As compared to the high levels of average dividends shown by the top performers in the sugar industries, the best among the tea companies gave still higher average dividend returns during 1955-57, viz., 50-1/3% by Belgachi Co. Ltd. (vide Table 3.) In the preceding two periods, the top most tea companies (New Dooars Tea Co. and Methola Co. Ltd.) had distributed a dividend 52%. In fact the average dividend rates of the companies holding the other four top positions were higher during 1947-50 and 1951-54 than those of similarly placed companies during 1955-57. This shows that the lowering of the dividend rate in the tea industry was only confined to the tea companies of small and medium size, but not to the best ones in the industry.

COFFEE AND RUBBER PLANTATION INDUSTRY

The dividend performance of the first five highest dividend paying coffee and rubber companies during the period 1947-50, 1951-54 and 1955-57 is depicted in Table 4. The levels of average dividend of the top class coffee and rubber companies were very much lower than the average dividend levels

of their compeers in the tea industry during each of the periods.

PAPER INDUSTRY

In contrast to the changes noticed among the best dividend paying companies in the other consumer goods industries discussed above, in the case of paper industry, dividend leadership was, by and large, confined to a smaller number of companies (vide Table 5.) Four out of 9 companies studied in this paper have, during one period or the other, figured among the first three best dividend payers to the investors. The paper companies named in the table retained their top positions not only among the small group of companies covered in the study, but also among other paper manufacturing companies of the country. Compared to the other consumer goods industries, the average dividend rates of the highest dividend paying paper companies worked out to lower figures during all the three periods. Among the best performers, the Titaghur Paper Mills had steadily stepped up its average dividend level from 18½% in 1947-50 period to 23% in 1955-57, and thus it had moved up from the second to the first place. As against the record of Titaghur Paper Mills, the other paper companies which at one time or the other figured among the best dividend payers, did not show any steady rise in their average dividend levels.

JUTE INDUSTRY

The overall position of dividend payments for the jute industry generally followed a downward course during the eleven year period 1947-1957. This tendency was clearly marked even among the highest dividend paying companies (vide Table 6.) For instance, the average dividend rate for the Hukumchand Jute Mills which led all along the other jute companies in the matter of dividend distribution during the entire period under study, fell steadily from 44½% during 1947-50, to 39½% during 1951-54 and to 22% in 1955-57. The top dividend leaders in this industry, by and large, paid lower dividends than their compeers in the cotton textile industry.

COAL INDUSTRY

By and large, the first five highest dividend paying companies in this industry recorded steadily falling performance from 1947-50 onwards. During 1955-1957, the best dividend performance was that of Katras Jharria Coal Co. in which case the average dividend during 1955-57 worked out to 65% as against 25½% for 1951-54 and 40½% during 1947-50. As against the high average dividend rate of 65% paid by the Katras Jharria, the two companies bracketed in the fifth place paid an average dividend of 15% to the equity shareholders (vide Table 7.)

IRON AND STEEL (including Engineering) INDUSTRY

Among the companies belonging to this group, the first three best dividend payers during the period 1955-57 were the Premier Construction Co. Ltd. paying an average dividend of 30%, the Burn and Co. (20%) and the Kumardhubi Engineering Works (18%) (vide Table 8.) The average dividend in the case of the Premier Construction Company for 1955-57 worked out to 200% more than that for 1947-50 and to 66% more than that for 1951-54. For the

periods, 1951-54 and 1947-50, the average dividend for the Tata Iron and Steel Company worked out as 21% and 20.5% respectively which declined to 12-2/3% in 1955-57. A plausible reason for the decline in the average dividend rate in the case of Tata Iron and Steel Company appears to be that the equity capital base of this company had considerably widened during recent years and the quantum of dividend had increased proportionately less than the capital base. By 1957 its capital base came to almost three times that of 1950 while the absolute amount of dividends showed an increase of nearly 70%. Among the best three dividend yielders, Kumardhubi Engineering Works, has alone figured in the lists in all the three periods.

CEMENT INDUSTRY

The performance of the highest dividend paying companies in this industry was considerably below the average dividend rates paid by their compeers, in the other industrial groups. While this was so, the best ones in this industry in all the three periods progressively improved the average dividend rates during the three periods, under study in this section. The two best dividend paying companies in this industry in 1955-57 were the Andhra Cement Co. and Associated Cement Co. paying dividends at the average rates of 10% and 9-2/3% respectively, as against 8½% and 9½% respectively during 1951-54 when the Associated Cement Company held the first place and Andhra Cement Company the second place and 6½% and 3% respectively in 1947-50 when Associated Cement held the first place and the other the fourth place (vide Table 9.)

(To be concluded)

Individual well-being is linked with national prosperity and only planned efforts can ensure both in the shortest possible time. And planning, for its success, largely depends on savings, individual as well as national.

Saving in the form of Bank Deposits provides resources for the National Plan.

BANKS' AGREEMENT

Uneasy Truce

NEWS from Bombay would suggest that a modus vivendi has been found whereby the small banks, the medium ones and the large institutions can all continue to be signatories to the inter-bank agreement on Deposit rates. Last Friday's meeting did not, as was apprehended, end in disaster. Sub-committees have been formed, and in principle the large banks have agreed that a differential may be allowed to the medium banks. The small banks of course are not worried, since they already "enjoy" a differential, and this concession will not be repealed.

But we can nevertheless sense that what we now have is an uneasy truce that may still be sparked off into a Deposits war. It is the definition of what is connoted by a medium bank that is likely to prove to be the troublesome point. The original basis upon which the medium banks approached the Indian Banks' Association was that a special differential be permitted in favour of banks with Deposits in the range of Rs 25 crores to Rs 75 crores. It would now appear that pressure might be exerted in one of two ways to narrow the range to Rs 25 crores to Rs 50 crores, or to widen it so as to extend the range to between Rs 25 crores and Rs 100 crores. Although the committee specially formed is to report only by the end of April, it is already clear that the medium banks will resist such changes in the "definition".

On the other hand it is heartening that agreement appears to have been reached as to the quantum of the differential. The small banks now possess a quarter per cent differential, and this may be split in two so that the new category also benefits. Thus, it does not seem likely that the revision of the inter-bank agreement on Deposit rates will result in any enhancement of the maxima; and in the sense that the committee will be reporting only when the busy season will have drawn to its close, it is appropriate that the steps now being taken to accommodate the medium banks' request will not lead to increase in Deposit rates.

An interesting point is that the Committee is to have nine members, to be drawn on the basis of three from each of the categories; and it so happens, consequently, that six of these members will represent banks having Deposits of Rs 50 crores or less. Weightage therefore is in favour of the medium banks. But the Committee's terms of reference are apparently only to examine and then report in this matter; its recommendations as we see it, are not necessarily binding upon the IBA. It is for this reason that we fear that the IBA may not agree to both the key points in the demands of the medium banks. We hope we are wrong, but we apprehend that the inter-bank agreement on Deposit rates may not exist past the end of April.

A further complication is posed by the exchange banks, almost all of whom (with the possible exception of Chartered and National and Grindlays) would come under the defi-

nition of medium banks. Deposits of exchange banks, it is true, have in recent years not grown at anywhere near the rate experienced by Indian Scheduled banks. Exchange banks may consider the present a splendid opportunity for pressing their claim to a differential in Deposit rates vis-a-vis the large banks. Here the objection is likely to be that world resources of the banks have to be taken into consideration, and not merely business in India. Disaffection on the part of the exchange banks could conceivably mean that they too, when the time comes, will opt out of the agreement.

We now come to the role of the Reserve Bank. It is known that the central banking, institution has been called upon to prescribe maxima for Deposit rates analogous to the action it took to stipulate floor rates for Advances; and we also know that the Reserve Bank has been reluctant to issue any directive in this behalf. Nevertheless, it would be Reserve Bank's duty to ensure that no adverse development takes place which could impede the process of strengthening of banks, a process which began with the Reserve Bank's directive of autumn 1960 which served to improve the earning potential of the banking system. The benefits accruing from that directive were fully in evidence in the working results for 1961, in that spectacular profits have been made and substantial transfers to Reserve.

The next point to consider is whether the small or the medium banks can afford the differential. It is debatable whether a high interest rate can succeed in attracting new Deposits, for as we have repeatedly pointed out the link between interest rates and the growth of new Deposits has never been clearly proved. Thus, all that the small and medium banks may be doing is to raise their operational costs without any certainty that thereby they will be enabled to earn more.

We need, therefore, to come back to the role of the Reserve Bank. While it may earlier have been embarrassing for Reserve Bank to act, in that any measures prescribing minima for Advances and maxima for Deposits would have been tantamount to assuring a spread and a margin for banks, the introduction of Deposit insurance and the need to strengthen the banking system both will justify, and even make mandatory, action being taken by the Reserve Bank now with regard to Deposit rates.

The Reserve Bank, it is known, has been gathering data about rates of interest paid by the various banks. The intention will doubtless be to see if a link can be found between Deposits and the interest offered. With the added safety to Deposits inherent in the insurance scheme recently introduced, we suggest that the Reserve Bank's studies in this regard should be completed by the end of April, so that just when the inter-bank agreement is in danger of being scuttled, the Reserve Bank can step in—and direct that banks will not be allowed to pay interest beyond maxima specified by the central banking institution.

We would repeat here our suggestion that by directive, since convention in this context at least is not likely to be observed by the banking system, interest rates in the banking world are linked with bank Rate. As it is, though not explicitly so, the minimum rate for Advances is one per cent above bank

Rate; and we feel that the ceiling for Deposit rates should also be fixed in relation to bank Rate: the existing "structure" calls for savings bank Deposit rate to be one per cent below bank Rate, and it may not be possible to effect any change therein. Hence the ceiling for Deposit rates could, we feel, be fixed at one per cent below bank Rate.

We have thus an uneasy truce that should last another nine weeks; and the emergence then of the slack season offers hope that tempers will cool. But in the final analysis, as we have stressed, the banks need to be rescued from a dilemma of their own making, and the aid operation can only be in the form of a directive issued by the Reserve Bank.

+

BANK RETURNS

Pause in Busy Season's Progress

The middle of the month pause in the progress of the busy season is reflected in the latest banking returns.

Active Note Circulation has, according to the returns of the Reserve Bank for 16 February, fallen slightly by Rs 0.48 crore to Rs 2,034.31 crores, and there has also been inflow of Rupee Coin for Rs 0.21 crore. Foreign Securities are left unchanged at Rs 126.86 crores and Rupee Securities similarly so at Rs 1,689.20 crores. Thus, the Reserve Bank's cash in the till has marked an improvement of Rs 10.73 crores to Rs 18.46 crores.

The States would appear to have made some payment to the Centre, whose balances are higher by Rs 9.39 crores at Rs 59.33 crores. On the one hand, Deposits of State Governments are lower by Rs 6 crores at Rs 15.52 crores; on the other, though ways and means borrowings have increased only by Rs 0.92 crore to Rs 59.10 crores, it would appear that the States have "disinvested" in Treasury Bills for about Rs 6 crores; for, Treasury Bills purchased and discounted by the Reserve Bank are higher by Rs 11½ crores, and only a part of it, Rs 5 crores, is traceable to the State Bank.

Strain on the banking system has somewhat relaxed: Reserve Balances of member banks are higher by Rs 0.64 crore at Rs 76.17 crores, and repayment of debt is suggested by the fall of Rs 6.38 crores to Rs 162.26 crores in the Other Loans and Advances of the Reserve Bank.

Investments are more or less unchanged at Rs 197.21 crores. Balances Held Abroad are gamely keeping their level, in being marked up by Rs 0.92 crore to Rs 10 crores; foreign assets held by the Reserve Bank now just exceed the Rs 136 crore mark.

+

There would appear to be "return" of beginning of the month disbursements as disclosed in the statutory statement of the State Bank for 16 February. Deposit resources are fairly sharply higher by Rs 9.32 crores at Rs 553.12 crores, and the total of Advances has expanded but slightly by Rs 1.44 crores to Rs 283.45 crores. The State Bank has nevertheless disinvested in gilt-edged for Rs 5 crores, and borrowings are up by Rs 0.17 crore at Rs 2.93 crores. This is partly reflected in an improvement of Rs 1.25 crores to Rs 24.55 crores in cash balances, including

money at call and short notice, and mainly in a rise of Rs 12½ crores to Rs 30.17 crores in Other Assets—suggesting that State Bank purchase of giltedged from the Reserve Bank is in the offing

+

Beginning of the month disbursements may have caused the fall in Deposit resources revealed in the return of Scheduled Banks for 9 February. Net Demand Liabilities are down sizably by Rs 12.13 crores at Rs 827.59 crores, and only part has been recouped in the form of a rise in net Time Liabilities, which are higher by Rs 2.63 crores at Rs 1,162.29 crores. Of the total fall in net liabilities amounting to Rs 9.50 crores, about half, or Rs 4.92 crores, is traceable to the State Bank. Spillover of beginning of the month disbursements and busy season pressure both stand revealed in the further sharp increase of Rs 14.75 crores to Rs 1,356.78 crores in the total of Advances—a new peak. Again, about half of the rise is traceable to the State Bank. Disinvestment in gilts for about Rs 8½ crores is accounted to the extent of Rs 7 crores by the State Bank. Hence, fresh borrowings have been heavy: though indebtedness to the State Bank is lower by Rs 1.46 crores at Rs 12.63 crores, borrowings from the Reserve Bank have mounted by Rs 9 crores to Rs 38.97 crores; it is necessary

to add that, apparently, in the week ended 16 February, banks have been able to reduce debt by upwards of Rs 6 crores. Lastly, in consequence, cash balances have also been drawn on appreciably, showing a decline as they do of Rs 8.44 crores to Rs 172.00 crores.

✱

Treasury Bills

Tenders for Rs. 2,00,00,000 of 91 days' Government of India Treasury Bills were opened on Tuesday, 20 February 1962. Total amount offered was Rs 2,02,00,000. Tenders at Rs 99.360 per cent were accepted in full and Rs 99.355 per cent were allotted approximately 99 per cent. Total amount accepted was Rs 2,00,00,000 the average rate of accepted tenders being Rs 2.580 per cent per annum.

Tenders for Rs 2,00,00,000 of 91 days' Government of India Treasury Bills will be received at all centres (Bangalore, Bombay, Calcutta, Kanpur, Madras, Nagpur and New Delhi) up to the close of business on Monday, 26 February, 1962. Successful tenderers should make payment on Friday, 2 March, 1962. Other conditions are as usual.

During the week ended 16 February, 1962 Government of India Treasury Bills for Rs 5,00,00,000 were sold in favour of Reserve Bank of India.

The Common Market

By Paul Einzig

HOPES or fears, whichever may be the case, about a dramatic conclusion of an agreement for Britain to join the Common Market have proved to be so far without foundation, and, according to the latest information really serious negotiations are not likely to begin until June. As far as it is possible to ascertain from the preliminary exchange of views, there is now distinctly a desire on both sides to come to terms. At the same time these preliminary exchange of views have already disclosed a vast number of difficulties which would have to be overcome somehow in order to come to agreement. The only concrete result of the rapprochement so far has been the decision to adopt the continental centigrade system for measuring temperatures and to consider the adoption of decimal coinage. Psychologically these gestures are important because they indicate a willingness to abandon traditional British insularism. Instead of wanting to remain as different as possible from continentals, the official policy is now to grow similar to them. That alone, however, would not solve the major economic and political obstacles to joining the Common Market.

Taking everything into consideration, the changes are that an agreement of some sort will be reached, if not this year then some time in 1963. This seems to be inevitable, having regard to the entirely negative attitude of Commonwealth Governments. There has been no gesture whatsoever on their part to indicate their willingness to make sacrifices in order to make it worth-while for Britain to abandon the idea of joining the Common Market if they could only do so at the cost of a considerable weakening of her ties with the Commonwealth.

A recent issue of the "Sunday Express" published a manifesto by Lord Beaverbrook calling upon Canada to assume the leadership of the Commonwealth if Britain should relinquish it. It is difficult to see, however, how such a combination would be feasible. While the United Kingdom and the rest of the Commonwealth are to a large degree complementary, the Commonwealth without the United Kingdom would consist largely of countries with conflicting economic interests. It is a great pity that Lord Beaverbrook, instead of putting forward such obviously hopeless suggestion, is not making use of his considerable influence on Commonwealth opinion for pressing Commonwealth Governments to adopt a more constructive attitude in face of the possibility of a British decision to join the Common Market on terms that would gravely affect her relations with the Commonwealth. Precisely because he is a staunch friend of the Commonwealth his advice and exhortations might stand a chance of receiving sympathetic hearing. The slowness of the negotiations with the Common Market provides an opportunity for Commonwealth Governments to reconsider their attitude. But they have not much time to lose.

Notes

EASTERN REGION

The Inexorable Logic

In his speech at the annual general meeting of the Bengal Chamber of Commerce and Industry held last week, Mr N. Stenhouse Chairman of the Chamber dealt at length with the problems facing the eastern region, and West Bengal in particular and urged the need for special attention being bestowed to have them solved in the interests of planned progress of industries. The more important of these problems are the current and prospective shortage of power supplies to industries operating in the region, the scarcity of coal arising from inadequate transport facilities for coal movement, the difficulties being experienced by the jute and tea industries and the problems posed by the deteriorating navigability of the Hooghly river and the consequent limitations imposed on the capacity of the Calcutta port. These are problems which call for prompt action, for the drag on industrial progress that may otherwise be entailed will have consequences that will affect the progress of the economy of the country itself. On tea and jute rests a major share of the responsibility for realising the

Third Plan target for foreign exchange earnings. The present state of these industries would provide hardly any ground for optimism. The jute industry has been passing through anxious days in the course of the last two years in obtaining regular and adequate quantities of raw materials. Only the self-discipline displayed by the industry has enabled it to keep itself going in the face of an acute shortage of raw materials. The raw material shortage in the industry reflects the existence of grave shortcomings in the present system and method of jute cultivation, the most glaring of which is the low yield of jute per acre. As Mr Stenhouse has pointed out, efforts so far made to improve raw jute cultivation with a view to raising per acre yield has only touched the surface of the problem. The most pressing needs for increasing the per acre yield are adequate supplies of fertilisers and seeds of standard quality and the launching of a campaign to educate cultivators in the benefits of better agricultural practices. The buffer stock scheme that has recently been introduced has also much to commend itself, but the challenge posed by the need to increase exports in the face of increasing competition from other countries and of other substitute products can only be met through firm action to improve per acre yield and to bring down cost of production. Increasing costs have been a source of anxiety particularly since rationalisation has made very little headway.

Tea presents a different picture, and what obscure its prospects is the slow pace of rise in world consumption. In this light it is arguable whether it was at all proper to have fixed an ambitious target of 600 million lbs for export of tea in the Third Plan. The target is attainable only on the basis of reduced prices for tea, but the pressure of wages and other factors such as Central and State taxation on the industry is such as hardly to permit any scope for such reduction. On top of this, raw material shortage particularly of coal and fertilisers has rendered the outlook somewhat bleak. Tea and jute are the two major export industries and anything that impedes the progress of these two industries may have wider repercussions.

The prospects for rise in exports as judged by the capacity of the Calcutta port to handle the traffic are also far from encouraging. In this connection, Mr Stenhouse has observed that the

economic disaster with which not only the eastern region, but India as a whole would be overwhelmed if the river continued to deteriorate at the present rate, does not seem to be sufficiently appreciated. The Farraka barrage project is a long-term one, but development of the subsidiary port at Haldia holds out more immediate benefits.

The other problems faced by the industries of the eastern region namely shortage of power supplies and transport difficulties etc., are not peculiar to this region alone. But in view of the agglomeration of industries because of historical and natural factors in this region, these problems impinge on industrial working in the region with greater force. Transport shortage particularly threatens to be a factor most disruptive of the industrial progress and has already led to the most ironical consequence, of industries of the region having to pay a larger bill for coal, due to the compulsory diversion of coal traffic by road to industries situated within 150 miles from coal fields and the imposition of additional excise duty by the Government to subsidise coal movement to other States. That industries in West Bengal should feel aggrieved at this discriminatory treatment is but natural. The situation in respect of power is also far from encouraging. The existing system of power distribution has proved erratic and industries in 1961 had a harrowing time in continuing production even at reduced capacities.

Such a combination of unfavourable factors does sound daunting. But the remedy is not running away from them. Diversion of industries from the Eastern region is sometimes mentioned as a possible way out. But such an idea is a counsel of despair and not particularly sound counsel at that. Taking away industries from a region which offers many natural advantages to States less favourably provided in this matter is, for whatever reason an indefensible proposition. Though the claims of regional development and balanced growth of industries are important, the economies of location and industrial tradition have their inexorable logic.

✱

ENERGY NEEDS

Modes of Forecast

One of the important subjects discussed at the Regional Seminar on Energy Resources and Electric Power Development held at Bangkok in December 1961, was methods of forecasting power demand. This has special significance to the developing countries of South and South East Asia, for which power development is the most important prerequisite for rapid industrial progress. It will be easily appreciated that mis-

takes in estimation may produce undesirable results with overestimation leading to needless locking up of resources, and underestimation leading to retardation of the pace and momentum of economic progress in general. The papers read at the Seminar have underlined the difficulties inherent in arriving at correct estimates of power demand. The liability to error in the estimates is rendered greater if they are attempted for long term periods as against short-term periods. It has therefore been recognised that long-term forecasts covering ten or more years can only be considered as a goal or target being useful as a general guide in power development and economic policy. On the other hand, short term forecast of 1-3 years will be helpful for programming operation and maintenance and for budgeting and for planning distribution system expansion. But the general consensus was that there was a tendency to conservatism in the estimates which is attributed to the heavy draft on resources entailed by a massive programme for power development.

The discussion on the subject distinguished between two methods for power forecasting namely the overall forecast and separate forecast. The former method is based on the extrapolation into the future of the past trends in power consumption with suitable modification. The overall method makes use of such economic data as per capita income, gross national product industrial production etc to get at a reasonable estimate. Under the second method, separate forecasts on various consumer groups of economic sectors are summed up to

get the total power demand. The second method, it may be seen, calls for more detailed studies of separate groups and for this reason may give more accurate results. All the same, it will be better to use both the methods since this may enable cross checking and reconciliation of discrepancies.

INDIANISATION Good Progress

An analysis of the returns received by the Government of India from the foreign controlled or owned commercial and industrial concerns in response to the public notice for furnishing detailed particulars regarding employment of both Indians and non-Indians as on 1 January 1960 and 1961 spotlight the progressive Indianisation of the staff in such organisations. The public notice issued by the Government is of special significance since, for the first time in history, separate information of the short term foreign

technicians employed by these firms was demanded. That the absolute number of Indian nationals as well as their percentage shares in the total employments showed an uptrend is also evidenced by the statements submitted by the foreign firms. The total number of Indian employees which stood at 3,455 on 1 January 1954 sharply shot upto 10,229 on 1 January 1961. The percentage of Indians recorded a similar rise and is placed at 70.1 on 1 January 1961 in contrast to 33.0 on the same day in 1954. Naturally enough, the number of non-Indians and their percentage share in the total employment registered a steady decline: the number of non-Indians on the employment register which totalled 7,008 on 1 January 1954 was marked lower at 4,364 on the same date in 1961 and the percentage also showed a notable reduction to 29.9 from 67.0. The improvement that has been registered in the position of Indians on salaries of Rs 1,000 and more per mensem since 1954 is vividly brought out in the table shown below:

Year (as on 1 January)	No. of Indians employed	% of Indians in the total employment	No. of non-Indians employed	% of non-Indians in the total employment*	Total No. of persons employed
1954	3,455	33.0	7,008	67.0	10,463
1955	4,139	37.8	6,810	62.2	10,949
1956	4,862	42.5	5,566	57.5	11,428
1957	5,906	49.5	6,025	50.5	11,931
1958	6,959	55.2	5,652	44.8	12,611
1959	7,916	59.9	5,304	40.1	13,220
1960	9,113	65.5	4,809	34.5	13,922
1961	10,229	70.1	4,364	29.9	14,593

*Excluding short-term foreign technicians.

The improvement shown in the relative position of Indians in the total employment in foreign concerns in 1959 and 1960 in all the three salary groups referred to in the Indianisation policy of the Government makes impressive reading. In the salary group Rs 1,000 to Rs 2,000 total Indian employed amounted to 7,907 on 1 January 1961 compared with 6,312 in 1959. As a result the proportion of Indians in the total employment edged forward to 85.9 per cent from 82.1 per cent. In the salary group of Rs 2,001 to Rs 3,000 the increase in the employment of Indian was remarkable, the relevant figure having risen to 1,633 on 1 January 1961 from 1,161 in 1959. The percentage also improved to 58.2 from 50.6 in the same period under review. In the salary group Rs 3,001 and above the increase in the percentage was higher by 7.9 at 23.9 as on 1 January 1961.

The percentage share of Indians as on 1 January 1961 was more than the overall share in the following thirteen groups: public utility companies (87.7%); oil companies (86.5%); leather and rubber goods (trading and manufacturing) (85.3%); chemicals and allied trades (84.5%); metals including iron and steel (82.1%); coal companies (78.1%); printing

publishing, stationery and allied trades (76.3%); machinery, equipment, tools, engineering etc. (75.8%); sugar and breweries (74.7%); automobile dealers and manufacturers (73.6%); cotton mills and presses (73.4%); insurance companies (71.9%) and all other companies (70.7%). On the contrary, the percentage was disappointingly lower in old industries like jute mills and presses, banking companies, planting companies etc.

Thus it is discernible that the Government's active interest in the progressive Indianisation of personnel in foreign owned or controlled industrial and commercial organisations has been, by and large, successful and has produced impressive results. By the end of the current year even more striking results will be yielded for, according to the present trend, all posts carrying salaries of Rs 2,000 or below will be entirely filled by Indians except in very special cases. In the salary-group of Rs 2,001 to Rs 3,000 nearly 70 per cent is likely to be filled by Indians except in very special cases. In the salary-group of Rs 2,001 to Rs 3,000 nearly 70 per cent is likely to be filled by Indians this year and in the other group also a similar performance is anticipated.

Indian Finance

COAL WASHERIES Opportunity for Indian Enterprise

By a recent decision of the Government, indigenous manufacturers of coal washeries have been brought within the scheme of preferential treatment that is being extended to other indigenous manufacturers. This is but an appropriate thing to have done in the light of the Third Plan programmes for creation of additional capacity for the washing of coal. Under the Second Plan itself a fairly ambitious programme for setting up of coal washeries was chalked out, but for reasons of foreign exchange shortage and other adverse circumstances, not much progress could be made. The Third Plan envisages additional capacity of 12.7 million tons per year for coal washeries, and the schemes in this field are being sponsored by the Hindustan Steel and the National Coal Development Corporation. The Hindustan Steel's programme comprises setting up of a second unit at the existing Dugda washery with a capacity of 2.4 million tons and expansion of the Bhojudin washery which is expected to be commissioned shortly by about 0.8 million tons. The schemes of the NCDC include setting up coal washeries at Kathara, Karanpura, Chalkari, Swang, Ramgarh and Sudamdih. These projects of the NCDC are in various stages of progress, with some of them being expected to be ready for commission before the end of this year.

In the setting up of these factories, the scope for allowing indigenous manufacture of machinery etc exists only where projects are free of foreign tie-ups. The Kathara and Karanpura washeries are for example being set up with Russian and Polish credits respectively and this may seem to exclude scope for the Indian manufacturers. The setting up of washeries at Chalkari and Swang, Ramgarh and Sudamdih and Dugda will however offer scope to Indian manufacturers. Though this preference to Indian manufacturers has been made conditional on reasonableness in respect of price and delivery, the value of the opportunity that is being given to Indian enterprise should not be overlooked.

CHEMICALS Concessions for Export Prospects

The Export Promotion Directorate of the Ministry of Commerce and Industry has recently finalised a 24-point special scheme for stimulating the exports of chemicals and allied products for the

current year. The new scheme envisages the achievement of higher levels of exports gradually by offering special concessions to the manufacturers of these items who are willing to participate in the export promotion programme. Registration under this scheme is open to producer-exporter and merchant-exporter and provisional enrolment of exporters will be made upto 31 March 1962.

The new incentives to registered exporters cover a wide range such as import of raw materials to some extent whenever the occasion demands, the allocation of items like caustic soda, ash, bleaching powder, raw rubber, and other items which are otherwise restricted under the import trade control policy and the import of machinery under a ceiling. Exporters of caustic soda, ash or camphor will, under the new scheme, be entitled 75 per cent of the f.o.b. value of the finished products exported containing such materials or twice the value of the raw materials imported whichever is lower. To those exporters of zinc-oxide, the import entitlement is even higher and placed at 95 per cent. In the case of manufacturer-exporter import entitlement pertaining to machinery will be roughly ten per cent of the f.o.b. value of exports when necessity arises for modernisation, replacement or for balancing the existing machinery which does not require governmental sanction. The Export Promotion Directorate, however, has stipulated that such entitlements to machinery or machine parts may lapse with the expiry of the period. Another attractive feature of the new programme is the special provision for export drawback on import duty as well as Central excise duty under the export drawback (general) rules 1960. The procedure for proving the bonafide of exports has also been further simplified by producing evidences of Export Risk Insurance Corporation Limited or shipping invoices. Besides, exports made against rupee payments under special arrangements will be considered for issuing import licences or discharging of export obligations if such exports are made from rupee trading countries. But, as is evident from the scheme, this should not be the sole criterion for granting licences for imports for, in special cases revalidating such licences for import from other areas may also be taken into account by the authorities.

The new arrangement for stepping up the exports of chemicals and allied manufactured items is timely in the context of the country's alarming foreign exchange reserves position. The new offer made by the Export Promotion Directorate is both a challenge and an opportunity for the exporters as well as manufacturers.

24 February 1962

COMPANIES

The South in the Fourth Quarter

The review of the working of the companies in the southern region shows 98 companies with an authorised capital of Rs 855.12 lakhs to have been registered in the region comprised by the States of Madras, Andhra Pradesh Mysore and Kerala during the quarter ended 31 December 1961. These included 8 public companies with an authorised capital of Rs 457.00 lakhs and 89 private companies with an authorised capital of Rs 382.12 lakhs while one was an association not for profit. State-wise, with 75 new floatations Madras accounted for the largest number. 7 new companies were registered in Mysore and Kerala each while the number of floatations in the Andhra Pradesh amounted to 5. In all the States, the companies registered as private companies outnumbered public companies among the new registrations, the very low number of public companies at 4 out of a total of 75 in the Madras State and the absence of public companies in the Mysore State being particularly striking.

Industry-wise, the bulk of the registrations was in the field of Transport, Communications and Storage. In Madras 47 new companies were registered in this group. A total of 20 new companies were registered in the field of processing and manufacture of which 12 were in Madras. There were no registrations under transport etc in Mysore and Kerala. Of the newly floated companies, six companies with an authorised capital of Rs 10 lakhs and more represented the giant floatations of the period. They are (1) Andhra Foundry and Machine Company Limited (2) Bluemount Ceramics Private Limited, (3) Madras Tube Company Limited (4) Lucas-TVS Private Limited (5) The Indian Veneer Company Private Limited (6) Seshasayee Wire Ropes Limited.

During the quarter under review 30 companies were struck off the register of companies as defunct, the total paid-up capital of which was Rs 8.59 lakhs while 20 companies went into liquidation the paid-up capital of which was Rs 34.70 lakhs. The review also testifies to rigorous enforcement of the provisions of the Companies Act 1956 to stamp out shady company practices and to secure compliance with the provisions of the law. It is reported that 92 prosecutions were launched during the period against certain companies and their officers for such reasons as failure to hold the annual general meeting and for non-filing of the annual returns and the balance sheets as required by the law. Prosecutions realised Rs 12,610 by way of fines.

PERSONAL INCOME

Regional Patterns

The November 1961 issue of the Monthly Abstract of Statistics, contains an article, on "Estimates of Personal Income by States" and provides interesting study of a relatively unexplored aspect of national welfare. Statistics of income and expenditure are among the vital indices of national growth and economic development and provide the indispensable tools for national planning. This offers a vast field for study which is only very meagrely covered at present. The Central Statistical Organisation, has been responsible for some painstaking work and it has collected and compiled fairly reliable and comprehensive data which offer useful basis for authentic studies of income behaviour.

Personal income as a concept in economics may be distinguished from the concept of national income in that the former is more narrow in what it signifies. Data for personal income include only the income that accrues to persons and therefore necessarily excludes anything that accrued to the vast Government sector. However, as a yardstick of welfare and the benefits of economic development and growth, the concept of personal income has even greater value than national income. The article has defined personal income which accrues to the households in the form of wages and salaries and other factor receipts including profits of household enterprises. Apart from these, it also includes other items of income like dividend, interest and other earnings. Estimates of personal income have been made on two bases, namely the income approach and the expenditure approach. As considered from the expenditure approach, the items included are domestic expenditure including expenditure on rent and taxes, net purchase of real assets, construction and improvements, net cash deposits, and net purchases of stocks and shares etc. It is noteworthy that estimates of personal income derived from these two different approaches tally remarkably well for all the States with the exception of Bombay and Assam. In these two cases there are significant divergences.

The estimates reveal great disparities in the levels of living in the different States, the index of personal income varying from 70 in the case of Orissa and 160 in the case of West Bengal. Apart from West Bengal, the Union Territories, Punjab, Assam and Jammu and Kashmir figure as relatively advanced in point of living standards. The index for all these States stands above 120 being higher than the all India index which at 100 provides the basis for determining State-wise variations. Orissa, Kerala, Bihar, Andhra Pradesh and Madras are

relatively worse off and have an index lower than 90.

The article also throws light into the relative share of the various components constituting total personal income and also into the trend in per capita consumer expenditure in the various States during 1957-58 and 1958-59. In view of the insufficient data collected for various States, only the all-India position in respect of the share of components is given. The major component in personal income is shown to be profit which accounts for nearly 60 per cent of total personal income.

Wages and salaries constitute a little more than a third. These estimates of the relative share of the various components are stated to be liable to greater error than estimates of absolute income, in view of the gross under-reporting by households in both the rural and urban areas. On the expenditure side, the break-up of personal income reveals some remarkable facts. Most importantly expenditure on rent and taxes is very low being about 1 per cent of consumer expenditure, even in urban areas. It is also noteworthy that net purchase of real assets is also very low being only Rs 0.22 in urban areas and Rs 0.70 in rural areas.

The study of consumer expenditure reveals a slight increase in 1958-59 as compared with expenditure during 1957-58, and this holds true for all the States. As with per capita personal income, there are also pronounced variations between the different States in respect of per capita consumer expenditure also. But the placings do not completely accord with the

placings in respect of personal income. All the same it is noteworthy that the States which have relatively lower per capita personal income also report relatively lower levels of per capita consumer expenditure.

★ VEGETABLE OIL Many Disabilities

The disabilities being suffered by the bigger units in the vegetable oil industry on account of the compounded levy of excise duty were brought to the notice of the authorities by the Andhra Chamber of Commerce recently. The system of compounded levy was intended to encourage the small manufacturers who now account for about 30 to 40 per cent of total production, but that it should hurt the interests of the existing big units in the industry is not quite a happy development. But it has come to pass that consequent on the introduction of the compounded levy, certain bigger units in the industry have had to close down. The main defect in the present system of the compounded levy which bears heavily on the bigger units, is that it is not based on the capacity of the machinery installed in different factories. If therefore, it is argued, the rate could be fixed with due regard to capacity of the crushing machinery, it would help stabilise the position of the bigger units and help the further development of the industry without adverse effects on the smaller units. In this connection it has been suggested that the levy

BANKING SERVICE OF EVERY DESCRIPTION OFFERED.

should be fixed on the basis of the working capacity of each unit, and the pre-shift rate should be fixed on the basis of what each can produce during that particular period of working. For fixing the rates for the various types of expellers, it has been proposed, that the cubical capacity of their chamber should be ascertained and the rate fixed on a pro rata basis.

The fiscal system as applied to the vegetable oil industry also admits of improvement in other ways. It has been pointed out that a unit containing two rotaries enjoys the maximum benefit from the present schedule while a unit containing say 12 rotaries which are equal to two standard expellers is in a disadvantageous position. There are also other measures taken by the authorities which have only tended to make the working of the industry less efficient than before. The prohibition of rollers is a case in point. Such prohibition is not helpful to production at all as a considerable quantity of oil would be left in the cake if rollers are not to be used. There is also needless harassment in the enforcement of these policies by the district officers. In the light of all these factors, a thorough scrutiny of the working of the industry seems warranted.

★

US The Outflow of Short-term Funds

The outflow of short-term capital has promoted the US Government to take new and vigorous steps to safeguard its international balance of payments position. These include measures to increase short-term interest rates at home and to intervene directly, when necessary, in exchange markets abroad.

The US government has, of course, been engaged for some time in a determined and multi-pronged effort to overcome US payments difficulties. Emphasis, for the most part, has been on curtailing outlays abroad whenever and wherever this could be done without damage to US interests, and on spurring exports as a means of earning more money with which to pay for imports and such other outlays as government economic and military aid, private investment and tourism.

These efforts have helped narrow the payments deficit substantially. It totalled about \$2,500 million in 1961, as against \$3,900 million in 1960 and similar amounts in 1959 and 1958.

There is another aspect to the problem, however, to which the government now is addressing itself. This is the outflow of short-term funds, which last year

accounted for the major part of the balance of payments deficit.

The Kennedy administration, in fact, has found it useful to draw a realistic distinction between the volatile and sometimes substantial net flows of short-term capital and the other balance of payments elements. These other elements—which it characterizes as the basic accounts—include the net payments resulting from merchandise trade, services, unilateral transfers and long-term investment. These, in the aggregate were brought significantly close to balance last year.

Because short-term capital movements are often temporary as well as erratic, they may tend to exaggerate the nature and extent of the over-all balance of payments problem. But they are real enough while they last, and if unchecked might tend to weaken the position of the US dollar. This the Kennedy administration has no intention of allowing to happen, as is evident from the early and vigorous measures to counter them through operations in money markets at home and abroad.

Since short-term funds are often speculative in nature and may tend to move in the direction of higher yields, one such measure is to induce a rise in interest rates at home. This is being accomplished through a refunding of outstanding US treasury bond issues in such a way as to increase rates in the short-term area and thus discourage an outflow of funds to money markets abroad.

To the extent that investors accept the new offerings, the treasury will have accomplished some needed restructuring of its outstanding debt, without diverting from productive purposes in other sectors of the economy the new savings flowing into the intermediate and long-term capital markets. Thus, this measure would help protect the US balance of payments without interfering with domestic economic growth.

On the foreign front, the treasury recently has expanded its operations in the foreign exchange markets, which it began last year. In effect, it has been obtaining foreign currencies, such as Italian lire and Swiss francs, which it can use if need be to help stabilize currency flows and the value of the US dollar.

In addition to the treasury, the US Federal Reserve Board—has indicated its readiness to intervene in the foreign exchange market if necessary. Its potential resources, in the form of its vast reserves of gold and dollars, are much greater, of course, than the \$350 million in the treasury's exchange stabilization fund—of which less than \$200 million would be available for transactions in Europe.

Just how much would be available through the Federal Reserve for this kind of an operation is not

known, but the belief is that a little could go a long way in defending the basically sound US position.

★

EMPLOYMENT The Dilemmas of Development

An expert team set up by the International Labour Organisation has urged the developing countries to aim at achieving full employment within a reasonably short time. The team consisted of five economists from Brazil, Canada, Italy, Poland and India and was asked to make a thorough study of the problems of employment creation in the context of development and suggest measures for expansion of employment opportunities both under national plans and policies and through international action. Unemployment is of the major economic maladies which developing countries face and the fact that the ILO had to set up a special committee to study the problem with reference to the developing countries goes to prove the very little headway that is being made in eliminating unemployment. In a number of these countries, economic development has only served to further accentuate unemployment. The main recommendation of the team of experts is to raise the levels of investment in their national plants by the developing countries. Employment creation is a function of investment and considering that the explosive rate of population growth in these countries had in many cases wiped out the gains from economic planning, the need for raising the levels of investment taking into account the rate of population growth is undeniable. The availability of foreign capital for the underdeveloped countries which are at present noted for their low capacity to import and to save is a necessary prerequisite for any substantial improvement in the rate of investment.

In urging special measures to increase employment, the Committee has also conceded possibilities of conflict between the objective of more employment and of more rapid economic growth. This is the dilemma of development which all the developing countries face in greater or lesser degree, and in some cases as the committee has noted, the preference has gone to more rapid economic growth. It will be agreed that such conflicts can be eliminated "once the level of investment became adequate for the maintenance of full employment". This situation of investment being adequate for the maintenance of full employment can hardly be predicated of the developing countries at present. The Committee has stated that as a rule, the em-

ployment of more labour would increase the total output and that given, appropriate measures to raise the level of and improve the pattern of investment more employment could also lead to a higher rate of economic growth. In this connection, however, it may be pointed out that even the pattern of investment in view of the exigencies of current production needs etc, may not permit of a change to sustain more employment. Further the countries depending on increased exports to secure the foreign exchange needed to import machinery etc, have very little freedom to choose between labour intensive methods and others suited to more efficient production. It is in the sectors of production which cater to the domestic markets that scope for greater employment opportunities seems to exist. Here the scope, will depend on the potentialities for realising production benefits, which are in turn linked with the pattern of investment and the total level of investment. The Committee has made some valuable recommendations to promote labour intensive methods in production, which includes lower interest and tariff rates, tax concessions and more rapid depreciation. The idea of linking wages in the large-scale sector to a desired rate of increase in employment is also calculated to ensure more employment without undermining the basis of living standards. However in the process of execution, these suggestions meet with rival considerations and pressures and to reconcile them poses a most delicate and difficult problem. A more practicable suggestion that the Committee has made is to set aside larger public funds for the promotion of small-scale industries using labour intensive techniques.

THE ALKALI & CHEMICAL CORPORATION OF INDIA LTD.

ANNOUNCEMENT

The Annual General Meeting of the Members of the Company will be held on Thursday the 22nd March 1962 at 2.30 P.M. at the Registered Office, 34, Chowringhee, Calcutta-16.

Notice of the Meeting together with the Annual Report and Accounts has already been posted to the Shareholders direct.

The Ordinary Share Registers of the Company will remain closed from the 6th March 1962 to 22nd March 1962 both days inclusive.

By Order of the Board,
IMPERIAL CHEMICAL INDUSTRIES (INDIA) PRIVATE LIMITED
Secretaries.

"I must have liberty
Withal, as large a charter as the wind
To blow on whom I please"
—As You Like It.

HAT began as a lack-lustre election is fast moving towards an exciting finish. The most interesting development reported is the heavy polling, which in some places is put at as high as over 90 per cent! This is certainly encouraging evidence of political consciousness: but the circumstance may well prove disconcerting to candidates and parties whose calculations may get upset. For, despite competitive bidding for votes, most candidates in India are rather heavily on electoral pathy, because of a feeling that the man who does not vote would probably vote for one's opponent if he did. It is true that both candidates cannot be right in this, but with constituencies as large as those prescribed under the Constitution, it is a forlorn endeavour to make sure of all possible votes. A candidate in India therefore normally prefers to have a small body of effective voters to contend with. It may well turn out that the experience of this election may make the parties change their strategy for the next and act on the opposite principle that the man who did not vote had probably a vote for oneself. This certainly was the psephological lesson that the British Labour Party drew at the end of the last election it contested: its defeat was due to those who did not vote rather than those who voted against it. When this does become the lesson of our election, we would have achieved democratic adulthood.

★

Meantime, campaigning in decisive battles still to be joined is becoming less gentlemanly. Tempers are being lost and masks dropped. North Bombay has led to considerable mutual slanging and behind the unmistakable weariness of the principal parties concerned, there is anxiety rather than hope. Inspired despatches are obviously written in panic rather than in exultation. Mr Nehru has been complaining—a rather odd complaint, this, to come from him—of neglect by newspapers. If newspapers are thus accused of playing politics, politicians are not exactly covering themselves with glory. One of them, it is reported, has been inciting crowds to ceremonially burn a particular newspaper in front of

its office. A rather far-fetched precedent cited for this barbarism is the burning of foreign cloth in pre-independence days! Though it would be wrong to underestimate the issues involved in the North Bombay election, there is a distinct chance of people now saying things that they may have to eat at leisure. The "either—or" polarisation of popular feeling that has been manufactured for the nonce in Bombay may well become permanent with disastrous consequences to the middle-of-the-road politics we have been practising with some success all these days.

★

It is hardly surprising that the initialling of the secret agreement between the French Government and the FLN over the future of Algeria has not been followed by wild rejoicings. It is not so much that official ratification from the French cabinet and the Algerian provisional Parliament in Tunis is in doubt. Considering how both the parties are heartily sick of the Algerian war, we may take formal endorsement by both sides for granted, especially since, on the Algerian side, the substance of the Algerian sovereignty has been secured. The real misgivings stem from the potentiality for mischief that the OAS still possesses. Evidence on this is confusing. Even as recently as a week ago, one could hardly have dared hope that France could scotch the OAS. Ever since the "episode of the barricades", (as President de Gaulle described it in a deliberate understatement last week), the army has been sorely divided in its loyalty. Sporadic acts of violence have continued and M. Mendes France said in a press conference last December that the "ultras" were responsible for as many as four hundred acts of terrorism in 1961. January this year saw the intensification of these bomb outrages both in Algeria and France. (Jean Paul Satre was the intended victim of a plastic bomb thrown on his house on 8 January, though in the event, he was not hurt.) Early this month we had some gruesome reports of OAS violence in one of which a little girl lost her eye. This led to the massive protest meeting of the 8th of this month organised by the

leftist parties and the clash with the police resulting in the death of eight persons. Last week, however, saw a distinct change for the better. The French Government, sensing probably the profound public anger, allowed a procession of mourners for the dead of the previous week. By all accounts, it was an impressive sight. Nearly a million people marched in silence towards the cemetery of Pere Lachaise after the entire city was paralysed by what was perhaps the most successful general strike in Paris in recent memory. The fact that this gesture was not, like the earlier protest on "Black Thursday", broken up by the police is significant. The FLN itself is reported to be feeling that if only de Gaulle cooperated with it, the OAS could be liquidated in a week's time in Algeria. This may sound a tall claim but it is clear that de Gaulle has no lack of allies, if he needs them. (Whether he will choose to use them is a different question.) But there is room for cautious hope that the Algerian question is in sight of solution. Let us keep our fingers crossed.

★

Parliamentary Privilege was the subject of excited discussion in India some months ago. Now it is the turn of Executive Privilege, invoked recently and reluctantly by President Kennedy. We in India are familiar enough with the kind of evasion that begins with "it is not in public interest to reveal." Neither the Indian nor the American Constitution provides specifically for this kind of shelter though it is defensible on commonsensical grounds. Mr Kennedy certainly has influential precedents, George Washington having invoked it in 1792. Since then, American Presidents, democrats as well as republicans, have used it sometime or the other against the insistent curiosity of the Congress and the implied authority to do so has not been successfully challenged. In any case not even the most passionate democrat would be disposed to challenge the propriety of the use to which President Kennedy has put it. Nor is he likely to consider that his action was precipitous. It was only when the President felt that it was the only weapon left with him in dealing with persistent efforts to undermine an important democratic principle that he used it. Ever since General Walker resigned, the question of "curbs on the freedom of the members of the armed forces" is being kept alive by the lunatic fringe in American politics. The American public itself has sensibly come down on the side of the traditional American

and democratic distrust of the military in political contexts. An offshoot of the debate was the question of pre-censorship of speeches by members of the Services. Here again, responsible military leaders themselves have testified to the reasonableness of the convention. No principle is involved in the assertion that the government should speak with one voice, though one is involved in the subsidiary proposition that that voice should be that of the Civil authority. Besides, it is an elementary precaution to take. At his press conference last week, Mr Kennedy referred to an interesting instance. Soon after the new administration took office, Admiral Burke voluntarily submitted a projected speech of his for clearance. This saved him and the Administration from a lot of awkwardness, because he was not aware that the Administration was then carrying on negotiations for the release of the RB-47 pilot held by the Russians. Indeed, the President said that he himself passes on the drafts of his speeches to the State and Defence Departments for comments.

★

Mr Kennedy has completely disarmed possible criticism by going as far as he decently could in meeting the wishes of the Senate sub-committee investigating speech-censorship. Defence secretary McNamara was prepared to reveal the names of the officials constituting the panel of speech censors. He was also ready to indicate the actual changes made and the reasons why they were made. But when the sub-committee wanted to have the makers of particular changes identified, he smelt a witch-hunt and very properly refused to allow any subordinate of his to take the senatorial rap for doing no more than his duty. In so doing, he has effectively scotched the revival of McCarthyism that did such harm to the reputation of the US in the fifties. Fortunately for the Administration, the sub-committee has done certain other foolish things and has alienated from itself even military sympathy. Its investigators have been interrogating individual Marines on their attitude to communism behind the back of their commandant. (Some of the reported questions, however, are hardly of the sort, that the Marines, at least as the national myth represents them, are likely to be able to answer. The true nature of dialectical materialism and the difference between pacifism and subversion are not the traditional subjects of speculation by the Marines.) In any case, it would seem that Senator Thurmond, who appears to have some claim to the mantle of the late-lamented junior Senator from Wisconsin has put his foot in it. After this ineptness, not even disgruntled generals are likely to shed tears over his discomfiture.

HIPPING

Tramps Afloat

Press comment on the recent agreement under which a private shipping firm, the Jayanti Shipping Co., will get a loan of over Rs 20 crores from the Shipping Development Fund, had cast doubts on the propriety of the transaction. The loan, the biggest so far given to any shipping company in the country and accounts for nearly two-fifths of the entire Third Plan allocation or shipping. The total of loans or the acquisition of ships during the decade covered by the two plans amounts to only Rs 40 crores. Some of the provisions of the agreement appear to give a handle to the criticisms to which so far no satisfactory answer is available from the official statements elucidating the agreement. These provisions are designed to ensure that the Company will have adequate capital and that the debt equity ratio of 4: 1 will always be maintained. The agreement stipulates that the Company could raise its paid up capital to Rs 1.5 crores before it can become eligible for any portion of the loan. Hereafter the Company will have to build up its equity capital progressively up to Rs 5 crores as further instalments of the loan all due. It is also stipulated that the Company shall convert itself into a public limited company within a period of one year from the date of the signing of the loan agreement or immediately before the first instalment of the loan is due for payment, whichever is earlier. These provisions it appears have been laid down in the agreement, because the Company was only formed last year as a private limited company with nominal equity capital of Rs 200. The promoter, a non-resident Indian, has stated that he proposes to take up Indian residence shortly. A well known Greek shipping group is associated as 25 per cent partners in the Jayanti shipping Company.

The Company proposes to acquire a fleet of 13 new cargo ships—five tramps and eight bulk carriers—aggregating 200,000 tons DWT, with the loan of Rs 20.25 crores which will cover 90 per cent of the cost of acquisition. Why the Government should show such special consideration to a private limited company, and that too, a new entrant to the Indian shipping industry, to the extent of enabling it to build up from scratch a sizable fleet with loans

from public funds, is more readily asked than answered.

If, however, the agreement works out satisfactorily as the promoters are confident that it will, the Third Plan target of additional tonnage would be over-filled by the third year of the Plan and at much lower cost than was envisaged when the Plan was drawn up. Even ahead of the finalisation of the agreement, the Company had arranged with shipbuilders in Japan for the supply of vessels on easy deferred payment terms. Under the arrangement with the Mitsubishi shipyard, no payment in respect of a ship is to be made to the shipyard until the ship is delivered. The first payment is ten per cent of the price of the ship, and the balance is to be paid in seven equal annual instalments. But as soon as the first payment is made, the ship will be in a position to earn or save foreign exchange. The delivery of all the ships is to be completed before 1964, but the total payments to be made to the shipyard during the Third Plan period will amount only to Rs 7 crores. But, during this period, it is claimed, the ships would have earned or saved foreign exchange to the extent of Rs 14 crores.

The entire loan from the Shipping Development Fund will be secured by first mortgage of all the ships to be built and will be repayable in 18 years commencing from the date of payment of the first instalment of the loan. The State Bank of India will issue a guarantee to the shipyard concerned in respect of the payment of 90 per cent of the price of the ships in eight annual instalments. The effective rate of interest will be 3 per cent, which is the concessional rate fixed by Government in respect of all loans granted by the Shipping Development Fund Committee for acquisition of ships. A nominee of the Committee will function on the Board of Directors of the Company for the entire duration of the loan. It is also stated that all the ships will be manned by Indian crew from the beginning, providing employment for over 700 seamen of various ranks.

The Company has shown remarkable enterprise in placing firm orders for construction of eight bulk carriers with the shipyard even before the terms of agreement with the Government of India were finalised. The first ship is expected to be delivered early next year, while the other seven are expected to join the Indian mercantile marine by the

middle of 1964. Orders for the remaining five ships have not yet been placed, but the Company expects to have them delivered before the end of 1964.

Under this scheme, tonnage added to the Indian merchant fleet will be 200,000 GRT by the end of 1964 against the Third Plan target of 180,000 tons GRT, and the actual payment in foreign exchange will be only Rs 7 crores. The balance of Rs 48 crores of the Plan allocation of Rs 55 crores to the Shipping Development Fund will thus be available for further expansion of tonnage which, it is generally conceded, is necessary if Indian ships are to carry more than a small fraction of the country's foreign trade. The acquisition of tramps and bulk carriers, it is stated, will make the Indian merchant marine a more balanced fleet by correcting the shortage of tramp shipping. At present tramps account for only 37,000 tons out of the total ocean-going fleet of 568,000 tons GRT. Bulk carriers will help to step up the export of ores and also save foreign exchange on the transport of imported food grains.

A dispassionate examination of these aspects of the transaction would suggest that the doubts and innuendos that had been widely broadcast were entirely misdirected. And this conclusion is strengthened by the fact that the Company had earlier suggested that Government offer long term contracts for carrying Government cargo instead of giving a loan, the Company finding the necessary funds for paying the cost of the ships. But the Government considered that a loan arrangement would be preferable. In any case it cannot be denied that the promoters of the Company have shown remarkable enterprise in discovering new opportunities for developing Indian shipping. And the exponents of free enterprise should be the last to complain if they derive the benefit of their business acumen.

The question, however, remains why the established shipping companies have not been able to come to similar advantageous arrangements with foreign shipyards for purchase of new ships. If they had taken the initiative, they too would have been entitled to the same generous measure of loan assistance from the Shipping Development Fund. The type of ships that the new shipping Company proposes to acquire may provide a clue to the answer. It is possible to have doubts whether the present state of the freight market could sustain optimistic estimates of the profitable working of tramps flying the Indian flag. The experience of tramps already afloat may be one of the reasons why established shipping companies have not displayed any great enthusiasm for adding to the tonnage of tramp shipping. It is, however, possible that with the assistance of their foreign associates,

Jayanti Shipping Co. will be able to do much better with their tramps.

There are also proposals for establishing closer trade relations among Afro-Asian countries. At the instance of the ECAFE Secretary General who had addressed the member Governments on the subject, the Government of India has indicated agreement in principle to the proposal that member countries should take necessary steps to foster intra-regional trade. A sub-committee of the ECAFE, of which Mr K. B. Lall, now posted as Ambassador at the headquarters of EEC in Brussels, was chairman, had drawn up a report indicating the practicable measures towards greater intra-regional co-operation in trade and industry. A former declaration on the subject is expected to be approved at the next ECAFE General Assembly session in Tokyo. The Afro-Asian Economic Conference held in New Delhi to synchronise with the Indian Industries Fair had highlighted the fact that one of the serious obstacles to growth of trade between Asian and African countries was the lack of adequate transport and communications. The established shipping routes link these emerging countries with Western Europe, but there are few regular services linking the countries within the region which could help to develop intra-regional trade. The volume of such trade at present may not justify regular cargo services, and in such a situation, tramp shipping has an important role in the development of Afro-Asian trade.

PERSONAL

Mr H. Mackay Tallack of Macneill and Barry Ltd and Mr A. R. Foster of the ICI were elected President and Vice-President respectively of the Committee of the Bengal Chamber of Commerce for 1961-62 at the annual general meeting held on 16 February. Messrs F. A. Collett (Imperial Tobacco); J. W. Easson (Gillanders Arbuthnot); J. V. Jardine Paterson (Jardine Henderson); H. K. S. Lindsay (Metal Box); A. I. Muri-son (James Finlay); A. D. Oglivie (Andrew Yule); D. C. B. Pilkington (Bird & Co); S. M. Smith (Shaw Wallace) and I. G. Thomson (Chartered Bank) were elected members of the Committee for the same period.

Mr K. P. U. Menon, former Chairman of the Rajasthan Electricity Board, has taken over as a Director of the State Trading Corporation of India.

Mr Hans Tambs Lynche, a Norwegian expert, has arrived in India to assist the Government in drawing the final project report for the Fisheries Operatives Training Institute to be set up at Cochin. Mr Lynche is expected to stay in the country for about five months.

Rise in US Burlap Consumption

THE sharp pick-up in burlap consumption in US in January has evidently provided the incentive for the steady undertone noticeable this week in the jute goods market. Burlap consumption last month in that country has been unexpectedly high at 88 million yards. This compares with the consumption of 73 million yards recorded in January 1961 and 72 million yards in December 1961. Stocks at 241 million yards are higher by 44 million yards than they were at the end of the previous month but compared to the corresponding month of 1961 are 16 million yards lower. The fact that burlap consumption in US in January was the highest for any month in the past many years has presumably been taken as an indication of a revival of interest in hessian in its most important market. The sharp rise in consumption last month seems to have strengthened the belief that the consumers in US have at long last realised that if they want to use burlap there is no point in waiting indefinitely for a fall in prices especially since it has been made clear that raw jute prices will be maintained at the minimum levels.

The mere possibility that there may be continued good demand for hessian has been enough for speculators to concentrate their attention on ready and near delivery hessian in the Calcutta markets.

But a point that speculators seemed to have ignored is that mills are to continue to work to their full capacity till the end of March and that the output of hessian is being stepped up as will be evident from the jute goods production figures for January. The expectation that hessian prices could be maintained at high levels as a result of scarcity of ready supplies may be belied as the industry is sure to take further steps to keep the markets supplied with adequate quantities of hessian. It is also possible that the US burlap consumption figures for January do not after all reflect a revival of active interest.

In the meantime, the East India Jute and Hessian Exchange has taken steps to prevent a squeeze in hessian. It has decided that no fresh transactions will be accepted in respect of the standard contract No. 1 (hessian cloth contract) for February 1962 delivery, with effect from 20 February. Earlier the Exchange had issued a warning about drastic action if overtrading was not sizably reduced by 19 February. The emergency measure had a sobering effect on the market which in

the past two days is displaying a quiet trend.

The raw jute market also ruled steady in earlier dealings in sympathy with the goods section. The minimum jute purchase quota for the current week is of the same quantum as last week. It would appear that the earlier steadiness mainly stemmed from the belief that with jute goods prices sharply looking up, raw jute prices also would improve. But mills however did not show themselves to be over-anxious in buying. Perhaps a point in favour of holders is that arrivals in January 1962 have slowed down. Arrivals of raw jute in Calcutta and mill stations during the month totalled 809,000 showing a decline of 87,300 bales compared with the previous month.

*

TEA

Arrivals and Stocks

ACCORDING to trade sources, arrivals of Tea in the Calcutta Port declined to 534,809 chests during January 1962 from 643,152 chests in the previous month; but were higher than the arrivals in January last year when they totalled 398,540 chests. Total arrivals in the ten months ended January, 1962 amounted to 4,843,738 chests as against 4,343,699 chests in the similar period ended January last year.

Arrivals by rail rose from 1,223,338 chests in the ten months ended January 1961 to 1,371,206 chests in the period under review as did those by river and road from 2,757,884 chests and 205,460 chests to 2,981,766 chests and 353,787 chests respectively. Arrivals by air, however, fell from 157,016 chests to 136,979 chests.

Stocks in Calcutta warehouses were higher at 1,110,536 chests at the end of January, 1962 (each weighing 106 pounds on an average) as compared to 1,093,068 chests at the close

GLAXO LABORATORIES (INDIA) PRIVATE LIMITED

"Glaxo Laboratories (India) Private Limited, invite applications for the post of Assistants in their Organisation & Methods Department. Applicants should have at least a first or second class degree in Business Management or Accountancy of an Indian or Foreign University, and must, in addition, have some practical experience in Organisation & Methods work. Total initial emoluments will be about Rs. 600/- per month with good future prospects. Higher emoluments may be considered for an exceptionally suitable candidate. Applications giving full details about qualifications and experience should reach the Personnel Officer, Glaxo Laboratories (India) Private Limited, Dr. Annie Besant Road, Worli, Bombay 18, on or before the 28th February 1962".

General Manager.

the previous month. While stocks in public warehouses rose from 18,627 chests in December, 1961 to 17,914 chests in January, those in private warehouses fell from 384,441 chests to 382,622 chests. Besides, float stocks of tea, at the end of January, 1962, were lower at 15,773 chests as against 76,356 chests at the end of the preceding month.

Meanwhile, in the Export Sale held in Calcutta, offerings were 75,047 chests. There was a good general demand with buyers following quality closely. There was, however, less inquiry for Fannings and prices ten-

ded easier. Plain Broken and Fannings, particularly where stalk and fibre were present, were up to 20 nP per kilo easier and sometimes more. Any well-made orthodox teas with bright liquors were sold well; but the remainder were generally easier.

The strongest feature of the sale were the best autumnal CTC types which met with keen competition and were often dearer. Fannings received more support than last week. Medium and secondary sorts with autumnal liquors were sold well and were generally dearer, parti-

cularly Broken. Legg-cut teas were irregular.

Darjeeling Teas were sold well, particularly those with quality. Whole Leaf grades were irregular, the cheaper varieties being generally firm to dearer. Tippy sorts were well supported. Following rates were quoted:—Slean Plain Pekoe Rs 4.20 to Rs 4.40; Plain BP Rs 3.50 to Rs 3.80; Plain Fannings Rs 3.70 to Rs 4.10; Medium Assam CTC BP Rs 5.20 to Rs 5.50; Medium Assam CTC Fannings Rs 5.10 to Rs 5.40; Best Assam CTC BP Rs 6.00 to Rs

6.50 and Best Assam CTC Fannings Rs 5.80 to Rs 6.40.

In the Internal Sale, offerings were 30,521 packages of Dusts and 735 packages of Leaf grades. There was a good general demand at easier rates except where teas met with competition, when useful prices were realised. CTC types showed a decline of up to 20 nP per kilo except for the best varieties which were fully firm to dearer. Orthodox descriptions also eased and were up to 20 nP below last rates. Legg-cuts followed a similar trend and, though irregular, were generally easier. Following rates were quoted: Plain Orthodox Dust Rs 3.90 to Rs 4.50; Medium Assam Dust Rs 4.30 to Rs 4.95; Legg-cut Dust Rs 4.60 to Rs 5.10; Medium Assam CTC Dust Rs 5.45 to Rs 5.90 and Good Assam Dust Rs 6.40 to Rs 7.00. Leaf grades met with a fair demand.

The average at the Cochin market for internal and export sales indicate that the internal market is weaker than the export market. The average price secured in the last sale was 98nP per kilo lower than the same sale average last year for Dusts. In the first six sales last year, the average was 91 nP per kilo higher than this year. In export sales, the drop this year for the sixth sale was only 22 nP per kilo and the average of the six sales was only 29 nP below last year.

In London auction, offerings this week were 28,582 packages including 17,027 packages from North India and 1,616 packages from Pakistan. Good general demand was again in evidence with the best liquoring teas remaining fully firm at the last rate. Medium descriptions, however, met with very strong competition and were inclined dearer, especially those of orthodox manufacture, which showed advances of 1d to 2d per pound. Clean Broken Pekoe was quoted at 3sh per pound.

Tea stocks in London, as on 9 February, totalled 143.68 million pounds as against 146.12 million pounds in the previous week. The total quantity to be landed on the same date was 13.67 million pounds. Total afloat was 20.23 million pounds including from Calcutta 13.36 million pounds; from Chittagong nil; from Cochin 707,340 pounds; from Ceylon 2,930,000 pounds and from other Ports 3.23 million pounds. The average price realised at the auction, during the week ended 9 February 1962, was 52.54d per pound as against 52.39d in the previous week and 54.04d a year ago.

COTTON Jarilla March Scales Ceiling

TRADING in the Bombay cotton futures market came to a stand-

24 February 1962

piercing the official ceiling of Rs 693 on Wednesday on account of the hectic buying by upcountry operators.

The Jarilla March which opened the week at Rs 689.50 smartly rose to Rs 693 on Wednesday deriving inspiration from the sustained short-covering. With the approaching maturity of the contract the operators were engaged in a frenzied bid to square up their outstanding commitments. The reported hardening up of prices in the upcountry centres also influenced the sentiment to a large extent. Toward the close of the week the contract was unofficially quoted at a premium of Rs 5.50 per three quintals over the ceiling. Turnover during the week showed a marked improvement to 2,500 bales a day as against 400 bales in the preceding week.

According to reliable quarters business of about 28,000 bales remains to be squared up. The operators are at present eagerly looking forward to the Forward Markets Commission for allowing trading in the August Contract. But considering the tight cotton supply position in the country permission to this effect cannot be expected in the immediate future.

A revival of demand in the spot market at Sewri was visible in the past week. Mills were anxious purchasers of Vijay, Co 2, Kalyan, and Wagad. Prices of all these growths were well maintained.

A steady tone was noticeable in the export section. Business on a small scale is reported to have been transacted in Bengal Deshi on shippers' account at contract prices. The trade is optimistic of a further quota for the export of 50,000 bales of this growth in the near future. A recent estimate has put the Bengal Deshi cotton crop during the current season at 485,000 bales in striking contrast to 350,000 bales in the previous season.

The import section was active during the week under review. All the available varieties of Sudan cotton were in great demand. Stray enquiries for African cotton for immediate shipment were also reported.

According to a latest estimate the cotton crop in Sudan will be of about 10 lakh bales. The method of marketing the crop has not yet been made clear and the shippers and merchants are in a dilemma. The Gezira Board has disposed of about 7,000 bales of cotton in the month of January. Sudan is prepared to sell a sizable quantum of cotton to India provided the latter is willing to offer reasonable prices.

The Egyptian Agricultural Ministry has made a downward revision of its estimate of cotton production to 6.5 million kantars

of ginned cotton from the December estimate of 6.8 million kantars. The Ministry has not taken into account cotton crop of Searo in drawing up the estimate. An official statement reported that all Isis, Menoufi, Karnak, Dendera and Ashmouni cotton that have been reserved for export against an officially registered export sale will be sold to the Egyptian Cotton Commission on 1 April. From that date onwards all export sales will be covered by direct purchases from the Commission.

Export of cotton from Egypt from 1 September 1961 to 31 January 1962 amounted only to 1,360,544 metric kantars (nearly 206,143 bales) compared with 2,126,571 metric kantars for the relevant period in 1960-61. Leading importing countries of Egyptian growth were Spain (139,613 metric kantars), India (98,706 m.k.), France (73,664 m.k.), Russia (185,299 m.k.), Poland (241,851 m.k.), Czechoslovakia (208,023 m.k.), Austria (59,108 m.k.) and Italy (85,409 m.k.).

Consumption of cotton by the Textile mills in Canada in 1961 aggregated 371,000 bales (500 lbs gross). This figure, based on the number of bales opened by mills, is 10 per cent higher than 337,000 bales consumed in the preceding year.

Exports of cotton from the United States of America in the first five months of the current season (August-December 1961) stood

at 2,207,000 bales, 10 per cent less than that of the corresponding period in the previous year.

*

PIECEGOODS

After a pretty long spell of dull trading the Bombay cotton piece-goods market during the past week evinced symptoms of looking up thanks to the emergence of buyers in seasonal goods. The upcountry demand also was a shade better. The turnover, however, failed to reach the expected level and prices ruled firm throughout.

Almost all the centres showed keen interest in seasonal goods like bleached longcloth, dyed poplins, grey and bleached dhoties, saris and bleached mulis and Bihar, Punjab, Delhi and Calcutta were active in the market. Grey uncalendared dhoties also commanded fair attention.

Bihar was found active in bleached mulis and printed saris while Punjab accounted for a small quantum of fancy goods. These goods were, however, in short supply. The prices of these varieties remained firm. According to the consensus the demand from upcountry centres will be on the uptrend in the following weeks and the prices will maintain their present level.

Trading on the export front was dull and drab. Enquiries from overseas were few and far between though prospects of improved transaction with those destinations in the coming months are

rated bright. The UK accounted for a small quantity of seasonal goods. Sudan was satisfied with a moderate quantum of lower width sheetings. Eritrea and Ethiopia enquired for bleached chaddar. Business on a restricted scale in grey bafts was done with West Africa. The Scandinavian countries focussed their attention on the usual varieties of sheetings and it is reported that those destinations purchased these goods on a small scale.

*

Small Pepper Crop Forecast

THE President of the India Pepper and Spice Trade Association has stated that the production of black Pepper in India for 1961-62 is not likely to exceed 24,000 tons as against 28,000 tons in the previous season. This setback in production is attributed to the unprecedented floods during the last monsoon in Kerala—the predominantly pepper-growing State. With a carryover of little less than 1,000 tons and the expected shortfall in production, the total quantity, that will be available for supply for internal and external consumption, is bound to be less by at least 6,000 to 7,000 tons during the current season. During the first three months of the current pepper export season, a total of about 7,000 tons of black pepper or about 50 per cent of the normal annual exports turnover had already been exported.

The estimated fall in production had a bullish influence on the Cochin market where sellers were anxious to cover up in order to sell at a later date at higher levels. The highest level was touched on Saturday last when March delivery was quoted at Rs 322 per quintal. Renewed buying from uncountrv sources and the deterioration in the stock position were also contributory factors to the upward movement in prices. It looks as if sellers will not be enthusiastic to release stocks at the current American rates.

CARDAMOM

In the course of the last few months, Cardamom prices had slumped on account of excellent crop prospects and dwindling export business. Although the crop has been partially damaged due to excessive rains and floods in the producing areas, the outturn in the new season is expected to reach last year's level of 60 lakh pounds. The yield in white variety is estimated at 80,000 maunds; in Coorg green around 40,000 maunds and in Alleppy green around 40 lakh pounds.

Thanks to the reported buying of a fairly big quantity by Russia, prices have started improving now. In the Bombay market, medium quality is quoted at Rs 10.50 to Rs 14; good variety at Rs 14 to Rs 16; superior at Rs 16 to Rs 17 and hand-picked-selected variety at Rs 19 to Rs 20 (all per seer). Good export demand is also reported from the Persian Gulf and Jeddah also.

The trade is not, however, much optimistic about the future trend, as the supplies are expected to remain high in view of the satisfactory crop and higher carryover from the previous season. The demand from export houses against such ample supplies is rather poor.

COFFEE

The results of the first open Coffee export sale, held recently at Mangalore, are reported to be

encouraging. The sale attracted more buyers, some from abroad and prices went up sharply above the levels for many months. There was a general feeling that the coffee, offered, was also of better quality than last year. According to one of the leading buyers, the pressing need is to make it worthwhile for curers to expand their facilities and equip them with the latest machinery which, in some cases, are years behind other countries.

According to advices from London, the general improvement in world coffee prices has been maintained in recent months against a background of chronic oversupply and most pessimistic statistical position. On the London market, the better tone was emphasised by a technical shortage for near-by Robusta coffee as a result of flood damage in Uganda. Although supplies are now reaching the coast, prices have continued to rule firm. This is largely due to a strong and consistent demand from the United States for African coffees, which has effectively supported the prices this year.

RUBBER

The price of Rubber is no longer as sensitive to changes in the cold war atmosphere as it once was; but it still reacts to political situations in the main producing centres. This year, the usual seasonal recovery in the price has been aided by a number of other factors, which could hardly have been foreseen four months ago. First of these is the return to the market of the USSR. The second unexpected factor in the present situation is last month's revision in the selling policy of crude natural rubber from the US General Services Administration's stockpile.

Under the new US policy, less rubber is likely to come on to the market, so that its announcement has had a distinctly bullish effect on the prices. In addition, the dispute between Indo-China and Holland over the future of Dutch

New Guinea has injected an air of uncertainty into the market and accentuated the present upward trend.

SUGAR

Sugar markets, which had remained depressed during the past many weeks, have now taken a slight turn for the better with prices showing small improvements. In the Kanpur market bold crystal has advanced by 50 nP to 75 nP a maund in the mill-delivery section, while D[29 prices have moved up by Rs 1 to Rs 103.50 per bag in the spot section. Similarly, other varieties have improved by 12 nP to 25 nP a maund.

The improvement in prices is attributed to the indications that total production would not be more than 2,600,000 tons as against the target of 2,900,000 tons. Sentiment is also aided by the slight delay in the release of the internal quota and the prospects of good seasonal demand.

GUR

About a week's deadlock in the Delhi Gur futures market came to an end towards the close of last week when trading was resumed after making certain amendments in the bye-laws relating to margin and delivery. According to the Forward Markets Commission's directive, no fresh transaction would be allowed in Gur Phagun 2018 and a special margin at the rate of Rs 400 per unit will be levied on the next working day, when the closing price on any day exceeds Rs 16.25 per 37.32 kgs. During the delivery period, the special margin shall be payable at the rate of Rs 750 a unit by all members holding long open position. Regarding Gur Baisakh 2019, the special margin at the rate of Rs 175 per unit shall be payable on the next working day, when the closing price on any day exceeds Rs 16.25 per 37.32 kgs. During the delivery period, the special margin shall be payable at the rate of Rs 900. For delivery against Baisakh contracts, gur containing above 60 to 75 per cent Choorā (powder) inclusive of libba (wet) will be tenderable, subject to an allowance of 37 nP per 37.32 kgs and above 75 per cent 75 nP to be paid by seller to the buyer. The allowance will be calculated on the basis of full weight of a unit of trading.

During the delivery period, the special margin shall be payable at the rate of Rs 750 a unit by all members holding long open position. Regarding Gur Baisakh 2019, the special margin at the rate of Rs 175 per unit shall be payable on the next working day, when the closing price on any day exceeds Rs 16.25 per 37.32 kgs. During the delivery period, the special margin shall be payable at the rate of Rs 900. The allowance will be calculated on the basis of full weight of a unit of trading.

GOLD & SILVER

PRICES on the Bombay Bullion Exchange displayed a mixed trend. In the initial stages, both the metals ruled firm; but towards the close, silver softened, while

ended firm. Activity was, however, mostly confined to switching operations.

The Silver section was generally quiet. After a modest rally early in the week induced by higher advices from the gold section, sentiment was affected by higher carryover charges in private. Advices from upcountry centres were also not conducive to activity. Arrivals were also heavy at 18 bars as against an offtake of only 12 bars. Silver (below .996) changed hands at Rs 212.25 to Rs 212.85.

Prices in the Gold section forged ahead due to increased buying by the Delhi operators. The offtake increased to as much as 10,000 tolas against arrivals of only 6,000 tolas. Ready changed hands at Rs 121.20 to Rs 121.50, while Sovereign was quoted at Rs 96.50.

OILS & OILSEEDS

After initial firmness, the markets for both oils and oilseeds developed a slightly easier tendency towards the close. The initial firmness was attributed to aggressive speculative support, while the subsequent weakness was mainly due to the uncertainty arising from the absence of strength in the spot section.

Turnover in the Groundnut section tended to decline to some extent, as crushers and vanaspati manufacturers were cautious buyers at higher levels. Saurashtra also appeared to be pressing sales steadily. Groundnut Bold ready was quoted at Rs 48.50 and Groundnut Oil at Rs 19.60.

In the Castorseed section, trading was of a routine affair with prices generally following the pattern set by groundnut. Fears that the offerings against the March contract might be relatively small if the market of the new crop failed to pick up before its expiry, however, induced the buyers to lend some support towards the close. In the meanwhile, the export trade in castor oil with the UK continued to remain dull. Castor ready was quoted at Rs 35.50 and Castor Oil, commercial quality, at Rs 14.90.

In the Linseed section, price movements were mostly confined to a narrow range. Linseed ready was quoted at Rs 44.40 and Linseed Oil at Rs 19.10.

In the Calcutta market, the price of Linseed ruled very steady at Rs 31.50 a mound for ready delivery. Turnover was limited, as supplies from upcountry centres were small. Crushers were showing interest in forward deliveries at lower prices due to the prospect that the new crop should be available in a month or so. Thanks to better demand, the market for Linseed Oilcake remained steady. Turnover was

Though a slight decline in the price of groundnut oil is recorded since Monday, altogether the trend in Madras seems to be one of firmness. The high price of this oil had also a good support. This support came from Calcutta buyers who were all aggressive during almost the entire period of last week. And in this they were also emulated by local interests. Oil prices recorded a good increase though there is a small set back, which the trade describes as "temporary."

Calcutta interests readily absorbed all offered groundnut oil quantity not only for spot deliveries but also for March early commitments.

In groundnut kernels, the price trend was not as much high as in oil. Due to election week, arrivals both in the City and markets in Southern centres were reported to be poor. The City arrivals were about 80 tons daily while in Southern Centres the arrivals of kernels were about 200 tons only daily.

In forward positions also groundnut oil activity turned out to be moderate. Having reached Rs 207.50 for May delivery, it declined to Rs 205.50 today.

Groundnut oil cake maintained a firm undertone but due to arrivals from north, there was a slight decline.

The prices obtained on Tuesday in the closing market were as follows: Groundnut oil per quintal ex-Madras Godown expeller Ready 3% F.F.A. Rs 198. May Rs 205.50.

Groundnut kernels per 80 kgs: Superior Rs 79.50. Bold Rs 75.00. Castor oil per candy of 500 lbs: Tirupattur Rs 365.

MARTIN BURN LIMITED

NOTICE

The Board of Directors of Martin Burn Limited has today recommended payment of dividend at the rate of Rupees Two and Seventyfive nP per share on the Ordinary Share Capital of the Company ranking for dividend for the year ended 30th September 1961. This dividend awaits the sanction of the Shareholders at the ANNUAL GENERAL MEETING to be held on Wednesday, the 28th March, 1962, at 12 noon. The dividend if declared will be paid under deduction of tax at the prescribed rates on or after the 16th April, 1962, to the Ordinary shareholders whose names are on the Company's Register of Members on the 28th March, 1962 or to their mandatees.

The Ordinary SHARE REGISTER AND TRANSFER BOOKS of the Company will be closed from the 14th to 28th March, 1962, both days inclusive.

By Order of the Board,
MARTIN BURN LIMITED,
A. G. Gidley
Secretary.

Registered Office—
12, Mission Row,
Calcutta.
19th February, 1962.

Coconut oil per tin Rs 40.25 to Rs 40.50.

Gingelly oil per maund Rs 26.50

Gingelly seeds per bag Rs 92.93.

Groundnut cake Rs 27.00

The groundnut oil was at Rs 194.88 last Wednesday per quintal. With Calcutta interests offering to buy sizeable quantities followed by local buyers, the price went upto Rs 196.20 the next day. The same quotation ruled for Friday also when a good business was recorded. Saturday's rate was still higher at Rs 197.10 and at this price also sizeable quantities were bought.

Opening rate on Monday was high at Rs 198.00. It has maintained that rate too.

The forward position for May was at Rs 205 for two days last week. On Friday it rose to Rs 206.50. On Monday last the market opened at Rs 206.50 and closed at Rs 207.50.

There was not much of a spurt in kernels superior. It was quoted at Rs 78.50 per 80 kgs for two days, Tuesday Wednesday last week. On the subsequent days, the rate slowly

went up to Rs 80. It declined to Rs 79.50 per 80 kgs today. Bold variety was at Rs 75 and it was maintained at this rate.

Groundnut oil price in other centres remained high: In Guntur it was quoted at Rs 450 per candy of 500 lbs. Except at Villipuram where the rate was Rs 430 per candy, in other centres like Vridhachalam, Nandayal, Cuddappha, Pollachi, Tanjore and Salem the quotation was Rs 440 per candy.

Kernels was uniformly quoted at Rs 80 except in Villipuram it was at Rs 73 per 80 kgs. Salem's rate of Rs 82 was the highest last week.

HIDES & SKINS

In this week's skins and hides market, there was moderate arrival of tanned cowhides. Prices remained steady. There was a slight lowering of quotations for the run and fourths. It is stated that the prices negotiated for these two varieties were 76d and 66d respectively. Quite a good number of inquiries were made for the medium weights. This week the

offerings made by tanners were sizeable, but there was cautiousness by overseas buyers.

There was no change in the tanned cow-calf position. Prices of this were also unchanged. Better business resulted from overseas in regard to lower weight and equalities.

Also in tanned buff calf no change was observed. Only premium marks remained in demand last week and continues to be so this week also.

Tanned goatskins had been selling well at moderate rates, heavier averages claiming more sale. Sheepskins too had a moderate inquiry. The price for 6/7 lb was at 12 for run while for thirds and fourths the quotation remained at 9/6. Inferior fifths remained at 8/6. Good demand continued for 11/12 lbs also. The price for fifths and inferior fifths was at 8/6d and 7/6d respectively.

The following were the prices of tanned skins and hides per lb.

Tanned cow prime 5½ lb Rs 3 to Rs 3.12; 6/6½ lb Rs 2.69 to Rs 2.75; 7/7½ lb Rs 2.44 to Rs 2.50; 8/8½ lb Rs 2.31 to Rs 2.34; 10/12 lb Rs 2.06 to Rs 2.12.

Here's Why Firestone

GIVES YOU
EXTRA SAFETY—FOR LONGER

Firestone Safety Tread Design

Still exclusive, with its thousands of non-skid angles to ensure the utmost in braking control.

Specially Compounded Rubber

Long-lasting, wear-resistant Firestone rubber, compounded to keep you safer—for longer

Top Quality Construction

All Firestone tyres are products of the same engineering skill in tyre construction that World Motor Racing Champions depend on for their lives.

Fit
Firestone

For the Investor

INVESTMENT GOSSIP
Outlook for Equities

THE stock market which was almost buoyant earlier in the week is somewhat subdued at the time of writing. Probably the fact that the results of the general election will begin to come in from early next week has served as a reminder to the erstwhile enthusiastic bulls to exercise some caution in extending their commitments. It is only a few days ago that the Prime Minister had his fling at the stock exchange while emphasising the need for including large-scale industries in the public sector. There is also the question of the huge resources to be mobilised for the Third Five Year Plan. It will be only prudent to expect Government to make strenuous efforts to mobilize the requisite funds through the

current year will make satisfactory showing.

With the company's decision to issue additional capital, in order to finance the construction of the Salem and Visakhapatnam projects, there is speculation whether same dividend can be maintained on the increased capital in respect of 1962-63. The Salem unit is expected to be commissioned into production by June next year.

It is expected that, with a continuance of the present conditions, the earnings for 1962-63 will be higher, as the revised retention prices will be in force throughout the year and the new shares will be paid up only to the extent of Rs 2.50 per share for the most part of the next accounting period.

NICCO

The National Insulated Cable Company Limited had applied to the Controller of Capital Issues for capitalising reserves to the extent of Rs 45 lakhs and issuing bonus shares in the ratio of one share for two shares held.

Indian Aluminium

Good progress is reported to have been made by the Indian Aluminium

Company, Limited on the expansion programme during the year 1961. The expansion of the smelter at Hirakud in the Orissa State from a rated capacity of 10,000 tons per annum to 20,000 tons per annum was completed in November—five months ahead of schedule. More than half of the expanded facility was put into production on 11 November, and the balance is scheduled for production in April 1962, when it is expected that the additional hydel power will become available.

The company's new extrusion press in Alupuram, Kerala State, started production in November and the expansion of sheet rolling facilities at Belur, in West Bengal, is scheduled to be completed in July 1962. Most of the expanded facilities at the company's alumina plant at Muri in Bihar have already been commissioned. Meanwhile, the company has made a net profit of Rs 1.11 crores as against Rs 1.20 for the preceding year. The dividend is, however, maintained at 15 per cent, subject to tax.

INVESTMENT BRIEFS

The shareholders of T. Maneklal Manufacturing Company Limited

will get an additional dividend of Rs 1.50 per share in terms of Section 23(a) of the Income-tax Act, for the year ended 31 May 1961. The total distribution for 1960-61 will amount to Rs 28.50 per share against Rs 18.50 paid for the preceding year. The extra dividend is payable to those shareholders whose names are registered as on 15 March, 1962.

Pandyan Bank has proposed a taxable dividend of 7½ per cent for 1961 as against 10 per cent, taxable, paid for 1960.

Panyam Cements & Mineral Industries Limited has raised the dividend on the Preference shares to 9.3 per cent, taxable, from 6 per cent, tax-free, from 1 September, 1961. The mission of the shareholders is sought for this purpose.

Coonor Tea Estates Limited has proposed a final dividend of 7½ per cent, making a total of 15 per cent, taxable, for the year ended 30 September, 1961 as against 76 per cent, taxable, paid for the previous year.

BALANCE-SHEET BRIEFS

The Alkali & Chemical Corporation of India Limited has reported excel-

lent results for the year ended 30 September, 1961. The net profit, after providing for Depreciation and Taxation, amounts to as much as Rs 1.89 crores as against Rs 1.30 crores for the previous year. The dividend on the ordinary shares is raised from Rs 1.20 to Rs 1.50 per share, less tax.

The National Pipes & Tubes Company, Limited has maintained the dividend at Rs 2.00 per share, taxable, for the same year despite a rise in the net profit from Rs 12.25 lakhs to Rs 14.55 lakhs.

Jay Shree Textiles Limited has reported a substantial rise in the net profit from Rs 9.79 lakhs to Rs 15.58 lakhs for the year 1961. The dividend is, however, maintained at Re 1 per share, subject to tax. This works out to a net dividend of 70 nF per share.

Reliance Firebrick & Pottery Company Limited has reduced the dividend from 22 to 15 per cent, taxable, for the year ended 28 February 1961 following a decline in the net profit from Rs 7.37 lakhs to Rs 2.96 lakhs.

The working of Eastern Investments Limited has resulted in a net profit of Rs 3.47 lakhs for 1961 as against Rs 10.25 lakhs. The dividend is maintained at 14 per cent, less tax.

STOCK EXCHANGES Partial Retreat

Watch-Dog Writes:

ALTHOUGH the stock markets were in a fairly good shape in the first half of the week's session and prices looked up a little further due to renewed speculative activity, there was a distinct lack of follow-up support during the second half. Operators were generally inclined to book profits before extending their commitments resulting in fair losses over a wide front.

A mixed pattern of trading was noticed on the Calcutta Stock Exchange. While some of the shares came in for profit-taking, several firm features were also in evidence.

With the immediate outlook being uncertain, operators on the Bombay Stock Exchange were hesitant to enlarge commitments and preferred to book short-term profits.

Business on the Madras Stock Exchange continued to be thin in all the sections. Enquiries tapered off as investment buying was negligible.

CALCUTTA

Friday Evening.

THE local stock exchange continued to rule generally firm though profit-taking during the closing days of the week rendered the finishing tone somewhat soft in some cases. Activity was on a comparatively reduced scale due to the reluctance on the part of the operators to extend commitments.

The initial firmness of the market was influenced by the reports of a number of companies issuing bonus and/or rights shares. As a matter of fact, that scramble for certain blue chips induced the rates of other shares to leap up quickly. The impetus for the issue of bonus shares emanated from the belief that, in the budget after the general elections, the tax on the bonus issues might be raised and several companies would naturally like to take advantage of the present conditions.

Moreover, there was a general feeling that the present atmosphere was quite congenial for the development of a fresh bull phase for a month or two before one might become busy in assessing the shape of the Central Budget. Excellent results released by some companies, the plans made by a few of them to extend their activities, the reported proposal by the Government to permit further expansion in certain industries and the consequent hope of the issue of rights shares by the companies concerned—all these factors provided further encouragement to the operators.

Had it not been for a general tendency to book profits during the closing days of the week, the

market's performance would have remained better as in the previous week. The uncertainty regarding the election results created a cautious feeling among the operators, who were rather hesitant to buy at the high levels. The absence of any news with regard to the bonus issue by Martin-Burns as well as the rights issue by Indian Aluminium, also caused some disappointment. Above all, anxiety was shown with regard to the outlook for next few months in the context of the uncertainties over the likely shape of the Government's financial policies to come. With the result, the market staged a partial retreat.

The Giltedged section continued to be listless. Completely devoid of support as the market was, the undertone remained subdued. There were sellers both in the medium and long-dated issues. 3 per cent 1986 Conversion Loan, which were quoting steady at Rs 71 in the previous week, came in for offer at as low as Rs 70.85.

Jute shares remained fairly steady although the business was a little diminished due to a general disposition to book profits at the higher levels. It was believed that, in view of the abundant supply of the raw material and the increasing demand for gunnies, the losses incurred by the mills early in the season might be recouped earlier than expected. Anglo-India charged hands at Rs 264 to Rs 278; Birlas at Rs 34.37 to Rs 35.06; Ganges at Rs 13.56 to Rs 14.00; Howrah at Rs 20.56 to Rs 21.12 and Megna at Rs 12.44 to Rs 12.75. The performance of New Central appeared to be very encouraging. Being the largest single unit jute mill having broad looms, the shares attracted more attention of the operators and the scrip, after being pushed further up to Rs 19.44 from Rs 18.56, finished the week at Rs 18.62. Reliance hardened further to Rs 7.00 from Rs 6.62.

Coal shares remained neglected and only few of them came in for business in the absence of any incentive. East Indian were enquired up to Rs 35.12 from Rs 34.25, while Burrakur were pushed up to Rs 18.25 from Rs 17.50 due to speculative activity. South Karanpura were, however, on offer at Rs 7.47 against Rs 7.62 following the passing over of the dividend for last year.

Textile shares remained buoyant on reports of higher profits made last year. Higher levels, however, could not be retained till the close due to general profit-taking. The publication of excellent results induced Jay Shree to forge ahead to Rs 17.44 from Rs 16.94, while J. K. Rayon closed rather quiet at Rs 20.87 after touching a high of Rs 21.19 in mid-week. Elgins lost half a point at Rs 25.25 with Bowreah changing hands at Rs 39.50 to Rs 39.62 and Dunbar at Rs 35.44 to Rs 35.62.

Except Huldibari which met with sustained buying up to Rs

32 from Rs 31.75 on reports of a bonus issue and Hasimara upto Rs 33.37 from Rs 32.87 on rumours of the possibility of a bonus issue, trading in the Tea section was generally restricted. There was a general feeling that the industry was faced with the problem of over-production.

Sellers continued to predominate in the Sugar section in view of the obscure outlook for the industry. Transactions were, there-

fore, limited. Balrampore came in for some enquiry up to Rs 2.50 from Rs 2.35; Raza/Buland up to Rs 10.62 from Rs 10.50 and SKG up to Rs 10.25 from Rs 10.06. Cawnore were a very steady feature at Rs 13.00.

Engineering shares showed a mixed trend. Trading in Indian Irons was not impressive due to the uncertainty with regard to steel retention prices. After opening steady at Rs 25.30, the scrip

MADRAS-1.

NEW ISSUE NOTES Barium Chemicals

The Barium Chemicals Limited, New Delhi, will enter the capital market on 9 March to raise Rs 40 lakhs in equity shares of Rs 100 each, at par. The subscription list will close not earlier than 13 March. The authorised capital is Rs 1 crore and the issued capital is Rs 50 lakhs. The directors and their friends have taken up shares worth Rs 10 lakhs and the actual offer to the public is Rs 40 lakhs, which has been underwritten. The company is the first of its kind in the country to manufacture all types of barium compound and inorganic chemicals at Kothagudem, near Dornakal, Andhra Pradesh, in collaboration with a British firm. The plant is expected to go into production by the end of 1962.

Apollo Mills

The Apollo Mills Limited has proposed to issue additional capital to the tune of Rs 50 lakhs by offering 25,00,000 ordinary shares of Rs 2 each, at par, to the existing shareholders in the ratio of one share for every share, subject to the sanction of the Controller of Capital Issues. The additional capital is evidently to finance the modernisation and rehabilitation of the mills with a view to improving their working. The directors have expressed the hope that, in all probability, the debit balance brought forward might be wiped out before the next closing period, i.e. by the end of 1961.

United Electric

United Electrical Industries Limited has proposed to issue 1,00,000 ordinary shares of Rs 10 each to the existing shareholders in the proportion of one new share for every share held and, in addition, one share for

every 15 shares held. The new shares will rank for dividend purposes from 1962.

Textile Supplies Syndicate

Textile Supplies Syndicate (India), Private Limited, which has obtained an industrial licence to establish a heavy electrical plant in Kerala in collaboration with Hitachi Limited of Japan, will shortly promote a new company with a capital of Rs 1.1 crores. The foreign collaborators will contribute Rs 27.5 lakhs by way of machinery and the Kerala Government an equal amount in cash. The balance of Rs 55 lakhs will be offered to the public for subscription. The new company will manufacture power transformers up to 50,000 k.w. in two stages, within a period of 3½ years. As no other firm in the private sector is given this concession, the company offers a sound investment.

Mahindra & Mahindra

The Directors of Mahindra and Mahindra Limited have resolved that 6,60,000 Ordinary Shares of Rs 10 each be issued for cash, at a premium of Rs 2.50 per share. Of these right shares, one new share will be offered to the existing shareholders as on 20 March, 1962 for every two shares held. A sum of Rs 7.50 per share is payable on application for each new share. The balance five rupees per share will be payable as and when the Directors make the call. Letters of offer with full details of the terms of issue will be posted before 31 March, 1962. Consent of the Controller of Capital Issues has been received. The Industrial Credit and Investment Corporation of India Limited and the Life

Insurance Corporation of India have agreed, in principle, to give the company long-term loans of Rs 1 crore and 35 lacs inclusive of Rs 35 lacs in foreign currencies. These funds will be adequate for doubling the manufacturing capacity for Jeeps to 10,000 units per annum, and provide sufficient funds for investment in other projects presently under consideration. Meanwhile, the company has reported a net profit of Rs 110.55 lakhs for the year ended 31 October, 1961 as against Rs 66.76 lakhs for the previous year. A dividend of Rs 1.25 and a bonus of 25 nP per share, subject to tax, are recommended.

Modern Mills

The Modern Mills Limited has announced that its proposed one-for-one rights issue of 92,947 new ordinary shares of Rs 50, at par, will be offered to those members whose names stood on the register of members on 15 December 1961. It might be recalled that the company's books had remained closed from 4 December to 15 December 1961 for the purpose of the rights issue; but the company did not issue the rights at that time. In the meantime, the consent of the Controller of Capital Issues pertaining to the above expired on 16 December 1961. The extension is now granted to 16 June 1962.

National Mineral

National Mineral Development Corporation Limited, a Central Government undertaking has been accorded consent to issue further equity capital of Rs 290 lakhs, for cash, at par. The proceeds will be utilized for mining operations of iron, copper and diamonds at various centres in the country.

Ralliwolf

Ralliwolf Limited, is to issue capital of Rs 10 lakhs divided into 10,000 equity shares of Rs 100 each, at par, to be subscribed privately. Of this, shares of Rs 3 lakhs will be issued to Wolf Electric Tools (Holdings) Limited of the U.K. against supply of plant, machinery, jigs and fixtures.

Republic Forge

Republic Forge Company Limited, is issuing fresh capital of Rs 120 lakhs, for cash, at par, divided into 1,00,000 equity shares of Rs 100 each and 20,000 9.3% (subject to tax) preference shares of Rs 100 each. The proceeds will be utilized for setting up a commercial forge shop.

Nanubhai Industries

Nanubhai Industries Private Ltd. will issue further capital of Rs 19.12 lakhs in equity shares of Rs 1000 each for cash at par. The proceeds will be used in connection with the nylon yarn project of the company.

Coates

Coates of India Private Limited, is to issue privately 28,153 equity shares of Rs 10 each, at a premium of Rs 65 per share. The proceeds will be utilized for financing substantial expansion in the manufacture of printing inks and surface coating materials.

Amalgamated Electricity

Amalgamated Electricity Company Limited, is raising further capital of Rs 28.53 lakhs in equity shares of Rs 10 each for cash at par. The proceeds will be utilized for the installation of generating sets and the establishment of a solvent extraction plant.

CALCUTTA TRAMS

Advertisement Managers:
PSOI The Publicity Society of India Ltd.
1, Waterloo Street, Calcutta - 1

receded at one time to Rs 25.26. After recovering again to Rs 25.56, there was a setback towards the close to Rs 25.40. TEXMACO were pushed up at one time to Rs 21.10 from Rs 20.50 on technical considerations, closing finally at Rs 21.00. Guest, Keen, Williams

touched a new high of Rs 46.50 from Rs 44.37 due to renewed demand before finishing at Rs 45.94. J. K. Steel were enquired up to Rs 20.31 from Rs 19.75 and so also Dalmia Iron up to Rs 11.69 from Rs 11.31. Jessop, after being taken up to Rs 23.50 follow-

ing the reports of the dividend being maintained, eased off at the close to Rs 23 due to profit-taking. Braithwaite were keenly sought after up to 50.25 from Rs 42.12, to close finally at Rs 42. Britannia, Kumardhubi and Marshalls moved narrowly around

Rs 12.69; Rs 7.87 and Rs 3.40 respectively.

Miscellaneous issues recorded fresh higher levels in the initial stages of the week due to renewed bull support, although profit-taking erased some of the extreme gains towards the close. Indian

UNITED BANK OF INDIA LIMITED

Regd. Office: UNITED BANK BUILDINGS

4, Clive Ghat Street, Calcutta

NOTICE

NOTICE IS HEREBY GIVEN that the next Annual General Meeting of the shareholders of UNITED BANK OF INDIA LIMITED will be held at the Registered Office of the Bank at the United Bank Buildings, 4, Clive Ghat Street, Calcutta, on Monday, the 26th March, 1962 at 11 a.m., to transact the following business:—

AS ORDINARY RESOLUTIONS

The following resolutions will be moved as Ordinary Resolutions:—

8. "By virtue of the discretion vested in the General Meeting by Section 228(3) of the Companies Act, 1956 as amended in 1960, it is hereby resolved that the accounts of the branch offices of the Bank may be audited otherwise than by the Company's auditor and it is further resolved that the Directors be and are hereby authorised to appoint from time to time persons qualified for appointment as auditors under Section 226 for audit of the accounts of such of the branches of the Company in India as they may deem fit or where branch offices are situated in countries outside India by persons qualified to act as auditors of the accounts of such branch offices in accordance with the laws of those countries in consultation with the Company's Auditor and pay them such remuneration as the Directors may decide."
9. "Resolved that pursuant to the provisions of Section 293 (1)(d) of the Companies Act 1956, as amended in 1960, the Board of Directors be and are hereby authorised to borrow from time to time such sum or sums of money as they may in their absolute discretion think fit up to Rs. 10 Crores notwithstanding that the amount borrowed may by this or together with any other sum or sums already borrowed and outstanding be in excess of the Company's paid-up capital and free reserves, i.e., reserves not set apart for any specific purpose."

- (ii) The Transfer Books of the Company will remain closed

Aluminium were boosted up to Rs 40.75 from Rs 38.69; but receded towards the close to Rs 39.25 on reports of lower profits and in the absence of any news with regard to the rights issue as was expected. Alkali Chemicals were, however, in good demand up to Rs 45.12 from Rs 44.87 following the publication of excellent results and the increased dividend from 12 to 15 per cent for last year. NICCO touched at one time a high of Rs 46.12 from Rs 39.87 following the company's proposal to issue bonus shares in the ratio of one for two shares, to close finally at Rs 44.12. Dunlop Rubber were done at Rs 42.31 to Rs 43.50 (Rs 42.81); Hindustan Motor at Rs 20.50 to Rs 20.94 (Rs 20.66); Asso. Battery at Rs 32.75 to Rs 33.12 x.d. (Rs 33.00 x.d.); Hindustan Aluminium at Rs 15.44 to Rs 15.81 (Rs 15.62); Orissa Cement at Rs 19.37 to Rs 19.69 (Rs 19.62); Jaipur Udyog at Rs 13.56 to Rs 14.19 (Rs 14.06); Orient Paper at Rs 41.70 to Rs 42.60 (Rs 41.70); Shree Gopal at Rs 25.69 to Rs 26.19 (Rs 25.75); Rohtas at Rs 17.50 to Rs 18.12 (Rs 17.62); and J. K. Synthetics at Rs 14.75 to Rs 15.06 (Rs 14.75). Figures shown within brackets were the closing rates for the week.

*

MADRAS

Wednesday.

WHERE was poor business in the stock exchange due to absence of sellers. Trade therefore was extremely limited in almost every section. Voucher bearing Government scrips were in demand and even here there were no sellers. Banks remained steady. In public utilities there was demand for every kind of scrip, but here again none offered to part with those shares. Sugars too was a steady counter with Deccans being bought. Plantings had only stray offerings. Textiles were strong and in the Miscellaneous counter too not much business resulted.

Government Securities: Government of Madras 4½ per cent 1972 were taken at Rs 98.05. Government of Kerala 4 per cent were taken at Rs 98.95. Government of Andhra 1972 4½ per cent remained at Rs 98.00.

Banks: 'Indian Bank was at Rs 180.00, Indian Overseas at Rs 179.95, Pandyan was quoted at Rs 26.00, Punjab National Bank was at Rs 22.10.

Electrics: Cochin was at Rs 12.10, Ellore at Rs 22.00, Karaikkal was listed at Rs 9.50, Kumbakonam was marked at Rs 11.25, Negapatnam was at Rs 11.25, Salem Erode was at Rs 15.25, South Madras was offered at Rs 10.12, Tinn-Tuticorin was quoted at Rs 13.00. Vellore was at Rs 15.35 and West Coast was at Rs 15.00.

Sugar and Breweries: Deccan was taken at Rs 9.90, EID was at Rs 36.00, India Sugars remained at Rs 10.40, KCP was at Rs 22.95, Mysore was marked at Rs 53.40, Travancore at Rs 8.00 and United Breweries Rs 82.25.

Plantings: Alageswar was listed at Rs 2.95, Blue Mountain was the same at Rs 2.62. Cochin Malabar was bought at Rs 7.32. Coffee Lands was unchanged at Rs 15.50. Consolidated Coffee was a tRs 17.65. Cowcoody was lower at Rs 4.00. Kil Kotagiri was unchanged at Rs 5.25. Mysore Coffee was offered at Rs 5.00 and Mysore Plantation was at Rs 1.95. Neelamalai was sold at Rs 8.85. Nellithanam was at Rs 11.00. Ouchterlony was at Rs 3.90. Periakaramalai was slightly better at Rs 3.35. Sangameshwar was unchanged at Rs 1.82. United Nilgiri was lower at Rs 21.62. Wartyhully was ten nP lower at Rs 2.80.

Textiles: Business was transacted in Adoni at the marked rate of Rs 13.12. Cauvery spinning was at Rs 16.75. Coimbatore Cotton was at Rs 221.00. Coimbatore Spinning improved to Rs 83.00. Lakshmi was strong at Rs 170.00. Madura had business at Rs 40.50. Loyal went up to Rs 49.00. South India Viscose was at Rs 189.00. Travancore Rayon was bought at Rs 43.80. Vijoyalakshmi improved to Rs 110.00.

Miscellaneous: Aluminium Industries was quoted at Rs 24.00. Ashok Leyland was at Rs 9.10. Daimia Cement was at Rs 13.01. FAQTs improved to Rs 8.35. India Cement was at Rs 5.95. Madras Rubber was at Rs 20.50. Mettur Chemical was quoted at Rs 14.75. Mysore Paper was quoted at Rs 14.25. Rallis was at Rs 152.00. Rane declined to Rs 7.05. Seshasayee Paper gained five nP at Rs 8.75. Spencer was at Rs 23.25. Textool remained at Rs 189.00. W I Plywoods was at Rs 210.00.

MOVEMENT OF COMMODITY PRICES

Review for December, 1961.

Wholesale prices as measured by the official index (with the year ended March, 1953-100) declined by 1.2 per cent to 122.8 during the month of December, 1961 as compared with 124.3 (revised) for November, 1961. The index was also lower by 1.4 per cent when compared with 124.6 for December, 1960.

During the month under review, 'Food Articles' receded by 2.1 per cent to 117.8, 'Tobacco' by 3.5 per cent to 91.4, 'Fuel, Power, Light and Lubricants' by 0.1 per cent to 121.5 and 'Industrial Raw Materials' by 0.4 per cent to 136.6. The index for 'Manufactures' remained unchanged at its earlier month's level of 126.4.

"FOOD ARTICLES"

Lower prices of rice, bajra and ragi brought down the index for 'Cereals' by 1.9 per cent to 100.8, notwithstanding a rise in the prices of wheat, jowar, barley and maize. The index for cereals was, however, higher by 0.4 per cent when compared with that of a year ago. Higher prices of gram, arhar and masur raised the sub-group index for 'Pulses' by 0.4 per cent to 93.5, despite a fall in the prices of mung and urad. A fall of 7.8 per cent to 137.7 in the index for 'Fruits and Vegetables' was caused by a decline in the prices of potatoes, onions and oranges although the prices of bananas and cashewnuts exhibited advances. The

sub-group index for 'Milk and Ghee' registered a decrease of 0.9 per cent to 115.4 owing to a decline in the prices of both milk and ghee. An advance in the prices of gingelly oil and mustard oil pushed up the sub-group index of 'Edible Oils' by 0.6 per cent to 153.1 despite a fall in the prices of groundnut oil and coconut oil. Increased prices of fish, eggs and meat raised the index for 'Fish, Eggs and Meat' by 2.4 per cent to 138.0. The index for 'Suga and Gur' drifted lower by 5.1 per cent to 114.4 as a result of a decline in the prices of both sugar and gur. The sub-group index for 'Other Food Articles' came down by 3.8 per cent to 161.9 as a result of a fall in the prices of tea, black pepper, cloves, turmeric, curcumin (jira), cardamoms and salt; the prices of chillies and betelnuts, however, witnessed increases during the month under review.

"TOBACCO"

Lower prices of raw tobacco brought down the index for 'Tobacco' by 3.5 per cent to 91.4.

"FUEL, POWER, LIGHT AND LUBRICANTS"

The index for this group declined by 0.1 per cent to 121.5 as a result of a decrease in the prices of castor oil.

"INDUSTRIAL RAW MATERIALS"

A fall of 0.8 per cent to 125.2 in the sub-group index for 'Fibres' was caused by a decline in the prices of raw jute, raw hemp, raw wool and raw silk; there was, however, a rise in the prices of raw cotton. The sub-group index for 'Oil seeds' moved down by 0.1 per cent to 153.5 due to a fall in the prices of gingellyseed, rapeseed and copra although the prices of groundnuts, linseed, castor-

seed and cottonseed showed advances. 'Minerals' also registered a fall of 0.1 per cent to 94.8 owing to a decline in the prices of manganese ore. Higher prices of lac raised the index for 'Other Industrial Raw Materials' by 0.1 per cent to 129.4 despite a fall in the prices of raw hides, raw skins and tanning materials.

"INTERMEDIATE PRODUCTS"

A sharp fall in the prices of rayon yarn supported by a decline in the prices of zinc brought down the index for 'Intermediate Products' by 1.2 per cent to 138.4 notwithstanding a rise in the prices of linseed oil, cotton yarn, coir yarn, aluminium, copper, tin and lead.

"FINISHED PRODUCTS"

The index for 'Textiles' rose by 0.2 per cent to 124.5 as a result of an increase in the prices of jute manufactures (—0.2 per cent to 128.0) and silk and rayon manufactures (—0.2 per cent to 120.4) exhibited declines. Among cotton manufactures, mill made cloth did not show any change while handloom cloth showed a fall. The sub-group index for 'Metal Products' remained stationary at its earlier month's level of 147.1. Lower prices of general chemicals and fertilisers brought down the index for 'Chemicals' by 0.3 per cent to 111.2; the prices of paints witnessed a rise. 'Oilcakes' moved up by 2.9 per cent to 152.6. A fall of 0.3 per cent to 115.8 in the index for 'Machinery and Transport Equipment' was brought about by a decline in the prices of machinery and cycles. Higher prices of bricks and tiles and glass raised the index for 'Other Finished Products' by 0.3 per cent to 123.8. On the whole, the index for 'Finished Products' advanced by 0.2 per cent to 124.4 during the month under review.

wheels for the Railways

The Wheel and Axle Plant at the Durgapur Steelworks is now ready to go into operation. Initially, the plant will manufacture a total of 45,000 wheel sets per year, including broad and metre gauge, for the Indian Railways. The ultimate rated capacity of the plant is 75,000 wheel sets and 8,000 spare axles per year.

With the erection of the Wheel and Axle Plant, the Durgapur Steel Works Project is now complete and stands as a lasting tribute to Indo-British collaboration.

Steel girder upon girder, a city for millions rises on the waste lands of yesterday—an architect's vision is transformed from abstraction to the living beauty of edifices in concrete and steel—tons upon tons of steel go into the making of a modern city. Elsewhere, mud hovels yield their place to new housing schemes in the cities and suburbs. All this improvement needs STEEL—all this is ours today and soon will be ours in even greater measure, as there is a little more steel for each of us.

Towards this end, IISCO is working for more steel to help you and you and you—in serving you we help the Nation and that is our privilege.

A Fresh Mandate to the Congress

AT the moment of writing, counting of the votes cast in the third general election is not over in all the constituencies but the final pattern of its results is clear enough. Detailed assessment will have to await fuller psephological data but the practical outcome of the contests is evident. It is certain that the Congress will have an absolute majority in Parliament and most State Legislatures and will be once again called upon to shoulder the responsibilities of office both at the Centre and in most of the States. As against this, in at least two States, it will have difficulties in forming a government without aid from others.

By far the most important and interesting development has been heavy polling in almost all parts of India. In the first general election, the total number of voters on the rolls was 173 millions. In the second, it rose to 193 millions and in the current election it has gone up to 210 millions. In the first general election 51.2 per cent of the electorate voted. In the second this percentage came down to 47.6 and in the third, it will probably be nearer 60. This is a remarkable development and indicates a high degree of awareness of the importance of the democratic process on the part of the electorate. It seems fair to deduce from this that the causal relationship between illiteracy and political backwardness that is sometimes erected is rather facile.

The second interesting thing about this election is somewhat paradoxical. Despite the fact that almost all the leaders of parties opposing the Congress have been defeated, both at the national and State levels—a circumstance in itself remarkable—the Congress has been returned to power with reduced majority in most States. (At the moment of writing, it is not possible to say definitely what the pattern of Lok Sabha membership will be.) Among the interesting Lok Sabha "casualties" so far announced are Professor Ranga, (Swatantra), Mr Asoka Mehta, (PSP), Mr Dange, (Communist), Mr Vajpayee, (the Jan Sangh leader, who however is contesting from another constituency whose result has not yet been announced) and Mahant Digvijaynath, (Hindu Mahasabha). And though it is perhaps too early to say, the reported lead of Mr Krishna Menon is such as to make any hopes on behalf of Mr Kripalani forlorn. But despite this circumstance, the Congress has suffered important reverses especially at the State level and its reduced majority, though not surprising for a party continually in power for ten years, is still significant.

At the State level, the defeat of party leaders and important party executives has also been remarkable. Nevertheless, except for the near-rout of the PSP in many States, the opposition parties have improved their positions relative to the last election. Thus the DMK has emerged as a much stronger opposition group in the Madras Assembly than on the last occasion. Likewise the Swatantra now has emerged the biggest single opposition group in Rajasthan, not excluding independents. In Bihar, too, this may well be so, though all the results have not yet been announced. Jan Sangh has

emerged as the most important opposition group in MP with the PSP trailing a little behind. The final results for the UP have not yet been announced but here also the Jan Sangh is likely to emerge as the largest opposition group. Not surprisingly, in West Bengal and Andhra, Communists have achieved the position of the biggest opposition group. The PSP has been completely eliminated in the latter and only in Mysore has the PSP retained the position of the principal opposition party.

As stated earlier, political instability is clearly ahead both in MP and in Rajasthan. In MP, in a house of 288 members and with two results still to be announced, the Congress has secured 142 seats. This means that the best that could happen to the Congress is to have exactly half the number of seats in the house. The position in Rajasthan is the same with one result yet to be announced. In a house of 176 members, the Congress has secured 87 seats. In both these States the Congress may eventually succeed in forming a Government with the help of the independent candidates who form a sizeable number in both places (68 and 30 respectively), but the Congress has not much cause for congratulation in either place.

In the other States, the Congress has won an absolute majority though it has suffered significant defeats by loss of seats to the opposition parties and by the emergence of significant opposition groups. In Punjab, the Chief Minister won by a very narrow majority and a number of important ministers were defeated. In Uttar Pradesh the Congress suffered some crucial losses including the defeat of its party chief in a contest for the Lok Sabha seat.

Though nothing like a national opposition party has emerged, there is evidence of rightist consolidation in large parts of the country. The Swatantra and Jan Sangh together constitute a well-defined political force in Rajasthan, Bihar, MP, UP and to an extent in Gujarat. The poor performance of Swatantra in Madras is undoubtedly due to the superior election strategy of the Congress party there. However, the DMK has every reason to be satisfied with its performance, especially in view of some influential defections from its own ranks.

Now that the elections are over, it is possible to look back on the way they were conducted. By and large they have been exemplary and there is no serious general complaint about their fairness or their general cleanliness. The same could not perhaps be said of the campaigning. It is unfortunately true that in many places considerations of caste and community and narrow local interests were taken into account in the setting up of candidates and in framing electoral appeals. Since all parties indulged in this, the actual voting was, ironically, not probably much affected, the special considerations cancelling each other. Now that the elections are over, a little honest shame about lapses from high-minded resolves at conference tables will be in order.

By Raj K. Nigam & N. D. Joshi

As in regard to the dividend leaders, three or more companies which paid the lowest dividends in each of the principal groups have been picked out in each industrial group during the three periods 1947-50, 1951-54 and 1955-57. The selection of the dividend laggards has been made on the basis of average dividend record of the companies during the periods under consideration. Out of the 336 companies selected for this study 32 did not distribute any dividends during the period 1955-57. The number of such companies came to 21 during 1951-54 and 15 during 1947-50. During the latest three-year period, the number of companies with a blank dividend record increased mainly because this period happened to be one of lean profits for the tea industry. During this period, while the tea companies with good dividend record lowered their dividend levels, those on the margin could not distribute any dividend whatsoever to the equity shareholders since their profits had turned into losses. Out of the 32 companies which did not give any dividends to the equity shareholders during 1955-57, 16 were tea companies, as against 9 tea companies among the 21 companies giving no dividends during 1951-54 and 3 tea companies among the 15 companies which distributed no dividends during 1947-50. Besides these tea companies, in the case of the other industrial groups, 4 cotton textiles companies, 4 jute companies, 6 coal companies, 1 iron & steel company and 1 cement company out of the 65, 41, 42, 15 and 7 companies belonging to their respective groups in this study did not pay any dividends during 1955-57. In the remaining three industrial groups, sugar, paper and coffee and rubber, there was no company which had a blank dividend record. In the preceding period 1951-54, 9 tea companies, 3 cotton companies, 4 coal companies, 2 sugar companies, 1 each in jute, iron & steel and engineering and cement groups did not declare any dividends whereas in the paper and coffee and rubber plantation industries, there was no company with a nil dividend record. Going still back to the period 1947-50, the paper and jute industries were free from dividends laggards of such type i.e. with a blank dividend laggards of such type i.e. with a blank dividend record, whereas 3 cotton companies, 2 companies each in coal, iron & steel, sugar and cement and 1 company in coffee and rubber industries did not distribute any dividends.

Table 10 below sets out the names of the cotton textile companies which come under the category of the dividend laggards. The lowest average dividend in 1955-57 was paid by the Malabar Spinning (1-1/3%) as against 1% by the Colaba Land during 1951-54 and 2½% by the Basanti Cotton in 1947-50. Jayashree Textiles and Coimbatore Kamala are the only two common companies in all the three lists.

Among the dividend laggards in this industry having a positive dividend record, the

*Average Dividend for companies in column (

*Average Dividend for companies in column 1

*Average Dividend for companies in column (5)

*Average Dividend Per cent

lowest average dividend of 5/6% during 1955-57 was recorded by the Carew & Co. as against which the Gwalior Sugar paid an average dividend of 3% in 1951-54 and the Travancore Sugar Company an average dividend of 11% in 1947-50 (vide Table 11 below).

In the tea industry, the 7 companies which formed the tail-end from the dividend distribution point of view in 1947-50 continued to be the laggards in the succeeding two periods 1951-54 and 1955-57 also (vide Table 12 below). Among these, 3 companies which had a low average dividend record to their credit in 1947-50 came in the group of companies with a blank dividend record. As between the two periods 1951-54 and 1955-57, 10 tea companies were found to be common. During 1955-57, the Central Cachar and the Bokakhat Tea Companies paid the lowest rates of dividend (1-2.3%) as against which the Singtom Tea Co. paid 14% during 1951-54 and the Looba Tea Co. and the Kaliti Tea Co. 3% during 1947-50.

As compared with the laggards of the tea industry, those in the coffee and rubber plantation industry displayed a better dividend record, at least during the two periods 1951-54 and 1955-57 (vide Table 13 below). As against the lowest average dividend rate of 1-2/3% in the tea industry in 1955-57, the Malabar Agricultural Co. paid the lowest dividend average of 3-1/3% during that period. During 1951-54 the lowest dividend on record in this group was 3 1/4% as against 1 1/4% in the tea industry. The comparative figures of the lowest average dividends for the tea and coffee and rubber industries for the period 1947-50 were 8% and 8% respectively.

In contrast to the low levels of dividends distributed by the laggards in other industrial groups, the lowest average dividend rates paid by the laggards in the paper industry were higher (vide Table 14 below). In fact, the dividend performance of the three laggards listed in this industry progressively improved over the period. In 1947-50, the Star Paper Mills paid the lowest average dividend rate of 8% as against which, in the succeeding two periods, the Sirpur Paper Mills which was second then paid an average dividend of 2½% in 1951-54 and 5½% in 1955-57.

Apart from the 4 jute companies which paid no dividends whatsoever during 1955-57, the Lawrence and Dalhousie Jute Co. paid an average dividend of 1% during 1955-57, as against the lowest average figure of 1/3% for 1947-50. The Reliance Jute Co. paid the lowest average dividend of 1½% during 1951-54 and Rameshwara Jute Co. 1/3% during 1947-50. Over the period as a whole, among the 5 companies spotted out as the laggards in each of the three periods, only two companies, viz, Rameshwara and Gangeo Mfg. are found to be common (vide Table 15).

It will be seen from Table 16 below that the average levels (of dividends distributed by the laggards in the coal industry were lower as compared to those of such companies in the other two industrial groups, namely, iron and steel (including engineering) and cement. The number of companies having a nil dividend record progressively increased from 2 in 1947-50 to 4 in 1951-54 and to 6 in 1955-57. In two of the three periods, the Balgora Coal Co. paid the lowest average dividend.

The number of companies selected for study in this group is comparatively small, as in the case of cement and paper industries. However, from those selected for the study, 3 laggards have been spotted out for each of the three periods. It will be seen from Table 17 that the National Screw, the Praga Tools and the Kamani stood at the bottom of the list of laggards in 1947-50. The Praga Tools and Kamani continued to be in the same position in 1951-54. In 1955-57 the Kamani and Kirloskar occupied the lower most position.

Out of the 3 laggards noted for each of the three periods, the India Cement, the Travancore Cement, and Dalmia Cement Co. Assam Bengal are common for two of three period studied. In 1947-50, the two lower most places were held by the India Cement and the Travancore Cement bracketed together whereas the Assam Bengal Cement Co. and the Dalmia Cement came to hold bottom most place during 1951-54 and the Dalmia Cement and the Sone Valley Cement Co. during 1955-57 (Vide Table 18 below).

(Concluded)

By KAMAL ROHTAGI

THE problem of international liquidity has been with us for the last three years in a more acute form and we are still groping in the dark to solve it. All developing countries have been beset by this problem and we are its special victims. With our present scale of economic expansion, this will become more and more acute in coming years. The facile way in which the foreign exchange requirements were calculated by the Planning Commission and then changed frequently and the gloss put over this problem, have only lulled us into a kind of economic complacency which is greatly disliked in sophisticated international financial circles.

Why is it so? It is so because our planning experts and their political leaders have not yet learnt to see the problem of adverse foreign trade balances of India and of the world in the perspective of a long-term trend in the structure of world trade. The ideas of most of them are still stratified in terms of dollars and pound sterling. Neither the fact that West German economic expansion is neither temporary nor transient, nor for that matter, of France, Italy and Japan, nor the impact of this circumstance on the world monetary situation appears to be adequately realised.

Goods produced in the factories of these advanced countries are finding their places in the markets of the world and would continue to do so. The prudence in economic affairs have endowed them with certain advantages over the Anglo-Saxon economic community, which have a long-term connotation. It is this, if any thing, that our rulers must understand. Otherwise we shall be drifting from one crisis to the other and in the meantime may lose a lot of essential development of our own.

Then what is the face of this problem of international liquidity as it affects us? The most visible face of this problem is in the shape of growing adverse balances in our external payments. And also in the direction of adversity in the payments problems of nearly every developing country and even of severely under-developed countries. If we analyse the course of this adversity, we find that it developed slowly since 1953 i.e. just at the time of the close of the Korean War. It affected those economies first, which remained stagnant like that of Greece and several Latin American countries like Argentina. Then by 1955 it began to affect even those economies, where economic development programmes were going on but at the same time the military expenditure was also very high. Turkey was a good example of that. Then by 1958 British pound sterling came under pressure. In the case of first two categories of countries, their currencies had to be devalued with the full consent of the I.M.F. and the advanced countries like America and England bore the losses through that operation. Britain just missed devaluation in 1958, but since then every time there is a trade deficit, there is a general talk of de-

valuation of sterling. Then by 1960 even the mighty American dollar had to be rescued by the West German Deutsche Mark. German Central Bank also promised **not** to repatriate German balances from America in the form of gold and thus a general run on the dollar was prevented.

We have been lucky that in the context of our economic development plans, for in that our defence budgets have been comparatively small and we have been spared the necessity of much unproductive expenditure. But should sterling and dollar be devalued, or alternatively, should the DM be upvalued, we cannot stay where we are. For, devaluation of a particular currency due to persistent international payments difficulties, also brings in several internal problems for that country and inflation is one of them. Inflation means higher prices, greater wage demands, and increased frustration and militancy amongst the people. Though the incidence of severity may change from country to country at the time of devaluation, the train of events is more or less the same and almost all of it is adverse in many ways. Thus it is a painful process, though that pain is not expressible in one big groan.

What do these potential and even disguised devaluations of various national currencies indicate? They indicate that the terms of world trade have **fundamentally changed in magnitude and direction** and that direction is irreversible. The whole concept of the International Monetary Fund had been that temporary adverse trade balances could be taken care of by loans advanced by the I.M.F. and thus obviate the necessity of devaluations. The I.M.F. was born because international bankers remembered the financial anarchy during the inter-war years of 1920-1939. But it was neither designed to meet long-term fundamental changes in the magnitude and direction of world trade, nor has it been amended since then to discharge this function. Various international financial experts have suggested various plans at various times during the last three years when this problem of international liquidity began to wrong them seriously. But none of these plans have been made practicable, because most of the plans have been advanced by those, who have been afflicted by these changes.

Several months have passed since the last annual meeting of the I.M.F. and increased borrowing powers were voted at Vienna. The final decisions thereon, taken recently show how reluctant lenders are to lend without controlling the disbursement of that lending. Even these are temporary aids. It is our firm view that the I.M.F., as it is presently constituted, cannot deliver us from the constant and chronic problem of international liquidity. And unless certain alternative means are found, our position in India would remain rather precarious.

What can be done then? The most natural development of the management and servicing of world trade that comes to one's mind is to change the bifocal financial mechanism into a multi-focal one. That means that, the world trade should progressively be financed through the West German DM, French Franc, Italian Lira and the Japanese Yen, if this mechanism besides the dollars pound sterling is developed cautiously, then we can also join in with the Indian Rupee. It means that besides sterling and dollar various **currency areas** would have to be devised and there would be at least seven international curren-

cies available for world trade instead of two as at present.

The value of these currencies would have to be guaranteed against any sudden devaluations and as and when these are forced to be devalued, then certain anti-loss devices would have to be written into an Area Currency Agreements, which would ensure that those national currencies, which seek protection under the umbrella of this or that international currency, would be guaranteed against any losses due to the changes in the functioning of the Area Currency. Naturally the managing institutions of these area currencies would become some sort of Area Central Banks and joining this or that Area would have to be purely voluntary for each country and no infringement of national economic sovereignties would be called for.

At the moment, all currencies of the world stand on a sort of Gold-Exchange Standard. Under the new arrangement, it would not be necessary to be so. Of course there could be adjustments between these seven currencies. And also their own regulations of their inter-relations on the basis of periodical negotiations. If these seven currencies desire, they may form an international central clearing bank as well, but it is not so imperative and the institutional frame-work of their mutual relationship might be just left over to be discussed and evolved.

This sort of flexible approach would take care of fundamental economic problems in general and also the problem of providing credit for short-terms trade deficits, middle-term industrial expansion, loans and long-term developmental loans. As and when other currencies, like that of Brazil in Latin America, ripen for a wider use, these might also start an Area of their own and thus increase the number of central international currencies.

We must realise that a lot of economic development is taking place in almost 100 countries of the world. The tempo, direction and magnitude of these developments are very dissimilar and we have seen that every ten years or so new problems of internal and external economic relations arise. These new problems clamour for solutions in a fundamental manner and temporary patch-work of solutions only accentuate them. The panacea for the problem of international liquidity would also have to be such that not only economic problems of today are sought to be solved but also the problems that are to come are taken care of in anticipation. It is here that the inadequacy of the I.M.F. has been forcing many people to look for other solutions.

The outline of a solution that we have advanced is not a very clearly defined outline, because it is not meant to be a rigid solution. Only outer contours are indicated, so that the problem may be discussed amongst financial thinkers of other lands and especially of India.

By our count, the incidence of need for foreign exchange for us in India during the next five years would be of nearly Rs 3,000 crores, out of which only one-third is assured at the moment. The rest is still unassured and would remain so unless and until the problem of international liquidity is begun to be tackled seriously and with some success. It would be much easier to assure the availability of this remaining sum, of the general problem of international liquidity is solved or is in sight of solution. Then the

lending mechanisms would be erected and the lenders would receive water-tight assurances of Security and of the fair and equitable return on their capital. It would also necessarily involve the introduction of, and stricter adherence to, a type of internal financial and economic discipline for developing countries like India, which would definitely involve the restriction of general consumption and the practice of financial stringency, especially in the field of social over-heads and also in the fields of non-economic expenditure for political purposes.

We must recognise that one of the problems of advanced countries like the Federal German Republic has been that in spite of their will to lend on a large-scale, they had to restrict their lending operations because of a near-anarchy in the present and future financing of the world trade. The West European reluctance to lend has been taken many times as the sign that they wanted larger return on their capital than was feasible in the circumstances. Our reading of the situation is that they had wanted greater security of their lent funds and their repatriation, which of course could come if and when institutional frame-work for the financing of world trade is erected, even though imperfectly in the beginning.

Thus we see that the problem of international liquidity not only impinges on our present balance of payments difficulties. It also has repercussions in the field of securing larger loans for our main development programmes. Thus while it is an international problem, it has serious national connotations for us. The solution of this problem would bring a lot of order in the present financial chaos.

Individual well-being is linked with national prosperity and only planned efforts can ensure both in the shortest possible time. And planning, for its success, largely depends on savings, individual as well as national. Saving in the form of Bank Deposits provides resources for the National Plan.

BANKS

Excellent Results in 1961

The first of the 1961 bank balance-sheets have been released during the week, and if they are typical of banks' experience then last year will undoubtedly go on record as the very best in banks' history. A high level of Advances in the first four months of 1961 (owing to the then busy season pressure) and on the whole an "optimum" utilisation of resources during the year have both obviously contributed to the results. But it is important to remember that the main factor responsible for the substantial rise in earnings is the increase in income brought about by the Reserve Bank directive of autumn 1960 as to the rates of interest charged for Advances. Even this measure would have been unavailing, had not the banks exercised a measure of prudence in their Deposit rate "policy". From evidence available it would seem that operating costs have not been allowed to eat up most of what surely must be reckoned adventitious earnings.

The Bank of India's balance-sheet is a striking example of how well a large bank could fare in the conditions obtaining in 1961; and Dena Bank's accounts for 1961 show that a medium bank, provided it competes vigorously, has a substantial part to play in the economy and also that it can do superlatively well. Reviews of both balance-sheets are published this week.

The State Bank's detailed accounts for 1961 also became available during the week. Despite the loss of a part of the windfall profit it used to earn on the investment of PL 480 counterpart funds, the State Bank has had a record year. It is fitting that Mr P. C. Bhattacharyya's last year as Chairman of the institution should have registered such a record; for he has this week taken over as Governor of the Reserve Bank after addressing the annual general meeting before which was laid a set of accounts bearing testimony to a high successful year's working. The State Bank balance-sheet will be analysed in next week's Indian Finance.

BANK RETURNS

Sharp Increase in Deposit Resources

The highlight of the latest banking returns is a considerable accretion to the Deposit resources of the banking system.

According to the returns of the Reserve Bank for 23 February, Active Note Circulation has contracted slightly by Rs 6.89 crores to Rs 2,027.42 crores and there has been inflow of Rupee Coin for Rs 0.47 crore. As a result, the Reserve Bank's cash in the till

With Balances Held Abroad, as shown in the Banking Department, falling below the level of minimum working requirement, there has been a transfer of Rs 3 crores from Foreign Securities in the Issue Department, which consequently are now lower at Rs 123.86 crores. To offset this, there has been a counter-vailing transfer of Rs 3 crores from the Banking Department to Rupee Securities, raising the latter to Rs 1,692.20 crores.

The return for the Banking Department is devoid of interest. The Centre's Deposits have been drawn down by Rs 6.63 crores to Rs 52.70 crores, while balances of State Governments have also declined by Rs 4.32 crores to Rs 11.20 crores; and borrowings of the States have at the same time risen by Rs 7.55 crores to Rs 66.65 crores.

Banks have apparently slightly improved their position vis-a-vis the Reserve Bank. Reserve Balances of member banks are higher by Rs 3.93 crores at Rs 81.10 crores, but the bulk of the increase may be accounted for by the State Bank. Again, reduction of debt is suggested by the fall of Rs 1.51 crores to Rs 160.75 crores in the Other Loans and Advances of the Reserve Bank.

By dint of the transfer to the Issue Department, Investments are lower by Rs 3.28 crores at Rs 193.93 crores. Balances Held Abroad, despite the "receipt" from the Issue Department, are shown to have risen only by Rs 1.96 crores to Rs 11.96 crores, thus indicating a net outgo during the week of Rs 1.04 crores.

Treasury Bills Purchased and Discounted by the Reserve Bank are lower by Rs 13.77 crores; an element of Rs 5 crores can be "explained" as reflecting purchase of securities by the State Bank; and the "balance" of the maturing liability has apparently been at least partly responsible for the fall in the Deposits of the Centre.

A further improvement has been recorded in the Deposits of the State Bank as disclosed in the return of the institution for 23 February. The relative figure has risen by Rs 2.55 crores to Rs 280.90 crores. The inflow of resources has enabled the State Bank to augment its gilt-edged portfolio by about Rs 5 crores to Rs 235.21 crores and to increase its cash balances by Rs 3.85 crores to Rs 28.40 crores. Nevertheless, borrowings are slightly higher at Rs 3.19 crores.

Net Deposits (that is, excluding borrowings from banks) of the banking system have, according to the statutory return for 16 February, risen substantially by Rs 16.71 crores. The rise has occurred mainly under the head of net Demand Deposits, which are higher by Rs 14.79 crores at Rs 842.39 crores; and net Time Deposits have also gone up by Rs 1.92 crores to Rs 1,164.22 crores. The State Bank accounted for Rs 9.32 crores of the total increase of Rs 16.71 crores in Deposits during the week. The banking system also encountered a slight falling off in the busy season demand for funds, so that the total of Advances has expanded by the relatively small amount of Rs 4.18 crores to Rs 1,360.96 crores; and of this rise a sum of Rs 1.44 crores is traceable to the State Bank.

PROGRESS OF BUSY SEASONS*				
(In Rs Crores)

—As %age of net Deposits ...	(68.1)	(76.1)	(73.5)	

*As at the end of 17 weeks for Reserve Bank State Bank and as at the end of 16 weeks for Other Scheduled Banks.

NOTES:—Cash balances include money at call and short notice.

Borrowings from the Reserve Bank have thereupon been reduced by Rs 6.36 crores to Rs 32.60 crores, and cash balances added to by Rs 4.55 crores to Rs 176.55 crores. Disinvestment in gilt-edged for Rs 6.54 crores is traceable as to Rs 5 crores to the State Bank. It is, incidentally, noteworthy that the Scheduled Banks' return for 16 February marks the crossing of the Rs 2,000 crore mark in net Deposits—the current week's rise takes the total to Rs 2,006.60 crores.

BANK OF INDIA

Spectacular Rise in Net Profit

The Bank of India Ltd, the first of the "large" Indian banks to publish accounts for 1961, can be proud of a spectacular performance. Deposit resources have improved by 14.2 per cent to Rs 125.02 crores. Of the increase of Rs 15.58 crores in Deposits, the lion's share is claimed by Fixed Deposits, which are higher by Rs 9.53 crores at Rs 60.79 crores. Savings Bank Deposits have also moved up appreciably by 25.2 per cent (Rs 4.12 crores) to Rs 20.48 crores. The rise in Current Accounts, Contingency Accounts, etc., is a rather smaller one of Rs 1.93 crores to Rs 43.75 crores.

The increased resources have enabled the Bank of India to extend a larger quantum of accommodation to constituents. The total of Advances has risen from Rs 83.86 crores (representing 76.6 per cent of Deposits) to Rs 98.53 crores (or 78.8 per cent of Deposits). But it is important to note that the expansion in Loans, Cash-credits and Over-drafts (Rs 7.09 crores) is smaller than the rise in Bills Purchased and Discounted (Rs 7.57 crores). There are no borrowings as shown in the balance-sheet (as against a nominal figure in the 1960 accounts), and Cash Balances have dropped slightly from Rs 12.09 crores to Rs 11.59 crores.

The profit and loss account reveals a substantial rise of Rs 70 lakhs to Rs 5.10 crores in the income by interest and discount; and we may take it that, but for provision for taxation being made from this item in respect of the 1961 accounts, the increase would have been more pronounced. Commission, exchange and brokerage have also fetched more at Rs 88.98 lakhs against Rs 75.32 lakhs.

Interest paid has been marked up by Rs 43 lakhs to Rs 2.60 crores, reflecting (a) the higher volume of Deposits; (b) the higher rates of interest paid from around March 1961; and (c) the possibility that the bank found it necessary to have recourse to central banking credit fairly substantially during the peak of the 1960-61 busy season. On the other hand, the rise in salaries and allowances is a more modest one of Rs 18 lakhs to Rs 1.61 crores. Fair-sized increases are also noticeable under two other heads of expenditure. Stationery, printing and advertisement, etc., have cost Rs 4.71 lakhs more, and this may be attributed to the general trend of banks to wage campaigns for attracting new Deposits. Secondly, Other Expenditure has moved up by over Rs 10 lakhs to Rs 27.80 lakhs, and it is just barely possible that a transfer to inner reserve has been concealed in this wise. Development Rebate Reserve gets Rs 3 lakhs against nil, and the balance of profit is spectacularly higher at Rs 110.32 lakhs against Rs 78.37 lakhs (net of Rs 25 lakhs provided for tax) in 1960. The rise in profit works out to 40.2 per cent.

Appropriations from the 1961 profits are generally higher than was the case in 1960: though it is necessary to add that the 1961 balance of profit is net of taxation, whereas a sum of Rs 25 lakhs was provided for the purpose out of profits in 1960. The transfer to Reserve is Rs 15 lakhs against nil, and the provision for bonus to staff is stepped up by Rs 1 lakh to Rs 19 lakhs. The dividend, comprising both the interim paid and the final proposed, is maintained at 20 per cent, absorbing Rs 60 lakhs. The carry forward is sharply higher at Rs 29.16 lakhs against Rs 12.85 lakhs brought in.

There are two more points to observe. Firstly, the ratio of reserves plus capital to Deposits works out to 5.0 per cent, the corresponding figure for the 1960 balance-sheet being 5.6 per cent. Secondly, the new provisions for audit raise the cost in this behalf (for Branch Audit Fees to Statutory Auditors): and this is a phenomenon that we shall doubtless encounter in most other banks' balance-sheets.

It is, finally, necessary to add that the Bank of India is taking steps to improve the capital plus reserves ratio to Deposits. At the annual general meeting under the head of special business shareholders will be called upon to consider and, if they approve, to pass resolutions raising the authorised capital and issuing rights shares. The proposal is that 200,000 rights shares of Rs 100 each (of which Rs 50 per share will now be called up) be offered in the ratio of one for three at a premium of Rs 20 per share. If passed, the rights offer will bring in Rs 1.40 crores by way of capital and reserves; and on the ba-

sis of 1961-end Deposits, inclusive of the new capital and reserves, the ratio would work out to 6.1 per cent.

DENA BANK

Superlative Results for 1961

THE Devkaran Nanjee Banking Co Ltd has the enviable reputation of being the first bank to publish its working results each year. In 1962 it can take added pride in being the first of the "medium" banks to publish a set of accounts which will be difficult to equal or surpass. Whether in respect of Deposits or earnings, transfer to reserve or dividend, Dena Bank has done extremely well.

Deposit resources have risen by Rs 7.55 crores (or 21.1 per cent) to Rs 43.36 crores. The increase has mainly occurred under the head of Fixed Deposits, which have been marked up by Rs 3.79 crores to Rs 19.77 crores. Savings Bank Deposits also show an appreciable rise of just over Rs 2 crores to Rs 10.71 crores; and a smaller share is ascribable to Current Accounts, Contingency Accounts, etc., which are marked up by Rs 1.76 crores to Rs 12.88 crores. Accordingly, Dena Bank has been able to increase the total of Advances by Rs 5.71 crores to Rs 30.06 crores, Advances/Deposits ratio thereby rising slightly from 68.0 per cent to 69.3 per cent. Giltedged investments show small change at Rs 11.99 crores against Rs 11.57 crores. Cash Balances are practically unaltered at Rs 4.78 crores, but borrowings are lower at Rs 2.19 crores against Rs 4 crores.

There is an innovation in the balance-sheet, to which attention may be drawn. Borrowings from the Refinance Corporation, at Rs 65.25 lakhs, are shown as a contra item, though not explicitly so in that there is not a similar notation on the other side of the ledger under the head of Advances. (Incidentally, the State Bank in this respect shows borrowings from the RFC as a true contra item).

The income by interest and discount, as a result of the higher volume of business, is higher by Rs 19.56 lakhs at Rs 1.83 crores, even as commission, exchange and brokerage have brought in about Rs 4 lakhs more at Rs 31.44 lakhs. The rise in interest paid is a moderate one of Rs 5.09 lakhs to Rs 9.29 lakhs, but the increase is sharper at Rs 9.29 lakhs to Rs 65.13 lakhs in the case of salaries and allowances. There is a breath-taking rise in the profit from Rs 14.55 lakhs (net of Rs 9 lakhs provided in the 1960 accounts for tax) to Rs 26.15 lakhs—a rise of 79.7 per cent. Auditors' Fees, as expected, have risen.

Indian Finance

As already noted, the 1961 profit is net of tax, as against an appropriation of Rs 9 lakhs in 1960. The transfer to Reserve is almost doubled from Rs 8 lakhs to Rs 15 lakhs. The dividend has been raised from 8.76 per cent to 11 per cent, the carry forward being much higher at Rs 13.51 lakhs against Rs 7.86 lakhs.

With the current transfer, Reserve Fund and Other Reserves are placed at Rs 75.16 lakhs as compared with the subscribed capital of Rs 50 lakhs. The ratio of capital plus Reserves to Deposits was placed at 3.1 per cent in the 1960 balance-sheet, and has now declined to 2.9 per cent.

Bank Rate Still Unchanged

By Paul Einzig

AT the time of writing the Bank rate is still at 6 per cent and the optimists who have been expecting a reduction ever since the beginning of this year have proved to be false prophets on Thursday after Thursday. This in spite of the pressure brought to bear on the Government from various sides. Quite recently the Federation of British Industries threw its substantial weight into the scales in favour of lower interest rates. In this respect it shares the views of the Trades Union Council. Yet the basic interests of the two bodies are in sharp conflict. Trade unions would naturally like the Government to adopt policy which would further strengthen their bargaining position against employers. On the other hand, the latter ought to realise that a lower Bank rate would mean a stepping up of wage demands, a further loosening of discipline in industry, and a further narrowing of profit margins.

It is true, pressure on sterling which was primarily responsible for the increase of the Bank rate has abated and is not likely to be resumed until the late summer. But if the Government should lower the Bank rate before it obtains assurance from the trade unions that they would co-operate in the policy of wage restraint, that policy might as well be abandoned. In any case it would be inconsistent for the Government to adopt a disinflationary policy on the eve of what is generally expected to be a very tough Budget. Public expenditure is rising, and since the mild recession brought about by last year's disinflationary measures has prevented a corresponding expansion of the yield of taxation the Chancellor of the Exchequer may feel impelled to put on additional taxes.

All this does not necessarily mean that by the time this article appears the Bank rate would not be down at 5½ per cent. But the authorities would be very ill-advised if they weakened their none too strong capacity of upholding the wage restraint policy to which they have committed themselves. The high Bank rate is virtually their only bargaining counter in the coming negotiations on economic planning and wages policy. If they discard it they would not be in a position to induce the trade unions to make any concessions. That being so, the Federation of British Industries is extremely short-sighted when advocating a reduction of the Bank rate. Beyond doubt the Bank rate is too high. If the employers represented by the Federation want to be reduced the remedy lies in their own hands. All they would have to do is to resist unwarranted wage increases instead of yielding too easily.

Notes

THE ECONOMY

Shortages of Many Kinds

In his presidential address to the third quarterly meeting of the Indian Chamber of Commerce, Calcutta, Mr S. P. Jain, drew attention to the disquieting symptoms that have been developing in the industrial front and which have adverse significance for the realisation of the industrial targets fixed in the Third Plan. Already the effects have become evident and there has been a decline in the rate of industrial growth to 8.3 per cent in the first eight months of 1961 from 12.0 per cent in the corresponding period in 1960. The factors that have contributed to this slowing down of industrial production are shortage of finance, transport difficulties and shortage of power supplies to industries. Transport difficulties and shortage of power supplies have assumed a chronic aspect and prospects for an early easing of the tight situation in both these realms are not very encouraging. Industrial production has been particularly hit by scarcity of coal brought about by transport bottleneck. Further, coal production continues to be hampered by many other factors of which the unsympathetic policy

being pursued by the Government in respect of coal prices is the most notable. Estimates of coal production for the first six months of the Third Plan indicate a possible shortfall as compared to the rate assumed in the Second Plan. In view of the formidable combination of adverse factors impinging on coal production, it is extremely doubtful whether the revised target for coal production at 110 million tons in the Third Plan has any chance of being fulfilled. Generation of power has also to be considerably increased to meet the prospective requirements of industries. The Second Plan programmes for power generation resulted in considerable shortfall owing to underestimation of requirements on the one hand and tardy implementation of schemes on the other. The present situation of power supplies for industries calls for a review of the Third Plan programmes for power with particular emphasis on early completion of schemes to meet the anticipated requirements.

Measures to solve the problem of shortage of finance for industries are also important to ensure the steady progress of industrial production during the Third Plan period. As Mr Jain has pointed out, difficulty in respect of finance has been felt even when industrial production has been at a lower level than it is at present. It is inevitable therefore, that the problem of shortage of finance should be further aggravated as the rate of production is sought to be stepped up in accordance with the Third Plan schedules. A very important consideration that arises in connection with the problem of finance for industry is the question of industrial pricing as it is being implemented by the Tariff Commission. This policy of the Commission is open to criticism on the score of being not sufficiently appreciative of the needs of industrial expansion. The pricing system of the Tariff Commission is based on the cost plus profit formula, and excludes any element for rehabilitation or improvements in production. As Mr Jain has stated, the standard rate of return allowed by the Commission is grossly inadequate. The units are left with not enough margin to pay an adequate return to the investors and to meet the needs of rehabilitation. The price policy is besides obstructive of technological progress in industries. The stagnancy that has settled on production in many industrial sectors can very well be traced to the framework of unfavourable prices within which they have to operate. Further harm has been

337

done by the arbitrariness of Government decisions in respect of Tariff Commission's recommendations.

URBAN MIDDLE CLASSES

The Income Pattern

A survey of middle class living conducted by the Central Statistical Organisation and published in the November issue of the Monthly Abstract of Statistics, throws interesting light into the income distribution and expenditure patterns of middle class families in the four important Centres of Calcutta, Bombay, Delhi and Madras. Though being confined to the four major cities, it is restricted in scope, it is a pioneering study and gives new dimension and amplitude to national income statistics and studies. Middle classes constitute the most predominant section of the country's population, and middle class standard of living is an important mirror of the national living standards.

The article defines middle classes as 'a social class standing between the working class on one side and the upper class on the other'. However, the survey has not fixed any upper limit to the income while collecting data and this may seem to be a possible shortcoming in the study. The only safeguard against any serious distortion of the study that may have crept in on this score is the presumption that the sample would not, in any case, have included many such families. The middle class population covered by the survey includes families of non-manual employees (outside agriculture) without regard to income.

Some of the significant conclusions of the study are the larger relative frequency of families at the higher income levels in Calcutta, and at the lower income levels in Madras in relation to other centres, largest average monthly expenditure for Delhi and the lowest for Madras. Madras has the largest proportion of families (11.9 per cent) in the income range of less than Rs 100 per month. Madras also compares adversely with other Centres in respect of proportion of families in the income range of Rs 100-1000. While the proportion is 84.9 for Madras, for all the other centres it is above 90 per cent, being highest in Bombay with 94.1 per cent. Madras has also higher concentration at the lower income levels, the maximum density occurring in the income range of Rs 100-150, while for Bombay and Delhi, the maximum density of income occurs in the income range of Rs 150-200 and for Calcutta in the Rs 200-500 income range. It is significant that Calcutta also records the highest density in the range beyond Rs 500, followed by

Bombay and Delhi. The placings in respect of average income clearly reflect the pattern of density in the highest average with Rs 378, followed by Bombay (Rs 374), Delhi (Rs 357) while Madras takes the last place with Rs 293.

The most significant thing about middle class statistics of living in Calcutta is the considerable density in the higher income ranges. On the basis of classifications by fragile groups the study reveals higher income for the lowest 70 per cent of families in Bombay than for Calcutta, while Calcutta accounts for higher income for the top 30 per cent of families. It is also noteworthy that the average income of the lowest 95 per cent is higher in Bombay than for Calcutta, while Calcutta accounts for higher income for the top 30 per cent of families. It is also noteworthy that the average income of the lowest 95 per cent is higher in Bombay than in Calcutta but the weight of the top 5 per cent tilts the scale of average income in favour of Calcutta.

The survey of expenditure also reveals considerable variations between the four Centres. Middle class families in Bombay and Delhi show larger expenditure than at Calcutta and Madras. The average monthly expenditure is placed at Rs 324.10 in Madras, Rs 388.27 in Delhi, Rs 380.94 in Bombay and Rs 354.28 in Calcutta. Expenditures reveal substantial income deficit in Madras and Delhi, while Calcutta shows an appreciable surplus. Food, beverages, tobacco and intoxicants account for 38.81 per cent, 42.10 per cent, 40.71 per cent and 42.07 per cent of total monthly expenditure for Bombay, Calcutta, Delhi and

Madras respectively. Calcutta has a lesser proportion in respect of light and fuel as compared with other Centres, and also in respect of clothing bedding, headwear and footwear. Expenditure on items within subgroup reveals further interesting variations. Cereals and cereal products account for 25.8 per cent and 23.10 per cent respectively of the monthly expenditure on food, beverage tobacco and intoxicants in Calcutta and Madras respectively, while the proportion is less than 20 in Bombay and Delhi. In this sub-group milk products figure prominently in the monthly expenditure in Bombay and Delhi, while it is cereals and cereal products that has the larger share of monthly expenditure in the other two centres. Calcutta ranks high in respect of vegetables while Madras lags behind both Delhi and Bombay. The expenditure on house rent is more or less the same in Bombay, Delhi and Madras, but in the case of Calcutta it is 30 per cent higher than in the other three. Delhi records the highest expenditure on household requisites such as furniture and furnishings etc. One of the most significant conclusions drawn by the study is that the relatively declining proportion of expenditure spent on food as income increases. The study reveals considerable inequalities in respect of expenditure on different items which in turn reflect inequalities in consumption and standards of living. Inequalities in expenditure are generally higher in Madras and Calcutta than in Bombay and Delhi.

★

FERRO-ALLOYS Crucial for Industrialisation

The four-day symposium on ferro-alloy industry held at Jamshedpur and which was attended by representatives from different parts of the world had served to focus attention on the development of the ferro-alloy industry in India. Though considered to be the backbone of the alloy, tool, special and stainless steel industries, the ferro-alloys are not as yet developed to the extent required to meet the demand of the alloy and special steel industry, the growth of which has in turn great importance to the development of basic heavy industries. In the Third Plan, the production target for alloy, tool and special steel was originally fixed at 200,000 tons, which was to have been met from production of 130,000 tons in the public sector, and 70,000 tons in the private sector. In the public sector, a major project was envisaged to be set up in Durgapur designed for a capacity of 80,000 tons while the balance was to be met by the ordnance factories of the Defence

Ministry. The target has subsequently been raised to 375,000 tons in view of the anticipated rise in demand. Even this revised target may appear to be on the low side, and with the projected rise in steel production to 10 million tons, a demand of the order of 500,000 tons may well be a safer estimate. It is against this background of the programmes for the development of the alloy, tool and special steel that the importance of the ferro-alloys has to be judged. As Sir Jehangir Ghandy, Director-in-charge of the Tata Iron and Steel Co Ltd., pointed out in the course of his address, there has so far been very little by way of integrated development in the field of ferro-alloys. Only production of ferro-silicon and ferro-manganese has made any kind of worthwhile headway. The Mysore Iron and Steel Works meets the country's requirements of ferro-silicon and the company has a programme to expand the production capacity to 20,000 tons per annum. In the production of ferro-manganese a number of units have come up since 1957 and that the country is an important exporter of this product is a measure of the progress that has been already made. The other fields in ferro-alloy production are relatively undeveloped and these include ferro-chromium, ferro-titanium, ferro-vanadium ferro-phosphorus etc. Exploratory surveys conducted to locate the sources of raw materials for the ferro-alloys industry have however indicated existence of potentialities for the development of the industry on a more extensive, and diversified basis. Bihar and Orissa are supposed to abound in resources for the production of ferro-chrome, while Bankura in West Bengal and Degana in Rajasthan hold promise of resources of tungsten needed for the establishment of the ferro-tungsten industry. Bihar and Orissa are also known to contain deposits of vanadium which may offer the basis for the development of the ferro-vanadium industry.

The National Metallurgical Laboratory has pioneered many experiments in the production of ferro-alloys of standard grades and the work it has done has been the inspiration behind some of the schemes for developing the ferro-alloy industry. The NML is setting up a pilot heavy plant with a capacity of one ton per day for studying indigenous raw materials and their suitability for production of various grades of ferro-alloys. This will be the first unit of its kind in the whole of the East and is expected to yield most useful data on smelting technique and economics of production. Much valuable results have already been obtained from the researches conducted by the Laboratory and the lead now being given by it is the most reassuring factor for the integrated development of the ferro-alloys industry. The heavy drain of the order of

Rs 30 crores a year on foreign exchange that will be entailed by dependence on imports from abroad for ferro-alloys to feed the tool, special steel and stainless steel industries during the Third Plan period provides overriding urgency to schemes to establish indigenous capacity for ferro-alloys. For the speedy development of the industry, however, one important condition has to be fulfilled. The advent of electric smelters has transformed the nature and outlook of the ferro-alloys industry. While this has opened access to more efficient methods of manufacture, it also assumes the availability of power to the smelters at cheap rates.

★

COAL Inadequate Price

In a memorandum submitted to the Union Minister of Steel, Mines and Fuel, the joint working committee of four mining bodies has drawn attention to the inadequacies of the revised prices for coking coal recently announced by the Government. Though the revision of price was done from representations of the steel and coal industries, it has been found that the actual prices fixed by the Government have departed very markedly from the new price structure that was recommended by the two industries jointly. The revised prices of coking coal, it is stated, will have serious repercussions on the output of lower quality grades because of the price-cuts ranging from 18 nP to Rs 1.05 per ton. The new prices will appreciably reduce the quantum of increase proposed for quality coals with ash less than 19 per cent. Also for proper coals the new prices will be less than those previously in force. The reduction of prices for coal of high ash content will have widespread effect since in recent years there has been an accentuated trend toward increasing production of the low grade coal. The joint working committee has warned that units whose entire production is of the lower grades will find it impossible to continue to function and their complete closure is not unlikely.

By its effects on production of coal of high ash content, the new price structure will also impinge unfavourably on the working of coal washeries which in turn will affect the production in the steel mills. On the basis of cost calculations of two typical collieries, the industry has estimated that the new prices will actually result in a loss of over Rs 3 per ton if these were to undertake upgradings of supplier. The new price system will therefore operate as a disincentive and will not lead to any improvement in the quality of coal raised.

The committee has also urged the Government not to hurry with

the reclassification of the 300 coking coal collieries and fitting all the numerous seams into the new 12-grade structure. Any attempt to rush through this part of the work, it is pointed out, will lead to grave inequities. Further, in the absence of revised grading, grave dissensions between the producer and the consumer are also apprehended.

INDO-GERMAN TRADE Tangible Results in 1961

Indo-German trade prospects were discussed in detail at the reception held by the Indo-German Chamber of Commerce in Calcutta last week. Dr H. Ruete Consul General of the Federal Republic of Germany expressed himself very optimistically about the scope for improving mutual trade between the two countries. As Dr Ruete stated, at present two factors dominate the economic relations between the two countries: "On the one hand, India's determined efforts to develop a modern industrial economy through her five year plans and on the other, Germany's rapid industrial recovery which has put her once again in a position to offer heavy equipment, instal plants, train technicians and even offer limited long-term facilities". The role of long term credit has of late gained greater recognition and Germany has pulled her weight with other countries of the Aid India Club to promise a substantial aid programme for meeting India's foreign exchange needs in the first two years of the Third Plan. It is worth noting that in the \$2,286 million that was vouchsafed to India after the first meeting of the Aid India Club last year, the Federal Republic's contribution amounted to \$425 million, being the second largest from the six nations participating in the aid programme. Apart from such direct aid, the Federal Republic has also given securities and guarantees for supplies made to India to the extent of Rs 248 crores. There is also greater interest displayed by West German private industrialists in collaboration schemes and already 260 Indo-German collaboration schemes are learnt to have been granted. It is trade with the Federal Republic that is a source for concern to India. Mainly owing to development programmes calling for large-scale import of machinery and equipment, India has been mounting up a huge deficit with the Federal Republic in foreign trade, and it is the trade deficit with the Federal Republic which is the most serious source of imbalance in India's overall payments position. Dr Ruete has stated that the volume of India's exports to the Federal Republic could be further increased particularly in the direction of greater

iron ore and manganese exports. Germany also offers scope for increased tea exports from India. It is gratifying that some tangible results have already been secured in increasing India's exports which show an increase of about 23 per cent in 1961 as compared with exports in the previous year. Present uncertainty about the shape of the final external tariff wall of the Common Market would seem to cast a shadow on trade prospects. However, an accommodating spirit has been displayed in respect of textile imports from the developing countries, which has led to the signing of the Geneva Textile pact providing for gradual increase in exports of textile products from the developing countries. It is to be hoped that the need of the developing countries for relaxation of restrictions in other directions to permit greater imports needed to sustain development tempo will also be appreciated.

★

STOCK EXCHANGES Distorted Public Image

In his speech to the Madras Stock Exchange, on the occasion of the inauguration of the "Study Circle", Mr S. Narayanaswami, Chairman of the Seshasayee Industries Ltd, sought to remove some popular misconceptions about the stock exchanges. Though stock exchanges in free economies function as a vital constituent of the capital market, the public image of them is still that of gambling dens where no worthwhile activity is done. Such notions proceed mainly from lack of investment habit among the people, but excessive speculation sometimes encouraged by the operators in the stock market has also been responsible for the creation of prejudicial public opinion against the stock exchanges. For this reason a measure of self-discipline and self-regulation, by the stock exchange fraternity as suggested by Mr G. L. Mehta, in the course of his address to the Share Brokers' Forum would seem to be most necessary to create a more favourable climate of opinion. The setting up of a self-policing committee of the Chairmen of the leading stock exchanges in the country to examine their practices in the circumstances a welcome step. Other measures that may also prove effective are steps to broaden the base of public investment and more systematic public relations work. The public relations work in the stock exchanges has so far lacked keenness and a sense of mission and this has led to infelicitous consequences to the market. As a measure of self-interest, Mr Narayanaswami has also emphasised the need for the healthy working of the shareholders' associations. In the proper working of these groups and associations lay the safeguard for the investor and the

shareholder. While the stock exchange guided the investor to invest his money judiciously and properly with reasonable regard to return and risk, the shareholders' associations exist to protect the interests of the shareholders by keeping the companies in reasonable check. The cooperation of the other constituents of the stock market has also to be ensured for protection of shareholders' interests. The stock broker particularly is in a position to protect his client from prejudicial action by a company. In the final analysis, however, it is the attitude of the companies to the shareholders that offers the real test of guarantee of investor interests.

★

COTTON Uncomfortable Supply Position

Addressing the fortieth annual general meeting of The East India Cotton Association Limited held in Bombay last week, Mr Madanmohan R. Ruia, the President of the Association, brought to sharp focus the alarming cotton supply position in the country. The comfortable carryover stocks coupled with the prospects of a better domestic crop as well as sizable imports of American cotton led to some optimism in the ranks of the trade and the industry which has, however, proved at present to be mere wishful thinking. The devastation caused to the crop in many growing centres particularly in Maharashtra and Madhya Pradesh by the unpropitious weather conditions in those tracts, has in its train, forced a downward revision of the crop estimate to a low of 43 lakh bales as against the original estimate of about 50 lakh bales. In addition to this the scope for imported US cotton under PL 480 in 1962 is dim in the context of lower production in that destination.

The consumption of cotton by the Indian mills, on the other hand, is on the increase and, if the present pace of consumption continues, it is likely to amount to nearly 57 lakh bales. The carry-over stocks as on 31 August 1961 stood at 22 lakh bales of cotton comprising 18 lakh bales of indigenous growth and 4 lakh bales of imported cotton. Imports so far arrived this year aggregated 4.5 lakh bales and licence has been granted for the import of another 5 lakh bales. It is thus evident that heavy inroads would be made into the carryover stocks and unless further imports are arranged forthwith, the balance stock at the end of the year may be precariously meagre.

The short supply of cotton has compelled the authorities to reintroduce restrictive measures like the compulsory surveys at the ginning and pressing stations, allocation of quotas to the mills on

the basis of their past consumption, variety-wise distribution, requisitioning of cotton and prohibition on holding stocks beyond the stipulated level. And the reluctance of a certain section of the trade to cooperate with the Government may lead to further imposition of restrictions. The immediate remedy to skip over this embarrassing situation is to import foreign cotton on a liberal scale but the paucity of foreign exchange does not allow for much complacency in this direction. Nevertheless it is gratifying that the Government is striving its best to import as large a quantum as possible without involving foreign exchange.

But all these temporary measures to ease the position is bound to do more harm than good if adequate measures are not adopted for stepping up the indigenous production. The average yield of cotton per acre in India is distressingly low at a mere 93 lbs in contrast to 604 lbs in the USSR, 542 lbs in Egypt, 446 lbs in the USA, 267 lbs in Sudan and 231 lbs in Pakistan. A careful survey should be undertaken to ascertain the potentialities and facilities available in each cotton growing region and special efforts should be concentrated in those areas which turnout to be promising. If necessary, as suggested by Mr Ruia, cotton should be included in the "package plan" so that extra supplies of fertilisers, pesticides etc could be adequately provided.

★

TEA Many Vexations

Many of the maladies that are corroding the vitality and competitive strength of the Indian tea industry have been brought to sharp focus recently by Mr K. Ghosh, the President of the Tea Packers' Association and Mr B. C. Biyani, the President of the Calcutta Tea Merchants' Association, in their addresses to the annual general meetings of their respective associations. The most glaring aspects touched by the speakers were the crippling taxation under which the tea industry is at present groaning and the failure in stimulating tea exports to the desired level. Being one of the most important earners of foreign exchange, promotion of tea exports is essential for the implementation of the various development plans. The main inhibiting factors in this direction are the uncompetitive nature of the Indian tea and the lack of an adequate propaganda machinery abroad. The Tea Board has addressed itself to the latter and various committees are set up to intensify the export promotion drive and for exploring the possibilities of making inroads into new centres of consumption as well. Despite the increased accent placed on larger exports coupled with the bumper crop in 1961,

the actual export performance failed to reach the expected level. Even in the traditional markets like the UK and the USA our share of sales is going down, though the tea intake in those destinations has remained steady. Countries like Ceylon have of late emerged as stubborn competitors and are actually stealing a march ahead of us in those centres. In the USSR itself, which had been entirely depending on Indian tea hitherto, Ceylon tea is gaining much popularity.

Viewed in this context the importance of a carefully chalked out export promotion policy assumes greater significance. Toward this end Mr Ghosh highlighted the need for allowing private traders, both big and small, a free hand in tea exports

Besides, as stated by Mr Biyani, increased stress on quality as well as quantity, organised propaganda abroad and the like can go a long way in producing striking results in the international tea consuming centres.

Dealing with the taxation pattern both the speakers referred to some of its vexatious aspects. The prevailing practice of levying taxes both by the Centre and the State Governments at different places have more often than not created a lot of inconvenience and harassment. Apart from these, the Assam and West Bengal Governments impose transit taxes too. All these add upto a complicated procedure of tax collection, at several points, involving untold hardships and a good deal of evasion. A reduction in the tax and simplification of the entire tax structure will be a welcome relief to the industry and trade.

★

VANASPATI Low Profitability

The vanaspati industry in India, after weathering all the storms of adverse criticisms which swept from all the quarters during the past few years, and in fact which almost threatened its very existence, has steered clear through the turbulent waters and is now sailing on an even keel. Much of the furore against vanaspati, particularly of its disastrous impact on heart and human health, has been proved baseless by research. The rational approach adopted by the Government to the whole matter also helped the industry immensely to extricate itself from the embarrassing position in which it was steeped.

Addressing the sixteenth annual general meeting of the Vanaspati Manufacturers' Association of India on 20 February, Mr P. L. Tandon, the Chairman, traced briefly the progress of the industry during the past. Though vanaspati enjoys considerable goodwill, the performance of industry judged by the return it makes on the re-

sources employed, which is at a low of about 2 per cent after taxation, the performance of the industry is far from satisfactory. According to a recent analysis of the Reserve Bank of India, against an average gross profit as a percentage of total capital employed for all companies for 1951-55 of 9 per cent, the average of vegetable oil including vanaspati was only 2.5 per cent. After deducting the tax and interest the return will be pretty meagre. The low profitability of the industry is attributed to its excessive capacity and the violent fluctuations in prices of the important raw materials like edible oils. This has been particularly due to the fact that demand for oil outstrips the total output. The only solution to rectify this anomaly is to step up production of groundnuts so that the yawning gap between demand for and supply of oil can be bridged to a satisfactory extent so as to ensure stability in oil prices. It is matter for gratification that tremendous increase in the production of groundnut is envisaged in the current Plan. Government should also accord greater attention for holding the price line of edible oils which is a prominent item of food in the diet of the masses.

Mr Tandon was quite optimistic of the future of the industry. It has, by dint of its stature and size, emerged as the largest food processing industry in the whole of Asia and one of the largest in the world. The performance will be even more striking if the industry takes a realistic attitude toward profitability.

US January Statistics

The January statistics are now trickling in and nothing has happened to make the experts change their optimistic views about the American economy's performance or prospects. Led by Walter W. Heller, Chairman of President Kennedy's Council of Economic Advisers, they see a continued and vigorous upswing as the hallmark of 1962 economic activity.

This confidence is being expressed in the face of some admittedly disappointing January data. Last month saw small declines in personal income, retail sales, industrial production, and the length of the average factory work week.

No one likes to see declines in economic activity, no matter how slight or temporary. But Dr. Heller and his fellow economists have good reason to believe that the apparent January lull provides no cause for alarm when seen in proper perspective.

In the first place, it is readily understandable that in an internationally free economy every sustained rise is bound to have what Mr Heller calls 'its sharps and flats, its spurts and pauses'. He

recalls, for instance, that four of the best years of recent US economic expansion—1951, 1952, 1953 and 1956—also started with a January dip in personal income.

Secondly, not all the January returns are bad. Indeed, for the first time in 16 months, the closely watched seasonal unemployment rate fell below the six per cent mark—to 5.8 per cent of the labour force.

Of equal importance is the fact that durable goods orders, historic harbingers of industrial activity to come, rose three per cent in January and continued to run well ahead of shipments. Manufacturers of durable goods have enough business on their books right now to keep them running for some three months at recent record operating rates. Plants turning out durable goods have booked more than \$16,000 million in new business, on a seasonally adjusted basis, in each of the last four months—the best sustained record ever attained.

It appears, then, that January business was a lot better than some of the figures may indicate, and that the apparent weaknesses in the economy were more statistical than real. This is a judgment with which, according to *Business Week* magazine, most American businessmen will agree. It also coincides with the generally accepted appraisal that certain erratic and non-recurring factors were at work during January and help explain the month's seeming business lull.

The chief culprit appears to have been the unusually bad weather, as severe January snowstorms—particularly in the west and south—kept thousands of industrial workers from their jobs at one time or another during the month. This inevitably cut into the hours worked, and accounted for much of the decline in production and incomes. Other factors also were in evidence. Contributing to the production dip, for instance, was a slight contraction in automobile output. But this appears to have been a let-down, largely, from December's breakneck production pace complicated by a brief and by now settled work stoppage at the plants of one manufacturer.

Contributing to the personal income dip, the first since last August, was the absence in January of certain non-recurring income—mainly extra year-end dividends and insurance payments—which had been included in and had helped inflate the December figure. Thus, January almost was bound to suffer in comparison.

All this tends to underscore the need to see economic developments in terms of basic trends rather than month-to-month assessments.

As the newspaper *Journal of Commerce* concluded, after analyzing the current US economic

situation, the basic indicators "still are saying that the best is yet to come."

SWEDEN Trade Union Example

Several interesting and noteworthy aspects of trade unionism in Sweden are brought out by the International Labour Office in its report entitled "The Trade Union Situation in Sweden" published recently in Geneva. The report is based on the findings of a mission specially deputed by the ILO which conducted an on-the-spot factual survey in last autumn relating to the freedom of association in Sweden.

Trade union organisations in Sweden enjoy such an enviable position at present that in fact they, along with employers' organisations, have become an integral component of the Swedish democratic system. In co-operation with the Government they are responsible for settling amicably several vexatious labour problems and many delicate and difficult questions that arise in the wider sphere of the social economy. At the same time they are not Government agencies but absolutely free and independent associations. Moreover strong organisations of both the employers and workers have developed a deep aversion for State intervention and a majority of employers consider trade unions as essential organisations and as an healthy appendage for the smooth ironing out of the labour-management estrangements. As the report states "mutual respect has developed and a high degree of maturity in the conduct of industrial relations has been attained". Both the employee and employers' associations look upon the other as partners in industry and the co-operative approach adopted by them for solving even the intricate problems for the mutual advantage is worthy of emulation. The employers' associations are particularly happy and they are eager to set trade unions on a sound footing as a decision taken once will be honoured by the contracting parties. The report also indicates that time and motion studies are generally accepted as the basis for setting piece rates and new methods or techniques will be introduced only after joint consultation.

The report also traces the growth of trade unionism in Sweden from its relatively late inception in the 19th century to the commanding position it at present occupies. It is evident that employees had to fight for asserting their right to form unions, to strike and bargain collectively, but the entire process was not abnormally fierce as in the case of other countries. Refreshingly enough, the repres-

sive legislation to fight against was only minimal and the need for protective legislation was never felt on an invidious magnitude. The two predominant central organisations, the Swedish Confederation of Trade Unions (LO) and the Swedish Employers' Confederation (SAF), took shape at the turn of the century and the subsequent expansion of the collective agreement system was rapid. The famous "December Compromise" of 1906 in which the LO conceded some managerial prerogatives, including a no-closed-shop stipulation, held sacred by the SAF in return for a recognition of the right to organise and, by implication, of the legitimacy to collective bargaining was an important landmark toward the management of labour market affairs by voluntary associations. Another development of equal importance in this sphere was the Supreme Court's decision in 1915, when, by ruling that collective agreement were binding contracts, these agreements were virtually given the force of law. As a fitting finale for these, the Basic Agreement of 1938 emerged, signed by LO and SAF which constituted a special machinery for regulating the labour market. This Agreement sparked off a new trend in the industrial relations in Sweden—toward centralised negotiations. Consequently the joint actions of the LO and SAF for the co-ordination of wage claims and policies in the interest of the Swedish economy as a whole has become accepted standard procedure of late.

The study also spotlights the "remarkable extent of organisation found on both sides." Total membership of the trade unions represents approximately 80 per cent of the employees. In industry, the manual workers are organised to a striking extent of over 90 per cent. Moreover even the armed forces and police have their own strong unions.

Nevertheless, there exists an elaborate machinery for the settlement of disputes. The Labour Court, established as early as 1928, is an integral part of this machinery, whose main function is to adjudicate litigations relating to the interpretation of collective agreements expeditiously. It needs special mention that the Court is a joint body including representatives of both the labour and managements whose decisions are final and on no account an appeal is granted. References to the Court are few and far between "as coercive action must not be resorted to by any party before he has complied with his duty to negotiate."

The Basic Agreement has also placed other restrictions on direction action with a view to safeguarding neutral third parties and essential community interests. A Labour Marketing Council has been set up to see that these provisions are honoured by the parties.

Indian Finance

3 March 1962

At the same time there is adequate provision for utilising legitimately the powers of the State for ensuring amicable settlements of legal disputes.

The whole gamut is working admirably well in Sweden to which the progressive deterioration in major strikes in the past few years bears ample testimony. The self-imposed restrictions have yielded rich rewards to the economy particularly in this period of prosperity and the voluntary co-operation of labour and management in handling the disputes has emerged as accepted norms for solving them.

ICICI

New Dimensions

In his speech at the annual general meeting of the Industrial Credit and Investment Corporation of India Limited, Mr G. L. Mehta, traced the achievements of the Corporation which has now completed seven years of its operations. Most strikingly, during this period, the activities of the Corporation have increased manifold. Not only has the basis of its operations been broadened, but also it has come to assume new roles and responsibilities. Particularly the foreign exchange loans being provided by the Corporation to industrial units in the private sector from loans negotiated from international credit institutions and other foreign countries, have added new dimensions to its activities. It has now been revealed that during the last seven years, the Corporation has rendered assistance to nearly 133 industries. This is striking proof of the pivotal role which the Corporation is playing in the development of industries in the private sector. The activities of the corporation in the last few years have emphasised its role as an underwriter, and it is significant that it is now looked upon as the largest underwriter in the country. Arising from its underwriting activities, the corporation has also become an effective catalytic agent in industrial development.

The activities of the Corporation during 1961 reflect substantial improvement over the previous year. The gross profits before tax increased from Rs 62.61 lakhs in 1960 to Rs 74.27 lakhs in 1961. The balance carried to revenue appropriations after providing for tax is also higher at Rs 46.52 lakhs against Rs 37.67 lakhs in 1960. During 1961, the Corporation sanctioned gross assistance for Rs 13.76 of which Rs 11.94 crores were in respect of new projects.

It is inevitable that consequent upon industrial development, which the Corporation itself is stimulating through its multi-faceted roles, greater demands should be made upon its resources. The need to strengthen resources is particularly great in respect of foreign exchange. It reflects to the credit of the Corporation that

it has already succeeded in obtaining a loan of DM 5 million (about Rs 60 lakhs) from the Kreditanstalt of the Federal Republic of Germany, being the first West German credit to be obtained by the Corporation. The World Bank has made a fresh loan to the ICICI equivalent to \$20 million which will be used to meet the foreign exchange requirements of projects financed by the Corporation.

In his speech, Mr Mehta has also satisfactorily answered some criticism that has been directed against the ICICI for alleged delay in examining proposals and also in sanctioning and disbursement of loans. Such misunderstandings, are based on inadequate appreciation of the difficulties and problem which the Corporation itself has to face in processing applications. Procedural formalities have necessarily to be gone through for the sake of safety and it has been revealed that there is room for improvement in cost calculations, there being a general tendency toward underestimation of capital requirements. The Corporation's activities in the field of loan assistance have to be adjudged in the context of sound principles of finance which it wants the new companies to follow in raising capital. A high debt-equity ratio in the initial stages is not desirable for the reason that it entails greater expenditure by way of interest in the early years when the rewards of investment are not very satisfactory. Further, it is understandable that the corporation should be guided by its own interests and considerations of profits to itself in its operations. Such considerations necessarily impose a measure of caution and vigilance in the working of the Corporation.

LIC A Record Business in 1961

The figure released recently by the Life Insurance Corporation of India relating to the new business completed in 1961, which is placed at over Rs 608 crores, is indicative of the successful operation of the Corporation. This figure compares favourably with the relevant sum of Rs 497.54 crores in 1960, thus registering an increase of 22.3 per cent. In the light of the fact that the year under review was for the LIC bristling with natural calamities in the form of floods and droughts the performance is striking. Nevertheless, there is nothing to gloat over, for the business completed fell short by approximately Rs 46 crores of the target of Rs 655 crores fixed for the year. Moreover, in comparison with 1960 when the target fell short of only by Rs 28 crores it is evident that the gap has still broadened. Mr P. A. Gopalakrishnan is however confident of fulfilling the annual

target of Rs 1,000 crores in 1965, though, it will require concerted effort by it. New business introduced by the LIC during last year recorded a sharp increase by Rs 136.40 crores to Rs 702.93 crores. The main factors that facilitated in securing larger business, according to the Chairman, were the greater insurance-conscience evidenced by the people, the strengthening of the LIC's rural organisation and the growing popularity of non-medical insurance scheme for policies not exceeding Rs 2,000. The introduction of the on-the-spot issue of policy may also expand considerably the volume of business and can be extended to other parts of the country as well.

Side by side with the increase in the quantum of new business the premium income also looked upto nearly Rs 110 crores from Rs 96.89 crores in 1960. The expense ratio in the same year might have slipped down to less than 12 per cent against 12.90 per cent in the

preceding year. The LIC is at present preoccupied with the task of strengthening the efficiency of the organisation and the setting up of an Organisation and Methods Division for eliminating the red tape.

The foreign business of the LIC failed to register any appreciable increase on account of the political uncertainty in places it used to operate. LIC will shortly be branching to Goa and has already entered into reinsurance arrangements with its counterpart in Ceylon. Mr Gopalakrishnan also referred to the strides taken by the LIC in the sphere of financial assistance to house construction activity in the country. Out of Rs 60 crores allotted for housing loans to the State Governments a sum of Rs 26 crores has been committed so far. The total investments of the Corporation in the same year aggregated Rs 545 crores against Rs 490 in the previous year.

This is one of the oldest and most commonly used of standards. But it is certainly vague. And when you use it, you are never sure of getting your exact requirements.

This is where Indian Standards come in useful. Developed by the Indian Standards Institution, each standard helps you to easily specify your requirements, ensures quality of the product and good value for the money you spend.

ISI prescribes standards for industrial and consumer goods. Under its certification marking scheme, goods produced to relevant standards qualify for carrying the ISI Certification Mark. This is a third-party guarantee of the products' continuous satisfactory performance and service. The next time you buy anything, look for the ISI mark.

Clive Street Gossip

"I must have liberty
Withal, as large a charter as the wind
To blow on whom I please"
—As You Like It.

IT is all over bar the shouting. The world's largest democracy has chosen its new rulers and enjoyed itself immensely doing so. It was good, clean—ah, well, fairly clean—fun. The millions who put their best clothes on and made their way to the hustings may have been going to a mela or a cricket match. (I can vouch for I did a little mass-observing on my own last Sunday). They looked so happy and relaxed. And this is as it should be. The fact that they troubled to vote at all showed that they were not frivolous unpolitical animals. On the other hand, they were not unduly weighed down by the burden of their fateful decision. They have a, partly, self-protective, cynicism about politicians. They know that these worthies, who were trying these last few weeks to wheedle their votes out of them, would call on them again only after five years. But they acquiesce in good-humouredly in the transparent ruse of being treated like royalty for the nonce. But anyone who plays the common man—especially one refers to sneeringly as the illiterate—for a sucker is one himself. He may prostrate himself before the ballot box before voting, but then he would drive a hard bargain even with God. (In any case, if we are to switch Gods, I don't see that abasing yourself before a hydro-electric generator—an act of piety that Mr. Nehru, with his neo-anthropomorphism, that makes temples of dams, recommends—is any the less absurd.) The common man may vote for his clansman or for the man who sets some all too tangible value on his vote, but he knows what he is doing.

Let us look at the evidence. The Congress is back in power, but has had some important lessons taught. Except in Maharashtra, its Lok Sabha performance has been, on the basis of results so far announced, worse than on the last occasion. Again, except for Maharashtra and marginally in Assam, it has had its wings clipped in the State legislatures. In two States, Madhya Pradesh and Rajasthan, it has been humbled pretty conclusively and in certain others, like Bihar, UP and Punjab, it certainly has had some hard knocks dealt to it. About fifty ministers all over the country and almost all the opposition leaders have been unceremoniously bundled out. This, you will agree, is pretty drastic. You may cavil at particular decisions and

you may deplore the motivation behind particular votes cast. You may also point to the large crop of invalid votes and say that the mechanics of voting—probably needlessly complicated—is yet imperfectly mastered. Even so, if we judge broadly—as indeed we must in evaluating decisions of such dimensions as a general election—the sending Congress back to power with reservations is as sensible a decision as any that a synod of wise men could have come to.

If the Congress has thus had a good drubbing, the opposition parties have useful morals to draw too. The communists have had Calcutta wrested from them, though rural Bengal, whom they wooed long and assiduously, has been freer with its favours. Elsewhere, except in Andhra, and in Kerala, (where Nambudiripad has been busy mending fences while the coalition has allowed its plot to go to seed), and marginally in Punjab, they have had their suit spurned. But the saddest story is that of the PSP. Its rout is pretty conclusive. Some of its important leaders have been defeated and at the moment of writing, its strength in the Lok Sabha has been reduced from 19 to 8. In the State Assemblies, its strength has been reduced from 175 to 149. It has yielded ground in States where it was formerly strong, though in Madhya Pradesh it has wrested some ground. And even here, it trails behind the Jan Sangh which has improved its position in this State as well as in UP.

Though it would be over-dramatising it, the evidence of rightist consolidation in what used to be referred to as upper India is not negligible. Swatantra, (to which I shall return in a moment) and Jan Sangh have between them fifty-two seats in Bihar, forty-three in MP, fifty-four in Rajasthan and sixty-three in Uttar Pradesh. In Bihar and Rajasthan, the Swatantra party is the senior partner (the two acting in concert may be assumed in the circumstances prevailing in all these States), while in Madhya Pradesh and Uttar Pradesh, it is the other way about. The Jan Sangh is the largest opposition group in Madhya Pradesh and Uttar Pradesh. Swatantra has this distinction in Rajasthan, Bihar and Gujarat. Significantly, West Bengal

the fortunes of the Swatantra party itself in the State.

What kind of talking shop is the new Lok Sabha going to be? There will be many new faces and, as a friend put it, some of them pretty to look at. I don't have the figures at hand, but I rather fancy that there will more women MPs this time. And though politicking on party lines leaves little room for sentimentalities of this sort the exit of a number of first-rate parliamentarians is somewhat saddening. Apart from party leaders like Asoka Mehta, Dange and Ranga, we shall be missing in the new Lok Sabha men of the calibre of Dr. Krishna-swami, Mr. Barucha, Mr. Goray and Dr. K. B. Menon. These men brought an informed vigilance to bear on the activities of the government and were keeping the government on its toes. A rather welcome come-back has been that of Mr. H. V. Kamath and of Mr. S. S. More. Two active gadflies that were missed in the current term. Mr

Olympus

APPRENTICES New Legislation

THE Apprentices Act, which was passed by the last session of Parliament in December, came into force with effect from 1 March, 1962. But it will be some months before the schemes for training of apprentices in designated trades is actually in operation. A good deal of preparatory work has to be done before that stage is reached. A survey has to be made of the number of places that will be available for training in the specified industries, and lists of designated trades drawn up. The syllabus and courses of training and the rules have to be framed and approved by the Central Apprenticeship Council which is yet to be set up. The notification issued on 12 February, bringing the Act formally into force effective from 1 March, clears the way for the establishment of the Central and State Apprenticeship Councils. The constitution of these Councils is being now worked out and officials of the Directorate of Employment and Training are hopeful that the Central Apprenticeship Council will be constituted in time to hold its first meeting in May.

In the meantime, Mr S. A. Qadir, Director General Employment and Training and Col. Pendse, Director of Training, are visiting the various centres for discussions with State Governments and industrialists on the programme for the implementation of the scheme. They have already held discussions in Calcutta and Bombay. They will be shortly visiting other centres, Madras, Kanpur and Ahmedabad. These discussions, which are mainly concerned with the administrative aspects of the scheme, will be followed by a second round of talks regarding technical aspects such as syllabus, courses of training, facilities etc. Simultaneously arrangements are also being made for survey of the specified industries, to find out the number of places that will be available for training in the different designated trades. It has been roughly estimated that 25,000 to 30,000 places could be found,, but firm estimates of the actual number of places in the different trades will not be available until the survey is completed.

Government have already issued a notification specifying 12 major groups of industries consisting of 46 minor groups to which the Act shall apply in the first instance.

The major industries that have been specified are: sugar; cotton and jute textiles; wood and wooden products; rubber, petroleum and coal products; chemicals and chemical products; cement and cement products; basic metals and their products; machinery and electrical equipment; transport equipment; electricity and gas; transport; and a miscellaneous group of industries such as manufacture of optical instruments, photographic equipment, scientific, medical and surgical instruments and equipment and assembling and repairing of watches and clocks.

India is perhaps the only country which has introduced legislation to ensure a steady flow of skilled craftsmen to meet the growing needs of industry. At any rate it is a unique experiment in a democracy and has already attracted good deal of interest in the United Kingdom and the United States. Though the Act makes it obligatory on the specified industries to make provision for training of a required number of craftsmen in the designated trades, it has all along been realised that the successful working of the scheme will depend on the measure of cooperation that is forthcoming from the industries concerned. The Directorate of Employment and Training is keen that the actual programme of implementation should be drawn up at each stage in full consultation with the industries. The discussions already held in Calcutta and Bombay encourage the hope that the required measure of co-operation from industry will not be lacking. In fact Col. Pendse is enthusiastic about the response so far, which is much better than he expected.

US Grants

A grant of Rs 1 crore from US PL 480 funds to meet the cost of the craftsmen training programme of the Central Ministry of Labour and Employment is one of the five grants totalling Rs 25.3 crores to five projects which were announced by the US, Ambassador at a press conference last week. The programme for craftsmen training at training centres is different from the Apprenticeship Scheme for in-plant training of craftsmen. There were 167 training centres at the end of the Second Plan. Their number is proposed to be increased to 318 during the Third Plan, increasing the admission capacity to 100,000 trainees. By earlier agreements, the United States had made available Rs 67 lakhs in foreign the negotiations, though he con-

exchange for the supply of equipment to a number of these centres. The rupee grant from PL 480 funds is to meet the costs of the expansion programme during the first two years of the Third Plan.

The other four grants are:

1. Rs 11.3 crores, of which Rs 3.4 crores is in foreign exchange, for the Malaria Eradication Programme. The amount of the grant in foreign exchange will be used to purchase from outside India approximately 12,000 long tons of DDT powder and 85 million tablets of the anti-malaria drug, chloroquine phosphate. The total American assistance to the Malaria Control and Eradication Programme now amounts to Rs 57 crores.

2. Grant of Rs 10.3 crores from PL 480 funds to the Government of India's programme to double the existing food grains storage capacity of 2.5 million tons during the Third Plan. This grant will meet the entire anticipated cost of the programme during the first two years.

3. Grant of Rs 2 crores from PL 480 funds, to meet the expenses, during the first two years of the Third Plan, on the establishment of 14 regional engineering colleges. These colleges are being located at Warangal (Andhra), Jamshedpur (Bihar), Nagpur (Maharashtra), Mangalore (Mysore), Allahabad (Uttar Pradesh), Durgapur (West Bengal), Bhopal (Madhya Pradesh), Silchar (Assam) Surat (Gujarat), Kozhikode (Kerala), Tiruchirappalli (Madras) Rourkela (Orissa), Jaipur (Rajasthan) and at a town to be chosen in Punjab.

4. A dollar grant of Rs 57 lakhs to the Indian Institute of Technology, Kanpur, to meet the cost of securing the services of one American Programme Director, and twenty professors and consultants. This Institute is being developed into one of India's finest institutions of higher technological learning. The latest grant brings the total American contribution to the Institute to Rs 2.2 crores, of which some 70 per cent has been in foreign exchange. A consortium of nine well known American educational institutions was formed recently to aid the Kanpur Institute. The consortium is comprised of The California Institute of Technology, The Carnegie Institute of Technology, The Case Institute of Technology, The Massachusetts Institute of Technology, Ohio State University, Princeton University, Purdue University, The University of California, and the University of Michigan.

More Talks on Bokaro

Ambassador Galbraith gave an indication at his press conference of continued American interest in the Bokaro Steel Plant. He denied that there was any hitch in

ceded that the discussions were not proceeding at a "breakneck speed". "These particular Mills," he said, 'grind rather slowly'. At any rate the Ambassador is taking keen interest to see that they do not come to a dead stop. It is learnt that it was at his suggestion that Mr William Gaud, Assistant Director of the M. S. Agency for International Development, who had gone to Pakistan on his way back after completing talks on the allocation of US aid for the first two years of the Plan, returned for further discussions last Sunday. The second round of talks will be concerned solely with Bokaro and it is expected that concrete proposals may emerge as a result of the current talks. Mr Chester Bowles who was in India on a six-day visit, in the course of which he had a number of meetings with the Prime Minister, also called on Mr. Morarji Desai and had talks with Mr William Gaud. Mr Tyler Wood, Economic Minister at the US Embassy, who had gone to Washington to discuss the Bokaro Steel Plant, also returned last Monday. The major issue which has so far eluded agreement is the question of operational control after the plant is set up. At his press conference Ambassador Galbraith stated that he did not think that there was any demand for control as such by the American collaborators. Elucidating the point he said that the main question was not merely the physical construction of the plant or bringing it to the point of production, but the attainment of efficient, low cost production. The current discussions are concerned with working out mutually acceptable arrangements under which this can be ensured.

Oil India Private Ltd.

With the wells already drilled and tested, Oil India Ltd, it is learnt is now capable of producing slightly over two million tonnes of oil per annum. By February 23, 1962 drilling of 122 wells have been completed, out of which 105 wells have been completed in Nahorkatiya and Hoogrijan concessions and 17 in Moran. A total of 83 wells turned out to be commercial producers of oil, and 74 of these are located in Nahorkatiya and nine in Moran. Seven wells in Nahorkatiya and one in Moran have turned out to be gas producers. Sixteen wells in Nahorkatiya have to be tested further and a good number may turn out to be producers of oil. Oil India Limited expects to complete a minimum of 40 more wells by mid-1963 to meet its commitments of supplying crude to the Public Sector refineries when Barauni goes on stream. It is already supplying 250,000 tonnes per annum to the Assam Oil Company and a total quantity of 68,500 tonnes approximately of crude oil has been supplied to Noonmati refinery by rail tankwagons up to February 22, 1962.

Markets

JUTE Prices Improve

Prices in the jute goods market have been steady during the latter part of the week under review. Although the start was rather easy sentiment improved in later dealings mainly on better enquiries. It would appear that sackings were the main attraction. There were reports of government business in B Twills coupled with enquiries from Indonesia and some Middle Eastern countries. The fact that there had been steady demand for jute goods almost throughout the week contributed to a rapid recovery in rates which were depressed by the declaration of an emergency by the East India Jute and Hessian Exchange last week. Prices at close on Wednesday were quite firm. B Twills ready closed last Thursday at Rs 123 but soon thereafter began to move up following sustained covering and reports of fresh business. By close on Wednesday the rate was Rs 4.75 higher at Rs 127.75. Although no fresh enquiries was reported hessian too steadied up in sympathy. Hessian 40"x10" ready moved up from Rs 55 at the beginning of the week to close at Rs 57.75 on Wednesday. The raw jute market was generally unchanged. Mills were in-

terested only in higher grades of jute which were however not readily available. Higher grades therefore commanded a premium but the position with regard to lower grades does not seem to be quite satisfactory. Some sections in the jute trade maintain that the time has come for the Buffer Stock Agency to go into action. Mr B. N. Mathur, Secretary of the Bengal Jute Dealers Association, Calcutta, in a statement issued on Wednesday has appealed to Government to take steps to make the Buffer Stock Agency immediately start buying assortment of jute on a large scale. In his view, if such steps are not taken, the loss now being sustained by many sellers and growers would seriously affect production of jute in the next season. Rumour had it that commencement of operations by the Agency was imminent. Now that all the required formalities have been completed, the Agency could commence operations anytime. But this need will arise only when prices of raw jute go below the minimum price levels. No two sections in the trade seem to agree that there is urgent need for taking fresh steps so that raw jute prices are maintained at the minimum level. Thanks to the continuation of the minimum purchase quota scheme by the Indian Jute Mills Association, point out

NOTE:—The rates for ready raw jute are nominally quoted at Rs 30 per maund for Assam Bottom; Rs 29.50 for Northern Bottom and Rs 32 for Daisee Bottom.

some, there is adequate lifting of jute every week. Moreover, the pressure of arrivals is also diminishing. For, arrivals of raw jute during January 1962 totalled only 7,65,874 bales against 896,297 bales in the previous month. Raw jute arrivals during the seven months ended January 1962 totalled 42,14,057 bales as compared to 33,09,943 bales in the corresponding period of the previous season. It is also argued that even if the Buffer Stock Agency starts operations now it will have little effect on the attitude of the jute cultivator because he has little jute in his possession.

TEA Production Trends

ACCORDING to the latest figures, production of Tea in Ceylon was higher at 37.4 million pounds in January as compared to 34.2 million pounds in the corresponding month of last year. The output in South India is, however, estimated slightly lower at 10.5 million pounds as compared to 11.1 million pounds in January last year. In British East Africa, production in November 1961 increased to 7.1 million pounds from 4.8 million pounds. This puts the total output, for the first eleven months of last year, higher at 70.9 million pounds as against 67.1 million pounds in the corresponding period of the previous year.

Meanwhile, in the Export Sale held in Calcutta this week, offerings were 74,242 packages. There was a good general demand. Clean plain descriptions were fully firm and sometimes dearer; but where stalk and fibre were present, prices tended easier. "Tea for price" was well supported. There was a better demand for orthodox descriptions and prices for BOPs were generally dearer. Fannings grades were irregular and generally dearer, the best being appreciably higher.

CTC descriptions were in demand at irregular rates with most interest centred on the better liquoring kinds. Legg-cut teas declined by some 10 nP to 20 nP per kilo. Darjeeling teas were sold well at irregular rates, the flavoury kinds being generally dearer. Whole Leaf grades were well supported, but irregular. Tippy sorts were sold well. Following rates were quoted:—Clean Plain Pekoe Rs 4.20 to Rs 4.40; Plain BP Rs 3.50 to Rs 3.80; Plain Fannings Rs 3.60 to Rs 4.10; Medium Assam CTC BP Rs 5.20 to Rs 5.60; Best Assam CTC BP Rs 6.00 to Rs 6.50 and Best Assam CTC Fannings Rs 6.00 to Rs 6.50.

In the Internal sale held this week, offerings were 29,933 packages of Dusts. Medium CTC dusts were irregularly easier by 20 nP and sometimes more with secondary types generally selling

well. The good CTCs were well supported at firm rates except for the occasional line which came to a lower market. Orthodox varieties were in good demand; but prices were 10 nP to 15 nP per kilo below last levels. Legg-cut dusts were irregular and often easier except for the bright liquoring descriptions, which tended dearer. Following rates were quoted: Plain orthodox Dusts Rs 3.90 to 4.40; Medium Assam Dust Rs 4.30 to Rs 4.80; Legg-cut Dust Rs 4.50 to Rs 5.80; Medium Assam CTC Dust Rs 5.40 to Rs 5.80 and Good Assam CTC Dust Rs 6.30 to Rs 7.00. Also 810 packages of Leaf grades were offered for internal consumption. There was a good demand; but prices were irregular.

In London auction, a sizable quantity of tea was offered. The auction followed the pattern of the previous week. The quality tea was in good demand, while the indications for mediums and plain teas remained unchanged. Ceylon teas enjoyed a good sale. Demand was very active and all descriptions were dearer with the exception of low-grown broken orange pekoes which were frequently one penny per pound easier.

Good general competition was in evidence for the North Indian and other miscellaneous growths with the demand strongest for coloury medium Assam and plain descriptions, which were mainly dearer. Bright African teas were strongly competed for at dearer rates; but thin poor liquoring kinds were irregular.

Among South Indian growths, Fannings grades were sold well at dearer rates; but those with poor leaf appearance were almost neglected.

Teas stocks in London, as on 16 February, totalled 141.49 million pounds as against 143.68 million pounds in the previous week. Total amount to be landed on the same date was 17.93 million pounds. Total afloat was 19.18 million pounds including from Calcutta 5.42 million pounds; from Chittagong nil; from Cochin 233,630 pounds; from Ceylon 9.11 million pounds and from other Ports 4.41 million pounds.

With the arrival of 43.9 million pounds in December, total imports of tea into the UK last year increased to 555.68 million pounds from 525.79 million pounds in 1960. Arrivals from India—the largest supplier—rose from 257.48 million pounds in 1960 to 281.76 million pounds as did those from Ceylon and Indonesia from 150.34 million and 10.06 million to 157.78 million and 12.58 million pounds respectively.

On the other hand, imports of tea into the UK from other important tea-producing countries registered a decline. Arrivals in the UK from all other sources, including Pakistan, Federation of Malaya, Formosa, the Irish Republic and Japan, rose from 23.44 million pounds in 1960 to 25.47 million pounds last year.

THE BANK OF INDIA LIMITED

ANNUAL REPORT

To be submitted to the Shareholders at the Fifty-Sixth Annual General Meeting to be held at the Registered Office of the Company at 70/80, Mahatma Gandhi Road, Bombay, 1, on Thursday, the 15th day of March, 1962 at 4 o'clock in the afternoon.

Directors' Report for the year ended 31st December, 1961.

The Directors submit to the Shareholders the BALANCE-SHEET and PROFIT AND LOSS ACCOUNT for the year ended 31st December, 1961. The Auditors' Report is also annexed.

The transactions for the past year after providing for income-tax and Super-tax have resulted in a profit of Rs. 1,10,31,508.75. To this has been added the balance of Rs. 12,84,842.08 brought forward from the previous year, making a total sum of ... **Rs. nP. 1,23,16,350.83**

An interim dividend was paid for the half-year ended 30th June, 1961, at the rate of 8.00 per cent., subject to deduction of tax at the prescribed rates, on the Paid-up Capital of Rs. 3,00,00,000 which absorbed ... **24,00,000.00**
Transferred to the Reserve Fund ... **15,00,000.00**
Bonus to Staff ... **19,00,000.00**

The Directors now propose:—

To pay a final dividend for the half-year ended 31st December, 1961, at the rate of 12.00 per cent., subject to deduction of tax at the prescribed rates, making 20 per cent., for the year, on the Paid-up Capital of Rs. 3,00,00,000 which will absorb ... **36,00,000.00**
To carry forward to the next account ... **29,16,350.83**

Total Rs. nP. 1,23,16,350.83

The Company's business continued to function satisfactorily.

The Bank Rate remained stationary at 4 per cent.

Branches were opened during the year at Bhavnagar and Jamnagar in Gujarat, at Ghatkopar, Tardeo, Mandvi and Electric House in Bombay, at Janpath, Karol Bagh and Khan Market in Delhi, at Ernakulam in Kerala and at Madurai and Coonoor.

Under the provisions of Section 256 of the Companies Act, 1956, the following Directors of the Company retire by rotation, but are eligible and offer themselves for re-election:—

Mr. Ambalal Sarabhai
Mr. Jugmohan Prasad Goenka
Mr. N. K. Petigara
Mr. Jaisinh Vithaldas

The Shareholders are requested to appoint Auditors and to fix their remuneration.

AUDITORS' REPORT TO THE MEMBERS

(1) We have audited the foregoing Balance-Sheet of The Bank of India Ltd. as at 31st December, 1961, and also the foregoing Profit and Loss Account of the Bank for the year ended upon that date, in which are incorporated the audited returns from all the Branches, of which 29 Branches have been audited between us and 46 Branches by other Auditors.

(2) We report that—

- we have obtained all the information and explanations which, to the best of our knowledge and belief, were necessary for the purposes of our audit and have found them to be satisfactory;
- the transactions of the Bank which have come to our notice have been within the powers of the Bank;
- in our opinion, proper books of account as required by law have been kept by the Bank so far as appears from our examination of those books and proper returns adequate for the purposes of our audit have been received from all the Branches of the Bank;
- the reports on the accounts of Branches audited by other Auditors have been forwarded to us and the same have been considered in preparing this report;
- the Bank's Balance-Sheet and Profit and Loss Account dealt with by this Report are in agreement with the books of account and the audited returns;
- in our opinion and to the best of our information and according to the explanations given to us, the said accounts give the information required by the Companies Act, 1956, in the manner so required for banking companies and on such basis the said Balance-Sheet gives a true and fair view of the state of the affairs of the Bank as at 31st December, 1961, and the Profit and Loss Account gives a true and fair view of the profit for the year ended upon that date.

*Includes allowances calculated in accordance with the Income tax Rule.

†The balance of profit for the year has been arrived at after providing for taxation from item (1) of Income. It is comparable with the figure of Rs. 78,37,098.89 being the profit for 1960 after deducting provision for taxation Rs. 25,00,000 from the figure of profit, subject to taxation, of Rs. 1,03,37,098.89.

Note:—The Profit and Loss Account has been prepared in conformity with Form 'B' of the Third Schedule to the Banking Companies Act, 1949.

THE BANK OF INDIA LIMITED

Statement pursuant to Section 212 of the Companies Act, 1956

The Profit and Loss Account of The Bank of India Ltd. for the year ended 31st December, 1961, does not include any profit or loss of its subsidiary, The Bank of India (U.K.) Nominees Ltd. (a nominee company incorporated and operating in the United Kingdom), as no profit was made and no loss was sustained by that subsidiary. All expenses incurred were borne and paid by The Bank of India Ltd. The shares of the subsidiary are wholly owned by the Bank.

Having regard to the fact that no Profit and Loss Account of the said subsidiary is prepared in the circumstances aforesaid and that its Balance-Sheet and the Reports of its Board of Directors and Auditors are drawn up in accordance with the law in force in the United Kingdom, an application was made to the Central Government under sub-section (8) of Section 212 of the Companies Act, 1956, and, in exercise of the powers conferred by the said sub-section (8) of Section 212 of the Companies Act, 1956, the Central Government, being satisfied that it is necessary so to do, have directed that, in relation to The Bank of India (U.K.) Nominee Ltd., a subsidiary of the Bank, the provisions of Section 212 of the said Act shall apply only to the extent that The Bank of India Ltd. shall be required to attach to its Balance-Sheets copies of the Balance-Sheets and of the Reports of the Board of Directors and of the Auditors of the said subsidiary made out in accordance with the provisions of the English Companies Act for the time being in force in the United Kingdom and that The Bank of India Ltd. is exempted from attaching to its Balance-Sheets a copy of the Profit and Loss Account of the said subsidiary.

Bombay, 9th February, 1962.

COTTON

Stagnant Conditions

The Bombay cotton futures market during the past week remained inactive as fresh development was conspicuously absent. The ruling contract, Jarilla March, was officially placed at the ceiling level of Rs 693.00 per three quintals. In private trading, however, the contract was at one time, quoted Rs 8.00 higher from the ceiling but later drifted downward to Rs 693.00 on bull selling induced by the reports relating the penalty and invoicing back

rate. Thereafter the contract remained unaltered at the ceiling rate. Business in unofficial trading was scattered and was mostly of a squaring-up nature.

The East India Cotton Association in an extra-ordinary meeting held last week made certain amendments to the existing by-laws with a view to commencing trading in the Jarilla August contract 1962. These amendments were adopted in the light of the tight cotton supply position in the country as a result of the paucity of indigenous cotton. It has been reported that the penalty clause also was amended. The Association forwarded the amendments to the Forward Markets' Commis-

sion for its approval. The approval of the Commission is expected shortly. The Jarilla August contract was unofficially placed at Rs 675.00 per three quintals.

The tendering differences in respect of the several descriptions of cotton tenderable under the Jarilla March contract 1962 delivery, fixed by the special committee of the East India Cotton Association recently were simply ignored by the market since the scope for tenders is rated dim.

The spot market at Sewri, on the contrary, ruled firm and depicted active conditions. Mill demand was fairly encouraging and widespread Wagad, Kalyan, Digvijay and Vijay commanded good

attention. According to some reports a few mills are trying to make some exchange arrangements among themselves of the various growths of cotton in relation to the quotas allocated to them.

In the import section, spinner interest was centred on Sudanese growth which turned easier. Prices of Sudan cottons during the week declined by approximately Rs 40 per candy, consequent on the bumper crop of about 1 million bales in the year. The Gezira Board has reduced the reserve prices of S and L growths by 2 per lb (Rs 88 per candy). The Government of India has recently announced certain concessions for

the import of lower grade cotton from that destination. In the case of cotton from Sudan upto G5L and G5S grade, import will be allowed under the staple group 1-1/16" and above but below 1-3/16". This relaxation will be applicable only for the current year and the above mentioned varieties. Apart from this, the transfer to lower grades of Sudanese varieties will be permitted upto 90 per cent. The Gezira Board will offer for sale on 27 February nearly 17,500 bales of new crop.

Bengal Deshi delivery contracts, in the export section, ruled firm. Rumours are current in the market the Government will release about 1 lakh bales of this type for export in the course of next month.

Consumption of domestic cotton by the mills in India in the first four months of the current season amounted to 1,546,469 bales in contrast with 1,276, 595 bales in the corresponding period of last season. Consumption of imported cotton stood at 378,798 bales-as against 458,647 bales. Mills carried stocks of 1,020,380 bales of Indian crop and 347,168 bales of foreign cotton as on 31 December 1961 compared with 790,793 bales and 353,894 bales respectively on the same date in 1960.

PIECEGOODS

Steady conditions prevailed in the Bombay cotton piecegoods market during the past week. The anticipation of an improved off-take did not materialise obviously due to the stringent monetary conditions, the slow movement of goods in the upcountry centres and the restricted turnover accounted by the upcountry centres. According to the latest reports the goods purchased by upcountry dealers in January were not disposed of.

The superior varieties which commanded good support in the early part of the month are almost facing a threat of complete neglect. Enquiries on a moderate scale were, however, reported in the seasonal goods. Saris, dhoties, and bleached longcloth met with good demand from the upcountry purchasers even at slightly higher prices.

Despite the low demand for ready goods, the mills and merchants were reluctant to reduce the rates. On the contrary the prices quoted for forward deliveries were a shade higher. This was evidently due to the prospects of an increased off-take in the immediate future. Moreover the higher prices of cotton and the bleak prospects of any improvement in the cotton supply position also helped to a great extent the hardening of prices.

The export front presented a sorry spectacle. Business transactions were distressingly at a low ebb. Stray business in the usual qualities was done with the United Kingdom. Sudan was satisfied with a moderate quantum to cover its immediate requirements.

Scope of Burma entering the market in the near future is rated pretty high. It has been known from reliable quarters that India would be able to spin cloth for Indonesia with cotton under PL 480. All other destinations, for all practical purposes remained quiet.

Proposal to Import Rubber?

THAT the indigenous Rubber production is hardly 25,000 tons per year and the gap between production and consumption has been widening during the past few years, are known facts. During the past year, the industry had to import about 30,000 tons to meet its requirements. In the coming years, the gap is expected to widen by about 10,000 tons per annum on a rough estimate, especially when many rubber-consuming factories are being set up in the country and the indigenous

production is not expected to show much progress in the coming years.

It is, therefore, believed that the Government of India is now considering a proposal to import rubber from Malaya under a rupee-payment or a barter agreement. The proposal has been referred to the Rubber Board for a detailed study and it is expected to come up for consideration at the next meeting of the Board.

Malaya is said to be anxious to enter into an agreement with India due to declining trend in world rubber price. It is suggested that a rupee-payment agreement can be entered into for a period of three years for importing 10,000 to 15,000 tons per year. This will also enable India to sell its products like cloth, machinery, agricultural implements, diesel engines to that country. It is stated that an agreement for 15,000 tons of rubber will involve an outlay of about Rs 4.5 crores per year.

While the rubber-consuming industry seems to have welcomed the proposition, the growers entertain a

fear that such an agreement will have an adverse effect on the rubber economy. They feel that no such agreement should be entered into when the replanting scheme is now in progress in Kerala. The outcome of the decision is eagerly awaited.

COFFEE

The Coffee Board will be releasing, on 15 March, for export to any destination 16,86,900 kilos of coffee out of the 1961-62 and 1960-61 crops consisting of the following:—Plantation "A" 9,57,600 kilos Plantation "B" 1,71,900 kilos and Plantation Triage 1,75,500 kilos—total 13,05,000 kilos from the 1961-62 crop. Arabics Cherry 75,300 kilos and Robusta Cherry 3,06,600 kilos—total 3,81,900 kilos from the 1960-61 crop.

Following were the details of the second coffee export open auction in 1961-62 crop held at Mangalore. A total quantity of 1,065 tonnes was exposed and the entire quantity was sold. Following were the range of prices (per 50 kilos):—Plantation

"A" Rs 205 to Rs 222; Plantation "B" Rs 193.50 to Rs 204 and Plantation Triage Rs 183.50 to Rs 188.50. The third export auction will take place at Mangalore on 15 March.

In the meanwhile, the Coffee Board has strongly urged the Government of India to seek immediate membership of the International Coffee Agreement, which is due for a review in the US in the current month. While membership of the agreement may confer no special privileges, it is feared that, if India is not a member, it will be disadvantageous to her in the long run. It is also considered to be better to join the agreement now rather than at a later date in view of the proposals for stricter controls made by some member countries. These proposals will come up for consideration at the forthcoming meeting. The meeting will also fix quotas for the third and fourth quarters of the current agreement, which is due to expire on 1 October this year.

In India, planters have supported the proposal for the membership of the agreement since that might, in their view, compel the Government to follow a more dynamic marketing policy within the country as well. Membership of the agreement, as in the case of sugar and other commodities, imposes an obligation on the participating country to export only the allotted quotas.

PEPPER

Sarawak has emerged as a formidable competitor to Indian black pepper export. Sarawak's pepper exports improved substantially to 10,515 tons last year from a low of 4,000 tons in the previous year. The increase in exports has been brought about mostly at the cost of India, which suffered a setback with her export of black pepper falling to 17,300 tons during the past season as against 19,800 tons in the previous season.

Sarawak's spectacular performance last year is attributed to the increased offtake by Singapore, which imported 3,427 tons of black pepper against only 698 tons in the previous year and 4,946 tons of white pepper against 3,051 tons. Besides Singapore, some other countries also increased their imports from Sarawak.

The progressive rise in the exports from Sarawak coupled with an increased share of the non-traditional buyers like Germany and the UK is likely to prove disturbing, as India's exports in pepper are largely centred in black pepper. The fact, that Singapore imported more pepper from Sarawak, indicates that it has been able to rope in more buyers last year.

FOODGRAINS

In the Hapur market, prices of Foodgrains sought lower levels in almost all sections on reports of bright prospects for the "rabi" crop. Stockists were, therefore, anxious to release their holdings. Coarse grain

harvesting was also expected to begin in the middle of the month.

Wheat prices registered a fall of about Re 1 per maund to Rs 16.50 for the average quality and to Rs 18.25 for the farm produce. The market for rice remained quiet due to a comfortable supply position. Seasonal demand was also lacking. Gram prices drifted lower to Rs 15.50 a maund for the Punjab variety. Barley was quoted lower at Rs 12.75, thanks to mid-January rains and the bright prospects for the crop. Although Maize was still being lifted for seasonal consumption, prices were depressed as stockists were anxious sellers. In the Pulses section, prices of Peas and Arhar displayed an easier tendency as stockists turned sellers.

GUR

Gur prices have been developing a hardening tendency, both in the Belapur and Kolhapur markets. In Bombay, too, prices have registered a modest rise of a rupee per 50 kg. Sentiment was mostly influenced by the activity in the export section.

Offerings in new gur have also tended to ease. The stocks of old as well as new gur have consequently declined in important areas like Kopergaon, Belapur, Baramati, Trichi and Kolhapur. The fall in arrivals is attributed to lower production in 1961-62 season. It is stated that the progressive decline in prices in the last two seasons has brought about a fall in the production by about 18 per cent in the new season.

On the other hand, the offtake has showed noticeable improvement in all the centres. At Kolhapur, Gujarat dealers and stockists from other centres have purchased substantial quantities in new gur, presumably due to improved railway booking facilities.

YARN

Amilon was in the limelight in the Bombay yarn market. The April contract registered a sharp rise of about Rs 42 to Rs 3,430, while the February settlement gained Rs 50 at Rs 3,345. The spurt was mainly attributed to an encouraging offtake in the spot market.

On the other hand, the Staple-Yarn section ruled weak for the greater part of the week. The February and April contracts were quoted at Rs 736 and Rs 737 respectively. Large arrivals were the main contributory factor to the easier trend in prices. A prominent mill was also reported to have sold sizable quantities at the end of last week. The market for Cotton yarn remained, however, dull.

The Surat Art Silk Cloth manufacturers' Association has stated that the Government's proposal to restrict the export of art silk fabrics through export houses will create a monopoly in the trade, detrimental to the interests of the art silk weaving industry. The Association

states that the proposed revision of the export promotion scheme will mean exploitation of smaller units in the industry at the hands of exporters and export houses. Again, the Association feels that the export of art silk fabrics should be allowed to be continued by individual weaving units. If there is any need for change in the present arrangement, the Government should revise the proposal in such a way that it guarantees a manufacturer all rights and freedom of business.

GOLD & SILVER

After initial steadiness, prices on the Bombay Bullion Exchange displayed a slightly easier tendency towards the close due to lower advices from the terminal markets, particularly from Jodhpur.

In the Silver section, arrivals amounted to 8 bars as against an offtake of 12 bars. Ready (below .996) changed hands at Rs 212.60 to Rs 212.85.

Gold receipt totalled 10,000 tolas as against an offtake of 5,000 tolas. Ready changed hands at Rs 121.45 to Rs 121.60. Sovereign ruled firm at Rs 97.

OILS & OILSEEDS

Easy conditions prevailed on the Bombay Oilseeds Exchange. Although trading in the Groundnut section revealed a firm tone initially,

higher levels could not be retained till the close in the absence of follow-up support. The setback was attributed mainly to the existence of a heavy discount for the spot Kanpur quality in relation to the forward prices. The weakness in groundnut oilcake and meal and the slump in mustard futures in the Delhi market were also contributory factors to the depressed sentiment. Ready Bold was quoted at Rs 48.25 and Groundnut Oil at Rs 19.65.

Trading in the Castorseed section reflected an uncertain tendency. The continued absence of a sizable foreign interest in castor oil tended to dishearten the operators. Although there were reports that Poland had purchased about 800 tons of BSS quality at Rs 1,710 per ton, these failed to impress the market in the context of the belief that the arrivals of the new crop would increase in the near future.

A section of the trade is, however, still inclined to believe that the supply position may not improve sufficiently in the immediate future. They feel that chances of Poland importing more of Indian castor oil are greater this year owing to the waning of export supplies from Brazil. The reports, that a special steamer has been chartered to some East European countries for sending castor oil, have given further strength to their belief. Meanwhile, castor ready was quoted at 35.12 and Castor Oil, commercial quality, at Rs 18.70.

The Industrial Credit and Investment Corporation of India Limited

Need for Cost Consciousness on the Part of Promoters

Steady Growth of Corporation

Statement of the Chairman, Mr. G. L. Mehta

The Annual General Meeting of the Shareholders of the Corporation will be held at the Registered Office of the Corporation, 163, Backbay Reclamation, Bombay 1, on Tuesday, March 27, 1962, at 4 p.m. The following is the Statement by the Chairman, Shri G. L. Mehta, circulated to the Shareholders with the Directors' Report and Accounts for the year ended December 31, 1961.

I have great pleasure in welcoming you and placing before you the Seventh Annual Report of the Board of Directors of the Corporation for the year ended December 31, 1961.

On January 5, 1962, ICICI completed seven years of operation. During this period, we have assisted 133 industrial concerns and in the process, have developed our own procedures. Industrial development is an inter-related process: no enterprise is self-sufficient. We, ourselves, come to realise this more fully as we build up our portfolio. Industrial development is a chain reaction and has a multiplier effect and we are gratified that ICICI's finance has been contributing to this growth in various ways.

The business of a development bank like ours is often taken to be merely that of providing finance for industrial projects. While this is true and the need for finance is the basic factor which brings together a development bank and its clientele, I feel that finance is not the only common ground in this relationship.

The process of development basically consists in drawing in to industry a large number of people hitherto engaged in other occupations. It means that a trader or a landlord or a technician decides to become an entrepreneur, that an agriculturist or an artisan decides to become a factory worker. This is what happened in the industrially developed countries a century or two ago, and this is what has been going on in India for some decades, although the pace has been accelerated only during the last few years.

What is this recent upsurge due to? On the one hand, import

cuts and re-direction of channels of trade have closed traditional avenues of vocation for many businessmen. On the other, with sudden curbs on imports, rewards in manufacturing activity have become more attractive; for, much of the recent upsurge in industry is based on import substitution, where demand is assured.

Recently, however the situation has been changing. The projects planned on the basis of the 1958 foreign exchange crisis are beginning to yield results, and gradually the supplies of many goods have started to catch up with the demand. The next phase of development will have to be based on the general growth of the economy and will require a much more acute cost consciousness on the part of the promoters. The search for worthwhile projects will have to be more painstaking, and quick and large profits more difficult to come by.

It is in this context that this Corporation's policies and procedures for appraising applications should be judged. I say this because here seems to be a misunderstanding in some quarters about the manner in which we process applications and the time taken in this exercise. I shall try to explain briefly how and why we act as we do.

What do we want to be assured about? First, about the market. Many promoters base their calculations on the prevalent shortages. However, the project planned by them may come into production two or more years later—which is the time relevant for considering the demand for the product. Moreover, others likely to have had the same bright idea, and consequently, the market situation in the future is not likely to be the same at the time the project goes into production as it is today. Hence, in assessing the market for a product, we take into account not only the present shortages (as evidenced by high market prices or long waiting lists with manufacturers) but also the likely growth in demand, the scope for further import restrictions and the probable increase in internal supply based on licences given and likely to materialise. Recent-

ly, we have taken steps to build up a market assessment cell in our Project Department, which we trust will go to strengthen our appraisals on the marketing side.

Another matter we want to be assured about is the cost of the project and the means proposed to be adopted to finance it. As regards the cost of a project, we have observed that there is generally a tendency to underestimate it. Promoters are prone to ignore a large amount of financial expenditure which is not for "hardware". Expenditure on buildings, machinery and equipment is more easily visible than pre-operative items. In fact, we have calculated that such financial expenditure often forms about 30 per cent of the expenditure on what I have called above the "hardware" of development. Similarly, working capital needs tend to be under-estimated. It is for these reasons that we endeavour to obtain a detailed break-up of the cost of a project according to certain standard categories.

A simple rule which too many promoters tend to ignore is the need to arrange for the total financing of the cost of the project in advance. I referred, in my last Annual Statement to you, to the tendency of many promoters to keep the equity base small. While we try to consider each case individually and allow for a large debt element in the capital structure where necessary, we feel that a company, particularly a new one, should have a strong equity base, for several reasons: a large equity base keeps the burden of interest low during the unproductive period of the enterprise; and by keeping the borrowing capacity unimpaired it enables the enterprise to borrow when actual costs go above the estimates; as they normally do; moreover, in the more competitive conditions which are likely to come about, a strong equity base will strengthen the capacity of the entrepreneur to withstand competition and weather temporary adversities. Although such advice on the capital structure may not always be palatable to some promoters, in the long run, it is sure to stand them in good stead.

In this connection, I would like to refer to recent developments in the stock markets. After the spurt in 1960, the market for industrial shares has recently quietened down. For quite some time, preference shares have, owing to various factors, been almost orphaned on the market. As we seek to attract investment in industry, it will be necessary to offer investors securities which appeal to their requirements. Financial institutions whose eventual objective (even when they immediately take up shares or grant loans) is to dispose of their holdings on the market and thus to turn over their resources to be able to help newer industries, are interested in seeing that promoters offer securities acceptable to the public. In the more discriminating times ahead, it will be necessary to offer to investors securities like preference shares and debentures with varying features like participation in extra profits, option to subscribe to or convert into ordinary shares and so on. Unless our entrepreneurs are willing to offer such terms, they will find themselves more and more inhibited in their development plans by lack of finance.

As a financial institution whose profits are dependent on the prosperity of its client, we naturally look closely into the profitability of an enterprise before deciding on our assistance. One factor which governs profitability is the prospective market for the product to which I have alluded earlier. A second factor is obviously the cost of production of the article proposed to be manufactured. Our entrepreneurs have become so used to conditions of artificial scarcity brought about by import and licensing restrictions, that the need to produce at economic costs is not adequately recognised. Besides lack of cost control procedure, this is also due to a failure to spread overheads over the maximum possible output. The results are vividly reflected in our performance in the sphere of exports which has failed to keep pace with the requirements of the economy. The somewhat easier supply position in the markets for many products recently has made entrepreneurs more cost-conscious, and I trust

help not only our exports but also the domestic consumer.

It is on an independent and careful assessment of all these factors that ICICI takes a decision for providing finance. This necessarily takes time which, in its turn, depends a good deal on the thoroughness with which requisite information and data are supplied and relevant queries answered. On an average, we find that it takes 3 to 4 months from the preliminary approach by a client to come to a decision although in some cases it takes much less.

But the sanction of finance by ICICI does not end the relationship between the Corporation and its client—rather it is only the beginning. Legal formalities have to be gone through, agreements signed, import licences obtained, and all the procedures involved in operating an industrial enterprise in a planned and complex economy gone through. The completion of legal formalities alone takes considerable time, as the company has to satisfy various conditions, titles have to be examined, and so on. On an average, we have found that it takes about six months after sanction is given, to enter into the Heads of Agreement with a company. This, however, is not a net loss of time as it is used to push ahead the project further in other respects.

Some of the formalities which have to be fulfilled before a loan is disbursed—for example, those connected with import control which is intended to prevent imports of goods which can be locally manufactured—cannot be avoided. We ourselves try to expediate decisions where we can. What is more, we try to adjust our procedures so as not to let them come in the way of expeditious carrying out of the project.

Disbursement of funds is a slow process. Some who look at our liquid funds, perhaps, feel that we are not using our funds fast enough. This is not so. Money, for a development banker, is his raw material and he has to keep a sufficient stock of it to enable him to continue sanctioning finance. Moreover, unlike raw materials where supply is continuous, for a development banker the funds do not ceaselessly flow in—we cannot hope to approach the market for funds every now and then and for small amounts. Here, we have to carry a stock of funds which will last us a year or more. By now, you will find that our sanctions have more or less caught up with our resources of about Rs 45 crores.

Even after all the legal and procedural formalities have been completed and disbursements have started, it takes quite a while to complete the utilization of funds and bring the plant to the stage of production. Machinery and equipment are not normally readily available across the counter; delivery periods for equipment are anything from one year to three

years or even more. This means that even when disbursement starts, it has to be spread over a period of two to three years. According to our estimates, out of our sanctions we can expect to disburse about 20 per cent in the first year, about 40 per cent in the second year and about 40 per cent in the third year. But this kind of time lag is inherent in the business of development banking.

I have spoken at length on all these aspects because the services we provide incidental to the provision of funds are no less important. We have familiarised entrepreneurs with modern practices of preparing project reports to assess the viability of projects. We help them to have a capital structure which, in our view, would stand up to difficult times. We assist them with their problems with the Government and we watch over the progress of the project both during the construction and the operating year. We do so in a helpful and constructive spirit keeping the broad requirements of development in view. Over the years, we have found that our clients have come to understand and appreciate our procedures and the need for them. There is a growing interest among the investing public in industrial growth. The appearance of two financial dailies should help them to judge intelligently industrial prospects.

I should say in fairness that the emphasis which we have been laying over the years on the need to have a full and detailed appraisal of each project and on the desirability of having closer understanding at all stages among the different financing institutions participating in a project is being increasingly appreciated by the various agencies concerned. This is a healthy development in the sphere of industrial finance which should pave the way particularly for financing large-sized projects which could only be carried out with the joint efforts of a number of financing institutions, including the Life Insurance Corporation, commercial banks, investment trusts as well as development banks.

I had mentioned the total cost of the projects assisted by us in 1960, in my Statement to you last year. In 1961, of the gross assistance of Rs. 13.76 crores sanctioned, Rs. 11.94 crores is in respect of new projects. The total cost of these projects would be Rs. 65.49 crores (Rs. 48.66 crores for fixed assets and Rs. 16.83 crores for working capital). This cost will be incurred over the next two or three years. When the units reach full production, the turn-over of the projects would be about Rs. 54 crores. The companies will finance the cost of the projects by raising ordinary share capital of Rs. 16.72 crores, preference share capital of Rs. 0.81 crore, loans of Rs. 23.07 crores, and bank borrowings and cash accruals of

Rs. 24.89 crores. Of the foreign exchange cost of Rs. 10.53 crores for the projects, ICICI has agreed to provide Rs. 7.40 crores.

In keeping with our increasing operations, we have been making efforts to increase our resources. In the third quarter of 1960, we were able to obtain from the Kreditanstalt of the Federal Republic of Germany, a loan of DM 5 million (about Rs. 60 lacs); other institutions in India have also obtained loans from the Kreditanstalt. This is the first West German credit we have been able to secure and legal formalities for operating it are being worked out.

In September 1961, when I visited the United States, I initiated discussions for a further substantial loan from the World Bank. Since then, negotiations have been going on both with the World Bank and with the Government of India on various aspects of the loan. I am glad to report that these negotiations have reached an advanced stage. I take this opportunity to express our gratitude to the World Bank for their continued confidence in ICICI. I would also like to thank the Government of India for its co-operation and assistance in our work.

ICICI's operations have been growing steadily, and as a result, the Corporation's profits before tax increased from Rs. 62.61 lacs in 1960 to Rs. 74.27 lacs in 1961. After providing for tax (Rs. 27.75 lacs), the balance carried to revenue appropriation account is Rs. 46.52 lacs in 1961 against Rs. 37.67 lacs in 1960. As required by Article 163 of the Corporation's Articles of Association, we have set aside Rs. 11.50 lacs out of this to the Special Reserve and Rs. 1.00 lac to the General Reserve. We have also transferred the entire amount of realised profit of investment being a sum of Rs. 24.26 lacs (net) to Capital Reserve. The Directors recommend a higher dividend at the rate of 6½ per cent as against 5.75 per cent last year.

In my last Annual Statement to you, I had referred to the need for budgetary relief to finance corporations in view of their important role in industrial development. The Government of India, in its last budget for the year 1961-62, was good enough to give finance corporations some relief in taxation. I should like to express our thanks to the Finance Minister for providing this relief, which will strengthen to some extent the financial position of finance corporations. However, I hope that in view of the increased role envisaged for finance corporations in future, the Government will see its way to provide some suitable incentive to strengthen their financial position.

For effective implementation of the Plan objectives, mobilisation of capital is required on a much larger scale than in the past. We who are charged with the responsibility of assisting the private

sector have a heavy task in future and only through the co-operation of all concerned can we hope to accomplish it. I trust in this constructive endeavour we shall have your good wishes and support.

Before concluding, I should like to mention that towards the end of March a conference is being convened under the auspices of ICICI, of development banks in Asia, to discuss various problems of development banks operating in Asia. This conference will be the first Regional Conference of Asian Development Banks and I am sure that, besides the useful personal contacts that would be brought about, the deliberations of the Conference would help to focus attention on various important aspects of development banking in Asia and assist us in our day-to-day tasks.

PERSONAL

On Mr P. A. Gopalakrishnan relinquishing office as Chairman of the Life Insurance Corporation, it has been officially announced that Mr B. K. Kaul, ICS, till lately joint secretary in the Department of Economic Affairs, will be his successor effective 1 March 1962.

Mr B. C. Biyani has been re-elected President of the Calcutta Tea Merchants' Association in its twenty-first annual general meeting held on 23 February.

Mr Gianni Miceli-Picard, the General Manager of Alitalia for India and Ceylon arrived in Calcutta in connexion with the opening of a new office in the city.

Mr H. R. Nevatia has been elected President of the Nag-Vidarbha Chamber of Commerce, Nagpur, for the current year. Mr Vithaldas Rathi and Mr B. P. Maheshwari have been elected Senior Vice-President and Junior Vice-President respectively of the Chamber.

The East India Cotton Association has elected Mr Madanmohan Ruia as President and Mr Ramdas Kilachand as Vice-President of the Association for 1962. The other members of the board are Messrs Tricumdas Chhabildas, Radhakrishna B. Maharia (from buyers' panel), Radhakrishna Rungta, Purushotam Jethabhai Punja and Jayantilal V. Ruia (all from the brokers' panel).

STATISTICAL OUTLINE OF INDIA 1961.

Compiled by the Department of Economics and Statistics, TATA INDUSTRIES (Private), LTD. With 95 tables covering all the key factors of the Indian Economy ranging from National Income and Population to Foreign Trade and Industries.

The State Bank of India

Impressive Progress in All Directions

Sri P. C. Bhattacharyya on Growth of Deposits

The following is the full speech of Sri P. C. Bhattacharyya Chairman of the State Bank of India:

Gentlemen,

I have much pleasure in welcoming you all to this Seventh Annual General Meeting of the State Bank of India. The report of the Central Board of Directors including the Bank's Profit and Loss Account for the year 1961 together with the Bank's Balance Sheet as on December 31st 1961 has already been circulated to you and has been taken as read.

FURTHER PROGRESS RECORDED

Following the improvement in 1960, the traditional business of the Bank showed further progress during the year under review. Average advances were higher by about Rs. 50 crores. In India, the advances portfolio reached a peak at Rs. 276.97 crores compared to the peak of Rs. 215.67 crores in 1960. Also, the rise in the lending rates, effected as from October 1, 1960 pursuant to the Reserve Bank's directive had its full impact during the year. Nevertheless, the income from interest and discount showed a small reduction due to the decline in the investment portfolio, caused mainly by the transfer to the Reserve Bank of a further sum of Rs. 72 crores of the U.S.P.L. 480 funds. It will be recalled that arrangements had been made for the transfer of these funds at Rs. 12 crores a month from July 1960 for one year. Simultaneously, there was also a reduction in the interest paid on deposits and the net position was in favour of the Bank.

HIGHER NET PROFIT

The net profit of the Bank, after making the usual and necessary provisions, increased from Rs. 2.18 crores in 1960 to Rs. 2.71 crores in 1961. This, I am sure, would be considered satisfactory. The increase in profits has enabled us to raise the appropriation to the Reserve Fund substantially—Rs. 75 lacs as compared to Rs. 25 lacs in 1960—as well as to declare a final dividend which, together with the interim dividend distributed during the year, amounts to Rs. 23.00 per share. The net dividend has been completely restored and even improved slightly. The higher appropriation to the Reserve Fund was necessary in order to comply with the request made by the Reserve Bank of India to adhere to the convention which is sought to be built up for strengthening the capital

structure of commercial banks. The contribution to the Staff Welfare Fund has also been raised.

GROWTH IN DEPOSITS

I had stated last year that the demand for bank credit was continually rising and that there was need for making all out efforts to increase the deposits of banks. The experience of last year has confirmed this view. It gives some satisfaction to note that the stagnation which had been witnessed towards the latter part of 1960 soon disappeared and 1961 did show a rise in total deposits of all scheduled banks of about Rs. 169 crores excluding P.L. 480 deposits. This compares favourably with the previous good years. In our case too, the growth in normal deposits over the year was of the order of Rs. 38 crores, which, though somewhat less than in 1960, a year which was unusual, was better than in any of the earlier years. This rate of growth will, however, require to be considerably improved upon, if the banking system is to be geared to meet the demands made on it by the Third Five Year Plan. The Plan postulates that the banking system should not only be able to meet the increasing needs for financing trade and industry, but that it should also contribute to public borrowings to a substantial extent. This is not, however, happening in actual practice. In our case, the accretion to our normal deposits both in 1960 and 1961 had to be fully utilised for financing trade and industry. The same position, I believe, obtained with other banks. This is not wholly satisfactory. Not only might this affect the liquidity of the banking system in the future but the lack of the required support for the securities market would ultimately affect the development of the national economy adversely. It is necessary that the banking system should be able to invest a reasonable proportion of its additional deposits every year in new investments. The growth of deposits has therefore to exceed the increase in credit demands, if, as is so essential, the resources needed for financing industry, trade and commerce are not in any way to be curtailed. I would, therefore, emphasise again the need for the banking system to continue the drive for promoting banking habit in new areas and for generally increasing bank deposits, with all the force at its command. Perhaps the situation demands a concerted effort to in-

crease the deposits by all banks, in a co-operative manner. If this idea commends itself to other banks, we shall be happy to lend support to such a venture.

INCREASE IN INTEREST RATES

The question as to the extent to which an increase in interest rates leads to an increase in deposits is very much before the banks at this moment. In my speech last year, I had referred to the fact that, as an experimental measure, the rate of interest on savings bank deposits had been raised by us to see whether this would assist in attracting more deposits from rural and semi-urban areas. I am glad to report that this experiment has shown some good results. The accretion to savings bank deposits during 1961 was of the order of Rs. 8 crores, compared to Rs. 5 crores in 1960, and to an average of about Rs. 2 crores in the earlier years. There is, however, a limit to which deposit rates can be raised, as they have to be in line with the overall structure of interest rates in the country and also take account of the financial position of each individual bank. It is also obvious that a continuous increase in interest rates cannot go on resulting in an increasing growth in deposits. The truth, as usual, lies somewhere in between and just as it is necessary to experiment with interest rates, it is also necessary to try other possible measures such as better customer service and wider coverage of depositors, if the desired growth in deposits is to be achieved.

SPECIAL CREDITOR TRANSFER SYSTEM

One of the measures of customer service recently introduced by us has been referred to in the annual report. This is a special credit transfer system, which is intended to cater to certain personal needs of our customers in the lower and middle income groups. The scheme in its present form operates in a limited way. It would, of course, be reviewed in course of time to see how far its scope can be supplemented by other measures. The large branch expansion programme undertaken by us has already assisted in spreading the banking habit to some extent. We have now embarked on the Second Branch Expansion Programme. This should increase the coverage of our depositors still further. We have also, with the same end in view, made a beginning with the opening of

additional suburban branches in big cities. These suburban branches would take the Bank nearer to the homes of the people and enable the Bank to cater to well-knit, compact units of community at a more personal level. The existing congestion and pressure of work at the other branches would be eased at the same time resulting in better customer service at those offices as well.

BRANCH EXPANSION PROGRAMME

The annual report refers to the recommendations of the Subcommittee appointed last year under the Chairmanship of Professor D. G. Karve for determining the future branch expansion policy of the Bank as well as our subsidiaries and details the decisions taken in pursuance thereof. It has been decided to take up the major part of the second branch expansion programme towards the latter part of the quinquennium ending June 30, 1965. This would enable us to consolidate the results of the first expansion programme as well as to recruit and train up, sufficiently early, the staff required for the second. We hope to avoid any strain on our staff resources in this manner.

SUBSIDIARY BANKS

The annual report also details the progress in respect of the other developmental activities of the Bank, and it is unnecessary for me to recapitulate them here. Generally speaking, steady progress is being maintained in all fields. The credit advanced to small-scale industries has increased substantially and so has the assistance given to co-operative institutions. The working results of the subsidiary banks have also shown further improvement in 1961. Their total deposits and advances have risen and their reserves have been strengthened. The State Bank of Mysore has declared a dividend of 10 per cent as compared to 9 per cent for 1960; the State Bank of Hyderabad and the State Bank of Travancore have maintained their dividends at 6 per cent and 5 per cent respectively; while the State Bank of Bikaner, the State Bank of Indore, the State Bank of Jaipur and the State Bank of Patiala which did not declare any dividends for 1960 have declared dividends of 6 per cent, 3 per cent, 6 per cent and 6 per cent respectively. In the case of the State Bank of Saurashtra no dividend was declared, as it was decided

that its internal resources should be strengthened further before it started distribution of its profits.

STAFF TRAINING COLLEGE

You would have gathered from the annual report that we have established a Staff Training College at Hyderabad to impart training to the members of our supervising staff. The first course is already more than half-way through. We have designed the course in such a way that in addition to being trained in banking in the technical sense, the trainees will also receive instruction and guidance on a variety of subjects of general importance, by means of which they should in course of time turn out as bankers in the widest sense of the term. The College is at present housed in a rented building but planning for the construction of buildings of our own has been started. We have also put into operation a scheme for imparting to the new entrants in the clerical grade a short course of initiation and general training. In addition as in the past, selected members of our staff are being sent for training at other institutions at home as well as abroad. I hope that all these steps will ultimately lead to an improvement in the quality of our staff and better service to our constituents.

DEPOSIT INSURANCE SCHEME

I would now refer to two important events that have occurred since the commencement of this year. Firstly, the Deposit Insurance Scheme has started functioning from the 1st of January this year. Originally, it had been decided that the deposits of the State Bank of India and its Subsidiaries would be excluded from the purview of the Scheme but that adequate contributions would be made by these banks to the Scheme in the general interest of the banking system. Certain difficulties were encountered in implementing this decision and accordingly, the Scheme finally adopted covers our Bank as well as our Subsidiaries in the same manner as other commercial banks.

BRANCHES OPENED IN GOA

The other event of significance is the extension of our activities to Goa. Following the taking over of the administration of these territories by the Government of India, arrangements had to be made to meet the banking requirements of the Government and the population of those territories. We accordingly opened a branch of the Bank at Panjim, the capital of Goa, on January 2, 1962. We have since opened three more branches at Vasco-da-Gama, Margao and Mapuca and one in Daman. One of our officers has also been appointed to act as the Custodian for the purpose of taking over and administering the affairs of the branches of the Banco Nacional Ultramarino. The demand for these services came upon us all of a sudden and I am

glad to say that we have been able to meet it with the utmost possible expedition.

STAFF RELATIONS

The staff relations in the Bank have been generally good throughout the year. Our staff has continued to be active in organizing sports, social and cultural activities at the branches and the Local Head Offices. The Award of the Tribunal that had been set up to adjudicate on the staff demands is not yet out but is expected shortly.

BANK GROWS FROM STRENGTH TO STRENGTH

This is the last occasion when I have the privilege of addressing the shareholders, as I shall be laying down my office and handing over charge to-morrow. I trust, therefore, that you will bear with me, if I make a brief reference to the development of the Bank during the period I have been associated with it. It was barely twenty months after the formation of the Bank on nationalisation of the erstwhile Imperial Bank of India, when I took over on the 1st of March 1957. The experience and traditions inherited from the Imperial Bank no doubt played an important part in the smooth transformation. But I owe a great deal also to the parts played by my predecessors, Dr. John Matthai, who is unfortunately no longer with us, and Shri H. V. R. Iengar, his successor. The total deposits of the Bank in India then stood at Rs. 223 crores, having risen from Rs. 188 crores as at the inception of the Bank. Total deposits exclusive of the P.L. 480 funds now stand at Rs. 361 crores. The advances portfolio has also almost doubled itself and now stands at Rs. 272 crores. The form and content of the credit portfolio has also undergone a considerable change; it is now predominantly industrial, as advances to industry now comprise as high a proportion as 71 per cent of the Bank's total advances as compared to 57 per cent in 1957. The services which the Bank is rendering to the private sector are illustrated by the fact that, of the total advances, about 92 per cent relate to this sector. The developmental activities also gathered good momentum during this period. There are now 959 offices of the Bank in India compared to 538 in December 1956 and 466 at the inception. This wide network of our offices is supplemented by 490 offices of the eight Subsidiaries which the Bank took over during the period. In addition, four minor State-associated banks were amalgamated. The Bank has thus grown from strength to strength. On the basis of deposits, the State Bank of India now ranks fifty-third, amongst the largest banks of, what is called, the free world. It is my earnest hope that the Bank would continue to grow still stronger in times to come and discharge its obligations in all

spheres, playing, as it has been, a major role in the development of the national economy.

WISE COUNSEL & ESPRIT DE CORPS

All this has, of course, been possible only with the support and the wise counsel I have always received from the Directors on the Central Boards as well as from Members of the Local Boards, and because of the teamwork of the staff at all levels. I can but express my gratitude to the Directors and Members, in particular, I would like to thank Prof. D. G. Karve, the present Vice-Chairman, who is also relinquishing his office to-morrow, and the Managing Directors, especially Shri S. P. Puri who was associated with me for over four years and has only recently proceeded on leave preparatory to retirement. I must also thank all members of the staff at all levels for their co-operation, and, at the same time, congratulate them on the esprit de corps displayed. In

the conquest of obstacles and the realisation of objectives, there is no alternative to hard work and single-mindedness. Much more has yet to be done to vouchsafe newer and wider horizons and the need for hard work is at no time greater than during the coming phase of development not only of the Bank but of the country itself. I am sure, our staff will continue to strive and will meet the increasing demands that will be made on them in future with ingenuity and resourcefulness to achieve the objectives of this great institutions.

A WORTHY SUCCESSOR

Shri Venkatappiah, who will be taking over from me to-morrow, is not new to the Bank, associated as he has been with us as a Director since its very inception. It gives me very great satisfaction that I shall be leaving this institution in his capable hands, and I am sure, he will receive full support and co-operation from all quarters.

MARTIN BURN LIMITED

NOTICE

The Annual General Meeting (being the Sixteenth Ordinary General Meeting) of the Shareholders of Martin Burn Limited will be held on Wednesday, 28th March, 1962, at 12 noon at the Registered Office of the Company, 12, Mission Row, Calcutta, to transact the following business:

- To receive and adopt the Audited Accounts for the year ended 30th September, 1961, and the Directors' and Auditors' Reports thereon.
- To declare a Dividend.
- To appoint Directors.
- To appoint Auditors and to fix their remuneration.

AS SPECIAL BUSINESS

To consider the appointment of Mr. Romendra Nath Mookerjee as a whole-time Director of the Company for a period of four years with effect from the 1st March, 1962, and in this connection to consider and if thought fit to pass with or without modification the following resolution which will be proposed as an ordinary resolution:

"That subject to the approval of the Central Government pursuant to Section 269 of the Companies Act, 1956, this meeting approves the appointment of Mr. Romendra Nath Mookerjee as a whole-time Director of the Company with effect from the 1st March, 1962, on the terms and conditions contained in an Agreement dated the 19th day of February, 1962,

and made between the Company of the one part and Mr. Romendra Nath Mookerjee of the other part a copy of which was laid on the table and signed by the Chairman for the purpose of identification or on such other terms and conditions as may be agreed upon with the Central Government and accepted by Mr. Romendra Nath Mookerjee."

The Ordinary Share Register and Transfer Books of the Company will be closed from 14th to 28th March, 1962, both days inclusive.

A member entitled to attend and vote at the meeting is entitled to appoint a proxy to attend and vote instead of himself and a proxy need not be a member.

By Order of the Board,
A. G. GIDLEY,
Secretary.

Calcutta,
1st March, 1962.

NOTE:—The Dividend, if sanctioned, will be paid on or after 18th April, 1962, to those Shareholders so entitled whose names appear in the Company's Register of Members for Ordinary Shares on the 28th March, 1962, or to their mandatees. No application for dividend warrants will be necessary.

AN EXPLANATORY STATEMENT as required under the Companies Act, 1956, has been forwarded to the members of the Company.

Company Reports

Chitavalsah Jute Skips Dividend

The Chitavalsah Jute Mills Company Limited has produced disappointing results for the year ended 31 July 1961. In this connection, the directors have stated that, by purchasing loom-hours, the full complement of 500 looms worked single shift up to 26 November 1960. hereafter, looms were progressively closed down until only 420 looms were working single shift of 48 hours per week from March 1961 to the end of July 1961.

Although sales are higher at Rs 2.38 crores against Rs 1.51 crores, the accounts reveal a net loss of Rs 7.86 lakhs as against a net profit of Rs 1.24 lakhs for the preceding year. The Depreciation amount is raised to Rs 7.74 lakhs from Rs 6.81 lakhs, while no provisions are made for Taxation and Development Rebate Reserve against Rs 50,000 and Rs 2.11 lakhs respectively. The dividend is passed over against 5 per cent, taxable, paid previously.

The auditors have drawn attention to an anticipated loss estimated at Rs 5.67 lakhs in respect of forward contracts in gunnies entered into as at 31 July 1961, which has not been provided for in the accounts. The estimated loss has been based on an arbitrary method of calculation. But, as the working results for the current year to date show a satisfactory profit, the directors do not consider it necessary to

Right Issue by Eastern Investments

SUBJECT to the consent of the Controller of Capital Issues, Eastern Investments Limited has decided to raise the subscribed capital by the issue of 25,630 equity shares of Rs 100 each, at a premium of Rs 10 per share. These will be offered to the existing shareholders in the ratio of one equity share for every two existing shares held.

Meanwhile, the decline in the item "By Dividends and Interest on Investments" from Rs 19.43 lakhs to Rs 18.55 lakhs is reflected in the working results of this company for the year ended 31st December 1961. The net profit, after providing for Taxation, is lower at Rs 9.47 lakhs against Rs 10.25 lakhs for the previous year.

lakhs, the provision for Taxation is lowered to Rs 7.77 lakhs from Rs 8.23 lakhs. The dividend on the ordinary shares is, however, maintained at 14 per cent, subject to tax.

For the Investor

INVESTMENT GOSSIP Cautious Trend

STOCK market sentiment has been on the whole steady this week although price movements have displayed an irregular pattern. Earlier in the week caution had been the keynote of trading presumably because of a general tendency to await election results. Later on, the success of the ruling party seemed to have emboldened bulls to extend their commitments but in Friday's trading the trend has become rather subdued once again. Even so, not only there is no marked rise in selling pressure but quite a few shares have continued to be in active request. This is because there has been a number of bonus and right issue announcements and the belief is that more companies will be issuing bonus and right shares before the Central Budget comes out in May. Such an expectation is perhaps based on the assumption that the bonus tax may come in for an upward revision in the coming Budget.

It is to be expected that the uncertainties in the investment situation will keep in check any untoward bullish fervour. This is not to say that the outlook for equities in bleak. Far from it. For, corporate news is good and will continue to be quite encouraging as a number of existing companies have either already embarked on expansion projects or are on the threshold of doing so. It cannot also be

Reliance Firebrick Pays Less

The Reliance Firebrick & Pottery Company Limited has reported a decline in sales from Rs 73.75 lakhs to Rs 44.40 lakhs for the year ended 28 February 1961, reflecting the go-slow tactics adopted by the labour and the consequent decline in production. The net profit, after providing for Depreciation and Taxation, is substantially lower at Rs 2.96 lakhs as against Rs 7.37 lakhs for the preceding year. In respect of allocations, the Depreciation amount is raised to Rs 1.51 lakhs from Rs 1.15 lakhs and Development Rebate Reserve to Rs 1,630 from Rs 27. The provision for Taxation is lower at Rs 2.80 lakhs against Rs 6.50 lakhs, while no allocation is made to Replacement Reserve against Rs 4.00 lakhs. The dividend is reduced from 22 per cent to 15 per cent, less tax.

CALCUTTA

Calcutta, Friday Evening.

ACTIVITY on the local stock exchange was initially restricted due to paucity of support. Operators were reluctant to enter into any commitments in view of the anxiety to await the final results of the general elections. Most of them thought that, until the shape of the new Union Cabinet was known, it would be wise to wait and watch further developments. Whatever business transacted, was mostly of a jobbing nature.

With the flow of election results in favour of the Congress party, however, the market took a better turn from the middle of the week. Sentiment was also aided by the favourable corporate news such as, the announcement of bonus issues by certain companies, better working results and higher dividends.

It was also thought that the expansion and diversification programmes of several companies might necessitate the issue of "right" shares. The names of Dunlop Rubber and Indian Copper were mentioned in this category, not to speak of the fact that Phillips Carbon and Fort Gloster announced their decision to raise further capital by the issue of rights shares, at premiums of Rs 3 and Rs 50 per share respectively.

The Giltedged section continued to be listless. With monetary conditions tight, institutional support was lacking and price movements were negligible. Even State loans were neglected and the undertone remained subdued. 3 per cent 1986 Conversion Loan moved narrowly between Rs 71 and Rs 71.14.

Bank shares were quietly steady with Punjab National changing hands at Rs 21.87 to Rs 22.06 and

Synopsis of balance sheet as on the last day of February.

NEW ISSUE NOTES

Prabhat Udyog

PRABHAT Udyog Limited, Bombay, will shortly be in the market with a public issue of Rs 29.40 lakhs in equity shares of Rs 100 each. The company takes over Prabhati (Stove and Lamp) Products Company (Private), Limited as a going concern manufacturing several types of pressure stoves and lamps, gas mantles, blow lamps, filters and spare parts at its factory at Jogeshwari, a suburb of Bombay. The authorised capital is Rs 3 crores and the issued capital is Rs 60 lakhs. Of the issued capital, the directors and their friends have taken up Rs 30.60 lakhs. The capital outlay on the proposed expansion programme is estimated at Rs 70 lakhs, which will be met by the proposed issue of Rs 60 lakhs plus a loan of Rs 10 lakhs by the ICICI. The entire public issue has been underwritten, partly by the ICICI and partly by leading stock brokers. The company will start producing in technical collaboration with a reputed Swedish firm, products like liquid gas stoves and lamps with a capacity of five lakh units and one lakh units respectively; gas mantles with a capacity of one lakh gross and spare parts worth Rs 18.50 lakhs.

Bengal Paper

The Bengal Paper Mills Company Limited have decided to issue right shares of Rs 10 each, at a premium of Rs 10 per share, to the shareholders as on 12 March, 1962, in the

proportion of one right share for three shares held. A sum of Rs 5.50 per share will be payable on acceptance of offer of rights and the balance when called by the directors. At the same time, the directors have decided to issue 12,000—6½ per cent Convertible Loan stocks of Rs 250 each, at par, in the proportion of one stock for every 45 shares held.

Pyrotenax India

Pyrotenax India Limited, a new company under registration, has plans to manufacture mineral-insulated metal-sheathed electric cables for the first time within the country. The company has proposed to set up its cable factory near Poona in collaboration with Messrs Pyrotenax Limited of the UK. The project is expected to involve a total capital outlay of Rs 55 lakhs. The company, which has an authorised capital of Rs 60 lakhs, will issue 55,000 equity shares of Rs 100 each to finance the project. Of the total issue, 27,500 shares will be allotted to the UK firm. The directors and their friends will take up 6,500 shares. The balance of the issue will be offered for public subscription.

Phillips Carbon

The Phillips Carbon Limited has proposed to apply to the Controller of Capital Issues for a further issue of 3,12,500 equity shares of Rs 10 each, at a premium of Rs 3 per share. The new issue, if sanctioned, will be offered to the existing shareholders in the ratio of one new ordinary share

of Rs 10 each for every four ordinary shares held by the existing members.

Bank of India

The Bank of India Limited will issue 2,00,000 equity shares, at a premium of Rs 20 per share, to the existing shareholders in the ratio of one for every three shares held.

Alcock Ashdown

Alcock Ashdown Company Limited has decided to issue two equity right shares of Rs 100 each for every nine shares held.

Hindustan Electric

The Hindustan Electric Company, Limited states that the company's new rights issue has been fully subscribed. The Swiss collaborators, Brown Boveri & Company, now holds 50 per cent share in the capital of the company.

Fort Gloster

Fort Gloster Industries Limited, at a meeting held on Wednesday this week, decided to make an application to the Controller of Capital Issues for the issue of further 21,000 ordinary shares of Rs 100 each, at a premium of Rs 50 per share.

Ahmedabad Advance Mills

The Ahmedabad Advance Mills Limited has proposed to issue 10,000 new equity shares, at par, to the existing shareholders in the ratio of

one new share for every four shares held. The company proposes to raise its authorised capital to that extent.

Union Bank of India

The Union Bank of India Limited has decided to raise the paid-up capital from Rs 60 lakhs to Rs 1 crore by issuing 8,00,000 new equity shares of Rs 5 each, at par, to the existing shareholders in the ratio of two new shares for every three shares held.

Elecon

Elecon Engineering Company Limited, which is already manufacturing varied types of mechanical equipment at its factory at Bombay, has put up a second factory at Vallabh Vidyanagar, Anand, Gujarat State. The company proposes to manufacture allied items like reduction gears and troughing idlers in collaboration with some UK firms. The authorised capital of the company is Rs 1 crore and the issued capital Rs 60 lakhs. Of this, the present paid-up capital is Rs 10 lakhs. The balance of Rs 50 lakhs is taken up as follows:—foreign collaborators Rs 2.40 lakhs; the directors and their friends Rs 13.10 lakhs and the public issue Rs 34.50 lakhs. The subscription list is likely to open some time in the second or third week of March. The entire issue is underwritten by institutions like the LIC, Investment Corporation of India (Tatas) and the Central Bank. Production at Vallabh Vidyanagar is expected to start shortly.

the various collieries. Except for some speculative buying in Burrakun up to Rs 18.12 from Rs 17.94 and support for New Beerboom up to Rs 21.75 from Rs 21, other shares were on offer at the quoted levels. Equitable had sellers at Rs 26.94 against Rs 27.25 with South Karanpura being offered at Rs 7.50.

In the Tea section, too, trading was restricted. Except for one or two shares which met with sustained support on expectation of bonus issues, other shares remained idle. Bhatkawa met with business at Rs 17.81 to Rs 18.06; Dhalakhat at Rs 21.44 to Rs 21.56 and Tezapore at Rs 16.56 to Rs 16.69. Grob were a steady feature at Rs 9.94 and so also Dufflaghur at Rs 30.56.

Selective interest was shown in Sugar shares. Activity was prominent in Ramnugger Cane which were taken up to Rs 31.37 from Rs 30.50. Carew were well maintained at Rs 13.06. Balrampore moved narrowly between Rs 2.37 and Rs 2.50 with Raza/Buland being offered at Rs 10.31 against Rs 10.62 and SKG at Rs 9.94 against Rs 10.19.

The most outstanding feature in the Textiles section were J. K. Rayon, which were boosted up to Rs 23.37 from Rs 20.81, thanks to the decision made by the Stock Exchange Committee to include the scrip in the forward list from the next clearing. Jay Shree turned rather quiet at Rs 17.69 against Rs 18.06. Cawtex at Rs 17.69 against Rs 18.06. Cawtex at Rs 17.69 against Rs 18.06. Cawtex at Rs 17.69 against Rs 18.06. Cawtex at Rs

Indian Finance

FOR A PROGRESSIVE COUNTRY...houses, hospitals, schools...

During the Third Plan period, India will build about 26,00,000 new homes, 96,300 schools and 2,000 hospitals and dispensaries. These great social welfare schemes involve construction work on an unprecedented scale and enormous quantities of cement will be required for this vast building programme.

In order that more cement may be available for these welfare schemes and for the private consumer, the Third Plan has set the cement industry a target of 15 million tonnes of cement a year by 1966. And the increasing output of ACC and India Cements factories will help to achieve this.

WHY TAKE CHANCES?

In what you do every day, you are taking many chances. For example, take the things that you buy in the market. Are you always sure of their quality? Do you get good value for the money you spend?

And yet, you can be sure if you know that the goods you buy have been made to a given standard. Standardization benefits not only you, the consumer, but also the producer, the distributor and indeed, the country as a whole.

The Indian Standards Institution has prescribed standards for industrial as well as consumer goods. To manufacturers producing to relevant standards, ISI grants licences to apply on their goods its certification mark which is the guarantee of quality. The next time you buy anything, don't take a chance; look for the ISI mark.

Great people to Fly with

—ALL 6,276 OF THEM

From the two full rated captains in every PIA jet cabin to the men that look after the 'planes with such loving attention to detail, they all believe in the job they are doing. The job is getting you there comfortably—on schedule.

PIA have marked up an unmatched record for punctuality, and people write nice letters about the service. That's why last year PIA carried more passengers (83% more) and showed a higher profit (41% higher) than ever before. Whether you want to fly to Rome or New York, London or Geneva, there are 6,276 people making sure that you get there comfortably—on schedule. They're great people to fly with.

Out of the Woods

NONE with some knowledge of the fortunes of the jute industry in 1961 would grudge Mr D. C. B. Pilkington his modest sense of achievement. In the relative comfort of present prosperity,—for the first time in many years mills have no idle looms and demand is outstripping production—it is possible to forget that 1961 was a crisis-ridden year, with problems of different and sometimes of opposing kind succeeding one another. Shortage of raw jute paralysed the industry in the earlier part of the year and, toward the end, it was the catastrophic fall in raw jute prices that caused anxiety. Mr Pilkington's lucid account of these and other difficulties and the steps taken by the industry in co-operation with the Central and State Governments makes impressive reading. Such steps involved not only self-discipline and curbing of competitive opportunism but also finding ingenious solutions for some old problems. More importantly, some of these answers devised last year look like providing lasting solutions for some of the recurrent maladies afflicting the industry.

The first lesson of last year's crisis was the need for eliminating uncertainties about availability of raw jute at a price that is reasonable to the producer, the mills and the consumer. The first requisite in assuring regularity of supply of raw jute is to ensure that the cultivator retains his confidence in it. It has happened only too often in the past that a bumper crop is followed by a lean jute season for reasons that have nothing to do with the weather. The reason for this is, of course, that the depressed state of prices causes an automatic shrinkage in the area of jute sown in the next season. The prosperity of the industry is so closely bound with the fortunes of the cultivator that it is not surprising that the industry and IJMA are taking steps to increase the attractiveness of jute as an agricultural commodity and doing everything in their power to improve productivity in raw jute growing. The yield per acre of jute is notoriously unsatisfactory as that of many another agricultural commodity. The yield per acre of Indian jute is less than that of Pakistan, whose competition is becoming keener. It is necessary that we pay early attention to this matter. Good seeds, fertilisers and scientific cultivation are commonplace requirements of increased agricultural productivity and these have to be provided for the cultivator.

A major factor determining the regularity of supply and price of raw jute is the weather. Weather determines the size of the crop that, in its turn, availability and prices. All these uncertainties have some chance of being ironed out by the idea of a buffer stock which was promoted last year under the aegis of the IJMA. The buffer stock agency buys excess jute in times of a comfortable supply position and the stock thus acquired is deployed for use in lean seasons. This experiment, started during the year, is of great significance to the future of jute industry.

Adequacy and regularity of supply of raw jute is only one of the problems facing the industry. At the other end of the manufacturing process, there are the problems of marketing the manufactured goods. Here the comparative comfort of the present situation is likely to obscure some of the basic challenges the industry has to face. Competition comes not only from other nations having jute products to sell but also from substitutes for jute and even for packaging ideas. Bulk handling ideas have become more and more attractive to people who find the vagaries of jute goods prices difficult to cope with. Synthetic substitutes to hessian have also made headway even though they are found wanting in qualities that have justly conferred on jute the title of the packing material par excellence.

Even more urgent is the need to improve our competitive capacity with our rivals marketing the same product. It would be complacent folly to feel that some permanent accretion to our selling strength has taken place merely because at the moment we are riding the crest of a wave of high offtake. As Mr Pilkington pointed out, the present comfortable offtake position is due to adventitious factors like the overseas buyers replenishing their stocks. There are no doubt certain encouraging features like our increased exports to Western Europe and Africa even in the adverse conditions of 1961. But these cannot be considered permanent improvements. The real test is yet to come when in the face of emergence of trading blocks and other competitors, our competitive ability in terms of prices and quality will be put to genuine strain. Some steps have no doubt been taken. Rationisation of production by modernising machinery and plants has gone some way. The spinning department has almost completely been modernised. The weaving department should also complete this task soon. Prices should be made competitive by increasing productivity. In this context, it is necessary to draw attention, as Mr Pilkington has done, to the fact that the competitive ardour of Pakistan is assuming menacing proportions. It has the advantage of a superior raw material at a lower cost. Its Government actively assists the industry by incentive schemes like export bonuses. These enable Pakistan mills to underquote Indian mills in the world markets. Already India has lost some of its important sackings markets, perhaps for ever. Unless concerted steps are taken to arrest such drifts of markets to our competitors, the current prosperity may prove short-lived.

Jute is still a decisive element in our economy in spite of the depth and diversification that have been given to it by planned efforts. It is still among our first few significant exports and exports themselves have come at last to be recognised as the major determinant of the success of the Third Plan. After the crises that convulsed it, the jute industry is emerging out of the woods. It is necessary that the same resourcefulness that was shown last year in the face of crises should be available to make the industry equal to the demands of increased competition in the years ahead.

West Bengal Budget

THE presentation of the West Bengal Budget last week comes close on the heels of the formation of the new Congress Ministry in the State headed by Dr. B. C. Roy, and contains few surprises either by way of fresh taxation or any radical departure from the traditional pattern. The tone and tenor of the Budget has been settled by the needs of development of the State outlined in the Third Plan and if anything it is the strains of economic growth and development that the budget most notably reflects. Dr Roy, the West Bengal Chief Minister who has steered the State's finances in the face of various vicissitudes, has desisted from fresh taxation though the picture of the State's finances is far from satisfactory judging from the economic challenges posed by the Third Plan. It is not as though there has not been improvement in the resources position of the State. The Budget for the 1962-63 financial year records net gain in revenue receipts under various heads which add up to a total of Rs 3.40 crores, the revenue receipts for 1962-63 being estimated at Rs 107.18 crores against Rs 103.78 crores being the revised estimates for 1961-62. But the improvement has been more than wiped out by the growth of expenditure which for 1962-63 has been estimated at Rs 111.23 crores against the revised estimates of Rs 104.11 crores for 1961-62. The recommendations of the Third Finance Commission have caused some disappointment to the State Government and though the effects are not yet clear, the total funds available to the State from the divisible pool in 1962-63 are estimated to be smaller by Rs 4.34 crores. The situation has been rendered worse by the withdrawal of the grant-in-aid to the State which for the last year fetched in Rs 4.75 crores. A balanced budget in such circumstances was clearly out of question and more so when the pressures associated with development of the State's economy have become inexorable. It is, in this connection, worthy of note that the deficit in the State's Budget for 1962-63 reflects mainly the imbalance in the revenue account of Plan provisions. While total resources on revenue account in the Plan have been worked out to Rs 16.46 crores, revenue expenditure under Plan schemes has been placed at Rs 20.51 crores leaving a gap of Rs 4.05 crores. The overall deficit has been further widened to Rs 6.73 crores by the gap in resources under capital account.

The main interest in the Budget is the prospect for growth it holds out by investment earmarked for the key sectors. Even a cursory study of the provisions made in the Budget will suffice to impress that it has been fashioned and geared to further the objective of accelerating the progress of the State's economy. The subject has been very lucidly analysed with details of the present state of economy and schemes that have been drawn up as part of the Third Plan, by Dr B. C. Roy in the course of his budget speech. The main burden of Dr Roy's speech was the inescapability of the need for rapid growth so that progress will not lag behind development in other States. There is, no doubt, cause for satisfaction at the achievements already registered in various fields. 1961 has witnessed signs of resurgence of economic activity allround. The production of jute and mesta which has slumped to 20.62 lakh bales in 1960-61 from 34.57 lakh bales in 1958-59, has touched a level of 40.94 lakhs bales in 1961-62. The tea industry in the State has scaled

new heights in production. Production of rice had picked up even by the beginning of 1960 and has maintained an upward trend. Gains in industrial production have also been remarkable. Output of coal, cement, electricity generated etc had all recorded expansion in 1961. While the progress underlined by these indices of growth is gratifying, what causes concern is the growing pressure of population which by virtue of its impact on density, continues to render the rate of growth less adequate to ensure increasing standards of living. The density of West Bengal's population estimated now at 1,031 per square mile, may be compared to 332 in Maharashtra, 286 in Gujarat, 671 in Madras, 691 in Bihar, 272 in Orissa and 252 in Assam. In the light of the continuing rising trend disclosed in the last census, the implications for faster economic growth are clear.

It is against this background of the rate of population growth that Dr Roy has focussed the major features of the Third Plan, which as he explained will mark a crucial turning point for development. The most refreshing feature of the Plan is the emphasis on agriculture and social services that has been laid in the allocations. Agriculture and community development account for nearly 32.8 per cent of the total Plan outlay of Rs 293.15 crores while Social services and Miscellaneous account for 33.9 per cent of the total allocation. [The agricultural schemes have been drawn up to secure allround expansion of facilities to help intensive cultivation. Among such measures, irrigation has necessarily to get priority and the Plan envisages substantial increase in the area irrigated. The allocation for industries has been stepped up to Rs 22.76 crores inclusive of allocation for small scale and cottage industries. Transport and Communications account for 9.0 per cent of the total outlay. The allocation for power at Rs 48.59 crores and working out to 16.5 per cent of the total Plan outlay is also generous. Though comparatively advanced in the matter of industrial development the pressure of growing numbers on the State's agriculture makes further acceleration of industrial growth indispensable to relieve unemployment. On this subject Dr Roy referred to the employment potential held out by the country's Third Plan and observed that the long-term solution of the problem of unem-

ployment is linked with the question of planned parenthood.

Thus in spite of the strains on the State's finances reflected in the Budget, it is essentially a picture of hope that the West Bengal Budget evokes. The allocations for 1962-63 have been made in such a manner as to ensure balanced development. The schemes for improvement of the Calcutta port, for setting up of the subsidiary port at Haldia, for expanding power potential at the Damodar Valley Corporation and other centres, the proposal for constructing the express highway to connect Calcutta with Durgapur, the project for the Calcutta Metropolitan Board and for the second coke oven plant and the fertiliser plants—all these hold out potentials for unprecedented rate of progress for the State in the years ahead.

The Indian Refractory Industry

By a Special Correspondent

THE principal types of refractories manufactured in India are fire-bricks, silica bricks, bauxite or high-alumina bricks, magnesite and chromite bricks. The raw material, used in the manufacture of firebricks is fireclay from the coalfields. There are large deposits of fireclay in the coalfields of West Bengal and Bihar and to a lesser extent in Orissa, Madhya Pradesh, Bombay, Mysore and Madras. Firebricks are used for boiler furnaces, blast furnaces, re-heating furnaces, brass melting furnaces and steel ladle lining. The manufacture of bauxite into brick is done in fireclay works by the machinery used for firebricks. A certain quantity of fireclay is mixed with bauxite to give it the required plasticity. The raw material is found in Madhya Pradesh, Bihar, Bombay and Madras. Bauxite bricks are used for cement kilns, some parts of glass furnaces and oil-fired furnaces of higher temperature.

The raw material used in manufacturing magnesite brick is magnesite from Salem (Madras) and Mysore. Magnesite bricks are utilised for steel furnace boilers and walls, copper furnaces and re-heating furnace floors.

Chromite bricks are manufactured from Chromite found in Singhbhum (Bihar) and Serai-kella. They are utilised mainly for snaking floors, lining and repairing basic hearth furnaces. Kyanite or sillimanite bricks are made pit floors and walls and re-heating furnace up of kyanite which is found in Singhbhum (Bihar), and Serai-kella. Sillimanite bricks are manufactured out of sillimanite from Assam. They are used in glass furnaces, mint furnaces and furnaces where similar conditions of high temperature and corrosive melts are encountered.

Besides the above types of refractories, the Central Glass and Ceramic Research Institute has developed a new type of refractory, namely mica insulating brick. Although waste mica, the raw material for it, is available in India in abundant quantity, this type of refractory has not yet been manufactured in India, presumably due to lack of demand.

Graphite also can be used to manufacture refractories. Its reserves have been estimated at 15 million tons. Refractories can be made of zircon too. The monazite sands of Kerala contain zircon. The manufacture of very special type of refractories has not yet been undertaken in India, mostly because of the limited demand and complicated technical processes involved.

SPURT IN OUTPUT

The organized manufacture of refractories began in India about the middle of the 19th century. Burn and Company, the pioneers in the line, started production on a small scale in the Raniganj coalfield area in West Bengal. The company supplied the foundries, boiler installations in the coalfields, and other small industries in the country. Later in 1890, Burn and Company established another plant at Jubbulpore for the manufacture of firebricks. But the industry could not make much headway, as there was no sufficient demand for its products. It was only during 1950's, that a steady demand for its refractories from the iron and steel industry, electrogenerating plants, cement, glass, heavy chemicals and other industries lifted the industry from the state of stagnation.

During 1951-53, the average installed capacity was 24.2 thousand tons per month. The capacity was increased to 27.5 thousand tons in 1954. The actual production, however, hovered around an average of 20 thousand tons per month for all these four years. Since then the production has started increasing steadily and from 20 thousand tons per month in 1954 it rose to 22.9 thousand tons in 1955 and 26.5 thousand tons in 1956, although the installed capacity remained stationary at 27.5 thousand tons per month.

The spurt in output was accelerated due to the increased demand for refractories from the newly set up public sector iron and steel plants. Since 1957, therefore, there has been a continuous rise in both installed capacity and production from year to year, as detailed in Table I. During January-August 1961, the monthly average installed capacity and production worked out to 65.4 thousand tons and 47.8 thousand tons, respectively. Thus during the 11 years 1951-61, both the installed capacity and production has gone up by 2 1/2 times.

RISING IMPORTS

Along with a spurt in output, the import of refractories are also rising side by side. The principal supplier of refractories are the USA, the UK, West Germany, Belgium and the Netherlands. Table II shows the year to

year value of imports during 1952-1961. The trend of imports has shown a steady upward trend all along. The slight decrease in 1956 may be explained by the Suez Canal crisis, while the sharp rise since 1957 may be attributed to the increased demand from the public sector steel plants.

The most disquieting fact in this connection is that we had to spend a huge amount of valuable foreign exchange resources for importing refractories, while we possess the best type of refractory minerals in abundant quantity in our country and the industry's installed capacity is being wasted due to lack of demand.

Thus, in an address to the steel workers at Bhilai on February 15, 1960 the Soviet Prime Minister Mr Nikita Khrushchev aptly remarked "I was told by Soviet scientists that India possessed the best type of earth to produce refractory bricks which were used in great numbers for lining blast and open hearth furnaces. At present, refractory bricks are imported into India. If there was high quality raw material in India, why not start manufacturing refractories?"

EXPORT MARKET

In recent years a beginning has been made in exporting refractories from India. In Table IV, the value of exports of various refractories has been shown during 1957-61. Although our export earnings on this account has not been very high so far, yet a good start has been made and if the potentialities are carefully exploited the exports are likely to go up appreciably in the near future. In the countrywise pattern, the bulk of the exports were directed to Pakistan, Ceylon and Burma while a small quantity was exported to the UK and Canada which shows that our products are able to stand the competition in the highly industrialised countries too.

In the developing countries of Asia and Africa new markets for refractories will come up with the establishment of heavy industries in those countries. We should, therefore make an earnest effort to boost our exports of refractories which will also help us to utilise the potentialities of the indigenous industry to the fullest extent.

PRINCIPAL CONSUMER

Iron and steel works is the principal consumer of refractories in India. Although refractories are used in the cement, glass and chemical industries too, their combined consumption is much less than the consumption of iron and steel industry alone. At the fifth meeting of the Panel on Refractories held at New Delhi on 23 and 24 November, 1959 the Panel felt that instead of 3:2 ratio the consumption of refractories by steel and other industries should be taken as 2:1. The higher consumption by steel works will also be clear from the pattern of distribution of principal types of refractories produced in India, namely firebricks, basic bricks, silica bricks and mortars, as detailed in Table III. The higher demand for refractories in the steel works is due to the very high rate of consumption which is estimated at about 200 lbs per ton of ingot steel produced as against only 85 lbs in the countries like the UK, the USA and West Germany.

The high rate of consumption reflects a variety of factors related to steel melting practice in India. Unlike other countries, Indian steel is produced mostly from pig iron. Pig iron is used even when the scrap is available because the cost is cheaper owing to low production costs and high iron content of the ore. Recently, however, there has been a great deal of improvement in the quality of

refractories leading to their better life. On this basis the future pattern of demand is estimated to be to the tune of 165 lbs per ton of ingot steel produced, composed of firebricks 80 lbs, basic bricks 45 lbs, silica bricks 25 lbs, high alumina bricks 10 lbs, and others 5 lbs.

DILEMMA OF SPECIFICATION

The main problem confronting the Indian Refractory industry today is the complexity of standards of the end-products. The absence of uniformity of the specifications for quality as well as for shapes and sizes of the various refractories required by the individual steel plants is simply bewildering. This is because the new steel plants have been set up with the technical collaboration of different foreign firms, who have specified their own standards for obvious reasons.

The Indian Standards Institution has already laid down the specification for quality for most types of refractories and a beginning has been made for specifying the sizes and shapes. The steel plants were represented on the Sub-Committee which laid down these specifications and the idea was that the steel plants would submit their requirements of refractories to the manufacturers on the basis of these specifications. But the individual steel plants are not placing their orders in accordance with those specifications.

So far as the construction and expansion of the steel plants are concerned, the foreign specifications of refractories might be adopted primarily on account of the fact that foreign firms are responsible for successful operation of the steel plants. As regards maintenance requirements, the Indian Standard specifications should be followed. In the case of constructional needs too, with proper co-operation between the manufacturers and the Hindustan Steel Authority, standard specifications for certain bulk items could easily be laid down, e.g., steel furnace roof bricks and ladle bricks.

The advantages of a common specification for use by all the steel plants would mean that stocks would always be available at some place in the country which may be procured at a short notice. As regards special specifications, the manufacturers are always agreeable to manufacture them, provided the requirements are made known to them sufficiently in advance, say a year ahead of the delivery date, as considerable time is required to prepare special moulds.

RAW MATERIAL EXPORT

Another problem before the industry today is the shortage of raw materials. The principal refractory minerals are regularly exported from India. In Table V, the quantity of exports of three main refractory minerals, namely, chromite, kyanite and magnesite, have been shown for 10 years 1952-61. True, that in these days of meagre foreign exchange reserves and increasing need for foreign exchange for implementing Plan projects, all possible ways should be adopted to step up export earnings. But in doing so we should not overlook the problems of our indigenous industry.

Thus, it becomes a matter of concern when our industry suffers from the shortage of raw materials due to the export of minerals. Although new deposits of magnesite have been recently reported in UP and Rajasthan, still we should not export magnesite in large quantities as the domestic demand for magnesite bricks are likely to go up in near future in view of the steel plants' impending change over to basic refractory roofs.

There is also lack of availability of good quality bauxite for manufacturing high refractories. The Saurashtra bauxite is ideal for the purpose, but its exports are seemingly

large. Similarly, in the case of sillimanite, the main supply of which comes from Assam area, the exports are considerably on the high side with resultant shortage and irregular supplies to indigenous industry. In the case of fire-clay too, although it is not exported there is the urgent need to locate additional deposits of fireclays as all the known deposits are being worked more or less fully and it is feared that in the near future there is likely to be shortage of fireclays, particularly high aluminium clays.

Moreover, in view of the export market for refractories found out recently and also on account of its high potentialities, we should not go on exporting the minerals as hitherto. Instead we should try to boost up exports of refractories and the minerals may be conserved for supply to the indigenous industry.

MINING LEASES

Owing to the concentration of the refractory industry in Bengal and Bihar almost all the good areas have been taken up and it has become necessary to look further afield. But as soon as any investigations start middlemen and speculators apply for leases without giving the manufacturer a chance of experimenting with the type of clay offering. Such cornering of mining leases for important raw materials inevitably results in irregular and inadequate supplies as also of inconsistent quality. The prices also tend to be on the high side.

In the case of imported raw materials, the Government has made a good start in issuing actual users' licences for importing raw materials for the benefit of the manufacturers. Here also the raw material problem can be solved to some extent by according priorities in granting mining leases to actual manufacturers.

Refractory industry is also a victim of the coal crisis, both in respect of quality and quantity. The Coal Controller has recently revised priorities for the refractory industry and has granted 75 per cent selected A and balance 25 per cent in grade I. Operational efficiency has been affected by the allocation of grade I coal as many of the plants are designed for the use of high grade coal. Although it may be difficult to allot 100 per cent selected A coal for the industry as a whole, the industry has pleaded to consider the individual cases on their own merit.

To mitigate the coal problem, the Government has advised to shift over to oil and gas firing. The industry, however, feels that while only a regular supply of adequate coal can solve the problem, the valuable foreign exchange required for setting up oil and gas plants may be conserved for the present.

Transport difficulty is yet another problem confronting the refractory industry, as in many other cases, both for moving raw materials and coal inward and finished products outward. The industry has made numerous representations to the Development Wing of the Ministry of Commerce and Industry and the Railway Board and has demanded the same priority as steel for the movement of raw materials and finished products. The transport bottleneck hampers not only the refractory industries only but also the consuming industries which suffer on account of delays in delivery schedules.

PLAN TARGETS

No target for the production of refractories was set under the First Five-Year Plan. The expansion programme of the refractory industry during the Second Five-Year Plan period was chiefly linked with the development in the iron and steel industry. The

annual requirements of refractories by the end of the Second Plan was at first estimated at 0.80 million tons with an installed capacity of 1 million tons. Later it was revised to 1 million tons of consumption with an annual installed capacity of 1.25 million tons.

TABLE I
Monthly Average Installed Capacity and
Production of Refractories in India
(Thousand Tons)

Year	Installed Capacity	Production
1951	24.2	19.8
1952	24.2	20.3
1953	24.1	19.0
1954	27.5	20.0
1955	27.5	22.9
1956	27.5	26.5
1957	39.4	30.6
1958	44.7	36.2
1959	63.7	41.6
1960	64.9	44.3
1961 (January-August)	65.4	47.8

In the Third Five-Year Plan the production target has been fixed at 1.60 million tons annually to be reached by 1965-66 with an annual installed capacity of 2.00 million tons. To achieve this target, fixed investment to the tune of Rs 22 crores during the five years

1961-66 has been envisaged, of which the foreign exchange component would be of the order of Rs 10 crores.

With this end in view, Government has formulated the programme for stepping up the production of refractories. To lessen the burden on foreign exchange, however, it has been decided to make an effort to manufacture certain essential parts of the refractories machinery within the country as quickly as possible.

The industry, however, feels that the estimated requirement of refractories by the end of the Third Five-Year Plan has been placed on the high side. They point out that with the improvement in the steel melting practices as also the quality of the refractories, the consumption of refractories per ton of ingot steel produced is likely to come down appreciably and so the total demand for them.

Moreover, the present installed capacity is calculated on the basis of 300 working days per year and a single shift per day. They are, therefore, actually able to produce more with this capacity, while over one-fourth of their capacity is being wasted at present. A better co-ordination between consumers, particularly the steel plants, and manufacturers would be able to make for increased use of refractories produced indigenously and thereby lessen the quantum of imports. Successful mitigation of the problem of shortages of raw materials and coal supply as also of transport bottleneck will help the industry in utilising the installed capacity more efficiently. Conditions should first be created for the fullest utilisation of the existing plants. The question of additional capacities may be considered only when the existing plants are fully utilised. The foreign exchange thus saved have other urgent uses.

Individual well-being is linked with national prosperity and only planned efforts can ensure both in the shortest possible time. And planning, for its success, largely depends on savings, individual as well as national. Saving in the form of Bank Deposits provides resources for the National Plan.

World of Finance

MONEY MARKET

Extreme Stringency Prevails

During the last week the money market has turned extremely stringent both in Bombay and in Calcutta. While it is possible that the heavy tax payments, which require to be made in March, may have aggravated the pressure upon banks, it would appear that it is the progress of the busy season toward its peak which is mainly responsible for the current stringency. The latest returns of the Reserve Bank show that banks have had to borrow very heavily; and the fact that many a bank may now be borrowing at the penal rate of 6 per cent was reason enough for the call money rate to be taken up to just this side of 6 per cent.

Fortunately the stringency may not last long. In the last two years the payments made by the Centre in March, in respect of planned disbursements, have served almost immediately to swell the Deposit resources of the banking system. It has happened in each of the last two years that automatically banks have been enabled greatly to reduce their indebtedness to the Reserve Bank. It remains to be seen whether, this year, too, banks will thus be helped out.

UNITED BANK

"Capital" Ratio Exceeds 6 per cent

The United Bank of India Limited is in the unique position of having capital plus reserves ratio to Deposits which exceeds the target of 6 per cent that has been set by the Reserve Bank for the banking system. That, nevertheless, a fair-sized transfer to Reserve has been made from 1961 profits would indicate that the growth in the bank's Deposits is at a rate as will necessitate such transfers to Reserve in the future. In fact, the relevant ratio has dropped during 1961.

UBI's Deposits have risen by Rs. 7.13 crores (or 13.8 per cent) to Rs. 58.87 crores. The rise is most marked under the head of Fixed Deposits and Cash Certificates, which are higher by Rs. 3.85 crores at Rs. 19.04 crores, while Savings Bank Deposits have also risen to Rs. 20.53 crores. The improvement in Current Accounts, Contingency Accounts, etc., is a more modest one of Rs. 0.68 crore to Rs. 19.21 crores.

The bulk of the increased resources has naturally been utilised to enlarge accommodation to constituents. The total of Advances has risen by Rs. 5.99 crores to Rs. 37.61 crores. The Advance-Deposits ratio is placed in the 1961 balance-sheet at 63.9 per cent as compared with the relative figure of 61.1 per cent in the 1960 balance-sheet. Not quite typical of banks' experience in 1961, UBI has enlarged its gilt-edged portfolio by Rs. 1.46

crores to Rs. 15.05 crores. The ratio of gilt-edged investments to Deposits has fallen slightly from 26.3 per cent to 25.6 per cent in 1961.

Borrowings as at the 1961 balance-sheet are at the nominal figure of Rs. 6.79 lakhs against Rs. 18.01 lakhs. As a result, cash balances, including money at call and short notice, have risen from Rs. 7.04 crores to Rs. 8.10 crores.

The income by interest and discount has gone up from Rs. 2.16 crores to Rs. 2.38 crores, while a smaller rise of Rs. 4.17 lakhs to Rs. 43.19 lakhs has been registered in the income from commission, exchange and brokerage. Notwithstanding the much greater increase in higher-costing Deposits, the rise in Interest Paid is a small one of just under Rs. 10 lakhs to Rs. 89.09 lakhs; and salaries and allowances have cost Rs. 8.58 lakhs more at Rs. 1.44 crores. The net result is a smart rise of Rs. 5.87 lakhs—or 40.1 per cent over the previous year—to Rs. 20.52 lakhs in the balance of profit net of taxation.

The transfer to Reserve is Rs. 4.11 lakhs, and the "capital" ratio to Deposits works out to 6.1 per cent as compared with 6.9 per cent in the 1960 balance-sheet. In accord with the much better results the dividend has been raised from 4.3 per cent to 6 per cent.

CHARTERED BANK

Sharp Rise in Profit

It is apparently not in India alone that, in 1961, conditions were conducive to growth of banking business and to rise in banking profits. In his statement circulated with the accounts of The Chartered Bank for 1961, Mr. V. A. Grantham, the Chairman, found it necessary in his opening sentences to say that his expectation, in the previous year of some element of recession has fortunately failed to materialise. The "anticipated" recession was naturally enough expected to make its impact felt upon world trade and, consequently, upon the bank's business. But, in the event, the Consolidated Balance-sheet total has risen by £45.3 million to £408.1 million. The profit for the year, in rising substantially (for the second year in succession) by £228,322 to £290,238, is now within reach of the £1 million mark; and it is now almost certain that such a level will be attained in 1962. Also almost paralleling Indian banking conditions the Chartered Bank raised its issued and paid-up capital to £6.6 million, and the final dividend is being paid at 7½ per cent on the increased capital. Again, over and above the £1.1 million realised as premium on the rights issue, a sum of £400,000 is being transferred to Reserve Funds, which now total £7.25 million.

Mr. Grantham's statement (extracts from which were published in last week's Indian Finance) is particularly useful for the light it throws upon economic conditions in the many countries in which the Chartered Bank operates. Particularly interesting this

year are his comments on India. He has paid a compliment to the "remarkable results" which this country has achieved in its "industrial revolution." Mr. Grantham has then gone on broadly to review prospects. Foreign aid is necessary in order that the Third Plan can be successful; but recent Government measures may serve to attract overseas investment. But "taxation is, however, still very high by world standards."

The export drive is producing feeble results, since "improved living conditions and a wider diffusion of purchasing power tends to attract production to the home rather than to the overseas market." Mr. Grantham warns against any export incentive schemes which may call for exports on an uneconomic basis; and, on the other hand, suggests that "the relatively stable domestic price level should make it possible for the introduction of some form of fiscal incentive which will genuinely encourage exports."

Reference has been made to the enactment of Deposit Insurance and to the voluntary agreement among banks on Deposit rates; and Mr. Grantham has asked that there should be a similar formula for Advance rates. In this regard we may point out that the 1960 autumn directives of the Reserve Bank have created a floor for Advance rates at 5 per cent. It is possible that Mr. Grantham has in mind a higher minimum than postulated by the Reserve Bank; but we would urge instead that a lower maximum upon Deposit rates would have the same effect, of widening the margin between banks' borrowing and lending rates, so as to enable the strengthening of the banking system which the Reserve Bank so keenly desires.

Mr. Grantham has paid a tribute to "the fair and open manner" in which the Reserve Bank "has always treated foreign banks in India"; and his concluding sentences in this regard are somewhat puzzling: "... it would be a sad day if any political pressure should be allowed to develop to an extent that discrimination against the exchange banks and their operations in India is introduced." Perhaps Mr. H. V. R. Iengar's remarks, in one of his last utterances as Governor of the Reserve Bank, calling for care and vigilance to safeguard the independence of the Reserve Bank may have provided Mr. Grantham with some food for diffident thought. The branch expansion programme of another exchange bank operating in India should be sufficient proof that, so far at least, there has been no such intention to circumscribe the role that exchange banks can play in India's industrialisation!

BANK RETURNS

Steep Increase in Banks' Borrowings

A sharp increase in the pressure upon the banking system is attested to in the returns of the Reserve Bank for 16 March; and this strain may be in part due to busy season needs and partly because of tax payment as the end of the fiscal year approaches.

In the week ended 16 March, Active Note Circulation has receded slightly by Rs. 5.45 crores to Rs. 2,073.07 crores, and there has been inflow of Rupee Coin for Rs. 0.21 crore.

Foreign Securities are unchanged at Rs. 123.86 crores, but Rupee Securities, at Rs. 1,737.17 crores, show a small adjustment. Consequently the Reserve Bank's cash in the till has improved by Rs. 5.64 crores to Rs. 21.49 crores.

In the return for the Banking Department, the most noteworthy change is the steep rise of Rs. 19.38 crores to Rs. 193.77 crores in the Other Loans and Advances of the Reserve Bank; that the increase is mainly, perhaps wholly—on account of additional recourse to central banking credit on the part of Scheduled Banks is confirmed by the brisk rise of Rs. 15.73 crores to Rs. 47.84 crores in the Reserve Bank's advances against usance bills. At the same time banks have also somewhat run down their Reserve Balances, which are lower by Rs. 5.24 crores at Rs. 77.49 crores.

The Centre's Deposits are higher by Rs. 22.83 crores at Rs. 86.04 crores, and this may be taken to confirm that the Centre has been in receipt of considerable tax payments, since there is no evidence of deficit financing. However, the pressure upon banks may ease a bit, as the Centre itself moves to make its end of fiscal year payments; it would appear that about Rs. 100 crores of deficit financing (as at 9 March) that has been budgeted for in the Revised Estimates for 1961-62 has yet to be put through. Hence, with larger governmental disbursements to be expected in the next week, the Deposit resources of the banking system stand to rise considerably.

The States continue to feel the pinch: their balances, Rs. 2.04 crores higher at Rs. 5.47 crores, are on the small side; and their ways and means borrowings, up by Rs. 8.81 crores to Rs. 84.44 crores, are higher than they are wont to be.

Lastly in respect of the Reserve Bank returns, Balances Held Abroad have shown a modest improvement of Rs. 2.54 crores to Rs. 10.19 crores.

The return of the State Bank for 16 March is largely featureless. Deposit resources have fallen (owing to tax payments of constituents) by Rs. 2.71 crores to Rs. 554.70 crores but the total of Advances, instead of expanding as might normally be expected, is lower by Rs. 0.41 crore at Rs. 284.96 crores. In the midst of the busy season the State Bank has again found money for investment in gilt-edged, which is marked higher by about Rs. 6 crores at Rs. 244.08 crores, with Other Assets showing a like fall. Borrowings are almost unchanged at Rs. 2.71 crores, and cash balances have receded by about Rs. 5 crores to Rs. 24.59 crores.

Deposit resources of Scheduled Banks appear to have fallen during the week ended 9 March. Net Demand Deposits are, it is

true, higher by Rs. 1.93 crores at Rs. 852.64 crores despite a fall of nearly Rs. 4 crores in Demand Deposits from banks; but net Time Deposits are lower by Rs. 2.98 crores at Rs. 1,161.37 crores. However, it needs to be noted that, in the relevant week, the State Bank reported a decline of Rs. 3.69 crores in and it may therefore be that other Scheduled Banks experienced a rise of about Rs. 2½ crores in their Deposits. Hence, the rise of nearly Rs. 10 crores, from Rs. 1,376.85 crores to Rs. 1,386.80 crores, in the total of Advances put the banks to considerable pressure. Borrowings from the State Bank are higher by Rs. 1.83 crores at Rs. 14.53 crores, while indebtedness to the Reserve Bank shows a sharper rise of Rs. 7.26 crores to Rs. 47.37 crores. Cash balances have improved by Rs. 3.18 crores to Rs. 179.08 crores, but this is wholly on account of the State Bank.

The prospect is that the return of Scheduled Banks for 16 March may reveal a sharp drawal on their resources: Advances should rise considerably, and it is also possible that there should be a fair-sized drop in Deposits. Both these changes would relate to constituents using their Deposits or their overdrafts to make tax payments.

Agreement has apparently been reached among the special Committee appointed by the Indian Banks' Association on the question of a differential for the medium banks. In principle the idea of three groupings for banks has been accepted; but what the range of Deposits will be, which will constitute the "medium" banks, it is not yet known. Again, the principle of two sets of differentials will probably evoke no objection. But it is doubtful if two differentials of a quarter per cent each will be approved. A disparity of one-eighth per cent should surely be sufficient. In any case, all the Committee can do is make recommendations; and it is still possible that, in the event of disagreement over definition of a medium bank or over the quantum of differential, the inter-bank agreement on Deposit rates soon ceases to be.

Treasury Bills

Tenders for Rs. 2,00,00,000 of 91 days' Government of India Treasury Bills were opened on Tuesday, 20 March, 1962. Total amount offered was Rs. 2,50,00,000. Tenders at Rs. 99.350 per cent were accepted in full and those at Rs. 99.345 per cent allotted 67 per cent approximately. Total amount accepted was Rs. 2,00,00,000 (Rupees two crores only), the average rate of accepted tenders being Rs. 2.610 per cent per annum.

Tenders for Rs. 2,00,00,000 of 91 days' Government of India Treasury Bills will be received

at all centres (Bangalore, Bombay, Calcutta, Kanpur, Madras, Nagpur and New Delhi) up to the close of business on Monday, 26 March 1962. Successful tenderers should make payment on Friday, 30 March, 1962. Other conditions are as usual.

During the week ended 16 March, 1962, Government of India Treasury Bills for Rs. 146,07,75,000 were sold in favour of Reserve Bank of India.

91 days' Intermediate Treasury Bills will be sold from 21 to 24 March, 1962, at Rs. 99.348 per cent. Sales can be stopped at any time without notice if Government think it necessary.

91 days' Intermediate Treasury Bills sold from 14 to 17 March, 1962 amounted to Rs. 15,50,000.

Bank Rate Policy

By Paul Einzig

HAVING resisted for several months to the pressure in favour of a lower Bank rate the Government and the Bank of England abandoned the 6 per cent level early in March. This was entirely due to the desire to discourage the influx of hot money. In view of the fact that the balance of payments continues to be adverse, the firmness of sterling must be attributed to that influx, and its extent has been giving rise to growing concern in official circles. To discourage it, the authorities are prepared to risk an accentuation of domestic inflationary pressure. Nor is it now certain by any means after the Government's defeat at the Orpington by-Election that an effort will be made to counteract the effect of the lower Bank rate by means of tough fiscal measures. Having regard to the Government's loss of popularity additional taxation is not likely to be resorted to.

It seems much more probable that an attempt will be made to recover the lost popularity by creating a wave of prosperity with the aid of lower Bank rate and credit expansion. The margin between the present position of very moderate unemployment and the recent position of overfull employment is very narrow. A reduction of the Bank rate to, say, 4½ per cent would inject into the economy a sufficient degree of inflation to make it possible to revive the slogan "we have never had it so good."

It would have been much wiser if the Government had discouraged the influx of unwanted hot money by causing forward sterling to depreciate and by repaying the whole of the International Monetary Fund credit. The resulting reduction of the published gold reserve would have been sufficient to make the international Foreign Exchange market realise that recent optimism about sterling has been overdone. It is true at the moment none of the other major currencies appear to be very strong. Even the Swiss franc has developed a weakness. But that is an additional reason why the policy of bolstering up sterling with the aid of borrowed gold should be discontinued.

Owing to the fact that the Government's defeat at Orpington is widely attributed to the unpopularity of the pay restraint policy, it is to be feared that the Government will deem it expedient to depart from that policy. This, together with credit expansion is likely to accentuate the rising trend of the cost of living. For this reason alone the firmness of sterling seems to be unjustified.

—(Copyright).

Notes

CALCUTTA CORPN. Augmenting Resources

The budget estimates of the Calcutta Corporation for 1962-63, the biggest on record, prepared by the Standing Committee and presented to the Corporation by Mr. Chittaranjan Bose, the Chairman of the Finance Committee, reveals an opening balance of over Rs. 50 lakhs. The revenue receipts are placed at Rs. 1,00,630,000 in contrast to the estimated expenditure of Rs. 99,385,000 thus showing a closing balance of Rs. 1,245,000. While presenting the budget estimates the Chairman drew pointed attention to the upward revision in the estimates for 1961-62 by Rs. 188,900 and the receipts for the present budget year had been drawn up by Rs. 5,687,000 over the Commissioner's estimate, the aggregate receipts being thus marked at Rs. 95,562,000. This amount along with the opening balance will add up to a total of over Rs. 10 crores, by far the highest contained in any of the budgets of the Corporation.

Before giving the final shape the Finance Committee had modified the expenditure side by incorporating Rs. 207,300 additional expenditure in the revised budget and Rs. 99,385,000 as the esti-

mated expenditure for the budget year thus providing a cash balance of about Rs. 12.5 lakhs. The Finance Committee has also increased the revenue to be realised on account of consolidation rates to Rs. 58,550,000 by adding Rs. 17 lakhs with the consent of departmental chiefs from Rs. 56,850,000 estimated by the Commissioner. A higher income from the consolidated rates is anticipated largely due to the amicable settlement of disputes pertaining to the properties owned by the Government of India in Calcutta. If the proposed amendment to the Municipal Act regarding the imposition of levy on profession materialises it would mean that the Corporation's revenue will be stepped up further. Revenue from levies imposed on carts, licence fees, licence under the Prevention of Food Adulteration Act and licences on canine species are tentatively fixed at Rs. 5,525,000 which is higher by Rs. 174,500 from the Commissioner's estimates. As pertinently remarked by the Committee the revenue from this source can be increased to some extent if the relevant departments discharge their function in the most efficient manner.

The main items included on the expenditure side are the provision of Rs. 182,000 for the establishment of family planning clinics, Rs. 1 lakh for the opening of a TB clinic mainly for the benefit of Corporation employees and Rs. 1 lakh for the construction of a hall in memory of Netaji to serve as a meeting place for the employees.

From the loan fund, the Committee has allocated Rs. 5 lakhs for water supply, Rs. 5 lakhs for improving the drainage system and prevention of floods, Rs. 10 lakhs for road construction and improvement activities, and Rs. 5 lakhs for an electric crematorium in North Calcutta and an additional chamber for the electric crematorium in the burning ghat at Shahnagore.

The resources of the Corporation thus augmented, expectations of greater civic comfort are not unreasonable. But in the past we have often been disappointed in our expectations from the Corporation that one daren't hope any more.

TOURISM

A Modest Rise in Inflow

A modest rise in the inflow of tourists to the country in 1961

can be gleaned from the statistics compiled by the tourists department. The total number of tourists, excluding Pakistani nationals, moved upto 139,804 from 123,095 in 1960, an increase of 13.6 per cent. The relative figures for the past five years are provided below:

Year	Number	(a)
1957	80,544	
1958	92,202	14.5
1959	109,464	18.7
1960	123,095	12.5
1961	139,804	13.6

(a) Percentage of increase over the previous year.

Of these, the tourists from Europe numbering 44,034 formed 31.5 per cent of the total tourist traffic. Tourists from South and South East Asia at 34,573 work out to a percentage of 24.7, those from USA and Canada totalling 33,268 to 23.8 per cent, from Africa 17,313 (12.4 per cent), from West Asia 5,880 (4.2 per cent), from Oceania i.e. Australia, New Zealand and Fiji, 2,903 (2.3 per cent), and from Latin America and West Indies 1,833 (1.1 per cent).

The increase in the total number of tourists from USA alone works out to 15.3 per cent in 1961, though the proportionate increase in the previous year was 25.2 per cent. The rise of tourist inflow from the European countries was of the order of 18.7 per cent (12 per cent in 1960), and that from Britain looked up by 18.4 per cent making 15.9 per cent (22.191) of the total. The total number of tourists from the Commonwealth countries formed 47.2 per cent (65,943) of the total traffic. Those from the adjacent countries of Burma, Ceylon, Malaya and Singapore along with African countries at 42,416 come to nearly 30 per cent of the total.

Judged from the arrivals of tourists month by month, it is evident that the first quarter comprising January to March and the last quarter, October to December, are peak periods while the second and the third quarters are relatively lean periods.

An examination of the travel habits of the tourists reveals that air travel is fast becoming popular obviously due to the remarkable speed with which they are transported from one destination to another thus enabling them to include more tourist centres in their itinerary. Of the tourists who visited India in 1961 88,441 (63.3 per cent) are airborne as against 43,674 (31.2 per cent) who crossed the seas and 7,688 (5.5 per cent) who came by land. Among the important places of disembarkation Bombay occupies the pride of place with 50,175 tourists followed by Delhi with 29,943 Calcutta with 24,916 Channukhodi with 12,171 and Madras with 12,084.

The purposes of their visit can be broadly classified under three heads: for pleasure, on business

or study tours or just because they chanced to pass through India and chose to spend a few days to have a passing glimpse of this ancient country. The tourists in total spent 5.53 million days, the average stay of an individual amounting to 39.6 days.

MAHARASHTRA

Joint-Sector Hopes

At the annual general meeting of the Bombay Chamber of Commerce and Industry held on last Saturday both Mr. Y. B. Chavan, the State Chief Minister, and Mr. N. M. Wagle, the President of the Chamber, understandably enough selected industrialisation of Maharashtra as their topics. Though both the speakers differed on several points, there was much in common in their discourse. Maharashtra, which is one of the industrially advanced States in the Indian Union, is, as is well known, on the threshold of bringing about an industrial revolution in a not too distant future. Both Maharashtra and Gujarat Governments have been active in sponsoring joint ventures in which the public and private sectors could co-operate and render some of the artificial quarrels between them meaningless. The Chief Minister while spotlighting the beneficial aspects of joint ventures invited the wholehearted cooperation of private entrepreneurs to join hands with the Government for achieving the objective of widely dispersed and speedy industrialisation of the State. It should be remembered that the Industrial Policy Resolution of 1956 has al-

lotted certain spheres where both the public and private sectors could operate utilising the talents, resources and managerial ability at their disposal. Mr Chavan was quite optimistic that the member concerns of the Chamber would welcome technical and financial collaboration between the two sectors in a common desire to industrialise the State.

Mr Wagle in his turn pointed out some of the inhibiting factors that stand in the way. The inordinate and unwarranted delay in sanctioning many of the schemes, obviously the results of the red tapism, has more often than not been vexatious to the industrialists and the depressing spell cast thereby continue to frustrate many of their tribe. Another kind of co-operation suggested by him was the elimination of ruinous competition between small undertakings and large scale industries and harnessing of resources for constructive activities. The large scale units should offer enough opportunities to the small ventures to develop as healthy ancillaries for mutual benefit. Another disconcerting fact in the industrial scene pointed out by Mr Wagle was the high cost of production. This is regrettable at a time when the export drives are intensified. The growing power shortage is another obstacle of a serious nature that throttles up industrial activities. The sanction to establish a fourth thermal unit at Tata Hydro-Electric Company bears, heartening evidence of Government's earnestness in the matter.

AUTO ANCILLARIES Big Strides Taken

The progress made by the automobile ancillary units in the course of the last few years has indeed been tremendous. From about less than Rs 1 crore in 1955, value of production in the ancillary sector of the automobile industry has risen to Rs 7.5 crores in 1959 and has been estimated at an even higher figure of Rs 12 crores in 1961. The most encouraging feature of this progress is the headway that is being made in bringing an ever increasing number of ancillary items within the fold of indigenous production. It should be a matter of no small satisfaction that the entire range of items amenable to independent manufacture has been covered by licensing and that production facilities should have been established for most of them. The Third Plan has set up the objective of achieving 80 to 90 per cent indigenous component by the end of the Plan period. In the light of the progress being made and also of the current schemes for expansion and setting up of new units, this task should not pose insurmountable problems. An encouraging factor is the healthy spirit of coopera-

on the development of ancillary items by the three important organisations namely, the All India Automobile and Ancillary Industries' Association, the Vehicle Manufacturers' Association and the Development Council.

The industry's complaint about shortage of raw materials was heard by Mr Manubhai Shah, Union Minister for Industry, when he inaugurated the second annual general meeting of the All-India Automobile and Ancillary Industries Association in Bombay last week. The shortage is particularly felt in respect of special steel for which the indigenous production capacity is very limited. Attainment of full production capacity in the public sector steel plants and the implementation of the other schemes for production of special steel are not likely to make the automobile industry independent of imports in the near future. In this situation, importance attaches to the suggestion made by Mr Shah that the ancillary units could ensure their requirements of raw materials by production for export. This obviously will serve a dual purpose of meeting the raw material requirements and also enable the country to add to vitally important foreign exchange earnings. A careful and realistic study of the export possibilities of automobile ancillary items is therefore important. Such a study should indicate the number of items that could be exported and also the markets which can absorb such exports from the country.

PREMIER AUTOMOBILES

The 100,000th Vehicle

Production of the 100,000th vehicle by the Premier Automobiles Limited, marks a milestone in the economic development of our country. The importance of the achievement derives from the strategic importance of the automobile industry and the part which the founders of the company played in developing an industry that had to face great odds in the initial years of growth. It was in 1943 that with the vision of a pioneer, Mr. Walchand Hirachand started the Premier Automobiles with an authorised capital of Rs. 10 crores and paid up capital of Rs. 5.54 crores. The establishment of the company came as the fulfilment of a long cherished ambition for Sir M. Visweswarayya, who had conceived the idea of an indigenous automobile industry even before the outbreak of the Second World War and which had been thwarted only by the unfavourable conditions created by the outbreak of the Second World War and the apathy of the ruling Government. The exigencies created by the War were not conducive to any programme. Though protection was given to the automobile industry in terms

riff Commission 1953, production of automobiles was not rendered an easy proposition. Lack of development in the ancillary sector necessarily means a departure from the traditional pattern and entailed responsibility for manufacture of components which in turn called for correspondingly higher investment. The relatively small size of demand and foreign exchange difficulties also posed problems. Judged in this background it is a great achievement that the Premier Automobiles has been able to produce 100,000 vehicles in the course of less than 10 years. The growth of the company in terms of number of workers employed and turn-over etc. is no less striking. There has been an eight-fold increase in the number of workers from 1,000 in 1943 to 8,000 in 1961 while the increase in turn-over is from Rs. 4½ crores to Rs. 23 crores. The leading position it occupies among automobile manufacturing firms can be gauged from the fact that one out of every six automobiles in India is now being made by it with an indigenous content of 75 per cent.

ASHOK LEYLAND

Six Trucks a Day

In his address to the thirteenth annual general meeting of the shareholders of Ashok Leyland Limited Sir A. Ramaswami Mudaliar, Chairman traced the progress of the company during the last five years. Judging from the expansion of assets and the up-trend in production, the progress of the Company can be considered impressive. With a paid up capital of Rs. 3.45 crores, the gross block on 30 September 1961 stood at over Rs. 3.76 crores and the total assets on that date included stocks valued at Rs. 3.21 crores. During the year under review, additional buildings of the value of approximately Rs. 40 lakhs have been erected and additional plant and machinery of a value exceeding Rs. 56 lakhs have been installed. By the end of the current financial year nearly all the machine tools will have been installed. The most remarkable achievement of the company is its success in producing 2,400 vehicles during 1961, (which means more than six trucks a day) though five years ago it had set store on a production of the order of only 1,000 vehicles. The success in turning out more than 2,000 vehicles has been made possible mainly by introduction of double shift working in the factory. Production of vehicles is expected to rise to 3,000 in the current year. and the completion of the expansion programme for comet chassis will permit its production to be raised to 5,000 per annum.

Performance in respect of sales have been more than satisfactory. Sales for a nine-month period in 1961 are valued at Rs. 8,11,93,053 which compares with sales realisa-

Indian Finance

ceding twelve month period, which shows that the value of sales in the nine-month period in 1961 nearly equalled the sales realisation in the previous year.

NEWS IN BRIEF

Mineral Production in December 1961

According to the Indian Bureau of Mines there was a general increase in the production of both metallic and non-metallic minerals in December 1961. The throughput of manganese ore during the month at 104,000 metric tons was up by 1,000 metric tons over the production in November. (The total output of this mineral last year was higher by 5,000 metric tons at 1,204,000 metric tons) Chromite production shot upto 6,500 metric tons in December from 4,074 metric tons in November. Output of iron ore totalled 1,141,000 metric tons.

Among the non-ferrous group of metals, copper output moved by 4,404 metric tons to 40,251 metric tons. Lead and Zinc concentrates also recorded a notable increase in production. Gold production edged forward to 425 kg from 415 kg and silver went upto 550 wg from 440 kg. The production of crude mica rose to 2,470 metric tons from 1,889 metric tons, fire clay, kyanite and magnesite also registered sizeable increases. Limestone output increased by 111,000 metric tons to 1,352,000 metric tons.

Development Banks in Asia

A regional conference of the development banks in Asia will be held under the auspices of the Industrial Credit and Investment Corporation of India on 29-31 March in Bombay for fostering personal contact between the various development banks in Asia and exchange views on the multifarious problems that are common to them. The conference will hold detailed discussions on numerous topics such as technical aspects for appraising the proposal for financial assistance, problems of financial resources for development banks and taxation. Besides, two panels will give much thought on "Role of Entrepreneurship" and "Identifying Industries for Development". Among the various invitees, Burma, Ceylon, China (Taiwan) India (IFC, New Delhi), Iran, Iraq, Lebanon, Malaya, Pakistan, Syria and Turkey have consented to depute delegates to the conference while Japan will be represented by an observer. The IBRD, Washington together with its sister organisations IFC and IDA, the Commonwealth Development Finance Company Ltd., Britain and Kreditanstalt, West Germany, the Government of India and Reserve Bank of India are likely to send fraternal delegates.

Clive Street Gossip

"I must have liberty
Withal, as large a charter as the wind
To blow on whom I please"
—As You Like It.

HOLI has come and gone and left behind dazed but colourful revellers and a lot of grouse. The latter with their finicky horror of the rowdiness of the festivities, I cannot abide. And I find even more appalling the dreary arithmetic of those who reckon up the national "waste" involved in the ruined clothes. The hypocrisy of this is maddening when it comes (as it usually does) from grim and humourless men on the make who think nothing of throwing money away in keeping up with the Joneses. Social anthropologists the world over have seen in festivities like the Holi the coming into his own of the natural man, l'homme moyen sensuel, who is held under for the rest of the year is made possible by the abandon of one day. On this day, the ground under the feet of Authority and Decorum is cut: and unlike in the rest of the year, you can, as happens in the Punch and Judy show, clout a police man on the head, or what comes to the same thing, throw coloured water on him without raising anything but a laugh. I understand from my friends in UP and Bihar that Holi isn't what it used to be. In the old days, the celebrations used to run their orgiastic course for days, especially in the Braj country sacred to Sri Krishna, that is, the area around Muthra and Brindavan in the UP and the surrounding Rajasthan country. (The name Holi, according to one legend, comes from "Holika", the demon-sister of a devotee of Krishna, whom the Lord destroyed and the festivity is in honour of this exploit). In pre-independence days, when the rulers of Native States could do pretty nearly everything they wanted, the pranks some of them used to play on the Holi occasion are said to have been pretty shocking. A rather minor amusement of one of them, I am told, was literally shocking. He used to make unsuspecting guests sit on mats interwoven with live electric wires. All these are things of the past and we have become more sober in our notions of fun. What a pity that even this little bit of colour in our lives, should be grugged! It is all part of a pattern in which the only colour in our life is that provided by technicolor, remote, glassy and unnessy.

*

In Parliament last week, Mr Tyagi complained about the size of the new State Cabinets and small wonder. With the shining exception of Mr Kamaraj in Madras, every other Chief Minister has found it expedient

to form farcically inflated ministries. Uttar Pradesh has now 46 holders of ministerial office against 22 in the last ministry. West Bengal, inclined to gigantism in this as in other things, has 37 against 34 in the last. Mysore has increased its ministerial strength from 20 to 23, Maharashtra from 26 to 31 and Assam from 12 to 20. But the most glaring instance is that of Punjab where against 18 members in the old ministry we have 31 in the new. This means that in Punjab every third successful Congress candidate and every fifth member of the legislature is now a minister (which term includes here and in what follows not only a cabinet minister, but every holder of office). In Assam, (as in Punjab), every fifth legislator is a minister and every fourth Congressman, who, scrambled home in the elections, is a minister. In UP, every fifth Congress legislator is a minister and one ninth of the legislature will be ministers. In Mysore one out of every six possible contenders of office has succeeded. The reason for these obese and unwieldy ruling apparatuses is clear enough: in most cases it is the cynically practical one of accommodating factions. Other reasons more or less respectable are offered, but without real conviction or approximation to truth. Thus the necessity to train a second line of leadership is often mentioned, though the evidence of this having happened by what has been done so far in this direction is meagre. The most disingenuous justification is that there is work to do for these enlarged ministries. One wonders whom Mr Kairon expects to take in by his assertion that he had to increase the number of colleagues because of the "considerable increase in development work". Madras, one supposes, had an equal amount of increases to cope with and yet it has found nine ministers quite adequate. The reason why Madras is able to make do with a small cabinet is precisely what has made it impossible for Punjab and UP: it has no clamant dissidents to silence, no regional or other interests to propitiate and no assaults on a shaky leadership to buy off with office.

*

But the pity is, appeasement never appeases. With his forty-six-strong ministry, Mr Gupta is insecure for the leader of the dissident group is holding out. Secondly, even as you buy off old factions, new ones are started by those that have not been propitiated. Again, one can be dissatisfied as much by not being included in the cabinet as by not getting a particular portfolio. There is a distinct possibility of this happening in UP, if one is to judge by the

portfolios that Mr Gupta has retained for himself. With 13 colleagues to share his burden in the Cabinet, Mr Gupta thinks that he should look after, Home, Finance, General Administration, Planning (excluding Community Projects), Industries (excluding small scale industries), Medical, Power and Co-operation. (The cynic may see the exclusions as significant as the inclusions in Mr Gupta's responsibility. For example some indication of the relative importance and priority in the Chief Minister's way of looking at things can be had in his assigning small scale industries and community projects to the care of lesser mortals).

*

In a Parliamentary Democracy, convention decrees that once the leader of the party in the legislature is chosen, he should be allowed to pick his men without regard to the feelings of his rivals and that these rivals should give him their co-operation. That is the game played according to the rules and if it is not so played we may as well give up playing it. Moreover, a bloated cabinet is an administrative monstrosity. It combines the vices of eighteenth century British politics, with the more insidious ones implicit in the first law of Parkinson. With a Plan, the size of the Third, we can hardly afford such a large ration of self-indulgence.

*

The Cassandra of the world are tragic or comic depending upon whether events justify them or don't. In either case, they are without honour or love and this has nothing to do with whether we believe them or not. The first of this tribe was right but that didn't endear her either before or after the events she shrilly predicted did come true. If, as often happens, the predictions come to naught, they become figures of somewhat resentful fun. Much unkind derision (most of it in the security of survival) was heaped on the luckless astrologers who foretold the end of the world early February. I don't know what reception awaits Dr Arthur Upgren, an American professor who has cast and studied the horoscope of the US economy and come to some grim conclusions. Addressing, of all people, a group of insurers, he fixed the time of its collapse as 10.30 A.M., 18th day of November 1970. His reasoning as reported, runs as follows: the US financial structure was only 23 per cent liquid on the eve of the great crash in 1929, and at the rate at which things are going now, the whole monetary system of the US is likely to have its liquidity reduced again to 23 per cent on 18 November 1970. 10.30 hrs is chosen as the moment of doom because that would be the hour when banks will reopen for the day and cheques will get presented—only to be dishonoured. I do not know what the CEA which recently came out with its own less catastrophic fore-

cast of the next ten years thinks of all this. I have no access to Dr Upgren's definition of liquidity or to his calculations as the report I have read is very short. I cannot therefore say how far justified Dr Upgren is. Anyway it is the psychology rather than the correctness of such predictions that interests me. Here is as nice a packet of disaster as one could wish to while away one's duller moments. The Mitties of the Age of Anxiety like their day dreams to be quietly desperate rather than extravagantly romantic. This, apparently is the way the world ends—not with the bang of a hundred megaton bomb but with the whimper of a ten dollar cheque that bounces.

*

Literary life in the Soviet Union can it now appears, offer the thrills of a secret vice, not to mention the excitement of cloak and dagger. But there is a price to pay. You will, of course, have to abandon hopes of the Lenin prize for producing triumphs of socialist realism. This may not be a terrible deprivation. But the other price is a different thing: it is the dreaded midnight knock. A tantalisingly brief report tells of how a Soviet writer managed to smuggle his manuscript across through a West German tourist. (His earlier attempt to use a French tourist for the same purpose, it is reported, failed.) Having safely got his manuscript across, the canny gentleman wrote to Mr Khrushchev asking him for permission either to publish the novel or to leave the Soviet Union. The dusty answer he got was a warrant of arrest. I am curious to know what he is charged with—surely not having broken export regulations? Anyway, this is not the first time novels by Russian authors have crossed the Iron curtain for publication. Apart from the celebrated case of Pasternak, there was the case of the young author who wrote under the pseudonym of Abram Terz. Encounter printed a brilliant story by him entitled "The Trial Begins." Both the story and some of his literary views are such as would have surely led to his liquidation under Stalin. Here is a sample: "In the name of our target, we have had to sacrifice all that we had inherited and to use the same methods as our enemies: proclaim the omnipotence of Russia, write lies in the Pravda, put a new Czar in the empty throne. . . . Sometimes it seems to me that all that was needed for the final triumph of communism was one last sacrifice—the renunciation of communism." Again, "I put my hope in a phantasmagoric art, with hypothesis instead of a Purpose, an art in which the grotesque will replace realistic descriptions of ordinary life. . . . May the fantastic imagery of Hoffmann and Dostoevski, of Goya, Chagall and Mayakovsky. . . . teach us how to be truthful with the aid of the absurd and the fantastic." Doesn't it take your breath away? Well, it is something that such things get written though not printed in the Soviet Union. I wonder whether anyone would have dared even to think such things under Stalin.

EXPORTS

Call for Crusade

".....India will have to make much more than ordinary efforts to boost her export business. The whole nation will have to crusade for the export markets—not only in traditional lines, but along the entire front of exportable products," says the Report of the Import and Export Policy Committee (Mudaliar Committee) which was presented to Parliament last Monday. The call for crusade is supported by 101 recommendations designed to bring about the requisite atmosphere and administrative support for a successful export drive. Though Government's decisions have not been released along with the report, it is understood that most of those on which the Ministry of Commerce and Industry could take decisions have been accepted in principle. As for the others, Government may take more time to examine their financial implications before arriving at their decisions, which may not be available before the Budget is presented to the new Lok Sabha.

The Committee has emphasised that trade and tax policies at all levels should be export-oriented. The plea for larger imports of certain categories of materials is justified by reference to the contribution that these could make to increased exports. Regarding import policy, the Committee has expressed the view that "the solution of the problem of bringing the balance of payments in equilibrium lies not in further import restrictions—the scope of which is in any event, severely limited—but, within limits, in augmenting specific imports to remove the bottleneck on exports.....the present stringent import restrictions and rigid exchange allocations may continue in respect of production destined purely for the domestic market. But where exports can be really assured, Government should have no hesitation in making available to the parties concerned such raw materials and balancing equipment as are essentially required for the purpose." The question is whether it will be practicable in implementing the recommendation to draw a line demarcating production for the domestic market and production for exports any more than between 'maintenance' and 'development' imports. Regarding the latter the Committee observe that "Maintenance" and Development "of the economy are two facets of the same phenomenon and there can be no hard and fast dividing line between them, a conclusion that Mr Manubhai Shah should find thoroughly acceptable."

The Committee has indicated that the policy should be to give facilities for the import of raw materials and

components to all existing industries subject to a higher priority being given to the following types of new industries:

- Power and Transport which have proved a serious bottleneck;
- 'Export-oriented' industries;
- Industries producing raw materials and components now imported, with priority for those industries which will save the largest volume of foreign exchange;
- Industries depending almost entirely on indigenous raw materials and finding and arranging their own foreign exchange for the import of plant and machinery.

It is also added that industries financed through a programme of 'tied credits' will be an exception.

Referring to reports of under-utilisation of existing, effective capacity, the Committee has drawn attention to the lack of precise information on the subject and suggested that the Development Wing of the Ministry of Commerce and Industry should constantly review the position and recommend remedial measures. The results of such reviews should be published annually.

While emphasising that the business community will have to shoulder the main burden of responsibility of augmenting exports, the report adds that the Government also has the responsibility to compensate the trade for its export effort through selective concessions, fiscal reliefs and other incentives to make the export business worthwhile. Apart from the threefold system of income-tax remission, freight and tax rebates, the most striking suggestion made by the Committee is the proposal for setting up an Import-Export Stabilisation Fund, a Revolving Fund, to be administered by an autonomous Board. The Committee has suggested that it might be necessary to make available a sum of about Rs 25 to Rs 30 crores in foreign exchange as Revolving Fund. When it has attained the desirable level, any surplus foreign exchange that may accrue would revert to Government. In this connection the Committee has observed that it may be possible to finance import of additional raw material needed by export industries through the media of the Revolving Fund and that groups of international bankers may be agreeable to supply credit for import of raw materials to be used by approved exporters who can be relied upon to fulfil undertakings on exports. Referring to the 'currency retention' incentive tried in many countries, the Committee has observed that it is not necessary to let the Indian exporters

to have a free hold on any percentage of the export earnings. Instead, the scope of the present export promotion schemes should be widened to cover the whole range of items in our export markets, and the exporters' choice of imports should not be limited to one or two items as at present.

Among other matters the Committee has dealt with participation in international fairs, liaison with Indian traders abroad, tourism, etc. It has made a number of important recommendations for simplifying administrative procedures including reversion to the system of annual licensing. The Committee has examined the working of the STC and found that there is a field in which it can co-exist in comfort with private enterprise, if Government were to issue its directives to the Corporation after planning forward its import and export programme and if the services of the trade were to be utilised more fully. The Committee has also noted that diversion of trade, which is possible, has not detracted from the value of Rupee payment agreements, or of diversifying export outlets and providing new sources of supply for scarce materials. At the same time, the need for care to ensure that imports from rupee payment countries are limited to essential goods, and for keeping watch on prices is also emphasised. The Committee has adopted a pragmatic approach to barter trade which, it observes, often becomes necessary in prevailing conditions. On matters of general importance, the Committee has made the interesting observation that a great deal could be done to conserve and earn foreign exchange through an integral policy for the whole nation, including Defence industries, and suggested that a Commission of Enquiry, necessarily working in camera, may be appointed to go into the matter.

After the Mudaliar Committee's observations on compulsory Exports the only thing left to do with the ill-starred proposal is to give it a decent burial. Likewise the Committee sees no virtue in Compulsory Quality Control and Preshipment Inspection, recommended by the Ad Hoc Committee which reported last year. But the Minister for Committee and Industry apparently holds a different view on the subject.

I. S. I. Annual Meeting

In his presidential address to the annual meeting of the Indian Standards Institution, Mr K. C. Reddy referred to the report of the Ad Hoc Committee on Quality Control and Preshipment Inspection under the Chairmanship of Dr Lal C. Verman and said that the recommendations have been, by and large, accepted by the Government of India and added that if early action was initiated on these recommendations, the country's export trade could be put on a sounder footing within the next few years. In this context he also referred to the report of another Committee under the Chairmanship of Mr D. S. Joshi which had been set up to consider the possibilities of extending the use of certification

marks in the country. According to its latest decision, Government will have to consider the advisability of proposing a voluntary development cess on certain products to cover the cost of certification and

EXPORT PROMOTION

The Concrete Suggestions

The Mudaliar Committee has grouped the measures under different headings which are detailed below:

Aids and Incentives: (1) Increased allocation of raw materials to enable full utilisation of industrial capacity, with preference to export oriented industries; (2) creation of an import export stabilisation fund (3) a three-tier system of income tax remission of 7½ per cent on profits of "Basic exports", a tax rebate of 5 per cent on all export earnings to enable the exporter to build an "Export Development Reserve" and a special tax remission of 10 per cent on earnings on "additional" exports; (4) liberalisation of import entitlements to permit import of any raw materials, components or equipment; (5) reduction in railway freight upto 25 per cent in general and exceeding 25 per cent in exceptional cases; (6) other measures of specific assistance such as provision of fertilisers etc.

Removal of Disincentives: (1) drawback of import and excise duties on goods on the basis of a tariff to be drawn up for the more important items of export; (2) remission of sales tax involving a uniform rebate of 2 per cent.

Other Measures: (1) participation in international fairs, maintaining liaison with Indian merchants abroad; (2) fostering tourism by means of increasing hotel accommodation, provision of facilities for cashing travellers' cheques, offering tourists' discounts.

Miscellaneous: (1) Organisation of voluntary inspectorate by the trade to effect quality control and preshipment inspection; (2) export risk guarantee to be given by the ERIC for a period of five years;

The Committee has expressed appreciation of the value of rupee payments arrangements but suggests a proper study of price data as a safeguard against undue mark up in prices and also registration of contracts. On the STC, the Committee suggests that the Corporation should utilise the services of trade, and chambers and associations which will obviate the complaints now voiced against it. Registration of all export contracts with the rupee payment countries with the STC is also suggested.

REPORT OF THE AUDITORS TO THE MEMBERS OF MERCANTILE BANK LIMITED

We have obtained all the information and explanations which to the best of our knowledge and belief were necessary for the purposes of our audit. In our opinion proper books of account have been kept by the Bank so far as appears from our examination of those books and proper returns adequate for the purposes of our audit have been received from Branches not visited by us. We have examined the Balance Sheet and Profit and Loss Account set out on pages 6 and 7 which are in agreement with the books of account and returns. In our opinion and to the best of our information and according to the explanations given to us the said accounts give the information required by the Companies Act, 1948, in the manner thereby authorised for Banking Companies and on such basis the Balance Sheet gives a true and fair view of the state of the Bank's affairs as at 31st December, 1961, and the Profit and Loss Account gives a true and fair view of the profit ascertained in the manner therein indicated for the year ended on that date.

To be placed before the Shareholders at the Annual General Meeting to be held at the Registered Office of the Bank at 4, Clive Ghat Street, Calcutta on Monday the 26th March, 1962 at 11 A.M.

ANNUAL REPORT OF THE DIRECTORS FOR THE YEAR ENDED 31st DECEMBER, 1961

The Directors beg to submit to the shareholders the Audited Balance Sheet of the Company as at 31st December, 1961 and Profit & Loss Account for the year ended 31st December, 1961 together with the Auditors' Report thereon.

The Profit for the year after making provision for taxation and including the balance of Rs. 2,07,685.45 brought forward from the previous year's account amounts to Rs. 22,57,694.16

Out of this amount the following appropriations have been made:
To Reserve Fund under Section 17 of the Banking Companies Act Rs. 4,11,000.00

Leaving an available balance of Rs. 18,46,694.16

Out of the above the Directors recommend the payment of a Dividend to the shareholders @ 6 per cent per annum, subject to deduction of tax at the prescribed rates in accordance with the provision of the Income Tax Act, absorbing Rs. 16,07,000.00

Balance to be carried forward to next year's account Rs. 2,39,694.16

The Bank's business during the year made satisfactory progress. During the year under report two branches—one at Behala (Calcutta) and another at Coke-Oven area in Durgapur (West Bengal) were opened. Tezpur Industrial Bank Ltd., and Cuttack Bank Ltd., were amalgamated with the Bank on 4-9-61 pursuant to the schemes of amalgamation prepared by the Reserve Bank of India and sanctioned by the Central Government under Section 45 of the Banking Companies Act.

Dr. N. N. Law, Sir C.B. Mehta, Sri T. S. Santhanam, and Sri B. I. Chaturvedi retire by rotation and being eligible offer themselves for re-election. The shareholders are requested to appoint Auditors for the ensuing year and to fix their remuneration.

AUDITORS' REPORT

We have audited the annexed Balance Sheet of United Bank of India Ltd. as at 31st December, 1961 and also the annexed Profit & Loss Account of the Bank for the year ended upon that date in which are incorporated the Returns from the Branches audited by other Auditors. (The reports on the accounts of the branches audited by other Auditors have been dealt with in preparing our report in the manner considered necessary by us.)

In accordance with the provisions of section 29 of the Banking Companies Act, 1949, read with the provisos to sub-sections (1) and (2) of section 211 and sub-section (5) of section 211 and section 227(5) of the Companies Act, 1956, the Balance Sheet and Profit & Loss Account are not required to be and are not drawn up in accordance with the Sixth Schedule to the Companies Act, 1956. The Accounts are therefore drawn up in conformity with Forms A & B of the Third Schedule to the Banking Companies Act, 1949.

We report that:

- we have obtained all the information and explanations, which, to the best of our knowledge and belief, were necessary for the purpose of our audit and have found them to be satisfactory;
- the transactions of the bank which have come to our notice, have been within the powers of the Bank;
- in our opinion, proper books of account as required by law, have been kept by the Bank so far as appears from our examination of those books and proper returns adequate for the purpose of our audit have been received from the branches of the bank;
- the Bank's Balance Sheet and Profit & Loss Account dealt with by this report are in agreement with the books of account and the returns;
- in our opinion and to the best of our information and according to the explanations given to us, the said accounts give the information required by the Companies Act, 1956, in the manner so required for banking companies and on such basis the said Balance Sheet gives a true and fair view of the state of the affairs of the Bank as at 31st December, 1961, and the Profit & Loss Account gives a true and fair view of the Profit for the year ended upon that date.

Dated, Calcutta,
The 16th February, 1962.

RAY & RAY,
Chartered Accountants.

other research and developmental activity which could be organised for the benefit of these industries.

The annual meeting provided the opportunity for a review of the impressive record of work of the Indian Standards Institution. As on February 28, 1962 the number of Indian Standards prepared on different subjects stood at 1904. The Third Plan target is 500 standards a year. The ISI has also issued 390 certification marks licences covering a number of products ranging from National Flag of India to aluminium conductors and wires.

It was indicated by the Minister that the General Assembly of the International Standards Organisation may meet in India in 1964, provid-

ing Indian experts with the opportunity to meet their overseas counterparts for exchange of views on matters of technological importance. This is an important consideration, especially in view of the fact that it is not possible to meet the foreign exchange needs for all the delegates to attend similar conferences held abroad. Mr Reddy agreed with Dr Verman that personal participation by national delegations cannot be substituted by written reports or even by submitting comments through proxies.

Trade with New Zealand

Prospects of increasing India's trade with New Zealand were explored by

J. R. Marshall, New Zealand's Deputy Prime Minister, who visited Delhi on his way back after attending the ECAFE session in Tokyo. Besides meeting the Prime Minister Mr Marshall had discussions with the Union Ministers for Finance and Commerce and Industry. At a press conference Mr Marshall indicated that, besides traditional Indian exports, like tea and cotton piecegoods, engineering goods also might be able to gain a footing in the New Zealand Market on a competitive basis.

It is understandable that New Zealand is not enthusiastic about the proposals for setting up an Asian Common Market; for, ninety per cent of New Zealand's exports of lamb, butter and cheese go to Britain, and a

regional grouping is hardly likely to enlarge the outlets for these commodities which may be adversely affected by Britain's entry into the EEC. New Zealand basic policy, said Mr Marshall, is multilateral trade without discrimination and within the framework of the GATT. New Zealand is interested in increasing trade with markets in the South East Pacific region on a competitive basis. Among the products that New Zealand could supply India, Mr Marshall mentioned, Wool, Milk Powder, Wood Pulp, Newsprint and Tallow. He said that it would be advantageous for India to export vegetable fats for which there is market in New Zealand and import tallow which is cheaper.

ECAFE

A Report from Tokyo

The 18th session of the United Nations Economic Commission for Asia and the Far East held in Tokyo recently had a heavy agenda of business to transact, ranging from review of development in member countries to discussion of the more pressing of the problems being faced by these countries in their march to further development. The ground-work for some of the business to be transacted at the Tokyo session was laid by the discussions and decisions at earlier meetings of affiliate bodies of the ECAFE. Between 19 January and 14 February 1961, for example, a group of experts had met in Bangkok to discuss the principal elements of industrial planning. Subsequently, a conference of Asian economic planners was held in New Delhi from 26 September to 3 October 1961 to discuss the scope for mutual regional co-operation between the Asian countries in the interest of more rapid economic progress. Under compulsion of the formation of trading groups in Western Europe such as the ECM and the EFTA there has been greater awareness of the need for co-operation between the Asian countries to counter any adverse effects that might be spelt by these trading groups. Quite a few schemes including formation of a customs union or even lesser form of co-operation involving only some degree of trade liberalisation and limited integration and co-ordination of efforts had figured in subsequent discussions. The ECAFE session at Tokyo was expected to endorse some decisions for concrete schemes for co-operation. In the event, the difficulties in the way of the formation of any trading group similar to those now formed in Western Europe had proved to be more formidable than were originally reckoned. In a realistic appraisal of the problem constituted by formation of a trading bloc, the Japanese delegate Mr Akira Ohya, pointed out that "since the economies of most of the Asian countries are still in the process of development, it is admittedly most impractical for them to aim at the immediate establishment of a regional economic arrangement similar to that of the European Economic Community and the European Free Trade Area in Western Europe". Japan's lukewarm attitude to such trading blocs for the Asian countries in the current context of international trade, had been known even earlier. However, it was heartening to hear the Japanese Premier Mr Hayato Ikeda, assure the member countries that Japan is determined to contribute positively to a peaceful reconstruction of the ECAFE-region while paying due consideration to the policies of the advanced

nations of the world. The only concrete outcome of the session having relevance to Asian economic co-operation was the unanimous decision to set up an Asian Institute of Economic Development.

In so far as economic development in the ECAFE region is concerned, the Commission has presented a report which records only tardy progress in development in the course of the last decade. India, Indonesia, Thailand, Pakistan and Ceylon are shown to have registered a growth rate of per capita income of less than 2 per cent, which is very unsatisfactory. Capital formation also has not registered marked improvement and is high only for Japan which has a figure of 21.6 per cent which compares with 14.9 per cent for India, 14.4 per cent for Thailand and 13.1 per cent for Taiwan. The infra-structure had however recorded marked progress and this was owing to the stress laid on development of transport, communications etc in the plans drawn up and implemented in these countries. The doubling of the installed capacity for power in the course of a decade in the ECAFE countries is one of the most salutary results of planning achieved by these countries. The progress in the field of transportation has been no less remarkable.

In the field of industry, it has been stated that investment has been smaller than in agriculture. In all the countries, with the exception of Philippines, public investment in manufacturing industry is shown to be somewhat larger than private investment. The report however draws attention to signs of change in the role of private and public investment in the Philippines, Pakistan and in some other countries also.

It is in the field of agricultural production that the most disappointing results have been recorded. As compared to the infrastructure, investment in agriculture is shown to have not produced comparable results. Only Japan with 29 per cent and Philippines with 17 per cent rise in agricultural production have made any worthwhile headway. India's performance in showing only 10 per cent increase is not satisfactory. But Pakistan has fared worse having registered only 3 per cent increase while the increase recorded in Burma at 5 per cent is only slightly better than Pakistan's. The reason for the relatively slower progress in agriculture is shown to be the inadequate attention to agriculture and also misdirected investment.

The session was rendered memorable, by the differences of opinion that were provoked among delegates of member countries by the observations contained in the

report on the progress of planning in the member countries. Exception was taken by the delegates of Indonesia and Cambodia to the report on the score of lack of objective assessment. The report is noteworthy for the new note of disapproval of the existing pattern of development in India. For the first time, the ECAFE has made some vehement criticism of Indian planning going to the extent of questioning the capital intensive basis for growth accepted by Indian planners. This bias toward capital intensive pattern of growth according to the report has led the Government into foreign exchange difficulties, and increased the strain on the economy and inflicted forced savings through a rise in prices. Indian planners are criticised for having overlooked the impact of world technological changes, the dangers of excessive foreign borrowing, and the very high capital costs of spectacular industries which promise comparatively less in terms of growth and in relation to the sacrifices implied. Stating that the country did not explore fully the avenues which would have secured a more rapid expansion of output, with relatively smaller input of capital, the report suggests that a different investment strategy might in the short run have made the process of growth not only quicker but easier for the people. While conceding that in terms of the amount of work done the record is impressive, it is observed that some results lie still ahead while some have not come upto expectations. Lagging progress in agriculture and in the intermediate section between agricul-

ture and modern industry is shown to reflect the main weakness of Indian planning being a direct result of the preference for capital intensive growth. Other points of criticism of Indian planning raised in the report relate to the relatively subsidiary role assigned to the private sector vis-a-vis the public sector and the stagnation of exports.

The ECAFE criticism of Indian planning should cause surprise only for the reason that it should be voiced now even though the bias for capital intensive pattern of growth had been evident long ago. It is also remarkable that no dissenting opinion had so far been advanced by the World Bank which had been intimately associated with Indian development, and the assistance provided by which had implied approval of the basis of Indian planning. It may also be pointed out that the decision in favour of the capital intensive pattern of development was taken after adequate consideration of the pros and cons of development by the Indian planners. For a country like India which until recently suffered from century-old stagnation arising from industrial backwardness, the growth of basic and heavy industries was fundamental to apid growth. It is however not denied that in the light of some of the adverse effects that had followed, the basis of development will admit of slight adjustment. The scope for such alteration will in the present circumstances be necessarily narrow. Also the extent to which such alteration may be necessary will depend upon the results of the Third Plan.

Markets

JUTE

Easier Trend

THE jute markets ruled easier during the past week due mainly to speculative selling pressure. Although earlier in the week there were reports of enquiries from a number of countries, sentiment deteriorated in the second half of the week in the absence of fresh support coupled with profit taking. Although near delivery positions were in demand business passing was of moderate proportions. The fact that mills were free sellers in forward deliveries accentuated the downtrend. It would appear that the easier trend had been touched off by the lower burlap consumption in US during last month. US Burlap consumption in February was placed at 78 million yards as compared with 88 million yards in January. Although few had expected the figure for last month to report a rise over that for January, the general expectation seemed to be that consumption would have been much higher than 78 million yards. The fact that stocks have risen seems to have also been responsible for the bearish trend.

The rate of despatches has been well maintained in February. Total despatches during the month were at

89,900 tonnes as compared with 90,800 tonnes in the previous month. Despatches for export were at 62,300 tonnes while those for internal consumption were at 27,600 tonnes. Hessian despatches for export at 34,000 tonnes were only 200 tonnes lower than in the previous month. Sacking despatches for export however were 2,200 tonnes lower as compared with the previous month at 22,200 tonnes.

The raw jute market ruled dull with sellers keen for business. Mills continued to clear their quotas but toward the close of the week the market developed a weak tendency in sympathy with the goods section.

TEA

Arrivals

WITH the 1961-62 season drawing to a close, arrivals of Tea in the Calcutta Port dwindled to 140,599 chests in February from 543,809 chests in the previous month; but were higher than the arrivals in February last year when they totalled 81,030 chests.

Total arrivals in the eleven months ended February 1962 increased to 4,984,337 chests from 4,424,728 chests in the corresponding period ended February last year. Arrivals by rail rose from 1,229,701 chests to 1,390,259

chests in the period under review as did those by river and road from 2,823,698 chests and 206,972 chests to 3,051,909 chests and 394,596 chests respectively. Arrivals by air, however, fell from 164,357 chests to 147,573 chests.

According to a bulletin issued by the UN Food and Agricultural Organisation, the present rising trend in tea production, trade and consumption is likely to continue throughout the current year; but it warns that increased supplies of plain teas may cause prices to weaken. Because of the increased activity, export earnings of the producing countries, especially India, have risen.

No export sale was held in Calcutta this week. The next and final sale for this season will be held on 28 March.

Production of tea in Indonesia fell to 5.5 million pounds in October 1961 from 5.7 million pounds in the previous month and 8.7 million pounds in October 1960. In the ten months ended October 1961, total output amounted to 74.8 million pounds as compared with 81.7 million pounds in the corresponding period of 1960.

COTTON

Dim Prospects

THE cotton futures during the past week was hovering around the official ceiling of Rs 693.00 with hardly any prospects of business. The extremely tight cotton supply situation was once again the focal point of attention of the authorities as well as the trade and industry. Several aspects of the cotton trade such as supply position, the need for requisitioning, the urgency for largescale imports and the demand for exports were discussed threadbare during the week under review. The Textile Commissioner, on his part, made known the stand taken by the Government in the press interview to facilitate the supply of cotton to the mills to meet their requirements at the ceiling prices. He also pointed out that as the import cotton from foreign countries would of take some time the mills requirements should be met from the domestic sources as far as possible. He also warned the trade to honour the statutory ceilings fixed by him.

The Cotton Advisory Board which met toward the latter half of the week took up various problems of cotton and drew up the following suggestions. The Board requested that an immediate decision should be taken on the question of price policy for cotton before the ensuing sowing season commences. It also suggested that at least one million bales of cotton should be imported immediately to tide over the present crisis and they should be distributed to the mills before the end of August and a further quota for the export of Bengal Deshi of 75,000 bales should be released soon. Over and above these an additional quota of 10 per cent of indigenous growth should be issued to the mills before the expiry of this month.

The cotton growers and the trade in a memorandum submitted to the

Government indicated that the price control policy of the Government did not allow any increase in the production of cotton in the country. Therefore they urged for a speedy decontrol.

Trading in the futures market was simply colourless as there was little interest in the maturing Jarilla March contract. Business transacted during the week was purely of a squating up nature and the quantity involved was small.

In the spot market at Sawri mill buying continued unabated and volume of transaction amounted to nearly 4,000 bales each day. Prices naturally ruled firm. Popular indigenous growths like Vija, Digvijay, Laxmi, Surti, and Kalyan met with good mill interest.

In the import section, rumours were astir that the Government was negotiating for the import of nearly two lakh bales of American cotton against the export of manganese ore to that destination. It was also reported that the Government was striving to get a least 1 lakh bales of cotton from America against an export of sugar. Deliberations are afoot to import cotton from Sudan under barter or on deferred payment. The import section on the whole presented a sorry spectacle as it was bereft of any important development.

Consumption of cotton by the Indian mills from 1 September to 30 November amounted to 1,429,659 bales against 1,286,801 bales in the relevant period in 1960.

Description	1960	1961
Indian	931,876	1,147,075
Pakistan	8,816	141
American	218,740	166,636

Japan	60,617	80,052
USA	206	14,439
Other Countries	68	367
Total	73,002	121,393

Sugar Prospects

The Union Government has now released only 190,000 tons of sugar for sale in the open market as against the normal release of 200,000 tons a month. This reduction has been made in compliance with the request of the trade, which had lately expressed concern over the fall in sugar prices in certain States. It is learnt that the Government will study the impact of reduced releases on market prices before restoring the normal monthly releases of 200,000 tons.

The release now made has been generally welcomed by the sugar trade and the consumers. The previous quota was announced on 13 February. The announcement is likely to check the rise in prices noticed recently. As a matter of fact, prices in the Hapur market are ruling steady as the stocks with the factories are reported to be running down. Superior quality continues to attract good support from the South. Rajasthan, and the Punjab. Inferior small crystal variety is also in request from East Uttar Pradesh. With the result, prices of this variety have registered small gains.

Reports from Uttar Pradesh—the major producing State—are indicative of growing strength in the sugar markets there. It is stated that the mills have entered into substantial commitments against release of quota for free sales. According to these reports, business has been put through for C and D grades at prices higher than the former controlled rates by 25 p to 50 p per bag. The price for 'E' grade remains unchanged.

Certain circles feel that regulating releases of stocks of sugar from the factories may temporarily help to maintain the price; but unless vigorous steps are taken to promote sales here and abroad, it will be difficult to bring stocks down to more reasonable levels. Although the price of the commodity has improved somewhat during the past week or so, the industry is still embarrassed by a large accumulation of stocks.

According to the Indian Sugar Mills Association, sugar production in February was 510,000 metric tons as against 503,000 tons in February last year. This brings the total production for the 1961-62 season up to the end of February 1962 to 1,648,000 tons as against 1,824,000 tons during the corresponding period of last year. The offtake of sugar from the factories during the same month was 182,000 tons as against 187,000 tons. Total despatches, during the first four months of the 1961-62 season, were 773,000 tons as against 677,000 tons for the corresponding period of 1960-61. The closing of stock with the factories, as on 28 January 1962, was 2,020,000 tons as against 1,697,000 tons on the corresponding date of last year.

As far as exports are concerned, the outlook is far from encouraging. The latest reports of the sugar companies show how they have incurred substantial losses by exporting the

commodity. The trend is not expected to change in the near future considering that sugar is in surplus in world markets.

In spite of the prospect of a smaller world crop during the current year, sugar is likely to be in substantial surplus. Unless steps are taken to cut back production, it will be difficult to bring supplies in line with demand. Whether the news with regard to the move by the USA to buy sugar at world prices instead of by paying premiums will help induce manufacturers to restrict production by agreement is being debated.

The setback in production has already forced Cuba to cancel contracts for supplying 500,000 tons to the Soviet Bloc, which is equivalent to loss of \$45 million. According to reports from Havana, shortages of western-manufactured machine parts in Cuba coupled with industrial management difficulties are adding to the setbacks in sugar production to bring a new economic crisis this year.

GUR

In the Delhi market, Gur futures have firmed up with the Baisakh contract crossing the marginal level of Rs 16.25 due to persistent bull support. A special margin of Rs 175 has been imposed on the bulls against their outstanding transactions in the contract. The rising tendency is attributed to higher advances from the spot market coupled with the fears of a fall in production by about 18 per cent. The reported drop in arrivals in the producing mandies and the good demand from the consuming centres have also aided the rising trend.

In the spot section, gur pansera quality has risen to Rs 16 a maund at Hapur and to Rs 17 at Muzaffarnagar. Reports from Sonapat, in the Punjab, indicate that about 75 per cent of the total crop in gur has so far been marketed. The news, that the Government of India has submitted to the USA a tender offering sugar in response to immediate import requirements placed at about 174,000 tons of raw sugar, is another factor contributing to the rise. Brisk export demand from West Asian and East African countries has also influenced the bullish tendency.

FOODGRAINS

A downward trend in the prices of Foodgrains has been noticed in the Hapur market, thanks to good crop prospects and the selling pressure from stockists. Wheat prices have declined fractionally to Rs 13.75 a maund for the average quality and up to Rs 17.50 for the farm produce. The market for Rice remains depressed in sympathy with the fall in the prices of other grains. Gram has registered a fall of over Re 1 a maund to Rs 13.50 for the Punjab variety due to easier advances from the Punjab on bumper crop expectations. Barley prices have drifted lower to Rs 11.75, while stockists

were anxious sellers of Maize. Bajra is quoted lower at Rs 13.75 in the absence of seasonal demand. Peas and Arhar prices have eased, as the demand is slack.

COFFEE

As on 1 March 1962, the receipts of 1961-62 Coffee crop into the Pool amounted to 24,836 tonnes comprising 18,944 tonnes of Plantation variety; 3,573 tonnes of Arabica Cherry and 2,319 tonnes of Robusta.

Up to the end of February, the sales for export from the 1960-61 crop amounted to 31,215 tonnes comprising 17,921 of Plantation; 4,762 tonnes of Arabica Cherry and 8,532 tonnes of Robusta. Sales from the 1961-62 crop amounted to 1,983 tonnes of Plantation variety.

During February 1962, the releases for internal market amounted to 2,481 tonnes comprising 882 tonnes of Plantation; 314 tonnes of Arabica Cherry and 1,285 tonnes of Robusta, bringing the total releases for January and February to 5,103 tonnes as against 5,563 tonnes in the corresponding period of last year.

The third coffee export open auction was held in Mangalore towards the end of last week. Following were the range of prices fetched (per 50 kilos): New Crop Plantation A Rs 215.50 to Rs 225; Plantation B Rs 205 to Rs 215; Plantation C Rs 187 to Rs 195.50; Old Crop Robusta Cherry A Rs 97 to Rs 103, Arabica Cherry Rs 90 to Rs 167.

TIN

Tin in the international markets has developed a hardening tendency during the past few days. The renewed strength, which is in sharp contrast to the dull spell that obtained only a few days ago, is generally attributed to a revival of the consumer demand.

Traders on the London Metal Exchange, commenting on the rise in Tin prices, say that the supply position has worsened steadily in the recent past. The consumers, who were inclined to wait in anticipation of the releases of the strategic US stocks at around £965—which is the international Buffer Stock ceiling—appear to have changed their ideas in the absence of any indication from the USA. The demand for the metal has, therefore, gradually revived and is considered encouraging at present.

Though the Tin Agreement has been finally ratified, the producer countries have continued their campaign for still higher ceiling prices. Obviously, the new ceiling fixed recently has failed to satisfy the producers.

With the economic outlook improving and the season of maximum consumption approaching, consumers will be forced to enter the market and considerations of price will have to take a second place. Under these circumstances, it is reasonable to expect that the price of cash tin will advance more rapidly than that of three months delivery.

BANGALORE SILK

In the Bangalore market, prices of filature raw silk of 20/22 Dr continued to be quoted between Rs 84.89 and Rs 85.99 per kgm. during the week ended 16 March. Rates of charka raw silk as well as that of cottage basin raw silk remained steady between Rs 46.30 and Rs 71.65 and Rs 73.85 and Rs 78.26 respectively.

Spun silk yarn of 2/210's was quoted at Rs 81.40 per kgm.

Prices of reeling cocoons in Sidlaghatta area increased slightly and varied between Rs 3.40 and Rs 5.30 per kgm. whereas that in Mugur area decreased to a level between Rs 4 and Rs 5 per kgm. The Mysore race seed cocoon prices declined sharply which ruled between Rs 5 and Rs 8 per thousand. Foreign race seed cocoon prices rose to a level between Rs 5 and Rs 15 per thousand.

In the Bhagalpur market, Tasar silk prices remained steady during the week ended 16 March 1962. Prices of tasar raw silk varied from Rs 68.14 to Rs 105.82 and that of silk waste and spun silk yarn ranged from Rs 22.04 to Rs 26.46 and from Rs 30.86 to Rs 48.50 respectively. Prices for daba and bogai were quoted at Rs 115 and Rs 100 per kahan respectively. Serikan cocoon prices ruled between Rs 40 and Rs 45 per kahan.

Landed cost of Japanese raw silk of 20/22 Dr was Rs 85.44 per kgm as on 3 March, 1962.

OILS & OILSEEDS

A sharp fall in prices characterised trading on the Bombay Oilseeds Exchange. The decline in prices was led by groundnut under the impact of sustained offerings and shrinking purchases.

The Groundnut section was the main target of the bear operators who, being influenced by the pressure of ready materials in Bombay as well as in the primary markets, tried frantically to expand their holdings. Unnerved by the falling prices, stockists tried to unload, resulting in a heavy fall in prices.

The improved supplies in groundnut in the face of falling prices was caused by the mounting stock with the growers and stockists. The estimate of the crop at 28 lakh tons seemed to become more acceptable. Ready Groundnut Bold variety was quoted at Rs 46.25 and Groundnut Oil at Rs 10.05.

Prices in the Castorseed section developed a reactionary tendency in the absence of any overseas demand for castor oil. Ready Castor quoted at Rs 33.54.

Prices in the Linseed section were mainly influenced by the trends in the spot section, which were indicative of a bearish situation. Discouraging reports from Delhi about mustard were also a contributory factor. Ready was quoted at Rs 35.62 and Linseed Oil at Rs 15.10.

The Cottonseed section followed the general trend of the market and closed lower. There was a general tendency to await further developments.

PRICE TRENDS				
	As on 15 March Rs	As on 21 March Rs

Devkaran Nanjee Banking Co., Ltd.

Continued Allround Progress

Chairman, Shri Lalitchandra C.D. Nanjee, on Banking Reforms

The following is the Speech of the Chairman Shri Lalitchandra C. D. Nanjee at the 25th Annual General Meeting Held on Wednesday, the 14th March 1960.

Gentlemen,

It gives me great pleasure to extend to you all a cordial welcome to this 25th Annual General Meeting of your Bank. The director's report and the Accounts for the year ended 31st December 1961 have been in your hands and with your permission, I shall take them as read.

The progress of your Bank during the year that has passed and its effective contribution in the general development of banking in the country should obviously be viewed in the perspective of the overall trends in the economy, particularly in the banking sphere. I therefore take this opportunity of reviewing briefly the impact of the economic trends on the banking system, and then refer to the bank's progress in particular.

BANKING SYSTEM AND THE ECONOMY

We have completed a decade of planning and the third five year plan is in the process of implementation. There has been an increase in the rate of investment in the second plan period to about 11 per cent. of the national income, and the target for the third plan is fixed at 14 per cent. This high rate of investment, as you are aware, implies the mobilisation of savings in the economy. In the second plan period, the savings are estimated to have risen to about 8 per cent of the national income, and in the third plan it is necessary to step up this rate of savings to 11 per cent. The significant fact is that in the process of development the rate of savings has lagged behind the rate of investment, by nearly 3 to 4 per cent, and this has inevitably forced the economy to rely on foreign resources. With the noticeable progress in the second plan period in the agricultural and industrial sectors and the buoyancy in the economy, it is necessary to augment the domestic resources in terms of mobilising the increases in income. The per capita income is steadily rising. From Rs 267.8 in 1955-56, it rose to Rs 279.0 in 1959-60, and was Rs 292.5 in 1960-61. Both money supply with the public and scheduled bank credit have recorded a significant expansion, and the money market has been experiencing stringency during the busy seasons of the year.

The progress reflected in the above figures and the stability achieved by the economy during the second Plan period owe a good deal to the policy pursued by the Finance Ministry both internally and externally. The Parliament approved the Second Plan without sufficient resources of our own; the Third Plan is still more ambitious, but we are aware that we do not have adequate resources for the same. The gigantic task of pulling up the economy from its low level by creating suitable conditions within the country to encourage savings and investments on the one hand and by inspiring confidence among friendly countries to give us increasing amounts of aid towards the planing effort on the other has been achieved in a quiet but effective way by the wise guidance and statesmanship in recent years to the lasting benefit of the country.

BANK CREDIT AND INDUSTRY

The high priority given to industrialisation, particularly in heavy and medium industries, both in the public and private sectors, has focussed the need for maintaining the supply of financial resources in adequate volume and in time. The index of industrial production has risen from 100 in 1951 to 132.6 in 1956 (the end of the first five year plan), and to 194 in 1960, and there was a decline to 178 in September 1961. The magnitude of investments in industry and the progress achieved, with all the diversification in industries has posed a challenge to the commercial banks to meet the needs of industries in an increasing measure. Over the decade 1951 to 1960 industrial credit by the banking system increased by Rs 410 crores or by nearly two-thirds of the total increase in bank credit, raising its relative share from 32 per cent to 51 per cent. This is clearly indicative of the dynamic role which the commercial banking system has played during the last decade, and particularly during the second five year plan period, in meeting the demands for credit by industries. The index of bank credit itself has risen from 100 in 1952-53 to 257.1 in December 1961. In 1951, the total advances of scheduled banks were Rs 580 crores of which 33.5 per cent was for industry. By 1956, the advances rose to 794 crores of which 38.5 per cent was for industry. The advances touched the impressive figure of Rs. 1,100 crores in 1960

of which 51 per cent. was for industries. This is a very vital change in the pattern of development of bank credit in the country, and I believe the trend for increased bank credit for industrial purposes will continue with intensified pressures. This obviously reflects the growing tempo of industrial activities in the country, inspite of the stresses and strains reflected in various shortages of essential raw materials, in coal, in economic overheads of power and transport and consequent unutilised capacity in a number of industries.

SLOW GROWTH IN DEPOSITS

The banking system has tried to provide adequate and timely credit for the industries through their efforts in mobilising the savings of the people in terms of increased deposits. With the adoption of a policy of branch expansion, the banks could increase the number of offices from 2,646 in 1951 to 2953 in 1956 and 4141 in 1960. The deposits increased from Rs. 870 crores in 1951 to Rs. 1,052 crores in 1956 and to Rs. 1,807 crores in 1960. But compared to the pace of rise in demand for bank credit, the rate of growth in deposits does not seem to be adequate, particularly in relation to the increasing pressure on the banking system from industries for funds apart from the normal demand by trade. While, no doubt, the stagnation in deposits which was witnessed in the latter half of 1960 has disappeared, and in 1961 there has been an improvement in total deposits of all scheduled banks, the rate of growth will require to be considerably stepped up, if the banks are to meet effectively the demands made on it during the third plan period. It is expected that the banking system will not only have to satisfy the increasing requirements of trade and industry, but that it would also make a sizeable contribution to public borrowings. Therefore, there is need for making sustained efforts to increase the deposits of the banks so that they may exceed by a fairly high margin the rate of increase in credit demands. This is essential if the resources for financing industry, trade and commerce are not to be restricted in any manner.

The situation calls for an active and co-operative approach on the part of the banking system for a sustained drive for penetrating

new areas and for promoting banking habits, thus increasing the resources that would flow into through an increase in deposits. In this connection, the inadequacy of the banking system for the requirements of a vast country like India, even at this stage of development, need not be over-emphasised. In spite of the growth in the number of offices, the base of the banking structure has not been widened. The ratio of bank offices to population still remains at one to 88,000 in India. The branch expansion programme of the Indian Banks has no doubt helped, but for reasons well-known such expansion is often restricted to areas where certain advantages are already available. This would show the degree of concentration of banks in cities and towns, where industries are growing and population attracted.

REORGANISATION OF BANKING STRUCTURE

Sometimes suggestions have been made for eliminating small banks and having only a few big units. While the need for the elimination of sub-standard and non-viable banking units through amalgamation or otherwise is recognised, it does not follow that small banks are necessarily weak and not playing their proper role. In fact, in the emerging pattern of credit in the economy and owing to the vast country that India is with a very large population and varied needs in the different regions, it is of the utmost importance that the requirements of different areas are fully known. The large element of local knowledge and the personal contact so necessary for developing the banking habit will be easily at the command of smaller regional banks. These banks would be in a better position to mobilise the deposits in the areas they serve and meet the credit requirements in time in an efficient manner. It is, therefore, necessary to examine whether it would be a desirable policy, in the context of our requirements to prefer only a few large banks created by the process of amalgamation to the development of local banks in different parts of the country. I would clearly emphasise the need for a practical approach in the reorganisation of the banking structure to suit the requirements of our country under planning. In a country like India with diverse languages, it is only the personal approach which can build

up local contacts; the larger the controlling unit of an organisation the greater the impersonal nature of its work. The growth of small units should not, therefore, be viewed from any other consideration, except that of their soundness and their capacity to satisfy the requirements of the law.

CREDIT INFORMATION BUREAU

The changing pattern of bank credit also raises the problem of having an institutional set up for a close and careful scrutiny of the borrowings by trade and industries. The knowledge of total banking commitments of customers would be of considerable importance to banks, while considering the proposals for financial accommodation or in reviewing the advance portfolios. Therefore, the proposal of establishing a Credit Information Bureau for banks, mooted sometime back by the Reserve Bank, should be taken up for early implementation. The potential information that may be supplied by the bureau could be of value to the individual banks if there was over-trading by the clients or if there was over-borrowing.

RESERVE BANK AND BANKING REFORMS

It is a matter for gratification that the Reserve Bank of India which has been enforcing selective credit controls on the banking system has felt the need for a more flexible approach and the building up of certain conventions rather than legislation or directives for the healthy development of the banking system. In accordance with this approach the Reserve Bank of India, which had outlined certain proposals in June last for strengthening the banking system, has recently formulated its final recommendations. The maintenance of a reasonable ratio between capital and reserves to deposits as well as a reasonable liquidity ratio, which at one time appeared to bring about some rigidity in the affairs of banks and which it was feared would hamper their progress and capacity to play their part in the process of development, is now left to the convention suggested by the Reserve Bank of India. According to this convention, the Scheduled Banks are expected to transfer atleast 20 per cent. of their annual declared profits to their published reserves. This is to be done even after the reserves become equal to the paid-up capital, with the object of reaching a ratio of at least 6 per cent. between the paid-up capital and reserves to total deposits. I may add that, while the banking system should extend their whole-hearted co-operation in strengthening their resources through a practicable ratio between capital and reserves to deposits, it would indeed be diffi-

cult to reach the 6 per cent. ratio in the present context of the pressures on the banking system and the impediments in the way of building up deposits and reserves. The existing position in regard to this ratio for many of the banks would show that it is not an easily attainable target. In this context, I am glad to inform you that your Board of Directors have decided to increase the bank's paid-up capital to Rs. 1 Crore by a further issue of 1 Lakh shares of Rs. 50 each, i.e. Rs. 50 Lakhs, and the necessary application for consent for the issue has already been made to Government.

THE INTER-BANK AGREEMENT

I referred to the imperative need for stepping up the rate of growth in deposits. The question as to the extent to which an increase in interest rate could contribute to this end has been considered by the banks. The Inter-Bank Agreement on Deposits Rates has been successfully working in so far as it has prevented unhealthy competition between the different banks in respect of interest rates. In fact, it has helped to maintain unity in the banking system and the promotion of co-operative effort in regard to problems on which there were differences of opinion. It is a matter for satisfaction that at the recent meeting to consider the Deposit Interest Rates Agreement the disadvantageous position of the medium-sized banks has been recognised, and I sincerely hope that it would be possible to arrive at an amicable arrangement without the medium-sized banks being forced to withdraw from the agreement and with some revision which may meet the requirements of the situation. It is necessary that the difficulties that arise from time to time in implementing the agreement should be reviewed and adequate steps taken to ensure that the unity in the banking system is continuously maintained.

DENA BANK'S PROGRESS

I now refer to the affairs of your bank. I am glad to say that the year 1961 has also generally been one of continued all-round progress for our bank. The deposits have increased to Rs. 43 Crores and the total working funds to over Rs. 48 Crores. There has been a keen demand for advances, which have gone up from Rs. 24.25 Crores to Rs. 30 Crores. The bank continued its policy of doing its bit in its humble way to help the country's development plans by making available to the trade, commerce, industry and agriculture increased amounts through advances. The number of accounts has risen from 204,000 to 240,000. During the year under review, we opened 11 new branches and 6 safe deposit vaults, raising the number of branches to 107 and safe depo-

sit vaults to 29. Our Reserve Funds have now reached the figure of Rs. 75 Lakhs as against our paid-up capital of Rs. 50 Lakhs. Your Directors have recommended a dividend of 11 per cent. gross as compared to 8.76 per cent. gross last year. Bonus, equivalent to 1½ months' salary was paid to the members of the staff as against 1 month's salary last year. Our net profit for the year, after providing for taxation and bonus, amounted to Rs. 26 Lakhs as compared to last year's net profit of Rs. 23.50 Lakhs out of which Rs. 9 Lakhs were provided for taxation. You will agree with me that these figures tell a heartening tale of healthy progress.

During the year, the bank took over and merged with itself the Wankaner Bank Ltd., Wankaner, under the scheme of amalgamation sanctioned by the Government of India. Statewise, we have 44 branches in Maharashtra, 53 in Gujarat, 1 in Madhya Pradesh, 3 in West Bengal, 2 in Delhi, 1 in Madras, 2 in Mysore and 1 in Kerala. In this way, we are serving 63 centres in all. Out of the 11 branches opened during the year, 7 branches are in towns with population less than 25,000, thus continuing our policy of catering to the banking needs of not only the city clientele, but also of those in small towns and rural areas which are outside the orbit of organised banking system. Along with external expansion, we continued our practice of internal expansion and intensive work by concentrating on the existing branches with a view to helping them to achieve better results.

Thus you will note that the Dena Bank has not lagged behind and has made every effort to contribute its mite to the banking system as well. For example, the offices of the Dena Bank were 54 in 1951; they were 63 in 1956 and rose to 107 in 1961. The deposits rose from Rs. 8.38 crores in 1951 to Rs. 19.49 crores in 1956 and reached the figure of Rs. 43.36 Crores in 1961. The advances also show a corresponding rise. They rose from Rs. 3.20 crores in 1951 to Rs. 9.15 crores in 1956 and amounted to Rs. 30.05 crores in 1961. The percentage of the advances given to industries was 29.38 in 1951 rising to 42.18 in 1956; it was 45.46 in 1961. In the light of these results, one may adopt an attitude of robust optimism regarding the part which the Dena Bank may play during the third and subsequent plans. Your Board of Directors and the management of the Dena Bank are anxious to maintain the position that the Bank has achieved, and if possible, to improve it, and will therefore adopt all practicable steps for legitimate expansion of its activities in different parts of the country. Our bank has already obtained a position among the first ten banks in the

country. The progress may be considered satisfactory in view of the fact that the Bank was started only 24 years ago.

TRAINING FACILITIES

The rapid expansion of the Banking system is, to some extent dependent on the availability of suitable trained staff. The increasing awareness on the part of banks of this problem has led to a desire for suitable arrangements for the training of bankers. The Bankers' Training College maintained by the Reserve Bank has been doing useful work. Several members of the staff of the Dena Bank have taken advantage of the training imparted by this college. More recently the State Bank of India started a Training College for its own staff at Hyderabad. Some of the Scheduled Banks have also arrangements for training their staff and we hear of proposals for suitable institutions to be conducted by one or more banks in co-operation. The Central Bank of India announced at its Golden Jubilee Celebrations recently its intention to start a Training College in co-operation with our Bank. While pursuing this effort, we have made a beginning towards the training of staff by organising courses of lectures for different levels of staff in the Bank itself. This effort has met with enthusiastic response. Whereas the Banks must do self-help in matters of this type, it is possible that they may learn from the experience of one another, and the Reserve Bank may help by co-ordination of such activities without interfering with the autonomy of the banks.

I am grateful to my colleagues on the Board of Directors for their unstinted co-operation and keen interest in the affairs of the bank. I am happy to say that the continued good progress of the bank is greatly due to our Managing Director's increasing diligence, devoted and conscientious work. We should be proud of the important role that he is playing in the public life of the country, which has incidentally increased the prestige of our bank. On your behalf and mine, I take this opportunity of offering our heartiest felicitations to our Managing Director on his election as President of the Indian Merchants' Chamber, I am sure you will agree with me in the wish that he may have many more opportunities to serve the business community.

I am also thankful to the members of the Local Advisory Boards at the upcountry branches for their advice and guidance as well as to the officers and the other members of the staff for their co-operation, particularly the Senior Officers for their sincere and enthusiastic efforts.

Note—This does not purport to be a record of the proceedings of the Annual General Meeting.

Ashok Leyland Limited, Madras

Thirteenth Annual General Meeting

Chairman's Review

The following is the speech delivered by Sir A. Ramaswami Mudaliar, K.C.S.I., D.C.L. (Oxon), Chairman, Ashok Leyland Limited, to the Shareholders at the Thirteenth Annual General Meeting of the Company held on 12th March 1962 at Ennore, Madras.

Gentlemen,

I have great pleasure in extending to you a cordial welcome to the Thirteenth Annual General Meeting of your Company.

The Directors' Report, Audited Balance Sheet and Profit and Loss Account for the period from 1st January to 30th September 1961 have been circulated to you and with your permission I shall take them as read.

At the last Annual General Meeting I referred to the change in the financial year which the Directors decided to make. This is reflected in the Balance Sheet and Profit and Loss Account before you which cover a nine-month period only from 1st January to 30th September 1961 and the future financial years will run from 1st October to 30th September inclusive.

As the Profit and Loss Account shows, the Sales for the nine-month period at Rs. 8,11,93,053 are a little less than the figure of Rs. 8,32,66,909 representing Sales in the previous twelve months. It is gratifying to note that the value of Sales in nine months this year has nearly equalled that in 12 months last year, a result which was achieved mainly by increasing the output of Comet Chassis, the average output per month being 170 in 1960 as against 195 during the nine-month period in 1961, an increase of nearly 15%.

The continuous expansion of the Factory is the result of the investment of funds mainly raised by additional Share Capital and to some extent by external credit. There has been only a negligible contribution of funds from the profits of the Company. In an expanding industrial unit, where plant and machinery have been added and additional buildings have been constructed to accommodate the plant and machinery and the increased activities of the Company, it must be obvious that after providing for depreciation, development rebate and taxation reserve, there will be little left for ploughing profits into the concern. The small surplus remaining after these expenditures have been apportioned for a reasonable divi-

dend. Your Directors are considering ways and means by which there might be a reasonable amount of profit which could be ploughed back into the concern for further expansion.

The progress of your Company during the last five years must be recognised to have been impressive. The rapidly expanding assets have been appropriately depreciated so that the total depreciation up to 30th September 1961 exceed Rs. 98 lakhs. The Development Rebate stands at Rs. 37.25 lakhs. With a Paid-up Capital of approximately Rs. 3.45 Crores, the gross block on 30th September 1961 was over Rs. 3.76 Crores and the total assets on that date included stocks valued at Rs. 3.21 Crores. I may mention here that the price charged by the Company for your Comets is the same today as it was in 1955, the difference in selling price being accounted for by the additional Customs or Excise Duties imposed in successive Finance Acts. I am not aware of any other Automobile Company which has maintained its price at the same level during the last seven years.

Additional buildings to a value of approximately Rs. 40 Lakhs have been erected and additional plant and machinery of a value exceeding Rs. 56 Lakhs have been installed during the year under review. These additions represent partly the provision of plant and machinery to carry forward the Phased Manufacturing Programme and partly the buildings, plant and machinery required for the expansion programme to which I referred last year. Buildings required for the expansion of production are nearing completion and the installation of plant and machinery has commenced. I hope that by the end of the current financial year, i.e., by 1st October 1962, nearly all the machine tools will have been installed and most of the jigs and tooling required for the production of components in accordance with the phased planning will have been supplied. We look forward to the production and sales continuing to increase during 1962 and I trust that in 1963 the expansion programme having been completed, our output of Comet Chassis will be at the rate of 5000 per annum with a 20% excess capacity for the production of Spare Parts. In addition, Engine output will have been increased to provide not only the Comet Engines, but also the heavier '600' and '680' types required for Chassis and industrial applications.

It will not be inappropriate at this stage of our development I attempt to review the task we have undertaken during the last few years. As I stated, its magnitude is impressive. In 1956, at the commencement of the phased Manufacturing Programme, it seemed an optimistic estimate that we might within five years reach an output of 1000 Comets per annum; and with restrictions on gross laden weights in most States, preventing the operation of our Goods Vehicles, it appeared a most formidable task to sell 1000 Vehicles per annum. However, by the end of 1957, it was clear that demands for our vehicles would exceed our ability to supply. Pending the practicability of a major expansion project, it was decided to introduce double-shift working with the object of increasing production to 2000 Vehicles per annum. It is no small satisfaction to the Board and myself that with plant and machinery designed to produce 1000 vehicles per annum with single-shift working, the Factory was able to produce nearly 2400 in 1961 and will probably produce over 3000 in 1962 with double-shift working. Coincident with the task of increasing production with the plant and machinery currently available and with the progressive deletion of imported components, planning has been in progress since 1959 to give effect to the decision to increase production capacity to 6000 'Comets' and in addition 1200 Heavy Duty Engines per annum.

Ennore Foundries Ltd. has made good progress since your last Annual General Meeting. Production commenced in November 1961 and by the end of March 1962 it will supply all the castings required by Ashok Leyland Ltd. which from April 1962 will discontinue the import of castings, including cylinder blocks and heads. From May 1962 progressively surplus capacity will be available for the supply of quality castings to users other than your Company. There are nevertheless, certain difficulties which Ennore Foundries Ltd. have to face. Steel scrap is in short supply and is expensive, while pig iron available in the country has too high a phosphorous content. These difficulties may be overcome in due course, but while they persist the price of high quality grey iron castings will remain higher than it might otherwise be. Until these difficulties are overcome, it is unlikely that it will be possible to produce iron castings appreciably more cheaply than the landed cost of imported castings.

It is hoped that before too long there may be definite plans to produce "Sponge" iron in India as this would provide an ideal raw material, as an alternative to steel scrap, at an economic price. "Sponge" iron is obtained by the direct reduction of iron ore by suitable carbonaceous matter; and considerable progress has been made in this new technique, particularly in Germany. Madras has iron ore available at Salem and lignite at Neyveli, which could provide an ideal combination for the production of "Sponge" iron, which would be very useful not only to Iron Foundries but also to Steel Works.

There has been from time to time discussions about the competition of road transport with rail transport and opinions have been expressed in some quarters that the Railway earnings must be protected and that they ought not to be eroded by road transport earnings. A review of present conditions of traffic on rail and road and a reasonable forecast for the future must leave one under no delusion about the necessity for road traffic developing and indeed side by side with the development of rail traffic. It must be clear in the light of recent experience that road and all other forms of transport must continue to expand and that in no other way can the success of India's agricultural and industrial development be assured. This expansion will during the next ten years not only result in the demand for Commercial Vehicles equalling the combined output of manufacturers but also in increased demand to a figure which may well be a 100% more than the existing maximum production targets. The Board has, therefore, decided to go forward with the expansion project with confidence and be ready for such further developments as time and circumstance may demand.

You will be interested to know that, following requests received from a number of Shareholders, we have come to an arrangement with our Bankers whereby they will charge us a concessional rate of 1/64 per cent on the total payments to Shareholders who encash Dividend Warrants at any Branch of our Bank; and this charge will be paid by the Company. This will obviate Shareholders having to pay bank charges of Naye Paise sixty-five per warrant in order to encash them at out-stations.

Since your last Annual General Meeting, we have had several

24 March 1962

visits from senior officials of Messrs. Leyland Motors Limited. Mr. West, Deputy Chairman of Leyland, accompanied by Mr. Grimshaw, Leyland's Engineering Consultant, came in November 1961; and Mr. Robinson, Leyland's Planning Controller in January 1962. In February 1962, we had the pleasure of welcoming Sir Henry Spurrier, Chairman of the Leyland Group, who visited us accompanied by Mr. West and

Mr. Grimshaw. I must once more place on record not only our appreciation of the readiness with which our British Associates come to India to assist our efforts, but also of the invaluable advice which we receive from them. I am sure you will wish me to convey to them, and particularly to Sir Henry Spurrier our thanks for all their assistance.

As Chairman I feel I must refer to one of my colleagues on the

Board whose contribution to the progress of your Company has been outstanding. I refer to the Managing Director, Mr. Collins. His initiative and drive combined with his suavity—an invaluable asset to both in the Factory and in relations with Governments—has been a great factor in all our progress.

I must also record the enthusiastic help and co-operation which the Officers, Staff and Workers of

your Factory have extended to your Directors. This co-operation has been readily given, indicating the interest of all employees in the development of the Factory and the cordial relations which exist. I should like to convey our thanks to them all.

NOTE: This does not purport to be a record of the proceedings of the Annual General Meeting.

Indian Mining Association

Chairman, Mr Pran Prashad, on Production Programme and Price Structure

Lack of Transport Facilities, Power, Explosives Etc., Hinder Progress

The following is the speech by Mr Pran Prashad, Chairman of the INDIAN MINING ASSOCIATION at the Annual General Meeting of the association held in Calcutta on 23rd March, 1962 at the Bengal Chamber of Commerce and Industry, Calcutta.

Gentlemen,

With your permission I suggest that we take the notice convening this, our Seventieth Annual General Meeting as read. On your behalf and mine, I extend a most cordial welcome to our distinguished guests from the Government, the Steel Plants, the Coal Board, the Mines Department and the Welfare and other organisations.

I would like to assure you that if in the course of my Address this morning I may occasionally sound a discordant note and bring up some of the difficulties which the Coal Industry faces to-day, it is only to bring these problems to the notice of the authorities. I am sure you will all agree that a frank and constructive discussion of problems will be helpful in looking for remedies to overcome them.

We miss on this occasion the former Coal Controller and Chairman of the Coal Board, Mr. Zaman, who relinquished his office earlier this year. There were times when we agreed to disagree, but we recognised nevertheless that he brought a balanced approach to bear on the many problems with which the Industry was faced. On your behalf, and mine, Gentlemen, I welcome the new Coal Controller, Mr. Talwar, and we all assure him of our continued help and co-operation in the difficult tasks that lie ahead.

My predecessors set a pattern whereby the Chairman of this Association reviews on this occasion the events of the previous twelve months and offers an assessment of future prospects. I see no reason to deviate from the time-honoured convention.

I may fairly claim that we have some outstanding achievements to our credit since we last met, offset unfortunately by our share of disappointments. For the first time in many years, we have available to us through the World Bank Loan, although not physically as yet, adequate foreign exchange to take care of our requirements of plant, equipment and spare parts until the middle of 1963. Again, for the first time, we embarked on a new approach to labour-management relations when we commenced direct negotiations between the principal Employers' and Workers' Organisations in the Coal Industry. These bi-partite negotiations proved, as I must regretfully admit, unfruitful in so far as revision of wages was concerned. They paved the way nevertheless to a bi-partite agreement on the vexatious question of employment of labour by or through contractors. Settlements of outstanding issues through bi-partite negotiations, without the necessity of State intervention, should indeed be the pattern and we hope to make further progress in that direction.

WORLD BANK LOAN

In the year since we last met we have been primarily concerned with detailed planning to fulfil the requirements of the World Bank Loan Agreement. My predecessor last year dwelt at some length on the negotiations which were then taking place between the Government and representatives of the International Bank for Reconstruction and Development. Throughout these negotiations, we in the Industry were kept informed at all times. We could, with some justice, claim that the successful outcome of a loan of 35 million dollars from the Bank to Government was in a great measure, due to the excellent staff work put in by this Association and the Joint Working Committee to assist Government in the deliberations with the Bank. I should also like to pay

a tribute here to the Bank for its understanding of, and sympathy with, the problems of the Private Sector of the Coal Industry.

The confidence and close co-operation that were established between Government and the Industry during the negotiations for this loan was indeed most welcome. We should like to see these extended to other spheres also where confidence will, we feel sure, be equally rewarding.

The terms of the agreement with the World Bank called for the submission of detailed project reports from each expanding unit in the Private Sector indicating grade-wise and seam-wise production programmes phased over the loan period; reserves of coal available; a break-down of the requirements of machinery and plant into both foreign exchange and rupee currency; particulars of funds available for expansion and the balance required to supplement internal resources. Government was required to set up separate Screening Committees to examine expansion projects for both technical and financial soundness before recommending them to Washington for approval. The burden of co-ordinating the work of the Screening Committees fell on the Industry. The Industry's association with these Committees helped considerably, if I may say so, in getting this stupendous task of scrutinising some 200 projects completed in a matter of weeks by the end of November 1961.

Again, for the first time, the Coal Industry is now represented on the Screening Committee set up in terms of the World Bank Loan Agreement to examine applications for import licences. While there have been many procedural delays, I am sure that once the cycle gets under way, licences will quickly issue, whether they are for maintenance, replacement or expansion.

We require a total of Rs. 28 crores in foreign exchange during

the five years of the Third Plan. Against this, we have been allocated a sum of 35 million dollars or approximately Rs. 17 crores. Foreign exchange requirements for certain new mines for the entire Third Plan period are, fortunately, covered by the loan but what we require for expansion, replacement and spares is taken care of, as I said, only up to the middle of 1963. To meet our needs beyond that date, we must have a further Rs. 11 crores. Government's assurances that exchange of this order will be available is most welcome. Having regard, however to the delays of last year, concrete steps should be taken now to arrange this foreign exchange so that the Industry may proceed with the numerous formalities to be complied with, before actual import of equipment becomes necessary.

Certain complementary measures are necessary if producers are to take full advantage of the facilities made available through the World Bank Loan. This Association has often pointed out, with tiresome persistence perhaps, that the Industry has been working for several years on an inadequate profit margin. Many units whose reserves are low find it difficult to raise the necessary funds to implement their expansion programmes. Without these funds, they can obtain little benefit from the foreign exchange made available by the Bank. This problem is, as I most thankfully record, receiving attention in official quarters. I take this opportunity to draw attention to a cognate problem: the obstacle that colliery companies face in raising funds from bankers and other credit institutions because of the restrictions on transfer or mortgage of coal leases under the Mineral Concession Rules, as applied to pre-1949 leases. Our viewpoint in this matter has been placed before Government and I hope that suitable action will soon be taken. The special section recently created in the Coal Controller's office

will help materially to co-ordinate requests from producers for matching rupee finance. It will, I trust, see to it that implementation of approved individual expansion programmes is not delayed due to lack of resources.

PRODUCTION

From the point of view of production the Industry's achievements may seem disappointing. All-India coal production for the calendar year 1961 amounted to only 56.11 million tonnes. The overall output in 1961 was therefore less than two million tonnes over that attained in 1960. Out of the total production of 56 million tonnes, about 46 million tonnes were contributed by private collieries. The Private Sector could therefore, claim that it has, despite many handicaps, fulfilled its share of the Second Plan target of 60 million tonnes. As my predecessors have, however, pointed out, we, in this Association, refuse to view national targets in this sectarian manner. Any shortfall in one sector must, in the country's interests, be made good by the other.

In the context of the colossal increases in coal production required in the years that lie ahead, there is ample scope for both the Public and Private Sectors not only to co-exist but also expand to the full extent of their respective capacities. When production is a crying need, a broad pragmatic approach, admittedly within the framework of the Industrial Policy Resolution, is essential.

Looking at production in terms of the Plan Year, the total production up to December, the first nine months of the Third Plan, aggregates 49.43 million tonnes. Even allowing for raisings of 15 million tonnes in the remaining three months, the total production can hardly be much more than 55 million tonnes, 5 million tonnes below the Second Plan target. This, to say the least, represents an extremely poor start to the Third Plan in the course of which production is scheduled to go up by as much as 76 per cent over the actuals for 1960-61. Notwithstanding this disappointing beginning, there is some talk of the target for 1965-66 being raised to 110 million tonnes. Perhaps the logic is that we should plan on the basis of 110 million tonnes to achieve an actual production of 97 million tonnes. The mere scaling up the target will not produce 97 million tonnes, a fact that seems to be overlooked in this approach.

During the twelve months up to March 1963, the Industry is required to produce over 68 million tonnes according to the phased production programme recently drawn up by the Coal Controller. This means an increase of 13 million tonnes in the next twelve months or an increase at the rate

of over one million tonnes per month. I am sure, Gentlemen, we all realise that in conditions as they exist today such an achievement is in fact beyond us, more so since the power and transport needed to produce and move this tonnage will not be available.

Throughout the history of the Coal Industry, its production capacity has been governed by transport availability. Our production in 1961 may seem disappointing, but it is pertinent to ask what would have happened if we had raised an extra one or two million tons. For nine months in the year, pithead stocks were at levels very much higher than those obtaining at the start of the Second Plan: so much so that large sections of the Industry were obliged to effect severe production cuts. In fact, at one time, stocks rose to 5.57 million tonnes, resulting in the blocking of almost Rs. 10 crores, an all-time record. No Industry, I submit, can bear such a burden without repercussions on its viability.

TRANSPORT CAPACITY

In the last ten years rail traffic increased by only 69 per cent. Because of the lengthening lead of traffic, however, the ton-miles achieved by the Railways have been doubled in the last decade. In the last four years, the average daily supply of wagons for coal loading in Bengal and Bihar increased by nearly 30 per cent, from 3,670 in 1957 to 4,768 in 1961. One cannot but express genuine appreciation of the magnificent performance of the Railways, which have no doubt been working under severe strain. The basic fact remains, however, that the country is desperately short of transport capacity, and consumers all over India have perforce had to accustom themselves to hand-to-mouth allotments.

Assuming that the Third Plan production target stands at 97 million tonnes, roughly 72.5 million tonnes have to come from the Bengal and Bihar coalfields and the remaining 24.5 million tonnes from the outlying fields. The target for coal movement by rail has been set at 87.5 million tonnes. This will require an allotment of over 12,000 wagons per day as against the present availability of slightly under 6,000 wagons. Of these 12,000, 9,000 will be required in the Bengal and Bihar coalfields and the balance in the outlying fields. Movement to the steel plants, including dual movement to and from the Central Washeries, will alone absorb over 4,000 wagons per day, as compared with about 1,400 wagons at present. The Railways, therefore, face a stupendous task in the fulfilment of their obligations. It has only recently been appreciated that development of transport should be so planned as to be ahead of industrial expansion, thus ensuring that carrying capacity will be available both for

speedy implementation of new projects and to meet their transport needs when they are in operation. Without adequate transport facilities, unutilised industrial capacity is, unfortunately inevitable.

No indication has been given to us of the phasing of rail transport capacity for coal movement during the Third Plan period. All we know is that the Railways will endeavour to maintain during 1962 an average daily supply of 6,925 wagons for loading coal. This includes about 300 wagons which will be required for dual movement of coal to and from the Dugda Washery, leaving an average of 6,625 wagons daily for effective coal transport. Even assuming that each wagon will carry 23 tonnes, and that 6,625 wagons will be loaded throughout each of the 365 days of the current year, this level of wagon availability will permit movement by rail of only about 55 million tonnes. Adding to this 2 million tonnes which can effectively be moved by road, and allowing an equal quantity for consumption at collieries, the 6,925 wagons that the Railways offer will suffice for a gross production of 59 million tonnes—a 9 million tonnes deficit against the phased target fixed for 1962-63. These figures will, I trust, convey some idea of the utter impossibility of meeting the country's expanding demand for coal given this level of wagon availability.

It is possible to contend that my analysis of the situation is pessimistic. In indicating a daily average availability of 6,925 wagons, the Railways have, I must add, provided a cushion of 5 per cent over and above this figure. Against this, I must reluctantly point out that the average daily supply in the first two months of the current year has, I believe, been only 5976 wagons or 949 wagons per day short of what has been promised.

Another aspect of rail facilities which requires very careful attention is the increase of the Pilot and Depot capacities on the basis of individual expansion plans. Only too frequently wagons are in abundance at certain points where coal is not offering but are woefully scarce in other areas. A new Committee to go into the question of increasing the Pilot and Depot capacities in the Third Plan was constituted over fifteen months ago but no substantial progress has yet been made. They are unable to proceed with enlarging capacity without detailed information relating to collieries expansion projects. These details, as I have said, are already available with the Coal Controller in the Project Reports submitted by collieries. There seems to be no reason for any further delays in this matter which now appears to be one of co-ordination between the Railways and the Coal Con-

troller. I might recall that a similar committee was set up at the start of the Second Plan but it did not finalise its deliberations until very nearly the end of that Plan. We had hoped that such delay, with all its attendant repercussions, could be avoided in the Third Plan but the progress made so far belies this hope.

In analysing the causes of the present transport deficiency, it becomes clear that lack of funds available to the Railways to carry out their programmes and incorrectly estimated traffic patterns are the major contributory factors. Apart from a basic shortage of rolling stock, the Railways also face problems arising from insufficient line capacity, lack of adequate marshalling yards, delays in electrification of certain sections, the difficulties inherent in changing over to BOX Wagons and many others. The Railways which entered the Third Plan with a backlog of equipment, track and other facilities, must plan for and be given the necessary resources to ensure that they develop sufficient capacity to move the traffic expected in 1966.

The problems created by the shortage of transport have been receiving a good deal of attention. A committee on transport policy and co-ordination was constituted in July 1959 under the Chairmanship of Mr. K. C. Neogy to recommend a long-term transport policy; define the role of different forms of transport and to suggest suitable means for their co-ordination.

I propose to deal, very briefly, with one or two aspects of the preliminary report made by this committee. In spite of the absence of detailed statistics, it is clear that the existing pattern of Railway administration requires drastic overhaul. There should be a much greater measure of decentralisation since many failures of administration can be attributed to its lack. Regional management is denied the flexibility and freedom without which they can hardly be expected to manage their operations successfully. Some degree of control from the Centre is desirable but this control should be restricted to co-ordination and standardisation to the extent necessary in the national interest.

The Committee has raised the question whether freight rates of low-rated traffic like coal should be raised to enable the Railway to make a reasonable profit on their overall operations. Coal admittedly enjoys a specifically reduced telescopic tariff tapering off with the distance of haulage. Unrealistically low rates on coal traffic to distant centres, such as Southern and Western India are made possible by charging the commodities more than the cost of their haulage. These regions are also being given preferential treatment in the allocation of rail

way capacity at the cost of consumers in North-East India, many of whom have to move their coal by road incurring much higher transport costs. I need hardly say that this practice is economically unsound as it leads to locational distortion and undue reliance upon coal in distant areas. I may add that we are not against coal being moved by road to the extent it is economically feasible, or can be made so by suitable fiscal adjustments and incentives. We do feel, however, that in the main all coal should move by rail with other more suitable commodities being transported by road and planning should be based on this premise. In any case, it seems inequitable that those already paying higher transport costs on coal by road should also have to pay a cess to subsidise movement of coal by sea.

Last year, it will be recalled, enhanced levies on coal despatches were introduced to subsidise movement of coal by coastal ships to consumers in Southern and Western India. It was envisaged that at least two million tonnes of coal would move in this manner but this target has not yet been achieved. It transpired that not only were there not enough coastal vessels available to cope with this order of traffic, but, even worse, the fears that had been expressed by various experts with regard to the much decreased Calcutta Port handling capacity and insufficient unloading capacity at destination ports were proved to be only too true. The cess continues to be levied although consumers have no indication of what subsidy they may expect for sea-borne coal.

Another transport problem of a different type may be mentioned here. Five Central ropeways were to be built in the Jharia field to transport sand from the river bed to the collieries carrying out stowing operations. There are several hundred million tonnes of coal standing in the form of pillars which could be readily extracted with stowing. This figure, I trust, will give you a measure of the importance of the ropeways. The construction of Central Ropeways by the Coal Board continues, however, to lag behind the schedule laid down some years ago. These Ropeways were supposed to have been commissioned in March 1963 but several have yet to pass the tender stage. It was envisaged last year that at least two ropeways—one in Jharia and one in Ranigunge—would be commissioned by the middle of 1964 but I have grave doubts whether even this date will be adhered to, as I believe that construction has not even started.

COAL CONFERENCE

While on the subject of transport, I should refer to the Coal Conference convened by Government in New Delhi last September. Among the many proposals

mooted at the Conference was one from the Railways to extend the block rake system to consumers other than brick-burning, soft coke and small-scale industries. We submitted a detailed memorandum to the Conference, and it is gratifying to note that our objections, supported by consumers and the State Governments, to the wholesale extension of the block rake system, were eventually accepted. Incidentally, we were also pleased to note that the proposal for uniform freight-paid prices for coal was not considered feasible. We agree with the view of the coal producing States that an artificial price such as this will be of no advantage to the country as a whole because it will obscure the real cost of transport and encourage its wasteful utilisation, besides negating the locational advantages the producing States enjoy.

Apart from the current transport deficiency, we also face an even graver shortage of power, jeopardising the achievement of our production targets. To the Private Sector, this is a matter of very survival as we are largely confined to vertical expansion. Deeper workings involve longer hauls and winds, more pumping and increased ventilation, electrification and mechanisation, all of which call for additional power. In an extractive Industry like Coal, consumption of electric power must also increase even for maintenance of output quite apart from the needs of increased production.

The total additional power available from the D.V.C. in the Bengal and Bihar coalfields, on the assumption that all their sets will work at full installed capacity without any breakdowns for 385 days in the year, has been estimated at 21 mW. The Coal Industry alone requires in the current year an additional 24 mW of power. It has been suggested that because of D.V.C.'s other contractual obligations, the Coal Industry cannot expect any additional power until the middle of 1964.

A belated realisation of the seriousness of the situation led to the appointment of a Working Group to assess the Industry's power requirements for the whole of the Third Plan period. Although it seems highly improbable that our requirements can be met in full, I do hope that the Working Group, on which unfortunately neither the Coal Industry nor the power distributing agencies are represented, will be able to devise short-term measures to ensure that our demands are met to a much greater extent than can be envisaged at present. May I repeat that the shortage of power needed by the Coal Industry can only create a vicious circle—a shortfall in coal output will hamper generation of electric power aggravating an already bad situation.

I would also urge that power cuts should not be imposed on the Coal Industry during the monsoon period when our need is greatest. In this period, when many of our older mines face the danger of inundation, the accumulation of water must be pumped out, but at precisely this time power cuts have been most frequent. This results in valuable faces and mining equipment being rendered unworkable for a period.

The periodic shortage of explosives occurring in the last 12 months has also affected coal production. Supply has been most erratic and in several periods collieries' demands have not been met in full. We have hitherto relied on imports from the Sterling Area to supplement the production of the Gomia factory. Supplies from both these sources have fallen short of the country's overall requirements. A proposal is now under consideration for the import of explosives from non-Sterling sources but the use of such supplies will have to wait until certain tests are successfully carried out to the satisfaction of both the Chief Inspector of Explosives and the Chief Inspector of Mines. The Industry has urged that these tests should be expedited. At the same time, the assessment of demand for the remaining years of the Third Plan should be quickly completed, as agreed, and steps taken to co-ordinate the production and supply of explosives to obviate future shortages.

PRICES

Apart from these factors directly impinging on our production capacity in the previous 12 months, other disincentives should also be noted. Repeated reference has been made to the issue of prices generally, and to our specific claims for neutralisation of enhanced working costs as envisaged in the Report of the Coal Price Revision Committee. This official Committee, whose report was accepted by Government in its entirety, recommended that any increase in cost on account of increased wages and amenities to labour should be neutralised in full. Our costs of production, however, show a constant upward trend. A price level which may have been considered adequate on the basis of certain hypotheses has become wholly unrealistic today. Numerous memoranda were submitted to Government for making good cost increases but no real response has so far been forthcoming from New Delhi. On the basis of Government's own data, our case is clear-cut but we have been called upon to submit further information. Although we shall do so, an early decision on this matter seems unlikely. I sincerely hope that in the context of the vast expansion which we are called upon to undertake, Government will on its part be a little more responsive to our representations for full neutralisation

of enhanced costs already incurred. The delay in this matter betokens perhaps a lack of confidence in the Industry's good faith, which is particularly disappointing in the context of the co-operation and understanding achieved earlier in relation to negotiations with the World Bank.

While on the subject of neutralisation, I should also point out that stowing costs are still not fully compensated. The Coal Board has recently put forward the suggestion that stowing should be bifurcated into surface and underground costs. The subdivision of the overall cost of stowing into such water-tight compartments would inevitably result, in many instances, in a reduction in the total amount of assistance receivable. I might call attention here to the recommendation of the Coal Price Revision Committee that voluntary stowing should be subsidised to 100 per cent of actual cost. We submitted our own proposals for disbursement of assistance to stowing collieries on a more realistic basis, particularly in regard to those distant from sources of sand supply where costs are not neutralised to the extent necessary. These proposals were submitted to the Board in November last and we still await the Board's decision.

In the Jharia field, we have during the last year silently witnessed the abrogation of all sand rights previously held by coal companies. After a period of uncertainty, we were advised that the State Government would grant a lease of all sand rights in the Damodar River to the Coal Board who in turn would allow coal companies which had installed their own ropeways to continue drawing sand as agents of the Board. No formal agreements were executed but we understood that we would henceforward be required to reimburse to the Board the royalty payable to the State Government. We in our turn asked the Board to bear the extra royalty that coal companies would have to pay.

Cost neutralisation is comparatively speaking a limited question; the larger issue is that of price policy. On the one hand, Government has ignored the Industry's legitimate claims but on the other it keeps on making substantial increases in the eventual cost of coal to consumers. The new cess to subsidise coastal shipments, the increase in transport costs—by the increased shift to road haulages in some areas and by the creation of dumps in all States—a periodical increase in railway freights—have had the result of making the consumer pay very much more. The producer is, however, denied a legitimate price for his products and even relatively small increases are refused on the plea of inflation, increase in industrial costs, effect on foreign

exchange earning industries and the like.

The expansion envisaged during the Third Five Year Plan calls for an additional capital investment in the Private Sector of approximately Rs. 60 crores. The Coal Industry having been denied a reasonable price for its products in past years, finds itself debilitated with its internal resources in bad shape. A large portion of the additional capital will necessarily have to be raised from finance institutions or from the open market. The Industry will find it difficult either to borrow or to attract new investment unless the price structure is substantially revised. The margins on which it has been operating leave no scope to provide for the payment of interest on loans; the repayment of borrowing at a subsequent date according to a phased programme acceptable to lenders; a level of dividend which will render investment in coal mining as attractive as in other industries, and finally the large increase in depreciation which will result from the additional capital investment envisaged. Only a realistic approach to price policy can instil in the Industry the confidence needed to perform the task allotted to it.

Much publicity has been given in recent months to the deterioration in the quality of coal supplied to the Railways, the steel plants and other consumers. Before I offer my comments, may I remind our consumers that we as producers can only raise coal of the quality that exists in the mines? We can also beneficiate manually but this has obvious limitations.

GRADING

The grading of coal has hitherto been undertaken on the basis of ash content in the case of coking coal and ash and moisture content in the case of non-coking coal. An impression has been created that coal producers tend to deliver supplies of a quality poorer than that prescribed for the various grades, and that consumers are generally obliged to accept supplies inferior to those contracted for. We in the Industry have been equally concerned over the fact of deterioration in quality. We have been endeavouring to persuade the authorities to increase the price differential between grades which was as low as Rs 1.87 nP per tonne between Selected A and Grade I till last month. But before commenting on the changes instituted since the 20th February in the price and grading structure for coking coals, it is necessary to take a quick look at the background.

The Industry has often drawn attention to the unsatisfactory classification and grading of coal but it was only last year that the Coal Board constituted a Study Group to draw up a scheme for the fixa-

tion of prices on the basis of useful heat units in coal.

The report of this Study Group was circulated to the Industry last June. After very detailed consideration, we submitted separate proposals in regard to coking and non-coking coals. It was obvious that any proposals for the fixation of grades of coking coal on the basis of calorific values would not only be unsuitable but would also fail to meet the requirements of the steel plants. The steel works assess that a rise of one per cent in the ash content of coal increases the cost of pig iron by Rs 3/- per tonne. A committee under the Chairmanship of the Chief Mining Engineer of the Coal Board recommended a bonus and penalty scheme, as proposed by two steel plants based on actual ash analysis as determined by mechanical sampling at destination. Subsequently, representatives of the Steel and Coal Industries and the Coal Board examined the matter and gave their approval to an agreed "Bonus and Penalty" scheme which substantially enhanced the price differential between Grade I and Selected A coals. It was also agreed that sampling at the steel plants by mechanical devices would cover at least 10 per cent of supplies over 10-day periods the ultimate aim being analysis of 25 per cent despatches. The Coal Industry, on its part, undertook to post Inspectors at each steel works.

These agreed proposals related to the supply of both coking and blendable coals having an ash range of between 14 and 20 per cent. When the matter came up for discussion at the meeting of the Standing Committee on Raw Materials held last August the Coal Industry made it perfectly clear that its acceptance of the principle of payments on results of analysis was based on the distinct understanding that the agreed proposals would be accepted in full and that they would apply only to supplies made to steel plants and coke ovens. We were amazed when the agreed proposals were substantially modified to our disadvantage without consultation with us and also made applicable to all consumers of coking coal. The result of these adverse changes is that the Industry found itself quite unable to agree to analysis at destination as the basis of payment in the case of Steel Plants, since it would be impossible for it to resist the claims of other consumers desiring a similar arrangement. Gentlemen, you can imagine the chaos which would result if thousands of customers throughout the country were to ask for joint sampling at destination. The revised prices of coals, particularly in the lower grades, were actually less than the prices which obtained for these grades previously, this at a time when Government was fully aware of the Industry's decreased profitability. I venture to suggest that the innumerable practical di-

fficulties which arise from the new price scheme could have been obviated had we been taken into confidence before the proposals were announced. The result of forcing such an unsuitable and anomalous price structure on the Industry which does not provide any incentive for improving quality will be that the steel plants will hardly obtain any reduction in ash content. Furthermore, there being an actual disincentive to the production of Grade I and Grade II coals an increase in output may have been rendered more difficult. Yet these coals are required and their unavailability will affect the operation of the Central Washeries which have been erected at considerable expense to the Exchequer.

No price increase was sanctioned for blendable coals, the production of which is below demand, and which is just as important for the Steel Industry as is Coking Coal. In fact, production figures carefully estimated in project reports prepared for assessing foreign exchange needs clearly establish this shortage. It is all the more necessary, therefore, that the price structure for blendable coals used for coke making should be urgently amended.

COKING COAL

The position with regard to non-coking coal is somewhat more complicated. It did not prove possible to submit agreed proposals to Government, but the Industry submitted a memorandum to the Coal Board suggesting 8 grades for non-coking coal over a calorific range from 5700 to 12000 BTU's. The suggestion had, I am glad to say, the full support of our Public Sector counterparts. The Board decided to recommend to Government that while the calorific range indicated by the Industry might be accepted, the number of grades should be increased to 14. This proposal has been referred to a further Committee constituted earlier this year to examine and report on the Board's grading procedures. A decision on the price structure in the case of producers of non-coking coals will, therefore, be deferred for some time to come. I can only hope that producers of non-coking coal will be spared the bitter disappointment that has resulted from the new coking coal prices.

The question of grading brings me to another controversial issue, namely, the sampling and analysis of coal for the fixation of grades. The Indian Standards Institution has already circulated a very comprehensive and detailed specification relating to sampling and analysis. We have, in the course of the year, received numerous appeals from the Institution itself and from Government for the adoption of Indian Standards in replacement of foreign standards. While we in the Coal Industry are fully prepared to fall

in line I am disappointed that the Coal Board has not seen it fit to adopt the ISI specifications. We appreciate that the Board is not yet fully equipped to do so but this does not justify the changing of a grade on the basis of three or four 'ad hoc' wagon samples which are neither representative of the collieries' production nor despatches. Incidentally, despite repeated objections against the unscientific system adopted, several million tonnes of production have been downgraded in the past year with consequential damaging results. The entire economy of a colliery depends on the grade allotted to it—on it depends the income and profit that a unit can expect. In the planning of new mines producers face avoidable uncertainty because of the frequent changes in grading that take place based on no scientific or established principles.

Numerous representations have resulted in the constitution of a committee charged with the task of devising a proper method for sampling and analysis necessary for fixation and verification of grades. I do hope that the deliberations of this committee will not be protracted and that we shall very soon have a reasonable solution acceptable to all.

For some time past the State Governments of West Bengal and Bihar have been pressing the Central Government to enhance the rates of royalty payable on pre-1949 coal leases. We suggested that before any changes were effected a conference between the State Governments, the Union Government and the Industry should be held to clarify issues relating to the acquisition of royalty receiving rights of lessees and sub-lessees which have not yet vested in the State Governments under either the West Bengal Estates Acquisition Act or the Bihar Land Reforms Act. We received no reply to our representation but a decision was suddenly announced in January increasing the rates of royalty in respect of all pre-1949 coal leases to 2½ per cent of the f.o.r. price of coal and sanctioning a compensatory price increase to the Industry of 0.24 nP per tonne. We felt this price increase was inadequate but were told that the quantum had been fixed by Government on the basis of data furnished by the Industry in January 1958. This ignores the simple fact that royalty liabilities calculated as a proportion of the price of coal have gone up with the price increases of the last four years. Collieries which were already paying royalty on a percentage basis were also allowed this increase of 0.24 nP allegedly to compensate them for the extra royalty they had had to pay on account of price increases in the past. May I be permitted to point out that the extra cost incurred by such units amounted to 0.39 nP per tonne on a weighted

24 March 1962
27 March 1962

average basis, leaving 0.15 nP per tonne uncompensated, which these collieries must continue to bear.

A connected matter is the question of compensation to Royalty Receivers who hitherto received income through old established arrangements whereby royalty receiving rights had been purchased or otherwise acquired. Under a Constitutional provision, no rights to property or income may be abrogated or removed without payment of full compensation. As a consequence of the Notification altering Royalty rates, the whole position is confused and many companies and individuals appear to have been deprived of a major part of their income without any compensation.

LABOUR

Our relations with labour in the past year have been cordial although we still suffer from stray cases of assault. A large part of the credit for this improvement must be given to the Code of Discipline. We are now considering, at the Labour Ministry's instance, a Code of Efficiency and Welfare, but as I would point out the successful implementation of such measures depends to a large extent on the re-education of and the re-thinking on the part of both labour and management. I would go further and say that management personnel, who are supposed to have a broader perspective in these matters, must lead the way. A good deal of re-education among our management personnel is necessary to this end, and I trust enlightened employers will set an example.

Our unions have been pressing for an early review of the wage structure. Their request for the setting up of a Wage Board for the Coal Industry was considered at the Eighth Session of the Industrial Committee on Coal Mining held in April last year when it was decided that the principal Workers and Employers' Organizations should jointly explore the possibility of granting increased wages or incentives within the framework of the Industry's existing price structure. This was a new approach in keeping with Shri Gulzarilal Nanda's welcome emphasis on direct settlements. While bi-partite meetings were held, our negotiations could not proceed since employers found it impossible to absorb any increase in wage costs within the framework of existing prices. In this context I might recall the statement made in the Lok Sabha by Shri Nanda who acknowledged that both the Ministers of Fuel and Labour appreciated our difficulty in agreeing to any revision of wages without neutralisation of the resultant increase in costs. Both workers and employers then suggested a tripartite meeting which took place two weeks ago, after the threat of a strike by INTUC unions in Bihar made it impossible to delay the matter any

longer. While we are basically in sympathy with the demand for an upward revision of wages, we are unable to offer any concrete views on the quantum by which wages might, in equity, be enhanced. This will depend entirely on the extent to which the economy can bear an increase in coal prices. With the decision to refer the matter to a Wage Board, the entire question will, I hope, be expertly and authoritatively examined, bearing in mind the unanimously accepted recommendations of the Coal Price Revision Committee with regard to full neutralisation of increased labour costs.

Our great achievement in the sphere of labour-management relations in the past 12 months has been the bi-partite agreement on the vexed question of contract labour in the Coal Industry to which I referred earlier. This issue has been pending since 1956 and there were strong feelings on both sides. Even so, an agreed solution, I am happy to say, was found. Government appointed a Court of Inquiry to examine this matter, and it is gratifying that our agreement was approved by the Court. I would appeal most fervently to all employers to ensure that the terms of this agreement are complied with so that when we meet our labour friends in September next, we will be in a position to say that we, on our part, have fully endeavoured to meet our obligations.

While on the subject, I should like to draw attention to the recent notification published by Government enhancing very considerably the minimum wages payable to labour employed at collieries on contract for building, road repair, clearance of jungles and the like. The implementation of this notification will increase very substantially capital expenditure at collieries for construction work and will also seriously affect the cost of miners' houses both under the subsidized and cheap housing schemes. When these proposed minimum rates of pay are enforced by the Labour Ministry, I hope it will take this into account and increase correspondingly the subsidies payable under both housing schemes.

In the field of welfare, substantial progress may legitimately be claimed. The fact that applications for construction under the cheap housing scheme were in excess of the allocations agreed upon for 1961 is an index of the keen sense of urgency felt by employers to resolve the acute problem of housing. I submit that this problem can only be tackled with goodwill, co-operation and assistance of all concerned. Invoking the compulsive provisions of the Mining Settlement Acts cannot provide a solution.

In regard to safety we continue to receive instructions from the Chief Inspector of Mines in the form of numerous circulars

and directives aimed at rendering working conditions safer. We fully appreciate the importance and value of safety but it must at the same time be realised that safety measures cost money. A co-ordination committee between the Ministry of Steel, Mines & Fuel and the Ministry of Labour & Employment has been in existence for some time. I trust it has been applying its mind to this cost aspect. Standards for lighting and ventilation are proposed to be laid down by the Chief Inspector which, if implemented, will enhance production costs substantially. Within the straight jacket of fixed selling prices, it becomes difficult, if not virtually impossible, to implement fully these measures which no one denies are necessary. I am sure you will agree with me, Gentlemen, that merely laying down standards or prosecuting managements for default cannot provide a satisfactory or lasting solution to the problems connected with safety unless the necessary resources are made available to the Industry.

Another aspect of this matter may be noted. We are now required to employ an increasing number of trained personnel to ensure safety. The Coal Council's Committee on Production and Preparation assessed that by 1965/66 the Mining Industry would require an additional 3,750 Mine Managers, 2,000 electrical engineers, 2,000 mechanical engineers, 950 supervisors, 7,000 overmen and 30,000 shotfirers and sirdars, Mining engineers in the Private Sector, who went into this matter in some considerable detail, estimated that our requirements would be substantial, though considerably less than those assessed by the Coal Council. We have previously suggested, and now feel it to be all the more urgent, that a conference of all concerned be called so that these and the many other problems connected with training can be gone into, and a sound and consolidated programme drawn up to ensure that sufficient trained personnel will be available.

The Minerals Industry other than Coal also continues to expand and, I am glad to say, is keeping pace satisfactorily with the progressively increasing demand. Commendable production targets have been achieved in respect of various minerals, particularly iron ore, limestone and dolomite which constitute essential raw materials for the growing Steel Industry, and we can confidently look forward to higher targets being attained in keeping with the needs of the Third Five Year Plan. Unfortunately, the position concerning manganese ore is not happy as exports have been much lower than envisaged owing to the highly competitive world market and the inadequate wagon supply for movement of ore to the Ports. As things are, the future, I am sorry to say, does not seem to hold

out much promise unless radical measures are taken resulting in a substantial reduction in the F.O.B. export value of this ore.

The deliberations of the Second Session of the Industrial Committee on Mines other than Coal led to the introduction of The Iron Ore Mines Welfare Cess Act, 1961, whereby it is sought to create a Statutory Welfare Fund for the benefit of the workers employed in Iron Ore Mines on the lines of the Coal Mines Labour Welfare Fund.

In the same Session of the Committee it was also decided that instead of declaring Iron Ore Mines as an essential service, workers and employers should abide by the Code of Discipline and give 14 days' notice before any strike or lockout is resorted to in the Iron Ore Mines.

The Metalliferous Mines Regulations, 1961, were enforced in March 1961 and in this connection I am pleased to say that the Mines Department have been most considerate in enforcing this legislation by showing due consideration to genuine hardships in complying with the provisions, some of which in actual practice have been found to be unnecessarily stringent.

Gentlemen, I have taken up considerable time in dealing with the problems that face the Coal Industry. If have sounded somewhat despondent, I repeat that my intention was only to bring these problems to the notice of the authorities concerned. This is so particularly because the whole success of the Third Five Year Plan hinges on the successful fulfilment of our coal targets. While expansion in the last few years has been appreciable, it is dwarfed by the tremendous potential of the future. No doubt, we have many and varied problems to contend with, and we are weighed down by multifarious restrictions. The tasks that lie ahead constitute not only a challenge but an opportunity; it will be our endeavour to prove equal to the challenge.

NOTICE

THE ALKALI & CHEMICAL CORPORATION OF INDIA LIMITED

Payment of Dividend on Preference Shares.

In connection with the payment of the above dividend for the half-year ending 31st March 1962, the Preference Registers of the Company will be closed from the 3rd April 1962 to the 10th April 1962, both days inclusive.

By Order of the Board,
IMPERIAL CHEMICAL INDUSTRIES (INDIA) PRIVATE LTD.
Secretaries.

Calcutta,
14th March 1962.

shares and the balance of the issue amounting to Rs 17.50 lakhs is proposed to be offered for public subscription. The subscription list will open on 9 April and close on 18 April or earlier at the discretion of the directors, but not before 11 April, 1962. The entire public issue has been underwritten by the Investment Corporation of India Limited.

BONUS ISSUE NOTES Hindustan Lever

Hindustan Lever Limited, Bombay, has been granted consent to the issue of Rs 267.36 lakhs in bonus shares of Rs 10 each on capitalisation of reserves, to be offered in the ratio of 12 bonus shares for every 25 shares held.

Nangdala Tea

The Nangdala Tea Company Limited, Calcutta, is issuing 24,000 bonus shares of Rs 10 each on capitalisation of reserves to the extent of Rs 2.40 lakhs. The existing paid-up capital of the company is Rs 12 lakhs.

Hindustan Construction

The Hindustan Construction Company Limited, Bombay, will issue bonus shares of the value of Rs 36 lakhs, divided into 36,000 equity shares of Rs 100 each, to be made in the ratio of one bonus share for every equity share held.

New Monkhoosi Tea

The New Monkhoosi Tea Company Limited will issue 72,000 bonus shares of Rs 7.50 each on capitalisation of its

reserves to the extent of Rs 5.40 lakhs. The existing capital of the company is Rs 9 lakhs.

STOCK EXCHANGES A Turn for the Better

Watch-Dog Writes:

THANKS to the revival of bull support following Mr Nehru's statement that there will be no big change in Government's industrial policy, conditions in stock markets have taken a slight turn for the better with selected shares showing a smart recovery from the recent low levels. There is, however, a general disposition to book profits at bulges.

Reopening after the 'Holi' holidays, the Calcutta Stock Exchange displayed a firmer tendency under the lead of speculative issues.

The Bombay Stock Exchange ruled steady and renewed support was lent to a few selected shares.

Although activity on the Madras Stock Exchange was restricted, conditions remained generally steady.

Wall Street closed barely steady.

CALCUTTA

Calcutta, Friday Evening. THE local stock market remained closed on Tuesday and Wednesday due to the 'Holi' festival. Even on the opening day of the week, operators seemed to be engaged in 'holi' activities, resulting in business being ex-

remely limited. Reopening on Thursday, the market displayed a steadier trend and, with the emergence of bull support, almost all the shares recorded a smart recovery under the lead of speculative issues although higher levels attracted slight profit-taking towards the close.

Apart from the fact that the selling pressure was restrained due to the flow of good corporate news, the main inspiration was derived from Mr Nehru's statement that there would be no big change in the Government's policy towards industries. Moreover, on second thoughts, it was felt that the revenue deficit in the budget estimate was no larger than was to be expected and the deficit might not be difficult to cover with judicious increase in indirect taxes.

There were also certain other factors which went a long way in improving the sentiment towards the close of the week. The recommendations of the Mudaliar Committee relating to the creation of a revolving fund and the grant of income-tax rebate in respect of profits realised through exports gave rise to a feeling that these should prove very helpful to all the industries, playing an important role in the export trade.

There was, however, a general tendency to realise profits at bulges and restrict commitments in view of the anxiety with regard to the final budget, to be presented in May. Nevertheless, the more prudent among the professional operators as well as investors nibbled at selected shares, at every bulge of lower values, which offered definite signs of capital appreciation.

The Glitged market continued to remain dull and quiet. Prices were hardly tested. With the monetary conditions tight, institutional investors showed little interest, while enquiry from other quarters was negligible. 3 per cent 1988 Conversion Loan was unchanged at Rs 70.95.

Bank shares were quietly steady with Punjab National quoting Rs 23 and United Commercial at Rs 101.50. Jute shares continued to be a firm feature although support was selective. It was believed that the working results for the current year would make good showing and satisfactory dividends might be declared by the mills which had not incurred heavy losses during the critical period of 1961. Birlas changed hands at Rs 35.62 to Rs 36.06; Ganges at Rs 14.62 to Rs 15.25; Howrah at Rs 21.50 to Rs 21.75; India at Rs 16.19 to Rs 16.50; Nandadea at Rs 68.50 to Rs 72.50 and Khaddah at Rs 17.31 to Rs 17.50. New Central were, however, quiet at Rs 18.

As in the past many weeks, there was little doing in the Coal section in the absence of any incentive-bearing news.

Textile shares came in for selective support. Jay Shree had buyers up to Rs 17.19 following the company's proposal to diversify its activities, while Kesoram moved narrowly between Rs 33.12 and Rs 33.50. J. K. Rayon met with some business up to Rs 23.81 from Rs 23.12.

Tea shares presented a quiet front as the Wage Board's recommendations for an interim relief in wages were taken to mean an additional burden on the industry, which was already fighting the problem of a lower price being realised for the commodity. Hasimara were on offer at Rs 31.50 against Rs 31.81 with Jay Shree quoting around Rs 20.56.

With the exception of Dyer Meakin which met with consistent support up to Rs 48.50 due to persistent rumours of the possibility of a bonus issue, sugar shares were generally neglected although Ramnagar cane met with some enquiry up to Rs 31.25 from Rs 31.06. Carew were on offer at Rs 12.56 and Cawnpore at Rs 12.44.

Miscellaneous issues displayed a smart recovery from the recent low levels due to some replacement buying. Orient Paper met with business at Rs 41.70 to Rs 42.70 (Rs 42.70); Shree Gopal at Rs 26.87 to Rs 27.50 (Rs 27.50); Alkali Chemicals at Rs 46 to Rs 46.37 (Rs 46.25); J. K. Synthetics at Rs 14.81 to Rs 16.19 (Rs 15.87); Hindustan Motors at Rs 19.66 to Rs 20 (Rs 19.81); Orissa Cement at Rs 19.31 to Rs 19.44 (Rs 19.44); Jaipur Udyog at Rs 13.61 to Rs 14 (Rs 13.94); Dunlop Rubber at Rs 43.56 to Rs 44.75 (Rs 43.94); Rohtas at Rs 16.62 to Rs 17.19 (Rs 17.06); Indian Cable at Rs 36.12 to Rs 36.50 (Rs 36.50); Indian Aluminium at Rs 38.62 to Rs 39.19 (Rs 39.00); Indian Copper at Rs 5.04 to Rs 5.16 (Rs 5.13) and India Steamship at Rs 6.75 to Rs 6.94 (Rs 6.94). Figures shown within brackets were the closing rates for the week.

Dunlop Rubber Company (India) Limited has proposed a taxable dividend of 20 per cent for 1961 on the capital increased by the issue of bonus shares as against 21.5 per cent taxable on the original capital.

REPORTS aver that the tone and tenor of Mr. Nehru's speech at the annual session of the FICCI last Saturday came as an agreeable surprise to many in his audience. It had been widely bruited that the ruling party might be inclined to draw the lessons of the last general elections, both in their positive and negative aspects, as consisting in the need for a more vigorous avowal and pursuit of "socialistic" policies. It was therefore anticipated that Mr. Nehru's speech would provide an occasion for testing the validity of this hypothesis. The speech proved, what probably should never have been in need of proving, that there will be no serious breach in the continuity of the policy hitherto pursued. Secondly there were passages in Mr. Karam Chand Thapar's Presidential Address which were forthright and even provocative to which some had expected Mr. Nehru to "react." In the event, however, Mr. Nehru's speech proved no "conditioned reflex" but a considered response. Neither Mr. Thapar's somewhat off-hand reference to the "power exercised by the myriad functionaries" nor his assertion that "it was in the nature of governmental activity to overstep the appropriate mark and overtake the field in which it cannot profitably function" provoked from Mr. Nehru any tart answer. Except for his scepticism about the claim that the current extent of share-holding by the general public confirmed the existence of a genuine economic democracy in the country—a scepticism we share—Mr. Nehru's reaction to the speech was remarkably uncombative.

Indeed on all the substantial grievances voiced by Mr. Thapar, Mr. Nehru was disarmingly ready to agree. He conceded their existence and irksomeness and promised to consider suggestions that might help remove them. He went further and said that he was for free enterprise and that what he objected to was monopoly. There is a familiar air about this argumentative ploy which many students of logic will shake their heads over. But it is not one which a particular type of propagandist of free enterprise will be able to exculpate for he would then be hoist with his own petard. But the important point is that this kind of exchange indicates the irrelevance of terminology in dealing with economic facts. The viciousness of the arguments about the sectors in the country has consisted in that they have little relevance to what is ultimately and quite sensibly being done. All that they have done is to distract and delay action. It should now be taken as settled, despite obiter from lesser luminaries to the contrary that the Prime Minister recognises no yardstick other than that of practicability and maximum efficiency. In determining how a particular economic activity in this country should be organised. And this is not surprising. The pressures that developed in power, fuel and transport in the last two years are not the result of socialism as such but of growth and, less excusably, of bad execution of a plan that was not in itself bad. On the other hand, there

is no socialistic way of relieving transport difficulties that does not involve the production of more wagons, better organisation of movement and greater outlay on railway projects. After all, there is nothing conventionally socialistic about Mr. Thapar and yet he pleads for greater investment in the Railways which is a public sector undertaking.

While on generalities, we should like to refer to Mr. G. L. Mehta's admirable speech at the annual session. Like Mr. Nehru's on this occasion, Mr. Mehta's speech revealed that not every one in the country reacted to certain words in a predictable behaviourist way. But Mr. Mehta was neither loftily censorious nor guiltily self-righteous as is often the case when the subject of "Private Enterprise in a Planned Economy" is discussed. He not only noted the existence but recognised the essential justice of the pressures of the "revolution of rising expectations." He also saw the need for coming to terms with a psychology in which, from across the great divide, the "accusing finger is invariably directed towards those who have power and who have the goods of the world." Above all he spoke up for the consumer, for whom neither the government nor the industry, both engaged in appeasements of their own, have any time. A pervasive atmosphere of shortage, profiteering and puritanism has destroyed the simpler pleasures of the common man, who, when, not denied totally, is fobbed off with shoddy ware at exorbitant prices. The number of businessmen who find this atmosphere stifling is small and that is what makes our claims of entrepreneurial daring somewhat dubious.

Mr. Thapar's speech and the resolutions subsequently passed at the session underlined the all too familiar particular problems that the economy was facing. He went into considerable detail in analysing the bad planning and execution of the transport requirements of the Second Plan. His fears that "we seem to be planning for a transport shortage, and in the circumstances we can legitimately expect, before we are out of the Third Plan, a more critical crisis" were underlined by the main resolution adopted by the Federation, which urged greater allocation for Railways. At the Central Advisory Council meeting since held, the Planning Commission's decision to increase the allocation to Railways by another Rs 125 crores has been announced. This is certainly welcome news. Some, though not much, relief is expected in the other two crucial areas of shortage—viz. coal and power. It now seems likely that power generation by the private sector for augmenting existing sources may not be frowned upon. Coal movement, to judge by official statements made at the Advisory Council, may ease, but production and price problems seem as yet to be shirked. Unless the three related problems are faced squarely, we may find ourselves in the middle of the Third Plan in even greater (though different) difficulties than those that arose in the middle of the Second.

LOOK FOR THIS
'Mark of Quality'

It is your Assurance of Extra Safety and
Dependability and only Firestone Tyres have it

Whether you own a Motor Scooter, a Car, a Tractor, a Truck or whether you control a fleet of giant Earth-moving units; there is a Firestone tyre to suit your needs. Every single one bears "The Mark of Quality"—the long-established Firestone symbol of Extra Safety and Dependability.

Specify Firestone and you get—

- * **SAFETY** The exclusive Firestone tread design and tyre construction will give you MAXIMUM STOPPING POWER and resistance to road hazards.
- * **ECONOMY** The longest-wearing tread specially compounded by Firestone for Indian service conditions ensures MORE KILOMETRES PER RUPEE from the original tread.
- * **RETREADABILITY** Look after your Firestone tyres—don't overload them or otherwise maltreat them—and they will remain suitable for RETREADING OVER AND OVER AGAIN.

Firestone BEST TODAY—STILL BETTER TOMORROW

Coal: The Problem Industry

THE coal industry has for the last couple of years been in a sad plight faced with a multitude of problems which have affected the basis of its working. As a result production has been in shortfalls, while supply to consumers has gravely lagged behind requirements. Many industries, and particularly the engineering industries, have complained about continuing shortage in coal supplies which reflects not only shortcomings in the system of distribution for coal but also the inadequate rate of production in the industry. At the end of the Second Plan itself, production of coal was found to be short of the target of 60 million tons by about 4 million tons, and only the reduced level of requirements by the steel plants obviated undue pressure on the limited supplies available. What should cause concern is the disappointing level of production registered in 1961 which shows decline of the order of nearly 3 million tons as compared with production in the previous year. For the first year of the Third Plan production has been estimated at 55.66 million tons, which shows a fall even against the Second Plan target of 60 million tons. This certainly marks a sad beginning for the Third Plan programmes for coal production which envisage total production at 97 million tons by 1965-66. The interruption to the progress of the coal industry witnessed in 1961 would thus seem to aggravate the magnitude of the problem constituted by the Third Plan target. The outlook seems even bleaker in view of the suggestions that have been lately heard for stepping up the production target for coal even beyond the 97 million tons originally fixed. While the extent of the increase in production target is not yet known, the inevitability of such an increase is now well beyond question. This is a situation which imparts particular urgency to measures intended to remove the difficulties that are now being experienced by collieries and which stand in the way of implementation of schemes to step up coal production.

Two spokesmen of the coal industry, namely Mr. Pran Prasad, Chairman of the Indian Mining Association, and Mr. B. P. Agarwalla, Chairman of the Indian Mining Federation, have recently drawn pointed attention to the problems being faced by the coal industry and urged the need to take concrete steps so that production could be stepped up to meet the anticipated levels of demand likely to arise during the Third Plan period. The gravest of the difficulties which has adverse bearing to the progress of production is the shortage of railway wagons to meet the full requirements of the collieries. The transport bottleneck had manifested itself even as early as the beginning of 1961, but the measures that had been taken by the Government had not proved sufficient to permit expansion in production in the collieries. While in the wake of the transport crisis, alternative means such as movement by truck and sea route were sought to be pressed into service, in the most important requirement of additional railway wagons, a serious gap was allowed to develop. While requirements of the collieries for railway wagons during 1961-62 were estimated at 7,183 on a daily average, the actual loading amounted to no more than 5,951 wagons. It is this shortfall in railway availability that threatens to be the most serious limiting factor to the successful execution of the Third Plan schemes for coal production. On the

basis of the target of coal production at 97 million tons, wagon requirement for movement of coal in the final year of the Plan has been estimated at more than 12,000. The prospect for meeting this order of requirements are, to say the least, dim. For 1962-63, the Railways have indicated that they will endeavour to maintain during the year an average daily supply of 6,925 wagons for loading coal. As Mr. Pran Prasad has explained in his speech, this level of wagon supply will suffice to meet requirements for movement of coal of only 55 million tons which will inexorably lead to shortfall in production against the phased target 68 million tons for 1962-63. Railway programmes have to be considerably stepped up if transport limitation is not to hinder coal production.

Second only to shortage of wagons is the problem of inadequate supplies of electricity needed by collieries. It has been stated that since March 1961 the industry has had to face frequent cuts in the supply of electric energy which put a brake on expansion projects. The power shortage is pronounced in West Bengal and Bihar the two States that have a the largest concentration of collieries in the country. For 1962, the shortfall in power supplies in these two States has been assessed at 25.50 MWA and 33. MVA respectively. The private units in the coal industry have particular cause for concern at prospective shortfalls in power supply since, in view of the vertical expansion to which it is confined by virtue of Government policy, its requirements of power are of a greater magnitude than those of units in the public sector.

An allied problem is the current shortage in supplies of explosives to the private sector units. It has been revealed that owing to periodic shortages in supplies of explosives, during 1961, some of the collieries had to suspend operation temporarily, while the general effect was a slowing down in production. While the shortage underlines the inadequacy of the production capacity of the only unit of production owned by the Imperial Chemical Industries, the impact of the growing demand for explosives that are being made by the Government has also to be taken into account. In view of the substantial expansion plans that have to be put into execution to reach the Third Plan target, and which will sizably put up the demand for explosives, there does not seem to be an alternative from increasing imports of explosives.

Apart from these shortages in raw material requirements, the most discouraging element in the prospect for coal production is constituted by the unfavourable structure that obtains for prices in the coal industry. The price structure that has been evolved by the Govt. has left little scope for capital formation in the industry to finance the expansion programmes chalked out for the private sector in the Third Plan. Owing to various labour awards and under pressure of the rise in various elements of costs, the industry has been finding it difficult to earn a margin of profit that will be comparable with earnings in other industries. This is a most disheartening feature considering the magnitude of capital requirements needed for expansion of production. The Third Plan demands for capital for the private sector expansion have been estimated at Rs 60 crores. It was to meet these capital requirements that the industry made representation to the Government for granting increase in price of the order of Rs 2.22 per ton for all grades of coal. The industry's case for a rise in price of this order was genuine and sound. Even according to the Reserve Bank study of

the working of the companies in the private sector, the coal industry had fared very badly in comparison with other industries in the matter of growth of assets and profit as a percentage of net worth. Sustained rise in the prices of mill stores and railway freight is only one ground for price rise demanded by the industry. Apart from this, increased rates for electricity has cut earnings in the coal industry by 15 nP. per ton, while indiscriminate downgrading of collieries enforced by the Coal Board had made inroads into earnings to the extent of 29 nP. per ton. The cost of introducing time-scales and grades has been another element in the cost rise witnessed in the industry, and though in terms of the recommendations of the previous coal price revision committee, the industry was entitled to full compensation for the rise in wages etc, there has been an inexplicable reluctance on the part of the Government to allow this particular recommendation to take effect. The alleged concern for the effect on cost of production in other industries is hardly understandable in view of the tiny proportion constituted by coal prices to cost of production in the majority of industries. For its part, the Government has not hesitated to raise the price for coal that became necessary when coal transport of an additional one million tons by the sea route to the Southern and Western States had to be subsidized.

On the question of coal prices, attention has also to be drawn to the anomalies contained in the recent revision of prices effected by the Government for coking coal of various grades. The revised formula included price increase for only the higher grades, but reduced the price for the lower grades to a notable degree. While the increases for higher grades ranged from 32 nP. to Rs 2.95 per ton, the prices for lower grades were lower than the previous prices by 18 nP. to Rs 1.05 per ton. The price cut will affect nearly 47 per cent of coking coal of Grade I and the entire production of grade II. While the ostensible object of the rise granted in the price for higher grades is to stimulate their production, no regard seems to have been paid to the current trend in respect of production of superior and inferior grades of coking coal, which shows continuing rise only in respect of the latter, owing mainly to the limited reserves of superior grades of coking coal. The ultimate effect of the new scheme of prices will be to render the overall production of coking coal even smaller than what it has been, a situation which will affect the supplies of the inferior grades of coal to coal washeries. It would be better therefore, if before the adverse effects on working of coal washeries become manifest, further revisions are made so that prices for lower grades may be restored to the original levels.

Finally the question of the role of the private sector has also to be faced realistically if the rate of production is to be increased to the level required to meet the demand for coal. A reassessment of the private sector's capacity is necessary in view of the suggestion for raising the coal target beyond the 97 million tons now fixed. All through the Second Plan period the public sector ie, the National Coal Development Corporation was lagging behind the production schedules originally drawn for it and had only succeeded in touching a rate of production equivalent to its production target in the last phase of the Plan period. Progress of the public sector has lately been rudely interrupted by the transport bottleneck resulting in drastic cut in production. In contrast the private sector has stood

31 March 1962

out during the Second Plan by even exceeding the target fixed for it. It has already made an offer to share the additional burdens in production implied in the upward revision of coal target. The private sector has the major portion of collieries producing superior grades of coal and considering the growing demands from steel plants and other important consumers, the case for a larger role for the private sector cannot be easily brushed aside without spelling harm to the Third Plan objectives for coal production.

Wage Board for Coal

IN the course of his comprehensive survey of the problems of the coal mining industry, Mr Pran Prasad, Chairman of the Indian Mining Association, touches on the subject of wage structure for the industry. He made it clear that it was no cussedness on the part of the employers that was preventing a better deal for labour for he unequivocally expressed himself as "basically in sympathy with the demand for an upward revision of wages." What prevents a realistic solution of this problem is the artificial price fixed for coal. It is the impossibility of "absorbing any increase in wage costs within the framework of existing prices" that has stood in the way of any agreement on the basis for a revised wage structure for the industry.

Colliery wages since May 1956 have been regulated by the Award of the All India Industrial Tribunal, (Colliery Disputes) as modified by the decision of the Appellate Tribunal. The three-year period for which the award was to operate expired on 26 May 1959, but it has been extended from time to time by agreement among the parties concerned, pending consideration of the demand put forward by the workers for setting up a Wage Board. This question came up before the eighth session of the Industrial Committee on Coal Mining held in April 1961, which decided to set up a committee of employers and workers to go into all aspects of the wage structure. The Committee was particularly asked to explore the possibilities of adjustment of wages within the existing structure of coal prices.

The Industrial Committee also decided that the question of setting up other machinery for the purpose was to be considered if the attempts to arrive at agreement on bipartite basis proved unsuccessful. The bi-partite committee which was set up in pursuance of the above decision has met three times in all. The last meeting of the Committee was addressed by the Minister of Labour and the Minister for Steel, Mines and Fuel on the issues raised at the earlier meetings of the committee.

The workers' representatives had demanded that the proposed wage structure should be binding only for three years, that is, the period of operation of Tribunal Awards under the Industrial Disputes Act. The employers' representatives, however, felt that in the interests of the smooth functioning of the industry during the Third Plan, the agreement should run for a minimum period of five years. They could cite in support of their position the views of the Wage Boards for Textiles and Sugar which had recommended that the wage structure recommended by them should not be disturbed for at least five years.

On wages, the workers' representatives demanded a wage structure based on the principles evolved at the 15th session of the Indian Labour Conference. While the need for revision of the scale of wages laid down by the Tribunal Award six years ago is conceded on all hands, it is not clear that the fixing of wages based on the formula adopted by the 15th Indian Labour Conference would be a practical proposition. Employers also do not consider that any upward revision of wages could be affected within the existing rigidly controlled structure of coal prices.

In this context it is relevant to mention that the Wage Boards for Textiles and Sugar, after reviewing the present economic position of the country and the requirements of development, arrived at the conclusion that it was not possible to give full effect to the formula adopted by the Indian Labour Conference. The demand for fixing the salaries of Central Government Employees on the basis of the formula was also examined, and rejected, by the Second Pay Commission, which found that it was not feasible economically, or financially. The reasons advanced by the Commission in support of that conclusion were:

1. The minimum remuneration calculated on the basis of the 'norms' works out to about Rs 125 per month as compared with Rs 52.50 which, with some exceptions, is the upper limit of minimum wages fixed under the Minimum Wages Act.
2. The minimum remuneration of Rs 125 per month is about 70 to 80 per cent higher than the rates prevailing in the organised sector of industry and would be well above the highest wage of Rs 112 (average for 1958) in the cotton textile industry in Bombay.
3. Such a high minimum wage is not feasible economically and financially at the present level of per capita national income.
4. The 'norms' adopted at the Conference are themselves open to question in the light of further researches on nutritional requirements.
5. Even assuming that a minimum wage of Rs 125 is made available, it may not be possible to make available goods and services on the scale envisaged in the 'norms'.

The inability of the Central Government to fix the salaries of its own employees on the basis of the "norms" agreed at the Labour Conference has induced the authorities to re-examine the nutritional needs which served as basis for the fixation of the 'norms'. These were based on the schedule of an 'adequate diet' recommended in 1944 by the Nutrition Advisory Committee of the Indian Research Fund Association, (now the Indian Council of Medical Research). The diet schedule recommended in 1944 was subsequently modified in 1959, resulting in a marked decrease in the protein allowances for adults, men and women. The 18th session of the Standing Labour Committee agreed with the suggestion of the Labour Minister that the 'norm' of 'need based minimum wage' should be re-examined in the light of the latest information available on the subject. At the instance of the Ministry of Labour, the National Nutrition Advisory Committee has been requested to set up a sub-committee to review the nutrition requirements of a working class family which could serve as basis for formulating a minimum wage.

In the meantime, a Working Group of the Nutrition Advisory Committee have suggested the adoption of a modified dietary schedule which further reduces the allowances recommended in 1958. Against 3000 calories, 92 grams protein and 94 grams fats recommended in 1944, the modified schedule now put forward would provide 2500 calories, 70 grams protein and 50 grams fat. The main consideration in drawing up the modified, it is stated, has been that the suggested schedule should not deviate markedly from the estimates which can be made on a scientific evaluation of requirements. An even more important consideration is the limitation set by the availability of foodstuffs estimated for 1966. Even on the basis of the modified schedule, there will be considerable shortfalls in the production and availability of many items like animal proteins, vegetables and fats. It would have been preferable if the Working Group had based their case for modification entirely on the economic ground of availability of food, instead of seeking to buttress their argument by what they describe as "scientific" evaluation of nutritional requirements.

The adoption of the revised schedule of diet, which now holds the field, should make it possible to fix the 'need-based minimum' at a level which could be achieved in practice. But in making their recommendations, the Wage Board will also have to take into account the impact on selling prices of coal and manufacturing costs in general. The Minister for Labour appears to have prejudged the issue when he stated that any increase in wages "need not necessarily entail an upward revision of coal prices." But if the Wage Board is obliged to take a different view, it will have to examine the extent to which the price of coal enters into manufacturing costs. Apart from the increase in coal prices announced last year, the effective prices for consumers have been further increased by shortage of rail transport which has obliged them to resort to other more costly means of transport. The decision to set up a Wage Board has been postponed to the last moment, till after the Colliery Mazdoor Sangh had served notice on 24 February, 1962 of the termination of the Coal Award.

The recommendations of a Wage Board do not have the binding force of Tribunal Awards, and this can give rise to difficulties of enforcement, especially when a large number of small units are involved as in the Coal Mining industry. Nevertheless, the Wage Board is preferred as the machinery for settling wage claims, because disputed issues are settled by discussion and persuasion making for better industrial relations. But it appears that the Wage Board for Coal will hardly have the time to work out an acceptable settlement on the basis of objective evaluation of all the relevant considerations.

Madras Takes Off

IN 1946, the Government of Madras put out a list of industries that seemed desirable or promising. It was a comprehensive survey of hopes rather than possibilities and there seemed then little likelihood of anyone coming forward to start these industries. But a decade of planning has wrought a remarkable change in the economic landscape of the South. An exhibition held under the auspices of the Southern Indian Chamber of Commerce last year gave a truly amazing picture of the extent and depth of the

changes that have taken place in these years. It revealed, as no official surveys or statistical reports could have done, what an industrial policy basing itself realistically on the extent and nature of available physical and human resources can do to stimulate productive industrial activity and entrepreneurial energy.

Recent industrial experience and prospects in Madras have been crystallised in the detailed techno-economic survey of the State carried out by the NCAER two years ago. Its report dealt principally with physical rather than financial resources and indicated both the possibilities and the limitations of further industrial advances in the State. For example, hopes for the development of Tuticorin Port and for the erection of a Steel Plant at Salem were quickened by it. The rise of large new industries like aluminium and paper also followed the survey. On the other hand, the report recognised that the limit of power development has already been reached and that transport difficulties can be a major handicap to organised industries. It however saw the immense possibilities of a large supply of technically competent and efficient labour with which the State was blessed.

Official policy in recent times has apparently taken note of the implications of these findings of the report and the consequence has been that there is greater husbanding of resources and fuller exploitation of special dispensations in Madras than in most other States. Madras expects to invest over Rs 291 crores in the Third Plan which is slightly higher than its outlay in the First and the Second Plans put together. The industrial, agricultural and educational infra-structure of the economy of the State is being strengthened and the foundation of progress has been laid on the eve of the Third Plan. Therefore, in Madras more than in many other States, private industry is expected to have greater initiative in future. The experience of the last few years has also been extremely encouraging in this respect. Company Registration figures bear witness to the accelerated growth of industrial ventures in the State. The number of industrial licences issued in the Second Plan period amounted to 370 against 52 issued under the First Plan. The State Government has proved an active collaborator in encouraging entrepreneurial venturesomeness. Early last year, it circulated a list of industries similar to the one published in 1946 in which details of new ventures for which scope existed in the State were given. It has also actively promoted the subsidiary requirements of raw materials and finance for starting new ventures. For instance, development of bamboo plantation on a considerable scale is contemplated for helping the output of rayon chemical for use in rayon production in the State. Whether the State invests directly or not in new concerns, it has been able to give assistance in regard to purchase of lands and provision of finance through the various financial agencies created in the State. Thus the Madras Industrial Investment Corporation is claimed to be the best among the state financial corporations so far. Apart from floating loans by bonds it has tried to secure fixed deposits from the public in order to obtain larger resources for making long term loans to industry.

The Government of Madras has also pressed forward with its efforts to rectify disparities in development vis-a-vis the more developed parts of the country. It has also vigorously pressed its claims on the Centre's

attention. In this task, the Government has been assisted to some extent by the scarcely defensible popular clamour basing itself on the alleged discrimination against the South by the Government at Delhi. The programmes under the Third Plan in the South under the Centre's auspices are certainly impressive. Apart from the commitments to increase power output, expansion of the Integral Coach Factory and certain other projects spilling over from the Second Plan, there are the new Tank and Motor Factory at Avadi and the Heavy Boiler Manufacturing Plant near Trichy. Programmes of expansion at Neiveli include a high temperature carbonisation plant because of the increase in the prospective output of lignite to 4.8 million tons per annum. The manufacture of Teleprinter at Guindy has already started and the Russian aided Surgical Instruments Factory at Guindy and the Raw Film Factory at Ooty are on the agenda of the Central Government.

But for the major break-through in the industrialisation of Madras, hopes are pinned on the Steel Plant at Salem. Expectations are running very high and popular feeling invests the project with a certain symbolic significance. According to the Third Five Year Plan, there are substantial deposits of iron ore in Salem and the iron content can be raised from 35 to 65 per cent. Because of the difficulty in bringing iron and steel from a distance it has long been argued that a steel plant is indispensable. The Madras Government has made a provision for a new Steel Works that will produce 300,000 tons of rolled steel in the first stage. With the commissioning of such a plant, it is felt that Madras may be said to have arrived industrially. Preliminary tests carried out last year have given room for cautious hopes. Great reliance is now placed on the experiments conducted with Salem Iron Ore in foreign countries to determine whether lignite could be used for smelting. A technical committee appointed by the Centre has recommended further tests with the electric low-shaft furnaces and the Madras Government has appointed a special officer to go ahead with the investigation as the West German Government has also offered to assist in the examination. The promise of steel for the South is dependent on the results of the tests being made abroad and at Jamshedpur. If steel for Salem becomes a viable industrial ambition the Neiveli-Salem industrial complex, may become the centre of innumerable concentric circles of secondary and tertiary economic activities. Compared to it the raw film factory at Ooty and the Surgical Instruments factory at Guindy are small beer.

While at the moment the steel plant remains in the realm of desirable things, progress in existing and newly started industrial ventures has been of an order that makes the desire for greater things a not unworthy ambition. Manufacture of cotton yarn and textiles is among the older private enterprises in Madras. In the last official review of existing industries, Madras is credited with 134 cotton mills of which 25 are co-operative mills. The total spindles exceed three million and it is claimed that 22.5 per cent of the total spindles in India are found in Madras. The number of looms is however, negligible at 7500. The Handloom Industry occupies a special position in the State's economy and is partially responsible for the limited growth of power looms. The mills in Madras produced in 1960, 3003 million pounds of yarn and 133 million yards of cloth. Four new spinning mills were licen-

sed in order to help Handloom Industry and it is proposed to set up four more spinning mills under the Third Plan with Government providing 50 lakhs of the required capital.

Among the other comparatively old entrants in the industrial field in Madras is cement. It may be noted that the three cement factories now produce over 7½ lakhs tons per annum and there is now a promise of more cement factories like that near Rajapalayam and the proposed one in Salem to be started by India Cement. The expansion of the sugar industry has continued with new cooperative sugar factories in North Arcot, Coimbatore and Chingleput coming into operation. In the case of sugar, the companies in Madras have experienced the same temporary adversity afflicting those in North India and the change from shortage to surplus in the case of sugar inhibits optimism about the future despite natural advantages. The inception of a new sugar factory in Trichinopoly District will enlarge supplies. Though at the moment enlarged supplies are a source of embarrassment it may not remain so for ever. Meantime, however, diversification of interests, where possible, may help tide over immediate difficulties. This trend is noticeable in the case of the East India Distilleries and Sugar Factory which has embarked on fertilizer production.

The old reproach that chemical and engineering industries in Madras have not developed has been met by the organization of three new fertiliser factories in 1961 and the advent of engineering enterprises including the manufacture of machine tools. Whether the rate of development would continue, depends on the rise of new centres of industry even more than the arrangements for collaboration like those made in regard to new factories for producing wheels set up by TVS in conjunction with Dunlop. Factory employment is still concentrated in the cotton industry but after the last zonal conference of the Chambers of Commerce, the anxiety is really felt in regard to transport facilities so that the electrification beyond Tambaram is viewed merely as a beginning. That is of course a hope resting on the belief that Neiveli would soon provide power for new industries in the South Arcot district and fertiliser production for improving agricultural output would take a great leap forward.

But the most striking development has been that of engineering industries under the Second Plan. On the heavier side, there are the sugar plants being supplied by Binny Engineering Works and KCP Ltd. which has a large workshop near Madras city. A licence has been given for the manufacture of paper mill machinery. The automobile factories in Madras have made considerable progress and Standard Motor Products of India is expected to reach the production of 6,000 cars and 1,500 light trucks by 1963. Ashok Leyland is also expanding and future production will rise to 5,400 trucks and 1,200 heavy duty Titan trucks per annum. The manufacture of diesel engines for automobile at the rate of 10,000 engines per annum by Simpson & Co. ensures a regular supply. The manufacture of tractors at the rate of 3,500 per annum along with accessories has been started in 1961. The manufacture of components and accessories by several concerns is now firmly established. The production of motor cycles by Enfield India along with three-wheel delivery vehicles will be supplemented by the production of scooters.

But the biggest of the engineering concerns is that of Tube Investments of India at Ambattur producing 30,000 cycles per annum. The company is now engaged in the manufacture of chains, saddles and lamps and is in a position to supply other manufacturers. Under the Second Plan the chemical industry developed and the Dhrangadhara Chemical and Industrial Works made substantial progress. The production of soda ash by Dhrangadhara Chemicals will be supplemented by the manufacture of PVC to the extent of 12,000 tons. There is a project by India Cements to produce 6,000 tons of PVC at Mettur for using chlorine available from Mettur Chemicals which has now embarked on increased output of caustic soda. The manufacture of sulphuric acid at the rate of 70 tons per diem by Shaw Wallace ensures a supply for consuming industries but far more importance is attached to the rise of fertiliser production under the Third Plan. The EID & SF has started construction of a new plant at Ennore for fertiliser production to supplement its present output of superphosphate. The Madras Government has recommended applications for starting new factories at Nagapattinam and another in Chingleput district. It may be mentioned that two smaller companies—Premier Fertiliser and Blue Mountain Industries—were launched in 1961 for producing superphosphate.

The increase noted in the metallurgical industry is due to the hope of pig iron production. Many firms have been authorised to produce forgings and castings but in the long run, the wagon building undertaken by Southern Structural which is now assured of collaboration by a British firm will see more importance. In regard to non-ferrous metals the expansion by Jeewanlal will make good the serious shortage experienced in the supply of sheets and circles in recent months. The manufacture of power alcohol at a new plant in Tiruchirappalli has been recommended and many sugar mills are reportedly anxious to find new outlets for surplus salt production in the chemical industry. But the stable demand for chemicals will come mainly from the paper, rayon and other industries whose prospects are now linked with the decline in imports and the increase in internal consumption.

As already stated the Government has drawn a list of industries suited for development and among those listed are a variety of light engineering industries like cables, meters and porcelain-insulators. To judge by the activity in the industrial suburbs of Madras, small and medium scale industries have taken root in Madras. Among the programmes of State assistance mentioned in the Third Plan, the small scale industries and ancillary industries find an important place. The outlay on such assistance has been increased to Rs 11.2 crores. The principal aim seems to be provision of the kind of services of a general nature that would help a whole range of small industrialists who would not have the wherewithal for providing the facilities themselves. Thus manufacture of precision instruments and provision of tool room facilities and expansion of foundries are all contemplated. These are to be supplemented by a structural workshop. Industrial estates in Madras have won a more than local reputation and in the scheme of Central assistance to industrial estates recently announced, Madras is the largest beneficiary. Last November, Madras hosted an international seminar on industrial estates and was able to provide much enlightenment from its own experience. A State Corporation for manage-

ment of industrial estates and colonies is proposed. The development of handicrafts, wherever there is a tradition of skill, will be supported by a design centre. The upgrading of the School of Arts and Crafts, the oldest institution of its kind in India, is also contemplated. Sericulture for which mulberry cultivation is being extended will receive attention. Engineering education is making steady headway. Besides higher technical institutes like the MIT, 14 polytechnics were opened under the Second Plan. These will be supplemented by six more and three technical institutions will be set apart for women. Junior technical schools also figure in the programme and the Directorate of Technical Education has already been strengthened in order to deal with the larger number of institutions.

All these do add up to an industrial endeavour of tremendous significance for a State not particularly endowed naturally. Optimism stems from the observed fact that Madras is probably one of the few States in India where the concept of mixed economy is given a fair trial and where decisions are taken without undue anxiety to toe the ideological line. But the crucial uncertainty that will throw the calculations and hopes awry is power. It is believed that in 1965-66 there will be a substantial deficit in power supply. Under the Second Plan itself, the demand for energy increased particularly in the Mettur system and a further increase in 1961-66 is expected because of new chemical and other plants that would be coming into existence. Even with the completion of the Periyar and Kundah schemes and the Thermal Power from Neiveli, the power position may prove difficult. This fear of shortage and the negligible sources of untapped Hydro-Electric power lies behind the local plea for an atomic power plant in Madras. The prospect of such an augmentation to the power resources of Madras seems rather remote at the moment.

The London Gold Price

By Paul Einzig

IN the recent past fluctuations in the London price of gold constituted a source of instability which after the experience of the autumn of 1960, could not be ignored. Although provisional arrangements were made to prevent the recurrence of the scare of 1960 the situation continued to be one of uneasy equilibrium. Even though the spectacular rise of 1960 did not repeat itself, on many occasions the price was above the equivalent of the official American selling price allowing for expenses. More recently there was a tendency for gold to decline below that equivalent. Evidently it was necessary to make some arrangement to prevent any abnormal movements. Under the Bretton Woods Agreement every Government was supposed to ensure that the fluctuations of the market price of gold in its own country are kept in narrow limits. That provision was never implemented, however. Quite obviously it would be beyond the British Government's resources to carry out that provision unilaterally. The joint arrangement with the United States Treasury prevented the recurrence of major movements but was far from satisfactory. It provided an opportunity for Central Banks of third countries to make heavy gold purchases in London.

One of the great advantages of the proposed arrangement is that it establishes the principle of collective responsibility for the maintenance of a stable gold price in London. We do not know enough about its details to be able to form an opinion about the exact way in which these arrangements will operate. But it is certain to constitute a useful link in the chain of international monetary cooperation. The fact that a number of Central Banks and Governments agreed to participate indicates the growing realisation that their interests in maintaining international stability are identical.

Quite recently the unexpected weakness of the Swiss franc provided a reminder that no currency, however strong and sound, is a hundred per cent safe. The crisis of one currency is followed by crises of other currencies as surely as night is followed by day. A Government can no more afford to look upon the crisis of a foreign currency with indifference than a householder can look upon fire next door with indifference. The adequate realisation of the identity of interests of all Governments in the prevention of exchange crises would not in itself be sufficient. If the economy of a country is out of balance its exchange is bound to come under a cloud and no amount of international cooperation will save it in the long run. What matters is that international cooperation should lead to the prevention of exchange crises due to false alarms or to the speculative exaggeration of genuine but tolerable difficulties. From that point of view the arrangement to ensure the stability of gold price in London is an important step in the right direction.

UBF-123-61

To help meet these changing requirements, President Kennedy not only has emphasized the need for a faster long-term growth rate but has made the retraining of workers, an integral and priority element in his domestic programme. Last week, Congress responded by completing action on a comprehensive manpower retraining measure, and President Kennedy promptly signed it into law.

Notes

IND. PERFORMANCE

Further Diversification

The report of the Ministry of Commerce and Industry for 1961-62 gives an impression of both expansion and diversification of the public and private sectors in industry. The average of the monthly indices of production for the first six months of 1961 was 181.4 as compared to 166.6 during the corresponding period of the previous year, that is, an improvement by 8.8 per cent. The most striking feature of the industrial performance was the success achieved in launching production of a number of new items such as hydraulic presses, gas-cutting machines, sintered bearings, time pieces, watches, radio valves, compressors, field cameras, reduction gear units, potassium permanganate, argon gas, ammonium phosphate and calcium ammonium nitrate fertilisers, butyl alcohol, butyl acetate, plasticisers, methyl violet, etc.

All the industries are shown to have recorded increase in output. Licensing of additional capacity of heavy mechanical engineering industries such as wire ropes, beats, and crafts, structural fabrication, cranes and lifts, steel pipes and tubes; mainte-

nance of the upward trend in production of items of light mechanical engineering industries like typewriters, machine screws, duplicators, razor blades, etc; and opening of new lines of production were the highlights of the sustained growth in the general engineering industry. Increase in production in the chemical industry is also shown to be remarkable. The main features of performance in this sector were the rise recorded in production of sulphuric acid, caustic soda, soda ash, calcium carbide, and bleaching powder, commencement of production of ammonium phosphate and calcium ammonium nitrate, and also of organic chemicals like butyl alcohol and plasticisers.

While all the industries registered increase in production, improvement was marked in the case of power transformers, power cables, machine tools, electric motors, grinding wheels, soda ash, caustic soda, sulphuric acid and oxygen gas. Cloth and yarn also shared in the buoyant trend, and tea, coffee, rubber and raw jute registered appreciable improvement. One major exception to this uptrend in production was constituted by jute goods which had to bear the impact of successive crop failures of raw jute in the two previous years.

In the public sector, most of the undertakings now in production recorded increase in output. While, despite some labour trouble, the Heavy Electricals, Bhopal, was well on its way to achieve the target production valued at Rs 3.5 crores by March 1962, the Hindustan Machine Tools manufactured a record number of 1,067 machines. Other notable developments in the public sector were the commencement of production at the Nangal Fertilisers, the assembly of the first low cost quality watches in the public sector watch factory, consolidation of the work of construction and installation of several of the new heavy electrical and heavy engineering projects, etc.

The report also refers to some of the difficulties that have arisen in the industrial sector during the year under review and which have hindered production in some important industries. Shortage of power, for example, is noted to have affected production of machine tools while chemical industries had to put up with shortage of coal. Shortage of raw materials aggravated the problem of idle capacity in the non-ferrous metallurgical industries. Shortage of foreign exchange also affected production generally. This

problem evidently will not admit of a solution in the short term and the only answer lies in the development of machine building industries which will ultimately reduce the demand for foreign exchange resources. On this consideration, the increasing orientation of Government's industrial policy toward the development of machine building industries is a matter for gratification. A number of projects designed to build and fabricate a wide variety of machines and equipment has been taken up in the public sector. The more important of these schemes are the Heavy Electrical plant at Tanipur, the Heavy Power Equipment Plant at Ramachandrapuram, the Heavy Pressure Boiler Plant at Tiruchirapalli, the Heavy Machine Building Plant at Ranchi and the Coal Mining Machinery Project at Durgapur. The current production of industrial machinery is valued at Rs 200 crores which includes capacity for the manufacture of paper machinery worth Rs 29.50 crores, chemical plants and machinery worth Rs 6 crores, building and construction machinery worth Rs 6.31 crores, sugar mill machinery worth Rs 4.20 crores, and tea processing machinery valued at Rs 2 crores.

While the evidence of progress reflected in the report cannot be questioned, the report seems to play down some of the difficulties that have made their appearance in the very beginning of the year and which have been further aggravated in the latter half. Shortages of coal, power and other essentials of industrial production have assumed a chronic aspect and the report does not take sufficient cognisance of their adverse impact. The decline in the rate of industrial production noticed in the latter half of 1962 should provide a warning against any undue complacency in the face of their continuing presence.

INDUSTRIAL FINANCE Loan or Capital?

In his address to the Bureau of Industrial Statistics, Calcutta, last week, Mr P. C. Bhattacharyya, Governor of the Reserve Bank, made a comprehensive survey of the institutional facilities that have been created during the First and Second Plan period for meeting the financial requirements of industries in the large scale organised sector as well as of units in the developing small scale sector. It will be granted that considerable progress has been made in the course of the last decade in the field of industrial finance not only by creating new institutions for providing finance not easily available before but also by expansion of facilities within the existing institutional framework itself. The major gap was in respect of medium term and long term finance. The internal resources of the companies and the

resources offered by the capital market had proved inadequate to the scale of effort envisaged by the development schemes for industrial expansion. It was in these circumstances that the step was taken for creating new institutions, for catering to the long term credit needs of industries. The Industrial Finance Corporation was set up by the Government in 1948 with the function of guaranteeing and underwriting issues of shares and debentures floated by industrial concerns and also for making loans and advances to them. Later in 1955, the Industrial Credit and Investment Corporation was set up with joint effort of the Government of India and the International Bank for Reconstruction and Development. With the gradual expansion of the scope of its activities witnessed in the course of the last few years, the ICICI has come to occupy a unique position. Its activities have come to include underwriting of new issues, participation in the share capital of new concerns underwriting new issues and provision of finance in the form of medium and long term loans both in rupees and in foreign currencies to industrial concerns. The institutional framework was further expanded when the National Industrial Development Corporation was set up as a purely State-owned body to provide finance for industrial expansion and modernisation in selected fields. The Refinance Corporation was the last of the new institutions to come up in the field of industrial finance, the main objective in its formation being to provide refinancing facilities to its members (Banks and other financial institutions) in respect of medium

Indian Finance

31 March 1962

term loans granted by them to medium sized industrial units in the private sector.

Since the setting up of these institutions very remarkable progress has been made to meet the long term and medium term credit needs of industries in the private sector. Up to 30 June 1961, the IFC has sanctioned loans of Rs 105.82 crores to 386 industrial concerns, the disbursements amounting to Rs 57.35 crores. The ICICI has till 31 December 1961 sanctioned assistance aggregating Rs 42.71 crores. For the NIDC, the total loans sanctioned upto the end of December 1960 has been estimated at Rs 18.40 crores while loans actually disbursed are placed at Rs 6.02 crores. The refinance accommodation made available by the Refinance Corporation since its inception in 1958 is put at Rs 16.49 crores, the actual disbursements being placed at Rs 7.00 crores.

In the field of short-term finance, there has been a spectacular increase in the quantum provided by the commercial banks. The industrial credit provided by the banks has risen from Rs 278.5 crores in March 1956 to Rs 533.3 crores in April 1960 and further to Rs 685.6 crores in April 1961. While this gives a measure of the rise in credit requirements of industries entailed by development and expansion needs, it also emphasises the increasing dependence of the industrial units in the private sector on the commercial banks for meeting their short term credit requirements. The rather high debt equity ratio reflected in such large scale borrowing from banks that is characteristic of the capital structure of many of the industrial units has been the subject of some critical comments. In his address to the annual general meeting of the ICICI, Mr. G. L. Mehta, Chairman of the Corporation has warned against the effects of a higher than normal proportion of borrowed funds which only lead to higher cost of production. Mr. Bhattacharyya has also referred to the undesirability of industrial units depending too much on banks for their working capital requirements. Instead he was of the view that a "greater reliance placed by industries on the capital markets both for equity capital as well as long term loans, will in addition to reducing the pressure on banks give a stimulus to the saving and investment habit of the people and will also make the ownership of these companies more broad-based."

The most difficult problem in industrial finance was posed by the requirements of small scale units. Inaccessibility to the capital markets, and dearth of internal resources had rendered the problem of meeting their financial requirements particularly ticklish. The problem was sought to be solved in a variety of ways. A scheme was introduced by which the State Governments began pro-

viding small loans under the State Aid to Industries Act on easy terms. Further in each State a State Financial Corporation was created granting medium term and long term loans to medium and small scale industries. The total loans sanctioned by the fifteen corporations since their inception now stand at Rs 30.52 crores. The facilities for hire purchase of machinery from the National Small Industries Corporation were another important step taken to ensure the credit requirements. The State Bank's scheme for provision of coordinated finance to small scale industries introduced in 1956 calls for special mention. Under this scheme, the small scale industries are assisted in meeting their financial requirements of all types. It has been stated by Mr. Bhattacharyya that finance is now being made available by the State Bank to small scale industries against the pledge of almost every kind of raw material or finished product. The project has made commendable headway and the credit limits sanctioned have risen from Rs 10.7 lakhs in 1956 to about Rs 10 crores as at the end of 1961. Finally the Reserve Bank of India has introduced the Credit Guarantee Scheme to encourage commercial banks and State Financial Corporations to increase their finance to small industries. Though it still covers only a very small area, it bids fair to be one of the most useful instruments for associating commercial banks in the financing of small industries.

CONFECTIONERY Bitter Taste

The maladies afflicting the confectionery industry in India are many. Exorbitant prices of raw materials, depressingly low quality of indigenous wrapping materials, abnormal freight charges and competition from spurious brands are among the major problems plaguing it and rendering a good part of its existing installed capacity idle. Nearly 70 per cent of the aggregate capacity of the industry is lying idle. The production capacity of the 44 organised units registered with the Food and Development Wing of the Ministry of Commerce and Industry totals 52,000 tons run merely on a single shift of the duration of eight hours a day. But the actual production remained at a low of 15,000 tons. Furthermore much of the capacity was utilised for producing unwrapped sweets for which the competition from handmade confectionery is assuming alarming proportions. In the international markets too, their disastrous repercussions are reflected as on more than one occasion the Indian products are priced out.

In the circumstance the plea entered into by Mr Goenka, the

President of the Indian Confectionery Manufacturers Association, in New Delhi last week, for adequate incentives in the shape of sugar at export prices, the reduction of freight charges and the strict enforcement of the provisions of the Prevention of Food Adulteration Act deserves speedy and sympathetic consideration by the authorities. Mr Goenka also drew attention to the fact that the Confectionery and Glucose Panel of Development Council for Food Processing Industries had endorsed the suggestion of the Association that the Government should exempt sugar used for manufacturing confectionery from all internal taxes, a practice which is in vogue in many of the foreign countries. Though the authorities have taken up the matter sometime back a decision is yet to be taken. The grant of such concessions which roughly works out to slightly over Rs 12 per maund of sugar should not be a difficult proposition as the quantity involved will be approximately 8,000 tons a year. Further, while the export of one maund of sugar will fetch foreign exchange of nearly Rs 12, a much larger amount can be earned by exporting confectionery produced by an equal quantity of sugar.

The freight rates required to be paid by the industry in actual practice would amount to nearly 25 per cent of the price of the product exported. The readiness expressed by the steamer companies to consider a downward revision of freight provided they are assured of a definite volume of export traffic is of not immediate use in the light of the poor export performance. The President also reiterated the old demand that the concessions granted to the export of confectionery should be merged together and passed on to the exporter at one point. This is a worthwhile suggestion as it can eliminate much of the harassing procedural delays and enable the exporter to effect shipments in an unobstructed and efficient manner.

The practice of flooding the market with spurious and sub-standard products should be stopped by deterrent measures. These goods not only pose a severe challenge to the standard products, but are a menace to the health of the consumers, particularly the young folk. Mr Goenka's suggestion for allowing the import of wrapping materials to the required quantum is impracticable in view of the stringent foreign exchange shortage. The stress should rather be on producing adequate quantity within the country of the prescribed quality.

STATE BUDGETS I—Andhra

The speech of Mr Brahmananda Reddi, the Andhra Finance Minister, while presenting interim Bud-

get for 1962-63 is bound to upset many a tax payer in the State. The Budget is a deficit one to the tune of Rs 2.13 crores and in the next four years there will be taxes galore for the State as it had undertaken to raise an additional Rs 45 crores from this source for the Third Plan and the first year of the Third Plan escaped taxation. The actual proposals for additional taxes will be made available to the Assembly while tabling the "full Budget" later.

The revenue receipts for the budget year are market at Rs 111.22 crores and the expenditure amounts to Rs 113.35. The revenue receipts of Rs 111.22 crores will be made up by ordinary revenue Rs 93.87 crores, increase in the revenue under the award of the Third Finance Commission—Rs 6.41 crores and anticipated grants from the Government of India—Rs 10.94 crores. The enhancement in the ordinary revenue receipts was facilitated mainly by the alterations made in the method of exhibition of working expenses of the State commercial undertakings in the Government account. It is evident that the revenue receipts had improved by an account equivalent to the expenses deployed on these undertakings. Apart from these, the revenue receipts took into account increased receipts under State excise duties reserves amounting to Rs 1.40 crores and other heads Rs 0.46 crore. Another predominant factor that contributed to higher revenues was the award of the Third Finance Commission which had recommended a substantial increase in the grants-in-aid for the State over and above the normal share in the divisible pool of the Central taxes.

The break-up of revenue expenditure of Rs 113.35 crores will be as follows: Rs 94.35 crores for covering ordinary expenses; Rs 16.00 crores for State plan and Rs 3.00 crores for Centrally sponsored schemes.

Total capital outlay for Plan and non-Plan schemes in the budget year will aggregate Rs 29.83 crores and the disbursements on loans and advances under the several heads are estimated at Rs 15.48 crores. Under the capital expenditure head are included Rs 9.00 crores for Nagarjunasagar Project, Rs 5.98 crores for other irrigation projects, Rs 4.54 crores for Public Works (building and communications), Rs 4.12 crores for industrial development, Rs 3.97 crores for electricity projects, Rs 1.04 crores for compensation for zamindars and Rs 1.18 crores for other items.

II—Gujarat

The interim Budget of Gujarat State for 1962-63 presented to the State Vidhan Sabha by Dr Jivaraj Mehta, the Chief Minister, who also holds Finance portfolio, shows a deficit of Rs 95 lakhs. This, as fashions in Budgets go,

is not too unsatisfactory. But this order of deficit is inconsistent with the demands likely to arise when the Third Plan gets into full stride. Though the interim Budget does not contain any fresh proposals for changing the taxation pattern, a further dose of taxation is implied when the Chief Minister referred to other measures for raising revenue to wipe out at least part of the deficit.

As the new Government was sworn in only a few days back the present Budget provided only for standing charges and schemes already in progress. The final shape will be given only after detailed study and will be presented in due course. The revenue receipts are placed at Rs 68.62 crores whereas the revenue expenditure is estimated at Rs 69.57 crores thus leaving a gap of Rs 95 lakhs. This chasm will only broaden while taking into account of the negative balance of Rs 2.31 crores at the end of 1960-61 and the anticipated overall deficit of about Rs 67 lakhs this year. The overall position will worsen further to the extent of additional expenditure on new schemes which might be taken up by presenting the complementary demands in the next session of the Assembly. The negative balance at the close of the current year and the eventual overall deficit will be covered, as indicated by Dr Mehta, by open market borrowing and other measures.

While presenting the Budget, Dr Mehta expressed gratefulness to the Finance Commission for its recommendation for a greater share of Central taxes and grants-in-aid. Consequent on this recommendation the accrual to the revenue receipts of the State will be to the tune of Rs 6.93 crores. Thus as against the Budget estimates of Rs 11.88 crores of State's share of Central taxes for the current year, the next year's share will be Rs 13.54 crores, showing an increase of Rs 1.68 crores.

As the interim Budget provided no scope for detailing new schemes, Dr Mehta utilised more time for reviewing the State's progress during the Plan periods and gave some indications of the shape of things to come. Foodgrains production has spurted from 10 lakh tons in 1951-52 to 21 lakh tons in 1960-61. The output of cotton stepped up from 7 lakh bales in 51-52 to 11 lakh bales in 60-61. There was seven-fold increase in the production of groundnut while tobacco output has been more than doubled. The actual expenditure during the Second Plan period totalled Rs 153 crores as against the target of Rs 146 crores. The Third Plan allocation for 1962-63 was fixed at Rs 45.15 crores while the actual amount provided in the Budget is only Rs 40.97 crores.

Referring to the rural development programmes Dr Mehta stated that all the villages in the State, barring those in Dangal District, have been covered by village panchayats. It needs special mention that the entire State has been covered by community development blocks including pre-extension service blocks on State account. The pace of industrialisation since the formation of the State had been accelerated and the actual demand for power supply by the end of the current Plan will be of a higher order than the previous estimates. The Government was, therefore, contemplating to increase the capacity of Dhuvaran Project by another 250 MW. The urgency for streamlining the administrative machinery is keenly felt and the Government has already constituted a study group for conducting a thorough probe into this matter.

US

Investment Plans for 1962

The capital investment plans of businessmen are adding a new dimension to the confidence surrounding the U.S. economic picture for 1962.

According to the latest government survey, businessmen will be pouring a record sum of \$37,200 million into new plant and equipment this year. This would represent an eight per cent gain over the 1961 outlay, and would surpass by a slight margin the all-time annual high established in 1957.

Significantly, the plans point to a sustained rise in plant and equipment spending throughout the year, continuing a trend which began in mid-1961. In the second half of 1962, outlays are expected to reach and exceed an annual rate of \$38,000 million.

This is a key point, as the rise in government expenditures could be tapering off somewhat as the year advances, and business outlays are being counted on to provide a major impetus to continual economic expansion. Investment in productive facilities is particularly important in this regard. In view of its traditional "multiplier" effect on the economy—the demands it sets in motion for jobs, materials and equipment, and the activity it stimulates in such supporting industries as construction and machinery.

Virtually all business sectors are planning to increase their capital spending this year. Manufacturers expect to step up their outlays over 1961 by some nine per cent. A 16 per cent rise is forecast by durable goods industries, including 30 per cent in steel and 20 per cent in transportation equipment. Non-durable manufacturers, public utilities, and wholesale and retail companies also plan to increase their investments.

These expansion and modernization programmes are geared to a continued optimistic sales outlook. Manufacturers, for instance,

foresee a seven per cent gain in sales over 1961 levels, while utilities predict an eight per cent increase and the wholesale-retail trade a five per cent rise.

The general economic advance in the past year has been so strong that even a substantial eight per cent rise in plant and equipment spending appears to have fallen short of some of the more optimistic expectations. It should be borne in mind however, that this investment forecast is based on a survey taken in January and February. Subsequent government surveys, scheduled for publication at quarterly intervals, could revise this forecast upward, as has been the usual experience during periods of strong economic expansion.

In this case, moreover, one does not have to depend merely on statistical experience, reliable as it may have proved in the past. There are other substantive reasons to anticipate rising rates of business investment.

The level of business investments, for instance, is very conservative in relation to sales, and in the key durable goods area manufacturers' orders have been running well ahead of shipments. Also, the marked rise in industrial production has sharply reduced excess productive capacity, and the improvement in corporate earnings has yet to be fully reflected in plant and equipment outlays.

There is, furthermore, the potential impact of US government policy, which could prove particularly stimulating to the expansion and modernization of productive facilities. In addition to maintaining favourable credit conditions, the government is contemplating important tax and depreciation moves.

One is pending legislation, now in the hands of Congress, to grant an eight per cent tax credit on machinery and equipment outlays. Another is the liberalization of depreciation rules for new facilities which would result in reduced tax liabilities, and which the US Treasury plans to put into effect in the near future.

It is difficult at this early date to tell the extent to which businessmen may already have taken these various factors into account in drawing up their 1962 investment plans. It appears most likely, however, that their influence is yet to be fully felt, and it could lead to better than anticipated business expansion and modernization programmes as the year progresses.

EXCHANGE CONTROL

A Lucid Guide

The Indian Investment Centre has brought about a small publication entitled "Exchange Control" which presents in a concise form the rules and regulations underlying foreign exchange con-

trol in the country. While the primary aim of foreign exchange control which has become an accepted instrument of economic policy in almost all the countries is to maintain stability of foreign exchange rates, in India foreign exchange control has to assume other important objectives and aims. The main object of foreign control in India is to help conserve and make the most effective use of the available foreign exchange resources for fulfilment of the country's planned development programmes. It is from this point of view that the subject has been treated by the IIC. While under the exigencies of planning, exchange control has come to embrace an enormous number of rules and regulations, the IIC has sought to present the essentials of exchange control that operates in respect of foreign investment, import and export trades. These are necessarily the most important angles for study of foreign exchange control since most of the transactions affected by control will come under one of these categories.

The main purpose of the publication is to familiarise intending foreign investors with the kind of control that operates in India so that it may help larger flow of foreign investment. The subject has been treated in all its main aspects. The book lists the rules that operate in respect of foreign exchange transactions arising from such activities as foreign investment in securities, transfer of shares, securities going abroad, securities brought in, repatriation of foreign investment, income on foreign investments etc. It also underlines the essentials of import licensing, the procedures and formalities that have to be gone through for obtaining import licences, and besides deals with letters of credit, remittance for imports, imports against share capital, payments for foreign technical collaboration etc. For reference of foreign entrepreneurs, an illustrative list of industries in which foreign capital would be ordinarily welcome has been given. This has been further amplified by statement of the general principles that are being followed by the Government of India for accepting foreign private investment. It is an indispensable guide through a maze of regulations for every intending foreign entrepreneur.

NEWS IN BRIEF

The new Calcutta Office premises of BOMAS, a well known advertising Agency, were opened in Govind Bhavan, Brabourne Road, about the middle of this month. With the setting up of this office, BOMAS now offers an all India net-work for national advertisers. The service chain includes Bombay, Calcutta, Delhi and Madras. Mr Campbell Banerman is the Director in residence at BOMAS, Calcutta.

Clive Street Gossip

"I must have liberty
Withal, as large a charter as the wind
To blow on whom I please"
—As You Like It.

I should like to commend to my readers the long survey of the industrial scene in Madras appearing in the Leading Articles section this week. Analogies are dangerous, but in many ways Madras is rather like Switzerland industrially. Perhaps a better way of putting it would be to say that Madras is to West Bengal, what Switzerland is to West Germany. Neither is over-abundantly endowed naturally. Switzerland has no coal of its own, or steel. Nor has Madras, though the lignite at Neyveli and the iron ore at Salem may distort the analogy somewhat. The primacy of hydro-electric power is a feature of both. But the resemblance is closest in the circumstance that in both economic development is tied up less with natural endowments than with human resources. Madras' best hope of industrialisation lies in its exploitation of its comparatively meagre physical resources by the most efficient use of its alert, quick-learning professional technocrats and a hard-working intelligent and technically facile labour it has in a fair measure. Something of a quiet sociological revolution is taking place in Madras, which augurs well for the industrial revolution in the offing there. Even a few years ago, a government job was the hallmark of a Madras as distinctive as his caste mark. The latter is not much in evidence and the former too is becoming less uniquely descriptive of his preferences in vocation. The last few years have seen the emergence of a new elite which seeks its livelihood in less humdrum ways. A new entrepreneurial class is coming into its own and what is even more interesting, its antecedents are technical rather than financial. In other words, a new industrial venture is not just another way of making money but one in which the entrepreneur feels a certain creative stake. It is quite common for retired engineers to launch new manufacturing lines and for many a young man coming out of the engineering college starting on his own despite the lure of jobs. For the first time, much frustrated local scientific and technical talent has had opportunities to fulfil itself the hard way instead of seeking comfortable salaried positions. Another kind of recruitment to the entrepreneur class has been analogous to vertical integration in industry. The erstwhile importer of a commodity becomes its manufacturer, often in

collaboration with his former supplier. These developments are, to be sure, not peculiar to Madras, but it stands out clearly there probably against the background of its comparative industrial backwardness until some years ago. The most striking change, however, has been in attitudes and it is this rather than any sudden accretion to physical or financial resources that has brought about the changes in the industrial scene in Madras.

University Convocations are, by a crusty convention that few dare break, occasions for hortatory humbug. To the discomfort of musty academic robes hired (at, so the papers tell me, wickered prices) for the nonce, is added the monotone of platitudinous eloquence that tell the young people nothing of relevance. Last week's Calcutta University's Convocation was a refreshing exception. A little breeze of a live controversy was let in and it relieved some of the physical and mental stuffiness that goes with the occasion. Professor Satyen Bose's view that the medium of instruction at the university stage should be the mother tongue is not a surprise for he has avowed it often enough. Both Srimati Vijayalakshmi Pandit and Mr Surjit Lahiri, the Vice-Chancellor demurred—the latter departing from his prepared text to do so. There is no quarrel with the argument that one should, if possible, be taught in one's own mother tongue, for that way one learns best. But this is not because of any mystical virtue possessed by one's mother tongue. It is only that it is the language with which one is most familiar in the ordinary course of events. This will be obvious if we think of children in a linguistic environment different from the one they were born to, or of children who have no "mother tongue", as in the case of children of parents having different mother tongues. The case for English is simply that of expediency, the historical accident of its use for over a century, its international and national status and so on. I dare say Professor Bose is thinking only of the learning part of it so that he would see no difficulty in a person using English later in national and international contexts to express himself on the subject. But difficulties will arise if, say, Professor Bose himself were to explain his theories to a Tamil graduate who has no English. I suppose that Prof. Bose

would meet this by saying everyone should have some English. Whichever you look at it there is no getting away from a basic grounding in English.

I will go so far with Professor Bose in thinking that there is, as some claim, no special virtue in English, except the one of its having a tradition as a medium in science. Any Indian language can, with some effort on the part of its user, be made to serve the purpose, if one is not too cranky about it. The chief difficulty often mentioned is the technical terms, which is a wholly imaginary obstacle. There is a very simple way of removing it. If all Indian languages were to adopt, with suitable phonetic modifications, the English technical terms as theirs, it should be possible to teach science in one's mother tongue to-morrow. I do not mean that we should adopt English substitutes for ordinary everyday words many of which, incidentally, are probably Sanskrit in origin and therefore of all-India currency. But I do mean that if we can give up the expensive frivolity of each language vainly searching for its own body of technical vocabulary and settle down to teach science in one's mother tongue using the English technical terms we should be nearer the kind of goal that Professor Bose has. This step will confer another advantage. The linguistic barrier between a Bengali and a Tamil scientist that a tradition of learning in one's own language is likely to create will no longer be insuperable. It would be about as high as that between an English scientist who has no French and a French scientist who has no English. This is easily surmounted, especially if both the Bengali and the Tamil have a little English. The phonetic barrier is no greater than what it is now when a Bengali and a Tamil converse with each other in English. The important thing is that all Indian languages will have the same word to express the same idea—a tremendous advance on the present situation. I don't want to be carried away by my own enthusiasm but it seems to me that the enrichment this will mean to all our languages is enormous. And lastly and looking farther ahead, with the Indian languages having so many words in common and using them in intellectual intercourse with each other, the much talked of national integration will be nearer realisation. That is why it amazes me to find that our Government which thinks nothing of issuing miscellaneous fiat of far more dubious value, should shy

away from this very simple expedient.

I don't know about you but I do find sympathique the 104 MPs who spoke not at all and the ten others who did for less than six minutes each throughout their five-year tenure in the second Lok Sabha. I am not one of those who want their money's worth in lung power out of the MPs they elect. And if I were, the record breakers at the other end of the scale would have cured me. For they illustrate the predicament described in the Tamil proverb of the fool who first pays a quarter to make a man sing and then has to find two to make him stop. Anyway, it was something to have so originally countered Dickens' sneer about Parliaments being talking shops. I don't suppose the whip cared so long as these people voted and indeed he might have preferred their votes to be unaccompanied by speeches. But I have a gnawing suspicion that these people not only did not speak but probably did not vote, finding more interesting ways of spending their time in Delhi than listening to 58 hours 45 minutes of Mr Thakurdas Bhargava and (though it is unchivalrous to say so) 18 hours and 32 minutes of Mrs Renu Chakravarti. This is perhaps naughty, but I don't find it in my heart to blame them. But if these good people are back in the third Lok Sabha, I would ask them to be careful. For if they have been employing the well-known modes of securing attendance without actually attending that we all learnt at college, they should take care that Mr Satyanarain Sinha does not get wise to them.

At any time Mr Karam Chand Thapar's death would have come as a shock, but it was only yesterday that I was reading with considerable enjoyment his presidential address to the annual session of the FICCI last week. I had read in the papers that Mr Shriyans Prasad Jain had to deputise for him at the session because he had suddenly taken ill but I don't think any one thought that the end was so near. There was a certain elan, a quality of gusto, about the address which ill accorded with imminent death. It was a speech in which he let himself go and pulled no punches and it gave the impression of a man with more ammunition for the future. I was particularly taken up with the expression "conspicuous investment"—a rather suggestive variation of Veblen's better known "conspicuous consumption." Mr Thapar was apparently thinking of the prestige projects for which under-developed countries have a fatal weakness. It was a neat phrase with just the sort of allusive reverberation that makes all the difference in writing or talking about economics most of which has necessarily to be heavy. Mr Thapar's vast and varied industrial interests speak eloquently of his energy and enterprise and his social and philanthropic activities bear witness to his extra-ordinary personal charm and deep compassion. Calcutta in particular will be the poorer for his passing away.

CONFERENCES Industrial Themes

The shortages of the basic requirements of industrial development coal, power and transport—which were highlighted at the annual session of the Federation, dominated the discussions of the Central Advisory Council of Industries which met last Tuesday. Four out of the six substantive items on the agenda of the Council, as the Minister for Commerce and Industries pointed out in his inaugural address, related to coal and coke, transport of coal by rail, power generation and prospects in regard to railway transport and shipping. The fifth item related to the working of public sector projects bearing on steel, coal, lignite and oil. The shortages were pinpointed by the Minister when he referred to the "serious difficulties and bottlenecks which may jeopardise the complete achievement of the goals during the Third Plan". The target set are themselves limited by shortages of raw materials, power and difficulties of movement. The achievement of even these modest targets has been threatened by the shortages that have developed last year. He added the assurance that the Government were keenly and continuously aware of these shortages and were endeavouring the whole time to correct the deficiencies. While Mr S. P. Jain, President of the Federation, who initiated the discussions with a comprehensive speech, drew attention to the inadequacy of the revised allocation of wagons for coal movement, Mr Tallack, President of the Associated Chambers of Commerce, said there was need for flexibility in implementation of the Plan for concentration of additional effort, resources and investment in those sectors where shortages retarded development. He made a special reference to the power shortages in the coal fields and to the limitations of the scheme for movement of coal in Box Wagons.

The Chairman of the Railway Board felt that the picture of transport shortage drawn by the speakers was more alarming than warranted by the circumstances. But his presentation of the relevant statistics was more emphatic than convincing. Mr S. P. Jain, who proposed the vote of thanks at the conclusion of the discussions, found it necessary to revert to the subject to point out that the position was not as satisfactory as it was made out to be.

The highlight of the discussions was the speech of Mr J. R. D. Tata who was attending the Council after a long interval. Mr Tata raised the question whether the Plan estimates for coal etc. were realistic in the light of the availability of resources and the experience of the past. Making handsome acknowledgement of "the Herculean Job" accomplished by the Railways, he pointed out that provision made for Railways in relation to the tasks set was not realistic. The demand for transport tends to grow much faster than production, but the plan estimates predicated that transport need grow only as fast as production. Even the proportion of the total outlay allocated to transport had been cut down to 20 per cent in the Third Plan as compared with 28 per cent in the Second. Mr Tata made an earnest plea for applying the brake on industrial licensing in order to ensure that licences were issued only when it was possible to supply the requisite materials and facilities. It was a criminal waste, he said, for a poor country like India to have idle capacity in established industries. And he asked whether it was not advisable to pause to consolidate the gains and to allow the supply lines to catch up.

The suggestion for slackening the tempo of development, or for going slow on industrial licensing, was not acceptable to the spokesmen of Government or other industrialists though the members of the Planning Commission who spoke at the Council, seemed to agree that industrial licensing in the private sector should be in phase with development, of basic facilities. Mr T. N. Singh pointed out that licences already issued accounted for over 90 per cent of foreign exchange allocated to industry in the private sector. This suggests that licensing during the remaining years of the Plan must perforce be halting. On the other hand, the Federation President urged that the Third Plan targets must be revised upwards wherever foreign capital was forthcoming to finance projects in the private sector. Mr Manubhai Shah, Minister for Industry, declared that almost all industries had made rapid progress and that priorities had been well maintained. Raw material industries are being given the highest priority. The current difficulties are inherent in the programme of development and should not be used as excuse for slowing down the tempo of development. These could be got over by the adoption

of what he called 'industrial discipline.'

Both Mr Tata and Mr K. K. Birla, who followed him, referred to the procedural difficulties, and the unnecessary controls, especially in the field of Company Law Administration, which apparently served no purpose except to waste the time of highly paid administrators and top management. Mr Birla warned that progress already achieved should not lead to a feeling of complacency and referred in this connection to the facts brought out by the latest ECAFF Survey that many neighbouring countries had higher rates of growth and per capita income than India. Referring to the restrictions on diversification by existing units, which are allowed to set up new units only in the same or related lines of production as those in which they are engaged, Mr Birla made the point that export-oriented industries could be helped to reduce costs by relaxation of this restriction which would enable them to cut overheads.

Apart from focussing attention on the shortages, the discussions also yielded concrete suggestions for relieving them, especially in the field of transport. Mr S. P. Jain and others pleaded for encouragement of the use of furnace oil by remission of excise duty. This will reduce the pressure on railways for coal movement. Mr Charat Ram suggested that the burden on Railways could be reduced if industries located at long distances from coal fields were supplied with low ash coals, and the high ash coals were used by industries situated near the collieries. The plea for allowing industries in the private sector to set up power plants to meet their own requirements, which was made at the last meeting of the Council, was renewed by a number of speakers including Mr Tallack. The spokesman of the Planning Commission said that the Industrial Policy Resolution did not ban establishment of 'captive' power stations and any concrete proposals could be considered on merits within the ambit of the Resolution. A plea for equalising the prices of coal all over the country was made by Mr P. R. Ramkrishnan M.P. who also suggested that, in view of cotton shortage, manufacture of man-made fibres should be encouraged. Mr T. S. Krishna showed how road transport if given the chance, could make a substantial addition to transport capacity without any large investment and at no cost in foreign exchange. All that is needed is removal of vexatious and meaningless restrictions on road transport especially on the pay-loads of trucks. But as he said, road transport is nobody's baby. Concerted action has to be taken by a number of State Governments, and Mr Krishna's suggestion seems likely to remain one of those which are accepted without

argument and then put in cold storage.

Indian Investment Centre

The urgency of eliminating procedural delays in processing applications for issue of industrial licences or foreign collaboration agreements was raised during the discussions of the Central Advisory Council of Industries. The difficulties in many cases are due to failure on the part of the applicants to follow the prescribed procedure and the Minister for Commerce and Industry had suggested that the representative organisations of industry could help to minimise the delays by opening information centres for the benefit of their constituents. In this connexion Mr Tallack paid a well-merited tribute to the work done by the Indian Investment Centre. The Centre has followed up its first publication, dealing with the industrial and fiscal policies of Government which was issued in October 1961, with a second brochure on "Exchange Control". The publication deals with the introduction and development of exchange control, and its administration in its various aspects as applied to foreign investment, industrial ventures, foreign personnel and foreign exchange holdings of residents. Of special importance to foreign investors is the chapter dealing with questions which have been received by the Centre from foreign firms interested in participating in Indian ventures, and their answers. These cover aspects of foreign investment in India, including the definition of residents and non-residents, the formalities necessary for investment in Government securities by residents abroad, requirements for approval of a foreign currency loan, repatriation of capital, remittances to India, transfer of earnings abroad by foreign personnel and the holding of foreign exchange and securities. A third publication "Basic Facts of the Indian Economy" is scheduled for release in April, 1962.

Largest US Loan

On Monday last, agreement was concluded between the Governments of India and the United States on the loaning to Government of India of a sum of Rs 256.8 crores being part of the rupee proceeds of the agricultural commodities being supplied to India under PL 480 agreements. As is well known, these rupee proceeds are to be utilised partly as grant and loans to the Government of India for use on agreed projects and partly for assistance to private enterprise under the Cooley amendment. The five agreements under PL 480 concluded cover a total value of Rs 1,113 crores of which Rs 892.4 crores (Rs 375.3 crores by way of grants and Rs 517.1 crores by way of loans) are to be made available to Government of India. With the latest agreement on Monday, the entire sum earmarked as loan has been allocated for specific projects.

LABOUR STATISTICS

Some Improvement

An article in the Monthly Abstract of Statistics for December 1961 reviews the progress made by the country in respect of labour statistics during the Second Plan period. Lack of adequate statistics had constituted a major impediment to proper economic studies and analysis and detracted from the very essentials of planning. What required to be done was to initiate schemes to provide the missing links in statistics and also to make improvements in regard to current statistics. The advances made during the Second Plan in these directions though not spectacular have been satisfactory.

One of the major aspects of work in development of labour statistics had to do with collection of data for the total volume of labour force, the size of the employed and unemployed population etc, and it was in this field that the most notable headway was made during the Second Plan. Even toward the end of the First Plan, surveys designed to study the volume of labour force, the pattern of employment and the extent of unemployment were initiated. During the Second Plan period, it is shown, the schedules on employment and unemployment have become a regular feature of the National Sample Survey in its various rounds. Standardisation of concepts, definitions and procedures has also been attempted with considerable success. The population census conducted during 1961 represented one of the most massive pieces of work completed during the Second Plan. In it a more direct attempt than heretofore was made to measure the size of the working population the volume of employment and the extent of unemployment. In respect of employment the Second Plan also laid the foundations for a comprehensive system of statistics collected by the establishment approach. The pilot schemes started by the Director General of Employment & Training to gather employment market information have been extended to 146 employment market areas. Quarterly studies of the employment and prospects in establishments of a specified size and above are being conducted in respect of each employment market area. Collection of statistics of employment on a quarterly basis from all establishments in the private sector employing 25 workers and above has also been regularised. The scope of the employment statistics has further been extended by schemes for collection of annual information of employment in respect of sectors not covered hitherto such as banking insurance and civil aviation. The Annual Survey of Industries con-

ducted since 1959 by the Department of Statistics (CSO) has made improvements on the statistics contained in the old Census of Manufacturing Industries which it has replaced. The Survey which covers all factories employing 50 workers or more with power and 100 workers or more without power is expected to produce information on the number of workers and other persons employed in manufacturing industries, manhours worked by them, payments made and benefits given in kind. Provision of data in respect of workers in mines is ensured by the Metalliferous Mines Regulations framed under the Mines Act 1952.

It is in respect of wages and working conditions that the greatest statistical leeway is yet to be made. The comprehensive wage census undertaken by the Labour Bureau in 1958-59 has succeeded only in partially filling the gaps in this field. The census covered 44 industries and sought to gather information of the current wage rates in respect of various occupations and the structural components of wages etc. It is claimed that the data collected in the wage census could furnish the basis for an index of wage rates if current information on subsequent changes in wage rates could be collected systematically at regular intervals. The comprehensive survey of labour conditions in all manufacturing and mining industries with a working strength of 5 thousand or more, tea, coffee and rubber plants and certain other sectors such as motor transport inland water transport etc, initiated by the Labour Bureau was another noteworthy scheme. (The survey has so far covered only ten important industries but is expected to be extended to 70 industries by the end of the Third Plan. When this is completed very useful information will have been collected in respect of employment, recruitment and training, wages and earnings working conditions hours of work, leave safety, welfare amenities, social security and industrial relations, and holidays with pay, health etc. Other aspects of work in respect of wages and living conditions initiated during the Second Plan period relate to processing of the available wage data to construct index numbers as summary indicators, collection of data in respect of break-down of earnings into certain broad components such as basic wages, allowances bonuses cash value concessions etc.

Construction of consumer price index numbers had also engaged attention. Some family living surveys have already been conducted to provide the basis for the construction of new consumer price index numbers applicable to the

urban working class urban middle class and agricultural labour. The new series of index numbers, it is claimed, constitute a great improvement over existing series in many respects. Also new schemes for index numbers applicable to centres of major public projects, and index numbers of comparative costliness of various cities in relation to a common base city are also indicated as likely to be put through during the Third Plan period.

Thus, by the end of the Third Plan considerable progress would have been made in improving la-

bour statistics according to schemes that have been already initiated and that are waiting to be put through. One of the reasons for the continuing wide gaps in labour statistics was the reluctance of the authorities to enforce the powers provided under the Collection of Statistics Act 1953 for collecting various types of labour statistics. The recent proposals of the Ministry of Labour and Employment to utilise the permissive powers of the Act should therefore go a long way in enabling further improvements in labour statistics.

MARSHALL, SONS & CO. (INDIA) LIMITED.

NOTICE is hereby given that the FORTYFOURTH ANNUAL GENERAL MEETING of the members of MARSHALL, SONS & COMPANY (INDIA) LIMITED will be held on Monday the 23rd day of April, 1962 at 11 A.M. at the Registered Office of the Company, No 331, Netaji Subhas Road, Calcutta to transact the following business:

1. To receive and adopt the Directors' Report and the audited Balance Sheet and Profit and Loss Account for the year ended 30th June, 1961.
2. To elect Directors.
3. To appoint Auditors for the current year and to fix their remuneration.
4. SPECIAL BUSINESS.
 - (a) "That due notice, as required by Section 257 of the Companies Act, 1956, signifying the candidature for the office of Director of Sri Maganlal Matalia, having been received by the Company from Sri I. M. Chudgar, a member of the Company, the said Maganlal Matalia shall be and is hereby appointed a Director of the Company."
 - (b) "That due notice, as required by Section 257 of the Companies Act, 1956, signifying his candidature for the office of Director, having been received by the Company from Sri A. N. Sircar, the said Sri A. N. Sircar shall be and is hereby appointed a Director of the Company."

The Share Transfer Books of the Company will remain closed from 9th April to 13th April, 1962, both days inclusive.

By order of the Board
D. P. DUNDERDALE,
Director.

331, Netaji Subhas Road,
Calcutta. 22nd March, 1962.

NOTE: A member entitled to attend and vote at the Meeting is entitled to appoint a proxy to

attend and vote in his stead. Such proxy need not be a member of the Company.

Explanatory Statement and Statement of Interest as Required by Section 173(2) of The Companies Act, 1956.

The two resolutions under the head 'Special Business' have reference to notices which have been received under Section 257 of the Companies Act in accordance with the notices so received. Sarvasree Maganlal Matalia and A. N. Sircar will be considered for election as Directors and their candidature for election will be put to the vote.

The Directors may be considered to be interested to the extent of their shareholding in the Company.

To the Shareholders of Marshall Sons & Co. (India) Limited and in particular to:—

Mr. Mark Burton (decd), Mr. L. F. Warren, Mr. Jerbai Hormusji, Miss M. Reid, Mr. M. C. Dubash (decd), Mr. P. G. D'Souza, Mr. F. C. Nelson, Mr. Shanti Shekharwar Ray, Mr. W. S. Beech, M/s. Kalidas Bashak, Pareesh Chandra Bashak, Naresh Chandra Bashak and Ashim Kr. Bashak (minor represented by their mother Sm. Rajeshwari Bashak), Mrs. M. H. B. Morton, Mrs. M. S. Redpath, Mrs. S. H. Goss, Mr. I. L. Watson, Mrs. E. S. Fink, Mr. R. C. M. Short, Mrs. Gole Annar Bibi, M/s. Marshall, Sons & Co., Ltd. Maj. C. H. Young & Mrs. I. H. Markets

JUTE Gunny Irregular: Jute Quiet

Although gunny prices steadied up in later dealings during the week, the raw jute market continued to look listless. Sellers were keen for business while mills evinced little interest presumably because they were well-stocked in raw jute and arrivals showed no signs of slackening. The easier trend in raw jute at a time when cultivators would be getting ready to commence sowing operations is not considered to be quite conducive to large sowings. There had been a number of questions in Parliament in the last two weeks about jute. Mr Nityananda Kanungo, Minister for Commerce, told the Lok Sabha early this week that the Buffer Stock Association was to begin purchases in about a couple of days. In a statement in the Lok Sabha last week Mr K. C. Reddy, Commerce and Industry Minister said that adequate steps had been taken to ensure that jute prices were maintained at economic levels. Elaborating the point, he pointed out that about 70 per cent of the crop had already been sold in the following manner: 30 per cent well above Rs 30 a maund, 20 per cent at or slightly above Rs 30 a maund and 20 per cent at Rs. 30 a maund. He, however, admitted that on a few occasions prices sagged below the level of Rs 30 a maund. The position, according to

him, has since improved as would be evident from the fact that deliveries for June were quoted at Rs 32 a maund. He did not think, therefore, that there was not sufficient incentive to jute growers to maintain the acreage under jute.

The report that the Buffer Stock Association would start operations soon seemed to have had little effect so far on sentiment in the jute market as prices continued to rule easy even after the announcement. Even supposing that prices in the mofussil centres had declined sharply it is unlikely that the cultivators would be adversely affected. For, as Mr K. C. Reddy has pointed out, a very large part of the crop (about 70 per cent) has already been disposed of. It is also not improbable that a large proportion of the balance of the crop would have also been disposed of by the cultivator and that whatever quantity that is still to be sold is largely held by middlemen. The easy trend now in evidence may perhaps prove to be only temporary in view of the current expectation that the next jute crop may be delayed. The fact that weather continues to be hot means that sowing will be delayed.

The jute goods market displayed an irregular trend during the past week due largely to lack of buying interest. In the absence of overseas interest activity was mostly of a speculative character. Last Thursday the market opened on a quite tone as there had been only small scattered business. B Twills March

closed at Rs 132 with Hessian 40"×10 oz March marked at Rs 54.75. Sentiment however improved next day mainly due to revival of interest in ready delivery B Twills. Hessian which was otherwise dull also improved towards close in sympathy with B Twills. B Twills March moved up to close at Rs 133.25 while Hessian 40"×10 oz closed higher at Rs 55. The trend was reversed on Saturday due to selling pressure in the futures market. B Twills lost ground to close at Rs 131.50 while Hessian also reacted partly in sympathy with B Twills and partly as a result of a rumour that an earlier Argentine order for Hessian may be postponed due to political unrest in that country. Hessian 40"×10 oz March came back to Rs 54.50. Although the market opened on Monday on a quiet undertone, rates improved in later dealings rather sharply especially in B Twills on revival of support for near delivery positions. B Twills March gained ground rapidly to close at Rs 133.15 while Hessian 40"×10 oz also improved to Rs 45.35 in sympathy. In the next two days the steady trend continued to be well maintained. By close on Wednesday B Twills March moved up to Rs 134.50 on reports of a Burmese Government tender for B Twills April. Hessian 40"×10 oz closed at Rs 55.50 after being higher at Rs 55.75.

TEA Rise in Exports

ACCORDING to the provisional figures released this week, exports of North-East Indian tea have shown a marked rise. With shipments of 18.55 million pounds in February, total exports in the eight months ended February 1962 have increased to 319.37 million pounds from 310.37 million pounds in the similar period ended February last year.

But, exports to the UK—the biggest consumer—have fallen from 211.51 million pounds in the eight months ended February 1961 to 202.85 million pounds in the period under review, as did those to the Irish Republic from 11.95 million to 10.93 million pounds; to Canada from 8.3 million to 7.62 million pounds and to Iran from 7.6 million to 5.56 million pounds.

Exports of tea from Ceylon have also been showing a steady increase. Shipments last year amounted to 425.8 million pounds as compared to 400.7 million pounds in 1960; 394.9 million pounds in 1959 and 377.1 million pounds in 1958. The UK continues to be, by far, the largest importer of Ceylonese tea last year with an offtake of 159.6 million pounds as compared to 152.4 million pounds in 1960. The next largest importers are Australia and the USA, which have taken 43.1 million and 42 million pounds respectively last year.

The statement, issued by the Board of Trade London, reveals a decline in imports into the UK from 69.87 million to 63.58 million pounds during January 1962. Imports from India, the largest supplier of tea to the UK, have fallen from 45.39 million pounds in January 1961 to

41.53 million pounds in the month under review. Similarly, arrivals from Ceylon, the second largest supplier, have declined from 15.07 million to 12.86 million pounds.

Imports of tea into the USA have, however, increased to 11.65 million pounds in January 1962 from 10.78 million pounds in the corresponding month of last year. While arrivals from Ceylon, the largest supplier of tea to the USA, have risen from 3.14 million pounds in January 1961 to 4.41 million pounds during the month under review, imports from India, the second largest supplier, have fallen from 3.39 million to 2.94 million pounds.

Meanwhile, the final export sale for the current season was held this week when offerings amounted to 51,586 packages. A large portion of these were of "end-of-the-season" types. There was a strong general demand with prices very irregular. Any bright liquoring teas with clean leaf were sold well. Whose Leaf grades were strong. No rates were given.

In London, offerings were 27,700 packages including 19,841 packages from Northern India and 680 packages from Pakistan. There was a fair general demand although the best of the Assam teas showed an irregular decline of a penny to two pence per pound. Medium sorts were barely steady. All other description remained fully firm.

COTTON Jarilla March off the Board

The Jarilla March contract 1962 went off the board at the ceiling rate of Rs 693.00 on Saturday last without any tender, for the first time in many years. During the fag end of its career the contract was practically neglected and the tame end was a forgone conclusion. With no immediate prospects for commencing trading in another contract, there is a virtual void in the futures section. Permission for trading in March 1963 contract, though anxiously awaited by the trade, will have to be delayed for the Government has not finalised the price policy yet.

The spot market at Sewri on the contrary depicted slightly better conditions during the past week. Spinner interest was prominent in CO 2, Kalyan, Surti, Digvijay and Khandesh varieties. The possibility of improved trading conditions within a few days is rated high when the mills will get supplementary quotas for indigenous cotton.

In the export of section a comparatively easier trend was evident in Bengal Deshi cotton. The prices slipped down by 20 points obviously due to the absence of foreign demand. Pakistan is reported to have been under-selling and there was no demand from Japan. The Textile Commissioner's announcement that those mills desirous of purchasing additional quantum of this growth should apply furnishing relevant details has generated suspicion among trade about the release of an additional quota in the immediate future.

Indian Finance

31 March 1962

In the foreign section Sudanese growth met with improved demand. East African cotton also attracted some attention particularly from the Southern mills.

The authorities endeavour to import foreign cotton on barter or deferred payment basis has so far proved futile. Some hope has been provided in getting American cotton by the US Ambassador Prof. Galbraith when he hinted that he would take up the matter with his Government and that something could be worked out to help India to tide over the present crisis in cotton which arose out of the crop failure this year. How far cotton supply will be arranged is matter for conjecture for there is no scope for providing cotton under PL 480. Moreover America too is in the thick of similar cotton crisis and the dwindling of cotton surplus is alarming the Government. It should also be noted that this snowwhite soft commodity is becoming scarce in the world and the consumption of cotton is outstripping production. The only plausible solution to avert further deterioration in the supply position is to resort to intensive and extensive cultivation.

The target for cotton during the current Plan is fixed at 7 million bales and there is possibility of fixing a higher target. In view of the reduced crop this season, achieving the target set will be extremely difficult. Improving the per acre yield and bringing more land under the plough through adequate irrigation facilities and providing incentives to the agriculturists can go a long way in realising the target.

The total acreage under cotton is expected to zoom up from 2.5 million to 4.5 million. The area covered by improved varieties of cotton which stands at present at 14 million or 70 per cent of the aggregate land under cotton is expected to rise by 90 per cent at the end of 1965-66.

PIECEGOODS

Sluggish conditions prevailed in the Bombay cotton piecegoods market during the last week and the turnover dwindled into a mere trickle. The poor demand from the upcountry centres created panic among the merchants. Export enquiry too was precious little.

One the other hand the ever increasing accumulation of stocks with both the trade and the mills was causing grave concern to those concerned. According to reliable sources the stocks with them at the end of February were higher than those in previous month. Dealers in the upcountry centres are also found anxious to dispose of their stocks even at a discount. The meagre turnover was also partly attributed to the Holi festival.

Scattered business was transacted in seasonal goods such as bleached longcloth, bleached and dyed mulls, printed voiles and dhoties and saris. Rajasthan, Agra, Calcutta, Bihar and Madhya Pradesh were the main consuming centres during the week under review.

No alteration in prices was reported. The mills were disinclined

to reduce the prices obviously due to the abnormal price of cotton. Naturally, dealers, both local and upcountry, were reluctant to conclude any business at the prevailing high prices. Stringent conditions in the monetary market was another inhibiting factor.

Due to the lack of upcountry demand transactions in the powerloom goods were few and far between. The high price of yarn is rendering production on an economic level rather difficult. Many of the upcountry looms are reported to have been closed and several others are threatened with closure in the immediate future.

Maximum Prices for Wheat Products

THE Government of India has statutorily fixed the maximum prices for wheat products—suji, maida, wholemeal atta and resultant atta—manufactured by roller flour mills. These prices will apply uniformly to all the mills in the country with respect to the first three products, viz., suji Rs 58.94 per quintal or Rs 22 per maund; maida Rs 53.56 per quintal or Rs 20 per maund and wholemeal atta Rs 41.53 per quintal or Rs 15.50 per maund.

In the case of resultant atta, however, the products of mills in West Bengal, Assam, Orissa and greater Bombay are higher in price by 87 nP per quintal (or 25 nP per maund), than those of mills in other parts of the country. This higher price has been found necessary because of local conditions in these four areas, where ex-mill prices of wheat products have always been more than elsewhere.

Different prices for different areas could be justified so long as zonal distribution arrangements for wheat held good and the movement of wheat products from one zone to another was not permitted. However, with the abolition of these, it has become necessary to fix ex-mill prices more or less on a uniform basis in the interests of fair competition.

Meanwhile, the Hapur market for Foodgrains remains depressed owing to expectations of a bumper crop. Wheat prices are stationary at Rs 15.50 a maund for the average quality and at Rs 17 for better farm produce. The market for Rice is depressed in sympathy with those of the other grains. Gram price have recorded a fall of 50 nP a maund for the Punjab variety following easy advices from the Punjab and Uttar Pradesh. With a fall in the consumer demand, Maize is marked down to Rs 10 to Rs 12 a maund. Peas of the new crop has started arriving in the market and the prices are lower at Rs 10.25 a maund. Despite the demand for conversion into dal, the market for Arhar remains quiet at Rs 14 a maund.

According to the latest estimates of the Commonwealth Economic Committee, a decline in the production of all major grains throughout the world is revealed during the 1961-62

season. The grain bulletin says that the main cause is the draught in North America. The USA and Canada account for 75 per cent of the 12 million tons decrease as compared with the 1960-61 figure. A 10 million-ton decline in maize production is large due to acreage restrictions introduced under the United States Food Grain Programme. Grain stocks with the main exporting countries decreased last year—wheat stocks went down by 10 million tons to 79 million tons and maize by nearly 4 million to 116 million tons.

SUGAR

(Thanks to the continued demand, Sugar markets have been ruling generally steady. The increase in the monthly release has, however, checked the rising trend of prices. The crushing season is in full swing following the availability of adequate cane supplies.

The remarkable steadiness of the market is attributed to the reported refusal of the Deccan sugar factories to quote low. They are not prepared to accept anything less than the previous controlled rates, evidently because of the sustained demand from the surrounding areas. The demand from Bombay has also remained high.

There are, however, reports to the effect that a majority of the 33 sugar factories of Eastern Uttar Pradesh have decided to close down from the next crushing season if the State and Union Governments do not grant them certain relief which they had sought. The factories had made representations to both the Centre and the State Governments recently urging the grant of relief following "grave financial crisis due to un-economic working and extra burden developing on them by the enforcement of the Wage Board awards and high rates of interest they are paying on abnormally large stocks of unsold sugar".

Against this background, the decision of the State Bank to adopt a more conservative valuation of sugar stocks for purposes of advances has caused great anxiety to the sugar mills as larger amounts will have to be found for margin purposes. They are already finding it difficult to make payments to the cane growers and meet other expenses. (The Reserve Bank should, therefore, consider the whole question and evolve a suitable formula, so that, during the period of difficulty, there may not be any fresh complications. Moreover, a policy decision should be taken by the Central Government in regard to the disposal and financing of accumulated sugar stocks.

CHEMICALS & DYES

Active conditions prevailed in the Bombay market for Dyes and Chemicals. There were fair enquiries both from local and upcountry consumers and dealers, resulting in a substantial turnover.

Almost all the items in the Chemical section have shown an improvement due to the impending announcement of the new import policy and the shortage of supplies. A section of the trade fears that the export

promotion licences for some of the items are likely to be cancelled in the next licensing period. Among the items, Cautic Soda and Soda Ash were in the limelight. The former moved up to Rs 47 for the ICI variety and Rs 46 for Indian variety. This was attributed to the delay in the arrival of fresh stocks from abroad and the revival of demand. Camphor, however, moved down to Rs 18.50 due to the comfortable supply position.

Dull conditions however, marked trading in the Dyes section. Lower demand from the upcountry consumers and dealers induced by the uncertainty about the import policy was responsible for the subdued tendency. There was practically no change in the prices of popular items.

YARN

Prices on the Bombay Yarn market showed a mixed trend. Prices of

THE INDIAN IRON & STEEL COMPANY LIMITED

NOTICE IS HEREBY GIVEN that a General Meeting of the Company will be held at 12, Mission Row, Calcutta on Wednesday the 25th day of April, 1962 at eleven o'clock in the forenoon for the purpose of considering and, if thought fit, passing the following resolution:—

That subject to such approval of the Central Government as is required by section 372 of the Companies Act, 1956 being duly obtained this general meeting having taken under consideration the scheme of collaboration between the Company and The Stanton Ironworks Company Limited do sanction the investment by the Company which is thereby contemplated in the purchase or acquisition of shares in the proposed company to be known as IISCO Stanton Pipe and Foundry Company Limited notwithstanding that such investment will exceed ten per cent of the subscribed capital of that Company.

A member entitled to attend and vote at the meeting is entitled to appoint a proxy (who need not be a member of the Company) to attend and, on a poll, to vote in his stead.

By Order of the Board

MARTIN BURN LIMITED
F. G. Liversedge,
Managing Director
Managing Agents

Registered Office:

United Bank of India, Limited

The Role of Banking in Medium Term Financing

Review of Various Banking Problems

Dr N. N. Law, Chairman, discusses Rate of Interest on Deposits

Excerpts from the Speech delivered by Dr. N. N. Law, Chairman United Bank of India Limited, at the Annual General Meeting of the share-holders of the Bank held on March 26, 1962.

BANK'S WORKING:

"The results for the year 1961 speak for themselves. Deposits have grown by 13.8 per cent over the last year and compares favourably with the rise of 5.2 per cent for all scheduled banks and 10.7 per cent for scheduled banks excluding the State Bank of India. The rise has been well distributed throughout the year, enabling the Bank to add to its Investments portfolio and to meet the significant demand for advances without strain. In addition, as in the previous years, your Bank remained a free lender in the Call Money Market in Calcutta, almost throughout the year.

"The average ratio of advances to deposits was 68.6 per cent as against 65.9 per cent in 1960. Of the total advances 62 per cent was to industries and 28 per cent to Trade and Commerce; the comparative figures for 1960 were 66 per cent and 26 per cent respectively. Our advances to industries include those to the small scale industrial units, aggregating about Rs. 2 crores. You would recall that in 1960 I informed you about our decision to establish a special section for handling such proposals from small scale units as could not be entertained in the normal course by our Advances department. I am glad to mention here that the section has since been organised and is doing good work in assisting such of the small scale industrial units as need special attention.

"You have, no doubt, been pleased to note the change in the Bank's dividend trend, made possible by the results of our past years' working. It is recognised that you had to wait for ten years before the turn could take place. But, I hope, you will appreciate that a period of ten years is rather short even in the life of an altogether new bank. This is more so in the matter of consolidating the amalgamation of rather old banks. Amongst various factors, the weight of large overheads, with all its complications, hung on us as a dead load. It was

that the position could be stabilised, and the Bank is thankful to its patrons for enabling it to make these efforts which, I am happy to say, have further strengthened the Bank's position.

RATE OF INTEREST ON DEPOSITS:

"In the general sphere of banking business the obsession of banks with rate of interest on deposits has already raised complications. Higher rates are now being offered on deposits which more rightly should be classified as 'demand'. Facilities for withdrawal on demand (or at a very short notice) and a high rate of interest go ill together. There is an urgent need that the nomenclatures of different categories of deposits should be precise and adhered to.

"The unrealistic emphasis on rate of interest has brought about a situation in which the Inter-Bank Agreement, on the rate of interest on deposits, recently came under severe strain; some of the banks considered it to be inequitable for them to be bracketed with larger banks as far as the rate of interest is concerned. Fortunately, however, I am told, the impasse is now over and a settlement has been reached. What, however, is most important to remember in this connection, is that as long as the banks continue to over-emphasise the importance of the rate of interest, such situations are bound to occur now and again. It is time that we realised the danger of trying to perpetuate such an unrealistic approach towards developing deposits.

"There may be stray individual cases where growth of deposits might have followed a rise in interest rate but if the position is thoroughly analysed, it will I am sure, be found that such growth has been by way of diversion from other banks rather than by attracting fresh deposits from outside the banking system. When every bank is in a position to compete with another, such gain for an individual bank will ultimately be found to be of only a temporary nature. In such a scramble, however, the net result is that an avoidable additional load is added to the already high operating costs of banks, with no corresponding benefit either to the banks themselves or to the economy at large. I would, therefore, urge on the

experienced bankers of the country to give this matter a closer thought.

"Interest rate has only a limited significance in the overall growth of deposits in the banking system as a whole. More important are the quality and efficiency of service and availability of banking facilities. Bank deposit is not to be equated with investment. There is hardly any real outside competition for deposit money.

DEPOSIT INSURANCE:

"During the past year, banking authorities have taken two very significant steps in the field of banking. A scheme for insuring bank deposits has been initiated and steps have been taken to strengthen the capital base of banks. Both these measures give us satisfaction inasmuch as the ideas were categorically sponsored and supported by us. I dealt at some length with Deposit Insurance in the past, and you will recall, last year I also emphasised the need for strengthening the capital base of banks. The measures however, have significant limitations calling for further study.

"When the Deposit Insurance Bill was introduced in the Parliament, statements sponsoring the bill seem to have visualised a scope much wider than what would actually result from the implementation of the Act. While the interest of the depositors has been safeguarded no scheme appears to have been devised to ensure that the small banks in the country can develop and continue to render uninterrupted service. This is very important. Bank borrowers are engaged in genuine production of wealth in one form or another and create employment. It is thus essential in the interest of the economy that the business of these borrowers is not hampered on account of any strain that may be felt by their banks. Unless the smaller banks can be assisted to develop and to work effectively even in the days of strain, the economy will continue to suffer from uncertainty with which the borrowers of these banks will be faced.

"There may be stray individual cases where growth of deposits might have followed a rise in interest rate but if the position is thoroughly analysed, it will I am sure, be found that such growth has been by way of diversion from other banks rather than by attracting fresh deposits from outside the banking system. When every bank is in a position to compete with another, such gain for an individual bank will ultimately be found to be of only a temporary nature. In such a scramble, however, the net result is that an avoidable additional load is added to the already high operating costs of banks, with no corresponding benefit either to the banks themselves or to the economy at large. I would, therefore, urge on the

CAPITAL STRUCTURE:

"Coming to the convention that has been established with regard to the capital base of banks relation to their individual

sits, I welcome the stand taken by the Reserve Bank in this matter. A target has been indicated and a minimum accretion to owned funds has been ensured. I, however, feel that the scheme has been rather inadequate, not to speak of its being self-sufficient.

LIQUIDITY:

"Linked with the subject of capital structure of the banks is the question of liquidity. I raise the issue, as I did also last year, not so much to emphasise the formal liquidity as to draw attention to the need for an overall liquidity in the banking system, as well as the liquid character of the bank's assets. The need for maintaining a reasonable liquidity becomes particularly important in a developing economy, which inheres various contingencies, that cannot always be forecast with certainty.

"If the required liquidity has to be preserved,—this applies both to the individual banks and to the banking system as a whole—it is necessary that the income differential of banks must go up without unduly making bank money dearer to the producers of goods and services. While maintaining a reasonably liquid position the need for using the cushion available may arise either in consequence of depreciation of assets, viz: investments and advances or owing to occasional sharp rises in banks' operating costs or as a result of changes in the Bank Rate. Further, banks are now required to explore in uncharted fields and are bound to be faced with higher overheads—all these, again, point to the need for raising the ability of banks to add to their internal strength.

BONDS MARKET:

"Since the state of liquidity in the banks' assets, to a large measure, is dependent upon the state of the Bonds Market and the pattern of financial management in the corporate sector, a treatment of these two aspects is relevant at this stage. The market for Government Bonds still continues to be rather limited. On many occasions we have raised this point and a detailed discussion was made in our Banking Plan. We consider it necessary to

31 March 1962

of Government Bonds. As long as subscription to the Government Bonds by the public reduces bank deposits, the banks cannot be expected to take initiative in dispersing the loans far and wide. On the other hand, the object can be achieved by making specified commercial banks, (and such of the Co-operative banks as are not sustained by Treasury loans), the exclusive bankers to the Union and State governments, with an arrangement that collection by way of sale of Bonds or of tax money through them will remain in deposit with the concerned banks.

CORPORATE FINANCING:

"Shiftability, or extinguishment in due course, of a bank credit will depend on the overall effective liquidity in the economy. Such overall liquidity, again, is dependent, amongst others, on the capital base of the corporate enterprises and their profitable functioning. The capital base of these corporations thus need be adequately broadened.

"Last year I drew your attention to what was said by the Chairman of the ICICI and the then Governor of the Reserve Bank about the propensity to depend too much on borrowed capital right from the beginning of an industrial venture. Such an approach is fraught with grave dangers. Firstly, despite all plans and programmes many contingencies do remain unobserved when a project is launched. The capital base should be adequate to take care of such contingencies, as and when they occur, so that the technological and operational expectations can smoothly be fulfilled. Too much dependence on borrowed capital, at this stage, may put the entire project out of gear. In such a state the lender also gets involved and is put to severe strain.

"Secondly, in order to ensure profitable functioning, the industry must be able to modify or expand the project even at an early stage. Also, in view of the quick technological progress being achieved in different parts of the world, every industry must be prepared to be able to modernise their capital equipments at short intervals. With an adequate initial capital base, it should not be difficult for an industrial undertaking to seek credit facility at these stages of expansion or modernisation. But here also the approach should be to obtain credit as a bridge-over to serve the intermediate stage only, before further capital is raised from the market.

TERM FINANCING:

"This brings me to the question of term lending by banks. It is a matter of satisfaction that the age old abhorrence to mixed banking is fast diminishing and that the banks are making a beginning in the matter of advancing loans to industries on term basis.

But in view of the present state of corporate financing, which I have just now discussed, I think a word of caution is necessary.

"A progressive outlook is required and is welcome. At the same time, it is also necessary that the limit is noted and the danger of overstepping the same is realised. I consider that in allowing term loans, the commercial banks must, first of all, satisfy themselves that the concerned industrial unit has an adequate capital base. Secondly, they must not try to provide more than medium term finance. It must be recognised that the longer term financing agencies and the Issue (or Investment) Houses must ultimately undertake to bear the long term risks. The basically short term agencies can come into the field only for tiding over the period of transition.

ASSOCIATION ACTIVITY:

"I have always held the view that it is only through co-ordinated and concerted efforts on right lines that the banks can fulfill their obligations towards development of the economy. On the threshold of the Third Plan and with the complex problems before us, I consider that the need for such actions have never been more urgently felt as now. We are in need of a strong and progressive Banks' Association. Such an association is necessary both for a co-ordinated action on the part of the banks, and for generating and guiding a healthy competition amongst themselves. I, therefore, urge that the existing Association should consider formation of a strong Central Federation with residuary authority remaining with the local and sectional organisations of banks.

NOTE: This does not purport to be a record of the proceedings of the Annual General Meeting.

MARTIN BURN LIMITED

Notice is hereby given that the Register of Members and Share Transfer Books for Preference Shares in the Company will remain closed from the 10th April to 13th April, 1962, both days inclusive, for the purpose of payment of Preference Dividend for the half-year ended 31st March, 1962, on or after the 19th April, 1962, to those Preference Shareholders whose names appear on the Company's Register of Members on the 13th April, 1962 or to their mandatees.

By Order of the Board.
A. G. Gidley
Secretary.

Registered Office
12, Mission Row,
Calcutta-1.
31st March, 1962.

THE DUNLOP RUBBER CO. (INDIA) LTD.

NOTICE

NOTICE is hereby given that the 36th Annual General Meeting of the Company will be held at the Registered Office, Dunlop House, 57B, Free School Street, Calcutta, on Tuesday, the 24th day of April, 1962 at 11.00 a.m. for the following purposes:

1. To consider the Profit and Loss Account for the year ended 31st December 1961, the Balance Sheet as at that date and the Reports of the Directors and Auditors of the Company.
2. To declare dividends.
3. To appoint Directors in the place of those who retire by rotation.
4. To appoint Auditors and fix their remuneration.

SPECIAL BUSINESS

To consider and if thought fit to pass, with or without modification the following resolutions of which number 5 will be proposed as a special resolution and number 6 as an ordinary resolution:

5. (As a special resolution): "That this meeting consents to Mr. Jatish Chandra Sen Gupta who has been in the employment of the Company since 1936, a relative, namely a brother-in-law of Mr. Phani Bhushan Sen Gupta, a Director and Deputy Managing Director (Administration) of the Company, holding and continuing to hold with effect from 1st January, 1962 an office or place of profit, namely, as an official of the Company at a salary of Rs 1,025 per mensem and on such terms and conditions as to dearness allowance, increment and other benefits as are applicable to the Company's officials."
6. (As an ordinary resolution): "That notwithstanding anything contained in the resolution passed at the General Meeting of the Company held on 24th April, 1951 and the Agreement of the same date between the Company of the one part and Angus Wallace Gillespie on behalf of the Ordinary Shareholders of the other part concerning the Bonus Issue of Ordinary Shares made by the Company in 1951, the Directors of the Company be and are hereby authorised to advertise a notice in The Statesman, Calcutta and Delhi, The Times of India, Bombay and The Hindu, Madras calling upon the holders of 375 fractional certificates representing 75 fully paid Ordinary Shares of Rs 10 each

which were issued in connection with the said Bonus Issue and are outstanding and have not been converted into fully paid Ordinary Shares in accordance with the said Agreement, to present to the Company five such certificates or such number thereof in multiples of five within 31st December, 1962 and in such presentation the Directors of the Company be and are hereby authorised to allot to such holders one fully paid Ordinary Share of Rs 10 in the capital of the Company for five such certificates presented to the Company and that on the expiration of 31st December, 1962 all rights of holders of the said fractional certificates issued in 1951 which have not been converted into fully paid Ordinary Shares on 31st December, 1962 be extinguished and any of the 75 Ordinary shares represented by 375 fractional certificates as aforesaid not converted on 31st December, 1962 be allotted by the Directors free to such person, company or other body corporate as they may think fit."

By Order of the Board,
P. B. Sen Gupta,
Director & Secretary.

Dunlop House,
57-B, Free School Street,
Calcutta
29th March, 1962

NOTE

A member entitled to attend and vote at the meeting is entitled to appoint a proxy to attend and vote in his stead. A proxy need not be a member of the Company.

In terms of Articles 4 of the Company's Articles of Association no Preference Shareholder as such is entitled to attend the meeting. A Debenture Stockholder as such is also not entitled to attend the meeting.

The Registers of Members in respect of the Ordinary and Second Preference Shares of the Company will be closed from 11th April to 24th April, 1962, both days inclusive. As any dividends that may be declared will be paid only to shareholders registered in the Company's Registers of Members, those holding shares on blank transfers are advised to register the transfers prior to 11th April, 1962.

An Explanatory Statement pursuant to Section 173 of The Companies Act, 1956 has been annexed to the Notice issued to the members of the Company.

CHAIRMAN'S SPEECH

The Alkali & Chemical Corporation of India Ltd.

A Year of Achievement

The Problem of Exports

Speech delivered by the Chairman, Mr. A. R. Foster, at the 25th Annual General Meeting held at Calcutta on Thursday, the 22nd March, 1962.

Ladies and Gentlemen,

The audited accounts and Directors' Report have been in your hands for some time and with your permission I shall take them as read.

An examination of the accounts will show that the year just passed has been a record one for the Company. Compared to the previous year, there has been a further substantial improvement in turnover and profits, with important contributions from polythene and paints.

PRODUCTION

You may recall that in the previous year the polythene plant achieved a production of 4000 tons against the designed capacity of 3500 tons. The performance of the plant in the year under review was even better and a total of about 4700 tons was produced, the increase being due largely to enthusiasm on the part of the technical staff at the plant and continued application of work study methods. Paints production also continued to rise, and would have been even higher, were not production hampered by a shortage of raw materials, which was aggravated by a reduction of import quotas. To overcome the problem, we are increasing our efforts to obtain raw materials from indigenous and rupee sources; whilst a measure of success has been achieved, supply difficulties still hamper production from time to time.

The other plants at Rishra have also contributed their share to the Company's prosperity and a reference to their performance has been made in the Directors' Report.

SALES

Our sales over the year have reached the record figure of Rs 6.6 crores as against Rs 5.4 crores in the previous year. This substantial increase in the volume of our sales would not have been possible without the strenuous efforts of our Selling Agents, Imperial Chemical Industries (India) Private Limited, and the technical services provided by them, and I wish to record our appreciation of their splendid achievement.

Wherever possible, although the cost of wages and raw materials has risen appreciably, we

have reduced our prices in order to pass on the benefits flowing from the increased scale of manufacture to customers. As an example, we reduced the selling price of polythene three times in 1961, making a total of five reductions since the plant started production in 1959.

Our returns on caustic soda and chlorine, however, continue to be low, partly due to the price ceiling imposed by the Government and partly on account of the rise in the cost of salt, coal and power.

During the year, excise duties were levied for the first time on polythene and caustic soda and existing excise duties on most of our paint lines were increased. The excise bill for the year shows a rise of nearly 30 lacs over the previous year. It has not been possible for the Company to absorb all of this substantial increase in manufacturing expenses and a part has had to be passed on to customers.

EXPORTS

During the year goods worth several lacs of rupees were exported to neighbouring countries. This is a beginning and we are hopeful of improving our export performance. We are fully alive to the magnitude of the country's foreign exchange problem and of the urgent need for greater exports. It is your Company's intention to do its best to help in Government's export drive. I must point out, however, that the capacity of the relatively young and small chemical industry in this country to play a major part in exports is limited. The chemical industry is essentially one in which large units are needed to achieve low priced production. Our industry is developing well, but its units are still small by world standards, and we are a long way short of the size necessary to enable us to compete in world markets.

India must indeed increase her exports, and it is encouraging that Government are considering experimenting with various methods of providing incentives. But we must not overlook that other countries are doing likewise, and there is a danger of a race beginning as to who can provide the best incentives. Long term, I am convinced that it is in India's best interests to concentrate on increasing her exports of those products for which she has natural advantages, and these are the traditional ones supplemented to an increasing extent by iron ore, steel etc. These are the industries where the

biggest expansion of exports can be expected, and they must be given every encouragement to operate at maximum efficiency and productivity.

APPROPRIATIONS

As you will have seen from the Accounts our profit before tax has increased by Rs 12 lacs to Rs 141 lacs. Tax on the current year's profit is Rs 52.5 lacs, a considerable increase over last year's figures because in that year the Company enjoyed substantial tax relief in respect of the Development Rebate allowances relating to the polythene plant.

The amount available for appropriation is Rs 90 lacs and in the light of these satisfactory results, your Board considers it is justified in recommending that the Dividend on the Ordinary Shares be increased to Rs 1/50 per share.

In its efforts to maintain a progressive but consistent Dividend policy, the Board has allocated Rs 26.5 lacs to Dividend Equalisation Reserve, bringing the total on that Account to Rs 48.5 lacs. I am sure you will agree that it is essential to safeguard in this manner the maintenance of your future Dividends.

Rs 14 lacs has been transferred to General Reserve. This is a further provision towards retaining in the business funds with which to assist in financing the projected expansion programme of the Company, with which I shall now deal.

MAJOR EXPANSION PLANS

With the increasing demands for our products both in the industrial and consumer fields, we have been giving close attention to the question of securing a fair share of the growing markets by expanding output from existing units and establishing new ones.

Construction on the site for the Rubber Chemicals Project is proceeding at a satisfactory rate and it is expected that the plant will go into production within the next 12 months.

The Company's Paints Plant has for some time been operating at high capacity and an application is now pending with the Government for permission to expand capacity. In view of Government's desire that expansion be achieved without sterling finances, we are investigating the possibility of obtaining raw materials and machinery from rupee sources and of getting more plant fabricated in India.

Construction work in connection with the Intermediate Density Polythene Plant, which it is proposed to set up at Rishra to increase production of polythene has been held up due to delay in obtaining the Capital Goods Licence from the Government. I am glad to say this licence has now been received so that arrangements for design and procurement of plant can now proceed.

In all these projects and expansions, we are grateful for the encouragement and technical assistance provided by our associates in the U.K., Imperial Chemical Industries Limited.

STAFF AND WORKERS

In view of the rapid progress in technology in other developed countries, it is necessary that our technicians are up-to-date in their knowledge of skills and standards elsewhere. To achieve this, selected members of our staff have been sent overseas for training with our associated companies in the United Kingdom and Australia, whose help to us in this respect has been most valuable.

Throughout the year your Board's efforts were directed towards improving communication and consultation with our employees in order to maintain our good relations with them, and there now appears to be a greater awareness and appreciation amongst increasing numbers of our workmen that their prosperity is intimately tied up with that of the Company and that to achieve this, effective and willing co-operation is indispensable.

Following the expiry of the last long-term agreement, we were able to reach, shortly after the end of the year under review, a 5-year Agreement with the recognised Employees' Union in conciliation proceedings before the Labour Commissioner, West Bengal. This is the first time that a 5-year Agreement has been reached in the area and your Board hopes that this will usher in an atmosphere of mutual confidence and understanding, which are so essential for the healthy growth of the Company.

We are supporting the Workers' Education Scheme organised by the Government of India and our workers have for some time past been receiving training under this Scheme.

We have also continued to promote the recreational activities of our workmen and to provide them with amenities for their welfare.

31 March 1962

DIRECTORS

Before turning to the business on the agenda, I must refer to the sad death last year of Mr. J. M. Lall, the late Chairman of the Company. Mr. Lall had presided over the affairs of the Company for only 3 years, but in that short time he made his presence felt and played a commanding part in all the activities of the Company. With his untimely death, the Company, and indeed, the Country sustained a very great loss.

Another loss suffered by the Company was in the death last November of Sir B. P. Singh Roy, who had been a Director since 1949. His guidance and wise counsel will be sorely missed by his colleagues on the Board.

Mr. F. G. Lamont, who retires by rotation at this meeting, is not seeking re-appointment. Throughout the period of five years that he has been a Director of the Company, his advice and assistance, particularly on technical matters, has been of very great value to his colleagues on the Board, and it is my pleasant duty to record our thanks for all that he has done.

Mr. C. E. J. Crawford resigned last year from the Board after having served as a Director for nearly 15 years, and I would like to express the Board's appreciation of the valuable services he rendered during that period.

Mr. B. R. Goodfellow and Dr. S. B. Cormack have also retired as Directors after many years on the Board and my colleagues and I wish to thank them for the great help they have given in dealing with the problems that have arisen over the years.

Mr. C. A. Pitts and Dr. E. C. Fairhead retire by rotation and their re-appointment is recommended.

AUDITORS

The Company's Auditors, Lovelock & Lewes, retire and have expressed their willingness to be re-appointed at the same remuneration as last year, namely, Rs. 16,000/- plus out-of-pocket expenses.

SILVER JUBILEE

The Silver Jubilee of the Company's incorporation will take place on 8th December 1962, and it is your Board's intention to celebrate the occasion in a fitting manner. It is interesting to recall that the Company commenced production on 4th April 1940, when its Caustic Soda/Chlorine Plant went into operation, and our profit in the following year was just over Rs 2 lacs.

We have come a long way since then and we look forward to the future with confidence and resolution.

And now, before I invite questions from you, I want to thank all of you who have found the time to be present here today.

NOTE: This does not purport to be a record of the proceedings

Sen-Raleigh Industries of India Ltd.

Chairman's Review

The 12th Annual General Meeting of Sen-Raleigh Industries of India Ltd., was held in Calcutta on the 29th March, 1962. Below are extracts from the statement of Mr. Abhijit Sen, Chairman of the Company.

In the year under review the Company's overall sales increased by 11%, but profits declined. Though bicycle sales dropped slightly owing to production bottle-necks, a greater production of components and accessories helped to realise the larger turnover. In the main, two factors affected bicycle production—a cut in import licence ceilings, and the failure of some indigenous manufacturers to meet commitments for supply of semi-finished components that could no longer be imported. The reduction in profit can be ascribed to:—

- The failure of individual indigenous suppliers to meet commitments, which resulted in a disbalance of stocks and in turn led to higher inventories with consequent higher financing charges,
- Poorer material utilisation, than had been anticipated, as, in many cases, as a result of changing import policies, materials had to be obtained from unknown and untested sources both within the country or abroad,
- High rectification costs where these non-standard materials had to be consumed,
- The higher cost of materials where indigenous or DLF buying from America replaced buying from usual sources in Europe,
- And lastly, the impact of unabsorbed overheads on a turnover, much smaller than planned.

Most of the factors which adversely affected our operating results in the past year were of a nature where solution was a matter of time and of adjustment to changing patterns of operation—as indeed our activities in the intervening period have tended to show. Indigenous supplies in general have improved remarkably both in respect of quality and in the honouring of commitments.

Import problems still remain a factor to contend with as the pace of development of ancillary and feeder industries has yet to catch up with the faster developing requirements of the consuming industries. The only predictable features of import policy would seem to be a reduction in ceilings from period to period and a change in sources from which the limited

imports could take place, and all production planning now has to start from these premises.

Whilst we accept this situation as unavoidable, and have taken whatever steps are within our powers to meet it, there are two aspects of import licensing which we find it difficult to face with equanimity. The first is the fact that the bicycle industry appears to be the only one to have had cuts in import licence ceilings linked with export performance. We wonder why this industry should have been singled out for this distinction. The second is that in many cases the policy makers too readily agree to deletion of items from the import list even when indigenous manufacture is very much in the air, leading at a later stage to licensing policies having to be reversed, with its consequent delays, added paper work and very often production failures—when a more careful check on the progress of the industries could have made for smoother sailing all round.

A redeeming feature of the past few months has been the remarkable progress achieved by the steel producing industries, and one can now safely assert that almost all categories of rolled or drawn steel required for the bicycle industry are being produced within the country. The bicycle industry is still however far from obtaining all its supplies of steels from local sources in such quantities as would allow utilisation of capacities to maximum advantage but the future of the bicycle industry appears to be more assured than in the immediate past.

The bicycle industry has now left the easy sellers market to enter an era of closer competition. Your Company has been lucky that there has been no slackening in demand for its products, and particularly in its major line—bicycles, it enjoys the reputation of marketing the fastest selling brands. In specific components, there is now a tapering off of sales which can be ascribed, in the main, to the unfortunate Government decision of allowing imports of friction parts in very large quantities for Small Scale assemblers.

A question that might arise in this context is why the Company should persist with a large production of components, when the same resources used for making more bicycles in preference to components would have fetched it better returns. The answer lies in the fact that releases of materials are very often earmarked for production of specific components, and so a smaller production of

these would not necessarily lead to any increase in bicycle production. We have to accept the fact that in the larger interests of a planned economy operational decisions cannot always be taken on the basis of profitability alone.

A sanction has been received for a further issue of capital. The Company's future plans envisage expansion of bicycle and chain production and diversification into the manufacture of Dynamo Lamps and House Service Meters. The successful implementation of these schemes depends largely on the availability of foreign exchange for import of plant through further foreign participation in the capital of the Company. Realising this, your Directors have been active in exploring the possibility of increased capital participation in the Company by Raleigh Industries Ltd.

At our invitation, a Raleigh Consultancy team visited our factories in November last—mainly for discussions on expansion schemes. Valuable contributions were made by it to our plans for the future. Raleigh have in the recent past developed new techniques and processes which would lead to more effective use of materials. As a result of the visit, it is proposed to incorporate a number of these new processes into our future scheme of operations.

For sometime, changes in the Company's methods of operation over the past few years had been high-lighting the need for radical changes in the Company's organizational structure to improve efficiency and tighten controls. Very recently changes in the organizational set-up were introduced to meet these changing conditions and whilst it is too early yet to comment on the long-term benefits of this move, the working of the factories in the months following the change has certainly shown marked improvement.

If the operating results for the year have been disappointing to our shareholders, they have been disheartening for our staff and workers, whose sincere efforts have so often foundered on the rocks of frustration. I would close on a note of thanks to all staff and workers for the effort they have put in and the understanding they have extended to the Company in a year of difficult operations, and share with them the hope of better operations in the future.

NOTE: This does not purport to be a record of the proceedings of the Annual General Meeting.

Company Reports

Excellent Working Results of Jessop

DESPITE the electric power crisis which curtailed the company's output for three months, Jessop & Company Limited has produced excellent working results for the year ended 31 October 1961. While sales have reached the record figure of Rs 12.01 crores against Rs 9.08 crores, the net profit, after providing for Depreciation and Taxation, amounts to as much as Rs 70.20 lakhs as against Rs 43.01 lakhs for the preceding year.

All allocations have been increased:—Depreciation from Rs 19.28 lakhs to Rs 23.09 lakhs; Taxation from Rs 29.17 lakhs to Rs 48.78 lakhs; Development Rebate Reserve from Rs 5.78 lakhs to Rs 9.06 lakhs and General Reserve from Rs 18.50 lakhs to Rs 42 lakhs. The dividend on the Ordinary shares is, however, maintained at 8.38 per cent, subject to deduction of tax.

According to the directors' report, the company's Order Book is excellent and they expect that the output for the current year will show an improvement. The demand for the full range of the company's products continues to be very great. With the rapid industrialisation of the country, the prospects for the next five years are considered to be exceedingly bright.

The company has proposed to construct a modern Meehanite Iron Foundry, capable of an output of 450 tons of finished castings a month, at Titaghur. In addition, it has been decided to construct a new Works for making a range of modern machine tools which the company has successfully designed and manufactured and which have given excellent service in Dum Dum Works. The directors have also, in hand, negotiations with a well-known British firm for the collaboration in the manufacture of Steelworks Duty Cranes.

Sen-Raleigh's New Schemes

Sen-Raleigh Industries of India Limited has applied for and obtained permission to issue 6,50,000 Ordinary shares. The issue was sanctioned at a premium of Rs 4 per share. The company's plans for expansion of bicycle production and diversification call for large foreign exchange resources and it is proposed that part of this new issue be offered to Raleigh Industries Limited to finance the foreign exchange component of these schemes. The shareholders are expected to be shortly approached on this issue.

Sales for the year ended 30 September 1961 are higher at Rs 3.98 crores against Rs 3.58 crores. The directors state that a larger production of components has helped to achieve this increase. In spite of full order books, bicycle sales suffered a decline. Anticipated levels of production could not be reached in this line owing to supply shortfalls in semi-finished components, occasioned partly by cuts in import licence ceilings and partly by failure of indigenous suppliers to meet commitments. The position in this respect has since improved.

The net profit for the year, after providing for Depreciation and Taxation, amounts to Rs 21.56 lakhs as against Rs 24.49 lakhs. The following allocations have been made:—Depreciation Rs 22.60 lakhs (Rs 20.01 lakhs); Reserve for Repayment of Loan Rs 3.75 lakhs (Rs 2.75 lakhs); Development Rebate Reserve Rs 1.28 lakhs (Rs 1.18 lakhs) and General Reserve nil (Rs 2.00 lakhs). The dividend on the ordinary shares is repeated at 8 per cent, subject to tax.

National Rubber Pays 6 1/2% Against Nil

Although the company's expansion scheme taken up in 1957 was completed in the later part of 1960, full effect thereof in the form of production up to the installed capacity could not be achieved by the National Rubber Manufacturers Limited due to various factors including power shortage in the first half of 1961. Nevertheless, the output of almost all the items recorded some increase during the year ended 31 December 1961.

Sales are shown higher at Rs 2.70 crores against Rs 2.43 with the net profit working out to Rs 6.87 lakhs against Rs 4.22 lakhs for the preceding year. A sum of Rs 6.93 lakhs (Rs 5.91 lakhs) is set apart for Depreciation; Rs 1.72 lakhs (Rs 2.62 lakhs) for Development Rebate Reserve and Rs 1.00 lakh (Rs 50,000) for Dividend Equalisation Reserve. The directors have proposed a taxable dividend of 6 1/2 per cent, as against nil for the preceding year.

Jay Shree Textiles Repeat

The working of Jay Shree Textiles Limited has resulted in a higher net profit of Rs 16.50 lakhs for the year ended 31 December 1961 as against Rs 11.19 lakhs for the previous year, thanks to a substantial rise in sales from Rs 127.70 lakhs to Rs 173.09 lakhs.

In respect of allocations, the Depreciation is reduced to Rs 3.19 lakhs from Rs 3.99 lakhs and Development Rebate Reserve to Rs 49,952 from Rs 1.19 lakhs. The provision for Dividend Equalisation Reserve is, however, doubled to Rs 10 lakhs, while that for Taxation is higher at Rs 11.95 lakhs against Rs 8.70 lakhs. The dividend is maintained at Re 1 per share, subject to tax.

The Cotton Spinning Plant of 15,200 spindles is making satisfactory progress. Orders for the High Tension Electric Insulator Plant are expected to be finalised shortly. Efforts are also being made to further diversify and enlarge the activities of the company. In view of the satisfactory working of the existing units and the new proposals mentioned earlier, the directors feel that the shareholders can look forward to the future with optimism.

capital of Rs 25 lakhs in equity shares of Rs 100 each, at par. The proceeds will be utilised to finance company's scheme of expansion during the Third Plan.

Nithyakalyani Textiles

Nithyakalyani Textiles Limited, Madras, has been granted consent to issue capital of Rs 20 lakhs, consisting of equity shares worth Rs 16 lakhs and 9.5 per cent cumulative preference shares of the value of Rs 4 lakhs. The proceeds will be used for the establishment of a spinning mill in Madras.

Dhanraj Mills

Dhanraj Mills (Private), Limited (in liquidation) in Bombay, has been granted to consent to issue Debentures of the value of Rs 16 lakhs. The Debentures will be issued for consideration other than cash, at par, in terms of the scheme of reorganisation approved by the Bombay High Court.

BONUS ISSUE NOTES IWACOM

Twadom' (Private), Limited, Bombay, has been granted to issue bonus shares of Rs 90,000, divided into 900 equity shares of Rs 100 each. The bonus issue will be made in the ratio of one bonus share for every two equity shares held. The company's paid-up capital is Rs 1,80,000, all in equity shares. The company is engaged in the manufacture of umbrella handles and other plastic goods.

INVESTMENT NOTES Premier Tyres

Premier Tyres Limited has entered into a fresh technical service agreement with US Rubber Company, New York. This agreement has been successfully completed in discussion with Messrs Dayton Rubber Company, USA, Premier's earlier collaborators. US Rubber Company is one of the three largest companies in the world, manufacturing tyres and tubes and allied rubber products. This company will provide technical assistance to Premier Tyres in manufacturing tyres, tubes, conveyor belts and power transmission belts under the terms of the agreement. The factory is expected to go into production early next month.

Burn & Company

The shares of Burn & Company have spurred to Rs 700 from a low of Rs 560 within a period of one week on rumours of a bonus issue, which cannot altogether be ruled out. Against a subscribed capital of Rs 1.12 crores, Reserves stand at Rs 2.57 crores. The last bonus issue by the company was in 1954, when the authorised capital was increased from Rs 70 lakhs to Rs 1.20 crores by the creation of 50,000 ordinary shares and thereafter Rs 42 lakhs was capitalised from the reserves for the issue of bonus share in the proportion of one bonus share for every share held. Most of the expansion programmes of the company has

either been completed or nearing completion. This will enable the company to maintain the present level of dividend, if not enhance it, despite an increase in the capital.

STOCK EXCHANGES Unsettled Conditions

Watch-Dog Writes:

THE overall performance this week, though good in parts, clearly suggests that the stock markets are still hesitant. While the professional operators prefer to keep on the sidelines, genuine investors seem to have diverted their attention to some of the attractive new issues.

After initial firmness, equities on the Calcutta Stock Exchange were subjected to some profit-taking towards the close. Attention was, however, mostly focussed on Jute shares.

The Bombay Stock Exchange disclosed no change in the overall trading pattern and price movements were mostly confined to narrow limits.

The Madras Stock Exchange presented a mixed pattern of trading with fractional gains and losses recorded for a number of shares.

Wall Street closed barely steady with mostly fractional price changes in either direction.

CALCUTTA

Calcutta, Friday Evening.

LYONS RANGE continued to present unsettled conditions. Apart from the fact that the market was closed earlier, consecutively for three days, due to the Stock Exchange Association's general meeting, activity was restricted as the leading operators preferred to be away from the market pending a clearer picture of the composition of the new Union Cabinet. The main question was: "Who will be the next Finance Minister—Mr Morarji Desai or Mr T. T. Krishnamachari?" Barring a technical recovery in some of the pivotal counters, the tendency of the market was, therefore, generally quiet.

No doubt, early in the week, the market exhibited a cheerful sentiment and prices staged a smart recovery following Mr Nehru's statement, at the annual session of the Federation of the Indian Chambers of Commerce and Industry, that he was in favour of expansion of the private sector. But, the tendency to take quick profits persisted and the operators were hesitant to go in for big commitments owing to the uncertainties with regard to the formation of the new Union Cabinet and the Budget proposals. As a result, prices moved aimlessly without any definite trend.

There was, however, no selling pressure due to the flow of encouraging corporate news. Again, hopes were entertained that, as the Government was now keen on maximising exports, the authorities might take vigorous steps to relieve the shortage of transport, coal and power, now being experienced by the various industries. It was also

thought that much of the additional taxation would be in the form of indirect levies.

The Giltedged section continued to remain dull. Prices were barely tested and the volume of business was extremely small. Support from institutional investors was lacking due to financial stringency, while enquiry from others was confined to only a few issues. 3 per cent 1986 Conversion Loan, after opening steady at Rs 71.25, eased off gradually towards the close to Rs 70.90.

Two main factors induced fair support for Bank shares. The first was, that banks had done very well last year. The second was, that banks were expected to issue right shares in order to bring a greater balance between their capital and deposits. Punjab National were taken up to Rs 21.75 from Rs 21.37 and United Commercial up to Rs 87.50 from Rs 95.

The Jute section continued to give a good performance, thanks to the demand for jute goods exceeding supply and the indications of the industry being able to recover past losses earlier than expected. It was also believed that, due to the comfortable stock position of the fibre, the mills would do well for the next few months. Alliance forged ahead to Rs 126 from Rs 112; Bally to Rs 300 from Rs 291; Barnagore to Rs 172 from Rs 163; Kamarhaty to Rs 181 from Rs 172; Kankarrah to Rs 131 from Rs 117 and Kelvin to Rs 208 from Rs 201. Howrah, however, moved narrowly between Rs 21.25 and Rs 21.69; Nuddea between Rs 70.50 and Rs 77 and Megna between Rs 13.04 and Rs 13.62. New Central were on offer at Rs 17.56 to Rs 17.75 against Rs 18.06 following the company's proposal to float a Debenture issue.

Coal shares were a neglected counter despite the talk of raising the Third Plan target to more than 100 million tons. The industry's major problem of shortage of transport, explosives and power having not shown any sign of being resolved in the near future, was the main contributory factor to the depressed sentiment in the section. South Karanpura moved idly around Rs 7.25 and so also Western Bengal around Rs 8.81. Burrakur fluctuated irregularly between Rs 17.50 and Rs 17.94 due to alternate buying and selling.

Textile shares showed a partial recovery from the recent low levels. The only two bright spots in this section were Bowreah which were pushed up at one time to Rs 43 from Rs 34.94 following the news of the dividend being doubled and Dunbar which had good buyers at Rs 34.75 to Rs 35.25 on reports of the dividend being maintained. Cawnpore improved to Rs 9.12 from the recent low of Rs 8.62 with Kesoram changing hands at Rs 33 to Rs 34.19; J. K. Rayon at Rs 23.12 to Rs 23.69 and Elgins at Rs 22.56 to Rs 22.81.

Tea shares were, to a certain extent, dormant due to the auction reports being not encouraging. The Wage Board's recommendations for an interim relief in wages were also taken to mean an additional burden on the industry, which was already

fighting the problem of a lower price being realised for the commodity. Hasimara changed hands at Rs 31.31 to Rs 31.69; Grob at Rs 9.87 to Rs 10 and Tezpur at Rs 15.94 to Rs 16.06.

Except for the continued support lent to Dyer Meakins due to persistent rumours of an early bonus issue, there was little doing in the Sugar section. Dyer Meakins, after after touching a new peak level of Rs 48.75, finished the week at Rs 47.56 due to profit-taking. Carew and Cawnpore hovered narrowly around Rs 12.56 and Rs 12.50 respectively.

Engineering shares gave an excellent performance early in the week, although higher levels could not be retained till the close due to general profit-taking. After a rather prolonged spell of dullness, Indian Irons made a good attempt at rally, being aided by the news that the company had a proposal to collaborate with the Stanton Iron Works for setting up a new company called IISCO-Stanton Pipe and Foundry Company Limited, not to speak of the hope with regard to an early announcement of the steel retention price. Against the previous week-end closing of Rs 24.64, Indian Irons opened higher at Rs 24.74 and advanced further to Rs 25.46 before reacting at the close to Rs 25.42. TEXMACO recorded a new peak of Rs 23.40 from Rs 22.90 on talk of foreign collaboration to streamline the present production and to enter into new fields, to close finally at Rs 22.90 Jessop were taken up to Rs 26 from Rs 24.12 on renewed demand, to finish at Rs 25.44. Burn & Company were a special feature and the scrip spurred to Rs 700 from Rs 540 on rumours of a bonus issue. Binani Metal met with business at Rs 13 to Rs 13.26 and J. K. Steel at Rs 19.75 to Rs 20.31. Guest, Keen, Williams were marked up to Rs 46.69 from Rs 45.49 to react toward close to Rs 43.87 on report of total dividend of 14 per cent for 1961 on the increased capital as against 16 per cent on the original capital.

After initial firmness, Miscellaneous displayed a slightly easier tendency due to profit-taking at the close, as will be clear from the following price trends of a few selected shares:

	Week's High	Week's Low	Week's Closing

Admirable Views on Banking Problems

THE range of banking problems that Mr Tulsidas Kilachand has dealt with at last week's annual general meeting of the Indian Banks' Association, of which he is Chairman, is breath-taking; and as commendable is the fact that it is a robust commonsense point of view to which he has given expression. By far the most heartening news he has is that the IBA is in the process of bringing into being a voluntary agreement on the minima of advance rates. Mr Kilachand has quite rightly given credit to the IBA for the agreement on Deposit rates, which has been in force for some three and a half years now, which exists, he says, "for the purpose of strengthening the banking system and, therefore, strengthening the economy of the country." The State Bank, of course, is not a member; but the State Subsidiary banks are members of the IBA, and Mr Kilachand goes so far as to say that an Advances agreement must be concluded, with the State Bank in it if possible, but without it if necessary. This is a very proper attitude, in as much as the existence of specified minima for Advances and maxima for Deposits is bound powerfully to make its influence felt upon the State Bank. Similarly, also, the IBA Chairman has referred to the fact that many services are being rendered by the banking system free and gratis, while others are available "at very low charges, which have not been revised since pre-war times." Indian Finance has long pressed for requiring banks' constituents to pay for services, since an addition to banks' earning potential is vital if the banking system is to be strengthened. Unfortunately Mr Kilachand reveals that a scheme of service charges recently drawn up "could not be put into operation on account of the unwillingness of a few banks to accept it unless it was accepted by the State Bank of India, which could not see its way to do so." Hope is not, however, altogether lost as the IBA has appointed a Special Committee to look into the matter. We would emphasise that, in this regard also, while all attempts should be made to secure the cooperation of the State Bank, the other banks should go ahead excluding, if necessary, the State Bank.

As is known quite widely, there has of late been a fissiparous tendency in that the medium banks have been clamouring for a revision of the inter-bank agreement on Deposit rates whereby they would have the benefit of a differential vis-a-vis the large banks. More recent information is to the effect that points of difference are being reconciled. But it needs to be stressed that the net result must not take the form of a further increase in Deposit rates; and Mr Kilachand seems to hint as much, when he asserts that banks should consider the Agreement "from the viewpoint of the welfare of the banking system as a whole and not merely from the viewpoint of individual banks desiring to increase their Deposits by offering higher rates of interest." Indeed it is by no means certain that the offer of a higher rate of interest lures in fresh Deposits; all that may actually happen is that Deposits get diverted from a bank which pays the lower rate to another paying a higher one. If therefore any re-

adjustment of Deposit rates is decided upon, we hope that the present upper limits will not be exceeded; for any increase will merely contribute to an unhealthy competition among banks that would do none any good.

Mr Kilachand has raised another important point. While undoubtedly in the last decade the banking system has shown welcome initiative, in opening about 1,300 new offices it is necessary, Mr Kilachand correctly asserts, that the Indian banks "must establish more and more branches in the interior." There are, according to his reckoning, about 1,400 townships which are totally devoid of banking facilities. So, branch expansion has to be planned with a view to preventing dissipation of efforts. (We may wonder why the Reserve Bank recently has given its official blessing for the opening of new branches in areas which are already sufficiently banked.) The IBA Chairman's suggestion is that "member banks of the Association should co-operate in drawing up a programme of healthy branch expansion, according to regional spheres of their operations." This stress on regionalisation is also the more desirable in as much as banks, by concentrating on areas of their own influence, will be enabled to imbue their operations with a more personal approach.

We may proceed to touch briefly upon other subjects covered by Mr Kilachand. Mr Iengar is justly given a tribute for the valuable work in behalf of Indian banking that he did during his tenure of office as Governor of the Reserve Bank; and high expectations are justifiably held of Mr P. C. Bhattacharyya's capacity and talents to cope with the problems which he will face as the new Governor. Small banks have a role to play in the Indian economy—but only if they are viable and well-managed. The Reserve Bank's preference for convention over compulsion is welcomed. Doubt has been expressed if banks can achieve the target of a capital ratio of 6 per cent—again, unless profits are increased. Mechanisation of operations is suggested for securing economies in operating costs—but foreign exchange shortage is the hurdle.

Mr Kilachand's remarks on banks and term financing are provocative. While the authorities would no doubt like the commercial banks to extend medium and long-term loans to foster industrial growth, the IBA Chairman doubts that the banking system has the capacity greatly to augment such form of accommodation. The resources of banks are already fully, if not over, extended; term loans cannot be recalled, as short loans can be; and the fact that the bulk of Deposits are "demand" in nature prevents the banking system from earmarking much by way of resources for term loans. He suggests the formation of a Consortium of Banks, which would be better fitted to provide such a facility. Mr Kilachand also reckons that the proposed Consortium would be in a position to secure an allotment from Cooley Amendment funds (arising from Public Law 480 counterpart funds) so that at least the Indian companies, with American associates could be helped to find medium-term industrial finance.

Developmental Banking

The conference of Asian Development Banks held in Bombay last week has provided the forum for discussion and mutual exchange of views between Asian countries on the many problems which the growth of development banking has given rise to. The rise of these institutions in the postwar period has been a common feature of the institutional structure of industrial finance in the developing countries of Asia and the Far East. Faced with the growing capital requirements to nourish and nurture new industries on the one hand, and the inability of the ordinary channels provided by commercial banks and the capital market, the Governments of these countries had to resort to new devices to make good the serious gap in industrial finance which had retarded industrial development before. On an international plane, the setting up of the International Bank for Reconstruction and Development designed mainly to provide long term loans, provided the pattern for a new type of institution to meet the credit needs of industries both in the public and private sectors. Development banks as they have come into being in these countries represent mere projections in the national economies of the world financial and credit institutions like the IBRD and the International Finance Corporation. In view of the divergent state of economic development in these countries the progress of development banks has also shown variations and for the same reason, the problems facing development banks also show no similarity. The capital market in India, for example, is more advanced than in many another neighbouring country: the progress of development banks compares even more than favourably with progress elsewhere. Mainly under the initiative taken by the Government and the Reserve Bank, a host of new institutions has come into being both at the Central and State levels to cater to credit needs of industries. In Burma development banking is barely six month old, while in India the IFC which was the first development bank to be set up has a record of nearly 14 years of fairly successful work. The Industrial Credit and Investment Corporation, represents one of the most novel institutions among development banks not only for the variety of activities in which it is engaged but also for the unique collaboration between the Government of India and the IBRD which it represents. Thus notwithstanding such varying stages of economic growth development banks in these countries face some basic problems in common which arise from the similarity in economic environment and the relatively vast ground that has to be covered to meet the full requirements for industrial credit.

Mr P. C. Bhattacharyya, Governor of the Reserve Bank of India who inaugurated the Conference referred to a crucial problem faced by development banks in all the countries and to which they have perforce to pay particular attention. This relates to the appraisal of a project by the development banks for the purpose of providing credit accommodation that is sought by prospective firms. While such appraisal has many facets including assessment of managerial competence, economic prospects for the borrowers' products, technical feasibility of the project etc, the crux of the problem relates to the weightage that is to be given to the various elements. The tendency in underdeveloped countries, Mr Bhattacharyya said, was to give

greater emphasis to the type and value of security available for loans. It is a moot point whether such priority to security accords with the urgency that is sought to be imparted to industrial development in these countries. An equally important point for consideration is the weightage that is to be given to the earning potential of a project. Current practices of development banks in the Asian countries show no uniformity of principles in this regard. The appraisal of applications for loans also raises intricate question about the proper financial structure that is to be maintained by the applying firms so that cost of production will be kept at minimum levels. This question was raised by Mr G. L. Mehta, Chairman of the ICICI in the course of his address to the annual general meeting of the Corporation last month. Mr Mehta had referred to the advantages of a low debt-equity ratio from the point of low cost of production. Existing practices have however run contrary to this sound principle.

Overshadowing such technical problems relating to appraisal of applications for credit, are the problems in respect of the technical personnel required for efficient functioning of development banks and the more serious one of the slender capital basis on which they operate. It has been brought to light that for want of properly trained technical personnel, development banks in a number of countries have come to depend on imported personnel from abroad. The shortage of capital, it is obvious, can be met only by greater assistance from governments of the countries concerned as well as from international credit agencies like the IBRD and the IFC. The IFC has, in the course of the last few years, become a model institution for development banks and has set itself the aim of assisting development banks in the backward economies. The foreign exchange shortage which has impeded the working of development banks in the underdeveloped countries has also underlined the need for stimulating a greater flow of funds from the capital surplus countries to the capital needy countries.

An important subject which was discussed at the conference was what Mr Mehta termed as the "Domestic problems of development banks." These, as he explained, included problems relating to financial resources and the terms on which finance is supplied. The discussion of this subject revealed the differences in practices of development banks in respect of margin requirement for security, the margins between the borrowing and lending rates, and the ratios of owned to borrowed funds of development banks. While the divergences in existing practices in different countries may be explained by the varying stages of growth of development banks etc, the discussion has pointed to scope for improvement in particular countries in the light of experience elsewhere.

Mr G. L. Mehta, Chairman of the ICICI, who was the moving spirit behind the convening of the conference admirably summed up the role of development banks in his address. Mr Mehta said that in some ways a development bank is an expression of a mixed economy. "It can combine the best of both the public and private sectors—a sense of service, an emphasis on public interest along with initiative and enterprise; profitability harnessed to economic growth." Elaborating the point further, Mr Mehta stated that a development bank does not only provide finance, but also seeks to inculcate discipline in promoters and by insisting on standards, brings into being projects which are sound financially. A development bank ensures planning at the project level. This role, it is obvious, can be fulfilled only under

conditions of a proper organisational structure and provision of efficient technical personnel who are imbued with the right conception of their roles. The danger of bureaucratic red-tapism creeping into the working of the development banks has to be guarded against. In this light, therefore, it is clear, that a development bank can function effectively only if it is ensured autonomy, in its day-to-day working. It should be free both from governmental interference as well as the pressures of powerful private interests. In the ultimate analysis, the success of the development banks will be judged by the record of work they have done to develop capital markets in the developing countries.

Bank Finance in UP

By KRISHNA KUMAR UPADHYAYA

OUT of the 15 joint-stock banks registered¹ in Uttar Pradesh, as on 31st March, 1961, one was agricultural and the rest were commercial banks. The industrial and investment banks which play a more important role in the financing of industry were conspicuous by their absence. The total paid-up capital of the 14 commercial banks was Rs 1.60 crores out of which Rs 1.25 crores was the share of the Hindustan Commercial Bank Limited, Kanpur. Three other banks also, namely, the Bareilly Banking Corporation Limited Bareilly; the Chaula Bank Limited, Dehradun; and the Oudh Central Bank Limited, Faizabad had together a paid-up capital of Rs 5 lakhs or above. The number of offices of scheduled banks in the State was 420 in 1959 with a total deposit of Rs 107 crores. The increasing trend in the number of offices and amount of deposits is evident from Table I.

While the number of scheduled banks having offices in Uttar Pradesh has been continuously varying between 23 to 25 in the period 1951-59, the number of branches has, more or less, steadily increased from 275 in 1951 to 420 in 1959. Except in the years 1956 and 1957, when they were very low, the deposits have also shown an increasing trend from Rs 63.23 crores in 1951 to Rs 107.94 crores in 1959.

The contribution of bank finance to total capital employed in industries in Uttar Pradesh is considerable. This is brought out in the study of the sample of 25 companies* shown in Table I. In the 9-year period 1951-59, the percentage contribution of bank finance to total capital of these companies has been fluctuating from 17.9 in 1953 to 29.5 in 1958.

According to the Reserve Bank's study, banks contributed 9 per cent, 10 per cent and 14 per cent respectively of the total capital of the companies studied in the years 1950, 1955 and 1957.¹ The high proportion of bank finance in the case of our study is accounted for by the nature of the companies studied, which were engaged in the manufacture of consumption goods and required relatively more working capital for which they depended on commercial banks.

SHORT-PERIOD LOANS TO INDUSTRY

The commercial banks are playing a pivotal role in the field of short-term industrial financing. Due to its flexibility both for the banker and the industry, cash-credit is the most popular form of rendering assistance. Since 1952 a large part of loans has been converted into bills of exchange to take advantage of the Bill Market Scheme of the Reserved Bank of India.

Most of the advances of banks are secured against physical assets. The banks generally

insist on the security either of raw materials or finished products which have a high degree of marketability. The banks have been reluctant to accept the security of stock-in-trade because of its low marketability and the relative difficulty of its valuation. A more ready acceptance of stock-in-trade as security for short-term loans will be conducive to a larger amount of assistance.

The industries of Uttar Pradesh do not permit, by the very nature of their business, the taking away of goods-in-the-making from the factory premises and hence no pledge on such securities is convenient. To increase the over-all contribution of banks towards the working capital of industry the popularization of hypothecation is essential even in the case of smaller units where a pledge is insisted upon to the disadvantage of the industry. The greatest hurdle to be cleared in this respect is the absence of any system of registration of hypothecation which entails the danger of many charges of hypothecation being made on the same asset.

The provision of short-term loans to industry has been a strong feature of commercial banking. Their services in this respect have, generally, been satisfactory in view of the need of the industry. But in times of difficulty, their assistance has lagged behind the short-term capital requirements of industry, for example, in the case of sugar industry in the crushing season 1960-61 when the demands for short-period accommodation were pressing due to unsold stocks of previous years¹ and in the case of cotton textile industry of Kanpur when it experienced a slump in the period 1955-58.

SUPPLY OF LONG-PERIOD CAPITAL

The role of commercial banks in the supply of long-term funds is extremely limited. Their direct investment in shares and debentures of industry is insignificant. In 1958, for example all the banks in India employed

1. Speech made by Deputy Minister for Industries, Uttar Pradesh, in Vidhan Sabha on May 12, 1961: Leader May 14, 1961.

only 2 per cent of their funds in industrial securities.²

Indirectly, the banks have provided long-term assistance in some measure. Some part of their short-period loans are so regularly rolled on from one period to other that it, practically, takes the shape of long-term loans. Although the banks can stop renewing the loans at any time it is unusual in ordinary circumstances. The banks make some advances against shares and debentures to share brokers, dealers in securities and others. On 31 December, 1959, for example, such advances amounted to Rs 91.18 crores for the whole of India.¹ Such advances, though invariably for short-periods, encourage investments in industrial securities by imparting liquidity to them, thus facilitating the flow of long-term capital to industry. The banks also contribute towards the shares, debentures and bonds of various special financial corporations and thus indirectly participate in their long-term financial operations.

The hesitation of banks in financing long-term capital needs of industry is attributable to the following causes. The provision of long-term capital is a more complicated process than that of short-term capital. While the repayment of short-term loans is made out of the sale of current assets the repayment of long-term capital is made out of the earnings generated by all the assets.² Hence the lender has to, by way of taking a longer view of the operations of the industry, make a comprehensive valuation of assets, assess the future profits of the industry and the comparative position of the unit in the industry and supervise the credit. These operations require skill and experience of different type than what the banks generally possess.

The banks, however, have had more or less a conservative outlook and have insisted on high proportion of liquidity in their investment portfolios. This attitude of the banks has been further encouraged by the Reserve Bank of India which discourages long-term investments by banks.

While the difficulties regarding long-term financing are real, those regarding the resources of the banks are not. The resources of the banking offices of Uttar Pradesh, after the setback of 1956 and 1957, have increased very steeply in the years 1953 and 1959 (Table I.) The advances, on the other hand, have not kept pace with the deposits: they were only Rs 56.28 crores in 1959 when the deposits were Rs 107.94 crores as against Rs 40.91 crores in 1951 for Rs 63.23 crores of deposits or Rs 48.69 crores in 1955 for Rs 74.18 crores of deposits.

It is generally believed that the banks may, acquire fixed securities to the value of their paid-up capital and reserves without putting them in trouble. It is also not contrary to sound banking principles to block a certain limited portion of the short-term deposits, especially when the time deposits constitute 62.1 per cent of the total deposits of all the scheduled banks of India in 1959. There is a hard core of deposits which is not likely to be withdrawn. Another justification for integration of the short and long term financing by banks is that it will provide for a more

intensive use of the limited capital resources in the State. The fact that the banking system holds the largest part of the money supply entails a responsibility on it for substantial long-term financing also. With their long experience in short-term financing of industry the banks may perform this service well.

To augment the resources of banks, the Refinance Corporation for Industry was established in June 1958. Upto 31 December, 1960, however, the total funds provided by the Corporation were only Rs 5.78 crore¹ for the whole of India which is disappointing. While the facilities provided by the corporation need to be further liberalised, the banks will also take some time to adapt themselves to long term financing and avail refinance facilities.

To encourage the banking habit, and thereby increasing their deposits all the scheduled banks have recently made an upward revision of interest rates both on savings and fixed deposits.

In view of the increasing capital requirements of industry and the comfortable resources position of the banking system, the responsibility of banks for the financing of industry is large. For making facilities and branch expansion, enlargement of the list of acceptable securities and the popularization of hypothecation are desirable. To increase long-term assistance of banks to industry, a series of steps like longer accommodation from Reserve Bank, some liberalization of the banking laws in respect of long-term advances and, most particularly, an over-haul of the whole thinking of the banks on the issue of long-term finance to industry are required.

1. Report of Refinance Corporation for Industry private Limited, 1960.

Individual well-being is linked with national prosperity and only planned efforts can ensure both in the shortest possible time. And planning, for its success, largely depends on savings, individual as well as national. Saving in the form of Bank Deposits provides resources for the National Plan.

CENTRAL BANK

Magnificent Performance

A record increase in the balance of profit is shown in the Central Bank of India Ltd's 51st annual report.

Deposits of the bank have risen by Rs 20.67 crores to Rs 220.19 crores, and this gives Central Bank the distinction of being the second institution to pierce the Rs 200 crore mark in Deposits. Fixed Deposits and Cash Certificates are higher by Rs 13.19 crores at Rs 114.52 crores; Savings Bank Deposits are up by Rs 2.56 crores at Rs 38.13 crores; and Current Accounts, etc., have improved by Rs 4.88 crores to Rs 67.55 crores. Just about half of the fresh accretions have been utilised to expand the Advances portfolio, which is higher by Rs 10.21 crores at Rs 161.00 crores. Investments in gilt-edged are shown to have gone up by almost exactly Rs 2 crores to Rs 49.10 crores, with market value, at Rs 49.25 crores, exceeding book value. Cash balance at Rs 23.91 crores have been added to by Rs 1.21 crores. Another important use for the new Deposits is a reduction in borrowings from Rs 13.48 crores in the 1960 balance-sheet to Rs 3.24 crores.

The Rs 10 crore mark has been pierced in regard to income by interest and discount, which, for 1961, is placed Rs 1.76 crores higher at Rs 10.16 crores. Commission, exchange and brokerage have brought in Rs 1.96 crores against Rs 1.68 crores in the previous year.

There is a considerable increase in the cost of interest paid on Deposits and Borrowings, an item which has gone up from Rs 4.34 crores to Rs 5.26 crores; and, similarly, salaries and allowances have absorbed Rs 4.02 crores as compared with Rs 3.66 crores in 1960. Even so, the earnings of the Central Bank were so considerable, that the balance of profit (net of taxation) has taken a great leap forward from Rs 1.33 crores to Rs 1.83 crores. In fact, the 1961 profit should be deemed Rs 10 lakhs higher still, in as much as such an amount, absorbed by additional Golden Jubilee Bonus, is an extra-ordinary expenditure.

The interim dividend at Rs 2.40 per share absorbed Rs 30.24 lakhs; the final at Rs 2.60 per share (and making up a dividend of 14 per cent for the year) will need Rs 32.76 lakhs. The transfer to staff Gratuity Fund is maintained at Rs 10 lakhs, but Contingency Fund gets nil against Rs 8 lakhs. Bonus to staff is to get Rs 9 lakhs more at Rs 60 lakhs, and there is a massive transfer of Rs 45 lakhs to Reserve Fund. The carry forward at Rs 23.37 lakhs is rather higher than the amount brought in of Rs 18.61 lakhs.

And now the ratios: Advances as a percentage of Deposits have moved down from 75.6 in the 1960 balance-sheet to 73.1. The ratio of Reserves plus capital to Deposits has moved down slightly from 3.4 per cent to 3.3 per cent in the 1961 balance-sheet.

Altogether, it has been a magnificent performance by the Central Bank in 1961.

HSBC

Profit Rises Spectacularly

The Rupee accounts for 1961 of the Hongkong and Shanghai Banking Corporation reveal an almost incredible increase in the balance of profit net of taxation. The sustained demand for bank credit, which was in evidence last year, is no doubt responsible for the spectacular results.

According to the balance-sheet of Indian branches, Deposits have shown a modest rise of Rs 0.66 crore to Rs 8.24 crores. But such was the pressure of demand from constituents, that the total of Advances has expanded by Rs 2.13 crores to Rs 9.99 crores. As a result borrowings have increased from Rs 1.61 crores in the 1960 balance-sheet to Rs 2.20 crores. Also, there has been slight disinvestment in gilt-edged, with the portfolio declining from Rs 1.58 crores to Rs 1.47 crores. Lastly, the rise in Advances in an amount exceeding the accretion to Deposit resources is reflected in a fall of just under Rs 15 lakhs to Rs 45.40 lakhs in cash balances, including money at call and short notice.

The increased earnings, it may be noted, are also due to rise in the financing of the export/import trade. A note under Contingent Liabilities points out the fact that Forward Exchange Contracts outstanding as on 30 December 1961, at Rs 3.28 crores, are sharply higher than the corresponding figure of Rs 1.33 crores for 1960.

The income by interest and discount is higher by Rs 15.70 lakhs at Rs 59.77 lakhs, while commission, exchange and brokerage have fetched Rs 1.20 lakhs more at Rs 17.61 lakhs. Besides, there is adventitious income to the tune of Rs 4.72 lakhs, made up of Rs 2.68 lakhs as net profit on revaluation of investments, etc., and Rs 2.04 lakhs (against Rs 6.041 in the previous year) from Other Receipts.

While interest paid marks a rise of Rs 5.19 lakhs to Rs 30.57 lakhs, salaries and allowances, most unusually, have absorbed less at Rs 28.02 lakhs against Rs 28.15 lakhs. In consequence the balance of profit has jumped up from Rs 2.29 lakhs to Rs 14.68 lakhs.

The summarised group consolidated balance-sheet (HSBC, HSBC of California, Mercantile Bank and the British Bank of the Middle East) shows a rise of £31.3 million (sterling equivalent) to £401.7 million in current Deposit and other Account, etc. There is a small rise of £2 million to £54.4 million in Hong Kong Currency Notes in Circulation. On the Assets side, the main change is a rise of £28.3 million to £201.9 million in Advances. The profit of the Hongkong and Shanghai Banking Corporation for 1961 is the sterling equivalent of £2.7 million after providing for taxation and transfers to inner reserves, and including dividends from Mercantile Bank, the British Bank of the Middle East and other subsidiaries.

CIB

Commendable Credit Ratio

The Canara Industrial & Banking Syndicate Limited has had a year of eminently successful working in 1961.

Deposits and other accounts have marked a rise of Rs 5.76 crores to Rs 24.63 crores. Much the bulk of the increase is under the head of Fixed Deposits, which have moved up by Rs 4.39 crores to Rs 16.98 crores. Savings Bank Deposits have improved from Rs 3.57 crores to Rs 4.27 crores, while Current Accounts, etc., also show a rise at Rs 3.39 crores against Rs 2.71 crores.

The improvement in resources has enabled Canara Industrial to expand its accommodation to constituents by Rs 3.21 crores to Rs 15.45 crores. This rise is almost wholly in respect of loans, cash credits and overdrafts, which are higher by Rs 3.03 crores at Rs 13.11 crores.

Canara Industrial has also taken the opportunity to augment its gilt-edged portfolio by Rs 2.73 crores to Rs 8.84 crores. Cash balances, including money at call and short notice, also mark a rise from Rs 1.72 crores to Rs 1.96 crores.

The profit and loss account shows that the income by interest and discount has gone up from Rs 1.21 crores to Rs 1.42 crores. There is also a small increase in the earnings by way of commission, exchange and brokerage, which have brought in Rs 8.65 lakhs against Rs 7.46 lakhs. While expenditure has risen, no doubt due to enlarged activity, the increase has been kept within bounds. Interest paid on Deposits, Borrowings, etc., has absorbed Rs 8.40 lakhs more at Rs 60.78 lakhs; and salaries and allowances have cost Rs 6.90 lakhs more at Rs 46.84 lakhs. It is interesting to note that Canara Industrial is probably the only bank whose cost of audit was lower in 1961 than in 1960. The result is that the balance of profit, subject to taxation, has risen from Rs 25.23 lakhs to Rs 32.10 lakhs.

The higher profit naturally entailed an increase in the provision for taxes from Rs 9.63 lakhs to Rs 12.25 lakhs. The provision for bonus to staff is also higher at Rs 2.25 lakhs against Rs 1.75 lakhs. Thirdly, the transfer to Reserve is higher by Rs 3.50 lakhs at Rs 11.00 lakhs.

The dividend on the equity shares is at 20 per cent, including a bonus at 10 per cent. The carry forward at Rs 0.35 lakh compares with the amount brought in of Rs 0.28 lakh.

Canara Industrial must be one of the few banks which in 1961 has reported a reduction in the credit ratio, despite a fair increase in the Advances portfolio. The ratio of Advances to Deposits has come down from 64.8 per cent to a highly commendable 62.7 per cent.

BANK RETURNS

End of Fiscal Year "Windfall"

There has been a slight easing in the inter-bank call money rate, and we assume that the strain upon the banking system has been somewhat reduced by the end of fiscal year payments of the Government. In fact, the latest banking returns disclose a considerable accretion to Deposit resources of Scheduled Banks, and the statutory return of the latter for 30 March should disclose an even sharper rise in Deposits.

According to the Reserve Bank returns for 30 March, Active Note Circulation has risen

7 April 1962

slightly by Rs 1.41 crores to Rs 2,070.30 crores; on the other hand there has been inflow of Rupee Coin for Rs 0.69 crore. The low level of Balances Held Abroad, as shown in the return for the Banking Department has necessitated a transfer of Rs 10 crores from Foreign Securities, which are now placed at Rs 113.86 crores. There is a countervailing transfer of Rs 10 crores to Rupee Securities, which have risen to Rs 1,747.14 crores. In consequence, cash in the till has moved down slightly by Rs 0.75 crore to Rs 25.37 crores.

State Governments would appear to have made repayment of loans to Government on a large scale in as much as their balances have been practically halved in falling by Rs 15.33 crores to Rs 15.89 crores, and this is on top of an increase of Rs 12 crores to Rs 80.89 crores in their ways and means borrowings from the Reserve Bank. This repayment is reflected in the considerable rise of Rs 19.50 crores to Rs 71.30 crores in the balance of the Centre. Investments are lower by Rs 14 crores at Rs 163.43 crores; Rs 10 crores of the decline can be held to be on account of the transfer to the Issue Department, and another element of Rs 11½ crores represents purchase by the State Bank; it follows that the Centre has apparently instituted deficit financing, but the magnitude of created money it is not possible to guess at. Such recourse to created money was of course because of the need to make end of fiscal year payments.

Reserve Balances of member banks are lower by Rs 4.46 crores at Rs 72.73 crores, but this is wholly on account of the State Bank; other Scheduled Banks may in fact have been in a position to add to their statutory deposits. Relaxation of pressure upon the banking system is suggested by the fall of Rs 7.02 crores to Rs 177.69 crores in the Other Loans and Advances of the Reserve Bank, whose advances against usance bills are seen to have declined by Rs 2.45 crores to Rs 40.73 crores.

Despite the transfer from the Issue Department, Balances Held Abroad are higher, only by Rs 5.96 crores at Rs 15.84 crores; the implication is that the foreign exchange drain during the week exceeded Rs 4 crores.

Payments of the Central Government marking the end of the fiscal year have had their due impact upon the return of the State Bank for 30 March, disclosing as it does a sharp rise of Rs 12.32 crores to Rs 572.28 crores in Deposits; and the previous week's return had shown a rise of over Rs 5 crores under the relevant head. At the same time busy season needs are reflected in the rise of Rs 3.84 crores to Rs 286.84 crores in the total of Advances. Almost the whole of the accretions to Deposits in the latest week has been utilised in enlarging the gilt-edged portfolio by Rs 11½ crores to Rs 254.28 crores. Hence, cash balances have been drawn on by Rs 5.43 crores to be placed at Rs 21.68 crores.

Government payments are presumably again responsible for the satisfactory rise in Deposit resources revealed in the return of Scheduled Banks for 23 March. Net Demand Deposits have risen by Rs 12.42 crores to Rs 864.87 crores, while the rise in net Time Deposits is a smaller one of Rs 1.17 crores to Rs 1,153.81 crores. Of the total rise of Rs 13.59 crores in net Deposits, some Rs 5.25 crores are ascribable to the State Bank. Despite busy season pressure, the total of Advances has risen moderately by Rs 5.01 crores to Rs 1,405.02 crores, but if regard is had for the fall reported in that week by the State

Bank, the expansion in credit extended by other Scheduled Banks is seen to have been larger. Disinvestment in gilt-edged to the extent of Rs 4½ crores reduces the portfolio to Rs 591.18 crores, and the State Bank is accountable for about one-third of the decline. While borrowings from the State Bank have increased slightly by Rs 1.04 crores to Rs 17.16 crores, indebtedness to the Reserve Bank has been reduced by Rs 7.08 crores to Rs 59.32 crores. Cash balances, as a result, have improved by Rs 1.69 crores to Rs 176.36 crores.

Treasury Bills

Tenders for Rs. 2,00,00,000 of 91 days' Government of India Treasury Bills were opened on Tuesday, 3 April, 1962. Total amount offered was Rs 2,00,00,000. Tenders at Rs 99.340 per cent were accepted in full. Total amount accepted was Rs 2,00,00,000, the average rate of accepted tenders being Rs 2.640 per cent per annum.

Tenders for Rs 2,00,00,000 of 91 days' Government of India Treasury Bills will be received at all centres (Bangalore, Bombay, Calcutta, Kanpur, Madras, Nagpur and New Delhi) up to the close of business on Monday 9 April 1962. Successful tenderers should make payment on Friday, 13 April, 1962 at Bangalore, Calcutta and Madras and on Thursday 12 April 1962 at other centres. Other conditions are as usual.

During the week ended 30 March 1962, Government of India Treasury Bills for Rs 96,63,50,000 were sold in favour of Reserve Bank of India.

91 days' Intermediate Treasury Bills will be sold from 4 to 7 April 1962 at Rs 99.356 per cent. Sales can be stopped at any time without notice if Government think it necessary.

91 days' Intermediate Treasury Bills sold from 20 to 31 March, 1962 amounted to Rs 2,00,000.

The Budget and After

By Paul Einzig

THE tradition under which Chancellors of the Exchequer in their annual Budget Statements mark time by a boring account of the past financial year, so as to defer announcements of taxation changes until after the Stock Exchange is closed, will be particularly justified this year. For the details of the capital gains tax are liable to influence the trend to a considerable extent. Already the anticipation of that tax has been casting its

shadow on that ugly building in Throgmorton Street. Since those details are a closely guarded secret, investors and speculators and their advisers are not in a position to know whether and to what extent the tax will be retrospective.

Many people sell out before the end of the financial year on April 5th or before the Budget Day on April 9th on the assumption that any profit arising on the realisation of securities before those dates would not be affected by the new tax. On the other hand, many people live in hope that the tax would not be applied to any securities which were bought before Budget day even if they are sold after Budget day. Should this expectation prove to be correct it would result in selling after Budget day of holdings deferred from the current financial year.

Apart from the capital gains tax, from which no substantial revenue is expected during the first year of its application, no substantial changes in taxation are anticipated. It is true, in view of the reduction of the Bank rate and of the continued expansion of Bank credit, a dose of fiscal deflation would be the correct policy. It seems most unlikely, however, that the Government would decide to act on such lines. Owing to the microscopic increase in unemployment there has been growing pressure on the Government to adopt policies of reflation rather than policies of disinflation in order to revive the economy. Actually labour in most industries and in most districts is as scarce as ever and any reflationary measures within or outside the Budget would only accentuate its scarcity. Nevertheless, pressure to that end will be sufficient at any rate to deter Mr Selwyn Lloyd from doing anything in the opposite direction in the Budget.

In any case, by consenting to the sharp increase in the railway charges the Government has virtually abandoned rigid resistance to inflation. In existing circumstances higher fares will inevitably mean the stepping up demands for even higher wages. With lower Bank rate and expanding Bank credit there will be every inducement for employers to concede wage increases and the resulting increase of consumer demand will revive capital expenditure plans which many firms deferred as a result of the slight halt in expansion. So the chances are that 1962 will witness an increase of both consumer demand and investment expenditure. The Government may feel that it would be a mistake to resist such a trend in view of its declining popularity in the country and in view of the fact that, owing to the weakness of other currencies, sterling might not be endangered by such a reversal of its policy. It would not be surprising to see further Bank rate reductions during the spring or early summer.

ENGINEERING INDUSTRIES Shortages of Various Kinds

The strident progress made by the engineering industries particularly during the Second Plan period has been one of the most heartening features of industrial progress during the last five years. Reflecting this progress, the engineering industry, which during the years of the Second World War was mainly confined to supply of railway equipment and semi-skilled products, has branched off into a number of new directions so that now it is in a position to produce a wide range of precision instruments & machinery such as machine tools, diesel engines and processing machinery for the mass production units in the textile, paper, sugar and cement industries. The progress of the automobile industry provides yet another testimony to the advance made by the engineering industry, which is further surpassed by the progress made in steel production. By virtue of the Third Plan programmes, the engineering industry is slated for further substantial expansion which is required to further diversify its range to cover new items now remaining outside the scope of production.

While the scope for such expansion is limitless, the prospects at present have come to be marred by difficulties which the industry has encountered on a wide front. Attention was drawn to the existence of such difficulties which detract from immediate prospects by Mr. Alok K. Mitra, Chairman of the Indian Engineering Association at the annual general meeting of the Association held in Calcutta last week. Put in a nutshell, the problem before the industry is one of continuing shortage of various kinds—shortages of raw materials, of transport, of power, and of foreign exchange which is required for essential imports.

On the raw material side the industry faces an acute shortage of steel, pig iron and hard coke. Shortages in respect of steel and pig iron are in the main to be attributed to the shortfalls and delays in the implementation of schemes for production in the private and public sectors of the steel industry. Apart from such shortfalls in availability, the system of distribution for steel has also left much to be desired. There has also been lack of coordination between needs and supplies—ample quantities of materials which the industry does not require are available, while deliveries of those sections and sizes which are urgently needed are unduly delayed. Mr. Mitra has pointed to cases where imported steel cannot be used because matching quantities of indigenous materials are not available. The higher prices for materials that are obtained from countries which have extended financial or other forms of assistance are another unsatisfactory feature of planning with reference to raw material imports.

The problem of raw material shortage has been aggravated by the transport difficulties. The critical situation of transport in the eastern region has affected the engineering industries in this region to a greater extent than in the South and the West. The diversion of coal movement to industries in the Eastern region by means of road transport, entailing greater expenditure on freight has caused considerable hardship to the engineering industries. Mr. Mitra has drawn attention to the implications of such diversion for the future industrial growth in the eastern sector, and states that the alignment of the transport policy in favour of consumers who are situated at a long distance from the main coal fields and steel plants imposes a severe strain and burden on industry in North East

India. "It increases their costs; it impairs their efficiency; it deprives them of the natural advantages which have encouraged investment in this part of India; and, in the long-term view, it increases true economic costs to the nation and distorts the pattern of industry which would naturally be dictated by economic advantage."

The problems of engineering industry to which Mr. Mitra has referred in his address are those which confront almost every industry. The seriousness of the situation in respect of shortage of steel, transport difficulties and bottleneck in power has been time and again brought to the attention of the Government and these have been understood to have engaged the attention of the Government also. Engineering industry is entitled to special consideration in respect of measures that are to be taken for rectifying the difficulties relating to raw material shortage, power scarcity etc. Considerable store has been set by the expansion plans chalked out for the industry to increase the exports of engineering goods and earn valuable additional foreign exchange. The target in the Third Plan is about Rs 30 crores and to reach this, the current level of exports will have to be more than doubled. The essential basis for such expansion in exports is increased production within the country itself which will in turn depend on the attempts made to relieve the wide shortages now experienced.

EXPORTS Latin American Prospects

The delegation of the Engineering Export Promotion Council which toured the Latin American countries with a view to exploring markets for engineering goods has returned with high hopes for increasing India's exports of engineering goods to those countries. The EEPC believes that in consequence of the visit, "India has been firmly placed on the map of South America for supply of a wide range of engineering products." During the tour, the delegation visited Brazil, Argentina, Chile and Peru in South America and also the East and West Coasts of the United States of America and Port of Spain.

One important development in Latin America has been the establishment of the Latin American Free Trade Association comprising Argentina, Brazil, Chile, Colombia, Ecuador, Mexico, Paraguay, Peru and Uruguay somewhat on the lines of EFTA rather than of those of ECM. Each country will be free to have its own tariff to third nation countries but the tariffs on commodities moving

from one country to another in Latin America will be on the lower side. There is hardly any uniformity in the external tariff structure of the different countries. In Trinidad, it is stated, the import of all engineering goods is free. In Brazil, on the contrary, there are restrictions on imports which are effected through auction of a limited amount of foreign exchange and levy of exchange surcharges. In Argentina, there is no import restriction, but importers have to pay import duty and surcharge on goods imported for local manufacture. Import trade in Peru is stated to be completely free, while in Chile, imports are free only for permitted items, though the list of such items contains all kinds of capital and producer goods which are not indigenously manufactured. Apart from the differences in the tariff structure, the disparity in the level of economic development among different Latin American countries has also to be taken into account. Brazil is more advanced than other Latin American countries and is fast developing its industrial resources.

The EEPC lists the specific items that could find prospective markets in the various countries of Latin America. Items which have prospects in Brazil are jute and cotton textile machinery, oil mill machinery, tea machinery, railway track materials, barbed wires and wire netting. Argentina would seem to offer market for agricultural implements, automobile spare parts, wire rods, big diesel engines, textile machinery, chemical and pharmaceutical machinery, printing machinery, rice machinery, tea machinery, sugar machinery, machine tools, railway wagons, and scientific

7 April 1962

instruments. The items which have scope in Chile are electrical goods, sewing machines, textile machinery, machine tools, razor blades, pumps and railway materials. In respect of Peru, it has been stated that almost all the items which India can offer have a market in that country. Even in the USA prospects are considered good for such products as cast iron soil pipes and fittings, cast iron components for machines, steel castings, water pipes, barbed wire, wire nails, deformed bars for r.c. sewing machines diesel engines, machine tools, rice mill machinery, small hand tools etc.

A substantial expansion of exports to the Latin American countries is necessarily only a long term proposition. During the Third Plan period, the Council has set store by an export of the order of about Rs 3 crores. While India suffers from freight disadvantage as compared with its competitors like Japan etc. the relatively lower prices for pig iron and steel and also lower labour costs should enable the country to compete effectively in those countries. There are however other important requirements also to be met for effecting exports. These include provision of long term credit and also production of goods according to exact specifications and quality.

EUROPEAN ECONOMY The West—

Economic developments in Western Europe during 1961 have reflected continuance of the boom conditions that were witnessed in the previous year and there are economic signs to suggest that the forces of expansion are firmly entrenched. The volume of national output rose in virtually all the Western European countries with an average increase for the industrialised economies of nearly 4.5 per cent. Referring to this, the "Economic Survey for Europe in 1961" prepared by the United Nations Commission for Europe states that while this represented a slower rate than in 1960, the pace of advance remained vigorous and that there is little reason to suppose that either demand or output will develop less rapidly in 1962 than in 1961.

In the majority of the industrialised countries, the rate of growth of national product was constant or showed a moderate decline from 1960. Only the Netherlands and the United Kingdom witnessed a comparatively steep fall in the rate of growth. As a result of the intensity of the demand in the two preceding years of the current boom, most of the countries of the area had exhausted their reserves of manpower and capacity by the early months of 1961 and the consequent scarcity that developed in respect of these had retarded the growth of output. The disappearance of overseas demand as a factor of growth and the smaller

impulse to expansion from intra-western European trade were also significant features in 1961.

There has been a pronounced decline in the rate of growth of industrial production during 1962 as compared with 1961. While in 1960 industrial production as a whole for Western Europe rose by 9 per cent, in 1961 the rise was only of the order of 4.5 per cent. The rate of growth has shown marked variations in the different countries. Belgium, the Netherlands and the UK recorded a growth rate that was less than the Western European average and their own 1960 rates. The slowdown in industrial production has not the characteristics of a permanent feature and the closing months of 1961 have revealed signs of a resumption in growth rate of industrial activity.

Individual industries have fared differently in respect of growth rate in production. Construction industry was the only example of an industry in which activity remained at as high a tide as in the previous year. Steel, forestry products and coal were the three industries where production rose relatively little mainly on account of the weakening demand in the consuming industries. Heavy running down of stocks in the steel industry contributed to the fall in production while the coal industry was mainly preoccupied with the problem of adjusting the short-term supply and demand into better balance. Within major industries, experience of various branches has been very diverse. In the engineering industry, production of machinery fared much better than that of transport equipment. Within the petrochemical industry, the petrochemicals branch increased its output more than others, but the expansion in production was considerably short of the annual rate registered during the last decade.

In the realm of trade, it is pointed out, there has been continuance of the tendency for trade to grow faster than industrial production. There was however a significant difference in the pattern of trade which shows a steady increase in exchange within the area which is due to the removal of trade barriers between different groups of countries. The foreign trade of the region showed little change in imports and a fall in exports. Reviewing trade prospects for Western Europe, the Survey concludes that continued expansion of output in Western Europe and further tariff reductions in the EEC and the EFTA should contribute to a further rise in intra-Western European trade.

The main feature of the payments situation was the sharp contrast between the UK on the one hand and the rest of Western Europe and particularly the EEC on the other. All the EEC countries except the Netherlands earned a surplus on current account larger than in 1960. Apart from West Germany and Portugal, no

continental country experienced a significant decline in exchange reserves. In the UK the current balance of payments has continued to be in deficit and the survey sees little prospect, pending the results of the longer-term reviews of overseas expenditure, of an early return to a satisfactory surplus to finance the normal outflow of long-term capital. The problems of speculative movements of short-term capital and the allied one of international liquidity have also loomed large and called for measures to tackle them. The decision reached in Paris in January 1962 by some countries of Western Europe to supplement the resources of the International Monetary Fund to the value of \$6 billion, goes some way toward dealing with the risk of a crisis of confidence. But no step has so far been taken to implement the more far-reaching proposals which have been made to deal with the "liquidity gap". The Survey points out that so long as there is no agreement on far-reaching measures for strengthening international liquidity, the crucial issue will be the ability of the UK to bring its balance of payments into equilibrium.

Price movements were marked by a general rise in the retail sector the rise being pronounced in Austria, Denmark, France, Turkey, Norway and the United Kingdom. In several countries, the swifter rise of earnings than of productivity has resulted in significant increases in labour costs per unit of output. The rise in costs was comparatively sharp in Austria, Denmark, West Germany and the Netherlands. While in most countries, the authorities have succeeded in maintaining a rough balance between supply and demand at full employment levels, they have been no more successful than in the past in avoiding a certain increase in the level of prices particularly that arising from the pressure exerted on domestic costs by increases in wages and other incomes in excess of gains in productivity.

The forecast for economic growth in 1962 is couched in optimistic terms, which is based on the national budgets and other such indicators. The assessment of prospects indicate public consumption as likely to be a strong force of expansion in 1962 while gross fixed investment is expected to be a less expansionary force in several countries. Rising personal income in all the countries is taken to presage a steady increase in consumers' demand.

and the East

The Eastern Europe and Soviet Union have also maintained during 1962 a fairly high rate of economic activity which compares favourably with the achievement in the Western sector of the continent. The national output has risen by nearly 7 per cent in both the

Soviet Union and its eastern satellites which is evidently higher than that registered in Western Europe. The main impulse to expansion was provided by industry and it is shown that global output of industry rose by about 9½ per cent in eastern Europe and only slightly less in the Soviet Union. The rate of industrial expansion were, however, everywhere somewhat slower than in 1960 but were above those planned except in Czechoslovakia and East Germany. The rate of economic growth was somewhat less than had originally been foreseen by the authorities in nearly all countries, but not much below that realised in 1959 and 1960 either for Eastern Europe as a whole or for the Soviet Union. Agriculture was an outstanding exception to the expansionary features evident in other sectors. Agricultural output was far below the planned levels in all countries except Poland and the disappointing performance has limited possibilities of raising average living standards.

There was no uniformity in the pattern of development which revealed variations from country to country. While Poland, Rumania and Albania registered a rate of overall economic expansion higher than in the previous year, the Hungarian and Bulgarian economies witnessed a fall in the overall growth-rate which is attributed to the poor results in agriculture. The stagnation in agriculture has also contributed to deceleration in the growth rate of national income in the Soviet Union and Czechoslovakia. Unfavourable weather is mentioned as the most important cause for the depression in agricultural output. Feed crops have been most adversely affected. The harvest of the gross cereals crop in the Soviet Union was about 2 per cent above that of 1960, but the substantial increase over that of the bumper year 1958 that was planned was not achieved.

The countries in this region have also failed to maintain the high rate of expansion of capital formation that characterised the preceding few years. There was a general slackening of investment growth which was noticeable everywhere. Only Rumania has managed to sustain in 1961 the high rate of capital formation. In Hungary there was a planned cut in state and co-operative investment of around 20 per cent. Centrally planned outlays in Bulgaria and total outlays in Eastern Germany rose only by about 3 per cent.

External trade shows increase in the value of turnover ranging from 9 per cent in Czechoslovakia and 17 per cent in Rumania. Soviet Union, however, registered an increase of only 4 per cent which was one of the smallest annual increases during post-war period. For the six countries as a group the rise in turnover was about 7½ per cent. The Percent-

age increments of turnover were below those registered in 1960 and below the very large increases of 1959.

REFINANCING

Newer Channels

The Report of the Refinance Corporation for the year 1961-62 which was released last week, reflects the progress made by the Corporation both in regard to applications sanctioned and refinance disbursed. During the year the Corporation received 69 applications for refinance from 20 financial institutions for a total sum of Rs 1,126.96 lakhs which compare with 25 applications received from eight financial institutions for a total sum of Rs 459.50 lakhs in the previous year. Thus it will be seen, that the loan applications sanctioned by the Corporation has registered a three-fold increase while refinance disbursed has increased by more than 225 per cent.

The total refinance sanctioned by the Corporation since its inception in 1958 and upto the end of 1961 has been placed at Rs 1,649.30 lakhs and covered 92 applications received from 17 financial institutions. The disbursements made by the Corporation during the last year amounted to Rs 470.57 lakhs which brings the total disbursements made by the Corporation since its inception to Rs 696.57 lakhs.

The profit subject to taxation earned by the Corporation is also higher at Rs 20.19 lakhs against Rs 19.39 lakhs in the previous year. The provision for taxation amounts to Rs 8.97 lakhs which compares with Rs 8.75 lakhs during the previous year. Income by way of interest on loans to financial institutions has moved up to Rs 19.72 lakhs from Rs 7.47 lakhs, and interest on Government securities is also better at Rs 13.89 lakhs against Rs 10.79 lakhs.

The business of the Corporation is slated for a further substantial rise in view of the move to amend the State Financial Corporations' Act to enable the various state finance corporations to borrow from the Refinance Corporation. Further, there are also other measures being considered by the Board of Directors of the Corporation for increasing the effectiveness of the Corporation by extending refinance facilities in respect of medium term export credit. In this connection it may be recalled that the Study Group on Credit Facilities for Exporters constituted by the Commerce and Industry Ministry had recommended expansion of its activities by the Refinance Corporation so that refinancing facilities could be provided in respect of medium term credit to be extended by banks for periods over six months and up to five years. Lack of proper facilities for export credit is one of the major handicaps in export

promotion which the country faces at present. Considerable importance therefore attaches to the new role that is likely to be assumed by the Refinance Corporation for refinancing medium term export credit granted by the commercial banks.

COIR INDUSTRY

A Five Point Programme

The Estimates Committee in its report presented to the Lok Sabha has drawn attention to the various problems faced by the coir industry in Kerala and has urged some important measures for putting the industry back on a healthy footing. Owing mainly to unfavourable conditions created by the stagnant exports of coir products, the industry has been in sore straits. Though the Board was established in 1954 with the specific object of looking into the difficulties of the industry, very little of improvement has been witnessed. On the other hand, exports had generally traced a downward course. Exports which stood at 15.36 lakh cwt in 1953-54 have never since then touched that level except in 1956-57 when it reached 16.54 lakh cwt. The tardy progress in the implementation of mechanisation programmes has been the main problem in expansion of production and better export performance. The Board has not shown adequate alertness in the matter of increasing coir exports. That even the financial implications of mechanising the spinning sector have not been looked into reveals the apathetic manner in which the Board has viewed the most important problem facing the coir industry. Other aspects of the industry's development have not fared any better at the hands of the Board. The Estimates Committee has drawn pointed attention to poor progress of work in connection with the Rubber Research Institute. The Committee has also observed that very little has been done in the matter of research by the Board. Even experimental research work in the direction of rubberisation of coir and mechanised extraction of fibre from green or dry husk had been prevented by lack of equipment. The inability of the Board to impart stability to the prices of husk, coir fibre and yarn which have been subject to sharp fluctuations which adversely affect producers has also been brought out.

The Committee has recommended a five-point programme for immediate implementation with a view mainly to facilitating exports of coir. The programme envisages (1) specification of standards (2) licensing and registration of exporters and adoption of measures to prevent competition among shippers and exporters

(3) mechanisation of the manufacturing industry solely for the purpose of export to ensure uniformity and better quality which the foreign market demands (4) fixing of quotas of finished and unfinished goods in the the agreement with foreign countries and (5) obtaining of concession in freight rates from shipping lines.

An important problem in improvement of exports is the need for enforcing quality control schemes for coir products exported to foreign countries. The Committee has underlined the importance of both quality control and pre-shipment inspection and has observed that foreign countries like Japan have introduced compulsory inspection before export.

KGF

Production Picks Up

The progress registered by the Kolar Gold Mines during 1960-61 makes impressive reading. This is particularly so when considering the fact that the year was a critical one for the gold mines. The series of rock blasts which occurred in the Nundydroog Mine has, in its wake, dislocated the production schedule and the fall in the grade of ore on the western reef was another distressing factor of no less significance. Despite these heavy odds, the crushing of 552,000 tons of ore yielding 123,000 fine ounces of gold during the first eleven months of the year under review is a creditable achievement. Moreover it is expected that the revised target for the year might have been fulfilled.

Speaking at the Mine's Day Celebrations held at Kolar Gold Fields last week Mr M. S. Swaminathan, the Managing Director, stated that the completion of the mill expansion programme will considerably step up the crushing in Nundydroog mine to 28,000 tons of ore per mensem from the present capacity of 21,000 tons. The scheme in the Champion reef line will undoubtedly facilitate the extension of mining operations to greater depths. The technical ingenuity involved in such stupendous tasks will be of a higher order and the skill available in the mines is considered sufficient to meet the requirements.

The exploratory programmes initiated for locating fresh sources of ore to ensure the longevity of the mines have also produced encouraging results. The contemplated move for the exploitation of a few promising areas open up new vistas for mining operations. It is also heartening that the development programmes for the current Plan period entailing an allocation of Rs 150 lakhs are being expeditiously implemented and the management is endeavouring to reap the maximum results for the longest period that will be permissible under the prevailing conditions.

The management's earnestness in enhancing the emoluments of the employees and their welfare needs special mention. For instance an amount of Rs 30 lakhs has been deployed in 1960-61 itself on medical relief, housing and sanitation, education and recreational facilities.

ANTIBIOTICS

A Major Offensive Against TB

The inauguration of the Rs 2.15 crore streptomycin plant of the Hindustan Antibiotics Limited by Prime Minister Jawaharlal Nehru last week constitutes a significant leap forward in the large-scale production of an important drug in India. The newly opened plant at Pimpri is a major step in the regular offensive against the dreadful scourge—tuberculosis—which is taking a heavy toll of lives and saps the vitality of a large number of our people. A remarkable feature of the streptomycin plant is that it has been constructed and completed by the Hindustan Antibiotics from its own resources with the technical collaboration of Messrs Merck and Company, an American firm of great repute.

According to the present estimates, the annual output of the plant will be of the order of 120 tons of streptomycin in the initial stages and it is expected to go into full production by the end of the current year. Nearly 16 per cent of the equipment required for the unit has been secured from domestically fabricated items. An effluent disposal plant has been already erected apart from the quality control equipment. A pilot plant laboratory at an approximate cost of Rs 10 lakhs is nearing completion in order to make the unit a complete antibiotic centre. Schemes have also been finalised for doubling the aggregate production by the middle of the next year at an additional cost of nearly Rs 60 lakhs. The plant will assist save the country foreign exchange to the tune of Rs 1 crore per annum.

The Hindustan Antibiotics Limited has been subjected to a good deal of criticism particularly with regard to the quality of the products and the price policy. "The fly in the vial incident" which let loose a great furore all over the country is an example. Assurances given in November last that the Govt. will be on constant vigil to improve the quality of its products should be fully translated into action. Another factor of equal importance is the price structure. A reduction in the price of potent drugs is an inescapable duty in a country where poverty and disease are both rampant.

Clive Street Gossip

"I must have liberty
Withal, as large a charter as the wind
To blow on whom I please"

—As You Like It.

ON the occasion of the centenary of its founding, the House of Birlas is permitting itself a modest measure of public rejoicing. The Birlas themselves may feel that more than this may smack of exhibitionism. But the public, which sees all over the country evidence not only of Birla enterprise but of Birla public spirit, need have no inhibitions about a more full-throated cheer. Success stories tend to be alike, especially in India. Like many a young man since, Shivanarain Birla set forth from his native Rajasthan in 1862 to seek his fortunes in the wider world and before he knew what he was doing, he had founded an industrial empire. Only it was neither an empire nor particularly industrial then. The Indian pattern, as has been well said, is for the third generation to become the industrialist. So it was only in 1916, that the Birlas took the plunge in the industrial waters. It was, inevitably, a cotton textile mill with which they began and since then, their interests have widened to include the whole gamut of industrial activity in the country. Their gross block is estimated at nearly Rs 150 crores and annual sales at over Rs 201 crores. But the impact of the Birlas on national life is not on the industrial sector only. These are days in which many post-facto claims, some of them highly dubious, of having been exclusively responsible for Indian Independence are staked. But, not many seem to know the crucial role played by Mr G. D. Birla in pre-independence days in some of the negotiations with the British Government. (A characteristically sober account of this is given in Mr G. D. Birla's book on Gandhiji.) But it is by their educational endeavour that the Birlas have impressed themselves on public imagination. The educational complex at Pilani and elsewhere—most recently at Ranchi—associated with the Birla philanthropy is among the most progressive in the country. Calcutta, where the education of the young is daily driving parents to desperation, has special reasons to think of the House of Birlas with gratefulness. It has endowed and looked after a number of schools well-known for discipline and efficiency. The Industrial Museum and the Planetarium that will be ready shortly are other instances of the educational venturesomeness of the Birlas. Besides there are countless number of educational institutions, not specifically associated with the Birlas, which have been the bene-

ficiaries of their philanthropy. Above all, the example of the House of Birlas, in these as in other matters, has been valuable for its "Demonstration Effect". Any industrialist wishing to make the grade now feels obliged to emulate the Birlas, which is a good thing indeed.

American participation in the erection of the Bokaro steel plant seems no longer in doubt. Some day, I suppose, we shall be told the whole story of the tortuous negotiations that preceded the agreement (still to be formalised). When we are, we shall know for certain what we have guessed all along, that we shall have owed this Indo-American venture to Mr Galbraith's phenomenal gifts for trouble shooting. At every step, some difficulty or the other had to be overcome. From the American side, there was the traditional prejudice against, breaking, so to speak, bread with the devil, that is to say, participating in a venture in the public sector. The Government of India was equally firm in not wanting assistance in this matter on any other terms. The precise mode of association also gave trouble. At one stage it looked as though the American participant, the Government of India and the Indian public would hold 30, 40 and 30 per cent shares respectively in the proposed venture. As now reported, only Hindustan Steel and the American collaborator will be the shareholders, the former being the majority share-holder. The US government enters the picture only to the extent of providing a large part of the foreign exchange needed by way of loan. The next hurdle was over the acceptance by the Americans of Indians as technical consultants. A variety of avowed and unavowed objections stood in the way of American acceptance of this situation. These again seem to have been overcome, by the provision that in case of disputes between the company and the consultants, the Government will be the final arbiter. Americans seem also to have felt that they should have complete technical control of the project lest less expert hands than theirs should make a "hash" of it to the detriment of their reputation. This seems a rather far-fetched misgiving, but it is necessary to understand the psychology behind it. Americans have made no secret of the fact that as far as they are concerned, Bokaro is America's retort courteous to Bhilai, by which they expect to

neutralise some of the undoubted propaganda gains of Bhilai. But if Bokaro is to succeed in this, it must be as good a show-piece as Bhilai. Americans who have seen Bhilai have been tremendously impressed and indeed recent American visits to Bhilai may be said to have clinched the decision to go ahead with assistance to Bokaro. They are therefore anxious that Bokaro should not be botched in any way. The bogey of failure vis-a-vis Russians by which Americans were haggard until John Glenn orbited the earth, seems still to obsess them in other contexts. The hoodoo reputation of Rourkela may also be partly responsible. But my information is that the Russian success at Bhilai was due to a readiness to share with Indians rather than to a too narrow sense of responsibility for the success of the project. The moral from Bhilai would therefore appear to be the opposite of what the Americans are said to be drawing. Anyway, we shall know something definite within a month from now about Bokaro. Already over a year has been lost and it seems unlikely that we should have any steel from Bokaro before the Third Plan ends.

For an hour's vicarious thrill of literary prize-fighting, I should recommend some recent issues of Spectator. I think, it was Kingsley Martin who, some years ago, deplored the squeamishness in controversy of our times. He was contrasting our "willing-to-wound-yet-afraid-to-strike" kind of sissy timidities with the full-blooded polemics of the eighteenth and earlier centuries. Controversial knocks were then given and taken with a fierceness that would be considered uncivilised these days. John Milton, for example, was one of the most scurrilous controversialists of all times. Some of his onslaughts were unprintable, except in the decent obscurity of Latin, in which most of them were actually printed, though not for this reason. It is unlikely that we shall ever scale Miltonic heights again in these matters: but the recent Leavis-Snow Collision in the pages of Spectator, may assuage somewhat our nostalgia for verbal brutalities. In its issue of 9 March, it printed in full Dr. Leavis' Richmond Lecture in which he went for C. P. Snow for all his splenetic worth. It has published in the subsequent issues the irate reactions of a number of people. Both make exhilarating reading.

A short background briefing may perhaps be in order. Readers in India are sure to have heard of Snow, though not perhaps of

Dr Leavis. Snow, besides being a successful novelist, struck the headlines last year by starting the hare about the "two cultures." Dr. Leavis is probably less well-known except among those who are professionally interested in English literature. He is best described as a temperamental Mrs Grundy of Literature, with a permanent scowl of disapproval. He has thus disapproved away most of English literature, past and present, especially the present, because it doesn't measure up to his exacting standards of excellence. His tortured and tortuous analysis of literary merit in the pages of Scrutiny has always left me undecided between admiration and irritation. From his Cambridge fastness he also sallies forth occasionally to take a snipe or two at the London Literary Establishment. Many of the points he makes are valid, for there is much lazy humbug and interested log-rolling in the critical pages of the posh weeklies. But he is so self-righteous and self-important about it all that it is a sore trial to read his books. Above all, his style is a sitting duck for the irreverent. It makes one wonder how anyone who could write so uncouthly can have any literary sensibility. Here is an example from his Richmond Lecture: "But it is basic cliché—more damagingly, for Snow's pretensions, cliché than the kind of thing I instanced first, for it dismisses the issue, tacitly eliminates the problem, discussion of which would have been the raison d'être of the lecture if Snow had been capable of the preoccupation and the accordant exercise of thought; he advertises." I dare say, some kind of meaning can be squeezed out of this passage, but surely this is not how English should be written.

Dr Leavis lecture is a sustained exercise in denigration of what he considers Snow's intellectual and literary pretensions. But in this case, he has got as good as he gave, though not from Snow, whose only reported reaction is a snort. Here are some from Snow's partisans: "Flushed with rising bile, spluttering, the doctor becomes irresponsible and silly. Seven times seventy devils splatter their spleen through one loud orifice. The impression is of Amanda Ross incoherently upbraiding, without either grammar or much sense, Barry Pain who has hurt the lady's literary vanity." Again, "Leavis is the Himmler of Literature,..... a sedentary pedant who gets all his dubious ideas of the Dark Unconscious from D. H. Lawrence." There are many more nuggets like these, which you may dig up for yourself, for it is fun. Luckily, it is still true that hard words break no bones, which is more than can be said of the fare that overtook Benny "Kid" Paret the other day in New York.

SMALL INDUSTRIES :

Incentives for Dispersal

THE Organisational Committee for Small Industries has submitted its report to the Government. Mr Manubhai Shah who gave this information to the Small Scale Industries Board last Monday also announced that Government had accepted one of the important recommendations of the Committee and that State Governments were being advised accordingly. The Committee, it may be recalled, was set up to recommend measures to bring about greater co-ordination in the activities of the numerous agencies engaged in promoting development of the small scale sector as well as to avoid overlapping of their functions. With this end in view, the Committee had recommended the appointment of an advisory committee in each State for the Small Industries Services Institutes with the Director of Industries of the State as Chairman, two non-official representatives of Small Industries, the Director of the SISI and the Regional Manager of the NSIC. This recommendation, as stated earlier has been accepted by the Government.

The report of the Committee on the Dispersal of Industries was presented to the Board Chairman Mr K. V. Venkatachalam and the recommendations were approved. The Board also discussed the report submitted by a Sub-Committee under the chairmanship of Mr T. Swaminathan, Additional Secretary, Ministry of Commerce and Industry, to extend the definition of Small Industries from the present limit of Rs 5 lakhs to Rs 10 lakhs; and decided that this recommendation may be further considered by the Government. Planning Commission and other authorities concerned. The appointment of an International Perspective Planning Team for small scale industries sponsored by the Ford Foundation, was also announced at the meeting. A team of Government of India officials and economists under the leadership of Dr P. S. Lokanathan has also been constituted to work with this International Team.

The Committee on Dispersal of Industries was set up to examine the question of industrialisation of rural areas and industrially undeveloped areas in the country through small and medium scale industries. While there is general agreement of the need to secure

regional balance in industrial development, the problem is one of attracting entrepreneurs to the comparatively backward regions. Approaching the problem from the standpoint of small scale industries, the Committee has mainly applied itself to the finding out of certain common measures including tax rebates which might be considered for adoption with a view to encouraging dispersal of small scale industries in backward areas. At the same time the Committee has pointed out that dispersal of a particular sector of industry in isolation, without regard to what might be happening to other industries, is unrealistic and has therefore recommended that certain overall measures might be considered by Government for stimulating location of large scale industries in backward areas, particularly, for the purpose of promoting development of ancillary industries. While recognising that the licensing policy of the Government under the Industries Act is playing quite an important role in the matter the Committee has suggested that greater emphasis should be laid on giving positive indications to industries for their establishment in backward areas.

The Committee has laid down criteria for the purpose of selecting specified areas deserving special attention on which developmental efforts including those relating to dispersal of industries might be concentrated in the Third Five Year Plan, greater emphasis being placed on more backward areas. The Committee point out that unemployment, which is the criterion used in Western countries to identify depressed areas, cannot be applied in India as unemployment is found in all parts of the country. Several other factors have to be taken into account to determine the backwardness of an area. For practical considerations of availability of the necessary data, the district has been selected as the unit of area, but it is recognised that even in apparently backward districts, there might exist relatively industrialised or highly developed pockets which should, therefore, be excluded from the application of the incentives recommended. The criteria laid down by the Committee for determining backwardness are:

1. Poverty of the people as indicated by low per capita income and low per capita consumption. Districts having per capita income of 25 per cent below the national average and 10 per cent below the State

average should be considered as backward.

2. High density of population in relation to development of productive resources and employment opportunities as indicated by ratio of population to cultivable land; low per capita value of gross agricultural output, absence or under-exploitation of natural resources like minerals etc; low percentage of population engaged in secondary or tertiary occupations; low ratio of urban to rural population; low percentage of factory employment. (In the case of percentage of population engaged in secondary or tertiary occupations, 25 per cent or more below national average is to be treated as backward and in other cases except 'absence of natural resources', 50 per cent or more below national average is to be treated as backward.)

3. Poverty of communications indicated by small lengths of railways and metal roads per square mile.

4. High incidence of unemployment or gross under-employment.

5. Consumption of electric power.

The response of the States to the Committee's request to furnish lists of districts which could be adjudged backward on the above basis, was very uneven. Only six States supplied lists indicating the criteria adopted. Seven other States prepared lists based on only one or two of the criteria, and two States, Madras and Mysore, did not send any list at all. The Secretariat of the Committee has also prepared lists from available data for all States except Bihar, Kerala and Jammu & Kashmir, for which no data could be obtained. The lists prepared by the Committee are different in the case of the seven States which adopted their own criteria. The Committee had pointed out that the criteria were to be applied in the aggregate, and that per capita income and unemployment were the basic indicators of backwardness; other criteria were only secondary and have been recommended only because district-wise data in respect of the basic indicators were not available in all cases. (A summary statement of district-wise per capita income for seven States appended to the report shows variations ranging from Rs 105 for Warangal (Andhra) to Rs 462 for Ahmedabad (Gujarat). The average per capita income for these seven States for the year 1955-56 at current prices were: Andhra Pradesh Rs 232; Punjab Rs 296; Madras Rs 229; Gujarat Rs 286; West Bengal Rs 318; Madhya Pradesh Rs 259; and Orissa Rs 198. It is interesting to note that, in West Bengal, Howrah had the highest income of Rs 437 per capita, Calcutta and 24 Parganas coming next with Rs 423. The district-wise

cludes Bombay, is not given in the Statement.

After reviewing the facilities accorded in Western countries for attracting industries to depressed areas, the Committee has recommended the following incentives divided into three categories:

1. Provision of social overheads which will include:

- (a) Arrangement for factory accommodation.
- (b) Facilities for housing.
- (c) Common Service Facilities etc.

2. Ensuring supply of raw materials.

3. Fiscal incentives which will include:

- (a) Tax concession.
- (b) Subsidised electricity tariff and water rates.
- (c) Credit facilities.
- (d) Machinery on hire purchase term.

- (e) Subsidy on freight.

The Committee is of opinion that tax concession, at least for a limited period is absolutely necessary and has recommended that a hundred per cent subsidy should be granted for a period of five years from the date of the establishment of a particular industry in the backward area for the expenditure incurred in meeting the following tax liabilities: (i) Sales tax including sales tax on purchase of machinery. (ii) Import duties. (iii) Excise duties (iv) Octroi and (v) Municipal taxes. As exemption from taxes would involve complicated legislation, the Committee came to the conclusion that the best method would be for the industrial unit in a backward area to pay up its tax liabilities and then to approach the administering authority concerned to make good such payments out of the funds placed at its disposal by the State Government concerned on the basis of certificates of payment of tax to be produced by the party.

The Committee has recommended, the exclusion of the following industries, which have no bias towards developed areas, from the concessions under the incentive scheme: Non-mechanised industries; Rice and Pulses Mills; Oil Mills; Alcohol producing industries.

The Committee has also recommended the appointment of one or more officers as Administrators at the district and at State levels for smooth and speedy implementation of the scheme.

Import Policy

The only notable feature of the Import Policy announced on March 31, which tightens the screw by a few more turns, is that it will apply for the whole year and applications for licences will be made on an annual basis, though effective licensing will continue to be on a half-yearly basis. Along with the Import policy Government have announced their decisions on most of the recommendations of the Mudallal Com-

7 April 1962

The East India Distilleries & Sugar Factories Ltd.

Sixty-Fourth Annual General Meeting

Mr. G. N. Noel-Tod's Review

PRESIDING over the Sixty-fourth Annual General Meeting of the shareholders of The East India Distilleries and Sugar Factories Limited held at Madras on Wednesday, 28th March 1962, Mr. G. N. Noel-Tod, Chairman, said:

"GENTLEMEN,

I extend to you a warm welcome to this, the sixty-fourth Annual General Meeting of the shareholders of this Company. The Accounts for the year ended 30th September 1961, together with the Directors' Report thereon, have been in your hands for the statutory period and, with your permission, I will take them as read. The sad events which have led to my presiding at this Meeting have been recorded in the Directors' Report, and it only remains for me to place on record here our profound gratitude to the late Mr. Wonfor and the late Mr. Srinivasan for their outstanding services to the Group over a long period. Mr. Srinivasan in his speech at last year's Meeting covered extensively the development of the Group since the war, and I am indeed glad that there exists this record of the progress that was achieved under his Chairmanship and, before him, that of Mr. Wonfor.

You will have observed from the Accounts that the net profit before tax and the net profit after tax have declined slightly compared with the figures of the previous year. This largely comes about through a sharp increase in interest paid, by reason of the loans it has been necessary to raise to finance the construction of our Compound Fertiliser Factory at Ennore, which increase was forecast in last year's speech, and a decline in profits on sugar, on which I will comment later. On the other hand, I am glad to say that the profits from general merchandising have increased substantially. We are accordingly reaping the benefits not only of the reorganisation of our merchandising business, which has been effected over the past two years, but also of your Board's consistent policy of retaining diversification in our operations so that if circumstances are such that one particular side of our business is adversely affected, there remains the opportunity to make good a setback in one direction by an advance in another. You will also have noted that the ratio of total dividend paid to total net profits after tax is less favourable than it was last year, arising in part from the additional amount of dividend payable by reason of the increase in the equity capital which took place in 1960. Considering, however, that our Ferti-

liser Factory at Ennore was under construction during the whole of the period under review and therefore no profits accrued therefrom, I do not think that there is any cause for apprehension over the long term prospects of the Group. In the shorter term, I expect the results for 1961/62 to be generally comparable with those of the year under review, even though little income may be expected during this year from our Ennore Fertiliser Factory. We are, however, confident that this factory will be contributing in full measure to the Group's profits in 1962/63, which means, in fact, that I have confidence that our contractors, Messrs. Simon-Carves, will "deliver the goods".

PROBLEMS OF SUGAR INDUSTRY

Let me now say something on the subject of sugar. The problems facing the sugar industry have received considerable prominence in the press for some time now and you must all be aware of the grave situation with which the industry is faced. For the past two years my predecessor has referred to the mounting surplus of stocks. The position today is that we are only now clearing stocks manufactured during the 1960/61 season which finished in June last year, despite having exported 9000 tonnes to America in September last year. The whole of our production during the current season to date is lying unsold in our godowns, to a total value, at cost of Rs. 1.5 crores. You will appreciate what a heavy burden this means for the Company, especially at a time when we are engaged in commissioning our new fertiliser factory at Ennore.

Time and time again the attention of the authorities has been drawn to the fact, by official representations and in speeches of my predecessor, that cane is planted one year before it is crushed and it is more than desirable that both the grower and the factory should know at the time of planting what will be the amount of cane available and what price will have to be paid for it. For the current season the Government of India have imposed a 10% cut on production throughout the country, but by reason of the exclusion of new factories and small factories from the scope of the Ordinance, only a few of the factories in Madras State will fully be affected during this sugar year. Nellikuppam's quota is 30706 tonnes against 34117 tonnes actually produced last year. We have

pointed out clearly to the Government of India, with the support of the Government of Madras, that, as is our usual custom, we have entered into forward contracts with our growers. As things stand at the moment there may be 60,000 to 70,000 tonnes of cane left standing at the end of the season for which the growers will have no means of disposal, for the manufacture of jaggery is practically unknown in the Nellikuppam factory area. I am, however, hopeful that some way out of this impasse will be found, which will be fair both to the growers and to the factory. The Government of India are seized of the position and early orders are awaited.

Meanwhile, we still await an announcement of the cane prices for the 1962/63 season and also the quantity of sugar to be produced by individual factories. I fear that a further cut in production next year is inevitable.

As regards the All-India position, you know that the current sugar year started with stocks in hand at all factories in the country amounting to 12 lakh tonnes, rather more than half the normal yearly offtake. Despite the cut of 10%, production this year is likely to amount to between 28 and 30 lakhs tonnes. Again, despite the relaxation of control on internal sales of sugar, it seems unlikely that internal consumption will rise to beyond 23 to 24 lakh tonnes, unless Government decide to slash the excise duty. The prospects of exporting more than 5 lakh tonnes of sugar this year are not good. Assuming, however, that 5 lakh tonnes are exported, still the surplus stocks of sugar at the beginning of the next sugar year will be not less than they are at present, which justifies my apprehension of a further enforced cut in production.

To export the current surplus appears to be the only alternative to dumping the sugar in the sea. The type of sugar made in India is a factory white, as opposed to a refined sugar, and it will not keep indefinitely. In view of the high rate of loss per tonne of sugar exported I suggest that the long term future of this industry should not be linked with any idea of exports, unless and until there is a radical rise in world price. Until then, and for at least the next few years, there seems to be no alternative to Government facing up to a temporary loss of revenue by reducing the excise duty on sugar in order to stimulate internal con-

sumption, and so use up the present unproductive excess stock, and by reason of the higher internal consumption gradually restore the quantum of revenue to something approaching its present figure. The present per capita annual consumption of sugar in India is 5.5 kilos, as compared with 55 kilos in the U.K. An increase of only 1.2 kilos per capita in India will represent an additional consumption of 5 lakh tonnes of sugar. My suggestion in this regard is that, at least as a first step, the basic excise duty may be restored to the pre 1957 level, i.e. Rs. 111 per tonne compared with the present rate of Rs. 222 per tonne.

There are other steps which should be taken to remedy the situation. These would involve a radical change in Government's attitude to the industry. One cannot escape from the fact that conditions for the manufacture of sugar at competitive rates are vastly different in different parts of the country, and the present policy of maintaining a high minimum price for sugarcane, this price being paid per tonne dead weight, without regard to quality, is subsidising uneconomic areas at the expense of those more fortunately placed.

Surely there can be no other agricultural commodity in the world which is paid for irrespective of quality. At last however, there are indications that the Government of India is being converted to the view that we have propagated for so long that the cane price must be linked to quality. I hope they may go even further than this and appreciate that the best method of getting the right amount of cane grown to give the quantity of sugar the country needs, will be to remove controls both from cane price and from sugar price. Factories are dependent for their profit on having adequate supplies of cane and I suggest that their judgement can be relied upon to ensure that enough, but not too much, is paid to secure this end. A natural consequence would, of course, be that in some areas the cultivation of the cash crop of cane would give away to the cultivation of food crops, which would be most desirable. If Government cannot, for political reasons, go as far as this, at least the immediate introduction of a sliding scale price, according to quality, will go a long way towards achieving the desired end of lowering the cost of sugar and relating production more closely to consumption.

While Government have gone so far as to announce that no further licences will be granted

the establishment of new sugar factories or the extension of old ones, I would like to see this policy taken one step further forward, by the withdrawal of licences for new factories in respect of which active steps towards their establishment have not yet been taken. Even so, production in South India is likely to rise steeply in as much as six new factories will go into production in the 1962/63 season and at least an equal number appear to have taken active steps towards commissioning units within the next two years.

Although our relations with the Government of Madras have been generally most amicable, and we have received the fullest support from them in most of our difficulties, I must enter a protest against their refusing to refund the cane cess on sugar exported in the last three years. They have claimed that they see no necessity for this refund on the grounds that the Company has received a refund of excise duty. This is so, but, even so, the Company incurred a loss of Rs. 7,67,000 on sugar exported last year. Refund of cess would have amounted to Rs. 79,500. Further, there is an established precedent in that the Government of Madras did refund cane cess on sugar exported in the year 1958, and the Government of India has requested all State Governments to sanction this refund in the interests of helping to solve the superabundance of stocks with which the industry is at present burdened. I do hope, therefore, that our Government here will be able to fall in line with this policy and refund cane cess on exports, past and future.

PRICE LINKING FORMULA

Reference was made last year to a contingent liability for the Company to make some further payment on cane crushed since November 1958 under the Price Linking Formula announced by Government, but not yet implemented. Since this Price Linking Formula was first announced, there has been a complete reversal in the fortunes of the industry, and I cannot see how the industry would find it possible to find the cash to pay anything extra in respect of past seasons. It is to be hoped that Government will soon clear the air by announcing what action, if any, they propose taking on the Price Linking Scheme.

We are still reasonably fortunately situated in the South in that we can sell whatever sugar is released without much difficulty within the period allowed for its sale. Prices, however, are still below those obtaining during the control period. Having regard to the smaller production allowed per factory and the probability that a certain part of the output will have to be exported, without any profit and possibly a loss, there can only be a contraction in the Company's profits arising from sugar. It would be wrong to

gloss over the seriousness of the situation, and I can but hope that it will be possible to give you a more reassuring view of the outlook a year hence.

FERTILISERS—FURTHER EXPANSION

The picture as regards Fertilisers is more encouraging and the progress made during the year under review has been referred to in the Directors' Report. For the future the addition of Ammonium Phosphate from our Ennore Factory to the range of fertilisers that we can market should result in a further substantial improvement. The confidence of your Board in the value of this side of our business is illustrated by the fact that we have already applied to the Government of India for permission to double, in due course, the capacity of our Ennore Factory. Assuming we obtain the necessary permission, the actual expansion will take place after we have gained some experience in manufacture and marketing of this fertiliser, and when that time comes, possibly in 1962/63, it will be necessary for your Board to give consideration to ways and means of raising the additional capital required.

Last year, reference was also made to the issue of a licence by the Government of India to a consortium of two well known American Companies and this Company to erect a fertiliser factory at Visakhapatnam to produce about 350,000 tons of fertilisers per year. Progress on this project has not been quite as much as might have been hoped for, the main stumbling block having been the finding of a suitable site at Visakhapatnam. I believe, however, that with the co-operation of the Government of India, this problem will soon be solved. The participation of this Company in the capital of the new Visakhapatnam Company will be small compared to the contribution of our two American partners, and it is they who have the major responsibility for the integration of the new factory, receiving of course from us all the assistance we can give by way of experience of local conditions, and contacts with the Governments concerned. I would like to take this opportunity of expressing my appreciation of the vigour which our American partners are displaying in overcoming initial difficulties, and I can assure them of our continued full support. When the Visakhapatnam factory comes into production, this Company will have an even more important part to play, namely in the distribution of the product. The distribution of fertilisers is a specialised trade, but I believe that the very large production to be expected from Visakhapatnam moves without undue delay into the hands of farmers and so into the soil.

CERAMICS—FOREIGN COLLABORATION

As regards Ceramics, you will have noted from the report that last year, owing to the necessity to overhaul the Thrift Kiln, which occurs from time to time, production was reduced. We are still able to sell without any difficulty our total output and during the year substantial progress has been made towards finalising a collaboration Agreement with the well known U.K. manufacturers of Ceramic ware, Messrs. Doulton & Co. Ltd. This Agreement places at our disposal technical advice of the highest quality from Doulton, and with this advice we propose to instal a third kiln at Ranipet and to improve the quality of our output generally. There have been protracted negotiations with the Government of India as to the exact terms of this Agreement, but I am glad to say that these negotiations have now reached the final stage. I would also like to make a special reference to the fact that during the year under review, even though Government's final approval to the Agreement was still awaited, (and is still awaited) our friends, Messrs. Doulton, have without stint given us the most valuable expert advice on various problems.

I am glad to be able to report that labour relations have, in general, continued to be satisfactory during the year under review. The Sugar Wage Board's recommendations have been the subject of detailed negotiations with staff and labour, and it is hoped that we shall shortly be able to conclude a satisfactory settlement with the Unions concerned. I am further glad to be able to record my sincere appreciation of the contribution to the maintenance and development of the Group's interests given by all members of the staff and the Directors of your Company. In particular, I should like to take this opportunity of placing on record your Board's gratitude to Mr. P. Hadfield, who relinquishes his appointment of Managing Director on the 31st of this month, for his services to the Group over more than 30 years. Mr. Hadfield recently left Madras to take up the appointment of Managing Director of our London subsidiary, Parry Murray & Co. Ltd. He remains a member of this Board, so that his vast experience and wise counsel will remain at our disposal.

Finally, you may have noticed in the announcement of my appointment as Chairman of this Company that I myself am nearing the end of my service in India. I am very happy to be able to tell you that Mr. H. V. R. Iengar, lately Governor of the Reserve Bank, has agreed to join the Board of this Company and, later in the year, to take up the appointment of Chairman and Managing Director. Your Directors will therefore co-opt him to the Board, and

an announcement regarding the date of his becoming Chairman will be made in due course. On this coming about, it is the intention that I shall revert to my previous appointment of Vice Chairman and Managing Director, until I leave India. Mr. Iengar needs no introduction to you and, for my part, I am very happy to feel that I shall be placing the direction of the Group affairs into such competent hands.

I would also like to take this opportunity of announcing the following appointments which will be effective from 1st April, 1962:

- (i) Mr. M. J. Edwards will retire from the Board of Parry & Co. Limited, of which he is Chairman, to take up the appointment of Deputy Managing Director of this Company.
- (ii) Mr. John K. John, Vice-Chairman of Parry & Co. Limited will be appointed Chairman Vice Mr. M. J. Edwards, and
- (iii) Mr. N. G. Bowen, Director of Parry & Co. Limited, will be appointed Vice-Chairman vice Mr. John K. John.

I now formally move the adoption of the Directors' Report for the year ended 30th September 1961.

The Directors' Report and the Accounts for the year ended 30th September 1961 were adopted and a final dividend on the ordinary share capital of the Company at the rate of 14-2/7 per cent subject to deduction of Indian Tax, was declared for the year ended 30th September 1961 payable on 29th March, 1962.

Mr. V. Ramakrishna and Mr. R. Venkataswamy Naidu were re-elected to the Board and the Auditors, Messrs. Lovelock & Lewes, were re-appointed.

N.B.—This does not purport to be a report of the proceedings of the general meeting.

MARTIN BURN LIMITED.

NOTICE

LOST—Certificate No. 25899 for 10 Ordinary Shares Nos. 1003546/555 in the abovenamed Company registered in the name of Shri Shyam Sunder Shah has been reported lost. An application for the issue of a Duplicate Certificate for the said shares in the name of the registered shareholder has been received by the Company. Notice is hereby given that the issue of the Duplicate Certificate for the said shares will be considered unless valid objection is received by the Company within one month from date.

"RESOLVED that, as authorised by Section 258 of the Companies Act, 1956, the number of Directors of the Company be and it is hereby increased from nine to the maximum of ten permissible under Article 97 of the Company's Articles of Association."

(b) SPECIAL RESOLUTION NO.—II.

Special notice of the following Resolution for the appointment of Mr. J. N. Guzder as a Director has been received by the Company from some members, and is hereby given to the members. The appointment being deemed to be in the interests of the Company.

"RESOLVED that pursuant to the provisions of Section 261, and other applicable provisions (if any) of the Companies Act, 1956, Mr. Jamshed Nusserwanji Guzder, who is a Director and member of Messrs. N. S. Guzder and Company Private Limited (who have been and are shipping, clearing and forwarding the goods of the Company as well as of the Company's subsidiary, Messrs. Nowrosjee Wadia Ginning and Pressing Company Limited, and who have been and are cotton muddams for the Company, and who also purchase cotton and kapas for the Company in certain areas in India on which they receive commission from the Company, and who may, therefore, be deemed to be holding an office or place of profit under the Company and its subsidiary), be and is hereby appointed a Director of the Company."

(c) SPECIAL RESOLUTION NO. III.

"RESOLVED that pursuant to the provisions of Section 314 and other applicable provisions (if any) of the Companies Act, 1956, the consent of the Company be and is hereby accorded to Messrs. N. S. Guzder & Company Private Limited, holding an office of profit under the Company and under its subsidiary Messrs. Nowrosjee Wadia Ginning and Pressing Company Limited for a period of five years in respect of shipping, clearing and forwarding of goods and as cotton muddams and for purchasing (on a commission basis) cotton and kapas in certain areas in India."

(d) SPECIAL RESOLUTION NO. IV.

"Resolved that, pursuant to the provisions of Section 360 of the Companies Act, 1956, the approval of the Company be and it is hereby accorded to a contract being entered into in terms of the draft placed before the Meeting, and for the sake of identification initialled by the Chairman, purporting to be between the Company of the one part and Messrs. Eastern Cotton Company, Bombay, (who are or may be deemed to be "associates" of the Managing Agents of the Company), to be operative as from the 26th day of May 1962, until determined by three months' notice given by either side to the other, in respect of purchases from them of cotton and kapas and such other goods in which they trade, or do business or may trade or do business, as well as in respect of the sale or supply to them of any property or any article produced, dealt in or owned by the Company, subject to the conditions that the prices of such cotton and kapas and such other goods as aforesaid shall be such as are reasonable and/or are approved of by the Directors, and that all payments to be made to the Company by Messrs. Eastern Cotton Company shall be made within one month from the date of the sale or supply of any property or any article by the Company to Messrs. Eastern Cotton Company."

(e) SPECIAL RESOLUTION NO. V.

"RESOLVED that, pursuant to the provisions of Section 360 of the Companies Act, 1956, and subject to the approval of the Central Government being obtained, the approval of the Company be and it is hereby accorded to a contract being entered into in terms of the draft placed before the Meeting and for the sake of identification initialled by the Chairman, purporting to be between the Company of the one part and Messrs. Shapoorji Pallonji and Company Private Limited, Bombay (who are or may be deemed to be "associates" of the Managing Agents of the Company),—(subject to any amendments as may be suggested by the Central Government and accepted by the Board and by Messrs. Shapoorji Pallonji & Company Private Limited),—to be operative as from the 26th May 1962, until determined by three months' notice given by either side to the other, in respect of any building, or construction work and any work of repairs and in respect of supply of

building materials and such goods in which they trade or do business or may trade or do business, as well as in respect of sales to them by the Company of any property or any article produced, dealt in or owned by the Company and in respect of the supply or rendering of any service by either to the other, subject to the conditions that the prices or rates to be paid by the Company shall be reasonable and/or approved of by the Directors, and that all payments to be made to the Company by Messrs. Shapoorji Pallonji & Company Private Limited shall be made within one month from the date of the sale or supply of any property or any article or the supply or rendering of any service by the Company to Messrs. Shapoorji Pallonji & Company Private Limited."

The Explanatory Statement under Section 173 is annexed in respect of the above Resolutions.

The drafts of the contracts referred to in Special Resolutions Nos. IV and V are open for inspection by any member at the Registered Office of the Company on all working days from 10-30 A.M. to 1-00 P.M.

By Order of the Board,
NOWROSJEE WADIA & SONS
(Private) LTD.,
NEVILLE N. WADIA
Director,
Managing Agents.

REGISTERED OFFICE:
NEVILLE HOUSE,
BALLARD ESTATE,
Bombay, 9th March 1962.

NOTE:

(a) A Member entitled to attend and vote is entitled to appoint a proxy to attend and vote instead of himself and a proxy need not be a Member.

(b) The Share Transfer Book of the Company will remain closed from Saturday, the 10th March 1962, to Thursday, the 29th March 1962, both days inclusive.

(c) The Dividend when declared will be made payable to the National and Grindlays Bank Limited, Bombay, on or after the 27th April 1962, to those Members whose names stand on the Register of the Company on the 29th March 1962, and the Dividend Warrants will be duly posted to them.

(d) The Members are requested to notify immediately any change of address to the Company.

(e) The relative Explanatory Statement pursuant to Section 173 of the Companies Act, 1956, in respect of the Special Business set out above is annexed to the Notice of the Annual General Meeting posted to the Members.

THE CENTRAL BANK OF INDIA LIMITED, BALANCE SHEET—(Contd.)

AUDITORS' REPORT TO THE SHAREHOLDERS

We have audited the foregoing Balance Sheet of The Central Bank of India, Ltd., as at 31st December, 1961, and also the foregoing Profit and Loss Account of the Bank for the year ended on that date in which are incorporated the returns of the 58 branches audited by us, 17 branches audited by other auditors and the unaudited returns from 268 other branches not visited by us, in respect of which the Central Government has made an order granting exemption from audit pursuant to Section 229 of the Companies Act, 1956.

We report that:—

- (a) We have obtained all the information and explanations which, to the best of our knowledge and belief, were necessary for the purpose of our audit and have found them to be satisfactory;
- (b) The transactions of the Bank which have come to our notice, have been within the powers of the Bank;
- (c) In our opinion, proper books of account as required by law have been kept by the Bank so far as appears from our examination of those books and proper returns adequate for the purpose of our audit have been received from the branches of the Bank not visited by us;
- (d) The Bank's Balance Sheet and Profit and Loss Account dealt with by this report are in agreement with the books of account and the returns;
- (e) The reports on the accounts of the branches audited by other auditors have been forwarded to us and the same have been considered in preparing our report;
- (f) In our opinion, and to the best of our information and, according to the explanations given to us, the said accounts read along with the notes appearing thereon, give the information required by the Companies Act, 1956, in the manner so required for banking companies, and on such basis the said Balance Sheet gives a true and fair view of the state of the affairs of the Bank as at 31st December, 1961 and the Profit and Loss Account gives a true and fair view of the Profit for the year ended upon that date.

Markets

JUTE Firm Trend in Gunny

The announcement last week-end that the Buffer Stock Association had decided to take up the first instalment of buffer stock, amounting to 2½ lakh maunds of jute and that this quantity would be allocated early this week to the member mills which would buy the jute on the Association's behalf and store it in their own premises, seems to have had little effect on sentiment in the raw jute market. It would appear that with arrivals continuing to be heavy, the offtake of 2½ lakh maunds would not lessen the pressure of stocks to any marked degree. But it is to be expected that the commencement of operations by the Buffer Stock Association will bring about stability to the jute market as it has been announced that further quantities of buffer stock will be taken up in due course.

That the Buffer Stock Association is having the cooperation of the industry will be evident from the fact that already more than 90 per cent of the jute manufacturing industry has joined as members. Although it is sponsored by the IJMA, so far five non-members have become members of JBSA. The State Bank of India is helping in the financing of the buffer stock and the JBSA is to issue detailed instructions to the mills regarding the procedure to be followed in making buffer stock purchases. It is expected that before long all jute mills in India will have become members of the JBSA. The Buffer Stock Association has two main objectives: (1) to ensure that the jute growers obtain a fair return for their produce and (2) to build up stocks

of raw jute as a cushion against unforeseen crop failures in the future due to climatic conditions.

It is however wrong to think that the fact that the Buffer Stock Association has commenced operations alone will solve all the problems. For, for the buffer stock to be built up, there should be surplus jute. Now that there is the assurance that the JBSA will be siphoning off the excess jute in the market, jute growers will be encouraged to maintain their acreage under jute from year to year. But in the event of the next one or two crops turning out to be poor ones, the problem once again will be one of shortage and not one of surplus. From the continued hot climatic conditions in the growing areas for the past two months, one thing seems to be almost certain. That is, the next jute crop would be delayed. With

rains in the immediate future in the growing areas, sowing may not be adversely affected. But it is not unlikely that the next crop will not be as big as that in the current year.

The jute goods market ruled steady to firm during the week ended Thursday. Interest centred mainly on heavy goods for ready and near delivery positions. No fresh overseas business was reported but that did not prevent operators from rigging up the price. Buyers evinced sustained interest in near delivery B Twills while in later dealings activities in the futures market also lent support to the bullish trend. B Twills April which was earlier in the week quoted at Rs 132, closed on Thursday as high as Rs 135.25. Hessian also improved in sympathy and Hessian 40"×10 oz April moved up from Rs 52 on Monday to Rs 53 by close on Thursday.

The raw jute market continued to rule quiet despite the announcement that the Buffer Stock Association would purchase jute to the tune of 2½ lakh maunds. Minimum buying quotas continue to be issued and the quantity for the current week is said to be about 6 lakh maunds. Later in the week it was reported that the JBSA has issued quotas to

the extent of 50,000 bales. But these steps had little effect on sentiment and sellers continue to be eager to sell all varieties.

According to a press note issued by the West Bengal Government, jute production in the season 1961-62 amounted to 6,269,000 bales, biggest since partition. The acreage increased from 512,000 to 2,259,000.

TEA Fall in Exports

ACCORDING to the provisional figures released by the tea trade in Calcutta, exports of tea from North-East India were placed lower at 18.55 million pounds as compared to 23.2 million pounds in February last year. This reduced the total exports, in the first two months of the current year, to 55.06 million pounds from 59.7 million pounds in the similar 1961 period.

Shipments to the UK fell from 36.73 million pounds in January/February 1961 to 31.71 million pounds in the period under review as did those to the USSR and the Persian Gulf from 2.88 million and 1.04 million to 1.63 million and 1.02 million pounds respectively. Exports to all other countries, however, showed an improvement.

Export sales in Calcutta have been over and the next season's first export sale will be held in the course of next month.

In the Cochin market, 235,000 kilogrammes of tea dusts were offered for internal consumption. Against good demand, Low Medium and Medium teas were irregularly easier, while clean and coloury sorts and residual sorts were fully firm to dearer.

In the Internal sale, offerings were 28,710 packages of dusts. Once again, CTC types with clean leaf appearance were well supported although prices were irregular and generally easier. Fibrous descriptions were heavily discounted and sometimes proved difficult of sale. There was only a fair enquiry for orthodox dusts and prices for these eased by 30 nP per kilo with the poorer teas neglected. Fibrous legg-cut,

7 April 1962

although irregular, were much easier. The clean bright liquoring teas were, however, firm to dearer. Following rates were quoted: Plain Orthodox Dust Rs 3.30 to Rs 3.80; Medium Assam Dust Rs 3.70 to Rs 4.60; Leggcut Dust Rs 3.65 to Rs 4.70; Medium Assam CTC Dust Rs 5.20 to Rs 5.70 and Good Assam CTC Dust Rs 6.30 to Rs 6.90. Also, 372 packages of Leaf grades were offered for internal consumption. These were sold at generally easier rates.

In the Colombo market, offerings totalled 6,431,273 pounds. Quality was again unsatisfactory and an attractive selection was catalogued. Best liquoring teas met with less competition and prices were substantially lower. Below the best liquoring teas were sold at irregular rates. Medium and Uva teas were again strong and sold at fully firm to dearer rates. Brighter liquoring low-grown broken orange pekoes were slightly dearer; but other sorts showed little change.

Production of tea in Ceylon declined to 31 million pounds in February from 36.1 million pounds in the previous month. Despite the shortfall, the total outturn of Ceylon tea, in the first two months of the current year, were higher at 67.1 million pounds as against 64.7 million pounds in the corresponding period of 1961.

One export sale and one internal sale were held in Chittagong in February this year. In the export sale, offerings were 9,149 chests. These contained a considerable quantity of thin liquoring, stalky end-of-the-season varieties, which were generally easier and sometimes difficult of sale.

According to tea sources in Nairobi, exports of tea from British East Africa rose to 4.12 million in December from 3.1 million pounds in November. While shipments from Kenya and Tanganyika rose from 1.92 million and 413,600 pounds in November 1961 to 2.69 million and 739,000 pounds respectively in December, those from Uganda declined from 758,600 pounds to 698,800 pounds.

In London auction, offerings were 24,776 packages including 21,952 packages of Northern India and 226 packages of Pakistani teas. There was again a good general demand for all descriptions and prices remained fully firm. Doors teas were the strongest feature and tended to move in seller's favour.

Tea stock in London as on March 23 were 145.54 million pounds as against 145.79 million pounds in the previous week. The total amount to be landed was 3.85 million pounds. Total afloat was 13.94 million pounds including from Calcutta 9.12 million pounds, from Chittagong 54,000 pounds; from Cochin nil; from Ceylon 938,000 pounds and from other Ports 3.83 million pounds. The average price realised at the auc-

tion was 53.03d per pound as against 55.20d in the previous week and 52.29d a year ago.

Sugar Markets Steady

Thanks to good buying support, Sugar markets have continued to rule steady. While bold crystal variety is in good request from Gujarat, Madhya Pradesh, Saurashtra and Delhi, inferior varieties have evoked good demand from east Uttar Pradesh and Rajasthan. Wholesale spot delivery is quoted at Rs 107 per bag.

The steadiness in the market is mainly influenced by the regulated releases from the factories. It is a strange coincidence that the international price of the commodity has, meanwhile, hardened somewhat on reports that the international Sugar Council has estimated that, during 1962, the supply and demand will be more or less in balance.

The prospect for India selling more sugar in foreign market is not considered to be encouraging. Response from the Malayan market has proved to be disappointing. It seems Malaya has purchased some British Hong Kong and Chinese sugar after waiting for a pretty long time to book from Indian sources. While enquiries were received for Indian sugar a fortnight ago, none has been received from last week.

Of the other markets for Indian sugar considered responsive, no business is reported to be forthcoming from Red Sea Port nor does the Pakistan market seem keen on Indian sugar. Any improvement in the domestic price is likely to be short-lived in view of the large stocks. In the meanwhile, the industry seems to be worried over the decision of the State Bank to reduce the valuation rates of the past season's sugar stocks by Rs 3 a maund as compared with the current market rate. It is feared that the move will reduce further the capacity of sugar factories to draw banking funds through overdraft.

The Government of India has assured the cane-growers that every effort will be made to see that their production is fully utilised by the sugar factories. To meet any situation and to secure that the factories are able to crush surplus sugarcane available in certain areas, arrangements are being made to transfer the balance of production of sugar factories which have reported a shortfall to certain other factories where sugarcane will be available for additional crushing.

Surplus cane is reported to be available in parts (of centre Uttar Pradesh, Eastern Uttar Pradesh, North Bihar, Gujarat, Maharashtra, Andhra Pradesh, Madras and Mysore. In the case of Uttar Pradesh, the surplus cane is estimated around 8.5 million maunds, which is equivalent to 30,000 tons of sugar. In Bihar, the surplus is estimated around 7.3 million maunds of cane, which is equivalent to 25,000 tons of sugar.

GUR

Gur markets are, however, ruling quiet despite the fall in daily arriv-

4 outstanding features 4-way economy

BLUE STAR-WORTHINGTON Packaged Air Conditioners 5, 7½ and 10 tons

- Plus this economy
- ★ Single units from 5 to 10 tons, cut costs on tonnage
 - ★ Units can operate without ductwork, save installation costs
 - ★ Single units can be connected to form multiple system, reduce expansion costs
 - ★ Every unit engineered, built and tested means low operation and maintenance costs

Get complete details from BLUE STAR offices at:
Lotus Court, Jamshedji Tata Road, Bombay 1

23/24 Second Line Beach, Madras 1
1B, Kaiser Bungalow, Dindli Road, Jamshedpur

als to about 1,000 maunde. Stray demand is reported from Gujarat. Stocks at Hapur are estimated at 33,000 maunds, while the total arrivals, during the current season, amount to 4.18 lakh maunds. In the Hapur market, Pansera quality is quoted at Rs 16.75 and the dara quality at Rs 14.75.

NON-FERROUS METALS

Prices on the Bombay Non-Ferrous Metal market displayed a firmer tendency. The main inspiration for the general improvement in prices was derived from the feeling that the new import policy might put an axe on the imports of non-ferrous metals.

Excellent consumer demand and paucity of supplies helped Copper prices to display considerable strength. Buying support from the dealers was also considerable.

Enlarged enquiry from consumers and small stocks caused a noticeable rise in the prices of Zinc and Lead.

Tin prices advanced briskly on sustained buying from the bulls and bears. Higher advices from Singapore, shortage of stocks in the face of consistent demand, better offtake in the ready section, encouraging reports from the upcountry centres—all these factors led to a sizable rise in the price.

On the London Metal Exchange, prices were mostly influenced by the release of details of the enormous surplus in the US strategic stockpile. The USA says that it holds large amounts of tin, zinc, lead, copper, aluminium, nickel and other metals, which are no longer required for strategic purposes. In the case of lead and zinc, the surpluses are reported to be as much as 40 per cent of the annual world consumption of

the two metals. In the case of tin, it is as much as the world uses in a whole year.

What the US Government intends to do with these surpluses is not yet known; but President Kennedy has made it clear that he would like to sell them if this is at all possible. A special committee is looking to the matter at the moment. Except in the case of tin where supplies are tight, any sales from the stockpile will be highly unwelcome at the moment.

PEPPER

Pepper markets are ruling quiet with prices displaying an easier tendency. This is attributed to paucity of buying support from dealers and consumers. In the Cochin market, the rate for the ready position is quoted around Rs 303.50 per quintal.

Pepper is a valuable foreign exchange earner. The Pepper & Ginger Merchants Association, Bombay, in a message to the Chairman of the Select Committee for the Kerala Sales-tax Amendment Bill at Trivandrum, has urged the maintenance of "Status quo", if the tax cannot be reduced. In this connection, it may be added that the enhancement of the sales tax on the export of commodities like pepper, ginger and cashewnuts from 4 to 5 per cent, as proposed by the Kerala Sales Tax Bill, has been viewed with considerable concern by the merchants in Bombay.

Traders feel that even the existing rate is very high and acts as a deterrent to the exporters, who have to face severe competition in the world markets. The Pepper and Ginger Merchants' Association has, therefore, submitted that provision should

be made in law for the grant of refund of tax on exports as is done in several countries and even in some States in India.

COFFEE

It is understood that the Government of India has shelved, for the present, the proposal for joining the International Coffee Agreement. The agreement is due for a preliminary review this week in the USA. India was among seven countries invited by the International Coffee Secretariat to join the proposed long term agreement.

In view of the need to examine fully the financial implications of membership of the agreement and the impending Cabinet change, the Government is understood to have deferred a decision on the question. It is also learnt that India will send only an observer to the meeting to get a first-hand idea of the consensus of opinion among the existing members of the agreement.

Some circles have pointed out that the advantages of a membership of the agreement may not be very substantial since India is only a small exporter of Coffee. They feel that, even if India keeps out of the agreement, it will not materially alter her export status, since the importing countries are allowed to buy a specified quota of coffee from non-members as well. Further, the prospects of India increasing her exports to the countries of Eastern Europe, which are not members of the agreement, are considered to be very good, particularly because of the bilateral trade agreements that India has with these countries.

YARN

In the Bombay Yarn market, prices of Amilon yarn displayed a firmer tendency, mainly due to speculative support. Reports, that the export promotion scheme for Art Silk Fabrics would be revised shortly, exercised a bullish effort. The revised scheme was expected to provide cash incentives in place of import entitlements provided under the present scheme.

Prices of Staple-Fibre Yarn declined on expectations of a decline in exports in near future.

In the Ludhiana market woollen yarn prices registered an upward trend and were up by 12 nP to 25nP per pound. Reports that the hosiery woollen yarn quota might be cut and replaced by the indigenous wollen yarn, caused the rise.

SILK

Prices of raw silk in the Bangalore Silk market maintained a steady trend during the week ended 30 March. Prices of filature, raw silk of 20/22 Dr remained unchanged between Rs 84.89 and Rs 85.99 per kg. Rates of cottage basin silk ruled between Rs 77.16 and Rs 82.12 per kgm. and that of charka raw silk varied from Rs 50.15 to Rs 74.40 per kg.

Mysore spun silk yarn of 2/210's was quoted at Rs 81.40 per kgm.

Prices of reeling cocoons in Sidlaghatta area ruled between Rs 4.60 and Rs 5.25 per kgm and those in

Channapatna and Mugur areas ranged from Rs 4.00 to Rs 5.50 and from Rs 3.50 to Rs 4.00 per kgm respectively.

There was moderately declining trend in the prices of Mysore race seed cocoons, which fluctuated between Rs 4.24 and Rs 5.50 per thousand. Foreign race seed cocoon prices however declined sharply when stood between Rs 8.00 to Rs 12.00 per thousand.

In the Bhagalpur Silk market, Tasar silk market remained steady at the last week-end quotations, prices ruling between Rs 66.14 to Rs 105.82 for raw silk, Rs 22.04 to Rs 26.46 for silkwaste and Rs 30.86 to Rs 48.50 per kgm for spun silk yarn respectively.

Prices of reeling cocoons showed an upward trend during the week. Daba variety was quoted between Rs 115.00 and Rs 120.00 as compared to Rs 110.00 and Rs 115.00 per kahan quoted last week. Bogai ruled between Rs 110.00 to Rs 115.00 and Serihan between Rs 50.00 and Rs 60.00 per kahan respectively.

Landed cost of Japanese raw silk of 20/22 Dr was reported as Rs 86.40 per kgm. as on 9th March, 1962. There has been perceptible rise in prices since December, 1961.

GOLD & SILVER

Prices on the Bombay Bullion Exchange displayed a reactionary tendency due to the absence of support and weakness in the ready section.

Despite firm bull grip, the Silver section lost further ground. Arrivals amounted to 35 bars as against an offtake of 15 bars. Silver ready (998) changed hands at Rs 219.45. Gold receipts were heavy at 12,000 tolas; but the offtake was only 7,000 tolas. Ready changed hands at Rs 118.90 to Rs 119.20. Sovereign ruled quiet at Rs 97.

OILS & OILSEEDS

Prices on the Bombay Oilseeds Exchange registered a smart rally, thanks to the absence of selling pressure.

In the groundnut section, the improvement in prices was attributed to renewed support at lower levels, inspired by the unwillingness on the part of the growers to offer supplies at very low prices. Moreover, crushers and vanaspati manufacturers were once again in the market for their immediate requirements. Ready Bold was quoted at Rs 45.50 and Groundnut Oil at Rs 19.00.

The Castorseed section took a significant turn for the better due to revival of support on reports that the new crop of Brazilian castorseed was likely to suffer on account of the adverse weather conditions. A section of the trade felt that the USA might turn to India for its requirements of castor oil if the Brazilian crop turned out to be smaller. Ready was quoted at Rs 33.75 and Castor Oil, commercial quantity, at Rs 13.70.

The Linseed section presented a steadier appearance in line with the general improvement in the market. Higher rapeseed advices from the Northern India and upcountry support provided additional bullish influence. Ready was quoted at Rs 38.25 and Linseed Oil at Rs 15.00.

THE CANARA INDUSTRIAL & BANKING SYNDICATE, LTD.

(Incorporated in Indian Union with Liability of Shareholders Limited)

DIRECTORS' REPORT

The Directors have pleasure to submit to the shareholders the 36th Annual Report for the year ending 31-12-1961. According to the audited Balance Sheet annexed hereto, the net profit of the Bank for the year 1961 was Rs. 32,09,832-28, which with the balance of profit of Rs. 27,708-25 of the previous year brought forward comes to Rs. 32,37,540-53.

After providing Rs. 11,00,000/- to the Statutory Reserve Fund, a sum of Rs. 21,37,540-53 is available for appropriations. The Directors recommend the following appropriations:

To pay dividend at 10% p.a. and bonus at 10% p.a. on 'A', 'B' and 'C' Class Equity shares, subject to deduction of tax	Rs. 4,79,950 50
To pay a dividend at 8.57 per cent p.a. 6% Cumulative Preference Shares and at 7.15 per cent p.a. on 5% Cumulative Preference Shares, subject to deduction of tax	Rs. 1,72,839 47
To provision for taxation	Rs. 12,25,000 00
To provision for Bonus to Staff	Rs. 2,25,000 00
To carry forward to next year's account	Rs. 34,750 56

The Directors have pleasure to state that the total Reserve Fund and other Reserves stand at Rs. 53,50,471/- as against Rs. 42,50,471/- (inclusive of share premium). For the first time the Reserves have exceeded the Paid-up Capital of the Bank. The total Paid-up Capital and Reserves including Share premium stand at Rs. 1,01,57,343/- as against Rs. 89,71,890/- as at the end of the last year.

Your Directors have obtained sanction for a further issue of Equity Capital of Rs. 50,00,000/- in 5,00,000 'B' Class shares of Rs. 10/- each at a premium of Rupee one per share. Every shareholder will be offered the right to subscribe for shares of this new issue of such face value as is equal to the face value of the total number of shares of any and all classes registered in his name as on 1st March, 1962. The Authorised Capital has also been raised to Rupees Two Crores. The growth of the Syndicate and the present policy of the Central Banking Authority warrants this increase so that we may be equipped with the necessary authority to increase the capital further at the appropriate time.

Though the Shareholders left the option of compulsory audit to the Auditor, it was deemed advisable to get 34 branches audited by our Statutory Auditor besides the Inspections carried out by the Bank's Officers in respect of all the branches including these 34 branches. Accordingly exemption was applied for in respect of other branches. As the audit of

branches by the Statutory Auditor extends to branches in a wide area, this balance sheet and report is delayed.

During the year 4 Banks were amalgamated with the Syndicate under Section 45 of the Banking Companies Act, 1949. They are:—

1. The Moolky Bank Limited, Mulki.
2. The Pie-Money Bank Private Ltd., Mangalore.
3. The Catholic Bank Limited, Mangalore.
4. The People's Bank Limited, Thirithahalli.

While in the case of the first 3 Banks we could pay 100% of the deposits, we were unable to do so in the case of the People's Bank Limited, where only 40% could be given as the initial credit. Steps are being taken to realise the advances under collection account of all these Banks so that the shareholders of the first three banks and the depositors of the fourth bank may be benefited by the amalgamation.

Besides sixteen branches of these Banks taken over by us, the Syndicate opened branches at Javali, Ramadurg and Siddapur (all in rural areas) and a branch at the Karnatak University Campus to serve the needs of the students and the teachers in the University. With one more branch opened on 9th February, 1962 at Gundlupet which is also in a rural area, the number of branches now stand at 149.

On the 12th November, 1961, Dr. T. M. A. Pai preferred to retire as Managing Director. Thereupon your Directors co-opted Sri T. A. Pai, B.COM. (BOM.), A.I.L.B., as a Director and also appointed him as Managing Director from 1-1-1962 and the necessary approval of the Reserve Bank for the appointment has since been received.

The Board also wishes to place on record the unstinted and solid service of Dr. T. M. A. Pai as the Managing Director of the Bank for an unbroken period of 22 years, under whom the Bank has made very great strides in its history. Though the Board feels sorry that Dr. Pai ceased to be the Managing Director, his valuable services and guidance are available to the Institution as its Chairman.

The solid and unstinted support of the staff under their able and energetic Managing Director, the increasing goodwill and co-operation of the shareholders and the rapidly growing clientele of the Syndicate, we trust, will enable us to reach yet another landmark with still greater progress during the current year.

UDIPI,
16th February, 1962.

(By authority of the Board),
(Sd.) T. M. A. PAI,
Chairman.

AUDITOR'S REPORT TO THE SHAREHOLDERS

I have audited the foregoing Balance Sheet of the Canara Industrial & Banking Syndicate, Ltd. as at 31st December, 1961 and also the foregoing Profit and Loss Account of the Bank for the year ended upon that date, in which are incorporated the returns from 34 Branches audited by me and, the un-audited returns from 125 Branches not visited by me for the purpose of this Report.

The Central Government have, by an Order No. 1(15)-CLVI/62 dated 22nd December, 1961, exempted 125 Branches of the Bank from being audited in accordance with the provisions of Section 228 of the Companies Act, 1956, in respect of the year ended 31st December, 1961. In addition to the 34 branches audited by me under the provisions of Section 223, I have also audited 10 exempted branches in December, 1961. I report that:—

- I have obtained all the information and explanations which, to the best of my knowledge and belief, were necessary for the purpose of my audit and have found them to be satisfactory;
- the transaction of the Bank which have come to my notice have been within the powers of the Bank;
- in my opinion, proper books of account as required by law have been kept by the Bank so far as appears from my examination of those books and proper returns adequate for the purpose of my audit have been received from the Branches of the Bank;
- the Bank's Balance Sheet and Profit and Loss Account dealt with by this Report are in agreement with the books of account and the returns;
- in my opinion and to the best of my information and according to the explanation given to me, the said accounts give the information required by the Companies Act, 1956, in the manner so required for banking companies and on such basis the said Balance Sheet gives a true and fair view of the state of the affairs of the Bank as at 31st December, 1961, and the Profit and Loss Account gives a true and fair view of the profit for the year ended upon that date.

For the Investor

INVESTMENT GOSSIP
Cautious Mood

The stock market has been subdued this week with prices, especially in the speculative counters, showing wide fluctuations. Business is largely speculative as most of the limited available funds has been mopped up by new issues. The fact that money continues to be stringent is effectively restricting speculative transactions. There has not been much encouragement from the LIC which has not made many purchases in recent weeks. In the last two or three days there has been a precautionary marking down of prices as it is expected that the composition of the new Central Cabinet will be known by the week-end. The earlier feeling of optimism in this regard has lost some of its strength in the course of the last two or three days. Last week it was generally believed that the more important portfolios would continue to be held by the old incumbents. With the indication that the new Cabinet will be assuming office from early next week, speculation as to its composition has revived. Latest reports from New Delhi mention the probability of the finance portfolio going to a new entrant. Earlier reports indicated that although Mr T. T. K. would not be given the

finance portfolio he would be found an important place in the Central Cabinet. This was responsible for the reactionary tendency in the market. It is but natural for operators and investors to move cautiously till the taxation proposals are known. Marketsmen now seem to be less sure than a week ago that the additional resources that have to be mobilised for implementing the Third Plan will all be covered by indirect taxation.

There has, however, been some encouraging news in the shape of the record production at the two private sector steel companies. Production during March at Indian Iron and Steel company has been impressive indeed. With the publication of the figures for March a full picture of the company's performance as regards output during the last accounting year has become available. The results are quite encouraging. It is quite probable that the higher production is reflected in higher profit for the year. But if the market has remained unimpressed by such excellent performance it is perhaps because it is apprehended that contrary to earlier expectations the announcement of the new steel retention price may be delayed. Indian Iron has had an additional depressing factor in the news that there will not be any right issue now.

NEW ISSUE NOTES

Aditya Mills

ADITYA Mills Limited, a newly-started company, will enter the capital market shortly with a public issue of Rs 30 lakhs, divided into Rs 25 lakhs in equity shares of Rs 10 each and Rs 5 lakhs in 9.285 per cent redeemable cumulative preference shares of Rs 100 each, free of company's tax, but subject to deduction of tax at source. The total issued capital will be Rs 60 lakhs, divided into Rs 50 lakhs in equity shares and Rs 10 lakhs in preference shares. Out of the balance of Rs 30 lakhs, Rs 5 lakhs worth of preference shares and Rs 10 lakhs worth of equity shares have been firmly allotted to the Government of Rajasthan and Rs 15 lakhs worth of equity shares have been taken up by the directors and their friends. The total project cost will be Rs 148 lakhs, including Rs 32 lakhs of working capital. The IFC has granted the company a loan of Rs 50 lakhs. The entire public issue is underwritten by leading financial institutions and brokers. Applications must be for a minimum of 50 equity shares or 5 preference shares.

Zenith Lamps

Zenith Lamps & Electricals Limited will raise Rs 15 lakhs by public subscription towards the middle of next month. The company has an authorised capital of Rs 1 crore, comprising Rs 80 lakhs of ordinary shares and Rs 20 lakhs of preference shares. It proposes to issue Rs 20 lakhs in ordinary shares of Rs 10 each and Rs 5 lakhs in 9.3 per cent (taxable) cumulative redeemable preference shares of Rs 10 each. The directors and their friends will subscribe

for half the issued ordinary capital and the balance along with preference capital will be offered for public subscription. The entire public issue is underwritten. The company proposes to establish a Rs 75-lakh project at Madras for manufacturing fluorescent tubes, lamps, mercury vapour lamps, infra-red lamps and projection lamps with the technical collaboration of a Hungarian firm.

Kanoria Chemicals

Kanoria Chemicals & Industries, a newly-started company, will shortly enter the capital market with an issue for subscription of Rs 70 lakhs. The issue will consist of Rs 20 lakhs in 9.5 per cent redeemable cumulative preference shares of Rs 100 each, free of company's tax, but subject to deduction of tax at source, and Rs 50 lakhs in equity shares of Rs 10 each. The directors and their friends have subscribed for Rs 30 lakhs in equity shares. The total issued capital of the company will thus be Rs 1 crore. The company intends to set up a factory at Pipri, Mizrapur district, Uttar Pradesh, for the manufacture of 16,500 tonnes of caustic soda, 9,900 tonnes of liquid chlorine and 19,800 tonnes of commercial hydrochloric acid per year.

Pyrotenax India

Pyrotenax India Limited, Bombay, has been granted consent to issue capital of Rs 55 lakhs, at par. Of this shares of the value of Rs 27.50 lakhs will be offered for public subscription to Pyrotenax Limited of the UK. The proceeds of the issue will be utilised for the manufacture of pyrotenax mineral insulated copper-covered cables.

Larsen & Toubro

Larsen & Toubro Limited will be raising Rs 55 lakhs in equity shares of Rs 10 each, at a premium of Rs 8 per share. The money will be used for financing certain subsidiaries and providing for working capital.

Bennett Coleman

Bennett Coleman & Company Limited, Bombay, is to issue Debentures of Rs 50 lakhs divided into 5,000-7 per cent redeemable mortgage Debentures of Rs 1000 each for cash, at par. The capital is intended to finance the modernisation and expansion of the company's printing presses at Bombay and Delhi, undertaken in 1961, and in construction of the company's own building for housing the presses and offices of Delhi at Mathura Road.

UP State ICI

Uttar Pradesh State Industrial Corporation Limited, Kanpur, will be issuing further capital of Rs 20 lakhs in equity shares of Rs 100 each, at par. The Corporation has a paid-up capital of Rs 25 lakhs.

Indian Drugs

Indian Drugs & Pharmaceuticals Limited, Delhi, is raising further capital of Rs 20 lakhs in equity shares of Rs 1,000 each, at par. All the shares will be taken up by the Government. Indian Drugs has an issued and paid-up capital of Rs 60 lakhs.

TI Diamond Chain

TI Diamond Chain Limited, Madras, is issuing further capital of Rs 10 lakhs in equity shares, at par, privately. The proceeds of the issue will be utilised, partly for the repayment of loan of the holding company and partly for the purchase of plant and machinery.

Tanjore Permanent Bank

The Tanjore Permanent Bank Limited, Tanjore, will raise further capital of Rs 4,23,450, divided into 16,938 equity shares of Rs 25 each—Rs 15 per share to be called up, at par, for cash. The proceeds will be used for strengthening the capital base. The present paid-up capital is Rs 3,56,230.

INVESTMENT NOTES
IISCO

The Indian Iron & Steel Company Limited has reported record production of pig iron and Steel Ingots for the month of March, 1962. The output of Pig Iron has risen to 113,178 tonnes from 79,258 tonnes in February; Steel Ingots to 88,241 tonnes from 75,949 tonnes; and saleable Steel to 86,294 tonnes from 53,600 tonnes. Despatches have also risen to 93,312 tonnes from 56,159 tonnes.

STOCK EXCHANGES

Slack Conditions

Watch-Dog Writes:

THE week's trading in stock markets has been generally dull and featureless, reflecting the apathy of the operators to lend support pending the formation of the new Central Cabinet.

The Calcutta Stock Exchange witnessed a dull session. Apart from the continued support lent to a few selected Jute shares, prices in other sections displayed an easier tendency due to want of support.

On the Bombay Stock Exchange, the tendency to book quick profits persisted which, in turn, caused an irregular trend of prices.

Trading on the Madras Stock Exchange remained subdued and the restrained activity reflected the absence of fresh enquiries.

Wall Street closed barely steady with a fairly good showing of declines, ranging mainly to one dollar or more.

★
CALCUTTA

Calcutta, Friday Evening.

AFTER opening on a steady note, equities on the Calcutta Stock Ex-

change displayed a slightly reactionary tendency due to scattered selling pressure in the absence of any support. While there was speculation about the composition of the new Central Cabinet, fears of increased taxation in the forthcoming budget brought about a growing uneasiness. Operators were, therefore, anxious to lessen commitments and, despite the flow of encouraging corporate news, prices moved down in slow dealings.

There were also other factors, which affected the general sentiment of the market. There was some disappointment over the circular let-

SUN
LIGHTED
SANDALS

To bring relief in midsummer boredom,
wander where you will, in sprightly
go-lightly Bata sandals.

Sun lighted shapes and open mellow leathers.

Bata sandals are the pure classic,
pure fun footwear that evoke
cheer for comfort, praise for taste.

Bata

ter issued to the shareholders of the Indian Iron and Steel Company Limited stating that there was no need for an immediate rights issue in connection with setting up the new company—the IISCO-Stanton Pipe and Foundry Company Limited. There were also reports that the decision concerning the new steel retention prices was not likely to be taken up by the Government until the Tariff Commission submitted its final report on the subject.

Again, it was felt that, as long as the pull of the busy season demand lasted, there was likely to be no increase in the support for stocks and shares. Thus, in the absence of any stimulating news, operators were reluctant to enter into commitments and this was indicated by a general tendency to press offerings on the upturns. There was, however, a marked absence of any large degree of unwarranted nervousness.

The Gilt-edged section was listless. Institutional support was conspicuous by its absence, while interest from other quarters was strictly limited. With the result, prices tended to sag on small offerings. 3 per cent 1986 Conversion Loan hovered idly around Rs 71.10.

Bank shares, in sympathy, were quite with Punjab National changing hands at Rs 21.81 to Rs 22 and United Commercial at Rs 97.50 to Rs 98.00.

In the week's trading, Jute shares were the only bright feature and continued to receive good support as if the section was endeavouring to claim restoration of its position as the nerve centre of the entire market. The main inspiration was derived from the fact that the industry was making adequate profits to recover the past losses. It was also thought that another good jute crop might place the industry in an unassailable position. Barnagore had buyers at Rs 172 to Rs 182; Birlas at Rs 37 to Rs 37.81; Howrah at Rs 21.25 to Rs 22.25; Kamarhaty at Rs 188 to Rs 194; Kanknarah at Rs 144 to Rs 154 and Reliance at Rs 6.69 to Rs 7.56. New Central turned rather quiet at Rs 18.12 against Rs 18.50 following the company's proposal to make a Debenture issue.

Coal shares continued to be neglected. Despite the talk of raising the Third Plan target to more than 100 million tons, operators were not inclined to lend support, as the industry's major problem of shortage of transport, explosives and power had not shown any sign of being resolved in the near future. East Indian met with some enquiry up to Rs 37.50 from Rs 37, while Central India were on offer at Rs 11.47; South Karapur at Rs 7.50 and Western Bengal at Rs 8.94. Burrakur fluctuated narrowly between Rs 17.56 to Rs 17.75.

The duller spot of the market was the Tea section where dealings were few and far between. Operators were reluctant to enter into any commitments due to a further fall in the prices obtained for common teas at the recent auctions. The only bright spots were Bhaktawa having some support up to Rs 19.75 from Rs 18.50; Grob up to Rs 10 from Rs 9.81 and Tezpor up to Rs 15.61 from Rs 15.62.

Sugar shares, too, were a neglected counter except for the continued

support lent to Dyer Meakins up to Rs 49 from Rs 47.62 due to persistent rumours of a bonus issue. Cawnpore turned better at Rs 13.12 against Rs 12.81, while Balrampur and SKG were on offer at Rs 2.44 and Rs 9.34 respectively.

Although Textile shares met with selective enquiry, there was not much expansion in the volume of business. The uncertain outlook regarding the textile industry in the matter of raw material supply as also reports of possible official moves to check prices of cloth restricted buying interest. Cawtex changed hands at Rs 8.94 to Rs 9.12; Dunbar at Rs 34.87 to Rs 35.12; Elgin at Rs 22 to Rs 22.12; Jay Shree at Rs 17.69 to Rs 17.81 and J. K. Rayon at Rs 22.31 to Rs 23.50.

Engineering shares, which were boosted up last week, displayed a reactionary tendency under the lead of Indian Irons on reports that there would be no possibility of any right issue in the immediate future. After opening at Rs 25.32 and improving to Rs 25.56; Indian Irons receded to Rs 25.12 before finishing the week at Rs 25.26. In sympathy, TEXMACO moved down to Rs 22.60 from a high of Rs 23.00 and Guest, Keen, Williams to Rs 41.37 from Rs 43.44 to close finally at Rs 23.05 and Rs 42.12 respectively. Braithwaite ruled comparatively firm at Rs 57.25 and so also Jay Engineering at Rs 28.37. Kumardhubi met with business at Rs 7.84 to Rs 8.12; Marshalls at Rs 3.94 to Rs 4.06; Dalmia Iron at Rs 11.62 to Rs 11.75 and J. K. Steel at Rs 20.12 to Rs 20.19.

Miscellaneous issues were generally dull and quiet in the absence of fresh interest and the entire list finished the week with minor losses on balance, as will be clear from the following price trends:

	Week's Week's Week's		
	High	Low	Closing
	Rs	Rs	Rs

IN BRIEFS

Maimala Estates, Madras, have passed over the dividend for 1961. Rajalakshmi Mills Limited has proposed to pay a taxable dividend of 20 per cent as against a taxable dividend of only 12 per cent paid previously.

Industrial Investment Trust Limited has raised the dividend from Rs 6.20 to Rs 6.50 per share, subject to tax, for 1961.

TUBE WELLS The Punjab Experience

The Minor Irrigation Team of the Committee on Plan projects, which has recently conducted a study on the State Tubewells in Punjab, has raised some pertinent issues about the whole set up in its report. They relate to the policy of intensifying the programme of tubewells in the State, construction and extension of water distribution system on the already established tubewells and rationalising the assessment of water charges on State tubewells. The recommendations incorporated in the report are evidently designed to maximise the benefits from tubewell water utilisation.

Though irrigation through the media of tubewells in Punjab has been initiated during the First and Second Plan periods a large number of them are still in the developmental stage. The pace of development of irrigation on tubewells has been disconcertingly lethargic and the suggestions of the Team will provide much food for thought for the authorities. The main factors that contributed to the slow progress are the time-lag between the completion of different items i.e. between the completion of wells and their energisation, between energisation and construction of distributory channels, slackness in preparing land for irrigated farming, uncertainty, on account of power failures, on perennial water supply from the wells, reduced discharges in some tubewells resulting in corresponding rise in water-rates and seasonal variations such as abnormal showers which occurred during the last four years.

The Team has suggested that the existing rules, which have brought the construction works on the channels almost to a standstill, should be suitably revised. The average length of lined and unlined channels of the wells needs to be extended and improved from the present one mile so as to facilitate a wholesome development of irrigation facilities. For this the Team is of opinion that construction of water-courses and lining them, whenever such occasions arise, should be accorded top priority. The suggestion for resorting to underground pipeline system, wherever economical and suitable, in places where difficulties in acquiring land for channel construction are to be confronted demand early attention.

A rationalisation of water rate structure applicable to tubewells is long overdue. The present practice of charging the cultivator on the basis of actual consumption of electricity by the tubewells is quite unjustifiable on the score that the cultivator is compelled

to pay for the inefficiency of the department when the pumping set fails to discharge adequate quantum of water. Another anomaly is that the cultivators whose lands are located at a distance from the well are always at a disadvantage compared to those near the wells. The latter invariably have plenty of water whereas the former's share is restricted due to the loss of considerable amount of water in seepage and percolation during its flow. In the circumstance imposing rates on the actual volume of consumption is advisable. Besides, as suggested in the report, a two-part tariff comprising a fixed rate between Rs 4 and Rs 6 per acre and a suitable tariff for sale of water on volumetric basis should be introduced in order to curb the indiscriminate increase in high water intake of crops like sugarcane and rice and thereby help balance agricultural economy of the tract.

Other important recommendations are the coordination of programme for development of irrigation on tubewells on a scientifically planned basis, the construction and operation of private tubewells in such a manner as to avert interference with the development of irrigation on State tubewells, the establishment of farms to demonstrate the efficacious utilisation of water according to crop requirements, adoption of improved agricultural practices, use of improved implements and to evolve cropping patterns suited to local conditions striking a balance between the Kharif and Rabi areas.

There is no gainsaying that the Team has carried out a commendable job and the tubewells can be interwoven into the agricultural economy of the tract if the suggestions are implemented.

THE INDIAN IRON AND STEEL COMPANY LTD.

NOTICE is hereby given that the Register of Members and Share Transfer Books for Preference Shares in the Company will remain closed from the 13th April to 17th April, 1962, both days inclusive, for the purpose of payment of Preference Dividend for the half-year ended 31st March, 1962, on or after the 1st May, 1962, to those Preference Shareholders whose names appear on the Company's Register of Members on the 17th April, 1962, or to their mandatories.

DORCHESTER PRINTING WORKS

PRINTERS OF DISTINCTION

116, LOWER CIRCULAR ROAD, CALCUTTA

Conditions in the stock market were rather irregular during March although the closing tone was steady. At the commencement, interest was at a low ebb as sentiment was overshadowed by thoughts about the shape of the new Central Cabinet to come. The fact that the former Finance Minister had been elected unopposed to Parliament seemed to have caused a good deal of anxiety and his name was frequently mentioned in connection with the New Central Cabinet. While one section believed that he would be given the portfolio of finance, another section would give him some other portfolio. Even so, the anxiety that a Cabinet which had Mr TTK in it would not be quite favourable to private enterprise continued to persist. Mr TTK's statement in Madras that the pace of nationalisation needed to be speeded up unnerved operators and they would not venture to extend their commitments. Higher levels could not be maintained because both operators and investors were not sure that there would not be additional taxation on corporate profits. For, huge resources were required for the Third Plan and the only way to mobilise the requisite funds seemed to be through the imposition of fresh taxation. Fears about additional taxation deepened further with the presentation of the interim Budget. The size of the overall deficit (Rs 147 crores) engendered a feeling of pessimism among operators as fears of a large dose of additional taxation to fill the budgetary gap revived.

From the second half of the week, however, confidence began to return, albeit slowly at first. Second thoughts on the interim budget appeared to have given rise to a feeling that the new Finance Minister might not be obliged to increase direct taxation as had been feared earlier. While it was not denied that the resources to be raised were by no means small, extreme steps might not become necessary to fill the gap. The belief gained ground that the emphasis would be on indirect taxation. What perhaps paved the way for a recovery was the reportedly very favourable reaction of Government to the recommendations of the Mudaliar Committee. Of the measures recommended by the Committee, those relating to tax rebate on exports and the creation of a revolving fund which would enable export oriented industries to get essential raw materials at reasonable prices seemed to have impressed marketmen very much. The general belief was that Government would accept most of the recommendations of the Committee and it was noted that Mr K. C. Reddy, Union Minister for

Late Recovery in March

Commerce and Industry, had told the meeting of the Export and Import Advisory Council earlier in the month that Government was in agreement with the Mudaliar committee's recommendation that incometax relief would be an effective incentive toward maximising exports. There was also ample evidence that Government was quite keen on increasing exports. According to Mr K. C. Reddy Government was

taking steps to improve the competitive capacity of Indian jute manufactures. At the same meeting Mr Reddy made it clear that essential imports would not be cut.

The fact that Prime Minister Nehru made it clear at the annual meeting of the Federation of Indian Chambers of Commerce and Industry that private enterprise would continue to play an important role in the national

economy seemed to have provided the incentive that the bull operators had been waiting for. It is not surprising that the particular statement of the Prime Minister which is by no means new because he has never said that private enterprise will be abolished has been made much of by bulls. For an assurance of this type was quite timely because rumours had it that the new Central Cabinet would favour a more pronounced socialistic policy.

The revival of interest during the second half of the month therefore, stemmed from a number of favourable developments. In the first place corporate news continued to be very encouraging. On second thoughts operators were not much worried about the shape of things to come in the Central Budget. In view of Government's anxiety to maximise exports, it was generally expected that most of the recommendations of the Mudaliar Committee would be accepted. All along, sentiment had been helped by the bonus announcements from some prominent companies and the expectation that more companies would announce their decision to issue bonus shares before the central budget was out. In later dealings the persistent rumour that the announcement regarding the new steel retention price would not be long delayed revived support for Indian Iron.

Sectionwise, jute shares were in good demand throughout the month. The sustained interest in the section was largely due to the growing belief that since current demand were so good that accumulated losses would be regained earlier than expected. Demand for jute goods continued to be excellent as would be evident from the low level of stocks of jute goods with mills. The fact that despite full production of the mills, stocks had not increased to a marked degree was interpreted to mean revival of overseas interest. Although it was generally agreed that one or two more bumper jute crops would be required before asserting that the industry had turned the corner, it was nevertheless admitted that as compared to the previous year the current year was bound to be quite favourable to the industry.

Little interest was noticed in the coal section as investors found no incentives to widen their commitments. Although it was believed that the Third Plan target for private collieries would be revised upwards, the continued anxiety as regards shortage of transport, power and explosives seemed to have cancelled out any enthusiasm that might have been aroused by hopes of increased share for the private collieries.

(a) After transferring Rs 162,500 from Dividend Equalisation Fund.
(b) After transferring Rs 67,000 from Dividend Equalisation Reserve.
(c) After transferring Rs 281,261 from General Reserve.
(d) After transferring Rs 784,586 from General Reserve No. 2; Rs 522,000 Reserve of exempted profits and Rs 358,750 from Dividend Equalisation Reserve.
(e) After transferring Rs 60,000 from Development Rebate Reserve and Rs 90,940 from Rehabilitation Fund.
(f) After transferring Rs 9,800,000 from General Reserve.
(g) After transferring Rs 125,000 from Dividend Equalisation Reserve.
(h) After transferring Rs 62,000 from General Reserve.
(i) After writing back Rs 61,971 being over provision in previous years.

(j) After transferring Rs 719,682 from General Reserve.
(k) After transferring Rs 125,000 from General Reserve.
(l) After transferring Rs 142,000 from profit on sale of capital assets.
(m) After transferring Rs 800,000 from General Reserve.
(n) After transferring Rs 150,000 from Deferred Taxation Reserve and Rs 129,559 from provision for taxes made in previous years.
(o) After writing back Rs 141,948 being excess provision for depreciation and Rs 19,398 being Investments written off.
(p) After transferring Rs 100,000 from General Reserve.
(q) After transferring Rs 2,500,000 from Dividend Equalisation Reserve; Rs 3,042,276 from provision made in previous years and Rs 1,613,455 from General Reserve.

(r) After transferring Rs 250,000 from Reserve for Deferred Income-tax.
(s) After transferring Rs 3,379,376 from General Reserve.
(t) After transferring Rs 7,000,000 from Tax Equalisation Reserve.
(u) Dividend in the form shares in The Punjab National Bank at one share for every 20 shares held in Bharat Nidhi.
(v) After transferring Rs 600,000 from Dividend Equalisation Reserve and writing back Rs 263,463 being excess provision made in previous years.
(x) After transferring Rs 114,000 from Reserve for Doubtful Reserve; Rs 31,138 from Investment Reserve and including Rs 129,735 being balance refunds capital from Baraboni Tea Co. and Rs 135,113 being refund of Income-tax.
(y) After transferring Rs 226,256 from Rehabilitation and Expansion Reserve.

THE BIG HURRY IN THE WORLD OF ASTRONOMY

Suddenly, a star exploded. ■ Turning within its spiderwork of iron and steel, the 200 ft. wide saucer-shaped 'eye' of the radio telescope at Jodrell Bank looked deep into black space and recorded: the star had exploded FIVE MILLION YEARS AGO! ■ Peering so deep into space as to question time itself such radio telescopes are revealing to us the breathtaking, even frightening, dimensions of space and time, gathering astronomical data that are making space travel a fast nearing reality. ■ Into the fashioning of the 2000 ton Jodrell giant went the most advanced technique and knowledge of welding and gas cutting. ■ It is this precise knowledge of industrial gas and its diverse applications that Indian Oxygen affords Indian industry.

The British Budget

Mr Selwyn Lloyd's latest budget confirms earlier impressions of him as a man who ostentatiously flexes his fiscal muscles for an encounter that never seems to come off. The anti-climax is shattering. For days, if not months, the impending capital gains tax, its retrospective terrors and general iniquity have been driving the City crazy. Lord Ritchie asked in the pages of the Statist sometime ago, "why pick on us?" implying thereby that it was an invidiousness of the most monstrous kind to subject to tax gains made on the stock exchange by sales of investments. In a different context he deliberately lost his temper saying that the City "had nearly reached the end of its tether and its loyalty and willingness to cooperate have almost reached breaking point." It would perhaps be uncharitable to attribute the extremely attenuated attempt at taxing "speculative gains" outlined by the British Chancellor to this and other warnings of impending storm.

But the Annual Survey published last week must have prepared many for the colourless budget that the Chancellor presented this week. Mr Lloyd, despite the National Economic Development Council he set up in an access of enthusiasm for planning seems to be too much of an Anglo-Saxon to fall readily for the professional fussiness of planning. As bemoaned by the Economist last week, the Survey is still to think in terms of targets of rates of economic growth, formulate the order of investment in the economy and detail the range of accretion to earnings and wages that such rates of growth and investments imply. Instead, both the Chancellor and the Survey consider the theme of the budget in such vague terms as "the maintenance of a firm base for sound expansion," without indicating too precisely how firm the base should be and how much expansion there should be.

The general assumptions behind the present budget are that the short terms expectations of the little budget of July last have been realised. Some would think that they were only too painfully, as indicated by the stagnation in production, revealed by the figures and by the successive reduction of the bank rate to the percentage it was before July last. Under-utilisation of capacity and fall in rate of industrial production (officially put at 4½ per cent between July 1961 and January 1962) eased somewhat the domestic pressure but the expectations of better export performance, somewhat optimistic on a short term, did not materialise. The value of exports did in fact fall by one per cent between May-July 1961 and December 1961—February 1962, while imports did not show any change during the same periods. The balance of payments position showed remarkable improvement, which is variously attributed to inhalation of hot money and the embarrassments of comparatively better off European countries. The Pay pause, which was riddled with breaches even before it got to a start, was not a conspicuous success.

The budget for the coming year is based on the assumption that the pressure of domestic demand still requires to be watched

and though public investment may rise, productive private investment will fall. Cautious hopes are entertained for export performance in coming year and for consequent expansion of production. Expansion for other reasons is still frowned upon. Personal expenditure is also expected to go up by about 4 per cent in real terms by this time next year, indicating again, according to the Chancellor, the necessity for proceeding cautiously about domestic pressures.

Of the specific fiscal proposals, the most important is the capital gains on speculative transactions. As stated earlier, after the anticipatory terrors, the levy is unlikely to seem onerous. It is not a separate tax and such gains are to be taxed under schedule D at the appropriate rate. The refinements of the American capital gains taxation in which different treatments were accorded to assets sold within six months and assets sold after that, are not being adopted. As outlined by Mr Lloyd, it is quite simple a levy on profit of sale of capital assets sold within stated period of acquisition and the consequence of "maturing the stock" a la American practice is not less but no taxation. Many will feel that the six-months' minimum holding of a stock for escaping tax is not such a terrible restriction. More important are the provisions for bringing into the net of Estate Duty immovable property situated outside the country. The more controversial provisions regarding abolition of tax on dwelling houses under Schedule A are so indefensible—only last week the Economist has made a cogent case against such abolition—that it cannot but be put down to party pressure. Mr Lloyd probably hopes to weather the storm released by this relief by postponing its actual operation to the next year. The shearing off of the purchase tax on consumer durables at the higher ranges does not square with the desire to curb consumer demand but makes sense as part of an effort at tidying up of the purchase tax structure as a preliminary act for joining the Common Market. Making smoking more expensive was one way of increasing revenue that many had thought the Chancellor will be able to get away with, in view of the finding of the British Medical Council about cigarette smoking and lung cancer. In the event, the Chancellor has left tobacco well alone. He has however come down on sweets, ice creams and soft drinks. No doubt he will be able to enlist dental authority for his step to combat Labour anger. Taxes on betting has been increased marginally and TV advertisement too will bear a slightly increased tax in the coming year. On the other hand, British soldiers may get tax incentives for staying on in the Army; estate duty exemptions are now to be available upto estates valued at £4000 instead of the present £3000; and there are sundry reliefs on income from small investments, and of small assesses. But all this adds up to nothing more than a somewhat miscellaneous effort to please. Getting to firm grips with Britain's problems is still some way off—perhaps to a date when the memory of Orpington has faded.

Small Industries Prospects

An optimistic picture of the development of industries in the small scale sector was presented by Mr Manubhai Shah when he surveyed the progress achieved during the Second Plan, and the prospects of the Third, in his comprehensive address to the last meeting of the All India Small Scale Industries Board. The progress achieved has been sustained by the various promotional activities of the Small Industries Organisations at the Centre and in the States, which are in detail in the Minister's address. These include provision of technical assistance credit through a variety of agencies including machinery on hire purchase through the NSIC, accommodation for factories in the industrial estates, training facilities, industrial and economic surveys, supply of materials and marketing assistance. While the activities in these different fields have been described, a precise assessment of the results is possible only in respect of the financial assistance. The State Governments have spent nearly Rs 30 crores during the Second Plan on development of small industries including loans to small units totalling Rs 13 crores under the State Aid to Industries Acts. Under their scheme of credit to small industries, the State Bank of India has advanced nearly Rs 19 crores while the State Financial Corporations have lent another Rs 8 crores. The volume of credit available for small units has been enlarged by the Credit Guarantee Scheme of the Reserve Bank which was introduced towards the closing years of the Second Plan. The guarantees issued under this scheme involve a total amount of Rs 6 crores covering Rs 1802 crores. Moreover, Scheduled Banks are estimated to have advanced Rs 27 crores to small industrial units up to end of June 1961, though many of the units getting these loans, it has been pointed out, do not come under the restricted definition of small industries which has now been adopted for the purpose of Government's development programme. For instance, industrial units engaged in processing of agricultural commodities or in old and well established manufacturing activities will not qualify for assistance, though from point of view of fixed assets they may come under the category of small industries.

A notable feature of the programme is the purposive development of new lines of manufacture requiring a high level of technical competence. The pattern of industries in the small scale sector is being rapidly transformed. New lines are being developed as the industries which attracted the small entrepreneurs a few years ago are getting saturated. The industries that are now being developed, in some cases with foreign collaboration, include manufacture of items like transistors, typewriters, automobile parts and ancillaries, scooter parts and other mechanised industries. While the development during the Second Plan was mainly in the field of engineering industries, the emphasis in the Third is on the expansion of chemical industries suitable for small scale operation. The Minister has referred to the decisions that have been taken by the Government to enable small units to take advantage of the scope that exists in processing plastic raw materials, dyestuffs, pesticide formulations, paints and varnishes, paper conversion, ceramics etc. A fixed percentage of the indigenous production of plastic raw materials as well as of intermediates for dyestuffs has been reserved for small units. It

is expected that by 1966, 50,000 tons of plastic raw materials will be available for processing by small units, representing a turnover of Rs 30 to Rs 35 crores. In demarcating the spheres of production for large-scale and small scale units, it is satisfactory to note that it has been possible to effect the necessary coordination solely through persuasion. The range of manufacture of dyestuffs in the small scale sector is expected to be further expanded. Manufacture of 88 new items of dyes (1957 tons) comprising Vat, Basic, Sulphur and Specialised Azo and Organic dyes has been allocated to the small scale sector. The annual production of dyestuffs in this sector, which is now of the order of Rs 3 crores, is expected to increase to Rs 8 to 10 crores by the end of the Third Plan. It is also stated that 15 to 20 small scale units would be sponsored in different States for the manufacture of pesticide formulations. Quality, which is of vital importance, would be ensured by requiring the approved units to join the Certification Marks Scheme of the Indian Standards Institution. A committee of experts has also been set up to suggest measures for the development of the small scale sector of the paints and varnish industry which even now accounts for about 25 to 30 per cent of the output.

While the account of manysided progress given by the Minister for Industry is extremely heartening, the views expressed by several members of the Board point to the existence of widespread dissatisfaction at the hardships caused by chronic shortage of essential materials and the unsatisfactory implementation of the schemes which look very satisfactory on paper. While the quantum of credit set apart for small scale units may be as much as these units could utilise, procedural difficulties appear to stand in the way of many of them getting the credit from scheduled Banks or the State Financial Corporations. The recent amendment of the State Financial Corporations Act should enable these institutions, which were originally set up to serve the medium industries, to cater more effectively to the needs of the small sector also. But the most severe hardship has been caused by the shortage of materials, especially coal and coke as well as of special varieties of imported steel. While it is Government's policy to set up industrial estates in rural areas in the backward regions of the country, it is not clear how they will be able to function successfully so long as the industrial units are handicapped by heavy differentials in the price of coal and coke representing the cost of freight.

The shortage of materials brings up in an acute form the problem of efficient utilisation of materials. Any proposal to set a ceiling on expansion of the small scale sector is bound to come up against even more severe opposition than in the case of large industries. In fact, any restrictive policy would destroy the rationale of the programme, which is to spread the benefit of industrialisation, especially in the backward areas, and to make up for the regional disparities in the location of large units. Legislation for regulation of small industries through a system of licensing on the lines of the Industries (Development) Act, will create more problems that it will help to solve. But at the same time, it is reasonable to expect that in pushing ahead with their promotional activities, the Small Scale Industries Organisation will keep in view the availability of materials. There is no point in inducing entrepreneurs to set up workshops in industrial estates and to purchase machinery on hire purchase from the National Small Industries Corporation, if

their machines are likely to remain idle for months together on account of lack of raw materials.

Sole Selling Agency Arrangements

A RECENT study by the company law administration reviews the provisions in company law relating to sole selling arrangements. These are contained in Section 294 of the Companies Act, and are special features of the Indian Company Law. These provisions have sometimes been severely criticised. For instance, Mr M. R. Masani had stated in his minute of Dissent to the Report of the Joint Committee of Parliament on the Companies Amendment Bill, that "the Central Government is given the widest possible powers to write new agreements with selling agents, and even cancel certain selling agencies by declaring sole selling agents for areas where there is more than one selling agent, all upon terms which the bureaucracy dictates." Other members who appended dissenting notes had also drawn attention to the large number of applications that may have to be dealt with and that the consequent delays will be most unfortunate in the matter of export promotion.

The earliest restrictions of the sale, purchase or supply of goods by managing agents were incorporated in Section 87D(4) of the Indian Companies Act of 1913 as amended by the Act of 1936. The Company Law Amendment Committee (Bhabha Committee), which was set up in 1950, felt that there was need for introducing additional provisions regulating the activities of managing agents relating to their appointment as selling agents. The provisions of Section 294 of the Act of 1956 broadly followed the recommendations of this Committee. The section as it stood before the Amendment of 1960 merely laid down the procedure to be adopted by the Companies in the matter of appointing sole selling agents; the object of the provision was to ensure that appointment of sole selling agents should not be left to the Directors but should have the express approval of the shareholders. The restriction only applied to the appointment of sole selling agent for any area. There was no restriction on the Board's powers to appoint selling agents other than as sole selling agents in any particular area. The terms of the contracts also did not require the approval of Government.

Within a year of the Act's coming into force, it became clear that this was one of the provisions that required further examination and comprehensive amendment. The adequacy of the provisions of Section 294 was examined by the Company Law Amendment Committee (Sastri Committee) constituted by the Government in 1957. It was brought to the notice of the Committee that the provisions restricting the remuneration of managing agents could be bypassed by the managing agents giving up the managing agency and getting themselves appointed as managing or other directors in order to enable them or their erstwhile associates to enter into agreement with the company as buying or selling agents or as sole selling agents on advantageous terms. It was found, in some cases, that the selling agency commission was equivalent to the entire profits earned by the company. Moreover, while managing agency commission could be collected when there is a profit, there is no such limitation in case of selling commission.

The entire scheme of the section was reviewed in 1960 and the provisions were made

14 April 1962

more comprehensive by the Amendment Act of 1960. The salient features of the section which are explained in the paper referred to above are summarised as under:

(i) The appointment of sole selling agents shall be subject to the approval of the shareholders in the general meeting and shall not be made for a period exceeding five years at a time; the reappointment or extension shall also not exceed five years on each occasion.

(ii) A person or body who has relinquished managing agency of a company shall be debarred from appointment as sole selling agent within three years from such relinquishment unless the appointment is approved by the Central Government.

(iii) Government has reserved to itself the power to call for all relevant information regarding the terms and conditions of any sole selling agency (by whatever name called). In case a company has more than one selling agent in any area or areas, Government has the right to enquire into the terms and conditions of the appointment of all the selling agents and to determine whether any of these selling agents is in fact a sole selling agent. In such cases the Government would be competent to order suitable variations in such terms and conditions of appointment as are considered prejudicial to the Company.

The entire scheme of company legislation is based on the assumption that it is not always possible for the shareholders themselves to protect their interest without administrative and legal sanctions. The Section, as it stands now, arms the Government with the power to call for an agreement and if it is found that the terms are onerous for the company, to direct that the agreement might be altered. The large area left to administrative discretion may give cause for misgivings. But this is unavoidable. The remuneration payable to selling agents, as the Sastri Committee pointed out, will vary from commodity to commodity, time to time and from area to area. It is not, therefore, possible to fix a ceiling on the selling agency commission in every case either by reference to a percentage of the price of the goods or to the total amount of the commission. The theory that the selling agency is a sinecure is of limited application and does not apply at all when it is a question of pushing the sale of Indian goods in foreign markets. There is no reason why the application of section 294 should act as a curb on exports. Much, of course, will depend upon how the provisions are administered.

It will always remain a matter for argument how far Authority is justified in arming itself with what seems at least on paper a formidable array of powers to interfere with the freedom of commerce. But legislating for the few is, unfortunately, a compulsion that can hardly be avoided in the light of experience. The evolution of Company Law, as also of the Income-tax Law in India and elsewhere has been the result of a ceaseless battle of wits between Authority and the socially irresponsible. Combating the latter who often operate barely within the four corners of the law certainly involves placing restrictions on those who have the necessary self-discipline to desist from anti-social aggrandisement. The choice between what Mr Masani called a "bureaucracy run amuck" and what Mr Kanungo called the fraternity that "bleeds companies white" can on balance of benefits, go only in favour of the former.

The Plan and its Critics

By Jnan

MORE and more of India's front rank industrialists are summoning courage to express their misgivings about the smooth and successful working of the Third Five Year Plan. First Mr G. D. Birla, in more than one contribution to the Press. And now Mr J. R. D. Tata. While the former's expressions of scepticism have not called forth any remonstrance from officialdom, the latter's appeal for caution in fixing targets has drawn some carping criticism from some of the ministers. Sir J. J. Ghandy has offered an explanation, which may even be called an extenuation of the position taken up by Mr Tata. But it is not within the narrow limits of justification or otherwise of particular remarks that discussion of issues relating to the Plan should now be conducted. Notable changes have taken place during the last two years and particularly since the publication of the Third Plan. Shortfalls of the Second Plan in the basic requirements of further economic development at this stage have begun to be felt in an inescapable manner and as a consequence, it is no longer possible to spot the optimism that has been the fashion and that has so long been considered to be good form for men of moment.

The tacit understanding that the shortcomings of planning in India should not be referred to at all or should at best be dwelt on but lightly—an understanding in which foreign critics have, for special reasons of their own, joined with gusto and with no feeling of guilt—has now become difficult to observe. Because it is no longer a case of the shoe pinching here and there; there is the threat of the nails piercing the sole into the soft underside of one's feet. Such indeed is conceivably the case with Mr J. R. D. Tata—perhaps to an even greater extent than with Mr Birla. To the steel magnate, the shortfalls in transport and coal are a more direct, intimate and harrowing experience. Mr Birla visualises more vividly the "disappointments" that are certainly in store for us in respect of exports and therefore of the other departments of our economic life which depend on the adequacy of our export earnings.

It is not alone in business circles that criticism of the working of the Plan is now frequently heard. The various official committees and commissions too have had little to say of a reassuring kind. The reports of the Estimates Committee have for a long time dwelt not only on the irregularities of financial administration of plan projects but also on the unsatisfactory methods of their execution. The Central and State Budgets recently announced, incomplete and tentative as they are, point very clearly to the fact that the buoyancy of revenues and increase in taxable capacity which followed planned development have been outpaced by public expenditure and a fresh bout of additional taxation is inescapable unless the Government chooses to let the country in for some more of the orgies of inflationary rise in prices. But the state of public finance in this country is not such that it is an easy task to tide it up. Over the last few years, planning has had its impact on national finance in two ways: firstly a mix up of revenue and capital expenditure and secondly through a new

nexus of financial relations between the Centre and the States which has complicated the system of financial devolution and the division of function. While former Finance Commissions had been content to vary the shares in the divisible pool to the advantage of the States, the Chanda Commission has gone farther to point out that the plan itself will be in jeopardy if plan and non-plan expenditure are not kept apart and that a new Commission of enquiry is needed to examine the problems in this regard. The need for additional taxation brought out by the new budgets has to be considered by the side of the comments of the Finance Commission on the State of public finance and by the unquestionable necessity of giving considerable tax relief in the interests of export promotion and new enterprise.

Thus, both financial and physical planning requires a careful reconsideration, whether or not such reconsideration would point to a downward revision of targets as a necessity. Those who are now expressing doubts about the working of the plan are obviously thinking of the political obstacles to reconsideration and revision, and not of the intrinsic difficulties of hitting the present targets. The reply to these doubts must take the form, not of political rejoinders but reliable assurance that facts will not be shirked and that the vital differences between the present plan at this stage and the previous plans will not be overlooked for a moment. Words apart, people will look for such an assurance in the constitution of the new cabinet at the Centre where one can see already whether the Government means business or just an observance of administrative routines or established forms of political behaviour.

Individual well-being is linked with national prosperity and only planned efforts can ensure both in the shortest possible time. And planning, for its success, largely depends on savings, individual as well as national. Saving in the form of Bank Deposits provides resources for the National Plan.

UBF-14.3-61

World of Finance

UCO BANK

Testimony of Eminence

The accounts of the United Commercial Bank Limited for 1961 once again provide irrefutable testimony to the swift progress and eminence the institution can claim to.

The Deposit resources of United Commercial have risen by nearly Rs 10 crores from Rs 88.94 crores to Rs 98.90 crores; The Rs 100 crore mark, which has proved to be evasive since 1959, will certainly be achieved in the 1962 balance-sheet. Rather more than half of the rise in Deposits is under the head of Fixed Deposits which are higher by Rs 5.71 crores at Rs 54.95 crores. Savings Bank Deposits have registered an increase of Rs 1.64 crores to Rs 10.89 crores. There is an extremely satisfying rise of Rs 2.62 crores in Current Account, etc, in as much as Demand Liabilities of the banking system have in recent years tended to be stagnant.

Restraint has been observed in the utilisation of the additional resources: the total of Advances is higher only by Rs 2.83 crores at Rs 64.21 crores; and, accordingly, the credit ratio has moved down from 69.0 per cent to 64.9 per cent.

Thus, the United Commercial has added the respectable sum of Rs 2.05 crores to its gilt-edged portfolio, raising it to Rs 32.98 crores; and considerably reduced its borrowings from Rs 9.32 crores to Rs 2.69 crores. In the event cash balances have been somewhat run down from Rs 9.57 crores to Rs 8.66 crores.

According to the profit and loss account, the income by interest and discount has risen modestly by Rs 0.31 crore to Rs 4.10 crores while commission, exchange and brokerage have fetched a shade more at Rs 1.424 crores against Rs 1.417 crores. The charge of interest paid on Deposits and borrowings has gone up by a little over Rs 8 lakhs to Rs 2.61 crores while salaries and allowances have cost Rs 15½ lakhs more at Rs 1.56 crores. The balance of profit net of taxation has in the result improved by Rs 5.18 lakhs to Rs 72.61 lakhs.

The transfer to Reserve is maintained at a massive Rs 30 lakhs, raising the Reserve Fund to Rs 2.35 crores. Bonus to staff gets Rs 1 lakh more at Rs 14 lakhs. There is a provision of Rs 4 lakhs to Gratuity Trust Fund against nil in 1960. The dividend is unaltered at 12 per cent and absorbs Rs 24 lakhs.

The "capital" ratio (that is, capital plus reserves as a percentage of Deposits) has receded slightly from 4.4 per cent in 1960 balance-sheet to 4.3 per cent in the latest accounts.

CANARA BANK

Lowest Credit Ratio

In its 56th Annual Report, Canara Bank Ltd has reported an appreciable increase in both Deposit resources and Advances; and despite an increase in the cost of interest paid as well as in the salaries and allowances payable to the staff of the four banks taken over during the year under Section 45 of the Banking

Companies Act, Canara Bank's balance of profit has risen more than proportionately.

Deposits have risen by Rs 6.74 crores to Rs 37.56 crores; the bulk of the increase is shared by Fixed Deposits (up by Rs 3.27 crores to Rs 17.87 crores) and by Savings Bank Deposits (higher by Rs 2.07 crores at Rs 7.71 crores.) Current accounts are better, also, by the smaller amount of Rs 1.40 crores at Rs 11.97. crores.

The increase in resources has been used almost equally in augmenting the gilt-edged portfolio and in extending greater accommodation to constituents. Investments in Government securities are higher by Rs 4.03 crores at Rs 14.00 crores, while the total of Advances has risen by Rs 3.76 crores to Rs 20.39 crores. The credit ratio has gone up fractionally from just under 54 per cent to 54.3 per cent. Cash balances, including money at call and short notice, have receded slightly from Rs 5.41 crores to Rs 5.14 crores.

The increase by interest and discount's has improved by about Rs 19 lakhs to Rs 1.48 crores. Similarly, commission, exchange and brokerage have earned about Rs 3½ lakhs more at Rs 36.23 lakhs. Roughly Rs 13 lakhs of the enlarged earnings have been absorbed by a rise to Rs 85.49 lakhs in the charge of interest paid, and salaries and allowances have cost Rs 10.53 lakhs more at Rs 60.74 lakhs. The balance of profit appears to be only nominally higher at Rs 21.24 lakhs against Rs 20.30 lakhs, but the increase is really an impressive one in as much as the 1961 profit is net of taxation whereas the 1960 profit was subject to a tax provision of Rs 7.65 lakhs.

Bonus to staff gets Rs 1.40 lakhs more at Rs 4.50 lakhs. Over and above a transfer of Rs 6.70 lakhs to Reserve Fund (against Rs 3.50 lakhs to inner reserve in 1960), a sum of Rs 4.50 lakhs is, in respect of the 1961 appropriations being transferred to contingencies. The dividend on equity shares, maintained at 15 per cent, absorbs Rs 5.40 lakhs. The carry forward is slightly higher than the amount brought in.

The ratio of capital plus reserves to Deposits is lower at 3.01 per cent against 3.45 per cent, but with the issue of Rs 25 lakhs of equity capital last year, the ratio will have shown an improvement.

Attention may be drawn to the fact that Canara Bank's credit ratio is probably the lowest for any Scheduled Bank—excepting, of course, the State Bank.

BANKING THEMES

Tasks before Indian Banks

THE speech of Mr T. M. A. Pai, Chairman of the Canara Industrial and Banking Syndicate Ltd, forming part of the annual report of the Bank for 1961-62, provides not only a review of the activities of the Bank during the year just ended, but also an analysis of the tasks before the Indian Banks. The problems facing Indian banking have crystallised in a clear manner after the debacle that overtook the

Palai Central Bank and as a result, 1961 had turned out to be a year of vital decisions and changes for the banking system as a whole. Palai's failures has been followed by a phase of amalgamation of weak and smaller banks with financially stronger ones. It has been revealed by the CIB Chairman that under Section 45 of the Banking Companies Act, the CIB was asked by the Reserve Bank to take over the Catholic Bank Ltd, the Pie Money Bank Ltd, the Mulki Bank Ltd, and the Peoples Bank Ltd. Consolidation of the banking structure has been further pressed forward by similar amalgamations enjoined on other major banks also.

The most important development however in the banking sphere was the comprehensive reform of the banking system that was initiated by the Reserve Bank at the instance of the Government. The proposals mooted by the Reserve Bank were mainly directed to strengthening the capital structure of banks. For, consequent on the phenomenal expansion in bank Deposits witnessed in recent years, the capital basis of the banking system had been rendered slender for efficient operation with particular emphasis on safety of bank Deposits. To increase the capital structure, therefore, the Reserve Bank proposed transfer of large amounts to their published Reserves by the banking system and also the building up of inner Reserves to provide additional strength in any time of stress and strain. The original proposals of the Reserve Bank enjoined on the Banks improvement of their capital and reserve structure so that they will form at least 7 per cent of the total Deposits. Finally however, it fixed the proportion at 6 per cent. The CIB Chairman has welcomed the proposals put forward by the Reserve Bank to improve the structure of banking system and it is gratifying that the CIB has already taken the step to increase its capital basis by a proposal to issue fresh capital of Rs 50 lakhs to be offered at a premium of 10 per cent to the existing shareholders.

Mr Pai refers to extension of banking service as another important problem to which the Banks have to address themselves with vigour and energy. He says that "unless banks make a positive effort in reaching larger sections of the people to make them bank-minded and cover a larger sector of the unorganised money market in this country, we would not have done our duty for the country". Opening of new branches is one important aspect of this problem and it has to be recognised that there is increasing awareness of its importance on the part of the banking system itself. Mr Pai has also testified to the anxiety of the banks to spread banking facilities and points as one important piece of evidence to the fringe benefits that are being offered by Banks. While the formation of the Deposit Insurance Corporation which has started functioning from 1 January 1962 was a measure that has restored public confidence in the stability of the banking system, in the matter of deposit creation, the Banks have to take into account the recent trend for surplus money in the hands of the people to flow into other sectors. The utility of the Deposit rates war to attract larger deposits has been demonstrated by the increase in the cost of operation that the banking system as a whole has experienced. A fresh agreement on interest rates covering the whole banking system including the large, medium and small banks is being assiduously sought, though the negotiations in this behalf have proved tortuous. Along with maxima on Deposit rates, the need for minima on Advances rates is also being keenly felt. Mr Pai has hailed the recent move to have an agreement in the matter of interest rates

14 April 1962

of Advances as a step in the right direction. "A well-knit and well developed banking system must be able to render its services, whether in the matter of accepting of deposits or making advances or collection of bills at fairly the same rates all over the country". Such uniformity of banking charges invariably imply the need for both a ceiling on interest rates on Deposits and a floor for the Advances rates.

Need for Lower Lending Rates

AFTER 32 years of service with the Hongkong and Shanghai Banking Corporation, the Hon. Sir Michael Turner, the Chairman, is now relinquishing that office. It has been an exciting three decades and the developments that have taken place in the countries where HSBC operates have been revolutionary almost literally so. Independence from colonial rule has been achieved by not a few of the countries, development plans have been taken up and the role of the exchange banks has itself undergone a sea-change. Sir Michael will have good cause to derive pleasure in the way in which HSBC, under him and with his guidance, has adapted itself to meeting the new challenges.

As ever, Sir Michael's statement, circulated with the accounts, takes the form of a comprehensive—and sometimes partly political—survey of Asian countries. While considerations of space will not allow a detailed review of the statement, there are one or two matters he has touched which are of immediate concern to students of the Indian money market.

Competition (of the unhealthy variety) for bank Deposits is not a problem that was or is uniquely India's. Sir Michael points out that in Hongkong such competition had caused a rise both in Deposit and Advance rates. He clearly deplores this, and states that "few would disagree with the view that the lower lending rates are the better for trade and industry"; the majority of the banks in the colony has since agreed on maxima for Deposit rates. The question has not been posed but needs to be asked: will higher Deposit rates really succeed in attracting new Deposits?

Sir Michael suggests that countries which have development plans have had little consultation with and scant regard for the effect they would have on the economies of other countries. The developing countries may soon find that they are unnecessarily competing with one another in export markets, whereas consultation might have prevented what is described as avoidance of duplication of efforts. The 64,000 dollar (Hong Kong of course in the present context) question is: will the threat posed by the formation of the ECM be looked upon as a challenge and an opportunity for the developing countries of Asia to consult more with one another, and to act more co-operatively on the basis of the needs of the region rather than of particular countries?

BANK RETURNS

Record Rise in Active Notes

The end of fiscal year transactions have made a profound impact upon the returns of the Reserve Bank for 6 April.

Active note circulation has expanded by record amount of Rs 62.75 crores to Rs 2,133.05 crores; and there has similarly been outflow of Rupee coin in the very large amount of Rs 3.15 crores, the rise of Rs 1.85 crores under the head notwithstanding. For we may take it for certain that the Central Government has exercised its right to tender Rupee coin for Rs 5 crores to Reserve Bank and receive credit thereagainst; in the light of such tremendous increase in Active Notes it is unthinkable that there can have been, as would ostensibly be suggested by the rise in Rupee Coin during the week.

Deficit financing has been instituted for a minimum of Rs 60 crores. Currency has been expanded against Rupee Securities for Rs 55 crores, and there is besides an increase of Rs 4.40 crores in Investments in the Banking Department, Foreign Securities are unchanged at Rs 113.86 crores, and consequently the Reserve Bank's cash in the till has been drawn down by Rs 5.90 crores to Rs 19.47

Payments of the Central Government, in respect of year end disbursements, have been so heavy, that the banking system appears to have benefited (presumably largely by way of rise in Deposits but possibly to a certain extent also by decline in Advances) very considerably indeed. Reserve Balances of member banks have gone up by Rs 13.45 crores to Rs 86.18 crores, and large reduction of indebtedness to the Reserve Bank is implied in the sharp fall of Rs 25.28 crores to Rs 152.41 crores in the latter's portfolio of other loans and advances. Indeed, the Reserve Bank's advances against usance bills have declined by just under Rs 16 crores to Rs 24.74 crores.

Heavy repayment of loans by the States is suggested by (a) the fall of Rs 9.09 crores to Rs 6.80 crores in their Deposits; (b) the increase of Rs 14.64 crores to Rs 95.53 crores in their ways and means borrowings; and (c) the fact that, despite heavy year-end payments, the Centre's balance have risen by Rs 2.31 crores to Rs 73.61 crores. Besides the rise of Rs 16.50 crores to Rs 63.10 crores in Treasury Bills Purchased and Discounted by the Reserve Bank may possibly mean that the States, by rediscounting Treasury Bills, have sought to replenish their dwindling balances.

Dwindling again are the foreign assets held by the Reserve Bank. For the second week in succession, the import surplus to be met by drawn-down foreign exchange is large. Balances Held Abroad are lower by Rs 4.51 crores at Rs 11.33 crores, and foreign assets held by the Reserve Bank now barely exceed Rs 125 crores.

The return of the State Bank for 6 April reveals again a sharp rise of Rs 14.96 crores

to Rs 587.24 crores in Deposits. Government Securities are lower by Rs 10.97 crores at Rs 243.31 crores. Other investments are slightly higher at Rs 9.11 crores. There is a rise of Rs 4.60 crores to Rs 291.44 crores in Advances. Cash Balances are higher by Rs 8.80 crores at Rs 30.48 crores.

As anticipated, the year-end disbursements of the Central Government have immeasurably benefited the banking system. We had seen last week that the State Bank had, in the week ended 30 March, reported a rise of Rs 12.32 crores in Deposits. The return of Scheduled Banks for the same week, now available, indicates that other Scheduled Banks have experienced an even larger accretion. Net Demand Deposits (that is, excluding borrowings from banks) have risen by nearly Rs 24 crores from Rs 864.87 crores to Rs 888.78 crores; and net Time Deposits show a smaller rise of Rs 3.80 crores to Rs 1,157.61 crores. Thus, the improvement in the Deposits of other Scheduled Banks works out to Rs 14.39 crores. At the same time, however, busy season pressures continued to be in evidence, so that the Rs 1,400 crore mark in net Advances has now been exceeded. The total of Advances has expanded sharply by Rs 13.28 crores to Rs 1,418.31 crores, with the State Bank accountable for slightly less than Rs 4 crores of the increase. Nevertheless the new resources have enabled banks to reduce indebtedness to the Reserve Bank by Rs 6.29 crores to Rs 53.03 crores, though borrowings from the State Bank have moved up by Rs 1.68 crores to Rs 18.84 crores. While the rise of a little over Rs 10 crores to Rs 601.45 crores in gilt-edged is attributable to the State Bank, it is noteworthy that cash balances of other Scheduled Banks appreciably improved. On the face of it cash balances appear to have risen only by Rs 1.78 crores, but to this we have to add Rs 5.43 crores representing the decline in that week in the cash balances of the State Bank. The resources position of the Scheduled Banks is now somewhat better, but with the busy season heading for its peak at the end of April, some element of monetary stringency is not to be ruled out.

Treasury Bills

Tenders for Rs. 2,00,00,000 of 91 days' Government of India Treasury Bills were opened on Tuesday, 10 April. 1962. Total amount offered was Rs 2,07,00,000. Tenders at Rs 99.340 per cent were accepted in full. Total amount accepted was Rs 2,00,00,000, the average rate of accepted tenders being Rs 2.640 per cent per annum.

Notes

COAL

Familiar Woes

In his speech at the twenty-ninth annual general meeting of the Indian Colliery Owners Association, Mr Rasiklal Worah, President of the Association, reviewed the problems facing the coal industry which have been aired at many a forum of businessmen in recent months. The difficulties created by shortage of railway wagons, inadequate supplies of power, scarcity of explosives and rigid price structure, etc, though all too familiar, should bear repetition in view of the great stake that is involved in reaching the coal target fixed in the Third Plan. The setback to coal production received in the very first year of the Third Plan should be a matter for particular concern. The main hindrance to production is admittedly constituted by transport bottleneck. But relieving transport shortage is obviously a matter of not only increasing the number of railway wagons, but also radically changing the present system of allotment, the type of wagons etc. Mr Worah has in this connection stated that due to haphazard and irregular placement of empties at the collieries, there has resulted a violent disruption of the equilibrium between production and distribution. The system of bulk allotment has also been found to be not working satisfactorily since it admits of no flexibility to satisfy the needs of consumers. The lack of facilities to

handle the box type of wagons has rendered the use of these kinds of wagons ineffective in coping with the transport requirements of the collieries. Arbitrary restrictions on movement of coal from certain pilot sections towards particular directions imposed by the Railways, have further added to the transport difficulties of collieries. A radical change in the present transport policy with reference to the coal industry is evidently called for to meet its full requirements.

Apart from the main problems of transport shortage etc, there are also other matters which have a bearing on the progress of coal production during the Third Plan. An important point for consideration is the need to set up ropeways for transportation of sand and also popularising sandstowing in collieries. There are some schemes under way for establishing ropeways in the important coal fields, but the progress of the scheme has been very slow. Further while Government has recognised the importance of sandstowing for which a subsidy has been allowed, the amount of the subsidy is too low to ensure widespread resort to it. The disbursement of the special assistance being provided to the industry for difficult mining has also been left in considerable arrears. This is deplorable considering the need for further widening the scope of such assistance and also enhancing the quantum of assistance.

Mr Worah has referred to a special problem posed by the accumulation of brickburning coal in many collieries for lack of proper transportation. He has suggested the deployment of a fleet of trucks for the movement of this coal from the collieries. Considering the demands of the construction industry for bricks and also the royalty of 2½ per cent that would accrue to the Government from coal of this kind, Mr Worah's suggestion seems worth considering.

Need for Price Revision

The difficulties of the coal industry are well brought out by the results of the Bengal Coal Company Limited for the year ended 31 October 1961. Profit is reduced although sales are higher by Rs 61 lakhs. Production during the year amounted to 3,188,709 tonnes and shows an increase of 92,196 tonnes. In his succinct statement circulated to the shareholders of the Bengal Coal Company along with the balance sheet of the company for the year ended 31 October 1961, Mr A. D. Ogilvie, the Chairman, has pointed out that shortage of transport power

and explosives is retarding production at the collieries. Output is adversely affected by restriction in power supply. The private sector collieries have been given an important role in the third plan inasmuch as they have to raise their level of raising by atleast 17 million tons during the course of the Third Plan. This is indeed a formidable task but the private enterprise in the coal industry is quite prepared, even eager, to do its part. Thanks to the World Bank's willingness to render substantial assistance, the problem of import of additional plant and machinery required may ease. But expansion of capacity involves deployment of additional funds which the private collieries simply do not have. Government's price policy as applied to the industry is to blame for this state of affairs. According to Mr Ogilvie the present price policy "still denies to the industry the ability to plough back adequate funds for capital expenditure". Government's responsibility does not end with allocating the targets of production. It is also its duty to ensure that the private sector collieries are enabled to complete their task successfully.

NMDC

Avoidable Delays

The Estimates Committee of the Lok Sabha, has in its report on the National Mineral Development Corporation, put forward a number of important suggestions for improving the working of the Corporation and for expediting the progress of the projects being undertaken by it. The Corporation was set up in 1958 with the object of exploiting the mineral resources other than oil, natural gas, coal and lignite in the public sector. The immediate need for the setting up of a Corporation for development of mineral resources arose out of a contract entered into with Japan for the supply of 2 million tons of iron ore per annum with effect from 1964. This contract with Japan opened up prospects for exploitation of iron ore at Kiriburu which was the first project assigned to the Corporation. Subsequently, four other projects, viz, the Panna Diamond Mining Project, the Khetri Copper Project the Daribo Copper Project and the Bailadila Iron Ore Project were also entrusted to the Corporation. The progress of these projects as the Estimates Committee has reviewed it, does not appear to be satisfactory. The Committee has drawn pointed attention to the needless delay that has crept into the execution of the two important projects for development of iron ore resources at Kiriburu and Bailadila. These are projects which have arisen out of the deal concluded by the Government for supply of iron ore to Japan on a long term basis, and it is worthwhile to note that Japan has offered foreign exchange credit for the development of these two projects. Strict adherence to time schedule has more than ordinary importance in the case of these two projects.

The Committee has urged measure to eliminate delays in the working of the other projects and has pointed out that delays only serve invariably to increase the estimated cost of projects.

The non-utilisation of fines that are mined along with lump ore at Kiriburu has also come for criticism at the hands of the Estimates Committee. The Committee has drawn attention to the widespread sintering operations in the UK for recovering iron from fines and states that in 1953, the output of sinter amounted to 24 per cent of the total of 20 million tons consumed in that country. It has estimated that in addition to the present production of 10.5 million tons of iron ore which is in lumps, seven million tons of ore could be produced in the shape of fines annually. With this objective in view, the Committee has suggested that the Government should at least now take immediate and effective measures to ensure that sintering is invariably provided for the utilisation of iron ore fines so as to avoid further waste of national wealth.

The existence of a multiplicity of agencies in the public sector to develop mineral resources has also not been viewed with favour by the Committee. There are at present three agencies in the public sector for exploitation of iron resources. These are the Bolani Ores Ltd, the Hindustan Steel Ltd and the National Mineral Development Corporation Ltd. To secure the advantages of co-ordinated development, pooling of resources technical skill, experience plant and machinery, research and training it has been suggested that the Government should consider the feasibility of having only one Corporation for the mining of iron ore in the public sector. Along with this, an integrated scheme for training of technical personnel required in the mining industry has

14 April 1962

also been recommended. The present tendency on the part of each public undertaking to start its own training schemes without co-ordinating its requirements with those of other undertakings functioning in the same field of technology has led to inexcusable waste of public expenditure. An integrated scheme can result in substantial economies in expenditure on training schemes.

COTTON TEXTILES Fluctuating Fortunes

Much has of late been said about the cotton crisis the country is facing at present. The steep fall in production in the country during the current season, that arose out of a combination of factors particularly natural calamities, the rise in the tempo of cotton consumption, the limited scope for importing cotton and inadequate stock of this crop have landed the trade and industry in a virtual crisis. Even the latest announcement of arrangement made for importing cotton from the USA against the export of 50,000 tons of sugar does not provide any breathing space as the quantum is far inadequate as according to the present calculations the immediate requirements are of sizable magnitude of over one million bales to ensure comfortable supply position apart from providing for a happy carry-over for the next season. The current season's crop is estimated at about 43 lakh bales which along with the carryover of 22 lakh bales and 5 lakh bales of imported cotton will not allow for an appreciable carry-over after the anticipated consumption of 58 lakh bales of cotton this season. The replenishing of the alarmingly dwindling stock is another formidable task. In the light of these factors only the import of cotton on a large scale alone can assist the trade and industry to extricate themselves from the embarrassing position in which they are steeped. As rightly remarked by Mr Pratap Bhogilal, the Chairman of the Millowners' Association, in Bombay the Government should at least import 10 lakh bales of cotton to enable the textile industry to maintain the present level of production. But the possibility of securing enough cotton from foreign countries is pretty bleak on account of the stringent foreign exchange reserves and as such arrangements for cotton on barter deals or under deferred payments basis will be eminently suitable. The Government should show no laxity in exploring all the possible channels through which cotton can be secured under such arrangements. At the same time stress should be laid on stepping up indigenous production which is unfortunately at a low level despite the largest acreage in the world.

Another problem touched by Mr Bhogilal is that of modernisation and rationalisation of the textile industry. The fluctuating fortunes of the textile industry and the comparatively low earnings in recent years have rendered it difficult to reserve adequate money for the implementation of the modernisation and expansion programmes. The Government should allot sufficient foreign exchange credit to help the industry to import capital goods. The acceptance by the Government of the recommendation of the Mudaliar committee report for providing export incentives will also be of immense help to the industry. The modernisation of the industry can go a long way in strengthening the competitive ability of the industry by improving the quality as well as reducing the cost of production.

As against the increase of Rs 5.21 crores in the receipts, the expenditure on revenue account is estimated to rise by Rs 15.80 crores. The major increases are Rs 2.47 crores under taxes on vehicles on account of transfer to larger receipts to the State

also been recommended. The present tendency on the part of each public undertaking to start its own training schemes without co-ordinating its requirements with those of other undertakings functioning in the same field of technology has led to inexcusable waste of public expenditure. An integrated scheme can result in substantial economies in expenditure on training schemes.

STATE BUDGETS

Maharashtra

Following the familiar pattern of many another State Budget the Budget estimates of Maharashtra for 1962-63 presented to the State Assembly seeks a mere vote on account with a view to covering the day-to-day expenditure of the Government for the first four months of the year. As the new Government has taken over only a few days ago, the estimates framed are only to provide for standing charges and for the continuation of the schemes already in progress. Naturally the speech of Mr S. G. Barve, the Finance Minister, did not create any jitters and it was more or less of the nature of a progress report of the year that has just ended.

The Budget estimates disclose a revenue deficit of Rs 1.95 crores on the revenue account at the existing level of taxation. The revenue receipts stand at Rs 132.50 and the revenue expenditure at Rs 134.45 crores. These estimates show an increase of Rs 16.67 crores in revenue and Rs 7.96 crores in expenditure when compared with the current year's revised estimates. The increase is the obvious result of the change in the account classification of working expenses and recoveries of interest charges from commercial schemes brought about from 1962-63. The improvement of Rs 8.71 crores in the revenue position from a deficit of Rs 10.66 estimated for the current year to a deficit of Rs 1.95 crores is evidently due to the larger share in the income-tax receipts and Union excise duties, the stoppage of payment to Gujarat Government under the Bombay Reorganisation Act with effect from next year (Rs 6.14 crores), increased grants from the Centre for Plan expenditure (Rs 2.3 crores), larger revenue from sales-tax, thanks to better trade and commerce (Rs 1.53 crores) and smaller expenditure under famine (Rs 2.78 crores).

The revised estimates in receipts over 1961-62 Budget estimates of Rs 5.21 crores, is chiefly on account of the increase in receipts under taxes other than Corporation tax and estate duty (Rs 1.32 crores), State excise duty (Rs 0.53 crore), taxes on vehicles (Rs 1.38 crores) and sales-tax (Rs 2.49 crores).

As against the increase of Rs 5.21 crores in the receipts, the expenditure on revenue account is estimated to rise by Rs 15.80 crores. The major increases are Rs 2.47 crores under taxes on vehicles on account of transfer to larger receipts to the State

Road Fund, Rs 2.30 crores under debt charges, Rs 1.36 crores under general administration, Rs 2.48 crores under education, Rs 0.73 crore under agriculture, Rs 0.62 crore under co-operation and Rs 3.14 crores under famine relief. As explained by the Finance Minister, the increase in expenditure under general administration and famine relief was due to expenditure on flood relief and restoration of public utility service in Poona, Vidarbha and Marathwada and on relief through seasonal employment to those affected by near-security conditions.

While referring to the progress of the Plan Mr Barve stated that Plan provisions have not only been fully utilised but have been exceeded to some extent. Out of the aggregate allocation of Rs 390.20 crores for the State's Third Plan, a provision of Rs 54.60 crores or 14 per cent of the total was made for 1961-62. This provision was solely deployed on the continuation of the spill-over schemes and the Government was particular to ensure that work on them was not prejudiced by the diversion of funds to meet the emergent needs such as the Koyana project, the construction of World Diary, schemes for agricultural production, for development of power and irrigation and for industry development etc. It needs special mention that the tempo of Plan expenditure was well maintained and the anticipated expenditure during the year will, in all probability exceed the budgeted figure of Rs 1 crore.

Mr Barve was critical of the impact on the State's resources of the Third Finance Commission's recommendations in regard to the devolution of Union excise duties and income-tax receipts. It should be remembered the State was deprived of the special grant-in-aid under Article 257 of the Constitution. Besides, the Finance Commission has overlooked the position about "communications" in the State in excluding it from the benefit of this grant. This seems a genuine grievance as large tracts of Marathwada, Vidarbha and the Konkan region are seriously deficient in communications.

Rajasthan

Rajasthan is the Second State that has so far come out with proposals for imposing fresh taxation in the Budget estimates for 1962-63. The new taxation measures will yield an income of Rs 128 lakhs which will not only wipe out the deficit but also provide for a small surplus. The revenue deficit account indicates a deficit to the tune of Rs 127 lakhs whereas the capital accounts show a surplus of Rs 5 lakhs and the overall surplus will be Rs 6 lakhs when considering the accretion to the revenue from new taxation.

The new taxes will affect all sections of the people. The sales tax on ornaments and jewellery has been enhanced from ½ per cent to 2 per cent, and that on other articles made of gold and silver from 1 per cent to 2 per cent. A uniform rate of sales tax on oilseeds has been finalised. The excise duty on coun-

try liquor and motor passenger tax has been raised by 5 per cent. A similar rise has been effected in the entertainment tax. The existing exemption on pulses including gram has been withdrawn.

[There are also some tax reliefs. Sales tax on the sale of packing material (bardana) by cloth dealers has been abolished. The annual turnover limit for registration for sales-tax has been raised to Rs 15,000 from Rs 12,000 in the case of ordinary dealer other than importers and manufacturers and Rs 25,000 in the case of manufacturing cooperative societies. Hereafter the cultivator utilising materials like bajri and clay and local stones other than roof slabs need not pay mineral royalty. While presenting the Budget estimates Mr B. N. Kaul, the Finance Minister, has announced that a market loan of Rs 400 lakhs will be raised during the next financial year and the State's share of small savings was expected to be Rs 200 lakhs. All these revenue would turn the overall deficit into a modest surplus in capital account.

The revised estimates for 1961-62 place revenue receipts at Rs 4,777 lakhs against the original estimates of Rs 4,833 lakhs. On the contrary the revised estimates of expenditure have gone up to Rs 5,280 lakhs from Rs 4,926 lakhs. The deficit in the revenue account thus comes to 93 lakhs in the original estimate.

Punjab

The Punjab Budget for 1962-63 presented to the State Assembly by the Finance Minister Dr Gopichand Bhargava discloses a deficit of Rs 14 lakhs, the revenue receipts being placed at Rs 87.01 crores and revenue expenditure at Rs 87.15 crores. The deficit of Rs 14 lakhs compares with the surplus of Rs 530 lakhs in the revised estimates for 1961-62. However while taking into account the revenue and capital budgets the overall deficit will amount to Rs 405 lakhs since the receipts are being marked at Rs 13,322 lakhs as opposed to expenditure of Rs 13,727 lakhs. The deficit of Rs 405 lakhs will be wiped out to the extent of Rs 122 lakhs from cash balances while the remaining Rs 283 lakhs will be left uncovered for the time being. It is strange that there was no indication of any fresh tax proposals.

Referring to the 1961-62 actuals Dr Gopichand Bhargava stated that the revenue receipts would be of the order of Rs 7,453 lakhs indicating a surplus of Rs 530 lakhs as against the deficit of Rs 96 lakhs in the original estimate.

Punjab, as mentioned by the Finance Minister, has received a raw deal from the Third Finance Commission for the benefit that will accrue to State from the award of the Finance Commission is only Rs 14 lakhs. Another disconcerting factor is the decision of the Government of India to discontinue the grant-in-aid of revenues to the extent of Rs 225 lakhs which had been allowed consequent on the recommendations of the Second Finance Commission in view of the special problems of that border State.

Some concession in sales-tax was also announced by the Finance Minister in his Budget speech. Periodicals like newspapers will be exempted from sales-tax and the sales made by dealers in course of inter-State trade and commerce to any of the diplomatic missions or any specialised agency of the United Nations Organisation will be exempted from Central sales-tax. Moreover no tax will be levied under the Central sales-tax on any dealer having his place of business in the State in respect of sales of any goods effected in course of inter-State trade or commerce to the cooperative societies. Another measure in this direction is the increase of taxable turnover for cooking establishments from Rs 10,000 to Rs 25,000 for the purpose of tax.

US

A Letter from Washington

If, as it has been said, critical self-examination is a key to progress in a free society, there is a positive virtue in admitting that the pace of the US economic upsurge seems to have slowed somewhat in the past few months, and that there are challenges to be faced.

By the same token, however, the admission should not be overstated. The fact is that business activity has maintained its rising trend, and the solid accomplishments of the past year augur well for the future.

The total output of goods and services, or Gross National Product (GNP), for instance, has grown some 10 per cent in the course of the past year—a gain that compares favourably with other post-war recoveries. Prices have been generally stable. Personal income has climbed from peak to peak. Corporate earnings have rebounded to record highs. The trade surplus—the excess of exports over imports—rose to a near-record level last year, and the deficit in the international balance of payment was sharply reduced. Monetary policy has kept funds readily available for lending, and interest rates have remained relatively stable.

Even in those economic areas which appeared to have posed notably difficult challenges significant progress is being made. In the steel industry, some uncertainty was developing over the course of labour-management contract negotiations. But in the past few days that uncertainty has turned to grateful relief as an early and non-inflationary settlement was reported.

A second challenge lies in the area of private demand—business and consumer spending. The latest government survey points to an eight per cent increase in business outlays for new plant and equipment this year, and experience shows that these plans usually are revised upward in a period of expanding sales, such as the present.

In addition, pending government moves to reduce the tax burden on investment via special credits and liberalized depreciation allowances would further improve the climate

for increased business expenditures. It is noteworthy in this connection that the House of Representatives has just approved tax credit legislation, which now goes to the Senate for its consideration.

Consumer spending also has been on the rise, with continued increases in personal income, an important sustaining factor. In this connection, the University of Michigan's Survey Research Centre notes a significant rise in consumer confidence and buying intentions.

A third challenge relates to the balance of payments, which still is something of a problem despite last year's improvement. It is especially heartening, therefore, that preliminary indications point to a dramatic reduction of the payments deficit during the first quarter of this year. About \$200 million for the quarter, the deficit has dropped to an annual rate of less than \$1,500 million, compared with the actual \$2,500 million for all of 1961 and the annual average of \$3,700 million for 1958-1966.

Finally, construction contract awards have started to a record high, well above earlier expectations. This indicates that actual construction activity this year also will be exceeding the earlier projections, despite an apparently slow start for home building. Significantly, the upsurge in contracts extends to both residential and non-residential construction.

All of this helps explain the Kennedy administration's continued confidence in the 1962 economic prospects. While economic activity in the early months of this year has not quite come up to expectations, the belief is that a vigorous second-quarter advance would bring within realistic reach the original estimate of a 1962 GNP in the neighbourhood of \$570,000 million. If achieved, this would mean that the US economy would be operating at close to a \$600,000 million rate by the end of the year.

RUBBER

Licensing Policy

The rubber manufacturing industry has taken rapid strides in recent years. The index of production for 1961 having recorded a rise of 7.35 per cent over that of the previous year. With improvement in the economic condition of the people and accelerated growth of industry, the demand for rubber manufactures will also show a progressive increase. Timely steps are being taken to raise indigenous capacity of rubber manufactures as will be evident from the number of licences issued for the establishment of units or substantial expansion of existing units. But it would appear that it will be some considerable time before the full benefit of increased indigenous production can be reaped. For, in the planning of the progress of the industry there is a serious flaw in that indigenous production of raw rubber is lagging far behind requirements. In 1961 rubber consumption totalled 48,319 tonnes against a production of 28,992 tonnes, leaving

a large deficit of 21,327 tonnes. The shortfall may be more in the next five years as by 1965 estimated consumption and production of natural rubber are placed at 94,000 tonnes and 45,000 tonnes respectively. Part of the gap may be filled by indigenous production of synthetic rubber but the bulk of the deficit would have to be made up by imports. It is therefore clear that the problem of procuring adequate raw rubber for the industry may assume serious proportions what with the present extreme paucity of foreign exchange. Economies in raw rubber consumption may also become inevitable. The position may however be retrieved to a great extent if Government's reported move to import natural rubber from Malaya on rupee payment is crowned with success.

The shortage of raw rubber however does not seem to worry those in Government who are responsible for issuing licences for new units or expansion of capacity of existing units. Speaking at the sixteenth annual general meeting of the National Rubber Manufacturers Limited, the Chairman Mr Mookerjee has shown how the licensing policy is adversely affecting the industry. For instance, already the capacity of cycle tyres and tubes is in excess of demand—in 1961 production of cycle tubes totalled approximately 13.6 million numbers against an anticipated demand of 12 million numbers resulting in a serious glut in the market. But it would appear that government is bent on creating a much worse situation in regard to cycle tyres as well. It is said that licences for cycle tyre production will be granted on the basis of a production target of 31 million numbers by 1965. The industry however does not place demand, including export quotas, above 20 million numbers. Licensing as applied to an industry such as the rubber manufacturers industry, should be realistic especially when the country is far from self-sufficient in raw rubber and has to expend considerable amounts of valuable foreign exchange to fill the gap in the supply of its most important raw material.

SUGAR

Over-Production

In his well reasoned speech at the annual general meeting of the shareholders of the East India Distilleries and Sugar Factories Limited, Mr G. N. Noel-Tod, Chairman, finds no early prospect of a return to full production for the sugar industry. The current sugar year started with a total stock of 12 lakh tonnes. Production this year despite the 10 per cent cut is expected to amount to between 28 and 30 lakh tonnes. With no change in excise duty internal consumption may not rise beyond 24 lakh tonnes while we may consider ourselves lucky if we are able to export 5 lakh tonnes. Thus

the next year also will start with more or less the same quantity of stocks as the current sugar year and Mr Noel-Tod quite justifiably voices the apprehension that there may be a further enforced cut in production.

It will be ideal if we are able to dispose of all excess sugar through exports. But considering the world price of sugar and our cost of production export will only entail heavy loss. This is no solution. The remedy has to be sought elsewhere and Mr Noel-Tod has pointed out that so long as world sugar price is uneconomic, "there seems to be no alternative to Government facing up to a temporary loss of revenue by reducing the excise duty on sugar in order to stimulate internal consumption, and so use up the present unproductive excess stock, and by reason of higher internal consumption gradually restore the quantum of revenue to something approaching its present figure." There is great scope for stimulating internal consumption because still the per capita consumption of sugar in India is at the meagre level—5.5 kilos as compared with 55 kilos in the UK. It is the price of sugar that is effectively keeping down internal consumption and the high price is the result of the high excise duty which at prevailing rate works out to Rs 222 per tonne. Mr Noel-Tod thinks that there are other steps which should be taken to remedy the situation. [The fact that the industry is forced to ake cane at a high minimum price greatly restricts the scope for affecting any reduction in the cost of production of sugar. No consideration is given to the need for ensuring that the cane offered to the mills is of fairly high quality kind the fact that the quality of the cane used has a direct bearing on the production of sugar. It is essential therefore that the price paid to the cane is linked to its quality.]

INDUSTRIAL INDIA

Calculator Factory for India

The First factory to produce Calculators in India will be established in Madras shortly.

The Government of India have granted AB Atvidabergs Industrier a licence to establish this factory. A separate company, Facit Asia Ltd., has been formed for the purpose. The largest block of shares in this company is held by Atvidabergs, with the remainder distributed between Indian interests. Atvidabergs has assisted in the local production of typewriters by supplying tools and machines from Sweden and training technical personnel. It is estimated that a preliminary investment of Skr 3 million (Rs 30 lakhs) will be needed to erect the new calculator factory. The Managing Director of the new company will be Mr S. Rajam, but the factory will be under Swedish technical direction. Construction work will get under way shortly and is scheduled for completion sometime during 1963. The initial construction phase will employ a labour force of about 150.

Clive Street Gossip

"I must have liberty
Withal, as large a charter as the wind
To blow on whom I please"
—As You Like It.

THE composition of the new central cabinet had been talked to inanition long before Mr Nehru announced his new team. Speculative forecasts, pretty wild in the beginning, turned out to be accurate enough last week-end for the actual list to come as an anti-climax. Wistfulness about new faces in the cabinet has its points of affinity with our weariness with the "star system" in our films. But this logically involves the acceptance of Mr Jaya Prakash Narayan's view that the greatest star of them all should quit. This has been found so far impracticable for reasons good and bad. Even people who think less drastically may have wished for a different set of ministers for one reason or the other. But Mr Nehru has, probably after some reflection, plumped for continuity, a virtue at all times, certainly in the next few years. For a person who has built for himself a "radical" persona, Mr Nehru has an instinctive "conservative" streak in him which asserts itself in crucial moments and which has saved from the political suicide that has been the lot of many a leftist politician who thinks of politics in terms of the theatre. Mr Nehru has always distrusted the grand gesture and other symbolic claptrap. Mr Desai's and Mr Menon's continuance in their respective portfolios is, in different ways, Nehru's answer to much unsolicited advice from the left and the right. The only new entrant in the cabinet is Mr Subramaniam, a person, who won his spurs as a pragmatist and a "functional" minister and who is ideologically neutral. Of the other "young men" who are being elevated to cabinet rank, Mr K. D. Malaviya (whom, the Economist singled out for praise in its review of the Indian Economy last year) had earned it by his versatility and resourcefulness in difficult negotiations. He has, in addition to oil, another problem mineral, coal, assigned to him. He certainly has his work cut out for him here. (Incidentally, Sardar Swaran Singh, has, as the new Railway Minister, the opportunity thrust on him for trying out his ideas on coal movement that he had earlier reportedly urged in vain on Mr Jagjivan Ram.) Mr Manubhai Shah's case is rather unfortunate. Both on grounds of the importance of the

subject of Foreign Trade and of personal deserts, a cabinet ranking would certainly seem to be indicated. Unfortunately the contretemps over this very assignment last year has repeated itself in a different form. But it is generally believed that cabinet-making is by no means over with last Monday's announcement, and Mr Nehru is reported to have told Mr Shah that he may have second thoughts on the subject. But by his decision not to join as a Minister of State, Mr Shah has probably made it difficult for Mr Nehru to make such subsequent amends.

Since the above went to press, I find from the papers that Mr Shah has decided to join the ministry—a sensible decision.

Fifty one weeks in a year are a fair ration for grumbling and so, during this, the Railway Week, I propose to count my railway blessings in stead. And despite everything, what a long list they make! A railway whose accounts are not in the red isn't such a commonplace that we should forbear from cheering when we see it and when its freight rates are pretty low by world standards, it does seem some achievement. Last Year has been pretty bad for the railways safety reputation, with accidents running close on each other's heels, but the general record of the Indian Railways, I am told, is good. But the most tangible gain of recent years has been the increase in the number and range of travelling amenities. Railway travel has become bearable, if not a pleasure and if it is not, the blame is not always the Railways. Indubitably the most popular thing that the Railways have done in their hundred years' history is the provision of sleeping facilities for long distance Third Class passengers at, in most cases, no extra charge. Overcrowding is still a problem but it has certainly ceased to be the nightmare of the old days. You may not even today arrive as sprucely as you departed, but you certainly can wash the dirt—or a reasonable amount of it—off your face, for these days, the taps in the compartments do function most of the time. Snobbery, especially in catering amenities, is pleasantly absent now. Indeed, the complaint is the other way about now: bumptious bullies

probably without tickets, not infrequently throw their weight about in dining cars these days. Which reminds me of the juvenile and other delinquents, who think it cute to outwit and even assault the ticket examiner when he asks for their tickets. So, if the next time you grouse about the Railways, a railway official tells you judiciously that everybody gets the Railway he deserves, I wouldn't consider it too rude, even if the incident took place during the Railway Week.

Even as the negotiations over Britain's membership of the EEC are taking their tortuous course, generalisations about its political and economic implications are cancelling each other out. Events too are casting their ironic shadows on professions. President Kennedy spoke eloquently early this year about free trade and meeting the challenges of the ECM by competitive tariff-cutting. But last week, the US had its first major brush since that speech with a member of the ECM when it started imposing import duties on goods from Belgium. The Commonwealth is a poor relation that is becoming more and more of an embarrassment to Great Britain despite professions to the contrary. Meantime, the political implications of the community have become the subject of increasing controversy and misgiving. Among the members themselves, the widest differences of opinion exist. From whole-hoggers who want an United States of Europe on the lines of the United States of America, to President de Gaulle who has too good an opinion of himself to let anything of the sort happen there is the broadest spectrum of opinion. In Britain misgivings are becoming more vocal. The Economist discusses two dissident voices this week—one a Fabian pamphlet by Mr William Pickles and another an Institute of Economic Affairs pamphlet by Professor Meade, an acknowledged expert on the subject, who argues that "Britain must be prepared, for the time being at least, to remain outside." Mr Pickle's objections, as summarised by the Economist, appear to proceed from his feeling that the EEC is the bureaucrat's dream come true with politicians being allowed to go through the appropriate motions. He is also apprehensive that the community might render nugatory such socialistic gains as national states have so far wrung out of big business. The community's record in such things like anti-cartel moves and social services has not been spectacular. Its most publicised activity has been in the field of

trade, which explains the fact that it is better known as ECM than as EEC.

From England comes the cautionary tale of a man who tried to be funny at the expense of the Income-tax people with disastrous consequences. Here are the facts. Mr X got a letter from the Inland Revenue addressed to the "personal representative of Mr X (deceased)." A trifle intrigued by this somewhat exaggerated report of his demise, he opened the envelope and discovered that he had been dead some two months. He then rang up the tax inspector in his capacity as personal representative of himself (which, in law, he probably was, though the point is moot), and found that some refund was due to the deceased. So far, so good. We all know what any sensible man would have done at this prospect of a perpetual tax holiday with a refund of tax to inaugurate it. But, alas, Mr X's sense of humour got the better of him at this point. He couldn't resist the vision of the tax inspector at the other end suddenly finding that he was talking to the dead man himself. The poor man didn't know that they make these tax inspectors tough as they come. The man at the other end heard him out, apologised for the inconvenience caused and said that Mr X will hear from him again. And so he did, about a demand of tax for the period he was supposedly dead. Will tax-payers never learn? Hasn't anyone told Mr X that it never does to argue with the income-tax people, even when they tell you to your face that you are dead? And how convenient can death be from the tax point of view! Mr X couldn't have seen or read Kauffman and Hart's play "You can't take it with you." If he had, he would have let the dead well alone as the scripture enjoins him to. You may recall how the old man, Grandpa Vanderhof had his tax troubles solved by the expedient of a fictitious death. Years ago, one of the members of his odd menagerie had died suddenly and in the casual way of that crazy joint no one had ascertained his surname though he had lived with them for five years. So they gave him Grandpa's name and a jolly funeral. And when the exasperated tax-inspector comes (at the end of a rather one-sided correspondence between the US government and Grandpa) and pesters him for back-taxes for twenty-two years, Grandpa is able to prove that he has been dead for eight years. Ever a gentleman, the US government apologises and tells him that probably some refund is due to him! Which only shows what a little co-operation with the department can do to increase everybody's happiness.

EAVESDROPPER.

Olympus

Allocations

With the assumption of office by the new Council of Ministers at the Centre, early decisions are expected on a number of matters concerning implementation of plan projects. The team of experts of World Bank and the IDA, which came a month ago for discussions on the projectwise allocation of the aid already sanctioned, has resumed discussions with the Ministries concerned. They are also expected to meet the Planning Commission for a general review of foreign assistance for the Third Plan. Apart from the allocation of aid to individual projects, the questions of utilisation of aid will also be examined in the course of these discussions. It has been suggested that one of the reasons for the slow pace of utilisation is the long-drawn-out process of appropriation of the loans already sanctioned by the World Bank or other agencies. Adoption by lending agencies of speedier procedure for appropriation of loans will be helpful in maintaining the schedule of imple-

mentation. This is a matter of considerable importance as some of the loans, for instance, the IDA loan of Rs 33 crores for road development, sanctioned last year, set a definite time limit for implementation of the programme.

Another matter which has been constantly before the public is the question of US assistance for the fourth public sector steel plant at Bokaro. As a result of the delay in arranging for foreign assistance, it is now considered necessary to plan for an initial capacity of 2 million tons with provision for further expansion at a later stage, in order to ensure adequate supplies of steel during the Fourth Plan. Ambassador Galbraith, who had gone to Washington to testify before a Congressional Committee, is understood to have returned with a formula which will be acceptable to both sides. The last round of the negotiations will start as soon as the newly constituted Ministry of Steel and Heavy Industries under Mr. C. Subramaniam settles down to work. It has been announced that the new Ministry will deal with both public and private sector establishments in Steel and the other Heavy industries that have been transferred from the Ministry of Commerce and Industry, to the newly created department of Heavy Industry. According to the President's Order of April 10, making certain amendments in the Government of India (Allocation of Business) Rules, 1961, the following subjects have been allocated to the Department of Heavy Industries: Manufacture of Heavy Engineering Equipment for all industries including coal mining equipment. (2) Heavy Machinery Project. (3) Foundry Forge Project. (4) Coal Mining Equipment Project. (5) Heavy Electrical Equipment Project. (6) Machinery Industries including Machine Tools and Steel manufacture (7) Auto industries, including tractors, earth moving equipment and diesel engines; (8) Heavy Electrical Engineering Industries. (9) Cement. (10) Fertilisers. (11) Public sector projects falling under the above subjects; (12) The Directorates of the Development Wing dealing with the above subjects.

General Industrial Policy and the administration of the Industries (Development and Regulation) Act, 1951 will remain with the Department of Industry under the Ministry of Commerce & Industry, as also Chemical Industries other than fertilisers, Small Scale Industries, Light Industries, Cables, Optical Glass Project and

some other subjects formerly handled by the Department of Commerce. The Department of Commerce has been abolished and a new Department of International Trade has been created. This Department will deal with most of the matters handled by the Department of Commerce. It will deal with Foreign Trade, State Trading, Import and Export Trade Control, Commercial Intelligence and Statistics, Plantation Industries like Tea, Rubber and Coffee, Textiles, Tariffs and Customs. A number of attached and subordinate offices and State Undertakings related to the above subjects also come under this department including the STC, Export Credit Risks Insurance Corporation and the Coir Board. But, Internal and Inter-State Trade, Control of Futures Trading, Essential Commodities Act, Trade Marks, Patents and Designs, Village Industries and a number of attached and subordinate offices including office of Economic Adviser to Government of India, Forward Markets Commission, and the Indian Standards Institution which were formerly under the Department of Commerce have been transferred to the Department of Industry.

Over to Metric

The practical problems of post graduate engineering education and research were considered at a conference of the representatives of Technical Institutions which met on April 7, and 8. The heartening progress achieved in expanding the facilities for technical education was reviewed by Prof M. S. Thacker, Secretary Ministry of Scientific Research and Cultural Affairs, who inaugurated the Conference. He pointed out that apart from training of technicians, it was also a matter of urgent necessity to train personnel with a technical background for top executive and managerial positions. The conference considered the questions of staff for post graduate courses, improvement of undergraduate facilities necessary to serve as the basis for advanced works and other organisational and administrative matters. The main topic discussed by the conference was the introduction of the metric system in technical institutions. The subject is not as simple as it may appear at first sight for it involves changes in the modes of thinking as well as of equipment and provision of adequate text books. A committee under the chairmanship of Dr Thacker meeting in October 1960 had recommended a schedule for bringing about the change over. The Union Ministry of Commerce had agreed to assist the institutions in the procurement of measuring instruments marked in the metric system from various sources and had also requested the institutions last June to prepare estimates of their requirements for new types of instruments dur-

ing each of the succeeding five years. But it seems that none of the institutions and State Governments has sent any list of requirements. As regards text books, Mr K. V Venkatachalam pointed out that we had the advantage that, in two of the Institutes of Technology at Bombay and Madras, where we have the benefit of the collaboration of the USSR and West Germany respectively, instruction was being imparted in the metric system, and we could draw on their text books and notes. But that will not be enough. A few teachers of technical institutions have offered to write or translate textbooks. The Ministry propose to call a meeting of all such persons to discuss the action to be taken and the kind of assistance that could be given to them for the purpose.

In this context, Dr Lal C. Verma referred to the aids that were now available with the Indian Standards Institution. The ISI has prepared a good deal of literature for their own use to guide conversion for various practices, as also handbooks for students and literature for training workers at different levels such as artisans, draughtsmen supervisors, foremen etc. The services of ISI, said Dr Verma, are now available to any institution that needed help in changing over to the metric system.

FICCI Regional Meetings

Suggestions have been made from time to time that apart from the annual session of the Federation held in March in Delhi, smaller sessions which will enable detailed discussions should be organised at regional centres. A beginning has now been made to institute such regional meetings which would help to highlight local problems. A meeting of the office bearers of the constituent organisations of the Federation in the western region, i.e., the Gujarat and Madhya Pradesh, has been convened by Mr Shriyans Prasad Jain to meet in Bombay on April 19. The will be preceded by a meeting of the Secretaries of these organisations with the Secretary-General and the Secretary of the Federation on April 18. Similar meetings will be held during the year to cover the southern, eastern and northern regions. The object of these meetings is to achieve better coordination of the activities of the Federation and its constituent units. Apart from problems of local importance, common problems of business throughout the country will also come up for discussion at these meetings. The Federation will analyse and group the various problems so that they could be appropriately taken up both with the Central Government and at the State level. Senior officials of the Governments of Maharashtra, Gujarat and Madhya Pradesh are expected to attend the forthcoming meeting in Bombay.

JUTE Earlier Firmness Not Maintained

THE pick-up in foreign demand for jute goods noticeable since the beginning of the year continues unabated as will be evident from the figures for stocks of jute goods at the end of March. Total stocks at 61,500 tonnes show a fall of 300 tonnes as compared with total stocks at the end of February of 61,800 tonnes. However, the only construction that has recorded a decline is hessian, the stocks of which are placed at 16,200 tonnes showing a fall of 900 tonnes as compared with the position at the end of the previous month. Stocks of sacking cloth and bag stand at 29,200 tonnes, showing a rise of 200 tonnes as February-end stocks were placed at 29,000 tonnes. Stocks of other goods at 16,100 tonnes are also higher having risen by 400 tonnes. At the corresponding date of last year total stocks were placed at 86,400 tonnes, comprising hessian stocks 25,000 tonnes, those of sacking 47,000 tonnes and stocks of other varieties 14,400 tonnes.

The fall in stocks in March has occurred even as production has risen. Total production during the month is placed at 97,800 tonnes comprising 38,400 tonnes of hessian, 45,200 tonnes of sacking and 14,200 tonnes of other varieties. This is in comparison with the total production in February of 92,200 tonnes comprising 37,800 tonnes of hessian, 42,600 tonnes of sacking and 11,800 tonnes of other varieties. The increased production in March is the result of a rise in working hours from 192 in February to 200 during the month.

It will be clear from the two sets of figures, stocks and production, for the month of March that despatches have been on a high level. While the actual figures are not yet available it is possible to conclude that total despatches should have been in the neighbourhood of 98,000 tonnes. At 61,500 tonnes total stocks are considerably below a month's production. The position with regard to hessian is that stocks of this category of goods are much below even half a month's production. Thanks to the continued high off-take of goods by overseas markets earlier expectation that sufficient stocks could be built up by working the mills to their full capacity upto March in the first instance

and later up to the end of the current month has not been fulfilled. Although mills have been given the freedom to operate all their looms, the attainment of production upto full installed capacity is governed by the limits of the industry's spinning capacity and the availability of electric power. It may be recalled that the IJMA had anticipated that power supply might not be available to the full extent needed from April onwards. However the IJMA has again lost no time in announcing the extension of the period of full working of mills by another month up to the end of May soon after the publication of the stock figures for March.

*Started quoting from 9 April

NOTE:—The rates for ready raw jute are nominally quoted at Rs 30 per maund for Assam Bottom; Rs 29.50 for Northern Bottom and Rs 32 for Daisee Bottom.

The jute goods market opened the week on a firm note following rumours of fresh US and Argentine business. Covering in ready and near positions was also partly responsible for the renewed interest. B Twills April closed last Friday at Rs 134.75 while Hessian 40" x 10 oz April was done at Rs 53.40. With buying interest developing in the futures market, prices moved up further on Saturday and the undertone was quite firm at close with the rates as follows: B Twills April Rs 136.25 and Hessian 40" x 10 oz April Rs 54.25. The undertone turned slightly easier on Monday despite the announcement of stock figures for March-end which showed an overall fall of 300 tonnes. B Twills April closed at Rs 136 with Hessian 40" x 10 oz at Rs 54. The reactionary trend became more pronounced on Tuesday presumably due to the fact that the IJMA announced its decision to permit mills to continue working to their full capacity up to the end of May. Covering business in near delivery hessian

and B Twills however continued to characterise trading. At the close of the day, the quotations were as follows: B Twills April Rs 135.50 and Hessian 40" x 10 oz Rs 53.75. On Wednesday the market continued to rule listless with the closing prices showing further small decline as follows: B Twills April was done at Rs 134.75 while Hessian 40" x 10 oz was quoted at Rs 53.25.

Earlier firmness in the raw jute market yielded place to a slightly easier trend with buyers keen to sell all varieties of jute. The minimum quota for this week is reported to be in the neighbourhood of 5 lakh maunds and later in the week some buying of low quality jute on behalf of the Buffer Stock Association has also been reported.

TEA

A New Record in World Output

ACCORDING to a report, production of Tea in the major producing countries of the world has touched a new record of 1,480.4 million pounds last year as against 1,368.7 million pounds in the previous year. With the exception of Indonesia, which harvested a crop of about 91 million pounds last year against 100.2 million pounds in 1960, the increase in production is shared by all the producing countries.

Production of Indian tea has risen from 697.1 million pounds to 771.3 million pounds. The output in North-East India has increased from 529.8 million pounds to 595.8 million pounds as did that of South Indian tea from 167.3 million to 175.5 million pounds. Production in Pakistan has also risen from 41.8 million pounds to 59 million pounds. In Ceylon, too, production at 455.2 million in 1961 has shown a rise of 20.5 million pounds.

In Africa, production has amounted to 103.9 million pounds with teas from British East Africa, including Nyasaland, accounting for 80.5 million pounds and those from Portuguese East Africa for 23.4 million pounds. This compares favourably with the outturn of 94.9 million pounds in 1960 when the shares of British East Africa and Portuguese East Africa were 75 million and 19.9 million pounds respectively.

Production in East Africa, in January 1962, increased to 6.48 million from 5.74 million pounds in the preceding month. The outturn in Kenya rose to 4.01 million in January 1962 from 3.53 million pounds in the previous month, as did that in Uganda and Tanganyika to 1.25 million and 1.22 million from 1.08 million and 1.13 million pounds respectively.

Although the North Indian output in 1961 was more than in 1960, the average price has fallen considerably. It is reported that, for certain districts, the fall in the average price has so far ranged up to nearly 40 p a pound. There is little doubt that some gardens have done fairly well and have probably offset

Chairman, General Manager.

the fall in the prices by increasing their output.

Trade circles are, however, getting worried over the dry spell which has been continuing in the tea districts for some time. As the manufacture of tea has already started in many gardens, producers think that, unless there is rainfall soon, the output will be affected.

Stocks of tea in Calcutta warehouses were lower at 585,019 chests at the end of March as compared to 893,710 chests at the close of the preceding month. Stocks in public warehouses declined from 551,440 chests at the end of February 1962 to 357,555 chests at the close of March as did those in private warehouses from 342,270 chests to 227,486 chests. Besides, afloat stocks of tea, at the end of last month, were lower at 92 chests as compared to 730 chests at the end of February.

In the Colombo market, offerings were 6,597,367 pounds. Quality showed a decline. The market met with a quieter demand and prices for useful quality brokens from western districts were substantially lower, particularly light liquoring descriptions.

In London auction, offerings were 25,810 packages, including 21,463 packages from Northern India. There was a very strong demand for all descriptions with Assams advancing by 1d to 2d per pound. Doars tea were a full penny dearer, while Low mediums and plain sorts remained fully firm. The rate was quoted at 3sh 1½d per pound.

Tea stocks in London, as on 30 March totalled 145.81 million pounds as against 145.54 million pounds in the preceding week. The total amount to be landed on the same date was 13.50 million pounds. Total afloat was 19.78 million pounds including from Calcutta 4.08 million pounds; from Chittagong 42,000 pounds; from Cochin 524,910 pounds; from Ceylon 7.49 million pounds and from other Ports 7.64 million pounds.

COTTON Pight Supply Tosition

THE vacuum created in the futures section when the Jarilla March contract went off the board a few days back is still unfilled and the Bombay cotton futures market during the past week remained closed throughout.

The report of the barter deal with the United States of America to exchange 50,000 tons of sugar for approximately 35,000 bales of cotton has been widely acclaimed by the trade circles. (The details of the deal will be made available by the authorities within a short period. As there will be some delay in the arrival of the US cotton, the trade has approached the Government to import cotton from East Africa and Sudan immediately to relieve the strain on the tight supply position.

It is reliably understood that the Government is making vigorous efforts to secure cotton from all possible sources to ease the strain, though nothing has been finalised

so far. The spinners are reported to have transacted some business in the long staple American cotton subject to the approval of the authorities. The interest in Sudan cotton has been well maintained and stray enquiries were made in African BP 52 for prompt shipment.

There was a revival of export enquiry for Bengal Deshi during the week under review. It should be recalled that the Government of India has released for export further quantum of 70,000 bales of Bengal Deshi cotton recently. This takes up the aggregate quantum permitted for export during the current season to 270,000 bales. The announcement will provide a welcome relief to the trade, which it gratefully greeted, as the substantial exportable surplus of this growth has resulted in the decline in prices by about Rs 50 per candy over the last two months. However, it is regrettable that the delay in releasing Bengal Deshi has been ruinous to the country as the prices in international markets of this variety has gone down by 3d per lb during recent weeks and Japan, a prominent purchaser of this growth, has already covered most of its requirements from other sources. But the trade is confident of disposing the allocation by the end of August. During the past week the prices of Bengal Deshi has moved up by Rs 20 per candy. Of the export quota of 70,000 bales released shippers have already negotiated business for over 30,000 bales. Fresh business for nearly 15,000 bales has been reported to have been put through.

Another important development is the readiness expressed by overseas buyers to purchase Bengal Deshi even at higher prices as a sequel to the rise in prices of this growth, through they were previously reluctant to pay more than 16d per lb for fine varieties. There were good enquiries for choice varieties at 20½d per lb and for extra superfine varieties at 19½d.

In the spot market as Sewri mill interest flowed on an encouraging level in Laxmi, Kalyan, Digvijay, Vijay, CO2 and 197/3. The mills have voiced their dissatisfaction at the inordinate delay in allocating 10 per additional indigenous quotas by the Textile Commissioner.

Meanwhile the reports that emanated from Gujarat narrate that the cotton cultivators were discontented on account of the requisitioning policy followed by the Government of India.

Consumption of cotton by the Indian mills from 1 September to 30 November totalled 1,429,659 bales in contrast to 1,286,801 bales in the corresponding period in the previous year.

Description	1960	1961
Indian	931,876	1,147,075
Pakistan	8,816	141
American	218,740	166,636
Egyptian	31,948	27,521
Sudan	29,038	34,420
East African	54,984	46,981
Others	8,580	6,885
Total	1,286,801*	1,429,659

*Adjusted.

Piecegoods:

During the past week the Bombay piecegoods market depicted slightly better conditions. There was a revival of demand from both the upcountry centres and on the export front. Large number of dealers from upcountry centres appeared in the market.

As anticipated, with the termination of the Holy festival, traders from Bihar, UP, and Rajasthan made their appearance in the market to replenish their stock for the current and coming seasons. Demand for grey and bleached dhoties and saris, bleached longcloth of old qualities, dyed and bleached poplins dyed and printed voiles and markins picked up considerably. But the turnover did not reach the expected level. Nevertheless, there is no room despondency for the sudden spurt in for demand heralds the advent of cheerful conditions in the followig weeks. Enquiries for blankets and flannel-ettes flowed on a fair scale from certain quarters but the actual business transacted was precious little.

However there was practically no variations in the prices. The mills are still firm in regard to the quotations as they rate the scope for improved cotton supply conditions in the immediate future rather bleak. On the contrary, the traders who have taken delivery of their purchases from the mills, were found very eager to liquidate their stocks.

On the export front there was marked improvement in demand. Ethiopia figured as the prominent purchaser obviously thanks to the reported relaxtions in the import policy announced by the Ethiopian Government. Scattered enquiries from Britain in grey shirting were reported during the week. Moderate business in furnishing was transacted with Burma and Singapore while demand from Aden was at a low ebb. All other destinations were on the whole inactive.

Rise in Wool Prices

REFUSAL of the spinning mills to make sales, good demand from the weaving factories and negligibie stocks have been responsible for a further rise in the prices of woollen weaving yarns. In the Amritsar market, prices have risen by 25 nP to 50 nP a pound, establishing a new peak level for the past eleven years. The soaring prices are reported to have resulted in the closure of a larger number of smaller weaving units.

In the Bombay market, prices have moved up with April delivery quoting around 69d for clean varieties against 67d a few days ago. There are good enquiries from the UK and the Continent; but the actual deals are few and far between.

Russia has continued to be a buyer. About 1,900 bales were reported to have shipped to that country during the last week. Since the start of the current season, Russia has taken about 15,000 bales. Shippers to Russia are buyers at around Rs 2.75 per pound in Bombay. The producing markets are, however, quoting almost

the same price and the traders in Bombay are, therefore, finding it difficult to meet the Russian requirements.

It is, however, learnt that the shippers have decided not to buy in the upcountry markets. The prices in the producing areas are, therefore, expected to ease. Should this happen, the arrivals in Bombay will tend to increase.

Exports of home-grown wool from India, during the third quarter of 1961, rose to 9.2 million pounds as compared with the previous quarter. They were twice as large as in July/September, 1960. The overall level of exports remains, however, lower. For the first nine months of 1961, aggregate exports amounted to 22.5 million pounds, which was 1 per cent below the previous year's figure.

Sea-borne imports of raw wool were seasonably lower in the third quarter at 1.5 million pounds (actual weight), although they were five times as great as a year earlier. The cumulative total for the first nine months of 1961 came to 6 million pounds or double the corresponding 1960 total.

YARN

Prices of imported Art Silk Yarn have shot up to new peak levels. The rise in ready prices is of the order of about Rs 3 per kg, while the premium of the art silk yarn import licence has gone up from 205 to 220 per cent.

Several factories have contributed to the bullish fervour in the market. The uncertainties about regular flow of licences under the export promotion scheme for art silk fabrics have initiated the present upward movement. Sentiment has also been aided by the reports of sizable increase in the export of art silk fabrics during the last few days. According to the trade, exports in March were almost double that recorded in February.

Professional speculators have, therefore, taken a strongly bullish view of the art silk yarn prices. Traders are eagerly awaiting clarification from the authorities about the export promotion scheme. Cautious operators are, however, disinclined to extend their commitments in view of the expected consignments. As a matter of fact, some importers have already figured as sellers. In the circumstances, it is expected that the market will rule erratic during the next few days.

CHEMICALS & DYES

Divergent trends were noticed in the Bombay market for Dyes and Chemicals. While the Dyes section was quiet, the Chemicals section was active.

In the Dyes section, dull conditions were attributed to the stringency in the money market and the comfortable supply position. Stockists were eager sellers, while buyers were few and far between. Among Vat dyes, blue RSN was placed around Rs 35. In violet RR, the German quality was quoted around Rs 66. In base dyes, red RC crystal and red KB German were done around Rs 10.50.

SUGAR

Sugar markets are ruling steady, thanks to good buying support even for the inferior quality. New produce sugar is reported to be realising higher prices. The cane position in Uttar Pradesh is satisfactory and the season is likely to last till the end of April. In the Hapur market, the rate is quoted at Rs 103 per bag.

Meanwhile, reports are coming in to the effect that exports of Indian sugar have been encouraging in the recent past. It is, therefore, believed that the latest quota of 50,000 tons received from the USA, is bound to brighten the sentiment of the sugar market.

Aden is reported to have purchased about 500 tons of sugar, while arrangements are being made for the shipment of 73,000 tons so far contracted for export. Export of this quantity is expected to be effected by the end of July.

Morocco is expected to call for fresh tenders for 200,000 tons of raw sugar and this is again the main centre of attention at present. The offers against this tender will shape, to a great extent, the prices in the next week or so.

As regards white sugar, the prices are expected to improve following the trend of raw sugar prices. But, there are still some white sugar bargains available at low prices. Polish second-hand crystals are reported to be on offer at £25.15.0 and East Germans at around £20 per metric ton f.o.b.

PEPPER

The Pepper and Ginger Merchants' Association, Bombay, has reiterated its plea for providing facilities to it to commence forward trading in Pepper. It is felt that hedging will considerably improve the scope for exports.

The need for a full-fledged forward contract in Pepper in Bombay is well-founded. Export houses in the City account for more than 60 per cent of the total export of the commodity. The largest number of exporters and dealers in the commodity have their offices in Bombay and not in Cochin.

Due to the lack of hedging facilities, shippers in Bombay are handicapped as they are unable to cover their export sales. After a detailed study of the whole question, the Forward Markets Commission has recommended that there should be alternate hedging facility in Bombay. The Association has suggested that, if its recommendation cannot be implemented immediately, provision should be made for TSD contract in the interim period.

RUBBER

On the London market, there is a widespread feeling of uncertainty about the future of Rubber prices. The firm tone of the new year, supported by temporary bullish factors, has long since lost its impetus. Most dealers feel that the values must decline further in the near future.

The wintering season for trees is drawing to a close and rubber production in South-East Asia should begin to rise this month. There

does not seem, however, to be a concurrent increase in the demand. Much depends on the strength of the economic recovery in the USA. If this fails to maintain its momentum, it is feared that the freely available supplies of synthetic rubber will depress the market.

In London, trade circles are not only concerned at the size of the synthetic output. They are also uneasy at reports of the change in the US stockpile position. Again, the consistency of Russian purchases is vital if the prices are to hold steady. This year, Russia has greatly diversified its buying, which makes it difficult to calculate the intake. In some quarters, it is believed that Malayan producers are selling their surplus rubber to Russia at marginal prices. If Russia withdraws from Malaya, the prices on the world market are likely to fall sharply.

GOLD & SILVER

After initial firmness, prices on the Bombay Exchange displayed a slightly easier tendency on reports of

increased arrivals. Gold receipts totalled 10,000 tolas as compared with an offtake of only 7,000 tolas. Ready changed hands at Rs 120.50 to Rs 120.75 with sovereign quoted around Rs 97.

In the Silver section, Jeth delivery started at Rs 219.05 and moved up to Rs 219.65 on higher advices from Rajasthan. Later, it declined on bull liquidation to Rs 219.85. Ready (below .996) changed hands at Rs 219.70 to Rs 220.40 to finish at Rs 220.25. Arrivals amounted to 44 bars as against an offtake of 18 bars.

OILS & OILSEEDS

Thanks to the lead given by Groundnut, prices on the Bombay Oilseeds Exchange developed a slight recovery from the recent low levels. The main inspiration was derived from the reports of a steady tightening of the supply position. The inflow into the City was also stated to have shrunk following a decline in the arrivals of the new crop in the major producing areas. Above all, the demand for groundnut

and oil tended to increase due to the anxiety of crushers and vanaspati manufacturers to replenish their stocks. Reports, that about 2,000 tons of groundnut oil was about to be shipped abroad from Saurashtra, also aided the bullish tendency. Bold quality was quoted at Rs 47.25 and Groundnut Oil at Rs 19.50.

In the castorseed section, trading was mainly of a speculative character. The situation in respect of exports of castor oil remained unchanged with the shippers reporting scattered deals for small quantities with the UK, which quoted £118 for commercial oil and £123 for BSS grades. The receipt of the new crop in Andhra and Gujerat was stated to be relatively small, perhaps due to the growers' desire to await higher prices. Castor ready was quoted at Rs 34.12 and Castor Oil, commercial quality, at Rs 13.75.

In the Linseed section, price movements were confined to narrow limits. Steadier advices from North India contributed to the improvement in prices.

United Commercial Bank Limited

All Round Progress Maintained

Mr G. D. Birla, the Chairman, on Mobilisation of Internal Resources, and on Foreign Aid

Statement of Shri G. D. Birla, Chairman, circulated to the Members at the Nineteenth Annual General Meeting held on Wednesday, the 11th April 1962.

Gentlemen,

You will notice from the Directors' Report and the accounts of the Bank for the past year now before you that the all-round progress of the Bank has been maintained and our deposits have improved after the slight setback of the previous year.

DEPOSITS

The deposits at the end of 1961 stood at Rs. 98.90 crores and showed a rise of Rs. 9.96 crores on the previous year's figure of Rs. 88.94 crores. This increase of 11.2% compares with 8.5% by which, after making allowance for the transfer of Rs. 72 crores of PL 480 funds from the State Bank of India to the Reserve Bank of India, the deposits of the public with scheduled banks as a whole rose during the same period.

CASH & SECURITIES

Cash on hand and with banks and money at call and short

notice were Rs. 8.66 crores and represented 8.8% of the deposit liability. The additional deposit resources which accrued to the Bank during the year were utilised primarily to improve the liquid position of the Bank through a considerable reduction of the borrowings from the Reserve Bank of India and the addition of a little over Rs 2 crores to our holdings of Government Securities and secondarily to increase our advances by the moderate amount of Rs. 2.82 crores. As a result of this policy our quick assets consisting of cash on hand and with bank money at call and short notice and free government securities amounting to Rs. 43.31 crores formed 43.78% of our total deposits. The corresponding figures for the previous year were Rs. 35 crores and 39.4%.

PROFIT AND LOSS ACCOUNT

Though the profits for the year have risen from Rs. 67.43 lacs to Rs. 72.61 lacs the extent of the increase would have been greater if we had observed a lower liquidity ratio. In disposing of the profit the Board have followed the same pattern as last year and transferred Rs. 30 lacs to the Reserve Fund, raising it to Rs. 2.35

crores, and added Rs. 4 lacs to the Gratuity Trust Fund which was newly set up with an initial contribution of Rs. 10,000/-. After allocating Rs. 14 lacs for bonus to staff the Directors have repeated the dividend of 12% less tax.

CAPITAL DEPOSITS RATIO

The subject of the ratio of paid-up capital and reserves of the banks to their deposits received the attention of the Reserve Bank of India and a proposal was put forward that this ratio should be gradually increased to 7½% and the views of banks were invited. After discussion with the Indian Banks' Association the Reserve Bank of India finally agreed that the matter should be regulated by a convention rather than by legislation and banks were required to transfer substantial amounts out of profits to published reserves and to supplement this action by increase of capital so as to bring the capital deposit ratio upto 6% within a reasonable period of time.

Our Bank has transferred every year substantial amounts to the Reserve Fund and you will notice from the Ten-year record of the Bank's progress annexed to the

balance sheet that the Reserve Fund has grown from Rs. 67.50 lacs to Rs. 235 lacs over a period of ten years. But in spite of such substantial transfers to the Reserve Fund the ratio of paid-up capital and Reserve Fund to deposits has declined from 9.04% to 4.39% by reason of the steep increase in deposits. It was in the year 1945 that the Bank increased its subscribed capital from Rs. 2 crores to Rs. 4 crores and paid-up capital from Rs. 1 crore to Rs. 2 crores and the Directors feel that it is now expedient further to strengthen the capital structure of the Bank. With this object in view the Directors propose to increase the paid-up capital by the issue of 200,000 ordinary shares at a premium of Rs. 25 per share and when the issue is completed the capital funds of the Bank will improve by Rs. 1½ crores. This proposal can be given effect to only after obtaining the consent of the Controller of Capital Issues for which an application has already been made. You will be advised as soon as possible after the sanction of the Controller is received of the steps which the Directors propose to take to implement the scheme.

It is a matter of gratification that deposits of the banking system have risen during the year under review in contrast with the stagnation which characterised the previous year. The rate of growth of 8.5% was, however, not the same as in the first four years of the Second Plan period when deposits recorded a growth of 11.2%. It is important that steps should be taken to attract more deposits to the banking system in order that the overlent position disclosed by the scheduled banks' return may be corrected and the banks may be enabled to meet the additional demands for finance that would inevitably arise with the progressive implementation of the Third Plan. The introduction of the Deposit Insurance Scheme, despite the fact that the amount of individual insured deposit is only Rs. 1500, has already infused confidence in the stability of the banking system in rural and non-metropolitan areas where it had received a setback sometime ago and the confidence will be reflected in due course in the speedy growth of deposits of individuals with the banks.

INTER-BANK AGREEMENT ON RATES OF INTEREST ON DEPOSITS

A stable structure of reasonable interest rates on deposits is worthy of defence against attacks. In my statements for the last two years I had referred to the healthy influence of the inter-bank agreement on deposit rates. It is a matter of regret that some banks gave notice last year to resile from the agreement. While there may be room for a modest revision, it would be undesirable to permit a material departure from the structure of interest rates and permit more and more banks to quote higher rates of interest.

Almost all banks have a large network of branches operating all over India and they have attained more or less equal status because of the Deposit Insurance Scheme, the supervision of Reserve Bank of India and the proposed capital/deposit ratio. It is not understandable how a few banks can be given a preferential treatment for the purpose of quoting higher rates of interest on deposits simply because their deposits are, for the time being, less than those of some other banks. It must be remembered that the history of Indian Banking is full of instances of small and medium sized banks which have grown into large banks without any weightage in preferential rates of interest interest. The proposed differentiation in rates of interest on deposits for three types of banks goes against the spirit and foundation of inter-bank agreement. A scramble for deposits through the offer of higher rates of interest would create stresses which might lead to the abandonment of the agreement and reduction in the profit margin to the point of imperilling the

building up of capital funds of banks to anything like the extent to which the banks are committed by the convention agreed to with the Reserve Bank of India. It is only through competitive development and extension of banking services and in the environment of stable interest rates and not in the atmosphere of a rate war that new deposits can be attracted. The non-nationalised banking sector should conduct its affairs in such a manner as to leave no room for further official control and regulation over its basic function of inculcating and spreading the banking habit and gathering the surplus funds of the public.

MOBILISATION OF INTERNAL RESOURCES

The Third Five-Year Plan is a challenge to the banks to meet the demands for finance which its implementation would generate. The Plan envisages a bigger programme of industrial development than its predecessor. At the end of the Third Plan industrial production is expected to increase by about 70% over the level at the end of the Second Plan. The general index of industrial production is expected to reach 329 (1950-51=100) in 1965-66 against 194 estimated for 1960-61. Estimates of the additional bank credit which industrial enterprises might require vary from Rs. 650 crores to Rs. 750 crores and the mean of the two figures may be taken as the probable requirement of industries in the private sector. Currency in circulation is also bound to expand during the Third Plan period and we may estimate the rise in circulation to be of the order of Rs. 1000 crores. As the level of bank deposits at present is on a par with currency in circulation it could be reasonably assumed that during the Third Plan period bank deposits would also increase by Rs. 1000 crores. In the United Kingdom the ratio of deposits to currency in circulation is 3.1.

To divert bank credit and currency in circulation into banking channels to an extent which would increase the proportion of bank deposits in relation to circulation should be the objective of banks so that the banks would not only be in a position to meet the demands of industry but also to play their traditional role of subscribing to Government borrowings in substantial manner. There must, therefore, be a drive to increase deposits by increasing banking service and branches of banks both in big cities and in rural areas. The recent trend in banking is to employ accretions to deposits in financing industry and trade partly because of the increasing demand from industry and trade and partly because of absence of ready market for Government securities. The banks have to build up the portfolio of Government securities so as to improve the liquidity of the banking system. In addition they

are also nowadays called upon frequently to subscribe to capital and debenture issues of various financial institutions and providing long-term finance to industry.

The Third Five-Year Plan envisages more and more borrowing by Government and public bodies and to make these borrowings successful, attempts should be directed towards making Government securities freely marketable and the position of Reserve Bank and Life Insurance Corporation should be used more towards making securities market really active.

THIRD FIVE-YEAR PLAN

Turning to the prospective development in the Indian Economy, the Third Plan, which nominally at least has been launched, visualises an increase in the national income from Rs. 14 500 crores at the end of the Second Plan to Rs. 19,000 crores at the end of the Third Plan. For achieving this, the Plan visualises a total investment of Rs. 10,400 crores of which Rs. 6 300 crores is in the public sector and Rs. 4,100 crores in the private sector. The ratio of net investment to national income which is 11% at present is proposed to be raised to 14 to 15% at the end of the Third Plan. Though the Plan is a modest one I must confess to a feeling of diffidence about its successful fulfilment. The Plan itself appears from every test to be more like a list of programmes and projects than a properly laid out and cohesive chart for progress. What really matter, however, are the targets of agricultural and industrial production. It is not easy to make a correct estimate or, for that matter, any kind of estimate of total production, especially in the private sector. But it is possible to estimate production in some important fields and treat it as a yardstick to measure in a reasonable manner the economic credit of the nation as a whole. If, for instance, the targets for important items like food agricultural raw materials, fertilisers, cloth, steel, petroleum, power, road and rail transport, coal and capital goods could be achieved at the end of the Plan and measured they would give a clear idea of the measure of the increased prosperity of the people.

PREPONDERANT RELIANCE ON FOREIGN AID

The circumstances in which the first year of the Third Plan has elapsed have been favourable enough in that record agricultural production (buttressed by import of foodgrains from America under Public Law 480) and sustained increase in industrial production (though the rate of growth was somewhat lower than in the previous year) both ensured that the price situation was under control. But the Plan's reliance on foreign assistance is preponderant, and the experience in the 1st year

has clearly been that the inflow has fallen short of both requirements and earlier assurances that we had obtained. We should be realistic enough to assume that we are unlikely to receive a blank foreign exchange cheque, and also that there will always be a gap between promises and performance in the matter of foreign aid. In the final analysis it is increased export earnings which will assure the country of continued progress achieved through planning. We cannot surely, for long, sustain increase in production, if our reserves do not even permit the import of industrial raw materials for feeding already existing and involuntarily idle units of production. Every incentive should be provided to the Indian entrepreneur to be a producer of industrial raw materials. Appropriate concessions will undoubtedly pay off in the form of enlarged exports.

NEED TO STEP UP EXPORTS

Foreign exchange plays an important role in the development plan because we have to import the "know-how" and equipment for many industries. A careful assessment of the prospects of securing foreign exchange is preliminary to a correct assessment of the success of the Plan targets. Laudable efforts are being made to earn foreign exchange by exports and although there has been some improvement in this regard the expansion of our exports is not proceeding at such vigorous rate as to justify full reliance on them. Moreover, there is even a limit to what India can afford to export. To permit exports at the cost of the home market, i.e., by starving the Indian consumer cannot improve the prosperity of the country or the standard of the people. Increase in the exports is, however, inescapable at present. More attention, should, therefore, be directed towards finding out ways and means of reducing cost of production of exportable commodities to a competitive level and the factors that account for increase in the cost of such commodities should be investigated and remedied at an early date.

FOREIGN AID AND INVESTMENTS

The second source of foreign exchange is loans and aids which we were receiving from friendly countries during the Second Plan period and which we can hope to receive in an increasing measure for the Third Plan. The third source, and the most important and durable one, is foreign investments which are coming only in dribblets.

The total requirement of foreign exchange is likely to exceed the Plan figure and in my view might go up to Rs. 3700 crores in place of Rs. 3200 crores assumed in the Plan. This is a problem of the utmost gravity and should be solved. The answer is not to cut

this or that item of the plan projects; that would cause the collapse of the Plan. In my view it is not impossible to earn foreign exchange to the extent I estimate provided we create an atmosphere to earn it. Aids and loans will be major contributory factors for a long time to come but we must make a special effort to attract private foreign investment and we should also try to raise loans not merely on Government to Government level but also in the financial markets of the World. At present the conditions are not favourable but an atmosphere must be created in which it would be possible to raise loans in the course of time.

PROBLEMS OF FUEL, POWER AND TRANSPORT

Apart from foreign exchange, there are other hurdles to the achievement of the targets. The chief of these are, coal, power and transport, all of which are in short supply thereby hindering the growth of the economy. I feel that there should be no ceiling for power production but that more power should be produced than is adequate to meet the existing demand completely so as to leave a great surplus of supply awaiting the growth of demands from potential consumers. Every concern that needs power for its own consumption should be freely allowed to set up its own plant without any restraint and if any

party can arrange for foreign finance on suitable terms for production of power he should be allowed to do so. Transport bottlenecks are in a way responsible for fall in production and increased inventory resulting in lock up of funds, which we can ill-afford today. Railways are not able to cope with the increased demands for transport and as such the development of road transport should be encouraged to further supplement the transport needs of the industry at reasonable rates. This alone would give impetus to progress, production and prosperity.

Administrative delays should also be eliminated and lengthy procedures in granting industrial licences should be very much simplified.

My diffidence also slightly increases in the matter of internal resources for the Third Plan. It is no secret that the tax effort for the Second Plan, as originally estimated, was, in the end, far exceeded; but not all the projects could be put through, and one of the reasons was inadequacy of internal resources. The fact is that non-plan expenditure has been allowed steadily to rise. For obvious reasons, and in this case inevitably too, the cost of Defence Services rose to Rs. 302 crores in the Revised Estimates for 1961-62 as against the Budget expectation of Rs. 283 crores; and the figure

for 1961-62, in the Budget, was itself some Rs. 35 crores more than the actuals for 1960-61. It is all very well to term such non-developmental expenditure as essential to the security of this country. We have, however, to recognise the possibility of further drafts on our Budgetary resources for "contingencies" and administration charges. What, then, is the solution?

Always, the easiest way for Government is to raise fresh taxes. But there is a limit to the forms of taxation that can be introduced and to the rates that can be fixed. As it is, there is an estimate that new taxes introduced in the first year of the Third Plan constitute fully one-third of the target for the quinquennium. The caretaker Budget for 1962-63 has made clear the prospect of additional imposts. No doubt, the tax targets for the Third Plan will be fulfilled. But there is considerable doubt whether additional resources raised by taxes will be available for developmental projects. I strongly suggest that tax enforcement laws are made stricter so that collections can be tightened up; and the addition to revenues should, I fancy, be surprisingly large. Secondly, greater care than ever before needs to be taken to ensure that there is strict control over non-development expenditure, whether it be costs of civil administration or even, if I may be permitted to suggest, defence.

Let I be thought unduly pessimistic, let me add that the holding of the third general elections in this country is of portentous significance. The return of Congress to power will have assured our foreign friends that India has a political stability and maturity that is comparable to conditions in countries in which democratic practices have been prevalent much longer. It is, I may remark, stability, both political and economic, which is one of the prerequisites for luring foreign participation in the industrialisation of this or any other country. At the same time the emergence of the Swatantra Party as the largest body of opposition in the country will have brought home the truth to our foreign friends that democracy is effectively at work in India, in that there is perceptible evidence of the growth of an Opposition. Thus, proof of Indian democracy as attested to by the third general elections may conceivably result in greater inflow of foreign assistance, not only on a governmental level, but I hope on the private sector level as well. The Plan must be fulfilled at all costs.

NOTE: THIS DOES NOT PURPORT TO BE A RECORD OF THE PROCEEDINGS AT THE ANNUAL GENERAL MEETING.

National Rubber Manufacturers Limited

★

Mr. K. N. Mukherjee Advocates Continuation of Import of Natural Rubber Directly by the Rubber Manufacturers

★

Higher Sales and 50% More Exports than in 1961

Ladies and Gentlemen:

It gives me great pleasure in extending to you all a hearty welcome to the Sixteenth Annual General Meeting of your Company. The Directors' Report and Audited Accounts for the year ended 31st December, 1961 have been in your hands for sometime now and with your permission I take them as read.

ACCOUNTS

You will have noticed from the Directors' Report that not only the upward trend of sales of the Company's products was maintained during the year 1961 but also the percentage of the net profit on sales registered a substantial increase in spite of adverse factors like some loss of production during the earlier part of the year on account of power shortage, and continued high cost of imported raw materials and indigenous natural rubber. On the basis of the improved working results, your Directors have re-

commended a Preference Dividend of 7.80% and an Ordinary Dividend of 6.50%.

INDUSTRIAL PROGRESS

Industrial production in India maintained an upward trend during the year 1961 the general index for the first 9 months of the year having reached the level of 180.0 as against 170.3 in 1960 representing an increase of 6%. Against this background the performance of the rubber manufacturing industry compares favourably, the index for the rubber production being 254.1 (During January—September, 1961) as against 236.7 in 1960 representing a rise of 7.35%. Quantitatively there was a rise in the production of major items of rubber manufactures during 1961 over that of 1960. During the year under review certain additional units were licensed for the manufacture of cycle tyres and tubes, conveyor belting, industrial Vee Belts and rubber moulded goods

and certain other units were permitted to effect substantial expansion of their capacity.

I feel it will not be out of place here to point out a disquieting feature of the industrial licensing policy for establishment of new units or substantial expansion of capacity by existing units are being issued by the Government rather liberally with adverse effects on the ability of units already in operation or to be established to achieve full utilisation of their respective capacities. This would be clear from the following figures indicating the position regarding the production programme for bicycles and cycle tyres included in the Third Plan:

Description	1960-61		1965-66	
	Capacity	Production	Capacity	Production
Bicycles	2.2	1.05	2.2	2.0
Cycle Tyres	16.9	11.00	38.6	31.0

Evidently, although there will be no increase in the manufacturing capacity for bicycles over the Third Plan period that for cycle tyres is expected to rise by about 2½ times, while actual production of cycle tyres is likely to register an increase of nearly 3 times. The average rate of rise in the demand for cycle tyres during the Second Plan period was of the order of one million numbers per annum and the overall consumption thereof in the country during 1961 was approximately 11.5 million numbers. In the circumstances it would be far from correct to place the demand at 31 million numbers by 1965. According to our own estimate the requirement of cycle tyres by the end of the Third Plan period including export quotas may not exceed 20 million numbers. If, therefore, licences are issued on the basis of the production target of 31 million numbers, huge capacity will be lying idle much to the

detriment of the interest of the cycle tyre industry in general and of the new comers in particular. Cycle tube production in 1961 amounted to approximately 13.6 million numbers against an anticipated demand for 12 million numbers which resulted in so serious a glut in the market that some of the manufacturers had to curtail or stop production completely. It is, therefore, essential for the Government to follow a more cautious policy in the matter of licensing additional capacities particularly to new units so as to enable the units already licensed to utilise their respective capacities fully and thereby effect substantial saving in cost.

EXPANSION PROGRAMME

During the year under review capital expenditure amounting to Rs. 10.21 lakhs was incurred. In spite of the initial set-back due to power shortage production of almost all items increased to cope with higher sales. To render better and quicker service to consumers of the Company's products and to the trade, New Sales Offices were opened at Ahmedabad, Ludhiana and Hyderabad during 1961.

EXPORT

During the year under review your Board of Directors actively pursued a policy of contributing to the country's export drive through progressive increase in the export of the Company's products which reached a record level being 50% higher than that of 1960. This performance compares favourably with the total export of rubber products from India which was Rs. 54.48 lakhs in 1961 as against Rs. 50.6 lakhs in 1960 representing a rise of 8%. The industrial licensing policy of the Government has indeed an important bearing on export promotion. As I have mentioned earlier, a policy of restricting further expansion of capacity in respect of industrial products before the capacity already

licensed is fully utilised, would go a long way in enabling manufacturers to reduce their cost of production by increase in the volume of output and thereby to improve their competitive strength in the export markets.

RAW MATERIALS

The cost of major raw materials continued to be high during the year under review except imported natural rubber. The situation was particularly aggravated by the levy of the higher cess @ 30nP. per Kg. on indigenous rubber from the 1st of April, 1961 and enhancement in the rates of customs and excise duties on other raw materials by the Finance Act, 1961.

The supply position in respect of natural rubber continued to be unsatisfactory during 1961, consumption in India being 48,319 tonnes against production to the extent of only 26,992 tonnes leading to a deficit of 21,327 tonnes, i.e., approximately 45% of consumption. This short-fall as well as the consumption of synthetic and reclaimed rubber to the extent of 9,600 tonnes and 5,929 tonnes respectively were made up by imports. According to official estimates the aggregate consumption of natural, synthetic and reclaimed rubber is likely to be about 94,000 tonnes by 1965 against which natural rubber production is not expected to be more than 45,000 tonnes so that the deficit would rise to 49,000 tonnes representing almost 50% of the aggregate consumption. Although part of this gap would be met by indigenous production of synthetic and reclaimed rubber as per capacities licensed or to be licensed, the deficit in respect of natural rubber will remain resulting in substantial drainage of scarce foreign exchange resources on account of imports thereof.

The Estimates Committee of the Lok Sabha, 1961-62 in their report submitted in December, 1961, has

categorically stated that the measures taken by the Government and the Rubber Board so far proved totally inadequate in making the country self-sufficient in rubber. The Committee has made certain important recommendations for improving the situation. Two of those suggestions, however, require close attention and analysis because they are of very vital significance to the rubber manufacturing industry. In the first place the Committee has urged that stricter control should be exercised on the use of rubber for the manufacture of non-essential goods. In my opinion this proposal, if implemented, would amount to a retrograde step unduly penalising the consumers of natural rubber on account of lapses on the part of the Rubber Board in taking effective steps for increasing the production of natural rubber. Besides, this measure is not likely to result in any real saving because the miscellaneous consumers items of rubber products account for not more than 5% of the total rubber consumption. Secondly, the Committee has suggested that the Government should examine the feasibility of the Rubber Board itself importing natural rubber to meet the shortage in indigenous production. I strongly feel that the present system of importing natural rubber directly by rubber manufacturers against import licence should be allowed to continue. Rubber manufacturers have long-standing arrangements with Overseas suppliers for getting correct grades of rubber at proper time and at competitive prices and any change therein at this stage would cause serious inconvenience and dislocation of work. In my opinion before any system of importing rubber by the Rubber Board is considered the Board should first make dependable arrangement for making available to rubber manufacturers indigenous rubber of correct grades at

the controlled rates. The Board should also take all possible steps for proper utilisation of Pool Fund and other Funds at its disposal to the mutual benefit of rubber growers and manufacturers. Meanwhile, it is gratifying to note that the Government of India have under consideration a proposal for arranging import of natural rubber from Malaya under rupee payment terms.

In 1961 other raw materials like cord fabric, bead wire, tube valves, carbon black and rubber chemicals valued Rs. 7.5 crores had to be imported. It is, however, encouraging to note that at the end of the Third Plan period India is expected to be substantially self-sufficient in respect of these materials as a result of implementation of certain projects already licensed or proposed to be licensed for the manufacture thereof. Meanwhile, the Government of India have taken a step in the right direction by reverting with effect from 1st April 1962 to the annual import licensing policy which was suspended after being in force for a single licensing period from April to September 1960.

ACKNOWLEDGEMENT

Before I conclude, I am sure, you will join me in expressing our warm appreciation of the co-operation and support from M/s. Goodyear India Ltd., as well as the dealers, consumers and suppliers of the Company. On behalf of the Board of Directors and on my own I have pleasure in expressing our sincere appreciation of the cordial relations maintained between the management and labour and the loyalty and devotion of the officers and staff of the Company throughout the year under review.

NOTE.—This does not purport to be a record of proceedings of the Annual General Meeting.

The Canara Industrial & Banking Syndicate Limited

★

Increase in Capital and Reserves

★

Dr T. M. A. Pai, Chairman, on Banking During Third Plan

The following is the statement of the Chairman Mr T. M. A. Pai, circulated to the shareholders of the Canara Industrial & Banking Syndicate Limited along with the 38th Annual Report.

Notable increases in deposits, loans and net earnings to new year-end high levels were the outstanding features of your Bank in the year 1961.

DEPOSITS AND ADVANCES

The total deposits of the Syndicate have increased from Rs. 18.87 crores to Rs. 24.63 crores, a rise of Rs. 5.76 crores, representing 30% increase over the previous year's figures, as against 10.4% rise last year. The number of deposit accounts have in-

creased from 2,56,118 to 3,13,378 showing an increase of 57,260 accounts during the year. This represents an increase of 22% in the number of accounts over the 160 figures. The rise in deposits has notably been under time liabilities, the preponderance of which has continued in our deposit structure. The time deposits now form 69% of our total deposits as against 67% in 1960 and 68% in 1959. The Savings Bank deposits have been steady at 17%

of the total deposits. Increasing efforts have been made to get a larger number of people to deal with the Bank through regular campaigns for Savings Bank accounts.

The total advances including bills discounted stood on 31—12—1961 at Rs. 15.45 crores and were higher by 3.22 crores over the previous year's figures representing a rise of 26%. As in previous years the total advances were about 60% of the aggregate Capital.

Reserves and Deposits of the Bank. Secured advances formed 86% of the total advances. While investments in Government Securities formed 31% of the total deposits, advances formed nearly 62% of the total deposits.

EARNINGS, EXPENSES AND DIVIDENDS

The gross earnings of the Bank have improved from Rs. 1.34 crores in 1960 to Rs. 1.57 crores in 1961, showing an increase of 17% over the previous year's figures and reflect the higher earnings due to the improvement in advances by Rs. 3.22 crores and investments by Rs. 2.77 crores. Interest received on advances and investments and discount on bills discounted, together account for 91%

of the Bank's earnings as in 1960. The earnings under commission, exchange and brokerage were 16% higher than in last year and constitute 6% of the total gross earnings. There has been a welcome improvement under collection business handled by the Bank, as evidenced by the figures of Bills Receivable for Collection and Acceptances which amounted to Rs. 2.31 crores as on 31-12-1961. As against Rs. 1.85 crores as on 31-12-1960. The net earnings of the Bank which were at Rs. 32.10 lakhs for 1961 were higher than last year by Rs. 6.87 lakhs and amounted to 20% of the gross earnings of the Bank. Interest paid on deposits and borrowings constitute 39% of the gross income, the percentage being the same as in 1960. Establishment charges have taken up 30% of the gross income as in 1960 and were 17% higher than last year. Out of the net earnings of Rs. 32.10 lakhs for the year, 34% amounting to Rs. 11 lakhs have been transferred to Reserves and 20% amounting to Rs. 6.53 lakhs is to be paid out as dividends to the shareholders. For payment of tax, an amount of Rs. 12.25 lakhs is set apart, which constitutes 38% of the net income. The dividends payable to the shareholders as a percentage of the capital and reserves will be 6% this year as against 7% last year.

CAPITAL AND RESERVES

The advice of the Reserve Bank that the Banks should improve the capital and reserves structure to form at least 6% of the total deposits, is timely. By transferring larger amounts to the Reserves and increasing the Paid-up Capital of the Bank, your Directors are making every effort to improve the percentage for your Bank. From the profits of 1961, an amount of Rs. 11 lakhs has been transferred to the Reserves of the Bank as against Rs. 7.5 lakhs last year. This will increase the Reserves to Rs. 53,50,000 compared to the paid-up capital of Rs. 48,07,000 as on 31-12-1961. For the first time the Bank's Reserves have exceeded the Paid-up Capital and the total of Paid-up Capital and Reserves now exceeds Rs. 1 crore. Together with this, the Capital of the Bank is also being increased and we propose shortly to come out with an issue of fresh capital of Rs. 50 lakhs which will be offered at a premium of 10% to the existing shareholders. Necessary consent of the Controller of Capital Issues has been obtained for this. I am happy that the shareholders have also recently resolved to increase the Authorised Capital of the Bank to Rs. 2 crores from Rs. 1 crore to enable further increase in the capital structure, which it will no doubt be necessary to issue within a few years in the light of the phenomenal increase in deposits of the Bank in recent years. The various measures that are now being taken in the country to improve the struc-

ture of the banking system are to be particularly welcomed. Not only have banks been advised to transfer large amounts to their published Reserves, but also build up secret Reserves to provide additional strength in any time of stress and strain. Your Bank will endeavour always to do its best to build up these healthy traditions, consolidate its position and build up its strength from year to year.

Another event which is of particular significance to depositors in the country is the formation of the Deposit Insurance Corporation, which has started functioning from 1st January, 1962. Deposits of the Syndicate are covered by the Insurance protection afforded by the Corporation.

OPENING OF NEW BRANCHES

The total number of branches of the Bank which was 141 as on 31-12-1960 has now improved to 159 with the taking over by us of some banks last year and the opening of new branches. The bank has continued to place before itself the ideal of extension of banking facilities to towns not already served by banks, in the opening of new branches. We have opened branches at Javali, Siddapur, Ramadurga and Gundlupet since January last year. All these being places not having any branches of Scheduled Banks.

INCREASE IN DEPOSITORS AND BORROWING ACCOUNTS

I am glad that there is an increased awareness in the Indian Banking System of the compelling need for extension of banking service not only to new areas, but larger sections of the society. Unless banks make a positive effort in reaching larger sections of the people to make them bank-minded and cover a larger sector of the unorganised money market in this country, we would not have done our duty for the country. In banking, there is only one way and that is to go forward and even a static condition without any growth in deposits is likely to react unfavourably on the economy of any Bank in the face of mounting expenditure over establishment and other charges. The recent rise in the rates of interest on deposits is indicative of the anxiety of the Banking System not to allow the surplus money in the hands of the people to flow into other sectors. This has added considerably to the cost of deposits, as this rise would ultimately affect the entire deposit structure. The fringe benefits that are now being offered every day in a competitive spirit by all the banks, show the anxiety of the banks for competition in service, which alone should help the growth of a bank in the face of agreed rates of interest on deposits. Your Directors have always felt that the progress of a bank should be judged not by the increase in deposits that a bank is able to have during the year, however important this factor is, but by the increasing num-

ber of accounts that a bank is able to add to itself. This attitude of ours has been able to help the Bank to increase the number of accounts both under deposits and borrowing accounts from 3,79,683 to 4,74,111 during the last year. While profits of the Indian Banks as a whole have been good, the problems before each of us is to reduce the cost of service and pass on this benefit by the increased efficiency of the system to the clientele.

STAFF TRAINING

The Staff Training College established by the Bank has continued to train young men and women joining our services, so as to equip them with the necessary banking knowledge and inculcate in them a spirit of service, for which very great attention is paid. The total number of the employees of the Bank increased during the year from 1606 in 1960 to 1933 in 1961. The training of officers is also receiving attention of your Directors and a special scheme of training is now on hand for training of young men for responsible positions at our offices.

AMALGAMATIONS

During the year, under Section 45 of the Banking Companies Act, we were asked by the Reserve Bank of India to take over the Catholic Bank Ltd., Pie Money Bank Ltd., Mulki Bank Ltd. and the Peoples Bank Ltd. In the case of the first three, we were able to pay back 100% of the deposits. In the last case, we are sorry, it was not possible for us to offer more than 40% of the total deposits back, though efforts are now being made to improve this figure. A number of proposals for voluntary amalgamations are before us and within a month or two, some of them might be finalised. We are happy, we have been able to absorb these units with ourselves with the least friction and with maximum advantage.

We are also happy that the Indian Banks' Association proposed to have a convention early this year, where all aspects of Indian Banking could be considered. There is a great deal to do together, not only to standardise ourselves, but arrive at an understanding which would help us to achieve the goal of wide-spread banking in this country.

INTER-BANK AGREEMENT

Our Bank has been a party to the Inter Bank Agreement with regard to interest rates on deposits. It is indisputable that this agreement among Banks has led to healthy traditions being built up. The agreement has been working quite satisfactorily and has stopped the unhealthy practice among Banks to secure each other's deposits, by offering higher rates of interest. The recent move among the Indian Banks to have an agreement in the matter of

rates of interest charged by them on different types of advances is again a step in the right direction, as it is but proper that people all over the country pay the same charges and interest for the money borrowed by them for their trade or industries. A well-knit and well developed banking system must be able to render its services, whether in the matter of accepting of deposits or making advances or collection of bills at fairly the same rates all over the country.

GENERAL

The Third Five Year Plan is now on the anvil and the country's economy must gear itself up to the great size and the potentials of the Plan, if the targets and expectations of the Plan are to be realised. The vast size of the Plan involving an outlay of over Rs. 10,000/- crores should bring about great economic prosperity and industrial and agricultural progress during the next five years and it is upto us to see that every co-operation is given in the matter and no effort spared in the great task before us. The banking institutions of the country have to play a most essential and useful role in the financing of the large number of new small industries that are now coming up in the country as ancillary to basic industries and in providing agriculture with the necessary funds for bringing new land into cultivation, so that proper use may be made by the Private Sector of what the Public Sector provides. The schemes of the Reserve Bank in the matter of financing of small scale industries and of the Refinance Corporation, illustrate as to how the Central Bank can assist banks in financing such industrial ventures and contributing to greater production. It is necessary that banks should come forward to avail of these facilities offered by the Reserve Bank and take greater interest in contributing to national development.

You are no doubt aware that I have retired from the office of Managing Directorship of the Bank in November 1961 and Sri T. A. Pai who was the Deputy Chief Officer has been appointed by the Board as Managing Director in my place. With his characteristic zeal, spirit of service and great ability, I am sure the Bank will continue to make great progress under his stewardship in the years to come.

I wish to express my sincere thanks to our valued customers for their continued patronage and to the Bank's Directors and Shareholders for their enthusiastic co-operation. I am deeply appreciative of the services of Sri T. A. Pai, the Managing Director and the continued hard work and co-operation of the employees during the year. I am confident that with their enthusiasm and continued support, the Syndicate will reach yet another landmark in the coming year.

ESTD. 1906

CANARA BANK LIMITED

(Incorporated in India, Liability of Members Is Limited)

DIRECTORS' FIFTY-SIXTH ANNUAL REPORT

The Directors have pleasure to submit to the Shareholders the Fifty-sixth Annual Report for the year 1961. After making the usual and necessary provisions including provision for taxation, a sum of Rs. 21,69,539-52 is available for distribution, inclusive of last year's carry forward of Rs. 45,108-78.

The Directors recommend the following appropriations:—

To Preference Dividend at 5.56% less Company's Tax at 20% ...	Rs. 62,300 00
To Dividend on Equity Shares @ 15% (Subject to Tax) ...	Rs. 5,40,000 00
To Bonus to Staff ...	Rs. 4,00,000 00
To Transfer to Contingencies ...	Rs. 4,50,000 00
To Reserve Fund ...	Rs. 8,70,000 00
	Rs. 21,22,300 00
Leaving a balance to be carried forward ...	Rs. 47,239 52
	Rs. 21,69,539 52

During the year under Report, the issue of a further equity Capital of Rs. 25,00,000/- was made, and the Directors are glad to report that applications were well in excess of the issue.

During the year, three banks were taken over by us under Section 45 of the Banking Companies Act, and the selective transfer of assets of one other bank was effected. This has resulted in an addition of 22 branches. To deal with the problems arising in the taking over of these branches, two Regional Offices have been set up in charge of senior managers and inspection of these additional branches twice yearly by independent auditors (in addition to the normal inspection by our inspecting staff) has been arranged.

Four training courses were specially conducted for the staff of the taken over banks by our Staff Training School. In addition, executive staff of the

taken over banks were from time to time brought to Administrative Office for refresher courses.

We are glad to report that subsequent to the taking over by us of the branches of the four banks, deposits in those branches increased by over 38% within an average period of 4 months. Nine new branches were opened during the year at Bagalkot and Visvesvarapuram—Bangalore in Mysore State; Khar, Santacruz, Parel and Kurla in Bombay, Maharashtra State and Changanacherry, Kottayam and Trichur in Kerala State. These new branches are making satisfactory progress.

Our offer to train the senior staff of smaller banks in our organisational methods was availed of by several of them who expressed their appreciation of the facilities provided by us.

One Officer of the Bank returned during the year after a refresher course in West Germany in the Deutsche Bank to whom we are thankful for the facilities given by them. Three more officers will be proceeding for Overseas Training during the current year.

The construction of the Administrative Office building is proceeding apace and it is expected that the building will be ready for occupation before the end of the current year.

The advance/deposit ratio of our Bank during the year under report was, as in previous years, we believe one of the lowest in the Country, our highest being 60.2% and average being 55.2%. The corresponding figures for Scheduled Banks as a whole (excluding the State Bank of India) were 78.9% and 71.3% respectively.

The Directors thank all Shareholders, Customers and Staff for their co-operation during the year.

Registered Office, Mangalore-1
Dated 8th February, 1962
(By order of the Board)
A. DAMODAR PAI, Chairman.

AUDITOR'S REPORT

I have audited the foregoing Balance Sheet of the Canara Bank Limited, as at 31st December, 1961, and also the foregoing Profit and Loss Account of the Bank for the year ended upon that date, in which are incorporated the returns from thirty-four branches audited by me and sixty-one branches audited by other Auditors and the following twenty-six branches audited by persons otherwise qualified for appointment as Branch Auditors, who are employees of the Bank, under exemption granted under Rule 4 of the Companies (Branch Audit Exemption) Rules 1961, Order No. 1(7)—CL VI/61, Government of India, Ministry of Commerce and Industry, Department of Company Law Administration, dated 30th December, 1961. The branches so exempted are:—

(1) Avenue Road—Bangalore; (2) Chamarajpet—Bangalore; (3) Con-
tonment—Bangalore; (4) Basavangudi—Bangalore; (5) Malleswaram—
Bangalore; (6) Narasimharaja Road—Bangalore; (7) Chickpet—Ban-
galore; (8) Visvesvarapuram—Bangalore; (9) Tumkur; (10) Shimoga.
(11) Mysore; (12) Sirsi; (13) Chickmagalur; (14) Mandya. (15) Udipi.
(16) Bantwal; (17) Coondapoor; (18) Karkala; (19) Ganzuli. (20) Puttur.
(21) Mulki; (22) Thambu Chetty Street—Madras; (23) Govindappa
Naick Street—Madras; (24) Mount Road—Madras; (25) Foreign Depart-
ment (T. C. Street)—Madras; (26) Mercara.

The reports on the accounts of the branches audited by other Auditors have been dealt with in preparing my report in the manner considered necessary by me.

I report that:

(a) I have obtained all the information and explanations which, to the best of my knowledge and belief, where necessary for the purpose of audit and have found them to be satisfactory. (b) The transactions of the Bank which have come to my notice have been within the powers of the Bank. (c) In my opinion, proper books of account, as required by Law, have been kept by the Bank so far as appears from my examination of those books, and proper returns adequate for the purpose of audit have been received from the branches of the Bank. (d) The foregoing Balance Sheet and Profit and Loss Account, dealt with, by this report, are in agreement with the books of account and the returns. (e) In my opinion, and to the best of my information and according to the explanations given to me, the said accounts give the information required by the Companies Act 1956, in the manner so required for Banking Companies and, on such basis, the said Balance Sheet gives a true, and fair view of the state of affairs of the Bank as at 31st December, 1961, and the Profit and Loss Account gives a true and fair view of the profit for the year ended upon that date.

MANGALORE,
Dated 8th February, 1962.

A. UMANATH RAO, B.A., F.C.A.,
Chartered Accountant,
Auditor.

The Bengal Coal Company Limited

Need for Reorientation of Policy on more Realistic Lines

Chairman, Mr A. D. Ogilvie's Statement

The following is the Statement issued by Mr. A. D. Ogilvie, Chairman of the Bengal Coal Company, Limited, to all Shareholders:—

I have pleasure in reporting to the members of The Bengal Coal Company, Ltd., on the operations of their Company during the year ended 31st October, 1961.

The Year's Results: Although sales of coal have shown a substantial increase of Rs. 61 lakhs to Rs. 7½ crores, ever increasing costs have resulted in reduced profits; and this is a problem which of course affects the entire Coal Industry. The gross profit of the Company for the year would in fact have been considerably lower had it not been for the financial assistance receivable in respect of the operation of deep, gassy and difficult mines: this assistance was sanctioned by Government in February, 1960, to take effect as from 1st September of that year, and in the Accounts under review full credit has been taken for the subsidy due for the 14 months period to 31st October, 1961. However, we are only now receiving actual payments in respect of the first quarter of 1961, and I trust that

these payments will be accelerated in accordance with recent assurances received from Government.

The Board are recommending a final dividend of Rs. 13 per share less tax on the Ordinary Shares, making Rs. 21 per share less tax for the year. This represents a gross return of less than 6.6% per annum on the capital employed in the Company. The total distribution now recommended on the Ordinary capital as increased by last year's rights issue is approximately the same as that made in the previous two years on the smaller capital.

Production: 3,188,709 tonnes of coal were raised during the year—an increase of 92,196 tonnes; but this increase could have been much more substantial had it not been for the general shortage of power experienced in the coalfields and the insufficiency of rail transport. In addition, raisings have been hampered by the lack of essential spare parts for machinery and the shortage of explosives. The difficulty arising out of the shortage of spares should be removed when the full benefit of the World Bank assistance is received; but our anxie-

ties regarding explosives can only be lessened when import licences are issued regularly so that supplies are available in good time before the existing stocks are dangerously depleted. In regard to transport and power, the gravity of the present position is well known, and I can only stress the vital necessity of overcoming these two problems if the country is to increase its annual coal production from the current level of under 60 million tonnes to the required figure of at least 97 million tonnes by the end of the Third Plan.

Transport: Whilst our coal stocks at the end of October, 1961, had decreased to a certain extent, stocks again rose in the early months of the current year and this affected production at certain mines. Nevertheless, the position would have been far more serious had not we and consumers taken full advantage of road transport. The lorry weighbridge at Poidih colliery referred to last year has been well utilised, and consideration is being given to the necessity for installing additional weighbridges. It is, however, the contention of the Industry and of consumers that planning must be on the basis of all coal being transported by rail, with road

transport only supplementing the capacity during peak periods.

The alterations and extension to the Parelbia siding have been completed, and I would like to acknowledge the co-operation which we have received from both the Eastern and South Eastern Railways during the year in attending to such matters at our collieries.

Power Supply: In my predecessor's Review last year considerable reference was made to the necessity for forward planning to assess and meet the demands for power supply. The serious concern which was expressed twelve months ago has unfortunately been fully substantiated by our actual experience since then.

With generating plant in the coalfields being inadequate to meet demand, there have been during the year a number of restrictions in power supply which have affected coal production.

I need hardly stress the critical position from the point of view of safety which might arise as a result of such restrictions when electrically operated ventilation fans and winding engines cannot be worked.

14 April 1962

The fact has to be faced that electrical energy is not available for the new motors and machines which we intended to install. So serious is the position that we have decided to install steam winders and fans for certain of our new shafts, even though such steam operated plant is considered outmoded in other parts of the world: this decision has, however, been forced upon us as a practical necessity, since there is little use in our continuing to obtain large electric motors for which there is no power available.

Sandstowing: The quantum of sand stowed at our collieries was increased still further to over 1,200,000 tonnes during the year under review. It has always been the Company's policy to give every attention to sandstowing underground, in the interests of both conservation and safety: we now have sandstowing installations at six collieries, and during the current year it is hoped to bring into use two new installations. It is, however, most disappointing that, in spite of assurances received to the effect that full reimbursement of sandstowing costs will be given as far as possible, the nett loss to the Company under this heading has more than doubled from the previous year's figure of about Rs. 6 lakhs to a new level of over Rs. 13 lakhs. Since stowing is being undertaken in the interests of all, surely it is not reasonable that the Company should have to bear a loss of this magnitude.

Prices: Representatives of the Coal Industry have referred in recent weeks at considerable length to the debilitating effect which the present restrictive price policy is having on the health of the Industry. Detailed figures, establishing the extent to which enhanced operating costs still remain to be neutralised, have been made

available to Government. In addition to these specific claims for neutralisation, the broad price policy still denies to the Industry the ability to plough back adequate funds for capital expenditure, to attract new investment, and generally to instil into its economy the vitality which is so necessary if it is to discharge the heavy responsibility for production placed upon it in the Third Plan.

Both the importance and the urgency of the price question are manifest, and it is hoped that a re-orientation of policy on more realistic lines will soon be forthcoming so as to afford some real relief to the Industry.

The Third Plan: Private enterprise in the Coal Industry has been given the task of increasing its level of raisings by at least 17 million tonnes during the course of the Third Plan. Within this framework your Company's plans have been drawn up on the basis of attaining by the end of the Plan an annual production of at least 4 million tonnes, representing an increase of more than 33% over the level of raisings at the commencement of the Plan. In considering this target it must be remembered that this expansion represents the nett increase after absorbing any fall in raisings at individual collieries. For instance, one of our largest mines, Banksimula 11 & 12 pits colliery, will have exhausted two of its seams during the next 12 months or so, and the resultant loss in production amounting to at least 250,000 tonnes per annum will have to be made good from other workings before we continue on the way of attaining our new targets. Our eagerness to subscribe fully to the great expansion envisaged in the Third Plan is reflected in our plans to avail very

substantially of the assistance being furnished initially by the World Bank for the import of plant and machinery.

We have plans for stepping up production to a great extent at our existing collieries, particularly at Parelbia, Chinakuri and at Girimint, all of which are producing the much required selected grades of coal; and the completion of the new sandstowing ropeway at Chanch colliery will result in greater output of high grade coking coal.

New Developments: In the Murulidih property which has been worked for many years, deep shafts are now being sunk to increase substantially the output of coal from this area. Whilst the full benefit of this new project will not be felt until after the end of the current Plan, it is anticipated that a fair level of production of coking coal will be attained by 1965. Our second new development is at Kunustoria, where some shallow workings were undertaken some years ago. Here we are sinking new shafts through which we hope to start raising coal during the course of the next year.

Over Rs. 1 crore is being spent on these two large projects, and this is a measure of the faith we have in the future, notwithstanding the many existing problems.

Labour and Welfare: I am glad to be able to report continued satisfactory relations with our labour. For the Coal Industry as a whole, however, a Wage Board has been set up and is expected to commence its deliberations shortly.

The construction of new quarters, the installation of water supply schemes and our programmes for welfare measures have proceeded, even though the actual

rate of progress has not been quite as satisfactory as we might have wished; the various shortages of materials, particularly cement, have impeded our efforts to a great extent. However, during the year work was completed on a new Sports Stadium which will be of considerable value to our labour force in the Poniati area, who will be using this for athletics, football matches and other sport. In February of this year I attended the All-India Coalfields Sports which were held at our Stadium in the presence of the Governor of West Bengal; it was a stimulating occasion and the large crowd of many thousands of spectators bore adequate testimony to our employees' enjoyment of these recreational activities.

It is of interest to note that, in addition to the very large labour force employed at our collieries directly for mining and despatching coal, we also provide permanent work for about 2,400 people who are engaged in operating and maintaining the various departments covering medical, welfare, water supply, road maintenance etc.

Staff: I would like to thank the staff in our coalfields organisation for their support to the Company during the past year. Quite apart from the increased complexity of mining problems, our staff at all levels have to deal with exacting matters relating to labour, legal and other affairs connected with the Company's operations. I wish to express to Mr. F. G. Massmann, our Chief Mining Engineer, and to all other members of the coalfields staff, our deep appreciation of their fine work.

Note: This does not purport to be the record of the proceedings of the Annual General Meeting.

For the Investor

INVESTMENT GOSSIP Budgetitis

The stock market has been ruling rather quiet this week with the more speculative counters showing marked losses. In Thursday's trading in Lyons Range prices have recovered moderately and selling pressure even in the speculatives seems to have abated. The reason for this week's reactionary trend appears to be renewed apprehensions about heavy taxation in the coming budget. It is rather strange that marketmen who were supposed to have been worried much over the composition of the Central Cabinet do not seem to show much enthusiasm now that it is known that the Cabinet is dominated by the old team. Mr Morarji Desai continues to be the Finance Minister and the expectation that Mr TTK would be included in the Cabinet has been belied. If the marketmen had equated changes in the Cabinet with a radical alteration in Government's policies as affecting the Private sector, they have little cause for concern now because the old team is again at the helm of affairs.

But it would appear that the composition of the Central Cabinet was only a comparatively minor uncertainty that was troubling operators. Earlier calculations were that whatever fresh taxation is coming can be taken by industry in its stride. Fears of heavy taxation have revived

and the general tendency is to keep commitments light till the budget is out of the way. The problem facing the Finance Minister is to mobilise enough resources for the Third Plan. It is believed that he could not make any real effort last year because of the General Elections. It is expected therefore that he will perforce have to make extra efforts this time. However, there is no anxiety on the part of investors to dispose of their holdings. The decline in speculatives is the result of bull unloading as a precautionary measure. The fact that bears too do not seem to be too aggressive indicates that neither side is quite confident of its position.

NEW ISSUE NOTES DENA Bank

Devkaran Nanjee Banking Company Limited, Bombay, has been given consent by the Controller of Capital Issues to issue 1,00,000 equity shares of Rs 50 each, to be issued for cash, at a premium of Rs 2 per share. The paid-up capital of the bank is Rs 50 lakhs.

Jaipur Metals

Jaipur Metals & Electricals Limited, Jaipur, will be issuing fresh capital of Rs 25 lakhs in equity shares of Rs 100 each, at a premium of Rs 15 per share. The proceeds will be utilised for the manufacture

of copper conductors, electrical meters, etc. The company has a paid-up capital of Rs 35 lakhs.

West India Steel

West India Steel Company Private Limited will issue capital of Rs 10 lakhs in equity shares of Rs 1,000 each for cash, at par. The proceeds will be utilised for re-rolling billets into bars, rods, etc. The company's present subscribed capital is Rs 10 lakhs in equity shares of Rs 1000 each.

Asian Refractories

A new company, Asian Refractories Limited, proposes to enter the market with an issue of Rs 40 lakhs, divided into 7,000—9.3 per cent preference shares of Rs 100 each and 3,30,000 equity shares of Rs 10 each. Licensed to manufacture 24,000 tons of firebricks and 6,000 tons of silica bricks annually, the company has plans to produce, at a later stage, magnesite bricks and chemically bonded bricks. The factory will be located in the district of Hazaribagh, Bihar. Technical collaborators are Messrs Cekop of Poland which will provide the machinery, plant, design, technical data and personnel as well as advice on the erection of the plant. The Industrial Finance Corporation has sanctioned a long-term loan of Rs 35 lakhs and has also agreed to underwrite Rs 5 lakhs in equity capital.

Bharat Forge

A new company under the name of Bharat Forge Company Limited for the manufacture of steel forgings, has been registered in the Maharashtra State. The company will be the first of its kind in this country to manufacture heavy forgings to the extent of 450 pounds a piece and to have facility to machine

forgings into finished components. The authorised capital of the company is Rs 3 crores of which Rs 2 crores will be in equity capital and Rs 1 crore in preference capital. The details of the capital issue have not yet been finalised.

BONUS ISSUE NOTES Capsulation Services

Capsulation Services Private Limited, Bombay, has proposed to issue bonus shares of the value of Rs 3,02,400, divided into 30,240 equity shares of Rs 10 each, to be made in the ratio of three bonus shares for every five shares held. The company's paid-up capital is Rs 5,04,000 and is engaged in the manufacture of one-piece soft gelatine capsules.

INVESTMENT NOTES Rohit Pulp

Rohit Pulp & Paper Mills Limited has gone into production. Initially, it will manufacture fine qualities of writing and printing papers with a daily production capacity of 10 tons. Plans for increasing the capacity from 10 to 20 tons have already been finalised. The expansion will be taken up as soon as the necessary import licences are released by the Government.

INVESTMENT BRIEFS

Gokak Mills Limited has recommended a dividend of Rs 14 per share plus a bonus of Rs 4 per share, subject to tax, for 1961 as against Rs 14 per share, taxable, paid for the preceding year.

Pandyan Bank Limited has maintained the ordinary dividend at 7½ per cent, taxable, for 1961. Aspinwall & Company (Travancore) Limited has maintained the

14 April 1962

dividend at 4 per cent, taxable, for 1961.

Kerala Lakshmi Mills Limited has skipped the dividend for 1961.

BALANCE-SHEET BRIEFS

Guest, Keen, Williams Limited has reported a net profit, before providing for taxation, of as much as Rs 102.92 lakhs for 1961 as against only Rs 91.62 lakhs for the previous year. The directors have recommended a total dividend of 14 per cent, taxable, on the increased capital as against 16 per cent, taxable, on the original capital.

The working of the Bengal Coal Company Limited has resulted in a lower net profit of Rs 43.69 lakhs for the year ended 31 October 1961 as against Rs 47.47 lakhs for the preceding year. The directors have proposed a final dividend of Rs 13, making a total of Rs 21 per share, taxable, on the capital increased by the issue of bonus shares as against a taxable dividend of Rs 25 per share paid previously.

Thanks to a rise in the gross profit from Rs 32.16 lakhs to Rs 59.36 lakhs, the Kohinoor Mills Company Limited has raised the dividend from Rs 15 to Rs 18 per share, subject to tax, for 1961.

STOCK EXCHANGES Mild Recovery After Initial Weakness

Watch-Dog Writes:

STOCK markets have continued to remain inactive, as the operators are in no mood to commit themselves. Even the formation of the Central Cabinet has failed to produce any bullish effect despite its coming up to market expectations. For, the Budget uncertainties have exercised a restraining influence.

Except for a mild recovery noticed towards the close due to some replacement buying, conditions on the Calcutta Stock Exchange remained generally dull and featureless.

Trading on the Bombay market was uneventful and there was a tendency to square up business in front of the long week-end.

There was moderate activity on the Madras Stock Exchange and the price trends continued to be steady.

Wall Street closed very steady with a majority of gains ranging to one dollar or so.

CALCUTTA

APART from Jute shares which ruled comparatively steady due to special reasons and Coal shares having met with a revival of buying interest on expectation of an early rise in the selling price

of the commodity, conditions in other sections on the local stock exchange remained generally subdued with prices developing a sagging tendency.

In general, operators did not react significantly to the news relating to the composition of the Central Cabinet, especially when the announcement was in line with the best expectation of the market. What the market was concerned was not so much with the Cabinet formation, but the proximity of the Union Budget.

It was feared that an attempt might be made to levy heavy taxes to cover part of the deficit in the capital budget as well.

Moreover, speculation was rife that a major re-shuffle might follow at a later stage after the budget was presented in the Lok Sabha. It was also feared that there might be a revision of railway freight rates. There was, therefore, an anxiety to await further developments.

Selling pressure was, however, conspicuous by its absence, which acted as a cushion against any steep fall in equity prices. With the continued flow of good corporate news, expansion plans, right and bonus issues, satisfactory response to the public issues in spite of the prevailing stringency in the money market, the market was successful in arresting a steep fall in prices.

[The Gilt-edged section continued to remain quiet. Although support was lacking, prices were maintained due

THE FLUX AT KULTI

Old furnaces at Kulti

By general consensus of opinion, Josiah Marshall Heath, a superannuated civil servant of the East India Company, was the first to produce steel in India by modern methods at the Indian Iron, Steel and Chrome Company which he set up in 1830 at Porto Novo in south Arcot.

India's nascent steel industry blundered on through many heart-breaking errors and failures until 1876 when the Bengal Iron Works erected, in the jungles of Kulti, two small open-top furnaces powered by a single blowing engine and charcoal-fired boilers. Welcoming this "economic revolution in the country," *The Statesman*, in its issue dated March 8, 1876, said: "... if these new works are but successful with the flux, India will at no distant date supply herself with her own iron, in place of importing it from Europe" thus speeding "the redemption of the people from poverty".

In 1892, the managing agency of these early works at Kulti passed to Martin & Co. Progressing steadily since then and continually expanding its iron-making

and foundry facilities, the Kulti Works were merged in December 1936 with The Indian Iron & Steel Co. Ltd., already in operation at Hirapur under Burn & Co.'s managing agency.

Today, The Indian Iron & Steel Co. Ltd., with fully modernised and integrated works at Burnpur and Kulti and with their own ore-mines and collieries, stand a fitting monument to the perseverance and toil of the early engineers and pioneers and as an abiding testimony of the vital role played by the Company in the development of India's foremost basic industry.

to official support. Scattered interest was shown in short and medium-dated loans, 3 per cent 1986 Conversion Loan changed hands at Rs 71 to Rs 71.20, closing finally at Rs 71.

Lack of support was reflected in Bank shares which displayed a slightly easier tendency.

The general recession in prices was not felt so much in the Jute section, which remained fairly steady. The decision of the LJMA to continue the maximum rate of production for a further period of one month was welcomed. Moreover, the easy availability of raw jute, which turned the fortune of the industry, was expected to be maintained.

Anglo-India changed hands at Rs 224 to Rs 229; Barnagore at Rs 182.50

Notice For Closure of Books

THE PUNJAB NATIONAL BANK LTD.

Registered Office

Parliament Street, New Delhi-1.

The transfer books and register of members of the Bank would remain closed from 24th April to 7th May, 1962 (both days inclusive). The final dividend, 1961, to be declared at the Annual General Meeting to be held on Friday, the 11th May, 1962 at 4.00 P.M. at the registered Office of the Bank (The Punjab National Bank Ltd., Head Office, Parliament Street, New Delhi-1) shall be payable to such shareholders whose names appear on the register of members as on 7th May, 1962.

By Order of the General Board of

Directors,
R. L. TULI
General Manager.

BURN AND COMPANY LIMITED.

Calcutta.
14th April, 1962.

to Rs 183.50; Champdany at Rs 137 to Rs 141; Birlas at Rs 36.56 to Rs 37; Howrah at Rs 21.08 to Rs 21.69; Kankannarrah at Rs 157 to Rs 163; Megna at Rs 13.12 to Rs 13.56; New Central at Rs 17.50 to Rs 17.87 and Reliance at Rs 7.50 to Rs 7.75.

After ruling initially weak following discouraging statement made by the Chairman of the Bengal Coal Company, Limited, Coal shares met with a revival of buying interest. The main factor contributing to the small recovery in prices was the report of the possibility of the Government raising the price of coal for enabling the mine-owners to raise their level of production. Burakur were enquired up to Rs 17.81 from a low of Rs 17.37; East Indian up to Rs 37.69 from Rs 37.12 and New Beerboom up to Rs 21.31 from Rs 21. Western Bengal were better at Rs 9.31 against Rs 8.87 and so also South Karanpura at Rs 7.75 against Rs 7.50.

There was an appreciable decline in the support lent so far to the Tea section. Operators seemed to be worried over the dry spell, which had been continuing in the various tea gardens. It was, therefore, feared that, unless there was a rainfall, the output might be affected. Brooke Bond were on offer at Rs 15.25 to Rs 15.37 against Rs 15.44; and Jay Shree at Rs 19.44 to Rs 19.56 against Rs 19.32. Hantapara and Tezore were the steady features at Rs 124 and Rs 16 respectively with Sapoi having some enquiry up to Rs 19.50 from Rs 18.25.

Sugar shares came in for selective enquiry. Prominent amongst these were Carew, Balramore and Cawn-pore, having support up to Rs 12.62; Rs 2.50 and Rs 13.62 respectively. Ramnugger Cane met with business at Rs 32.50 with SKG ruling unchanged at Rs 9.31.

The uncertain outlook regarding the industry in the matter of raw material supply had an adverse effect on the Textiles section. Jay Shree came in for offer at Rs 17.19 against Rs 17.69; Dunbar at Rs 34 against Rs 34.47 and Kesoram at Rs 32.50 against Rs 33.12. J. K. Rayon, after touching a new low of Rs 21.37 from Rs 22.37 on rumours of the possibility of an increase in the excise duty on rayon goods, recovered partially towards the close to Rs 21.81.

In the Engineering section, price movements were mostly influenced by the speculative activity in Indian Irons which, in turn, were subjected to settlement adjustments till the middle of the week. After opening at Rs 25.36, Indian Irons receded gradually to Rs 24.90 before finishing the week better at Rs 25.06, thanks to some short-covering. In sympathy, ITEXMACO moved down at one time to Rs 21.75 from Rs 22.15.

Guest, Keen, Williams to Rs 40.44 from Rs 42.56; and Binani Metal to Rs 12.50 from Rs 13, to close finally at Rs 22.10; Rs 41.06 and Rs 12.56 respectively. Jessop changed hands on the ex-dividend basis at Rs 24.62 Rs 25, to finish at Rs 24.75.

Miscellaneous issues moved in sympathy with the general trend of

the market. Following were the price trends of a few selected shares:

	High	Low	Closing

MADRAS

The stock exchange seemed to be in a holiday mood with practically little business moving. The dullness was evidently a reflection of other important market centres connected with the yet unknown procedures of the Central Government's policies. As in other places Madras market did not very much react to the new Ministry at the Centre. No business was transacted in the banking shares. The same was the case with the public utilities. EID was strong in sugars. Plantings were colourless. Textiles were weak and lower due to profit taking. Chemicals and cement shares proved good in the industrial section.

Government Securities:—These were at marked prices. Madras Government's 4-1/4 per cent 1972 was marked at Rs 98.10. Mysore Government's 4 per cent 1971 was at Rs 98.00. Kerala Government's 1982 4-1/4 per cent was listed at 98. Andhra Government's 1970 4-1/4 per cent was quoted at Rs 98.15.

Banks:—Indian Bank was quoted at Rs 180. Indian Overseas was at Rs 179. Pandyan Bank was unchanged at Rs 26. Punjab National Bank was at Rs 21.87.

Electrics:—Cochin was listed at Rs 12, Elore at Rs 22, Karaikal at Rs 9.50, Kumbakonam at Rs 11.85, Naga-patam at Rs 12.10, Salem Erode was at Rs 15, South Madras was quoted at Rs 10.15, Tinnevely-Tuticorin was at Rs 13.25, Vellore at Rs 15.25 and West Coast was at Rs 16.12.

Sugars & Breweries:—Deccan was the same at Rs 10.08. EID was bought at Rs 40.25. India remained at Rs 10.35. Kirlampudi was at Rs 71. Mysore was quoted at Rs 53.30, United Breweries was at Rs 82.25 and Travancore proved better at Rs 7.99.

Plantings:—Blue Mountain was at Rs 2.60. Cochin Malabar was five

nP lower at Rs 7.05. Coffee Land's was at Rs 14.50. Consolidated Coffee was at Rs 18.06. Coorg was at Rs 5.20. Halleybury was ten nP higher at Rs 13.60. Kil Kotagiri was at Rs 5.03. Lucky Valley was at Rs 10.50. Mercara was at Rs 1.95. Nonsuch with an interim dividend of 10 per cent was at Rs 22.37. Periakaramalai was fractionally less at Rs 3.32. Ouchterlony was unchanged at Rs 3.93. Talayar improved to Rs 1.77. Pullengode was at Rs 1.80. Travancore Rubber was quoted at Rs 12.80. T. R. & T. was at Rs 10.87. Vayitri was slightly better at Rs 1.40. Waterfall declined to Rs 2.33.

Textiles:—Anglo-French registered a point more at Rs 148.00. Bangalore Woollen was at Rs 267 and Buckingham was at Rs 284. Bhavani was at Rs 11. A new share Akkamamba was registered and was quoted on par at Rs 10. Lakshmi was at Rs 168.50. Madura was the same at Rs 40.15. Rayalaseema declined to Rs 164.50 ex-rights. South India Viscose was at Rs 183.50. Travancore Rayons declined to Rs 42.80.

Miscellaneous:—Aluminium Industries was at Rs 23.58. Dalmia Cement was at Rs 13.75. FACT's was at Rs 8.10. India Cement was at Rs 5.83. IS Rolling was quoted at Rs 11.95. Madras Cements was quoted at Rs 92.00. Mettur Chemical was lower at Rs 12.95. Parrys Confectionery was at Rs 4.48. REM had declared an interim dividend of 9 per cent and quoted at Rs 20.00. Rallis was at Rs 159.00. Seshasayee Industries was at Rs 10.10. Seshasayee Paper was better at Rs 8.50. Standard Motors remained at Rs 16.75. Textool was at Rs 184. Tube Suppliers was at Rs 10. W. I. Plywoods remained at Rs 207.00.

Esso

With effect from 30 March petrol pumps throughout the country which were till then displaying the distinguishing sign boards with the flying red horse have changed over to a new symbol Esso. Esso is a new symbol only for India and some other Asian and African countries: it is already well-known in a large number of countries. The change is the result of the splitting up of Stanvac which was jointly owned by Jersey Standard and Socony Mobil. Way back in 1933 the two companies, Jersey Standard and Socony Mobil jointly set up the Standard Vacuum Oil Company with a view to deriving mutual advantage; for, the former had considerable crude resources in the Far East while the latter had marketing arrangements. As it has been felt that the original circumstances which led to the amalgamation no longer obtained, the partners have agreed to go it alone. The assets of Stanvac have now been divided between Jersey Standard and Socony Mobil on an agreed formula. Esso Standard Eastern which is a wholly owned subsidiary of Jersey Standard has taken over the assets of Stanvac in India as in some other Asian and African countries.

THE PAN AM
\$15-A-DAY-WAY

See Old Faithful in famous Yellowstone Park on an inexpensive Pan Am USA visit

Pan Am now introduces a unique low-cost way to visit any one or all of 32 major U.S. cities.

Have you always wanted to see the USA but thought it far too expensive? If so, Pan Am's \$15-a-day-way is *your* way to the USA.

Here's how: You may spend 3 days and 2 nights in any of 32 major U.S. cities and pay only \$15 for your hotel room with bath *and*, in most cities, a full sightseeing tour. Average cost for each full 24 hour stay—only \$7.50!

Food? You'll be free to dine where you like, at your own expense. However,

Pan American has surveyed every one of the 32 places included in this plan and can assure you that 3 substantial meals at popular restaurants need not cost more than \$7.50 per day through the entire USA.

Result: \$15 a day for room with bath, meals and sightseeing in any or all of 32 fabulous U.S. cities.

Fares? No extra charge on a Pan Am 'round-the-world trip for many of these U.S. cities. Only Rs. 6092 economy class from Calcutta for Europe and the Pacific, and North America as well!

Travel a New World—See the USA.

The Years Ahead

The erection of the new ruling apparatus at the Centre is nearly complete. The new Central Cabinet has already been formally installed, the recently elected members of the Third Lok Sabha have been sworn in and the new Speaker chosen with heartening unanimity. Only the election of the President and the Vice-President still remains and though there is a contest of sorts ahead, the result in either case is a foregone conclusion. The country is particularly fortunate in having Dr Radhakrishnan available for the President's office. There is an air of authority, neither pompous nor fussy, about him that goes admirably with that office. This springs from his philosophic calm, his profound humanity and a certain 'a-political' concern with fundamentals. Authority will sit lightly on him and his counsels will compel respect all the more for not being binding. The choice of a member of a minority community for the office of Vice-President (as also of another for the office of the Speaker) may or may not have been deliberate: but the personal qualities in both cases have been so outstanding that such considerations need not have entered in the choice at all. Both the Lok Sabha and the Rajya Sabha have in the new Speaker and the likely Vice-President wise counsellors and understanding mentors.

The new Lok Sabha contains a number of new faces who may get innumerable opportunities to prove their mettle. While hopes in this regard may not prove unfounded, what is certain is the loss, in consequence of the general elections, of considerable talent that the last Parliament indubitably possessed. The coming weeks in which the Railway and the General Budgets and the President's Address will be debated may give some indication of the kind of Lok Sabha we shall be having for the next five years. But the nature of parliamentary preoccupation has been undergoing a quiet change. Major political and social legislation, like Reorganisation of States and codification of the Hindu law, Company Law. Income-tax Law has already been put through. With Goa incorporated into India and with the final de jure transfer of former French possessions, no penumbral challenges to our sovereignty remains. The major political preoccupation of the coming years will only be with problems arising out of our relations with some of our neighbours, some of whom are openly hostile and aggressive. Others, like Nepal, are allowing themselves by internal and external pressures to put needless strain on Indian goodwill. These may determine the course of debates in Parliament. But the really ambitious parliamentarian will have to do his home work in economics rather than in any other subject. If he does, there can be little doubt that he will make his mark quick and make his impression felt on the public mind.

As the Third Lok Sabha starts functioning the Third Five Year Plan has already been in operation for a year. By an accident, the economic quinquennium and the

political quinquennium of the Republic have, during the last twelve years not coincided and, as at present ordered, are never likely to do so. This has not so far mattered because of the continuity at the seat of power. But it is not unlikely that in the future—some non-Congress parties optimistically put such a future as near as the next election—such a continuity may not obtain. In such an event, the new government may find itself saddled with a Plan already in operation and one which it does not approve of. Of course, in theory, it is possible for the new government to seek a Parliamentary mandate for a Plan more to its liking. It is also true that the planning process is a continuous one and it takes more than two years for the final shape of any particular plan to emerge. Even so, it seems necessary to impart a clearer political authority and responsibility for the kind of economic plan that a government may be pursuing. In this connection we would commend the idea of a plan which is essentially of a four-year duration with a fifth year largely devoted to gathering the loose ends and completing the delayed projects. The fifth year will also coincide with the first year in office of the new government and the new government can devote its first year of office to formulating the next four year plan to be put into effect in the remaining four years of its office. The spill-over from this plan will get executed by the next government in the first year of its office even as it formulates its own plan for its period of office.

The chief virtue of this suggestion is, as already suggested, that each new government will have the responsibility for the success of the Plan and will have no alibis for failure. Nor need it feel frustrated that it is obliged by the compulsion of events, to pursue a plan for which it has no heart. A secondary virtue of the proposal is that it goes some way in meeting the views of those who, like Mr J. R. D. Tata, would wish for a pause and period of consolidation. This idea is often dismissed off-hand, as implying a cessation of economic activity during the pause. This is an absurd travesty. All that is asked for is a pause for taking one's bearing and recovering, so to speak, one's wind.

It is true that the putting into effect of this suggestion would result in the putting off of the commencement of the operation of the next plan to 1 April 1968. We do not think that this need be an insuperable objection. All that this would involve is the extension of the current plan nominally by another year. This can be done, if necessary by revising upward the targets of growth and related expectations and responsibilities—including raising of resources—for the period. No implication of defeatism or lack of rigour need be read into a four-year plan being in effect allowed to spread over five years. Obviously the fact that the plan will run a full five year course will be taken into account in fixing norms of performance, though considerable room for manoeuvre will be available.

Stock Market in First Quarter

THANKS to an improvement in the domestic economy and increasing opportunities for investment as a sequel to the mammoth economic development of the country, stock exchanges have continued to maintain an even keel. At the commencement of the year, hopes were entertained that the appreciable improvement in industrial production that was noticed last year, would continue provided concrete measures were taken to relieve the shortage of transport, electric power and raw materials. There was also a general feeling that, as imports would be seriously curtailed in view of the tight foreign exchange position, it might become imperative to set up indigenous production vigorously.

As a matter of fact, the quarter just ended turned out to be a profitable period, notwithstanding the fact that there was no spectacular boom as in the first quarter of 1961. While the speculators were largely responsible for a spurt in selected shares, investors, too, were inclined to pick up growth stocks with a favourable statistical and fundamental position. Thus, almost all popular shares tried to establish new peak levels, as will be clear from the price trends of a few selected shares in each counter (Table I).

The improvement in the investment climate was reflected in the new issue market, which continued to remain as active as ever with a

good response in a number of new floatations and over-subscriptions in a number of cases. Investors found it comparatively cheap to invest their funds in good new shares, especially when companies offering new issues often had an assured demand due, among other things, to the incidence of import restrictions (Table II).

But, the professional operators seemed to be reluctant to go in for big commitments. Although it was recognised that the industrial outlook had not changed in any way and the flow of corporate news continued to be encouraging, they were ignored owing to various uncertainties. First, the market seemed to have been infected with the Astagraha fever. Secondly, the approach of the general elections contributed to some hesitancy. Thirdly, there were rumours of the possibility of the Government fixing up different steel retention prices for producers according to their individual costs of production. Fourthly, with the general elections over, speculation started about the composition of the Central Cabinet. Finally, with the announcement of the new Cabinet, fears were entertained with regard to additional taxation at the time of the full-fledged budget.

Despite these adverse factors, there were certain bullish points which caused the professional operators to support the market at every setback in prices. The main stimulant was provided by the actual or expected issue of bonus or right shares by a host of companies which changed the entire atmosphere of

the market during the last month of the quarter under review. Even investors were inclined to be fairly optimistic considering that the corporate sector had been working satisfactorily in spite of the various difficulties such as the shortage of transport, coal and power.

Although the turn of the year presented a cheerful appearance, the mood of caution was in evidence. There was considerable nervousness amongst a section of the operators due to the approach of the conjunction of the eight planets. Moreover, the prospective load of heavy taxation of the Third Plan and the anxiety to await the outcome of the Aid-India Club meeting contributed to the hesitancy of the market. Another contributory factor was the news that Mr T. T. Krishnamachari had been elected unopposed to the Lok Sabha. This gave rise to a fear that he might be given the finance portfolio and his return might herald in heavier and fresh tax burdens.

But, the market put up a brave front from the commencement of February due to the quiet passing of the Astagraha period with no untoward incidents. Sentiment was also influenced by the flow of encouraging corporate news and the reports of the Government proposal to provide tax relief to the industries engaged in exports. Again, the announcement of bonus or right issues by certain companies gave rise to a feeling that many more companies might hurry up with their bonus issue proposals on the fear that, the bonus

issue tax may be raised in the new budget.

Trading, however, remained subdued from the beginning of March when there was a marked hesitancy to go too far ahead due to uncertain outlook over the near-term. It was feared that, in view of the Congress victory in most of the States, the new Central Cabinet might contain strong supporters for socialism. Moreover, with the election results announced, the uncertainty about the shape of the coming budget was a cause for worry. It was not known whether the budget would be seeking to maintain the status quo in the matter of taxation or contain new levies for the purpose of financing the Third Plan.

Actually, when the interim budget was announced, it was freely discussed that a serious attempt would be made to cover as much as possible of the whole deficit of Rs 147 crores. But, on second thoughts, it was felt that the revenue deficit was no larger than was to be expected considering the steady rise in Government expenditure and the deficit might not be difficult to cover with a judicious increase in indirect taxes. There were also other factors which went a long way in improving the sentiment.

Apart from the indications given by the Commerce and Industry Minister in regard to the possibility of tax relief being given to the export industries, the continuous flow of encouraging corporate news in the shape of bonus or right issues kept down the selling pressure to some extent. Operators were also

inclined to the view that the Finance Minister might try to make up the budget deficit mainly from indirect taxation, as direct taxation could not be increased further without hampering the investment climate. As a matter of fact, operators were even in a mood to accept the prospect of a fresh taxation as inescapable whoever became the Finance Minister in the new Cabinet. They also derived some inspiration from the statement made by Mr Nehru, at the annual session of the FICCI in which he recognised the importance of the private sector in our economy.

In the dealings during the quarterly period under review, Jute shares fared exceedingly well on the feeling that the industry was turning the corner. Apart from the fact that the outlook for the industry was considered to be much brighter than what it was for sometime past in view of the abundant supplies of the fibre, it was believed that, with the increased working hours and the unsealing of more looms, the mills might show better results for the current year.

In contrast, Coal shares remained practically neglected throughout the period. Despite the talk of raising the Third Plan target to more than hundred million tons, operators were not inclined to lend support, as the industry's major problem of shortage of transport, explosives and power had not shown any sign of being resolved in the near future.

Except for a few selected shares which came in for some enquiry in the hope of

bonus issues, trading in the Tea section was generally restricted. The Wage Board's recommendation for an interim relief in wages was taken to mean an additional burden on the industry, which was already fighting the problem of a lower price being realised for its product.

Sugar shares were a neglected counter in view of the obscure outlook for the industry. The only bright feature were Dyer Meakins, which met with consistent support on rumours of a bonus issue.

After initial firmness on reports of higher profits being made by the companies for 1961, Textile shares displayed a slightly reactionary tendency towards the close of the period in view of the anxiety with regard to the supply of raw cotton during the current season.

Engineering shares came in for a good deal of attention in the belief that the scope for the engineering industry, during the next few years, was good as a large portion of the development in the Third Plan would take place in this sector of the economy. The publication of excellent results by a few companies and the issue of right shares by others were also contributory factors to the extraordinary strength displayed by this section.

Generally speaking, Miscellaneous issues received constant attention although profit-taking erased some of the extreme gains towards the close. There was a general belief that the companies, which were engaged in the newer lines of production, were doing very well. As the existing blue chips had attained such dizzy heights as to be out of reach of the average investors, the new shares, even with the considerable premia they were commanding, attracted attention on the long-term view.

TABLE II

Company.	Type of Issue.	Issue Price	Details of Issue
1. Universal Electrics.	Offered to public.	Ord. Rs 10 Pref. Rs 100	Issued 3,30,000 ordinary and 8,100-64% tax-free Cum. non-redeemable preference shares. The preference shares are allotted to the foreign collaborators. The directors and their friends have subscribed for 8,000 ordinary shares. The remaining 2,50,000 ordinary shares are offered to the public. The entire public issue has been underwritten.
2. Star Paper.	Rights ordinary as well as for public subscription.	Rs 10 at par	Issued 5,00,000 equity shares. The shareholders took up 2,22,117 shares and the balance of 2,77,883 shares are offered to the public.
3. Electro-Equipment Corporation.	-do-	Rs 10 each	Out of the issued capital of Rs 35 lakhs, the shareholders subscribed for 1,00,029 shares and the directors for 78,480 shares. The balance of 1,71,500 shares are offered to the public. The entire public issue has been underwritten by the leading brokers.
4. Modella Woolens.	Offered to public	Rs 10 each	The issue is 3,05,000 equity shares. The entire public issue has been underwritten.
5. KFC Bonds.	-do-	Rs 100 at par	Issued Bonds for Rs 50 lakhs carrying interest at 44%, redeemable in 12 years.
6. Antifriction Bearings.	Offered to public	Rs 10 each	Out of the total issue of Rs 60 lakhs, the promoters have taken up Rs 22.50 lakhs; foreign collaborators Rs 5 lakhs and the LIC Rs 5 lakhs. The balance of Rs 27.50 lakhs was offered to the public.
7. Kerala Premo-Pipe.	-do-	Rs 1000 at par	Issued Rs 12.50 lakhs in equity shares.
8. Northern India Motor.	Rights Ordinary	Rs 100 at par	Issued additional capital of Rs 2,62,500.
9. Malabar Bank.	Offered to public	Rs 100 at par	Issued capital of Rs 2 lakhs.
10. Martandam Commercial Bank.	-do-	Rs 25 at par	Issued Rs 22,200 in 888 ordinary shares.
11. Chittaranjan Cotton.	-do-	Ord. Rs 10 Pref. Rs 100	Issued Rs 16 lakhs in 1,00,000 equity shares and 6,000 cumulative redeemable preference shares.
12. Indian Overseas Bank.	Rights Ordinary	Rs 100 at par Rs 10 prem.	Issued further capital of Rs 25 lakhs.
13. Seshasayee Industries.	Offered to public	Rs 10 each	Issued 4,00,000 equity shares. The entire issue has been underwritten.
14. Speciality Papers.	-do-	Rs 10 each	Issued Rs 10 lakhs in equity shares. The issue is over-subscribed by two times.
15. R. R. Engineering.	-do-	...	Of the issued capital of Rs 40 lakhs, the promoters have taken up Rs 9 lakhs. Out of the balance, shares to the value of Rs 15 lakhs are offered to public.
16. India Cements.	Rights Ordinary	Rs 5 at par	Issued further capital of Rs 1,25,55,250.
17. Associated Bearing.	Offered to public	Rs 100 at par	Of the issued capital of Rs. 4 crores in equity shares, 60 per cent will be subscribed by the foreign collaborators.

TABLE II—Contd.

Company.	Type of Issue.	Issue Price	Details of Issue
18. W. S. Insulators.	-do-	...	Issued a capital of Rs. 1 crore—Rs. 80 lakhs in equity shares and Rs 20 lakhs in ½ per cent preference shares.
19. Struthers Wells.	-do-	Rs 10 at par	Issued capital of Rs. 1 crore. Shares of the value of Rs. 28 lakhs are issued to foreign collaborators.
20. Ganesh Flour.	Rights Ordinary	Rs 12.50 at a prem. of Re 1	Issued additional capital of Rs. 25 lakhs in equity shares.
21. Sardesai Brothers.	Offered to public	Rs 100 each	Offered 40,000 equity shares. The directors and their friends have taken up 22,500 shares to the public.
22. Film Finance.	Offered to public	Rs 1000 at par	Issued further capital of Rs. 24 lakhs in equity shares. All the shares are taken up by the Central Government.
23. Lenet Ranbaxy.	Offered to public	Rs 100 each	Issued Rs. 35 lakhs in equity shares to the foreign collaborators and Indian nationals in the ratio of Rs. 50 : 50.
24. Globe Motors.	Offered to public	Rs 100 at par	Issued Rs. 25 lakhs in equity shares.
25. Hindustan Oxygen.	Offered to public	Rs 100 each	Issued Rs. 30 lakhs in equity shares. The actual offer to the public was 19,000 equity shares and the directors have taken up 11,000 shares.
26. Kanoria Chemicals.	Offered to public	Ord. Rs 10 Pref. Rs 100	Issued Rs. 1 crore in 8,00,000 equity shares and 20,000 cumulative redeemable preference shares.
27. Hindustan Machine.	Rights Ordinary	Rs 1000 each	Issued further capital of Rs. 1 crore in equity shares. The Government of India has taken up the entire issue.
28. Eastern Investments.	Rights Ordinary	Rs 100 at a prem. of Rs 10	Issued 25.63 lakhs in equity shares in the ratio of 1 : 2.
29. Victor Gaskets.	Offered to public	Rs 100 each	Issued Rs. 15 lakhs. Out of this, Rs. 9 lakhs are issued to the foreign collaborators and the balance to the Indian nationals.
30. Food Specialties.	Offered to public	Rs 100 each	Issued further capital of Rs. 50 lakhs in equity shares to the foreign collaborators and the Indian nationals in the ratio of 75 : 25.
31. Hindustan Pilkington.	Rights Ordinary	Rs 10 at a prem. of Rs 4	Issued 10,00,000 equity shares. Of this, 48.75 per cent is given to foreign collaborators and 51.25 per cent to the existing shareholders.
32. Panyan Cements.	Rights Ordinary	Rs 100 Pref. at par	Issued 3,64,000—9.3 per cent preference shares.
33. Larsen and Toubro.	Rights Ordinary	Rs 100 at par	Issued Rs. 55 lakhs in equity shares to the shareholders in the ratio of 1 : 3.
34. Tata Chemicals.	Rights Ordinary	Rs 10 at a prem. of 50 nP	Issued to the existing shareholders in the ratio of 1 : 5.
35. -Mukund Iron.	Rights Ordinary	Rs 10	Issued additional capital of Rs. 10 lakhs in the ratio of 1 : 8.

Individual well-being is linked with national prosperity and only planned efforts can ensure both in the shortest possible time. And planning, for its success, largely depends on savings, individual as well as national. Saving in the form of Bank Deposits provides resources for the National Plan.

“Reasonable Interest Rates”

It is good to find from Mr G. D. Birla, in his speech at the annual general meeting of the United Commercial Bank Ltd, that he for one will apparently view with disfavour any sort of drift in the matter of interest rates on Deposits. He has called categorically for “a stable structure of reasonable interest rates” and has added that “it would be undesirable to permit a material departure from the structure of interest rates and permit more and more banks to quote higher rates of interest”. He would in particular appear to be against a differential in favour of the medium banks which, it may be recalled, are threatening to opt out of the inter-bank agreement on Deposit rates. It may not however, be politic to deny altogether the request (or should we say demand?) of the medium banks. We take it that the rates presently obtaining under the inter-bank agreement are considered reasonable by Mr Birla—though for our part we feel that some reduction should be possible. In that case, surely adjustments could be made whereby three sets of rates can come into force—but with the stipulation that the differential is one-eighth of one per cent rather than the one quarter of one per cent which banks seek. Mr Birla makes the point that new Deposits cannot be attracted in the atmosphere of a rate war. The medium banks, attaching perhaps more prestige and psychological value to increase in Deposit resources, may conceivably feel that they can afford the dissipation of earnings over the short term and that therefore no great harm lies in any increase in the Deposit rates they are permitted to pay.

But any upward revision of Deposit rates will be, let it be clearly recognised, self-defeating in two ways. On the one hand, the new Deposits so attracted will be analogous to the hot money that the UK for instance succeeds in acquiring every time the Bank of England rate is unconscionably raised. The loyalty, as it were, of such funds is open to doubt, and in the event of a Deposits war being waged, the turncoat characteristics of the hot money would be immediately exposed. On the other hand the “spending” of earnings on Deposits will so eat into profits, that the glamour of an increase in resources may often times get nullified by lower profits—and, may be, an enforced reduction in the rate of dividend. It is not yet too late for wisdom to dawn in the matter of interest rates on Deposits.

PANDYAN BANK

High Capital Ratio

That small banks did not find 1961 to be a good year, as was the case with large institutions, is brought out in the latest accounts of Pandyan Bank Limited. After years of

steady improvement in both earnings and in Deposits there has now occurred a slight recession. Mr S. N. K. Sundaram who was Managing Director from Pandyan Bank's inception, has now retired with the certain knowledge that he has built up an institution that will thrive. It is up to Mr K. L. Subramanian, who has taken over as General Manager, to consolidate the position before embarking on expansion.

Deposits and other resources have declined somewhat from Rs 4.39 crores to Rs 3.69 crores. This is almost wholly accounted for by a drop of Rs 65 lakhs to Rs 2.07 crores in Fixed and Recurring Deposits. An improvement of Rs 11 lakhs to Rs 78.38 lakhs in Savings Bank Deposits has largely offset the fall of Rs 15 lakhs to Rs 79.43 lakhs in Current Accounts, etc.

Accordingly the total of Advances has had to be reduced from Rs 3.07 crores to Rs 2.75 crores, the credit ratio meantime rising from 70.0 per cent to 74.4 per cent. Also, there has been slight disinvestment in gilt-edged with the portfolio moving down from Rs 1.07 crores to Rs 83.37 lakhs. Thirdly, Cash balances have been run down by about Rs 5 lakhs to Rs 60.73 lakhs. As a result borrowings had to be increased from Rs 20.63 lakhs to Rs 26.71 lakhs.

According to the profit and loss account the income by interest and discount has fallen by Rs 6 lakhs to Rs 32.27 lakhs, whereas commission, exchange and brokerage have fetched in the unaltered amount of Rs 6.05 lakhs. Savings have been possible in interest paid, the amount absorbed being a little over Rs 4 lakhs less at Rs 16.53 lakhs. But salaries and allowances have cost Rs 0.74 lakh more at Rs 12.51 lakhs. The result is that the balance of Profit, subject to taxation, has come down from Rs 7.50 lakhs to Rs 4.38 lakhs. The tax provision for the two years is Rs 3.40 lakhs and Rs 2.25 lakhs respectively. There is a transfer of Rs 88,000 to General Reserve against Rs 2.50 lakhs last year, and besides a provision of Rs 30,000 for contingencies against nil. The dividend has been cut to 7½ per cent from 10 per cent.

Mention may lastly be made of the fact that Pandyan Bank's “Capital” ratio is commendably high at 8.2 per cent against 6.7 per cent in 1960.

BANK RETURNS

Third Successive Week of Rise in Deposits

For the third successive week bank Deposits show the beneficial impact of the Central Government's end of fiscal year disbursements. The increase in resources since 16 March 1962 has just exceeded Rs 80 crores.

According to the returns of the Reserve Bank for 13 April, Active Note circulation has risen further by Rs 16.27 crores (on top of a rise in the previous week of Rs 63 crores) to Rs 2,149.32 crores. There has besides been

outflow of Rupee Coin for Rs 0.75 crore. Foreign Securities are unchanged at Rs 113.80 crores, and currency has been expanded for Rs 10 crores against Rupee Securities by transfer from Investments in the Banking Department. As a result the Reserve Bank's cash in the till has been drawn down by Rs 7.27 crores to Rs 12.40 crores.

Inter-governmental transactions are indicated in the return for the Banking Department. The Centre's balances have improved by Rs 9.66 crores to Rs 83.27 crores, whereas, owing to payments made the States disclose (a) a fall of Rs 2.91 crores to Rs 3.89 crores in Deposits; (b) a sharp rise of Rs 23.69 crores to Rs 119.22 crores in ways and means borrowings from the Reserve Bank; and (c) rediscount of Treasury Bills for a probable amount of Rs 25 crores as mirrored in a rise of like amount in Treasury Bills purchased and discounted by the Reserve Bank. By dint of the transfer to the Issue Department. Investments are lower by Rs 10.13 crores at Rs 157.70 crores.

The growth of new Deposits has enabled Scheduled Banks considerably to improve their position vis-a-vis the Reserve Bank. In the week ended 6 April, Scheduled Bank debt to the central banking institution was reduced by about Rs 21½ crores to Rs 31.45 crores. The decline of Rs 17.05 crores in the Other Loans and Advances of the Reserve Bank as at 13 April would suggest that Scheduled Bank debt to Reserve Bank is now less than Rs 15 crores. However, Reserve Balances of member banks are practically unchanged at Rs 86.39 crores against Rs 86.18 crores.

It is distressing to report another fair-sized decline in Balances Held Abroad, which are lower by Rs 5.17 crores at Rs 6.16 crores. Foreign assets held by the Reserve Bank now barely exceed the Rs 120 crore level—and the slack season for exports is just beginning.

The explanatory memorandum to the “caretaker” Budget for 1962-63 disclosed that the State Bank was expected to transfer a further Rs 50 crores to the Reserve Bank in respect of past accumulations of Public Law 480 counterpart funds that were on deposit with that institution. The question is, does the fall in Deposits of Rs 9.50 crores, in the State Bank's return for 13 April, relate to such transfer of PL 480 funds in monthly instalments of Rs 10 crores each? The answer could well be in the affirmative, though of course there is no manner of securing any confirmation of our hypothesis. To continue with the analysis of the State Bank figures for 13 April, the fall of Rs 9.50 crores to Rs 577.73 crores in Deposits has been matched by the decline of Rs 8.10 crores to Rs 33.65 crores in other Assets. The last few signs of busy season pressure are indicated in a further increase of Rs 1.62 crores to Rs 293.05 crores in the total of Advances; and it would now appear that there is just a bare chance of the Rs 300 crore mark in this regard being crossed. The gilt-edged portfolio is more or less unchanged at Rs 242.81 crores and Cash balances have receded slightly by Rs 0.85 crore to Rs 29.63 crores.

For the third week in succession, as already noted, Deposit resources of Scheduled Banks have sharply improved. Net Demand Deposits are higher by Rs 18.74 crores at Rs 907.32 crores whereas net Time Deposits have also risen considerably by Rs 19.39 crores to Rs 1,179.00 crores. This has enabled, in the first instance a reduction of Rs 21.59 crores to Rs 31.45 crores in borrowings from the Reserve Bank. Secondly, Reserve Balances of

Scheduled Banks have gone up by Rs 16.61 crores. Thirdly, the Scheduled Banks have besides been able to take in their stride a busy season cum beginning of the month increase of Rs 3.74 crores to Rs 1,422.05 crores in the total of Advances. There has been disinvestment in gilt-edged for Rs 12 crores, but this is on account of the State Bank.

Of the rise in net deposits of Rs 38.13 crores, a sum of Rs 14.96 crores is traceable to the State Bank; and, secondly, the State Bank accounts for Rs 8.80 crores of the increases of Rs 25.32 crores in cash balances.

Treasury Bills

Tenders for Rs. 2,00,00,000 of 91 days' Government of India Treasury Bills were opened on Monday, 16 April, 1962. Total amount offered was Rs 2,00,00,000. Tenders at Rs 99.345 per cent were accepted in full. Total amount accepted was Rs 2,00,00,000, the average rate of accepted tenders being Rs 2.620 per cent per annum.

Tenders for Rs 2,00,00,000 of 91 days' Government of India Treasury Bills will be received at all centres (Bangalore, Bombay, Calcutta, Kanpur, Madras, Nagpur and New Delhi) up to Monday 23 April 1962. Successful tenders should make payment on Friday, 27 April, 1962 at all centres. Other conditions are as usual.

During the week ended 13 April 1962, Government of India Treasury Bills for Rs 1,86,08,50,000 were sold in favour of Reserve Bank of India.

Is British Budget “Neutral”?

By Paul Einzig

ALL Ministerial speakers during the debate that followed Mr Lloyd's Budget statement stressed the essentially “neutral” character of the Budget. By which they meant that on balance it will neither add to the volume of purchasing power nor deduct from it. Admittedly, the overall deficit seems to be too small to make much difference. But on the basis of experience in recent years a Budget which appears to be balanced on paper fore-shadows and excess of expenditure over revenue, for the simple reason that year after year there have been supplementary estimates running into hundreds of millions of pounds. There is no reason to suppose that this will be different during 1962-63—unless there should be a sufficient increase in wages and profits to lead to an increase in revenue above estimates.

It seems to be safe to assume that wages will increase well in excess of the limit of 2½ percent which the Government has laid down for 1962. For one thing, the Budget is certain to cause a rise in the cost of living, as a result of the increase in the purchase tax on necessities such as clothing, shoes, furniture &c. and of the new tax on sweets and chocolate. This means accentuation of the pressure for higher wages. What is more important, scarcity of labour is likely to be accentuated by the ill-advised reduction in purchase tax on motor vehicles. As a result of the increase in domestic demand for motor cars, the motor industry will be in an even stronger position to drain the manpower of the country and other industries will have to raise wages to defend their manpower against this drain. So it is necessary to envisage a year of inflation.

The Government does not expect much revenue from the new tax on speculative capital gains. Indeed it is conceivable that the resulting decline in the volume of turnover on the Stock Exchange will cause a fall in the proceeds of the stamp duty which will wipe out the proceeds of the new tax. On balance it seems probable that the current financial year, like the past financial year, will produce a deficit which will accentuate the inflationary effect of some of the budgetary measures. Coming as it does in addition to the deflationary effect of lower interest rates and credit expression, it seems reasonable to anticipate a rise in prices and profits during the current year.

It remains to be seen whether this new inflation will be strong enough to reverse the improving trend of the trade balance. Possibly owing to the operation of the usual time-lags the improvement may continue for some time and sterling may remain firm. But sooner or later the rise in costs will react on exports. When that stage is reached it will become necessary once more to revert to disinflationary policies. The Government is likely to try to defer the evil day when it will have to resort once more to high Bank rate. Yet it is very important that the economy should be reasonably balanced during the next few months while the question of planning a wage policy is under consideration. Amidst the demoralising effects of an inflationary atmosphere the chances of a broad measure of agreement on such policy would be negligible. The Government would have been wise in continuing the disinflationary policy, as under the threat of growing unemployment the trade unions may have been induced to see sense. But once overfull employment is attained all unions will aim at snatching the maximum benefit out of it.

—“Copyright.”

D Mark no Longer Dominates

By A Special Correspondent

FOR something like ten years the West German currency has been the hardest currency. A succession of export surpluses and an influx of foreign long-term and short term funds enabled the Deutsches Bundesbank to build up a gold reserve second only to that of the United States. In this respect history repeated itself. After the Napoleonic Wars the exchange of defeated France—a country which was invaded twice in less than two years by its victorious opponents and was made to pay reparations—was for years much firmer than the exchanges of the victorious

allies, Britain, Prussia, Austria and Russia. This was because under the financial administration of Baron Louis, France submitted to the austerities required by sound economy. Likewise, during the late 'forties and the early 'fifties Dr Erhard succeeded in persuading the West Germans to work hard in return for relatively moderate reward. This attitude has now changed to a large extent and West Germany is in danger of losing the advantages she has been enjoying over her industrial competitors. Wage demands are now pressed relentlessly and resistance by employers is inadequate because they hope to be able to add the extra cost to the prices of their goods.

This attitude has been all too familiar in other industrial countries and has been largely responsible for the frequently recurrent pressure on sterling and the dollar. It is indeed a great pity that both sterling and the dollar have to regain their strength not through an improvement at home but through a deterioration abroad. Even so, the abatement of the perennial pressure on the British and American gold reserves caused largely by the strength of the West German economy, will provide a breathing space to the British and American Government and peoples. They will have an opportunity of working out their salvation free from immediate pressure caused by persistent adverse exchange and gold withdrawals.

Even so, there is no cause for rejoicing over West Germany's difficulties. It is true she is our trade rival, but she is also our ally. It is to the interest of the democratic world that every democratic country should exert itself to the utmost to increase its output and productivity. If wage inflation should force the West German Government to curtail by means of disinflationary measures it would mean a loss not only to West Germany but to the whole democratic world. It would assist the Communist bloc in its efforts to catch up with the democratic world in respect of industrial production.

The moral effects of a deterioration of West German economic strength would be also greatly to our disadvantage. The West German miracle helped the democratic world to hold its own in competitive co-existence with the Communist world not only through its example. The spectacular progress made by West Germany proved that it was possible to produce such results without having to enslave the population and force them under the iron discipline of a totalitarian state to work hard in return for inadequate reward. It would be a great pity if, instead of following the German example, other industrial countries of the free world were to inspire West Germany with the urge to emulate them by adopting as its ideal the “economic man” of the classical literature whose sole object in life is to obtain the maximum reward for the minimum of exertion.

Notes

COTTON TEXTILES Streamlining

The Estimates Committee's report on Textiles, the Office of the Textile Commissioner—contains a wealth of information about the functions and organisational set-up of the Textile Commissioner and his office, of cotton textile industry, starch industry, handloom and powerloom industries, woollen industry, art silk industry and export promotion of cotton textiles. The suggestions, mainly reformative in character, incorporated in the report will, if implemented, pave way for the better showing of the industry and the efficient functioning of the organisation.

The office of the Textile Commissioner, Bombay, is a war-baby. During the post-war period the role of the office has undergone a perceptible change and at present it is concerned less with supplies and distribution than with the rehabilitation and re-organisation of various sectors of the textile industry on modern lines in a regulated manner in accordance with the country's economic policy.

The functions of the Textile Commissioner can be broadly described as the development and regulation of cotton, wool, and art silk industry and the starch industry. He is also the ex-officio Joint Secretary to the Government of India as well as the Chairman of the All India Handloom Board. As ex-officio Joint Secretary the Commissioner has to discharge

secretariat functions of formulation of proposals for the policy regarding planned development of several branches of the industry in addition to the functions pertaining to the execution of controls. Organisation of the Textile Commissioners Office is still *ad hoc* in its approach. For example, as pointed out by the Committee, despite its long existence, the recruitment rules have yet to be approved.

The textile control orders issued by the Government of India from time to time, whenever the occasion arises, are implemented by the Textile Commissioner. Unfortunately, the implementation of some of the important controls has not received the desired attention obviously due to the inadequacy of the staff and lack of requisite well-knit machinery for their enforcement. The growth of the unauthorised powerlooms is a striking instance of this. The Committee has also suggested that the work of drafting of the policy manual will have to be expedited and completed expeditiously so as to give sufficient time for the trade and industry to get themselves familiarised with the rules.

The steps adopted by the Commissioner for greater devolution of powers and responsibilities are sure to result in a better outcome of work. But the inordinate delays should have to be done away with by adequate remedial measures and leave no room for complaints from the various interests. The time lag in the compilation of the statistics should be reduced with a view to ensuring their timely publication. The defaulters who fail to submit the relevant particulars within the stipulated time should be brought to book.

The Committee has also drawn attention to the desirability of publishing the annual report of the Ministry containing information about the textile industry separately or along with the annual review of production and distribution of the textile industry.

Though the textile industry is India's oldest and biggest organised enterprise with a capital investment of over Rs 1,310 million its fortunes are wayward. Internally it has to accommodate the decentralised sector and contend with the popularity of man-made fabrics. In the international markets too severe competition is experienced from countries like Japan, France, West Germany and China. The competitive ability of our industry is relatively weak and the rehabilitation and modernisation of the industry is proceeding at snail's pace. To add to its troubles there is the present scarcity of cotton which will adversely affect the production schedule of the industry.

India's entry into the manufacture of industrial machinery is a post-war development. As such the tex-

tile machinery manufacturing industry in India is still in its infancy. Only a part of the country's needs are met by domestic fabrication. The requirements of the textile machinery during the Second Plan period were assessed at Rs 90 crores both for modernisation and expansion. The actual production of machinery during the last quinquennium was of the order of Rs 43 crores. At the same time the production of textile spares and accessories had sharply risen up to Rs 15 crores from Rs 10 crores. The Third Plan has estimated the industry's requirements at Rs 177 crores. The non-availability of standard pig iron and standard steel, scarcity of ball bearings, lack of specialised items like measuring instruments, control instruments, gauges, electronic equipment etc., are major inhibiting factors. The procurement of specific raw materials, the encouragement of the manufacture of ball bearing and specialised items and the improvement of quality of indigenous machinery can go a long way in meeting major part of the industry's requirements. The conspicuous absence of a research institute catering to the exclusive needs of the textile machinery manufacturing industry is another drawback. The establishment of such an institution will help considerably to improve the efficiency and productivity. The setting up of a Development Council is another recommendation worth considering.

STATE BUDGET UP

THE Budget estimates of UP for 1962-63 presented to the Vidhan Sabha by Mr Kamalapati Tripathi, the Finance Minister, have many grounds in common with some of the other State Budgets announced so far. The complaint against small share of revenue from the divisible pool of taxes on account of the award of the Third Finance Commission and leaving the deficit uncovered for the time being are some of the phenomena akin to them. The revenue receipts for the budget year are estimated at Rs 178.06 crores against Rs 191.41 crores under revenue expenditure. The revenue deficit of Rs 13.35 crores will mostly be left uncovered for only a part will be met by adjusting rates as might be permissible under the existing framework of law and there is no definite policy statement regarding the imposition of further taxatory measures. The Finance Minister has, however, given some hint that the balance will be covered by "suitable measures" which will be tabled before the Assembly in due course. The substantial increase in the estimates are partly due to the alterations effected consequent on the rationalisation of the accounting procedure.

In his speech Mr Tripathi has voiced the grievance of the State in the comparatively low share of the income tax revenue which

arose out of the total exclusion of the company taxation from the divisible pool and lower weightage accorded to the population. Referring to the allocations for power schemes Mr Tripathi stated that a sum of Rs 12.29 crores has been earmarked for the various power projects in the State for the next Budget year. Power generation will be stepped up by putting up two small schemes of 200 kw each in Kashi and by commissioning this year a new 60 megawatt power station of the Haridwar extension project.

Reviewing the progress made by the State during the past the Finance Minister observed that though the State can be legitimately proud of the achievements there remains much to be desired. For instance in the agricultural sphere there is much room for improvement. The steady growth in the membership of the co-operative societies is praiseworthy, but the failure of the societies to fulfil the task desired of them constitutes a matter for genuine complaint. Furthermore the State has the dubious distinction of the non-utilisation of a portion of the power available which will have to be put into profitable uses. The programmes finalised for the modernisation of the vast stretches of roads are admirable. But stress should be laid on road safety so that the accidents can be limited to the bare minimum.

Progress made on the industrial front due to the sustained efforts of the authorities is encouraging and the creation of a congenial climate for establishing new ventures is a welcome augury for the State's rapid industrial development.

STAINLESS STEEL

Meagre Supplies

If the stainless steel industry is having more than its share of troubles, it is because unlike many industries, it is depending solely on imports for its main raw material. The situation may however change for the better before long as it is expected that within the next two or three years sizable quantities of stainless steel will become available from indigenous sources. A licence has been granted to Tata Iron Steel Company for setting up an alloy tool and special steel plant, which in addition to special steel, will produce 20,000 tons of stainless steel per year. The tool and alloy steel plant to be set up in the public sector will further augment the supply of indigenous stainless steel as this factory is to produce 17,000 tons per annum of stainless and heat-resisting steels in the first stage.

It is not improbable therefore that most of its present difficulties which mainly arise from an adequate supply of its chief raw material will, once domestic production of stainless steel become available, lose much of their rigorous if not altogether disappear. But this is no reason why the industry should not be spared some of the avoidable hardships with which it seems to be plagued. While there can be no complaint against a policy whose main objective ensures that only the most essential minimum quantity of stainless steel is imported, there can be no cause for allowing the limited foreign exchange allotted for the import of stainless steel to be frittered away. In his presidential address to the recent annual meeting of the All India Stainless Steel Industries Association, Mr Ramanlal M. Shah, has referred to a number of inconsistencies in the policy governing the import and distribution of stainless steel to the various sections of the industry. For instance, the ruling that utensil production is to be kept to the minimum and that this section of the industry is to get stainless steel only from barter imports, does not seem to be applied in a rational manner. As Mr Shah has pointed out the whole procedure is vague and the limited quantity that is available for the utensils industry, does not appear to be utilised in the best manner possible. While a number of old established utensil manufacturing units are starved of raw material, new units are allowed to spring up all over the country, apparently with the blessings of the State Governments. Mr Shah has made serious charges against those who are entrusted with the responsibility of passing applications for the import of stainless steel. This is what he says: I am absolutely certain and it is clearly obvious that neither the Director of Industries of any State or for that matter the

ANNOUNCEMENT

THE STATE BANK OF JAIPUR

have pleasure to announce the introduction as from the 1st May 1962

of

SPECIAL CREDIT TRANSFER SYSTEM

whereby any customer having a personal account with the Bank will be enabled to use any office of the Bank for transfer of money paid in cash for credit of his account to the extent of Rs. 1,000/- in any one instance FREE OF CHARGE.

A deposit relationship with the Bank will entitle the use of the services of any of its 49 offices throughout the country for the free SPECIAL CREDIT TRANSFER FACILITY.

For details,

Please contact any office of the State Bank of Jaipur where you will always find a friend.

STATE BANK OF JAIPUR,

Subsidiary of the State Bank of India — at the Nation's Service.

4½ PER CENT ORISSA STATE ELECTRICITY BOARD BONDS, 1972

FOR Rs. 150 LAKHS

(PAYMENT OF INTEREST AND REPAYMENT OF PRINCIPAL
GUARANTEED BY THE GOVERNMENT OF ORISSA)

The Bonds will be trustee securities under the Indian Trusts Act and also approved securities for the purposes of the Insurance Act and the Banking Companies Act.

ISSUE PRICE Rs. 99 PER CENT

Redeemable at par on the Third May, 1972.

SUBSCRIPTIONS will be received in cash or by cheque. Applications will be received at the branches of the State Bank of India at Calcutta, Bombay, Madras, New Delhi, Patna, Lucknow, Hyderabad, Cuttack, Berhampur and Sambalpur from the 30th April, 1962 to 2nd May, 1962 both days inclusive. Subscription may however, be closed earlier without notice if the total subscription is reached.

Copies of loan prospectus and application forms are available at all the offices of the State Bank of India mentioned above and at the office of the State Electricity Board, New Capital, Bhubaneswar.

Iron and Steel Controller is in the correct position to gauge the quantities, types and specifications that are required by the applicant." This suggests an off-hand manner of dealing with application for imports of stainless steel whose quantity is limited by the small amount of foreign exchange available and which is an essential requirement in a number of industries. It stands to reason therefore that Government exercises utmost care in dealing with matters requiring expenditure of foreign exchange and it is also its responsibility to ensure that what little foreign exchange is allotted for a particular purpose is made available for that and no other. A way out will be to enlist the co-operation and assistance of

representative associations of industries and trade in vital matters affecting them, such as allocation of foreign exchange for import of essential raw materials. Even if Government does not feel obliged to accept the recommendations of such bodies in toto, it will be able to get more information on which to base its decisions.

★ SMALL INDUSTRIES STC as Export Promoter

The State Trading Corporation has finalised a scheme for assisting exports of small industries products. Known as the "Export Aid for Small Industries" (EASI),

it is conceived on a modest scale at present and is in the nature of a pilot scheme, and for this reason, it will be restricted only to those products for which, in the opinion of the Corporation, a market already existed abroad. The scheme would be open only to those manufacturers who had already built up an internal market for their products. Initially about 40 to 50 items would be selected for inclusion in the scheme. Items which are already catered for under a governmental export marketing scheme such as minerals, commodities, hard-loom fabrics etc, will not qualify for inclusion in the scheme. In addition, products of highly technical nature will also be, for the present, excluded from the

scope of the scheme. Only one manufacturer would be selected for each item so that competition could be avoided. Considerations in the selection of the manufacturer will be fairness in price, reasonableness in quality and promptness in delivery. In assessing a product for participation in the scheme, particular emphasis is to be laid on the costs to ensure that the manufacturer will receive a reasonable profit on any export order which may accrue. It has been stressed that the manufacturer should receive the same margin of profit as he would if he were supplying to the internal market.

The Corporation will not be participating in export of small industries products directly. On

21 April 1962

the other hand, it will only extend assistance in effecting exports by establishing contacts with interested foreign parties and providing other services essential to exports. The Corporation is expected to open three centres initially from where it could offer its services to prospective exporters. The Corporation will entertain applications from manufacturers only through the small industries service institutes and only from those who were registered with the latter.

The main purpose of the new scheme is to assist diversification of the country's exports. It has been pointed out that in the industrially advanced countries, small and medium industries contributed as much as half of the total value of their country's exports. In contrast, in India, there is not even a stable internal market for the products of small industries. The proposals of the STC to explore foreign markets for products of small industries should, therefore, give a new dynamism to their growth.

★ US Improved Construction Outlook

A revised and improved construction outlook has reinforced the general optimism surrounding the economic outlook in the U.S. Building this year promises to exceed the 1961 level by an even greater amount than had been forecast earlier. This conclusion is based on the recent pace of building contract awards, precursors to actual operations in the construction industry.

According to the F. W. Dodge Corporation, the nation's leading compiler and analyzer of construction statistics and trends, building contract awards not only rose in February, but spurted a substantial 23 per cent ahead of the February 1961 level to a new high for the month. The rise reflected sizeable advances in all major construction categories—residential, non-residential and heavy engineering.

The fact that the gain was particularly large in residential construction is particularly significant, as the pace of housing starts has been considered somewhat disappointing so far this year. But indications now are that this slow start may well be made up—and more—as the year progresses.

Dodge economists now figure that total building awards will reach a record \$40,800 million this year, up 19 per cent from the 1961 level. Last November, when the company published its original 1962 forecast, it predicted that contract awards this year would total about \$39,900 million, or

some seven per cent above the 1961 level.

The quickened pace of contract awards, say Dodge economists, implies an annual rate of actual spending on construction this year as high as \$61,000 million. This tops both the official government estimate of \$60,000 million and February's seasonally adjusted annual rate of \$58,700 million.

This is bound to have an important impact on the sale of building materials and on the economy generally, especially later in the year as contracts are translated into construction starts. There is more than a little significance in the fact that contract awards this year are running ahead of expectations even after allowance is made for the rela-

tively low level of 1961 awards.

The recent high level of awards may have been reflected in the orders for structural steel and construction machinery, both of which have shown good strength in the early months of this year. It is interesting to note, in this connection, that over-all steel production in the first quarter of 1962 totalled 31 million short tons (one short ton equals 0.91 metric tons), a gain of 55 per cent over the first quarter of 1961. According to reports from purchasing agents and other industry sources, inventory building has played a relatively minor role in this production gain.

Another factor bolstering the construction outlook, Dodge economists point out, is the recent

government survey showing that businessmen plan to spend eight per cent more this year than last on new plant and equipment. Taking note of the tendency for such estimates to be raised progressively during periods of economic expansion, the company concludes that the final figures are likely to show an even larger increase.

In a breakdown of its figures, Dodge estimates that on the basis of results so far residential building awards will total some \$18,200 million this year compared with \$16,100 million last year. Although housing starts were down to an annual rate of 1,126,000 in February, the company is sticking to its forecast of 1,400,000 home starts this year.

Your Income tax affairs need not worry you

Preparation of Income tax returns is a complicated matter these days. This need not, however, worry you.

You will find it to your advantage to place your Income tax affairs in the hands of your bank.

The State Bank of India will be pleased to undertake the preparation of returns, the checking of assessments and the submission of claims for refund of tax at moderate charges. The Bank will ensure that you obtain all the refunds to which you are entitled.

Why not talk things over with your nearest Bank Agent or write for information?

The State Bank's local head office at Calcutta, one of more than 909 offices waiting to serve you throughout India.

—THEY FLY NOTHING BUT THE BEST

You may not recognise all the 'planes in the PIA fleet. Some of them are used for the local air-bus services that make flying in Pakistan almost as cheap and simple as hopping on a bus. They were chosen because they were exactly right for just that kind of job. In the same way, only the great Boeings are sufficiently big, fast and comfortable for PIA's New York run. And PIA extend this thinking far beyond just choosing their 'planes. They maintain and fly them with loving care, and land them strictly on schedule. (PIA hold an unbroken record for punctuality.) This is what makes people say nice things about PIA. It brought the airline 63% more passengers last year, and 41% higher profits than ever before. The figures wouldn't go up if they weren't great people to fly with.

Function and Activities of Commodity Exchanges

By J. RAYMAND STUART

President, Commodity Exchange, Inc. New York City.

Organized futures markets as we know them in the US have been in operation for many, many years. The need for them grew out of the more widespread use in industry of the so-called "to arrive" contract—a contract to deliver merchandise at a fixed time in the future. Such contracts, of course, developed from the desire on the part of procurement officers to assure themselves and the companies they represented of a continuing flow of needed supplies at reasonable prices well into the future. As time went on, the idea of standardising the side and specifications of such contracts grew in favour. It was only natural, therefore, that eventually a place was arranged where both buyers and sellers could meet to conduct their business more efficiently. Out of this rather simple beginning have grown the great market places which we know today as commodity futures exchanges.

Stripped of all the jargon, a futures market exists primarily as a facility to enable producers, consumers, and distributors of basic raw materials to obtain price insurance. This is called "hedging" in business circles. With it industry can operate successfully on relatively small price mark-ups and profit margins. Without it, selling price of finished goods must inevitably be higher to compensate for the risk of loss due to adverse price changes in basic raw materials between the date of sale of the finished product, and the time it is possible to acquire the materials needed in its manufacture.

Consider, for example, the case of a manufacturer who has an opportunity to book a large order for copper "widgets" at a time, when his inventory of raw copper is insufficient to make the quantity desired. To land the order he must be in a position to quote a finished product price based on today's price for raw copper. It may be days, or even weeks, before he can obtain the red metal he needs to fill the order. Since most copper producers book orders on a time-of-delivery price basis, the manufacturer is in a bad fix unless he can assure himself that his raw copper costs, when the metal is obtained will be

no greater than today's copper price on which he must fix the selling price of his manufactured "widgets". This is where the futures market comes in handy. Let us suppose the manufacturer needed 100 tons of copper to complete the order he has received. Knowing that he can't possibly get delivery of the metal for some weeks, he arranges to buy four contracts of copper futures for delivery in, say, the month of May. Four contracts happen to represent 100 tons of copper. While today's price of spot copper on which he based his finished product selling price may be, say, 33 cents per pound, it is possible that he may have to pay only 30.50 cents for May futures. In April the manufacturer may be able to acquire the needed copper, but he finds then that he may have to pay 34 cents for it, not the 33 cents on which he based his "widget" selling price. Fortunately, however, by that time his long May futures contracts have also enjoyed a sympathetic rise in price by an approximately equal amount.

Thus, the extra price the manufacturer must pay for his raw material is substantially off-set by the price gain on the long futures contracts. These, of course, are liquidated in the trading ring by an offsetting sale of four contracts of May copper futures at the same time the spot metal is acquired. Had the spot price declined rather than advanced, the manufacturer would have paid less than 33 cents per pound for his copper, but he would very likely have sustained a loss on his long futures contracts of about the same proportions, sufficient to wipe out the advantage gained from the lower spot market. In either case, the "widget" manufacturer is always able to be competitive in the market place for his finished product, simply because he takes the precaution of insuring his raw material cost through a hedging programme.

Use of the futures markets, however, is not limited to those who must buy. Raw material sellers who find inventory accumulating and unsold can always remain competitive regardless of price by offsetting excess inventory of actuals with the sale of a corresponding tonnage amount of futures contracts. If prices drop before the inventory can be sold, the profit made by the corresponding decline in futures will largely tend to offset the lower price which must now be accepted if sales of actuals are to be made. On the other hand, if prices advance following the hedge sale in futures the less sustained on the futures hedge will more than likely be made up by the better price available at the time on the sale of actuals. It should be remembered, of course, that in either case, the futures hedge must be closed out promptly following a transaction in the actuals. Failure to do so would place the futures transaction from that point on in a speculative category, and it is not the normal business of a manufacturer or dealer to speculate in raw materials.

CONTRACTS ARE NOT A SCRAP OF PAPER.

From these illustrations it can readily be appreciated that most futures contracts are liquidated by offsetting transactions in the trading ring rather than by actual delivery of the material involved. This does not mean, however, that the futures contract is a mere scrap of paper. By its terms a buyer of copper futures remaining long into the delivery month can fully expect some time during that month to have the red metal delivered to him on an Exchange-approved warehouse and in the form prescribed by Exchange regulations. By the same token, a seller of copper futures who remains short after trading in the contract month expires is obligated to deliver the required amount of metal in an approved warehouse before the last business day of the delivery month is over.

All futures exchanges pride themselves on the sanctity of their contracts. It is rare, indeed, when there is a default in delivery. When such a situation develops it is customary for exchange authorities to move in on the situation promptly. Usually the needed material is bought on the outside market for delivery to the offended party, and the cost of the same plus financial penalties are charged to the seller.

SPOT PRICES ARE DETERMINANT.

The question of whether cash markets regulate futures or whether futures markets establish cash prices is, fortunately, easier to answer than the old question of "Which came first, —the chicken or the egg?" In the final analysis prices are determined in any free market by what buyers are willing to pay or, conversely, by what sellers are able to get for their products. This is certainly true of commodity trading. But because futures contracts ultimately, if left open, must be settled by a delivery of actuals, it is prices in the actual or cash markets which determine futures prices. This can best be illustrated during periods of stringency when supplies of actuals may be limited and spot market prices, accordingly, are high. Under such circumstances it is unusual to find futures prices for the nearby or spot month trading moderately below the cash market. This situation, however, cannot last indefinitely. For unless the owner of spot copper can get as much for it by delivering it against a short futures contract as he can get from a sale in the market, he will elect to sell his metal outside and cover or buy back his short futures hedge.

The process of covering short futures contracts under such circumstances during the last days of trading tends to bring the futures market price, up to the spot market level. Thus we see that it is spot markets which regulate futures markets, and not the reverse. This is not to say that many spot market sales are not based on futures prices, because they are. But in the final analysis, it is what buyers are willing to pay in the spot market that ultimately sets the level of futures prices.

By this time it is surely apparent that one of the very important func-

tions performed by commodity exchanges relates to the establishment of true market values. Through the medium of the facilities offered by our exchanges buyers and sellers from all over the world can quickly determine the correct price for the commodity involved. Prices are established when bids and offers, communicated by open outcry around a trading ring, happen to match and a sale is made. Such prices within a matter of minutes then become public information as high-speed tickers flash last sales from the trading floor for all to see. Thus, potential buyers or sellers who may not be represented in the trading ring have ample opportunity to know the prices others are paying or receiving and can be guided accordingly. This is one of the most important services performed by commodity exchanges.

USEFUL ROLE OF THE SPECULATOR.

Now, where does the speculator come in? How does his operation serve the exchange and the public interest? If trading on futures markets were limited simply to trade hedging activity, it would frequently be exceedingly difficult to do business. Bids and offers would tend to be far apart. Fortunately, this is not the case. The activity of speculators helps to broaden the market. A speculative trader may be defined as an individual or company which hopes to realize a profit from trading in futures contracts. It makes little difference to the speculator whether prices rise or fall—all he wants is price movement for he will go either long or short the market depending on his estimate of the price situation. But in the process of doing so he and all his companies provide a constant supply of bids and offers in the hands of brokers on the trading floor. This makes it much easier for legitimate trade firms to lay off their hedges than would be the case if the speculators were not there to assume the off-setting price risks. Thus, we can say that speculators do perform an important and vital function in ensuring orderly instead of erratic trading in futures markets. Without them most futures markets would either cease to perform their principal function in a satisfactory manner or, what is worse, would cease to exist altogether.

EXCHANGES DON'T MAKE PRICES

But it is necessary to bear in mind that our futures exchanges in no sense make prices. They only provide the facilities where buyers and sellers through their selected brokers, can get together around a trading ring and complete sales transactions, thereby determining a price. The exchanges themselves have nothing to sell except service to the industrial community and the public. Through years of experience they have learned how to regulate the trading activity of brokers and members on their floors so it can proceed in orderly fashion. To the extent that they succeed in providing industry with a well-regulated place where true values can be established in a free market, and where abnormal price risks can be "insured" or offset by hedging, they contribute towards an orderly economic activity.

Clive Street Gossip

"I must have liberty
Withal, as large a charter as the wind
To blow on whom I please"
—As You Like It.

SHOW of grief at the passing away of Dr Visvesvaraya would be an impertinence for rarely has a life ended so gracefully after such variegated fulfilment. It is also difficult to speak of him without seeming garrulous. No small talk, no anecdotal clings to him as with many lesser men. To him was given a span of life larger than the psalmist's gloomy ration of threescore and ten; indeed, he had crossed the more generous Indian limits of felicity in these matters. And what a hundred years they have been in terms of personal fulfilment! Dr Visvesvaraya had a certain Miltonic concern about accounting for the "talent" that had been given one. What a magnificent rendering he would be making! One has only to try to imagine what Mysore would have been but for him to realise how fruitfully has his time been spent. And yet, he came to Mysore at an age when most people would call it a day and his formal association with that State was for about eight years only. Incidentally, one wonders about the good fortune that gave Dr Visvesvaraya the comparative free hand that the office of the Dewan gave him to work out his ideas. For in British India of those days, he would surely have had to contend with obstacles that were mercifully absent in Mysore. Subsequently, his special skill and particular love was constantly drawn upon, among others, by Gandhiji, who wanted Dr Visvesvaraya to apply his mind to flood control problems in Orissa. Economic Planning came naturally to him and in 1934, long before it became a vogue word and a fashionable cult, he wrote a book on it. Indeed, his Mysore experience no less than his continuous thinking on the subject pointed inexorably towards State initiative in the releasing of economic forces for the betterment of the country. Indeed, he did in Mysore in the second decade of this century in a limited way what India is trying to do in an all-India context today. From early forties, he had been actively interesting himself in the rapid industrialisation of the country. But it is by his example rather than by his particular accomplishments, great as they are, that he will be best remembered by those who had the good fortune to be his contemporaries. His character and integrity and above all, his practical

exemplification of his philosophy of "Work" stand out in an atmosphere of general corruption and shirking on a national scale.

In his recent lecture at Gujarat University,—the full text of which has just come into my hands—Mr Galbraith has returned to the subject that he dealt with in the now famous lectures that he delivered last year in quick succession at Madras, Calcutta and Bombay universities. A leading article this journal published at that time referred to those lectures as a compendious "grammar of development." Mr Galbraith himself would appear to prefer a less musty appellation than that of a grammarian—that of a clinical diagnostician. The Ahmedabad lecture is entitled "The Causes of Poverty—A Clinical View" and develops Mr Galbraith's familiar theme that it is a vulgar error to imagine that there is a single sovereign remedy or magic cure for poverty. The superstition arises from an uncritical attitude towards the causes of poverty. There is also the tendency to generalise from the experience of particular countries. Thus Mr Galbraith lists as many as nine causative factors of poverty canvassed at sometime or the other. Some of them are currently fashionable and others so unpopular in certain circles that it may not be quite tactful to mention them in public.

Thus, a nation is poor because its people are easy-going, unambitious and idle; because it has been oppressed by colonialists; because of class exploitation; because of ignorance; because of war and civil mismanagement; because of insufficient capital; because of over-population; because of backwardness and because of lack of natural resources. Mr Galbraith examines each of these causes both in respect of countries of which it is true and of which it is not but which are indubitably poor. He therefore comes to the conclusion that a great deal of data of the real causes of poverty in each is necessary before you start prescribing. You may even have to know whether certain symptoms are at all indicative of disease. Indeed it may even be necessary to make sure that what you fancy is a diseased condition is any such thing and that the cure is not worse than the disease. For example, an abundance of pos-

sessions might be considered a healthy condition if all you meant by poverty was a lack of them. But lack of possessions may not necessarily be poverty and in any case, such poverty may not be necessarily considered a dangerous or fatal disease. Conventional indicators of well being like a high consumption pattern may mislead the physician into believing that there is something wrong where, probably there is no such thing. In any event, it would be folly to prescribe on the basis of experience of the "richer" countries. For to prescribe capital and technical assistance indiscriminately is "to follow the practice of the physician who has vitamins available and whose own health has been improved by taking them. He proceeds to prescribe his vitamin pills for all illnesses coming to his attention. These illnesses being variously caused by calcium deficiency, general malnutrition, slipped vertebrae, malaria, elephantiasis and acute neurosis, the remedy naturally has little effect." It is absurd that the nature of the cure should be dependent more on the contents of the medicine chest than on the cause of the illness. It is also silly to offer the glamorous thrills of a psychiatrist's couch to a man who needs a stiff dose of castor oil, merely because psychiatry is more fashionable to day. All this, of course, only points to the need for a companion volume to Adam Smith's "The Wealth of Nations," entitled the "Poverty of Nations." I wonder whether it is not a good idea for Mr Galbraith to take time off his ambassadorial duties and write it.

Mr Barnes, the new Traffic Commissioner of New York is reported by the New York Times to have recently distilled the wisdom of his three months experience of the job thus: "If you come up with a good traffic idea for a street, everybody living there will agree it is a good idea—for another street." Traffic Commissioners all over the world will fervently agree, none, at the moment more fervently, than the Madras Commissioner. But he has probably only himself to blame. There is none who seriously disputes that the rationalisation of traffic on Mount Road by, among other devices, the installation of automatic traffic signals,—an elementary traffic-control idea long in use in most cities of the world—is basically sensible. What the Madras High Court faulted last week in allowing a batch of writ petitions was the fact that the traffic department was so taken up with the gadget that "no other matter seemed to have entered into the consideration or calculation

of authorities in imposing the restrictions" on the plying of hand carts and other slow moving vehicles in the stretch of Mount Road covered by the order. Indeed, it appears that there was some representation in December 1961 against the proposed prohibition. But, according to the judgment, it did not lead to the examining of the scheme in greater detail to assess collateral consequences like the inconvenience to small firms operating on Mount Road. Almost the only thing that appears to have weighed with Authority was the impossibility of the slower vehicles traversing the junction within the half a minute allowed for the purpose by the automatic signal. Perhaps the idea that the interval should be increased did not find favour because of the impatience it will generate in motorists straining at the leash to step on the gas. It was suggested in the course of arguments that some alternative routes for use by hand carts were provided by the police. The press reports do not show how far the High Court considered such alternatives as reasonable mitigation of inevitable hardship. Admittedly, the accommodation within a single scheme of traffic (or indeed of economy, as planners know to their cost,) both the bullock cart and the motor car has its difficulties. But they cannot be solved by wishing the former away. Perhaps some further examination of data will help locate other comparatively slack traffic hours than those the police have spotted so far. Or may be, the affected interests will cooperate in finding suitable alternative routes.

Death has removed from the world of Indian Banking an outstanding personality this week. Calcutta's loss has been particularly grievous. Narendra Chandra Dutta was among the pioneers in banking in this part of the world having founded the Comilla Banking Corporation in 1914. In the comparative affluence of recent times, many may tend to forget the heroic dimensions of the struggle of the early days. Indigenous initiative in modern banking was then an open invitation to heartbreak. Banking depends for its success on the complete and unshakable confidence of the constituents. But confidence was then not easily won—often, alas, with good reason. And if won, easily lost. A whiff of baseless rumour or malicious gossip was enough to kill a bank that had at its helm men of the highest probity. To have nursed the Comilla Banking Corporation in those days is a considerable achievement. And yet when the time came for submerging a treasured identity in the larger interests of the bank, Mr Dutta did not shrink. If the UBI is among the big nine in Indian Banking to day, it is not a little due to Mr Dutta's wise counsels at all times.

A Long-term Transport Policy? Not Yet!

The numerous and complex problems of transport policy, to which the Neogy Committee is called upon to provide the answers, were highlighted by the Chairman at a press conference in New Delhi last week. The Committee was set up in July 1959 to advise the Planning Commission on the long-term transport policy suited to the needs for a growing economy. The Committee was also specifically asked to define the respective roles of different forms of transport during the next five to ten years and also to recommend the best mechanism for the regulation and co-ordination of these different means of transport. After eighteen months of investigation, the Committee submitted a preliminary report formulating a number of issues concerning road and rail transport and inviting comments in the form of answers to the detailed questionnaire appended to the report. From what Mr K. C. Neogy stated at his press conference, it appears that, though more than a year has elapsed since the preliminary report was circulated among the authorities concerned, the Committee is yet nowhere near the end of its labours. This state of affairs is bound to cause widespread disappointment, because the public has been anxiously awaiting the Committee's report in the hope that it would show a way out of the

transport muddle. Mr Neogy could not even hold out any assurance that the final report would be ready in time to help in formulating the transport policy for the Fourth Five Year Plan. Anticipating the adverse comments likely to be made in Parliament, the Chairman has sought to disarm criticism by taking the public into confidence regarding the complexity of the task assigned to the Committee. And he could quote in support the views of the Associated Chambers of Commerce which had stated that 'if the Committee have not reached final complexity demands much further study and discussion and because to a large extent the statistics and data on which informed decisions may be taken do not yet exist.'

The long-term transport policy has to be framed, as Mr Neogy has pointed out, against the perspective of the country's overall economic and industrial policies. It involves study of the impact of Government policy regarding location of industries and regional development, on transport requirements, allocation of traffic over different forms of transport and the determination of the pattern of investment and priorities in the development of various means of transport. The Committee has been handicapped in its work by lack of the relevant data necessary to arrive at conclusions on these matters and has therefore been obliged to undertake ad hoc studies to gather information on different aspects of the working of the transport system. The Committee has also undertaken studies

of how transport problems have been tackled in foreign countries.

A plan for organising transport facilities to meet the requirements of the future will have to start from the existing pattern of traffic in respect of major commodities and industries and the extent of the unsatisfied demand. It is also necessary to take into consideration the likely growth of traffic in the future. But even in respect of the Railways, there are significant gaps in the information ready to hand. And no reliable estimates are available regarding the traffic carried, or to be carried, by means of transport other than Railways. Precise and detailed information of the comparative costs of providing different traffic services, which is necessary for co-ordinating the different forms of transport to maximum advantage, is just not available even in respect of the Railways, not to speak of other modes of transport. Until basic data become available, the Committee cannot even begin to formulate its conclusions.

Progress of work has also been held up by the slow response of the authorities concerned, such as State Governments and Central Ministers as well as private agencies, to its questionnaire. So far, it is said only two State Governments have sent the information called for. Perhaps the complexity of the issues, which has prolonged the work of the Committee, may also be the reason, partly for the delay in securing the information sought by it.

Mr Neogy's pointed reference to the shortage of experts on transport planning raises the question, whether the fullest use has been made of the expert knowledge of the persons whose services are readily available. The Committee has succeeded, after prolonged efforts, in getting the services of an expert under the Colombo Plan to help with advice regarding technical matters relating to its enquiry. But it is quite on the cards that the advice tendered may divert attention to a new set of problems which may or may not have relevance to the situation in India, leading to further delay in the finalisation of the report.

In the meantime the transport situation, as the Committee is well aware, is one of the extreme urgency calling for immediate action.

Mr Neogy has referred to the difficulties likely to be created, if emergency action taken by the Government departments concerned, to overcome the most serious shortages, runs counter to the long-term plan contemplated by the Committee. The fact that the representatives of the departments concerned are also members of the Committee may be regarded as a safeguard against such difficulties becoming intractable. But there is also another aspect of the matter. The fact that the Committee is engaged in drawing up a long-term transport policy may inhibit action at departmental level to deal with immediate problems. The natural tendency will be to wait as long as

possible for the Committee to formulate its views before taking action having policy implications, and to remain content with hasty improvisations when it becomes impossible to postpone action any further. Since it has now been made absolutely clear by the Chairman, that the Committee's report may not be ready for some years—he even hinted that he may not be there to present it—it becomes all the more necessary—to ensure that practical measures to relieve the transport shortage are not held up.

The Committee, we may be sure, will in good time arrive at the best possible solutions, after an exhaustive and exhausting study of all aspects of the problems. But in this as in other matters, the best is the enemy of the good. The time factor is important and cannot be ignored in evaluating the utility of any set of recommendations. From what Mr Neogy has said, it appears that the most helpful course for the Committee to follow would be to submit another interim report formulating the issues against the background of a comprehensive survey of the problems of transport policy and indicating the areas where more information is required. Such a report could afford valuable guidance to the authorities charged with the responsibility of maintaining and expanding transport facilities and ensure adequate consideration of the issues involved before action is taken. And the elaborate ground work that the Committee has prepared, and the special studies undertaken by the Secretariat, should ensure that the final report, even if it serves no other purpose, will be of immense assistance to students of advanced economics in understanding the basic principles of transport economies.

THE CALCUTTA ELECTRIC SUPPLY CORPORATION LIMITED

(Incorporated in England)

Notice is hereby given that the Board of Directors of this Company have declared payment of a Final Dividend on the Company's Preference Stock for the year ended 31st March 1962 at the rate of £2-14-8.16/49d. per cent less Income Tax at 7s. 9d. in the pound equal to £1-13-6d. per cent. Payment will be made on 25th May, 1962 to those stockholders whose names are registered in the Company's Stock Register on 11th May, 1962.

Applications for transfers received in this office before 12 O'clock noon on Friday, the 11th May, 1962 will, if otherwise satisfactory, be registered at that date for the purpose of participation in the above dividend.

By Order of the Board
H. C. BOWKER
Agent.

Victoria House,
Calcutta, the 12th April, 1962.

Braithwaite & Co. (India) Limited

Statement by Sir John Brown

The following is the statement by Sir John Brown to the Thirty-second Annual General Meeting of Members of Braithwaite & Co (India) Ltd to be held on 10th May, 1962:

Following the precedent established last year, I am again circulating with the Directors Report and Accounts for the year ended 31st December last the statement which I would otherwise make at the forthcoming 32nd Annual General Meeting of the Company.

I must unfortunately introduce my statement this year on a note of sadness. The death occurred in July last of Mr. R. J. Newman Taylor, who, although he was never employed by this Company, did so much for its development in his capacity as Vice-Chairman and earlier Joint Managing Director of its then parent, Braithwaite & Co. Engineers Limited in the United Kingdom. I had the privilege of knowing Mr. Taylor only for the last five years of his life but in that time we were in close touch with one another in regard to the affairs of this Company and I welcome this opportunity to pay tribute to his outstanding contribution not only during those five years but, as I have reason to know, previously, which was a combination of foresight and caution based on a lifetime's experience of an industry which has had its ups and downs in the past in this country as elsewhere.

PROFITS, TAXATION & DIVIDEND

The profit for the year, after providing Rs. 5,72,910 for depreciation, Rs. 32,25,000 for taxation and transferring to Development Rebate Reserve the sum of Rs. 2,36,690, amounted to Rs. 35,86,414. It will be seen that this represents a substantial increase of some Rs. 15.14 lakhs over the corresponding figure for 1960.

The figure of profit constitutes a record for the Company and that it was achieved in the face of continuing difficulties over steel and power supplies only reflects the wisdom of the policy which has been followed over a period of years of limiting the distribution of earnings and ploughing money back into the business by further investment in plant and machinery. This has enabled us to increase our output in certain directions while making the most economical use of the steel which was available. As I indicated last year, this policy of ploughing money back into the business is one which must be continued and notwithstanding the large increase in profits, your Directors, after very careful consideration of all

the issues involved, have felt it advisable to recommend the same dividend as was paid in respect of 1960, viz. Rs 2.50 nP. per share, subject to deduction of tax. I shall have more to say later in this statement on the subject of future dividends when discussing our proposals for financing our expansion programme.

PRODUCTION, DEVELOPMENT & EXPANSION

Clive Works: As forecast in my statement a year ago, we found that we had insufficient orders to fill the available capacity in the Structural Shops and this situation was aggravated by delays in receipt of raw materials. The situation improved in the latter half of the year during which the Shops were employed in fabrication of the Company's portion of the Brahmaputra Bridge steelwork. Production in the Wagon Shop was maintained throughout the year at an increasing tempo and improved availability of materials and components permitted the gradual introduction of a second shift until, by the end of the year, we were obtaining outputs in excess of our planned production. The total number of wagons built in the Wagon Shop was 1,023, weighing 12,827 tons and to this must be added 124 four-wheeler wagons totalling 907 tons weight which were built in the Structural Shops in an endeavour to utilize spare capacity there. In the result, the total tonnage output of wagons was 13,733, the highest ever obtained. The development of wagon manufacture during the past two years reflects highly on the efforts of the production staff under the energetic direction of our Chief Engineer, Mr. J. E. Sawtell, and his organisation within the Shops.

Completion of the buildings and extensions referred to in my statement last year was delayed by the acute shortage of cement from May until after the Pujah holidays in October, since when good progress has been made. Work in hand includes the extension of the General Office and the development of a new steel stock yard. This has been made possible by the removal of a large amount of erection plant and tackle to the ample space which is available at Angus Works and when it is completed the new stock yard will greatly facilitate handling of raw materials. The extension of the Wagon Works to provide for the painting of the large bogie motor and parcel vans now under construction has recently been completed and negotiations are in hand for the acquisition on lease

from the Commissioners for the Port of Calcutta of an additional area adjoining Clive Works to enable us to further rationalize production of the three types of wagons now in hand.

I have referred above to the paucity of work in the Structural Shops; in this connection I must express our disappointment at the delays which have taken place in finalizing the terms of the fabrication and erection contracts for the heavy forge and foundry project at Ranchi and the alloy steel plant at Durgapur, in both of which this Company is substantially interested as a constituent of the Braithwaite, Burn & Jessop Construction Company Limited. While agreement has finally been reached after much delay in regard to the terms of the first of these contracts, the second is still outstanding with the result not only that work cannot proceed but also that capacity earmarked by us for several months which, could the delays have been foreseen, could have been profitably utilized on other work, has remained or will remain idle. There is another and broader aspect of these delays which I fear is too little appreciated and that is that projects such as these have a very high import-saving potential. Each month's delay in finalizing the contracts and getting on with the job means that imports have to be continued eventually for longer than would otherwise be necessary with the result that industry as a whole and particularly that branch of the engineering industry which is dependent on imported components, is prevented from functioning as efficiently as it might otherwise do. I shall have more to say later in this statement in regard to exports: all I would say meanwhile is that energy devoted to finalizing construction contracts for projects with a high import-saving potential will greatly assist in creating the atmosphere which I am sure is necessary if the country's foreign exchange problems are to be successfully tackled.

Angus Works: In addressing you a year ago, I informed you that the terms of a 99-years' lease of these works had recently been agreed. This lease was signed on the 13th April, 1961 and during the year a great deal of progress has been made with the rehabilitation and re-organisation of the buildings and plant under Mr. A. D. Morley. Pending finalization of our foreign exchange loan arrangements, to which reference is made later in this statement, a number of new machine tools have been obtained against

rupee payment from agents importing from Eastern European countries and this has enabled us to quote for a wide range of products to recently licensed undertakings seeking component manufacture. We have submitted our applications for import licences in respect of most of the machinery which we require and we hope that licences will be forthcoming shortly after our foreign exchange requirements have been provided for.

Progress so far has been most pronounced in the foundry, the output of which is now some 250 tons per month and we hope that this will further increase during the current year. Castings up to four tons weight are being supplied and improved techniques are permitting of a continually higher quality and complexity of work being undertaken. Notwithstanding the shortage of foreign exchange with the consequent difficulties in obtaining the necessary equipment, progress has been made with the establishment of a laboratory and within a few months this will be fully equipped to undertake all chemical and metallurgical investigations likely to be required in our production processes.

I informed you last year that the Company had submitted or was in the process of submitting applications under the Industries (Development & Regulation) Act, 1951 for the manufacture of various types of cranes. We have now received a licence in respect of overhead electrical travelling cranes, steam loco cranes and dock-side level luffing cranes and Government approval has been obtained to the terms of our collaboration agreements with Thomas Smith & Sons (Rodley) Limited and John Smith (Keighley) Limited, both members of the Thomas W. Ward engineering group in the United Kingdom, for the manufacture of their products in India. We have been acquiring experience in the manufacture of overhead travelling cranes for use in our own works and three orders for outside customers have already been booked. We have also quoted the Railway Board for the supply of 10-ton steam loco cranes and are hopeful that an order will be forthcoming before very long.

FINANCE

During the year under review, considerable progress was made in finalising the shape and content of the plans for the expansion of the Company's activities. According to present estimates, the capital expenditure involved over the years from 1961 to 1965 will total approximately Rs. 290 lakhs of

ALLAHABAD BANK LIMITED

M. J. MacLaren,
General Manager.

which the foreign exchange component is estimated at the equivalent of Rs. 88 lakhs. In addition, the Company's requirements of working capital will increase by some Rs. 100 lakhs and it has, therefore, been necessary for your Directors to consider ways and means of financing of a total outlay of Rs. 3.9 crores.

So far as the foreign exchange component is concerned the Industrial Credit & Investment Corporation of India Limited has already sanctioned a foreign exchange loan for the equivalent of Rs. 45 lakhs subject to certain terms and conditions. Application has also been made to the Commonwealth Development Finance Company Limited, London, for a loan for the equivalent of Rs. 43 lakhs and it is hoped that the terms on which this loan may be granted will be finalized in the near future.

We have made a careful assessment of the Company's financial requirements in rupees and as far as we can see these will be met by the issue of preference capital to the extent of Rs. 40 lakhs. The necessary application has already been made to the Controller of Capital Issues and having regard to the fact that a dividend will be payable on the preference shares from the date of their allotment and within a year thereof, it is hoped that this issue will prove acceptable to the market. The balance of our requirements of rupee finance will be found from retained earnings and depreciation provisions supplemented as necessary by temporary borrowings from our bankers.

In order to maintain a balance between the paid-up share capital of the Company and the actual capital employed in its business and also to ensure that the ratio between the proposed preference share issue and the equity capital is established on a reasonable basis, proposals are being submitted to you for the capitalisation of reserves to the extent of Rs. 43,40,210. This will result in an increase in the equity capital to Rs. 1 crore but I would particularly direct your attention to the terms of the Board's announcement of this capitalisation issue. The issue is nothing more than a recognition of an existing situation and it cannot by itself in any way increase the Company's dividend-paying capacity. It should not, therefore, be taken to imply an intention on the part of the Board to recommend dividends on the increased capital at the same rate per share as has been paid in the recent past. Indeed, the question of whether, and if so to what extent, the total dividend disbursement can be increased from the present figure of Rs. 14,14,948 must depend on the level of profits from year to year and their relation to the Company's financial requirements for the maintenance and expansion of its business. The foreign exchange loans, if and when they are fina-

lised, will impose an obligation on the Company to provide for their amortisation and similarly a Preference Share Capital Redemption Reserve Account will have to be created to provide for the redemption of the preference capital in due course. While, therefore, it is reasonable to expect that the increasing scale of operations will lead to an eventual increase in profits, it is clear to your Directors that for some years at least the bulk of this increase will have to be set aside for the purposes mentioned.

The work involved in assessing our financial requirements and in producing the figures and information required in connection with our loan negotiations has thrown a heavy additional burden on our Commercial and Secretarial Departments and I am indebted to Mr. Y. S. Tayal and his staff for the manner in which they have discharged their task.

EXPORTS

With the continued co-operation of our London associates, Braithwaite & Co. Engineers Limited, which in this as in other directions I would here gratefully acknowledge, we have in the past year more than doubled our exports of pressed steel tank materials to South East Asian markets and further expansion in this field is dependent primarily on the availability of materials. I have no doubt that practically all of the development projects which consume steel in India carry a high priority; but I venture to suggest that until it is appreciated that even some of them, if they do not have a high import-saving potential, must be put back for a few months, it will not be possible to create in the minds of those in charge of the country's industrial effort the necessary mentality which will ensure that the export problem receives all the attention which it undoubtedly demands. If I may say so, I feel that much more effort than hitherto will have to be devoted to the establishment in the immediate future of new markets in neighbouring countries for goods which will, in the years to come, command a natural market abroad without the necessity of devising complicated incentive schemes. I have no objection to incentive schemes and indeed they have a very useful role to play in dealing with the problem of the country's exports; but I would suggest that before they are invoked the maximum effort should be devoted to creating conditions for the export of goods which can be exported to-day without too much loss and without incentives, other than relief from import and excise duties. I do not underrate in any way the difficulties which face Indian exporters but I would say that at least some of these can be removed if the right psychological background can be created between

Government and Industry. As I have already indicated, I believe that timing in this matter is of the greatest importance and if the steel using industries are to be encouraged to go out and find markets for their goods—markets which undoubtedly exist—they should be allowed to import as much steel as they wish provided they can show the reasonable certainty of a net gain in foreign exchange. India is not the only country which is faced with the problem of expanding her exports and that is why I feel that there is a real urgency about establishing ourselves in our natural markets now rather than waiting for four or five years, by which time the necessary raw materials will, we hope, be in more ample supply from indigenous sources.

LABOUR

In general, relations with our labour force were amicable throughout the year and this has undoubtedly played a large part in the steady increase in output from the Wagon Shops, providing the workers with the opportunity to earn a high rate of production bonus. Based on the decision of the Supreme Court in regard to the Company's appeal against the bonus award of the Labour Tribunal in respect of 1957, settlement of the outstanding bonus issues for the years 1958, 1959 and 1960 was effected under a bi-partite agreement with the Workers' Union.

During the past year the Company instituted a scheme of long service awards for those retiring or resigning on account of ill-health. The Company also played its part during the National Technical Training Week held in September last by organising functions embracing the Company's apprentices and senior students from the technical wings of local schools. The award of a technical scholarship in memory of the late Mr R. J. Newman Taylor was instituted and a prize scheme for the best apprentice at Clive and Angus Works respectively has been introduced.

MANAGEMENT & PERSONNEL

Despite shortages of raw materials which in recent years have been the main hindrance to increased output, I foresee that before very long it is the shortage of skilled personnel which will impose limits on our output. I can assure you that the management of this Company has devoted a great deal of time and care to the search for talent, both within the organisation and by recruitment from outside it. Even so, they are under no illusions in regard to future needs. I am happy to say that the challenge of the opportunities presented by the expansion of the Company's business is being met by the younger members of the staff and although I do not underrate the magnitude of the task which confronts us in the next few years, I am nevertheless con-

fident that under the present management the inevitable difficulties of growth will be overcome.

During the year Mr. J. E. Bingham, our Managing Director, was re-appointed to that office for a further period of three years from 1st July, 1961. While Mr. Bingham is the first to acknowledge the contribution of his colleagues in the management, shareholders will, I know, join with me in an expression of our appreciation of his services during what has been an arduous year. To him, to Messrs Tayal, Sawtell and Morley and to the senior executives working under them we are particularly obliged for their respective parts in producing the satisfactory results which are now before you. They have been well supported by the staff and workers, to whom also our thanks are due.

PROSPECTS

The Company's order book is now in a most satisfactory state. Structural capacity is fully booked with work which will not be completed until 1964, while the Wagon Shop should be fully occupied until the middle of 1963. The level of output will, of course, as in the past, be determined to some extent by the availability of raw materials but as far as can be foreseen at present we should be able to work the Structural Shops to near capacity from the month of August, 1962 onwards. An important order recently entrusted to the Company is for the fabrication and erection of the steel work for the urgently required extension of the Cossipore Power Station of the Calcutta Electric Supply Corporation Limited. All raw materials for this order are being imported from British mills and much of the steel has already arrived in Calcutta. Fabrication is in hand and despatches will commence from the month of May with completion of erection on site expected by November, 1962. The tempo of work in the Wagon Shops is being maintained at a high level while orders for the Mechanical Works are being obtained to match increasing capacity. In these circumstances, it is reasonable to expect a further increase in output in 1962.

Looking further ahead, we believe that our record of performance to date and the needs of the country's railway system will ensure the receipt of further orders to keep our Wagon Works fully employed at least until the end of the Third Plan period. The rapid industrialisation which is now taking place in India should result in a continually expanding demand for the products of both the Structural and Mechanical Works in the years ahead.

N.B. This does not purport to be a record of the proceedings of the above Annual General Meeting
Calcutta,
31st March, 1962

BRAITHWAITE & CO. (INDIA) LIMITED

NOTICE

Notice is hereby given that the Thirty-second Annual General Meeting of Braithwaite & Co. (India) Limited will be held at the Registered Office, 4, Clive Row, Calcutta-1, on Thursday 10th May, 1962 at 11-00 a.m. to transact the following business:—

- 1 To receive and adopt the Director's Report and Audited Accounts for the year ended 31st December, 1961.
- 2 To declare a dividend.
- 3 To elect Directors in place of those retiring.
- 4 To appoint Auditors and fix their remuneration.

As Special Business

To consider and if thought fit to pass with or without modification the following resolutions of which numbers 5 and 6 will be proposed as ordinary resolutions and numbers 7, 8 and 9 as special resolutions.

- 5 (As an ordinary resolution)
"That the capital of the Company be increased to Rs. 1,40,00,000 by the creation of 3,00,000 Ordinary Shares of Rs. 10 each and of 40,000 Redeemable Cumulative Preference Shares of Rs. 100 each carrying the rights and privileges set out in the Articles of Association of the Company as altered by resolution no. 8 set out below."

- 6 (As an ordinary resolution)
"(a) That the sum of Rs. 43,40,210 forming part of the undivided profits of the Company standing to the credit of General Reserve be capitalised and that this amount be issued as a capital bonus which shall be applied on behalf of the persons who are on the 10th day of May, 1962 holders of the 5,65,979 issued Ordinary Shares of Rs. 10 each in payment in full for 4,34,021 Ordinary Shares of Rs. 10 each and that such 4,34,021 new Ordinary Shares credited as fully paid shall be accordingly allotted to such persons respectively in the proportion of 7,6885 new Ordinary Shares for every 10 issued Ordinary Shares then held by such persons respectively and that the said new Ordinary Shares so distributed shall rank in all respects pari passu with the existing Ordinary Shares and shall be treated for all purposes as an increase of the nominal amount of the capital of the Company held by each such shareholder and not as income.

- (b) That in satisfaction of the said capital bonus the Directors be and they are hereby directed to allot and distribute 4,34,021 new Ordinary Shares credited as fully paid up

amongst the persons who are on the 10th day of May, 1962 holders of the 5,65,979 issued Ordinary Shares of the Company in proportion to the issued Ordinary Shares held by them save that where members are entitled to a fraction of a share as a result of the issue of such capital bonus, the Directors shall allot the shares represented by the total number of such fractions to a person or persons appointed by them who shall as soon as practicable sell the said shares and distribute the net proceeds to the said members in proportion to their respective entitlements.

(c) That the draft of the agreement providing for the allotment of the said new Ordinary Shares in satisfaction of the said capital bonus submitted to this meeting and signed in the margin by the Chairman thereof for the purpose of identification be and the same is hereby approved and that authority be and is hereby given to the execution thereof on behalf of the Company as and when the same shall have been signed on behalf of the members holding Ordinary Shares in the Company on the 10th day of May, 1962 by a person to be appointed by the Directors in that behalf.

Provided that no part of this resolution shall take effect except in the event of the approval of the Government of India being obtained to the issue of the said capital bonus."

7 (As a special resolution)

"That pursuant to section 81 of the Companies Act, 1956, the Company hereby approves of the issue to the public by a Prospectus of 40,000 Redeemable Cumulative Preference Shares of Rs. 100 each forming part of the unissued capital of the Company and carrying the rights and privileges set out in the Articles of Association of the Company as altered by resolution no. 8 set out below.

8 (As a special resolution)

"That the Articles of Association of the Company be altered as follows:—

- (1) Article no. 4 shall be deleted and the following new Articles adopted in place thereof:—

"4. The capital of the Company is Rs. 1,40,00,000 divided into 40,000 Redeemable Cumulative Preference Shares of Rs. 100 each and 10,00,000 Ordinary Shares of Rs. 10 each.

- 4A. The following provisions shall apply to the Redeemable Cumulative Preference Shares:—
(a) The said shares shall confer on the holders thereof the right to receive a fixed

cumulative preferential dividend at the rate of 9 per centum per annum (without any deduction therefrom on account of income-tax payable by the Company but subject to deduction of tax under section 194 of the Income-tax Act, 1961, or any statutory modification or reenactment thereof) on the capital for the time being paid up thereon end the right in a winding up to repayment of capital and arrears of dividend, whether declared or not, down to the commencement of the winding up in priority to the Ordinary Shares in the capital of the Company but shall not confer any further right to participate in profits or assets.

- (b) The Company may at any time after 31st December, 1974, on three months' notice to the holders thereof, out of any profits or monies of the Company which may lawfully be applied for that purpose redeem the whole or any part of the said shares at par together with a sum equal to the arrears of the fixed dividend thereon down to the due date for redemption thereof upon giving to the holders of the shares to be redeemed not less than three months' previous notice in writing.

- (c) If the Company shall at any time determine to redeem a part only of the said shares for the time being outstanding the shares to be redeemed shall be determined by a drawing to be made at the office in the presence of a Notary Public of which not less than 28 days' notice shall be given to the holders of the said shares who shall be entitled to be present at such drawing."

- (2) Article no. 78 shall be deleted and the following new Article adopted in place thereof:—

"78. Save as hereinafter provided on a show of hands every member present in person shall have one vote and upon a poll every member present in person or by proxy shall have one vote for every share held by him provided that no Company shall vote by proxy so long as a resolution of its Board under the provisions of section 187 of the Act is in force.

A member registered in respect of a preference share shall not in respect of such share be entitled to vote at any general meeting of the Company except—

- (i) on a resolution placed before the Company in general meeting at the date of which the dividend due on such share or any part thereof remains unpaid in respect of an aggregate period of not less than two years preceeding the date of such meeting; or

(ii) on a resolution placed before the Company which directly affects the rights attached to the preference shares in the capital of the Company and for this purpose a resolution for the winding up of the Company or for the repayment or reduction of its share capital shall be deemed directly to affect the rights attached to such shares."

9 (As a special resolution)

"That Article no. 95 of the Articles of Association be altered by the addition of the following proviso at the end of the Article:—

"Provided that no remuneration shall be payable to any director until the last day of the month during which the meeting or meetings to which the remuneration relates was or were held and provided further that the remuneration so payable to any director together with the remuneration payable in respect of earlier meetings during the same financial year of the Company shall not exceed the remuneration which would prior to the adoption of this Article as one of the Articles of Association of the Company have been payable to him in respect of the period from the first day of January in that financial year upto the said last day of the month."

The Transfer Books of the Company will be closed from the 26th April, 1962 to the 10th May, 1962, both days inclusive.

A member entitled to attend and vote at the meeting is entitled to appoint a proxy to attend and vote on a poll instead of himself and the proxy need not be a member.

Payment of such dividend as may be declared will be made on or after the 17th May, 1962 to those members whose names are on the Company's Register on the 10th May, 1962.

By Order of the Board

Markets

JUTE Steady Trend

A steady trend was noticeable in the jute goods market this week largely due to buying activity in the futures market. Bull operators have evidently derived encouragement from the continued hot weather conditions in the growing areas. The enthusiasm, however, does not seem to be based on sound reasoning. For in the first place it is idle to expect that there will be a severe scarcity in jute goods because mills are to work to their full capacity up to the end of May and it is quite likely that the period will be extended further if found necessary in order to instil confidence in overseas buyers. Moreover, it is not as though the weather has been hot and dry all over the growing areas. Some areas have received rainfall and latest reports indicate that sowing is in progress in these areas. The position is reported to be even better in Pakistan where most growing areas have received sufficient rains for sowing to continue unhampered. It is expected that since again there is no restriction on acreage, sowings in Pakistan will be quite satisfactory. As far as India is concerned, while it may be rather too early to arrive at any definite conclusion about the prospects of the next crop, the general belief is that the absence of sizeable rainfall in growing areas so far

would not seriously interfere with the size of the crop. One effect of the paucity of rains may be that the crop is delayed. This possibility is not causing much worry because there is no anxiety about raw jute supply to mills in the early months of the next jute year. For, thanks to this year's bumper jute crop, there will be a sizable carryover into the next season. For this reason it will be even preferable to have a late crop in as much as a delayed crop will show considerable improvement in quality. One of the difficulties encountered this year is that although the crop has been comfortably large, a high proportion of it has turned out to be of a low quality. The generally low quality of this year's jute production has somewhat complicated the situation as, while there has been a plethora of jute in the market, mills have been hard put to it to procure the required quantity of high quality jute. It may be expected that the problem of quality may not become as acute in the coming season as it proved to be in the current year in view of the active measures taken by Government to increase the supply of good seeds and fertilizers to the farmers. Now that the Jute Buffer Stock Association has come into the picture, uncertainty will be further reduced. Although originally it was thought that after meeting the increased requirements of mills in the second half of the season, the

quantity left would not be too big to require the intervention of the JBBA, it has been subsequently decided that the JBBA should commence operations this year itself. Evidently this decision is primarily directed towards instilling confidence in jute cultivators at the sowing time.

After earlier steadiness the jute goods market closed on Wednesday on a quiet note. Sentiment was steady on Monday with buying interest developing especially in the ready and near delivery positions. The revival of interest was evidently due to ideas about the next jute crop consequent on the continued hot and dry weather conditions in most of the growing areas. The rate for B Twills April was quoted at Rs 135 by close on Tuesday as against Monday's closing rate of Rs 133.25. Hessian 40"x10 oz April too was higher in sympathy at Rs 53.70 as against its previous closing of Rs 53.10. Prices however again declined on Wednesday with B Twills April at Rs 133.80 and Hessian 40"x10 oz April at Rs 53.25. Presumably the news that US Burlap consumption in March was lower at Rs 74.6 million yards as compared with 77.5 million yards in February was not considered to be quite satisfactory.

TEA

Market in 1961-62

ACCORDING to trade sources, an increase in world tea crops to the extent of about 120 million pounds, of which North-East India's share amounted to over 66 million pounds, expected to depress prices. The London figures showed a decline of 4d per pound in the average price of North-East India teas of 1961 manufacture, while Calcutta export prices at the end of March 1962 were 66 nP per kg lower.

Although total tea exports from North-East India, at 156 million pounds, were 9 million pounds more than the 1960-61 figure, they were still below the 1959-60 figure in spite of the larger crops harvested. This was a situation which could not be viewed with complacency from the angle of foreign exchange earnings, especially, as compared with 1960-61, the slightly lower exports produced less foreign exchange due to the lower prices realised.

What was particularly disturbing was the smaller offtake by the UK—India's main traditional market—as compared with the two previous years. This was not only due to the increasing popularity of Ceylon tea which, over the past few years, had benefitted at the expense of Indian tea from the intensive propaganda efforts of the Ceylon Tea Bureau; but also to the fact that plain teas could be purchased more cheaply from Ceylon and other sources than from India.

With the close of the 1961-62 season, arrivals of tea in the Port of Calcutta during March 1962 fell sharply to 20,562 chests from 140,599 chests in the previous month. In March last year, they amounted to 6,196 chests. Total arrivals of tea in the 1961-62 season (April to March) were higher at 5,004,899 chests as compared to 4,430,924 chests in the previous season.

In the ten months ended January 1962, direct tea shipments to the UK were higher at 161.3 million pounds as against 149.24 million pounds in the corresponding ended January last year. Out of the total exports in April-January 1962, shipments to London auctions accounted for 148.11 million pounds and those against private sales and forward contracts for 13.19 million pounds as against 137.79 million and 11.45 million pounds.

In the Cochin market, offerings were 477,000 kilogrammes of Leaf tea. Quality in general showed a slight decline, which was more noticeable among teas from the Nilgiri district. Against a good general demand, Low Medium and Mediums, where quality was maintained, were firm, while the rest in this category were irregularly easier. Good Mediums were well supported at slightly easier rates than last week's prices.

Highgrown Brokenes were again irregular and often sold at lower rates than last week's prices except for a few selected invoices. Corresponding Fannings met with less support and generally declined in price. Clean black leaf BOPs were sold readily at slightly easier rates, but their fannings did not meet with the same support and were sold at lower prices.

In London, trade circles are feeling a good deal happier this month than what might have been anticipated in the depressing days of Autumn. A surplus of more than 100 million pounds then threatened to undermine the market. As a matter of fact, prices in December last were, on average, 9d a pound below the levels of a year earlier. But this crisis, however, failed to materialise and dealers are now confident that values can be maintained around the current rates until the new crop appears in July.

Trade circles, however, add that there is little likelihood of the missing excess production affecting the market this season. Major consumers, who are well aware of the supply position at source, have shown no inclination to withhold purchases, even at this year's prices. It is widely believed that the increased domestic consumption in producer countries has taken the surplus.

COTTON

Further Imports?

The scope for importing further quantities of cotton has brightened during the past week. The announcement made by Professor John Galbraith, the American Ambassador, pertaining to the supply of US cotton in the immediate future and the reported arrangements for importing cotton from Sudan are the main factors that led to the optimistic view taken by the trade and industry. In addition to these encouraging factors the possibility of importing cotton from Pakistan is also rated high though a section of the trade is sceptical of getting large quantities of cotton from that destination. Though Prof. Galbraith did not clearly mention the quantity involved it is expected that at least two lakh bales of cotton will be available from that source. One attraction of the proposed arrangement is that the shipments will commence immediately after the decision is finalised. The details of the barter deal with the USA to import cotton are expected to be released shortly.

Serious concern has been voiced over the acute scarcity of cotton by different spokesmen of the trade and industry. In his address to the annual general meeting of the Indian Cotton Mills' Association held at Bombay, Mr Lala Bharat Ram, the Chairman of the Association, highlighted the paramount importance of importing sufficient cotton immediately to ensure a regular supply of cotton to the mills to help them to proceed without disturbing the production schedule. Mr Bharat Ram has also drawn attention to the low per acre yield of cotton in India and suggested that concerted attention should be paid for stepping up production. It should be noted in this context that despite the largest acreage in the country the per acre yield is at a low of 90 lbs as against 540 lbs in the USA, 430 lbs in Mexico, 270 lbs in China and the world average of 275 lbs.

Mr Bharat Ram was rather reticent to comment on the repeated plea for cotton decontrol and how far the prevailing ceiling on prices has acted as a deterrent on greater production of this crop. He was also uncertain of the repercussions of decontrol, per se, on the production of cotton. The progressive utilisation of fertilisers and adopting modern methods of cultivation that is followed in other cotton producing countries can go a long way in reaping a bumper harvest, but the extreme dependence of this crop on the vagaries of nature is a factor which is beyond human control. A thorough probe into the entire affair will have to be undertaken and suitable measures to be implemented.

The export enquiry into Bengal Deshi has been well maintained during the week under review, though the rate has slackened slightly toward the close of the week. Fresh business of nearly 12,000 bales has been reported to have been put through thus taking the total business approximately to 55,000 bales out of the aggregate quota of 70,000

bales. The prices in the spot market at Sewri looked up by Rs 20 and the price of delivery contracts has also improved by about ten points. If the present trend persists there is no difficulty in exhausting the whole quota by the end of this month.

The joint meeting of the representatives of cotton trade and industry convened during the last week failed to arrive at any final decision though the various problems concerning cotton have been discussed. Close on the heels of the amendments to the by-laws of the East India Cotton Association in respect of penalty clause on hedge contracts the Forward Markets' Commission has made similar amendments in regard to non-transferable specific delivery contracts in the domestic growths. According to the amended laws the quantum of penalty along with the rates at which outstanding contracts are to be settled shall not exceed the maximum price if the seller fails to deliver cotton or if cotton tendered by him is rejected in the survey.

In the spot section varieties like CO2, Kalyan, Laxmi, Digvijay, Surti and L. 147 attracted the attention of the mills.

Imports of cotton from foreign countries into India from 1 September to 24 March totalled 569,911 bales as against 583,156 bales in the corresponding period 1960-61.

Description	1960-61	1961-62
American	420,069	275,771

USA	1,100	15,827
Other Countries	174	517
Total	110,946	151,070

Pepper Exports

THE export performance of India in Pepper, during the first five months of the current season, has reached a record figure of 12,000 tons as against only 8,600 tons in the corresponding period of the previous season and 11,800 tons in 1960 period. It is gratifying to note that the bulk of these exports had gone to the United States. It may be added that over 60 per cent of India's exports of the commodity is shipped to the United States every year.

India was able to export such a large quantity in spite of the very

small pepper crop of 26,000 tons in the current season against 28,000 tons in 1961 and uncertain freight rates an hazardous forward selling during the period. With the home consumption estimated at between 9,000 to 10,000 tons, India has 4,000 to 6,000 tons of pepper as exportable surplus with seven months still to go for the new crop to arrive.

In the above connection, the President of the Indian Pepper and Spice Trade Association has urged the need for maintaining a satisfactory price level in the export of pepper to the United States. He adds that the Indian shippers should not only forget the price factor in their anxiety to export as much quantity of high quality pepper as possible and thereby earn the much-needed foreign exchange for the country; but also should maintain a satisfactory price level.

CASHEW

It is learnt that the USA and the East European countries are now in the Indian market to buy Cashew-nut. More than 25,000 cases are reported to have recently purchased by the USA at around 46 cents per pound for delivery ranging from April to August. Even at the higher rates, enquiries continue and it is very likely that further business will be concluded soon.

Naturally, the export price for cashewnut kernels have gone up by about 2 to 3 cents per pound on account of these developments. The recovery in prices is attributed to lower crop estimates in the produc-

ing countries as well as in India. It is reported that, in Tanganyika, the crop has been affected by unfavourable weather. The marketing of the crop has consequently been delayed. Moreover, the export trade between Portuguese East Africa and India has been disturbed following the merger of Goa with India. Knowledgeable circles, however, feel that the present rise in prices may not extend further as it is expected that supplies from Africa will soon pick-up.

on account of the paucity of supplies. The rise has been to the extent of 10 points at Rs 82 per 50 kg in the last few days. The spurt in prices is attributed to the excellent export demand. Latest reports indicate a sharp increase in shipment since December 1961.

Exports in January this year amounted to 1,364 metric tons. These have further improved in February and March, thanks to excellent demand from Aden and other Middle East centres. Total exports, since the commencement of the current season, as at the end of January, have been larger at 2,400 metric tons. During the corresponding period in the previous season, the volume of export was only half of this quantity. It is estimated that shipments, up to the end of March, will exceed 4,500 metric tons.

INDUSTRIAL CONTAINERS LTD.

The Board of Directors of the above Company has decided to recommend to the forthcoming Annual General Meeting, the payment of a Dividend of 10 per cent for the year ended 31st December, 1961.

SUGAR

Thanks to good buying support from the consuming areas, Sugar markets have continued to rule firm. Export prospects of further 50,000 tons to the USA have also their effect on sentiment. Prices of all varieties have registered an advance of 12 nP to 37 nP a maund.

India has also been able to sell 25,000 long tons to Malaya. The deal was finalised by the State Trading Corporation with an Indian trade house last week. Shipments are to be made in April, May and June. During the last week, another 2,900 tons were sold to Aden for April/May shipment. (This brings the total sales to date to over 1,02,000 tons.)

The sale of 50,000 short tons of sugar, recently authorised by the US for purchase from India, is likely to be finalised soon. The whole quantity has to be shipped in the course of a month or two and it should reach the American shores before the end of June. The vessels required for the shipment of this quantity are being presently chartered with the help of the Indian Supply Mission, Washington.

CHEMICALS & DYES

Steadier conditions were noticed on the Bombay market for Chemicals and Dyes. There were good enquiries from the upcountry centres which, together with the paucity of supplies, kept sentiment firm.

In the Chemicals section, most of the popular items were in the limelight. The new import policy continued to push up the prices of Ultramarine blue. Belgian quality was higher around Rs 265 and the Spanish around Rs 230. There was an impressive recovery in Menthol from Rs 133 to Rs 140 for the Chinese quality due to brisk buying at the lower levels. Other items continued to be quoted around the previous week's rates.

Among Dyes, there was a sustained demand for vat violet though the prices remained unchanged. The German quality was quoted around Rs 66 and the Japanese around Rs 68. There was no appreciable variation in the price of Base Dyes.

NON-FERROUS METALS

In the Bombay market, prices of Non-Ferrous Metals showed a mixed trend. Copper received considerable support from the consumers, as stocks were reported to be inadequate to cope with the forthcoming orders. As a result of the delay in the receipt of import licences for copper for the period October 1961 to March 1962 as late as March, the actual users in the non-ferrous metal industry generally and in particular the sheet rolling industry are hard put to secure the minimum raw material to maintain the level of production. Fears are expressed that, as a result of the late receipt of the licence, some of the units may have to curtail their production in the coming months, while some are faced with complete closure.

It is, therefore, suggested by these quarters that the Government should come to the rescue of these indus-

tries by providing them their requirements of copper from the stocks held by the State Trading Corporation, which is reported to be having ample stocks as loan on replacement basis. On account of the delay, the shipment of copper against the licences cannot be had before three months from now due to procedural difficulties and the longer period of transit from the USA to this country as these supplies are being imported under the DLF Loan.

A similar situation is obtained in the Scrap section, especially for copper and brass. Stocks are reported to be small while supplies from outside sources are inadequate and the offers are few in number.

The Zinc and Lead sections did not show much change from their previous positions.

Prices of Tin ruled firm on lack of supplies, increased demand from the actual users and other consumers and higher advices from Singapore.

OILS & OILSEEDS

A sharp break in Groundnut prices provided the main feature of trading on the Bombay Oilseeds Exchange. In the Castorseed section, price movements were rather erratic. Prices of Linseed moved within narrow limits.

In the Groundnut section, sentiment was adversely affected by the reports of a larger crop in Gujarat while the sustained pressure of the stocks of the Kanpur quality accelerated the downward movement of prices. Moreover, the fear, that the inferior supplies might be tendered against the May contract, induced buyers to unload their holdings and gave sellers an additional ground to press sales.

In the ready section, prices ruled comparatively steady, as arrivals from the producing areas were far from heavy.

In the Castorseed section, prices reflected an uncertain trend. While the possibility of exporting castor oil to the USA continued to be remote, the UK remained content with periodical purchases of very small quantities. The UK prices were placed at £117 for the commercial quality and at £122 for the BSS grade. But reports of inadequate arrivals of the new crop in Andhra and Gujarat made the sellers rather cautious. With the result, prices hovered narrowly within a range of Rs 4.

In the Linseed section, trading remained dull. There was, however, no inclination to press sales aggressively in view of the reports that the new crop might be affected adversely by the unseasonal rains in Andhra.

Tanned cow hides continued to rule in quotations in the market which had restricted receipts of this commodity. The demand continued for light weights which were transacted on the basis of 66d, 56d and 52d for run, fourths and fifths. Heavy weight leathers did not attract attention much and continued in the same price.

Tanned cow calf skins too were poor in arrivals and prices of these skins ruled very high. Only in-

ferior fourths could be vendible, but even there was lack of stock.

As for tanned buffalo hides there was also poor inquiry and prices were steady. Buffalo calf tanned skins also remained unchanged.

Both tanned goatskins and sheepskins were better, the sheepskins particularly getting more demands. Clearance of tanned sheepskins continued dull with a lot of accumulations left over.

Due to intervening holidays there was no business in the market and the quotations for tanned hides and skins were the same as of last week.

Bardahl

Industrial progress in recent years has been characterised by an accentuated trend toward development of high-revolution engines and machines chiefly as a sequel to the increasing demand of modern industry for maximum speed and efficiency from minimum volume and weight. This development has been considerably accelerated by changes in lubrication technique. For, with the new machines and engines evolving high temperatures and greater wear and tear, the demands for lubrication efficiency have also increased multi-fold, while the ordinary lubricants were found to be ineffective. The search for new lubricants answering to the demands for speed and efficiency of machines led to the discovery of a new Lubricant "Bardahl" in the USA in 1939.

Bardahl has been claimed as "World's No 1 seller additive" which can lubricate and protect beyond the capabilities of ordinary lubricants. It is a synthetic product diluted in hydrocarbon base oil; clear, oily, fluid, with a specific gravity of 0.9, without sulphur graphite or harmful acids; and mixes with all types of oil without causing any loss of viscosity. Because of its polar molecules' extreme pressure agent, it has a polar molecular attraction to metal so that it clings to metal surfaces forming a protective coating between working parts. Bardahl provides lubrication under extremes of heat and load. The oil film has a resistance to heat upto 1,300°F, while the regular mineral oils burn at 500°F. In the same way, its capacity to withstand loads also far exceeds the normal capacity of ordinary mineral oils. While ordinary mineral oils can withstand loads of only about 25 lbs, the lubricant film produced by Bardahl can stand loads upto 253 lbs. Because of its peculiar chemical properties, it also reduces friction between moving parts to a substantial degree. Because of its greater resistance to heat and higher loading capacity, the use of Bardahl also reduces wear and tear materially. Another distinguishing feature is its detergent quality which reduces the build-up of carbon, sludges, varnishes and gums which rob engines and machinery of power.

Company Reports

Excellent Results of Dunlop Rubber

THE Dunlop Rubber Company (India) Limited has produced excellent working results for 1961, reflecting the increased volume of business, increased efficiency and a lower cost of imported rubber. While sales have risen to Rs 32.86 crores from Rs 30.47 crores, the net profit amounts to as much as Rs 1.65 crores as against Rs 1.25 crores for the preceding year.

In respect of allocations, the Depreciation amount is raised to Rs 61.39 lakhs from Rs 58.71 lakhs; Taxation to Rs 1.23 crores from Rs 81.37 lakhs and General Reserve to Rs 2.50 lakhs from Rs 37.50 lakhs. The provision for Development Rebate Reserve is, however, lower at Rs 7.50 lakhs against Rs 17 lakhs. The directors have proposed a taxable dividend of 20 per cent on the capital increased by the issue of bonus shares as against a taxable dividend of 21.5 per cent in the original capital.

In this connection, it may be added that, during the year under review, permission

was obtained from the Controller of Capital Issues for a bonus issue on the basis of one share for every two shares held. This issue was made by capitalising an amount of Rs 1.5 crores from General Reserve.

Against a paid-up capital of Rs 5.20 crores. Share Premium Account is shown at Rs 70 lakhs; General Reserve at as much as Rs 3.29 crores and Development Rebate Reserve at Rs 71.50 lakhs. The gross block at Rs 10.92 crores is depreciated by Rs 4.60 crores, leaving a net block of Rs 6.31 crores.

Director:—Mr. M. L. Bexon.

Marshall Skips Dividend Again

Thanks to a rise in sales from Rs 2,27 crores to Rs 2.69 crores, Marshall, Sons & Company (India) Limited has been able to report a net profit of Rs 3.69 lakhs for the year ended 30 June 1961 as against a loss of as much as Rs 6.12 incurred in the preceding year.

In respect of allocations, the Depreciation amount is slightly higher at Rs 1.01 lakhs against Rs 1.00 lakh, while Development Rebate Reserve is lower at Rs 5,080 against Rs 9,934. The directors have proposed to pass over the dividend again for the year.

The directors state that much will depend upon their ability to maintain satisfactory and efficient rates of despatch of goods from their suppliers and their godowns. They, however, add that the order position has been well maintained, although the immediate problem is that of processing the orders in hand efficiently and speedily.

The paid-up capital is Rs 10.50 lakhs divided into shares of Rs 2 each. Against this, General Reserve is shown at Rs 18.50 lakhs; Contingency Reserve at Rs 40,000 and Development Rebate Reserve at Rs 28,004. The gross block amounts to Rs 19.47 lakhs; total depreciation to Rs 15.45 lakhs and the net block to Rs 4.02 lakhs.

Indian Aluminium Repeats

The Indian Aluminium Company Limited has reported a new record in sales which have reached Rs 8.39 crores for 1961 as against Rs 8.01 crores for the preceding year. In spite of dislocations from the extensive construction work on the expansion programme during the year, metal production of 15,902 tonnes is almost unchanged from the 15,561 tonnes produced in 1960. Production

of fabricated products has increased slightly to 13,193 tonnes from 12,691 tonnes.

The net profit, after providing for Development Rebate Reserve and Taxation is, however, slightly lower at Rs 1.11 crores as against Rs 1.20 crores. A large part of this decrease is due to high provision for Development Rebate Reserve. Apart from maintaining General Reserve at Rs 50 lakhs, the provision for Development Rebate Reserve is substantially higher at Rs 45.50 lakhs against only Rs 2.63 lakhs. Taxation provision is lower at Rs 53 lakhs against Rs 99 lakhs. The dividend is repeated at Rs 1.50 per share, subject to deduction of tax.

According to the directors' report, the company's expansion programme has progressed very satisfactorily. At Hirakud, the expansion programme, aimed at doubling the capacity of the plant to 20,000 tonnes per annum, was completed five months ahead of schedule.

An additional extrusion press was installed at Alupuram on schedule and started operation on 25 October 1961.

The expansion of alumina production facilities at Muri progressed satisfactorily and a portion of the new facilities was brought into production in December—four months ahead of schedule. Completion of the balance of the new facilities is scheduled for April 1962, when rated capacity will be of the order of 54,000 tonnes per annum as compared to 18,000 tonnes per annum before the expansion.

The expansion of sheet rolling facilities at Belur is proceeding satisfactorily and is expected to be completed in schedule by July 1962.

Year ended Dec.	1961 Rs.	1960 Rs.	1959 Rs.

For the Investor

INVESTMENT GOSSIP

Equities Subdued

As Budget Day draws near, equity values are marked lower. The fact that holidays have intervened again this week is also partly responsible for the extra cautious approach of operators. The last two days of the current week will be holidays in Lyons Range and the market will reopen only next Monday, which is Budget Day. It would appear that market men who seemed to be quite optimistic some days ago have in the past few days been assailed by renewed apprehensions about the shape of the tax proposals to come next Monday evening. It is now believed that the gap to be filled is much wider than what the interim budget figures would have suggested. The recent announcement that the dearness allowance of low-paid government servants has been increased with effect from November last is cited in support of this conclusion. However there is no mistaking the general apprehension among operators that next Monday will bring a hefty dose of taxation which will not be only indirect in its impact. It is more or less assumed that indirect taxation will be both heavy and widespread. The fear is not entirely irrational because there is no denying the large resources that have to be mobilised in order to implement the big Third Five Year Plan. It is also noted that defence expenditure, if anything, will be higher, what with the still menacing attitude of China.

It would also appear that the easier trend can be traced to the lingering fear that the new Central Cabinet may favour the advancement of socialism at a faster pace than its predecessor was able to accomplish. The Railway Budget has already administered a rude stock. It is feared that the increase in freight and fares as proposed will put up cost of production.

While it is only prudent to anticipate sizable additional taxation in view of the large resources needed for the Third Plan, it is necessary to note that consistent with its aim of fostering industrialisation, Government cannot do anything that is likely to hamper capital formation. Moreover, it is not as though moderate additional taxation will completely alter the present position of the corporate sector; for, companies by virtue of their expansion and increasing production can take a certain amount of new taxation in their stride.

NEW ISSUE NOTES

UCO Bank

The United Commercial Bank Limited, Calcutta, has been allowed to issue further capital of Rs 2 crores, divided into 2,00,000 shares of Rs 100 each for cash, at a premium of Rs 25 a share, Rs 50 paid-up. The present paid-up capital of the bank is Rs 2 crores.

Hindustan Shipyard

Hindustan Shipyard Limited, New Delhi, having a paid-up capital of Rs 5.81 crores, will raise further capital of Rs 47 lakhs for cash, at par. The proceeds are to be utilised for financing the expansion scheme of the company's shipyard.

Elecon Engineering

It is learnt that the public issue of Elecon Engineering Company Limited for Rs 29,50,000 has been over-subscribed.

Mettur Chemicals

The recent issue of 6,00,000 equity shares, at a premium of 50 nP per share, by the Mettur Chemical & Industrial Corporation Limited to the existing ordinary and preference shareholders for financing the expansion programme costing nearly Rs 2.5 crores, has been over-subscribed.

TOMCO

Subject to the sanction of the Government, the Tata Oil Mills Company Limited has proposed to raise the share capital of the company by the issue of rights ordinary shares in the ratio of one share for every two shares, at a premium of Rs 10 per share. Additional Debentures of the value of Rs 50 lakhs, carrying interest at 6½ per cent (taxable) are also proposed to be issued, subject to the Government sanction. These Debentures are repayable in 1969-74.

T.E.C.I.

The directors of the Travancore Electro-Chemical Industries Limited have decided to issue additional capital for Rs 10 lakhs in equity shares to the existing shareholders in proportion to their holdings.

BONUS ISSUE NOTES

Indian Standard Wagon

The Indian Standard Wagon Company Limited, Calcutta, will issue 1,55,940 bonus shares of Rs

25 each on capitalisation of the company's reserves to the extent of Rs 38,98,500. They will be issued in the ratio of one bonus share for every share held.

Hind Sugar

The Hindustan Sugar Mills Limited has applied to the controller of Capital Issues for sanction to the issue of bonus shares by capitalising Reserves. It is proposed to issue bonus shares in the ratio of 5 new shares for every 6 shares held. The Rs 100 paid-up share is currently quoted around Rs 315 in the Bombay market.

NICCO

The National Insulated Cable Company of India Limited, Calcutta, is to issue 4,50,000 bonus shares of Rs 10 each on capitalisation of Reserves to the extent of Rs 45 lakhs. These will be issued in the ratio of one bonus share for every two shares held.

INVESTMENT NOTES

New Tyre Project

One more tyre plant is being set up at Madras in collaboration with Cooper Tyre and Rubber Company Limited, one of the leading tyre manufacturers in the United States. The promoters are Southern Tyre Manufacturers Private Limited. The foreign collaborators are expected to provide the necessary foreign exchange for the import of the plant and equipment. The capacity of the plant will be 3,00,000 tyres and tubes each per annum. The promoters have already applied to the Government for the necessary licence.

Wandleside

The Poona project of Wandleside National Conductors Limited is reported to be progressing according to the schedule. The bulk of the imported plant has already arrived at the site and is at present under erection. The remaining items have been shipped from the UK and will be at the works before the end of this month. Production is expected to start by about June/July.

INVESTMENT BRIEFS

Udayagiri Rubber Company Limited has skipped the dividend for the year 1961.

Kadri Mill (Coimbatore) Limited has reduced the dividend from 15 to 12 per cent, taxable, for 1961.

Lynx Machinery Limited has skipped the dividend for year ended 30 November 1961.

The Tamarapally Rubber Company Limited has proposed a taxable dividend of 18 per cent on the increased capital for 1961 as against a taxable dividend of 30 per cent on the original capital.

Nenmeny Rubber & Produce Company Limited has maintained the dividend at 15 per cent, taxable, for 1961.

Radio & Electricals Manufacturing Company Limited has proposed an interim dividend of 9 per cent, taxable, for the year ended 31 March 1962. The right shares, issued in February, are not eligible for dividend purposes.

BALANCE-SHEET BRIEFS

The working of the Century Spinning & Manufacturing Company Limited has resulted in a jump in earnings from Rs 276.01 lakhs to Rs 377.13 lakhs for 1961. The directors have proposed a final dividend of Rs 18 per share, making a total of Rs 30 per share, taxable, on the increased capital, same as previously. There is, however, a larger capital ranking for dividend purposes.

The net profit of the Cambodia Mills Limited has increased to Rs 10.16 lakhs for 1961 from Rs 9.57 lakhs for 1960. The dividend is raised from 9 to 12 per cent, taxable.

The Trichinopoly Mills Limited has made a net profit of Rs 7.70 lakhs for 1961 as against Rs 5.13 lakhs. The dividend is raised from 13½ to 15 per cent, taxable.

STOCK EXCHANGES

Pre-Budget Caution

Watch-Dog Writes:

STOCK markets have adopted a cautious attitude with the forthcoming Easter holidays in mind and the full-fledged budget in prospect. Business is restricted, operators keeping aloof till the tax proposals for the current year are known.

Prices on the Calcutta Exchange displayed an easier tendency due to renewed offerings. Even the slight recovery, that was noticed on Tuesday, proved to be short-lived.

Sentiment on the Bombay Stock Exchange continued to remain depressed. Although selling pressure was not heavy, even small offerings were sufficient to depress the price levels.

On the Madras Stock Exchange, buying support was feeble and patchy as enquiries from outside tapered off due to the proximity of the budget.

The London Stock Exchange, however, remained firm and fairly well-spread gains were recorded.

CALCUTTA

Calcutta, Wednesday Evening.

The week's trading on the local stock exchange was very much restricted not only due to the forthcoming holidays for Easter, but also to the caution adopted on the eve of the Central Budget. While some

21 April 1962

operators were not inclined to add to their commitments, others even thought of reducing their holdings. With the result, prices recorded a further fall from the last week's levels.

Although the composition of the new Central Cabinet was welcomed it had no effect on sentiment. Good corporate news also went unheeded. This was mainly due to the fact that, with the approach of the budget, there was a growing feeling that the Finance Minister might resort to fresh taxation and increase the excise duties on a number of commodities in order to wipe out the revenue deficit.

At one stage, the rumour was that direct taxation might be stepped up from 45 to 50 per cent and that rayon might attract excise levy this time. These brought about sizable liquidation from the bull operators, while bears also sought the opportunity to press sales on an unwilling market. There was, therefore, a general tendency to wait and watch developments.

The Giltedged market was devoid of interest. Some enquiry was noted for short-dated issues, while long and medium-dated issues were neglected. 3 per cent 1966 Conversion Loan hovered idly around Rs 71.05.

Bank shares were quiet with Punjab National being offered at as low as Rs 21.25 against Rs 21.62. United Commercial were quoted around Rs 96.25.

Even Jute shares, which had been meeting with consistent support till the end of last week, came in for scattered liquidation on lack of fresh support. The only steady features were Alliance, Champdany, Kankannarah and Lansdowne at Rs 134, Rs 141; Rs 165 and Rs 156 respectively. Barnagore were on offer at one time at Rs 175 against Rs 183; Birlas at Rs 36.56 against Rs 36.75; Fort William at Rs 25.81 against Rs 26.50; Howrah at Rs 21.25 against Rs 21.37 and New Central at Rs 17.31 against Rs 17.69.

In an otherwise dull market, Coal shares ruled comparatively steady on the report that the Government might increase the price of coal to enable the mine-owners to raise their level of production. Bengal were supported up to Rs 341 from Rs 339; East Indian up to Rs 37.37 from Rs 37.19 and South Karanpura up to Rs 8.06 from Rs 7.75. Burrakur fluctuated irregularly between Rs 17.37 and Rs 17.62, to close finally at Rs 17.62.

The uncertainty with regard to the outlook for the new crop had an adverse effect on the Tea section where dealings were few and far between. Brooke Bond were offered at Rs 15.25 against Rs 15.37; Hasimara at Rs 30.44 against Rs 31.25; Hantapara at Rs 121 against Rs 124; Jay Shree at Rs 19.06 against Rs 19.44 and Tezapore at Rs 15.87 against Rs 16.00.

Sugar shares were practically neglected. The only two steady features were Cawnpore and SKG having some support up to Rs 13.56 and Rs 9.31 respectively.

In the absence of fresh support, Textile shares displayed a slightly

easier tendency with Dunbar easing off to Rs 23.81 from Rs 34; Elgins to Rs 21.44; Kesoram to Rs 31.62 from Rs 32.50 and J. K. Rayon to Rs 21.37 from Rs 21.81. Jay Shree were, however, nearly maintained at Rs 17.19.

The lead to the general fall in prices was given by the speculative issues due to selling pressure on lower Bombay advices. Against the previous week-end closing of Rs 25.06, Indian Irons opened lower at Rs 24.88. After improving at one time to Rs 24.94, the scrip receded again to Rs 24.76 at the close.

In sympathy, TEXMACO moved down to Rs 21.70 from Rs 22.10; Guest, Keen, Williams to Rs 40.37 from Rs 41.06 and Jessop to Rs 24.37 from Rs 24.75, to finish at Rs 21.90; Rs 41.00 and Rs 24.62 respectively. Braithwaite turned cheap at Rs 54.75 against Rs 55.25 despite the bonus issue announcement. Binani Metals were, however, in enquiry up to Rs 12.81 from Rs 12.56 with Dalmia Iron

and J. K. Steel hovering narrowly around Rs 11.75 and Rs 19.62 respectively.

Miscellaneous issues moved in sympathy with the general trend of the market. Following were the price trends of a few selected shares:

Facts & Figures

Oil Exploration in Third Plan

In view of the success achieved by the Oil and Natural Gas Commission in locating three new oil-fields—Ankleshwar and Kalol in Gujarat and Rudrasagar in Assam—the revised plan envisages a total expenditure of Rs 202 crores as against Rs 115 crores stipulated earlier in the Third Five-Year Plan, according to the Annual Report of the activities of the Department of Mines and Fuel during 1961-62.

The Planning Commission have already approved the foreign exchange expenditure up to the extent of Rs 68 crores along with the matching rupee expenditure. The foreign exchange element of the earlier allocation was only Rs 53 crores.

The Commission also envisages the total cumulative production of six million tons of crude during the Third Five-Year Plan period and an annual production of 3 to 3.5 million tons in the last year of the Plan.

The trial production of crude oil at Ankleshwar oil-field commenced on August 15, 1961. The supply, which initially was at an average rate of 100 tons per day, has been stepped up to 600 tons per day from the third week of February, 1962, for processing by Burmah-Shell and Stanvac refineries at Bombay.

Drilling has been in progress in Cambay, Ankleshwar, Ahmedabad and Padra in Gujarat, in Assam, Punjab and Uttar Pradesh. During 1961-62, 14 deep rigs and 4 structural rigs were under operation in various parts of the country. A West

German team carried out seismic survey in North Bihar and is presently operating in West Bengal. The contract entered into with Schlumberger Seaco. Inc. for carrying out electro-logging work has been extended for a period of one year from August 1961. A contract has also been entered into with the French Petroleum Institute for carrying out oil exploration in Jaisalmer area. The Government of France have offered a credit of Rs 4 crores to meet the foreign exchange expenditure of this project.

OIL EXPLORATION

After the promulgation of the Petroleum and Natural Gas Rules, 1959, the Government of India received proposals for oil exploration from several foreign oil companies. Detailed negotiations resulted in two agreements signed in July 1961 and August 1961 with the Burmah Oil Company and E.N.I. of Italy, respectively.

The first agreement increased the Government's share in the project to 50 per cent while granting exploration rights to Oil India over an additional area of 1,886 sq. miles in North-East Assam.

According to the second agreement the E.N.I. have agreed to provide a credit of Rs 46.15 'crores for the establishment of petroleum projects in the public sector, such as product pipelines connecting Barauni, Calcutta and Delhi; a gas fractionation plant in Assam, a liquid petroleum gas bottling plant and distributing equipment, and contract drilling.

The Oil India had drilled, up to the end of December 1961, 30 wells

and produced 305,687 tons of crude oil as against its target of 32 wells and 423,600 tons of crude during 1961. The proved and indicated reserves of crude and gas by the end of June 1961 were estimated to be 48.1 million metric tons and 740,428 million cubic feet respectively.

The second stage of pipeline construction up to Barauni was expected to be completed by December, 1962, and the work of designing and construction was entrusted to the Burmah Oil Company (Pipelines) Limited.

REFINERIES

The Nunmati refinery was inaugurated on the 1st January, 1962. The refinery is expected to be on full stream by June, 1962. The estimated total cost of the refinery which has an annual capacity of 0.75 million tons of crude oil, is about Rs 17.70 crores.

THE PUNJAB NATIONAL BANK LIMITED,

REGISTERED OFFICE,
PARLIAMENT STREET,
NEW DELHI

NOTICE IS HEREBY GIVEN that the next Annual General Meeting of the Shareholders of the Punjab National Bank Limited, New Delhi, will be held at the Registered Office of the Bank, Parliament Street, New Delhi, on Thursday, the 17th May, 1962 at 4-00 P.M., to transact the ordinary and special business mentioned in the Notice dated 16th April, 1962 and the explanatory statements attached therewith, posted to the Shareholders individually at their registered addresses.

By Order of the
Board of Directors.
R. L. TULI,
General Manager.

Dated 16-4-1962.

N.B.

- The Transfer Books and the Register of Members of the Company will remain closed from 24th April to 7th May, 1962 (both days inclusive).
- A member entitled to attend and vote at the Meeting is entitled to appoint a proxy to attend and vote instead of himself and the proxy need not be a member. Such proxies on the form should reach the Registered Office of the Company at least 48 hours before the time fixed for the Meeting.
- The dividend when declared will be made payable at the Registered Office of the Company on or after 18th May, 1962 to those Shareholders whose names stand on the Register of Members as on 7th May, 1962, subject to the provisions of the Articles of the Company. Shareholders are requested to intimate the change of address, if any.

The PAN AM
\$15-A-DAY
WAY

Niagara Falls — one of the world's most spectacular natural attractions in the U.S.A.

Pan Am now introduces a unique low-cost way to visit any one or all of 32 major U.S. cities.

Have you always wanted to see the U.S.A. but thought it far too expensive? If so, Pan Am's \$15-a-day-way is your way to the U.S.A.

Here's how: You may spend 3 days and 2 nights in any of 32 major U.S. cities and pay only \$15 for your hotel room with bath and, in most cities, a full sight-seeing tour. Average cost for each full 24 hour stay—only \$7.50!

Food? You'll be free to dine where you like, at your own expense.

However, Pan American has surveyed every one of the 32 places included in this plan and can assure you that 3 substantial meals at popular restaurants need not cost more than \$7.50 per day through the entire U.S.A.

Result? \$15 a day, for room with bath, meals and sightseeing in any or all of 32 fabulous U.S. cities.

Fares? No extra charge on a Pan Am 'round-the-world trip for many of these U.S. cities. Only Rs. 6092 economy class from Calcutta for Europe and the Pacific, and North America as well!

a helping hand...

As far back as 1921, Tata Steel established a Technical Institute in Jamshedpur to develop a cadre of fully qualified technical personnel to take up positions of responsibility in India's first steel works. Subsequently, the Company instituted training courses for skilled artisans and other categories of employees.

During the last four years, the Jamshedpur Technical Institute has planned and provided special training programmes to meet the urgent needs of Hindustan Steel. Over 1,800 technicians from the Government steel plants at Rourkela, Bhilai and Durgapur have availed themselves of the accumulated training experience and facilities placed at their disposal by Jamshedpur, where industry is not merely a source of livelihood but a way of life.

The Central Budget

SINCE the interim budget had given advance intimation of the hard times ahead, the hefty dose of taxation that the Finance Minister administered last Monday did not come as a surprise to anyone. Indeed, if one were to judge solely by the first—which were noticeably different from the second—reactions of the stock markets, the surprises, such as they were, could not have been of a particularly disagreeable kind. This somewhat odd situation is explicable only on the assumption that the actual budget was less formidable than what frenzied imagination had visualised it would be. There were good reasons for fears. In the event, however, the actual revenue deficit which Mr Desai had to cover was, somewhat surprisingly to the public, less by about Rs 3 crores than the Rs 83 crores anticipated last month.

Though anticipated, and probably reconciled to in advance, the proposals to increase personal and corporate income tax (except on inter-corporate dividends) and to tighten up the provisions relating to capital gains will be received with misgivings. The general impression that the government has persuaded itself that there was no scope for increase in personal taxation is not strictly correct. The Third Five Year Plan leaves the matter open saying guardedly, "In the field of income-tax, the scope for raising the rates generally is limited although adjustments in tax rates in particular income brackets may be necessary from time to time." The attempt in the present budget has been to make increases all along the line (except on incomes less than Rs 5,000). In consequence, those in the highest slab (persons with an annual income of Rs 30 lakhs) will part with about 86 per cent of their income if it is wholly unearned. Persons similarly situated paid only 83.2 per cent for the assessment year 1960-61. This is certainly a crippling rate, especially when such a person will probably have to pay in wealth tax the rest of his income. But the case for increasing the income tax rates at lesser levels—in the range of Rs 10,000 to Rs 50,000, for instance,—cannot be dismissed off-hand.

The increase in taxes on companies is more difficult to justify. Almost the only extenuation besides tax hunger that the Finance Minister can urge is that a greater percentage of tax would not leave companies worse off in absolute terms in view of the current high rate of earnings in a sheltered market. When the present rate of 45 per cent was fixed, it was officially defended on the ground that the new arrangements would leave everybody—the Government, the company and the shareholder—where each was before. In actual practice, however, it turned out that in a majority of cases the rate of 45 per cent left the company and the shareholder together slightly worse off than before. Representations on this probably unintended consequence did not make much impression on official thinking. The additional levy of 5 per cent will eat further into the profits available for plough-back and dividends to shareholders.

who are yet to reconcile themselves to the loss in earnings under the new dispensation. At this rate, there will hardly be any incentive to make appropriation for expansion out of profits.

Among the positive measures announced by the Finance Minister should be mentioned the abolition of the Expenditure Tax. Its revenue potential was meagre, its ability, in its present form, to alert tax officials of evasion, doubtful. Above all, its vexatiousness to both the tax official and the tax payer was extreme. Its demise will therefore be un mourned. The Finance Minister's proposals to reduce the surcharge on salary incomes was a thoughtful gesture to a rather neglected class of taxpayers, appreciated all the more in the context of general increase. Some, though not much, fiscal substance is being provided to professions of anxiety to promote exports. A crore of rupees has been set apart for expenditure for the purpose. A tax incentive in the form of a 5 per cent rebate in tax on earnings is also to be given. This falls far short of the requirements of the situation and the recommendations of the Mudaliar Committee. The most tangible evidence of exports consciousness is the welcome reduction, though not abolition, of export duty on tea. Concessions in tax for various forms of voluntary savings like life insurance and postal savings are obvious steps in the right direction.

As regards excise duty, all that can be said now is that the scope for such levy being what it is, the Finance Minister has had to eke it out further. It is interesting that for the first time in recent years, receipts from fresh levies in excise are expected to be less than those from fresh levies in direct taxes. The effect on cost, especially of the new levies on steel and other metals and manufacturing intermediates is sure to be adverse. However, exports will not be affected as the duties on raw materials and intermediates used in export manufactures are to be refunded. Relief in deserving cases like sugar has not been forthcoming and fresh levies on cloth and yarn are inopportune.

The Finance Minister's attempt to make the most of the exiguous room for fiscal manoeuvre is evident at every turn in the budget. Given the requirements of the Third Plan and the order of deficit, there was no alternative to further taxation. Given the necessity of fresh taxation, the Finance Minister has done his best under the circumstances. But the experience of the last ten years has been one of systematic under-estimate of receipts with estimated revenue deficits or small surpluses turning out to be large surpluses in actuality. The same pattern may be repeated this year also. But as we stated in our comment on the interim budget, the inexorable pressure of non-plan expenditure is corroding every new accretion to resources from taxation. It is necessary to repeat that it would be a species of misfeasance to fritter away on non-plan purposes taxes wrung out of the people in the name of plan.

NEW TAX PROPOSALS

THE tax proposals announced by Mr. Morarji Desai, Union Finance Minister in his budget for 1962-63 presented to the Lok Sabha early this week, are of a wide range which are expected to fetch in a revenue of Rs 68.88 crores in the current year and Rs 71.7 crores in a full financial year. The specific measures grouped under major headings are as follows:—

CORPORATE TAXATION: Increase in the tax on Indian companies from 45 per cent to 50 per cent by raising the income tax applicable to all companies from 20 per cent to 25 per cent, the rate of super tax being suitably adjusted. Earnings from exports have been exempted from the increase in rates. Tax on foreign companies is retained at 63 per cent.

INTER-CORPORATE TAXATION:—In the case of Indian companies the rate of tax including supertax applicable to dividends received from Indian subsidiary companies registered before 1 April, 1961 retained at 30 per cent. The tax on dividends received from all other Indian companies reduced to 35 per cent. Continuation of the concession of 5 per cent in tax for Indian companies in which the public are substantially interested and whose income does not exceed Rs 25,000. For foreign companies which have not made the prescribed arrangements for the declaration and payment of dividends within India, the rate applicable to dividends received from Indian subsidiary companies registered before 1 April 1961 will continue at 30 per cent, but on dividends received from non-subsidiary Indian company registered before 1 April 1959 it will be reduced from 63 per cent to 50 per cent and on dividends received from other Indian companies it will be reduced from 40 per cent to 35 per cent. (Anticipated additional revenue from changes in corporation tax is Rs 10.25 crores.)

INCOME TAX AND SUPERTAX:—Revision of the schedule of rates of income and super taxes on individuals, Hindu undivided families and unregistered firms under which the rate at the highest slab fixed at 72.5 per cent, exclusive of surcharges, the intermediate slabs being suitably adjusted.

Reduction of the surcharge on income tax on salaries including pensions from 5 per cent to 2.5 per cent. Exemption limit for provident fund contributions and insurance premia raised to Rs 10,000. Liberalisation and widening of the cumulative time deposit scheme with benefit of income tax exemption, for self-employed and uninsurable persons. Revision of structure of rates of tax on registered firms by reducing the limit for exemption, revising the number of slabs and the rates of tax and having higher rates for firms with five or more partners. (Anticipated additional revenue from changes in income tax is Rs 15 crores.)

CAPITAL GAINS TAX:—Gains from disposal of capital assets within a period of one year from the date of acquisition made subject to income-tax and super-tax. Capital gains for assessee other than companies from assets held over a period longer than one year will be subject to incometax at the rate of 25 per cent or at the rate applicable as if they were short-term gains whichever is less. (Additional revenue expected from changes is Rs 50 lakhs.)

WEALTH TAX:—The rate of tax raised by 0.25 per cent and 0.5 per cent on the two highest slabs coupled with slight revision of the slab structure. The exemption on shares held in new companies during the first five years discontinued. (Additional revenue expected is Rs 2 crores.)

EXPENDITURE TAX:—Abolished.

INDIRECT TAXES:

EXCISE DUTIES:—Rates of duty on unmanufactured tobacco and cigarettes revised with reclassification of tobacco granule and regrouping of cigarette price slabs. Revision of the general structure of duty on cotton cloth and yarn. The yarn rates revised in such a way as to achieve a progression in the incidence of tax according to quality of cloth, maintaining the present duty on coarse yarn at 10 nP. Duty on processing of cloth stepped up keeping in view the improvement in quality and price of cloth as a result of processing. Reduction of the duty on grey unbleached cotton fabrics. Units with 50 or more power-

looms placed on the same footing as composite mills. Rates of compounded levy on powerloom units with looms from 5 to 49 increased, units employing four looms or less being exempted. Revision of the duty on match boxes in order to wipe out the unintended margin made by the retailer by selling a box at 6 nP per box. Conversion of the duty on unprocessed woollen, rayon and art silk fabrics into a duty on yarn and processing. Reduction of the incidence of the tax on patent medicines and drugs from 10 to 7 per cent. Duty on aluminium foil raised by Rs 100 per tonne. Duty on loose tea increased by 5 nP to 10 nP per kilogram with rebate of 15 nP in the case of tea exported.

Levy of fresh excise on 9 new items which include an ad valorem duty of 5 to 7.5 per cent on certain iron and steel products, duty of 5 to 15 per cent on electric cables and wires, duty of 10 to 15 per cent on plywood, 10 per cent duty on asbestos cement products, 20 per cent duty on tread rubber and latex foam sponge, 15 to 30 per cent duty on gramophones, gramophone parts and accessories, and gramophone records, a levy of 5 per cent on mineral oils and mineral oil products, a fresh levy on jute manufactures and also on specific acids and gases. Anticipated yield from these fresh levies is Rs 15.42 crores.

CUSTOMS DUTY:—5 per cent increase in the rate of import duty on certain iron and steel items and art silk yarn. 25 per cent duty on stainless steel plates and sheets, roads and bars. Import duty on copra raised from 15 per cent standard and 5 per cent preferential to 25 per cent and 15 per cent respectively. Increase in the duty on certain types of tools excluding machine tools and agricultural implements from 35 per cent to 50 per cent.

IMPORT DUTY:—The rate of import duty on cars raised from 100 per cent to 150 per cent, alongwith abolition of the specific duty of Rs 6,000.

EXPORT DUTY:—Export duty on tea reduced from 44 nP to 25 nP per kilogram.

(b) Registered firms. The existing tax-free slab of Rs. 1-40,000 is replaced by a tax-free slab of Rs. 1-25,000 and the slab of Rs. 25,001-40,000. The revised slabs and the rates applicable, which depend upon the number of partners in the firm, are set forth in the following table:—

	Where the firm has 4 or less partners.	Where the firm has 5 or more partners.
(1) On the first Rs. 25,000 of total income	nil	nil
(2) On the next Rs. 15,000 of total income	5%	7%
(3) On the next Rs. 20,000 of total income	6%	8%
(4) On the next Rs. 40,000 of total income	7%	9%
(5) On the next Rs. 50,000 of total income	8%	10%
(6) On the balance of total income	10%	12%

2. Companies.

(a) The rate of income-tax applicable to all companies is proposed to be raised from 20 per cent to 25 per cent.

(b) The effective rates of super-tax payable by various types of companies on incomes other than capital gains and royalties of the type mentioned at (c) below are set forth in the following table:—

Rates of super-tax payable by companies.

Income	Companies in which public are substantially interested and whose total income does not exceed Rs. 25,000.*	Other companies.*	Rates applicable to companies which have not made the said prescribed arrangements.
(1) Dividends received from:	(2)	(3)	(4)
(i) A subsidiary Indian company formed and registered before 1-4-1961	5	5	5
(ii) An Indian company, not being a subsidiary, formed and registered before 1-4-1959	5	10	25
(iii) Any other Indian company formed and registered on or after 1-4-1959	5	10	10
(2) Other income	20	25	38

*Rates applicable to companies which have made the prescribed arrangements for the declaration and payment of dividends within India.

(c) The effective rate of tax on royalties received by a foreign company (which has not made the prescribed arrangements for the declaration and payment of dividends within India) from an Indian concern in pursuance of an agreement made with the Indian concern on or after 1-4-1961 and which has been approved by the Central Government, is proposed to be continued at 50 per cent.

(d) The effective rate of super-tax payable with reference to bonus shares issued is proposed to be continued at the existing rate of 12-1/2 per cent.

3. Export incentive.

An incentive for export promotion has been provided for all assessee other than foreign companies (which have not made the prescribed arrangements for the declaration and payment of dividends within India). A rebate of one-tenth of the income-tax and super-tax attributable to income from exports out of India will be allowed in such cases. The Central Board of Revenue will make rules for the computation of such income.

Railway Budget

SARDAR SWARAN SINGH'S proposals to augment Railways' resources could not have come as a surprise after the interim Railway Budget presented to Parliament last month by his predecessor, Mr Jagjivan Ram. The tentative estimates showed a net surplus of Rs 13.16 crores for credit to the Railway Development Fund while the expenditure on works chargeable to the Fund in 1962-63 amounted to as much as Rs 23 crores, with the result that a temporary loan of Rs 9.88 crores from the General Revenues became unavoidable.

RAILWAY BUDGET AT A GLANCE

	Actuals 1960-61	Revised Estimates 1961-62	Budget 1962-63†	Budget 1962-63‡
Gross Traffic Receipts*	456.80	501.24	524.10	545.36
Working Expenses Net i.e., after taking credits or recoveries	313.24	330.55	345.74	356.04
Net Miscellaneous Expenditure (including cost of works charged to Revenue)	10.89	13.51	16.35	16.35
Appropriation to Depreciation Reserve Fund from Revenue	45.00	65.00	67.00	67.00
Total	368.93	409.06	429.09	440.29
Net Railway Revenue	87.87	92.18	95.01	105.07
Payment to General Revenues:—				
(a) Dividend on Railway Capital-at-Charge (@ 4 per cent for 1960-61 and 4.25 per cent for the quinquennium 1961-66)	55.86	63.20	69.35	69.35
(b) In lieu of passenger fare tax	—	12.50	12.50	12.50
Net Surplus	32.01	16.48	13.16	23.22

*As presented in March, 1962.

†As now anticipated.

*The increased gross traffic receipts from 1961-62 onwards include the element of passenger fare tax merged in railway fares from 1 April, 1961 against which a payment of Rs. 12.50 crores is to be made by the Railways annually to the General Exchequer, during the quinquennium 1961-66, for transfer to the States.

The position has since changed for the estimate of the working expenses for the budget year has increased by Rs 12.20 crores as a consequence of the recent decision of the Government to enhance the dearness allowance for lower-paid Central Government employees with retrospective effect from 1 November 1961. The increase in expenditure will almost wipe out the anticipated surplus in the interim budget and ways and means have to be devised to find about Rs 23 crores to replenish the Railway Development Fund.

The new proposals for increasing revenue envisage enhancement of freights and fares. There will be an increase in the basic freight rate for all goods traffic, excepting railway materials, postal, military and export manganese ore traffic, by 50 nP per tonne carried up to 40 kilometres and by one rupee per tonne beyond 80 kilometres with suitable adjustment for intervening distances. There will be an increase in passenger fares in the first class by approximately 15 per cent and in the second and third class by a little below 10 per cent. In the case of foodgrains the increase in freight of one rupee per tonne will apply only beyond 160 kilometres. The increase in freight is in addition to the existing supplementary charge of five per cent. Sardar Swaran Singh has pointed out in his speech that the proposed increase in freight would in no case exceed 105 nP per tonne whatever the commodity and the distance.

The proposed increase in goods freight rates and passenger fares are expected to yield an additional revenue of Rs 21.26 crores during the Budget year. The estimated gross traffic receipts are thus now placed at Rs 545.36 crores. The estimated ordinary working expenditure including payment on account of increased dearness allowance is put at Rs 356.94 crores. Miscellaneous expenditure and appropriation to Depreciation Reserve Fund from Revenue will absorb Rs 16.35 crores and Rs 67 crores respectively. There will thus be left a net railway revenue of Rs 105.07 crores. Out of this payment to General revenue has to be provided for dividend on Railway capital at charge of Rs 69.35 crores and Rs 12.50 crores in lieu of passenger fare tax. The surplus available amount to Rs 23.22 crores as against Rs 13.16 crores estimated by the interim budget. The estimated surplus will thus be able to take care of the expenditure

of Rs 23 crores on works chargeable to the Development Fund.

With a mounting deficit the Railway Minister had no real alternative to an increase in rates. In extenuation, he can rely on two factors. The first is that both the freight and passenger fares have not risen commensurate with the increase in the cost of working of the Railways, during the past several years. As far as freight is concerned, the previous increase was in 1958 and a surcharge of five per cent was levied from April 1960. Passenger fares as such have not been increased since April 1951, though a passenger fares tax was imposed in September 1957 and this was subsequently merged with the fares since April 1961. The merger of the passenger tax with fares has not made any material difference to the Railways' earnings since an annual sum of Rs 12.5 crores is to be transferred to General Revenues for payment to the States in lieu of tax all through the Third Five Year Plan period. Secondly, he can also draw support from the Railway Freight Structure Enquiry Committee which had recommended that Railways should raise additional revenue through increased freight rates to meet their growing expenditure. Sardar Swaran Singh has shown that between 1957 and 1962 (including the increases now proposed by him) the total increase is well below the level of 12.9 per cent of the earnings recommended by the Committee.

While one sympathises with the Railway Minister's dilemma, it is not easy to acquiesce wholly in the manner in which he has set about raising the additional revenue. Sardar Swaran Singh himself admits that "the passenger fare tax levied since September 1957 and merged in the Railway fares on 1 April 1961 though not accruing to the Railways, nevertheless has had the effect of increasing the incidence of burden to the railway passengers on the average by about 10 per cent".

In the light of this, the statement that passenger fares have remained frozen since April 1951 is true only in a special sense. Such accounting quibbles may save the Railway Minister's conscience, but the passengers who have to pay more within five years of the latest increase are not amused.

The reasoning of the Railway Minister in respect of the increase of 4 per cent in freight rate, is, however, more convincing.

INCOME-TAX AND SUPERTAX

Rates of tax for the assessment year 1962-63 on incomes other than capital gains

1. Assessee other than companies.

(a) Individuals, Hindu undivided families, unregistered firms, etc. In the rate schedule applicable to individuals, Hindu undivided families, unregistered firms, etc., the existing slab of Rs 15,001-20,000 has been substituted by two slabs, namely, Rs. 15,001-17,500 and Rs. 17,501-20,000. For all the slabs above Rs. 5,000, the rates have been slightly increased as compared to the existing rates. The basic surcharge for purposes

of the Union has been fixed at 2-1/2 per cent for incomes from Salaries. In other respects, the existing surcharges are to continue.

The following table sets forth the total tax (income-tax, super-tax and surcharges) payable by a married individual with two children at certain levels of income at the rates applicable for the assessment year 1961-62 and the rates proposed for the assessment year 1962-63:—

Income.	Income-tax (including super-tax and surcharges) payable by a married individual with two children.		Wholly earned income other than Salaries.		Wholly unearned income.	
	1961-62	1962-63	1961-62	1962-63	1961-62	1962-63
5,000	42	42	42	42	42	42
10,000	438	479	438	490	500	560
15,000	1,094	1,171	1,094	1,199	1,250	1,370
20,000	2,039	2,272	2,039	2,328	2,330	2,660
25,000	3,896	4,044	3,896	4,142	4,224	4,734
40,000	10,521	11,065	10,521	11,334	12,024	12,954
70,000	29,421	30,745	29,421	31,495	33,624	35,994
1,00,000	51,471	53,039	51,471	54,332	58,824	62,094
1,50,000	91,721	93,820	91,721	96,020	1,00,824	1,05,594
2,00,000	1,31,971	1,34,801	1,31,971	1,37,707	1,42,824	1,49,094

As already stated, the cumulative effect of the increase so far effected including the proposed increase will be well below the rate that had been recommended by the Railway Freight Structure Enquiry Committee. The flat rate increase which will now spread over almost all commodities is said to be the first step towards narrowing down the existing gap between the lowest and highest freights. This would suggest that further such steps may be taken in coming years. The stiffer increase on short distance traffic may encourage road traffic and reduce the pressure on railways. One drawback, however, in the flat rate increase is that low-rated goods will feel the pinch more than other goods traffic. In the context of the need for furthering export promotion, freight concessions for other commodities besides manganese ore intended for export would have been an appropriate gesture.

The Relevance of Socialism

By 'Jnan'

ONE of the most serious defects of our political and economic life and, therefore, of the formulation and execution of our Five Year Plans is that we have in this country only a large number of Socialists—of various shades, from the pale pink of the average popular politician to the flaming red of the thoroughbred Communist—but no socialist thinking worth the name. From the Prime Minister downwards, popular politicians, particularly those of the Congress Party, speak and act under the assumption that for any measure to be sound socialism, it is enough if it will not help any section of business to make private profits. Oftentimes it is found that even this condition is not satisfied—the beneficiary is the kind of businessman who will give the community nothing in return for what he is able to pocket for himself.

The point however is that in politically influential circles no attempt has been made to decide what forms of socialism and what kinds of socialist policies are suited to the conditions of this country and whether, and to what extent, modifications of the basic principles of socialism are necessary to provide for the differences between the conditions in the country and those which are presupposed in all pleas for change over to socialism. No socialist in India can deny that there are such differences, or that socialist policies for progress in this under-developed country which overlook these differences will only push the country into a morass, which will be politically as well as economically most serious and dangerous to the nation.

Socialism as a body of political and economic thought is the product of advanced industrial nations. The impetus to socialist thought was derived from the evils of advanced industrialism in conditions of laissez faire. Its hopes were kindled by the spectacle of increased productivity which cried aloud for better distribution, both for its own sake and for the sake of further advance in production. It could afford in those conditions to simplify its problem by assuming that the incentives to work were there and stood in no need of special efforts to generate them. The problem of economic organization as such did not loom large, because, like the incentives, it was there and the only question was that of ownership, control and direction. For its political philosophy, too, socialism did not have to look far. It was enough to deny the validity of the concept of economic freedom,

to raise the claims of the State sufficiently above the rights of the individual to justify the inroads of a socialist government into private property.

As a school of political thought opposed to individualism, socialism is consistent and complete. But in the economic sphere, a similar consistency is impossible except with a reckless unconcern for practical considerations and consequences. It compares most unfavourably with communism which has a special standpoint of its own in metaphysics and philosophy, in science, history and sociology. It takes full account of the problems of the transition, of the tasks to be tackled for achieving that larger social transformation of which the change in economic organisation is but a part. Socialism as an economic creed has too many loose ends to be tied up and many of them will defy or elude the attempt.

It is not an accident nor is the result of a passing perversity of the average worker that in the advanced democracies of the West either the Socialist parties recoil from the delicate complexity of their tasks, or the working classes find it advantageous to themselves to transfer their political support to other parties or to remain without close association with them. While the Labour Party in Britain, for instance, is attributing it to the shortcomings of the Socialist programme and the methods of its presentation, the real reason is to be found in the haziness of the practical ends they have set before themselves and the lack of outline in their ideology. Socialist economics is overtaken by the same fate as classical economics, the nemesis for overlooking the differences between the presuppositions of theory and the objective facts of life. There can be no such fate for communism, because communism makes no such assumptions and frankly and determinedly sets out to change the facts of life according to its tasks and requirements.

The pressure to reconsider socialism in the light of such an outstanding phenomenon as the Labour Party's defeat in three successive general elections is felt by all. But the response is not uniform or alike. It varies according to the loyalty to theory or the anxiety to win the next elections. The history of the attempted change to Clause 4 is specially illuminating. But the basic question which confronts the sincere socialist is, how much of socialism the average voter is prepared to stomach, how much of equality he is keen on securing and how much inequality he is anxious to retain as in the case of wage differentials. This question cannot be answered so long as there is any rigidity of adherence to doctrine.

The only way out of the socialist stalemate that is now discernible is the proposal of the Lib-Lab merger advocated by Mr Wyath. The proposal is by no means popular among socialists. But the record of the Liberals at the Stockton by-election is a fact, not a mere argument in favour of the Union. One may recall in this context the view urged by Mr L. T. Hobhouse in the years after the first World War that the Liberals would not be true to their faith unless they became Socialists. The wheel has gone one full round. It is now being said that Socialists must turn Liberal if they are to salvage socialism. Now both these stress the same point, that Socialism and Liberalism have much in common and it will be fatal to either to ignore what it holds in common with the other. That is, there are certain Socialist aims which Liberalism must strive to attain and must not disown just because of its own allegiance to individualism and its association with capitalism. Likewise, there are liberal principles like individual freedom, in the broadest sense,

which Socialists cannot discard because of its blinkered pursuit of economic equality.

As has been said already, there has been no methodical attempt to ascertain the extent of economic inequality that is consistent with the dignity of the individual on the one hand, and the reliability of adequate productive effort on the other. Empirically, we have such facts as the rise of a new class and the concessions to the pressure for inequality in Soviet Russia, the various forms of deviationism in Eastern Europe particularly Yugoslavia and, on the other side, the unwavering faith of the American workers in free enterprise, the swing of labour opinion in Britain and the amazing progress of the European Common Market in the face of its implicit, but unmistakable, rejection of Socialist ideas of economic organisation. All these come on top of the failures of social democrats in Europe in the inter-war period of which writers like Hayek have made so much.

All this is in respect of countries which have solved the problem of poverty, which are affluent and which are keen on maintaining a high rate of growth of the national income over and above that state of affluence. Socialist thought which is recognised as standing in need of reconsideration would in the conditions of an under-developed over-populated country with a high rate of population would need, not reconsideration, but even careful pleading in the admission Court. And yet Socialist platitudes are considered decisive arguments in the context of any economic problem in this country. The reason is simple. We have Socialists, but no genuine socialist thought springing from the soil, just as we have democrats after the Western model but no political thinking. The poverty of political thought in this country is more glaring than even the material poverty of the masses.

Individual well-being is linked with national prosperity and only planned efforts can ensure both in the shortest possible time. And planning, for its success, largely depends on savings, individual as well as national. Saving in the form of Bank Deposits provides resources for the National Plan.

BUDGET

Chicken-hearted Borrowing Target

AS we had remarked on the occasion of the caretaker Budget, the target for market borrowings this year is chicken hearted in the extreme. Market loans are to fetch Rs 260 crores gross, and with the decision to suspend sales of Prize Bonds the whole amount has to be realised from the new loan programme. As against this the provision for discharge of permanent debt is nearly Rs 183 crores, so that new cash sought in 1962-63 is to amount to no more than Rs 77 crores. This figure nevertheless represents a modest raising of the target from 1961-62, when new loan realisations were placed at Rs 202 crores less Rs 139 crores for discharge of maturing debt. What is certain is that we are a far way from approaching, least of all achieving, the annual average of Rs 160 crores postulated by the Third Plan. Last year's market loans were an unmitigated flop, and that experience may have soured Government's expectations in this behalf in the current year. But we believe that in certain important respects the conditions and circumstances attending the gilt-edged market have changed for the better and, provided the terms of the new loan are drawn up suitably and appropriately, there is now rather more cheerful prospect of realisations from market loans.

The most significant development is the resumption of growth of bank Deposits from, say, the beginning of the 1961 slack season after about nine months of stagnation. It is after about nine months of stagnation. It is not necessary to detail the reasons why Deposits have thus begun to accrue afresh with the banking system; the implications of the inflow of new Deposits are what really matter.

A record expansion in credit during the 1960-61 busy season, accompanied as it was by stagnation in Deposits, imposed considerable strain upon the banking system and resulted in recourse to central banking credit to the tune of nearly Rs 100 crores. Hence, though there was a slack season contraction in Advances as well as the beginnings of increase in Deposits, banks were more anxious to liquidate debt to the Reserve Bank than they were to add to their gilt-edged portfolios.

Though the 1961-62 busy season will probably witness credit expansion on a scale and magnitude to compare with last year, the inflow of new Deposits has been of significantly large dimensions. So much so, Scheduled Bank indebtedness to the Reserve Bank now barely exceeds Rs 15 crores. If slack season return of funds should be experienced—and there is no reason why seasonal credit should not contract—and if at the same time the trend of growth of Deposits is maintained, then banks are likely during the 1962 slack season to suffer from an embarrassment of riches. At that juncture and in such circumstances the Government would have an admirable and enviable opportunity to

canalise the free resources of banks into gilt-edged.

But no medium loan with a ten year maturity will be found to the liking of banks. We would emphasise here the necessity of a special loan meant specifically for banks; the interest coupon perhaps need not exceed 3.4 per cent; but on no account should such loan have a maturity longer than five years. In other words, provided the Reserve Bank sees fit to advise a 3.4 per cent 1967, and provided Government is enlightened enough to accept that advice, there is no reason why the banks cannot be expected to muster anywhere between Rs 50 crores and Rs 100 crores in the course of the 1962 slack season. We would favour a first tranche of such loan to be issued in July to coincide with the maturity date of the 3½ per cent 1962 (outstandings of Rs 107 crores) and a second tranche in November, when the 2½ per cent 1962 (outstandings of Rs 76 crores) falls due for repayment.

CENTRAL BANK

Why the Distrust?

1961 was a good year, Sir Homi Mody made plain in his introductory remarks at this week's annual general meeting of the Central Bank of India Ltd, of which he is Chairman, but the fact remains, he would seem to insinuate, that prospects are not altogether cheerful. Warnings of industrialists in the matter of prospective shortage of the "basic" industrial raw materials proved unavailing, and "conditions of acute scarcity were allowed to develop in respect of coal, power and transport". The trouble is, that Government now appears belatedly to have recognised the threat that such shortages will pose to the growth of production, and there is the possibility that "even the existing productive capacity in the country may be seriously affected." For it is true that Mr Malaviya is calling for the private sector in coal to augment its target of production under the Third Plan by some 8 million tons. But more coal would be futile if there were not the wagons to move it. Sir Homi charges that, "whether it is wagons or steel or washeries, we seem to be revolving in a circle of shortages, and no adequate effort has been made to view the problem as a whole."

Certainly what is absolutely necessary is a revision of priorities; and in such revision there must be recognition of the fact that the supply of the four basic industrial raw materials—coal, power, transport and steel—must always precede and therefore generally exceed the demand for them. Sir Homi infers from these facts that there are great imperfections about the plans as they have so far been drawn up; and one reason for the difficulties that have been experienced, or the unexpected hurdles that every so often have been allowed to disrupt production, lies in an inadequate consultation by Government of the private sector in this country.

With a good deal of justice Sir Homi accuses Government of harbouring "a certain distrust and suspicion" of the Indian indus-

trialist—and this at a time when foreign experts are in great demand. It is dissipation of effort and energy to indulge in arguments about the roles of the private and public sectors; what is necessary is the recognition of the fact that they are really complementary, and that to the extent that the private sector "depends" upon the public sector it has both the duty and right to inform Government about the problems that it experiences or apprehends. The private sector has not, we may add, shirked from this duty; it has been the failing of Government that it has not paid adequate attention, possibly shrugging off any complaints as emanating from an "interested" source. We would emphasise that planning will yield best results if there is really co-operation between the private and public sectors—and not competition.

CBC

Deposits Cross Rs 10 Crore Mark

Yet another bank to report a sizable rise in the profit for 1961 is The Canara Banking Corporation Ltd; and the balance-sheet for the latest year is moreover notable for the fact that Deposits have crossed the Rs 10 crore mark.

Deposit and other accounts are higher by Rs 1.40 crores at Rs 10.12 crores, and by far the bulk of the increase is accounted for by the rise of Rs 0.81 crore to Rs 6.70 crores in Fixed and other Time Deposits, though it is necessary to add that Savings Bank Deposits (up by Rs 33 lakhs at Rs 1.84 crores) and Current Accounts (higher by Rs 35 lakhs at Rs 1.58 crores) have also registered an improvement.

Almost the whole of the new accruals to Deposits has been utilised to expand the total of Advances by Rs 1.27 crores to Rs 6.16 crores. As a result the credit ratio has moved up somewhat from 56.0 per cent to 60.8 per cent—but still, it will be noted a very satisfactorily low percentage.

There is a small increase in the gilt-edged portfolio from Rs 3.53 crores to Rs 3.85 crores, and a fractional decline in cash balances including money at call and short notice, from Rs 1.07 crores to Rs 1.05 crores. Borrowings are, as a result, some Rs 3 lakhs odd higher at Rs 12.77 lakhs.

The profit and loss account discloses an increase of Rs 5.31 lakhs to Rs 53.94 lakhs in the income by interest and discount and a rise of Rs 2.53 lakhs to Rs 13.62 lakhs in the amount brought in by commission, exchange and brokerage. Interest paid cost only Rs 1.82 lakhs more at Rs 32.71 lakhs, but the rise in salaries and allowances is a larger one of Rs 3.44 lakhs to Rs 18.31 lakhs. Nevertheless, the control on expenditure has resulted in an improvement of Rs 1.48 lakhs to Rs 8.22 lakhs in the balance of profit subject to tax.

The transfer to Reserve Fund is stepped up from Rs 1.35 lakhs to Rs 1.65 lakhs, while tax claims Rs 1.10 lakhs more at Rs 3.90 lakhs. The dividends are maintained, the distribution on equity shares being at 15 per cent. The carry forward is somewhat higher than the amount brought in.

The Reserve Fund and other Reserves are placed at Rs 21 lakhs against the issued and paid-up capital of Rs 25 lakhs. The capital plus reserves ratio to Deposits, in the 1961 balance-sheet, works out to 4.54 per cent.

All in all, 1961 has been a year of satisfactory—and all round—progress for The Canara Banking Corporation Ltd. The Directors' Report incidentally points out that the bank for the first time undertook a bit of underwriting—and "there was no need to fulfil any part of the underwriting obligation" of Rs 14 lakhs.

BANK RETURNS

Busy Season Tapering Off

A slackening of pressure is distinctly discernible as the busy season nears its peak. According to the returns of the Reserve Bank for 20 April Active Note Circulation has declined by Rs 8.26 crores to Rs 2,141.06 crores, and there has been inflow of Rupee Coin for Rs 0.46 crore. For purposes of buttressing Balances Held Abroad a transfer of Rs 5 crores has been made from Foreign Securities in the Issue Department, reducing the balance in this respect to Rs 108.86 crores. There is a counter-vailing transfer of Rs 5 crores to Rupee Securities, raising the latter figure to Rs 1,817.04 crores. In the result, the Reserve Bank's cash in the till has improved by Rs 8.67 crores to Rs 21.07 crores.

The Centre's balances, as shown in the return for the Banking Department, are sharply lower by Rs 32.21 crores at Rs 51.06 crores and the decline reflects, we may be sure, the maturing liability of Rs 27 crores in respect of Government of India Treasury Bills purchased and discounted by the Reserve Bank. Balances of State Governments have improved by Rs 2.98 crores to Rs 6.86 crores, but this is at the cost of a further increase of Rs 6.65 crores to Rs 125.87 crores in the ways and means borrowings of the States from the Reserve Bank.

There has been still further improvement in the position of Scheduled Banks vis-a-vis the Reserve Bank. Reserve Balances of member banks are higher by Rs 2.13 crores at Rs 88.51 crores, but if regard is had for the State Bank reporting a decline in the same week, the rise on account of other Scheduled Banks may exceed Rs 4 crores. Secondly, indebtedness to the Reserve Bank has been again pruned as indicated by the fall of Rs 3.79 crores to Rs 131.56 crores in the latter's portfolio of Other Loans and Advances. Indeed the Reserve Bank's advances against usance bills are shown to have moved down by Rs 1.53 crores to Rs 12.47 crores.

By dint of the transfer to the Issue Department, Investments are lower by Rs 5 crores at Rs 152.11 crores. Despite the transfer of Rs 5 crores from the Issue Department, Balances Held Abroad are higher only by

Rs 2.86 crores, thus implying a foreign exchange drain during the week of over Rs 2 crores. Foreign assets held by the Reserve Bank have now fallen below the Rs 120 crore mark.

The return of the State Bank for 20 April is largely featureless. Deposits are lower by Rs 2.15 crores at Rs 575.58 crores; the gilt-edged portfolio is about Rs 1 crore higher at Rs 243.79 crores; the total of Advances, in a sort of eleventh hour busy season spurt, has moved up by Rs 1.29 crores to Rs 294.34 crores; and cash balances, including money at call and short notice, have been marked down by Rs 1.87 crores to Rs 27.76 crores. Borrowings have been reduced slightly to Rs 1.80 crores.

It would seem that growth of Deposits, which has been so prominent a feature of Scheduled Bank returns since the middle of March, has slowed down in the week ended 13 April. For, net Demand Deposits are lower by Rs 7.94 crores at Rs 900.37 crores; and though this is fully offset by the rise of Rs 11.77 crores to Rs 1,190.78 crores in net Time Deposits, the net improvement in Deposits appears to be only Rs 3.83 crores, with possibly some element of switch-over from Demand to Time Deposits. But regard needs to be had for the fact that in the same week the State Bank reported a fall of Rs 9.50 crores in Deposits, and hence it follows that the rise in the Deposits of other Scheduled Banks must have exceeded Rs 13.33 crores—not a small sum. Such new resources have been utilised to reduce indebtedness to the Reserve Bank by Rs 14.41 crores to Rs 17.05 crores and to the State Bank by Rs 1.68 crores to Rs 21.76 crores. The gilt-edged portfolio, at Rs 589.46 crores, shows a fractional drop that is mainly on account of the State Bank. The total of Advances has risen rather less briskly by Rs 2.13 crores to Rs 1,424.18 crores—but if the element relating to advances due from banks is omitted, the rise would have exceeded Rs 5½ crores. The end result is a drop of Rs 9.58 crores to Rs 193.87 crores in cash balances, including money at call and short notice.

Treasury Bills

Tenders for Rs. 2,00,00,000 of 91 days' Government of India Treasury Bills were opened on Tuesday, 24 April, 1962. Total amount offered was Rs 2,00,00,000. Tenders at Rs 99.355 per cent were accepted in full. Total amount accepted was Rs 2,00,00,000, the average rate of accepted tenders being Rs 2.580 per cent per annum.

President Kennedy's Victory

By Paul Einzig

PRESIDENT Kennedy's success in forcing the American steel industry to reverse its decision to raise the price of steel may well prove to be a turning point in the economic trend in the United States. During the last few years the United States has been frittering away its economic strength at a rate that was bound to cause concern in the free world. Efforts to stop the rate have been only partly successful until now. But the President's action, which saved the country from an accentuation of the rising trend of its costs and prices, is a most important step towards a restoration of the dollar to its former unique position. Apart altogether from its immediate effect, it is liable to produce far-reaching indirect effects. Having been tough with short-sighted employers, the Administration is now in a better position to be tough with short-sighted trade unions. And the success of the efforts to restore the economic strength of the United States depends entirely on the willingness and ability of the Administration to be tough with the trade unions.

Nothing succeeds like success. The remarkable victory won by President Kennedy will go a long way towards improving the morale of the country. It seems reasonable to expect that the show of firm hand has impressed both sides of industry and will place the Administration in a better position to end the conspiracy between trade unions and employers to exploit the consumer. Employers have been conceding unwarranted wage increases too easily, in the full knowledge that they could make the consumer pay the higher prices. Now that President Kennedy has proved that it is possible to call a halt to this disastrous process, there will be perhaps more resistance to unwarranted wage demands. And the trade unions, knowing this will not press excessive demands of the kind they were pressing on the certain assumption that, after some shadow-boxing, employers would concede most of it.

It is to be hoped that the effect of President Kennedy's gesture will not be confined to the United States. All industrial countries of the free world are in a state of demoralisation. Some major crisis would administer the necessary shock to restore the spirit that is essential in order to be able to achieve expansion without progressive inflation. But possibly the success of curbing the power of one of the most powerful group of industrial interests might produce a somewhat similar effect. Perhaps the British Government, too, will now muster up sufficient courage to give industry the lead and guidance it badly needs. This is essential in order to maintain the strength of sterling which has been depending until now to a considerable extent on the weakness of the dollar. The President's action should cause the dollar to recover, and in the absence of an improvement in the basic economic situation of Britain this would mean a weaker sterling. Fortunately for Britain and the sterling area, the British economy shows signs of improvement. This balance of payments is better, the index of production shows an increase, and several trade unions have accepted the limitation of wage increases to 2½ per cent for 1962. Should progress in the right direction continue, sterling will no longer depend for its firmness on the caprices of hot money.

Notes

RAILWAYS

Rating Policy

Though the Neogy Committee on Transport Policy and Co-ordination has not arrived at any conclusions and is not likely to do so for some time to come, the studies undertaken by the Committee's Secretariat seem to provide the arguments for an upward revision of Railway freight rates. The present stage of the work of the Committee was explained by the Chairman at a press conference two days before the meeting of the new Lok Sabha. The points made on that occasion suggested that an increase in freights was unavoidable. The studies made by the Committee's Secretariat, it was stated, had shown that, with the steady development of road transport in the country, which is desirable and inevitable, in an expanding economy, the Railways may have to be prepared in the long run to lose some of the high rated traffic and they may have to rely for their revenue more upon the goods like mineral ores coal etc, which now earn a lower average rate per ton-mile. The Railways' rating structure is at present based on the 'value of service' principle, rather than the 'cost of service' principle. The value of service principle was, however, more appropriate in the

days when the Railways held the monopoly of traffic and could charge a large proportion of the overhead or joint costs of the total traffic to those items of traffic which were comparatively high valued and could bear relatively high freight rates, leaving the low valued and bulk traffic like coal, mineral ore, salt etc. to be carried at very low rates. There is, however, a distinct recognition in the world now that the old railway rating policy has become out-of-date and railway rating has to be based to a much greater extent upon the cost of service. With the changing pattern of traffic on the Indian Railways on the one hand and their obligation to find resources for the Plan, on the other, the question of reorientation of their rating structure is assuming increasing importance. It thus requires to be examined what long term changes may have to be contemplated in the railway rating policy, and what will be the implications of adjustments in the rates of low-rated and high-rated commodities respectively, from the point of view of the cost structure of different types of industry in the different regions of the country and also of the economy as a whole. These questions are under the examination of the Committee.

Mr Neogy also indicated at his press conference that the Committee was considering questions relating to the efficiency of the Railways as a commercial and public utility undertaking, and in this connection, was also examining questions pertaining to the administrative organisation of the Railway Zones, and possible improvements in the accounting and costing practices of the Railways so as to enable them to ascertain the profitability or otherwise of specific operations.

Mr. Neogy did not, however, indicate in detail the various aspects of "efficiency of operations" which would be examined by the Committee. Under this compendious heading would come measures calculated to increase the marginal return on investment, the volume of goods transported and the operational efficiency through adoption of new techniques and practices. Perhaps it is not quite reasonable to expect the Railways to explore new avenues, though we may be sure that they will leave no stone unturned. However it may be added that the Railway Administration is least perturbed by the criticisms that have been levelled by those

who have intimate knowledge of its working.

Attention has been drawn to the increase in the capital at charge out of all proportion to the increase in route mileage during the decade of planning. In this connection it is also pointed out that most of the increased route mileage is in metre gauge which carries far less traffic than the broad gauge. In refutation of this line of criticism, it is pointed out that the Railway system had already reached a high stage of development before the War and the scope for new lines is very limited and confined to out-of-the-way areas served by metre gauge. Most of the industrial development has taken place in areas already served by broad gauge lines, so that there was no need to increase route mileage on the broad gauge to cater to the additional traffic arising from industrial development. The new investment has, therefore, been mostly concentrated on improvement of the carrying capacity of the existing track by increases in track mileage (that is, doubling and provision of additional tracks in station sidings, marshalling yards etc which do not add to the route mileage) and provision of adequate rolling stock. Improved facilities for handling freight etc. While the point has been well taken, the question remains how much of the additional investment reflected in the heavy annual increases in the capital at charge is really productive investment.

As regards innovations, the Railway Administration has not yet come to the stage of serious consideration of suggestions such as adoption of 'trailer-on-flat-car' for transport of goods. It has been suggested that the adoption of this practice, which is widespread in the United States, would enable the Railways to combine the advantages of road transport and, incidentally, eliminate the difficulties arising out of the existing of two gauges. The Railway Administration is conservative in its outlook, as befitting an organisation which has completed its century; but it is not incapable of learning, though the process may take some time. The use of diesel electric locomotives was suggested more than ten years ago. At the last meeting of the Central Advisory Council of Industries, Mr S. L. Kirloskar stated that he had been trying in vain since 1954 to get the authorities interested in the manufacture of diesel locomotives. In respect of both these items, positive decisions have been announced in the course of the last one year. The White Paper on the Railway Budget for 1962-63 says that 222 diesel locomotives were on order including 50 from the Diesel Locomotive Works at Varanasi. This Rs 13.7-crore project, being set up in the public sector in collaboration with ALCO Products Incorporated of USA, is planned for manufacturing 150 locomotives per year.

IRON & STEEL

Moderate Improvement

The report of the Department of Iron and Steel, in the Ministry of Steel, Mines and Fuel deals with the various aspects of the steel situation in the country during 1961-62. The report reflects only moderate improvement in the availability of steel in the country as compared with the previous year. Total availability amounted to 3.84 million tons comprising indigenous production of about 2.84 million tons and imports of the order of 1 million tons. Against this, total availability during 1960-61 has been placed at 3.2 million tons. Production of steel in the country was only slightly better at 2.84 million tons against 2.26 million tons in 1960-61. However, owing to the growth of steel using industries, the demand for steel has registered substantial expansion in the course of the last few years and during 1961 demand for the restricted categories of steel has been assessed at 6.2 million tons, as against 5.06 million tons in 1960. The shortfall in internal availability was particularly marked in respect of sheets, tin-plates, and galvanised wire. Production of pig iron was also in shortfalls and the worst to suffer were the foundries, in view of the grave shortfalls in the production of foundrygrade pig iron.

Total imports of iron and steel during 1961 (upto September 1961) have been assessed at 729, 200 tons which compares with 941,548 tons in 1959 and 1,144,121 tons in 1960. Though the pres-

sure of demand for steel was acute, the shortage of foreign exchange had not permitted liberal imports. Under the policy of strict control on imports, import licences were issued to actual users only and for categories of steel which were not produced in the country or produced only in limited quantities. Imports comprised purchases from rupee payment countries and also against Development Loan Fund. A fresh loan of about Rs 20.52 crores was made available from the Development Loan Fund for the import of steel, during the year under review.

Exports of steel included only those items which could not be utilised in the country. Total exports of pig iron and steel during the year amounted to 137,966 metric tons which included 67,687 tons of pig iron, 58,190 tons of Blooms, and Slabs and 12,089 tons of finished steel.

The report also deals with the progress made by the units in the public and private sectors in their development programmes for steel production. It is shown that the Tata Iron and Steel Company has completed its two million tons programme for the production of 1.5 million tons of saleable steel. The Indian Iron and Steel Company has also completed its expansion programme for the production of 0.8 million tons of saleable steel.

Production in the public sector units is far short of targets. The Rourekela Steel Plant produced during the year only 311,905 tons of steel ingons while the Second Plan target for production was about 1 million tons. The Bhilai steel plant is reported to have completed the one million tons stage, but here also production has not been running to full capacity. In the Durgapur plant the No. 3 coke oven battery and the No. 3 blast furnace remain to be completed. Further expansion of capacity is envisaged in all these public sector units during the Third Plan period. The Rourekela plant is to be expanded from 1 million tons to 1.8 million tons of steel ingot. The Bhilai plant has already embarked upon expansion to 2.5 million tons.

MINERALS & OILS

Many-Sided Progress

In many respects, 1961-62 had been an eventful year for the development of mineral and oil resources of the country. The report of the Department of Mines and Fuel records the many sided progress achieved in these fields by the country during 1961-62. The highlights of the achievement include the commissioning of the first oil refinery in the public sector at Nunmati in Assam, the find of the lignite bed at Neiveli and the rise registered in the production of coal from 52.61 million

tons in 1960 to 56.04 million tons in 1961. Apart from these, the other noteworthy aspect of development in this sector was the intensification of the mineral investigation programmes. Large-scale mapping has been conducted with a view to finding possible deposits of mineral ores. About 4,363 sq miles are shown to have been covered by such mapping during the year under review. Such mapping has further been followed by drilling with some notable success. In the coal belt nearly 8,823 metres were drilled, while the area drilled in the field of copper ore amounted to 2,597 metres. Extensive drilling has also been completed in the search for possible deposits of other minerals such as lead, zinc, gold, iron, manganese, chromite, gypsum, limestone, bauxite, fluorite etc.

Improvement in production has been considerably assisted by changes effected on the organisational side. The Department of Geological Survey was reorganised on a regional basis for more effective and decentralised working. Three directorates have been set up for the eastern region with headquarters in Calcutta, for the northern

Minerals	Units of quantity		1959	1960	1961
Iron ore	'000 Tonnes		7,982	10,683	12,009
Manganese ore	" "		1,187	1,199	1,201
Copper ore	" "		404	448	423
Lead Concentrates	" "		6,488	6,245	5,494
Zinc Concentrates	" "		9,978	9,787	9,253
Gold	Kilograms		5,144	4,995	4,868

It will be seen that only copper ore and manganese ore had shown some improvement while there has been a slight fall in the production of other important mineral ores. The fall in the output of lead and zinc concentrates has been put down to the fall in the metal content of the ore mines, while the slight fall in the output of gold is attributed to the depletion of ore reserves in Mysore mine, fall in the average grade of ore mined and a rockburst in Nundydroog mine.

In the field of coal production, though there was a rise in production total production at 56.04 million tons was considerably short of the Second Plan target of 60 million tons. The most important factor that hindered production from reaching the target was shortage of transport facilities which resulted in considerable accumulation of coal at the pithead of collieries. The private sector collieries had during the year raised about 45.76 million tons of coal which compares with 43.91 million tons raised in the previous year. In the public sector, the National Coal Development Corporation only succeeded in attaining a rate of production equivalent to its Second Plan target.

It was in the field of oil industry that the most striking progress was witnessed during the year under review. Apart from the

region with headquarters at Lucknow and for the Southern region with headquarters at Hyderabad. The Indian Bureau of Mines has also considerably extended its activities which comprise mainly mineral exploration and inspection of mines in the various States. The Bureau has ensured the systematic exploration of mineral deposits, the elimination of avoidable waste and promotion of improved methods of mining. The Bureau has engaged in intensive proving operations for copper at Khetri, Kolihan, Daribo, Pratapgrah, and Hodhawas and in Sikkim, and tungsten at Degana, Diamond at Panna, pyrites at Amjore, Apatite in Singhbhum, Gold at Ramgiri, iron ore at Bailadila and Sasangda etc. A significant achievement of the Bureau during the period was the discovery of rich deposits of metallurgical coal in the vicinity of North Karanpura coalfield in Bihar where more than 50 million tons of such coal reserves had been proved.

The following table gives comparative figures of production for some of the important minerals in the country during the last three years.

Minerals	Units of quantity		1959	1960	1961
Iron ore	'000 Tonnes		7,982	10,683	12,009
Manganese ore	" "		1,187	1,199	1,201
Copper ore	" "		404	448	423
Lead Concentrates	" "		6,488	6,245	5,494
Zinc Concentrates	" "		9,978	9,787	9,253
Gold	Kilograms		5,144	4,995	4,868

inauguration of the Nunmati refinery in the public sector the other major development in the oil industry was the signing of the agreement with the Assam Oil Company and with the ENI of Italy. The agreement with the Assam Oil Company grants exploration rights to the Oil India Limited over an additional area of 1886 sq miles in north east Assam. According to the Second agreement, the ENI have agreed to provide a credit of Rs 46.15 crores for the establishment of petroleum projects in the public sector. The beginning of trial production of crude oil in the Ankleshwar oil field and the commencement of bulk despatches of oil at the rate of 600 tons per day to the Burma Shell and the Stanvac refineries were also noteworthy achievements. Steady progress is also reported in respect of the construction of the Barauni refinery in Bihar and the completion of the remaining stage in the Nunmati project. The Oil and Natural Gas Commission has further intensified its operations. It is revealed that during the year under review, the geological parties deployed by the commission completed about 2,331 sq miles of detailed mapping, 7,180 sq miles of regional mapping and 782 miles of traverses in Gujarat, Rajasthan, Madhya Pradesh, Jammu and Kashmir, Punjab, Himachal Pradesh, Uttar Pradesh and Nepal,

Assam, West Bengal, Andhra, Madras and the Andamans. During the year, 14 deep rigs and 4 structural rigs were under operation in various parts of the country.

INDUSTRIAL POLICY

The Yardstick of Performance

In his address to the annual general meeting of the Indian Chamber of Commerce held in Calcutta last week, Mr S. P. Jain, the outgoing President of the Chamber dealt at length with the larger question of the Government's industrial policy, with special reference to the role of the private and the public sectors in contributing to economic development of the country. The Statement of Industrial Policy Resolution delimits the roles of the public and private sectors in fairly precise terms. Public sector is given exclusive responsibility for provision of essential services like railways, transport, power, communications, irrigation etc. Further, new development in industries of key and strategic importance is also almost exclusively reserved to the public sector. That such delimitation and exclusion of private sector from further participation in the essential industries has not conformed to the best interests of industrial growth has been becoming increasingly clear especially in the light of the lagging performance of the public sector units. The extremely meagre return on investments in the public sector is a feature that is in striking contrast to the performance of the units run in the private sector. The return on the total investments of Rs 606 crores in 73 undertakings in the public sector at Rs 2.01 crores in 1967-61 works out to a bare 0.5 per cent. Such meagre returns inevitably imply a wasteful utilisation of the scarce resources of the country. In view of this disheartening performance, it is essential that expansion of the public sector projects which are not in the nature of services should be carefully weighed. Such reconsideration is particularly essential in respect of further development in the coal industry and in power generation. In both these realms an acute shortage is being currently experienced by the country pinpointing the need for a more flexible approach to private sector participation in development in these two fields.

Mr Jain has also been critical of the restrictions placed by the Government on expansion of industrial units on grounds of diversification of ownership and regional distribution. In view of the effects on cost of production of such restrictions the policy seems hardly defensible, despite arguments urged in their former, especially the latter. Mr Jain has pointed to cases where with such a policy, our expenditure of foreign exchange has greatly increased and our earnings have been seriously affected. There is need therefore to exercise great care and caution in implementing this policy.

There is also need for effecting such revisions in the system of industrial pricing as are warranted by the country's need to expedite industrial development and promoting exports. The iniquity of the present system which, in many cases hardly leaves any margin for rehabilitation has been widely recognised. The essentials of a rational pricing system should be "an adequate price to cover the full elements of costs, adequate return on the capital employed and a surplus in savings for rehabilitation." Further as Mr Jain has stated it has also to be examined how the price fixation policy can be adjusted so as to attract foreign equity capital in fields to which price regulation applies because of their importance to national life.

LABOUR MINISTRY

Active in 1961-62

The report of the Ministry of Labour and Employment provides a comprehensive review of the labour situation in the country in the Central sphere during 191-62. Barring a few isolated cases of labour unrest, the labour situation in railways, defence and other Central Government undertakings was, unlike the preceding year, when Government employees went on strike normal. Industrial relations in the 47 public sector ventures, run both as corporations and companies, turned out on the whole to be satisfactory with the notable exception of a strike stretching for a few days in the Hindustan Shipyard, Vizagapatnam, and some troubles of a major nature in the Heavy Electricals Bhopal. The threatened strike by the employees of port and dock in Bombay, Calcutta and Madras for pressing their demands for the upward revision of wages, dearness allowance, housing and the like, was averted by arriving at a settlement to the advantage of the workers concerned and the general public. The year under report saw the taking of a significant step toward the abolition of the contract labour for which an agreement was reached between the employers and employees under which all the workers engaged in processes directly linked with the raising manufacture or despatch of coke and coal were to be treated as direct employees of the principal employer save in the case of seven specified categories. All the workers covered under this agreement should be absorbed by the principal employer at a date not later than 30 September 1962.

The drive for the strict enforcement of the code of discipline was intensified during this year. More than 50 per cent of the 709 complaints received by the Central Implementation and Evaluation Division on breach of the code were set right or the parties involved were advised to avoid such breaches in future. In several cases the Central organisa-

tion assumed responsibility and instructed their members to faithfully abide by the code. The Division has also successfully settled many a dispute peacefully by persuasion. Besides the Division has succeeded in 45 per cent of the cases taken up for out-of-the court settlement.

Two Wage Boards were set up for coffee and rubber plantations during this period. The recommendations of the Wage Board in the textile industry were implemented by 305 out of 416 cotton textile mills and the non-implementation of the remaining units is under scrutiny. 23 cement factories out of the 33 factories have so far implemented the recommendations of the Cement Wage Board and 7 factories are reported to have been done so in part. Similarly 105 sugar factories out of 170 have carried out the instructions of the Wage Board.

The scheme of social security has been extended to cover 22,845 additional workers thus taking the total coverage to approximately 17 lakhs in 132 centres. The number of employees who received medical attention was up by 55,700 to 6.29 lakhs and the amount spent on this score rose to Rs 6.23 crores. The Employees' Provident Fund Scheme and the Relief and Assistance Fund have proved beneficial to the employees; the former by advancing loans to the needy and the latter by rendering fiscal aid to the old indigent and physically disabled persons.

General welfare amenities extended by the Coal Mines Labour Welfare Fund are in the shape of medical facilities, educational, recreational and training facilities etc. The Fund has constructed over 2,000 houses under the first scheme of direct construction of townships. Subsequently two such schemes were introduced to cope with the mounting demand for accommodation. To expedite the progress of the scheme the low-cost housing scheme was approved. Notable progress has been recorded in the educational sphere and the various centres have imparted useful instructions to the labourers. The precautionary steps adopted for ensuring the safety of workers in mines, the enforcement of the Dock Workers (Safety, Health and Welfare) Scheme also require special mention.

RLY. ACCIDENTS

The Human Factor

The Railway Ministry's review of the accidents on the Indian Railways in 1960-61, published along with the budget papers, incorporates in a compendious form all the statistics, and furnishes a comprehensive picture of the nature and causes of accidents that occurred during the

year under review. The total number of accidents at 8,808 is less by about 2.9 per cent and 1.2 per cent in contrast to the corresponding figures in 1958-59 and 1959-60 respectively. The decline in accidents was conspicuous in categories of derailments and failure of engines and rolling stock which between them constitute nearly two-thirds of the aggregate accidents. The different categories of accidents are broadly classified into eleven heads, some within and some beyond the control of the Railways. The pattern of distribution as amongst the various categories during the year under review has shown little variation from that of the previous year. A cursory glance of the review will reveal that though the incidence of accidents in some categories has indicated marked decrease, in categories like collisions it has gone up. For instance the number of accidents under collision which is placed at 120 in 1959-60 has gone up to 148 in 1960-1961.

The causes of the accidents are many and varied. Failure of Railway staff accounts for a major number of accidents, the next pronounced factor in the causes of derailment being failure of mechanical equipment, responsible for nearly 13 per cent of the total number of derailments in 1960-61. Accidents caused by tampering with the track and sabotage, accidental derailment and those due to other reasons, which are not established yet, are also many. Serious accidents rose from 10 in 1959-60 to 15 in 1960-61. The proportion of serious accidents attributed to the negligence of railway staff in the year under report was 60 per cent in contrast to 50 per cent in the previous year.

The railway accidents which took heavy toll of human lives and resulted in great losses have been brought to careful scrutiny from time to time and such probes reveal that disregard of rudimentary precautionary measures by the employees has been to a great extent responsible for the majority of accidents. As such the safety consciousness of the staff will have to be improved for averting such accidents and it is gratifying that the authorities are paying close attention to that matter.

The administration has been directed to adopt requisite steps to introduce in all the railway training schools a definite course of lessons to impart instructions to avoid accidents. The scheme of award of running safety shields to stations, yards and divisions to foster healthy competitive spirit among the employees and to inculcate collective safety consciousness among them, though admirable, has not so far produced the desired result. Other instructions released to make efficient signalling, interlock devices checking and for taking security measures, if properly implemented, can definitely bring down the number of accidents. Apart from these preventive measures, the vigilance exercised by the authorities would be in a position to maintain a comparatively high standard of safety in rail travel in future.

WAREHOUSING

Essential for Marketing

Though an essential ingredient of scientific marketing for agriculture produce, warehousing has yet a long way to go to meet the full requirements of the country. The pace of implementation of the 'warehousing' programmes by the Central Warehousing Corporation and the State Warehousing Corporations has been slower than originally anticipated. The main factor that has led to slacken the progress of warehousing programmes has been the delay in getting ready the buildings essential to operation of warehouses. In view of the time involved in constructing buildings, recourse had to be had to the expedient of hired accommodation. The Central Warehousing Corporation however has since been making steady progress in completing new building.

At the end of the Second Plan the Central Corporation had about 0 warehouses. The Third Plan envisages opening up of a further 60 warehouses during the five year period. With 20 warehouses already opened in the first year of the Plan itself, the Third Plan programme for warehousing can be considered to have got to a flying start. All the same, considering the advantages which a scientific system of warehousing confers on the agriculturists in the form of a higher price for the produce, the pace would need further stepping up. The essence of the warehousing programme with reference to marketing lies not only in the storage facilities it affords, but also the advantages of credit that depositors derive from scheduled banks which dispense with the pressing immediate need for disposal of the produce by the agriculturists. The increase in the quantum of outstanding advances against warehouse receipts from Rs 5 crores at the end of 1959-60 to Rs 7.20 crores, reflects creditable progress in the course of the last two years.

Progress of warehousing calls for tackling a few difficult problems, chief of which is storage. The storage problem varies depending on the type of commodity that needs storage. Articles as different as gum, turmeric, groundnut, jute, cotton, foodgrains and pulses would obviously need different types of storage facilities. Coupled with adequate storage accommodation to suit the different needs of articles, there is also need for a foolproof system of identification of the goods by the concerned parties necessary for efficient marketing.

BOLTS AND NUTS

Tightening up Needed

It is clear from Mr K. L. Choudhary's presidential address at the annual general meeting of the Indian Bolts and Nuts Manufacturers Association that the industry is suffering from a multiplicity of illnesses.

Manufacture of bolts and nuts has been allowed in the last few years in such a haphazard manner that there is now over-production, unhealthy competition and serious deterioration of quality. Government is not entirely unaware of the problems, at least those that arise from overproduction. Grant of licence for fresh units in the large scale sector has been stopped. But this is only plugging one hole and probably the more tractable one at that. The unorganised small scale sector is still very much left alone. These units have sprung up all over the place in an unregulated and uncoordinated fashion and it is quite possible that there is no clear data available with the government of the extent of such units. Planning and regulating capacity becomes farcical when large areas of activity do not enter the calculations at all. Mr Chaudhary's suggestion for a permanent machinery to keep track of development in the industry is worth considering.

It is undeniable that there is already over-production in the industry. The installed capacity of the

large-scale sector for the manufacture of bolts and nuts is at present placed at 95,000 tons per annum. It is estimated that the capacity available from the small scale sector of the industry is about 50,500 tons per annum. Thus the total available capacity in the industry as a whole is about 1,45,000 tons per annum. Although demand for bolts and nuts was estimated to reach a level of 1,85,000 tons by 1960-61, the actual offtake did not exceed 70,000 tons. Actual demand during the Second Plan however seems to have been completely ignored as the official estimate of the demand at the end of the Third Plan puts the figure as high as 2,00,000 tons per year. On this assumption, the policy of unrestricted expansion in the sphere of small scale industry may be justified. But considering how the estimate of consumption at the end of the Second Plan was very much wide of the mark, it seems unlikely that such a high target of consumption will be hit at the end of current Plan.

Government should examine thoroughly the whole position of the

nuts and bolts industry with a view to restoring it to sound health. Such an examination need not necessarily result in banning all further expansion. The industry will be called upon to play increasingly important role as industrialisation advances in the country. Perhaps what is required is only a move toward diversification as there appears to be a number of sizes and quite a variety of special types of bolts and nuts that are still imported.

POWER

Giant Generator in Bandel

The formal inauguration of the Rs 25 crore Bandel Thermal Unit by Professor J. K. Galbraith, the US Ambassador, on Friday last marks an important stride in India's power generation programmes. Wholly financed by the US Government and claimed to be the biggest of its kind in India, the new project, when commissioned in 1964, will assist

alleviate the recurring power shortage and failure which has in its wake disrupted the production schedule of many an industry and has been vexatious to the consumers of this energy in this part of the country. Undoubtedly, the 800,000 kilowatts generated from this unit would ensure regular and interrupted supply of power for the sustained industrial growth of Calcutta and the adjoining region.

The loan arrangements are quite liberal. The entire rupee costs be met from Public Law 480 Funds and the dollar cost will be met by a long term loan from the USAID at a substantially low interest and there is provision for a moratorium in the first ten years.

The project which will be constructed and operated by the West Bengal State Electricity Board will involve building a power house and installing a four 75,000 kilowatt turbo-generating units, associated boilers, coal and ash handling systems and auxiliary mechanical and electrical equipment. The power produced in Bandel unit will be distributed over the existing transmission lines, including bulk supply to CES and Gouripore Electric Supply Company.

It should be noted in this connection that Bandel is the third power station financed by the US in the Calcutta-Damodar Valley region, and the tenth Indian power project which is solely financed by the US Government. Though the power that will be made available from this station may be inadequate to meet the entire requirements of Calcutta and the region around it, its contribution to bridge the gap between demand for and supply of power will be substantial.

BRAITHWAITE

Expansion Plan

Sir John Brown, Chairman of Braithwaite & Co. (India) Limited, has reported very satisfactory results for the company for the last financial year. In terms of physical performance, progress was most pronounced in the foundry section, in which the output is shown to have reached a level of 250 tons per month. Difficulties there were particularly in respect of supplies of steel and power which called for the utmost economy in their use. In the face of these shortages, it was a remarkable achievement that the company should have improved upon its financial performance last year. The profits for the year at Rs 35,86,414 were a record for the company.

In his speech, Sir Brown referred to the expansion plans being undertaken by the company during the next five years. Financial requirements to meet these plans have been roughly assessed at Rs 3.9 crores. While the foreign exchange component would be met by borrowing from the ICICI and the Commonwealth Development Finance Company Limited, the rupee requirements are to be met by the issue of preference capital to the extent of Rs 40 lakhs supplemented by the retained earnings and depreciation provisions.

The Causes of Poverty

By Professor J. K. GALBRAITH

[The following is the text of an address recently delivered by the American Ambassador to India, Professor Galbraith at Gujarat University, Ahmedabad. A short comment on this appeared in last week's Clive Street Gossip—Ed.]

Among the great enterprises on which man is now engaged, his efforts to solve the problem of poverty rank in intensity and command an energy that is third only to the development of means of self-destruction and the contest to conquer space. There is, however, startling difference in the way in which these tasks are gone about. Both destruction and the matter of getting to the moon are approached only after the most careful study of the problem involved. One even hears discussions these days of the need to avoid "overkill," which means that weapons of popular euthanasia should not have power unduly in excess of what is needed for eliminating the population for which they are designed. (One hopes that the meetings now in session in Geneva will render obsolete for all time such gruesome mathematics.) Moon travel too is approached with an intelligent and detailed consideration of how to get there without a too spectacular crash at the moment of arrival and also how to get away again. Consideration is even accorded to the physical and mental responses, including the perhaps considerable anxieties of the travellers.

The solution of the problem of poverty proceeds, however, without any such attempt at analysis. We have only a variety of assumptions as to the causes of privation and their remedy. But these are as often the product of theology, or even fashion, as of careful, clinical analysis. Among many who are actively concerned with the problem of poverty and its cure an excessively cold-blooded view may even be rather frowned upon. People are a trifle touchy about anything that interferes with established belief.

It is quite true that for approximately two centuries economists have actively interested themselves in the causes of wealth. Everything from thrift to (since the days of John Maynard Keynes) the prevention of excessive thrift has been examined for influence on the growth of income and wealth. The role of work, the provision of proper incentives to effort, the protection of property, the proper distribution of wealth, the wage and tenure system, the effect of religion, the maintenance of law and order, the protective tariff, the willingness to have or avoid social experiment, the proper forms of public planning, have at one time or another been given greater or less weight as the foundation of individual and national prosperity. And so have many other factors. But the reciprocal, what causes the absence of prosperity,

has attracted no comparable attention. And the causes of poverty cannot be inferred from the causes of prosperity. For one thing the causes of prosperity have never been fully agreed—in the last century, for example, men were about equally divided as to whether development depended on the vigorous development of free international trade or on the benign influence of a tariff protecting infant industries. Were poverty inferred from the causes of prosperity, it could be equally the consequence of free trade and protection.

However, economic science has certainly said a good deal that is useful about the causes of increasing income just as the biological sciences have said a good deal about the nature of the growth of healthy tissue. But the study of normal growth is one thing. Pathology is something else. We may know much about health and little of the things which bring stagnation or atrophy in income or tissue. For years the prophets of the commonplace have been proclaiming that poverty is a disease, but they have never dealt with it as a disease. In particular, they have not done so where the poverty of national communities as distinct from that of individual persons, is to be studied, explained—and cured.

III

In the absence of a clinical consideration of nation-wide poverty, we have had a series of assumed causes of poverty and stagnation. The list of these causes, including many that are now so unfashionable that one hesitates to put them down in black print, is formidable. Let me offer a list.

1. The country is poor because the people are easy-going, idle, unreliable or unambitious. This was perhaps the most commonplace explanation of the expatriate European in the last century. It is, of course, highly unfashionable now. The discovery, a year or two ago, that the Encyclopaedia Britannica had retained, without revision, a nineteenth-century characterization of a South Asian people as pleasure-loving and not very diligent created a minor international crisis.

2. The country has been kept in poverty by its colonial oppressors. This explanation is rather less unfashionable. However, it has increasingly to contend with the fact that in many parts of the world as colonialism ends poverty continues, and promises to continue, for a long while. And in other parts of the world—Australia, Canada, Puerto Rico, Costa Rica, Ireland, the United States—

erstwhile colonialism did not preclude in the end a considerable measure of subsequent prosperity.

3. Poverty is the result of class conflict and exploitation. This also is more fashionable. And a formidable apparatus of dialectic and analysis lies behind this explanation. One cannot always, however, identify the exploiters. In India and Pakistan there are millions of small land-owning peasants who are very poor and whose poverty is unrelated to enrichment of any landlord, tax-collector, usurer or other visible oppressor. In Haiti, one of the most abjectly poor of all national communities, per capita income has almost certainly been going down ever since the French plantation-owners were ejected a century and a half ago. (Today independent farmers are poorer than those who labour on the handful of foreign-owned sugar and sisal plantations.)

4. Poverty is caused by ignorance. This was also a widely held view in the nineteenth century. And with rare exceptions, literate, well-educated people do manage to win for themselves a decent standard of living. But how much does this really explain? We must still ask why some peoples have remained illiterate and also how the very poor community goes about providing itself with a good school system from its meagre resources.

5. Poverty is the consequence of war, civil disturbances, and misgovernment. The growth of wealth, it is said, requires stability in social institutions. Since long before the Ostrogoths swept over Rome, the Fourth Crusade sacked Constantinople, and colonial Spain based public administration on organized theft, it has been observed that war, civil disturbance, and public rapacity have been the enemy of prosperity. But some well-governed and stable countries are also poor. India is a case in point. In the last hundred years she has probably had greater continuity in government, greater freedom from internal disturbance and certainly greater freedom from the blighting influence of war and invasion than France. France is much more affluent than India.

6. Poverty is the result of insufficient capital. This is almost a cliché. Capital is what a poor country lacks and capital is what rescues it from poverty. And certainly in many poor countries there is a shortage of savings for investment. But not in all. Most of the people in the Middle East (and also Venezuela) are poor. But several of the national communities in this region have rich sources of oil revenues for investment. Israel is without comparable sources of revenue. But it has a relatively high and rapidly rising living standard.

7. Over-population is a cause of poverty. It is not always easy

to know what this means. Sometimes those who cite it as a cause of poverty seem only to be saying that the national income, when divided among the population, gives an insufficient dividend per head. By such calculation every poor country is over-populated. But there is no indication that were some of the people somehow spirited away from these countries to another planet, per capita income would rise. There is little to share because no one produces very much. In any case this explanation is replete with contradictions. Southern Brazil is rather densely populated and has a high living standard. The Amazon basin in northern Brazil is sparsely populated and very, very poor. The Netherlands and Belgium have a dense population and high living standard. The people of the Arabian Peninsula are few and poor.

8. Backwardness is a cause of poverty. In the United States, Western Europe, and increasingly in the Soviet Union, advanced technology is rescuing people from the privation associated with primitive methods of agriculture, industry, and commerce. But much of the world clings stubbornly to the old ways. This accounts for their poverty. But does it? Before Papuans, Patagonians or Peruvian Indians are equipped with tractors, hybrid corn, and high-speed looms, they must be trained to their use. They must have capital to buy them. Given the education and training and the capital, they would no longer be technologically backward.

9. Finally we hear it said that people are poor because the country lacks natural resources. The soil is sparse; the forests are thin; there are no minerals. In the United States, the state of West Virginia contains our greatest wealth of mineral fuel. It has long been one of our poorest states. Much of the farm land there is more fertile than in the arid West where incomes are far higher.

IV

What are we to make of all this? I have said we have no diagnosis of poverty. Perhaps it would be more accurate to say that we have a plethora of explanations, each superficially plausible, each inadequate for all or even a considerable number of the conditions it is called upon to explain.

But also in each explanation there is a little that is plausible. Thus nothing is currently more unfashionable, not to say insulting, than to attribute the absence of economic advance to the indifference of the people involved. Everyone wants improvement or advance. But in the United States for more than a century the Navajo one of the great aboriginal tribes of North America, remained solidly aloof from what most people would agree was a considerable national ambition for economic improvement in the rest of

4½ PER CENT ORISSA STATE ELECTRICITY BOARD BONDS, 1972

FOR Rs. 150 LAKHS

(PAYMENT OF INTEREST AND REPAYMENT OF PRINCIPAL
GUARANTEED BY THE GOVERNMENT OF ORISSA)

*The Bonds will be trustee securities under the Indian Trusts Act
and also approved securities for the purposes of the Insurance
Act and the Banking Companies Act.*

ISSUE PRICE Rs. 99 PER CENT

Redeemable at par on the Third May, 1972.

SUBSCRIPTIONS will be received in cash or by cheque. Applications will be received at the branches of the State Bank of India at Calcutta, Bombay, Madras, New Delhi, Patna, Lucknow, Hyderabad, Cuttack, Berhampur and Sambalpur from the 30th April, 1962 to 2nd May, 1962 both days inclusive. Subscription may however, be closed earlier without notice if the total subscription is reached.

Copies of loan prospectus and application forms are available at all the offices of the State Bank of India mentioned above and at the office of the State Electricity Board, New Capital, Bhubaneswar.

America. The Navajo tended their flocks, spun their yarn, wove their cloth, ate their sparse simple food, and slept in their hogans. By the standards of everyone else in Arizona and New Mexico they were poor and it was partly because they did not ask for wealth. Kusum Nair tells in Blossoms in the Dust of the considerable tendency of Indian villagers to react to improved agricultural opportunity—to irrigation or improved methods of cultivation—with the argument that after all, they have enough.

It is true that some of the one-time colonial countries have prospered and it is also certain that simple release from colonialism provides no guarantee of progress. But there can also be no doubt of the blighting effect of some of the colonial regimes on the chance for

progress. Nor can there be any question that, in an unfortunate inversion of historical process, it was the least progressive of the colonial regimes that lasted the longest and thus today place the deepest blight on the chance for progress.

I have said that exploitation and social injustice cannot be causes of poverty in the absence of oppressors. But that absence is not universal. It has always been difficult for me to see why (for example) an Andean peasant should seek to enhance his income by improved agricultural methods when he knows out of centuries of experience that anything over subsistence will be appropriated by the landlord, the tax-collector, the money-lender or the merchant. Such injustice and exploitation is identified, in turn, with misgov-

ernment or the absence of effective government. Similarly, while absence of education or capital or the unwillingness or inability to accept technical change may all require further explanation they all have a bearing on economic well-being. So does population or over-population. There are some countries where to remove an able-bodied man from the community would be to subtract also the small product which he contributes. Per capita income would be unchanged as a result. But in the typical Asian village, there is rarely enough work to go round. If a man and his family leave there is no loss of product. There are fewer mouths to feed and hence more for each. In such a community over-population is a cause of poverty. I have argued that natural resources do not insure escape from poverty. But clearly, also, there is some economic advantage in sitting on an oil well.

V

None of the commonly ascribed causes of poverty, in other words, can be entirely accepted. And none can be entirely dismissed. Some causes of poverty work in some countries; others are at work in others.

But surely this is reasonable and what we should expect. Surely we would not expect the causes of low incomes in the sparse, illiterate population of northern Brazil to be the same as in the dense, relatively well-educated populace in the South of India. We should not expect to generalize from the semi-serfdom of some of the Central American states to the problems of organizing a new state in the Congo, to the endemic disorder of Laos. Each in a very different way can obviously be a cause of privation.

This leads to my emphasis on a clinical view of poverty. We shall understand the causes of this disease only if we recognize their great variety and the extreme unlikelihood that they will be the same in any two cases. We must have a diagnosis appropriate to each case. Without such a specific diagnosis we shall be prescribing remedies without any relation to cause. That, indeed is what we have been doing these past several years.

In particular, in the absence of any more precise understanding of what is wrong, we assume that the basic problem is a shortage of capital and, to a lesser extent, of technical "know-how." This is partly because these happen to be the things which are important in the more prosperous countries and also available for export. In the United States and Western Europe illiteracy is not a problem. There is no colonial or in most countries serious class exploitation. We are not overpopulated. People in the main are restless and concerned to advance themselves. The minimal requirements of public law and order are maintained. In

these parts of the world the supply of capital and of technological innovation thus come to control the rate of increase in wealth. But to prescribe capital and technical assistance for poverty wherever it occurs is to follow the practice of the physician who has vitamins available and whose own health has been improved by taking them. He proceeds to prescribe his vitamin pills for all illnesses coming to his attention. These illnesses being variously caused by calcium deficiency, general malnutrition, slipped vertebrae, malaria, elephantiasis, and acute neuritis, the remedy naturally has little real effect. The analogy to the present attack on poverty is exact.

Our task in attacking poverty is to relate the remedy to the contributing causes in the particular situation. Some retarding factors—easy-going values (for example—that was to cut deeper was actually greeted by prices in speculative counters going up, in some cases by as much as a rupee! No doubt second and gloomier thoughts emerged the next day after the proposals had been slept over. But the break-through had already been accomplished. What could be the reason for such uncharacteristic behaviour? I can only put it to the earlier conditioning to the possibility of a far more severe drubbing. The Pavlovian victim faced with a sudden switch of stimulus gets into a "state of uncontrollable excitement followed by submissive apathy." The interim budget with its forecast of a Rs 63 crore deficit contained a plain hint of taxes to come. Then came the announcement of increased dearness allowances to government employees. Increases in emoluments to certain classes of defence personnel were also announced. All these straws in the wind were indications of the larger deficit than what was anticipated in March. Indeed, increase in personal and corporate taxation was freely mentioned as a possibility last week. Even the percentage of increase in corporate taxation then mentioned has turned out to be remarkably accurate. But despite all this, the actual deficit that had ultimately to be wiped out by fresh taxation turned out not only to be nowhere near the Rs 75 to Rs 100 crores gloomily forecast but to be actually less than the Rs 63 crores originally estimated. This piece of legerdemain was possible by a transfer to revenue of Rs 15 crores from a suspense head of balance of profits from coinage operations, a fiscal nest egg that has long lain unnoticed by the public. I do not know how far Mr Desai acted deliberately in thus agreeably confounding prophecies of the extent of taxation needed for making up the deficit. But there is little doubt that this circumstance had not a little to do with the reception to his budget.

Anything which so urgently commands our attention as the attack on poverty as urgently commands the right approach. We must now and promptly abandon the assumption that there is a single explanation with its fatal presumption that there is a single remedy. The provision of specific diagnosis, and of remedies appropriate to the particular form of the disease, will not be easy. This is a case where to be patiently right may even command less honour than to be grandly wrong. The author of the bold generalization will continue to get the applause of those who believe that he is saving them from thought and do not see that as usual the price is error.

Clive Street Gossip

"I must have liberty
Withal, as large a charter as the wind
To blow on whom I please"

—As You Like It.

I wonder if the Finance Minister has not a psychological lesson of some importance to draw from the initial reaction of the stock markets to his new budget. On second thoughts, I rather suspect that he knew it all along. It was an odd spectacle that was presented in the post-budget session: announcement of stiffer personal and corporate taxation and of a capital gains tax that was to cut deeper was actually greeted by prices in speculative counters going up, in some cases by as much as a rupee! No doubt second and gloomier thoughts emerged the next day after the proposals had been slept over. But the break-through had already been accomplished. What could be the reason for such uncharacteristic behaviour? I can only put it to the earlier conditioning to the possibility of a far more severe drubbing. The Pavlovian victim faced with a sudden switch of stimulus gets into a "state of uncontrollable excitement followed by submissive apathy." The interim budget with its forecast of a Rs 63 crore deficit contained a plain hint of taxes to come. Then came the announcement of increased dearness allowances to government employees. Increases in emoluments to certain classes of defence personnel were also announced. All these straws in the wind were indications of the larger deficit than what was anticipated in March. Indeed, increase in personal and corporate taxation was freely mentioned as a possibility last week. Even the percentage of increase in corporate taxation then mentioned has turned out to be remarkably accurate. But despite all this, the actual deficit that had ultimately to be wiped out by fresh taxation turned out not only to be nowhere near the Rs 75 to Rs 100 crores gloomily forecast but to be actually less than the Rs 63 crores originally estimated. This piece of legerdemain was possible by a transfer to revenue of Rs 15 crores from a suspense head of balance of profits from coinage operations, a fiscal nest egg that has long lain unnoticed by the public. I do not know how far Mr Desai acted deliberately in thus agreeably confounding prophecies of the extent of taxation needed for making up the deficit. But there is little doubt that this circumstance had not a little to do with the reception to his budget.

I got into some trouble with a friend last week by suggesting very tentatively that personal income tax in India was not at all points as crippling as he fan-

cied. This was when we got to discussing what Mr Desai had in store for us. Mr Desai has since justified the worst fears of my friend, but my arguments are intact. I shall grant straightaway that in the higher reaches where the tax takes away as much as 87 per cent of a man's income, he may quite conceivably consider making money (which, by the way, is not the same thing as earning it), a mug's game. But consider certain other ranges of income. By Indian standards, a person who earns an income of a thousand rupees a month would be a pretty lucky man. Such a man, if he is married and has more than one child (which is only too likely) would pay slightly over six naye paise in the rupee by way of income tax. In other words, this leaves him, if a salaried employee, a take-home pay of Rs 940 per month. Surely, this is not taxing till it hurts! Moving in the next higher income bracket, a man with an income of Rs 1,500 per month will pay 10 naye paise in the rupee as tax if he is a salaried individual, slightly more if his income is earned but not as salary and about 12 naye paise in the rupee if his income is wholly unearned. A person with an income of Rs 2,000 per month will have to pay between 15 and 16 naye paise in the rupee if his income is wholly earned and slightly over 18 naye paise if wholly unearned. Only when you reach the environs of Rs 7,000 per month will you have to part with half your income and even here if you get this income as salary you will be still left with more than half. And all these hypothetical tax payers can pay less tax by the simple expedient of taking out policies of life insurance. I am not saying that it doesn't hurt to part with money, especially if it is made the honest way. (Of course, money made the dishonest way is never parted with, and occasions no pain whatever, but that is another story). But I do say that money ceases to be worth making because of fiscal reasons only when you make about a lakh of rupees a year. Speaking personally, making more than this is a mug's game and not for fiscal reasons only. I rather fancy that men who do make more do so not because they want to but because they can't help it. (Of course, here, as earlier, I am thinking of personal and not corporate earnings.) In any event, who is the monster who earns a salary of Rs 30 lakhs and who the fabulous employer that hires him? If such do exist, the further absurdity of the former parting with over Rs 24 lakhs by way of taxes is not parti-

cularly bizarre. In any case, let us get back to reality from these statistician's hypothetical abstractions. We all know, though we do not often mention it, that in such astronomical reaches, more often than not, no salaries are paid. The poor slave has no income but only expenses and even these are not his. The house he lives in belongs to the firm, the food he eats and the drinks he entertains his friends with are paid for by the firm and there isn't a thing in the world the wretch can call his own. On the whole, I think, it is better for my lady not to protest too much.

For the first time in years, receipts from new direct taxes (Rs 27.2 crores) are expected to exceed receipts from new excise duties (estimated to yield in a full year Rs 20.74 crores). I have heard people wondering whether this is the beginning of a reversal in a trend. I doubt it. Excise has long ousted income tax as a leader of central revenues. None takes seriously the pretence, used sometimes as an argumentative ploy, that excise duties are consumption-inhibitive and deflationary and are so intended. Such averments don't square with others that say that excise duties give an opportunity to the common man to contribute to the Plan. But the search for more

articles to tax, however diligent, can no longer yield much, unless the Finance Minister takes his political courage in both hands and thinks of items like salt. This is the quandary that has probably driven him to take another look at direct taxes this year. But it is quite impossible that he can get much farther than where he has this year. Taking it all in all, it looks as if we have reached the end of the tether in taxation of all kinds. And yet, according to Mr Desai, he may still have to find another Rs 250 to Rs 300 crores by further taxes if he is to hit the plan target of Rs 1100 crores. This may well sound the last straw but for two facts. The systematic under-estimate of revenue in the last few years lends weight to the hope that the yield from the new taxes levied in the first two years of the Third Plan will be far more than the Rs 800 to Rs 850 crores Mr Desai expects from them. Secondly, if the tax that is now evaded is collected, there is no doubt that the present rates of taxation will be found uncalled for. Why then this official reluctance to impart to the public so comforting and even heartening a piece of news? It is not just cussedness. What I suspect is that government is creating a secret reserve which it has good, though hardly creditable, reasons for doing. The truth is that only a part of the tax collected in the name of the plan trickles down to finance it. And that is why hopes of reduction in tax burdens in the near future are so forlorn.

Coal Movement: Different Voices

Discussions on the Railway Budget have been overshadowed by the General Budget which followed close on its heels. The spotlight of popular concern has shifted from the fare increases and is now focussed on the new imposts announced by Mr Morarji Desai last Monday. Nevertheless, the increased fares and freights will result in the transfer of Rs 21.26 crores a year from private pockets to public coffers, amounting to about 30 per cent of the expected yield of all the new taxes announced by the Finance Minister. The multiplier effect of freight increases on costs and prices will also have to be included in the reckoning. But the public, and most of the people's representatives, appear to have reconciled themselves to the increases which are regarded as inevitable. This can be justly regarded as an indirect tribute to the competent financial management of this vast public undertaking. The Opposition members have made the appropriate responses, but their criticisms have not disturbed the equanimity of the Railway Ministry. By contrast interest in Railway performance, especially in the sensitive area of coal transport, is more sustained. Though the former Minister for Mines and Fuel is now responsible for the administration of the Railways, the spokesmen of the two Ministries continue to speak in different and, apparently, discordant voices.

Answering a question in Lok Sabha last Monday, the Minister for Mines and Fuel frankly admitted the existence of shortage of wagons for moving coal, though the budget speech of the Railway Minister a few days earlier, and the statement made by the Chairman of the Railway Board at his press conference on April 19, had together given a totally different impression of the Railways performance. But a detailed examination of the various statements will show that there is, in fact, no contradiction between the positions taken up by the two Ministries. While the Minister for Mines and Fuel had to answer a specific question, the Railway Minister was naturally concerned to highlight the improvement in Railway performance in 1961-62. This was further emphasised at the press conference addressed by the Chairman of the Railway Board.

Mr Karnail Singh, it seems, was mainly concerned with dispelling

the doubts that had been raised regarding the Railways' ability to fulfil their commitments regarding movement of coal under the Third Plan. At the same time, he has repeatedly emphasised that the Railways' role was that of a "mere carrier"; it was not reasonable to expect the Railways to guarantee the availability of coal for all categories of consumers, as the supply and movement of coal were strictly controlled within the framework of a Plan. The Railways could be held responsible only for carrying out their commitments under the planned programme for the movement of coal which had been drawn up in consultation with other Ministries and the Planning Commission. This programme, moreover, was based on total raisings of 97 million tons, in 1965-66, from the different coal fields, according to the agreed programme. Any increase in the coal target, which is now under discussion, would call for further measures to supplement the transport gap. Likewise, any change in the field-wise programme of production would upset the Railway programme, especially, if it resulted in greater demands for wagons in the Bengal-Bihar area.

Out of the total production of 97 million tons of coal in the last year of the Plan, 66 million tons have to be raised in the Bengal-Bihar fields and the remaining 31 million tons from the "outlying fields", i.e., Central India Coal fields, Singareni, Talcher etc. Under the Third Plan programme, the Railways have to step up their capacity to move 95 million tons in 1965-66. This will require that average daily loadings will have to be stepped up to 11855 wagons per day against the average of 5917 wagons per day in the year 1961. The total figure of 11855 wagons, comprises 8307 wagons from Bengal-Bihar fields and 3548 wagons from outlying fields. From the Railways' point of view, it is easier to move coal from outlying fields, as the leads are shorter. Movement from Bengal-Bihar fields involves longer hauls over congested tracks. The fulfilment of the programme of coal movement set for Railways depends directly on the attainment of the production targets in the outlying fields. Currently, all the production from these outlying fields, which is about 11 to 12 million tons, is being carried by the Railways and no difficulty is envisaged in carrying the increased production from these areas in future.

As regards Bengal-Bihar Coal fields, where transport shortage is

most severe, out of the daily movement of 8307 wagons planned for 1965-66, 3698 wagons will be for Steel Plants and Washeries and the remaining 4609 wagons are for other consumers, including the Railways. Railways' own requirements will be of the order of 2000 wagons per day. Steel plants and washeries have the highest priority. Their requirements are now met in full and will continue to be met. As regards "Others", against the 1965-66 target of 4609 wagons per day, Railways in 1961-62 had moved 3580 wagons. This represents an increase of 182 wagons over the average of 3398 wagons per day reached in the previous year, that is, the concluding year of the Second Plan. This increase represents roughly one-sixth of the total increase of 1211 wagons over five years, that will be required to reach the target of daily movement set for the last year of the Plan. With the progressive increase in additional wagon supplies in the remaining years of the Plan, there is no doubt that Railways would be able to carry out their commitments. And the Chairman of the Railway Board has given an emphatic assurance that this would be done. But as already indicated, the fulfilment of the movement programme will depend to a great extent on the achievement of fieldwise production targets. It will also depend on the successful implementation of other elements of the programme such as coal movement in block rakes of box wagons, creation of coal dumps, loading on Sundays and holidays etc.

While the actual performance during last year does not justify misgivings regarding the capacity of the Railways to make available the wagons required for the movement planned for 1965-66, it, however, appears that there was in fact, a shortfall in regard to the supply of wagons required to meet the requirements of consumers other than Steel Plants and Washeries, from the Bengal-Bihar coal fields. In regard to these, the Railway Minister did not claim, as he did in the case of outlying coal fields, or steel plant requirements, that all demands had been met in full. But he was very much concerned to highlight the improvement in the supply of wagons for 'other consumers' as compared with the previous year, by pointing out that, despite occasional shortages for inescapable reasons, coal loading in 1961-62 averaged 319 wagons a day more than in the previous year, representing an increase of 7.1 per cent. Though a careful perusal of his speech does not reveal any contradiction, the general impression conveyed by the Railway Minister's speech is totally different from that of the frank admission by his colleague, the Minister for Mines and Fuel, regarding the existence of shortage of wagons for movement

of coal from the Bengal-Bihar fields.

The programme of movement for 1961-62 in respect of "other consumers" from Bengal Bihar fields originally envisaged daily loading of 3471 wagons during the three months April, May and June and 3671 wagons during the remaining nine months from July 1961 to March 1962. This works out to an average of 3621 wagons per day for the whole year. Against this target, the actual achievement was an average movement of 3580 wagons per day, a shortage of 41 wagons per day or about 300,000 tons of coal in a full year. According to Railway spokesmen, loading for other consumers was affected by the heavy military movement the Railways had to undertake in December last year. Before the loss could be made up, the Railways were also called upon in January 1962 to provide an additional 25 wagons per day for the Jamadooba Washery. Nevertheless, loadings have been appreciably above the target since February onwards; otherwise, it would not have been possible to achieve the daily average of 3580 wagons for the whole year. It is also pointed out that the loading of coal has suffered due to an appreciable drop of 766 in the number of wagons loaded on Sundays and holidays as compared to the week day loading.

For the current year, that is 1962-63, the programme envisages movement of 3640 wagons daily during April to June 1962 for other consumers from the Bengal-Bihar fields. The supply of wagons, it is expected, will be progressively increased in subsequent months to reach the daily average of 3746 wagons during the period July 1962 to March 1963. The average for whole year will be 3721 against 3580 for last year, representing an increase of only 141 wagons during the year as compared to 182 wagons in the previous year. This means that the availability of wagons will have to be increased by 888 wagons per day over the last three years of the Plan, to reach the target of 46.9 wagons a day in 1965-66.

THE BENGAL FLOUR MILLS COMPANY LIMITED.

The Board of Directors of the Company has decided to recommend to the forthcoming Annual General Meeting, the payment of a Final Dividend of 20 per cent for the year ended 31st December, 1961.

JUTE Excise Duty Depresses Sentiment

AMONG the new taxation proposals made by Mr Morarji Desai, the imposition of an excise duty on jute goods is perhaps the least expected. Nothing could have been further from the thoughts of those who spent considerable time and energy to guess what was in the Finance Minister's bag than a levy on gunnies. For though at the moment jute goods are enjoying a comparatively prosperous time, it would be too rash to suppose that the jute goods industry has definitely left behind hard times. It would however, appear that the levy is intended to attain a limited objective and may well turn out to be a short-term measure.

The excise duty now imposed for the first time is fairly heavy. The levy on hessians is Rs 250 per tonne while that on all other descriptions of jute manufactures including cloth, bags, twist, yarn, rope and twine is Rs 125 per tonne. The Finance Minister has estimated the accrual from this duty at Rs 3.21 crores. He expects that, though intended as

a revenue measure, the duty may result in curbing internal consumption, which he considers is a good way of promoting exports.

Internal consumption of jute goods has grown apace in the past few years. Despatches of gunnies for internal consumption are placed for 1958-59, 1959-60 and 1960-61 at 223,600 tonnes, 252,200 tonnes and 278,600 tonnes respectively. Production of jute goods in the three years mentioned above was respectively 10,57,100 tonnes, 10,91,500 tonnes and 10,22,500 tonnes. It will be seen that internal consumption accounts for roughly one-fourth of the total production. A further breakdown of the figures will show that sacking forms the major portion of internal consumption. Of the total internal consumption of 278,600 tonnes in 1960-61, sacking accounted for as much as 215,600 tonnes while Hessian and other goods accounted for 34,200 tonnes and 28,800 tonnes respectively.

The decision to levy an excise duty of Rs 250 per tonne on hessian is evidently to discourage local consumption of this category of goods, the total stock of which is much more limited than those of sacking. Since the local consumption of hessian is quite small, the impact of the high excise duty may not cause much hardship. The position in the case of sacking will be quite

NOTE:—The rates for ready raw jute are nominally quoted at Rs 30 per maund for Assam Bottom; Rs 29.50 for Northern Bottom and Rs 32 for Daisee Bottom.

different. Although it is arguable that increased reliance on used gunnies may go to lessen the burden on the users, it is not possible for all consumers to make do with used bags. In cases where consumers are obliged to use only new bags the outcome may not be quite agreeable; for, the increase in packaging cost will tend to inflate price of particular commodities.

In the present context of a persistent shortage of jute goods despite full production by mills for the past four months, anything that helps curb speculation is welcome. The jute industry has been doing its utmost to meet the unexpectedly high overseas demand by allowing mills to work to the full extent of their installed capacity. The period of full production which was originally to last for one month was twice extended with the result that mills will continue to work to full capacity upto the end of May. The increase in production thus obtained has, however, not been sufficient to meet the increasing demand as off-take has continued to be at a very high level.

With demand well maintained ready and near delivery goods have continued to be in short supply. This has led to a distortion of the real situation. Moreover, though foreign buyers were buying our goods steadily during the past three or four months, probably to replenish their depleted stocks, they may be pretty sure about the high price they have been obliged to pay notwithstanding a plentiful supply of jute for the mills. In the interest of continued good-will overseas, it is imperative that steps are taken to regain the confidence of the foreign buyers. There is no better of way or doing this now than by keeping the prices of our jute goods at reasonable levels. In the present context this will be possible if a part of the goods now being consumed within the country can be diverted to exports.

As is to be expected the excise duty levy had a depressing effect on sentiment in the jute goods market. B Twills Ready has been sharply marked down after Budget Day from Rs 134 on last Wednesday to Rs 128.20. The decline in hessian prices was comparatively small as Hessian 40" x 10 oz. was quoted at Rs 58.70 at close of transactions on Wednesday this week as against its quotation of Rs 59.25 a week ago.

TEA Reduction in Export Duty

AMONG the new taxation proposals, announced for the year 1962-63, Tea seems to be the only major beneficiary. A reduction in the export duty on this commodity was long overdue. The anomaly whereby tea was the only commodity on which an excise duty rebate was not granted when it was exported, has also been corrected, though partially. The export duty is proposed to be reduced from 44 nP to 25 nP per kilogramme. Although tea prices will go up due to the increase in the excise duty by

5 nP to 10 nP per kg, according to quality, the reduction of the export duty together with the refund of the excise duty at a flat rate of 15 nP per kg on all tea exported is expected to stimulate exports, though outright abolition has often been suggested.

It is only the export trade which has received some benefit though the relief granted falls short of the recommendations of the Mudaliar Committee. Even so, it will be difficult to justify the imposition of a countervailing excise duty on tea with the obvious objective of restricting internal consumption.

With the uncertainties facing the export market due to keen competition from other producing countries and fluctuating demand, it is essential to step up internal consumption in order to provide a comfortable cushion to the industry. An idea of the extent of the rise in the prices (per kg), obtained in this week's internal auction will be clear from the following table:

	18 April	25 April
Dust Sale:	Rs	Rs
Plain Orthodox	3.30 to 3.60	3.30 to 3.60
Medium Assam	3.90 to 4.30	3.90 to 4.30
Legg-cut	3.75 to 4.40	4.10 to 4.60
Medium Assam		
CTC	5.50 to 5.90	5.70 to 6.10
Good Assam		
CTC	6.40 to 6.90	6.60 to 7.00

Meanwhile, in the internal sale, offerings were 28,547 packages. Medium CTC dusts came in for keen enquiry and appreciated considerably in values, particularly the brighter lines and secondary fibrous types. Both CTCs were fully firm to dearer.

Orthodox varieties were somewhat irregular, but where quality was maintained, they were much dearer. Non-wither legg-cuts were sold extremely well at enhanced rate. The fibrous secondary types, which have been a weak feature in recent weeks, came to a good market and realised prices which were well above last rates.

An experiment with far reaching possibilities for Tea in future is now being carried out in Ceylon with the decision to establish a pilot factory for the manufacture of "instant tea". According to Ceylon Ministry of Agriculture, "instant tea" is an extract of the soluble components of tea. A cup of tea can be made with "instant tea" by putting a tea spoonful of it, which is in powder form.

The factory is now being set up at Agapapna, in the hill country of Ceylon. About 10,000 acres of high-grown tea will be set apart to supply the necessary tea leaf for the factory. It is the intention of the Ceylon Government to capture new markets for "instant tea" in the USA, West Germany and other Continental countries. The Government does not hope to sell "instant tea" in the traditional Ceylon tea markets like the UK and Australia.

The total quantity of tea production in Pakistan from 30 April, 1961 to 31 January, 1962 is reported to be 58.07 million pounds as against 41.45 million pounds during the corresponding period of the previous season. The average price per pound obtained in the internal tea auction, during February last, is Rs 2.31.

Directors' 56th Annual Report

more than maintained, and this is in accordance with the general trends during the year.

In order to improve the Capital/Deposit ratio of the Bank, it is the intention of your Directors to approach you later in the current year with a proposal to increase Capital.

Shri B. Vaikunta Baliga, who was the Chairman of the Board of Directors on the date of the last Annual Report, had to relinquish his office as Director of the Bank on 27th February, 1981 consequent upon his joining the Cabinet of Ministers to the Government of Mysore. His invaluable guidance has helped not a little in building up the business of the Bank. In his place, Shri U. Gopalakrishna Nayak, a Director longest in office, having been on the Board since 1935, was unanimously elected as Chairman.

Shri V. R. Kamath, General Manager of the Bank having gone on leave from 3rd September, 1961, Shri K. S. Shenai, Deputy General Manager of the Bank is holding additional charge of the duties of the General Manager since then, for the duration of his leave, and as such is the Chief Executive Officer for the time being.

AUDITORS' REPORT

I have audited the foregoing Balance Sheet of The Canara Banking Corporation Limited at 31st December, 1961 and also the Profit and Loss Account of the Bank for the year ended on that date, with the books of accounts of the Head Office and Branches.

(a) I have audited the accounts of all branches of the Bank;
 (b) I have obtained all the information and explanations, which to the best of my knowledge and belief were necessary for the purpose of my audit.
 (c) Such information and explanations have been found to be satisfactory;
 (d) The returns received from the branches have been found adequate for the purpose of my audit.

(e) The transactions of the Bank as have come to my notice have been, in my opinion, within audit;

(f) In my opinion, and to the best of my information and according to the explanations given to me, the said accounts give the information required by the Companies Act, 1956 in the manner so required;

(g) In my opinion, (i) the Balance Sheet gives a true and fair view of the state of the Bank's affairs as at 31st December 1961; (ii) the Profit and Loss Account gives a true and fair view of the Bank's operations for the year ended 31st December 1961.

(h) The Bank's Balance Sheet and the Profit and Loss Account dealt with by the Report are in agreement with the books of accounts and Returns.

Mangalore,
25-2-62.

MANAGING DIRECTOR'S SPEECH

The Dunlop Rubber Co. (India) Limited

The following is the speech delivered by Mr. M. L. Bexon, M.E., Managing Director of The Dunlop Rubber Co., (India) Ltd., at the 36th Annual General Meeting of the Company held at Calcutta on the 24th April 1962.

Ladies and Gentlemen,

I have much pleasure in welcoming you to the 36th Annual General Meeting of the Company. The Directors' Report and Accounts have been in your hands for some time, and with your permission I should like to take them as read. You will have noticed that we have this year for the first time incorporated some information and photographs of the activities of your Company, and I am sure you will agree that this is a worthwhile addition to your general knowledge of the Company's affairs.

THE YEAR'S TRADING

The year under review saw both our factories at Sahaganj and Ambattur working to full capacity, the notable feature being a general increase in productivity which was most encouraging.

During the early part of the year the Tyre Dealer Associations continued to play a worthy role in ensuring an equitable distribution of the sizes in short supply at list prices to consumers, but with the onset of the monsoon retail selling prices generally began to fall: by the end of the year the general shortage of tyres, except in a few sizes and types, was no longer felt and trading tended to return to normal.

Increased supplies of our High-way Truck and Bus tyre were made in the main sizes but the demand for this extremely popular pattern remained unsatisfied. Similarly, our Gold Seal car tyre continued to maintain its high level of acceptance with users and remained their first preference.

Throughout the many irrigation and industrial projects our Off-the-Road tyres continued to be in keen demand and particular mention may be made of the Dunlop "Powergrip" and "Earthmover EM. 7" patterns which found ready acceptance for their high quality and durability.

Sales of Cycle tyres and tubes in the domestic market increased although our deliveries to the Bicycle Industry were below the level of 1960 as the activities of some of these concerns declined during the period. It is our view that the general trend in this Industry will improve before long and the signs today already confirm this view.

In the Industrial Rubber Products field our Conveyor belting expansion was completed during the period and field reports on the high quality of our product continued to be most encouraging.

The demand for Industrial and other types of hoses was also satisfactory and it is true to say, I think, that in every large project throughout the country Dunlop hoses are being used.

Dunlopillo sales remained at a high level and the demand for our range of products continued to exceed our manufacturing capacity.

It is of interest that sales of Dunlopillo for industrial applications increased considerably.

During the year we were continually handicapped by the shortage of finished products from our factory at Sahaganj to our various Sales Offices spread throughout the country, and this problem unfortunately still remains with us today. Increasing use of road transport where possible for long distance routes has proved very helpful and we would strongly urge that this medium be given every encouragement to develop to the full. Emphasis, we feel, should be placed on road building and maintenance as a positive contribution towards solving the existing transport difficulties.

EXPORTS

Your Company has responded to Government's call for exports and we are currently exporting all types of tyres, cycle rims and accessories. We are also seeking to widen the range of products we export and negotiations are in progress to this end.

However, I feel it would not be out of place to mention that export business is not highly competitive but has its own special difficulties, and by its very nature cannot be built up over a short period of time.

Nevertheless, I am glad to be able to tell you that our Cycle tyre exports in 1961 were 17% higher than in 1960, and in the first quarter of this year our overall exports were running at a

level over 50% higher than the same period in 1961.

EXPANSION PLANS

I am sorry to report that there has been a delay in implementing our expansion plans, which we mentioned at this time last year. You will probably have seen pre reports that Government are considering the question of raising the target for the automobile tyre manufacturing capacity to 1 established during the Third Five Year Plan. It is to be hoped that their decision will be announced soon and that we shall then be able to go ahead with our plans because Ambattur has been designed so that economical expansion can take place quickly and efficiently.

Meanwhile we are implementing some small expansions at both factories for which we have licences.

We also have a licence to manufacture P.V.C. belting, for which there is a good demand from the coal mines. Because of its fire resistant properties, it is advantageous for use in underground gassy mines, and we are finalising to implement this project.

The Directors have constantly under review the possibilities and necessity of expanding capacity and introducing new products.

RAW MATERIALS

During 1961 the supply position of raw materials in general was reasonably satisfactory, although the foreign exchange situation and

the consequent uncertainties and delays in the issue of import licences presented a constant problem. For some items, however, we had to abandon our established suppliers and find new sources in the U.S.A., with a consequent increase in our raw material bill. Despite these difficulties, production at both factories was maintained according to schedule.

On a number of items, import duties were further increased and resulted in a substantial addition to raw material costs, thus offsetting a number of economies which we had introduced.

Considerable progress has been made towards producing indigenously various raw materials we use, and we are already arranging comprehensive test programmes in order to ensure that these materials will be suitable for the very high quality products we make. It is gratifying to note that over half of our cycle rims are now manufactured from local rim strip, and as indigenous production increases, are hopeful that during 1962 our entire output of rims will be made from Indian steel, with a consequent saving in foreign exchange.

PROFIT AND LOSS ACCOUNT

The profit for the year after providing for depreciation, interest and taxation was Rs. 1,04,75,494 as compared with Rs. 1,24,56,228 for 1960. The profit after tax expressed as a percentage to sales was 5%, and, as you will have gathered from the Directors' Report, the improvement over last year's figure of 4.1% arises mainly

from the increased volume of business and increased efficiency.

Excise Duty now exceeds Rs. 6 crores and absorbs a substantial amount of working capital a matter which your Directors continue to keep under constant consideration.

It will be observed that overall Salaries, Wages and Bonus show an increase of approximately Rs. 34 lakhs and Welfare Expenses are also up due mainly to improved canteen and catering expenditure at factories, depots and head office.

Advertising expenditure has been increased to meet the ever growing competition facing us now and in the future, and our participation in the Indian Industries Fair accounted for a substantial portion of the increase.

The amount of Bank Overdraft Interest has decreased as a direct result of our reduced borrowings.

As a result of the temporary lull in capital expenditure until our next planned expansion receives approval and gets under way, the amount transferred to Development Rebate this year is only Rs. 7,50,000.

The amount transferred to General Reserve is Rs. 62,50,000, this being considered prudent in the light of our forward expansion plans.

Our net profit available for disposal is higher than last year by approximately Rs. 41 lakhs. The compulsory transfer to Development Rebate Reserve has decreased by Rs. 9,50,000 and this gives an overall increase of approximately Rs. 50,50,000 of profits available

for disposal. Out of this additional amount it is proposed that Rs. 25,50,000 is allocated to you, the Shareholders, the balance of Rs. 25 lakhs remaining as retained profits within the Company.

The Directors recommend a dividend for 1961 of 20% subject to tax on the ordinary share capital as increased by the recent Bonus Issue. In 1960 the dividend paid on the old capital was 21.5%.

BALANCE SHEET

On the Assets side there have been no significant changes since last year. Inventories are higher in line with the higher level of output and sales.

The Share Capital as Issued and Subscribed has increased by Rs. 1.5 crores, which is, of course the Bonus Issue, and Reserves have already been mentioned in the Directors' Report and need no further comment. Our overall borrowings through Bank Overdrafts, etc. are lower in line with the increased profits and reduced capital expenditure. The Provision for Taxation is higher arising from the increased profits and the additional liability in respect of the Bonus Issue.

FUTURE PROSPECTS

The are now several manufacturers producing tyres in the country and others are expected to come into production during 1962. Competition will, therefore, be keen but your Company does not fear this and indeed welcomes it. We have the product, the sales organisation and the market acceptance to retain our share of the expanding market, but it is our

earnest hope that if the total manufacturing capacity of the country is in excess of demand, then free competition and consumer preference will be allowed to decide sales levels.

EMPLOYEE RELATIONS

It is particularly gratifying to record a further improvement in labour relations at the Sahaganj factory during 1961. Increased productivity was obtained from both our factories with correspondingly greater rewards to our workers. I should like to mention that the workers also shared in the improved results of the Company, an annual bonus being paid at the rate of 3½ months basic salary as opposed to 3 months last year. The total bonus paid for the year exceeded Rs 44 lakhs.

The Company entered into long-term agreements with Employees' Unions at Sahaganj and Ambattur factories, and at several of our depots throughout the country. These contain increasing benefits to the employees and reflect the success that has been achieved over the years in the field of industrial relations. At head office and the depots the service conditions continue to be improved.

You will, I am sure, wish to join the Directors in thanking the employees for the loyal service they have given and the hard work they put in towards another year's successful results.

NOTE: THIS DOES NOT PURPORT TO BE A RECORD OF THE PROCEEDINGS OF THE ANNUAL GENERAL MEETING.

The Central Bank of India Limited

Impressive Increase in Deposits.

Sir Homi Mody on the Five Year Plans

Summary of the Speech delivered by the Chairman, Sir Homi Mody, at the 51st Annual General Meeting of the Shareholders of the Central Bank of India, Ltd., on Wednesday, the 25th April, 1962.

During his speech at the Annual General Meeting of the Shareholders of the Central Bank of India Limited on Wednesday the 25th April, 1962, Sir Homi Mody, Chairman, said that by and large, the year was one of general expansion of national output. He said that in regard to industrial production, though there was an increase of something like 8%, the rate of growth was lower than in the previous year. Conditions of acute scarcity were allowed to develop in respect of coal, power and transport, inspite of repeated warnings of businessmen and

industrialists. The failure in these all-important sectors together with an inadequacy of maintenance imports of items such as raw materials, spares and components have been chiefly responsible for the slackening in the pace of industrial production during the year.

"The Second Plan had sufficiently indicated", continued Sir Homi, "that the transport capacity was grossly inadequate for the needs of the country. The situation demanded drastic recasting of ideas with regard to targets of production and priorities. A position has now been reached in which not only the Plan estimates are likely to be confounded, but even the existing productive capacity in the country may be seriously affected."

Continuing, Sir Homi said that the transport bottleneck has been

most seriously felt in the Coal industry. There was, as a result, growing shortage of coal in consuming centres, affecting all industries depending upon it for industrial or power production. He added that it was remarkable that when the country was desperately short of wagons, a large part of the rated capacity of the railway wagon industry should be lying idle. In the face of this situation, the targets of production set for the Coal industry during the Third Plan period would seem to be completely unrealistic. Sir Homi was of the opinion that the capital expenditure and foreign exchange involved in the projected expansion, and the time required for developing new mines, had apparently not been given adequate consideration. He went on to point out that even if we could raise all the coal estimated in the

Third Plan, the problem of transport would remain.

Sir Homi observed that side by side with this imbalance in our economy was the acute power shortage that the country was experiencing. Under-estimation of the country's requirements, the failure of Public Sector undertakings to reach their targets and the disincentives to the Private Sector of the industry had resulted in a shortage which was being increasingly felt, particularly in regions which are far away from the coal fields.

All this, argued Sir Homi, provided growing evidence of the imperfections of the Five Year Plans. "Arguments about the Public and the Private Sector" continued Sir Homi, "and even about the size of the Plans, are becoming irrelevant in this con

text. What the country needs is national planning in every sense of the word, and the policy of keeping the Public and Private Sectors at arm's length, so to speak, from each other, needs to be revised."

"There ought to be a much closer relationship", Sir Homi said "between the two than is now the case, and it is a thousand pities that the knowledge, experience and enterprise of those who have built up in the past, as they are building up in the present, an imposing structure of considerable dimensions, in the face of many difficulties should not be more adequately utilised. There has recently been a welcome awareness on the part of Government of the importance of the Private Sector, but there is, as yet, an imperfect understanding of the role it can play in national development. While foreign experts are greatly in demand, there is still a barrier between the Government and the Indian industrialist arising from a certain distrust and suspicion. I have been emphasising for some years that there has been a change in the outlook of the business community, and that there are many in its ranks who are not dominated by self-interest and are anxious to co-operate in the task of national development. I hope it may be found possible for their voice to be heard more effectively in the framing and implementation of our Plans for a rapid advance in the moral and material condition of our people."

Sir Homi expressed concern over the persistent erosion in the total foreign exchange reserves which had dropped from Rs. 825 crores at the beginning of the Second Plan period to Rs. 302 crores at the end of 1961, in spite of large drawings on the International Monetary Fund. He said, "In the year under review our adverse balance of trade amounted to Rs. 283 crores. This shows a welcome decline from the figure of the previous year, but this was more due to a decrease in imports than to an increase in exports". "The remedy", he continued, "lies in our ability to attract greater foreign investments and to promote larger exports". As regards the first Sir Homi advocated that our Government should seriously consider ways and means of doing away with the harassing procedures, delays and stiff-necked attitudes which a number of foreign investors, anxious to participate in Indian undertakings, were experiencing. "As regards export promotion", said Sir Homi, "Government must realise that the measures so far undertaken have but a limited value, and that the basic fact is that our products have to be competitive in quality and price. In this connection, I would quote from a speech made by Mr. Alfred Hayes, President of the Federal Reserve Bank of New York, to the New York State

Bankers' Association a few months ago, on the subject of export promotion. Whilst sounding a note of warning against the habit of looking upon import restrictions, higher tariffs and exchange controls as a panacea for their balance of payments difficulties he said: "We must be willing not merely to recognise foreign competition as an economic fact but also to make an aggressive effort to compete more effectively in all markets, both with new and important products and with lower costs.... This is not the job of monetary policy alone, nor even of monetary policy primarily. Whole-hearted co-operation from Government, industry and labour is a necessity in this area." "I would add", Sir Homi continued, "that giving subsidies and inducements, on the one hand, and loading costs of production with all manner of burdens, on the other, is a self-defeating process."

Sir Homi Mody then informed the shareholders that with a view to improving their position, Banks effected in March an upward revision in the rates laid down under the Inter-Bank Agreement. The pressure on the banking system, however, for additional credit continued to persist and the Advance-Deposit ratio rose in consequence from about 62% in December 1960 to over 70% in March 1961. The banks were therefore obliged, during the busy season, not only to liquidate a part of their investments in Government Securities, but to borrow on a larger scale from the Reserve Bank, even at penal rates of interest.

Sir Homi then went on to recapitulate the various measures taken by the Reserve Bank during the year to strengthen the banking system and revive public confidence, which had been somewhat shaken by bank failures in the preceding year. The policy of encouraging a merger of the weaker banks with the stronger ones was vigorously pursued and resulted in the reduction in the total number of Scheduled Banks from 94 to 83. In conformity with this policy, the Central Bank took over the Jodhpur Commercial Bank.

By far the most important event that took place during the year was the passing of an Act for the establishment of a Deposit Insurance Corporation, which would fully cover about 75% of the total number of deposit accounts in the country, and provide protection to all depositors to the extent of Rs. 1,500/- per account.

"Towards the close of the year", continued Sir Homi, "the Reserve Bank also put forward a proposal for strengthening the equity base of the banking system and exhorted all the banks to observe a convention which would lead to their achieving a ratio of 6% between their Paid-up Capital and Reserves and their Deposits. This is no doubt a sound move, but if

the present pace in the growth of Bank Deposits is kept up, the attainment of the prescribed ratio may take a long time, even with the transfer of 20% of declared profits to the published reserves of Banks."

Sir Homi then disclosed to the shareholders that as a step towards implementation of this proposal, the Directors had decided to increase the Authorised Capital of the Bank to Rs. 10 crores and to raise additional Capital by the issue of 6,30,000 new shares in the ratio of one new share for every two existing shares. This would increase the Paid-up Capital to Rs. 4,72,50,000/-.

Turning to the affairs of the Central Bank itself, Sir Homi informed the shareholders that, for the second year in succession, the Bank's deposits registered an impressive increase of Rs. 20 crores the total moving up from Rs 200 crores in 1960 to Rs. 220 crores in 1961, and that in the quinquennium 1957 to 1961, the growth of the Bank's Deposits had been of the order of 42%.

Over the past 5 years, the improvement in gross earnings had been of the order of Rs. 4.43 crores, or 57%. The increase, Sir Homi affirmed, had taken place under all heads, namely, Interest and Discount, Commission, Exchange and Brokerage.

The net profit during the year showed a substantial rise, and was indeed a happy culmination of the progress made by the Bank during the first half a century of its working. He, however, sounded a note of warning that while it would be their constant endeavour to keep up the rate of growth in profits, it must not be forgotten that the future would throw additional burdens on the industry. As a corollary to the growth of Deposits, progressively larger amounts would be needed year after year for payment of premia to the Deposit Insurance Corporation. The implementation of the Tribunal's award was likely to impose a further burden. The Reserve Bank's proposal for strengthening the equity base and increasing the liquidity ratio of Banks would also have their effect on the availability of resources for employment in the Bank's business. It was, therefore, considered prudent and necessary to conserve the Bank's resources, and accordingly, out of this year's profit, Rs. 45 lakhs were transferred to Reserves, taking the total of the Bank's owned funds to Rs. 7.28 crores. This, however, was still short of the ratio between Capital and Deposits as envisaged by the Reserve Bank.

Referring to the dividend, Sir Homi stated that this year in view of the larger profits, it was proposed to pay a final dividend of Rs. 2.60 per share subject to tax, which together with the interim dividend of Rs. 2.40 would amount

to a total dividend of Rs 5/- per share, subject to tax, or Rs. 3.50 net for the whole year, thus restoring the dividend to the level of 14% net at which it had stood prior to the cut effected as a result of the changes in the taxation system.

In conclusion, Sir Homi made a reference to the Golden Jubilee of the Bank which was celebrated in a befitting manner all over the country, as well as in Pakistan, Rangoon and London. The great enthusiasm witnessed everywhere served to bring home vividly the abundance of goodwill and public confidence which the Bank enjoyed. Everyone connected with the Institution had derived fresh inspiration from those celebrations. In commemoration of the occasion, it was decided, in collaboration with the Devkaran Nanjee Banking Corporation, to set up a Staff Training College, which would be named after the Founder of the Institution, Sir Sorabji Pochkhanawala. Sir Homi stated an announcement to that effect had been made at the time of the Golden Jubilee and the draft outlines of the Scheme were now being examined.

At the conclusion of his speech, Sir Homi, referring to the Budget proposals of the Finance Minister which were announced after his speech went to the Press, observed "It is idle nowadays to expect from a budget anything but heavy burdens. The reactions of the harassed tax-payer can, therefore, only be in the nature of either a groan or a sigh of relief that it has been no worse, depending on how much has been sought to be extracted from him. He can expect nothing better so long as our Government's planning continues to be what it is. All that can be said, accordingly, about the latest Budget is that the Finance Minister has done his best in the circumstances and is to be commended for his courage in doing away with the vexatious and unproductive Expenditure Tax. He must not forget however that the additional burden he has cast on the corporate sector is unjustified and is bound to affect the pace of industrial development."

Note:—

This does not purport to be a record of the Proceedings of the Annual General Meeting.

INDEX NUMBER OF WHOLESALE PRICES IN INDIA

The official wholesale price index (with the year ended March 1953 as 100) witnessed a rise of 0.3 per cent to 123.0 during the week ended March 31, 1962 as compared with 122.6 for the earlier week. The index was, however, lower by 1.0 and 2.5 per cent respectively, when compared with that of a month ago and the corresponding week of the previous year.

COTTON Plea for Decontrol

THE delegation led by Mr Madan-mohan Ruia, the Chairman of the East India Cotton Association, met the authorities in New Delhi and entered a plea for the immediate decontrol and announcement of the new cotton policy before the sowing season commences. The delegation has also urged that in case the Government is reluctant to decontrol it should make an upward revision of the ceiling prices of cotton. In this connection, it should be noted that the Government had almost decided to enhance the ceiling rates but the idea was dropped on account of the opposition raised by the Planning Commission. The delegation, while holding discussion with Mr Manubhai Shah, the Minister for International Trade, brought home the fact that the internal production of this crop has been consistently lagging behind the Plan target where as the rate of consumption by the cotton textile mills had shown a notable increase.

The import of cotton during this season has not been encouraging and the pace of actual imports from 1 September 1961 to 7 April 1962 has been far below the requirements. It is, therefore, evident that nothing substantial has been done to tide over the acute scarcity conditions prevailing in the domestic cotton. Total imports of cotton during the above mentioned period, according to the figures released by the East India Cotton Association, aggregated merely 597,324 bales in contrast to 632,581 bales in the corresponding period in the previous season. It is apparent that unless further imports are arranged the textile industry will really be in trouble and it is a matter for conjecture how far the mills will be able to maintain their production without impairing the stock position. As usual the USA continued to top the list of suppliers of foreign cotton to India. Cotton imported from that destination totalled 276,419. Other suppliers were East Africa (110,212), Sudan (81,580) Egypt (61,903) and Pakistan (50,287) in that order.

The trade circles have welcomed the details governing the barter deal with America under which 44,000 bales of cotton will be available in exchange of 50,000 tons of sugar. It has reliably understood that about 10,000 bales of cotton will be imported shortly from Pakistan against the export of pharmaceutical products and pesticides. The export section failed to live upto the expectations. Nearly 52,000 bales of Bengal Deshi have been registered for shipment. The shippers are awaiting New Delhi's decision with regard to the permission to ship the quota sold to countries inside the iron curtain. The prices of Bengal Deshi after rising by about Rs 10 per candy slipped down by about Rs 5 to Rs 8 toward the close of the week.

In the import section Sudan and East African growths were in demand. It is reported that some business has been transacted in US and Pakistan cotton on the basis of subject to licences and cancellation at par. In the spot market at Sewri trading activity was sluggish though mills continued to evince keen interest in popular varieties like Vijay, Digvijay, L 147, Kalyan, Co 2, Surti and 197/3. Prices showed little variations.

★

PIECEGOODS

Sluggish conditions prevailed in the Bombay cotton piecegoods market during the past week with demand remaining at a low ebb. The sentiment on the eve of the presentation of the Central Budget was somewhat subdued.

Demand from upcountry centres did not flow upto the expected level, though buyers from centres like Calcutta, Rajasthan, Bihar and Uttar Pradesh were found active in the market for seasonal goods. Popular varieties of seasonal goods met with good interest from the buyers, but they were not available for ready delivery. Items like good quality lawns, bleached longcloth and cambrics ruled firm. Printed voiles and coloured and bleached mulls evoked the interest of the buyers.

The prices of popular varieties, during the week under review, went up by about 5 to 10 per cent. Though the merchants were eager to transact business the high prices prevented transactions on an encouraging level.

The export front on the whole remained inactive as almost all the overseas buyers kept aloof from the market pending the presentation of the Union Budget and the Government's stand on the recommendations of the Mudaliar committee.

The prospects of UK entering the market in the immediate future have brightened. It is reliably understood that the importers from that destination are finding it difficult to procure quality goods from other sources at their prices. Their anticipation of a decline in prices also failed to materialise as the mills were firm on their prices.

★

Reaction to Budget

THE Central Budget proposals, announced for 1962-63, have been received with a mixed reception in commodity market circles. While the export trade has welcomed the Finance Minister's announcement with regard to the earmarking of Rs 1 crore for export promotion, some circles feel that the full implementation of Mudaliar Committee's recommendations would have boosted exports.

Sectionwise, the news of a reduction in the export duty has been welcomed by the tea circles. In the case of sugar, the trade is naturally disappointed to learn that the excise duty on sugar has not been removed. Rayons have fared better as the much-feared increase in the excise

duty on rayon yarn has not materialised. In the case of yarn and cloth, it is felt that the increased duty on superfine varieties of yarn and processed cloth will largely be passed on to the consumers. The benefit of a reduction in duty on grey unbleached cloth may not be passed on to the consumers. It is felt that middlemen will stand to benefit by this reduction.

The traders in jute goods are expected to benefit from the export incentive in the form of the new duty on jute manufactures not exported. Importers of stainless steel and the manufacturers of stainless steel and utensils and other articles have received the decision to impose an import duty of 25 per cent on the metal with a feeling of disappointment. They are of the view that the measure will increase the difficulty for the industry and the trade which are already suffering from inadequate supplies.

★

RAYON

The immediate reaction in the Yarn market was markedly bullish. The April contract for staple-fibre yarn, which had finished the pre-Budget session at Rs 730, shot up to Rs 753 before reacting to Rs 748. Similarly, the April contract for Amilon yarn shot up from Rs 3,620 to as high as Rs 3,685 in the post-budget session before reacting to Rs 3,630.

The general inclination in the market is, however, to avoid any immediate commitments in the absence of a clear picture of the proposed changes. The manufacturing units are reported to be cautious in their comments, pending a fresh assessment of the situation vis-a-vis the prices of rayon fabrics and exports.

★

COFFEE

The major coffee-producing countries in the world will shortly be meeting in the United States to discuss the question of a long-term agreement in respect of supply of coffee. The FAO has warned that, unless long-term measures are taken to restore the balance between supply and demand in respect of coffee, the world market situation, by 1965, will have serious implications on the economy of the major producing countries.

The existing annual coffee agreements are short-term expedients, designed to restrict the flow of available supplies so as to prevent a drastic fall in the world price. But, the greater and more urgent need, in FAO's view, is for long-term measures. Following this warning, major coffee-producing countries in the world have decided to meet for discussing the question of a long-term agreement.

The FAO observations on the world coffee economy are of relevance to India, which has lately emerged as a producer and exporter of substantial quantities of coffee. Production in India is estimated to rise by 30 per cent in 1965. The FAO estimates that the world production will be about 4.4 million tons in 1965, showing an increase of 25 to 40 per cent over the output of the 1958-59 season.

★

PEPPER

Thanks to buying demand, Pepper markets have continued to remain firm. In the Cochin market, the rate for the garbled variety is quoted around Rs 315 per quintal.

Bombay is reported to have received 2,200 tons of black pepper from the primary markets in the South during the first four months of the current season. The bulk of the receipt is from Cochin and Calicut. During the same period, Calcutta received 624 tons from Cochin. The exports of black pepper from India, during the same period, are placed at 9,555 tons as against 6,991 tons in the corresponding period of last season.

The estimate for the month of March is placed at 3,540 tons as against 2,956 tons in the preceding month. Of the total exports during the last month, about 2,569 tons are reported to have been shipped to America.

★

CASHEW

There has been a sudden spurt in Cashew prices since the beginning of this month. The latest rate for processed kernel is 46 cents per pound. The commodity was nominally quoted at 41 to 42 cents a couple of weeks back. There is a corresponding increase in the price of raw nuts also. Imported nuts from Africa is presently selling around Rs 665 a ton and indigenous nuts at Rs 630. (The improvement in demand is attributed to sustained enquiries from the USA, which is now prepared to offer up to 45 cents a pound. This may be due to reasons of a temporary shortage in the USA following the competition from the Communist countries.

According to trade estimates, 50,000 tons of African nuts have already reached India. There will be another 70,000 tons more available from Africa this season. The indigenous supply is not likely to fall below last year's level of 60,000 tons. If these estimates materialise, the total availability of raw nuts this year will be anything between 180,000 to 200,000 tons, or more or less the same as last year's.

Bonus Issue by Hindustan Lever

In order to bring the company's issued share capital into closer relationship with the capital employed in the business, the directors of the Hindustan Lever Limited have proposed to raise the capital of the company from Rs 5,57,00,000 to Rs 8,24,36,000 by the creation of 26,73,600 new ordinary shares of Rs 10 each and that the new shares will be credited as fully paid by way of capitalisation of Rs 2 crores of Development Reserve and Rs 67.36 lakhs of the accumulated balance of the Profit & Loss Account, in the proportion of 12 new shares for every 20 shares held as on the 10th May, 1962. These new shares will not rank for dividend in respect of 1961, but will rank in all other respects pari passu with the existing shares.

Meanwhile, there was a substantial increase in sales from Rs 46.23 crores to Rs 50.04

crores; but there is a drop in profits mainly due to the difficult time for vanaspati and toilet preparations. The net profit, before providing for Depreciation and Taxation, amounts to only Rs 4.63 crores against Rs 4.98 crores.

In respect of allocations a sum of Rs 39.46 lakhs (Rs 35.33 lakhs) is set apart for Depreciation; Rs 1.93 crores (Rs 2.08 crores) for Taxation and Rs 5.30 lakhs (Rs 5.60 lakhs) for Development Reserve. The dividend on the Ordinary shares is repeated at 26 per cent subject to deduction of tax.

According to the directors' report, the land required for the skimmed milk powder and ghee factory at Etah, Uttar Pradesh, has been acquired and preparation of the site has begun.

An application for a manufacturing licence for the solvent extraction of cottonseed has been made to Government.

The milk project at Etah will require about Rs 47 lakhs of foreign exchange. The Industrial Credit & Investment Corporation has agreed to grant the company a loan in foreign currencies of about Rs 25 lakhs. Unilever Limited has agreed in principle, to supply the balance of the foreign exchange requirements for the project.
