SPLITTING THE ATOM

talk about alloy steel

Farmers farm with them. Bus drivers depend on them. Air hostesses would get nowhere without them. And Samuel Fox make them—the tremendous variety of alloy steels, from everyday stainless to special steels for nuclear reactors. Steels for farm tractors and commercial vehicles—for axle gears, laminated springs. Steels for gas turbines and con-rods. They all began as billets and bars by Fox. Part of United Steel—one of Europe's biggest steel producers.

INTERNATIONAL

OUTSIDERS

French acquiescence and Mr Kennedy's "declaration of interdependence" are more favourable omens for Britain's entry to the common market—in spite of the moods of Dr Adenauer and General de Gaulle (p. 13).

Others left in the cold by the common market are meeting in Cairo to seek a common attitude to trade and aid (p. 21).

The conflict between ben Bella (outside Algeria) and ben Khedda troubles **Algeria** by weakening the chances of a collective leadership so needed by Algerians (p. 16).

So far, the realist **ben Khedda** may have outwitted the revolutionary **ben Bella**—but the day is not yet won (p. 36).

French Algerians returning to France do not feel that they belong; if Algeria shows a minimum of stability, some may return (p. 37).

Nyasaland is, to all intents and purposes, already the independent state of Malawi (p. 19).

INSIDERS

Khrushchev's stand behind **China** suggests that the Chinese have at present little fear that the talks between Russia and the United States may succeed (p. 20).

The *Tour de France* has become a *tour de force* for the boys in advertising (p. 40).

Oil-producing countries want a new deal with the international companies—but would the consumer be prepared to pay? (p. 59).

INDEPENDENTS

Charges of administrative impropriety against **Herr Strauss** have provided the occasion for the Free Democrats to show their independence of their coalition partners, the Christian Democrats (p. 38).

New Zealand prepares to mature to meet changing markets (p. 39).

In need of aid, **Jamaica**—independent on August 6th—is careful to show that it has not been contaminated by Cuban concepts (p. 21).

Dictators are two a penny in Africa; some are nicer than others (p. 25).

DEPENDENTS

The American Executive Depends: One success, over his Bill to expand foreign trade, does not mean that President Kennedy's troubles with Congress are easing (p. 27).

Interdependence Days: Mr Kennedy has been talking of a grand Atlantic partnership—and acting to spur Mexican enthusiasm for his Latin-American programme (p. 28).

Sand in the Sugar: the new sugar Bill is a surprising, if only partial triumph for the Administration (p. 28).

Non-conformist: the Supreme Court has blazed more liberal new trails this year (p. 29).

To Pray or not to Pray: constitutional amendment to permit official prayers in the schools probably will not get far (p. 33).

NIGERIA WORKS IT OUT pages 41 to 46

Politically disturbed, Nigerians are doing their best to bring stability to their country by planning a bold economic advance.

HOME

SIDE STEP

The Government's reaction to Pilkington shows that it has still to throw off for good the embrace of illiberal restrictionism (p. 15).

UHF plus 625 plus colour equals expenses (p. 66).

The **protection of investors** is adequate say Jenkins, but it says nothing about the soliciting of deposits (p. 73).

The **Minister of Labour** has eaten humble pie in public—but this could lead to national indigestion (p. 21).

There will be no general wage claim in the **engineering** industry this year—but the employers may regret that the unions do not agree on the need to raise the lowest wages of all (p. 22).

Assistance: the real poor are to [illegible] but it may not be enough [illegible] a year ago (p. 20).

SORT OUT

The Atomic Energy Authority is torn between the interests of its commercial plants and research installations. So why not split the atom? (p. 61).

Taxation plays havoc with the yield comparisons on **foreign investments.** A guide sorts out the problem (p. 62).

The **Tory party** is not without its untried talents: Mr Macmillan may soon be giving some of them a run in harness (p. 22).

Last Sunday's **disturbances in Trafalgar Square** must make people wonder where liberty ends and licence begins. (p. 24).

Social changes may do more than the **trade unions'** own efforts to reshape their public image (p. 49).

SPEED UP

Hire purchase debt has levelled out, but there is still a danger that the authorities may be tempted to speed up a revival by relaxing its controls (p. 68).

Dr Beeching can look across St George's Channel at the **Irish railways** for some ideas on how to get his own system moving (p. 50).

Back to the pram: safety belts are going to be compulsory on new cars (p. 68).

Smaller car companies do better—especially abroad (p. 68).

SLOW DOWN

Britain and Europe can profitably learn from each other how to deal with a **declining industry** (p. 17).

Copper producers trim production to protect their brass (p. 72).

Detailed contents on page 13

WITH AIR BRAKES on the new Leyland COMET RANGE

REALLY POWERFUL, DIAPHRAGM-OPERATED AIR BRAKES are a special feature of Leyland's new Comet range. These provide instant, full-force braking in emergencies and smooth controlled retardation under normal conditions. 'Private-Car' pedal pressure, acting on a specially designed D.1. valve, releases air progressively and gives an exact predictable response to pedal-travel. This fine braking system, expressly designed to cope with the extra power of the Power-Plus 370 engine, is only one of the Comet's many features which include a 5-speed gearbox with optional overdrive, choice of hub reduction or 2-speed axle, 14" hydraulic clutch and a super-luxury 'Vista-Vue' cab. *In an independent road test, the fully laden Comet, from 30 m.p.h. was stopped in 43½ ft, and the handbrake showed an efficiency of 30%.*

Mr. C. Kruyscheepers of Martin Gibbs Ltd., Bloemfontein, South Africa, poses with a huge 10 feet one piece enlargement which he produced from his original 35mm Asahi Pentax negative. This picture is only a portion of the giant enlargement, and the 35mm contact print is shown above his hand.

STAGGERING PROOF of why

the ASAHI PENTAX

is enthusiastically acclaimed and used by photo journalists, professionals and discriminating amateurs the world over!

Get the maximum enjoyment from photography ... make your dreams come true ... with the Asahi Pentax camera. Through-the-lens viewing means that you shoot exactly what you see. The Asahi Pentax-invented instant return mirror eliminates annoying black-out. Focussing is quick and accurate with the ultra bright Fresnel screen. Razor sharp interchangeable lenses at varying focal lengths are available for all round versatility ... from intimate world of micro-photograph to the wide open adventures of imagination inspiring tele-photography. The Asahi Pentax is classically designed, light, trim, sleek and compact and is a real thrill to handle because of its finger tip controls. The new ultra-sensitive Asahi Pentax clip-on exposure meter using the latest CdS cell makes the Asahi Pentax system more versatile than ever.

AROUND THE WORLD

At the other end of that tail is a set of sharp white teeth. Plant Investors Beware. Original plant costs, start-up date, pay-out time, plant efficiency, operating costs . . . each can make you feel you have a tiger by the tail. That's where Kellogg International Corporation comes in. Kellogg handles the whole project from the ground up: Engineering, Procurement, Construction. This makes cost control easier and more efficient. The result: your plant goes up within its appropriation. Faster too. Produces sooner. Most important, you get the plant you want and the cost comes as no surprise. You and Kellogg set the figure when the plant is still on paper. Be a wise plant investor: Let Kellogg tame the tiger.

More research

Research—the exploring arm of industry—creates new demands and develops new applications for materials. Inco-Mond research anticipates demands for metals and uncovers new uses for nickel which confers unique qualities on alloys.
More research creates more demands for nickel. Inco-Mond meets the challenge with its new annual production capacity in excess of 400 million lb. of nickel and the metal will be available in ever increasing quantities in future years.
Behind this certainty of ample supply are the outstanding technical and market development services freely provided by Inco-Mond to industry throughout the world.

SCOBIE ON MINTY

THIS WAS THE WINNER IN THE RECENT MINTY LITERARY COMPETITION

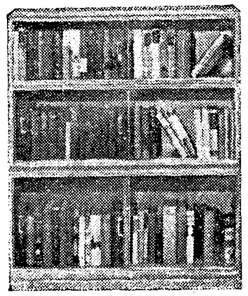
It was submitted by Enoch Soames, Medley Farm Lodge, Binsey Lane, Oxford, who receives a Minty bookcase worth £31.19.6 as illustrated.

"That Scobie had been using his Minty bookcase — and who but Scobie, after all, would have thought of the inexpensive and conveniently *sectional* structure of the thing—as a means of smuggling variable quantities of hashish for himself and Sephiroth's daughter . . . was a fact which only came to light much later . . .

"I'm starting unambitiously, old fruit," I recall him saying, as he removed his elaborate wig and offered me a narguileh . . . "These Mintics grow as my library grows . . ." He winked, and slid open the glass front (which had a certain cachet with us in the Lebanese Consulate), took out what appeared to be an extravagantly bound copy of the Zohar . . . (the pages were cut out in the middle, like a joke cigar box . . .)

What were we, after all, I reflected, savouring the fresh consignment and gazing into those enigmatic glass fronts, built up into a strangely archetypal, dolmen like edifice, like foundations of a zigzurat, glinting with baleful ambiguity in the dawn Alexandrian sunlight . . . what were we but Minty bookcases . . . each of us haphazardly constructed . . . the elegant glass front urbanely reflecting the titles of books in the opposing case . . . ?"

THE PRIZE



The judges were astonished at the number and the quality of the entries received. Mr. Soames scraped home by a very narrow margin. The runners-up were Mr. H. B. Walker, South Norwood, S.E.25 and Mr. H. Evans, Blackheath, S.E.3. People who *still* want a free Minty Bookcase are advised to

look out for the second MINTY literary competition in this magazine

Mitsui technology takes the lead

Mammoth dock in Tokyo Bay now in operation

An important step toward alleviating the traffic congestion in Tokyo Bay has been taken by Mitsui Shipbuilding & Engineering Company with the construction of huge new dock facilities. The mammoth dock, now available for ship repairing, accommodates vessels up to 85,000 deadweight tons. A part of Mitsui's new Chiba Works, it is ideally situated in one of the world's busiest port areas—only 24.1 kilometres from Tokyo, 38.5 kilometres from Yokohama.

These expansion projects are further evidence of the position of progressive leadership held by Mitsui, pioneers in the application of the latest technological advances to ships, engines, and industrial and chemical machinery and equipment.

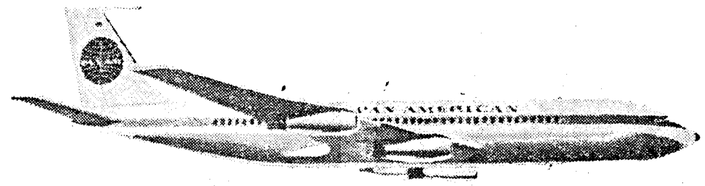
EXPORTERS! IMPORTERS!



Speed your U.S. cargo on any of 218 weekly Pan Am flights!

Never before such frequency. Such convenience as you have right now on Pan Am!

ALL THIS SUMMER ON PAN AM: more transatlantic Jets than the next 2 airlines combined! 92 jet flights weekly . . . plus 9 weekly 18-ton-capacity all-cargo flights, plus 8 piston flights. You have 109 opportunities to reach your United States markets every week—109 more to bring in imports.

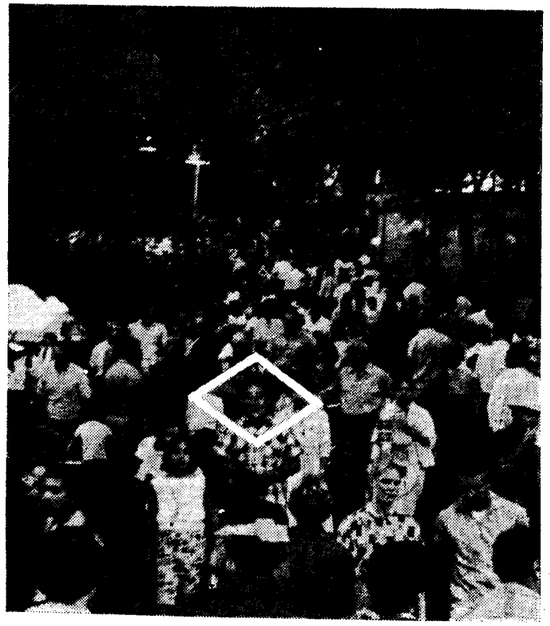
No matter what you're shipping or importing, your shipment gets extra care on the World's Most Experienced Airline. Pan Am knows much more about cargo handling, because Pan American carries *more cargo* than any other international airline.

Air shipments are lower now too! Up to 63% lower than last year. You also save in other ways. Delivery *in hours* means more sales, smaller inventories, less "tie-up" of your capital. Insurance rates for air shipment are much lower than surface shipment rates. Less packing and crating, too.

Ship by air—ship Pan Am . . . and if you're importing, specify shipment by Pan Am! It's never been easier, or more convenient! For details, call your Cargo Agent, Freight Forwarder, or local Pan Am office. Ask, too, about Pan Am's exclusive World-Wide Marketing Service that can help you get new business in 111 major markets 'round the world.

PAN AM

WORLD'S LARGEST AIR CARGO CARRIER
WORLD'S MOST EXPERIENCED AIRLINE



Millions of customers and a trader who knows them

In thriving Los Angeles, a business shirt is often plaid and purple. But when in L.A., do as the Angelinos. That's why you'll find the trader from C.Itoh almost anywhere that business is being done.

For C.Itoh's traders are not only business experts, they're trained to know their markets intimately. Instantaneous communications between our far-flung offices means that information requests and orders can be processed and served immediately. Even three-cornered or many-sided trade can be handled easily.

Whatever, and wherever, your business—exporting, importing or co-operative ventures—get the benefit of your C.Itoh trader's shirt-sleeves approach.

"There is no new thing under the sun, dad"

"Ecclesiastes, Son. And you've got the quotation right, too. Out of the mouth of very babes and sucklings . . ."
"Book of Psalms, Dad; and you've got your quotation right as well. Fifteen all"
"Son, where's all this cross-talk taking us?"
"Back a hundred years to 1862, Dad"
"A memorable year, Son, for, amongst other things, the birth of Debussy, the capture of Garibaldi, and the then highest recorded ascent in a balloon"
"And, Dad, for the earliest recorded advertising leaflet of the Patent Plumbago Crucible Company, forerunner of The Morgan Crucible Company. It claimed that they sold crucibles to Mints in Australia, India, France, Russia and elsewhere"
"Quite a performance for those days, Son"
"Yes, Dad; and, what's more, this leaflet was printed in English, French, German, Swedish and Spanish"
"And we're still talking today about the need for English exporters to use the customer's language, Son. Well, well"
"It doesn't end there, Dad. Even in 1862 Morgans converted all their weights and measurements into metric terms for the benefit of those foreign addicts of the decimal system"
"I suppose there's no danger of their getting smug, Son, is there?"
"Hard to say, Dad; but they've reason to be proud of their past achievements, I think"
"Then what of the future, Son?"
"Well, Dad, between 40% and 45% of The Morgan Crucible Group's sales are now outside the U.K., made up of nearly all the products manufactured in the U.K.—carbons, pots, Crusilite elements, refractories, resistors, colloidal dispersions—and of those products manufactured by its overseas subsidiaries; and they aim to keep it that way"
"And does each subsidiary do its own exporting, Son?"
"No, Dad. With two exceptions all the Group's exports are handled by Morganite Exports Limited, who operate through twelve overseas subsidiaries of The Morgan Crucible Company Limited, and over two hundred agents"
"So they cover the world, Son"
"Indeed they do, Dad. And the verdict of the world is conclusive"
"St. Augustine, Son"
"Correct, Dad. Wasn't it also he who prayed: Give me chastity and continency but do not give it yet?"
"Son, I hardly think . . ."
"Don't worry, Dad; I only wanted to say that there's no containing Morganite Exports Limited, and as for being chaste—well it's they who do the chasing"
"Son—you're incorrigible"

With apologies to Harold Wincott

42 PLACES WHERE YOUR COMFORT AND SAFETY BEGIN

Take Swaziland, for instance, in far-off Africa. This is one of the places where we mine Asbestos that goes to make brake-linings for your car or insulation for your home. Or Erdington, where Britain's most modern plastics toolmaking company made the moulds from which the new G.P.O. telephones are turned out as fast as biscuits. From this same factory came moulds for many other things: from plates to powder-compacts, toys to textile machinery parts. Yes, in a very real sense, the sun is always shining somewhere in the world on a TURNER AND NEWALL company. Each is independently managed but all have this in common: each in its own way is doing its bit to contribute to your safety and comfort.

VOLUME CCIV - NUMBER 6202

Brussels Auguries

TO the French government British membership of the common market now seems inevitable. This, for all the alarming reports that came out of the confusing ruck of last week's negotiations in Brussels, is the important fact that emerged. Meetings between General de Gaulle and visiting statesmen like Mr Macmillan might often be lost weekends, so discreet are they; in Brussels in the past ten days, the secret of the meeting on June 2nd at Champs has come out. Some time before or during Mr Macmillan's talk with President de Gaulle the French government recognised that British membership was bound to come sooner or later. The change may have been due to dislike of France's growing isolation within the community, or to the fact that President de Gaulle's respect for Britain has for the moment triumphed over the bitterness he brought back from London in 1944. Perhaps Mr Macmillan found the right words at the right time. Whatever the reason, the change is a great encouragement to Mr Heath as he enters the most difficult, and the decisive, phase of his negotiations.

This week's prolonged tête-à-tête between Dr Adenauer and President de Gaulle could have checked the process of evolution in Paris. Indeed, at the end of the talks, their joint statement on Thursday showed the intention of trying for a political union as quickly as possible, without waiting for Britain. But there are no signs that this amounts to anything like a combined Franco-German roadblock in Britain's way. In Bonn Herr Schröder, the foreign minister, has evidently been fortified in his vigorous support of British membership by Mr Rusk. From June 28th to 30th, on the eve of Dr Adenauer's visit to Paris, Herr Schröder attended the Brussels negotiations for the first time, with the plain intention of demonstrating that whatever the old might say in Paris he, and a weighty body of opinion in Bonn, were resolved to get Britain in. Some of the political auguries for British membership of the common market have never been better.

There is a very great difference, however, between recognising reluctantly that the British will join "one day," in General de Gaulle's phrase, and doing everything to help them join. M. Couve de Murville is certainly not behaving like a man in a hurry. The French government is prepared to disengage from a position when it becomes untenable, and indeed it has budged on a number of important matters, but it is not concerned to give Mr Macmillan a smooth ride home. During the coming vital weeks the pace could quicken. The Six are now devoting a deal of time to thrashing out points among themselves, and many of the tussles end up with a small but significant French concession. Yet the British government must inevitably be worrying about its timetable. Can the aim, an agreement in general by the end of July, be achieved? Patience and determination are now needed more than ever. If necessary, the negotiations will have to go on into August, with the clock "stopped," French-fashion, as it was early this year when the Six were debating their own agriculture. If, even then, loose ends remain untied, enough will at least have been done to give the Commonwealth prime ministers a broad picture of the likely terms when they gather in September.

If the government is to be allowed to negotiate patiently in this way, going as fast as conditions in Brussels (and all the interests involved) allow, but no faster, it is important for British opinion not to be too excitable. "Six Take Tough

Line" run the headlines whenever the ministers meet in Brussels, and the conclusion, however false, becomes inescapable that the negotiations have hardly got off the ground. If there were not disagreements, as there were when the ministers met on June 28th, there would be no need to negotiate. There will be more differences, more rows, and maybe a super-crisis at the end of July as the deadline approaches and the negotiations move into a last desperate spurt. None of this need mean that no progress is being made. A large part of the highly complex Commonwealth problem has in fact already been argued out and agreed on.

THE negotiators have now succeeded in whittling away a good many of the smaller issues around the hard core, which is trade in the products of temperate agriculture. Last weekend ministers reached agreement on seven out of 24 commodities where the British have asked for the common tariffs to be reduced to zero. Some of the tariffs are to be reduced, some removed, and in other cases there are to be tariff quotas for the British market. Agreement may not come on some other items, especially the big three, aluminium, lead and zinc, until a late stage in the negotiations. But it is clear already that there will not be much left in the way of raw material tariffs round the community once Britain joins.

After the agreement on imports of manufactures from the developed Commonwealth (an early minor minus in the balance sheet) which provoked the wrath of Mr Menzies and Mr Marshall when they were in London, a more positive outline agreement is in the making on the larger and politically significant imports of manufactures from India, Pakistan and Ceylon. Here the Six have in fact accepted the principle of "comparable outlets"—that the enlarged community must import as much as, indeed more, from these countries than Britain plus the common market do today. In textiles the working out of the agreement has gone a considerable way, though there are still differences. For other manufactures the task for the British in the next few weeks is to translate what one Indian called the "constructive disposition" of the Six towards undeveloped countries into harder provisions, for instance for the enlargement of quotas and the reduction of some tariffs: to bring the principle down to earth.

On a fourth issue, association for Commonwealth countries in Africa and the West Indies, the negotiations have been going still more smoothly. Last week the Six accepted that these countries were eligible for association on the same terms as the existing associates (free entry to the whole European market). The remaining differences are about politics. Who is to make the first move, the Six, the British, or the Africans? Are Ghana and Southern Rhodesia to be accepted? Will they indeed want to come in? What happens to African countries that choose to stay out? The differences are important; but at any rate the principle of association is accepted for the African Commonwealth, and the new model association the Six are negotiating with their existing African partners has taken British wishes into account.

Only on the fifth and much the most important and most difficult section of the Commonwealth puzzle, the agricultural trade of Australia, Canada and New Zealand, is there a great deal of the really hard down-to-earth work still to be done before agreement is sighted. There is more common ground than there was six months ago. It is agreed that there will have to be special transitional arrangements for Commonwealth farm exports and, very generally, that world-wide agreements might provide the best solution for them in the end. Last weekend the Six went a step further and accepted, again very generally, the British claim for some kind of "bridge" between these two phases, so that if world-wide agreements do not come off, the Commonwealth will not be let down with a crash at the end of the transition. What the Six suggested was that, if the world-wide discussions failed, there would be "consultations" between the community and those suppliers, "especially in the Commonwealth," interested in the search for world-wide plans. The formula looks at best like a frail rope ladder rather than a bridge across the precipice; certainly it does not meet the wishes of the Commonwealth countries; but it can be the start for something more secure.

To understand the remaining differences about Commonwealth agriculture it is important to understand what the community's common agricultural policy is, and what it is not. It is not what Mr Gaitskell said it was in his speech in the House of Commons on June 6th: an intrinsically protectionist set-up tending automatically to exclude imports from outside. What the community has agreed so far about agriculture—levies, target prices and so on—is no more than a method whose results will be determined by the policies actually chosen later on. If prices and levies are fixed low, the effects could be a great deal more liberal than present systems of protection. If they are fixed high, the system could indeed be a great deal more protectionist. The negotiators' problem is to guarantee that at some future date policy will in fact be liberal enough to ensure the continued import into Europe of Commonwealth products.

This problem—a problem not only of the wording of good intentions but also of practical machinery to guarantee them, as well as of mutual trust—will be at the heart of the debate in the next fateful weeks. Bit by bit differences have been narrowing. The Six are prepared to promise a "reasonable price policy," in order to maintain a substantial volume of "traditional trade." But the French minister of agriculture, M. Pisani, said again on June 29th that his government thought that the Commonwealth should be given "comparable revenues" from its exports through higher prices, not "comparable outlets" for quantities sold. The British do not want to pay more for their imports. They want a much more explicit guarantee on paper that whatever price policy is followed will give the Commonwealth access to the market.

The argument is heavy with conflicting interests. But it would certainly be wrong to conclude that the negotiations are yet stuck, or going badly, or even that the Six are proving unduly intransigent. The sea change in French attitudes and the progress of the talks so far are good auguries. If the palpitations of British opinion sometime fret the Prime Minister's nerves, Mr Heath's reports from Brussels should calm them. The most striking new factor of all was contributed on Wednesday (Independence Day) by President Kennedy with his plea for a "declaration of interdependence" between the United States and western Europe. The pace at which the American attitude is evolving may make one wonder who—the United States or Britain—will be first into Europe. British membership does, however, remain for the Americans the necessary first step.

Post-Pilkington

The Government has made clear that it has not swallowed the Pilkington committee's polemics whole; but it still has to turn the television knob fully on

THE Government's white paper (Cmnd 1770) on the Pilkington committee's report says it would be quite wrong to take "precipitate" decisions about the committee's main recommendations on the future of television in this country. It says so over and over again. This may be a nice way of telling the Pilkingtonians where they get off in making proposals that would effectively cramp any dynamic growth in this medium until 1976. But what is needed from the Government is a pretty precipitate decision to lift the wraps and allow the maximum expansion of television—which means attracting the maximum available capital—as rapidly as possible. The viable demand for such an expansion exists. It is beside the point to complain that the whole business of deciding who is to be allowed to satisfy that demand is "controversial" and bothersome. The controversy is not new, and it certainly did not begin with Pilkington. A whole range of proposals for financing an expansion—by various mixtures of licence fees, appropriately-taxed advertisement revenue, and pay-in-the-slot TV—has been proffered by other people beside the committee. If the Government does not have a fair inkling by now of which mixture it would like to choose, it will be a worse enemy of television than the Pilkingtonians themselves.

As things stand, the Government has mollified the public service enthusiasts by telling the BBC that it can start its second service, on ultra high frequency, by mid-1964 in the London region. The technical implications, including the uncertainties about UHF, are discussed on page 66. But, since the Government has not uttered a syllable on the size of the licence fee it is prepared to impose for this service, no one, including the BBC, can be at all confident about the scope of the new programmes to be offered. Should the outcome of this political hesitation be a second service able to broadcast for no more than three or four hours each evening, the mountain will have heaved for precious little. And, frankly, if the BBC is going to ask only for the £5 15s. licence fee of which it is talking, one does not believe that it will be able to put on good new programmes for much longer than that.

The kite is being flown unofficially that the BBC could be sustained by the existing licence fee of £4, plus a direct subvention from the Treasury. This subvention might come from the advertisement tax, or from the purchase tax levied on the sale of new sets for 625-line reception. But what this really means is that the BBC would be invited to become a Government pensioner—and to place its neck on the chopping block whenever a Chancellor decided to wield his axe on easier victims than the universities or the hospitals. The corporation should think twice before lending itself to that idea.

If the Government is not prepared to charge a reasonable licence fee, and thus give the BBC the chance to make something of the new channel (and to extend the broadcasting hours on the existing one), it is the more important that a dynamic expansion should be pressed forward in systems of television where capital is willing. It is thoroughly good news that the Government is by no means giving pay-TV the brush-off; and there should certainly be no more Pilkingtonian talk about a five-year penance before any new commercial development is permitted. It will be even better news if the Government can decide quickly on whatever adjustment it thinks necessary to stop new advertisement-financed programmes being too advertisement-department-dominated (thankfully, the Pilkington idea of a second Auntie, sitting there and airing respectable prejudices under threat of further restriction if it is not respectable enough, seems to be more than halfway out the window already); and if the green light can thereby be given to let two new complete channels get under way in 1964.

The point that ought to be looming large in the Government's mind is whether or not the BBC can really make the best use of its two channels when it has to rely solely on public subvention of any kind. (This shortage of cash is the reason given for the official thumbs-down on local broadcasting run by the BBC—although the logical conclusion for developing this side of sound broadcasting, namely allowing advertisement-financed broadcasting to start up in certain areas, is deliberately avoided.) In television itself one answer to the potential waste of band space through the BBC's lack of resources would also be to make the third channel a frankly mixed one by accepting advertising at certain periods of the day. But the BBC will have no truck with advertisements itself, and it would certainly resent being left with half a channel if commercial television were allowed to muscle in openly on the remainder as well as spreading itself elsewhere. The best compromise might be to make room, say after 10 p.m. and on Sunday afternoons, for an adult educational service (e.g., in teaching European languages) which could be jointly produced and financed by BBC and ITV—if necessary under the ægis of a special educational authority.

IF the Government is as serious as it says about adult education, it ought not to baulk at any method that would provide finance for it. Education is one sphere where an attempt could be made to introduce something of the healthy compromise that sustains the press, i.e. revenue both from circulation (licence fees) and advertising (such as advertisements for careers or "situations vacant"). It is fairly clear that it is in some such mixture of licence fees and advertisements, eventually on all wavebands, that the real future of television finance will lie. The new educational authority could certainly be relied on to try to expand its activities, not least in persuading the Government and the teachers to let it undertake a full service to help to educate schoolchildren when no one else is watching—during the mornings. Why on earth the Government shares the Pilkingtonian blind spot about giving more children (including recent school leavers and those in technical or county colleges) a chance to learn

something from television, above all when there is a crying shortage of teachers and accommodation, is beyond understanding.

What, above all, has got to be impressed upon the Government's, and the public, consciousness is that television is the expanding medium of entertainment and information that will finally engulf and replace the shakier sectors of the entertainment industry and of the press. The need to secure as many channels, and as much competition between channels, as possible should be increasingly apparent to everyone with liberal instincts not content to rely on the kind of news, or the kind of entertainment, that one or two masters with their eyes on the establishment think it safe or proper to serve up.

Because much of the press has castigated the Pilkington report in the past week the Pilkingtonians have been muttering that this is only the press which has holdings in the commercial television companies. This is a simple untruth. It would be much more to the point if those who genuinely want to see the development of television in all its potentiality were now to thank their stars that the press, for whatever reason, is not making a dead-set against this dangerous rival and trying to smother it in its cradle. No doubt a lot of people, including governments, find it hard to attune themselves to a new medium of opinion and popular influence, but illiberalism and restrictionism and censorship on the Pilkingtonian scale will not help the adjustment one whit. The Government must shed itself of these impulses in making up its mind with the least delay.

No Orchids for ben Bella

The first troubles of Algeria's passage into independence (recorded in a report from the spot on page 36) have come from another quarter than the expected one

ALGERIA'S recent history has shown portents of storm, and North African precedents made a storm seem likely. Tunisia's first year of self-rule was vexed by ben Yussef's revolt, Morocco's by the continuing warfare of an uncontrolled liberation army. How much greater was the power for disturbance of Algeria's massed battalions, so many straining at the leash on the Tunisian and Moroccan frontiers, and impatient of the stratagems of statesmanship that brought Algeria finally to peace. Even so, it was barely conceivable that the popular Mr ben Bella would be willing to use the army to plunge his long-suffering countrymen, at the moment of victory and rejoicing, into an internal conflict that could touch off a new civil war. And for ends no other than his own ends.

In Mr ben Bella's bid for power there has been no clear principle at stake. His army supporters, to be sure, breathe fire against the French, indeed against almost everything; which is not to be wondered at in soldiers far removed from more humdrum reality. But Mr ben Bella himself has never yet openly denounced the Evian agreements which (after all) secured him his freedom. Nor are there any plain signs yet that he is the chosen instrument of Nasserist, Arab League, Russian or anti-western forces, even supposing these forces could be properly lumped together.

Russia recognised Mr ben Khedda's provisional government in Tunis immediately after the Evian accords had been signed, and Mr Khrushchev sent congratulations the moment France handed over sovereignty on Tuesday, when Mr ben Khedda and his colleagues came triumphantly into Algiers. There were no courteous hesitations on account of Mr ben Bella. The Arab League has consistently supported the provisional government and confirmed that it approved its "loyal attitude to the Evian agreements" in a council resolution as recently as June 18th. So also has President Nasser, whose appeal for Algerian unity was so movingly expressed on Monday, the day after the referendum with its decisive vote for the Evian formula. No touch of egocentricity has marred his tactful efforts to reconcile Mr ben Bella with Mr ben Khedda; they may yet bear fruit.

The Egyptians would not be human if they did not see in a strong, well-ruled Algeria a potential rival for Arab and African leadership. But President Nasser is far too genuinely concerned for the Arab reputation as a whole to wish to see Algeria's great victory squandered in petty dissension. There is plenty of time for Algeria to develop the national character that may seem to its Arab League friends to serve Arab interests best.

The clash between ben Bella and ben Khedda cannot really be placed in an east-west or inter-Arab context. It springs from more local complexities within the Algerian nationalist movement itself. Both are of the same revolutionary vintage, and both broke away together from the old, original nationalist leader, Messali Hadj, when he started to indulge in a "personality cult." But Mr ben Khedda's revolutionary spirit has been disciplined in the hard school of carrying responsibility and having to come to terms, not merely with France but with the world as it is lived in. Mr ben Bella's, preserved for five years in prison, is pure and undefiled. This is both his charm and his weakness. He is much like a man who, having been bedridden, finds the use of his limbs and indulges in too violent exercise. From his prison cell he saw the revolution pass by him, and resented ben Khedda's prestige as the organiser-in-chief of the terrorist battle in Algiers, and his subsequent rise to the premiership of the provisional government. But it is only fair to remember that Mr ben Khedda took over from his forerunner, Mr Ferhat Abbas (who was considered too mild to head the government when the Evian talks were in session), only after strenuous efforts had been made to get France to release Mr ben Bella. Indeed it is a thousand pities that France was unwilling to do so, since only thus could Mr ben Bella have been brought into the main stream of Algerian political ideas.

That the conflict between Mr ben Bella and Mr ben Khedda does not follow rigorous left-right or east-west lines is suggested by the nature of its partisans. Mr Ferhat Abbas, who, if Mr ben Bella claims to be "father" of the revolution, must surely be its grandfather, has been announced by the army leaders favouring Mr ben Bella as a true ben Bella man. Judging from the tributes he paid to the Algerian nationalist army as opposed to the political front when he returned to Algeria last Sunday, there would seem to be no doubt about it. Yet he is the most western-minded of the country's nationalist leaders, a rather old fashioned liberal. His grudge against Mr ben Khedda cannot be much more than that he lost the premiership to him.

MUCH may depend in the future on the attitude of Mr Belkacem Krim. There is no single nationalist leader who has been so deeply committed in all the vicissitudes and vagaries of the Algerian revolution. Brother in arms with ben Bella, he was for long commander in the field. The army admires him as a fighter, although in more recent years, as defence and foreign minister, he turned statesman and diplomat. He conducted the Evian talks and did not flinch last month from associating himself, if lightly, with the talks in Algiers with the European Secret army that brought European resistance to a mercifully rapid end. No leader has shown more strongly the courage of his convictions and in the present conflict his convictions are likely to count. He commands the loyalty of his district, the influential and densely populated Kabylia, and stands with ben Khedda, in spite of a personal attachment to ben Bella, which might yet affect his judgment.

The people of the Kabylia go most naturally with Mr ben Khedda, because their strong Berber traditions (which even in village life call for rule by committee rather than by a headsman) are deeply opposed to the so-called "personality cult." It is really from this Berber tradition that the Algerians have developed their preference for collective leadership, and their fear of dictatorial pressures. Yet this conflict among personalities, and even about personality, has a sadly distorted side. Cult or no cult, personality is something valuable in politics and not to be lightly dismissed. Mr ben Bella's is unquestionably so magnetic that in a less touchy climate he might, without buttonholing even a single soldier, have charmed himself to the top.

In King Coal's Wake

Britain can learn from European experience in finding new jobs for its miners

IT is just five years since the pit-props collapsed under the coal industry of Europe. Artificially sustained after the war by the need to provide industry at almost any cost (but without dollars) with the fuel it needed, European coal was in 1957 suddenly exposed to competition both from other fuels and from cheap imported coal from America. The old mines in which men have for generations won coal in sweat and in shared danger suddenly became economically useless, as they had for long been humanly intolerable. Meanwhile highly productive new mines, with all the advantages of wide seams and elaborate machines, opened up in new coalfields.

Between 1957 and the end of 1961, the number of workers employed down coal-mines in the United Kingdom sank from 566,000 to 447,000; in France it fell from 142,000 to 120,000; in Germany from 341,000 to 280,000; in Belgium from 111,000 to 66,000. The process of shrinkage and reconcentration on new mines is by no means over yet. Britain produces almost as much coal as the rest of western Europe; it is hardly a joke these days when people concerned with the Coal and Steel Community of the six common market countries suggest that Britain's entry into membership would merely double their biggest problem. Some cynics even forecast that British membership would increase the pressures in Europe that tend to keep up fuel prices and delay the necessary process of readaptation. But surely countries so deeply involved in this inevitable economic process should be able to act together more constructively than any one of them could on its own.

The collapse of the old coal areas, and the rise of the new, is more than an economic process. The need to pay men enough to attract them down the new mines, in areas without a mining tradition, forces up mining wages to a level that gives the old pits even less chance of economic survival. But in Scotland, in Wales, in southern Belgium, on the Ruhr and in central France, whole communities built around coal and coal alone have seen their *raison d'être* disappear. And miners are quite exceptionally well placed to make their protests heard.

Whatever language they speak, miners are apt to resemble each other pretty closely. Everywhere they are now paid above the average for their back-breaking labour. Intense group loyalties, left-wing politics and sturdy trade unionism are common to mining communities. The concentration of the mining vote and the industrial strength of the mining unions enable miners to exert exceptional pressures on governments and on public opinion; but because their interests are so special, and often so closely concentrated in small geographical areas, the causes they argue are all too often in conflict with the general economic interest.

Even where the workers' organisations persuade their members to accept the need for pit closures, all they can do is to urge that alternative employment should be provided in the mining areas to replace the jobs lost. This, of course, cannot be done by the mining companies, nationalised or not. Their preoccupation, quite rightly, is to disentangle themselves from areas where they have been losing money. Inevitably, any salvage operation must be undertaken by governments or, in continental Europe, by the new international economic institutions.

Sometimes the salvage operation does not need to be large; there are areas where the transition to other employment can be made with no difficulty, save for the miners reluctant to leave their proud trade. When some mines closed down at Bochum on the Ruhr the Federal German Government and the Coal and Steel Community were all prepared to leap to the rescue by helping new industry to move in. But their kindly offers were spurned by local industrialists and by the

Land government—and, sure enough, there were enough jobs going locally to absorb every one of the redundant miners.

But this simple solution is by no means always possible. More often, the dying pits are in areas where there are no established industries outside mining to absorb the redundant workers, and where the draconian solution of leaving communities to wither away proves politically unacceptable. In Europe it is rare for such regions to prove their plight by producing high unemployment figures. But the loss of the one high-wage industry may leave the whole local economy flabby. The Borinage riots three years ago—in which the local shopkeepers, significantly, played a leading part—convinced the Belgian government that it simply could not leave the solution to the problems of this worn-out and inefficient coalfield to time and attrition. Other governments both in the United Kingdom and on the continent have decided that the slow death of whole communities is too high a price to pay. It is two years since the Coal and Steel Community revised the Paris Treaty to empower it to help the readaptation of miners and mining communities to new and more profitable uses. The 1960 Local Employment Act was only the latest in a series of (fairly half-hearted) attempts by successive British governments to deal with the consequences of collapse in a variety of long-established industries, among which coal is at present the most needy.

The right policy is to choose brutally the areas in which closing down pits and assisting large-scale migration and retraining of workers who have to move is the only solution (some mining areas in the Welsh valleys, for example, are bound to revert to the state of mountainous semi-desert in which they would have remained if no coal had been discovered there); and in which others a policy of bringing new industries to the workers has a chance of success. In Britain the first worry under this head must be Scotland—but the problems of the Scottish coalfields are complicated by the parlous condition of the Scottish economy as a whole. Scotland has already been allotted 60 per cent of the total financial assistance offered under the Local Employment Act—but the first report* of the new Scottish Development Department describes the short-term outlook as "unsatisfactory," and reflects local feeling by calling for further efforts to attract new industries.

IN attracting new industries the old coal areas have some pretty crushing disadvantages. Communities built exclusively around the pits whose spoil dominates their horizons, and whose workings undermine the very ground, are hardly attractive to go-ahead manufacturers. Coal-miners, although they have often shown their adaptability to new skills, have a tradition of resistance to employers, and nowadays an expectation of high wages, that are equally discouraging. Very often the mining industry leaves behind it a pattern of communications adapted only to the transport by rail of coal to a market that may not be at all that sought by a newly arrived factory. Nevertheless the economic argument for moving industry to the redundant workers, rather than waiting for them to move to jobs elsewhere, has one solid piece of support. The scarcest resources throughout western Europe (this is the European miner's advantage over his American brother) are labour and housing: both are plentiful around the pitheads.

* Industry and Employment in Scotland, 1961-62. HMSO. 6s.

How to do it? The worst and most piecemeal approach is exemplified by the British Local Employment Act, which draws tiny circles round pockets of unemployment and qualifies any development within them for grants and government loans. Thus, in County Durham, good industrial sites a mere ten miles by bus from decaying pit villages fail to qualify for development aid. If it is considered that a stricken region should stand a good chance of sound economic survival, it is not enough to compel a firm to move into Wales simply by refusing an industrial development certificate in Berkshire, nor to attract American firms to Fife simply by the offer of a cheap factory. Such temporary dickering can, in the short run and at a price, provide enough new jobs to occupy the workless miners. But it cannot provide the purposeful view of the future without which no community can keep its self-respect. Fortunately, for the longer term, British experience can contribute ideas of value. The new road bridge across the Forth into Fife will benefit the county more than any amount of subsidies for new industry there. The Ministry of Labour's removal grants for workers shifting to another part of the country are an example of the constructive encouragement of labour mobility. Above all, the new towns have shown their worth in attracting workers out of the old centres and in providing a suitable—and profitable—setting for modern industry.

In general, however, the British have more to learn from the Europeans than they have from us. Since 1953, the Coal and Steel Community has set aside $65 million, and spent $22 million (independently of the sums spent by national governments) to help workers to adjust to economic change. Thus 115,000 ex-miners have been helped to retrain, or to move to a new mining area where work is to be found. Displaced men are paid a high proportion of their full wages for a year, or even more, after their job has gone. Vocational training is largely paid for by the High Authority, which also helps workers with their travelling expenses to a new job if it is out of the normal area. The siting of new industries in stricken areas is primarily a responsibility of national governments; but the High Authority undertakes expert studies of the economic prospects for such developments, and its blessing is likely to ensure that a firm can raise loans for development easily enough. (In Belgium the High Authority has even helped with the installation of an aluminium plant to employ ex-miners, which cannot have been easy for a body paid for largely by steel producers).

In the first postwar decade coal was supported, and encouraged to expand, by a combination of artificial circumstances. But when the moment of truth arrives—as it has also arrived in Britain for the railways—the real cruelty for those whose livelihood is affected is to prolong the agony. It is then that the true value becomes apparent of an economic organisation not subject to the nostalgic pressures of one-industry communities. The High Authority of the ECSC can do nothing until it is asked to act by national governments. But then it can undertake studies to see what development (if any) has a chance of giving long-term viability to a region; it can consult with bodies such as the European Investment Bank on necessary infrastructure developments like modern roads; it can pay workers during the first, unavoidable period of idlenesss, and retrain them in useful skills. It has set aside the money to do all this. These are the examples that the contraction of the coal industry on the continent holds up to Britain. It hurts, but it looks like working.

State of Malawi

With the emergence of Nyasaland to *de facto* independence outside the Rhodesian federation, a new—and surprisingly moderate—Dr Banda is becoming the centre of central African politics

NGWAZI the great Kamuzu Dr Hastings K. Banda, leader of the people of Malawi, prefers his title that way: he has twice been offered "chief minister" by the British Government, and has twice refused. He knows better. "Ngwazi Kamuzu" sounds grandiose to European ears, but "chief minister"—an accepted Colonial Office stage before "prime minister"—does not, in Malawi eyes, sufficiently convey the degree of power Dr Banda's party actually wields in Nyasaland. According to the colonial rule-book, indigenous ministers working with a constitution like the one Nyasaland has at present should be hesitant learners; in fact, Dr Banda and his Malawi party lieutenants are reshaping their country's political structure, planning its economy, and even conducting a foreign policy.

This is remarkable for a backward colony which, on paper at least, is part of a powerful federation; it is even more remarkable for being brought about by men little more than two years out of detention and only eleven months on from the first proper elections they ever fought. Their success has been built on qualities not found in every African country: on (so far) a realistic approach to African problems, on an ability to organise both the people and the chiefs of their tight little country, and on (so far again) a moderation in practice that belies the stridency of their voices. Nothing lasts in Africa, but if the present state of Malawi lasts beyond its emergence into official independence (an event probably due next year), then the effect on central African politics could be profound.

The British minister responsible for central Africa, Mr Butler, seems to have recognised this by repeatedly acknowledging Dr Banda's right to demand secession; this week Mr Butler agreed with Dr Banda that a confesence should be held in November to discuss Nyasaland's next constitution. That constitution will have to go far towards acknowledging the independent republic of Malawi if it is to measure up to Nyasaland realities as they are today. Since August, Dr Banda points out, everything his government has asked its colonial governor for has been granted (more money, presumably, excepted); every bill offered has been passed. The first five of these bills have served to whittle away the powers of the district commissioners and the chiefs, the two supreme local authorities under the colonial administration. Local government, education, local courts, agriculture, all have been Malawied; there is more to come.

Next week a Malawi-designed three-year development plan will be presented in the budget speech at Zomba, the capital. It will be followed by a conference of economists from the United States, India, Europe and Africa—a conference designed to attract development capital to the country. (At the same time, of course, Mr Butler's four advisers will be examining the books and working out whether Nyasaland will be able to carry on at all without subventions from either the Rhodesian federal government, or the British Government.)

By thus taking over the ship before it is launched, Dr Banda is giving himself as good a chance as any of keeping his country together after independence; he will still, however, be faced with the problems of poverty, ignorance, and the impatience of youth that this week sent Mr Nyerere of Tanganyika back to stay with his old landlady in Edinburgh for a short rest. Optimism is out of place in Africa; but Dr Banda's neighbours must assume that the strength the Kamuzu's country displays today will not wither away too quickly.

The first country that this could worry is Portugal; on the map, Nyasaland is a dagger in the head of Portgual's "overseas province" of Mozambique. The war in Angola was first made possible by the existence of an African-governed territory—the Congo—across the Angolan border; this gave the rebels an outside base. As a man with a position to uphold among African nationalists, Dr Banda might be expected to make threatening noises about Mozambique. He is doing just the opposite. The reason is that Nyasaland (the future Malawi) has only one railway to the sea, and this passes through Mozambique to the port of Beira. By closing the railway the Portuguese could do Dr Banda more harm in the short run than he could do them by sending ill-equipped rebels across the border. So taking his courage, his reputation, and a British colony's foreign policy in his hands, he went on a "private" visit to Portugal on June 20th, there to discuss railways and rebels with Dr Franco Nogueira, Portugal's minister for foreign affairs, and Dr Adriano Moreira, minister for overseas territories.

This is quite a lot for even Dr Banda to get away with. He may feel that he will make up for it in his African compatriots' eyes before the year is out by giving some assistance to Mr Kaunda in Northern Rhodesia. The Northern Rhodesian elections are due in October and Mr Kaunda may just possibly win enough seats in the legislative assembly to set him (albeit with greater political obstacles ahead) on the same road that has carried Dr Banda so far. A Banda-Kaunda alliance at the end of this year could be formidable in central African politics.

MR TSHOMBE, of Katanga, is displeased with the prospect: he is contributing heavily towards the election expenses of Mr Kaunda's African opponent, Mr Nkumbula. With Mr Nkumbula in charge in Northern Rhodesia, Mr Tshombe's position in neighbouring Katanga might seem more secure than it does today; Mr Kaunda and Dr Banda, in contrast, would be implacably hostile, and Katanga's chances of continuing to exist as a separate entity would be that much lessened. Mr Nkumbula's party is unlikely to get very far. Mr Tshombe's renewed contact with Sir Roy Welensky in Salisbury this week cannot have enhanced Mr Nkumbula's reputation among most Africans.

Much the same alternatives face the *white* government in Southern Rhodesia. Dr Banda's method of consolidating his position before making his move could be Sir Edgar Whitehead's undoing if Southern Rhodesian nationalists caught on to it. It is this method that has taken Nyasaland out, in effect, of Sir Roy Welensky's federation of the two Rhodesias and

Nyasaland. (Dr Banda's ministers tear up correspondence from the federal government.)

Again, Dr Banda's is such a well-known and powerful voice among black politicians that his emergence to officially recognised headship of an independent state would make his an influence doubly to be respected by Mr Nyerere and the Tanganyikans and Ugandans. And, assuming a Kaunda victory in Northern Rhodesia in October, the distance between these men and South Africa will be reduced to the width of Southern Rhodesia and Mozambique. But for the time being, and because he is an untypically realistic African, Mozambique at least seems safe from the great Kamuzu, Ngwazi of Malawi.

NOTES OF THE WEEK

COMMUNIST BLOCK

United against Chiang

EVEN at the height of the Russian-Chinese controversy it was obvious that nothing was more likely to bring the two communist giants together than an outside threat. It is hardly surprising, therefore, that Mr Khrushchev, in a broadcast on July 2nd that was primarily devoted to an account of his recent Rumanian trip, gave warning that "an attack on the Chinese People's Republic will be met by a crushing rebuff . . . from the whole socialist camp." He can give such an assurance all the more readily because he cannot genuinely believe that the United States will allow General Chiang Kai-shek to attempt an invasion of the mainland.

Yet it is significant that Mr Khrushchev seized this opportunity to assure the Chinese of his solidarity with them against outsiders. It has been argued that his assurances of support were not as strong as those he made in letters to President Eisenhower in 1958. He did, however, go beyond the formal requirements of the Sino-Soviet treaty of 1950, which was directed against Japan and, by implication, the United States. Mr Khrushchev's warning thus confirms the impression that a truce has been reached in the dispute between Russia and China. It is difficult to decide just what shifts of policy or ideology, in Peking or Moscow, have paved the way for the truce, but the signs of it are unmistakable. Delegations are once again travelling between the two capitals, and the general atmosphere is noticeably more friendly than in the recent past.

But the causes of the conflict, which earlier this year looked like leading to an open breach, have not been eliminated. Neither side has accepted the ideological arguments of its opponent, or been converted to the opposition line of policy. However, it is only when Mr Khrushchev starts fraternising with the Americans that Sino-Soviet differences about political strategy come explosively to the surface. The current truce may thus be a sign that no rapid progress is expected in the talks between Moscow and Washington.

LAOS

Back to Work

NO sooner had the interrupted Laos conference resumed its work at Geneva on Monday than the Chinese and north Vietnamese delegates called on the United States to withdraw its troops from Siam. Mr Malcolm MacDonald, the British co-chairman of the conference, reasonably replied that there was enough work on hand in defining and guaranteeing the neutrality of Laos without taking on extraneous problems. In fact, President Kennedy announced on Sunday—the day before the conference resumed—that 1,000 of the marines who were sent to Siam in May because of renewed fighting in Laos would now be withdrawn. This was clearly a gesture of goodwill, reflecting the reduced tension that has made the resumption of the conference possible.

That there are still American troops in Siam, on the other hand, takes account of the fact that the conference has yet to complete its work. The main obstacle is not, indeed, the presence of American forces in Siam, but that of several thousand north Vietnamese military personnel of various kinds in Laos. The communist delegations at Geneva still refuse to admit that north Vietnamese troops are there, and know that they could easily be withdrawn if any serious inspection of the border were proposed.

Back to the green table : Laotian delegates at Geneva.

In other respects, however, the omens are not unfavourable. The Russians did not join the Chinese and north Vietnamese in demanding an American withdrawal from Siam. The Siamese, who had been sulking about a temple which the International Court of Justice had awarded to Cambodia, turned up at Geneva on Monday after saying they would not be there. Best of all, Laos is now represented by a single delegation instead of three rival ones and can ratify any decisions the conference may reach. And back in Vientiane, those recent enemies, General Phoumi and Prince Souphannouvong, now minister of finance and minister of economic planning in the new coalition government, are said to be getting along famously, as Laotians say they do *entre Laotiens*. If this lasts, it will be an agreeable surprise, however, for the two men have little in common except an uncommon energy.

NATIONAL ASSISTANCE

The Needy Just Catch Up

SINCE the budget it has become apparent, even to the Treasury, that there is a case for pumping more demand into the economy. One of the best ways of doing this would be to make a timely increase in social service payments for the really needy : this should not mean raising old age pensions indiscriminately, but it should mean making a sizeable increase in the real value of national assistance rates. On Tuesday, the Government duly announced that it is to spend an extra £20½ million a year on these. But are the rises as generous as the Minister of Pensions made out ?

National assistance scales were last increased in April, 1961, at the same time as pensions and other national insurance benefits. They provided a minimum income, exclusive of rent, of 90s. a week for a married couple and 53s. 6d. for a single householder. From September these rates will go up by 5s. 6d. and 4s. respectively. Mr Boyd-Carpenter said that the new proposals will:

> in the case of the single householder appreciably, and in the case of the married couple by a smaller margin, more than restore the values which the scale rates which came into operation in April 1961 then had.

In other words, he claimed that the needy were not just catching up with the rise in the cost of living, but were improving their living standards.

In fact, however, between April, 1961, and May, 1962, the retail price index went up by 6 per cent and food prices alone by 7.3 per cent. The percentage increases in the new assistance scales are 6.1 for a married couple and 7.5 for a single householder. Since food bulks larger in the expenditure of the needy than in other people's, especially since their rent is taken care of separately by the Assistance Board, the new scales seem only barely to keep up with the rise in their living costs. Admittedly, part of the recent rise in food prices has been seasonal and caused by the shortage of potatoes, so that by September the food index may be lower than it is now. Admittedly, the new increases will bring national assistance rates up to, and for a married couple beyond, the ordinary pension level, thus making more old age pensioners eligible for assistance as well as entitling the million or so pensioners who already draw assistance to help them with their rent eligible for a bigger allowance. Admittedly, Mr Boyd-Carpenter was able to claim that since 1948 national assistance rates will now have increased by 139 per cent, against a rise of only 70 per cent in the cost of living. But a good opportunity to push forward further the real standard of living of the neediest people in Britain seems to have been missed.

MR HARE

Not Before the Children

LAST weekend, in impromptu answer to a question at a Suffolk meeting about the relationship of the mother country to the Commonwealth, the Minister of Labour remarked that some Commonwealth countries were "behaving in some respects like children" over Britain's common market negotiations. Everybody knows that this is exactly what many other ministers are thinking, largely because it happens to be true. Every sensible person in the overseas Commonwealth (even including some politicians there) ought to prefer the sort of British minister who speaks his mind with blasphemous candour to the drip who overlays his utterances with polite hypocrisy. Everybody with any acquaintance with current British politics knows that Mr Hare, far from being an outspoken blasphemer, is one of the mildest public characters since W. S. Gilbert's curate at Assesmilk-cum-Worter. But on Tuesday poor Mr Hare was made to do public penance in Parliament for his statement, and to explain abjectly that he had not meant what he said.

There will be three probable results of this apology. First, Mr Hare is likely to be even more circumspect and soft-spoken in his public utterances in future—although the sort of Minister of Labour that Britain in fact needs nowadays is a man who will speak out militantly, contentiously, through a loud megaphone, about every inflationary wage tussle which comes along. Secondly, because everybody knows that Mr Hare was treated a bit unfairly on Tuesday, there may now be a heightened tendency for his cabinet colleagues to rally round and to feel personally protective towards him ; this may have a paradoxical effect in blocking any change that might otherwise have been made in his department—towards a more militant exponent of an effective incomes policy—in any autumn reshuffle of the Government. Thirdly, the tradition has been re-established that in the common market debate with the Commonwealth, British ministers must always speak in circuitous platitudes, never in plain words. Those outside the Government who forced this apology, and those inside the Government who decided that Mr Hare must crawl into Parliament and make it, have not served the country well.

NEUTRALS

Temperance on the Nile

ECONOMISTS and others from some 25 countries are collecting at Cairo for a ten-day meeting that starts on Monday. Most of the governments that attended the meeting of non-aligned countries at Belgrade last summer are again sending representatives, in some cases, but not all, their ministers for economic affairs. But the sponsors, of whom Jugoslavia and the United Arab Republic have been the most indefatigable, have tried to ensure that the delegates at this conference muffle their political drums and concentrate on the shared economic problems of development, trade and aid. Secondly, the sponsors have tried to extend the membership of the Cairo conference to include as many as possible of those countries that are linked neither to the European Economic Community nor to its communist equivalent, the Council for Mutual Economic Aid.

So far as the second aim goes, the sponsors have had moderate success in Latin America, and not much anywhere else. Brazil and Bolivia, who went to Belgrade as observers, are now, with Mexico, participating fully ; Chile and Venezuela may send observers. Pakistan is a welcome newcomer. A number of others, including Tanganyika and Malaya, have been havering up to the last minute. Austria, Switzerland and Sweden turned down their invitations ; Nigeria first accepted, then changed its mind. Some countries may have shied off because they suspect that the sober stated aims of the conference could be turned upside down by anti-imperialist passion from some such quarter as the Cuban delegation. With the United States Congress becoming increasingly tetchy over the whole question of foreign aid, this is no time, the hesitant may have argued, to score a black mark in Washington.

But if the conference sticks to the exercise it has set itself, the results could be illuminating. The agenda roams broadly over both the international and the domestic aspects of development ; it gives the delegates a good chance of exchanging notes on the way that they are dealing with their problems—or being foxed by them. The intention is to set up a permanent expert committee, whose pooled experience might provide a useful step forward in the direction of self-help. The question of the impact of customs unions (by which is meant the European common market) on outsiders is tucked into the agenda between an attempt to work out schemes for controlling commodity prices and a discussion of the sources and conditions of international aid. This arrangement suggests that the three subjects, all of intense interest to underdeveloped countries, may, with luck, be treated with equal seriousness.

JAMAICA

Sugar, Mr Speaker

A MONTH before Jamaica's independence on August 6th, Sir Alexander Bustamante, prime minister since April, has spent this week in London at the head of a money-raising delegation. As if to make up for the years of dither and procrastination that attended the withering away of the West Indies federation, Jamaica has wasted no time in thrusting out into the lonely space of independence. Trinidad follows three weeks later on August 31st. The safe orbit of these small Caribbean states in a world cross-grained with all forms of political rocketry is by no means automatic.

Sir Alexander and his ministers are asking the British government for help of two kinds. He wants immediate loans or grants to cover the cost of the count-down (including the establishment of a miniature defence force), and, more ambitiously, he wants long-term help with his ten-year plan, which has as its target a 7 per cent annual rate of economic growth. Confusingly, Sir Alexander's Jamaica Labour Party is to the right politically of Mr Norman Manley's People's National party ; the prime minister himself has a useful line in demagoguery, but it would need a long stretch of imagination to call him left-wing. Both parties recognise the need for planning: Mr Manley campaigned as "The Man with the Plan" ; the Labour party retorted, successfully, that it was "The Party with the Programme." But plans and programmes both could become fantastical unless Britain and the United States decide to give them some basic substance.

One method of raising money might be

effective if it were not repugnant to Jamaica's sophisticated leaders. At present nearly one in five of the working population is unemployed, and the population, with emigration to Britain restricted, is expected to rise at the rate of 3 per cent a year at least. The government, sensibly, is trying to increase tourism, but the rich at play are no sight for the hungry. The bulk of Jamaica's income comes from sugar, cultivated by foreigners. But the new ministers wince at the thought of pressing money out of the United States by emphasising the analogies with Cuba, only 70 miles away. Instead, they insist that Cuba from Jamaica is as remote as Timbuktu; there is no contact between the two islands, and communism has never won friends in Jamaica. This is an honest approach; it could also, one day, turn out to be a sanguine one.

WAGES

The Engineering Settlement

THE rise of 3 per cent in wage rates in the engineering industry conceded this week would have come earlier if the unions had not muffed their tactics, and earlier yet but for the pay pause; the employers and the Government can therefore look back on their operation as a limited success. This is not because, even in this industry, where the workers themselves turned down a call to strike, wage rises have been kept down to near the official guiding light. In engineering, a national wage increase is merely piled inflationarily on top of other increases already secured at the plant level; average earnings in engineering for a 42 hour week have already risen by 12s. 2d. for fitters and 5s. 7d. for labourers since last June, in a period when nationally negotiated wage rates have not changed at all. But the great gain is that for next year it looks as if there may at last be no general and national wage demand in the industry. The Confederation of Shipbuilding and Engineering Unions has decided, instead, to concentrate on the wages of the lower-paid workers.

The employers are more than willing to discuss this. They have for long felt embarrassed at the extremely low level of minimum wages, raised by this settlement to £10 1s. 2d. for skilled men, £8 9s. 10d. for labourers and £6 18s. 6d. for women: these rates are always quoted to make a quite absurdly good propaganda case for those asking for more all round. Few newspaper readers take note when the employers point out that 99½ per cent of skilled and 91 per cent of unskilled workers in fact get more than these minima. But because of the insistence of the craftsmen on keeping their differentials over the less-skilled men (differentials whose full weight is in fact felt more in merit bonuses, piece-rates and other kinds of payment, rather than in the basic time-rate) it has never hitherto been possible to concentrate an increase where it is most needed, at the bottom of the scale. Although the executive of the confederation agreed, on the initiative of the Transport and General Workers, to press this year for an increase in the minimum rates, some craft unions will certainly do their best to see that any increases at the bottom of the scale are reflected all the way up the scales: and some left-wing craft union leaders disagreed strongly with the decision of the majority of the union negotiators to accept a mere 3 per cent this time. The mineworkers, too, decided this week to ask for a reorganisation of their wages structure: despite their internal disagreements, reform, not revolution, may be the unions' aim this year.

JUNIOR MINISTERS

Young Hopefuls

JUNIOR ministers are not the brightest stars in the political firmament. But, as leaders of the future, they in a real sense carry the Tory party's destiny, and Mr Macmillan will have to remember this when making any new appointments this summer and autumn. He is starting from a position where, if the Treasury and Board of Trade are excluded, there appear to be only a handful of present junior ministers who could hold high office with distinction. In the appointments of the past five years there have been some oversights which would have surprised most political tipsters in the mid-1950s. Mr Peter Smithers, for example, who has been in the House since 1950, a good European and a staunch Commonwealth man (he was PPS to Lord Boyd when he was Colonial Secretary), has unaccountably never been given office. Another wasted talent is that of Mr Nigel Fisher; and Mr Macmillan could do worse this year than find a place for Mr Gerald Nabarro whose eccentricities have grown with his frustrations, but whose abilities have not yet been visibly eroded.

In general, however, if he is to give his government the appearance of youth and vigour, the Prime Minister will have to

THE GAME LAWS

On Thursday, in the House of Lords, Lord Berners moved the second reading of his Second Game Law Amendment Bill, the dimensions of which seem to be in the inverse ratio of the magnitude of the consequences it involves. . . . Let us say at once that we entirely sympathise with the noble lords in the concern they express regarding the enormous increase of poaching assaults and murderous affrays. But it is because we look with alarm and aversion upon the almost guerilla warfare which is already carried on between the country population and the hated caste of keepers, that we earnestly deprecate a measure which would embitter the strife, and more than any other circumstance expose the rural policy to every influence detrimental to its character. The warmest advocates of the game laws admit that every attempt to increase their stringency has ended in utter failure. Both by principle, by prejudice, and by tradition, the rural population are opposed to the game laws. On principle, they believe that there is a natural distinction between wild animals and domestic creatures. They cannot understand that partridges were made for the rich, and not for the poor. They hold it iniquitous that the hare is allowed to eat their cabbages, and that they are forbidden to take the hare. They see in every field the damage done to the food they covet by overgrown preserves. . . . Moreover, village tradition connects the game laws with the most odious vexation and tyranny which the English people ever endured at the hands of their conquerors. Under these circumstances, even if the people had not what they think abstract principle on their side and if we had no experience, it would be the height of impolicy to aggravate a feeling so deeply seated in the breasts of all but the upper ten thousand. . . . We are not insensible to the advantages derived from field sports by the higher classes, nor do we advocate the right of trespass. But if it were only a question of reducing the game laws within the limits of a Trespass Act, as we think they should be, if not entirely abolished, we should raise no objection. And as for our young sportsmen, they have the heaths of Scotland and Ireland, and the wilds of Norway, Sweden, Canada, and the East to roam over and satisfy their propensities with less butchery and more romance. Be this as it may, it is perfectly clear that the privileges of the minority, however innocent, and even, in themselves, commendable, cannot upon any principle of sound policy, be maintained against the daily increasing crimes which they confessedly foster throughout the whole extent of the country, and which the remedy proposed would only envenom by a complication of artificial evils.

Man on the right lines

pleases by finding fault. A high wind is blowing in the Highlands. Two wires on the overhead transmission line begin to dance . . . and touch. There is a flash and a burn. This transient fault can be overcome—but it cannot be repaired until it has been looked for over the line's entire length. In rugged, mountainous country, and often in cruel weather conditions, the linesman must be out making laborious tests for mile after mile—and often week after week.

Ferranti have now found a way to make fault finding easier. With their Line Fault Locator, the maintenance engineer can detect the position of faults on high voltage transmission lines without leaving the substation. This is done by pulse reflection, the principle used in radar. The fault can be traced down to a short section of line, and quickly repaired so that the line is out of operation for the minimum time.

Our own day owes much to Ferranti's pioneer work in electricity. Transformers and summation meters for the Kariba Dam and the Niagara Falls Power Project . . . the **world's largest** generator transformers for the **British National** Grid . . . Ferranti have made **them all. In the** air and at sea, their research **into electronics** has made transport faster and **safer. Atlas, the** world's most advanced super-speed computer, comes from Ferranti. And Ferranti are leading the way into tomorrow.

LONDON OFFICE: KERN HOUSE, 36 KINGSWAY, W.C.2.

start drawing now on the parliamentary intakes of 1955 and 1959. An outstanding member of the 1955 intake is the Prime Minister's own son, Mr Maurice Macmillan who, were it not for the burden of his parentage, would have been in office some time ago. Mr Peter Kirk, who entered the House at the same time and has been one of the pioneers of the European Movement, would also be a good bet for promotion if only he could learn to tolerate fools—which means a sizeable portion of his own party—even a little gladly. Mr Richard Hornby, chairman of the party's education committee (he was once a master at Eton) and Lord Balniel, who distinguished himself by his liberal speeches on the Immigration Bill, are popular favourites for advancement.

Among the 1959 intake, Mr Humphry Berkeley has made a reputation for enlightenment and outspokenness, but has not thereby made himself the idol of the party whips. More acceptable to them might be Mr David James, who combines intellectual ability with military distinction. Among the abler Europeans are Mr Julian Critchley, who has clashed with the Government over defence, and Mr David Price (who would certainly bore the Prime Minister, but junior office should be a specific against this peril). Mr Charles Longbottom, who has earned golden opinions as PPS to Mr Macleod, may well be rewarded for his exertions. The promotion of Mr Christopher Chataway would do a deal to brighten the Tory image, and that of Mr Charles Curran would infuriate the Opposition. If Mr Macmillan needs to look for some suitable women to embellish his front bench, Scotland should rise to the occasion; Lady Tweedsmuir, who has been in the Commons since 1946, would be an embellishment anywhere, and Miss Betty Anderson, the member for East Renfrewshire, is also of officer material. The Prime Minister's skill as a cabinet maker is beyond question. It will be interesting to see if he is an adept at humbler joinery.

DEMONSTRATIONS

Heil!

THE National Socialist Party, whose members enthusiastically celebrate Hitler's birthday by dressing up in jackboots and armbands, booked Trafalgar Square for a rally last Sunday: the keynote was "Free Britain from Jewish control." Some of those who heard the paranoiac outpourings of the leaders of this tiny group—itself a breakaway from the British National Party, which was formed from an alliance of the National Labour Party and the White Defence League—indulged in the understandable reaction of throwing things, punching people, and generally replying to violent incitement with violence; quite a few, for whom there should be much less sympathy, had gone along expressly to do so. Nineteen disturbers were arrested and several were subsequently fined. Mr Jordan and Mr Tindall, the main orators on behalf of the nazis, got off free (although Mr Butler has said that legal action may yet be taken), and are delighted about the large publicity given to their nasty emotions.

The police did their best. When the uproar got particularly violent, they stopped the meeting until quiet was restored; but it was never restored for long. (Arguably, they could have arrested the speakers for insulting behaviour, but policemen are very rightly shy of doing things like that off their own bat.) In fact it is probable that, once given the chance of shooting off their mouths in public, the organisers of the meeting were looking forward to the chance of provoking a punch-up. It is natural to question whether the Ministry of Works should give up Trafalgar Square to people like this, while refusing it to the Committee of 100: the nuclear disarmers had, of course, wanted to break the law, but not to enjoy provoking others to break it.

It seems certain that the authorities or the police had powers to stop the holding of this meeting, before or after it had begun, under the Public Order Act of 1936 (directed against disorders caused during the fascist rallies of Sir Oswald Mosley). But in our sort of democracy it is right to err, every time, even sometimes quixotically, on the side of permissiveness. British fascists of various persuasions have shown that they can be violent—by knocking down an African diplomat in the belief that he was the late Patrice Lumumba, or by chucking a smoke bomb into the headquarters of the Movement for Colonial Freedom. It is surely desirable that such people should be allowed, from time to time, to come into the open to be identified: only when the disorder they are deliberately provoking causes genuine inconvenience to outside people need they be pushed out of sight, like other public nuisances. Mr Jordan has now been suspended from the Coventry school where he teaches; the decision on his future employment should not depend on his opinions but on the interests of the children taught by so controversial a personality.

EAST-WEST LINKS

Beyond Co-existence

"EVIDENCE of ideological apathy accumulates on both sides of the Iron Curtain." Mr Christopher Mayhew, MP, is happy to see it pile up. In a new pamphlet,* expanding arguments which he had set out in a broadcast last year, he calls for active co-operation between communist and non-communist governments, in place of a "sterile rivalry" based on the false assumptions of outdated ideology. The two immediate objectives of what he terms "Co-existence Plus" are "an ideological truce" and completely free contacts between peoples. The broader prospect is one of adjustment to the fact, already plainly seen by growing numbers of observers, that no one creed is going to sweep the world in the age of ideology, any more than one did in the age of religious crusades.

Such blasphemous ideas have already drawn the fire of the outraged faithful on both sides, the Soviet reaction being spearheaded by Mr Victor Mayevsky of *Pravda* with a couple of fine ranting exercises in question-dodging, which Mr Mayhew has helpfully printed as appendices to his pamphlet. There are certainly still a good few people in non-communist countries who view the world, as tenaciously as orthodox communists do (but the other way round), as the scene of a predestined fight to the death between the darkness and the light. Fortunately they do not, like their opposite numbers, hold the main levers of power.

Mr Mayhew quotes with approval President Kennedy's claim, in his State of the Union message last January, that "our basic goal" is

> a peaceful world community of free and independent states—free to choose their own future and their own system. . . We offer a world of choice—they (the communists) offer a world of coercion.

He gives persuasive chapter and verse for the argument that the "two camps" dogma is a ludicrous distortion of the reality of a world that already shows a rich variety of social (and political) systems; some of which variety is to be found even within the "socialist camp." But it is here, perhaps, that a fault may be found with his reasoning. He calls for "a clear, firm statement by the non-communist world of their own conception of co-existence." Can any clear statement of that kind possibly be agreed upon by the many elements that make up the richly varied "world of choice?"

* Co-existence Plus. By Christopher Mayhew. The Bodley Head. 57 pages. 4s. 6d.

CHURCH OF ENGLAND

Nine Rivers to Cross

THE summer session of the Church Assembly has had a heavy load of church legislation to consider. Of the nine measures, that on the Prayer Book is by far the most important. The Book of Common Prayer is part of the law of England and departure from it must be authorised by lawful authority. In practice the law is too strict and there are many departures from legal usage in parish churches. The new measure would allow the Convocations, with the agreement of the House of Laity, to authorise forms of service for an experimental period, with a possible extension for another seven years thereafter. A two-thirds majority must be obtained in all Houses. The Convocations would also be given power to authorise services for a preliminary trial period of up to two years in selected churches under the direction of the bishop. The concurrence of parochial church councils would be necessary if a service authorised by either of these provinces were to be used in any parish, and in the case of burial or marriage, the consent of the persons concerned or their families would also be required. There seems little doubt that the Church Assembly will pass this modest measure; and, because of its safeguards, there should be no danger of another 1928 when Parliament comes to consider it.

The Church Assembly is also revising other matters relating to ritual and ceremonial. The obscure ornaments rubric in the prayer book would be clarified by a measure setting out the vestments which a priest may wear; it seeks to empower him "at his discretion" to wear a cope on any appropriate occasion. No mention is made of whether bishops are authorised to wear mitres (to which they seem to have no legal entitlement), but this appears now to have been established by usage. It is worth recalling, however, that when Archbishop Lang was installed at York, he refrained from wearing a mitre in case it should provoke hostile demonstrations, and surreptitiously began wearing one later. Another measure would enable the Convocations and the Ordinary to authorise additional Holy Days to those listed in the prayer book, and permit the use of either leavened or unleavened bread at the communion service. It would also extend the right of using Latin for Church services, now confined to the ancient universities, the Convocations, and the colleges of Westminster, Winchester and Eton.

The Church Assembly is also laying its reforming hands on the second sacred institution of Anglicanism, the cathedrals. A commission is to be set up to revise the constitutions and statutes of all cathedrals. Every cathedral is to have a dean or provost and two canons based on the cathedral, engaged in "cathedral duties," a term which is to be liberally interpreted. These officials will now be paid by the Church Commissioners. The reform will not introduce another era of Barchester, but it should release substantial cathedral funds for local purposes.

EAST AFRICA

Black Ethos

IT is impossible, according to Mr Julius Nyerere, to devise a constitution that would be foolproof against a tyrant; certainly, as an African, he knows what he is talking about. The real safeguard, the Tanganyikan leader said in Dar-es-Salaam on June 28th, lies in the "ethic of the nation"—in other words, in the attitude of mind that most citizens bear towards dictatorship. This is true of Britain, where Parliament is supreme and the prime minister who controls it could in theory do as he chose—except, it must be supposed, for the national ethic. In Africa, where, unlike Britain, most constitutions are written and rigid, the built-in safeguards have not been proof against the national willingness to succumb to dictatorship in the interests of unity and promised economic advance.

For these reasons dictatorships may be expected to emerge in the east African territories of Kenya, Uganda, and Tanganyika. Mr Nyerere himself is likely to be president, and wholly in charge, in Tanganyika when the new constitution comes into force in December; if this is inevitable, it may also be not too bad while a pleasant man like Mr Nyerere is in fact the boss. But in Kenya and Uganda the divisions within run so deep that successful dictators may have to be of the nasty kind. The British Colonial Secretary, Mr Maudling, has just left for Kenya to see how far the tribal, personal, and trade union bickering has taken the country since he sent the Kenyan politicians home from an unsuccessful constitutional conference in Lancaster House at Easter.

The Ugandans have also been sent home by Mr Maudling—with a ready-made constitution for independence on October 9th and a ready-made quarrel for fighting out on October 10th. The arguing will be about two counties in Buganda, claimed by the neighbouring tribal kingdom of Bunyoro. Mr Maudling has laid down that these counties shall remain Buganda's, but be administered by the central government (in which Baganda politicians feature strongly); within two years there must be a referendum to decide, once and for all, the fate of the counties. Bunyoro has, somewhat bitterly, rejected this solution: it fears that the central government, dependent as it is on Buganda's support, will succumb too easily to the ethic that is tempting them down in Kenya and Tanganyika. It is not impossible.

JAPAN

No Orpington

UNLIKE some other conservative governments, Japan's Liberal-Democratic party seems to be able to constrict the economy without making the voters squeak. The restrictive measures imposed last September, to deal with the major balance-of-payments crisis into which Japan had drifted earlier in the year, have now taken effect—rather later than the government had hoped, but nevertheless effectively. The foreign trade balance appears to have been restored to a rough equilibrium, at least in the letters-of-credit figures (which have objections to them as a yardstick; but so does every other measure of the balance of payments). The other side of the coin, however, is that Japan's gross national product, after its soaring flights of the last three years, may now fall or mark time; if so, Japan will not be able to achieve, between 1961 and 1962 as a whole, the "mere" 5.4 per cent increase for which the government had budgeted. One consequence is that the annual round of wage claims this spring brought smaller increases than usual for many workers.

Yet, despite these difficulties, the elections to the upper house of the Japanese parliament on July 1st gave the governing Liberal-Democrats five more seats than they had before. This success, in an unusually high poll, was achieved at the expense of the more moderate of the two socialist parties, which lost five seats and now has fewer places in the upper house than a rarher odd Buddhist group called the Society for the Creation of Values—just what values, no one is sure. The other loser as a result of the election is a member of the Liberal-Democratic government itself: Mr Fujiyama, the director of the economic planning agency. Mr Fujiyama, who has ambitions for the premiership, has been saying for some months that the government ought to have put the brake on the economy harder and sooner, and had doubtless hoped that last Sunday's election would give a helping hand to his campaign. It did not give him this boost, and thus reduced his hopes of taking over the prime ministership from Mr Ikeda.

AMERICAN SURVEY

AMERICAN SURVEY is prepared partly in the United States, partly in London. Those items which are written in the United States carry an indication to that effect, all others are the work of the editorial staff in London.

Cross of Congress

WASHINGTON, DC

THE passage of President Kennedy's trade expansion Bill by an overwhelming margin in the House of Representatives last week not only prevented this year's congressional session from becoming an utter disaster for the Administration, but also served as a needed stimulus for flagging morale at the White House. Furthermore, the trade Bill, which gives Mr Kennedy more sweeping power to reduce tariffs than any other President has ever had, is his most substantial accomplishment in Congress so far. But those Administration officials who are hailing the House passage of the Bill as the break-through that will mean smoother sailing for the rest of the Kennedy legislative programme are going much too far. Rather, the trade Bill may well be the only bright spot for Mr Kennedy in a singularly depressing congressional session.

The wonder of last week's proceedings in the House was, in fact, not that the trade Bill was approved but that there was so much doubt about this beforehand. No other of Mr Kennedy's legislative proposals boasts such unanimity of support from national leaders of both parties and from business, organised labour and major newspapers. Months ago the President bought off Congressmen from the textile-producing states, the most powerful congressional voting block with protectionist tendencies, by promising new quotas on textile imports.

Yet, just two days before the House debate began, the Democratic leaders there were in a state of panic. They feared that a wave of anti-Kennedy sentiment, evidenced by the House a week earlier when it killed his farm Bill, would spill over into the trade debate and result in the passage of a substitute measure; this, in effect, would have prevented trade negotiations with the European common market for at least a year. The Democratic leaders were so apprehensive that they considered—but later rejected—courting Republican votes (and risking the loss of important trade union support) by modifying a section of the Bill which provides cash payments to workers who lose their jobs because of the competition of imports. As it was, the defeat of the substitute Bill by an 82-vote margin was made possible in no small part by the representatives of big business, who argued for Mr Kennedy's Bill with the Republicans and by the decision of the Republican leaders in the House not to make a party issue out of the trade question—the first time for many years that they have been so helpful.

As for the other Kennedy Bills, which have no such broad and bipartisan base of support, the outlook is bleak indeed as Congress aims for an adjournment early in September. This week or next the Senate may approve the plan for providing health care for the aged through the social security system, but this Bill is dead in the House. Continuing efforts by the Administration to secure tax revision and tighter government controls over farm production face apparently insurmountable odds. Those Kennedy proposals which depart most from conservative orthodoxy, such as stand-by powers for the President to reduce taxes temporarily or federal standards for state unemployment benefits, have been rejected out of hand by Congress without a hearing.

This demolition of Mr Kennedy's programme, along with the stock market decline and growing prophecies of a recession on the horizon, have bolstered Republican optimism over the congressional elections in November—and even over the possibility of ousting Mr Kennedy from the White House in 1964. On the other hand, some Democrats believe that Mr Kennedy's setbacks in Congress give him the opportunity to go to the public this autumn and demand the election of more Democrats to help him. Some peculiarly involuted political thinkers among the Democrats maintain that it would have been a political asset for the Democrats if the Republicans had killed the trade Bill in the House last week, thus exposing the total irresponsibility of the Republican party.

Such Washington speculation, however, seems far removed from reality. In the past, the success with which a President has pushed his programme through Congress has had little influence over the outcome of presidential elections, much less over that of congressional elections in years when the Presidency is not at stake. As in any off-year elections, the coming balloting will be influenced primarily by the state of the economy and of world peace on election day, as well as by local factors in the more than 460 separate congressional contests. If present conditions continue into November, the Democratic margins of 3 to 2 in the House and 2 to 1 in the Senate are not likely to change markedly, although probably the Republicans will pick up a number of state Governorships.

MR KENNEDY'S current troubles with Congress by no manner of means signal his political downfall; but why should a President who is consistently popular with the public, according to the Gallup poll, receive such shabby treatment at the hands of a Congress controlled by his own party? Mr Kennedy offered an obvious and essentially correct explanation at last week's press conference when he suggested that the Democratic majorities are illusory because they contain many conservative Southerners ideologically in sympathy with the Republicans. But, in fact, the President has been remarkably successful this year in winning support from southern Democrats and it has been non-southern Democratic defectors in the House and particularly in the Senate that have been causing much of the trouble.

These defectors simply believe that the safest political course for themselves is to oppose many of Mr Kennedy's Bills. Since there is no effective party discipline under the American system, a President enjoys complete legislative success only in times of national emergency or when his Bills have demonstrable political appeal. Mr Kennedy's proposals of 1962 contain no such appeal. Normally loyal Democratic senators fear reprisals from the voters on election day if they support the President's major tax proposal, which the House has already adopted; this would authorise the withholding of present taxes on dividends and interest payments. The President's uncongenial but eminently sensible plan to try to reduce the immense surpluses of wheat and maize by controlling production appeals neither to the farmer nor the city dweller. His health plan does have some popular support, but this is mainly in northern metropolitan areas where the trade union movement

is strong, areas over-represented in the electoral college that picks Presidents but under-represented in Congress.

The Administration has sought to counteract the basic lack of public enthusiasm for the Kennedy programme by what probably ranks as the most persistent campaign of persuasion and pressure ever experienced by individual Congressmen. Efforts are made to secure a single congressional vote by reasoned arguments, by promises of political favours, by threats that federal spending in the Congressman's district will be reduced. But many members complain that there is an illicit, shades-down aura about these tactics which is eroding congressional goodwill toward the Kennedy Administration. One introspective Senator whose vote for one proposal was secured by some economic favours for his state now admits that he feels a twinge of conscience every time a White House agent enters his office, and he is apt to oppose the Administration occasionally just to convince himself of his own integrity.

Consequently, a good many pro-Administration Democrats in Congress would prefer Mr Kennedy to subdue his campaign of private persuasion on Capitol Hill and instead build a fire under Congress by taking his case to the public. The President's aides retort that any such efforts might completely alienate Congress, might diminish the President's popularity and probably would not do much good anyway. It is true that Mr Kennedy's recent unusual public appeal for his health plan did little more than strengthen the opposition to it. But this cannot be considered a fair test. The circus-like atmosphere of a Sunday afternoon rally in New York's Madison Square Garden is scarcely the proper setting for a reasoned exposition of a complicated issue, and Mr Kennedy's impromptu, rambling remarks were reminiscent of his campaign oratory at its worst.

At any rate, the Administration will keep plugging throughout the oppressive Washington summer, going through the annual chore of coaxing foreign aid money out of Congress and generally trying to make the best of a bad session. There remains a hope that at least some of the provisions of the farm Bill, passed by the Senate before it was rejected in the House, can be salvaged. The Treasury keeps exploring every possible avenue leading to passage of the tax Bill, although there is a growing belief that nothing short of an amendment for general tax reduction will save it. Unless there is a significant change in the composition of Congress, things may be a little better in 1963. The income tax reduction planned for next year's tax Bill should please Congress. There is reason to believe that opposition to the health plan cannot remain much longer in its present supercharged state. Nevertheless, Mr Kennedy will not be blessed by any blanket endorsement of his proposals and most probably will continue to find dealing with Congress the most unrewarding of all the President's difficult tasks.

Interdependence Days

IT was a striking idea for President Kennedy to dedicate Independence Day to the newer concept of interdependence among free nations and to hold out to Europe, once it is truly united, the promise of a concrete Atlantic partnership. Speaking in Independence Hall, where the famous declaration was signed 186 years ago, he stirred his hearers by a vision of to what could be accomplished by a union of free men in the fight against world-wide poverty and against the threat of war and coercion. Interdependence is not limited, however, to the Atlantic. Only three days earlier Mr Kennedy had returned from a visit to Mexico, America's still suspicious and withdrawn southern neighbour. Mr Kennedy was only the second American President to visit Mexico City and the vast crowds—as well as the absence of any anti-American demonstrations—may have testified to natural curiosity and the efficiency of the police as well as to warmth of feeling. But the welcome was still remarkable in a country where ancient resentments have been reawakened by the vexed question of Cuba. Mexico voted against the expulsion of Cuba from the Organisation of American States and is one of the five Latin-American countries which continue to recognise Sr Castro's government. But enthusiasm for him in Mexico has been waning since December, when he openly announced himself as a life-long Marxist.

Cuba was certainly discussed by the two Presidents, but wisely Mr Kennedy came with no expectations of altering Mexico's stand. From his speeches it is plain that his real aim was to associate Mexico much more closely with the lagging Alliance for Progress, the 10-year plan for raising standards of living and of social justice throughout Latin America. Mexican enthusiasm and co-operation, if it can be awakened, would be particularly helpful, not only because it is the second-most populous country below the Rio Grande, but also because, Mr Kennedy said, the aims of Mexico's fifty-year-old "continuing revolution" are so similar to those of the Alliance. In the breaking-up of large estates to provide small holdings for the landless Mexico has had long, if not very successful, experience. As a pledge of American interest in Mexico's agricultural programme an agreement was signed for a 40-year loan of $20 million for rural credit on exceedingly easy terms. If it wishes, the country might become a show-case of the Alliance.

Mr and Mrs Kennedy, young, gay, complimentary and Roman Catholic, did much to alter the stiff and superior image of Americans which many Mexicans have. The visit also gave a little more substance to the old concept of the good neighbour. The two Presidents discussed the importance of stabilising the prices of Mexico's exports and Mexico's grievance about discrimination against its cotton, coffee, metals and sugar in the American market. Such problems are not overcome overnight, but the United States promised to try to remove, simpler frictions along the border. One is the saltiness of the water which Mexico receives from the Colorado River for irrigation purposes; this is due to American use of the water first and has ruined many acres of good cotton and wheat land in the Mexicali Valley across from Arizona. The other concerns the Chamizal—a bit of land transferred from Mexico to the United States by the wanderings of the Rio Grande. Although it was awarded to Mexico as long ago as 1910 the United States has never honoured the findings of the Canadian arbitration commission.

Sand in the Sugar

WHILE President Kennedy was busy smoothing the way of the Alliance for Progress in Mexico City, a Latin-American storm was blowing up in Washington over sugar, an export of vital importance to many countries in the western hemisphere. Ironically this was due partly to the fact that the compromise between the Senate and House, which was hammered out unexpectedly over the weekend, was closer to the Senate Bill and to the Administration's views than anyone had hoped. Usually the House, under the adroit generalship of Mr Cooley, the chairman of its Agriculture Committee, has the last word on sugar but this year the Senate rebelled, sickened by the clouds of lobbyists for sugar-producing countries which have descended on Washington. Its arm was strengthened by the probability that Mr Kennedy would veto any measure which followed the lines of the House version.

The new Bill, which makes a start toward the freer sugar market and the abolition of premium prices for foreign producers which the Administration favours, is not, however, popular with the Latin American suppliers; they much preferred the cosy old system. The Dominican Republic, where General Trujillo's democratic successors are struggling to establish themselves and face an election next month, threatened to cut itself off from the Alliance for Progress when it found it was to lose the windfall—at premium prices—which it had inherited from the Cuban quota. The Administration is now backing an attempt to provide somewhat higher quotas not only for the Dominican Republic but also for Peru and Argentina; the instrument, appropriately, is a Bill dealing with honey-bees. The Administration is also proposing more foreign aid to help the Dominicans to diversify their economy, but the Latins found their sugar money sweeter.

There was no real dispute between the Senate and the House over reserving a larger share (60 per cent) of America's sugar market for its own producers. The real quarrel was over the system of quotas and premium prices for foreign suppliers and in particular over what should be done with Cuba's 3.2 million ton quota under the law which expired on Saturday; its present government is not allowed to send any sugar to the United States. The Administration wanted to retain a theoretical 2.6 million ton quota for Cuba, to be used to reward a democratic government if one appears; the House allotted only 1.5 million tons to Cuba and distributed this temporarily among eleven other countries thus, as Senator Fulbright remarked acidly, giving them a vested interest in keeping Sr Castro in power. The final compromise puts the Cuban quota at only 1.6 million tons, but this is to be thrown open to all competitors at the world price, which is 2 or 3 cents below that in the United States. Apart from the Philippines, countries allotted quotas—there will now be 23 of them—will have to give up their premium gradually over the next ten years. The whole battle over foreign sugar will be reopened at the end of 1964. But it is likely to be fought under more enlightened conditions now that the extent of lobbying for quotas—and the cordial relations of Mr Cooley with Dominican sugar interests—have been put on record.

Non-conforming Court

EVEN without the explosive finale of the decision on school prayers, the term just ended by the Supreme Court amply earned the right to be called historic. Especially within the past few months the Court laid down far-reaching rulings, some of them in areas where it had heretofore trodden very gingerly. The decision on reapportionment, for example, allowing federal courts to consider cases challenging the composition of the State Legislatures, seems certain to have even more revolutionary effects on the country than the decision on prayer. Already more than two dozen states have undertaken the long-postponed chore of redrawing the lines of legislative districts in order to break the hold of rural areas and to give fairer representation to the cities and new populous suburbs. An even more controversial ruling by the Court has been overshadowed because the decision on prayer was announced the same day: the opinion that the Post Office was wrong to refuse to handle certain magazines alleged to appeal to male homosexuals.

This was the latest of increasingly strict interpretations of the First Amendment's guarantees of freedom of the press; the Court seems to be moving toward a narrow definition of obscenity which is bound to arouse the ire of parents, teachers, and religious groups throughout the country. The recent decision—that the magazines were not patently obscene—allowed one Congressman to sneer that the sum of the Court's work that day was "obscenity, yes; prayer, no." Earlier in this year's session, congressional disfavour was also incurred when nine convictions for contempt of Congress were reversed. The Court found that the indictments did not specify the subject under inquiry at the time that the witnesses refused to answer the questions of a congressional investigating committee. In other far-reaching decisions, it was decided that California's statute making addiction to narcotics a crime was unconstitutional, and that under certain conditions trade unions could break no-strike clauses in their contracts.

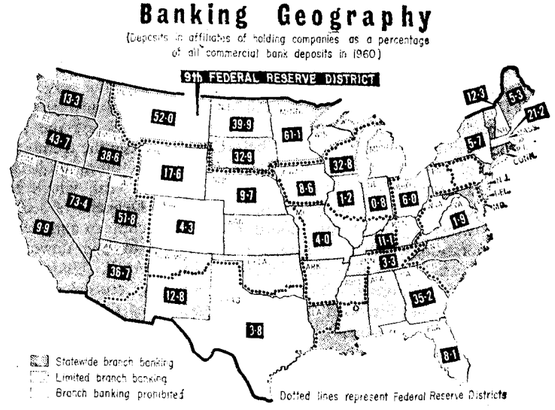
It is perhaps not a coincidence that, at a time when America is accused of moving toward ever greater conformity, the Supreme Court should tend toward stronger assertions of the rights of the individual against organized society, particularly Congress and state governments. The liberal swing of the past few months was undoubtedly aided by the loss in the spring of two of the more conservative justices: Justice Whittaker, who retired, and Justice Frankfurter, who became ill. What complexion the next session will have is still unknown; the new Justice, Mr Byron White, has not yet revealed his judicial temper, and it is not certain whether Justice Frankfurter or Justice Black, who has just completed 25 years with the Court, will return. But the next term, with many cases already postponed from this one, is almost certain to be the most overworked in history.

Families of Banks

FROM A CORRESPONDENT IN MINNEAPOLIS

THE Ninth Federal Reserve District, which stretches more than 1,500 miles from the iron ranges of the Great Lakes west to the mountains in Montana, is the stronghold both of the independent banking tradition and of the group banking (or holding company) movement. The small "unit" bank, locally owned and serving its local community, was a part of the original small-town pattern of settlement. But the small banks, like the small churches and schools and farms and the small towns themselves, were pressed inexorably toward larger, stronger combinations by the instability of agriculture and income on the Great Plains.

Examples of chain banking had appeared in North Dakota before the turn of the century. Now the four registered bank holding companies which have their headquarters in the Twin



Cities of Minneapolis and St Paul—the region's economic capital—dominate commercial banking in their area to an even greater degree than do the larger groups in upper New York State or in the states west of the Rocky Mountains. Moreover, in the Ninth District, where the groups were formed by the association of independent banks, the group banking movement is "purer," with fewer banking offices in the form of branches and more in the form of independently-organised affiliated banks. Two of the

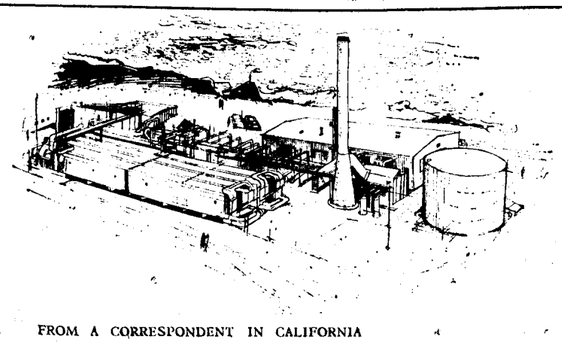
four Twin Cities groups are predominant: Northwest Bancorporation, the third largest holding company in the country ($1.9 billion in deposits, with 77 banks in 87 communities in seven states) and First Bank Stock Corporation ($1.7 billion in deposits, with 87 banks serving 74 communities in five states). With the far smaller Bank Shares, Inc., and the Otto Bremer Company, they account for some 60 per cent of all commercial deposits in Minnesota, 52 per cent in Montana, 33 per cent in South Dakota and 38 per cent in North Dakota. In the country as a whole, holding companies accounted in 1961 for about 8 per cent of all commercial deposits and operated in 31 states, including 14 of the 18 in which branch banking is forbidden or severely restricted.

All the factors which contributed to the rush to form holding companies in the nineteen-twenties worked with particular force in this area: the desire to keep the region's financial institutions under local control, the agricultural distress pressing on the country banks, the receptive securities market in 1929 and, from the local banker's point of view, the opportunity to exchange the shares of his own small institution for the more marketable ones of the new corporation. By 1931 both of the big groups had succeeded in acquiring a substantial number of important banks, but it was a strain to keep them all open throughout the nationwide banking crisis which followed. It was not until 1945 that Northwest and First Bank Stock began expanding again, particularly into the iron-mining regions, the fast-growing suburbs of the Twin Cities and the other cities that are attracting the bulk of the new population and industrial development.

> A bank group, as a Northwest official defined it in 1929, was "a system whereby a number of corporately independent financial institutions, retaining their own identity, capital, personnel and management, are co-ordinated, through majority stock ownership, by a supervising holding company operated by the banking interests of the territory which it serves."

Bank groups in the Ninth District provide more than most holding companies do in the way of supervision and services to their affiliates: audits, retirement and profit-sharing programmes, assistance with construction and central purchasing and advice on insurance, income taxes, loan and investment policies and bank operations. Last year, First Bank Stock retained a major national agency for the first time to advertise the "First Family of Banks." Most important, perhaps, has been the development of a group-

Drink from the Pacific



FROM A CORRESPONDENT IN CALIFORNIA

IT may be of some interest to the two British firms, Richardsons Westgarth Ltd., and G. & J. Weir, Ltd., which bid against two American firms and each other for the contract for the salt water conversion plant at Point Loma on the outskirts of San Diego, that this has developed a number of "bugs" since it began preliminary operations at the end of last year. The plant went into production at the capacity rate of 1 million gallons a day at the beginning of April. But before the end of the month its operations were halted temporarily.

The contract for the $1.6 million plant was won by the Westinghouse Electric Corporation, which built it on a promontory next to San Diego harbour in southern California. The reference to "bugs" is not intended to be derogatory. The Point Loma facility is a pilot plant, at which, it is hoped, solutions will be found for the problems which are bound to arise. The nature of these problems, and the steps taken to solve them, will be of general interest to the young and fast developing industry concerned with the conversion of salt water to fresh.

At Point Loma desalting is accomplished by high-efficiency multi-stage flash distillation. Sea water at about 65 degrees Fahrenheit flows by gravity through an intake extending out into the Pacific and is pumped into an evaporator which consists of horizontal vessels each about 124 feet long. Here the heated brine "flashes," or vaporises, into steam which falls back into cool condenser tubes. This flashing operation is repeated through 36 successive stages and by the end the water is said to be virtually free of impurities.

Among the problems encountered has been the teeming marine life in the ocean; at times this has blocked the screening system, which has had to be modified. Deposits of scale have also caused some concern and were the principal reason for shutting down the plant at the end of April. Under constant review is the effect of corrosion upon the structural materials of the plant, though this is a long-term rather than a short-term study. Various modifications have been made, and still are being made, in the pattern of flow.

The Point Loma plant, whose cost was shared by the federal government and California, is one of three at present in operation under the programme authorised by Congress in 1958. The two others are at Freeport, Texas (also with a capacity of 1 million gallons a day of fresh water), and Webster, South Dakota (250,000 gallons a day). Recently the contract was let for a fourth plant at Roswell, New Mexico (1 million gallons), and ground probably will be broken this month for the fifth, at Wrightsville Beach, North Carolina. When these are finished a salt water conversion plant will be in operation in each area of the country where conceivably a commercial facility might become economic eventually.

Each uses a different process. The flash distillation unit at Point Loma is basically the same as the system used on modern ocean passenger liners to produce drinking water when at sea. However, on a ship reliability of performance is uppermost in importance. With a land-based plant and one looking towards the eventual use of sea water to supplement the supplies of a community, the price has also to be weighed. Re-engineering of the seaborne flash distillation process to fit it for lower-cost operation on land is said to have contributed to the problems which have arisen at Point Loma.

Even with penny-pinching, fresh water from the Pacific is expensive. When the facility is operating regularly around the clock it probably will not yield drinking water for less than $1.25 for 1,000 gallons. The city of San Diego, as its contribution, has contracted to buy this water for 20 cents a thousand gallons—compared with a price of 15 cents for water from the Colorado River—and the federal government will subsidise the difference.

At present converted sea water from Point Loma could supply only about 1.5 per cent of the 70-80 million gallons used by the city every day. But if the "bugs" can be removed from the process, the sea may become an important source of drinking water for the fast-growing urban area extending from Los Angeles to San Diego. Even the water to be brought from the north of California under the Feather River project may not suffice to keep the taps running if this expansion continues.

Chemical New York

King George IV
OLD SCOTCH WHISKY

"Yes, I'm glad you like it. Nothing to touch a fine old Scotch whisky. That's King George IV you're drinking. Really know the art of blending, don't they? Worth telling your friends about."

EXTRA SPECIAL. Guaranteed to contain the finest Highland Malt and other Scotch Whiskies matured in seasoned wood. *Bottles 41/6d., Half bottles 21/9d., Quarter bottles 11/2d., Miniatures 4/3d.*

wide programme for the selection and training of staff.

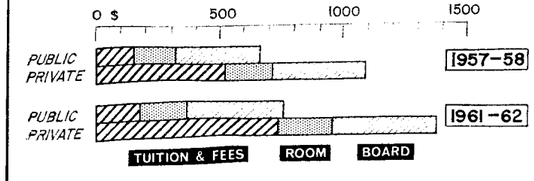
In the thirty years of controversy over the growth of the holding company system in this region the independent bankers (whose national association has its headquarters in Sauk Centre, Minnesota) have brushed away all arguments about the autonomy of affiliated banks; they regard the groups simply as a device to circumvent the legal barriers against branch banking. They cite the statistics on the concentration of deposits and deprecate the implications for the control of credit and for the pattern of economic development. The companies, on the other hand, argue that they provide important services, and that there is a need for substantial accumulations of capital in a region with small banks and a history of agricultural instability. They suggest, too, that what the independent banker (who is frequently in something of a monopoly position within his own community) really dislikes is not so much the size of the whole group as the competition its local affiliate is likely to give him, particularly in the field of retail banking.

The restrictive legislation which Congress enacted in 1956 was particularly significant for these groups, with their many small banks spread over several states. It barred them from making acquisitions across state lines, and the groups can now expand only within Minnesota or in states where local laws permit their affiliates to establish branches (currently only in South Dakota). Moreover, the Federal Reserve Board, somewhat to the surprise of the holding companies, has required them to divest themselves of some non-banking subsidiaries and has recently rejected certain applications from both Northwest and First Bank Stock to acquire additional banks in Minnesota. In voting last year to deny Northwest's application to acquire a bank in western Minnesota, the Board took the position that it must consider not only the size of Northwest but also the extent of holding company banking generally in the trading area affected. This decision was upheld last month by the Federal Court of Appeals. In addition, both groups have recently been denied the right to acquire new affiliates in suburbs of the Twin Cities. Their existing banks account for some 80 per cent of the commercial deposits in the metropolitan area (which now contains nearly half of the population of the state) and members of the board concluded that it would be desirable to have someone else supply the required banking service. The records of these holding companies, like those elsewhere, have also been subpoenaed by the anti-trust division of the Department of Justice and at present are being considered by the federal grand jury.

Recent studies have concluded that, if independent bankers really want to ease the pressure for unrestricted branch banking, they might be wise to leave room for some limited use of the holding company device—possibly for their own members. But they remain unconvinced. In Minnesota they are trying to restrict group banking on a statewide basis and are fighting even the limited branch-banking proposal put forward at the last legislative session by the state's only mutual savings bank, which is now confined to a single office in downtown Minneapolis. Officials of the groups, for their part, hope that eventually Congress will reassert the interest of the federal government in banking policy and will open the way for affiliates of holding companies to engage in branch banking at least within local trading areas.

COLLEGE CHARGES

As a result of the increase in academic salaries and in other costs students are having to pay more to attend college; the average charge for tuition has gone up by 10 per cent in the last two years in publicly-financed institutions and by 19 per cent in private ones; in the previous two-year period the respective increases were 8 per cent and 17 per cent. On a percentage basis there have been roughly similar rises in charges for rooms, but the cost of food has gone up much less. The chart shows what male students pay; the average rate for a woman's room is slightly higher in both types of college, but the public institutions charge her less for her meals than they do her brothers, while the private ones charge her a good deal more. At publicly-financed colleges students from other states pay substantially more than the chart shows for tuition—an average of $432 this year instead of the $185 paid by local residents.



To Pray or Not to Pray

CONGRESS, more unanimously angry even than America's religious leaders over the Supreme Court's ruling against prayers in tax-supported schools, is in a mood to launch amendments to the Constitution. The Senate has already begun hearings on various proposals, which began to flood in as soon as congressional epithets against the Court had died away. Although there has been an appeal for change in the Constitution from the Governors' Conference of the heads of 50 states (Governor Rockefeller of New York abstaining), it is not likely that an amendment linking church and state would survive the tortuous route required for its adoption: approval of two-thirds of both Houses of Congress, plus that of three-fourths of the State Legislatures. In the House of Representatives a stock of such resolutions faces an initial hurdle in Representative Celler of New York, the chairman of the House Judiciary Committee and the lone Congressman to give outspoken praise to the Supreme Court's action. They will get no priority in his committee, for he sees them as "an entering wedge to destroy one of the most important tenets of our democratic faith."

A more vulnerable target of congressional wrath is apt to be the Kennedy Administration's Bill for federal aid to colleges. It is now in the hands of a House-Senate committee which is trying to find a compromise between the different versions that each has passed. The Bill has already been bogged down by the troublesome question of whether to give grants, as well as loans, to church-related colleges. Washington observers see the Bill's chances of passage as dim—even though President Kennedy tried to give faltering legislators a push by declaring that he saw nothing unconstitutional in giving federal aid to church-controlled colleges since attendance at college, unlike that at secondary school, was voluntary.

The decision has produced some swift results and some defiances. The school authorities of the District of Columbia have sought legal advice on whether to suspend immediately both the required daily Bible readings and recitation of the Lord's Prayer. The New York State Department of Education, whose committee-written prayer started the row, were disappointed in the decision, but have promised to accept it as law. Yet some local New York school boards said they would defy the ruling; so have the Governor of New Jersey and the superintendent of schools in Atlanta, Georgia. But most of the country's school administrators, especially those in the 22 other states where daily school prayers are required by law, are thankful that the long summer holidays will postpone the "to pray or not to pray" crisis until the autumn.

THE CONFUSION OF WORDS IN THE WORLD OF MAN-MADE FIBRES

THE NUMBER ONE PROBLEM THAT CAME TO LIGHT AT THE SECOND WORLD CONGRESS OF MAN-MADE FIBRES IN LONDON

The world of man-made fibres is a wonderful world of invention.

But, a leading question at the Congress: Is it, perhaps, too inventive?

Too inventive in the manner, and profusion, in which it talks about itself?

First, there is laboratory talk: acrylics; acetates; triacetates; polynosics; and whatnot. Most manufacturers don't understand it. Most merchants don't understand it. And most consumers don't understand it. Most people, after all, are not chemical engineers.

Then there is number talk about blends: 70/30; 65/35; 55/45; 50/50. It may add up numerically. But, to consumers, how does it add up in the way of performance?

And label talk. Fibre and fabric names try hard to sound alike, yet be different. How can consumers tell one from another?

And, finally, there is advertising talk. A scan through our notes made at the Congress turned up this highly relevant quote:

"... naturally, the consumer will often be confused by the bewildering medley of fibres with varying properties and qualities which clever, and sometimes even uncritical, advertisements offer him. ..."

One thing came clear in the Congress: there is a confusion of words in the world of man-made fibres. People went away from the Albert Hall carrying resolutions to the effect that something in the name of clarity needs to be done.

How can the problem of confusion be solved?

It would seem that the answer would have to come from a thorough and intelligent programme of:

(1) standard setting;
(2) testing;
(3) policing; and
(4) promotion.

Such a programme would call for a deep technical knowledge of textiles, an ability to achieve standards, and an ability to make those standards clear to millions of people.

There are precedents.

Once upon a time, there were many, many different ways to say shrinkage control. And one man's word seemed as good as another's. But to-day, one word—"Sanforized"—has emerged as a clearly understood and wanted standard all over the world.

And another label—"Sanforized-Plus"—is becoming the standard to-day in the field of wash-and-wear.

It is interesting to note that both these standards have *not* competed in any sense with the brand names of fibres, finishes, fabrics, or garments. The "Sanforized" name is simply an added factor in making performance claims clear and convincing to consumers.

We of the Sanforized Company have every sympathy with the views that were expressed at the Congress.

Every sympathy, because we have, for many years, been concerned with the setting of standards and the simplification of textile and garment labelling.

We will be glad to sit down with interested parties and talk about these problems.

We offer you our experience, inventiveness, and textile know-how in exploring technical standards and then in presenting those standards—in the simplest possible terms—to both the trade and the consumer. May we hear from you?

THE WORLD OVERSEAS

Algeria's October Days

FROM A SPECIAL CORRESPONDENT IN ALGIERS

PRESIDENT DE GAULLE has solved his Algerian problem; but the new Algerian republic begins its life in the grip of a major political crisis. The deputy prime minister (Mr ben Bella) and a former minister of state (Mr Khider) did not enter Algeria in the official aircraft from Tunis with the prime minister, Mr ben Khedda, and the other members of the provisional government. Some members of the crowd were waving pictures of ben Bella and shouting his name. But this made little difference to the thunderous reception Mr ben Khedda received from hundreds of thousands of Algerians, for a majority of whom it had been a day's march to be there to cheer the cortege as it made its way from the airport to the prefecture in the centre of the city.

Mr ben Khedda's government has now assumed the governmental control, and the provisional executive, in whom sovereignty is vested until a constituent assembly has met, will apparently do as it is told. The men of the new government, largely because of the ovation they received, believe they have the whole-hearted backing of the Algerian people. But the crisis is not over, though the gulf between ben Khedda and ben Bella may once more be papered over for months or even years.

It is fashionable in Algiers to compare ben Bella with Trotsky, and to say that he missed his chance by not marching on Algiers with the Algerian Liberation Army, 15,000 trained and armed men, then stationed in Tunisia, on Monday—after the referendum and before the arrival of the new government. But the ALN, in any case, was unable to cross the electrified barrier, which was guarded by the French army until a few hours before ben Khedda and his colleagues from Tunis reached Maison Blanche airport. Certainly Mr ben Khedda ("like Stalin after Lenin's death") has control of the party machine, but there the analogy must end.

The prime minister, ben Khedda, will direct the new republic on the lines envisaged in the Evian agreement, in close co-operation with France. He is anxious to negotiate a trade agreement with Paris as soon as possible. Until the moment of independence Algeria, as part of France, was within the common external tariff barrier of the European Economic Community; he hopes it will remain so. Mr ben Khedda looks to France also to continue aid at a rate equivalent to some £300 million annually in order to enable the government to continue the Constantine Plan and the development of Saharan natural gas and petroleum. Mr ben Khedda wants the Europeans to stay because the new republic will need their technical skills.

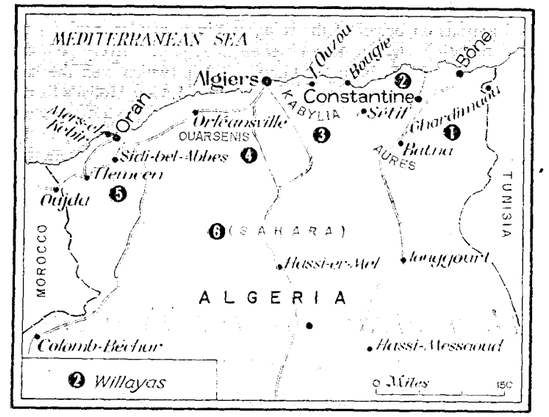
July 1st: Algerian vote for independence

Mr ben Bella, by contrast, is still smarting from the years he spent in a French prison, and he disapproves of many of the decisions taken by the government in its exile in Tunis during his enforced absence. Reluctantly he endorsed the Evian agreement, after having turned down several earlier drafts, when he was told that the draft then submitted was final and that no further chance would remain to reach an agreement with France. One of the members of the Algerian delegation told a member of the French delegation then, "Either he will kill us, or we shall be forced to kill him." Mr ben Bella sees the new republic orientated towards Cairo, Islam and the Arab League; he is ready to receive aid, without strings, from the Soviet Union or Communist China.

Plainly the Moslem middle classes and the 300,000 Algerian workers in France are whole-heartedly behind Mr ben Khedda. Desperately tired of the years of struggle, they want nothing more than a period of political stability in order that they may achieve some economic prosperity. That is all that can be stated with certitude. It is generally assumed that a majority of the nationalist party apparatus and activists inside Algeria supports Mr ben Khedda. But it is also a fact that at the last meeting of the revolutionary council, which took place in Tripoli in early June, Mr ben Khedda did not dare to put any of the issues raised to the vote, because he had reason to fear that his supporters were in the minority. Certainly the Army of National Liberation, with the exception of some units inside Algeria, supports ben Bella.

Much depends on how ben Khedda and the cabinet handle the situation. They have the reins of government in their hands, but they agreed before they left Tunis that a meeting of the revolutionary council should be called in October. Ben Bella's supporters have requested an early meeting of the council, the supreme body of the revolution. Meanwhile, the provisional executive at Rocher Noir is drafting a new electoral law to enable a constituent assembly to be elected as soon as possible; this, in turn, will elect a government. It is a government elected by this procedure that France and its allies have agreed to recognise. Mr ben Khedda and his supporters will surely be able to choose their own candidates. As it has already been agreed that there will be no opposition between any former supporters of the National Liberation Front, Mr ben Khedda should obtain a majority, no matter how the electoral law is finally drafted.

Once in existence, this officially elected assembly must surely take precedence over the revolutionary council, the latter becoming in effect the party conference. For these reasons Mr ben Khedda appears to have outwitted his opponents. Because of his success, and perhaps because of an apprehension that another coup in Algeria would produce a new Congolese situation in North Africa,



President Nasser has urged Mr ben Bella, a personal friend, to seek a compromise at least for the moment. But ben Bella is a born revolutionary, unlikely to accept defeat. He has charm and magnetism and the ability to arouse crowds to enthusiasm. His name is still far better known to the Moslem masses than that of ben Khedda. Should a compromise fail, ben Bella will be able to use the anti-imperialist line which still appeals strongly to the Arabs by saying that he signed the Evian agreement in prison, almost under duress, and that with 110,000 French troops on the sacred soil of Algeria "real" independence has not been achieved. He will no doubt also suggest that the poverty of the countryside is due to the greed of the French "imperialists." If he were to succeed in rousing the masses, the middle classes would be likely to transfer their allegiance to the successful man in order to avoid civil war or further troubles.

While the capital is still enjoying a succession of days of hysterical celebration, there is hard work going on in the countryside in an effort to harvest the barley, already slightly overdue, and the corn. Many of the European and Moslem landowners who left the country during the crisis have already returned and are harvesting on their own land. In the case of abandoned farms, the crops are being harvested by official National Liberation Army and National Liberation Front groups who claim that they will share out the food and give a share to the landowners if and when they return. There are, however, some free-lance harvesters, in certain parts of the country, where anyone with a bill-hook and a gun is amassing as much food as possible for private use while the going is good. What strikes one in the city of Algiers is that with so many armed men about, many of them utterly unofficial, law and order are being as fully maintained as they are.

The Other Algerians

FROM OUR CORRESPONDENT IN SOUTH-WEST FRANCE

FOR Port-Vendres, the French Mediterranean port on the Spanish frontier, this is the storm before the lull. Within a few weeks, the townsfolk say, the Algerian traffic—military as well as civil—which has been their source of livelihood for so long will begin to shrink rapidly. They are not depressed: tourism, and the growing popularity of the area as a haven for retired people, will take care of the future. For the present the bright little harbour still resounds often with the *Marseillaise* as ship after ship arrives, packed tight with Europeans from Algeria. Sometimes they meet outgoing parties of Moslem troops and civilians who are being repatriated to Algeria. Slogans and catcalls are exchanged. Twice there have been riotous physical clashes—provoked, the authorities say, by the exultant Moslems. The European Algerians shrug. "You see what it would have been like if we had stayed."

Last November an official spokesman gave the National Assembly the French government's estimate that 25,000 European families might leave Algeria annually during the next four years. Since April they have been leaving at a rate of 25,000 families a month. By the end of June more than 310,000 persons—nearly a third of the European population of Algeria—had arrived in France, and at least 50,000 were ready to follow as soon as ships and aircraft could take them. Several thousand have arrived at Spanish ports, chiefly Alicante and Cartagena, in recent weeks.

At Port-Vendres and Marseilles, and on the airports of the Midi, the refugees are given a cash grant of £60 to £100 a family and a free railway ticket to wherever they wish to go. Those who have no particular destination in mind are sent to reception centres at Toulouse, Montpellier and other big towns. Most of these refugees regard the Loire as being unpleasantly near the Arctic circle, and despite the government's offer of higher subsistence allowances to those who are willing to settle in areas of central and northern France where they might be more easily absorbed, the majority are stubbornly opting for the Midi.

The refugees intend to go on being stubborn. They are in no mood to be bought off with charity. They are determined to insist on what they consider to be their rights—and they have one big organisation (the *Association nationale des Français d'Afrique du Nord*, founded in 1956) and two smaller ones, all under right-wing leadership, to fight for them. "Every French government since 1954 has lied to us," they say, "and de Gaulle, after using us in order to climb to power, stabbed us in the back. If he had had the decency to warn us, three years ago, what he was preparing, we could have made our own arrangements, and fewer lives would have been lost. The metropolitan French have approved his double-dealing; now let them pay the bill." Spokesmen for the small business men, artisans and farmers among the refugees say: "The authorities talk of advancing low-interest loans to enable us to start again from zero in France. But this is impertinence. The government has sacrificed us, coldly and deliberately, in what it conceives to be the national interest. It must now make amends by paying cash compensation for the property we have lost in Algeria."

The big landowners and business men acquired footholds in France long ago, soon after the Moslem revolt broke out. Of the present male refugees, 4 per cent were farmers, 12 per cent

France's Homecomers

Of the 320,000 Frenchmen who used to live in Morocco, 145,000 have returned to France. Of the 220,000 who used to live in Tunisia, 140,000 have returned. 11,000 (out of 35,000) have returned from Indochina, 7,000 (out of 9,000) from Egypt, and 1,800 (out of 4,500) from Guinea during the last six years.

artisans and 13 per cent small traders and members of the liberal professions; over 50 per cent were employees. Their assimilation into metropolitan France might in the short run seem onerous (estimated cost: £6,000 to £10,000 per family) but it would give the French economy the kind of boost that west Germany received from its intake of east German refugees.

Not all the refugees will wish to remain in France. In many families, the husband or the eldest son has stayed behind to see how things work out. Many have asked friendly Moslems to keep an eye on homes and business premises. If the next two months of transition are calm, and if enough of the French schools in Algeria reopen in the autumn, thousands of families will return. The harsh sunlight, the vast perspectives, the glorious coastline, the anisette, the colours and odours of Moslem markets—"*tout ça nous manque*". Algeria's Europeans feared the Moslems, and their fear—cultivated by the official French propaganda machine and the right-wing press—drove them to ugly extremes; but personal hatred between the two communities remained less than one would have expected. Moslem tact and statesmanship could speedily exorcise fear and convince the refugees of the attractions of an Algeria which is no longer the plaything of French politics.

The road to France

The average Frenchman has been exposed to so much conflicting propaganda from the same governmental and semi-governmental sources that he no longer knows whether to consider the refugees heroic compatriots or potential fifth-columnists. The French army —which has shared something of their anguish—is doing all it can to help the refugees. The Red Cross, the Salvation Army and other relief organisations are usually within call. Thousands of private individuals have shown great kindness. But effective aid is sometimes held up by administrative unpreparedness and the lack of sympathy of petty officials. Exorbitant prices and rents are being asked for slum property. A columnist in the *Dépêche du Midi* complains that "the public has, on the whole, turned a deaf ear to all appeals on behalf of the refugees—in particular, appeals for accommodation. *Le bilan est absolument négatif.*" Every political faction in the Midi, from the Gaullist UNR (which won the last election on a "French Algeria" platform) to M. Guy Mollet's SFIO (Socialist party), is worried about the impact of the refugees on the political geography of the region. The director of one fairly typical secondary school (an SFIO stronghold) visited by your correspondent has already—with the approval of most of his staff—so arranged next term's intake as to ensure that he will have no room for refugee children. "We don't want any troublemakers in the school," he says; "besides, these people don't have the same mentality as us".

EUROPEAN COMMON MARKET

EIU Quarterly Economic Reviews
covering 57 countries or groups of countries

For those wishing to trade with or invest in the Common Market, regional subscription facilities are available at reduced rates for the EIU's Quarterly Economic Reviews on Belgium/Luxemburg, France, Italy, Netherlands and West Germany. As from September, the regular reports will be supplemented by a special six-monthly analysis of trends in major economic indicators and the development of Common Market trade.

Further details on subscriptions from:

Herr Strauss in the Twilight

FROM OUR BONN CORRESPONDENT

THE timbers of Dr Adenauer's coalition are creaking so perceptibly that he is expected to start attending to the seams this weekend, straight back from France. Tentative arrangements have already been made for him to meet Herr Mende, the leader of the Free Democrats, on Tuesday. In the meantime the squally weather continues. When the Bundestag dispersed on June 29th for a three months' vacation, one Christian Democrat cabinet minister, Herr Würmeling, could think of nothing more comradely to say of the Free Democrats than that they were a lot of "Bolshevik serfs"—a parting shot which stung the serfs' press service into retorting that Herr Würmeling had the mentality of a Spanish inquisitor.

The day before, on June 28th, the Free Democrats, in ephemeral league with the opposition, had supported, and carried, the rejection of the report of the parliamentary committee set up to investigate charges against Herr Strauss, the minister of defence. The charges —levelled unrelentingly week after week by the news magazine, *Der Spiegel*—concerned Herr Strauss's part, and possible financial interest, in an abortive scheme of 1960 for building some 5,000 family homes (with rents guaranteed for at least five years) for American servicemen stationed in Bavaria. Composed of three Christian Democrats, three Social Democrats, and one Free Democrat, the committee had listened to an unappetising tale of business intrigue so tangled that the three Social Democrats wanted to hear additional evidence in the hope of unravelling it more neatly. But the Christian Democrat chairman, Herr Hoogen, had been in a hurry; the allegations against Herr Strauss were injuring the party as a whole, and might even prejudice its chances in the elections this weekend for a new Land parliament in North Rhine-Westphalia. Herr Hoogen thought fit to close the inquiry on June 20th. A lenient report was hurriedly produced, clearing the minister altogether of improper conduct while noting a few characteristic but venial indiscretions. It was signed by the four coalition members of the committee. The three unsatisfied Social Democrats withheld their signatures.

When the Bundestag was asked to approve the report on June 28th, the Social Democrats declined on the ground that they considered Herr Hoogen had not been a sufficiently impartial chairman, and that he should have allowed the committee to hear further evidence. The Free Democrats, disowning the views of their representative on the inquiry, explained that while they were convinced that Herr Strauss had not intended to enrich himself personally through the scheme projected by some of his Bavarian acquaintances, they did not consider that he had yet emerged—nor parliament with him—wholly "out of the twilight". Consequently they were of the opinion that the report should not be accepted in its present form, and that the committee should continue its investigations, this time more thoroughly.

Their misgivings may have been genuine, but they were not the only considerations that impelled them that day defiantly through the "Aye" door with the opposition in support of the reference back of the report. They wished simultaneously to demonstrate their displeasure with their stronger coalition partners, and their capacity to make trouble. The Christian Democrats' new managing chairman, Herr Dufhues, had recently made a series of uncomplimentary remarks about the Free Democrats. And Herr Starke, who as finance minister is the Free Democrats' most conspicuous representative in the cabinet, has been humiliated by government pay concessions—which, since they will have to be met largely from state revenue, have flouted the party's pledge to reduce public spending. [The settlement of the mineworkers' wages claim is discussed on page 65.] The Free Democrats, too, had an eye on Sunday's election in North Rhine-Westphalia. This, they reckoned, was one way of showing that they were by no means as submissive to the Christian Democrats as they were reputed to be.

The result of the subsequent vote—rejecting the report by 226 votes to 224, with four abstentions—was all the more mortifying to the Christian Democrats in that one of their deputies voted in error with the opposition. Herr Richarts, who had driven hell for leather across the Eifel from Trier in response to an urgent party whip, had developed such impetus and sense of purpose by the time he reached the Bundeshaus that before anybody could stop him he shot straight through the "Aye" door, thus voting against the government. It was too much. In their exasperation the Christian Democrats instantly protested that the rejection of the report would give "neutralists of all shades an opportunity to prosecute their campaign against the government's foreign and defence policies through systematic personal defamation of the minister of defence." This outburst gave Herr Strauss the cue to observe that the campaign against him was directed from east Berlin on promptings from still farther eastward, as had been the campaigns against Generals Speidel, Heusinger, Förtsch and other Bundeswehr personages inherited from the Wehrmacht.

Certainly there is some truth in this, but Herr Strauss has also enemies nearer home, and for quite other reasons. Although he has toyed occasionally with the idea of resigning, Herr Strauss, it seems, has no serious intention of doing so. He is as robust in the rough and tumble of politics as he is ambitious; and he has strong domestic and foreign backing in his conviction that he is the best man for the job of developing, virtually from scratch, the German armed forces that are being more or less integrated with those of the Atlantic alliance. It is a blow more to his pride than to his position that he is now still left "in the twilight."

IT was more than a year ago, on May 29, 1961, that *Der Spiegel* launched a new offensive against Herr Strauss by trying to incriminate him in the shady manœuvrings of the legally non-existent *Finanzbau-aktiengesellschaft* (Fibag). Enough mud stuck to justify the Social Democrats asking a question in the Bundestag seventeen days later. The answer was not wholly satisfactory. But although *Der Spiegel* continued to press its charges, the long parliamentary summer holiday, and the distractions of the general election and of the long-drawn-out coalition negotiations, prevented the Bundestag until this spring from giving due attention to the matter. The committee which it then appointed to investigate the charges reported last month that it had discovered little more than petty fraud among some bizarre Bavarian adventurers, along with some regrettable ingenuousness and impetuosity at the overworked ministry of defence. The broad outline of the tale is this. Being anxious at the time to provide housing for the American servicemen as quickly and effortlessly as possible, Herr Strauss—a Bavarian and proud of it—seems to have been relieved when an old boyhood acquaintance, the Passau publisher, Herr Hans Kapfinger, recommended a likely deliverer of the goods. He was Lothar Schloss, another Bavarian. But the minister and his staff did not find time to establish that Herr Schloss was not the qualified architect he claimed to be (he had spent only one term at a building school), or that his *Finanzbau-aktiengesellschaft*, which proposed to raise the money, some 280 million marks, on the American and German capital markets, had no legal status. On June 1, 1960, the minister of defence signed a letter addressed "to whom it may concern" recommending Herr Schloss's scheme, and on July 20th another addressed to Mr Gates, the United States secretary of defence. In the event no harm was done, because the "rental guarantee housing project" was suddenly cancelled as a result of President Eisenhower's demand for economies.

Herr Strauss's unstilled critics hold that they are not satisfied that urgency and minor negligence, rather than Bavarian nepotism or gross neglect, caused the minister to accept Herr Schloss so unquestioningly, and that he should be much more severely reprimanded for his own and his advisers' slackness. Some of this criticism is undoubtedly honest. Yet much of it comes from political enemies who would like to see Herr Strauss driven from public life. They like neither his manner, his achievements, nor his ambitions—which include the chancellorship. But it seems most unlikely that further inquiry into the Fibag affair will do him the harm they wish it would. It has not yet been decided whether the committee will resume its hearings before the Bundestag reassembles on October 9th; Herr Hoogen has asked the six other members to confer with him in mid-July. Herr Strauss has announced that he intends to continue to devote himself this summer to the technical, financial and personal problems arising from the part allotted to the Bundeswehr in Nato planning for 1963 to 1966. He has learned, perhaps, to walk more warily. Asked by a Social Democrat member of the Fibag committee whether he did not sometimes have misgivings about people, Herr Strauss replied, "I've had them about everybody for some time now."

New Zealand Begins to Adjust

FROM OUR CORRESPONDENT

ALTHOUGH he referred bluntly to the doubts, misgivings and uncertainties created for New Zealand by Britain's application to enter the common market, the minister of finance, Mr H. R. Lake, has not allowed these uncertainties to deter him from a modest budgetary experiment designed to promote New Zealand's commercial and trade expansion. In his budget speech on June 28th he announced the lifting of capital issues control, the establishment with government backing of an industrial finance corporation, an increase in the Post Office savings bank interest rate and other inducements to small savers. Other measures that were announced included a rebate of 50 per cent on the land tax; the removal of several small irritating controls such as taxation clearance for New Zealanders wanting to travel abroad; and special tax inducements to assist exporters and reduced income and social security taxes. The tax concessions were estimated at a total of £14 million. With the exception of a small increase in war veterans' pensions and a cut in death duties—both of which have been widely applauded—Mr Lake avoided anything that can be described as political sops.

In a budget that is balanced by the proposed borrowing of £72 million (the same amount as last year) and in an economy that is tentatively dipping a toe in the chilly waters of deflation, these measures require courage. In the event, Mr Lake appears to have moderately pleased the business community and the farmers and avoided rebuffing the mild expectations of wage-earners. These had been a little unnecessarily whetted by the government's preliminary publicity about pending tax cuts; but more than enough

had been said about financial and trade problems to indicate to all but the most optimistic that they should not be too sanguine. The latest wage award, announced on Wednesday, rubs this home.

The removal of the capital issues controls, the establishment of a short-term money market and the raising of the Post Office interest rate by one-half per cent for deposits over £1,000, all indicate the government's somewhat belated recognition of the pressures upon the interest rate and its admission that the rate must rise. In particular, the raising of the Post Office rate suggests that the government realises something must be done to check the alarming drop of more than £16 million in small savings last year. Small savers are now to be permitted, as an added incentive, to open up to five "special purpose" accounts, each with a limit of £500. This in effect increases by £2,500 the amount on which the Post Office's top interest rate of three per cent for money at call can be paid. The abolition of capital issues controls follows a statement by the New Zealand monetary and economic council that these controls are hampering both business efficiency and the most effective allocation of New Zealand's economic resources.

New Zealand's urgent need for new markets to compensate for the losses it has to expect when Britain begins to taper off Commonwealth preferences is recognised by special tax concessions to exporters. These will mean that exporters will have to bear only five shillings in every pound of their expenditure upon overseas trade promotion under such headings as advertising, market research, overseas trade missions and the provision of samples. In general, Mr Lake was able to report that the level of bank advances has been reduced by £20 million during the year and that there has been a modest improvement in the country's overseas balances. His estimates, however, showed that expenditure is expected to increase by £11.5 million, including an increase of £6.3 million for defence.

Most of the relaxations and concessions announced cannot be regarded as anything more than a beginning in reshaping the New Zealand economy to the new pattern it must adopt under the influence of the European common market. But they are at least a beginning. They recognise the need for more flexibility in the New Zealand money market, the "urgent" need to increase the rate of investment and of economic growth, the need to stimulate savings and, to a lesser degree than many New Zealanders would like, the need to relax tax burdens in areas where they are most hampering to production and enterprise.

Common Market on Wheels

FROM OUR PARIS CORRESPONDENT

THE aperitif could not keep up with the pasta, but in a final spurt the espresso machine left the refrigerator standing. After studying the signs on the riders' jerseys, an innocent commentator might be forgiven for describing in these terms the major sporting event that is now riveting the attention of Frenchmen and their neighbours. The French cycling race, the Tour de France, arouses at least as much interest as test matches and cup finals in England. This year's edition is now in progress. The 150 cyclists and the mammoth advertising caravan left Nancy on June 24th. Having crossed Belgium, Brittany and the Bordeaux region, they are this weekend in the heart of the Pyrenees. On July 15th, with the Alps and 2,600 miles behind them, the caravan and the surviving riders will end their marathon in Paris. During these three weeks, only the most startling political event can hope to compete with the race for radio and press coverage.

If the riders now sport somebody's trade mark and not the colours of their country, if a Frenchman, a Dutchman and a German can be found in the same team, this should not be taken as a symptom of supranationalist trends within the common market. It is simply that the Tour has changed its character. Hitherto, the individual cyclists and the teams were supposed to compete for their country or region (there were French regional teams as well as national teams from France and other countries). But the commercial sponsors who pay the cyclists throughout the year for their publicity value did not want to lose the advertising opportunities provided by the star turn of the cycling season, and the organisers had to yield. This year, the fifteen teams, of ten riders each, are not wearing the colours of France, Italy or Belgium, but those of their sponsors: three wine firms, two brewers, two manufacturers each of electrical equipment, petrol and Italian pasta, and one each of coffee-making machines, television sets and chicory.

Only one team is sponsored exclusively by cycle manufacturers; this is not surprising, since in this motorised age the market for the anachronistic muscle-propelled bicycle is not what it was. But cycling contests still capture the imagination. The team competition, the solitary effort against the clock, and the agonising climb in the mountains can, when properly publicised, captivate millions—and advertisers like captive audiences. Secondly, the Tour is an institution. It attracts thousands of spectators along the roads and the villages through which it passes and provides an excuse for festivities in the towns chosen for the nightly halts. (In fact, the towns have to pay the organisers for this privilege.) The caravan brings its camp followers. There are pop singers, dancing competitions and all the fun of the fair.

Advertising is never forgotten. The winner of each stage drinks his Perrier water, the successful team gains points in the Martini challenge and so on. These prizes are worth money. There is also a daily reward for the wearer of the yellow jersey (the provisional leader of the race) or of the green jersey (leader on points), for the pluckiest and the unluckiest rider. But the best plums are the contracts for subsequent appearances on the race tracks

of western Europe. The champions, their minds on these higher things, often leave their earnings in the collective kitty for distribution among their assistants.

For the host of riders, pedalling each day at some 25 miles an hour, has its patricians and its plebeians. Each team has its leader and one or two potential substitutes. The other members are there to defend the master's chances and help him in distress. Called *domestiques* by the French (and *gregari* by the Italians) they are the workmen of the Tour who quickly fade into obscurity. The stars, on the other hand, are famous and their celebrity is judiciously exploited for the benefit of their sponsors. The names of Coppi, the Italian, and Bobet, the Breton, are still a legend on the continent. But new names, and new rivalries, must be produced to keep up popular interest. Van Looy, the unlucky king of Flanders, and Anquetil, the prince charming of Normandy, are better known than the prime ministers of their countries. Rudi Altig, the first German since the war to wear the "yellow jersey," is as familiar to Frenchmen as Dr Adenauer; and Tom Simpson is among the most famous of Englishmen.

NIGERIA WORKS IT OUT

Often described as Britain's great black hope in Africa, Nigeria is going forward with the most ambitious economic development plan the continent has yet seen. Yet, just as the plan is beginning, political trouble in the Western region has led to the suspension of parliamentary rule in the region and has raised questions about the federation's future political balance

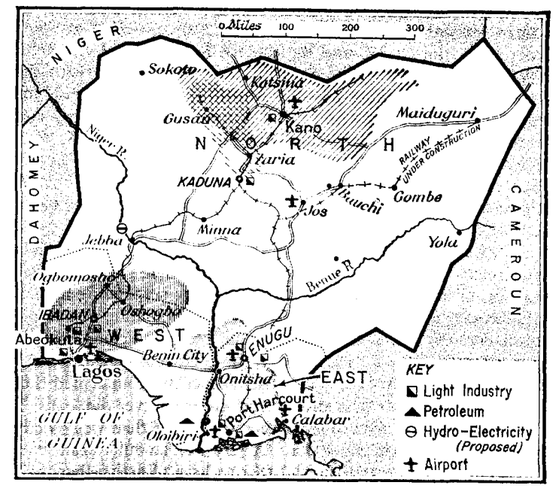
Black Baby

Nigeria is in many ways the epitome of West Africa. Its wide frontiers cut across all the broad horizontal bands of climate and vegetation—coastal mangrove swamp, deep rain forest, open savannah, the dry rim of the great desert. Its colonial inheritance left it at the end of the second world war with the familiar pattern of a dependent economy.

Nigeria is also typical in the degree to which in the postwar decades it has begun to move away from this basic colonial pattern. For West Africa, the fifties were a time of boom. And Nigeria had even greater elbow room for growth than most of its neighbours. Reserves were built up by setting up marketing boards which bought crops at prices below the inflated world levels. In 1956, these reserves reached their peak at £256 million. Thereafter they could be spent to sustain expansion despite a steady decline in primary prices. Between 1953 and 1960, the economy as a whole grew by about 4 per cent a year, and gross investment, as a proportion of national income, rose from 7 per cent in 1950 to nearly 15 per cent in 1960.

This prosperity undoubtedly smoothed the way to the achievement of independence in October, 1960. When, more than ten years earlier, pressures to end colonial control began to gather force, it was by no means clear that the transition would be peacefully and gracefully made. Quite apart from the fears and uncertainties of a dozen minorities—Nupe and Tiv, Ijaw and Efik—the two largest southern tribes—or nations—the 5 million Yoruba living mainly in the West, and the 5 million Ibo centred in the East (1952 census) feared the numerical superiority and Moslem zeal of the North. The Northerners in turn distrusted the more developed peoples of the south who were already beginning to move north as clerks and teachers.

In a series of constitutional conferences, a form of federation evolved which allots only specific functions to the centre—foreign affairs, defence and police, foreign trade, currency and banking, electricity and major roads, ports and inland waterways. All export duties and a share of import duties are handed on to the regions. Decentralization was reinforced by the tendency of a single political party to become dominant in each state. The Northern People's Congress, the party dominated by the traditional leaders of the North, set out to be a regional party. Both the Action Group, rooted in the Yoruba west, and the National Council of Nigerian Citizens, centred on the Ibos, have sought to become nation-wide parties, but failed. In the federal elections of 1960, the NPC emerged as the largest party, but had no overall majority. The federal Government was therefore formed by an incongruous coalition between the conservative NPC and the more radical NCNC. The Action Group went into opposition.



Not-so-Stupid Federation

At this point, Nigeria's development diverges sharply from the African pattern. However rational the federal solution may seem to Africa's driving problems—unviable territories, fragmented markets, tribal intermingling, the underlying political dream of pan-Africanism—the fact remains that most federations on the African continent are either unstable or have broken up. Yet Nigeria survives. How has this come about?

Some of the answers lie in past history. Nigeria was long being prepared, however slow the process might have seemed to Nigerian nationalists, for self-government and independence. In neighbouring French territories, the official aim was assimilation; and by the time France offered independence, politics were polarized between Paris and the local capitals—Abidjan, Bamako, Ouagadougou. Intermediate federal institutions, after their half-life in the shadows, faded away. In Nigeria, on the contrary, federal institutions were at work throughout the postwar decades, with national feeling expressing itself through them. Again, no one Nigerian province is overwhelmingly richer or better endowed than its neighbours;

none has wondered whether, if allowed to "go it alone," it would be spared the cost of subsidising poorer neighbours. There is also a certain balance of economic interest between north and south.

Yet the final answer lies, as it must, in the temper of Nigerian politics. No federal system can survive if its leading statesmen push regional issues to the point of no return. So far, Nigeria has not lacked cautious political skill. The good fortune could not be very clearly foreseen. The Sardauna of Sokoto, towering above his fellows in the autocratic tradition of the North; Dr Azikiwe leading the NCNC with pan-African fervour, Chief Awolowo veering within two years from an uncompromising "pro-western" policy to an espousal of "positive non-alignment"—these are not men of whom, *a priori*, moderation can be postulated.

Yet, after independence, they started off by observing the federal decencies, and each found lieutenants who proved statesmen in their own right. With Dr Azikiwe's translation to the Governor-Generalship, the NCNC and the Eastern Region found a forceful leader in Dr Okpara. The Sardauna sent to Lagos perhaps the wisest moderate of them all—Sir Abubakar Tafawa Balewa, the Federal Prime Minister. And Chief Awolowo, becoming leader of the federal opposition, left Chief Akintola to handle the Western Region.

But at the beginning of this year the storms began to gather. A split between Chief Awolowo and Chief Akintola led, first, to Chief Akintola's dismissal from the premiership and then, on May 25th, to a brief chair-throwing scuffle in the western house of assembly between supporters of the two chiefs' factions. The federal government was all too quick to show its strength by suspending normal parliamentary government in the region and appointing a supreme "administrator," Senator Majekodunmi, virtual dictator of the region until Christmas. Fortunately, the good senator is a Yoruba like the men he rules. A Nigerian newspaper has commented that he wields more power than any colonial governor ever did.

The federal government may have gone further than was strictly necessary to keep law and order. A series of lawsuits against its actions await judgments that may take so long to arrive that their purpose will have been lost. The assault on the Action group—which remains the opposition in the federal parliament—began last year with a plan to carve a new "mid-west" region out of the Action Group-governed Western Region. Its culmination today can be seen in Chief Awolowo's confinement to a remote island two hours from the mainland by boat (and without a telephone), and in Chief Akintola's restriction to a village only forty miles from Ibadan. (Of the two, Chief Akintola is in the lesser degree of disfavour; he has now started his own "United Peoples Party.")

This may not augur well for Nigerian democracy; what of Nigerian unity? The federal government has shown that it is strong enough to impose its will in the advanced West—stronger, perhaps, than many Nigerians realised. But will it now go too far and, perhaps, provoke the Yorubas into an unconstitutional and possibly violent reaction? Or will the federal coalition, for want of an enemy, split—dividing Nigeria disastrously between north (Muslim, backward, heavily populated) and south (Christian and pagan, comparatively advanced, with a smaller population)? It seems more likely that the country will hold together than that it will not. But while these questions are being answered, federal government "moderation" in matters not directly affecting the Action Group is, in a sense, going to be on trial before young Nigerians. Therein lies the possibility of another political division—between the establishment that rules today and between the potential young radicals of tomorrow.

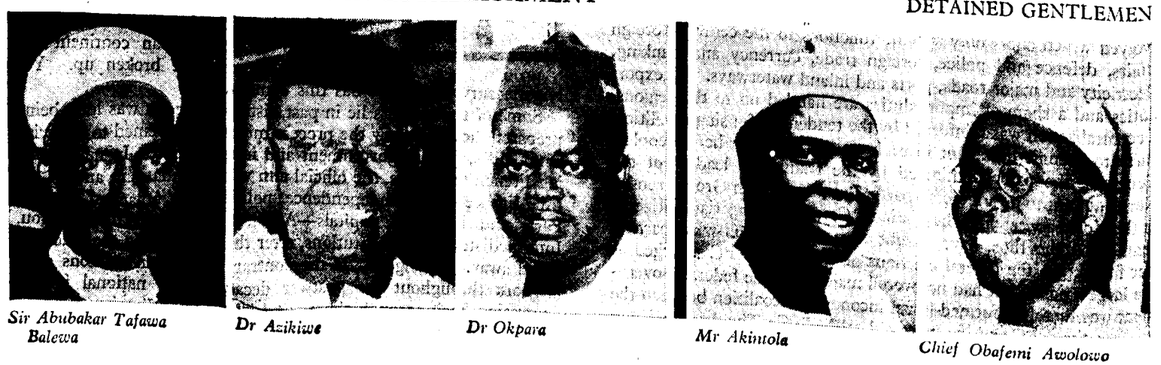
If "moderation" does not produce results in rapid economic growth, faster industrialisation, and more apparent freedom of action in African affairs, there will be pressure for policies that do. These elements of uncertainty must, however, be set against a more reassuring background—the day-by-day education of politicians, officials and people in the realities of a functioning federation. And nowhere is the weaving together of interests so pervasive as in the elaboration of the federation's first systematic long term plan for economic development.

Colonialist Schemes

Planning of a kind has been going on in Nigeria since 1946, when the colonial government prepared a consolidated programme of its expected public expenditures over the next decade. The projects covered in the main social welfare and public works and were to amount to about £56 million, half of it financed by grants from Britain's Colonial Development and Welfare Fund.

A World Bank team's report, published in 1955, emphasised two shortcomings, both typical of developing economies throughout Africa. Basic public services were inadequate to sustain a more rapid rate of growth, and trained manpower would prove even more so. Nigeria was educating each year no more than 800 graduates, 12,000 secondary students and a few hundred technicians. The Bank mission recommended that over the next five years, some £126 million should be spent on education and infrastructure. Nigeria bettered this figure. The economy was, in fact, in continuous momentum for over a decade. Public expenditure increased from £69 million in 1955/56 to £163 million in 1961/62; private investment grew at a sustained rate of 8 per cent a year. Most

LEADERS OF THE NIGERIAN ESTABLISHMENT — DETAINED GENTLEMEN



Sir Abubakar Tafawa Balewa — *Dr Azikiwe* — *Dr Okpara* — *Mr Akintola* — *Chief Obafemi Awolowo*

significantly, the value of the old subsistence life in the villages was reduced to a fifth of the economy as a whole.

Since 1962, the manpower shortage has undergone a further more detailed examination by a Commission under the chairmanship of Sir Eric Ashby and in a subsequent government White Paper the Commission recommended increasing the flow of graduates to 2,000 a year, of secondary school leavers to 30,000 and of technicians to 2,000 by 1970. The cost of such a programme in terms of capital would be of the order of £56 million and the recurrent costs of education would rise from £22 million (in 1961-62) to £59 million by 1970. Even so, Nigeria with its vast population would still be behind Ghana in the training of educated people and the White Paper suggested rather higher targets.

Independence Scheme

The new plan is based for the first time on more than a tabulation of desirable projects. An analysis of the economy and its major trends has been attempted. The goals of the plan are expressed not so much in terms of a "shopping list"—though specific plans are naturally included—as in a dynamic concept of an economy in the process of growth.

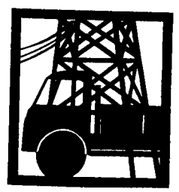
Broadly speaking, the plan aims at a continued expansion of the economy by four per cent a year. Consumption should increase by three per cent, or by one per cent per capita allowing for a two per cent rise in population. The government would take a rather larger share of the economy's resources by 1966 but gross investment would not fall below the 13-15 per cent of gross national product achieved in recent years. The planning authorities have made certain assumptions about prices—they envisage a 20 per cent fall in export prices, stable import and investment prices, and a one per cent annual increase in the domestic price level. On these calculations, the gross national product would rise—in constant prices—to £1.5 billion by 1967 and the investment needed to sustain such an expansion would, according to the estimates, amount to approximately £1,200 million over the six years—£675 million in the public sector, the rest private.

This estimate of around £675 million for public investment is not only a measure of the planners' ambition; it is the most they think can safely be spent. In no year, so far, has public investment risen above £75 million. The proposed figure is two thirds as big again. Yet the government's total claims on the economy's resources will be pushed up further by the steady increase in recurrent expenditure, particularly on education. In the past, budgetary surpluses have covered a large part of the investment programme. Recurrent expenditure will eat these away unless taxation is steadily increased, but there comes a point at which too much taxation stifles private investment and the willingness to work. Yet Nigeria intends to rely heavily on private enterprise. The economy needs a whole range of highly profitable ventures to release resources quickly for further investment. These lie mainly in the private sector—in industry and perhaps in agriculture. They could be squeezed out if too large a share of current resources is sucked back into relatively low-yield government investment.

To tackle this problem, the planning authorities have put as much emphasis as possible on public investment with a high rate of return—electricity, feeder roads, ports. The figure of £675 million remains on the high side, however, and unless some underspending slows down the rate of investment—as it probably will—the scale of the programme could put the economy under some strain.

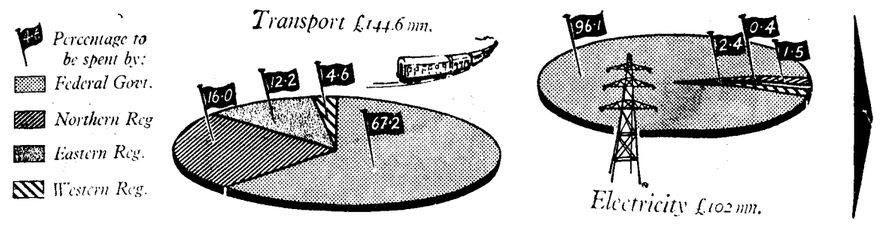
Even so, the strain will be less than it might have been if Nigeria had not accepted some of the disciplines of planning. Preliminary estimates of the various schemes and projects prepared by the federal government and by the three regions for inclusion in their four plans amounted to just over £670 million in the public sector, over a planning period of five years. Here was a double challenge—to the validity and influence of Nigeria's new planning mechanism and, even more vital, to the good will prevailing between the federal partners, all of whom had to reduce their ambitions. For all the country's built-in political troubles, in their economic planning the ministers concerned have shown a shrewd grasp of reality and a heartening capacity to work out a joint approach. The plan in its final form has been made—in part by squeezing, in part by stretching out—to fit into a framework which does not depart too much from the planners' view of the possible, yet does not disappoint too sharply the politicians' hopes and promises. The two chief modifications are the extension to cover six years and the careful rearrangement of priorities towards directly developmental projects and public enterprise with a high return. In the broad breakdown, developmental spending receives 72 per cent of the resources. Social overheads—education, health, social welfare—account for 21 per cent. The remaining 7 per cent represents costs of administration. The regional plans follow much the same pattern, with the chief emphasis on productive investment. Only in the North, where education is a laggard, do social overheads reach nearly 40 per cent of a planned expenditure of £97.7 million. The total for the Western Region is £90.3 million and for the Eastern Region £76 million.

Power and Transport



What are the chances of turning these broad expectations into concrete achievement? On the basis of past performance, important sections of the plan should not present any very great difficulty. The federal government tends to dominate the public services simply because power, communications and a large part of the transport system are federal responsibilities. Here the record of past efficiency is encouraging. The Nigerian Ports

NIGERIA HOPES to spend £676.5 million over the next 6 years, like this . . .



Authority has a unique record of combining successful operation with the rapid training and promotion of Nigerian staff. It expects to finance its extensions very largely out of profits. The Electricity Corporation of Nigeria—which generates and distributes all public power—has kept pace with rising demand, although its rates are rather high. It expects to finance its own £29 million expansion plan, including the transmission lines of a national grid linked to the proposed Niger Dam generators.

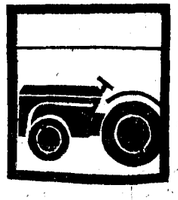
This vast Niger scheme, for which £68 million is set aside in the federal plan, will ultimately provide over a million kilowatts from three dams on the Niger and Kaduna Rivers. According to preliminary estimates, the hydro-electric system can pay for itself, plough profits into further expansion, and reduce future electricity rates. The Nigerian Railway Corporation, on the other hand, began to show a loss in 1959. The chief reason is the usual one—heavy competition from road transport, which has become a lively feature of local private enterprise. And the dilemma is the same. Should road charges—which do not now cover the government's spending on roads—be increased at the risk of discouraging a growing economic sector? Should traffic be diverted by fiscal means back to the under-used railways? The Nigerian plan looks for a positive answer. Its chief emphasis lies in increasing the operating efficiency of the railways. But higher road charges are also to be considered. The likelihood is, therefore, that the profitability of the railways can be restored and since the ports are already heavy earners, the prospects for transport seem reasonably good. Mercifully the Nigerian government does not appear to equate national prestige with the operation of an immensely expensive international jet airline.

Education

The most vital of all public services—education—depends in the main upon regional decisions. The federal government pays for education in Lagos, provides certain funds for the universities and is now extending its grants ambitiously to primary and secondary education in the regions. Just over £5 million has been set aside for such grants. Nevertheless, the main structure of Nigerian education is determined at Ibadan, Enugu and Kaduna and it is there that the main dilemmas have to be faced. They are the fundamental dilemmas of developing Africa. In education almost everything is still to be done—primary and secondary education, technical training, teacher training, the universities. The immediate capital cost is high, the return long delayed. Meanwhile, every capital expansion adds to irreducible recurrent costs in salaries and maintenance. In the Eastern region education already accounts for about 45 per cent of the annual budget. Nor is the issue simply a general one of high costs and low returns. Governments have to evolve priorities in education which support the wider pattern of development.

This is not easy, especially since citizens and experts, voters and planners tend inherently to disagree. Experts stress the need to keep primary and more advanced training in step with each other. Fathers and mothers want primary schools for their children as the only door opening on the opportunities of the modern world. Both the Western and Eastern regions—self-governing since 1957—have provided for free and very nearly universal primary education. But for village children the primary school tends to produce rapid disenchantment with the rigour and monotony of rural life. The school leavers, barely literate, technically untrained, stream off to towns still unprepared to absorb them. By 1967 there may be 500,000 unemployed school leavers in the Eastern region; 700,000 in the West. The Northern region is limiting its current primary school programme to 50 per cent of the potential school-goers. This lessens the immediate impact of the problem but does not eliminate the need—also faced by East and West—to speed up secondary and technical education and prevent the uncontrolled drift of untrained children to the cities. As the scale of capital and recurrent costs has sunk into the minds of ministers, they have retreated from the idea, expressed in a White Paper published last year, of out-doing the goals of the Ashby Report. And in every region, the awareness has grown that any real hope of growth depends intimately upon success in the most productive sectors, agriculture and industry.

Agriculture



All four governments recognise the primacy of agriculture. Three-quarters of the people depend upon it: it provides over half the gross national product and 78 per cent of the exports. If the percentage of capital to be spent on it—13 per cent of the total—seems low, this is in part because the programmes in transport and power assist agriculture directly, in part because Nigerian farming is not ready for massive investment and needs instead well distributed capital combined with a great deal of human effort. The chief gains are to be made through higher productivity. Whether it is a question of the cattle, cotton and groundnuts of the north; the cocoa and citrus, rubber and palm trees of the south; or millet and yams, the fundamental need is better stock and seed and better methods. These are only beginning to appear; matchet and hoe are still all but universal implements. Tribal systems of land tenure and divided holdings hold back both enterprising and individual farmers and non-tribal co-operative ventures.

The governments concentrate on two chief lines of advance. They are trying to develop adequate extension services, so that the farmer may get to know what opportunities agricultural science generally and Nigeria's own excellent research institutes have already worked out for him. If the minimum coverage is taken as one agricultural adviser for each 300 to 500 farming families, then an adequate service can be said to exist only in the Western Region with its agricultural graduates at the top and one field adviser to every 670 farming families at the bottom. In the North the ratio is one to 2,000; in the East, one to 5,000. The plans envisage rapid expansion, but a large and expensive leeway has to be made up—and in an area in which a worldwide shortage of experts is becoming apparent.

The other line of attack is to attempt larger and hence more productive types of operation. A few commercial plantations—for sugar in the north, for rubber in the east—have been licensed. New land, which is still quite freely available in most parts of Nigeria, is being cleared for farm settlements. School leavers, after a year's intensive training, will receive plots of some 20 acres, on which they can farm for themselves but within a broad management plan for the whole settlement. The scheme is particularly designed to arrest the drift of young people to the towns. Serious thought is being given to various combinations of the two approaches—for instance, encouraging firms to establish "nucleus plantations" round which peasant owners would settle, learning new methods and profiting by the plantations' common services. There is a hope that such examples of higher output and income will encourage villagers themselves to reorganise their holdings on co-operative lines. All this is in its infancy. There are thirteen settlements in the west so far. Six are under consideration in the east. No "nucleus plantations" have yet been attempted. There is virtually no structure of agricultural co-operative credit. And all such schemes are expensive. But all west Africa would gain from a demonstration that communal traditions and individual initiative can be fruitfully combined.

Industry

As in most developing economies the industrial sector is minute compared with agriculture, but it is growing two and three times as fast. Nigerian industry is well into the process of import substitution—the "beer, boots and bricks" stage. Indeed, it may soon be self-sufficient in beer. The transformation of local materials has begun very successfully with the cotton mills at Kaduna, using Northern cotton. A refinery is to process local petroleum and a number of foreign concerns are interested in using local iron ore, coal and limestone to set up a steel industry. Given the large internal market, varied local materials, an intelligent labour force and governments determined on economic development, it is not too ambitious to expect that industrial investment will continue to rise at a rate of about eight per cent a year. Domestic savings and local managerial talent are, however, scarce.

There are Nigerian businessmen but they tend to be drawn to enterprises in which the returns are high and quick—retail trade, transport, house-building. This does not inhibit industrial growth at this stage, for foreign entrepreneurs are ready to come in. In 1960 they invested £20 million of fresh capital. The Nigerian governments encourage them with income tax reliefs, import duty rebates and protective tariffs. Over the next two years, the estimate of foreign investment amounts to £176 million (of which a large part will be in oil). This is on the large side but it does not seem, in economic terms, an impossible target.

But it does create some real political apprehensions. Can any African government, in the turbulent and uncertain state of African politics today, comfortably look forward to a time when the bulk of its industry will be in foreign hands? Can the cry of "neo-colonialism" be stilled, especially when both southern parties are sensitive to the issue? In strict realism, no African government should spend precious domestic capital on enterprises for which others will provide the funds. But the risk of a violent political reaction remains if none of the funds and hence none of the control is Nigerian. Yet when the Nigerian authorities suggest public participation in new enterprises and even (as in the case of the proposed oil refinery) majority holdings, foreign companies draw back and look over their shoulders for the expropriator's axe. Nigerian industry as a whole is still so small that the issue may not become acute for a few years yet. But it hovers over the scene already.

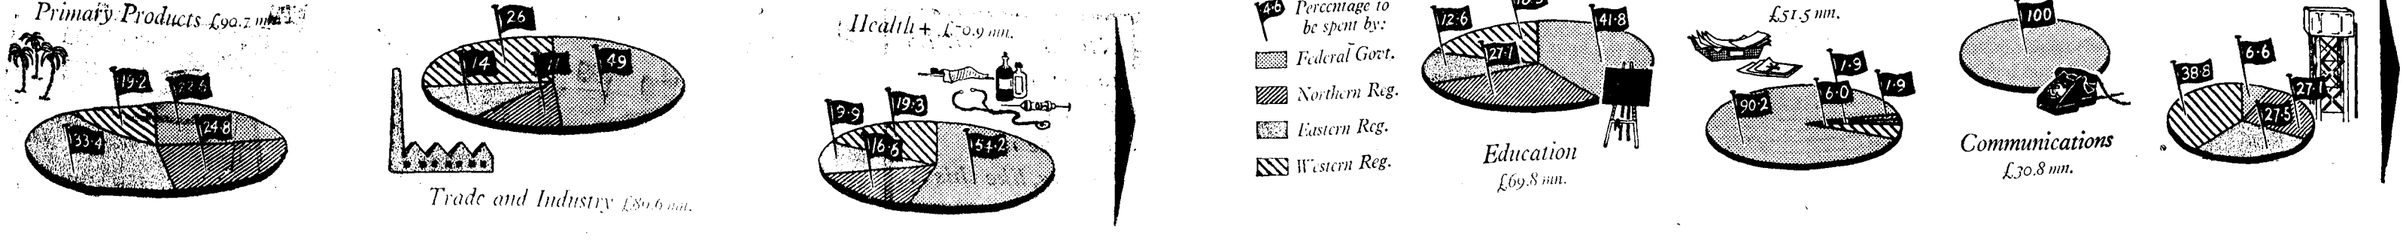
Will it Succeed?

So much will affect the plan—the weather, markets, availability of expert talent, political leadership, Africa's continental pressures and politics—that it is almost invidious to pick out any as of overriding importance. It can, perhaps, be argued that success will depend directly upon three conditions. The first is the government's ability to mobilise sufficient domestic resources. The second is its capacity to secure sufficient foreign exchange. The third factor—the most vital and least predictable of all—is the degree of political stability and coherence a great federation, under all the strains of growth, can maintain in the heart of a turbulent continent.

Private investment raises the problem that Nigeria must find £200 million from abroad; if it succeeds, domestic savings need not even be maintained at their present level of £70 million a year to achieve the hoped-for target of £535 million.

Public investment has been proposed at a level of about £112 million a year. The planning authorities believe that with tough control over recurrent expenditures and equally firm willingness to reduce certain forms of consumption, nearly half the sum can be raised internally.

But some producer prices must come down and some internal taxes must go up. The outlook is not unpromising, for the governments are showing real political courage. All the marketing boards



have reduced the prices they formerly paid to farmers. The Western region board did so twice in 1961. The Northern and Eastern governments have imposed produce taxes. The Eastern government has increased school fees by 50 per cent. Official salaries for ministers and civil servants are being reduced.

There remains about £340 million of public investment to be raised from external sources. Nigeria's planners consider £100 to £150 million as the utmost that could be borrowed at commercial rates. However, the readiness of the United States to provide £89 million in grants for the six years of the plan suggests that the necessary flow of non-commercial grants and soft loans may be not too difficult to secure.

These possibilities are in turn helpful in meeting Nigeria's second problem—the provision of foreign exchange. Since 1955, the balance of payments has shown a consistent deficit. In 1960 it rose to £72 million. Nor is there much immediate prospect of reversing this trend. Exports are increasing, but imports grow more rapidly. The terms of trade do not look promising. The tonnage of most agricultural exports seems likely to increase (in rubber, it should double) yet the planners have prudently foreseen a fall of at least 20 per cent in export prices. Even increased sales of petroleum are not expected to fill the gap, and no sharp increase in earnings from foreign trade is foreseen. Meanwhile, reserves are not much above the safety limit. Current foreign exchange earnings do not even cover current needs. The entire foreign exchange component of the plan must be secured from foreign aid and investment and, in addition, some extra assistance will be needed for the balance of payments. The total need—for public and private investment and for balance of payment support—may be of the order of £550 million. Provided the private inflow of capital continues, however, well over half this sum is already assured. Thus, in purely economic terms, the problem clearly is not unmanageable, especially since the Nigerian government is determined to avoid if it can the inhibiting effect of foreign exchange control. The issue turns on whether Britain and other Western governments follow America's lead in taking a generous view of the assistance they can and should extend. It may be hoped that Britain's offer of £10 million toward the plan is simply a first instalment.

Yet this dependence on foreign aid—indispensable at Nigeria's present stage of development—is a reminder of how much the country depends upon decisions taken elsewhere. In two crucial areas, there are uncertain days ahead. The first concerns Africa's relations with Europe; the second the evolution of the political struggle in the southern parts of Africa.

Nigeria and Europe

Nigeria is vitally concerned with the continent's future relations with Britain and the countries of the Common Market. In the last five years, Nigeria's trade with the sterling area has declined sharply: its exports from 71 per cent to 50 per cent of all exports, its imports from 58 per cent to 49 per cent. The largest part of the switch has been caused by a jump in exports to the European Common Market—from 17 per cent to 32 per cent, and by some growth in imports—from 17 per cent to 21 per cent. If, however, Britain were to join the Common Market without being able to negotiate a special relationship for its former colonies in Africa, Nigeria would suffer more than a loss of its small preferences in the British market. It would face a measure of discrimination throughout Britain and western Europe in favour of its French-speaking African neighbours, most of which are strictly competitive. Nigeria may not suffer much in the short run. But over a decade, an enforced exclusion from the Common Market could seriously damage its economic prospects. The issue is still in doubt primarily because Britain's entry is not yet decided. But even thereafter, it is not clear whether Nigeria, for *political* reasons, would find it easy to seek association on lines similar to the close and preferential arrangements made for ex-French and ex-Belgian Africa. Their links are felt by many Nigerians to be too close and so portend a relationship in which European economic interests could remain paramount.

. . . and Africa

A division between Nigeria and its ex-French neighbours might have more than economic repercussions. It might weaken the political cohesion of the "Monrovia" grouping of African states whose leaders, on the whole, represent a moderate and gradualist approach to Africa's problems. These attitudes are, inevitably, under attack. Every time a crisis erupts in the troubled lands to the south—in Congo, in Angola—the mood of a tougher pan-African solidarity gathers strength, particularly among the young. It is fanned by the less patient utterances of leaders in Africa's other grouping—the Casablanca group of Ghana, Guinea, Mali, Morocco and Egypt. Taken together, distrust of association with Europe and anger at the crises of colonialism and discrimination further south could tragically drive the two groups further apart.

Happily, the division within the Monrovia group over the issue of association with Europe is not inevitable. In the longer run, an alternative to close vertical association between Africa and Europe could be worked out which would compensate the ex-French territories for their loss of preference and privilege by extending wider Western aid. This might encourage the African territories to form their own economic union parallel to, and in friendly co-operation with, the movement towards unity in western Europe. Such a *dénouement* would give Nigeria and its French neighbours the opportunity to make the Monrovia grouping a genuine nucleus of stability and growth.

This possibility is not ruled out. The negotiations are still fluid. Meanwhile, there can be no doubt that a strong Nigeria, rapidly modernizing itself, would be a force of incalculable strength in African politics. In its present mood it would also be an influence for sanity and stability.

NIGERIA NEEDS

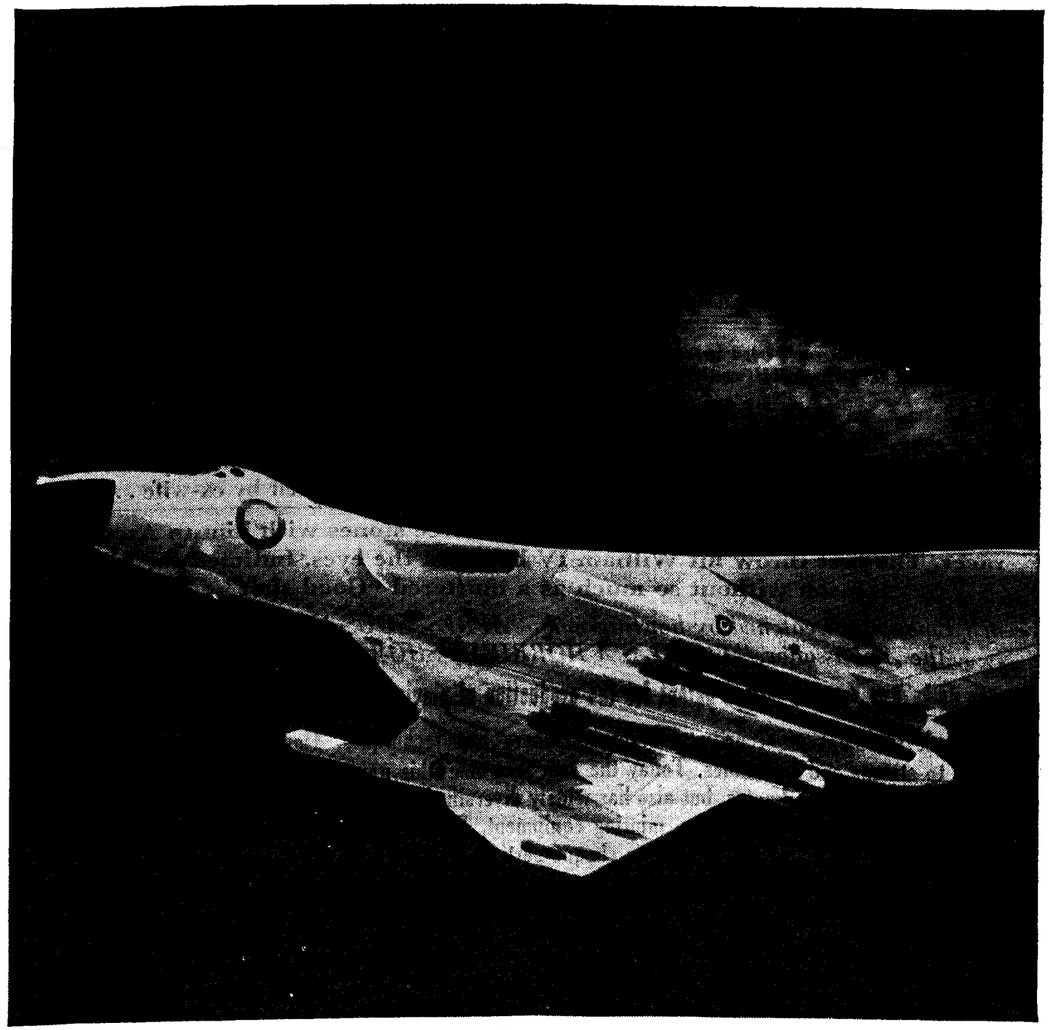
If, as calculated, they underspend £25 million

THE LAUNCHING PAD THAT FLIES!



This is the Avro Vulcan bomber—mainstay of Britain's nuclear deterrent force today and for many years to come. The Vulcan—a product of the Hawker Siddeley Group—is scheduled to carry both the Blue Steel air-to-ground nuclear missiles, and the new Skybolt which can be launched by a Vulcan as much as a thousand miles away from its target. It is the adaptability of the Vulcan that is its most remarkable characteristic. Only an exceptionally advanced aircraft like the Vulcan can effectively carry the weapons of tomorrow. Equipped with missiles like Blue Steel and Skybolt, the Vulcan combines the flexibility of a manned aircraft with the immense striking power of ballistic missiles. In this way, it adds a new dimension to the British nuclear deterrent and maintains its role as a vital guardian of the Free World.

HAWKER SIDDELEY GROUP

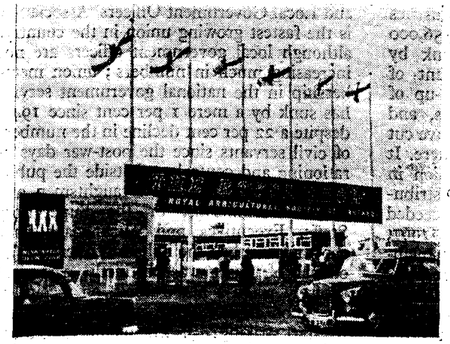
HOME REPORT

Members of the editorial staff and local correspondents report on life and happenings in and around Britain

Home for the Royal

FROM A CORRESPONDENT IN NEWCASTLE



If farmers alone visited the Royal Show practically every single one in England and Wales would have to attend for it to break even this year. Nine days before the show opened on the Town-moor, Newcastle, on Tuesday, a storm swept the site and left chaos behind it. As a result staging costs have been inflated well above the usual rate of around £1,000 an acre. But in the glow of pride the organisers can reasonably feel at the mere achievement of salvaging the show, the critical questions trade contributors in particular have been asking should not be forgotten.

It costs a firm about £3,000 to put up any sort of decent stand at the show, and it could easily be a great deal more. Shell is reported to have spent well over £12,000 this time on an elaborate steel and glass structure that suffered cruelly in the winds. For that kind of expenditure a great deal of space could be bought in the farming press, and more than one exhibitor has begun to voice doubts as to whether the money could not be spent to more telling effect there. The exhibitors' main criticisms are over what the media world calls wastage—this year the large numbers of urban Geordies who have merely come to stand and stare rather than to buy. The Royal Agricultural Society of England which organises the show is in a quandary. If it is to break even it has to go all out to attract visitors from outside the industry. That means putting on some entertainment rather than the instruction which it is thought farmers prefer.

But more town visitors will displace the trade. And if only one or two big exhibitors decide to withdraw—say, Fords or International Harvester—a large number of smaller fry will thankfully follow suit. The alternative is to go all out for the farmers. At present, in more enlightened agricultural circles, the Royal has the reputation of being something of a Royal Academy of the farming world. The livestock classes in particular are a horrible anachronism. Judged strictly on beauty contest lines the winners may or may not be of commercial value, but the points on which the awards are made certainly are not. The pig lines, for example, full of Tamworths and Berkshires and Long White Lopears, are fascinating only to connoisseurs of the curious.

But something more than museum exhibits is needed to bring a pig farmer from, say, Cornwall to Newcastle. This view is held forcibly by Mr Frank Sykes, one of the progressives in the RASE hierarchy who have succeeded in getting practical demonstrations made an integral part of the show. A beginning has been made with them this year, with plots showing different methods of improving hill pasture, and pens of progeny-tested breeding stock, together with some of their progeny alive and dead to illustrate the main point about quality meat production.

The need for far more demonstrations has been one of the reasons why the Royal has decided to experiment in the next five years with a permanent site—which the Royal Highland and the Great Yorkshire shows already possess. The society has taken a seven-year lease on 550 acres of Lord Leigh's land at Stoneleigh Abbey Park, Warwickshire, and a permanent show ground is being developed, though the decision on whether to take a longer lease will not be taken until two shows have been staged. The savings from a permanent site will certainly be substantial. With a travelling show new roads, plumbing, electricity, telephones and so on have to be laid down each year. Buildings have to be dismantled, moved and re-erected, and that means they cannot be anything like as stormproof as permanent ones. Now the society will be able to spend more on demonstrations and a full 58 acres is being devoted to them next year. At the back of the organisers' minds is the hope that many firms will think it worth while to take permanent sites themselves.

Probably in year or two the competitive livestock classes as they are known today will cease, and show fanciers will have to make do with pigeons, flowers, honey and home-made rhubarb wine. (Indeed, it is these peripheral exhibits that crowds cluster thickly round.) Instead, the breed societies will stage exhibits of the best proven animals that they have, and the proper recognition of genetics will have advanced one step further forward.

More important is the opportunity a permanent site offers for developing an all-the-year-round centre for British agriculture. Though the Royal will remain something of a circus as well as a trade fair and must be the main focus for the society's efforts, there is no reason why demonstrations should not be held at other times of the year. This year not one single trade stand has been taken by an overseas firm, although such a situation is unlikely to last once the present tariffs on machinery imports from Europe start to come down. At the same time there will be new opportunities for selling British cattle and machinery to Europe, and the Stoneleigh site could well become the shop window for this.

Unions' New Frontiers

FROM OUR SPECIAL CORRESPONDENT

Trade unions in Britain have done so much to change the environment in which their members work that they are apt to be looking the other way when the environment changes without them. A new pamphlet* by Mr Keith Hindell of Political and Economic Planning traces some of the social and industrial changes that have come over Britain in the years since the war, and makes some shrewd guesses at the effects these may have on the unions.

As the old industries with strong union structures decline—coal, railways, cotton—the balance of employment swings over to new activities, in distribution, food and drink, clerking, chemicals and man-made fibres. Few of these growing trades have a strong union tradition: few of them seem, at first sight, fruitful ground for the growth of union membership. And the pamphlet points out that, to maintain their present position with 43 per cent of all employees in unions (9¾ million out of 22 million workers), the unions will have to have 10¼ million members by 1968.

For the unions, the most disturbing point made by Mr Hindell concerns the group of trades: food, drink, tobacco, distribution,

*Trade Union Membership. PEP. 5s.

clothing. Employment in these industries went up between 1948 and 1958 by 556,000 people—but union membership sank by 23,000. The increasing employment of women, often part-time, the setting-up of clothing factories in country towns, and numerous other sociological factors have cut the ground from under the unions here. It is noteworthy that the brightest union in these fields, the Union of Shop, Distributive and Allied Workers, actually succeeded in recruiting 90,000 new members in 1961, but still sustained a net loss of 4,000 members. (A similar situation may apply in parts of the building industry, where men work for comparatively short periods on one job.)

Unions in this kind of situation often keep their subscription low, so as not to price themselves too high for their potential members, and their recruitment costs may then absorb much of this money, leaving practically none for providing new benefits. Now that the Trades Union Congress is pleading for dues and benefits to be brought into line between unions, its next contribution might be to establish a fund out of which some prosperous unions (and some are certainly prosperous) could help their less fortunate fellows.

Fortunately, the prosperous unions include a good many of the newer and more go-ahead organisations catering for white-collar workers. The picture is especially bright in the public service. The National and Local Government Officers' Association is the fastest growing union in the country, although local government officers are not increasing much in numbers; union membership in the national government service has sunk by a mere 1 per cent since 1948, despite a 22 per cent decline in the numbers of civil servants since the post-war days of rationing and controls. Outside the public service, unions like the Draughtsmen and Allied Technicians, or the Supervisory Staffs, Executives and Technicians have shown more than their share of increase (an official of Asset was distinctly perturbed recently when a new recruit, on receipt of his union card, at once asked: "When do we start striking?"). The members of these unions do, however, work in contact with members of manual unions. More remarkable is the rise of the National Union of Bank Employees from 28,000 in 1948 to 53,000 now, in the face of overtly anti-NUBE action by most of their employers.

THE most serious failure among white-collar workers is in private industry. Here Mr Hindell points out the disadvantages of the present set-up, whereby the Clerical and Administrative Workers (38,000 to 64,000 members since 1948) and the clerical sections of the General and Municipal Workers and of the Transport and General Workers split the union effort. A single clerical union for private industry, he suggests, could draw a membership of 100,000 from existing unions—and it could both recruit more efficiently, and present a more favourable image, among white-collar employees. It would also make necessary a change in the present composition of the 35-man general council of the TUC, on which the white-collar workers as such now have only one seat (occupied, to the fury of many people, by Sir Tom O'Brien of the Kine Employees).

For the TUC, however, the biggest change is still to come. Since Mr Hindell's booklet was written it has become tolerably likely that the members of Nalgo will vote for affiliation to the TUC—which would more than ever reinforce the case for increasing white-collar representation on the general council; and Nalgo could eventually be joined by the National Union of Teachers.

The addition of these two large and overwhelmingly middle class organisations, neither of which is affiliated to the Labour party, could do more to change the image of the TUC than a million wise words from Mr Woodcock; it would raise to gale force the wind that, this year, has blown Miss Anne Godwin of the CAWU to the chairmanship. Mr Jack Cooper of the General and Municipal Workers has said that if Nalgo joined the TUC it would "be like fitting the *Queen Elizabeth* with stabilisers."

Ireland's Dr Beeching

FROM OUR SPECIAL CORRESPONDENT

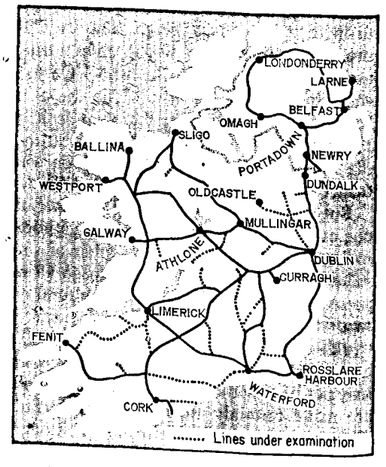
FOR long a cultural mentor of Britain, Ireland is now, it seems, beginning to teach her economic mother to suck eggs. Well before the reorganisation of the British Transport Commission, the government of the Republic set about reconstructing its own nationalised transport concern. *Coras Iompair Eireann* was in 1959 given new commercial freedom and endowed with a board headed by some of the country's bright new, economic realists. Transport subsidies, mainly sunk without trace in maintaining a British-style rail network of over 2,000 route miles for a widely-scattered rural population, had been running at around £2 million a year: the new board was guaranteed an annual subsidy of £1,175,000 for five years, after which decisions would be taken on the closure of those lines that really could not pay their way. The official report on which the reconstruction of CIE was based had forecast an eventual 850 miles of track for the whole country.

In its first year of operation the board reduced the railway deficit to £700,000, and the next year to £246,000: a mere 396 route-miles of irretrievable track have been closed in the past three years. Modern diesel units and more efficient operation had given the railways a fair chance of survival. But this year wage increases for railwaymen, and a couple of costly unofficial strikes, have raised the CIE deficit to £1.6 million. The latest wage increase and improvements in railwaymen's conditions could add over £2¼ million to costs. So last week the chairman of CIE, Dr C. S. Andrews, announced the imminent closure of 489 miles of branch lines.

The usual complaints have come from those likely to be affected, but they lack conviction. Dr Andrews had a good concrete argument in hand with the case of the old West Clare Line, closed before his term of office. This white elephant (famous for the excellent song whose chorus is: "Are ye right now, Michael, are ye right? Do ye think that we'll be there before the night?") used to lose £23,000 a year. Now more freight and passengers are carried in this remote rural area by bus and truck for a mere deficit of £4,000. In the country the railways can be heavily used, but only two or three times in a year for the sugar-beet harvest or the cattle-fair; the logic of using the money for improving roads and buying lorries is irresistible.

WHAT is more, there were sound reasons for granting the railwaymen the wage increases that are now to put some lines out of business. Industry in Ireland is rapidly increasing its demand for labour, especially for people like the skilled engineers from the railway workshops. A country in competition with the British labour market could not afford to let its wage rates be dragged back to subsidise an industry with no future. (In Northern Ireland, where the demand for labour is barely rising at all—and where many of the summer visitors come from Lancashire and Scotland, and expect to travel from port to holiday resort comfortably by train—the problems of the forthcoming rail closures will be far harder than those Dr Andrews is facing.)

The wholly admirable thing about the CIE operation is that it gives to the country



a clear demonstration of the effects of wage increases, and allows the public, as voters and as consumers, to make an open choice between reaction—in the sense of the retention of a service for which there is no further use—and progress, in the sense of a reallocation of resources, including labour, into new and expanding industries.

Just this week the Irish are facing up to a typical piece of reaction—and the threat of a national strike on CIE's buses next week—over the corporation's attempts to abolish the sinecure job of conductor on long-distance motor coaches. The official union leaders are trying to help CIE do this, having won safeguards for the men likely to be affected: but they have been repudiated in a ballot of their members.

In the long term this Luddite reflex seems doomed to failure. In the speech in which he announced the rail closures, Dr Andrews did not omit to mention that, by the time his five-year term of office is up, the Republic's system of wage-planning should be in full operation. Dr Beeching is known to be watching with interest his fellow-surgeon across St George's Channel.

Fair Enough?

FROM OUR SPECIAL CORRESPONDENT

ANTIQUE dealers were afraid that the antics of Wall Street and the London stock market might cloud their annual trading fair at Grosvenor House. In the event, most of them were pleasantly surprised: "Not so good as last year" was how many described business, "but not far behind. And anyway last year was astonishingly good". When the fair closed last week, 25,441 people had visited it over its fourteen days, much the same as in recent years. As in the past, some exceptional antiques were sold within a few hours of the fair's opening, but some were still there a fortnight later. Very top-priced things did not go quite as well as last year: above the £2,000 mark in furniture, it was less easy to find buyers.

Americans and Canadians were conspicuously absent this year, but the continental buyers, notably Italians and Greeks, were there, as well as Australians. However, the middle-aged English are now the fair's mainstay. They pray that their purchases will prove a good investment, but they are not collectors who want to hoard their things away: they want pretty things, to be used and admired. There was less Georgian mahogany furniture on show; the more fashionable taste is for something a little more ornate, such as French or lacquer furniture. In silverware, which did well, the demand is for articles like coffee-pots which can actually be used.

The trade's chief trouble is still to find good pieces, some of which are now being brought back from the United States. There is no sign of any crack in the prices of antiques and few dealers are complaining about business so far this year, even if it is down a little in volume on last year. But traders are most anxious about the future, trying to weigh their fortunes against those of the Stock Exchange. Few think that the capital gains tax is going to keep money away from them, but a Stock Exchange depressed for any length of time obviously could. It might increase the desirability of investing in goods rather than stocks: but where would the money come from?

LETTERS

TV with Auntie

SIR—It is not for me to comment on the opinion expressed in your leading article on the Pilkington committee's report. But I think your readers would wish to know that, according to our researches, your facts about the relative audiences for Panorama and This Week are incorrect.

In claiming that "ITV's public affairs programmes are now seen by an appreciably higher proportion of the viewing public than the BBC's" you state that This Week is being twice as well as Panorama.

BBC audience research figures for the last complete month available (May 1962) show that the programmes were seen by the following audiences:

Panorama		This Week	
7th May	8¼m.	10th May	5¾m.
14th May	7¼m.	17th May	5¼m.
21st May	7¼m.	24th May	5½m.
28th May	7¾m.	31st May	5¼m.

—Yours faithfully, GEORGE CAMPEY
Head of Publicity,
British Broadcasting Corporation
London, W1

[We are happy to print the BBC's estimate of its audience figures. However, the figures produced by Television Audience Measurement for the four weeks May 7th to June 3rd showed that This Week was watched, on average, by 47 per cent of homes able to view both channels and Panorama by 22 per cent. Probably 3 million sets can still receive BBC only.]

★

SIR—I found your article on the Pilkington report to quite irresponsible. Is not the real question for the government to decide not whether "the broadcasting audience is discriminating enough to be allowed to make a choice of its own on the quality of what it sees", but rather whether or not some safeguard for a basic minimum standard of quality in broadcasting shall be legislated for to prevent men enriching themselves at the cultural expense of the nation?

How "adult" does one have to be to withstand the handiwork of the depth psychologists and motivation research specialists commonly employed by advertising agencies?—Yours faithfully,
London, W10 G. J. B. WILLIAMS

★

SIR—I do not wish to argue about the Pilkington report, but I must express my dismay that *The Economist* should say that one minority should have no part in debating it, and that if any of its members dared to do so "they should be hit squarely on the head". Has violence on the screen really so affected the champions of liberty and the rights of minorities?—Yours faithfully,
Winsford, Cheshire W. N. LEAK

Canada's Warning

SIR—You are of course right in saying that it is now six weeks since there was any drain on the United States' supply of gold, but these six weeks have seen a very substantial build-up in the foreign investments held by the Federal Reserve, which increased by some $426 million last week and by over $150 million the week before. Surely the figures are related: instead of the US deficit being expressed in the gold reserve figures, creditors are content to build up their credit with the Fed.

In your article on Canada, you exhort foreign bankers to be co-operative (which they seem to be!) but surely these bankers have a duty to their own countries too. They cannot be happy to see their reserves being gradually transformed into another currency which may or may not be devalued. The dangers implicit in a gold exchange standard, where the supply of gold is very strictly limited, have already been strongly argued by M. Jacques Rueff in a series of articles which appeared some time ago in France and were reprinted in *The Times*.

You are right in pointing out that the principal danger now comes from too little demand, not too much. Surely the close

attention to wage costs which you also propose will very probably only contract demand still further. What seems necessary is a general expansion in demand, in company profits and therefore in the general liquidity position of the whole western world, i.e., paying *less* attention to costs and giving the world a good dose of inflation. For this governmental co-operation will be necessary (the bankers cannot do this on their own), either to raise the price of gold substantially, or to adopt some sort of Triffin type plan to abolish the use of that metal as a reserve base altogether.

There is the unpleasant possibility of a good, old-fashioned slump ahead of us unless something is done. As no government will admit the existence of the problem, however, it is unlikely that the problem will be solved—until it is far too late. The present rally on Wall Street seems very likely to lead the US government to assume that everything is all right again, until the rally comes to a stop as it is sure to if no action is taken.

Business confidence (and profits) needs to be restored, but the refusal of the US administration to admit that anything is seriously wrong will only serve to weaken confidence. Propaganda has a damaging effect when it is obviously untrue.—Yours faithfully,
T. H. STEWART
Cambridge.

Science Teachers

SIR—To paraphrase your own editorial comment, when will *The Economist* learn that it cannot hope successfully to address the educational world if it persists in serving up its own prejudices in place of facts?

Commenting on the report on the Supply of Science Teachers, published not by the National Union of Teachers but by a Joint Committee consisting of the Association of Scientific Workers, the Association of Teachers in Technical Institutions, the Association of University Teachers, the National Union of Teachers and the Science Masters' Association, you say: "Why spoil a perfectly good case by announcing in such a pleased manner that there is not the slightest chance of getting the science teachers we need?" There is nothing in the report which can justify this comment; on the contrary the object in publishing it is to draw public attention to the seriousness of the shortage of science teachers and to urge certain measures which would help remedy the situation.

It is true that at the press conference on the report a journalist said there was no room in the schools to accommodate the extra science teachers if they were to be found now, to which Sir Ronald Gould replied that this was no problem because there was no likelihood of the required science teachers being found in the near future and any extra accommodation needed could be provided by the time the teachers were found. To report this as the NUT "announcing in such a pleased manner that there is not slightest chance of getting the required science teachers" is rather like the old story of the Archbishop and nightclubs in New York.—Yours faithfully,
FRED JARVIS
National Union of Teachers
London, WC1

Vaulting Ambition?

SIR—On June 2nd when writing of the office of chairman of the Conservative party organisation you said: "no previous holder has ever gone on to really high office."

Neville Chamberlain was party chairman in 1930-31. He was Prime Minister in 1937-40. It would be interesting to know what you considered to be the *ne plus ultra* of political ambition.—Yours faithfully,
London, SW7 M. CHAPMAN-WALKER

Ashes or Dust?

SIR—Did you really have to ruin an otherwise fair, though critical, review of my paper on the Economics of Burial and Cremation by the blatant misrepresentation of reporting me as suggesting that bodies should be centrally amassed, cremated together, and the ashes then parcelled out to relatives by weight and volume? I said nothing of the kind.

Emotional responses make cremation difficult enough to put over without added burdens of bowdlerised reporting. I said that if after most cremations ashes are simply scattered in crematoria gardens, then there is little to justify the separate cremation of each body if larger cremations are more efficient.

The return of ashes to relatives (jokes about egg-timers apart) is to my mind inconsistent with the philosophy of cremation and I argued strongly against it. On the other hand, I learn that at one crematorium ashes are separately buried under the turf, each deposit being carefully plotted on a chart, so that relatives can visit the "grave." You like the personal touch?
—Yours faithfully,
Manchester H. R. PAGE

Teacher Shortage

SIR—You mention the importance of persuading as many as possible of married women teachers between the ages of 40 and 45 to return to teaching.

Could not the net be spread wider to include married women graduates (such as myself) who, before having their first children, held responsible posts in industry, the civil service, or in social work, and who, for some reason, are unable or unwilling to return to full-time work, but for whom school hours are suitable?

The day colleges designed for older entrants to the teaching profession do not seem to me to meet the need of such women. What is required are short intensive courses in modern practical teaching techniques, including supervised teaching practice, critical discussion of the latest textbooks in the subject or subjects in which the entrant's degree was taken, and some supervision of home study. These courses could be held in every education division in which the need for additional teachers was felt, and need not be expensive in manpower or resources. They would last for one or two terms, at most.

I am aware that any such scheme would only provide a very small contribution to the solution of a very large and complex problem, but it might help precisely in areas where the need is greatest.—Yours faithfully,
E. HOLLOWAY
Hitchin, Herts.

BOOKS

How Russia Has Grown

The Growth of Industrial Production in the Soviet Union

By G. Warren Nutter.

Princeton University Press. 733 pages. $15.00.

THIS fat volume is the result of some years' intensive work under the auspices of the National Bureau of Economic Research. The text proper runs to 292 pages, the rest of the book consisting of technical notes, output series and other "raw materials" used in the computations, and also an extensive bibliography. The great merit of this lies in the fact that the critically inclined scholar can check the calculations, and has at his disposal a mass of statistics that have been painstakingly gathered in numerous Soviet publications. To take a small example: on page 451 one may find output figures for sausages, fish, soap, salt and raw sugar for most years from 1913 to 1959, and one may be confident that any omissions are due to non-publication and certainly not to any lack of ingenuity or diligence on the part of the researchers. The volume also includes numerous comparable figures and indices for the United States.

Mr Nutter and his collaborators have used the figures with skill and care, and the resulting indices faithfully reflect the data they had at their disposal. They cover in detail the period 1913-55, with an occasional look at the Tsarist period and also the years 1955-58. They show a growth rate far lower than the official one; this is hardly surprising. It is also lower than that calculated by some other Western scholars (for instance, Seton and Hodgman), though others tend to confirm Mr Nutter's findings (see the recent index devised by Kaplan and Moorsteen). The work must be taken seriously, and it is plainly a scholarly and honest piece of research. Yet there are a series of doubts in the reviewer's mind. These relate to three main points: the product coverage of the index, the meaningfulness of the comparisons with the United States, and, lastly, the conclusions drawn from the trends in the chosen period.

The problem of product coverage is essentially one of deciding whether the material used is representative. Russia's published data suffer from gaps (for instance, nothing on ships, aircraft, electronics, some chemicals) and also from lack of precision (metallurgical equipment in tons, or clothing in millions of roubles). There are the usual problems, too, of allowing for changes in product design, which so complicate computations, particularly in the engineering industry. This reviewer is of the opinion that in almost every case the items left out of Mr Nutter's index (left out for lack of usable data), are items that grow fast. To take a few examples: cloth is there, but clothing is not; paper is in, books are out; flour is included, bread is omitted. Yet in each of these instances it is known that the more highly fabricated item grew much the most rapidly. The machinery index is heavily "weighed down" with railroad equipment, production of which was already well developed in 1913. Then Mr Nutter's handling of quality changes appears to be unreasonably selective. A Soviet reviewer pointed out that while he corrects downwards in the case of textiles, he fails to make any upward correction for higher quality steel; this seems a well-founded point, which may well also apply to a wide range of machinery. Lastly, Mr Nutter's index as a whole seems at odds with his own calculation of Soviet energy consumption. This, he calculates, rose roughly eightfold in the period 1913-55, during which industrial production increased only sixfold, whereas in the United States in the same period energy consumption slightly more than doubled and industrial production rose 4.7 times. Although there is no particular reason to expect a closely similar relationship between energy and industrial ouput, so great a difference seems incredible, the more so as the Russians have devoted so high a proportion of their energy production to manufacturing industry. One should add that energy is here measured in thermal units, and that in value terms the figures show a much larger rise in Soviet output.

Whereas many of Mr Nutter's comparisons with the United States are of great value, the same cannot be said (at least in this reviewer's opinion) about his use of the "lag" concept. He seeks to show that, in the period 1913-55, the USSR actually fell further behind; in 1913 Russia lagged twenty-nine years behind America; in 1955, thirty-five years. This conclusion is reached by a procedure arithmetically correct but of questionable usefulness. Thus in 1955 the output of cement in Russia was equal to American output in 1922 ("lag of 32 years"), but in 1960 Soviet output reached the American production of 1953, so the lag is reduced by twenty-five years in five years.

This leads to the third and last point of criticism. Mr Nutter evidently believes that the period 1913-55 is suitable for analysing long-term trends and for comparing growth rates with the United States. The period includes, for Russia, a disastrous civil war, recovery, another disastrous war and another recovery. Mr Nutter suggests that disasters stimulate growth, and that they need not necessarily distort the trend line. This may be so over a very long time-scale, but surely such an approach leads to wrong conclusions when so large a proportion of the years covered are abnormal. One of the abnormalities is demographic: perhaps the destruction of factories in the second world war stimulated their rapid replacement, but the millions of men lost in the prime of life are irreplaceable.

On balance, therefore, this study appears to understate Soviet achievement, but it remains a most valuable work: conscientious, precise, a storehouse of information. It is also a useful corrective to the exaggerations of official Soviet claims.

Gaitskellite Nato

The Politics of Western Defence

By F. W. Mulley.

Thames and Hudson. 293 pages. 30s.

MR MULLEY is a quiet bird as politicians go, and a rare one: he really does believe in close military integration within Nato as a solution to the political problems of the alliance. His analysis of Nato's tasks, and of western resources, is highly factual and very well done. He recommends that all western nuclear weapons committed to the European theatre should be assigned to Nato itself, under a supreme commander who would be on a par with General Norstad and subject to similar political control. If it has always seemed improbable that President de Gaulle was building a striking force with an eye to handing it over to Nato in the end, there could still be a possibility that a tripartite (American, British, French) strategic directorate for the Nato theatre will not be totally unacceptable to the deterrers concerned in the long run. If so, the Mulley proposal may not turn out to be quite as theoretical as it first looks.

His ideas on tactical nuclear weapons are certainly worth pursuing. He would like a separate Nato commander-in-chief for these weapons, controlling a separate atomic artillery force which would normally be held behind the conventional units in forward positions and would be multi-national in organisation and personnel. (The parallel here is with General Norstad's existing fire-brigade units.) The essential point is to remove nuclear weapons from national forces and thus, by implication, from the sphere of purely national policies as well. This cuts pretty near the bone as far as the present composition and tactical training of Britain's Rhine army are concerned, at least as a force that could be employed in a forward defensive position.

Mr Mulley is plainly uneasy at the British—and the general Nato—failure to provide sufficient conventional troops. As a Labour party spokesman he is unwilling to embrace selective service for Britain with any enthus-

iasm. But he points out that Britain is, in fact, the only Nato country that has accepted a specific military commitment to General Norstad's command, however uncertain the actual fulfilment of the British pledge under the 1954 agreements has been in the Sandys and Watkinson years. He believes that this type of specific commitment should be publically extended to all Nato countries:

> Certainly it would be easier in Britain to get public support for a strong British contribution to the shield forces if there were outward and physical evidence of equal concern and binding undertakings on the part of other member countries as to their contributions.

The shriller advocates of selective, or national, service in Britain have a good deal to learn in political persuasiveness from Mr Mulley.

Economic Landscape

Britain Yesterday and Today: *An Outline Economic History from the Middle of the Eighteenth Century.*

By W. M. Stern.

Longmans. 304 pages. 21s.

THE author of an outline—as Dr Stern engagingly confesses—has to be a fairly brazen liar; he must above all things abridge and simplify. Dr Stern has reduced the need for mendacity by an initial act of heroic simplification. He treats the last two centuries of English economic history not period by period but topic by topic; trade, industry, agriculture, and the rest are each in turn followed through their whole career. The price the reader pays is a loss of a sense of the movement of the whole economy through time; he meets the fall in the birth-rate before he is introduced to the industrial revolution, and the development of air transport before the repeal of the corn laws. He misses too many of the interconnections between the various sectors of the economy within a given period; for this method of exposition insensibly creates the impression that developments in, say, trade or banking are to be explained mainly by previous events in the same sector rather than by contemporaneous events in the rest of the economy. Dr Stern throws some grappling ropes from one chapter to another, but he is forced by his method of presentation to trace antecedents rather than to relate problems to the setting of their period.

On the other hand, the concentration on topics yields some real advantages. There are certain subjects where the roots in the past are more interesting than the lateral links in the present, and these are better suited to Dr Stern's methods. Population is one, and possibly the structure of industry another. And even when this is not the case, concentration on topics rather than periods has enabled the author to pack an impressive amount of information and judgment into a small space. The information is up to date and reliable, the judgment shrewd and independent, and the exposition extremely lucid and economical. The reader who knows nothing of the subject will not find it easy to take his bearings, but anyone, whether professional student or layman, who is already familiar with the main landmarks, will find this book an intelligent and convincing guide to the economic landscape of the last two centuries.

Outstanding Battle

The Fall of Crete

By Alan Clark.

Anthony Blond. 206 pages. 25s.

MR ALAN CLARK has written a first class account of the 1941 battle for Crete, succinct, vivid and clear. Not everyone who experienced the battle at first hand will agree with the way he apportions blame for the loss of the island, but they will certainly respect his ability not only to recreate the battle, but also to single out the key decisions—and the key deciders.

He takes up a healthily belligerent attitude about the issues involved. Indeed one senses that Mr Clark writes, like his fellow historian, Mr Corelli Barnett, with the exasperation of a man who would almost certainly have conducted himself with distinction in battle had he had the chance, but who now finds himself confined to studying the mistakes made by his forebears.

Mr Clark contends that Anthony Eden, even more than Churchill, was responsible for pushing ahead with the disastrous proposal to go into Greece. He shows how Churchill alone saw the struggle in Crete in its true light, not as a rearguard action but as a justifiable head-on collision with "the very spear-point of the German lance." He tells the tragic story of muddle and half-heartedness in equipping and reinforcing the island. And he argues that once the battle was joined its outcome was determined above all by sluggish and inept leadership by commanders in the Maleme area, and in particular by the commanders of the New Zealand Division and its Fifth Brigade. Mr Clark's case is that the Germans, by a monumental blunder in underestimating the number of Allied troops on the island, gave us an unexpected chance of victory that was thrown away.

This case he sustains with some effect against the commanders directly responsible for the defence of Maleme, but much less effectively against General Freyberg, who was in overall command of the island. Mr Clark does not make sufficient allowance for the fact, which dominated all decisions made in the battle for Crete, that they were almost always based on grossly inadequate information. So completely and so constantly did the enemy aircraft interrupt communications that information was almost always out of date by the time it reached headquarters. The orders issued in return were even more out of date by the time they reached the front. Indeed the main criticism of Mr Clark's book is that he has not examined closely enough the effects of the enemy control of the air on the minds of the garrison. He is right in pointing out that actual casualties from the air were remarkably few. But the noise and strain of the bombing and straffing, the paralysis it clamped on all movement in daylight, above all the sense of omnipotence conveyed by these aircraft as they roamed and hunted at will overhead, had an indirect effect out of all proportion to the number of men they killed or wounded. To fight in these conditions was difficult; to think and plan in them was nightmarishly difficult. These points need to be made. But in other respects (except for the dearth of maps) this is an excellent account of an extraordinary battle.

Comparative Colonialism

Political Advancement in the South Pacific

By Francis West.

Oxford University Press. 201 pages. 35s.

BOOKS on dependent territories of colonial powers past, present or (in the case of the United States) unacknowledged by themselves as such tend to fall into two categories. One comprises the condensations of the accumulated knowledge of those who as administrators, missionaries or otherwise have given years of their lives to those territories; in the other are the treatises of scholars and students who decide to investigate, often with the aid of a research grant, some aspect of a given dependency for the purpose of a thesis or book, spend such time as they can spare in collecting their material and then go home to write it up. To say this is not to imply that the latter type of work is inferior in quality to the former. But it is the product of different experience, of a different approach and of a different motive. The former type of book can be, if it is a good one, a work in the round; the latter is a piece of specialisation.

Dr West's work of 180 pages of text is a useful, practical example of the second type: a straightforward piece of investigation free from the irritating air of superiority that sometimes mars these academic studies. It originated in the author's need to collect material for a course of lectures on comparative colonial policy and the result is precisely what he set out to produce: a comparison of the colonial practice of Great Britain, France and the United States as exemplified in one each of their Pacific dependencies. It is the author's purpose to ascertain and explain the differences; it is no part of his purpose to inquire whether one system is better or worse than another. The territories investigated are the British Crown Colony of Fiji, French Polynesia and American Samoa. Fiji's indigenous race is Melanesian, but the Melanesians of Fiji share with the Polynesians of the two others a similar pre-European background of respect for aristocratic rank and obedience to chiefly authority.

In Fiji the author finds an administrative situation unique in Pacific Island groups, for here we have a plural society in which the indigenous Fijian people owns most of the land but has come to be outnumbered by the descendants of arrivals in the second half of the nineteenth century from the Indian sub-continent; these people had come to work in the canefields, preferred Fiji to their homeland, stayed and multiplied. To prevent Fijian society from disintegrating in the face of these circumstances it was deemed necessary to set up a separate administration for Fijians only; and it is this little *imperium in imperio* within the general framework of the colonial government of Fiji that is here the author's primary concern.

The groups composing what is now called French Polynesia present a simpler picture; the indigenous inhabitants are racially homogeneous and the French colonial system is assimilative, making no legal distinction between French citizens of Oceanic origin and those of France. Less satisfactory is the section on American Samoa, in which the author, after recognising that "American Samoa cannot be treated separately from Western Samoa," where five-sixths of the Samoan people live, then proceeds to do so. A short last chapter lucidly and usefully summarises his findings.

Paperback Selection

MARSHALL'S "PRINCIPLES" (8th edition), Keynes's "GENERAL THEORY," and Jean Robinson's "EXERCISES IN ECONOMIC ANALYSIS," are among the last additions to Macmillan's Papermacs. A particular welcome should also be given to the appearance as a paperback of Bagehot's "THE ENGLISH CONSTITUTION."

Below is a guide to some of the paperbacks received by this journal in recent weeks:—

Arts and Archaeology:

STRAVINSKY IN CONVERSATION WITH ROBERT CROFT. By I. Stravinsky. 301 pages. 7s. 6d. (Pelican). *Penguin.*

THE BIBLICAL ARCHAEOLOGIST READER. Edited by G. E. Wright and D. N. Freedman. 358 pages. 10s. (Anchor.) *W. H. Allen.*

THE INSTRUMENTS OF MUSIC. By Robert Donington. 218 pages. 12s. 6d. (University). *Methuen.*

THE ESSENCE OF JEWISH ART. By Ernest Namenyi. 103 pages. 7s. 6d. *Yoseloff.*

Biography:

THE AUTOBIOGRAPHY OF JOHN STUART MILL. 240 pages. 7s. 6d. (Dolphin). *W. H. Allen.*

TRAVELLER'S PRELUDE. By Freya Stark. 332 pages. 6s. AUBREY'S BRIEF LIVES. Edited by O. Lawson Dick. 400 pages. 12s. 6d. (Peregrine). *Penguin.*

Economics:

MAN, MONEY AND GOODS. By J. S. Gambs. 351 pages. $1.95. 14s. *Columbia University Press.*

THE GENERAL THEORY OF EMPLOYMENT, INTEREST AND MONEY. By J. M. Keynes. 415 pages. 8s. 6d. (Papermac).
EXERCISES IN ECONOMIC ANALYSIS. By J. Robinson. 262 pages. 6s. (Papermac).
PRINCIPLES OF ECONOMICS. 8th edition. By A. Marshall. 763 pages. 18s. (Papermac). *Macmillan.*

DEVELOPMENT OF THE EMERGING COUNTRIES. By R. E. Asher *et al.* 250 pages. 20s. *Faber* for Brookings Institution.

History:

THE PEOPLE AND THE CONSTITUTION. 2nd edition. By C. S. Emden. 348 pages. 7s. 6d. *Oxford University Press.*

CROMWELL'S ARMY. By C. H. Firth. 448 pages. 14s. (University).
HISTORY OF ENGLAND. By E. L. Woodward. 205 pages. 7s. 6d. (University). *Methuen.*

CHAUCER'S WORLD. Compiled by E. Rickert. 471 pages. 21s. $2.95. *Columbia University Press.*

THE FRAMING OF THE CONSTITUTION OF THE UNITED STATES. By M. Farrand. 290 pages. 12s. 6d. *Yale University Press.*

SAINTS AND SCHOLARS. By D. Knowles. 219 pages. 9s. 6d. *Cambridge University Press.*

Literature and Literary Criticism:

OXFORD LECTURES ON POETRY. By A. C. Bradley. 403 pages. 11s. 6d. (Papermac). *Macmillan.*

DRAMA AND SOCIETY IN THE AGE OF JONSON. By L. C. Knights. 286 pages. 8s. 6d. (Peregrine).
OLD CALABRIA. By N. Douglas. 356 pages. 12s. 6d. (Peregrine). *Penguin.*

OVID SURVEYED. (An abridgement of Ovid Recalled). By L. P. Wilkinson. 248 pages. 13s. 6d. *Cambridge University Press.*

SHAKESPEARE'S TRAGIC HEROES. By L. B. Campbell. 308 pages. 14s. (University). *Methuen.*

MODERN FRENCH THEATRE FROM GIRAUDOUX TO BECKETT. By J. Guicharnaud in collaboration with J. Beckelman. 313 pages. 11s. 6d.
THE VISION OF TRAGEDY. By R. B. Sewall. 187 pages. 10s. 6d. *Yale University Press.*

SOPHOCLES: THREE TRAGEDIES, ANTIGONE, OEDIPUS THE KING, ELECTRA. Translated into English verse by H. D. F. Kitto. 167 pages. 6s.
ORPHEUS, OEDIPUS REX, THE INFERNAL MACHINE. By Jean Cocteau. 153 pages. 7s. 6d. *Oxford University Press.*

THROUGH THE LOOKING-GLASS *and* THE HUNTING OF THE SNARK. By Lewis Carroll. 192 pages. 7s. 6d. (Dolphin).
OLIVER TWIST. By Charles Dickens. 474 pages. 10s. (Dolphin).
SELECTED POEMS AND LETTERS OF EMILY DICKINSON. Edited by R. N. Linscott. 352 pages. 10s. (Anchor). *W. H. Allen.*

CAVALLERIA RUSTICANA. By G. Verga. Translated by D. H. Lawrence. 157 pages. 2s. 6d.
THE BRIGADIER. By I. Turgenev. Translated by M. Budberg. 144 pages. 2s. 6d.
THE LITTLE DEMON. By F. Sologub. Translated by R. Wilks. 253 pages. 3s. 6d.
DANGEROUS ACQUAINTANCES. By C. de Laclos. Translated by R. Aldington. 352 pages. 5s.
THE TALES OF HOFFMANN—FOUR TALES. By E. T. A. Hoffmann. Translated by M. Bullock. 216 pages. 3s. 6d.
THE ADVENTURES OF A SIMPLETON. By H. J. C. von Grimmelshausen. Translated by W. Wallich. 249 pages. 3s. 6d.
SALAMMBO. By G. Flaubert. Translated by R. Goodyear and P. J. Wright. 251 pages. 3s. 6d.
THE ANATOMY OF LOVE. By R. Burton. 287 pages. 5s. (All Four Square Classics). *New English Library.*

Philosophy:

AN INTRODUCTION TO METAPHYSICS. By Martin Heidegger. 193 pages. 7s. 6d. (Anchor). *W. H. Allen.*

LUDWIG WITTGENSTEIN: A Memoir. By Norman Malcolm, with a biographical sketch by G. H. von Wright. 100 pages. 5s. *Oxford University Press.*

ARISTOTLE. By J. H. Randall, Jr. 316 pages. 11s. $1.60. *Columbia University Press.*

THE THEORY OF BEAUTY. By E. F. Carritt. 250 pages. 9s. 6d. (University). *Methuen.*

LECTURES ON THE REPUBLIC OF PLATO. 2nd edition. By R. L. Nettleship. 370 pages. 10s. 6d. (Papermac). *Macmillan.*

UTILITARIANISM. By John Stuart Mill. Edited by M. Warnock. 352 pages. 7s. 6d. (Fontana).
A TREATISE OF HUMAN NATURE. Book I by David Hume. Edited by D. G. C. Macnabb. 383 pages. 7s. 6d. (Fontana). *Collins.*

AN ESSAY ON MAN. By E. Cassirer. 246 pages. 11s. 6d. *Yale University Press.*

Politics and Political Theory:

THE ENGLISH CONSTITUTION. By Walter Bagehot. 309 pages. 7s. 6d. (Dolphin). *W. H. Allen.*

AN INTRODUCTION TO WORLD POLITICS. 4th edition. By W. Friedman. 398 pages. 16s. (Papermac). *Macmillan.*

INDIAN POLITICAL THOUGHT. By D. M. Brown. 254 pages. 12s. 6d. *California University Press.* London: *Cambridge University Press.*

THE BUSINESS WORLD

Oil's Terms of Trade

EUROPEAN negotiators in Brussels who are at present trying to persuade the British of the virtues of world commodity agreements on producers' terms might well take a quick look at the principles for one such agreement suggested this week by one group of raw material producers—the Organisation of Petroleum Exporting Countries. For ultimately, the European consumer will have to consider these terms.

Resolutions adopted at the end of the fourth conference of Opec, which took place at its headquarters in Geneva during April and June, were published simultaneously this week in the capitals of all its member countries—Iran, Iraq, Kuwait, Qatar and Saudi Arabia in the Middle East, Indonesia and Libya in other parts of the Eastern Hemisphere, and Venezuela in the Western Hemisphere. Between them, these countries account for close on 90 per cent of the crude oil exported across the world. What they say they have in mind is a significant increase in the posted price of crude oil in the Middle East, and a yet more significant increase in the revenue that Middle East governments draw from the oil companies that produce and move the oil from their territories.

Their demands, for the moment, are upon the oil companies. This is as true of the pressure for an increase in posted price as of the rest, since at present the posted price of Middle East is simply a benchmark for setting the level of government revenues, and not a price actually paid by independent buyers in any market. But these oil companies, described by Opec in one of these resolutions as being "of the nature of a public utility," would argue at present that on their international operations, right across the board, they are earning no more than a public utility return. There is little chance that they could accede to Opec's demands, if they were prepared to, without pushing up oil prices to the final consumer—if they could. So Opec's resolutions, eventually, are addressed to the European consumer nations—which, it is relevant to note, are at present considering an energy policy accepting basic future dependence upon imported oil.

Opec's demands are threefold. First, they are recommending member countries to enter into negotiations forthwith "to ensure that oil produced in member countries shall be paid for on the basis of posted prices not lower than those which applied prior to August, 1960." It was this price cut in August-September, 1960, effectively of some 4½ per cent, that brought Opec into being. The main Middle East producing countries, whose government revenues depend upon a proportion of profits shown at posted prices, refused to recognise the cut and formed Opec to protect their common economic interests; they were joined by Venezuela, where prices were not cut at that time. The Middle East governments concerned have since individually reiterated their refusal to accept the subsequent level of posted prices as a basis for the assessment of tax liability. But the recommendation from the Geneva conference is the first united move to restore the original price level (or datum for tax).

The second demand takes a little more explaining. It is that royalty payments on oil should be fixed at a uniform rate "which members consider equitable," and should not be treated as a credit against income tax liability. This touches upon the ground rules of the concessions under which international oil companies now produce and move oil in the Middle East. Payments to the host governments include a royalty—at present, generally of 12½ per cent of the posted price—and a tax element. The tax is set at 50 per cent of the posted price less allowable costs; so it takes half of notional "profits," but when the company is in fact getting less than the posted price for its crude the tax amounts to well over 50 per cent of actual profits. The royalty due can be credited against the income tax; in effect, therefore, the tax paid "makes up" payments to the government, in total, to 50 per cent of the notional profit.

Now if royalty ceased to be credited against tax, the government would get it in addition to the 50 per cent tax due. The royalty would presumably be "expensed," or treated as a cost before settling the taxable income for Middle East purposes; the tax liability would be lower but it would all be actually payable, with nothing to credit against it. So the total payment to the governments would still show a significant increase particularly if the rate of royalty were put up.

TAX complications do not quite end there. In the United States and in Britain, income taxes paid to the governments of oil countries can be credited, or set off fully, against a company's domestic tax liability. Royalties are not normally creditable in this fashion; most Western tax jurisdictions treat them as expenses, and credit only the amount of tax paid to "make up" the revenues to 50 per cent of profits reckoned at posted prices. An increase in the tax due in the Middle East, if royalties ceased to be deductible for tax assessments, would thus in principle create a corresponding additional tax credit in the Western home country. In that case, therefore, part of the additional tax paid by an international company in the Middle East might be offset by the ability to reduce further any tax payable at home. But in practice, whether such an effective offset can occur, and its size, will depend upon the tax situation of any given inter-

national company; moreover, certain of the major companies operate under Continental tax jurisdictions where income earned abroad is not taxed so that questions of tax credit do not arise. In the case of American companies this is complicated by the "depletion allowance," which they are allowed against American tax on all production anywhere. Ironically, perhaps, Opec has put forward this second demand upon the companies as a form of "depletion charge." It argues that since petroleum is a wasting asset, "in conformity with the principle recognised and the practice observed generally in the world," its developers should compensate the countries from which it is drawn "for the intrinsic value of such petroleum, altogether apart from their obligations falling under the heading of income tax."

The third specific demand of Opec is a minor one. It recommends that countries should get rid of the small discounts for "cost of sales" which are at present allowable as costs in most of the Middle East countries before computing taxable income. These discounts are usually about one per cent of the posted price. To end them would fractionally increase the government's revenues; but not as much as putting the posted prices back to pre-August, 1960, levels, and not nearly as much as changing the basis of dealing with royalties.

DR PEREZ ALFONZO, the petroleum minister of Venezuela, is said to have stated in Caracas this week that the result of the change in Middle East formulas would bring Middle East government participation into line with the share in Venezuela. Certainly this would be its effect on the government's "take." If one were to assume that a proper market price for Middle East oil—i.e. what a company could realise in sales to independent buyers—might be about 20 cents a barrel lower than the ruling posted prices, then the governments' take today, as 50 per cent of posted prices, would amount to more than 55 per cent of such a market price. The effect of these resolutions, if conceded in full, might be to make that 55-60 per cent into about 65-70 per cent of the "realisation" price in an independent deal. The Venezuelan tax and royalty formula already brings the government's take to some 65-70 per cent of the prices actually paid. There remain differences between the actual operating costs of Venezuelan and Middle East oil. But certainly the effect of these resolutions would be to bring the effective price of Middle East crude—which is bought mainly by European consumers—nearer to that of Venezuelan crude moved across the Atlantic.

In the preamble to its recommendation about pushing prices back up, Opec states the basic case of these "host" governments:

> ... Oil production in all member countries is the most prominent source of revenue for financing the implementation of projects of economic development and social progress, and ... a fall in crude oil prices reduces the level of oil revenues, thereby bringing about a setback in the realisation of the above objectives and seriously dislocating the economy of the member countries.

This is a real case; indeed, an inevitable complaint of every government of a "monoculture" economy dependent on only one resource for most of its income, with the development, marketing and pricing of that resource controlled by the foreign company that brought the capital to develop it. And Opec has another argument about the terms of trade between raw material producers and their industrialised consumers. This relationship underlies its idea of "a rational price structure" for oil, which Opec's organisation is to study; it specifically talks of "linking crude oil prices to an index of prices of goods which the member countries need to import."

The member countries recommended to enter into negotiations about prices—Iran and Saudi Arabia are apparently to carry the ball for all the Middle East members of Opec—will naturally approach the oil companies in the first place, though the resolutions talk of negotiating also with "any other authority or body deemed appropriate." The issues of revising the treatment of royalties, and of cost of sales discounts, lie right inside the details of the different concession agreements. In its resolutions, Opec has put more importance or urgency into the question of pushing prices up again; it talks of consultation about further measures if negotiation should not achieve this object, and wants a report on progress, in any case, by its next meeting in Riyadh, Saudi Arabia, in November. Yet its spokesmen have admitted that its members attach more importance to the royalties issue—which would mean more to it in terms of revenue.

In fact, the three claims cannot be separated. The argument over posted price is less about an actual price than about a device, linked with the concessions, for determining the level of government revenues. It is really as fundamental a part of the concession pattern as the other two issues, big and small, are. The Opec governments cannot really imagine that they will be able to negotiate on these issues without a fundamental re-negotiation of the whole make-up of the existing concessions. Some such break-through to a new relationship has been discussed often enough, in all conscience, among the governments, among the companies, and even between the two in recent years; what Opec is now trying to force is nothing less.

The question remains open whether the major international companies with which these countries would be negotiating would still have, at present, sufficient market power to force up the effective levels of product prices if they sought to pass on extra Middle East costs to the final consumer. Their weight in European markets remains massive; and their determination to retain market positions, in recent years, has had much to do with the bitterness of competition in oil product prices. That might leave the price initiative with them. Nevertheless, the strength of big independent companies now committed to markets such as Europe is growing, and there are also many consumers with no inhibitions at all about getting Russian oil cheaper whenever they can.

This Opec move, again, cannot but strengthen the arguments of the advocates of protection for European fuels, who are by no means silenced yet; and those of France, seeking privileged access to the common market for what it is still, perhaps hopefully, prepared to call secure Algerian oil. Some of Europe's more liberal energy planners, even, might not be averse from some increase in the price of fuel oil, over the next few years; but that will not attract them in the least bit to the idea of more expensive crude. Nor is the concern of the Brussels negotiators for the plight of poorer underdeveloped countries in a world where the terms of trade continue to move against such countries likely to make them too sympathetic when it comes to the richest underdeveloped countries in the world.

Splitting the Atom

THE Six and Mr Heath have reached the point on their agenda where Britain's entry into Euratom has come up for discussion. This is virtually the last opportunity for asking whether Britain is going into Europe with the right kind of atomic energy organisation. On the evidence of the Atomic Energy Authority's eighth annual report published on Thursday, it is not. This does not imply criticism of the AEA, which is carrying out a difficult commission honestly and well. It merely recognises that friction between the authority's scientific ego and its commercial ego is tearing the organisation apart.

THE Atomic Energy Authority was created in the days when membership of the nuclear club was a coveted honour and Britain had only just qualified to join. Its function was primarily to make nuclear weapons and the material for them; after that, it might think of nuclear power. To take these military tasks from a government department and entrust them to a special kind of public corporation was daring in the mid-1950s. Today, all is changed. The cart has somehow got in front of a horse which is showing evidence of a strong death wish. Like elderly ladies unravelling and re-knitting wool, the bomb designers of Aldermaston spend much of their time making-over old bombs into new, and the huge production plants erected to feed them with nuclear explosive have become a source of embarassment rather than pride.

This change is reflected in the authority's public image. Ask any layman what the AEA's chief function is and he is likely to think of research, and to add that it is a job that the authority does supremely well. And he would be two-thirds right. The AEA is spending and will continue to spend for at least another five years an annual £50 million on research, four-fifths of it on new systems for nuclear power. This covers a huge field, but still represents only two-thirds of the authority's civil work and probably less than half of its total activity.

The rest of the authority's time and energies are consumed in production; the production of weapons, the production of nuclear materials, the manufacture of fuel elements, the refining, smelting and sintering of ores, the purifying and disposal of radioactive wastes, the buying and stocking of raw materials, the selling of nuclear fuels. These are important functions. In Europe, they could prove vital, for no comparable production facilities exist except in the United States. One would never think so, reading the authority's report.

The whole direction of the authority is turning more and more to research. Its pre-occupation with nuclear power is increasing rather than diminishing, and the production departments are taking a back seat. This is understandable. The authority must still work, and work fast, to fill gaps in existing knowledge about the behaviour of the relatively simple nuclear power stations now being commissioned; there are more of these than is generally realised. Then, it must look to power stations for the future; it has become only too obvious that the authority and the Central Electricity Generating Board no longer see eye to eye on this. There is broad agreement on the desirability of linking up today's nuclear network of uranium-fired, Calder Hall type stations with a complementary chain of plutonium-fired stations (probably of the "fast breeder" type) that will use plutonium produced by the former as a by-product of electricity generation. Otherwise this by-product will go to waste. It is not suitable for bombs. But this is looking a long way ahead, to the second half of the seventies. As a stop-gap for the late 1960s, the AEA has offered the generating board what amounts to a hotted-up version of the present-day stations; the pilot plant is due to start up at Windscale any day.

The generating board has so far refused this offer. It has not even tried to conceal its mingled dislike and fear for the new "advanced gas-cooled" system which has had a run of alarming technical troubles. All these are now said by the authority to have been solved. Nevertheless, the AEA could still have a white elephant on its hands—a prospect that makes it understandably touchy and resentful of criticisms of this system and explains the extravagantly glowing language used to describe its properties and possibilities in the annual report. Nor does the authority miss any opportunity for sharp cracks about the Canadian heavy water system for atomic power that the generating board is currently favouring as an alternative to the unlucky AGR. There are many reasons why it would be an advantage to look at reactors that are based on heavy water as well as on graphite, and the authority knows this as well as the generating board. But the heavy water experiment that it proposes to start some time next year is a far cry from the simple power station that the generating board is demanding. It is, indeed, a complex system that may take almost as long to develop as the fast breeder itself, and to rely on it would leave the generating board as badly placed as ever for nuclear power in the late 1960s.

This clash of wills involves serious issues for the authority, the generating board and the country as a whole, and it is a mercy that when the experts are differing so violently, there is more than one voice with authority to speak for atomic energy. Against such a background, with big decisions on hand involving the choice and the timing of multi-million pound reactor experiments, it is not surprising that the authority treats its production work as a chore to be carried out with the minimum of fuss and bother. This is an understandable attitude but it is a wrong one.

THE cut-back in the civilian nuclear power programme and the military weapon programme has had two results. Having brought sufficient tonnage of uranium ore for a civil power programme twice the present size and a weapon programme many times the current size, the authority has sufficient stocks in hand and on order to last it for ten to twelve years (assuming that the 12,000-ton Canadian contract is ultimately signed). The second consequence of the cut-back is that the authority finds its production facilities underemployed.

These take various forms. There are the eight reactors at Chapel Cross and Calder Hall, producing some hundreds of

kilograms of plutonium a year for weapons, much of it now going into stock. There is the diffusion plant at Capenhurst producing enriched uranium, the only one of its kind in Western Europe, one of the only four known diffusion plants in the West. This is being partially closed and 500 of its staff dismissed. There are also fabricating plants, ore smelting and treatment plants, assembly lines for reactor fuel, chemical plants for spent fuel—all running below capacity and representing something like half of the authority's £560 million assets. The authority mentions quite spectacular improvements in process efficiency, 30 per cent here, 40 per cent there. But of what avail is this when the overheads of this fantastic complex are spread over a pitifully small output?

The blindingly obvious solution would be to sell the output of this idle capacity across the five continents. It represents a most valuable asset in terms of skill, investment and experience needed by every country with any pretensions to an atomic power policy, or even an atomic research programme, and which such countries must establish for themselves at untold pain and cost unless someone else will undertake the work on commission. But the authority cannot expect to get the business unless it has a commercial pricing policy.

What should the rudiments of such a policy be? First, a cold look at raw material stocks. These consist of thousands of pounds of uranium ore bought at treble the current market price—$12 a pound against $4 or less—and an increasing stockpile of plutonium to which the commercial nuclear power stations will begin to add at the rate of four tons a year by the late 1960s. The AEA cannot hope to re-coup its outlay on uranium; the sensible course would be to write down these stocks to their current market value. Then foreign buyers might be more tempted than they are today to buy their fuel from the authority. Once they are sufficiently put off by the AEA's current prices to set up their own manufacturing facilities, the market is lost for good. This the authority should avoid at all costs. But has anyone inside the AEA bothered to do the necessary sums? Salesmen are ordered to squeeze the customer until it hurts, and on those rare occasions when they win a sizeable foreign order by cutting prices to a realistic £14,500 a ton for manufactured natural uranium against the £17,500 to £20,000 currently quoted, they are rapped for squandering the tax-payer's money—as if he can hope to get it all back.

The same myopia influences the authority's attitude to its surplus plutonium. Were the AEA to take the long-term view, it would fix a selling price for plutonium at a level low enough to encourage the research needed to produce a tonnage demand for this "ornery" nuclear material some years hence when the AEA will have tonnage quantities to sell. The authority seems to be doing the opposite. It is reported to be asking monopoly prices of $80 a gram, ten times higher than observers consider "reasonable" and so alienating potential customers like the French who are not prepared to be exploited.

All this stems from the best of all possible motives, a desire to protect the interests of the tax-payer. It could have the opposite result. A once-and-for-all book loss on stocks looks bad at the time but is less serious than the chronic underemployment, year in, year out, of valuable plants and skilled men. The authority wants foreign custom, but hesitates to take the draconian steps necessary to get it; neither the Treasury nor the Comptroller and Auditor General have shown much sympathy. The running of commercial plants and the running of research installations are as oil and water, and the same men cannot be expected to be at home in both mediums. One way out of the difficulty would be the formation of a separate atomic trading company with separate, commercial trading accounts. Why not?

Overseas Taxes and Investors

BY A SPECIAL CORRESPONDENT

Six countries of the European Community, together with the United Kingdom and the United States, cover the bulk of the world's private investment. In any one of these countries an investor can use dividend yields published there as a reasonable yardstick of comparison between individual securities. But when it comes to international comparisons many different factors get in the way, the most important being the effect of taxation in the country where the dividend is paid before the investor comes to pay graduated personal tax on it in his country of residence. The problem is to find some way of expressing dividend yields on foreign securities which is affected by no other factor than the investor's liability for tax in his own country of residence.

This may sound easy; but to carry the calculation through the investor needs to understand how proportional withholding taxes in the country of origin combine with personal taxes in the country of residence and the effect of any double tax relief. In particular, the investor must be aware how far the terms of any double tax treaty have reduced the standard rate of withholding tax and how far the tax withheld will be accepted as a payment on account of personal tax in his own country.

Both the United Kingdom and the United States are tax credit countries, as taxes deducted at source from foreign dividends are regarded as a payment on account of domestic personal taxes. Where the British investor's average rate of tax is lower than the withholding tax, he can calculate the appropriate yield by grossing up the net dividend received by applying his own average rate of tax. Double tax agreements concluded by Britain with Holland and the United States reduce the withholding tax on Dutch dividends to nil (instead of the normal 15 per cent) and on American dividends to 15 per cent (instead of the normal 30 per cent), provided that the British resident who receives them is subject to British tax. The full rate of 25 per cent is deducted from German dividends but, under the Anglo-German tax treaty, the British resident can reclaim 10 per cent.

When the British investor's average rate of tax is higher than the foreign withholding rate, he will not usually have to adjust the published gross yields on foreign securities, as double tax relief, granted unilaterally under the Income Tax Act or allowed reciprocally by treaty, effectively offsets the tax withheld at source against the British tax liability. But there are important exceptions to this rule. First, dividend yields on French and Belgian shares are usually shown in the financial press net of withholding taxes. The full rate in Belgium, excluding a special surcharge, is 30 per cent and in France it is 24 per cent. These rates, however, may not apply in full to the dividends paid and it is often impracticable for the companies to state precisely what rate is payable at the time they declare their dividends. In these cases, all that the British investor can do is to note how much was withheld in tax on past dividends and use this for grossing-up purposes.

Secondly, double tax treaties with the United States and Germany enable British residents to credit underlying corporate taxes as well as withholding taxes on dividends against their liability for British income tax and surtax. For them the appropriate dividend yield is the lower of either the net dividend grossed up by the investor's average rate of British tax or the gross dividend grossed up by the rate of tax suffered on the profits of the paying company. As the corporate rate of tax in the United States is 52 per cent, this particular method of crediting tax can greatly enhance the merits of American securities for British residents with a high average rate of tax. The combined rate of company tax and withholding tax attributable to past American dividends is readily available in the half-yearly supplements of the *Stock Exchange Weekly Official Intelligence*. Equivalent information on German dividends is not so easy to obtain; this is particularly unfortunate as the tax payable by German companies can vary between nil and 51 per cent according to the proportion of the profit that is distributed.

As the United States also uses the tax credit method to resolve the problems of double taxation, the procedure followed by American residents in calculating comparative yields on foreign securities is the same as that used in this country. The appropriate yield is determined by grossing up the net dividend by the lower of either the investor's own average rate of American tax or the rate of tax withheld at source. In the case of British dividends, however, the rate to be taken into account is not the standard rate of income tax (equal to 38¾ per cent of the gross dividend) but the "net UK rate" paid by the company. Only in the case of Holland has a double tax treaty reduced the withholding tax; the rate on Dutch dividends received by American residents is nil, instead of the normal 15 per cent.

Taxes withheld at source represent the same inescapable tax burden to investors with a low income on the Continent as they do in Britain and United States. But as the granting of tax credits on the British and American pattern is exceptional in Europe, withholding taxes often reduce the true yields for investors at all levels of income. In France, for example, full relief by tax credit is only available on dividends from Germany and Luxemburg; for Belgian dividends the credit is restricted to 12 per cent, for British dividends to 24 per cent and for American dividends to 25 per cent. To a French resident, therefore, the appropriate yield on Belgian, British and American securities can be

TAX ON DIVIDENDS FOR INDIVIDUAL SHAREHOLDERS

(Per cent of gross dividend)

	Withholding tax	24	15	30	..	..	25	38¾	...

All figures are percentages of original gross dividends. The "maximum" and "minimum" entries seek to establish the upper and lower limits of tax on the dividends in the recipient's hands. The "withholding tax" entry shows how much of the total tax borne by a non-resident shareholder has been paid in the country of origin. * Certain surcharges imposed for special or temporary purposes have been ignored. (a) After allowing for certain relief for witholding tax by tax credit. (b) Dividends are exempt from German taxes. (c) After allowing for relief for direct taxes but relief will also be granted for any tax on underlying profit; maximum tax could be reduced to 77 per cent. (d) The tax of 38¾ per cent is subject to claim for proportional allowances (e.g., marriage allowance) in the case of residents of France, Belgium, Holland and Germany. (e) Minimum tax is the difference between 38¾ per cent and the net UK rate. (f) No withholding tax, but in theory the progressive surtax should be assessed later—not exceeding 15 per cent for US residents.

determined by grossing up the net dividend by the lower of either the investor's own average rate of French tax or the maximum permitted rate of credit. A French shareholder in a British company is entitled to claim proportional reliefs and allowances in Britain and so reduce the rate of tax withheld in this country. He, in fact, is granted the same facility as is available under Section 227 of the 1952 Income Tax Act to all non-resident British subjects. Whether French shareholders make full use of this concession is doubtful. Tax treaties concluded by France with Holland and Germany reduce the rates applicable to Dutch and German dividends received by French residents to nil and 15 per cent respectively, instead of the normal 15 per cent and 25 per cent.

Germany allows tax withheld at source on dividends from France, Luxemburg and Belgium to be credited against the German investor's domestic tax liability. The appropriate yield on these securities can therefore be calculated by grossing up the net dividend by the lower of either the tax withheld at source or the investor's own average rate of tax. On French dividends, moreover, a tax treaty reduces the withholding rate from the normal rate of 24 per cent to 15 per cent. Double tax treaties concluded with Britain and the United States exempt a German resident from German tax on British and American dividends, though such dividends are included in the German individual's total income in determining his capacity to pay tax on his other chargeable income. The appropriate yield on British and American securities can be calculated by the German resident by grossing up the net dividend by his own average rate of tax; this can produce a higher return than the gross yield published in Britain or the United States.

Within the Benelux countries, Luxemburg has signed few double tax agreements, with the result that the net amount of dividends received from Belgium, Holland, Britain and United States is fully taxable in Luxemburg and the yields on these shares must therefore be calculated on the dividends net of the tax withheld in the country of origin. Relief by tax credit of up to 15 per cent is available to residents in Luxemburg on French and German dividends and in these instances the appropriate yield is determined by grossing up the net dividend by the lower of either the investor's average rate of tax or 15 per cent. Similarly, Dutch shareholders do not enjoy double taxation relief on foreign dividends, the net amount of the dividends being fully chargeable to Dutch tax. This severity is however tempered by treaties signed with France, Germany, the United States and Britain. The tax withheld on French dividends paid to Dutch residents is nil, instead of the normal 24 per cent, and on American dividends 15 per cent, instead of the normal 30 per cent; 10 per cent of the German withholding tax of 25 per cent can be reclaimed; and Dutch investors can claim proportional allowances and reliefs on the tax charged at source on British dividends.

In Belgium the tax system is likely to be changed in the near future, but at the moment it offers unusual advantages to Belgian investors in some foreign securities. Excluding the special surcharge, the Belgian tax on domestic dividends is 30 per cent; but the rate usually imposed on foreign dividends is 12 per cent, though the net dividends received are included in the total income of a Belgian resident in assessing surtax. Moreover, French and British dividends received by the Belgian resident are not subject to any internal tax and he can, like his counterpart in France, Germany and Holland, claim proportional reliefs and allowances so as to reduce the tax withheld in Britain. Hence, where the foreign withholding tax and the Belgian internal tax together amount to less than 30 per cent, foreign securities may be more attractive to Belgian residents than domestic securities; this is usually true in the case of dividends from France, Luxemburg, Holland and Italy but not of dividends from Germany, Britain and the United States where the total tax payable amounts to more than 30 per cent. In practice, therefore, Belgian investors compare all dividend yields at their net amounts after charging both foreign and internal taxes (other than surtax).

Up to now, no tax has been withheld on Italian dividends, though in theory recipients can be subject to a progressive Italian surtax. No form of double tax relief is available to the Italian investor if he receives his income on foreign securities in Italy and he has to calculate yields on dividends from Britain and the six countries of the European community net of taxes deducted at source at their full rate. On dividends from the United States a reduction in the withholding rate from 30 to 15 per cent has been negotiated and, in addition, the Italian investor can credit up to 8 per cent against his personal liability to Italian tax. But if the dividends on foreign securities are received and disposed of outside Italy, the Italian investor escapes any liability for Italian tax, which is imposed on foreign income only to the extent that the income is enjoyed in Italy. For an Italian investor who reinvests or spends his foreign dividends abroad, the appropriate yield can therefore be fairly calculated by grossing up the net dividend by the marginal rate of Italian surtax that has been avoided.

The complications imposed by tax on such a seemingly simple matter as a comparative study of yields are immense, and obviously the choice between securities in one country rather than another will be considerably influenced by the comparison the investor makes between his own liability for tax in his country of residence and the tax withheld at source. Generalised conclusions that for tax purposes securities are more attractive in country X than in country Y can therefore be dangerous. But the material summarised in the accompanying table should help the individual investor to decide what course he should pursue in view of his own tax liabilities.

AVERAGE RATE OF UK TAX

WHEN the average UK tax rate of a resident of the United Kingdom is lower than the foreign tax rate available for relief (including indirect tax where appropriate) the limit of tax credit relief on foreign dividends is determined in a somewhat arbitrary manner. The amount of income tax (and surtax) is tentatively calculated on the individual's total income including foreign dividends at their amount before any foreign tax is withheld from or charged directly upon such dividends. The computation of tax follows normal lines, except that no relief for life assurance is taken into account. The rate resulting from dividing the tax so calculated by the total income is the effective UK rate for the purpose of relief and this rate is used to gross up the net amount of foreign dividends (that is after deducting foreign tax withheld from or charged directly upon such dividends). This process decides finally the assessable amount of foreign dividends and at the same time the actual amount of the foreign tax credit (which is the amount added to the net dividends in the grossing-up process).

BUSINESS NOTES

COAL COSTS

No Strike on the Ruhr

A correspondent in Dusseldorf writes:

THERE will be no strike on the Ruhr. As was expected, the negotiations which took place between Heinrich Gutermuth's miners union, the *IG Bergbau*, and the employers' federation, the *Unternehmensverband Ruhrbergbau*, with the active participation of the Federal Minister of Labour, Herr Theo Blank, resulted in an agreement that granted most of the union's demands. No one cared for a coal strike just in the week before the elections for the Diet of West Germany's biggest province, North Rhine Westphalia. So all coal employees and workers are to get a pay increase of about 8 per cent, including 2 DM extra for every night shift. And though there was a small majority against this agreement in the miners' direct vote last week, the agreement is regarded as accepted: in German law a vote of 25 per cent for any wage agreement concluded by the union is regarded as sufficient.

Outwardly, therefore, everything seems well again on the Ruhr: the blue skies over the Ruhr cities, of which Herr Willy Brandt made an election slogan last year, seem to have been re-established, at least metaphorically. However, none of the problems of the Ruhr mining industry has really been solved. The employers had insisted in the course of the debates that they were unable to bear the burden of any wage increase out of their own pockets, and the Federal government accepted this point by agreeing to take about 5 per cent out of the 8 per cent increase, i.e., about DM200 million a year, on the budget. Only the distribution of this new burden between the Federal budget and the land budget of North Rhine Westphalia seems to be unsettled.

From the economic point of view, however, the rest of the wage increase, which will not be borne by the budget, is more important. The employers want to shift it straight on to the consumer, and have announced a price increase for Ruhr coal of 2-2½ per cent. This pretension is economic nonsense. Already the official "list price" for coal is more or less theoretical. In practice, much of the coal is sold at discounts: on the average, Ruhr coal brings only 87 per cent of the official prices. The competition of cheaper oil, skilfully directed by the big mineral oil firms from Hamburg, is making steady progress, in spite of half-hearted attempts by the government to protect coal as a "national source of energy" and in spite of the special tax imposed on oil.

Is this state intervention for coal and against oil now to be strengthened? Is oil, the second big source of energy, also to become more expensive, contrary to the government's policy of checking inflation? How long will the tax payer go on subsidising a coal industry which has increasing difficulty in competing? And how long can the economy reasonably uphold the traditional, but more and more economically unrealistic, claim of the German miner to be at the top—or at least near the top—of the wage scale?

THE ECONOMY

Growth and the Treasury

SOME soggy verbiage—and thinking—characterises the Treasury's latest Bulletin for Industry, in which it makes a somewhat crabwise approach to the question of growth in the British economy. Other countries have grown faster, it notes; there are some excuses for this; still,

> ". . . even if special circumstances favoured other countries in the past there is general agreement that the present position, including the high rate of industrial investment in recent years, could now permit the achievement of a faster rate if the appropriate policies could be devised and carried through."

That being so, an august nod towards NED: but "such a complex undertaking as the acceleration of growth cannot be accomplished solely either by changes in government economic measures or by changes in industrial attitudes."

Considering its own policies—export promotion, the approach to an incomes policy, the maintenance of "an appropriate level of demand", and the control and financing of public expenditure—the Treasury is conscious that the fulfilment of the conditions it sets "may in practice sometimes seem negative, but only if they are viewed narrowly and in isolation from the processes of growth which they are in fact designed to foster."

Is there a hint in this bulletin that NED should confine itself to the supply side, and keep off the Treasury's pitch of adjusting demand? The demarcation between medium-run planning and the short-run balancing of the economy has always seemed liable to come into question between these two economic authorities, and certainly the Treasury cannot surrender any of its short term responsibilities. But its own approach to faster growth in the economy—which after all its master created NED to foster—seems rather unforthcoming. And in its repetition of the view that slack in the economy means growth in exports it has a somewhat cavalier way with the evidence. In 1959 there was some slack, and exports rose fast: so that proves the two go together. In 1952 and 1958 there was slack and exports didn't rise? No matter. Those years don't count because of "depressed world trading conditions." Adduce no evidence of said depressed conditions: the simplest way to deal with awkward facts is to rule them out of order.

GOLD AND EXCHANGES

Swap or Not?

THE sterling area's gold and convertible currency reserves fell by £33 million in June to £1,226 million. Once again, however, there were special factors to allow for—an outflow of £36 million resulting from Britain's share in the international assistance for Canada, and various loan repayments totalling £3 million—which transform the physical outflow to a true increase of £6 million. This is a fairly satisfactory movement; the seasonal pattern of trade now weighs against sterling, the reduction in short-term interest rates has made London less attractive to foreign funds, and the break in equity prices may have checked the inflow of foreign portfolio capital. Allowing for special factors, mainly IMF repayments by the United Kingdom and Australia, the true rise in the reserves since the turn of the year has been £249 million compared with a physical inflow of £41 million.

The growing informal co-operation between central bankers is making it increasingly difficult to interpret movements in reserves. Britain's June figure, in the aftermath of the Canadian operation, is no exception. Britain's share in that operation amounted to $200 million—$100 million in the IMF drawing and a further $100 million as a credit. The mystery involves the second $100 million. Was it a one-way credit or a currency swap? At the time Mr Diefenbaker described it as "comparable" with the Federal Reserve's "reciprocal currency arrangement." The IMF called it a "credit." It is of more than academic interest to know which it was. The currency swap is an important way of increasing the base of international liquidity. The Americans have so far arranged five of these swaps amounting in all to $450 million, one of which was for $50 million with the Bank of England. A swap that did not directly

involve the United States would be a significant step forward.

It looks, however, as though the British operation is no more than a straight credit. The Bank of Canada's latest statement indicates that the credit has been used. Had it been a swap, London's reserves would have gained, not lost, £36 million. Had it been a swap and, if at the same time, the IMF sterling had been converted, the reserves would have been unchanged. A one-way credit and a conversion of the IMF money would have meant a fall of £72 million in the reserves. The fall of £36 million can only mean that it was a straight credit and that the IMF money has not yet been converted.

Controlling Gold

THE exchange markets have been quiet this week but the London gold market has once again burst into activity. The price per ounce rose to \$35.11¾ at the fixing on Wednesday and finally closed at \$35.12. Turnover has been growing steadily this week, with the demand channelled through Switzerland where the anonymity of bank accounts is a great advantage in gold dealings. Official sources have been containing the price by meeting all demands at the fixing, and with the American gold stock unchanged, it seems certain that the European pool is being drawn upon. This gold pool is believed to amount to \$250 million. This is not a particularly large sum and could disappear very quickly if private demand really got under way. It is not known how much of the pool has already been used, but if considerable inroads have been made on it the Federal Reserve Bank may soon be called upon once more to supply the London market across the gold bridge.

Sterling eased slightly this week and closed on Thursday at 2.80¾ to the US dollar. The dollar itself is still at its support point in Amsterdam, Paris, and Zurich, and very near the floor in Brussels and Frankfurt. European central banks are taking in large amounts of dollars, but are not converting them into gold. The Canadian dollar fell below its parity on Monday but recovered to close at 92.62 cents to the US dollar on Thursday.

The slide in the Argentine peso has been temporarily arrested. The rate had fallen to 379 to the pound at the end of last week, compared to 232 in April when the central bank withdrew its support, and on Monday the central bank closed the exchanges. They re-opened on Tuesday, with the promulgation of further controls; importers must now make 100 per cent prior deposits, exchange earnings must be changed within five days of shipment, and anything received over 110 pesos to the US dollar must be paid to the treasury. On the strength of these measures the sterling rate recovered to 143 pesos.

IN THE MARKETS

Wall Street's Rally

A correspondent cables:

BROKERS on Wall Street departed for the Independence Day holiday on Wednesday in relatively good spirits, for equity prices had advanced in five successive trading sessions. This is the best showing that the market has made since the decline began in March and on Tuesday the Dow Jones industrial average had risen to nearly 580, just over 50 points, or nearly 10 per cent, above last month's low. Although there is considerable doubt whether the climb will continue, the market's performance in the last few days is regarded as welcome as well as surprising. Many brokers attribute the turn round in prices to renewed hopes that the administration will recommend tax reductions this year. Political pressures urging a tax cut are growing and as investors believe that it would stimulate the economy they have been buyers of such issues as steel and automobile equities for the first time since the decline began.

Quite apart from purchases based on such considerations, the mutual funds were heavy buyers in the last days of June, partly because they wanted to make a better showing in their half-yearly accounts. There is no sign as yet that the mutual funds have suffered from net redemptions and reports to date indicate that they are still gaining customers even though their shares have fallen sharply. Some private investors who had earlier sold such popular issues as IBM and Polaroid short began to cover when prices started to rise and this has speeded the advance. On the grounds that there may be some more bear covering to come and that the pension funds usually have fresh money to invest at the beginning of a new quarter prices could go a little higher. But a reversal in the market cannot be ruled out if hopes for tax reductions are dashed or if economic activity shows any further signs of faltering.

Investors are still nervous. Some who failed to sell earlier may now unload while those who bought in the first stage of the decline, when the Dow Jones average dropped from 700 to 600, may wish to lighten their portfolios—and their losses. The market believes that the test will come if the Dow Jones average hits the 600 mark; any advance beyond this point, it is argued, will require an actual cut in taxes and a continued flow of good earnings reports. On both counts, doubts remain. Many companies, particularly in the steel and machinery industries, may be unable to maintain their dividends unless business expands. Hence some investment analysts insist that buying will be limited to issues such as utilities, where earnings are assured, and to consumer good stocks.

London's Echo

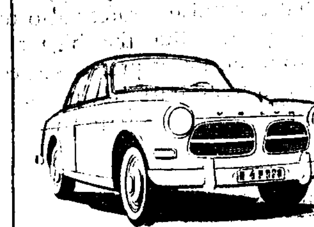
THE doubts about the underlying strength of Wall Street's rally were echoed in the London market this week. Before the weekend equity prices in London, following Wall Street, had moved up sharply and largely account for the rise of 8.5 points to 318.8 in *The Economist* indicator in the week to Wednesday's close. Then caution again got the upper hand and after the weekend business fell to a very low level indeed. Fewer than 10,000 bargains were marked on Wednesday, for example, and the real weakness or strength of the market has not been properly tested. At first the continuation of the climb on Wall Street failed to inspire the London market, where on Monday and Tuesday prices drifted lower. Then, catching up as it were on Wall Street, the market recovered just a little of its confidence on Wednesday when the cyclical steel issues made the biggest advance.

Wall Street's earlier fall has shaken confidence throughout the stock markets of the world and London's hesitancy and its unwillingness to build any great hopes on the base of a few days' rally is understandable. Hence, though the yield gap between equities and gilt-edged stocks is now small, investors have continued to be attracted to fixed interest securities. The gold and dollar figures contributed to the continued firmness of the gilt-edged market but most of the buying is still concentrated upon the short-mediums on hopes of a still lower Bank rate or a further release of special deposits. These hopes have been reflected in the buying of high coupon corporation stocks with the currently popular life of about ten years before redemption. The £10 million issue of a 6¼ per cent stock, 1972, at £96½ by the Port of London Authority falls into this category and though at first it was thought that the issue might only just go, the continued strength of the fixed interest market led to oversubscription, perhaps by four or five times, and a premium of ¼ when dealings began on Thursday.

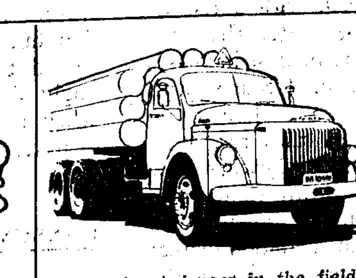
TELEVISION STANDARDS

Softly, Softly!

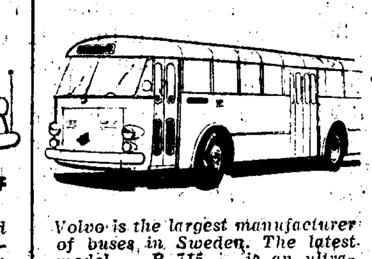
TREADING throughout with considerably more caution than the Pilkington Committee, the Government has approached the question of television standards in the spirit of a man stalking a difficult and timorous quarry. The White Paper published on Wednesday accepts in principle the need for changing from 405 to 625 lines, with the inevitable corollary that any new programmes must be transmitted in the ultra high, rather than the very high frequency region of the radio spectrum. But the Government is in no crashing hurry to put this principle into practice before more is known about ultra high frequency television. The BBC's own chief engineer has not been specially glowing over the prospects, speaking of "far more likelihood of patchy reception . . . more care has to be taken in locating the receiving aerial if 'ghosts' are to be avoided . . . more money must be spent on



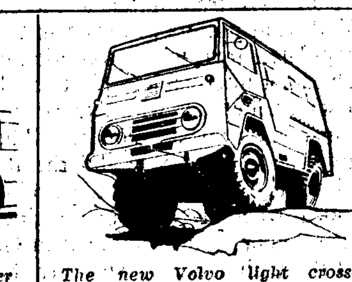
During 1961 Volvo advanced from 10th to 4th place among imported car makes in the United States.



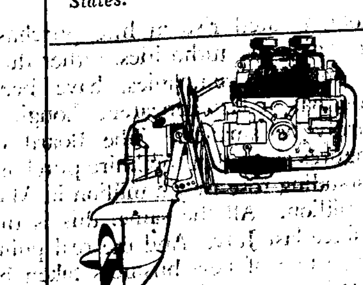
Volvo is a pioneer in the field of Turbo-compressor Diesel engines for trucks. A new Turbo truck model was added to the Volvo range during 1961.



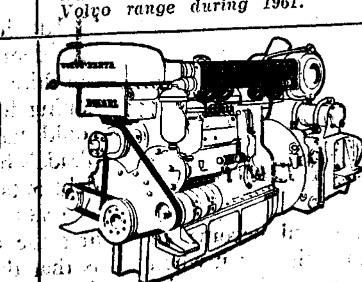
Volvo is the largest manufacturer of buses in Sweden. The latest model — B 715 — is an ultra-modern chassis with a supercharged Diesel engine.



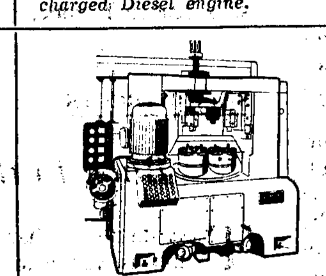
The new Volvo light cross-country vehicle has been designed for both military and civilian purposes.



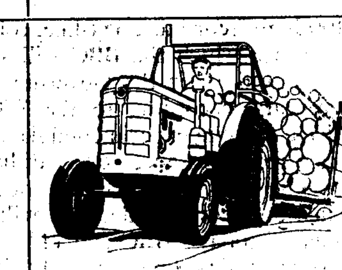
The Aquamatic is a Volvo Penta product and the first inboard-outboard engine to be marketed successfully.



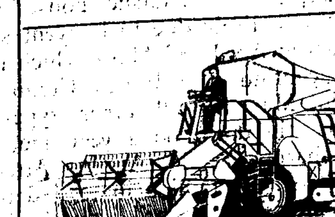
Volvo Penta tops sales of marine and stationary engines in Sweden and is the leading supplier of marine petrol engines to the United States.



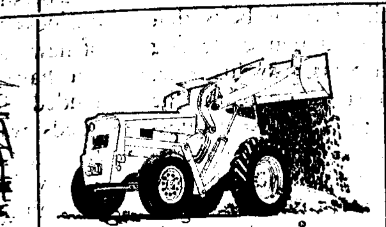
Köpings Mek. Verkstads AB manufactures machine tools. Besides high-speed lathes and milling-machines, special machines are also made.



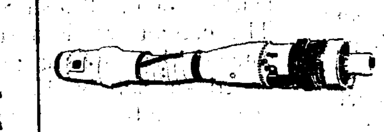
Bolinder-Munktell in Eskilstuna, another Volvo company, is a large manufacturer of agricultural and industrial tractors and medium-heavy earth moving machinery.



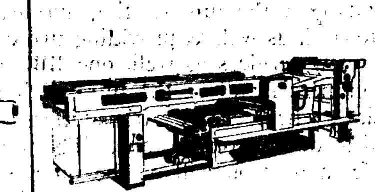
Bolinder-Munktell produces four basic types of combine harvester, of which about 50% are exported.



Bolinder-Munktell also manufactures loaders. The LM 218 belongs to the medium-heavy class with a large loading and pulling capacity.



Svenska Flygmotor AB (The Swedish Aero-Engine Company) in Trollhättan builds all the jet engines for the Swedish Air Force which is the third largest in Western Europe.



Grafiska Maskin AB manufactures printing presses of which 80% are exported.

THE VOLVO GROUP

The Volvo Group of Companies — the second largest industrial concern in Scandinavia — reached new record figures in 1961. The annual turnover increased by £8,155,000 to £115,700,000. Export figures reached £44,100,000 compared with £38,000,000 in 1960. 42% of the total production of the Group in Sweden was exported. ■ In Gothenburg the first stage in the construction of the new car factory was completed. When this plant is ready it will have a floor area of 1,722,000 sq. ft. (160,000 sq. metres). In December an electronic data processing installation (7070 and 1401) was taken into use by Volvo, the parent company of the Group. New models of the Volvo 121/122 and 544 were introduced, new features including the B 18 engine in two versions with a five-bearing crankshaft and outputs of 75 and 90 b.h.p. New truck models, the L 475 and the L 465 were introduced. Production was started on a new four-wheel drive light cross-country vehicle. ■ At the Volvo Skövdeverken plant a new engine factory was taken into use. ■ At Bolinder-Munktell in Eskilstuna, a new tractor factory was opened in April. Bolinder-Munktell introduced a new Diesel tractor with an independent Terra-Trol hydraulic system and a new multi-purpose loader. ■ Svenska Flygmotor AB in Trollhättan, which builds all the jet engines for the Swedish Air Force opened a new laboratory towards the end of the year for machining technique research. The Grafiska Maskin Aktiebolaget, which has hitherto specialized in the production of letterpress printing machines, expanded its programme to include offset rotary presses and a new cutting and creasing machine. During the year GMA also took two workshops into use. ■ The intensive expansion during 1961 further reinforced the position of the Volvo Group of Companies.

the receiving aerial itself . . . three times as many main UHF transmitters as there are present VHF transmitters . . . even so there may be populated areas where reception will be difficult if not impossible. . . " The BBC is due to start field trials with experimental UHF transmitters next month. These should give the Government and the BBC some indication of the size of the problem and an idea whether, as some engineers maintain, the poor results obtained in Germany and the United States with ultra high frequency television were simply due to rushing onto the air with inadequate research.

The ultra high frequency, 625-line, colour television service which the BBC will start in London in 1964 with the Government's blessing appears, according to the White Paper, to have a strong experimental flavour, a technical reconnaissance over difficult territory. The way it goes should decide largely when and how the decision will be taken to change today's BBC and ITV programmes over to 625 lines as well. The Pilkington Committee recommend an elaborate system of duplicating services on both systems, until all the old 405 line sets had worn out. This would be a staggering undertaking if the broadcasting authorities need to do it as well as providing two completely new services as well, one BBC and one commercial, all in the ultra high frequencies where three transmitters are needed to do the work of one. The touchstone from now on will be the number of people who want a third choice badly enough to buy, first, the more expensive receiver and aerial required for UHF reception and, secondly, a set with UHF reception and colour, costing perhaps three times more than its black-and-white equivalent. Nobody will be watching this more carefully than the ITA's advertisers.

MOTORS

New Models Help

BETTER days for the smaller car manufacturers who have had new models to bolster the effect of brighter markets are shown by reports from Vauxhall and Standard-Triumph International. Vauxhall made 81,000 cars in the first half of this year, compared with 40,779 in the same period of 1961—a result of the change to the new Victor, of which 100,000 have now been built. Exports rose 64 per cent, in much the same proportion as those of the industry as a whole, from 25,000 to 41,000, of which 32,000 were Victors; Europe has proved a particularly good market, with sales 3½ times those of twelve months ago. Production of commercial vehicles, however, fell from 54,000 in 1961 to 40,000 this year; van sales fell only on the home market, but exports of trucks fell as well. Vauxhall's total output of 121,437 represents rather less than 80 per cent of capacity—it has been deliberately limited by the size of the labour force.

Standard-Triumph has shared in the recovery in exports; indeed, with a rise of 80 per cent it has done better than the industry as a whole. The biggest increases are reported from the United States, with shipments four times those in January to June, 1961—though retail sales rose only 40 per cent, the difference showing how stocks were being run down—and from the free trade area, with shipments also quadrupled. Exports to the common market rose 50 per cent. The introduction of the TR4 accounts for most of the improvement in the United States, while the Herald 1200 sells best in Europe.

SAFETY BELTS

Back to the Pram

TRAVELLING in harness will become an adult as well as an infantile norm when the Ministry of Transport carries out its stated intention of making safety belts a compulsory fitting on new cars. The date on which the move will be made depends, no doubt, on the availability of belts that have passed the new dynamic testing machine of the British Standards Institute. The present test is a static one, and the value of the results it gives has been questioned—notably by *Which?*. If the government intends to compel people to buy belts, it must assure them that they are getting something that is really worth possessing. But if the belt is strong and properly mounted, so that it does hold the driver and passengers in their seats, it can make a dramatic reduction to deaths and serious injuries. Mr Hay, Parliamentary Secretary to the Ministry of Transport, quoted a Road Research Laboratory study as suggesting that these might be halved. Such investigations must always be largely hypothetical, whether or not there is much experience of accidents to cars with safety belts; but some studies in Sweden, where safety belts are generally used, suggest that the reduction in injuries in practice may be as much as 70 per cent.

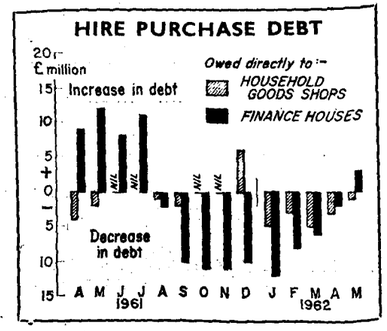
Safety belts have already become established; 1,158,000 of the types approved by the BSI have been sold, suggesting that about 550,000 cars are now fitted with them—say one in eleven. All the big manufacturers now offer an "approved" belt as an extra, and usually provide anchorage points for them as a standard fitting. This inducement does not seem to make much difference to the number of belts fitted; the British Motor Corporation sold only 100,000 belts in the eleven months after it began supplying them, so that only one in nine of its newer cars will have been fitted with belts. Price is the chief obstacle to the more general use of belts: with fitting a pair will cost around £12. And if they are to be fitted to new cars, some solution to the purchase tax problem will be needed: they are now tax-free if fitted after the car is made, but bear tax—like other accessories—if fitted to the car on the production line. Buyers might feel excusably aggrieved if they find that compulsory safety also means forced tax-paying. But the bigger sales ought also to mean lower prices—especially when manufacturers start buying on their own account.

CONSUMER CREDIT

Under Way Again?

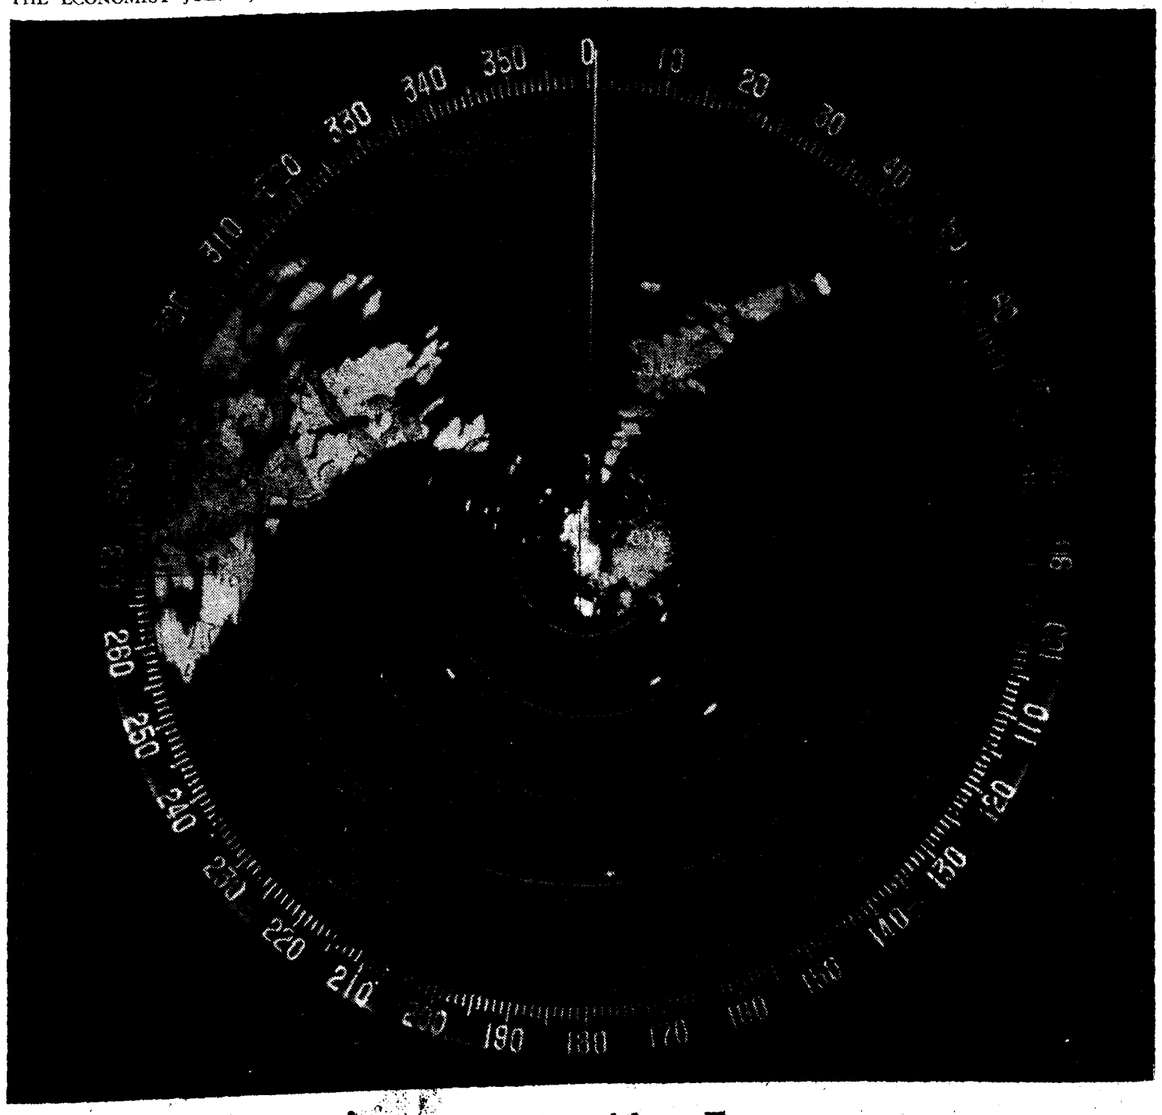
THE long-awaited rise in hire purchase debt, which the authorities, rather than the hire purchase companies, have been hoping for, has at last appeared, though it could hardly be smaller. The Board of Trade's figures show that total hire purchase debt outstanding rose by £2 million in May to £885 million. All the same, this is the first rise since last July. And the real point is that the value of new business taken by the finance houses in May was 26 per cent higher than in April, while that of the household goods shops rose by 8 per cent.

The sharp rise in the finance houses' new business was entirely due to buoyant sales of new cars in April and May—which may not have continued in June. Credit extended in May for all other types of goods was still down on a year ago, but not so sharply as in April. After a steady fall of £85 million in total debt in the nine months to April, it now looks as though hire purchase debt may be levelling out. As yet there is no evidence



that a sustained rise is likely. Indeed the June figure may show a further marginal fall. The numbers of contracts for new cars recorded by Hire Purchase Information in June were 19,063 compared with May's record 23,451 and a figure for June, 1961, of 19,882. Contracts for used cars fell by nearly 6,000 to 70,583. There may, however, have been higher sales of durable goods by the household goods shops after the relaxation in terms in June.

Although hire purchase business is tending to pick up, this is balanced by the bunching of maturing contracts—the two-year ones entered into after restrictions were reimposed in April, 1960, and longer period contracts entered into before that date. Many of these longer term contracts are



Toshiba's Far-Reaching Eye

Toshiba's dependable weather radars are on the watch around the clock. Reaching out 400km over the Pacific Ocean, they can detect approaching typhoons in ample time to warn the nation and its people to guard and brace themselves against nature's coming onslaught. From antenna to screen, the entire radar equipment is backed by Toshiba's technical know-how, long experience and most modern facilities. Also, in such diversified production lines as mammoth hydro- and thermo-electric generators, transformers, rolling stock and nuclear equipment, to name a few, the engineers and specialists at Toshiba are always thinking in terms of better living for tomorrow.

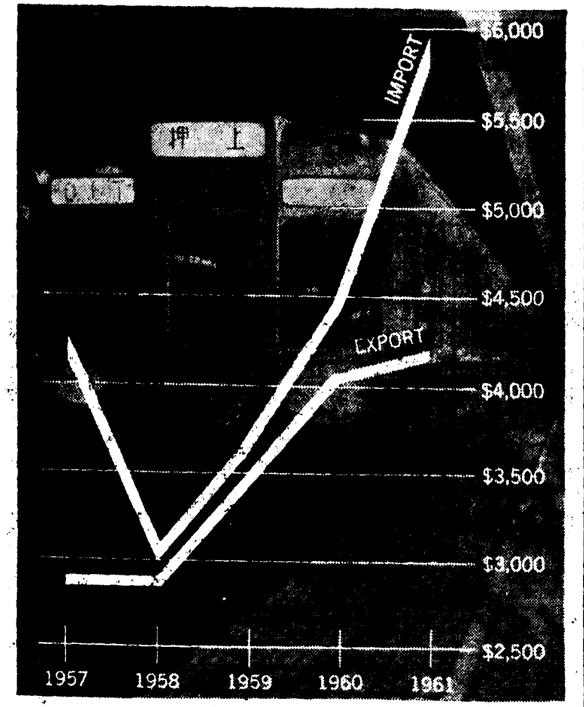
TOKYO SHIBAURA ELECTRIC CO., LTD. Tokyo, Japan



Japan's imports-exports (in millions of U.S.$)

How to buy and sell in the billion dollar Japanese market

One way is to open your own office in Tokyo staffed with 3,000 experts on Japan's industries, commerce and foreign trade. In effect this is what you get when you deal with Japan's largest general trading company, Mitsubishi Shoji of Tokyo. From its head office with 100 branches and associates throughout the world, Mitsubishi Shoji helped 5,000 overseas firms do $1,100,000,000 worth of import-export business in Japan last year. Mitsubishi Shoji handles everything from consumer goods to heavy industrial equipment. Long association with other Mitsubishi enterprises (30 of Japan's largest corporations) gives you a priceless advantage when either buying or selling in the Japanese market. Put Mitsubishi Shoji's proven ability to work for your firm. For complete information write:

not being renewed. They were often hastily accepted in the bustling days of 1958 and 1959; hire purchase terms are now more stringent and companies are more discerning over the customers they take. Finance houses are worried that if total hire purchase debt fails to show a substantial rise in the near future the authorities may be tempted to follow the easier terms for durable goods with a relaxation in the existing restrictions on vehicle sales. Such a move, it is felt, would put the industry back where it was in 1958; it is still not disciplined enough to avoid the pitfalls of the wrong sort of competition.

The check in the downward slide in hire purchase debt has been accompanied by a slight rise in retail sales. The Board of Trade's index, using a new method of calculating the seasonal adjustment, is just over one per cent higher in May than in March and April. It is significant that the increase was concentrated in the durable goods sector; sales by food shops fell and those of clothing and footwear shops, still afflicted by the bad weather in May, remained at the April level.

DAILY MIRROR-SUNDAY PICTORIAL

Full Blooded Merger

A MERGER between Daily Mirror Newspapers (which now includes the Odhams group) and its associated organisation, Sunday Pictorial Newspapers, has been the buzz of the City for years. Now the merchant bankers, S. G. Warburg and J. Henry Schroder Wagg have been called in "to examine ways and means of affecting a merger of the interests of the two companies and to make recommendations." This will be no easy task, because complicated cross-shareholdings of the two companies have to be sorted out. The Daily Mirror group owns 26 per cent of the equity of the Sunday Pictorial group and the latter owns 10 per cent of the Daily Mirror equity; they have joint shareholdings in A. E. Reed amounting to about 45 per cent of the equity and controlling about 60 per cent of the votes; and both have interests in Associated Television. The merchant banks are not expected to have any plan ready before October.

The announcement refers, perhaps significantly, to a merger of interests rather than to a direct merger of the companies. Presumably some form of holding company could be created. But, whatever form the merger takes, it could create the opportunity for a logical group structure, which would distinguish, for example, between national newspapers, provincial and overseas newspapers, magazines, trade papers, commercial television and paper interests. Some such formalised division of a Daily Mirror-Sunday Pictorial group would be needed.

DEVELOPMENT BANKS

Lending Hard

IN the year that ended last week the World Bank has made a break-through in its lending operations. Loans by the bank itself look like totalling about $900 million and the loans of its two affiliated institutions, the International Finance Corporation and the International Development Association, have certainly taken the total well over the billion mark. In earlier years the bank never seemed able to get its operations above $650-$700 million a year.

At the same time the bank managed to close its year on a highlight by approving two loans to Mexico totalling $160.5 million—$130 million for a countrywide expansion of electric power facilities and $30.5 million for an extension of the toll transport system. This $130 million loan is the biggest single loan ever made by the bank, apart from the special reconstruction loans to France and Holland made in 1947. The only other loan anywhere near this figure was one of $100 million made to Australia as long ago as 1950. Mexico now ranks fourth in the World Bank's list of borrowers, with outstanding loans that now total $387 million. Ahead of it are India with loans of $817 million, Japan with $482 million, and Australia with $418 million. Mexico is one of the few really underdeveloped countries that has—nowadays—the confidence of private investors. A fortnight ago the International Finance Corporation, in its first ever underwriting operation, was joined by Kuhn, Loeb of New York and by Handelsfinanz of Zurich in underwriting a share issue totalling more than $4 million of a Mexican steel company.

Too Much Money

A DEVELOPMENT bank with too much money and too little work is an odd spectacle. Over four years ago the Treaty of Rome gave the common market its own investment bank to help finance development in the community's less developed areas. Unfortunately a demand has not materialised. Last week the European Investment Bank announced a loan equivalent to $16.2 million to the French railways for electrification and modernisation in Brittany; this is still only its twenty-third loan since operations began in 1958.

The bank's authorised capital is equivalent to $1,000 million, of which $250 million has been issued. This has proved more than enough for the bank's needs, but the bank has also made four bond issues, two in the Netherlands, one in Italy, and one in Switzerland, equivalent to a further $45 million. The bank's income in 1961 was a handsome $11.7 million of which some $10 million went to reserves. The result is that the bank has nearly as much cash in its coffers as it has made loans. Loan commitments to date are equivalent to $176.4 million; cash on December 31, 1961, was $143.8 million, gold assets were a further $8.5 million, and investments, over half of which were treasury bills, amounted to another $50.9 million.

At December 31st the bank had undertaken loan commitments equivalent to $160.2 million of which $66.2 million was approved in 1961 compared with $41.3 million in 1960. Some 54 per cent of the loans went to Italy compared with 24 per cent to France, and 17 per cent to Germany. Of the $57 million that has so far been lent to industry, $45 million has been shared by iron and steel, and chemicals.

CUNARD

Releasing Property Values

LAST week at the annual general meeting of Cunard, the chairman, Sir John Brocklebank, gave a strong hint that the company would link itself with a property development group. Three days later, Mr Jack Cotton, the chairman of City Centre in which Mr Charles Clore is the other major partner, revealed that negotiations were proceeding with Cunard for a joint company to exploit the values locked up in Cunard's land-based properties, both at home and overseas. The attempt to rehabilitate the fortunes of the Cunard group is thus being taken another step forward.

Property should be a profitable area of exploitation for Cunard, for some of its holdings in London and Liverpool, New York, Canada, Australia and New Zealand must offer an opportunity for redevelopment that would free space for letting or sale without hampering Cunard's commercial use of them. Help from experts is needed to realise their full potential—to assess, for example, whether there is an opportunity for profitable development in London and New York rather than in Liverpool, where there appears to be a surplus of office accommodation. Cunard's land properties have a book value of only £4½ million but Sir John Brocklebank has suggested £10 million as a conservative current value. Their development will obviously take time; but the stock market was sufficiently pleased with the announcement of the negotiations to mark the shares up a few pence to 17s. 10½d.

SUPERSONIC AIRCRAFT

"M. Caravelle" Goes

THE repercussions of the resignation of M. George Hereil reach far beyond France and the French aircraft industry. Until last weekend, M. Hereil was the president and the driving force behind Sud Aviation, the biggest aircraft company on the Continent, probably the world's most successful builder of helicopters, builder of the Caravelle airliner and potential builder

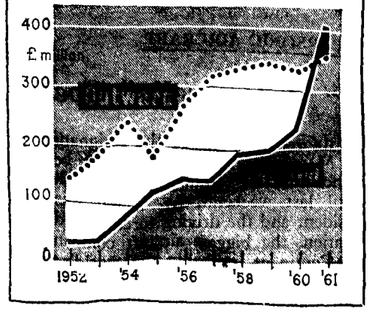
of the supersonic super-Caravelle. This was started, almost in despair, as a way to find work when orders for the Caravelle began to dry up. If Sud should not build this supersonic replacement, the company would have to bow out of the airline market, which M. Hereil hoped to avoid at all costs. He tried, unsuccessfully, to force the French government into supporting the super-Caravelle by presenting it with a fait accompli; but the government, which had met these tactics before, refused to be rushed.

Suddenly Mr Thorneycroft arrived on the scene, in the unusual guise of a ministering angel; within a matter of weeks the super-Caravelle had turned into an Anglo-French project and acquired something approaching diplomatic immunity. Why then did M. Hereil resign just when his plans seemed to bear fruit? Will the French government lose its enthusiasm for supersonic flight when he is no longer there to keep ministers up to scratch? And what will be Mr Thorneycroft's position at home, where the British Aircraft Corporation is working on a design study for a long-range version of the aircraft, if the French drop their side of the agreement?

There are rumours that M. Hereil felt in past weeks that he was losing control of the project to Sir George Edwards at BAC; he was also at something of a crisis in his career. A man who had always doubled presidency of Sud with jobs in private industry, M. Hereil found himself becoming forced to choose between Sud, and his outside interests in companies expanding too fast to be treated any longer as part-time jobs. Increasingly irritated by the course of negotiations with BAC, and apparently upset to discover that he had been demoted from chairman of the joint project to become one of a team who would serve in rotation, M. Hereil decided that he had had enough of nationalised industry and resigned. His replacement by General Puget is interpreted in France as a complete break with his policy and all that it stood for. This could include the super-Caravelle.

PRIVATE INVESTMENT

In 1961, helped by the £130 million Ford payment and a rise in portfolio investment, the inflow of private capital into the United Kingdom exceeded the outflow by £50 million compared to an average net outflow of £130 million in the previous nine years. Both the inflow and the outflow of private capital have been rising steadily. In the years 1952 to 1954 outward private investment averaged £189 million a year and inward £48 million. By 1959 to 1961, outward investment averaged £346 million and inward £280 million. These figures are still influenced by a number of controls. Inward direct investment is not controlled and the repatriation of capital and profits is free; but inward portfolio investment by residents of the non-sterling area may be realised only in the form of security sterling. Outward direct investment is subject to restrictions which were made more severe last July. New outward portfolio investment by UK residents in the non-sterling area is not permitted.



MAN-MADE FIBRES

Record May

DESPITE the poor level of demand for textiles generally, production of man-made fibres in May set a new record. Output reached 55 million lb, compared with the previous best of 54½ million lb in March, 1960. That year was the high water mark for the industry in this country; the following year brought a reaction which is best remembered for the cut in Courtaulds' interim dividend and the importance that cut assumed in the bid by ICI for the group. The early part of 1961 was therefore a lean period for man-made fibres, though production picked up towards the end of the year. Production in the first five months of this year is only 21 million lb higher than in the corresponding period of 1961, but practically all of that increase is accounted for by greater exports in those months (though because of the time-lag, export figures are not strictly comparable).

Deliveries of filament yarns in this country for industrial purposes (chiefly tyres) are sharply down, though they have picked up in recent months to about their former level. A fall of about the same order has occurred in deliveries of filament yarn to weavers, and prospects for a recovery in this sector do not appear too promising. Staple fibre absorbed by the wool industry increased in the first quarter of this year, but cotton spinners took considerably less. Staple fibre has been helped by the sharp recovery in demand for carpets: sales in May were 16 per cent higher in value than a year earlier. In the three months March to May manufacturers' sales of carpets were 7 per cent higher.

Sales of filament yarn to hosiery manufacturers and for warp knitting expanded further, though in volume these are relatively smaller outlets for man-made fibres. Sales by the hosiery and knitwear industry which has been the strongest of the textile industries have also been slipping recently. Following the decline from peak levels earlier this year, manufacturers' sales in May were only 1 per cent greater than a year ago, and higher selling prices accounted for the whole of the rise. But a useful factor in demand for man-made fibres which natural fibres lack is the introduction of new types such as Courtaulds' newly named Vincel polynosic fibre and the as yet unchristened BHS, which can normally be relied on to stimulate greater demand. According to the International Rayon and Synthetic Fibres Committee, output of man-made fibres in western Europe, the United States and Japan reached a record level of 738,000 metric tons in the first quarter of 1962, compared with 639,000 tons in the corresponding period of 1961. The committee tentatively forecast a new record for production this year.

COPPER

Second Round

THE big African copper producers have made a further cut of 5 per cent in production or sales from the beginning of July. A cutback to 90 per cent of capacity was made in the last quarter of 1960. Some of the mines on the Copperbelt have therefore been held in for 21 months, only to be rewarded now by a further tightening of the reins. One of the large groups, Rhodesian Anglo American, put on its blinkers when over-capacity reappeared in 1960 and patiently stocked up with excess copper against the time that full production would again be needed. As the Rhoanglo group has retained the option to cut production or check sales, it can be assumed that the stockpiling policy has been pursued through to the end of June. The companies within the group, which mostly have a financial year running to that date, will therefore presumably reveal a corresponding addition to their stocks in their full accounts.

According to market lore, the best way to get rid of a surplus that is depressing prices is to leave the metal underground, and its truth was confirmed by the listlessness of copper even in the face of the Copperbelt strike in May, which failed to lift the sagging forward price up to the level of the supported spot price. The producers' stocks were regarded as being available to cover any gap in supplies. The Rhoanglo group is now to limit sales or output by 55,000 tons a year below the group's capacity of 365,000 tons. The Rhodesian Selection Trust cutbacks will hold 39,000 tons off the market, but a significant part of these reductions will be made up by expansion of capacity. In 1961, Northern Rhodesian output was maintained despite the 10 per cent cutback which operated throughout the year.

Bearish elements in the market were not overawed by the cutback announcements, though the discount on forward supplies narrowed to about £3 a ton. However, producers are continuing to hold spot copper firmly at £234 a ton. They have not been communicative about their market strategy. It seemed once that the market price in London was pegged towards the end of January partly to correct technical factors, which were depressing the market, and partly to

JENKINS REPORT

THE PROTECTION OF INVESTORS

On the sale of securities the Jenkins committee finds that the protection of investors as afforded by law and as reinforced by stock exchange regulations and the conduct of the issuing houses is adequate, though it suggests some tightening up of the regulations and envisages a new deal for unit trusts. It does not, however, touch on the soliciting of deposits from the public as the Government has a bill in preparation. This is regrettable; some public discussion of the problems and of the opportunities for abuse would have been useful before a bill is laid before Parliament. The committee hopes that the Prevention of Fraud (Investments) Act can be consolidated with the Companies Act in such a way as to separate its provisions governing unit trusts from those relating to security dealing. It further suggests that the Board of Trade should become more closely associated with other bodies in keeping the law and practice for the protection of investors under constant review.

Prospectuses:

Current safeguards, as embodied in the law and stock exchange regulations, are broadly adequate but the committee suggests that many of the regulations imposed by the stock exchange on the information to be contained in prospectuses should be codified in law. In addition, in any prospectus, companies should be required to publish turnover figures for the five preceding years, with a narrowly drawn exemption for such companies as banks and discount houses where turnover is meaningless. This reinforces the committee's suggestions about the publication of turnover (with the option of escape) in annual accounts.

The compass of the law should be broadened so that where a document offers securities for a consideration other than cash (for instance, shares) it should comply with the regulations governing normal prospectuses, though where shares are offered in a take-over bid the committee thinks that compliance with the Board of Trade's take-over provisions would be sufficient safeguard. Debenture prospectuses should contain information on such matters as interest, redemption terms and the security offered.

Dealing in Securities:

Stock exchanges: Lord Ritchie's suggestion that there should be a national stock exchange is given fresh impetus by the committee's recommendation that the number of provincial exchanges should be reduced by amalgamations and that all stock exchanges should establish guarantee funds.

Licensed and exempted dealers: The committee seeks greater control over "fringe" activities in security dealings by stricter definition of persons and companies that can deal in securities and by empowering the Board of Trade to keep a more continuous watch on them. It suggests that the sought-after status of "exempted dealer," in which category the leading banks, merchant bankers, discount houses, finance and issuing houses fall, should be retained and extended to those who the Board of Trade believes could fulfil the conditions of exemption within two years, to give new entrants an opportunity. But the committee suggests that the status of "licensed dealer"—there are now 35 of them, mainly small issuing houses—should be rigorously confined, as originally envisaged, as far as possible to those who deal in securities directly with members of the public.

Unit Trusts:

The committee tackles unit trust problems in the spirit that they have grown responsible and need no longer be tethered so tightly to the Board of Trade "nannie." *The Economist* in evidence to the committee and on other occasions, has argued for greater freedom for the unit trusts and greater flexibility in the control of their operations, and it warmly welcomes a report that establishes adequate provisions to safeguard the interests of unitholders but does not pinion the managers in a strait-jacket.

Up to now the registration of unit trusts and regulations governing their conduct have been at the complete discretion of the Board of Trade, acting within the framework of the Prevention of Fraud (Investments) Act. It has the right to refuse registration; it can and does concern itself with the detailed arrangements of the trusts; and since 1950 it has laid down what the maximum management charges should be, though this was not envisaged in the original act. The committee would like to see this system replaced by a legal code, which would allow some flexibility in statutory regulations but would, for example, require the Board of Trade to register any unit trust that complied with the law. The committee's proposals are towards greater freedom for the trusts within the framework of regulations established by law (and not at the discretion of the Board of Trade). The most important are:—

Trustees: The committee explicitly recognises the advantages of the trust form for British mutual funds, where independent trustees make sure that the managers keep within the trust deed, and it rejects the idea that the American model of open-ended investment companies, where no trustees are required, should be imported to this country. Trustees, however, should be confined to British-registered corporate bodies with a paid-up capital and net assets of not less than £1 million.

Prices: The Board of Trade should continue to have the power to govern the calculation of bid and offer prices and yields. The repurchase of units below the calculated bid price (as is still legally possible) should be prohibited. Managers should be prohibited from making profits for themselves on the underlying securities—a recommendation that tolls the death knell of the appropriation fund. The committee openly recognises, as *The Economist* has, that the managers should be allowed to continue to act as principals in jobbing in the units, but that any profits made in this way should be publicly disclosed.

Charges: The maximum management charge should continue to be published in the trust deed, but it should be fixed by the managers and not at the behest of the Board of Trade. Those who have wished to see the unit trust movement grow have long pressed for such a freedom in management charges. As the committee recognises, competition will prevent charges from sailing up into the sky and the suggested ban on door-to-door canvassing for sales (which has done some harm to American mutual funds) should be sufficient to prevent excesses.

Advertisements: These should continue to be vetted by the trustees. The committee sees no danger in "block offers" so long as new subscribers are not offered terms that would prejudice existing holders, and so long as the advertisement makes it clear that after the period of the block offer units will continue to be available at the then current offer price.

Information: The committee rightly attaches great importance to the provision of adequate and up-to-date information about the trust to potential unitholders and it suggests that applications from new investors should only be accepted on application forms issued with a detailed prospectus. This document should contain: the names of the trustees, managers and auditors; details of the maximum charges; details of the investments, at a date no less recent than the last half-yearly accounts; certain specific details about the investment policy of the trust; particulars of distributions made to investors in the three preceding years; and the address where the trust deed can be inspected.

Continued from page 72

tide copper over a period of slack demand, which might have been expected to be temporary, though it proved more persistent than anticipated.

But if supply and demand can be balanced effectively by flexibility in output, is there any need for a rigid price floor? Fluctuations in prices can help to absorb surpluses by encouraging others to hold larger stocks. It begins to look as though producers want an arbitrary price floor of £234 a ton and are prepared to consider whatever temporary cuts are necessary to achieve that level and though the 5 per cent cut looks a rather tentative move in the present circumstances, copper producers have shown a high degree of co-operation. A hint has been dropped that American producers, who effectively allowed their output restrictions to lapse last year, are considering their reimposition. Noranda, the Canadian producer which has stayed on level pegging with the Copperbelt companies since 1960, also followed the extra 5 per cent cut this week. The latest round of cutbacks on the Copperbelt coincided with the failure of strikes to materialise at American copper plants when wage contracts expired at the end of June, but minor disputes are affecting production and more labour trouble seems to be brewing on the Copperbelt.

PLASTIC PIPES

Setting a New Standard

Two British Standards for polyvinyl-chloride piping were introduced last week, having been considered for eight years. Pipe manufacturers hope that they will lead to a swift increase in the market, which at present takes 4,000 tons a year. The delay was caused partly by the near impossibility of getting the manufacturers to agree on the tests to be included in the standards. But, perhaps more important, only within the last two years have suitable techniques and raw materials been available. For instance, water mains once laid are expected to perform undisturbed for fifty years at least; it is difficult to guarantee this performance from present experience, as pvc pipes have only been in use in Britain for eight years.

The standards lay down the quality requirements for unplasticised pvc pipe for cold water supply and industrial uses. Pressure pipes are expected to make up 50 per cent of the market, mostly for water mains, domestic water supplies and low pressure gas. Another 25 to 30 per cent will be made up of drain pipes, rainwater pipes and small sewers. Manufacturers are optimistic about the growth of this market and estimate that it will be 13,000 tons a year in 1965 and 30,000 tons in 1968. They have an encouraging precedent: consumption in Germany has jumped from 6,000 tons a year in 1960, when their standard was introduced, to a current rate of 18,000 tons a year.

FIRES

More of Them

Fire brigades were called out to deal with 160,000 fires last year against 134,000 the year before, doing £40 million of damage. It takes a considerable time to analyse the causes of all these, but if experience of 1960 is any guide, rather less than half of them will have occurred in buildings and a fifth of these may have been due to electrical equipment of one kind or another. This trend towards more electrical fires has been worrying the Department of Scientific and Industrial Research's Fire Research Station for some years. Industry argues, correctly, that the fires occur because owners abuse the equipment—knocking over heaters, leaving on electric blankets and spilling fat on electric hotplates. To this the Fire Research Station comments in its latest annual report, "Any improvement in the fire situation will only be brought about when the design is such as to make allowance for misuse." The difference, as some members of the staff have put it, is between being foolproof and damn foolproof.

A total of 329 fires caused by electric blankets in one year, with five people dead, nine injured and 54 buildings damaged has at last led to the question of "protective devices of a higher quality than at present attained" being "considered by the British Standards Institution." And about time too. It is sometimes much more difficult to introduce small changes than big. Having nagged local authorities for years about the laxity of their fire regulations, the Research Station now says that some of them have been unnecessarily strict in their treatment of curtain-walled buildings. Tests on the station's favourite toy, a four-storey tower that can be set on fire to simulate various buildings, show that these are less of a fire risk than some local authorities suppose. But tall flats "which may be inaccessible to fire brigade ladders" are another matter altogether. Knowing the statistical regularity with which kitchens catch fire, the Fire Research Station suggests that architects and owners of tall blocks might like to ponder the implications.

SHORTER NOTES

Mr Morarji Desai, India's finance minister, spent Wednesday in talks with the Prime Minister, the Chancellor of the Exchequer and other Ministers, on Common Market prospects and aid for India. He described his talks with Mr Lloyd as "cordial" and has proceeded to the European capitals in a hopeful mood that refuses to contemplate the possibility that no more money will be forthcoming. After the delays and indecision of the Aid India Club, now due to meet in Washington at the end of this month, and a $220 million foreign exchange deficit for the second year of the third plan, India has applied to the IMF for a standby credit of $100 million. Its IMF drawings to date amount to $250 million.

★

Subject to final confirmation in a fortnight's time, the Council of the London Stock Exchange has passed a rule that will enable broking firms to establish branch offices overseas. The proposal has been under consideration for some months and clearly only a handful of the bigger firms will take advantage of the new freedom. Those that wish to do so will have to obtain the prior consent of the Council and the branch offices will have to be wholly under the control of the London firm and will have to comply with the rules of the stock exchange (including those restricting advertising).

★

The government has made the clause in the Finance Bill concerned with the disclosure of information by agents of their principals' security dealings to the Inland Revenue for the purposes of assessing the speculative gains tax a little more precise. Commenting on this clause, the Attorney-General, Sir Reginald Manningham-Buller, explained that inquiries would not be made unless the Inland Revenue were satisfied that the investor is or may be chargeable to tax. The procedure will be, first, to ascertain whether in fact the agent acts for the named investor and then, if necessary, to ask for details of the assets bought and sold and for what prices and for the dates of the transactions. An amendment designed to relieve solicitors from the necessity of providing such information was defeated.

★

The consolidated trading profits of the Associated British Picture Corporation rose in the year to March 31, 1962, from £5,717,000 to £5,872,000 though net profits are slightly lower at £2,245,000, against £2,285,000. The ordinary dividend is effectively unchanged at 30 per cent.

COMPANY MEETINGS

L M ERICSSON TELEPHONE COMPANY

STOCKHOLM—SWEDEN

ANOTHER RECORD YEAR, SALES UP 13 PER CENT

BACKLOG OF ORDERS $267 MILLION

SALES DOUBLED IN ASIA, AFRICA AND AUSTRALIA IN TWO YEARS

The eighty-sixth annual General Meeting of L M Ericsson Telephone Company was held on June 7th in Stockholm. The following is an extract of the report circulated with the accounts:

REVIEW OF THE YEAR

The rapid growth of the Ericsson Group recorded in recent years continued unabated through 1961, and the increasing demand in all parts of the world for the Group's products created a record backlog of orders at the end of the year, despite unprecedented large deliveries.

Sales of the Ericsson Group, which exceeded one billion Swedish kronor ($196,840,000) for the first time in 1960, continued to rise during 1961 and amounted to $222,147,000 for the full year. This is exclusive of income from the Group's telephone operating companies in Argentina and Peru, amounting to $7,800,000 in 1961, compared with $5,800,000 in 1960.

Orders booked by the Group exceeded the record figure for 1960 and the backlog of orders, which at the beginning of 1961 amounted to nearly $232,000,000, rose to $266,925,000 at year-end, despite the increase in invoicing.

The progress made in sales reflects the increasing recognition of the modern, advanced telecommunications techniques offered by the Group today.

Geographical distribution of Group sales is shown in the following table:

	1961 Sales	%	1960 Sales	%	Backlog December 31, 1961
Sweden	$ 77,234,000	34·8	$ 71,180,000	36·2	$ 90,367,000
Europe (Excluding Sweden)	68,143,000	30·7	58,433,000	29·7	92,417,000
USA and Canada	36,886,000	16·6	34,540,000	17·0	17,776,000
Latin America	25,338,000	11·4	22,069,000	11·2	32,418,000
Africa, Asia and Australia	14,546,000	6·5	11,618,000	5·9	33,947,000
Total	$222,147,000	100·0	$196,840,000	100·0	$266,925,000

Successful cultivation of the markets in Asia, Africa and Australia in recent years is reflected in increasing orders booked from these areas of the world, where sales have more than doubled in the past two years.

As indicated in the following table, the Group's manufacturing and sales programme is concentrated on products in the telecommunications and cable fields.

	1961 Sales	%	1960 Sales	%
Telephone exchanges, switchboards and instruments	$ 96,576,000	43·5	$ 84,758,000	43·0
Other telecommunications equipment	31,451,000	14·2	23,559,000	12·0
Cable, wire and network equipment	46,557,000	20·9	42,411,000	21·5
Other products manufactured by the Group*	38,568,000	17·4	37,350,000	19·0
Miscellaneous	8,995,000	4·0	8,762,000	4·5
Total	$222,147,000	100·0	$196,840,000	100·0

* Includes components, electronic equipment and development projects for military use.

Group earnings, before exchange differences, taxes and special adjustments, increased to $25,502,000 in 1961, equal to 11.5 per cent of sales, compared with $21,472,000, or 10.9 per cent of sales in the preceding year. Net income of $8,700,000 in 1961, compared with $7,668,000 in 1960, was affected materially by special adjustments totalling $8,415,000 compared with $2,127,000 in 1960.

SWEDEN

Group sales in Sweden increased slightly more than eight per cent during the year, totalling $77,234,000 in 1961 compared with $71,180,000 in 1960.

Orders received from the Swedish Telephone Administration, the Group's largest customer, rose by 20 per cent.

A new automatic central exchange in a suburb of Stockholm is being equipped with the new "code switch" crossbar system developed by the Parent Company and to which further reference is made in the section on research and development. The exchange is designed to handle 4,000 lines initially; ultimate capacity is 30,000 lines.

The Long Distance Division is producing components for transistorised amplifying equipment for use with a new type of coaxial cable which is of a smaller diameter than that used to date. This line equipment, which permits handling of 300 simultaneous circuits, is placed in hermetically sealed containers that are buried underground.

Sieverts Kabelverk, the Group's cable manufacturing subsidiary, has received an order for the world's largest series capacitor bank with a capacity of 300 MVAr for use on one of the 140 kV lines of the Swedish State Power Board. The Board has also ordered a 145 kV submarine cable to be laid in the Öresund, between Sweden and Denmark.

The Telephone Administration has placed an order for an additional 175,000 one-piece Ericofons, which are becoming increasingly popular everywhere. The number of Ericofons purchased by the Administration since the instrument was approved as standard equipment in Sweden in 1958 now totals 325,000.

Equipment for automatic central exchanges and subscriber switchboards involving a total of 63,000 lines was delivered to the Administration during the year. Delivery of 180,000 telephone instruments established a new record.

The first equipment for 900-group translation for use in a 2700-circuit coaxial cable system was delivered and placed in service. The installation is believed to be the first of its kind in the world.

Sweden's State Railways placed in service two large Centralised Traffic Control systems (CTC) for remote control of rail traffic. Both were supplied by L M Ericsson Signal AB.

Sales of capacitors by Rifa, a subsidiary, have continued to increase. A new factory with approximately 85,000 square feet of floor space is being built for this company at Kalmar, in southern Sweden, on a site acquired for the purpose.

The need for increased production facilities, particularly by the Parent Company, was partially met during the year through the completion and occupancy of a number of new or remodelled plants.

The second phase of the expansion of the Parent Company's cable factory at Älvsjö, involving the addition of approximately 165,000 square feet, was largely completed at year-end.

About 80,000 square feet were added to facilities at the Mölndal plant, primarily for laboratories and environmental testing.

In the autumn the Ermi subsidiary moved into its new 110,000 square foot plant at Karlskrona.

Sieverts Kabelverk completed a new building to house, among other departments, development laboratories and testing facilities.

Among the larger building projects now under way and due to be completed during the current year are the new expansion of the headquarters office at Midsommarkransen (110,000 sq ft) and construction of factories at Visby and Ronneby, each with nearly 110,000 square feet. These factories will produce telecommunications equipment for the Parent Company. Until the buildings are completed, manufacturing is taking place in rented facilities.

A rented plant in Norrköping, with about 85,000 square feet, is being equipped and should be ready for occupancy towards the end of the year.

EUROPE (EXCLUDING SWEDEN)

The Group's sales in the European market outside Sweden amounted to $68,143,000 compared with $58,433,000 a year earlier. Of this total, approximately 90 per cent was recorded in Italy, France, Holland, Denmark and Finland. In the first three countries, sales are based primarily on domestic production in Group-owned factories. The Group has factories also in Denmark and Finland but sales in these countries largely comprise products manufactured in Sweden.

In Italy, construction of the FATME factory is progressing according to schedule and the building has now been roofed in. Automatic exchanges for 44,000 lines of the Group's OS-system were placed in operation in Italy during the year and more than half a million lines of this system have been installed to date in this country. Sales of crossbar equipment also continued on a high level and the number of exchanges completed more than doubled during the year. The new code switch crossbar system was introduced in Italy through orders for "detached" exchanges serving 7,000 lines.

The Group's French subsidiary, Société des Téléphones Ericsson, which celebrated its fiftieth anniversary in 1961, has received a number of substantial orders from the French telephone administration. Sales to the private market have also been good. The company is currently building a new plant at Dieppe to handle increased production of telephone instruments.

In Denmark, which is the Group's largest market for automatic crossbar exchanges, automation of telephone facilities is progressing. With an unprecedented new installation of nearly 43,000 lines in 1961, the number of automatic central exchange lines now in service totals 262,000. An order for a 12,000-line code switch exchange for Copenhagen has been received.

Automatic central exchanges placed in service in Finland in 1961 had a capacity more than 30

	104,371,000	91,647,000
Less—Accumulated depreciation	48,313,000	43,933,000
	56,058,000	47,714,000

	1961	1960
Assets pledged to secure indebtedness	$39,037,000	$38,303,000
Total assets	$315,868,000	$289,601,000

The United States dollar amounts shown in the above statement represent translations from Swedish kronor at the official parity at December 31, 1961, of S. Kr. 5·17 to $1·00.

CONSOLIDATED INCOME STATEMENT

	1961	1960
Net sales	$ 222,147,000	$196,840,000
Dividends, interest and other revenue		
From unconsolidated subsidiary companies	152,000	168,000
From associated companies	490,000	407,000
From others	4,900,000	5,055,000
	227,689,000	202,470,000
Cost of products and services sold	144,023,000	129,970,000
Selling, administrative, research and development expenses	49,158,000	43,079,000
Depreciation	6,001,000	5,268,000
Interest	3,005,000	2,681,000
	25,502,000	21,472,000
Exchange gains (losses) resulting from translation of foreign subsidiary accounts	2,125,000	(1,151,000)
Income before items at right	27,627,000	20,321,000

	1961	1960
Special adjustments		
Transfers to or (from) reserves for accounts receivable (net)	3,958,000	(1,303,000)
Transfers to or (from) special inventory reserves	2,392,000	(1,415,000)
Transfers to reserves for future investments	1,934,000	4,814,000
Write-downs of investments	131,000	31,000
	8,415,000	2,127,000
Income before taxes	19,212,000	18,194,000
Taxes on income	10,018,000	9,579,000
	9,194,000	8,615,000
Minority interest	494,000	947,000
Net income	$8,700,000	$7,668,000

per cent greater than corresponding installations a year earlier. Large orders have been received for long distance and rural exchanges, among other equipment.

The Group was successful in holding its share of the market in other European countries.

The Ericsson Group has for many years had its own production facilities in several countries both within and outside the EEC. The Group's experience in multi-national operations facilitates relatively rapid adjustments of production and distribution to meet conditions in the European market.

AFRICA, ASIA AND AUSTRALIA

Cultivation of the African market resulted in a tripling of business in 1961, compared with 1960.

Automation of the Tunisian telephone system continued and new orders for central exchanges to handle 12,400 lines were booked.

In Egypt the first crossbar exchange, in the Abbassia section of Cairo, has been completed. This installation is part of the large contract for nearly 150,000 lines received in 1960 from the national telephone administration.

Liberia can now be included among the growing number of Group customers for automatic central exchanges in Africa. The contract recently signed with this country also covers substantial network installations.

Ethiopa has placed an order for its first automatic crossbar exchange.

The Group's French subsidiary has increased its sales to a number of the newly-established African states.

Sales of telephone instruments and cable in the Asian markets were high. Among them were large orders from Iraq which has thus become an important market for the Group.

In Thailand an earlier order for automatic central exchanges has been followed by repeat orders. As a result, installations comprising a total of 17,000 lines are now in progress.

In Taiwan work was completed on the centralised traffic control CTC system installed by L M Ericssons Signal AB on the railway line linking Changhua and Tainan.

In Australia the large-scale programme of deliveries to the telephone administration is progressing according to plan. During the year, the Group's manufacturing subsidiary, L M Ericsson-Trimax Pty Ltd, purchased a site near Melbourne for construction of a new plant. Initially the factory will have approximately 55,000 square feet for production of telephone equipment.

Total sales in Africa, Asia and Australia increased to $14,546,000 in 1961, compared with $11,618,000 in 1960.

LATIN AMERICA

The Group's major markets in Latin America are Argentina, Brazil, Colombia, Mexico and Venezuela. These countries, combined, accounted for more than 80 per cent of 1961 sales totalling $25,338,000 in this area, compared with $22,069,000 a year earlier.

Sales of cable, manufactured in the Group's factory outside Buenos Aires, are an important factor in Ericsson's activities in Argentina. The capacity of the Group's telephone operating companies is being expanded, partly through installation of 21,000 new central exchange lines and partly through construction of carrier frequency systems for main trunk circuits.

Large orders in Brazil include automatic central exchanges for Recife and an additional 10,000-line exchange for the capital city of Brasilia. Nearly 150,000 lines of Ericsson-system automatic exchange lines have been installed to date in Brazil. The Long Distance Division of the Parent Company has received an order for carrier frequency equipment to be used in the interior of the country.

The gradual changeover from assembly to local manufacture of exchange equipment is progressing on schedule in the Brazilian plant at São Jose dos Campos.

Business in Brazil has been affected adversely by the economic crisis through which the country is passing. Certain governmental measures, which discriminate against foreign investments, cloud the outlook for profitable activity in the near future.

Colombia has to date been a major market for the Group's OS-system—currently there are more than 220,000 lines in service—but the crossbar system has now also gained a foothold. The first crossbar system was inaugurated in Bogotá during the past year.

Installation of the long distance network in Colombia has been completed and a major portion of the network has been placed in service.

The Group's main customer in Mexico, Teléfonos de México, placed orders at about the same rate as in previous years. The first local and toll exchanges of the crossbar type were opened in 1961 and equipment delivered by the Long Distance Division included transistorised carrier frequency terminals for broad-band radio links.

The instability that has characterised the Venezuelan economy in recent years continued to retard expansion of that country's telecommunications. Orders booked last year were therefore relatively modest. During the year, however, the telephone administration developed plans for long-range expansion of the nation's telecommunications, as a result of which increased business can be anticipated.

In Ecuador, work was begun during the year on expansion of the automatic central exchange in Guayaquil and two connected rural exchanges. This installation is notable since it represents the first step toward automation of the national telephone system in the Guayaquil area.

USA AND CANADA

Group sales in the United States and Canada increased to $36,886,000 in 1961, compared with $33,540,000 in 1960. North Electric Company, the Group's manufacturing subsidiary in Galion, Ohio, accounted for $35.9 million of the sales recorded last year, compared with $32.5 million a year earlier. North Electric's sales include those of Power Equipment Company, also of Galion, which was merged into North Electric at the beginning of 1961.

During the early part of 1962, North Electric began deliveries of solid state switching centres to the U.S. military authorities under a contract for the largest electronic switching system in the world.

Since becoming affiliated with the Group in 1951, North Electric, one of the pioneer telephone manufacturers in the United States, has more than quadrupled sales volume and it now a much stronger company financially. The company's operations cover a wide range of telecommunications systems, supervisory control systems, power control equipment, and other

products. The company's Science Centre has access to the extensive research and development facilities of the Parent Company.

Additional orders have been received from Canada for rural exchanges of the crossbar type. Although these orders are relatively modest, they are of special interest owing to the potentialities of this new market.

RESEARCH AND DEVELOPMENT

During the year additional facilities were added to a number of the Group's research and development departments. The Parent Company, among other projects in this field, established a new laboratory for analysis of materials and techniques used in printed circuitry and a special laboratory for the study of problems related to surface treatment and corrosion.

In the field of telephone traffic, progress was made in developing theories and methods for quantitative analysis of telephone systems. This research project is being undertaken jointly with the Swedish Telephone Administration and other telephone administrations. Operations analysis is also being applied to the evaluation of telephone systems as a whole.

After many years of development work by the Parent Company, a wholly new switching concept—the code switch—was introduced in 1961. The code switch offers a number of distinctive features. Among others, it requires less space and less operating power and makes it possible to divide central exchanges into smaller units, with consequent favourable effects on network costs. The market for the code switch is not limited to automatic central exchanges since its advantages can be utilised effectively in private telephone systems and in subscriber switchboards.

The Long Distance Division has developed equipment for sending television programmes over fixed connections in the local network by use of specially balanced cables as well as by means of coaxial cables.

Work on a new voice frequency repeater using transistors as the amplifying element was completed during the year. The new design features a marked reduction in space requirements, with 60 complete two-wire/four-wire repeaters mounted on a single-sided bay.

Development work continues on a new carrier frequency system for power lines featuring extensive use of transistors. The system permits significantly greater freedom in selection of transmission frequencies.

The design of the electronic switching system being delivered by North Electric is based on research conducted at the laboratories of the Parent Company.

A new two-piece telephone instrument has been designed in co-operation with the Swedish Telephone Administration. Both the case and the speaking unit of the new instrument are made of a thermoplastic material that permits production in a greater number of colours. The new instrument has improved transmission qualities, an adjustable ringing device and simplified construction.

New subscriber exchanges have been designed, utilising both the crossbar switch system and the new code switch system.

Sieverts Kabelverk has developed a new technique for sheathing cables through high-frequency welding of aluminium.

Svenska Elektronrör, the Group's electronic

valve manufacturing subsidiary, has designed and begun production of new types of microwave valves for use in radar systems.

PERSONNEL

Expanded business resulting from the heavy inflow of orders in recent years has required expansion of the work force, particularly within the Parent Company.

	Number of employees Dec. 31 1961	Dec. 31, 1960
Parent Company	13,300	11,000
Subsidiaries in Sweden	5,700	5,400
Total employed in Sweden	19,000	16,400
Foreign subsidiaries	17,600	15,900
Total	36,600	32,300

The Group's training programme was reorganised during the year to meet the growing demand for on-the-job training.

A total of 1,142 Swedish students enrolled in the various courses arranged by the company during the past year. At the same time some hundred foreign students from customer organisations and Group affiliates in some 30 countries underwent training in the manufacture and maintenance of Group products.

The annual maintenance conference arranged by the Parent Company in Stockholm last May, attended by staff from 13 countries, concentrated on problems involving maintenance of exchanges and networks, as well as transmission equipment.

EXCHANGE LISTINGS

Since the introduction of the Parent Company's shares on the stock exchanges in London, Paris, Amsterdam, and Frankfurt-am-Main during the last two years the number of shareholders has grown considerably. Interest in the Company's shares has also been evidenced by American investors which further accentuates the international character of the Ericsson Group.

FINANCIAL STATEMENT

CAPITAL EXPENDITURES

During the year the Group invested $15,400,000 in property, plant and equipment. This compares with capital expenditures of $11,700,000 in 1960.

Projects now under way or authorised will require continuing high capital expenditures in the next few years.

CASH POSITION

Increased expenditures for inventories and trade receivables as well as for investments in property, plant and equipment, caused by expanding activities, affected the cash position at the end of the year. Despite these demands, liquidity remained satisfactory.

In order to gain certain tax benefits, the Parent Company left on deposit with the Bank of Sweden that portion of the 1960 payment to the special investment reserve account that was repayable to the Company on December 30, 1961. For the same reason, the full amount of the new allocation to the Reserve for future investments, or $1,934,000, which is subject to approval by the 1962 Annual Meeting, was paid to the bank during 1961. At the end of the current year the Company is due to recover 54 per cent, equal to $3,134,000, of the combined 1960 and 1961 deposits of $5,803,000 to the account.

SUBSIDIARY COMPANIES

To organise its operations in Australia more efficiently, the Group early in 1961 acquired from Australian interests shares in Trimax Transformers Pty. Ltd. with a par value of £32,000. The total capital stock of the company amounted to £80,000. Subsequently, a majority of the stock was acquired in connection with a new stock issue and, at the same time, the name of the company was changed to L M Ericsson-Trimax Pty. Ltd.

In Spain, a subsidiary, Eleme Comercial S. A., was established with a capital stock of 1.0 million Pesetas.

North Electric, Company, USA, acquired the remaining minority stock outstanding in Power Equipment Company, which was later merged into North Electric.

Reorganisation of operations in Argentina eliminated the need for the holding company Corporación Sudamericana de Teléfonos y Telégrafos S. A., which was liquidated at year-end.

Through cash payments or conversion of intercompany receivables, the capital stocks of the following subsidiaries were increased:

L M Ericsson A/S, Denmark, from 3.0 to 8.0 million Danish Crowns.

Dansk Signal Industri A/S, Denmark, from 600,000 to 2.0 million Danish Crowns.

Swedish Ericsson Company, Ltd., England, from £2 to £125,000.

L M Ericsson Telephone Company Pty. Ltd., Australia, from £15,000 to £170,000.

Cía Ericsson S. A., Peru, from 1.0 to 2.0 million Soles.

L M Ericsson, Ltd., Canada, from $100,000 to $200,000.

North Electric Company, USA, issued 18,810 new shares of common stock with a par value of $10 per share. The issue was purchased by minority interests at a price of $25 per share. In addition, the Group sold a small portion of its equity in the company. As a result, Group holdings of North Electric capital stock decreased from 86 to 82 per cent.

The capital stock of Cia Sudamericana de Teléfonos L M Ericsson S. A., Argentina, was increased from 35.0 million to 50.0 million Pesos and that of Cía Ericsson S. A., Uruguay, from 750,000 to 1,250,000 Pesos, in both instances by means of stock dividends.

EARNINGS

Group sales, dividends, interest and other revenue amounted to $227,689,000 in 1961, compared with $202,470,000 in 1960, resulting in an income, before exchange differences, special adjustments and taxes, of $25,502,000 ($21,472,000 in 1960).

As a consequence of the introduction of the national supplementary pension plan in Sweden and of the 1960 agreement covering additional pension benefits for office employees, a surplus developed in existing pension foundations of the Group's Swedish companies. The foundations have therefore been credited only with interest on notes receivable from these companies. To cover pension liabilities to the new foundations for "pensions without insurance" (PRI), established in 1960, the necessary funds have been transferred from the older foundations. Total pension costs of the Group in Sweden, including interest payable to the foundations, amounted to $3,515,000 in 1961 ($4,040,000 in 1960).

Special adjustments totalled $8,415,000 in 1961, ($2,127,000 in 1960). After deductions for taxes and minority interests, consolidated net income for the year amounted to $8,700,000 ($7,668,000 in 1960).

In accordance with proposals of the Boards of Directors of the respective companies, $2,760,000 of the Group's net income will be allocated to reserves not available for distribution.

Part of the consolidated unappropriated earnings of the Group is accumulated in foreign subsidiaries. Transfer to Sweden of these earnings is in some cases subject to taxation and limited by exchange regulations.

Total revenues of the Parent Company amounted to $87,021,000 in 1961 ($72,821,000 in 1960).

Income of the Parent Company, before special adjustments and taxes, was $16,428,000, which was applied in part to depreciation of inventories during the year. The comparable income figure in 1960 was $13,765,000. Subject to the approval of stockholders at the Annual Meeting, $1,934,000 ($3,868,000 in 1960), has been allocated to the Reserve for future investments. Net income of the Parent Company, after deductions for taxes amounting to $5,802,000 ($4,681,000 in 1960), was $6,580,000 in 1961 ($5,832,000 in 1960).

DISPOSITION OF UNAPPROPRIATED EARNINGS

The sum of $18,817,000, consisting of the net income of $6,580,000 for the year and unappropriated earnings of $12,237,000 from previous years (including the General Reserve and the Contingencies Reserve, is available for disposition by the stockholders at the Annual Meeting.

The Board of Directors and the President propose that the above amount be distributed as follows:

To the Special Legal Reserve	$ 1,953,000
To Stockholders—Sw. kronor 4.00 per share against Coupon No. 35	4,808,000
Unappropriated earnings retained in the business	12,056,000
	$18,817,000

The report and accounts were adopted.

BOARD OF DIRECTORS

Marcus Wallenberg, *Chairman*, Ernfrid Browaldh, *Vice-Chairman*, Erik Boheman, *Vice-Chairman*, Erik Anderberg, Wilhelm Söderman, Ragnar Woxén, Sven Ture Åberg, *Managing Director*.

DEPUTY MEMBERS

Nils Sterner, Lars-Erik Thunholm, Marc Wallenberg Jr., Stig Ödmark.

AUDITORS

Nils Olsson, Swedish Certified Public Accountant, John C. Dickinson, Chartered Accountant, Price Waterhouse and Co., Nils Ericsson.

LONDON PAYING AGENTS

Warburg and Co.

The Annual Report is available at the offices of the Swedish Ericsson Company, Limited, 329, High Holborn, London, W.C.1.

THE STANDARD BANK LIMITED

CENTENARY YEAR

SIR EDMUND HALL-PATCH ON ESSENTIALS FOR PROGRESS

The Annual General Meeting of The Standard Bank Limited will be held on July 25th, at 10, Clements Lane, London, E.C.4.

The following is the statement by the Chairman, Sir Edmund Hall-Patch, GCMG, which has been circulated with the Report and Accounts:

The year 1962 will be a memorable year for the Bank. For reasons which I shall describe later it marks, in more ways than one, the beginning of a new stage of development. Because of this I shall confine myself, this year, to matters more of a general than of a territorial nature.

1962—A MILESTONE

1962 is first and foremost a special year because, on October 15th next, this Bank will celebrate the Centenary of its foundation.

The year 1962, however, already marks a new stage in the life of the Bank. As a result of the changes which were put into effect on April 1st last, the Bank's name was shortened, and our business in South and South West Africa transferred to a wholly owned subsidiary company.

These changes are the logical outcome of the economic development of the areas served by the Bank, and of the expansion of the Bank itself, since 1945. The post-war upsurge of commercial and industrial activity in East, Central and South Africa, although perhaps temporarily obscured by events of a more political nature, is nevertheless a very real fact. The bank, in turn has enlarged its organisation considerably in order to deal with a greater volume of business, as the following table illustrates:—

	31st March 1945	1962
Paid-up Capital and published Reserves	£6 million	£22 million
Total Assets	£197 million	£408 million
Number of branches and agencies	394	902
Number of staff ...	5,544	11,507

Against this background your Board have given constant thought to the shape of the Bank's structure in the light of changing circumstances. We have now over two hundred branches and agencies in Africa outside the Republic and South West Africa, and these are responsible for a considerable part of our activities. So far as this section of our business is concerned, the abbreviated name "Standard Bank," by which the Bank has for so long been familiarly known, is more appropriate. It is equally appropriate that the Bank's former name should be retained in the case of our business in the Republic. It was clear some years ago that the Bank's organisation in that country should move gradually towards complete local control which would be the ultimate objective. In 1953 a South African Board was appointed. In the ensuing years, as it gained greater experience, this Board has enjoyed an increasing measure of local autonomy. By the beginning of 1962 it was clear that the objective, which the Bank's policy had set out to achieve in 1953, was within reach.

It was gratifying to have received such overwhelming support when the proposals to change the name of the Bank, and to form a subsidiary to carry on our business in South and South West Africa under the Bank's old name, were put forward by your Directors at the Extraordinary General Meeting held on the 21st March. Apart from certain matters of administrative detail, the operation has now been completed. I am sure you will wish to join me in thanking all those whose efforts have enabled these changes to be made so promptly and so successfully.

The fact that these changes have taken place in the year of the Bank's Centenary is fortuitous, but nevertheless a happy coincidence. As the Bank moves into the second century of its life, a history of the first hundred years culminating in these developments is being prepared and will, it is hoped, be published early in 1963.

BALANCE SHEET

As a result of the transfer at 31st March, 1962, of the business of the Bank carried on in the Republic of South Africa and in South West Africa to a wholly-owned subsidiary company the form in which the accounts have been presented this year has been changed so that the relevant information provided now comprises:—

(a) A consolidated balance sheet setting out the combined assets and liabilities of the Bank at 31st March, 1962, and its wholly-owned subsidiary companies, the Standard Bank of South Africa Limited and the Standard Bank Finance and Development Corporation Limited.

(b) A balance sheet of the Bank at 31st March, 1962, setting out the assets and liabilities of the Bank, including its investment in its wholly-owned subsidiary companies.

In previous years the accounts of the Standard Bank Finance and Development Corporation Limited have been presented separately but in view of the other changes in presentation necessary your Board of Directors considered it opportune to include this company in the consolidated accounts. For ease of comparison the figures for the year ended 31st March, 1961, are presented in the same form.

It will be seen from the consolidated balance sheet that, although business conditions in Africa have not been altogether favourable, the Bank's position as a whole has been well maintained. Needless to say, this is largely due to the continuing efforts and devotion to duty of the staff, for whom local stresses and strains have by no means diminished. I am sure, therefore, that shareholders will wish to join me in expressing once more our sincere thanks to the staff for all their work during the past year.

To deal now with various items in the consolidated balance sheet. A rather less favourable trading situation in Africa and a continuing outflow of capital from some areas are reflected in a fall of some £3 million in the Bank's Liabilities in respect of Current, Deposit and Other Accounts. As regards Current Assets, the total of Cash in Hand, at Call and Short Notice, Treasury Bills and Trade and other Bills is some £13 million higher than last year. Advances, on the other hand, are about £6 million lower. The total of Investments has remained almost unchanged at a little under £50 million, a figure which is below cost and below market values on the 31st March, 1962.

PROFIT AND LOSS

A consolidated profit and loss account sets out the combined profits of the Bank and its wholly-owned subsidiary company, Standard Bank Finance and Development Corporation Limited, for the year ended 31st March, 1962, and shows how these profits have been dealt with in the accounts of the Parent Company.

The balance of profit to be dealt with in the account of The Standard Bank Limited is £1,300,180 compared with £1,338,862 last year: Profits are lower by some £39,000 since the rather less favourable trading conditions encountered in Africa were not completely offset by higher earnings in London. The balance brought forward from the previous year is £596,115 and the total to be dealt with is, therefore, £1,896,295. Your Directors propose the allocation of £150,000 to the Reserve Fund, which will then be increased to £11,000,000 and equal the amount of issued capital. After allocating a further £50,000 to write down bank premises, a final dividend of 10 per cent is again recommended, making a total distribution for the year of 15 per cent. To mark the occasion of the Bank's Centenary, your Directors have also considered it appropriate to recommend this year the payment of a special Centenary Bonus of 2½ per cent. This will leave £517,233 to be carried forward to the next account.

LOOKING INTO THE FUTURE

As it completes its one hundredth year of business, the Bank is able to look back on a history of steady growth. At this point in time, further economic advance in East and Central Africa is hampered by political uncertainties and unrest. The situation is made more difficult by the division of responsibilities between the Local Administrations and Whitehall. In South Africa there are now signs of recovery from recent economic setbacks, and foreign exchange reserves have risen strongly. Indeed at the end of May these reserves were higher than for over a decade. Nevetheless, up to the present, the Authorities there have felt it necessary to retain control over imports and the outward movement of Capital with only minor relaxations.

"In a technically shrinking world there is little room for absolute political or economic independence." These are the words of S. H. Frankel, a distinguished Oxford professor with great knowledge of Africa. They are apposite at the present juncture, and not only in an African context. If political unrest and economic crises are to be avoided in the present rapidly changing world, it would seem wise for statesmen and businessmen alike to recognise the inevitability of inter-dependence, and to seek its advantages. This course may well produce

speedier and better solutions to the pressing problems which beset us than attempts to cling to concepts of sovereignty and self-sufficiency now increasingly difficult to reconcile with the facts of modern life.

A prime need of East, Central and South Africa is a sufficient inflow of private capital. Neither present levels of internal savings, nor such efforts as national or international organisations are able to make, can provide a substitute. Development of natural resources and of secondary industry, rising levels of employment and of material welfare, orderly social progress—all depend upon the attraction of sufficient private capital from overseas. Such capital assistance will be forthcoming provided internal policies take sufficient account of certain conditions. These are: that the maintenance of law and order remains beyond doubt: that investments from overseas can be operated with due regard to efficiency: that a reasonable profit can be earned and remitted: and that the investment can be repatriated in need. In addition, until comparable indigenous skills are available and can keep pace with constantly improving methods and techniques, the skills of technicians from other countries will continue to be required locally. These thoughts are not new, but they have yet to be fully appreciated by many of those now actively concerned with the political future of large parts of Africa where we conduct our business.

Investment is but one aspect of the dependence of the less-developed countries on those generally more advanced. Another is trade. In the case of the Rhodesias and Nyasaland, for example, about three-quarters and, in the case of East Africa, about one-half, of exports go to Western Europe. The United Kingdom is now in the course of negotiating entry into the European Economic Community (the Common Market). At the same time, deliberations are proceeding amongst Common Market Members in order to decide whether to renew the preferential arrangements for their Associated Overseas Territories which expire at the end of this year. The United Kingdom, if it joins the Common Market, will presumably seek the same privileges in regard to certain products for its "Associated Territories" in Africa as will be enjoyed under any new arrangements by the Associated Territories of the original members. For the Federation, the risks involved are lessened insofar as about three-quarters of its exports to Europe are minerals strongly in demand. In the case of East Africa, however, existing Commonwealth Preferences granted by the United Kingdom are in some cases important. Coffee, tea and vegetable oils are the principal products affected by the E.E.C.s existing arrangements for its Overseas Territories. It is to be expected that efforts will be made to place East Africa on an equal footing with them, should the United Kingdom join the Common Market. Neither the Rhodesias, nor Nyasaland nor those East African territories for which the Government of the United Kingdom still have responsibility, are themselves in a strong bargaining position. In any negotiations with the Common Market the United Kingdom is their only advocate.

But what of South Africa, now regrettably no longer a member of the Commonwealth, should Britain join the Common Market? Gold provides roughly one-third of South Africa's export revenue and, in other respects, South Africa's position, fortunately, is relatively strong. As with the Federation, an important section of her exports comprises base minerals, which are likely to find a growing market in an integrated Western Europe. However, South Africa has a considerable potential for miscellaneous agricultural and industrial products, which constitute a rising proportion of her exports. Wider outlets for these products may have to be found as the British market, for which South Africa has catered in particular, may no longer be so accessible. On the other hand, South Africa has provided one of the most important markets for British exports and, so long as this remains the case, the United Kingdom will almost certainly wish to maintain a large reciprocal trade with South Africa.

Should the United Kingdom join the Common Market, Associate Membership for South Africa does not seem to be a practical possibility. It follows, therefore, that existing South African trade arrangements not only with the United Kingdom but also with other Commonwealth Territories, could be affected. For example, South African manufacturing industry finds an important outlet in Rhodesia.

It is encouraging that efforts are now being made by the South African Government to probe in detail the likely shape of the Republic's future trade with Europe and the Territories now, or in the future, associated with it. There is need for sound guidance on the best means which the Republic can employ in order to protect her important trade links with Europe and the Commonwealth. Although, in many respects, the economy of South Africa has great inherent strength, it is likely to have to rely to an increasing extent on export earnings to finance foreign exchange expenditure. It augurs well, therefore, that the problems for South Africa which may arise, should the United Kingdom join the Common Market, are now being faced with realism.

In relation to East, Central and South Africa, one particular section of the Treaty establishing the European Economic Community should be borne in mind. This section states that the activities of the E.E.C. shall include associating overseas countries and territories with the Community with a view to increasing trade and to pursuing jointly their efforts towards economic and social development. Such a statement of purpose may well be thought to embrace not only territories now associated with the Common Market and, if the United Kingdom joins, with the Commonwealth, but other countries, too. It is also to be hoped that, in any deliberations now taking place in Brussels, thought is being given to the time when it will be necessary to ensure that the markets of Western Europe, and not only of the United Kingdom, are made accessible both to the primary products and, as they are developed, to industrial exports of the less advanced countries of Africa. Otherwise, the process of industrialisation of these areas will be held back and with it the improvement of living standards.

We should not forget that, much as Europe has now to offer Africa, there is much, too, that Africa can provide, of which Europe and the rest of the industrialised world may find itself increasingly in need.

CONCLUSION

It seems clear that, in this year 1962, two main factors are dominant—the present political readjustments of Africa, the shape of which will only emerge with time, and the changing trade and financial patterns of the countries of Western Europe. There is need, on the one hand, for closer understanding of the problems involved by all those concerned with Africa, and, on the other, for a capacity for adaptation to changing circumstances, which will affect governments, businesses and people alike.

By the changes already made in its structure, the Standard Bank has shown that it recognises these facts. During the first century of its activities the Bank has faced and overcome many difficulties arising from unpredictable changes in the social, political and economic climate of the territories in which it conducts its business. The second century of its history opens with some dark clouds on the African horizon. Nevertheless your Directors are confident that the Bank will continue to make a fruitful contribution to the orderly economic evolution of East, Central and South Africa upon which its own fortunes so much depend.

* * *

It is with regret that I have to report that Mr J. N. Hogg, who joined the Board in 1946 and was elected Deputy Chairman in 1953, resigned at the end of September last year. We miss his wise counsel and the long experience he had of the Bank's affairs.

We have been fortunate in obtaining the services of Sir Cyril Hawker who joined the Board in March of this year on relinquishing his directorship with the Bank of England. His wide knowledge and long experience of international finance is already proving most valuable. Sir Cyril is at present Deputy Chairman. Owing to ill health I am obliged to give up the Chairmanship and arrangements have therefore been made for him to replace me in the Chair in the near future. I am sure that under his capable guidance the Bank will solve with success any difficulties which may lie ahead in these uncertain times.

The mandate of Mr Robert Annan expires this year and he does not propose to seek re-election. Mr Annan, who is President of Consolidated Gold Fields of South Africa Limited and a Director of the British South Africa Company, joined the Board in 1956. He has been a most helpful colleague, and his departure leaves a gap which it will be hard to fill.

I am pleased to report that Sir Keith Courtney Acutt has joined the Board. He is Deputy Chairman of Anglo-American Corporation, a Director of the British South Africa Company and of many other companies with interests in the various territories in which our Bank conducts its business. He was Deputy Chairman of our Rhodesian Board before joining the Board of the Central Bank in the Federation of Rhodesia and Nyasaland when it was formed in 1956. With his wide knowledge of Africa he will be able to make an invaluable contribution to our deliberations. Sir Keith was knighted in the New Year's Honours List and I do not doubt that you will wish to take this opportunity of congratulating him on this honour. In accordance with the provisions of the Articles of Association, Sir Cyril Hawker and Sir Keith Acutt retire at the Annual General Meeting and you will be asked to re-elect them to office.

Changes have taken place during the year in the constitutions of our local Boards. I mentioned in my Statement in 1960 that Mr Ralph Gibson, after 50 years of service in the Bank, had decided to take life a little more easily and in February this year he resigned from the South African Board. I would like to pay a special tribute to the lifelong service which Mr Gibson has rendered to the Bank. After working in South and East Africa, and later in New York, he served for 25 years in London, first as a member of the Management and then on the London Board. In 1953, when the local Board was inaugurated, he agreed to take up residence in South Africa and since then he has successfully guided the development of that Board first as Chairman and latterly as Deputy

Chairman. No one who has served in the Bank ever had greater detailed knowledge than Mr Gibson of its affairs in Africa, in London and in New York, and his experience has been invaluable. We all wish him many years of health and happiness in his retirement. Others who have retired are Mr J. T. Jurgens and Mr J. N. Mackenzie from the South African Board and Mr T. Graeme Duncan from the Cape Board. All these gentlemen have served with distinction on the local Boards since their inception in 1953. I also have to report with regret that Sir Robert Hudson, Chairman of the Rhodesian Board, and Sir Ferdinand Cavendish-Bentinck, a member of our East African Board, have decided to retire from these Boards. We are fortunate, however, in that Mr R. M. Taylor accepted the Chairmanship of the Rhodesian Board. Mr Taylor was a member of the Monckton Commission and before that was Permanent Secretary to the Treasury of the Federation of Rhodesia and Nyasaland. Mr H. W. Jeffreys, our General Manager in the Federation before his appointment in 1958 as Minister representing the Federation in Washington, returned to Rhodesia last year and, I am pleased to report, accepted an invitation to join our Rhodesian Board. The knowledge and special experience of these two gentlemen will be of the greatest value to us. Sir Robert Hudson, Sir Ferdinand Cavendish-Bentinck and Mr Graeme Duncan have all indicated their willingness to serve in a consultative capacity. In this way we shall continue to have the benefit of their advice.

We also welcome warmly the new appointments to the Board of the Subsidiary Company, The Standard Bank of South Africa, Limited of Dr A. J. Norval and Mr. A. M. Rosholt.

BANQUE NATIONALE POUR LE COMMERCE ET L'INDUSTRIE

Registered Office :
2/16 Boulevard des Italiens—Paris

1350 BRANCHES, AGENCIES AND OFFICES IN FRANCE, OVERSEAS TERRITORIES IN THE FRANC ZONE AND ABROAD

The accounts for the trading year 1961 approved by the Banks Control Commission at its session on June 14, 1962, bring forward, after deduction of the general expenses, redemptions, provision for risks and other charges, a net profit of NF. 5.445,699,90 against 5.197,690.48 for the preceding year.

The distribution allocated to shareholders has been fixed at NF. 1,125 gross, an identical amount to that of last year. This amount will be paid on July 1st next, under deduction of taxes, for an amount of NF. 0,99 nett.

HIGHLANDS & LOWLANDS PARA RUBBER CO. LTD.

RECORD PROFIT

In the Statement presented at the Annual General Meeting held on July 3rd in London the Chairman **Mr T. B. Barlow** said:

We have had another record year and I want to thank all our employees for the contribution they have made to a profit of £1,506,500.

After making appropriate allowances including £536,800 for taxation and £300,000 for replanting reserve and the interim dividend of 3d. less tax per 2s. stock unit paid last November, we are able to recommend a final dividend of 7d. less tax per 2s. stock unit, which requires £424,000 and to carry forward £192,700—an increase of £40,000. The final dividend will be paid on July 17, 1962.

In March 1962 £159,600 compensation was received for 670 acres required for the new Kuala Lumpur airport. Last month we bought Ichamaram oil palm estate of 695 acres for £170,000. This has brought our total area of oil palms up to 14,134 acres. The acreage under rubber is 46,952 acres.

ESTATES

The average yield of rubber per acre was 843 lbs. and the profit per mature acre £26. The estates continue to improve and now six of them have an average yield of over 1,000 lbs. of rubber per acre tapped. The yield of palm oil and kernels was 1.17 tons per acre and the profit £35 per mature acre.

We are diversified to the extent that we have 23 per cent of our acreage in oil palms, which over recent years have been more profitable per acre than rubber. At present we are operating five palm oil factories, but in due course we expect to build a new one and reduce their number.

Our estimated crops for 1962 are 29,611,000 lbs. of rubber and 11,150 tons of palm oil and kernels. Crops harvested during the first six months of 1962 are in line with these estimates. The yield per acre from our oil palms is steadily improving and we are gradually replacing old rubber with oil palms on land which is suitable for them.

OUTLOOK FOR RUBBER

The advance of synthetic rubber is of benefit to us because at last it has stopped the wild variations in price that did natural rubber such harm. 1961 was an all time record in that the price of rubber only varied 20 per cent. Previous variations were at least 50 per cent. Much of the new synthetic will compete with existing synthetic rather than natural. During 1961 the market expected lower prices for natural and therefore stocks were low and demand was maintained. The world requires about 4,000,000 tons of rubber and the demand increases annually. It would be reasonable to expect that there is room for both natural and synthetic.

Natural rubber is a wonderful commodity and now that synthetic is exerting a steadying effect on price perhaps the chief disadvantage of natural is overcome. The current outlook suggests that supply and demand are evenly balanced.

MALAYSIA

Any reference to events in Malaya in 1961 would be incomplete without the mention of the word "Malaysia," which can be defined as the proposal to institute a form of federation for Malaya and Singapore together with the Borneo territories of Sarawak, Brunei and North Borneo. One would hope that the association of these five territories would bring swifter economic and social progress to them all, for they have much in common in culture and racial origins. There are similar customs and similar problems and all share the same currency. Let us hope that 1962 will complete what began in 1961 and that a strong, prosperous and contented Greater Malaysia will emerge.

The report and accounts were adopted.

PORTALS LIMITED

Extracts from the Report and Accounts for 1961 and from **Sir Francis Portal's** Statement to the Stockholders.

Group Profit, after Tax	681,488	645,747
Dividends	20%	20%

GROUP TRADING

On the Bank Note papermaking side our mills have been fully extended with the demand from all parts of the world. It is satisfactory to have achieved this in spite of keen competition; and the figures show a modest improvement.

Our subsidiary the Laverstoke Investment Trust group, consisting of water treatment and engineering companies, also maintained an upward trend both in turnover and in profit during 1961.

PROSPECTS FOR CURRENT YEAR

This year has brought a further increase in the demand for our Bank Note paper from many countries and unless any unforeseen difficulties arise the prospects for 1962 should be satisfactory. The Laverstoke Investment Trust group also looks forward to a year of further expansion and progress.

This year is the 250th anniversary of the foundation of Portals which took place in the year 1712, at Bere Mill, which still stands on the company's property.

Scrip issue of two 5s. Ordinary Shares for each 25s. in nominal value of Ordinary Stock held was approved at the meeting.

By Appointment to Her Majesty Queen Elizabeth II Wine Merchants John Harvey & Sons Ltd. Bristol

HARVEYS of Bristol Limited

RECORD GROWTH CONTINUES

From the annual statement of the Chairman Mr G. E. McWatters

The sales of the group have increased from £3,968,792 to £9,302,939 while net profit before tax rose from £707,326 to £922,111. Of the total group sales, approximately one and three quarter million pounds represents sales in companies acquired during the year.

	1962	1961	1960	1959	1958
SALES AND PROFITS					
Sales	9,302,939	5,968,799	4,779,943	4,279,357	4,225,586

ORDINARY DIVIDENDS	190,478	148,974	92,497	69,982	44,774

NEW GROUP STRUCTURE TO MEET EXPANDING OPPORTUNITIES HERE AND OVERSEAS

The group now consists of the holding company and five main trading companies:
John Harvey & Sons Limited carries on the trading operations of the firm of that name selling wines and spirits, and providing group services.
Harveys of Bristol (Overseas) Limited co-ordinates the activities of companies established abroad.
William Perry Wine Merchants Limited embraces all the licensed outlets in the group, including Sidgwick & Cowell Ltd, A. J. Smith & Co Ltd, Connolly & Olivieri Ltd, Matthew & Son Ltd and Byron Gulliver & Son Ltd.
Cater, Stoffell & Fortt Limited is the group's grocery, catering and restaurant division.
Stewart and Son of Dundee Limited forms the spirits division of the group, where 'Cream of the Barley' Scotch Whisky is the leading brand.

SUPPLIES: INCREASED AND SAFEGUARDED

The dominant theme of our activities for the year under review was continued expansion to assure our sources of supply. In Spain, *Zoilo Ruiz Mateos S.A.*, responsible for the supply of our sherries, has continued to build up stocks to meet our ever growing needs. These stocks now stand at 60,000 butts.
The Portuguese assets of *Martinez Gassiot and Company Limited* and *Cockburn Smithes & Cia Limitada* were merged in *John Harvey & Sons (Portugal) Limited;* we acquired Stewart and Son of Dundee Limited, whisky blenders and rum bottlers, and early in 1962 we became closely associated with *A. Delor & Cie of Bordeaux.*

SUBSTANTIAL ADVANCES IN HOME SALES

The Bristol range of sherries continued to make substantial advances. I am sure that our extensive advertising has contributed to this—our summer campaign for Bristol Dry resulted in sales of a third more Bristol Dry in the year under review.

EXPORTS: PRE-EMINENCE IN NORTH AMERICA, OPPORTUNITIES IN EUROPE

We plan to maintain our pre-eminent position in the United States and Canada. Our distribution arrangements in Europe are being rapidly improved, and I see this market as one of considerable potential.

CURRENT PLANS TO MEET GROWING COMPETITION

To increase our storage and bottling capacities for the years ahead, it was decided, early in 1961, to double existing facilities at Whitchurch by October this year, and also to build a new wing to our offices at Whitchurch. Although we anticipate a further increase in sales at home and abroad in the current year, there are indications that trade is becoming more competitive. Despite this, however, I have every reason to believe that the return on your investment in Harveys of Bristol will be at least equal to that of the past.

Copies of the Report and Accounts may be obtained from the Secretary, Harveys of Bristol Limited, 12 Denmark Street, Bristol 1.

ALBERT E. REED & COMPANY, LIMITED

Annual Statement by the Chairman The Rt. Hon. Lord Cornwallis of Linton, K.B.E., M.C.

"We have become a Group of wide interests"

In his circulated statement to shareholders the Chairman, Lord Cornwallis, said:

The year ended 31st March, 1962, has been a year of great activity for the Reed Group. You will recall that last year the Group put into effect its policy of a world-wide spread of operations and continued the programme of diversification at home.

During this year these activities have been developed and expanded and the Group is now firmly established in the Commonwealth, the European Common Market and the European Free Trade Area, in addition, of course, to the United Kingdom. The value of sales, excluding inter-company sales, has been substantially increased, rising from £71.4 million for the year to 31st March, 1961 to £95.0 million for the year to 31st March, 1962.

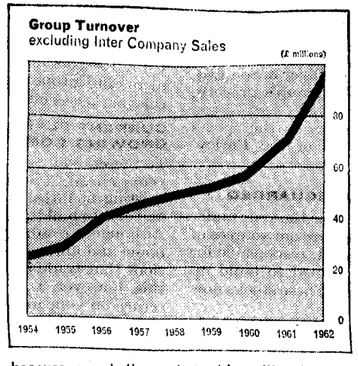
This year we are showing the amount of Group inter-company sales in relation to our figures of turnover, as we feel this is useful additional information for our shareholders.

During the year to 31st March, 1961 no profits were included for The Imperial Paper Mills, Limited, only four months for the Anglo-Canadian Group, and six months for Reed Paper Products (Holdings) Limited. These were the profits from the date of acquisition to 31st December, 1960. This year in all the above cases profits for a full year are included.

The profits arising in the United Kingdom are, however, lower than for the previous year. This is due to the fact that profit margins in the United Kingdom paper making operations have been substantially reduced. This is a situation which was fully anticipated, and you will recall that I referred as long as eighteen months ago in my comments accompanying the statement of trading results for the half year ended 30th September, 1960 to the probability of falling margins. They have progressively declined under the influence of the accelerated tariff reductions under the E.F.T.A. Agreement.

Although we have made strong representations to the Government in pressing upon them the severity of the impact of accelerated tariff reductions on the paper industry, we have so far obtained no satisfactory response. They appear either not to understand the seriousness of the situation, or, if they do, are not prepared to do anything about it. On the Continent the paper industries of various countries are regarded as of very considerable importance by their respective Governments, and I cannot help feeling that the non-recognition by our own Government of the necessity to maintain a healthy and progressive home paper trade shows a considerable lack of appreciation of the importance of this great industry.

We welcome the possibility of Britain entering the European Economic Community; firstly, because we feel that Britain should continue to be an important influence in Europe as a whole, and secondly—and perhaps more selfishly—



because we believe that this will stimulate economic growth of the country and alleviate to some extent the difficult competitive situation which the formation of the E.F.T.A. of the Outer Seven has produced. We are not afraid in the long run of pitting our ability against anything we may have to meet, and although as an industry we do not feel that entering into the Common Market will solve all our problems, at least it presents us with a challenge which does not have in it the extreme elements of unfairness which we see in the present situation. I feel it is reasonable to ask:

(i) that a harmonised tariff be adopted by this country and the "Six" against all countries which do not become *full* members—a principle already agreed by Her Majesty's Government. This does not exclude the possibility of negotiating favourable terms of association with the enlarged Common Market for the E.F.T.A. neutrals;

(ii) that in order to facilitate the negotiation of suitable terms of association for the E.F.T.A. neutrals, the present E.F.T.A. tariff reduction of 40 per cent should not be taken any further for the time being;

(iii) that Commonwealth countries, especially Canada, should receive at least as favourable treatment as our present E.F.T.A. partners;

(iv) that the principle of duty-free imports of raw material from whatever source is upheld.

UNITED KINGDOM OPERATIONS

At home, our paper and board making activity is being conducted with increased efficiency and new products are being developed to meet the new opportunities which arise. As an example, we have developed a special type of Newsprint to suit the Web Offset printing machines which are being introduced by newspapers in this country. The extremely high standard of colour printing achieved on Reed Web Offset Newsprint has aroused great interest, not only here, but also in the rest of the world.

It has been our policy to encourage stability in both the pulp and the paper markets in the belief that exaggerated price movements are ultimately not to the benefit of either the consumer or the producer. However, it will become increasingly difficult to refrain from exerting the maximum of pressure on the raw material prices if our foreign competitors continue to offer paper on this market at prices that are so much under the average ruling prices. I repeat that this is a course we should be very loath to adopt because all past experience shows that a period of depressed raw material prices is always followed by one when those prices are grossly inflated and in the end it is the customer who suffers.

It is our consistent aim to improve the Group's manufacturing activities in this country and to try to maintain them at the highest efficiency.

Sometimes this involves radical reorganisation, and as an example, we have in our Packaging Division recently decided upon a drastic rationalisation of the Reed Corrugated Cases Limited production activity. As a first step, we have closed the Brentford factory, which,

Breakdown of £1 Sales	
Raw Materials, Fuel and Power	9s 8d
Wages, Salaries and Pensions	4s 10d
Depreciation	10d
Other Costs	3s 0d
Taxation	9d
Dividends	8d
Retained in Business	3d
	£1 0s 0d

although well situated in some respects, nevertheless was in a high cost area where additional labour was difficult to recruit. The production from this factory has been catered for by expanding our activities at Thatcham, and the transfer has been smoothly achieved with the least possible disturbance to our employees, many of whom have been moved to Thatcham, and in any instance of hardship adequate compensation has been granted. The transfer has also been achieved with no interruption of service or supply to our customers.

Our entry into the plastics packaging field was entirely logical, having regard to our very great commitment in packaging, and enables us to offer an ever-increasing range of product and service to customers.

ACTIVITY OVERSEAS

Our acquisition of the Anglo-Canadian Group in Canada has been a great strengthening factor and the co-operation between our Canadian friends and the British companies is increasing month by month. We have every reason to believe that we have secured an adequate and important base for additional development on the American continent, and the exchange of ideas and the development of inter-continental trading have already proved of considerable financial advantage.

Our operations in Australia required initially some reorganisation and are now developing and expanding in a highly satisfactory manner.

Our partnership in Italy with La Centrale Finanziaria Generale S.p.A. giving as it does an important interest in carton manufacture at Turin, and eventually, with the establishment of our new mill at Cassino, a backing of raw material supply of board, represents a very important stake in the undoubted industrial growth of Italy.

At Sande, in Norway, the pulp mill is already in operation and this year the paper mill will be completed and will be in a position to supply the fluting paper for corrugated case operations.

The building of the second newsprint machine at Tasman Pulp and Paper Company Limited in New Zealand, in which your Company has a substantial interest, is progressing favourably, and it is hoped that this machine will come into operation at the end of this year.

These are the instances which I can report to you specifically, but it is our intention to maintain growth and to develop in all countries where suitable opportunities may arise.

RESEARCH AND DEVELOPMENT

We are convinced that a large group such as is represented by your Company, cannot fulfil itself and play the important part it should in the industry in this country and the world unless considerable emphasis is given to research and development. We are continuing our emphasis on this sphere of activity, thus enabling us to ensure growth within ourselves and to take advantage of the best current ideas which are developing all over the world.

GROUP TRADING RESULTS

Although, as I have already pointed out, the current year's results are not entirely comparable with those of last year, we consider that having regard to all the difficulties that have had to be encountered in this period, the profit of

Group Trading Results	Years to 31st March 1962 £'000	1961 £'000
Sales	95,000	71,400
Profits, before depreciation and taxation	11,790	9,103
Depreciation	4,026	2,513
Taxation	3,635	2,800
Minority Interests	195	103
Profits attributable to Shareholders	3,934	3,687
Dividends (Net)	2,870	1,981
Profits Retained	1,064	1,706

Salient Facts about the Group at 31st March, 1962	
Capital Employed	£102 million
Employees	22,100
Output	1,650,000 tons

£11,790,358, subject to depreciation of £4,025,828 and taxation of £3,635,199, is more satisfactory than might have been expected.

This has been a period—and it is not yet over—when the paper and board industry has been experiencing difficulties as acute as any which we can remember, arising from world trading conditions, a situation of acute over-supply, and Government action in relation to tariffs, none of which, as a Group, we feel we had any ability to control. Nevertheless, opportunities are offered in these times, and in order to take advantage of them, additional capital will be required. We have, therefore, since the 31st March, 1962, made arrangements for a further issue of Debenture Stock, and this, together with other arrangements which we may make from time to time, will put your Company in a position to accept the opportunities which occur and enable it to take full advantage of the changes which will arrive in this country as conditions gradually alter themselves for the better.

FUTURE PROSPECTS

In retrospect I feel we can say that our policy of expansion and diversification of our operation has been well considered and is well based. It is true that the full benefit of some of our developments has been off-set by some factors which have been outside our control and to which I have referred previously. Nevertheless, we have become a Group of wide interests, both from the technological and the geographical point of view, and year by year we are becoming more secure and more competent to deal with all the vicissitudes that can occur in this world-wide industry. We are one of the world's largest paper makers. We are the largest paper packaging operation in this country and are increasingly extending our activities in this field to other countries. We are increasing our resources in management and technological talent year by year, and our relationships with our large numbers of employees are sound and producing increasing mutual confidence.

I believe, therefore, that your Group can look forward with confidence to a steady and effective growth. The more difficult the times, the more we rely on the loyalty and skill of each and every one of the executive, staff and employees in our large group of companies. It is therefore with a feeling of real gratitude that I tender to them all especial appreciation of their service during the past year.

Analysis of Group Turnover excluding Inter Company Sales	
Converted Packaging Products	35%
Newsprint	24%
Wrapping Papers	15%
Printing Papers	13%
Pulp	5%
Miscellaneous	8%

(If you would like a full copy of the Annual Report and Accounts please write to The Secretary of Albert E. Reed and Co., Ltd., 105 Piccadilly, London, W.1.)

REDIFFUSION LIMITED

RESULTS SHOW FURTHER IMPROVEMENT

GROWTH OF EXPORT AND OVERSEAS ACTIVITIES

MR JOHN SPENCER WILLS' REVIEW

The thirty-fourth Annual General Meeting of Rediffusion Limited will be held on July 25, 1962, at the Connaught Rooms, Great Queen Street, London, W.C.

The following is an extract from the Review by **Mr John Spencer Wills,** Chairman and Managing Director, as circulated with the Report and Accounts for the year ended March 31, 1962.

(It will be noted that Mr Wills' Review was prepared before the Report of the Pilkington Committee was published.)

I said last year that we should be satisfied if this year's results equalled those of last year. I am, therefore, content that we have done a little better. The Group's trading profit and investment income, totalling £7,684,000, exceeded the previous year's record by £526,000, but they were earned upon a larger capital and owe something to a higher dividend from Associated-Rediffusion Limited. Most branches of our business, both at home and abroad, contributed to the improvement in trading profit. It was particularly noteworthy that, in a very difficult year for the television trade, the number of television sets on hire from our companies showed a most satisfactory increase.

The balance of the year's profit, after tax, available to the parent company for distribution is £195,000 higher at £1,506,000. We are able to recommend a final Ordinary dividend which is the equivalent, on the capital as increased by the recent two-for-one capitalisation issue, of the rate paid for the previous year. Although the rate is effectively the same, however, the amount distributed this year will be £171,890 more than last year, because the additional capital created by the rights issue of December, 1960, ranks for this year's interim and final but did not rank for either dividend last year. The balance of undistributed net profit carried forward is £1,023,581, which is £101,830 more than we carried forward last year.

It has been a year of intense effort by our executive team, which has been enlarged and strengthened over the last eighteen months. New enterprises have been started at home and abroad and planning work is well in hand for new developments which are bound to come.

EXPORT AND OVERSEAS ACTIVITIES

The maintenance and expansion of export trade are now of very great importance to us. In the year under review, the Rediffusion Group derived more than one third of its net trading profits from exports and overseas activities. During the year our revenue from overseas was £7,358,000, and of this £3,333,000 came from the physical export of varied electronic equipment manufactured by our companies in the United Kingdom.

Our undertakings in the Far East have had a good year. Although our Hong Kong company's wired sound service has lost further subscribers, its wired television service—unique in the world—has done extremely well, with a 40 per cent increase over the year in the number of its subscribers.

The Government of Hong Kong is giving consideration to the possibility of making television available over the air as well as over the wire. We doubt whether Hong Kong could support two independent television services, and have suggested that if a new station is to be established, the present and the new services should be amalgamated, to secure economic operation and the maintenance of quality.

In Singapore and Malaya our companies have shown good results. The Malaya company's undertakings, which are at Penang and Kuala Lumpur, have made progress, and we are considering the possibility of establishing a new service in Ipoh, the third largest town in Malaya. In Singapore our local company achieved, in December last, the record number of 50,000 subscribers, but a cessation of work at the instigation of the employees' trade union in May last has had a damaging effect.

Ceylon Rediffusion Service, although it has still not recovered from the strike of 1958 and has brought us no profit, nevertheless pays its way without subsidy from this country and has made such progress this year that I feel we are justified in maintaining its popular service. The local Board and management are to be congratulated upon increasing the number of subscribers by more than 25 per cent since I last reported.

We can report satisfactory results from our undertaking in Orlando, near Johannesburg. Our commercial radio broadcasting station in Liberia made significant progress. In Nigeria our Rediffusion wired service has shown a worth-while profit. The number of its subscribers has increased to nearly 80,000. In the latter part of last year the Government of the Western Region of Nigeria, with whom we were equal partners in the foundation of Western Nigeria RadioVision Service Limited in 1959, proposed that they should take over full ownership and control of the company. A series of meetings in Ibadan ended with the sale of our interest to the Government at a satisfactory price, of which one half has been paid and the balance is to be paid by instalments over three years. I cannot conceal our disappointment that this partnership should not have lasted longer, but I must pay tribute to our Nigerian partners for their honourable conduct of the inevitably difficult negotiations which resulted from their decision.

The profit from our operations in the Caribbean as a whole was not as good as in the previous year. There was a falling off in the advertising revenue of our broadcasting station in Jamaica, but we hope to show a considerable improvement this year. Both in Jamaica and in Trinidad our wired networks lost some subscribers in the face of competition from broadcasts over the air, but in Barbados our wired network continues to grow steadily. Our broadcasting station in Trinidad and our two stations in British Guiana each had a successful year. The complete impartiality of the news and information broadcast by our stations in British Guiana during the disturbances in February of this year won praise, and was undoubtedly a reason why our company's installations escaped damage at the hands of one or other of the rioting political factions.

In Trinidad we are building a television station in partnership with the Government of Trinidad and Tobago, Scottish Television Limited and the Columbia Broadcasting System of America; it should be on the air by the end of 1962. The Jamaica Government has invited applications for the establishment of television in the Island, and we have submitted an application which is now under consideration. In our Caribbean companies the policy of training local people for executive appointments, a policy which is followed in all our overseas undertakings, has worked extremely well.

Bermuda Broadcasting Company Limited, in which we are large minority shareholders, and its subsidiary, continue to give satisfactory operational and financial reports on their sound radio and television broadcasting activities.

The negotiations, which I mentioned last year, for the provision of a television service in Malta were concluded in September, 1961. A new company—The Malta Television Service Limited—has been set up and will start television transmissions, over the air, on the 625-line standard, in the early autumn. Our Malta company's wired sound service has lost some subscribers owing to the movement of British service families away from Malta, but the number of Maltese subscribers remains fairly steady.

Our wired television and sound service in Montreal had another difficult year. I said last year that we were considering plans to convert the network to provide a more comprehensive service: those plans have now been put into operation and I am hopeful that I shall be able to give you better news of Montreal next year.

TELEVISION BROADCASTING OVERSEAS

All over the world countries which have just achieved independent statehood are turning their thoughts to the extension of broadcasting, and particularly to the introduction of television. Within the lifetime of many of us, we may expect to see a tremendous increase in the standard of living of the countries we now call "underdeveloped." The leaders of these new countries are acutely conscious of this, and it is not surprising that they would like to accelerate the process by the spread of television. We are pleased to put our resources at the disposal of a Government in the establishment and operation of any type of broadcasting service, commercial or non-commercial. For television, however, a commercial service will almost inevitably be decided upon, as a matter of deliberate Government policy. Broadcasting will often be the only available medium of advertising, and, unless trade can be stimulated by advertising, a Government's efforts to improve the industry and prosperity of its people will be much less effective. A far higher quality of programmes will be attainable with a commercial television service than most small countries could afford from their own resources—and it is so vitally important that the programmes should be good.

Education will be one of the principal aims of a television service in any developing country, and will not be limited to the special broadcasts which will be needed for schoolchildren and students. The programmes as a whole must be entertaining, and within the intellectual grasp of unsophisticated people, if there is to be a receptive audience by whom the educational benefits of television can be assimilated. The Rediffusion Group has at its disposal a wealth of material and experience in the provision of educational television programmes which is probably unrivalled by any other organisation. Associated-Rediffusion, in which we have an important interest, and which we were instrumental in forming, has been responsible for giving a remarkable stimulus to the use of television for education in the widest sense. Even in that company's early, difficult days it broke entirely new ground by introducing television broadcasts for schools, before the BBC or any other broadcasting organisation in Britain had operated such a public service. Those broadcasts have received universal acclaim and have been shown in many countries throughout the world. Although designed for children, some of them have been highly popular with adults in this country when repeated as part of the evening entertainment programme. Associated-Rediffusion has been very successful, too, with its programmes on current affairs. Its admirable programme "This Week" has recently been among the "top ten" T.A.M. ratings for two weeks in succession, the first time that a current affairs series has been viewed by more than five million homes for two consecutive weeks. The great "Intertel" co-operation, of which Associated-Rediffusion was one of the founders, has ended its first experimental year with great success and is to continue. By its means specially made programmes on subjects of topical importance have been shown internationally in Britain, the United States, Canada and Australia, to an audience of quite exceptional size for programmes of a documentary character.

Thus in its television operations Rediffusion can draw upon a fund of highly successful experience in education by television. The educational needs of overseas countries need special study, and we therefore welcome the formation of The Centre for Educational Television Overseas, which has been set up with the support of the Nuffield and Gulbenkian Foundations, the British Government, British industry and the B.B.C. Your company is making contributions totalling £15,000 to this Centre.

Competition to secure overseas television contracts is now surprisingly intense, considering the heavy capital outlay and the long period which must elapse before revenue equals expenditure. Your company is as eager as any to assist overseas governments, but it will not undertake any broadcasting or television operation unless it is enabled both to maintain its standards and to earn an adequate return for its services after a reasonable initial period. However, we shall not hesitate to undertake commissions which we judge to be in the long-term interests of the Company and of the Government and people of the country we are supporting. We shall welcome local investment, where this is possible, in any overseas company we take part in forming. Such companies will be run, as are all the Rediffusion companies overseas, by independent boards of directors representative of informed local opinion, who will do their utmost to train local people to undertake the highest managerial and executive posts.

MANUFACTURING COMPANIES

The Group's principal manufacturing subsidiary, Redifon Limited, has maintained its consistently high export performance. Its communication and navigational equipment is now to be found in some 80 countries. It is the world's largest supplier of civil aircraft flight simulators, and during the year has delivered flight simulators for civil and military use to the United States, Italy, Switzerland, Israel and Canada; orders are in hand from the Royal Navy, the British Overseas Airways Corporation, and from Western Germany. A full flight simulator for an aircraft such as a Boeing 707 costs approximately £250,000, and by its use an airline with a fleet of seven or more aircraft of the type can make sufficient saving to pay for the simulator in three to four years. Moreover, by using the device, training can be carried out without any hazard whatever and emergency drills which it would be impossible, or too dangerous, to carry out in the actual aircraft, can be simulated without danger.

Successful demonstrations have been given by Redifon of the world's first full-colour visual landing and take-off simulator, for use in conjunction with existing or new flight simulators.

New models of Redifon radar trainers were delivered during the year to Australia, Denmark, Holland, Norway, Portugal, Sweden and West Germany.

Discussions with the Philips Group have led to a friendly agreement for the formation of a jointly-owned company, in which the industrial radio-frequency heating activities of Redifon and Philips will be merged. This company, which is called "Intertherm," will be one of the strongest manufacturing organisations in this specialised field.

Rediweld Limited and Glass Fibre Developments Limited, which are manufacturing companies in the field of plastics, have had a satisfactory year.

Our television set factories, whilst they did not produce receivers in the record quantities of two years ago, more than maintained their share of national production. Of their output 7 per cent was exported, compared with the 4 per cent exported production of the British television industry as a whole.

REDIFFUSION SOUND AND VISION

At home, our Rediffusion wired sound and television networks have grown and maintained their pre-eminent position. The number of subscribers to the wired vision service in the British Isles is now 330,000 compared with about 275,000 a year ago. We are making progress with the new network in Leicester, our most ambitious new undertaking in recent years.

We welcome the fact that receivers specially designed for our wired systems are now made and marketed by four manufacturers, apart from ourselves. Our policy continues to be that we will connect to our wired television system any receiver which is technically satisfactory, without discrimination.

Our aerial television set rental service is available in many areas where wired services are not provided, and has also developed satisfactorily during the year.

As I mentioned last year, we expect that the developments which are to come in television broadcasting will increase the usefulness and popularity of our wired services. They will, however, undoubtedly involve us in very considerable expenditure.

625 LINES AND COLOUR

To receive any new television programmes which may be broadcast on the UHF bands or on the 625-line standard, Rediffusion wired vision subscribers will have to incur some outlay, but not such heavy expense as will face aerial viewers. The advantages of wired reception will be willingly made available to local dealers, for the benefit of their customers, as well as to those who buy or rent their sets from us. I am pleased to say that co-operation between local dealers and Rediffusion companies continues to grow, to the mutual benefit of both businesses.

Our networks will be able to transmit television in colour. If colour becomes widely popular, Rediffusion will be able to transmit it over its wires by an "out of band" method, whereby the colour signals will be sent on separate channels from the black and white picture signal. Where the demand justifies this, it will result in considerable cheapening of the cost of colour television reception.

PAY-TV—CHOICEVIEW LIMITED

Our associated company Choiceview Limited, which is jointly and equally owned by The Rank Organisation and Rediffusion, staged for the members of the Pilkington Committee in October last, a most convincing live demonstration of its system of Pay-TV. Choiceview has asked the Pilkington Committee to recommend that the Government should permit the introduction of Pay-TV on an experimental scale, and considers that the first experiment in Pay-TV should be made over a wired network. As no one will pay for the service if he does not want it, and as such an experiment would not take up one of the precious television wavebands in the ether, it is difficult to see how the request could reasonably be refused.

THE PILKINGTON COMMITTEE

As this Review goes to press, we are waiting for the Report of the Pilkington Committee on Broadcasting, and the expected White Paper which will give the Government's view upon it. I therefore hope to comment at the meeting upon the Committee's recommendations, and to give some idea of how they will affect our future plans.

The future of our investment in Associated-Rediffusion is in the hands of the Pilkington Committee and the Government, but I am on record as Chairman of Associated-Rediffusion in stating my conviction that the Independent Television Authority will be given a new lease of life and that the existing programme contractors will continue to provide television programmes. It is unthinkable that it should be otherwise.

Until the Pilkington Committee has reported and the Government has made known its intentions we cannot tell what the future pattern of our development in this country will be. It may well be that forthcoming changes will give a great impetus to our business, but it is certain that they will also intensify the competition we face and that they will involve considerable capital expenditure. We shall continue our efforts to develop our activities overseas, where, also, we face strong competition not only from the United Kingdom but from America and other countries. I cannot, therefore, make any promise of greater reward for our efforts over the short term. I can only say that I shall be disappointed if the results of the current year are less satisfactory than those of the year just past, and that twelve thousand employees of the Rediffusion Group at home and abroad are ready and eager to improve upon those results if they can be given the chance.

GODFREY PHILLIPS, LIMITED

SIXTH CONSECUTIVE YEAR OF IMPROVED RESULTS

INCREASED VOLUME OF SALES AND PROFITS BY OVERSEAS COMPANIES

MR P. A. GODFREY PHILLIPS ON HOME TRADE REORGANISATION

The Fifty-third Annual General Meeting of Godfrey Phillips, Limited, was held on June 29th at the registered office of the company, 112, Commercial Street, London, E1.

Mr P. A. Godfrey Phillips, the chairman, presided.

The secretary, Mr A. H. Grindell, read the notice convening the meeting, and Mr H. C. Medlam, FCA, read the report of the auditors.

The Chairman said:

Gentlemen, you have heard read the Notice convening the Meeting and the Auditors' Report. As the Accounts and Directors' Report have been in your hands for some time with your permission we shall take them as read. (Agreed.)

The Year 1961 showed a further improvement in results for the sixth consecutive year and your Board feels justified once more in recommending an increase in the rate of the Final Dividend to make a total distribution for the year of 20 per cent.

If you will turn to the Accounts before you, you will see that the Group Profit for the Year, before charging Taxation, was increased to £861,145 compared with £811,809 for 1960. This increase is derived from higher Trading Profits and reduced Interest Charges, offset to some extent by a lower and more normal figure for Exceptional Profit, lower Dividends from Trade Investments and heavier Depreciation Charges. After providing £458,202 for Taxation and crediting Provisions No Longer Required, there results a Profit of £492,857. From this must be deducted £73,612 for the interests of Outside Shareholders in Subsidiary Companies, leaving a Profit attributable to the Members of Godfrey Phillips Limited of £419,245 as compared with £351,254 in the previous year.

The balance on Profit and Loss Account brought forward from 1960 is reduced by the sum of £150,267 in respect of Companies liquidated during the Year to which I shall refer later; after setting aside £50,000 for Pensions and making transfers to General Reserve and deducting Dividends paid, accrued and proposed, there remains to be carried forward to 1962 the sum of £1,735,592—a decrease of £30,501.

CONSOLIDATED BALANCE SHEET

In considering the Consolidated Balance Sheet and the Balance Sheet of the Parent Company, there will be found changes in the value of Goodwill and in the levels of Capital and Revenue Reserves; these reflect Goodwill and other adjustments arising from the outright sale of our Abdulla Home Trade Rights as already announced and the general reorganisation of our Home Trade during the Year. As part of these measures and as foreshadowed at this time last year, your Board decided to put Cohen Weenen & Co. Limited into Voluntary Liquidation and to pay off its substantial Participating Preference Capital out of the improving cash resources of the Group. This has been done and the consequential adjustments to Goodwill which arise therefrom are reflected in the Accounts before you. In particular, the liquidation of this Company gives rise to the deduction from the balance of Profit and Loss Account brought forward from 1960 referred to above, and to the creation of a new Capital Reserve in respect of the revaluation of Goodwill in certain Subsidiary Companies, previously Subsidiaries of Cohen Weenen & Co. Limited.

In the Consolidated Balance Sheet these and other adjustments arising from the reorganisation reduce the value of Goodwill by £446,217. The increase in Trade Investments is due to the inclusion of our Paperback interests under this heading following the sale of 51 per cent of these to The New American Library of World Literature Inc. and this transaction also gave rise to a Profit which has been transferred to Capital Reserve.

PENSIONS

The decision announced last year to set up a Contributory Pension Scheme for the benefit of employees of the Parent Company and our other UK Subsidiaries, made necessary the provision of a sum to meet a considerable liability in respect of past service. In consequence there appears a new item under the heading of Quoted Investments which represents the funding in Dated British Government and Corporation Stocks of this amount which, as it becomes payable over the years, will be charged against the Amount Set Aside for Pensions, leaving to be met out of Current Profits only that part of the Annual Premium payable for present and future service. During the Year under review, considerable sums have been charged against the Amount Set Aside for Pensions in respect of pensions and leaving gratuities for personnel rendered surplus as a result of our Home Trade reorganisation; in the opinion of your Board the balance remaining, augmented from time to time by further moderate provisions, is adequate to meet our foreseeable requirements.

A marked reduction in the level of Current Assets was to be expected in view of your Group's virtual withdrawal from the Home Trade, and this has been helped by a significant reduction in Trading Stocks throughout the rest of the Group. The excess of Current Assets over Current Liabilities remains at a satisfactory level but is reduced as compared with the previous year, due in the main to the repayment of the Cohen Weenen Preference Capital and the investment in Government and Corporation Stocks.

There has been no change in the Share Capital but Capital Reserves have increased as outlined above by some £212,000. Revenue Reserves & Surplus are reduced by approximately £358,000 by reason of Goodwill and other adjustments and total Shareholders Funds now stand at a figure of £6,990,384, a reduction of £145,980.

The interests of Outside Shareholders in Subsidiary Companies are substantially reduced as a result of the repayment of the Participating Preference Share Capital of Cohen Weenen & Co. Limited, and this will have a beneficial effect on Group earnings in future years, through the elimination of the high fixed interest cost and the element of participation.

PARENT COMPANY'S BALANCE SHEET

Turning now to the Balance Sheet of the Parent Company, the main changes in the figures, as compared with the previous year, follow closely those in the Consolidated Balance Sheet which I have reviewed. The movements in the figures relating to investment in Subsidiary Companies in the main derive from the liquidation of Cohen Weenen & Co. Limited and the acquisition of its Subsidiary Companies by the Parent Company. Trade Investments are higher by reason of the adjustment of our Paperback holdings, and Current Assets reflect the reduction in Working Capital previously required by our Home Trade Cigarette and Tobacco activities. Whereas Current Liabilities are decreased by some £662,000, the excess of these over Current Assets has grown during the year, but this is of no special significance in the circumstances in which the Parent Company is acting increasingly as Banker to the Group. In general during the year, there has been a substantial reduction in bank borrowing, and, although the incidence of the Tobacco Duty on our operations has recently been aggravated by yet a further increase, our short and medium term borrowing arrangements are, in the view of your Board, adequate. Indeed, during the present year we have been able to reduce our Bank borrowing still further and yet make substantial purchases of the outstanding 4½ per cent Unsecured Loan Stock for cancellation. This Stock is obtainable under present economic circumstances at a substantial discount and these interim purchases should lessen the strain on Group resources when it is ultimately due for redemption at the end of 1966.

THE YEAR'S TRADING

I will now turn to a review of our trading during the year. Our Export Trade has met with the usual difficulties of increasing tariffs and quota restrictions, and its volume was slightly down on the previous year. The rising cost of production in the UK has inevitably entailed an increase in the invoice and consequently in retail prices which has made even more marked the difference between the British manufacturers' prices and those of locally manufactured goods. As the Commercial Street factory is mainly dependent on healthy Export Sales to maintain an economic level of production, our efforts to expand and develop our trade in the many overseas markets in which we are represented will have to be still further intensified.

Our Cigar importing Subsidiaries have both enjoyed another year of successful trading, and the reputation of the brands for which they have the trading rights stands as high as ever. We are learning to live with the difficulties of obtaining adequate supplies from Cuba and Jamaica and provided there are no unforeseen obstacles, these Companies should have another good year in 1962.

Our Printing and Publishing interests have met with even stronger competition than hitherto, and, in the case of our Printing Subsidiaries, in what was probably a slightly contracted market. They have stood up well to these conditions but have not shown such good results as during 1960. I am glad to say that there appears to be an improving trend in the Printing Trade, and, if this continues, we can look for better results this year from these activities.

Our Greeting Card interests ran into management difficulties during the course of the year, and their increasing turnover was not matched by an increased profit. Furthermore, they are expanding and developing new techniques, which, whilst contributing to a sure foundation for the future, are not productive of an immediate profit. Steps have been taken, and are being taken, to improve the management and administration generally, and a greater contribution can, I believe, now be anticipated.

Competition in the Paperback book trade has become more intense than ever, and the battle for good selling titles so keen as to make profits hard to earn. The Agreement into which we entered with The New American Library of World Literature Inc., should in the future help us considerably to acquire a wider range of best sellers, but in the meanwhile we have suffered some set-back. The literary quality of our Series is generally highly regarded throughout the trade, and I am glad to say that, without sacrificing the quality, we have in recent months been able to acquire for future publication books of greater popular appeal than those which we have more recently been publishing. Nevertheless, the way ahead is hard, and will require all the resources and ingenuity of our associates and ourselves for the establishment of a sound and profitable business, and this will not be quickly achieved.

OVERSEAS COMPANIES

I now turn to our overseas Companies, and I am pleased to be able to say that all of these have during the Year increased their volume of Sales and their Profits.

In India, as I forecast last year, a substantial improvement in sales enabled us more than to compensate for the slightly reduced margins of profit consequent upon the 1961 Budget and our Staff there are to be congratulated on the further record result which they have achieved. The enthusiasm and industry with which they approach their tasks is beyond praise and will, I am afraid, be needed all the more this year in view of the serious reduction in the margin of profit now available from our leading brands consequent upon the 1962 Indian Budget. In this market our main brand is Cavanders Navy Cut which retails at 30 nP for ten. The increased taxation represents a further cost of between 1 nP and 2 nP for ten, and normally one would pass this on to the consumer and an increased cost of some five per cent would appear not to be unreasonable. However, in India the bulk of cigarettes are bought by the ultimate purchaser not in packets of ten, but a cigarette at a time and as there is no coin smaller than one naya paisa, it would mean the payment of 4 nP a cigarette instead of a 3 nP—an increase of 33⅓ per cent. In these circumstances we have no alternative but to retain the price of 30 nP and redouble our efforts to increase our sales. I am glad to be able to say that since the Budget the steady increase in our sales has been considerably accelerated and this should go some way, but some way only, to recoup our loss of profit.

In Australia, the steady advances of 1959 and 1960 have been maintained and both the sale of our leading brand Viscount, and our profits have improved. I am glad to say that this trend continues and in the current year we may reasonably hope for a return more commensurate with the efforts that have gone into the development of this most important market. This expansion of trade has thrown heavy burdens on the management and the results which they are showing are largely due to the excellent teamwork which I found so evident there during my visit last November.

In New Zealand, our leading brand D. R. Filters has continued to make progress and during my recent visit there I saw, and was most favourably impressed with, the site at Elsdon which has been acquired for a new factory. For some considerable while now our New Zealand Staff have been working under very unfavourable conditions in a rather outmoded factory which can offer little attraction to employees in a highly competitive labour market. Plans for the new factory are now ready and it is anticipated that a really modern unit will be completed early in 1964. It is hoped that we shall be permitted to modernise our manufacturing processes but import restrictions are severe, and official approval of our proposals is not always easily or rapidly obtained. There is some tendency for the old established company to be placed at a disadvantage through difficulties in the replacement of old machinery with up-to-date equipment, whereas new competitors are perhaps not so handicapped.

At the end of the Year, on my way back from visiting our New Zealand, Australian and Indian factories, I spent a few days in Karachi where I was able to appreciate at first hand the esteem in which is held our newly Associated Company there, the Premier Tobacco Company. I saw the early stages of the building of the new Factory in which our Cavanders cigarettes are to be manufactured and despite the almost inevitable delays which must occur in a country short of raw materials, it is still hoped to get underway before the end of this year. I was able to confirm how well the name Cavanders is remembered and what a high reputation it still enjoys and I feel confident that this will be reflected in its sales.

TRIBUTE TO MANAGEMENT AND STAFF

The results before you would not have been possible but for the keenness and enthusiasm of all our employees, staff and management here at home and in all our overseas factories. I think it will be generally accepted that successful trading in all spheres is becoming more and more difficult and in the next few years success will not be possible without the continued loyalty and endeavours of all our employees which I am confident will be forthcoming. Once again I must thank my immediate colleagues, for their support and efforts in the direction and management of our affairs.

TRENDS IN CURRENT YEAR

In conclusion, I will turn for a moment to the year 1962. The Tobacco Trade is at present under a cloud, for the Report of the Royal College of Physicians published in March and the subsequent Debate in the House of Lords, although they brought forth no new facts and no new evidence did, with the publicity accorded by the B.B.C., make a considerable impact with an immediate effect on sales, which was not exclusively confined to this country. In the United Kingdom the Tobacco Industry has shown all along a marked sense of responsibility in this whole controversy and has never indulged in competitive health claims. Indeed until fresh facts are established concerning the aetiology of Lung Cancer no such claims can possibly be justified. Our only direct interest in the Home Cigarette and Tobacco Trade is through Pritchard & Burton, but we also have for many years manufactured cigarettes for other companies either exclusively or in order to fill gaps in their own production capacity. The most valuable of these has since March not been renewed and this will adversely affect the earning capacity of the Commercial Street factory where our export brands are also manufactured. In India we cannot anticipate as good profits as in 1961 owing to the extra burden of Excise which we are forced to carry. On the other side we look for better profits from Australia and to a slightly better contribution from our non-tobacco Subsidiaries. All-in-all we cannot forecast for this year as good a profit as in 1961 but it is hoped that it will prove adequate to maintain the present rate of Dividend and that our foundations will be strengthened for improved results in 1963.

I now propose that the Report of the Directors and the Balance Sheet be received, approved and adopted; and that the payment of Dividends on all classes of Preference Shares and the proposed Dividend on the Ordinary Stock and Shares and the allocations as shown in the Profit and Loss Account be approved and confirmed.

I will ask Mr D. V. Littlejohn to second the Resolution.

Mr D. V. Littlejohn, TD, FCA, a managing director, seconded the resolution and it was carried.

The retiring directors, Mr D. S. Barron, CIE, and Mr A. M. Borthwick, MC, TD, were re-elected and the proceedings terminated with a vote of thanks to the chairman, directors and staff.

FITZROY FINANCE

The fourteenth annual general meeting of Fitzroy Finance, Ltd., was held on June 29th in London.

Mr H. D. Michaels, Chairman and Managing Director, presided and the following is an extract from his circulated Statement:

It gives me great pleasure to report that the net profit for the year ended March 31, 1962, is more than double the figure for the previous year. The Accounts show that this amounted to £94,617 as compared with £46,404. This profit is after making full provision for the costs of the increases in capital, brought about by the Scrip and Rights Issues which took place during the year.

Your Board recommend a final dividend of 8 per cent less tax, on the capital as increased by the Scrip and Rights Issues of last year, making a total of 12 per cent for the year. These dividends will absorb £30,524 gross, less tax, leaving £12,538 to be carried forward as compared with £6,391 brought forward from the previous year.

CONTINUED PROGRESS

The Company continues to make good progress. It will be seen from the Balance Sheet that the reserve for Unearned Finance Charges shows an increase of over 60 per cent.

With new business currently running at record levels, it is already clear that the profit for the year to March 31, 1963, will again show a marked advance. Accordingly, it is our intention to maintain the present dividend on the total capital as increased by the recent Scrip Issue of 1 for 3 made in May.

The report and accounts were adopted.

WHESSOE LIMITED

(Designers and Builders of Capital Plant for the Oil, Atomic Power, Gas and Chemical Industries)

EXPORTS AND OVERSEAS CONTRACTS CONTINUE TO INCREASE

BOARD'S CONFIDENCE IN LONG-TERM FUTURE

MR JOHN H. LORD REVIEWS ACTIVITIES

The Forty-second Annual General Meeting of Whessoe Limited will be held on Tuesday, July 24, 1962, at 40, Broadway, London, S.W.1.

The following is the Review of the Chairman, **Mr John H. Lord, CA, FIRI,** which has been circulated with the report and acounts for the year ended March 31, 1962.

THE BOARD OF DIRECTORS

In the Report of the Directors the changes in your Board during the year are formally set out but I would especially like to refer to Mr E. R. Cartwright, who does not seek re-election after serving on your Board for 17 years. He has been a most assiduous and valued counsellor and we shall miss his shrewd advice and experience. In his place we have been fortunate in that Mr E. Le Q. Herbert has accepted our invitation to join the Board. His wide experience as a chemical engineer and director of companies will be of great value to us. At the last Extraordinary General Meeting I paid tribute to our ex-Managing Director, Mr A. G. Grant, who unfortunately had to retire due to ill-health after 31 years' service. Following the appointment of Mr M. J. Noone and Mr S. R. Chetwynd Archer as chief executives of the Company and Joint General Managers, Mr Archer has recently joined Mr Noone on your Board. You are accordingly asked to re-elect Mr Herbert and Mr Archer as Directors of the Company.

GENERAL AND FINANCIAL

In last year's Review the excess capacity of capital plant manufacturers was emphasised and a warning given that profits would decline. This has become a familiar feature of many industries, particularly the heavy engineering, and our profits for the past year are lower. The pattern of excess capacity, intense competition and low margins has persisted and I would expect this pattern to continue for some time yet. Whessoe has however been successful in maintaining the volume of throughput and in maintaining a high order book. I believe that for your Company a change is beginning to take place and that a more normal pattern of throughput and profits is emerging. It seems desirable and probable that some rationalisation of facilities in our industry should take place and your Board fully intends to seize any opportunity to increase the Company's profitable activities by any appropriate means which are in the interests of Stockholders.

I am particularly glad to report that the amount of work we export and the contracts we carry out overseas continue to increase. In the past year our overseas proportion, directly and indirectly, was over 33½ per cent of our total work completed and we hope still further to increase this proportion.

Already our progressive diversification and extension in more profitable outlets have resulted in a larger proportion of our work being concerned with long-term contracts at home and overseas. These long-term contracts increasingly involve three major features: they may spread over several years, they may be fixed price quotations and final claims and adjustments may occur long after fabrication, erection, site-clearing and so on have been completed. Until conditions materially alter and in order to ensure that the financial accounts should continue to provide a true and fair view for the year, the profits or losses earned in each year on long-term contracts will in future be brought into account. Our recently reorganised and mechanised costing system is important in this respect as costs can be more speedily and accurately ascertained than previously. Also, in order to provide for the contingencies inherent in the final claims and adjustments of long-term contracts as mentioned above, it has been thought advisable to transfer £400,000 from the profits of prior years appropriated to General Reserve to a Provision for Contingencies to be included in Current Liabilities and Provisions.

Your Directors have again recommended a final dividend of 22½ per cent, making 27½ per cent total dividend for the year. In our statement accompanying the declaration of the interim dividend we warned Stockholders of the probable decline in profits which has in fact eventuated but your Directors feel that the total distribution should be maintained having regard to the conservative policy pursued in the past in the distribution of profits earned and to their confidence in the future of the Company.

You will have received the Notice calling an Extraordinary General Meeting following the Annual General Meeting and Notice of the Resolutions to be proposed with an explanatory circular from the Secretary, which sets out the reasons for the proposals. The issue of Ordinary Shares as indicated does not affect the dividend recommended to be paid on Ordinary Shares for the year under review but the new shares will rank fully for dividends in future. Your Directors, being in agreement with the statements later in this Review under the heading of Prospects, do not anticipate that the amount of dividend which may be recommended for distribution in respect of next year will exceed the amount distributed in respect of this year.

THE ACCOUNTS

Consolidated Accounts have this year been prepared for the first time. These are submitted in the form of a Consolidated Profit and Loss Account, Consolidated Balance Sheet and the Balance Sheet of the Parent Company, Whessoe Limited.

The Consolidated Profit for the year, after all deductions except taxation, amounts to £403,000 compared with £626,000 last year. The total depreciation charge this year was £260,000 as against £224,000, reflecting the recent capital expenditure on buildings and equipment. The taxation charge for the year is lower at £215,000 compared with £295,000 and as a result the Group Net Profit for the year is £188,000 compared with £331,000 for the previous year. The lower profits are mainly due to the lower margins earned for the reasons stated earlier in this Review and on contracts taken some time ago and subsequently affected by cost increases. On certain contracts there were relatively substantial losses and, as I mention later, there were initial losses in certain subsidiaries only now coming into actual productive work. As against these losses there have been taken into account credits of £365,000 on long-term contracts extending beyond this year. The value of total production for the year was 25 per cent higher than last year, which represents a record level for your Company. Gross Work-in-Progress at March 31, 1962, of £8,291,000 was approximately the same as a year ago.

In the Consolidated Balance Sheet the Issued Ordinary Share Capital has slightly increased and the item Share Premium Account reappears. Both these are explained in the Notes on the Accounts and arise out of the acquisition of the entire Share Capital of Express Tools Limited. The Revenue Reserve reflects the transfer to Provision for Contingencies mentioned earlier in the Review and the unappropriated profits of this year. The cash position of the Company has materially changed since the previous year due to the financing of our new subsidiary companies overseas, the completion of the major capital expenditure at Darlington and the additional working capital now required especially in connection with our contract work. As a result there was a Bank Overdraft of £923,000 as at March 31, 1962. This has since been slightly reduced and your Board consider that the resources available to your Company should be adequate for the immediate foreseeable future. Finally it may be noted that due mainly to the inclusion in Current Liabilities and Provisions of the Provision for Contingencies of £400,000 the Net Assets have declined by some £357,000 to £3,654,000 but the Gross Assets of your Group have increased to £5,861,000.

ORGANISATION AND PERSONNEL

The reorganisation to which reference was made last year has now been substantially completed and I would like to pay tribute to the employees of the Company at all levels for the way in which they have adapted themselves to new conditions and for their continuing enterprise and loyalty. We employ approximately 2,000 people in the Group and their efforts have resulted in further enhancement of the Company's prestige and in our ability to obtain and execute satisfactory orders.

The recruitment of skilled engineers, design and estimating staff continues to present problems. Training is in consequence a most important aspect of our organisation, and our apprenticeship scheme, our examination awards and our promotion incentives are constantly under review, not only to give opportunity to employees for acquiring further skills but to provide advancement in initiative and management status. This is especially important to us because of our increasing activities overseas and the need for highly trained efficient technical representatives.

THE YEAR'S WORK

THE PARENT COMPANY: I am glad to report that the new Heavy Welding Shop—one of the finest in Europe—has been in full operation for most of the financial year under review. The new facilities provided by this shop enable the Company to shop fabricate Pressure Vessels of three times the previous maximum weight and in the rest of the works to increase other output, in particular that of Heat Exchangers and Shand & Jurs products. As you will have read in the Press we were fortunate and honoured to have the Rt Hon Frederick Erroll, MP, President of the Board of Trade, perform the official opening ceremony of these new extensions.

A high output has been maintained both in the works and in the field. It is gratifying that in accordance with the Company's policy of reducing its dependence on conventional Storage Tanks, the majority of completions in the year under review has consisted of shop and site built Pressure Vessels, Heat Exchangers, complete Chemical Plants and work of the Light Products Division.

A considerable amount of work is on hand for the storage of liquefied refrigerated gas in insulated tanks, an example being the recent order for four such tanks to a total value approaching £1,000,000 for the North Thames Gas Board. Work on the Reactor Pressure Vessel at Latina in Italy is in the final stages and at Dungeness we are well up to scheduled programme. We continue to be heavily engaged in the work available in the new Nuclear Power Stations in this country and have just received instructions for the supply and erection of the Reactor Vessels for the Oldbury Station. Two complete Chemical Plants, one in Australia and the other for the South Eastern Gas Board, have been finished and work is in progress on a £900,000 Crude Oil Conditioning Plant in Assam. Other comprehensive schemes for major Chemical Plants are also currently in progress; one, the first of its kind, involves refrigeration storage and vaporisation of butane. Output of Heat Exchangers and sales of Light Products, notably Shand & Jurs Fittings, continues at a high level. The Company has also been engaged upon a large number of major Tankage schemes at home and overseas.

It has been possible during the current year to exploit the Company's expanding fund of technical knowledge by concluding a number of agreements to licence our "know-how" to companies in areas where it is more practicable and economical for such companies rather than ourselves to obtain orders. Our close and amicable arrangements of very long standing with The Chicago Bridge & Iron Company and the Shand & Jurs Company continue to our mutual advantage, not only in technical development but in obtaining and executing orders.

As part of our planned extensions, substantial additional facilities have been provided for Research and Development, which are now coming into operation. These include investigations into the commercial feasibility and production of non-conventional materials for which we have recently obtained satisfactory premises at Crook, County Durham. I would like here to acknowledge the help and co-operation we received from the Crook and Willington Development Board.

SUBSIDIARY COMPANIES

WHESSOE S.A.—CALAIS: A new works has recently been completed for this Company for the production initially of Light Products. This is now in operation, output is being rapidly expanded and the prospects appear to be very satisfactory for our products in France and adjacent Continental countries.

WHESSOE ENGINEERING LIMITED—NIGERIA: During the year this Company has been recruiting staff, obtaining premises and installing equipment, etc. Permanent shop facilities are currently being erected and should come into operation this Autumn. We are already receiving encouraging enquiries.

WHESSOE ENGINEERING SERVICES LIMITED—LONDON: This Company, which provides design, consulting and contracting services, is emerging from the difficult period following initial setting up. The nature of the work involved requires considerable overhead expenses and time, but valuable technical and prestige results are obtained.

EXPRESS TOOLS LIMITED—CHESSINGTON, SURREY: The acquisition of this Company during the year was satisfactorily carried out with the full co-operation of the vendors. It continues operations with a satisfactory profit and in excellent accord as a member of the Whessoe Group. It is confidently anticipated that this subsidiary will be able to expand and show an increasing return on our investment.

THE ORDER BOOK

It is particularly gratifying to be able to report that the intake of both long and short term orders has continued at near record levels. Although we regard the margins obtainable on orders as too low, there are some signs of improvement. The present state of our order book reflects our success in broadening the Company's spread of customers and consequent ability to obtain a better average profit. The orders include supplying and/or erecting Tankage, shop and site built Pressure Vessels, Nuclear Vessels, Heat Exchangers, Gas Plants and complete Chemical Plants. Our Light Products Division orders include the supply of diverse types of valves, metering and measuring devices, telepulse and electronic controls for the Oil, Chemical, Gas and Other Industries.

Apart from the Home market we supply to Africa, America, the Near and Far East, Australia, the West Indies and the Continent of Europe, and our energetic sales force is actively pursuing possibilities in the countries behind the "Iron Curtain."

PROSPECTS

As I have indicated earlier in this Review, there are still short-term hazards to be overcome and again in the coming year results will be affected by the completion of orders with sub-normal margins. Your Board is however confident of the long-term future of the Company. Whessoe has progressively adapted itself with reorganisation in personnel, equipment, technological advances and salesmanship to the changes in the engineering and capital equipment markets. The Company's performance under the difficult market conditions of the last two or three years makes me assured of its ability to meet whatever competition lies ahead, including that which is already evident whether or not the United Kingdom joins the European Common Market.

GRAND CENTRAL INVESTMENT HOLDINGS

The third annual general meeting of Grand Central Investment Holdings Limited was held on June 29th in London, **Mr C. A. Meakin,** chairman, presiding.

The following are extracts from his circulated statement for the year ended December 31, 1961:

The profit for the year in round figures amounted to £252,000 before taxation. The corresponding figure for the previous year is £402,000 and the appreciable falling-off reflects the shortage of crop, with correspondingly increased costs.

Taxation on the profits for the year under review, computed on the data presently available, amounts to £124,000 net against £242,000 on the profit for the previous year. The level of taxation in Ceylon generally remains the same.

FACTORS AFFECTING PROFITS

Turning to the Company, as a whole, its results may be said to depend on four obvious factors: Taxation, Crop, Costs and Selling Price. To the first of these, I have already referred and there is no doubt, in my mind, that the present penal structure presents as efficient a form of strangulation of enterprise and growth as can be devised. Over the last five years, admittedly aided by Government, we have spent over half a million pounds sterling (gross) on replanting and new planting in rubber. This work, as I have stated, is now to cease, a retrogressive step actively encouraged by taxation. I only hope that circumstances will permit of an early resumption. Last year we replanted 16 per cent of the remaining old rubber, this year we are undertaking 16 per cent, after which there will remain 20 per cent of the total acreage assuming that all the old rubber is replantable, which is debatable.

RUBBER CROP.—It has been a poor year for crop throughout the island, and this Company was no exception: we only harvested the equivalent of 866 lbs. per acre from our clonal areas, due to an excessive number of non-tapping days.

RUBBER COSTS.—In the circumstances, were higher than normal but they compare favourably with other estates in such a year as we have experienced.

The last of the four factors, governing results, is the SELLING PRICE. This showed a reduction of 1.71d. over the previous year which is in line with market conditions and, since the last accounts, a sliding scale of export duty has been introduced which, to my mind, is a definite improvement. There have been optimistic forecasts of world consumption in some quarters against which we have to place the increasing use of synthetics and the menace of the U.S. stockpile. On the present market, however, and given ordinary climatic conditions, we can hope to produce a reasonable surplus in our trading account, before taxation.

TEA.—The results from the tea areas remain satisfactory. Crops continue to increase, although there was a slight decline in the selling price, in conformity with market conditions. Costs were held at the same figure as for the previous season.

The report and accounts were adopted.

THE BRITISH PLASTER BOARD (HOLDINGS) LTD.

A VERY SATISFACTORY YEAR

STATEMENT BY SIR GRAHAM HAYMAN

The following is the statement of the Chairman, **Sir Graham Hayman,** which has been circulated with the report and accounts for the year ended March 31, 1962:

I have to report certain changes in the Directorate.

Mr J. C. Duffus, having attained the age of 70 years, retires from the Board at the forthcoming Annual General Meeting. Mr Duffus became a Director in 1954 at the time of our acquisition of C. Davidson & Sons Limited, and he continued as Chairman of that Company and its subsidiaries. His experience and knowledge have been of much value to us and I am glad to record our sincere thanks to him for his services.

It was a matter of great regret to us all that Mr Douglas L. Walker died in February last. He joined the Board in May 1959, having then just completed a long and distinguished career as General Secretary of the Federation of British Industries. In the short time he served with us, we came to value highly his shrewd judgment and wide experience.

I am glad to report that your Directors have unanimously agreed that Mr R. S. Jukes, the Managing Director, be also appointed Deputy Chairman with effect from June 21, 1962.

FINANCIAL RESULTS FOR THE YEAR

The Accounts for the year to March 31, 1962, show that the Group's profits before taxation amount to £3,217,446, which compares closely with £3,210,381 for the previous year. This is considered very satisfactory taking into account the fact that during the period under review costs of transport, fuel and labour have all increased and domestic building, particularly in the United Kingdom, has been curtailed through restrictions in credit imposed by the Government.

After providing for taxation on the results for the year of £1,763,956 (which includes Profits Tax at 15 per cent compared with 12½ per cent for the previous year), and after taking account of outside shareholders' interests and adjustments relating to prior years, an amount of £1,500,601 remains available for appropriation by the Group. The sum of £500,000 has been added to General Reserve in the Holding Company and the Subsidiary Companies have retained £199,235 as Reserves and unappropriated profit.

A review of the basis used to arrive at the amount of depreciation charged in the Accounts has just been made which shows that the Group has been providing depreciation in past years on a more generous basis than has been necessary. Arrangements will be made to provide depreciation in future years on a lower but still conservative basis.

When the Board recommended that last year's distribution to Ordinary Shareholders should be maintained at 11¼ per cent for the year, there was uncertainty as to the effect on profits of certain factors to which I then referred. While there have been various additional charges, they have been offset to a greater extent than anticipated by higher turnovers so that, as shown above, the results for the year compared favourably with those of last year. In view of this position, and the modification in depreciation expected to be charged in future years, the Board recommend a final dividend at the rate of 8½ per cent which, with the interim dividend paid in January of 4 per cent, makes a total for the year of 12½ per cent.

The note in reference to Fixed Assets on the Consolidated Balance Sheet shows that during the year £1,841,000 has been spent on additions to land, buildings and plant at home and overseas. The increase in trade investments, which are also included under Fixed Assets, of £578,000 represents in the main the Group's interest in Australian Gypsum Industries Limited. Just over 10 per cent of that Company's shares were acquired during the year and are held by a newly formed, wholly owned subsidiary, British Plaster Board (Australia) Pty. Limited.

As foreshadowed in my last Statement, the Group's main bank accounts were overdrawn at the year end to a greater extent than in previous years. The amount shown is, however, considerably below the limits of the temporary facilities arranged with our bankers which should prove adequate for our short-term needs.

As you will note from the Directors' Report, an extensive re-organisation of the United Kingdom gypsum companies has been carried out. This was done to facilitate administration and to reduce overhead and production costs, with the result that we now have two main Companies in that section of the Group—British Plaster & Boards Limited and Gyproc Limited. While these two Companies retain their separate selling organisations, they have between them taken over all the plants and trading activities of the United Kingdom gypsum producing companies. We are satisfied that the Group and its customers will benefit from this re-arrangement.

There are two Resolutions attached to the Notice calling the Annual General Meeting which are to be proposed as Special Business. If adopted by the Members, these Resolutions, which are recommended by the Board, will change the Company's Ordinary Stock into Ordinary Shares of 10s. each and will make certain amendments to the Articles of Association so as to bring the borrowing powers of the Board into line with the limits now being approved by the Stock Exchange and to simplify dealings in the Company's shares by the elimination of transfer and other fees. These proposals are dealt with more fully in an explanatory letter accompanying the Notice of the Meeting.

TRADING ACTIVITIES IN THE UNITED KINGDOM AND THE REPUBLIC OF IRELAND

The production of gypsum and anhydrite rock from our mines and quarries in the United Kingdom and the Republic of Ireland showed an increase on the previous year and now exceeds 2¼ million tons per year. This higher rate of output reflects the increasing use of mechanisation in our operations.

The construction of the new mine at Brightling, Sussex, to which I referred last year, is proceeding according to plan and it is expected that full operations will start early in 1963. This particular project, together with other plans we have under consideration, are designed to ensure the availability for many years to come of a supply of rock of suitable quality at the high level of output required.

Sales of plasters and plasterboard in both the United Kingdom and the Republic of Ireland also showed increases in quantity over the previous year, this position having been achieved in spite of a downward trend in the amount of new building construction. Margins have, however, been narrowed through increased costs of labour, fuel and transport, while selling prices of our main products have remained unchanged throughout the year. In this connection, it will be of interest to mention that our present prices of plasterboard are lower than those ruling under Governmental Price Control at the end of 1951, while prices of hardwall plasters are lower than they were in 1957.

In common with producers of other building materials whose prices have been kept relatively stable through increasing efficiencies during a time of rising costs, we deplore the continuing rise in the cost of building generally and in the price of houses in particular, brought about by causes beyond our control. Greater attention should, we think, be focused upon the causes of this state of affairs and to taking appropriate remedial measures. In this context, we very much welcome the recent report by Sir Harold Emmerson in his 'Survey of Problems before the Construction Industries,' in which, for example, he draws attention to the need to give the building industry confidence that there will be a steady increase in the demand for their services over a reasonably long period of time. Undoubtedly, he is also right when he insists that the short term measures of recent years for regulating the economy of the country have had a frustrating effect on the building industry.

In the bituminous building products industry, competition remains very keen but better trading conditions have operated, and D. Anderson & Son Limited have improved their position. However, as in the case of the Group's main products, the trading results of this subsidiary will be influenced particularly by the extent to which the contracting side of the building industry can be fully employed.

The Davidson Group of Companies, which makes paper, paper-board and allied products, have not had an easy year, and in the case of the departments dealing in wrapping papers and packaging products, the recent credit restrictions have affected business with many of their customers in the retail and wholesale trades. Costs have continued to rise and selling prices generally have been under pressure, a position aggravated by two further reductions in the import duties on paper which occurred in July 1961 and March 1962. In spite of these factors, improvements in operating efficiency and the installation of new plant have enabled this section of our Group to maintain its contribution to the Group's total profits and the future outlook is regarded as satisfactory.

Our engineering companies have been handicapped by the credit restrictions operating, but in the circumstances have had a good year. We are adding to the range of our products in this field which will enable us to make further progress.

OVERSEAS

Our Canadian companies, although making a reasonably satisfactory contribution to Group earnings, did less well than anticipated.

While there was an improvement in house building activity in Canada during 1961, and our companies secured an increasing proportion of the available business, profit margins have been narrowed by rising costs and reductions in selling prices to meet competition.

We are nevertheless confident that the long term prospects in Canada are satisfactory, and as a measure of our confidence, we are installing a new plaster mill and plasterboard plant at Clarkson, Ontario, as an initial step to enable your Company to share in the expanding markets of Eastern Canada. This new unit should be in production before next Spring.

In Australia, there has been a recession in the building industry but as increased finance is now being made available for house building, it is expected that this should result in an increase in demand for the products of our associate company, Australian Gypsum Industries Limited.

Our Australian wood wool subsidiary company, Woodtex (S.A.) Limited, has shown improved results and efforts are being continued to broaden its sales outlets.

The fall in the rate of building activity in the Republic of South Africa had an adverse effect on the sales of our associate company, Gypsum Industries Limited, in the latter part of 1961. Since then, Building Societies have been lending money more freely for house construction and good orders have been booked for the sale of Manganese, so that prospects for the current year to June 30, 1962, remain satisfactory.

In April last, accompanied by Captain Waterhouse, the Chairman of our Rhodesian subsidiary, Allied Rhodesian Manufacturers (Private) Limited, I had the pleasure of attending the official opening by Sir Edgar Whitehead, the Prime Minister of Southern Rhodesia, of the new newsprint plant at Umtali. All those concerned with this new venture are to be congratulated on getting the plant ready on schedule in spite of many frustrations. I am glad to report that this plant is already producing excellent quality newsprint paper, and we feel that it will make a useful contribution to the Group's profits in the future.

Our other plant at Umtali, manufacturing paper and paperboard, is planned for further extensions and we should thus be able to take immediate advantage of any improvements in trading in Rhodesia.

In France, building activity remained at a high level and with a need to provide houses for Europeans returning from Algeria, this position should continue for some years. On this account, our associate company producing plasterboard has had another satisfactory year, but there has been a tendency towards overproduction in the plaster industry which has had an adverse effect on our two subsidiary companies in the East of France.

Our Belgian associate company is still hampered by the low level of selling prices for plaster and plasterboard, but the growth of sales continues and it is expected that trading results will show improvement in the current year.

In accordance with our policy of increasing, where possible, our investments in companies producing building materials in Europe, we have agreed to take up our share of the additional capital to be raised by our Swedish associate company, Svenska Aktiebolaget Gyproc. The additional funds are required for the erection of a new plasterboard plant in Eastern Sweden, which is scheduled to come into production in 1963. The Company's existing plant at Varberg continues to do well.

FUTURE PROSPECTS

In common with most industrial concerns, we await with interest the declarations of Government policy on the long-term economic growth for industry in the United Kingdom. In the uncertainty of present conditions, it is extremely difficult to forecast with any degree of accuracy the prospects of those sections of our Group producing building materials. However, if no further restrictions are placed on credit, we are confident that the volume of our trade in the United Kingdom will remain at a high level. Generally speaking, with the increasing contribution being made by our Research establishments, the continuing modernisation of our plants and the extension of our activities both at home and overseas, the prospects for the future progress of our Group are favourable.

PERSONNEL

It is with pleasure that I place on record the sincere thanks of the Board to the executives and other employees in all our companies, whose hard work and loyal service continue to contribute to the success of the Group. June 21, 1962.

BRITISH SUGAR CORPORATION

A SEASON OF STEADY GROWTH

The twenty-sixth annual general meeting of the British Sugar Corporation, Ltd., will be held on July 24th, in London.

The following is an extract from the circulated statement of the Chairman, **Sir Edmund Bacon, Bt, OBE, TD, JP**:

The 1961 season may be looked upon as one where steady growth rather than spectacular progress has been the pattern. Nevertheless, the production of the second highest crop yield is one of which our growers may well be satisfied. This success, following immediately in the wake of the record-breaking crop of 1960, was obtained under very different weather conditions—indeed, with the exception of a comparatively short period before Christmas, the harvesting season was almost ideal. The final tonnage of beet delivered was 5,936,479 tons.

The output in terms of white sugar was 760,388 tons. The production of dried pulp in all forms from beets delivered amounted to 460,739 tons and of molasses 265,252 tons.

For the first time the National Spring Demonstration sponsored by the Sugar Beet Research and Education Committee and organised by ourselves in co-operation with the National Agricultural Advisory Service, was extended to two days. Perfect weather conditions prevailed and there was an attendance of approximately 10,000 people.

RECORD BEET CROPS

The beet crops of the past two years were easily the highest in the Corporation's history. This is in no small measure due to the agricultural advances of the past few years which I outlined in my Report to you in 1960. The steady increase in agricultural productivity presents a problem to our factories and to match the greater yields of beet we have to continue to increase our slicing capacity. The Corporation's capital expenditure programme continues at a high level, not only to deal with larger throughput and improved techniques but also to replace plant which has been in use for many years. The main items which contributed to increased capacity were new power plants at Cupar, York and Bury St. Edmunds; new evaporators and extraction plant at King's Lynn, a new pulp drier at York, and new continuous centrifuges at Bury St. Edmunds.

We have already progressed a long way with the scheme to expand and modernise our packeting plants by the installation of the latest high-speed machinery giving first-class packets with a big reduction in labour.

The prospect for 1962 is for an average crop and certainly not an exceptional one, due to the slow emergence caused by the cold spring and soil conditions.

I would like to review briefly the technical progress which has been made since we embarked on our post-war programmes of capital development in 1949. In the 1961/62 campaign our capacity was nearly 52,000 tons per day. Since 1949 it has increased by 36 per cent, but the increasing yield of beet gives us no ground for complacency and increase in capacity must remain the prime object of our technical advancement.

In selecting plant for increased capacity we have always had regard to its labour requirement. This policy, in conjunction with the rapid development of automatic controls, has now enabled us to reduce the labour usage per ton of beet processed to just one-half of that needed in 1948. This is a big step towards our ultimate objective, which is the elimination of our need for casual labour for the campaign period.

A considerable part of the expenditure over this period has been on plant for extracting sugar from the beet. In 1948 our overall extraction in terms of white sugar and molasses was 93 per cent of the sugar in the beet. Last year it reached 96.75 per cent. Based on the 1961-62 campaign, the improvement in extraction since 1948 is equivalent to an additional 34,000 tons of sugar per annum.

The lower water requirement of modern extraction and filtration plant, together with new boilers, improved evaporation plant, and the increased use of heat-exchangers, have enabled us to reduce our process coal usage from 6.48 per cent in 1948 to 4.95 per cent this last year. At certain factories, depending on geographical location, oil is now becoming a more economical fuel than coal. When new boiler plant has to be installed we are having regard to this factor.

We have done much to improve our efficiency since 1949, but there is still a big field for worthwhile investment and although our efficiency compares favourably with the beet sugar industry of the European Economic Community, it is essential, especially in view of the possibility of British entry into the Common Market, to maintain and, where possible, to increase our technical standards.

THE CENTRAL MINING & INVESTMENT CORPORATION LIMITED

SIR ARCHIBALD FORBES' STATEMENT

The fifty-seventh annual general meeting of The Central Mining & Investment Corporation Limited was held on July 2nd at the Great Eastern Hotel, Liverpool Street, London, E.C. **Sir Archibald F. Forbes, GBE** (the chairman) presiding.

The following is the chairman's statement:

RESULTS

The profit on the year's operations, before providing for taxation, amounted to £2,722,000 which was £274,000 greater than for the year ended March 31, 1961. This was due to increased income from investments and to a rise in trading profit which included for the first time the results of one of our new industrial subsidiaries. There was, as forecast, some falling off in profits from share dealing.

Taxation was relatively higher than last year partly because of the increase in the rate of profits tax and partly because last year's charge was reduced by a credit of £85,000 in respect of previous over-provisions. After allowing for taxation and the interest of minorities the net profit available for members of the Corporation is £1,408,000. This (ignoring the tax credit in 1960-1961) represents an increase of £75,000 over the previous year.

The directors consider that the improvement in earnings and the general position of the Corporation warrant an increase in the distribution to shareholders. They accordingly recommepd a final dividend of 2s. per share which with the interim of 9d. already paid would give a total distribution of 2s. 9d. per share (less income tax) as against 2s. 6d. for the previous year. These dividends (net after tax) would absorb £716,000 leaving £693,000 retained in the business. In addition £147,000 was carried directly to reserves.

INVESTMENTS

The Directors' Report contains a survey of the principal interests of the Corporation including a table summarising in broad terms the nature and geographical location of the net assets and the proportionate income derived therefrom. For this purpose the assets have been valued at March 31, 1962 (i) in the case of quoted securities at middle market prices on the relevant Stock Exchange; (ii) in the case of unquoted holdings at such value as the directors consider appropriate, and (iii) in the case of operating subsidiaries at the book value of their tangible assets. Liabilities have been deducted under the appropriate headings.

On this basis the total net assets amounted to £27.1 million. This was the same figure as brought out at the previous balancing date because, in general terms, the effect of accruing resources and appreciation in the market price of some holdings was offset by a further fall in the market price of a number of our African investments. This latter circumstance accounts for the proportion of our net assets in the Republic of South Africa having fallen from 50 per cent to 47 per cent despite some net additional investment in that country.

On the income side the table (which does not include profits from share dealing) shows some changes in the proportionate sources of revenue. The most notable of these are the drop from 49 per cent to 43 per cent in the income from gold mining in South Africa and an increase from 3½ per cent to 10 per cent in the income from industrial holdings outside Africa.

There was no single new investment of particular note during the year although there was the normal follow up associated with our mining interests and in addition a number of minor investments in the non-mining field. We had under consideration various mining and industrial projects but nothing of a major character came to maturity in the period.

Towards the end of the financial year our interest in Heatrae Ltd. was increased to an extent which made this a subsidiary company and since the close of the year we have made an offer to acquire the whole of the remaining shares for a cash consideration. This is in pursuance of our policy of extending our industrial and commercial interests in the United Kingdom and elsewhere.

SOUTH AFRICA

During 1961 the gold mining industry continued to prosper.

On the whole the country's economy has so far withstood to a considerable degree the effect of the circumstances which led to the flight of capital in 1960 and the early part of 1961 and continue to act as a deterrent to further investment from external sources.

The imposition of exchange and import controls has brought about a rapid strengthening of the financial reserves and a favourable balance of payments. On the other hand, however, there was a falling off in private investment and a consequent slowing down in expansion chiefly reflected in constructional and secondary industry generally.

South Africa is faced with the familiar dilemma of how to promote growth while at the same time containing inflation—and this is made more difficult in her case because of the need to raise the living standards of the African, an objective which can only be satisfactorily attained with the assistance of the inflow of foreign capital. I believe, however, that recently there has been a considerable revival of internal confidence and the problem remaining is to recreate this abroad.

The exchange control regulations have placed no ban on the remittance of income. On the capital side the effect is to place an embargo for the time being on the withdrawal of capital and realisations of capital have accordingly to be reinvested in the Republic.

In the case of "residents" in South Africa there is no control over the nature of such reinvestment. In the case of "non-residents" this is broadly limited—without special permission—to immediately realisable deposits or securities quoted on the Johannesburg Stock Exchange.

With the ready co-operation of the South African authorities—which I am glad to acknowledge—we arranged to be treated as "resident" in respect of funds and securities physically held in South Africa and otherwise as non-resident. This we considered essential in enabling us to discharge our functions in South Africa.

The fact remains that these restrictions have seriously disturbed the freedom of the "Kaffir" market which in the past played such an important part in financing gold mining and other developments in South Africa. I do not see this function returning until complete freedom for arbitrage dealings is restored. I am sure that the South African Government is fully alive to these considerations and recent pronouncements show that they intend to mitigate and if possible ultimately abolish the restrictions as soon as they consider this to be justified by the state of the economy.

CENTRAL MINING/RAND MINES GROUP INTERESTS

In 1961 the gold mining companies of the group produced about 4 million ounces of gold or some 18 per cent of the total for the South African industry. Working profits on gold amounted to £14 million (a rise of £1 million) and on uranium to £3.7 million (a fall of £1 million). Dividends declared were £7.1 million, against £7.2 million for the previous year.

There was no material change in the earnings of Rand Mines, the colliery companies or the Northern Lime Company. There was some falling off in the profits of the cement companies and a marked improvement in the results of the Hume Pipe Company.

NON-GROUP INTERESTS

In the case of our major holdings in companies with overseas mining connections dividends received during the year were in general maintained at the same level. The exceptions were an increased distribution from Selection Trust and a smaller payment from Consolidated Zinc Corporation whose earnings suffered a set-back largely because of the weakness of lead and zinc prices. Consolidated Zinc is proposing to merge with Rio Tinto through the formation of a holding company and if this is carried through our interest, while it would be proportionately reduced, would then cover a wider field through the joint activities of the two concerns. Western Decalta Petroleum increased its net revenue but, as formerly, applies this in further prospecting and development.

We have substantial interests in the Rhodesian copper mining industry and we cannot but be disturbed by the uncertainty produced by the constitutional problems affecting the Federation which are as yet unresolved. It is earnestly to be hoped that a solution will soon be found of a nature which will again encourage the economic development of the various territories on the basis of both internal and external confidence in their future stability.

In the case of our major interests in the United Kingdom the three principal subsidiaries, Wall Trust, Elastic Rail Spike Company and Heatrae each produced satisfactory results.

OUTLOOK

So far as the current year is concerned it is difficult having regard to the character and wide geographical range of our interests—some of which are peculiarly subject to political factors—to make a reliable forecast. Subject to this I should not expect any marked change in our overall revenue from investments. I think it possible that there may be some diminution in profits from share dealing but on the other hand I should look for some modest expansion in profits from our industrial subsidiaries.

ADDITIONAL REMARKS

Addressing the meeting, the Chairman said: There have been considerable fluctuations in Stock Exchange prices since the end of our financial year on March 31, 1962. Broadly speaking the effect on our quoted holdings has been an appreciation in the prices of South African securities of about £1.4 million offset to some extent by a fall in the prices of North American and United Kingdom securities of about £650,000. If, therefore, the valuation of our net assets at March 31st had been based on current market prices the total net assets would have been some £750,000 higher or about £28 million in all.

The report and accounts were adopted.

NYASALAND RAILWAYS LIMITED

The thirty-first annual general meeting of Nyasaland Railways Limited will be held on July 25th in London.

The following is an extract from the circulated statement of the chairman and managing director, **Mr W. M. Codrington, CMG, MC**:

During 1961 the gross operating receipts of the Company were £1,346,752, an increase of £175,113, or 14.9 per cent compared with last year. Expenditure also increased by £168,794 or 15.9 per cent to £1,230,052, leaving a net operating surplus of £116,700, compared with £110,381 in 1960, an increase of 5.72 per cent. Adding interest received and after deducting interest paid and making various provisions, the final balance carried forward is £44,341 compared with £50,206 last year.

The Directors regret that they have not felt justified in recommending the payment of a dividend in respect of the year 1961.

It will be remembered that in my review last year I sounded a note of warning about the liability of the Company to maintain the rate of dividend it had been paying on its Ordinary Shares and pointed out the extent to which this was dependent on the amount of arrears of interest received on its holding of the Debentures of its subsidiary, the Central Africa Railway Company Limited. The receipts from this source, as you will see, declined from £175,000 to £114,000. The reason for this appreciable decline was a sharp increase in the rate of Mocambique taxation levied by the Portuguese Authorities on the subsidiary's operations in Mocambique. Furthermore, this higher rate of tax had a retrospective effect on the earnings of 1960. Consequently the 1961 earnings of the subsidiary have had to carry the burden of increased Mocambique taxation, not only for that year, but also the additional amount payable in respect of 1960. As a result, the subsidiary's overseas taxation, brought to charge in 1961 mounted to £158,000 compared with £65,000 in 1960. Moreover, we shall receive no final dividend from the Central Africa Railway for 1961.

For some years I have been emphasising the need for new Capital to increase our stud of locomotives and to effect a general improvement in the facilities for handling traffic over our lines. Unfortunately the cloud of political uncertainty which hovers over Africa in general, and over Nyasaland in particular, rendered any major operation in the capital market quite impossible. The Board, therefore, felt it necessary to place an order for five diesel locomotives on deferred payment terms in order to cope with the growing traffic demands. Our Associated Railway, the Trans-Zambesia Railway, has also placed an order for three diesel locomotives.

The locomotives are the latest Sulzer—A.E.I. diesel electric type with a tractive effort considerably in excess of that of our heaviest steam locomotives.

The whole economic future of Nyasaland, and the prosperity of its inhabitants, depend not only on increased production, but on the ability of the railway to provide efficient transport. We have shown our faith in the country's future and in the ability of those who govern it by forgoing our ordinary dividend and pledging to the hilt our probable cash resources in order to provide some—but only some—of the equipment the railway needs. We trust that those responsible will support us in our efforts and justify our faith in the country's future.

In an agricultural country like Nyasaland it is notoriously difficult to make forecasts. The present indications are that there will be very little maize and very little available for export, with a consequent decrease in the ability of the producers to pay for imports. It is too early to forecast the production of other crops, but it seems unlikely that our results for 1962 will show any material improvement on those of last year.

ROADS RECONSTRUCTION LIMITED

RECORD RESULTS

The twenty-eighth annual general meeting of Roads Reconstruction Limited will be held on July 27th in London.

The following is an extract from the circulated statement of the chairman, **Mr J. S. Roberts:**

The results are a record in the history of the Company. The net profit after tax is £219,243, compared with £162,044. This is due to an increased volume of sales and higher operating efficiency. An increase of 3 per cent in the Final Dividend for the year is recommended, making a total of 14½ per cent on the Ordinary Share Capital, as compared with 11½ per cent for the previous year.

Much new equipment has been purchased during the year and the modernisation of the older quarrying units is progressing satisfactorily. The quality of our manufacture remains high, but is under constant review to improve further the standard of our products.

Roads Reconstruction (Contracting) Limited: The contracting side of our business has made excellent progress in consolidating its position as a subsidiary Company. It is the intention that your Company shall continue to extend its activities in the field of road surfacing and Civil Engineering, making even further use of the materials available from the Parent Company as opportunities arise.

It is too early in the year to forecast the level of sales with any accuracy, but the first two months, April and May, show similar figures to last year. As far as I can foretell, we should be able to hold own own during the Summer months. The Winter season is always a difficult period in our industry. Frost and snow hold up the laying of our products. Unless we have an exceptionally severe Winter I look forward with confidence to satisfactory results for the current year.

LONDON SUMATRA PLANTATIONS

MR F. W. HARPER'S REVIEW

The second annual general meeting of London Sumatra Plantations Limited will be held on July 30th at the Baltic Exchange, St Mary Axe, London, E.C.3.

The following is an extract from the statement by **Mr F. W. Harper,** the chairman, circulated with the report and accounts for the 9 months ended December 31, 1961.

The offers which were made last year with a view to the extension of the Group met with an overwhelmingly favourable response and the results for the period already reflect advantages obtained from the widening of our activities.

LAND TENURE

The Indonesian Basic Agrarian Law of September 24, 1960, provided that new estate titles would not be granted beyond the expiry dates of the original concessions and would in any case be restricted to a maximum period of twenty years. Subsequently it was learned that the Indonesian Government required the surrender of about one-third of the former concession areas in Sumatra for re-allocation to national plantation companies and that new titles to the remainder would not be granted for the full period authorised by the Law.

After negotiations which extended over a period of some six months the Minister of Agrarian Affairs decided to grant us a 15-year title expiring September 24, 1975 on a planted area of 70,779 acres of rubber and oilpalms in Sumatra.

Although the reduction in the scale of our operations is regrettable, it can be counted an advantage that the Group's remaining estates will consist of viable economic units with a uniform period of tenure. Including 16,735 acres in Java and Celebes, our total planted area in Indonesia becomes 87,514 acres.

ESTATE OPERATIONS

The period under review saw the end of the rebellion which over the past few years had caused loss of production and material damage on some of our outlying properties in Sumatra and Celebes. At 19,356 tons, the total rubber crop of the Group's Indonesian estates was slightly greater in 1961 than in 1960, despite a reduction in area. Palm oil and kernel production, totalling 7,856 tons in 1961, shows a steady upward trend following the extension and rejuvenation of oilpalm areas over the past decade.

During the past five years the companies now comprising the London Sumatra Group have planted approximately 17,000 acres of first-class pedigree rubber, of which unfortunately only about two-thirds will now be retained, and 2,000 acres of oilpalms.

The executive staff on the estates, five-sixths of whom are Indonesian nationals, worked as an efficient and resourceful team in its task of supervising the production during the year by some 20,000 workers of export commodities to a value of about £5 million—no small contribution to Indonesia's eight-year plan.

Turning to the Federation of Malaya, 1,100 tons of rubber were harvested on the 3,500-acre estate of the Kulai Company, which is now a

wholly-owned subsidiary. Virtually the whole estate consists of pedigree rubber and this fact is reflected in good yields and correspondingly low costs of production. The planting of suitable reserve land is being completed this year and from 1963 onwards we shall be systematically replacing the older pedigree rubber with modern strains which promise still better yields.

ACCOUNTS

I told you last year that the acquisition of a Malayan estate and additional trade investments would supplement the amount available for dividend in any year during which remittances from Indonesia might be delayed. That is in fact the pattern of the accounts now presented, remittances from Indonesia having made only a minor contribution to the sterling results for the nine-month period. I am sorry to have to report that profit remittances have not been resumed up to the time of writing.

The Board are recommending the payment of a dividend of 16 per cent less income tax, which is the same rate as last year. Although the accounts cover a period of only nine months, the proposed dividend should not be taken to indicate a proportionately higher rate for any subsequent twelve-month period.

Our trade investments in plantation companies as at December 31, 1961, were equivalent to a planted area of over 4,300 acres, mainly consisting of rubber and oilpalms in Malaya. We are building up our portfolio as suitable opportunities occur and with an eye to the future have recently agreed to participate in a promising oil-palm development project in North Borneo, to be financed over a period of 4 or 5 years.

The reduction in our planted area in Indonesia has been a severe disappointment, but we do not intend to allow this to divert us from our progressive policies. Our objective will be first to make up in yield and productive efficiency what we have lost in area and thereafter to resume our forward progress.

THE ARTIZANS' & GENERAL PROPERTIES

GENERAL PICTURE OF SOLID PROGRESS

The ninety-fifth annual general meeting of The Artizans' & General Properties Company Limited was held on July 2nd in London, **Brigadier Sir Richard A.-G.-Calthorpe, Bt, CBE, LLD, DL, JP** (the chairman), presiding.

The following is an extract from his circulated statement:

The Group's net profit for the year, after providing for taxation, is £315,302, as compared with £303,512, for 1960. Income and Profits Tax at the rates current for 1961, absorb 53 per cent of profits. The Directors propose that the final dividend should be maintained at 7 per cent, making a total of 12½ per cent for the year.

RENTAL INCOME

The Company's portfolio of property investments continues to make good progress and growth, and revenues continue to increase.

I told you last year that while we could look for some further measure of increase from the rents of properties which are still within the provisions of the Rent Acts, the main expansion of the Group's rental income must rest upon modernisation and the completion of new developments.

Two important office developments, Melton House, Watford, and Ashley House, Wood Green, were completed towards the end of 1961 and let to British Railways, Midland Region, and the Postmaster-General, respectively. The first full year's income from these developments will be received in 1962.

Good progress is being made with the construction of a further office block at 146 Hagley Road, Edgbaston, Birmingham; this building is due to be completed in 1962 and has been let to the Birmingham Regional Hospital Board.

Late in 1960 the Company acquired a 99 year lease of a substantial and very important site in Hagley Road, Edgbaston, Birmingham. After a Planning Appeal we have secured Outline Consent for a development comprising a covered shopping precinct with a department store and some 30 shops, an office block of some 100,000 sq. ft. and parking for 500 cars.

TRADING

You will have noted that the profits from property sales and developments for sale undertaken in London and Birmingham have again risen and amounted to £187,000, as compared with £143,000 for the previous year.

We received a Civic Trust Commendation for our first group of flats at Fairlawn, Westbourne Road, Edgbaston.

Developments in hand by Vista Flats Ltd. and Vista Developments Ltd. in Edgbaston will provide some two hundred houses and flats for sale in 1962 and 1963.

MODERNISATION

This is a very important aspect of our operations, affecting many older properties owned or held on long lease by the Company in Central London. The Board has decided that all such properties should be modernised to standards required by present day society. This requires a considerable capital outlay, but the Board considers that this is in the best interests of the Shareholders and certainly of the many tenants concerned. Our achievements have been the subject of much favourable comment and we are ready to make our specifications available to others who may be interested.

THE UNITED STATES AND CANADA

The Terminal Tower Building in Cleveland, Ohio, continues to be virtually fully let.

The interest on the 6 per cent Convertible Debentures in the two Canadian Companies, Artagen Properties Investments and Pan-coast Properties Developments, has been received in London and is included in the Group's Revenue for 1961.

GENERALLY

1961 was a year of high interest rates and credit restrictions but in spite of this it is still hardly possible to purchase ready made property investments of good class to show a yield in excess of borrowing rates. Opportunities for investments have therefore to be created.

The general picture is one of solid progress with redevelopment and expansion of the Company's property investment interests and of increased activity by the Company's property trading subsidiaries.

Although profits from trading are proving a valuable source of revenue during this period of expansion they must inevitably fluctuate according to the opportunities that we may be able to create. We shall keep Shareholders informed as to earnings resulting from trading as opposed to investment.

From 1962 onwards we should increasingly benefit from the results of our recent efforts and investments.

The report was adopted.

HUPFIELD BROTHERS

MR A HUPFIELD'S STATEMENT

The twenty-fifth annual general meeting of Hupfield Brothers, Limited, was held on July 2nd, **Mr A. Hupfield,** chairman and managing director, presiding.

The following are extracts from his circulated statement:

The report and accounts for the year ended December 31, 1961, give a picture of increased turnover and reduced profits, and I am quite sure that the generality of this pattern means that National and International trading conditions are thus reflected. It has been a more difficult trading year with credit restrictions, tighter trading conditions and increased competition all playing a part to reduce profit margins. It has also become clearly apparent that Industry generally will be much happier when it is aware whether the U.K. is to join the Common Market or not. To plan business and export strategy, it is important for a final decision to be made in this matter at the earliest possible moment.

In addition to the tighter trading conditions, certain non-recurring expenses have been incurred by your company and taking these into account I believe the trading results, which show some 12½ per cent increase in turnover, are satisfactory.

Trading conditions in the present year are more difficult to forecast since it would appear that the now large Plastics Industry is virtually "taking a breath" after its non-stop expansion over the past 10 years or so. Orders are coming in at a satisfactory rate and at the immediate moment it would appear that, if industry generally remains buoyant, we may well have reached the beginning of the next surge forward of the Plastics Industry.

Your Directors are therefore confident in recommending, for your approval, a Final Dividend of 15 per cent, thus maintaining a total dividend of 20 per cent for the year.

Addressing shareholders at the Annual General Meeting, Mr Hupfield gave details of a new 6-8 oz. capacity screw pre-plasticising machine with many novel features. At a highly competitive price it will particularly challenge continental competitors who would appear to have been gaining some ground with a somewhat similar type of machine in this country.

The new machine is an addition to the Hupfield range and the Chairman said that he believed that it would quickly become a firm rung on the Company's ladder of expansion.

HAZELL SUN LIMITED

MR T. R. WALKER ON RECOVERY AND PROSPECTS

The SEVENTY - EIGHTH ANNUAL MEETING OF HAZELL SUN LIMITED will be held on July 26th at 44, Great Queen Street, London, W.C.2. The following is an extract from the statement by **Mr T. R. Walker,** the Chairman, which has been circulated with the accounts to March 31, 1962:

"The profits for the year, though showing a reduction compared with the previous exceptional year, are better than anticipated.

Apart from the abnormal conditions experienced at Watford, our greatest problem has been to contain the ever-increasing burden of costs. Increases in selling prices were inevitable but we did not recover the whole of the higher costs.

The Unions have now faced the British Federation of Master Printers with a series of new demands despite the 5s. per week cost of living bonus paid since last January and a further 5s. starting at the beginning of July. Even if the new demands were only partially met a situation could be created whereby much of the printed matter now produced in this country might be priced out of existence or placed with continental printers.

Surely it is time all associated with the printing trade realised that we have reached the point when further increases in wages, shorter hours and longer holidays must be matched by greater productivity and the more efficient use of the industry's manpower. It is to be hoped both sides will take a realistic view of the situation and think again before it is too late.

The profit on trading is £877,302 against £1,182,388 last year and £756,899 for 1959/60.

Despite the reduction in the demand on the photogravure side of the business the total sales of the Group were slightly higher.

After providing for taxation and minority interests, the balance remaining for members of Hazell Sun Ltd. is £346,914 (£440,098 last year and £327,943 in 1959/60). Of this sum £149,561 (£202,611 last year) is transferred to reserve.

The Preference Dividend absorbs £36,817. The Directors recommend a final dividend of 8 per cent, making a total of 12 per cent (less tax) on the Ordinary and Employees' shares.

OPERATING COMPANIES

Our letterpress plants and bookbinding section were kept reasonably well occupied and sales were up but unfortunately higher costs resulted in narrower profit margins.

The reduced demand in the periodical field forced the closing of the Rembrandt factory at Watford. Staff reductions were kept to a minimum in consultation with the Unions concerned.

In our offset division Taylowes enjoyed record turnover with greater costs. At Slough much progress has been made. Our web-fed presses have been fairly well occupied, mostly on a two-shift basis.

Chromoworks and its subsidiary companies are being concentrated in a new building at Nottingham.

No company can operate successfully without the co-operation of the staff and the Directors wish to express their appreciation to everyone. That they have had to reduce staff during the year is a matter of sincere regret.

THE OUTLOOK

The Directors have no reason to be dissatisfied so far with this year's trading. The improved trend of the fourth quarter of last year has continued and our order books are reasonably well filled.

The Directors propose to enter into agreements with two of the Group's most important customers. Taken together, these two agreements combine the advantages of securing continuity for a longer period of present contracts for important periodicals and of providing the prospect of additional work in the future. They secure our existing base and broaden our interests. I have no doubt that they will be of great value to us.

Providing we can continue to keep our costs under control and in the absence of any unforseen difficulties, the results this year should be satisfactory."

ALLAN KENNEDY

MR T. A. KENNEDY'S STATEMENT

The annual general meeting of Allan Kennedy & Co., Limited, was held on July 3rd at Stockton-on-Tees.

The following are extracts from **Mr T. A. Kennedy's** circulated statement:

The accounts for the year ended March 31, 1962, are very good considering the fact that the structural steel industry is not doing particularly well at present.

During the year under review, business gradually increased as the year progressed. Unfortunately this has not continued and we are finding it difficult to maintain a reasonable output.

Longer term prospects are more encouraging as we already have a good basis to our order book for 1963.

Profit margins continue to be narrow due to the keener competition being experienced and this seems to be a trend which is going to remain generally in business.

At the present time there is no difficulty in obtaining steel and our stocks are down to our more normal level.

Taxation again takes most of our profit. It is only four years ago that we obtained some relief by the change in method of calculating profits tax; since that time, however, increases in the percentage charged have more or less nullified the benefit we obtained.

Your Directors have recommended a final dividend of 10 per cent, less tax, which makes a total of 13 per cent, less tax, for the year against 10 per cent last year.

The final development of the rectangular mesh flooring referred to in my last statement revealed some manufacturing problems; these now appear to be solved. Tests are being carried out at the research laboratories and on completion of these we shall be able to formulate the information which potential customers require.

Copy for the insertion of Company Meeting reports must reach this office not later than Wednesday of each week and should be addressed to:
The Company Meetings Department,
The Economist,
22 Ryder Street, S.W.1.

HIELD BROTHERS LIMITED

DEVELOPMENT PROGRAMME SHOWS SATISFACTORY PROGRESS

The fortieth annual general meeting of Hield Brothers Limited was held on June 29th at Briggella Mills, Bradford.

The following is the statement by **Mr David H. Hield** (Chairman) which had been circulated with the Report and Accounts for the year ended March 31, 1962:

The Accounts now presented show a reduction in profit compared to last year although the volume of orders booked and of goods delivered has been slightly higher. The principal reasons are, on the one hand, intense competition for all available business and, on the other, a continuous rise in costs. These pressures are likely to continue.

MODERNISATION AND EXPANSION

In order to improve our efficiency we are carrying through a plan for redeploying several departments and we are installing the most modern machinery available. In the year 1961-62 the building programme at Briggella Mills initiated in 1960 has been completed and several departments moved into their new quarters about the end of 1961. We are well satisfied with the new facilities we have provided which will be most helpful to us in the future.

Included in the development programme at Briggella Mills was the provision of a large extension to the weaving shed and the installation of high-speed automatic looms. The first batch of these were started up in January and February 1962 and are now giving valuable service. Further looms, which will complete this part of the programme, cannot be delivered by the makers before December 1962.

Meantime, as announced last year, we have put in hand a programme of development at Greystone Mill which will, when completed, double the capacity of this unit. The work is making good progress and we hope to complete erecting the new spinning machinery during the coming summer.

We believe that this new equipment, when in full production, will reduce our costs and enable us to face competition with confidence.

ACCOUNTS

We have decided to recommend a dividend of 16⅔ per cent on the Ordinary Stock. After providing for the dividend there will remain a sum of £27,613 to add to Revenue Reserves bringing them to a total figure of £693,942. In the last three years profits retained in the business for development have totalled £281,623 as compared with net dividends distributed in the period totalling £257,709.

We still have large commitments for future capital expenditure but we do not anticipate difficulty in providing for our needs. In order to preserve a liquid financial position, we have thought it prudent to spread the payment for part of this new equipment over a period of years. Hence the appearance in our Balance Sheet for the first time of the item "Hire Purchase Finance."

Despite the competition which prevails for all available business the order book shows a figure only slightly less than a year ago.

CANADIAN OPERATIONS

Our Canadian Company has been very busy throughout the past year. Its production and

sales show a large increase on previous years and it has operated at a small profit. During the year however the Canadian dollar has fallen in terms of sterling from a rate of $2.76\frac{3}{4}$ to $2.95 which represents a loss on exchange and conversion of £26,800 to be provided in the Group Accounts and reduces the sum to be added to our Reserves this year. During the last 13 years we have made a practice of adding to our Reserves profits on exchange and conversion which have aggregated £162,179, after deducting losses but subject to taxation. In the current year we may have to allow for a further loss arising from the devaluation of the dollar carried out by the Canadian government in May 1962.

It is with very great regret that we have recently accepted the resignation of Mr S. E. Ryley. He has been in the employment of the Company for 39 years and for the last 18 years has given invaluable service as a Director. His resignation has been due to ill health and it is the earnest hope of all his former colleagues that he may now enjoy a long and happy period of retirement.

Mr J. T. Barraclough, BA, FCA, FCWA, the Chief Accountant of the Company, has been appointed Secretary.

It is a pleasure to record once more the grateful thanks of the Board to all members of the staff for the excellent service they have rendered to the Company in the past year.

The report and accounts were adopted and the dividend, as recommended, was approved.

The retiring Director, Mr D. H. Hield, was re-elected and the remuneration of the Auditors, Messrs Whinney, Smith & Whinney, having been fixed, the proceedings terminated.

HENDERSON'S TRANSVAAL ESTATES

The fiftieth annual general meeting of Henderson's Transvaal Estates, Limited will be held on July 12th in London.

The following is an extract from the circulated statement of the chairman and managing director, **Mr A. H. Ball**:

With a view to achieving a wider spread of our active coal interests, we welcomed the opportunity, which occurred in March of this year, of discussing with the Board of The Natal Navigation Collieries and Estate Co., Ltd., the possibility of merging our Tweefontein United and Witbank Consolidated companies with the Natal Navigation and Transvaal Navigation companies. The basis initially proposed was that shareholders in Tweefontein United should receive 44 Natal Navigation shares for every 100 shares held, and that shareholders in Witbank Consolidated should receive 28 shares for every 100 held. In the course of discussions it became apparent that an association on a broader basis might well be feasible and further negotiations are consequently now in hand.

Your Board has for some time past been anxious to extend the Group's interests into the anthracite field. This, of course, has now been achieved by the acquisition of over 18 per cent of the capital of Natal Ammonium Collieries, an anthracite producer operating near Vryheid which is some 300 miles from Durban.

Our Group profit for the year, after taxation and depreciation, at £125,000 showed a decrease of some £14,000 when compared with the previous year; this reduction is due almost entirely to the fact that sales of surface and mineral rights were restricted to approximately 30 morgen.

THE 'SANITAS' TRUST

RECORD PROFITS, INCREASED DIVIDEND, BONUS ISSUE

The thirty-sixth Annual General Meeting will be held on July 24th, in London. The following are extracts from the circulated statement by the Chairman, **Mr Charles Sweeny**:

TRADING RESULTS, DIVIDEND, BONUS ISSUE

Group Trading Profit for the year under review amounts to £691,891, compared with £507,558 for the previous year. The total Ordinary Dividend now recommended for the year of 45 per cent compares with the equivalent of 40.9 per cent paid in respect of the previous year. Having given consideration to the increased sales to date and the favourable prospects for the current year, your Directors also recommend a bonus issue of one Ordinary Share for every five Ordinary Shares held.

GROUP SALES

The year under review has not been a particularly easy one for our business as a whole, although overall sales of your Company's products maintained the record level established in the last financial year, despite some disappointments arising from seasonal factors in the home market.

Export sales were again satisfactory, although your Board had hoped for an even better showing. However, owing to unexpected Government intervention in certain areas, the growth of overseas sales was not what we anticipated. I am pleased to report that import restrictions on sales to Ghana, which affected sales for the last five months of the past year, have now been lifted.

We have, therefore, in the past year had various unforeseen conditions to contend with, but we are meeting these difficulties and overcoming them. On the whole, the export situation for your Company is promising, with the proviso that our business can be affected by the actions of local Governments, which are beyond our control.

NEW ACQUISITIONS

The past year has seen a substantial overall expansion of the activities of the Group by the acquisition of four new operating Companies, Spa Brushes Limited, Rimmel Limited, Tuxan Holdings Limited and Superma Limited. The products of these Companies are being successfully introduced to overseas markets.

FUTURE PROSPECTS

What matters to your Board and to shareholders are the Company's future prospects and the steps which we are taking to improve and extend sales and profits. Our objectives are threefold:

1. To extend sales at home and abroad and reduce our costs of operation. New sales methods and presentation, imaginative use of advertising media and the opening up of new sales outlets should improve our overall profitability.

2. Our new Subsidiaries will become an integral part of the Group by combining facilities as far as possible. New products are being planned and overall sales are being co-ordinated. These planned objectives are well in hand and results are already accruing which give confidence for the future.

3. It is your Board's intention to continue to employ the substantial cash resources at its disposal in the acquisition of suitable new businesses or products, where opportunities arise. We are investigating numerous situations and are hopeful that in the new financial year we shall add to our Group new Companies which offer possibilities of growth and expansion.

Finally, the Company has acquired the world rights (except North America, Western Germany, Austria, Switzerland and Holland) of the "Aquafilter," which has proved to be the most effective cigarette filter yet devised. "Aquafilter" is a water activated disposable cigarette holder, which largely eliminates the tars and nicotine in cigarette smoke. The filter is being manufactured at the Plastics Division of Spa Brushes and the present production of approximately 2,000,000 units per week will be further increased in the coming months. We, as a Board, believe your Group will continue to expand its share of the market in its related fields and view the future of your Company with considerable confidence.

SIMMS MOTOR & ELECTRONICS CORPORATION

MR G. E. LIARDET'S STATEMENT

At the Annual General Meeting of Simms Motor & Electronics Corporation Limited held on June 29, 1962, at Hendon Hall Hotel, London, NW4, **Mr G. E. Liardet**, the Chairman, in the course of his circulated speech said:

I am pleased to announce that Mr R. G. Sutton has been appointed a Director.

It is with a sense of keen disappointment that I now tell you our results have been adversely affected by a number of factors, relating mainly to our largest subsidiary, Simms Motor Units Limited.

In modern large-volume production, fixed costs are high and a turn down in output can soon lead to under-recovery of overheads. Demand started to rise from March of this year but eroded profit margins do not warrant the hope of a complete reversal of the situation in 1962.

In 1961 we transferred our electrical equipment manufacture from Finchley to new Works at Ponders End. This proved a costly operation and the dislocation of production, training of new labour etc. considerably exceeded our budget forecast.

Arising from the factors I have mentioned, the Group profit before tax for the year 1961 is £642,650.

Capital expenditure on fixed assets of £700,000 created tax allowances in excess of depreciation and as a result the net profit after tax is £428,150 compared with £702,647 in 1960.

Your Directors recommend a final dividend of $12\frac{1}{2}$ per cent making $17\frac{1}{2}$ per cent for the year. The surplus carried forward is £1,253,790 compared with £1,142,581 in 1960.

It is believed that our results for 1962 will show an improvement, but the estimated results for the first four months do not indicate that this improvement will be spectacular or rapid.

ROTHSCHILD INVESTMENT TRUST

SATISFACTORY FIRST YEAR

READY RESPONSE TO ISSUE

MR D. R. COLVILLE'S STATEMENT

The twenty-second annual general meeting of Rothschild Investment Trust, Ltd., was held on July 2nd at New Court, St. Swithin's Lane, London, E.C., **Mr D. R. Colville**, chairman, presiding.

A representative of the Secretaries, Messrs. N. M. Rothschild & Sons, read the notice convening the meeting and the auditors' report.

The following is the chairman's statement circulated with the report and accounts for the year ended March 31, 1962:

The financial statement covering the first year in which an investment trust not only becomes a public company but also increases its capital, demands some explanation before it becomes intelligible to shareholders.

Your Company, which had previously been wholly owned by N. M. Rothschild & Sons, increased its capital on July 19, 1961, from £1,000,000 to £3,000,000, and, at the same time, 1,000,000 Ordinary Shares and £750,000 $6\frac{1}{2}$ per cent Debenture Stock were offered for subscription, making the issued share capital £2,000,000. Mr Michael Crichton, OBE, who is the Chairman of The Foreign and Colonial Investment Trust Co. Ltd., and a Director of many other companies, and Mr Michael Verey, TD, a Director of J. Henry Schroder Wagg & Co., Limited, and other companies, both accepted an invitation to join the Board, and we may consider ourselves fortunate to have been joined by these two gentlemen whose wide knowledge of investment matters has lent great strength to our deliberations.

As forecast at the time of the public issue, two subsidiaries have been formed, R.I.T. Holdings Ltd., an investment trust, and R.I.T. Finance Ltd., a finance company, both with issued capitals of £100.

The time at which the new Ordinary Shares and Debenture Stock were placed coincided with a serious financial crisis in this country, and it was gratifying to your Directors that notwithstanding the difficult days of last July and the necessity for "The Little Budget" such a ready response was received.

DIVIDEND DECISION

Your Directors have sought to invest the money entrusted to them in sound companies with a reasonable geographical spread and giving at the same time a fair yield and some prospect of future growth. The break-up value of the ordinary shares was 24s. on March 31, 1962, and, in accordance with the terms of the prospectus, we have decided to distribute approximately 80 per cent of the profit by way of dividend on the ordinary shares.

It will be obvious to shareholders that the new money which was subscribed has only been in our hands for part of the year under review and in fact the average amount of money employed during the year has been £1,955,257, and it is on this average that the dividend now recommended has been earned.

In this connection the service of the $6\frac{1}{2}$ per cent Debenture Stock makes a heavy demand on the income available, and it will be appreciated, I hope, that the gearing which is such an attractive feature of all investment trusts cannot in the circumstances be expected to become advantageous for the first year or two. After writing down certain holdings, writing off the whole of the preliminary expenses and the appropriate proportion of the discount arising from the issue of the Company's Debenture Stock, a net surplus of £10,708 has arisen on capital account during the year. The Trust is invested on a yield basis which in the opinion of the Board is as high a rate as can be obtained after due allowance is made for growth as well as income.

SECOND CONTINUATION LIMITED

Since the end of the financial year your Directors have subscribed £200,000 in the capital of a corporate partner of N. M. Rothschild & Sons called Second Continuation Limited. Your Directors are satisfied that, taking a long view, this should prove a first class investment, but it should be borne in mind that the holding represents only about 6 per cent of the assets of your Company and a one-fifth participation in only one of the partners of that bank. Viewed in this light it is apparent that, although this investment gives to shareholders in Rothschild Investment Trust Limited the first opportunity that has been made available for investment in the banking firm of N. M. Rothschild & Sons, the interest is comparatively modest.

Taking all in all, your Directors are not dissatisfied with the results for the first year, but I must ask shareholders to view with caution any prospects of rapid or spectacular increase in the break-up value of their shares or in the income likely to be received by the Trust.

The report and accounts were adopted and the other formal business was duly transacted.

APPOINTMENTS

MALTA COLLEGE OF ARTS, SCIENCE AND TECHNOLOGY

Applications are invited for a LECTURER IN COMMERCE to develop Studies and teach a selection from ECONOMICS and GEOGRAPHY OF TRADE, ACCOUNTANCY, INDUSTRIAL MANAGEMENT.

Qualifications: Good degree. Some years' teaching experience in a major institution of Further Education plus industrial experience desirable.

The selected candidate will be required to take up duties as soon as may be possible, and may be required to teach some of the subjects enumerated at all levels.

Salary: The salary offered is that of BURNHAM SCALE FOR LECTURERS PLUS 30 PER CENT. Appointments are on contract terms for a period of three years.

Free passages to Malta will be provided for the successful candidate, his wife and children not exceeding five passages in all on first appointment, and free passages back to the U.K. on satisfactory completion of engagement. Children to be under 18 years, unmarried and dependent on the Appointee. Free quarters are not provided, but furnished flats at a reasonable rent are available.

Leave: Three and a half days for each completed month of service which can be aggregated at the end of contract plus Twenty-eight days leave per year to be taken normally during the Long Vacation.

APPLICATIONS (SIX COPIES), giving age, qualifications, experience and names of three referees, should be sent to THE COUNCIL FOR TECHNICAL EDUCATION AND TRAINING FOR OVERSEAS COUNTRIES, 12, Lincoln's Inn Fields, London, W.C.2, by July 20, 1962.

UNIVERSITY OF BRISTOL

DEPARTMENT OF EXTRA-MURAL STUDIES

Applications are invited for the post of STAFF TUTOR for secondment to Urchfont Manor Residential College in Wiltshire from as early a date as possible. Initial salary within the scale £1,150 x £50 x £1,500 x £75—£1,575, according to qualifications and experience.

Applicants should hold a good Honours Degree in Economics or Social Studies. Experience of adult education or research is not essential, but will be taken into account. The programme of the College includes many industrial courses, which offer interesting experience and contacts. The appointment is for an initial period of three years, subject to review and extension at the end of that period.

Applications (three copies, with names of referees) should be sent to the undersigned, from whom further particulars may be obtained, not later than Saturday, July 21, 1962.

H. C. BUTTERFIELD,
Registrar and Secretary.

CAMBRIDGE UNIVERSITY

Applications are invited for the position of Assistant in Research in the Department of Estate Management. Applicants should be qualified to undertake research in economic, legal, or social problems related to the use, tenure, or development of land. Salary scale £750-£1,000.—Further information may be obtained from the Secretary of the Board of Estate Management, 18a, Silver Street, Cambridge. Closing date for applications July 31, 1962.

UNIVERSITY OF KEELE

Applications are invited from graduates for the post of Secretary or Assistant Secretary to the Appointments Committee at an initial salary in the range £1,150 x £50—£1,500 x £75—£1,950 per annum, depending on qualifications and experience. F.S.S.U. and children's allowances. Industrial commercial or similar experience highly desirable.—Applications should reach the Registrar, The University, Keele, Staffs., from whom further particulars and application forms may be obtained, not later than July 14, 1962.

UNIVERSITY OF MALAYA

NON-FACULTY DEPARTMENT OF AGRICULTURE

Applications are invited for (a) one post of LECTURER/ASSISTANT LECTURER IN AGRICULTURAL ECONOMICS AND FARM MANAGEMENT and (b) one post of LECTURER/ASSISTANT LECTURER IN PLANT BREEDING AND GENETICS.

Candidates for post (a) should have a good Honours degree in Agricultural Economics, with specialist qualifications and post-graduate experience in Farm and Estate Management.

Candidates for post (b) should have a good Honours degree in Botany or in Agricultural Science with research and teaching experience in the above field.

For both posts, previous experience in tropical agriculture is desirable, but will not be regarded as essential in the case of candidates who are otherwise well qualified for appointment.

Salary Scale: The amounts mentioned below refer to Malayan dollars (per mensem) and their approximate sterling equivalents (per annum) are shown in brackets.

Lecturers M$820 x 35—1,030/1,100 x 40—1,300 (£1,148 x 49—1,442/1,540 x 56—1,820)

Assistant Lecturer M$715 x 35—785 (£1,001 x 49—1,099)

In addition, a variable allowance is at present paid at 35 per cent. of basic salary, subject to certain maxima, together with expatriation allowance if applicable, at specified rates. An allowance is made towards travelling expenses and housing assistance is available.

Further particulars and application forms are obtainable from the Secretary, Association of Universities of the British Commonwealth (Branch Office), Marlborough House, Pall Mall, London, S.W.1.

The closing date for the receipt of applications in Malaya and London is *July 31, 1962*.

THE ROYAL COLLEGE OF SCIENCE AND TECHNOLOGY, GLASGOW

FACULTY OF INDUSTRIAL AND SOCIAL STUDIES
CHAIR OF INDUSTRIAL ECONOMICS
CHAIR OF ECONOMIC AND INDUSTRIAL HISTORY

Consequent upon the recent Government announcement concerning the development of the College to full University status, arrangements are now being made to offer Degree Courses in a new Faculty of Industrial and Social Studies as from October, 1963. The first two professorial appointments arising are to the Chair of Industrial Economics and the Chair of Economic and Industrial History, for which applications are now invited. The successful applicants will be expected to take up duty not later than January 1, 1963, and preferably earlier by agreement.

Further particulars may be obtained from the Secretary, George Street, Glasgow, C.1, with whom applications (10 copies) should be lodged not later than August 18, 1962.

HASTINGS EDUCATION COMMITTEE

HASTINGS COLLEGE OF FURTHER EDUCATION

Required for September, Assistant Lecturer (Grade A) to teach mainly COMMERCE and ARITHMETIC, also ECONOMICS to G.C.E. Advanced Level from September, 1963.

Salary £570-£1,170 with Allowances in accordance with Burnham Report, 1961.

Application forms and full details from the Principal of the College, Archery Road, St. Leonards-on-Sea, Sussex.

Completed forms to be returned to the College, with not more than three testimonials, within 14 days from the date of the advertisement.

Canvassing will disqualify.

THE UNIVERSITY OF MANCHESTER

Applications are invited for the post of LECTURER IN PUBLIC ACCOUNTING in the Faculty of Economic and Social Studies. Candidates should have a University degree and membership of the Association of Chartered Municipal Treasurers, or equivalent experience in Public Institutions: e.g. Hospitals, Nationalised Industries or Local Government. Salary on a scale £1,150 to £1,950 per annum; initial salary according to qualifications and experience. Membership of F.S.S.U. and Children's Allowance Scheme. Applications should be sent not later than July 14, 1962, to the Registrar, The University, Manchester 13, from whom further particulars and forms of application may be obtained.

UNIVERSITY OF YORK

LECTURESHIPS IN POLITICS

Applications are invited for two Lectureships in Politics to date from October, 1963. Salary on Lecturers' scale according to experience and qualifications. A successful applicant if exceptionally well qualified may be appointed as Senior Lecturer. Applicants should, preferably, have a special interest in modern political theory, social institutions, or political behaviour.

Applications (three copies) naming three referees by July 23 to the Registrar, University of York, The King's Manor, York, from whom further details may be obtained.

THE UNIVERSITY OF MANCHESTER

Applications are invited for the post of LECTURER or ASSISTANT LECTURER IN ECONOMIC STATISTICS. Preference will be given to candidates with special interests in mathematical programming and/or statistical decision theory. Duties to commence on October 1, 1962, or as soon as possible thereafter. The salary scales are as follows:—Lecturer, £1,150 to £1,950 per annum; Assistant Lecturer, £900 to £1,050 per annum. Membership of the F.S.S.U. and Children's Allowance Scheme. Applications must be sent not later than July 16, 1962, to the Registrar, the University, Manchester 13, from whom further particulars and forms of application may be obtained.

For other appointments see page 106

THE DURHAM COLLEGES IN THE UNIVERSITY OF DURHAM

POSTGRADUATE STUDENTSHIP

Applications are invited for a Postgraduate Studentship, tenable for three years, with effect from October, 1962. The field to be covered will be either Anthropology, Geography, Politics or Economics, with reference to the Middle East, and the successful candidate must hold a good Honours degree in an appropriate subject. The Studentship is intended to train the candidate for an academic career in accordance with the recommendations of the Hayter Committee. The successful candidate will therefore be required to learn an appropriate Middle Eastern language and will spend approximately one year in the area with which he is concerned. A special additional grant will be made to finance this period abroad.

The financial arrangements will be in line with those of the Ministry of Education State Studentships in Arts subjects—i.e., payment of approved fees and a maintenance grant of £340-£450 a year. Family allowances may also be payable to candidates over 25 years of age.

Applications (three copies) should be sent not later than July 23, 1962, to the Registrar and Secretary, 38 North Bailey, Durham. Full details of education and qualifications and the names of three referees should be given.

COMPANY AFFAIRS

The rally in equity prices in the London market was well sustained until the weekend, but prices fell slightly afterwards and only on Wednesday did they begin to rise again. Over the week to Wednesday's close "The Economist" *indicator gained 8.5 points to 318.8. Gilt-edged issues and corporation stocks remained firm, on hopes of a further cut in bank rate or in special deposits, and the new Port of London Authority issue was well received. Among equities, insurance and property shares were in demand before the weekend, but afterwards demand fell away and the level of business in the market was very low, though on Wednesday steel shares made a good advance. Commercial television shares were unaffected by the latest government proposals.*

Beecham Feels the Pinch

THE preliminary results of the Beecham Group in May showed that its margins were under strong pressure, and since then its ordinary shares in the general decline in equity prices have fallen by 9s. 3d. to 37s. 10½d., to yield 4 per cent. In his statement with the full accounts the chairman, Mr H. G. Lazell, explains why trading profits fell by 5 per cent when sales rose by 4 per cent. The pressure on margins, as expected, has been particularly marked at home, where sales rose by 5 per cent (against 13 per cent in the previous year) but profits fell by 8 per cent. Home sales, at £39 million, account for two-thirds of the total of £58.6 million. The squeeze on domestic profits reflects the tightening of economic conditions: hitherto the Beecham Group has managed to offset rising costs by higher sales but in 1961-62 it was not able to push up sales quickly enough and the directors did not feel that they could raise prices to a level which would completely restore profit margins. Mr Lazell draws attention to the steep rise in the cost of television advertising.

Overseas profits have also proved disappointing, the rise of 2 per cent in sales being made at fractionally lower margins. This increase compares badly with the rise of 25 per cent in sales achieved in the previous year. Two major influences held the overseas results back: one was a loss of £400,000 following currency devaluations in South America and Canada, and the other was the failure of operations in the United States to live up to expectations. Marketing costs in the United States proved so unexpectedly high that the "substantial profit" that the directors anticipated failed to materialise; although Beecham added to its share of the market in hairdressing and shampoo products it did so at the expense of its profit margins and it appears that the group made a loss in the North American market.

On current prospects Mr Lazell is understandably guarded. More than half of the group's home sales are affected by the purchase tax imposed on soft drinks and confectionery. Although the full effect of the tax is as yet difficult to predict because many retailers had built up stocks before the budget, clearly Beecham will feel the pinch. Trading results in the United States should be better and Mr Lazell expects the growth of sales of "Brylcreem" and "Silvikrin" to offset the high cost of advertising and to result in profits in the current year. In the near future the balance sheet should show some growth in cash resources as the group has now completed a three-year period of high capital expenditure and commitments for the next three years should be well covered by cash flow. Mr Lazell backs Sir Harry Jephcott, the chairman of Glaxo, in his plea for a revision of patent law to encourage research in pharmaceuticals; though Beecham's sales in this field are expected to grow in the next few years this year's result will not depend on the success of this venture so much as on the trend of sales in Beecham's food and drink products and on its efforts to keep costs down.

Years to March 31	1958	1959	1960	1961	1962

Dividend yield: 4%, equal to 25 years' earnings.

Courage, Barclay and Simonds

COURAGE, BARCLAY AND SIMONDS is a regional rather than national brewer but the acquisition of Bristol Brewery Georges last year gave it outlets in the West Country; its trade now covers practically the whole of Southern England and it is also a junior partner in the Harp Lager venture. As the group's profit figure for 1960-61 of £4,428,000 excluded the results of Bristol Brewery Georges and Saccone and Speed no straightforward comparison can be made with the results for the year to March 31st last when gross profits of £6,361,000 (before higher interest payments) were earned. If, however, the £1,370,000 earned by BBG and Saccone in 1960-61 is added back, it appears that the group pushed up its profits by about 10 per cent. Those who questioned the price that Courage paid for BBG cannot but be impressed by these figures, which include about six months' trade at a higher rate of duty. The acquisition of BBG, however, was followed by a convertible debenture issue in August and an extension of bank overdraft facilities and the new financial burden is reflected in the increase in bank and debenture interest from £401,000 to £879,000. Net profits at £2,612,000 cover the maintained ordinary dividend of 14 per cent, paid on a bigger capital, just over twice, and there has thus been only a tiny dilution in earnings.

The directors have announced that the £1 ordinary shares will be split into 10s. units and there will be a one for two scrip issue. This might be accepted as an encouraging omen; but, on the other hand, full conversion of the debenture would raise the ordinary capital by about a sixth and this puts a limit on future increases in the dividend. The 6¾ per cent convertible second debenture, 1976-81, was issued in August at 99, which set the conversion price on the first option date in September, 1963, at 61s. 3d. With the ordinary shares standing at 74s. 6d. the option must look attractive to the original subscribers to the debenture, which now stands at 125 (imputing at the first conversion date a value of 77s. 3d. to the ordinary shares). The true measure of Courage's success will not be evident until the full benefits of rationalisation are realised but so far the signs are encouraging and the market's hopes are reflected in the debenture price and the yield of 3.8 per cent on the ordinary shares.

Steel Interims

THE steel interim dividend season closed as it began with the anouncement of disappointing trading results. The dividend policies followed by the two companies concerned, however, were sharply contrasted. **Whitehead Iron and Steel,** like many of the other steel makers, has cut its interim payment. The reduction from 6¼ to 4 per cent follows a fall of 46 per cent in gross profits from £597,000 to £321,000 in the six months to March 31st, which marked the fifth consecutive fall in half-yearly profits. As the tax charge was proportionately lighter net profits fell by just under 40 per cent from £269,000 to £162,000. This suggests that earnings were running at a rate of about 21 per cent in the six months to March 31st, compared with a rate of 31 per cent in the year to September 30, 1961. Clearly, the group's substantial holdings of liquid assets and the directors' opinion that "present trading conditions are a little more satisfactory and it is anticipated that the results for the second half of the year will show an improvement" were not considered sufficient of a support for a maintained interim. Its reduction, indeed, came as no real surprise to the stock market and the £1 ordinary shares now stand at 33s. 3d.

While Whitehead is mainly engaged in steel rolling, **Hadfields** is concerned largely with specialist steels and steel products such as mining equipment and gas turbine blades. The directors say that, in common with many other steelmakers, their trade this year has been disappointing and add that "apart from investment income, the company has only made a marginal profit on production this year" and the immediate future is not promising. The implication must be that trading profits for the year as a whole will be very small, but investment income is expected to rise from £98,000 to £230,000 in the current year and to amount to £300,000 in a full year. Following the rescue operation and the injection of new capital into Hadfields, the directors have decided to equalise dividends and failing any worsening of the trading results expect to pay at least 6 per cent for the year to end-September, 1962, and again in the following year. The interim dividend this year is thus 3 per cent and the total of 6 per cent compares with 4 per cent paid in 1960-61. The directors say that a 6 per cent payment in the current year will probably involve drawing on the unappropriated profits reserve, which amounts to over £1,000,000. The directors claim that the existence of this reserve, the volume of investment income and the group's substantial holdings of liquid assets, justify the new dividend policy. No doubt those who have invested new capital in Hadfields want to see an immediate return on their money. But part at least of the dividend may be coming out of reserves and thus out of the capital assets of the group. Investment income will, moreover, remain high only until expenditure on new plant and equipment falls due and the holdings of liquid assets will be reduced once such capital expenditures are made. And, as the directors admit, there will be a time-lag before the reorganisation and re-equipment schemes produce good results. How sound will this dividend policy, which in effect anticipates future benefits, look if the reorganisation and re-equipment schemes fail to come up to the directors' expectations? The stock market, where the shares at 14s. yield 8.6 per cent, is cautious.

De La Rue

THE tone of the full report from De La Rue is confidently optimistic and adds to the attraction of the rights issue announced with the preliminary figures last month. The group's gross profits rose by 13¾ per cent from £2,287,000 to £2,599,000 in the year to March 31st. By far the biggest increase in profit came from the Thomas De La Rue International subsidiary which includes the interests in security and banknote printing and in engineering and whose gross profits more than doubled from £588,000 to £1,233,000. The profits of the domestic boiler manufacturer, Thomas Potterton, fell by £14,000 to £338,000 and those of Formica International fell from £1,507,000 to £1,298,000. The chairman, Mr B. C. Westall, says that both Formica and Potterton produced more but earned lower profits for the second year in succession. Formica, in particular, seems to have experienced unexpectedly high losses in the new German factory.

The accounts reveal the group's need for new money, for capital expenditure of £1,250,000 and further investments of over £500,000 in Spain and Belgium ran well ahead of the cash flow of £1,126,000 and the group's overdraft rose to £2 million. The new issue, one-for-one at 10s. per share makes the rights worth 23s. 3d. and will raise just over £2¾ million, which the directors believe to be "sufficient for the time being to enable the expansion of the group to be continued." It is launched at a time when the prospect is reasonably encouraging. Mr Westall says that the order book of the group is "very substantially higher than it was a year ago" and on the basis of the first few weeks of the current year he expects the results to show a "reasonable improvement" over last year. Orders in the printing side of the business are higher than they were at the same time last year; the order book of Potterton is also bigger and without referring specifically to orders or profits, Mr Westall says that the directors expect Formica "to resume its advance" in this country. At 57s. 6d. the 10s. ordinary shares yield 4 per cent ex rights on a dividend of 13¾ per cent, covered twice by earnings.

British Plaster Board

OVER the last five years the growth in the gross profits of British Plaster Board has kept pace with the growth in capital employed, and the gross rate of return has remained practically constant at 20-21 per cent. This is not an exciting record, but at least a stable rate of return on capital funds is better than the decline in returns reported by many industries. The rate dipped slightly in the year to March 31st, to about 19½ per cent, for though the year began well, gross profits for the whole year were only £7,000 higher at £3,217,000. In view of what he describes as a "downward trend in the amount of new building construction" in this country and the rise in the cost of labour, fuel and transport, the chairman, Sir Graham Hayman, clearly considers the results to be satisfactory. Provided that no further restrictions are placed on credit, he is confident that the volume of BPB's trade in Britain will remain at a high level and he describes the prospects for the future progress of the group overseas, where in some markets there is clear evidence of pressure on margins as favourable.

Sir Graham, indeed, directly attributes the increase in the ordinary dividend from 11¼ to 12½ per cent to the fact that higher costs were offset to a greater extent than had been anticipated by bigger sales and to the decision to charge depreciation in the future at a lower, though "still conservative," rate than in the past. The stock market does not rank BPB among the growth stocks of the building industry, but the stability reflected in the yield of 5.2 per cent, covered twice, offered by the 10s. shares at 24s. 9d, should not be overlooked.

Lancashire Cotton

THE gloom overhanging Lancashire darkened three weeks ago when Fine Spinners and Doublers announced that its net trading profits had fallen by more than 50 per cent; but even after this sombre prelude the interim report of Lancashire Cotton came as a shock. Profits in the half year to April 30th before depreciation or tax, but after debenture interest, amounted to no more than £741,000—barely one third of the comparable figure of £2,122,000 for the first half of 1960-61 and less than one-fifth of the total of £3,775,000 for the whole of 1960-61.

The effect on margins of falling yarn sales, which have left the mills working well below capacity and have pushed up unit costs, and the pressure on selling prices have obviously more than outweighed any benefits Lancashire Cotton has gained from its policy of diversification outside the cotton industry. Short of a miracle in the current half year the directors can have been faced with little alternative but to cut the interim dividend. In the event the reduction from 7½ to 5 per cent is perhaps paradoxically the most heartening part of the interim statement; for though the dividend is probably short-earned on the half year's profits the fact that it has not been further suggests that the directors hope for some improvement in trade by the end of the financial year.

THE MONEY MARKET

THE Treasury bill rate rose by 1s. 5.19d. to £3 18s. 5.03d. per cent at last Friday's bill tender when the syndicate of discount houses lowered its agreed bid by 4d. to £99 0s. 4d. Although the market has lowered its bid, and therefore raised its rate, two weeks running it has nonetheless increased its bill allotment on both occasions. The reason for this success has been the sharp reduction in outside applications. In two weeks, total applications have fallen by £58 million to £365 million—from the year's high point to the year's low point.

The half year made credit first very tight and then very easy. On Friday, after the market had lowered its bid, three or four houses were actually forced to borrow a moderate amount from the Bank of England at Bank rate. On Saturday credit was extremely tight, and a very large amount of assistance from the authorities was still not enough to prevent one or two houses calling on the Bank for a small amount. On Monday credit was so easy that they sold a very large number of bills to absorb the surplus credit.

In New York last week, the three-month bill rate rose to 2.930 per cent, its highest level since June, 1960, from 2.792 per cent.

APPOINTMENTS

FORMICA INTERNATIONAL LIMITED

a member of the De La Rue Group

wish to appoint

AN ACCOUNTANT

Applications are invited from men aged 25-35 years who have had several years' experience in industry and who have a sound knowledge of all aspects of Accountancy with particular emphasis on Financial and Management Techniques, preferably involving overseas operations.

An ability to converse in French, German or Spanish will be an advantage.

The successful candidate must be prepared to travel abroad for short periods and will require the personality and initiative to work successfully at top level.

This is a first class opportunity for a man of character who is at present earning a good salary and is capable of assuming greater responsibilities in an expanding and successful group.

Please write to the

Chief Personnel Officer, Formica Limited, De La Rue House, 84-86, Regent Street, London, W.1

quoting ref. R.7202 and giving brief details of age, education and experience.

AN INVESTMENT ANALYST is required by a leading firm of Stockbrokers for their Research Department. The essential attributes are high intelligence, the initiative to conduct original research, and the ability to formulate and express conclusions on paper. The ideal applicant would also have a background of economics and Stock Exchange practice, coupled with a thorough grounding and experience of investment analysis; but there may also be room for a younger man, with the same qualities but less experience, to train for the same duties.—Reply with brief particulars to Box TE.786, c/o Hanway House, Clark's Place, E.C.2.

BRISTOL COLLEGE OF SCIENCE AND TECHNOLOGY

DEPARTMENT OF SOCIAL AND GENERAL STUDIES

Applications are invited for the post of

RESEARCH ASSISTANT

from persons qualified in the Social Sciences. The successful applicant would assist in research of an educational and sociological nature and would be responsible to the Head of Department.

Salary not less than £700 for a graduate.

Application forms and further particulars from the Secretary and Registrar, Bristol College of Science & Technology, Ashley Down, Bristol 7.

Quote reference CST 62/42.

ECONOMIC RESEARCH

A large manufacturing company, the British member of an international group, wish to recruit an able and experienced young economist who is seeking a career in economic analysis or economic research in industry.

His duties will include the provision of an economic intelligence service; collaboration in long-term forecasts and general studies of marketing policy.

Candidates should be under 30 years of age and should have undertaken post-graduate research. Further, since it is intended to develop the scope of the work, the successful candidate will be one who can show real evidence of initiative as well as ability.

An attractive starting salary will be offered and there will be considerable scope for increased earnings. The Company's employee plans provide also for Pension, Group Life Assurance, housing and education.

Letters of application should be fully detailed and sent to **Box 1639.**

AUSTRALIAN NATIONAL UNIVERSITY

INSTITUTE OF ADVANCED STUDIES

RESEARCH SCHOOL OF SOCIAL SCIENCES

Applications are invited for the position of *Research Fellow* or *Senior Research Fellow* in the *Department of Demography*. (Head of the Department: Professor W. D. Borrie.)

The appointment will be within the salary range £A1,856-£A2,450 for a Research Fellow or £A2,620-£A3,160 for a Senior Research Fellow.

While appointments in these categories are usually for three years with possible extension to a maximum of five years, a shorter term may be considered.

Reasonable appointment expenses will be paid for the successful applicant and his family.

The research interests of the Department include the broader historical, social and economic studies of population movements, such as international migration, fertility and mortality. Current research is focused upon Australia, New Zealand, the Pacific Islands and South Eastern Asia, but research is not necessarily limited to these areas.

Further details should be obtained from the Secretary, Association of Universities of the British Commonwealth (Branch Office), Marlborough House, Pall Mall, London, S.W.1.

Applications close in Australia and London on *August 20, 1962.*

Pritchard Wood require

MEDIA RESEARCH MANAGER

He must have practical experience in all forms of advertising research and should have a degree in Economics.

He should be capable of initiating and implementing original research as well as supervising the day-to-day work of a busy Media Research department.

He will be in close contact with clients, as well as with all departments of the Agency.

This senior appointment, for an enthusiastic man with plenty of initiative, carries a commensurate salary.

Write or phone Mrs. Ena Leech, Personnel Manager, PRITCHARD WOOD & PARTNERS, 197 Knightsbridge, S.W.7. KENsington 8151.

UNIVERSITY COLLEGE OF SWANSEA

LOWER SWANSEA VALLEY PROJECT

APPOINTMENT OF A RESEARCH ECONOMIST

Applications are invited for appointment as Research Economist to examine and report on the prospects of new industrial growth in an old industrial area, together with the economics of land use in the area. The appointment will be for two years within the scale £1,150 x £50—£1,250 plus F.S.S.U. and Children's Allowances. Applications (6 copies) giving the names of two referees should be sent, by July 31, 1962, to the Registrar, University College of Swansea, Singleton Park, Swansea, from whom further particulars may be obtained.

THE SOUTH WALES ELECTRICITY BOARD

PRINCIPAL ASSISTANT (STATISTICS)

Applications are invited for the superannuable position as Principal Assistant (Statistics) in the Board's Research Group at Head Office, St. Mellons, Cardiff.

The work includes development of costing methods suitable for a Joint Supply Industry, analysis of engineering and commercial data and preparation of budgets.

The successful candidate should preferably be a graduate in mathematics or statistics and have practical experience of statistical work.

Salary: N.P.C. Grade 8 (£1,380-£1,500 per annum).

Applications should be submitted on forms obtainable from the undersigned and returned to him not later than 21st July, 1962. Envelopes should be endorsed Principal Assistant (Statistics) 88/62.

R. G. WILLIAMS, Secretary.

THE FINANCIAL CORPORATION FOR OVERSEAS COUNTRIES

3-5 rue du Conseil Général, in Geneva, which owns subsidiary banking corporations in Africa and whose main shareholders are:

Banca d'America e d'Italia
Bank of America (International)
Banque Lambert
Banque Nationale pour le Commerce et l'Industrie
Berliner Handels-Gesellschaft

invites application for overseas appointments from ambitious and enthusiastic young executives of any nationality with banking experience.

Maximum duration of each tour in Africa: 18 months with 6 weeks' leave in Europe. Basic salary guaranteed in Switzerland. Provident fund in Swiss francs.

This organisation is expanding rapidly and opportunities for promotion are plentiful for the right persons.

Write, giving full details of personal history, to above address.

For other appointments see page 99

ECONOMIC AFFAIRS REFERENCE SERVICE

CENTRAL OFFICE OF INFORMATION (ECONOMIC UNIT) requires an Information Officer (unestablished) to write reference information papers and provide factual briefing for overseas use on British and international affairs. Desirable qualifications are a university degree in economics or a related subject, research experience, and the ability to present factual information concisely and accurately. Familiarity with technological matters would be an asset. Candidates may be asked to produce examples of written work. Salary £1,282-£1,490.—Write, giving age, full details of experience and qualifications, to Manager (PE.1430), Ministry of Labour, Professional and Executive Register, Atlantic House, Farringdon Street, London, E.C.4.

THE RANK ORGANISATION

ORGANISATION AND METHODS DEPARTMENT

O and M ASSISTANT

An experienced Organisation and Methods Assistant is required at Victoria. He should preferably possess a university degree or professional qualification and have a successful record in O and M work. This is a challenging job covering a wide variety of assignments and will carry a salary commensurate with responsibility.

A further vacancy also exists for a qualified accountant with commercial and organisation and methods experience.

Apply to: The Personnel Officer (O & M)

THE RANK ORGANISATION LTD., 11, BELGRAVE ROAD, S.W.1.

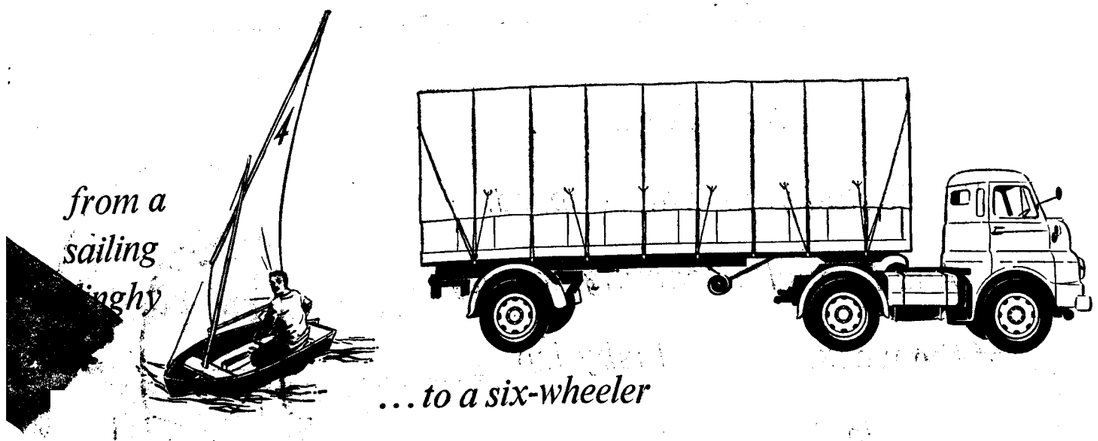
General Secretary: **Stanley Heesom, O.B.E.**



Lloyds & Scottish Finance helps manufacturers and merchants to sell...helps firms and individuals to buy

A comprehensive hire purchase service backed by two great banks

Through its integration of two long-established finance houses—Scottish Midland Guarantee Trust and Olds Discount—Lloyds & Scottish Finance Ltd. represents an unusual concentration of specialized skill and experience in financing the purchase of: ● *Cars, commercial vehicles and motor-cycles* ● *Industrial and agricultural plant and equipment* ● *Domestic electrical appliances and household goods.*

To traders in motor vehicles, radio, television, and domestic appliances and furniture, Lloyds & Scottish Finance offers both direct collection and block discounting facilities. The manufacturing and building industries, and other users of capital equipment and machinery, including agriculture, are employing its financial resources on an increasing scale. And convenient time payments are arranged for individuals for central heating installations, marine craft, garages and garage extensions, school fees and other such personal requirements.

Lloyds & Scottish Finance Ltd. is a subsidiary of Lloyds & Scottish Ltd., a holding company with a capital of £15,000,000 jointly owned by Lloyds Bank and National Commercial Bank of Scotland. With assets now exceeding £100,000,000, Lloyds & Scottish Finance is well placed for further expansion. Through its country-wide network of branch offices it has established a reputation for efficient, courteous and understanding service to all its customers.

"Coal? You're kidding!"

Every schoolboy knows that seeing is believing – and you can't blame the young sceptic for refusing to believe something incredible. Incredible? It was. But today, coal is being delivered under pressure, invisible and dust-proof in its flexible hose – a ton every three minutes – from road tankers to more and more customers. If you want the most economical heat nature can provide, you want coal. And now, coal can be delivered without dust or disturbance, without extra labour or lost time.
The coal industry today is a leader in the development of new techniques; constantly and vigorously demonstrating in so many ways that coal and progress are synonymous.

PROGRESSIVE INDUSTRY PLANS ITS FUTURE ON COAL

INTERNATIONAL

INTERDEPENDENCE

With the crowning of Franco-German reconciliation and President Kennedy's doctrine of interdependence, the forces impelling western unity are swinging into swift, and perhaps colliding, stampede. Nimble movement is required from Washington and London if western Europe is to group itself into the kind of union that could, and should, develop eventually into an Atlantic partnership (p. 123).

• President Kennedy's grander design for **world integration** is for a more remote future (p. 147).

• Against a background of pageantry—and a politely indifferent French public—General de Gaulle and Dr Adenauer have been pressing on with their plans for **western Europe's political union** (p. 160).

Dr Adenauer may have missed the affability of Paris when he returned to a chilly climate on the Rhine (p. 132).

Unity between the western allies makes a poor showing when the question is **Berlin** (p. 134).

The **"rainbow" explosion** in the Pacific is only part of a triple bill on America's nuclear stage (p. 151).

INDEPENDENCE

Fire smoulders under **independent Algeria** as the rival leaders set up their separate strong points (p. 131).

In scrupulous effort to avert an explosion the **French**—and the **Egyptians**—are playing it cool: Paris not backing its favourite, **Mr ben Khedda** (p. 159); Cairo not backing its favourite, **Mr ben Bella** (p. 131).

The **Moroccans**, playing punctilious host to both factions, are urgently concerned with their own claims to **Saharan territory** (p. 131).

Mr Maudling has dealt briskly with some of the problems obstructing **Kenya's transformation** from colony to nation (p. 159).

Laotian neutrality has been recognised at Geneva but no formula has been found for merging its less-than-neutral armies (p. 135).

Malaysia's emergence from dream to reality is close (p. 165).

DEPENDENCE

Appeal to intelligent economic self-interest is the most effective argument for loosening the tight fists of advanced, and relatively wealthy, nations for **developing the poorer nations** (p. 129).

Persia depends on foreign aid, and foreign aid depends on Persia's self-help (p. 161).

Czechoslovakia's president is running risks (p. 137).

General Franco has designated the successor whom the army would have chosen even if he had not (p. 132).

PENCE

American businessmen got one **tax cut** this week and may get another during the summer—and maybe a third if the economic situation deteriorates further (p. 148).

How can **American teachers** improve their bargaining position without being unprofessional? (p. 151).

More good than evil may come out of the **Saskatchewan doctors' strike** (p. 162).

HOME

SIGNS AND PORTENTS

The Government is in mountainous labour, heavy with (among other things) "further measures" to implement its incomes policy: the result need not be the traditional mouse if some unorthodox suggestions are followed (p. 125).

At Westminster, Tory morale is low: but the party's leaders think there is light ahead (p. 130).

Gilt-edged stocks are enjoying a return to favour; but twice-shy investors are less enthusiastic about long-term prospects than they might be (p. 169).

The London County Council is commendably worried about **London's homeless**: but it has not yet recognised the obvious way of helping them (p. 134).

Newport, in Monmouthshire, is looking forward without joy to the day when the **Severn Bridge** makes it the focus of westward transport (p. 145).

HAPPY AUGURIES

Any new signs of revolt on the left of the parliamentary **Labour Party** need not be taken seriously—at least until after a general election (p. 130): two researchers have produced interesting documentation of the swing to Gaitskellism (p. 145).

Railwaymen and mineworkers, at the annual conferences of their unions, struck a new note of sobriety and sense (p. 132).

The success of the **City of London Festival**—latest of a long line of artistic jamborees—may do much to set a fashion in patronage (p. 144).

"Nation shall speak peace unto nation. . . .": Telstar explained (p. 175).

ILL OMENS

A falling rate of **air accidents** for distance travelled is small consolation for the carnage among passengers: much remains undone which could be done to prevent accidents (p. 170).

British motor cycles, the noisy sort, are facing a bleak future; but they may be the only survivors of the onslaught of affluence (p. 172).

Labour was expecting on Thursday to win the Leicester North-east **by-election** with a majority of around 5,000 to 6,000: if it has not done better than this, its recovery will still look pretty shaky (p. 132).

Two decisions this week by the appeal court have disturbing implications (p. 134).

Ill winds: British's research into germ warfare has proved how devastating it could be: it has also turned up important medical discoveries (p. 127).

The only daily jets to Texas

...now on Pan Am

Pan Am Jet Clippers fly direct from London or Frankfurt—no change of plane to Dallas and Houston! You fly straight to the heart of the oil and cowboy country. Excellent connections for Central and South America.

Make connections with a Pan Am Jet in London. Only 9 hours to Chicago, 12½ hours to Dallas, or 14 hours to Houston—no change of plane all the way! (Beyond Chicago your Pan Am Clipper flies over the route of Braniff Airways.)

Round-trip Jet Economy fare London—Dallas, is just $653*, or $669* to Houston. On every flight there's also first-class service. Look into group-fare savings available to groups as small as 25 people. For reservations, call your Travel Agent or Pan Am.

*Plus U.S. Tax on U.S. portion of your trip. Clipper, Trade-Mark, Reg. U.S. Pat. Off.

Bound for Mexico Central or South America?

Pan Am connections from Houston are convenient and fast. Or stop over in Texas on your way south if you wish.

Giants' feet have rubber soles

Many of today's construction colossi stand on mats made from one of the various types of Polysar* rubber. Polysar shock absorbers insulate the footings from the building proper, dampen the vibrations caused by road and rail traffic. You'll find Polysar rubber in floor tiling, in stair treads and rails, stripping for windows and doors, in cable and wiring, caulking compounds and sealers, escalator steps and platforms. In fact from sub-surface rock to weather-bombarded roofing, Polysar rubber is vital to the construction industry.

If you are planning a new process, a new product, or improvements to an old one, success can depend on your finding a new raw material. A most promising source may lie among the 40 different types of Polysar synthetic rubbers, produced by the Polymer Corporation Limited.

Within the world-wide Polymer organization there is a representative nearby, ready to advise you. A letter to the Marketing Division, Polymer Corporation Limited, Sarnia, Canada, will put him in touch with you.

Certainly not..

Clearly, no one in his senses would use chewing gum at a time and place such as this.

However there are times and places where the use of chewing gum can be most beneficial; in fact its discreet use is a mark of tact and consideration for others as it is a definite aid to oral hygiene.

Doublemint chewing gum is especially made for such people. Its ingredients are carefully selected throughout, even its flavour has been double distilled; in fact, as its name implies, Doublemint is double good and gives you double benefits in many ways.

Try some at the right time and in the right place and see for yourself.

I·C·T SELLS ITS 100TH SECOND GENERATION COMPUTER

Here are the facts. A hundred computers, each worth between £65,000 and £300,000, have been sold. More than forty have been bought by firms in Europe, Africa and Australasia.

What will they be used for?

Dozens of different jobs such as invoicing; sales, purchase and stores accounting; market analysis; payroll; production planning and control; hire purchase and rental accounting; banking and insurance procedures; public utility and local government accounting; merchandising control; scientific calculations, statistical analysis, and so on.

How will they do it?

By employing specifications with infinite variety and expansibility. Computers with up to 12 magnetic tape units with search speeds varying from 10,000 to 90,000 digits per second; with backing stores in the form of data record files, high-speed drums and data disc files catering for 12,000 words through to 176 million characters; with very fast input and output, paper tape, and interrogation facilities.

I·C·T computer specifications meet any demand that modern business can make with the utmost economy and efficiency, and the equipment can be expanded on site at any time to satisfy the requirements of increasing momentum.

Here are just a few of the organisations that have ordered these computers in the United Kingdom:—

B.P. Refinery (Llandarcy) Ltd.
Bristol Siddeley Engines Ltd.
British Railways (Eastern Region)
Carreras Ltd.
C. H. Elkes & Sons Ltd.
Freeman, Hardy & Willis Ltd.
Lancashire County Council
Liverpool Victoria Friendly Society
London Electricity Board
Milk Marketing Board
Mantague Burton Ltd.
Pfizer Ltd.
Rubery Owen & Co. Ltd.
South Western Regional Hospital Board
University of London
Vickers-Armstrongs (Engineers) Ltd.

And a sample of sales overseas:

AUSTRALIA:
W. D. & H. O. Wills (Ausl.) Ltd., and The Colonial Sugar Refining Co. Ltd.
DENMARK:
A/S Forsikringsselskabet Codan
FRANCE:
Societe Economique d'Alimentation, and Cie d'Assurances Le Monde
GERMANY:
Hamburger Hafen und Lagerhaus AG., and Süddeutsch Bremsen AG.
IRELAND:
Revenue Commissioners for the Republic of Ireland, and Esso Petroleum Co. (Ireland) Ltd.
NEW ZEALAND:
New Zealand Government Department of Education, and Cadbury, Fry, Hudson Ltd.
RHODESIA:
Rhodesia Railways
SOUTH AFRICA:
Johannesburg Municipality, and South African Railways & Harbours
TRINIDAD:
Government of Trinidad & Tobago Central Statistical Office,
and so on.

With every one of these computers goes the most comprehensive and thorough computer pre-sale and post-sale service available anywhere. Meticulous research into the customer's individual problem; computer education and training, from management to operators; the facilities of extensive program libraries of utility and sub-routines and autocoding systems. And the vast background of I·C·T's data processing experience.

Europe or Atlantis?

TWO resounding gestures, Mr Kennedy's Independence Day speech at Philadelphia and the pageantry of national reconciliation offered by General de Gaulle to Dr Adenauer for six days in France, last week reminded the Atlantic world of the dizzy speed at which its affairs are now evolving. Some shrewd Europeans concluded at once that Mr Kennedy's announcement of the American goal of an Atlantic partnership was addressed to the two elderly rulers of France and Germany, as a reminder that any project for a new Europe was a direct American concern.

More probably, in fact, Mr Kennedy was first and foremost concerned to bring home to the American nation what his spokesmen had been trying to tell them for some time: that American actions now have to be seen within the framework of a Grand Design for Atlantic unity (a unity intended, as he emphasised, to be capable later of world-wide extension). His speech is discussed in its American setting on page 147. As the best day for it, the Fourth of July must have chosen itself. Still, it remains true that Dr Adenauer's business with General de Gaulle in Paris was doubly relevant to what the American President said in Philadelphia. The reconciliation of their two nations is a necessary condition of Atlantic unity; it also, in the way it is being managed just at present, offers a possible obstruction to it.

Dr Adenauer's week in France ended in a series of spectacles full of symbolism: the joint parade of German and French troops at Mourmelon in the Champagne (the historic theatre of German-French wars), and the High Mass in the cathedral of Rheims. It would be wrong either to overrate the psychological depth, or to underrate the political effectiveness, of this demonstrative act of reconciliation. The French public's reaction to it all was well-mannered and not unfriendly; but, by and large, it seems to have shown the visiting Chancellor much the same degree of polite disinterest as it accords to its own government. The warm embrace was for the leaders—who, however, are both gravely determined that it shall not be left there.

Welcome and respect are due from the other western nations, including the British, to these acts of friendship between Germans and Frenchmen. Their friendship is, after all, a necessary starting-point for any project of western unity—whether Community Europe, or the Gaullist Europe of the Fatherlands, or Mr Kennedy's Grand Design. At the same time the British may, indeed must, pore over the De Gaulle-Adenauer statement of July 5th (when their political talks ended) and sound the echoes to find out what form the Franco-German friendship is going to take, and what place it allots to Britain.

Britain's European policy has been based for the past two years on the proposition that British political relations with continental western Europe can best—perhaps only—be put on a satisfactory basis if Britain enters the common market. The proposition remains valid; but there is a complicating factor, which has lately grown alarmingly in importance. Perhaps not entirely by chance, the swing of British policy coincided, within a few weeks in the summer of 1960, with General de Gaulle's proposal to the other common market members that they should form a political union separate, and on different lines, from the institutions of the existing European communities.

The two efforts—Britain's, to get into the common market; France's, to organise the political union of the Six—went on for a time side by side, until

on April 10th Mr Edward Heath took the occasion of a ministerial meeting of Western European Union to say that the time had come when the British Government should be brought into the political talks. The next meeting of the Six on political union, a week later, ran into deadlock, the Belgians and Dutch refusing to go ahead while the question of Britain remained unsettled. After three months of standstill, Dr Adenauer and General de Gaulle have now agreed to pursue the project actively again—as it seems, in some haste, without bringing the British in, and without waiting for the outcome of the Brussels negotiations.

If this means what it seems to mean, it puts the British Government in a double difficulty. Britain's overriding motive for going into Europe is political. But if, on crossing the threshold of the common market, Britain finds in the room beyond a prefabricated inner sanctum of political union and has to start groping for the key to that, then the political prize will have been neatly whisked from its grasp. What is more, the timetable that General de Gaulle and Dr Adenauer are believed to have in mind could add to the difficulties of entry into the common market itself. The Government is still hoping to reach, by August, an outline of terms which it can present to the Commonwealth Prime Ministers in September and to Parliament in October. The fact that the fag-end of this year and much of 1963 would then be taken up by the donkey-work of drafting, legislating, and ratifications is not really relevant: unless there is a hitch, this coming October will be the month of decision. But General de Gaulle and Dr Adenauer are believed to have agreed to press for a meeting of heads of government of the Six, to pursue the project of a Union of European States, in the latter half of September. To be ostentatiously by-passed by its proposed partners just at that moment, and on so important and so relevant a matter, is not going to help the Government to get Parliament to approve the common market terms.

NOBODY suggests that Dr Adenauer, who is stated in Paris to have pressed General de Gaulle for this spurt in the political talks, has any obstructive purpose in mind. His anxiety, no doubt, is to crown the edifice of Franco-German reconciliation before he himself leaves the scene. Quite possibly it is made doubly urgent by his well-known disbelief in the competence or steadfastness of any German politician who might come after him. General de Gaulle, whose tactical mastery it is impossible not to admire, may have allowed Dr Adenauer to provide the motive force for the operation of keeping the key to Europe in French hands, where the British put it years ago.

It is true that Dr Adenauer, as his grip on his own country's affairs weakens, is becoming a shaky pillar for any policy that does not command majority support in Bonn—as a project deliberately to leave the British out of a political union they were willing to join would not. But, though Dr Adenauer's ministers and party captains may (and do) grumble, the Bundestag has gone on holiday until October; it is not clear who in Bonn, between now and then, can stop Dr Adenauer having his own way if he is bent on it. Not surprisingly, the British Government has been busy telling Paris and Bonn, in more vigorous language than Mr Heath used on April 10th, that if there are to be talks on political union, Britain wants to be brought in, and to be seen to be brought in.

Thus a packed and lively summer and autumn are promised in European politics; and it is hardly to be supposed that the United States will hold back from taking a hand. Unlike its predecessor, the Kennedy Administration is one that feels the need to evolve and display a philosophical framework for its actions. In the framework displayed at Philadelphia on Independence Day, the idea of "interdependence" is used to link two apparently opposed requirements—the need to learn to work with the post-colonial world of multiplying independent centres of national power, and the need to base the western system securely on a community of the North Atlantic peoples with their common European origins.

INTERESTING as the philosophy is, the shove that has impelled it so quickly into the open has obviously come from concrete national interest. As the western European revival has gathered speed, the possibilities of a revived western Europe acting as an independent political force have become more imminent and, to Washington, more alarming. The Trade Expansion Bill is a useful but not, by itself, a sufficient instrument to cope with the new European pretensions that are coming into view. Washington has had the experience this spring of finding its freedom to discuss Berlin with the Russians narrowly circumscribed by Dr Adenauer and General de Gaulle, acting together. It has not succeeded in getting a concerted western aid policy, without which a satisfactory relationship with the underdeveloped countries (discussed in an article on page 129) can hardly begin.

Neither precept nor example has produced from the Europeans the accessions of conventional military strength to Nato which were announced as an urgent need last year. Instead, French and British cling to their independent (and, in American eyes, useless) nuclear forces; the Germans press for a Nato or European nuclear force controlled separately from the American strategic system; French pressure for the Union of European States is accompanied by talk of a common "European" defence policy which, obviously enough, is not intended to be necessarily the same as the common Nato defence policy. None of these separatist strivings releases the Americans in any degree from the fearful burden of their commitment to come to the rescue of western Europe in any mess it may get itself into with the Russians. Thus, looking ahead, they are forced to the recognition (not so very different from that which Britain faced two or three years ago) that they must either get closer to Europe, or lose the power to influence its affairs. Probably the prospect of western Europe taking a separate course in nuclear defence has done more than any other factor to bring these apprehensions into focus at this moment.

Rheims: Church and State

An American design to correct this drift towards a position in which western Europe, the weaker, could act freely while America, the stronger, remained tied to its tail must depend in some part on Britain. Britain is still the European country which the Americans can best understand and where they can best make themselves understood; and a Britain that is no longer imperial no longer presents the old embarrassments as an associate. The mere thought of America having to "choose" between Britain and Europe is as painful as it is absurd. As first priority, therefore, Washington wants Britain in the European Economic Community. But the reasons for this are political, and include the hope that Britain may influence, and take part in, whatever political projection the community may eventually form. A political union deliberately formed without Britain, at a time when Britain was willing to go in, would be a rebuff to Mr Kennedy as much as to Mr Macmillan.

In Paris, if not in Bonn, Britain is still regarded as the particular friend of America, a member of that long-resented entity known to General de Gaulle as *les Anglo-Saxons*, whose encroachments on France's domain he has resisted for so long. A warm American pressure for a closer Atlantic partnership is bound to set up some European resistance among people who will see such a partnership as an American threat to Europe's independence. Doubtless some people in Paris, and some elsewhere on the Continent, at present see Britain as an American trojan horse. In a sense it is, and quite rightly; it is a pity a trojan horse cannot be more nimble sometimes. Western Europe and North America are going to share the same future, good or bad; if the European union is one on which an Atlantic partnership can be based, the future will be that much the brighter. Some counter-manœuvre and evasive action have to be expected; but it will come from a minority, almost certainly quite small, among the western Europeans; and it will probably fail if the British play their cards properly this summer and autumn.

Debagging the Cat

The Prime Minister has said that the Government needs to find "further measures" through which to implement its incomes policy. Here are some suggestions.

WE are now, once again, paddling up towards a change of emphasis in British economic policy. So far, two things have held the Government back this year from re-expanding demand. One has been its short-term assumption that if it continued to maintain "some slack in the domestic economy" it would be in a good posture to enable Britain to run a large balance of payments surplus in 1962. But it is just beginning to be realised that a large further improvement in Britain's balance of payments this year would mean that there would have to be a large further deterioration in other countries' balances of payments; and that these other countries would then respond by holding back their own already sluggish internal demand. It is not very clear why Britain's prospects will be made so very much sounder if the whole free world thus takes another step towards a quite unnecessary slump. Under cover of the usual press conferences called to say that there has been no change in view since Mr Lloyd's last budget, there really is some sign of official retreat from that budget's main assumption: the assumption that the orthodox thing for Britain and the other deficit countries of 1961 to do in 1962 was to continue to concentrate mainly on fighting against last year's balance of payments crisis at the same time as a fight is being waged against this year's balance of payments crisis by the countries that have necessarily fallen into deficit as soon as this country emerged from it.

The second thing that has held the British Government back from re-expansion, however, has been its fear that if production rises, wages may rise by still more, so that costs per unit of output will go up. There is, as a matter of fact, room for sober statistical argument whether trade union and arbitrational pressure on costs per unit of output is relatively worse when output is expanding or when it is stagnating. But that argument is temporarily beside the point. The blunt facts are that creeping cost inflation in Britain has got to be stopped in any event, and that the Treasury (which believes that the pressure is worst when demand for labour is high) will not allow re-expansion to proceed very far if it is not stopped. And here, too, there are signs that the Government is edging towards some new thinking. In a speech at Luton Hoo three weeks ago, the Prime Minister made specific reference to the need to find "further measures" to prevent incomes from rising faster than production. Mr Macmillan added that the Government intended to

> find methods—and I believe we shall succeed—which will improve and fortify the complicated mechanism of the modern state in this respect.

Since then several other ministers have drawn attention to the importance of these remarks, and Mr Macleod has intimated to Conservative backbenchers that the Government has some sort of "cat in the bag" for the future of incomes policy which he cannot yet reveal.

NOBODY knows what sort of an animal pussy is going to be. But now is the time to proffer suggestions, to try various possible pussies out on the dog. It will be worth being regarded as more than a little unorthodox if one can make any contribution whatsoever to suggesting how, this time, a new period of re-expansion might be followed boldly through, instead of being stopped short by cost inflation as it was in 1960. A little thought suggests that there are four approaches to "fortifying the complicated mechanism of the modern state" for the implementation of an incomes policy which are worth considering.

I.—The Compensatory Tax Approach

If the official guiding light for expected increases in production in any period is 3 per cent and the index of weekly

earnings rises by 4 per cent, this means (at present levels of national income) that the average worker would be getting an "excessive" rise of about 3s. a week which is not expected to be covered by rising productivity but is expected to be an addition to industrial costs. In those circumstances, there is one way in which the Government could see that the effect of this "excessive" rise on both incomes and costs was exactly cancelled out. It could say that, as soon as the earnings index rose by more than 1 per cent beyond the "guiding light" figure, it would add 3s. a week to each employee's national insurance contribution and take 3s. a week off each employer's contribution to the weekly stamp.

The administrative difficulties in the way of this system, queer and unorthodox though it might seem, would be less than everybody will say they would be. (Of course, the system would have to be supplemented by *ex-post* corrections in the subsequent budgets: putting profits taxes up if any underestimate in the guiding light had allowed profits to swell to an unreasonably larger proportion of national income at wages' expense, and putting profits taxes down and employers' national insurance contributions back up again if the latter were deemed to have become too low and it was desired to return the weapon to store.) The reason why any real variant of such a scheme is unlikely to be put into effect is that the Government will not dare to do it; at least it will not dare to take power to put employers' contributions down—although if it is searching desperately for new weapons, it might now conceivably dare to take power to put employees' contributions up. If so, the latter would merely become a special tax imposed on workers' earnings at times of excessive wage inflation; as such it could have certain psychological advantages (and some social disadvantages) compared with some other taxes, but it would amount merely to another weapon for use against overdemand. This is not the place where another new weapon is now needed; what is needed is a weapon for use in a time of wage-push inflation which could siphon off excess incomes with one hand but simultaneously push down costs with the other, thus leaving total demand unchanged.

II.—The Bludgeon Against the Boss Approach

On a different tack from the above: some people think that the way to stop excessive wage rises is to wave a bludgeon at individual employers' organisations who look like granting them. The most tempting way might seem to be to make it clear that those who grant these rises will not be allowed to pass on the cost to consumers in higher prices: to say that if an individual industry gives a wage rise above the guiding light, the Government will immediately clamp down price control on that industry's products, so that the firms in that industry will have to bear the whole strain of any excessive wage rise in their own profits (and thus perhaps to risk going bankrupt). Unfortunately this policy would not work; it would involve the Government in making impossibly detailed calculations about what the right level for prices in every industry is.

But certainly the bludgeon of publicity should be used in future much more brutally and with a much more militant sense of timing. In both respects the Government failed badly in the past year. The Government should have said publicly before the docks settlement (instead of privately after it) that it would regard any increase of more than 3 per cent granted by the employers as a grossly anti-social act. The same should have been said quite specifically and publicly before the electricity settlement, not merely muttered after it. Moreover the man to make this sort of public statement, just before each wage dispute reaches its crunch, should be the Minister of Labour; this would be an immensely important change of departmental ethos.

III.—The Scratch-Their-Backs Approach

Some people profess to believe that if the Government strokes the ears of certain politically conscious trade union leaders—for example by being beastly to the rich and imposing a compulsory dividend freeze—then those leaders will cooperate in not pushing wage claims beyond the point justified by rises in productivity. This belief is nonsense. And there would be a certain danger even in implementing certain parts of the Conservatives' so-called "industrial charter" as a *quid pro quo* for a new incomes policy; although a worker who loses his job certainly deserves much larger severance payments than he may sometimes get now, it would not necessarily be wise to lay the burden of compulsorily heavier severance payments upon the individual employer. (This could give an incentive to employers in declining industries to hang on to labour when it would be better for the economy that they should release it.)

It would be much better if the money for higher severance pay came directly from the Exchequer. In the case of industries which are due to decline, like the railways and the coal mines, the Exchequer should be generous to the point of being quixotic in granting special funds for resettlement grants; it would also be a good thing if ordinary unemployment pay and some other national insurance benefits were raised. Fortunately, there should at present be scope for this. It would be a reasonable economic, as well as political, decision to allow a sizeable part of the extra demand that ought to be pumped into Britain in the next twelve months to take the form of higher national assistance and other popular social welfare payments, if at the same time the Government moved to making its incomes policy effective. This effective incomes policy should include:

IV.—The Interference with Arbitrators Approach

Throughout this year the trade unions have loudly protested that the Government has been "interfering with arbitration"; in point of fact it has not interfered with arbitration nearly enough. The corps of emollient men who have made a part-time occupation of acting as members or "independent" chairmen of arbitration tribunals, wages councils, courts of inquiry and the like all reached their present eminence under the fatally different economic atmosphere of the 1950s; they have in recent years done great damage to the country. That damage and that atmosphere have got to be stopped. The urgent need is to introduce somewhere in the arbitrational mechanism a court, like the restrictive practices court, which should be given an economically justiciable issue to decide: the best and simplest issue would be whether any award is needed in order to attract sufficient labour to the trade or profession or job concerned. Such a court need not even be told to pay attention to the officially illuminated "guiding light": except that it would know that if everybody else was getting an award near to the guiding light, the trades that were offered increases below that guiding figure would be likely to attract less labour in future. Its job would be to decide whether this would be economically a good or a bad thing.

Ideally, all arbitration should be carried out on these lines. But initially it might be best to set up this court as a sort of generally available court of appeal. Sometimes the appeals made to this court could come from particular unions which thought that they had been uneconomically treated by arbitration courts lower down. More often, in the present climate, appeals would come from the Government which had been recommended to pay particular groups of public servants more than it thought was justifiable in the state of demand for their services, or employers in wages council industries who had been ordered to pay compulsory wage rises which they regarded as exorbitant, or even employers who did not wish to implement recommendations emerging from voluntary arbitration bodies or courts of inquiry, and who wanted to achieve a public justification for not doing so. Necessarily, those who carried their case to this court of appeal would often have to stand up to strikes. But a mechanism that would bring about fewer inflationary arbitrational settlements, even at the expense of causing more strikes, is the sort of mechanism that Britain needs.

With this court of appeal in being, arbitrators would be more careful to justify their awards by reference to the state of labour supply in the industry with which they were dealing; when they made out no justification for an increase on these grounds, their recommendations would simply and constantly be declared to be against the public interest by a judicial body.

Insensibly, those who continually offended in this way would come to feel uncomfortable, and would find themselves being dropped from the official stud list for arbitrators. This suggestion will be loudly attacked by those who will say that it would break up the traditional machinery for peaceful and inflationary settlement of disputes which has been built up in Britain over the postwar years. That is precisely what it is meant to do. It is in some such directions as these, eventually, that any country which wants to secure economic expansion without cost inflation—but with a free trade union movement—will have to go.

The Germs of Porton Down

In a week in which scientific headlines have been dominated by Rainbow Bombs and Telstar, some of the best scientific news has sprung from a strange source: the medical advances that are arising from Britain's study of germ warfare

THE shape of these islands and the direction of the prevailing winds provide ingredients for a special kind of nightmare: one in which an enemy submarine surfaces off the coast at night and releases an aerosol spray carrying germs or gas across the country that kills, sickens, debilitates, or temporarily knocks out the population. In their waking moments, scientists see Britain as specially vulnerable to this kind of attack. About 40 of them spend their working hours at what the War Office delicately calls its Microbiology Research Establishment at Porton Down, measuring the risk and how to fight it. As the same germs kill indiscriminately in war and in peace, their work has an important bearing on public health and has, ironically, done more to relieve suffering than other and less revolting aspects of military research. It is a case of flowers blooming on a specially vile midden.

Germ war or no germ war, Porton Down has a formidable scientific reputation as the best equipped laboratory in Britain for work on bugs. But it remains first and foremost a military centre interested primarily in those micro-organisms that are a real military threat—i.e. those that could live long enough in the open air to find a victim. These are mercifully few. Many of the most dangerous are unstable and difficult to prepare even in the laboratory; they could never be distributed on a mass scale. Others could not survive the British climate. The polio virus, for example, can live for a long time in the open in a dry country, but dies quickly in a moist one like Britain; the influenza virus behaves in the opposite way. A good deal more work is needed to analyse the reaction of different germs to different climates, but of all the bugs screened at Porton Down in the past twenty years, only a handful—headed by traditional epidemics like plague, anthrax, smallpox and undulant fever—have passed all tests as obvious military dangers. Some would add botulism, a form of food poisoning, to this short list, as a tough, quick and deadly killer; but the services discount it for two reasons. First, they believe that modern food hygiene reduces the opportunities for infection, at least among the army. Secondly, the organism is too easily detected for an enemy to have much success with the time-honoured trick of using botulinus toxin to poison the water.

A good deal of research has gone to discovering whether germs could be mass-produced to order by the pound. It is one thing, and not always an easy one, to coax them to grow in a test tube. It is quite another to farm them on the scale on which industry grows yeasts and penicillin (where moulds feed and grow in fermenting tanks of broth as high as a house). Porton Down's scientists have by now acquired a witch's cookbook of recipes for each bug's favourite brew and have built up as a by-product a thriving trade growing micro-organisms of all kinds—but mainly harmless ones—to order for other scientists. The latest refinement, which

Bug Boffins at Work

could have far-reaching repercussions in industry, is to develop a continuous production process in place of the traditional batch production. This is being used at the moment to grow one of the newer and most exciting antibiotics. Its implications are, quite simply, that it may make obsolete a great deal of industry's vast fermentation plant, particularly in the drug and yeast producing countries; it looks as if in future the same output could be achieved in a much smaller plant for a fraction of the cost.

While the first task of Porton Down is to advise the Government whether germ warfare is technically possible—and it has proved this beyond reasonable doubt—its second task is to find whether (a) the services and (b) the population can be protected against it. There is only one way to do this: by finding antidotes to diseases that have baffled medicine for years. It is a bitter comment on the scale of human values that results have been obtained at Porton Down in the name of military defence that could not have been obtained in the name of common humanity. A technique has been developed for immunisation against anthrax that remains effective for several years. So has a rather less successful immunisation against plague; it is effective for only about six months and it would be difficult to keep an army's inoculation record as smartly up to date as that. Porton Down's scientists are also well on the way to finding protection against the germs that cause undulant fever in man and contagious abortion in cows. The cows have been first to benefit; vaccines are now being produced on a scale sufficient to wipe the distressing and expensive disease out of this country's dairy herds. Man's turn for immunisation should come when scientists have got the better of a rather more virulent American strain to which cows appear immune.

THIS is good as far as it goes, but it does not go far enough. Vaccination against smallpox has been available for generations, but smallpox still ranks high as a danger in germ warfare because so few people make use of it. Scientists watched with consternation the upset and disruption caused by this year's tiny smallpox outbreak, and ruminated on what the results of a large-scale germ warfare attack might have been. Their solution has been to look for a method of treating smallpox once it has been diagnosed, and one serum developed at Porton Down has been tried out with quite startling success in the laboratory; fourteen out of fifteen very sick rabbits injected with it recovered. But this has not been tried out yet on man and if the fact that it apparently requires serum from a rabbit to cure another rabbit means that only serum from man, and from a convalescent smallpox victim at that, can be used to treat another smallpox victim, then supplies are likely to be very small indeed.

As a corollary to this work on vaccines, Porton Down has developed apparatus for mass vaccination at the rate of 1,000 an hour with a tank of serum, a foot pedal and a head through which serum is forced under the skin by compressed air (in place of the usual needle). The risk of cross infection where the head touches the skin, or gets contaminated by serum back-scattering from it, probably limits the peacetime use of such equipment to public emergencies like the Agadir earthquake. But in defence against germ warfare this new method of vaccination would play a key part.

JUST how serious is the military threat? Some people say that in these horrific days any enemy could always find easier ways of prostrating troops and the civil population, for example by fall-out. But for an enemy who wanted to occupy a country after defeating it, both chemical and germ war would have the advantage of not wreaking apocalyptic physical damage, as well as of not requiring expensive megaton weapons. As between chemicals and germs, the nerve gases that the War Office is studying in its chemical defence centre seem to have the edge over the germs, since the gases are absorbed through the skin while the germs can affect the body only via the nose and mouth. Germs, moreover, could be spread only by night, since even the sunlight over cloudy Britain is sufficient to decimate them by day. And for less horrific wars—even for brushfire operations—some people harbour the hope that "safe" and "humane" gases might be developed to stupefy a population harmlessly and temporarily while the troops move in.

As military weapons, however, both the germs and the gases suffer from one overwhelming disadvantage. They have never been tested, and by their nature it is difficult to see how any but the very "safest" ever can be tested, outside the laboratory. There are plenty of data about the effect of nuclear weapons, including that of Hiroshima and Nagasaki. There are no data on the newer gases or germs other than what scientists can tell military commanders about the concentrations that have killed or infected rats and mice in the laboratory. Of the effect on men in the open they know nothing beyond what can be guessed from the results of accidents, again inside laboratories, to scientists in American germ warfare centres. No military commander, so it is argued, would base his strategy on information as scanty as this, and germs and gas are both strategic weapons. The main deterrent therefore seems likely to remain a nuclear, not a chemical or biological, one. Yet these remain real and horrible weapons. The majority of countries have signed an undertaking not to be the first to use them in anger; this stops some way short of undertaking that they would never be used under any conceivable circumstance. And the greater the success that establishments like Porton Down meet in their search for antidotes to germ warfare, the more is the emphasis likely to shift from germs to gases and other chemical weapons.

FEDERAL REPUBLIC OF GERMANY

EIU Quarterly Economic Reviews
covering 57 countries or groups of countries

The review describes the trend towards higher wages, the resulting pressure on profits and prices, and government concern about these developments. It shows that while economic growth has slowed down there is no stagnation, and export surpluses have continued. Moreover, exports will now benefit from longer credits and tied development aid.

Development's Brave Banners

The argument for helping Asia, Africa and Latin America to break out of poverty needs to be put on a basis of hard fact

CHARLES DICKENS'S question, to one who swore he was ready to shed his blood for his fellow men, was: Would you shed legs of mutton for them? Word and deed are never farther apart than when large numbers of people are collectively called upon to make sacrifices to help other large numbers of people for whom they feel no specific responsibility. So it is not surprising that there is always scope for the cynic in the field of economic aid for under-developed countries.

Unanimously, last December, the world's governments pledged themselves, in a United Nations Assembly resolution, to "intensify their efforts" in this field, and solemnly designated the nineteen-sixties as the "UN Development Decade." On July 3rd the Economic and Social Council met in Geneva to address itself to the task, starting from detailed proposals enthusiastically presented by the acting secretary-general, U Thant, who has just been in London. But another visitor to London last week was India's finance minister, Mr Morarji Desai, who is anxiously scouring Europe, bowl in hand, for the help that is now urgently needed to rescue his country's third five-year development plan; and the prospects of him filling his bowl seem slender.

Does Mr Desai's plight represent bleak reality, then, while all the brave banners of the "Development Decade" are no more than flags in a cold wind?

The fact has to be faced that the most effective motivation for providing aid has hitherto been the providers' desire to attach the recipients to themselves, or to detach them from rival powers. Some of this motive power has been lost as the providers—western and communist powers alike—found the receiving countries increasingly insistent on asserting their independence; increasingly taking it for granted that aid would keep flowing their way, regardless; and inclined to press for the channelling of aid through multi-national institutions that would not be able to apply pressure on them as direct providers can.

Can a substitute motive power be found, strong enough to push a total aid effort larger than all those made in the past by rival providers seeking attachments? Humanity being what it is, one must doubt whether its sense of world-wide community is as yet a powerful enough force for this purpose. The weakest point in the UN report that is now being debated at Geneva is its scant concern with incentives for providers. It is not enough to say, as it does, that "the basic problem" is to translate into action "the express desire of the advanced countries to help the developing countries." There is a Dickens-wide gulf between the fervent expressions of that desire that echo from both western and communist capitals, and their reactions when the problem comes down to actual legs of mutton—or even to the thin gruel that would meet the needs of an austere vegetarian like Mr Desai.

Yet a strong vein of realism runs through the secretary-general's report and proposals. U Thant himself has pointed out that the proposals "do not represent any great innovation," but call rather for the pressing forward of activities already in hand. Facts are faced. The brief reference to the much-debated UN capital development fund says tersely that "the necessary resources for this fund are still not in sight." Not only is the usefulness of private foreign capital in developing countries stressed; due attention is paid to the fears that discourage investors, as well as to the receiving countries' reluctance to see more foreign control of parts of their economies. Nor are fears of "disruptive competition" from low-income countries ignored, though the advanced countries are told that they are surely advanced enough to be able to resolve such difficulties without simply shutting out the low-income countries' goods and thus making it impossible for them to earn their way in the world.

Development as a whole, not just the aid element, is the UN theme; and the developing countries get some plain speaking as well as hopes of succour. Perhaps an Asian secretary-general has a tactical advantage here. His report, for instance, declares it "essential" for these countries to stop the flight of half-educated youngsters to the towns, largely by remodelling rural education to develop their skill in farming and make it a more attractive life's work. And, in a recent speech on the Development Decade at Copenhagen, U Thant tore into the too common idea that industrialisation is always in itself beneficial, and that

> ten enterprises, all running below capacity and working at a loss, are in some magic way contributing to development. The wrong factory in the wrong place for the wrong product is the besetting danger of every period of growth.

ARE the proposed goals unrealistic? The report argues that the annual growth rate of the under-developed countries' national incomes, now averaging about 3½ per cent, could be raised to 5 per cent in a few years and to more than 6 per cent by the end of the decade—thus getting well ahead of the population increase, and bringing nearer the take-off into self-sustaining growth—given three basic conditions: effective planning, improved export earnings, and adequate foreign aid.

The target set for the volume of net capital flow is the scarcely unreasonable one of 1 per cent of the wealthier countries' combined national incomes. Some of the richer countries have already hit this target. If all did so, and if their incomes went on rising at the average annual rate of 4 to 5 per cent, the net flow to poorer countries would more than double by 1970. This increase in the flow, the report notes, would actually be less than the growth rate in recent years.

As the disparity between rich and poor countries is now so great, a flow representing 1 per cent of the former group's incomes adds about 10 per cent to the incomes of the latter (and could double their net capital formation). Effectively used, this alone could do half of the whole development job. And the developing countries' remaining needs of foreign exchange resources for development could be fully met if their terms of trade could be improved by ten per cent, and if their share in total world trade could be raised from the present 26 to 28 per cent—improvements that would mean restoring their position only to what it was in the middle nineteen-fifties. The

report does not try to imply that this is an easy task; but, by setting it thus in perspective, it should dispose of the charge that these proposals are wildly impracticable.

Perhaps the UN report actually overplays the magnitude of the task. A good part of it might be made more or less painless, if an increase in world liquidity could somehow be partly channelled in the first place through a certain quantum of new liquid funds put at the disposal of the underdeveloped countries (by special drawing rights on the International Monetary Fund, or some similar institution, which might be the Organisation for Economic Co-operation and Development through the European Monetary Agreement). The present system of voting funds for economic development originated (with the Marshall Plan) during a period of overfull employment in America; and this has given people the idea that it is the actual aid that puts a strain on advanced countries. In the present, non-inflationary, world economic atmosphere, the advanced countries could find the stimulus of such new liquidity, with the consequent surpluses in their balances of payments, no strain but rather an advantage—up to a point.

What of the will? As far as British participation in the new effort is concerned, it would be foolish not to recognise the unfavourable factors. In many people's eyes, and notably the Foreign Secretary's, the "harassing" of Britain in the UN cannot predispose opinion in favour of making even very modest sacrifices to help the harassers. There are some who visibly relish the fact that the United Nations itself is in financial difficulties. The sense of common humanity has to contend with humanity's rugged founding father, the old Adam.

Alongside the moral appeal, however, there is that of intelligent self-interest. The only alternative to the development effort is resignation to sharing the shrinking world with 2,000 million people condemned, for the most part, to hopeless poverty. There is, most literally, no future in that: least of all for a trading nation. The case needs to be put in the terms that the American Assistant Secretary of State, Mr Harlan Cleveland, used when addressing a presumably hard-headed audience of insurance men in New York three weeks ago:

> Our own goals for economic growth and stability are interdependent with the goals of the Decade... All boats rise on the incoming tide. The expansion of the world market that will accompany the Decade of Development promises not only more jobs, more production and more sales but better jobs, better products, and an important hedge against the bearers and criers of havoc in our own economy.

There is something there to which even the old Adam may respond.

NOTES OF THE WEEK

PARLIAMENT

Tory Unease

BAGGED cats or no bagged cats, these are dog days for the Conservative party. At Westminster, members are waiting for news of the common market, for the Government's reconstruction, for the next phase of the incomes policy, for the final decision on Pilkington. This is frustrating for everyone, from the Prime Minister downwards. Morale at Westminster is at a low ebb—lower now than in the constituencies, where there is some sign that the local stalwarts are preparing to fight back.

Everything still turns on the timetable for the common market, and anxiety is growing that the hard news will not be available, as had been hoped, by the end of this month. There is increasing confidence inside the Cabinet that the negotiations will succeed, but whether they will succeed in time is another matter. The Government is seriously worried about the reports of the public opinion polls that the country has been turning against (or at least away from) the common market in recent weeks; and as long as the Brussels negotiations are still being fought out it is difficult for ministers to make effusive pro-European speeches to try to turn back the tide. If no news comes from Brussels in July then Parliament, which will probably disperse on August 2, will have to be recalled. There is no doubt that, as soon as the terms for entry into Europe are known, Mr Gaitskell will demand the fullest possible discussion by the Commons, and this is not something which the Government can deny.

Meanwhile, existing positions have to be held, and enough constructive new measures announced to prevent despondent spirits from flagging further. The Prime Minister is to make a major speech on economic policy in the House before the recess, but if the Treasury has any say in the matter this is likely to be an anti-climax. He is expected to make a more detailed policy statement at the party conference in October. Normally the leader's speech there is almost devoid of content, as everything has been said, or hinted at, by ministers speaking in the preceding debates. This year it is intended to leave some plums in the pie for the Prime Minister to pull out for himself.

The Tory leadership was gloomily preparing on Thursday for bad news from the North East Leicester by-election, but it believed that this would mark the end of the party's worst period of public disfavour. By the autumn, when North Dorset looms, it trusts that recovery will have set in. These are brave thoughts, but they have not yet fully communicated themselves to all Tory MPs for marginal or near marginal seats—which nowadays means any seat with a majority of much less than 10,000. They are obsessed with the thought that at the next election their seats may be lost; and presumably the industrial charter will not provide increased severance pay for them.

Labour Unity

THE motion on the Commons order paper favouring further nationalisation, tabled by a group of Labour MPs, has now attracted more than sixty signatures, and has caused some speculation about another split in the party. In fact it is the last shot in an old battle, not the first of a new one. There is no doubt that, for the pre-election period at any rate, Labour policy is to be framed in Mr Gaitskell's image, with Clause Four in decline. The weakness of the rebels is shown by their agreement to delete a demand for the nationalisation of the chemical industry, which would have constituted a direct challenge to Mr Gaitskell's statement at West Middlesbrough that the Labour party had no plans for nationalising ICI. The motion now calls generally for "a policy which will provide for an extension of public ownership so that parliamentary control is established over the means of production, distribution and exchange." Those signing the motion are mostly the usual left-wingers, plus those with personal grievances against Mr Gaitskell. Much has been made of the adherence of Mr Bill Blyton, but this has little significance. Mr Blyton has always been firm in his opposition to unilateralism but equally he has been a fervent upholder of Clause Four. He is also rabidly anti-European. These views cost him any chance of election to the shadow cabinet at the beginning of the session and he came very low down in the poll.

In general the Labour party appear to be in its healthiest internal state for years. Transport House is at last being revitalised with Mr George Brown firmly in control. His organisational ability is beyond question, and his trade union background is a valuable source of strength to Mr Gaitskell. So, paradoxically, is his elephantine tactlessness towards some of his colleagues; for Mr Brown at present forms a useful lightning conductor, attracting away some of the hostility and vituperation that would otherwise be concentrated entirely on the party leader.

The chances of any further split in the party before the next election seem remote. Even those who would prefer to lose it rather than win it on Gaitskellite terms have no desire to earn the obloquy for Labour's fourth electoral defeat. There is no change in the party position on the common market, and if the terms are anything short of outrageous it seems likely that the majority will support entry with varying degrees of enthusiasm. On Wednesday the party met in conclave to consider the Pilkington report, on which the party is very definitely divided. But such differences of opinion as were expressed were not on the old left-right axis, and do not therefore present a serious threat to party unity.

NORTH AFRICA

Algeria Waits

MR BEN BELLA'S talks in Rabat with emissaries from Mr ben Khedda ended obscurely on Tuesday; there seems to be little doubt that no agreement was reached. Had there been any, Mr ben Bella would surely have gone on from Rabat to join the provisional government in Algiers. Instead, he went to his native town, Marnia, and thence to Tlemcen, where he received a thunderous welcome, likely to be repeated in Oran. The army commanders in the area are his supporters; there seems no doubt that he will use western Algeria as a territorial stronghold from which to pursue his dispute with the ben Khedda government. His two demands for a settlement—the reinstatement of the three senior officers of the Liberation Army whom Mr ben Khedda had accused of plotting dictatorship and dismissed; and the immediate convening of the revolutionary council—have evidently not been granted.

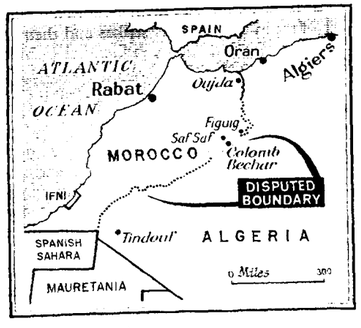
But as the army moves in and his position strengthens, it may become increasingly difficult to refuse to refer to the council, which is virtually a temporary parliament, and wherein Mr ben Bella's supporters are in a majority. Mr ben Khedda can still command Kabylia, parts of the Constantine region, and Algiers itself; elsewhere, power seems to be slipping from his hands.

In his speech to the crowds at Tlemcen Mr ben Bella insisted that he supported the Evian agreements and had no wish to set up a military dictatorship. But he pointed to the army as the instrument through which Algeria should realise "its democratic aims." His position vis-à-vis the army is thus a rather confused one, though its sentiment for him is not. The big well-armed battalions who for years were immobilised outside Algeria, on the Tunisian and Moroccan frontiers, and denied to a large extent the free expression of fighting, have had to save up their energies for something—and for something bolder than Mr ben Khedda seems to offer. They see this as their hour, and Mr ben Bella as their man.

Watch on the Sahara

WHILE the two Algerian factions, ben Kheddaist and ben Bellaist, were trying to thrash out their differences in the capital of hospitable Morocco this week, the Moroccans went carefully with their frontier dispute with Algeria. This was a matter of courtesy, and of putting first things first. If and when the Algerian contestants can come to terms with each other, Morocco will waste no time in seeking to come to terms with them about its Saharan interests. With France's transfer of sovereignty to Algeria, the Sahara was handed over to the Algerians. It was, however, assumed that Algeria would eventually combine with the other desert-bordering powers to sort out their various claims.

Morocco's claims, at their tallest, extend to nearly the whole of the western Sahara, running southward roughly from Figuig. Its more immediate interests, signified last week by a mounting press campaign and by a military sortie across the frontier, concern Tindouf in the west, an important iron ore region, and, in the east, a coalmining district in the neighbourhood of Colomb Béchar. The Moroccan troops that occupied Saf Saf and other oases close to Colomb Béchar have reportedly withdrawn and been replaced by Moroccan civilian officials, though whether these officials officiate is far from clear. Some confusion arises from the fact that the Moroccan-Algerian frontier is strictly demarcated only for some 140 kilometres south of the Mediterranean.



That Morocco should have made such militant claims, at a moment when in Algeria Mr ben Khedda's government is under so much strain, might seem to suggest that Morocco favours Mr ben Bella. But there is no other evidence of this. In Rabat the Moroccans were punctilious in turning out ben Bella supporters who had seized the buildings of the Algerian provisional government's mission, and reinstating Mr ben Khedda's people. Their principal interest in Algeria's future government is that its rate of socialist evolution should not be so rapid as to upset Morocco's conservative government, and that Algeria's relationship with France should be in tune with their own. Thanks to the lowering of tension since the war in Algeria ended, Morocco has at last been able to negotiate with France the agreements for technical and financial aid which were envisaged when Morocco first became independent but which, through mutual touchiness, could not be realised. The technical assistance agreement signed with France on July 7th exceeds in scale anything that France has hitherto offered Morocco, except in the cultural sphere. It is expected to be followed soon by a proportionately generous financial and commercial agreement, which Morocco badly needs. Thus Morocco is contemplating a period of closer understanding with France for which it is bound to hope there will be parallels in the rest of the Maghreb.

Fireman Nasser

PRESIDENT NASSER'S part in the Algerian drama should be edifying for those to whom the Egyptian leader's outside activities still spell glory-making for himself and mischief-making for others. His dismay at the crumbling of the Liberation Front was undisguised; his response was urgent and constructive. His plea for unity came from a heart that may beat more warmly for Mr ben Bella than for Mr ben Khedda but which did not allow personal affection to invalidate his message. On July 2nd, he sent Mr Ali Sabri, his minister for presidential affairs, on a whirlwind 20-hour mission flying back and forth between the quarrelling Algerians. Mecca radio, which immediately accused the president of exacerbating the dispute, was playing an out-of-date record which, even in the past sometimes rang false.

Mr Hassanayn Haykal, the editor o *Al Ahram*, also went on the flying peac mission. On July 6th, he made a seriou

attempt in his newspaper to analyse the historical and psychological causes of the friction. Where Mr Haykal was examining the background of the Algerian leaders themselves, his analysis was perceptive if over-simplified. But he was not averse to looking for a scapegoat, and he found one in President Bourguiba. He accused the Tunisian president of counselling over-moderation and even of advising the Algerian provisional government to dissolve the whole of the Liberation Army as well as sacking the three commanders. The Tunisians have swiftly denied this charge, but the breath of an old inter-Arab dispute has flickered into life. President Nasser has shown himself anxious to do what he can to shield the new Algeria from its own smouldering dangers; at the same time, he cannot, it seems, resist a dart of flames at an old adversary.

BY-ELECTIONS

Bogey for Leicester

SIR LYNN UNGOED-THOMAS'S old constituency of Leicester North-East was polling on Thursday, in the last parliamentary by-election until (presumably) next November. The result will have been announced before this issue of *The Economist* is in readers' hands. In the last twelve years this seat has provided something of an epitome of political trends in the plush Midlands. When Sir Lynn came here as Labour's Solicitor General in 1951, he inherited a Labour majority of over 10,000; this fell steadily to a marginal 1,431 in 1959, when Sir Lynn got 51.9 per cent of the poll against a Tory Miss Spokes's 48.1 per cent. More recently—and to a greater degree than most other Midland towns—Leicester has shown a very sharp desertion from Tory to Liberal at local council elections. In reflection of this, National Opinion Polls Ltd. was predicting in the *Daily Mail* this week that the Liberal candidate on Thursday would pick up about half of the 1959 Tory votes plus an additional 7½ per cent of the electorate from Labour. That would give the Liberal about 31 per cent of the total vote, against the victorious Labour candidate's 44 per cent and the bottom place Tory's less than 25 per cent.

As any such result would humiliate the Tories and give Labour a majority of something around or over 5,000, Labour would no doubt claim it as a great victory. But it would mean that Labour has still done little to roll back the ground it has lost in the prosperous parts of England since it was last in power. The last time a Liberal appeared in Leicester North-East—in the general election of 1950, when Labour won the narrowest of overall parliamentary majorities (a majority of only 7)—the percentages were: Labour 56½ per cent (with an extra ½ per cent for a Communist), Conservative 33½ per cent and Liberal 9½ per cent. The sort of result forecast by National Opinion Polls would therefore actually suggest that since 1950 Labour would have lost more ground to the Liberals in Leicester than the Tories have done. The Labour recovery will still look awfully shaky if it really cannot do better than this.

TRADE UNIONS

A New Seriousness

THE annual round of trade union conferences reached its climax last week with both the railwaymen and the mineworkers putting their heads together. Both of these important unions came out of their huddle with their heads screwed firmly into place. The only conceivable embarrassment for the Labour movement was the railwaymen's vote against joining the common market, but embarrassment on this score is not likely to be large.

Both conferences were much less militant than usual over questions of pay (which was not surprising after the engineering and shipbuilding settlements). Sensibly enough in view of the position of their industries, the railwaymen concentrated on rightly demanding better redundancy arrangements for workers who lose their jobs owing to rail closures; while the miners were comforted to hear Lord Robens announce that grants for miners who are required to move their homes out of areas where pits have been closed would receive more generous treatment from now on.

So the great industrial unions have followed their fellows into a newly serious mood. Ever since Mr George Woodcock became general secretary of the Trades Union Congress, observers have been optimistically hoping that he, with his team of competent lieutenants, would sooner or later produce the ideas that are needed to drag the TUC along into the mid-1960s. There has been some sense of disappointment that he has moved so slowly up to now, but it can no longer be said that the atmosphere in the individual unions makes constructive leadership from him impossibly difficult. If the will to reform really does exist at Congress House, the next few months will reveal its shape.

SPAIN

Madrid Shuffle

THE eruption of Spanish discontents, first in the Asturias strikes and then in last month's clash between General Franco and the Spanish "Europeans" who visited the Munich congress of the European movement, was almost bound to leave some mark on General Franco's government. A reshuffle in the cabinet, unchanged since 1957, was known to be in the wind; it was announced on Tuesday. Seven out of 17 ministers have been replaced; and unexpectedly, General Franco has indicated his immediate successor.

The shuffle follows the by now classic Franco method of matching a gesture to the forces of order and to the *status quo* with another to the liberal elements that are asserting themselves so forcefully in Spain. The appointment of General Muñoz Grandes, chief of the general staff, as deputy premier and successor to the Caudillo is a formal recognition that the army will be the arbiter of Spanish politics when General Franco goes. The other ministerial changes seem to favour the liberal side. Sr Fraga Iribarne, the new minister of information, reputedly a European, is thought likely to allow the press a shade more latitude than his hidebound predecessor did. Under the new minister for industry, Sr Lopez Bravo, the state industrial complex can probably expect a somewhat less privileged status, and private enterprise a more effective freedom to invest than it has had.

The designation of an heir inevitably looks the biggest of these changes, yet it no more than recognises a fact. The army has the power to arbitrate when General Franco leaves the scene; he has empowered it to do so in legal form. General Muñoz Grandes has long been the obvious man on whom this duty would fall. Among Spanish generals he counts as a middle-of-the-road man, a balancer, like his master, between the different forces in the state.

Much therefore still depends on the skill and vigour with which the liberal forces operate within the framework of the possible. Here Spain's anxiety to get into the common market remains an important lever. In an interview with M. Wigny, M. Hirsch, and Mr John Hynd, MP, three prominent members of the European movement, General Franco explained on July 6th that Spain's application to the common market was made in "full recognition and acceptance" of its "supranational and democratic" principles. But the bad impression left by the sentence of exile on the Munich Europeans will only be removed by lifting it.

GERMANY

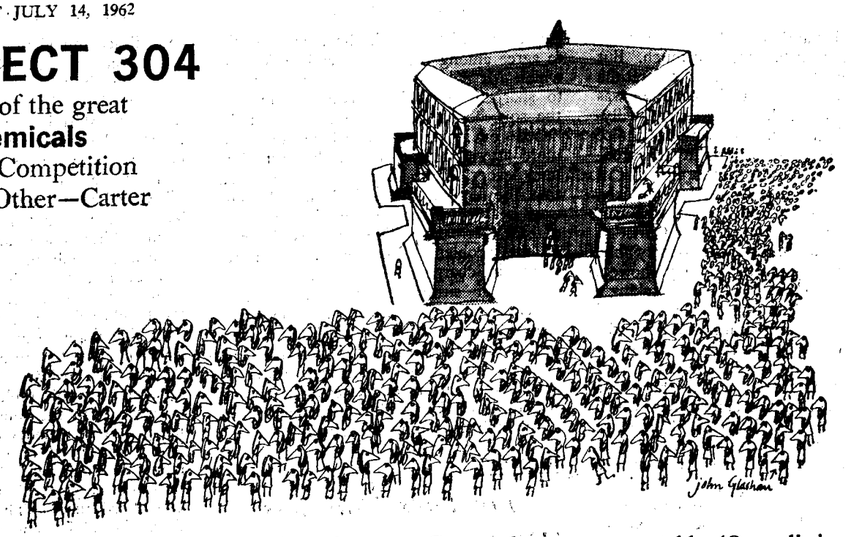
Pomp and Circumstance

THERE was a contrast between the pomp of Dr Adenauer's visit to France, which ended last Sunday, and the political unrest which confronted him on his return to Bonn. On Friday, July 6th, Herr Mende, the leader of the Free Democrats, declared that the atmosphere of distrust and strife in the Bonn coalition had become "unbearable." On Sunday the Christian Democrats suffered an electoral setback when they lost their absolute majority in the Land of North-Rhine Westphalia. The fact that the Free Democrats also lost a seat to the Social Democrats, who have gained at the expense of both the other parties, cannot have greatly comforted Dr Adenauer's party. As one member put it last week in London: "The future of the Conservatives in Britain is obscured by the need to be ambiguous about the common market; ours is obscured by the vacuum of leadership in Bonn."

Since the west German elections last October, Dr Adenauer has evidently lost a

PROJECT 304

The story of the great
Shell Chemicals
Sculpture Competition
by A. N. Other—Carter

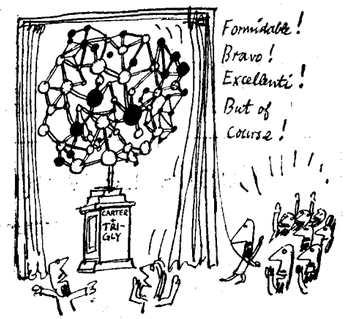


Chapter Twelve:
Carter's Double Prize

Announcement Day was a great occasion, and I am bound to say a bit poignant for me; not only because this meant perhaps the end of those gay Chelsea parties with witty sculptors, a return to the old routine of writing pamphlets about careers in expandable polystyrene (for moulding and insulation work), or Epikote epoxide resins, or seed dressing and horticultural sprays. There was, also, Isobel.

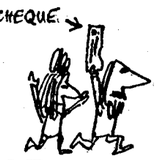
As I looked down from the windows of the 57th floor of the Resins Building, where so many months ago Mr. Carter, one of our directors, had outlined his scheme for the sculpture competition for *The Spirit of Shell Chemicals* I saw a gay scene. Mr. Carter had declared a holiday, and except for essential maintenance staff at Stanlow, Cheshire (solvents, intermediates, detergents, resins, sulphuric acid etc.), Carrington near Manchester (polyglycols, plastics, toluene) and Shell Haven, Essex (agricultural, and detergent alkylates) *everyone* was there, chatting on the flower-decked lawns round the Exhibition Marquee where the winning sculpture awaited unveiling. I could make out Carter from Ketones, Carter from Polyolefins . . .

A familiar voice murmured at my ear. 'I think we'd better forget Paris, A.N.' She was right. That was another time, when we were both young sculpture students. Now I was happily settled at Shell Chemicals, with a house and three lovely children at Sidcup. And Isobel . . . 'so you see,' she was saying, 'Waldo is a scientist of genius *and* a brilliant sculptor, and we . . .'



Waldo! So that was how she spoke of Carter from Triethylene Glycol!

Sure enough, when punctually at 3 Mr. Carter unveiled the winning exhibit it was *Waldo's* molecular model of that substance, a dynamic swirl of the carbon and hydrogen clusters at the heart of our world. 'Our distinguished judges,' said Mr. Carter, 'Cosmo Fanlight, TV panelist and articist, Benson Benson the famous non-sculptor and author of *Negative Form*, and Professor Hugo O'Bapchild, the famous Irishman, are unanimously agreed that no sectional representation of our many activities could so clearly express the real *us* as does this abstract yet supremely practical and beautiful form, one of the basic structures underlying our aids to a hundred industries from paint-making to engineering, dry-cleaning to fruit-farming. So I now call upon Waldo———er, *Mister* Carter (laughter) and his charming fiancée, Miss Isobel *(prolonged cheers)* to accept this cheque . . .'



THE END

But of course there's no end to **Shell Chemicals**

For any information about chemicals contact the Information Officer, Shell Chemical Company Limited, 170 Piccadilly, London W.I.

great deal of his authority. It is not that the Chancellor himself has changed much. But his commitment to leave office before the next election, made when the coalition was formed, means that Bonn politics are, willy-nilly, increasingly concerned with the choice of a successor. The uncertainty has convinced even his closest supporters that if the deed is to be done it is best done quickly. The problem is to find a man who can both win general acceptance in the Christian Democratic Union and run the country ably.

As their party congress in May showed, the Social Democrats, too, are now taking a practical interest in the succession and angling for a "large coalition" with the CDU. Six months ago resistance from the Christian Democrats' side seemed to put that idea out of court. Today there is a strong current of opinion among them which sees a coalition with the Social Democrats as a means of introducing a reformed electoral system (on the same lines as the British) which would cut back the Free Democrats and lead in time to a two-party system. A start has been made in North-Rhine Westphalia, where the Christian Democrats, after losing their majority, have started to discuss the next coalition with the Social Democrats, not with the Free Democrats, their former partners. The change may have no more than local significance; this Land had a "large coalition" until Dr Adenauer broke it up in 1954. But it must be making Herr Mende uneasy.

BERLIN

Ripe I Cry

THE time is not ripe, said Sir Tufton Beamish and Sir Harmar Nicholls in the House of Commons on July 5th. The time is ripe, insisted Mr Khrushchev the evening before, at a reception in the Kremlin for the visiting Austrian chancellor. This long-range disagreement was about the urgency of the need to reach a negotiated settlement of the Berlin dispute—even if the settlement costs some concessions. Since it is Mr Khrushchev who can test the ripeness of the fruit in question, by shaking the bough, and since his hand seems to be moving in that direction just now, it is a pity that the western allies are still stuck in glum contemplation of their internal differences on the subject instead of looking for ways to narrow their joint differences with Mr Khrushchev. The Russian leader said on July 4th that an agreement ought to be reached "in the very near future," thus reintroducing, though in a conveniently vague way, the notion of a deadline which he dropped last October. He returned to the question on Tuesday in his speech to the World Peace Congress in Moscow, suggesting a substitute for the western garrisons (troops from two small Nato countries, plus Poland and Czechoslovakia) which had already been rejected by the Americans in private discussions.

And there the matter rests. Or does it? The history of this 44-month-old crisis shows a depressing alternation between periods in which the allies have been unable to agree among themselves, and periods in which Mr Khrushchev has obliged them to sharpen up their thinking by putting the squeeze on Berlin. In a speech published on June 20th, which deserved more attention than it got, the east German leader, Herr Ulbricht, acknowledged that the United States had moved some way nearer to recognising the existence of east Germany. This remains the nub of the problem. Yet Dr Adenauer remains in charge in Bonn, and has succeeded in sitting on the most recent American initiative in this direction—the suggestion of an international body to control access to Berlin on which the east German government would have a seat. Is further thought on the western side now to wait until Mr Khrushchev once more plucks at the lifelines leading to Berlin?

HOUSING

London's Homeless

THE London County Council deserves credit for publishing the report on homelessness which it commissioned from a team of sociologists. Neither the report nor the council's commentary upon it thump the expected political tub of blaming homelessness on the Rent Act. The basic problem is recognised quite simply: between 1951 and 1961 the resident population of the county of London fell (despite inward migration) by 150,000, while the working population rose by 200,000. Add to this the council's necessary slum-clearance programme, the rising earnings and expectations of most Londoners—and there are bound to be an increasing number of people who want or need to live in London who cannot find any accommodation there. Inevitably, those who are most squeezed are the lower income families with lots of children, who have to search for a new home in London for any reason.

It is for lower-income families with children that council houses and council flats should be mainly provided. They are, in fact, virtually the only ones for whom council accommodation should be provided at a subsidised rent. Naturally, neither the report nor the LCC is disposed to recognise this; but both the council's comments and the report skirt hopefully round this main point. The report wants the Housing Department, rather than the Welfare Department, to take over some of the responsibility for housing the homeless and particularly for seeing that homeless families with young children are not broken up. The council goes only part of the way with this plea, because it says that its housing department cannot break faith with non-homeless families already on the council's waiting list. The report wants the council to buy up, and use for priority cases, a large volume of private housing which is scheduled to be replaced over the next twenty years; the council says that it has not got enough money to do this. The idea is not canvassed of getting some of the money by charging fully economic rents to those of the council's present tenants who can afford them. There is an intelligent discussion of housing densities in London, and the council thoroughly agrees that more should be done to persuade elderly occupiers of houses that are too big for them to move and make room for whole families; once again, however, the price mechanism should be used to do this.

THE LAW

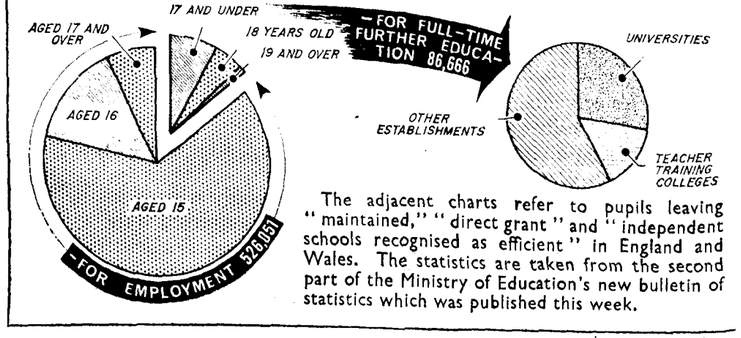
Appeals Dismissed

THE Court of Criminal Appeal has made two decisions this week of some importance. The first, which has some disturbing implications, concerns Alfred George Hinds who has maintained for some years that he was wrongfully convicted in 1953—owing, among other things, to the alleged wrongful admission of evidence. The court refused an application from Hinds to appeal. This is very odd since the Act of 1907 which set up the Court of Criminal Appeal allowed an appeal, as of right, where a point of law is involved. Where the point is of fact, or of mixed law and fact, permission is required. Clearly if the point of law is merely frivolous the Court of Criminal Appeal has a right to dismiss the application at once, but one had not thought that it had any statutory jurisdiction to decide at the application stage that a *prima facie* point of law is not a point of law at all.

The second case concerns the admissibility of tape recordings as evidence. The appellants had been convicted of burglary and larceny at Andover Borough Quarter Sessions, and an important piece of evidence against them was a conversation carried on in their cells. This had been overheard by a police officer who on one occasion used a microphone and on another a tape recorder to overhear what was said. The appellants argued that the planting of a microphone in or near a cell evaded the spirit of the judges' rules, since it was equivalent to an interrogation without any caution. The court did not accept this point, but went on record as saying that it did not wish to be thought to be giving approval to a police practice of planting microphones in cells. The court decided that the tape recording was admissible, by equating it with writing in a witness's notebook which is admissible under certain circumstances. These are that a witness is only using the notes to refresh his memory, and that these notes were made by himself, or were notes made by another person which the witness had contemporaneously seen read and adopted.

Great care should obviously be taken when admitting tape recordings as evidence because of the danger of falsification. While there is no reason why such evidence should always be barred, it does seem to require some additional precaution such as the use of a locked cassette. It should also be noted that the court's decision is of fairly narrow application. It has no bearing on whether evidentiary material obtained by a tape recording without confirmation from a human being listening to the same sounds is admissible or not. The courts have not pronounced on this question.

Pupils Leaving School 1960-61:—



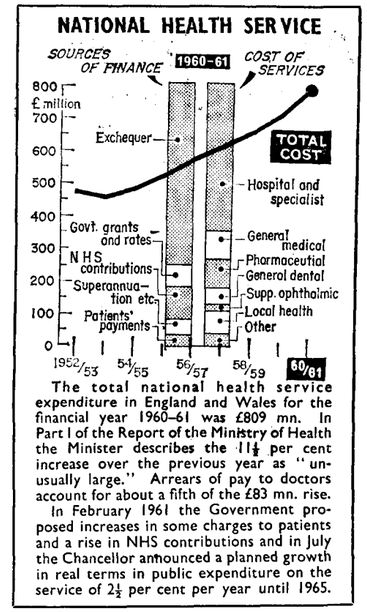
The adjacent charts refer to pupils leaving "maintained," "direct grant" and "independent schools recognised as efficient" in England and Wales. The statistics are taken from the second part of the Ministry of Education's new bulletin of statistics which was published this week.

LAOS

Towards a Pact

NO great obstacle now seems to stand in the way of agreement at the Geneva conference on Laos. There is to be a declaration on Laotian neutrality by thirteen participating countries, supplemented by a protocol defining the functions of the three-nation control commission which is to see that foreign military influence is eliminated from Laos. In addition, the fourteenth member of the conference, Laos itself, has drawn up its own declaration of neutrality. This week's work has been to try to find a way of withdrawing the "protection" offered to Laos, on paper at least, by Seato (the South-East Asia Treaty Organisation). The problem is how to do this without too great a loss of face on the western side, and it looks like being overcome.

Looking beyond the conference to the realities on the spot, the picture is distinctly less encouraging. There are still three separate armies in Laos—right-wing, neutralist and communist—and no acceptable formula for merging them seems likely to emerge from Geneva. Moreover, it will be a clever and united control commission that makes certain the north Vietnamese troops and advisers now in Laos are in fact withdrawn within 75 days, as the draft agreement stipulates. Until lately, the communist delegations at the conference simply refused to admit that the north Vietnamese were there; now they go so far as to concede that there might be a few north Vietnamese "advisers." The Americans say there are 10,000 of them, of whom 5,000 are in regular battle formations; the more conservative British put the figure at 8,000. They are unfortunately harder to tell apart from the local population than the larger and pinker Americans (who are also to be withdrawn); and they will find it easier to slip back across the border even if they do get out. It will be too soon, then, to rejoice when 14 hands put pen to paper at Geneva.



The total national health service expenditure in England and Wales for the financial year 1960–61 was £809 mn. In Part I of the Report of the Ministry of Health the Minister describes the 11½ per cent increase over the previous year as "unusually large." Arrears of pay to doctors account for about a fifth of the £83 mn. rise.

In February 1961 the Government proposed increases in some charges to patients and a rise in NHS contributions and in July the Chancellor announced a planned growth in real terms in public expenditure on the service of 2½ per cent per year until 1965.

The Economist

JULY 12, 1862

POLICY FOR CHINA

Once fairly landed in Indian politics we had no choice but to go on, and so it will be, we fear, in China. Certainly a bolder beginning of such a policy we have seldom heard of. The customs revenue, the military and the naval system of China, are already distinctly sheltered beneath the English wing; and though it may be said that the English officers are only permitted to take employment under, and be paid by the Chinese, we know well what that ultimately means. These Anglo-Chinese volunteers,—naval, military, and civil,—are of course in constant connection with our own services, and have the greatest influence with them. If wronged, or if they think they are wronged, or if they think that they see an opening for a sagacious English policy, they will apply for aid to our regular services, and the chance is greatly in favour of their receiving it. China is a long way off. English officials there have a habit,— partly inevitable, partly the result of this infinitely expansive national energy of ours,—of doing what seems to them good, and then applying for the English sanction, which they usually receive with very little hesitation: and so we shall find ourselves rapidly committed to the virtual government of a large territory at some sixteen points on the Chinese coast, with a powerful Counsellor-general at Pekin to concentrate the English influence. . . . We confess we think England exceedingly ill-prepared for such a policy, and quite unaware of the giant strides we are now making, with Prince Kung's aid, in carrying it out. We have not the resources for it either political or financial. India is more than we can manage. Yet, without the very *strongest* repressing force exerted from home, this is our fate. There is a terrible attraction between English political energy and Eastern imbecility. . . . Wherever there is contact, there will be a demand on our political energy. Wherever there is a demand on our political energy, the temptation to supply it will be exceedingly grave. Trading ports we must have,—but the fewer, so long as they are adequate outlets and inlets for trade, the better. If we begin pouring statesmen and soldiers into the Chinese services, we cannot long choose in the matter. We shall Anglicise those services, so that at last we shall be compelled to assume publicly the responsibility of actions which are really the necessary fruits of our policy.

TURKEY

Soldiers in the Wings

MR INÖNÜ'S new coalition government duly won its vote of confidence in the National Assembly on July 7th by 259 votes to 134, with four abstentions. But more than fifty deputies chose to stay away; and the proceedings on that day, as well as once during the preceding confidence

without air conditioning...

will it soon be obsolete?

What's the biggest single change in building construction worldwide in recent years? Many builders agree it's the general trend toward *air conditioning*. The cleaner, quieter, more healthful atmosphere of air-conditioned buildings is now preferred by workers, customers, guests the world over. If you want your new building to retain its desirability in the competitive decades ahead, give it all the advantages of air conditioning. You'll be protecting a huge investment at small additional cost.

Air conditioning means automatic all-the-year-round control of temperature, humidity, air movement and air cleanliness. And the economical time to install it is now, at planning stage. Ask your architect to give you the benefit of his knowledge and experience in this area.

CONTROLS BY HONEYWELL—international experts on every aspect of air conditioning—are an important part of the systems in these recently completed buildings:—

- B.O.A.C. Air Terminal, London
- Commercial Union Assurance Company, Exeter
- A.E.I. Ltd, Lincoln
- Imperial Hotel, Torquay

debate, were marred by a resort to fisticuffs by some of the deputies. Turkey's politicians do not seem to be making much progress in the business of mastering their political passions (which used to get so out of hand in Mr Menderes's day) and getting on with governing the country. The new government has given them an opportunity for quiet reflection by recessing Parliament until September 3rd. Unfortunately, the deputies have dispersed without making any progress in putting urgent economic and social measures on the statute book.

The question many are asking in Turkey is how much longer the civilians will be able to go on delaying over the tasks they are meant to be doing before the army gets too impatient. There are disquieting signs of impatience now. Two of the fourteen officers expelled from the revolutionary junta in November, 1960, and afterwards posted to embassies abroad, have been on leave in Turkey. Their temporary return is an experiment which the government may now regret; it has been given a lot of publicity in the Turkish press, and the two officers did not exactly behave as if they, or the rest of their group, had given up their interest in politics.

Still more disturbing has been the behaviour, and subsequent arrest on Monday, of the retired colonel, Talat Aydemir, former commandant of the Ankara War College, who is believed to have led the attempted coup against Mr Inönü's government in February. In recent weeks Colonel Aydemir has issued a number of statements complaining about the parliamentary regime and its failure to get on with social and economic reforms. He has alleged that last February's coup was called off only because at the last minute the generals changed their minds and decided to support Mr Inönü. At a press conference last Sunday he delivered a vindictive personal attack on the prime minister. Colonel Aydemir seems to have said enough to get himself gaoled, under the existing penal code, for up to two years. His forthcoming trial will not soothe the susceptibilities of the army. But how far his views and his manner of propagating them are really approved by his fellow officers is, at the moment, anybody's guess.

Studies in
IMMIGRATION
from the Commonwealth

No. 3 Social Integration and Housing

What has been the effect of the recent wave of immigration on housing conditions in this country? Do immigrants become integrated into the communities where they settle? These are some of the questions answered in the third booklet in this series. The first two were: 1. Basic Statistics; 2. The Immigrant Communities.

CZECHOSLOVAKIA

Mr Novotny's Troubles

RUMOURS that a major upheaval in Prague was imminent, or had even taken place, were reported in the British press early this week. Mr Antonin Novotny, Czechoslovakia's stalinist president and party boss was said to be on the skids; and his political rival, Mr Rudolf Barak, who in February was sent to prison for 15 years, allegedly for embezzling state funds, was said to be about to be released or at least retried. No confirmation of these rumours can so far be obtained from either Czech or western sources in Prague; Mr Fierlinger, president of the Czechoslovak parliament, flatly denied them—for what that is worth—when he arrived in London on a visit on Monday. On Wednesday it was announced in Prague that Mr Novotny had presided over a meeting of the central committee, at which a reshuffle of the State Planning Commission had been decided.

Mr Novotny is in trouble, all the same. The treatment meted out to Mr Barak, a much more moderate and popular man, has apparently aroused a good deal of discontent. Mr Novotny's reluctance to carry out more than a very basic minimum of destalinisation also irks some of his associates. In May, Mr Ilyichev, Moscow's ideological trouble-shooter, visited Prague. Soon afterwards it was announced that the twelfth congress of the Czechoslovak Communist party, scheduled for October, had been postponed until December. The reason given was that work on the basic programme to be laid before the congress had not been completed; presumably the party leaders wanted more time to argue about what it should say.

The country's economic difficulties, especially in agriculture, are openly discussed (see *The Economist* of May 12th, page 546). Party leaders insist that the food shortages in the towns are temporary; but they do not hide what Mr Bacilek recently described as their "great concern." On July 5th the Czech parliament was told that last year, for the first time since 1953, the gross production plan was not fulfilled in the "decisive branches" of the economy, and this, together with the failure to complete a large number of investment projects, was causing "considerable difficulties." The shortcomings responsible for last year's failures are not being put right in the current year, and are undermining next year's prospects.

With such a sea of troubles opposing him Mr Novotny's prospects are not good. Which way Russian influence will be exerted is doubtful. Mr Khrushchev would probably like to see the last of Mr Novotny: but he may feel that with Czechoslovakia's mounting economic difficulties it might be wiser just now to paper over the cracks in the top leadership. All the same, a revolt inside Hradcany castle cannot be ruled out.

LETTERS

Post-Pilkington

SIR—You say it is arrogant for the Pilkington Committee to say that a vast audience may not "derive a greater sum of enjoyment than will several small audiences." But if the calculus of pleasure does not work in this way, Pay-TV does very little for minorities. Unless the minorities derive most pleasure from their specialised programmes, and express this pleasure in cash terms, it will be most profitable for Pay-TV to seek a relatively vast audience paying for each programme at low rates. (Does *The Economist* produce a larger profit than the *Daily Mirror*?)

If one production attracts twice as large an audience as another of equal cost, the smaller audience would have to pay more than twice as much to make it worth while to show their choice, because there are overhead costs which remain the same for both time periods. The existence of fixed charges, not in the least related to intensity of pleasure, helps explain why the Pilkington Committee feared that Pay-TV would be unlikely to take very much interest in minorities.

As a point of fact, the committee was proposing an increase, not from £4, but from £3 to £6 in the amount of revenue going to the BBC from each television-and-wireless licence. The present £4 includes £1 of excise duty, and the committee appears to recommend that this should lapse.—Yours faithfully, TREVOR LLOYD
Northwood, Middlesex

*

SIR—If the readers of your footnote to my letter last week would like to know the BBC's estimate of the number of people who watch Panorama and This Week in homes able to choose—that is excluding those who cannot (or will not) receive ITV—the figures are as follows:

Panorama.	This week.
7th May 7¾m.	10th May 5¾m.
14th May 7m.	17th May 5¾m.
21st May 7m.	24th May 5½m.
28th May 7¼m.	31st May 5½m.

You said in your footnote that there were probably 3 million sets which can still receive BBC only. This would amount to about 9 million people. Our estimate i

that there are fewer than 2 million *people* who cannot get ITV on their television sets. —Yours faithfully, GEORGE CAMPEY

London, W1. Head of Publicity, BBC

School Prayers

SIR—Contrary to the note in your issue of June 30th, the decision of the Supreme Court in the school-prayer case could be reversed by other than constitutional amendment. As evidenced by several dozen examples, the court could reverse itself, i.e., overrule its decision, at such time as another case on the point comes before it. Perhaps the closest analogous situation came in 1943 when the court held, overruling a decision reached in 1940, that compulsory flag salutes in public schools transgressed the rights of members of the Jehovah's Witnesses sect to free exercise of religion. While the court can reverse itself, whether it would do so is quite another matter.—Yours faithfully,

Washington, DC. ARTHUR S. MILLER

Arab Poker

SIR—Your statement that the recent economic agreement between Iraq and Syria makes a start towards establishing the free flow of capital and labour seems to overlook that these beginnings already had been made, though did not materialise, earlier.

In 1958 the principle of the free movement of labour between the Arab countries was proclaimed under the first (1954) Arab League economic convention. The second convention provided for the encouragement of capital transfers for investment in constructive projects. By 1958 all Arab League members except Libya and Yemen had signed these conventions.—Yours faithfully,

New York J. O. RONALL

Anatomy of Britain
By Anthony Sampson.
Hodder and Stoughton. 676 pages. 35s.

THIS is again an age of gossip-writers. So were the birth-years of the British press two hundred and fifty years ago; the early newsletters pinpointed policies and opinions upon the persons who held them. Since the latest world war a conspicuous feature of the British press has been the big sales of papers bought by the majority of Britons. But the chief feature in recent years has been the quantitative growth of the quality and minority press, especially on Sundays; and perhaps the best invention in this success story has been the higher gossip-writing, begun by *The Observer*, giving liveliness to institutions, groups, firms and enterprises, and so by anecdotage making a personal comment upon their significance. The prime inventor of this much-imitated journalistic trick was Mr Anthony Sampson, author of this book. The question raised by the book is whether this skilful device, apt as it is for Sunday columns, fits a product of nearly seven hundred pages. Do the hors-d'oeuvres of Sunday morning make a satisfying main meal? Or, to change the metaphor, is the author not caught on the wrong foot between the pointed snapshot which has been his weekly business and the long-shot balanced view which a book of this weight required?

Mr Sampson has a thesis running through his thorough-going report. It is that British society, politics and business are commanded too much by amateurs and too little by professionals: too many gentlemen (new and old) and too few players. His own book is a case in point: as a journalist Mr Sampson is a proved professional; in politics and economics he is, confessedly, a British gentleman.

He says so himself: he writes not "as an historian, or as a student of constitutions, but simply as an enquiring journalist," and so his round-up of the people who count at the London headquarters of British life, and who account for what he calls the "slowness" of Britain, should be read and judged. His exemplar—and who better?—is *The Economist's* own Walter Bagehot. Bagehot, like him, commented a century ago on the pain of a new idea to an Englishman and weighed the worth of men and institutions by their capacity for "variation" in changing times. But Mr Sampson does not begin (and would not claim) to have Bagehot's practical and intuitive grasp—his "feel"—of the ways in which politics and business are really carried on. On his journey among the managers of Britain Mr Sampson was an innocent at home, painstakingly setting down what he found, "rather as a foreign correspondent reporting territories."

Nobody looks for new discoveries or expert insight in a guide book. No doubt Mr Sampson himself learned a lot on the way about aristocrats and courtiers, politicians and lawyers, churchmen, schoolmasters and civil servants, stockbrokers, bankers and financiers, company chairmen and directors, accountants, scientists, technicians and trade unionists and the rest; and he strings his simple tales together on one critical thread: why in Britain nowadays are the propensity for innovation and the capacity for decision, upon which its future depends, apparently so muffled? He comes up with the familiar answer that he expected when he started: it is a fault of recruitment in old grooves, of caste in many kinds, and of lopsided education. With the passing of Britain's imperial and insular confidence,

> the old fabric of the British governing class, while keeping its social and political hold, has failed to accommodate or analyse the vast forces of science, education or social change which (whether they like it or not) are changing the face of the country.

It is "a malaise among the few thousand managers of our society who have failed to absorb new challenges and new ideas."

Perhaps Mr Sampson is too innocent. Perhaps he too easily identifies the natural diversity of a free and old society in transition with merely foggy confusion; the blur of focus, one feels, is often in the observer's eye. He hardly seems to realise that the "sense of overriding purpose," whose lack he laments, might best be got by having a Hitler or a Stalin—or a Buchman—to run things. It is a fact not a fault that a free country is "a loose federation of institutions, each threatening, not to coalesce, but to conflict or break away"; Harold Laski, for instance, might have told him years ago that, in a free-sifting society, opinion, thought, fashion and policy itself must inevitably be the plural resultant of the rubbing-together of all the groups to which "the people" naturally belong, even within the parliamentary-balloting, party-channelled and cabinet-ruled system we call British democracy.

Even so, Mr Sampson's worried questions are apt enough: the danger now, as the twentieth century runs its course, of a dogged, indecisive and backward-looking British decadence; the spectacle of Lord Heyworth "perpetually in a fog"; the "sentimental softness for inefficiency" that Mr Paul Chambers has upbraided; the "lack of dynamic and stimulus" that Mr Sampson bewails. Mr Sampson's book does not prove any of this; it just illustrates it. Whatever deeper tides there may yet be, his method cannot plumb; if there are new growing points in British thought and work, they are not here; nor, in the nature of the inquiry is there any assessment of the policies at the top that might aid or hinder growth. But the book, with its honest verdict of honest doubt, ought to be read, or tasted, quickly—before new actors take the place of those with whom Mr Sampson has topically peopled his thoughtful and apprehensive peepshow.

How Like an Angel?

The Ordeal of Consciousness in Henry James.
By Dorothea Krook.
Cambridge University Press. 435 pages. 45s.

"THE genius of the angelic novelist, Henry James. . . ." These words come not from the volume under review but from Dr Krook's previous book, "Three Traditions of Moral Thought". Admirers of James who certainly would not cavil at "genius" might yet raise an eyebrow at "angelic". This super-subtle chronicler of a very rarified fraction of the social scene, this intensely intelligent master of the art of fiction—by what extension of fancy can he be credited with the attributes of an angel?

A partial answer is provided in "The Ordeal of Consciousness", though not the fullest of which its author is capable; for she explains that this is a collection of elucidatory studies of some of James's most significant works, and not quite the book that she originally planned. That was to have illustrated her contention that the moral insight of Henry James is of a kind that gives his humanism a religious quality; and we may look forward to a thorough exposition of this view in another volume. But in the present one, we are often reminded of the point made in "Three Traditions": that James "affirmed as authoritatively as Lawrence, only less obtrusively and less stridently, the redeeming power of human love." Not specifically sexual love, in James; though the element of passion is undoubtedly there in Milly Theale's redemptive love for Morton Densher ("The Wings of the Dove") and in Maggie Verver's love for her husband that brings about his moral reclamation ("The Golden Bowl").

It is a measure of Dr Krook's catholicity of sympathy that she, an impassioned adherent of Lawrence, should care even more deeply for Henry James, at first sight his antithesis. What commends them both to her, of course, is their intense moral seriousness, their searching diagnoses of the sickness of society and their grasp of the complexities of the interrelations of human beings. But James, more than Lawrence, as she amply shows, recognised the existence of an order of goodness superior to the current values of this world (though not of supernatural origin), and saw how submission to that vision entails admitting as the regulative principle of life a love that extends beyond passion to compassion, a love that expresses itself in selflessness, forbearance and forgiveness. The trouble about human love as a force of redemption is that it always is, by its very nature, fallible and imperfect. "No man," as the psalmist says, "may deliver his brother, nor make agreement unto God for him, for it cost more to redeem their souls. . . ." "The Turn of the Screw" is, in Dr Krook's reading of it, a Faustian fable, in which the governess is the good angel, truly striving for the salvation, through love, of the corrupted and haunted children; yet because her love is tainted by possessiveness, she becomes the agent of Miles's death.

It may be thought that Dr Krook at times presses her religious interpretations of James's situations a little too hard; but it is fascinating to see what riches his later writings yield when they are subjected to the serious literary analysis befitting work of tragic dimensions. In her introductory chapter, Dr Krook suggests that the characters in James's mature novels are "high personages" of a Shakespearean kind, deliberately set above the turmoil of common life, superior in intelligence and in powers of articulation, possessing an inordinate capacity for "being and seeing"—creatures of tragic stature whose sufferings, though far from typical, are yet representative. Her defence of James's tireless preoccupation with moneyed people is less convincing. Though money is undoubtedly the ultimate source of power in a capitalist society, plutocrats cannot effectively be equated with rulers unless their wealth is seen to affect the lives of society at large. James's millionaires and heiresses do not wield power; they give no impression of counting for anything, outside the salons in which they expensively exist. But though not all her arguments carry conviction, Dr Krook puts up a brilliant case for James's deliberate restriction of his field of social observation; and by constant and sensitive examination of what he actually wrote she exhibits the depth of his moral insight and the incessant play of his ironic and compassionate intelligence.

Rolesmanship

The Nature of International Society
By C. A. W. Manning.
George Bell for London School of Economics. 231 pages. 30s.

PROFESSOR MANNING, who has lectured at the London School of Economics on the structure of international society for more than thirty years, has returned in the year of his retirement to examine the fundamentals of this curiously controversial subject.

Many have argued that international relations, as nothing but an amalgam of international history, politics, economics and

other subjects, are unworthy of separate study. Academic empire-builders have to be allowed their prejudices. But, just as psychology deals with the individual, and sociology with society, international relations deal with the behaviour of states in the world. Professor Manning points out that it is irrelevant whether or not an international society exists in "fact," for so long as it exists in "effect"—in that states act as if it did exist—there is a subject for study. His book is refreshing, stimulating and subtle. It is written in an individual, even poetic, style, which may frustrate those whom it does not fascinate; but it is a work that deserves to be read and pondered.

This is not another book of fragments about international organisations, treaties and national movements and we are spared yet another analysis of international relations in terms of "power" or "economic forces." It is not that Professor Manning denies such forces but that he wishes to focus attention on men, and on men as the components of states that are "deemed" to exist in international society. Most of all he is concerned to distinguish between real and notional entities and to understand their respective roles in human affairs:

> . . . just as it is in the name of that notional being, the state, that government is domestically conducted, so in the name of those notional beings the members of international society . . . do the processes of diplomacy keep proceeding on their artificial way.

Looking at the theories and dogmas in the light of which these entities conduct their relationships he points out that in this society "membership is understood not as sovereign statehood merely but as sovereign statehood subject to international law". In an excellent chapter on "moral niceties" he makes good use of his concept of "rolesmanship" arguing that "for the purpose of its fulfilment the role may be more significant than the one who fills it." Perhaps it is not that those who rise to be statesmen are unpleasant characters, but, rather, the choices that face statesmen are unpleasant ones.

At a time when there is so much easy talk of the need to return power from governments to people in order to preserve peace, it is useful to be reminded that states do form, if in a rudimentary way, "a global social order", which serves as an insulation from the human quarrel. "It is between man and man that quarrels occur, it is between states that peace is maintained".

Thus Professor Manning states his prejudice in favour of the existing international system as a lesser but preferable evil. His book provides some valuable insight into the world that the nations are forced to share. It does not pay as much attention as his argument would suggest ought to be paid to the possible role of the new "revolutionists" in international society. These are the countries that are not interested in keeping the system going; they are numerous and mostly new, and have not yet calculated that if the present system is brought down, what follows may be worse.

About Africa

African Profiles
By Ronald Segal. 352 pages. 6s.

A Short History of Africa
By Roland Oliver and J. D. Fage. 280 pages. 5s.

Portugal in Africa
By James Duffy. 240 pages. 4s. 6d.

The Arab Role in Africa
By Jacques Baulin. 144 pages. 3s. 6d.
Penguin.

POSTWAR African politics and the emergence of a long list of independent states have inspired a spate of books directed at the general reader. Many have been written in haste to catch a deadline and bear all the marks of ephemeral journalism. It can be argued that the events of the past two years in the Congo provide some significant lessons on the transfer of power in the twilight era of colonialism, but they still await a fair and lucid analysis. Passions have been aroused among participants and observers, and the reporting has suffered in consequence.

The new series launched by Penguin Books under the general editorship of Mr Ronald Segal is therefore timely, but of these first four volumes only two have permanent value. They alone would justify the enterprise. "A Short History of Africa," despite its commonplace title, gives a perceptive and very readable account of African history from palæolithic times down to the present day. There is only one unsatisfactory section: the last two chapters, dealing with developments since the Boer War, are too brief and compressed to be anything more than a guide post to other books. Professor Duffy's "Portugal in Africa," based on his longer standard work published three years ago, is an admirable summary of a colonial experiment inspired by a sense of glory which atrophied over the years and led finally to a regime of indefensible exploitation. Of all Europeans the Portuguese have been longest in Africa, and have done least for the land and the people they ruled. The book deals mainly with Angola and Mozambique; the remaining small territories are not important except as props to a specious argument—that they all form part of metropolitan Portugal. That was said not long ago about Algeria, too. Professor Duffy comes down firmly on the side of African emancipation, but he is not naive or starry-eyed. "There can be no easy answer," he writes, "to the problems of Portuguese Africa. Independence may not itself be the answer, but there will be no satisfactory answer without it."

Mr Segal's "African Profiles" is a useful reference guide to personalities and parties in Africa. He is mainly concerned with nationalist movements and their impact on events, but his inter-linking sections depend too heavily on press-cutting files, and his use of them is too selective to satisfy the reader who knows Africa well. His account of the United Nations intervention in Katanga, for example, is notable for its omissions and will surprise any detached observer who was there at the time. Too often he is looking at contemporary Africa through the eyes of others; and his failure to reflect the thinking of the moderate whites in Africa (who are more numerous than is sometimes supposed) merely serves to minimise the hardships and difficulties that lie ahead. There is not much to say about M. Baulin's book. We do not get the right answers because he has not asked the right questions. It is highly doubtful if the Arabs will have any sway in Africa until they first achieve unity among themselves.

Management Audit

The Appraisal of Management
By Jackson Martindell.
Harper: New York. London: *Hamish Hamilton.* 222 pages. 38s.

IS a company well managed? Many investors would like to know the answer. In the United States they can turn to the American Institute of Management, a non-profit research foundation, which has developed a method of assessing management. It has applied its form of management audit to a large number of, mainly American, companies, and produced a list of ones that are excellently managed. In this book, Mr Martindell, chairman of the board of the American Institute of Management, describes how this management audit works. Investors, he suggests, can use it to select investments by the evaluation of managements.

The theory of the management audit, developed by the American Institute of Management, is based on the assumptions that the process of evaluation must be comparative and historical, and that weakness in a single division of management reflects failures of management as a whole. The management audit is divided into ten categories: economic function, corporate structure, health of earnings, service to stockowners, research and development, directorate analysis, fiscal policies, production efficiency, sales vigour and executive evaluation. Numbers are assigned to each category as a guide to the relative values of different management functions; for instance, out of a total of 10,000 points, executive evaluation is given 2,200, and economic function, fiscal policies, production efficiency and sales vigour score from 1,000 to 1,300 each. All the rest are rated at under 1,000. The institute collects the information under these headings by a lengthy questionnaire, extensive interviews with management, information and opinions from external sources and a study of the past, present and future activities of the company. What Mr Martindell has to say about the analysis of each of these ten facets of management is always sensible.

Investors who want to read company annual reports more intelligently will find the chapter on "The Meaning of Health of Earnings" particularly helpful. In it he points out some of the ways in which the report may be misleading. The actual income earned, for instance, may differ considerably from that reported to the shareholders. Mr Martindell explains how to arrive at a more correct figure. Again, the amount reported to be spent on research may be much greater than the reality. Many companies have, he says, gained an undeserved reputation for progressiveness through the simple device of crediting to research expenditure sums that were previously correctly included under engineering or production costs. Prospective investors in a company should find out how well fiscal policies have been handled. The best test is whether the company has maintained as favourable a return on new moneys as it did before their employment.

Some investors may be sufficiently energetic to analyse their prospective investments in the detailed manner suggested in this book. A few may even be sufficiently bold to follow Mr Martindell's suggestion and visit the company to cross-question the management—although in this country, at least, their reception may often be less than enthusiastic. All investors should, according to the author, insist that their brokers give them these facts. But how many members of the London Stock Exchange would regard this as a reasonable request?

The Chartmakers

Marine Cartography in Britain
By A. H. W. Robinson.
Leicester University Press. 222 pages. 5 guineas.

HITHERTO there has been no satisfactory history of one of this country's most beneficial services to mankind—the Admiralty chart. After following far behind the standard set by the Majorcan cartographers of the sixteenth century, the Dutch in the seventeenth and the French in the eighteenth, the British took the lead only after the establishment of the Hydrographic Department of the Admiralty in 1795, four years after that of the Ordnance Survey. Even then it was not the first official cartographer, Alexander Dalrymple (Cook's rival), but his successor, Captain Hurd, who formed an independent surveying branch of the Navy and made the fruits of its labours accessible to the seamen of all nations.

Nor could the task of charting the seas of the world be undertaken until the survey of the British seas was completed in 1855. This is the subject of Dr Robinson's handsome and scholarly volume, the production of which is a credit to a comparatively new university press. As a history of the marine cartography of the British seas from the magnificent manuscripts executed for Henry VIII to Sir Francis Beaufort's more utilitarian services to navigation in the mid-Victorian epoch, it will not soon be superseded. But those interested in the subject should be warned that the book is concerned with coastal surveys, some fifty of which are reproduced, and with 'platemakers' and their publishers in this country only, not with the charting of the oceans of the world, nor with the artistic aspect that has attracted so many to the study of old land maps. The splendid cartouches and gorgeous colouring of the old sea atlases play a small part in this book compared with the development of the science of hydrography, the careers of early cartographers, many of whom are exceedingly obscure, and the task of surveying coastal waters. It is to be hoped that the author will now turn his attention to the great ocean surveys done by men whose names are still commemorated in those of modern survey vessels—Cook, Vidal, Owen and the like. If it is true that the new ship has not yet been named, that of Dr Robinson's hero, Murdoch Mackenzie, would do well enough.

Economists in Rome

Guest Lectures in Economics
Edited by E. Henderson and L. Spaventa.
Guiffre, Milan. 294 pages. L.2500.

THIS volume makes it clear that the recent procession of eminent economists to Rome has had more to do with Professor Papi that with Il Papa. The economists lectured at the former's seminar and now have their words immortalised in print, the British contingent consisting of Balogh, Caine, Dow and Robbins (twice). Since the lectures have nothing in common but the English language, a review that is not to be a mere catalogue would have to pick out particular items at the cost of unfairness to the other authors.

Reviewing, however, consists largely of making invidious distinctions, so let it be said that the lecture on East German economics by Professor Stolper is an exciting one. After constructing gross national product figures for East Germany, he and a colleague went on to estimate an input-output table and it is this statistical *tour de force* with which his lecture deals. By 1950, West German GNP per head had just passed the 1936 level, while in the East it was 20-25 per cent lower. The gap had not been narrowed by 1956, the year for which the input-output table was estimated.

Since East German prices are largely meaningless, all quantities are valued in West German prices. These can be taken to represent world prices and hence used to examine the gains from trade. Professor Stolper thus finds that in 1956 one million DM of exports required much less capital and labour than did the production of import substitutes of equal value. Since then, planning has improved the allocation of resources by shifting the emphasis in production towards labour intensive products.

The range of subjects covered in the other lectures is enormous, from Lord Robbins's generalisations about modern economics to Professor Gerschenkron's discovery that productivity in Bulgarian manufacturing rose not at all between 1907 and 1937. It is difficult to decide which is the more remarkable, the discovery itself or the fact that people know such things.

OTHER BOOKS

MODERN INDIA. By Percival Griffiths. 3rd Edition. *Benn.* 292 pages. 30s.

This is the third edition of what has deservedly become a standard descriptive work for the non-specialist student of Indian affairs. The sudden impact of a fresh foreign exchange crisis very recently provides a typical example of the impossibility of keeping absolutely up-to-date with the ever changing Indian scene. But Sir Percival is way ahead of most people in knowledge and understanding of India's problems, which are documented with his usual lucidity and thoroughness in this latest edition of his now well-known book.

MARKETING DICTIONARY. By Stanley Strand. *Philosophical Library Inc.* 810 pages. $10.

Even though the British tend to borrow their marketing terms from the United States, this dictionary of commercial jargon contains so much that is exclusive to America that its practical use to outsiders is limited. Those with a specialist interest in US commerce will have more reason to refer to it, but will be irritated by the amount of space devoted to vague general terms such as "Good Taste in Advertising." Definitions range from a few words to several pages.

INDEX OF ECONOMIC JOURNALS, VOL. III, 1940-1949. 522 pages. VOL. IV, 1950-1954. 490 pages. Published by *Richard Irwin,* Illinois, for the American Economic Association. $25 for set of volumes I-V.

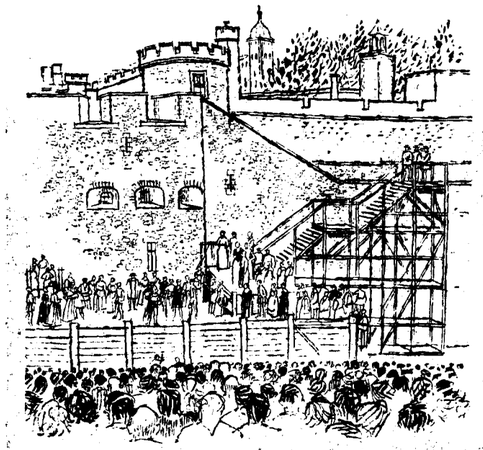
HOME REPORT

Members of the editorial staff and local correspondents report on life and happenings in and around Britain



Not So Square Mile

SWARMING by day, deserted by night, the City of London is not generally a citadel of community life. Only Wren's surviving churches and Mr Bernard Miles's dashing Mermaid Theatre provide a measure of cultural leaven in a district more devoted to dough. But for this week and next week the City, by putting on its very own festival, is showing that financiers, too, can rise to higher things. Much of the entertainment consists of solid gilt-edged entertainment—the *Yeomen of the Guard* at the Tower, Handel's *Fireworks Music*, with fireworks, on the Thames—but there are also some new issues in the form of seven musical works specially commissioned for the festival. True to its best traditions, the City is not having too much to do with speculative modernity. The nearest approach to daring in the official programme was the choice of Mr Tommy Steele to sing a much appreciated cockney ballad before the Queen.

On the less formal side of events somewhat greater risks are being taken, including the organisation of an open-air jazz dance in Lime Street. The organisers' first worry was about thunderclouds: when they failed to appear the result was in fact a fair-sized melee in which some 50 people were hurt and 3 arrested. The reason for this unpleasantness was that fifteen or twenty thousand people turned up, instead of the expected thousand or two: the moral is not that young jazz-fans are incurable hooligans, but that they are very numerous, need plenty of space, and are apt to complain when (supposedly in the interests of peace) Mr Humphrey Lyttelton's band is replaced by bagpipers.

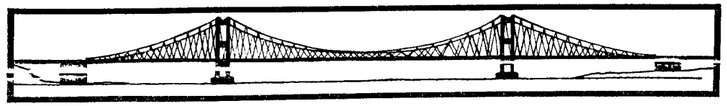
Other non-highbrow festival events are less risky, it would appear. For the athletic, there is a yacht-race on the Thames; for the more sedate, City merchants are arranging tastings of their wines; and for traditionalists, an ox is to be roasted in the open (over coke, since the anti-smoke regulations ruled out any more romantic fuel). Everyone must welcome this outbreak of pomp, patronage, and festive spirit in the capital's capital.

Festivals, in fact, are rapidly becoming a part of British life. London itself has recently been the setting of the Festival of Labour, whose centre-piece was a procession of floats, decorated by trade unions and applauded by Mr Gaitskell, in Battersea fun-fair. The older, smaller, festivals, of which the best known is perhaps that at Aldeburgh associated with Mr Benjamin Britten and Mr E. M. Forster, have often been the work of small groups with local connections. The new wave of festivals, commanding financial support both from local authorities and from local firms and individuals, have generally been either in honour of a particular event—such as the Coventry festival this year in honour of the new cathedral—or frankly designed to boost the tourist trade, as at Edinburgh, York, Bath and even Pitlochry. What is new about the City festival is that it is largely intended to appeal to local people—local workers if not local residents.

THIS appeal to local people—and a similar desire to give them, for a short period in the year, a supply of culture for which a year-round audience is unobtainable—inspires another ambitious newcomer in the festival world. The Trades Union Congress of 1960 adopted a resolution—number 42—expressing the will of the unions to be nice to art. Mr Arnold Wesker has laid aside his work as a playwright for a while to organise Centre 42, a body whose aim is to provide festivals of culture to trades councils and Labour parties—and presumably Labour-dominated local authorities—that are prepared to foot some of the bill and to provide some of the audience. This year organisations in six towns are using the services of Centre 42.

Laying on a worthwhile festival is an expensive business. Despite the large tourist income brought in by their festival, not a few burgesses of Edinburgh resent the £70,000 subsidy given by the corporation to their festival last year (to which must be added some £66,500 in private and business donations, £15,000 from the Arts Council, and sums from the general fund). Of course neither Mr Wesker's organisation nor the City Corporation would wish their local celebrations to aim at the international class along with Edinburgh. But it will be interesting to see how their finances fare. So far Centre 42 has raised an encouraging amount of cash both from trade unions and from personal gifts. In London over £20,000 raised from subscribers and a grant of £7,500 from the City Corporation is helping to finance the City Arts Trust that is organising the festival. At this early stage it appears almost impossible to find a spare seat at any performance on the City's programme; if this impression is reflected in the final results London may be fortunate enough to have another festival in the future.

The success, which now seems assured, of the festival could in the long run benefit not only London. The list of supporting firms, and of influential City figures (and their ladies) on the various ruling committees should—if anything can—set a fashion for generous support of the arts; and the lavish support given to the festival by Associated-Rediffusion cannot simply be dismissed as an anti-Pilkington gambit. The amount of support for the arts already given by private individuals and by firms in Britain is often sorely underestimated: but if such giving—at festival-time—becomes even more clearly a matter for public applause it will be the greatest possible boon at once for artists and for the art-loving public.



Newport by the Bridge

FROM A CORRESPONDENT IN BRISTOL

NEWPORT, Monmouthshire, the southern gateway to Wales, is not exactly living for the day when the new Severn Bridge is opened, possibly in 1966. Newport will then be the focus of motorway systems from London and the Midlands, and it could be at the centre of a new trading area, opened up by the bridge, comprising South Wales and the West Country.

The bridge, being built 18 miles from the town, will cut 50 miles off the old route through Gloucester between South Wales and the West of England. But Newport itself (population 105,000) feels pretty snug with what it has already got, and some locals say that all the Severn bridge will bring is traffic congestion. There are demands that two important local road schemes should be carried out before the bridge opens. One of these, a seven-mile, £3 million northern by-pass, is perhaps symbolic: it will hasten traffic past Newport and on to West Wales. The other scheme, which is now to go ahead, is a new £1½ million river bridge to help relieve traffic pressure within the town.

Newport's reaction to an opportunity that other towns seeking new employment would envy, is not quite as negative as it looks. In the past it suffered for its reliance on a few heavy industries, but it has now achieved a healthy diversity by encouraging lighter industries, including aluminium, chemicals and clothing. There is, in fact, very little land left on which manufacturers could exploit new opportunities.

The place that can is the new Spencer steelworks at Llanwern, which started limited iron production last month, and will need nearly 6,000 workers for its first stage of development. Newport cannot provide these, and labour recruiting schemes are being launched on the Bristol side of the water. The Severn railway tunnel provides the only access for these workers at present, but the bridge should enable the Spencer works to employ men from a much wider area in the West Country.

Newport docks, however, stand at a crossroads. From exporting 6½ million tons of coal in 1923, the port has dropped to handling a total of only 2½ million tons of exports and imports combined. Although the South Wales ports, controlled by the British Transport Commission, together handled half a million tons more cargo up to mid-May this year than in the corresponding period last year, Newport's contribution dropped from 945,000 tons to 881,000.

Newport's iron ore trade, however, has increased over the years, particularly through expansion at the Richard Thomas and Baldwin steelworks at Ebbw Vale. With existing facilities the docks could cater for the 3 million tons of iron ore imports a year which the Spencer works need for their first phase of production. But eventually the works will need 10 million tons a year. The empty side of Newport's South docks, once used for coal exports, could take iron ore imports of 10 million tons a year, and it could handle three or four sizeable ships at a time. Major operations on the already large lock would, however, be needed to cope with the big ore ships.

A second possibility for the port would be a loose association between Newport and the successful Bristol ports, handling 7½ million tons of cargo a year. As an article in *The Economist* last April pointed out, such an arrangement would avoid the duplication at Avonmouth of facilities that already exist at Newport. It would not be significantly more expensive for West Country manufacturers to send goods through Newport, once the Severn bridge is built.

If neither of these possibilities materialises, the prospects for Newport docks are bleak. The ultra-conservatism of ship owners has defeated the sales campaign of the British Transport Commission, who tried to retain the trade that was diverted to the docks during the war. Even the motorways, which should make delivery to Newport much quicker than to London docks, will not induce manufacturers to use Newport if the shipping lines running from the port do not visit their markets.

The Right Ward Trend

AN extremely interesting article in the latest issue of the *Political Quarterly* throws the clearest light yet on one of the most dramatic developments in Labour politics since the 1950s: namely, the clear swing to the right that has taken place—and had taken place even by the time of the Scarborough conference in 1960—among active workers in the constituency Labour parties.

Mr Keith Hindell and Mr Philip Williams have tracked down all but 20,000 of the votes cast by trade union leaders in the Scarborough vote on defence in 1960 (which Mr Gaitskell lost by 3,339,000 conference votes to 3,042,000) and in the Blackpool vote in 1961 (which Mr Gaitskell won by 4,526,000 to 1,756,000); their deductions about the constituency party votes on each occasion are shown in the table below. It confirms that more than the whole of the switch between Scarborough and Blackpool came about because three large unions swung from unilateralism back to multilateralism between 1960 and 1961. But it also confirms that even at Scarborough Mr Gaitskell had a two-to-one majority of the constituency parties (521,000 votes to 260,000) on his side; at that conference, however, up to 289,000 constituency votes abstained or were absent. In 1961, about half of the previous genuine abstainers came off the fence, a majority actually on the unilateralists' side. But Mr Gaitskell still seems to have had 548,000 constituency votes for him and only 320,000 against.

This solid support for Gaitskellism in the committee rooms (which is confirmed by the way in which Gaitskellite candidates are nowadays regularly chosen to fight by-elections) puts Mr Gaitskell in a much more favourable position in the constituencies than Mr Attlee ever was. In the 1954 vote on German rearmament Mr Attlee is believed to have had 900,000 constituency votes against him, only 280,000 for him, with 125,000 abstainers or absentees. The rightward trend has been obscured because three-quarters of the constituency parties' votes in conference-time elections for the national executive still regularly go against Gaitskellite candidates, thus putting people like Mr Mikardo in. The reason, say Messrs. Hindell and Williams, is that multilateralist parties traditionally vote for a mixed slate of candidates at these elections (particularly for candidates who are members of the executive already), while unilateralist parties are a bit more likely to concentrate all their votes on their own kind. But last year at Blackpool, there was some sign of change: the total vote for pro-Gaitskellite candidates in these executive elections rose by 30 per cent, while the vote for anti-Gaitskellites and "compromisers" fell. Unfortunately, the pro-leadership vote was obscured by being diffused over a larger list of candidates. The remaining unilateralist local parties are largely to be found in Tory seats; local parties in Labour seats are nowadays much more likely to be Gaitskellite.

AMERICAN SURVEY

AMERICAN SURVEY is prepared partly in the United States, partly in London. Those items which are written in the United States carry an indication to that effect, all others are the work of the editorial staff in London.

Mr Kennedy's Commonwealth

WASHINGTON, DC

LAST week President Kennedy spoke in Philadelphia with customary eloquence of the hard core of his grand design. This is a politically integrated Europe able to bear its share of the weight of an Atlantic bridge. But foreign ministers and commonwealth prime ministers will do well to remember that, though the concept exists as yet only in broadest outline, there is much more to it than a core. What the President and his advisers seem to have in mind, in the end, is nothing less than a world commonwealth.

The United States is seeking what is called a new bone structure for the free world. This week the *New York Times* delivered a warning that "a super-state with an over-sized bureaucracy has no lures for a democratic world." It has been pointed out in Washington that the changes which would be involved in Britain's entry into the European common market and in the forging of Mr Kennedy's new transatlantic partnership go deep into the history of each country concerned and that the United States, if it is to be a partner, has to learn to be both sensitive and knowledgeable about other people's hopes and fears. This is essentially a plea for the sort of partnership which rests on intimate understanding more than formal ties and which stands at the opposite pole from the crude conveyor-belt relations between the Soviet Union and its satellites.

American thinking seems increasingly concerned with a world which will no longer be conditioned by the political reflexes of a de Gaulle and an Adenauer—or of a Franco and a Salazar. It is believed that, with luck and good management, such a world could consist, on the right side of the Iron Curtain, of a series of interdependent modern states, busily planning in harmony to achieve or sustain high levels of economic activity. Such states would be able to compete successfully with a stale Marxism that is increasingly out of tune with modern notions of political and economic behaviour and is visibly failing to satisfy human aspirations, all the way from the Berlin Wall to the gates of Peking.

Despite *Pravda's* fulminations over Mr Kennedy's speech, Mr Khrushchev need not prepare himself for a duel to the death, even though his system is being challenged. For President Kennedy's full programme is not intended for implementation by this generation but by the next. At present, it is argued, the United States and the Soviet Union have some basic interests in common: for instance, neither can really afford to fight a nuclear war nor to go on preparing for one. The next milestone may not be the still far-off Atlantic community but some easing of East-West tensions and perhaps even a summit meeting which, it has long been hinted in Washington, might be attainable if progress were made towards a treaty to ban atomic tests.

The theory of an evolving world community does not stop at the Iron Curtain. Washington holds that history is on the move on the other side also. A time will come when even East Germans will be as relatively free as Poles are now. The immediate purpose of having a strong, united Europe is to provide effective competition for a still fast-growing though old-fashioned Russia. But Poland and Jugoslavia ought to find the doors from the West open and not closed for trade and aid, while General de Gaulle's vision of a Europe that will stretch one day all the way from the Atlantic to the Urals must not be dismissed as altogether fanciful.

The grand design has places for neutrals as well as for Poles and even Russians. The Treaty of Rome may resemble the articles of association of the original thirteen American states, but every precaution is being taken to try to prevent the natural American interest in this resemblance being misinterpreted by other non-Europeans; to them support for a strong Europe may look like support for the last stronghold of white colonialism. The importance of the Afro-Asians in the United Nations has not been forgotten in Washington, nor have Latin American and Japanese friends, and a softer note has been sounded recently regarding Europe's own neutrals. It is hinted that they can, after all, co-operate politically with their neighbours, without injury to their neutrality yet without diluting, in any significant way, the political commitments of the Treaty of Rome or of the North Atlantic Treaty Organisation.

Apart from communism, and some outmoded public figures in Europe, the chief obstacles along the path of progress are held to be angry young men in the under-developed countries of the world and angry older men in the Congress of the United States. The Marxist spectres of poverty and revolution still stalk Asia and Africa, while most of Latin America is a haystack awaiting a Castro match. The peasants feel that they have nothing to lose but their landlords, against whom communism would be a good lever to use. In Latin America especially, the problems are aggravated by rapidly growing populations, a growth which the United States abets by helping to improve health but not to curb fertility, and by a grave shortage of trained or even literate persons.

COMPROMISE is still possible this week on Congress's drastic attempt to tighten restrictions on trade and to cut foreign aid to communist nations, including Poland and Jugoslavia, as well as to countries that either discriminate against American businesses or nationalise them without adequate compensation, like Brazil and Ceylon. But even a satisfactory response to the President's appeals will hardly ease the unlucky impression created by these attempted amendments to his foreign aid programme. Mr George Kennan, the Ambassador to Jugoslavia, said that these came as bolts from the blue and indicated a "terrifying" lack of understanding between Congress and the Administration.

The painful jolt which the Administration received is being blamed by it on confusion in the recently created Agency for International Development, which is well short of its first birthday but has already lost its Deputy Administrator and may lose its Administrator, Mr Fowler Hamilton, as well. He sought to recruit experienced business men instead of civil servants or figures from the academic world as regional directors and field officials and many business men responded with the same sort of zeal that has attended recruiting for the Peace Corps. But somehow "Operation Tycoon" failed to achieve a similar success or esteem.

The Administration is highly conscious of India's vast importance as well as of its good offices in Vietnam and the Congo. But legislators are even more annoyed than usual by Mr Krishna Menon's scoldings and moralisings and also by what is regarded

as Mr Nehru's high-handed rather than high-minded petulance. Congress finds it difficult to appreciate how much time as well as money is involved in preparing under-developed countries for an economic "take-off"—probably because originally and rashly there were promises of early results. Also, however much Mr Rostow of the Department of State may say that planning and the public sector are here to stay and that the old controversy between socialism *versus* capitalism is just fading away, few Congressmen see things in this way. Some of them are also incensed by what is called the "commingling" of American and communist aid, in countries like Cambodia and Yemen, where American materials have been discovered in a Russian-built hospital and a wireless studio supplied by the United States has been found linked with a wireless station built by the Chinese; in Yemen the Americans have built roads connected with a Chinese-built harbour. A congressional committee has inferred that American taxpayers are financing the cause of communism, which it is "a basic purpose" of foreign aid to combat, and that the United States is thereby contributing dollars towards its own downfall.

The sophisticated propositions of the new frontiersmen have thus had little or no effect on the thinking of members of Congress to whom the most effective argument for foreign aid continues to be that Mr Khrushchev would be happy if it were stopped. The curbs which Congress continually threatens to put on the Administration, which it is of course constitutionally entitled to apply, also raise some disturbing doubts about just how the United States itself could or would fit into Mr Kennedy's grand design.

On the other hand, Congress has permitted the Administration to make loans to under-developed countries at very low rates of interest and what chafes Mr Kennedy is that, simultaneously, the Germans and Italians are charging 6 per cent for similar loans. Some Americans also contend that, while Britain's signature is, of course, her bond, it is sometimes the devil of a job to get her to sign anything. Perhaps, on the whole, it is wise of President Kennedy to look mainly to the next generation to achieve the more perfect union, which will succeed somehow in spreading the benefits of industrial civilisation without a proliferation of the weapons of a new age and which will remain strong at the centre and able to defend the weakest and farthest-flung frontier.

Waiting for Tax Cuts

WHEN the Senate Finance Committee agreed to work on the tax Bill for a week before dealing with the trade Bill, this looked like no more than a token recognition of the importance which the Administration attaches to its tax proposals before the committee shelved them. For no one expected it to agree on a tax measure within the week and the tariff legislation will occupy it for most, if not all, of the rest of the session. But now it looks as if a tax Bill may be reported out after all; if it is, it will not allow taxes on dividends to be withheld at source, a provision on which the Treasury was counting to enable it to make up some of the revenue lost through the credits to be granted under the Bill for business investment. This second provision, which seems acceptable to the committee, is part of the Administration's plan for encouraging industry to expand and modernise its facilities and thus for stimulating the country's lagging economic growth and its competitive position in world markets.

The other half of that plan was at last revealed in detail this week, with the long-delayed publication of the new tax rules covering depreciation allowances for machinery and equipment. Assets of businessmen and farmers are now divided into only 75 categories, instead of the 5,000 in the old regulations, introduced in 1942 and long recognised to be out of date; the average life of manufacturing equipment, for depreciable purposes, will now be only thirteen years instead of nineteen. As a result businessmen are expected—by the Treasury, at least—to save up to $1.5 million a year in tax payments and it is hoped that most, if not all, of this money will be invested in new facilities.

While all these concessions were proposed originally for the sake of their long-term effects, the Administration is now counting on them to promote the quick expansion in capital spending which the economy needs this year. But in the opinion of a growing number of businessmen, economists, politicians and even officials, an immediate and straight-forward reduction in income taxes (even if it involves an increased deficit in the Budget, as it will) is essential if the country is not to sink into another recession. Two weeks ago the conservative United States Chamber of Commerce and the liberal trade union organisation both came out simultaneously for such a move. This sensational coincidence does not stand up to serious examination, for the chamber would concentrate on reducing corporate taxes and those on high incomes, in order to spur investment, while the labour group wants cuts in levies on low incomes to give consumers more to spend. If the Administration does decide to ask for a tax reduction this year, it will apparently request a straight cut of, say, 3 per cent in all income taxes.

The Administration is hesitating partly because a tax cut this year would jeopardise its chances of getting through Congress next year the major tax reform Bill which it wants, but mainly because it is not yet convinced that the situation is serious enough to justify using an important anti-recessionary weapon which can only be employed once. Even if the President does decide that a cut is needed, it is by no means sure that Congress will give it to him, for the chairmen of the two finance committees, Representative Mills and Senator Byrd, are both bitterly opposed to deficit financing—Mr Byrd was appalled at the Chamber of Commerce's suggestion—and would do their influential best to prevent the measure coming to a vote. If it were to reach the floor, however, it would be popular for this is an election year and voters like lower taxes—and do not like recessions.

Omens of Recession

THERE are more disquieting signs that a recession may indeed be coming, even though in general the economy is still moving in a generally upward direction. The rise in unemployment in June, as well as the rise in employment to a record level, was the result of an influx of school-leavers into the labour market; but the rate of joblessness, after having gone down with disappointing slowness all year, has turned up again. Retail sales declined for the second month in succession in June, by 2 per cent; steel prices are weak; and new orders for durable goods continue to fall. All these factors may lead to a drop in industrial output and they certainly indicate a weakness in demand which will deter businessmen from increasing their capital investment, however much the government may be trying to stimulate it by liberal tax treatment. But at least the tax concessions should give businessmen more confidence in the government—a matter of great importance in the present uncertain atmosphere.

They are also favourably impressed by the Federal Reserve Board's lowering of the margin requirements—the minimum amount of cash which must be put up when shares are bought—from 70 per cent to 50 per cent of their value. The board had been urged to make the reduction when the stock market fell so precipitously at the end of May but refused on the ground that to do it then would be to advertise the market's weakness. The central bank relented only when prices were moving upwards again. It insists that the collapse of share values was not brought on by lack of credit, which has usually preceded decline in the past, and that there is still no shortage of credit even though interest rates are now being pushed up. However the high margin requirements did lead to wholesale circumvention of the credit regulations and the lowering of the requirements should lessen this.

Under the Rainbow

IN the triple nuclear bill just presented by the United States the "rainbow" bomb was the unquestioned star of the show. Finally making its debut 200 miles above Johnston Island, it briefly blacked out communications in many parts of the Pacific, disrupted the earth's magnetic field as far away as the United States, terrified natives of Samoa and provided ready material for speeches at the World Peace Congress in Moscow. Yet the news that at least one more high-altitude test is planned suggests that Monday's experiment did not tell the experts all that they hoped to learn about the effects of such explosions on radar and radio systems and about their potential ability to damage nuclear warheads. Certainly it did not interfere with communications for anything near the three to 36 hours that had been anticipated. The next bomb sent aloft—although not to be in the thermonuclear megaton range—may be detonated at or near the more controversial altitude of 500 miles—well within the Van Allen belt of atomic radiation which many scientists fear may be affected seriously by such treatment.

Somewhat dimmed by the spectacular fireworks, two other "firsts" appeared in the American series of bomb tests last weekend. A relatively small explosion—20 kilotons—marked the first nuclear blast in the American atmosphere since the 1958 ban on nuclear tests. Another, set off 650 feet below the Nevada desert, was the first hydrogen bomb ever exploded within the United States. A 100-kiloton push for Project Plowshare—the AEC's search for peaceful uses into which nuclear bombs may be beaten—it was intended as a rehearsal for Project Chariot, the scheme to use a nuclear explosion to dig a ship channel in Alaska. The latter scheme is still delayed because Eskimo fishermen and the Alaskan state government are not yet convinced that a text from Isaiah is adequate protection against radio-active fallout.

A Sunday pause in the tests was filled by the appearance of a report from the Defence Department which held out hope that the 40-odd tests held this year in Nevada may have yielded new and easier ways of detecting explosions beneath the ground. Yet official optimism—that the discoveries might remove a major obstacle to a test ban treaty—seems excessive. More sensitive monitors, such as seismic instruments placed 10,000 feet deep in the earth, might eliminate the disputed international control stations but they would not do away with the on-site inspections seen by the United States as necessity and by the Soviet Union as espionage. While the report had obviously been issued with an eye to the negotiations on banning tests which are to be resumed next week in Geneva, it could also have been intended to reassure the American public who are eager that the tests shall not be extended beyond the two or three months originally suggested by President Kennedy—a period which is almost over.

Sanctions for Teachers

FROM A CORRESPONDENT IN DENVER

LIKE a horse stung by a gadfly, the massive National Education Association has broken from an amble into a trot—and in a new direction. The NEA is the old—this year's convention in Denver was its hundredth—and enormous organisation which has traditionally represented the interests of all professional employees in public education below the college level, particularly those of teachers and administrators. It has always insisted, however, that its obligation extends further, to the well-being of the whole system of education and of the 40 million children in the publicly-financed schools. It has also insisted that its interest is preclusive, that it should be the sole body charged with this great responsibility through its state and local affiliates. Its 812,000 members make it the largest professional group in the world and its budget approaches $9 million a year. It is extremely jealous of the professional status of its members and of its own independence.

The gadfly is the up-and-coming American Federation of Teachers, one of organised labour's chosen instruments for breaking into the growing ranks of professional people to compensate for the attrition—the result of automation and other causes—in the number of production and industrial workers belonging to trade unions. At the latest count the AFT had about 80,000 members, mainly in the larger cities. Its line has been that professional standards may be all right but that bread and butter counts, too, and that the teachers' bread has been pretty thin and spread with margarine. The AFT points out that many other "professionals"—musicians, for example—have not felt themselves sullied by being affiliated to a trade union. It stung not only the massive NEA but the entire American world of public education when its local branch was chosen by the teachers of New York City as their collective bargaining agent in negotiations with the school board and when they then struck for a day last April, something which no one thought could ever happen. Though the strike was ended quickly by an injunction, it proved that the teachers were not only in earnest but also almost desperate.

The NEA is traditionally against collective bargaining for teachers and against teachers' strikes as being both ineffectual and unprofessional. But the more aggressive teachers call the NEA a "company union" and say that its "professional" loftiness has allowed many school boards to avoid doing anything about the demands of their teachers. The secretary of NEA himself pointed out that American teachers are not only paid more poorly than any other professional group, but are also paid less well than such highly-organised workers as plumbers and electricians. Nevertheless, although the NEA appreciates organised labour's efforts on behalf of education, on the agenda of the convention was a warning to the trade unions to stay out of the schools themselves, since the NEA regards these as its own particular province. But if teachers are to be prevented from defecting to the AFT, the NEA must offer its members something to put them into a stronger bargaining position.

A solution was suggested by Dr Corey, secretary of the California Educational Association, when he described the "sanctions" used in that state to send a recalcitrant local school board to Coventry. Notices are given to the press and circulated all over the country through professional channels that educational conditions in the offending district are sub-standard; teachers who might have applied for jobs there are thus warned off and better behaved districts are given notice that the teachers already employed there might be interested in better jobs. Since there are never enough qualified teachers to go round, such action is not without effect. It is only taken after the state Educational Association has investigated the situation carefully and has done all it can to improve it by conciliation. Sanctions mean that local

teachers do not have to act directly against their employers. But the Still Lake School Board in Los Angeles County, against which this final weapon has been used reluctantly but with promise of success, has gone to the state courts to demand an injunction against the sanctions; the case may well reach the Supreme Court.

Several other states have experimented with sanctions but the subject, as such, was not even on the convention's agenda. However, Dr Corey touched off so much discussion that, by means of a handwritten resolution handed up from the floor, the convention was forced to go on record as favouring sanctions where appropriate, and to ask the state and local affiliates of the NEA to help the parent body to work out the procedures for applying them.

Investigations for All

MR ORVILLE FREEMAN, the Secretary of Agriculture, opened with a bold stroke in defence of his sprawling department when he appeared before the Senate committee investigating the Billie Sol Estes case. He insisted on talking about a newer revelation of corruption within the Department of Agriculture: the discovery that in 1959 and 1960 brokers who were licensed to buy surplus cotton for the federal government and to sell it on the open market were buying it for themselves at a considerably cheaper price. As a reward for such candour, Mr Freeman hoped to gain praise for having tried to recoup the government's alleged loss of nearly $15 million in profits and opprobrium for the Eisenhower Administration in whose time the illegal sales had occurred.

But the Secretary was given perhaps more opportunity than he liked to exercise his talent for self-criticism: soon he had also to reveal that two Texan officials had been suspended for illegally selling federal allotments to grow rice—a new product on the scandal list which has now cost at least twelve employees of his department their jobs. Turning the rice case over to the Federal Bureau of Investigation, Mr Freeman went back to his Billie Sol investigators before whom he maintained that he had found the Department of Agriculture in urgent need of reorganisation when he took it over from the Republicans and that he had now cleared all of Mr Estes's helpers out of it. Even that modest claim did not stand long. Several days later, two of the department's employees in Oklahoma came close to tears as they admitted to the Senators that they had accepted $1,640 for helping Mr Estes to obtain cotton acreage allotments in their state.

Despite the efforts of Mr Freeman, the Republicans seem certain to make some political hay for the November elections from the various scandals in agriculture. Yet they may profit even more from a newer investigation just announced by the Senate Foreign Relations Committee. Beginning in August, the inquiry will study the activities of the lobbyists employed in Washington by foreign governments to secure favourable quotas for exporting their sugar to the United States. What will concern the investigating Senators is not the existence of lobbying—a respectable occupation—but its unofficial practice by members of Congress. Already several Democratic names have been bandied about in the press: that of Representative Cooley, the North Carolina Democrat who heads the House Agriculture Committee and who was influential in securing for Guatemala the first permanent sugar quota—20,000 tons a year—that it has ever had, and that of Senator Dodd, a Democrat from Connecticut, who was the registered agent of Guatemala in Washington before he became a Senator. Whatever the political harvest of these investigations, the Administration should win more converts to its belief that the system of sugar quotas not only tolerates, but breeds, graft and corruption and that the present programme for supporting farm prices is criminally wasteful.

Governors in Decline

HERSHEY, PENNSYLVANIA.

THE annual outing of the Governors of the fifty states was held this year at Hershey in Pennsylvania, the home of the chocolate bar. The meeting began sunnily enough with a visit to the Gettysburg farm of former President Eisenhower, who conducted the Governors over the historic battlefield of the American Civil War. But it ended in acrimony and confusion when a single Governor from the South forced the withdrawal of all resolutions opposing racial discrimination and calling for the enforcement of Negroes' civil rights. On other topics also the Governors gave a painful impression of feeling inadequate and nervously irresolute. While they agreed that school prayers and the National Guard (the state-controlled territorial army) should be preserved from the interferences of the Supreme Court and the Secretary of Defence, they failed to agree on any resolution about medical care for elderly persons, although last year most of them supported a health plan for the old to be financed by social security payments. And they backed away from general debate on the redistribution of seats in State Legislatures, which at present is probably the most widely-discussed problem actually facing the states.

Defending his proposal that the states should pledge themselves to combat racial discrimination both by passing laws and by executive action, Governor Rockefeller of New York said rather heatedly that there was something wrong if, a century after Lincoln signed the proclamation that freed the slaves, the State Governors decided that it would be inexpedient for them to talk about civil rights since this might offend Southerners. Mr Rockefeller's statement was dismissed, however, by most of the other Governors as a bid for Negro votes from a Republican who hopes to become President. It is said that few, if any, State Governors permit a day to pass without reflecting on their chances of becoming President of the United States. The Governors' Conference is one place where traditionally they flex their muscles and try out their strategies.

But since 1960 there have been some doubts about whether State Governors really have the best chances of being named presidential candidates. In 1960, for the first time in over half a century, neither nominee had governed a state. Times may be changing, but a trend away from Governors as presidential timber should not be exaggerated. Mr Richard Nixon and other politicians would probably not be aspiring so hard to become State Governors this year if they did not feel that this would be a step towards the White House. Governors are still important figures. They lead their parties in their states, dispense patronage there and are usually the chairmen of their states' delegations at party conventions held at the national level. Nevertheless, a feeling does exist that Governors no longer cast the public image which they used to do and that they have shrunk from national to merely local figures.

Certainly it is difficult to think of most of the current crop of Governors as likely to command national attention. They are harried and uneasy men. They have budgetary troubles and their political mortality appears to be increasing. They are weak executives, enjoying only brief and limited authority. Most of them are confined by law to a single four-year term or else are no sooner elected than they have to begin campaigning in order to be re-elected in two years' time. Some seem to have less power than the political bosses who run their party's state machines or control the chief cities.

Most of the states have financial deficits as well as rapidly growing budgets. They cannot collect taxes fast enough and Governor DiSalle of Ohio maintained last week that, in his state, of every dollar that is paid as a tax 76 cents goes to the federal government and 18 cents to local governments, leaving only 6 cents for the state government. Mr DiSalle persuaded his fellow Governors to approve his proposal that 5 per cent of personal

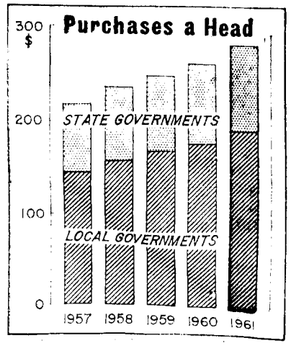
income taxes should be returned by the federal government to the state governments in whose domains they are collected. The state governments are also now in a squeeze between the federal government and the increasingly important urban areas that have been for so long neglected by State Legislatures. The federal government has been showing a disposition to deal directly with the metropolitan regions, by-passing the state governments in the process. Both Governor Kerner of Illinois and Governor Swainson of Michigan admitted at Hershey that rurally-dominated State Legislatures have been cheating the cities by spending most of their time helping the farmers who constitute a dwindling minority of the nation. But the urban Cinderellas may be about to become the American equivalents of the under-developed countries which milk two cows. At present only five states provide direct financial aid to city governments for urban renewal but the number is expected to increase. State payments to local governments are now mainly to help with education, public assistance and roads.

Mr Nixon said at Gettysburg in connection with last week's Governors' Conference that the best answer to the threat of big government was better local government and he chided some State Governors for turning to the federal government for financial help. But General Eisenhower could have reminded Mr Nixon that, when he himself was President, not a single State Governor responded to the virtual invitation that he once extended to them to take back some functions from the federal government. On the contrary, at that time the Governors reversed their opposition to national responsibility for highways after they had learned that the federal government was willing to bear ninety per cent of the estimated $50 billion that would have to be spent.

The experts upon whom the State Governors lean increasingly in these bewildering times have advised them that, in order to exercise what is called aggressive leadership, they ought to create planning units, which will work hand in hand with federal agencies and arrange for inter-state schemes to cope with metropolitan regions which grow across state lines. The experts cheerfully contemplate expenditures totalling $1,300 billion by 1970, to "restore or replace" all sub-standard housing, schools, highways, services, shops and industrial plants. Hitherto State Governors have tended—with some vivid exceptions, not all of them fortunate—to be men who automatically express allegiance to what they call private enterprise and abhorrence of "planning." On the other hand, past experience indicates that they tend to gulp down the bait of federal grants quite happily even when it barely conceals the hook of compliance with federal projects. Certainly, some bolder initiatives than most of the Governors displayed last week at their outing will be required if the state governments are to be the "great centres for political experiment" that Governor Rockefeller forecast so flatteringly and if the suspected decline in the Governors' own authority is to be halted.



Jackpot at the Petrol Pump

FROM A CORRESPONDENT IN LOS ANGELES

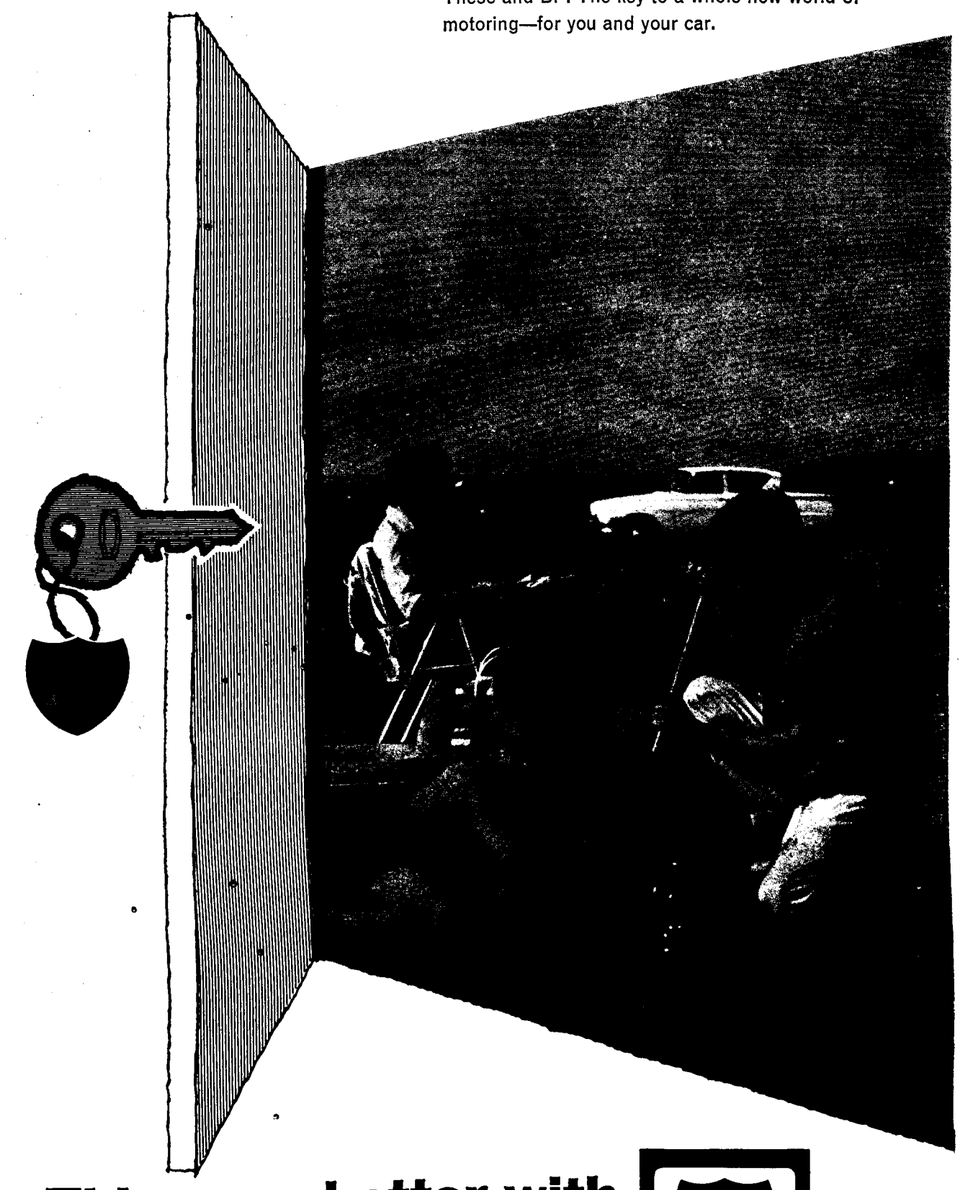
THIS spring in southern California motorists patronising the petrol stations of the Wilshire Oil Company, a subsidiary of Gulf Oil, have had a chance to win one of the Ford Falcon cars offered free, every other day of the week, by the company to all who purchase its "gas." This has brought some additional business into the Wilshire stations, but competing oil companies have not stood by idly. Most of them have their own free gift programmes to attract buyers in one of the most fiercely competitive businesses and areas of the United States. In and around the city of Long Beach distributors of Texaco's and Tidewater Oil's petrol are also giving away cars—though not on the scale of Wilshire. At other local stations guessing games are enjoying a vogue. In one the motorist gets his petrol free if his bill comes to a lucky number such as $2.22 or $3.33. Another way the game is played is for the motorist to guess how much petrol he needs, in terms of gallons or dollars. A correct guess means that it is on the house.

Free gifts for the purchase of petrol are no novelty on the American motoring scene. But in the past they have been of very limited value—a free car-wash or free parking. Now gifts in kind involve soft drinks, glassware, gramophone records and toys, including replicas of space craft. Most oil companies also sponsor the distribution of trading stamps which, like those obtained at supermarkets, are redeemable for goods. In California a perennial battle is waged between stations offering Green Stamps and Blue Chip Stamps. Some petrol stations give away stamps or vouchers which the motorist, when he has enough, can use to buy petrol and oil or turn in for cash. Some stations hold regular drawings at which holders of "lucky number" vouchers qualify for free petrol.

Behind the big step-up to free cars lies the increasingly hot competition between the oil companies for the lucrative petrol market in southern California, the largest in the country and one which is growing because of the continuous influx of population. Taxable sales of petrol in southern California came to some 5,750 million gallons in 1961. This year they are expected to rise by 3-4 per cent to more than 6,000 million gallons. But even in this expanding market competition is intensifying. Traditionally, the sale of petrol in southern California has been dominated by a few large oil companies, Standard of California, Shell, Union Oil, Richfield, Tidewater Oil, Mobil Oil and Texaco; between them they do about 80 per cent of the business. However, their dominant position is being assailed, not only by Wilshire, but also by Signal Oil and Gas, Douglas Oil (a subsidiary of Continental Oil) and Standard of New Jersey. Its subsidiary, Humble Oil and Refining, is busy establishing outlets under the Enco sign. Last year the struggle between these many competitors erupted into petrol price-cutting "wars" which made all the motorists in southern California happy. Now prices have been stabilised and the luck of the draw decides who hits a jackpot.

BP IS THE KEY

At every BP Garage, this you will find. The responsive petrol—BP Super-Plus. The most advanced motor oil in the world—BP 'Visco-static'. These two are the key. These and BP. The key to a whole new world of motoring—for you and your car.



Things go better with

SUPER·PLUS

THE ECONOMIST JULY 14, 1962

The mind that values vision is the mind of a GEC engineer. This is the imaginative approach to the job in hand, the thing that marks him as a man who thinks and re-thinks a problem. Talk to a GEC engineer. You will find that his part in the engineering of a major mining project demands an energetic approach, a flexible mind and a broad-based experience. GEC backs this man with very considerable resources, enabling him not only to do a difficult job but to do it better. All over the world, the story of GEC engineering is the story of the industries it serves—imaginatively.

THE WORLD OVERSEAS

The Maudling Cement Mixer

FROM OUR CORRESPONDENT IN NAIROBI

DURING his visit to Kenya last weekend Mr Maudling was aptly referred to in one Nairobi paper as "the cement mixer." Certainly the Colonial Secretary succeeded, in five brisk days of talks with ministers and officials, in laying the first visible line of bricks on the structure of an independent Kenya government since the Lancaster House conference ended in April. He has probably inspired the local politician-builders to work faster by themselves, but his visit emphasised what a slow construction job it is likely to be. Mr Maudling said that enough agreement had now been reached to start drafting the constitution whose framework was sketched out at Lancaster House, but elections under the constitution would not be held until next year. Most Kenyans calculate that this means their country will not be independent before 1964.

Mr Maudling seems to be in two minds about the timing of Kenya's advance. He said this week that he wanted the general elections "as soon as possible in the interests of public order and of the economy." On the other hand, he sees some usefulness in the present foggy period during which the rival parties—Mr Kenyatta's National Union and Mr Ngala's Democratic Union—are carrying on a coalition government while some of their supporters have (whether in mimicry or mockery it is not clear) formed a "coalition opposition." It is useful, he believes, because the rival leaders are working harmoniously as ministerial colleagues; but since the coalition is not achieving its main purpose of creating national harmony, and the parties' rank and file are already manœuvring for the election battle, there seems little point in prolonging this period.

What Mr Maudling mainly needs time for is the transformation of Kenya from a centrally run colony into a federal state. It is part of his astute tactics never to mention the word "federal," but his entrenchment in the constitution of the powers of the six regions leaves no real doubt what form of government he intends Kenya to have. He is, however, aiming at a tightly knit federation. His suggested solutions on the outstanding points of party difference—which may later reappear as impositions if the parties cannot soon agree—place secondary education under the regions, but health and the control of labour under the central government. He rejected Kadu's demand that each region should have its own public service commission. He could hardly do otherwise, for it would have been impossible to recruit good staff (whether expatriate or local) for such penny packet administrations, and he is anyway concerned about a possible breakdown in the country's administration after watching the unexpected speed at which expatriates have left Tanganyika. The day after a futile walkout from the talks, Mr Ngala accepted the Colonial Secretary's plan for a central pool of public servants, controlled by an independent commission, from which each region can draw.

With equal disregard for precedents and by a remarkable act of persuasiveness Mr Maudling has got Kanu to agree that control of internal security should remain the Governor's responsibility until independence, instead of passing to the elected ministers when self-government is reached. Kanu leaders like Mr Tom Mboya, who has battled with industrial troubles from the moment he became labour minister, may have reasoned it was best to leave to the Governor for as long as possible the taking of inevitably unpopular decisions over security. Nevertheless, it is a notable concession by the party that can expect to control the next government. It would be ascribing too altruistic motives to politicians to suggest that Kanu made this concession for the same reason that Mr Maudling had planned they should—the reassurance of the minority tribes and races. The result at any rate should be a quietening of alarms among the white farmers and Asian traders as well as the pastoral Kadu tribes.

The more substantial assurance that Mr Maudling gave to the white farmers, however, was an undertaking that Britain would finance the purchase of one million acres of mainly mixed farming land. Some Europeans reacted by complaining that there was still not enough urgency in a scheme that was spread over five years, but it is such an advance on the previous resettlement plans covering only 350,000 acres that it won immediate approval from Lord Delamere, the president of the farmers' union. Despite the weighty alliance of Miss Perham and Mrs Huxley in a letter to *The Times,* Mr Maudling is even now unprepared to accept for the British Government the obligation to buy out all Kenya's white farmers who want to leave. The buying of the million acres, he explained, was primarily intended to ease the problem of the landless Africans. However, the outlook for the mixed farmer has definitely been brightened.

Much still remains to be done. The resettlement schemes even in their modest beginnings which have so far seen the transfer of 200,000 acres, have been plagued with technical problems. The chairman of the new central land board will need to solve not only larger problems of this kind but also face the political question of whether the danger of Kikuyu landlessness is so great that they must be settled on land in the Highlands claimed by other tribes. Until now this question has been dodged, each tribe being allowed to advance separately a little way.

The appointment of the chairman of this land board, the setting up of fiscal and boundaries commissions, and the commission to discover whether the people of the northern frontier district want to stay in Kenya or secede to Somalia, have all hung fire for three months. Mr Maudling's explanation is that eminent commissioners are busy and elusive people. But these matters are as urgent as any work that might keep the commissioners away from Kenya. All races here hope that the brisk Mr Maudling will very soon be followed by the arrival of these groups of wise men bent on hurrying to complete a weatherproof structure for a people who have known enough storms already.

Which Horse in Algeria?

FROM OUR PARIS CORRESPONDENT

IF the intention of the French government had been simply to disentangle itself from Algeria so that General de Gaulle could devote himself to other tasks, the target would now be well in sight. But the French authorities had other objectives as well. They wanted to preserve French economic—and strategic—interests in North Africa. By slowing down the transformation of Algeria they hoped to prevent a mass flight of the European population across the Mediterranean. It is this second part of French policy which is now under serious threat.

Until the moment of independence things looked almost too good. Despite the French failure to suppress the Secret Army, the provisional government headed by Mr ben Khedda stuck strictly to the terms agreed at Evian. In Algeria the provisional executive, with the moderate Mr Farès at its head, was carrying out the transition in a conciliatory fashion. People in Paris were beginning to conclude that General de Gaulle had achieved by making peace what he had failed to obtain through war, the emergence of moderate nationalism. Just when the vote on independence was imminent, it was revealed in a startling way that the nationalist leaders were deeply divided. If Mr ben Khedda had a majority in the government, the opposition had a majority in the Council of the Revolution; it also had the support of the bulk of the guerrilla army and a leader with tremendous prestige—Ahmed ben Bella.

When the conflict thus burst into the open, it seemed for a brief spell that the French authorities would come to the rescue of their partners in negotiation. At Mr ben Khedda's request, the French forces were going to keep the frontier of Algeria sealed so as to keep out the Algerian troops stationed in Tunisia and Morocco and known for their backing for Mr ben Bella—and their admiration for Dr Castro. The provisional government of Mr ben Khedda and the provisional executive of Mr Farès were to be amalgamated. M. Chevallier was to join the new team so as to reassure the European business community. France, instead of waiting, as agreed, for the result of the Algerian elections, was to recognise the new government. Its allies would follow suit. Mr ben Khedda, first back in Algiers amid popular acclaim, could thus consolidate his position and face his rivals with a *fait accompli*.

But none of these things happened. Both sides realised the dangers of such open collaboration. Ben Khedda realised that if he were to be accused of "collusion with colonialism" he would be stripped of popular support. The French government decided that it was too risky to put all its money on a potential loser. And so events did not follow the pattern forecast in Paris. Algeria's frontiers were opened. The provisional executive and the government returned from exile continue their legally quaint co-existence. The French ambassador presented his accreditation to Mr Farès, not to Mr ben Khedda. French troops, still some 300,000 strong, did not interfere in Algeria's struggle for power. The balance, as seen from here, has begun to shift in ben Bella's favour.

That French sympathies, like Mr Bourguiba's, go to Mr ben Khedda and his colleagues is obvious. It is enough to glance at the French papers contrasting the wise realism of ben Khedda and his associates with the revolutionary romanticism or adventurism of his opponents. Mr ben Khedda is presented on the French left as Robespierre faced with his own *enragés*. Religious, nationalist and regionalist factors, as well as the absence of clear political platforms, make it difficult to divide the conflicting factions on classical political lines, but there are some clues to their behaviour. Mr ben Bella draws part of his support from a guerrilla army of land-hungry peasants eager for rapid reform. Its officers, quoting Castro, proclaim that the popular army's revolutionary task has only begun. They protested against the deal with the Europeans in Algeria not only because it whitewashed people like M. Susini, but because it reintroduced into the political circuit such liberals as M. Chevallier. Mr ben Bella asserts that he stands by the letter of the Evian agreements, but he is less likely, at least for the moment, to stick to their spirit of economic collaboration than ben Khedda, Saad Dahlab and Belkacem Krim, the chief Algerian inspirers of that pact.

The French government is still banking on economic co-operation. This is illustrated through the choice of the first French ambassador, M. Jeanneney, a distinguished economist who entered politics only in 1959. But as minister of industry in the Debré government, he had to deal with both the Constantine plan and Sahara oil, the two economic levers by which the French hope to influence the course of Algerian politics. He is eminently suited to pursue a policy which its advocates call liberal and its opponents "neo-colonialist." There are, however, difficulties. One is the vacuum left by the departing Europeans. True, the rate of departures has slightly declined since independence. It is still very high. Many Europeans are going to France for a while; they will watch events and make up their minds. Their absence is a factor in the equation, all the same. Not only are their empty villas and shops a temptation, but the resulting administrative chaos, economic standstill, commercial contraction and unemployment may force the Algerian authorities to embark on more radical courses than they originally contemplated.

The other difficulty is the internal Algerian struggle which is likely to push the new Algeria towards radicalism, whatever its outcome. The Algerian masses may be thirsting for peace, but like all peoples at the moment of liberation, they expect change. Visible change in Algeria must involve encroachments on European privileges. Bidding for popular support, both sides in the struggle for power are obliged to take this mood into account. The moderate, gradualist foundations of the Evian agreements may well be shaken in the process. The French government is watching the rapidly changing situation with anxiety; while watching, it holds to the maxim that economic aid has reasons that nationalist leaders understand.

Le Grandes Manoeuvres

FROM OUR PARIS CORRESPONDENT

Nothing was spared to surround the celebration of the Franco-German reconciliation with a maximum of pomp. The climax of Dr Adenauer's visit to France was reached on July 8th at Rheims. The war-scarred cathedral, with its famous smiling angel, was the chosen place in which the Church gave its blessing to the secular alliance. The President and the Chancellor sat by the altar facing the archbishop. If the stage setting in the cathedral, and the music of the organ, were made for T. S. Eliot, the scene at Mourmelon during the military parade earlier in the morning, suggested Eisenstein and the Teutonic Knights. The heavy tanks with the German cross and the lighter French vehicles came out of the dust in close succession, for once moving together and not in pursuit.

The roar of German tanks still has fairly fresh associations for Frenchmen of a certain age. But the parade contained other lessons. It was opened by the slow march of paratroopers from the 11th *division légère d'intervention*, a unit created out of three awkward divisions after last year's April mutiny and promptly removed from Algeria. These fighters from the djebels, marching in front of tanks, were a visual illustration of the French army in transition from the colonial to the European era. General Massu, no longer in battle-dress but in parade uniform with white gloves, symbolised both the change and the continuity.

But symbols are not all. For the first Franco-German military parade to have a popular impact, the public would have had to be admitted. In fact the only unofficial guests at Mourmelon were the journalists. In the end, the organisers decided that the sight of German uniforms was unlikely to rouse local enthusiasm. Yet, even in those parts of Dr Adenauer's French tour where the public was admitted, its response can hardly have delighted the stage-managers. What was true of Rheims had been equally true at Rouen and Bordeaux. Dr Adenauer does not draw French spectators as Mr Khrushchev does. If the counter-demonstrations were sporadic and unimportant (admittedly, with the exception of Paris, the towns visited contained no communist strongholds), the popular reception was at best one of courteous indifference.

It is in boardrooms and stock exchanges, and in the secrecy of ministerial cabinets, that the links between France and Germany are really being forged. What matters is what the two main architects of the Franco-German alliance decided in their private talks in the first part of that week. By all accounts, the relations between the two elderly rulers were exceptionally friendly—and not only during the official functions, when host and guest predictably flattered one another. In their private talks Dr Adenauer apparently did not insist on discussing nuclear forces, the one awkward topic about which his French and American allies are clearly divided. The German reason for this discretion is that the French nuclear force will not be operative for some years and, in the meantime, the whole issue will be raised from the French to the European level. It was therefore regarded as unnecessary to antagonise the French, whose support over Berlin remains so useful. Berlin and the German question figured prominently both in the talks and in the two leaders' final statement.

Paris: State and Stage

One point in the statement which attracted attention was the "hope," expressed jointly and publicly by the two men, that the Brussels negotiations would provide a solution to "the problems raised by Britain's application" to join the common market. It was greeted with the more satisfaction in British quarters since the President, and more recently the Chancellor, had not appeared markedly keen on Britain's entry into Europe. The satisfaction, however, was tempered by the simultaneous announcement that the Six ought to bring to a conclusion, "as soon as possible," their negotiations for a political union. A sneaking suspicion arose that economic hurdles may be lowered because political hurdles are being set up further down the track.

Here, in Paris, the French reject such suggestions. They disclaim any interest in the rather curious idea—which some people here attribute to Herr Schröder's entourage—of letting Britain into the economic communities, while leaving the question of its participation in political institutions unsettled. Indeed, French officials argue that the current haste to achieve a political union is not of their making. True, the scheme of European political union known as the Fouchet plan was of gaullist inspiration, but, bitten by M. Spaak's veto on April 17th, the general has apparently kept shy of the subject since then. The French say that the prompting this time came from Rome and Bonn. Dr Adenauer, wanting to get results while he is still in power, is seemingly in a great hurry and suggested that a conference of the heads of government of the Six should be held this month. It was finally agreed to explore the ground through diplomatic channels and, if the soundings are good, hold the meeting in Rome, possibly in September.

Contradictions reappear when the timing of Britain's entry is raised. On the one side, it is asserted that by the autumn it should be quite clear whether Britain is going to join the common market. On the other, it is being argued that it will take a long time, until 1964, before the agreements are ratified; and this is given as the reason why the Six must proceed with their political negotiations in the meantime. If the time lag were due exclusively to procedural matters, there should, on the face of it, be no objection to Britain's joining the political talks or at least, as Herr von Brentano has suggested, being represented by observers. When the advocates of European integration argued in the past that the Six should erect their political institutions before Britain's entry, their aim was obvious: to establish the principle of supranationality, to which Britain would thus be committed. But this cannot be the gaullist objective. The French claim that the British suspicions are really groundless; but the discrepancy between the economic and the political timetable leaves uncertainty in the air.

This uncertainty surrounds not only European politics but the Atlantic alliance, its strategic premises and its future shape. The European partners of the United States—who are also its competitors—are jockeying for position in the bigger interdependence stakes. The Paris talks, the Rheims blessing and the Mourmelon parade are merely episodes in the major western manoeuvres now in progress.

Diffident Dr Amini

FROM OUR CORRESPONDENT IN TEHERAN

Persia's financial woes are more than ever apparent in the battle of the budget now being fought between the country's young economists and its old guard politicians. The fiscal year began on March 21st, but the budget became four months overdue as planners struggled to reduce a proposed deficit of $160 million to some less staggering figure. Going at their task with a butcher's axe, the planners this week came up with a proposed deficit of, ostensibly, about $60 million.

The cuts were not easy to make. A programme of economic austerity has not prevented the government's own operating expenses from shooting up. Revenues have been lower this year, import restrictions and a business recession having sharply reduced the expected tax and customs returns. And the government is still plagued with an over-inflated civil service whose salaries and pensions eat away at the money. Individual ministers and army chiefs have been reluctant to accept cuts in the appropriations they originally requested. Two ministers have offered to resign rather than comply with the budget reductions, and army chiefs have not been happy about the rejection of their proposal to increase army pay by a quarter.

The army budget has been quarrelled over—but not in public. At present the army, with its 200,000 men, gets about 28 per cent of the ordinary budget. When development spending is included, its share is 18 per cent. On top of this the army last year received a grant of $15 million from the United States and another $9 million transferred to it from a procurement fund. Further cash assistance to the army from the United States is highly improbable—or at least this is what the Shah appears to have been told when he went to Washington in April; and this has made it difficult to resist army demands for an increase over last year's appropriations. But the debate about the army's budget has not been about the amount of money it needs to maintain its strength. The army in recent years has gone in for large-scale barrack-building and for investment in factories which, the government planners say, are far from necessary. It is extravagance such as this that they wish to prevent in all government departments.

While arguments of this nature continue, austerity is, willy-nilly, being forced on the government. With Washington restricting its aid to development assistance, the budgetary support, which last year amounted to $44 million, will not be available this year. Over the next twelve months, the government must pay back nearly $100 million in foreign loans, and few of these payments can be deferred. Persia is to begin in September its third development plan which is scheduled for completion in five and a half years (it officially ends in December 1967). The plan calls for a total investment of $2,500 million in the public sector, of which between $800 million and $1,000 million must come from foreign loans. The government has been hoping the World Bank would sponsor a consortium, on the

lines of those that are helping to finance development plans in India and Pakistan. But foreign lending on such a scale is unlikely if the budget deficit is too high, and the Persians will also have to demonstrate greater willingness to mobilise their internal resources if they are to win World Bank support.

It is here that the prime minister, Dr Ali Amini, has yet to be firm. Despite repeated promises, the premier has done little to make the tax dodgers pay their due. An increase of no more than $3.5 million in revenues from direct taxes is expected this year. Nor does the prime minister favour new taxes; in particular the government has shied away from a proposed tax on the salaries of civil servants, who at present do not pay any income tax. Plans to cut down the size of the civil service have materialised on paper, but nowhere else. Without this and other administrative reforms, many of the budget cuts are bound to remain unrealised. The Persian government still spends more than $1.60 on day-to-day expenses for every dollar it spends on development.

Dr Amini may be underestimating his own power to push through the economic changes that are called for. His government last year did a good job in checking inflation (the cost of living had been rising steadily at the rate of at least 5 per cent a year) and in imposing strict credit and monetary controls. These measures brought to an end three years of hectic speculation, the wastage of foreign exchange on luxury and other consumer goods, and a bubbling but false prosperity. By the end of the year the government had managed to reduce its debt to the International Monetary Fund by $30 million. But Dr Amini has had to accept the bad with the good during the inevitable aftermath. Business confidence fled, unemployment rose, the rate of investment sank, and construction slowed down. His immediate task now is to raise the $100 million in foreign loans that will be needed to finance development projects over the next year. His chances of success depend largely on the courage and determination with which he insists on the internal reforms that would clear the way for foreign help.

Saskatchewan's Medical Battle

FROM A CORRESPONDENT LATELY IN CANADA

THE memory of the Saskatchewan doctors' strike, including the episode when Royal Canadian Mounted Police were ordered to protect the doctors of Swift Current from angry citizens, will last to shame all sides for some time. Mixed with the shame are some consolations. The 930,000 people of Saskatchewan have the only socialist provincial government in Canada, and they are used to setting the pace for the whole country; their leaders are confident the other provinces will soon be following, if more cautiously, in their path. Of all social reforms, health schemes are acknowledged by every party (except the Social Credit party which acknowledges virtually nothing in this field) as being the most urgent legislation.

Newcomers from Britain may find the present fuss in Saskatchewan hard to understand. The British health service is more radical and comprehensive than the Saskatchewan scheme. And because the measure is being placed on a fee-for-service basis, instead of a capitation plan like the British, energetic doctors can expect to be better paid under the scheme than they were in private practice (where they have been able to collect only two-thirds of their fees). In a late concession the Saskatchewan premier, Mr Woodrow Lloyd, made it clear that doctors could continue to practise outside the scheme, and he removed from the Act two clauses about the administrating commission that the doctors said were most objectionable.

The government has shown itself conciliatory, but the doctors have refused to compromise, or to work the modified scheme. Some patients assert that the doctors, despite their denials, are fundamentally opposed to surrendering their freedom to set their own scale of fees. Others are sure that the basic reason is more political than material: about a hundred of Saskatchewan's 750 private practitioners call themselves "fugitives" from the British health scheme, and a correspondent of the Toronto *Globe and Mail* declared that the doctors saw themselves as "shock troops" in the front line of the battle against socialist tyranny. They have offered, as an alternative, suggestions for the extension of the present private and voluntary insurance schemes, without saying clearly how these could embrace the most needy.

The government made one big blunder in not stating clearly, at an early stage in the two years of negotiations, that private practice could continue. It has not yet fully retrieved this mistake; the assurance to private practitioners is only contained in an Order-in-Council. Not until after the strike began did Mr Lloyd offer to call a special session of the legislative assembly to amend the Act properly; until then he had seemed prepared to leave the amendment pending for eight months.

Doctors out: Regina General Hospital

The doctors' mistrust of this procedure gained them public sympathy, and they found further encouragement for their opposition in the Liberal and Progressive Conservative parties' attacks on them at provincial by-elections and last month's federal elections. They interpreted the 20 per cent drop last month in the New Democratic Party vote in Saskatchewan as evidence that the whole province was adamantly opposed to the scheme. They did not see this decrease as part of a national trend of rising opposition to whichever party held power provincially.

In the last days of negotiations and the first days of the strike the doctors' tactics were badly at fault. They demanded total repeal of the Act before they would call off the strike, while Mr Lloyd argued that the scheme could not be delayed because for the last six months people had been paying sales tax and increased income tax to finance it. The father of a child, who died of meningitis after being rushed to two towns where doctors were "not available", put the blame on Mr Lloyd. But public opinion predictably swung against the doctors on general grounds. The arrival of the first of 52 doctors from Britain and 100 promised as replacements from elsewhere in Canada further weakened their stand. The comment of one of these British doctors—"All I can say is I couldn't strike"—was worth many political speeches to Mr Lloyd.

The dispute will have harmed the province's health services by driving away some talented physicians and surgeons. But the damage will not be as great as some medical propagandists have maintained; this prairie province is accustomed to a 20 per cent turnover of doctors in a normal year. The harm may even be more than outweighed by the benefit to the rest of Canada of rubbing the rough edges off health reform legislation. Mr Diefenbaker earned credit for introducing a federal hospital insurance scheme, but this trail had been blazed by Mr Tommy Douglas in Saskatchewan years before. The Ontario authorities

are planning a drug insurance scheme, and both main parties will find their electoral commitments to some extensions of the health services hard to dodge if the Saskatchewan venture finds an even keel. And who knows but that American journalists, crowding into Regina to report on chaos and not finding it, may not end by bringing American opinion round to the need for some such reforms as these?

Progress Towards Malaysia

FROM A CORRESPONDENT IN SINGAPORE

WITHIN the next two months final and irrevocable decisions are likely to be made about the formation of a Malaysian federation. Mr Lee Kuan-yew, the prime minister of Singapore, confidently repeats that it will be born before June, 1963, and Tunku Abdul Rahman, the Malayan prime minister, has made no secret of his wish that Malaya's next National Day on August 31st shall become a Malaysian Day. If the formal declaration is made on August 31st and becomes a constitutional reality by June, 1963, they may well both be right.

The Cobbold Committee, set up to assess what people in Sarawak and North Borneo felt about joining Malaysia, presented its report to the British and Malayan governments last month. The report has not yet been published, but it is known to be unanimous and is assumed to have found a majority in favour of joining a Malaysian federation. The Tunku has said that less than 20 per cent, and these the immigrant rather than the indigenous people, oppose a Malaysian federation if it is brought about quickly. Next week he is going to London for talks, and a delegation from Brunei, as well as Mr Lee Kuan-yew, have been having talks with him in Kuala Lumpur. Since the Malayan government has made it clear that a "satisfactory basis of discussion" must be agreed upon before a visit to London, it can be assumed that among the governments concerned there is no major obstacle to an agreement.

Whether the pro-communist Sarawak United People's party will resort to violence to keep out of Malaysia seems doubtful in face of the odds suggested by the Cobbold report and the dangerous communal implications of such action. Thus, with time running short, Singapore becomes the only territory in which Malaysia can be frustrated by constitutional means; but the tone of recent political controversy suggests the last ditch of a defensive battle.

On July 6th, after eight days of midnight sessions, the Referendum Bill, which will allow the electors to pronounce on the issue of Malaysia, was passed by a majority of 26 to 18 in the Singapore Legislative Assembly. The debate was bitter, personal, highly emotional and even minatory, as the opposition failed to frustrate the government or defeat it on any clause at any stage. The opposition was led by Dr Lee Siew-choh of the Barisan Socialis party, Mr Ong Eng-guan of the United People's party, and Mr David Marshall, a former chief minister of Singapore before self-government, who, in effect, is the Workers' party. But another former chief minister, Tun Lim Yew-hock (whose political stock even his rivals on the opposition benches agree is rising), and the members of the Singapore People's Alliance and the United Malays' National Organisation, voted with the government to give it the parliamentary authority to carry through the merger. This was even more important when the government lost its absolute majority of one after the resignation of Mrs Hoe Puay-choo from the People's Action party on July 2nd; she is a founder member and a member of the party executive. She has not joined any of the existing parties, whose overtures she publicly spurned, but now sits as an independent. The government has yet to face a no-confidence motion, but further defections are unlikely.

Opposition has concentrated on the form of presenting the question in the referendum; and on the provision that blank votes shall be counted as if in favour of the White Paper proposals that have been negotiated between the Malayan and Singapore governments and ratified by a two-thirds majority in the Singapore assembly. The most bitter epithets have been reserved for this clause 29. It was added to the Bill only after the second reading, when the Barisan Socialis party sought to safeguard the right to deface voting papers or leave them blank. The government saw this as an indication of a communist-inspired campaign to wreck Malaysia through the referendum; it therefore introduced this clause to frustrate the scheme.

The issues have been debated outside the assembly on Radio Singapore, at the two universities, at dinner tables and in coffee shops. The trade union group associated with the Barisan Socialis party have set up a civil rights committee. They have called it by the same name as the group which precipitated the riots of 1956; they have appealed to the same united front of student, old boy, cultural and peasant organisations, and have even sought to hold their meetings in the same trade union premises into which the police had to break in 1956 to arrest the leaders. A memorandum of protest which they sent to members of the assembly led the infinitely patient Speaker to warn them that "influence by veiled threats" constituted a grave breach of privilege. Five political parties are also trying to form a council of joint action, again harking back to the title of the group which in 1946-47 led the opposition to the Federation of Malaya proposals.

Neither of these groups has been allowed to hold meetings, but existing parties and organisations have not been deprived of their

legal right to do so. There have been recurrent threats to the government that if it frustrates the opposition it must take the consequences. Nevertheless, the fact that in spite of all the wild talk official action to prevent the holding of illegal meetings has not been resisted indicates that these groups are not prepared to risk the consequences of unconstitutional action. This is a significant change from the tactics of 1956, when similar illegal action could be glamourised as anti-colonial. Moreover, the self-conscious revival of the past allows the government to argue convincingly that the same outcome as in 1955 and 1956 must be intended—and prevented. As a final gesture the opposition members of the Legislative Assembly and the council of joint action have appealed to the United Nations against the British and Malayan governments, under the UN's anti-colonial resolution of 1960, on the ground that the Referendum Bill will not allow the "free expression of opinion"; they have asked that a UN observer should come to Singapore.

The government, however, remains in power, and with the sort of Referendum Bill that it wants. The prime minister has said that he will fight and fight and will win the last battle. The referendum presupposes a wish for a Malaysian merger, and an alternative association with Indonesia would clearly not compensate Singapore for its exclusion from a state that will include its traditional economic hinterland in Malaya and the Borneo territories. On referendum day it is likely that the White Paper, with its proposals for partial autonomy, will prove at any rate the least unacceptable. In these circumstances violent opposition before, during or after the referendum seems unlikely. This has been a game of political and diplomatic chess and unless someone kicks the board Malaysia should emerge as the winner.

The Dimitrov Legend

BY OUR SPECIAL CORRESPONDENT LATELY IN SOFIA

After the 22nd Soviet party congress last October the Hungarians were making ironical cracks about the uncertainties of being buried in a mausoleum. Stalin had been removed from his, and the Czechs were talking about following suit with Gottwald. The Bulgarians, on the other hand, neither then nor since, have ever shown the slightest intention of disturbing Georgi Dimitrov, who lies, a waxen figure dressed in a tidy dark suit and guarded by two motionless soldiers, inside his small mausoleum that faces September 9th Square in the centre of Sofia.

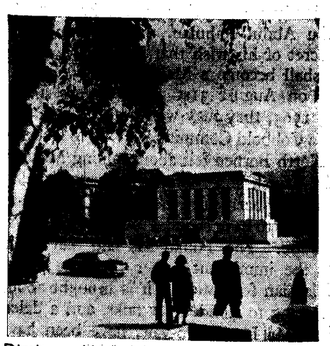
Nor are the Bulgarians at all shifty, surreptitious or diffident about their embalmed hero. Enormous official wreaths flank the entrance to his mausoleum. When it is open, for instance, on Sunday afternoons, organised parties of school children trail through in a fairly steady stream; there is also quite a respectable trickle of the general public. Bulgarian communists like to refer in public to their central committee as "Dimitrov-like." The eightieth anniversary of his birth was celebrated on June 18th with huge rallies and meetings. Like Lenin, in short, Georgi Dimitrov—the hero of the Reichstag fire trial, and the secretary-general of the Comintern—is apparently too exalted a figure in the international communist movement to be touched by the current campaign against the cult of personality. In any case, as the Bulgarian central committee emphasised in its resolution on the 22nd Soviet party congress, "any equation of the prestige of a leader with the cult of personality is not only incorrect, but harmful. . . ."

Dimitrov enjoys the prestige of a leader, but in death he has become a controversial one; no-one knows for certain what he really stood for in the last years of his life after he had attained supreme power in his own country. He behaved like a devoted disciple—some would say a stooge—of Stalin. He ruthlessly got rid of all his non-communist political opponents, and made his country into a pilot project for a people's democracy along the lines laid down in the Kremlin. In his long theoretical exposition of popular democracy at the fifth congress of his party in December, 1948, he stressed that he had received Stalin's "personal advice and guidance."

Yet he also fell foul of Stalin. In his discussions with the Jugoslavs about a federation between their two countries, he showed too much independence of Kremlin control. He also pushed his ideas further than Stalin liked. When he publicly said that the eventual goal was a federation of all eastern Europe, plus Greece, *Pravda* on January 28, 1948, angrily rebuked him. Dimitrov recanted abjectly, thanking *Pravda* for its "valuable and useful warning." After the Jugoslavs had broken with the Cominform he denounced them as agents of American imperialism and so on.

But some people, including the Jugoslavs, believe that Dimitrov would not have been so abject if he had not been a sick man. They claim that he was worried about his country's growing dependence on Russia and wanted to counteract this through some form of Balkan federation (the Jugolavs never managed to agree with Dimitrov on the exact form this should take). Dimitrov was certainly sick. He was eventually carried off to a Russian sanatorium where he died in somewhat mysterious (the Jugolavs would hint sinister) circumstances in the summer of 1949. But although his death may have been a convenience to the Russians, they did not deprive him of his posthumous glory. At his funeral Stalin himself took his place among the guard of honour, and Dimitrov's successor, Vlko Chervenkov, made a speech carefully modelled on Stalin's funeral oration over Lenin's corpse 25 years earlier.

A Dimitrov legend was thus created and allowed to persist. On the 80th anniversary of his birth, last month, tributes were



Dimitrov Mausoleum

paid to Dimitrov not only throughout the Soviet block, but in Belgrade and Tirana, too—although not always for the same reasons. For the Bulgarians themselves, it was quite simple; they praised him for his part in bringing their party to final victory and for his "merciless struggle against any deviations from Marxism-Leninism." In Moscow Mr Kuusinen said with, no doubt, unconscious irony that Dimitrov's great virtue was his "political flexibility"; he also pointed out that the Bulgarian leader had strongly criticised those who maintain that war is inevitable. In Budapest *Nepszabadsag* said that Dimitrov had criticised "some negative features of the Stalin cult." In Tirana, *Zeri i Populit* reminded its readers that Dimitrov, "a disciple and intimate collaborator of Stalin," had praised the Albanian communists and their present leader, Enver Hoxha, and in December, 1948, had denounced "the present traitors of the Jugoslav communist party." And in Belgrade *Borba* claimed that Dimitrov had always advocated collaboration between Bulgaria and Jugoslavia.

As with all legends, the origins of Dimitrov's are by no means completely clear. This, however, helps it to provide something for everybody; and his memory is kept green by those who find in the obscurities of the myth fresh ammunition with which to prosecute their mutual feuds.

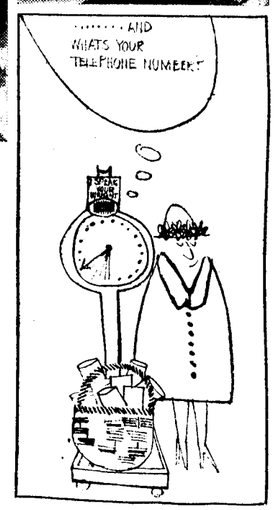
FAY BATEMAN SAYS:

It's better to buy it in a can...

...here's why

These days children like to have a say in what Mother buys (see Mark, above), and they know how to get what they want (see Mark, right). Since it's Mother who has to carry the shopping home it's just as well that so much of the food that children like does come in cans *because cans keep the shopping light.* When you come to think of it, a can weighs next to nothing in itself.

THINKPIECE (on your right) The weighing machine is impressed. The basket's owner is delighted. Cans (besides being compact and easy to stow in a small space) always weigh less than you think. What's inside is always sheer goodness, because, you see, it's *dark* inside a can: there's no daylight there to harm the vitamins and flavour. One way and another, it *pays* to buy food in a can.



THIS IS THE EAST...

Economic development in Asia is bringing higher living standards to these young people and to the vast population of that continent. Demand for an ever increasing range of merchandise is steadily rising. If you are interested in trade with these expanding markets, you are invited to avail yourself of the banking and information services of The Chartered Bank and its subsidiary, The Eastern Bank Limited. The combined organisation of the two banks comprises one hundred branches in twenty-seven territories extending from the Eastern Mediterranean to the Pacific Ocean.

THE CHARTERED BANK
(Incorporated by Royal Charter, 1853)

HEAD OFFICE: 38 BISHOPSGATE, LONDON, E.C.2

West End, London branch: 2 Regent Street, London, S.W.1 · Branches in the United Kingdom also at Manchester and Liverpool, in Germany at Hamburg and in the United States at New York

The Eastern Bank Limited HEAD OFFICE: 2 & 3 CROSBY SQUARE, LONDON, E.C.3

Associated Banks: Allahabad Bank Ltd. (Incorporated in India) · The Irano British Bank (Incorporated in Iran)

THE BUSINESS WORLD

A Turn in Gilt-Edged?

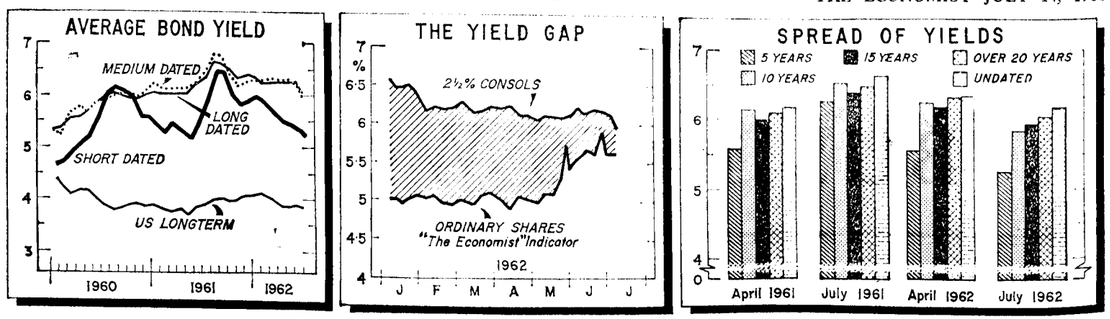
THERE have been too many disappointments for holders of British Government securities through the inflationary fifties and the disinflationary sixties to make them accept the recent strength of gilt-edged as something that is bound to last. After a fairly severe shake out in the ordinary share market from end-May onwards, there are still more private investors, probably, who would take their chance with a property share yielding 2 per cent than with a 25-year stock yielding 6¼ per cent. But within the extremes of virtual distrust of fixed-interest securities and unflinching confidence in the prospects for equities, a deeper change in thinking about the relation of fixed-interest stocks and ordinary shares is taking place. The emphasis is shifting towards the possibility of a further, and maybe sustained, rise in gilt-edged, though not of the heady character of last week's. And it is shifting away from automatic assumptions about growth and inflation as the twin supports for equities, for growth does not guarantee comparable growth in profits and, just conceivably, inflation-free government policies may be here to stay in the western world for quite some time.

None of these is a closed issue, and investors are not in any mood to regard gilt-edged as "in" and equities as "out." Equities have made a useful come-back this week on Wall Street's improvement in response to relaxed margin requirements. But given the lively prospect of a further reduction in Bank rate or of a further release of special deposits, there is more confidence about in the gilt-edged market than for many a long day. Against a background of a stable pound and reasonably stable prices, the attractions of high interest rates are still powerful. When the pound was under fire a year ago, the gilt-edged market was a place of despair; yet the foundations of recovery had been laid in the April budget and have since been reinforced. There is room for argument about the consequences of Mr Selwyn Lloyd's policy for the economy as a whole, but there need be none about its consequences for the gilt-edged market. For many months (having first made sterling secure) the authorities managed the market with an austere hand, allowing nothing of the old doctrine that "funding is easier on a rising market" but engaging in successful selling at high and more or less stable rates. Investors (mainly institutional but some private) have compared the compounding of a 6½ per cent return over, say, ten or twenty years with the assumptions about earnings that have to be made to justify some of the growth favourites priced on a current yield basis of, say, 1½ per cent. They have not gone overboard for gilt-edged nor have they thrown equities overboard either, but their demand has sustained a long period of what might be called natural funding.

The effects of this process have recently become pronounced, not so much as a consequence of the reduction in Bank rate from 5 per cent to 4½ per cent at the end of April (though this was a further step towards lower interest rates and easier credit) as of the release of one-third of special deposits at the beginning of June. Immediately, the banks got busy and within a few days the 6 per cent Conversion 1972 tap ran dry; bank and discount house buying in the 5- to 10-year range of dates started the climb at the short end of the market, only temporarily muffled while the London County Council issue was being absorbed and resumed with the welcome given to the Port of London Authority issue, again with the popular date of 1972. It needed only the suggestion by the authorities that they had nothing left to sell, apart from the remainder of the 5 per cent Treasury stock 1986-89, and the newly created 5 per cent Exchequer stock 1967, for the market to get the bit between its teeth. Some brokers remain unconvinced that the cupboard is quite so bare, even though they read the tactics employed by the authorities as an attempt to bring interest rates down in an orderly fashion and in the long end of the market also.

IN this process the banks have led, followed by investment trust buying and insurance office switching, until some effects are visible as far as the 25-year range. But another factor has been the foreign buying of War Loan, interest on which is not subject to British tax in the hands of non-residents. The interest differential here is an attraction to those American buyers who see more reason for concern about the dollar than about the pound, and do not expect any significant recovery in common stocks. The result of these swings of domestic and foreign investment sentiment has been virtually to wipe out the reverse yield gap. Profit margins trimmed by competition, less than unbounded prospects of expansion, and policies that seek a growth in trade without releasing inflation again—all these have challenged the basic premises of the equity cult and enhanced the counter-attractions of high income from bonds.

But economic policies in Washington and London are bound to have more effect on equities. If either centre were free of the responsibilities of a reserve currency, a positive march for growth would already be moving. But so long as external fears inhibit domestic action, in the United States or in Britain, any rise in the ordinary share markets, there or here, is likely to be slow and highly selective. And whether the growth



stocks of the past (mostly on low yields still) will again take up the lead must depend on the time it takes for changes in monetary and fiscal policy to exert a pervasive effect throughout the two economies. With so much evidence of slack and even decline in many sectors of both economies, it would indeed be an optimist who took this to be the right moment to buy equities for recovery.

One comes back, then, to the current attractions of gilt-edged yields, even for investors who would rightly refuse a fully-fledged commitment in this sector of the market. Here is the spectrum, from the shorts to the undated stocks:

	Post-Budget Yields			Current yields, July 11, 1962
	April, 1961	July, 1961	April, 1962	
	%	%	%	%
Bank Rate	5·05	7·70	5·50	4·4½
Exchequer 5½% 1966	5·67	6·28	5·54	5·20
Conversion 6% 1972	6·16	6·54	6·30	5·90
Funding 5½% 1982–84	5·93	6·24	6·30	6·08
Treasury 5% 1986–89	6·05	6·42	6·24	6·20
Treasury 5½% 2008–12	6·11	6·50	6·33	6·05
War Loan 3½%	6·20	6·64	6·41	6·10

Falling interest rates have had the customary effect of working more directly on the short-dated bonds, and spreading more slowly to the middle- and long-dated issues. Indeed, Funding 5½s, 1982-84, and Treasury 5s, 1986-89, are yielding a shilling or two more than they did after the 1961 budget (when Bank rate was 5 per cent) and the Treasury 5½s, 2008-12 (that favourite of the pension funds) only a shilling less. Further improvement in the gilt-edged market should now have a more obvious impact on longer-dated stocks. But this will undoubtedly depend on the Government's success in keeping sterling firm and prices stable. There may also be less foreign support for gilt-edged if monetary policies in the United States and Britain are directed towards closing the gap between bond yields in the two countries. Again, the market in fixed interest securities will probably have to bear the weight of substantial new issues, for industrial financing through rights issues has received a sharp check and there is a queue of local authorities and Commonwealth governments hoping for their turn. Australia got through the turnstile this week with a £10 million 6 per cent conversion stock, also for ten years, with the satisfactory yield of 6.42 per cent. One can imagine the anxiety of local treasurers, with something like £1,500 million of mortgage and shorter-term debt, to fund on any sustained rise in the gilt-edged market. All that has happened so far is that the investor has been given a demonstration that realistic interest rates, against a background of steady prices and a firmish pound, still have their attractions. These are probably not exhausted. But the time to talk of a gilt-edged boom will be when Old Consols show a clear margin above 50 ; there are still sufficient risks of things going wrong for them to lose their four-point gain from this year's low of 38⅛.

Danger in The Air

THE Alitalia airliner that crashed in India last weekend is the fifth big jet to be involved in an accident this year. This is five too many. The death roll in the air since January is a horrifying 872, nearly 500 of them in the five jet accidents, four of which involved Boeing 707s and the fifth a Douglas DC-8. In the last two years the numbers killed in the air have averaged little more than 1,200, but at the present accident rate a jet crash is beginning to seem statistically predictable at the rate of nearly one a month. In terms of actual miles flown, this might seem like an improvement on the safety record of slower aircraft. In terms of human life, when more than 130 people can be killed in a single crash as they were at Orly, it is not to be tolerated. The number of air accidents in recent years has been steady or declining in spite of the great increase in civil flying, and the aviation industry has every reason to congratulate itself on this. But the number of people at risk in any single accident is rising rapidly as aircraft double and treble in size, and a crash to any one of them is no longer a private tragedy. It is a public disaster that can put an entire city into mourning. This introduces a new dimension into flying, and one with which the aviation industry must come to terms.

It would be something in these circumstances if the recent run of accidents could be clearly attributed to structural weakness in the jets, and especially in the Boeing 707, which had a run of four crashes in almost the same number of weeks. Then at least there might be hope for a swift technical cure, like those that were found for both the de Havilland Comet and the Lockheed Electra. But unfortunately there is too little in common between the accidents, and too many points of similarity between them and other accidents to other aircraft, to hope for any such ready solution. The

trend that is emerging in air accidents is a deeply disturbing one, because it begins to suggest that the weak link in the chain is the human one. If this is so, it is infinitely more difficult to cure than a structural fault, and it calls for new thinking among airlines and manufacturers.

Two rather sweeping generalisations might be made about recent accident trends, the first is that a high proportion of accidents occur at take-off or landing (nearly half the total this year) and in a disturbing number of cases aircraft hit mountains that have stood for so many centuries in the same place that pilots might presumably be expected to know where they are. The second is that a high proportion of accidents occur to aircraft on charter. The magazine *Flight* pointed out recently that 40 per cent of the passengers killed in the previous twelve months had been flying on chartered aircraft, adding " this is out of all proportion to the scale of non-scheduled passenger operations " which the magazine guessed might account for no more than five per cent of world air traffic.

WHY should this be? There has been an uneasy feeling among observers for some time that in spite of rigid safety requirements and strict licensing regulations in all major aviation countries, airlines which live mainly by chartering are somehow getting off more lightly than those that fly passenger services to a regular time-table. The Ministry of Aviation has more or less publicly admitted that there is more than a grain of truth in the rumour so far as this country is concerned. The Parliamentary Secretary said last week that our " airworthiness standards for (older) aircraft do not match up in all respects with those prescribed by the International Civil Aviation Organisation for international transport operations " and will have to be tightened. If this can happen in Britain, the same—and worse—can happen in other countries.

But tightening the airworthiness regulations will not remove one hazard peculiar to charter flying—the risk that the pilot may be strange to the route. Pilots on scheduled services undergo intensive route training; this is precluded for pilots of a chartered aircraft by the nature of their job. The onus is on the airline to see that the captain of a charter flight has taken all necessary steps to study his route. But who makes sure that the airline carries out this responsibility, perhaps in the peak of the holiday rush when the line is short of aircraft and short of crew? Nor, it appears, is this uncertainty confined to charter flights. Considerable weight is attached in France to reports that the pilot of the Air France Boeing that hit a mountain in Guadeloupe while trying to land had protested before taking off that he did not know the airfield well enough to attempt a night landing.

This raises the human element in flying. More and more accidents are being vaguely blamed, for want of better reason, on that ambiguous term, " pilot error." No one seriously implies that pilots are more slaphappy or less capable than they were some years back; this is a euphemism for saying that more and more pilots find themselves in situations with which it is not humanly possible to cope. The big jets, with their narrow, swept wings, are the most efficient and economical flying machines yet sold to the airlines. The price they pay therefore been specially rated, particularly jet aircraft because their work capacity is so much greater than that of their predecessors. In general, however, aviation insurance rating is based not so much on the type of aircraft used as on the overall experience of the particular airline, when such factors as financial strength, the soundness of crew and engineer training, general discipline and management abilities are taken into account. Many airline managers, to put it mildly, expressed considerable annoyance with the caution displayed by the insurers towards new types of aircraft.

Jet aircraft lost to date, though by no means all of them were insured, are estimated to have been worth more than $100 million and in their early years of flying their loss ratio per 100,000 flight hours was no better than their predecessors ; but, as their hulls are worth about £2 million apiece, the values involved were much higher and therefore had a very disturbing, if temporary, effect on loss ratios.

Recently the loss ratio has improved from the order of 1 per 100,000 flight hours to 1 per 140,000 hours and if this trend continues some adjustment of the rates on new types of aircraft might be expected. But, until something positive is known about the causes of recent accidents, insurers are obviously unwilling to make any forecasts about the future of rates. Looking much further ahead they are not, on the basis of what has been revealed about the technical problems of supersonic commercial jet aircraft, viewing their advent with any joy.

The Insurer's View

AVIATION insurance is a vexed subject: some airlines, both state-owned and privately-owned, regard the premiums charged by the insurers as cripplingly high and prefer to run their own internal insurance funds. The view expressed somewhat peevishly in the insurance world is that while no one can object to any commercial concern running without the help of outside insurance no state or quasi-state concern has the right to expose taxpayers to greater risks than face a shareholder in a reasonably prudent commercial concern.

London has played a leading part in the development and handling of aviation insurance. There are now about 5,000 commercial aircraft in use throughout the world, of which about half are registered in the United States ; it is not therefore surprising that the only major market in aviation insurance outside London is New York. Here a great deal of the domestic business in the United States is underwritten, but even so a substantial part of it is reinsured in the London market.

The main source of income arises from the insurance of aircraft hulls against accidental damage, but a fair amount of income arises from cover on the various legal liability risks to which an aircraft operator finds himself exposed in conducting what is often an international business. Statutory returns do not entirely cover the field ; but, taking into account recent rates of growth in the business, the annual income of the London market from aviation insurance appears to be around £40 million.

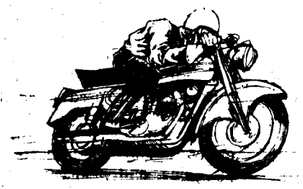
The profits are small and in some years there have been losses. The main problem from the insurer's point of view has been severe cyclical fluctuations, with a sharp rise in accident trends, or a cessation of an improvement in these trends, occurring at a time when premium rates were falling. Some years ago it was suggested that the introduction of new types of aircraft might possibly be the disturbing factor and the London underwriters set in train an informal investigation on an international scale to examine this problem. The startling result of this investigation was that in the case of a number of new types of aircraft a loss incidence as high as 20 per cent occurred in the early period of introduction of the new aircraft. Most of the accidents, however, occurred in the crew training period and happily, therefore, not many passengers were involved. Aviation insurers decided that they had to take this factor into account in quoting premiums on the new types of aircraft, for they argued if rates were raised only after the bad losses had been incurred they would have little chance of recouping those losses in a reasonable period of time.

Nearly all the new type of aircraft have

for this performance is ease of handling; they are angels in the air, but devils near the ground. The shape of wing that is perfect for cruising gives the pilot no help when taking off or landing, both at speeds so high that the average airline captain is required to have the split-second reactions of a racing driver, often at the end of a long and tiring flight. The large number of pilots employed by the airlines—BOAC alone has 1,904 and Pan-American 1,343—makes it wholly unreasonable to build aircraft that can only be flown by supermen.

THE biggest single measure that could be taken now to improve air safety would be to reduce the burden on the pilot, particularly the big-jet pilot. The first move in this direction would be better aids at airports. These are in many cases little short of scandalous, and pilots are battling to bring in jets under conditions that would tax a DC-3. They land on occasions without such elementary aids as approach lights: at Madrid the pilots have to pick out the runway from among the lights of the town, and this example can be repeated across the five continents. Too many airport authorities seem to think that their obligations to the jets end with provision of enough concrete to allow the brutes to stop. It is hardly surprising that landing fees at such aerodromes are lower than, for example, at Heathrow; in many cases they provide little more than a flat piece of ground to land on, without even bothering to shoo the dogs off the runway. But some manufacturers and airlines are realising that they must go as soon as possible at least some of the way towards automatic take-off and landing. This is not because they want the ability to land blind in fog, but because some degree of automation must be introduced into the cockpit if the pilot is to do his job without unnecessary strain. Manufacturers are belatedly recognising that the pilot is the one aircraft component that has not changed since the Wright brothers, and that is showing dangerous signs of overload.

The Flight Safety Foundation in the United States would urge the industry to accept the sad fact that some aircraft will always come to grief, and build a degree of crash-worthiness into the machine itself. It is a moot point how much protection any fuselage could give passengers from the impact of machine meeting mountain. But what is the airlines' answer to the foundation's case for better fire protection? Passengers and crew travel between thousands of gallons of fuel; and the most common sequel to any air crash is a raging fire which could, the foundation argues, be avoided by the kind of pressurised water sprays developed and demonstrated five years ago but ignored by the air transport industry. The airlines might retort that these refinements, if that is the right way to describe them, will cost money and higher fares. The Flight Safety Foundation has heard this answer so often before that it suggests in its current annual report an investigation of what it describes as the economics of safety—the cost of building every conceivable precaution into the aircraft and of providing every known aid on the ground, both balanced against the possible saving of a lower accident rate. Then some sensible conclusion might be reached about the probable cost, and whether it was likely to be more than passengers were prepared to pay. The airlines should at least consider giving their customers the choice; otherwise at some point of carnage they could find themselves without passengers altogether.



Recession on Two Wheels

BRITAIN'S motor cycle industry may be small, but it has a gift for spectacular fluctuations. Its downward slide from a boom in the euphoria of free hire purchase in 1959 has now brought home sales down by about a half—back to the 1958 level—though there has been a slight recovery with the summer. Production has fallen even more, because motor cycle dealers are now running down their stocks and exports have fallen too; in the first four months it was about 25 per cent lower even than in 1958. Imports, which provide about half the motor cycles sold in Britain, were much the same in the first five months of this year as in 1958 or again last year—when they amounted to less than half the peak level of 1959. So the industry, whether home producers or importers, has equalled the achievement of the grand old Duke of York with his ten thousand men.

Importers had the best of the 1959 boom, but took the first knock in the recession. The scooters and mopeds that they mostly sell were the machines that enjoyed the most rapid rise in popularity and then felt the draught soonest when hire purchase restrictions were re-imposed in April, 1960. This left dealers and importers with a stock problem that took them eighteen months to solve. Imports in 1960 were 20 per cent lower than those of 1959, and in 1961 they fell another 40 per cent. But they rose again this year; scooter sales now seem to have stopped falling. Sales of the "real motor cycles" in which British manufacturers specialise have followed a rather different pattern. Initially their sales fell less than those of scooters and the makers' inability to meet demand in 1959 left stocks low and resulted in a backlog of orders from the dealers. But dealers then entered 1961 with stocks related to the sales of 1960—and demand continued to fall, now extending to the big sports motor cycles and some of the smaller types. So stocks of these cycles rapidly became excessive, and dealers cut their orders drastically last winter. The accelerated fall in sales this year has compelled makers to cut output further. Stocks are now falling; but they still represent about three months' output.

It is probable that no British maker of motor cycles has been making a profit since last autumn. Birmingham Small Arms—the dominant firm in the industry, accounting for about two-thirds of British production—has warned shareholders that profits are so much reduced that it will be unable

to maintain the dividend for the current year, although motor cycles only provide about a third of its turnover. The second biggest company, Associated Motor Cycles, was already showing a loss of £350,000 in the year to the end of August last year. With no prospect of much improvement until next spring, the outlook for the industry is bleak indeed. But it remains confident that this is a short-term recession, the aftermath of over-expansion in 1959, and that it can expect to start growing again once it manages to climb out of its present troubles. Sales were especially depressed early this year by cold weather; and the presence of old stock in the showrooms —sometimes last year's models—was another factor hardly encouraging sales. When the stocks are cleared, makers hope, sales will turn up again—aided by higher incomes and new models.

Popular though it has been to criticise British manufacturers for their failure to get into the scooter boom, most of them are probably too small to be able to produce on the scale of Innocenti (Lambrettas) or Piaggio (Vespas). By the time they were being urged to make scooters, it was already too late to make profits from them: such British firms as BSA that started building scooters have found the trade more or less dying on their hands. Until last year, the traditional motor cycle stood them in good stead. But the rising road accident rate, with its concomitants of higher insurance rates and press publicity about the perils of two-wheeled transport, has meant a drastic fall in the sales of motor cycles in the home market, and cut away one of the bases on which manufacturers depended. They are finally being forced to change their products, but not to the "traditional" scooter for which the market has already shrunk and where the Italians are so strongly entrenched.

LIGHTWEIGHT, low-cost scooters and light but sporting motor cycles are the products on which British makers seem to be pinning their hopes: lower prices and running costs, they hope, will widen the market. But they will mean operating on narrower profit margins, and foreign manufacturers are thinking along similar lines. Some of the smaller manufacturers abroad are already making lightweight scooters, with Lambretta and Vespa expected to follow. Light sports motor cycles are a Japanese speciality, now to be assembled in Europe: there is no escape from foreign competition. But British makers have shown a better sense of timing in entering this market than they did with the bigger scooter. Raleigh started making an Italian design, the Roma, last autumn and BSA introduced the 100 cc Triumph Tina scooter with automatic transmission last March, selling for £92 as against the £150 or so of the conventional scooter. This model seems to have got off to a good start.

Poor designs have been just as much the trouble of the motor cycle industry as sometimes over-cautious commercial judgment—especially where it tries a new product. Hence relief at the apparent success of the new BSA scooter, for nearly ten years ago that company produced a form of lightweight scooter, the Dandy, which proved largely abortive, and the moped that Raleigh introduced nearly four years ago later had to be replaced by a French design. The motor cycle industry seems to have become too much craft-based and too little acquainted with modern engineering, tending to follow the lead of one or two able designers of traditional machines. The years of intense depression during the 1930s, followed by the easy years for sales after the war, were not the best preparation for meeting the competition of the big foreign companies that entered this industry after the war.

The only company in the British industry that seems to possess the financial and engineering resources needed for success in the present is BSA. Backed by engineering and steel interests that provide two-thirds of its turnover and so cushion it from fluctuations in its motor cycle division, this group has the capital needed to tool up for large-scale production—which, for scooters, means sheet metal presses as well as the assembly and machining operations involved in making a motor cycle. Associated Motor Cycles, the second largest company, is in a difficult position; after losing money last year, sales and presumably profits have dropped further, and it has little other business to fall back on. Its new management is trying to diversify, but this can only be an insurance against future recessions rather than a cure for the present one.

BSA is unlikely to want to buy up AMC or any other small companies; it must already have considerable surplus capacity at the present production rates, and as bewildering an array of brand names as the British Motor Corporation. When the range of conventional motor cycles is likely to be reduced, to match falling demand, and the new scooters account for a larger share of output, old brand names lose much of their appeal—as do motor cycle production facilities. Some of the small and specialised companies should survive, especially where they have other engineering business to back their motor cycle production. Operating on a small scale, with low overheads and using many bought-out parts, they should be able to provide machines that are sufficiently different in appeal to those of the bigger firms to enjoy a market. But the pattern of the motor cycle industry seems likely to be much the same as that of the cycle industry, with one dominant manufacturer and a fringe of smaller ones; AMC seems more anxious to spread its interests outside the industry than to try to strengthen its position within it.

The British motor cycle industry can hardly expect again to match the size of its counterparts in Japan, Italy and Germany, or to penetrate their home markets as they have penetrated its own. But the present troubles should have a salutary effect on its attitudes and competitiveness; perhaps it will at least be able to eat into the half of the home market that imported machines now possess. Rapid growth in this market, however, seems a thing of the past; the last three years may have to be regarded as a break in the traditional pattern of the market. Heavier traffic makes the motor cycle a more alarming means of transport for all concerned, whether their riders charge down arterial roads in search of "the ton" or weave through city traffic. And higher incomes tempt potential buyers to get a car instead—which brings more comfort as well as, perhaps, higher social esteem. Of the two markets that this industry can aim at, cheap transport or "riding for kicks," the former is now the more stable: the latter is rather dependent on fashion, even if the continuing demand for big motor cycles in the United States, where they are no longer ridden as transport, suggests that it may prove the more durable. Perhaps the British makers of old-fashioned, noisy motor cycles may yet have the last laugh.

BUSINESS NOTES

COAL

A Modest Proposal for Scotland

ALTHOUGH the nationalists are already in full cry, it is difficult to believe that the National Coal Board's plans to cut Scottish coal down to size are unreasonably —perhaps even sufficiently—severe. Nobody can be sure how much production will be economic there in five years' time, because this depends on demand and demand depends on prices and the competition. But it is not easy to believe that production at many of the board's "Class B" pits—"where the past results have been generally unprofitable and where potential is doubtful"—will remain economic by 1965-66. It is more likely that quite a number of the pits it puts into "Class A"—"where reserves are quite adequate to last over the five-year period, and where generally there is potential to enable economic working to be pursued"—will have to be demoted and closed down.

The board, in the review that it published this week, has put 46 pits into Class A; 33 into Class B; and 27 into Class C, which will be closed within five years mainly because their "realistic reserves" will be exhausted by or before then. Its forward assessment of output might be summarised as follows:

	Output 1961	Est. Output 1966
	(million tons)	
Class A	10·0	14·5–15·0
Class B	3·7	Nil–2·0
Class C	2·1	Nil
Pits due for closure this year	1·2	
Opencast and licensed mines	1·2	1·0
	18·2	15·5–18·0

So its plans are not for a very large cut in Scottish output, but for the concentration of whatever output is required into the region's 40-50 most efficient pits.

How much coal can one expect Scotland to demand—from British suppliers? At present, it says, about 18 million tons a year of Scottish coal is sold (about 1.6 million tons are sold outside Scotland, balanced by 1.2 million tons "imported" from England). The board isn't publishing its own quantitative guesses. It thinks demand from electricity and coke ovens (in spite of economies in the use of coke for smelting iron) will rise; but sales to gas and general industry will lose ground to oil, and total demand will certainly fall.

Who is Redundant?

IF the only Scottish pits operating by 1966 are those that the Coal Board now has in its Class A, then the industry would need only 44,000 miners in Scotland by 1966, against 62,000 today. These pits, now employing 38,000 men, may need 6,000 more when reconstruction and concentration of output is completed there; but between now and 1966 they would expect the "natural wastage" of men retiring and leaving the industry to take away about 25,000 miners from their present, comparatively aged, labour force. To man up these pits alone over the five years, the board thus expects to have to bring in 31,000 people. If the demand justified, say, 2 million tons in 1966 from the Class B pits, it would raise the labour force required then by about 6,000-7,000 miners; and all these figures exclude trainees and men on common services.

The theoretical arithmetic of manpower, thus, might make this sizeable transition, even if future demand turns out to be no more than these "economic" pits can produce, quite painless. In fact, the Board recognises that it won't be. In Ayrshire and the Lothians, it should generally be possible to achieve "simple and direct redeployment of men from pits as they close to continuing pits in Class A"; but not elsewhere. In Central Fife, Douglas, Harthill/Shotts/Forth, Motherwell/Hamilton, and Campbeltown, pits employing some 11,000-12,000 men "could," as the board puts it, be affected, and redeployment could be difficult. The board will be offering men jobs within a reasonable distance of their homes, or work elsewhere in coal in Scotland, the Midlands or Yorkshire. But many, inevitably, will not end up in jobs in coal.

It has to be noted that even these Class A mines are only economic in that they more than cover operating costs. The Coal Board is carrying all its interest charges on more profitable divisions. Moreover, its not very pessimistic assumptions about demand appear to presume continued insulation from American coal, and perhaps from the most rigorous of world oil competition. If Scottish coal were pressed towards absolute realism in its costing, and had to meet the price of cheap imported energy, there might ensue a degree of redundancy that not even arithmetic could make look painless.

GOLD AND EXCHANGES

The Dollar-Go-Round

EUROPE, as usual, is preoccupied with the dollar. The Swiss National Bank was forced last week to deny reports that it had converted $100 million of its steadily increasing dollar balances into gold, by announcing that it had in fact converted only $25 million. Swiss dollar holdings have increased by $190 million since the beginning of June, some $59 million of this increase occurring in the first week of July. The German Bundesbank has had to deny rumours that it was no longer prepared to support the American dollar on the exchange market. So long as rumours like these are published and believed, sensible discussion of the dollar's problem will be overheated. In America the President and Mr Roosa, Under-Secretary to the US Treasury, have yet again thought it necessary to deny that the price of gold will ever be changed. On a happier plane Mr Roosa also said that he expected the US balance of payments deficit this year to be somewhere between $1 billion and $1.5 billion, compared with last year's deficit of $2.5 billion. Previously the most optimistic estimates of the 1962 deficit expected it to be no better than $1.5 billion.

In London the private demand for gold is still testing the Bank of England's ability to control the price. So far, by meeting all demands, the Bank has kept the price at around $35.12 an ounce. The American gold stock has now passed its seventh week without change, and it seems a safe assumption that it is the European central bankers who are keeping London supplied with gold. Although private demand is strong it has not as yet shown any signs of running away; it must nonetheless be biting deep into the European gold pool of $250 million. The central bankers may soon have to decide what they will do if this pool runs out; they presumably discussed the matter at last weekend's meeting in Basle. Having co-operated in defending the dollar so far the bankers are not likely to back down at this stage, and the chances are that if the pool looks like running out the bankers will increase it.

The dollar has fared slightly better on the continental exchange markets this week after last week's heavy short-selling. In Switzerland the National Bank has been able to sell back some dollars to its own nationals. The New York opening has, however, usually meant that the rate has eased in the afternoon, which suggests that the Americans themselves are still selling dollars. Sterling has been slighty easier this week and was supported by the authorities on Wednesday when the rate fell to 2.8047 on selling from Germany. This selling was reversed in the afternoon and the rate closed at 2.80⅝, about ⅜ down on the week. On Thursday continuing continental demand took the rate to 2.80⅛. The Canadian dollar continues strong, and with the rate against the US dollar at 92.67 the Bank of Canada has been taking in substantial amounts of US dollars. In the last week of June, after the emergency measures, Canada's reserves, excluding the international help of $650 million, rose by $59 million, to $1,809 million. The $400 million standby credit with the Export-Import Bank in Washington has not been drawn on.

WALL STREET

Cautious Welcome

A correspondent cables:

THE reduction in margin requirements from 70 to 50 per cent pleased Wall Street and immediately brought a good number of small investors back into the market. Over seven million shares were traded on Tuesday and the bulk of the issues made gains though these were trimmed by profit taking; the volume of trading fell on Wednesday, but, even so, the Dow Jones average edged up to 589. Dealers do not believe that the rally will last unless economic conditions improve, and some big stockholders have taken advantage of the better tone in the market to float secondary issues which had been held off the market in the dark days of May and June. Some investors are covering the short sales they made earlier, and this has added to the volume of trading and helped to push prices up. But more experienced speculators are now selling short, as they feel that the prevailing trend is downwards.

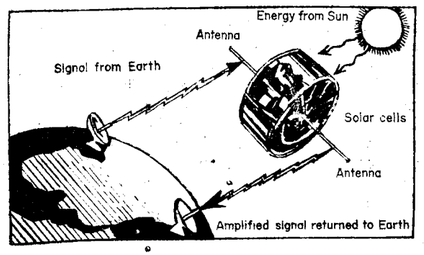
The judgment of professional speculators and of investment analysts and institutional investors was, however, shown to be fallible in the fall in the market and they may still be without their bearings. The rally that began at the end of June has wiped out about 25 per cent of the earlier losses and by past precedents of other market rallies the latest one may still have a good deal further to go. But the precedents could easily be misleading, particularly at a time when the economic indicators are so confused. Hence, most investors, especially the institutions, prefer to be guided in their decisions by the outlook for yields and profits. The dividend cut announced by Lukens Steel, which admittedly is not a major producer, is thought to be ominous and the decline in chemical and oil earnings is regarded as a harbinger of trouble in other sectors of the economy. Even so, the market was cheered by the reduction in margin requirements, which was interpreted as a sign of the administration's willingness to provide a psychological lift, and it was cheered again by the proposals to liberalise the treatment of depreciation for tax purposes and by the defeat of a proposal to withhold income tax on dividends and interest compulsorily at source. But Wall Street is still pinning its hopes on further action by the government, preferably in the form of an outright cut in taxes.

STEEL

No Recovery?

DURING the first half of 1962 Britain produced 1.6 million ingot tons less crude steel than twelve months before. The out-

Telstar in Orbit



TELSTAR, chattily orbiting the earth, is unlikely to be alone in space for long; the National Aeronautics and Space Administration intends to launch a sizeable family of communication satellites during the coming months to experiment with the best design and most suitable orbit for a full-sized telephone/telegraph/telephotography/television communications system. But to Telstar goes the honour that no-one can take from it of being the first—and of working. American rocket engineers are getting very good at their job.

Telstar's first task was a simple "yes" or "no"; can a satellite perform like an immensely tall radio aerial, transmitting multi-channel voice and picture signals across trans-Atlantic distances for as long as it can be seen by both sides—in this case about 30 minutes before it sets like the sun below the horizon? The answer looks after the first day or so like a resounding "yes." The next questions are more subtle. If this feat is possible from an engineering standpoint, is it worthwhile doing commercially? How many satellites would be needed for a commercial communication link; what should their orbits be; how often would they have to be replaced; how much traffic could they carry? Telstar cannot begin to answer all these questions; in this sense it is only part, and a small preliminary part, of what must be a much wider series of experiments.

It would be much easier for all concerned if a communication link could be established merely by bouncing radio signals off a high satellite as they are bounced now off the ionosphere layer of the atmosphere. But this "passive" system is not likely to produce a strong enough signal, and Telstar and its kind are "active" satellites, with all the complication of their own power system (from the sun), their own receivers to pick up signals beamed from earth, their own brain to change the frequency, and their own transmitter to re-transmit the signal to waiting receivers on the other side of the Atlantic. The "active" satellite is a complex, delicate piece of equipment; the aerials that serve it are remarkable feats of engineering, to greater precision than a ballistic rocket; it is not often that an aerial costs £750,000, as the Goonhilly aerial has cost the Post Office.

A Telstar type of communication has to compete with the kind of telephone cable that the Post Office can now lay for about £3,300 a mile, less than half the price of a few years ago, or £6 million for a 60-channel link between Britain and Canada. This is roughly the same initial outlay that might be required for a satellite communications link providing a 24-hour service and 100 or more telephone channels between two points, or £80 million for a round-the-world system against the same price for the commonwealth cable. Engineers costing the two systems might argue that the cable is more or less everlasting, provided no one hooks an anchor to it, while each satellite in the network might have to be replaced every twelve months at a possible cost of £1 million per firing, and a probable cost, allowing for some failures, that might be much higher. But satellites have a huge capacity for work, using ultra high frequency and microwave techniques that are impossible with normal aerials. If the demand for communications, and particularly long-distance telephone conversation, grows as fast as the Americans expect (some 15 to 20 per cent a year) satellites should win over cables because of their greater capacity. If, on the other hand, traffic grows as slowly as some UK sceptics think, perhaps 10 per cent a year and not all of it long distance, the case for satellites is harder to make.

The cost may ultimately be decided by the best orbit out of the three possible choices. A 24-hour orbit based around the equator would do the work with one satellite that would always appear stationary between two points. A 6,000-mile-high orbit would also be fairly economical with satellites; ten would give 24-hour service. The low orbit chosen for Telstar by American Telephone and Telegraph—this has the unique distinction of being a private-venture satellite—will require more satellites than the others for good cover but is technically the easiest bet.

put figures for June—allowing for seasonal factors, the figure was about 1½ per cent down from May, so that the slight upturn in April and May was not sustained—complete this picture. This year's first-half production was, indeed, the lowest since 1958: it employed on the average only about 76 per cent of the industry's capacity.

Steel consumers seem to have gone on running down stocks during the second quarter of this year, whereas they were being built up a year before. They are still not low in relation to output; in Britain and Europe, there is probably still room for some once-for-all cut to a lower level than seemed advisable during the decade of

NET EXPORTS OF STEEL
(thousand tons actual weight, monthly average)

Period	Exports	Imports	Net exports
1937–38	135	82	53
1946–55	153	60	93
1956	198	116	82
1957	235	62	173
1958	204	38	166
1959	223	31	192
1960	242	103	139
1961	249	37	212
1961 (Jan.–May)	265	40	225
1962 (Jan.–May)	242	40	202

inflation. The rate of working continues to differ sharply as between producers of different kinds of finished steel, and even by geography: Scotland and the North-East coast are far worse off for orders than plants making car body sheet in Wales and the Midlands. Even so, the sheetmakers are no longer restricting their exports; both they and the plate producers have been able to increase foreign sales. This year both import and export figures for steel have included significant tonnages of foreign steel brought in for "hire-rolling" and then sent back to its owners. In such transactions the tonnage sent back is smaller through the scrap loss; but the mill replaces this with a sizeable dollop of "added value."

THE ECONOMY

Private Investment Falling

FINAL estimates of the Board of Trade confirm that, after taking both price changes and seasonal factors into account, capital expenditure by the manufacturing, distributive and service industries in the first quarter of this year was about 3 per cent down on the previous quarter. The fall of 2 per cent in manufacturing expenditure, however, was a little less than first estimated; the fall of 5 per cent in the expenditure of the distributive and service industries was a little greater.

Compared with a year before and at current prices, expenditure of the distributive and service industries was 8 per cent lower, mainly because of a large fall in investment in ships and other vehicles. Expenditure by the shipping industry was about one-third lower, that by wholesalers about one-quarter lower, but that by retailers was 30 per cent higher. On the same comparison manufacturing investment as a whole was 4 per cent up with changes for the different industrial groups ranging from a rise of 15 per cent for chemicals to a decline of 4 per cent for the iron and steel industry.

BANK SHARES

Profit Outlook

TWO-THIRDS of the 794 companies bring no surprises; they are left unchanged though, as forecast, the payments by the Midland and Lloyds have been rounded up. Bank shares have been among the hardest hit since the break in stock markets. Equity prices are about 5 per cent below their level immediately before Blue Monday; bank shares are about 18 per cent below. The decline in bank shares is partly due to the weight of banks' rights issues. In May and June four banks announced rights issues amounting in all to £36 million. At the same time the recommendation of the majority of the Jenkins committee that the banks should not be forced to declare their true earnings has lowered speculative interest.

Disclosed profits of the Big Seven rose by 11 per cent in 1961, and this has led

PROFITS AND DIVIDENDS

The Pressure on Margins

TWO-THIRDS of the 794 companies reporting in the second quarter of 1962 make up their accounts to December 31st and for many of them 1961 was a disturbing year, with increasing pressure on margins and operations below capacity. This is reflected in the decline for all the 794 companies in the gross return on net capital employed from 14.5 to 12.6 per cent. This is the resultant of a fall of 4¼ per cent in trading profits from £1,410 million to £1,351 million and of a rise in net assets from £8,107 million to £8,734 million. With net current assets practically unchanged the increase largely results from additions to fixed assets and additions to trade investments. The new investment in plant and machinery has produced a sharp increase in depreciation provisions so that profits before tax fell by just over 7 per cent and, following a proportionately higher tax charge, the fall in net equity earnings widened to 9 per cent. As the table shows, only five groups—building, entertainment, property, newspapers and tobaccos—managed to improve their return on capital employed but to achieve in most cases a marginal increase they added between 10½ and 25 per cent to their trading profits.

Despite the steep decline in distributable earnings, dividends in fact rose by £13½ million, or 5½ per cent. But as the detailed tables on pages 192 and 193 show, the bulk of the increase in dividends came from the oil companies, notably "Shell" Transport; excluding this section, dividends in fact showed little change and there was a sharp fall in earnings cover. The fact, however, that most companies at least maintained their dividends for 1961 and a goodly number would have been prepared to make a higher payment but for the Chancellor's request, suggests that they are hoping that 1962 will not turn out to be such a bleak year; the stock market however remains cautious.

Group total assets exceed £478 million

some observers to hope, now that the Chancellor is easing his restraints, for an increase in this year's final dividends. However the banks are in something of a dilemma. Their future growth depends on attracting more deposits, but this is likely to prove an expensive business and may in the short run cut into profits. It would be surprising if the banks' profits had not taken a knock in the first half of this year. Advances, the main earning asset, were about 2½ per cent below the average for the first half of 1961, and interest rates are lower. Bank rate averaged out at 5.22 per cent in the first six months of this year compared to 5.67 per cent in 1961, and at the moment it looks as if the authorities would like to see borrowing rates somewhat lower still.

BANK DIVIDENDS*

	1961 Int.	1961 Final	1962 Int.	1962 Final †	Price. July 12, 1962	Current yield %
Barclays	6½	6½	6½	?	80/-	3·3

District	8	8	8	6¼	62/6	4·0
Martins	7	8	7	?	20/3	3·7

* Dividends adjusted for scrip issues. † Forecast at the time of rights issues.

It is possible that a rise in advances will counter the effect of lower interest rates. Net deposits of the clearing banks in the first six months of this year were 2 per cent up on the first six months of 1961; the authorities, having released one third of special deposits, appear to be contemplating further releases; and the banks' liquidity at mid-June was high for the time of the year. There is certainly room for an increase in advances but lately it appears to have been a lack of demand rather than credit restraint which has held them down. It is also possible that with more steam in the gilt-edged market the Government residual borrowing needs may be reduced; this could mean a squeeze on bank liquidity.

As it is, the banks face a continuing rise in costs. Salaries have risen by about 5 per cent so far this year; the premises departments, with plans for new branches and extensions of existing branches, are probably the busiest departments in the banks at the moment; and the expense of the electronics programmes is now making itself felt. If bank earnings do increase in 1962 it is not likely to be by very much.

TELEVISION SALES

Weather Report

THE wind generally changes about this time of year in the television trade, with manufacturers preparing for the Radio Show and for the orders from dealers who in their turn anticipate an answering flicker from the public as the days draw in. This year the extreme stickiness of the spring (manufacturers' deliveries in April were 26 per cent lower than April, 1961, and in the first quarter 14 per cent less than last year) was loosened by the lower hire purchase deposits introduced in June. Dealers' stocks began to move, and manufacturers are confident that this movement will work through to them before long. Some people, too, were probably waiting for Pilkington before buying overdue replacements, though the adaptable sets designed to meet any circumstances—including the phased switch to 625 lines accepted by the Government—have been on sale for a year and are now about the same price as ordinary 405-line sets.

This all adds up to rather better immediate prospects for the trade; but whether higher hopes are justified will not be known for perhaps six weeks. As for the less immediate outlook, manufacturers mostly await a more definite timetable for the switchover before talking in terms of prospects for 625-line-only sets. Further ahead still, the view of the promised land of colour is still obscured by a lot of technical fog.

COMPUTER MERGER

EMI + ICT = ?

THE merger between EMI's computer division and International Computers and Tabulators introduces some rationalisation into what ICT has always regarded as a highly irrational industry where too many companies were marketing too many different designs of computer. Now EMI apparently agrees. The latter has been through a cycle only too common in this industry, where its computers swept the market for a short time and were later eclipsed by later designs of other manufacturers. It is bowing out of one section—but only one—of the computer market, namely that for business computers bought and sold virtually off the shelf. This is the field that ICT understands so well, having been formed out of the merger of two of the biggest office machine companies. The EMI designs for which it now assumed responsibility fit nearly into the ICT range and save the company the expense and trouble of designing similar models for itself.

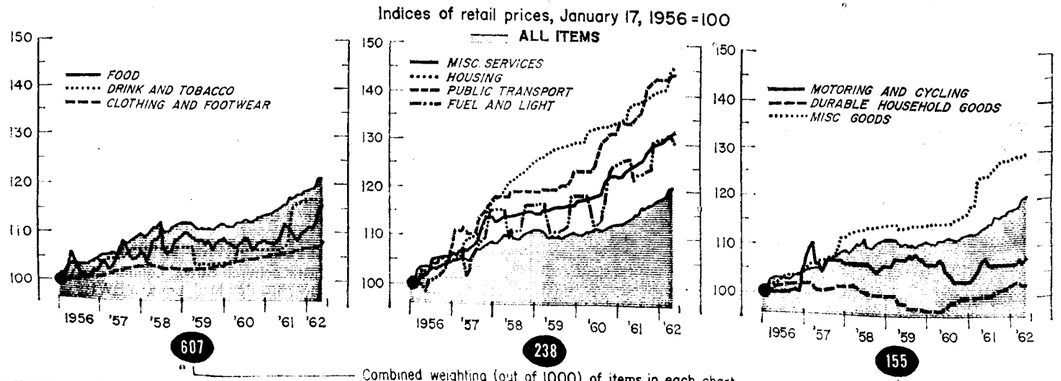
For the future, it looks as if EMI intends to concentrate on the market for factory automation and for special one-off equipment, where the computer forms only one small part of the unit. This is an easier market for an electronics company working on its own than the market for business computers, which presupposes the kind of sales and service organisation to which buyers of office machines have become accustomed and which no electronics company can be expected to possess. It is also better suited to EMI's special skills. In some ways it is surprising that ICT was not tempted to go into the automation business in partnership with EMI.

Which Prices Have Changed Most?

In recent years, services have become, relatively, quite a lot more expensive. Between January, 1956, and January, 1962, the total index of retail prices went up 17½ per cent, but within this index the rise in services, including housing, was as much as 36 per cent, while that in food was only 11 per cent and in other goods 12½ per cent. With a weighting of less than a quarter in the total index, services contributed getting on for one-half of the total increase.

An article in the current issue of *Economic Trends* shows that prices were constantly changing over the six years under review and that the movement of the total index from one year to the next was the result of many changes, some up and some down. Taking 12-monthly periods from mid-January to mid-January, the total index rose most sharply (by nearly 4½ per cent) in 1956, when, of the 91 sections of which it is composed, 77 went up, 4 remained unchanged and 10 went down. In 1959, when the total index fell by nearly 0.5 per cent, 50 of the sections showed increases, 9 no change and 32 decreases.

Food as a whole went up less in price than most things over the six years. The index for the group consisting of bacon, cooked ham, butter, cheese and chilled and frozen beef—items which are considerably affected by changes in import prices—was lower in January this year than it had been six years before. But "seasonal foods," notably potatoes, milk and eggs, were dearer by one-fifth and other foods by one-tenth.



COASTAL SHIPPING

A Small Breakwater

THE government has accepted the case for granting coastal shipping rather more protection against possibly "unfair" competition from British Railways. Amendments to the Transport Bill that were introduced in the House of Lords last Tuesday meet the fear of the shipowners that the railways might take advantage of their new freedom to charge excessive rates for transporting goods to or from the ports, if they could hope to carry them for the whole journey themselves and the shipowners could not carry the consignment unless the railways brought it to them. If the Minister of Transport receives a complaint of such action by the railways, he can appoint a "suitable person" to investigate it and consider his report before giving a direction to the railways. But he has some discretion over appointing an investigator. And if the railways refuse to quote for any such consignment, the Minister can direct them to quote a charge.

These provisions add considerably to the strength of the existing provisions in the Bill, and they were accepted by the champions of coastal shipping in the Lords. The Minister previously had no obligation to act if he received a complaint that charges for shipments to ports were excessive—or those for shipments in direct competition with coastal shipping were too low—but he now does. The new provisions, however, do not change the grounds on which the Minister may take action: that the charges are either excessive or inadequate in relation to the full cost of providing the services—and, in the latter case, that a grant will be made to the railways in that year to meet a deficit. So the protection would cease if the railways, across their whole traffic, should ever succeed in living commercially.

BMC-ROLLS-ROYCE

Something is Happening

LORD KINDERSLEY'S remarks about the progress of the talks between his company and the British Motor Corporation did little to lighten the delphic obscurity that has marked previous statements on this subject. All they tell us is that the two companies agree that technical collaboration in motor car engineering, which they have been discussing for several months, would be advantageous to both companies; and that talks are now going on to see how such co-operation could be put into effect.

Just what might be covered by "technical collaboration" is still left to the imagination; and though Lord Kindersley insists that these talks do not affect the continued production and marketing of the present range of Rolls-Royce and Bentley cars, one can hardly believe that all this discussion is going to produce so small a mouse as just the interchange of engineering information between the two companies: that could be done without announcing anything. Even if cars are now a small part of the Rolls-Royce business, the group is hardly so prosperous nowadays that it can afford to carry an unprofitable division—as this one is likely to be since sales were hit hard by the restriction on tax allowances for cars. Some sort of co-operation on production therefore seems the most likely outcome—which would give BMC the benefit of the Rolls-Royce name and allow Rolls-Royce to shift some of the cost of the magic of a name.

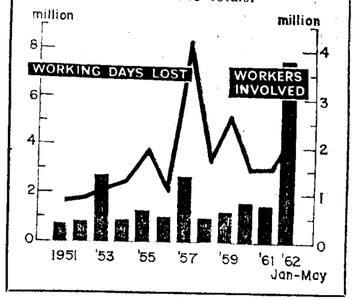
SULPHUR

Canadians Unwelcome

A CONSORTIUM, Cansulex, has been formed by oil and gas producing companies in Canada to export the sulphur that they extract from "sour" natural gas. Initially, the group will market half a million tons a year, but this is expected to treble by 1970. This sulphur is produced in the West of Canada and the main export markets are expected to be the west and north central states of the United States, where nearly 200,000 tons were shipped last year; Australia, Brazil and the Far East.

STRIKES

Days lost through industrial disputes averaged 3½ million a year over the last decade and the number of workers involved averaged 700,000. These figures have been well exceeded already this year, because of the token one-day strikes in engineering and shipbuilding on February 5th and March 5th; although the same workers were involved on both occasions, they are counted twice in the totals.



The arrival of Canada as a major supplier will arouse little enthusiasm among other producers, struggling to keep their shares of a world market that is already oversupplied. Yet between 1950 and 1952 the world felt itself threatened by a shortage of sulphur so acute that it became a matter of national importance to find and exploit other, and sometimes uneconomic, sources. At the time, the USA was virtually the only exporter of elemental sulphur; world consumption was rising and it seemed that the US reserves, then thought to be limited, might soon be exhausted. The American government warned other importing countries that exports might have to be cut to keep these reserves for the United States.

Between 60 and 70 per cent of all sulphur is used to make sulphuric acid, and the main effort of the importers was concentrated on other routes to it. The two main methods, already well-known, used sulphur-containing ores, anhydrite and pyrites, which were roasted to give sulphur dioxide, a starting point for sulphuric acid. Large deposits of anhydrite are found in Britain: plants based on this raw material were built and existing plants were extended. On the Continent, pyrites is more easily obtained than in Britain and the new plants were based on this material. Research was also carried out on bacteria which "feed" on hydrogen sulphide and excrete sulphur, but this was abandoned as too expensive.

Gradually the shortage was turned into a surplus. American production was increased by, among other things, drilling under the sea; methods were found for exploiting deposits in Mexico which had been thought unworkable; and sour gas became an important source. The composition of natural gas varies from place to place; where it contains a high proportion of acid gases (hydrogen sulphide and carbon

dioxide) it is called "sour." These acid gases have to be removed before the gas can be used as a fuel or chemical feedstock and the sulphur can be extracted from them, turning an expensive purification process into a profit. The largest source of this sulphur at present is the natural gas field at Lacq, in France, where 1.4 million tons a year of sulphur is produced. From being an importer of sulphur, France has become an exporter; last year it exported nearly 600,000 tons. Production from sour gas in Canada has started more recently but is potentially greater: it should reach two million tons a year by 1970.

As a result of this surplus, the US and Mexican mines are working at only about 60 per cent of their capacity and the natural gas producers, who cannot cut back sulphur production without affecting other processes, may soon be accumulating large stocks. Since the days of shortage the price of sulphur has fallen drastically, by a third—but it has been showing signs of levelling off.

OFFICE MACHINERY

Hard Patches

Some dog-fighting among typewriter manufacturers, some doubts about decimalisation and more customers looking before they leap into buying the more expensive or up-to-date gadgets for their offices: these are at present the harsher aspects of life for the makers of office equipment that ranges from typewriter ribbons to business computers. Most of them feel that this is no more than a wholesome dose of reality after the seven fat years since 1955. Business began to draw in over a year ago, but the first quarter of 1961 was the crest of the boom, and it is against that period that the first three months of the year showed a decrease in the value of manufacturers' deliveries of 15 per cent. Things had already improved by April, helped by a recovery in exports which by the end of May totalled nearly £13 million, fractionally higher than in the first five months of 1961. Only electric typewriters and the expensive and decimal-troubled category of accounting and calculating machinery failed to do better than in April last year. Duplicators and dictating machines—sometimes bought in order to effect greater savings—never seem to have felt the pinch at all. Gestetner's profits, for example, increased from £3.3 million to £3.9 million in the seven months to March 30th compared with the same period a year earlier.

Typewriters were the worst hit in the early part of this year, when manufacturers' output fell by as much as 26 per cent, and the market is still tight. Importers of German machines remain in difficulties, and so do those of the British-based manufacturers who have not tried, or have tried unsuccessfully, to imitate the aggressive, or foolhardy, methods of others. Boldness may pay off in buying a permanently bigger share of the market: Olivetti, known in the trade as tough sellers, take a notably more optimistic view of the future than most. Though portable typewriters seem still to enjoy steady consumer demand, many makers of the big office machines are faced with a choice of stockpiling or price-cutting. Competition on big contracts is very stiff. In April 46 per cent more non-electric standard typewriters were delivered than in April, 1961; but the value of these deliveries was up by only 23 per cent.

LEAD-ZINC IN GALWAY

A Crock of Mud

A quiet and patronising chuckle ran around the City last December when Northgate Exploration, a Canadian prospecting company, announced that it had unearthed lead-zinc ore on Eamon Reilly's farm at Tynagh, County Galway. The sceptics' worst suspicions seemed to be confirmed when in January dealings in Northgate shares were suspended in London and Dublin and when a bogus telegram purporting to come from the Toronto Stock Exchange added to the confusion.

In fact the Tynagh project is gradually winning respectability. The Irish Geological Survey originally suggested to Northgate that the area had mineral potential. It has also succeeded in interesting 34 other companies in concessions in Clare and Galway; among them is Anglo-Austral, a subsidiary of Consolidated Zinc. Since December, geophysical instruments and drilling rigs have been charting the ore bodies on the Tynagh property, the 70-odd drill holes giving it the appearance of a cribbage board. There are two ore bodies. The secondary, or geologically younger, deposit is a rich black mud containing commercially significant quantities of lead, zinc and silver, and a hint of copper. Its limits are not yet defined but in parts it is 150 feet thick and in all could amount to 5 million tons. Moreover, as it is only covered by a thin crust of glacial soil, it could be mined by simple opencast methods. Much lower down, the drills struck a harder primary ore, rich in lead; this would involve shaft mining but the surrounding limestone presents no problems for this. Much of the primary ore remains to be charted, so that any serious start to mine the black mud and establish a concentration plant on the site will have to wait at least three months until the task of exploring the primary ore body is completed.

Once a decision to mine the secondary ore is taken, Northgate reckons that it will need 15 months and $5 million to produce the first concentrates. The directors are confident that funds will be forthcoming from Canada and do not expect to come to the London market. But there is still some geological work to be completed, and the policy of the Irish government has yet to be clearly defined. The secondary ore might well be mined, like tin ore in Malaya, by a hydraulic method and concentrated by a flotation process; but this needs big supplies of water and electricity. The nearest metalled road is over a mile away and if the concentrates are to be taken out via Limerick or Galway, some roads would have to be built as well. Tynagh forms part of a development area established by the Irish government and thus Northgate would be able to apply for cash grants for the full cost of factory buildings and half the cost of machinery and roads. At the moment the development policy is under review and might be abandoned in favour of developing specific centres, such as Limerick. In the past the Irish government has burned its fingers over the Caneran copper venture and it remains to be seen how far the smiling goodwill of Dublin officials will be translated into hard cash. Of more immediate interest to Northgate is the fact that for the first four years of production profits would be free of tax and for the next four years would pay at only half the normal tax rate.

Finally there is the important question of smelting the concentrates. Smelters in France and Britain have expressed interest in the ore, but their action could be simply defensive at this stage. The obvious smelter in Britain would be Imperial Smelting Corporation, the Consolidated Zinc subsidiary at Avonmouth. The first hurdle has been cleared: Tynagh is geologically respectable. The next and perhaps more formidable one is to determine how far the project will be commercially viable. This depends not only on the grade and workability of the deposits, about which so far every indication is good, but also on the prices which the smelters would charge. With Northgate stocks quoted at just under $8 in Toronto there are clearly some people who are prepared to gamble that Tynagh will be earning worthwhile profits before too many years have passed. But there are others with memories of the "penny uranium stocks."

The world of Anglia television

Once Cambridge was a cloistered place, its culture for the few. But today dons pass on their knowledge not to the undergraduates alone but to all East Anglians. East Anglians looking in at Anglia television.

Regular features by and about some of the keenest minds in Cambridge are just one of the regional services Anglia television brings to its viewers. Every weekday, news and magazine programmes of all kinds entertain this prosperous, homogeneous area... and Anglia's 'Survival' nature series and drama programmes are seen throughout the country.

Anglia

INDUSTRIALISED BUILDING

Flats from Factories

HEADED by the LCC, local authorities are at last turning with more than incidental interest to the well-tried solution of other countries whose need for housing is greater than the labour available. This is so-called industrialisation: moving the main construction of a building from the site to the factory floor. The Ministry of Housing itself has in conjunction with CLASP designed the components for some partly prefabricated flats at Stevenage; opening them last week, Dr Hill gave his personal blessing to the principle.

Of the eight or nine systems available, the LCC's attention is at present concentrated, for the purposes of a £3 million scheme at Woolwich, on that of the Danish firm Larsen Neilsen, whose eighteenth foreign licensee is the specially formed company Taylor-Woodrow-Anglian. Through their Myton subsidiary, Taylor-Woodrow have joined with a big concrete firm, Anglian Ltd., at whose works near Norwich the component factory will be built.

It has been estimated that about 55 per cent of the cost of building is generally from materials and the rest attributable to labour, plant, etc. In this country and in similar conditions abroad it is the shortage and expense of skilled labour that makes large panel construction systems attractive, for they save up to a quarter of the total labour content. This has to be set against the capital outlay which the Building Research Station reckons to be three times that required by conventional builders. Besides the expense of large moulds and other special equipment transport costs are predictably heavy. An English firm, Reema, the most advanced so far in the field in this country, puts up between one and two thousand dwellings a year mainly composed of two-ton prefabricated units (compared with the Larsen Neilsen average of 3 tons); they reckon roughly that it costs £1 a mile to transport a house. Speed is the forte of this sort of building; an instance quoted from the Continent is of a block of 40 flats being completed in 1½ months.

Taylor-Woodrow are not saying more at the moment than that their system will cost no more than conventional methods; the reason for their caution is largely the same which has prevented the wide introduction of industrialised building so far in Britain—uncertainty of having enough orders over a sufficient length of time to gain full advantage from mass production methods. The tendency of local authorities to order on a yearly basis contrasts with the long-term building development favoured, in particular, in France, where factories turn out about 40,000 dwellings a year. This has encouraged French firms such as Camus, Coignet and Balency to evolve elaborate production systems suitable for long runs but needing even greater capital outlay than most Scandinavian systems.

A characteristic of the Larsen Neilsen method, though not exclusive to it, is a very high degree of finishing in the factory, even down to the installation of wiring and plumbing. Bathrooms and lavatories can be installed as complete units and walls, once bolted into place on the load-bearing frame, are ready for paint.

SHORTER NOTES

The export credit consortium of banks, insurance companies, and pension funds organised by Lazard Brothers has now signed the agreement, detailed in *The Economist* of March 17th, lending £14 million to Peru at 6½ per cent over 15 years. This is the first project to be financed under the Export Credits Guarantee Deparment's new long-term financial guarantee scheme introduced in April 1961.

★

The National Group of Unit Trusts has introduced a new scheme for linking life assurance with unit trust investment. Investors willing to invest a minimum of £5 a month, for say ten years, will be given life cover for the balance of the total to be invested in the period. Should the investor die within the ten years his estate receives the units accumulated to date plus the sum that he would have saved over the balance of the ten years. The life assurance cover costs 9d. of every £1 invested.

★

The World Bank has made a loan equivalent to $30 million for the continuation of a national power expansion programme in Jugoslavia. It is for 25 years at 5¼ per cent. The bank's affiliate institution the International Development Association, has approved a development credit equivalent to $18 million to India for improvements at the Port of Bombay. The credit is for 50 years interest free—IDA's usual terms. India also received a stand-by facility of $100 million for twelve months from the International Monetary Fund last week, and has taken steps to reduce imports, to increase taxation, and to tighten credit.

★

Grants of St James's, a subsidiary of Ind Coope Tetley Ansell, has sold one-third of the capital of its wholly owned subsidiary, J. R. Phillips, for £83,000 in cash to George G. Sandeman Sons and Company, and a further third to the Canadian House of Seagram world's biggest distillers. A new associated company will be formed to promote export sales of Phillips' "Bristol Milk" sherry and the home company will become the sole distributor of "Courvoisier" brandy in England and Wales.

★

Montague Burton is to make a £6 million debenture issue and as a preliminary step holders of the existing 3½ per cent stock are having the interest rate raised to 4 per cent. The directors say that in view of the increase in property values cover for the fixed charge has become abnormally high. Properties specifically charged as security for the stock were revalued at £16.9 million last September. In addition the group owns other shop properties worth more than £21 million.

★

At this week's annual meeting of Butlin's the chairman, Mr Billy Butlin, forecast that a rights issue at about half the market price would be made later this year or early in 1963. In the current year so far bookings at Butlin's camps were 20 per cent higher than at the same period in 1961; the new Minehead camp opened in May has accommodation for 3,500 campers.

★

Hambros Bank and J. Henry Schroder Wagg have joined a number of European financial institutions as shareholders in Intershop Holding of Zurich. The object is to provide finance for property development.

RENOLD CHAINS LIMITED

Extracts from the Statement by Sir Charles Renold, LLD, JP

I feel that we can be reasonably satisfied with the results of the year. To have come within measurable distance of maintaining our profits during a year, the second half of which was so severely affected in the home market by restrictive Government measures, was a considerable achievement. Had it been possible to repeat in the second half of the year the sales and profits of the first half, our hopes would have been fulfilled; but, unfortunately, the fear which I expressed last year—that rising costs, unaccompanied by extra productivity, would necessitate remedial Government action—was only too well founded and the Government measures of July 1961, which began to be felt by us in September, had the intended effect of restricting demand in the home market. At the risk of anticipating my comments on the prospects at the end of this statement, I may say that this trend has not yet been reversed.

Although Government action has spoilt our highest hopes, it must be remembered that Government policy has undoubtedly contributed to the limitation of increases in costs which have been such a serious problem over the years. Thus, if the result of these measures has been to restrict the spiral of inflation and to improve this country's competitive position in the export market then this levelling out in our rate of progress will doubtless prove to have been well worthwhile.

I would like again to refer to the efforts which we have made and will continue to make in the export field. We believe that these efforts are the most important contribution we can make to the future of our country and of our company alike. Last year, we made up to some extent for the shortfall in our anticipated sales in the home market by sustained efforts abroad and we ended the year in a strong position on this side of our business. I am sure that, here again, we shall achieve further success during the current year.

In accordance with the indications I gave you last year, we have made plans for selective expansion in preparation for the time when the country's economy will again be allowed to move ahead. At Manchester, our plan is proceeding according to schedule and should be virtually completed by the end of the present financial year. The plan at Cardiff has been completed and is now making its contribution to Chain Wheel and Sprag Clutch production. Arrangements are being made for further expansion in France. Plans are under consideration for various projects throughout the world, although it is not expected that immediate decisions need be made.

Our exports to the Common Market countries against existing tariffs have increased over the high figures of last year and so, if we do go in, we shall do so with a considerable measure of optimism. Nevertheless, although we realise that the Common Market involves in its turn the threat of increased competition at home we view the balance of advantage and disadvantage with sober confidence. If we do not go into the Common Market, our current performance, in the face of existing protective tariffs, gives us reason to suppose that we could still continue to operate satisfactorily in the countries which comprise the Common Market.

The Group Profit for the Year after Taxation was £961,785, of

FINANCIAL SUMMARY

	1961/2 £	1960/1 £
Group Profit on Trading	2,096,302	2,152,780
Profit after Taxation and Minority Interests	954,942	1,019,418
Profit retained	444,768	509,244
Dividends net	510,174	510,174
	954,942	1,019,418
Issued Share Capital	8,561,568	8,561,568
Reserves (including Equalisation of Taxation)	7,397,922	6,714,240
	£15,959,490	£15,275,808

which £6,843 relates to Minority Interests in Subsidiaries; thus £954,942 is attributable to shareholders of Renold Chains Limited. From these profits the Directors now recommend a Final Ordinary Dividend of 7 per cent on the issued Ordinary stock, making a total for the year of 10 per cent, which is the same as last year.

The operating profit of Renold Chains Limited (which is, of course, before the inclusion of dividends from Subsidiaries) amounts to £1,639,740, compared with £1,684,677 last year, a decrease of some 2½ per cent. The Profit after Taxation amounts to £762,636, compared with £787,915 last year.

The value of sales for the year as a whole was again slightly higher than in the previous year both in the home and export markets, although there was a substantial falling-off in sales to the home market in the second half of the year. At the end of the year, the order position was, in total, maintained, although there was a reduction in orders outstanding for the home market, balanced by an increase in orders outstanding for the export market.

This achievement in the export field in times of considerable difficulty and competition has been made possible mainly by the continual strengthening in our overseas sales organisation.

The Subsidiaries achieved an operating profit amounting to £456,562, compared with £468,103 last year, and this profit of the Subsidiaries, together with the operating profit of Renold Chains Limited, makes up the Group Profit on Trading.

Changes in the executive of the Company have recently taken place, notice of which has been given in the Press.

On the 1st May 1962, Mr O. Bertoya and Mr W. S. C. Tully, CBE, on reaching normal retirement age, retired from their respective executive offices of Managing Director and Deputy Managing Director. Mr Bertoya, whose service with the Company began 39 years ago, has been successively General Manager Overseas Subsidiaries, General Sales Manager; he was appointed a Director in 1948 and, since 1953, has been Managing Director. Mr Tully joined the Company in 1946 as General Administration Manager and was appointed a Director in 1948. He has been Deputy Managing Director since 1953.

The contributions of both Mr Bertoya and Mr Tully to the development of the Company during their term of office have been major ones and the Directors wish to place on record their own appreciation of their services and feel sure that stockholders and employees alike will desire to join them in this and in wishing them every happiness in their retirement from executive duties. Both Mr Bertoya and Mr Tully will (subject to their re-election at the Annual General Meeting) remain members of the Board and so the benefit of their great experience will continue to remain readily available.

Mr L. J. Tolley has succeeded Mr O Bertoya in the post of Managing Director. He joined Renold Chains Limited in 1953 as General Works Manager, was appointed a Director in 1955 and an additional Deputy Managing Director in 1961. Mr Tolley is 48 years of age.

Mr J. P. Halpin, who joined the Company in 1956 and was appointed a Director in 1957, has been appointed Deputy Managing Director in addition to his existing post of Finance and Overseas Subsidiaries Director. Mr Halpin is 52 years of age.

PROSPECTS

It is difficult to make a confident prediction about our prospects for the coming year. Although it now appears that the Government intends to relax some of the controls over economic expansion and has already taken certain steps towards this end, it still remains uncertain when results will show themselves. Since the Company's prospects in the home market are inevitably closely linked with the country's economy, these measures should be of some assistance in increasing our sales at home. However, it may not be until the second half of the year that the Company will derive any benefit. In any case we are determined to do whatever lies within our power to maintain our impetus irrespective of economic vicissitudes.

In the export market our prospects are bright. We continue to improve our position and we expect to see more of our plans materialise during the year. Trading with and manufacture in Commonwealth countries, however, are currently going through a difficult period, and, although our efforts to offset these difficulties by expansion elsewhere are meeting with success, spectacular improvement in overall export trading is hard to envisage so long as these countries remain in difficulties.

In general, therefore, we look forward to continuing expansion in the export field, but, at home, I feel that the first half of the year is going to be a difficult trading period and, whilst there may be some progress in the home market in the second half of the year, the likely effect of this on our current year's trading is impossible to predict. It is, perhaps, better to view our prospects over the next two years and, on this basis, we have every reason to feel confident in the future, particularly if a satisfactory solution can be found to the economic problems which face many of the Commonwealth countries.

WEBB'S CRYSTAL GLASS COMPANY

The forty-second annual general meeting of Webb's Crystal Glass Company Limited was held on July 11th in London, **Mr R. E. N. d'Abo** (the chairman) presiding. The following is an extract from his circulated statement:

The Group Profit for 1961 amounts to £90,186, compared with £116,937 for the year 1960, and the Net Profit after crediting an overprovision for Taxation of £8,000 amounts to £56,723 as against £62,822.

An Interim Dividend of 5 per cent was paid in January of this year and a final Dividend of 7½ per cent is recommended.

Our results are reasonably good considering that the bulk of our industrial glass is sold as components to the consumer durable market, which suffered from credit restrictions; our profits were also affected by the large increase in costs due mainly to wage awards and the fuel oil tax imposed in the 1961 Budget.

Walthamstow Works: The rebuilding programme continued to cause considerable inconvenience and this fact coupled with a slightly lower turnover increased the pressure on profit margins. The major part of the work has now been finished, the benefits of which are already being reflected in improved production and warehouse facilities.

Stourbridge and Edinburgh Works: An increase of over 8 per cent in the sales of tableware was obtained, being well above the average for the crystal glass industry. A substantial increase was also made in sales of glassware for electronic components.

Prospects: During the first five months of this year sales and orders for Stourbridge and Edinburgh have shown a satisfactory increase. At Walthamstow, the continuance of credit restrictions affected business adversely, but the recent relaxation in credit is now improving the position. It is hoped that the profits for the whole year will not be less than in 1961.

The report was adopted.

WILMOT BREEDEN (Holdings) LIMITED

The following information is condensed from the Annual Report for 1961 *considered at the Thirteenth Annual General Meeting held in Birmingham on* 11*th July*, 1962.

	1961	1960
	£	£
Net Income from all sources	840,421	1,367,083
Taxation	413,034	760,030
	427,387	607,053
Add Taxation over-provided in previous years	265,295	—
	692,682	607,053
Group Net Assets	13,244,312	10,436,715
Ordinary Share Capital	4,200,000	4,200,000
Ordinary Dividend: Total (after tax)	289,406	289,406
Rate	11⅛%	11⅛%
Times covered...	1·4	2·3

The Group has 12,000 *shareholders and* 9,500 *employees.*

Motor Car Division
Sales fell as a result of reduced car production and a higher proportion in the total number of vehicles built of the smaller cars. Following the closure of the Bridgwater factory, all production for the car industry was concentrated in Birmingham, where increases in output will be achieved more by improved methods than additional investment in fixed assets.

Europe
Sales in Europe are rising satisfactorily, but later than expected because of delays in the introduction of new car models. Demands on capacity have further increased unexpectedly following requirements from Germany and Italy. Greater participation on Italian cars has substantially increased sales of components developed in England and produced by our associated company in Italy.

Flight and Special Products
Sales of 'Truflo' stainless steel pipe bends and fittings increased, offsetting decreases for aircraft components, and further expansion is expected.

Hydraulics
Sales of industrial hydraulics for automation and servo control systems increased, the potential, for which is high. An improvement in trading conditions in the commercial vehicle industry is expected. A Belgian company was formed to sell Telehoist products in the Common Market.

Electronics
Sales and earnings of The Wayne Kerr Company Ltd. improved, and their growth as a supplier of measuring instruments is likely to be above average. The famous tape recorders and marine depth sounders of The Ferrograph Company Ltd. are in great demand.

Australia
The unfavourable economic climate and the move to a new factory presented difficulties which are now being overcome.

Principal Operating Companies *are in Great Britain, France, Italy and Australia.*

M. SAMUEL & CO. LIMITED

VISCOUNT BEARSTED'S STATEMENT

The forty-third Annual General Meeting of M. Samuel & Co. Limited was held on July 12th in London.

The following are extracts from the circulated statement of the Chairman, **The Viscount Bearsted, TD, DL**, for the year ended March 31, 1962:

In July, 1961, we made a rights issue of 500,000 Ordinary Shares at 42s. each. As a result, the issued capital of your Company has been increased by £500,000, which, with the share premium account of £544,000, makes a total addition to our resources, after expenses, of £1,044,000.

The profits for the year, after providing for taxation and after transfer to Contingencies Reserves, were £226,924, compared to those of last year of £197,111. Your Directors now recommend an Ordinary Dividend for the year ended March 31, 1962, on the increased Ordinary capital of 7½ per cent less Tax.

The main reason for raising new capital was to provide backing for the large increase in our banking business, but, in addition, your Directors felt that any new capital raised could be fully and profitably employed in the business.

Our Acceptances increased by nearly £3,000,000, and there was also a substantial rise in our Deposits. The former was accomplished not in defiance of but in spite of the credit squeeze, and the latter represents an increase from various sources, both at home and abroad. The results of this increase in our banking business have been correspondingly profitable.

During the year, we formed a wholly-owned subsidiary, M. Samuel & Co. (Jersey) Limited. This Company has been formed because it was considered that the economic growth and financial importance of the Island were such that there was scope for the services of a Merchant Bank. The extent of our operations to date has confirmed our original opinion.

NON-BANKING DEPARTMENTS

Turning now to the non-banking departments, they also had a successful year. The New Issue Department remained fully active and this Department continually meets with new problems which call for highly specialised knowledge and techniques.

The Investment Department continued to attract further clients and extend its already considerable knowledge of overseas investments. During the year, we helped to set up the Trades Union Unit Trust and were appointed Secretaries to the Management Company. The success of this Trust will not only materially benefit those Unions which have joined but will help to forge a vital link between them and the City. I feel that any movement which brings the realisation that the City is ready and eager to work with all people, regardless of politics or other prejudices, must be for the benefit of all concerned. Glendaruel Investments, our investment company, had another satisfactory year.

Last year, I mentioned the formation, in conjunction with The First National Bank of Boston and Tozer Kemsley & Millbourn Ltd., of International Factors Ltd. This project is amply fulfilling its purpose and helping to finance trade, both within this country and abroad.

A GREAT OPPORTUNITY

Much has been said of late concerning Merchant Banks and the Common Market. It has been continually suggested, and rightly so, that the incorporation of the United Kingdom in E.E.C., presents a great opportunity and challenge to the City in general, and Merchant Banks in particular.

The prospect of making London the financial centre of this great trading area is indeed stimulating and we are anxious to maintain a prominent position in this vital picture. To that end, we have for some time been studying the problems involved and we have the requisite Continental relationships of long standing to supplement and foster our own knowledge. The problems involved are still in the nature of surmise and many are naturally complex, involving different languages, legal and accounting systems, and Governmental practices. The technical knowledge to be acquired is very large and I must emphasise that financial gains therefrom are unlikely to be immediately apparent. It is a mistake to imagine that entry into the Common Market will produce forthwith exceptional profits to Merchant Bankers. Nevertheless, I do not wish to give the impression that we hold the future in the Common Market in the longer term as of little importance. Profitable opportunities will surely be there to be grasped, but they will not materialise tomorrow nor without much hard work.

THE BUDLA BETA TEA COMPANY

The sixty-seventh annual general meeting of The Budla Beta Tea Company, Limited will be held on July 30th in London.

The following is an extract from the circulated statement of the chairman, **Sir Charles Miles, OBE**:

The profit for the year ended December 31, 1961, is £89,923, which compares with £143,251 for the year 1960 and £92,476 for 1959. The drop in profits of some £53,000 as compared with 1960 is attributable to a sharp fall in sales proceeds occasioned by: 1. The considerably lower prices realised for our second flush teas, and 2. The prospect of over-production, which adversely affected markets in the latter part of 1961. Expenditure was well controlled and in fact was £10,600 lower than in the previous year.

In regard to the disposal of the 1961 profits, your Board has decided to place £30,000 to General Reserve, and we recommend a dividend of 15 per cent, less Income Tax, leaving a balance of £46,718 to be carried forward.

It is of course much too soon to forecast what is in store for 1962. Our crop to the middle of June is 744,880 lb, an increase of 158,160 lb when compared with 1961. This is mainly "second flush" tea and reports on manufacture have been satisfactory. Present indications are that World crops will again show some increase and it remains to be seen whether consumption will keep pace with the increased production.

SENA SUGAR ESTATES

UNFORESEEN FACTORS AFFECT RESULTS

The Forty-second Annual General Meeting of Sena Sugar Estates, Limited, will be held on July 18th at Winchester House, Old Broad Street, London, E.C.

The following is an extract from the statement by the chairman, **Lieutenant-Colonel C. B. R. Hornung, DL,** circulated with the report and accounts for the year ended December 31, 1961:

I reported at our meeting last year that the estimate of tonnage of cane available indicated a quantity in excess of the previous year. This proved to be the case as the mills crushed 924,817 tons compared to 874,309 tons in the previous year but it required 9.8 tons of cane to make 1 ton of sugar compared to 8.5 tons previously. The result was that we only produced 94,256 tons of sugar, brought about by the conditions over which we have no control and could not foresee. Apart from the increased cost of labour and many other items required in our operations, the growing and processing of a larger tonnage of cane resulted in increased expenditure while income was reduced by the lower output of sugar.

Group Profit on Trading comes out at £634,238 compared to £1,047,150 in the previous year.

ALLOCATION OF PROFITS

After making provision for all charges including an estimate of taxation at the rate now in force and the retention of £553 by our subsidiary, we are left with a balance of net profit of £83,921 which, together with £212,721 brought forward from the previous year and £2,000 Tax provision no longer required, gives us £298,642 available for appropriation compared to £607,049 previously. The Preference Dividend for the year absorbs £17,916. No interim dividend on the Ordinary Stock was paid earlier this year. At that date the estimate then before your Board indicated a serious reduction in the Profit which, together with increased taxation, made the payment of an interim dividend inadvisable and Stockholders were at once informed of this decision.

We now propose that a final dividend of 4 per cent free of tax be paid on the Ordinary Stock absorbing £122,850 and leaving £157,876 to be carried forward.

OUTLOOK FOR 1962 CROP

I can now turn to the future and give you news of the 1962 crop which our factories started crushing at the beginning of May. The two factors which determine the size of the crop are firstly climatic conditions and secondly supply of labour. Climatic conditions have been very favourable for the growth of the crop with the result that the estimate of tonnage of cane available is in excess of the factory capacities in the period available for crushing.

Welfare of African labour has been under close scrutiny and much has been done to make employment more attractive quite apart from increases in wages and the effect of this is already being felt. I am glad to report that there is no sign of any unrest among the African population. I myself visited the estates last August and was delighted to find the atmosphere of contentment and discipline in our labour force. However, in view of the number of agitators in many parts of Africa and whose aim it is to disrupt law and order, it is very necessary to be vigilant and to keep in the closest touch with the Authorities.

The heavy rainfall up country resulted in the Kariba Lake reaching a level which required the Federal Power Board to open the spillways in the dam and release large quantities of water during April and May this year. This caused us some anxiety as the Zambesi was already at a higher level than in previous years, but the river did not rise to a dangerous level.

THANKS TO PORTUGUESE AUTHORITIES

Once more it is my pleasure to thank the Portuguese Authorities for their assistance and sympathetic understanding of our problems and we, in our turn, have done our best to meet their wishes. The misfortunes which have overtaken Portugal with her Overseas Provinces and the grossly unjust attacks which have been made on her policy are very much to be deplored but I am pleased to note a distinct change in world opinion and recognition of the most valuable part that Portugal is playing in maintaining stable conditions in her territories. Her critics would be well advised to study the recent legislation emanating from the Minister for Overseas Territories in connection with labour relations, to realise how great a degree of protection African Labour today enjoys throughout all her Overseas Provinces.

I wish to express our thanks and gratitude to our Staff both at home and overseas for their continued devotion and loyalty in the interests of the Company.

RUMIANCA S.p.A.

TURIN, ITALY

(Fertilisers, Chemicals, etc.)

The annual general meeting and an Extraordinary general meeting of Rumianca S.p.A. took place in Turin on April 18th, under the chairmanship of **Avv Riccardo Gualino.**

The report of the board indicated that production during the financial year 1961 had been entirely normal and the amounts invoiced had increased by about 5 per cent, as compared with the previous financial year, despite a restricted but continuous reduction in the sales prices. Exports amounted to more than 20 per cent of the total amount invoiced and showed a moderate increase over 1960.

It was subsequently proposed to distribute a dividend of Lire 100 per fully paid-up share, payable on May 2nd, equivalent to 10 per cent on the current capital and to carry forward to next year the resulting profit balance of Lire 305,448,664.

It was also proposed to increase the Company's capital from Lire 10,000,000,000 to Lire 15,000,000,000 by an issue of 5,000,000, shares of Lire 1,000 each, to be offered in full to the shareholders at the rate of one new share for every two old shares held at the price of Lire 1,500 each; to amend Article 5 of the Company's memorandum of association and to authorise the issue of a debenture loan of Lire 6,000,000,000 at the rate of interest of 5½ per cent and finally, to amend Article 4 of the memorandum and articles of the association.

The report, the accounts, and the proposals put forward by the Board of Directors were adopted.

THE GOTAVERKEN GROUP

Shipbuilders and Engineers
Gothenburg, Sweden

GROUP TOOK SECOND PLACE AMONG LEADING SHIPBUILDERS WITH 14 LAUNCHINGS IN 1961

LIVELY INTEREST SHOWN IN NEW SUPER-CAPACITY DIESEL ENGINE

The fifty-sixth Annual Meeting of AB Götaverken was held in Gothenburg on May 16th, **Mr K. E. Jacobson** presiding. The following is an extract from the report circulated with the accounts.

ORDERS AND PRODUCTION

The shipbuilding industry is still suffering from the depressed state of the shipping business, and orders for new tonnage continued to decline also during 1961. Nonetheless, considering the world-wide state of the industry, the Götaverken Group had a reasonably satisfactory year. From its yards in Gothenburg and Landskrona were delivered 12 ships of altogether 224,435 dwt, while 14 ships aggregating 275,657 dwt were launched. This output put the Group in the second place in respect of launchings, in terms of gross tons, among the world's leading shipbuilders.

Orders for new ships improved somewhat during the year and nine contracts were signed, although at unsatisfactory prices and credit conditions. Total orders on the books at the end of the year amounted to 1,000,650 dwt, an improvement of about seven per cent from the previous year. Contracts for 12 engines were signed for delivery to other yards.

The newly developed diesel engine capable of delivering 2,100 rated b.h.p. per cylinder has aroused world-wide interest and 14 units are now being built by Götaverken and its licensees. During the year a contract was signed with Empresa Nacional "Bazán" El Ferrol, Spain, whereby the number of licensees reached ten, situated in seven different countries.

In 1961, deliveries of steam raising plant improved materially in volume. The largest Tomlinson unit ever built was installed in the plant of Kemi Oy, Finland, and a second unit of the same type was put into service in the Obbola sulphate mill in northern Sweden.

Ships repairs were carried out at about normal level and 183 ships were docked at the two yards. A lively interest was also shown in the hydraulically operated hatch-covers developed by Götaverken and the calculating devices "Lodicator" and "Stalodicator"; a relatively large number of ships were provided with this equipment.

Total turnover of the Group was Kr. 393.3 million, as against Kr. 462.9 million in 1960.

DELIVERIES AND LAUNCHINGS

Twelve ships with an aggregate tonnage of 224,435 dwt were delivered by the two yards during 1961, viz:

One motor tanker of 42,000 dwt
One motor tanker of 49,200 dwt
One motor tanker of 34,100 dwt
One cargo motor ship of 17,100 dwt
One cargo motor ship of 16,250 dwt
One cargo motor ship of 14,120 dwt
One cargo motor ship of 12,620 dwt
One cargo motor ship of 11,050 dwt
Two cargo motor ships of 10,070 dwt
One cargo motor ship of 9,055 dwt
One refrigerated motor ship of 7,800 dwt

Fourteen ships of altogether 275,675 dwt were launched during the year. Main diesel machinery delivered by the engine shop comprised 23 units with a combined rating of 181,450 b.h.p. Fifteen of the engines were delivered to other yards in Sweden, Norway, and Finland.

INVESTMENTS

Plant investments in the yards amounted to Kr. 74.2 million. The engine department at Götaverken was provided with a new experimental shop and the Landskrona yard with additional mechanical facilities.

A major part of the investments were put into the Arendal yard, the work on which is proceeding on schedule. The dock gates have been installed and the hull assembly shop, plate fabricating shop, machine shop, etc., are under roof. Work has started on the office building, welding shops and the 200 x 60 m fitting-out shop. The yard will be put into production in 1963.

GROUP COMPANIES

In addition to AB Götaverken the Group includes the following wholly owned subsidiary companies:

Öresundsvarvet AB
AB Göteborgs Skeppsdockor
Rederi AB Zenit
Götaverken American Corporation
Götaverken Norsk A/S
Götaverkens Fönster AB

RESULTS

Net earnings of the Group after taxes were Kr. 15.0 million (Kr. 17.4 million) which together with Kr. 4.6 million carried forward from the previous year made Kr. 19.6 million (Kr. 35.2 million) available for appropriation, as follows:

	In Kr. '000s
Statutory Reserves	7
Suppl. Statutory Reserves ...	1,738
Dividend of Kr. 7.00 per share	5,390
Carried forward	12,473
	19,608

The report and accounts were adopted.

THE LONDON COUNTY FREEHOLD AND LEASEHOLD PROPERTIES

CONTINUED, STEADY AND RELIABLE PROGRESS

The fifty-second annual general meeting of The London County Freehold and Leasehold Properties Limited will be held on July 30th in London.

The following is an extract from the circulated statement of the Chairman and Managing Director, **Mr Thomas J. Cullen:**

"The year has been one of continued, steady and reliable progress. Group total income, less rates for the year to March 31st last was £3,441,264, an increase over the previous year of £394,813. Group net revenue before tax at £1,634,606 shows an increase of £232,317 and after taxation of £899,039 (last year £738,023) net revenue was £735,567, an increase of £71,301.

Not only the total income receivable for the year but also the net revenue from both the Parent and the Rhodesian and Australian Subsidiary Companies has increased considerably. After all outgoings, including interest and tax, the improvement in net revenue for the year is sufficient to warrant an increase in the total dividend to 1s. 4d. per 10s. 0d. unit (1s. 2½d. last year).

The gross rent roll of the Group at March 31st last was over £4,050,000, as compared with £3,805,000 last year. In comparing these figures the increase represents a greater improvement than would appear, since the recent acquisitions are let at exclusive rentals and do not include any services.

We find all contracts to purchase or to build take much longer to complete in these days. Thus the increase in Property Assets at March 31st last does not reflect our actual progress. In fact, since March 31st last, we have completed the negotiations and detailed work in respect of three contracts that have been in hand for a long time. Two have now been signed and the third is almost ready for signature. These three contracts represent over £4,000,000 of investments.

The chairman then outlined the details of the contracts which concerned the erection of two buildings on freehold sites, one in Sydney, Australia, and the other in the City of London and also the erection of a building in West Central London in which the company would have a long leasehold interest.

He continued: We are always considering suitable acquisitions or investments and the above-mentioned three investments alone, when completed, will increase our Rent Roll by some £500,000 per annum. After completion 51 per cent of the Book Value of our properties will be residential and 49 per cent offices and high class factories.

Our progress is steady and very reliable. I would mention that our income for the ensuing year will be substantially increased by lettings made during the past year. We anticipate there will be larger increases in the year 1963/4 and the properties under construction will be fully revenue producing in 1964/5. We have every reason to think that we can look forward to our future with confidence.

STEEL BROTHERS AND COMPANY LIMITED

The seventy-first annual general meeting of Steel Brothers and Company Limited will be held on July 26th in London.

The following is an extract from the circulated statement of the chairman and managing director, **Mr P. G. G. Salkeld, CBE:**

The profits for the year total £626,111 as against £544,079 for 1960. Provision for taxation is £387,000, leaving a net profit for the year of £239,111.

Dividends have been paid and recommended as set out in the Report of the Directors.

As is customary I give a short review of our main activities:

UNITED KINGDOM.—Profits from trading have again improved on those of previous years.

Carbutt & Co. (1928) Ltd.—Throughput for their Mills is running at a record figure, but margins have again been too small to produce satisfactory results.

Sondes Place Research Laboratories Ltd.—The improved results which have been attained in recent years have been maintained.

Expanded Perlite Ltd.—Expectations for 1961 were fully realised and this company earned a satisfactory profit which enabled it to resume dividend payments.

The future outlook continues to be encouraging.

Steel Brothers and Higgins (Insurance) Ltd.—This company continues to make steady progress.

BURMA.—Profits earned were well up on last year and were at a satisfactory level.

Strand Hotels Ltd.—Again earned a satisfactory profit.

INDIA.—Our business in India continued on much the same profitable scale as last year.

Indo-Burma Petroleum Co. Ltd.—This subsidiary more than held its own in meeting the increased demand in India for petroleum products during the past year.

PAKISTAN.—Trading was active and on an expanding basis at both Karachi and Chittagong and I am glad to report with very satisfactory results.

CEYLON.—In spite of considerable labour unrest, mainly in the Port of Colombo, our subsidiaries, especially E. B. Creasy & Co. Ltd., had a good year.

MIDDLE EAST.—In Iraq our subsidiary, Rafidain Developments Ltd., I am pleased to be able to report had a successful year, but our other subsidiary, W. J. Coker & Co. Ltd., made only a small profit.

Our associated company, Spinney's (1948) Ltd., had a reasonably good year and is extending its operations in the Arabian Gulf and Libya.

EAST AFRICA.—We have made considerable progress in winding up Steel Brothers (Tanganyika Forests) Ltd., but have still a fair quantity of assets yet to dispose of; the main proportion of which we hope to realise within the current year.

A. Baumann & Co. Ltd., our associated company, has again had a reasonably satisfactory year.

CANADA.—The general picture does not show any material change, but overall there was some consolidation from which we can expect ultimately to benefit.

PROSPECTS.—Our operations cover many Countries in those parts of the world in which problems confront us almost daily and I consider it imprudent to make long term forecasts, but for the current year to date I can say that our results are fully comparable with those at the same time last year.

THE INVESTMENT TRUST CORPORATION

The seventy-fourth annual general meeting of The Investment Trust Corporation, Limited was held on July 5th in London, **The Right Hon Lord Latymer** (the chairman) presiding. The following is an extract from his circulated statement.

The Gross Revenue for the year amounts to £1,679,168 an increase of £82,160 or 5.1 per cent on that of the previous year. The Profits Tax provision of £102,000 is £19,000 more than the amount set aside last year.

After allowing for Management Expenses, Debenture Interest, Taxation and the dividend on the Preference Shares the amount available for the Ordinary Shareholders is £755,374 an increase of £30,674 or 4.2 per cent on the amount available last year. Earnings expressed as a percentage of the Ordinary capital are 34.4 per cent compared with 33 per cent for the preceding year.

Your Directors recommend a final dividend of 19 per cent making a total dividend of 27 per cent for the year. The dividend for the previous year was 26 per cent.

The valuation of the investments at May 1, 1962, amounts to £31,490,054 and shows an appreciation of 167.5 per cent over the book value. A year ago the valuation was £32,117,760 and the appreciation 183.3 per cent. The classification and distribution of the investments show little change, and 95.9 per cent of the portfolio is in equities.

I expect that our income in the current year will be at a level sufficient to cover the present dividend of 27 per cent with a satisfactory margin.

The report was adopted.

SHEFFIELD TWIST DRILL AND STEEL

The fifteenth Annual General Meeting of The Sheffield Twist Drill and Steel Company Limited was held on July 11th at Sheffield, **Mr Alexander Dorner,** chairman and joint managing director, presiding.

The following is an extract from his circulated statement for the year 1961:

The consolidated turnover again created a record although the net profit did not move upward in the same proportion due to an ever narrowing margin of profit. The net profit before taxation was £766,097, an increase of £67,958 over that of the previous year.

Whilst the home demand for our products showed little change over that of 1960, exports showed a satisfactory increase. It is on the latter sales that the margin of net profit is lower because of the higher selling costs abroad.

The European Common Market continues to be debated and in the meanwhile tariffs between the six member countries continue to be lowered, whilst the ECM external tariffs on your Company's products rise. The present differential is serious enough, and naturally, we wish to know where we stand as soon as possible in order that our action in the future can be decided upon.

Sales for the first five months of the current year are on the same level as those last year. Home demand shows a slight fall, but on the other hand exports have increased. There are indications that home demand will increase during the second half of this year.

The report was adopted.

EAST RAND CONSOLIDATED

The thirty-sixth annual general meeting of East Rand Consolidated, Ltd., was held on July 11th at the Chartered Insurance Institute, London, E.C.

Mr C. J. Burns, Chairman, presided, and the following is an extract from his Statement circulated with the Report and Accounts for the year ended December 31, 1961:

Total revenue for the year amounted to £124,541 as against £93,129 for 1960. After all charges there remained a net profit available for distribution of £101,162.

Income from investments increased for the fourth consecutive year, amounting to £57,943. A further increase in this source of revenue can be anticipated for the current year as the Company has yet to receive the full benefit of the monies subscribed to the share issue last August.

As regards our income from royalties, I stated last year that these derive from the mining of vanadium ore from Farm Kennedy's Vale, which we own in the Republic of South Africa, and that in the first five months of 1961 the income from this source had totalled £16,377. This was equivalent to an annual rate of approximately £40,000. In the event, the revenue for the whole year was £43,959, due to production therefrom increasing during the latter months of the year. Royalties received from this source for the first three months of the current year total £12,257.

Our third source of income, namely profit from sales of shares, is a variable item as much depends on the level of activity on the various Stock Exchanges during any one year. It will be noted, however, that our dividend distributions are more than adequately covered by the other two sources of revenue.

Having regard to the profit for the year under review the Directors have recommended a dividend of 11½ per cent for 1961 payable on the capital as increased by the share issue in August last to £900,000. This is a distribution of an additional 1½ per cent over the forecast made at the time of the issue and in spite of the fact that the new monies resulting therefrom contributed to profits for only four months of the financial period.

I am satisfied that, subject to unforeseen circumstances, the results for the current year should show an improvement on those now presented.

The report and accounts were adopted.

COMPANY AFFAIRS

Gilt-edged stocks have taken most of the limelight in the London stock market this week, although the rate of advance at the end of last week was not maintained. Equities, however, have hardly responded to the festive air in the City, and over the week The Economist *indicator fell 2½ points to 316.3. The reduction in margin requirements on Wall Street helped equities on Tuesday, and on Thursday many stocks showed useful gains on the Treasury's apparent confidence in the economic outlook but these were not always held. Gold shares enjoyed another short-lived rally and oil shares improved slightly.*

House of Fraser

As last year, it is the House of Fraser's balance sheet which forms the most interesting part of the full report and accounts, revealing how much the improvement to liquid resources owes to the sale and lease-back of many of the Harrods properties. In two years these sales have reduced the freehold and leasehold properties in Harrods' balance sheet by £9 million to £12.6 million, and Harrods has been able to lend £11.9 million to House of Fraser. The bank overdrafts of both Harrods and its partner have been replaced by substantial cash holdings. At the end of January, House of Fraser held £5,402,000 in cash and owned investments with a market value of £4,865,000. Against this were capital commitments of £1,296,000 so the group is well set for further expansion and Sir Hugh Fraser may well claim that the group's finances have "never been stronger."

In the profit and loss account the effect of this redeployment shows its less advantageous side in higher rents which were mainly responsible for the fall in trading profits in the year to January 31st from £6,431,000 to £5,860,000. But a sharp fall in interest charges and a rise in investment income came to the rescue and after a lower tax charge net profits at £2,692,000 were fractionally higher, leaving the cover on the maintained dividend of 30 per cent unchanged at 1¼ times. Sir Hugh looks forward merely to "another satisfactory year" but a more pronounced advance in net profits than occurred in 1961-62 seems possible, for despite the hard long winter Sir Hugh says that turnover was fully maintained in the opening months of the current year. Profits should also benefit from the completion of extensions to various stores, and from the new Henderson store in Liverpool which will be opened before Christmas. Stronger competition from the chain stores offering an ever-widening range of goods is, however, likely to limit the growth in any of the department stores, but at 31s. the 5s. shares offer a yield of 4¾ per cent, which is higher than that offered by most shares in this field.

John Thompson

The preliminary results of the boiler-makers, John Thompson, at the end of May came as a pleasant surprise, revealing gross profits for 1961 of £1,424,000, compared with £994,000 in 1960 and £1,332,000 in 1959, and a net profit of £552,000, compared with a net loss of £1,777,000 in 1960. The full report is also encouraging and the chairman, Sir Edward Thompson, says that the results in general confirm the forecast that he made in last year's report: "last year trading conditions were not easy but many of the subsidiaries contributed to the rather better profit position." For 1962 he forecasts cautiously that results will be "at least as good as those for 1961." Output rose last year by over £4 million to £29,219,000, and in the first quarter of this year was 20 per cent higher than in the first quarter of 1961. Exports in 1961 were also a new record with direct exports reaching £4¼ million. At the end of last year orders amounted to nearly £35 million and in the first quarter of this year new orders received were 30 per cent higher than in the corresponding period last year. In the current year the group should benefit from the reorganisation of the Australian design and boiler contracting subsidiary which made a heavy loss last year but may well break even this year. Sir Edward says that four of the group's smaller companies at home made losses but "these black spots are receiving the closest attention" and while some losses may still emerge in 1962, total losses will be substantially less than they were.

The group's improvement is reflected in the fall in bank overdrafts from £4.2 million to £3.5 million by the end of last year and in the further reduction to £2.5 million at the end of June. Sir Edward draws attention to this financial improvement but adds, significantly, that when nuclear losses restricted expansion the group postponed capital expenditure on improving the works generally and on the purchase of new plant. Capital commitments at the year end amounted to only £230,000 so that the improvement in margins has not so far tempted the group into making up this leeway; but

clearly shareholders must expect before long some expansion in capital commitments. Margins in boiler-making, as the chairman of Babcock & Wilcox recently noted, are still inadequate but on hopes of further recovery the 5s. shares of John Thompson are, at 14s. 6d., close to their high point for the year, and yield 5.2 per cent on the dividend as raised from 5 to 15 per cent, covered 1.6 times.

Smith's Potato Crisps

How safe is the ordinary dividend of Smith's Potato Crisps? In the year to March 31st last net available earnings fell from £876,000 to £566,000 and trimmed the cover on the maintained 55 per cent dividend to 1¼ times. The company's own farms supply only about 10 per cent of its potato requirements and the high prices of potatoes has hit Smith's just as they hit housewives, fish-and-chip shops and other caterers. The potato costs of the parent company alone rose by 31 per cent last year and its selling costs also went up. Smith's own sales rose by only 3 per cent but those of the whole group rose by 6 per cent, for Tudor Foods and the Australian subsidiary both achieved bigger sales but there too high potato costs offset the expansion in sales.

Sales have continued to advance in the current year but with potato prices "far beyond any previously experienced" the outlook for profits is uncertain particularly as the peak period of potato crisp sales precedes the main crop. Not surprisingly the directors considered raising retail prices but they decided against such a move in the hope of a return to more normal potato costs; no doubt more intensive competition in the potato crisp market was another factor in this decision. Confidence in the future, however, is revealed in the programme of capital expenditure: £660,000 was added to fixed assets in 1961-62 and at the end of March capital commitments amounted to £416,000. The chairman, Mr F. Le Neve Foster, expects expenditure on modernisation and development to continue at a fairly high level for several years to come. Last year's cash flow was £325,000 and with liquid assets down from £1,106,000 to £361,000 the group is likely to need fresh capital. The chairman hints that this will probably take the form of a debenture issue, rather than a rights issue, and he draws attention to the group's valuable freehold properties which are at the moment unencumbered and stand in the balance sheet far below their up-to-date values. For the ordinary shareholders a prior charge issue could provide a useful element of gearing, particularly if the directors' view that the present recession in profits represents only a temporary setback proves to be correct. The 5s. shares yield 5¼ per cent at the current price of 52s. 6d. on the assumption that a dividend of 55 per cent. can be maintained.

London County Freehold

The impressive growth of London County Freehold in recent years seems certain to continue in the future. In the year to March 31st the total income of the group after paying rates rose by 13 per cent from £3,046,000 to £3,441,000, and the dividend was raised from 12.1 to 13.3 per cent, absorbing £689,000 out of a net revenue of £736,000. The chairman, Mr T. J. Cullen, says that at the year end the rent roll was £4,050,000, compared with £3,805,000 twelve months before. This does not reveal the full extent of the improvement in income, as recent acquisitions have been let at rents exclusive of services so that in effect the costs of managing properties have fallen. Lettings made in 1961-62 will substantially increase the group's income this year and in the following two years there will be even bigger increases as many of the three-year leases signed after the Rent Act will then expire and the group's major development projects will come to fruition. Contracts for two of these development projects have already been signed and the third is on the point of signature; in all they call for over £4 million.

At the end of the financial year the group had a small net overdraft, and since it makes only small retentions of profits the group needs new money to finance these developments. For the new IBM office building in Sydney, Australia, "a considerable part of the finance" will be raised locally through mortgage debentures; developments in the City and the Tottenham Court Road area will require capital from the London market. Initially this will take the form of a £3 million debenture to be issued later in the financial year, and then a rights issue and a further debenture will follow before the end of March, 1964. In the past London County has held the greater part of its interests in residential property but by the time the three developments are completed 49 per cent of the book value of properties will be offices and factories—£9.8 million in offices and £3.5 million in factories.

Mr Cullen says that the group has written off the exchange loss on its investment in Vancouver following the depreciation of the Canadian dollar. He is not perturbed about the Rhodesian investment (which last year accounted for just over 3½ per cent of total profits) but he says that in future the group would concentrate its interests in London and selected overseas areas such as Australia. Mr Cullen rightly describes London County Freehold's progress as "steady and very reliable." The group is more of a property investment company than a property developer and the 10s. ordinary shares at 33s. 4½d. yield 4 per cent on the dividend as raised from 12.1 to 13⅓ per cent. Shareholders can expect a further increase in the dividend this year.

Nchanga

Last week the market was quite prepared for the Rhodesian copper producer, Nchanga, to announce a mild set-back in its profits for the year to March 31st. Over the whole year it had felt the pinch of the 10 per cent cut-back in copper sales, first agreed in October, 1960; and the average price of copper had slipped back from £237 to £232 per ton. Moreover, the policy of Rhodesian Anglo-American, the controlling company, was to continue to build up stocks so that no benefit accrued from a cut-back in production. Against this background the rise in operating profits from £20,078,000 to £20,695,000 came as a welcome surprise. The maintained ordinary dividend of 35 per cent is covered 1.3 times. The £1 shares were marked up 1s. 9d. to 48s., but now ex the final 30 per cent dividend stand at 43s. 9d.

Presumably Nchanga, the lowest-cost producer in the Rhodesian copperbelt, has succeeded in cutting its operating costs. But in the current year the outlook is problematic, for at the beginning of this month the major copper producers accepted a further cut of 5 per cent in production or sales. The success of this measure clearly rests on stabilising the price of copper. But even if, as producers hope, the price settles at about £234 per ton Nchanga would probably need to cut costs yet again to show any rise in profits this year. A bigger factor in the yield of 16 per cent is the political outlook.

Express Dairy

In 1960-61 the advance of 22 per cent in the profits of Express Dairy largely reflected the acquisition of the hotel and catering group of Spiers and Ponds. But in the year to March 31st last gross profits fell by 20 per cent from £2,820,000 to £2,226,000, which is below the 1959-60 level when Express Dairy had not yet acquired Spiers and Ponds. This is a disappointing performance, particularly as sales rose in every section of the business and total turnover rose from £70 million to £73 million.

The chairman, Mr Walter Nell, gives a number of reasons for the reduction in gross profit margins to 3.1 per cent. Over the last financial year the company was confronted with the biggest increased wage bill in its history and at the same time the Government's price control structure on milk, butter and other dairy products (covering in all about 70 per cent of the group's turnover) limited the extent to which the group could pass on the rise in costs to customers. For Spiers and Ponds it has been a year of re-equipment and consolidation rather than expansion. At first sight the supermarkets might be expected to be the most buoyant section of the group; thirty are now operating and fourteen more are now being developed. But Mr Nell says that this sector of the business carried "substantially unproductive expenditure in respect of premises in course of development and must continue to do so for some time to come." However, the future should bring benefits in this field. In the milk and dairy business there might be some improvement as delays in erecting plant and equipment involved it last year in "abnormally high operating costs." But the outlook for Express Dairy seems unexciting and at 9s. 7½d. xd its 5s. shares are barely above their low point for the year and yield 5¼ per cent on the maintained 10 per cent dividend.

Union Corporation

Until the 1952 Finance Act, a company resident in this country could move freely elsewhere; since then Treasury consent has been needed and the ring-fence has not been easy to surmount. Union Corporation made a formal application in 1956 to change its domicile to South Africa, where about 90 per cent of its total assets are held, but this was turned down in the following year and subsequent support to the application from the South African government failed to move the Treasury. Now the negotiations have succeeded and the Treasury has given its consent. South Africa's changed political status may have affected the decision but it is also the fact that the loss to the Inland Revenue will be much less now than it would have been in 1956.

On the basis of the last accounts, however, the move should still give a useful boost to profits, with a tax saving of about £210,000; this compares with net available earnings of £2,692,000 and the dividend of £1,250,000. Apart from the hopes of a higher dividend from the tax saving, the effect for British shareholders will be to raise the effective net rates and it will thus benefit those paying the standard rate or more; the current net UK rate is only 1s. 4d. South African shareholders holding about one-third of the capital will be spared the necessity of claiming double tax relief and will be paid in local currency and taxed at local rates.

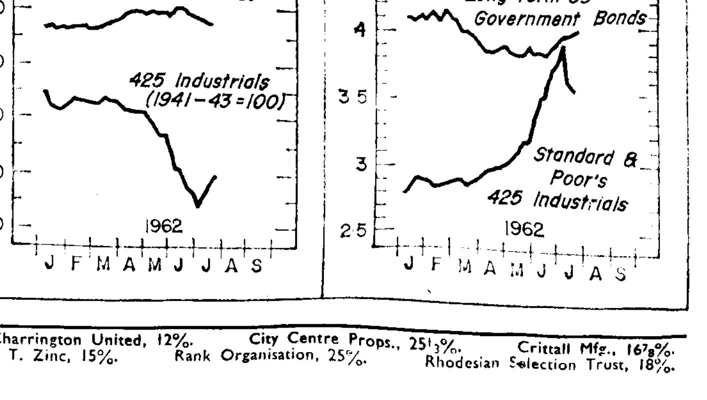
* Ex dividend. † Tax free. ‡ Assumed average life 7¼ years. § The net redemption yields allow for tax at 7s. 9d. in £. ‖ Ex capitalisation. ¶ Ex rights. ‡‡ Ex all. (a) Interim dividend. (b) Final dividend. (c) Year's dividend. (d) Capital distribution of 1s. 0d. per share. (f) Flat yield. (g) Equivalent to 7·2 sterling. (h) After Rhodesian tax. (l) To latest date. Japanese prices supplied by Daiwa Securities, Tokyo.



Industrial Profits and Assets

The tables below continue the analysis of company balance sheets and profit and loss accounts which was introduced in *The Economist* of January 22, 1949; the figures are discussed on an earlier page in this issue.

Comparative analysis of 794 profit and loss accounts published April - June, 1962 (£'000)

THE MONEY MARKET

THE market reversed the movement of the previous fortnight which took the bill rate back up to $3\frac{15}{16}$, by raising its agreed bid by 2d. to £99 0s. 6d. at last Friday's Treasury bill tender. The average rate of discount fell by only 4.40d. to £3 8s. 0.63d. per cent however, and although total applications rose sharply, by £40 million to £405 million, the market syndicate still managed to increase its allotment to 49 per cent compared with 45 per cent in the previous week.

Credit has been short throughout this week and the authorities have helped the market balance its books by the special purchase of bill on each day. On three occasions this help was very large and on Monday a small amount of assistance proved insufficient for the market's needs and one or two houses were forced to call on the Bank of England to borrow a very small amount at Bank rate. The rate for day-to-day money has never fallen below $3\frac{1}{4}$ per cent and has been up to $3\frac{7}{8}$ per cent—only fractionally below the current bill rate.

In New York this week the three month bill rate again rose and is now 2.974 per cent, the highest it has been for over two years.

APPOINTMENTS

RTB

RICHARD THOMAS & BALDWINS LIMITED
SPENCER WORKS
require

2 PLANNING OFFICERS

at the integrated iron and steel plant now being commissioned at Llanwern, near Newport, Mon. The main production departments consist of coke ovens, sinter plant, blast furnaces, L.D. steelmaking, hot mills and cold mills.

To co-ordinate these departments into an economically efficient and integrated works is a function of top management. It requires the periodic preparation of plans indicating the optimum levels of production and stocks and the regular checking of plant performance against these plans.

Electronic computer programmes will be developed to carry out the mathematical calculations involved in preparing such plans and to optimise them whenever possible.

To carry out the dual tasks of preparing the necessary co-ordinated plans and assisting with the development of analytical models of the works operations which can be programmed for the department's computer, two planning officers are required within the Planning and Computer Development department.

Applications are invited from men with mathematical, economic or other suitable qualifications. Experience in similar integrated planning posts is desirable.

Applications, which should be returned by July 23rd, can be obtained, by POSTCARD, from

The Manager, Staff and Labour Relations Department,
RICHARD THOMAS & BALDWINS LIMITED
Spencer Works,
Llanwern, Nr. Newport, Mon.

Please quote reference 222/1d.

BBC REQUIRES DEPUTY EDITOR (female), Woman's Hour, Sound Broadcasting. This is a magazine programme broadcast daily. Essential qualifications: evidence of creative talent, broad sympathies, wide interests and experience and understanding of the demands of a mass audience. Ability to write and act quickly and to develop a sound editorial judgment also necessary. Selected candidate will be expected to take a share of daily production of discussions and interviews, etc. Salary £1,725 (possibly higher if qualifications exceptional), rising by five annual increments to £2,225 max. p.a. Requests for application forms (enclosing addressed envelope and quoting reference 62.G.27/LEct.) should reach Appointments Officer, Broadcasting House, London, W.1, within five days.

THE UNIVERSITY OF LEEDS
DEPARTMENT OF ECONOMICS

Applications are invited for a research post in the Department of Economics at a salary on a scale rising from £1,000 to £1,500 a year, according to age, qualifications and experience. Applicants should have a degree in Economics or Statistics and will be required to assist in work mainly of a statistical nature. Applications (three copies) stating date of birth, qualifications and experience, together with the names of three referees, should reach The Registrar, The University, Leeds, 2 (from whom further particulars may be obtained), not later than July 23, 1962.

THE Government of Aden require an experienced sociologist with a knowledge of Arabic to undertake a social survey of Aden. The primary purpose would be to obtain basic information on movements of population, labour conditions, wages, housing, etc. The study which would take about fifteen months would involve mainly field work, and the officer appointed would be given the close co-operation of Government field staff.—Further particulars may be obtained from the Research Department, Department of Technical Co-operation, Room 566A, Sanctuary Buildings, Great Smith Street, S.W.1. Reference RE 247/1/01.

UNIVERSITY COLLEGE OF SWANSEA
LOWER SWANSEA VALLEY PROJECT
APPOINTMENT OF A RESEARCH ECONOMIST

Applications are invited for appointment as Research Economist to examine and report on the prospects of new industrial growth in an old industrial area, together with the economics of land use in the area. The appointment will be for two years within the scale £1,150 x £50—£1,250 plus F.S.S.U. and Children's Allowances. Applications (five copies), giving the names of two referees, should be sent, by July 31, 1962, to the Registrar, University College of Swansea, Singleton Park, Swansea, from whom further particulars may be obtained.

GKN COMMERCIAL INTELLIGENCE

The G.K.N. GROUP RESEARCH LABORATORY has established a unit to assist a Group advisory committee in the consideration of new products. The unit investigates both economic and technical trends over a wide range of industrial markets and products.

Applications are invited for a vacancy in this unit. The person appointed will preferably be not over 35 years of age and will have had experience in *Industrial Market Research* or *Commercial Intelligence*, and probably (but not necessarily) be a graduate in Economics or Commerce.

Applicants should have wide interests in economic and industrial affairs, ability to work without close supervision, and be capable of writing objective and literate reports on their studies.

Staff conditions are good and the Laboratory is situated on the edge of the Midlands conurbation not far from pleasant Severn countryside.

Please write, giving details of age, experience, qualifications and present salary, to the:—
Personnel Officer,
G.K.N. Group Research Laboratory,
Birmingham New Road,
Lanesfield, Wolverhampton.

KATETE CO-OPERATIVE MARKETING UNION LTD.
P.O. KATETE, EASTERN PROVINCE, NORTHERN RHODESIA,

require a MANAGER to begin work at KATETE as early as possible after October 1, 1962.

QUALIFICATIONS: Proved managerial and accounting ability. Academic and/or professional qualifications, though not essential, will be a recommendation. A Medical Certificate of fitness covering the employee and his family will be required.
DUTIES: To be responsible to the Managing Committee for the Management and development of the business of the Katete Co-operative Marketing Union Limited, which is primarily concerned with the marketing and processing of crops of African producers of the Katete area of the Fort Jameson district. The retail trading of the Union is also the responsibility of the Manager.
SALARY: £1,750 x £75 — £2,125.
ACCOMMODATION: Free house with certain items of heavy essential furniture.
NOTICE OF TERMINATION OF EMPLOYMENT: Six months from either side.
LEAVE: Two and a half working days per month for each completed month of service cumulative up to a maximum of thirty working days.
PERSONAL ACCIDENT INSURANCE: Cover up to £5,000 provided free.
MEDICAL: Free medical treatment (excluding major operations, dental and optical treatment) for applicant and family.
COST OF MOVING TO KATETE: Will be borne by Katete Co-operative Marketing Union Limited up to a maximum of £60 (sixty pounds). In the case of applicants from overseas, passages will be provided at Tourist rates for the applicant and his wife and half passages for children up to three in number.
LENGTH OF CONTRACT: 5 (five) years.
APPLICATIONS: In duplicate, with copies of three recent testimonials, must reach The Chairman, Katete Co-operative Marketing Union Limited, P.O. Box 1, Katete, Northern Rhodesia, before August 15, 1962.
Applications should include full details of previous experience and qualifications.

THE FINANCIAL CORPORATION FOR OVERSEAS COUNTRIES

3-5 rue du Conseil Général, in Geneva, which owns subsidiary banking corporations in Africa and whose main shareholders are:

Banca d'America e d'Italia
Bank of America (International)
Banque Lambert
Banque Nationale pour le Commerce et l'Industrie
Berliner Handels-Gesellschaft

invites application for overseas appointments from ambitious and enthusiastic young executives of any nationality with banking experience.

Maximum duration of each tour in Africa: 18 months with 6 weeks' leave in Europe. Basic salary guaranteed in Switzerland. Provident fund in Swiss francs.

This organisation is expanding rapidly and opportunities for promotion are plentiful for the right persons.

Write, giving full details of personal history, to above address.

BBC REQUIRES SENIOR ASSISTANT in its Asian Services in London (British Subject). Duties include: Writing news talks of five minutes or more duration for translation into any of the fourteen languages in which Asian Services broadcast to South and South-East Asia, the Far East and Persia; supervision of preparation of similar talks written by an assistant; writing and broadcasting news talks for General Overseas Service; finding and briefing experts able to supply scripts for specialised talks at very short notice; maintaining close liaison with BBC departments and with U.K. and Commonwealth Government Information Departments, foreign Press Attaches, and journalists who specialise in foreign and political affairs. Essential qualifications: considerable journalistic experience, good general knowledge of international affairs and home politics; ability to think and work quickly. Candidates who have spent some time in Asia, have made a special study of the area or part of it, and have broadcasting experience, would have an advantage. Selected candidates will be required to submit a script of a five-minute talk on one of a number of given topics and to read it at the microphone as part of a voice test. Salary £1,725 (possibly higher if qualifications exceptional) rising by five annual increments to £2,225 max. p.a.—Requests for application forms enclosing addressed envelope and quoting reference 62.G.269 Ect.) should reach Appointments Officer, Broadcasting House, London, W.1, within five days.

STATISTICAL ASSISTANT

required

in the System Operation Branch of the Operations Department at Bankside House, London, S.E.1.

The work consists of the analysis of weather conditions and demand for electricity with the object of establishing a relationship and applying this to the short-term prediction of demand. The successful candidate will be required to supervise and check the work of the sub-section. Opportunity also exists for original thinking and development of new methods.

Candidates must have obtained the G.C.E. at "A" level in mathematics and should have had some training in statistical calculation.

• **The salary within scale £935 to £1,060 per annum, inclusive of London Allowance.**

This is a superannuable appointment.

Applications, stating age, qualifications, experience, present position and salary, to the Appointments Officer, Central Electricity Generating Board, 24/30 Holborn, London, E.C.1, by July 26, 1962.

Quote Ref. ECO/369.

CAMBRIDGE UNIVERSITY—SCHOOL OF AGRICULTURE

Applications are invited for the post of Senior Research Officer, or Research Officer. Candidates should hold honours degree in Economics or in Agricultural Economics, and should have had post-graduate research experience. Duties will include research into either costs of production, marketing or the effects of European integration. Salaries: Senior Research Officer, £1,250 x £50 — £1,400 x £75 — £1,875; Research Officer, £1,050 x £50 — £1,400. A proposal to increase these rates by £100 is currently under consideration. Further details from Secretary, School of Agriculture, Cambridge, to whom written applications with the names and addresses of not more than three referees should be sent not later than August 2, 1962.

For other appointments see page 196

AUSTRALIAN NATIONAL UNIVERSITY
INSTITUTE OF ADVANCED STUDIES
RESEARCH SCHOOL OF SOCIAL SCIENCES
DEPARTMENT OF SOCIOLOGY

Applications are invited for the position of *Senior Research Fellow* in the Department of Sociology. An appointment as Senior Research Fellow is normally for three years with the possibility of extension to a maximum of five years—but a shorter term may be considered. The Acting Head of the Department is Professor W. D. Borrie.

This is a new Department in the School, and a major objective is the development of research into contemporary aspects of Australian society, with particular reference to such questions as urbanisation, social and occupational stratification and mobility, and the structure and function of social institutions.

The greater part of the successful applicant's time will be available for his own research, but he will be expected to assist in the supervision of postgraduate students and in seminars.

The appointment will be within the range £A2,620–£A3,160. Reasonable appointment expenses will be paid for the successful applicant and his family.

Further details should be obtained from the Secretary, Association of Universities of the British Commonwealth (Branch Office), Marlborough House, Pall Mall, London, S.W.1.

Applications close, in Australia and London, on *August 20, 1962.*

General Manager

Financial Institution Canada

A prominent financial institution in Canada requires a General Manager who will be responsible directly to the President and the Board.

Candidates must have had first class managerial experience, preferably in Banking. The preferred age range is 35-45.

This is a challenging opportunity which requires unusual qualities of imagination and vision as well as sound practical judgment. The successful candidate will be paid a starting salary of between $20,000 and $30,000 p.a., dependent on experience and qualifications, with substantial further prospects.

Please send full details of qualifications, career and present earnings to H. G. L. Sleep of Binder, Hamlyn, Fry & Co., 121 Queen Victoria Street, E.C.4. No information will be given to the client or to anyone else without the candidate's permission.

ASSOCIATION OF UNIVERSITIES OF THE BRITISH COMMONWEALTH

DEPUTY SECRETARYSHIP

The Association of Universities of the British Commonwealth invites applications for the post of Deputy Secretary of the Association which will become vacant on January 1, 1963. Present salary £2,700 per annum, F.S.S.U., child allowances. Main duties will be concerned with the work of the Committee of Vice-Chancellors and Principals of the Universities of the United Kingdom. Administrative experience and academic background essential. An information sheet giving further particulars of the appointment and the procedure for application may be obtained from the Secretary, A.U.B.C., 36 Gordon Square, London, W.C.1, with whom applications must be lodged not later than *August 15, 1962*.

For other appointments see page 195

KENT COUNTY COUNCIL

SENIOR PLANNING STAFF

Applications are invited for the following appointments:

(a) **SENIOR DIVISIONAL PLANNING OFFICERS.** Scale C-D (£1,860-£1,975).

(b) **SENIOR PLANNING ASSISTANTS** at appropriate grades within Grades A.P.T. III-V (£960-£1,380), according to qualifications and experience.

Initially the officers appointed will be concerned in a responsible capacity with the preparation of Town Maps and the Review of the Development Plan, and subsequently with the study of central areas and urban redevelopment problems or other aspects of the work of a Planning Department serving a large and varied County.

For posts (a) Corporate Membership of the Town Planning Institute is essential. Other qualifications related to the work would be an advantage.

For posts (b) Corporate Membership of the Town Planning Institute is required but consideration will be given to applicants who have recently passed the Final Examination of the Town Planning Institute or been exempted therefrom. Corporate Membership of the Royal Institute of British Architects or the Institute of Landscape Architects will be an advantage for certain posts.

Successful applicants will be required to drive a car which will either be provided by the County Council or an appropriate allowance paid.

Applications, with names of two referees, to County Planning Officer, County Hall, Maidstone, by Tuesday, August 7, 1962.

COUNTY COUNCIL OF ESSEX

COUNTY PLANNING DEPARTMENT

Applications invited from honours graduates in Geography (or expecting to graduate this year) for post of Survey and Research Assistant (Development Plan) at County Planning Department—Headquarters.

This is a first-rate opportunity for a career in Town Planning, with assistance in obtaining professional qualifications and prospects of promotion. Survey and research for the County Development Plan is varied and interesting, including work on population, industry and employment, minerals (sand and gravel, chalk, clay and brickearth), transport, water supply and urban and rural settlement. Ample scope exists for field work, and originality in written and cartographic presentation of material will be welcomed. Duties will be carried out under the general guidance of the Survey and Research Officer.

Entry for applicants without previous planning experience would be within A.P.T. I/II (£645-£960) according to class of degree and suitability of special subjects (in particular, geology, geomorphology, physical geography, and economic geography), and to former research studies of relevance. Entry at higher grade A.P.T. III/IV (£960-£1,310) would be considered for suitable applicants with experience in this particular aspect of planning work.

Five-day week, day release and financial assistance for study purposes, superannuation, medical examination.

Applications, stating age, qualifications, experience, present and previous appointments and salaries, together with names of two referees, should reach the County Planning Adviser, Broomfield Place, Broomfield, Chelmsford, Essex, not later than July 23, 1962.

COLEG HARLECH

RESIDENTIAL COLLEGE FOR ADULT EDUCATION

Resident Tutor required to teach Industrial Relations. Applicants should be unmarried graduates preferably with industrial experience. Salary scale £900 x £50 — £1,050 less £50 for board; free accommodation; superannuation scheme.

Further particulars from Secretary, Coleg Harlech, Harlech, Merioneth. Closing date August 2, 1962.

UNIVERSITY OF DUBLIN

TRINITY COLLEGE

LECTURER OR JUNIOR LECTURER IN ACCOUNTING

Applications are invited for the post of Lecturer or Junior Lecturer in Accounting, duties to be taken up on September 21, 1962, or as soon thereafter as may be arranged. Salary in the range (Lecturer) £1,000 x £50 — £1,550 p.a. or (Junior Lecturer) £800 x £50 — £950 p.a., less 5 per cent. deduction for superannuation, and with marriage and child allowances.

Applications (four copies), giving full details of academic career and experience, and the names and addresses of three referees, should reach the Registrar, Trinity College, Dublin 2, from whom further details may be obtained, not later than July 30, 1962.

A GRADUATE ECONOMIST

under the age of 30, is required to take charge of a small section carrying out research into various aspects of the Packaging industry.

This includes consideration of the supply demand and price of raw materials, competitive activities, customers' trades consumption patterns, etc., it also involves a continuous study of national and international economic trends and their implications for the Company and its products.

The section is responsible for providing an export advice service and assisting generally in the field of export sales promotion.

The work is varied and interesting, demanding a lively intelligence and an active interest in economic, political and social affairs. Some experience is essential and it would be an advantage if this had been in the fields of packaging, consumer goods, or distribution.

Apply: Head of Staff Division, The Metal Box Company Ltd., 37 Baker Street, London, W.1, quoting reference ISX/3.

AUSTRALIAN NATIONAL UNIVERSITY

INSTITUTE OF ADVANCED STUDIES

RESEARCH FELLOW OR FELLOW IN ECONOMIC HISTORY

Applications are invited for appointment to a research position for the purposes of a comparative study of the changing structure and the long-run processes of growth of a number of developed economies including those of Australia and New Zealand. Research at present being carried out is designed to investigate major structural and institutional characteristics and the conditions and processes of growth of these economies over the past century and up to the present day. The appointee would be expected to take responsibility for some leading aspect or aspects of this study and applicants should nominate their special interests in this field.

Appointment may be at the level of Research Fellow or Fellow in the Department of Economics, Research School of Social Sciences. Applicants should possess first-class qualifications in economics, economic statistics or economic history with considerable experience of research in applied economics, statistics or economic history.

The salary range for Fellows is determined within the limits of £A2,151-£A3,000 per annum. Appointment to age 65, with the option of retirement after age 60, is normally confirmed before expiry of the initial appointment which is for five years. Fellows are entitled to one year's study leave on full pay plus a contribution towards travel and other expenses, in every seven years.

The salary range for Research Fellows is £A1,656-£A2,450; initial salary depends on qualifications and experience. Appointment is for three years with possible extension to a maximum of five years.

Superannuation is on the F.S.S.U. pattern. Reasonable travel expenses are paid and assistance with housing is provided.

Further particulars should be obtained from the Secretary, Association of Universities of the British Commonwealth (Branch Office), Marlborough House, Pall Mall, London, S.W.1.

Applications close in Australia and London on *August 20, 1962*.

THE NEWMAN DEMOGRAPHIC SURVEY

invites applications from

Graduate Sociologists and Economists

for appointment to its professional staff.

The work is in the fields of educational sociology and planning and requires some knowledge of statistical method. Salary will fully reflect qualification and experience. Applicants, who should be Catholics under 35, are invited to write for further information to **The Director, Newman Demographic Survey, 31 Portman Square, London, W.1.**

APPOINTMENTS REQUIRED

AMERICAN

Registered Representative presently with a major New York Stock Exchange firm, seeks a position with an internationally oriented financial organisation, located in London, utilising his knowledge of American securities and commodities.

Excellent references.

Available for interview in New York or London.

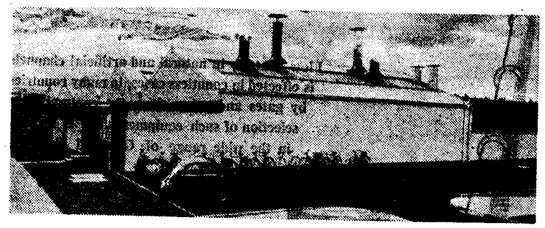
Cessna® GOES AHEAD IN GLENROTHES



Cessna Industrial Products Ltd., is one of several important American firms who have found an ideal factory location at Glenrothes, Fife, in recent years. Cessna is manufacturing a growing range of mobile hydraulic components and systems, such as pumps, valves, cylinders and associated items for agricultural and light industrial equipment. Cessna is happy with its choice of Glenrothes. It finds its workers are quick to learn, and eager to help turn out a quality product. The company was able to move in to a standard unit factory and start production without delay. Whenever expansion makes it necessary a first-class site will be available for a larger Cessna factory at Glenrothes.

GLENROTHES OFFERS YOU

- Top-grade labour.
- Houses for all grades.
- Rentals from 3/- per square foot.
- Excellent sites.
- Factories built for lease or sale.

Glenrothes is within a development district for the purposes of the Local Employment Act, 1960. Financial Assistance is therefore available for new industrial development in approved cases. Write for further information to:—

General Manager, Glenrothes Development Corporation, Glenrothes, Fife, Scotland.

Clearly, no one in his senses would use chewing gum at a time and place such as this.

However there are times and places where the use of chewing gum can be most beneficial; in fact its discreet use is a mark of tact and consideration for others as it is a definite aid to oral hygiene.

Doublemint chewing gum is especially made for such people. Its ingredients are carefully selected throughout, even its flavour has been double distilled; in fact, as its name implies, Doublemint is double good and gives you double benefits in many ways.

Try some at the right time and in the right place and see for yourself.

E397-2

ARE YOU AN INVESTOR -WITHOUT KNOWING?

You probably are... because two people out of three are INDIRECT investors on the Stock Exchange

You may never have bought a share in your life. But do you pay into a pension fund or a friendly society? Are you insured—life, fire, car, anything? Do you belong to a trade union? Have you some money in a bank, savings bank, building society?

If so, you are, like two adults out of three in Britain, an indirect investor. Organizations like these invest their funds (which means *your* money) through the Stock Exchange.

So *you* benefit. Without the dividends and profits from sound investment, these institutions would either have to charge you more—by higher contributions and premiums—or give you less in return for your money.

And Britain benefits, too. Millions of pounds from millions of people, which might otherwise not be invested, are thus put to work through the Stock Exchange—helping to finance and expand industry and commerce, to create employment and prosperity, to produce more goods both for home use and for export.

How the Stock Exchange serves us all

The Stock Exchange makes investment possible, by providing the essential free market in securities. Because of this market, industry and commerce, Government and public authorities, are able to raise hundreds of millions of pounds every year on the best terms, by the issue of shares and loans; while investors (private people or institutions) can put their money to work, buying or selling securities at fair, competitive prices. The skill and experience of Members of the Stock Exchange is at the service of all investors.

Publicly financed companies, whose shares are dealt in on the Stock Exchange, not only do most of our trade and employ millions of people; they make many of the goods we use every day, from toothbrushes to cars and TV sets. Large-scale, low-cost production has brought these things within the reach of more people than ever before. Thus investment leads to *shared* prosperity, a higher standard of living.

Such companies, again, carry on most of our export trade, enabling us to pay for the food and raw materials we must import to live.

The Stock Exchange, too, attracts much overseas business to London. As a great *world* market, it plays an important part in maintaining Britain's financial position.

THE STOCK EXCHANGE LONDON

"My word is my bond"

LIKE TO KNOW MORE? For more information, or a list of stockbrokers, please write to The Secretary, Room C13, The Stock Exchange, London, E.C.2. Or you can watch the Exchange at work from the Visitors' Gallery and see a film about it. Open from 10.30 to 3.0, Monday to Friday, entrance at 8 Throgmorton Street.

In addition to but independent of the London Stock Exchange are the Council of Associated Stock Exchanges, with separate exchanges in 21 of the larger cities and towns, and the Provincial Brokers Stock Exchange, with members in about 110 other centres throughout the British Isles.

In a brilliant move...

VOLUME CCIV - NUMBER 6205

Course for Recovery?

THE country had been peering forward to Thursday's censure debate over the shoulders of two question marks. The first concerned the personal position of the Prime Minister. That was virtually settled, at least for the time being, by his snug reception by Tory backbenchers on Wednesday. If the country and party manage to march along what Mr Macmillan calls "prosperity road" to the next election, there will now be no Tory Brutuses, only Antonys. The Prime Minister's remaining "personal crisis" therefore probably rests only in this: if the nation's and party's fortunes do not revive, there is now a political force in being that could edge him out of his leadership. If Mr Butler, Mr Macleod and Mr Maudling in dissatisfied unison asked Mr Macmillan to take his earldom before 1964, he would now have to obey. No conceivable junta could have had any such power only a fortnight ago.

The second, and more important, question mark on Thursday concerned the new team's policy. The course *The Economist* had hoped to see followed was some stimulation of demand through tax reliefs, accompanied by a tightening of incomes policy and by deliberate long-term measures designed to increase competition (and thus to start moving skilled labour and other resources into the expanding and prosperous forms of employment out of the uneconomic and wasteful ones). In the event there was no earnest of any reflation of demand on Thursday. On balance, this delay in reflation, whether for economic or political (backbench) reasons, is probably a mistake—both on economic and political grounds. But there is no need yet to grumble too spikily about this, provided the Government is really looking forward determinedly to re-expansion of demand as the next step; unfortunately the proviso is important, and has not yet been satisfactorily answered.

The long-term measures announced by the Prime Minister on Thursday deserve the same general comment, although perhaps here with a sharper bark of disappointment. Mr Macmillan said most of the obviously right things, but on first analysis seems to have drawn back from the most determined forms of action. His promised review of monopolies and restrictive practices legislation is desirable, particularly if it were designed to abolish resale price maintenance and to start really doing something against restrictive practices by labour; but by six o'clock on Thursday the impression was that the Government could not make up its mind about the first nettle, was still going largely to avoid the second. The promised review of apprenticeship and training of skilled workers is thirty years overdue, but has hardly been proclaimed even now in very dynamic terms. The Molony report on consumer protection (discussed in the following article) does not go far enough in the right radical direction. The promise to implement the Gowers report on conditions of work in offices and shops is a plain sweetener to the Trades Union Congress, and might actually turn out to be an undesirable one; one thing that is needed now is more legislative flexibility to allow shops to stay open longer at night, and the original Gowers report was the reverse of liberal on that.

By far the most important part of the Prime Minister's mouse in the bag is therefore obviously the proposed National Incomes Commission. The Government (which has reiterated that it will restrain aggregate profits by "fiscal and other means") will henceforth "indicate publicly its view" that this new commission should be asked for its advice before any settlement is reached of

any really major or pace-setting wage demand. But one had better set down brutally here the different ways in which it would seem that this experiment might go.

The least useful outcome will be if the commission merely becomes a device whereby groups of workers, usually in the public service, who had not got that year's average inflationary wage increase, are enabled to get it as well as (and on top of) everybody else. This would then merely be a device for spreading a little more inflation a little more ostensibly fairly all round. The second least useful outcome will be if after the Government has "indicated publicly" that it thinks the commission should advise on particular wage claims, these claims are then often blithely settled by inflationary wage increases without any regard to the Government's statement of work. Politicians would then no doubt regard the whole experiment merely as a device for casting odium on the Government. In fact, however, even a development of this sort would not be wholly pernicious compared with the present appalling mess; it would be a positive sign that the Government no longer regarded itself as purely neutral even in private wage settlements, and it is probable that the nationalised industries at least would then have greater inhibitions about granting wage increases of which the commission would plainly disapprove.

The best outcome will plainly be if the commission becomes the main body for setting the pace of each year's main wage settlements, in line with expected increases in national productivity. Bluntly, however, the trade unions are likely to accept its recommendations only if they think that they cannot get more money by other means: in other words by threatening or fighting strikes. Probably, they will think for some time that they can. Whether the Government should "insist" on referring particular claims to the commission even over the protests of the union concerned therefore boils down to two questions. Is it better that an agreement to refer a wage claim to the commission should be the eventual ladder held out to a union to climb down on to after an unsuccessful strike, albeit a pretty bitter ladder because it will presumably be one it has refused to countenance before calling its members out? Or is it better that any union which is contemplating strike action should know that if it refuses to take part in argument before the commission, an inquiry into its wage claim might go forward none the less, without its own official summary of its own case having been heard (if it is really silly enough to boycott the proceedings)? On balance we would prefer the second alternative, because there would then be blazoned forth a specific figure that the public would know had been adjudged to be the maximum increase consistent with the national interest, the maximum terms on which it would be economically sensible to settle or avert the strike. If it be said that this is a receipt for industrial strife, the answer is that, if a tough incomes policy is married to an effective policy for growth, there need be no strife, because all will be gainers.

That Consumer Council

The Molony report is not quite radical enough

ONE of the misfortunes of the British economy is that it is saddled with too little salesmanship and too flaccid consumers. It is saddled with too little salesmanship largely because "slick American-style selling" is regarded by many Britons as an opprobrious phrase, and this opprobrium has lost to the economy some of the real dynamic that constantly pushful salesmanship can afford. It is saddled with too flaccid consumers because the largest industry in Britain—the housewife industry, 15 million women strong—has one of the least trained, least organised and least effectively-informed labour forces in the land. In an age when many consumer goods have become pieces of minor engineering equipment or even major chemical mystery, Britain has drifted rather aimlessly round the revolution of uninstructed consumers' choice. Manufacturers of consumer goods are not forced by their customers to be nearly as helpful and exact in the information they give about their products as manufacturers of capital goods are; and housewives are too often unaided (and therefore unwilling) to make any sort of intelligent appreciation of which so-called bargains before them are plainly the worst possible buys. This is not only a great source of waste at home; it is also a national obstacle abroad. Britain will not be able for long to export goods that are made in quantity here merely because there are sufficient mediocre and uninstructed British shoppers to put up with buying them in British shops.

This is why it was so important that the Molony report on consumer protection (which came out on Wednesday) should get its balance of recommendations just right. The right precept is full free speech for the advertiser and salesman, but also full free speech (and sufficient detailed information) against them. In the event the Molony committee sensibly avoids being anti-salesman, but seems not quite sufficiently radically pro-consumer.

The committee's most publicised recommendation, which it calls a "major organisational reform," is for the establishment of the grandiloquent-sounding Consumer Council. Unfortunately, it is not very clear what this would really do. The argument that this council of ten or twelve part-timers "will serve as a focal point for information on matters of general consumer grievance" sounds altogether too generalised to be effective; the council's proposed annual report and "periodical magazine, pamphlets or leaflets, as deemed appropriate" might find themselves bombinating *in vacuo* unless the council is given some specfic tasks.

Admittedly, some of the specific functions suggested for the council by some witnesses before the Molony committee were ones that the report was abundantly right to reject. Undoubtedly, the report keeps its feet on the ground by saying that neither the council nor anybody else could sensibly prescribe overall quality standards below which no consumer goods should be allowed to be marketed, and by rejecting any idea that the council should take over from the publishers of *Which?* the comparative testing of consumer goods and the recommendation of best buys. The committee rightly does not "think that the consumer would relish being told what to buy by any official body" in view of the delicate political pressures that would clearly become involved. Unfortunately, the report is obviously also right to say that it would be far too expensive to make the council "a national centre for receiving and dealing with shoppers' individual complaints," at an estimated service cost to the taxpayer of £4 to £5 per complaint, many of them inevitably frivolous.

There seem to be less cogent arguments for the report's firm "opinion that a Consumer Council should play no executive part in law enforcement either in criminal or civil courts," on the grounds that "it must stand detached from the acrimony with trade which particular cases might engender." If the council is effectively to represent the consumer, one would have thought that a little occasional acrimony with particular trades might be no bad thing. The report's belief that local authorities are "well-qualified" to act as the prosecuting authority, without any formal link being forged between them and the council, sits oddly beside the report's plain indication that some local authorities have fallen down badly on the job; its only (and admittedly moderately useful) recommendation here is that in the Consumer Council's annual report the "relevant statistics [about prosecutions] might well appear" ... and "areas in which enforcement appeared to be deficient singled out for attention." In rejecting some of the wilder schemes of the advocates of a consumer council the Molony report has thrown out a lot of bilge water, but it may well have thrown out too much of the baby as well.

IN the absence of any decision to give the Consumer Council greater powers, the most important and welcome recommendation of the Molony Committee concerns the informative labelling of goods. It wants the President of the Board of Trade to have authority to issue regulations requiring specific information to be placed on labels, defining (e.g.) the size of some goods such as carpets that may be sold only by appearance, the material of which they are composed, the manner in which they should be cleaned, their mode of manufacture, fitness for purpose, performance, behaviour, strength or similar physical properties. Even here, however—one is sorry always to be carping at the exceptions—the report refuses to recommend that shoppers should be told specifically how much they are paying per pound for all packaged products, on the rather odd grounds that somebody selling, say, a 6¼ oz. package of confectionery might have to express his price per pound to several places of decimals (but why on earth shouldn't he?); and it does not think that it should be compulsory to say how much wool, how much cotton and how much of any other fibre there is in each specific piece of cloth. The report also recommends only rather minor changes in the Sale of Goods Act, where its main complaint is that the shopper is surprisingly ignorant of the legal rights he can already exercise against retailers who sell him defective goods. In view of this it is strange that it finds, in its next summarised conclusion but one, that "the consumer need for legal aid and advice in obtaining redress is adequately met by the present schemes administered by the Law Society." And its recommendations for changes in the law of hire purchase (discussed in a Business Note on page 381) seem open to some bigger objections.

On advertising, the report gets its positive proposals broadly right. It recommends that advertisements which are deliberately misleading in their descriptions of goods should be an offence under a revised version of the Merchandise Marks Acts, but it is "not disposed to take too censorious a view" of (e.g.) TV charades where nobody ever chooses Brand X instead of the advertiser's own product "for the simple reason that we cannot believe any normally sensible person is misled at all." In a wise aside it says that the task of consumer protectors is to judge when particular advertising or sales techniques are "not merely unethical, but a sufficient menace to the consumer to justify repressive measures: a distinction more apparent to us than to some of our representors." Nevertheless, as it has proclaimed free speech for advertisers, it is a pity that the committee is not a bit more forthright in clearing the ground for free speech against them. It surely need not have gone out of its way to approve the "no-knocking-copy" rule of the advertising industry; it says that, if advertisers were permitted "to belittle competing goods and to make exact comparative claims," then it would expect "disparagement to be met by counter-disparagement" and the consumer to be "confused by efforts to rationalise and justify competing claims." But might not the intelligent consumer get some instruction as well as edification from a shouting match in which each advertiser tried to show, within the law of libel of goods, in what respects he claims a rival's product to be defective?

The committee is right to say that the effectiveness of the so-called Advertising Standards Authority, set up this week as a sort of voluntary "press council" by the advertising industry, "will depend on the personal qualities of its members" (and those of the independent members just chosen, including the economist Sir Arnold Plant and the TUC's wittily sceptical Mr Victor Feather, are fortunately high); but one must echo here the regret of the director of Consumers' Association Ltd. (publishers of *Which?*) that these advertisers' watchdogs "have called themselves an Authority. This smacks of the worst kind of misleading advertising because they are nothing but a private body." Finally, although the Molony report's "cautionary notes" attached to its general enthusiasm for *Which?* (now with 300,000 subscribers) are fair enough when read in context, they will be widely quoted out of context by aggrieved salesmen of products that *Which?* has found wanting. The balance of propaganda power is thereby surely given an unnecessary push in the wrong (because already predominant) direction.

The Molony report is therefore not without its blemishes. But to particularise them in this way is possibly to run the risk of giving a false impression. The report says many of the right things: conspicuously about competition being the consumers' best friend. It castigates many of the wrong things and least desirable ideas with a trenchancy which will cause great annoyance in some of exactly the right places. The Government's right course now would be to enact a series of charters for consumers based on Molony-plus. Unfortunately it is probably a delusion (albeit a beneficial one) for politicians to suppose that there are a large number of immediate electoral votes to be won by this; the Molony committee itself deduced, from the smallness of its post-bag from the public, that on the whole the British consumer does not sufficiently realise or resent the respects in which he, or she, is at present ill-served. But the real advantage, first economically and then politically, would come from gradually helping to make the housewives of Britain a better-trained and more efficient and more discerning and more militant group of forceful and freely-choosing shoppers at last.

Pity Poor Saceur

Norstad Lemnitzer

General Lemnitzer's new chair of office is poised over some gaping cracks

EISENHOWER, Gruenther, Norstad and now Lemnitzer; the latest name in the Nato succession rings with a fine Nordic familiarity. (There was an Anglo-Saxon interlude under Ridgway, but it was short-lived.) But General Lemnitzer is going to need more than the right kind of name, and a sound if unspectacular military reputation, if he is to escape the heart attack and the reported ulcer that his—much younger—predecessor has suffered while Supreme Allied Commander in Europe. It is fashionable to describe the allies as in disarray, as if they were so many privates just needing a good sergeant's bark to get them dressed in line again. It would be more accurate, and more honest, to compare the present state of the thirteen-year-old North Atlantic alliance to a fallen mirror cracked by so many disputes that one wonders whether it will ever reflect the unity of 1949 whole and clear again. The comparison is fair. In 1949 the nail that held the alliance in place was the nuclear monopoly of the United States; this has now been removed, with shattering consequences.

General Lauris Norstad, though the fault is not his, will bequeath three major unsolved problems to his successor on November 1st; two of the problems are strategic, and the third is at bottom political. The first unanswered strategic question is how far the alliance ought to build up its conventional forces—so that it could put up a reasonably prolonged fight for western Europe before having to resort to all-out nuclear war. The disagreement here is, at one level, between those countries (such as west Germany and the United States) that have recently been helping General Norstad to get closer to the 30-division force level prescribed in 1957 and those (such as Britain and France) that have not. At a deeper level, it involves a further argument whether or not the 1957 targets ought to be raised to a point where western Europe could be held without the need to fall back on massive nuclear retaliation at all.

The second unsolved strategic problem has got mixed up with this, but is in fact quite separate. It concerns the moment at which the alliance ought to bring tactical atomic weapons into action (if it should bring them into action at all) in a fight for Europe that had not yet degenerated into an all-out nuclear conflict. The dividing line here at the moment is between on the one hand Britain, with some support from west Germany, holding that tactical atomic weapons would probably have to be used quickly; and on the other hand President Kennedy, who wants (surely rightly) to pause for thought before crashing over the nuclear threshold.

These arguments about strategy are serious enough; but it is reasonable to think that the military thinkers could eventually cut their way through this arcane jungle to a rational consensus, were it not for the third and still more intractable political problem that underlies them. Who is to control the alliance's armoury of nuclear weapons? Professor Henry Kissinger argues convincingly in the July issue of *Foreign Affairs* that the other questions are unlikely to be solved until this one is; and it is precisely here that the inter-allied battle lines, crisscrossing those of the other disputes, are most deeply entrenched. The American and British governments want effective control to remain where it is now, in American hands (though it is hard for Britain to say this without a blush while clutching its own V-bomber force). Other people believe that sooner or later western Europe, as it grows stronger and more united, will come to assume its share of nuclear power; and these are in turn divided between nationalists like General de Gaulle, and internationalists who hope that it will be possible to create a combined west European force to form half of a transatlantic "nuclear dumb-bell."

Nobody assumes that General Lemnitzer is the man destined to think up the answers to all these questions—least of all, one suspects, General Lemnitzer. But the general, presiding over his inter-allied command near Paris, will be in a good position to conduct the day-to-day task of trying to reconcile the different points of view. It is a pity, therefore, that his replacement of General Norstad has been handled in a way that draws attention to the current irritations within the alliance. A few years ago no one would have thought it odd that the retiring commander of Nato's troops should have submitted his sole letter of resignation to the American President, merely informing the Nato authorities that he was doing so. People notice it now; they also note that General Lemnitzer, who will have less than two years to serve before he reaches his army's compulsory retiring age, comes to Europe convoyed by rumours that Mr Kennedy was happy to give someone else his present job. Ever quick to feel a slight—intended or otherwise—General de Gaulle made the alliance wait till Wednesday for his *nihil obstat*.

QUITE possibly Mr Kennedy intends General Lemnitzer's to be a stopgap appointment while the various arguments are thrashed out. This thrashing out is likely to take a long time, perhaps some years. The solutions eventually reached will depend on the way a number of still imponderable matters work themselves out in the meantime: on Britain's success or failure in joining Europe; on the reactions of west European politicians when they realise the cost of building a nuclear armoury fit for the nineteen-seventies; on whether or not

eastern Europe can be persuaded to lose some of its terror of west Germany (and vice-versa). Until the outcome of these matters is known, people whose chief concern is to stop the North Atlantic alliance from breaking into its component parts can do no more than spell out the limits within which they believe the basic problem—the control of nuclear weapons—ought to be solved.

Until 1965 or 1966, perhaps, things can and will go on much as they are. That is, the United States will continue to exercise ultimate control over the vastly greater part of the western deterrent—subject only to the arrangements for joint consultation (but not joint control) outlined at the Nato meeting in Athens in May—while, if General de Gaulle remains adamant, France and probably Britain too will go on pursuing national nuclear power. But about the middle of the present decade matters are liable to reach a turning point. If the cost of building a really modern missile force—together with such addenda as missile warning systems and, possibly, anti-missile missiles—is as huge as the Americans say it is, the European demand for nuclear equality may die away into a dismayed silence. But if the European demand for equality persists, some way of satisfying it will have to be devised.

The intolerable way of satisfying this demand is to let the growth of national nuclear forces continue. The tolerable ways may be various; the task of the defenders of Nato unity is to pick out and champion those which keep the links between north America and western Europe as strong as possible. Within this category, for instance, lies the possibility of a joint Nato force, containing a sizeable American contribution plus the British V-bombers and the French *force de frappe*, and commanded by a Nato general—presumably an American successor to General Lemnitzer. If Britain gets into Europe, the way may be opened to another just possibly acceptable solution. This would take the shape of a united European nuclear arm linked to the American one under a system of joint operational planning.

Beyond a certain point, however, it must be made clear that western Europe's thrust for self-sufficiency can burst Nato wide open. This would be true, for instance, of a European nuclear force that excluded Britain; or of one that lacked the necessary close links with its American counterpart. It is true that, within the alliance, power is gradually being reallocated between Europe and America; but neither can afford a rupture down the mid-Atlantic seams.

Timeless Tests?

Even if Russia's claim to the "last bang" is satisfied, no real end is yet in sight

ON Sunday the Soviet Union announced that it is about to hold yet another nuclear test series. It has closed the Arctic waters east of Murmansk, where Mr Khrushchev was visiting the fleet last week. Some of the new Soviet tests are also likely to take place in central Asia, as in the series held last autumn. When Mr Kennedy was asked for his reactions, at his press conference on Monday, he was cautious, but clear. Whether America would test again must depend, he said, on whether an analysis of the imminent Soviet series showed that Russia had made technical advances that "present further risk to our security. . . . We will not test again unless we are forced to."

Both the Soviet announcement and the American reaction were predictable, and long predicted. It would be asking too much to expect Mr Kennedy to concede, in so many words, the Russian claim, formally published on July 13th and repeated on Sunday, that

> Moral principles and the interests of world peace demand that the Soviet Union should be the last to carry out nuclear weapons tests.

But America has not staked any claim of its own to a *jus ultimae noctis*. Thus it is still possible that, after the Soviet series, a second period of restraint might begin.

Whether it could be formalised by treaty is another matter. On the western side, the element of uncertainty now concerns the implications of the latest results of "Project Vela," the American programme for improving the observation of underground tests. Mr Kennedy said on Monday that the study of these results should be completed this week. Mr Dean Rusk's preliminary judgment, as expressed on July 12th, was that the apparent improvement in instrumental detection could not completely remove the need for control posts and inspections on the spot. What is clear is that the infringement of privacy that is now involved would be extremely small.

If the western governments are now in an embarrassing tangle about identification requirements, they are, however, not so painfully twisted up as the Soviet government has got itself on the plainer question of simply halting tests. Mr Khrushchev's laboured defence of its position, in his speech on July 10th at the World Congress for General Disarmament and Peace, in Moscow, was riddled with contradictions. One wonders whether he was wise to seek publicity in the western press, to the extent of buying advertising space, for a speech which hurried on from asserting that

> The after-effects of nuclear tests are very serious for mankind. . . . Those who are carrying on the tests do not even see fit to think of the harm they are doing to the health of the peoples.

to the claim, only a few sentences later, that

> The Soviet Union's rocket and nuclear strength is the decisive factor in preserving peace. . . . We cannot fail to take steps to strengthen the (our) defences. . . .

Yet, four days later, the Moscow congress declared itself "firmly opposed to all testing of nuclear weapons."

How those participants in the congress who support Soviet policies can square these conflicting doctrines, and how they will dodge the dilemma posed by the coming series of Soviet tests, must be object lessons for all students of the highest hypocrisy.

The declaration of the Moscow congress was, indeed, of some interest. In striking contrast to the inevitably strong pro-Soviet slant of most of the speechmaking, the declaration contained some encouragingly objective phrases:

> In every disarmament plan, weak aspects can be pointed out. . . . We call for businesslike and practical discussions on all the plans put forward. . . . The positions of the chief negotiating powers . . . have to some extent drawn closer. But serious differences of opinion are still producing deadlock.

It would be rash to deduce that, henceforward, some real

discussion of the real problems of disarmament will be permitted inside communist countries. The declaration was presumably worded so as to satisfy as many as possible of the minority of dissidents present in Moscow. But it represents a sharp deviation from the customary claim that the Soviet disarmament plan has no flaws, that negotiation should be based on it and on it alone, and that it is mere malign obstructiveness, not "serious differences," that prevent agreement. The call for "businesslike and practical discussions" may also be sincerely echoed by the non-communist delegates at Geneva.

THE proposals listed by Mr Godber last week were only the latest in a series of attempts to prevent the Geneva conference from "frittering away its time," as the Minister of State put it. Hitherto it has been difficult to get the Russians to agree even to embark on businesslike talk—a fact which the non-aligned delegations have noted with some disenchantment. If Mr Khrushchev really believes, as he said on July 10th, that it is the western delegates at Geneva who have confined themselves to "purely perfunctory and declaratory" speeches, he is not getting very good reporting from his representatives.

His speech that day itself refurbished some of the major self-contradictions in Soviet disarmament policy which account for the Russians' reluctance to argue the matter out in concrete terms. He repeated—as Mr Gromyko and Mr Zorin have since repeated at Geneva—that, in the first stage of disarmament, all troops must retire to their own countries and all means of delivering nuclear weapons must be abolished; and that there could be no verifying of amounts of weapons and forces retained at any stage, not even by the Sohn technique of "sampling zones."

These demands not only violate the principle, already agreed, that no party should gain a military advantage at any stage of disarmament; they also in effect invite other countries to buy a pig in a poke. And the virtuous indignation with which Mr Khrushchev denounces all inspection of retained arms as mere espionage ("No self-respecting country can accept such control") would be more effective if he had not already, in backing the Rapacki plan, proposed that precisely such control should be imposed on Poland, Germany and Czechoslovakia.

The sheer irrationality of the Soviet proposals unhappily strengthens the case of those who (like General de Gaulle) see no point in slogging on with the talks on disarmament. It is probably true that, but for the presence at Geneva of the eight non-aligned delegations, the Russians would by now have walked out, as they did in 1957 and in 1960. As it is, the resumption of the conference has revealed little that is new or encouraging. After Russia has demonstrated the force of its "moral principles" by staging another series of big bangs, there may well be a second period of restraint from tests. But, whether or not this is sanctified by a treaty, it will be as fragile a restraint as that of 1958-1961 unless there is progress toward disarmament proper.

For that, it seems, we may still have to rely on the closing of the secrecy gap to manageable proportions. It is not inconceivable that, as America's new weapons (and China's ?) become more and more difficult for Soviet intelligence to enumerate and pinpoint, Moscow may begin to realise that it, too, has an interest in seeing that disarmament should not only be done but be seen to be done.

Kennedy's Latin Primer

Democratic government or material improvement: which comes first?

PERU'S fall from democratic grace has been seized upon as a ready-made occasion for President Kennedy to reassert forcibly the languishing principles of the inter-American economic alliance for social and democratic progress. While others of America's allies have managed to slip, slide or sidestep their way round the rules that signpost the way to social justice and to democratic behaviour, there was absolutely no ambiguity about the Peruvian army's rude and violent gesture. Peru's president was deposed and imprisoned on July 18th because he refused to annul elections that were in no way detectably fraudulent, but which had been won by a man, Sr Haya de la Torre, whom the army does not like. There were no side-issues to confuse Washington's objective concern for democratic procedure: public order had not been seriously threatened, and the far-left fervour of Sr Haya de la Torre's youth had long been replaced by the evangelical anti-communism of his middle age. Confronted by this undisguised contempt for the democratic institutions that the alliance seeks to strengthen, the United States suspended diplomatic relations, held back the $81 million that had been booked as Peru's current slice of alliance aid (except for some minor charities that go on) and cut off military assistance.

To give money and then to snatch it away again is a course guaranteed to win any prize offered for the policy least calculated to win, or to influence, friends. The cautionary precedents include the West's withdrawal in 1956 of the money it had offered Egypt for building the Aswan high dam. True, the circumstances, and the personalities, are not at all the same. President Kennedy's criteria for giving aid to Latin America are blazingly right. The Latins are allowed a wide latitude of nonconformity. Mexico's expressed dissent from American policy towards Cuba does not prevent it being one of the more important beneficiaries of American aid. Brazil stands at least a fair chance of continuing to get its large dollops of American help despite the expropriation, in February, of an American-owned telephone company.

But for Peru there was no escape from the axe. The decision to make a test case out of Peru's relapse must have been an excessively difficult one for President Kennedy—although he may have been spurred on by personal indignation (which he showed at his press conference on Monday) at the summary treatment of his recent guest, President Prado. A more telling argument might have been the dismay with which other Latin Americans have been following the sorry story of the Peruvian elections and their aftermath. The basic

conflicts at work in Peru are by no means singular; obviously the others fear a chain reaction of military coups across the continent. Most of them have declined or delayed relations with the new Peruvian regime, without going as far as Venezuela and the Dominican Republic, which have broken relations formally and withdrawn their ambassadors. Argentina's military caretakers, having too much glass in their own house to risk stone throwing, have underlined their minority view by sending a naval vessel to join in the celebrations this weekend of Peru's independence day.

Peru's military chieftains have to look for support to their like-minded neighbours, or to Latin Americans of the extreme Right and the extreme Left, both of which, for different reasons, welcome any check to the social changes envisaged by the alliance. The murky half-light of dictatorial or reactionary regimes is fine sailing weather for the communists; the alliance, if it worked, could be their sinking. Significantly, the neo-communist parties in Peru are among the few groups to have thrown their weight on the side of the junta—although it was reported at the mid-week that Sr Haya de la Torre, who will soon qualify as the Peruvian Vicar of Bray, has himself reached some sort of agreement with the military.

THE United States still carries the scars of its failure in the past to be visibly and incontrovertibly on the side of democratic progress. Not long ago, Washington was being scourged for using the sacred doctrine of non-intervention as an excuse for doing nothing at all to help the Latin Americans rid themselves of their autocrats and oligarchs. The amiability that General Eisenhower and others showed towards some of the less desirable strong men nourished the belief that the American Administration's sole concern was to keep the southern half of the hemisphere dotted with governments that were seemingly strong and irrefutably anti-communist. In April, 1961, President Kennedy set about destroying this image for good and all. His alliance for progress attempts to identify the economic power of the north with the political and social aspirations of the south. Aid on a much more massive scale than the neglected Latins have known before is the President's weapon for dragooning the governments into promoting change. This will, in the President's words,

> demonstrate to the world that man's unsatisfied aspirations for economic progress and social justice can best be achieved by free men working within a framework of democratic institutions.

But is it so sure that it will? America's decision to show disapproval of the Peruvian generals by suspending the aid programme, however enlightened the arguments, does generate a bunch of nagging doubts. First, it is controversial whether, even in exceptional circumstances, it is prudent to augment the impression that aid is a carrot, to be snatched away if the receiving country does not move meekly in the desired direction. The United States in Latin America, as Britain in Africa or the Middle East, has to move with extra delicacy if it is not to fall into one of the pitfalls that it dug for itself in more arrogant—and less enlightened—days. By the wildest flight of fancy, President Kennedy would never say, or allow anybody else to say, that he had to "show those Dagoes that they will have to behave decently." But the fact that Theodore Roosevelt did once say this makes any form of Yanqui coercion, even for "decent" causes, the more resented.

Then, at his press conference, President Kennedy stressed his anxiety that Peru should return to "constitutional forms." Just how much of a formality are some of Latin America's constitutional exercises? The sinner that leaps to mind is Argentina. In March, Argentina's military leaders threw out their president and annulled the elections because, as in Peru, the party they most disliked had done well. But, wilier than their Peruvian colleagues, the Argentine generals escaped nemesis by preserving a thin layer of constitutional correctness. Instead of setting up a straightforward all-military cabinet, they installed civilians in the front seats—and American aid went on. It is just possible that honest United States eagerness to throw its full weight into the support of democratic procedures in Argentina wilted when these produced a triumphant return of Peronistas.

These doubts lead to the most uncomfortable doubt of all, and one that needles its way to the heart of the alliance. Can one be so sure that western democratic traditions will take fruitful root everywhere in Latin America? It is perhaps pertinent to remember that the most radical social breakthrough have been the work of individual leaders, some of them not over-scrupulous about shared responsibility or, even, political justice. Cárdenas of Mexico, Vargas of Brazil, Perón of Argentina, Paz Estenssoro of Bolivia, Castro of Cuba are the names that occur of leaders who made, or are making, a sizeable dent in the established order. The tough structure of Latin American society seems to need a man with a hammer as well as with votes.

OBVIOUSLY it would be both cavalier and offensive to suggest that none of Latin America's parliamentary regimes is capable of carrying through the wide sweep of changes contained within the ideals of the alliance. The alliance is little more than a year old; several republics, notably Mexico and Venezuela, are pushing ahead with the kind of scheme that it was conceived to foster. But in most countries the schemes, in all their virtue, are being more talked about than acted upon. One of the problems for the United States has been the question of timing. Clearly if the bulk of aid had been held up until the Latin American governments began seriously playing their part in the bargain, very little would have been distributed so far. As it is, the administrators have been blamed again and again for pedagogic meanness. But several countries have received their chunks of aid on the strength of promises: Chile, for instance, was given its money although its congress was still baulking at a land reform bill. And one wonders what major steps the conservatives in the late Peruvian government had promised to take when they were apportioned their share of $90 million ($9 million had already been handed over when the aid was suspended).

A voyage as uncharted and as experimental as the alliance for progress is bound to flounder into mammoth difficulties. Its splendid goal is economic and, above all, social improvement within a framework of democratic institutions. The Peruvian coup was, as President Kennedy said, a setback; even the most imaginative mind would boggle at the fantasy of those flinty Peruvian generals being transformed into the agents of any sort of reform. But there are occasions when it is as well to hesitate before giving the democratic framework precedence over the progressive concepts it is supposed to adorn and protect.

NOTES OF THE WEEK

GENEVA TALKS

Kiss and Scratch

THAT comparative infant, the Geneva conference on Laos, ended its work on Monday, fourteen months after it began, with the ceremonial signing of an international agreement declaring Laos to be neutral and inviolable. It remains to be seen whether neighbouring North Vietnam will respect the pledge it signed "not to use Laotian territory for interference in the affairs of other countries," and will hereafter refrain from using Laos as a handy back door for sending guerrillas into South Vietnam. Two other signatories, Russia and China, are in a position to see that the communist North Vietnamese comply. It may or may not be ominous that the Chinese foreign minister, Marshal Chen Yi, said at Geneva just before the signing that "peace in Laos cannot be regarded as consolidated so long as the flames of war are kept alive in South Vietnam."

East and West having thus kissed and made up over Laos, with fingers crossed behind their backs, there was an immediate relapse into intransigence about the much bigger and beastlier baby on their doorstep —the 44-month-old crisis over Berlin. Three conversations in the Laotian afterglow at Geneva between the Russian and American foreign ministers, Mr Gromyko and Mr Rusk, have proved abortive. President Kennedy said on Monday that no progress had been made. On Wednesday Mr Rusk gave up and flew back to Washington. On July 17th the Russians resumed the unpleasant habit, which they introduced in February and then dropped again, of sending planes into the allied air corridors to Berlin. They have also repeated their promise to settle matters once and for all by signing a separate peace treaty with east Germany.

If they do, it will not necessarily be fatal. East Germans may take over certain responsibilities on the access routes from the Russians; but President Kennedy, who told readers of *Izvestia* last November that he recognised east Germany would go on existing as long as Russia wanted it, is unlikely to make the change of officials on the frontier a matter of war or peace. Nevertheless, a separate Russian-east German peace treaty would add to the day-to-day tension and uncertainty about Berlin. Lamentably, in April the West missed what may possibly turn out to have been the last chance to have the matter settled by negotiation, instead of by *fait accompli*; it was missed because the west Germans were unwilling to let the east Germans take part in the settlement. It has taken fourteen nations fourteen month to agree about Laos. How many years will it take for the two parts of Germany to agree to each other's existence?

EUROPE

Double-Action Drama

WITH dispersal of effort and much scraping of heavy furniture on parquet floors, the scene-setters for the next act of the movement for union in western Europe were in action this week at Brussels and elsewhere. Our Brussels correspondent describes on page 341 the state of the negotiations there for British membership of the European Economic Community. M. Spaak and Dr Luns, the Belgian and Dutch foreign ministers, have been in action on the other important front, that of political union.

Here very much has depended on M. Spaak's further thoughts after the depression and doubt about Britain in Europe that followed the purge in the British Government and Mr Gaitskell's unhappy skirmish with the Europeans. M. Spaak was engaged to meet Dr Adenauer at Bonn on Thursday, and it was known that he would find the west German Chancellor pressing for the swift conclusion of a Union of European States. Signor Fanfani, who has been asked by Dr Adenauer and General de Gaulle to invite the six heads of government to Rome in September for this purpose, is not being compliant. His attitude is that there should first be preparation at a less exalted level; that Britain should be kept informed; and that, in any case, the political union project should keep step with Britain's talks with the common market.

Dr Luns arrived on Tuesday from Rome (where he had seen Signor Fanfani) to lunch with M. Spaak. Both men then made known the lines on which they want to see the political union handled. They do not want Britain faced with a *fait accompli*. But difficulties face the leaders of small countries when they oppose themselves to the wishes of powerful partners. Bland talk has continued in Bonn and Paris of a "little" political union which nobody need join unless and until they made up their minds. Thus the threat of a *fait accompli* faces Belgium and Holland, not only Britain.

A simple negative would not, therefore, do; nor would it be what the Dutch and the Belgians want. Instead, M. Spaak and Mr Luns are now proposing a number of radical improvements to the Fouchet plan, to bring the idea of a union of states, and the older "European" aspiration of a development and extension of the communities, into relation with one another. This plan they would pursue stage by stage and with due deference to governments (like the French, and perhaps the British) jealous of their national rights. But it would merge (and therefore strengthen) the communities and would foster their parliamentary life. How their plan stands up to criticism in Bonn, and later in Paris, remains to be seen. The British Government, and for that matter the British Opposition, would do well not to shoot holes in it hastily; it may come in useful.

CONSERVATIVES

Motion of Confidence

THE Tory party marched into Thursday's censure debate with its morale markedly higher than had seemed possible a week before. The Prime Minister showed considerable resilience in his luncheon address to the 1922 Committee on Wednesday, and thereby did a great deal to restore his position with backbenchers. If he is vulnerable still, it will be only because some of his most senior colleagues would now be in a position to ask him to go if a series of disasters in the autumn by-elections impelled them into feeling this was the right thing for the party. In such a crisis the Prime Minister would have to fall back on the loyal feelings of the parliamentary rank and file, and there is some indication that although he has regained members' confidence he may have lost their affection. At the same time it should not be forgotten that the Prime Minister has one weapon which could defeat any rebellion, the threat of dissolution (which every Tory MP with a vulnerable seat wants to delay for a long time to come).

In the constituencies, where the pro-Lloyd feeling was alleged to be strongest, the changes are said to have been accepted much more readily than at Westminster. Indeed one of the loudest complaints appears to have been that they did not come sooner. Lord Avon's implied criticisms of Mr Macmillan at Leamington seem to have had a negligible effect; his supporters are being forcibly reminded that the state of the Tory party was not exactly healthy when he left office after Suez. Local associations are, however, smarting a little from the effects of Mr Macleod's roneoed censures on the elderliness of some of their officers, although no great volume of protest has reached Tory Central Office. It would have been more effective as well as more tactful to have found out from the area agents what are the moribund associations and to have sent their officers a personal letter.

Government strategy is still tied closely to the common market negotiations. It now seems to be expected that there will be little hard news for next week's Commons debate on Europe, but there is still a reasonable chance that there will be some for the Commonwealth Conference in September. After that it is planned to recall Parliament and then (it is hoped) to advance an irresistible European wave to the Tory party conference in October. The next parliamentary session would then be largely devoted to legalising Britain's entry into the market. The Government has at present no intention of seeking a mandate from the people even if Labour comes down against joining EEC and launches a full scale campaign against it.

LABOUR

Mr Gaitskell's Wavelengths

LABOUR ears are by now quite accustomed to the crash of breaking china, and the reverberations of Mr Gaitskell's speech at Brussels have not done him much damage in his own party (although the pro-Europeans are understandably cool). Mr Gaitskell himself is genuinely pained and surprised at what he considers the unreasonable reaction to his remarks. He said, he maintains, nothing which he had not said already, at Blackpool and elsewhere. The eyes of the continent cannot be supposed to be permanently concentrated on Blackpool, but he thinks they might have noticed what he said at Oslo. Some of Mr Gaitskell's apologists find a tentative solution in the quirks of M. Spaak's character, and his alleged nobbling of the Brussels press correspondents. But there is more to it than that.

The root of the trouble lies not in M. Spaak's character but in Mr Gaitskell's. The Leader of the Opposition is a rationalist and therefore often finds himself on the wrong emotional wavelength. He seems to have viewed the Brussels visit as a kind of shadow negotiation with the continental socialists and his remarks were correspondingly circumscribed. What annoyed his audience was not his polygon of conditions for Britain's entry but his lack of any enthusiasm for the European cause. The fact is that he has not got such enthusiasm, and he is not a man to go in for displays of synthetic emotion. Mr Gaitskell really has very little feeling for Europe, and this lack of positive sympathy seems to have been transmitted to M. Spaak. The danger for Labour now is that it might also be transmitted into Mr Gaitskell's policy and tactics if the Government decides to go into Europe amid some continuing objections from the Commonwealth, and if Mr Gaitskell thinks he can then force an early general election by opposing this; this would almost certainly be another sign of Mr Gaitskell's misjudgment of wavelength, and would land Labour in an unnecessary mess by the time of any election in late 1963 or 1964 (as well as making Labour's relations with the Liberals decidedly odd).

At home, Mr Gaitskell has also been criticised by some people in his party for tabling Thursday's censure motion on the Government and so threatening to consolidate Government forces. There is something in this, but Mr Gaitskell's position was difficult. Had he not tabled a motion his leadership would have been attacked from another angle and he would have left a flank exposed to the Liberals who would undoubtedly have tabled a motion of their own. Mr Gaitskell might, however, have worded his motion a little more subtly. Instead of a straight declaration of no confidence and the demand for a general election, more play could have been made with the vagaries of Government economic policy. This would not have endangered the Government, but it might well have given the Opposition a little more fun.

COMMUNIST BLOCK

Stuffing for Comecon?

SIGNS that a determined effort is being made to put some stuffing into the Council for Mutual Economic Aid (Comecon) keep cropping up in eastern Europe. Most significant perhaps is the calibre of the persons now being appointed to concentrate on problems of economic co-operation between the Communist countries. On July 19th it was announced in Moscow that Mr Vladimir Novikov, a deputy premier who two days earlier had been released from his post as head of the state planning commission (Gosplan), had been appointed permanent Soviet representative on the executive committee of the council, set up early last month. A week earlier, Czechoslovakia's chief economic planner, Mr Otakar Simunek, gave up his job as head of the Czech state planning commission in order to concentrate on his country's role in what is known as the "international socialist division of labour." Mr. Simunek, who retains his rank as deputy premier, had just been attending in Moscow the first meeting of Comecon's new executive committee. At this meeting "specific steps" were discussed for co-ordinating national economic plans.

It remains to be seen whether other Comecon members will sacrifice their top planners to the cause of promoting the economic integration of eastern Europe. (The Czechs may have found the sacrifice made easy for them by the mess their own economic planning has got into.) Not all the members of the Council for Mutual Economic Aid share the Russian enthusiasm for integration. In recent weeks, however, the problems involved have been discussed with unusual frequency and urgency in Polish, Hungarian and Czech articles and speeches. These have urged the need to think "internationally"; emphasised that some countries may have to abandon the manufacture of certain products which can be better turned out elsewhere; and foreseen a more important role for Comecon in the future than it has been allowed in the past. One highly-placed Hungarian in the Hungarian State Planning office has even hinted at the setting-up of supra-national organs in Comecon.

All this down-to-earth, and even sombre, discussion of the problems of economic integration suggests that business is really meant. If so, jealousy of the common market will have been a sharp spur. On July 21st, at Gdansk, for instance, Mr Gomulka complained plaintively that Poland wanted to maintain trade relations with the capitalist countries, but these were "not shaping favourably for us" because of the "discriminatory moves" of the Six. These fears and resentments are real; but whether they will outweigh the reluctance of Poles, Hungarians and others to give up their hard-won economic independence is more doubtful.

SOUTHERN AFRICA

Katanga Again

ANOTHER Security Council meeting on the Katanga problem appears imminent. U Thant, the acting secretary-general of the United Nations, made it clear during his European tour last week that he must soon get his mandate in the Congo clarified or confirmed. On Tuesday he described to his advisory committee (representing the governments whose troops make up the UN force in the Congo) his idea of using economic pressure to induce the Tshombe regime to end its two-year-old secession. The committee's members also discussed whether, if economic pressure failed, the UN should use force.

The UN's patient endeavours to get Mr Tshombe to come to terms with the Congo government seem now at last to have run into the sand. On Tuesday Mr Tshombe denounced the government as "only a fiction" and said he would not negotiate again with Mr Adoula, the prime minister. Four days earlier, Sir Roy Welensky had gone out of his way to issue a sturdy denial that Mr Tshombe was "intransigently persisting in secession." There cannot be many people now who would share Sir Roy's view.

The United Nations' hand has been strengthened by the International Court's advisory opinion on July 20th that the Congo operation costs are an assessable part of the organisation's expenses, and by Mr Kennedy's success in getting Congressional approval of his plan to buy up to $100 million worth of the UN bond issue. ($27 million worth have already been bought, and pledges to buy a further $45 million have been given, by 43 other coun-

tries. More immediately, it has been particularly strengthened by the United States' open advocacy of UN action to end the Tshombist secession.

The rift between the British and American governments in this matter is once again yawning wide, despite all the claims that Lord Home and Mr Rusk have reached agreement about Katanga during their Geneva conversations. The British official position is at present much less frankly stated than the American, but there is every indication that, at bottom, Lord Home agrees with Sir Roy that the secession is a "domestic political problem" in which there should be no external intervention.

DEPORTATIONS

Botany Bay?

THOSE critics who from the first doubted the Government's ability to administer "humanely" the Immigration Act will have had ample confirmation of their forebodings in the regrettable performance of the new Home Secretary over the case of the £2 shoplifter. It is true that the deportation order on Miss Bryan, the unemployed Jamaican girl concerned, has now been cancelled; but Mr Brooke said that this was solely because "if she now wishes to stay in Britain, it would be unconscionable to deport her when she has already spent six weeks in prison" for commission of this first offence. The implication is that first offender shoplifters who have not spent six weeks in prison might well be deported in future. Although Mr Brooke agrees that deportation should not be the penalty for "trivial offences which involve no moral obloquy" (breaking the speed limit perhaps?), he considers that:

> Looking ahead, some of the most difficult cases might arise where a person has obviously not succeeded in settling down in this country, and in earning his or her own living, as the ordinary person does, and then starts committing offences, perhaps because he or she has been out of work. . . .

This could amount to an open invitation to some magistrates to use the Act to rid their districts of every apparently "undesirable" and unassimilated West Indian and Irishman; and there are disturbing signs that the invitation is being heeded. Already, in the eight weeks since the Act became effective, no less than 109 people, whose offences as immigrants have ranged from ten-shilling thefts or drunkenness to robbery with assault or more, have been recommended to the Home Secretary for deportation.

The Act was not meant to be a removal measure for casual misfits. Where an indigent immigrant has so obviously not settled down that he actively wants to go home, there may be a case for *ad hoc* welfare grants to help him on his way; but not for advertising even to these people that to go and commit a paltry crime is the best way of getting an entirely free passage. Even more serious, however, is the danger that Commonwealth citizens who want to stay may now be about to be punished much more severely than other British citizens for relatively small transgressions; Miss Bryan, it appears, was about to be deported 3,000 miles away from her fiancé in this country. The proper use of the deportation provisions under the Immigration Act is against immigrants who are obviously engaged as professional criminals in Britain, equivalent perhaps to a recommendation to preventive detention upon native old lags. The Home Office ought to issue a clear statement to this effect to magistrates who have overindulged their taste for outrage at the spectacle of British laws sometimes being transgressed by "foreigners."

TRAFALGAR SQUARE

How Liberal?

SIR OSWALD MOSLEY has duly applied to use Trafalgar Square for another rally by his National European movement on September 23rd. It goes without saying that if permission is given by Mr Rippon, the new Minister of Public Building and Works (and the responsible authority under the Trafalgar Square Act, 1844) there will be another organised attempt to break up the meeting—exactly as happened, despite the efforts of 300 police, last Sunday. In the Commons on Monday Mr Rippon was given a great deal of extraordinarily illiberal advice. Two Tory backbenchers wanted to shut the square to public meetings for all time. Mr Silverman wanted to gag every potential Sir Oswald (the propagators of "anarchy and wickedness") for a similar period. Mr Grimond and Mr Brown called, in their best senatorial tones, for legislation against "the preaching of racial hatred and intolerance." How would this last legislation, worthy though it may sound, help? No form of words has yet been put forward that would both be tough enough to prohibit the Mosleyites from holding meetings (after all, they claim to have other policies), and yet loose enough to allow, say, reasonable public discussion of the Immigration Act, or even some of the things that have been said at some Labour party meetings against the presence of German troops in Wales.

Mr Rippon is rightly reluctant to agree that a political party should be stopped from holding meetings simply because its opponents go along and start a punch-up. There is no doubt that the Mosley meeting on Sunday was broken up by toughs who had come along precisely to do this.

Some of the same problems of free speech are raised by the recommendation by the school governors to dismiss the British Nazi leader, Mr Jordan, from the Coventry school where he teaches. This matter should be determined paramountly by the interests of the children; and it may seem obvious at first sight that a classroom is not the right place for this man. But the point is that Mr Jordan's teaching (of several subjects, including civics) had been closely watched for political bias for several years without any evidence being produced against him. Coventry's local education authority should certainly take

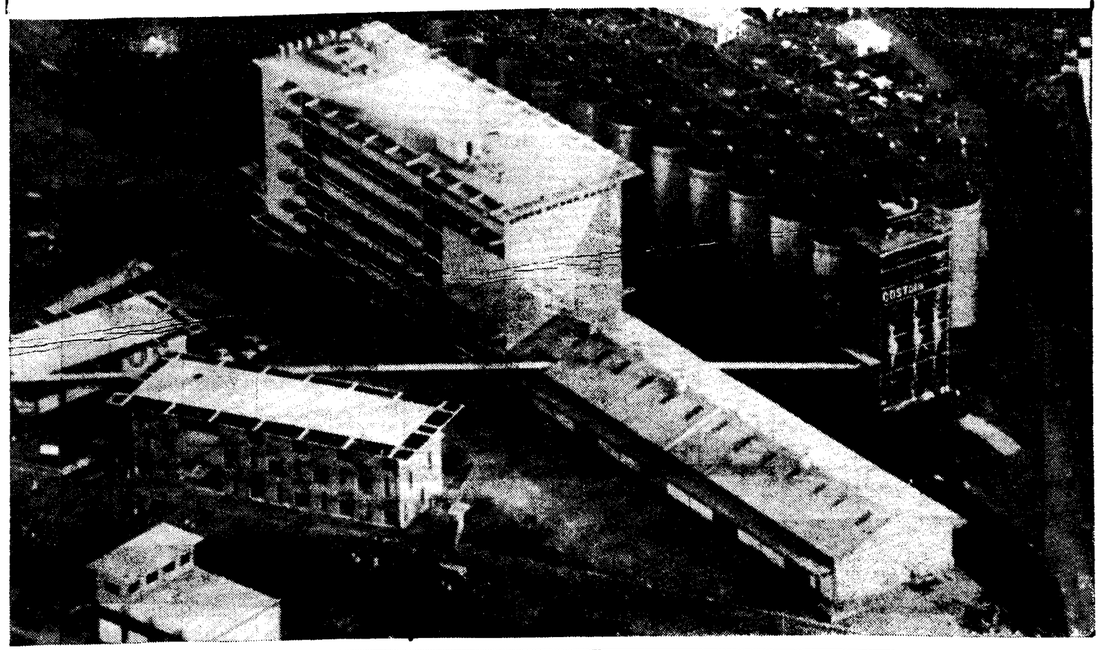
The Economist

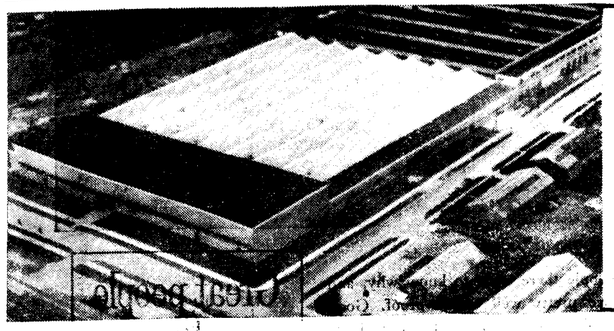
JULY 26, 1862

ARE DIPLOMATS WELL PAID?

In March, 1861, in consequence of the general agitation to bring all the services within the scope of a competitive system of examination, and partly of the prevalent opinion that the system of unpaid attachéships had given rise to a very inefficient body of diplomatic servants, a Select Committee was appointed by the House of Commons to inquire into the constitution and efficiency of the present diplomatic service. . . . We may remark at once that the bulk of the evidence went to show, that the pay of the Ministers abroad at the larger courts, and of the Secretaries of legation, is often inadequate, owing, among other reasons, to the great increase of late years in the cost of necessaries and comforts of life. Lord Clarendon being asked whether he considered that the present pay of heads of missions is sufficient, answers unhesitatingly, "*I am sure that it is not.*" His own salary in Spain was £5,000, and that was not sufficient. "I could not," he said, "make it do." It is true that Lord Clarendon was in Spain during the whole time of the civil war, when things were dearer. But under no circumstances ought a Minister to be called upon to employ his own private means in the service of the country. And it should be observed, that the scale of salaries, fixed 30 or 40 years ago, might be fair and even liberal at the time. But there is perhaps no capital in Europe, or great town in America, in which prices have not risen from 40 to 60 or 70 per cent. So large a change cannot but have been felt severely by diplomatic servants, and it is by no means unlikely, as stated in evidence, that many Ministers are put to very considerable straits. Thus it frequently happens that the head of a mission is called upon to advance money out of his own funds to meet extraordinary expenses. To take one instance. In Lord Clarendon's case in Spain, "the extraordinaries" were very large. To defray the expenses he was compelled to borrow money from his bankers. The Government paid back the principal, and left Lord Clarendon to pay the interest. This is clearly wrong.

APAPA FLOUR MILLS, NIGERIA CONSTRUCTED IN 197 DAYS





BORG-WARNER

Factory extension, Letchworth

DESIGNED AND BUILT IN 10 MONTHS

Nigeria's first flour mill is now in production. It was constructed by Costain (West Africa) Ltd. for Flour Mills of Nigeria Ltd. in only 197 days, and went into immediate operation. ■ Here at home, Costain designed and built a 140,000 sq. ft. factory extension for Borg-Warner Ltd. in 10 months. In this building, the new fully-automatic transmission systems for medium-sized family cars are being manufactured. ■ These two projects, completely different in every way—size, purpose, location—illustrate the scope of the Costain organisation. ■ *Architect for Borg-Warner factory extension: H. Stanley Smith, A.R.I.B.A.*

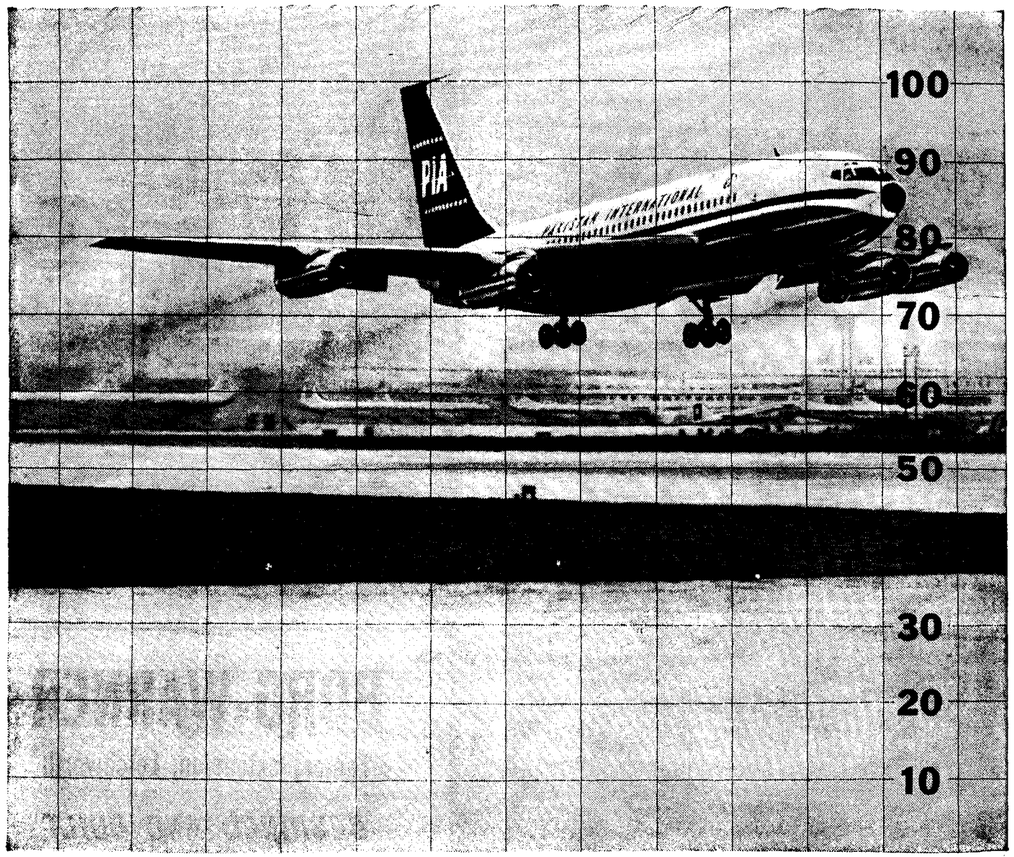
PIA give you outstanding punctuality with 88.5% on-schedule departures and landings



A close time-check kept on PIA routes during 1961 showed that an average of 88.5% of all PIA flights took off and landed at the scheduled times. (And during the first five months of 1962, this figure has risen to 88.6%.) This is an outstanding achievement, and PIA have done it simply by being strict with themselves. If a plane should land or take off even five minutes late, a memo goes to Head Office in Karachi.

The people there want to know why, and they are pretty well excuse-proof. Good timekeeping shows that a streamlined organization is doing its job properly, getting you to your destination comfortably and on schedule. PIA's punctuality is just one of the points that brought them 63% more passengers last year, and 41% higher profits. It's one of the things that make them great people to fly with.

See your Travel Agent or consult us: 45 Piccadilly, W1. Tel: REGent 5344. PIA offices in these UK cities: Birmingham (Midland 1900), Glasgow (City 3133), Leeds (21188), Manchester (Blackfriars 7340). All cables: Pakintair.

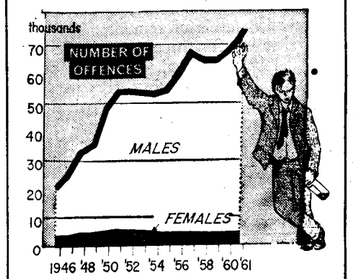
Last year 74,694 offences of drunkenness were proved in England and Wales, 10 per cent more than in 1960. Of these, only 126 arose from drinking methylated spirit, compared with 588 in 1951. Of all cities and boroughs, excluding the City of London, Liverpool had the highest rate of offences, with a total of 151 per 10,000 of the adult population and Cambridge the lowest with a rate of 3.58.



this into account in deciding whether the obnoxious way he spends Sunday afternoons in Trafalgar Square should mean total disqualification.

ARAB WORLD

Egypt's V2

"RISE oh sun of our Arab nation, illuminate the world and tell everyone we shall always be glorious and triumphant Arabs. . . . The United Arab Republic has successfully launched a missile." Thus, on July 21st, the Arab world was told that President Nasser, on the eve of the Egyptian revolution's tenth anniversary, had joined the space age. Four single-stage rockets were fired, the largest, the Conqueror, having a range of 400 miles. President Nasser, scornfully dismissing the smaller rocket that Israel launched a year ago as "borrowed from the French," claimed that Egyptian scientists, engineers and workers were responsible for the Conqueror and its companions. A more precise version of this interesting project seems to be that the know-how came from west Germany, the parts were manufactured in Germany, Spain and Egypt, the assembly was in Egypt, the launching by Egyptians. It is, perhaps, not for the British with their own expensive nuclear deterrent to reproach Egypt for indulging in self-glory it can ill afford.

To boast a rocket that might, if anybody were foolish enough to point it that way, land in Israel, is a prestigious triumph at a time when President Nasser is under fire all round for having admitted to some of the realities of the Palestine situation. The Israelis, who in the last year have kept pretty quiet about their own advance in rocketry, admit to uneasiness but recognise a far greater threat in the Mig 21 fighters and the TU 16 bombers that Egypt has been receiving from the Soviet Union. However much the Egyptian rocket is played down, its unveiling is bound to add impetus to the expensive, and potentially dangerous, arms race between Israel and the Arabs—and between Arabs themselves. President Nasser gave a nightmare glimpse into the far distance when he casually answered the *Pravda* correspondent's question about nuclear warheads with: "We have not reached that yet."

Mouse Watches Cat

POLITICAL rocketry, too, has made this a heady week for Arab statesmen. Syria, as so often before, is at the centre of activity. On Sunday, the trial started in Damascus of the 17 officers who were involved in the Aleppo revolt at the beginning of April. The brutal murder of several of their fellow officers (an incident that helped to shock Syria into peace) is almost certain to carry the death penalty; the instigator of the revolt, safely in Egypt, is being tried *in absentia*. A more momentous trial is in the offing. Over the past two weeks, bomb explosions have shaken the peace of several Syrian cities. Now the Syrians claim to have captured Egyptian documents that not only give detailed instructions to terrorist agents but go so far as to set out a master plan for the recapture of Syria. The stages of this plan, according to the Syrians, are general unrest, strikes and terrorism, leading to a demand for reunion with Egypt and ending with a pro-Egyptian coup from within the Syrian army.

On July 17th, the Syrian and Lebanese foreign ministers met and talked about infiltration over the frontier—the first official Syrian-Lebanese encounter since Syria left the UAR. The Syrians, at any rate, left the conference believing that Lebanon was becoming more ready than in the past to crack down on Egypt's subversive activities. When, as on two recent occasions, Syria's currency suddenly shoots up on the Beirut market, the Syrian authorities take it for granted that Cairo is paying its agents. President Nasser, meanwhile, spoke warmly of the Syrian people in his anniversary speech. "Should 1958 come again," he declared, "I shall not hesitate to accept unity." Once or twice—perhaps by mistake?—he referred to Syria as the "northern region."

TESTING DRUGS

A Product of Thalidomide

THE thalidomide disaster has engendered a great deal of justifiable emotion, some ill-conceived suggestions, and one wholly desirable movement towards reform. The ill-conceived suggestions are that doctors should be legally permitted to abort pregnant women known to have taken thalidomide and that the malformed babies should be "mercifully" killed if the parents desire this. Ethical considerations apart, why should these thalidomide babies be regarded differently from other malformed or otherwise abnormal babies? Provided pregnant women are not continuing to take the sedative from unused stocks—and publicity and professional warnings should have prevented that—no more babies should be born with two or more deficient limbs as a result of the drug after the end of August (nine months after it was withdrawn). The total number is then estimated to be about 1,200 in England and Wales, of whom 600 are expected to survive. Every year about 1,000 spastic children, 1,000 mongols, and an unknown number of children with limb deformities not due to thalidomide are born, with similar distress to their parents, but without publicity. The important thing is to see that full remedial and training facilities are available to the new cripples rather than to talk about euthanasia.

The movement towards reform is that the Minister of Health has told the Commons that he is asking for advice from the Standing Medical Advisory Committee on the question of the testing of new drugs before they are marketed; and in Belfast, at the British Medical Association's annual meeting, a unanimous motion has been passed calling on the association's council to set up an independent body to supervise the introduction of new drugs. This body would assess both the claims made for the efficacy of the drugs and the possibility of harmful side-effects, and, if successful, is even envisaged as licensing drugs before they are marketed. Although in America supervision and licensing are done by an

official body, the Food and Drugs Administration, in England there is a great deal to be said for carrying these tasks out independently of the Ministry of Health, which has a vested interest in keeping down the cost of drugs in the health service. Apart from this, the experience of the Food and Drugs Administration, and the standards it enforces, should be useful to whatever body is set up. But it is worth pointing out that though its vigilance and caution prevented the marketing of thalidomide in America, it has licensed other drugs that have subsequently been found unsafe.

LABOUR CONFERENCE

Brighton Unrocked?

BETWEEN four and five hundred resolutions for the Labour Conference at Brighton in October—later to be filleted, skewered and composited—have been published this week. They do not suggest many headaches for Mr Gaitskell. At home, housing, education and the national health service have attracted the highest number of resolutions ; generally they ask for more money. An encouraging sign for Mr Gaitskell is the number of resolutions calling for the expansion of the economy. There is even one motion—which might even be passed—which says that the next Labour Government should work with the TUC to implement an incomes policy of a sort that would gladden Mr Macmillan. There are the usual calls for Clause IV nationalisation, but they come typically from constituency zealots in Tory-held areas like East Grinstead. The nationalisation shopping list that is demanded includes ICI, Courtaulds, Unilever, shipbuilding, seaports, telecommunications, drugs, engineering, motors, road haulage, breweries and docks—but Mr Gaitskell should be able to get all the motions that he dislikes here voted down or referred back. Just possibly, his most embarrassing moment at home might come with the voting on one of the three specific motions which fully support the Pilkington report on broadcasting.

In foreign affairs, there are fewer anti-Nato resolutions (and these typically from places like Epping) and more multilateral ones than in the past. The most dangerous groundswell seems, at first sight, to be against the common market. Of the fifty resolutions on the market, nearly all are against it or so qualified in support as to make Mr Gaitskell's Brussels speech look like a manifesto from Lord Gladwyn. Only three openly favour Britain's entry. But the point is that all but one of the anti-market resolutions come from constituency parties (and, once again, typically from places like Surbiton). The only trade union to have a resolution set down against the market is the National Society of Metal Mechanics. Mr Gaitskell should be able to secure the passage of a meaningless and hovering motion on Europe if he still wants to.

Connoisseurs of conferencemanship will be happy to find resolutions calling for the abolition of indirect taxation, for compulsory voting, for no deprivation of the parliamentary whip without the consent of the member's constituency party (from Orpington), and a clarion call to Mr Gaitskell to dissolve the Krupps empire. Perhaps the most endearing resolution of all is from the Coventry East Labour party. "This Conference," it pleads, "asserts the right of the individual to take part in public functions and to express a personal point of view." Mr Richard Crossman is the member for Coventry East.

DENTISTS

A Cut in Fees

IN 1960 the royal commission on doctors' and dentists' pay (chairman: Sir Harry Pilkington) recommended that the average earnings of a dentist in general practice in the health service should be £2,500 net of expenses for a working year of between 2,050 and 2,200 hours. Since dentists are paid neither by salary nor by capitation fees but by the amount of work they do, this meant that a scale of fees for each dental operation had to be drawn up that would produce this average remuneration. Before the royal commission, dentists' fees were subject to arbitrary reduction by the Minister of Health if they earned more than they were supposed to. The commission, therefore, in order to provide some stability, recommended that a standing dental rates study group should be set up, composed of representatives of the profession and the Ministry of Health, persons experienced in work study techniques and an independent chairman. This body was to draw up a scale of fees that would produce the recommended £2,500 a year, and would thereafter draw up fresh scales whenever the predetermined average income was altered.

This dental rates study group has now completed its first set of researches, and recently produced its scale of fees in accordance with the commission's recommendations. Not unnaturally, since dentists have, on an average, been earning more than the £2,500 that was recommended, thanks largely to improved techniques but also to public demand for treatment, some of the new fees are lower than they used to be, and not unnaturally many dentists are protesting and moving votes of "no confidence" in the British Dental Association, their official negotiators, for accepting the Pilkington proposals.

It certainly is a bit hard that dentists should suffer a cut when all around them pay is going up. Perhaps it would have been more tactful, as it is two and a half years since the commission reported, and as its recommended levels of remuneration were supposed to last for three years, if the new scales had been delayed. Dentists could then have been refused a rise in their average predetermined earnings when the three years were up ; as it is, they will now certainly apply for (and probably get) such a rise—and, it seems, the doctors are likely to apply for one, too.

MOTORING OFFENCES

Eternal Vigilance?

THE number of convictions for exceeding the speed limit (generally 30 mph) in built-up areas in Britain rose in 1961 by 39 per cent over the previous year, and those for all other motoring offences by 12.5 per cent. In the same year, motor traffic increased by 8 per cent ; and the death and injury rate on British roads very slightly dropped. The accident rate has gone on dropping, by some 4 or 5 per cent in the first half of this year. Some people (but not the Ministry of Transport) have seen a connection between these sets of figures: "Speed kills," they say, meaning that when the police are "doing their job properly," by increased vigilance and prosecutions, road safety is the automatic result. There are dangers in this assumption. While all motor traffic did indeed increase by 8 per cent in 1961, motor cycle, scooter and pedal cycle traffic decreased by 7 per cent—and it is in these categories that the casualty rate is highest, nineteen times more than motor cars in the case of motor cycles and fourteen times more in the case of scooters. Much of the expected rise in casualties (about 6 per cent annually up to last year) should have been lost automatically in this reduction. While everybody should welcome increased vigilance by the police in the prevention of or dissuasion from really dangerous driving, it would be a pity to build up a myth from these figures.

SHORTER NOTE

Mr Peter Dallas Smith, hitherto a joint manager of *The Economist*, has been nominated to the board of The Economist Newspaper Limited and appointed Managing Director of the company. Mr Gerald Andrews, hitherto also a joint manager, will be appointed Executive Director, Overseas Operations.

We call it skin. It comes in a range of colours—and for most people it's a well-tailored, washable, hard wearing, trouble-free suit that lasts a lifetime—60, 80, maybe a 100 years! But for 1 in 10 of the population, this suit is not perfect.

Last year in Great Britain alone, some 5,600,000 people consulted doctors nearly 14,700,000 times about skin disorders. Sometimes these were just pimples—sometimes more serious skin conditions that are disfiguring and embarrassing, even crippling and psychologically distressing to the sufferer. And until recently, doctors were limited in the treatment they could prescribe for these more serious skin diseases.

Then came the great breakthrough, the discovery and development of the cortisone family of drugs. The Pharmaceutical Industry, including Cyanamid's Lederle Laboratories, spent many years and millions of pounds on research to find these wonder drugs. Now the skin no longer has to fight its enemies alone. For these new drugs are as effective in the treatment of skin disorders as broad-spectrum antibiotics are in the treatment of infections.

But helping to make your suit last a lifetime is just one problem Cyanamid has worked to solve. Research goes on. Cyanamid will invest over £11 million this year in research of all kinds: research to find drugs that will conquer human ills; to find new and better ways to produce more food; to find better ways to make life happier and more abundant.

THE WORLD OVERSEAS

Algeria's Feudal Interlude

LITTLE good has come to Algeria from Mr ben Khedda's surrender to Mr ben Bella on Monday although it was an act intended to restore national unity. How he was forced by the army to accept a political bureau under Mr ben Bella to run all political affairs is described below by our correspondent in Algeria. But the action, registering, in effect, the break-up of the ben Khedda government, has merely served to exacerbate the deep divisions that exist. The soldiers supporting either side have clashed. Zealously rushing in before Mr ben Khedda's surrender could even be decently negotiated, army units supporting ben Bella seized Constantine and Bône on Wednesday, when they overwhelmed the ben Khedda supporters who had hitherto held these towns. The move was clearly premeditated; and on Thursday, an armed force, issuing from Kabylia, the heart of resistance to Mr ben Bella's take-over, was reported to be bearing on Constantine presumably to take revenge. Mr ben Khedda, deserted in Algiers, is now half-way out of the picture. Opposition to Mr ben Bella is centred on Mr Belkacem Krim and Mr Boudiaf, who, taking their stand in Kabylia (where the whole population is behind them), are trying to rally the clans against the ben Bella "coup d'état."

That Mr Boudiaf has joined Mr Krim in Kabylia makes a nonsense of Mr ben Bella's proposed political bureau. For Mr Boudiaf was one of the leaders nominated to serve on it. His disinclination to do so was manifest in Tripoli in June, when Mr ben Bella, proposing the self-same team, was angrily opposed by Mr Boudiaf himself as well as by Mr ben Khedda and Mr Belkacem Krim. That a political bureau of some sort should run the FLN (National Liberation Front) upon its transformation into a political party has never been in question. But the ben Bella choice of candidates was deliberately provocative, excluding, as it did, Mr Krim and reviving old quarrels within the revolutionary movement.

Once an outside matter, these quarrels are now being recklessly pursued across the face of Algeria itself. Civil strife, and with it, the possible complications of French armed intervention should Europeans suffer, need not necessarily follow. The forces are unequally divided. By now Mr ben Bella holds two-thirds of the country; the Kabyles can hardly expect to turn him out. But, exceptionally self-reliant, they might stand out for a long time on their own. Mr ben Bella himself is operating more cannily than his soldiers. On his leisurely tour towards the capital he has offered soft words, especially to Europeans, designed to placate the French. But his will be a pyrrhic victory if it is won with no regard for Algeria's war-forged unity, and imposed by force.

A Round to ben Bella

FROM OUR SPECIAL CORRESPONDENT

Wednesday

MR BEN BELLA has won the first round in the struggle for power in Algeria. But the crisis is by no means resolved. By his intransigent attitude, and with the support of the ALN (Algerian Liberation Army), he was able to attract many of Mr ben Khedda's supporters to his side, among them the important provincial politicians who had followed the moderate Mr Ferhat Abbas into the Tlemcen camp.

However, the two sides have much in common, in addition to the fact that they both, at least in theory, support the political programme which was approved by the CNRA (revolutionary council), but has never been published. Both leaders have been living isolated from their followers and insulated from public opinion, ben Khedda in the splendid summer palace in Algiers and, until Wednesday, ben Bella in a luxury hotel on the hill above Tlemcen, where he was surrounded by 200 armed men. Neither leader pretends to be working on his future plans for the government of the country, or on any adaptation of his political programme; nor, indeed, does either attempt to administer the immediate areas he claims to control. Both are apparently unconcerned by the breakdown of law and order in the countryside and the daily kidnappings, thefts and murders.

Both ben Khedda and ben Bella stress the importance of "the people," the "heroes of the revolution," but neither has personally involved himself yet in the hunger and suffering that many of these heroes are now enduring. The suffering cannot be relieved, and indeed will inevitably increase, until the political crisis is over and public security sufficiently restored to enable economic life to be resumed. Mr ben Bella's spokesman stated publicly, with what sounded like deplorable cynicism, that hunger and distress were inevitable factors of a revolution. Apart from the members of the defence forces, there are no more than a few hundred or so people deeply involved in the political struggle. The mass of Algerian Moslems, both in the Casbah of Algiers and in the hot, dry countryside, want nothing more than to return to work. For them the meeting of the wilaya leaders at Orléansville, the establishment of a political bureau, and the future meeting of the revolutionary council mean little.

Middle-class Moslems are, however, aware that the real power is in the hands of the army which, through lack of money and transport, has not yet shown its hand. But it has played an important role already, not only in giving its support to Mr ben Bella, but in causing Mr ben Khedda's sudden capitulation on Monday afternoon, when the military leaders of the Algiers government informed the prime minister that they would no longer be responsible for guarding him or the GPRA (the provisional executive), or for maintaining order in the city, unless he agreed to Mr ben Bella's proposal for the establishment of a political bureau. For a few hours after this ultimatum even the tough, experienced diehard Mr Belkacem Krim appeared to believe that there was nothing to do but capitulate. But after a little reflection Krim rushed away from the smoke-laden, air-conditioned bars of the Aletti Hotel, where the cabinet has been living, to his mountain home in Kabylia; there, in the name of Wilaya 3, he denounced ben Bella's actions. Mr Belkacem Krim and Wilaya 3 are undoubtedly supported by the two million inhabitants of Kabylia. This independent action will considerably complicate the task of Mr Mohammed Farès, president of the provisional executive, who is trying desperately hard to play honest broker between the two nationalist leaders in the detailed horse-trading of their "conciliation." Other Algerian politicians are visiting their families for less honourable reasons than Mr Belkacem Krim: they want to be out of the Algerian sunlight while Mr ben Bella makes his progress from Tlemcen to Algiers. If his arrival there is followed by a brotherly reconciliation with Mr ben Khedda, then the absentee politicians will re-emerge.

There seems little chance that any future government will be able to keep the full terms of the Evian agreement which Mr Belkacem Krim negotiated and which Mr ben Khedda, when he returned to Algeria at the time of independence, had every intention of keeping. Mr ben Bella has already denounced it in private and called it "robbing the Algerian people of their rightful riches in the Sahara." Other politicians in his entourage argue that now that Algeria is independent the government is free to demand modifications, while a third group claims that France has lost the right to "associate" with the new republic because it has already broken the Evian terms. The claim is based on the lamentable fact that one of the reasons for the breakdown of the administration has been the lack of trained French personnel during the transition period. Nine-tenths of the French civil servants are said to be "on holiday" in France.

The international oil companies can, however, be fairly sure that within the next year or so they will be invited to renegotiate their concessions in the Sahara, in spite of the few far-sighted Algerian economists, lawyers and bankers who will attempt to delay any demand for a revision of the Evian treaty until a trade agreement has been negotiated with France.

Progress in the Dark

FROM OUR BRUSSELS CORRESPONDENT

As the ministers of Britain and the Six, overworked and weary, embarked this week on the meeting from which they hoped to emerge with the general terms for Britain's accession to the common market, they had behind them one new indication of the possible future structure. This was the agreement achieved around 4 a.m. last Saturday on annual reviews and long-term assurances for domestic farmers. The difficulty with which this was reached —recalling the all-night sessions before the Six's own farm policy agreement in January—was a further sign that agriculture lies at the heart of the present negotiation; and it illustrated once again the permanent preoccupations that influence the community's thinking on the bigger question of temperate agricultural imports. Basically, the Six fear that the exceptions the British ask are too big, big enough to drive a coach and four through the framework of the Rome treaty and particularly through the delicate fretwork of the common agricultural policy, worked out at so much cost in hours and heart-attacks so few months ago. As Professor Hallstein said recently, "We have no flag, no common language and no emblem, nothing to establish our identity except our common external tariff."

Britain originally requested outlets in the enlarged community for temperate agriculture comparable to those that Canada, Australia and New Zealand now enjoy in Britain and in the common market. This was rejected, largely on the ground that the fundamental principles of the Rome treaty would require Commonwealth countries to be treated by 1970 on the same footing as all non-member countries: that is, to pay the levy which would raise their prices to something like those on the protected European market. The argument of the Six was that the purpose of the levy was to adjust world prices made artificially low by conditions amounting to dumping—an argument the British reject, maintaining that economic prices for farm commodities would be a good deal lower than those charged by common market farmers. In reply the Six declare themselves willing to establish a "reasonable" price policy which would leave a margin for imports; but, they insist, the preferential position of the Commonwealth in the British market must be tapered off by 1970. By that date they hope to secure agreements among world producers that would, among other things, protect the interests of Australia, Canada and New Zealand.

As for the British negotiators, not only were they reluctant to accept the principle that Commonwealth advantages would be tapered off; they are, or appear, sceptical of the possibility of reaching world agreement on more than a few commodities. For this reason they are asking for a "bridge" in cases where such agreements are not reached by 1970. The Six offer a system of consultation around 1970 with all countries—particularly Commonwealth countries—willing to reach world agreements.

As this message was written these questions were still the subject of debate, not only with the British but—indeed, crucially—among the Six themselves. West Germany, still uneasy at the common agricultural policy with its insistence upon modernisation for inefficient German farmers, would prefer to give Britain quantitative guarantees, a precedent that would assist in the safeguarding of west German interests both at home and in foreign trade. But the French and the Commission are adamant that the only hope of a satisfactory settlement lies in the price mechanism, about which the British are so sceptical. They point out, too, that there are now three new incentives for reaching world agreements: first, the prospective size of the enlarged community, which would be the world's largest agricultural market; second, the effect of the levy, which would make low world prices meaningless in that market; third, the ability of the common market to influence events by letting it be known that only those willing to accept world agreements would be included in future consultations. Some of these questions may be cleared up as the week's work progresses, perhaps by the time this account is printed. What is clear already is that the community is asking for an act of faith in future decisions. This is not easy for the British, but it is not impossible; by seeking conditions and modifications they are, in effect, trying to confine the element of faith within reasonable limits.

To the British the attachment to the letter of the Rome treaty often seems over-legalistic and inappropriately rigid, particularly on the agricultural policy (which is, after all, incomplete and still evolving). But the original British scheme for domestic agriculture, modified last Friday, had seemed to the Six to mark a step backward, with its allowances for action on a national scale and even on purely national initiative.

The agreement as it finally emerged provided for both national and community annual farm reviews, neither of which as now envisaged is to have automatic consequences in the form of deficiency payments. If agricultural incomes in the community, or in any area of it, should not ensure a fair standard of living, the European Commission may propose action on its own initiative or on that of a member state. In this respect, therefore, British farmers are to rely on future decisions by the enlarged community, and only within limits will they have specific guarantees. This pattern, which is in some ways inherent in the whole conception of the Rome treaty, is the one the Six wish to apply in the present basic disagreement about temperate Commonwealth foodstuffs. In this week's negotiations, exports from the Asian Commonwealth countries, zero tariffs for industrial materials, and the association of independent Commonwealth producers of tropical foodstuffs are also part of the agenda, but the feeling here is that the problems they present are nothing like so crucial as that of temperate foodstuffs.

Light on Ladakh

FROM OUR CORRESPONDENT IN INDIA

What is really happening in Ladakh? Through the fog of rival versions of truth, a pattern is beginning to emerge. It suggests that the latest firing incidents between Chinese and Indian troops in the Chip Chap river area and near Pangong lake—the first reported shots since October, 1959—are unlikely to be the last. The truth has been obscured not only by contradictions between

41 YEARS OF DEPENDABLE SERVICE

QANTAS

Australia's round-the-world airline

In association with Air-India and BOAC

Peking and New Delhi, but by the latter's uncertainty whether it wants to claim credit for defending India or for loving peace. Both sides naturally claim that the other has been attacking. China's case on the border dispute has always been less credible than India's. But after Goa there is no reason to accept Indian defence ministry handouts as gospel. What is definitely known of this year's developments suggests that the truth this time is nearer to the Chinese version.

The core of the matter is that this spring, for the first time, India's defence forces were in a position to do their job, and are doing it. A massive logistic complex has been built up, based on Srinagar and the air base at Chandigarh in the Punjab. Forward posts have been dug in and fortified, and supplied by airdrop and helicopters. Behind them hundreds of miles of jeepable roads are now building or already built, notably from Leh to Chusul and from Chusul to Damchok.

At the front, it is the Chinese who are on the defensive. In January the Chinese had pushed forward a patrol less than ten miles from the vital Indian post of Daulatbeg Oldi, at the base of the Karakoram pass. By April, the Indians had outflanked this post and were vigorously probing from all sides near a long established Chinese post on the Chip Chap river. Since then both sides have set up a series of posts in this area. There is now a regular front line of posts on both sides, running 30 miles south-

south-east from the border across the Chip Chap river. The latest firing occurred where the opposing posts are barely one mile apart. It was the same story in other sectors. The Indians have established posts near the Chinese post on Spanggur lake, near a Chinese post on the Chang Chenmo river, and on both north and south banks of Pangong lake. The last two, also near a Chinese post, are supplied by motor boat. The Indian prime minister has described the situation as "a game of military chess," with both sides manoeuvring for position. In some cases, he said, Indian troops had got in behind Chinese positions. This, according to the Chinese, is what happened in the Galwan valley incident; an Indian patrol cut off the rear route of an advanced Chinese post. In the Indian version, it was the Chinese who encircled an Indian post. It could well be that the Chinese correctly describe the genesis of the incident, the Indians its outcome. In two more recent incidents, though there is the usual dispute as to who opened fire first (it was probably the Chinese, since the Indians would have nothing to gain), there is no fundamental conflict. An Indian patrol was fired upon from a Chinese post, clearly because the Indians were too close for comfort.

The Indian government has recently been anxious to play down what most Indians would regard as commendable activity in defence of Indian territory. Hence, one suspects, its curious blowing hot and cold on successive days about the Galwan valley incident. No doubt New Delhi does not wish to appear before the world as responsible, however justifiably, for the shooting. And there are grounds for thinking that Mr Nehru still believes that a peaceful solution of the dispute can be found. The reported statement of Marshal Chen Yi in Geneva—where he met Mr Krishna Menon privately during the Laos conference—that he regarded the conflict as a purely localised one which would not break out into open war, suggests that the Chinese may hope so, too. But there is little prospect that the local conflict can remain non-violent, unless the Chinese are prepared to abandon some of the territory they have stolen, or the Indians to give up their forward probing—which, in territory such as Aksai Chin, is the only effective form of defence. The Indian public, at long last seeing the Chinese getting some of their own medicine, would certainly ask why India should hold back when the Chinese are still a hundred miles inside India's borders.

"Stop Thief" in Lagos

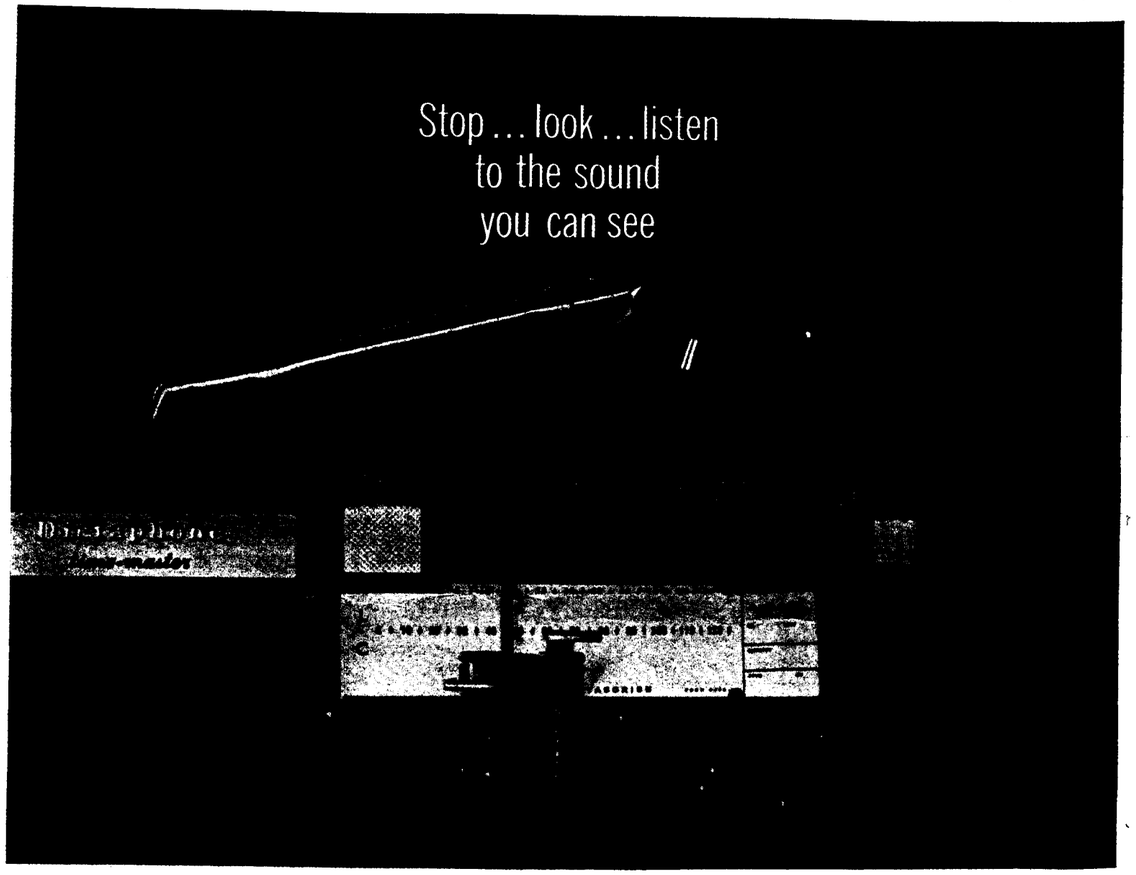
FROM OUR SPECIAL CORRESPONDENT

BETWEEN the imported skyscrapers most Lagos Africans live in stinking compounds; the sewage is collected by lorry. But they paper their rooms with cheap magazine pictures and some have radios. One named Sonny turned off the news yesterday evening saying, "All politicos dey eat money." His girl sighed "ole"—not a tribute to Sonny as a matador, but simply Yoruba for thief.

"Ole" is heard often in Lagos today. It has been shouted at more than one politician. Some public men have been attacked by thugs screaming "ole" and stoning their smart cars and house-fronts. It was even heard last Sunday when thousands of Nigerians stood in the tropical rain to cheer Chief Obafemi Awolowo, leader of the opposition Action Group, on his return from restriction out of town to a new restriction on Lagos island. On Monday the federal government (which hopes the word "ole" is meant only for politicians of the suspended western region government) responded by banning all meetings for two months.

Two months is the expected duration of a public inquiry that opened on Monday into the affairs of six statutory corporations run by the suspended government of the western region. The inquiry is one of west Africa's most fruitful sources of scandal for years. On Monday Chief Michael Okorodudu, QC, leading counsel for the commission conducting the inquiry, managed with many pretty court-room gestures to bring enough public figures into his speech to satisfy even the imagination of Nigerians like Sonny. He included most leading Action Group figures, the Pepsi-Cola company, the Israelis and Mr Macmillan. The allegations involve many millions of pounds. For instance, £6,200,000 was said to have been diverted from government funds to a company controlled by four leaders of the Action Group and the question posed is whether this company was created "to enrich a few individuals." Evidence was promised by Chief Okorodudu to show that the Action Group's finance officer, Chief Lanlehin, was paid £2,000,000 by the above company between 1960 and 1962 and that £2,400,000 was paid into his account in 1959. And so on. And in a letter from a British public relations firm Mr Macmillan was quoted as telling Mr Roy Thomson that the Action Group leaders should be backed in the long-term interests of a stable progressive and liberal Nigeria. Chief Okorodudu went on about "the tragedy of a people being misled by foreigners," but even so Mr Macmillan does not seem to be flying out to give evidence, as is wistfully dreamed in local headlines.

The inquiry's chairman, Mr Justice G. B. A. Coker, is an unflap

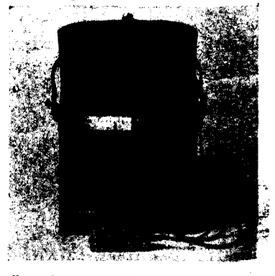


1962...and Dictaphone streamline design and prices

The new Dictaphone Ta6 ...
is specially streamlined to give greater Dictabelt visibility. Dictabelts record permanently and visibly so that you can find your place at a glance and play back in a second. The sound you can see brings an end to the mess and guess of the unmarked tape. The Ta6 costs £95 0s. 0d.

If you have a thumb you can dictate ...
with the Dictaphone Time-Master. Just four buttons on the microphone control the complete dictating process. One controls stop and start and the others control playback, corrections, and letter length. This machine uses the unique Dictabelt recording system and costs £129 10s. 0d.

This phone puts words on to paper
The Dictaphone Telecord selector unit automatically feeds your dictation on to a vacant Time-Master recorder. The message completed, the Dictabelt is handed to a typist for immediate transcription. This system saves you money every time you pick up the phone and in a few months pays for itself.



Now take it straight from the shoulder ...
with the new Travel-Master portable. No wires or tapes for recording, just the revolutionary Dictabelt. Wherever you are just slip the Dictabelt into an envelope and send it back for transcription on a normal Time-Master Transcriber. This portable, which weighs only 5 lb., costs £105 0s. 0d.

pable Nigerian who insists with virtuous solemnity that the witnesses, counsel and public around him should suppress their giggles —giggles perhaps of nervousness at the enormity of it all. Mr Coker is awed by nobody, frequently cuts long-winded speeches short by telling leading counsel that they may be seated now, and seems to forget the names and titles of some of Nigeria's most famous politicians. When the Action Group lawyer, Chief Rotimi Williams, stormed out in a huff on Tuesday Mr Coker said languidly, "You can as well please yourself." Hopefully, however, Mr Coker does not please himself but sticks to the rules; and in that lies the good of this inquiry.

For it is an all-Nigerian affair, and some of the leading players are at least trying to do it the legal way, in open session, with journalists around them watching and taking sides. It could not happen elsewhere in west Africa. Admittedly the whole inquiry is partly intended by the federal government to damage the Action Group, which provides the federal opposition, but it may also impress at least some Nigerians with the dangers of corruption. Some of the federal government's blows against the Action Group have been low, but all have been legal.

Nobody expects that anything the Coker commission may say will destroy the Action Group finally, but it may affect the group's future outlook towards politics and it may decide whether the group itself or its offshoot, the United Peoples party under Chief Akintola (the regional premier deposed by the Action Group leader, Chief Awolowo) gains the upper hand. Chief Awolowo seems determined to keep an opposition in the federal parliament and a government in the western region (when parliamentary government is restored after Christmas), but Chief Akintola and his new party may join a federal coalition which might then divide within itself between the Muslim northerners and the alert southerners. At present the north by weight of population dominates the federation. Even within the present federal coalition the northerners have all the major ministries and have quietly put their own men in as permanent secretaries. The eastern region party is grumbling about it, but so far the east-north coalition is holding together.

MANY Nigerian calculations are likely to be upset by the results of the new census due in a few weeks' time. It is rumoured here that the new figures will show that east and west heavily outnumber the north in population. This would mean a re-allocation of seats in the federal house in favour of the southern parties, and a re-allocation of federal revenues as well. There may have to be another public fight over the reliability of the figures. This might be unfortunate for Nigeria's name overseas at a time when £600 million of foreign private investment and half as much public aid are being sought for the country's new economic plan. But Nigeria's economic planners are more worried about getting European countries, notably France and Germany, to contribute to an aid fund for Nigeria; at present, both countries are holding out for bilateral aid instead.

The kind of political upheaval seen in recent weeks is the result of a clash between men already in power. The kind of clash Nigeria has not properly felt, and must surely one day feel, is between a genuinely all-Nigerian nationalist movement (probably led by young intellectuals) and the present establishment. The men to lead such a campaign are already in the existing parties and the universities. Their potential followers are, in a land where contrasts between rich and poor are painful, all around them. Only a cleaning-up of politics and an increased momentum in raising the standard of living of ordinary Nigerians can avert such a political clash in the long run. Sonny, the young layabout in the Lagos slum, knows it all. The people shout "ole" today, he says, but vote for the richest thief tomorrow. But one day, Sonny says, they will see that "for learning you no need book. Just head and eyes."

Aden's Tangled Talks

BY A CORRESPONDENT

THE ultimate objective of the Aden constitutional conference, which opened in London on Monday, is the fusion of Aden with its hinterland, the eastern and western protectorates. The most superficial examination of the region makes plain that something like this must happen if the area is to make any political and economic progress, for Aden colony is a city without a state and the hinterland is a potential state without a city. The tangle begins in this geographical simplicity.

The colony, only 75 square miles in extent, is the main bunkering port on the sea-route to the East and is as busy with ships as Hongkong and Singapore. There are nearly 200,000 people cluttering the lowlands of its two harsh, craggy peninsulas, busily serving ships, refining oil, trading with each other, with neighbouring territories or transit passengers, or earning in one way or another the £11 million which the British forces stationed there spend each year. The protectorates, consisting of 23 sheikhdoms and sultanates, cover 111,000 square miles of which only one per cent is fit for cultivation. Nevertheless, the vast majority of 650,000 Moslem Arabs make their living by agriculture on the one per cent. This is not an underdeveloped area; it is just not developed. British aid—although it may have been as much of the British taxpayers' money as the nature of the region seemed to warrant—has not yet been enough to provide the communications and services essential for setting up small businesses that could put the protectorates into some sort of economic relationship with the colony.

There are the rudiments of political democracy in Aden in the bewildering number of factions that claim to be parties, and in the powerful Trades Union Conference which is active in shaping opposition opinion and has now formed the People's Socialist party in a bid for ultimate power. Most of the parties' policies shade finely from the unlikely to the impossible, but there is one firm strand, the desire of the Adenis to govern themselves. Development in this direction has not gone beyond an elected majority on the Legislative Council, and an elected half of the Executive Council of ten. The Governor, who administers the colony, is facing demands for autonomous self-government which are not likely to be granted.

The protectorate rulers are under varying degrees of British influence or control through a series of treaties going back to 1839. They are popularly regarded in Aden as feudal chieftains propped up by the British and a miscellany of British-armed native troops—the Protectorate Levies, the Hadrami Beduin Legion, the Mukalla Army and various tribal guards. This does much less than justice to some of the rulers, who are politically acute. In February, 1959, six of them from the Western Protectorate, adopted a federal constitution under the benevolent eye of the British Colonial Secretary; this set the course for this week's conference and provoked much heart-searching in the colony.

The British Government undertook to protect and provide for the federation and to help it on the road to independent statehood; and by advocating at the same time a link with the colony, it implied an eventual end to Aden's colonial status. A cautious promise of "constitutional advance" was made by the Governor in January. In May the ministers of the colony and the federation agreed on proposals for constitutional advance and federal union, and the present conference is intended to mould the proposals into an agreement that satisfies all parties, including the British Government. By now the federation has eleven member states, and the lights of its brand-new capital, Al-Ittihad, beckon at five miles range of Aden's Steamer Point.

If the conference reaches agreement, the present government of the colony will presumably introduce the new constitution before January, when the term of the present Legislative Council ends and new elections should be held, and arrange the terms for merging with the federation some time next year. The actual process by which the merger would be achieved has never been made clear, but one assumes that elections would come after it. In that case, the conference agreement will presumably be made known in Aden and debated in the existing Legislative Council.

This plan is very tidy but it will not please the People's Socialist party or the political opposition in general. They consider that any constitutional advance which at the same time tethers them to protected and reactionary tribal rulers, some of whom have their own little armies, will be no advance at all. They want a new constitution, new elections and a new government of their own, and because they contend that the present council does not represent the colony, they want all this to happen before a final decision on federation is reached. This, in effect, is asking for an indefinite postponement of the plan, for no one has yet decided who should be given the vote in Aden's hotch-potch population, in which 48,000 Yemenis outnumber the indigenous Arabs, and 16,000 Indians and Pakistanis and 10,000 Somalis all claim rights of citizenship. Even the business community fears that the impoverished hinterland will become a burden on Aden for lack of adequate financial help from Britain. Certainly, whatever disputes the conference may see, the sequel in Aden will be even rougher. A difficult autumn can safely be prophesied for the Governor.

Clean But Not Free?

FROM A CORRESPONDENT IN TEHERAN

PERSIA'S politicians, left virtually without occupation while Dr Amini was prime minister, are getting ready for work again. The new prime minister, Mr Asadollah Alam, said at his first press conference on July 22nd that he is going to hold general elections "as soon as possible." Otherwise, Mr Alam's programme is identical with Dr Amini's. It includes all one could wish for: land reform, administrative reform, health, education and social welfare programmes; also plans for decentralising Persia's cumbersome Teheran-based bureacracy, establishing village and town councils through local elections, and delegating greater authority to these local bodies.

Mr Alam also says he will balance the budget, create work for the unemployed, and induce economic recovery. The prime minister has not described how he proposes to accomplish all, or any one, of these aims. Nor has he explained why he feels he might be successful where Dr Amini failed. Persians may thus be forgiven for wondering why Dr Amini had to go at all. Dr Amini, it is true, doggedly refused to have elections; but the wisdom of the present decision to hold them is highly questionable.

The truth of the matter is that Dr Amini, having saved the country from the major crisis that threatened it 14 months ago, had become much more dispensable to the Shah. His reform policies alienated powerful vested interests, and he did not succeed in getting the Americans to provide all the equipment and money the Shah wanted for his army. Mr Alam lacks Dr Amini's independent cast of mind, and, as a close friend of the Shah, will certainly do his monarch's bidding.

Dr Amini's departure may be regretted, but sharpest interest at the moment centres on the new government's economic and election plans. Mr Alam appears to have no striking new ideas for meeting the $70 million budget deficit that, ostensibly, brought the Amini government down. And it is hardly to be expected that the United States, having hesitated over supporting its favourite son, should now reverse its stand and give help for non-development spending to his successor. Mr Alam must clearly try to solve his difficulties by domestic measures. He speaks of cracking down on tax collection and paring operating expenses even further. But Mr Alam is unlikely to be able to accomplish much more than Dr Amini in either field. The government is said to be toying with the possibility of requesting a moratorium on foreign debts. These amount to $70 million for the current year; there is also a $20 million debt to the International Monetary Fund, but this does not have to be paid immediately. A 12-month moratorium, if requested and given, could cover the deficit, but it would merely postpone the hard decisions, and the crisis, until next year.

In the short run it is elections that will give the government the gravest trouble. Elections held in the summer of 1960 were so blatantly rigged, that the Shah himself had to annul them. Dr Manouchehr Eqbal, then prime minister, had to resign and, later, to leave the country. Mr Asadollah Alam, then leader of the opposition Mardom party, got off strikingly better, by becoming director of the Pahlevi Foundation Endowment, a giant trust of those of the Shah's properties that were recently endowed to the public. Another go at elections the following winter produced a parliament, but four months later the assembly was dissolved and Dr Amini became prime minister.

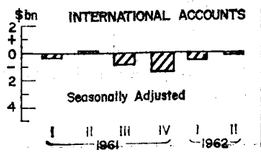
MR ALAM, however, claims his elections will be free and all parties will be allowed to participate. What the government intends to do about the National Front is not yet clear. The front has not been allowed to participate in any previous elections. Not even allowed a voice in the press, the front, supported by university students, has in the past taken to the streets. If its demonstrations have not actually brought governments down, they have helped to show up previous elections.

Mr Alam cannot arrange this sort of election again and hope to survive. On the other hand, he is unlikely to be so bold as to allow full freedom to the National Front. Antagonism between the front and the Shah is bitter; the Shah and his friends are convinced that strong National Front representation in parliament would open the way to the communists. The front's repeated denial of communist connections, or sympathies, has gone unheeded. Mr Alam may be hoping that the front will listen to reason and agree to a "clean" (as opposed to a free) election. But Dr Amini, too, tried to reach an agreement with the front and failed. Speculation on how many seats the front could win in an open fight vary wildly enough to make all present estimates useless. And the conservatives are not eager to try and find out the truth.

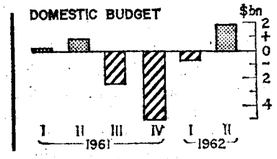
The probable contenders in the election will be the Melliyun and Mardom parties, and several right-wing groups. Both these parties were formed in 1957 on the Shah's orders. Neither is well-organised and neither has depended on popular support to win elections. Several right-wing organisations mushroomed during Dr Amini's relatively liberal administration. There are at least two new parties, one led by the powerful Mr Asadollah Rashidian, who controls the Teheran trade guilds, and another led by General Zargham, who was once minister of finance. Both men were put in prison by Dr Amini: the general for alleged corruption, Mr Rashidian for his share in fomenting last January's riot against Dr Amini. Mr Rashidian announced the formation of his party from his prison cell. Party programmes tend to be much the same; everyone is for social welfare, freedom, a healthy economy and a more equal share-out of wealth. In another country this might indicate that the politicians were paying attention to the wishes of the people.

AMERICAN SURVEY

AMERICAN SURVEY is prepared partly in the United States, partly in London. Those items which are written in the United States carry an indication to that effect, all others are the work of the editorial staff in London.



Deficits on Two Fronts



WASHINGTON, DC

THE Kennedy Administration is finding it difficult to make progress on more than one economic battleline at a time. Fighting on two fronts is a new and vexing experience for Washington policy-makers, especially when strengthening the attack on one may weaken that on the other. The Administration has had substantial success in curbing the deficit in the international balance of payments; the President himself drew the world's attention to the improvement this week and took the opportunity to reiterate that he had no intention of devaluing the dollar. The campaign to stimulate the domestic economy, however, is bogged down and Mr Kennedy is conspicuously silent about any change in his battle plans. Nevertheless, a new strategy has been evolving in the White House to cope with the changing situation. It is a question not only of waging war on two separate fronts, but also of gaining political and psychological support for any new action. This has been, and to a considerable extent still is, the stumbling block. Not unexpectedly, conservatives in Congress are against increased spending or cuts in taxes which would enlarge the deficit in the domestic Budget. A number of liberal Democrats are also opposed to new moves, while within the Administration itself there is some fear that a request for a tax reduction would be viewed as tantamount to pressing a panic button and would therefore do more harm than good.

Lately Mr Kennedy's advisers have shed most of their doubts about the advisability of a tax cut, but they have yet to convince Congress. Ever since 1958, when America's international accounts first emerged as a serious problem, there has been general recognition that the "discipline" of the balance of payments has inhibited the government's freedom to cope with the domestic economy. Yet there is an understandable reluctance to accept specific restraints. Historically, the Democrats are the party of cheap money and some of their stalwarts are prepared to attack any attempt to raise the cost of credit, whether it is to discourage the flow of capital to higher-yielding markets abroad or to prevent a deficit in the domestic Budget from being financed through the banking system. They are up in arms already at the recent rise in short-term interest rates which, through the concerted efforts of the Federal Reserve Board and the Treasury, have moved from the 2.5 per cent level to nearly 3 per cent.

Suspecting that still higher levels are in the offing Democrats in Congress have launched their own offensive against Mr William Martin, chairman of the central bank, who is being accused of pursuing a policy that is designed solely to protect the dollar abroad at the expense of growth at home. This group, of which the leading spokesmen are Senators Douglas and Proxmire and Representatives Reuss and Patman, feels that the Administration has concentrated too much of its energies on the payments problem to the detriment of domestic expansion. They point out that the deficit in the Budget for the 1962 fiscal year, which ended last month, was held down to $6.3 billion because of fears about the dollar and that in the last quarter the Government actually showed a surplus which depressed the economy.

In a sense, these Democrats are resisting the notion of fighting on two fronts; even those who acknowledge that the deficit in the international account requires attention regard the domestic theatre as the more important battleground. If sacrifices have to be made, they feel that the foreign front should bear the brunt. This line of thinking is not shared by another formidable group of Democrats in Congress, who fear the addition which a tax cut would bring to the domestic deficit already in sight for this year. They are alarmed not because of the payments problem, but simply because their constituents are suspicious of big deficits. Winning over these two disparate groups of Democrats calls for all the political sagacity and talent for compromise that Mr Kennedy can command.

On the surface he may appear to be fumbling, weighed down with indecisiveness and doubt. This is the obvious explanation for his desire to wait until early August, when the economic statistics for July will be available, before deciding on what steps, if any, he should take. But the summer is a notoriously poor time for an accurate reading of the state of the economy and another month of waiting will not by itself provide any compelling new evidence for or against a tax cut. These few weeks, however, are what the Administration feels it needs to win widespread support for such a move. The machinery for a shift of policy has been set up by getting Mr Wilbur Mills, the influential chairman of the House Ways and Means Committee, to hold hearings on the state of the economy. If the committee finally decides off its own bat to ask for a tax cut, then President Kennedy will have clear sailing for his request.

FROM Mr Kennedy's own point of view the idea of a tax cut could not have been entertained without an improvement on the international front. But this is precisely what there has been. Though there is still considerable scepticism about the way in which the international deficit has been reduced, the Administration insists that there has been a steady and accelerating reduction in the basic problem, quite apart from the inflow of funds from Canada during the first half of the year and the prepayments of debt by the French and Italians which will show up in the third quarter. Officials complain, with some justification, that the series of remedial measures which have been initiated are being overlooked or belittled in the currency markets which are not reflecting, therefore, the marked restoration in the dollar's strength.

The Administration's willingness to predict the reduced size of the payments deficit contrasts with its reluctance to estimate the Budget deficit. Mr Robert Roosa, the Under Secretary of

the Treasury for Monetary Affairs, has predicted that the adverse balance on the international account this year will be between $1 and $1.5 billion compared to $2.5 billion last year. Mr Kennedy expressed confidence that the account would be satisfactory by the end of 1963 and privately some officials are hoping to reach the target date even earlier, provided that the Europeans step up their procurements of military equipment in the United States. There is some danger that the Administration's crowing over its record will encourage, rather than dampen, uncertainty; after all, the deficit is not going to disappear overnight and there seems bound to be an increase in the fourth quarter.

Nevertheless, the administration's attempts to counter doubts about the dollar indicate that it is preparing the ground for action on the domestic front. Officials have no intention of proposin a stimulus in the form of a tax cut only to have it n...ated by a restrictive monetary policy. Instead, they are ...nvinced, and are in the process of trying to convince everyo... else, that the dollar will not be imperilled by a clear-cut exp...sionist programme featuring lower taxes.

There are risks in such a policy. ...Congress voted a reduction of, say, $7 to $9 billion in inco... taxes, effective on October 1st, this would probably spark a new wave of consumer buying which would be reflected in an increased demand for credit. With Mr Martin on record as unwilling to provide all the funds required to finance the government deficit, this would mean higher interest rates and the financial community might push up the rate structure in anticipation. But there is a limit to the amount of financing that the Treasury can carry out in the long-term market and the Federal Reserve Board is well aware that it will have to provide reserves to help finance the deficit in the Budget. The money managers will not, of course, make credit as easily available as they have over the past eighteen months but, with less pressure on the dollar, they need not embark on a really restrictive policy.

Congressional Democrats would not object too strenuously if short-term rates moved up gradually to the 3½ per cent level and long-term rates registered a proportionate advance. Officials in the Administration and even in the central bank feel that it would be undesirable to see interest rates get much higher than that over the next six to twelve months unless there is a renewal of inflationary pressures or a resumption of boom conditions. In fact there is some feeling that in spite of the advice which is coming from abroad, advocating a higher rate of interest in America, Europe, and particularly Britain, might be embarrassed by too steep a climb.

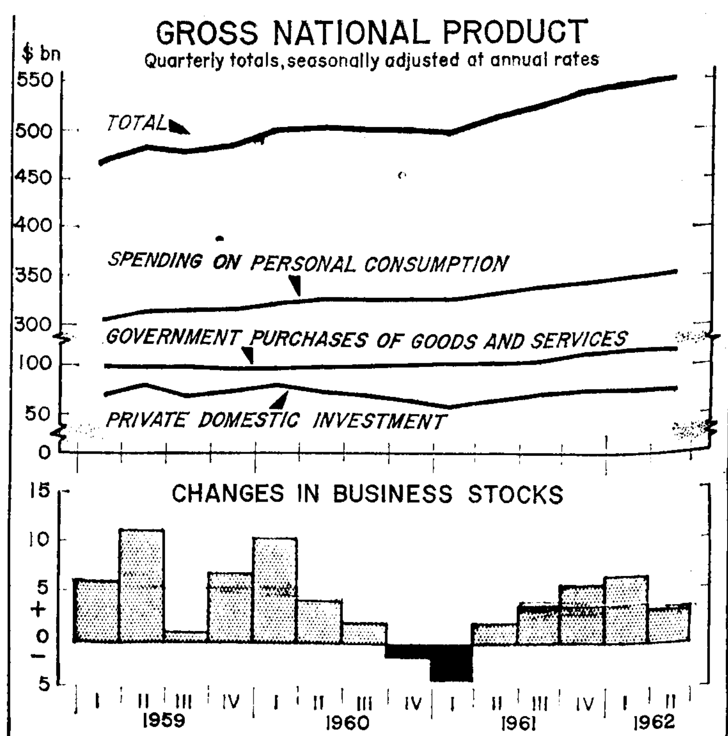
An immediate reduction in taxes would mean a total deficit of well over $10 billion in the current year's Budget and this could bring some new questioning of the dollar by Europeans. This is not the only risk that the Administration is weighing. Without tax cuts to offer, it is doubtful whether it will be able to get approval next year for the thorough-going tax reform Bill which is admittedly overdue; in addition there is always the danger that a reduction in taxation will not stimulate growth effectively. But the risks of doing nothing appear even greater. Mr Kennedy's election campaign was keyed to his pledge that he would get the economy moving forward and his image as a man of action has been badly tarnished with the slow-down in the rate of growth and by his own current deliberation. He cannot hope to pin the label of "stand-patters" on the Republicans if he himself puts off any action. For if the economy did falter the failure to make a request for lower taxes could damage his political fortunes severely. Moreover, any downturn in the domestic economy would almost certainly have repercussions on the payments deficit. While a decline in business would mean a cut in imports and probably therefore a rise in the surplus on the trading account, there would be a risk of encouraging an increased outflow of capital seeking either higher yields or more attractive opportunities for investmeny Adminis-oad.

This shift in strategy is not one which the ...nises ...hat a tax tration is undertaking with any relish. ...olve the fundamental reduction is not a panacea and will... that it carries a threat to problems confronting the econo...should give the Administration the dollar abroad. But a ...es and to plan a much more vigorous further time to regroup... and the general under-utilisation of re- assault on unemplo... plaguing the economy, without endangering sources which ...uly. Mr Kennedy may still change his mind and the dollar ...inst any overt moves, but at this juncture his apparent decide ...uation of the waiting game is purposefully deceptive. He ...tends to use the next few weeks to win acceptance of his strategy of concentrating on two fronts at once, hoping to gain ground on both of them.

Not Gross Enough

America's total output of goods and services went up in the second quarter of this year but by little more than in the first quarter and by far less than during the second half of last year. In January the official forecast of the gross national product for the April-June period was an annual rate of $565-$570 billion; in fact it ran $13-$18 billion below this. The only really substantial gain in the period was in spending by consumers, particularly on durable goods; outlays for these had actually declined in the first quarter. So had investment in new construction which also rose substantially between April and June. But there was a sharp falling-off in the rate at which businessmen invested in new stocks; this was largely because the threat of a steel strike had led to an unusually heavy advance accumulation of supplies in the first quarter.

For this reason and because stocks are now near their minimum level they may be built up more rapidly during the rest of the year. Another depressing factor in the second quarter was the slower rate of increase in government spending; this also may be accelerated from now on and during the next six months the government will be putting more into the economy than it takes out of it in tax receipts. While it does not look, therefore, as if economic activity is actually about to decline or even to stop expanding, there is no sign that it is about to grow at what the Administration would regard as a satisfactory rate.



Change for the Chiefs

General Norstad's retirement at the early age of 55 from the United States Air Force and from being both the American and the allied military leader in Europe is not the surprise that some reports have suggested. He has been in his present gruelling job for six years; he has not been in the best health; and it has been known for some time that he wished to leave. Presumably his desire for a change is partly the result of disappointment that he did not get stronger support from President Kennedy for his idea of a European nuclear force. And Mr Kennedy may feel that a new military representative might be more able to penetrate President de Gaulle's intransigence. But certainly General Norstad had President Kennedy's full confidence and no pressure was put on him to resign.

Nevertheless, the resignation has given Mr Kennedy a welcome opportunity to reshape the top military command in the United States to his own pattern. General Lemnitzer, who replaces General Norstad in the autumn, was already chairman of the Joint Chiefs of Staff when Mr Kennedy became President. By sending him to an equally if not more important job in Europe—the only one there is at that high level—Mr Kennedy saves himself the embarrassment of having to explain why he is not reappointing a man for whom he has the highest respect and regard. Mr Kennedy has found the Joint Chiefs—consisting of the three heads of the services and a chairman—an argumentative group which does not always give him the clear, decisive advice which he expects, particularly in a field where he lacks first-hand knowledge (or did when he took office). For that reason, following his usual habit of providing himself with a choice of expert opinion, he asked General Maxwell Taylor to be his personal military adviser, a challenge to the authority of the Joint Chiefs which they did not appreciate. Now General Taylor himself becomes their chairman, even though he is an Army man and it was the Navy's turn for the chairmanship; and the present Army Chief of Staff is being replaced by General Wheeler, brought up from a comparatively low position because he has the President's confidence. The Navy and Air Force Chiefs are both Kennedy appointees.

General Taylor's move relieves the Joint Chiefs of one threat to their influence, but it brings another. For he has long favoured the idea of a single Chief of Staff rather than the present group of four equals. This does not appeal to the other services; nor are they entirely happy about the defence policy which he resigned from the Army in 1959 to advocate publicly—a "flexible response" with conventional forces as an alternative to massive retaliation with city-destroying missiles. General Taylor has sold this policy, in part at least, to the present Administration. But since flexible warfare requires plenty of soldiers General Taylor advocates a substantial increase in the size of the Army, at a cost which the civilian authorities in the Department of Defence will not accept. The Chiefs of Staff may now all be President Kennedy's men, but they will not be his yes-men.

Starring Space

The strange sense of inferiority which European culture often inspires in Americans was revived by the first formal exchange of television programmes through the Telstar communications satellite; some American critics berated as superficial and banal their country's offering of baseball, Cape Canaveral and a Red Indian in exchange for the Sistine Chapel, *Tosca* and the Winged Victory of Samothrace. The morning-after assessments should have been cheered by the fact that the first live presentation to Europe of a presidential press conference brought the almost immediate granting of Mr Kennedy's wish to strengthen the dollar; following his insistence that there would be no devaluation, gold shares fell swiftly on the London Stock Exchange. Naturally, Americans did not appreciate how favourable was the impression made upon Europeans by the (to them) rare spectacle of a head of state submitting himself willingly, even eagerly, to a battery of spontaneous questions from the press. The exciting glimpse of the Chicago-Philadelphia baseball game, moreover, was as enlightening to Europeans as the display of the medieval works of religious art in Communist-dominated Jugoslavia must have been to Americans.

With the abrupt emergence of Telstar as a household reality, several liberal Democratic Senators, led by Mr Kefauver of Tennessee, are intensifying their fight against the Bill to allow the future commercial system of communications satellites to be owned by an especially established private corporation. The Bill, backed by President Kennedy and already approved by the House of Representatives, would allow ownership to be divided equally, through shares of $100, between the communications companies and the general public. Liberal critics say that this would be a "give away" to the American Telephone and Telegraph Company, which could dominate the corporation and might hinder the development of technically superior satellites with orbits 22,000 miles above the earth; AT & T research has been concentrated largely on satellites with low and medium orbits, such as Telstar, which can be put more quickly into commercial service.

All in all, the American space programme has had a busy fortnight. In Congress, Senate and House conferees have agreed to authorise $3.7 billion for civilian space projects this year. Over the mid-Pacific, an Army Nike-Zeus became the first missile known to catch another; the success, however, did not alter the scepticism of the Secretary of Defence about whether the Nike-Zeus is really the answer to the country's anti-missile missile prayer. Such caution could well have been imitated by the National Aeronautics and Space Administration, which chose instead to announce a new, cheaper and riskier "lunar ferry" scheme for

July 10—Telstar, the 170-pound communications satellite, was launched from Cape Canaveral into an orbit 593 miles above the earth at its lowest point and 3,502 at its highest.

July 11—The National Aeronautics and Space Administration announced the adoption of the "lunar ferry" plan (three astronauts in a mother ship from which two would venture to and from the moon in a smaller dinghy) as a faster and cheaper way of putting Americans on the moon.

July 17—Major Robert White flew an X-15 rocket plane to a height of 58.7 miles over Nevada—the highest altitude ever reached by a winged aircraft.

July 18—The largest object ever to be put into space—a balloon 13 stories tall—inflated itself from a small cannister shot 922 miles over Cape Canaveral; it was the forerunner of the experimental passive communications satellite, Echo II, to be launched in the autumn.

July 19—For the first time, a US Army Nike-Zeus missile intercepted an Atlas intercontinental ballistic missile, over Kwajalein Island in the Pacific, 4,800 miles from California where the Atlas was fired.

July 21—An Atlas-Agena B rocket and a spacecraft, the Mariner I, headed on a journey of 224 million miles to study the planet Venus, but were destroyed after less than four minutes of flight when the rocket veered off course.

getting Americans on the moon by 1970. Even the new plan leaves the cost of this Project Apollo at around $20 billion and NASA officials admit that, if the two astronauts in the ferry fail to make their rendezvous with the mother craft waiting in lunar orbit, they will have small chance of thumbing a ride home.

Moving Congress Ahead

On Monday, with his domestic programme lying in ruins about him, President Kennedy proclaimed a holy war against Republican negativism and obstruction. This opening shot of the congressional election campaign reflects the President's conclusion that he cannot fulfil his own pledge "to move this country ahead" without a shift in the balance of power in Congress which only the voters can give him. Mr Kennedy did not ask for very much—five or ten more Democrats in the House of Representatives and one or two in the Senate. But this is more than he is likely to get. Even at his Telstar press conference he admitted that for the party in power to increase its congressional representation in an off-year election, when the Presidency was not at stake, was almost unknown. It has not happened since 1934, in the first flush of the New Deal. Mr Truman campaigned successfully against another "do-nothing" Congress, but that was in a presidential year and, luckily for Mr Truman, his own party was not in control of Congress.

The Republicans are very scornful of Mr Kennedy's "cry-baby" call for the election of more Democrats to Congress when his party has such substantial majorities there already; they point out quite rightly that Democratic votes—most of them from Southerners—have helped to defeat Mr Kennedy's Bills. It may even

Master Builders

FROM A CORRESPONDENT IN NEW YORK

Putting up a building, which was once an art, has been reduced to a science. Architects can now design a structure and feed the specifics into a computer, which will tell them how to organise the actual construction. Then prefabricated components (girders, walls, etc.) are ordered from a factory, shipped to the building site and hoisted into place by teams of highly skilled workmen, who resemble technicians rather than craftsmen to an increasing extent.

An example of this assembly-line technique in action is provided by the Pan-Am building in the centre of Manhattan which, when completed early next year, will be 59 stories high and the largest commercial office building in the world. Mr Cotton, the British property magnate who put up half of the $100 million which it is costing, was deeply impressed with the fact that all the basic construction work for this 830-foot building was done in seventeen months—and without causing a single train in the station underneath to be delayed or diverted.

The building is constructed of steel shipped to the site above Grand Central Station from a storage yard in New Jersey. Because of the extraordinary congestion in this particular area, materials must arrive on schedule and be put in place promptly. Seven derricks, which have handled as much as 1,200 tons of steel in a day, hoist it on to the building. Workmen have the steel bones of the building erected at the rate of two floors to a 35-hour working week.

Hard on their heels are other iron workers who lay a steel floor deck which contains special raceways for electrical systems. Behind them come the electricians, installing wiring in the raceways, and behind the electricians come pourers who cover the deck with a concrete floor surface. Workmen armed with guns shoot asbestos foam at the underside of the decking to fireproof it; plumbers, steam fitters, and men in the finishing trades follow them. The curtain walls (so called because they do nothing to support the structure) are made of precast concrete panels, each of which contains a window frame. These are hoisted up the side of the building by one crane, transferred in mid-air to another one which operates on a monorail and finally shunted along the side of the building to the point at which they are to be bolted into place. On the average, it takes the one thousand workers involved in the Pan-Am job seven to eight days to complete a floor.

Prefabricated components cost more than traditional building materials but, beside saving time, they have other distinct advantages. They are constructed in controlled environments where each individual piece can be examined and tested thoroughly. They facilitate construction since much of the assembling can be done from the inside of a building working out, instead of from the outside working in; they also permit the finishing trades to get at the job more quickly.

The critical cost in building is labour and contractors are introducing several innovations in attempts to cut wage costs. The lifting of materials has posed one major problem, particularly in the construction of tall blocks of flats and offices made of concrete; 30 stories has been about the limit for them. The standard procedure has been to use a crane parked in the street, which hoists a huge bucket of concrete up over the top of the building and deposits it in a container. Workmen, driving small dumpers, scoop up the concrete and spread it over the floor. Now, however, use is being made of the tower crane, which has long been in operation in Europe and which takes the concrete to the place where it is needed. Tower cranes can be anchored to the central lift shaft and jacked up floor by floor as the building rises. One contractor says that with the tower crane it will be possible to construct a 100-story concrete building if need be. Helicopters have also proved a great help in hoisting—for example in lifting ventilators to roof tops.

Concrete is extremely popular, for it is cheap and does not require the fire-proofing necessary in steel construction. Prestressed, precast concrete has been used successfully in bridges and now competes favourably with steel as a structural building material. One contractor, using conventional materials, was able to construct a 19-floor block of flats at an average rate of three stories a week by using concrete.

New methods in joining materials together also promise to save time. The rivet gun is all but silent in New York, because as a rule steel is now bolted together and welded. The development of epoxy resins makes it possible to glue concrete to steel and may make it possible to glue steel to steel. Plastics, which compete on favourable terms with aluminium and glass in curtain walling, now have various other applications. They are used for piping, partitions, flooring, facing for concrete blocks, ceilings and flashings. They also show signs of becoming a major structural material: entire buildings have been constructed of foam plastics and plastics in various forms are used for roofing.

The SAS big three divide the world between them. Three highly specialized types of aircraft, each perfectly matched to the SAS route on which it operates. Each reigns supreme in its class. The right jet for the job means even faster service and even greater comfort for our passengers.

be, as the President himself is said to fear, that the country is too contented to vote for change. And if it does, Congress as an institution may be too parochial, too conservative and too wrapped up in petty interests to rise to national issues.

Pessimists can point to the stubborn and irresponsible feud between the Senate and House appropriations committees which has just been settled. It has held up all appropriations Bills for three months, but the House committee apparently considers this a small price to have paid. For the rest of this session conferences between representatives of the two groups to adjust differences in Bills will meet on half-way ground, not, as has been traditional, at the Senate end of the Capitol, and on some occasions the chairman will be a member of the House ; for a hundred years every chairman of such a conference has been a Senator. Last week the honour went to a Representative by the flip of a coin. A special committee is to go into the whole matter and report in January. This costly quarrel reflects no credit on Congress but Mr Kennedy can hardly exploit it ; both of the stubborn old chairmen involved are Democrats.

No Missile Strikes

OVER the weekend trade unions representing workers in the missile and space field agreed, in response to a plea from the President, to put off their threatened strike for sixty days. This will give a three-man team of government mediators time to try to arrange a settlement. Also, in all probability, Congress will have dispersed by the middle of September, taking with it the likelihood that it might pass hasty legislation banning a strike at the 51 missile plants, testing sites and bases which are involved. Congressmen are already exasperated by the persistence of unofficial stoppages, caused by inter-union disputes, at missile bases. But an official strike of any length seems improbable. The trade union leaders know that it would be regarded as intolerable and not long ago the Secretary of Labour said that he would not hesitate to ask Congress to intervene if a big walk-out took place. If a settlement has not been reached in September Mr Kennedy could still ask the courts for an injunction under the Taft-Hartley Act which would postpone a strike for another eighty days—practically until Congress returns in January.

It is precisely because they realise that they cannot afford to strike that the trade unions in the "aerospace" field feel that the government should help them to obtain fair terms for their 300,000 or so workers. They also point out that the government buys about 90 per cent of the industry's products. Wages are not the prime issue, although it is argued that workers in the aerospace industry have been falling behind ; they earn less than automobile and steel workers. The two trade unions involved are even more concerned because none of the big companies in the industry accepts the union shop (under which all workers hired must join the union) and because there is no system of company unemployment benefits to supplement those provided under state schemes, such as other workers enjoy.

This is particularly important in the space and missile fields where a government decision to halt a given project may throw thousands out of work. The unions received some satisfaction on both these scores—as well as moderate increases in wages and other benefits—in the settlement reached last week with the Douglas Aircraft Company ; this employer agreed to begin setting aside money for a system of supplemental unemployment benefits, on which negotiations would begin before the new three-year agreement expired, and accepted the agency shop. This provides that non-union workers must pay the equivalent of dues to the union and is often a forerunner of the union shop. This is just what the other companies fear, although it is said that the Aerojet-General Corporation is also prepared to accept the agency shop.

Non-violence on Trial

NEGROES in Albany, a city of 60,000 in the south-west corner of Georgia, observed a day of penance on Wednesday for the stones thrown at the police the night before and Dr Martin Luther King, the leading exponent of non-violent resistance to racial oppression, said that peaceful demonstrations might have to be suspended if members of the Negro community could not hold themselves in check. This was the first real violence offered by any of the city's 24,000 Negroes in eight months of marches and prayer meetings to secure their constitutional rights. It took place when the police arrested a group that was on its way to the City Hall without a permit for a demonstration. The stone-throwers were not members of the Albany Movement, the local organisation which is attempting to end racial discrimination. But any violence undermines the moral authority of the movement ; it also provides an excuse for further repression. Mr Vandiver, the Governor of Georgia, lost no time in offering to send in the state National Guard to preserve order.

Over 900 Negroes have been arrested since last December when their clergymen, who had been trying since February to have racial segregation relaxed, began to lead groups to pray and sing hymns outside the City Hall. They were protesting against the arrest of "freedom riders" who were trying to end segregation at the bus and railway terminals. Only a handful of leaders, including Dr King, has been brought to trial and their fines were paid for them, much to their annoyance, so that they could not suffer for their principles. The city is still holding the threat of prosecution and prison over the heads of the rest. One of the Negroes' basic demands is that these trials should take place or the charges be withdrawn ; others are that discrimination in transport should end and that the city commissioners should discuss with them in good faith other steps toward desegregation—in the schools, swimming pools and so on. Up to now all negotiations have been handled by the chief of police.

It was not till last week that the Negroes decided to ask the courts to order an end to racial discrimination in all public facilities. They think the courts move too slowly and their faith in the judicial process was not increased when the federal district judge, at the request of the city, issued an order forbidding a number of Negro leaders and organisations to take part in protest marches, boycotts of white tradesmen and other peaceful demonstrations. But this order has been over-ruled by a higher court and Dr King's own experience in Montgomery, Alabama, ought to have taught him that direct action, however valuable, needs to be buttressed by the courts. The remarkable boycott of the buses which he led there did not succeed until the courts intervened.

SHORTER NOTES

This year's Sugar Act was no sooner signed than it was amended, by means of an addition to a Bill prohibiting the importation of adult honey bees from countries where the bees are diseased. The amendment will mean a substantial increase in the amount of sugar which may be imported from the Dominican Republic, will allow Argentina to send sugar to the United States for the first time and will enable refined sugar to be imported from Eire.

* * *

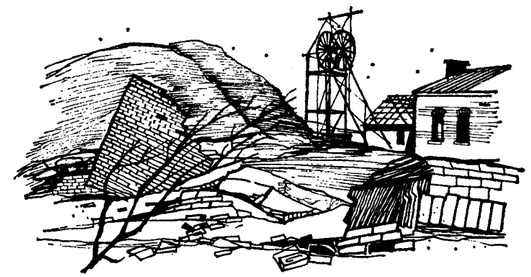
Mr George McGovern has given up his White House post as head of the Food-for-Peace programme in order to run next autumn in South Dakota for a seat in the United States Senate as a Democrat. He used to be a member of the House of Representatives from that state. He will be succeeded in the White House by Mr Richard Reuter, who has much experience of administering international relief programmes.

HOME REPORT

Members of the editorial staff and local correspondents report on life and happenings in and around Britain

North-Eastern Anglers

FROM A CORRESPONDENT IN DURHAM



The image Mr Chetwynd's NEDC doesn't like

NORTH-EAST England is one of the regions that badly needs to attract new industry, without always being wholly sure of how to go about it—as Monday's debate in the Commons demonstrated. The instinctive reaction is to ask for more Government money. In his first annual report Mr George Chetwynd, who left the Labour front bench to become director of the North-east Development Council, has complained that in 1961-62 Government loans and grants for his region amounted to only £433,000, compared with £10 million for Merseyside and £14 million for Glasgow and central Scotland. But like its rivals the Scots, who produced the Toothill report last year, the north-east feels that a further bout of rigorous self-analysis may turn up more clues about why private capital has been passing it by.

In March, Mr R. Wood, the northern regional controller of the Board of Trade, called for an authoritative economic survey of the region. Now his wish will be doubly granted, for not one, but two, surveys will begin this autumn. The more ambitious one is to be undertaken by the Social Studies Department of Durham University. It will study social as well as economic problems and will take up to five years, although interim reports may well be published annually. It is being paid for by a grant of £18,150 from the Joseph Rowntree Memorial Trust. The second survey will be by the North-east Development Council itself. Here the aim is to produce something quickly, possibly by next May, in the hope of influencing the Government when it is considering new legislation on aid to development districts. The cost of this survey is not yet known, but it will have the aid of Ministry of Labour staff, and "basic statistics" provided by Government departments.

The north-east is certainly feeling the draught. Shipbuilding and steel are both suffering from a lack of orders, and coal mining is undergoing a reorganisation which will mean the closure of uneconomic pits. The bottom has dropped out of the market for Durham coking coal. Only heavy engineering and chemicals seem to be relatively stable. Heavy engineering firms are spread around the north-east, but the major chemical concentration is on Teesside, where Imperial Chemical Industries has its giant plants at Wilton and Billingham. Even here, technological changes will mean a smaller labour force.

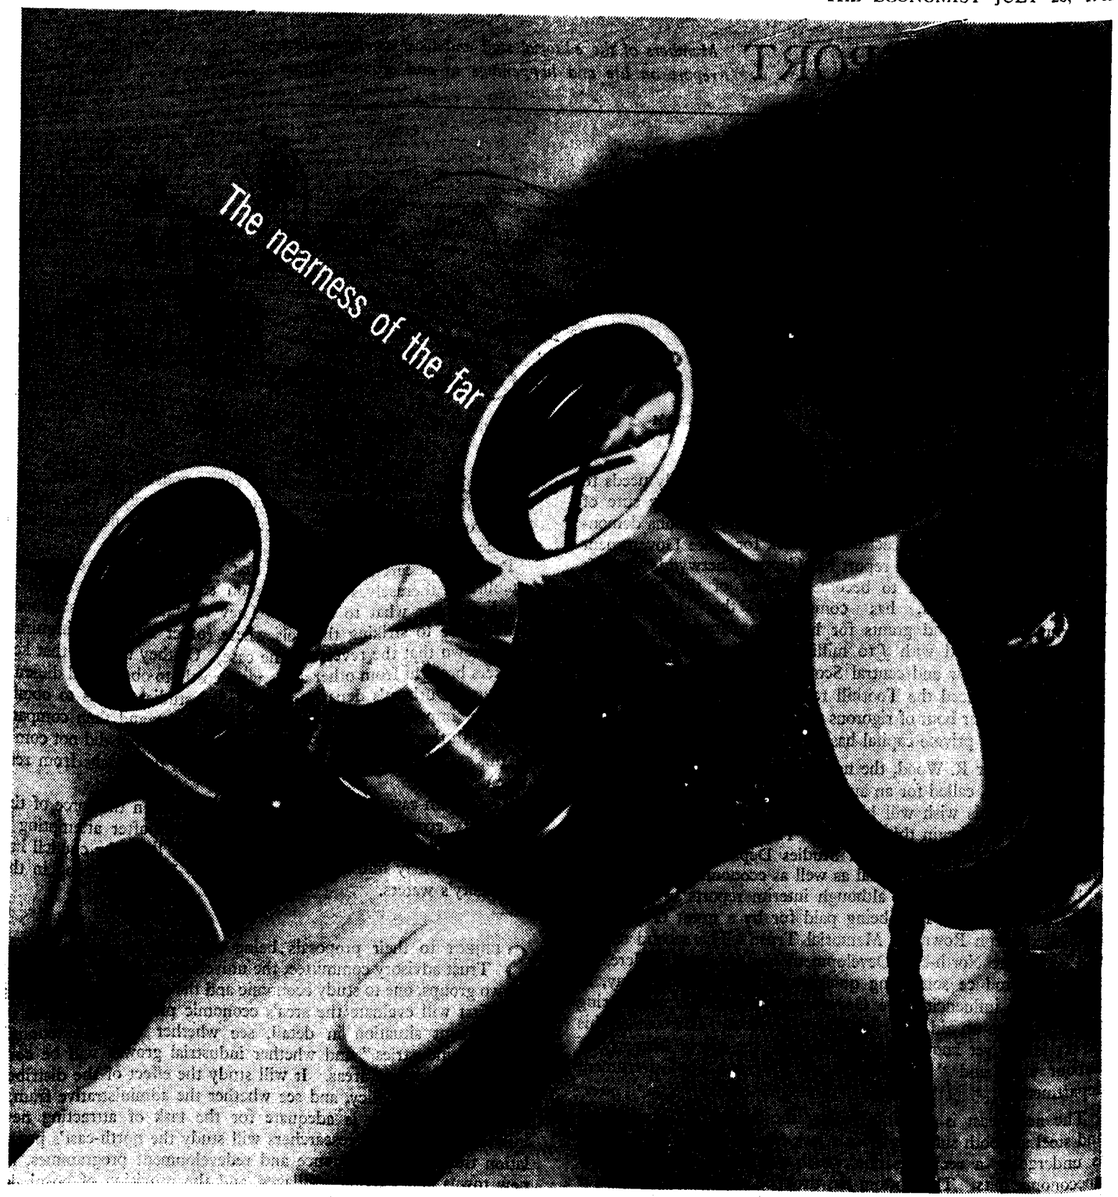
New industries have come and are coming to the area, but not enough. Too many firms send their executives to look at the possibilities and then decide to go somewhere else. One result is that local conferences called to discuss industrial development often seem like angling club meetings. The main topic is the size of the fish that got away. These fish that were not hooked have fascinated the Durham university economists for a considerable time, and as a result will play an important part in their survey. They intend to approach the firms which shied away from the north-east and ask them why.

Previous research has shown that firms which have actually established themselves in the region sometimes had misunderstandings over what to expect. They thought north-east labour more prone to striking than elsewhere (other university inquiries have shown that the reverse is the case). Or they thought that key workers brought from other areas were costly to obtain and difficult to keep. Durham's department of social studies means to obtain the later impressions of these immigrant firms and then compare them with the impressions of firms which looked but did not come. In this way it is hoped to separate mythical drawbacks from real ones.

The North-east Development Council has seen the force of the university economists' argument, and hankers after attempting a similar comparison. However, with the time limit the council has set itself, it may find it has enough to do without fishing in the university's waters.

SUBJECT to their proposals being approved by the Rowntree Trust advisory committee, the university researchers will work in two groups, one to study economic and the other social problems. The first will evaluate the area's economic prospects, examine its employment situation in detail, see whether there are enough "growth industries" and whether industrial growth will be concentrated in certain areas. It will study the effect of the distribution of industry policy, and see whether the administrative framework of the region is adequate for the task of attracting new industry. The social researchers will study the north-east's population trends, slum clearance and redevelopment programmes, its new towns and "dying" villages, and the provision of hospitals, educational facilities, and social amenities.

Mr Chetwynd wants his council's survey to concentrate on economic growth and the employment problem, and hopes that as well as having an effect on the Government it will give industrialists an idea of what the area will be like in five or ten years' time. He feels there is a real need to get the facts: "It may be only a small fault which could easily be put right, or it might be a fundamental objection to the north-east which only a sustained publicity campaign can overcome." He says that his inquiry will not cover the same ground as the university's, and that in any event there is room for both. Considering all the problems facing the north-east, he is probably right.



Binoculars widen horizons, enable you to see further and more clearly. ISR widen industrial horizons by providing a range of synthetic rubbers applicable in every industry. Binoculars show you things you might otherwise miss. ISR use their vast technical knowledge to advise British industry on the most economical and efficient methods of using synthetic rubber. Binoculars enable you to plan in advance—so do ISR.

Crisis at The Royal

FROM A CORRESPONDENT IN BRISTOL

Bristol has always had its fair share of the arts, but often enough at a cut price. The burden on the rates has been small: about one-seventh of 1d. in the £ has been the normal limit of the corporation's enthusiasm for culture. But now the Arts Council has decided not to renew its 21-year lease on the old Theatre Royal, home of the Bristol Old Vic. The lease expires next year, just before the building's 200th birthday. The city council, the only alternative leaseholder, has been served notice that it must accept responsibility for what belongs to Bristol.

If the corporation has any self-respect it cannot afford to shy away from its responsibility. But its criteria for deserving cases are sometimes felt to be a trifle too philistine. A recent Gilbert and Sullivan presentation at the municipally-owned Colston Hall was a sell-out, but failed to cover its production costs. The corporation benevolently agreed to help out because the show had been demonstrably popular. But the Paragon Orchestra, which showed a £161 deficit after a Colston Hall concert last November, has been warned by the council that it will not be so generous with its assistance in future.

To criticisms that it panders solely to mass culture, the corporation replies stiffly that its policy makes economic sense to the thousands waiting for council houses, and the city's entertainments committee rightly points out that there is little prestige or educational value when a choir, orchestra or drama group play to a near-empty house.

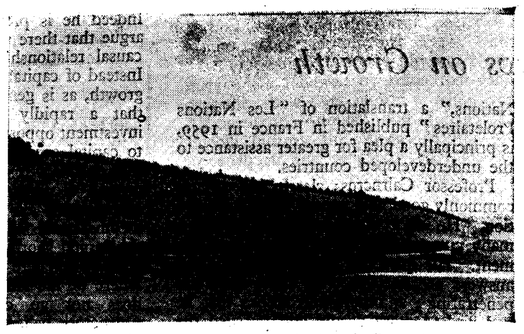
But, say the critics, this means that progressive works without box office appeal will eventually be frozen out of Bristol, as a place that artists will learn to avoid. This year the corporation decided there should be more consultation over programmes with orchestras visiting Colston Hall. Thereby hangs a tale. The Indian Paranjoti Chorus, a pretty good example of unconventional cultural entertainment, had played to packed houses on the Continent but it attracted only 49 people to the Colston Hall (seating capacity 1,900). The takings on that terrible occasion were less than £10. The corporation felt that its point had been made.

The Theatre Royal, and its company, depend on an annual grant of £14,000 from the Arts Council; Bristol corporation's annual grant to the theatre is £250. There are those who think this stingy. The repertory company in Birmingham got £5,000 from its local authority last year, besides £14,000 from the Arts Council; even Cheltenham gave £1,000 to its theatre. The Arts Council's decision to rid itself of the Theatre Royal lease is said to be prompted by its general desire to drop administrative responsibilities. It is probable that most of the present £14,000 grant will continue to go to the resident repertory company. But the crisis in the affairs of the Theatre Royal has now coincided with the decision to establish a national theatre, which will eventually result in the disbanding of the Old Vic Company, of which the Bristol Old Vic is a part. It is not clear what the Arts Council will do then. It is thought locally that there will be a better chance of a sizeable grant if the new repertory company is at least based on the lines of the Bristol Old Vic (possibly with some carry-over in membership), than if the corporation set up a completely new local group with new programme policies.

When the Theatre Royal last faced a big crisis (it was about to become a warehouse in 1941) the Council for the Preservation of Ancient Bristol raised £10,000 to save it. Visiting entertainment companies need not look on this as a sign that Bristol corporation, too, goes in for philanthropy on a big scale. If it does its duty by the Theatre Royal it will consider that it has done enough; Maecenas never was a vote-catcher anyway.

Through Vale or Downs?

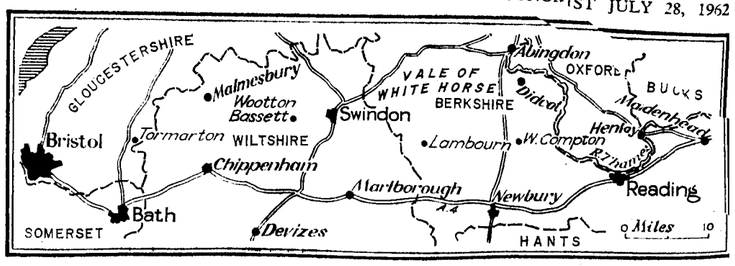
FROM OUR SPECIAL CORRESPONDENT



All roads lead to rows. The latest has been raised by the men of the Berkshire Downs, where, it is foretold, the maidenly countryside is soon to be violated by the rapacious planners of the Ministry of Transport in their siting of the projected South Wales motorway, M4. It is not contested that such a motorway is necessary to improve the traffic flow from London to Swansea; in the end necessity will prevail, in one way or another. What has roused the downsmen is the way in which it should prevail.

When M4 was first planned its route was supposed to lie in much the same course as the present Great West (or Bath) Road as far as Chippenham in Wiltshire, thence northward through Tormarton to the new Severn Bridge and Wales. But signs and portents to be read in the Berkshire and Wiltshire countryside (and in severely restricted handouts from the Ministry) indicate the consideration of two routes alternative to that. One would cross the Downs through West Compton, Lambourn and Wootton Bassett, passing close to the south of Swindon. The other would thread along the Vale of the White Horse, through Henley, Didcot and possibly Malmesbury, passing to the north of Swindon but to the south of Abingdon. Both would begin at Maidenhead, the present westward limit of work on M4, and rejoin the original route at Tormarton. Both seem to be designed to attach the rising industrial town of Swindon umbilically to its sources of material (the steel industry of South Wales) and its markets. Swindon, since its main employer is Pressed Steel Limited, car-body makers to the British Motor Corporation, is part of the Oxford industrial complex; and if the vitality of that complex is to be maintained it will be necessary to give it some system of communications more efficient than the country roads on which it now depends. A motorway which served the southern part of it, Swindon and Abingdon, would be a helpful start—and a welcome relief to pleasure motorists at present terrorised by the industrial traffic on their narrow roads.

The existing, and static, industries of Reading, Newbury and Chippenham, meanwhile, would be left to rub along as best they could with the existing road which can be expected—at least in the short term—to carry less traffic than it now does after the diversion of through traffic to the motorway. If for this reason alone, it would not seem sensible to run M4 next to the Bath Road, since there it would replace an almost adequate trunk road (which nobody would use with a motorway available nearby) instead of complementing it, as it would if sited further away.



ALL this argues for one of the two supposed alternative routes. But neither would be borne easily by the people who live in the pleasant country between the Bath road and the grim beginnings of the midlands. Both in the Vale and on the Downs opinion is being mobilised (with the backing of agricultural and rural preservation bodies) into the sort of groups which have some chance of confounding ministerial plans. The Downs Preservation Committee has already published its manifesto, proclaiming its intention of "preserving the Downs for all legitimate purposes." Their case against the road is not one which will cause perturbation and rethinking in the ministry. It is based on the disruption of agriculture—which is a small price for Britain, as a whole, to pay for a free flow of blood to the west; the discomfort of racehorses faced with the crossing of this putatively humming artery—which is an even smaller price to pay if the ministry's thinking is valid; the Downs' adverse weather—which is disadvantageous but by no means a bar to a motorway, properly built; and the destruction of the countryside. This last is worth consideration: the Downs are, after all, the last "undeveloped" part of southern England, and the tremendous cicatrice which the roadbuilders' operation leaves behind would undoubtedly devalue their natural beauty, cutting as it would right across the north-south grain of the country. But if the Downs route is the only feasible one, that should not be an ultimate sanction against M4: wherever the road is to go, somebody's delightful panorama will be harmed.

As far as the ministry has permitted anybody to know, however, the Downs route is not the only feasible one. It has at least one advantage in being seven miles shorter than the others; but planners, conscious that a motorway costs £650,000 a mile, may be naturally inclined to lay too much stress on that. There seems to be some case for favouring the Vale route to the north on other grounds. That route would more usefully serve Swindon, the apparent focus of the Government's plans; it might even be cheaper, since successive cutting and embankment would be unnecessary on the flat floor of the Vale, which runs east-west. Furthermore, it is said, the interference with the dairying of the Vale would be slighter, and in any case more easily borne by the country, than the disturbance of the cereal-growing Downs; and being wooded, neither the effects of weather nor the degrading of the view would be as great in the Vale as they would be on the exposed and naked Downs. The argument should not be treated as settled yet.

BOOKS

Contrasting Views on Growth

Factors in Economic Development
By A. K. Cairncross.
Allen and Unwin. 346 pages. 35s.

The Underprivileged Nations
By Pierre Moussa. Translated by Alan Braley.
Sidgwick and Jackson. 217 pages. 30s.

THESE are contrasting books: one by a gentle sceptic; the other by an enthusiast. "Factors in Economic Development" is a collection of "essays, guesses, and addresses" prepared by Professor Cairncross over the past ten years. It covers a range of subjects: the work of an economic adviser; a visit to Moscow; the problems of the underdeveloped countries; questions of planning; and some others. But the heart of the book lies in a long list of papers on investment and technical progress and in a rather shorter group on international trade. "The Underprivileged Nations," a translation of "Les Nations Proletaires" published in France in 1959, is principally a plea for greater assistance to the underdeveloped countries.

Professor Cairncross clearly has an uncommonly good nose for the pertinent question. He is sceptical, and rightly so, about many current ideas on economic development. His questions are stimulating. His answers are variable. At times they are penetrating; at others one wishes that he had probed more deeply and pursued the facts more intensively.

A development of the past twenty years in our understanding of the process of growth has been a realisation that capital accumulation by itself is not sufficient. Indices of the volume of investment in a country are not sufficient indicators of its prospects for economic expansion. A good deal of the credit for the wider understanding of this point must be given to Professor Cairncross. A number of the essays in "Factors in Economic Development" are restatements of his views on the relation between capital growth and output growth. In them he rehearses a variety of reasons why it may be misleading to put too much emphasis on capital accumulation. Indeed he is prepared to go farther and argue that there may be reason to turn the causal relationship the other way round. Instead of capital growth leading to output growth, as is generally assumed, it may be that a rapidly growing income creates investment opportunities and thus gives rise to capital accumulation. If capital formation does not respond, this may check the growth of output. But, given some rearrangement of the investment pattern, income could still grow a long way before the capital shortage became acute. And so it may; but here we have one of the issues where we are tantalised by an analysis that does not go deep enough. Professor Cairncross believes that the initial growth of income may come from technical progress. But what is technical progress and what are its springs? In a good deal of the literature on economic development, it is a loose phrase covering a variety of diverse elements: inventions, the growth of skills, redistribution of the working population, economies of scale. The essays contain hints of these, but this is where we need more than hints.

Professor Cairncross is also gently sceptical of some of the gloomy prognostications about the impact of international trade on the prospects of the underdeveloped countries. He has some penetrating questions to ask of those who believe that the demand conditions facing the primary producers are seriously unfavourable. He says enough to show that there may be other interpretations of the movements of primary product prices and the patterns of trade of the underdeveloped countries than the one commonly put upon them. But he does not go on to carry out the kind of statistical analysis that alone can hope to resolve these disputed issues.

For all that, these are essays worth reading. M. Moussa would certainly benefit from some of their caution and questioning. He puts a case for greater aid to underdeveloped countries. He concludes with the proposal that aid should be organised on a grand multilateral basis by international agencies pooling the resources made available by all the countries of the world, including those in the Sino-Soviet group. This sounds like a non-starter. But, despite that, M. Moussa has some sensible things to say on the need to make better use of aid and to distribute it more wisely to countries genuinely capable of using it effectively. These things have been said increasingly in recent years; but it does no harm to have them said again. Unfortunately his book is marred by a failure to take proper account of a number of important issues, such as the balance of payments problems of both providers and recipients of aid. Moreover it is surely time that writers on economic assistance to underdeveloped countries stopped making rough calculations of their capital requirements and then assuming that all the additional funds needed to reach this total must come from outside. The ability of the underdeveloped countries to finance their own development may be rather greater than we sometimes think.

BRIEF BOOKLETS . . .

have been produced jointly by The Economist and The Economist Intelligence Unit to present the essential facts behind important current topics. Each takes about one hour to read. Here are the first three titles in this new series:

Numen-Lumen

Man and the Sun
By Jacquetta Hawkes.
Cresset Press. 280 pages. 30s.

THIS book is as alive and radiant as its title. It has humanity, it has warmth, it has brilliance. Above all, it has that infrared quality that penetrates and invigorates.

The sun is a paradoxical body. Upon its rays we depend for our existence, as do all created things. It has on that account been worshipped more widely and for longer than any other visible god. And yet, it was just when man started to know what, physically, the sun was that his religious regard for it diminished. By the time that Cortés entered Mexico city in 1519, and so terminated one of the sun's most splendid cults, Copernicus had already formulated his theory of the earth's relation to the sun and had thus set in motion a train of investigation that was to lead from Galileo to Eddington and beyond.

During the last fifty years knowledge of both departments, as it were, of the solar government has enormously and bewilderingly increased. On the one hand, we know far more about solar religion both in the old world and in the new, where as Mrs Hawkes shows, it is not extinct even today; on the other, we have discovered a great deal concerning the composition of the sun, its distance from the earth and its method of transmitting its benign influence thereto. Thus, to write about the sun, in these days, is to take as one's subject all time and a large part of space. Probably only Mrs Hawkes could tackle it: it is certain that she has done the work outstandingly well.

Her book starts with a chapter on the birth of the sun, followed by one on the birth of man. These are precise and factual, but because they are written by their author they are instinct with poetry and vision. These introductory essays, which "fix" the sun for us as a physical phenomenon, are followed by seven that range over the whole topic of sun-worship, from Akhnaten to Aurelian and Julian: the Pueblo Indians, the Mayas, Mithras—all are analysed and weighed. Mrs Hawkes also places in its proper perspective the still largely unrecognised contribution which Roman imperial sun-worship made to the *preparatio evangelica*, and publishes as one of her admirable illustrations the recently uncovered mosaic, below St. Peter's in Rome, which shows Christ as Helios.

The modern uses to which man has put the sun are ignoble and tragic. On page 210, lamenting the secularisation of modern life, Mrs Hawkes writes: "for the present no Phoenix has presented itself," and then describes our ludicrous travesty of sun-worship:

> Millions go to places held suitable for their secular rites. They buy vast quantities of oils, greases and lotions to anoint, not as of old the *benben* or other sacred images, but their own bodies. . . . Strong men make themselves ill, women ruin their complexions, children get sunstroke.

Pathetic as this is, it is as nothing to the vile and tragic uses that man has since put his knowledge of radioactivity. In 1952 "Man's first artificial sun rose above the Pacific, but it was not a star of peace." Nevertheless all is not lost. Mrs Hawkes concludes her survey with these words:

> The sun shines upon us all in turn, the black and the white, the peoples of the East and the peoples of the West. There is just a chance that it may waken us to a Good Morning.

It is a beautiful book.

Company Servant

Charles Grant and British Rule in India
By Ainslie Embree.
Allen and Unwin. 320 pages. 42s.

MR EMBREE'S work adds a link to the growing chain of modern studies of the men who made British India, studies which are inspired by the knowledge of what has become of the India they made. Charles Grant—a striking figure, harsh, loyal, intensely high-principled and industrious, and even more intensely devout in a narrow but exacting faith—served the cause for eighteen years in Bengal and then in England for the rest of his life. That he also made a competent fortune and won for himself a position of eminence and power was no more than the natural by-product of the qualities he possessed.

In Bengal he was never more than a subordinate, though an outstandingly valuable one—as Cornwallis discovered; in England he became the man who, for a number of crucial years, did more than any single individual to put his stamp on the development of British India. Mr Embree may exaggerate when he claims that it was "in many ways a result of his career" that British India "was not merely a designation for a territory held by foreign arms, but was a historical entity with a life of its own," but there is truth behind the exaggeration.

Grant was always a controversial figure, as a man of such uncompromising views at the head of affairs was bound to be, and the judgments passed on him have varied widely at different times. On one point, however, all critics are agreed; they unite in acclaiming the part he played in creating the superb civil service of nineteenth century India, on the basis of the disorganised and discredited East India Company servants of the years before Pitt's East India Act. He may have been going rather far when he claimed in the 1790s that ". . . nowhere . . . throughout His Majesty's dominions has public business been transacted, so far as the civil servants of the Company are concerned, with more public principles than in Bengal," but the boast was rapidly coming true, and his own character and actions both in Bengal and in England did much to bring this remarkable change about.

Mr Embree has not aimed at writing a

biography such as Henry Thomas attempted in 1904, but at a study of Grant's Indian career in its setting, and he carries out his task well, making effective use of the voluminous manuscript material, including that in the National Archives of India at New Delhi, as well as the Parliamentary Papers and the controversial literature of the time. He is perhaps particularly interesting in his analysis of three major issues: Grant's ferocious battle with that over-mighty company servant Lord Wellesley, whose triumphant expansionist policy he (true to the tradition he had been formed in) described as "the splendid road to ruin"; Grant's work, in alliance with the Evangelical interests in England, for the opening up of India as a mission field (Mr Embree shows the part played in these plans by Grant's political aims for India and their relation to his abhorrence of Hinduism and those aspects of Indian character that he believed to derive from this religion—a facet of his policy which the modern historian views with disfavour); and his gallant delaying action against the forces demanding the abolition of the company's commercial monopoly, and the opening of India to English traders. It is a battle which Mr Embree sees as inspired less by mere defence of vested interest (as so many contemporaries saw it) than by a real concern for the interests of the Indian people. There is nothing that annoyed Grant more than Adam Smith's sweeping statement that "a company of merchants are, it seems, incapable of considering themselves as sovereigns, even after they have become such." Whatever one may think of some aspects of his policy, this loyal company's servant, bred in its commercial tradition, was a living refutation of the truth of such a dictum.

The Khrushchev Interlude

The Kremlin Since Stalin

By Wolfgang Leonhard. Translated by E. Wiskemann and M. Jackson.

Oxford University Press. 409 pages. 42s.

More than nine years have now elapsed since Stalin's death. One is almost tempted to add "only nine years", so much has happened in Russia since that morning of March 4th, 1953, when Moscow radio startled the world with the news that the master of the Kremlin was dying. The purpose of Mr Leonhard is to retrace, analytically, those nine years packed with events of historical importance. His fellow students of contemporary Russia may disagree with some of his views, but nobody can suspect the author of twisting facts to fit his interpretation. Mr Leonhard quotes his sources and shows the premises of his arguments. The result is a very well documented chronicle of the post-Stalin era.

Nobody could step into Stalin's shoes. Malenkov at first appeared as the *primus inter pares* in the collective leadership, but Nikita Khrushchev rapidly gained control of the crucial party secretariat. The elimination of Beria, the policeman, the removal of Malenkov from the premiership are episodes in his rise. This rise seemed threatened by the upheaval in eastern Europe that followed his notorious "secret" indictment of Stalin, in 1956. It was only in the following year, after the elimination of the "anti-party group" and the removal of Marshal Zhukov, that Mr Khrushchev really reached the top.

The struggle for power cannot be explained in purely personal terms. The author links it adroitly with the fundamental controversies dividing the Soviet leadership. There are the economic controversies over such topics as decentralisation, priority for heavy industry or the reclamation of virgin lands. There is the connected dispute over the meaning of peaceful co-existence. Lastly, there is the basic conflict over the pace of change in all fields.

The general impression left by the book is that Russia, artificially frozen by Stalin, was doomed to change. Mr Khrushchev appears not as the heir of omnipotent Stalin but as a pragmatical and adroit instrument of that transformation.

Historical writing on contemporary Russia has its drawbacks. One is the difficulty of keeping up with events. The author has brought this English edition up to date. Yet the twenty-second congress of the Soviet communist party could not be taken into account. True, it did not alter the trends described in this book; but it gave a new impetus to the process of change. The other drawback is the distance taken by the outsider. An analytical chronicle requires a judicious sifting of evidence rather than colour. Readers of Mr Leonhard's previous recollections of life in Russia will miss his perceptive personal impressions. Yet this is a different kind of book by choice. Within his chosen limits, the author has produced an extremely useful chronicle. Specialists will find it very valuable for reference, while the general reader will find in the book sufficient material to make up his own mind on changes taking place in Russia.

Portrait of an Artist

The Darkening Glass: *A Portrait of Ruskin's Genius*

By John D. Rosenberg.

Columbia University Press. 287 pages. 40s.

The variety of John Ruskin's writings is almost as remarkable as the richness of his influence. *Unto This Last*, wrote Gandhi, "marked the turning point in my life." A quite different but more familiar chain of ideas links Ruskin with the modern British welfare state. Yet Ruskin as a critic of society can be understood only if he is first considered, as William Morris must be, as a critic of art and architecture. "Modern Painters," written when he was in his early twenties, provides clues that need to be followed up in all his later writings and lectures. "Stones of Venice" is about nineteenth-century capitalism as well as Venetian culture: it is concerned, on

A Postscript to SCIENCE AND GOVERNMENT
C. P. SNOW
In the light of the controversy aroused by *Science and Government*, and of the information that has become available since its 1961 publication, Sir Charles Snow gives his further thoughts on the Lindemann-Tizard affair and on the—to him—terrifying way in which scientific and political decisions are taken.

'To tell a scarifying and a highly un-plain tale excitingly in terms of strict academic history is no ordinary achievement, yet this, in her new study of the European impact on the Congo, is just what Dr Slade has done . . .' THE SUNDAY TIMES
Illustrated 30s *net*

NATIVE ADMINISTRATION IN NIGERIA
MARGERY PERHAM
A reprint of a book first published in 1937. Miss Perham considered that unity in Nigeria should be built up gradually from below. It was in fact imposed from above, but Lord Lugard's system of Native Administration had great influence on the character of the new Nigerian state and was later applied to other parts of Africa. *Maps* 42s *net*

AMERICA AND THE WORLD REVOLUTION
PUBLIC LECTURES DELIVERED AT THE UNIVERSITY OF PENNSYLVANIA, SPRING 1961
ARNOLD J. TOYNBEE
Maintaining that America has now become an arch-conservative power, Dr Toynbee makes a plea that Americans should not isolate themselves from foreign communities when they go abroad. He criticizes the American advertising industry and pleads for a reassertion by the United States of the spiritual rights of man. 12s 6d *net*

THE KREMLIN SINCE STALIN
Translated by ELIZABETH WISKEMANN *and* MARIAN JACKSON
WOLFGANG LEONHARD
'. . . Here is Khrushchev's story. It is the story of a "Westernizer" with his roots fathoms deep in the Russian past, a most illuminating footnote to the study of Russian history.' THE OBSERVER

Foam to stop the Daily Mirror ever getting stuffy

Newspapermen work best in shirtsleeves, whatever the weather. And for Daily Mirror people that's fine. One of the things that makes a big contribution to good working conditions in the new Daily Mirror building is foamed Polystyrene. 41,000 square feet of it has been used for insulation in the building's giant heating and ventilation system. Foamed Polystyrene is the newest material to be applied to the problem of insulation. It has exceptionally low conductivity. Is easy to handle. And since it works on the air-bubble principle, it weighs astonishingly little. Headline news for the building industry!

FOAMED POLYSTYRENE is made from Monsanto 'Montopore'
If you as a manufacturer are interested in chemicals or plastics it will pay you to get in touch with Monsanto.

Foamed polystyrene insulation board was supplied by Flamingo Foam Ltd. and Poron Insulation Ltd., and installed by Falcon Insulation Ltd. on behalf of G. N. Haden & Sons Ltd. who were responsible for the design and erection of the heating, ventilation and air-conditioning services.

Montopore is a registered trade mark

MONSANTO CHEMICALS *help bring a better future closer*

the grand scale, with the relation of art to "moral temper" and of both to the forms of society. The multitudinous writings on political economy, some turgid, others incisive and illuminating, all stem from this concern. Ideas and feelings dart backwards and forwards from a central core of perception, often darkened by mental sickness but on occasion dazzling, even at the distance of a century. "Praeterita," Ruskin's last book, written between bouts of insanity, leads back to the beginnings again, to the discovery of things past, to the young child starting his study of art with the patterned carpet on his nursery floor.

Mr Rosenberg's portrait of Ruskin catches all these and many other facets of Ruskin's genius, often quite brilliantly. He shows how Ruskin's insights were linked with each other, how little he was influenced by academic or other kinds of specialisation, how it was possible for him to make not only friends and enemies but disciples also, and how he changed, with little inconsistency, from being a defender of an *avant garde* into an enemy of new generations of creative artists.

At a deeper level Mr Rosenberg treats each of Ruskin's major books as a private and a public document, as a revelation and as a communication. He probes deeply into Ruskin's psychology with no desire to expose him to the glare of the curious but rather to interpret him to a new age. He writes admiringly not only of the sickness of Ruskin's mind but also of what he calls its "essential sanity." The only weakness of this study is that the nineteenth century, particularly its political economy and its society, are seen only through Ruskin's eyes. There is much less sensitivity in the historical passages than in the other parts of the book. To understand Ruskin is not necessarily to understand Victorian England.

Inner Economics

A Philosophical Interpretation of Economics

By J. K. Mehta.

Allen & Unwin. 288 pages. 35s.

"THE purpose of this book", says its author, "is to lay bare the philosophical foundation of economics," and to search for "the one in the many," a phrase which recurs throughout. He then proceeds to impart to the reader his vision of the inner oneness of economics which lies behind its multiple facets, leading him gently through long chains of fairly intricate argument.

Whether the reader will feel that Professor Mehta leads him by the hand or by the nose probably depends more on temperament than on intellectual conviction. Professor Shackle, for instance, is recorded by the publishers as calling the book "beautiful", while those who get their kick out of economics more from using it to deal with actual problems will react with puzzlement rather than with aesthetic appreciation. For in his desire to get at the inwardness of things Professor Mehta is apt to give them his own definitions and then ignore differences between his concepts and current usage.

An example will show this. On page 80, wages are defined as "those commodities the consumption of which makes good the depreciation of the body caused by physical work". The pragmatist may tolerate the idea suggested here, but continue to regard wages in the same way as do, say, the compilers of PAYE tables. Thus he will feel that the author's apparent objections to orthodox wage theory sixteen and seventeen pages later lack all force and merely constitute the elaboration of a peculiar definition: too much inwardness and the determinants of pay packets are lost for ever.

Later on in the book, successive chapters deal more and more with specific parts of economic theory. Professor Mehta knows what he is about in these fields, so no one should dismiss these disquisitions out of hand. The trouble with them is simply that it is difficult to see what he is getting at, for one can agree with each paragraph yet be baffled by each chapter. The exposition is there, but the conclusions are not. Thus if the book is to satisfy the reader he must share the author's need to get beneath the surface multiplicity of economics, seeing its oneness, and he must be better able to see with the author's eyes than are the review columns of this newspaper.

The Four Pretenders

The Shakespeare Claimants: *A Critical Survey of the Four Principal Theories Concerning the Authorship of the Shakespearean Plays*

By H. N. Gibson.

Methuen. 320 pages. 30s.

THE title is somewhat inelegant and even obscure, but the book does a useful job and can be recommended to the honest inquirer who has been misled by fancies of the press. Here a fair-minded consideration is given to the notion that Bacon or Marlowe or Derby or Oxford wrote Shakespeare's plays: Dr Gibson says he began his work as an agnostic, but it has made him a "convinced Stratfordian". He has clearly demonstrated the flimsiness of all four theories, and by restricting himself to these four (the total number of "claimants" has now passed the half-century) he has had ample room to set out and rebut the anti-Stratfordian "evidence". There is no excuse now for further debate, though of course Dr Gibson is right to say we must be ready to consider any new evidence that may be offered—provided always that it is new and is evidence.

In welcoming the book one is obliged to draw attention to a few places where the author shows himself to be not entirely at home in contemporary Shakespeare studies. He assumes too positively the existence of a regular "School of Night" to which Ralegh and Marlowe belonged; he disregards the evidence of Richard Baines on Marlowe's sexual inclinations; he takes it too easily for granted that Marlowe's plays contain a large proportion of non-Marlowe writing; after the early Stratford years we can "pick up Shakespeare's trail" in 1592, not 1594; two of the sonnets, not six, were printed in *The Passionate Pilgrim*; it is no longer a commonly held view that the "Bad Quartos" stem from shorthand reports; in view of the omission of the deposition scene from *Richard II* in Elizabeth's lifetime, and the possibility that 2 *Henry IV* was censored, we cannot be sure that Shakespeare never gave offence to the government. More important, however, is Dr Gibson's repeated insistence that the 1623 Folio was a "shoddy" production: in view of its size (far larger than that of the Jonson 1616 Folio) and the textual problems that faced the editors, it should be seen as a major undertaking commendably carried out.

In addition, there is a little carelessness with proper names; Sir Gilly Merrick appears as Sir Gilby, Robert Herrick as Richard, and, apparently, *Sejanus* on two occasions for *Every Man in his Humour*.

Stranger than Fiction

Mongkut, the King of Siam

By Abbot Low Moffat.

Cornell University Press. London: *Oxford University Press.* 271 pages. 30s.

KING MONGKUT ruled Siam as late as the time of Victoria and Abraham Lincoln, yet today his story has (so far) resembled those of Ivan the Terrible or King Arthur. Mrs Anna Leonowens, English governess to his more than 60 children, began the popularisation by writing two best sellers. An enterprising publisher in our day reprinted them, and then producers of musicals and films gave us, in *The King and I*, vast and gorgeous versions of more than all that Anna told. Never, since Autolycus sold ballads, has the entertainment industry done a more characteristic job. From this sober book emerges an odder, more subtle, story. The king himself was clearly an exceedingly interesting figure, as sympathetic as India's Buddhist hero, King Asoka, and, with his hot temper, doubts about etiquette and intellectual interests, nearer to us.

Heir to the throne, he was a Buddhist abbot for fourteen years, a learned commentator on the holy texts, and an astronomer. At forty, as king, he was called to almost absolute power, and to extensive marriage. Characteristically he also chose to take trouble regarding his people's drains and cooking arrangements. His political good sense must have amounted to genius, for we see him steering his small kingdom successfully among the violent clashes of the great powers. As for his treatment of surplus "Ladies of the Inner Palace"—so drastic in the folklore versions—it seems that he never burnt or thrashed them. Unless they have children who need a mother's care, he lets them go free, though sometimes with a distinctly irascible "reference."

LETTERS

The Dollar

SIR—I suggest that there are two measures which would immediately restore the world's confidence in the dollar: the announcement that it will henceforth be freely convertible into gold at present parity, coupled with the issue of a redeemable United States government loan of, say, $1,500-$1,800 million at 5½ per cent with capital and interest payable at the holder's option in United States dollars or at its present gold parity. The loan would be placed in London and other European capital markets. It might be divided into tranches according to countries and issued in proportion to their dollar holdings.

By its present policy the United States has effectively demonetised $1,600 million worth of gold. Since people always hanker after the unobtainable these measures have increased the demand for gold. Furthermore, there are too many people about who have gone through at least one, if not several inflations. They are all only too familiar with government declarations designed to offset the effects of inflation by administrative measures. They are not prepared to accept these assurances, as recent developments in the European gold markets prove.

Judging from the statistics published in the latest Annual Report of EMA the quantity of hot money is probably of the order of $1,500-$2,000 million. The proposed loan would mop up the whole, if not the greater part of these funds. In days to come the loan might well play an important role in stabilising the reflux of funds into the United States.—Yours faithfully,

London, SW1 GEORG TUGENDHAT

Saskatchewan's Medical Battle

SIR—Your correspondent's account of the Saskatchewan medical situation (July 14th) is not, unfortunately, without its own bias in favour of the government of that province. It does not mention one important element in the whole mêlée, the fact that, for some time, medical service clinics, based on a form of insurance contribution by family, have been in operation in some towns under the direction of the doctors themselves, that before the last provincial election the government promised that its own plans would follow the same pattern, and that after the election it broke that promise and introduced instead a wholly centralised scheme which placed the plan (and the medical profession) under a Medical Care Commission staffed by provincial civil servants. Coupled with that is the threat, as yet largely implicit, that the government will, if it can, take away from the doctors' own body the power and duty of licensing to practice and turn that, too, over to another government agency.

Your correspondent is not even fair to Social Credit in Alberta. I sit in opposition to them in the legislature, but it is untrue to say that the Alberta government is indifferent to the problems of public health and medical care. They go about tackling them in a rather odd way, but at least they are aware they exist.

I think there are three other factors to be taken into account. One is that professional and managerial people in Saskatchewan have for the last 15 years watched, and experienced, the activities of a number of Saskatchewan public bodies, from power and insurance downwards, and have found them to be inefficient, bureaucratic and dictatorial. There are some who would say that they are not entirely free from corruption. A second is their belief that once freedom is lost it is almost impossible to win it back. Instead, one lives in a regime where permission to do this or that becomes a matter of negotiation, in which political influence is very desirable. Thirdly, there is still in Canada, particularly among those in the professions who came here from Britain since the war, a belief that professional independence is worth fighting for on principle, that there is a difference in kind between the man who is answerable only to his patient and his professional organisation and the man who is answerable to some state organisation as well. Obviously, this concept has no appeal to your correspondent; he does not even mention it.

The situation in Saskatchewan is truly tragic. If the government believed it had general support at this moment it would dissolve the legislature and hold an election. As it is, it is not strong enough to compromise and must wait in the hope that the doctors will lose. And if the doctors are starved into submission, the government may find that, while it has won a battle, the people of Saskatchewan have lost a war.—Yours faithfully, ERNEST WATKINS

Calgary, Alberta

Taking Care of the Railwaymen

SIR—Industrial redundancy is only beginning to be considered as the problem it is and your admirable argument for the railwaymen in your issue of July 21st is logical and fair.

Redundancy payments may be costly but the alternative hoarding of labour or lack of versatility are vastly more expensive. Only a few companies attempt a scheme of payment for severance of service. I and others have advocated, in the House of Commons and elsewhere, a national scheme which we believe overdue. I am grateful to you for your timely comment on this question which so urgently needs constructive thought.—Yours faithfully,

BETTY HARVIE ANDERSON

House of Commons

Development's Brave Banners

SIR—The United Nations General Assembly last December unanimously adopted two resolutions under the heading "UN Development Decade." Your excellent article of July 14th dealt only with the first. The second resolution "calls upon states members of the United Nations . . . to review their contributions to the support of the work of the Special Fund and the Expanded Programme of Technical Assistance to the end that the combined budgets for these two agencies in the year 1962 will reach the target of $150 million."

The Americans, while the combined target was $100 million, pledged 40 per cent of the total contributed by all nations, up to $40 million. They have increased their ceiling to $60 million to accord with the $150 million target. But Britain has continued to contribute exactly the same as in several previous years. For whatever reason, we have so far not responded to the call to increase our 1962 contribution in proportion to the higher target.

Britain's contributions for 1961, as in several previous years, were £1,071,000 to EPTA and £1,786,000 to the Special Fund. It would be an invaluable stimulus to the Development Decade if this year, 1962, before the General Assembly, Britain gave a lead by paying over the additional £1¼ million, or thereabouts, which would demonstrate unanswerably our determination to play our full part in the Decade programme.—Yours faithfully,

GORDON EVANS

Secretary for Economic & Social Affairs,
London, W1 United Nations Association

G. D. H. Cole

SIR—I am endeavouring to collect material for a possible biography of my husband, G. D. H. Cole, who died in 1959.

As your readers are probably aware, the scope of his activities was wide; but he kept very few personal papers. I should be grateful, therefore, if any of your readers who may have preserved letters or notes from him bearing on any part of his life—especially, of course, the less recent ones—would let me see them. Any documents received would be very carefully copied and returned with all speed to the owners.

Might I ask that any response to this appeal should be made soon, since neither documents nor their owners are immortal? If letters or other documents could be sent, with any instructions for return, to me,

c/o Mr. H. L. Davies,
"Taradale," Ramley Road,
Pennington, Lymington, Hants.

it would very much facilitate matters.—Yours faithfully, MARGARET COLE

without air conditioning...

will it soon be obsolete?

Make sure your new building *stays* new . . . with the advantages of air conditioning. Workers, customers, guests all prefer the quieter, cleaner, more healthful atmosphere of an air conditioned building.
Within a very few years, judging by the present worldwide trend, air conditioning will be essential for the profitable operation of commercial and industrial buildings. You're protecting a huge investment when you add the small additional cost of air conditioning.
Air conditioning ensures automatic all-the-year-round control of temperature, humidity, air movement and air cleanliness. And the economical time to install it is now, at planning stage. Ask your architect to discuss its many advantages with you.

CONTROLS BY HONEYWELL—
international experts on every aspect of air conditioning—are an important part of the systems in these recently completed buildings:

- **A.E.I. Ltd, Lincoln**
- **B.O.A.C. Air Terminal, London**
- **Commercial Union Assurance Company, Exeter**
- **Imperial Hotel, Torquay**
- **Wilton Hotel, London**

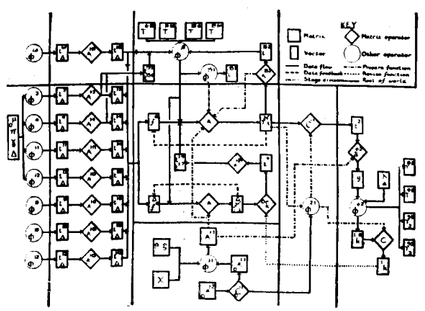
THE BUSINESS WORLD

Shone and Stone Limited

It would be unwise to exaggerate the extent to which Sir Robert Shone's planners in Whitehall are—or for a considerable time, could become—dependent upon Professor Richard Stone's economic model-computing in Cambridge. But it would be equally foolish to burk the implication that if professional economists are to offer any distinctive expert contribution to long-term economic planning for the sixties, they will have to draw heavily upon all the refined quantitative techniques of economic assessment that are now being developed. Ned's secretariat was not brought together to ghost new exhortatory homilies for politicians; the Treasury can do that lamely enough already without assistance.

There is no magic about making economic models—though some physical scientists might say sniffily, and Professor Stone would perhaps agree, that it is one stage in the emancipation of economics from alchemy towards science. Anyone who discusses the nation's economic tribulations is using some model, implicitly if not explicitly, all the time. All the tired slogans—that Britain must export or die, that growth depends upon our position in the investment league tables, that it is vital to increase productivity—arise from inherent assumptions that the key elements in demand and supply are interdependent, and that changes in one set of factors bring about resultant changes in others and in the total performance of the economy. These assumptions may be vague, their internal logic lacking in consistency, and their correspondence with real life dubious. So may the more refined models of econometricians. This does not reduce the value, in principle, of trying to bring quantitative order into all our assumptions about how the economy does work.

Professor Stone's team at the Department of Applied Economics at Cambridge have been occupied for some time in constructing a more elaborate model of the way the British economy works than has ever been put together before. This is a conceptual model, not a physical one of, say, the "plumbing" kind with which some students have become familiar in the basement of the London School of Economics. Specifically, it a very large social accounting "matrix" table developed from the national income accounts, showing transactions between different sectors of the economy; and a set of quantitative relationships between the quantities, prices and values involved in these transactions (and in the associated stocks of assets that may be built up or drawn down in the course of them). The matrix arrangement sets out an identical number of rows and columns, showing the transactions of each of the sectors into which the social accounts happen to be divided with all of the others. These transactions show, for example, how much of the produce of each industry is sold within a given year to other industries and how much to final buyers; how much of private income is spent on different commodities and services and how much is saved; how much of the revenue from production is spent on wages or profits or indirect taxes, how much represents depreciation, and how much is available for new investment; how much of each kind of output is sold abroad; and so on.



A TABLE set out in this way provides a quantitive "map" of inputs and outputs right across the economy—between as many sectors, or in as much detail, as the modeller chooses—within any given base year. The relationships comprised within the model—some of which are obvious, but the values of many of which are debatable—can be expressed as a system of equations linking together change in any of these transactions with change in others. Some of these relationships are technological—for example, the proportions of labour and capital combined to produce a given output and the extent to which technical change may alter these proportions over time. Others are based on human behaviour—how consumers choose to lay out their income as between different goods and services, how their choices alter as their total income rises, how changes in the prices of commodities affect the volumes purchased, and "how long consumers take to accept new commodities" (though how one builds an allowance for this last into any model we fail to understand).

Programmed on to an electronic computer, this "social accounting matrix" of transactions and this system of relationships that affect change in these transactions can be used to simulate development of the economy at any chosen rate over any given period, and to see what this simulated development throws up for all the sectors into which one has broken down the economy.

That is a grossly over-simplified description of an extremely complicated econometric exercise—which itself, one should add, can work only with a grossly over-simplified sum-

mary of actual transactions taking place right across the economy. Professor Stone's team has broken down the social accounting of the country into 257 different sectors and their transactions with each other, which is much larger than most other researchers anywhere else have ever attempted. Yet even this breakdown—which has to make provision for 65,792 separate possible transactions, and which on roughly the scale of a typical table in *The Economist* would take up a space 7½ feet long by 3½ feet deep—can only distinguish 31 separate industries, for example, as against the 152 in Britain's Standard Industrial Classification. Complex as it is even to visualise, this matrix involves a great deal of aggregation of sectors of demand and supply that ought ideally to be considered apart.

Constructing a matrix of this complication has been as much as the team could manage. Performing operations on it, at least at the outset, also seemed as much as the EDSAC computer at Cambridge that the department is using seemed likely to be able to manage, within the limits of the information it could readily store in its "high speed memory." In fact, now, this memory could quite easily be extended by the use of magnetic tape units, so the technical capacity for calculation would not be a constraint on extending the matrix to include, say, 100 industries. But it seemed so to begin with. The model has been programmed on to the computer in stages, so that the relationships used at one stage could be altered without requiring a new programme for all other stages ; the whole operation had been designed, its authors say*, to ensure that the model

(i) covers the whole economy in a fair degree of detail and does not leave loose ends unaccounted for ;
(ii) incorporates up-to-date and even forward-looking relationships for both producers and consumers ; and
(iii) is capable of examining many alternative possibilities despite the very large number of calculations involved in each case.

The fundamental assumptions of the calculation are the level of consumption per head for the economy in the base year, the growth from then to the year in question in population and in consumption per head, and the rate at which it is assumed that the economy will go on growing after the year in question (since this affects the amount of investment in fixed capital and stocks assumed for that year). Through a series of stages, the outcome of the calculations thus set in train is the information required to construct a social accounting matrix (to the same chosen degree of complexity) for the year in question. The year that the Cambridge team is working upon is 1970 ; though as a service to Ned it is going to do an exercise on 1966, in parallel with Ned's own calculations about requirements in that year on the assumption of a 4 per cent growth rate. The Cambridge computations for 1970 will examine the implications of a number of different rates of growth.

Model building of this kind, up to the last few years, tended usually to be non-quantitative, or to confine its figuring to comparatively simple operations. This was simply because the computation required—which often involves a series of iterative operations to bring interdependent variables into balance—simply involved more intelligent-man-hours with a slide rule or a hand calculator than could be justified by the results. The computer quite revolutionises this. Once the basic social accounting matrix, and the relationships governing change, are programmed on to the computer, and the chosen assumptions are fed in, the computation to produce a similar matrix for any given year takes twenty minutes of EDSAC time. This does not increase the final intrinsic value of any given set of results ; but it means that any chosen set can be had so readily that it becomes worthwhile to try out quite a wide variety of ranging shots. If various ambitions or courses of action can be demonstrated to be ridiculous, it may be unfair to Chancellors, but they will cost the rest of us only twenty minutes a time.

THERE is quite a distinction between this Cambridge exercise, which is aimed primarily at developing an econometric technique, with the utmost provision for altering the assumptions about relationships at any point, and Ned's necessarily more arbitrary and workaday job. Like the nuclear physicists' research reactor, the eventual importance of this exercise as a tool for planning would come in its ability to explore the potential results of alternative courses quickly without too much painful trial and error. How much reliance could be placed on the results remains to be seen—in the relationships to be applied to this social accounting, in particular, there are many issues upon which econometricians are not agreed even in principle. But that calculation based upon models of this degree of refinement should be set in train—which was impossible before the electronic computer became available and some economists at least learned how to use it—is entirely to the good.

It would be ridiculous to encourage the idea that the process of planning could come down to coding all one's questions on to a strip of tape and waiting for the answers to come out of the other end of the computer ; purposive planning, for one thing, will be concerned with achieving in practice some of the requirements that the computation of growth suggests, and removing some of the obstacles to growth. Moreover, however much technological change one may allow for in one's forecasting, nobody can determine just where in the economy technology will in fact alter. The same is true of consumer's demand. But the sheer speed of calculation that the computer now allows has made an economic model "capable of supplying detailed, quantitative information" no longer an idle dream of mathematical economists. Managers of the economy—as in so many other spheres of top management in individual enterprise—now have "a tool fit for the task," if they can use it.

Bankers of Moscow

BY OUR SPECIAL CORRESPONDENT RECENTLY IN RUSSIA

ON the same day that ban the bomb slogans made their brief appearance on Red Square earlier this month an equally uncharacteristic scene was being enacted in a banqueting room of Moscow University, that mammoth monument to Stalinist sterility. Glasses were being raised, and raised again, to the world's bankers—to not only their peaceful co-existence but even to their closest co-operation. "And the animals looked from pig to man and from man to pig again . . ."—no, it clearly *was* still possible to tell which was which, but at this triumphant closing ceremony of the fifteenth and unquestionably the most extraordinary session of the International Banking Summer School there was more than one reason for feeling befuddled.

The two-week confrontation had been expectedly rich in irony—on both sides. When else did London's merchant bankers develop such a fine sense of discrimination in their breakfast reading between the *Daily Worker*, *Unita* and *Humanité* ? When else could one see representatives of western central banks baying for the principle of full publication, and squirming under a response of verbal soporifics not entirely unlike those which on occasion have been known to emanate from their own august institutions ? And what of Lenin-quoting Soviet bankers who in private were at pains to stress that they, too, are popularly regarded as bloodsuckers ; and in public were hectoring their audience on the danger of budget deficits and the necessity of sound finance with an insistence that could not be bettered in New York or Zurich. Among the noisiest clashes of the meeting was one provoked by a New England banker haranguing the Russians for their wickedness in stimulating agricultural output by raising prices to consumers ; the stinging response was to inquire whether it was perhaps better to tackle the problem in the American way through inflationary subsidies. So in the ideological battle between proponents of a free market economy and a planned one the principles occasionally became a little confused.

Transplanted from its usual western environment and heavily infiltrated by a new wave and a new species of bankers from Bulgaria to Mongolia, this could hardly be a summer school in the traditional manner. The Russians, while expressing in their Victorian way every deference to tradition, and organising the school with high efficiency and the warmest hospitality, had promised to tell the bankers and the world all about their financial system and to show that, in its own framework, it embraces a genuine banking function. By the end of the session perhaps most of the western participants still had doubts about both How It Works and What It Means. Little was said in the lectures that will be fundamentally new to that select band of Sovietologists whose interest extends to economics and finance ; and it was said in a way that to ordinary western mortals begins to take meaningful shape only at a third reading and after some quick homework on the conceptions of *Das Kapital*.

Yet for all the frustrations, the gathering undoubtedly achieved a part at least of its serious purpose. The lectures, which should shortly be published in English, do provide, beneath the inevitable layers of propaganda and Marxist verbiage, some important scattered facts on Russian finance for the English reader. The oral questions, which were accepted by the school authorities without demur, yielded no sensational revelations, but they did bring out some interesting sidelights—besides evoking an intrinsic pleasure, equally shared by the Russian bankers and students among the participants, in seeing the high and mighty among the Soviet ministers, academicians and bankers being exposed to the sharp battery of western style interrogation. Finally, and most valuably, the Russian participants went out of their way to mix freely, so that the intricacies of use-value could be discussed courteously but firmly over excellent Georgian champagne. But, in striking contrast with the mature readiness for frank discussion displayed by the Poles and Hungarians—including those who actually appeared to be communists—the Russians still maintained a depressing defensiveness. Even in private conversation the guard is lowered only rarely, usually at that brief moment of truth on the alcoholic curve.

By maintaining their own version of the stiff upper lip the Russians indeed did themselves less than justice. Any western observer can now learn, most notably from the excellent survey of *The Soviet Economy*, by Alec Nove, of the intricate and at points passionate debate that is going on among young Soviet economists on matters such as price policy and the role of interest rates. In Moscow, by contrast, the assembled bankers were treated to a picture of a monolithic and unchallenged system, which to any western observer looks at best crude and at worst ridiculous. To arrive at an outline picture of the role of finance in the Soviet economy, which is attempted in the notes that follow, still requires much sieving and not a little speculation.

Control by the Rouble

THE role of banks and finance is indeed fundamentally different in the Soviet and western systems—but the nature of this difference is conventionally misunderstood, on both sides. The prime difference is not that the total volume of credit is fixed by state planners in Russia and by commercial banks in the west ; for nowadays the regulatory activities of both central banks and governments mean that total credit and total purchasing power are in effect determined in the West, too, by central official decision. It can be held that the effective role of the banks in both systems, and not only in the communist one, is to act as a check on the distribution of productive resources rather than as a determinant of their total. The processes of allocation and production are, of course, entirely different in a (mainly) market economy on the one hand and a (mainly) planned economy on the other, and it is in this that a basic difference in banking functions lies. In the Soviet system, too, the constructive role of the banks in the allocation of resources is no doubt smaller than in the West, as the banks are essentially an adjunct of the state planning organisation. But they are in practice a part of that organisation, and their real role will depend on the pull of departmental power.

Soviet banks extend credit not only to collective farms and other

bodies outside the field of full state ownership, but also to state enterprises, which now normally operate on the basis of separate balance sheets and, within the framework of their allocated tasks, are given incentives to maximise their profits. In financing these enterprises many of the styles, if not really the forms, of western banking are used—letters of credit, acceptance facilities, loans against documents *en route*—and Russian bankers delight in rolling them off the tongue. These instruments serve a genuine function: to invoke "control by the rouble" as an additional check on performance of a centrally determined plan. It is no part of Soviet bankers' jobs to go beyond this, to use their knowledge and judgment to take actions not laid down in the overriding plan. But their knowledge and judgment will in practice affect the plan itself.

Nor are things entirely what they seem in the role of the interest rate, a function which seems to stimulate some of the most agonising Marxist contortions. Interest in the Soviet Union, which is fixed at a basic 2 per cent for state enterprises with some loans at 1 per cent and overdue loans at 3 per cent,

> by no means plays the role of regulator of one aspect or another of the country's economic life; it does not influence the direction and volume of credit . . . [it] is a source for covering a bank's expenses.

Thus said Professor Plotnikov, director of the Institute of Economics of the Academy of Sciences. But a few words later:

> At the same time, interest is to some extent an instrument of bank control over the economy and helps to strengthen credit discipline.

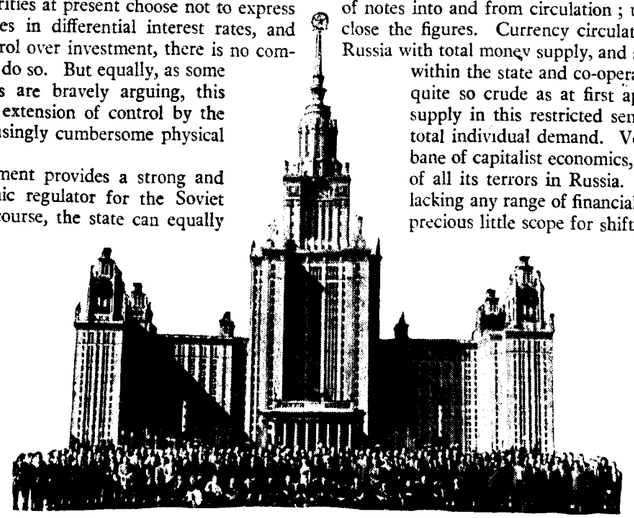
More revealing still, surely, is the following justification by Professor Bystrov of the Moscow State Institute of International relations of the 2 per cent normally charged on credits between "the countries of the socialist system." This interest reflects

> the fact that the country granting credits gives another country material resources, whose equivalent the creditor country only receives after a certain lapse of time. Consequently the creditor country temporarily withdraws from its national economy material values that could have been used by it in production to obtain an increase in national output.

So the return on capital does, after all, slip through the Marxist screening. But what can be the basis of two per cent? The return on capital in the Soviet Union is surely higher than that.

In practice, Soviet planners undoubtedly are influenced by different rates of return between enterprises, even though they may charge them the same interest rates or, more frequently, extend long-term capital as a grant. Again, the return on capital that is considered acceptable for marginal projects may, surely must, vary over time. The Soviet authorities at present choose not to express such decisions and guide-lines in differential interest rates, and because they have direct control over investment, there is no compulsive reason why they need do so. But equally, as some Soviet economists themselves are bravely arguing, this would be a fruitful field for extension of control by the rouble as an aid to the increasingly cumbersome physical control alone.

Direct control over investment provides a strong and almost instantaneous economic regulator for the Soviet planners. Theoretically, of course, the state can equally regulate personal demand, through variations in wages, prices or taxes. Officially, Soviet planners hotly deny that they use such adjustments for short-term restraint and, for the short-term, there is no evidence that they do. To meet an undue pressure of demand on available consumer supplies they say that they rely solely on higher production (productivity?). In the short-term, in practice, that surely necessitates a switch of resources from investment to consumer goods. Experience in Britain has been that "regulatory" disruptions in public investment projects tend to be very wasteful; and Soviet planners, in their growth mindedness, are in any case reluctant to make such switches. "There can be no question of inflation in the Soviet Union," the bankers of Moscow were definitively told. But neither have there been any razor blades in Moscow shops for the past month, and inflation, as Soviet economists recognise, can take suppressed forms.



The Banking Structure

THE state banking organisations enjoy a monopoly of credit in the Soviet Union; mutual commercial credit has been forbidden since the early 1930s. Credit is extended to state organisations and co-operatives but not to individuals—except in the form of limited hire purchase facilities and, increasingly rarely, for houses. At the centre of the banking structure stands the State Bank or *Gosbank*, which issues notes and coins, acts as cashier for the state budget, handles internal credit settlements, extends short-term credit within Russia and now makes certain long-term loans for agriculture, rural housing and technology. Its balance sheet is not published—this is "being discussed"—but its total credits extended on January 1, 1961, are revealed at 44.2 billion roubles. (The "heavy" rouble introduced on that date, by knocking off one nought from the old unit, was formally revalued and effectively devalued to a parity of $1.11.) The Gosbank claims to be the biggest bank in the world. It has 6,786 offices and 4 million accounts, belonging to one million clients. Its chairman, Mr Korovushkin, has the status of a minister; in practice, Kremlinologists report that his standing is lower than that of Mr Dymshits at Gosplan.

Total short-term credit in Russia at the beginning of 1961 is given at 47.4 billion roubles, and long-term credit at only 4.2 billion roubles. Most of the long-term financing that enterprises secure from outside (i.e. in addition to using their own depreciation funds and profits) comes from the special Investment Bank (*Stroibank*) in the form of grants. Foreign exchange transactions, credits and settlements are handled by the Bank for Foreign Trade. But the State Bank also maintains extensive foreign contacts, and has 1,000 foreign correspondents.

A key element in making the quarterly adjustments in the state plan, the Soviet authorities disclose, is the issue and withdrawal of notes into and from circulation; unfortunately they do not disclose the figures. Currency circulation appears to be equated in Russia with total money supply, and since credit is used exclusively within the state and co-operative sector this concept is not quite so crude as at first appears. Furthermore, money supply in this restricted sense is also often equated with total individual demand. Velocity of circulation, that old bane of capitalist economics, is said to have been disarmed of all its terrors in Russia. Certainly the Soviet system, lacking any range of financial securities and markets, offers precious little scope for shifts in liquidity preference to be exercised, even if they are felt.

A more significant, and growing, intrusion on official calculations of consumer spending is likely to arise from personal saving. There is apparently no limit to private accumulation in the Soviet Union, or to inheritance—provided the citizen can show that he has not infringed the law. Very few individuals have accounts at the Gosbank but, much more important, one in four of the population has an account with the state savings bank, receiving interest at 2 per cent on current accounts (from which transfers can be readily made) and at 3 per cent on savings accounts. These banks may be open until eight or ten in the evening, and they have succeeded in gathering in total deposits of over 12 billion roubles (which includes accounts of co-operatives, trade unions and collective farms). Average personal savings are no doubt still very low; but as real incomes rise and consumers get more choosy about their spending, the problem of monetary control is bound to become more complex.

Within the State sector, the Soviet authorities insist on maximum use of clearings—cash payments between enterprises are normally confined to ten roubles and are subject to a maximum of one hundred roubles. Credit is extended according to strict rules and procedures, including provisions for security of material values. Strict watch is kept on abuse of credit facilities for the hoarding of stocks and other activities contravening the plan. Credit sanctions include the refusal of any further credit facility, and insistence on payment by direct transfer or "limited cheque" (i.e. from a cheque book that is limited to the amount that the enterprise holds in a credit balance). The bank, in association with the local planning authorities, may insist on a reorganisation of laggard enterprises. It keeps constant watch on the balance sheet and on management: the *Stroibank* has engineers on its staff.

Much emphasis is placed on organising credit settlements in the most efficient possible way. There is an elaborate system of clearing, mainly by direct transfer rather than by cheques; these at present account for only a fraction of one per cent of the clearings, though the bankers say they are investigating the possibilities of their wider use. There are virtually no personal cheques. Payment for goods by enterprises is now largely on the basis of "subsequent acceptance," involving immediate payment with the possibility for subsequent refusal of goods by the buyer within a stated number of days. Introduction of this system speeded up settlement by 1½ days and the authorities declare themselves much impressed with the consequent "freeing of locked up capital," which leaves a mere Keynesian economist cold. But real savings are also being sought by reducing the number of payments—for instance by relieving state enterprises of obligations to pay post office and telephone bills and making due adjustments in the budget. They should call in O & M.

Personal Credit

HOUSING credits, which in earlier postwar years were granted on a fair scale for the building of individual housing in the country, now seem to be reserved more and more for co-operatives and groups of workers. The new form of individual credit, introduced in 1960, is hire purchase. It is available on a strictly limited scale. It is restricted to goods that are in ready supply (and occasionally, now, in over supply). The current list embraces cameras, radios, bicycles, motor bicycles, furniture, and clothes—and when a suit costs well over the average salary for a month instalment facilities are often needed. The conspicuous omission from the list is cars—they are still too scarce.

Interest on Soviet hire purchase is at 2 per cent flat, and repossessions are said to be almost unknown. It is easy to see why. The minimum deposit is 25 per cent and the maximum period of repayment twelve months. The total allowance is limited to four months' salary; credit is extended only to workers who can present a certificate showing that they are in regular employment and have no other outstanding hire purchase commitments. The buyer then pledges repayment by stoppages from his pay packet, which are transferred directly by the employer to the trading enterprises. Finance companies in Britain, charging perhaps three times as much interest, look disgustingly rapacious to the Soviet theorist; yet if the ordinary man in either country could choose between one system or the other, taken as a whole, which would he go for?

A Convertible Rouble?

TO nobody's surprise, the Soviet financial luminaries gave nothing away on that burning question, gold. Russia's gold production? "I'm afraid we didn't bring the figures with us." Russia's gold sales in the west? A fine display of Russian humour here, with pauses for translation finely calculated for effect: "Well, as you know, these matters are dealt with by eminent bullion houses in London. Samuel Montagu write regularly about it. Their information is most interesting. It would be more interesting still if it were accurate." Questions on the prospect of the rouble becoming convertible touched a rather more sensitive spot. Professor N. N. Lyubimov, who graduated in 1917 and has performed the remarkable feat of having remained in official positions ever since, quoted Dr Per Jacobsson as referring to Western Europe's own convertibilty as "fragile" and then added:

> Technically, the necessary conditions for convertibility of the rouble exist today. The choice of timing is another question, and one for the politicians.

External convertibility for the rouble would indeed present few difficulties, for Russia already meets its net deficit with the west in gold: western countries have no rouble balances whose convertibility would suddenly present a problem. Some observers argue that a convertible rouble might begin to be used internationally and attract a switching of working balances out of western centres to Moscow—particularly by communist countries such as Hungary which at present are not inactive in western foreign exchange markets. But the extent of such movement would partly depend on what interest rate the Russians were prepared to concede—or could a new phenomenon, the Euro-rouble, appear on the international scene?

But the real significance of allowing foreigners to convert their roubles into other currencies will always be slight as long as tight controls on Soviet foreign trade closely limit the amount of roubles that foreign traders can earn. A much more important question, therefore, is whether the communist countries may now move towards effectively greater freedom of trade and effective convertibility between themselves. Extraordinarily little has been accomplished so far. When they take your frozen zlotys from you at Warsaw airport, ask if you can exchange them into roubles; you get a good horse laugh. The rouble is indeed used as the accounting currency for trade within the communist camp, but it is an accounting currency only. Prices fixed in trade agreements, which are normally kept stable for at least a year, are based not on domestic prices but on recent average prices in world markets. Until domestic prices in the different communist countries are fixed on a more rational basis internally, trade between them is bound to remain cumbersome. At present, trade even within the block is channelled through the state trading monopolies—rather than being arranged directly between enterprises, which some Russian economists are now urging.

The development of the west European common market does appear to have given a temporary push to thoughts of greater integration within the Comecon block, and there are many Poles and Hungarians who fear that their previous, and remarkably successful, attempts to resist economic integration eastward may now become more difficult to maintain. Yet the pressure against such integration remains strong. All along, the principle of the "socialist division of labour" has conflicted with the socialist principle of "equal national development." Mr Khrushchev, in his recent visit to Rumania, is said to have promised that plans for a Rumanian car industry should still go ahead. So the economic benefits of the communist association of planned economies is manifestly smaller than the association of free ones. Perhaps because the political association is compulsory, its economic accompaniment is not so much co-operation as a good deal of effort to remain at arm's length.

BUSINESS NOTES

THE EXCHANGES

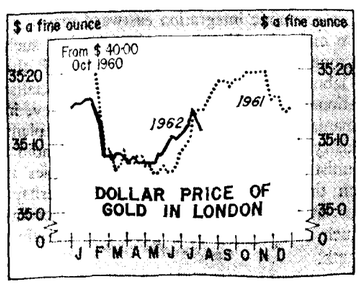
Telstar for the Dollar

WHATEVER one expected the peaceful uses of outer space to be, the defence of currency stability was surely not prominent among them. Yet such has been the momentary impact of Telstar's debut on Monday, which immediately brought about a strengthening of the dollar in every European centre and an abrupt falling away of the demand for gold. At a time when the worth of official denials of currency rumours is increasingly suspect, a denial via Telstar worked wonders.

Why? Novelty, no doubt, does help. Even in June 1961, in the midst of the sterling crisis, an official statement from Dr Per Jacobsson, head of the International Monetary Fund, did convince the market for a few days—because it was in an unusually impressive form and came from an unusually impressive source. Last Monday's affirmation was still more clearly unique: a devaluation denial from outer space. Yet conceivably the effect could have worked the other way—alarm rather than reassurance at the haste to use Telstar for this purpose. The positive response in the markets must therefore be attributed to three additional, more important factors. First was the substance of what the president said:

> The United States will not devalue its dollar. And the fact of the matter is the United States can balance its balance of payments any day it wants if it wishes to withdraw its support of our defence expenditures overseas and our foreign aid.

Second among the bull points was the president's manner—and here Telstar did add a new dimension. European bankers were plainly impressed by the president's easy mastery of this technical subject and by his sure grasp of the issues at stake. Thirdly, the president's words fell on not unreceptive ears. Many thoughtful people on the Continent, in central banks and also in commercial banks, had already focused on the improvement in the United States balance of payments this year, and had therefore questioned the rationale of the new speculation in favour of gold and against the dollar. More people are asking, too, whether the United States does not now offer better immediate growth prospects than over-employed Europe, and whether, as a result, one should not expect a change in the flow of capital across the Atlantic. Dr Roy Reierson, of the Bankers Trust Company, spoke convincingly in this vein at an international investment symposium in Cambridge on Thursday evening.



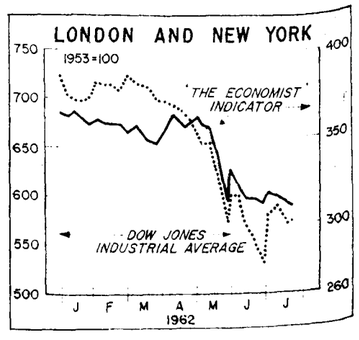
The strengthening of the dollar actually began on Monday morning, before the president spoke, though this may possibly have been attributable to the normal breather that occurs after a weekend has passed without upheaval. On Monday afternoon the London market detected some substantial selling of gold shares from American sources, and dealers later wondered whether these were inspired. But the real turn came on Tuesday. The dollar moved off its support point against even the hardest European currencies—the Swiss franc, French franc and Italian lira—and also rose against sterling, to $2.80½. Equally dramatic was the turn-round in the London gold market. Business on Monday had not been on the heavy scale of the previous week, but it was still moderate, and the price edged up to a new peak of $35.15. Thereafter demand fell right away, and the predominance of sellers brought the price down to $35.11½ on Wednesday. The volume of selling was still slight by comparison with the substantial buying of the previous few weeks; but the relatively sharp fall in price has presumably made other speculators uncomfortable—the logic of the Bank of England's tactic in letting the price rise gently when demand was strong is now more apparent.

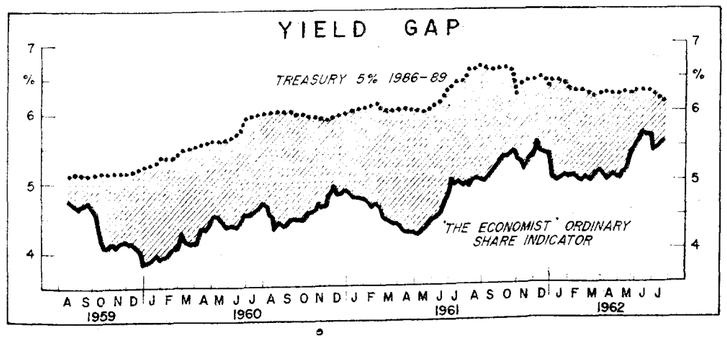
IN THE MARKETS

On Your Marks

AHEAD of the economic debate on Thursday, a few investors in both the gilt-edged and industrial markets behaved like anxious sprinters, ready at their blockholes for the starter's pistol. Many more, however, were content to jog around in their tracksuits for fear that Mr Macmillan's pistol might misfire. Certainly there were hopes in the stock market that the Government would pursue more reflationary policies but among the eager and patient alike there were fears of a false start. The mood in Wall Street was still cautious and there are not many who believe that equity prices in the London market can enjoy a sustained rise unless Wall Street does. Prices moved up quite sharply in the middle of this week; but the volume of trading remained thin and the rally had not been sufficiently strong by the close on Wednesday to wipe out the losses made before the weekend, with the result that *The Economist* indicator was still 2 points down at 310.9. On Thursday, however, the pace of the advance quickened in almost all sections of the industrial market. More reassuring news from a handful of companies, including GEC and GUS, had helped; but cyclical issues including steel and engineering shares were supported. Some investors at least argued that the Government would do something—indeed, had to do something.

While equities had only hopes to sustain them, the gilt-edged market remains confident that lower interest rates will be an integral part of any action the Government takes. Thursday again passed with no further reduction in Bank rate but the steady rise in gilt-edged stocks was maintained. A month or so ago, the advance was largely confined to medium dated stocks and to War Loan, whose interest is tax-free to the non-resident. Now it has spread to the long-dated stocks and again this week the tap price on the 1986-89 stock has been raised. When both gilt-edged and equities rise together, dealers often talk of a healthy market. At the moment such talk, at least as far as equities are concerned, could be premature, for after the battering they have lately had throughout the western world the restoration of confidence will take time. And when that happens, it will not be supported by quite the same faith in automatic economic growth as before. One new issue pinpoints the change in mood: N. M. Rothschild is sponsoring the issue of three million 10s. shares at 15s. each (with an





indicated yield of 6½ per cent on a projected 1963-64 dividend) in the Equity Income Trust, which will invest in equities with a view to obtaining as high an overall yield as is prudently possible. The trust is primarily intended for certain gross funds and private investors; but what a change in thinking is embodied in the idea that equities should be bought for income—a target, as the prospectus declares, that is "not consistent with rapid growth."

Caution in Wall Street

A correspondent cables:

WITH business news mixed and Washington refusing to be stampeded into taking action, Wall Street is in a cautious mood. The fall in the Dow Jones industrial average to 575 has been accompanied by a decline in the volume of trading. The market is likely to stay in the doldrums until there is a marked change either in the business outlook or in the administration's attitude. Corporate profits in the second quarter were in some cases impressive but this has helped individual issues rather than stock prices in general. Stocks of companies reporting disappointing profits have been hard hit. Growth issues, which have declined sharply but which continue to sell at lower earnings yields than the cyclical and staider blue chip stocks, have been subject to waves of selling. But disenchantment with these issues is not complete, for every fall in their prices has brought in fresh orders, either because the stocks looked cheap or because the buyers wanted to cut their original costs by "averaging." Cyclical issues, whose earnings are expected to decline in a recession, have been sold as well, which is one indication of Wall Street's fears about the future level of economic activity.

Mutual funds, which on balance were fairly heavy buyers of stock in the second quarter because the sales of their shares held up well, have been more cautious recently. Few of the other institutions have been making net additions to their funds and some have continued to sell equities. Private investors, puzzled as to what to do, are staying out of the market. As a result, a substantial portion of market activity is now being generated by traders who, in the hope of a quick profit, are moving in and out of stocks. Investors who take long-term views appear to feel that they can wait before buying, though there is some demand for high yielding issues as well as for defence, oil and aluminium stocks whose prices now appear to be on the floor. But for the most part, investors are not venturing out on any limb, for if business conditions grow worse there is the prospect that the "lows" touched in June will be in for a new test.

WESTERN GERMANY

Shadows over the Miracle

WEST GERMANY'S Chancellor, Herr Adenauer, has not the reputation of being an economic expert. When, from time to time, he feels urged to intervene personally in economic affairs this is almost sure to be an indication that he smells some political danger arising out of Western Germany's pullulating economic life. This was the case when last week he assembled Dr Erhard and Dr Starke, his ministers of Economics and Finance, together with Herr Blessing, President of the Notenbank, Herr Abs, the respected chairman of the Deutsche Bank, some representatives of industry and a few Secretaries of State and other experts for what was called a *Konjunkturgespräch*, a conference about prospects of and dangers to German prosperity.

Is there any real danger to German prosperity, or is the malaise—which has begun to creep into every economic discussion of the day and whose most visible sign is the continuing weakness on the stock exchange—just a question of failing courage and confidence and growing uneasiness without real cause? All the outward signs are indeed of continuing prosperity. The labour shortage becomes more and more acute; the latest figures show an all-time low of about 100,000 unemployed, compared with 700,000 vacancies and there are now nearly 650,000 foreign workers. The advertising columns of every newspaper, with their pages full of positions on offer, convey a picture of a strongly expanding economy; the seasonal flow of company reports for 1961 now appearing show mostly a consolidation of high profits gained in the years before, apart from the traditional problem children like mining and shipping. The case of the firm of Margaritoff & Schaffer, famous for their "Opal" stockings, which was declared insolvent some days ago, seemed to be as isolated as the failure of the Borgward-motorworks last year—until the news broke about Willi Schlieker.

However, there are two danger signals ahead which cannot be overlooked. One is the balance of foreign trade, which used to be one of the main pillars of German prosperity. The figures just published for the first half of 1962 show a reduction in Germany's trade surplus from DM 3.6 billion to 1.6 billion—though some analysts now expect a rise in exports and recovery in the trade surplus in the second half of the year. Germany's basic balance of payments is now running neatly in balance—and the ample reserves could easily accommodate a deficit. But in view of Germany's moral or contractual commitments for exports of capital—through repayments, development aid, long-term purchase of arms, and reparation for Nazi victims—a continuing surplus in visible trade is seen to be indispensable.

The real worry however is the growing discrepancy between rising productivity and rising wages—the latter being ruthlessly and successfully fought for by the unions. In the past year statistics have shown that the rise of the wage level has exceeded the rise in productivity by 3½ per cent, and long forgotten is the Blessing memorandum of two years ago, which advocated a close conjunction between productivity and wage-claims. Dr Erhard now goes to the microphone and makes a moving appeal for "restraint" all round; but it was the government itself that acted in flat contradiction to these appeals. It granted the wage demands of the Saar miners, in face of the continued deficit of the federally owned mines. It urged the Ruhr mineowners to give in to the claims of the Ruhr miners, promising to pay a great part of the bill out of the Federal budget; and it granted a pay increase to its own public employees. In each case the hard arguments of economic reason were overruled by the Chancellor's principle of "no political trouble," especially in a year of several elections for new *Land* parliaments.

Willi Schlieker Kaputt?

FOLLOWING the failure of the Borgward motor works last year, West Germany has now experienced its second case of insolvency overtaking a major industrial enterprise. Willi H. Schlieker, a self-made man whose "miracle" career in the past fifteen years has been sensational in every respect, has had to declare that he cannot meet his liabilities.

Schlieker, 48-year-old son of a Hamburg dock worker, who had already during the war carved himself out a career in the

German armament industry, came into post-war business in the scrapiron trade. He managed to buy the goodwill of the Düsseldorf iron merchant firm Otto R. Krause, which he moved to Hamburg; very soon he was West Germany's biggest iron dealer. He extended his activity also to the international iron and steel trade, did a big business in Japanese sheet and plate, and bought and sold in almost every country on both sides of the iron curtain.

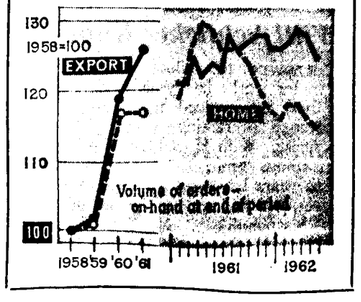
At the beginning of the fifties, Schlieker took the big step from trade into production. He acquired two steel mills in the Ruhr and converted them into prosperous, thoroughly rationalised modern enterprises. He has of late controlled more than a quarter of West Germany's production of steel plate for the electrical industry. From here it was only a minor second step from production of steel plate to using it in shipbuilding. The lure of the sea began to work on the boy from Hamburg. In 1958 he acquired a small shipyard in Hamburg. Soon afterwards he bought a part of the site of Hamburg's famous Blohm & Voss shipyard, and there he built a modern shipyard which soon reached third place in Hamburg shipbuilding output.

But these ships, it seems, have been his ruin. By the time he was in business the years when orders came in readily from home or abroad, were running out. After the revaluation of the D-mark last spring, the orders German yards could get—or had to go on fulfilling at fixed prices—yielded little or no profits, and there were fewer advance payments coming in. It became clear that the capital basis of Schlieker's combine was too small. The holding company through which he controlled all his enterprises had a capital of only DM 20 million (it is owned entirely by himself and his wife); experts guessed that between the owned and borrowed capital employed in his group there was the fantastic gearing of 1:25.

What will now become of his combine is at the moment too early to say. As in the Borgward case his major creditors seem to be his suppliers—big steelworks such as Phœnix Rheinrohr—and not his bankers. But the impact of Schlieker's failure is likely to be much less localised than that of Borgward. An insolvency of this magnitude—his commitments are given as about 80 million D-marks—cannot leave the big banks untouched, and the *Land* Government of Hamburg may also feel compelled to intervene in some way. There are already suggestions that two major creditors and a bank are stepping in with support to tide over his iron business. But so far no economically feasible way of continuing the work of the whole Schlieker complex of industries has been suggested.

ENGINEERING ORDER BOOKS

Work on hand in the engineering industries for export markets was about 1 per cent more at the end of May than a year earlier; but that for the home market was down 11 per cent. Deliveries for both markets have been running higher than last year, but net new home orders about 14 per cent lower.



COAL

Servicing Sunk Capital

Apart from the railways, the National Coal Board is being set the most lenient "target" for return on its investment of any nationalised industry under the Government's present financial régime for these industries. All it has to do is to break even (after providing £10 million a year over its book depreciation to allow for the inflation of fixed asset values). But it is not, for the present, to receive any special dispensation in the form of a capital reconstruction, as the railways have.

Lord Robens has referred to this vaguely, in recent weeks; he said at the beginning of the month that "obviously if there is to be any capital reconstruction it will be for Parliament to decide." Mr Woods, in the Commons this week, was equally unwilling to commit himself:

> There is no disagreement between [the] board and the Government, but we think this is not the appropriate time to make a capital reconstruction. It would be wrong to look at certain parts of the capital. The whole capital must be looked at.

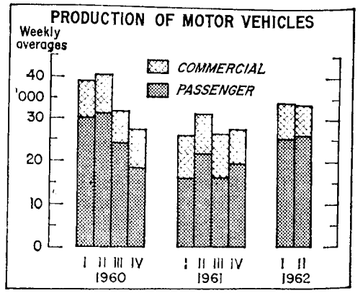
His present insistence, reasonably enough, is on "securing a better relationship between the board's whole capital and the earnings of that capital."

The mining industry is, as the railways were, hoist with the financial structure created by nationalisation, in which all its capital has to pay a fixed interest, with no equity element. On the other hand, the interest on a large proportion of its capital is low by the standards of recent years: nor was the valuation at takeover high in terms of what earnings in a free market for coal might have been in the immediate postwar years of shortage. But there is danger in this artificial financial structure with no give in it. It helps commit the industry (and the minister) to maintaining a level of coal output that could not be economically viable in a fuel market as free as, say, the present draft energy policy before the European communities which Britain is trying to join would make their market—and ours.

MOTORS

Midsummer View

Production of cars in the second quarter of this year was running at a weekly rate of 25,525 vehicles, about halfway between the level achieved in the comparable period last year and the peak rate at the same time in 1960. June, as was to be expected, was generally a less busy month than May, when seasonal habits and a reduction in purchase tax caused a record number of cars to be registered. But the disappointment of some manufacturers with the subsequent state of the home market, in which hire purchase sales of cars dropped 10 per cent in June, is reflected in a drop almost as steep in the average weekly output of cars. This figure looks worse against the sustained strength in exports which rose to 49,899 cars in June, compared with 45,935 in May and 31,937 in June last year. Car sales to France and Italy were three times as big in the first six months of the year as in the first half of 1961.



In spite of a general flaccidity in the home market, most manufacturers have some strong spots on which to concentrate. Both June and July proved good months for the popular BMC models; with leeway to make up after the electricians' strike and before this year's earlier holiday the company was able to step up its production rate in June (apart from Whitsun week) and again in July before the annual break. The new Vauxhall models are in good demand, though long waiting lists for the larger Ford cars are largely due to the company's present drive to improve production quality. Delays with fittings, such as heaters, have also slowed things up. And many potential buyers of medium-sized cars seem to be holding back to see what the autumn will produce in the way of new models.

A European Giant?

Rumours have been current for months that Fiat was manoeuvring to set up a European "General Motors" in order to gain advantage in the growing competition that is certain to develop within the Common Market's motor industry. There was talk of an agreement according to which Fiat might give up the shares it owns in the

THE UNITED STEEL COMPANIES LTD

Michelin rubber company of France in exchange for Michelin's controlling interest (56 per cent) in Citroën. The president of Fiat, Signor Valletta, vehemently denied the rumours at the time.

Business circles in Milan, however, are now arguing that Fiat has no need to go through financial acrobatics to achieve the same purpose. They argue that there already exists very close co-ordination of policy between Simca and Citroën. And Fiat owns 70 per cent of Simca.

This three-way alliance, if it existed in fact, would make Fiat-Simca and Citroën perhaps the third largest motor grouping in the world after General Motors and Ford. Already these companies produce well over one million motor vehicles annually; moreover their expansion plans, formulated more precisely than those of most European makers, would increase their share of total European output. Fiat already controls 80 per cent of the Italian motor vehicle market, has an efficient distribution network in France, and an assembly plant at Heilbrönn in Germany, where it sells close to 100,000 cars a year; and has talked of doubling its output.

In France, it is estimated the combined output capacity of Simca and Citroën will be of the order of a million motor vehicles a year by 1965, while Renault will be producing approximately 800,000 motor vehicles annually by that time. So a Fiat-Simca-Citroën group would loom as a formidable competitor not only for Renault, but also for the British, German and American makers, who are already taking notice of the possibility.

Volkswagen, which still holds first place in motor vehicle exports, is trying to cope with the situation by strengthening its sales network in France. It has also been suggested that the company is considering building an automobile plant in Italy in a joint venture with Edison, the giant Italian electricity supply company which is going to be deprived of its power interests by nationalisation. Partnership with a largely denationalised German motor firm might well suit Edison.

OVERSEAS TRADE

Glorious June

The onward march of exports since the turn of the year was capped in June by the biggest rise in the series, of £12 million to a seasonally adjusted figure of £328 million fob. This unflagging effort has produced in the first half of the year a gain of 2 per cent over the average level of exports in 1961. In the second quarter exports were 4½ per cent higher than in the preceding three months, but exports in that period were lower than in the corresponding quarter of 1961. Exports to the sterling area accounted for a large part of the unexpectedly sharp rise in June; a recovery in exports to Canada was responsible for much of the remainder.

These were among the soft spots in which the export effort had previously bogged down. In the first half of this year, exports to the sterling area were still 9 per cent below the level of a year earlier; at the same time, exports to Canada fell by 17 per cent. By contrast, exports to Western Europe rose by 14 per cent (with slightly more emphasis on exports to members of the common market), and the gain in exports to the United States amounted to 28 per cent. Though the motor industry was mainly responsible for the expansion which had occurred up to the end of the first quarter of this year, in the second quarter the expansion became more generalised. Exports of machinery and instruments, seasonally adjusted, rose by 3 per cent between the first and second quarters. Exports of textiles which had been static for more than a year increased unexpectedly by 6 per cent in this period, though world trade in textiles is generally depressed. The sharp growth in exports of man-made fibres caused the improvement and enabled the industry to set in June a new record for its rate of fibre production, beating its previous best achieved in May by a short head.

Imports in the first half of the year were only one half of one per cent greater than the average for 1961, though the need to import more cereals, fruit and vegetables because of unfavourable weather here caused the cost of these imports to climb by no less than 25 per cent above the level of a year earlier. But imports of oil did tail off in the second quarter after the previous sharp rise. Reduced imports of basic materials continue to hold down total imports, but imports of finished manufactures also fell slightly in the second quarter compared with the first. It is noteworthy that in a period when Britain's own exports of machinery and instruments began to expand significantly, its own imports in these wide categories decreased.

COTTON TEXTILES

Insuring Against Prosperity

By April 27th, almost precisely three years after re-equipment by cotton textile manufacturers first qualified for government assistance, the industry had submitted applications for grants in respect of expenditure of £43 million only. Actual claims, on which the Government was liable to 25 per cent of the cost, amounted to less than £13 million. The deadline for applications was July 8th; except by special exemption, re-equipment must be completed within two years of that date to qualify for the grant. Between the end of April and the qualifying date, a rush of applications pushed the value of applications up to about £115 million, of which about a third came in July itself. The Government's potential share in this expenditure—£28¾ million—is nearly as large as the projected total cost of the reorganisation and re-equipment schemes, although the scrapping schemes alone are expected to absorb more than £12 million of the estimated £30 million of Government expenditure.

A late spurt has won many a race, but Lancashire's form should deceive no one. Applications for grants involve little effort and no cost. In an attempt to cajole more support from the Government, the industry has recently made great play with the poor response to the re-equipment carrot. The industry has been even quicker to deny that applications potentially involving £100 million of new investment mean that it has regained its confidence. The summer has been poor and no improvement is yet apparent in the level of demand for cotton goods; production was still heavily down in May and workers continue to slip away. Although the impression is gaining ground that the end of the lengthy period of stock reduction is in sight and that demand might revive at a time when production is seasonally low, prices of many products are currently extremely poor, and few are sanguine about the degree of relief that Britain's entry into the common market might bring.

The open-ended nature of the Government grants staggered the Estimates Committee on Assistance to the Cotton Industry with the thought that the final bill could be £150 million. But the industry will almost certainly not spend even £115 million on re-equipment; it might not spend much more than the £50 million it apparently intended to risk before putting in a spate of applications as an insurance against things turning out better than expected for the industry. If manufacturers could have spent money on knitting machines and still qualified for grants, the size of applications for grants might indeed have been startling. To a surprising extent, knitted goods are replacing woven cotton garments; the trend is especially marked in shirtings. Acquiring new machinery is the worst bottleneck, but its installation gives British manufacturers the marked advantage over their Asian counterparts which they have long sought. But while Lancashire manufacturers have been grudgingly slapping in their last-minute applications for grants, the signs that the industry is prepared to help itself have multiplied. The fresh concentration within the Lancashire Cotton Corporation, announced this week, will facilitate more shift working, and schemes are afoot to improve marketing. Heartening results are claimed for some ventures into re-equipment, which contrast with the tales of newly equipped mills standing idle.

MACHINE TOOLS

An Aachen for England?

Though the new Institute for Advanced Studies in Engineering Sciences to be set up at Birmingham University will be

devoted to research and postgraduate teaching in engineering as a whole, the main emphasis of research projects that are being placed with it by the Department of Scientific and Industrial Research is on machine tools, their operation, and the materials that they are called upon to work. In a sense, this is the first British counterpart to the Technische Hochschulen in German cities, of which those at Aachen and Munich specialise in machine tool research and development.

Establishment of such an institute was one of the recommendations of the committee headed by Sir Steuart Mitchell that reported on the British machine tool industry two years ago. It also represents an example of the inter-disciplinary research in which, as Sir Harry Melville, Secretary of DSIR, said last week, rapid advances in the physical sciences seem at present to be clustering. The new institute will bring together a number of specialists from different fields; this seems to have creative advantages, and may also facilitate mixing with design engineers from the machine tool industry and its customers.

Much of the technical strength of the German machine tool industry stems from the very close liaison between the industry and these Technische Hochschulen—and from the infiltration of engineers trained there deep and wide within the industry's management. The new institute at Birmingham, along with some other efforts of the industry in recent years in the field of training graduate students, should help to do as much for the British industry.

A Survey for Salesmen

ANOTHER suggestion of the Mitchell committee—and before that, of Professor Seymour Melman—to the British machine tool industry was that it should commission some large-scale market research into home and export prospects for machine tool demand. This the industry entrusted to McGraw-Hill, the trade and technical publishers, along with the job of compiling a census of machine tools in use in Britain. This second job, the results of which were published this week, is inherently less possible to complete to anybody's satisfaction; but McGraw-Hill has made a workmanlike stab at it.

Its analysis of the British market was understandably in greater detail than its work on any other country. It made "separate projections of the probable changes in production to 1967 and 1970 of the five main engineering industry groups" (on which Sir Robert Shone might well like advice), combined these according to with a weighting corresponding to the proportion of all types of machine tool in each industry, and thus projected an index of activity in the machine-tool-using sector of the economy.

This index the surveyors found to correlate well with "consumption" of machine tools in Britain for recent years; so they have applied it to produce forecasts that demand for machine tools in 1967 will be about 15 per cent higher than in 1961, and that in 1970 home sales should be 60 per cent above the 1960 level. The survey even breaks this estimate of total demand down into demand for individual tools.

Its assessment of future international demand has perforce to be based upon much shakier basic data and projections.

The McGraw-Hill estimate is that in 1960 world purchases of machine tools totalled £783 million (this precision is a bit extreme); that in 1967 the total may be about £1,400 million; and that by 1970 total world purchases may exceed £1,600 million. Since the majority of machine tools bought are made in the same country, international trade is much smaller than this—shown as £238 million for 1960, and forecast as £370 million by 1967 and £400 million by 1970.

McGraw-Hill record that 30 per cent of machine tool sales in 1960 were in the United States and about the same percentage in Europe. But it does not regard this equality as normal—the United States, after all, has a far larger "park" of machine tools that will at least need replacement. Its forecasts are based, therefore, upon an assumption that demand for tools will grow faster in the United States than in the European Common Market or in Britain.

This may be logical, though on current form it could still be wrong. What is more important to the total estimate is that in 1960 these three markets took nearly 80 per cent of demand in the world outside the Soviet block. A percentage point or two of error in the annual expansion in machine tool sales assumed for the United States or Western Europe might send the estimates far awry.

INTERNATIONAL CREDIT

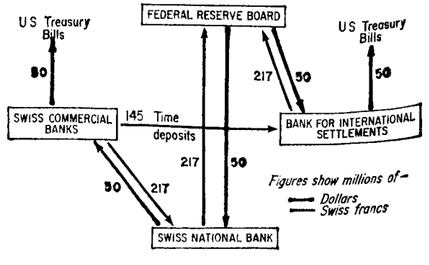
Four Cornered Swap

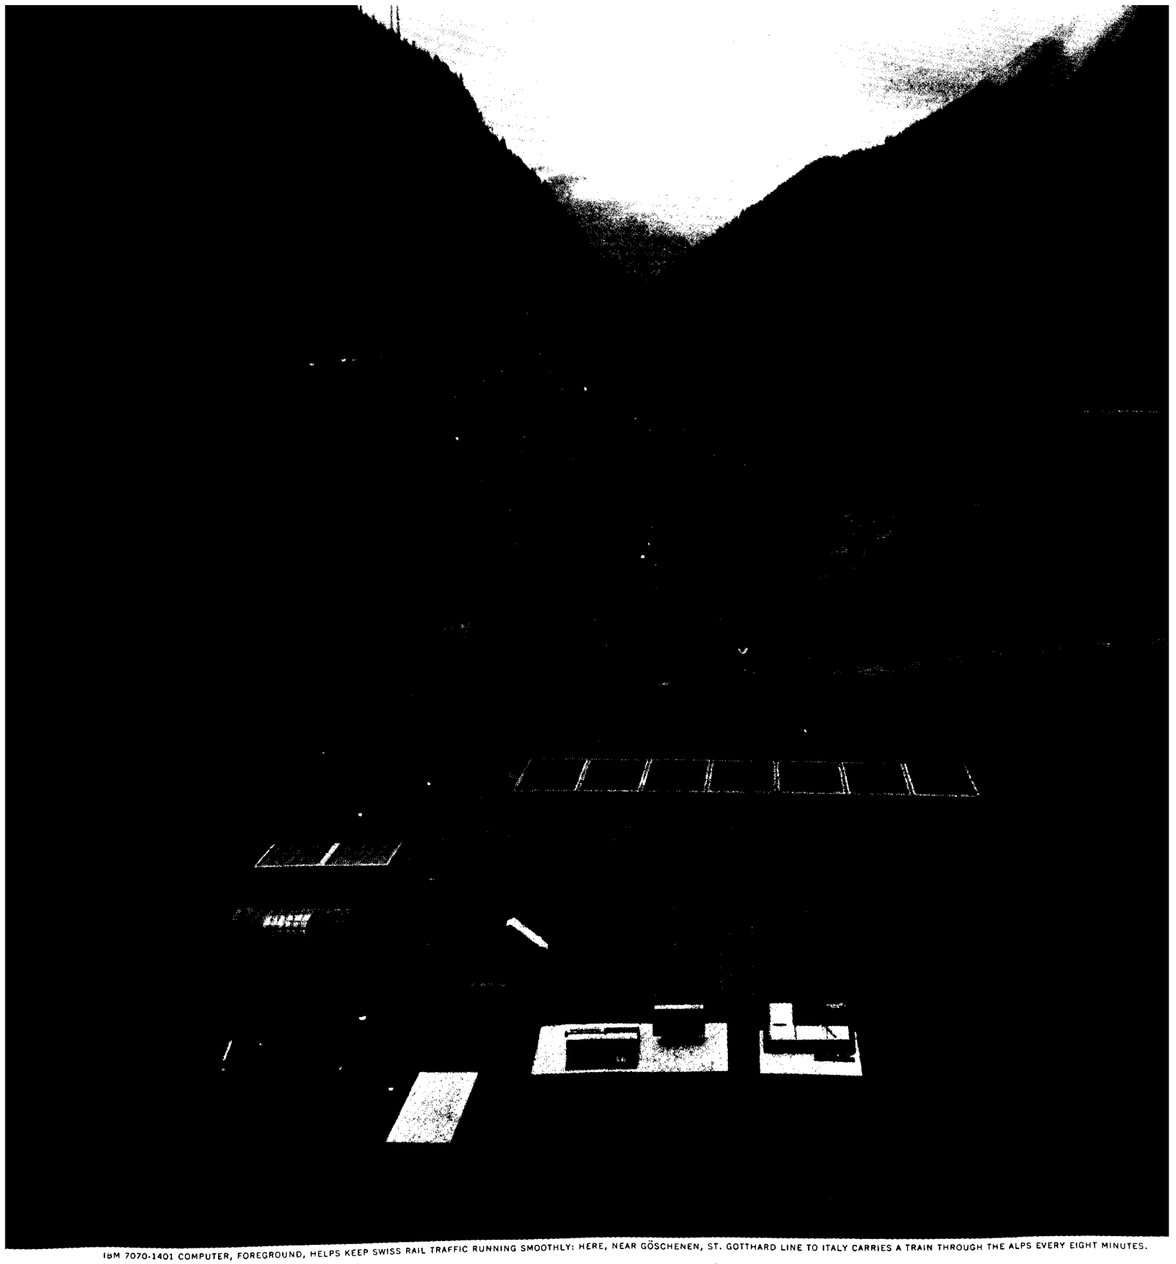
THE special credit arrangements announced at the end of last week between the Federal Reserve and the Swiss National Bank and the Bank for International Settlements follow the same basic pattern as earlier agreements with other authorities, of a three months swap of official credit facilities. But the new arrangement, for $200 million, is substantially larger than the $50 million arrangements with France, Britain, the Netherlands and Belgium (though still $50 million smaller than that with Canada); and the participation of the BIS, acting as a true bank for international settlements, gives it a special interest, as well as a special complexity.

Two identical swap agreements of $100 million in US dollars against Swiss francs have been made with the Swiss National Bank and the BIS; one half of these amounts have been drawn so far. Thus the Federal Reserve has provided $50 million to the Swiss National Bank, with a three months' swap into Swiss francs; the national bank has passed these dollars on, secured on a similar swap basis against Swiss francs, to the big Swiss commercial banks, which have used them to buy United States Treasury bills. These banks have also provided some 145 million Swiss francs in three months' time deposits with the BIS, thus bringing the resources of the BIS in Swiss francs to the point needed for its own $50 million swap agreement (initially, before these time deposits were fully arranged, the Swiss National Bank provided the BIS with Swiss francs against gold, but this arrangement has now been unwound).

The effect of these transactions is then as follows. The Federal Reserve has received the equivalent of $100 million in Swiss francs, in equal parts from the Swiss National Bank and the BIS, and has used this to pay off $100 million of dollar balances accumulated by the national bank. Offsetting this, a new $100 million is held in US Treasury bills by the Swiss commercial banks and the BIS, in both cases secured against a swap into Swiss francs.

These operations have had two effective results. First they have reduced liquidity on the Swiss money market, by channelling some 360 million Swiss francs into US Treasury bills and into BIS time deposits. Secondly, they enable the national bank to reduce the proportion of foreign exchange in its total reserves—which had risen close to the 15 per cent reached at the height of last year's Basle assistance to sterling—without causing an equivalent strain on the dollar. The Swiss National Bank has in fact taken the opportunity this week to make a second conversion of $25 million into gold; and it has passed a further $25 million on to the Swiss Confederation. At the same time, the week's market intake of dollars was around $20 million, so that the net reduction in the National Bank's currency reserves was some $130 million, reducing them to the equivalent of 950 million francs compared with 1,494 million francs last week. And a further $100 million could readily be switched by drawing on the rest of the mutual credit facility.





IBM 7070-1401 COMPUTER, FOREGROUND, HELPS KEEP SWISS RAIL TRAFFIC RUNNING SMOOTHLY: HERE, NEAR GÖSCHENEN, ST. GOTTHARD LINE TO ITALY CARRIES A TRAIN THROUGH THE ALPS EVERY EIGHT MINUTES.

How to unscramble an Alpine maze

Climbing around, between, over, and under the Alps, the Swiss Federal Railways packs into 1,800 miles of right-of-way enough terrain, traffic, and troubles for a line ten times its size.

Every 1,000 yards the tracks leap a torrent; every nine miles they tunnel a mountain. Express trains race to link the Baltic to the Mediterranean; leisurely freights carry commuting cows to Alpine pastures. Blizzards and avalanches keep track crews busy. To keep this rugged railway ticking like a fine watch, SFR uses advanced equipment both on the line and in the office. Management's latest assistant is an IBM data processing system. Figuring car mileages and rentals, determining the rates and shortest routes between 1,200 stations, making up payrolls, analyzing costs, forecasting traffic volume—the computer cuts time, trims expenses.

Railways around the world use IBM electronic computers to handle the immense amount of information that helps run a transportation system. A new sound effect has been added to the traditional clackety-clack of the wheels and the distant wail of an engine whistle—the low hum of a computer hard at work.

THE DRY SHERRY~
~& THE ICE BUCKET

Last year a fable; today a fact

This is the picture that last year launched a thousand conversations. *Chill a sherry? Anything as fine and subtle as Harveys Bristol Dry? It sounded incredible!*

But those who dared were handsomely rewarded. For when a dry sherry has been matured in cask for many years like Bristol Dry, chilling actually reveals its depth of character. The dry, delicate flavour blooms with a glow of hidden warmth.

No sherry drinker who has once tasted Bristol Dry this way would dream of drinking anything else. By the end of last summer, Bristol Dry in its ice bucket had moved into all the very best houses. Now, to drink your summer sherry any other way is nothing short of reactionary. *Harveys Bristol Dry 22/6*

HARVEYS BRISTOL DRY

BANK CREDIT

Waiting for Borrowers

THE omission of a further release of special deposits from Thursday's measures in itself caused no great dismay among bankers. For the effective brake on their activities is now quite clearly a lack of public demand rather than pressure on their own resources ; so that an effective stimulus to their own activities can come only from measures that stimulate public spending and revive industrial confidence.

The bank statements for July confism that the release of special deposits in April had no visible effect in reviving advances. Net advances of the London clearing banks rose by £64 million net in the four weeks to July 18th, and those of the Scottish banks by £12 million. After allowing for a large temporary fluctuation in borrowings by nationalised industries, the rise in clearing bank advances to other borrowers in July, at £46 million, was actually £11 million less than in the (five weekly) June period. But in both months the figure was swollen by the half yearly debiting of interest, which must have accounted for the bulk of the increase of £100 million in the nine weeks as a whole. This is closely in line with the increases at this season in both 1961 and 1960.

LONDON CLEARING BANKS

(To State Boards).	55		+18	− 16

* Excluding all transit items except ratios of advances to deposits ; all ratios are of gross deposits.

The sluggishness of advances encouraged the banks to build up their gilt-edged portfolios a little further. They added £27 million in June, bringing the ratio of investments to 15.9 per cent of deposits, compared with the low point of 13.9 per cent a year ago. Even so the liquidity ratio dropped only from 33·4 per cent to a still comfortable 33.1 per cent.

HIRE PURCHASE

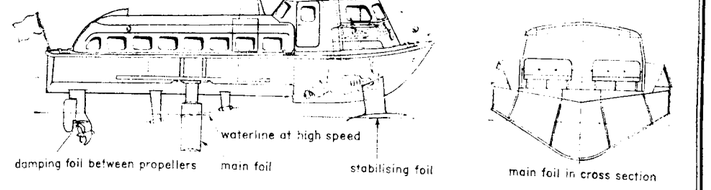
Patchwork Not Reform

Our conclusion is that the present framework of hire purchase law, as generally understood and applied, and as amended in accordance with the recommendations in this chapter, is capable of serving the consumer well.

THE recommendations of the Molony Committee on hire purchase are an attempt to patch up a system that really needs radical reform. They offer little more than those of the private member's bill that was talked-out of the House of

HYDROFOIL BOATS

Sailing on Wings



THE hydrofoil has now been in existence for 55 years, yet it is only recently that it has found commercial use: it is operating services across the Straits of Messina, on the Swiss lakes and on Russian rivers. British participation has so far been limited to ideas, with most of the manufacture being done in Germany ; the first major British interest comes now that one company in the business, International Aquavion SA of Luxemburg, has been taken over by British interests. Duncan Macneill and Company, of the Inchcape group, and Wallace Bros and Company (Holdings) have become the controlling shareholders. Aquavion has its design and manufacturing centre in Holland, where it has been developing hydrofoil craft for some ten years ; now it is marketing a 22-foot boat that carries 10 passengers and a 32-foot one that carries 40, and has designed boats up to 120 feet long, carrying 400 passengers.

The hydrofoil is essentially a water aeroplane, planing on submerged foils with its main structure well clear of the water. It thus sets up less resistance than a conventional speedboat, for there is a much smaller area in contact with the water. And, what is just as important, it can operate in rougher water, for the foils run beneath the surface and so beneath the waves. Most hydrofoils have four foils to carry the weight, mounted near the corners of a boat-shaped hull that will float when at a standstill or at low speeds. Aquavion designs differ in that they have a single V-shaped foil mounted amidships across the full width of the hull to carry the weight, while a pair of smaller foils on either side of the bow provide longitudinal stability and another small foil between the propellers helps to damp pitching movements. Apart from eliminating the projecting legs that make it difficult to put other hydrofoils alongside a quay, Aquavion claims that this arrangement makes its hydrofoil craft more seaworthy : it says its 22-foot boat can cruise at 30 knots in waves up to 3½ feet high, and the 32-footer in waves eight to ten feet high—the worst conditions likely to be experienced in coastal waters. The 120-foot design should be able to operate in waves of 15-20 feet. All these designs have been approved by Lloyd's.

The chief competitor for the hydrofoil will be the hovercraft. But it cannot yet match the seagoing abilities claimed for the Aquavion craft, and it costs a good deal more to build, especially in the smaller sizes, though its operating speed is higher. Aquavion offers its 40-seater for £50,000, though a 100-passenger machine would cost perhaps £180,000-£200,000 : there are not the same gains in efficiency as size increases as there are with hovercraft, and the need for light, powerful engines forces the use of expensive gas turbines, as on hovercraft. Aquavion believes that the best business will be done with machines of around 100 passengers, which could operate ferry services in almost any sea conditions. It estimates that the 40-passenger boat would show a return of 5-7½ per cent on capital if amortised over 12 years, assuming a 70 per cent load factor and a fare of 4½d a mile. If the more usual ferry charge of around 6d a mile was used, the boat should on these figures prove reasonably profitable. And at this size it would seem pretty well immune from hovercraft competition.

Commons last December on the ground that it anticipated the report of this committee. The committee's main recommendations are: (1) that all consumer transactions involving credit should have the protection of the 1938 Act irrespective of the sum involved; and (2) that all door-to-door credit sales (but not sales at retail establishments) should be subject to a 72 hour "cooling-off" period, during which the hirer may cancel the agreement, as protection against the unscrupulous salesman. Minor recommendations include the placing of the words "I realise that by my signature I am offering to commit myself to a hire purchase agreement on the terms contained in this document" immediately above the space for the hirer's signature; and an obligation on the dealer always to give the total hire purchase price. The committee inexplicably turns down the suggestion that the difference between this price and the cash price should be expressed as an annual rate of interest on the average sum outstanding. Simplification of agreements is dismissed as impossible on the ground of "the necessity for legal precision". Standardisation of contracts for classes of goods is something that "ought to be worked for." The committee makes no recommendation, apart from the general one that action is long overdue, on the protection of third parties who in good faith purchase goods still subject to a hire purchase agreement, on the ground that the Government has set up an inter-departmental inquiry into this.

The finance houses are bound to fight hard against the committee's main recommendation on the extension of the 1938 Act, which will mean that when they are forced to repossess they will be able to get only half the hire purchase price from the hirer. In a weak second-hand car market this could mean quite big losses. Much more sensible is the practice now used by most companies of charging the hirer the amount still owed *less* the amount received for the re-sale of the car.

The consumer's interest can be served in the long run only by a radical reform of existing hire purchase practice, from which the committee shies. Its recommendations simply patch up some of the more blatant legal anomalies; they could even put off the day when the finance houses move away from complete dependence on the dealer and towards a more direct lending relationship with the hirer. It was suggested to the committee that hire purchase "must now be regarded as a combination of legal fictions divorced from the reality of the relationship between owner, dealer, and hirer." Recent case law and the bad debts that have undermined the hire purchase industry point to the truth in this statement, but the committee chose to reject it. Only if "the existing legal structure was incapable of supporting consumer interests to the necessary degree" says the committee, would it have had to "probe more deeply into theoretical deficiencies."

GOLD SHARES

Kennedy's Kaffirs

FOLLOWING President Kennedy's strong stand on the dollar, gold shares tumbled. Kaffir jobbers who watch television had a troubled night and were at the "House" early on Tuesday to mark down prices sharply; this did not deter the more determined sellers and for a time dealings were hectic. But the market was short of stock and the selling soon dried up; as a result prices rallied for a while though they are still below their earlier near peak levels.

This quick recovery suggests that buying of gold shares in the past months has been based on something more than the remote chance of an increased price of gold, though this was not absent from investors' minds. Good results and dividends from many South African mines and the steady improvement in the immediate economic outlook in South Africa have made their high yields increasingly attractive. And for the moment at least the political risks seem less acute. A reminder of the not far distant days when few would look at South African gold shares is given by the figures published by the Bureau of Census and Statistics in Johannesburg. These show that in 1952-53 40 per cent of gold mining dividends were paid to investors outside South Africa; by 1960-61, following the massive repatriation of shares that followed the Sharpeville riots, the proportion had fallen to 26 per cent.

South Africa's controls on capital movement halted the massive selling of gold shares. Dr Dönges, the finance minister, and his Treasury advisers are no doubt pondering whether the lifting of these controls would bring renewed selling. The meagre response to the issue of blocked rands, which purports to enable overseas investors to get their funds out of South Africa over a period of five years, suggests that investors are not inclined to sell their shares at the moment. Meanwhile the discount between Johannesburg and London prices remains around 10 per cent while South Africa's foreign exchange reserves continue to rise: at the end of last week they amounted to R420 million compared with R140 million immediately before controls were imposed.

AVERAGE SALARIES

Civil Service Leads

BETWEEN October, 1959, and October, 1961, salary earnings for men and youths in manufacturing industries rose by about 11 per cent to an average of £20 7s. a week, according to the current issue of the Ministry of Labour *Gazette*. Wage earnings for men aged 21 years and over rose just fractionally more, by nearly 12 per cent, to an average of £15 18s.; those for boys and youths by 18 per cent to £6 19s.

• The statistics about the earnings of salaried employees bring more up to date and enlarge those first published in the Ministry's new bulletin in April. They relate to all administrative, technical and clerical grades: the movement in a composite index, therefore, reflects not only changes in the pay of individual grades but also any changes in the relative proportions of the different grades. Clerical pay is not distinguished from other salaries in manufacturing industries but elsewhere, in certain other industries and services, the rise in pay for male clerks was proportionately less over the two years than that for other

* Including boys and youths among salary-earners. † Those covered by the Ministry of Labour's inquiries, which are not identical for salaries and wages. Agriculture, distribution and most miscellaneous services excluded from both wage and salary enquiries; railways, coalmining and docks also excluded from wage enquiries.

male salary-earners; however, the reverse was true for women employees. Typists are evidently still at a premium.

Outside manufacturing, in what are called the "other productive industries" (mining, construction, public utilities) the average salary for men rose over the two years rather more sharply than in manufacturing, by 13.5 per cent; in public administration and public services it rose less sharply, by 10.6 per cent. In both these broad sectors, however, men in salaried occupations in October, 1961, earned less on average than in manufacturing. But the average male civil servant, after a rise of 12.6 per cent in the two years, earned more: his pay was £20 12s. a week.

RAYON

Generous Giant

IT may be that one lesson at least was learned in the chemical industry from the ICI's struggle with Courtaulds this year: to make offers that have a reasonable chance of succeeding first time. The offer by the Chemstrand Company of New York of 21s. 6d. in cash for each 2s. 6d. ordinary

Our foreign service grows — at home

For many years a full overseas service for customers and others interested in foreign trade has been provided at Birmingham, Bradford, Liverpool and Manchester, as well as at our two foreign branches in London. Our experience in these four provincial centres has shown us how useful the provision of local expert advice can be, and we are now extending our services to every part of the country. Premises have already been acquired in Southampton and in Nottingham, and Foreign Branches will be opened there as soon as they can be made ready, while plans are well advanced for opening Foreign Branches in six further centres.

Our Foreign Managers have always been well equipped to discuss the problems of export and import finance, in their offices or, if it suits you, in yours. Now there will be many more of them, more widely spread to bring our foreign service virtually to your doorstep. Do *you* need their help?

BARCLAYS BANK

Money is our business — throughout the world

MSL *have been retained to advise on this appointment.*

REPRESENTATIVE New York

of a unique European group of consultants (about 300 strong) who specialise in economic, marketing and operational research.

The man appointed must be prepared to travel throughout the United States, promoting the services of the group. He will make contact with people in high business, professional and academic circles, studying their problems and advising on the services available in the group to assist them in any problems affecting their present or future activities in Europe.

He must have experience of industry and of marketing research or allied work. He must know Europe, and have some contact with Americans. He will probably be aged 35 to 45, honours graduate with scientific interests, and perhaps, consultancy experience. Salary will be of the order $20,000 to $25,000. Please send brief details in confidence quoting reference S.9234 to J. G. Smith.

In no circumstances will a candidate's identity be disclosed to our client, unless he gives permission after a confidential interview at which he will be given full details of the appointment.

The world of Anglia television

Today, calm. Tomorrow, what?
North Sea storms for the fisherman?
Flattened crops for the farmer?
Or a sun-drenched Sunday for you and me?
Accurate local forecasts on Anglia Television give the answers every day.

The daily local weather forecast is just one of the regional services Anglia Television brings to its viewers. Every weekday, news and magazine programmes of all kinds entertain this prosperous, homogeneous area. And Anglia's 'Survival' nature series and drama programmes are seen throughout the country.

share of Lansil has this merit, and the directors of Lansil have recommended that it be accepted. It would have been surprising if they had not—the offer is fair to the point of generosity. When it was made, the shares stood at 12s. 6d., exactly matching their assets value. Their record over the past few years has been erratic: in 1958 the 2s. 6d. units touched a nominal price of 4d. However, there has been a trong recovery since then and earnings have climbed from nil in 1958 until, at the time of the bid, the dividend yield on the 2s. 6d. units was 8 per cent, covered 2.4 times. But the bid values the company at an earnings yield of 10.5 per cent and on that basis it seems less generous—Courtaulds are having to buy Kirklees, another rayon firm, at an earnings yield of 6 per cent.

Rumours of takeovers have been with Lansil for five years, mostly coupled with the name of Courtaulds. One of the few independents left in rayon manufacturing, Lansil produces 10 million pounds of cellulose acetate a year, a sixth of UK production. This is mainly in the form of filament yarn, which has benefited from the recovery in acetate rayon since 1958. This recovery has been reflected in the steadily rising profits until, this year, the board was able to raise the dividend from 33⅓ to 40 per cent. As a hedge against loss of the rayon market Lansil has attempted to diversify into non-woven fabrics and anti-corrosion treatments, but these will probably not have contributed much to profits.

The question remains: why should Monsanto, alias Chemstrand, want to buy Lansil? In the United States, Chemstrand makes and spins an acrylic fibre, Acrilan, and nylon; the British subsidiary makes Acrilan in Northern Ireland and has an interest in a company which will make elastic yarn. The chairman of Monsanto Chemicals in the United States, Mr E. O'Neal, Jr., said that the offer was "prompted by the opportunity for greater participation by Chemstrand in textile manufacturing and marketing in the United Kingdom." The synthetic fibres market is the fastest-growing sector of the chemical industry and the same opportunity prompted ICI's bid for Courtaulds. But acetate rayon is not Courtelle: in spite of last year's surge it doe not offer a long-term growth market. Mr O'Neal went on to say that the purchase would make available to Chemstrand "additional distributive channels, plant and equipment" and it would "strengthen Chemstrand's competitive position for further entry into the textile markets of Western Europe." Chemstrand in the United States is the second largest manufacturer of nylon in the world. Does it intend to add to its range in the United Kingdom?

LEAD

Piling on Pressure

LEAD was the first metal to be favoured with free dealings on the London Metal Exchange after the war. All the major

Progress in Credit Reporting

IN November 1960 credit reporting became headline news. Seven leading hire purchase finance houses announced their intention of transforming Kemp's Mercantile Offices into a nationwide credit rating bureau, and immediately many newspapers began warning their readers against black lists and credit snoopers. Others applauded the idea as likely to snare the persistent defaulter who, if left unchecked, must inevitably keep up the cost of hire purchase to the honest majority. United Dominions Trust, the largest finance house, declined an invitation to join the scheme and its chairman, Mr J. Gibson Jarvie described it as "unfair" to the public. In a day or two the fuss had died as quickly as it had started and disappointingly little has been heard of this scheme since.

In Birmingham this May, however, these same finance houses, doing over half the vehicle business in the area, started a new comprehensive credit register based on the Kemp's records and managed by an Englishman with some years' experience of an advanced system of credit reporting in Canada. The driving force behind this pilot scheme is Mr John McQueston, the chairman of Lloyds and Scottish Finance and the current chairman of the Finance Houses Association. He argues that the industry needs to know far more than at present about its customers. It needs, above all, a clearing-house of information, a credit register into which the hundreds of finance companies and retailers would feed both positive and negative credit information. Eventually, it is hoped, such a register would cover the entire country, and every granter of credit would supply the data not only of the bad transactions but of all transactions and their subsequent history. A record card might look something like this:

A. N. OTHER, 1, High Street, New Town.
£50, television set (Telesales Ltd.), Nov. 1958, paid off Nov. 1961, satisfactory.
£150, furniture suite (Furnihomes Ltd.), May 1960.
£450, Ford Anglia (IOU Finance Ltd., through A1 Cars Ltd.), June 1961, slow payer.

United Dominions Trust still remains aloof from this scheme, though after its recent results it might perhaps be having second thoughts. Mr Gibson Jarvie's standpoint on credit reporting is simple. He believes that finance companies should protect their business adequately by keeping their own records as elaborate as possible, but private. He objects to national "black-lists" of defaulters or bad debtors, on the grounds that the records could be misused so that innocent borrowers suffered. And he sees no reason why he should turn over the names of his good borrowers for the benefit of his competitors.

To some extent, Mr Jarvie has supporters in other finance companies. The habit of competition dies hard, and many lenders may be quite genuinely bothered at the prospect of sharing such vital information about customers. They may find, in any case, that existing credit bureaux or agencies which "do a search" on prospective borrowers for a small fee, act as a useful long-stop to their own records. Any radical new departure would also be extremely costly.

Few outside observers of the hire purchase industry would give much sympathy to Mr Jarvie's views, which take scant account of the huge bad debts, variously estimated at up to £60 million, which have plagued hire purchase since 1959. Mr Jarvie and his supporters seem to assume that the losses can be placed almost wholly at the door of relatively few swindling dealers.

NOR have existing credit bureaux helped very much to cut hire purchase risks down to manageable proportions. Their flow of data comes much less from the source, the granters of new credit, than from the courts, if and when a hirer appears on an arrears charge. The bureaux files are thus choked with "black" information. What little they possess of a positive character results from specific inquiries from subscribers. These are the work of "agents" or "correspondents" who are generally clerks in professional offices, or post office people, or ex-policemen. The subsequent report on the intending borrower may, at worse, be an elaborate composition based on nothing more than inquiries from his milkman and landlady.

Will other large HP concerns join the Birmingham experiment, thus broadening the coverage and sharing the cost? (Even a regional scheme could cost £250,000 to set up.) More specifically, will Mr Jarvie throw in his UDT records? The new register can hardly achieve much in its first six months; and there is a danger that once the incidence of bad debts becomes less painful, the finance companies may become correspondingly less keen to take an active part in the scheme.

In the meantime there is much that can be improved by the companies themselves. In Britain at present they usually ask a new customer for four facts only—his identity (name, address) and his age and job. American lenders would ask for (and insist on being told) many other facts, primarily the customer's income and his existing total commitments against hire purchase. The initiative, in going after the data, clearly lies with the lenders, but in Britain, at least, most finance companies are still strangely shy. The argument most widely used is that most Englishmen dislike disclosing their incomes and would dislike it even more if they felt that any subscriber to a credit register had only to telephone to be told it all.

metals in which a free market exists got off on the wrong foot when dealings were resumed because they were deliberately launched into the post-Korean recession when the danger of severe shortages had passed. But through the ups and downs of the post-Korean decade, lead has come off relatively worst. To some extent, the better performance of some metals might be ascribed to their producers' attempts to control the market. But lead's malaise appears to be deeper-seated. If lead producers have failed to stem the tide, it has not been for the want of trying. Despite these efforts, ineffective though they may seem, lead has declined more heavily and more quickly than was foreseen.

For a metal which is reputedly resistant to recession, because its principal outlets include additives for petrol and the manufacture of batteries, lead is making heavy weather of the prevailing slackness in demand. Consumption of lead does in fact appear to be holding up relatively well compared with other metals. Even so, since the end of May when the international lead and zinc study group produced what was then accepted as a mildly bullish forecast of reduced stocks this year, spot lead has fallen from £59 to £52¼ a ton. On the continent discounts on the LME price are commonplace and the quoted New York price of 9½ cents a lb is being heavily discounted. The significance of this fall can be gauged by the level of prices prevailing at the end of the war. Up to 1945, lead had been priced at £25 a ton. The price was raised from £30 to £55 a ton in the following year. The rise in costs between then and now must make the mining of lead a vastly less profitable operation.

The reduction in stocks forecast this year stemmed partly from the fact that output was still being curtailed in the first quarter under last year's cutback agreements. The restrictions announced this year (which affect refined lead output and not mine production) appear far too mild, so that if an overall reduction in stocks is achieved, which despite the reduction in stocks held in London Metal Exchange warehouses, does not now appear to be so likely in Britain or Europe, it will not be sufficient to exert any appreciable influence over the market. Following the study group meeting, production of refined lead in European OECD countries was 3 per cent lower in June than a year earlier. However, stocks held by smelters and refiners increased further.

In contrast to last year, sales of lead by Russia, which has bound itself not to increase supplies, have not been responsible for the current slide. In recent months a sharp rise in imports from Australia and to a lesser extent from Canada appears to be weighing down the market. Given the apparent small but persistent surplus that afflicts lead despite the gradual expansion in its consumption, the view that it would be a good thing to leach a little of the surplus capacity out of the industry has much to commend it. Unfortunately this treatment is slow to take effect and in many cases is in danger of being forestalled, as in the United States, for instance, by subsidies for small or ailing producers.

MARKETING

Retailing to Business

More than one company in the field of light engineering, selling fairly standardised components or sub-assemblies that go into quite a variety of finished domestic or industrial equipment, has been talking in the last year or so about "retailing to business." Traditionally, all this equipment is marketed in the same way as custom-built components or sub-assemblies made to individual firms' specifications—i.e. by direct canvassing by the suppliers for enquiries from their customers—but the method may well become inadequate when the components are standardised, and the buyers none too expert about their needs or, more particularly, about what is on offer. One middleman, Manufacturers Sales and Display, is now opening a showroom in London for electronic controls where such desirous but uncertain buyers will be able to shop around.

Control mechanisms might well be a good example of the kind of goods that businessmen might find it convenient to buy in this way. More and more of this equipment is now being offered by manufacturers in unit or building-block form. On the other side, there is a growing field of customers, particularly among small and medium-sized business, who are interested by the ideal of "automation" but do not know whether or how it could be applied to their requirements, and do not feel inclined to seek consultant advice that will either cost money or be likely to commit them to one firm of suppliers. The London showroom is going to have specialist staff, with language as well as technical qualifications, available to help such business shoppers. The company, started by a Canadian engineer, has gained the approval of the trade associations of the electronic and instruments industries. Whether it succeeds will depend on the extent to which it gets the practical co-operation of manufacturers of control systems ready to exhibit their products for sale in this way.

SHORTER NOTES

Still at a low rate by any long-term experience in this country or by an international standard, unemployment nevertheless continues to rise in Britain. On July 16th, there were 400,182 people registered as out of work, equivalent to 1.8 per cent of the labour force; a year ago the rate had been 1.2 per cent. This is the same July rate as in 1959. Excluding school-leavers, and those stopped only temporarily, the numbers wholly unemployed rose by 2,169 between June and July, whereas normally a decrease of about 15,000 can be expected. At the same time, instead of the usual seasonal increase of about 18,000, vacancies fell by 1,000. Excluding seasonal variations, for every job on offer in July there were more than two people seeking work.

*

There have been a number of notable boardroom appointments in the past week. *Lord Cobbold*, formerly Governor of the Bank of England has been elected a director of the Hudson's Bay Company from which Mr H. Benson, then deputy governor, and Lord Heyworth recently resigned as directors: no reason was given for their resignations. *Sir Alan Wilson* who last month resigned from the board of Courtaulds, where he was chairman-designate, has been appointed a director of International Computers and Tabulators. Lord Longford, formerly Lord Pakenham, is to give up the chairmanship of the National Bank in February in order to return to active politics. His successor will be *Sir Ivone Kirkpatrick* who has been a director of the bank since October, 1960, and whose five-years term as chairman of the Independent Television Authority ends in November. The first directorship for a victim of Mr Macmillan's "axe" goes to *Mr Harold Watkinson*, the former defence minister, who joins the board of the Consolidated Trust, one of the trusts in the Drayton group.

*

Montague Burton is to issue £6 million of 6¼ per cent first mortgage debenture 1987-92 at 97½. The stock will be offered to holders of the company's shares and debentures. £50 will be payable on application by August 21st and the balance on January 10th.

BEECHAM GROUP

Increased sales, narrower margins

Reporting to shareholders on the 25th July, 1962, Mr. H. G. Lazell, Chairman of Beecham Group Ltd., made the following points:—

TRADING RESULTS

Total Group sales increased by 4%, but trading profit fell by 5% in comparison with the previous year. In the home market, soft drink sales improved but turnover in advertised medicines, particularly analgesics, was less than last year.

Increase of 5% in home sales as compared with 13% last year reflects the restraint placed on demand in the home market by current fiscal measures. Marketing operations were handicapped by the increased cost of television advertising, caused by higher rates and the tax on television.

Sharp increase in operating costs caused 8% decline in home profits. Sales volume did not increase sufficiently to cover cost increases and we did not feel able to raise prices to a level which would completely restore our profit margins. If the recent imposition of purchase tax on soft drinks and confectionery reduces turnover, this could seriously affect the profit, because the profitability of these mass-production businesses depends largely on the last 10 to 15% of sales.

OVERSEAS

Owing to trade recessions in some areas and import restrictions in others, the increase of 2% in overseas sales and profit is disappointing compared with the 25% increase last year. Currency devaluation in South America and Canada reduced the sterling value of sales by £400,000.

Brylcreem continues as the leading hairdressing for men in the United States. Silvikrin Shampoo sales are also steadily increasing in that market.

In Europe, we had a successful year in Denmark, Holland and Belgium. Sales in Italy reached a record level but our business there is still in the development stage and not yet showing a profit.

CAPITAL EXPENDITURE

The last three years have been marked by exceptionally high capital expenditure. Our Worthing penicillin plant cost £2.3m and we spent substantial sums on extending overseas factories. A new toiletry factory at Maidenhead has also been completed at a cost of £1.2m, most of which was incurred during this period. As our present plans will result in a substantial reduction in the level of capital expenditure during the ensuing three years, we can look to the replenishment of our cash resources over this period out of provisions for depreciation and normal retentions of profit.

'The choice is between having new drugs at high initial prices or not having them at all'

The pharmaceutical industry has been the subject of much criticism, both here and in the United States, a great deal of it ill-informed and some of it unfair. During the last 30 years, the achievements of the industry have been quite remarkable. The latest advance in the field of antibiotics was made by our own scientists at Brockham Park when they isolated the basic core of penicillin. The initial selling prices of many of the products resulting from these efforts will be high, but it must be remembered that receipts from sales have to cover the costs of both successful and unsuccessful research. It is unrealistic to expect to get new and better drugs at low prices. The choice is between having new drugs at high initial prices or not having them at all.

COST REMARKABLY STABLE

The majority of the drugs used in this country is paid for by the National Health Service. The total cost of the National Health Service in 1960-61 was £827m, the amount received by manufacturers in respect of all drugs supplied being some £63m. The introduction of many improved drugs has not increased the relative cost of the pharmaceutical service which has remained remarkably stable in recent years in relation both to the cost of the Health Service and to the National Income:—

Cost of pharmaceutical services	1951/52	1959/60
as proportion of total N.H.S cost	11.3%	11.4%
as proportion of National Income	0.43%	0.44%

* * * * *

The industry is also making an increasingly valuable contribution to Britain's export trade. The value of pharmaceutical exports from the U.K. rose from £39.6m in 1957 to £48.8m in 1961. It is therefore difficult to understand the Ministry of Health's recent decision to purchase certain patented drugs from abroad at cheaper prices.

I believe that these drugs come mainly from Italy and that some come from behind the Iron Curtain. In Italy there is no patent protection for drugs. Consequently, Italian drug companies can manufacture important new drugs without paying royalties to the originators and can sell them at low prices because they are contributing nothing to the cost of the research which made the discoveries possible. But the Italian manufacturers would not have had the drugs to offer had it not been for the research laboratories of the drug companies in those countries where patent protection enables them to finance basic research. **These are the countries to be considered when comparing drug prices. Such comparisons would not support the argument that prices are unduly high in the United Kingdom.**

THE DE LA RUE COMPANY LIMITED

De La Rue '62

'Big Increase in Exports'

MAIN POINTS FROM MR.B.C.WESTALL'S REVIEW

The past year has again demonstrated the strength of your Company in difficult conditions and the value of the policy of diversification which we have long pursued. Our efforts to continue our expansion lead us not only to make investments in entirely new fields but also to organise our business in such a way that each of our operating companies has the encouragement and authority to expand on its own. With this in view we have continued during the past year to decentralise and the formation of Thomas De La Rue International Limited, with several subsidiaries, is one of the fruits of this policy.

PROFIT AND LOSS ACCOUNT

The consolidated net profit attributable to De La Rue shareholders, after tax, has increased from £761,069 to £832,210. The profits before tax of the three main subsidiaries were as follows: Thomas De La Rue International Limited £1,232,741 as against £587,899; Formica International Limited £1,297,913 as against £1,506,548 and Thomas Potterton Limited £337,590 as against £351,570.

At the time of the half-yearly Announcement, the Group profit before tax showed an improvement of 6¼ per cent on the comparable period in the previous financial year. The figures for the full year show that this increase has been further improved and the figure is now 13.6 per cent.

Turnover has now reached the record figure of just under £22 million, an increase of £3¼ million over last year, or an overall 18 per cent improvement.

Of this total £6,958,000 derive from exports, which increased by 33 per cent and £8,977,000 from home sales which advanced by 11 per cent.

BALANCE SHEET

The surplus of net current assets has now dropped to just over £2,750,000. The liquid position of the Group as a whole has been influenced by the further investments made by the Board in capital expenditure which, although not so great as last year, still amounted to over £1,250,000. In addition to this amount further investments to an amount of over £500,000 have been made in the forming of new subsidiary companies, particularly in Spain and Belgium.

The Group has borrowed sums of money from the Banks slightly in excess of £2,000,000 and this has been required by an increase under the heading of Debtors and Prepayments—an increase of nearly £2,000,000.

I have already drawn your attention to the fact that export sales showed an increase of 33 per cent compared with last year and with the further call to Industrial Companies in this country to increase exports it may well be that in the future the amount outstanding for Debtors will remain at a higher proportionate figure than in the past.

FINANCE

Last year I indicated that the time must come when more money is required in our business. Further sums are required to finance new developments that are taking place in the subsidiary companies of the Group and to liquidate Bank overdrafts. The Board accordingly propose that existing shareholders shall be able to apply for one new 10s. share at par (10s. per share) for every share held on 11th July, 1962. This Rights Issue will raise just over £2,750.000 which sum will in the opinion of your Board be sufficient for the time being to enable the expansion of your Group to be continued.

In the announcement we made at the beginning of June we said that we hoped to pay total dividends of 1s. 4½d. per share. I shall be surprised and disappointed if our results next year do not justify this forecast.

SUBSIDIARY AND ASSOCIATED COMPANIES

Thomas De La Rue International Limited

The Thomas De La Rue Group has enjoyed a very good year. The main and traditional business of printing Banknotes, Stamps, Cheques and other documents of monetary value has maintained and improved upon its leading international position in this highly specialised field. The volume of orders on hand for the new financial year is considerably more than it was at the corresponding period of last year.

Formica International Limited

The results of the Formica Group as a whole have not been so good as we hoped but not so bad as might have been, bearing in mind the restrictions in the UK market imposed by the Government last autumn.

Thomas Potterton Limited

In common with all other companies supplying consumer durables to the home market the demand for water heaters began to decline as a result of Government credit restrictions towards the end of last autumn. Since the close of the year the Order Book shows an improvement on that of the corresponding period for last year and it is my own belief that profits for the current year will resume their upward trend.

De La Rue Bull Machines Limited

Encouraging progress has been made and today there are many De La Rue Bull installations operating. A promising number of surveys, ranging from large-scale computer applications down to quite modest punched card systems, are at present being actively undertaken.

OUTLOOK

The Order Book for the Thomas De La Rue Group is very substantially higher than it was a year ago. Unlike these latter companies where the execution of orders may run over many months, the demand for FORMICA and POTTERTON products can vary week by week. If, however, I take the first few weeks of the new financial year as some indication as to what is going to happen for the period 1962-63 it would seem to me that we shall be able to show a reasonable improvement on the year which we have just concluded.

SALIENT FEATURES	1962 £	1961 £
Group Turnover:		
Home Sales	8,977,000	8,082,000
Export Sales from the United Kingdom	6,958,000	5,243,000
Sales by Overseas Companies	5,974,000	5,217,000
	21,909,000	18,542,000
Group Profit before Tax	2,599,000	2,287,000
Profit before Tax as a percentage of Turnover	11·9%	12·3%

REDIFFUSION LIMITED

THE PILKINGTON REPORT—SCOPE FOR DEVELOPMENT OF GROUP'S ACTIVITIES

MR JOHN SPENCER WILLS ON IMPORTANCE OF TV ADVERTISING IN PROMOTING OVERSEAS TRADE

The thirty-fourth Annual General Meeting of Rediffusion Limited was held on July 25th in London.

Mr. John Spencer Wills, chairman and managing director, presided, and in the course of his speech, said:—

You will have received with the Report and Accounts, my Review of the year, which had to go to press before the Report of the Pilkington Committee was published.

I have not so far publicly expressed an opinion about the Committee's condemnation of independent television and I do not consider it would be in your interests for me to do so now. The subject has been discussed at length in the House of Lords and is shortly to be discussed in the House of Commons. In the light of the opinions then expressed, and of evidence and facts not so far published, the Government will make up its mind what to do. What the Government decides to do could materially affect the value of your investment in, and your income from, Associated-Rediffusion.

Such a large part of our Rediffusion revenue is derived from the distribution to subscribers, over the wire, of both BBC and ITA programmes that, quite apart from our investment in Associated-Rediffusion, we are naturally greatly interested in the contents of those programmes. It does not appear to be to the benefit of our subscribers that the two services should adopt identical standards of balance and quality, each striving to be as like the other as possible. And which service is to set the pace? If the Governors of the BBC were to be the sole judges of what is a correct balance of programmes (differing at different dates), what would be the sense of appointing the equally eminent members of an Independent Television Authority to discharge the same task? The odds are millions to one against the establishment by two Statutory Authorities of precisely the same balance at the same time. Do many people really desire that the balance should be precisely the same in the two rival services? If so, why not ask the Government to settle and define exactly what that balance should be? This would make it so much simpler for everyone concerned—except for the Government!

LIKELY EFFECT UPON BRITISH EXPORTS

One sad consequence of the Pilkington Committee's strictures upon independent television is their likely effect upon British exports. Other countries can, and do, advertise their products on television in the United Kingdom. It is clearly desirable that British products should be advertised in overseas countries and there is no better medium for advertising than commercial television. Many countries which dislike the American system of sponsored television, and have hitherto kept away from advertising, have been watching the British method with great interest. From the Pilkington Committee's Report those countries might assume that the British system has been a failure. Two days after the publication of that Report the "South China Morning Post" said:—

"Two reports have recently been issued in Britain which are of considerable interest to Hongkong. One is that of the Pilkington Committee on Television. This may well have an impact on Government's decision about the Working Party's report on a second TV service for the Colony which is now before them. It had been understood that the most likely outcome for Hongkong would have been a verdict that any such service should be left strictly to private enterprise, with the rights put to tender. The Pilkington Committee's ringing condemnation of the British commercial networks, however, may well cause some second thoughts. The networks are accused of failing to realise the purposes of broadcasting."

This reaction is not unique.

Rediffusion will be the sufferers in their overseas developments and so, probably, will be those many British firms who seek an outlet for advertising their products in the markets of the world.

NETWORKS PLANNED TO PROVIDE ADDITIONAL PROGRAMMES

I am pleased to say that, in the development of our Rediffusion wired television and sound networks, we have made provision for the changes which the Government has now announced its intention to introduce in the near future. Our networks have been planned to give subscribers more programmes than are now being broadcast and also to carry television both on the existing 405-line standard and on the new 625-line standard. We therefore look forward to giving our Rediffusion wired vision subscribers perfect reception of any additional television programmes which may be introduced, as well as the television and sound programmes which those subscribers already receive. With the permission of the Post Office, a field trial of 625-line television over wire, to selected subscribers on our North London network, is now in progress, and the results have been completely satisfactory. At the Radio Show at Earl's Court next month we shall be showing our new dual-standard wired television receivers, in operation on both line standards.

THE NEW 625-LINE STANDARD

You must realise that the Government has yet to decide upon the method by which the new 625-line standard for television is to be introduced. Whatever the final decision, it is to be hoped that ample warning will be given of the date on which any television programme, existing or future, will first be transmitted on the 625-line standard in any part of the country, so that the necessary steps can be taken in good time to enable all viewers to equip themselves with the appropriate receiving sets, without incurring unnecessary expense.

The use of the UHF bands will be necessary for future television broadcasting, and will present problems of reception to some owners of aerial television sets, because the service areas of the UHF stations will be more restricted than those of the present VHF stations. Many more transmitting stations will be required with UHF than with VHF and it may take a long time to give an acceptable standard of reception to everybody over the air. It is therefore likely that, where wired reception is available, more people will wish to take advantage of its high quality and reliability.

COLOUR TELEVISION

Our networks will be able to carry the colour television programmes which will be broadcast, also on the 625-line standard, in any new television service which is established. The necessity of keeping a colour receiver in perfect adjustment, added to the difficulties inherent in UHF reception will, we expect, encourage viewers who want colour television to make use of an inclusive service of rental and expert maintenance, such as Rediffusion companies can provide; and the higher quality and reliability of wired reception, where it is available, should be attractive to viewers who want to see programmes in colour. As I pointed out in my circulated Review, we may be able to bring down the cost of colour television reception, for Rediffusion wired vision subscribers. If the demand for colour television becomes great enough, it may justify the addition of special equipment on our networks, which would make possible further simplification and cheapening of the colour receiver.

The licences which our companies now hold from the Postmaster-General are for a term of 15 years expiring at the end of 1967. The Government has announced its intention to grant the new licences for a term of twelve years, which we think is much too short. We shall continue to press for a longer licence, and also for the removal of some of the restrictions which attach to the licence.

PAY-TELEVISION

You will have read that the Pilkington Committee has recommended against the introduction of Pay-television, even on an experimental scale, but the Government, while taking careful note of the Committee's arguments, "recognises that there are cogent considerations in a contrary sense" and, for the present, reserves its decision on Pay-television. We therefore hope that our associated company, Choiceview, may be permitted to undertake a field trial of its system of Pay-television. Those who would like to see how the Choiceview system works will be able to satisfy their curiosity at the Radio Show, where Choiceview will be exhibiting.

For two years we have been waiting for the Report of the Pilkington Committee to settle a great number of questions which affect the future development of the Rediffusion Group. We could hardly have expected that every one of those questions would have been settled in the way we should have liked best, but the decisions which the Government has already made upon some of the Committee's recommendations will, we believe, give some boost to our Rediffusion services in this country—although they will involve us in further expenditure. The report will, moreover, serve a useful purpose if it brings about, as surely it must, a clear-cut decision upon the lines on which broadcasting in this country is to develop. Whatever that decision may be, I have no doubt that the Rediffusion Group will have scope for considerable development of its many activities.

The report and accounts were adopted.

THE MIDLAND TAR DISTILLERS LIMITED

MAINTENANCE OF TRADING PROFIT—A MATTER FOR SATISFACTION

MR R. B. ROBINSON REVIEWS PROSPECTS

The fortieth annual meeting of The Midland Tar Distillers Limited was held on July 20th at the registered office, Springfield Chemical Works, Oldbury, **Mr R. B. Robinson, BA** (the chairman), presiding.

The following is the statement by the chairman which had been circulated with the report and accounts for the year ended March 31, 1962:

In my statement last year I referred to Mr W. F. Dines, who had recently succeeded Mr Aylwin, as Director in charge of Works Operations. Mr Dines died suddenly of heart failure in October last and the Company suffered a sad loss. He came to us in September, 1949, to undertake the construction or perhaps more aptly the creation of our Four Ashes Refinery on a virgin site. He was conspicuously successful in his task and very appropriately became the first Manager of the Works. From there he moved on to become General Works Manager and a Director of the Company. Such men are not easily come by.

The position of General Manager has been filled but the vacancy on the Board remains as yet.

In August last Mr Harold Leach, Chairman of the West Midlands Gas Board in succession to Mr G. le B. Diamond, was elected a Member of our Board and we welcome him as a colleague. He has had a long, varied and successful career in the Gas Industry and we hope to reap the benefit of his experience and of his stimulating outlook.

RESULTS—A MATTER FOR SATISFACTION

You will see from the Accounts that we have been able, roughly speaking, to maintain our level of Trading Profit: this must be regarded as a matter for satisfaction for in common with other Chemical Manufacturers, we have been and still are experiencing falling prices and receding profit margins. Net profit after taxation, helped by Investment Allowances, stands at £197,000, an improvement on the figure last year. The Accounts present a relatively straightforward picture and need no elaboration by me.

TRADING ACTIVITIES AND DEVELOPMENTS

I wrote last year of our policy of extending chemical manufacture: in particular I referred to our plans for developing production of Pyridine and Pyridine Bases. These plans are now coming to fruition and there is every reason to expect benefits in 1962-63, followed I hope by the full advantages in 1963-64. Substantial expenditure on research has preceded these developments, and this outlay must continue if we are to have further projects ready to follow on.

I referred last year to Schenectady-Midland Limited, the Company which we have recently formed in conjunction with Schenectady Chemicals Inc. of America to manufacture and sell special resins, adhesives, varnishes, etc. The site preparation mentioned is being followed by erection of production plant which it is hoped to complete by the end of the calendar year. We are at present merchanting the products of our American partner, and these have created a wide interest so that, when we are able to offer home produced products, a number of interested customers will be prepared to order in quantity.

During the year our supplies of Crude Tar have kept up. We have paid our Producers a price for it which, though not quite equal to last year's record figure, is certainly satisfactory in the circumstances.

The year's trading does not exhibit any really exceptional features. We continue to lean quite heavily on the Tar Acid Group for revenue; the total turnover here is much the same though Phenol prices have steadily weakened.

Pyridine itself has fallen in price: this is a world market and the position is affected by the reappearance of Russian Pyridine, and by cheaper American Pyridine, presumably in preparation for American production in Europe. We hope, as you know, to have a very big stake in this market. Beta and Gamma Picolines have been sold to capacity: Alpha Picoline is used to make 2:Vinyl Pyridine and our sales of this product have improved substantially.

I gave a warning last year about White Products, and the deteriorating situation certainly justifies it. The preferential excise duty of 1s. 3d. per gallon is definitely to go and this will remove any remaining attractions from this market.

Prices of Naphthalene have receded. It is used in the main as a raw material for the production of Phthalic Anhydride, and so many plants for Phthalic Anhydride production have sprung up all over the world that there is a considerable surplus of capacity over demand. It does not make the lot of the Naphthalene producer any easier that the Petroleum Companies are now offering O-Xylene as a raw material competitive with Naphthalene.

We are continuing to nurse our Road Tar outlets with all care; these depend nowadays on geography and service-on-the-spot. It is interesting that in the twenties and early thirties spraying tar was delivered in barrels—we had 90,000 at one time—and so a distiller in the North of the country could and sometimes did compete with another distiller in the South. Nowadays spraying tar has to be supplied hot in bulk to road tankers at all hours of the day or night, and we have equipped ourselves well to provide this service.

Last Autumn a sales and technical deputation visited the Far East including Japan and China. These visits seem likely to bear fruit, and the value of a Company's appearance in person rather than only by proxy in the hands of an agent has again been demonstrated. The task of a would-be exporter, however, is not being made any easier by continual increases in freight rates.

A WELL-EQUIPPED ORGANISATION

If we could look to a future in which we could depend for our prospects on our own organisation and efforts we should be justified in being very optimistic. I say this because whilst the Company is large enough to carry ancillary departments such as Research, Development, Engineering, Transport and so on, it is small enough to enable all these to be in close liaison and so to produce a sense of united purpose difficult of achievement in a larger concern. We have, however, to work in a light somewhat dimmed by the shadow of the Common Market. The present times carry with them inevitable doubts and uncertainties, and one has the feeling of much pushing and jostling for position, not so much domestically as in the world chemical scene. None the less we feel we shall be able to give a good account of ourselves at home and abroad.

On the night of March 29th a considerable fire occurred at our Oldbury Works, from an unknown cause, in a battery of overhead loading tanks of Road Tar. The burning tar cascaded down the Works yard and consumed the Engineering Shop and the Works Laboratory but thanks to the valiant efforts of our own staff and workpeople, and of a number of local fire brigades, the fire was eventually brought under control without affecting production plant.

In expressing our thanks on this annual occasion, to our Staff and workpeople for their continuing efforts on the Company's behalf, I must therefore specially emphasise what was done at Oldbury on March 29th.

The report and accounts were adopted and the dividend of 12½ per cent on the Ordinary Shares was approved.

G. R. A. TRUST

MR F. S. GENTLE, CBE, ON NEW LEGISLATION AND PROSPECTS

Mr Francis S. Gentle, CBE, presided at the thirty-fourth Annual General Meeting held on July 25th.

In his Chairman's Statement, previously circulated, Mr Gentle attributed a fall in attendances and profits to the diversion of money to the new media for betting and gaming legalised by the new Act: these, particularly the betting shops, had developed on a greater scale than he believed the Government had envisaged and they were not subject to the Pool Betting Duty borne by the greyhound totalisator. Members of Parliament who appreciated this inequity had obtained a Treasury undertaking to review the whole field of betting taxation before the next Budget.

The Company faced an anxious time and it might be two or three years before the lasting effects of the new legislation could be properly assessed but the fundamental character and attraction of greyhound racing and the underlying interest in it were as great as ever.

The Accounts were adopted, the proposed dividend confirmed and the retiring Directors re-elected.

SAMUEL WILLIAMS & SONS LIMITED
JOHN HUDSON FUEL & SHIPPING LIMITED

The Annual General Meetings of Samuel Williams & Sons Ltd. and John Hudson Fuel & Shipping Ltd. were held on July 25th in London. Mr. A. L. Williams, who is Chairman of both companies, presided and the following are extracts from his Reviews of the year's activities.

SAMUEL WILLIAMS & SONS LTD.

Reduced profits but dividend maintained

The profits for the year show a reduction when compared with the previous year's almost record achievement.

The Group Profit before taxation is down by approximately £142,000, tax requirements by £99,000 and Group Profit after taxation by only £43,000. The tax requirements appear large compared with the Group Profit before taxation and the reason for this is that the profit figure covers a loss on the Canadian subsidiaries which cannot be set-off for United Kingdom tax.

You will see that your Directors recommend an appropriation to General Reserve of £35,000 and a Final Dividend on the Ordinary Stock of 12½% less tax, making 17½% less tax for the year, thus maintaining the increased distribution paid for the previous year.

Future development

Your Board has been considering with their professional advisers the future development of your Group and the provision of finance. An Extraordinary General Meeting will shortly be convened at which Stockholders will be asked to agree to amendments to the company's Articles of Association with a view to providing increased borrowing powers, to bring these more in line with the present size and scope of the company. As you will have seen in the press, your Board is proposing to make an offer to acquire the balance of the equity capital of John Hudson Fuel and Shipping Limited, of which your company already owns 40 per cent. The terms of the offer are being considered.

Operations at Dagenham Dock.

The reduction in profits when compared with last year's figures has in the main been brought about by a lower tonnage of solid goods handled over our wharves and jetties during the year. This trend has affected the Port of London generally and has resulted in intensified competition.

The tonnage of liquids handled continued to show an increase during the year, and this has contributed to our profit figures. Our tank farm for the storage of both oils and chemicals is being further extended.

I am pleased to be able to report that the tonnage figures for all goods passing over our wharves and jetties for the past two months show an improvement over the same period of last year.

Your Directors have continually under review our facilities for dealing with the smaller type of cargo ship used for trade with the near Continent. They are at present considering modernisation of some of our older inshore jetties.

Canada

During the first complete financial year since the opening of the wharves at Vancouver rapid progress has been made in providing the facilities considered necessary for economic trading. Last September a second deep sea general purpose berth came into use. In February this year a third deep water berth, equipped with specialised plant for loading bulk materials into ship at up to 1,500 tons per hour, was put to work. Extensive storage areas for sawn lumber, metal concentrates and steel, with the necessary roads and railways, have been laid down.

The installations now completed are sufficient to enable us to undertake large scale trading and we are now concentrating on obtaining the required tonnage. The present general increase in exports through the port of Vancouver, and negotiations now taking place, justify our anticipating a considerable increase in tonnage and favourable trading prospects in the future.

JOHN HUDSON FUEL & SHIPPING LTD.

Good results

The Group Profit before taxation shows an encouraging increase of approximately £11,000 which, aided by a reduction in the requirements for taxation of approximately £29,000, produces an increase in the Group Profit after taxation of £40,000. The reduction in tax charge this year results from an increase in investment allowances on new assets and a generally favourable tax position, which will not necessarily recur.

In these circumstances the Directors recommend a transfer to General Reserve of £45,000. They also recommend a dividend on the Ordinary Shares of 6% less tax making a total for the year of 9% less tax, as in the previous year.

The expansion in the Group's business is being financed mostly by bank overdraft and your Board are considering, in conjunction with their professional advisers, the raising of long term finance in order to provide for further developments.

Offer for shares

You will no doubt have seen the announcement in the press recently of a proposed offer by Samuel Williams & Sons Ltd. for the balance of the Ordinary Shares in this company. Details of this offer will be communicated to the Shareholders concerned.

Shipping

On the Shipping side of our business the improvement in deep sea freights anticipated at this time last year has failed to materialise. They have in fact fallen still lower and there are as yet no signs of this trade becoming profitable. However the cold weather since Christmas this year has provided a good load for our coastwise colliers and our earnings have consequently shown some improvement over those of last year.

Coal and Oil

John Hudson & Company has had another satisfactory year though I must admit that the extended winter has had a beneficial effect on our business. I am pleased to be able to report that we continue to maintain and indeed in many cases to expand both our seaborne coal tonnage and also our coal sales direct by road and rail to our industrial and merchant customers.

Competition in the United Kingdom fuel oil market is still intense but I am able to report not only a satisfactory increase in our tonnage but also indicate that the future is not without promise.

The Midlands

Our subsidiary in the Midlands, John Hudson (Birmingham) Ltd. continues to make good progress.

Scotland

At the meeting last year I mentioned that, after my review had gone to press, we had taken over Logan, Sons & Company Ltd. of Paisley. I now have to tell you that, although still operating as Logans, we have changed the name to John Hudson (Glasgow) Ltd., and this new subsidiary has made a worthwhile contribution to the year's results.

Hudson Forwarding Limited

We have increased the staff of Hudson Forwarding Ltd. with the object of expanding still further the services offered by that company.

WILLIAMS-HUDSON GROUP

CONNAUGHT ESTATES

ANOTHER YEAR OF PROGRESS

The twenty-eighth Ordinary Annual General Meeting of Connaught Estates Limited will be held on August 9th in London.

The following is an extract from the statement by **Mr Leslie M. Slot** (Chairman and Managing Director) which has been circulated with the Report and Accounts:

The Group Profit, before tax, has increased from £141,703 to £163,991. This gross figure is satisfactory. Taxation, however, including the extra 2½ per cent Profits Tax, has cost £92,740 which leaves £71,251 as the net profit for the year. We have continued with our policy of converting and improving our existing properties.

We are satisfied that we can expect a gradual increase in our income, and although Dealing Profits fluctuate from year to year we know that so far this year they have kept fairly well in line with last year's figures. Your Directors feel justified, therefore, in recommending a dividend of 18½ per cent which is 1 per cent more than last year although paid upon an increased Share Capital. The increase in Share Capital was, of course, related to the acquisition of certain properties, particulars of which were sent to Shareholders in a letter dated September 20, 1961.

The amount standing to the credit of our Capital Reserves is large in relation to the Capital of the Company, and your Directors recommend that part of the Share Premium Account be capitalised. It has been decided to make interim dividend payments in future, the first of which will be made during the year ending March 31, 1963.

I look forward to another year of progress.

WOODHEADS BREWERY

The twenty-sixth annual general meeting of Woodheads Brewery, Ltd., was held on July 26th in London.

The following is an extract from the circulated statement of the chairman, **Mr Richard P. Beamish,** for the year ended January 31, 1962:

The trading profit of the group amounts to £149,676, which compares with £113,744 for the previous year. The drop in profit of a year ago has been more than recovered, and the improvement is partly accounted for by better results from our Mineral Water subsidiary, and partly by the contribution to the profits from two companies acquired during the year, together with improved results from the Brewery and Off-licence Companies.

The problems to which I referred last year have in no way lessened, but the increases in prices imminent at that time have since come into effect. Then soon afterwards came the 10 per cent surcharge imposed by the Chancellor which perhaps some of us were naive enough to assume was introduced as a temporary measure, in accordance with the assurance which was given at that time. In the Budget, the Chancellor cancelled the surcharge and substituted this temporary imposition by an equivalent burden in the form of an increase in duty.

The dividend recommended on the Ordinary shares is the same as last year, but it is proposed to recommend an increase of 2½ per cent to 5 per cent by way of bonus, making a total distribution to the Ordinary shareholders of 20 per cent. The report was adopted.

BALFOUR & DARWINS LIMITED

PROGRESS OF THE MERGER

The first annual general meeting of Balfour & Darwins Limited was held on July 24th at Sheffield, **The Right Honourable The Lord Riverdale of Sheffield, DL, JP** (the Chairman), presiding.

The following is an extract from his circulated statement:

During the year 1961 the Group operated for six months as two separate organisations—Arthur Balfour & Company Limited, and Darwins Group Limited, and for the remaining period as Balfour & Darwins Limited.

The combined turnover of Balfours and Darwins was similar to 1960, but was insufficient to prevent a sharp deterioration in earnings. The bulk of the decline took place in the second six months. If the figures before us in July, 1961, had been maintained, the results would have not been substantially less than those of 1960.

The overall export trade volume was higher than 1960 but the profit margins were reduced.

After reviewing the financial results, the Chairman continued:

During the last few months a great deal of work has been done to take advantage of the combined resources. Study Groups have been actively engaged in investigating such joint problems as Sales, Exports, Research, Steel Production, Personnel problems and the development of co-ordination and integration. Some of the resulting plans are now coming to fruition and tangible progress is being made in the way of co-ordination of production and services with resulting economies. These investigations are being actively pursued and the Board is convinced that they will bring substantial benefits to the Company in the form of more efficient and economic production and marketing. Reductions in overall expenditure are confidently anticipated during 1962.

A review of the first five months trading for 1962 is not encouraging. Despite all management and other economies, which have been mentioned, costs continue to edge upwards. Turnover as a whole is down on the same period for 1961. In these circumstances and with no comparable period for the merger as a basis, I hesitate to make forecasts but it is obvious that a considerable improvement will be required during the later months of the year if the results are to be satisfactory. A very slight tendency to improvement is showing in some sections but it is too soon to say whether this is a genuine trend.

The report was adopted and the dividend of 4 per cent approved.

SOUTHCROS LIMITED

A successful year in difficult conditions

The third Annual General Meeting of Southcros Limited will be held on August 2nd in London. The following are extracts from the Accounts and from the Statement by the Chairman, **Mr John V. Sheffield,** for the year ended March 31, 1962.

Group Profit before tax ...	£458,335
Tax	£249,285
Dividends :—	
Preference	£16,912
Ordinary (1/- per share) ...	£83,289
Retained Profit	£108,869
Net Current Assets	£333,350
Total Assets	£1,417,176

Further growth within existing companies has been achieved and two more companies —D. S. Fordyce & Co. Ltd. and Bell Toys Ltd.—have been acquired.

The eight operating companies which were owned throughout the year ended March 31, 1962, produced combined profits 10 per cent above those for the previous year. That is a very creditable performance in a period when trading conditions for industry as a whole were difficult.

Most of our companies have made a good start to the current year and are operating at a high level of activity. If general trading conditions do not worsen there is every prospect that they will make further progress in the present year.

We shall also have the benefit of a full year's trading by Bell Toys Ltd., none of whose profit in the year just ended has been included in the Group profit. Against this, two companies are experiencing less favourable conditions.

Some of our subsidiaries have distinct growth possibilities and the parent company is keen to provide them with whatever help and finance that is needed to promote profitable expansion. A considerable measure of success has resulted from efforts to increase export sales and if Britain joins the European Common Market we stand to gain.

Whilst every effort is being made to expand the activities of our existing companies, we can also reasonably expect further expansion by acquisitions in the future.

COMPANIES OF THE SOUTHCROS GROUP

Anderton Springs Ltd.—Makers of circlips and spring pressings
Arlc, Ltd.—Instrument makers
Bell Toys Ltd.—Manufacturers and merchants of toys and games
Brett Daniels Ltd.—Distributors of **Frigidaire** products
Baker-Dorset Associates Ltd.—Advertising Agents
Dowell Hissett Ltd.—Metal finishing specialists
D. S. Fordyce & Co. Ltd.—Laundry and dry-cleaning machinery
H. J. Reece & Sons, Ltd.—Makers of packaging machinery
Ward, Brooke & Co. Ltd.—Makers of aircraft electrical components, injection moulders and toolmakers
Wigan Richardson Cold Stores Ltd.—Cold Storage

Copies of the full Report and Accounts are obtainable from The Secretary, Southcros Limited, 129 Kingsway, London, W.C.2.

CSF-COMPAGNIE GÉNÉRALE DE TÉLÉGRAPHIE SANS FIL

PARIS

SUCCESSFUL DEVELOPMENT OF COLOUR TELEVISION SYSTEM

The Annual General Meeting was held on June 15, 1962, under the chairmanship of **Monsieur Maurice Ponte.**

The report stressed the fresh expansion of the Company in every sphere of its activity. Turnover rose from NF. 394.721 million in 1960 to NF. 486.7 million in 1961, an increase of 23 per cent, or more than in the past few years. Exports followed this trend, and amounted to NF. 123.091 million, compared to NF. 105.816 million in 1960. Despite increased sales, the order book rose by about 38 per cent during the year. The turnover of all the French members of the group rose from NF. 608.249 million to NF. 758.663 million, an increase of about 24 per cent.

In his speech, the President recalled this increased activity, and stressed the particular need and interest to improve techniques to supply the elements of information lacking in the home, especially the technique of colour television. The work on colour television, carried out by CSF and Compagnie de Saint Gobain has produced a system with definite advantages, and the Company is making great efforts to achieve international recognition for this system.

The problems of securing an adequate number of technicians and skilled labour can be solved by improved technical education of youth rather than in artificial limitations to the inexorable and necessary expansion of world electronics.

The Group continued to develop throughout the world; employees in Italian factories increased by 42 per cent; establishments are now operating in Germany and Britain. A new Company has been set up in the United States to develop the manufacture of special electronic tubes by processes developed by CSF.

PROFIT AND DIVIDEND

Net profits for 1961 were NF. 9.473 million. It is proposed to pay as from July 2nd a net dividend of NF. 5.5 on former shares of a face value of NF. 50 which have been regrouped, and a dividend of NF. 2.75 on former shares of a face value of NF. 25 which have not yet been regrouped.

W.G.I. LTD.

(West's Group of Industries)

TRENDS IN THE GAS INDUSTRY

The eighty-ninth annual general meeting of W.G.I. Ltd. was held in Manchester on July 19th. The chairman, **Mr Ernest West, MIMechE, MIGasE,** presided. The following are extracts from his circulated statement for the year ended March 31, 1962:

The Group accounts indicate in themselves the trend of business which has been reported by so many companies in the field of engineering over the past few months. Competition has been keener and profit margins smaller.

Net Group Profit for the year is £154,497 compared with £202,178. The Directors recommend payment of a Final Ordinary Dividend of 7½ per cent making a total dividend for the year of 12½ per cent, the rate forecast when the Rights Offer was made twelve months ago. This is the equivalent of 25 per cent on the Ordinary Capital prior to the Scrip Issue and Rights Offer, compared with the dividend of 22½ per cent of a year ago.

This year the major contribution to the Group Profit is made by West's Gas Improvement Co. Ltd.; the proportion of its turnover in the Gas Industry on conventional carbonisation plants is less than in previous years, though the final settlement of contracts executed in prior years makes a considerable contribution to its profit. It has a better future order book than at this time last year and we look forward to it increasing its turnover in new spheres.

A year ago I reported that the first Lime Kiln incorporating the Catagas Oil Process, of which we hold a world-wide licence, was about to go to work. We have had some initial teething troubles during the year in achieving the performance which was expected of it, but I am happy to say that these have now been resolved and we are confident of a very good future for this kiln.

EXPANDING TURNOVER

We have also acquired during the year a licence for an oil reforming plant from the Stazione Sperimentale per i Combustibili of Milan, for which we have received our first order in this country.

We are also obtaining work in the Chemical Industry and with the Atomic Energy Authority on a growing scale.

We could not expect West's Piling & Construction Co. Ltd. to maintain its record turnover of 1960/61. Their results have suffered to some extent by the postponement in execution of a major contract, but in spite of keener competition and smaller profit margins, they have a good volume of work ahead.

West's (Manchester) Ltd. have also suffered from the postponement for some months of a major contract, but they are expanding their activities, both in the Coal Industry and Sand, Gravel and Mineral Industries and they too should have an expanding turnover.

Tully Engineering Co. Ltd. have increased their turnover during the year, mostly in the field of agricultural and industrial buildings and they are beginning to expand their turnover in the field of automation.

The prospects of West's Works Ltd., who rely for their work on the Contracting Companies, are of course dependent on the turnover of those companies, but I do not envisage any difficulty in keeping them fully occupied during the current year.

NEW AQUISITION

During the year, the Group acquired the Capital of the United Kingdom Construction & Engineering Co. Ltd. This Company, whose offices are on the Kirkby Industrial Estate at Liverpool, carry on business in two main fields —that of main laying for the Gas, Water and allied Industries and general civil engineering, and also in industrial pipework. We consider this to be a profitable acquisition to the Group.

The general trend of business today is towards keener competition and small profit margins. Again the diversification policy which we have adopted, while in modern times the only sound one, is not an immediately profitable exercise. While we hope to increase our turnover in the current year it does not follow that we shall increase our profit by the same degree.

The Report and Accounts were adopted.

PECHINEY

PARIS

(Electro-Metallurgical and Chemical Products)

The Annual General Meeting of PECHINEY was held in Lyons on May 28th under the Chairmanship of **M. Raoul de Vitry.** The following extract has been taken from the report presented by the Board of Directors, and from the Chairman's Speech.

Apart from **Aluminium,** which has been the Company's most important activity for many years, its industrial activities now include various **iron alloys, graphite products, new metals** and **nuclear products.** The Company has not only supplied the French market with its requirements of **aluminium** and has arranged its investments as rationally as possible; it has also taken an active part in exports and has achieved remarkable technical progress resulting in extremely moderate prices. There is, therefore, no good reason why our market should be exposed to the direct and indirect results of certain external disturbing influences, such as pressure due to an unreasonable gap between production capacity and the consumption level of the corresponding national market. A judicious and reasonable customs and import duty policy is an essential requisite for the harmonious development of the **aluminium** industry in the Common Market.

Exports rose from 30.5 per cent to 36.5 per cent. The increase of 15 per cent in turnover less taxes from 1960 to 1961 is due almost exclusively to the sector "Metals."

Net profits for the year amounted to NF43,933,365, after allowances for depreciation (including cost of loans issued) of NF136 million as against NF134.9 million in 1960. It is accordingly proposed to distribute a gross dividend of NF4.74 per share.

THE TRUSTEES CORPORATION LIMITED

SIR EDWIN HERBERT'S REVIEW

The Seventy-fourth Annual General Meeting was held on July 25th at Winchester House, EC2. **Sir Edwin Herbert, KBE, LLD,** the Chairman, in the course of his speech said:

Once again it is my pleasure to be able to present to you Accounts, which I hope you will consider satisfactory.

The Gross Revenue from Interest and Dividends, for the first time in our history, has exceeded the "million mark" at £1,002,334. An increase of £103,181. In this connection it should be remembered that we raised additional funds during the year and the income from these new monies has contributed to this increase. At the same time, I would point out that effectively we only had the use of these monies for approximately nine months of our financial year. Even without the new money our income would have shown some increase. At £75,228 the receipts from Double Taxation Relief were £645 less than in the previous year. In consequence of a down turn in the economy and the "Little Budget" of July last, the demand for new capital was considerably reduced and the opportunities for underwriting new issues were likewise reduced. This resulted in our income from Underwriting Commission being only £3,537 as compared with £6,559 for the previous year. Net receipts from our Safe Deposit are £360 up. Trustee and other Fees show little change at £11,176.

The interest on the Debenture Stock shows an increase of £51,750, which is on account of the new Debenture money raised during the year.

In a full year this charge will amount to £115,000. The Net Revenue for the year, after charging £378,667 for Taxation, is £536,365—an increase of £29,896. The dividend on the Preference Stock took £24,117 and the interim dividend of 8 per cent on the Ordinary Stock took £110,250. We now recommend a final dividend of 17 per cent (making 25 per cent for the year), which absorbs £257,709.

The only item in the Balance Sheet which calls for any comment is the Valuation of our Investments at £20,237,522, a figure slightly less than in 1961, in spite of the fact that we have invested an additional £1,500,000 during the year. Shareholders will recall that the Stock Market broke very badly on Tuesday, May 29th. I think that in many cases the values placed upon investments, as reflected in Stock Exchange prices, had in some instances reached unrealistic heights. Whether the fall in prices has in fact been overdone is one of the many problems facing the institutional investor today. As can be seen from our Balance Sheet, we have surplus funds temporarily on deposit and it is our intention to keep our powder dry until such time as we can find a permanent home for them though, on a reduced scale, we are still pursuing an active investment policy.

At this stage I usually try to give you an estimate of what the prospects are for the current year. Profit margins continue to be squeezed and competition is intense. Until the economy of the world expands, I cannot see this position improving and I would be unduly optimistic if I led you to believe that we can hope to continue to receive an increase in our income on the scale we have enjoyed for so many years. We, of course, will have the full benefit in the current year of the new monies raised last year, and taking this into account I believe that we shall at least be able to maintain our revenue at last year's figure.

The report and accounts were adopted.

CHARRINGTON GARDNER LOCKET & CO.

CONTINUED PROGRESS

The fifty-ninth annual general meeting of Charrington Gardner Locket & Co. Limited was held on July 20th in London, **Sir John Charrington**, the chairman, presiding.

The following is an extract from his circulated statement:

It is pleasing to report a trading profit which at £716,723 exceeds by £21,546 the record level of the previous year.

The charge for taxation is however at a higher level than last year and the profit for that year after taxation is £326,233 as compared with £363,323 a year ago.

Your Directors recommend a final dividend of 9 per cent making a total distribution of 13 per cent on the existing Ordinary Stock, as compared with 12 per cent for the preceding year.

Assuming that no unforeseen circumstances arise, your Directors expect to be able to recommend for the year ending March 31, 1963, a total distribution of 13 per cent on the Ordinary Stock as increased by the recent issue to Ordinary Stockholders of 2,500,000 Ordinary Shares of 5s. each at a price of 10s. 6d. per share.

In my statement a year ago I referred to the probable growth in the demand for central heating in homes. This trade is certainly extending, and there is fierce competition in this market between gas, oil and solid fuel. The share of this market captured by oil is still considerable, but solid fuel has made quite a striking advance.

A year ago I mentioned that your Company had just gone into partnership with the Hargreaves Group of Companies for the sale of Mobil fuel oils in the North of England, and I am pleased to report our complete satisfaction with this arrangement and with the progress in trading.

Shortly after the last Annual General Meeting negotiations were concluded for the acquisition of D. M. Stevenson & Co. Ltd. of Glasgow. That Company, which has for many years been one of the leading coal and coke exporters in the Country, has more recently developed a prosperous branch in Birmingham.

By arrangement with the Mobil Company, D. M. Stevenson now have the sole sale of Mobil fuel oils in Scotland.

Trade in coal and coke in the Eastern Counties by our subsidiaries, Coote & Warren Ltd. and R. Coller & Sons Ltd., has been satisfactory.

The Lighterage Department had a rather smaller tonnage in general goods to handle during the year, but a considerably larger tonnage of oil.

The report and accounts were adopted.

Copy for the insertion of Company Meeting reports must reach this office not later than Wednesday of each week and should be addressed to:
The Company Meetings Department,
The Economist,
22 Ryder Street, S.W.1.

LORRAINE-ESCAUT

The Ordinary General Meeting, held on June 19th under the Chairmanship of **Mr Roland Labbe,** approved the accounts for the financial year 1961 and the allocation to depreciation of the total amount available viz. NF.151,848,000—. It was also decided at the Meeting to distribute, by withdrawal from the stocks renewal reserve, a gross dividend of NF.7.65 per share, the same as the previous year. This dividend will be made available for payment on 2nd July, 1962—coupon no. 14.

The Meeting then renewed the appointments as Directors of Messrs. Jacques LENTE and Henri de WENDEL.

In 1961, LORRAINE ESCAUT produced 2,163,000 tons of steel, against 2,120,000 tons in 1960, i.e. an increase of 2 per cent. They manufactured 454,000 tons of tubes against 399,000 tons during the previous year (all types), the turnover being NF.1,420,000,000 against NF.1,343,000,000 in 1960.

The Board recalled the principal features of the 1961 construction programme. Two blast furnaces were rebuilt at the Longwy Works, four 33-ton converters, two blowers and a casting crane were installed at the Thomas Steel Works, Senelle Section of the same foundry. Conversion of the Maubeuge small iron production line, and the extension of the Sedan foundry were also completed. A new electric furnace and a cold rolling mill were started up at Anzin, also a new welded tube works at Besseges.

Construction of the following important plants was continued: The enrichment plant at Metzange, a girder rolling-mill and laminated sections plant at Longwy, an agglomeration plant and a new blast furnace at Thionville. Finally, under the Fourth Reconstruction Plan, the conversion of the blooming plant and of the rolling-mill at Senelle, the modernisation of a rolling-mill at Anzin and at the same works and also at Besseges, modernisation of the production of small seamless tubes.

The first orders have also been placed for the creation at Anzin of a factory at which the drawn-press technique will be used for the above-mentioned tubes.

The Board also referred to the arrangement made between LORRAINE ESCAUT and USINOR for the use by the former, in exchange for their financial interest, of part of the production capacity of the hot and cold-rolling production lines which USINOR have to install at their new Dunkirk Works.

In 1961, the Company invested NF. 211,900,000 in these new installations.

The Chairman ended his report by stating that, during the first five months of the current financial year, the Company have produced 886,000 tons of steel against 945,000 tons during the same period of 1961, and 150,400 tons of tubes (other than large Sedan weldings) against 153,900 tons. As regards the Sedan production line, which is at present stopped, it completed during the year the order for the Lavera/Carlsruhe Pipeline, in which 68,000 tons of large tubes were used.

The Chairman stated, in conclusion, that the Company expected, probably before the end of the financial year, to increase the capital by increasing the number of shares, but that the conditions and arrangements for this have not yet been decided by the Board.

An Extraordinary Meeting was held prior to the Ordinary Meeting at which it was decided to authorise the Board to take all steps necessary to increase the capital, on one or more occasions, to a maximum amount of NF.300 million, and to make a number of alterations to the Company's Memorandum and/or Articles of Association.

COMPAGNIE GÉNÉRALE D'ELECTRICITÉ

PARIS, FRANCE

(Electrical Engineering)

The Annual General Meeting of COMPAGNIE GÉNÉRALE D'ELECTRICITÉ was held in Paris on May 23rd, and the following are details of the report presented by the Board of Directors:

REVIEW

Turnover reached NF.1,350m. in 1961, orders received amounted to NF.1,500m. Electronic and other new products made the greatest progress. Investments were NF.70m. *Câbles de Lyon* played an extremely important role in the construction of the submarine electric power cable between the French and British grids. The departments concerned with installations and telephone cables made good progress. The Company manufactured the first submarine telephone cable between Perpignan and Oran. Sales of high and low-tension equipment and prefabricated cells by the *Delle Works* made excellent progress, especially abroad. Orders received by *Savoisienne* were 20 per cent higher in 1961 than in 1960. Sales of large and small transformers, especially for export, were appreciable, and new models were produced. The production of certain special engines and small motors in the *Ateliers d'Orleans* at Orleans continued and a manufacturing licence was sold to Spain. Thirty per cent more lifting equipment was sold than in 1960. Six per cent more *Tudor* accumulators and slightly more replacement car batteries were sold.

Both the number of countries and the range of products and services supplied by the group throughout the world (notably the U.S.A., Portugal, Greece, Kuwait, Ceylon, Indonesia, Mexico, Columbia) rose markedly.

ACCOUNTS, PROFITS, DIVIDENDS

Revaluation of our assets showed a net plus-value of NF.96,612,528. Returns from subsidiaries rose 12 per cent (to NF.9,668,000). Various new investments were made and earlier investments raised. Net profit for 1961 amounted to NF.24,536,672.46 and it is accordingly proposed to distribute a net dividend of NF.9.13 compared with 9.03 in 1960.

The report, the accounts, and the proposals put forward by the Board of Directors were adopted.

COMPANY AFFAIRS

Depression in the London stock market at the end of last week gave way to eager anticipation and indeed optimism ahead of the speeches of Mr Macmillan and the new Chancellor. But the modest increases in equity prices, helped by better company news on some fronts, failed to offset the earlier falls and The Economist *indicator by Wednesday's close had lost 2 points to 310.9, fractionally above its low point for 1962. Stores shares responded to the good results from GUS and tobacco shares improved after the interim statement from Imperial Tobacco. Steels made a better showing. Oil shares were a firm market with Lobitos prominent on takeover rumours. The gilt-edged market has remained firm but gold shares after a further advance fell back sharply on President Kennedy's dollar pledge.*

General Electric

Is General Electric over the worst? The improved results for the year to March 31st and the directors' decision to maintain the dividend at 10 per cent suggest that it might be and the £1 shares have risen to 32s. 6d., to yield 6¼ per cent. This year's results include a full year's contribution from Radio and Allied, acquired in April 1961, and the group's profits before tax amounted to £4.1 million, against £3.3 million. This accords with the estimate made in February that profits before tax and reorganisation expenses would be about the same as the combined profits of GEC and Radio and Allied in the previous year.

Group sales rose from £118.6 million to £135.2 million and the directors say that the benefits of the reorganisation programme are now becoming apparent. Trading has remained difficult and competition severe but a "concentrated attack" on costs has resulted in improved margins in some lines of output. In all trading profits rose from £4.6 million to £6.1 million; this represents an improvement in margins on sales from 3.9 to 4.5 per cent. The full accounts will show what effect realisations have had on the group's massive bank overdrafts which with acceptance credits amounted to about £16½ million (including £8½ million for Hunterston) for the greater part of the past year. The increase in short-term debt and higher interest rates doubled the charge for bank interest to £1.1 million and as loan interest took another £1.3 million, total interest charges absorbed 36 per cent. of the profit. This is a formidable burden, which should be reduced this year. It has to be reduced if GEC is to regain its health.

The cost of GEC's sweeping organisational changes has not been small: reorganisation expenses amounted to £1,469,000 (or £679,000 after tax relief) but this was balanced by £1,300,000 in capital profits which in turn arose from the reorganisation. Clearly the results show that efforts to restore the group's health are meeting with some success. But there is still a long way to go and shareholders must await the meeting and Mr Lindley's statement for an indication of progress in the current year.

An interesting sidelight on these results is this week's offer for sale of one million 5s. shares in Woods of Colchester. Since 1945 GEC has held a 51.2 per cent interest in this family business which makes propellor fans including the Xpelair window fans. To maintain its stake GEC is also taking up one million shares at 21s., the same price as the public issue. On the forecast dividend of 20 per cent the shares offer a yield of 4¾ per cent, covered twice by earnings. Profits in the current year are not expected to be very different from those for 1961-62 when they amounted to £860,000, representing 21 per cent of GEC's profits before tax.

Great Universal Stores

A YEAR ago shareholders of Great Universal Stores had their dividend pegged at 37½ per cent in deference to the Chancellor's request for restraint. Now it is raised to 40 per cent, in line with expectations and accompanied by a one-for-three scrip issue which is bigger than expected. What it means for future dividends is not clear, but the the latest dividend is backed by good results. In the year to March 31st, GUS's trading profits rose by just over 4 per cent from £28.9 million to £30.1 million; these figures in fact understate the improvement as only £610,000, against £1,169,000, has been added back from the provision for unearned hire purchase profits. A higher tax charge, reflecting in part the higher rate of profits tax, has kept the rise in net profits down to about £400,000 and earnings of about £12.2 million now cover the bigger dividend just over twice.

These figures show that GUS has done better than most store groups in a difficult trading year. Greater diversity in its selling policy seems to have paid off. Presumably, the mail order division, which is the biggest in Europe, has continued to do well. Little more than a tenth of GUS's sales is on hire purchase and the reliance on short-term credit sales appears to have stood many sectors of its business in good stead.

Stores shares have been hit more heavily than most in the market setback and the "A" shares which on balance gained 1s. 9d. to 58s. 9d. after the results yield just under 3½ per cent. Although the yield remains comparatively low (though nothing like as low as some others) the results suggest that GUS is well placed to benefit from any further easing of credit restrictions.

International Tea

After the previous year's setback in profits the results of International Tea for the year to April 30th came as a pleasant surprise. The slight fall in profits in 1960-61 stemmed from intense competition and rising costs, and these factors must still have had their effect in 1961-62. But trading profits rose by 12½ per cent from £2,562,000 to £2,884,000, and as net profits rose by 13 per cent from £899,000 to £1,016,000 the unchanged dividend of 12½ per cent is now covered by earnings of 23.4 per cent, against 20.3 per cent. The results presumably reflect the benefits of the group's modernisation scheme; at the last reckoning 322 of its retail stores had been converted into self-service branches (of which 23 stores were supermarkets) and the company expected to make a further 70 conversions in 1961-62. A year ago the chairman pointed out that the profits of the new self-service stores were often temporarily affected by the disturbance to trade during conversion and by heavy initial expenses, but he was hopeful that these would produce "considerably improved profits in future years"; the latest results certainly suggest that these hopes were justified.

The group has been able to carry through its programme so far without calling on its shareholders for funds, for in addition to a cash flow running at over £1 million a year International Tea has made sale and lease back arrangements with the Legal and General. The surplus on properties sold last year fell from £421,000 to £124,000 but with capital commitments higher at £805,000 there seems every likelihood that International Tea will continue to use this method of financing.

Food shares have fallen more sharply than most this year. This is not surprising; a number of shares in this section, notably the supermarket pioneers, Tesco and London Grocers, had been offering very thin yields. But both companies produced good results and their shares have begun to move up again. International Tea's 4s. shares stand at 13s. 4½d., compared with a high of 15s. 10½d., and yield 4¼ per cent. While the growth in International Tea profits is not likely to be as spectacular as that reported by other groups, as three quarters of its retail stores still operate in the traditional fashion, the current yield is not unfavourable in view of the signs of more progressive approach by its management to retailing.

Davy-Ashmore

The results from Davy-Ashmore just about bear out the chairman's view expressed a year ago that "the results for the current year should not be disappointing." Gross profits in the year to March 31st fell by almost 3 per cent from £4,082,000 to £3,969,000 after an unexplained rise in the additional provision for contingent claims from £125,000 to £545,000. The ordinary dividend has been maintained, as expected, at 27½ per cent, covered 2¼ times.

A year ago the chairman said that the group's order book was good and clearly orders already on hand for new equipment and plant from the steel industry, including those of RTB and Colvilles, have so far sustained Davy-Ashmore's profits. But the directors now say that "the group profit for the year ending March 31, 1963, will be substantially reduced mainly because of the present falling off in the capital expenditure programmes of the British steel industry and severe competition abroad." Those shareholders who hoped that the next few years might bring a steady improvement in profits as the benefits of the merger with Power Gas became apparent have now learnt the hard lesson that suppliers to the capital goods industries are subject to sharp swings in demand. The directors of Davy-Ashmore have always recognised the cyclical nature of the business and that in the future the group's fortunes would become dependent on overseas orders; but the cycle this time has turned quickly and sharply.

After gaining 1s. ahead of the results, the 5s. ordinary shares lost 3s. to 19s. 6d. and now yield 7.1 per cent.

United Dominions Trust

Mere size is no protection in hire purchase finance; the giant of the industry, United Dominions Trust, made a loss of £76,000 after tax in the year to June 30, 1962. This compares with a net profit of £933,000 in 1961, and £1,753,000 in 1960. Despite this loss UDT has maintained its dividend at 26½ per cent by drawing £1,244,000 from its substantial reserves. UDT has always pursued a conservative dividend policy, and Mr J. Gibson Jarvie, the chairman, points out that shareholders are now getting the income that many felt they should have had earlier. This, however, is not likely to make shareholders any happier with the results. Some indeed may be surprised at the way the chairman apportions the blame: "The responsibility," says Mr Gibson Jarvie, "for creating the conditions which made it impossible for us, for two years, to continue our amazing record does not rest with us." Who then takes the credit for the profitable years?

Three reasons are given for the sharp reversal in profits: the fall in business; the increased cost of borrowing; and overseas losses. Outstanding hire purchase debts fell by £13 million to £173 million. Mr Jarvie puts the increase in the cost of financing this business at more than £2 million. This was due to higher interest rates and a substantial switch from bank finance to more expensive deposits from the public. Bank loans fell from £48 million to £24 million, while deposits from the public rose from £119 million to £135 million. Mr Gibson Jarvie suggests that had Bank rate not been increased a "substantial part" of the £2 million would have been added to profits. But the real source of the trouble this year was the serious losses made by UDT's subsidiaries in Africa and Jamaica; unlike Lombank, UDT is not withdrawing from these areas. The losses, amounting to £763,000, have been provided for, and the African companies, with one exception, are now on a profit earnings basis. The business of the Jamaican subsidiary has been drastically reduced and "will not again be allowed to grow beyond the capacity of the island." On these results the 5s. shares fell 2s. to 28s. 6d. but recovered to 31s. to yield 4¼ per cent, for the stock market was impressed by Mr Gibson Jarvie's reassurance that these were abnormal results and that this year's results "should show quite substantial improvements." UDT and other hire purchase finance issues are obviously among the shares which could benefit from any attempts to stimulate demand in the economy.

Breweries and Rationalisation

Partly because the beer duty was raised a year ago, consumption in the winter months fell away, but in May production rose to 2.9 million barrels, the highest level for that month since the happy VE days of 1945. At the same time the regional groups are beginning to show how economies from earlier mergers can make their impact on profits. A striking example is **Scottish and Newcastle Breweries,** whose shares have always been highly regarded. Gross profits in the year to April 30th rose by 16 per cent from £5,034,000 to £5,855,000—partly because they include a full year's profits from Newcastle, against nine months in 1960-61. The dividend has been raised from 8 to 10 per cent and is covered twice by earnings; the payment has been raised in each of the past ten years and is now about ten times what it was in 1951-52. But rationalisation and modernisation costs money and Scottish and Newcastle which raised £4 million on a debenture in September is seeking a further £7 million by a rights issue to fund overdrafts and provide for further capital expenditure. The terms of the issue are to be announced later but its impact outweighed the good profits and dividend and the £1 shares fell back to 57s. 6d. to yield 3½ per cent.

After allowing for the acquisition of Bristol Brewery Georges the gross profits of **Courage Barclay and Simonds** rose by about 10 per cent to £5½ million in the year to March 31st. In his statement the chairman Mr R. H. Courage makes the valid point that the group's financial year this time included no benefit from the profitable Easter trade whereas 1960-61 included two Easters. The long, cold winter also depressed sales in the final quarter but over the full year beer sales rose. The increase came mainly in draught and keg beers rather than in bottled and canned beers. One sign of rationalisation has been the reduction in the number of beers sold within the group which now concentrates in bottled beers on its "Top Ten," sold throughout its trading area. Mr Courage "looks forward with confidence to satisfactory results for 1963," subject to the weather but he warns shareholders that not all the major developments in production and distribution will have much effect this year. On the ordinary dividend maintained at 14 per cent the £1 shares at 69s. 3d. yield 4 per cent, twice covered. They are to be split into 10s. denomination and there is to be a one for two scrip issue, which will make the dividend equivalent to 9¾ per cent. Shareholders will no doubt hope for a rounding up to at least 10 per cent for the current year.

From **Ind Coope Tetley Ansell** comes a less encouraging statement. Gross profits in the 36 weeks to June 9th were 8 per cent higher than in the corresponding period of the previous year, but beer sales were slightly lower. The swing back from bottled beer to draught appears to have continued and this will hit the Ind Coope sector of this brewing commonwealth harder than many other brewers for it has spent a good deal on promoting its bottled beers on a national scale. From the shareholders' point of view there is some compensation in the fact that about two thirds of the sales of the group as a whole now come from draught. A smaller relief for investment allowances has left net profits for the 36 weeks approximately the same as in the corresponding period in 1960-61. But the sting of the Ind Coope statement is in the tail; the directors say that since June "there has been a lack of buoyancy in the trade" though given "normal summer conditions" they expect profits for the year to end-September to be close to those for the preceding year.

Then Ind Coope's own profits rose by only one per cent although its partners Tetley and Ansell reported increases of 10 per cent. The interim dividend has been maintained at 4 per cent and there is every prospect that the total payment will be left effectively unchanged at 12 per cent. But there is little evidence of growth in this group at the moment and the 5s. shares at 12s. 4½d. stand close to their low for the year and yield 4¾ per cent.

Imperial Tobacco

SMOKERS' initial reaction to the lung cancer report in March was sharp. Some gave up smoking altogether while others, inexpertly, sought solace in a pipe. Non-smokers cynically wondered whether confirmed smokers could long resist the attraction of cigarettes and the interim report from Imperial Tobacco suggests that many of them broke off smoking for no more than two or three months. The directors say that "the demand for cigarettes since March has been, and still is, below last year's level, but has recently shown an upward tendency." The interim dividend is maintained at 8½ per cent and the directors expect to be able to repeat last year's total payment of 22½ per cent. Profits are not likely to be substantially different from those of 1961-62 when the dividend was covered nearly 1¾ times. Lower cigarette sales and continued trading difficulties in the paper and board industry have been offset by bigger sales of pipe tobaccos and cigars and by the full year's benefit of the increase in prices on the more expensive brands of cigarettes made in June, 1961. On this reassuring statement the £1 shares gained 3s. 9d. to 54s.; they now stand 6s. 9d. above their low for the year and yield 8¼ per cent. As an income stock "Imps" undoubtedly still have attractions.

Richardsons, Westgarth

THE preliminary statement from the marine electrical and general engineers, Richardsons, Westgarth is a sorry document, and realises the worst fears aroused a year ago when the chairman, Mr E. J. Philipson, said that the shipbuilding and marine engineering industries "may well be facing a major and possibly prolonged recession and certainly no positive indication of any early recovery can be seen at the present time." Depreciation, development expenditure and loan interest were all higher and left the group with a loss before tax of £767,000 in the year to March 31st, compared with a profit of £128,000 in the previous year. Tax credits and tax provisions no longer required reduced the net loss to £483,000, against a net profit of £187,000. The directors have again passed the ordinary dividend and this year the tax free capital distribution of 1¼ per cent from reserves has not been repeated.

The loss comes as no surprise in view of the current plight of the shipbuilding industry and the "major changes designed to improve efficiency in production and administration" which Mr Philipson announced a year ago clearly did not have time to bear fruit before the financial year ended. The directors say that "the extremely competitive conditions and shortage of profitable work continued throughout the whole of the year." Shareholders are probably more interested in their assurance that "drastic action" has been taken to reorganise the group and that therefore "the current year's trading is expected to show a considerable improvement." The 10s. ordinary shares now stand at 3s. 6d., or little more than a quarter of their net asset value.

Murex

THE stock market was fully prepared for a fall in Murex's profits in the year to April 30th, as an interim statement in December had revealed that sales in the first six months had fallen by 3 per cent and net profits by 10 per cent. The directors then said that results for 1961-62 were not expected to match those of the two preceding years. In the event, therefore, the fall of nearly 9 per cent in sales from £11,749,000 to £10,712,000 and of 10½ per cent in trading profits from £1,661,000 to £1,470,000 was not too unpleasant a shock. But net profits have fallen by 17 per cent from £691,000 to £572,000, reducing equity earnings from 28¼ to 23¼ per cent and the dividend has been cut from 13 to 12 per cent.

The directors say that the fall in demand for ferro-alloys used in making alloy and stainless steels became even more marked in the closing months of the financial year, though "sales of chemical products, powder metallurgy products and welding electrodes were well maintained." Capital expenditure at Rainham and Waltham Cross amounted to £450,000, compared with £550,000 in 1960-61, but stocks have risen by £706,000, as a result of an accumulation of finished products towards the end of the financial year, and liquid balances have been reduced from £540,000 to £200,000. Murex has felt the pinch of the decline in orders from its customers in the steel and engineering industries and clearly a revival in its fortunes depends upon the stimulus that can be given to capital investment in this country. The £1 ordinary shares stand at 34s., to yield just over 7 per cent and, for the moment at least, the stock market is not enthusiastic about the prospects.

Dowty Group

THE preliminary results from the Dowty Group came as a tonic to a market which in the last few months has had its full dose of falling profits and declining margins. Indeed they were appreciably better than the interim statement had led the market to expect. In February the directors said that profits for the year to March 31st would be higher, but implied that the inclusion of a full year's profits from Boulton Paul would be the main source of the increase. They also said that costs were rising and that it was "unlikely that profits will show any significant increase for the time being." In the event Dowty's gross profits rose by 27 per cent from £2,527,000 to £3,213,000. As there are no separate figures for Boulton Paul it is impossible to say how much the rise in profits resulted from the inclusion of its results and how much from Dowty's own interests in aircraft, and industrial and mining hydraulic equipment. But the tax-free ordinary dividend has been raised from 9½ to 10½ per cent, and the latest payment is covered 2½ times by earnings. Despite the misgivings voiced by the directors in the interim statement about the difficulties of switching from long run to batch aviation production the group has evidently done well, and the stock market was so impressed by the higher profits and the dividend to mark the 10s. ordinary shares up by 4s. 3d. to 31s., to yield 5½ per cent.

Unigate

IN his statement a year ago the chairman of Unigate said he did not expect spectacular results but he hoped the group would achieve "solid and steady progress." This is borne out in the results to end-March when trading profits rose by just over 4 per cent from £8.6 million to £9 million but higher charges for depreciation and tax absorbed the increase so that net profits are hardly changed at £3.1 million. The dividend is maintained at 14 per cent and is still covered twice by earnings.

This is the third year of trading since the merger of United Dairies and Cow and Gate (followed later by the acquisition of Aplin and Barrett) and as the recent Express Dairy results (which showed a 21 per cent fall in profits) suggested, it was by far the most difficult of the three. Unigate's sales amounted to £197 million in 1960-61 and seem certain to have topped the £200 million mark in 1961-62 but the small increase in profits suggests that like its competitor Unigate has continued to find margins on milk sales inadequate. However on these results, which were a little better than the market had expected, the 5s. shares gained 6d. to 15s. 9d. This compares with a high of 18s. and the shares yield 4½ per cent.

THE MONEY MARKET

ANTICIPATION of a cut in Bank rate was conspicuously absent at last Friday's Treasury bill tender. The syndicate of discount houses in fact cut its bid by 4d. to £99 0s. 2d.—denoting a rise in its discount rate of 1s. 4d. per annum. The syndicate's action took outside applicants by surprise and the Treasury bill rate rose by only 9.8d. to £3 18s. 7.14d. Nevertheless, the market improved its allotment, from 23 to 29 per cent. The offer had been reduced by £10 million but applications fell by £22 million to £382 million.

After last week's very comfortable conditions the market received a sharp jolt on Tuesday when credit became very tight. The weekly tax transfers meant that the clearing banks were calling in funds on a large scale. The authorities supplied a very large amount of help but one or two houses were still forced to borrow a very small amount from the Bank of England at Bank rate. The pressure had eased somewhat by Wednesday although there was still a keen demand for credit, but a small amount of official help and the wide use of privilege facilities kept the market out of the Bank.

In New York the Treasury bill rate fell for the first time in five weeks from 2.983 to 2.892 per cent.

(1) For a rough conversion to basis of June, 1947, multiply throughout by 1·534. (2) The interim index of retail prices has been linked back to 1938 with the aid of calculations made by Professor R. G. D. Allen for the London and Cambridge Economic Service. (3) For a rough conversion to basis of June, 1947, multiply throughout by 1·561. (4) In general males under 21 and females under 18 years of age. (5) Weekly earnings are surveyed in April and October. October figures are : Men, 1959 : 271s. 1d. ; 1960 : 290s. 8d. ; 1961 : 306s. 10d. Women (full time), 1959 : 140s. 11d. ; 1960, 148s. 4d. ; 1961 : 154s. 6d. Youths (under 21), 1959 : 117s. 6d. ; 1960, 130s. 0d. ; 1961 : 137s. 10d. Girls (under 18), 1959 : 90s. 10d. ; 1960, 96s. 10d. ; 1961 : 102s. 0d. (6) 18,000 workers had a net decrease in wages over the year. (7) 25,000 workers had wage cuts in November 1961 but over the whole of 1961 no worker had a net decrease. (8) Index of building costs. (9) Average for second quarter. (10) Using the revised retail price index based on January, 1962=100 ; June, 102·9. (11) Average for first quarter.

APPOINTMENTS

THE COMMON MARKET

An international professional firm with a large and rapidly expanding practice in Europe has vacancies on their staff in several countries for qualified accountants, whether recently qualified or with several years' experience since qualifying. Men with good experience on large audits and investigations would command a substantial salary and younger men of outstanding ability would be given rapid promotion. The positions offered provide attractive opportunities to accountants who either wish to make a career or to gain extensive experience of business conditions on the Continent of Europe. A knowledge of a foreign language would be an advantage but is not initially essential. Applications, giving full particulars of education and previous experience, should be addressed to Box 1640.

ACTUARIAL STUDENT or Associate of the Institute of Actuaries (or equivalent) required for interesting and varied work connected with staff statistics, pensions, sick pay, friendly societies and other actuarial matters. Commencing salary would depend on qualifications and experience. Medical examination, contributory superannuation scheme after probation, free travel, financial assistance with tuition and examination fees, study facilities arranged. Please write to Staff and Welfare Officer (Ref. 885/3), LONDON TRANSPORT EXECUTIVE, 55 Broadway, S.W.1.

THE AIRWAYS CORPORATIONS JOINT PENSION SCHEME require a graduate to undertake investment analysis work in the Research Section of the Investment Department.

The duties will include economic reviews, studies of industry structure and trends and analysis of company financial statements.

Applicants must have an Honours Degree in Economics, preferably including Accountancy, together with an ability to analyse and interpret statistical and economic information.

The age limit is 21 to 24, and persons graduating this year will be considered.

A commencing salary of around £950 is being offered and the post is pensionable. Extensive welfare facilities are available.

Applications, with details of qualifications, should be sent to the following address not later than August 10 :—

The Secretary,
THE AIRWAYS CORPORATIONS JOINT PENSION SCHEME,
Kershaw House, Great West Road,
Hounslow, Middlesex

CIRCULATION AND PROMOTIONS MANAGER (male or female) required for leading British export magazine.—Box 1042.

BTR INDUSTRIES LTD., require in their Market Research Department an ambitious STATISTICAL ASSISTANT for extracting and recording statistical data for product planning and sales forecasting.

Man or woman equally acceptable, age 19-25, preferably with some experience in statistical work.

Please apply, with personal details, to Staff Manager (Ref. MR/SA), BTR Industries Ltd., Herga House, Vincent Square, London, S.W.1.

CENTRAL OFFICE OF INFORMATION requires ASSISTANT INFORMATION OFFICER (unestablished) to write reference information papers for overseas use on international affairs. Candidates should be graduates with good knowledge of foreign territories and of relevant sources of information. Some experience in preparing factual articles, lectures or broadcasts would be advantageous. Examples of written work may be required. Starting salary according to experience and qualifications on a scale rising to £1,260 p.a. Write, giving age, full details of experience and qualifications, to Manager (PE.1156), Ministry of Labour, Professional & Executive Register, Atlantic House, Farringdon Street, London, E.C.4.

THE UNIVERSITY OF SHEFFIELD

Applications are invited for a post of LECTURER IN PUBLIC ACCOUNTANCY, to begin duties on October 1, 1962, or as soon as possible thereafter. Initial salary according to qualifications and experience on the scale £1,150 x £50—£1,500 x £75—£1,950, with F.S.S.U. provision and family allowance. A grant towards removal expenses will be made. Further particulars may be obtained from the Registrar, to whom applications (four copies) should be sent by August 31, 1962.

The South African Co-operative Citrus Exchange's marketing organisation for Europe is seeking a trained

ECONOMIST

to fill a senior post on its Headquarters staff in London, reporting directly to the Chief (Marketing) Executive.

His work will have a major influence on the decisions of line management throughout Europe—whose confidence and respect he must therefore win—and will comprise:

1. *developing* and applying new techniques for price forecasting and logistic control of fresh produce;
2. *instituting* a conventional market intelligence service, subcontracting market research, and ad hoc tasks as assigned.

The successful applicant will be an economics graduate with statistical experience; he will have worked in a business atmosphere and be able to express himself clearly, verbally and in written reports.

Applications, with details of present and previous positions, age, salary and other relevant information, should be addressed to **S.A.C.C.E. Ltd., 6, Henrietta Street, WC2,** marked **"Strictly Confidential—Economist."**

CHARTERED ACCOUNTANT

Large Oil Company requires a Chartered Accountant for work in its Head Office in London. Duties, which include the examination of records and reports and the consideration of new accounting and financial control techniques, will principally consist of the constructive appraisal of accounting and administrative procedures and management controls. Pensionable post, with salary according to qualifications and experience. Applicants, aged 23-28, should write in detail, quoting No. L/42, to Box No. E.286, c/o Charles Barker & Sons Limited, 20, Cannon Street, London, E.C.4.

D.S.I.R.

BUILDING RESEARCH STATION, Garston, nr. Watford, Herts., requires TWO ASSISTANT EXPERIMENTAL OFFICERS.

Post 1: To work with scientists, engineers and builders in the study and development of processes, operations and plant associated with building construction.

Post 2: To study building operations as part of a programme of research into building processes and costs. Candidates should have had training and practical experience on work study, preferably in building or other construction work.

QUALIFICATIONS: G.C.E. "A" level in two science or mathematical subjects plus, for Post 1, O.N.C. (Building). If over 22, pass degree or H.N.C. in appropriate subjects or equivalent qualification.

SALARY: According to age in range £476 (age 18)—£573 (age 20)—£833 (age 26 or over) —£1,022 maximum. Career prospects to £1,389.

Application forms from DIRECTOR at above address, quoting B.R.S. 42H (Post 1), B.R.S. 43H (Post 2). Closing date, August 28, 1962.

UNIVERSITY OF EXETER

RESEARCH ASSISTANT—ECONOMICS OF INDUSTRY

Applications are invited from persons with Honours Degree in Economics. Salary £900 per annum. The appointment is for a period of up to two years. Further particulars from the Secretary of the University, Exeter. (Closing date for applications, August 18, 1962.

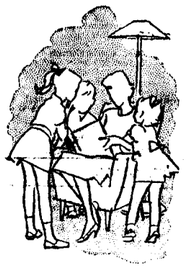
ASPRO-NICHOLAS GROUP

A DIFFICULT YEAR BUT PROSPECTS ARE GOOD

AT THE ANNUAL GENERAL MEETING of Aspro-Nicholas Limited at the May Fair Hotel on the 23rd July 1962, the Chairman, Mr. M. A. Nicholas, announced that the Group profit for the year under review was down at £1,078,170 as against £1,127,734 last year. This result reflected a number of adverse (but fortunately temporary) factors, such as a lowering of U.K. stock levels caused by the restriction of credit which followed the high Bank Rate, North American losses of over $1,000,000 which could not be set against Group profit for tax purposes, and costs incurred during the final stage of the integration with the Griffiths Hughes business. For different reasons, we were also affected by a reduction of stock levels in France and Germany. But prospects were good now that these difficulties lay behind. The Board, therefore, felt fully justified in maintaining the same rate of dividend at 3½% for the fourth quarter making a total for the year of 14%.

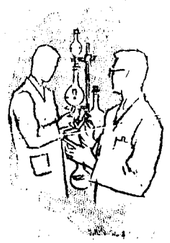
During the year there had been a lot of uninformed comment on proprietary medicines, a subject more fully discussed in an article in this year's Group report in which the following points are mentioned:



Why home medicines are essential

Home medicines are essential because otherwise surgeries would be overburdened with patients seeking treatment for minor and temporary complaints. These home medicines are made to the highest possible standards of effectiveness and safety. They are given a proprietary name which makes the manufacturer personally responsible for their quality. Virtually all the new products of research are proprietary products.

Modern advertising of proprietaries exists to give the consumer the information he must have about the action and uses of the product. Without it the product would be unknown, manufacture on a national scale would be impossible, and products would be produced at hand-made prices. That is how advertising lowers prices. It also enables research and testing and new product introduction to be carried out.



"WE ARE ENTERING A PERIOD WHEN HOME MEDICATION, USED BY A MODERN AND INFORMED PUBLIC, WILL PERFORM AN INCREASINGLY NECESSARY AND USEFUL FUNCTION"

Offering you a Second Income

An extra source of income is always welcome. For that special something you have longed for, for vacations, etc., a second income is the logical solution.

To establish a second income, Nikko offers for your choice a diversified portfolio of stocks, bonds, investment trusts and debentures. Nikko, with its eminent history in the field of investments in Japan, is known for its competent, dependable service. A special staff of experts for consultations with foreign clients is at your service.

THE COMMON MARKET ECONOMIES

Recent issues of the District Bank Review have contained specially commissioned articles by French, Belgian, German, Dutch and Italian authorities describing the basic economies and current development of their own countries—our possible E.E.C. partners, our trade competitors in any case.

These articles present a good deal of statistical material not otherwise readily accessible to British readers. The series is now reprinted in booklet form and includes a summary and analysis by Professor T. E. Chester of Manchester University.

Copies of "The Common Market Economies" are available on request from:

AN ENGLISH COXSWAIN

. . . are all banks the same?
I wouldn't know, but for a girl like me just starting her career my bank is just right. All the people are so friendly and helpful. Go out of their way to put you at ease and make you feel a valued customer. And that counts a lot when you want to see somebody about your money, or perhaps about a passport or a reference. I quite look forward to my visits to the bank—they have a knack of making you feel important . . .

I'm glad I use Martins Bank

Like the proverbial ability of the Englishman to adapt himself to the vagaries of the English weather, Kellogg can, by drawing on their vast pool of scientific and technological knowledge, adapt themselves to meet the varied demands of complex plant construction in all parts of the world.

Kellogg's adaptability has applied itself successfully to such diversified projects as Copper Refineries and Paper Mills, Steel plants, and of course, oil refineries and petrochemical plants.

If you are considering adding to, or adapting your plant to meet new production requirements, add the Kellogg organisation to your staff. Better still, let the entire resources of the world wide Kellogg International Corporation take over, bringing with them their coordinated engineering-procurement-construction service and the technical knowledge of their laboratories in America.

Whatever your production expansion problems are, Kellogg would like to show you how today's technology can be applied to your company's advantage.

Write for the booklet—"On the Job With Kellogg International Corporation".

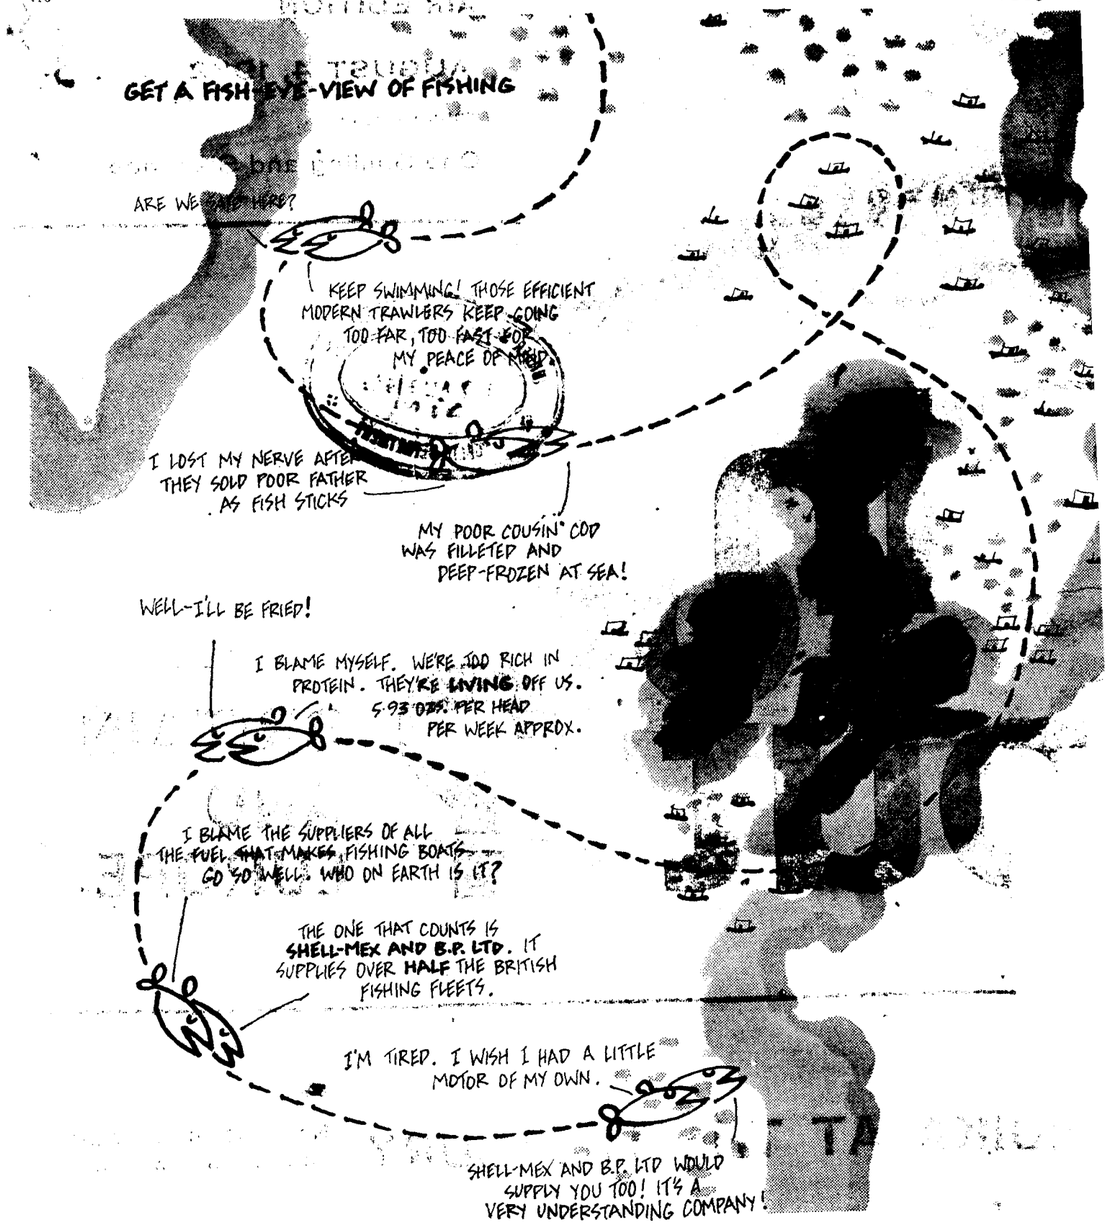
New machinery for the new men's new measures?

REAPPRAISAL FOR THE DOLLAR

MR MAUDLING'S TASK



Three facts worth remembering: (1) The fact that over 750,000 tons of fish were landed by British fishing vessels in 1961 shows how important the fishing industry is to Great Britain. (2) Over half the fuels and lubricants used by Britain's fishing fleets are supplied by Shell-Mex and B.P. Ltd. On average this represents the fuel for a mileage equal to a fortnightly trip to the moon and back. (3) Shell-Mex and B.P. Ltd not only run the most complete supply service for fishermen, from the Orkneys to Cornwall, but also supply the important handling and distribution sides of the industry.

HOME

GOLDEN HANDSHAKE

Bankers and politicians, in America and in Europe, must deal effectively with the world's dangerous obsession with gold. Britain's part can be to show how the world payments system can be not only reinforced, but also purposively reformed (p. 457).

In Britain, the changes in **organisation at the Treasury** could give the remodelled government—if it chooses—a firm base for economic policy-making (p. 422).

The Army's costs took some hard knocks this week (p. 428), while the emotional criteria for **buying works of art** for the nation appeared unduly extravagant (p. 425).

BRIGHT PROSPECT

The **anti-marketeers in Parliament** this week muffed their chance to strike against Britain's bid to join Europe (p. 421).

The Local Government Commission may get away surprisingly easily with its proposals for **reorganisation in Yorkshire:** but it may still not have reorganised enough (p. 446).

The Trades Union Congress agenda gives the **trade unions** a chance to work out just what they really think about planning (p. 430).

House buyers, after suffering years of a sellers' market, can now hope for steadier prices (p. 466).

BLUE MOON

An alliance in the air could be the slowest aspect of European integration (p. 459).

The one triumph of this **parliamentary session** has been to finish its programme on time (p. 426).

Television: the debate on the Pilkington report provided little that was new and less that might be useful (p. 425).

Violence: the Conservative Political Centre fails to recommend the true radical solution for compensating the victims of violent crime (p. 430).

The Norfolk Broads are no longer wide enough for their booming summer traffic (p. 447).

INTERNATIONAL

TO EUROPE WITH FAITH

At Brussels, Britain is trying to reconcile the needs of new friends in Western Europe with the promises it has made to old friends. These promises must be kept; and it should be possible to keep them (p. 419).

Bonn still does not trust President Kennedy's desire to steer his allies away from too much dependence on **nuclear weapons. Britain,** though, at last shows some signs of following him (p. 423).

Saying that **Australia** would survive anything decided in **Brussels** has cost one Australian politician his job (p. 453).

Faith in their own independence has enabled the **Poles** to look west while facing east; and some domestic policies have a air of uncommunist flexibility (p. 452).

UNITING UNCERTAINTIES

Are the **Algerian leaders** really settling their differences, or is a new drama opening? (p. 424).

The **Malaysia** negotiations were tougher than Mr Sandys would have us believe. There are still problems to be solved in piecing the new federation together (p. 428).

Peaceful settlements are sweet, but the informal agreement between the Dutch and Indonesians concerning **New Guinea** has doubtful points (p. 431).

In the **Congo,** President Tshombe has been strengthening his position, but there is a new modesty about **Katanga's** wealth (p. 449). He has not yet rejected Mr Adoula's proposed new constitution—although the hope of it may encourage Congress to buy UN bonds (p. 424).

Developing **Ghana** has many problems, but its dictatorship is not the world's worst. With luck it may improve up to the expectations of outsiders and live up to its own (p. 450).

ASKING FOR MORE

Bulgaria, like Russia, is asking for more **food** from its farmers and more money from its shoppers—but, unlike Russia, is attempting to help those who will suffer most (p. 426).

Marshal Tito still hopes to guide rather than command **Jugoslavia;** but expects his officials to get the economy out of its present trouble (p. 426).

Aid has been promised to **India** by the western countries; but the Mig question may not help to persuade Congress to approve the American contribution (p. 432).

China will not beg for **food.** Amid the current discontent Peking finds the threat of an invasion from Formosa a useful distraction (p. 428).

At **Aswan** the Egyptians ask for no more than **Russian** machines and technicians; and that is what they are getting (p. 454).

German youth likes modern ways; but the spirit of the youth hostels is back to nature—on foot (p. 455).

ONCE MORE DEAR FRIENDS

President **Kennedy** is appealing to the voters in the coming **American elections** to provide him with a congressional crew more willing to sail to the New Frontier than is the present one (p. 439). But in fact the present crew is doing more than its critics admit (p. 441).

At the same time Mr Kennedy is faring well in the South (p. 444).

The expected change in **American policy on nuclear tests** has been announced but is being kept vague on purpose (p. 440).

The **United States Treasury's** latest financing is imaginative and skilful (p. 441).

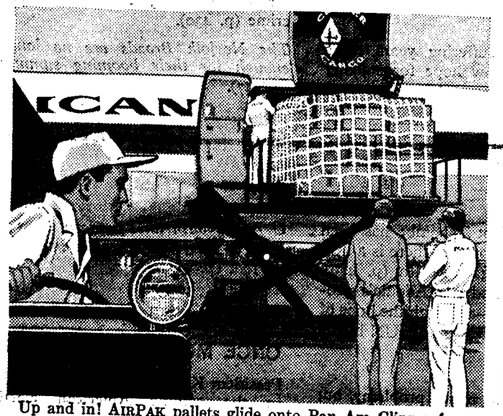
Both Congress and the President are strengthening America's already effective defences against **drug disasters** (p. 442).

Summers at Newport are still gilded but nevertheless the town is fighting obsolescence (p. 442).

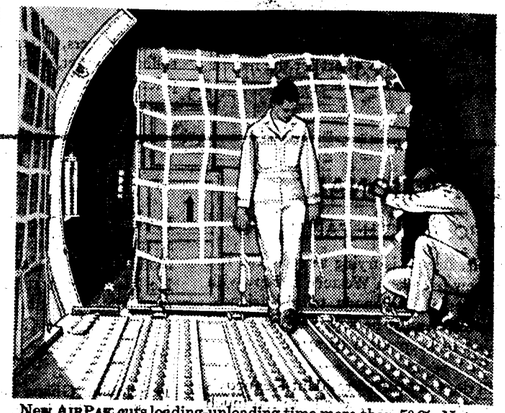
Detailed contents on page 419

Shipments are "unitized" on unique 88" x 108" pallets compatible with over-the-road transport facilities.

Each pallet carries up to 6,700 pounds of cargo, combining different items from one shipper or several.



Up and in! AIRPAK pallets glide onto Pan Am Clipper from specially designed lift. Your products get top handling care!



New AIRPAK cuts loading-unloading time more than 50%. Note "magic carpet" of rollers on floor.

Pan Am's new AIRPAK obsoletes ordinary means of loading, shipping, unloading! And here's how you benefit.

Today's increased business tempo calls for better, broader air cargo service for more and more commodities. AIRPAK—the exclusive Pan Am-developed cargo handling system—is just one of many challenging new ideas coming from the world's leading air cargo carrier.

AIRPAK is a deceptively simple idea that turned a bottleneck into a plus! And *you* reap the benefits—added speed, greater safety for your goods. With AIRPAK, an entire Cargo Clipper can be loaded in just 45 minutes—a job that used to take 2 hours!

But AIRPAK—introduced for the first time anywhere by Pan Am—does more than save loading and unloading time. Delivery is speeded, too, because pallets are loaded according to destination. Your products—even the unusually shaped ones—travel more "comfortably." Remember, too: Pan Am's complete family of containers is available to streamline your packing and shipping. You get *extra* protection against damage and loss!

This summer, Pan Am offers you the largest transatlantic cargo capacity in history. With 24 all-cargo flights and 188 Jets each week between Europe and the U.S.A., Pan Am's weekly cargo capacity is more than 1300 tons! With capacity and frequency like this, you know your shipment moves fast!

Another Clipper Cargo development you'll be interested in: Pan Am's exclusive *World-Wide Marketing Service*, which helps you find new markets, and literally gives your company hundreds of *free* representatives in 114 world markets! Ask your Cargo Agent, Freight Forwarder, or any Pan Am office about the extras—including the priceless extra of experience—that are yours when you specify Pan Am Clipper Cargo!

More research

Research—the exploring arm of industry—creates new demands and develops new applications for materials. Inco-Mond research anticipates demands for metals and uncovers new uses for nickel which confers unique qualities on alloys.

More research creates more demands for nickel. Inco-Mond meets the challenge with its new annual production capacity in excess of 400 million lb. of nickel and the metal will be available in ever increasing quantities in future years.

Behind this certainty of ample supply are the outstanding technical and market development services freely provided by Inco-Mond to industry throughout the world.

A very Turkish bath

This is the Walpamur water vapour test. Sample panels of paint are sealed inside a humidity cabinet for as long as fifty days. Throughout this time they are soaked in electrically heated vapour, with the temperature varying between 42°C and 48°C. No bathroom or kitchen conditions could possibly match the severity of these. It is testing such as this—ruthless and ceaseless—which conserves the quality of Walpamur Quality Paints. And it is thus that The Walpamur Company, with its overseas factories and multiplicity of branches, maintains its position of pre-eminence in the world of paint.

BRITAIN, NOT EUROPE

British membership of the Common Market means the permanent surrender of Independence and Sovereignty to a European-dominated organisation. It would also cause the destruction of the British Commonwealth.

The Anti-Common Market League is opposed outright to Britain signing the treaty of Rome and joining the European Economic Community.

If you share our grave concern, send for more details as below.

Please send me free literature and full details of
The Anti-Common Market League

SIDINGS are one of Wards' main lines

There's a whole department of the Ward organisation devoted to the designing, laying-down and maintenance of factory railway sidings. One of the reasons for the pre-eminence of Wards in this field is the fact that the trackwork and railway 'furniture' is produced by companies within the Ward group. Further evidence of the comprehensive nature of Wards' service to industry!

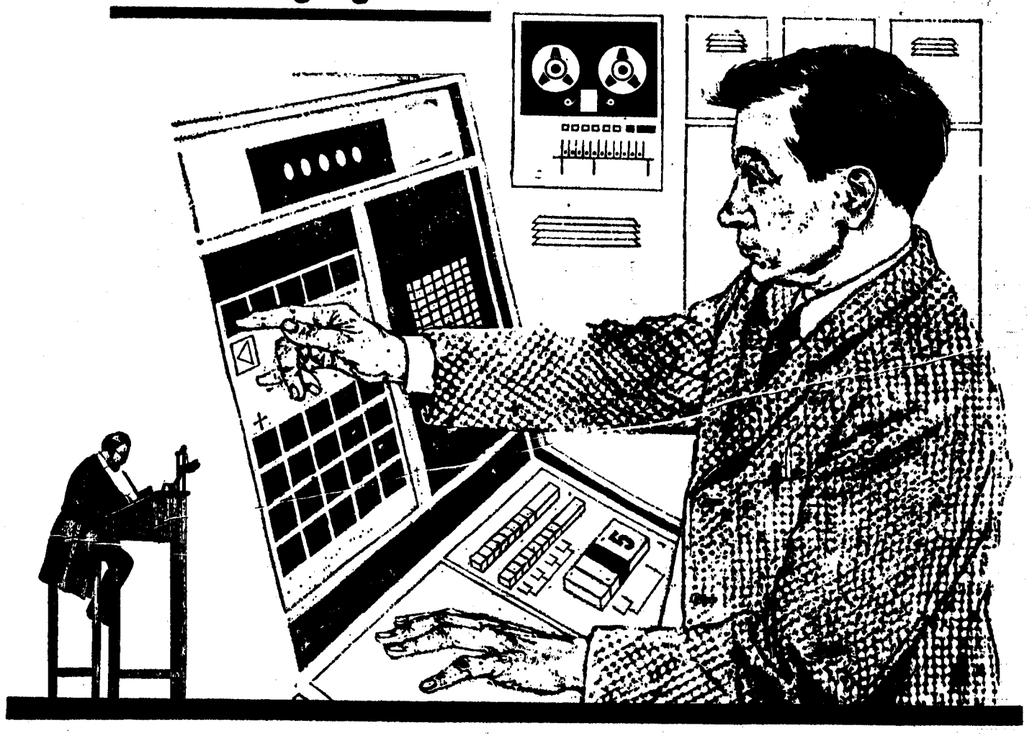
in a changing world



If ten Dickensian clerks with ten pens worked ten hours a day for ten years, how many sums would they have done? Fewer, no doubt, than one modern electronic computer can do in ten hours.

In commerce, in industry, in research and in defence, the computer is performing prodigious tasks today—saving time, saving money, saving valuable manpower.

And Mullard's contribution to this revolutionary development? Principally in the shape of memory cores and assemblies, transistors, valves and other specialized devices, but also to some extent in know-how.

Mullard research and applications laboratories play an important part in satisfying the urgent and critical needs of the designers of modern electronic equipment. Could they also be of service to you? If you would like to find out, please write to us at the address below.

Mullard products used in computers include:

FERRITE CORES · MATRIX ASSEMBLIES
COMPLETE STORAGE SYSTEMS
HIGH SPEED LOGIC AND CORE DRIVING TRANSISTORS
SEMICONDUCTOR DIODES
SPECIAL VALVES · THYRATRONS
COLD CATHODE TRIGGER AND COUNTING TUBES

Mullard
ELECTRONICS
....in partnership with progress

ELECTRONIC VALVES AND TUBES
MAGNETIC COMPONENTS
TRANSISTORS AND OTHER SEMICONDUCTOR DEVICES

Write to the address below, on your Company notepaper, for a copy of the illustrated book "Something About Us".

VOLUME CCIV - NUMBER 6206

Acts of Faith

HOW much simpler life would be if the only interests Britain had to defend at Brussels were British interests. If that were the case, it would be perfectly reasonable for the common market to say, like a bride coaxing her groom through his premarital nerves, that Britain must make an "act of faith" in joining Europe. Face to face with the vicar, after all, one does not normally demand assurances about the future course of the marriage, especially where the delicate matter of feeding arrangements is concerned; and it is hard to think of any risk in joining the common market, so far as Britain itself is concerned, equal to the enormous risk of being left outside the potential United States of Europe.

Unfortunately, however, the problem is not so simple. Britain is at the receiving end of an act of faith, as well as possibly the giving end. This country would have been under an inescapable obligation to protect the interests of six countries in the current negotiations—the three old dominions, and the three European neutrals—even if Mr Macmillan had not spelled the pledge out in writing when Britain decided to apply for entry a year ago. This obligation cannot decently be dodged now; and it requires rather more precise assurances about the common market's future plans than would otherwise have been necessary.

How much more precise? Last week, by the look of it, the British demand for precision had stretched both sides' willingness to compromise pretty tight by the time the ministerial meeting broke up, to the sound of twanging nerves, in the early hours of last Saturday, July 28th. This week's meeting, which began on Wednesday but then put off the really crucial issue until Friday, may bring the extra inch of stretch required, or a rupture, or quite possibly nothing definite either way. But two observations are worth making at this point. The first is that the dismayed mood in which the ministers parted last weekend, having been unable to agree about the common market's policy on food prices, is partly explained by the fact that, immediately before, they had appeared to be making some cheering progress on other aspects of the Commonwealth farm problem. The second point is that, as matters stood when they reassembled on Wednesday, it still seemed possible for both sides to go a little further in search of a compromise—in Britain's case only a very little, perhaps, but a step or two nevertheless.

Before the ministers ran into the disagreement on price policy, each side had made a number of concessions on other points. On the whole, Britain appears to have done more conceding than the Six, but not so much that the reasonable man on the Clapham omnibus (or, more important, the Canberra one) would be obliged to say that it amounted to a betrayal of New Zealand, Australia and Canada.

Mr Heath has no longer been insisting that imports of food from the old dominions should continue to enjoy the present system of imperial preference throughout the transitional period to 1970—the year in which Britain would be fully blended into the common farm policy of the European community. In return, however, the common market has agreed to extend part of its own "preference" system to these Commonwealth imports, so that until 1970 they would have an advantage over food coming to Britain from other overseas countries. But food sent to Britain from within the common market would

apparently have a greater advantage, unless the Six can be persuaded to modify their proposals. This would mean that farmers in the dominions would suddenly be shifted from a position in which they have preference over their competitors in Europe, to the reverse. The effects, in some cases at least, might be disruptive; some way of avoiding them will plainly have to be found if Britain is not to be guilty of breaking its promise.

After 1970, on the other hand, the sky grows distinctly clearer. It has long been agreed by all concerned that the only hope of reconciling the Commonwealth's farming interests with those of western Europe once and for all lies in a series of world-wide agreements on the various commodities involved—"world-wide" necessarily including New Zealand, Australia and Canada as three of the world's principal food exporters. Mr Heath managed to persuade the common market's negotiators last week to be rather more specific than they had previously been about what these world-wide agreements ought to do.

He got them to agree, for instance, that the agreements ought to include an understanding about prices, and about the maximum and minimum levels of world production. Moreover, Mr Heath has obtained a promise that, if 1970 arrives, but the hoped-for international agreements do not, the common market will consult with (among others) the dominions concerned with a view to making special arrangements to fill the gap. One has some qualms about that "with a view to"; and what happens after 1970 needs to be spelled out more precisely in some other respects. But it is not blindly optimistic to think that the long-term interests of the Commonwealth could well be met along roughly these lines.

It was at this point, when things seemed to be marching tolerably well, that the negotiators fell into the argument about the common market's price policy for food. Not surprisingly, the effect after the rising hopes of the two previous days was a sudden jolt, as of a foot set firmly on a non-existent stair; the air of crisis over London last weekend may have been due as much to the abruptness of what happened as to its seriousness. But one should make no bones about the importance of this question of price. Unless the European community fixes its food prices at a reasonably low level, neither transitional arrangements up to 1970 nor long-term assurances after 1970 will dispel the Commonwealth's fears. High prices might well lead the common market's farmers (and France's in particular) to produce so much that western Europe would stuff itself with home-grown food and have little room left over for imports from anywhere. Low prices that would leave room for imports, on the other hand, might well put many of Germany's high-cost farmers out of business—as well as depriving French farmers of the opportunity they long for. The price question thus lays bare the conflict of interest between Britain's old friends and its prospective new ones.

On Wednesday the position was that the Six had offered to follow a "reasonable" price policy; and, pressed by Britain to specify what "reasonable" meant, had said that they would bear the interests of other producers in mind when fixing their prices. But they were unwilling either to make this assurance more precise, or to put it in the form of a written document that Mr Macmillan could lay before the Commonwealth prime ministers on September 10th. Moreover, M. Couve de Murville, the French foreign minister, made it clear on July 27th that he envisaged a reduction in the total amount of food western Europe imports from overseas. (He suggested that the overseas producers could be compensated for this by higher prices for what they did manage to sell to Europe.)

How much further can Britain reasonably push its request for precise and foolproof (if that is the word) assurances? The two places where Mr Heath has yielded ground most noticeably are places where yielding was almost certainly necessary and proper. By shelving the idea of maintaining the imperial preference system intact until 1970, Britain has acknowledged that it cannot claim the right to have its front door inside the European economy and its back door outside it; the relief sought for Commonwealth farmers must be found within the rules of the European community. By laying aside the demand for "comparable outlets," Britain has also recognised that the future trading relationship between the dominions and western Europe cannot be neatly tied up in quantitative terms before Britain joins Europe; it will mainly have to be worked out within the price-fixing machinery of the group Britain is applying to join. The thought behind these concessions has a Stein-like simplicity: if you are in Europe, you are in it, and what you do on behalf of old friends must be done from inside.

But before taking the final step Britain is entitled to find out roughly how much it will be able to do on behalf of these old friends. In fact it may well be in the common market's interest to assure everyone that it is not going to set its food prices too high. If it persisted in refusing this assurance, Britain might quite possibly be frightened out of joining the European community, with the result that an important market would be lost to the French farmer. If prices were in the event set too high, the common market might well find itself pouring more of its resources into agriculture than it really wanted—as well as impoverishing overseas countries to which, after all, it must hope to sell its industrial products. But the difficulty remains that when the community's farm policy is in full operation decisions about prices will be taken by majority vote; and Britain will then have no guarantee that these counsels of reason are listened to.

Back to Brussels: Mr Heath

It is therefore entirely fair to ask the Six to spell out their intentions a little more specifically. Not very much more specifically; it might be possible, for instance, to settle for the formula of the Belgian deputy foreign minister, M. Fayat, who said last week that it was "inconceivable that the enlarged community would not be conscious of its world-wide responsibilities"—and in particular, he made clear, its responsibilities towards New Zealand, Australia and Canada. If the Six could bring themselves to assent plainly to this proposition in regard to their future price policy, the back of this problem might have been broken. Suppose that, in addition, the aims of the post-1970 world-wide agreements were defined to include some reference to access for the Commonwealth's food exports; suppose, too, that the pre-1970 arrangements were softened enough to prevent a sudden, serious dislocation in the dominions' exports. The reasonable man on the omnibus might then fairly conclude that Britain had kept its promise.

That would not be the end of the negotiation. It is also necessary to look after the interests of the Asian members of the Commonwealth; but the Six have appeared willing to be quite co-operative on this. More seriously, there is Britain's promise to make sure that Sweden, Switzerland and Austria will be able somehow to link themselves to the common market on acceptable terms. Sweden and Austria began to argue their case in Brussels only last Saturday, July 28th; Switzerland has not even begun yet. It will be some time before Britain can tell with certainty whether going into Europe is compatible with Britain's undertakings towards all the countries that have put their trust in us. If the two are not compatible, there is no doubt what should be done; but the evidence still suggests that with pains and ingenuity the way can be found.

All to Play For

The Government's easy escape from the anti-marketeers this week is a sizeable straw in the European wind

Despite the tizzy of alarms and trumpetings into which the anti-marketeers were thrown by their interpretation of last weekend's news from Brussels, the sporadic exchanges in and around the Commons (ending in Wednesday's brief and inconclusive debate) brought no significant shift whatever in the political balance. Everyone was predictable. This consistent failure of the anti-marketeers to increase their strength, even when the negotiations are in difficulty, is a sign of their indifferent leadership and influence on the House. The summonses on Wednesday to save the country from Agricola's legions (Mr Wise) and the Norman invaders (Mr George Thomas) gave early intimation of what a bore the debate would be. With no one at all sure of what was happening in Brussels and Mr Butler placing a damply reassuring hand on fevered brows, the Commons departed docilely enough (only Mr Silverman and Mr Foot noticeably kicking and screaming) in expectation of some hefty white paper reading during the recess and, very probably, their recall in September for much more purposeful business.

But if ever there was a week for the anti-marketeers to seize the initiative, this was it. If ever the European negotiators in Brussels were to be impressed by a mounting tide of British unrest (see the opinion polls), discrediting a weak Government and making any European bargain with it not worth the paper it might be written on, this was the time. Yet nothing happened. There can be no certainties until after Mr Heath's final report. But if the terms then are near enough the mark, the failure of the anti-European bandwaggon to roll forward this week may look very like a decisive breakdown. By Thursday morning even the *Daily Express* had decided that the Commons performance did not rate its front page. What the week has made evident is the pretty general will on both sides of the House that the negotiations should succeed. On Monday, when Sir Tufton Beamish wished Mr Heath success and godspeed, there was no mistaking the warmth of ministerial cheers.

Even the minatory (and inevitable) Tory backbench motion which finally emerged was dull in tone and significantly lacking in signatories. It called on the Government to honour its pledge to safeguard Commonwealth trade and to retain sovereign control over British agricultural policy: there was nothing new about these demands or about the people making them. Despite the motion's moderation it attracted only 40 signatures, just about half the number its sponsors had hoped for. Not one prominent Tory of the centre nor any leading agriculturalist joined in. The explanation is not too hard to find. Whatever noises they may make in public, the Tory farmers have in private come round to the view that British agriculture is likely to do pretty well in the new Europe. Pro-Commonwealth sentiment is genuine among these members, but they are also aware that what is good for the Commonwealth could be less than good for British farmers. Provided the Commonwealth arrangements are in any way reasonable they will not split the party.

Although Labour's attitude was said to have hardened against Europe, little evidence of this was discernible (except in Gaitskellite rationalisations of what happened in the blood-spitting row with M. Spaak). Mr Blyton's committee of 100 has become much more noisy, but the net effect has been to produce a counter-manifesto from Mr Jenkins's pro-market forces, which claim to have consolidated their strength at around the 80-90 mark. (If true, this would leave the official leadership in control of the smallest segment of the parliamentary party, still upon the fence.) In the House of Lords, which staged a two-day debate in mid-week, Lord Attlee followed Lord Avon into the ex-prime ministers' cave of Adullam, but Lord Morrison and Lord Citrine were equally strongly for going into Europe.

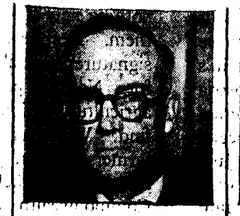
Mr Gaitskell himself, after his stay in Brussels, is still distinctly lukewarm. His immediate concern is likely to be how to keep the party from dividing over Europe despite his efforts (and this week has not improved matters); but in the long run the ineluctable fact remains that the hard core of the anti-marketeers contains a predominance of his bitterest opponents on the Left, and this could finally outweigh the divisions among his friends. Mr Brown, although standing by his preference for Europe, seemed primarily concerned on Wednesday to stop the ranks behind him from dividing irremediably. He professed to see no reason for hurrying into Europe; the impression he left was that Mr Heath could well be going too fast for Labour's party conference.

The present expectation is that the European terms must be available by mid-August if the Government's reply is to be worked out reasonably fully for the Commonwealth prime ministers in September. After that, parliament could be recalled at the end of the month. Mr Macmillan's reshuffle has left a cabinet that is finely poised between confident and diffident Europeans: in the actual decision it could still jump either way, depending on the terms, but not the least significant point about the Prime Minister's distribution of the top jobs is that this is preeminently a cabinet that is likely to jump together. One's guess is that, in these circumstances, a jump

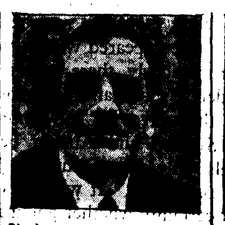
into Europe would carry almost all the parliamentary party along: the names of Mr Butler, Mr Maudling and Mr Sandys together on the order paper should ensure that.

If all goes well in the Cabinet and in the House the way would then be open for the Prime Minister and Mr Macleod to rally the party as a whole at Llandudno in October. At Conservative Central Office all is said to be ready for the publicity campaign: the slogans are coined and the posters drawn up. It will be a campaign designed to push through the common market legislation next session, in time for the Government to receive the electorate's plaudits when they will be most pertinent. Politically, the Government has everything to play for now: this week's events have done nothing to worsen the odds against it.

Troika at the Treasury



Sir Burke Trend: to "No. 10"



Sir Laurence Helsby: manager from Labour

Mr William Armstrong: from Third to First

A legacy from Mr Lloyd (and Mr Amory) could be the launching-pad for better informed and more decisive policies

THE Kennedy regime in the United States was widely heralded a year and a half ago as a new essay in "thought-out" decision-making by government. In the event, so far, the process of decision on the new frontier has not been dramatically bettered; it has been long in ideas but short in method and edge. Here, three weeks ago, the Prime Minister switched his ministers, not because the incumbents were physically tired, but because—so he thought—they had run out of new ideas. Now, as a legacy from Mr Maudling's two predecessors, a change is announced, not only in the manning of the Treasury establishment, but also in its methods of organisation, as a means to better decision-making. This could give the remodelled Government the purchase now desperately needed for more purposive, and more informed, economic policies.

Every firm announcement that has been made since Mr Macmillan changed his team has been a legacy from Mr Selwyn Lloyd: the National Incomes Commission; the repayment to the International Monetary Fund (which is discussed in its wider context on page 457); and now the changes at the Treasury, based as they are upon the report of Lord Plowden's committee set up by Mr Heathcoat Amory, which reported to Mr Lloyd a year ago. The core of the Plowden report on the control of public expenditure was that a government needs to know what it is doing: "this question of awareness is important." The curse of public policy, it flatly said, was twofold: first, that decisions were taken piecemeal without regard to the prospective balance between expenditure and resources, and the economy's growth, over the years ahead; and, secondly, that decisions were reached both in the Treasury and between the departments of government on a disparate not a co-operative basis. The cause was the lack both of a proper system of collective decision bringing together ideas and facts, present and prospective, and of modern methods of management in the public departments, with the Treasury at their head. It is from the Plowden recommendations to rectify this lack, founded upon "the development and use of long-term surveys of expenditure and resources," that the changes at the Treasury announced last weekend spring. (A tentative step was taken, on the ministerial side, last October when the new post of Chief Secretary to the Treasury, then Mr Brooke, now Mr Boyd Carpenter, was created to control the course of public expenditure by looking at its long-term trends.)

"THE Treasury monster has, in fact, not two heads but three at least": so *The Economist* said just six years ago when the departure of Lord Bridges led to the splitting of his task at the top of the Treasury between two joint permanent secretaries, one responsible for the organisation of the civil service as well as being secretary of the Cabinet, the other responsible for the Treasury's financial and economic work. Now the two have become three (though not the three-way split we had in mind in 1956): Sir Burke Trend will be secretary of the Cabinet and the personal link-man of the First Lord of the Treasury, who is the Prime Minister; Sir Laurence Helsby, who is now permanent secretary at the Ministry of Labour, will become joint permanent secretary at the Treasury and head of the home civil service concerned without other distractions with the civil service's management; and Mr William Armstrong, who jumps from being a third secretary to the top job, succeeds that masterly public servant, Sir Frank Lee, as joint permanent secretary in charge of financial and economic policy. Given the loss that the higher reaches of the public service now tend to sustain by the departure of good men, with their pension already secured, to new careers in business and industry, these are distinctly encouraging choices; the hope must be that they will stay to see their work done.

But the chief significance of the changes, beyond the welcome due to the new officials, is the new machinery of management and decision. The new head of the home civil service, when he takes over next January, will have the responsibility of developing good management throughout the public services. Two groups in the Treasury under him will, first, foster management services by all the modern means of technical efficiency, training and selection; and, secondly,

co-ordinate pay and conditions. The financial and economic work under Mr Armstrong, who starts in October, will be entirely and functionally regrouped. On the one side, both overseas and home finance will be brought together, as well as overseas aid and co-ordination of the external economic policy of all the departments, in one group. On the other side, public income and outlay in relation to resources will be the business of another group. In between, and most significantly of all, because it will bring together the Treasury's economists and administrators in an integrated team, there will be a new group of work concerned with the balance of the economy, with the correlation of short-term trends and long-term reviews, with the implications of economic growth (and so with the National Economic Development Council) and with incomes policy (and so with the National Incomes Commission for what that proves to be worth).

On the face of it a real and rightly-directed attempt has been made by this shrewd surgery to break down the lesions that have tended to clog response and performance in Britain's new world circumstances since the war. The fact is recognised in the Treasury set-up itself that the state of the budget, the position of sterling, the role of monetary policy, and both the growth and solvency of the national economy are parts of one and the same issue: external policy will be mated, as it ought to be, with home finance, formerly an outmoded division engrossed in form and detail and lacking both professional economic expertness and initiative; and in the central group—the gyroscopic group as it were, serving and balancing the other two—the economists, under the Government's economic adviser, are brought right into the mainstream of reckoning and resolution. There are no doubt untidinesses still, as in the relationship betwen this new-style Treasury and the changing Bank of England. And there is at least one outstanding doubt: whether even in the reconstructed organisation the doors and windows will be wide enough open to let in the fresh light and air of outside ideas, experience and discussion. It was one of the bad features of the Plowden report that it plumped so firmly for keeping the long-term surveys of expenditure and resources, which were the essence of its proposals, secret from Parliament and the public; and there is more need not less in the new set-up to loosen the close corporation of the Treasury men by drawing upon the thought and services of shrewd and informed outsiders. This, on the management side, the Plowden report saw: "we must emphasise the advantage of seizing every opportunity for interchange of ideas and experience with people in commerce and industry." This is so, too, of applied economics; there should be no "Treasury view," just the right view.

MR MACMILLAN, when he was Chancellor of the Exchequer, complained of the "out-of-date Bradshaw" by which his advisers had to plan the journey ahead. Many others have growingly complained about the Treasury's horse-and-buggy arrangements. Now the attempt is being made, in the Plowden phrase, to "strengthen the organisation against wrong decision-making," by getting rid of both bad management as well as piecemeal decisions and by basing policy, instead, upon "a balanced view of the alternative uses of national resources." By itself, new machinery will not do the trick. In an early, perhaps unguarded, moment, when his appointment was announced, Mr Armstrong is reported to have said that the decisive thing was "the will" of the politicians. This is indeed true: the propensity for innovation and the capacity for decision, these must start at the top. Historians will say that during the past decade the Conservatives during their too-long lease of power did half-see and half-make the great needed decisions of our times, upon which Britain's future for another century will depend: the entry into Europe, the huge new requirements of widespread education, the necessity for urban renewal on the broadest scale. And they have glimpsed, too, that basic to all was a solution to the problem of economic growth from which alone the rest can spring. But policy has stayed fuzzy at the edges and soft at the core. Now the means are being sought of moving more purposively in the daylight instead of piecemeal in the dark; but the will to reach Britain's right twentieth century destination is still more important even than the means of working out how to travel.

What Weapons and Where?

Some much-blurred facts about defence policy begin to come into focus

RIGHT or wrong, Herr Strauss, the west German minister of defence, has one of the sharpest minds in the military business. Last Saturday, July 28th, he once again cut his way through to the heart of the strategic argument being fought out in the western alliance. In a speech in Bonn, and an article in a Cologne newspaper, Herr Strauss said in effect that he thought President Kennedy was in danger of embracing the wrong doctrine about the use of tactical nuclear weapons. The doctrine Herr Strauss disapproves of holds that these weapons, instead of being put into the hands of front-line troops who would almost certainly use them if fighting broke out, should be held in reserve behind the front line so that the decision whether to use them or not can be taken deliberately and (relatively) coolly.

Herr Strauss is worried by the fact that General Maxwell Taylor, who supported this more cautious approach to nuclear weapons in his book, "The Uncertain Trumpet," has just been nominated by Mr Kennedy as the next chairman of the Joint Chiefs of Staff in Washington. His worry is compounded by the impending departure from the Nato command in Europe of General Norstad—whose practice has been to put tactical atomic arms at the disposal of the divisions manning the front. Herr Strauss's argument cannot just be dismissed out of hand. The further forward these weapons are kept, the harder it is for the Russians to be sure that they will not be used (and bring in their big intercontinental brothers after them) if a fight begins; in technical terms, forward deployment maximises the deterrent effect of nuclear weapons.

But the other side of the argument—the side that Mr Kennedy supports—still has the better of the debate. For one thing, one cannot rule out the possibility of an accidental

fight beginning when neither side really means to start a war; for instance, as the result of a brush on the border between the two parts of Germany. It would be stupid if this developed pell-mell into full-scale nuclear war simply because of the way equipment had been deployed. In the second place, forward deployment of these weapons means that the West probably has no choice, when faced with a military challenge, except either to respond with total war, or to make no response at all. This could tempt the Russians to think they could get away with a minor incursion into western territory because the Americans (who hold the nuclear warheads) would rather do nothing than start a general holocaust. A wider range of choices is opened, however, if more tanks and bayonets are put in the front line, and the kiloton brutes are kept in the rear. This still seems, on balance, the better bet.

HARD to believe though it is, Britain may just possibly be starting to swing round to Mr Kennedy's side in this strategic debate. It was reported on Wednesday that the British Aircraft Corporation and the Nord Aviation company in France are to conduct a joint Anglo-French operation in producing guided missiles. This raises some fascinating prospects, not least of the possibility of joint work on nuclear warheads for these gadgets one day. But its immediate importance is that it casts doubts on the future of Blue Water, the purely British tactical missile hitherto intended to be the first home-produced weapon of its kind in the armoury of the British Army of the Rhine. It is now possible that euthanasia will be applied to Blue Water before it comes to birth.

If Blue Water is done away with, the chief motive will doubtless be the feeling that two countries working together can make more progress with missiles than either working alone. But there may also be another, only half-acknowledged, motive. Given the limited amount of money Britain can afford to spend on defence, it is impossible (and is gradually coming to be recognised as impossible) both to undertake a missile programme and to provide the army with all the conventional equipment it needs. If Blue Water dies the death, the result may be gradual improvement in the supply of new tanks, guns and communications equipment to the Rhine Army. It was also announced on Wednesday that, not before time, the obsolescent Thor missiles which have theoretically been part of Britain's contribution to the western deterrent since 1958 are to be removed next year. Thus, little more than a fortnight after Mr Thorneycroft took over the Ministry of Defence from Mr Watkinson, a start is perhaps being made on the shift of emphasis—away from national nuclear efforts and towards better conventional forces—that Mr Kennedy has been calling for. Are we witnessing a sensible reversal of British defence policy as gently circumspect as Mr Macmillan's retreat from Suez five years ago?

NOTES OF THE WEEK

ALGERIA

Act Three?

THE scene is Algiers, the time a month since Algeria became independent. The management is mainly military. One of the leading characters has changed his role. This is Mr ben Khedda. Formerly cast as the rival in a struggle for power with the mettlesome Mr ben Bella, he has stepped down to play conciliator. He opens (July 30th) on a warning note:

> Our people can wait no longer. . . . Unemployment is growing apace. The Europeans have closed the doors of their businesses. Trade is stagnant, our stocks are dwindling and our money is running out.

Three important emissaries are heralded: from Oran Mr Khider, representing Mr ben Bella; from Kabylia Mr Boudiaf—who last week succeeded ben Khedda as ben Bella's principal adversary—and Mr Belkacem Krim. All three are about to enter for talks with Mr ben Khedda when some soldiers dive into the wings and capture poor Mr Boudiaf. There are noises of anger off, from Oran as well as Kabylia. The soldiers have exceeded their authority. But that, as everyone knows, is nothing new.

Last week's seizure of Constantine and of ports in east Algeria are now said to have been carried out by units supporting ben Bella, but not by ben Bella's order. Most of them came from Tunisia, ardent followers of Colonel Boumedienne, the one-track commander in chief whose dismissal by Mr ben Khedda put him even more energetically into Mr ben Bella's camp. Then, on Sunday, the neutrals moved. Largely on their own initiative the uncommitted troops in the Algérois (staid forces of the interior) took over Algiers and made it an open city. Already in control of the country through the regional administrations that have had to make do in the absence of any umbrella government, the army, though politically divided, has developed a kind of rhythm in prodding the civilian leaders to face their responsibilities.

Happily, Mr ben Bella combines with his rivals to secure Mr Boudiaf's release. Mr. Boudiaf turns up looking distinctly worn out. Talks between Boudiaf, Krim and Khider are stated on Thursday to have ended in agreement: Constituent Assembly elections August 27th, the revolutionary council to meet soon after. Once more the dénouement seemed near, and Mr ben Bella was expected in Algiers on Friday to set up his political bureau. Is this the end of Act III or the opening of a new drama? Two questions hung over Thursday's preparations. Had Kabylia got satisfaction, excluded as it had been from representation on the political bureau—even by such a candidate as its army commander, Colonel Mohand oul Hadj, doyen of all the commanders of the interior forces? And would Mr ben Bella ride in accompanied by Colonel Boumedienne, or would he come in peace, unescorted?

SOUTHERN AFRICA

Is the Dawn False?

ALTHOUGH it would be a rash man who saw light at the end of the murky Congo trail, Mr Adoula's new outline for a federal constitution, issued by him on July 29th, does give room for a ray of hope. A frustrating and destructive year has passed since Mr Adoula, on becoming prime minister, pledged himself to end Katanga's secession: his suggestions now go a long way towards meeting Mr Tshombe's demand for provincial self-rule. According to these proposals, the central government would control national defence, foreign affairs, customs, currency, immigration and communications. The provinces would run their own local administration, manage their own economies, and be responsible for law and order within their own boundaries. On the basis of these general proposals, Mr Adoula has written to U Thant, acting secretary-general of the United Nations, asking for a team of international lawyers to draft such a constitution. If all goes as Mr Adoula plans, this draft may be presented to the Congolese parliament in September.

That Mr Tshombe does not intend to turn down this proposal out of hand is suggested by the suddenness with which he went back on his earlier refusal to talk any more with Mr Adoula. As our correspondent describes on page 449, Mr Tshombe now declares himself ready to negotiate. He may have got wind of Mr Adoula's new concessions; or he may, resilient and skilful politician that he is, have decided that it was time to yield an inch or two before the gathering impatience of the United Nations and of Washington.

If a new constitution can be worked out, it may at least give the two sides something positive to discuss. Whether such a discussion would get anywhere is another matter altogether. The crux of the dispute is contained in Mr Adoula's vague phrase proposing that the provinces should each make their own economic arrangements. Significantly, there is no mention of what should happen to Katanga's copper revenues. As the Congo subsides into bankruptcy, the relevance of this question is biting. The most that can be said for Mr Adoula's suggestions is that they point in a general direction that might, with more luck and good will than hitherto, lead out of the mess. This in itself is important at a time when the United Nations is lacking the money to pay for its forces in the Congo. Even a vague hope of an end to the UN operation might just encourage the American House of Representatives to approve the Bill authorising the President to buy up to $100 million worth of the UN bond issue. So far only the Senate (not Congress, as wrongly reported on page 333 of *The Economist* last week) has authorised this vital purchase.

No Dead End

THE American view of the Katanga secession rejects the notion that it is a simple bid for self-determination by Mr Tshombe's Lunda tribesmen, in favour of a more sophisticated scrutiny of the external interests that sustain it. President Kennedy on July 23rd referred bluntly to "the *Union Minière*, the company which controls these vast resources in the Katanga." Washington's (and the UN's) present thinking about ways of restoring the unity of the Congo without resort to force is centred on the application of pressure upon this Belgian-British company and its associates.

What needs to be more generally understood in this context is that Katanga is not a remote dead-end, presenting a problem that can be solved in isolation. It is, at the moment, a contested zone between the new world of independent African states and the still white-ruled southern third of the continent. Its significance is sharply brought out in a pamphlet published last month* by a group of organisations which are particularly concerned to end Britain's identification with the Portuguese and South African governments in their repressive policies. Although this is a polemical pamphlet, it does present the factual evidence, not only of the offences of the rulers of southern Africa (including Katanga), but more particularly the close links between them. The data, here presented in concise but detailed form for the first time, about their financial, political and military connections, and about British involvement too, cannot be disregarded by anybody who seriously seeks to understand the problems of Katanga and of the regions to its south.

TELEVISION DEBATE

Low Rating

NOTHING very tangible emerged from the Commons debate on the Pilkington report on Tuesday. The Postmaster General bafflingly sustained the part of a man still waiting to make up his mind—or to have it made up for him. In the process he appeared to have retreated a step or two from his own white paper's willingness to establish a second commercial channel: not an encouraging performance. Mr Gordon Walker, enunciating the official Opposition line (as distinct from the Mayhew line, now diffused solely by Mr Mayhew), was no less adamant for more time to think. He could use it. The ideal way to raise commercial standards, Mr Gordon Walker declared, was to keep ITV's one channel in permanent competition with the BBC's two; then ITV would really have to "think about all sorts of minority interests." Really? And he was worried about the Pilkingtonians' complacency in suggesting that any dealing with advertisers should be transferred to the ITA itself, out of the hands of the programme companies; would this not fatally corrupt the ITA as well? It was on this curious ground that the Opposition's reservations on the Pilkington reorganisation seem to be based; Mr Gordon Walker made no others explicit.

On television finance, neither the Government nor the Opposition is at all anxious to do what Pilkington and the BBC have asked them to do—and that is raise the licence fee to something like £6. Whatever agonising thought is being done in either party at the moment boils down to trying to find an acceptable way of subsidising the BBC so that it can actually run a (truncated) second channel at all. Sir Hugh Linstead egregiously suggested a straight swop: ITV profits to go into the Treasury, and the Treasury to finance the BBC. Nearly everyone else saw through that. Mr Gordon Walker wanted a statutory charge on the Consolidated Fund (he refrained from specifying for how much) so that the BBC would always be sure of some cash—although one suspects that the sum any Government contracted itself to supply in perpetuity would be appreciably less than the BBC would like for rapid and competitive development. The point is, as Mr Woodrow Wyatt had the nous to explain to his front bench, that the taxpayer may legitimately feel that there are more deserving claimants for Treasury funds than a medium of popular entertainment.

There are two possible ways round this central predicament. Either the BBC finally brings itself to do what the press does and accepts a proportion of its revenue from advertising; or the BBC's second channel is devoted to a specifically educational service, for which the use of public money would be legitimate and to which the commercial companies should contribute their share both of funds and technical expertise. Mr Bevins ought to have done his homework on the financing of television's expansion long ago; if he had, Tuesday's debate would have been to some purpose.

THE LEONARDO

Happy?

ALTHOUGH all parties concerned in the sale of the Leonardo cartoon are busy taking credit to themselves, none come out of the business at all well. The Royal Academy might, at the end, have had the moral courage to settle for the lower sum at which it first offered the drawing; the National Art-Collections Fund, if it really had to handle it, should have got its appeal off, professionally, to a quicker start; the richer art-lovers among the public might have been more forthcoming; and the Government should not have taken the bite out of the appeal by hovering over it like a fairy godmother, even lending a hand in the collection of the money, and then finally waving its wand without, apparently, attaching any strings to it. This may seem a carping comment on a "happy ending," but it will be a pity if too easy benevolence prevents serious consideration of two questions.

First, is the present operation of export control the best one to govern the nation's acquisition of important works of art? This requires the purchase, out of public funds, of any work sold to a foreign buyer when export is refused, and the purchase must be at a "fair price" acknowledged to be the knock-down auction value even if a Texas millionaire has bid it up. This is an expensive system. Aware that the success of the Leonardo sale could encourage other institutions to realise their assets, the Prime Minister assured the House of Commons

that with regard to major works of art held by public or semi-public bodies, "we are considering whether the procedures are adequate." But, in general, the acquisition of a work of art simply because it has been in this country and is now about to leave it, or because it is on offer in lieu of estate duty, will not necessarily give the national museums what they most need.

It is matter for rejoicing that the nation has added the Leonardo cartoon to its national collections. But if it means that the serious gaps in these collections are the less likely to be filled, art-lovers might have done better to have been content with the newly-afforded opportunity of seeing the Leonardo drawings in the Queen's collection. In any case, if the Government really intends to dip periodically into its pockets for special purchases (it did so to the tune of over £200,000 in 1960-61), surely it might be more sensible to step up the annual purchase grants (now £125,000 for the National Gallery and £40,000 for the Tate) and let the experts get on, unemotionally, with the job of acquiring the works that figure highest on their lists.

The second question to be asked is, since fancy prices have to be paid for works of art, should not admission fees be introduced for viewing the best of them? Despite the fact that taxpayers may grumble that they are being asked to pay twice over, which is often the case, with suitable publicity a small charge could be justified in one room of the National Gallery—for the Leonardo, for other acquisitions and for the display of (say) the best provincial pictures on periodic loan in London.

JUGOSLAVIA

Presidential Pep

AMONG Europe's ageing statesmen, President Tito, now past his seventieth birthday and with a particularly tough life behind him, is by no means the least energetic and forceful. If the Jugoslavs do not manage to make an economic success of their own particular brand of socialism, it will not be for lack of forthright prodding and goading from their president. On May 6th at Split he laid into those whom he considered responsible for Jugoslavia's economic difficulties; the repercussions of that speech were widely felt in factories and local party offices throughout the country.

Two weeks ago the central committee met (for the third time in less than six months) to discuss the problems posed by rising prices, a marked falling-off in the rate of expansion of industry, a mounting trade deficit and stagnating agricultural production. It was decided among other things to scrap the current five-year plan, due to end in 1965, have a transitional one-year plan next year, and then embark on a seven-year plan for 1964-70; in this way it is hoped to give the planners enough time to do their job more efficiently and realistically. Meanwhile, investment policy will be more tightly controlled; and some investments in inessential projects (including housing and schools) will be postponed so that investment resources can be concentrated on those projects most likely to lead to increased exports.

The pep talk which Marshal Tito saw fit to deliver at the end of the committee's discussion (after expressing a "little surprise" that no one else wanted to speak) showed clearly that he was not altogether satisfied with his colleagues' labours. He complained that their reports were too general, and that he failed to find in them suggestions for getting out of the present difficulties. One reason may well be that his colleagues do not yet see their path clearly before them. It is after all a new and experimental path. Progress along it is not made any easier by the difficulty of getting the six republics to co-operate for the general good, or by Marshal Tito's praiseworthy determination that the Communist party must confine itself to "correct guidance" and not "assume the right to direct and command."

BULGARIA

Carrots for Farmers

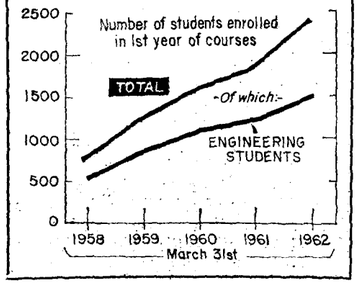
BULGARIA has this week maintained its reputation for treading particularly closely in Russia's footsteps, by being the first country in the Soviet block to copy the Soviet decision, announced on June 1st, to raise meat and butter prices. (Two weeks ago Mr Gomulka stoutly denied that there would be any need to raise food prices in Poland. Elsewhere in the Soviet block, the authorities are not committing themselves.) On July 29th price increases were announced in Sofia ranging from 8 per cent for milk to about 23.5 per cent for meat and nearly 32 per cent for dairy produce.

For some years Bulgaria's collective farms have been putting up a disappointing performance; not all the blame for recurrent shortages can be put on the weather. The higher food prices will both choke off demand and meet part of the cost of providing some strong financial stimulants for the farmers; if the government were to meet the whole cost, it is pointed out, the country's capital investments would suffer. From January 1st a special fund will provide a guaranteed minimum wage for the collective farmers (Bulgaria will be the first Soviet block country to do this). Other incentives for the collective farmers include a reduction in their income tax and reductions in the prices they have to pay for petroleum and for chemical fertilisers.

The Bulgarian regime seems to be rather nervously aware that the price increases will cause hardship, and are bound to be highly unpopular in the towns; the press has already threatened legal measures against those who complain openly. The lowest paid workers are to be compensated by immediate increases in family allowances, and by exemption from income tax from the beginning of next year. Old age and disability pensions will also be increased from January 1st. All the blame for the increases is being planted on the "gross sectarian doctrines and errors" of Mr Chervenkov, who had to resign as prime minister in April, 1956, and was finally disgraced last November, since when he has become a convenient scapegoat for all sorts of things. One could argue that Bulgaria's present leader, Mr Zhivkov, who in 1959 tried to dragoon the whole country, peasants, workers and all, into the "great leap forward," has made his contribution towards the present malaise in the countryside.

DIP. TECH.

There are now 111 courses at 28 colleges which the National Council for Technological Awards recognises as leading to the Diploma of Technology. The courses are for four or five years and combine academic study with industrial training. Since 1956, when the council first began to consider courses submitted by colleges, 1,092 diplomas have been awarded, 620 between April, 1961, and March, 1962.



PARLIAMENT

On Schedule

THE Commons adjourned this week for the summer recess with the Government's legislative programme completed, an achievement which has been equalled only once in the past ten years. This is a personal triumph for Mr Macleod, whose reputation as Leader of the House has been steadily growing. He has wisely refrained from overloading the timetable with legislation and has made judicious use of the guillotine. The guillotine is invariably the signal for an outbreak of synthetic fury about parliamentary rights, but after the initial rumpus the Opposition has given Mr Macleod comparatively little trouble on this score—chiefly because it had a bad conscience over a good deal of the obstruction-

ism that had gone on in committee. The name of Robespierre has not stuck to him.

Before the Easter recess the Immigration Bill, the Army Bill, the Criminal Justice Bill, the Export Credits Bill and the Education Bill had all received the royal assent. Since then the South Africa Bill, the Road Traffic Bill, the Scottish Housing and Licensing Bills, the Sea Fish Bill, the Health Visitors Bill and the Pipelines Bill have passed through all the necessary stages. The promised Weights and Measures Bill has never appeared and will probably be dealt with next session. The significance of Mr Macleod's clean sweep is that the Prime Minister has the whole of the next session unencumbered for common market legislation, should it have to be introduced.

This efficient dispatch of business happens to be the only thing of which this session of parliament can be proud. The debates on the Immigration Bill were not of a high order, nor were the Budget discussions; and over the common market the House has not discharged its informing function with any marked degree of success. The new cabinet has not yet had the opportunity to establish itself: the old one has sunk without trace. The Opposition has managed to keep, if not pull, itself together. The Liberal Party has increased its strength by 16 per cent. The session passes into limbo without regret.

WAR OFFICE

Brass Necks

THE War Office emerges with scant credit from the report of the Estimates Committee,* published on Tuesday. The report says (to use plain language) that there are too many senior officers hanging around Whitehall in administrative jobs that civilians could do better and with much greater continuity; that there are too many War Office bodies sitting in expensive buildings throughout central London because no one has bothered to work out who is essential and who isn't; and that the internal committees supposed to organise the headquarters staff and cut it down are pretty much a farce. The permanent undersecretary explained in his evidence that "you cannot draw a horizontal line between staff which are considered of sufficient seniority to be near the centre and staff which are not." But there seems to have been very little effort to evaluate branches on a properly functional basis. When the Treasury has had to be placated a few more junior staff have been packed off to outstations. As a result, headquarters staff has fallen by 500 to just under 8,000 in the past two years; this is still 1,000 above the target.

Even more serious are the lapses in army financial control, some of which appear to have been taken remarkably lightly by the top brass. The War Office's solution to the problem of how best to run costing policy was to set up another committee of senior officers: the report is rightly severe about this kind of reflex recommendation (and it points out that the plethora of committees says precious little for the internal organisation of the office). While there are umpteen brigadiers to lay down general policy, there are only 20 costing staff in the whole of Rhine army (annual expenditure £100 million). On research and development there has plainly been a need for much more tightening up along Zuckerman lines. The War Office felt that professional qualifications were "irrelevant" in local command auditing; the report is not so complacent.

Finally, the committee makes no secret about its belief that running separate service headquarters departments may just possibly not be the best way of organising national defence. It calls on the Minister of Defence, at the least, to knock some elevated heads together in order to get much more co-ordination among, and economy in, service efforts. At the least, Mr Thorneycroft should do just that.

*HMSO: 10s. 6d.

CHINA

Not Yet Broken

CHINA has had three bad harvests and faces the prospect of a fourth—the result partly of weather, partly of collectivisation. Most western commentators take their habitually gloomy view of these troubles. Either China will call for aid, they think, as Gorky did in 1921 for a Russia disorganised and plagued by famine, or the Peking government will collapse under revolt. But on July 24th Marshal Chen Yi, the foreign minister, crushed the first idea for the present. "China will not beg . . . and does not want help," he said, "for no western aid is unconditional." And so the unpleasant dilemma that would have faced the United States if China had asked for aid was removed. On the other hand, the Russians have made no offers—unconditional or otherwise.

Times are hard in China. The communes, one cause of the difficulties, have been abandoned in all but name; but drought and floods have hit the harvest. This year's diet will be more monotonous and less satisfying than usual. But for most Chinese it will at least be a diet, and not the starvation common in the inter-war years. And yet, for all that food distribution has been improved, there may still be local famines, and with them unrest and revolt. Reports and rumours of unrest in Canton and south China suggest that, as yet, the outbursts are directed more against arbitrary and inept local officials than the regime as a whole.

But Peking is worried about the loyalty of its army. Until now it has been privileged, but food shortages have meant smaller rations, and the soldiers are not deaf to the complaints of their families. Though Marshal Chen Yi is reported to feel agreeably surprised by the withdrawal of American advisers from Laos and American marines from Siam, Peking is not yet disposed to believe that the United States will continue to restrain General Chiang Kai-shek. The old bogey of an invasion from Formosa can thus be used to rally and distract the Chinese people. Amid the tension, military discipline was stringently tightened in Canton on June 2nd. The reason seems to have been that the local troops were becoming too sympathetic to the population; and the Canton command had to plead with them to accept party leadership in their duty of helping with the harvest. These troops were moved north and replaced by larger reinforcements. In the circumstances, Peking may have found it a convenience to be able to blame the troop movements on the threat from Formosa.

MALAYSIA

Birth Ahead

IT is good news that the British and Malayan governments are to try to bring the proposed Federation of Malaysia into being on August 31st (Malaya's own independence day) next year. The going was rougher than those who listened to Mr Duncan Sandys's statement in the Commons on Wednesday may have gathered; but in the end the differences between Tunku Abdul Rahman, the Malayan prime minister, and the Commonwealth Relations Secretary were smoothed out. The main difference presumably arose out of the division of opinion within the Cobbold Commission, whose report on political opinion in North Borneo and Sarawak was also published on Wednesday.

The British members of the Commission favoured a transitional period of three to seven years before final constitutional arrangements were made in the two territories, which, with Singapore and the Sultanate of Brunei, are supposed to join Malaya to form the new federation. During this time, they argued, a ministerial system of responsible government should gradually be introduced. The Malayan members admitted the need for a transitional stage, but wanted it to be much shorter. Under Wednesday's provisional agreement a joint committee of British, Malayan, North Borneo and Sarawak representatives is being set up to work out the constitutional arrangements. Brunei, which has had constitutional government since 1959, is no problem, and the Sultan has been invited to bring his state in.

Mr Lee Kuan-yew, the prime minister of Singapore, came to London to be available for consultations. He personally is in general agreement with Wednesday's proposals. His main problem is one of

domestic politics, and he will shortly put Singapore's membership of the proposed federation to the test of a referendum, in which the island's overwhelmingly Chinese population will be allowed to say what kind of association it wants to have with Malaya and the other territories, but not to opt out altogether. Opposition to the whole idea is strong and articulate, however, and Mr Lee will need all his skill to steer the project through.

CRIMES OF VIOLENCE

Helping The Victim

THE Conservative Political Centre's report *Victims of Violence* (CPC, 1s.) is a useful contribution to the discussion on providing compensation for victims of crimes of violence, although it does not go a great deal beyond the Home Office white paper on the subject (Cmnd 1406) published a year ago. The committee of Tory MPs and lawyers favours a limited scheme of compensation for injuries to the person caused by crime, excluding compensation for loss or damage to property, and excluding also anyone whose own behaviour has not been free of responsibility, e.g., accessories or accomplices. There is nothing intrinsically wrong with the limitation to crimes against the person, since it would give an opportunity to show how a novel scheme of this kind would work and thus itself provide evidence for or against extension.

The choice, the committee maintains, is between a scheme based on industrial injuries insurance and one based on common law damages, and it comes down in favour of the common law. Compensation would be assessed by the county or high courts in appropriate cases. Whether the courts are the right bodies for this type of case is very dubious, and it would be better to erect a special tribunal to deal with them. The report concedes that one of the shortcomings of common law damages is the wide variety of compensation awarded for similar injuries and seeks to avoid this by setting limits to the amount of compensation payable. Thus no claimant should have an earning capacity exceeding three times the latest published figure for average industrial earnings; and offers of less than £50 compensation should be "in the nature of a gratuity." The report also suggests that all claims should be submitted in the first instance to some specified official who, in straightforward cases, would make a compensation assessment. Disputed assessments would go to the courts. The report puts the likely cost to public funds at £1 million a year.

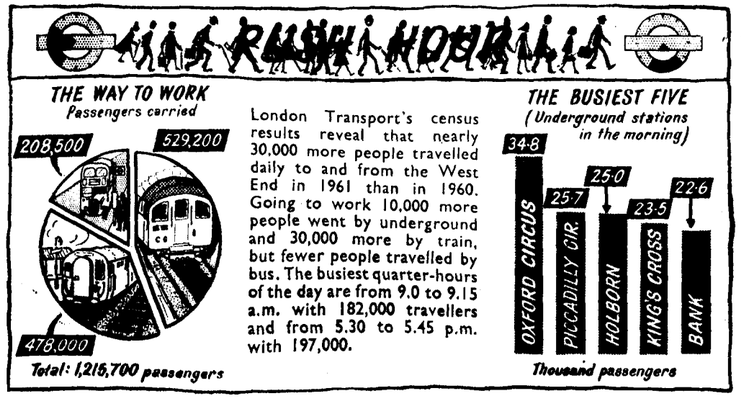
The CPC committee is even more cowardly than the Government when it comes to deal with contributions from the criminal himself. Cmnd 1406 included a feeble discussion of the idea; the CPC report makes no practical suggestions. The solution lies along the lines of raising prison earnings to a more realistic level. It would be well worth while for the CPC to appoint another committee to tackle this issue.

TRADE UNIONS

To the Grindstone

DELEGATES to this year's Trades Union Congress at Blackpool in September may have to do without their usual emotional splurges on the bomb and Britain's entangling alliances—to judge by their preliminary agenda. Of the 101 resolutions submitted by affiliated unions, only one thumps the anti-Polaris drum and one other protests against the training of German troops in Britain. The sole unilateralist resolution comes from the Fire Brigades' Union: because it is honest enough to declare that unilateral disarmament would mean the end of the American alliance, its prospects are nil. The popular subjects this year are far more sober, and far more interesting to outsiders, than the militant peace-cries of recent years. The ten resolutions on the common market will no doubt give rise to a good deal of passion, but the conferences of individual unions have suggested that it will at least be well-informed passion.

The hard centre of the week's debates will be provided by the thirteen resolutions on the pay pause and the five on the National Economic Development Council (the agenda went to press before the Prime Minister announced his incomes commission, but this too will no doubt come in for some hard knocks). These resolutions will be melted down into a few approved texts that should give the congress its clearest chance ever of working out a stable position on the knife-edge between the unions' oft-proclaimed love of planning, and their simultaneous and equally trumpeted hostility to Tory planning. Four congress resolutions call for more planning of incomes, although rejecting the Government's way of trying to do it; six resolutions want greater co-ordination between unions in order to achieve coherent planning; seven unions call for expansionist economic policies as the right way to increase incomes. The task of finding an effective answer to Mr Lloyd is giving the TUC some healthy exercise.



GYPSIES

Dog in the Manger

ALTHOUGH some softening of oaken English hearts is evident (Kent County Council, for example, is offering considerable financial inducements to its local authorities to harbour travellers), the impression persists among the elected administrators of rural England that gypsies, even if deserving of some sympathy, are hardly up to the human standard. This week the Ministry of Housing and Local Government ended an inquiry into the refusal of Strood (Kent) rural district council to allow a site at nearby Cobham to be used as an encampment for those 300 gypsies who have been living on the verge of the Dover road ever since their heartless eviction from Darenth woods in February. Strood has, however, offered an alternative site at Meopham which it hopes will compensate for its behaviour over the Cobham land.

The 6½-acre derelict gun emplacement at Cobham was bought by its present owner as potential residential development. Planning permission having been refused, the concrete-and-Nissen covered ground has lain empty, an unimprovable eyesore, ever since. Touched (as few parish councillors have been) by the gypsies' difficulties, the owner offered it to the council at a rent of £1 a year as an encampment. The offer was not accepted; and the land was then given for the same use, at 1s. a year, to Mr Norman Dodds, the gypsies' champion, who went as far as offering to organise and run the camp himself to ensure its propriety. Permission was refused, and the Meopham site, "more suitable in every way," offered in its place.

BRIEF BOOKLETS . . .

have been produced jointly by The Economist and The Economist Intelligence Unit to present the essential facts behind important current topics. Each takes about one hour to read. Here are the first three titles in this new series:

by Joe Rogaly

2 MONEY FOR GROWTH
by Fred Hirsch

3 LABOUR IN BRITAIN AND THE SIX
by Val Schur

Each booklet costs 2/6d. post free for remittance with order from:

PUBLICATIONS DEPT.,
THE ECONOMIST 22 RYDER STREET
LONDON, S.W.1. WHI 1511

The Cobham site, for all its dereliction, has water, electricity and hard standings: the Meopham one has not, and they will all have to be provided, presumably at the expense of the Kent County Council. But Cobham also has its visitors (it is one of the thousand or so "most beautiful" villages in Kent), a parish council ("the camp might soon become a scrap-iron heap"), a girls' school ("there will be some doubtful characters about") and "local feelings": all of which means, to Strood, that it would be unpopular to allow this suitable resting place to gypsy caravans. Kent County Council want to find at least 10 sites for its 120 gypsy families; but when will more district authorities think of human beings instead of their own precious amenities?

NEW GUINEA

A May Deadline

THE informal agreement to negotiate that has been reached in a Virginia country house by Dutch and Indonesian representatives offers a peaceful way out of the New Guinea quarrel, and must therefore be welcomed; but the welcome can hardly be unreserved.

The basis of the agreement was the proposal made in April by the retired American diplomat, Mr Ellsworth Bunker, for a phased transfer of control in west New Guinea from Dutch administrators to United Nations officials, and finally to the Indonesians. Mr Bunker had suggested that the transfer should be spread over two years. It has now been agreed, however, that UN officials will move in as soon as arrangements can be made—probably in the early autumn—and that they will hand over to the Indonesians by next May. This does not quite meet President Sukarno's declared intention of taking over by January 1st; but it is a considerable retreat from the Bunker proposals which, even in their original form, had seemed to favour the Indonesians at the expense of the Dutch. For this reason, it cannot be taken for granted that the Dutch government will accept what is now proposed.

If the Dutch are to get out anyway, there is no special virtue in their going later than the date now agreed. The unsatisfactory aspect of the new agreements is that they whittle down the Dutch promise of self-determination for the Papuans to a mere formality. There is to be a referendum "not later than 1969" giving the Papuans a choice between independence and incorporation into Indonesia. As the initial transfer of powers is to be so swift, the Indonesians will have some five and a half years in which to build up a local administration that makes sure the population votes the right way. The marked lack of hospitality with which Papuan villagers have greeted Indonesian paratroopers dropped in their jungles suggests, even so, that the last may not have been heard of Papuan nationalism.

If, as must be hoped, both sides accept this week's formula, formal negotiations ought to begin in mid-August; any agreement then reached would be submitted to the UN General Assembly, which goes into session on September 18th. All being well, the first UN officials could be in Hollandia by early October.

NIGERIA

Precedent for Turbulence

BENEVOLENTLY unanimous, the House of Commons agreed on July 24th to present Nigeria's federal parliament with a Speaker's Chair. In pledging wholchearted support for the gift, the opposition spokesman, Mr Denis Healey, expressed pride in Nigeria's loyalty to parliamentary procedures. He shot off a two-edged compliment when he went on to note "with interest" that

> the precedent of some parliamentary turbulence which was set by Nigeria in recent months has been followed in our own parliament in the last week or so.

But the mild punch-up that took place in Western Nigeria's house of assembly on May 25th was not taken so lightly by the federal government. The Western Region's constitution was suspended, a state of emergency called and the region was put under the control of a federally-appointed "administrator."

Some British observers have criticised the central government for being excessively zealous in its role as the guardian of parliamentary good manners. But the government was vindicated when Nigeria's supreme court ruled, on July 7th that the federal constitutional power had not been exceeded. On the other hand, the court found that the governor of the Western Region did go beyond his mandate when he swapped premiers during the political crisis that precipitated the emergency. Since the state of emergency and its attendant regulations will go on until the end of the year, the second part of the judgment can bring only legalistic comfort to the former regional premier, Chief Akintola.

The row between Chief Akintola and Chief Awolowo, the federal leader of the Action Group (until May, the ruling party in the Western Region and the main opposition group in federal affairs), goes deeper than a clash of personalities. Chief Awolowo, alive to the unease among his younger and more radical supporters, was trying to make the party less tribal-minded and parochial and to map out some kind of socialist programme. Chief Akintola would have none of this. Chief Awolowo's supporters, nervous at the thought of facing new elections while the party was in so split a frame of mind, did not force the issue to a vote of confidence; instead, they persuaded the governor to remove the regional premier on the evidence of a petition signed by a majority of the Action Group parliamentarians. This led a few days later to the shindy in the western house of assembly.

What comes next? The central government has shown what it can and will do to enforce parliamentary discipline, and all for the time being is calm. Chief Akintola has hardened the split in the Action Group by forming his own United People's party. But when the administrator hands over, it

looks as if there will have to be new elections in the Western Region. These may well offer some more precedents for turbulence, parliamentary and otherwise.

INDIA

Shopper's Guide

It might have been worse; it could have been better. On Monday, the consortium of the ten contributing governments and the World Bank announced that they had raised subscriptions of $1,070 million to help India with the second year (April, 1962, to March, 1963) of its third five-year plan. This falls about $130 million short of the original target; but is substantially more than was pledged by the club in faint-hearted mood in May.

In the maelstrom of aid problems, it is hard to pin down the effect on club members of India's negotiations with the Soviet Union for the purchase of Mig 21s. As Mr Nehru said on July 29th, nothing yet is settled. But the same weekend, a team from the Indian defence ministry left for Moscow to look over the aircraft. In any case, it was not the United States that baulked. Washington has kept steadily to its pledge to match the contributions of the European members, together with Canada and Japan, up to $500 million; it is the others who have so far only been able to raise $435 million between them. Of these nine members, four countries were contributing for the first time and four others, including Britain, raised their contributions above the pledges made in May. West Germany stands out as the country that has kept to its pledge and no more; on the other hand, Germany already puts far more into the kitty than any other country except, of course, the United States.

The money has been promised; it is not yet in the hand. All the pledges are conditional on parliamentary approval, and here it looks as if the sternest problem will be for the American Administration, in getting the appropriations through Congress. The argument that India, or any other country, should shop where it is cheapest and best for its military hardware is one that some important people still find shocking—even when, as in India's case, the need for a modern defence force is kept alive by the threat from China. Egypt, somehow slipping under the wire, is getting its Russian Migs and its American aid. But from India, those supersonic fighters are casting an unconscionably long shadow.

LETTERS

The Railways

SIR—In your article on the railways (July 21st) you write "drastic rationalisation . . . follows logically from the idea of making the railways break even." You imply that the decision to rationalise is itself logical but this is not the case. Rationalisation would only be logical if it were not the case that there was any other way of breaking even; and even then only if any subsidy can be regarded as illogical.

If all subsidies are illogical surely the vast concealed subsidy to the motorist, whose payments of various taxes bear no relation to the cost of providing the roads he uses—let alone providing any return on the capital involved—must also be eliminated.

Once road users were made to pay the full economic cost of the facilities they use, or the public became reconciled to the idea that subsidisation of transport was not wicked, the whole problem of the railways would appear in a quite different light. Only in such a light could any proposal be adjudged either logical or otherwise.

While I wholeheartedly support your plea for reasonably high severance pay for any workers who have to be made redundant I cannot share your certainty as to the necessity for such vast redundancy on the railways. Indeed the money spent on such payments would almost certainly be wasted: admittedly the amount wasted would be small compared to that involved in building roads for secretly subsidised cars at the same time as closing publicly subsidised railways. The waste of land that this policy would involve is quite colossal.

My own opinion is that both subsidies should be abolished—but if the recovery of all costs on the roads is politically impossible it is untrue that the closing down of railways is thereby rendered either logical, necessary or right.—Yours faithfully,

JOHN S. FLEMMING

Trinity College, Oxford

*

SIR—The two rail traffic density maps shown by you ought to be supplemented by the map issued in 1951 by the committee investigating railway electrification from the point of view of traffic density. It will appear from such a comparison not only that the actual carrying of passengers and freight is concentrated on about half the existing route mileage, but also that a high proportion of the high-density traffic lanes—many of which carry four tracks or more—qualifies for electrification. Here then is an opportunity to make positive use of at least some of the labour that will become redundant on the railways and in the railway workshops. To curtail overall route mileage while stepping up the amount of electrically-hauled traffic has been a precept followed with conspicuous success by the French railways. This was done at a time when France's industrial resources were far more stretched than steel and machine industry capacity are likely to be in this country for the next few years. As to the cost of electrification, it has been found that it is recouped within less than a decade on lines carrying high-density traffic; moreover, to electrify one route mile of track costs roughly one-fifth of the construction costs of one mile of motorway—and railway electrification, unlike road construction, does not eat into a commodity in extremely short supply: land.—Yours faithfully,

RALF BONWIT

Henley-on-Thames

West Irian

SIR—Your appraisal of the Bunker plan (June 9th) leaves several impressions which could be misleading. You lay the blame for the outbreak of military hostilities in West Irian on Indonesia, although it was caused by the Dutch who, instead of immediately accepting the Bunker plan as Indonesia had done, continued to send military reinforcements, thus provoking tension in that territory. And now, when the Dutch have, as you said, "announced their government's acceptance of the plan on May 24th," you are again blaming Indonesia for not having welcomed this fact.

Well, the problem is that the Indonesian Government is not yet convinced that the Dutch have really accepted the Bunker principles in the way Indonesia has. For Indonesia to negotiate just for the sake of negotiations serves little purpose; it remembers previous experiences in which negotiations with the Netherlands never led to anything. Therefore, before we go to the conference table we must first be sure that the negotiations will really offer a chance of success.

President Sukarno in his cable to the UN Acting Secretary-General on June 26th said that even up until now there had been no public confirmation from the Netherlands Government regarding their alleged acceptance of the Bunker proposals without any qualification or reservation, which should imply acceptance of the phased operation envisaged in the proposals.

As for the part dealing with economic problems, I would like to point out that you must have been misled in many of your conclusions by mistaken figures. Among other things, I can refer to your figure of

£400 million, which you said was used for Indonesian arms purchases from the Soviet Union. This figure was exaggerated.

Secondly, to be able to get an objective picture of the economic situation in Indonesia, it is more than necessary that one should project it in its historical perspective. Indonesia has had to fight hard for independence and international recognition. After this had been achieved, it had to build itself up (from scratch, even with unwarranted debts imposed on it by the former colonial country), and steer its way through the strong currents of world power politics with its consistently-upheld independent and active foreign policy. In the meantime, compromises in the revolutionary objectives have produced difficulties at home in the form of rebellions and counter-revolutionary actions. In spite of many predictions (usually from foreign observers) to the contrary, the endurance of the Indonesian people has proved to be able to overcome these difficulties. Now, stability has been restored, Indonesia's position has been strengthened, at home as well as abroad, and reconstruction programmes are in the process of implementation in the first 8-year development programme. The positive economic and industrial achievements in Indonesia, which are many, should not be ignored.

As to your implications with regard to the consequences resulting from Indonesian arms purchases from the Soviet Union, I assume *The Economist* should be aware of Indonesia's determination, capability and consistency in defending her independent and active foreign policy, which she has followed, up to now, with success.—Yours faithfully,

SUKARNO

Press Attaché, Indonesian Embassy

London, W1

[The figure of £400 million referred to Soviet credits of all kinds and, as explained in our issue of June 9th, nearly half of this sum seemed likely to go on military supplies.]

Nigeria

SIR—You seem to think (June 2nd) that the take-over of the government of western Nigeria by the Federal Government under the emergency regulations is conclusive proof of your theory that Nigeria is not a nation but a collection of tribes living within the boundaries drawn by a former colonial power. While the motives of the Federal Government in declaring a state of public emergency in western Nigeria are highly questionable, it is not correct to say that the events which led to the present situation in Nigeria are due to a conflict between warring tribes.

The incident in the western Nigeria Parliament was started by a member of the opposition who was later joined by dissident members of the government party. Political parties in Nigeria, especially the Action Group, are making vigorous efforts to draw their support from all parts of the Federation and with the exception of the Northern People's Congress, all the ethnic groups of Nigeria are fairly well represented in the major political parties.

I think it is wrong to describe Nigerian politics as tribal; but as to whether many of the politicians have the temperament and sophistication to nurture the rule of law and parliamentary democracy within a delicately balanced federal constitution, I have serious doubts.—Yours faithfully,

Lagos S. O. IDOWU

Commonwealth and Colonies

SIR—Your criticisms of the Commonwealth Relations Office (July 21st) cannot be allowed to go unanswered.

You make mischievous criticism of the CRO and the quality of its staff without producing a shred of factual information to substantiate them.

You state: "There is little that is clear or specific about the functions of the Commonwealth Relations Office . . ." This is quite untrue: the functions of the CRO are quite clear and specific. The Secretary of State for Commonwealth Relations is responsible for maintaining diplomatic relations with the countries of the Commonwealth. The functions of the CRO in the field of Commonwealth relations are exactly the same as those of the Foreign Office in foreign relations.

No case exists for the amalgamation of the CRO with the FO. To do so would be a complete denial of the special relationship which exists between the countries of the Commonwealth. Desire to be integrated with Europe may be commendable, but we cannot just "ditch" the Commonwealth because of it.

It would be pointless to enter into arguments as to whether the FO or the CRO is staffed by better officers, but I think a glance through the current "CRO List" will convince you of the erroneous nature of your statement that the FO attracts a higher calibre of recruit.—Yours faithfully,

London, W1 W. H. FREEMAN

Centre 42

SIR—The article "Not So Square Mile" in your issue of July 14th suggests that Centre 42 aims at providing festivals for Labour parties. I must point out that not only does our charitable status not allow us to do this, but it is not our intention to establish a cultural organisation for any one political party.

Centre 42 is entirely independent and although its name indicates an association with the Trades Union Congress, it is, nevertheless, completely unattached to that body. Our aim is to help any community body to mount a festival for all the people of that community.—Yours faithfully,

London, W1 ARNOLD WESKER

BOOKS

Post-Radcliffe Synthesis

Theory of Money

By W. T. Newlyn.

Oxford University Press. 177 pages. 18s.

LIKE "Das Kapital" and the "General Theory," the Radcliffe report on the working of the monetary system possessed two characteristics that jointly ensure it a place in the history of economic thought. The first characteristic was that it dealt with an important topic; the second was that it contained confusions or ambiguities at crucial points in the argument. The natural result has been an efflorescence of articles about what Radcliffe really meant, what other people have said it meant and what it ought to have meant. But nearly all these articles are Radcliffe-centred, and it is therefore a relief to welcome one of the first post-Radcliffe writings to be organised as a discussion of its subject *per se* and not as a polemic. For what Dr Newlyn has attempted in this admirable book is "a short but complete exposition of the theory of money"; he has, that is to say, attempted a synthesis.

After some definitions and classifications, the book starts with an account of the determination of the money supply that is first class. When he gets to the liquid assets of the clearing banks, Dr Newlyn makes it clear that changes in these are not quite the same thing as changes in the amount of market Treasury bills outstanding. But the subsequent discussion of their divergences occupies no more than a single paragraph, so that the role of the outside demand for Treasury bills and supply of commercial bills is far from clear. This means that the influence of the pattern of interest rates upon the magnitude of bank deposits is not analysed. If the discussion had been carried a little farther, Dr Newlyn would have broken new ground.

The next group of chapters, which constitutes about half the book, deals with the demand for money and the determination of interest rates. These chapters are well written and contain some new ideas here and there, but nevertheless suffer because Dr Newlyn has fallen between the two schools of highbrowness and empirical relevance. The discussion of the demand for money as an asset, for example, has an air of reasonableness rather than logical rigour, yet relates to an abstract choice between money and "bonds," which somehow stand for all non-money assets. Again, the macro-economics in chapters VII and VIII is neither completely à la mode nor the sort of stuff that anyone actually uses in forecasting the gross national product six months hence. This does not make the book any worse than other advanced textbooks in the field, but it is a mark of the quality of much of Dr Newlyn's book that one judges the rest of it by high standards.

Dr Newlyn's approach to interest theory fails to take on board recent work that regards the determination of the rate of interest on government bonds as part of a more general theory of asset pricing. A mere two pages on the relationship between wealth and the demand for money is not enough, and, like other more orthodox writings, the book sometimes fails to set out precisely just which owners or owners of which assets and debts are being considered and which have been netted out.

The most original and controversial chapter is the one on liquidity, which endeavours to bring order out of Radcliffian chaos by distinguishing and relating three concepts. The first, the "maturity" concept (relevant to interest rate determination), is the maturity pattern of financial assets in relation to the time pattern of future cash requirements; if the two patterns coincided, there would be no capital risk. Since the rate of interest can be regarded as largely a compensation for bearing capital risk, a rise in the degree of coincidence between these patterns constitutes an increase in liquidity that will lower the interest rate. An increase in the quantity of money is merely one way in which liquidity can increase.

These ideas are certainly interesting, but are they correct? Is it true that, say, a shortening of the average maturity of privately held government debt will lower long-term rates more than it raises short rates so that the average falls? Is it right to speak only of financial assets so that the volume of real assets is implicitly assumed to be irrelevant? Presumably such questions require a factual answer, which raises the interesting methodological point of whether, supposing the necessary facts to be unobtainable, the resulting inability to answer these questions either one way or the other should not have led Dr Newlyn to reformulate his theory in other, testable, terms.

The second concept of liquidity, financial strength, relates the value of financial assets to real assets. This definition immediately raises the problem of where liabilities fit into the picture, a problem which Dr Newlyn meets by bold assertion without much formal analysis. Once again, the question of testability will be raised, since liquidity in this sense is regarded as one determinant of spending; fortunately there is much more hope of measurability here than in the first case.

Lastly, Dr Newlyn suggests the ratio of money to income as a third concept of liquidity, which he denotes "easiness." He then shows convincingly that his three concepts are useful in examining the impact of monetary policy upon the economy, both because the degree to which they are under the control of the monetary authorities varies and because the effects of variations in them are different.

The last chapter discusses the effects of monetary policy. It provides a well-argued review of this frequently trodden field, coming out with a fairly low score for the interest-incentive effect, a lower one for the capital gains or losses effect and a higher one for the degree of monetary ease or tightness. The distinction between this and the first two effects arises from imperfections in the market, that is, from the existence of credit rationing. There is nothing very new here, but it is all good stuff, especially the critique of Radcliffe on capital values and the willingness to lend.

Algeria's Fragile Peace

L'Algérie d'Evian

By Maurice Allais.

L'Esprit Nouveau (Paris). 379 pages. 16.95 NF.

IN this passionate but closely reasoned book, Professor Maurice Allais argues that the Evian agreements of last March, which opened the way to the independence of Algeria, did a grave injustice to the Europeans of that country and to those of the Moslems who had cast their lot with France. If M. Bidault, the former French premier, now in dissident exile, had expressed such a view (as indeed he has) it would carry little conviction. Professor Allais, however, deserves to be heard with respect. Far from being a representative of the lunatic Right, he has publicly advocated independence for Algeria since 1955, and condemned the Suez policy while it was being applied. In France, in their day, these were acts of courage.

In fact, in the articles or lectures in which he advocated Algerian independence, Professor Allais was always careful to say that it should be given to those who were asking for it; special arrangements would have to be made for the Europeans and for the large minority of Moslems who supported *Algérie française*. Such arrangements, in Professor Allais's view, could only be a choice between an "internal federation" (on the lines, say, of Cyprus or Lebanon) or partition (Palestine or Ireland). Since the Evian agreements were negotiated without representatives of the Europeans and pro-French Moslems, he goes on, they constitute a violation of elementary rights. Because they did not provide either for partition or for communal representation, they have the effect of substituting a new form of oppression for the old form, which led in its time to the outbreak of the Algerian rebellion in 1954. Professor Allais does not, however, confine himself to negative criticism. In a constructive last chapter, he makes four suggestions for improving the Evian agreements. He would like the European and pro-French minority to elect its own representatives; give them the power to veto executive decisions violating the agreements; reserve the right of secession for the minority as an ultimate sanction against abuse of power by the majority; and, lastly, subject the whole settlement to a joint guarantee by Tunisia and Morocco, western Europe and the United States.

These suggestions, if they were ever adopted, would indeed provide the "guarantees" without which Professor Allais fears the Evian agreements would be no more than a scrap of paper. It is unlikely, however, that the first two could be agreed so late in the day; the third is politically unrealistic; and the fourth begs difficult questions about the kind of sanctions the guaranteeing powers could take against a sovereign government. In reality, the present Algerian tragedy had its origins in previous Algerian tragedies. It is hard to close the vicious circle of oppression, terrorism and counter-terrorism. In the end, the best guarantors may be the mutual dependence of the communities and their enlightened self-interest. The shifting ambiguities of General de Gaulle's Algerian policy probably disguised a hope that he could impose his own solution on the National Liberation Front. He could probably have got better terms at Evian in the spring of 1961 than he finally obtained last March; and he might then have avoided the worst excesses of the Secret Army.

To have brought this book out so soon after the Evian agreements was a writing and publishing feat, even though much of the text was written before March. It was manifestly impossible to include an analysis of the new situation created by the negotiations between the Secret Army and the Provisional Executive at Rocher-Noir in June, and the later split among the Algerian Moslem nationalists. But a duplicated postscript inserted in the book deals with both these developments, welcoming the first but pointing out that the second could rapidly threaten the application of the Evian texts.

Road to Fulfilment

The Autobiography of Eleanor Roosevelt

Hutchinson. 368 pages. 42s.

ALTHOUGH she was 61 when she left the White House as a widow, it is not perhaps surprising that Mrs Roosevelt has devoted almost half of her revised autobiography to her full and busy life since 1945. For not until her espousal of the causes of the United Nations—particularly its Commission on Human Rights—and of the presidential candidacies of Mr Stevenson did Mrs Roosevelt seem to find the outlet for her progressive and humanitarian idealism which her pragmatic husband and the single-minded America of the depression and war years did not provide.

In many ways, Mrs Roosevelt's chronicle is as sad as it is admirable; the search for personal fulfilment was very long—from an unhappy childhood to a marriage dominated by a severe mother-in-law, to the years in the White House when her private life became public and she the target of as much ridicule as Americans have ever heaped on a public figure. For those who are curious about the nature of the relationship between two people of such patently opposite temperaments as herself and her husband, Mrs Roosevelt offers a terse answer: "He might have been happier with a wife who was completely uncritical. . . . Nevertheless . . . I was one of those who served his purposes."

This Freedom

Freedom in the Ancient World

By H. J. Muller.

Secker and Warburg. 377 pages. 35s.

THIS book is described as "a history of Western Civilization from prehistoric times through the ages of Rome and Byzantium, with special emphasis on man's experiments with freedom." Professor Muller confesses that his subject is "a very large, deep, complex one." Nevertheless, he treats it with immense verve and gusto. We are swept along on the tide of his enthusiasm from Neanderthal to Byzantium, and all in 350 pages. It is amazing how much information Professor Muller has assembled, little of it new, but admirably arranged for the busy reader to enjoy and profit by. And in case he should flag, the text is enlivened with a series of witty and trenchant footnotes.

Where, in this great pageant, does Freedom appear? The answer is, not very conspicuously. The index has only fourteen citations under Freedom (including freedom of conscience, thought and speech) as compared with 35 for Judaism, 46 for Christianity, and nearly a hundred for Greece. But this is not Professor Muller's fault: it is the fault of the ancient world; and one of the many values of this book is that it shows the reader how modern is the idea, the concept of freedom on which a modern free society seeks to base itself. Cicero might write "What is freedom (*libertas*)? The power to live as you wish"; but in fact the Roman *libertas*, like the Greek *eleutheria*, was not a practical political creed—it meant primarily the status of a man who was not a slave. Professor Muller has much to say of St Paul, but he does not, surprisingly enough, quote the most famous of all interchanges on this very point: that between Paul and the Centurion on the stairs of the Antonia (*Acts* xxii).

The author himself narrows his freedom-field still further by excluding "the notion that a person is 'really' free only when he is avoiding 'license', acting virtuously, doing his duty to the state, serving God, or being his true self." Yet it is just these brands of freedom that are the most enduring and have proved the most germinal. In fact, Profesor Muller's penultimate

HMSO
From the Government Bookshops in London, Edinburgh, Manchester, Birmingham, Cardiff, Bristol and Belfast, or through any bookseller

chapter is devoted to a penetrating and sympathetic analysis of St Augustine, whose ideas of freedom were based on precisely that premise; and of the "City of God," about which, says the author, "the last word is properly a word of gratitude for its enduring contributions to the life of freedom". This tribute is worth waiting for; but the way thither is a delightful journey through time and learning.

This is the first of three books on Freedom through the ages. It is to be hoped that in its successors the illustrations will be better done. In this volume they are badly produced—hazy grey instead of black and white—often irrelevant (what on earth is the "Old Market Woman" doing, and where did she come from before she entered the Metropolitan Museum?), and wholly lacking in captions to link them to the passages they are supposed to refer to. The business of an illustration is, primarily, to illustrate.

Gulf Seaboards

The Persian Gulf in the Twentieth Century

By John Marlowe.

Cresset Press. 288 pages. 30s.

WHEN the author of three good books on the Middle East announces a fourth on the Persian Gulf, mouths water in anticipation. For here is a problem area for Britain on which the most recent standard work came out in 1928. But this time Mr Marlowe has disappointed his admirers by producing a book that is not really about the topic of its title.

Since Sir Arnold Wilson wrote his classic thirty-four years ago, India has ceased to be a British dependency and parts of the Gulf have changed out of all recognition. The Persian shore has altered relatively little; now as then, it is busy—apart from commercial activity at a single port of entry—only where foreign oil companies make it so, and remains a sadly neglected part of Persia. But the Arab coast is a world transformed. Several of its nine sheikhdoms have blossomed from villages into city states, and the rest are hoping that oil prospectors will work the same miracle on their behalf. Socially, politically and economically, each tiny political unit offers problems that are uncommon and perplexing. Can they survive as such? Is the reason for their survival the British protection they have enjoyed? Or is it the repellent state of public affairs in Saudi Arabia—a thought that kills any desire to join forces with a large and rich neighbour? Lastly, can Britain, which gave their rulers protection at a time when it could do so purely by naval means, now disentangle itself without dishonour from protecting ruling families not only against foreigners but against criticism from their own newly educated citizens?

These questions Mr Marlowe does not pose or answer; he mentions several of the sheikhdoms only once, and that in a bracket, and the bulk of his book is about the internal and foreign affairs of the three big states possessing Persian Gulf seaboards—Persia, Iraq and Saudi Arabia. Since the men who run both Persia and Iraq wave their antennae in every direction but southwards, his narrative is propelled, willy nilly, in the same directions, and is forever straying to Moscow, Damascus or Cairo and to topics that have little or nothing to do with Gulf affairs. And the section on Saudi Arabia (which by contrast takes a lively interest in its Gulf seaboard) is too superficial to be commended.

The book abounds in careless slips, and more than once commits the crime of imparting conflicting information. It is written with Mr Marlowe's usual gusto and distinction of style, but is too hastily put together to lay before anyone who takes Gulf problems seriously.

Ironmongery

Men of Iron: *The Crowleys in the Early Iron Industry*

By M. W. Flinn.

Edinburgh University Press. 282 pages. 42s.

MOST business historians can at least work from the records of the firm they are describing. In the case of the Crowley iron manufactories nearly all the evidence was burned a hundred years ago, and the splendid house at Greenwich, which Sir Ambrose Crowley bought in 1704, was demolished at about the same time. The author of this important contribution to industrial history has the added disadvantage of describing a firm long since defunct, but which was, in its day, the largest individual business organisation in Europe. Mr Flinn's assiduity in searching out collateral evidence has enabled him to build up a picture of a large scale organisation that was unique. It was not only a giant among pigmies, but also a successful combination of capitalist enterprise with a concern for the well-being of its employees.

Sir Ambrose Crowley was an Owenite a century before Owen. The duties of every employee are set out in an unusual document called "The Law Book of the Crowley Ironworks," a fascinating exercise in managerial technique. It is a written constitution that enabled the London headquarters to control factories and warehouses scattered all over the country, and which breathes a lively concern for the moral and physical welfare of its members. There is an arbitration court to remedy grievances brought up from the factory floor by specially appointed chaplains. Every factory has its schoolmaster and doctor, and even a contributory insurance scheme. There are the usual defects of paternalism, such as the prohibition of smoking and drinking, but there is no doubt that this experiment in industrial relations was a success.

One suspects a Quaker influence. Though Sir Ambrose himself was a High Tory and a Londoner, his father was a Quaker in the Midlands who married two of his daughters into the Lloyd clan at Birmingham. The son was sent to London to make his way and his Quaker relations cannot have been pleased when he made naval contracts the basis of his fortune. With a keen eye to geographical advantages, he established his principal factories on Tyneside, whence his own fleet of vessels carried the products down to a warehouse at Greenwich, admirably sited between the dockyards of Deptford and Woolwich. From here he supplied the navy with every type of ironmongery, from anchors and cannon to bolts and sheathing nails. As long as the navy expanded, the Crowley business prospered, thought its founder was long since dead; but after the French wars it declined, and the sense of employer's responsibility also began to fade in the harsher age of economic man. After a century, what Sir Ambrose called "this society" became just another chain of factories.

Aviation Annals

Annals of British and Commonwealth Air Transport

By John Stroud.

Putnam. 675 pages. 84s.

De Havilland Aircraft

By A. J. Jackson.

Putnam. 491 pages. 63s.

The German Giants

By G. W. Haddow and Peter M. Grosz.

Putnam. 296 pages. 84s.

Santos-Dumont

By Peter Wykeham.

Putnam. 278 pages. 30s.

AVIATION is beginning to acquire a sense of history; authors are taking time off to explore the by-ways with a new feeling for the importance of detail that has left its mark on all these four books. The most comprehensive is John Stroud's "Annals of British and Commonwealth Air Transport," the fruit of twelve years' research, which lists in chronological order every event of importance to the end of 1960. This needs to be done well if it is done at all; Mr Stroud does it superlatively well. Mr Jackson has a rather easier task in describing every aircraft built by the de Havilland company, an exceptionally prolific manufacturer, but Messrs Haddow and Grosz must have had to burrow long and deep to come up with their account of the giant German bombers of the first world war. These dangerous looking monsters weighing between 10 and 20 tons, with a 48 ton leviathan on the drawing-board, hint at what the German aircraft industry might have been were it not destroyed by two world wars. As big as anything that Germany put into the air in either war, they are a quite extraordinary technical tour-de-

The Economics of Socialism Reconsidered

HENRY SMITH

'... an honest, informative and penetrating study of the great unrealized Utopia of the modern industrial age—and of the forces which have hitherto made it unrealizable.' FINANCIAL TIMES

30s *net*

THE AMERICAN TORY

WILLIAM H. NELSON

'... a useful little study of the crumbling and disorganized resistance to the American revolution. He carries on the work of rescuing the Tories from the complete ignominy to which earlier American historians condemned them, and examines the reasons for their loyalty to Britain.' THE TIMES 30s *net*

THE GEOGRAPHY OF COMMUNICATIONS IN GREAT BRITAIN

J. H. APPLETON

Roads, railways, and canals are examined in their geographical context. There is a chapter on airways and other communications and a brief review of some of the important issues in the geography of transport at the present time. (*University of Hull*). '... would fill a useful place in all geographical libraries.' AMA *Illustrated* 30s *net*

THE ECONOMIC DEVELOPMENT OF UGANDA

REPORT OF A MISSION ORGANIZED BY THE INTERNATIONAL BANK FOR RECONSTRUCTION AND DEVELOPMENT AT THE REQUEST OF THE GOVERNMENT OF UGANDA

A general Bank mission report on the economic condition of Uganda, including outlines of possible development programmes. 68s *net*

TIBET AND ITS HISTORY

H. E. RICHARDSON

'... a fascinating introduction to a very little known subject, and a valuable guide to an international problem which is most unlikely to decrease in gravity as time goes on.' PETER FLEMING in the SUNDAY TELEGRAPH *Illustrated* 42s *net*

PAGES FROM THE GONCOURT JOURNAL

Edited, translated, and introduced by

ROBERT BALDICK

A newly translated selection from one of the most celebrated of diaries, written by Edmond and Jules de Goncourt. About one third of the material has never before been published in English. 'All should enjoy this extraordinary picture of the relaxations of genius and the splendours and miseries of a great creative epoch.' THE SUNDAY TIMES *Illustrated* 38s *net*

THE OXFORD HISTORY OF ENGLAND VOLUME IV:

THE THIRTEENTH CENTURY 1216—1307

SIR MAURICE POWICKE

In this edition the pagination of the first has been retained. Additions and corrections have been included with slight alterations in the text and notes. A surprising amount of work on the period has been published since 1953, and doubtless more is soon to come; Professor Powicke, however, feels that he would not be justified as yet in making any major changes in narrative or opinion.

Second edition 35s *net*

VOLUME XIII

THE AGE OF REFORM 1815—1870

SIR LLEWELLYN WOODWARD

A revised edition, taking account of work done on the period by British and other historians since the book was first published in 1938. The plan of the book is unaltered, but there have been certain changes of emphasis, as well as an advance in knowledge which has given greater precision to the survey. *Second edition* 42s *net*

THE ELIMINATION OF CORRUPT PRACTICES IN BRITISH ELECTIONS 1868—1911

CORNELIUS O'LEARY

The first book to treat this important aspect of democracy in nineteenth-century Britain which resulted in the improvement in electioneering morals. '... scholarly and useful ... an exercise in political pathology in that it concentrates on corrupt constituencies and the means which were adopted to discover corruption and to eliminate it.' ASA BRIGGS in the LISTENER 35s *net*

WEST AFRICAN HISTORY SERIES

MACLEAN OF THE GOLD COAST

THE LIFE AND TIMES OF GEORGE MACLEAN 1801-1847

G. E. METCALFE

This story deals mainly with the political life of the man who first restored and then extended British influence on the Gold Coast, when the British Government had almost completely broken off contact with it. *Illustrated* 35s *net*

force as well as a monument to the courage of the men who got them into the air as much by will power as by engine power and to the mechanics who went out on the wings to service those engines in flight. When the publishers call this "an extraordinary episode in aeronautical history," the blurb is not exaggerating.

An even odder episode was the tragi-comic life of Alberto Santos-Dumont, a wealthy, aristocratic young Brazilian in the direct tradition of the great amateur scientists of the seventeenth and eighteenth centuries. In Santos-Dumont's Paris of the nineties these were a dying breed, and Santos-Dumont looked like and behaved like a dilettante among the tough and growing band of professionals to whom science and technology was a living, not an intellectual exercise. Santos-Dumont never tried to sell anything, least of all his skill. Yet his own achievements were considerable. He designed the first steerable balloon and used it to fly to lunch. He designed and flew the first aeroplane in Europe and looked, for a time, as genuinely the first man in the world to fly because no one, the Americans least of all, believed the Wright brothers' claims.

Air Vice-Marshal Wykeham has deep affection for this odd little character, and the period in which he lived; he also knows and understands flying; the result is a miniature piece of scholarship which is also a labour of love, the curious smell and texture of pressed flowers hanging about its pages.

The Age of Rolled Gold

The Famous Druids

By A. L. Owen.

Oxford University Press. 264 pages. 30s.

SCIENTIFIC method has made the world a duller place. If the present-day researcher discards certain accepted rules of logic and evidence, he will probably not be published; if he is published, he will be ignored. Even a century and a half ago, the field was wider open. When Iolo expounded the druidic lore whose last followers can sometimes be seen dressed in sheets on Primrose Hill, and when one Edward Davies wrote a book linking up druidism, Shiva, the pyramids, Taliesin, sun-worship and the flood, they did not sink into obscurity or get a scoffing article in the Sunday papers: they flushed a full-length book in reply from the dean of Merton, some of whose own ideas read a little strangely by modern standards.

Mr Owen has allowed himself the solemn game of following the innumerable theories about the druids that were launched on the world by British antiquaries and poets between the sixteenth and the early nineteenth centuries. Thereafter, except as a pleasing adjunct to eisteddfodau, the subject ceased to be interesting. More rigorous criteria were applied to archaeology, and the concept of progress made it implausible to look back for wisdom to a past age of gold. But the druids had had their run, and it was not surprising that they were so popular. Practically nothing was known about them except that they were British (or, in France, Gaulish) and very wise, though given to human sacrifice. During the happy period of uncritical ingenuity, everyone who studied them could add what conjecture he wished, and nearly everyone stamped them with his own interests and the feelings of his day. The last flash of the old syncretic spirit which Mr Owen records is among the finest: an Archdruid offered prayers (presumably in Welsh) to Kali at Pontypridd in 1878.

Mr Owen (doubtless for professional reasons) leaves nothing out, so that the book is longer and more detailed than the subject deserves; and, as he arranges it by topics rather than chronology, one feels suspiciously addlepated after a time, as if the druids had got at one. But it can be recommended to any reasonably patient reader as a study in the methods of thought on antiquarian topics during his period and, more generally, as a splendid mish-mash of human nonsense.

A Maverick Historian?

France in Modern Times

By Gordon Wright.

Murray. 634 pages. 55s.

"THE pageant [of France's history] will never lose its passionate interest for mankind." But it may lose the interest of too many readers long before they reach this, the last sentence of Professor Wright's book. His obvious enthusiam, nourished by wide reading, displays itself in his ingenious maps and critical bibliographic comments. But its impact is weakened by idiosyncrasies that may be stimulating in a lecture or a tutorial but are irritating in a book.

His purpose, he says, is to "draw into the story the great mass of monographic and interpretative writing on modern France that has appeared during the past generation." This has demanded a somewhat capricious pruning of the narrative—"if the question of including or omitting a detail arose . . . my customary reflex has been to omit it." But some readers moved by different reflexes may be disappointed to find only three allusions (totalling nine words) to Lafayette before 1815, a mere dozen lines on Mirabeau (with no mention of their fatal antipathy) and three scattered references to Danton followed by a superficial comparison of his qualities with Robespierre's. Yet these men might have altered the course of a revolution which was "to shape . . . French development from that day to this."

The author's attempt "to provide the essential framework of events but to . . . concentrate on main strands" produces the depressing effect of too many journeys along the same road. To do it twice, once for a general political reconnaissance and again looking for social and economic trends, may be interesting and instructive But four times is dismally reminiscent of Alice's tour with the Red Queen. There seems no reason why social and economic strands should not be interwoven throughout the book as they are quite competently in the story of the years 1919-60.

The political narrative only comes to life when home and foreign affairs, hitherto rigorously separated, are reunited in 1914. Until then a student trying to connect them for himself may be frequently frustrated by the deficiencies of the index. For he will find the Commune of 1871 but not that of 1793; Cavour (half a line of text) but not Italy, except for a mention of Laval's intrigue; Austria, but only as "defeated by Napoleon" and "annexed by Hitler." Curious about France's recurrent interest in the "Eastern Question" he will hunt vainly for Turkey or the Congress of Berlin or any clues to the Franco-Turkish intrigues of 1921. Nor will he get any help from footnotes if he tries to link the stimulating arguments of historians in the chapters entitled "Varieties of History" with the relevant topics in the preceding sections.

For Professor Wright says he does not believe in footnotes. Yet they would also be useful in explaining words and phrases that will be unfamiliar to many British readers. What is a run-off ballot? Or pork-barrel legislation? Or an electoral slush-fund? What is the English equivalent of maverick? Lafayette is said to have been a maverick noble; Duveau a maverick leftist; Mandel a maverick rightist; de Gaulle a maverick officer. Perhaps Professor Gorden Wright is a maverick historian.

OTHER BOOKS

MATTHEW SMITH. *Allen and Unwin.* 73 pages. 53s.

Coming in direct contact with the Paris school and obviously indebted to it, Matthew Smith's art is, as Sir Philip Hendy writes in his foreword to this book, "pure painting." A biographical note by Francis Halliday and John Russell completes the introduction to the fifty-two colour plates. If some of the reproductions are more highly coloured than the originals, they fully convey the sensuousness and joyfulness of this rich English painting.

ART AND ILLUSION. By E. H. Gombrich. *Phaidon.* 401 pages. 40s.

The first edition of this important book appeared a little over two years ago. Now reset, with a few amendments, and carrying a rather smaller number of coloured plates, this new edition appears, 30s. cheaper, in the same format as the author's earlier book "The Story of Art." In a new preface, Dr Gombrich takes up some criticisms of his arguments.

TIEPOLO. By Valentino Crivellato. *Weidenfeld and Nicolson.* 98 pages. 21s.

In this addition to the "Masters and Movements" art series, the text, translated from the Italian, describes the great success of this artist. There are over fifty illustrations.

CARPACCIO. By Jan Lauts. *Phaidon.* 309 pages. 90s.

A short but scholarly essay introduces illustrations of all surviving works by Carpaccio and there is a critical catalogue of the paintings and drawing. Nearly all the 260 illustrations are based on newly taken photographs; eighteen are in colour.

AMERICAN SURVEY

AMERICAN SURVEY is prepared partly in the United States, partly in London. Those items which are written in the United States carry an indication to that effect, all others are the work of the editorial staff in London.

Mutiny on the New Frontier

WASHINGTON, DC

LIKE a captain appealing to the passengers for help against dissidents among the crew, President Kennedy is asking Americans to confirm his sailing orders. Some members of the Democratic party in Congress are not only disputing his navigational instructions but, Mr Kennedy implies wrathfully, have been defiantly throwing out anchors to keep the vessel from putting out to sea at all. Both the mutiny and the appeal have focused attention on an apparently widening gap between Mr Kennedy's popularity and his prestige. It is being said, not for the first time but now with a new emphasis, that while he enjoys a sort of *matinée* idol status with the unreflecting masses—though even this has begun to decline—sober and solid men feel that he is failing to make good his promise of leadership, just as they always said he would.

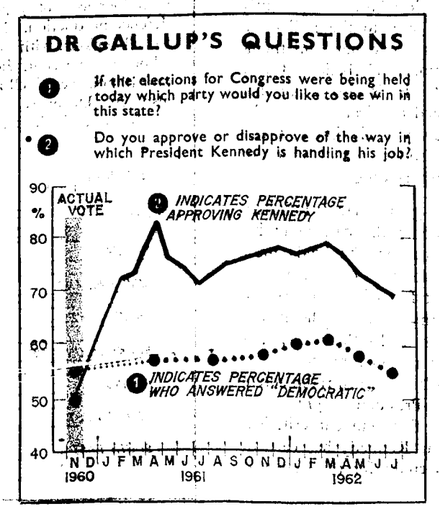
To put down the mutineers, and to strengthen his own position *vis-à-vis* the patriarchs in parochial blinkers who lord it over the powerful congressional committees, Mr Kennedy intends during this year's election campaign to go over the heads of Congress and talk to the voters, face to face. By doing so he will be following the advice of those who have long urged him to spend his popularity instead of hoarding it. He will try to transform the cheers which greet him wherever he goes into a more practical demonstration of overwhelming support for his policies. Americans will vote in November for the whole of the 435 members of the House of Representatives and for 39 Senators. The Democrats already have comfortable majorities in both the House and the Senate. But the legislation that the White House recommends to Congress is being defeated rather monotonously by a loose coalition of Republicans and recalcitrant members of Mr Kennedy's own party. Therefore he wants the voters to return enough "pro-Kennedy" Democrats to enable him to beat the coalition which now thwarts him.

He himself admits that this may be asking rather a lot. It certainly does not look as if it will be easy to achieve. The Democratic party's national chairman, Mr John Bailey, has declared, however, that he will build a "grass roots fire" under Congress on behalf of the President's programme. This boast will now be tested and the test will be a severe one. Presenting himself to the voters in person, Mr Kennedy will presumably offer them the plans which Congress has rejected, such as "medicare" for providing hospital insurance for elderly people. He may also be able to claim credit, among other things, for cutting taxes as a step towards quickening the rate of economic growth and so reducing unemployment. But meanwhile the Republicans will not be idle. They will probably be warning the electorate against a budgetary deficit which will run into billions of dollars by next summer if Mr Kennedy is given his way. They are expected to depict the New Frontier as a sort of loose-living extension of the swimming-pool of the Attorney General, Mr Robert Kennedy, into which the guests of the President's brother are allegedly hurtled fully clothed. Republicans are already making dire noises about the menace to the American way of life of the Kennedy family's alleged ambition to become the founding members of a political dynasty.

For the Democratic party to win in November in spite of all this would undoubtedly be a tremendous personal triumph for Mr Kennedy, especially since it is almost unprecedented for a party in power to increase its congressional majority in a non-presidential election year. A personal triumph would seem to be just what Mr Kennedy needs rather badly. It would help to refute the growing tale that he is a weak President who is getting mired in trouble because he lacks the qualities that make for truly strong leadership. Such evidence as exists for this contention is almost entirely circumstantial. But it could become a net in which Mr Kennedy found himself badly entangled.

Last year he handled the successive jolts of Cuba, Vienna and Berlin with admirable calm and skill. But this year in place of international crises there has seemed to be only the dreary attrition of stubborn domestic wrangling, mainly with Congress. And these troubles are only partly the consequence of the flaws in the American parliamentary system, which have existed, after all, since at least the eighteen-eighties and are well known. Nor has Congress refused to give Mr Kennedy the funds—or most of them—which he has requested. It has voted money for defence and for his space agency and it seems likely this year to give him substantially what he asks for foreign aid and to approve his request for power to expand foreign trade. But on other matters the White House's negotiators all too often have marched up Capitol Hill, only to march down again empty-handed.

There appears to be a number of reasons for this. The President has a reputation as a political tactician, but he ran out of both sticks and carrots too soon. Also, the candidature of his youngest brother, Mr Edward Kennedy, for a seat in the Senate is resented both in that body and in the House. The Senators feel it as an affront because young Mr Kennedy is a fledgling whose only claim to consideration is his name. And his Democratic opponent is the nephew of the Speaker of the House, Mr McCormack, who long ago warned those who declare war on the McCormacks that they may expect only war in return. But more significant is the impression that the President has simply lost control of



Congress, which feels free in consequence to indulge its bruised spirits in filibusters and octogenarian squabbles.

The critics say that the New Frontiersmen can no longer plead that their new brooms are fully occupied with the accumulated dust that General Eisenhower is accused of having left under the rugs. The rebuffs which Mr Kennedy has received are regarded in some quarters as deserved punishment for a certain intellectual arrogance that some of his assistants displayed earlier. It is noted with amusement that in some cases their former cocksureness has given way to extreme prudence or even to lack of decision. It is asked if perhaps the failures form a pattern of weakness and even Mr Kennedy's announced intention of spending his popularity is interpreted as fitting into such a pattern. Having saved up his popularity until almost too late, he is accused of deciding suddenly to invest it in a rash attempt to rally people behind measures, such as "medicare," which are not particularly well liked in fact. It is added that businessmen, whom he challenged and then sought to appease, publicly express their lack of confidence in him and privately congratulate themselves that they have got him on the run.

WHAT would probably serve best to disperse those vapours would be another international crisis, putting Americans solidly behind their President. Perhaps Mr Khrushchev will oblige. But the very criticisms which Mr Kennedy is now provoking are in themselves the best proof that he has already deserved well of his countrymen. He promised to get America moving again, but the necessary prelude was a new ferment of ideas. This, which was lacking before he came into office, is now very much in evidence. (And it may well be that Mr Kennedy has twice in the recent past exchanged his usual philosophical calm for a flare of temper not by accident but on purpose, in order to stir things up a bit more.) Americans have been very loath to face the problems presented by their sluggish economy, their choked cities, their inadequate transport, their exploding population and consequently overcrowded schools, their polluted water, their neglected countryside, their increasingly adverse ratio of dependents to breadwinners and their growingly restive Negro semi-citizens. Now, spurred on by Mr Kennedy, they are debating some of those matters vehemently.

Mr Kennedy said when he became President that the torch had passed to a new generation. But the people who ask impatiently when he is going to use it to light the way to the millenium forget that he also said that the problems would not lend themselves to quick or easy or permanent solutions. He believes firmly that time is on his generation's side. But he is also aware that the old order represented by the entrenched political forces of the rural and southern regions may not pass away in his time as President, even with the redistrictings and consequent redistribution of political power that the courts are now commanding.

He has not, however, gone without any gains. He is infinitely surer now than he was last November about the passing of his trade expansion measure, which is also the one he holds most important. Almost a year ago the New Frontier's covered wagon was ironically depicted as halted and shot full of Indian arrows. But, historically, it was the Indians not the pioneers who finally bit the dust. Americans no longer seem to feel either over-complacent or confusedly cowed about their national purpose—nor are they any longer mad about building shelters against radio-active fall-out. Although in this last regard the President might prefer them just a little madder, on the whole their current criticism of him may well be a sign of health. Mr Kennedy has earned, even if he is not at the moment getting, credit for this renewed vigour.

Testing Realities

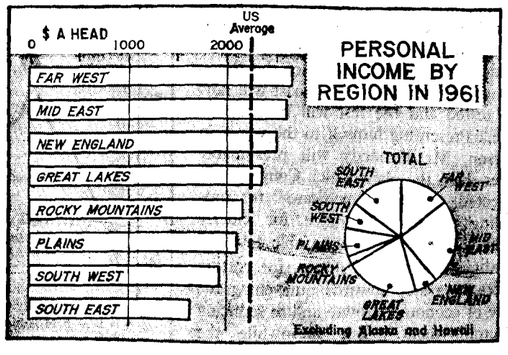
PRESIDENT KENNEDY has at last made his long-expected announcement of a major change in the American requirements for a treaty banning nuclear tests. Supported by the new methods of seismic monitoring, which have been developed recently through underground tests in Nevada, the President has now offered to accept a detection system built around existing national monitoring posts. Until now, the United States has insisted that such control stations must be both staffed and controlled by an international commission. Yet his qualification that the stations should be "internationally supervised," purposely left vague to allow room for negotiation and compromise with the Russians at Geneva, gives no hint of how far the United States has lowered its earlier demand that the personnel of control stations in the Soviet Union should be one-third western and one-third neutral.

The firm promise that the United States has not abandoned its demand for "on-site inspections" by international teams when suspicious underground events are detected should reassure those, especially on the Joint Congressional Committee on Atomic Energy, who feared that the Administration was preparing to retreat from that principle in order to get a treaty at any price. Yet such fears may in fact have been wildly optimistic. The President stated that the first task of Mr Dean, the chief American negotiator at Geneva, would be to persuade the Russians to accept the principle of on-site inspection; they once agreed to this, but later rejected it as facilitating espionage. Unless they change their minds again Mr Dean may never be able to get down to actual bargaining on the number of inspections on Soviet soil, even though the United States is now prepared to have fewer of these than it considered necessary earlier. Within the United States, there may be some criticism that Mr Kennedy's new stand is less flexible than it might have been, considering the advances which have been made in monitoring techniques. Last week the liberal *Washington Post* declared its belief that a world under a less-than-perfect treaty would be better than a world of "unrestrained, uncontrolled thermonuclear testing."

The reluctance of Mr Kennedy to permit three more high-altitude tests in the Pacific shows the importance which he attaches to world opinion. His military advisers argue that these controversial tests, from which it is hoped to determine the effect of high explosions on radio and radar communications, were a major reason for resuming atmospheric tests in the first place. But if he gave his assent, the President would be breaking his promise that the current American series would be over three months after they began on April 25th. Neither would he be happy to see the fall-out of these tests in late September or October mingling with that expected from the new series which the Soviet Union is preparing. Mr Kennedy will withhold his decision until the launching pad on Johnston Island is repaired—a galling reminder that the present dilemma arose because three rockets failed and had to be destroyed before making their rainbows.

Where is America Richer?

The total of personal incomes in the United States in 1961 amounted to $416.4 billion, compared with $400.8 billion in 1960, as a result of the improvement in business activity after the recession touched bottom in the first quarter of the year. This increase of 4 per cent for the country as a whole was matched or exceeded by all regions except the two leading industrial ones—and the two richest: the Mideast—New York, New Jersey, Pennsylvania, etc.—and the Great Lakes—Illinois, Ohio, Indiana, Wisconsin and Michigan (where the depression in the motor industry brought a decline of 1 per cent in total personal income over the year). While there were also losses in the Dakotas farming regions as a whole did well, with the largest relative advances in total personal income being found in Iowa, Nevada and Mississippi; Colorado and Arizona, both with increases of 7 per cent, were helped by expansion in defence production. Income a head was at a record high level for all regions, with an average increase for the country as a whole of 2 per cent. Incomes a head in New York, New Jersey and Illinois were well above the national average, as they were also in Delaware, Connecticut, Massachusetts, Nevada, California and Alaska.



Package from the Treasury

NEW YORK

IN its latest financing operation amounting to $8.5 billion—all but $1 billion to replace maturing debts—the Treasury is seeking to kill a number of birds with one stone. It offered a one-year 3.5 per cent certificate designed mainly to help to maintain the upward pressure on short-term interest rates which has been a keystone of the Administration's general economic policy. At the same time its offer of a new six-and-a-half-year 4 per cent bond as well as a 4½ per cent bond due in twenty-five to thirty years not only extends the maturity of the national debt, even if only modestly, but, even more important, is also being regarded as setting the pattern for financing the deficit which the government is sure to run in the current fiscal year whether or not there is a tax cut; altogether at least $7 billion more will have to be borrowed before the end of 1962.

The thirty-year issue is the longest that the Kennedy Administration has offered for cash and it came as a surprise. The Treasury made it clear that this bond was aimed at stimulating the long-term capital market; this has been in the doldrums because prospective investors have been holding back in anticipation of a rise in interest rates. The new bond is attractively priced and should act as a catalyst. In some investment circles it is interpreted as being the first stage of a new rise in long-term interest rates but the Treasury disagrees, taking the view that there is no need for any sharp rise in rates and that the coupon it has established should prevail for some time to come. Treasury officials also dispute Wall Street's suggestion that higher long-term rates are needed to discourage foreign borrowing and stem the outflow of dollars; they point out that foreign interest rates may well come down and add that higher rates at home would involve a much tighter monetary policy than is desirable under present economic conditions in the United States. But they have engineered a moderate rise in interest rates with their current financing and are hopeful that the general pattern which it has established will serve both their purposes and the economy as a whole.

Balance-of-payments considerations played only a minor part in the decision on the form the Treasury's operation was to take, but the gesture of a three-way package covering a variety of maturities should help to mollify the fears of foreign creditors who have been worried by the preponderance of short-term debt in the government's financing. The Treasury may not tap the long-term market again soon, simply because its move in that direction is being accepted as a sign that it has the flexibility to do so when it wishes. The latest financing, as imaginative and skillfully conceived as most of the Treasury's earlier operations, should help to stimulate private investment at the same time as it puts the structure of the national debt into better shape.

Congress Does Something

THE Senate's recent performance deserves Mr Truman's famous epithet of "do nothing" if anything ever did. The liberal Democrats always press for tighter rules against the delaying tactics with which Southerners prevent votes being taken on measures affecting the civil rights of Negroes; yet these same liberals have been filibustering in their turn, to prevent the Senate from voting on the communications satellite Bill which would set up a corporation, owned partly by the industry, partly by the public, to handle this new development in space. The liberals are also the people who are always urging Congress to get on with its job of passing legislation. Yet the filibuster has not only prevented the Senate from doing any other business but it has also been called off at last through a complicated political bargain which, while saving the faces of the liberals, has probably destroyed the President's last hope of getting his farm Bill through Congress at this session.

Its chances had been practically nil in any case, however, and at least the communications satellite Bill now seems almost certain of passage before long. The liberals, having made their case for government ownership of the satellites, are expected to accept the President's guarantee that the new Bill does in fact establish sufficient government control over the new corporation to ensure that this great national asset will not be misused for private gain. Two weeks ago Congress completed action on another constructive Bill to which the Administration also attached great importance, but its significance has been obscured by the defeat which Mr Kennedy suffered during its passage on his plan for government-financed health insurance for old people.

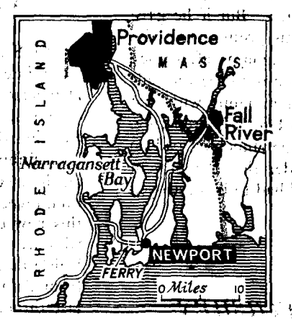
His supporters attempted to attach this to a Bill providing for much-needed improvements in the public welfare system. This costs federal and state authorities together about $4 billion a year and helps 7.4 million people. The new provisions will add $300 million to the federal government's contribution in the current fiscal year but are expected to save money in the long run. The emphasis of the legislation is on encouraging the states to do more about improving their child welfare schemes and about rehabilitating as many as possible of the people who receive public assistance—the old, the blind, the disabled and the mothers of dependent children—and thus helping them to become wholly, or partly, self-supporting. But Congress, as was to be expected in an election year, increased from $66 to $70 the monthly federal contribution to the states for each old, blind or disabled recipient of relief. These increases, opposed by the Administration because of the cost, about one-third of that of the whole Bill, will take effect just one month before polling day. Congress made it clear that it expected the extra money to be passed on to the voters and not to be regarded by the states as a means of reducing their own shares of the costs of such programmes.

In Thalidomide's Wake

SYMPATHY for the unfortunate Mrs Finkbine of Arizona, who took the drug thalidomide early in her pregnancy before learning that it might deform unborn infants, is unlikely to bring about any demand for the relaxation of America's strict regulations on therapeutic abortions. In virtually every state, as in Arizona, the laws which sanction the termination of pregnancy when the life of the mother is endangered are already more liberal than many religious groups would like. In fact, the plea of Mrs Finkbine for authority to have an abortion contained no argument with existing law; the judge ruled that the court had no jurisdiction to determine whether or not the operation was necessary to save the mother's life. The case has already caused a furore quite apart from its connection with thalidomide. With the announced intention

Gilded Obsolescence

FROM A CORRESPONDENT RECENTLY IN NEWPORT



THE announcement that the President will go to Newport in September for the sailing races between Americans and Australians has stirred a social froth reminiscent of the great days when the more flamboyant members of New York society spent expensive summers at this famous resort on Rhode Island. This time, however, it is not a Commodore Vanderbilt who will be entertaining at the dinner on the eve of the races but the Australian Ambassador, Sir Howard Beale. He has secured the state dining room of the Vanderbilt "cottage" for his party and is said to be inviting three hundred guests. The speaker of the evening will be a grandson of Irish immigrants, Mr John Fitzgerald Kennedy.

The social pageantry that is being dusted off for the occasion may be as obsolete as the two old forts at the harbour's mouth, but affluent obsolescence is an enduring characteristic of Newport. The town has been poor from time to time, particularly when its water-borne traffic has been interrupted by war, but even its poverty has been gilded, thanks to its splendid site.

A distinguished small town at the southern end of a small island, it looks north to the handsome complex of land and water which is Narragansett Bay. Newport's treasure of seventeenth and eighteenth century wooden houses and brick public buildings reflects the wealth that came with its triangular trade in colonial times; the town made rum in its twenty distilleries, traded it in Africa for slaves, bartered the slaves in the West Indies for sugar and molasses and took these back to Newport to make more rum. Its naval installations, which are still its main economic support, go back to 1860, when the Civil War forced the Navy to move north. The base is the home port for the Atlantic Fleet Destroyer Force and last year the naval payroll in the area amounted to $159 million, though not all of it was spent in Newport.

On the south, Newport faces the open ocean, a vista which the huge and expensive summer houses of the gilded nineties were built to enjoy. It is this southern stretch of open water, with the safe anchorage of Narragansett Bay behind it, that beckons contenders for the America's Cup. These contenders, their friends and their followers are bringing a summer's prosperity to Newport—it costs $4,000 to rent a *cabana* at Bailey's Beach for the season. But what the town, with its 37,000 people ashore and 10,000 more afloat, yearns for is a sure and dependable source of income. Built on and supported by water-borne traffic for most of its three centuries, the old town now has two great enemies—new means of transport which tempt visitors to go further afield and the income tax which killed its golden age and threatens all conspicuous private display.

Newport still profits from its great estates. But whereas in 1890 those architectural white elephants paid 50 per cent of the town's taxes, by 1950 they were paying only 20 per cent. Moreover two of them have become museums, which tourists pay to visit; at least two more are private schools with religious backing. Others are occupied by their owners for only a few weeks a year or are let to the newly enriched who seek social acceptance. Newport's cachet still has power but it is snobbish about mere money, its formal pattern of living has gone out of fashion and even a Texas millionaire might flinch at paying the modern wages of the sixty servants which the Vanderbilt house required in its great days.

At the moment, the town's social fortunes seem to be picking up. Commercially, however, it is a different story. The old and narrow streets were not made for motor traffic; half the shops on Thames Street have closed their doors, forced out of business by competition from modern shopping centres on the outskirts which have plenty of parking space. There are plans for urban renewal but recently the tax payers refused to approve a bond issue to carry them out. Worst of all, the Navy has declared to be surplus and dispensable the two forts that guard the harbour and with them the big torpedo factory which made some 80 per cent of the anti-submarine torpedoes produced by the United States during the last world war.

This does not mean that the Navy is pulling out of Newport, but merely that it is once more facing the hard facts of technological and strategic change. In fact the local Navy commands have grown rather than shrunk with the addition of the air arm. Its overhaul and repair station is the biggest single industry in the state. At two new service piers destroyers may tie up four abreast and have their needs supplied from lorries in an hour and a half, instead of having to spend a day and a half at anchor being fed from supply barges—a gain for the Navy but a loss to local tradesmen.

The torpedo factory is on Goat Island, right at the town's front door. Newport would like to buy the island, build a causeway to it and persuade private industry to occupy its factory buildings. So far the problems of doing so have not been solved and this may be fortunate. Goat Island would adorn Newport's water approaches far better if it were turned into a park. Whatever the town's future may be, this rare and beautiful seven square miles should not suffer an industrial fate. A better solution is suggested by the ingenuity of the local Preservation Society, which has furnished a brace of fine old buildings to attract visitors. Williamsburg has proved that Americans will support their notable antiquities if they are allowed to look at them.

tion of Mrs Finkbine, the star of a children's television programme in Phoenix, to seek an abortion in a more favourable legal climate, the stage seems set for yet another of those fierce moral arguments which Americans seem to favour.

It now appears that other American families may feel the tragic effects of thalidomide. Although the courageous obstinacy of Dr Frances Kelsey of the federal Food and Drug Administration kept the new sedative off the American market, it was nonetheless given to several hundred people experimentally before being withdrawn last March and other Americans have purchased the drug abroad. The American Medical Association is undertaking a thorough study of the effects of thalidomide on the unborn, not only to protect the public but also to learn more about the general problem of congenital malformation. But amid the painful reports of thalidomide babies in New York there was excellent news from the National Institute of Health, where the virus of German measles—another cause of malformation of infants—has been discovered and isolated.

The bitter lesson of thalidomide has strengthened the hand of Mr Kefauver and four of his Democratic senatorial colleagues who hope that the Senate will toughen the pending Bill which gives the government greater power to regulate the manufacture and sale of drugs. They want to restore some of the sterner provisions which were stricken from the Bill by conservatives on the Judiciary Committee, particularly the one which requires drug manufacturers to inform doctors of the adverse side effects of their remedies. President Kennedy agrees that the Senate Bill does not go far enough; the Administration's own proposals, put forward some months ago, provide for the immediate removal from the market of a drug if there is a hazard to public health. Mr Kennedy is also considering stricter federal controls over the distribution of new medicines to doctors for experimental purposes. Congress has already approved his request for an increase of 25 per cent in the FDA's staff.

Southern Comfort

In the one-party South, the source of extreme conservative opposition to Mr Kennedy inside the Democratic party, the important election is the primary at which Democrats choose their candidates. The primary decides whether the President's handful of southern supporters in Congress—men like Senator Fulbright and Representative Boggs—are to be replaced by reactionaries and whether southern states are to be ruled by racial extremists such as, for example, Mr Wallace who recently won the Democratic nomination for Governor of Alabama. Except in Georgia, these southern primaries will be completed this week. Tennessee was to vote on Thursday, while *The Economist* was in the press; on Tuesday Democrats in Arkansas decided to give Mr Orval Faubus, who is known all over the world for his segregationist defiance at Little Rock, an unprecedented fifth term as Governor. They also sent Mr Fulbright, the chairman of the Foreign Relations Committee, back to the Senate for another six years.

Mr Faubus did not do quite as well as he has in the past but, with 194,000 votes to about 180,000 for his five opponents, he secured more than the 50 per cent of the total which he needed to avoid a run-off; this was a surprise to many observers who thought that the Governor was showing signs of wearing out his welcome when two of his proposals were turned down recently by the voters in referenda. To Mr Faubus, his victory showed that the state wanted a moderate, not an extremist; of his two main opponents one, Mr Dale Alford, stood to the Governor's right, particularly on the racial issue which fortunately played little part in the campaign. The other, Mr McMath, is a liberal. To both of them the chief issue, however, was the "personal dictatorship" made possible by the strong political machine which Mr Faubus has been able to build up. Senator Fulbright's victory, by a margin of nearly two to one, over a politically unknown right-wing critic of foreign aid and of the Administration, was not, unhappily, as crushing as had been expected. If the Republicans in Arkansas were stronger Mr Fulbright might be in trouble in November.

The President had already had other good news from the South: the rout of extreme conservatives in Louisiana by Mr Boggs, a strong backer of the Administration, and by two representatives of the Long dynasty, Senator Russell Long and a newcomer, Mr Gillis Long. Earlier still Senator Olin Johnston of South Carolina turned back triumphantly a challenge from [illegible]lings, a reactionary in modern dress. 'All this amounts, of course, to no more than holding the line' and in Mississippi one of the President's most reliable southern [illegible] Mr Smith, has been reelected out of his seat in the Ho[illegible]epresentatives. Mr K[illegible]y knows better than to attem[illegible]e of the southern wi[illegible]s party. But by appointing [illegible]n to the board of [illegible] of the Tennessee Valley Authority he has shown that [illegible] not go unrewarded. The President has also in his [illegible]us quiet but effective ways of making his displeasure felt.

GE Makes Good the Damage

By early next week the General Electric Company must hand over to the government $7,470,000 in settlement of eleven suits for damages. These were brought by the Department of Justice against the company which, with twenty-eight other firms, was convicted last year of rigging bids and fixing prices on heavy electrical equipment. The damages are by far the largest ever obtained in settlement of an anti-trust suit; the previous record was $44,000. The money represents nearly 11 per cent of GE's sales to agencies of the federal government between 1956 and 1959, a fairly heavy overcharge. All but $1 million will go to the Tennessee Valley Authority which first drew attention to the high identical bids which it was receiving from members of the industry. GE now hopes for a swift settlement of the 1,600 other suits for damages brought against it by state and local governments and electricity firms which, unlike the federal government, can claim triple damages. If these suits are settled on much the same basis as those of the government, GE's price-fixing will have cost it, in all, some $50 million—about a fifth of its profits in 1961—over and above the fine of $437,500 which it paid last year.

Nevertheless GE seems well pleased, as it should be, at the prospect of being spared the publicity and cost of years of litigation. So is the government, which itself has suits pending against eighteen other electrical firms and which has been alarmed by the risk that the courts would bog down completely under this mass of litigation; in all, nearly 2,000 suits have been filed and none has been settled or brought to trial because everyone has been waiting to see what the government would do. Now it seems probable that the other plaintiffs will agree to settle out of court although the "formulas" for each product worked out by GE have not been made public and do not seem to have played a big part in the bargaining with the Department of Justice. (Privately, some of the electricity companies still doubt whether they were overcharged at all but they feel that their shareholders will expect damages.) The government must also be well satisfied that it has obtained a fair settlement without widening the present gulf between business and the Administration—though, if the Internal Revenue Service decides that the damages qualify as deductions from taxable income, the Treasury, which is to receive only $1 million of GE's refund, may actually be worse off.

States in a Quagmire

Justice Stewart has stayed the court order that the Michigan Legislature must reapportion the seats in the State Senate immediately, on the grounds that a new issue has been raised which his colleagues on the United States Supreme Court will wish to consider at their next session which begins in October. The same issue is also coming up to them from Maryland and probably other states as well. The question is whether the Fourteenth Amendment to the Constitution, establishing the right of all individuals to the equal protection of the laws, requires each citizen to be represented equally in both houses of his State Legislature or whether it can be satisfied by distributing the seats in the lower house according to population and those in the upper house on a geographical basis; this is frequently done by allotting a seat to each county. Thus in Michigan one State Senator from, say, the Detroit area may represent twelve times as many people as another from a rural county. It is this which the State Supreme Court has ruled to be unconstitutional.

But in Maryland, which redrew the boundaries of the districts in its lower house earlier this year, the State Court of Appeals has refused to order reapportionment of the State Senate, even though 14 per cent of the voters can elect a majority in it under the present system. The arguments against giving up the geographical basis of distribution are that the upper house is designed to act as a check on the lower and to represent the views of minorities and special interests. There is a danger, it is claimed, that the present tyranny of the rural minority in many states may be replaced by the tyranny of an urban majority. The Supreme Court of the United States has not yet ruled on what constitutes a fair distribution of seats in either house of a State Legislature. All it said last March was that this was a suitable matter for the courts to consider.

When Justice Frankfurter dissented from this decision he gave warning of the "mathematical quagmire" which it would bring and already over a third of the states are struggling in this. Florida, Delaware and Vermont are among those holding special sessions of their Legislatures through the hot summer because the courts have ordered them to reallocate their seats more equitably before this autumn's elections or before their next session. The pattern is one of rural (and usually Republican) representatives trying to satisfy the judges without sacrificing their control of the Legislature. Rhode Island's attempt and Kansas's have both been rejected by the courts and in Wisconsin the Democratic Governor has been vetoing schemes put forward by the Republican legislators almost weekly for dealing with the state's seats in the United States Congress as well as with the State Legislature. In Alabama, however, the federal judges, after turning down various plans produced by the Legislature, are now themselves redrawing the boundaries of the state's districts, something which has not been done for over sixty years; a temporary scheme has already been announced for this autumn's elections.

Brought to Book

In 1954, when the Supreme Court ruled that racial discrimination in the tax-supported schools was unconstitutional, one of the five cases before it involved Prince Edward County, a sleepy tobacco-growing area in backward southern Virginia with proportionately more Negroes than any other section of the state. But no Negro child has yet been allowed to mingle with the white ones in Prince Edward. First a sympathetic federal judge put off the day of judgment until 1965 and then in 1959, when more immediate compliance was required, the local authorities shut the schools; they have been shut ever since. Prince Edward is the only place in the country where resistance has been carried to this point. A "private" school system has been established for the 1400 or so white children but two-thirds of the Negroes, who are slightly more numerous, have had no formal schooling for three years; the rest have sought it elsewhere.

Last week a federal district judge ruled that the schools must be reopened on a non-discriminatory basis; if this is not done by September 7th, the court will take further action. It has already been held by the courts that a state may not shut certain schools to frustrate orders to desegregate while keeping the rest open. Judge Lewis proceeded to sweep away the disingenuous argument that the closing of the schools in Prince Edward was a purely local matter and hence outside the range of the Fourteenth Amendment to the Constitution. As long as a free school system is operated by the state, it must be operated in Prince Edward County.

But this victory for the Negroes is not the end of the story. For one thing, an appeal is almost certain to be lodged. For another, if the schools are reopened they may be left to the Negroes; most of the white parents say that they would not send their children back. The local authorities themselves have been considering the reopening of some schools ever since last summer when Judge Lewis knocked much of the financial stuffing out of the "private" school system. He held then that, as long as the ordinary schools were shut, white pupils might not benefit from the state tuition grants and local tax concessions which have helped to keep the private system going. Virginia provides grants to enable white parents to educate their children elsewhere when Negro children are admitted to the tax-supported schools and last year white parents in Prince Edward County had to find only $15 a year for each child.

SHORTER NOTES

Last week Puerto Rico celebrated the tenth anniversary of its existence as a free Commonwealth associated with the United States—a unique relationship which gives the island's 2.3 million people many of the advantages and few of the disadvantages of statehood. Governor Munoz Marin proposed early last month, and President Kennedy has now agreed, that this would be an appropriate time to discover, by holding a plebiscite, whether Puerto Rico wishes to continue the commonwealth relationship, to become an American state or to be given independence. The people are not expected to vote for either of the latter when they are prospering so visibly by being inside America's tariff walls but outside the range of its income tax. But there may be defects in the commonwealth arrangement which Puerto Ricans would like to eradicate; for example, Congress can pass laws affecting them without their consent or participation.

* * *

A tremendous scramble among talent agencies has been set off in Hollywood by the decision of MCA, Inc., to dissolve its talent agency, the largest in the world, and to end its contracts with about 1,400 top entertainers in the United States and Great Britain. The dissolution of the talent agency was sought by the Department of Justice, which accused the company of violating the anti-trust laws by acting both as a television producer and as a talent agency. Charges are still pending concerning its acquisition of Decca Records, Inc., and Decca's film subsidiary, Universal Pictures, and concerning package television deals offered by MCA.

Water skiers can now be equipped with two-way "ski talkies," waterproofed and provided with a float, which enable them to communicate with the towing boat.

HOME REPORT

Members of the editorial staff and local correspondents report on life and happenings in and around Britain

West Riding Roundabout

FROM A CORRESPONDENT IN LEEDS

Batley's back streets

VEHEMENT opposition to the proposals of the Local Government Commission in its draft for the West Yorkshire special review area is likely to be confined to Wakefield, the seat of West Riding county government, which sees as "a monstrous injustice" the suggestion that it should lose its county borough status. But Wakefield is being left pretty well to fight alone: what it stands to lose on the roundabout others look like gaining. The most radical of the commission's suggestions is the creation of a new county borough, with a population of 165,000, which would include the boroughs of Dewsbury, Batley, Ossett and Spenborough. And this seems to have gone over well.

Considering that the towns to be merged in the new county borough could be held to cover the haunts of the genuine dyed-in-the-wool Tyke, the proposals have even met with remarkable acclaim. This is undoubtedly because of the local eye for the main chance. As the commission suggests, a single authority in the heavy woollen district could best help future industrial development —which will certainly be needed. Equally, the integration of the county and district services would be a particular advantage in planning and executing redevelopment. Although the new county borough will not be a rich authority (and will have a major slum clearance problem on its hands) it could expect to finance work in the district services beyond the scope of its present constituents.

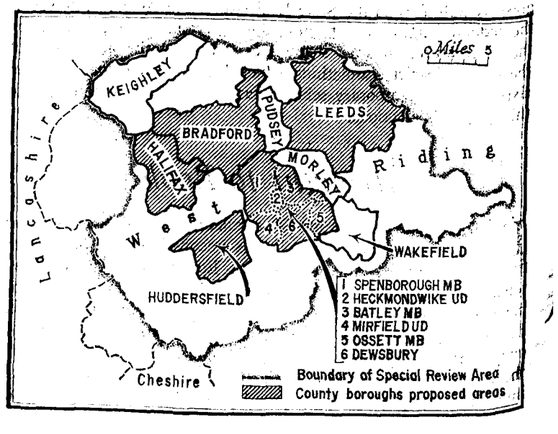
The biggest of the new partners is Dewsbury, which has been a county borough in its own right since 1913, but its present population of 52,942 would be too small to justify that status any longer. It is the chief centre of the rag trade and boasts two grammar schools of more than local renown. Batley, with a population of 39,390, is the centre of the heavy woollen textile trade and has grown pretty rapidly in recent years. Its industries now include the production of rugs, carpets, mattresses and biscuits. It also has two grammar schools and a technical college. Strangers can have difficulty in knowing whether they are in Batley or in Dewsbury; on such occasions their wellbeing among the local population may be in danger.

The others involved are Ossett (population 14,729) and Spenborough (population 36,412) which was elevated to borough status only in 1955 and includes districts with such hallowed Yorkshire names as Cleckheaton, Gomersal, Liversedge, Birkenshaw and Hunsworth. For good measure the new county borough also has the urban districts of Mirfield and Heckmondwike.

To propose the new borough is all very well. But what on earth will it be called? As though to outdo the Welsh, the name being canvassed in the West Riding now is Ossbatdewspenwikefield. The Local Government Commission would be much more popular everywhere if it had some inspired name-givers. Otherwise, Batley and Dewsbury are very pleased with the plan. Batley had originally suggested a seven-authority merger comprising the six proposed by the commission, plus Morley (which remains a buffer state between the new county borough and Leeds). Ossett is not so happy. It is in a sound financial position and wonders why it should go to the aid of Dewsbury and Batley, where most of the bad slums are.

Wakefield is lamenting the indignity of losing its county borough status despite its territorial expansion by amalgamating with the urban district of Horbury, part of Stanley urban district and part of the parish of Crigglestone. Both Wakefield and Horbury are preparing to resist the commission's suggestions. Wakefield, the Labour leader of its council says, is run as efficiently as any city in the country. But the commission considers that its present population of about 60,000 is not enough to provide all the services which a county borough should have, and the addition of population from any reasonable extension would make little material difference. On the other hand, to merge Wakefield with the county for which it is the *de facto* capital would bring positive benefits; other county capitals have pricked up their ears at this evidence of the commission's thinking.

BY and large the commission has been decidedly conservative in its recommendations. Leeds has been left pretty well untouched. Bradford, which had applied for a large expansion (including Pudsey, which would have brought it right up to Leeds's doorstep), has got a few acres only, to the south-west. Keighley's imperialism at the expense of Bingley and Skipton has been stopped dead in its tracks. Despite the attractions of a number of the schemes put forward, the commission set its face against both the "continuous county" solution and the extension of the county borough system to cover the whole of the review area (the solution that Sir Keith Joseph has just approved for the Black Country). Its reasons are worth repeating. It considered that the area was "far from being continuously built up"; this is, of course, a matter of

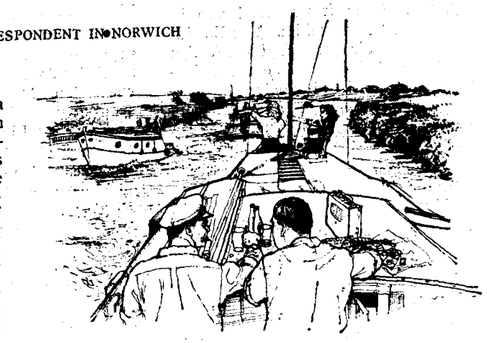


whether one looks at the intervening hills or at the valleys where people actually live (and even the commission has been unable to stop Bradford, Halifax and Dewsbury running into each other). The commission also thought that it could not set up viable county boroughs in the mining region of the east or the industrialised valleys of the south-west.

It is true that west Yorkshire is geographically a different kind of conurbation from either Tyneside or the west Midlands. It is true, too, that "people who live there regard themselves as belonging to their local town, or as belonging to the West Riding"—not to a conurbation as such. Since the commission has ruled out anything more radical, it is something, at least, that it has tried to secure county districts which can expect a fair degree of delegation of services—and thus build up loyalties above the parochial level. But it is difficult to summon up much optimism that regional planning and the redevelopment that is badly required in towns and mining villages throughout the region have been greatly advanced by the commission's labours.

The Booming Broads

FROM A CORRESPONDENT IN NORWICH



THE Norfolk Broads—a name that is still known to mislead American airmen who find themselves stationed in the county—are a series of shallow freshwater lakes in the valleys of the rivers Yare, Bure and Waveney, which wind across the agricultural landscape of east Norfolk and Suffolk to a common outlet to the sea at Yarmouth. The Broads offer holiday-makers in motor cruisers and sailing yachts about 140 miles of waterways to explore, without interruption by locks.

The advertised picture of the Broads is still one of blessed peace and quiet. White-sailed yachts and black-sailed trading wherries glide through a landscape of woods, water meadows and windmills, and the refugees from industrial towns moor of an evening at the staithes of old-world villages with thatched cottages, great flint churches, and quiet inns where the talk is all of harvest, and of country sports like fishing and wild-fowling. For anglers, the waters teem with perch, bream, roach, tench and giant pike. Naturalists rejoice in the discovery of such rarities as the bittern, the great crested grebe, the bearded tit, and the swallow-tailed butterfly. The Broads, the story-line runs, are "unspoilt."

The reality is a little different. The black-sailed wherries are represented by a solitary example maintained by the Norfolk Wherry Trust. The windmills have all been replaced by electric pumps. Except for certain specimens preserved for a mixture of antiquarian and sentimental reasons, they have been reduced to decaying brick towers. Sailing yachts are outnumbered three to one by motor cruisers. Apart from the fleets of racing dinghies and half-deckers, sail is losing the battle against power. The reason is plain to see on the crowded reaches of the Bure, between Wroxham and Horning, where the traffic of boats is as dense as the traffic of cars on the roads to the coast, and big launches full of trippers take the place of motor coaches.

The rivers are now pervaded by the snarl of outboard motors and the whine of transistor radio sets. The banks are lined with hundreds of anglers, fishing in highly organised matches, and jealously guarding their tackle against the intrusion of the yachts. The old-world villages have gone in for boat-building, boat-letting and holiday catering in a big way. They all have their riverside petrol pumps for the motor cruisers, and are the subjects of plans for caravan camps. The quiet inns are equipping themselves with jazz bands, and sometimes with dance halls.

SINCE the Broadland rivers are tidal, the navigation authority is that of the Great Yarmouth Port and Haven Commissioners, who levy tolls upon all boats using them, and use the money to dredge and clear the waterways. The commissioners, however, have no power to control either the number or the type of craft. Their accounts show that there are now about 3,000 motor and 1,000 sailing craft plying for hire on the Broads, and some 2,500 motor and 1,250 sailing craft which are privately owned. Even although a great many of these are dinghies and launches, and not cruisers, that is still a lot of boats for 140 miles of waterways—more especially as the majority of them are concentrated on one river, the Bure. Efforts are now being made by the commissioners both to make more privately-owned waters available to the public and to increase the commissioners' powers of checking bad behaviour.

Boat building and letting has become a major local industry, with an export trade attached. Some members of the industry are anxious to spread the summer traffic by building "marinas" in the less frequented parts of the Broads. This alarms the local planning authorities, who are apprehensive lest the term "marinas" means not only yacht harbours, but gin palaces and dance halls for the gregarious throng in motor cruisers—some of whom, it is said, get no farther in a week's cruise than Yarmouth, where they use their boats as floating lodgings and spend their time on the piers and among the bingo stalls of the sea front.

There is a belated movement of opinion —outside the local authorities—in favour of a Broadland National Park, an idea that was distrusted when, soon after the war, the Broads were set down very tentatively as the twelfth and last of the proposed national parks. What has since happened to the Broads, however, is very different from the hope then expressed, of encouraging hardy young adventurers to go sailing, canoeing and camping in the district. The National Parks Commission is hardly likely to see itself as a remedy for overcrowding by people in expensive motor boats. Moreover, the commission must have been scared by its own local advocates, who, frightened by the extensive growth of reed beds and water weeds when the waterways were neglected during the war, urged that £1 million should be spent immediately on dredging and embanking. Since then use, plus the operations of the River Commissioners and the River Board, has made a more gradual and less expensive clearance—but the Broadland National Park seems a very remote prospect, even if the entire locality were clamouring for it, which it is not.

It is unlikely that Norfolk will ever be unanimous about the Broads. There are the conflicting interests of the holiday trade (predominantly in motor boats), the sailing clubs (in yacht racing), the fishing clubs (in angling), the River Commissioners (in navigation), the River Board (in land drainage), the Nature Conservancy (in saving the flora and fauna from human intrusion), and the landowners (in agriculture, privacy and duck-shooting). That is not to speak of the local councils, who alternately draw water supplies and discharge sewage into the rivers, and draw rates from the riverside properties. Ordinary lovers of the Broads can only hope that the local planning authorities will preserve a precarious equilibrium. A National Park Authority, if it did not exactly tread a path of thorns, would tread on so many corns that it must conclude the whole district was paved with them.

Questions Of Domicile

DOMICILE is one of the law's more curious by-ways that the layman usually leaves unexplored until he finds himself lost in it. It is something more than residence, for it includes the intention to reside permanently, and it is something less than nationality. But in some very important ways domicile is more important than nationality. It affects the disposition of your property when you die; it decides the law to be applied when you are married or divorced. And, if you are a woman, it is one of the few remaining badges of your legal subjection to the other sex, to set against the many of your husband, unilaterally liable for your maintenance, your debts and your income tax.

Judgment has just been delivered in two matrimonial cases involving questions of domicile, each of them with its own rather esoteric facts. Cheni *v.* Cheni, reported this week, concerned a marriage that took place in Egypt in 1924, between two members of the Sephardic Jewish community domiciled in Egypt, but since 1957 in England. The husband was the maternal uncle of the wife, a relationship within the permitted degrees of consanguinity according to general Jewish law (Leviticus forbids marriage between aunt and nephew but not between uncle and niece), but outside the permitted degrees of English law. Moreover, the Egyptian Jewish community, like some others of their faith in predominantly Moslem countries, recognise polygamy, in that after ten years of childless marriage the husband is permitted to take a second wife if the first wife approves.

So it was argued for the husband that, as the marriage was potentially polygamous, an English court had no jurisdiction to try the case. This argument the President of the Probate Division rejected, holding that the true test of jurisdiction was whether the marriage was still potentially polygamous when the present proceedings began. It was not; because a child had been born in 1926.

But on the consanguinity question Sir Jocelyn Simon refused to grant the decree of nullity sought by the wife. The marriage was valid by the law of the parties' domicile; it was valid also in other civilised communities. The English courts would refuse to recognise a foreign law of domicile if it would be unconscionable to do otherwise; but only then. Here the injustice would be in declaring illegitimate a child clearly legitimate by the law of England. But the wife's suit for divorce on the ground of cruelty would be restored to the list to await hearing.

THE President cited as an example of the courts' refusal to recognise a foreign law of domicile, Formosa *v.* Formosa, on which the Court of Appeal had delivered judgment a few days before. In that case a Maltese who came to England in 1948 had married an English wife in a registry office. He was a Roman Catholic, she a Protestant; there were three children. In 1951, when the third child was expected, he went to Malta, ostensibly on holiday, and never returned. And in 1959 the husband obtained a declaration from a Maltese court that the marriage was void: the husband, baptised in a Catholic church, could not by the law of Malta be validly married otherwise than by the rites of the Catholic church.

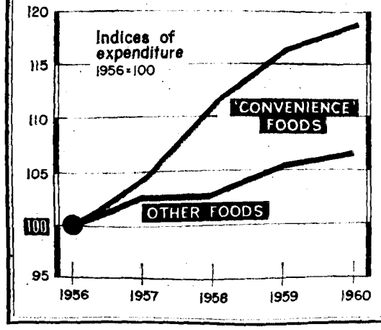
The question the Court of Appeal had to answer—what, in these circumstances, is the position of the English wife in England?—is not an easy one. Matrimonial law is largely a matter of domicile; and a wife has in English law no independent domicile, her domicile being that of her husband. In Formosa *v.* Formosa, therefore, the wife's domicile was Malta. Must the courts here therefore hold the marriage void even though it was valid by our own law? It is one of the prettier problems of domicile that the marriage could be void only if the domicile was Maltese; but if the marriage was void then the wife could never have acquired Maltese domicile.

The Court of Appeal firmly rejected the suggestion that she had never been married and that her children were illegitimate. The Master of the Rolls, never sympathetic to laws that work injustice, quoted Lord Lindley as saying as long ago as 1899 that the English courts would not interfere with foreign decisions unless they offended against English views of substantial justice. The English courts were not compelled to recognise a decree of a foreign court which offended English ideas of justice as did this decree. But the court held her entitled to the divorce she sought on grounds of desertion.

Lord Denning took the opportunity also to remark that the domicile rule as it affects wives is a "barbarous relic" of the kind of wife servitude that has otherwise almost disappeared from English law. The old fiction that the husband and wife are one, and the husband that one, has been painstakingly dismantled through the years; very soon, as the latest brick falls, one spouse will be able to sue the other. But still, it would appear, the wife has to accept the domicile of the husband, for the Formosa judgment would not seem to have done more than remove one of the more burdensome aspects of that principle.

PRE-PREPARED FOR INSTANT EATING

Demand for "convenience" foods increased by almost 17 per cent between 1956 and 1960. In 1956, 17.1 per cent of a total expenditure on food of 27s. 3d. per person per week went on these partially prepared foods. In 1960, the proportion had risen to 18.7 per cent of a total of 29s. 8d. The prices of these foods, though probably relatively high, rose less than 2 per cent. in the period compared with a rise of nearly 6 per cent for other foods.



EXPENDITURE ON "CONVENIENCE" FOODS IN 1961

(pence per week)

Total	66·36
of which:	
Biscuits	9·82
Cakes and pastries	9·60
Canned and cooked meat (other than bacon and ham)	6·63
Cooked, canned and bottled fish	5·95
Canned and bottled fruit	5·52
Cooked and canned bacon and ham	4·86
Canned peas and beans	4·79
Meat products (other than sausages)	4·78
Frozen foods	4·58

THE WORLD OVERSEAS

Katanga Ebb and Flow

FROM OUR SPECIAL CORRESPONDENT

ELISABETHVILLE has none of the appearance of a provincial capital under siege from the rest of the world. There are, of course, defiant posters in every shop-window reminding the strolling UN soldiers that "all Katanga supports President Tshombe." But these are dwarfed by placards announcing an exhibition of sculpture. A hi-fi club advertising for members feels assured enough to draw the line at "inebriates and soldiers in uniform." The daily newspaper is printing a series of entries for a government-sponsored literature contest in memory of Lucas Samalenge, the information minister who died mysteriously some months ago. There seem almost as many baby-clothes shops in Elisabethville as there are in Montreal.

It could all be explained as putting a brave face on a dreary situation. Certainly there are signs of strain. There is gross vilification of U Thant for calling the Katanga ministers "clowns." President Kennedy is also blackguarded by Radio Katanga because he is thought to be the master mind behind what plans there may be to squeeze Katanga's copper artery by pressing Union Minière, diverting its revenues, or perhaps freezing the giant company's funds in Belgium. Crude cartoons alongside the cultural contributions in the daily paper attack the United States for racial discrimination. The continuing growth of the gendarmerie, now said to number anything between 18,000 and 24,000 men, suggests no relaxation of tension. There is abnormal emotion in the airport farewells of Belgian families. Last weekend a columnist admitted that "Katanga is tired of waiting." Two years of uncertain independence have left their mark.

Nevertheless, President Tshombe is at present brimming with smiles and self-confidence. His personal position, which seemed insecure in June (when he had been six weeks in Leopoldville talking to Mr Adoula) looks completely assured now that he has reviewed his soldiers and had the necessary brush with Indian troops at a roadblock. With some satisfaction he watches the deterioration elsewhere in the Congo; Mr Adoula's inability to command a majority in parliament, the fighting among Lulua leaders in north Kasai, the closing down of a diamond plant in west Kasai and a gold-mine in Orientale province at Kilo Moto. He can congratulate himself as he notes that the central government is having to use a Katangese as special commissioner in Equateur province, and that it will probably be soon designating another to look after Leopoldville itself. His gendarmerie has been greatly strengthened by the appointment as chief of staff of Colonel Kyembe, who held the same post under General Mobutu until he became disenchanted with Leopoldville. And in the background Union Minière's taxes and duties keep rolling in at the rate of £1,500,000 a month. His claim to be an island of stability and prosperity has never seemed better grounded.

All the same, Mr Tshombe is in no mood to leave Katanga for some time. Last weekend a government statement said that the Katangese representatives who have been nominated to the four commissions which face the task of reintegrating Katanga with the Congo were ready to leave without delay. It ignored the point that the commissions—to advise on military, fiscal, economic and transport matters—had not been properly constituted because Mr Tshombe had refused to sign the formal agreement setting them up. United Nations officials suggest privately that Mr Adoula should ignore this formality himself in the interests of breaking the present stalemate. Mr Tshombe's latest apparent turn towards conciliation may have encouraged them to take this attitude. Whereas a fortnight ago he was declaring that he would talk no further with Mr Adoula (presumably believing that this would complete the premier's downfall), by July 27th he was saying that he would negotiate "with any Leopoldville government whatever it may be." *[Mr Adoula's new constitutional proposals of July 29th are discussed on page 424.]* The suggestion of Mr Paul Struye, president of the Belgian Senate, that the leaders of Senegal, the Ivory Coast and Malagasy should act as mediators has been quietly welcomed here. But it is regarded only as a plan to hold in reserve in case direct negotiations achieve nothing within the three months that Mr Tshombe gives the commissions to complete their reports. Similarly, the news that the United States, Britain and Belgium are working on a new plan has excited neither the UN officials here nor the Katangese. It could perhaps serve to head off an unpleasant session of the Security Council, but what after all is there new to be said? The only real variant in two years of Congolese calculations has been the ebb and flow of strength on the opposing sides. Just now the tide is running for Mr Tshombe, who among the groups hostile to Mr Adoula can claim several new allies in his fight for "a very supple federal type constitution." In the meantime the Katangese leaders have prepared for the worst: the interior minister, Mr Godefroid Munongo, is fond of boasting how they have mined the country's main dams. "Après moi, le déluge" is a literal threat with these men.

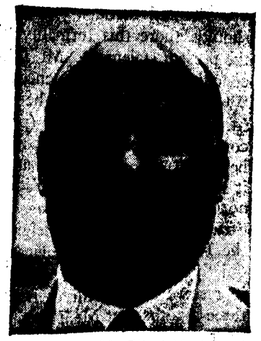
Mixed with Katangese confidence is a new modesty about Katanga's wealth. At the start of its secession Katanga's patriots declared how intolerable it was that their country should be contributing 60 per cent of the Congo's revenue and only receiving back about 15 per cent. Now Union Minière officials are eager to publish figures which show that their company only provided an average of 26 per cent of Congolese revenue during the ten years before independence. Mr Tshombe has used these figures to explain that the reintegration of Katanga will not resolve all the Congo's difficulties. Obviously, this is true: soldiers will not easily swap the rewards of a rifle for the backbreak of a hoe, the administration will not increase its efficiency overnight, nor will investors return within a month. But optimists see in Mr Tshombe's new argument that Katanga is only moderately wealthy a desire to make terms swiftly, in the hope that he will get better terms now than later.

The tired waves of United Nations endeavour have gained a few painful inches in Katanga recently. This week the evacuation from Elisabethville to their distant home areas of 70,000 Balubas and men of other minority tribes was completed, and Mr Tshombe has accepted responsibility for those 6,000 who remain. This is no small achievement of persuasion; only eight months ago his foreign minister, Mr Evariste Kimba, was accusing the UN of training the Balubas as commandos to slaughter law-abiding citizens. The new UN representative, Mr Eliud Mathu of Kenya,

has made a good start and speaks the same language as Mr Tshombe —figuratively as well as (in Swahili) literally. But with little respite after the Balubas he has now to face another struggle: to argue the Katangese leaders into sending back the 200 Northern Rhodesians whom Mr Harry Nkumbula's African National Congress despatched for army training in Elisabethville. Mr Mathu has a mandate under the February, 1961, resolution to remove foreign military personnel. But the execution of such mandates in hostile military camps is hardly easy. Britain, which has a direct responsibility in this matter, must be appalled at this threat to the hopes of peaceful elections in October.

Last week's visit to Elisabethville of Mr Patrick Matimba, until recently president of the minority African party in Southern Rhodesia, has also an ominous ring.

Mr Tshombe's open intetvention in Rhodesian politics should be welcomed by no one, and it would be interesting to know whether Sir Roy Welensky brought up this matter at the most recent of his meetings with Mr Tshombe. Perhaps he is happy to watch the Katangese leader pay handsomely in Landrovers to encourage dissension in Rhodesian African ranks. If he believes this is copper well spent, his friends may warn him it is gilding neither his nor Mr Tshombe's reputation in other lands.



U N man : Mr Eliud Mathu

Crystal-gazing in Ghana

FROM OUR SPECIAL CORRESPONDENT

ACCRA

NOT much future is to be seen in a black crystal ball ; you have to stare hard to find the present. The handful of African politicians who run Ghana have been five years under the world's stare. On March 6th, 1957, they took over from a handful of Europeans the task of leading six or seven million tribesmen towards understanding a mechanised civilisation, and towards becoming part of it. This is now the task of new black masters throughout Africa. All confront ignorance, illiteracy, superstition, tribalism, corruption, poverty, disease, one-crop economies, their own temptations and (like it or not) some degree of dependence on outside countries.

Ghana's way out of all this has a singular flavour, not without bitterness. The justification must lie in the results. So far, these are impressive. Ghana is more independent than any other black African country ; most decisions, that is, are taken with an eye to what are considered in Accra to be Ghanaian interests. Ghanaians can be seen to be in charge, virtually everywhere. This is the real African revolution, to get Africans to run Africa on modern lines—and Ghana today seems to have in it enough black impetus to keep it going, if necessary without Europeans.

But the outsider gets the sour taste, all the same ; say, when he watches the piccanins march, chanting hymns to His High Dedication the Osagyefo. They clap rhythmically when anyone big enters the classroom. They stand and salute with their tiny black forearms erect, pale palms outwards. But like as not, a little one at the back will get a sudden fit of the giggles. At the bureau of African affairs two pages of intimate questions must be answered, especially if the visitor is white, and everyone who enters must first be photographed. There is a wait of two hours to be told that one has no business there. "So every other African country thinks Ghana is isolated ! As long as we don't think so, we are not," the bureau official spits in the visitor's face as he walks back through the waiting rows of patient Africans.

But, driving away, one may find the balance restored. Ghana's function is to be the capital of radical Africa, the centre of its continued revolution against the whites who still control a third of the continent directly and much of the rest of it indirectly. This at least is the Ghanaian view, and who can deny that Dr Nkrumah has the money to buy the best information on the Union Minière and the Rhodesia lobby ? The most moderate Ghanaian will point this out. And ordinary Ghanaian niceness puts things right. A ramshackle bar called "Slow But Sure" beckons ; a mammy-wagon turns the corner, showing the enigmatic label: "After This." Across the road is the "Why Worry?" spare parts shop and no ordinary Ghanaian in these places seems to have heard of the African affairs bureau.

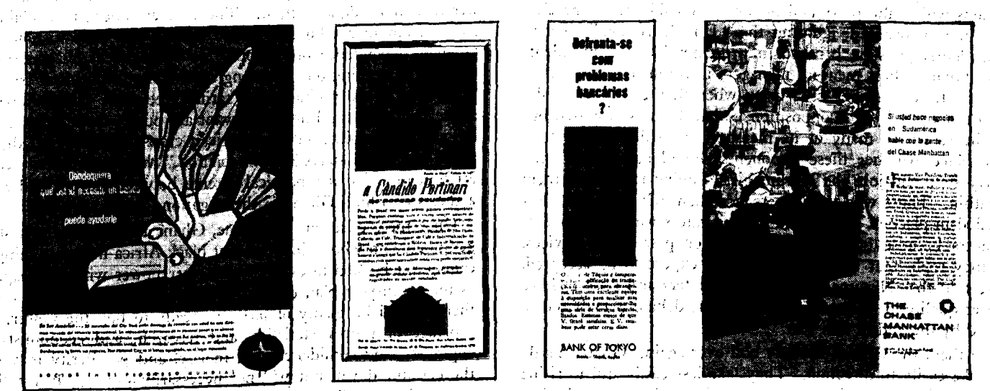
Ingloriously, the earnest "Nkrumahist" at the university will explain how academic freedom is essential, but the university, "which is after all financed by the government," should "assume its correct role in the national life." Students may discuss what they wish, "but we expect respect for our President just as you expect respect for your Queen." If it is protested that the whole meaning of Nkrumahism (to produce Africans demonstrably equal to everyone else) is made nonsense of by interfering with the universities, the answer is that some expatriate lecturers, now gone, wrongly sought to guide the affairs of the nation.

At the magnificent secondary school at Achimota, Ghanaians tell a tale of how the government tried to introduce Young Pioneers to the school and failed—and of how one minister threatened to have the school's grant cut if his unqualified offspring were not admitted, and of how the threat was made good. The government will smother Achimota one day, but it will be a long battle because so many Ghanaians in positions of power and influence are old boys. Is Ghana to be blamed for these things, or praised? The headmasters who, at Achimota and elsewhere, are stoutly holding out for school independence are Ghanaians themselves.

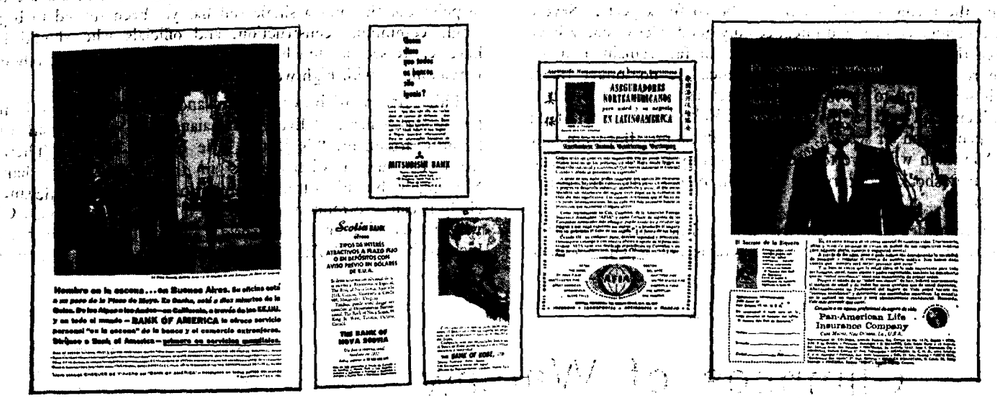
Stoutly holding out for Ghanaian liberties as a whole is Dr Danquah, a man of principle, who refuses to fight with the gloves off or even (as others have been tempted to do) to take his battle outside the country. Now out of detention, Dr Danquah remains the nagging conscience of Ghana and its grand old man. He has the dignity, and the absolute rightness, of a Chief Luthuli, but his world and his time are wrong. The contrast with Dr Nkrumah, the showboy who, a long decade ago, left Dr Danquah's party to form his own, is immense. But, again, it is hard to say that Dr Nkrumah is not doing many right things for Ghana.

Agriculture, for example, needs to be diversified and productivity increased. This is the core of the country's economic problem. Dr Nkrumah's "Future Farmers," a kibbutz brigade, have the soul of the idea: they are slow about putting it into practice. At the George Padmore settlement farm, near Accra, a group of future farmers voluntarily cleared a few hundred square yards of bush with scythes and were rewarded by a visit from Osagyefo himself, who, beaming his beatific smile, congratulated them and their uniformed non-working comrades on their enthusiasm. The leader sprang up to complain that the higher leaders were going too slow, and Dr Nkrumah laughed with joy. He looked on with distaste as the local chief sacrificed a live sheep before his feet, but ran bravely into the fields with the future farmers, who waved their cutlasses in the air behind him. Then the Ghana Farmers' band played a political calypso. Refrain: "With Ghana as the trigger, Nkrumah as the gunman"—Africa, it appeared, was waiting for this great gun to fire, of course, metaphorically. Yet, even after such a dose of unpalatables, the outsider must still ask himself how else the thousands of youngsters in the cities can be got back

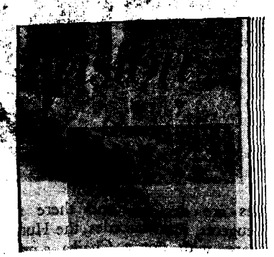
More financial and insurance companies



direct their advertising to Latin America



in Visión/Visão than in any other magazine



Bankers and insurance firms play a vital role in the fast-growing industrialization of Latin America, in its business and its commerce. Their services are ever present from the very beginning: from the leasing of land, through the construction of the plant and installation of machinery and equipment. Once in operation, the firm cannot exist without the services of banking and insurance for working capital, purchasing, trade credit financing and investments. And besides promoting their branches and representatives to local industrialists, modern international bankers use Visión and Visão to encourage correspondent banks to use their facilities overseas. That's why Latin America's largest newsmagazines consistently carry the most financial and insurance advertising.

to the land, and working more efficiently than their grandfathers.

This is a one-party state, and Dr Nkrumah is its boss ; but there are factions within the party and opponents outside it. Some civil servants, it is whispered, ignoring the "Double Action" slogans on their doors, go slow because they do not like the president. Many of Ghana's best men are managers in commerce and industry ; their attitude can be, "We listen when they call us comrade, but we do not talk." The opposition United Party still exists, but awaits the return of many of its members from detention. It is much debated whether these opponents should acquiesce in the one-party state and join the Nkrumahists, hoping to restrain them from within. Those who would persuade them tell them that they are needed in place of some of the second-raters who hold government posts because of party enthusiasm or past party services. When they reply that they are too late to expect to be accepted, they are told that Nkrumah welcomes repenters and likes to have the better quality Ghanaians with him. The debate is expected to be settled by the end of this year.

Before then, the Ghana pot may boil over again. Ghanaians do not all take easily to direction. They take less easily still to rising prices and salary cuts ; it was these results of last year's budget that led to a wave of strikes and arrests. This year's budget, everyone guesses, will be worse (unless the government takes fright and puts the medicine back in the cupboard for a year). Severe foreign exchange control and unexpectedly good sales of cocoa have improved the figures so far this year, but the fact remains that the massive reserves inherited at independence are no longer there. There is something to show for these reserves: a magnificent harbour at Tema, all paid for by Ghana ; the Volta Dam, now started ; money spent on an air service, roads, and education. But from now on Dr Nkrumah will have to earn every penny he wants to spend and this new shock may turn out to be the biggest that Ghana has had to absorb.

It may coincide, this September, with a political crisis about the common market. The question in Accra is not whether Ghana will join, but whether Dr Nkrumah will attend the Commonwealth prime ministers' meeting at all—or simply leave the Commonwealth and be done with it. The best argument to explain this comes from men who are not so heated that they wish to deny Ghana's dependence on Europe (for cocoa sales) by bankrupting Ghana (by keeping on the wrong side of the future tariff barriers). Such men would probably like tariff agreements with Europe, but argue that if all the Europeans want are purely trade arrangements designed to stabilise sales of African crops, then why all the fuss about associated states ? "Association," they hold, must mean an attempt to arrive at a political entente between Europe and Africa, a thesis of which Ghana is the negation.

Once these crises are overcome, Ghana may emerge as a strong, genuinely and wholly independent black Africa nation, a thing that cannot yet be said to exist. Volta river power will be cheap, and, as the seven-year plan due to be announced this year will outline, there should be plenty of industry ready to buy the power. The shortage of proper statistics, and research, and economists, and engineers, and confidence, and money, and popularity may weigh the country down, but will not necessarily sink it. If a policy of "non-alignment" means signing £100 million worth of trade agreements with communist countries, this does not mean that Ghana will go communist out of frustration. Ghanaians are quick to point out that not a single sod has yet been turned to begin a single communist construction, and officials who should know have expressed as much impatience with Russian methods of bargaining as with high western rates of interest.

This mixture of bitter flavours and heartening news is to be found everywhere. "Every Ghanaian," one will be told after a friendly argument, "is just a little bit anti-white." There are many far nastier dictatorships in the world today than Dr Nkrumah's, but his attracts more than its share of criticism, precisely because so much was expected of Ghana. With luck, Ghana will one day live up to the world's expectations and, with greater luck, to its own. "The future looks black" has two meanings.

A Gaffe in the Market Place

BY A SPECIAL CORRESPONDENT

AUSTRALIAN newspapers are busy attributing complicated motives to the principal actors in the drama that culminated in the dismissal on July 27th of Mr Leslie Bury, the minister for air. Mr Bury's motives were surely simple, too simple. As minister assisting the federal treasurer he had his eye on the domestic scene, and like rest of the cabinet he was concerned at industry's lack of confidence in spite of all the pump-priming there has been since December, when the electorate recorded its notable censure on the government's monetary policy. One reason for the slow return of confidence is what Mr Bury called "exaggerated fears" about the common market. So he told his audience of Sydney business men:

> Currently less than one-fifth of our total exports are going to Britain, and of this one-fifth only a small proportion seems likely to be affected. Even if this small fraction of our export trade disappeared entirely—which is in no way likely—the event would hardly impair the main fabric of the Australian economy.

Whether Mr Bury was right or wrong depends on what is a minor and what is a substantial effect. An effect that is minor in relation to the economy as a whole (which is what Mr Bury was discussing) could be annihilating to an industry like dried and canned fruit, which depends on the British market, and possibly on the British preference, for its existence. Whether Mr Bury was right or not, it is indeed strange that he did not notice that his toes, far from being on the party line, were trampling the corns of his senior colleagues.

The deputy prime minister and minister for trade, Mr John McEwen, who has been Australia's principal spokesman in the common market negotiations, reacted very passionately to this talk about exaggeration. Independently and without consulting the prime minister, he prepared a long statement for the press in which he said, "I was shocked that a ministerial colleague should publicly undercut the strength of Australia's negotiating position." That statement led inexorably to Mr Bury's resignation and so brought his heretical views into the world's headlines. It might have been better to explain away the differences and say that it all depended where you were sitting.

Mr McEwen, however, is a man who feels strongly. Negotiators on both sides of the Atlantic are familiar with those lowering black brows and that voice, vibrant with indignation. In any case, as leader of the Country party, Mr McEwen has to be very indignant on behalf of the primary producers—the more so, perhaps, because his protectionist policies as minister for trade are inimical to their interests, in that their costs are thereby increased without any corresponding increase in the prices they can earn in world markets. In this connection echoes of a departmental clash may also have stimulated the passion of Mr McEwen's pen. Mr Bury, as an economist, would be likely to agree with officials of the Treasury that Australia's big export problem is going to be those same high costs.

The prime minister's reaction was much quieter. He had to ask for Mr Bury's resignation in the name of cabinet solidarity, but he paid tribute to his integrity and said he respected his views. Mr Menzies could, if he had been so disposed, have applied to himself Mr Bury's remarks about exaggeration—notably to his joint statement with Mr Marshall of New Zealand about Britain's tentative agreement to eliminate preferences on Commonwealth manufactured imports, precious little of which, as a matter of fact, come from either of the protesting countries. But Mr Menzies had himself mildly tried to cheer up the business men only three or four weeks ago when he said that the common market must be regarded as a challenge. Here again one must study the political scene. Mr McEwen is much canvassed these days by a section of the Sydney press as a potential prime minister, and the business man's friend. Just as Mr Macmillan has been dissociated in the public mind from the Suez venture, so somehow Mr McEwen has become dissociated from the credit squeeze and other unpopular measures of November, 1960. Moreover, the Liberal party has no

Glimpses of Warsaw

BY OUR SPECIAL CORRESPONDENT

ONE'S first trip behind the iron curtain is still a great adventure ; it is also, if Warsaw is first stop, a great surprise. There, immediately you stand on the airport runway, looms the familiar Palace of Culture. The sad-faced girl from Canada, who is bracing herself for all the heartaches of a month's return to relatives and homeland, follows your glance. "St Joseph's Cathedral, our wedding cake from Stalin ; yes didn't you know, the smart flats in Warsaw are those that *don't* have a view of it." A few hours later, you can tread your lonely way through the echoing marble of its empty halls and take your choice which of twelve deserted lifts should carry you to the top. A subsequent comment to a Polish acquaintance on the excellence of the view provokes a quizzical, almost hostile look. There it is, this painful daily reminder of Russian dominance ; the Poles cannot move it, but they can turn the other way.

Looking west while facing east is indeed one's overriding surface impression of Warsaw. By western standards certainly the town is still pretty shabby, which reinforces the feeling of sadness that this hapless victim of history so strongly evokes. But the contrast with western capitals of to-day is primarily a straightforward one of standards of living. Warsaw reminds one much more strongly of Vienna in 1950 than of Moscow in 1962. Here in the shop windows are the sights familiar to western eyes—Penguins, Haig's whisky, Gaulloise cigarettes, even Mont Blanc pens. The cars in the streets are predominantly the local product, an ungainly model taken over from the Russians who in turn took it over from Opel. Among imported cars Russian and Czech types are said to be given preference over western models, which cost hard currency. But glance into the forecourts of the palatial offices in which these priori-

ties are decided, and there stand the Peugeots, the Mercedes, the Humbers, the Fiats—with not a Chaika among them. Even at the top, among the men who have their place in the system, the national preference for western styles of living is freely indulged.

On a wider level this indulgence is still more striking. Warsaw cafe life is admittedly only a shadow of its former self—was it wiped out with the Warsaw of 1944, and its subsequent revival stultified by the dead hand of a state-owned catering industry? But dance bands are active and unrestrained, and in restaurants well short of the luxury class they beat out the latest (well, not quite the latest) pops of the western world in an atmosphere that one does not normally associate with iron curtains. Some time in the early hours of Sunday morning your Polish companions may call a halt with the fashionable Warsaw refrain: "Well, we must be up early for morning mass. It's a frightful bore, but you have to go, otherwise everybody thinks you're a communist."

At the official level, too, the Poles display an almost breathtaking independence of spirit. As Polish planners describe their methods—or at least their aims—they are not far removed from the managed use of the price mechanism as envisaged by prewar socialist economic theorists (not least Poland's own Oskar Lange) and as partly practised in postwar Jugoslavia. As one Polish official put it:

> Our policy is to influence consumer choice in a number of ways—price policy, education or advertising (very effective with the field to oneself!) and wages policy. But once the consumer has made his choice, subject to these influences, our aim is to adapt production to it.

Official price policy is in fact a very strong influence. Thus the authorities are seeking to delay the increase in the car population by pricing cars at about ten times the figure for motor cycles. So the real significance of this price flexibility, by comparison with Soviet practice, is that it reduces queues and waiting lists—although Polish politicians will not always allow their planners to push flexibility to the limits they would like.

Hire purchase, also, is used essentially as an instrument of short-term expediency, to influence demand. "At first there was a lot of sentimental talk about hire purchase as a means of bringing former luxuries within the worker's reach," one official said privately with uninhibited frankness. "Now we just use it to clear stocks." The lists of goods sold on credit are revised every month. The Polish car is on it ; foreign cars are definitely not. Nor are bicycles, or any but a few badly selling lines of furniture or washing machines.

Within the important limitations set by their strategic aims, the Polish authorities do try to step up production to meet changes in demand—though they have had much less success in using prices as a guide line to producers than to consumers. Perhaps the most important spur to production of consumer goods is the not inconsiderable flow of consumer goods from the West. Since a quarter or a fifth of Polish families have gift-sending relatives abroad, the authorities accept this intrusion as one they have to live with. They make no frantic efforts to prevent western luxuries being brought into the country, taking comfort from the amount of purchasing power that their high prices soak up. Meanwhile they find themselves forced to produce imitation Chesterfields and imitation Gaulloises, and to copy from discarded garments that arrive from America the women's fashions that Chicago took from Paris three years ago—and which will ultimately end up as the novelties of Moscow.

obvious heir-apparent. In these delicate circumstances it would not have done for Mr Menzies to seem the less vehement of the two in defence of Australia's interests—particularly as (until his disillusionment at last year's prime ministers' conference) he was suspected at home of being too fond of the British.

For the first time the question is being asked here, has Australia overplayed its hand in the common market negotiations? Here is a paradox. Australians generally, whether politicians, officials, journalists or men in the street, have been cynically certain from the start that Britain would have to go into the common market with or without a fair deal for the Commonwealth. (Incidentally, if the Six were aware of this, it could have hardened their hearts against concessions far more than any references to the statistics which they have before them anyway.) Yet if this cynical certainty proved justified and Britain were to enter the market on terms unfavourable to the Commonwealth, then Australia could be hit with its own boomerang. To prevent world confidence in Australia's prospects from drying up, and with it the flow of migrants and of overseas capital which Australia needs for its development, more voices than Mr Bury's would be needed to cry that Australia will be all right after all.

Co-existence at Aswan

FROM OUR MIDDLE EAST CORRESPONDENT

More humane than most of the Pharaohs, the directors of the High Dam project at Aswan have decreed that all heavy work should be done by night. Three shifts are working round the clock. The two cooler shifts, from 6 p.m. to 10 a.m., are devoted to construction; perhaps, at the present stage, "destruction" would be a more precise description, since the immediate task is to drive two deep chasms, upstream and downstream of the dam site, through a mighty wall of stubborn granite. The day shift, now working in temperatures ranging up to 110 degrees, is reserved for maintenance, repairs and the preparation of charges to be ignited when the evening shift comes on.

The two chasms now being cut out of the right bank of the Nile are the upper and lower ends of the canal which, with two coffer dams, will divert the river, so that the High Dam itself can be built in still water. There has been much discussion of the rival merits of diverting the river by means of an open channel or by tunnelling. The course adopted is a compromise. The greater part (1,550 metres) of the new canal will be open; where it crosses the line of the dam site, six tunnels, each 285 metres long, will be driven through the rock to link the upstream and downstream channels. According to present plans, the power station will be sited at the downstream outlet of the tunnels.

Any day now, somebody's finger, probably President Nasser's, will press a button to explode the first charge in the first of the six tunnels. The president was supposed to have done so on July 9th, but he postponed his visit to Aswan because of preoccupations with the National Congress and with the split between the Algerian leaders. Meanwhile, work on the open channels goes on. Explosives, drills and excavators have already bitten some 50 metres deep into the granite, to a width of 50 metres. They still have 25 metres further down to go.

There is much sound and fury at the works, especially by night. Arc-lights flood the area, throwing brilliance and darkest shadow. Far below the original level of the rock, men swarm on ant-like errands, dwarfed by towering cliffs and whirring, clanging machines. The work site is freely hosed to keep down dust which would otherwise blind and choke. Heavy lorries splash around in the mud like ducks. Electric excavators snap up tons of broken granite in one mouthful, slew round in a semi-circle, and dump their loads into waiting 24-tonners. The trucks roar up through a tunnel which now connects the bottom of the cutting with the cliff-top. The Egyptian engineer in charge of it takes a professional interest in the Channel Tunnel project, and particularly asked whether the old Suez Canal company was really involved in it.

Almost all the machinery used on the project is of Russian origin, though the lubricants are supplied by Shell. Power is brought to the site through two feeders from the power station at the old Aswan dam, four miles downstream. Russians are working at many technical levels, although neither they nor the Egyptians like to talk figures. One gets the impression, confirmed several times over, that working relations between them are good, but that the two communities do not mix much off duty. As the Cairo train came to a halt in Aswan station, some 20 Russians got off, four from the first class car, the rest from the second class. Their reunion with wives stopped traffic for a while; then they grabbed their bags (no nonsense about tipping porters) and trooped off to their bus. It all seemed cosy, communal and workmanlike, especially as there were no taxis in the station yard.

An Egyptian at Aswan offered two explanations for Russian aloofness. First, he thought that the Russians were taking care to stick to their technical brief and to avoid any suggestion that they might be fraternising for ulterior motives. Second, he suggested that they might be embarrassed by getting too close to a "bourgeois" revolution, and were therefore stressing the purely business side of the connection. Of the two explanations, the first seems plausible, the second somewhat far-fetched. It may also be said that the Egyptians, on their side, are becoming sensitive to the charges of being godless and having communist leanings that are being levelled against them from Mecca and Baghdad, and may be anxious to show that their co-operation with Communist countries has no political or moral significance.

Most westerners in Cairo have given up the attempt to match the work achieved against "schedule." With a time-span of 11 years, schedules must be flexible; time-tables must be readjusted frequently to meet new conditions. If the Egyptian engineers feel any disappointment at the Russian effort, they do not show it. They speak of the completion of the diversionary canal in about two years, of the installation of the first power unit in 1968, of the end of the whole project in 1970, as if these things were as inevitable as the tides. And they give all the credit to President Nasser. Apart from the High Dam, a new housing project is almost finished outside the town for the 5,000 workers at the fertiliser plant that is already producing half Egypt's annual consumption. Aswan is one of the main shrines of Nasser-worship.

INDIA

EIU QUARTERLY ECONOMIC REVIEWS
covering 57 countries or groups of countries

India's Third Five-Year Plan has run into serious difficulties. This Review looks at the recent failure of the West to keep up its instalments of aid; it examines reasons why private oil companies are now receiving better treatment from the government, and why, on the other hand, the publicly owned steel plants are in difficulties. Finally, reactions to the Common Market's proposals for trade in textiles are discussed.

Battle of the Youth Hostels

FROM OUR BONN CORRESPONDENT

Just now, when the young hikers are hopefully afoot, a German iconoclast has protested that Germany's youth hostels are "an *omnium-gatherum* of the kind of doctrinaire sectarians for whom an encounter with the main stream of youth would be healthier than the repeated cultivation of their own get-togethers. The other kind of young people, however, stay outside."

This mouthful of disrespect for a sacred cow among German institutions has provoked some hot discussion. Having begun 53 years ago, the Germans can claim to be the first to have developed youth hostels systematically. There are now 715 in West Germany alone, many of them buildings of considerable architectural grace and historical interest, often superbly situated. Last year these *Jugendherbergen* together counted 7,800,501 overnight visitors, including foreigners. The under-twenties among them paid an annual subscription of 3 marks (5s.), and 90 pfennigs (1s. 6d.) per night for their accommodation; the over-twenties a minimum annual subscription of DM. 5 (7s. 6d.) and DM. 1.60 (2s. 6d.) a night. Nearly 95 per cent were under twenty. And of all who came, 18.5 per cent were travelling alone, 13.4 per cent members of youth clubs, 18.6 per cent in elementary school groups, 18.8 per cent in secondary and grammar school groups, and 25.4 per cent in parties of apprentices.

Grizzled over-twenty-fives (who are not entitled to use youth hostels) will find these figures at first sight impressive. Does it look as though the "main stream" of German youth is passing the *Jugendherbergen* by? Yet it is true that many hostel visitors complain that the house rules are unnecessarily irksome, sometimes insufferably paternal, sometimes even "Prussian." It is also true that a minority of young travellers, who do not look or behave like the *Wandervögel* of tradition, sometimes feel themselves unwelcome in the hostels.

Discussing the house rules, the provocative critic who has already been quoted —Herr Jürgen Zimmer, writing in *Die Zeit*—has asked whether it is really necessary nowadays to remind hostel guests not to spit on the floor, not to make a noise when others are asleep, and not to abscond next morning with the bedding. The rules are indeed bluntly specific; in the official handbook of the *Deutsches Jugendherbergwerk*, it is solemnly laid down, for instance, that "the washing facilities are to be used; no-one must go to bed with unwashed feet."

Some object to lights out and doors locked at 10 p.m., on the ground that this practice prevents guests from going to the cinema or to a dance, or even from taking a properly romantic *Wandervögel* walk under the stars. There are two sides to this. There is something to be said for intelligent relaxation of the curfew in the big towns—where, it has been alleged, you may sometimes see youths lowering themselves after 10 p.m. from hostel window to street by means of sheets knotted together. Yet it is understandable when the defenders of the regimen rejoin, as one has rejoined: "You say you are imprisoned at ten o'clock, forgetting our undertaking of responsibility that enables your parents at home to sleep in peace. What do the young rebels under eighteen want outside the hostel after ten o'clock at night? There too,—at least in the pubs and cinemas—a law is in force for the protection of young people. The statistics show that scarcely anyone over twenty ever uses a youth hostel. They have earned their freedom, and prefer tent, pension or hotel."

But the brunt of the current offensive against the youth hostels is being directed against the spirit more than the letter of their laws. For the text of his Philippic in *Die Zeit* Herr Zimmer chose words spoken by Richard Schirrmann, the founder of the youth hostels, at the fiftieth anniversary ceremony in 1959. "I should like," Herr Schirrmann declared, "to take the fashion dolls and the ninnies for a week *through the wind and the weather*. They would discard their stiletto heels the first day, believe me; and they would go back home quite different persons—for Nature forms us, body and soul."

This kind of sermonising, the critics complain, is born of the outmoded *Weltanschauung* that most youth hostel directors still try to purvey with their accommodation. It is this *Weltanschauung* that, as one critic has put it, insists that woollen socks are more respectable than nylon stockings, rucksacks more youthful than suitcases, and communal singing to the guitar healthier than listening to Alban Berg's *Wozzek*; and that young people are all simple, sanguine comrades who cut their bread with clasp-knives. Among its disciples, the "lesser breeds without the law" are those who belong to the "sceptical generation," and more particularly car owners, music lovers with tape recordings, jazz-club members, theatre and cinema goers, and "nineteen-year-old girls with a waft of the exotic The elect are boys in leather shorts, girls wearing the *Dirndl*, folksong minstrels, and "group leaders with a father fixation."

The failings of the youth hostels are being joyously exaggerated in the heat of the debate. They are largely a hangover from the heady German youth movement whose history is admirably related in a recently published book* by Walter Z. Laqueur. In his summing up, Mr Laqueur observes that the German youth movement "wanted, like Rousseau, to return to nature, to enter into a life free of the restraints of civilisation, warmer, more vital, and more spontaneous. To justify this aspiration, it unduly idealised primitive society, completely unaware that it is in fact hag-ridden by fears and taboos, and anything but free. Equally unfounded was the assumption that human beings in groups were more sincere and spontaneous than as individuals; for is it not precisely within a group that people learn to adopt mask-like patterns and attitudes?"

At the German youth hostel headquarters at Detmold they admit that there are some hostel managers and groups of young people who try to foist quaint, prudish notions on the rest. But they deny that the hostels are being generally shunned, or that they should be either drastically rejuvenated or abolished. The original and as yet unattained aim, they maintain, is still valid—the establishment of so many cheap hostels throughout the country that none is more than a day's journey *on foot* from another.

THE BUSINESS WORLD

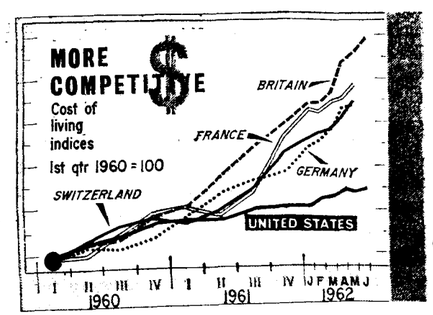
Reappraisal for the Dollar

In a scantily reported closing speech to last week's censure debate in the House of Commons, the new Chancellor of the Exchequer gave an important commitment. Mr Maudling first declared his concern about low commodity prices, the weakness of Wall Street and possible restrictive pressure on world trade; he largely agreed that the piecemeal measures recently taken to ease strains on world liquidity in general and on the two reserve currencies in particular have not been in themselves sufficient; and he then stated that he intended "to take the initiative" for a new approach—presumably at next month's Washington meeting of the International Monetary Fund. A few hours after Mr Maudling spoke, it was announced that Britain was squaring its own account with the Fund—that the remaining $512 million outstanding on the biggest-ever drawing from the Fund was to be repaid within a year of its being made last August. Mr. Maudling and his new team at the Treasury can therefore bring Britain back into the forefront of this great debate free of any debtor's inhibitions.

One may hope, therefore, that the next phase of this continuing world currency saga may be more constructive than seemed likely even a week or two ago. The currency markets are enjoying a brief respite. Sterling has been bolstered all this year by the real strengthening that has taken place in the basic balance of payments, thanks first to an improvement in the current balance and, secondly, to the support given to the capital account by relatively high interest rates. Sterling has also undoubtedly benefited from the fact that the attention of speculators has this year been switched to the dollar. In May, June and the first three weeks of July this speculation built up to a worrying pitch; then the most widely witnessed devaluation denial in history, by President Kennedy via Telstar, achieved an instantaneous and surprising success in pricking the bubble. This success, it now seems clear, was founded on cool reappraisals of prospects for the dollar that were already being made in a number of influential quarters.

Analysts have been fastening on the marked reduction in the American net payments outflow achieved in the second quarter of this year, and of the good prospects for the current quarter, which have enabled Mr Robert Roosa, an Under Secretary of the US Treasury, to revise his estimate for the full year "deficit" from $1½-1¾ billion to $1-1½ billion. It is recognised that part of the recent improvement—possibly $300 million—is attributable to the flight of capital from Canada before the crisis measures of end-June, and that the noticeable improvement in the current quarter comes from special debt repayments totalling nearly $500 million from France and Italy. But advance debt repayments by European countries could still make a continuing contribution over the next few years. Meanwhile, the United States has gone far to achieve its aim of "taking aid out of the balance of payments" by tying 80 per cent of it to its own products, and it is now on its way to doing the same for its equally massive overseas military expenditures. The recent ordinance that United States supplies should be given preference at prices up to 50 per cent above foreign prices does indeed amount in effect to a corresponding "planner's devaluation" in this sector; but while the American economy remains underemployed this may have a logic of its own.

These successes, or prospective successes, in plugging leaks in America's non-commercial payments are most important, for it is these special payments that throughout have been wholly responsible for its net deficit. But the reappraisals that are being made in favour of the dollar are based on wider considerations. It is being asked, not unreasonably, whether the prospect for economic growth could not be better in the medium term in the United States, with its substantial margin of spare capacity, its rapidly growing population and its relatively stable costs, than is the prospect in the now largely over-stretched economies of continental Europe; and, with the often decisive influence of capital flows in mind, a faster rate of domestic expansion is increasingly being associated with a strengthening rather than a weakening in external payments. In a thoughtful speech in Cambridge at the end of last week Dr Roy Reierson of the Bankers Trust Company asked



> whether the same lag that was experienced a few years ago in recognising the end of the "dollar gap" may now be delaying appreciation of the profound effects that full employment, rapid growth and widespread prosperity are having upon the balance of payments relationship between continental Europe and the United States.

Much the same question is being asked by central bankers on the continent. Some of them have made a direct and momentarily successful attempt to counter the denigration of

the dollar and President Kennedy alike that has been drummed into the ears of their local banking communities by New York bankers who are not in the habit of considered analysis in the Reierson manner. Dr M. Iklé of the Swiss National Bank stated in a public speech recently that "if exchange regulations were in force in the United States as they are in certain European countries for capital transactions, there would be a world-wide dollar shortage." And last week Dr Otmar Emminger, a director of the Deutsche Bundesbank, wrote a hard hitting article in the *Frankfurter Allgemeine Zeitung* pointing out that the marked shift in costs in favour of the United States has itself "noticeably reduced" the overvaluation of the dollar.

Above all, Dr Emminger speaks out against the widespread belief that present stresses on the dollar force the United States to take risks with its domestic economy.

> Nothing would harm the world economy and confidence in the dollar more than a premature slide by the American economy into recession. . . .

As for the danger that official counter measures may be inflationary:

> Some experts indeed maintain that in the present circumstances of the United States it would be very difficult to bring an inflation about.

A reflationary policy of the right kind, Dr Emminger points out, could actually help the balance of payments, through its crucial effect in attracting private capital back from Europe to the United States. The gist of this advice is the same as that given by European economic and financial officials meeting in the important economic policy committee of the Organisation for Economic Co-operation and Development earlier this summer—that the United States should not leave until too late any necessary measures to counter recession; but that it should keep a close watch on its costs and try to finance its increased budget deficit by market borrowing. This would serve the double purpose of reassuring financial opinion generally and bringing about that rise in interest rates which is being increasingly urged on the American authorities as a powerful line of defence for the dollar.

Mr Maudling's Task

THIS prescription is a basically sensible one, though if American interest rates are to rise and the economy is still to be steered into full activity, the necessary budget deficit might be larger than some European bankers contemplate. But one must acknowledge that many European central bankers are now giving the right lead to their markets on this object lesson in modern economics. They have thus risen to the first part of the challenge with which the Wall Street slide confronted them two months ago. The other, unfinished, parts of their task are

(1) to ensure that their good sense prevails in the immediate future, that their defences against short-term speculation are sufficiently strong; and

(2) to provide the necessary longer-term framework in which world trade can grow smoothly without continual resort to emergency expedients.

In the short-term task of offsetting speculative movements of private funds, the financial authorities have made a good deal of progress. The new style mutual credits between central banks; Britain's example in offsetting short-term capital flows, in both directions, by transactions with IMF; last year's Paris Club arrangements, now being completed, which will provide resources for a drawing on IMF by the United States (which many people now believe may be necessary to fund short term credits from central banks); and the undercover arrangements for management of the London gold market—all these have given valuable relief. But the psychological reassurance that ought to be gained from such co-operation has been unfortunately limited by the evident scepticism with which certain central bankers still view these ventures. And their lasting value has also been weakened by the conspicuous failure to touch the root of present strains on the key currencies—the ever present and increasing danger of switches from key currencies into gold.

The gold exchange standard certainly can and should be strengthened in the way now accepted in principle by M. Roosa, through a wider move towards mutual holding of currencies. But it becomes increasingly apparent that if a deliberate extension of this kind is to be carried through on a sufficient scale and in a convincing manner this demands the grasping of another nettle—the nettle of the gold guarantee. The issue must not be ducked again in Washington; and Britain, instead of seeking to eliminate the admittedly outdated dollar guarantee in the European Monetary Agreement—and creating appalling misconceptions in the process—should be proposing new guarantees in appropriate forms.

How else can one persuade monetary authorities to hold each others' currencies when there is a genuine fear of their depreciation? Is it desirable, let alone feasible, to rely on good neighbourliness and all kinds of semi-political pressures as permanent features of a world currency system? Must the French finance minister always have to undergo a barrage of questions at Idlewild about a minor conversion of dollars held by the French into gold? Must the German Bundesbank always have to wrestle with its conscience in reconciling help for the dollar with its duty to the Federal Republic? The granting of gold value guarantees—guarantees, that is, to secure that any depreciation in the gold value of currency balances held by central banks would be made good—should immediately transform the relative attractiveness of gold and currencies. Some central bankers, indeed, argue that there might then be a massive switch out of gold into gold guaranteed, interest bearing paper securities. If so, well and good; a wider aim of the guarantee would indeed be to strengthen the role of international credit and reduce gold more and more to a measure of value. An appropriate and by no means unsafe accompanying gesture from America, it may be repeated, would be to get the extension of the gold exchange standard moving by a straight sale of, say, $2 billion of its own gold for (guaranteed) European currencies.

The opposite apprehension, particularly for Britain, is that the guarantee would be "disbelieved," and actually stimulate conversion of a suspect currency into gold. But this danger would be a real one only if the markets expected a general rise in the price of gold; and the whole object of the guarantees, and of the mutual extensions of credit that would have to go with them, would be to obviate the necessity for any such rise, and to relegate currency adjustments to rare and small moves necessary for an extra adjustment in relative costs.

Guarantees on exchange balances, not in gold but in the currency of the holder, have in fact been written into the new swap arrangements between the Federal Reserve and European central banks. They have thereby enabled countries like Switzerland to add to their dollar holdings with only a limited departure from traditional reserve-holding policy (intriguingly, Dr Iklé himself has pointed out that the interest-earning dollar holdings of some [other] central banks have produced a high enough reserve to absorb a 20-30 per cent dollar devaluation). But to remove the current dangerous obsession with gold, which is by no means appeased by all the official efforts to disguise published figures and to economise in gold shipments, it is necessary to extend guarantees over official balances generally.

One useful way in which this could be done would be to confine the guarantee to balances that are transferred as deposits with the International Monetary Fund. These deposits, in contrast with the initial subscriptions to IMF, would naturally bear interest, in the same way as loans to IMF under the Paris Club facilities. And these deposits would also be available for immediate use, with even less formality than a drawing on the existing "gold tranche" of the quota now involves. They should certainly be freely transferable, and thereby acquire an independent form. For the holder they would be as good as existing foreign currency balances, only better by virtue of the guarantee. For the country granting the guarantee on its currency, the advantage would be that the IMF would automatically be a considerate holder of the balances, drawing them down only when the currency was scarce because the country concerned was in basic payments surplus.

Such a move could then be a voluntary first step towards the creation of a new international currency, a goal towards which present piecemeal credit arrangements must ultimately lead. Mr Roosa was no doubt right when he said in Rome that these piecemeal moves by the existing centres of power and responsibility were the only practical means of moving forward in the world of today. There is no sensible chance of the price of gold being hoisted to $100 an ounce, and lesser moves would bring more trouble than relief. Nor is there any chance of an overnight introduction of a Triffin plan. Meanwhile mutual extension of international credit, on a sufficient scale and with sufficient enthusiasm to carry conviction, can serve something of the same purpose. Mr Maudling's immediate task is to overcome any remaining suspicions that may linger at the other end of his own town about the propriety of "creating" international reserves. That is the whole object of the exercise. On a wider front, he must show world bankers that the not inconsiderable bits and pieces of financial co-operation that have been built up under stress in the past two years can still be presented in two ways: as short-lived palliatives for a doomed gold exchange standard; or as a first instalment of a far-reaching but progressive reinforcement and ultimately indispensable transformation of the system.

Can Air Union Get Airborne?

BY A CORRESPONDENT IN PARIS

AFTER five years' hesitation the French government once again this week put off the decision that it had promised about whether, in principle, France should join the Air Union project. It had been stated that the ministers were about to hand down the decision made by General de Gaulle and his technical advisers; but once again, taking as an excuse the absence of some of the ministers concerned, the announcement has been delayed until September.

Air France and the French Ministry of Transport have always backed this scheme. The opposition has come from French private airlines, and from the Ministry of Foreign Affairs. It was initiated in 1957 by Air France and negotiated between that company, Alitalia, Sabena, Lufthansa and KLM; but later KLM backed out, partly because it did not feel it was getting its fair share in the proposed Air Union and partly because it thought the scheme as planned would not work. Agreement between the other companies was completed by 1959: it has been held up for the last three years by the absence of government approval. France's partners in the European Economic Community are waiting for its decision before announcing theirs; but none of them would be likely to jib on points of detail if France were to accept.

What would Air Union be? Basically, a plan for the joint running of the international routes of the common market airlines. Air Union is designed as a half-way house between the kind of straight "pooling" agreement for business on shared routes between independent companies that already exists, and a total integration of companies into a single giant common market airline. As in a pooling agreement, members would pool all their earnings on international routes (other than the French airline network to "franc zone" territories in Africa) and share them out according to predetermined quotas—34 per cent to the three French airlines, 30 per cent to Lufthansa, 26 per cent to Alitalia, and 10 per cent to Sabena. (These figures, calculated for 1970, would concede to Air France's and Sabena's partners more than is justified on current shares of the business.) But a proportion of the expenses of this shared business would also be pooled. The lines' international networks would be integrated, cutting out much of the present duplication, though each company would retain its agencies and representatives, its national character and its prestige—which can be an important commercial attribute.

Maximum frequencies, services to all points and the concentration of each company's operations on its most effective lines—these are some of the possibilities opened up by a pool extended to the entire network. Integration of the four networks with unified scheduling might give Air Union a variety of services with which few other companies could compete. But it stops short of complete integration. A technical agreement would have brought even greater savings in running costs; but this scheme, at least as originally envisaged, stops well short of technical unification.

At this stage, there is no suggestion of joint training or joint employment of staff, common checking and maintenance or any co-ordination of investment in aircraft and facilities, or

central purchasing of currently consumed materials. Many observers believe this would become essential if Air Union is to work. They argue that the insignia of Air Union would gradually, but inevitably, gain in importance over the national markings. And the commercial association seems to them only a first step towards an inevitable technical co-operation in the future, leading to total integration of the separate airlines.

Once airborne on the route towards "Europeanisation," failures could speed up the process of integration just as much as successes. Both could make the process irreversible, whatever its results: good or bad or—as is more often the case—indifferent. So it is understandable that the governments have trembled so long on the brink of what they all recognise as an irrevocable decision; and that none will move before France does.

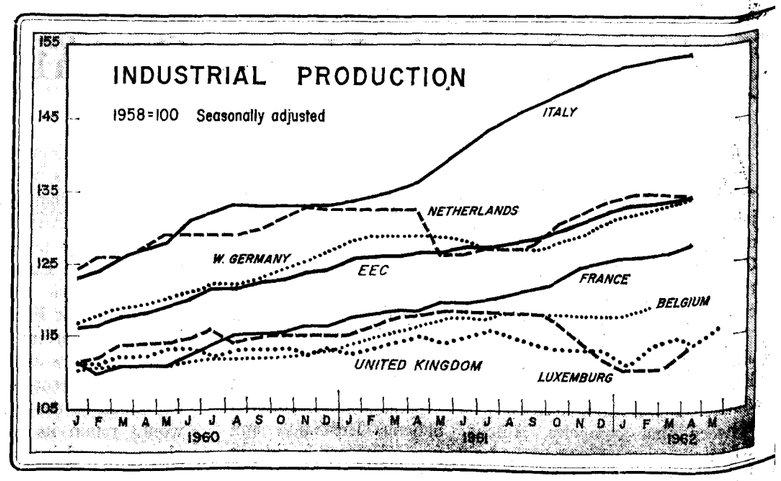
THE basic idea of Air Union is valid. Too many European airlines make it difficult for air transport to develop efficiently and profitably. Moreover co-ordination of effort seems the only way to meet British and American competition —particularly when it comes to horse-trading over traffic rights. None of the European governments questions the initial caution in airline co-operation proposed here, or the empirical advance towards fuller integration. It is the future prospects of Air Union, rather than its structure and mechanism, that have raised reservations and objections from French opinion.

For exactly the same horse-trading reasons as it appeals to European governments, the basic principle of Air Union has caused and is still meeting strong reservations on the part of Britain and the United States. As powerful as Pan American and stronger than the airlines of the British Commonwealth, Air Union might eventually upset the present balance of world air transport. The idea of Air Union arose partly out of the upheaval which the arrival of jet aircraft caused in inter-continental transport. The union, as a fact, might be in a position to ensure that the timetable of introducing supersonic aircraft will not upset the air transport market again. For aircraft manufacturers, Air Union would mean the emergence of a powerful buyer that could have a decisive voice in deciding what sort of supersonic airliner eventually gets built—and who builds it. French airline operators, with an eye on the governments' still only half-formed plans for Anglo-French co-operation to build a supersonic Caravelle, are pertinently asking whether Air Union would have to fit in with governmental ideas about the development of air liners (and the maintenance of favoured aircraft builders in being) or whether the governments would fit in with Air Union's.

The idea of a supra-national airline buyer that might assert its power over the separate governments' ideas on aircraft and air transport is one that gives pause to other governments, and not only to the French. A second objection made to Air Union is that it attaches considerably more importance to inter-continental than to European air traffic—and that the development of this internal traffic should be one of the primary concerns of any community grouping of European airlines.

Embarked on a global rivalry with Great Britain or with the United States, would Air Union be in a position, these critics ask, to give sufficient attention to the short-run traffic which, from Bayonne to Hamburg, from Brest to Venice, from Amsterdam to Marseilles, has a big part to play in integrating European solidarity? Such routes call not for supersonic aircraft but for short runway omnibuses or, at the most, for jets in the Caravelle class. Nor will agencies in New Delhi or on Fifth Avenue attract European customers towards this internal network; it calls for simple terminals, ease of access, and moderate fares, on the lines of the internal American network. In preference to the power and prestige politics on the world-wide plane that attract Air Union, these critics would like to see the organisation devote itself more to European needs.

There are no signs that the six airlines concerned believe that promoting European integration is their business. Their motive for coming together has been to find a formula for common survival in the hard world of international aviation, not for the political development of the European communities. Three of these airlines, admittedly, are French; airlines anywhere depend on government support in their international bargaining, and power to bargain with a whole inter-European network of traffic rights as one's counters would be tremendously attractive; and France is a *dirigiste* government with considerable experience in getting private business to do what it plans. Acceptance of the principle of Air Union by the French government at least is likely to depend upon some stiffening of ultimate political authority over the policies that this European airline in embryo might carry out. On the other hand, if Air Union does not gain the blessing of France and the other European governments, the airlines concerned are likely to seek a wider and more rational framework for their activity through individual relationships with airlines outside Europe.



BUSINESS NOTES

THE ECONOMIES

Caution and Confidence

STATISTICALLY, the European Economic Commission is always prepared to look forward more confidently than the Treasury usually is—on the basis of figures that are farther behind. "While expansion slackened somewhat in several non-member countries in recent months," says EEC in its latest *Economic Notes*, "the growth of industrial production in the Community—admittedly only moderate—continued more or less unchanged." This is no doubt true, but it is as well to remember that these economic notes, "for July," and published in August, appear to rest upon indices of output reaching no farther than April. However, the EEC is confident that its forecast of a 6 per cent increase in production for 1962 as a whole "still holds good."

Mr Maudling in his first speech as Chancellor last week, working with indices reaching at least to May, was hopeful that Mr Lloyd's forecast of a substantial expansion in the economy might hold fairly good too. He said that exports are now growing as predicted; so is public consumption; the rise in private consumption "has fallen a bit behind what we thought"; but this may grow enough in the second half of the year, along with a possible onset of re-stocking in the economy, to provide the "vigorous expansion" the Government is looking for. "If that does not happen, we shall do something about it."

National income figures published this week indeed suggest that following the fall between the third and fourth quarters of 1961 there may have been a further slight fall to the first quarter of 1962. The calculations based on expenditure suggest a fall from fourth quarter 1961 to first quarter 1962 of 1¼ per cent; such indications of output as are available suggest little change. Stocks, which were rising during the second half of last year but fell during the first quarter of this year, tended to even out recovery in other sectors of demand. From the first quarter of 1961 to the first quarter of 1962 there was an increase in total domestic incomes of 3 per cent, which came wholly from a rise of 5 per cent in incomes from employment. Company profits fell by 5 per cent during the year; but the Treasury thinks that this decline in profits may probably have stopped early this year.

Any contrast between caution about prospects in Britain and confidence within EEC needs to be tempered with the commission's remarks about individual countries. In France, it says, output will probably go ahead steadily. But in the other countries it is talking about moderation in the rate of increase. Italy is still in general expanding faster than the rest of the community, but there are signs of moderation in its rise. In Germany cuts in the working week, the commission thinks, are holding up the response of output to some recovery in demand. In Holland, again, it is capacity and labour that are hampering output; but in Belgium demand seems to be levelling off. The rate of growth of industrial production in the Community as a whole, says the commission in these somewhat more cautious tones, seems to be affected by a levelling off in the growth of fixed investment; for the moment, cars and consumer durables seem to be the expansionary element in manufacturing trade among the six.

IN THE MARKETS

Funding We Didn't Expect

EQUITY shares in London have had another quiet week, as investors resign themselves, sensibly enough, to marking time through the holiday season. At the beginning of the week prices were marked down on the basis of fears for the common market negotiations, but later the strong trend on Wall Street provided a sufficient counter influence, and in the week to Wednesday's close *The Economist* ordinary share indicator rose slightly to 312.8. Gold shares have been broadly steady, after last week's momentary fall in the wake of the Telstar assurance.

The steadiest section of the London Stock Exchange over the past few weeks has been the gilt-edged market. Steady investment buying has continued, and while the sharp rise in prices experienced a month or so ago has not been repeated, neither has there been any technical reaction—and dealers see no sign of one. Meanwhile investors can already see significant gains. War Loan, at a net price of 57½, shows a rise of over five points from the beginning of the year. The market rise is moreover being checked by official sales. The stream of local authorities being let through the turnstiles continues, with Warwickshire County Council making an issue this week of £12 million of 6 per cent stock, 1973-74, which at the issue price of 98 yields a gross redemption yield of just under 6½ per cent. The issue was heavily oversubscribed on Wednesday and dealings opened at a premium of one quarter.

Meanwhile the Government's own long dated tap stock, 5 per cent Treasury 1986-89, has become markedly attractive. When the new tranche of £300 million of this stock was put into the tap in May, the issue price of 84½ was deliberately pitched above the market price of the existing tranche, for the authorities evinced no anxiety to take large sums out of the market through funding sales. Rather, unexpectedly however they have subsequently not allowed the tap price to rise in line with the rest of the market: at a net price of 85¾ the gross redemption yield of Treasury 5's is 6⅛ per cent, all but the highest in the list. This has attracted large scale switching into this stock, both from medium dated and from the very long and undated stocks. Some dealers estimate that as much as two-thirds of the tap issue may now have been sold. The authorities have tried to make most of these sales through switches, to avoid taking money out of the market as a whole; but their tactics have undoubtedly restrained the market. Once again, long-term strategic aims, to lengthen the maturity of the national debt, seem to have predominated over short-term objectives of monetary control.

TARIFFS

Tit for Tat

ANOTHER blow for Atlantic Union was struck on Wednesday, when duties imposed by the EEC Council in June came into force on certain imports from the US, in retaliation for recent duties on carpets and plate glass imposed in the United States. There was no question of turning the other cheek; the damage to Belgian producers from the American duties was too great to ignore, and European producers have been suffering too long from what they consider unfair competition for them to be understanding of the President's reasons. The products chosen by the EEC Council were polythene, polystyrene, varnishes, paints and textiles made from man-made fibres. No reasons for these choices have been published, but it is possible to guess at them. These plastics are petrochemicals that have been dumped in Europe and have figured in several anti-dumping actions; imports of varnishes and paints are increasing fast; and the duties on textiles are in return for those on carpets. On glass, EEC cannot retaliate directly; the United States exports little glass.

The value of EEC exports affected by the American duties is $35.5 million, and it is estimated that loss of sales there could put 11,000 people out of work. Under Gatt,

the retaliatory duties must cover a corresponding value of imports; they will affect $27.5 million, although the damage likely to result in the US will be far less. The products most affected will be plastics, paints and varnishes; new duties of 40 per cent will effectively shut them out of the European market, which is already very competitive. Of these, the most important in value is polythene. American producers need export markets for their surplus production (currently about 180,000 tons a year): exports in the last five years have risen from 85,000 to 150,000 tons a year, of which 35,000 tons went into the EEC. As a result of this competition, and similar tactics from Italy, prices have fallen even further in Europe than they have in Britain, to levels that are said barely to cover costs. The first result of the anti-dumping duty in Britain has been to give producers an opportunity to increase prices—ICI announced an increase of 1d. a pound at the weekend, followed by other producers—and the same may happen in Europe.

The retaliatory duties will give warning to the United States of European determination; it is to be hoped that they will not lead to a tariff war. However, pressure from industry on governments continues: last week the finance committee of the French Senate called on the government to protect the chemical industry against American dumping. Already duties have been imposed in France on polythene and butanol.

RESERVES AND IMF

The Right Choice

BRITAIN'S repayment of $512 million to the International Monetary Fund on July 31st entailed a drop of slightly more than that in the central reserves—other transactions in July, when seasonal influences are adverse, resulted in a net outflow of $6 million. As a result, the central reserves at $2,915 million are some $460 million higher than they were on the eve of the record drawing a year ago; though they are more than $300 million below their level at end-1960, before last year's outflow of funds from London began. Now, as then, sterling and the reserves have been bolstered by a considerable inflow of foreign funds; and the authorities are aware that sterling remains vulnerable. But their preference for repaying the IMF rather than adding further to the central reserves has certainly been the right one. It has done much to replenish the IMF till in the lean period before the arrangements for supplementary borrowings under the Paris arrangements are through; and it has given a valuable practical demonstration of the flexible use of the Fund. Britain is indeed keeping open its own line with the Fund by taking a new stand-by credit for the next twelve months, to a total of $1,000 million; this replaces the existing stand-by which was originally for $500 million but had been increased by earlier repayments to $1,270 million. The British authorities have informed the Fund that "they will continue the policies necessary to maintain a satisfactory balance between demand and resources. A principal objective is to keep the growth of money incomes within the limits set by the long-term rate of increase in output."

Britain's final repayment comprised $322 million in dollars, the equivalent of $65 million in marks, $50 million in French francs, and the remainder in other Continental currencies. This big repayment of currencies must have brought a sharp, and increase in the ratio of gold in Britain's reserves, which had been considerably reduced by the IMF drawing. At end-March, the latest date for which IMF calculations are available, the Exchange Account still held just over $1,000 million of convertible currencies in addition to $2,450 million of gold.

PROFITS AND DIVIDENDS

What Sort of Squeeze?

THE past week has been the brightest for company news for many months past; several companies in widely different sectors of industry have reported higher profits and paid bigger dividends. This brighter tone is backed by the findings of the Treasury statisticians who in the latest issue of *Economic Trends* suggest that the decline in company profits slowed down or stopped early in 1962. Between the first quarters of 1961 and 1962 they estimate that profits fell by 5 per cent but they then indulge in what they admit to be the "particularly hazardous" exercise of making seasonal adjustments and come up with the answer that on this basis profits actually recovered slightly.

These estimates are based on an Inland Revenue sample of what has been earned in a particular quarter. They differ essentially from the results of the analysis of company accounts made by *The Economist* of profits earned in a full financial year. The bulk of the companies reporting in July ended their financial years in March and thus earned their profits around a mean date last September. For the full year, as the table shows, their profits show little change. The July analysis is more representative than usual, as it is not dominated by one or two very big companies. The sharpest increase in profits came in the brewery group, reflecting the results of Courage Barclay Simonds, and the steepest falls were in the iron and steel and cotton groups, reflecting the trading experience of Consett and Fine Spinners respectively. Once again the figures show no let up in the pressure on margins.

PROFITS AND DIVIDENDS
(£ million)

230 Companies reporting in July	Previous year	Latest year
Trading profit	157·2	150·5
Gross profit	119·0	111·2
Net equity earnings	55·8	59·4
Net ordinary dividends	28·0	29·5
Times covered	2·0	2·0
Net equity assets	642·8	720·4
	%	%
Gross profit/net assets	18·5	15·3
Net earnings/net assets	8·7	7·4

This problem is one which is facing managers on both sides of the Atlantic and is the subject of an article in the latest issue of the *Harvard Business Review*, which suggests that recent competitive pressures are producing something quite different from

The Economist

AUGUST 2, 1862

TWO PER CENT

It was once said that "John Bull can stand many things, but he cannot stand two per cent." As far as appears, he will now, however, be obliged to endure it. The market rate for good paper of moderate length is far below that rate, and the applications at the Bank have been of late considerably less than usual. Some persons have said, Why, under these circumstances, should the Bank have reduced their rate? They do not gain business by it. Their private securities are this week rather less than they were last. As far as respects the interests of its proprietary, the Bank should charge as much as it can. If, on the other hand, the Bank regard the interest of the public, the conclusion is the same:—Why in that case should they lower the rate of interest and encourage mischievous speculation? On other accounts the Bank of England is, however, justified. As far as regards the interest of its proprietary, it cannot expect to retain any business unless it follow the market rate,—not, indeed, exactly and to a single eighth per cent., but still approximately and generally: Those who have discount accounts at the Bank expect to have the advantage of cheap money, just as other people. On the other hand, as far as the interest of the public goes, it is most expedient that money should be as cheap as possible. If we have no occupation for it at home, let us say we have no occupation. Let us induce those who are competent to weigh the real advantages and disadvantages of foreign investments to engage in those investments. We may believe that many incompetent persons may invest their savings in them,—we may fear that many may make an erroneous selection, and may lose their savings; but let us not on that account refuse to acknowledge the real cheapness of money, or allege that we can employ capital at a profit in our home trade when in truth we cannot employ it.

An independent report on

RUBBER

Production and consumption of natural rubber were nearly in balance last year, but prices are low. Only by increased productivity and reduced costs can the industry hope to meet the increasing challenge from synthetic rubber.

Rubber is the subject of the most recent of a series of enquiries into raw materials and their prospects made by Barclays Bank. This report explores the background and development of rubber and discusses the problems of price, production and markets. For an informative appraisal of rubber today, and a realistic estimate of its place in industry tomorrow, investors and businessmen will find this report invaluable. Copies may be obtained from:

Money is our business—throughout the world

SHUT THAT WINDOW—

—and keep COOL

It's better business to air-condition your boardroom and executive offices. Open windows let in distracting noise, dust, fumes; unventilated rooms grow stuffy, exhausting. But a Temkon *refrigerated* air-conditioner keeps the room cool, calm, fresh—brains alert and businesslike.

The Temkon 'Whispair' floor-standing unit is the world's quietest room air-conditioner. It just *breathes* out clean cool refreshing air, filters out dust, reduces humidity. And it even supplies background warmth between seasons!

One room, a suite or your whole building can be fitted with these elegant, slim-built units for less than half the price of a central installation. Each unit allows for personal control of room conditioning and cuts running costs.

the traditional wage-price squeeze on profits. The authors suggest four main factors in the present squeeze: inability of companies to add to their profits from the growth of established markets (with its corollary that many companies have been forced into the costly business of introducing new products); substantial unused capacity even at high levels of business activity; more intense foreign competition; and relative price stability. Industrialists have to abandon their assumptions of automatic growth and inevitable inflation, and do some new thinking about running their businesses. The authors quote the president of one company: "It is like starting out all over again in business." British industry might take note.

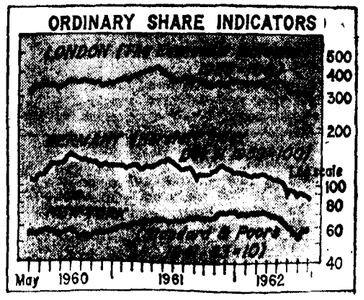
GERMANY

Shares Fall Further

Frankfurt

THE slide on the West German stock exchanges shows no sign of stopping. German share prices have shown none of the stabilising tendencies which have recently become apparent elsewhere, particularly in New York. Sharp falls early this week brought prices below their level on "Black Tuesday" (May 29, 1962). The fall has now wiped out all the previous gains since the summer of 1959; the Herstatt index, which reached a peak of over 150 two years ago, has dropped below 84. Since the beginning of July, Volkswagen has fallen from 518 to 472; Mannesmann from 234 to 216; Farbwerke Hoechst from 394 to 372; Daimler-Benz from 1031 to 915; and Dresdner Bank from 422 to 386. Electrical stocks alone have remained immune from the fall.

Remarkably, though by no means unprecedentedly in Germany, the public has hardly taken part in recent trading and the sharp falls have occurred on a small, bank-dominated market. The new turn for the worse on the West German bourses is attributed both to the recent bankruptcies, of which the Schlieker affair is the most notable, and to new fears of Soviet action against Berlin. The international situation also explains the absence of foreign purchases of German stocks and the continued predominance of foreign selling. Another weakening factor is the behaviour of some German banks which, expecting in the long run tighter liquidity as a result of the arrival of equilibrium or even deficit in the German balance of payments, are making efforts gradually to reduce their stock commitments. The stock exchange commentaries of the German banks and of the press do not offer particularly optimistic forecasts for the German stock market in the near future.



Rescue for Schlieker?

Düsseldorf

AT a press conference last Friday Herr Willy Schlieker gave his own version of West Germany's biggest postwar insolvency. It consisted largely of bitter attacks on his main creditors—his suppliers such as the big Phoenix-Rheinrohr (formerly Thyssen) combine in Düsseldorf, the Salzgitter and the Ilsede iron works. His keynote was that given a little more patience and goodwill, they ought to have been ready to allow him some more breathing-space and to overcome his financial difficulties. But, so he insinuated, Phoenix-Rheinrohr was out for easy prey: it wanted to capture his steel works and his iron trade. And does not his shipyard in Hamburg lie side by side with the famous Blohm & Voss, 50 per cent of the capital of which is in the hands of Phoenix?

Phoenix-Rheinrohr was quick to answer these accusations. Herr Mommsen, chairman of its managing board, gave its side of the whole complicated story of the negotiations taking place since early June, that had preceded Schlieker's insolvency. He insisted that Phoenix never had any intention to disrupt the Schlieker group or to get hold of the iron works and the iron trading firm. Only to stave off the bankruptcy of the whole group had Phoenix taken over 80 per cent of the capital of the Neviges steel works, while the Dresdner Bank had raised the capital of the former Schlieker iron trading firm from 1 to 5 million DM to appease the other creditors. The iron trade could be restored to Schlieker's full control, said Herr Mommsen, at any moment that he was able to buy it back.

The public, however, is less interested in the question how it all came about than in the future of these enterprises. Herr Schlieker seems more or less prepared to sacrifice his steel works on the Ruhr to satisfy his creditors (so that Phoenix-Rheinrohr probably will enlarge its already formidable industrial empire), while the future of the iron trading firm, the origin of Schlieker's wealth, seems to be in the balance. In Hamburg, there seems considerable anxiety to save the shipyard from

Schlieker's personal failure, or even to give him a fresh chance. Thanks to credits from the Dresdner Bank, work in the shipyard continues, wages are being paid, representatives of big American companies such as American Telephone and Telegraph and Bethlehem Steel have assisted by giving credits to ensure the completion of the orders, and even new orders are said to have arrived. The Hamburg city authorities had already offered in earlier negotiations to give a credit guarantee of DM 25 million provided that a new financial backer could be found who was prepared not only to give credits, but to invest new money in Schlieker's shipyard. Phoenix-Rheinrohr declined; so the city had to let things take their course. But Herr Münemann, Germany's "wonder-banker" (as he is called in the popular press) and the promoter of a new system of revolving credits, has been called to Hamburg to help. His idea is to attract new (maybe American) capital, and to transform Schlieker's personal enterprise into a shareholding company with a broader capital base, while Schlieker could remain the management.

SHIPPING

What Our Ships Earn

BRITISH shipping, which conducts an annual survey of its foreign income and disbursements on behalf of the Treasury, never feels these are quite done justice in the invisible accounts in Britain's balance of payments. The balance of payments white papers naturally have to count in payments to foreign shipping on British account; and they also leave out the receipts of British shipping bringing imports to Britain. This, too, is logical, since every import is a debit; nevertheless, if all the imports were carried in foreign ships and none in British, the payments to foreign shipping would be about £250 million a year greater.

GROSS AND NET EARNINGS OF BRITISH SHIPPING ENGAGED IN FOREIGN TRADE

	1959 £ mil.	1960 £ mil.	1961 £ mil.
Receipts:—			
Freight on UK imports	246·0	259·6	285·8
Freight on exports	148·2	147·9	148·6
Freight on cross voyages	332·6	345·4	356·3
Passage money collected in UK	26·9	25·2	26·7
Passage money collected abroad	49·4	50·0	45·7
Time-Charter hire from abroad	23·7	25·9	27·6
Total receipts: gross	826·8	854·0	890·7
net	553·9	569·2	578·2
Disbursements abroad:—			
Fuel*	94·1	91·3	93·1
Canal dues	18·2	23·1	23·8
Port and other expenditure	181·6	187·4	196·4
Charter hire	160·5	195·1	212·7
Total disbursements abroad	454·4	496·9	526·0
Net contribution of UK Shipping to invisible exports	99·5	72·3	52·2

* The cost of bunkers taken at ports abroad, whether or not paid for in the United Kingdom.

Every four years the Chamber of Shipping conducts a full-scale inquiry into these payments and earnings; in between it uses sample surveys, and the figures that it has just published for 1961 were based on one of these. It reckons that the net earnings of British shipping last year amounted to £52 million, against £72 million in 1960. The difference between this figure and the net debit of £50 million in the provisional balance of payments figures for 1961 is that the country spent about £100 million on the use of foreign shipping.

POST OFFICE

Postman's Knock

THIS year, 1961-62, has been the first year of the Post Office's financial independence, and by commercial standards it has not been successful. The Post Office annual report and accounts show that its total profit fell by £10.7 million to £13.6 that its return on assets fell by 2 per cent to 6.5 per cent. These results are the more disappointing as they follow two exceptionally good years. They may even have been a surprise to the Post Office itself: only in March, a white paper gave an estimate of the current year's profits as £20 million. The reason given for this strange collapse—and it is not enough—is that pay increases which in a full year would amount to £11 million were unexpectedly awarded after the white paper was published.

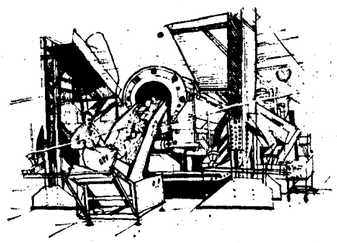
The postal services contributed £233 million of the total income (£495 million) but only £1 million of its profit. The main contributor to profits on postal services was the inland letter post, which made £15.4 million at about the same volume as last year. Fewer parcels were carried and the parcels post continued to lose more money (£9.1 million) than the other postal services. Inland and overseas printed papers lost £5 million, a loss which had been increased by the 20 per cent reduction in pools postings. These normally account for 8½ per cent of land mail and bring in about £5 million.

Telecommunications continued to absorb most (93 per cent) of the capital expenditure and provided £12.6 million of the total profit. STD encouraged people to make more trunk calls and these contributed £12.9 million to telecommunications profits. The main effect of a time limit on local calls seems to have been to dissuade people from making long calls, rather than to charge them more for the calls they do make; this helped to increase the loss on this service to £2.7 million. Other losses came from residential, i.e. non-business, telephone lines (£3.8 million, in spite of the increased tariffs), callboxes (£2.8 million) and inland telegrams (£3.7 million, representing a loss on capital of 63 per cent). The main single item in both services contributing to increased expenditure was wage increases, which added £15 million to total expenses. On the other side of the coin (and the side most assiduously publicised) improvement of equipment and the capital programme is continuing. Most of the investment (£114 million last year) is financed from within, although £40 million came from the Exchequer.

No one expects the Post Office to behave like a commercial organisation; it performs too many unprofitable services for this to be possible. But it is as well that commercial criteria should be in the background. There may be arguments for keeping the telegram service running, even at a loss. It is hard to see how this argument can be extended to the parcels post, printed papers or rentals on private telephones. If they do not immediately suggest remedies, these accounts at least show where attention should be directed.

The Machines Take Over

THE Post Office's elaborate plans for mechanisation are beginning to bear fruit, with the first production machines taking over the preliminary sorting and cancelling of a large part of the mail coming into the main Southwark post office. These cost £48,000, but the bill includes an element of development cost and the Post Office hopes that if and when it orders in quantity, prices will come down.



For the moment, it has plans for two other installations, in Glasgow and Liverpool, which should be working later this year.

For this outlay the Post Office has four machines which can do with eight men work that previously required forty and the prospect of reducing by four-fifths the labour needed in some departments. The first machine, which cost £15,000, separates the contents of mailbags emptied at its feet by shaking the life out of them in an immense, slowly rotating pipe with graduated slits through which first the small letters, then the large ones fall until only the parcels are left to tumble out of the other end. It looks slow, but in fact handles 60,000 items an hour and delivers them bundled by size and shape. The letters pass to three £11,000 cancelling machines which identify the position and value of their stamps by the number of phosphor lines these carry, seize the letters in a convoluted, twirling series of belts and deliver them, right side up, neatly cancelled and separated into letters and printed paper. (These machines loathe coloured postcards and throw them into the reject pile.)

The next stage of mechanisation will be more difficult. It depends on whether letter writers can be coaxed into using coded addresses. If they can, then post office sorters have only to re-code in machine language and machines can sort the letters much as the banks expect to sort cheques. A field trial in Norwich shows that about half the post now arrives with the code added, most support coming from business led with notable enthusiasm by the football pools. This is a better response than the Post Office expected and might justify experimental mechanical sorting. But these machines are likely to suit only the big post offices.

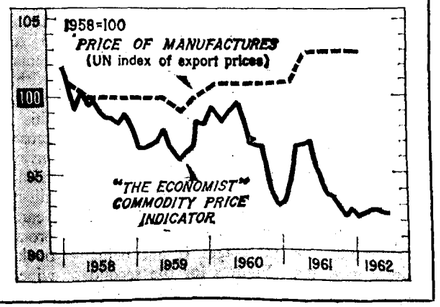
PLESSEY

Background to a Dispute

THE reconstruction of the Plessey board following the death of its founder, Sir Allen Clark, and the appointment to the chairmanship of Sir Harold Wernher, who was the chairman of Ericsson Telephone when it and Automatic Telephone merged with Plessey, has involved the resignation of three directors and the appointment of two others. The three that have resigned are Mr J. F. Mallabar, an accountant who

"We have reached a time when we must look at the whole problem (of low commodity prices) again and make a fresh attempt to secure new and revised agreements on commodities. . . . I hope that we shall make a new advance and a new approach to the general problem of commodity agreements because the low price of commodities certainly threatens the balance of international trade, and is a very serious problem for many underdeveloped countries."

Mr Maudling in last week's censure debate.



acted as chairman during Sir Allen's illness, Mr Bedford Attwood, the chairman of the Attwood market research group which runs TAM and who served on the Molony committee, and Mr A. F. Roger, who was the chairman of Automatic Telephone and is a director of a large number of other telephone companies. This is a formidable trio of talent and experience, and their departure must surely mark some clash of opinion about the future running of the group. The two sons of Sir Allen, Mr John Clark and Mr Michael Clark, and Mr A. E. Underwood, the only director outside the family to be promoted from the executive level to the full board in recent years, have remained on the board with Sir Harold and have now been joined by Mr Harold Watkinson, the former Minister of Defence, and Field Marshal Lord Harding.

The directors who have resigned have referred to "a difference of opinion concerning the arrangements for the future management of the company"—a difference of opinion, possibly, within the board about Sir Allen's elder son ultimately taking over the chairmanship. Sir Harold Wernher, who is in his late sixties, has been quoted as saying: "It was a clash of personalities and not of policies." With its widely ranging interests in television and electronics, Plessey has an important concern with the British telephone industry, in which the power of the "ring" is less strong than it was. The reconstruction of the board is not yet complete; the stock market's initial reaction to the resignations was to mark the shares down by 3s. 9d. to 35s., but they have since recovered to 36s.

HOUSE-BUYING

Over the Top?

THERE have been few more compelling reasons for buying houses of late than the nearly certain knowledge that, if you did not, you would be buying later anyway, and at a higher price. Arguments for caution based on the logical certainty that "It can't go any higher" have invariably been refuted, for some years, by another rise. Now at last there are signs that the rise in prices has slowed down. The general manager of the Co-operative Permanent Building Society said in a recent statement that there appeared to be "certain areas of resistance to high prices" and that, although the pockets of resistance are not numerous, "they remind us that the demand (for houses) is not necessarily inexhaustible." Most buyers form one-man pockets of resistance as soon as they enter an estate agent's office; it is good news that some have coalesced.

This tentative opinion has been confirmed by other building societies, one of which has found that the extra money it is able to offer for mortgages is not being entirely used up. Figures for the second quarter of this year, which should be published in a few weeks, are expected to show the usual seasonal surge but, adjusted, to support the suspicion that the market is slowing down. Sales have fallen but only in a few areas have prices fallen: South Wales, the North East and the South Coast have been mentioned. But it is impossible to pin these areas together and to try to draw a common conclusion from them. Houses are not standard products with a homogeneous market value: each group of the same age and price range in a given area forms its own market, and the higher up the scale one goes the more particular the market becomes.

London house agents find no difficulty in selling the few really outstanding houses they get even at very high prices. But in the lower reaches of the market there are fewer houses for sale than usual (possible sellers are holding off), and they stay longer on the books. Where last year an agent might have had six or seven houses for sale, this year he may have 15 or 20. This is more true of the suburbs where prices have even fallen in the last three months. Along the South Coast the market is steady in commuting areas but has eased back in the retirement belt, where buyers may depend on shares that they are unwilling to sell at the moment. Prices have risen most in the South over the last few years, and it is to be expected that they will react most quickly to any change in the market. In the Midlands house sales are steady and showing few signs of falling off, except in areas where for local reasons the future looks uncertain. Around Liverpool, where prices have been for a long time below the national average, house agents report business that is even lively, a report echoed further north.

These opinions confirm what even the most superficial examination will show, that no national pattern exists. But buyers of houses in the London area will probably do well to breathe deeply (the price no doubt having taken away their breath first) before they sign.

Going It Alone

WONDERING what they were thinking in Halifax, some building societies were a little surprised when the Leicester Permanent announced, as it had once before in May, 1959, a reduction in its mortgage rate but no change in its investment rates. Leicester's mortgage rate comes down from 6½ to 6¼ per cent but the rate on its shares remains at 3½ per cent, tax paid, in line with the Building Societies Association's recommendation. The Leicester can make this voluntary sacrifice in its surplus because it has a strong reserve ratio. Taking investments at market values, its current ratio is about 5 per cent, and the rise in gilt-edged prices which has taken place this year has obviously played its part in prompting the decision. The deficit on the book value of its gilt-edged stocks has been wiped out and its directors are not alone in believing that interest rates will go down still more. The flow of funds to the society has been strong and the directors believe that the reduction in the mortgage rate may help to stimulate the demand for houses which, they say, "in some parts of the country is showing slight signs of falling off."

Few of the big societies have reserve ratios strong enough to follow the Leicester's example—even if they wanted to do so. They could knock one quarter of one per cent off the mortgage rate if the government relieved their surpluses of profits tax but mortgage rates could not be brought down to 6 per cent unless the rate on shares was lowered to 3¼ per cent. And the societies will need stronger evidence than they have at the moment that interest rates throughout the economy will stay at a comparatively low level for a good period of time before abandoning the idea of "stability" in rates and before deliberately checking the inflow of savings. They are still watching the Halifax, even though another board meeting this week passed without a cut in its rates.

EURO-DOLLARS

Counsel for the Defence

THE Euro-dollar, symbol of the large and highly efficient international market in foreign currency deposits that has expanded rapidly in recent years, is not generally popular among central bankers. Just as its growth has been stimulated by national restrictions and regulations seeking to isolate money markets in self contained units, so its existence does in some measure complicate the task of isolated measures of credit control. Earlier this summer Signor Carli, governor of the Bank of Italy, felt obliged to give some pointed hints to a gathering of foreign exchange dealers, whose creation the Euro-dollar market is, on the need for some restraint in exercising their freedom to shift money into the most profitable uses. In Germany the desire of the Bundesbank not to add unduly to the supply of Euro-dollars is one reason why it is no longer seeking to shift dollar holdings into the hands of commercial banks. In Britain a few months ago Sir Charles Hambro, chairman of Hambros Bank and a director of the Bank of England, declared his belief that the Euro-dollar was a temporary phenomenon, based on the artificial limitation of interest rates in the United States under Regulation Q.

But now Sir George Bolton, chairman of the Bank of London and South America and also a director of the Bank of England, speaks out for the defence. In a characteristically free-flying article in his bank's quarterly review, in which Sir George declares his suspicion of official "gerrymandering" of forward exchanges and of the new co-operative central banking techniques in general, he also, and more convincingly, argues that the official resist-

The Athlete and the Parakeet

AESOP-TO-DATE

This is the Tale of "Tiny" Pete,
A slender lad of seven feet,
Who heard his new Blue Parakeet
Say, "Guinness!"
Now nothing could be more discreet.
But Pete, who thought that birds went tweet,
Was petrified at each repeat
Of "Guinness!"
Young Pete, he started getting sweet
Upon a sprinter, most petite,
Who, when she heard that Parakeet
Say, "Guinness!"—
Exclaimed, "I train for every meet
On that. And so should you *tout de suite*.
You too, could be a fine athlete
On Guinness."
Soon Pete was ready to compete.
He straddled hurdles fast and fleet
Until he won the final heat,
On Guinness.

MORAL

Many a blue bird knows what's best,
Many a true word's spoken in jest.
A glass in the hand's worth two in the nest—
Of Guinness.

Guinness is good for you—and me

The world of Anglia television

Cities without slums!
Industrial towns without smoke!
Housewives in comfortable homes with all the amenities and all the products that go to make life easy and pleasant.

Since Anglia Television opened in 1959,
the sales of refrigerators, washing machines,
vacuum cleaners and consumer durables in general
have gone up, up, up. 39% of Anglia's
one and a half million audience are women.
31% are housewives.
And every one is in the market now
for all the products you can sell them.
Time on Anglia is time well spent.

tions which he so much dislikes are the basis of the new international money market, and give the Euro-dollar market "a long term potential." Moreover, Sir George says:

> It is probable that the supremacy of the official New York and London money markets has now passed and is unlikely to return, unless these two markets were to absorb the newly created international money market.

That, he adds, would be neither easy nor necessarily desirable; he sees this market as providing potential financial resources for Britain that "the sterling system cannot itself generate," and here again one must agree. The Euro-dollar has encouraged a remarkable extension of private financing of international trade, and it has had welcome effects in loosening the hold of local banking monopolies and cartel arrangements. If it complicates the problems of monetary control, national and international, the right solution is not to suppress it but (and here *pace* Sir George) to develop such new official techniques as may be necessary to deal with any adverse side effects of the generally welcome Euro-dollar.

TIN

Quite a Shock

No agreement was reached last week between officials responsible for the United States' stockpile of tin and the representatives of the International Tin Council. The United States had invited the ITC's views on its scheme for getting rid of part of this self-imposed burden, but while the ITC (for a change) was firmly united for this occasion, the United States showed who was master in tin by largely ignoring the ITC's recommendations. The ITC sought to ensure that American releases did not exceed its own estimate of the likely shortfall in tin production and that the United States should work within the new price ranges in the stabilisation scheme.

But there was little chance of complete agreement about "the specific rate and conditions of disposal." The ITC's proposals could have hobbled the United States's plan to peddle out a steady supply of tin from the stockpile, and the United States seems hostile to the price limits in the international agreement. The United States is therefore pursuing its original plan of disposing of a maximum of 300 tons of tin a week for a trial period of six months. As these sales are expected to begin before the end of August, the announcement of a detailed programme for disposals will probably be made before the ITC next meets in the middle of the month.

The maximum rate of disposals is likely to be somewhat less than 300 tons a week and could be softened by disposal through other government agencies, but fairly prompt delivery and acceptable quality should attract reasonable bids for all the tin tendered, partly at the expense of purchases in Malaya and elsewhere. Action is promised if the impact on the market becomes "too severe," though there is no definition of this distressing condition. The tin market registered concern at the United States' bluff treatment of the ITC delegation by dropping the price to £825 a ton, though the ITC's buffer stock manager pushed the price back above his buying limit of £850 a ton without great resistance. The United States is willing to consult at any time with the ITC or "substantially interested" governments. After last week's rebuff, this sounds like a sergeant major asking that any complaints should be addressed to him. The ITC got a better response from Russia in the crisis of 1958.

COMMONWEALTH DEVELOPMENT

A Merger Required

Belatedly, the Government has agreed to keep the Colonial Development Corporation in effective existence. Mr Duncan Sandys announced in the House of Commons on Tuesday that the existing bar on the corporation undertaking new projects in countries that have become independent is to be removed. When the necessary legislation is passed, CDC will again be able to operate freely in all Commonwealth countries that achieved independence after India, Pakistan and Ceylon. At the same time, the corporation's name will be changed to the Commonwealth Development Corporation. As such it is bound to be confused even more widely than it already is with the Commonwealth Development Finance Company—and there is in fact quite a good case for merging the two. Although the CDC is financed almost entirely by the Exchequer while CDFC is financed by Commonwealth central banks and City institutions, the two organisations have for some time been moving closer together in their operations. CDC has deliberately reformed itself to operate on commercial lines, it often works with private capital on a joint basis and it is now in a better position to borrow funds from the market—which could soon be necessary if its extended sphere of operations brings forth a rush of applications. Meanwhile CDFC languishes with impressive backers and good management but a dearth of projects. The two organisations do not lack a mutual respect for each other; a genuine merger into a strong new organisation would be a sensible, and not expensive, contribution to a more effective aid effort.

DIVIDEND REMITTANCES

Local Difficulties

The desperate need of under-developed countries for foreign exchange has tempted several of them to interfere with dividend remittances. Ghana announced in March that foreign companies operating there would have to invest 60 per cent of their net profits after tax in that country. This proposal has not yet been enacted, but officials treated profits earned by Konongo Gold Mines in the year to September 30, 1961, in this way.

Konongo has been forced to pay the final dividend for that year, recommended in February, out of funds previously accumulated in London. But Ashanti, the only other foreign-owned gold mine now operating in Ghana (five others were nationalised last year) has announced an effective increase in its interim dividend for the year to September 30, 1962, and has received money from the Bank of Ghana to pay it. An offer by Ghanaian officials to release part of the funds necessary to pay Konongo's final dividend was accompanied by further conditions which the company found unacceptable, and this presumably accounts for the perplexing difference in the treatment of the two companies. The only encouraging aspect of this clamp down on dividends is that a Ghanaian official has said that the restriction of remittances is not intended to be permanent.

More trouble for tea companies in Ceylon, where taxes already account for three quarters of profits, was contained in last week's Budget. The finance minister is to see Mr Maudling about reducing the level of dividend remittances from Ceylon. A year ago, Mr Lloyd in effect exhorted British companies to do precisely the reverse to aid Britain's balance of payments. At the beginning of last month Carolina Tea passed a dividend on its preference capital because it could not obtain the remittance of funds from Ceylon, and in retrospect that difficulty now seems to have been a harbinger of general restrictions.

Some of the money held back by Ceylon will indirectly help to finance the extension of Ceylon's state-owned plantations. In the same breath as his announcement of the likely curtailment of dividend remittances, Ceylon's finance minister repeated the well-worn assurance that foreign estates would not be nationalised. That promise was little help to Ceylon tea shares, which reacted sharply following their recent slight recovery on improved profits.

PROFIT SHARING

ICI Cuts Its Coat

Since 1954 Imperial Chemical Industries has run a generous profit-sharing scheme, payable in ICI ordinary stock to employees with more than twelve months' service. For 1961 the bonus amounted to nearly £9 million before tax for over 91,000 employees and after tax it will result in the distribution of £2,361,000 nominal of ordinary stock. ICI has now adjusted the scheme for bonuses for 1962 and afterwards. If the new rules had been applied to the 1961 bonus they would have

reduced it from 2s. 1d. to 1s. 6d. in the £ of wages. In the past the bonus has represented 22 per cent of the amount paid out before tax on the ordinary, preference, debenture and loan stock. In future, the bonus will be calculated after deducting from this 22 per cent of gross distributions to stockholders all revenue received from subsidiaries whose employees are not in the scheme, revenue from asociated companies and dividend and interest income.

The first reason given for the change is that ICI's revenue from subsidiary and associate companies whose employees are not in the scheme has been rising and it is illogical that this should swell the bonus of employees who have not contributed to its making. The directors had already indicated that the scheme might have to be altered on this account alone. But the adjustment might not have occurred now, or might not have been so sharp, had it not been for two other factors. First, the issue of convertible loan stock for Courtaulds shares adds to the cost of the bonus and now the directors tell their employees, in effect, that they will have to share with stockholders the burden of the bid for Courtaulds. Secondly, the directors believe the amount paid out in bonus for 1961 was more than could be justified in the light of current conditions even though "it might be acceptable in the future if the company's profits, in relation to the capital employed, again reached high levels." The adjustment tries to hold the balance fairly between employees and stockholders. As profits are depressed the employees' bonus and ordinary dividend could have been maintained only at a great sacrifice in profit retentions. ICI is having to cut its coat from less cloth.

BANKING LAW

Not Negligent

It is so long since a bank appealed successfully against a decision that it had been negligent in collecting a cheque for a customer that the Court of Appeal decision in *Orbit Mining and Trading Co. Ltd.* v. *Westminster Bank Limited* will take a conspicuous place in banking text books. One swallow does not make a summer but bankers may well be mixing their metaphors this week and wondering whether the tide has turned at last.

The Orbit case involved a fraudulent director and secretary, Epstein, who was entrusted with cheques signed in blank by his co-director. Some of these he completed "Pay cash or order" for varying amounts, and paid in to his own account with the Westminster Bank, either at the branch at which the account was kept or at another branch. Three such cheques were the subject of this case, the company alleging that the bank, which had clearly converted them, had lost its statutory protection through negligence. Mr Justice MacKenna found for the company, and judgment has now been reversed by the Court of Appeal.

The company's most weighty argument was that Epstein's signature was one of the two signatures on the cheque, and that when the cheques were paid to the credit of his account this fact should have put the bank on enquiry, even at a branch where Epstein was not known, and certainly at his own branch which knew of his directorship of the company. But Lord Justice Sellers held, according to the only report that has so far appeared, that there were no suspicious circumstances to put a cashier on enquiry—this on the basis, apparently, that the cashier owes no duty to examine the signatures of cheques paid in for a customer's credit unless there are other circumstances that make the transaction appear suspicious. In the present case, Lord Sellers considered that the amount of the largest of the three cheques, £1,269 18s. 6d., was not quite enough to put the cashier on enquiry, and Lord Justices Harman and Davies concurred.

All this is a striking reversal of form, both in the general tenor of banking decisions and on the particular point at issue, on which few bankers thought the appeal could succeed; they await the full report of the decision with special interest.

RUSSIAN PATENTS

Western Approaches

In its ambition for enlarged trade with the West, Russia is having more truck with capitalist institutions. The Soviet Union, it is said, is contemplating filing more applications for patents abroad and joining the "Paris Union" of countries subscribing to the international convention on the treatment of these industrial property rights. Nothing prevents Russians filing more applications here; but in fact, such applications declined from 41 in 1959 to 22 last year against 9,574 applications by Americans, 5,677 from Germans and 1,968 from France.

Non-membership of the international convention means that Russia has been losing the year's priority from the first date of registration in filing patent applications with the member countries. Russian inventions are therefore open to piracy, and there have been many cases of Russian inventions being taken up without payment by Western industrialists. Two forms of registration of patents exist in Russia. "Inventors' certificates" vest all rights to the invention in the state in return for a payment based on the use made of the invention. A little used alternative allows the inventor to exploit his own invention, though his scope is naturally limited in Russia. Until recently, Russians applying even for inventors' certificates have been stigmatised as being unreasonable in attempting to squeeze the fruits of their inventiveness from the state. The form on which both types of patent application must be made are identical, and copies are sent as a matter of course to foreign records offices where they may be inspected by the public. A private body exists for disseminating this sort of information.

As Russians are reluctant to file specifications in their own country, the danger arises with increasing trade with the West, that a major group—say, an ICI—might patent an invention in Russia that had already been developed in Russia. Also, if Russia is to export more manufactures, the march it will steal on its competitors through new inventions must surely be consolidated by taking up abroad the normal protection with which the West rewards its inventors. The current drive in Russia to get more inventions patented is therefore hardly surprising.

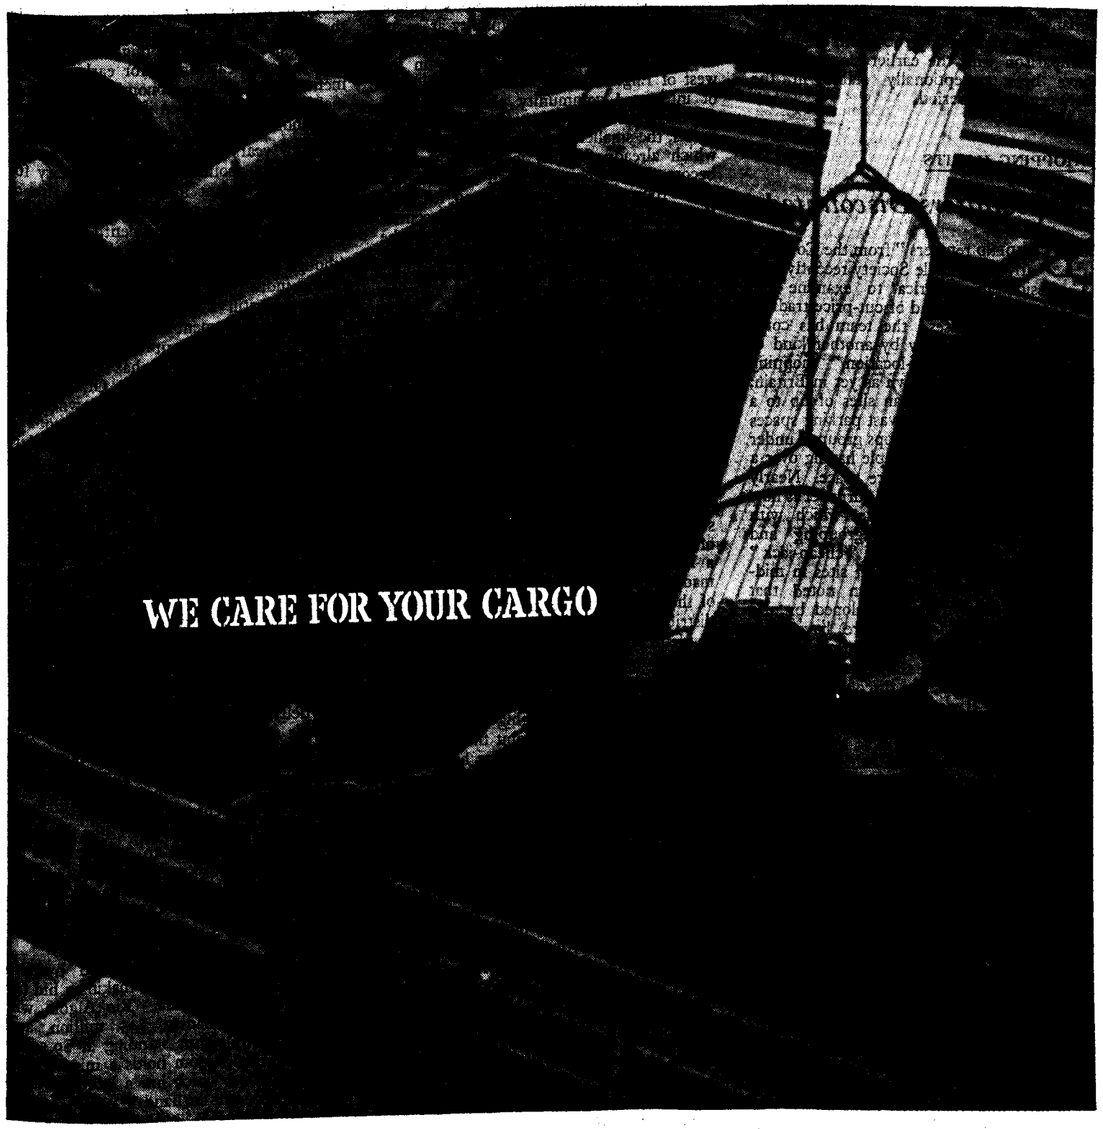
COCOA

Superabundance?

After last season's freakish twists, forecasters are more than usually cautious in weighing the prospects for the cocoa crop in the new season beginning on October 1st. After four successive years in which production records have been broken, conditions are reported favourable in both West Africa and Brazil, the chief producing areas. In the last two seasons, Brazil's output has been considerably below its potential, and at one time during the season just ending prospects in West Africa seemed relatively poor. For those willing to risk a forecast so early in the season, another big stride forward in production therefore appears to be on the cards. Consumption has continued its steady rise this year and has made up some of the leeway on production. But if production has only been taking a breather in its rapid upward climb, consumption could again be left trailing next year.

Like the Wheat Council, when the international cocoa study group first got down to business in 1956 there was no surplus problem. But its main pre-occupation now is with a sales quota scheme with which it could possibly hope to iron out the imbalance in supplies after the end of the coming season. Producing a full United Nations stabilisation scheme for cocoa has been put back so often that it is now not expected to be considered by a negotiating conference until possibly the middle of next year. But recently the international study group has obtained a shadow in the form of a producers' alliance which includes all the main growers.

This body has a louder bark if not a sharper bite than the study group, which includes consumers, but though at the recent meeting of the alliance a claim was made that it possessed the power to lift cocoa from the rut into which it had fallen it has not yet chosen to demonstrate this very conclusively. In the middle of the negotiations, Brazil unexpectedly cut its selling price sharply though it later partly reversed the reduction by declaring a higher minimum price for exports. As a result of



Strange things come our way for stowage in our ships and this is one of them. But, whatever they are, they receive the same care and attention.
