2,950 per annum.

Candidates should have high academic qualifications and wide experience including, if possible, teaching and commercial or industrial experience.

Application forms and details of the post may be obtained from the undersigned, to whom completed forms must be returned not later than Monday, December 10, 1962.

E. L. RUSSELL,
Chief Education Officer.

Education Office (Room 315),
Margaret Street, Birmingham, 3.

UNIVERSITY OF ADELAIDE

The University invites applications for the following posts:

In the Faculty of Arts:
Reader or Senior Lecturer in History; Senior Lecturer in German; Lecturers in English, History, Psychology, Politics.

In the Faculty of Economics:
Lecturer in Economics.

In the Faculty of Law:
Senior Lecturer.

SALARY SCALES: Reader £A3,000-£100-£3,300; Senior Lecturer £A2,450-£110-£3,000; Lecturer £A1,675-£100-£2,450; with superannuation on the F.S.S.U. basis. The initial salary may be fixed within the appropriate scale in accordance with the successful candidate's qualifications and experience. Salaries are paid monthly.

FURTHER INFORMATION:

(a) The Calendar of the University may be consulted in the Library of any University which is a member of the A.U.B.C. or at the office of the Association. Inside the covers are plans of the University buildings and site, and of the Waite Agricultural Research Institute at Glen Osmond (four miles from the University).

(b) A potential candidate for any post should also seek from the Registrar of the University or from the Secretary, Association of Universities of the British Commonwealth (Branch Office), Marlborough House, Pall Mall, London, S.W.1, the following documents:

(i) General Conditions of Appointment, which include particulars of tenure, superannuation, removal expenses, invalidity and study leave.

(ii) A statement giving further particulars of each post and of such matters as help in housing, conference grants and special support for research.

(c) The University will gladly supply any further information desired on request to the Registrar.

APPLICATIONS, in duplicate, should give the information listed in the final paragraph of the General Conditions of Appointment, and should reach the Registrar, The University of Adelaide, Adelaide, South Australia, not later than *January 7, 1963.*

MILK MARKETING BOARD

AWARDS IN AGRICULTURAL ECONOMICS

The Milk Marketing Board invite applications for their awards for vocational study and for research in agricultural economics. The awards are open to men and women who are graduates of universities in the United Kingdom in any subject, but preference is given to those whose degrees have been obtained in agriculture, in economics, or in social or business studies. Candidates are expected to have gained a first-class or good second-class Honours degree, but any qualifications of similar status may be accepted.

There are two categories of awards:

(a) STUDENTSHIPS (£700-£750 per annum) are for postgraduate students qualified to study for a postgraduate degree or diploma or to take up research work in agricultural economics;

(b) FELLOWSHIPS (£800-£1,200 per annum) are for persons who have already had experience in postgraduate study in some subject cognate with agricultural economics.

Applications should be sent not later than January 31, 1963, to the Secretary, Awards in Agricultural Economics, Milk Marketing Board, Thames Ditton, Surrey, from whom further particulars and forms of application may be obtained.

UNIVERSITY OF NEW ENGLAND

Armidale, New South Wales

LECTURER OR SENIOR LECTURER IN AGRICULTURAL ECONOMICS

Applications are invited from suitably qualified persons for appointment as Lecturer or Senior Lecturer in Agricultural Economics.

Salary will be within the ranges of £A1,730 x £105—£A2,435 for a Lecturer and £A2,550 x £95—£A3,000 per annum for a Senior Lecturer, with commencing rate determined in accordance with qualifications and experience. In addition, a cost of living allowance at present amounting to £44 per annum is payable. Provision is made for travel and removal expenses, superannuation benefits and travel grants and full pay for study leave. Under the staff housing scheme an advance of up to 90 per cent, or more in special cases, may be made towards the cost of purchasing or building a home. Residential Fellowships may be awarded to single persons by one of the University Colleges.

Further information may be obtained from the Secretary, Association of Universities of the British Commonwealth (Branch Office), Marlborough House, Pall Mall, London, S.W.1.

Applications close in Australia and London on *December 31, 1962.*

AIC EXECUTIVE SELECTION DIVISION

is advising on the following appointments

OPERATIONAL RESEARCH CONSULTANTS

for Associated Industrial Consultants Limited. Due to the success of Operational Research projects undertaken for A.I.C. clients, an Operational Research Division was established in 1960 which has since expanded rapidly. The Division now comprises scientists, mathematicians, statisticians, engineers and economists who are engaged on highly interesting problems in industry, commerce and government departments. We would like to engage additional men who are fully experienced in O.R. and who are capable of successfully implementing their solutions. Attractive salaries will be offered.

(Mr. D. V. E. Howard: Reference 846/4)

Brief written applications, quoting reference number, should be sent, in complete confidence to the Consultant concerned at:

ASSOCIATED INDUSTRIAL CONSULTANTS LIMITED
KNIGHTSBRIDGE HOUSE 197 KNIGHTSBRIDGE LONDON SW7

Associated Industrial Consultants

THE UNIVERSITY OF MANCHESTER

HALLSWORTH RESEARCH FELLOWSHIPS

Applications are invited for the above Research Fellowships for advanced work in the field of Political Economy (including Business and Public Administration). The value of the Fellowships will normally be within the range £900-£1,900 per annum, according to experience and qualifications. Regulations governing the award of the Fellowships may be obtained from the Registrar, the University, Manchester 13, to whom applications should be sent not later than December 31, 1962.

UNIVERSITY OF GLASGOW

LECTURESHIP IN MATHEMATICS

Applications are invited for a Lectureship in Mathematics from persons qualified in Pure or Applied Mathematics. Salary scale: £1,150-£1,950 per annum. Initial salary according to experience and qualifications. F.S.S.U. and family allowance benefits.

Applications (eight copies) should be lodged, not later than January 31, 1963, with the undersigned, from whom further particulars may be obtained.

ROBT. T. HUTCHESON,
Secretary of University Court.

For further appointments and other classified advertisements see pages 968 and 970

UNIVERSITY OF GLASGOW

LECTURESHIP IN MATHEMATICAL STATISTICS

Applications are invited for a Lectureship in Statistics from persons qualified in Mathematical Statistics. Salary scale: £1,150-£1,950 per annum. Initial salary according to experience and qualifications. F.S.S.U. and family allowance benefits.

Applications (eight copies) should be lodged, not later than January 31, 1963, with the undersigned, from whom further particulars may be obtained.

ROBT. T. HUTCHESON,
Secretary of University Court.

FORMICA LIMITED
a member of the De La Rue Group

require a young

MARKET RESEARCH EXECUTIVE

A young executive, aged 23-25, is required for the Commercial Development Department of Formica Limited. Essential qualifications are education to university standard, a clear, fast mind, and an ability to talk and write lucidly. It is desirable, though not essential, that candidates should have a degree in economics, and some experience with a manufacturing concern or an agency.

The department is concerned with economic and commercial intelligence, business forecasting and the investigation, development and marketing of new products and applications.

Write (quoting reference R.7221), stating age, education, experience and salary, to:

Assistant Personnel Officer,
Formica Limited,
De La Rue House,
84-86 Regent Street, London, W.1.

UNIVERSITY OF GLASGOW

RESEARCH FELLOWSHIP IN MATHEMATICS

Applications are invited for a Research Fellowship in Mathematics. Salary scale: £900-£1,050 per annum. Initial salary according to experience and qualifications. F.S.S.U. and family allowance benefits.

Applications (three copies) should be lodged, not later than January 31, 1963, with the undersigned, from whom further particulars may be obtained.

ROBT. T. HUTCHESON,
Secretary of University Court.

NABISCO FOODS LIMITED

Welwyn Garden City, Herts.

invites applications for the position of

RESEARCH OFFICER

to be responsible to the New Products Manager for the direction and supervision of all research appertaining to the marketing of existing and new products.

Ideal candidate will have about two to three years' market and consumer research experience, including product testing, motivation research and pre- and post-testing of advertisements. He will be looking for a progressive career in industry and be equipped in personality and temperament to become a vital part of a young management team occupied with the task of widening and diversifying the Company's range of products.

Applicants invited to write, stating age, educational background, qualifications, experience, present position and present salary, to DIRECTOR OF PERSONNEL.

EDUCATION: BUSINESS AND PERSONAL

UNESCO

Applications are invited for one- or two-year appointment as Professor of Statistics at the University College of Rhodesia and Nyasaland. Duties include development of facilities for training professional statisticians at University level and teaching statistics courses for Universities of London B.Sc.(Econ.) degree. Base salary equivalent to approximately $US10,650 p.a. plus substantial allowances, all tax free. Passages provided for appointee, wife and children under 18. Gratuity of 8 per cent of salary on termination. Appointment to commence as early as possible in 1963. Application forms available from the Secretary, Inter-University Council for Higher Education Overseas, 29 Woburn Square, London, W.C.1, from whom further particulars may be obtained.

KENT COUNTY COUNCIL

SENIOR PLANNING STAFF

Applications are invited for the following appointments in the Planning Department serving Kent, where problems of great interest are arising:—

(a) SENIOR DIVISIONAL PLANNING OFFICER, Scale CD (£1,615-£2,045).

(b) DIVISIONAL PLANNING OFFICER, Scale AB (£1,370-£1,730).

(c) SENIOR PLANNING ASSISTANTS at appropriate grades within Grades A.P.T. IV/V (£1,180-£1,535) according to qualifications and experience.

For post (a), an architect planner is required for the study of Central Areas and urban redevelopment problems, a large programme of work of this kind being in hand. Corporate Membership of the Town Planning Institute and of the Royal Institute of British Architects is essential.

For post (b), Corporate Membership of the Town Planning Institute is required. This officer will be concerned initially with the preparation of Town Maps and the review of the Development Plan, including related development control work.

For posts (c), one officer is required for central area and redevelopment work and one for Town Map and Review work or development control duties. Consideration will be given to applicants who have recently passed the Final Examination of the Town Planning Institute or been exempted therefrom, but Corporate Membership of the Town Planning Institute will be required for posts progressing beyond Grade IV.

For the post concerned with redevelopment problems, consideration will be given to the appointment in Grade IV of an applicant qualified as a Chartered Surveyor, Civil Engineer, Municipal Engineer or Architect who has had acceptable experience of this kind of work and who intends to obtain a planning qualification.

The posts are superannuable. Five-day week. Applications, with names of two referees, to County Planning Officer, County Hall, Maidstone, by 31st December, 1962.

HOW A NATION GROWS

Gigantic hydro-electric project will be Asia's largest

The Kurobe River hydro-electric power project now under way in Japan's Northern Alps will produce 960,000 kilowatts, enough to supply the entire city of Osaka. Kurobe Dam No. 4, now nearing completion, is 1,448 metres above sea level at its highest point and will hold 160,000,000 tons of water. This is only one of many such projects throughout the country that will provide the basic power essential for Japan's continuing economic growth.

The growth rate of Japan's economy in the past few years has attracted astute investors throughout the world. Despite the present period of business adjustment, the long-term outlook is favourable. But the securities market has become more selective, and to make the best investments you need accurate data and the kind of expert advice Yamaichi has the skill and experience to give. More than 110 Yamaichi offices and 50 research specialists are in constant touch with every segment of the economy. Our services and a wide range of publications on investing in Japan are available to individual and institutional investors on request, without obligation.

ABSTRACT CALLIGRAPHIC RENDITION OF MT. FUJI

COMBINING LONG EXPERIENCE
WITH A YOUTHFUL SPIRIT,
THE FUJI BANK BRINGS YOU
EFFICIENT, PERSONALIZED BANKING SERVICES
DIRECT FROM IMPORTANT TRADE CENTRES
THROUGHOUT JAPAN.

JAPAN'S LARGEST COMMERCIAL BANK
THE FUJI BANK LTD.
Head Office: Tokyo, Japan
Overseas Offices: London and New York
Representative: Calcutta

. . . I must say we always get prompt service from our bank. They operate a system of decentralised control with a District Head Office in this area empowered to make major decisions. This not only saves time, it also enables us to negotiate with people who are familiar with local conditions here . . .

I'm glad we use Martins Bank

Martins Bank Limited.

The Importance of Good Counselling

The present trend of moderation in the phenomenal growth of the Japanese economy is attributed to the Government's policy of controlled capital investments. In portfolio management, proper counselling is just as important, if not more so, during this period of readjustment. Nikko . . . adviser to the U.S. Japan Fund . . . offers you complete data on Japanese stocks gained through experience and comprehensive research. Your nearest Nikko office will be pleased to give you up-to-date market information.

Managing Directors

The choice of a whisky to send to your fellow-directors or clients at Christmas time is often not an easy one. There are many fine whiskies on the market, but specially recommended is a rather more exclusive than average blend, the Grand Macnish. This light de luxe whisky retains the true flavour of the Highland malt whiskies, and has a delicate quality which once tasted is never forgotten. Available from your wine merchant. In decanter bottles packed in presentation boxes.

Sole agents in England and Wales:

ATKINSON, BALDWIN & CO. LTD.
46 Glasshouse Street,
Regent Street, London, W.1.

A copper seal used more than 4 centuries ago. This seal was used by Toyotomi Hideyoshi, Japanese military leader (1536-1598) during his rule for most important documents. On it are engraved verses from an ancient poem which signify good fortune and longevity and contain the word Tokai (東海); hence the name of the Tokai Bank.

Ever since its establishment this bank has enjoyed continued growth and prosperity. Today it is one of the leading banks in Japan with 176 branch offices strategically located and staffed with more than 9,000 employees—many of them experts in the field of foreign trade. With this nation-wide network of branches, Tokai Bank is in a position to offer unrivalled service to whoever trades with Japan.

Christmas Gifts—please think of our 700 children, too

To most children, Christmas is a time of happy excitement; some are less fortunate. It is for these poor children that we make this Special Christmas Appeal. There are 700 in our Homes and in the "Arethusa" who depend on us for everything. We are neither Nationalised nor subsidised; even with the utmost contrivance it is impossible to make ends meet in face of constant increase in costs. We have to depend on voluntary subscriptions . . . will you be among our benefactors?

Please send a donation to the General Secretary, F. A. Thorp, Esq.

This CAN holds a new sensation for instant coffee users

How two industrial giants laboured to retain one of the most elusive aromas in the world—the fragrance of freshly roasted coffee—in this can of new 'Nescafé'* instant coffee.

It took more than 10 years of difficult and costly research to perfect the new aroma-rich 'Nescafé'. For the aroma of freshly roasted coffee is elusive and intangible, even though it is a large part of the enjoyment.

Canning an aroma is not easy. (Metal Box, who make the 1-oz. and best-selling 2-oz. cans, say this is the understatement of the year.) Especially when the can will be in constant use, must open and close easily, and, above all, must be produced cheaply, in vast quantities, at high speeds.

Air is the problem . . . New, airtight cans were specially designed for 'Nescafé', and have heavy-duty aluminium-foil protection, cushion-seamed into the top, wrinkle-free and capable of being packed under 13″ of vacuum. They are 5-part containers, made to be opened 30-40 times during a short life. And since 'Nescafé' prices have not increased, cost is all-important.

. . . but speed is the answer. Metal Box's solution was to simplify production and get high speeds. It took months of testing, rejigging and headache to achieve a tough, airtight, cheap little can that runs at *600 a minute* off the only machines in Europe capable of such speed. With all its sophistication, the new can only costs a few shillings a thousand more than its simpler, non-airtight predecessor.

What's in it for the consumer? Aroma, needless to say. The new olfactory sensation will help to keep 'Nescafé' in its position as brand leader in a highly competitive market. A growing market, too, for demand is increasing by 20% a year, and there are already over 12 million cups of 'Nescafé' drunk every day. It is well worth 10 years of work, and thousands of pounds invested in research and development, catering for the instant coffee drinker of today.

Metal Box were consulted at a very early stage by Nestlé, themselves international canning experts. But smaller, and even more complex, problems get the same service. Metal Box, with all their size and resources, place their design, engineering and research skills at the disposal of anyone selling food. Could they help you with *your* product?

JOBS FOR THE BOYS

The first industry that could, and should, be decentralised from London is that of government: why not a Brasilia, Canberra or Washington of our own? (p. 989).

Other Government aid for depressed areas is admirable—as long as it does not prolong the lives of fading and inefficient industries at the expense of those better able to grow (p. 1037).

•The Minister of Labour is to remodel the nation's arrangements for **industrial training**; but can his new committees be radical enough? (p. 994).

•Should **civil servants** leave their jobs for industry? (p. 999); has the Government any means of planning where they should work before they do? (p. 1023).

East Anglia is steadily preparing to receive its latest population explosion (p. 1022).

BACKROOM BOYS

Mr Macmillan's position is not yet seriously challenged within the Conservative party: but it could be—after a reform of the Lords or a let-down at Brussels (p. 995).

The Board of Trade has acted untypically in a recent **dumping** case: but it does not propose to set a precedent (p. 1051).

The Government may be going slow on **railway reorganisation**: after this week's good debate in Parliament it must push on faster (p. 996).

Oxford is to (slightly) modernise its arrangements for selecting candidates (p. 1024).

The Economist analyses **profits** and **dividends** in October and November (p. 1047).

BOYS WILL BE BOYS

A new **television** transmitter should enable Londoners to identify more clearly the jiggling on their screens (p. 1023). The jigglers should be wary of pricing themselves out of the BBC market (p. 1000).

Rumours are rife in the motor industry: of new cars particularly (p. 1048).

By leaving reform of **hire purchase** law to a private member's bill, the Government has made sure that this will not receive the attention it ought to have (p. 1046).

A reform of the university careers structure could be the way to give **dons** a fair reward for their labours (p. 999).

Commodities discussed: tin (p. 1052); sisal (p. 1048); cotton (p. 1044).

Colour reproductions of pictures are unscientifically tested: and some are found wanting (p. 1003).

INTERNATIONAL

NOT FOR PROTESTANTS

Politics in the **Vatican Council** in Rome have proved to be active and liberal, and anything but fatherly (p. 1007).

On the other side of the same town religious cries of "revisionist" and "imperialist tool" rock the political sessions of the Italian Communist party congress in the course of the **grand doctrinal debate, and power argument, between Moscow and Peking** (p. 987).

Dr Adenauer's latest gambit has got all factions confused; and at the moment it has turned into a bewildering free-for-all (p. 1008).

Mr Khrushchev has managed that not uncommon feat for politicians of stating two points which are, logically, mutually contradictory; he has stated them both with his usual vigour (p. 1006).

NOT FOR PACIFISTS

Europeans and Americans are once again hard at work on the riddle of a multilateral **nuclear European force; the *nth*** power problem; and how many fingers to have on the **trigger** (p. 991).

India, Pakistan and China form a most unsteady triangle in the midst of that massive form, the Himalayas (p. 992 and p. 1005).

FOR REALISTS ONLY

Britain and the Six face their real difficulties next week (p. 1005). The talks have reached the delicate and ambiguous question of Britain's commitments to the **Efta countries** (p. 1000). Signor **Colombo** has been active (p. 1003).

In Germany, as elsewhere, coal means votes: the government may well be prepared to drop a liberal energy policy overboard for a chance to strengthen its position (p. 1040).

The World Bank report on **Spain** has had an astonishing success: it has been described as Anglo-Saxon, and the government has paid it the compliment of taking some of its advice (p. 1003 and p. 1046).

The Gaullists came to power promising **price stability in France**, but prices continue to rise: the battle against cost inflation must be one of the first jobs of the new cabinet (p. 1047).

MADE IN USA

The coming American **defence budget** will reflect the lessons learned over Cuba (p. 1013).

Mr Adlai Stevenson may have had queries about Cuba but these do not make him any less valuable to President Kennedy (p. 1014).

Americans hope that retraining may be the answer to their long-term **unemployment** (p. 1014).

Labour cannot be blamed for the decline in **business profits** (p. 1018).

The **railway unions**, united against the railway companies, have driven them to unite in their turn (p. 1021).

It is still possible that Webb and Knapp may indeed become "one of the greatest companies in the world" (p. 1017).

Made in Europe

The future of the **supersonic "Concord" aircraft** now depends on its competition: and it may make its own—by stinging US manufacturers into pressing for an American rival (p. 1039).

Giants' feet have rubber soles

Many of today's construction colossi stand on mats made from one of the various types of Polysar* rubber. Polysar shock absorbers insulate the footings from the building proper, dampen the vibrations caused by road and rail traffic. You'll find Polysar rubber in floor tiling, in stair treads and rails, stripping for windows and doors, in cable and wiring, caulking compounds and sealers, escalator steps and platforms. In fact from sub-surface rock to weather-bombarded roofing, Polysar rubber is vital to the construction industry.

If you are planning a new process, a new product, or improvements to an old one, success can depend on your finding a new raw material. A most promising source may lie among the 40 different types of Polysar synthetic rubbers, produced by the Polymer Corporation Limited.

Within the world-wide Polymer organization there is a representative nearby, ready to advise you. A letter to the Marketing Division, Polymer Corporation Limited, Sarnia, Canada, will put him in touch with you.

Budd progress rides the rails

Budd has pioneered railway progress for over 25 years. Today, Budd-built passenger cars of all types—mainline, multiple units, self-propelled rail diesel cars (RDC) and subway cars—are in use on six continents. Railways around the world prefer cars built by Budd and its licensees because of the advantages of sound stainless steel construction: lightness, dependability, economy and low maintenance. They also like such extra features as unique Budd-designed trucks and efficient disc brakes. Budd continually seeks new ways to improve rail service, lessen maintenance and reduce operating costs. Unique skills in engineering . . . metallurgy . . . tooling . . . welding . . . research . . . testing and production have helped place Budd high among the world's 250 largest industrial concerns. For information about our railway activities, write THE BUDD COMPANY, INTERNATIONAL DIVISION, Philadelphia 32, Pa., U.S.A.

Left-Handed Cigars or Right-Handed Golf Clubs: Everyday Examples of AMF's World-Wide Versatility.

Left-handed or right, a properly-instructed golfer will usually prefer to play with right-handed clubs — and the AMF-Ben Hogan complete line of golf equipment is ready to accommodate him. On the other hand, a cigar wrapped with natural leaf on cigar machinery must be wrapped either to the left or the right, depending on which half of a destemmed wrapper leaf is used. Thus, cigar machines must be designed to wrap either to the left or to the right. Solving such problems in cigar machinery, like making the best in sports equipment, is the function of the world-wide versatility of AMF. In many fields, in many lands, in many product lines, new important departures take place every day—thanks to AMF International.

Why Kofi Asare moved house

Kofi Asare grew up in the quiet Ghanaian fishing village of Tema; going out in the boat every day with his father and brothers. Until two years ago he lived in a reed hut—like the rest of the villagers. But today, Kofi is a man with a promising future! With the building of the new £27,000,000 harbour at Tema (Africa's largest man-made port) his whole way of life has changed. Kofi now lives in a house in the new township of 40,000 people, and works as a leading hand on one of the modern fishing vessels operating out of Tema. His children attend a new primary school and his wife shops in modern surroundings. Ghana's Tema harbour has brought a new standard of living to Kofi and to thousands of others like him.

Atlas Copco compressed air equipment and Sandvik Coromant drill steels and bits were used extensively in the construction of the harbour and its connecting roadways. Tema harbour is only one of the many large engineering projects in which Atlas Copco and Sandvik Coromant equipment have played an important role. Group Headquarters: Atlas Copco AB, Stockholm 1, Sweden.

VOLUME CCV - NUMBER 6224

The Wars of Religion

WHEN, nearly seven years ago, Mr Khrushchev first denounced Stalin, and proclaimed peaceful co-existence with the West, he must have realised that he was starting something pretty big inside the Soviet Union. One wonders whether he fully realised how much trouble he was creating for himself in the communist world as a whole. Two years ago, a compromise between the opposing views of Moscow and Peking was painfully hammered out at a conference of 81 communist parties in Moscow. Both the Soviet and the Chinese press, each turning a blind eye to the real state of affairs, have recently been celebrating the anniversary of that declaration. As is proper with a compromise, each party managed to interpret it to its satisfaction. In fact the rift in the communist world is now as wide as it has ever been.

The pretence that the quarrel is not between the two communist giants, China and Russia, but is merely due to the excesses of two mavericks, Albania on the one side and Jugoslavia on the other, has been virtually dropped. "We must tell you frankly," said the Chinese delegate at the Italian Communist party congress on Tuesday, "that the Chinese communists have different opinions on certain matters to other Communist parties." The quarrel has become so pervasively obsessive that practically everything that happens in the communist world—whether it be Marshal Tito's "holiday" visit to Russia, or a communist party congress in Sofia or Budapest, or even one outside the Soviet block, in Rome—is judged primarily in the context of its effect on the quarrel between Moscow and Peking.

In fact, the 1960 Moscow compromise received a body blow a year ago at the 22nd Soviet party conference when Mr Khrushchev launched his new destalinisation campaign and made an open attack on Albania, which was publicly condemned by the Chinese delegate. The open break, which looked dangerously near, was avoided; for most of this year both parties, for reasons probably more domestic than ideological, managed to be comparatively civil to each other. The doctrinal quarrel, however, simmered on; towards the end of the summer it began to boil again, and Peking's vituperative reaction to President Brezhnev's visit to Belgrade in late September showed that Chinese patience was again running out.

It is, however, the Cuban crisis and the Chinese invasion of India that between them have made the crisis so acute now. All the dreary and repetitive wastes of ideological polemics were suddenly made actual. Mr Khrushchev's withdrawal from Cuba and, perhaps to a lesser extent, the Chinese invasion of India owe far more to considerations of power politics than to ideology. But both go straight to the heart of the practical problems which are what the ideological quarrel is fundamentally about—the relations of the communist world with the West, and how to bring the uncommitted world within the communist fold.

According to the Peking *People's Daily*, on November 15th, "The distinction of a Marxist-Leninist from a modern revisionist lies, first of all, in the attitude towards imperialism." The Russians, as much as the Chinese, agree that imperialism is wicked and an active danger. (Each in fact tries to pin it on the other by suggesting that the Albanians—or the Jugoslavs—are actively helping the imperialists.) But while the Russians distinguish between "aggressive circles" in the United States, and those Americans, like President Kennedy himself, who appreciate the dangers of nuclear war, the Chinese and the Albanian

tar all Americans with the imperialist brush. The Russians believe that because of the common danger of nuclear destruction they can come to an understanding with the Americans. Their opponents are shocked at the very idea of trusting an imperialist: "Kennedy," as the Albanian premier, Mr Shehu, declared last week, "is no more sincere or peace-loving than Hitler." Thus, while in the Russian view Mr Khrushchev has triumphantly vindicated the peace-loving nature of communism, defeated the designs of the imperialist groups in America, and paved the way for better relations with the United States, in the Chinese view Mr Khrushchev is a traitor to the communist cause: he has retreated before the imperialists and deserted the brave Cuban people who form the spearhead of revolutionary communism in the western hemisphere.

RUSSIA's reaction to China's invasion of India has been much more muted than China's reaction to the Cuban crisis. No doubt the delicacy of Moscow's diplomatic position between New Delhi and Peking has had an inhibiting effect. But it must have been very galling for the Russians to see the Chinese pushing the Indians off their non-aligned course, further demoralising the Indian communist party, and presumably filling the rest of the uncommitted world with doubts and disillusion about the communists' peaceful intentions. The Chinese may hope that they have given the timid Russian comrades a convincing demonstration of how to impose your will on another country (or heave a local communist party into power) by armed force without sparking off a nuclear war—although they can hardly say this openly since their action was allegedly purely defensive.

The Russians are more likely to be impressed by the evidence of the strength of Asian nationalism provided by the divided Indian communist party's public denunciation of "Chinese aggression"; they may well have felt confirmed in their own less crude methods of peaceful penetration. This week, in the sympathetic atmosphere of the Italian party congress in Rome, both Signor Togliatti and the chief Soviet delegate, Mr Kozlov, made clear their deep disapproval of the Chinese action against India. It is significant that the Russians, who up to now have been reluctant to expose their quarrel with Peking to prying western eyes, should have chosen to criticise the Chinese so plainly at a western communist party congress where their words could be expected to receive the maximum publicity in the West.

For the Italian communist delegates assembled in Rome this week, their congress must seem a rather curious affair. Threatened by growing political isolation at home through the Nenni Socialists' involvement with Signor Fanfani's centre-left experiment, they have particularly tricky problems of domestic tactics to worry about; but what in fact has monopolised their attention and their interest has been the inflamed international conflict between Moscow and Peking. This inflammation is bound to have its effect on the argument about internal policies that is now going on inside most communist parties—between the adherents of Mr Khrushchev, and those who sympathise with the "dogmatic" Chinese and fear a too rapid retreat from stalinism. Three weeks ago the Albanian party paper published a long and detailed condemnation of the "theses" that have been presented this week to the Italian party congress; the Italian attitude was condemned as "a total slide into opportunism and revisionism." This article represents an extreme case of one of the most rigid communist parties attacking one of the most experimental. For most of the important communist parties in power in eastern Europe, the Khrushchev line is accepted in principle; the argument is about how far and how fast to put it into practice.

In Hungary, for instance, the process of what the West calls liberalisation seems to be going comparatively fast. Czechoslovakia is different: Mr Novotny has kept his foot firmly on the brake and is clearly very reluctant to let it off even a little. In his opening speech at the Czechoslovak party congress in Prague on Tuesday, he announced that the political trials held between 1949 and 1954 (including presumably that of Rudolf Slansky) would be reviewed "once again," and "basic conclusions" drawn within four months. Plainly Mr Novotny feels compelled to promise a political post-mortem; just as plainly, he would dearly like to wriggle out of it. But when the quarrel between Moscow and Peking is in an acute phase, as it is at present, it increases the pressure on lesser communist leaders in the Soviet block to follow the Khrushchev line on internal policies.

This does not mean that what is now going on in the communist world is just a crude struggle for power by Russia—although the Chinese, with their baleful references to the dangers to the communist movement of "great-power chauvinism," would obviously like to insinuate that it is. True, the reported circumstances of Mr Yugov's fall from power at the Bulgarian party congress last month suggest that Mr Khrushchev is not above throwing his weight about when it is a question of preventing a possibly pro-Chinese regime in a European communist state. But today, with the doctrine of different roads to socialism firmly established, this sort of behaviour is the exception rather than the rule. Marshal Tito, who knows his Russians, would never have gone to Moscow this week if he had not felt reasonably confident that he could do business with the Russian leader on acceptable terms. Mr Khrushchev would almost certainly not have cultivated Marshal Tito so assiduously in recent months had he not been quarrelling so heartily with the Chinese, and had he not felt that the support of the arch-revisionist might be useful. It remains to be seen how much he is prepared to offer for that support.

ALTHOUGH considerations of national power and prestige are basically involved in the calculations of both Moscow and Peking, what is going on between them is not just an old-fashioned struggle for power; it is primarily a clash of doctrines on the correct methods of developing and extending the communist world. As with all doctrinal disputes, this one has become bitter, and neither side any longer shows any real wish to compromise. Mr Khrushchev seems to be forging ahead on his chosen course with conviction and even with bravado. He has embarked on a major reorganisation of the Soviet communist party, not in order to improve the party politically and ideologically, but in order to make the Soviet economy more productive and the Soviet people more prosperous; the ideological pundits in Peking can pick all sorts of doctrinal holes in such a course. The allocation of funds between defence and agriculture in the new budget (to be presented to the Supreme Soviet next week) will give a significant indication of how far Mr Khrushchev means to go in concentrating on Russia's internal needs in reliance upon the good intentions of the West.

Outside the Soviet Union, the Russians' insistence on publicly advertising their differences with the Chinese at every available party congress suggests that they are now determined to do all they can to isolate their opponents. But, although at the moment the tide in the communist world is flowing strongly Mr Khrushchev's way, in virtually every communist party (and especially in the Asian ones) there are undercurrents of varying strength flowing Peking-ward. If the quarrel goes too far, it will indeed split the whole communist world from top to bottom. Both Moscow and Peking may well shrink from the responsibility of dealing the proselytising power of the communist movement such a crippling blow.

North to Elizabetha

What magnetic industries could the Government persuade to move to the north of England (See "Anatomy of Unemployment" on page 1037)? The most dynamic one to move would be central government itself—to a newly built administrative capital—a Brasilia for Britain—somewhere north of the Trent

WHAT has the south of Britain got that the north really wants? Short answer: the economic and social stimulus of a London. What has the south got that it would be well rid of? Short answer: the inefficiency of a congested central London (where office employment alone is rising by 15,000 a year). The chief arguments for re-invigorating the north are only too well known to every politician and economist—and, indeed, to everybody with any social conscience—at the present time. The chief arguments for decongesting the south-east are that a prolonged and unregulated influx means a high cost in road building and traffic jams; excessive journeys to work; and the effect of soaring urban land values on the provision of housing and other social needs (like schools and hospitals). The troubles of the north and south are, at least to this degree, complementary. If only something could be done to move one of London's fundamental magnets to employment (and especially to office employment) up to the north, the problem of Britain's steady relapse into being "two nations" could be solved at a single blow.

Up to now, all British political parties have assumed that the right magnets to try to move northwards are manufacturing industries, particularly of new style consumer goods. This policy has never really worked, because it means trying to cajole private commercial enterprises to go to one part of the country when they know in their hearts that they would make bigger profits if they operated somewhere else. Unfortunately, in the near future this policy is likely to work even less well still. The pull of Europe, whether Britain is in the common market or not, is calculated, for good economic reasons, to increase the flow of industry and population into the south-east. No government, whether Tory or Labour, could really bring itself to prohibit this movement into the British segment of the largest consumer goods market in western Europe. But, in return, is there any major, non-manufacturing, non-market-located and really magnetic growth industry that could be safely and profitably transplanted north of the Trent? The most obvious candidate, despite the horrified cries of protest that will be sent up, is the industry of central government itself.

London's past pride and present headache is to have become three capitals in one: the centre of commerce, finance and administration. In the nineteenth century, it was the financial capital and the administrative capital only. The centre of gravity for industry and commerce in those days lay in the north. As industry has congealed into large corporate agglomerations, and as boards of directors have therefore become financial tycoons rather than men of the workshop manager type, the centre of commercial power has inevitably moved down into the financial capital of the country. The financial mechanism of the City of London could not be successfully uprooted and shifted now, any more than the nearby continent of Europe can. But administration is something different, more detached and (highly important) happens to be directly under the Government's own control. A civilised Peter the Great is what Britain's top planning needs.

WITH modern means of communication (telephones, teleprinters, television) it is no longer a handicap to have the administrative capital of a country separated from its financial capital. America, Australia, Brazil, Canada, Holland, Switzerland, West Germany and others have them separated; they have even found that there are certain governmental advantages in that fact. True, there are certain other forms of employment that have to be in or near the administrative capital. Often, they are industries of a non-manufacturing type (newspapers, lobbyists and the like); but even among manufacturers it is obvious that for the new, science-based industries, proximity to government and the dispensers of governmental contracts has had a demonstrable influence on postwar factory location. And it so happens that the lack of these new industries beyond a 3½-hour travelling distance from Whitehall is a primary cause of the decline neurosis that has now overtaken even the most viable regions of the north and west. It would be a major advantage of shifting government bodily to a more central position in Britain that it would carry with it these and other dependents and ancillaries, and thus make it more possible to allow the industries that want to get closer to Europe to open up new factories in the south.

The proposal of this article is therefore as follows: to start building a new administrative capital for Britain—a Washington, a Canberra, a Berne, a Brasilia—somewhere north of the Trent, and to move Queen, Parliament and civil

service into it. A site on, say, the open building land between York and Harrogate (the Marston Moor country) might best fit the bill. It is midway between Thames-side and Clydeside; it would have good north-south communications; it would be within easy reach of the industrial areas of Lancashire and the West Riding (thus saving it from the complete social isolation of a Canberra); it would have on one side an historic city which, with its new university, is beginning to shake off the lethargy of its past and, on the other, a potential posh-suburb (highest current social rating outside the south-east) with an impressive initial stock of hotel accommodation.

The only workers whom the Government would be directly responsible for moving would be the 75,000 headquarters civil servants in the London region, plus another 25,000 members of the royal household, MPs, embassy staffs and miscellaneous dogsbodies. The new city of Elizabetha would thus have a basic bureaucratic population, at the family ratio of 3½ persons per salary earner, of 350,000 at the end of the first stage (five to seven years after construction began). This would be exactly equal to the number of people who migrated from the less favourable regions of England and Wales in the decade 1951-61. But with the build-up in service employment Elizabetha would rapidly pass the half-million mark; it would draw northwards to itself or its radial satellites such institutions as the law courts, elements of Fleet Street, the big lobbying establishments (public relations men, engineers and others) and, increasingly under the ægis of Bishopsthorpe, the Church of England.

Elizabetha would be at once the greatest single enterprise in Britain, or anywhere else, in modern architecture and town planning—and the effect of having one city securely anchored in modernity might be healthily cumulative elsewhere. Indeed the psychological consequence of having modern architecture, instead of those quaint old Houses of Parliament, as Britain's central governmental symbol could be a massive national advantage in itself. The net loss of population and even spending power to London would be comparatively small by London's standards; the potential gain to the north (by northern standards) would be very substantial.

The Economist

DECEMBER 6, 1862

PRESIDENTS AND MINISTRIES

It is a minor but still considerable defect of a Presidential Government, that not only does it compel the nation to wait during a certain interval before it makes a new choice of a supreme ruler, but also that it enforces a choice at the end of that interval. In a Parliamentary Government there is no stated day at which Lord Palmerston must be rechosen Prime Minister. He is removeable at pleasure, but he is not under notice to quit; his power does not of itself cease and determine at a particular time. The country, therefore, is not bewildered, nor is its policy deranged, by the proximate probability that upon a certain 4th of March the entire machinery of Government may be changed—that everything which is may cease to be, and everything which is not as yet may begin to be. In a Presidential Government, therefore, the Executive administrator is chosen by unskilled persons, whereas in a Ministerial Government he is chosen by comparatively skilled persons; he is chosen by persons who have few opportunities of judging, whereas a Parliament has many and good opportunities; he must be chosen at a fixed time, whereas in a Ministerial constitution the country is never convulsed without necessity, and the same Cabinet may last twenty years; he is chosen *for* a fixed time, and during that period he must remain, however incompetent he may be to new events and changing circumstances, and though by his gross unfitness he may be palpably ruining the country. Even these several points of superiority are not all which a Parliamentary Government possess, but they are enough to show that we need not grudge our Transatlantic relatives that form of Government which the *dis*united States, both North and South, from habit, blindness, and ignorance of what is better, seem both of them disposed to retain.

AGAINST the constructional cost and initial human discomfort of moving this nationalised industry into new quarters must be set the advantages of social and administrative efficiency that this beacon of the new Britain would accrue to itself. To have a big city designed from scratch for the motor age; to have the space to build half-decent Houses of Parliament and give MPs their office accommodation; to set up an administrative centre that neither requires the odd £900,000 (latest revised estimate for Downing Street) to save the most important bits of it from dry rot nor involves the dispersal of ministries in job lots throughout the metropolitan region—all these should be glowing incentives to the displaced administrators themselves (if the Admiralty still wants to, it could even reclaim its chaps from Bath).

To the north the stimulus would not only be psychological. It would bring it into much closer contact with, and influence upon, government; the Establishment would live in the new capital, and to retire to and visit the north would become one of the In things to do. The move would bring with it the construction of a convenient second international airport that actually connected the north of Britain with the outside world; and it would mean, to the outside world, the opening up of a whole under-developed interior. Elizabetha would do precisely the job Brasilia is trying to do, with considerably less risk and vastly more immediate effect.

For London, shorn of its one movable central industry, there would come the last, great chance to plan itself properly in a situation of temporarily relieved congestion at its heart. To pay for the move one would like to see the sale of most of the abandoned high-value sites to the highest bidder. The sites at Whitehall and Buckingham Palace could be sold off to Messrs Cotton and Clore, albeit under sensible town planning restrictions which saw to it that London's peak-hour traffic problem would be sensibly diminished. The more historic buildings whose destruction would pain Mr John Betjeman too deeply (with the Houses of Parliament at their head) could be turned into the nucleus of London's second and third universities; nobody except dons and students will easily put up with the discomfort of actually living and working in them much longer. The shopping and entertainments centres would remain in the old financial capital (Broadway and Fifth Avenue have not moved to the Potomac).

None of this would therefore knock the economic stuffing out of London. It would, indeed, give it the opportunity to become again an efficient commercial capital and port, secure in its own large local consumer market and poised to make the most of a Channel bridge or tunnel or dam with the continent. Heaven knows there is a multitude of built-in resistances to moving anything worth-while from the south-east to the north; government happens to be one of the most mobile and potentially one of the most magnetic industries of all. There are no prizes for spotting difficulties. But, really and truly—if politicians are serious about the need for long-term planning in Britain—why not?

Splitting Nato's Atoms

Nuclear weapons can cause either fission or fusion in the western alliance

AN intercontinental pundit himself, Mr Walter Lippmann was intercepted on Monday by an anti-pundit pundit in the shape of M. Raymond Aron. The two met nose-cap to nose-cap on the most difficult of all the questions now troubling the western alliance—the question who is to be responsible for the nuclear protection of western Europe. Mr Lippmann, talking to an assembly of journalists in Paris on November 29th, said that the European members of the alliance, like passengers in a car, could help the driver to map out the general direction of nuclear policy, but once the road was chosen "there can be only one driver at the wheel." For some years to come this solitary figure will obviously, in Mr Lippmann's view, be the President of the United States. On Monday M. Aron replied in *Le Figaro*, with a back-seat driver's tartness, that if this was what the Americans really wanted they were going to push the Europeans into buying a car of their own; even if (he might have added) it was only a modest little mini-deterrent.

Mr Lippmann does not speak for the American government, nor M. Aron for western Europe. But the clash between them does illustrate the conflict between the two impulses at work within the alliance. One is the impulse towards unity; the other the impulse for parity between western Europe and North America. The two may in the end prove irreconcilable. President Kennedy's Administration, however, has made a number of attempts to reconcile them, by offering the European allies a rather larger share of responsibility in nuclear matters short of full independence. The last such offer was made on November 16th in Paris by Mr George Ball, the second-in-command of the State Department, who said that the United States was ready to consider "a genuinely multilateral, medium-range ballistic missile force, fully co-ordinated with the other deterrent forces of Nato." The foreign and defence ministers of Nato, who meet in Paris next Thursday and Friday, will have to consider this offer, though they are most unlikely to come to any decision about it. It may be worth while to spell out, in broad terms, why it was made and what it probably means.

Why an American offer at all? If they want to, the Americans can make it a very long and expensive business indeed for the western European countries, either separately or in combination, to break the Americans' near-monopoly in nuclear arms. The total defence budgets of the six common market countries plus Britain add up to rather less than the $15 billion that the United States is spending this year on its nuclear armoury alone. The doubling of defence expenditure that would thus theoretically be necessary if these seven countries wanted to duplicate the American effort would be equivalent in Britain's case (to make it a joke) to roughly an extra seven-and-sixpence on the income tax. Of course, the Europeans would never try to duplicate the Americans' seven major nuclear weapons systems (the B-47, B-52 and B-58 bombers, and the Atlas, Titan, Minuteman and Polaris missiles). They would settle, at the most, for a relatively cheap range of two or three systems. But even this would be hideously expensive without American help.

Nevertheless, the fact is that some Europeans seem determined to damn the expense, and make a plunge for nuclear equality in some form or other. Unless they are frightened out of it later by the size of the bills, the only question left is what form the plunge will take. There are basically four possibilities. At the Western European Union assembly in Paris on Monday and Tuesday the French foreign minister and the British minister of defence, M. Couve de Murville and Mr Peter Thorneycroft, found themselves defending the national nuclear forces on which their governments have so far put their money.

A good many people, on the other hand, would much prefer to aim for some kind of united European force instead of a series of local atomic satrapies. This combined force is presumably the preference of those who want to see western Europe become in some sense or other a single unit, not just an alliance of separate states. They may or may not include Mr Thorneycroft (who spoke on Tuesday of Europe as a future "world power"). However, whether Europe decides in the end to go the national or the supra-national way, the nuclear forces that come into existence—of whichever kind—can either be meshed in with their American counterpart, or stand separate and independent. It is in order to make sure they are meshed in that the Americans have recently been dropping hints about "multilateral" forces.

Is the United States proposing an Atlantic deterrent? Not in the full sense of the term. The multilateral missile force mentioned by Mr George Ball on November 16th would probably consist of a number of Polaris submarines jointly financed and jointly manned by several Nato countries, including the United States. The Americans have worked out, and are circulating among their allies, an ingenious scheme for operating Polaris submarines with international crews. But it is pretty clear that no scheme can be devised for an international decision on whether and when to fire their missiles. It will be the Americans in the crew, taking their orders from the White House, who man the compartment with the firing button.

The point is that a genuinely transatlantic nuclear force will have to wait until a political bridge strong enough to support it links the two sides of the Atlantic. The man at the driver's wheel, in Mr Lippmann's phrase, would then be the accredited chief executive of a united Atlantic community instead of merely the head of one member of an alliance. But no such community is in sight. Until and unless the ideal solution of a really unified nuclear force becomes possible, Nato collaboration can usefully include joint ownership and joint manning of nuclear delivery vehicles; but it is bound to stop short of true joint control.

Is a combined European force more feasible? Marginally, yes. This is simply because the political binding together of western Europe, which is the essential prerequisite of a united military arm, is likely to go faster and further than the binding of western Europe to North America. (Even so, it may never go far enough.) There are signs that the Americans recognise this possibility, and are allowing for it. In a speech in Copen-

hagen on September 27th, Mr McGeorge Bundy, the chief foreign policy adviser in the White House, talked about the possibility of "a genuinely multilateral European deterrent, integrated with ours." This differs from Mr Ball's formula by the insertion of the word "European."

Obviously, the United States is feeling its way very carefully towards the exact degree of nuclear power it will have to share with western Europe. If the demand from Europe is strong enough, the Americans may be willing to help in setting up a joint European missile force, manned and theoretically owned by Europeans alone. But here again one runs directly into the question of who is to control the warheads. It is hard to imagine Congress agreeing to hand over the warheads as well as the missiles (although not to hand them over would raise some baffling problems in the case of a purely European-manned submarine force). And even if circumstances changed enough for the Americans to relinquish control of the warheads, they would undoubtedly insist on the closest possible integration between this new force and their own.

What will the outcome be? This is the hardest question of the lot. All one can do is to identify the best possible solution, and the very worst, and hope that something reasonable can be achieved in between. The ideal outcome would plainly be a genuinely Atlantic nuclear command based on a full-bodied Atlantic political community. This is certainly something to be worked for; but it is too remote to affect the decisions that now press upon the statesmen. The worst, and quite intolerable, outcome would be for the Europeans, either separately or together, to set up their own private atomic armoury without any links to the American one. This would polarise the alliance, since separate nuclear forces will nourish separateness in foreign policy. It would also alarm the east Europeans so much that a relaxation of tension in the middle of the continent might no longer be possible.

It may be that, as bombers grow obsolete and missiles and orbiting spacecraft become the order of the day, the Europeans will find the cost of sharing nuclear responsibility too great and, led by Britain and France, will back out of the competition. If that does not happen, however, the essential objective will be to weave the continuing European contribution—whatever its form; whether it is national or multilateral—as intimately as possible into the American contribution. The weaving could take several forms: combined planning, co-operation in fixing targets, perhaps in some cases collaboration in buying and manning weapons. Whatever the details, the aim should be to make it as hard as possible for either half of the alliance to act without the advice and consent of the other: otherwise, sooner or later, they will, calamitously, wrench apart.

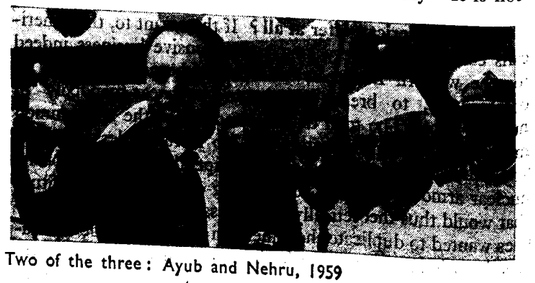
Three in the Himalayas

The threefold partition of Kashmir is likely to remain a fact, even if the Indo-Pakistani agreement to talk about it yields positive results—which is not likely

WHAT used to be, under successive Sikh and British paramountcy, the princely state of Jammu and Kashmir is now physically partitioned among three powers, India, Pakistan and China. From the time of the Indo-Pakistani cease-fire secured by the United Nations in January, 1949, India has held the greater part of the state—Jammu in the south, the Srinagar valley in the centre, and Ladakh in the east, together containing three-quarters of Kashmir's 4½ million inhabitants; while Pakistan has effectively controlled, through a rather shaky "Azad (free) Kashmir" government, a thin strip along the western border (which runs only forty miles from Rawalpindi, Pakistan's new capital), as well as a large area in the remote northern mountains. Now China has carved itself a third slice, in the north and east; a substantial acquisition in terms of territory—some 12,000 square miles, the size of Belgium—but virtually uninhabited.

India, struggling against this latest partition, now finds the question of the older one consequently revived. For the best part of a decade, the Kashmir dispute had been a one-sided affair, repeatedly raised by Pakistan, while India, having the nine-tenths of the law conferred by possession of the best three-quarters, sat tight and insisted that the case was closed. The more complacent Delhi appeared, the more frustration grew in Karachi and Rawalpindi. After President Ayub Khan's strong but restraining hand had restored some stability to Pakistan's previously often frenetic politics, a major work of reconciliation between the two neighbour countries was achieved in the 1960 treaty on division and redeployment of the Indus basin waters; but the momentum of that year was lost before it could carry them as far as a compromise over Kashmir, and their relations were soon marred again by a series of lesser border affrays. Nor has the new Chinese attack in any real sense improved the atmosphere between them: its effect has been to worsen it.

Only the poisonous working of the Kashmir dispute can explain the wild joy with which many Pakistanis have hailed India's discomfiture at the hands of China's army. It is not



Two of the three: Ayub and Nehru, 1959

so many months since President Ayub was chiding India for its refusal to discuss with him the joint defence of the Himalayan frontiers against encroachment from the north. Pakistan then had the posture of the West's sturdy ally in resistance to the communist powers' ambitions, and scorned the spinelessness of India's refusal to stand up in the same line and be counted. But now its president is deafened by

his fellow-countrymen's cheers for communist victories, urged by many of them to renounce alliance with the West, and urged by virtually all to make India's difficulty Pakistan's opportunity to redress the Kashmir account. The Chinese, whom Mr Nehru bluntly labels "imperialists." have certainly found for themselves the classical type of situation that has so often made imperialist expansion an easy job in the past: a quarrel between two neighbours so bitter that one of them gladly welcomes the armed intervention of a third and more powerful state, heedless of the familiar consequences. (Did not the British establish themselves in the Indian subcontinent, with remarkably little resistance, through the workings of just this same historical pattern?)

When Mr Nehru and President Ayub announced on November 29th their decision to try once again to resolve their differences "on Kashmir and other related matters, so as to enable India and Pakistan to live side by side in peace and friendship," it must have seemed to many far-off observers that sanity had triumphed. The family fight was apparently going to be settled so that the northern intruder could be held off. A closer view, such as our correspondent in India takes on page 1005, is much less comforting. The agreement to talk has indeed been made; that is something. The talks may well proceed from the initial stage at ministerial level to that of a personal meeting between the two heads of government. If things do get that far, some papering-over device may be worked out (indeed, to save face, something will have to be worked out). One or two marginal issues might get settled; some kind of continuing mechanism for consultation, perhaps in the shape of joint committees at the "expert" level, might be left behind. But that is just about all that can be expected, as matters stand.

THE plain fact is that the agreement to talk has itself been achieved only in consequence of the strenuous diplomacy of the special British and American emissaries, Mr Duncan Sandys and Mr Averell Harriman, who were in India and Pakistan last week. The agreement represents no real shift toward a Kashmir settlement. In Rawalpindi on Tuesday, Sardar Bahadur Khan urged in the name of Pakistan's renascent parliamentary opposition that the talks should not even be started. For the government, Mr Bhutto pleaded for "one last attempt to settle our differences with India by good will through negotiation. The future of the sub-continent is at stake." This ministerial speech on the last day of the emergency debate was a great improvement over the initial one that the foreign minister, Mr Mohammad Ali Bogra, had made on November 22nd, before retiring, or being retired, to bed. All the same, the president will enter the talks with India (assuming they can be started) with his ears ringing. He dare not speak too openly of realism and compromise after seeing the effectiveness of the wretchedly demagogic tactics deployed inside the national assembly by Bahadur Khan (his own brother), and outside it by the agile ex-prime minister, Mr H. S. Suhrawardy, with their all-or-nothing slogans.

On the Indian side, even the government itself gives the clear impression that it agreed to talk only as a gesture to the United States and Britain, on which it now counts for vital supplies. There is no doubt that Mr Sandys and Mr Harriman, concerned not only to enable India to switch troops from the Pakistan borders to the Chinese invasion zones, but also to sidetrack the very real Pakistani anger with America and Britain for arming India, gave Delhi to understand that the western governments would be better placed to help if it showed reason over Kashmir. A few hours after the agreement to talk had been announced, Mr Nehru's comment that "anything that involved an upset of the present arrangements would be very harmful to the people of Kashmir, as well as to the future relations of India and Pakistan," nearly scuppered the project, brought Mr Sandys whizzing back to Delhi for another round of reassurance, and at the same time laid bare the heart of the matter as India sees it.

BRITAIN and America, as Mr Sandys indicated in the Commons on Monday, have to go very cautiously in this affair. In the past six weeks they have won a mass of genuine goodwill in India by visibly attaching no strings to their urgently needed, and swiftly supplied, help. All of that could be lost again if they seemed to be exploiting India's troubles to squeeze it into concessions over Kashmir. Indians are, not surprisingly, more sensitive than ever at this moment about "friendly" pressure on them from any quarter. They have viewed with foreboding the "summit" meeting of six other non-aligned states—Ceylon, Burma, Cambodia, Indonesia, Ghana and the United Arab Republic—that Mrs Bandaranaike has called for next week in Colombo in hopes of contributing to a settlement between India and China. Senior envoys from Delhi have been chasing their opposite numbers from Peking round the capitals of these states, restating India's reasons for looking askance at China's plausible-sounding terms. Similar Indian qualms about their "friends'" intentions have contributed (along with some spectacular clumsiness on the part of Dr Nkrumah) to nip in the bud several attempts in the past three weeks to mobilise the non-aligned group at the United Nations for a Himalayan conciliation effort. Hurt and enraged by China's brutal thrusts, India is in no mood to take kindly to any chivvying from flank or rear.

It may well be that, as the latest indications suggest, India is bound in due course to accept the hard reality of China's hold on north-east Kashmir. Its formal position at present is that the Chinese must quit every inch of the disputed soil; but, then, it has also been formally committed for years to the proposition that all of Kashmir is Indian and that the Pakistanis in the north and west of the state must likewise "vacate their aggression." The most probable prospect is that the threefold partition of Kashmir will continue, with tacit understandings slowly prevailing over formal claims; perhaps with some modification in favour of Pakistan, perhaps not, but certainly with no sweeping change. It is wholly permissible for its real friends to remind India, now as at any other time, that it would serve its own best interests if it could achieve a "good neighbour" relationship with Pakistan by letting the restive people of the Srinagar valley decide their own fate. It is good that Indo-Pakistani talks have been agreed, and the British and American contribution to securing this agreement deserves praise. But to twist India's wounded arm would be quite a different, and almost inevitably a very damaging, thing.

Two Sighs for Training

The Government's new proposals for training skilled industrial workers are only a small advance towards tackling an extraordinarily badly handled British problem

THE first reaction to the Minister of Labour's new white paper on industrial training must be two familiar sighs. The first is of relief that somebody is at last attempting to widen the cramping economic bottleneck formed, even when unemployment is the talk of the day, by the national shortage of skilled labour. The second is of regret that the attempt is, at this stage, so limited in its scope.

The urgent needs for a reform of industrial training in Britain are perfectly plain. In many crafts the traditional apprenticeship periods should be drastically cut down. Age-limits on entry to apprenticeships should be done away with; it is absurd that the only people who can qualify for training in some skilled manual jobs are youths who have left school at the age of 15, and who then have no opportunity to move on to train in another trade if they find that their first haphazard choice has not been suitable. For all young people, training needs to be much more closely integrated with their education. And the supply of people trained, maybe for quite short periods, in techniques that do not rank as crafts needs to be vastly increased, which means a far more methodical approach to the retraining of adults—especially of adults made redundant by the decline of an industry. The scale of the reforms that are needed has led an increasing number of people to wonder whether large-scale national training schemes should not be introduced to supplement the traditional British system of training in individual firms: whether the French system of state-run *centres d'apprentissage* would not be the right answer in Britain as well.

Mr Hare's new white paper contains no such dangerous thoughts. Instead, the problem is to be left in the hands of tradition-bound people from both sides of industry, but they are to be mobilised into some new committees. The minister proposes to introduce (perhaps in the next session of parliament, which means next winter) a bill enabling himself to set up statutory industrial training boards, organised by and for individual industries, and composed of employers, trade unionists and government representatives; some educationalists might be brought in to partner officials from the Ministry of Labour, in view of the overlapping between training programmes and schooling. The boards will be able to levy money on firms in their industry and to pay back some training costs of firms that are doing a good job, as well as making grants to trainees; they should agree on a coherent training policy, establish tests both for pupils and for instructors, and if necessary set up their own training centres.

All this holds out some real promise of advance. Given that this is to be the framework chosen, what needs to be done to enable the promise to be fulfilled? The first point to make is that the new and regular levies on firms should be stiff enough not merely to meet the running costs of the schemes that the boards will introduce, but also to serve another purpose that should not be purely financial. Ideally, the levies should come to look like some kind of a fine imposed on those firms that make no attempt to train workers, while those that do their bit should get back at least as much as they spend. The gap between the big firms that run their own apprentice schools and the mass of industrial concerns that do not is enormous. The fact that so many companies are content to cannibalise other people's training schemes by luring away their skilled labour (using the cash they have saved by not training in order to pay inflated wages) has for long deterred a number of fairly well-intentioned companies from taking on their share of trainees. Under the proposed scheme it should be possible to penalise the lazy, to give the well-intentioned an easy way of paying their whack, and to favour the virtuous.

Unfortunately, an additional difficulty is that almost a quarter of all factory workers are employed in buildings containing fewer than fifty men. Small firms can do little training within their own plants, because they cannot spare the skilled labour. The white paper talks of fixing a size-limit below which firms should be exempt from paying the levy—but it is important that this should be set at a level to spare only the very small employer, since all firms must eventually benefit from an increase in the supply of trained men.

ON the union side the obstacles to improving the training system are still more formidable. Any craft union with unemployed members anywhere in the country is obviously under pressure to restrict entry to its trade, even if there is a dramatic shortage of craftsmen elsewhere in the country; even where there is no unemployment, unions sometimes think that they can push up wages by maintaining a labour scarcity, through sticking to traditional long apprenticeships for their trade, or to an arbitrary age-limit on entry to training schemes. One of the worst of the results of this last restriction is that it excludes from the chance of acquiring a manual skill many boys who stay on at school after the age of sixteen, only to discover that they will not quite make the grade in "a grammar-school type job": these brighter-than-average people are just the sort who would make the adaptable operatives and foremen who are desperately needed by industry.

This legacy of conservatism—on both sides of industry—gives one reason to distrust the likely zest of training boards formed of people who, with the best will in the world, cannot help being marked by it. Against this, it will be argued that those within an industry are best able to see what kinds of skill it is likely to need; and the minister hopes that the boards can plan their training programmes in line with the National Economic Development Council's tentative forecasts of rates of expansion in different industries. A useful step here—and one which the minister would do well to think about—is that the reports of the new boards (and one devoutly hopes they will publish annual reports) should be open to searching scrutiny and public comparison by some central body unconnected with the industries concerned. Since select committees on estimates—i.e. committees of MPs—now inquire into the nationalised industries as well as into government expenditure, could they not also take annual power to rout through the achievements, or the non-achievements, of these different industrial training boards as well?

Early in their researches, the boards are likely to come up against the difficulty that many 15-year-old school-leavers have no information on which to base their choice of job, and that some boys who tumble into apprenticeships are unsuited to absorb the special training needed. One immediate and practical step that could be taken would be to expand and strengthen the Youth Employment Service that is supposed to provide a measure of vocational guidance for school leavers. At present its officers are few and poorly paid, while the service itself is, with fantastic illogic, sometimes run directly by the Ministry of Labour and sometimes by local authorities. No amount of improvement in apprentice schemes will do good if the right people are not picked for training.

Finally, it is essential to keep emphasising that today the training problem is by no means confined to the young: redeployment out of some old-established industries over the next few years must make it necessary to retrain ever-increasing numbers of adults. At the same time the demand for semi-skills seems bound to increase: the building industry, with the need for men to put together prefabricated bits and pieces of houses, is only one example among many. Here, in fact, the Ministry of Labour has itself recently made a modest step forward with the setting up of two small retraining centres for adults in Scotland. It would be a pity if this new initiative of industrial training boards were to divert attention from—or even set up a vested interest against—the recognition that more initiatives of this kind, with generous retraining allowances, are urgently needed. With this week's white paper Britain has only just begun to nibble at one of its worst-handled problems.

NOTES OF THE WEEK

CONSERVATIVES

Are They Downhearted?

LIKE St Sebastian, the Conservative party has been shot through with arrows, but, like him, its inner morale still seems surprisingly high. There is no real sign of panic, much less any crisis of conscience such as that which seized the party at the time of Suez. Mr Macmillan's personal position has not been seriously challenged by Tory MPs in the fortnight since the by-elections, despite his disastrous slump in popularity in the public opinion polls and despite some murmurings from Sir Harry Legge-Bourke, who wants to get in on the act once again. Cynics are saying that the wisdom of Mr Macmillan's elevation of Mr Butler to deputy-Prime Minister is now apparent, since most people in the party do not really think that much would be gained by substituting Mr Butler for the present premier at this stage.

There are other able men in the Tories' front rank—Mr Macleod, Mr Maudling and Mr Heath; but none can command a wide enough front in the party to make the immediate displacement of Mr Macmillan a possibility. Mr Macleod, potentially the ablest of all, is being badly burned on the hot seat of the party chairmanship, where he has had to base himself on the part of the party that views his ideals and achievements with the least sympathy and the most distrust. The latest chortle at Westminster is that the race for the Tory leadership could be transformed if, after the impending report of the select committee on the Lords, all hereditary peers were allowed a period of grace in which to renounce their seats in the Lords and to become eligible for one in the Commons. The return of Lord Hailsham to the Commons would be of no importance for succession to the leadership, since he would be unacceptable to the parliamentary party, however popular he is in the country; but Lord Home's return there, in the unlikely event of his leaving the Lords, would be quite another matter. All sections of the party, right, left and centre, could unite behind him. That, however, is at most a rather outlandish hypothetical prospect for the next parliament, not a real problem for this one.

For the time being, Tory fortunes, as well as Mr Macmillan's, are still inseparably linked to the success of the common market negotiations. Although there is no disguising government anxiety about the present situation at Brussels (see page 1005), ministers are still saying, with a confidence that does not yet sound too much like desperation, that they expect to push the issue through to a successful conclusion. After recent disappointments, many people had feared that a wave of impatience against Europe might sweep over the Tory back benches, but so far there have been no "quit Brussels" speeches by any waverers who really matter; what has happened is that pro-European Tories have rightly warned Europe that these speeches could erupt at any time. Mr Macmillan is said to have some hopes of exercising a little persuasion on President de Gaulle at their coming meeting; if Mr Heath reached deadlock at Brussels, a call for a European Summit rather than a cowed report to Westminster would be the Prime Minister's most likely reaction. The next month or so will be perhaps the most difficult of all for the Tories—with a hostile press, rising unemployment, and the psychological stress induced by uncertainties at Brussels. But they look, at present, as if they are taking the strain.

UNITED NATIONS

Better Mouse-Trap

UNANIMOUSLY elected on November 30th to serve for a further four years (which, with the year he had already served as acting secretary-general, adds up to a five-year term), U Thant can truly be described as a man who has had greatness thrust upon him. When his name emerged from the awed murmurs that followed Mr Hammarskjöld's death last year, there were those who assumed that the UN had found itself a chief executive whom all the powers would accept as nice, quiet and "safe." The gentle Burmese has, in fact, proved just as much of a surprise as the "safe" Swedish technician about whom the same mistake was made in 1953. He has turned out to be plain-spoken (instance his characteristic speech at Johns Hopkins University immediately after his re-election). His skilfully timed interventions—notably in "Cuba week"—have inspired widespread confidence. Yet it is the dynamic of the evolving UN itself that has propelled him, a man not driven by personal ambition, to the place in the world that he fills today.

"Fills" is here the right word. U Thant may have only about two more divisions than the Pope; but the nations have come to recognise their need for an occupant of his lofty, though temporal, office: an occupant who has to be a good deal more than a titular focus of respect. Did the thought not even occur to Mr Khrushchev, at some point during the Cuba crisis, that the defeat of his attempt to shackle the secretariat had its consoling side?

The troika has now visibly ceased to roll. The day before Mr Thant's re-election, the Soviet block suffered a resounding defeat in the UN assembly's administrative committee, which voted by 84 to 10 in support of his proposals for future staff recruitment, sweeping aside Russia's renewed demands

for the reshaping of the whole secretariat on a three-block basis. As to the secretary-general himself, the Russians have had to abandon all hope of tying strings on to his freedom of decision. He had openly declared for the broad "Hammarskjöldian" interpretation of his function that Mr Khrushchev condemned with bell, book and candle in 1960; yet he has been confirmed, and strengthened, in office. And a man who has been begged to stay on disposes of a powerful weapon—the threat of resignation if others fail to co-operate. Mr Thant may yet be seen wielding this weapon with effect.

CENTRAL AFRICA

Gentlemen and Players

THE territories of central Africa are strung together as in a mobile: touch one and all the others move. On Monday and Tuesday, for example, Northern Rhodesia's African nationalist leader, Mr Kenneth Kaunda (accompanied by his new-found ally, Mr Harry Nkrumbula), spoke at length in London with Mr Butler. These talks ranged beyond the immediate issue of who is going to form the government in Northern Rhodesia after next Monday's by-elections. Mr Kaunda's attitude to the Katanga province across his border, as well as his ideas on the future relationship between the three (British) central African territories were also, it can safely be assumed, of deep interest to Mr Butler.

For their part, Mr Kaunda and Mr Nkrumbula remain closely concerned with developments in Southern Rhodesia—still the core of the central African problem. Southern Rhodesia's nearly all-white electorate will choose next Friday between Sir Edgar Whitehead's liberal programme and the opposition Rhodesian Front's apartheid. The assumption in Britain is that if Sir Edgar wins, all will then be on the way to being put right. (It certainly will not be if the Rhodesian Front wins.) But Southern Rhodesia's Africans, who are not taking part in the election, do not share this faith in Sir Edgar. They fear that he may be stringing the British Government along with reforms (and promises of more to come) in the hope of getting independence for Southern Rhodesia in the likely event of an early break-up of the Federation of Rhodesia and Nyasaland. This would be independence under white control and, the Africans argue, there would then be nothing to protect them from a backward-looking white-elected Southern Rhodesian government.

In the House of Commons on Monday Mr Butler dismissed a direct challenge to promise not to let Southern Rhodesia go until Africans are in charge (or well on the way to being in charge) by saying that the question was hypothetical. But it is still the important question. If Mr Butler did declare an intention to retain British control until there is majority rule in Southern Rhodesia, then the African nationalists might turn back to constitutional methods of opposition. An extension of the franchise might be thrown in as an added inducement. And, of course, bringing Southern Rhodesia's African nationalists out of detention and into the light would have an effect on African decisions in all Central Africa.

KENYA

Stumped at Lords

LED by Mr Milton Obote, the prime minister of Uganda, east Africa's nationalists are getting impatient about Kenya. It now seems that this most intractable (and expensive) of colonies will not be able to raise its independence flag for another eighteen months at least. This is partly due to the difficulty of welding a unity of purpose out of the tribally-dissident Kenya politicians, but part at least of the fault lies in Westminster. Kenya's new constitution was agreed upon in principle in April; but, as Lord Lansdowne, the minister of state for colonial affairs, admitted in the House of Lords on Monday, the details are only about one-third filled in.

One of the more important details is the appointment of a central land board to manage the schemes for resettling African farmers on the former White Highlands. A move that could be made quickly might be to announce the name of the chairman-designate of the board, General Sir Geoffrey Bourne. Several Lords asked for it on Monday, but by Thursday the Colonial Office had made no statement. It is hard to understand why announcements of this sort should be held up when some of the people who are awaiting them are already so suspicious of Britain's intentions in Kenya. The sooner General Bourne, an excellent choice, can be got to Kenya, the better.

Not only African nationalists are made unhappy by slowness in settling Kenya's affairs. Lord Lytton described on Monday how he had written to fifty Kenyans of all races and shades of opinion asking for their points for the debate—and how, to his surprise, all had replied. Lord Lytton read out reply after reply, from black, white and Asian Kenyans, all asserting that the longer the delay between now and the next election the greater would be the loss of confidence in Kenya. It was unfortunate that in the same debate Lord Salisbury talked about "the primitive African" and "men who are still only one generation removed from a savage state." Phrases like this are read by Africans as further evidence of a British desire to hang on to Kenya as long as possible.

RAILWAY RE-ORGANISATION

Slow Coach?

THE Commons were told last week that Dr Beeching's plan for railway reorganisation may not reach the Government's hands until "a month or two after Christmas." Thereafter, to judge from the tone of Government spokesmen in the debate, it may be handled like a very hot potato. Mr Hay, deputising for his indisposed chief Mr Marples, did not exactly slow his pace to that of an old-style Parliamentary train; but his constant emphasis on consultation procedure made it fairly plain that he might well prefer some of the necessary pruning to be hidden under a bushel until after a general election.

Three points should be made. First, Dr Beeching himself is not a great believer in bushels. Secondly, although there are always loud protests before any proposed closure (especially so long as any local interests think they can baulk it), one fifth of the mileage of Britain's railway system has already been shut down since 1950 without any visible effect on Tory electoral fortunes in the areas concerned (and without most people elsewhere in the country even noticing it). One suspects that this is another of the familiar issues where the Government has much more to lose by fumbling than by firmness, particularly as protest strikes by the workers do not cost it votes.

Thirdly, the backbench debate in the House was surprisingly an almost progressive one. True, Labour was moving an absurd amendment which viewed "with deep concern the proposed large-scale closure of railway workshops [even when there is no work for them to do?] and the withdrawal of unprofitable branch line services"; but the best points made from the Labour side were complaints, not against closures, but against the shabby little economies that are almost inevitable so long as an industry is still operating with a £150 million a year deficit—such as the pension of only 13s. 6d. a week for long-service engine drivers, and the fact that the Transport Commission is emulating the worst private landlords in not using improvements grants to put decent lavatories into railway-owned houses. From the Conservative backbenches, there was some surprisingly robust support for a new broom. Mr Geoffrey Wilson foresaw a great change in businessmen's attitudes to the railways when Dr Beeching implements his idea of having freight trains permanently made up of flat wagons into which large containers can be loaded, with the knowledge that the train will be leaving at a certain time and will arrive at a certain time, and that it will be travelling at 60 or 70 miles an hour; businessmen shy away from railway freight at present, he said, because we are "basing ourselves on the single railway truck, shunted from point to point, marshalled and remarshalled and put into a train a dozen times in 150 miles, with the result that there is tremendous uncertainty of delivery in railway traffic." The Government would be well-advised to decide now to move right over and act as a spur instead of as a brake to Dr Beeching's changes; this will be one of next year's major tests of whether it wants to keep campaigning on the issue that it is the party that regards reform as its ally.

CIVIL SERVANTS IN INDUSTRY

Much-Wanted Men

NEARLY a hundred senior civil servants (£2,000 a year and upwards men) have been allowed during the past ten years to take jobs in industry within the statutory two years of leaving government service; 61 of them came from the Ministry of Aviation which has the closest commercial dealings with industry of any government department. This has given rise to some needling questions in Parliament. No one has yet asked how many service officers have won similar concessions; but a quick count shows that the five main aircraft companies employ eight air marshals among them, including a recent chief and vice-chief of the air staff, both working for the same company.

The rule that public servants should not take jobs within two years of retirement without special permission was laid down in 1937. The motive behind it—to see that when industry employed ex-public servants it did so for their special skills rather than their special connections—may seem as sound today as then. Industry, on its side, frequently insists on harsh service contracts to prevent senior executives from working for competitors; but industry generally pays more than the Government and compensates handsomely for this loss of freedom. The big change in the last twenty years is that few Government servants have the private means that they might have been expected to have in the 1930s; to ask an active and able man to kick his heels today for two years is to impose a very real hardship. This fact, combined with the shortage of skilled men in industry (and it is presumed that a man who reaches senior Government rank has above-average ability) tends to make more and more people feel that equity and the possible gain to the economy together outweigh the marginal risk that here and there a public servant might allow his integrity to be dented by the whiff of industry's golden carrot.

By odd coincidence, this same view is contained in a pamphlet on Science in Industry published by the Conservative Political Centre on Tuesday. Indeed the committee which drafted this report goes further. It wants a special scientific-cum-economic secretariat to advise the Government on the growing points of technology. To staff them, says the committee, "we attach great importance to the development of an interchange (in both directions) of personnel between the civil service, industry and the universities . . . we recognise the risk to civil service objectivity . . . we believe it to be a risk worth taking." Recent Government committees have suggested much the same kind of two-way traffic between government and industry without seeming to think that it would introduce abuses. Is there any evidence to show that the fairly modest drift from the top to date has produced any recognisable ones? Is it, perhaps, objectionable only because it always seems to be one-way?

UNIVERSITY SALARIES

Incentives for Dons?

IS there a better way of adjusting university teachers' salaries upwards than tying them, irrespective of merit or need, either to an inflationary escalator within the civil service (as the Association of University Teachers wants) or to the intermittent flat 3 per cent of a Treasury paymaster? The real pinch, and with it the thought of moving to industry or North America, comes when a don is in his middle or late thirties: even with ten years' experience behind him he may still be getting well under £1,500 a year, a derisory sum by commercial standards. To get a real boost in salary through promotion he faces another ten to fifteen years kicking his heels until some professor somewhere dies or is pensioned off. The emergence of good jobs in new universities and other institutions is beginning to break the log-jam, but the prospect of high mobility among dons following the main chance has started fears in the older civic universities that their teaching departments are going to be broken up for avoidably marginal financial reasons. The most sensible answer would seem to be to abolish the arbitrarily-fixed ratio of professorial to other appointments and make promotion (and salary) dependent on actual work.

Thus, in the United States, the first step is the non-pensionable post of assistant professor, usually attained after an apprenticeship of five years or more. To get permanent tenure and a pension the assistant professor has up to seven years more (and usually needs five) to qualify as an associate professor. This kind of incentive is completely lacking among English dons when they get their fellowship. Having got his foot firmly on the hierarchical ladder at the age of, say, 34 the American may then hope to reach a full professorship in another five to ten years, depending solely on the quality of his work and not on the number of empty shoes above him. Most Americans do work and do get this promotion. The slope of the salary scale from bottom academic posts to top in England is of the order of 1 to 3 (£900 to £2,700) although it is lower in Wales and steeper in Scotland. In the United States it is 1 to 2 ($6,000 to $12,000). The real difference is that the American system is manifestly a career open to talents; the British, all too often, is one of genteel subsistence—or downright luck.

ALGERIA

Cracking the Whip

A NATIONAL purge committee, with panels in every region, is to weed out slackers and bunglers from the Algerian civil service. The committee will be responsible to the political bureau alone. This new big brotherly power, assumed by the political bureau, was announced last Saturday, while Mr Khemisti, the Algerian foreign minister, was still in the throes of his five-day talks in Paris. He himself, at a Paris press conference, put his government's worries in a nutshell: "When decisions are made in Algiers they are not always carried out locally in a good spirit." Probably not. But feuds between Algeria's leaders were bound to confuse government servants' loyalties.

Whether the Gestapo approach is the best way of recreating a national esprit de corps is open to doubt. It is clearly the whip-lash way of Mr Mohamed Khider, the bureau's secretary general and big brain behind the government. The prime minister, Mr ben Bella, is believed to prefer gentler methods, such as might help heal the quarrels between Algeria's leaders and thus truly reconsolidate the FLN (National Liberation Front).

Attempts to establish the front as the country's single party have so far taken the limited form of suppression. The communist party has been outlawed, the UGTA (General Union of Algerian Workers) denied any separate political identity, the Federation of France not only dissolved (as is proper) but set up with a liaison committee to see that its former members toe the political bureau's line. The press is severely censored. This kind of political strait-jacketing might be all very well were the "single party" not divided, and the communists and any others who consider themselves ill used not free now to throw their weight behind the political bureau's critics within the FLN. The crack of the whip has anyhow made a disturbing accompaniment to Mr Khemisti's negotiations in Paris, though he himself earned respect there by his obviously sincere exposition of Algeria's intention to make co-operation work. It is interesting that he singled out the Sahara as the one sphere in Algeria where Franco-Algerian co-operation was "perfect."

JORDAN

The Party Spirit

ON the brighter side of the Arab political medal, Syria and Jordan are both thinking, rather sportingly, of reviving party politics. Parties have been banned in these countries for respectively six and five years. The Syrian government confirmed a fortnight ago that the parties would reconstitute themselves next year, and elections follow later. King Hussein, judiciously perhaps, has held out some hope for the parties only after carrying out elections (on November 24th) and finding the results to his liking. This was a great satisfaction, since by every account the elections were relatively free. The withdrawal of some of the candidates as a protest against the king's policy in Yemen did not lead, as was feared, to a large-scale boycott, although the Yemeni issue was hotly disputed during the electoral campaign.

What seems clear is that many Jordanians are doubtful of the king's foreign policy but have liked Mr Wasfi Tel's government for what it has done in improving the country's whole administration. A general trend

in the poll was to throw out conventional old-timers and put in young professional men. Mr Tel and his modern young ministers have all come back into office with only one new addition—a minister of development who once served in Mr Nabulsi's pro-Nasser government. If these elections are anything to go by, domestic issues in Jordan are beginning to outweigh foreign ones—a sign of political maturity that has perhaps encouraged the king to believe that political parties may safely be revived.

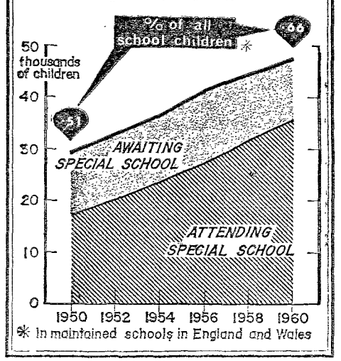
SOUTH ARABIA

Fuel for Cairo

BRITISH members of parliament who, a week ago, spent 48 hours exploring Yemen were taken aback by the virulence with which British policy was attacked by their host, Dr Abdur Rahman Baidani, the Yemeni vice-president. Dr Baidani, whose relationship to President Sallal is being compared with Nasser's to Neguib ten years ago, made charges ranging from the fantastical to the prosaic: from some sort of involvement with the alleged dispatch by Israel of Yemeni Jewish soldiers to fight on the royalist side, to transmitting Saudi messages through Aden and supplying the Jordanian air force with a map marked with military targets. But the charge to which Britain is most vulnerable is that British military equipment sent to the Emir of Beihan and to his father, the Sherif (who is minister of the interior in the South Arabian Federation), has been finding its way into the hands of the Yemeni royalists.

THE LOWER IQ

There has been a steady rise in the number of educationally subnormal children attending or awaiting entrance to Special Schools. This, however, according to the Ministry of Education's report "The Health of the School Child 1960 and 1961," does not necessarily reflect a growing number of really defective children—i.e., those with an intelligence quotient below 70. About a third of the special school pupils have an IQ above 70; the prevalence of IQs below 70 is around five per thousand school children.



With this in mind, it can be questioned whether this was the time for Britain to announce the handing over of £1.5 million worth of military stores to the federation's army. Clearly it is up to the British to see that the new federal army takes over as smoothly as possible from the former Aden Protectorate Levies, whose British officers and other ranks are gradually being replaced by Arabs. The transfer does not actually affect events in Yemen in any way. But the announcement has been seized on by Cairo radio as evidence of Britain's hand-in-glove association with the ruler of Beihan.

If Britain could bring itself to recognise the republican government in Yemen, the transfer of stores to the federal army could be dismissed as routine. But recognition still hangs fire, on the argument that President Sallal depends too much on the Egyptians to be in effective control himself. Certainly once Egypt, Saudi Arabia and Jordan had weighed into the civil war, matters were partly taken out of Yemeni hands. However unwilling the Egyptians may be, for financial and security reasons, to leave their units for long in Yemen, their support is still decisive. The Imam's regular army took his overthrow as a signal to disperse to their villages, and the raggle-taggle national guard would probably not yet be an effective instrument to prevent any new foray by the loyalist (and Saudi-paid) tribes in the north.

But the fact that the republicans are leaning heavily on Egyptian help is not, by itself, a convincing reason to delay recognition. The United States, which also has not yet recognised the republicans, has been sounding out the Arab governments concerned in an effort to mediate. But Lebanon and Tunisia, which have also been trying their hands as peacemakers, make the point that a useful first step to peace would be recognition by the major powers. The alternative, both for the United States and for Britain, is bound to be their ready identification with the Imamate and with what it stood for.

TELEVISION FEES

Killing the Goose

AFTER its successful raid on the coffers of the independent television companies last winter, Equity, the actors' union, has turned its attention to the steam-radio-orientated scale of fees paid by the BBC. In quiet and intelligent negotiations, the union has pleased the BBC by recognising the different natures of the two operating systems, the relative poverty of the corporation (£20 million a year from licences as opposed to £90 million from advertising) and the comparative irrelevance, in the corporation's case, of networking and audience size. All that Equity is asking for is some less tenuous financial relationship between more prestigious BBC and more lucrative ITV work. Little has emerged publicly from the talks between the union and the corporation; but from the general tone of guarded comment it seems likely that an agreement, quite possibly mutually satisfactory, may soon be arrived at.

But the BBC has not only this—on this occasion—model union to deal with. The Variety Artists' Federation (which with much publicity first joined and then abandoned the actors' strike against ITV companies last winter) is negotiating separately for an improvement of the apparently penurious lot of the 50 or so of its 3,000 members who appear regularly on the television screen. They have been getting a minimum of £8 for each BBC appearance (although it is difficult to trace anyone actually paid at only this rate), and are demanding a fee near the £30 minimum paid by ITV for a national broadcast; they are threatening "trade union practices" if they do not get satisfaction at the hands of an arbitrator. BBC offers, first of £16 and later of £18 minima, have been rejected as ludicrous. The BBC's hope is presumably that the VAF—which is led, sometimes with considerable publicity, by Mr Jimmy Edwards—will eventually accept the terms offered to Equity, as it did after the ITV dispute. The VAF would not be in a very good position to refuse. The impression that the ITV companies have cut down on the number of artistes they use since they have had to pay more for them is denied by all sides; but it apparently has enough substance to have provoked Equity to a full-scale analysis of employment since the strike, with particular reference to the use of inexperienced actors at minimum fees as replacements for more expensive old troupers (which some critics may think to be no bad thing). Clearly, the variety artists, if they insist on separate and inflated claims, would have to speculate on whether the BBC's income problems might not tempt the corporation to economise.

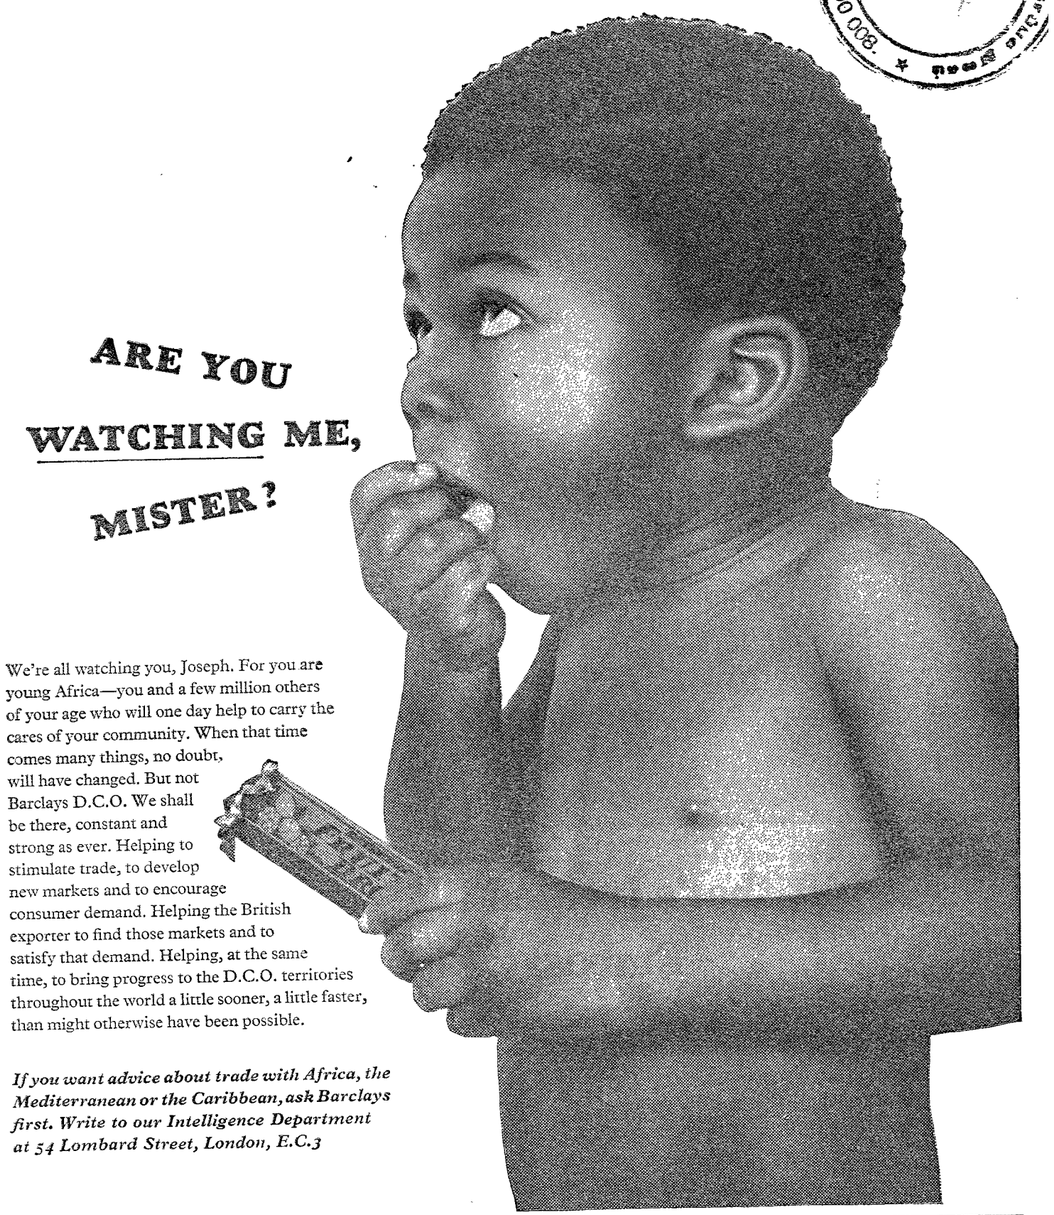
EFTA

Touché

WHEN novels come to be written about the power struggle between the political statesmen who determined whether or not Britain would enter the common market, one supposes that the French will be cast as the villains. This particular thought is prompted by still another delicate French manoeuvre when the deputies of the Six met in Brussels last week. Just before the weekend the French delegation raised the question of Britain's convention with the European Free Trade Association, which requires a member country to give twelve months' notice before quitting the association. The French point is that, if Britain hopes to join the common market by January 1, 1964, then theoretically notice has to be given to Efta by the end of this year.

One says "theoretically," since the Efta ministers were somewhat vague in their joint statement in June, 1961, in London. They resolved on that occasion "to co-ordinate their actions and remain united

1001



We're all watching you, Joseph. For you are young Africa—you and a few million others of your age who will one day help to carry the cares of your community. When that time comes many things, no doubt, will have changed. But not Barclays D.C.O. We shall be there, constant and strong as ever. Helping to stimulate trade, to develop new markets and to encourage consumer demand. Helping the British exporter to find those markets and to satisfy that demand. Helping, at the same time, to bring progress to the D.C.O. territories throughout the world a little sooner, a little faster, than might otherwise have been possible.

If you want advice about trade with Africa, the Mediterranean or the Caribbean, ask Barclays first. Write to our Intelligence Department at 54 Lombard Street, London, E.C.3

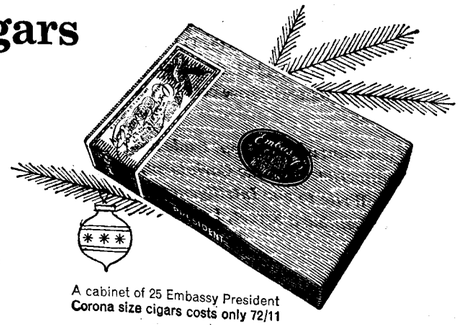
A gift that's treated like a special guest –Embassy Cigars

NO MAN should be without a good cigar at Christmas. And what better cigar than an Embassy. Embassy cigars are skilfully blended and rolled by Wills from fine tobaccos which include the best Havana leaf. Yet, because they are rolled in Britain, they are surprisingly inexpensive. Ask your tobacconist to show you some of the many attractive packs, from a single tubed cigar at 2/7 to the traditional cabinet box of 25.



A cabinet of 25 Embassy President Corona size cigars costs only 72/11

WILLS **EMBASSY CIGARS** *Rich in Havana tobacco*

throughout the negotiations"—until satisfactory arrangements had been made to meet the legitimate interests of all members. However, these legitimate interests are various. Britain, Norway and Denmark want full membership; Austria, Sweden and Switzerland, fighting shy of political entanglements, want a form of association; Portugal would like almost any kind of co-operative arrangement. Is Britain to negotiate for each special interest involved? Clearly not, if only because the other members of Efta want to argue their own cases.

All the Efta countries agree that Britain's negotiations with the Six must be concluded (successfully or otherwise) before any of theirs can be pressed to a finish. Until this happens Mr Heath can do no more than keep his colleagues in the Seven briefed on what is happening in Brussels, and get their approval for the order in which things are done. Unfortunately, the six ministers concluded on Wednesday that terms for association cannot be settled before British entry. In principle this would require Britain to adopt the common external tariff against these countries from the date of its accession. There is a hint of possible standstill arrangements to get round the difficulty.

The French have scored a good debating point. They can, if they wish, use the terms of the Efta convention to raise further doubts about the timing of Britain's entry into the common market. But it is too much to expect Britain publicly and humiliatingly to cut its links with the rest of the Seven before it knows what will happen to its own application; or to sign on the Six's dotted line before it knows what is to happen to the rest of Efta.

EUROPE

Don't Shoot the Pianist

LAST week's comment in *The Economist* (page 888) on Italy's position in the common market negotiations has been misunderstood in some parts of the Italian press. It was not an attack on Signor Colombo. His visit to London seemed as good an occasion as any to ask why Italy's weight has not been as obviously and as clearly felt in the Brussels negotiations as the British, among others, would wish. The answer does not lie in any lack of ability or goodwill on the part of the Italian minister of industry and commerce.

This week, when the six ministers have been thrashing out their own attitude on matters that closely affect Britain's chances of getting in, the strain at Brussels has been punishing. (What happened is described on page 1005.) The negotiating problem is indeed complex: the talks with Britain cannot get on unless the Six can agree, nor can they get on if, in order to agree, the Six settle on solutions that are too much for the British to swallow. The dilemma is the same for all the common market ministers, or at least for all those who are friendly to the British application. Of these, Signor Colombo is undoubtedly one (as he showed, incidentally, this week in his energetic championship of the proposal to offer Britain a one-year moratorium in the dismantling of the agricultural deficiency payments). To say that he is caught in the same dilemma with the others is not to cast doubt on his personal qualities, which include clarity, intelligence, and not least valuable in this situation, an unquestioned reputation for having his heart in the Community.

It remains true that Italy's spectacular transformation into a modern country entitles the Italian government to more weight in European decisions than it is habitually accorded, or than it usually accords to itself. Some Italian self-assertion is probably essential if the common market team is to function in the way it set out to function—as a team.

SPAIN

Planners' Prelude

THE Spanish government has published the prelude to its impending long-term development plan. In effect, its "preliminary measures" decree is a deck-clearing exercise for action on the recommendations of the World Bank mission; the decree is discussed more fully on page 1046. Spanish economists have been powerfully impressed by the French formula for entrusting the strategy of development to a central planning commissariat, while leaving the tactics to private enterprise. The decree strengthens the planners' essential powers while seeking to stimulate business initiative at the same time. Official spokesmen in Madrid say that the government is trying not only to improve the competitive efficiency of the economy, but to reshape it in the way most likely to facilitate Spain's association with—and ultimate integration into—the European common market.

The various reactions in Madrid to the decree are of interest. Spanish and foreign business people in Madrid have welcomed the decree. Old-school falangists deplore this "further sell-out to foreign capitalism and liberalism"; but their influence is now negligible. Slightly more significant is the displeasure of the officials in charge of the workers' wing of the government-controlled *sindicato* (trade union) movement, who, only six weeks ago, published a statement urging massive wage increases, stricter price controls, and other measures that would straitjacket, not liberalise, the economy. Sr Solís Ruiz, the Minister for the Movement (that is, in charge of falangist and *sindicato* affairs), has associated himself with this demand. Both in business and in church circles the suspicion is heard that he may be developing a demagogic line that will allow him, at the appropriate moment, to "fall to the left"—with a view, it is said, to re-emerging as a labour leader in whatever régime succeeds the present one. Whether the imputation is fair or not, his reaction to the "preliminary measures" decree is one pointer to an issue in future Spanish politics.

ART

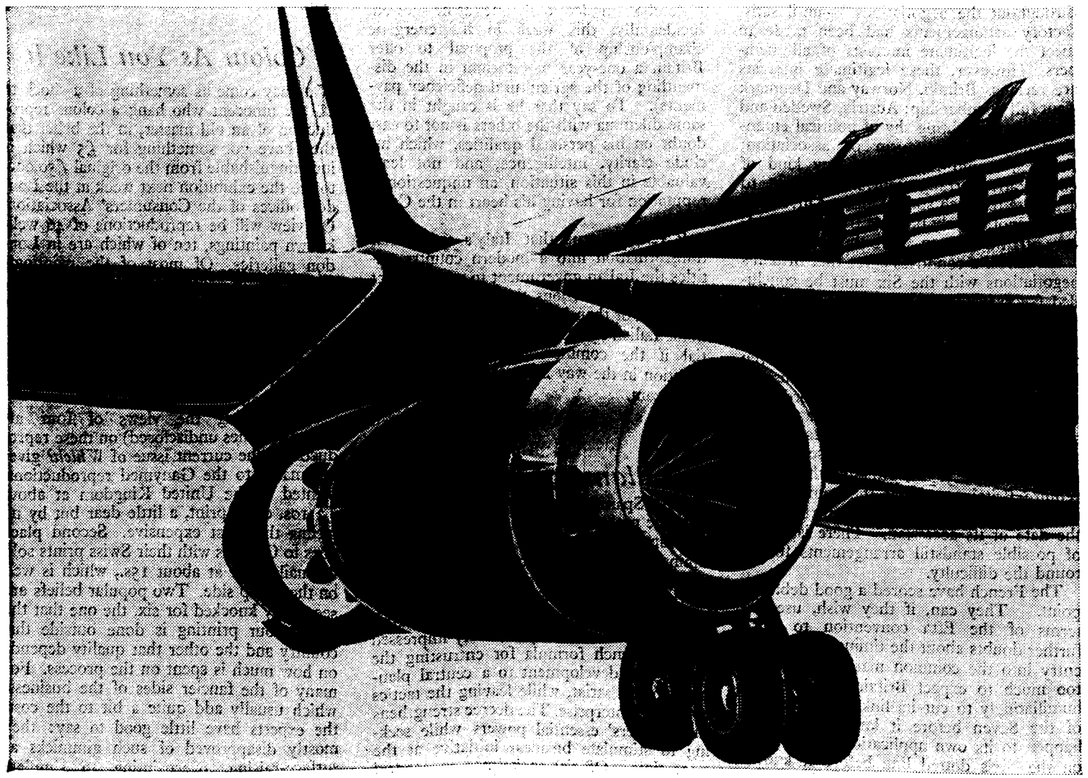
Colour As You Like It

IT may come as something of a shock to the innocent who hang a colour reproduction of an old master, in the belief that they have got something for £5 which is indistinguishable from the original £50,000, to see the exhibition next week at the London offices of the Consumers' Association. On view will be reproductions of 46 well-known paintings, ten of which are in London galleries. Of most of the paintings, there are at least two, and often four, different prints. Many of them differ violently in colour from the original and from each other; others have been savagely cropped to leave out part of the original painting, while at least one is bigger than the original.

Summarising the views of four art experts (names undisclosed) on these reproductions, the current issue of *Which?* gives top marks to the Ganymed reproductions, printed in the United Kingdom at about £3 10s. 0d. a print, a little dear but by no means the most expensive. Second place goes to Odhams with their Swiss prints sold by mail order at about 15s., which is well on the cheap side. Two popular beliefs are seemingly knocked for six, the one that the best colour printing is done outside this country and the other that quality depends on how much is spent on the process. For many of the fancier sides of the business, which usually add quite a bit to the cost, the experts have little good to say: they mostly disapproved of such gimmicks as surface-raising, overpainting to simulate brush strokes, the sticking of paper on canvas or the embossment of an imitation canvas pattern on cardboard.

This little investigation is offered by *Which?* in a Christmas spirit and it certainly must not be taken as the last word on the subject. There are about thirty publishers and distributors in Britain selling colour reproductions and only twelve have been assessed in this "test," if it can be so glorified. Some works are much more easily reproduced than others. Watercolours and drawings are more successful than oils and Ganymed has built up its reputation on facsimiles of these, three examples of which are included in this show. Only three Odhams prints, out of its two dozen or so titles, have been judged. The shopper is not told whether one printing process is clearly better than another; apparently this did not emerge. Perhaps the majority of buyers of these prints have never seen the originals; perhaps they like the choice of the same Renoir in blue or pink. Does it matter so very much?

What the *Which?* exercise has done is to draw attention to some of the insensitive liberties taken in this reproduction work. If publicity should set a better standard, might framed reproductions return to fashion in the more sophisticated circles? And what could happen to parts of the art market then?



"VISIT U.S.A." WITH ALITALIA

ALITALIA now offers you the opportunity of an economical itinerary to your own personal requirements. Effective immediately, and up to the 31st March 1963, the 17-Day Excursion Fare* brings to you the possibility of taking a vacation or business trip to the U.S.A. - taking in new cities and new pleasures - of the New World. All this is open to you if you take advantage of the greatly reduced ALITALIA 17-Day Excursion fare.* Call your Agent or nearest ALITALIA Office - Group or individual travel you can save money - Don't delay - Call to-day. THE WORLD OVERSEAS

Common Market Treadmill

FROM OUR BRUSSELS CORRESPONDENT

THIS week's discussions among the ministers of the Six on Britain's entry into the common market ended fairly quietly on Wednesday afternoon: the fireworks will come later. The Six made little progress in settling their internal dispute (outlined in *The Economist* of November 24th) on the agricultural finance regulation. Professor Hallstein's proposed compromise was coldly received, and they are all to think again. Hence they are not yet ready to discuss this with the British. But enough emerged on agriculture and on the European Free Trade Association (Efta) to make it possible for things to start moving again, after the uneasy pause of the last few weeks, when Mr Heath returns to Brussels on Monday. Indeed, if M. Spaak has his way, the negotiations should reach their grand finale early in the New Year, when the chairmanship of the Six passes to Belgium. His feeling that the British affair must be settled soon, one way or the other, reflects the general mood here, which is shared by everyone except that perennial dissident, France. Undoubtedly, M. Spaak's appeal for an *esprit communautaire*, which in this context means rallying to the opinions of the majority, was addressed to France. Whether it will have any effect remains to be seen.

On British domestic agriculture the Six's proposals remain substantially what they were: deficiency payments to end on entry, and the transition period to end by 1970, with two new modifications. These are that pigmeat and egg production should continue to be subsidised until 1970; and that the deficiency payment system, while abandoned in principle, should in fact continue, in accordance with the British Government's pledges, until the end of the present parliamentary mandate. Next week will show whether these two gestures are a substantial help to Mr Heath and Mr Soames. They do not appear to meet the British contention that the change should be gradual; indeed a standstill of perhaps a year would mean that the transition, when it came, would have to be accomplished within even shorter limits—though the British farmers would have had that much more time to prepare themselves for the change. Moreover the Six's nervous fear of deficiency payments implies also that they have not yet taken the point that, if phased out on the lines proposed by the British, these could appear anyway within two or three years. Next week's discussions along these lines could lead to an acceptable compromise, or they could end in deadlock.

Regarding Efta, the Six point out that Britain should sufficiently clear up its commitments to its trading partners to be able to apply the community's common external tariff upon entry. The tariff would not, of course, be applied against any Efta country which the community itself had an agreement with. This might meet the case of Denmark, whose own negotiations with the Six are already well under way, and possibly that of Norway also, though Norway has not proceeded very far or very fast with its application for community membership. But it clearly presents difficulties with regard to Portugal (whose overseas "departments" make it a special case in everyone's eyes including its own) and the neutrals, Switzerland, Sweden and Austria. The Six have not yet even decided on the bases of future discussion with these three, and, given the habitual snail's pace of their negotiations, it is quite likely that the talks with the neutrals will not have got very far before the time comes for Britain to enter.

The neutrals, and Britain, no doubt each have their own ideas on how the dilemma should be resolved, but within the Six various suggestions have been made this week: that until the negotiations finish, the enlarged community might apply a special tariff; or that it might begin gradually to apply the common external tariff in the same way as to Commonwealth countries; or that in the meantime Britain should maintain the *status quo*, (that is, a 50 per cent customs reduction) with its Efta partners.

Discussions on this question form part of next week's agenda for the ministers. Already the French have stood out against any continuation of the Efta *status quo* beyond Britain's entry. The problem, they maintain, is Britain's own and the community should not be expected to solve it. On the other side, the neutrals may be unwilling to adopt any of the temporary expedients and may insist that they should share in the integrated European market from the same date, on the lines of the London declaration of June, 1961.

This has always been one of the most tricky problems of the negotiation, and one that sooner or later had to be faced—if one sets aside the earlier hopes that, if the negotiations had proceeded fairly quickly, Efta might have peacefully dissolved of itself, to everyone's mutual satisfaction. Given a little goodwill from all the interested parties, it should not be impossible to resolve it, among European countries whose interdependence is already geographically and commercially very real. The question is, will the goodwill be there?

No Road in Kashmir

FROM OUR CORRESPONDENT IN INDIA

THE Indo-Pakistani talks may conceivably ease the Kashmir dispute, but cannot hope to solve it and may very well peter out in complete failure. That is the feeling of most Indian commentators today. There is no sign that the Indian government is prepared to consider any concession which could satisfy Pakistan. It will be something of a small miracle if the talks start at all. The agreement to talk, joyfully launched on Thursday of last week, seemed to have been shot down in flames by Mr Nehru within twenty-four hours. His prepared statement to parliament, making plain that India could not contemplate "anything upsetting the present arrangements" in Kashmir, and his still stronger impromptu amplification of this seemed to make nonsense (the head of the Pakistan foreign office said "absolute nonsense") of any negotiations. Did Mr Nehru want to talk or didn't he? By Saturday, after some more frantic diplomacy by Mr Duncan Sandys, it appeared after all that he did. Despite a further speech on Sunday by the Indian home minister, reiterating the theme of "no further partition of the country," the Pakistani foreign office was soon urging a speedy start to the talks. The conspicuously quiet tone of Pakistani statements suggested that Rawalpindi saw prospects of some real gain.

But what gain, apart from the propaganda satisfaction of blaming India if the talks fail? Either Mr Nehru's statement in parliament

was pure bluff, preliminary to bargaining, or, as the *Times of India* said, "as of now there is absolutely no conceivable basis for negotiations." The reasons are twofold. At the diplomatic level, what can India gain from concessions over Kashmir? As New Delhi sees it, not much. At infinitely remote best, a joint defence pact. More possibly, a non-aggression pact. New Delhi regards neither as necessary, though they might be agreeable. Indians do not seriously believe that the Pakistanis will make a military attack on Kashmir. If nothing else, western pressure would surely be enough to prevent them. So a non-aggression pact would only make safer the removal of Indian troops from their positions facing the Pakistanis in Kashmir, which already seems reasonably safe and is now extensively under way. A joint defence pact seems inconceivable unless the Chinese appear likely to pounce on Pakistan. In that case, New Delhi argues, the Pakistanis will come running for a joint defence agreement anyway. Lesser gains such as a right of transit through East Pakistan for Indian troops and equipment would certainly be valuable if the Chinese renew their attack in the North East Frontier Agency (NEFA). But New Delhi does not really believe that this will happen.

Possible gains are therefore limited, and the one remaining possible gain, a settlement of the Kashmir dispute *per se*, does not rank high among Indian priorities. New Delhi likes to pretend that Kashmir is a settled issue, and so far as India is concerned actually feels so: Kashmir is part of India, period. No one is worried about Pakistan-held "Azad Kashmir": India would accept the present Indo-Pakistani ceasefire line as a definitive international line after a minimum of face-saving noises. But emotional attachment to the Kashmir valley as being Indian soil, built up by years of propaganda, is as strong today as ever and has been strengthened by resentment at unofficial Pakistani threats to grab it when India is being kept busy elsewhere. This, as always, is a spanner in the works of any proposed settlement. India has no real interests in the Kashmir valley in exactly the sense, but only in the sense, that Britain has no real interests in the Channel Islands. A settlement preventing Indian military movement from Srinagar would today make it more difficult to defend Ladakh (which, being Buddhist, would stay Indian in any settlement). But, short of the Kashmir valley going to Pakistan outright, which India will never accept, this difficulty could be overcome. The real difficulty is Indian national emotion, which the prime minister fully shares.

THE one remote hope of settlement is that much of the Indian emotion over Kashmir is essentially emotion against Pakistan. Autonomy for the valley would not be as hard to sell to Indian opinion as a transfer to Pakistan. But it could only be a distress sale, and there is no sign of anyone ready to promote it. Even the minority that knows (as the general public does not) that in any hypothetical plebiscite the Kashmir valley would vote for Islam, does not therefore feel that India must now seek the end of a quarrel which it has survived for fifteen years.

This is indeed the sad lesson of the Chinese attack: while it has brought out the essential unity of India, it has not demonstrated any essential unity of the sub-continent. If and when both countries found themselves under common attack, mere geography would make them cling together. But, on present evidence, there is little hope that this would last a moment longer than the threat that produced it. The unwitting cause of the trouble is India's large Moslem minority. Because of them India cannot afford to accept Jinnah's "two nation theory"—that Moslems are a nation as Moslems, and Hindus as Hindus. Even in the midst of his Chinese troubles, this thought remains as ever in Mr Nehru's mind as he ponders Kashmir; and the fear it arouses is not an idle one. But this means that India has to pretend that ideologically Pakistan is a myth. Pakistanis in their turn pretend that secular India is a fake. These feelings have deep roots. Unless India is to become a Hindu state, or Pakistan a secular one, the conflict can be eradicated only when both countries manage to accept abroad a theory which they with equal truth deny at home. Six weeks of limited attack from China could not be expected to achieve anything so difficult.

Soviet Frontiers of Freedom

TWO events, in quick succession, have demonstrated both the progress made by artistic freedom in Russia, and its limits. Mr Khrushchev has apparently played a part in both, though in one he appeared as a benefactor and in the other as a villain. The first event was the publication last month of A. Solzhenitsyn's long short story on life in a stalinist concentration camp. The sixty-six pages in *Novy Mir* describing "One Day in the Life of Ivan Denisovich" are, in their moving sobriety, more damning than thousands of speeches. It is reported that Mr Khrushchev's blessing was needed to allow their publication. Yet, a few days later, on December 1st, Mr Khrushchev, parading as an arbiter of the arts, pronounced a public anathema on abstract painting, which is "alien to the Soviet people." Thus he delivered at least a temporary setback to the timid advance of modern art in Russia. (The Soviet leader asked rhetorically whether abstract paintings were not the work of a donkey's tail. His metaphor suggested an unexpected knowledge of the anecdotal side of western art. It seemed to refer to the famous hoax perpetrated by anti-impressionists, towards the end of the last century; they managed to get a picture, "painted" by a donkey's tail, accepted for exhibition. On second thoughts, however, Mr Khrushchev may not have known the background of his metaphor. Impressionists, after all, are now hailed as masters in Russia too.)

Concentration camps hold no mystery for millions of Soviet citizens. But in the Stalin era, the subject was only broached in whispers. In the last five years the existence of the camps and the fate of their innocent victims has been publicly admitted and condemned. Yet, never before in Russia has concentration camp life been described in such revealing detail. The hero of Mr Solzhenitsyn's story is an ordinary man who does not really know why he was deported. His fellow inmates are equally ordinary. The day described does not differ from the 3,653 other days of the ten-year sentence, including three leap years. The prosaic story achieves an epic tone because of its quiet compassion. In Russia, where literary projectiles are explosive, this tale from the camp of the dead is bound to have a tremendous impact.

No wonder that there was opposition to its publication and that Mr Khrushchev's permission was required. If the rumours coming from Moscow are to be believed, he not only gave his blessing, but devoted the bulk of his still secret speech before the central committee, on November 23rd, to a violent condemnation of the literary practices of Stalin's day and to a plea for greater freedom. It may, therefore, seem strange that a few days later he should have donned the mantle of a stalinist philistine.

The painting incident would be relatively trivial, were it not an example of how difficult it is to get rid of conditioned reflexes from the Stalin era. That Mr Khrushchev, with his background, should have Victorian tastes and a horror of abstract painting is neither surprising nor shocking. His views on art (like those of Zhdanov in Stalin's time) would be echoed approvingly in many a London club. It might, equally, be perfectly legitimate for communists to criticise abstract art on ideological grounds. But there are two major snags to Mr Khrushchev's behaviour. The first is that his position in the party hierarchy gives him a curious right to pose as an authority on art. He can tell painters how to paint in the same way that Stalin used to advise composers to put more tones into their scores. The second, and connected, snag is that

Mr Khrushchev is no ordinary onlooker. He is both the chief critic and the exclusive patron. The way in which his strictures are now being played up by the whole Soviet press suggests that they may be a signal for a halt in innovations in Soviet painting, music and possibly even in literature.

The attack on modern painting will not be unpopular. If Solzhenitsyn's story had been censored, it might have circulated from hand to hand. Young poets, like Yevtushenko or Voznessensky, can fill a hall. On the other hand, all Moscow correspondents seem to agree that wherever Russians have had an opportunity to look at modern paintings (for example, in Western exhibitions) their reaction, as a rule, has been similar to Mr Khrushchev's. It is principally among the young intellectuals that the new blow will be resented.

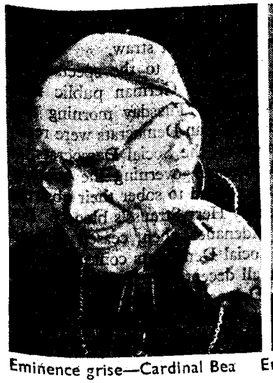
And yet the new setback is also a sign of the distance that has already been covered. In the Stalin era, during Zhdanov's reign over the arts, nobody would have dared to stage an exhibition of abstract art; if he had dared, he would have shared Ivan Denisovich's experiences in Siberia. Now, at the worst, the orthodox counter-attack will simply mean a delay. The most consoling conclusion after nearly a decade of battles over artistic freedom in Russia is that each time the authorities, frightened lest the trends should get out of control, fix new frontiers, these are more distant from the original Stalinist line than their predecessors. It was idle to expect that the Soviet bid for freedom would reach its destination in one go. The hopeful sign is that, amid advances and setbacks, the general direction is towards greater freedom. The movement may well carry Russia beyond Mr Khrushchev's expectations.

The Vatican Council's Start

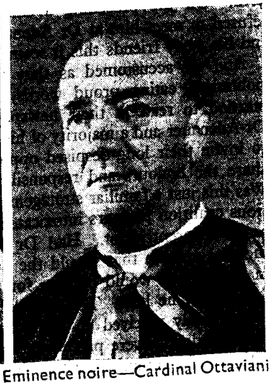
BY OUR CORRESPONDENT

WHEN the Pope, in June, 1959, announced the calling of the twenty-first general council of the Roman Catholic Church, he made it plain that he looked to the Council to renew the inner life of the Catholic Church, bring it into relationship with the modern world, and remove the obstacles to a closer accord with other Christian churches. This weekend, on December 8th, the feast of the Immaculate Conception, the first session of the council comes to an end. How far have the Pope's hopes been fulfilled?

By any judgment progress has been remarkable. As soon as it opened two months ago, it was clear that the council was not made up of deferential bishops who would carry out the behests of a conservative-minded Curia. This second Vatican Council assembled in an atmosphere very different from that of the first. In 1870 the conservatism of Pius IX, reinforced by the obscurantism of



Eminence grise—Cardinal Bea



Eminence noire—Cardinal Ottaviani

Cardinal Antonelli, his secretary of state, and the fanaticism c Cardinal Manning, set the gathering's prevailing tone. This tim John XXIII's opening address firmly repudiated reaction, pessimist and those whom he termed "the prophets of gloom." Hailing th present freedom of the Roman Catholic Church in non-communi countries from the fetters of state establishment, the Pope pr claimed that today the message of the Church could only b delivered by using the forms of modern thought and the technique of contemporary scholarship. Anathemas were out of date, an today "the Church prefers to make use of the medicine of merc rather than that of severity."

Pope John, as Benjamin Jowett might well have remarked, clearly a "capital fellow"; do his fellow bishops measure up t him? The answer came at once on the second day of the Council the assembled fathers refused to be railroaded by the Curia int electing a list of nominees to the vital commissions which are t reduce the bishops' decisions to their final form, before they a presented for approval to the Pope. The voting was put off unt they could fully discuss the matter among themselves. In the en the bishops elected to the ten commissions came from 42 countri and fully represented the international character of the Churc The Pope followed this up by observing the same principle in h personal nominations to the commissions.

The Council fathers went on to debate the first "schemata," t the future of the liturgy. These debates are still secret but as wi private meetings of British political parties, information about wh has gone on somehow gets around. Evidently the reformers carri the day. Italianate devotions are on the way out; simplicity is in the mass is to have its proper position as the centre of all liturgic devotion, and much of it is to be said in the vernacular. Latin h had its day. As the Patriarch of Antioch, Alexandria, Jerusalem a All the East is reported to have remarked, "Christ, after a talked in the language of contemporaries." The use of the vernac lar will no longer need direct authorisation from Rome but w be left to the bishops.

So far so good, but the real test came with the discussion on t second "schemata," on the sources of revelation. This pap drafted by a group of predominantly conservative theologians un the redoubtable leadership of Cardinal Ottaviani, head of the H Office, who has passed all his 72 years within a stone's throw the Vatican, outraged not only the northern liberals but the gr majority of the Council as well. Its rigid distinction between tradition of the Church and the Scriptures as sources of revelat would, they feared, drive Catholics and Protestants farther ap Its distrust of contemporary biblical scholarship made nonsense the Pope's championship of the scientific approach. In a sh debate, the name of Galileo, which is bandied about more of at meetings of the Protestant Truth Society than in the aug setting of St. Peter's, echoed through the nave. The draft defeated by 1,300 votes to 800, but the minority, taking advant

of the two-thirds majority rule required for reference back, insisted on continuing the discussion ; this dismayed the majority, who felt that unfair use was being made of procedural rules to impose a rejected view. At this point the Pope, exercising his final authority, intervened to announce that the " schemata " would be redrafted by a special commission headed jointly by Cardinal Ottaviani and Cardinal Bea, the head of the Secretariat for Christian Unity. It is reported that Cardinal Bea's services had earlier been rejected by the theological commission. A very different draft will undoubtedly be brought forward as a new basis for discussion.

This debate was followed with keen interest by the forty non-Catholic observers, who expressed their frank surprise and delight at the freedom of discussion in what they had always regarded as a monolith. The observers have also expressed their appreciation at receiving the same documentation as the council fathers. They have even been invited to do something that good manners might otherwise have inhibited them from—namely, express their views on the things they find most distasteful in the Catholic Church. Clearly a wind of change is blowing in the Vatican.

Unfortunately it has not fully penetrated the Vatican press office. This is presided over by Archbishop Felici, who recently announced thankfully that he had never been farther north than Milan. Some of his press releases have raised journalistic eyebrows. One release contained fifteen condemnations, which might be considered pretty good going, and another contained the following not untypical sentence: " this Deposit of Faith does not appear as an inert collection of dust-catching backfiles but rather as a continual spring." The press conferences have been happier ; one given by Monsignor Cardinale, a high official of the Curia, on the subject of Church and State, was highly praised. For officials of the Secretariat of State to give any press conference is in itself revolutionary.

As expected there have been clashes between liberals and conservatives at the council. One dramatic highlight came when Cardinal Alfrink, who was in the chair, cut short Cardinal Ottaviani when the latter exceeded his allotted time ; the council fathers broke into spontaneous applause. Doubtless this owed something to a slender appetite for other people's Latin, but it had a symbolic significance, since the desire for reform shown by the bishops of the centre has been a surprising and unsuspected feature of the council. The pace has been set by the great reforming prelates of the north, but the centre has been sympathetic. The English bishops so far have not played any prominent part, but their weight, such as it is, has been cast on the side of the *status quo*.

The conclusion of this week's discussion of the draft on the nature and government of the Church has had to be held over until the council reassembles next September. The postponement is important because it will give an opportunity for substantial redrafting of " schemata " which in the present temper of the council might well be unacceptable.

The council has had its disappointments, particularly that the Greek Orthodox representatives stayed away, although surprisingly the Russians came. The Pope's illness has been a worry. Secular Rome has undoubtedly taken to the fathers. Italian radio and television paid them the tribute this week of a performance of Beethoven's Ninth (Choral) Symphony in St Paul's Outside the Walls, the sister basilica of St Peter's. The second Vatican Council has made a more liberal, and decidedly more interesting, start than most people expected.

Bonn's Wobbling Pillars

FROM OUR BONN CORRESPONDENT

THE stir in German public life caused by the gradual, yet quite visible, decline of Dr Adenauer's thirteen-year-old authority developed this week into something like a commotion. Both collectively and individually, the deputies of all three parties represented in the Bundestag are now openly jockeying for what seem likely to be the most advantageous positions when the Chancellor goes. That great solitary, Dr Adenauer himself, is still pertinaciously manœuvring to delay his exit as long as possible.

The Free Democrats are perhaps the unhappiest group in the general scrimmage. Pitting a mere sixty against 439, they have glimpsed the horrific prospect of their exasperated coalition partners, the Christian Democrats, doing a deal with the Social Democrats that might well beget a new electoral law which might do away with proportional representation in parliament. Such a change would be a mortal blow to the Free Democratic party, none of whose candidates were directly voted to the Bundestag in the general election of September 17, 1961.

It was from that day, when a majority of the west German electorate voted against him, that Dr Adenauer's authority began inexorably to wane. It then took him some three months to get his coalition government into harness. The team has since seldom pulled harmoniously together, and in consequence much of its promised legislation is in arrears. The ministerial blunders exposed to the public gaze after the legal action launched against the magazine *Der Spiegel* on October 26th revealed something of the extent of the estrangement between the coalition partners—an estrangement widened since by the Free Democrats' insistence upon Herr Strauss leaving not only the defence ministry but also the cabinet altogether. Herr Strauss complied on Friday, November 30th. On the preceding Wednesday the Free Democrats had refused to meet him at Dr Adenauer's dinner table. For the host and his party friends this it seems was the last straw.

And so, accustomed as they have grown to the spectacle of politicians eating proud words, the west German public were startled to read in their newspapers on Tuesday morning that Dr Adenauer and a majority of his Christian Democrats were ready to invite their long-despised opponents, the Social Democrats, to share the honours and responsibilities of governing the country. Was this just a familiar stratagem, intended to sober their obstreperous coalition partners intoxicated by Herr Strauss's blood ? For once, apparently not. Had Dr Adenauer, then, ceased to hold the dire opinion that should the Social Democrats come to power in Germany it would be time for all decent citizens to emigrate ? Apparently he had. The Social Democrats announced that they had actually received an invitation to talk, and that the supplementary details were promising enough to warrant further investigation. The committee which they set up to examine the Christian

PRODUCT MULTIPLICITY: ANOTHER REASON WHY TRUST IN PHILIPS IS WORLD-WIDE.

WHY TRUST IN PHILIPS IS WORLD-WIDE

Philips is a multitude of companies producing a multiplicity of products in many countries. Philips' interests are in light, vision, sound, communication and automation - also in health and human comfort - for homes and industry. Such is the varied nature of the Philips World Federation of Industries. *In manufacturing so many different products for so many markets,* Philips practise the wise advice: "Never put all your eggs in one basket!" This is one reason why the organization stands firm in times of market fluctuations .. and why there is confidence in Philips.

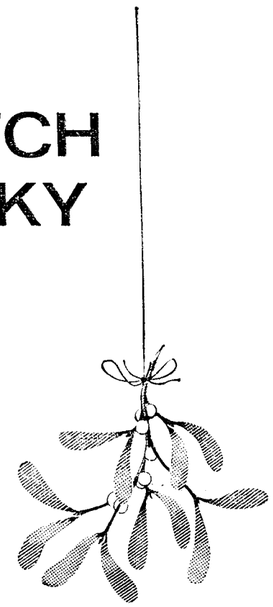
RARE SCOTCH WHISKY

QUEEN ANNE



The finest scotch wherever you are

The Connoisseur asks for it by name

Democrats' offer included Herr Ollenhauer (the party chairman), Herr Brandt (the party's alternative to Dr Adenauer in the 1961 election), Herr Wehner (the vice-chairman and former communist who once filled Dr Adenauer with thoughts of emigration) and Herr Erler (the party's solid specialist on defence questions). The Free Democrats, who had been building coalition castles in the air over the weekend, felt they had been outrageously duped. Within a few hours they, too, were putting out feelers to the Social Democrats, protesting simultaneously against any tampering with the existing electoral law.

Dr Adenauer's placid government reshuffle had burst into a bewildering free-for-all in which the play of national, party and individual interests was inextricably joined. The west German radio stations that talk especially to east Germany did their best to explain the confusion to possible doubters. Rias (Berlin) told its listeners not to worry. This was not a state crisis, it was a government crisis. And in a democratic state the essential pillars did not collapse when the government changed.

The Christian Democrats admitted that their leaders' decision to open negotiations with the opposition had been hotly contested among them; and the Social Democrat leaders admit that, in responding, they likewise were acting against the wishes of "a substantial minority." The Socialist rank and file especially were dismayed by their leaders' turnabout. It meant, apparently, that they were ready after all to serve under Dr Adenauer. To the pure in heart this revocation was too high a price to pay, even for nine of the twenty-one ministerial portfolios, which, it had been suggested, should be theirs. But to Herr Wehner, who had represented the Social Democrats in the preliminary exchanges, the Christian Democrats' offer presented a useful opportunity to bring pressure to bear upon Dr Adenauer's regime from within.

Christian Democratic misgivings about Dr Adenauer's surprising move derive in part from Herr Wehner's reputation as a Marxist student of power, and one whose heart has long been sick for want of wielding it. When Dr Adenauer gathered on Wednesday that the Social Democrats were toying with the idea of imposing a time-limit on his chancellorship as part of the bargain, he abruptly cancelled the arrangements that had been made for a second meeting of the coalition negotiators on Thursday morning. Herr Ollenhauer promptly despatched a conciliatory letter to the Chancellor, maintaining that there had been a misunderstanding. Dr Adenauer relented and agreed to a meeting on Thursday evening. A little colour had come back into the Free Democrats' cheeks. After all, Dr Adenauer was still negotiating with them too.

Regions for Italy

FROM OUR ROME CORRESPONDENT

When the Italian Socialists agreed to support (without joining) Signor Fanfani's government as a step towards fuller collaboration in the future, they made two conditions. The government must nationalise electricity and set up the self-governing regions into which, in theory, the constitution divides the Italian Republic. The first part of this pact has been honoured. The bill to nationalise power has been passed and takes effect on January 1st. Now the government, after a sharp tussle between Signor Fanfani and the Christian Democrat moderates, has presented four bills on the formation of the autonomous regions. Another bill to regulate regional elections is also before the Chamber. The government has not made clear how much of this regional legislation it intends to push through before this Parliament dies next spring. The time factor is important. The Communists and Signor Nenni's obstreperous left wing are trying to prove that the government's slowness amounts to a default on its pledge. The conservative opponents of the regions (that is, the Liberal party, the Monarchists, the neo-fascists and a Christian Democrat minority which probably would not vote against the party line) hope that if they can retard things in Parliament the regional laws will not pass before the elections.

Signor Fanfani would certainly like to see all the regional laws passed this session, but he knows that this is a lot to ask of his party. His proudest adversary, Signor Scelba, and the moderates, some of whom are in his government, are using the regional issue as a lever in the struggle for power—more personal than ideological—inside the party. They have small chance of ousting Signor Fanfani, still less of putting a centre right government in place of his centre left coalition. But this does not make their opposition less bitter or less dangerous. A government crisis was narrowly avoided the other week and Signor Fanfani has had to make room for another moderate, Signor Carlo Russo, in his cabinet.

The regions have become a test case for the centre left. The Social Democrats and the Republicans are pledged to promote them. Signor La Malfa, the (Republican party) minister directly responsible for their promotion, considers that they are the springboard for his economic development plan. He is thinking as much of industrial as of bureaucratic decentralisation. It is this economic aspect of the regions that has turned the Liberal party against them, made it deny its own doctrine and led it to misquote one of its most venerated leaders, the late Luigi Einaudi, who wanted to give Italy regional governments with wider powers than those proposed by this government. In fact Einaudi was such an ardent regionalist that he wished to abolish the prefects as unnecessary agents of the central administration. Signor Fanfani has no intention of going that far.

For obvious historical and natural reasons the idea of regional autonomy has been a recurrent theme in Italian politics since the unification. Cavour and Minghetti toyed with it but, after Cavour's death, it was feared that the new state was too weak to risk decentralisation. At that time only two per cent of the population habitually spoke Italian. Later the idea was revived by the Popular party and became part of its doctrine. At the end of World War II all the anti-fascist parties were regionalist and the Radicals (Action Party) even wanted to make Italy a federal state. Sicily was then in the throes of separatist agitation and received a statute of self-government before the Constituent Assembly had devised the constitution of the republic.

Anti-regionalists often point to Sicily as an example of the dangers of regionalism. Constitutional conflicts between Rome and Palermo are fairly common and many aspects of Sicilian regional politics are unedifying. Signor La Malfa's answer is that Sicily is an example of the sort of region this government does not want to set up. It has primary legislative powers whereas the new regions will only be able to legislate on local matters in the framework of national laws. They will not levy their own taxes or dispose freely of money assigned to them by the central government, nor will they be free to set up new offices and appoint new personnel. The government project is essentially a transfer of money (£180 million) and staff (8,000 employees) from the state to the regions.

The constitution of 1948 divided Italy into five special or frontier regions and fourteen ordinary regions. Four of the frontier regions received their statutes immediately. The fifth, Venezia Friuli, was set up this year. The fourteen ordinary regions have existed only in name. The urge to set them up now is partly due to the economic "miracle" which has emphasized the need to correct the unbalance between the different parts of the country. Regional planning, incidentally, is also a development of the common market ethos, as witness M. Marjolin's ideas which were discussed in

Rome last week-end. Politically, the regions have become a practical possibility as a result of the "opening to the left." So long as the Socialists were closely tied to the Communists there was a real danger that the two central regions, Tuscany and Emilia, might form a "red belt" dividing Italy in two. This danger hardly exists today. When the Christian Democrat party recently asked the Socialists to give a formal pledge that they would not form regional juntas with the Communists, Signor Nenni replied by proposing a pact between the four centre left parties to act together at every level—municipal, provincial, regional and national—for the duration of the next Parliament. The five year pact has not been signed but substantial agreement is implicit in the government's promotion of the regional bills. If they are passed by this Parliament the centre left should look forward to a long innings and Italy to a period of stable government.

Australian Tariff Policy Rift

FROM A CORRESPONDENT IN MELBOURNE

AUSTRALIANS, as everyone knows are upside down. They are preparing for the fight for new export markets by doubling the protection given to home industry—a protection that had already made it unnecessary to keep Australian costs in line with world costs. This is the basic truth that underlies the announcement on November 7th of the resignation of Sir Leslie Melville, chairman of the Australian tariff board.

Sir Leslie, an experienced administrator and economist, came to the tariff board from the Australian National University, of which he had been vice-chancellor. In theory the board, established under an act of 1921, is an independent body, whose advice (published as a report after a public inquiry) the government is not bound to accept but must at least obtain before making any change in the tariff. The principles governing its recommendations are rather vague, but it is supposed to have a regard not only for the damage caused by competing imports, but also for "economic and efficient" production. Although its special care is for import industries, it does not grant protection in advance of their establishment, and in order to qualify for protection they should be, in the words of the 1957 trade agreement between Australia and Britain, "reasonably assured of sound opportunities for success".

These principles might allow of a wide variety of interpretation, but in theory at least that interpretation was the board's own. In practice there was for many years a remarkable harmony between the board and the department of trade, not unconnected with the facts that Sir Leslie's predecessor, Dr Westerman, was an official of the department (he has now returned to it as its permanent head) and that the tariff board draws its staff from the department.

Sir Leslie disliked this close link and wanted the tariff board to have its own establishment—and a larger one, too, in order to speed up its work. But his efforts to strengthen its independent status foundered on the results of the general election of December, 1961. The government, having discovered that even some of its old friends, the manufacturers, had voted against it, immediately set out to placate them for all it was worth. Not only did it go into full retreat from the credit squeeze; it also obliged with extra protection against competing imports. It could not just restore the import quotas whose removal in February 1960, in boom conditions, started the run on the reserves which later was dealt with so drastically. To do that would have meant too much loss of face. But it is increasing tariff protection, and even quantitative restrictions will shortly make a furtive reappearance by the back door.

The government's first action was to empower the deputy chairmen of the tariff board to grant temporary, emergency increases in duties to suffering industries. But the deputy chairmen were too much in line with normal tariff board policy to satisfy the manufacturers, who now had the whip hand and knew it. So the government appointed a single individual, the recently retired head of the department of customs, Sir Frank Meare, and gave him the grand, collective-sounding title of "The Special Advisory Authority." Unprejudiced by an expert investigation of applicants' circumstances and undistracted by wider considerations of the national interest, Sir Frank can recommend emergency tariff increases as he pleases, and can even put quantitative restrictions on imports if he thinks that a duty will not be protection enough. After three months, any changes so made are reviewed by the tariff board; but as Sir Leslie Melville pointed out in a protesting letter to the minister for trade, Mr McEwen, to reverse a decision once made causes manufacturers to feel aggrieved, and justifiably so, since business planning in such circumstances is impossible.

What is most disturbing about all this, however, is neither the difficulties of business men nor the personal position of the tariff board's chairman. The effective power of the tariff board has been eroded, and if Sir Leslie is succeeded, as he probably will be, by a tame department of trade man, the board will simply be another instrument of the government, and the tariff-making might just as well be done by the department of trade directly.

The worst of it is that special advisory authority is a device for dishing out protection to all and sundry, and the last remaining scruples about "efficient and economic" production are being swept away. Naturally there has been a rush by manufacturers to secure additional protection, whether they really need it or not, while the going is so good.

IN Australia, because of this nation's peculiar philosophy about employment, protection, once given, is especially difficult to withdraw. Not only must there be a job for everyone, but nobody must ever find himself obliged to change his job, still less to move to another place in search of work. There can therefore be no question of allowing uneconomic and uncompetitive industries to die a natural death and their work force to be absorbed by up-and-coming enterprises that could do something for the country's economic future. They must be propped up by subsidies and import duties at the expense of the taxpayer and consumer.

The consumer in Australia is happily unconscious of any connection between subsidies and import duties, and the high prices he pays in the shops. Quite the contrary, he is inclined to complain that goods are imported that can be made just as well domestically. By the same token, hardly anyone in Australia understood what the government was trying to do with its credit squeeze in 1960-61, which was regarded as a senseless blow at Australian prosperity. So the government, bowing to public feeling, has reinflated the economy to the point where unemployment is again below 2 per cent of the work force. Now only the bad effects of the old policy remain—the loss of production and the unused capacity, the shaken confidence, the fear of panic measures suddenly imposed and suddenly withdrawn.

The good results, by contrast, are being lost, or were never given time to show themselves. The unions have never drawn in their horns and still ask for more. Prices will soon begin to climb again, as wages and demand rise, and as competing imports are excluded. Manufacturers can turn back to a prosperous home market after only a brief and uncomfortable glance at overseas markets. A run of four deficit months in foreign trade has just been broken. But unless famine or war should give a boost to the export prices of primary products, another balance of payments crisis may be looming up even before the government has expunged from the mind of the electorate the memories of the last crisis and its painful aftermath.

AMERICAN SURVEY

AMERICAN SURVEY is prepared partly in the United States, partly in London. Those items which are written in the United States carry an indication to that effect, all others are the work of the editorial staff in London.

Nuclear Arms Found Wanting

WASHINGTON, DC

THE defence budget which President Kennedy will recommend to the new Congress next month may give a clue to the fate of Skybolt, the missile which it is hoped to fire from an aircraft as a Polaris missile is fired from a submarine and the one with which Britain is vitally concerned. The amount of money that it is proposed to spend on the research and development of a new weapon generally indicates how it is coming along. Developing Skybolt is going to cost nearly $500 million, instead of the $170 million estimated originally, and it has had five failures in recent tests. The United States Air Force wants Skybolt persevered with, and so no doubt does Mr Macmillan. But many people, discouraged by its succession of launching failures, think that Skybolt's future is dark. Congress will be asked to vote more money for Dyna-Soar, an aircraft whose pilot will, it is claimed, be able to take it in and out of orbit; and also for Zeus, which its backers hope will prove to be an effective anti-anti-missile. Another $50 million already allocated to the proposed "reconnaissance strike" bomber RS-70 raises the cost of developing this monster to $1.5 billion so far.

These experiments continue partly because of the political and military lobbies which sustain them but also because there is now an inclination to turn back (while there is still time) from fully automated, push-button war in which, once the basic decisions were made, computers would take over. The Cuban crisis may encourage this trend, just as it has helped to confirm the American belief that Russia's nuclear inferiority makes it more, and not less, urgent for the West to have conventional weapons. It is argued that western nuclear superiority may block Russian attempts at nuclear blackmail but that this will be done clumsily and dangerously without strong conventional military forces. The American hope is that Mr Khrushchev's setback in Cuba gives the West time to chew over the event and to apply its lessons to Europe's military affairs.

Like the rest of the world, the two superpowers are still living in the age of the bomber and this age promises to have a more lengthy twilight than expected. Intercontinental missiles are still relatively rare. America's long-range jet bombers will continue to fly well into the nineteen-seventies. Both the United States and Russia continue to rely on aircraft to carry most of their nuclear warheads and there is an evident disposition to keep those aircraft as far as possible out of harm's way in a crisis, until they may be actually needed. During the Cuban crisis B-52s and older B-47s on training flights joined with the Navy to maintain a watch on the 2,000 ships that were in the Atlantic Ocean area. But most of the force of B-52s was kept airborne, over a period of four weeks, to ensure that it would not be destroyed on the ground.

Strategic bombers were moved out of bases in Florida to make room for tactical fighters, reconnaissance and troop-carrier aircraft. Navy and marine aircraft flew more than 6 million miles from October 22nd until November 20th when the quarantine of Cuba was lifted and the Atlantic fleet had 183 ships, including eight aircraft-carriers, patrolling more than 2,000 miles of ocean. The fleet's anti-submarine force is still on the prowl and will continue to be so until December 20th, according to present plans, in order to find and photograph Soviet ships leaving Cuban ports with Russian bombers aboard. But almost 200,000 men and 1,400 aircraft have now returned to normal duties from their Cuban preoccupations.

It is against this background of recent events that the Department of Defence is preparing its annual budget. Congress will probably be asked to appropriate at least $2 billion more for defence for the fiscal year which begins next summer. If Congress agrees, servicemen will get more pay, the Army will get more aircraft, the Navy will get new ships and civilians may get more bomb shelters. Some time after he delivers his Budget Message, Mr Kennedy will have to submit one or more supplemental appropriations for the current fiscal year that ends next June to cover the cost of the Cuban operation. But for the ensuing fiscal year, to which the Budget Message will apply, it is hoped to suggest some economies, as well as some additional expenditures. In this way the defence budget may be kept from going quite as high as $53 billion; $50.3 million was appropriated last year.

This $53 billion ceiling may be too low. Much will depend on what happens in Asia and in and around Berlin. It is expected that more than $1.5 billion will be asked for higher pay and allowances for servicemen. This is less than was recommended by a committee which studied how to keep men with technical skills from leaving the services for jobs in industry. In addition, the Secretary of Defence, Mr McNamara, formally yielded last week to political pressure against his plans for an immediate reduction of the National Guard and the army reserves from 700,000 to 640,000 men. The number will be reduced more slowly by imposing higher physical, mental and training standards. The aim is to have a compact reserve establishment more closely designed to supplement the active Army and to correct the defects exposed during last year's call-up over Berlin. Eight less effective reserve divisions will become brigades while six others will be given much higher priority for men and equipment and the rest strengthened moderately. Of the eight thousand small detachments of reserves scattered all over the country over a thousand are to be reshaped and over seven hundred dropped altogether.

THE pattern of spending seems to indicate fairly well the policy that the Department of Defence is pursuing. There has been an increase of 45 per cent in America's conventional forces, with 16 instead of 11 army divisions ready for combat and with more mobility, more airlift and more tactical air support. The United States Army has 5,650 aircraft and helicopters for use on the battlefield (compared with 16,000 for the Air Force) and is to get more. More money is also to be requested for research and development of the new fighter, the TFX, which will fly at two and a half times the speed of sound and which is to be used by both the Air Force and the Navy. The Navy still needs new destroyers, to replace the large numbers which were built during the Second World War and which are all reaching obsolescence at about the same time.

Since 1961 spending on long-range missiles, mainly solid-fuel ones like the Minuteman and the Polaris, has doubled but it is not likely to go on rising at this rate, though technological progress

can always be counted on to create a clamour for expensive adaptations and improvements. The generation of solid-fuel, long-range missiles that is now being placed in "hardened" underground sites in the United States and in American nuclear-powered submarines is expected to endure for years. By 1965 it is calculated that the American lead in those weapons will have increased considerably. Americans hope that Mr Khrushchev will decide that he cannot now catch up with the United States in strategic military strength. In order to do so, failing such tricky short cuts as his Cuban venture, he would, it is estimated, have to maintain his spending at twice what the United States is now spending on arms. The state of the Russian economy is regarded as a barrier to Soviet military effort of this order.

Nevertheless, it has to be assumed that the time will come eventually when both sides will have many solid-fuel missiles placed in hardened sites. Mr McNamara has declared that this will constitute a more stable balance of terror than that which exists now. He did not go quite so far as to say that the strategic nuclear weapons of the two sides would then apparently cancel each other out. He said that, with a more stable balance of terror, there might be nuclear exchanges which would be confined to military targets. But many Americans are sceptical of this "no cities" doctrine. It ignores certain facts such as that many military targets are near or even in cities and that missiles fired from submarines under water cannot, as yet, be aimed very accurately. Moreover, it has been pointed out that even if a "no cities" strategy were adopted by both sides and even if there were bomb shelters for all city-dwellers, the cost of using strategic nuclear weapons would still be at least twenty million American dead.

In the light of Cuba, most Americans hope that Russia would not run the risk of the nuclear attack on the Soviet Union which, it is said officially, might be the American response to a massive invasion of western Europe by the Russians even if they were armed only with conventional weapons. But Mr McNamara has said that an American nuclear response to mere Soviet "pressure" is "incredible." Many Americans, including knowledgeable military officers, are dubious about a tactical nuclear response to a Soviet military probe. They think that, once tactical nuclear weapons were used, the fighting would escalade into total general war. Therefore there is some demand for the pulling back of these weapons from front-line units in Europe.

The stories in *Der Spiegel* about alleged inadequacies in the west German military forces have induced some dismal American thoughts about the probable brevity of the "pause" that would ensue, theoretically, before western tactical nuclear weapons were employed during any clash between the Soviet and western conventional forces in Europe. Mr McNamara has noted that even the 25 per cent increase in the strength of the North Atlantic Treaty Organisation has not provided the "conventional option" that he would like the West to have in Europe. In Paris next week the Americans will again attempt to persuade the other Nato countries to help to provide this "conventional option."

Stevenson Unaligned?

EARLY winter seems to be a particularly stormy season for Mr Adlai Stevenson. It is then that his work as United States Ambassador to the United Nations reaches its annual peak with the General Assembly. And it is then that the rumours that the President would prefer someone else to be doing that work reach their peak as well. Last year they centred round the suggestion that Mr Stevenson might be sent back to Illinois to try for a Senate seat. This year they centre round the appointment of Mr John McCloy, an experienced international negotiator, to assist Mr Stevenson at the height of the Cuban crisis and to bargain with the Russians on the details of the subsequent settlement.

It would seem fairly obvious both that Mr Stevenson needed help with this extra burden and also that it was desirable to associate an authoritative Republican like Mr McCloy with the negotiations. But the rumours have now hit the headlines with an article in the *Saturday Evening Post* by two well-known journalists who have close personal links with the White House. They maintain that Mr Stevenson was opposed to the military blockade of Cuba and that he wanted to deal with the Russian missiles there by political negotiation only. The authors suggest that he might have been prepared to bargain over bases in Turkey and in Europe. They even go so far as to mention the dirty word "Munich."

Mr Stevenson has castigated the article as a classic "example of irresponsible journalism" and the President has declared his complete confidence in his Ambassador. But Mr Kennedy did not jump to Mr Stevenson's side quite as quickly as he might have done and few people doubt that Mr Stevenson had at least initial hesitations about the Administration's toughness on Cuba. Yet it is just this imaginative, high-minded flexibility which makes Mr Stevenson so valuable to Mr Kennedy as a reassurance not only to those Democrats who distrust the President's pragmatic approach but also to the representatives of African and other non-aligned countries at the United Nations. Mr Stevenson does not make policy (although he is a member of the Cabinet) and once it is made he presents it brilliantly and loyally—as he demonstrated when he put the American case on Cuba to the United Nations.

Learning a Living

ONE of the most intractable labour problems in the United States has been the persistently high level of long-term unemployment. The number of Americans out of work for six months or more rose tenfold between 1953 and 1961 to more than 800,000; nor has the moderate recovery in economic activity this year made much of a dent. The hard core of the long-term unemployed—largely Negroes, women, young people and other unskilled workers—represents the human backwash left by rapidly changing markets and technology. Chronic unemployment in the textile towns of New England and the mining areas of Minnesota and the Appalachian states has been supplemented by the emergence of pools of unemployable labour in places like Detroit and Pittsburgh, a result of the replacement of semi-skilled workers by machines. And officials of the Department of Labour estimate that a million production workers in manufacturing will be displaced by mechanisation each year over the coming decade.

So it is good news that the Administration's programmes for teaching jobless workers new skills under the Area Redevelopment Act (ARA) and the Manpower Development and Training Act (MDTA) have made a fast start. More than 14,000 workers in depressed areas across the country have enrolled in or completed courses in the training projects created under the ARA in 1961. The more ambitious MDTA—designed to retrain 400,000 people and give limited on-the-job training to 250,000 more by 1965—is barely three months old, yet 279 projects involving some 10,600 workers have already been approved under it.

These statistics, however, mask formidable difficulties in the recruitment and placement of trainees. Far too many of the long-term unemployed are either too apathetic or too poorly educated to be drawn into the new programmes. In a West Virginia project 1,015 jobless workers were notified to appear for aptitude tests; only 640 showed up and of these only 240 passed. It is estimated that half of that state's unemployed cannot be retrained because of deficiencies in basic reading and arithmetical skills. This position is not atypical and it has spurred the Administration's plans to ask Congress for new legislation to provide more training for school

Chicago's Oldest Bank Now Serves You in London, Too

Address: 58/60 Moorgate, London, E.C. 2

Now in London—just as in Chicago—Continental offers a complete range of commercial and international banking services. The members of our London staff have been selected for their experience in both fields. You'll find them equipped to serve you well.

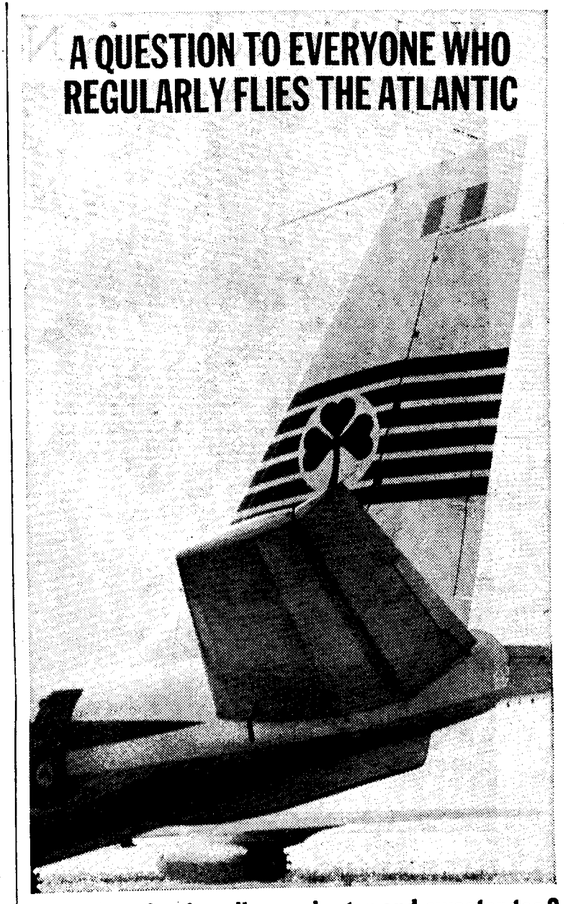
A QUESTION TO EVERYONE WHO REGULARLY FLIES THE ATLANTIC



Can you make the mileage shorter and sweeter too?

Yes! By Aer Lingus—Irish International Airlines. Catching a transatlantic jet need not mean hours of cross country journeying in the wrong direction. Aer Lingus flies *direct* from the major airport nearest you, to connect at Dublin with the daily Boeing jet to New York and Boston.

Not only is this far more practical, it is also more of a pleasure. *At Dublin* take a breath of fresh air, and enjoy a meal in the most famous airport restaurant in Europe. *At Shannon* stop off at the Duty Free shopping centre. Here the nicest things from Ireland and the rest of the world are all gathered under one roof and sold for a song. *In the air* you will discover that the Golden Shamrock menu and wine list are the finest that ever got off the ground.

Your travel agent will give you full details of all Aer Lingus services from the airports listed here, and of the connecting flights to New York or Boston.

Check your home town against this list of Aer Lingus take-off points in Britain.

Yorkshire accent in North Carolina

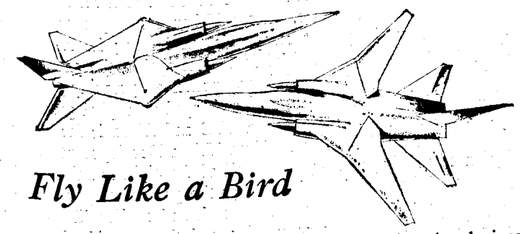
PR170H

In a field in North Carolina where cotton once grew, a £20,000,000 chemical plant has now arisen. Here Fiber Industries Incorporated is producing a new synthetic fibre known as 'Fortrel', whose silk-like threads, cascading out of spinnerets, are going to textile mills throughout America. But among the voices to be heard above the whirr of machinery are some that are unmistakably English; for this is a joint venture by Britain's leading chemical company, I.C.I., and Celanese Corporation of America, in which experts from I.C.I.'s 'Terylene' polyester fibre plants in Yorkshire are supplying the scientific skills.
This is yet another milestone in the triumphant progress of I.C.I.'s remarkable synthetic fibre. As 'Terylene', it's made in Britain and Canada. In France, Germany, Italy, Holland, Poland, Czechoslovakia, Spain and Japan, similar polyester fibres with different trade names but the same outstanding properties are being produced under licence from I.C.I. And now, too, in the U.S.A., one of the world's most sophisticated and discriminating markets, 'Fortrel' will be contributing its unique qualities to exacting jobs in industry and bringing to clothes for the citizens of Paris, Illinois, the same crisp elegance that delights the citizens of Paris, France.

The influence of I.C.I. research and production is felt today in every corner of the globe

Imperial Chemical Industries Ltd., London, S.W.1

drop-outs and other poorly-educated youngsters. Difficulties in placing retrained workers have been less serious. To a large extent the shortfalls which have occurred have reflected the fact that there are simply not now enough jobs to go around in the economy. The welcome improvement in the unemployment figures registered in October was reversed last month; 5.8 per cent of the labour force is again out of work. And until current efforts to generate more jobs through accelerated outlays on public works and other measures begin to take effect, the task of placing newly-trained workers in many areas is likely to remain thankless.



Fly Like a Bird

THE biggest contract for fighter aircraft to be placed since the war has just been carried off by the General Dynamics Corporation, in association with the Grumman Aircraft Engineering Corporation, after nearly two years of hard-fought competition and weeks of excited speculation in the stock market. The contract is for the TFX (Tactical Fighter Experimental), now to be renamed F111, a revolutionary supersonic aircraft for both the Air Force and—with some modifications to adapt it to life on an aircraft carrier—for the Navy. This bagging of two birds with one design is expected to save about $1 billion. The radical new feature of the TFX is its retractable wings. Held straight out, they enable it to take off and land at slow speeds on short runways on shore or afloat; tucked in, either partially or entirely, they will reduce the "shock-wave drag" encountered at supersonic speeds and enable the aircraft to fly at over twice the speed of sound at high altitudes. The idea of varying the sweep of the wings is not new but the pivot for the outer portion of the wings, which made the idea practical, was only worked out in 1959 after studying British experiments.

The award of the contract was greeted with cheers at Grumman's plants on Long Island, New York, a state which complains that it has not received its fair share of defence contracts, and with even greater enthusiasm at Fort Worth, Texas, where General Dynamics recently produced its last B-58 bomber. The firm is Texas's largest employer; last year it lost $143 million on its operations as a whole. At the Boeing Company, the runner-up whose designs are said by some to have been superior, the news was received with dazed stoicism. Production of the TFX at the Boeing plant in Wichita, Kansas, would have prevented the plant from closing as production of bombers finished and taken the edge off middle-western complaints of neglect by the Defence Department, but Boeing itself is not hard up for work. In any case over half of the prime contract will be farmed out to other firms.

The experimental models now being ordered will bring in nearly $1 billion, but if the government goes on to order, say, 1,500 operational models over the next five years or so the contract may be worth over $5 billion. Experience of the movable wing in military service is also a key factor in designing a supersonic passenger aircraft. (This is discussed further on page 1039.) Whether or not there is any justification for nicknaming the TFX the LBJ—for the Vice President, Mr Lyndon Baines Johnson—his state of Texas has real cause to rejoice. The Department of Defence insists, however, that the contract went to General Dynamics because its proposals were best designed to satisfy the needs of both services.

A Governor's Lot

IT is now a month since the elections but voters in Massachusetts and Maine cannot be absolutely sure whom they elected as Governor until recounts are completed. It is not expected, however, that either Mr Peabody, the Democratic newcomer to politics who defeated Governor Volpe of Massachusetts, or the incumbent Republican Governor of Maine will have their victories snatched from them. Just this week the last Senate contest was decided—giving the Democrats 67 and the Republicans 33—when South Dakota finally plumped for Mr McGovern, the former director of Food for Peace. A Republican, Mr Chafee, has just seized the Governorship of Rhode Island from a Democratic incumbent by 389 votes. But in Minnesota the decision that the Republican incumbent, Mr Andersen, has retained the Governorship by just over a hundred votes is being challenged. Mr Rolvaag, the Democratic-Farmer-Labour candidate, is demanding a full recount even though his party will have to pay $100,000 for it if it confirms Mr Andersen's lead.

If it does, the Republicans will have won seven Governorships and lost six, a much poorer showing than had been expected, even though three of the states which they won were big and important ones: Pennsylvania, Ohio and Michigan. Given no upsets, there are now 33 Democratic Governors and 17 Republican ones. What has also attracted attention is the hard row which incumbents now have to hoe, whether they are Democrats or Republicans. Ten of them were defeated and only in four small states was a Governor re-elected with an increased majority. A courageous record in office may hurt, not help. The political mortality of Governors is, indeed, greater than that of holders of any other major office.

The main reason is clear. Unlike Senators and Representatives in far-off Washington, Governors cannot side-step controversial bread-and-butter issues; whatever they do is bound to affect some group of voters with long and unforgiving memories. A Governor is usually punished—as Mr DiSalle was in Ohio—if he cannot meet the soaring costs of education and welfare without raising taxes. Often his term is only for two years, sometimes he cannot succeed himself, his powers are frequently restricted and his salary exceeded by that of other officials in the state. It is not surprising that Governors—once the prime source of presidential timber—are often mediocre or that they envy Senators with their six-year terms, large rewards and relative remoteness from deeply-felt local issues. Few Governors are, however, as lucky as Mr Mechem of New Mexico, a Republican who was defeated last month. The Governor had the power, which the Democratic Legislature tried unsuccessfully to end, to appoint a successor to Senator Chavez, a Democrat who died recently with two more years of his term to run. Mr Mechem has resigned in favour of his deputy, who has dutifully appointed the ex-Governor to the Senate, thus giving him a new lease of political life.

Mr Zeckendorf's Troika

FROM A CORRESPONDENT IN NEW YORK

A YEAR has now passed since Mr William Zeckendorf, the archetype of the free-wheeling American promoter of land development projects, reached to the City of London for roughly $18 million in sorely-needed new capital to keep his ailing company, Webb & Knapp, Inc., afloat. This spectacular transaction made it possible to arrange conventional bank financing of another $25 million. Thus Webb & Knapp was able, at one swoop, to eliminate $40 million of short-term debt on which interest was being paid at rates of up to 20 per cent. To be sure, a stiff salvage fee was exacted. Mr Zeckendorf's partners in London—principally

Philip Hill, Higginson, Erlangers, Ltd., and the Second Covent Garden Property Company, Ltd.—demanded and obtained half of Webb & Knapp's interest in ten of its choicest properties and also a virtual power of veto over the ebullient Mr Zeckendorf's future dealings. But at long last Webb & Knapp seemed to be in a position to bring its multitudinous schemes for urban redevelopment to fruition.

But in fact things have not gone as smoothly as either Mr Zeckendorf or the Philip Hill group might have wished. In the first place the Zeckendorf Property Corporation which took title to the thirteen properties which were handed over, and which is controlled in approximately equal proportions by Webb & Knapp and Philip Hill (with a small minority holding by the Aluminium Company of America), failed in an attempt to sell 200,000 shares to the public. Another attempt will presumably be made when the stock market has recovered sufficiently since the Bank of England sanctioned the Philip Hill participation on the understanding that a public market would be created "as soon as possible" in Zeckendorf Property shares.

In the second place it is clear that the capital requirements of these projects have been underestimated, even by Mr Zeckendorf himself. Thus, within the last few weeks, both Zeckendorf Property and its nominal parent, Webb & Knapp, have been forced to solve their need for cash by trading existing holdings for ready money. ZPC sold five housing developments for middle-income families to the Alcoa Urban Development Corporation, 90 per cent of which is owned by the Aluminium Company and 10 per cent by ZPC. Alcoa contributed $10 million in cash to finish the projects and ZPC received a 10½-year note for $25.6 million. For its part, Webb & Knapp established yet another liaison with the City of London by selling a one-third interest in New York's Savoy Hilton Hotel to Mr Max Rayne's London Merchant Securities Ltd. He, too, was able to exact his ransom; for though he has but one-third of the equity, he now has equal voting power with Webb & Knapp in the corporation controlling the hotel.

Of the two deals, that with Alcoa is by far the more significant. It marks the emergence of Alcoa as a force of the first order in American property development; the company is now involved, generally playing a minor part, in eleven urban building projects that are expected eventually to cost $1 billion. Alcoa Urban Development passed long ago beyond the initial conception of a device to promote sales of aluminium building products; it is now involved in property investment for its own sake or rather for the sake of the tax-sheltered income which such investment provides in the United States. Alcoa Urban Development will be consolidated on its parent company's tax return; its substantial charges for depreciation will be deductible against the 52 per cent rate of corporate taxation, while any profits on property sales will be taxed at the low 25 per cent rate charged on capital gains.

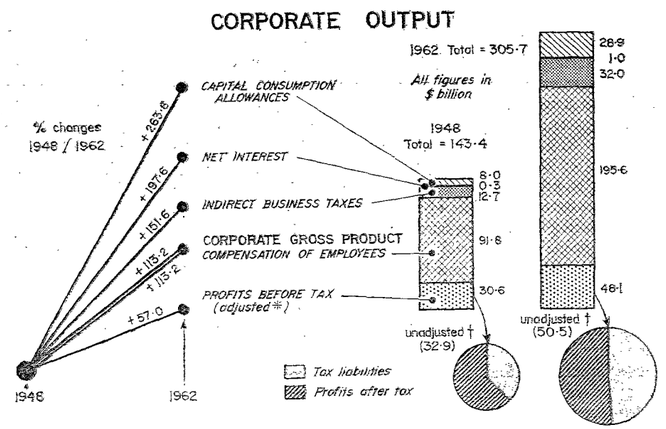
But the understanding between ZPC and Alcoa is far broader than appears on the surface. Alcoa Urban Development has the option to acquire, at cost, any or all of the eight remaining ZPC projects. The clear intention is that the parent company, Alcoa, with its apparently endless stock of cash and credit will take over each project as it nears completion and thus provide funds for those in earlier stages of construction. Moreover, between October and November of 1972, under the terms of yet another option, Alcoa has the right to exchange its entire holding in Alcoa Urban Development for 1.1 million ordinary shares of ZPC. If this option were exercised, as it appears reasonable to assume it will be, it would have the effect of putting Alcoa in a three-cornered partnership with Webb & Knapp and the Philip Hill group. It would also seem to assure that Webb & Knapp may eventually be able to distribute dividend-paying ZPC shares to its own ordinary stockholders as the first tangible evidence of return that they have had in the twenty-five long years of Mr Zeckendorf's hegemony.

Postwar Profits

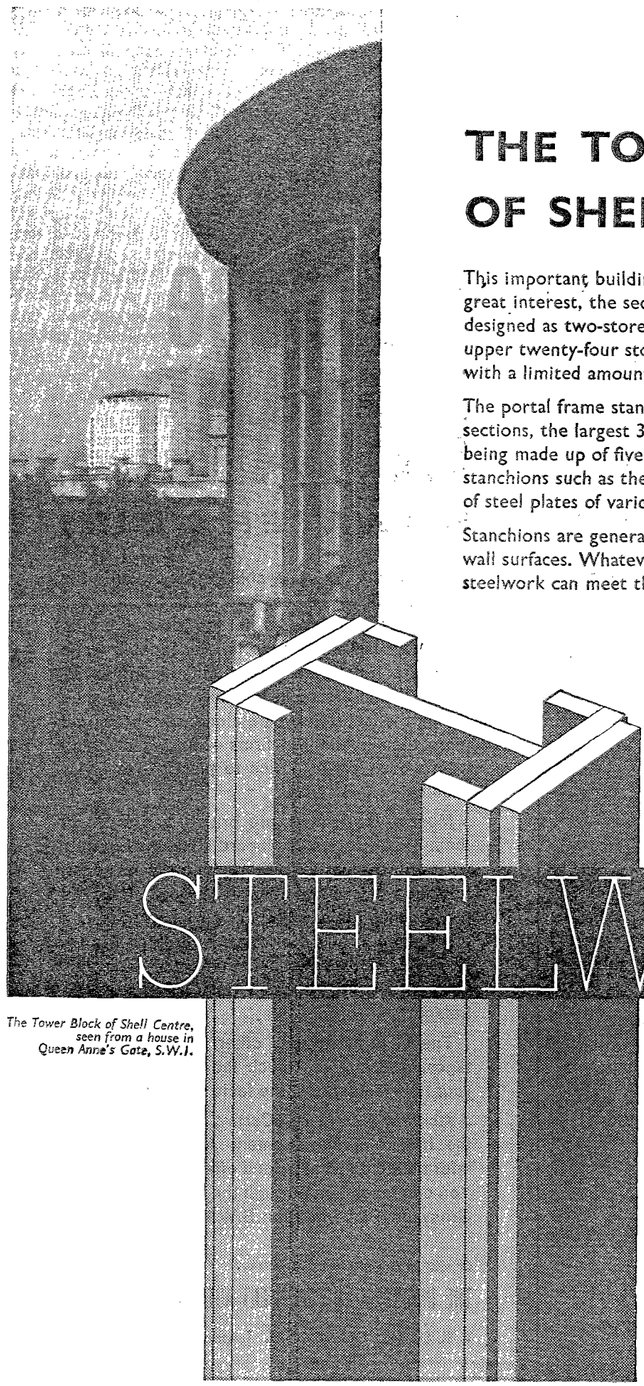
One thing emerges clearly from the Department of Commerce's new estimates of the gross output of corporations since 1948 (*Survey of Current Business*, November, 1962): the profit squeeze has been a reality, particularly between 1951 and 1957 when profits went up hardly at all. Since 1948 corporate output has more than doubled while profits have risen by less than three-fifths before direct taxes on them are paid and by only one-fourth when allowance is made for these tax liabilities; then total profits in 1962 were only $25.9 billion compared with $20.5 billion in 1948.

Something else which emerges clearly from the analysis is that the blame cannot be attached to increases in labour costs—wages, salaries and "fringe benefits"—which have gone up at exactly the same rate as corporate output and which have accounted for an almost constant 64 per cent of total corporate product throughout the post-war period. Businessmen argue, however, that this proportion ought to have fallen because of the large sums spent on labour-saving equipment.

These heavy outlays on expensive capital goods, leading to big increases in depreciation allowances and also to faster write-offs for tax purposes, are one reason why profits have lagged in recent years. Another is that since 1957 this additional capacity has not been used to the full. But a third reason for the lag is the rise in indirect levies on business, chiefly taxes on property and on sales; these are paid mainly to state and local governments and their increase reflects the increased demands made on these governments by a growing economy.



* "Adjusted" includes valuation for stocks and excludes profits originating outside the United States.
† "Unadjusted" excludes stock valuation and includes all profits.



THE TOWER BLOCK OF SHELL CENTRE

This important building embodies structural steelwork of great interest, the section from basement to second floor being designed as two-storey three-bay portal frames and the upper twenty-four storeys as rigid frames acting in conjunction with a limited amount of wind bracing.

The portal frame stanchions 70 ft. high, are built-up box sections, the largest 37 ins. x 24 ins. (with inner web plate) being made up of five steel plates 2½ inches thick. Other stanchions such as the one shown on the drawing, are built-up of steel plates of various thicknesses up to 2½ inches.

Stanchions are generally so arranged as to give flush interior wall surfaces. Whatever the loads, whatever the problems, steelwork can meet them with outstanding efficiency.

Architects:
Messrs. Easton and Robertson, Cusdin, Preston and Smith.
Consulting Civil and Structural Engineers:
Messrs. Scott and Wilson, Kirkpatrick and Partners.

BOWATERS DID!

Substantial non-repayable grants towards the cost of site, premises, and staff training. No income tax, no profits tax, for ten years on profits from new industrial exports. Reasonable wage rates. Air freight facilities of outstanding excellence. These are some of the advantages that, during the last three years alone, have prompted more than a hundred firms — making anything from woven glass fabrics to pianos — to begin production in Ireland.

Most of these firms are British, and amongst them are Bowaters Wallboard Mills. And here is what Mr. Donald Bell, the company's manager, has to say about that other major asset. Ireland's plentiful labour supply: "The Irish worker can compete with any. He learns quickly and is responsible. He, no less than anyone else, has helped to build the good name of Bowater in Ireland."

These, together with other important advantages, make Ireland much the finest choice for *your* new factory. Get the facts without delay!

Ask Mr. Gerard MacCarthy, representative of the Industrial Development Authority, for full information on what Ireland offers new exporters. You can reach him through the Irish Embassy, 17 Grosvenor Place, London, S.W.1 (BELgravia 2171).

Or write for two informative booklets to:

THE INDUSTRIAL DEVELOPMENT AUTHORITY OF IRELAND

14 St. Stephen's Green, Dublin, 2. Telephone 61965.

While the need to trade property for cash has obviously robbed Philip Hill's American venture of some of its sheen, it has done little to alter Mr Zeckendorf's own long-range effort to rationalise his far-flung empire into a troika-like organisation of three corporations—Webb & Knapp, Zeckendorf Property and, finally, another Webb & Knapp subsidiary, Gulf States Land & Industries Inc.—each with a distinct part to play. Mr Zeckendorf owns over 35 per cent of Webb & Knapp's 32.5 million ordinary shares and that company, in turn, is the fulcrum of his control elsewhere, in Webb & Knapp (Canada) Ltd., for example, with its elegant Place Ville Marie development in Montreal. But the financial strain of urban redevelopment on a national scale—with each project requiring years while existing buildings are pulled down, financing negotiated, new buildings put up and finally rented—has proved too much for Webb & Knapp, given the maze of other alliances and entanglements facing the company. Hence, the decision was taken at the time of the Philip Hill financing to transfer all of Webb & Knapp's major construction ventures to Zeckendorf Property.

This had the effect of separating Webb & Knapp, which needs a large pool of unencumbered cash for the in-and-out property deals so dear to the Zeckendorf heart, from the quite disparate redevelopment schemes, where huge sums of money are committed over a long term in the hope of generating recurring income at the end. There are indications that most of the remaining Webb & Knapp properties are on the block as well and that the company may emerge as a holding operation, maintaining extreme liquidity in order to capitalise on short-term opportunities as they arise. For example, in the six months ending on September 30th Webb & Knapp made almost $13 million in trading profits. These more than offset $7.7 million in operating losses which were produced, in fact, by the Zeckendorf Hotels Corp.; this company operates—but does not own—seven New York City hotels.

At the same time, Gulf States Land is the receptacle for a grab bag of other promotional schemes outside the property field which Mr Zeckendorf has been unable to resist over the years. Inevitably, this company is also involved in property development in Louisiana and in New York, but these undertakings are only incidental to the company's long run potentialities which are bound up in three very un-Zeckendorf areas—steel, copper and oil. Gulf States owns rights to an immense pile of copper slag in Arizona that, theoretically at least, contains enough low-grade ore to make its exploitation commercially feasible. It owns all the common stock of the Chemetals Corporation, which claims to have a revolutionary process for the large-scale recovery of copper powder from both ore and scrap. Additionally, Gulf States has oil and gas rights, in Louisiana and the West Indies, which are gradually beginning to produce an income.

Fascinating as the speculative possibilities in Gulf States may be, the company does not hold the ultimate key to profitability for Webb & Knapp. This still depends on real estate and on the undeniable genius of Mr William Zeckendorf for buying property low and selling it high. And if Webb & Knapp can escape from its multiple misadventures—in hotels, in amusement parks and, to some extent, in shopping centres—without suffering irreparable financial damage, it may indeed fulfil the typically grandiose Zeckendorf boast that "if we can solve our problems, we'll be one of the greatest companies in the world."

BRIEF BOOKLETS . . .

have been produced jointly by The Economist and The Economist Intelligence Unit to present the essential facts behind important current topics. Each takes about one hour to read. Here are the first three titles in this new series:

Brief 1 **RHODESIA: BRITAIN'S DEEP SOUTH** by Joe Rogaly
2 **MONEY FOR GROWTH** by Fred Hirsch
3 **LABOUR IN BRITAIN AND THE SIX** by Val Schur

Each booklet costs 2/6d. (U.S. $0.40) post free for remittance with order from:

Railways in Line

FROM A CORRESPONDENT IN CHICAGO

LAST week the federal Court of Appeals in Chicago ruled that the railway companies have the right, under the Railway Labour Act, to introduce without further delay the changes in work rules which have been under negotiation for three years and which the trade unions still refuse to accept. The men involved are those who actually run the trains and the changes are designed to eliminate unnecessary jobs of various kinds—the requirement that diesel engines should carry firemen, for example—and to save the railways at least half-a-million dollars a year. Unless some further means of legal delay is devised by the unions, the companies now intend to go ahead, the men intend to strike and the President, it is presumed, intends to appoint yet another fact-finding board which would keep the railways running for another two months while it prepares yet another report which can hardly fail to agree that the changes are justified. Then presumably will come an attempt to submit the whole matter to binding arbitration, with Congress perhaps making this compulsory.

This and other recent efforts to eliminate featherbedding on the railways have all been opposed by a united front of the 23 railway trade unions in mortal fear of technological unemployment. This has brought in response a united front of the 105 railway companies whose lines interlock across the continent and most of which are in mortal fear of bankruptcy. In the past the three regional railway conferences—the eastern, the western and the midwestern—tended to go their separate ways in spite of their common problems. As a result almost always the men had the initiative. But now the carriers have set up in Chicago, the railway centre of the country, a National Railway Labour Conference, which will mean that, for the first time, management will be bargaining on an industry-wide and permanent basis. Obviously, the unions will be forced to follow suit and, because the federal government is always a party to collective bargaining in this industry, Big Labour, Big Industry and Big Government will all become bigger.

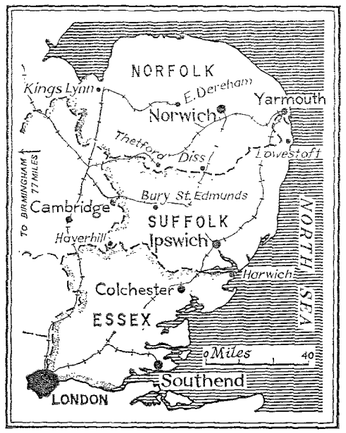
The conference, something new for America, will be a continuing organisation with its own secretariat of lawyers, statisticians and public relations men, a mighty propaganda forum whose announced objective is to plan strategy years ahead and thus to seize the initiative from the unions. It will not only co-ordinate labour policies but pile up statistics and slogans in an effort to anticipate and to circumvent union moves. This, however, may not necessarily always be against the welfare of the workers. Circumscribed as the railways are by a multitude of federal and state laws, any plans to rationalize the industry will have to provide cushions and carrots galore in the form of schemes to ease the pain of being sacked. The emergence of industry-wide bargaining might also be to the benefit of the unions if the result is a uniformity which automatically upgrades substandard contracts and hastens the settlement of disputes. Labour's immediate reaction, however, was that this was part of an attempt to create a "railroad monopoly" and to speed up the mergers which many railways regard as a form of salvation.

HOME REPORT

Members of the editorial staff and local correspondents report on the life and happenings in and around Britain

East Anglia Digs In

FROM A CORRESPONDENT IN NORWICH



NORFOLK and Suffolk together cover more than two-and-a-quarter million acres, but their joint population is only just over one million—less than that of Birmingham alone. Almost ignored by the industrial revolution, they seem to their frequenters—and to the more conservative of their residents—to have borne a charmed life. It is only in summer, when Midlanders on holiday descend on the East Coast and the Broads, that the native East Anglian is reminded of the teeming industrial and urban population at all. By the end of September sugar beet lorries have replaced the motor coaches on the roads, and life returns to its norm.

It is, however, being borne in upon East Anglia that the cathedral city of Norwich is only 112 miles from the Great Wen, and that the latest industrial revolution is catching up with the countryside. Sooner or later, the drift of population from the north to the south-east will lap over the charmed border, or (even more certainly) the overspill from London will come welling up out of Essex into Suffolk and thereafter into Norfolk. Already King's Lynn and Thetford, in west Norfolk, and Bury St. Edmunds and Haverhill, in west Suffolk, have welcomed London overspill for the sake of the industrial prospects it offers. Now the prosperous port and engineering town of Ipswich, on the Orwell estuary, is the subject of a survey by planners from the Ministry of Housing and Local Government, to see whether its population of 117,000 could conveniently be increased to half as much again, or even doubled.

The Norfolk County Council—rather with the air of one giving hostages to fortune lest worse should befall—has produced a report suggesting that Norfolk could accommodate 200,000 Londoners on its 1,300,000 acres, and among its 560,000 people. There are, however, some careful reservations—particularly about the water supplies of the county which are not plentiful, and are being heavily drawn upon for agricultural irrigation as well as for domestic and industrial purposes. It is proposed that King's Lynn (pop. 27,000) and Thetford (5,000), both of which have agreed with the London County Council upon town expansion schemes of 10,000 apiece, should both raise their sights, and that the industrialised market town of East Dereham (8,000) could be the subject of another expansion scheme. It is also suggested that two new towns should be built—one in west Norfolk (on the route to the Midlands) and the other in south Norfolk (beside the road and railway to Ipswich and London).

However, this tentative report has already raised an outcry from the defenders of the rural peace, who declare it means the outright rape of Norfolk. King's Lynn and Therford have protested, less vehemently, that they have contracted only for moderate expansions, and do not want to be overwhelmed by overspill. The market town of Diss, in south Norfolk, has objected that although it would like some more people and industries it does not want to be reduced to a suburb of some brash new neighbour.

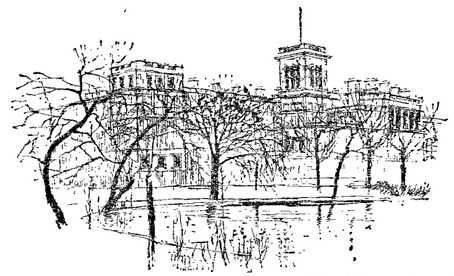
If the wishes of the market and seaside towns of Norfolk and Suffolk were consulted, all of them would probably welcome new industries, and many would welcome expansion by five or ten thousand new inhabitants—which would nicely coincide with the limitations of the water supply—but none of them wants to be flooded by the overspill. This is prompting a digging-in of heels just when London's planners seem to be getting impatient with the speed and dubious about the economics of small town expansions. The national movement of population demands something bigger. There is also the important question of the wishes of the overspill—a word which is one of the planners' least fortunate inventions, since it tends to obscure the fact that this is a movement of people, who are possessed of characters and preferences. East Anglia suspects that the immigrants, being urban people, would probably prefer to move, if they must, to biggish towns.

The Norfolk County Council, however, has carefully omitted from its proposals the two county boroughs of Norwich and Great Yarmouth. It says that Norwich—which, together with its outer suburbs, is now an industrial and commercial community of 165,000—is likely to grow without any artificial stimulation to 200,000. In the county council's view, a larger growth would be in danger of destroying the character of the city, and would, moreover, confront the county with a problem of Norwich overspill. As for Yarmouth (53,000), it is too closely pent between the sea and the rivers and marshes of Broadland to be susceptible of really large expansion.

NOT unexpectedly, in the state of local government relations, these comments by the county council were bound to infuriate the corporations of Norwich and Yarmouth. Nothing, in fact, could have been better calculated to make them keen on accommodating Londoners. The cold war had already been warmed up, in Norwich, by the county's opposition to the proposed extension of the city boundary, and by its desire for statutary definition of a green belt outside the suburbs. Now the Norwich Planning Committee—in spite of local counsels that bigger does not necessarily mean better—is talking about the desirability of expansion to a quarter of a million.

As for Yarmouth, its primary concern is the fear of losing its status as a county borough. Being a seaside town, it suffers from winter unemployment, and it badly needs more permanent jobs in industry. It feels it has plenty of room to expand to the southward—into east Suffolk, where, in conjunction with Lowestoft, it can be regarded as part of an industrial, seafaring and holiday catering community of about 100,000.

To an observer detached from the rivalries of town halls and shirehalls, the situation seems to call for a summit conference, presided over by someone who can see East Anglia as a whole, in relation to the national problem as a whole. It might also be desirable to correct the implicit assumption that overspill is a plastic and obedient mass of industries and units of labour, which can be placed exactly where planners want it to go.



The FO: another £1½ million

Moving the Government

FROM OUR SPECIAL CORRESPONDENT

LAST week the Ministry of Health moved, Minister and all, to across the river to the Elephant and Castle: the Government's intention to save some taxpayers' money, and to improve its efficiency, by getting its central departments at once under one roof and out of the most expensive areas of London, takes another step forward. Surprisingly enough, the area occupied by central government workers in London has actually gone down over the past ten years, by a million square feet and 9,000 people: of the total 103,000 civil service headquarters staff (excluding the Post Office), 62,500 work in central London—including as such Earls Court, Southwark, the City—while 12,500 work in the London suburbs and 28,000 in the provinces. Next year the Admiralty will be moving out of Victoria to the vast building they have rented in Earls Court; almost 2,500 other government workers are due shortly to get out of London to Southend, Southampton and Basildon.

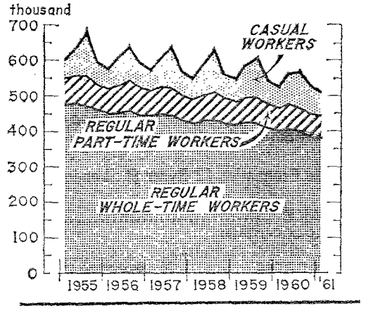
All this is a welcome, if fairly insignificant, contribution to the relief of congestion in the capital. But it is being done with an eye almost exclusively to finance—to the securing of less expensive accommodation—rather than to planning considerations. If enough attention were paid to this aspect, the odds and ends of umpteen departments would never have been allowed to move into the expensive State House in Holborn—where transport is (through no fault of London Transport itself) thoroughly inadequate, and where nobody likes working anyway. The machinery simply does not exist that would permit the various departments of state to look sternly at themselves and decide that such and such departments—probably a good many—do not need to be in regular contact with the minister, which means within a ten-minute drive from the palace of Westminster. What happens is that departments decide that they need new accommodation, the Treasury says how much can be spent on providing it, and the Ministry of Public Building and Works (to give it the proud new title) decides how the two conditions are to be reconciled. Nobody asks the two vital questions—how many, where?

The curious case of the Foreign Office may be to the point—although this is one of those rare departments in which the ministerial nucleus cannot be clearly separated from the other, more easily decentralised, departments. The present building, designed in the 1860s by Sir Gilbert Scott, is a splendid example of clubland Palladian—just as St Pancras Station, said to be his first proposal for this site overlooking St James's Park, is a splendid example of industrial Gothic. On three floors the rooms are 25 feet high, magnificent for receiving foreign dignitaries, but heated often by open fires, inadequately wired for electricity, and provided with decrepit old lifts; above this stately slum lies a semi-attic squalid slum. A plan was, it seems, prepared for rebuilding the whole thing; but at a vital moment (Foreign Office men insinuate) a new master came to foreign affairs, and a new project came to favour that would preserve Scott's façade.

The new plan will, for £1½ million, provide new heating, wiring, lifts and so on—and, to provide the space that the office wants to reassemble its scattered departments, a complete new storey on top designed not to spoil the Italinate outlines. The point is not an aesthetic one—although there certainly are good arguments for preserving the Scott building; nor is it an economic one—there are arguments for not knocking down this side of Whitehall during the next ten years, while the other side of Whitehall is being rebuilt, and while government resources are heavily engaged in other important public building. The point is that this decision seems to have been made in an informal, old-boyish way, with no particular regard to the genuine economic and aesthetic choices that exist between a new, expensive, efficient and controversial-looking Foreign Office and a patched-up, cheap, pretty inefficient and accustomed one. This, one fears, is how so many such decisions are taken—considering, for example, existing civil servants' (or, worse, ministers') convenience rather than the long-term advantages that might be obtained from, to take the prime example, moving outside London. But there is one hope. The new Ministry of Public Building will have far more say both on budgetary and on technical considerations than ever did the old Ministry of Works. Perhaps these twin powers will attract to themselves the capacity to think (as nobody is empowered to at present) about the Government's part in helping to create a decent environment in Britain.

OFF THE LAND

The number of regular workers employed on agricultural holdings in England and Wales has continued to decline over the last seven years. The estimated numbers of casual workers have, however, maintained a fairly even ebb and flow with the summer influx reaching its height at harvest time: in September the March figure of between 50,000 and 60,000 is almost doubled.



Top Mast

BY OUR SPECIAL CORRESPONDENT

COMMUTERS through the featureless desert of Croydon have, over the past year, been able to relieve the tedium of their passage by assessing the measurable daily growth of a new television mast which has come increasingly to dominate its skyline of subtopian semis. On Wednesday it was formally brought into operation by Croydon's mayor, and independent television programmes began to radiate from a point in space 300 feet above the aerials of the temporary tower, which, looking niggardly a mere 200 feet above Beulah Hill, is now replaced and may shortly be moved to a doubtful reception area, perhaps in Scotland. Much improved reception is claimed as the certain result for the whole of the London viewing area and far beyond, to Oxford, Stevenage and Bishop's Stortford, 400,000 viewers in which were beyond the old aerial's coverage.

Something of a technical triumph, the new mast radiates at different strengths in different directions in order to extend the

Channel 9 cover of certain desirable areas while inhibiting it in areas where other ITA transmitters (notably in Devonshire) might be subject to interference: thus the effective power north-westerly is 400 kW, that to the south-west only 50 kW. It is also slimly pleasing to the eye, an advantage dictated more by the nature and size of the site, only 100 yards from the temporary tower, than by the avowed aestheticism of the authority and its planners; and it was built in a remarkably short time, having been started from scratch in January and completed, by teams usually of no more than a dozen men, last month.

Viewers in London will be most interested in its effects on their set pictures which, in certain notorious areas, have been only marginally enjoyable (and lately most of London has been plagued by double vision, not the fault of the old transmitter mast): by now they will have noticed any improvement, perhaps not quite comparable to that at Southend, where signal strength was said to have been increased five-fold, but significant enough to make the expenditure of £130,000 seem worth the authority's while. It is not thought that much difference will be made to the level of interference from unsuppressed hair-dryers, vacuum cleaners, motor cars, electric drills and jet aircraft (but people plagued by these things —other than the last—during their favourite soap opera have a remedy in legislation operated by the post office which insists on the fitting and maintenance of suppressors in most new equipment and provides for the tracing and silencing, by persuasion, of the subject of any viewer's complaint). And it is certainly not to be expected that the programmes themselves will get any better—only clearer.

Oxford's New Sieve

FROM A CORRESPONDENT IN OXFORD

OXFORD'S decision in principle (the details have still to be worked out) to revise its procedure for sifting entrants is a concession to its critics. Traditionally, the university has been, not a unified body, but a federation of states—the individual colleges. Some of these states have been, and are, larger and more powerful than others: all, even the newest, are jealous of their autonomy, tend to regard the university as a potential encroacher on their liberties, and are suspicious of outside direction or planning of their affairs.

The situation in practice is, of course, less anarchic. The growing science sector, with its powerful laboratories, cuts across the college structure. The state's contribution to university finance is now so large that even the most diehard dons must admit its claim to a share in deciding policy. And as between colleges arrangements on a private basis to share or swap teaching along specialist lines are commoner than they were. Even lecture lists are being planned in a rudimentary way and syllabuses revised. Still, their right to "choose the young men" (the recent agreement applies only to the men's colleges) is one about which most colleges feel very strongly indeed. Their willingness to depart from existing methods of selection is the more significant.

The present unreformed system is a mixture of design, chance and nepotism. For scholarship purposes—and over 60 per cent of all entrants were chosen on such examinations last year—colleges form groups of five or six, which (in December, January and March in rotation) examine together, in the sense that candidates express preferences between the members of the group and may be passed on to their second or third choice college for an award if their first choice college cannot give them one. About 30 per cent of all entrants will be given awards, and another 30 per cent places as a result of these examinations.

Separate entrance examinations are also held by a number of colleges, and it is in this sector that there are the widest variations of practice and opinion. The meshes of some colleges' entrance nets are generously spaced, and critics complain far more of this than of the small number of avowedly nepotic candidates which every college accepts on a variety of personal grounds. The "good commoner" who will contribute to the life of his college without necessarily flying high academically is regarded with great reverence in some colleges and with suspicion in others—which take all their entrants on the scholarship results.

THIS loosely-organised system will, unless unforeseen difficulties occur, operate for the last time in 1962-3. The dynamic behind this change is the growing multiplicity of applications for places at provincial universities, which led to the setting up of the Central Council for University Admissions under Mr J. S. Fulton, the vice-chancellor of Sussex University. The council aims to establish a clearing-house which will effectively sort all applications (except those for Scottish universities and Oxbridge). But to do this it needs to eliminate the Oxford examinations in March, for while these are still held other universities cannot get a firm acceptance of places with them from candidates who still hope for an Oxford place instead. (Cambridge scholarships are examined only in December.)

Oxford appointed a working party of eight dons last February to study the whole question of admissions. Presided over by Mr Frank Hardie, a business-like and popular philosopher, who is president of Corpus Christi College, this committee held twenty-six meetings, and wrote its report, by the end of Trinity term. The difficult process of securing agreement by individual colleges has occupied part of the present term.

The main features of the new scheme are that candidates for scholarships will be required to sit an examination in two parts, the first in October, the second in either December or January. The first part will act as a sieve to reduce the number of candidates for the second. Entrance (as distinct from scholarship) candidates can be chosen on part one alone or on both parts. In this way, the variant practices of colleges are reconciled, or intended to be reconciled. At present, work on the details of the scheme, including the formation of colleges into "equipollent" (i.e. scholastically equivalent) groups is proceeding. There are dark rumours of unilateral secession by colleges or—more interestingly—by faculties, but current opinion in the university is that the new proposals should be given a fair run to see how they work. Once in operation, they will probably soon become a new strongpoint of orthodoxy, to be defended at all costs against change.

In the article "Town Clerks or City Managers" on November 24th the population figure to which town clerks' maximum salaries are related was said to be 60,000; it should have been 600,000.

Through another man's eyes a GEC engineering project may often appear formidable and full of insuperable problems. To a GEC engineer each problem is something that demands precise thinking. Then action. Because of this—and the fact that GEC backs its engineers with substantial resources and experience—the project becomes a successful reality. Talk to a GEC engineer. You'll find that attention to detail teamed with breadth of vision are fundamental to his part in the engineering of power plant from the smallest industrial installation to the large reheat machines being built for British power stations. All over the world, the story of GEC Engineering is the story of the industries it serves—imaginatively.

Morocco

SIR—In your issue of November 24th you mistake the significance of the introduction of Mr Boutaleb in the King's government. Mr Abdelhadi Boutaleb resigned from the UNFP at the end of 1960 for personal reasons as well as Mr Ahmed Bensouda and Mr Thami Ouazzani. Afterwards they were employed by the King: Mr Ouazzani as ambassador at Belgrade and then general secretary of the "Casablanca Group"; Mr Bensouda as governor of Rabat district (October 1962); Mr Boutaleb as ambassador in Damascus and recently Secretary of State of Information.

None of these personalities now claims any connection with the UNFP. Nevertheless the King's propaganda tried to present these last nominations as a manifestation of liberalism to the opposition. The King has obstinately refused during the last 20 months to take into consideration our proposals for the formation of a transitory government on the basis of national union, and with a limited mission to prepare elections for a constituent assembly. We have always confirmed that we desire a constitutional monarchy.

The two main reasons which have decided us to boycott the referendum on King Hassan II's constitution can be summarised. It is for us an untouchable principle that the sovereignty belongs to the people and remains in the people, and to be valid the constitution has to be made by a constituent assembly and not handed out by the Palace. The participation of the voters by "yes" or "no" will be a kind of resignation of the people from their natural rights and at the same time it will be a kind of plebiscite for or against the King, which is a very dangerous adventure for the monarchy. Even if the percentage of "no" is low the King will lose his functions as "arbitrator" to become the leader of the "yes" party.

The proposed constitution is an accentuated Gaullism in a sense of an absolutist regime *de bon plaisir*, based on revived feudal structures and reactionary and colonial interests in an underdeveloped country which needs, more than anything else, stability without dictatorship, efficiency without corruption, and a minimum of sincerity and honesty.

I am sending you this letter from Cologne where I have just arrived from Morocco for medical consultation after my "accident". Before leaving Morocco I brought an action against the Minister of the Interior and the Director General of the Sûreté Nationale for an attempt at assassination by simulated accident.—Yours faithfully,

EL MEHDI BEN BARKA

Cologne

Canadian Problems

SIR—Your survey of Canada's economic and political problems dismissed a key issue rather briefly. "The emerging population bulge is a formidable question," your correspondent said, "which can only be answered by a much improved expert performance by manufacturing industry."

The structure of the Canadian population is indeed important. Total population grew by about 30 per cent in the 1950s compared with a 23 per cent increase in the labour force and a 20 per cent increase in employment. In the 1960s the stimulus of a population growing faster than the labour force is likely to be absent. My forecasts, which ignore the effects of immigration and emigration (these may well balance out, as in the last eighteen months) and which allow for some increase in higher education, suggest that both total population and the labour force will increase by about 19 per cent in the present decade. Employment will have to increase even faster if any permanent inroad is to be made on the 7 per cent level of unemployment which prevailed in 1960. And a higher level of immigration is only likely to help, if policies can be devised which encourage a greater inflow of dependants rather than workers.

Will Canada be successful in finding the new markets outside its own economy to keep this rapidly growing labour force fully employed? If exports cannot be expanded fast enough, then the labour force may shrink. Canada's traditional export of skilled and professional manpower south of the border might increase, and the girls who make up the so-called population "bulge" might start to replace the large number of married women who have found jobs since the war. Jobs for older men might get even harder to find than they are to-day.

This kind of adjustment is far less palatable because it slows down the long term growth of the economy. But, given the present government's policies, it seems a more likely outcome than the rapid growth of exports (and replacement of imports) needed to avert it.—Yours faithfully,

RICHARD LINE

College of Technology, Oxford

Wards into Workshops

SIR—In seeking contracts, the mental hospital, while remaining a therapeutic community, is entering the industrial world and therefore accepts the normal obligations as to price, quality and delivery. As regards the hospital at Malvern, referred to in your article of December 1st, one firm is so satisfied that it has transferred one of its processes completely to St Wulstan's and is therefore entirely dependent upon the hospital for this part of its output. It is already clear that the hospital is not asking for industrial charity but will provide a sound economic service as a fundamental condition of its existence.—Yours faithfully,

J. GLYN PICTON

Member of the Birmingham Regional Hospital Board

Birmingham

POINTS

FACILE interpretations of the recent by-elections indicate that Labour would have won a general election projected on the basis of the five contested constituencies. Whether such a projection is valid, however, is open to question. Especially since the shift in voting since 1959 was definitely anti-Tory rather than pro-Labour, could one not speculate that anti-Tory voters, faced with a decision that might install a Labour government (as last week's contests had no chance of doing), would divert their Liberal protest votes back to the Conservative party?—ROBERT E. HUNTER, *London, WC1.*

YOUR comment last week that the Woodside result "casts increasing doubt on the argument that it is in unemployment-affected Scotland that the Tories will have most to fear" seems to ignore one important factor. Since 1959, an estimated 12 per cent of the electorate has left this constituency, almost entirely from the working-class tenements, now demolished. Thus, the *real* swing to Labour was probably not 6 per cent, but around 10 per cent. We can expect a more distinct reflection of this trend in neighbouring constituencies, in which these Labour voters have been rehoused, at the next election.—ROBIN A. G. BENNETT, *Glasgow*

YOU repeat (December 1st) the maxim that Labour voters are more apathetic than the Conservative ones, from which it follows that Labour stands to gain from a high poll. Yet in the ten general elections since the present party system emerged, of the five in which the total poll has gone up, 1924, 1931, 1945, 1950 and 1959, the Conservatives have gained in four, while Labour has gained in three of the five elections in which the total poll has gone down. The correlation between falling polls and Labour gains is especially marked in the pendulum-swinging years before the war. —CHRISTOPHER CLAPHAM, *Oxford.*

RECENT reports on thalidomide babies, wrong patient operations and tests on patients underline the need for an association to represent the interests of patients. A group of people are proposing to form such an association. May I invite interested readers to write to me? —HELEN S. U. HODGSON, 47 *Cumberland Terrace, London, NW1.*

BOOKS

The Paris Correspondent

A Prince of Journalists: *The Life and Times of de Blowitz*

By Frank Giles.

Faber. 228 pages. 25s.

READERS of the eleventh edition of the Encyclopaedia Britannica, still a useful work, may notice the florid style and wealth of gallicisms in the account of the modern history of Paris, together with the initials of the contributor, "De B." This was Henri Stefan Opper de Blowitz, the great Paris correspondent of *The Times*, who brought the story up to date with the Universal Exhibition of 1900, "a grand manifestation of human concord." He was eased out of his post in 1902, reluctant, as journalists are, to leave the scene, arguing to the last about his pension, the cost of his carriage, and the need to keep up his Paris flat; and died a month after.

Blowitz giving utterance to general sentiments was something pretty pompous, very ready with sententious bits of twaddle about "serving the cause of peace" and what not. Blowitz ferreting out a story was quite a different matter. Mr Frank Giles, one good journalist writing about another, amiably baffled about the man but showing a shrewd understanding of the job, picks a number of stories that Blowitz was "on" and shows how he tackled them. This is well worth while. There is Blowitz getting the most celebrated of all diplomatic scoops at the Congress of Berlin in 1878, and, what may have been harder, getting it back to his newspaper in the neatest possible way; Blowitz driving through the snow into the courtyard of the Hotel Basilewski on New Year's Eve, 1874, to interview Don Alfonso whom a revolution had just put on the throne of Spain; Blowitz having Nubar Pasha to lunch, talking his guest's head off from soup to coffee, and yet extracting from the air a long, penetrating and informed article on Egyptian affairs that reflected his guest's views with embarrassing exactness.

Blowitz's personal way of doing his job, together with his resounding success in it, must have led many a good correspondent astray. He maddened his colleagues in other capitals by writing at length about the affairs of their countries, often from the vaguest sources. He made himself a factor in diplomacy and in politics. He kept up a state that he could not afford, hobnobbed with the great to a perhaps pathological extent, attached himself to cliques, got involved with the causes of his highly-placed friends, and lent himself on notable occasions to their axe-grinding. If later foreign correspondents have fallen prey to a somewhat artificial conception of what their job consists of, Blowitz is a good man to blame.

He justified all the spoofing and nonsense by giving results: *The Times*, in his heyday not the most awesome, dignified or antique of newspapers but simply the best, got the benefit of an endless flow of informed, ingenious, exhaustive, often highly-coloured stories that it was easy to pick holes in but impossible to compete with. His great years were the eighteen-seventies and eighties. The nineties saw a new team in power in Printing House Square—Arthur Walter, Moberly Bell and MacKenzie Wallace. Blowitz found himself exposed to a new set of criteria of newspaper work; and as the correspondence between Paris and London went elaborately on (they were all terrific letter-writers) it began to appear that he was an archaic survival and in rather bad taste.

Mr Giles's treatment of his subject, mildly flippant, cheerfully exposing the flaws, pretences and weaknesses, has been taken as an attack on Blowitz; but if one looks in the round at the picture he draws, it is not. The flaws are all there; so are the qualities. It is a matter of taste whether one takes the judgment to be, in sum, adverse or not. One thing that is made plain is that Blowitz was a superlative newspaper man. What of the judges who sat in Printing House Square in the nineties, finding his idiosyncrasies not at all the thing for *The Times*? They too were able men, thorough, learned, principled, dedicated.

Bell and Wallace attempted something new, to organise the foreign department of the paper in a logical and systematic way, and it is obvious enough that Blowitz, the supreme individualist, did not fit in to such a way. However, it is a matter of record that under them the fortunes of the newspaper declined, and that by the early years of the century it was ripe for the Harmsworth take-over. Certainly competition was terribly stiff in those years. The team that was so hard on Blowitz may have been unlucky; still, their prescription of exactitude, discretion, dignity and conscientiousness did not work. Thus it was not Blowitz who turned out to be out of date. In a way, the great character actors of journalism (of whom he was one, and Wilmot Lewis another) are timeless. Bores they may be: but any newspaper can gain from their urge to be visibly in the know.

The Russian Threat

Strategy and Tactics of Soviet Foreign Policy

By J. M. Mackintosh.

Oxford University Press. 336 pages. 38s.

"THE reason why there is now no Communist government in Paris is because in the circumstances of 1945 the Soviet Army was unable to reach French soil." When Stalin wrote these frank words—to the Jugoslavs in 1948—he had brought most of eastern Europe under his control by a "revolution from above" imposed and maintained largely by military force. In the years that followed, as this study shows, wherever Stalin pursued his empire-building ventures, his standard practice was to form an enclave under Communist control, which could then be extended further as the opportunity arose. Already during his lifetime it was becoming clear that this crude strategy was obsolete. It involved a high risk to Soviet security and led the West to consolidate its defences under United States leadership. The last occasion when these methods were applied, rather cautiously, was by the Malenkov government in Vietnam in 1954.

At this time the Soviet leaders were engaged in a great strategic debate. Malenkov seemed ready to recognise the principle of mutual deterrence. But Mr Khrushchev, who won the argument, held that Russia must prepare to use nuclear weapons, both defensively and to forestall an enemy about to strike. Hence his efforts to secure a disarmament agreement that would avert a surprise attack. By 1959, with the successful development of the Soviet missile programme, he had become confident that the United States would not dare to launch an all-out nuclear war. He also recognised the corollary to this: that the Soviet Union could not afford to launch a surprise attack itself. Mr Mackintosh thinks that the Soviet leaders may even have concluded that "war by proxy in the pursuit of new conquests is too risky in the modern world." One hopes he is right: he evidently takes a rather benevolent view of Soviet actions in Laos before the recent settlement, since he does not discuss them. Nevertheless, most observers seem to agree that the Soviet leaders now have less scope for the use of military force in support of their expansionist aims than they had in Stalin's day—as is well brought out in this well-balanced analysis of the development of Soviet strategic thinking since 1944.

So far as Soviet foreign policy as a whole is concerned, however, the strong emphasis placed in this book on the military aspect produces a less satisfying picture. In Mr Mackintosh's view the dominant theme of Soviet policy in recent years has been an endeavour to stabilise the situation on Russia's flanks in Europe and the Far East in order to concentrate on undermining the western position in the Middle East, Asia and Africa. This may perhaps be so; but do the Soviet leaders really think in such geographical terms as this implies? Their approach is surely more complex. Mr Khrushchev has been most skilful in applying pressure simultaneously on several planes—political, economic and psychological as well as military. It is precisely this flexibility, backed by increased power, that makes the Soviet threat harder to deal with than it was a decade or so ago. Mr Mackintosh would probably agree. But his treatment of the problems involved is rather sketchy. No mention is made, for example, of Mr Khrushchev's use of the United Nations as a forum for mobilising nationalist and neutralist opinion against the West, or of the Soviet Union's involvement in Cuba. It would also have been useful to have up-to-date figures for Soviet aid to underdeveloped countries: those given here relate only to 1958.

Nevertheless there is also much sound sense in these pages, and the treatment of Soviet policy in the Middle East during and after the Suez crisis is particularly stimulating. Mr Mackintosh is not afraid to question official western orthodoxy. He is probably right in thinking that the Soviet decision to deliver arms to Egypt was a response to the Baghdad Pact. He also reminds us that initially, at any rate, the Berlin crisis was in part a reaction to the western decision to arm Nato with nuclear weapons and set up intermediate-range missile bases in Europe. One hopes that superficial readers of this useful book will not jump to the conclusion that it is enough for the West to improve its military posture to meet the multiple challenge presented by the Soviet Union to the international *status quo*.

The Aid Programmes

United Nations and US Foreign Economic Policy

By Benjamin Higgins.

Richard D. Irwin, Inc., Illinois. 241 pages. $3.75.

THIS study is presumably addressed primarily to Congress and the American taxpayer. Its purpose is to compare the performance of United States and United Nations aid programmes in implementing the objectives of American foreign economic policy, and

> to arrive at some conclusions regarding the appropriate role of the United Nations as an instrument of United States foreign economic policy.

The objectives of this policy, as defined by Professor Higgins, are to accelerate growth in the underdeveloped countries in ways that will contribute to the growth of representative, responsible and independent governments that are not hostile to the West, and to assist in economic stabilisation of other countries. He does not mention a third increasingly prominent objective that might be thought to have a direct bearing on his subject—the need to persuade other high-income countries to assume a larger share of the aid burden.

Unfortunately Professor Higgins has not chosen to offset his rather peculiar viewpoint of the United Nations by any serious discussion of the aims of the various United Nations aid and technical assistance programmes as seen by the UN organisation itself. Admittedly this would be a hard task, as substantial disagreement exists not only among the member countries but also among the various parts of the system: the views of the World Bank, for example, with a smaller membership and a system of weighted voting favouring the donor countries at times differ widely from those of Ecosoc and the General Assembly, with their more diverse memberships and unweighted votes. Nevertheless such a study would be worth undertaking, as a distinct United Nations viewpoint about the meaning of development has emerged as its technical assistance and aid work has expanded.

It would be wrong to suggest that the author is without insight in these matters. In the chapters discussing the records of United States and United Nations aid programmes over the past fifteen years, he has some penetrating things to say about the difficulties encountered by technical assistance experts in the field (he has worked for the United Nations in Libya, Indonesia and the Philippines) and about the different kinds of administrative problems encountered by the United States and the United Nations. But the framework of his book makes it hard for him to reach any par-

Turner WATERCOLOURS

'Turner is surely the supreme English watercolourist and only now, perhaps, is the subtlety and range of his art being properly discerned.' (Denys Sutton, *Financial Times*). This book, with 32 colour reproductions, serves Turner supremely well. Martin Butlin of the Tate Gallery contributes an illuminating introduction and comments in detail on each plate. 84s.

Porcelain

OF THE EAST INDIA COMPANIES

By MICHEL BEURDELEY. In his round-up of the season's art books, H. D. Ziman (*Daily Telegraph*) writes: 'About *Porcelain of the East India Companies* there is no doubt whatever: it is the most beautifully produced and illustrated of the lot.' *With 48 plates (24 in colour) and many more text illustrations.* 7 gns.

ticular useful or illuminating conclusions. And one must have the gravest doubts about the effect of some of his rather over-bearing language on non-American readers of his book. He sometimes sounds like a brisk missionary-doctor, a believer in the virtues of "carrot-and-stick" (simultaneously) and in the necessity of "intervention" for the good of the souls he is called upon to save.

Plans under Scrutiny

Prospects for Indian Development

By Wilfred Malenbaum.

Allen and Unwin. 325 pages. 35s.

OF late there has been published in India an unprecented mass of information about the economy. There have been national income estimates, national sample surveys, five-year plans, progress reports on the plans, the report of the All-India rural credit survey, and the reports of the agricultural labour inquiries, to name only the main ones. Hitherto, nobody has put this information together into a coherent whole; nobody has seen whether one part of it is consistent with the other parts.

All planning has to be based on assumptions about the present and guesses about the future. If the planning is to be successful, the assumptions must be checked, and the guesses must be corrected, by the facts as they happen. Professor Malenbaum's book is the first major attempt to use the published data to do this. He begins by presenting an outline of the Indian economy and of what the government is trying to achieve. He gives the figures of poverty and population growth; he makes clear the stagnation of the fifty years before independence; he shows how small was the modern industrial sector when planning began; and he insists on the difficulties posed for the government by its determination to be democratic, to do its planning by consent, in so unfavourable an environment.

So much is fairly well known, though it is useful to have it presented with all Professor Malenbaum's scholarship. His main contribution, however, is his careful study of the validity of the assumptions on which the plans were based, of how far their objectives have been achieved, and of whether they in fact chose the easiest path out of poverty. His conclusions are, on the whole, favourable. The priorities given in the plans to fertilisers and steel were correct; there has been a reasonable balance between agriculture and industry; the foreign aid needed has been obtained and reasonably used; savings have been rather higher than expected.

Some of the facts that come out of this study are, nevertheless, surprising. Seventy-five per cent of India's savings are invested by those who make the savings. A good crop produces a considerable increase in saving, the money is not all spent. Income elasticities of demand vary a great deal between the peasant and the townsman; the peasant spends much more of any increase on food grains than the townsman does. The government has only been able to borrow about a fifth of the community's savings; the rest of what it needs it has had to get from tax, or deficit finance, or foreign aid. The private sector has always fulfilled, and sometimes over-fulfilled, its targets. The public sector has always lagged behind.

The importance of Professor Malenbaum's book is in its facts. His conclusions, notably that the government should give the individual and his savings more head, are very tentative. There is no better place to get the facts; it would have helped if, just occasionally, they could have been vividly presented.

Assertions Unproved

Masters of Indecision

By George K. Young.

Methuen. 207 pages. 21s.

A SCOT partly educated in Germany and at Yale, and with experience of journalism, the army, the foreign service and merchant banking, might seem well equipped to comment upon the political problems of contemporary Britain from a practical point of view. One might even hope that the national predilection for abstract thought might enable him to make an original contribution to political philosophy. But to do both within a span of 200 pages demands a degree of intellectual discipline which Mr Young shows no sign of possessing. The book has all the amateur's weakness of trying to stuff far too much into far too little space; almost every chapter has the material for a book in it. And as a result Mr Young is driven to make a series of assertions that may or may not be true, but which certainly require more in the way of proof than he has space to give. What might have been an original and challenging work is thus at best provocative, and at worst exasperating, not to say downright silly.

It is particularly painful for the present reviewer to have to say so, since on many points his own prejudices coincide with those of Mr Young; nor does he differ with him on the side of prescription in some respects—the need for Britain to go into Europe rather than indulge in pretences about the new Commonwealth; the need to reform and invigorate Parliamentary procedure; the need for a new look at the role of the professional civil servant both at home and abroad. But Mr Young's presentation of his point of view may, through over-emphasis, do more harm than good.

It is, for instance, valuable to have the *Observer* picture of the world put on the dissecting-table: the view that talent and virtue vary inversely to the colour of a man's skin; that Asia and even Africa are more interesting intrinsically than our own far more creative continent; that departures from what we regard as proper political norms in these countries are temporary aberrations rather than a reassertion of their own more familiar attitudes towards government; that with a little more financial or technical aid the "take-off" can be ensured, and with it the appropriate commitment to "western values." So, too, the guilt complex about our treatment of, and our alleged inferiority to, the civilisations of Asia—the whole lamentable Toynbee ethos—is summarily dismissed. But need all this be combined with a defence of South African *apartheid?* Or with the view that only severe restrictions on immigration can save Britain from becoming "a multi-racial slum" and enable it to survive as a healthy community? Or with the idea that any legal protection for minority rights in Britain is somehow an outrage upon the principles of common law?

And if Mr Young has not clearly sorted out his ideas about race and civilisation, the same is true of Government. For someone so scornful of the myth of the Commonwealth, it is curious to argue for "Europe" on deliberate myth-making grounds. Nor can one really reconcile the argument that increasing "interdependence" makes nonsense of government responsibility with advocating a still fuller measure of integration into a United Europe. Mr Young finds Western Europe today more to his taste than the United States, and that would seem all there is to it. A rather shaky foundation for a foreign policy.

The Industrial Society

Industrialism and Industrial Man

By Clark Kerr, J. T. Dunlop, F. H. Harbison and C. A. Myers.

Heinemann Educational Books. 323 pages. 30s.

THE central theme of this book, by four prominent American professors, is the universal evolution of societies through the process of industrialisation to a state of "industrialism." Industrialism is an abstraction, an ideal system which no country has yet reached, although several of its characteristics are already apparent in the more advanced industrial societies. In an early chapter of the book entitled "The Logic of Industrialism" these characteristics are set out: they include such features as a wide range and broad distribution of skills throughout the work force, a high degree of occupational, geographical and social mobility among workers, an educational system functionally related to the demands of the economy, the dominance of urban living, an increasingly important co-ordinating role for governments, an elaborate set of rules governing relations between managers and managed, the dominance of an ethic of hard work, and so on. The authors' thesis is that all societies will be forced by the demand of industrial technology to adopt this sort of pattern. They

THE SUNLIT YEARS

GORDON RICHDALE

An exhilarating and enlightening success story—of one of the world's leading industrialists.

"A carefree rollicking autobiography. The book exudes the happiness of a full and successful life." *The Times Literary Supplement*

"Mr. Richdale writes lucidly and entertainingly of his business life." *Sunday Times* 25s

COLLINS

1963
BEGINS TODAY

Today, your current Whitaker's is out of date. Today, the new Whitaker for 1963 is published—the largest edition ever, with every one of its authoritative and factual entries right up to the minute. Public affairs, politics (including the ministerial changes), industry, finance, commerce, social usage—all the latest facts can be reached in a few seconds, thanks to Whitaker's unrivalled index. Bring yourself up to date today—and remember that Whitaker's is a Christmas present that lasts all year.

THREE EDITIONS
Complete Edition, cloth, 1,200 pages ... 25 -
Library Edition, half-leather, with coloured maps, 1,200 pages ..... 42 -

thus see a tendency for differences of social and economic structure gradually to disappear until industrialism reigns throughout the world. In the place of ideological conflict we shall devote ourselves to the realistic and practical, finding relief from our bureaucracy-dominated work in greater leisure.

Despite their belief in the ultimate achievements of uniformity, the authors recognise that the present siuation is one of great variety in the industrialisation process in different parts of the world. They attribute these variations basically to different "strategies of the industrialising elites", which in turn arise partly out of diverse cultural and social situations. From a broad study of different industrialising societies at varying times and places, they identify five main types of "elite"—the traditional dynastic, middle class, revolutionary intellectual, colonial and nationalist. (These ideal types today correspond roughly with, say, Saudi Arabia, Britain, Soviet Russia, Angola and Indonesia.) Each type of elite has its own characteristic strategy of industrialisation. In a series of chapters with detailed tables, the authors set out the type of unemployment recruitment and wage policies, labour organisation, training systems, social values, etc., which tend to be associated with each sort of strategy and elite at the same time underlining the consistencies that must exist between the different parts of any industrial system.

The book thus attempts nothing less ambitious than a theory of culture and society, and even though experts on particular societies will undoubtedly be able to bring forward a host of phenomena that do not fit the elaborate typology, it represents a brave attempt at explaining the contemporary world and the direction in which it is moving. Most people will jib at the authors' tendency to ascribe independent roles to such abstractions as "the forces for uniformity and for diversity" or "the push of progress" and will doubt whether the existence of industrialising "elites", each having its own "strategy of industrialisation," completely reflects historical truth. Nevertheless it is useful to be reminded in this context that the industrial revolution of the eighteenth and nineteenth centuries was probably unique in its lack of conscious direction and that industrialisation in the twentieth century is everywhere increasingly guided and planned. This is particularly true of the newly developing countries, whose industrialising problems, though unfortunately not the solutions, are clearly set out in this book.

It is perhaps inevitable that a work of this sort should be studded with generalisations. The reader should expect to disagree with some of these and also to be irritated by such statements as "an initiating human agent is requisite" for industrialisation even in Kuwait. He must also be prepared to struggle with words and phrases like "pluralistic industrialism," "societal" and section headings entitled "The Hour on the Clock of Evolution", "The Culture of the Industry", "The Push of Progress".

Science Goes to War

The Rise of the Boffins

By Ronald W. Clark.
Phœnix. 287 pages. 25s.

MR CLARK is a light-weight writer with a penchant for heavy-weight themes but one is obliged to bite back the obvious criticism that here, once again, he is attempting what is beyond his compass by the realisation that although there must be many far better equipped to tackle these cosmic subjects—in this case the conscription of science as the fourth arm of defence—they have not done so and Mr Clark has the field virtually to himself.

What does he make of it? An account on a competent Sunday-paper level of the rise in the late thirties of a special type of scientist now extinct, the "boffin." The boffin was trained in the universities steeped in a liberal tradition that did not always stop this side of eccentricity. War until the boffin took a hand in it, was simply bang-bang based on a little chemistry, a little crude engineering and a great deal of hot-blooded, unthinking courage. The boffin, profoundly disturbed at the disappearance of freedom over Europe, produced a new formula that leaned heavily on theoretical advances in physics, both nuclear and solid-state, and recommended at the same time the introduction of a little scientific method into the planning of war and the measurement of results. This produced a new industry, a new strategy, a new type of fighting man. Electronics, nuclear weapons, precision engineering, operational research, technicians, not heroes—these changes have still to be fully worked out. In the meantime, the boffin disappeared, to be replaced by the professional defence scientist, to whom weapon designing is not something to which he turns his hand in national emergency, but a way of life.

Science came slowly to Whitehall and in the teeth of apathy and a suspicion that seems human enough in view of the unmerciful in-fighting among the scientists themselves. To Mr Clark, they are all simply splendid chaps with the possible grumpy exception of Lord Cherwell, which is no doubt wise since the majority are still living and no more tolerant of fools—i.e., those who disagree with them—now than they were then. But he neither asks nor answers the question of what place and how much responsibility should be given to scientists in the planning of defence. Scientific training does not automatically turn ordinary mortals into super-men, as some seem to think it does. It does not widen narrow minds, sometimes the opposite. How much power, then, should the scientist be given? The rapid switches of policy since the war, the arbitrary cancellation of weapons and ordering of others suggests one of two alternatives. Either the quality of scientific advice available to the Government since the far is not all it should have been, or it is not being taken. Which is it?

NEW YORK 3 HOURS - SYDNEY 13 HOURS

BRISTOL SIDDELEY AND SNECMA SUPPLY THE POWER

Supersonic airliners are being jointly developed by the British and French aircraft industries which will carry 100 passengers at more than twice the speed of sound. These aircraft will be powered by four Olympus 593 turbojets, which will produce a total of more than 50 tons of thrust. Development and manufacture of the engines will be undertaken jointly by Bristol Siddeley Engines Limited, and the Société Nationale d'Etude et de Construction de Moteurs d'Aviation.

THE BUSINESS WORLD

Anatomy of Unemployment

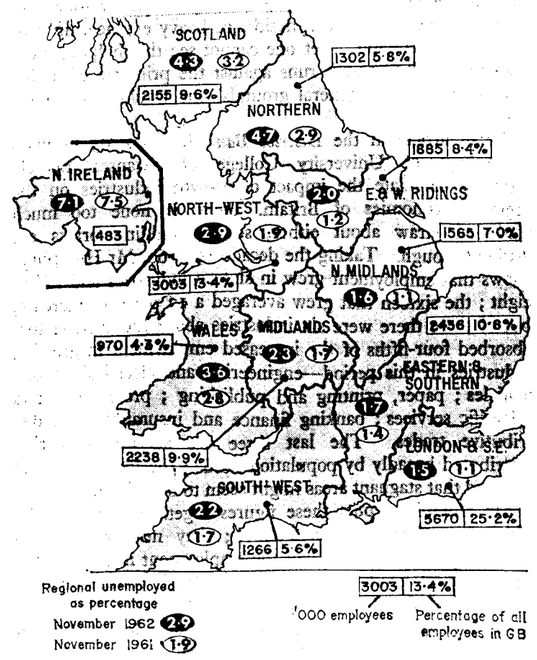
SOMEHOW, 2.4 per cent does not sound tragic. It is a lower rate of unemployment than Britain was prepared to put up with before it learned better economic sense; and some countries (including, say, the United States) would accept it as welcome prosperity. But serious it most certainly is. It means 544,451 men and women out of work, and over half a million of them have no job to go back to. In just a month, from mid-October to November 12th, the count of the unemployed jumped by 42,000, compared with the 18,000 or so that might be expected to lose work at this season of the year. The midwinter figures are bound to break 600,000, and perhaps by a margin—the second time within four years that such figures have been recorded. What is new is not the size of the unemployed but the nature of their unemployment. In the winter of 1958-59, unemployment reached 620,000, not far short of 3 per cent. Restraint on home demand (which was intended to strengthen the balance of payments and in some degree succeeded) had by then produced a sizeable recession in the engineering and vehicle industries.

With so much capacity in steel, engineering, shipbuilding and vehicles presently underused, there are obviously some comparisons that can be made between now and four years ago. But there is now the threat of a pattern of unemployment that takes minds back irresistibly to the thirties—a predominantly prosperous South and a basically regressive North. The latest returns show unemployment percentages of 1.3 for Greater London, less than 1 per cent for Oxford, Cambridge, Slough and Northampton, 2 per cent or more around Birmingham, though over 4 per cent in Coventry. But Middlesbrough and Stockton are over 5, and Hartlepools and Workington 8 or more; so is Girvan, and Greenock is nearly 9; in Wales, Milford Haven and Pembroke Dock (despite great capital investment there) lead the national field with 11½ per cent registered unemployed.

Whether one accepts the current "two-nation" cliché, it is difficult to pretend that healthy local societies can be founded on the basis of one in twelve being out of a job. A former member of the Government, Lord Eccles, has been advocating a crash programme of help for these seriously affected areas. Ministers who remain responsible have stopped well short of that idea. The Chancellor of the Exchequer in a television discussion on Monday managed to combine a sympathetic understanding for the unemployed workers and undermployed managers who were questioning him, with the assurance (honestly meant but seemingly optimistic for this winter) that his recent measures would come to the help of the north-east coast. The Prime Minister on Wednesday declared that Scotland's prospects would be improved by general measures towards expansion, and by special measures for the development areas, including "all the other proposals which we have in mind."

Here indeed is the dilemma. When the Prime Minister, quite rightly, says that expansion is limited "by our great need not to fall into another danger through the incomes policy not being adjusted to general expansion," he cannot expect to make much impression on the minds of those whose incomes policy for several or even many weeks past has been determined for them by their rates of unemployment pay. In the still moderately fully occupied sector of the economy south of that industrial barrier Humber to Mersey (or is it now Humber to Severn?) an incomes policy retains its meaning. But what sort of incomes policy would bring back the much under-employed areas to the north into fair prosperity? There is no permanent solution in shoring up industries that are obsolete or whose costs are too high.

It is, indeed, beginning to look as though the basic structural troubles of some of these areas, which were half hidden



while the economy had a chance to grow, are now emerging once again as serious problems. This is not the fault, necessarily, of particular industries or areas. Shipbuilding is not commonly regarded as the diadem in the crown of British industry, yet it has spent enormous effort and money trying to get up to date. It is not getting many orders, but that is not wholly its fault; the fact that it is getting any orders at all, as in the last few weeks, argues for its competitiveness. But the capacity that a few years ago helped to satisfy a world boom in new ships is as excessive here as it is in Europe or

Japan. What, again, does one make with new rolling mills intended for structural steel when the building industry has brought reinforced concrete construction to such an economical art? Obviously general expansion across the world will put many local excesses of capacity at least partly right—for a time. But the fact is that the areas now most affected by unemployment are the ones that have been least able to secure industrial innovation and growth. One answer here, that Mr Maudling has recently emphasised, would be to attach aid for underdeveloped countries more directly to spare resources—ships for India built on Tyneside, or heavy engineering products from Scotland. Yet one cannot see this helping more than marginally—and it runs against the principle of multilateral aid that (on general grounds) one would wish to see extended.

In an article in the *District Bank Review*, Mr Graham Humphrys of University College of Swansea bravely attempts to relate the impact of growth industries on the regional economies of Britain. There is none too much statistical straw about either, so his building bricks are distinctly rough. Taking the decade 1951-60, Mr Humphrys shows that employment grew in sixteen industries and fell in eight; the sixteen that grew averaged a 12 per cent increase, but of these there were six industries above the average that absorbed four-fifths of the increased employment in growing industries in this period—engineering and electrical goods; vehicles; paper, printing and publishing; professional and scientific services; banking finance and insurance; and distributive trades. The last three are service industries, distributed broadly by population needs; the first two are of the kind that stagnant areas might seem to need for growth.

Mr Humphrys puts these figures together in two tables which have been combined above; they need to be read against the fact that over half the employment in engineering and electrical goods and also in vehicles is concentrated in London and the South East, the Midlands, and the North West, and in paper and printing (though less important absolutely) nearly three-fifths. So the industries that have grown fastest are concentrated in three of eleven regions. Scotland and Wales lost employment in vehicles in the 1951-60 decade, and the "two-nation" dividing line can be traced pretty consistently through the table—the dominating job-creating power of London in particular.

IT would be easy to slip from this demonstration into the false idea that the backward regions would be fine if they could chisel off a piece of some other region's growth. The fact that the growth industries are least to be found in the areas where growth is most needed does not automatically guarantee that the relocation, or extension, of a growth industry in another region will carry with it the accustomed rate of growth in its old location. It may so happen where an industry has overgrown (like vehicles in the Midlands) and has drained all the skilled labour from its hinterland. And capital assistance, tax incentives, retraining of labour and management, deliberate steering of government orders—all these elements of development area policy can help, though not forthwith, in improving the lot of the hardest hit regions and localities. But one must also allow for the possibility—perhaps most tangible in shipbuilding—that there is some capacity that is by no means economically disreputable which cannot hope to get business except towards the top of the demand cycle; and when that is coming in shipping would need a brave guess. Further, there is a slimming of labour forces in the prosperous areas, as well as the radical cuts in regions where business has been declining, which must be counted for good—in terms of cost paring, higher efficiency and the switching of jobs where this is still possible.

But, over a limited industrial and geographical area (though one too big for comfort) government, people and industry are facing a mixture of cyclical and secular problems which is incapable of a single solution. In the widest areas of international economic policy, the signals have been made for more expansion. The external crisis that forced nearly 3 per cent unemployment on Britain four years ago does not exist today; risks can be taken now, particularly in external finance and aid, that were not possible then. Mr Maudling's general measures are likely to emphasise, at least for a time, the "two nation" differences they are intended to level out—for all past experience suggests that south-domiciled industry is faster in its response to expansionary noises and measures. They will not mean a prompt increase in orders for depressed industries and areas, even though he fairly claimed on Monday that their help would spread through the economy.

The fatal mistake, on any sensible long-term view of what the British economy needs, would be to panic into crash programmes of help for industries whose ailment is not a sudden cold but is associated with age and decline. Steering private and public investment to help depressed places is admirable so long as growth is never denied to the areas that can best achieve it. Nor is labour mobility a negligible factor today in securing it. Some element of rescue will have to come into the operations for the northern nation. But an equally urgent need will be to secure the bases of sustainable growth in areas that have so far achieved too little of it. One needs, so to say, more IBMs in Glasgow to make Scotland grow; and fewer of the crazy Solomon decisions that divide a steel mill into two inefficient halves in the name of balanced regional advance.

How Much Faster than Sound?

Our Aviation correspondent, back from the United States, reports on supersonic thinking there

NOW that the decision has been taken to proceed with an Anglo-French airliner flying at twice the speed of sound, the chips are down and arguments about the soundness of the choice become academic. The aircraft's future—and that of the taxpayer's investment in it—will now depend largely on the kind of competition that it is going to meet. The only competition that matters is whatever will come from American factories, and it had better be recognised straight away that Mr Amery's signature on the Concord agreement plays straight into the hands of those government agencies in the United States that are raring to try their hand at supersonic designing. Pressure from government scientists to mount the supersonic band-wagon is at least as great on that side of the Atlantic as on this; what has held them back so far is the conspicuous reluctance of American aircraft builders to get in on the act. It is assumed there, as here, that the government will have to finance the development of any supersonic airliner; to date the American government has confined itself to placing small development contracts across the industry to investigate specific features of supersonic design. But in the past few weeks, the head of the Federal Aviation Agency (whose role would be similar to that of the Ministry of Aviation) has said repeatedly that an Anglo-French agreement would force the United States to come to a decision in the following six months. The agreement has been signed; what will Mr Halaby now decide?

Most American designers would say that they do not know. They have a clear distinction in their own minds between a supersonic airliner, and a good supersonic airliner. By the latter, they mean one that meets at least some of the criteria laid down by the International Air Transport Association, including the important proviso that the operating costs of such an aircraft should be no worse than those of today's big jets (privately, most airlines think that they could charge a small premium for supersonic flights). With unexpected humility, American designers have been saying in almost identical words, "If they want us to produce nothing more than a machine that will fly passengers at supersonic speeds, we could start tomorrow. But if they ask for an airliner that will do this economically, then we do not know where to begin." What is one to deduce from this? That the English and French aircraft industries are more knowledgeable than the American, or that they are more rash?

It is possible that the industries on the two sides of the Atlantic are working to different ends. The English and French are bidding to snatch a lead in world markets, even a short-lived one. Such an aspiration would lend a semblance of logic to a choice of design that is indeed difficult to justify on technical or commercial grounds. The Americans, for their part, are not interested in short-term gains, but only in long-term production runs. Their engineers know only one way to build aircraft, by mass-production methods requiring massive investment in jigs and tooling. Since supersonic airliners will be ordered in smaller numbers than today's jets (fewer being needed to do the same work), it is vital for the Americans to choose a design that can stay in production over a long period if they are to see their money back. It is not always realised that the US aircraft industry has taken staggering losses on its jet airliner production. Only the Boeing company is within sight of recouping its development costs, and it will still take another two years before the company finally does so, by which time the 707 will have been in service for six years. Lockheed, Douglas and Convair are less fortunate; each has written off sums that range in ascending order to the near-incredible.

THE supersonic aircraft promising longest life is an aircraft built entirely of steel, so that its performance can be improved without running into limits imposed by the rising temperatures that come with rising speeds. The light alloys which will be used for the Anglo-French aircraft will already be up against these limits, so that the Concord will be an aircraft offering no further scope for development. This is the key difference in the approach to supersonic design on the two sides of the Atlantic. The American industry has not abandoned all idea of building a light alloy aircraft. Most companies have their Concord-type designs and are discreetly writing for European samples of the sintered aluminium, out of which the British and French aircraft will be built and which is said to be the secret of its performance (this material is not made in the United States). But the American industry would prefer to build its supersonic aircraft from steel, and will choose light alloys only if steel proves to have insoluble drawbacks, as the British and French say it has.

The Americans would be the first to admit that huge gaps exist in their knowledge of how aircraft and materials behave at speeds between 1,500 miles an hour and 3,000 miles an hour, which would be the tentative speed range for a supersonic airliner built of steel. This is precisely why they cannot for some years put such an aircraft into production. They have no more evidence to prove that it can be built than the British have to prove that it cannot. But against British comment that few aircraft have ever flown at these speeds, and then only for minutes, must be set the fact that the world's first big steel aeroplane is due to fly this spring and when it does, American designers will begin to fill the gaps in their data. This aircraft, the B.70, was planned as a 2,000-mile-an-hour bomber, but out of that controversial and ill-fated programme are emerging two prototypes that will serve as supersonic flying test-beds and settle, among other things, arguments about the sonic bang from a big aircraft. The B.70 holds the key to what the Americans will do next.

If the American industry builds the kind of supersonic airliner that it wants to build, and which it certainly will build unless data from the B.70 flights are sadly disappointing, the American factories might be offering delivery of a supersonic airliner five to seven years after the Concord, assuming that the British and French factories can meet their tight schedule of putting the Concord in service by 1970. This week's fire in the prototype engine shows how the unpredictable accident can upset any time-table. How, in these circumstances, are the world's airlines going to react? Will they buy British? Or will they wait, as they waited

when they were offered Comets and Britannias, for bigger, faster American aircraft more closely tailored to their requirements? Britain is again attempting to steal a march on the competition by offering early delivery of an interim aircraft. Will the airlines take the bait this time?

The bait is a deal tastier in the case of the Concord than it was with the Britannia. If Air France and the British Overseas Airways Corporation both put the Concord into service on the North Atlantic (even if their respective governments have forced them to do so at gun-point) other major North Atlantic airlines cannot fail to buy the aircraft. BOAC and Air France between them control too much North Atlantic business to allow American lines to shrug off this kind of competition. But the big airlines will buy, if they must, only the minimum needed to hold off the worst of the competition until they can get the kind of supersonic airliner they really want. They would react in the same way to any maverick that put Concords on the American domestic network. Like the American manufacturers, these airlines want an aircraft with a long life; a light alloy aircraft that may be outdated in a few years by a potentially (but not necessarily initially) faster steel one does not seem to them to fit the bill. The trend in the United States is towards longer depreciation; while BOAC is prematurely writing down much of its fleet, United Airlines, the biggest airline in the world after the Russian Aeroflot, is extending the depreciation of its jets from ten to fourteen years and setting a precedent of which the airline industry generally approves. It is difficult to see the Concord fitting into this pattern unless it can be proved that it does in fact represent the ultimate in supersonic design, and that speeds of more than the Concord's 1,400 miles an hour are unattainable in a civil transport.

If Concords had to be bought as a stop-gap, the number would turn on the time-lag between British and American delivery. A gap of three years could mean that American airlines would buy none at all. One of between four and five years could find them buying token quantities, with the numbers increasing as the gap widened. The balance could be tipped slightly by making the Concord more acceptable to the airlines than it is today. Major airlines outside Britain are accustomed to have a large say in the designing of any new airliner and have engineers qualified to do this. There appears to have been scant consultation of this kind while the Concord was being designed and the aircraft has features to which airlines are already taking exception. Not least of these is the tendency of all machines of this shape to land with their tails scraping the ground, their noses high in the air and their passengers presumably on their backs contemplating their toes until the machine returns to the horizontal with a wallop. Nothing about the behaviour of the Ministry of Aviation's research aircraft suggests to the airlines that the British have an answer to this—hence airline interest in wings that change their degree of sweep according to whether the aircraft is flying supersonically, when it needs a lot of sweep, or slowly, when it needs very little (this also has an important bearing on operating costs). American designers are offering this British-invented refinement in their supersonic designs; it is already going into American military aircraft like the one described on page 1017.

But no amount of improvement or improvisation can remove the spectre of untimely obsolescence that turns the prevailing mood in the United States against the idea of standardising on an all-Concord supersonic fleet. The airlines intend any purchases of Concords to be marginal, and it will be difficult to change their minds. Whether such export prospects justify a joint Anglo-French investment that may in the end come to £200 million is a question that the two governments alone can answer.

GERMANY'S ENERGY MARKET—II

Retreat from Liberalism?

THE company structure of the German energy business, to an Englishman, is one obvious way in which it differs from the British market. Coal is mainly though not entirely privately owned, often by groups having large steel interests. What are nicknamed the "zebra companies"—those with mixed coal and oil interests—have a sizeable stake in German refining and oil marketing, as well as in mining; some were originally based mainly upon local crude oil, but are nowadays also "arm's length buyers" of imported crude wherever—and as cheap as—they can get it. The government owns some coal mines and one or two refining groups (one of which processes some Russian oil). Among the German affiliates of international oil companies, Esso, Shell and Mobil have significant interests in German crude production; Mobil is associated in the ownership of one refinery with one of the bigger coal-oil groups. And perhaps the biggest splash in the widely coverted South German market has been made by the plans of a group dominated by ENI, the nationalised Italian gas and oil company.

Price-cutting independents no longer retain the large share of the German market for motor spirit, 15 per cent or so, which they touched some years ago; the larger companies cut prices too, and now the original price-cutters are down to perhaps 8 per cent of this market. A German group, BV Aral, has the largest single share of this retail market; but counting in all products, it is possible that Esso ranks first. The big companies have largely mopped up the competition from Russian oil products, though a number of the German independent refiners are refining some Russian crude. Most of the products come in via East Germany, against which the Federal Republic charges no customs duty; products refined from East German crude oil even get the same protection as those refined from West German crude.

Coal lobbyists in Germany, in spite of their side interests, present a firmly united front; not so those of oil. In reviewing their plans for refinery expansion—and refusing to reduce these as the German government asks—some of the major international companies have emphasised to Dr Erhard that they themselves are practising moderation; they aver that it is the "zebra companies," planning to increase their share of German refining capacity from about 40 to about 45 per cent by 1966, whom he and the coal owners should bring to book.

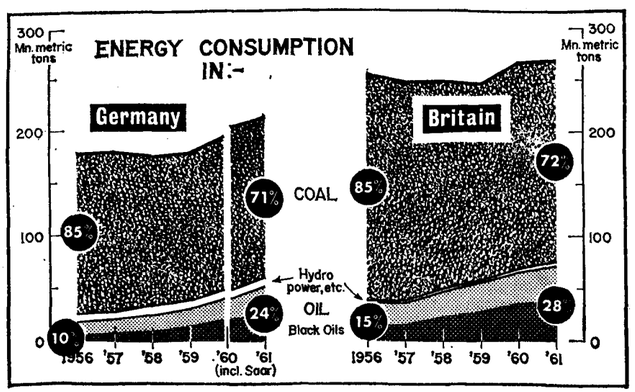
Does this mean, counter the coal-oil companies, that they should be prevented from developing the growing side of their business; and is not the major's moderation in refining plans inside Germany explained by the fact that some of them have refineries just across the French border from which they are planning to increase fuel oil imports into Germany?

The German-owned refining companies, whether or not they have interests in coal, also contend that the most bitter price competition of recent years came from the major companies while these were building up the fuel oil market and their shares of it. Refining affiliates of these international groups, their German rivals complain, can price themselves into the red while trading in Germany, yet have their books brought into balance at the end of the year by various forms of adjustment from international profits made in the Middle East or elsewhere. And it takes astute buying—even from the Russians—for any independent refiner to get big enough discounts on his crude to match this.

ON one issue, however, the oil companies do say the same thing—that the refinery expansion they have in mind is not excessive. And that German consumers, given freedom of choice, would be glad to buy the oil which the new capacity will produce, plus a margin of imports, is not in dispute. What is disputed is the growth one can expect in total energy consumption, and how much room will be left for coal. The oil companies reckon that total consumption will grow at roughly 2½ per cent a year from now until 1966, which they consider is quite moderate by comparison with the estimate of a 2.8 per cent average growth up to 1975 that was made early this year in an *enquête* conducted by a group of German economic institutes. The coal companies and trade unions argue that the growth may be nearer 2 per cent yearly; on this analysis, they think the refinery capacity planned may bring about a surplus of say 5-10 million tons of coal a year by the late sixties. Nobody questions that if the surplus arises it will be one of coal; even with a price stabilising at around DM.75-80 a ton (including the DM.25 tax), fuel oil is more than competitive with coal, and by 1966 the new refineries will penetrate the last few refuges in South Germany where coal still retains some price advantage.

Coal means votes, political backing for parties of more hues than one, the traditional stronghold of German capital. Oil does not employ many people, and much of the capital with which it is intensive is foreign. Another basic difference between Germany and Britain that an Englishman notes everywhere—even in its admirably unbiased Ministry of Economics—is that Germany has no national interest in international oil. "At least in our professor of economics' pack of liberals," said a sardonic coalowner to his visitor last month, "nobody stands to attention when they hear the word Shell. Can you say that at home?" (He was clearly confident that there are plenty of ministries in Bonn ready at a moment's notice to turn out the guard for the Ruhr.) The Ministry of Economics would like to see more German interest in foreign oil; indeed, one reason why it is reluctant to give open-ended subsidies for local crude production is that it gives German oilmen "the chance to look for oil comfortably where it probably isn't, rather than in nasty places with sand and mosquitoes where it probably is." But it retains a certain un-British detachment towards the fortunes of the major international groups; towards American companies, indeed, it is apt to raise the point that Russia is not the only big oil-producing country that has largely closed its own home market to foreign oil and from behind this protection can afford to push competition hard abroad.

This ministry wants Germany to enjoy the benefits of cheap energy: its own energy policy is becoming nearly as pragmatic as Britain's, though still with a rather larger dash of liberalism. Its hopes of any early progress towards any common energy policy for the European community are not high: it regarded the most recent Marjolin-Lapie draft for such a policy with indulgent scepticism, as an intellectual construction trying to face too many ways at once. It is highly reluctant to intervene in what it regards as a fairly free market for oil, for the sake of further protection of "coal-owners whom it would be a pity to see reduced to selling matches." It has no doubt that all future growth of fuel demand in Germany must be met from imports; even if German mining is rationalised down to an efficient and competitive core (do not ask how big) its chances of attracting labour while maintaining its costs fairly level seem low. The Ministry is worried only about the rate of growth of oil sales; it fears that the rush of refinery construction for the Bavarian market set off by ENI can in practice push coal farther down in the rest of the sixties than the coal policy of retreat and rationalisation can take care of. Its own room for political manœuvre is clearly limited, with a government in difficulties and conceivably prepared to toss liberalism on this issue overboard for any extra chance to re-establish its position. The Ministry is still reluctant even to discuss the two obvious methods of intervention: import quotas on crude and fuel oil, which unless put on oil from the rest of the Community under an escape clause of the Treaty of Rome would simply invite an influx of imported products from other common market refineries; or some form of refinery licensing, a long way short of France's *dirigiste* oil policy but a move in that direction. Low water on the Rhine, and a really cold winter—which might make fuel short in Bavaria and even divert the Ruhr's attention slightly from lobbying—would help it play for time. But there are plenty of Parliamentarians to press illiberal action upon it.



BUSINESS NOTES

RESERVES AND EXCHANGES

Sterling's Strength

THE sterling area's gold and convertible currency reserves rose by £22 million in November to £1,030 million ; and on this occasion there were no special factors to distort the figures. The seasonal pressures of autumn have left sterling relatively unmarked this year. In September the reserves fell by £13 million, after allowing for special factors, but they rose again in October by £11 million. The rise in November reflects both the ebbing of the seasonal strains, the stronger balance of payments, and the confidence shown in sterling in the foreign exchange markets.

This is the best performance since the rises recorded in the first five months of the year when a good deal of foreign money was being pulled into Britain by high interest rates. There were no signs of any such inflow in November. In fact, as far as these movements can be spotted, there seems to have been a small net outflow of foreign money during the month. During November, it is true, there was a small amount of switching from American to British Treasury bills to take advantage of the covered arbitrage margin of around ½ per cent, but this seems to have been more than balanced by a steady, but small, outflow over the whole month from the local authority mortgage market into the Eurodollar market, where the three months' rate remained at around 4⅛ per cent on a good demand from the Italian banks. Throughout November the local authorities, with rate money coming in and a good deal of accumulated money from new issues and mortgages available, were repaying their maturing short-term debts without renewing them.

Sterling was consistently strong throughout November, keeping within the range of 2.80⅛ to 2.80⅜ against the US dollar. The Sino-Indian dispute passed without a ripple. Confidence in sterling now seems to be stronger than for a very long time. This good external performance contrasts with the growing public feeling about unemployment ; the gold figures have revived expectations of a cut in Bank rate to 4 per cent. But the Government has already pulled out most of the monetary stops and a good few of the fiscal ones too ; and more might be needed. Bank rate with its predominantly external impact, remains a useful guard against external pressure on sterling—and notwithstanding the good November gold figures, that guard may still be needed.

INTERNATIONAL CREDIT

Multilateral Swap

A correspondent writes:

THE American and Swiss authorities have arranged a further currency swap, not as yet officially disclosed, which for the first time involves a third currency. The Federal Reserve has a liability of $30 million maturing in Switzerland that must be covered. This is part of the $60 million taken off the Swiss market at the time of the Cuban crisis by the National Bank, which then passed on these dollars to Swiss commercial banks on a short-term swap against Swiss francs, which would be returned to the banks before they made up their accounts at the end of the year.

Now the American authorities have covered this maturity, and in an intriguing way. They have made use of the one foreign medium of exchange with which they are flush, German marks ; and in order to do so they have used the Bank for International Settlements as an intermediary in a three-cornered swap operation. The American authorities have used their marks to acquire Swiss francs, on a swap basis, from the BIS ; and with the proceeds they have repaid the Swiss National Bank. The BIS in turn has acquired the Swiss francs (those it swapped with the Americans) from the Swiss National Bank, again on a swap basis, this time against gold. All these operations will have to be reversed when the swaps mature in three months. So the Americans will still need to find Swiss francs in the new year, though it is hoped that the underlying commercial deficit in the Swiss balance of payments may by then again be making itself felt.

The Federal Reserve could not use the marks directly because the Swiss authorities hold only gold and dollars in their reserves, apart from small working balances. Nor did the American authorities want to use up what remained of the Swiss franc balances obtained by the $200 million swap arranged in mid-July and renewed for three months in mid-October, and the two borrowings, also in mid-October, of 220 million Swiss francs from the Swiss Confederation, and 200 million Swiss francs from the Swiss National Bank. The Americans prefer to use these francs to purchase gold from the Swiss. In November the US Treasury made two gold purchases from the Swiss National Bank ; the first was of $20 million that the National bank had obtained on a swap basis from the BIS, and the second was a purchase of $30 million in the week to November 23rd—a purchase which was reflected in the National Bank's weekly statement.

THE ECONOMIES

Planning Or Not?

DR Ludwig Erhard took the opportunity once again last week, at the session of the European Parliament in Brussels, to say that he was utterly opposed to the spirit of planning that he sees thinly veiled behind the *programmation* recently advocated by the European Economic Commission in Brussels ; and M. Robert Marjolin, vice-president of the commission, finally came out, at a conference in Rome, and used the word *planification*. Dr Erhard, continuing his controversy with Dr Hallstein, president of the commission, said that he had the support of Dr Adenauer in his stand against this extension of centralised planning. M. Marjolin, without entering this controversy, was at pains to remark in his speech how much the disciples of the "social market economy" in Bonn do in practice find themselves intervening in the conduct of German business.

Germany's laisser faire economists, when the common market began to be built, had hoped that their own, then hugely successful, economic ideas would prevail over any spirit of French planning within the Brussels bureaucracy. In practice, though M. Marjolin himself is often at odds with the French Government over common market policies, his own approach to the problems of the *économie concerte* inevitably parallels that of the Commissariat du Plan ; Dr Hallstein, too, seems to have lost some of the doctrinaire liberalism that Bonn requires.

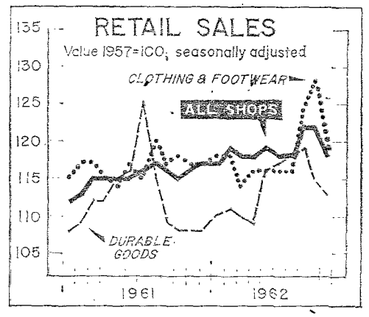
M. Marjolin, in Rome, cited the open resort to planning in France, Belgium, the Netherlands, and Italy, and added that in Germany the government had exerted considerable influence on investment, particularly regarding the heavy industries, some backward areas, and the export industries. He suggested that the German economy, no longer benefiting from the impetus given to exports by an undervalued currency, now faces new problems, and that it would be forced into new techniques of public intervention in the private sector of the economy.

Two philosophies are in conflict here within the common market ; the commission has much of the practical initiative in its hands, though here too, finally, ministers dispose. Before Europe could adopt a free market policy in the Erhardian sense (providing it so chose) it would have to become a common market. Common external tariffs, harmonisation of the agricultural policy and taxes and social policies—all these are tasks that could hardly be tackled without the help of a planning bureaucracy formally in the saddle which is able to lay clear cut proposals before the Council of Ministers. It is not M. Marjolin's socialism but the impetus of European economic integration which gives the commission in Brussels its preponderant emphasis.

CONSUMER SPENDING

Back on Course

IT was not surprising that the fashion trade did less well in October than in the two preceding months, when it had benefited from an especially early spree of autumn and winter clothes-buying. Even at the lower level, the turnover of the clothing and footwear shops, according to the Board of Trade's seasonally adjusted series, was still 2 to 3 per cent above what it had been in the second quarter of the year. The more disappointing features of the October retail trade returns were a quietness in the food trade, and a further decline in the sales of durable goods shops, to their lowest level in six months. The credit business of household goods shops was likewise in the doldrums, the rise in October, as in September, being smaller than might be expected for the time of year. Thus, the stimulus given by the reduction in minimum deposits on June 5th, which was maintained in July and August, has since lost some of its force.



As a result of these changes, total spending in the shops in October fell back to the June and July level, after having been 3 per cent above it. Since prices had edged downwards a little, however, the volume of business did not fall off quite as much, although it was barely any more than at the same time last year. The poorer showing in October may be explained away by "unseasonably mild weather" which puts paid to those "seasonal" corrections, or it may be wrapped up with the September results to show that trade was "marginally higher." On the face of it, however, it looks as if the Indian summer for the shopkeepers was over and that buying was once more at the level at which it has stuck, more or less, for the last eighteen months. Yet the Chancellor asserted in the House on Tuesday that he cut purchase tax on cars instead of using the general regulator, because "consumption was rising and is rising." Did he mean outside retail trade, in the other half of personal spending ? The only available indication on this side relates to car-buying on hire purchase

Will Car Sales Rise?

THE motor industry finds the first month after the cut in purchase tax a disappointment and a puzzle. After selling 60,000 cars at home in October, matching the record of 1959, it finds that sales in November may have fallen by perhaps 10 per cent, when seasonal factors would cer-

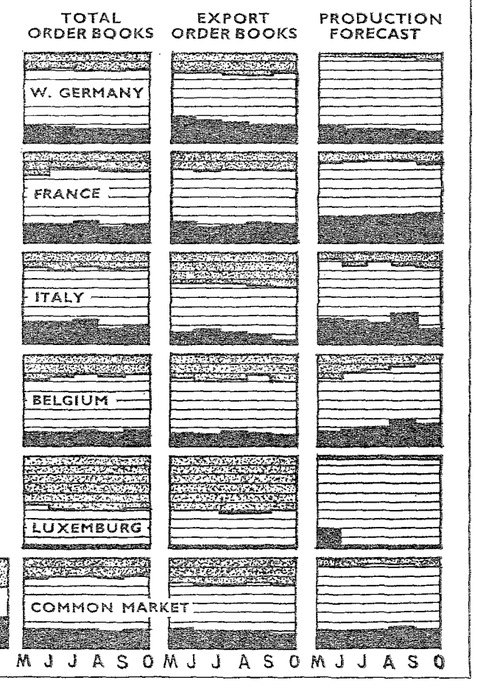
Business Attitudes in Europe

BUSINESSMEN in the common market hope that their output will grow at a moderate pace in the next few months ; but their total order-books are fairly static, as a result of declines in export orders. Slack is developing in the capital goods industries, where stocks of finished goods are mounting ; the consumer goods industries show clear signs of a further rise in output.

Sampling of company directors' feelings about the state of their business began in Europe a good time before the Federation of British Industries took it up here: the IFO Institute in Munich devised its *Konjunkturtest* technique in 1949. Such questionnaires, framed to be answered with "Up," "Same," or "Down," are now regularly answered in all the common market countries. This spring the European Economic Commission began sending out a standardised questionnaire to 13,000 businessmen in all these countries but the Netherlands, where businessmen do not altogether approve the form of the EEC test and in any case want the results kept secret.

The charts show the answers, as now published, for three of the six questions that the commission asks ; they are published in this graphic form only, without any figures. The Europeans prefer this kind of presentation, which gives full weight to the "No change" answers, to the method often used for the FBI survey, where the answers are often given in terms of the balance of the percentages "Up" or "Down," ignoring the "No changes."

In graphic terms the Europeans may be right—though presentation of the graphs without three colours is almost inevitably ugly—but it would probably be better to publish figures too, for anyone wanting a different presentation. These surveys, however, are monthly, with big samples, and more detailed than the British : there may be an advantage in bringing those of the FBI into line, whether we enter the common market or not.



tainly not indicate any bigger fall and are generally expected to produce a rather smaller one. Hire purchase business, however, remained almost the same as in October, so if the signs of a fall in sales prove correct, the reduction in deposits demanded by members of the Finance Houses Association must have raised the proportion of cars bought on hire purchase to nearly 25 per cent.

Though nobody expected that there would be an immediate rush of buyers after the cut in tax, everybody thought sales would show some improvement. If they prove to have fallen the industry will wonder how much effect the cut in tax will have in the long run, when the public has had time to work out the effect on them. Forecasts for next year are already tending to become slightly less optimistic, while the results of December and then January are being anxiously awaited by harassed prophets. When purchase tax was cut in the budget, the big rise in sales came in May; so those months should give the final answer.

STOCK MARKETS

Norfolk's Success

Following the final release of special deposits, business in the gilt-edged market remained thin and renewed suggestions of a reduction in Bank rate did little to stimulate buying. But prices have continued to improve and where they have had the opportunity the authorities have tried to nudge them up. Corporation stocks have followed and so brought success to the £3 million offer by Norfolk County Council of a 5½ per cent stock, 1971, at 98, offering a yield of 5¾ per cent to redemption. Nearly two months have passed since the last corporation issue, and the Norfolk loan was regarded by the authorities and the market as a test case. At the tail-end of the boom in local authority issues Somerset just scraped by with a 5 per cent coupon, but that stock now stands at a discount and the decision was taken to retest the market with a 5½ per cent coupon for Norfolk. Its oversubscription of more than 30 times will encourage the authorities to bring a bigger local authority issue forward on finer terms.

Equities in the British and Continental markets have tended to follow Wall Street, dipping on the slight technical reaction in dollar stocks and then rallying on the recovery which carried the Dow Jones average up to 654 on Wednesday. Renewed European interest in dollar stocks has been reflected in a slight hardening of the dollar premium in the London market. The concern among British investors about domestic unemployment was expressed in quite a sharp dip in equity prices on Tuesday. But the gold figures and the rally on Wall Street gave fog-bound Throgmorton Street a little more confidence later in the week. Even so, as a result of the earlier fall, *The Economist* indicator was 6.8 points down at 348.1 in the week to Wednesday's close.

SWEDISH CAPITAL

Break-up on the Stockholm Market

Stockholm

This year has witnessed a conspicuous turnabout on the Swedish credit market. At the beginning of this year when there were indications of a slowing-down in the rate of economic expansion in Western Europe and private capital expenditure in Sweden seemed no longer to be increasing, the Riksbank successively loosened its strong hold on bank lending. The banks became free again to extend new credits and were even encouraged to do so. The money supply was deliberately increased and the official discount rate lowered—in April by ½ per cent to 4½ per cent and two months later by another ½ per cent. But the changes on the capital market have been even more drastic and far-reaching than those on the market for bank credits. For years prospective long-term borrowers, consisting of industrial enterprises, municipalities and mortgage institutes, had been queueing at the Riksbank's issue door to get permission to make bond issues. More often than not, they had had to wait for several years before an issue permit was granted, and it fell to the banks to try to find ways and means of financing these long-term credits. There were signs last year of a better balance on the capital market, but this year a real break-up has taken place.

At a rate deemed unbelievable only a year or two ago, bond and debenture loans have been issued and almost immediately absorbed by the market. In all, more than 4,000 million kronor have already been placed this year against some 2,150 million during the whole of 1961. Industrial companies and power authorities which had previously been most starved of new issue permits, have been able to borrow three times as much as in the whole of 1961 and no less than twelve times as much as in 1959. Only recently has the market begun to suggest a certain state of saturation, but the once long queue of borrowers has virtually disappeared and the most pressing requirements have undoubtedly been satisfied.

Several factors explain this remarkable change-over. On the demand side for new investments the National Pension Fund has become an increasingly important source of finance since it was set up in 1960. Its resources are rapidly rising and next year it will have not far short of 2,000 million kroner to invest. On the other side, the Government, having a surplus on the budget, keeps away from the market, leaving other borrowers to enter. This more satisfactory balance on the capital market to all appearances will persist and perhaps improve this coming year; it has given rise to expectations of a further lowering of interest rates. It is hard to say whether this will materialise. Experience shows that changes of the official discount rate are generally decided on grounds other than pure demand and supply in the credit market. As a rule, forecasts of business development have been the decisive factor, and, on present evidence, these would not appear to warrant an easier credit market.

COTTON TEXTILES

Curb on Pakistan

Since summer, India and Pakistan have been ready to restrict exports of yarn to Britain and to extend current quotas on exports of cloth and garments when they expire at the end of this year. But despite considerable pressure, Pakistan has so far withheld its consent to this voluntary limitation. Last month, the President of the Board of Trade stated openly that, failing agreement, the British Government would step in to enforce restrictions, and it has now done so. Imports of cotton yarns from Pakistan have been fixed at 1.2 million lb over the two years, 1962 and 1963. Licensing has been put into effect immediately though spreading the quota over two years would appear to remove the urgent need for the new arrangements.

The yarn quota is based on imports in 1961, the last full year in which the Commonwealth suppliers competed here freely. Pakistan unfortunately came off badly in 1961 partly because re-equipment was dislocating its industry, and therefore it has a case to plead. No action to restrict Pakistan exports has had to be taken up till now because they were lagging badly for most of the year and were heavily down on the 1961 level until quite recently. But an upsurge in Pakistani exports to this country has occurred and orders placed in Pakistan which the Board of Trade has apparently also taken into consideration, have been large. The expansion is a sign both of quickening trade in the Lancashire cotton industry, in which so far not all manufacturers have shared, and a tribute to the effectiveness of a restored export subsidy in Pakistan.

India and Pakistan have kept their yarn exports to Britain within the 1961 level pending Pakistan's agreement to do the same. Pakistan has not yet agreed to extend cloth and garment export "ceilings," but if this warning is not enough to bring Pakistan to heel, import controls will be used. Controls are more easily applied and dignified when applied in the producing countries; the trend should be towards self-administered restraint but many importers have recently been forced to impose import restrictions on cotton textiles Pakistan now appears determined to set the clock back further.

HIRE PURCHASE

Repeat Performance

The Protection of Depositors Bill received an unopposed second reading this week, but six years is a long time to wait for such a straightforward bill. The third attempt at a Weights and Measures Bill is no improvement on earlier dismal efforts. Now, in what must be almost a negation of government, the Government has returned the job of reforming hire purchase law to the private members.

Just one year ago this week the private bill of Mr W. T. Williams, Labour MP for Warrington, was talked out on the grounds that it anticipated the report of the Molony Committee. That report appeared last July; three weeks ago Lord Derwent, Minister of State at the Board of Trade, blandly pointed out that hire purchase was a traditional field for private legislation and invited private members from either house to introduce bills. Lord Peddie has taken up the invitation and introduced a shortened version of Mr Williams's earlier bill.

What happens now? If the Government has any sense it will realise that this matter is too important for a private member's bill and it will find time for comprehensive legislation. Lord Peddie's bill extends the protection of the 1938 Act to cover goods up to a total hire purchase price of £1,000 and proposes a 72-hour "cooling off" period for all contracts not signed at a regular retail outlet. The arguments of a year ago against reform in this shape still apply; extending the 1938 Act means that a finance house can never recover more than half the hire purchase price from a defaulting hirer. Most companies themselves now follow the reasonable practice of charging the hirer who terminates his agreement the balance owed less the amount received for the re-sale of the car.

A change in the law must recognise the need to protect the consumer, but it must also see that the finance company gets a square deal when a contract is broken. At the same time it must open up the way for the companies to enter the personal lending business, now that they are building up their credit rating service, by exempting them from the Moneylenders Act. This would avoid the present problem of the finance house, as legal owner of the goods, being responsible for a dealer's misrepresentation. Finally, if the third party who in good faith buys a car still subject to a hire purchase agreement is to be protected, then car registration books must be recognised as documents of title; an inter-departmental inquiry was considering this as long ago as last July.

SPAIN

Controls Coming Off

Madrid

Sir Hugh Ellis Rees, head of the team of international experts who wrote the report on Spain for the World Bank, can already see some concrete results from his work. His ears should be burning. After the release of the report at the beginning of October the Madrid paper *Ya* wrote that everybody could see that the report had been written by a group with an Anglo-Saxon majority:

> It is a document full of common sense, unbiased, cool, and with one object in view of establishing—far from all doctrinaire arguments which lead nowhere—a close contact with Spanish realities in order to become a realistic and practical contribution towards Spanish economic development.

This acclaim was indeed surprising. True, there were some discordant voices as well, but they did not count. The report has sold over 10,000 copies in a country where 2,000 copies are considered normal and 5,000 a great success. Last week *Codorniz*, which is Spain's equivalent to *Punch*, shows on its cover a Spanish John Doe poring over three thick volumes of the World Bank report with a Russian abacus as a calculating aid.

The latest and most promising success for the report, however, was last week's approval by the Cabinet of the "Preliminary Dispositions", meant to prepare the legal ground for the Economic Development Plan which will officially come into force in January, 1964. Events of the last twelve months have proved that cooperation between Spain and the World Bank is continuous and close. Some advice which appeared subsequently as a modest opinion in the report had been carried into effect several months before publication: increased trade liberalisation, autonomy for Spanish Railways, the aversion to new state industries (as in the case of the Barcelona refinery); and the creation of an Undersecretariat of Tourist Trade.

The purpose of these "Preliminary Dispositions" may be seen mainly in three directions: the suppression of controls, the clear definition of economic policy, and the fight against abuses. Although the text itself has not yet been published (it has probably still to wait for General Franco's signature) such publicity was given to the decree by the authorities that the reconstruction of its contents offers no problem.

On the abolition of controls and further liberalisation, the decree is well-nigh sensational: the introduction of new controls, on goods, services, or even wage and welfare problems, will require in future the explicit previous approval by the so called *Comision Delegada* which is formed by the ministers of the seven economic departments plus the Commissioner of the Economic Development Plan. More: all such controls at present in force will automatically come to an end within three months unless they are explicitly and individually confirmed by the *Comision*. One of the immediate consequences is the disappearance of the Price Control Board (*Fiscalia de Tasas*).

In foreign trade, the simplification of the inspection of goods in import and export trade, and the merging of all export levies into one, will be greatly welcomed by traders. Another step in the same direction is the streamlining of foreign trade: by making tariffs more homogeneous (by putting sub-items, if possible, all in the same group of trade, and by transferring more commodities from state trading to private hands.

Other articles of the decree refer to the definition of economic policy; the lack of clear principles in the past had been held responsible for the "wait and see" attitude of the public. The *Comision Delegada* will list and define all economic branches in which official authorisation will no longer be required for foreign participation of more than 50 per cent. (The exceptions mentioned in the decree of July 27, 1959—enterprises directly related to national defence, public information and public utilities—remain in force.)

New conditions will facilitate foreign participation in Spanish official tenders and new legislation will favour the establishment of temporary joint ventures by foreign and national firms.

To check abuses, the decree stipulates that all restrictive trade practices, and monopolies which try to dominate markets, will be dealt with under new legislation. At the same time state-owned industries will henceforth have to limit themselves to activities not sufficiently covered by private enterprise or to sectors where monopolies or restrictive practices have to be fought.

On all these matters the Government pledges its word to prepare pertinent legislation within six months from now. The new team that is conducting Spain's New Deal has kept up, and even accelerated, the initial push with which it started, back in 1957.

INDUSTRIAL LOCATION

Slough or Belgium?

Slough Estates has decided to establish a trading estate in Belgium because, it says, the Board of Trade refuses to allow a new factory estate to be built in the south of England. The site it has chosen is 14 miles from Antwerp, at Sint-Niklaas, and it plans to spend up to £3 million on developing it. The Bank of England has given permission for the company to transfer £200,000 to Belgium to start the operation; £750,000 will be raised on the continent, though further funds may be raised either in Britain or on the continent.

The Board of Trade's pressure to force new industrial development into the areas of high unemployment may once or twice have already sent firms overseas; but in this case Slough Estates seems more likely to be catering for foreign companies than British expatriates. And the arguments for allowing free development in the south, staffed by migrants from the depressed and depressing north, have to answer the question of whether we want more Sloughs in southern England.

PROFITS AND DIVIDENDS

In Reverse

Evidence in the summer that industrial profits had begun to turn the corner has not been confirmed by company results published in October and November. Following a fall of 3¼ per cent in October, profits of 217 companies publishing their accounts in November fell by 5¼ per cent. Last month's analysis included leading companies in the motor and component industries. Indeed, Joseph Lucas was the only really bright spot in the motor group where in all profits fell by 20 per cent. The biggest company in last month's analysis was Tube Investments, whose profits fell by £5 million. BMC's profits fell by the same amount and together these two giants accounted for £10 million of the total fall of £11 million in profits. These were not the only companies to have a difficult year: Fisons contributed to the fall of 5⅝ per cent in chemical profits and Combined English Mills to the slump of 54 per cent in cotton profits. Profits of the widely spread engineering group were also lower and the electrical manufacturing group reflected the slight fall in EMI's profits. A few groups reported increases in profits of between 15 and 20 per cent—notably breweries, building and food. Property companies, with Metropolitan Estate to the fore, achieved an increase of one-third in profits.

PROFITS AND DIVIDENDS
(£ million)

Trading profit	213·1	202·1
Gross profit	153·7	135·9
Net equity earnings	68·3	58·3
Net ordinary dividends	34·6	35·3
Times covered	2·0	1·7
Net equity assets	880·2	963·3
	%	%
Gross profit/net assets	17·5	14·1
Net earnings/net assets	7·8	6·1

Several companies which earned lower profits in 1961-62 forecast better things to come in the current year and this helps to explain why, in the face of a fall of 14¼ per cent in net equity earnings, dividends in general have been left unchanged. As a result the average dividend cover for the November companies came down to 1.7 times, just as it did in the preceding months. It will need a smart recovery in profits and an ampler air of confidence in the boardrooms to start dividends moving up again.

FRANCE

Price Rise Continues

Paris

"Economic expansion with monetary stability" was the slogan of the Gaullists in their successful election campaign; yet prices in France continue to rise. In October the cost of living index increased by 0.4 per cent, and there is every indication—particularly in the weekly food price statistics—that there was a further increase in November.

At present, the cost of living in France is 5.4 per cent higher than last year, bringing the increase which has taken place since the devaluation of December, 1958 to 17.8 per cent. Foodstuffs (particularly the sharp increases in the prices of fruit, vegetables, meat and wine) account for about half of this persistent rise. But, contrary to official expectations other prices too have continued to rise over the past year—including rents, clothing, shoes, transport, and entertainment.

Even industrial products, which have long remained steady, are now affected: the recent rise in steel prices (6 per cent on rolled steel) has brought about corresponding increases in cars and household appliances. This is all the more disturbing as further increases have been announced—in rents, sugar, newspapers, and tariffs on railways and the Paris métro.

So the vaunted stability of prices is far from a fact; and a new factor threatens to make matters worse. Up to now, wholesale prices have on balance remained steady, the increases (in steel and building materials) being compensated by decreases (especially in imported raw materials). But the continuous increase in wages is becoming faster: after a rise of 2.5 per cent during the third quarter, it is estimated that over the year as a whole the rise will amount to more than 10 per cent for wage earners, and about 12 per cent for managerial grades.

This trend has already for many enterprises whittled down the profits available for self-financing, slowing down private investment below the rate envisaged in the Fourth Plan. If this squeeze continues, it is in danger of producing two more serious effects—an increase in the price of many industrial products; and the creation of bottlenecks in production as a result of equipment being insufficient. The outgoing government was already showing signs of anxiety over prices; the battle against cost inflation will demand the first attentions of the new cabinet.

GREEK BONDS

Tactical Breakdown?

Negotiations between the British Council of Foreign Bondholders and the Greek government have collapsed; and the price of Greek bonds on the London market fell sharply this week. The 6 per cent Public Works Loan, 1931, dropped 4 points to £41½. Settlement of Greece's £55 million of prewar sterling debt now seems as far away as ever. But is it? The terms of the agreement with the American bondholders in October so enraged many British holders that the Greeks may have decided that their wisest course was to offer the British unacceptable terms at first in the hope that terms on the same basis as the American settlement if offered would be gladly accepted. This sort of conditioning process has been fairly common in the past. It is unthinkable that the Greeks will be able to get away with anything less than the equivalent of the American terms, and at the same time, having reached a settlement with the Americans, they will surely not jettison the chance of financial respectability and loans from the World Bank by refusing to concede the same terms to the British.

The British Council of Foreign Bondholders found the Greek offer unacceptable on two counts. First, the Greeks offered "American" terms only on the later issues in an apparent attempt to differentiate between original holders and "speculators" who had bought in the market. The council argues that all non-Greek holders of the debt must be treated alike. Secondly, the Greeks are not prepared to recognise the currency option on the 6 per cent Public Works loan, 1931, allowing the payment of principal and interest in Dutch florins, Swedish kronor, or Swiss francs. The Swiss franc rate was 25.2 at the time and compares with the present rate of 12.10 to the pound. The council is not prepared to negotiate unless the Greeks

offer all British holders the same terms as were offered to the Americans, and also recognise the currency clause. If the Greeks conceded these two points a settlement would probably quickly follow. The extra cost to the Greeks would not be great, and the eventual benefits would be well worth the price.

MOTORS

Rumours of New Cars

DETAILS of a new car can hardly remain secret in these garrulous days: the latest victim is Rootes. Its new small car, it appears, will be called the Imp and have a rear-mounted aluminium engine of 875 cc that can give a maximum speed of 90 mph —but will be detuned to provide a more modest performance for production cars. Coventry Climax advised Rootes on the design of the engine in its earlier stages; a light engine for its power is desirable in a rear engined car. The springing will be independent on all wheels; as Rootes is making a big effort to avoid the handling characteristics of most rear-engined cars, which are generally more prone to tail slide than others, it may well be using some more elaborate type of suspension than the simple swinging half-axles commonly used.

If the Imp can really be sold at its reported price of under £500, it should be a strong competitor for existing small cars. But the experience of the British Motor Corporation suggests that it is difficult to make a small car profitably at this sort of price—especially when it contains many special parts, as the Imp seems likely to do. And its aluminium engine must add something to the cost. The Imp will be made at a maximum rate of perhaps 150,000 a year; so if Rootes makes its price really competitive with the larger-volume Minis, it may find that it is less profitable.

As the opposite end of the scale, rumours are increasing about some link between Rolls-Royce and BMC. The latter is known to have made the prototype of a smaller car for Rolls-Royce, which might use the BMC 3-litre engine and would, presumably, be intended to sell for less than £2,000. But the companies have said no more than this about their discussions, which are still, officially, limited to exploring the possibility of technical collaboration. On the aero-engine as well as the car side, Rolls-Royce may be facing some future difficulties: the desire to profit from the asset of its name must be getting stronger; and BMC remains weaker than Ford in the profitable big-car market. A joint effort might well therefore appeal to both.

ATOMIC ENERGY

Twentieth Birthday

IT is twenty years since Enrico Fermi started up his—and the world's—first atomic reactor in great secrecy at Chicago, the "Italian navigator" who in the words of the immortal code message "reached the New World" and found the natives "very friendly." Today, the world contains an estimated 381 reactors operating, not counting several that have already reached the end of their safe life and been shut down. Fermi's memorial in the United States, where he died, is the 286 reactors now either working or under construction. Nothing better illustrates the difference between the British and American approach to atomic energy than the contrast between this figure and the 39 reactors built or under construction in Britain, which has a much larger nuclear power investment programme than the United States. The United States has a greater variety of reactors of different design, a greater number of research and training and teaching reactors, some of them very small, than any other country. Britain is only now beginning to make grants to the universities for their own small teaching reactors, but has a more intensive programme of atomic power development than the United States either needs or could justify.

The Soviet Union seems to work on British rather than American lines; it has an estimated 39 reactors, some of which are known to be very large. The International Atomic Energy Agency has just revised its directory of nuclear power stations but its information on the three Soviet nuclear plants included in the new directory date from March, 1959, as against early to mid-1961 for all the other systems described. France ranks as the fourth nuclear power with 25 reactors, but the world-wide dispersal of small to tiny research reactors, most of them American-built, is demonstrated by the presence of nearly a score in West Germany, and 14 in Italy (including two power stations) against only 10 in Canada which in terms of research, design ability and concrete achievement ranks fifth in the atomic table after France.

FURNITURE

Cinderella of the Home

THE short-lived improvement in demand for domestic furniture of last winter and spring gave way to months in which manufacturers' output and orders have been persistently lower than last year. At the end of October order-books added up to £10.5 million, £2 million less than a year earlier, while the index of deliveries in that month, allowing for price changes, stood at 127 (1958 = 100) compared with 137 in October 1961.

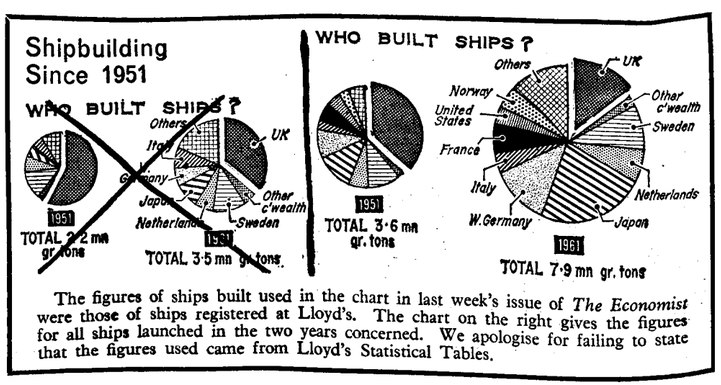
Seeking explanations, the industry slips easily into grievance—its complaint this year is the increase in its purchase tax from 5 to 10 per cent (which simply brings it nearer to the level of other consumer durables). But the truth is as it always has been: people are often quite happy with old or secondhand furniture when they insist on new cars or washing machines, and when spending is limited furniture will most readily be made to last. Small additions, such as easy chairs, sell most easily, which helps to explain why in recent company results those like Parker Knoll and Jentique have done better than bigger firms with a wider coverage.

Bigness is no advantage in this industry: under-used capacity produced poor results from Harris Lebus and especially from Gomme (G-Plan) which for the second year running made a net loss before tax—in the year ending 27th July this was £153,511, slightly smaller than the year before. But even a smaller group of more specialist interests, Avalon (formerly Yatton) Furniture which did comparatively well in the year to the end of April, is not optimistic about current prospects.

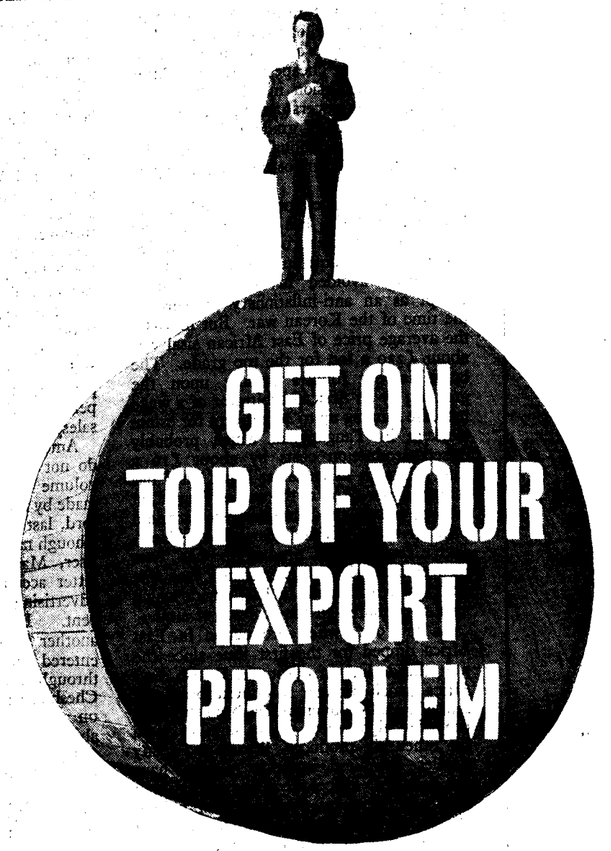
SISAL

Carrying the Burden

GRAIN crops this year have outstripped expectations while production of sisal used in baling and binding has continued to decline. As a result, the price of sisal has shot up, as it did in different circumstances a year earlier. But starting from a higher level, East African sisal at £118 a ton for the top grade has reached a level which has provided the government of newly-independent Tanganyika with an opportunity for raising additional revenue



The figures of ships built used in the chart in last week's issue of *The Economist* were those of ships registered at Lloyd's. The chart on the right gives the figures for all ships launched in the two years concerned. We apologise for failing to state that the figures used came from Lloyd's Statistical Tables.



E.C.G.D. COVER FREES YOU FROM FEAR OF IMPORT CUTS

Is your export business wide open to sudden import restrictions imposed by your buyer's government? Not if you have ECGD behind you. Insurance makes good your losses on selling-off frustrated exports for whatever they will fetch. And of course you are covered against such risks as default on goods accepted, war, diversion of voyage, sterling shortages, buyer's insolvency—all the major risks. Are you out to expand oversees sales? ECGD is at hand to help—to back you (more cheaply than ever before) so that you can press ahead with single-minded confidence. Insured business is sound business. ECGD makes helpful bank managers even more helpful. Get in touch with ECGD straight away.

The Economist Diary

A happy mixture of all the ingredients necessary to ensure the smooth running of a busy man's day.

A week's appointments at an opening; a book that lies open flat on the desk

*

A diary lay-out specially designed for use at Board level

*

72 pages of facts and figures covering the world; 32 pages of maps

*

All information easily found by means of handy thumb-indexes

*

A memorandum book, an appointments register, and a complete reference book

*

Bound throughout in red leather; title blocked in gold. Size 10" x 8"

45/- Price for U.K. only, including postage and purchase tax

Price overseas by surface mail. Air rates on request **41/-**

An American Edition, price $12.50, is available from Brooks Brothers, 346 Madison Avenue, New York 17

which it could not resist. A 5 per cent export tax has been loaded on Tanganyikan sisal valued at £60 a ton or more, which covers all but the cheapest varieties. After a period of confusion in which buyers at first resisted producers' attempts to pass on the tax, the price of grade 1 fibre rose to £120-£122 a ton, though not all the rise resulted from the imposition of the export tax.

Production of export commodities in British East Africa has thrived in a world in which so many producers have levied export taxes because in general such taxes have been avoided in these territories, except as an anti-inflationary measure at the time of the Korean war. But in 1951, the average price of East African sisal was about £230 a ton for the top grade. The latest impost follows rapidly upon the granting by an African arbitrator of a wage increase ranging up to 40 per cent for estate workers in Tanganyika, which probably raised production costs by about £10 a ton. Though in its latest spurt, sisal has jumped from £100 at the end of August, at current prices, producers on estates retain little of the profit for themselves. However, Tanganyikan production has now recovered to a level higher than a year ago, after last year's floods in East Africa which have contributed to the scarcity of sisal.

As in 1961, when production in East Africa dipped for the first time since the war, the decline in output in British East Africa, which last year accounted for 46 per cent of world production, has been the main prop for high prices. But supplies from the other big producer, Brazil, and many smaller supplies, including Cuba, have also been cut. Prices are relatively high, but sisal producers are confident that neither alternative fibres nor alternative means of ensuring that all the harvest (including the valuable straw) is safely gathered in, will restrict future demand for sisal.

CAKE-MIX

Recipe Fails

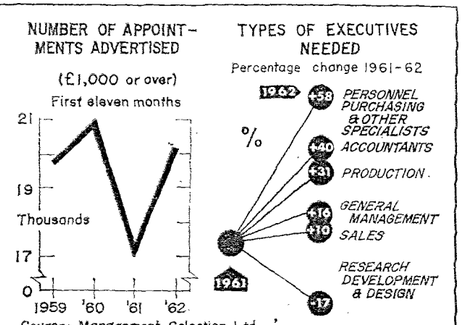
THE patent failure of American manufacturers to beat life into the British cake-mix market has not prevented another of them, Pillsbury, making a bid for an established British firm—Green's, who have been making sponge-mix for 50 years. The post-war peak of nearly £6 million for retail sales of these mixes, reached in 1955, was largely the result of shortages of other foods; demand subsequently fell off steadily in spite of the launching of more elaborate and varied American-style products. These are also more expensive, which helps to account for the slight recovery in money turnover which has taken place in the last two years bringing sales in 1961 back to not far below the 1955 level. Little success can be claimed for most of the disproportionately heavy advertising in the cake and pudding mix field, which has been increasing at the rate of about 10 per cent a year and in 1961 totalled £975,000, or about 30 per cent of manufacturers' sales (nearly 20 per cent of what customers paid in retail sales).

Among the leading brands market shares do not always show much response to the volume of advertising. Viota cake-mix, made by the British firm Stoddart and Hansford, last year sold about as many packets (though more cheaply) as the heaviest advertiser, Mary Baker (Nabisco Foods)—the latter accounted for 28 per cent of total advertising compared with Viota's 17 per cent. Betty Crocker (General Mills), another favourite of American housewives, entered the British market early last year through the purchase of Latham Foods, Cheshire; it spent nearly as much as Viota on advertising but managed to sell only about a quarter of the quantity.

Betty Crocker's failure to do well so far in Britain this year is as significant as the noticeable absence of its only superior in the American market—Duncan Hines, the Proctor and Gamble subsidiary. How long will General Mills' faith in the British—or other European?—markets continue to burn in these disencouraging conditions? Another question no maker can answer is just why the British and American housewives should behave so differently. Possibly the inconvenience attached to this so-called "convenience" food is the main reason — cake-mixes need mixing, and American women have more mechanical aids to the wrist.

Executives in Demand

Advertisements in six major newspapers for executive posts carrying salaries of £1,000 or more increased by 18 per cent in the first eleven months of this year compared with the same period of 1961. The main part of the increase took place in the latter part of the year—for example 250 accountants were advertised for in November.



Source: Management Selection Ltd.

USED CAR PRICES

REDUCING the price of new cars by 12½ per cent seems to have brought the prices of two-year-old cars down by around 10 per cent—though there are variations from model to model, depending on their popularity and whether changes were made for 1963. Newer cars are affected slightly more—especially those that are only a few months old—but the effect still tails off as cars get older. A five-year-old or older car seems to be little affected by the price of a new car, for its potential buyer cannot afford one, and the only effect from the new car market comes indirectly through the fall in the price of newer used cars. Despite this fall in real prices, many dealers are refusing to mark down their stocks of used cars in the over-optimistic hope that the new year will bring a recovery to the old price levels.

INSURANCE

A Dutch Merger

Amsterdam

HOLLAND'S two biggest life assurance companies have recently merged; speculation on further mergers has led to an increased interest in insurance shares on the Amsterdam bourse. The Nationale van 1868 and De Nederlanden van 1845 together account for 24 per cent of the life business in Holland and the new company, Nationale-Nederlanden NV, will be the second largest in the common market—surpassed only by Germany's Allianz Versicherung. De Nederlanden brings to the merger a recently acquired interest in the British Orion Insurance Company. This will give the group its first foothold in the London market.

Life assurance in Holland is in the hands of about sixty companies, but eight major companies account for about 60 per cent of total business, 95 per cent of which is contracted in Holland, and the remainder in Belgium, France, Canada and Australia. Competition from foreign companies is limited but is increasing; the seven foreign companies operating in Holland, of which Gresham Life and Union Life are British, accounted for no more than 2 per cent of new life contracts in 1961. Life business as a whole is buoyant; between 1958 and 1961 sums assured rose by 34 per cent to Fl.43 billion (£4.3 billion), while national income rose by 24 per cent.

There are 179 general insurance companies in Holland, but a good many of these are subsidiaries of the larger life companies. Foreign competition in this sector is fierce; British, American and Swiss companies have strong positions in the market. Expenses are rising, as are loss ratios, but most companies have good reserves and are not over-worried about the present lean period. The Brandaris debacle in 1961 caused by over-trading and undervaluation of risks did not shock the companies. The Dutch authorities, however, took a different view and there is now a bill before Parliament, much to the annoyance of the companies, providing for a certain degree of governmental supervision for non-life offices —supervision which has applied to the life offices since 1922.

DUMPING

Quicker Action

ALTHOUGH the Board of Trade has the power to impose anti-dumping duties summarily, it has steadfastly refused to wield it. Last week it bowed in the direction of flexibility and imposed a temporary shilling a pound duty on imports of lithium carbonate from Canada until its present investigations are completed. The chemical industry, which has long badgered the board to impose anti-dumping duties quickly and freely, may regard this as evidence of a change of heart. It is likely that the board would rather this duty be seen as the first case where summary action was appropriate.

Applications for anti-dumping duties on lithium carbonate and hydroxide from the USA and West Germany, and on the carbonate alone from Canada were announced in September and October. They were made by Associated Lead, the only UK producer, and were aimed at the surplus material whose imports had forced the price of the carbonate down by nearly 40 per cent in the last two years. The surplus was created by cancellation of contracts in the USA by the Atomic Energy Commission (which uses lithium to make hydrogen bombs), leaving large stocks and excess productive capacity. Because of the importance to American producers of the AEC contracts, which British producers regard as a subsidy, the Board of Trade was also asked two weeks ago to impose a countervailing duty (specifically aimed at subsidised imports) on imports from the USA.

No explanation for quicker action this time has emerged from the Board of Trade, but it is likely to have had one of two causes. Either exporters were forestalling—anticipating a duty by stepping up, and stocking, exports—or just stalling, and holding up investigations by not co-operating. The Board has caused the chemical industry much unhappiness in the past by refusing to take summary action when forestalling was alleged. It is possible to sympathise both with the Board's reluctance to act before ready and the frustration felt by industries as dumped imports increased even while home producers tried to have them stopped. There may be a case for amending the 1958 Act to make anti-dumping duties effective from the date on which the application was first announced; the action would be retrospective (and perhaps administratively difficult), but importers would have had fair warning.

TYRES

Rubber Prosperity

Milan

ITALY'S rubber industry is booming with the tyres equipping Italian-made motor vehicles. Accounting for 60 per cent of the output of rubber products, the value of the Italian tyre market reached approximately £65 million in 1961, up by 15 per cent from 1960, and is expected to hit a record figure of over £67 million in 1962. The surge in demand, caused mainly by Italy's rising car output, has forced Italian tyre makers to expand their productive capacity by 70-80 per cent over the three-year period.

The Italian market is dominated by three Italian tyre companies. Pirelli of Milan accounts for about half of domestic sales. CEAT and Michelin Italiana, both of Turin, share most of the rest, with tyres from about half a dozen foreign firms with sales organisations in Italy a long way behind.

No foreign tyre firm manufactures on its own account in Italy, although General Tyre has a technical agreement with CEAT and Goodyear has a manufacturing arrangement with the same firm. A third American firm, Seiberling Tyre, last year signed a licensing agreement with Dardanio Manuli S.p.A. of Milan to supply the Italian firm with know-how and technical assistance for the purpose of setting up a new tyre plant in Southern Italy.

Foreign companies selling in Italy concentrate on the replacement market and

special items such as heavy duty tyres not manufactured locally. Pirelli, CEAT and Michelin supply practically all of the original tyre equipment as Italian automakers give preference to national companies in which they often participate financially.

Italy's tyre makers are now preparing to meet both increasing demand and competition. Unofficial estimates place the industry's investments at close to £15 million this year. New plants include those currently under construction by CEAT just outside of Turin, by Pirelli at Villafranca, Sicily, and by Michelin Italiana at Cuneo in northern Italy. Future investments are expected to level off at £9 million a year to keep in step with motor vehicle production. The main hopes of foreign tyre manufacturers depend on imports of foreign cars, and the chance that in replacing tyres on them Italian motorists may be prepared to fit the original brand again.

TIN

Enforced Follow On

As the *de facto* boss of tin now resides in Washington, the latest meeting of the International Tin Council in Bangkok is seen as merely a preliminary to discussions with American stockpile authorities. The ITC dispatched its routine business in Bangkok, presumably worked out proposals to put to the Americans, which the chief Malayan delegate has described as "really hot," and picked its men for Washington. A new round of stockpile talks will begin on December 13th to clear the ground for a new series of disposals following the final sale under the current programme on December 19th. Producers fear that the United States will suggest a higher maximum rate for releases. That much American officials are almost certain to do, if only to establish a first bargaining position. Similar tactics appear to have been used quite coldly in the past. The reported divergence between American estimates and official ITC statistics on the size of the shortfall in tin production is presumably also part and parcel of the stockpile preliminaries.

Apart from an extraordinary premium on spot supplies of tin in London, the market has sobered down in recent weeks after two year's cavorting. But having had the opportunity to let off steam without inhibitions, the market appears now to have settled at £865-£870 a ton merely because it does not know in which direction to turn next. The future of tin has seldom been more obscure. As producers and consumers are aware that the rate of stockpile releases will dictate the price range of tin for many years to come, contributions to discussion of what ought to be a fair price for tin have been couched in theoretical and extreme terms. Producers threaten that through their niggardliness consumers will eventually deprive themselves of supplies of tin, while some consumers would claim that because of producers' greed for high prices, tin might be displaced by substitutes.

The ITC is keeping its counsel—and estimates—for American ears, so that no further guide to the extent of the expected shortfall in production below consumption is available. The Malayan Finance Minister is cautiously budgeting for a somewhat smaller output in 1963 and foresees an apparently unavoidable reduction in Malayan production in later years. But the further discovery of likely tin-bearing land is reported in Malaya, so that the long threatened run-down in tin output could be staved off yet again.

RESTRICTIVE PRACTICES COURT

Heavier Burden?

THE Court of Appeal has upheld (with one dissension) the right of the Restrictive Practices Court to consider whether an oral agreement on newspaper prices and terms of sale was contrary to the public interest, even though the agreement had been terminated before it had come before the Court. Whether or not this particular judgment is upheld—the appellants have leave to go to the House of Lords—a very important interpretation of the Restrictive Trade Practices Act has been raised.

If, as Lord Denning said in his summing up, the Registrar has not only a right but a positive duty to bring before the Court all registered agreements even if these have expired or been abandoned since registration, a mountain of work materialises. About 1,400 registered agreements have so far died, been voluntarily killed, or rendered innocuous by the removal of relevant sections. This figure compares with 20 contested and over 60 undefended cases so far dealt with by the Court. The point made by Lord Denning was that the power of the Court not only to condemn an agreement but also to issue an injunction restraining the parties concerned from making a similar one in the future meant that a useful purpose was served in passing judgment on dead agreements. Especially where these have died merely from an explicit time limit this could mean that the already lengthy list of cases liable to be defended to the end would swell to fantastic proportions.

SHORTER NOTES

Merchants in the export trade, according to a survey carried out by the Association of British Chambers of Commerce, are more optimistic than they were four months ago. Of those reporting a change in the rate of export orders received, more say these have gone up than say they have gone down—though export deliveries seem to be rising even more strongly, and the outstanding export order books are being reduced. The length of time they can quote for delivery, therefore, is tending to come down. Merchants also note that higher prices for some British exports are being accepted abroad, and they expect orders to go on rising. It should be noted, however, that much the same picture is reported by import merchants; the rate of ordering abroad is going up, import arrivals have increased, higher prices are being paid for foreign goods, and the outstanding import order book is going on rising.

★

Television stations earned in total less revenue in October than they did in October last year, according to calculations by Media Records Ltd., though three less stations were in operation last year. Total revenues were £8,689,000 compared with £8,859,000 in October 1961. With the addition of 11 per cent tax, total expenditure on television advertising in October was £9,643,000 compared with £9,833,000 a year earlier.

★

Canada has repaid a further $25 million of the $100 million borrowed from the Bank of England in June. This leaves $25 million outstanding. The repayment does not affect Britain's reserves since the $100 million was never deducted in the first place.

★

Export orders for machine tools recovered in September. though they were only one per cent higher than a year before compared with an increase of nine per cent for the year as a whole. The slump in home demand continued to accelerate, however, with September orders 55 per cent below those of a year before. Total orders for the month were 40 per cent below those of a year before.

★

Courage Barclay and Simonds is making a £2 million bid for Harman's Uxbridge Brewery. The offer of £10 for each £1 ordinary share has already been accepted in respect of 59 per cent of the equity and it is to be extended to minority holders on the same terms. The shares do not have a quotation.

COMPANY MEETINGS

THOS. W. WARD LIMITED

MR H. W. SECKER ON A DIFFICULT YEAR

The fifty-ninth Annual General Meeting of Thos. W. Ward Limited was held on November 30, 1962, at Sheffield. **Mr H. W. Secker, OBE** (Chairman), presided and, in the course of his report, already circulated, said:

Changes involving both personnel and certain sections of the business have taken place since the last meeting.

Mr Harold Vernon died during the year. A director since 1938, he had been with the Company all his working life, had charge of our Machinery Division, and was on the Boards of a number of subsidiary companies. He was an enthusiastic worker and will be missed by his many friends.

Mr Arnold Carr has been appointed Joint Managing Director. He has been a Director since 1941, during which time he was for nine years in control of our London Office and the South. He was appointed an Assistant Managing Director in 1954 and Deputy Chairman in 1958. He is, therefore, a man of wide experience, well qualified to join me as Managing Director.

Mr F. W. Robinson, appointed a Director in 1950 and succeeding Mr Arnold Carr in the control of the London Office, has returned to Sheffield as Assistant Managing Director.

Mr G. S. Wood, a Director of the Company since 1948, has been appointed Director in charge of the London Office and operations in the southern part of the country.

GROUP RESULTS

Since the end of 1957 we have had a rising trend of Group profits, increasing from £2,599,578 in 1958 to the record profit of £2,949,198 in 1961, and it is, therefore, disappointing that profit for 1962 at £2,466,832 shows a decrease of £482,366 from the record profit of the previous year.

Although we have a certain diversity in the Group, at least 48 per cent of our interests are directly bound up with the fortunes of the steel industry, which is working well below capacity, and a further 12 per cent can be affected by the policies pursued by the British Transport Commission and National Coal Board. Further factors have been that output levels in Scotland and the North East coast, particularly associated with shipbuilding and heavy engineering industries, remain considerably below those of 1961, and that the de-stocking movement in steel is proving more serious than expected.

Full credit is due to my colleagues on the Boards of the Parent Companies, and the Management, Staff and workpeople for results, which, having regard to circumstances, are not unsatisfactory.

The percentage of profits before tax on the Group turnover of £47 millions has fallen from 5.67 per cent to 5.23 per cent, and profit before tax on the capital employed has fallen from 18.13 per cent to 14.41 per cent.

PARENT COMPANY

The reduction in demand for scrap, and in stocks at the steel works, has severely restricted the activities of our scrap and shipbreaking departments. From November 1, 1961, we have been able to sell scrap abroad but there is no sign of an increase in demand for home consumption.

Unless we can induce the steel industry to value shipbreaking scrap as other countries, at a higher price than is paid for ordinary production and collected scrap, British shipbreakers are in danger of being forced out of business.

Our Machinery Division has experienced a satisfactory year and turnover, but profits show a slight fall due to intensity of competition. The Factory Planning and Installation Department has undertaken many contracts of a very interesting nature, among them being one for the new B.M.C. factory at Bathgate; 750 machine tools have already been removed and installed, and the programme involves another 2,500.

Railway Sidings, Wagons, Dismantling and Foundry Supplies Divisions have maintained a satisfactory turnover, but Contractors Plant showed a fall in turnover, and a decline in profits.

CEMENT AND QUARRIES

Ketton Portland Cement Co. Ltd. showed an increase in profit and its new unit, brought into operation at the end of May, should add 150,000 tons per annum to the capacity.

Ribblesdale Cement Ltd., and its subsidiary, the Horrocksford Lime Co. Ltd., jointly owned with the Tunnel Portland Cement Co. Ltd., have continued to work at full pressure.

Shap Granite Co. Ltd., Eldon Hill Quarries Ltd., and De Lank Quarries, have had a reasonably good year, and the Company is pursuing a policy of increased mechanisation to offset the continued rise in production costs.

ENGINEERING

A difficult year has been experienced by Thomas Smith & Sons (Rodley) Ltd. where inflow of orders deteriorated very considerably during the second half of the year particularly on the home market. The export market is proving difficult, but during the year, a contract for 12 cargo-handling cranes for the Lyttelton Harbour in New Zealand, one of the Company's largest individual contracts, was obtained.

John Smith (Keighley) Ltd. achieved an increase in turnover, and maintained reasonable profit margins by close attention to specifications and designs.

The machine tool businesses of Woodhouse & Mitchell and Fredk. Town & Sons Ltd. were merged under the name of Town Woodhouse Ltd. to obtain benefits from the integration of design, selling and production methods.

The results of Widnes Foundry & Engineering Co. Ltd. were satisfactory, and though conditions of extreme competition have developed, a fair share of the business is being obtained.

Darlington Railway Plant & Foundry Co. Ltd. and Railway & General Engineering Co. Ltd. have suffered from drastic restrictions on expenditure by nationalised industries and steelworks in both the foundry and engineering sections. There is a substantial falling away in the number of enquiries for exports, and fierce competition for the small amount of business offering.

George Cooper (Sheffield) Ltd. has experienced a relatively satisfactory trading year, although the profit shows a small decline.

MANUFACTURE OF IRON AND STEEL AND NON-FERROUS METALS

Against severe competition, Wolverhampton & Birchley Rolling Mills Ltd. have kept all mills fully employed and good progress is being made with the replacement of the 12 inch mill, expected to be in commission about the end of June, 1963.

The depressed state of trade in Scotland and the North East has had adverse effects on John Williams (Wishaw) Ltd. There has been some improvement since June 30th; if this continues, we should reap benefits from the new plant installed two years ago.

The Midland & Low Moor Iron & Steel Co. Ltd., and its subsidiary, Steel (Sheffield) Ltd. suffered a reduction in turnover due to the recession and increased costs of production, but the profit is not unsatisfactory.

Alexander Metal Co. Ltd. achieved its highest turnover but generally speaking, business has been unremunerative. At the present time the order book is substantial, and the Company should benefit from a programme of modernisation and development.

MISCELLANEOUS

Results of E. H. Pickford & Co. Ltd. and Deighton Motor Co. Ltd., affected by the strike at the Rootes Works last autumn, are in the circumstances satisfactory.

Conditions have been extremely adverse for our insulating interests, Dick's Asbestos & Insulating Co. Ltd., and Anchor Insulating Co. Ltd., due to limited work in power stations and shipbuilding industries.

Profits of Watson (Metallurgists) Ltd. are extremely satisfactory, and recent development plans will enable the Company to reap benefits when conditions in the steel industry improve.

Ward, Longbottom Ltd. has achieved a useful increase in profit. George Hassall Ltd. of Stoke show consistently satisfactory results, and Frank Parker & Co. Ltd. of London are consolidating their position in the supply of contractors' tools.

OVERSEAS TRADE

The French Company has had a satisfactory year, and, together with the Belgian Company, can prove of value in the event of our entry into the Common Market. The Australian Company is now operating in Melbourne as well as Sydney. Difficulties experienced by the Australian economy have not helped, and in the circumstances the profit is not unsatisfactory. The Swedish Company continues to make good progress, mainly in selling excavators in Sweden for Thos. Smith & Sons (Rodley) Ltd.

Many difficulties have been encountered in the Parent Company's export business, but tours have been made of the Far East and Australia and New Zealand by Directors and executives, from which valuable information has been obtained.

APPROPRIATION OF PROFIT

The available profit for the Group after taxation is £1,400,984, from which £216,791 is to be deducted being the profit attributable to Minority Shareholdings, leaving the profit relating to the Parent Company at £1,184,193.

The incidence of profits tax and income tax for 1962 is 45½ per cent compared with 46 per cent in 1961 but the profit for 1962, however, has had to bear the full impact of the increase in profits tax from 12½ per cent to 15 per cent made in the 1961 Finance Act.

Out of the profit relating to the Parent Company of £1,184,193 there has been retained £393,717 in the accounts of the subsidiary companies, leaving a balance of profit of £790,476, after deduction of dividend on Preference Shares and interim dividend on Ordinary Shares, is left a balance of £643,008. Your Board recommends a transfer to General Reserve of £350,000 and the payment of a final dividend of 10 per cent less tax on the ordinary share capital making a total of 13¾ per cent less tax for the year. A balance of £792,978 to be carried forward to next year.

BALANCE SHEET

Capital and reserves in the consolidated Balance Sheet total £14,762,063, compared with £13,982,347. Capital additions during the year are approximately £2,200,000.

The reduction in debtors and creditors reflects the contraction in trade and for this reason, bank balances have increased approximately £285,000. The cover provided by Current Assets over Current Liabilities approximates 2.2 times, which again may be regarded as very satisfactory.

PROSPECTS

The outlook for the coming year is very uncertain. At least 60 per cent of the Group's business is linked with steel and heavy engineering industries, in which are few signs of recovery in the immediate future. In other activities there are bright spots, particularly in cement, but the relatively large minority shareholdings in the subsidiary and associated Company mean that the profits these companies may achieve do little to offset decrease in profits experienced in the depressed industries.

Unless there is some sudden improvement, which I cannot foresee at the present time, it may be very difficult to improve on the profit shown for the year to June 30, 1962.

The report and accounts were adopted and the dividends recommended declared. The retiring directors were re-elected and the auditors re-appointed.

CHARTERED INSTITUTE OF SECRETARIES

YEAR OF ACTION AND INTEREST

Sir Denys Lowson, Bt.
President, Chartered Institute of Secretaries, 1962

The seventy-first Annual General Meeting of the Chartered Institute of Secretaries was held on Tuesday at the Chartered Insurance Institute, 20, Aldermanbury, London, E.C.2.

Sir Denys Lowson, Bt., President, in moving the Report of the Council for 1961-62, said:—

This has been a most active and interesting year for the Institute. I should like to refer to some of those activities of the Institute undertaken in discharge of the responsibility laid upon us by our charter "of submitting advice on matters of law and practice relating to all things connected with the profession of secretary." During last summer the Report of the Jenkins Committee on Company Law Amendment was published and it was interesting and pleasing to see how, on many aspects of the law, the views of the Institute were in close correspondence with those of other leading professional bodies and of the Jenkins Committee itself. Further work is now going on on this Report so that the Institute will be ready, when proposals for legislation are introduced by the Government, to submit further considered views. We have continued to work in close co-operation with the Stock Exchange, London, and other bodies on transfer and dividend procedure. We have had several meetings with representatives of the Committee of London Clearing Bankers on problems resulting from the introduction of electronic machinery—in particular the use of sorting code numbers and personal account numbers. Perhaps one of the outstanding events to which reference may properly be made under this head is the conference held in Guildhall in October on decimalisation of the currency, organised by the London Branch in conjunction with the Council of the Institute.

I look forward to further events of this kind. For example, the many legal and practical problems which may well confront company secretaries and staffs if and when Britain enters the European Economic Community perhaps provide suitable material for another conference in London next year. Mention must be made of the extremely successful annual conference which was held in Leamington Spa in May and over which I had the privilege of presiding. We then had the pleasure of studying three important papers, two of which had been prepared by colleagues of mine on the Council of the Institute, Sir David Muir on Australia and Lt. Col. F. W. McGuinness on the wine trade. Mr H. G. Lazell, Chairman of the Beecham Group, gave us a most interesting address on sales promotion and advertising.

EXAMINATIONS

This year saw the coming into force in June of the new regulations governing our examinations. Inevitably, the examinations have become more difficult, and it would not really have been surprising if our student population had fallen. In fact, however, it has increased—by more than 1,000 in the last 12 months, reaching a total today of more than 20,000. And at the last diet of examinations in June, 1962, an all-time record number of candidates sat—nearly 6,800 in almost 200 centres in many widely separated parts of the world.

The results of the examinations were about average with a still disappointingly low percentage of success (34 per cent) in the Final. The simple explanation, as before, is that too many candidates attempt the examinations, which in practice require five years' part-time study, with inadequate preparation. We may indeed have to look again at the regulations in this connexion.

MEMBERSHIP

We now have over 28,000 members and licentiates, and the numbers steadily increase by about 700 every year. Such a membership, spread all over the English-speaking world, constitutes a great reservoir of knowledge and practical experience, which may be drawn upon by virtually anyone who requires help or advice. It cannot be too often emphasised that our Head Office in New Bridge Street is a clearing house of advice and information on administrative matters and that we have what may be, for professional bodies, a unique opportunity and responsibility of obtaining advice from some, and providing it for others—from the most developed and sophisticated community to the latest country to achieve independence and to assume responsibility for its own administration.

I am particularly glad to say that the Institute is very strong in Australia, a country with which I have long had very close business and personal connexions. Of our 28,000 members no fewer than 7,000 are in Australia, and they, as we ourselves, are much looking forward to 1964, the year in which the Division will celebrate the 50th birthday of the first Institute organisation on Australian soil. We were therefore particularly happy that the Governor-General of Australia, the Right Honourable Viscount De L'Isle, VC, GCMG, during the year accepted Honorary Membership of the Institute. In New Zealand, Canada and Southern Africa too, where we have Divisions, steady progress is being made.

CONCLUSION

As the latest in a long line of Presidents taking the chair at the Annual Meeting, two others of whom besides myself (in the persons of Lord Broadbridge and Sir Stephen Killik) have also occupied the position of Lord Mayor of London, I should like to assert once more the purpose of the Institute. We believe that bodies such as ours, training the young, providing firm and accepted standards of knowledge and integrity, and binding together, through their common interests and experience, administrators in many lands, make a very substantial contribution to the basic ideals of peace, order and good government.

The Report and Accounts were adopted unanimously, and the proceedings terminated with a vote of thanks to the President for all that he had done during the year.

Lloyds & Scottish Ltd

Group profit more than doubled

SOME CONTRACTION IN VOLUME, BUT LONG-TERM GROWTH PERIOD AHEAD

Statement by the Chairman, Mr. Ian W. Macdonald

In his statement accompanying the Report and Accounts for the year ended 30th September 1962, the Chairman reviewed the integration of the two former operating companies, with clearance of arrears, during the earlier months; and the Group's steady advance since then, with a marked increase in earnings. His statement follows:

The activities of our Group during the past year may conveniently be divided into two phases. In the early months we were preoccupied with management integration, both at home and overseas. In my previous statement to shareholders I intimated that from 1st October 1961 Lloyds & Scottish Finance had become the main operating company, superseding Olds Discount and Scottish Midland Guarantee Trust. The consequential streamlining of activities and procedure involved many decisions and much hard work at all levels of management and our shareholders are grateful to Mr. McQueston and his colleagues for their energy and enthusiasm in tackling and completing this major exercise. The integration phase was made the more burdensome as it unfortunately coincided with the final stages of clearing the considerable volume of arrears which continued to emerge from 1958/60 contracts. In that connection shareholders will be glad to know that the management consider that adequate provision has now been made for all material losses on these older contracts in the United Kingdom. The one reservation which has to be made is in relation to certain overseas subsidiaries, to which I shall refer later, where there is still a measure of doubt about the true value of outstanding contracts.

The second phase might be described as a slow but steady advance all along the line by the combined and integrated forces. The extent of this advance was of course influenced, certainly in this country, by the prevailing hire purchase climate, which could not be described as set fair. Indeed the barometer of the industry as a whole kept falling during the early months of the year and then levelled off. The two main sections of the economy on which we rely for the volume of our business, i.e. vehicles and consumer goods, were both in a somewhat depressed state during much of the year, but there has been a slight upward trend in the last month or two in consumer goods following a relaxation by the authorities in the minimum deposit for certain categories of household durables.

Long-term growth prospects

It is still too early to measure the effect on hire purchase business of the recently announced cut in purchase tax on cars. Any stimulus which increases the demand in the home market should eventually be reflected in an improved volume of hire purchase business. The immediate reduction in second-hand prices may however, postpone the re-entry into the market of hirers with future instalments which now aggregate more than the market value of the vehicle. While there is not as yet any positive evidence of the resumption of a general upward trend, there is still good reason to believe that in this country we are in a long-term growth period for hire purchase and instalment finance in all its different forms.

The factors which influence our United Kingdom profit have fortunately tended to move in our favour. The cost of money has fallen steadily in association with several reductions in bank rate, and the incidence of bad debts has been a receding element. As a result, our earnings, as compared with the previous year, show a marked improvement. Perhaps the most encouraging feature is the extent of that improvement in the last few months of the financial year.

Overseas: disappointment and progress

Turning to our overseas activities, these might be divided geographically for the purpose of description. In Africa our local subsidiary companies have all contributed to the group profits and this success is due not only to the ability of our local managers but also to the enthusiasm of our local directors. On the other hand, in the Caribbean area we have encountered continuing difficulties, stemming from a variety of adverse factors including economic and political disturbances. It is not yet possible to say that these have been entirely surmounted, although we now hope that we have their measure in so far as this lies within the control of our management. It will be seen from the consolidated profit and loss account that certain subsidiary companies in this area incurred considerable losses against which, unfortunately, there is no means of obtaining British tax relief. As I said earlier, we cannot yet be confident that further losses will not emerge in these areas. In the meantime we have made full provision for our share of all ascertained losses.

As shareholders will know we have, in association with Bowmaker, a considerable investment in Western Europe and during the year this has been further extended by the acquisition of a controlling interest in two established and well managed finance companies in Holland. The other subsidiaries of our Swiss holding company (in France, Italy and Switzerland) have made steady progress and we are satisfied with our participation in the growth of instalment finance business in Western Europe.

Molony Committee recommendations

Reverting to home affairs, the past year has been one of comparative tranquillity after the storms and upheavals of recent years. There has been no intervention by government, apart from the slight easing in deposit terms on certain classes of goods. There have been no sudden or unexpected changes in bank rate and the variations in the national volume of business, although mainly adverse, have not been substantial.

One subject which may prove to be of considerable importance to the hire purchase industry is the Molony Committee Report on Consumer Protection. Many of the Committee's proposals relating to hire purchase are of a minor nature and if put into force will improve both law and practice. The most important recommendation is to extend the protective legislation—which requires court consent prior to repossession—to all classes of hire purchase and credit sale agreements covering goods intended for private or consumer use. (Paragraph 557.) The present protection covers goods with a hire purchase price not exceeding £300 at the date of the contract. This proposal would have its main impact on new and better class second-hand private cars, where deterioration in value could be rapid if remaining in the possession of a defaulting hirer for some considerable time pending a court decision. It seems inevitable that in practice finance companies would suffer from such a change in the law, and would in consequence increase their charges to meet this new hazard. It is to be hoped that the Government will carefully weigh and compare the advantages and disadvantages to the consumer of this controversial recommendation.

Finance Houses Association

It is only right that the major national companies should have a special interest in the progress of the Finance Houses Association, of which we are members. As I see it, this Association—and the Industrial Bankers Association, whose members are finance companies somewhat smaller in size—have already done much useful and valuable work in guiding and steering the affairs of a relatively new industry, and I suggest that there is particular need for such associations when a national industry is still more or less in its infancy and yet growing rapidly. Through these associations it is possible to promote more quickly a general acceptance of higher standards of commercial practice and greater measures of protection for members of the public who in the past have not always been able to protect themselves. One occasionally hears accusations levelled against the Finance Houses Association of restrictive practices as regards rates and terms offered to the public, but I am satisfied, from an analysis of their activities, that these could better be summed up as protective practices designed to benefit both themselves and their customers. It is certainly our intention to give solid support in future to this Association.

Credit information

Another topic of special interest to the Finance Houses is the continuing effort to improve the standard of available credit information. As shareholders already know, we are partners with other national Finance Houses in the development of Kemp's Mercantile Offices Ltd. Through this agency—and in association with other credit givers—we are striving to make up for the lost years when the granting of credit surged far ahead of the registering of credit information. It should perhaps be emphasized that the gap in the structure is not so much the non-existence of vital information as the failure to centralize it. This point is demonstrated in relation to a pilot scheme presently being undertaken by Kemp's in a selected area. The information being collated into the new register is mainly of a positive nature, flowing from existing sources, and the only new feature is its convenient availability to any regular credit giver in the area. It therefore offers an improved measure of protection to the finance house or credit retailer and helps to restrain the unwise hirer from excessive commitments.

Profit more than doubled

The Accounts show that the group profit before taxation has increased from £739,004 to £1,741,431. The Directors thought it appropriate to utilize part of the Contingency Reserve to absorb certain bad debts which were known to be doubtful when the accounts were closed last year but only crystallized during the current year. £150,000 of the Reserve was applied in this way.

As I have already stated, the volume of our group business declined over the year as a whole and the Consolidated Balance Sheet shows Hire Purchase and other Debtors at £90 million compared with £102 million.

Our colleague, Mr. Stanley Keywood who prior to the integration was Chairman and Managing Director of Olds Discount, reached retiral age during the year and resigned from the parent board. Mr. Keywood had long experience of hire purchase, particularly in relation to consumer goods, and made a valuable contribution to our growth and strength in that field.

Lloyds & Scottish Ltd
OWNED BY LLOYDS BANK LTD
AND NATIONAL COMMERCIAL BANK OF SCOTLAND LTD

BROKEN HILL SOUTH LIMITED LOOKS TO FUTURE

INCREASED WORLD DEMAND FOR LEAD AND ZINC EXPECTED

Addressing shareholders at the annual meeting of Broken Hill South Limited in Melbourne on November 5th, the Chairman of Directors, Mr G. Lindesay Clark, struck a note of optimism both with regard to the Company's present activities and the development of a number of its projects.

Mr Clark said that increased world demand for lead and zinc, as well as an increase in price for silver was beneficial to the Company. He reported favourably on other big investments by the Company including the progress of Alcoa of Australia which is constructing a £45 million aluminium complex in Australia; Cobar Mines Pty, Ltd. which is developing the C.S.A. copper mine at Cobar, N.S.W. and other exploration activities.

FINANCIAL

Profit—The net profit of the Company fell to £567,000 from £761,000 in 1961, due to lower prices realised from lead and zinc, as well as the low level of production voluntarily maintained under the International Agreement restricting mine output.

The surplus from working the South Mine declined by £224,000. Investment income, including £50,000 in dividends from the subsidiaries Barrier Central and Zeehan Mines, totalled £600,000 which showed an increase of £3,000 on the previous year.

Mining expenditure charged to the working account was down £200,000 due to the lower mine output, and to the capitalisation of £170,000 expended on the development of the Junction mine; a sum which appears in the balance sheet under "assets" for the first time.

Strong representations are being made to the South Australian Government for a reduction in the excessive high rates applying to railage.

The Chairman advised that it was the Company's intention to call up 2s. 3d. per share (including 9d. premium on January 31st) on the contributing shares.

Dividend—Dividend No. 114 of four pence for each stock unit payable on December 4th, will require £274,167.

Balance Sheet—The substantial rise in shareholders funds reflects the reorganisation and issues of share capital and the revaluation of certain assets. The Share Premium Account credit balance stood at £444,000; an additional £704,000 will be credited to this account as premiums are received from Shareholders.

The Assets Revaluation Reserve has a credit balance of £2,145,000 after capitalisation of the sum of £3,200,000. Market value of listed securities is higher than that reported on the balance date. Current assets amounting to £2,575,000 include £392,000 invested temporarily in Commonwealth Loans but since sold toward payment of a call on shares by Alcoa of Australia Pty. Ltd. current liabilities amounting to £1,863,000 are adequately covered by the remaining current assets of £2,183,000. Contingent Liabilities include £3,297,000 uncalled on Alcoa of Australia Pty. Ltd. contributing shares, since reduced to £2,748,000 by the payment of a call.

BROKEN HILL SOUTH MINE

Operations.—Operating expenditure increased from £7 6s. 0d. per ton of ore to £7 18s. 8d. for reasons already explained.

The latter figure includes the cost of development expenditure which has been capitalised in the accounts.

Operation on the British Junction Leases, acquired from North Broken Hill Limited, commenced during January, 1962. Following investigation it was decided to extend the 1,480 ft. level drive some 6,200 ft. north to connect with the British Junction working. The drive will be the main transport opening for ore produced at Junction.

Reserves of ore are 220,000 tons higher than the previous year due to the acquisition of the British Junction Cases.

Mine production this year to date is approximately 50 per cent higher than it was for the same period last year. It is proposed to increase the annual rate of production to 350,000 tons as compared with 259,000 tons produced last year. The achievement of this rate during the current year will depend on whether the Junction haulage drive is completed by March, 1963. Diamond drilling of the deep fold structure in the Western Zone was continued from two locations. On the first location two further deflections were drilled from holes Nos. 1093 and 1126. The first passed beneath the main fold whilst the second intersected the structure exposing three feet width of ore at a grade of 14 per cent Pb. 5.5 ozs. Ag per ton and 3.7 per cent Zn. A third deflection is in progress.

On the second location Hole No. 1205 was completed and passed beneath the fold structure, indicating the position of the structure to be higher than anticipated. Drilling from the Junction haulage drive to test the position will be delayed until next April.

Exploration—Diamond drilling on geophysical anomalies in the Broken Hill district has been increased, and five geophysical anomalies located, and a further two being drilled. Of those tested two contain considerable widths of strongly mineralised lode material whilst the remaining three are minor sulphide or graphite disseminations not warranting further investigation. The two well mineralised positions occur at Staurolite Ridge and Stirling Vale, the former about sixteen miles South of Broken Hill, and the latter six miles South West. Two further holes drilled 5,000 ft east of the first location showed a similar lode with less iron but somewhat stronger, though uneconomic copper content. At Stirling Vale a similarly broad iron sulphide mineralisation was intersected in the one hole drilled to date. The discovery of these mineralisations marks an important step forward in the effectiveness of our geophysical techniques.

The exploration in the district is being financed jointly with North Broken Hill Limited and Electrolytic Zinc Co of Australasia Limited. Exploration work beyond the Broken Hill district is being carried out by the Broken Hill South subsidiary, Mines Exploration Pty. Ltd., in conjunction with McPhar Geophysics Ltd. of Canada, and North Broken Hill and the Electrolytic Zinc Co. propose to participate.

Geological and geophysical testing has been done in the Kanmantoo and Tumby Bay districts in South Australia, resulting in some twenty-four mineral claims being pegged. In Queensland a number of anomalies have been located in the Chillagoe area.

Drilling has been started to test two anomalies disclosed in the Moonta-Wallaroo district on Yorke Peninsula, South Australia, by Western Mining Corporation, a project in which Broken Hill South has a 30 per cent equity.

COBAR MINE

Satisfactory progress is being achieved in the C.S.A. Mine No. 1 ventilation shaft of 14 ft. diameter was sunk to a depth of 174 ft. initially, and sinking in No. 2 service shaft of 18 ft. diameter was suspended at 157 ft. The installation of the head frame and sinking winders at No. 1 shaft is now virtually complete and sinking operations recommenced on November 5th.

The sinking head frame has been erected over No. 2 shaft. The three deck sinking stage is being assembled and sinking will resume within the next few weeks.

In the power station four of the five diesel alternators have been commissioned, and the four stationary air compressors are available for use.

Tenders have been called for the erection of the pilot ore treatment plant.

Experience over many years in the various Cobar ore-bodies reveal that both ore and enclosing rock are strong and that the ore stands well without support over considerable widths during mining. Early work on the upper levels of the C.S.A. western orebody showed that it had a similar property. Diamond drilling to below 3,000 ft. has indicated that this favourable characteristic should continue in both eastern and western orebodies, making them suitable for extraction by some open stoping method. To select the particular mining method most suitable for the wall and lode condition at C.S.A., Mr M. Howell, Executive Director of Broken Hill South, and Mr L. Thomson, General Manager of Operations at Cobar visited a number of comparable deposits overseas, and inspected newly developed mechanical equipment for underground use. Following this visit it has been decided to adopt a mechanical cut and fill system of mining, which will enable mining to be carried out at costs comparable with open stope methods.

Broken Hill South holds a 76 2/3 per cent interest in the Cobar Mines and Consolidated Zinc Pty. Ltd. the remaining 23 1/3 per cent. An amount exceeding £2,100,000 has been expended to date, including prospective development at the C.S.A. Mine, and acquisition of fixed assets. The initial finance for 1963 calendar year will be provided by short term borrowing. Discussions are in progress with the State department and various State authorities in New South Wales for the provision of essential public services and housing needed for the establishment of the enterprise.

The assessment of the capital requirements for Cobar accordingly has to await the conclusion of these discussions.

ALCOA'S PROGRESS

This company has a 16.6 per cent interest in Alcoa of Australia Pty. Ltd., consisting of 486,111 fully paid £1 shares and 3,663,889 contributing shares of £1 each on which 5s. per share has been paid to date totalling £916,000.

The company budgets to meet a further £2,100,000 for Alcoa during 1963 and 1964. This liability is covered by the outstanding balance of 5s. 3d. per share on Broken Hill South's own contributing shares. The provision of the balance of £641,000 will be considered at the appropriate time.

Alcoa reports good progress at its refinery at Kwinana and its smelter at Point Henry. Kwinana with a capacity of 210,000 tons of alumina per annum is expected to commence operations in the last quarter of 1963, whilst the first stage of the Point Henry Plant, with an annual production of 20,000 tons of aluminium is expected to commence production about March, 1963, initially from imported alumina.

The second stage at Point Henry will increase the smelting capacity to 40,000 tons per annum. Work on the fabricating plant has commenced and production from the first segment should begin about the middle of 1963.

Long range prospects both at home and abroad are bright for Australian aluminium, initial sales contacts having proved to be encouraging.

World Market Trends—The Lead/Zinc Study group meeting at Geneva predicts a further statistical improvement in the metal field. According to estimates by the delegates the Free World's consumption of lead this year will reach a record level, and new supplies will fall short of demand by 75,000 tons. With regard to zinc the study group also forecasts a consumption record for 1962. The world price of silver has risen since November, 1961, and is now approximately 10s. 8d. per ounce as against 8s. 3d. in June, 1961. Indications point to stability.

BRITISH OVERSEAS STORES

The forty-first Annual General Meeting was held on November 30th in London, **Mr H. C. Mumford** presiding.

The following is an extract from his circulated statement for the year to March 31, 1962:

The very disappointing results again reflected in the accounts have led to the decision that no Ordinary dividend is to be paid.

Our Caribbean interests have been disposed of in their entirety. The political uncertainty in Portuguese East Africa and the Federation of Rhodesia and Nyasaland continues to have a very marked influence on trading. In South Africa the results have continued to be unsatisfactory and a general programme of reorganisation and modernisation has been undertaken. In Kenya our small company in Nairobi is affected by the decisions of many Europeans to leave the colony and prospects are extremely uncertain.

In New Zealand Kirkcaldie & Stains' turnover and net profit are new records. However, the uncertainty regarding Britain's application to join the European Economic Community is being felt and there has been a downward trend in sales since April and the likelihood is that profits will be less than those of past years.

Economic and political uncertainties in various parts of the world in which Whiteaway, Bickley & Bell Limited, London, trade have resulted in reduced turnover. Generally, it is expected that the realistic measures that have been taken in the last few months will be reflected to some extent in the current year and more certainly in the years to come.

The report and accounts were adopted.

NETHERLANDS BANK OF SOUTH AFRICA LIMITED

DIVIDEND 10 PER CENT

The twelfth Ordinary General Meeting of shareholders of the Netherlands Bank of South Africa Limited was held on December 4, 1962, **Dr F. J. C. Cronje** (the chairman) presiding.

The following is an extract from his circularised statement:

POSITION OF THE BANK

Accounts: The increase in the Bank's credit monies and the lower level of advances and discounts resulted in greatly enhanced liquidity during the year as was, for instance, reflected in a considerably larger holding of Government Stock.

This position accorded with the general financial and economic situation in Southern Africa during the period under review.

A significant development is, however, that the Bank's commission earnings, which may be regarded as a useful barometer of business activity, have shown substantial improvement since the second quarter of 1962.

Continued restrictions on imports affected our business in this particular field but our export financing activities showed a satisfactory development.

It is gratifying to mention that, in spite of a further increase in expenses, the Bank's profit could be maintained at about last year's level.

In December, 1961, the Bank's issued capital was increased by R1m. to R6m. All the new shares were locally issued and taken up, together with 400,000 old shares held previously by the Nederlandse Overzee Bank N.V., in Amsterdam. As a result the majority shareholding in the Bank passed to South African investors.

At the same time our Institution was offered a 12 per cent share in the capital of our erstwhile parent company in Amsterdam with representation on its Board of Directors. The offer was taken up and this placed our Bank in a position where it would be able to participate in the development of its affiliated company within the European Economic Community and elsewhere in Europe as well as on the American continent. This strengthened link will also prove beneficial to the Bank's customers.

It is also important to mention here that the expected dividend income accruing from our participation in the share capital of the Nederlandse Overzee Bank N.V., should become available only during the next financial year and has not influenced our results in the period under review.

In regard to the expansion of our local activities it gives me pleasure to place on record the elevation of the status of our Regional Manager's office in Cape Town to that of an Assistant General Manager's office.

Furthermore, I would like to mention that in January this year we moved into the first completed part of our new Head Office premises under construction in Johannesburg. The second stage of the building is expected to be ready for occupation towards the end of 1963.

The construction of a new building in Bloemfontein, to accommodate the Regional Manager's office for the Orange Free State, is also proceeding according to plan and is likely to be completed in November next year.

A new South African branch was opened in Johannesburg (Newtown), while in Southern Rhodesia a branch was established at Que Que. In both countries our representation was extended by the establishment of new subbranches and agencies.

Our business outside this continent could be maintained on a satisfactory level although the activities of our London office were affected by the reduced level of import spending by South Africa and the Federation.

Our relations with the Nederlandse Overzee Bank N.V. and its subsidiaries and affiliates were again of great benefit to us. During the year the Nederlandse Overzee Bank N.V. participated in the capital of a Swiss banking institution and also established a new, wholly-owned, subsidiary in New York.

Our own Representative's office in that important centre continues to render us valuable services.

Finally, it should be mentioned that, as is customary, all additions to the Bank's office equipment, furniture and stationery were written off while adequate provision was made for taxation, possible bad and doubtful debts, depreciation of bank buildings and for the usual strengthening of the Pension Fund.

NETHERLANDS FINANCE AND INVESTMENT CORPORATION LIMITED

In previous years no detailed figures of our fully owned subsidiary "Netherlands Finance and Investment Corporation Limited" were published. However, the activities of this company, mainly in the field of industrial finance by way of participations or medium-term lending, have grown in importance lately. For the first time its balance sheet and profit and loss account, for the financial year ended September 30, 1962, are now published for the information of shareholders. Consequently, the publication of a consolidated balance sheet of our Institution became necessary.

DIRECTORS' REPORT

You will have noticed from the Directors' Report that, as a result of the issue of 500,000 shares of R2 each to which I referred earlier, our general reserve could be increased to R3.7m. by the share premium, which amounted to R500,000. In addition, your directors propose to allocate a further amount of R200,000 from this year's profits, which will bring the total reserve figure to R3.9m.

The results obtained during this financial year enabled your directors to declare an interim dividend of 5 per cent, which was payable in July last. It is recommended to shareholders to declare a final dividend of 5 per cent, making a total of 10 per cent, which equals last year's dividend.

The report and accounts were adopted.

INTERNATIONAL DISTILLERS AND VINTNERS

Confident of Increased Profitability and Expansion, says Mr H. C. B. Berens

SHAREHOLDERS APPROVE CAPITAL REORGANISATION AND SCRIP ISSUE

The tenth Annual General Meeting of International Distillers and Vintners Limited was held on December 5th in London. The following are extracts from the Statement by **Mr H. C. B. Berens,** Chairman of I. D. & V., which has been circulated to Shareholders. Mr Berens stated:

"In the spring of this year we carried through by far the most important step forward in the Company's expansion by the merger with the well-known firm of Gilbeys Limited. Full particulars of the merger were sent in the Letter of Offer dated April 19, 1962, from Hambros Bank Limited to I.D.V. shareholders and, of course, Gilbeys shareholders who are now shareholders in I.D.V. As a result of the merger the name of your Company was changed in May this year from 'United Wine Traders Limited' to its present title, it being considered that this was a more suitable name.

"Although the merger was a bringing together of two Groups basically in the same trade, their structures, methods of operation and administration were in many ways different. Nevertheless, the integration of ideas and interests is going very well and although the merger only became effective in May, a number of important steps have been taken.

"It is not expected that these steps will have any material effect on combined profits in the current year but your Board are confident that such steps as these will form a sound platform for increased profitability and expansion in the future."

He pointed out that the Accounts now being presented to Shareholders were for the period to May 31, 1962, and covered a period of 11 months for the old I.D.V. Group, then called United Wine Traders, while those of Gilbeys cover 17 months.

RECORD SALES

Reporting on United Wine Traders, as it was constituted before the merger Mr Berens said it had another record year. Profits after all charges, but before taxation, rose from £674,701 for the 12 months to June 30, 1961, to £1,199,007 for the 11 months period to May 31, 1962, equal to over £1,300,000 for a 12 months period. Out of this figure unfortunately, £667,991 had to be provided for taxation. This was an abnormally high figure due to the change in the accounting date.

"As in the last few years," said Mr Berens, "this increase in profits is largely due to the continued success of Justerini & Brooks' 'J. & B. Rare' Scotch Whisky in the United States of America. The value of sales to that area increased over the previous 11 months period by 90 per cent. As you will be aware during the year 'J. & B. Rare' was made generally available in this country for the first time and your Directors are fully satisfied with initial sales. Agents have already been appointed in some 50 countries throughout the world.

"In Europe initial sales are most encouraging and with whisky becoming a more and more popular drink on the Continent I see no reason why 'J. & B. Rare' should not get its fair share of this increasing market. If this country does join the Common Market it is your Board's opinion that it will have beneficial effects on this aspect of the Group's trade.

"Once again our thanks must go to our American agent the Paddington Corporation for making 'J. & B. Rare' one of the best selling brands of Scotch whisky in the U.S.A. The value of sales has more than quadrupled in the last four years, a truly remarkable performance. While we are confident there will be no flagging in the energy and desire for achievement of our friends over there, and while there are still many areas to conquer in that vast country, one cannot expect this rate of increase to continue. However, sales for the first 4 months of the current year show an increase over sales in the corresponding period last year.

"In the home trade, Justerini & Brooks, Chalie Richards and Julian & Trower have had another very good year. Value of sales over all departments have increased in the 11 months period as compared with the 11 months period last year by about 17 per cent.

"In the year to June 30, 1961, the results of Twiss & Brownings & Hallowes showed a marked improvement on the previous year and this has been maintained in the period under review. Sales of Hennessy Brandy show a further steady increase in the home market and the decision to market their well-known Three Star Brandy in a new and attractive design bearing the name of the Hennessy family crest 'BRAS ARME' appears to have met with universal favour. This subsidiary continues to handle certain export markets for Hennessy Brandy and Heidsieck 'Dry Monopole' champagne and these brands maintain their firmly established position in the countries concerned."

DIVIDEND POLICY

On the question of dividends, Mr Berens said: "Your Board recommend payment of a final dividend of 35 per cent less tax on the capital increased to £798,555 as a result of 100 per cent Gilbey acceptances. With the interim already paid, this makes a total payment of 110 per cent less tax.

"In the current year we will revert to normal dividend date payments and your Board would accordingly expect to pay an interim dividend about June, and a final dividend about December.

"The equivalent of 110 per cent total dividends which can be said to have been paid on the capital of £798,555 would be 11 per cent on the proposed increased capital. Barring unforeseen circumstances, your Directors would expect to pay at least such total dividends for the year ending May 31, 1963."

SCRIP ISSUE

At the Annual General Meeting shareholders approved resolutions to increase the capital and make a Scrip Issue. In his statement Mr Berens pointed out: "After capitalisation each Ordinary shareholder will hold two Ordinary Shares of 5s. each fully paid for each Ordinary Share of 1s. held on October 27, 1962, one of such Ordinary Shares being comprised in a Renounceable Share Certificate, which will be posted on December 7, 1962, and which will be renounceable up till January 18, 1963. The Ordinary Shares to be issued for consolidation and capitalisation will not rank for the final dividend of 35 per cent for the period ended May 31, 1962. Application will be made to the Council of the Stock Exchange, London, for permission to deal in and for quotation for the issued Ordinary share capital of the Company in shares of 5s. each.

"The authorised Ordinary Shares capital is now £10 million divided into 40 million Ordinary Shares of 5s. each of which 31,942,214 Ordinary Shares of 5s. each will have been issued, which figure will be increased to 33,194,021 shares when acquisitions have been completed leaving a balance of 6,805,979 unissued Ordinary Shares of 5s. each."

BANK OF MONTREAL

ASSETS NOW $4,015 MILLION

The one hundred and forty-fifth Annual General Meeting of the Bank of Montreal was held on December 3rd in Montreal.

Mr G. Arnold Hart, the President, in the course of his speech, said:

In general, the level of economic activity in Canada during the past year has been high and rising, continuing the advance that began early in 1961. On the whole this has been a year of progress and it now seems certain that total output in 1962 will reach a record high.

It is unfortunate that the degree of economic progress that has been achieved has tended to be obscured by the headlines which at mid-year accompanied a major foreign exchange crisis.

The crisis was triggered by an abrupt and temporary cessation of the net inflow of foreign capital, which for some ten years had offset a continuing imbalance in Canada's trade in goods and services.

While it is a matter of considerable satisfaction that the situation was brought under control promptly it would be a mistake to reach the conclusion that all problems in this area have been solved. While the problem of obtaining balance in Canada's external position is far from being solved, I should like to make it clear that I am not among those who view Canada's future with gloom and foreboding. Some slowing down in the general level of business activity must be expected from time to time, but I am confident that Canadians will rise to the new challenges with a new approach and that there continues to be a bright future for Canada and for the Bank of Montreal, which throughout the past 145 years has been so intimately connected with the nation's growth.

GENERAL MANAGER'S ADDRESS

In the course of his address, Mr R. D. Mulholland, Vice-President and General Manager, said: The 145th Annual Statement of the Bank records increased revenues and profits from the employment of our assets and from our services.

Our net profits for the year amounted to $16,013,512 after depreciation of premises and equipment and transfers to inner reserves, and after providing for income taxes. A provision of $12,757,500 has been made out of net profits for regular and extra dividends, equivalent in total to $2.10 per share, compared with $2.05 per share for the preceding year.

Total assets of the Bank amounted to $4,015,000,000 at the end of the fiscal year, an increase of $65,000,000 from the end of the previous year. This is the first year end in which our assets have exceeded $4 billions and we derive some satisfaction from it in the light of the restrictive official monetary policy of the past few months and the changes brought about by the exchange reserve crisis of last June.

On October 31st, our total deposits amounted to $3,713,000,000 compared to $3,647,000,000 a year earlier. It is encouraging to observe the continuing strength of personal savings deposits which increased by $85,000,000 during the year. Such savings deposits are the life blood of the banking business, and it is therefore, most pleasing to be able to report that our personal savings accounts rose in number by more than 100,000 during the year.

NATIONAL MINING CORPORATION

The annual general meeting of National Mining Corporation, Ltd., was held on November 30th at the Chartered Insurance Institute, London, E.C.2.

Mr C. J. Burns, Chairman, presided, and the following is an extract from the circulated Statement:

The year ended March 31, 1962, was marked by the continued growth in our investment income, the present figure of £20,411 comparing with £17,863 for the previous year, and the increased profit of our wholly-owned subsidiary company, British Patent Glazing Co. Ltd. These increases have, however, been offset to some extent by lower revenue from sales of investments and from oil royalties. Our portfolio of investments at the commencement of the year of £219,761 (market value £247,654) compares with the present day figure of £229,146 (market value £251,556) notwithstanding profitable realisations as shown in the Accounts and subsequently.

The profit for the year at £42,839 compares with £41,796; and an interim dividend of 5 per cent in respect of the year was paid on November 30, 1961, and a final dividend, also of 5 per cent, is now recommended.

The board is maintaining the interim dividend at 5 per cent on account of the current year.

The Canadian companies, namely, Loders Lime (Alberta) Ltd. and Ladco Co. Ltd., both traded at a small profit in spite of the continuing depressed state of the Canadian economy. For several years I have had to report that capital has not been forthcoming for the development of our lead/zinc interests in Eastern Nigeria, represented by our shareholding in Mines Development Syndicate (West Africa) Ltd. At the present time, however, powerful international financial interests are closely examining the Nigerian project with a view to bringing it to production.

British Patent Glazing Co. Ltd. transferred its operations to new factory premises. Sales during the year were a record.

The report and accounts were adopted.

THE NATIONAL BANK OF AUSTRALASIA LTD.

Extracts from the Chairman's 1962 address

Mr. J. A. Forrest, Melbourne, 28/11/1962

BUSINESS RECOVERY HESITANT. Against the rapid expansion of the 1950's business recovery has been somewhat hesitant and many have felt it has neither been fast enough nor sufficiently embracing. However, most classes of business are reporting increased sales, and profitability, though still well below what is generally desirable, has begun to improve, but tougher trading conditions are to be expected for some time to come.

THE COMMON MARKET AND US. Anything said on this issue is still largely conjectural as the terms on which Britain may be enabled to join are not yet known. Of £206m. of exports to Britain last financial year (approximately 19% of our total exports), dairy products, fruit, sugar, wheat and meat were worth more than £100m. The future of these industries naturally gives cause for concern should she enter, and the most desirable outcome would be arrangements to give us access to the enlarged market on terms designed to offset, to some degree, our long-enjoyed British preferences. However, with Britain in, a united Europe may progress so rapidly that industrial expansion and rises in the living standard of 225,000,000 people would lessen our possible export difficulties.

OUR INDUSTRIAL GROWTH MUST CONTINUE. Rough estimates suggest that our workforce may reach 4.6m. in three years time and about 5.2m. by 1970, and provision of productive employment for this rise requires that growth of secondary industries and those in the tertiary sector should be as rapid as possible, and on a sound economic basis.
Even with no further rise in prices, gross national production (£7,300m. last financial year) will need to be about £900m. higher by 1965, and near £2,500m. higher by 1970, to employ our workforce and provide a small advance in real productive value per head.

A BRIGHT PROSPECT FOR AUSTRALIA. The estimates imply plenty of room for growth in our production and commerce. We must not be discouraged by the changes in the business and trading scene of the last year or so; they may require more flexibility in our outlook, and more self-reliance but are no cause for loss of confidence. Many of the world's peoples have a new vista of higher standards of living, and rising living standards suit the businessman, as they permit the efficient use of capital equipment and the knowledge and skill of the workforce. Against this background, Australia's prospects are bright, whatever the problems of the 1960's.

ACCOUNTS. Consolidated balance sheet assets at £401m. are a record, and over £32m. higher on the year resulting from a rise of £19m. in the assets of the parent Bank, and accrual to 30th September of £15m. of assets by the new Savings Bank. Deposits increased by nearly £32m., there being an addition of £18m. by the parent Bank and £14m. by the Savings Bank. Consolidated gross earnings, at £12,581,000 were £380,000 higher than in 1961, but expenses rose by £427,000. After slightly lower taxation provisions, net profit at £1,065,486, was £9,401 below the 1961 figure.

STAFF THANKED. The Australian and London staff were thanked for their efforts in maintaining their high standards of service.

THE NATIONAL BANK OF AUSTRALASIA LTD.
and its wholly owned subsidiary
THE NATIONAL BANK SAVINGS BANK LTD.
Head Office: 271-285 Collins Street, Melbourne.
Chief London Office: 6-8 Tokenhouse Yard, E.C.2.
923 Offices throughout Australia, Papua/New Guinea and 3 in London.
(Incorporated in the Commonwealth of Australia)

HALEYBRIDGE INVESTMENT TRUST LTD.

HIGHER PROFITS AND DIVIDEND

FUTURE VIEWED WITH CONFIDENCE

The fifteenth annual general meeting of Haleybridge Investment Trust Limited, was held on November 29th, in London, **Sir Aynsley Bridgland, CBE** (the chairman), presiding.

The following is an extract from his circulated statement:

After providing for a transfer by a subsidiary company of £93,869 to Capital Reserve, the group earned net profits after tax of £181,881 as against £138,674 last year, a rise of £43,207. Your Board proposes a final dividend of 8½ per cent, making a total payment of 13½ per cent for the year as compared with 12 per cent last year.

CONSOLIDATED BALANCE SHEET

The market value of our various investments at June 30, 1962, show an unrealised surplus of £2,752,306 over book value as compared with £2,497,769 last year. There has been a further considerable increase in this surplus since that date.

We propose to sub-divide our £1 Ordinary Shares into 4 shares of 5s. each. Our present shares stand at over £3 each on the market and at that price are a bar to the smaller investor who may wish to acquire an interest in our ventures.

DEVELOPMENT POLICY

In property we are dependent on the rents receivable from our developments and these rents are in turn dependent on the cost of the buildings we erect. Should the money we borrow bear a high rate of interest, we must pass this cost on to our tenants if we are to have an economic investment. If there are no tenants available to pay the rentals necessary to assure our profit or if tenants are obtained who subsequently find they cannot carry on with such a burden not only would our anticipated profits be imperilled but also we should be liable to meet high rates of interest on our borrowings out of our own resources.

For this reason, rightly or wrongly, we in this group have withdrawn from competition in developing areas where site values are high, tenants are limited, and risks consequently enlarged, and have confined our operations to that sphere where we can, except in isolated instances, be reasonably immune from these risks until the costs of borrowing are stabilised at a lower level.

I must frankly confess that having been made aware of prices paid for sites, in many cases on borrowed funds at high rates of interest, I personally am very glad that we are not taking part in such business.

THE FUTURE

As to our future, I feel we can face it with confidence. Our Balance Sheet is exceptionally strong, our dividends are amply covered and only paid out of true income and realised profits and we are still continuing to build up our reserves.

The report and accounts were adopted and, at the subsequent extraordinary general meeting, resolutions in connection with the proposed subdivision of the Company's Ordinary Shares were approved.

DEBENHAMS LIMITED

Mr. John Bedford's review

The Annual General Meeting of Debenhams Limited was held in London on December 6. The following are the salient features from the circulated statement by the Chairman, Mr. John Bedford, O.B.E.

Trading Results

The Consolidated Trading Profit and other income for the year under review amounts to £8,464,145 which is just under 2% lower than the figure for the previous twelve months. However, during the last few months there has been a considerable improvement in the sales throughout the Group. The Consolidated Net Profit before taxation at £6,945,128 shows a reduction of 3·8% on the previous year. The net profit available for appropriation is £2,717,560 compared with £2,649,201. The Directors recommend a Final Dividend of 1/4d. per share be paid on the Ordinary Shares making 1/11d. per share for the year.

The Consolidated Balance Sheet shows the continuing expansion of the Group with total assets up by £6,297,766 and the capital and reserves up by £6,584,105.

Acquisitions

During the year the family business of Gammons Ltd. was acquired and since the end of the financial year the companies owning the Matthias Robinson Stores have been purchased. I am very pleased that it has been possible to bring these new stores into the Group and thus extend our activities into new areas.

Properties

Investigations have continued into the way the various Group properties are being used and discussions are taking place with one of the largest property development companies to form a joint enterprise in connection with one of the larger sites in the Group; preliminary talks have also started with the view to the development of a second site.

Organisation

The reorganisation of our central buying operation has continued and as our initial experience in the Chain Store field has proved satisfactory, we propose to extend this part of our activities.

The reorganisation of the Debenham Food Division is proceeding. In an age when so large a proportion of the spending of the public is on food this should prove a valuable addition to the Group.

We have extended the range of merchandise sold under our own brand names, and we are introducing new methods of presentation and sales promotion throughout the companies.

The Future

The time is overdue for a new appraisal of our taxation system and as a first step the increases in profits tax and purchase tax brought in as regulators might well be reduced to their previous levels. If the Government are successful in their plans to stimulate the economy, we are in a sound position to take full advantage of the opportunities available and to meet whatever challenges we may have to face both in this country and in Europe.

With a great nation-wide million-pound-a-week Buying Power, the Debenham Group searches the world's markets to bring to their stores quality merchandise of impeccable good style. Even in the fickle world of high fashion the exclusive branded goods of the Debenham Group create new standards of value—values that challenge comparison.

CROMPTON PARKINSON LIMITED

STRENUOUS BUT SUCCESSFUL YEAR

INCREASED EARNINGS

MR ALBERT PARKINSON'S REVIEW

The forty-ninth Annual General Meeting of Crompton Parkinson Limited was held on December 5th in London, **Mr Albert Parkinson, MBE**, the chairman, presiding. The following is an extract from his statement, which had been circulated with the report and accounts for the year ended June 30, 1962:—

We can look back on a strenuous but successful year. The Company has been busy in conditions which demand complete fitness to meet competition. It has been, above all, a year for realism, and plans and efforts to achieve greater efficiency have dominated our activities. The Company has a team capable of meeting and putting to advantage the exacting problems and challenges which arise every day. The good employee relations which we have been fortunate enough to enjoy in the past continue to have our closest care and attention at the highest level. The Consolidated Net Income attributable to your Company showed, at £1,391,000, an increase of 6.5 per cent. The total dividend for the year is equivalent to 12 per cent on the increased capital, compared with 11.3 per cent last year.

OVERSEAS

In Australia, our factories in Sydney and Campbelltown have had an excellent year. Despite continuing adverse trading conditions, a high level of trading in CP manufactured products, merchandised engineering products and non-ferrous metal extrusions was maintained by the Noyes Company. The straitened circumstances of India's economy and her need to manufacture all she can for her development have kept our Indian factories in full production throughout the year, and there has been a steady and strong upsurge in turnover necessitated by the electrical demands of this growing nation. Unfortunately, rising costs have not enabled us to report any comparable increase in profit.

U.K. ACTIVITIES

It has been a better year for our heavy products. Transformers at Hayes works have had a very good year. We have recently been entrusted with a further substantial order for traction equipment which will go into production in 1963. Our industrial machines have had a good year. The fractional horsepower motor market has reflected the keen competition for business limited by economic conditions which have been far from buoyant. Our instrument business makes excellent progress. The Company's lighting fittings business operates in a field where there is still much scope for expansion. The lamp industry has continued to enjoy an increasing demand and the battery business continues to show a steady growth, but profits are under constant pressure from rising costs and increased competition.

THE OUTLOOK

Even those most closely associated with the electrical manufacturing industry are not always able to forecast the movement of the forces which initiate the ebb and flow of its trade. What we can and will do is to ensure that Crompton Parkinson can meet the requirements of the inevitable and remarkable increases in the use of electricity. We shall, I think, have a hard year which I believe our managerial, physical and financial resources are well equipped to meet.

EMI Electric & Musical Industries Limited

Rising prosperity means big opportunities for EMI

From gramophone records to computers, from television to refrigerators, EMI products are products of prosperity. Rising prosperity will bring big opportunities which the group is ready to grasp, reports **Sir Joseph Lockwood**, Chairman of EMI. Other points from his review of EMI's financial year ended June 30, 1962, were as follows:

Last year there was intense competition with Capitol Records in the United States and with the refrigerator business in the U.K. The rest of the group had a most successful year and their profits reached a record level.

Records and Computers In the U.K., our sales of records increased further and we improved our share of the market. EMI Records Ltd. won 9 out of 15 National Record Awards by the Gramophone Record Retailers Association.

Our supremacy in the classical market is ensured by the cream of the world's great classical artists combined with superb recordings.

New arrangements have been made on magnetic tape with Philips Gloeilampenfabrieken and on business computers with International Computers and Tabulators Limited. They have strengthened EMI in fields which will offer excellent opportunities for expansion.

Television Booming exports of broadcast television equipment include the first orders from Western Germany for six years.

The Government's plan for television will mean large orders for broadcasting equipment. EMI have been making 625 line cameras and transmitting equipment for overseas buyers for years and can start producing for the British market immediately.

From the Accounts *Year to June* 30, 1962

Group Sales	£82,581,000
Trading Profit	£ 7,390,000
Depreciation	£ 2,044,000
Interest	£ 544,000
Pre-tax Profit	£ 4,802,000
Tax	£ 2,311,000
Net Profit...	£ 2,316,000

JOHANNESBURG CONSOLIDATED INVESTMENT COMPANY, LIMITED

(Incorporated in the Republic of South Africa)

EXTRACTS FROM MR H. J. JOEL'S SPEECH

The annual general meeting of Johannesburg Consolidated Investment Company, Limited, was held on December 4th in Johannesburg.

Mr H. J. Joel, the chairman, presided and, in the course of his speech, said:

The profit, before tax, for the year ended June 30, 1962, of your Company and its wholly-owned subsidiaries, Barnato Brothers Limited and Barnato Holdings Limited, amounted to the record sum of R6,599,657 (£3,299,829), an increase of R1,324,507 (£662,254) over the comparable figure for the previous year.

Our dividend income amounted to R5,982,830 (£2,991,415), which was also a record, the increase on last year's figure being of the order of R200,000 (£100,000). This improvement was accompanied by an increase in profit from the realisation of investments which at R1,105,242 (£552,621) was substantially higher than the average for the past few years.

The net profit after tax amounted to R4,007,631 (£2,003,816).

During our financial year, there was a general increase in the London market value of shares in companies operating in Southern Africa, with a consequential increase of some R8.5M (£4.2M) in the aggregate market value of our portfolio. The book value increased by R2,420,768 (£1,210,384), of which amount approximately one-half was accounted for by net investment during the year and approximately one-half by a re-appreciation in value.

TRANSFER OF RESIDENCE

After commenting on the Company's successful application to H.M. Treasury for consent to transfer the residence of the Company from the United Kingdom to South Africa, Mr Joel then referred to the consequences of such transfer, and said: On the basis of present rates of taxation in the United Kingdom and South Africa, and assuming the same size and type of portfolio, and an estimated average incidence of investment depreciation and realisation profits, the reduction in the annual tax charge in relation to the Company itself may be put at around R900,000 (£450,000) for a full year.

The change in residence will also alter the incidence of taxation payable by shareholders of the Company. Subject to any changes in the other factors affecting the dividend decision, it is intended that the total dividend in future should be increased to an extent sufficient broadly to compensate United Kingdom shareholders for the adverse change in their position, which change will be uneven in its incidence. A dividend of 4s. 0d. per share as compared with the past net dividend of 3s. 1d. would appear to satisfy this aim. Present indications are that the Company will be able to pay such a dividend for the current year.

HARRIS LEBUS

EFFECT OF RESTRICTIONS

The fifteenth annual general meeting of Harris Lebus Ltd. was held on November 30th in London, **Mr Oliver Lebus,** chairman, presiding.

The following is an extract from his circulated statement for the year to July 13, 1962:

The restrictive measures which the Chancellor imposed in July, 1961, on the economy generally added further to the problems of the furniture industry which, before that, was already in a depressed state. I warned stockholders in my review and later at the annual general meeting that this would be a very difficult year.

The stimulus to the economy which was intended in the Budget and in June, 1962, far from helping the furniture industry, in fact put it at a disadvantage relative to many other industries in the consumer durable field. Whereas the rate of purchase tax for motor cars, radios, television and household appliances was reduced, the level for furniture was virtually doubled to 10 per cent. Whereas the deposit required on hire-purchase transactions on all the products I just mentioned was reduced, on furniture the deposit remains unchanged at 10 per cent.

The overall effect of these conditions, in spite of substantial contributions from some of the other activities of the group not so directly involved in the manufacture and sale of furniture, has contributed to a reduction of trading profits to £136,489 as compared with £255,586 last year.

RESULT OF YEAR'S OPERATIONS

The net result is a group loss of £15,519 for the period. After providing for the amount of £24,500 for the dividend paid on the preference stock and £60,000 for losses expected on the curtailment of the Rhodesian subsidiary, the retained profits of the group have been reduced by £100,019 and now stand at £973,574. In these circumstances, your board reluctantly recommends that no dividend be paid on the ordinary stock.

The pattern of the contribution of the various divisions of your company towards the group trading results has been broadly similar to last year with the transport and upholstery divisions and that dealing with hire purchase finance making the largest contribution. Losses in the wooden furniture division and the overseas companies offset these.

Your company has for many years been in the forefront of the industry regarding conditions of work, amenities, and levels of remuneration. We have recently introduced an improved scheme of payments in the event of redundancy of hourly paid employees.

Many of the country's best brains inside and outside Government circles forecast that a growth in the economy would develop in the spring of 1962. This has been both slower in coming than many had expected and of smaller degree, especially in the trade of consumer durables and the furniture industry was handicapped in participating in this growth. Your board believes that given reasonable trading conditions its position will slowly but surely improve, and it is devoting its full energies to this end.

The report and accounts were adopted.

THE BANK OF NOVA SCOTIA

GENUINE IMPROVEMENT IN CANADIAN ECONOMY

The past year has been one of genuine improvement in Canada's economic position though there is still need to get the economy moving ahead at a better pace, **F. William Nicks,** President, The Bank of Nova Scotia told the Shareholders at the Bank's 131st Annual Meeting held on December 5th in Halifax, Nova Scotia.

Canada is in a better position to go ahead than it was a year ago Mr Nicks said, "There is no longer undue preoccupation with the fear of inflation nor on the other hand are there unrealistic expectations of what easier money can do. Canadians are now much more aware of the kind of competitive world in which they live and are adjusting themselves to it. Moreover we have an exchange rate which is at least in reasonable alignment with our underlying economic interests. It may indeed be that we are emerging from a period of economic disturbance into one more favourable to economic growth."

However, he pointed out, circumstances are as yet by no means satisfactory, for the economy is still operating well below its real potential with a considerable degree of unemployment and excess productive capacity. In planning for the future, he emphasised it is essential that Canada be able to compete effectively.

GENERAL MANAGER'S REMARKS

The General Manager, J. Douglas Gibson in his review of the year's operations, told the Meeting that the Bank's assets during the year had increased by $179 millions, or about 8 per cent, to reach a total of $2,448 millions. "Both our Canadian and our external business expanded significantly," he said.

The main feature of the Canadian banking picture during the year, commented Mr Gibson was the sharp advance in the demand for loans which developed during the spring and summer. After the rapid sequence of financial events in June it was necessary during the mid summer to become more selective in lending policies but a vigorous drive for deposits, combined with the co-operation of some larger customers who used alternative sources of fund enabled the Bank to continue to lend to those who needed working capital and to those who applied for Scotia plan loans. Special attention was paid to the needs of small business borrowers not in a position to draw on other sources of financing.

In view of the increased competition for personal savings from trust and savings companies and from credit unions—"The increase of 6 per cent in personal savings deposits is particularly gratifying. It is the best record among the chartered banks."

During the year Scotia Bank opened 25 new branches, bringing the banks total number of branches to 626. International offices were also established in Amsterdam and Tokyo and three new ones are being opened in Munich, Houston, Texas, and in the U.S. Virgin Islands.

COMPANY AFFAIRS

The growing unemployment figures were a dominating factor in the London stock market early this week. On Tuesday prices fell back sharply with "Panorama" not for the first time playing its part, and over the week to Wednesday's close THE ECONOMIST *indicator fell by 6.8 points to 348.1. The fall would have been sharper but for a brighter showing on Wednesday by equities helped by the gold reserve figures and the rally on Wall Street. This was in sharp contrast to the murky gloom elsewhere which kept business down to a low level.*

First Steel Results

THE opening of the steel dividend season has been awaited by the stock markets with fear and trepidation. Running down of consumers' stocks caused a drop in production in the "steel year" to end September of about 12½ per cent. Most companies were operating at about 70 per cent of capacity in the first half of the year but activity crept up to about 75 per cent in the later months of the year. The one bright sector of the industry has been sheet steel, thanks to the recovery in the motor industry, and John Summers alone of the steel companies reporting this month is expected to show higher profits.

United Steel.—Sheet steel is the only important product not manufactured by United Steel, the largest and most diversified of all the steel companies. Its trading profits fell by just under a third from £22.1 million to £15.4 million while ingot output fell by 16 per cent in the year to September 30th. For the first 24 weeks of the year profits were down by some 44 per cent, so that there must have been some improvement in margins in the last few months. This confirmed the statement made by the directors in June that while the February increase in steel prices was insufficient to cover increases in costs the rate of earnings had shown a marked improvement since March. In the second half of the year United Steel profits before all charges fell by 15 per cent, but it must be remembered that in the corresponding period in 1961 they had already fallen by 30 per cent from the peak level of 1960.

As expected the final dividend has been cut from 7½ to 6 per cent to make the total payment 10 per cent, against 12.3 per cent. The computation of earnings is complicated by the incidence of substantial investment allowances. Tax relief of £2.3 million arising from these allowances is included in the £3 million transferred to fixed assets replacement reserve. On the lower tax charge the reduced dividend is covered 1.9 times; but if the credit for investment allowances is excluded the cover is only 1.1 times. If the allocation to fixed assets replacement reserve is treated as additional depreciation, earnings then work out at only 9 per cent. One important feature of the preliminary statement is the profit of £1.8 million made on the sale of investments. This almost certainly refers to the sale of some of United Steel quoted trade investments, which in the 1961 balance sheet had a book value of £1.5 million and a market value of £5.9 million. Among the investments believed to have been sold is all or part of its stake in the John Summers equity. To pull out of sheet steel now, when it is the most prosperous sector of the industry, may at first sight seem odd but on the longer view, taking account of the growth of sheet capacity in Britain and on the Continent, such a decision may not be ill-timed. On the results the £1 shares gained 2s. 3d. to 2s. 6d. to yield 7 per cent on the smaller dividend.

Thos. Firth and John Brown.—Despite its emphasis on stainless and other special steels this company appears to have fared as badly as other steel producers, reporting a fall in trading profits from £4.6 million to £3 million. Investment income, which includes the dividend from Firth-Vickers Stainless Steel jointly owned with English Steel, was £13,000 higher at £844,000. As in 1960-61 this more than covers the maintained dividend of 12½ per cent. Earnings are down from 40 to 26½ per cent and the £1 shares at 38s. yield 6.6 per cent. This is slightly better than average and reflects expectations that the demand for the alloy steels, particularly stainless steel, will grow.

Land Securities Investment Trust

FOLLOWING Mr Selwyn Lloyd's request to insurance companies to curb their investment in property development, lending was limited to schemes already arranged and the pipeline was practically empty when Mr Maudling announced a relaxation on lending limitations early in October. The latest deal between Land Securities and the Prudential, is the largest ever single property-insurance link. Previously Land Securities had looked largely to the Legal and General for its funds, though it had links with Norwich Union and the Church Commissioners as well. Over the past three years Legal and General has lent or agreed to advance £21 million on 6¼ per cent debentures to Land Securities. In addition it has been given options on 3.7 million shares of 10s. each in Land Securities. These arrangements are dwarfed by those now made with the Prudential which provide for £30 million, also on a 6¼ per cent debenture, plus £3¾ million through an issue of 3 million shares at 25s. per share. This will give the Prudential a 7½ per cent stake in the enlarged equity. This will come down to 7 per cent when Legal and General through its options takes up its full stake of 9¼ per cent.

The issue price of 25s. compares with the current market price of 28s. 9d.; allowing for the July rights issue (which raised a further £4.6 million) the shares were as high as 38s. 6d. earlier this year but fell back sharply on the very modest increases in profits and dividends announced in May. At the current price the shares yield 2¼ per cent. This looks a long way ahead—to the fruition of some of the property developments for which the new funds are being raised. In London, Land Securities' major development schemes include those in Oxford Street and Victoria Street and its Ravenseft subsidiary in undertaking schemes in the provinces, of which the most important is the comprehensive redevelopment of a five acre site in the centre of Liverpool.

Watney Mann

IN the first six months of the year to end-September the gross profits of Watney Mann fell slightly from £3,440,000 to £3,392,000 but the directors said in June that trade was improving. The full results show that gross profits in the April-September period rose by nearly 10 per cent from £4,432,000 to £4,851,000. This suggests that sales rose sufficiently to offset the pressure on profit margins exerted by higher costs. For the full year gross profits rose from £7,872,000 to £8,243,000 and the dividend has been raised from 18 to 20 per cent so that the 5s. shares at 24s. 9d. now yield 4 per cent. Earnings are slightly higher at 39¼ per cent covering the bigger dividend nearly twice. The increase in sales is probably due to Watney Mann's successful promotion of its keg beer "Red Barrel" and other high gravity draught beers. The current year has started off on a good note, with sales higher in the first two months.

Forte/Kardomah

IN 1961 Kardomah "A" shares stood at 26s. Now they are valued at 65s. by the bid, worth £2 million, from Forte's Holdings of five "A" shares, currently priced at 30s., plus 110s. cash for every four 5s. "A" or ordinary shares. Last month Forte said that it would not make a bid unless it
