Sharp Decline in Cawnpore Sugar's Profit

The Cawnpore Sugar Works Limited has reported a sharp decline in earnings for the year ended 31 October 1961. Although the total quantity of cane crushed is higher at 23.68 million maunds against 11.94 million maunds and the sales are higher at Rs 4.19 crores against Rs 3.58 crores, the net profit, after providing for Depreciation and Taxation, is substantially lower at Rs 2.67 lakhs as against as much as Rs 14.28 lakhs for the previous year. In this connection, the directors state that the company suffered a loss of about Rs 10.84 lakhs in the export of sugar at prices far lower than the production costs. Again, the implementation of the Sugar Wage Board recommendations also involved a recurring expenditure of Rs 6.47 lakhs, not to speak of the high amount of interest paid on over-drafts due to accumulation of heavy stocks.

In respect of allocations, the Depreciation amount is higher at Rs 6.80 lakhs against Rs 6.70 lakhs and Development Rebate Reserve at Rs 2.19 lakhs against Rs 1.60 lakhs. The provision for Agriculture Tax is lower at Rs 7,834 against Rs 9,922. On account of the unabsorbed losses, there is no liability for Taxation. The profit earned now is adjusted against the previous year's loss, leaving still a debit balance of Rs 3.70 lakhs to be carried forward.

The succulent and mouth-watering gains could not fail to attract the attentions of the speculative fraternity. The SGIT may now, I hope, cause some element of hesitancy in the part of the speculator, and the result will be, I further hope, that the genuine investor gets a fair share of the allotment of new issue. However, a fly in the ointment, the provision for set off of short term capital losses. This provision to my mind is unnecessary, and it may encourage the speculator to continue his gambling interest in the new issue market.

So, in the interests of promoting private sector industrialisation would call for the repeal of the increase of 5 per cent in corporate tax. (Incidentally Mr. Malaviya, the Minister for Mines and Fuel, now called upon the private sector in coal to produce an additional million tons of coal toward the Third Plan target; surely in their search for finance, apart from the increase in the price of coal that Mr. Malaviya is apparently willing to consider, coal companies would be in a better position to raise capital from internal issues—and to find internal sources through ploughing back 'profit'—on the basis of a 45 per cent rather than 50 per cent rate of company taxation?) The Government of course would be charging the revenues implicit in the new tax proposal. But in the

tion of expansion programmes enabled a dividend to shareholders that was equivalent to the status quo ante the introduction of the new company structure.

And now Government desires that fully one-half of company profit be turned over to the exchequer. In another context, in his Budget speech, Mr. Desai has gently chided the private sector in industry for relying overmuch on bank finance and has emphatically suggested that there should be more of a balance between equity and borrowed capital. Very good, but...

Isn't there the distinct possibility that the raising of the corporation tax will inevitably reduce the size of the distributable surplus of companies? If, with a view to ensuring the success of a rights issue a company raises its ordinary dividend, then the quantum of profit it is able to plough back suffers. If the dividend rate is not increased, on the other hand, a rights issue may fail. Again, the "penalty" attached to booking the profit on a short-term capital gain may conceivably act as a damper upon the new issue boom.

At this stage, however, I should express my full support of what properly should be called the Speculative Gains Tax. New issues in particular, and rights issues generally, have almost invariably come on the market at a considerable premium vis-a-vis the issue prices.

of past experience in regard to the buoyancy of revenues, I should think the Government could afford to be magnanimous.

I welcome the abolition of the Expenditure Tax—it was not revenue productive, and Mr. Desai made clear that the one thing he wished to avoid taxing was the patience of the tax-payer.

For the rest, too, Mr. Desai's proposals subserve the ends of planning. Tea export is to be encouraged; so also jute exports, but by discouraging growth of internal consumption. Adjustment is perhaps the best word to use about the excise duty changes. Income-tax rates go up for everybody—and that I suppose is social justice.

I do not, however, see how the Budget can depress markets—despite the Rs 70 crores raised. I repeat, a sense of having been let off lightly, combined with adjustments already made prior to the Budget, have both paved the way for a modest rise in share values, but an improvement that looks likely to be sustained. It is only a tapering off of the new issues boom that should, in the near future, serve to reverse market trends. And I frankly cannot see that happening.

NEW ISSUE NOTES

Hindustan Steel

Hindustan Steel Limited, a Central Government undertaking, has been given consent to issue further capital of Rs 67 crores in equity shares of Rs 1,000 each, at par. The money will be used for financing construction, expansion and operation of the public sector steel and coal washery projects. It has a paid-up capital of Rs 300 crores.

Bank of Baroda

The Bank of Baroda Limited is raising further capital of Rs 1 crore, divided into 1,00,000 ordinary shares of Rs 100 each, to be issued at a premium of Rs 15 per share, Rs 50 paid-up. The proceeds will be utilised for strengthening the capital base. The present paid-up capital is Rs 1.50 crores.

Paper Products

The Paper Products Limited, Delhi, having a paid-up capital of Rs 34,00,000 is raising further capital of Rs 16 lakhs, divided into 16,000 equity shares of Rs 100 each, at par. The proceeds will be utilised for financing installation of the Rotogravure printing cylinder-manufacturing plant and partly as working capital.

Lakshmi-Vishnu Mills

The Lakshmi-Vishnu Cotton Mills Limited has proposed to raise the ordinary capital of the company by the issue of right shares in the proportion of one share for every four shares held. An application, in this respect, has been made to the Controller of Capital Issues. No indication is available whether the shares

will be issued at par or at a premium. The present paid-up capital of the company is Rs 89.80 lakhs and the rights issue will be an additional capital of Rs 22.40 lakhs. The funds will be utilised for the company's rehabilitation programme.

BONUS ISSUE NOTES

Indian Oxygen

The Indian Oxygen Limited has decided to capitalise Rs 1.04 crores from Reserves and issue 10,40,000 ordinary shares of Rs 10 each as capital bonus to the holders of the existing ordinary shares in the proportion of two such bonus shares for every five ordinary shares held, on a date to be fixed later. The issue is subject to the sanction of the Controller of Capital Issues.

Godrej & Boyce

Godrej & Boyce Manufacturing Company, (Private), Limited is to issue bonus shares of the value of Rs 36,00,000, divided into 3,600 equity shares of Rs 1,000 each. Godrej is engaged in the manufacture of safes, safe deposit lockers, steel furniture, refrigerators and typewriters. It has a subscribed capital of Rs 58.50 lakhs, all in equity shares.

National India Rubber

The National India Rubber Works Limited, Katni, is to issue bonus shares of Rs 50,000 on capitalisation of the company's reserves to a like extent. It has a subscribed capital of Rs 2½ lakhs.

INVESTMENT NOTES

Dalmia Cement

The Madras High Court has directed a meeting to be held on 11 May, 1962 to approve the scheme of arrangement with Magnesite Corporation of India Limited, whereby on and from an effective date, the Magnesite Corporation of India will become a wholly-owned subsidiary of Dalmia Cement and the holders of 49,925 fully-paid preference shares of Rs 10 each and 74,965 fully-paid equity shares of Rs 10 each in Magnesite Corporation will be issued shares in Dalmia Cements of the same number, class and value.

East Indian Coal

The East Indian Coal Company Limited has a programme for increasing raisings to 1.6 million tons annually. Only sometime back, the output was less than 6 lakh tons. The programme of expansion is scheduled to be completed by the end of 1963. The total outlay is estimated to be Rs 1.06 crores. The loan capital to be raised will be in the form of Debentures, carrying interest at 6½ per cent per annum, taxable, for Rs 50 lakhs. Half of this issue has been already taken up by the underwriters and their friends. The balance of Rs 25 lakhs will be offered to the public and is underwritten. The Debentures will be redeemable at the earlier option in 1967, but not later than 1976.

IN BRIEFS

Jyoti Limited has maintained the dividend at Rs 12 per share, taxable, for 1961.

Ferro-Alloys Corporation Limited has recommended a taxable dividend of Rs 11 per share for 1961.

Ahmedabad Advance Mills Limited has maintained the dividend at Rs 12 per share, taxable, for 1961.

Travancore Rubber & Tea Company, Limited has proposed a final dividend of 6 per cent, making a total of 10 per cent, taxable, for 1961 as against a taxable dividend of 9 per cent for the preceding year.

BALANCE-SHEET BRIEFS

Killick Industries Limited has reported a higher net profit of Rs 10.53 lakhs for the year ended 30 November, 1961 as against Rs 8.63 lakhs for the previous year. The directors have, however, passed over the dividend.

Clive Buildings (Calcutta), Limited has earned a net profit of Rs 3.67 lakhs for 1961 as against Rs 2.62 lakhs. The directors have proposed a taxable dividend of Rs 15 per share, both on the Ordinary and Management shares.

The working of the Sivanandha Mills Limited has resulted in a net profit of Rs 17.15 lakhs for 1961 as against Rs 13.81 lakhs. The dividend is raised from 22 to 26 per cent, subject to tax.

The Western India Match Company, Limited has shown a net profit of as much as Rs 151.98 lakhs

for 1961 as against only Rs 139.36 lakhs for 1960. The dividend is, however, maintained at 16 per cent, subject to deduction of tax.

STOCK EXCHANGES

Pre-Budget and Post-Budget Reactions

STOCK markets have generally greeted the taxation proposals for 1962-63 with an appreciable rise in equity values. Initially, a sort of panic developed in an atmosphere of confusion created by various rumours with regard to the Budget proposals. But, when the actual announcement was made, most of the shares rebounded with renewed vigour as the operators felt convinced that the taxation proposals, both direct and indirect, were not as heavy as were not as heavy as were apprehended.

On second thoughts, operators took a cautious view as indicated by the trading pattern from Wednesday. It was feared that the increase in company taxation might retard the capital formation and the companies might be forced to curtail their reserves to maintain the dividend until their profits increased. Again, towards the close of the week, conditions in the market turned better, thanks to the encouraging corporate news.

After the excitement of the Budget proposals, the Calcutta Stock Ex-

INVESTMENT GOSSIP

'Could have been worse'

Watchdog

It could have been worse, and because we have been let off more lightly than we had hoped for the Budget must be deemed to be a cheerful one—such appears to be the action of the Stock Exchanges to Mr. Morarji Desai's new tax proposals for 1962-63. There are, to be sure, few enough surprises, and not in the event is bad enough to be a shock. But the fact remains that the Finance Minister has succeeded in garnering in another Rs 10 crores a year for the Third Plan, and has now therefore "accounted" for some 75 per cent of the target additional taxation for this five-year period. It may be that this very fact is hailed, that there is a general expectancy that the Budgets of the next three years will consequently make lighter demands on the tax-payer. But whatever may

be the attitude of the Stock Exchanges—and theirs, let it be remembered, is an essentially short-term assessment—I for one must confess to being both disappointed and troubled. It is with the increase of 5 per cent to 50 per cent in the Corporation tax to which I take exception. I would like the reader to recall that, when first the new format of company taxation was introduced some three years ago, the Finance Minister, in fixing the rate for advance payment of tax at 45 per cent, said it was his intention merely to maintain revenue receipts under this head; there seemed the implicit assurance that, should any adjustment later be found necessary, the Finance Minister would not hesitate. Ah, well! I suppose in a socialistic democracy rates of taxes can move only in one direction—and that is not downward. For, subsequent years have proved that the 45 per cent rate greatly increased Government's revenues—the 45 per cent rate did constitute a heavier burden on companies. It took many a company a year or two before enlarged profit arising from comple-

for their requirements giving storage licence details.

These supplies have been incorporated from
Messrs. FERUNION Budapest, Hungary

change resumed normal conditions. Activity was prominent in the Coal and Tea sections.

Price movements on the Bombay Exchange were irregular with activity confined to selected shares, which were so far neglected.

Steady conditions prevailed on the Madras Stock Exchange where price variations were small.

There was a widespread improvement in prices on the London Stock Exchange. The cut in the British Bank Rate from 5 to 4½ per cent tended to over-ride all other considerations, including the sharp fall in prices on Wall Street.

CALCUTTA

Friday Evening.

THE uncertainty regarding the Central Budget proposals has now ended. In the pre-Budget session, the market presented a noticeably better appearance with an all-round recovery in prices under the impact of buying of leading shares by the professional operators on the hope that the Finance Minister might adopt an accommodating attitude in making fresh imposts.

When the Budget proposals were actually announced, they were well received and the favourable response stemmed from the fact that the total additional taxation had been much less than expected and that special emphasis had been placed in the matter of export promotion. It was also thought that the companies would be able to take the additional taxes in their stride. There was, therefore, a heavy turnover especially in the clearing list, resulting in a sharp recovery in prices from the previous week-end levels.

On second thoughts, however, the market took a cautious view as was indicated in the trading pattern from the middle of the week. Although the dose of direct taxation was far below earlier expectations, operators were inclined to wait and watch, pending a clearer picture of the changed situation.

When it was known that the taxes on corporate profits had been raised and there would also be higher wealth tax and income-tax, there was less jubilation. It was feared that the higher rates of income-tax and the withdrawal of exemption from wealth tax of the shares of the new companies would be reflected in less enthusiastic response for new floatations. It was also thought that the internal capital formation would be affected to the extent of the amount paid to the Exchequer by way of higher corporate taxes.

It was, however, encouraging to note that the above factors did not prevent sustained interest being shown in selected Tea and Jute shares, both tea and jute goods being specially marked for export promotion. Even Coal shares, which were long neglected, came into prominence due to special reasons. The flow of encouraging corporate news was another contributory factor to the steady improvement in sentiment noted toward the close of the week.

Section-wise, Coal shares took the pride of place in the week's trading. Almost all the shares were marked up substantially from the recent low levels. The main inspiration was

derived from the report that the Government was prepared to increase the price of coal provided the industry would give an undertaking to

raise production to meet the growing demand.

Tea shares buoyed up on the proposal to reduce the export duty on the commodity. But, in the absence of sellers, business completed was small.

After initial firmness, Jute shares were subjected to heavy profit-taking towards the close of the week. The initial firmness was attributed to a general feeling that the excise duty on jute goods for local consumption might be passed on to the consumers. Subsequently, it was thought that there might be considerable resistance from the local consumers in view of the high prices ruling for jute goods at present.

Sugar shares were a neglected counter. Operators were utterly disappointed to learn that the excise duty on the sweet commodity had not been removed.

The weakest spot in the whole market was the Textiles section where there was a heavy liquidation and the consequent sharp decline in prices. It was felt that the industry would not be able to bear the higher taxes as well as higher excise duties. The prospects for the current year were not, therefore, considered to be encouraging, especially when the prices for raw cotton were ruling at higher levels.

In the Engineering section, price movements were mostly irregular due to alternate buying and selling. Indian Irons and TEXMACO were subjected to settlement considerations till the middle of the week. The sharp rise in TEXMACO was mainly due to speculative manipulations.

After showing weakness in the middle of the week, Miscellaneous issues displayed a smart recovery towards the close, thanks to the flow of encouraging corporate news, such as the proposal by Indian Oxygen to issue bonus shares and the rumours of the possibility of a right issue by Goodyear. The entire list finished the week with major gains on balance.

In the Giltedged section, business continued to be restricted though there was some interest in certain directions.

Bank shares were rather quiet in the absence of fresh interest.

MADRAS

Wednesday.

TEA shares have gone up in prices with good support as an aftermath to the relief given to tea export by the Central Budget. Chemical and cement shares have looked up with good turnover in today's transactions pointing to general support these scrips enjoy continuously. Investment support was accorded to textiles in which South India Viscose was spotlighted. Very good turnover was reported too in these shares. Anglo-French textile shares were in much demand. Other textile shares that changed hands today were Coimbatore Spinning, Lakshmi and Madura.

Banks and Electrics were featureless. Coffee and Rubber shares were dull.

Government Securities:—All scrips in this section were at market prices. Madras Government's 4½% 1970 Loan was quoted at Rs 99.50. Mysore Government's 4½% 1971 loan was quoted at Rs 99.80. Kerala Government's 1971 4½% share was listed at Rs 98.10. Andhra Government 4½% 1971 Loan was marked at Rs 08.15.

Banks:—Indian Bank did not change at Rs 180.00. Indian Overseas was quoted at Rs 167.20. Pandyan was at Rs 26.00. Punjab National Bank was at Rs 21.25 and the State Bank of Mysore was priced at Rs 153.00.

Electrics:—Cochin improved to Rs 12.25. Others were the same as of last week. Ellore was quoted at Rs 22.00. Kumbakonam was at Rs 11.85. Negapatnam was at Rs 12.10. Salem Erode was at Rs 15.00. Tinnevely-Tuticorin was at Rs 13.25. Vellore was at Rs 15.25 and West-Coast was available at Rs 16.12.

Sugars and Breweries:—Andhra was available at Rs 22.12. Deccan was at Rs 10.08. KCP was quoted at Rs 22.75. Mysore was at Rs 53.40. Travancore remained the same at Rs 7.12 and United Breweries at Rs 82.25.

Plantings:—Blue Mountain improved to Rs 2.59. Chembra to Rs 3.55 and Cochin Malabar remained at Rs 7.10. Coffee Lands was quoted at Rs 14.50 and Consolidated Coffee was at Rs 18.25. Coonoor Tea was marked at Rs 23.00. Cowcoody at Rs 4.06, and Devashola at Rs 26.05. Kailas was the same at Rs 5.00. Kil Kotagiri did not change at Rs 4.63. Midland was quoted at Rs 11.20. Nilgiri was at Rs 8.40 and Nonsuch was at Rs 21.67. Osoor was unaltered at Rs 2.75. Periakaramalai improved to Rs 3.64. TR & T was at Rs 10.85.

United Nilgiri was quoted at Rs 20.25. Wartyhully was at Rs 2.70 and Woodland was at Rs 7.85.

Textile:—Anglo-French was transacted at Rs 147.00. Bangalore Woollen was at Rs 262.00. Buckingham was quoted at Rs 281.00. Coimbatore Spinning was available at Rs 82.00. Coimbatore Pioneer was higher at Rs 296.50. Lakshmi was fifty nP less at Rs 165.00. Madura ex-dividend was at Rs 38.25. Rajalakshmi was quoted at Rs 113.00. South India Viscose was sold at Rs 184.00. Travancore Rayon was at Rs 42.10.

Miscellaneous:—Aluminium Industries gained five nP and was quoted at Rs 23.55. Ashok Leyland was at Rs 8.95. Central Scientific was better at Rs 7.35. Dalmia Cement moved up to Rs 13.65. FACTS was at Rs 8.10. India Ceent was higher at Rs 6.00. Madras Aluminium was priced at Rs 20.90. Madras Cements was at Rs 92.00. Marikar was at Rs 67.00, while Mettur Chemical improved to Rs 12.75. Rallis was at Rs 153.00. Travancore Ogale was at Rs 6.70. W I Plywood was quoted at Rs 210.00.

The Lincoln Memorial is the most visited of all the shrines in Washington, D.C.

Pan Am now introduces a unique low-cost way to visit any one or all of 32 major U.S. cities.

Have you always wanted to see the USA but thought it too expensive? If so, Pan Am's \$15-a-day-way is your way to the USA.

Here's how: You may spend 3 days and 2 nights in any of 32 major U.S. cities and pay only \$15 for your hotel room with bath and, in most cities, a full sightseeing tour. Average cost for each full 24 hour stay—only \$7.50!

Food? You'll be free to dine where you like, at your own expense. However,

Pan American has surveyed every one of the 32 places included in this plan and can assure you that 3 substantial meals at popular restaurants need not cost more than \$7.50 per day through the entire USA.

Result: \$15 a day for room with bath, meals and sightseeing in any or all of 32 fabulous U.S. cities.

Fares? No extra charge on a Pan Am round-the-world trip for many of these U.S. cities. Only Rs. 6092 economy class from Calcutta for Europe and the Pacific, and North America as well!

Travel a New World—See the U.S.A.

ALLAHABAD BANK

LIMITED

Established 1865:
Affiliated to The Chartered Bank.

Registered Office:
14, India Exchange Place,
Calcutta-1.

Authorised Capital	...	Rs. 1,00,00,000
Subscribed Capital	...	Rs. 60,00,000
Paid-up Capital	...	Rs. 45,50,000
Reserve Fund	...	Rs. 1,08,00,000

FOREIGN EXCHANGE BUSINESS TRANSACTIONED

CLEARING AND FORWARDING OF
GOODS TO DESTINATIONS UP
COUNTRY IS UNDERTAKEN BY
THE BANK'S CALCUTTA OFFICE

M. J. MacLaren
General Manager.

ANNOUNCEMENT

THE STATE BANK OF JAIPUR

have pleasure to announce the introduction as from
the 1st May 1962

SPECIAL CREDIT TRANSFER SYSTEM

whereby any customer having a personal account with the Bank will be enabled to use any office of the Bank for transfer of money paid in cash for credit of his account to the extent of Rs. 1,000/- in any one instance FREE OF CHARGE.

A deposit relationship with the Bank will entitle the use of the services of any of its 49 offices throughout the country for the free SPECIAL CREDIT TRANSFER FACILITY.

For details,

Please contact any office of the State Bank of Jaipur where you will always find a friend.

STATE BANK OF JAIPUR

subsidiary of the State Bank of India — at the Nation's Service.

THE CENTRAL BANK OF INDIA LTD.

(Established—December, 1911)

Head Office:—MAHATMA GANDHI ROAD, FORT, BOMBAY-1.

Authorised Capital	...	Rs. 6,30,00,000
Subscribed Capital	...	Rs. 5,77,50,000
Paid-up Capital	...	Rs. 3,15,00,000
Reserve Fund & other Reserves	...	Rs. 4,13,08,635
Deposits as at 31-12-1961	...	Rs. 2,21,07,12,035

DIRECTORS:

Sir Homi Mody, K. B. E. (Chairman)
Cooverji Hormusji Bhabha, Esq. (Vice-Chairman)
Dharamsey Mulraj Khatau, Esq.,
Chimanlal Bapalal Parikh, Esq.,
Sir Jamsetjee Jejeebhoy Bart.,
Jaykrishna Harivallabhdas, Esq.,
Shiavax Sorabji Khambata, Esq.,
Nani Ardeshir Palkhivala, Esq.,
Nityanand Mangesh Wagle, Esq.,
Nawab Prince Mukarram Jah Bahadur.
Mr. N. K. Karanjia, Managing Director.

Branches and pay Offices in all important Commercial Centres of India, Pakistan and Burma.

LONDON BRANCH: 159, Fenchurch Street, London, E.C.3.

NEW YORK AGENTS—Morgan Guaranty Trust Company of New York,
The Chase Manhattan Bank.

Banking business of every description transacted on terms which may be ascertained on application.

LOCAL BRANCHES:

CALCUTTA - 33, Netaji Subhas Road.
COLLEGE STREET - 1, Cornwallis Street
BALLYGUNGE - 157/A, Rash Behari Avenue
BARABAZAR - 71, Jannanlal Bazar Street.
BHOWANIPUR - 86, Shyamprasad Mukherjee Rd.
HATKOLA - 100, Sovabazar Street.
NEW MARKET - 10, Lindsay Street.
SHAMBAZAR - 11 Bhupendra Basu Avenue.
HOWRAH - 18/A, G. T. Road.
KIDDERPORE - 3/1, Diamond Harbour Road.
Branches in West Bengal: Asansol, Bankura, Burdwan, Durgapur, Jalpaiguri, Kalimpong, Raniganj, Siliguri, Purulia.
Branches in Bihar: Arrah, Bettiah, Bhagalpur, Chapra, Darbhanga, Deoghar, Forbesganj, Gaya, Jamshedpur, Jaynagar, Jharia, Katihar, Khagaria, Kishanganj, Laheriasarai, Lakhisarai, Motihari, Monghyr, Muzaffarpur, Patna, Patna City, Ranchi, Raxaul, Samastipur, Sahibganj, Sasaram, Sitamarhi and Sevan.

Branches in Orissa: Sambalpur.

Branch in Assam: Gauhati.

THE CHARTERED BANK

(Incorporated in England by Royal Charter 1863).
(Liability of Stockholders Limited).
Affiliated Institution:—
THE ALLAHABAD BANK LTD.

Head Office:
38, BISHOPSGATE LONDON, E.C.2
West End Branch, London:
2, Regent Street, London S.W.1.
and at
MANCHESTER, LIVERPOOL, NEW YORK and HAMBURG.

Branches of the Bank are established at most centres of commercial importance throughout Southern and South-Eastern Asia and the Far East.

Branches of The Eastern Bank Limited, a wholly-owned subsidiary of The Chartered Bank, are established in Iraq, Bahrain, in the Persian Gulf at Qatar and Sharjah, Lebanon and Hadramaut and in India, Pakistan, Ceylon, Aden, Singapore and Malaya.

Calcutta Office:
4, Netaji Subhas Road.
Sub Branch: I. G. THOMSON,
31, Chowringhee Road. Manager.

BUY in KILOS

Metric weights are compulsory throughout the country.

To ensure quick service and fair dealing, buy only in round units e.g.

1 KILOGRAM
500 GRAMS
200 GRAMS

1 KILOGRAM =
86 TOLAS

If 1 seer (=80 tolas) was sold at Re. 1, 1 Kilo should sell at Re. 1 n.p. 7.

Issued by Government of India
DA 62/2

More on The Budget

IN formulating its views on the budget proposals, the Federation of Indian Chambers of Commerce and Industry summarised four features of recent budgets that ought to cause concern to the public. They are: a persistent tendency to under-estimate revenue, the increasing burdens on urban sector which is already bearing a heavy burden of tax, the mounting administrative expenditure and the meagre returns from public sector undertakings in which sizable savings of the community siphoned off in the form of taxes are locked for a long time without earning an adequate return. These are certainly long term trends that ought to be reversed if taxation should become bearable. The under-estimate of receipts has every appearance of deliberation. It would appear that authority has a certain fatality about its inability to anticipate expenditure and to control it and therefore would prefer to have such hidden assets accreting to it for further possible use later. For instance, the fresh tax effort is correlated to the surpluses needed for plan purposes and authority even permits itself a certain amount of gratulation over success in the matter. But it invariably turns out that the Plan does not receive the full extent of the taxes meant for its pursuit. This fact gets obscured by shortfalls in performance. This was only too painfully revealed when our performance during the Second Plan became clear towards its end. Against an anticipated surplus from current revenues of Rs 350 crores, it was found that we had actually a deficit of Rs 50 crores. The experience of the Third Plan so far is unlikely to be different, though firm figures are difficult to deduce from the budget papers. Thus the cost of the plan is greater than anticipated and this extra cost is being surreptitiously provided for by underestimate of receipts. Authority may find this convenient, but the fiscal propriety of the procedure is extremely dubious.

As regards the urban bias in Central Taxation, it is to some extent inevitable because of the division of fiscal responsibilities in a federal set-up. Some redress of balance should be possible if the States discharged their fiscal duties with the same zeal that the Centre brings to its duties. Though full details are not available, the complaint gently voiced by Mr Desai in his speech that the States have not buckled down to their tax efforts is only too true. Out of the total of Rs 610 crores that the States have to find by additional taxation, the first year of the Plan is estimated to have resulted in a total of only Rs 20 crores in new taxes by the States. This works out to a quinquennial total of Rs 100 which works out to about one sixth of the total. The figures for the second year are not readily to be had for all the States, but it is unlikely that the States will have matched the Centre's efforts in the first two years of the Second Plan viz., one third and three fourths respectively of the total target for the Plan. In the light of this reluctance to face up to their responsibilities, the States' clamour, in other contexts, for an increase in their Plan outlay sounds odd and even irresponsible.

The mounting administrative and other non-

plan expenditure is a source of erosion of funds raised for the purposes of the Plan. In this connection, we may point out that accounts as now presented make it difficult to sort out how much of the expenditure on the Plan and how much on other things. It is true that some steps have been taken to rationalise the structure of government accounts. Thus, social and development services which were till recently accounted under civil administration are now separately shown. A clearer correlation of this expenditure with the estimates in the Plan will be useful aid for assessment of performance.

The assessment of the extent of profits from public undertakings is not very easy from figures available in the budget papers. Indeed the Explanatory Memorandum makes some misleading computation of their performance. It lists over seventy undertakings, returns from which it purports to give. But in many cases, the figures of profit or loss are not given, presumably because they are not readily available. For instance, no profit have been shown against Hindustan Aircraft, Bharat Electronics, Mazagoan Dock and Garden Reach Workshop, Air India International, which most certainly made profit during the year, is not shown to have made any in this statement. And yet the Statement solemnly totals up the profits. It has arbitrarily recorded and even works out the return on investment. Thus it is stated that the percentage of profits is 0.3 in 1961-62. This conclusion has been widely hawked to show how inefficient the public sector undertakings are. Thus, the statement from enlightening, actually obscures the position, which, ironically, is probably much better than what the statement makes it out to be. This could hardly have been the intention of the government. The least that the Finance Ministry could do is to indicate the pitfalls in the statement and make its computation of percentage of return by taking into account only the profits and losses on the one hand and the capital on the other of the undertakings for which it gives full figures. Otherwise, it should scrap this statement.

But it is nevertheless true that the return from public undertakings is far less than what it ought to be. This is partly attributable to the cause pin-pointed by the FICCI—the long period of gestation of some of these enterprises. Theoretically, socialist thinking in recent years has swung round to the view that a Welfare State should be financed more by profits from public undertakings than by taxes. The relative equity of such a proposition is obvious enough though pricing policy can make such a set-up as unbearable as the other in which taxes are ubiquitous and harsh. In any event, the chances of this socialist doctrine being translated into reality in India are still remote. Surpluses from public undertakings anticipated for the Third Plan are put at Rs 300 crores for the Centre and Rs 150 crores for the State. The realisation of this expectation is very doubtful. Indeed, it is this fear that is probably making the Finance Minister create nest eggs out of taxation by under-estimating receipts.

Techno-Economic Survey of Kerala

Severe pressure of population, high incidence of unemployment, low per capita income and poor industrial production are the distinctive features of the present day economy of Kerala that are highlighted in the preliminary report of the Techno-Economic Survey of the State undertaken by NCAER. The density of population in Kerala is nearly three times the density for India as a whole (Kerala 434 persons per sq. Km. and India 149 persons per sq. Km.) The unemployed accounted for 4.2 per cent of the population in 1956 and, considering the shortfall in the creation of new employment opportunities in the country as a whole during the Second Plan, the number of unemployed at present should be very much larger than the figure of six lakhs estimated for 1955-56. With such a large population and an exceptionally high volume of unemployment, it is not surprising that per capita income in Kerala is also among the lowest in India, (Rs 232 against the all-India average of Rs 261 in 1955-56.) Among the other States, only Madras and Orissa have lower per capita incomes. The figure for Madras is Rs 229 and for Orissa Rs 198. The figure of per capita income for Orissa is probably depressed by the large population of Tribals whose real standard of living cannot be computed in monetary terms. In the case of Madras, the poverty of the people is accounted for by the poverty of natural resources, as was very clearly brought out by the NCAER Survey published last year. But Kerala is richly endowed by nature, except for metallic ores. And though the State occupies only 1.2 per cent of the land surface of the country, it contributes 3.4 per cent of the national income. The productivity of the workers is also higher than the all-India average. In the primary sector, labour productivity is Rs 638 per worker as compared with the all-India average of Rs 411. But the high pressure of population, and the consequent unemployment, depress the per capita income below the national average. The Report has also drawn attention to another reason, namely the extremely low productivity in industries (Rs 548 per worker against the all India figure of Rs 1294) which is attributed to the predominance of cottage industry using antiquated techniques.

The Survey has brought out that, if Kerala is to catch up with the rest of India by the end of the Fourth Plan, the net output of the State will have to be doubled during the two Plan periods. This means that the development programme of the State should aim at an annual rate of growth of 10.7 per cent which is higher than the rate projected for the country as a whole. Achievement of this rate of growth will call for the investment of the order of Rs 1000 crores—Rs 400 crores in the Third Plan and Rs 600 crores in the Fourth Plan. As the resources of the State are not expected to amount to more than Rs 160 crores, it is evident that the achievement of the level of investment that is considered necessary will have to depend heavily on Central assistance and investment in the private sector.

Though agriculture has large potentialities for growth the Survey makes it clear that the basic problem of the State can be solved only by further industrialisation, and improvement of the techniques of existing industries. If the required level of investment in

industries could be achieved, there are several favourable factors which will ensure that the investment will be fruitful. Kerala, as the Report points out, is comparatively well placed in respect of transport facilities and hydro-electric potential. The State now produces electricity at the very low rate of 1.7 nP per unit, which is one of the lowest in India. Even allowing for increased capital costs of future development, there is no doubt that Hydro-electric power could be generated in the State at much lower cost than in other parts of the country. With its ample resources, the State could also look forward to selling its surplus power to neighbouring States that are short of power, if the resources are fully developed. The capital cost that the State will have to incur could be reduced, if it is possible to arrive at agreement with the neighbouring State of Madras for the joint development of water resources. This will also help the State to meet the food deficit, by swapping power for food grains without pursuing the costly and impractical schemes of self-sufficiency. The Report has pointed out that it would be far more advantageous to the State to concentrate on cash crops, many of which are good earners of foreign exchange.

The Report suggests the following order of priorities for crop development in Kerala: (1) the crops which serve as raw material for industry, specially those which are at present in short supply, e.g., coconut, rubber, cashewnut; (2) the crops making a substantial contribution to foreign exchange earnings, e.g., tea, coffee, lemongrass, cardamom, etc.; (3) food crops. If Kerala is to undertake an agricultural programme according higher priority to cash crops over food-grains, there should be a firm assurance that the State's food deficit would be fully met by supplies from other parts of the country. The NCAER report has also done well to point out that, though Kerala has a high degree of rainfall, development of irrigation facilities is essential for making the most effective use of the limited area of arable land through double and triple cropping, stabilisation of crops and effective application of fertilisers. A total investment of Rs 59 crores, of which Rs 20 crores will be on minor irrigation works, is recommended in the Report.

The industrial programme suggested by the Report envisages a total investment of Rs 193 crores, comprising Rs 22 crores on village and cottage industries, Rs 27 crores on small scale industries and Rs 144 crores on largescale industries. Lists of industries, both large and small, based on agriculture forest products, as well as new chemical and engineering industries which may be taken up for development, are also included in the Report. The lists do not, however, mention any new industries based on marine products, especially the processing of sea-food for export, which appear to have good prospects. It cannot surely be the case that this field has already been developed to the maximum extent possible. The Report has also recommended adoption of improved techniques for the manufacture of coir which is carried on as a household occupation. But unless there is a reasonable prospect of expanded markets, improved techniques could lead to largescale unemployment. It is not evident that it is the quality of the coir manufactures that are now exported that stands in the way of larger exports.

The Survey attaches considerable importance to the development of engineering industries. Apart from a list of essential in-

dustries designed to meet the regional demand for engineering goods, the Report also gives a supplementary list of metal-based industries like alloy and special steels machine tools, industrial machinery, precision instruments and heavy electrical equipment. It is recognised that raw materials for most of these projects will have to be obtained from other parts of the country. The output will also have to find an all India market. But the Report argues that Kerala deserves special consideration on account of the peculiar problems with which it is beset such as a high degree of unemployment a technologically backward industrial sector and the shyness of investment in private enterprise in Kerala. Armed with the authoritative support of the NCAER Survey, the Government of Kerala should be in a stronger position to make itself effectively heard when the question of location of heavy industrial projects, again comes up for consideration. It is also relevant to point out in this context that according to the survey, even if all the programmes suggested it could be implemented, there would still be a backlog of 6.5 lakhs unemployed by 1979-71.

INDUSTRIAL RELATIONS

A Tangled Picture

INDUSTRIAL relations in the country have presented a tangled picture. Many have seen the instances in the last decade when labour management relations in important industrial sectors came to sudden boil even leading to violent eruptions of trouble. The recent incident of the labour strike in the heavy electricals at Bhōpal and the Burmah Shell in Bombay have furnished fresh reminders of the explosive potentials which the labour situation holds out. While there are a number of issues that are encouraged in the realm of labour relations, the real difficulty has lain in the emotional and doctrinaire attitudes that tend to be invariably struck by both sides to specific questions. In this circumstance a factor of crucial importance has been the labour policy of the Government which has been aimed at ensuring the right climate in which uninterrupted production so essential in the present context of planning could be sustained without danger of disruption resulting either from labour strike or lock out by the management. The Government's labour policy has sought to comprehend all the main issues that have agitated industrial relations, and has therefore far-reaching implications. Attention has been drawn to some of these aspects at the conference of the All India Organisation of Industrial Employers held at New Delhi and also at the meeting of the Employers' Federation of India held at Bombay in the last week.

That social welfare and, particularly, labour welfare, must keep in step with industrial development, was the dominant theme of the address of Surottam P. Huthesing who pleaded for a greater element of realism in policies and programmes relating to social betterment. Referring to the spate of labour legislation passed by the second Parliament, he declared that "mere intention to work in the interests of social welfare will not in itself yield the desired results. On the other hand, it may indirectly give rise to other conditions which, on the balance, may negative the larger purpose in view." Mr Huthesing's general pro-

position that social welfare cannot outstrip economic development is a truism which does not admit of serious argument. The difficulty arises when the proposition appears in the modified form that any measure for increased social welfare should follow demonstrable increase in production. This gives a handle for controversy which is not easily resolved, as the evaluation of objective factors is governed by individual attitudes to what constitutes a just and equitable distribution of the national income. The justification for any particular measure of reform has to be found in the social attitudes and the material circumstances prevailing at the time. And the best justification will be a general consensus on the desirability of the reform.

The central problem in labour management relations has concerned the material rewards of workers in industrial establishments. In this matter, Government has tried by a spate of legislative measures to further the interests of the workers as a result of which there has been a material improvement in wages and other fringe benefits. A recent survey carried out by the Labour Ministry at the Centre has revealed wage increases ranging from 33 to 100 per cent during the first two Plan periods in cotton textiles, cement, sugar, jute and plantations which together account for a working force of nearly 17 lakhs. However, the wage policy of the Government has lacked a rational basis and consequently had led to gross anomalies of inter-industry and inter-regional discrepancies in wages. In this connection, the findings of the Labour Ministry survey are very relevant. It is shown that wages of workers in the cotton textile industry with 1951 as the base increased by 34 per cent in Bombay, 18 per cent in Ahmedabad and Baroda 20 per cent in Indore, 30 per cent in Nagpur, 25 per cent in Madras and 21 per cent in West Bengal in 1959 as compared to 1951. In the jute textile industry, the wage increase amounted to as much as 100 per cent in Andhra Pradesh and only 24 per cent in Madhya Pradesh. The disparity in the rate of increase witnessed in the sugar industry was no less marked. While in West Bengal there was an increase of about 33 per cent, the increase was of the order of only 17 per cent in Andhra Pradesh, 7 per cent in Bihar and 5 per cent in Uttar Pradesh. An even more glaring anomaly is the sharp disparity in the relative levels of material conditions commanded by industrial labour on the one hand and the agricultural labour on the other. A comparison of the relevant figures of remuneration will show the extremely depressed conditions of agricultural labour which receive only a fraction of the earnings of industrial labour. While the average annual earnings of agricultural labour for 1956-57 was estimated at Rs 99/- the figure for industrial factory labour was as much Rs 1,296. These inter-industry differences and regional disparities which are not accountable by differences in cost of living and work performance are important elements of the wage problem which a rational wage policy has successfully to tackle.

An important aspect of wages policy that has to be taken note of is its impact on industrial production. The fact that the increase in wages that has been effected almost on a universal scale has not been accompanied by corresponding increase in the productivity of labour has aggravated the strains on industrial units in the country leading to inefficiency and higher cost and loss of competitive strength in foreign markets. There is also the problem of choice between greater employment and higher wages which has to be

placed in view of the explosive rate of population growth revealed in the latest census. This choice, as Mr Surottam Huthesing stated in his address to the All India Organisation of Industrial Employers has relevance to the cost structure which will influence our capacity to export and our ability to earn the necessary foreign exchange to finance the import component of investment and production.

Peaceful relations have also been sought to be promoted by other measures notable of which are the code of discipline and the experiment of workers' participation in the management of industrial enterprises. The code of discipline was evolved in 1958 in the aftermath of violent labour troubles that rocked some private sector units and enjoined on labour, management and the Government adherence to some fundamental prerequisites for the maintenance of industrial peace. Figures of man-days lost since the formulation of the code and its acceptance by the three parties would hardly prove any improvement that could be ascribed to it. The figure of man days lost in 1958 when the code came into vogue, was 4.04 million. From this it increased to 4.31 million in 1959, and further to 4.8 million in 1960. In view of the voluntary character of the code and the lack of statutory binding force, it was understandable that the code of discipline could not have contributed much to remove tensions. However it is heartening that in spite of its relative inefficacy, there is undimmed faith in the essential soundness of the technique for settlement of industrial disputes which it embodies. A recent seminar organised by Employers' organisations has reiterated faith in the potentialities of the code for bettering industrial relations.

The experiment of joint councils between workers and management which was initiated in some units in both the public and private sector has also proved to be a relative failure. It is particularly noteworthy that in the Hindustan Machine Tools, one of the foremost concerns in the public sector where the experiment was given a fair trial, it broke down mainly on account of labour intransigence. Lack of the requisite educational background for the workers which would fit them for shouldering responsibilities implicit in the scheme of joint management, was a factor that reduced the effectiveness and scope of such joint councils. The extreme vagueness with which the functions of the councils were conceived had also detracted from their usefulness. As Mr Naval H. Tata has observed the scheme has greater chance of success if it is attempted at the unit level rather than at the level of the industry. Self-government at this level will serve to educate workers in the general functions and difficulties of management.

In his inaugural address at the Delhi conference, Mr Nanda claimed that, not only the policy which was set out in the three Plans was based on general agreement, but the detailed measures for implementation of the policy were also based on the common consent of the parties affected. He also gave the assurance that this policy of seeking agreement at all stages would continue in the future and no action would be taken which did not have tripartite backing. Regarding enforcement of the decisions of Wage Boards, whose functioning came under critical scrutiny in the Presidential address, the labour Minister has declared that only such decisions of the Wage Boards as were unanimous would be taken up for implementation. To this he

added the rider that, in a rapidly changing world, standards of labour welfare could not be expected to remain stationary and that no one could claim a permanent veto in the matter.

Prospects for improvement of industrial relations on the basis of the trade union traditions are not very bright. In fact the singularities of the trade union structure have been at the source of many a show down between labour and management. The polarisation of trade union organisations on the basis of political ideologies, the existence of innumerable small unions and the raging inter-union rivalry are factors that have continually undermined the scope for collective bargaining and encouraged increasing State intervention in industrial disputes. However the experience of other advanced countries has shown that it is only through uninhibited free collaboration between organisations of management and labour that causes of friction in the industrial field could be eliminated. Sweden furnishes a shining example. For the past many years, Sweden has enjoyed an enviable degree of industrial peace which has been secured through mutual negotiations between employers and workers and without the aid of State intervention. In this light, the growing intervention of the State in India can hardly be viewed as a sign of strength in the field of industrial relations. The remedy as Mr Tata has spelt it out is "more of bipartite agreements and less of adjudicated awards, more of voluntary codes and less of labour laws, more of self-reliance on the part of the employer and the worker and less eagerness on the part of the Government to interfere".

Individual well-being is linked with national prosperity and only planned efforts can ensure both in the shortest possible time. And planning, for its success, largely depends on savings, individual as well as national. Saving in the form of Bank Deposits provides resources for the National Plan.

Notes

COAL

Rise in Prices?

New Delhi, at long last, seems to have conceded the claim of the coal industry for a rise in the coal price for which the industry has for long been clamouring. Though an official announcement on the subject has not yet been made, the assurance given by Mr K. D. Malaviya, Minister for Mines and Fuel in the new Central Cabinet, to a representative group of coal producers last week, should put out any misgivings which the industry may have on the subject. Obviously, the change of mind on the part of the Government on the question of coal price has been caused by the proposal for further upward revision of the coal target. The industry had estimated its total requirements of funds to finance its expansion plans to raise coal production by 17 million tons fixed for it, at about Rs 60 crores. If the industry were to be called upon to increase production by a further 7 million tons which seems likely, it is essential that it should be assured an additional element in the price to service the additional investment that will be entailed by the revision of its production target.

For the past several years, the industry has been operating under conditions which have left little

scope for capital formation in the industry. While the price for coal has been subject to strict control by the Government, the pressure on cost of production has been consistently upward, consequent on increased level of wages forced on the industry under various labour awards, rise in railway freight and electricity tariff, and indiscriminate downgrading of collieries. To cover this increase in costs, the joint working committee of the several mining associations in the eastern region had asked for an average sales realisation of Rs 22.50 which would give the industry an increase of Rs 2.22 per ton. This was the minimum which would have satisfied the industry having regard to the low level of profitability and its Third Plan capital requirements. Whether it was concern for the consumer, or some other reason, the Government has tried to resist the legitimate demand of the industry, though the implications from the point of view of availability of coal etc were only too patent to be glossed over. However, the logic of the situation that would have developed in the absence of price incentive for increasing coal production seems now to have been grasped by the Government and it is pertinent to note that Mr Malaviya has qualified the assurance regarding an increase in price by imposing the condition that the industry will do its every bit to step up production. That the Government should have relaxed thus far in its attitude on the question of coal prices is a welcome sign and should give the stimulus which the industry badly needs to expand production.

INDUSTRIAL PRICING

Vagaries in Principles

Price fixation through the machinery of investigation by the Tariff Commission has been in vogue in the country since a long time. The obvious purpose has been to control the prices of industrial products, particularly the basic ones. It has, however, been found in practical experience, that the principles of price fixation adopted by the Tariff Commission have not been uniform and over a period of years different criteria urged have found partial and tardy acceptance. An article in the Tata quarterly dated January 1962 examines with illuminating details the methodology followed by the Tariff Commission in fixing

industrial prices, and shows the vagaries that have dogged industrial pricing by the Tariff Commission and the Government.

The uniform practice of the Commission in fixing prices has been to estimate the cost of production in relation to an expected level of production that is also estimated for the entire period for which the price to be fixed by the Commission is to hold good. Prior to 1958, the Commission did not make any allowance for variations in cost that may arise from shortfall in estimated production or other unforeseen factors that may directly impinge in cost of production. This was made good only in 1958 when the Commission accepted the need for contingency allowance in the case of cement industry to cover not only statutory and non-statutory increases in costs but also increases arising from setback in the estimated levels of production. This was a welcome advance, but in the other important matter of provision of depreciation and rehabilitation allowance no concession has been made to industry to cover the full replacement costs. The Commission has in many instances granted extra depreciation and rehabilitation allowance, but it has refused to consider the plea for allowing depreciation on the basis of replacement costs on grounds of technical difficulties. As the article in the Tata quarterly has stated, there is a great drawback in calculating depreciation on the basis of original costs or written down value in that in times of rising prices, the price-regulated industries become unable to accumulate sufficient depreciation funds to meet the cost of essential replacements and renewal, which consequently entail special programmes of rehabilitation at later date.

In the fixation of the rate of return also, the Commission has laid itself open to criticism. While the Commission has oftentimes in the past shifted its ground in respect of the various elements that should be covered by the rate of return, in its last report on the cement industry, it has grouped commitments under profit sharing bonus, interest on borrowed capital and on debentures, managing agency commission, taxation, dividend on preference shares a reasonable dividend on ordinary shares as the elements that are to be covered by the rate of return. It is however, worthy of note that the the Commission has kept a curious silence on the vital question of what constitutes a reasonable dividend to which the ordinary shareholders should be entitled. Thus in many ways the methodology of industrial pricing that is at present followed by the Tariff Commission would seem to need revision. Apart from margin for rehabilitation, the need to allow a rate of return to attract sufficient flow of investment is also overriding.

NEW COMPANIES

105 Registered in W. Bengal

The review of the working of the companies by the Company Law Administration discloses that during the quarter ended 31 March 1962 a total of 114 new limited companies with a total authorised capital of Rs 21,95,29,800 were incorporated in the Eastern region. The state-wise distribution of new companies reveals a pronounced concentration in the West Bengal State which has accounted for a total of 105 of new companies. In contrast, Bihar, Orissa and Assam had a share of 2,3 and 4 new companies respectively. It is remarkable, however, that considered from the standpoint of the total authorised capital of the newly registered companies during the quarter under review, it is Orissa that leads the other three States in the region. The total authorised capital of the 3 companies registered in Orissa amounted to Rs 10,06,00,000 as against the total authorised capital of Rs 8,24,29,800 of the 105 new companies in West Bengal. The relevant figures for Assam and Bihar are Rs 3,55,00,000 and Rs 10,00,000 respectively. It is obvious that the new floatations in the West Bengal State have been predominantly small sized concerns, while the one public limited company that was registered in the Orissa State had an authorised capital of Rs 10 crores.

Out of the 105 new companies registered in the West Bengal State, 27 were public companies having a total authorised capital of Rs 4,90,75,000, while 77 were

private companies with a total authorised capital of Rs 3,33,54,800. One was a guarantee company. The new registrations included 5 giant companies having a total authorised capital of Rs 4,50,00,000. Assam also witnessed the floatation of giant public company with an authorised capital of Rs 1 crore.

During the quarter under review, six companies went into liquidation of which 4 were in West Bengal, the other two being in Bihar and Orissa respectively. The number of companies struck off under Section 560 (5) of the Companies Act 1956 in the region stood at 387 of which 383 were in West Bengal. West Bengal also reported the largest number of prosecution cases launched against companies and their management for non-compliance with the provisions of the Companies Act. The relevant figures in this regard are 313 for West Bengal, 24 in Bihar, 28 in Orissa and 5 for Assam.

STEARIC & OLEIC ACIDS The Case for Protection

One of the main reasons for the good progress achieved by the Stearic Acid and Oleic Acid Industry is that it is enjoying tariff protection for the past fourteen years. On the Tariff Commission's recommendation in 1959 Government extended the protection to the industry for a further period of three years ending 31 December 1962 at the existing rate of 35 per cent ad valorem of 50 nP per lb., whichever was higher. The industry has again requested the continuance of protection beyond 31 December 1962 and the matter is presently under enquiry by the Tariff Commission.

It would appear that the industry is still handicapped by the need to depend on imports for some of its essential raw materials. Even so, steady progress has been achieved by it as will be evident from the fact that production of the two acids has increased considerably during the past few years. The production of stearic acid in 1961 was placed at 2,838 tonnes from only 69 tonnes in 1947-48 while that of oleic acid has increased from 8 tonnes to 392 tonnes during the same period. The industry comprises nine units with a total installed capacity of 7,765 tonnes for stearic acid and 1,269 tonnes for oleic acid. One difficulty in the way of arriving at a correct assessment of the position of the industry is that the figures pertaining to the installed capacity, demand etc., computed by the industry and other bodies show wide divergence. For instance the Development Wing places the present capacity of the industry at 6,949 for stearic acid and 1,786 tonnes for oleic acid, while others put it differently. No two estimates

agree with regard to demand for the two acids and their derivatives. While the Tariff Commission had expected at the time of its last enquiry that the demand for stearic acid to increase to 2,743 tonnes and that for oleic acid to 610 tonnes by 1962, the estimate of the Development Wing for the current year is 3250 tonnes for stearic acid and 425 tonnes for oleic acid. However, there is no doubt that there is a large unutilised capacity in the industry. It would appear that the capacity already built up will be able to take care of the increase in demand likely to occur during the next five or six years. For, even according to the highest estimate, demand for oleic acid not exceeding 700 tonnes.

In his speech at the opening of the public inquiry into the question of continuance of protection to the industry, Mr K. R. P. Aiyangar, Chairman of the Tariff Commission, has referred in appreciative terms to the progress made by the industry. Although the quality of the industry's products has also improved considerably, there is some anxiety over the recent upward trend in prices as quite a few industries are using stearic and oleic acids and their derivatives. As pointed out by Mr K. R. P. Aiyangar, it should be possible for the industry to bring about a reduction in its cost of production and consequently in the selling prices of its products by the installation of modern machinery and equipment. In view of the fact that indigenous sources for the supply of palm oil an essential raw material needed by the industry, are yet to be developed, a further period of tariff protection will be of great help to the industry in consolidating its position.

US A Letter from Washington

The Administration's Brush with the steel companies naturally made big news. Now that the episode has ended satisfactorily, attention to the less exciting aspects of the economy will be in order.

The March results cap a year of important gains. According to preliminary reports, the nations, total output of goods and services—the Gross National Product (GNP)—hit a seasonally adjusted annual rate of \$549,000 million in the first quarter of 1962 a new record. This represents a gain of some 10 per cent over the rate of the first quarter of 1961, when the recession bottomed out and the sustained upturn began.

If the first quarter GNP did not quite come up to earlier projections, it nonetheless represented a \$7,000 million rise over the previous quarter's rate. Moreover, incorporated in the quarterly figure

is an admittedly sluggish January performance, when business activity was affected by some unusually bad weather in many parts of the country.

Now, with the normally expansive second quarter in its early stages, the data for March appear to indicate a renewed firming of the nation's economic advance.

Particularly heartening has been the upsurge in home building, as work was begun in March on private houses at a seasonally adjusted annual rate of 1,409,000 units. This was a 23 per cent rise over the February rate, and 9 per cent above the rate in March 1961. The March housing pick-up ended four straight months of decline, recovering in a single bound most of the ground lost since last October. What is more, industry officials point to a huge backlog of as yet unused building permits as indicative of a brisk construction pace in the months ahead.

Personal incomes increased in March to a seasonally adjusted annual rate of \$435,300 million. This was another new high, up \$2,000 million above the February rate of \$28,000 million above the March 1961 rate. It was the second consecutive income rise since January's dip.

Total industrial production also rebounded for the second consecutive month in March, climbing to a new record of 116 per cent of the 1957 average. The production gains were widespread among consumer goods, business equipment and materials. Output of industrial machinery and commercial equipment rose to new highs.

Automobile production also rose in March, and the rise appears to be accelerating in April under the imports of booming sales. During the first 10 days of April, new car deliveries by dealers totalled more than 190,000, up 48 per cent over the same period a year ago. This was the strongest sales showing since the record-breaking automobile year of 1955, and it has prompted car makers to step up their production schedules accordingly.

Labour Department officials, meanwhile, are enthusiastic over the March employment gains in the non-farm area. Total non-farm employment rose to a record of nearly 54 million a more than seasonal gain of 160,000 over February. The new figure is 1.2 million higher than in March 1961, and 500,000 higher than in March 1960, before the onset of the last recession.

In manufacturing, the sector hit hardest by that recession, employment, in March rose by 60,000 to more than 16.5 million, although it usually declines by some 40,000 at this time of year.

The average factory work week, a bellweather of industrial activity, also rose more than seasonally in March to 40.5 hours, the

highest since 1956. This helped push average factory earnings to a record \$95.91 a week, up \$6.37 from March 1961.

These developments, plus recent signs of a substantial pick-up in consumer spending—retail sales also hit a new high in March—have engaged government officials in the belief that a good part, if not all, of the early first-quarter lag in economic activity will be made up as the year progresses. Much will depend, of course, on second quarter trends, which are being watched closely by economists in and out of the government.

BOMBAY PORT TRUST

Buoyancy in Receipts

The budget estimates of the Bombay Port Trust for 1962-63 released last week disclose a revenue surplus of Rs 1.17 crores, the revenue receipts being placed at Rs 20.84 crores and the revenue expenditure being put at Rs 19.13 crores. The buoyancy in receipts has been imparted by the estimated increase in the total volume of traffic to be handled by the Port during the year under review. The estimated receipts at Rs 20.84 crores will represent an increase of Rs 2.90 over that of 1961-62. The aggregate volume of trade to be handled by the Port is placed higher at 15.4 million tonnes in contrast to 14.4 million tons according to the revised estimates of traffic for 1961-62.

Imports of mineral oils in the budget year are in all probability to exceed 6 million tonnes, an increase of more than 4 million tons over the revised estimates for 1961-62. Imports of foodgrains are anticipated to improve by 1.4 million tons and a similar rise in the coastal traffic is expected mainly on account of the movement of coal by sea occasioned by the shortage of railway wagons. A substantial increase in the export of manganese ore is also in order consequent on the reduction in railway freights.

The total revenue on general account has been marked at Rs 13.09 crores and if the question of arrears of terminal charges is settled an additional terminal revenue of Rs 10 lakhs per annum will accrue.

The overall expenditure on general account during the year approximates Rs 11.37 crores. This amount includes a provision of Rs 70 lakhs for the payment of arrears to the staff which will be necessitated due to such revision of the pay scales on the recommendations made by the Second Pay Commission spanning a period of 21 months from 1 July 1959 to 31 March 1963.

The prominent items included in the capital programme are dock expansion scheme (Rs 20 lakhs),

reorganisation of the electrical distribution system in the docks (Rs 13.28 lakhs), dredging of the main harbour channel, the purchase of floating plants and the construction of quarters and a hospital for the staff. The trust has also plans for purchasing ten diesel hydraulic locomotives under the Colombo Plan at an approximate cost of Rs 33 lakhs. An allocation of Rs 22.45 lakhs has been provided for the marine oil terminal project. The various expansion programmes will entail an outlay of Rs 5.94 crores during the budget year.

INDAL

Accuracy in Planning

It is a pity that Mr K. C. Mahindra is laying down office this year as Chairman of the Indian Aluminium Co Ltd for next year it will celebrate its silver jubilee. A 14-year association between Mr Mahindra and Indal is thus to end, but Mr Mahindra can look back with satisfaction on a decade and a half during which his company consistently sought to be ahead of time with what he, at last week's annual general meeting of Indal, termed "forward-looking plans." This Indo-Canadian enterprise has set an enviable record in the implementation of expansion projects. The plan for doubling the Hirakud plant's capacity to 20,000 tonnes was completed five months ahead of schedule in 1961. The additional extrusion press was installed on time at Alupuram. Progress is satisfactory at Muri for the expansion of alumina producing facilities, and indeed Mr Mahindra points out that "a portion of the new facilities was brought into operation in December, again ahead of schedule by approximately four months." The integrated expansion programme undertaken in 1959 will in a few weeks be completed.

The achievement is all the more spectacular because "all the projects have been or will be completed within the capital expenditure figures originally budgeted." There are few companies, not only in India but anywhere in the world, which can boast of such accuracy in planning that both time schedules and expenditure estimates have not been exceeded.

For Indal the completion of one project is merely the signal for embarking upon another. Licences have been received from Government for expansion of ingot capacity at Alupuram by 5,730 tonnes and for a new foil mill in Maharashtra with an annual capacity of 2,500 tonnes. Mr Mahindra says: "Other forward-looking plans are under study". Indal is also breaking new grounds as an exporter of know-how, a refreshingly different position from what we usually find ourselves in. Indal was able in 1961 "to make

a small beginning in lending specialist Indian staff for overseas projects."

But the company has its problems too. Although there were protracted negotiations with the Government of Orissa for the supply of power for the Hirakud plant at fixed rates, the State Government has since levied a 15 per cent ad valorem duty on electricity consumption; and the result is that future plans are upset. Mr Mahindra cites the example of Ghana, which has agreed to supply electricity at a fixed rate (which is slightly more than half the equivalent Indian rate) to the Volta Aluminium Co Ltd; and the contract is to be valid for 30 years. The Ghana example is referred to, says Mr Mahindra, "in the hope that the Government of Orissa will reconsider the matter and exempt the aluminium industry in the State from the duty."

The National Planning Association, a non-profit research organisation in Washington, DC, has said of Indal: "It is in this confidence in the future of the country, and in the rewards of doing progressive business there, that the basic motivation of Indian Aluminium Company's management philosophy may be discerned." This is rare praise indeed and it is this attitude that gives room for confidence that its problems will be overcome by the company.

DUNLOP

Higher Profits

Increased business, increased efficiency and increased profits are the features that have been highlighted by Mr B. L. Bexon, Chairman of the Dunlop Rubber Co (India) Ltd, in his speech at the annual general meeting of the company. The profit for the company after providing for taxation, interest and depreciation has been placed at Rs 1,64,75,494 which compares with Rs 1,24,56,228 for 1960. Contributing to this increased level of profits has been the expansion in the business of the company that was witnessed last year. There was an increase in the sales of cycle tyres and tubes in the domestic market. Satisfactory demand for industrial and other types of hoses, high level of sales for Dunlopillo, continuing keen demand for Off-the-road tyres in the irrigation and industrial projects and increased supplies of highway truck and bus tyre are the other factors which have contributed to improved performance by the company. The company has also done well in exports and Mr Bexon has stated that the company is seeking to widen the range of its export products.

The attainment of full production capacity in the company's factories at Shahabad and Ambattur should call for special mention. Mr Bexon referred to the

expansion plans being currently undertaken by the company which include a new line of manufacture namely PVC belting. Though there has been some delay in the implementation of these plans, the finalisation of the target for tyre production by the Government is expected to provide the momentum to their execution. Mr Bexon referred to transport difficulties for movement of the company's finished products and the difficulties that have arisen in the foreign exchange sector which seem to some extent to detract from the prospects for the company. However, the progress being made in producing the various raw materials indigenously should make for steady conditions of working for the company.

B. C. & B. W.

Satisfactory Results

Shareholders of the Buckingham and Carnatic Company Limited and of the Bangalore Woolen Cotton and Silk Mills Co Ltd, should have cause for satisfaction at the financial results of the two companies for the last year. Both the companies have declared higher dividends at 18 per cent gross equivalent to 12½ per cent net which compares with the 10 per cent net declared for each of the preceding eight years. It is noteworthy that the Buckingham and Carnatic Company has registered record sales which include a rise in exports by 2½ per cent as compared with exports in 1960-61. However it is not improvement in production and sales alone which the higher profits for the year reflect. The balance-sheet of the Buckingham and Carnatic Company shows that the company has to meet a rise in cost under almost every item. That this has not affected the level of profits shows the care the management took to offset it by more efficient working. Further rise in costs is inevitable during 1962 since both the companies have commitments arising from rise in wage of workpeople by Rs 2 per month under the terms of the Textile Wage Board recommendations, doubling of the Company's contribution to the Employees' State Insurance Scheme and the special levy imposed on consumption of Indian cotton. This naturally underlines the need for further stepping up efficiency to maintain profits level.

In his speech at the annual general meetings of these two Companies Mr E. F. G. Hunter, has drawn attention to the difficulties experienced by the cotton textile industry in obtaining raw cotton. Total production during 1961-62 was only of the order of 43 lakhs bales which was far below the requirements of the indigenous industry. In this connection Mr Hunter warns that "unless the Government takes early

action to import suitable short staple cotton with which to augment indigenous supplies, the industry will later in the year be faced with an acute shortage of its primary raw material".

Mr Hunter is also critical of the restriction of production which is being effected by the authorities by the control of looms and spindles installed. According to him, this has created a condition of shortage in the textiles in the country. Referring to the Third Plan target for cotton textiles, Mr Hunter has expressed the view that the target at 5,800 million yards will not prove sufficient to meet the future growth in demand. To what extent exports could be stepped up becomes, in this circumstance, problematic. The Government has announced a scheme of exports which attach penalties for failure to fulfil export obligations. This is hardly the condition which will help the industry to improve productivity which is essential if the country is to maintain its position in world markets.

NEWS IN BRIEF

The production of iron ore during February, 1962 was 1,213,000 metric tons, according to the Indian Bureau of Mines.

This was higher by 30 per cent when compared to the output of 933,000 metric tons during the corresponding month of the preceding year.

Orissa was the principal producing State with an output of 562,000 metric tons followed by Bihar with an output of 259,000 metric tons. The production from Madhya Pradesh, Mysore, Maharashtra and Andhra Pradesh was 207,000, 114,000, 39,000 and 34,000 metric tons, respectively.

During the month despatches for consumption in the iron and steel plants totalled 665,000 metric tons while the despatches for export amounted to 236,000 metric tons.

The Union Minister for Irrigation and Power, informed the Lok Sabha today that the irrigation potential created upto 1961-62 from the major and medium Projects taken up during the First and the Second Five-Year Plans was about 12.9 million acres. The area expected to be irrigated in the First Five-Year Plan, 250 irrigation schemes—20 major and 230 medium—were included, of which 237—19 major and 218 medium—schemes were taken up for execution during the First Plan period.

In the Second Five-Year Plan, 188 new schemes—30 major and 158 medium—were included, of which 154 irrigation schemes—21 major and 133 medium—were taken up for execution. In addition, 13 irrigation schemes, which were not taken up in the First Plan were also started in this period bringing the total number of major and medium irrigation schemes taken up in the Second Plan to 167, by the end of the Second Plan period, an outlay of Rs 670 crores had been incurred on these schemes.

Clive Street Gossip

"I must have liberty
Withal, as large a charter as the wind
To blow on whom I please"
—As You Like It.

PRESIDENT Ayub Khan cannot possibly be serious about solving the Kashmir problem. It is difficult to explain in any other way his perverse insistence on having the question debated at the UN once again. The suggestion has sometimes been made that he is deriving some encouragement from influential friends. To judge by the obvious weariness with the subject that these people show, this hypothesis is difficult to accept. More plausible is the suggestion that Pakistan is blackmailing them into a sense of guilt by appealing to its pro-west record against India's ostentatious neutrality, its membership of the regional anti-communist military blocs and its general readiness to toe the western line even when it sometimes involves taking a line different from that of other Asian and African nations. These accusations sometimes go home. They try often to tell Pakistan that it would be best for the two countries to discuss the question and come to agreement. Such advice is not merely pious because they have some evidence of India's readiness to participate in such a discussion. They have also a shrewd idea of what India is willing to concede and they consider that such a concession would be the most satisfactory basis for the final solution of the problem. As far as I can see, the only possible solution is for the present factual position in Kashmir to be given legal recognition. This would mean that the present cease-fire line should, with necessary adjustments to be mutually agreed upon, be made the permanent frontier between the two countries. That India may not, when it came to the sticking point, object to this solution is a fair enough inference from its frequent reference to the need for recognising the present reality in Kashmir and not get bogged in the legal tangles of a decade ago. This of course is not a solution that will find automatic acceptance in the country but it is not one for which consent cannot be won after some persuasion. After all, after having swallowed the partition of the country, we should not strain at the partition of Kashmir, if that would put an end to a dispute that is poisoning the lives of the two peoples. For some reason President Ayub Khan is shying away from this solution. One suspects that it is the fear that the solution of the Kashmir

problem will destroy the one convenient alibi for many failures.

The CPI has emerged, after the deliberations of its National Council, no nearer a final solution of the problems of leadership that are plaguing it. Its seriousness on generalities like the need for a "national democratic front to unite all democratic secular and progressive forces" will hardly conceal its failure to paper completely the cracks in its own walls. The struggle that preceded Dange's election as Chairman—the office itself, an innovation to accommodate differing factions within the party and not acceded to without a struggle—and Mr Nambudiripad as General Secretary is probably the beginning and not the end of the struggle. The council itself admits that "the ideological and political activities of the party are unsatisfactory and there is need for remoulding them in certain vital respects" but it has passed the buck to the new secretariat and central executive. Time has thus been bought till the next meeting of the Council but whether things will sort themselves out by then is doubtful. The self-imposed silence on the implications of the Twenty Second Congress of the Soviet Communist party is to continue. This is not only because of the toughness of the China lobby in the party but also because of the confusion caused by the extent of the anti-Stalin feelings in the ruling circles in the Soviet Union. The ideological pattern has been further confused by recent reports of a rapprochement between the Soviet Union and the People's Republic of China. In the national context, the CPI's equivocation over Sino-Indian Dispute is no nearer its end as the "leftist" faction is not ready to yield any ideological ground. The post-election heart-searching is also postponed to a date after the secretariat had prepared a report on it. Here again, the original embarrassment was principally caused by the West Bengal unit which, with incredible ineptitude, chose the slogan of an "alternative government" leading to much post-election baiting by others. The choice of Mr Nambudiripad as General Secretary simultaneously with the elevation of Mr Dange as Chairman has been widely interpreted as indicative of the fact that the power disposi-

tion inter se is very much what it was before. Time was when the Communist Party was a shining example of party discipline. Unless it regains its earlier cohesiveness, its effectiveness will forever be undermined—a circumstance that many may not deplore.

On the face of it, there is no valid reason why artists should have special treatment in such matters as taxes. Even so, it comes as a shock that the sales tax people in Madras should have sought to tax as proceeds from sale "within the meaning of the act" certain receipts of a well known sculptor on two commissions. Mercifully, the Madras High Court had held that the attempt is unlawful. Controversy has sometimes raged around Devi Prasad Roy Chowdhury's "Gandhiji" (standing at the junction of Park Street and Chowringhee) and "The Triumph of Labour" (on the Marina in Madras), but it requires obtuseness of a special order to consider them as articles of sale like brinjal or black gram. Mr Chowdhury urged in vain before the sales tax authorities that he was not a bania but an artist: at the worst, a contractor executing "works that did not involve any element of sale". The tax officer was not impressed and the High Court had to interfere. It said in effect that in order to attract sales tax, the sale should be one effected in the course of trade or business and that the two pieces were not "articles of commerce or trade" made for the purpose of finding a market for commercial exploitation. Thus on purely legal grounds philistinism has been worsted and I for one cannot forbear from cheering.

Of course, the issues are not so clear-cut and self-evident in all cases where a work of art has its brush with law. For instance, there was a good deal of hypocrisy in the purely legal arguments urged on behalf of Lady Chatterley's Lover. If the sexual implications of some of the passages in the book that have been aired in the pages of Encounter since the trial had been made clearer to the jury, it might well have returned a different verdict. (Incidentally, the obsession of English intellectuals with this case is a psychological curiosity of some interest.) But the important point is that such a verdict would still have left the merits of the book as a piece of creative literature untouched. How can creative literature, which is often subversive of the very basis of the kind of morality on which our laws are based be logically judged by criteria that such laws lay down? And yet it often becomes expedient to do so and the

battles of the artist are often fought within a frame-work he is out to destroy and according to rules he probably scorns. It is rather like the odd spectacle of a self-proclaimed revolutionary bent on overthrowing the established order basing his defence on the very law of the establishment he is trying to overthrow. In neither case is the friendly onlooker disposed to be too censorious about the hypocrisy involved in such a procedure. So long as his artistic conscience is clear, he and his champions may permit themselves a somewhat elastic legal conscience. In such a war, all is fair.

Whilst a popular victory, President Kennedy's triumph over Big Steel in America also appears to have given rise to a feeling of dismay in certain quarters in that country. Should an American President have gone to what the Pittsburgh Post Gazette calls "disquieting lengths to bolster (his) case"? In the haven of free enterprise obviously the answer will sometimes be a resounding "No." The Wall Street Journal's language is more than merely harsh: "... this proof positive of how naked political power, ruthlessly used, could smash any private citizen who got in its way." The argument does not revolve around whether or no the President should have interceded, but rather whether Big Steel's decision to raise prices by \$6 a ton should have called forth from him such massive show of strength.

In the fifteen months since his inauguration, President Kennedy has had a measure of success in forging an entente cordiale with big business. Wall Street was not displeased with his fiscal policies. But the honeymoon is now over, and the only cause for wonderment is perhaps that it has lasted so long. More vocal and stiffer opposition will undoubtedly confront Mr Kennedy both in Congress and outside it. A stiffening of Republican backs is naturally to be expected in as much as the President's action—or should we say, Big Steel's blunder and the presidential action that followed it—will have evoked popular commendation so greatly as to help the Democratic Party's chances in next November's mid-term congressional elections. To the world outside, President Kennedy's show of strength is greatly welcome. American foreign policy and foreign aid decisions too often became dithering and uncertain under the eight years of the Republican Administration simply because the President chose not to exercise his power. The assumption of responsibility necessarily involves the use of power. We have long known that President Kennedy is keenly alive to his responsibilities; we now know that he will not shirk using the power that the most powerful man in the world possesses.

The FICCI on the Budget

THE Committee of the Federation of Indian Chambers of Commerce and Industry has measured the Budget against the requirements of economic growth and export promotion and found it wanting. In the considered opinion of the Committee, the cumulative effect of all the measures of direct taxation will be reduction of the savings in the hands of individuals, progressive diminution of their capacity to save and a severe set-back to investment in new ventures. Corporate savings, one of the most important sources of financing the private sector, will be reduced. The Finance Minister, it has been made clear, does not agree with this pessimistic estimate of the effects of his taxation proposals. Anyone who cherished the hope, that the Finance Minister had mental reservation about the new levies or regretted the necessity to step up the rate of corporation tax, will be completely disillusioned by what he is understood to have told the Consultative Committee of the Finance Ministry last Tuesday. He has justified the increase in corporation tax by pointing out that profits and dividends have been rising faster. He is apparently satisfied that companies would be left with sufficient funds for expansion after paying tax at the enhanced rate. The Finance Minister, preferred to reserve his comments on many of the topics raised at the meeting to his reply to the Budget debate. But there was no hint in what he is understood to have said that he had something up his sleeve by way of tax concessions to be announced at the last moment. He does not share the view that additional indirect taxes will result in increased prices, especially of cotton textiles. The additional levies on textiles, it appears, are designed

Bokaro Survey

The announcement by the US Ambassador last Sunday regarding the techno-economic survey of the Bokaro Steel Project has been followed up by a statement by the Minister for Steel and Heavy Industries in Lok Sabha on 1 May. Mr Subramaniam stated that discussions with the American Agency for International Development had been somewhat prolonged, but an understanding with reference to the next step to be taken had been reached. AID will arrange for an American team of experts to undertake a techno-economic survey of the projected Bokaro Plant. The American team is expected to examine the position regarding availability of the raw materials and transport and other facilities. The actual decision on the aid, will, however, be taken only after the report of the team is available and satisfactory agreement has been reached on other important aspects of the project. The cost of the survey is for the present being met by AID and the survey will be directed by the United States Steel Corporation. The Minister also stated that, as at present, the United States steel firms have not raised the question of equity participation in the project. He also affirmed Government's intention to associate fully Indian resources and skills in design and engineering of steel plants with the further stages of the project. Though the Minister stated that the procedure adopted was by no means unusual, it will result in further delay in getting the project started. There is no indication when the techno-economic survey will be completed. If the result is favourable a project report will have to be prepared, which will take more time, before the aid agreement could be finalised. By present indications, Bokaro is hardly likely to make any contribution to the achievement of the Third Plan target for Steel. Mr N. N. Wanchoo, Secretary, Department of Iron and Steel who left on May 1, for West Germany to discuss expansion of Rourkela plant is also expected to visit Washington in connection with the Bokaro Plant before returning to India. Mr Wanchoo is accompanied by Mr K. N. Subbaraman, Director, Hindustan Steel and Mr K. M. George, Chief Designs Engineer of Hindustan Steel.

Training in Company Law Administration

At the last meeting of the Industries Advisory Council, the complexities of Company Law came in for a measure of critical attention. References were made by prominent industrialists to the procedural difficulties and 'unnecessary controls which apparently served no purpose

except to waste the time of highly paid administrators and top management. The Secretary of the Department of Company Law Administration took the bull by the horns when he inaugurated the staff training scheme for field organisations of the Department, in Delhi last Tuesday. Mr Majumdar declared that the complexity of Company Law was the inevitable result of the complexity of industrial and business organisation. Moreover, it was bound to get more complicated in future with the economic development of the country and the growth and diversification of business. Simplification of the law was not, therefore, practicable. But he conceded that the public are entitled to better service and the only way to ensure it was by improving the instruments for execution of policy.

The training scheme which will be extended to other centres also, wherever practicable, is intended to ensure an adequate appreciation of the objectives of the legislation and procedures on the part of the staff. The Companies Act is a highly technical piece of legislation and requires for its purposeful implementation a high degree of knowledge in law and accounting principles on the part of those entrusted with its administration. The training scheme has been designed to impart basic knowledge of the principles involved to the trainees and as so oriented as to keep a balance between principles and practice so that the trainees will also be coached in respect of application of principles to concrete cases. Arrangements will be made for giving lectures for an hour every working day for a period of four months. At the end of this period there will be a departmental examination to test how far the staff has benefited by the scheme. The main training will be followed by refresher courses every year. The lectures will be given by Departmental Officers and also, where possible, by outsiders like Chartered Accountants in practice. It has been made compulsory for all staff at the level of Assistants and Upper Division Clerks to undergo this training, while for Lower Division Clerks it is optional. The question whether any incentive should be provided to the staff participating in the training is under consideration.

Indian Aluminium Company, Limited

Expansion Programme Completed Well Ahead of Schedule

Mr K. C. Mahindra, Chairman, on Company's 'Forward-Looking' Plans

The following is the address to the shareholders delivered by the Chairman, Mr. K. C. Mahindra, at the Twenty-fourth Annual General Meeting of Indian Aluminium Company, Limited held in Calcutta on Friday, April 27th 1962.

I have great pleasure in welcoming you to the Twenty-fourth Annual General Meeting of the Company.

The salient features of the Company's operations in 1961 are contained in the Directors' Report which has already been submitted to you along with the audited accounts for the year. You will no doubt have noticed that following the termination of the sole selling agency agreement with Venesta Foils Limited effective 30th June 1961, sales of agency products for the year dropped to Rs. 17 million from Rs. 32 million in 1960. Production and sales of the Company's own products were however maintained at a satisfactory level during the year despite extensive dislocation by the construction work on the expansion programme at each of the plants.

The net profit for the year of Rs. 11.10 million shows an apparent decrease from the Rs. 11.98 million in 1960. During the year there were increased interest charges on borrowings, additional wage costs following new labour agreements, and exports, though small in quantum, at prices below total cost. But the major shift is due to the much larger allocation to Development Rebate Reserve (Rs. 4.55 million as against Rs. 263,000 in 1960).

During 1961 your Company entered the export sales market for the first time. Sheets and circles were sold to South Vietnam in the face of severe competitive conditions. Your Company's efforts in this direction are in conformity with the declared wishes of the Government of India and we will continue to search for overseas markets. Currently, your Company is looking into the possibilities of exporting aluminium extrusion and paste to south-east Asian countries.

In recommending a dividend of Rs. 1.50 to be paid on each ordinary share, your Directors proposed that to the extent as it may be possible, the dividend should be paid out of the Company's undistributed profits exempt from tax under Section 15C of the Indian Income-tax Act. It now gives me great pleasure to announce that the Income-tax Officer has certified that 78.1% of the dividend on

ordinary shares will be deemed to have come out from the undistributed profits of the Company exempt under Section 15C of the Indian Income-tax Act 1922. 78.1% of the ordinary dividend will thus be exempt in the hands of the respective shareholders for payment of income-tax and super-tax.

Dividends will be paid to the ordinary shareholders in accordance with the above instructions of the Income-tax Department.

The most satisfying aspect of your Company's activities during 1961 was the progress made in respect of the expansion programme. At Hirakud, the expansion aimed at doubling the capacity of the plant to 20,000 tonnes per annum was completed five months ahead of schedule. At Alupuram, the additional extrusion press was installed on time and started operating in October 1961. The expansion of alumina producing facilities at Muri progressed satisfactorily and a portion of the new facilities was brought into operation in December, again ahead of schedule by approximately four months. In a few weeks' time the Company will have completed the integrated expansion programme undertaken during 1959. You will be glad to know that all the projects have been or will be completed within the capital expenditure figures originally budgeted. This is specially heartening in view of what appears to me, a chronic occurrence in inflationary conditions to exceed capital estimates. On behalf of all of you, may I take this opportunity of expressing our sincere appreciation of the efforts of all those within the Company who have made this remarkable achievement possible. I should mention at this stage that a few years back the Company commenced developing an engineering and design section, and the closeness between actuals and estimates are largely due to the meticulous preparatory exercises by our engineers. Our thanks are also due in very great measure to our technical consultants, Aluminium Laboratories Limited, under whose guidance and general supervision the expansion programme was conceived and carried out.

I have said it before, but it merits repetition, that your Directors are anxious that your Company continues to play its leading role in the development of aluminium industry in India. With this in view proposals consistent with sound business principles are constantly in review for further expansion of the Company's activities.

In accordance with this policy plans were submitted in 1960 to the Government for the expansion of ingot capacity at Alupuram by 5,730 tonnes and for the establishment of a foil mill in Maharashtra State with an annual capacity of 2,500 tonnes of aluminium foil. Late in 1961 we received licences under the Industries (Development & Regulation) Act from the Government of India covering these projects, although financing terms still await Government's approval. While there have been unnecessary delays we hope we shall soon be able to start construction work which when completed will save the country approximately Rs. 8 million per annum in foreign exchange. Other forward-looking plans are also under study for further expansion of the Company's activities as and when market and other conditions justify.

Shareholders with a historic sense will have noticed that the Company has followed over the years a consistent and continuous policy of development; the thinking of your Board and the Management has no doubt been inspired by the philosophy of growth which Indian planners placed before us, but we have advisedly, and I am proud to say, deliberately planned to be a stage ahead of the targets and aims of the Planning Commission. The Third Five Year Plan, which commenced last year expressed a tentative but half-hearted hope that by the end of the Fourth Plan, i.e. 1971, India would reach the stage of a self-sustaining economy. In our own sphere of industrial operations, I make bold to state that Indian Aluminium Company would reach this stage 5 years ahead; I mean that expectations are that your Company would by 1966-67 achieve sufficient strength to stand on its own and generate enough technique, enough management and enough resources to follow through further expansions.

Prof. J. K. Galbraith, the distinguished Harvard economist, and now the US Ambassador to India, commenting on Indian planning in 1959, affirmed that:

"In both capitalist and communist countries investment is in very large measure from the earnings of industrial enterprises. Something must happen in India like this. Industrial plants must take on their full job which is to be efficient producers and to accumulate surpluses which will provide for future expansion."

Your Company has taken on this full job.

Recently, the National Planning Association, a non-profit research organisation in Washington D.C., made a case study of the Indian Aluminium Company as an example of Indo-Canadian collaboration. Here is their recorded judgement:

"...different aspects of the Company's growth reveal an underlying unity of approach, ...fitting current actions into a telescopic view of future objectives. This view encompasses an industrially developed economy in which aluminium will play an important role. It is enterprising business policy and enlightened self interest to be in the vanguard of this development, which demands a many sided responsibility in investment, in technical and managerial efficiency and above all in willingness to share responsibility for the Indian community's development over and above the profit motive. Indispensable to this responsibility is a confidence in one's ability to assess and face the future. It is in this confidence in the future of the country, and in the rewards of doing progressive business there, that the basic motivation of Indian Aluminium Company's management philosophy may be discerned."

You will be interested to hear that after many years of benefiting through borrowing technicians and specialists from associate companies overseas, your Company was able in 1961 to make a small beginning in lending specialist Indian staff for overseas projects. I welcome this beginning and look forward to further opportunities for your Company to assist in the development of new projects overseas through the loan of Indian specialists, as such exchanges benefit not only the overseas projects but also this Company and the men concerned through broadening of experience.

As we all know, aluminium industry is a major power consuming industry. About 2.5KW/year of electric power is consumed in the production of every tonne of metal, the power cost forming approximately 20 per cent of the total cost of production. It therefore becomes necessary for all producers of aluminium to ensure a long-term supply at rates which are both economical and definite. Before setting up its Hirakud

smelter and again, before its further expansion, your Company held protracted negotiations with the Government of Orissa to ensure long-term supply of power at fixed rates. These negotiations resulted in our entering into firm long-term contracts with the Government which formed the basis of our expansion.

In mid-October 1961 the Government of Orissa levied a 15 per cent ad valorem duty on the consumption of electricity in the State. This levy of duty has considerably upset our future plans and put the Company to a serious competitive disadvantage through direct increase in the cost of metal produced at Hirakud. The Company does not claim that the imposition is ultra vires the rights of the State, but submits that the levy will furnish a handicap to long-term planning, beside increasing the already high prices for aluminium products in the country. It is also a matter for consideration of the authorities that development in a comparatively underdeveloped country can proceed apace only if the contractual fundaments of industrial operations are not disturbed by the Government for the period of the contract. May I, in contrast, cite the case of Ghana where Volta River Authority has been set up for construction and operation of a dam and power generating plant and firm agreements have been signed with a consortium which proposes to set up an aluminium smelter. Guarantees have been given by Government of Ghana and that while the power contract is in existence, the Government will not impose any tax or other fiscal charge on the use of electric power by the Volta Aluminium Company Limited. The tenure of the contract is for 30 years, and rate for power is fixed firm at 2.625 U.S. mills per Kilowatt hour or Rs. 110 per KW/year (in contrast to Rs 190 per KW/year at Hirakud—Stage II). This constitutes the linchpin of the entire project as the power contract forms the foundation for financing the hydro dam and power plant. I have cited the Ghana example in the hope that the Government of Orissa will reconsider the matter and exempt the aluminium industry in the State from the duty.

Another interesting feature of the Ghana project may be mentioned: Government of Ghana has agreed that for the first 30 years the Volta Aluminium Company's income taxes will be based on the tax laws in effect on January 2, 1961, including receipt of benefit from Pioneer Company relief. There is also provision for exemption from customs duties of imported construction materials and exemption from minerals duties in connection with the mining or processing of Ghanaian bauxite.

I would like to draw the attention of the Government from this matter to another matter which is

of some concern to both the present and the potential producers of aluminium in this country. It has often been said that India has plentiful supply of bauxite, the ore from which aluminium is produced. This is, perhaps, true but it is equally true that the deposits of bauxite ore throughout India have not yet been thoroughly field-tested for quality or reserves. Aluminium producers in India naturally desire to make geological surveys of areas known to possess bauxite and your Company has applied for prospecting licences for several of such areas. One difficulty which is being experienced in this exploratory effort is that a lot of bauxite-bearing areas are under the mining lease of persons whom I would venture to call "intermediates", i.e. persons who have no direct interest in the utilisation of ore for producing aluminium. Large areas are thus closed for any prospecting or exploratory effort and sometimes there is a scramble for obtaining mining leases by private negotiations for areas which are yet unproven. Whatever has been done over the past years probably cannot be undone; but I venture to suggest that State Governments should from now on exercise care in issuing prospecting licences or giving mining leases for bauxite properties to persons or companies who are not directly engaged in the production of aluminium. This would ensure more effective utilisation of the bauxite reserves in the country and greatly contribute to the establishment of new economic production units.

Speaking on this occasion last year, I had mentioned to you the transportation difficulties which the Company was experiencing on account of uncertainty of railway wagon availability. This difficulty continues, and representations made to the Railway Board have proved of little avail. The Company has been forced to use road transport in several instances, which has proved costly as well as unsatisfactory in other respects. But it would appear that we have no alternative until such time as the transportation situation in the country improves.

I had also spoken to you last year about the way in which excise duty regulations were being enforced resulting in serious competitive disadvantage to your Company. Our application to the Central Board of Revenue for permission to move aluminium ingot in bond from the smelters at Alupuram and Hirakud to the rolling mill at Belur has as yet produced no relief. This matter was also taken up with the Central Excise Reorganisation Committee. In the meantime, our losses on account of blockage of working capital on metal in pipeline and excise duty on melt loss are multiplying. This is an unfair burden which the rigidity of regulations has imposed on the Company.

Several years ago speaking from this forum I attempted a comparison between two kinds of growth—that in population and in productivity. Since then we in India have learnt in the bitter context of a population explosion that most of our efforts at 'national growth' have proved inadequate. We have still to comprehend the true meaning of productivity, its nature and content, for otherwise our development plans for growth would not so fumble and confound. Despite a plethora of productivity associations seminars, numerous delegations abroad and published records of these trips, I remain sceptical in that the true measure and content of this coordinate of industrial activity is little understood. There is a personal factor which appears to be missing in such reportings—a factor of personal judicious assessment of the extent of application of a particular analysis in a selected industry. Is productivity a mere coefficient of labour, of work done by the individual artisan? Does automation qualify the conclusions? Does the emergence of professional managerial class, as distinct from financiers or even technocrats have any bearing on the classical concept of productivity as output per man-hour? This is a puzzling thesis.

The popular measuring rod for productivity is output per man-hour. But the President of US Steel Corporation—the largest steel complex in the world—has recently raised a few broad queries:

"What about the capital invested in more efficient equipment? What about the research which produced better production processes and the knowhow which made available higher quality materials? What about the input of man-management, when directed and contributed to this effort?"

These are pertinent questions; practical difficulties emerge as one begins to frame an equitable distribution of gains in productivity over the various sectors—labour, management, machines, research, technology, capital employed, etc.

Searching for an appropriate definition of Productivity, I have not come across anything better than:

"an attempt to anticipate and solve man's major problems on earth by providing through the highest technology more and more of everything, for everybody from less and less resources."

This does not however provide either a measure for gauging the actual quantum of increase in productivity, nor provide the base for any rational system of distribution.

But no matter what economic and industrial philosophy inspires national efforts, productivity increment is essential for growth and

productivity is largely the result of social attitudes of the labour force—their attitudes to technology, to professional management, to work discipline. In our country under the stress of circumstances, over-burdened by extreme poverty many of these attitudes have got perverted and frequently one witnesses drop in productivity with inexorable increase in wage costs. This is a spectacle which one should deplore and not applaud—as many of our labour and even political leaders do, without reason and without understanding. Whatsoever the measure of productivity one may adopt, no one will deny that it is the key as well as the handmaiden of prosperity. Witness Japan: her astounding industrial recovery is explained in large part by productivity-wages-prices relationship. Over the six years, 1955-60 productivity increased by 47 per cent, wages by 34.3 per cent and prices only by 2.8 per cent. As a recent survey in the London Economist indicated "the margin between productivity and wages makes possible a high rate of capital accumulation by companies, and thus a high rate of capital investment. In addition, personal savings are exceedingly high... these are probably the most important determinants of economic growth in Japan." There is a deep lesson to be learnt here.

An odd feature in the Indian planning firmament has been the comparative playdown of productivity in the agricultural sector—a field which contributes to more than 53 per cent of the gross national income of the country. An understanding of the perspective relationship between agriculture and industry, of the true meaning and content of productivity, of the measures which will quickly fructify and yield tangible results—these are essential virtues which we must cultivate along with discipline of mind and of habit. The latter is most needed in the context of our present development.

Government quite rightly has concerned itself over the last decade with a fair deal for industrial workers but, perhaps unwillingly, has created a climate of unenforceable and irrational demands which halt and do serious damage to the productive machine. With a larger and larger portion of the cake the industrial worker, by and large, recognises no discipline and little responsibility for growth in results.

It may interest you, as it intrigued me, to know that a keen foreign observer mentioned to me the other day that perhaps what India needs is compulsory military training—to import amongst the young a sense of discipline during the formative stages of one's character. A country need not become war-minded if there is compulsory military training—witness Switzerland; nor need it possess arms—as was successfully done in Germany a few years

after the war ended. This is a commendable counsel coming from a friend of our country.

In the person of Mr. A. J. Zullig, the new Managing Director of the Company, you see a very wise and experienced head. It is fortunate that the Company has been able to secure the services of a man who has lived his life with aluminium and at the same time is conversant with social and industrial conditions in diverse climes and places. It is my hope that he will stay with the Company for

many years and continue the tradition of sound business and forward look for which the Company has already made a name.

To the staff and workers I give our thanks on your behalf for their loyal and steady work throughout the year.

Perhaps you will allow me to conclude on a personal note. This will be the last occasion I will be addressing the Shareholders at their Annual General Meeting. I am aware of the calendar but indifferent health also has com-

pelled me to seek retirement from active work. Let me say that I am deeply grateful to the Shareholders for their indulgence, to the members of the Board and the Staff for their confidence and to everyone connected with this great Company for the trust and loyalty they gave me throughout my 14 years' association with them. I have relished with them the dignity of shared confidence for I believe that faith and work alone do not always yield results; work is merely an expression of what man

believes and does. To be enduring other men must feel and believe and work the same way. These years have been personally of great satisfaction to me. I feel happy that the Company is in good shape and that I will be entrusting the charge in the next few months into younger and abler hands.

NOTE: This does not purport to be a record of the proceedings of the Annual General Meeting.

The Indian Bank Limited

Satisfactory Progress Made

Dr P. V. Rajamannar, the Chairman, on Interest Rates

Excerpts from the speech delivered by Dr. P. V. Rajamannar, D.LITT., LL.D., M.L.C., Chief Justice of Madras (retired), Chairman at the Fifty-fifth Annual General Meeting held on Wednesday the 25th April 1962 at 4 p.m. at the Registered Office of the Bank viz., The Indian Chamber Buildings, Esplanade, Madras-1.

Gentlemen,

I would now refer briefly to the result of the recent General Elections. The people of this State have again returned to power Shri Kamaraj and his colleagues. The Ministry of Shri Kamaraj has earned for Madras the reputation of being the best governed State in the country. Its two great virtues are stability and solidarity, which are very essential for industrial and mercantile progress. Let me also give expression to our pleasure and satisfaction at the inclusion of Shri C. Subramaniam, who steered the finances of our State for several years with considerable ability, in the Cabinet of the Union, in charge of one of the most important portfolios, namely, Steel and Heavy Industries. I have no doubt that with his dynamic energy and resourcefulness, he will be able to give an impetus to the Industrial Development of our Country. The Banks on their part will certainly be willing and ready to offer all the assistance in that direction.

GENERAL ECONOMIC CONDITIONS IN THE COUNTRY

Before commenting on the figures in the statements before you, I should like to make a few observations on the general economic conditions in the country.

By the beginning of the year 1961, the second Five-Year Plan period was completed and the Third Five-Year Plan period commenced. Each succeeding plan has naturally been more ambitious

than the earlier one and the economy of the country has greatly benefited by these plans and their implementation. The plans involved a large outlay of foreign exchange and we could get through them only with generous aid from certain well developed countries, particularly the United States of America. Even so, we had to borrow from the International Monetary Fund to keep our foreign assets from dwindling to below danger point.

The implementation of the plans necessitated deficit financing despite the generous help received from more fortunately placed friends overseas. Such deficit financing has been, I have no doubt, responsible for the inflation in the country and the continued rising trend of the price level. It is satisfactory to note, however, that during the third plan period, deficit financing is expected to be kept at a lower level. But, as this can only be achieved by imposing fresh taxation, it is difficult to say how far the price level can be controlled.

All this emphasises the very great urgency and necessity of increasing our exports and earning as much foreign exchange as possible. We need foreign exchange not only for purchasing machinery for our new industries but also for the purpose of importing necessary raw materials for the various industries that have already been started. In this connection, I welcome the formation of a separate Ministry of External Trade, at the Centre and we shall hope that this Ministry will achieve the much needed success in this direction.

Such of you as are interested in statistics will have seen that in 1961, we have increased our production both in the agricultural and industrial sectors by more than 8% over the previous year. This satisfactory state could be achieved

only by the implementation of the first two Five-Year Plans and there can be no two opinions on the necessity for or the success of the plans.

The Capital market has been very active and buoyant during the year and almost all the new issues have been over-subscribed. A number of industries are being started with foreign collaboration and it is gratifying that the aid that we receive from overseas friends is not only from Government to Government but also extends to the private sector.

In the Banking field, following the increase in agricultural and industrial production the demand for bank credit rose; the credit expansion during the busy season was in the order of Rs. 198 crores as compared to Rs. 188 crores in the previous year. During the slack season the contraction was Rs. 73 crores as against Rs. 20 crores in the year before.

Deposits of scheduled banks aggregated Rs. 1978 crores over the year as compared to Rs. 1893 crores at the end of 1960.

I would now like to make some comments on two or three matters of general interest to Banks and Bankers.

The Deposit Insurance Scheme has been put into effect from the 1st January 1962 and a Corporation for the purpose commenced functioning from that date. The entire capital has been subscribed by the Reserve Bank of India. It was originally suggested that the State Bank of India should be out of the scheme; but finally that institution has also been included. The premium payable to the Corporation has been fixed at 5 naya Paise per Rs. 100 per annum and this has to be paid in four quarterly instalments during the year. Although the scheme has been criticised on the ground that sound banks are penalised by having to pay for unnecessary insurance, in

the light of the contretemps in the Banking World in 1960, the scheme is welcomed as infusing confidence in the minds of particularly the small depositors and I have no doubt that the confidence so created will ensure to the benefit of both the Banks and the depositing public. Another point I would like to touch upon is the question of the ratio of owned funds (that is paid up capital and reserves) to deposits. In consultation with all Banks, the Reserve Bank of India has suggested that, by convention, all Banks should aim at a ratio of six per cent and you will have noticed that a number of Banks have taken steps to implement this suggestion. In our case, we are recommending an addition of Rs. 5 lakhs to the Reserve this year. The Directors have called up Rs. 10 per share on the 28,000 partly paid shares in the Bank and will make a further call of Rs. 10 on these shares next month, making all the issued and subscribed capital of the Bank fully paid.

I shall now dwell upon another important matter which has attracted large publicity. I am referring to the question of the rates of interest allowed by Banks on deposits. I am sure you would like to hear our views in the matter especially as differing views have been expressed by the Chairmen of Banks who have spoken at the Annual General Meetings of their Banks recently. A number of Banks in the Country entered into a voluntary agreement in 1958 on the maximum rates of interest to be allowed on the various types of deposits of customers. Under this agreement Banks having deposits of less than Rs. 25 Crores were allowed to pay interest at 4% per annum more than that paid by the bigger banks. Till 1960 the deposits of Banks went on increasing and the agreement was considered to have worked satisfactorily. But, in the

last months of 1960, with the failure of two Banks, confidence in Banks other than the very big ones was somewhat shaken and the tempo of further accretions to deposits slowed down in the case of small and medium sized banks. Fortunately, this trend was checked late in 1961; but it was still found that the increase in the deposits of Small and Medium Sized banks has not been as great as was the case with other Big banks. Along with other Banks of our size we felt a change in the inter-bank agreement was called for and we have been pressing for such a change so that we could offer a quarter per cent more interest on our time deposits. A special Committee of the Indian Banks' Association considered the matter in detail some time back and have come to the conclusion that a change is called for in the present circumstances. It is expected that the recommendations of the Committee will be accepted by the Association soon. If for any reason the Big Banks cannot agree to the sound principle of allowing Banks of different sizes to quote different rates consistent with their resources, and under a common formula, the responsibility for the abandonment of the agreement should have to be laid on their shoulders.

In this connection I would like to endorse the views expressed by the Chairman of the State Bank of India in his recent speech in the Annual General Meeting of the Shareholders of that Bank. He said that as a result of increasing the rate of interest on Savings Bank deposits, his Bank was able to attract more deposits. He also said that there was a limit to which deposit rates can be raised as they had to be in line with the overall structure of interest rates in the country and the financial

position of each individual Bank has also to be taken into account. I am quite sure, gentlemen, that you would agree with me that our request to the Indian Banks' Association to allow us to quote a $\frac{1}{4}$ % interest more than big banks is quite reasonable and necessary to attract more deposits.

AFFAIRS OF THE BANK

I shall now turn to the affairs of our own Bank.

During the year, we opened a Branch in the Steel City of Jamshedpur in Bihar, thereby extending our activities to the Eighth State in our Country.

By order of the Central Government under Section 45 of the Banking Companies Act, the Rayalaseema Bank Ltd., was amalgamated with our Bank on the 1st September 1961 and from that date the branches of that Bank at Anantapur and Bellary have been functioning as branches of our Bank. On the date of amalgamation, an initial payment of the balance at credit of Rs. 250 which ever was less, was made to all depositors of the Rayalaseema Bank Ltd., and very shortly thereafter, a further 55% of the balances at credit of each depositor was also paid. Vigorous steps are being taken to realise the outstanding still due to that Bank.

With this amalgamation and the opening of the Jamshedpur Branch, the Bank now has 146 offices in India and Overseas.

I may mention here for the information of Shareholders that we have sometime back introduced free mail transfer facilities to improve our customer service.

I shall now briefly comment on the figures in the Balance Sheet and Profit and Loss Account before you.

The Directors have made a call of Rs. 10 per share on 28,000 shares in the Bank on which only Rs. 80 has been paid up and these amounts were payable after the 31st December 1961 and have now been received by the Bank. Today, the paid up Capital of the Bank is Rs. 85,80,000 (not deducting the very negligible amount of calls unpaid on the holdings mostly of deceased shareholders) and the Reserve Funds amount to more than Rs. 88,00,000 including the balance at credit of the Share premium account and the appropriation recommended to you to be approved at this meeting.

There has been only negligible change in the deposits position of the Bank as compared to the figures at the end of 1960; but shareholders will notice that the Rs. 40 Crores of deposits as on the 31st December 1961 are themselves an improvement on the figure of Rs. 38.17 Crores as on the 30th June that year. I am glad to report that the improvement in deposits since June last is being well maintained.

Our investments in securities of the Central and State Governments and other approved securities are less by Rs. 1.93 Crores. This reduction was effected by the redemption of a block of State Government securities and by sale of some other securities this year in order to lessen our borrowings from the Reserve Bank at a high rate of interest. This, however, has not in any way affected the liquidity position of the Bank and we continue to maintain a much higher percentage—almost double—than the statutory obligation of 20%.

While on the subject of our investments, I would draw your attention to the fact that all our holdings in Government securities

mature for payment within the next ten years and on redemption will yield a profit. There is adequate provision in the Sinking Fund for the depreciation in our holdings of foreign securities and the very small amount of shares in companies.

There has been a contraction of our advances by about Rs. 1½ crores which was necessitated by the absence of improvement in our deposit position. Even though the demand for advances from trade and industry was persistent throughout the year, we did not wish to increase our portfolio of advances by borrowing against securities but desired to maintain a high liquid position.

Our gross profit at Rs. 287.43,000 and net profit at Rs. 40,37,000 show nominal increases over the last year's figures. I would mention that had we not had to write off some loss on the sale of securities, our net profit would have been much greater.

Five years ago, when we celebrated the Golden Jubilee, our deposits were only Rs. 35.21 crores against the present Rs. 40 crores. Our advances then were Rs. 19.98 crores and the present figure is Rs. 25.71 crores. The gross profit in 1957 was Rs. 2.11 crores against the current year's Rs. 2.87 crores. The net profit which was only Rs. 32 lakhs in 1957 has increased to Rs. 40.37 lakhs in the current year.

Considering the vicissitudes that we have passed through during these five years, I trust that shareholders will agree that the progress of the Bank has been satisfactory.

NOTE: This does not purport to be a record of the proceedings of the Annual General Meeting.

annually secured an increasing share of the Company's revenues.

Your Company is at all times engaged in a drive to increase exports and 1961 was no exception. This is evidenced by the increase in your Company's export sales by 2½% to approximately Rs. 2.02 crores, which increase was once more against the trend of India's sales of textiles in overseas markets which last year fell by nearly 19%.

Many more countries have entered the field of cotton textile manufacture and this has resulted in keener competition for the narrowing fields open to exporters. India is at a disadvantage compared with many other producers due to the latter's superior equipment and higher productivity of labour. Quality has now become the key to success in overseas markets, but this alone is not sufficient and it is essential that quality is backed by higher productivity to ensure a low cost product.

Much has been said and written lately about incentives to export, and there is little I can add except to say that from your Company's point of view it is most important that these schemes continue thereby enabling your Company to obtain modern equipment from overseas, as well as cotton, dyestuffs and chemicals.

The indigenous dyestuff industry now provides your Company with a much larger proportion of its requirements and this trend will continue, but in my opinion unless imported dyestuffs are always available in reasonable quantities, the indigenous industry will suffer from lack of competition. Already most indigenous dyestuffs are more expensive than those imported, in spite of a heavy import duty, and if this duty is increased, as is rumoured, it will be still more difficult for Indian finished cloth to compete overseas. In fact now that India has increasingly to export finished goods, there is a case for a reduction in the import duty on dyestuffs and chemicals.

The restriction of production effected by the control of looms and spindles installed, to which I referred in my speech last year, has created a condition of shortage in the textile market in India. This is neither good for the consumer nor the industry and provides an unsatisfactory background for promoting sales in overseas markets where profits, due to intense competition, are negligible or non-existent.

The agitation for special incentives to export would lose much of its force if the industry could be carried on in a climate where the conduct of business was less subject to constant and disturbing alterations of policy, the most recent of which has affected the supply of cotton.

The 1960/61 Indian cotton crop was good and plentiful. Although the quota system introduced during the previous year was continued,

Mills had no difficulty in securing their normal requirements of cotton. Unlike the cotton season ended August 1960 when the carry over was dangerously low, at the end of August 1961 the carry over of Indian cotton was around 18.5 lakhs bales, i.e. roughly 87% more than the carry over of the previous year, and the Textile Industry had every reason to begin the 1961/62 season with confidence in so far as raw cotton was concerned, with the new crop estimated at around 50 lakhs bales. However, during the last four months of 1961, growing conditions deteriorated rapidly and it became clear that once again Mills would be faced with a cotton crisis. The 1961/62 crop is currently estimated at 43 lakhs bales, which is far below the annual requirements of the Textile Industry in India, and the Textile Commissioner introduced varietywise rationing with retrospective effect from 1st September, 1961. Apart from the fact that there is a serious shortage of most varieties of cotton, prices are now inordinately high and unless Government takes early action to import suitable short staple cotton with which to augment indigenous supplies, the Industry will later in the year be faced with an acute shortage of its primary raw material. All these factors cannot but have an adverse effect on the Textile trade, particularly on exports.

With a steadily rising Mill consumption, intensive efforts must be made, not only to increase acreage under cotton, but also to increase the yield of cotton per acre in this country, which unfortunately is the lowest in the world. I understand that the Indian Central Cotton Committee has made certain recommendations to Government in this respect and it is to be hoped that effective and prompt action will be taken. Unless this is done and a realistic approach to the problem is made, the country will have to grapple with cotton crises for years to come.

The increase by almost exactly Rs. 50 lakhs in the Company's overdraft loan from the Bank is mainly due to the increase in Stock-in-Trade, mostly raw materials, and to the reduction in Creditors. Capital expenditure during the year amounted to nearly Rs. 56 lakhs and this was financed by the allocations to Depreciation and Reserves. The re-equipment, modernisation and rehabilitation of the Mills is a continuous process and an essential one if the Company is to maintain its trading position. The programme for the next three years, in pursuance of this policy will involve further heavy capital expenditure and this, it is intended, will also be met from the Company's own resources.

As is noted in the Directors' Report, by the allocation of Rs. 6,50,281 to the Debenture Redemption Fund, there has now been

provided for the redemption of the Debenture Stock Loan a total of Rs. 50 lakhs being 50% of the original loan which still has half of its term to run to the latest redemption date, namely 1972.

I referred earlier to the record sales, but if you will turn to the other side of the Profit and Loss Account you will find that costs under almost every head of account are higher than for the previous year, many of the items of cost being unfortunately also record figures, despite every effort by the Management to economise and trim expenditure wherever possible. You will observe also from the Profit and Loss Account that charges in respect of Management have undergone a change in consequence of the relinquishment of the Managing Agency from the 1st January 1961, and charges in respect of 'Managing Directors' Remuneration' and 'Directors' Commission' appear for the first time.

During 1962, there will certainly be further rises in costs as, apart from the general upward trend, which in January of this year was reflected in the highest monthly labour dearness allowance figure to date of Rs. 77.66 per head, the Company will be obliged to meet certain specific increases. The first of these is in respect of the increase of Rs. 2 per month in the wages of all workpeople from the 1st January, 1962 in accordance with the terms of the Textile Wage Board recommendations made in 1960 and this alone will cost over Rs. 3 lakhs per annum. Secondly, the Company's contribution to the Employees' State Insurance Scheme has doubled from the 1st April, 1962 and this means a further increase of over Rs. 3 lakhs in a full year. Thirdly, in order to finance the Export Incentive Scheme, Government has imposed a special levy on all India cotton consumed from the 1st January, 1962, and it is estimated that this additional levy will also involve an increase in costs of over Rs. 3 lakhs per annum. Thus these three specific increases alone will cost your Company more than Rs. 10 lakhs a year and unless labour makes some extra effort in return for the further increase in wages, no compensating benefit will accrue to the Company. It is hoped shortly to initiate with the leaders of the recognised Unions, the question of greater productivity.

Towards the end of 1960 the Industry at the behest of Government entered into a voluntary price control agreement under which prices were fixed on the basis of those at which individual mills were selling their cloth in August 1959. No provision was made in the agreement for the adjustment of prices to meet an increase in costs. It is obvious, therefore, that the pressure of rising costs will narrow margins and inevitably affect the Industry's profit making capacity, unless a revision of the prices fixed can

be agreed upon. The immediately future prospects of the Industry should, therefore, be viewed with the foregoing in mind. It is to be hoped that the report of the Tariff Commission appointed by Government to enquire into fair prices for cotton textiles and yarn will provide a satisfactory solution to the price question.

The Wage Board recommendations concerning rationalisation in respect of which substantial increases were awarded to labour, including the increase of Rs 2 per month from 1st Jan. 1962 to which I have already referred, have yet to be implemented although the principles were settled by agreement between Management and labour in the previous year.

In the course of a speech I made last month as Chairman of the Employers' Federation of Southern India, I referred to the problem of absenteeism in industry in India which has increased in an alarming fashion in recent years and has resulted in expensive machines standing idle, due to workers helping themselves to leave to which they are not entitled. Unfortunately, your Mills have not proved immune to this new industrial disease which, experience shows, seems to thrive when higher wages and generous bonuses are paid. Your Mills, like many other factories, maintain a leave reserve of men but this reserve in recent months has frequently proved to be inadequate, as for example when on some working days total absence, including normal authorised leave, has exceeded 16%. In the case of your Mills an absentee figure of 16% means that over 2,300 men are away from work.

The increase in absenteeism has to some extent been due to the manner in which the State Health Insurance Scheme, the Company's contribution to which as I have already mentioned has this year been doubled, is being implemented, and there is evidence that it is possible for fit men to obtain generous medical leave on proportionate wages. It will be apparent to you how this development, if allowed to continue, can result in a serious increase in costs, besides being a most disruptive element to production.

Industrial development during India's first two Five Year Plans was marked by significant achievements, but the target for production of mill made cloth was set at a low figure by comparison with that fixed for other industries, and was exceeded without difficulty. The target of 5,800 million yards fixed for mill cloth in the Third Plan, which was launched during 1961, is also modest being only 13% over the yardage achieved at the end of the Second Plan. This target, which I have no doubt will be reached provided adequate supplies of cotton are available, will barely keep pace

The Buckingham & Carnatic Company Limited

Another Record Year in Sales

Production Maintained

Mr E. F. G. Hunter, the Chairman, on Competition Facing in Export Markets

Presiding at the Forty-first Annual General Meeting of the Shareholders held at the Company's Office at Madras on Friday, the 27th April 1962, Mr. E. F. G. Hunter said:—

Gentlemen,

It is my pleasure to welcome you to the Forty-first Annual General Meeting of The Buckingham & Carnatic Co. Ltd. You will have had an opportunity to study the Directors' Report and the Accounts for the year ended

31st December, 1961 and with your permission I propose to take them as read.

Trading conditions in India during 1961 were generally good but the improved results recorded in the accounts now before you are largely due to the maintenance of production at a satisfactory level throughout the year.

In the Directors' Report your attention has been drawn to the record sales figure achieved for the fourth year in succession. This fresh record is a credit to your

Company's sales organisation and whilst I am hopeful that sales will continue to grow, other factors, particularly rising costs to which I will refer later, may make it difficult to maintain profits at the 1961 level.

For the first time since 1953, your Directors have recommended an increase in the dividend on the Company's Ordinary Shares. The final dividend proposed will bring the total for the year to 18% gross, equivalent to 12.6% net, which compares with the dividend of 10% net declared for each of

the eight preceding years. Your Directors feel fully justified in recommending the higher dividend which represents a modest 5% return on the ordinary capital and reserves. Whilst it is of course essential in the interests of all concerned that a substantial share of the profits be retained to finance the heavy costs of modernisation, it is but equitable that shareholders should participate in higher profits particularly as labour by way of wages, dearness allowance, bonus and other benefits, and Government by taxation, have

with the anticipated population increase and will leave nothing for securing the progressive rise in living standards, one of the aims of the successive Five Year Plans, and certainly no margin for increasing exports, so necessary if India is to reach the stage of self developing growth. Perhaps this is why the limited scheme of expansion announced by Government last year has attached to it an obligation to export which if not met will involve heavy penalties.

Such a condition is likely to inhibit growth rather than assist it, but growth and higher productivity are essential if India is to maintain its position in world markets.

The satisfactory results for 1961 could not have been achieved without the loyalty and sustained efforts of the Officers and Staff of your Company who continually have to face new problems, invariably accompanied by frustra-

tion and anxiety. I am sure you will wish to join with me in expressing sincere thanks to them for the devoted service they have rendered the Company throughout the year.

In the Directors' Report reference has been made to the resignation of Mr. Molyneux who, for family reasons, has retired from India. Over the years, Mr. Molyneux has rendered splendid service to your Company and it is

hoped that we shall shortly be in a position to appoint Mr. Molyneux as one of your Company's Technical Advisers and that he will make periodical visits to India. Before concluding, I would like to record my very grateful thanks to my colleagues on the Board for their loyal support and co-operation throughout the year.

NOTE: This document does not purport to be a report of the Proceedings of the General Meeting.

The Bangalore Woollen, Cotton & Silk Mills Co., Ltd.

Higher Profits Result From Improved Efficiency

Mr E. F. G. Hunter's Review

Presiding at the Seventy-ninth Annual General Meeting of the Shareholders held at the Company's Office, Agharam Road, Bangalore City on Thursday, the 26th April, 1962 Mr. E. F. G. Hunter said:—

Gentlemen,

I have pleasure in welcoming you to the Seventy-ninth Annual General Meeting of The Bangalore Woollen, Cotton, & Silk Mills Co. Ltd. The Directors' Report and the Accounts for the year 1961 have been in your hands for the prescribed period and with your permission I propose to take them as read.

You will have seen from the Accounts that the Company had a successful trading year, sales having reached a figure of over Rs. 3 crores for the first time in the history of the Company. The higher profit resulted from the progress made to improved efficiency in the Mill and also from the good conditions which prevailed for most of the year in the Indian markets.

The better results have made it possible for your Directors to recommend an increase in the dividend on the Company's ordinary shares. The final dividend recommended will bring the total for the year to 18% gross, equivalent to 12.6% net, which compares with the dividend of 10% net declared for each of the eight preceding years, during which period labour by way of wages, dearness allowance bonus, gratuity and other benefits has annually taken an increasing share from the Company's revenues.

The closure of the Company's Hebbal Mill in June of last year saw the final conclusion of a battle which the Woollen Department of your Company has fought over a period of years against the tide of rising costs, which together with the cess and excise duty, imposed on all but the coarser rugs in 1955, made the working of this Department uneconomic. Fortunately, by careful reorgani-

sation and re-deployment of labour, the closure was effected without retrenchment. Negotiations for the sale of the woollen machinery and the machinery parts at satisfactory prices were concluded during the year, and formal sanction of Government to the transfer of the machinery to the buyer is awaited. It may be some time before the machinery is removed from the Mill but meantime consideration is being given to the future use of the Hebbal Mill premises.

Sales of the Company's popular Union fabric "Cotswol" and the heavier cloth "Angola" increased during the year and a substantial contract for the supply of both these fabrics to Soviet Russia was completed.

Your Directors continue their efforts to improve sales in overseas markets as they are most anxious to secure the valuable incentive benefits by way of licences for the import of cotton, dyestuffs and machinery.

Increased supplies of indigenous filature silk enabled the Company to increase the number of looms in use in its Silk Department for the manufacture of filature silk shirting and sarees, and I am pleased to say that this increased activity contributed to the improved results for the year. Recent developments in the production of spun silk in Mysore State are promising and there are prospects that during 1962 the Silk Department will once again work to full capacity.

The supply of Indian cotton during the 1960-61 season was favourable, both in respect of quality and quantity, but controls which had been introduced during the previous cotton season were continued. Although the Textile Industry had every reason at the beginning of the 1961-62 cotton year to expect a satisfactory Indian cotton crop, with the new crop estimated at around 50 lakh bales, during the last four months of 1961 growing conditions deteriorated rapidly and it became clear

that once again Mills were faced with a cotton crisis. The cotton crop is now estimated at around 43 lakh bales, which is far below the annual requirements of the Textile Industry in India, and this represents a reduction of approximately 21 per cent on the 1960-61 Indian cotton crop. This obliged the Textile Commissioner to introduce variety-wise rationing of cotton several months after the start of the season. Apart from the fact that prices of all varieties of Indian cotton are now exceedingly high, it is clear that unless Government takes urgent measures to augment imports, including a proportion of suitable short staple cotton with which to supplement indigenous supplies, the Industry will very soon be faced with a serious shortage of its primary raw material. We know that negotiations are in progress with the USA and, we believe, with certain other countries.

The Industry has not been faced with any serious shortage of long staple cotton so far, but with effect from January 1962 Government has increased the rate of premium payable on long staple imported varieties in order to finance the Export Incentive Scheme. The increase in the rate of premium varies from Rs 20 to Rs 30 per bale, depending on the staple length of the cotton, and this will necessitate increased expenditure by your Company of about Rs 2,00,000 per annum.

Your Company has been carrying out experiments with the production of a Terylene/Wool suiting and this fabric will be introduced to the market shortly.

The increase in costs recorded in the Profit and Loss Account is, in general, no more than proportionate to the increase in production and sales despite a tendency for all costs to rise, and reflects the energy with which measures of economy have been exercised by your Company.

Unfortunately your Company, in common with others in the In-

dustry, is frequently faced with new charges and imposts over which it has no control and three of such additional increase in cost will have to be met this year. First, the wages of all workpeople were increased by a further Rs 2 per month from the 1st January, 1962 in accordance with the terms of the Textile Wage Board recommendations made in 1960. Secondly, the Company's contribution to the Employees' State Insurance Scheme, has been doubled from the 1st April, 1962. Still further to finance the exports incentive Scheme Government has imposed a special levy on all Indian cotton consumed from the 1st January 1962 and it is estimated that this additional levy will involve an increase in cost of about Rs 85,000 per annum. It is hoped that labour will make some extra effort in return for the further increase in wages; otherwise the Company will have nothing to show for these specific increases in cost.

It will be noted that a new item of cost, namely, automatic loom cess, appears in the Profit and Loss Account. This new impost introduced by the Budget of 1961 is levied on 30 per cent of the production of automatic looms less the value of cloth exported. Had, therefore, the Company's export sales not improved this levy would have been much heavier. While the Company will make every endeavour to increase exports, it is unlikely that it will be able altogether to avoid the payment of this additional levy.

You will observe from the Profit and Loss Account that charges in respect of management have undergone a change which is in consequence of the relinquishment of the Managing Agency from the 1st January 1961.

The Company's appeal to the Supreme Court against the imposition of Octroi Duty by the Corporation of Bangalore on raw materials entering the city was heard during the year and I regret

to have to report was decided against the Company. As a result, a sum of over Rs 8 lakhs, for which provision had been made, being the balance 50 per cent of the Octroi Duty levied since 1953 when the new duty was first introduced, was paid during the year to the Corporation of Bangalore.

Industrialisation in Bangalore has made considerable progress during the last ten years and one result is that during this period the population has almost doubled. Unfortunately, neither the supply of electric power, nor of water to the same area, has progressed at the same rapid pace. During the year it became necessary for the State Government to introduce staggered working days to reduce the daily electric power demand and the Mills now work on Sunday

of each week and have Monday as the weekly holiday. Further, the Mills have been asked to reduce their demand during the evening peak load period which occurs between 6-30 and 9-30 p.m. ways and means of meeting this request, without adversely affecting production, are being explored. No doubt as a further measure to reduce consumption, as well as a means of raising revenue, the Government of Mysore saw fit during 1961 to enhance the tax on electricity consumed. I regret to report that no improvement in the supply of water is in sight and it has been necessary to supplement the Corporation supplies by water from Bore Wells which your Company has sunk in recent years at considerable cost. The water thus secured is, however, initially unsuitable for production purposes,

and to make it usable a Water Treatment Plant has been installed and is now in operation.

Coal supply difficulties were again experienced in 1961 and recourse had to be made to the purchase of sea-borne coal which costs nearly double that supplied by rail. Apart from a recurring difficulty in obtaining supplies, the use of coal has made it difficult to maintain cleanliness in the Mill and the storage of coal has taken up valuable space. Your Directors, therefore, decided to convert the Mill boilers from coal to oil firing and it is hoped that the conversion will be completed during 1962.

In addition to the space which will be gained by the release of the coal yard, the Company has obtained from the Corporation of Bangalore a promise to sell to the

Company approximately six acres of the tank bed to the south of the Company's property. The Mill has for many years been severely handicapped by lack of space, and the additional area promised will prove invaluable in the Company's plans for reorganising and modernising the Mill.

I am sure you will wish to join with me in expressing thanks to all the Company's Officers, Staff and employees who have contributed to the satisfactory results.

Finally, I would like to express my very grateful thanks to my colleagues on the Board for their support and co-operation throughout the year.

Note: This document does not purport to be a report of the Proceedings of the General Meeting.

Wednesday at Rs 125.00 the highest level touched during the week being Rs 125.95. 40"x10 oz hessian May after moving irregularly during the week closed on a steady note on Wednesday at Rs 50.34. Assam

Bottoms June was firm in earlier dealings but toward close of the week developed a reactionary tendency, presumably on indications of a large new jute crop, to close on Wednesday at Rs 30.78.

Markets

JUTE

Hessian Firm: Sacking Quiet

INDICATIONS are that jute mills will have to work to their full capacity for quite some time to come. For, in the first place, it would appear that the scarcity of ready and near delivery goods is much more acute than had been anticipated. The move to divert part of the jute goods now being consumed within the country to export through the imposition of excise duty is not likely to be quite successful because domestic consumers who have no substitute packaging materials to turn to, may perforce be obliged to go on buying new bags notwithstanding the heavy excise levy. Anyway, from the improved tone of the gunny market this week, it is clear that ready and near delivery jute goods have continued to be in short supply and consequently prices have rallied.

In the meantime, authorities are not relaxing their efforts to ensure an increased supply of gunnies from month to month. Two handicaps have been noted to stand in the way of full production being attained by mills even though all their looms have been unsealed. One is the inadequate spinning capacity. This is now sought to be removed. It is understood that Government have permitted the industry to increase its spindleage to the extent necessary to feed the increased loomage. The second handicap is shortage of power but this also seems to have been overcome in a way.

Side by side with the move to increase the quantum of ready goods, steps are being taken to encourage the farmer to take active interest

in jute cultivation. It was reported early this week that the authorities have asked the Jute Buffer Stock Association to indicate its programme of jute purchases in the coming weeks. There was also a report that the JBSA had been permitted to import 1 lakh maunds of Pakistan cuttings. The JBSA has since indicated its programme. The size of the buffer stock is to be increased to 6½ lakh maunds and the Association is asking members to concentrate as far as possible on low grade jute and mesta. It is to be noted that in its press note issued in this connection, the JBSA says that it does not consider the present an appropriate time for making any purchase of imported cutting. The outlook for the next jute crop has improved considerably as most growing regions have received rains during the past few days. Sowing operations are reported to be in full swing and it is now expected that the coming jute crop stands a good chance of turning out to be bumper one.

The jute goods market opened the week on an improved tone partly due to reports of some government business having been done in B Twills for June-July delivery and partly because of revival of bazar interest. B Twills ready was done up to Rs 131. In later dealings however B Twills Ready turned rather quiet in the absence of fresh overseas interest. In the second half of the week attention was mainly concentrated on hessian with the result Hessian 40"x10 oz Ready advanced to close at Rs 53.75.

The raw jute market continued to rule listless throughout the week. While sellers were anxious for business with a fair quantity on offer, mills were reserved.

In the futures market, after earlier firmness, B Twills May fluctuated within narrow limits to close on

Jute Buffer Stock

The Jute Buffer Stock Association, which has already made an initial purchase of 50,000 bales of jute for its buffer stock, is now to make another and larger purchase, according to a press note issued by the JBSA. At their meeting on 1 May 1962 the Committee of the Association decided that a further quantity of 75,000 bales should be bought by the end of next week, thus increasing the size of the

buffer stock to 125,000 bales, equivalent to 6½ lakh maunds of jute. Purchase allocations for the additional quantity are being issued to member mills this week and as on the previous occasion, it is being recommended that purchases should be concentrated as far as possible on low grade jute and mesta. The Association does not think the immediate present an appropriate time for making any purchase of imported cuttings.

Good Demand for Wide Hessian

A new outlet for Indian jute goods which has arisen in the last seven years is the supply of a special construction of wide hessian for use as a backing material in the manufacture of tufted carpets, says a Press Note issued on 1 May 1962 by the Indian Jute Mills Association. With the growth of the tufted carpet industry, particularly in the USA, the demand for this backing material has increased and to keep pace with the demand, the Indian jute industry has been installing more and more broad looms for the manufacture of the wide hessian required. Already more than 900 wide looms are in operation in the Calcutta mills, but at present there is a shortage of carpet backing material and the installation of more wide looms is planned.

This is a development that is being encouraged by the Indian Jute Mills Association, which has evolved a formula whereby all member mills may install broad looms in proportion to their spinning capacity. The formula is a very liberal one, since it would permit the installation of no less than 9,000 broad looms, which would be ten times the number at present operating and far more than will be required to meet any foreseeable demand. In response to applications from the mills, the installation of another 1,500 looms has already been sanctioned but only a few of these will actually be installed remains to be seen. Less than a year ago there was a large accumulation of carpet backing material in the USA which forced the mills to curtail their production. Today there is a shortage but an independent assessment has placed the additional productive capacity required at 10 looms and this is the number which the Government of India has licensed.

COTTON Ceiling Prices Increased

For long last the repeated requests for the cotton trade for an upward revision of the ceiling prices of cotton have come to fruition. The decision of the Union Government to raise the ceiling price of basic varieties of cotton Jarilla fine 25/32" to Rs 35 per quintal, with corresponding increase in the prices of other varieties is indicative of the moderate attitude of the Government to assist the various cotton interests extricate themselves from the ailing in which they are, at present, mired. The revision of ceiling prices will result in an increase in the ceiling price of the basic variety from Rs 231 per quintal (Rs 820 per candy) to Rs 286 per quintal (Rs 945 per candy). However, it should be noted that the

revised scale will be applicable only to the crop of 1962-63 season and the crop of the current and previous seasons will be governed by the prevailing ceiling prices. The differentials for other varieties are expected to be announced in the near future.

Meanwhile the trade is anxiously awaiting the Government's announcement regarding the cotton policy for 1962-63 season and according to the latest reports it is expected to be made available within a fortnight. The trading in the March 1963 hedge contract is likely to commence before the middle of next month. This will undoubtedly act as a tonic to the cotton trade as the sowing for the next season will be starting shortly. The East India Cotton Association has suggested some alterations in the terms of the Indian Cotton Contract (hedge contract) for 1962-63, season and they are forwarded to the Forward Markets Commission for approval. The main features of the proposed changes are: (i) there will be only one hedge contract christened as Indian Cotton Contract, with Moglai Jarilla fine 25/32" as the basic cotton and tenderable varieties ranging from 2/32" 'on' to 2/32" 'off', (ii) all descriptions tenderable under the hedge contract will be tenderable upto 2/32" 'off' except Cambodia 'A' and Dhollera in which case they will be tenderable upto 1/32" 'on' only and (iii) the tendering differences shall be fixed on the basis of the hedge contract rate of the delivery concerned and the spot rate of the respective descriptions of cotton on the date of fixation of the tendering differences, but subject to certain reductions stipulated in the amendment to by-law 55(V). The East Indian Cotton Association has also suggested some amendments to its by-laws to give effect to the over-mentioned alterations to be carried out.

The statement of Mr Manubhai Shah, Union Minister for International Trade, in the Lok Sabha last week to tap all sources for the import of adequate cotton coupled with the proposal to create a buffer stock of cotton to ensure enough and uninterrupted supply of cotton to the cotton textile mills over a period of ten years will receive widespread acclaim. The requirements of cotton for consumption in the textile mills during the current season stretching from September 1961 to August 1962 have been estimated approximately at 56 lakh bales.

Random business was transacted in Bengal Deshi in the export section during the week under review. The total sales registered so far for export has been placed at 58,000 bales. Buying interest in this growth has slackened to a great extent owing to delay in Government's clarification pertaining to the sale of over 10,000 bales to Yugoslavia from the current quota of 70,000 bales. An additional quota for exports of Bengal Deshi is expected immediately after the present quota is exhausted in order to keep continuity in business.

The spot market depicted a sorry spectacle and business transactions were few and far between. Mill

enquiry was restricted to Vijay. Digvijay, Laxmi, Kalyan, CO2 and Wagad. In the import section higher grades of Sudan cotton met with good enquiry.

PIECEGOODS

Trading in the Bombay cotton piecegoods market during the past week was virtually at a standstill owing to the reluctance of both the mills and traders to enter into any commitment consequent on the proposed revision of excise duty on yarn and processed cloth indicated by Mr Morarji Desai, the Finance Minister, in his speech at the presentation of the Budget. Apart from the prohibitive levies in store, the merchants and mills were in a dilemma as to who should ultimately bear the new imposts.

The reactions of the announcements of the Finance Minister were evident in different parts of the country. Some of the mills particularly those situated in the South have already decided to stop functioning unless and until the entire position is made crystal clear from the Capital. Mr Morarji Desai's statement that he would reconsider the whole issue will provide some relief to those who are perplexed over the issue.

On the export front, the prospects of improved trading with Burma have brightened thanks to the innumerable tenders invited by the import agencies of that destination. Similarly the Government of India has decided to effect some modifications in the textile export incentive schemes with a view to stimulating the exports to the US and Canada and to eliminating the inordinate delay which has hitherto been vexatious to the trade and exporters. Under the new alterations, the incentive payable to the mills from the Pool Fund operated by the Indian Cotton Mills Federation will be a flat rate of 21 per cent against exports of cloth and yarn effected from 1 January last on the residual value of the import entitlement for cotton accruing to the mills. Furthermore, those mills exporting cloth and yarn to the US would be entitled to an additional premium of 13 per cent in lieu of the 10 per cent on the residual value of the import entitlement of cotton. Similarly with regard to fine and superfine cloth woven out of foreign cotton and exported, mills would be eligible from the Pool Fund an incentive calculated at 21 per cent of the amount in rupee representing the difference between the f.o.b. value of the cloth exported and the entitlement value on it calculated at 66 2/3 per cent.

The Cotton Textile Export Promotion Council announced last week that the UK Textiles Export Licensing Committee would distribute the remaining 20 million square yards of unreserved quota to reserved and unreserved quota-holders. Further quantities that might accrue to the pool arising out of the surrender and forfeiture would be distributed as supplementary quota.

Sugar Markets Active

SUGAR markets have reacted to the Budget proposals bullishly with a moderate rise in prices. It was earlier thought that the excise duty on the commodity would be reduced with a view to encouraging the domestic consumption. In the absence of any proposal in the budget, the stockists and the industrial consumers, who were reluctant to enter into commitments, have extended their purchases. With the result, prices improved by 25 nP to 30 nP per quintal. Presently, spot delivery Simbhaoli is quoted at Rs 105 per bag and Bulandshar at Rs 102.

Production is estimated to reach 27,00,000 tons. This means, there will be a carryover of 11,00,000 tons at the end of the current season. In this context, it is felt that the reduction in the price rate of excise duty of Rs 222 per ton will have helped greatly in increasing the internal consumption. A cut in the excise duty had been suggested by the Indian Sugar Mills' Association as a way to boost consumption of sugar to dispose of the accumulated stocks. But, the Finance Minister is understood to have indicated that there is no possibility of the excise duty on the commodity being reduced.

FOODGRAINS

In the Hapur market, prices of Foodgrains ruled quietly steady as arrivals of the "Rabi" crop were small in the face of the increasing consumer demand. Wheat prices were steady at Rs 40.20 per quintal for the average quality and at Rs 42.88 for the farm produce. Thanks to better buying support from consumers, the Rice section held steady. Gram prices were quoted around Rs 36.84 a quintal. Although arrivals of the new gram from the Punjab ranged from 509 to 750 maunds, arrivals in the local market were reported to be meagre. As maize stocks were poor owing to a heavy offtake by Ahmedabad, prices were quoted higher at Rs 26.79 to Rs 32.15 per quintal.

Among Pulses, new Peas arrivals were fairly heavy. The average quality ruled steady in sympathy with superior white farm variety, which was lifted by the stockists for conversion into dal. The market for Arhar remained steady in the wake of dwindling stocks and poor crop prospects.

CHEMICALS & DYES

The markets for Dyes and Chemicals, which were ruling quiet during the past week, turned active following the announcement of the budget proposals, as the fears of a change in the duties did not materialise. There was, there-

fore, a free movement of goods in the market.

In the Chemicals section Causitic Soda was in the limelight. The ICI variety moved both ways, depending upon the supply position. The rate, after being pushed up to Rs 52 from Rs 49, finished a shade easier at Rs 51 following the reports of fresh arrivals from abroad. It is learnt that the State Trading Corporation is to import 10,000 metric tons of heavy soda ash from Britain. Of this, about 2,500 tons have already been imported and await distribution.

The STC is expected to authorise the Chemical and Alkali Distributors as well as some of the prominent indigenous manufacturers in this chemical to distribute these stocks to the actual users. Negotiations for the distribution rights are reported to be in progress.

Shipments worth about Rs 4 lakhs is due in a few days from Poland, while the rest of the quality will be imported gradually by the end of June. Meanwhile, the Chemical & Alkali Distributors and the Dyes Distributors Limited have obtained licences worth Rs 7 lakhs each from the STC to import coal tar dyes from Poland and Hungary.

Menthol, after remaining steady around the previous week's level, came down to Rs 134 for the Chinese variety. This was attributed to the availability of unauthorised stocks. Camphor was steady at Rs 17.50 with other items ruling more or less unchanged.

The Dyes section was featured by normal activity and steady prices. Though the demand was fairly brisk for most of the items, there was no proportionate rise in the prices due to a comfortable supply position. In vat dyes, violet RR was in prominence. The German quality was done at Rs 66 and the Japanese variety at Rs 58.

SILK

It is understood that the Government of India has agreed to grant to the exporters full refund of the excise duty levied on processed art silk fabrics. The shipments of about 25 lakh yards of cloth are reported to be held up in the absence of official clarification in this regard. Shippers say that, since there is no clear legal provision for the refund, considerable risk is involved in shipping these goods.

Meanwhile, traders are reported to have agitated over the "double increase of the duty. The Silk Merchants' Association has stated that the interpretation of the excise authorities regarding the budget proposals is both "inequitable and unjust", leading to untold hardships and heavy monetary loss, both to the trade and industry. The Association has pointed out that this interpretation, if allowed, will result in extra duty

on goods, which have already borne the duty.

NON-FERROUS METALS

Prices on the Bombay Non-Ferrous Metal market showed a mixed trend. While Tin ruled steady, Copper was listless. Zinc was easy, while Lead was neglected. Price movements in the Scrap section were rather irregular.

No material changes were announced in the duties on the non-ferrous metals except in respect of copper alloys. Operators did not know exactly the implications of the levy and so they preferred to restrict their business activity for the time being.

The excise duty on Zinc and copper and their alloys containing more than 50 per cent of copper was hitherto levied at Rs 300 per metric ton and on pipes and tubes at 10 per cent an valorem. Under the new proposal, an excise duty of Rs 100 per ton will be imposed on unwrought copper and alloy containing more than 50 per cent of copper; but the manufacturers will get a set-off against the duty paid by them on plates, sheets, circles, etc. Despite the reduction in the duty, the burden on the industry in effect remains unchanged, as customs duty will have to be paid first.

PEPPER

Prices on the Cochin Pepper market have displayed a slightly easier tendency in the absence of demand. Garbled ready is quoted at Rs 313 per quintal. Grinders in New York are not inclined to enter the market, as advices from Singapore are weak. Reports of better crop prospects from Brazil have also contributed to the easy trend. With future prospects equally dim, sellers are showing anxiety to dispose of their stocks.

OILS & OILSEEDS

The Bombay market for Oils and Oilseeds presented a mixed appearance. Although conditions in the Groundnut spot section were fairly good, trading in futures was featured by a mounting concern on the question of tenders against the maturing May contract. The absence of any increase in the excise duty on vegetable oils also accounted for the easy tendency.

The comparative steadiness in the spot section was mainly due to reports of small arrivals in relation to the demand and upcountry advices. Moreover, crushers and vanaspati manufacturers also figured as steady buyers, as the demand for groundnut oil and vanaspati was expected to rise in the current month.

In the Castorseed section, trading reflected an absence of enthusiasm. Shippers reported business for about 300 tons of castor oil, commercial quality, with the UK at £117 per ton in bulk; but the

hopes of a revival in American demand remained unfulfilled. The absence of the much expected incentives for export promotion in the Budget proposals also tended to discourage the operators.

Prices in the Linseed section displayed a firmer tendency due to speculative support, inspired by higher rapeseed advices from North India. The tight supply position and a moderate revival in the demand for linseed oil from the paint industry provided other helpful factors.

Uncertainties of the budget having gone, the Madras groundnut oil and kernel market after fairly sizeable business in the latter part of last week settled down to a comparatively quiet level. Most of the oil crushers in the South are carrying on their normal business. They bought small quantities of kernels initially and later on absorbed large quantities. Factories having more than one ties. Factories, however, were not in a position to continue business of crushing due to the difference in rates between the standard rate of excise duty and the compounded levy. Only those factories which come within the compounded levy scheme could carry on crushing steadily and offer small quantities of oil for trade daily.

The 15 per cent increase in duty has not seriously affected the competitive position of the crushers falling within the compounded levy scheme. There is still a substantial difference between the standard rate of duty and the new rates under the compounded levy scheme.

Most of the buying was done in either spot or early May delivery. Calcutta interests which bought some quantity towards the latter part of last week, disappeared from the scene. This was mostly due to sellers' reluctance too.

Kernel arrivals in the City had improved to about 200 tons daily. In the southern markets the same 400/450 tons daily are being got. The new crop had some sobering effect and the price of kernel remained mostly steady for all varieties. Local crushers preferred the summer variety whose improved oil content compared not so badly with the other superior varieties.

In forward positions also business turned out to be somewhat better. The May deliveries were converted into June ones on a premium of Rs 1 per quintal.

In the South crushers were keen on buying kernels. The price therefore slightly went up in these areas.

(The following were the closing prices of oils and kernels in Oils and Seeds Exchange on Tuesday.)

Groundnut oil per quintal ex-Madras godown expeller Ready 3% F.F.A. 182.60, May Rs 184; June Rs 188.

Kernels per 80 kgs: Superior Rs 72.50; Bold Rs 70; Summer Rs 66.

Castor oil per quintal Rs 148.50; Coconut oil tin Rs 43.

Gingelly oil per quintal Rs 238.10.

Gingelly seed per bag Rs 90/91. Groundnut cake per bag of 160 lbs Rs 26.75.

Groundnut oil last week began in a quiet tone. On Wednesday last it was quoted at Rs 181.20 per quintal. There was an increase of merely 20 nP the next day. The rate went up to Rs 182.20 the next day. There was an increase of thirty nP per quintal on Saturday and the price was nominal. On Monday there was another increase by fifty nP per quintal but this rate too remained nominal.

May Vaiday was quoted at Rs 184 early last week. It went up to Rs 185 and again came down to Rs 184 per quintal. June position improved to Rs 187.50 Rs 185. It reached Rs 189 per quintal. Then it came down to Rs 188 at which it remains now.

Superior kernels continued at Rs 73 per 80 kgs. Bold went up to Rs 71 per 80 kgs for a while and loss a rupee and again increased to Rs 71. Summer crop gained two rupees from Rs 65 last week. It was at Rs 67.50 last Saturday and was at Rs 66 per 80 kgs.

In the southern markets, groundnut oil per candy of 500 lbs was quoted between Rs 425 to Rs 410. Guntur continued to quote at Rs 425. Vridhdhachalam and Villipuram rate was at Rs 408. Cuddappah and Pollachi rate was Rs 410. Nandal, Tanjore and Salem quoted at Rs 415 per candy.

Kernels were a bit higher in these places. Vridhdhachalam price was Rs 72 per 80 kgs. Villipuram was at Rs 71, Cuddappah's rate was Rs 69. Tanjore quoted Rs 73 and Salem Rs 74.

Groundnut cake was consistent at Rs 26.50 per bag.

Latterly it increased to Rs 26.75.

JENSON AND NICHOLSON (INDIA) LIMITED.

NOTICE is hereby given that the Annual General Meeting of Members of the Company will be held at the Registered Office of the Company, No. 2, Fairlie Place, Calcutta, on Thursday, 7th June, 1962 at 11 a.m., for the following purposes:—

1. To receive and consider the Directors' and Auditors' Reports and the Profit and Loss Account for the year ended 31st December, 1961 and the Balance Sheet as at that date.
2. To declare Dividends.
3. To elect a Director.
4. To appoint Auditors and fix their remuneration.

The Share Transfer Books of the Company will be closed from the 1st to 7th June, 1962, both days inclusive.

By Order of the Board,
H. S. CHALLIS
Secretary.

2, Fairlie Place,
Calcutta, 30th March, 1962.

Note:—A member entitled to attend and vote at the above Meeting may appoint a proxy to attend and vote instead of him. A proxy need not also be a Member of the Company.

HIDES & SKINS

Price of tanned cowhide whose arrivals were limited in the market this week also remained high and clearance was very small. Towards the latter part of last week numerous inquiries were made from United Kingdom for premium and semipremium marks. In the 5½ lb semipremium run, fourths and fifths the prices were at 73 d, 63 d and 58d respectively. The rates for the premium marks for the same weight were 76 d, 66 d and 60 d. In tanned cow calf there was moderate business. Inquiries for 2½ lbs semipremiums were more in this section. Rates quoted were very dear for this commodity.

(Tanned buff skins did not show any change. Tanned buffalo calf skins continued firm. The demand from UK for semipremium and premium in the weight of 1½/2 and 2½ was high. Tanned goat skin also continued to rule dear in quotations. Only for middle class sheepskins inquiries were made from UK.

The following were the prices of tanned skins and hides per lb:

Tanned cow prime 5½ lb Rs 2.94 to Rs 3.00; 6½ lb Rs 2.63 to Rs 2.69; 7½ lb Rs 2.44 to Rs 2.50; 8½ lb Rs 2.28 to Rs 2.31; 10/12 lb Rs 2 to Rs 2.06; inferior fifths 5½ lb Rs 2.44 to Rs 2.47; 8½ lb Rs 2.03 to Rs 2.06; 10/12 lb Rs 1.85 to Rs 1.88; Buffalo 12/13 lb Rs 1.94 to Rs 2.00; 5½ lb Rs 2.40 to Rs 2.44; Buff calf 1½/2 lb Rs 3.13 to Rs 3.19; cow calf 16/2 lb Rs 3.69 to Rs 3.88.

BANGALORE SILK

Prices of raw silk in Bangalore Silk Market maintained a steady trend during the week ended 27-4-1962. Prices of alature raw silk of 20/22 Dr. continued to rule firm, being quoted between Rs 84.89 and Rs 85.99 per kgm. Rates of charka raw silk and that of cottage basin silk ranged from Rs 50.70 to Rs 78.06 and from Rs 77.16 to Rs 82.87 per kgm. respectively.

Spun silk yarn of 2/210's was quoted at Rs 81.40 per kgm.

Prices of reeling cocoons in Siddaghatta and Channarayana areas varied from Rs 4.00 to Rs 5.50 and from Rs 4.50 to Rs 5.00 per kgm. respectively, and those in Mugur area increased to rule between Rs 3.75 and Rs 5.60 per kgm. Prices of foreign race seed cocoons declined slightly to vary between Rs 5.00 and Rs 10.00 per thousand. Mysore race seed cocoon prices ranged from Rs 4.50 to Rs 6.00 per thousand.

Bhagalpur Silk Market

Tasar silk market prices remained steady during the week ended 27-4-1962. Prices of tasar raw silk varied from Rs 68.14 to Rs 105.82 and that of silk waste and spun silk yard ruled between Rs 22.04 and Rs 28.48 and between Rs 30.88 and Rs 48.50 per kgm. respectively. Prices of reeling cocoons presented a steady trend when those for Daba, Bogai and Serihan were quoted between Rs 115.00 and Rs 120.00, Rs 110.00 and Rs 115.00 and between Rs 60.00 and Rs 60.00 per kahan respectively.

Trend of silk prices in Japan

Landed cost of Japanese raw silk of 20/22 Dr. was reported as Rs 90.18

per kgm. as on 7th April, 1962. There has been a perceptible rise in prices since December, 1961.

Textiles Export to the UK

In accordance with the Scheme for licensing of exports of cotton textiles to UK, as provided in Public Notice No. PN (UK Licensing)/1 of 1961, dated 12 October, 1961, the UK Textiles Export Licensing Committee, have decided to distribute the balance of 20 million sq yards of Unreserved Quota and any further quantities that may accrue to the pool on account of surrender and forfeiture, to Reserved and/or Unreserved quota holders who fulfil the following conditions:

(i) The applicant should have passed for shipment a minimum of 25 per cent of their Reserved

INDUSTRIAL CONTAINERS LTD.

NOTICE is hereby given to the members of the above-named Company that the Fourth Annual General Meeting will be held at the Registered Office of the Company, 21, Netaji Subhas Road, Calcutta, on Friday, 25th May, 1962, at 12-10 p.m. to consider the Accounts of the Company for the year ended 31st December, 1961, to transact other ordinary business and the undernoted special business.

SPECIAL BUSINESS:

NOTICE is also hereby given of the following resolutions which will be proposed as special resolutions:

"That the word 'three' appearing in the third line of Article 144 of the Articles of Association of the Company be deleted and the word 'six' be substituted therefor."

NOTICE is also hereby given that the Transfer Books and Register of Members of the Company will be closed from 10th May, 1962 to 25th May, 1962, both days inclusive.

By Order of the Board,
BALMER LAWRIE & CO. LTD.

MADHYA PRADESH Estimates of Income

The Directorate of Economics and Statistics Madhya Pradesh has compiled an useful brochure on income data in the State. The state income (at 1952-53 prices) was Rs 833.5 crores in 1959-60 compared to Rs 803.2 crores in 1958-59, Rs 674.0 crores in 1955-56 and Rs 510.3 crores in 1950-51. The per capita income at 1952-53 prices work out to Rs 285.1 Rs 279.2, Rs 244.9 and Rs 196.6 in the four years 1959-60, 1958-59, 1955-56, 1955-56 and 1950-51 respectively.

Unlike 1958-59 which recorded an all-round improvement over the previous year both in agricultural and non-agricultural output, the year 1959-60 registered only a marginal increase of Rs 30.3 crores (at 1952-53 prices) in the total net output. This was mainly due to a fall in the production of a large number of agricultural commodities and agricultural sectors, which registered an increase of Rs 148.4 crores in 1958-59 over 1957-58 work out an increase of Rs 1.4 crores only in 1959-60 over the preceding year. The increase

registered by the non-agricultural sectors was, however, sharp and works out at Rs 28.9 crores during 1959-60 over the preceding year compared to an increase of Rs 12.1 crores in 1958-59 over 1957-58.

		Net state output (in Rs crores)		Per capita net output (in Rs)	
		At current prices	At 1952-53 prices	At current prices	At 1952-53 prices
	1	2	3	4	5
1950-51	...	550.5	510.3	212.1	196.6
1951-52	...	563.2	557.7	214.5	212.4
1952-53	...	591.2	591.2	222.5	222.5
1953-54	...	608.4	626.3	226.3	233.0
1954-55	...	556.3	648.1	204.6	237.6
1955-56	...	643.5	674.0	233.9	244.9
1956-57	...	767.1	730.2	275.1	261.9
1957-58	...	698.1	642.7	246.5	226.9
1958-59	...	901.4	803.2	313.3	279.2
1959-60	...	861.2	833.5	294.6	285.1

These figures show a rise in state and per capita income in real terms of 23.7% and 16.4% respectively during the first four years of the Second Five Year Plan period, viz. 1956-57 to 1959-60 as against 32.1 per cent and 24.6 per cent respectively over the First Five Year Plan period, viz. 1951-52 to 1955-56.

The State Income expressed at current prices was Rs 861.2 crores

Column 2 and 3 of the statement below indicate the trend in net state output put at current and at 1952-53 prices respectively during the last 10 years 1950-51 to 1959-60; columns 4 and 5 reveal the trend in per capita income.

the trend in per capita income.	
Net state output (in Rs crores)	Per capita net output (in Rs)
At 1952-53 prices	At current prices
3	4
510.3	212.1
557.7	214.5
591.2	222.5
626.3	226.3
648.1	204.6
674.0	233.9
730.2	275.1
642.7	246.5
803.2	313.3
833.5	294.6

in 1959-60 as against Rs 901.4 crores, Rs 642.5 crores and Rs 550.5 crores in 1958-59, 1955-56 and 1950-51 respectively. The per capita income at current prices has been placed at Rs 294.6, Rs 313.3, Rs 238.9 and Rs 212.1 in 1959-60, 1958-59, 1955-56 and 1950-51 respectively. The larger decrease in 1959-60 compared to 1958-59 at current prices was mainly due to fall in the prices of agricultural commodities.

NEW PROCESS FOR ANTI-SHRINK TREATMENT OF WOOD

A new process for anti-shrink treatment of wood which is equally effective on coniferous and hard woods has been developed at the UK Forest Products Laboratory, Wisconsin. The process can be used to stabilise rifle stocks against shrinking and swelling due to humidity variations.

Reversing the traditional procedure, the stocks are first shaped and semi-inletted from fresh-cut green wood. Then they are heavily treated with the stabilising chemical, polyethylene glycol-1000, and then kiln dried. Best dimensional stability results from treatments that impart a glycol retention of 20-30 per cent (by weight of dry wood) in the thin, critical areas. Only a small portion of the chemical penetrates the part of the butt.

The preferred treatment consists of soaking the green pre-carved stocks for 45-60 days in a 30 per cent solution of glycol inhibits shrink, swell and warp by bulking the wood fibre cells where the large molecules of the stabilising chemical displace the natural moisture of the wood.

For the Investor

INVESTMENT GOSSIP Capital Gains

Second thoughts on the budget are naturally devoted to examining the snags and the loopholes. The full implications of the provisions relating to Capital Gains taxation are revealing themselves on further study. One consequence of the attempt to tax short-term capital gains at the rate appropriate to the total income including itself (but excluding long-term capital gains) is to obliterate a distinction that used to be very vital in the past. Case law and (lawyers) have been enriched by endless and often thin-spun arguments about the distinction between a capital receipt and a revenue receipt. Such distinctions would no longer seriously matter, except in cases of windfall receipts that do not arise out of a sale or transfer. Secondly, as far as non-company assesses are concerned, the temptation to enter into benami transactions to avoid capital gains tax would sharply increase in view of the stiffening of the rate and mode of taxation. The new provisions differ in three important respects from the old. First, under the existing law, no super-tax is leviable on capital gains of non-company assesses. This is now changed. Secondly, if the total of capital gains of a non-company assessee did not exceed Rs 5,000, no capital gains tax was payable. This minimum non-taxable capital gains is not provided for in the bill, though the provision regarding exemption from capital gains to non-company assessee whose total income does not exceed Rs 10,000 is retained. Thirdly, under the existing law, only a third of the capital gains of a non-company assessee was included in the total income for determining the rate at which the whole of the capital gains was to be taxed. Now the whole of the gains will form part of the total income and exclusions for rate purposes are limited to, in the case of short-term capital gains, to long-term capital gains and vice versa.

All this adds up to a fairly energetic turning of the screw and that is why I fear the temptation to have recourse to Benami transactions would be strong. And as the law stands even after amendment, the difficulty of bringing home the benami nature of many such transactions would be considerable. To assesses with fairly large incomes, the advantages of "maturing the stock", i.e. making the capital gain after retaining the asset for more than a year is considerable for they would then pay a maximum of 25 per cent of such gains as tax. A rather odd fact is that the Finance Minister expects only Rs 25 lakhs from tax on capital gains of non-company assesses. This may mean one of two things. Government

leans to the view voiced by some market men to the effect that the tendency to book capital profit is vastly exaggerated though the prospect of capital appreciation is almost certainly the prime mover behind the buoyancy in the stock market. They base this conclusion on the scarcity of floating stock in the market. On the other hand, it may well be that the Finance Minister's estimate is based on an appreciation of the fact that benami transactions, not easily traced and proved as belonging to the really big fish, would disperse profits so widely as to yield a bare Rs 25 lakhs. It may, finally, be part of the general pattern of underestimation of revenue for reasons canvassed in the Leading Article.

INVESTMENT SPECIAL Asiatic Oxygen

A new issue of more than ordinary interest is Asiatic Oxygen Limited which proposes to enter the capital market with an issue, later in the month, of Rs 67,00,000 of Equity Capital divided into 6,70,000 shares of Rs 10 each. The Company has been promoted by Asiatic Oxygen and Acetylene Co., Ltd., Calcutta who have been in the line of industrial gases since 1942. The issued and paid-up capital of the Company will be Rs 1,60,00,000 divided into 16,00,000 equity shares of Rs 10 each. Out of this Capital, foreign collaborators will contribute Rs 25,00,000 and 6,70,000 Equity shares of Rs 10 each, are being offered to the public. The entire issue offered, we understand, to the public is being underwritten.

The Company has a programme of setting plants for the manufacture of industrial and medical gases, including oxygen, dissolved acetylene, argon nitrogen nitrous oxide, hydrogen, etc, to start with at six centres, namely, Bombay, Madras, Rourkela, Durgapur, Patna and one factory with three units at Calcutta to manufacture oxy-acetylene welding are cutting equipment, welding transformers and electrodes.

The setting up of the manufacturing facilities will be substantially completed within one year and production of gases will start before the close of the year. The Company has concluded technical assistance arrangements with three leading American companies:

Air Products and Chemicals, Inc., USA (for manufacture or industrial gases KGM Equipment Co., for manufacture of oxy-acetylene welding and cutting equipment, and Metal and Termite Corporation, USA, for the manufacture of welding electrodes. The Company has also negotiated technical assistance agreement with the famous Westinghouse Elec.

International Co of USA for the manufacture of arc welding transformers. Besides, Air Products and Chemical Inc have agreed to participate in the Equity Capital of the Company to the extent of Rs 25 lakhs. They have also nominated Mr Leonard P Pool their President, on the Board of Directors of the Company.

Asiatic Oxygen will be the first Indian Company to have a net-work of industrial gases factories, the other being Indian Oxygen. The offer of Asiatic Oxygen compares very favourably with other recent entrants in the field. Thus, Bombay Oxygen, the shares of which command a premium, has almost the same capital load as that of Asiatic while its capacity would be less than one-fourth of that of Asiatic. The programme of manufacture of Asiatic Oxygen unlike that of other companies is also supported by products in allied fields, such as, welding and cutting equipment, welding transformers and electrodes, which are so essential for servicing the industry.

NEW ISSUE NOTES

Jagatjit Cotton

Jagatjit Cotton Textile Mills Ltd., Calcutta, is to issue further capital of Rs 41,63,640 in equity shares of Rs 10 each as "right" in the ratio of 1:1 for cash at a premium of Rs 5 per share. The proceeds will be utilized to finance the expansion programme of the company. The company's paid-up capital is Rs 58,57,440 (Rs 41,63,640 in equity and Rs 16,93,800 in preference).

Thiyagi Industries

Talyagi Industries Ltd., Madras, is to issue capital of Rs 50 lakhs consisting of equity shares of the value of Rs 45 lakhs and preference shares worth Rs 5 lakhs. The proceeds will be utilized to manufacture transmission towers and structures.

Air Control and Chemical

Air Control and Chemical Engineering Company Ltd., Ahmedabad, is to issue Rs 1 crore capital (including Rs 10 lakhs already issued, divided into 100,000 equity shares of Rs 100 each for cash at par of which shares of the value of Rs 5.50 lakhs will be subscribed by two US companies. The proceeds will be utilized to manufacture all types of refrigeration plants for industrial use, including heating, heat transfer, air conditioning, etc.

Mopeds India

Mopeds India Ltd., Andhra, has been granted consent to issue capital of Rs 35 lakhs for cash at par of which share worth for cash at par of which shares worth Rs 2 lakhs will be issued to the foreign collaborators M/s. Motobecane, France. The proceeds will be utilized for the manufacture of mopeds.

BONUS ISSUE NOTES

General Industrial Society

The General Industrial Society Ltd., Calcutta, has been granted consent to the issue of capital of Rs 44,90,000 divided into (i) 108,000 bonus shares of Rs 10 each to be issued in the ratio of one bonus share for every share held, (ii) a cash issue of 216,000 equity shares of Rs 10 each at a premium of Rs 3.50 per share and (iii) 12,500 9.5 per cent cumulative redeemable preference shares of Rs 100 each. The proceeds will be utilised for the establishment of a factory at Mirzapore, UP to manufacture aluminium foil and to take over a textile mill near Calcutta.

Braithwaite

Braithwaite and Company (India), Ltd., Calcutta, has been granted consent to the issue of 434,021 bonus shares of Rs 10 each on capitalization out of its reserves. The company's existing capital is Rs 56.59 lakhs.

C/o. Indian Finance
116A, Lower Circular Road,
Calcutta-14.

Shri Ambica

Shri Ambica Mills Ltd., Ahmedabad, is to issue bonus shares of the value of Rs 21,25,300 to be made in the ratio of one bonus shares for three shares held.

★

INVESTMENT NOTES

Goodyear

The newly-built Rs 6 crores tyre plant of Goodyear India Limited is to be expanded immediately from the present capacity of 213,000 tyres to 513,000 tyres a year. Plans for expansion are well in hand and it is expected that the installation of additional facilities will be completed within the next 12 months. The new plant which started trial production in August 1961 was handicapped by an uncertain power supply, but the position has lately improved. Daily production is now approaching the current licensed capacity.

East Anglia Plastics

The offer of right shares for Rs 75 lakhs by the East Anglia Plastics (India) Ltd., has been over-subscribed. The subscribed capital is thus increased to Rs 1 crore. The proceeds will be used mainly to finance building a new factory in Andhra for producing cellulose acetate flakes.

BIC

The outlook for British India Corporation Limited is assessed to be quite good. The woollen branches are working quite satisfactorily with full order books and prospects of continued good demand. Plans for the rehabilitation of the units have been drawn up and are awaiting licences from government. The cotton textile units have likewise worked satisfactorily with sales and profits remaining higher. Despite the fact that a record quantity of sugar cane was crushed during the 1960-61 season, the sugar units could not record higher profits because the advantage of large crushing had been offset by losses suffered in respect of export.

Indian Aluminium

The Indian Aluminium Company Limited has made substantial progress in its expansion programme. At Hirakud the expansion aimed at doubling the capacity of the plant to 20,000 tonnes per annum has been completed five months ahead of schedule. At Alupuram the additional extrusion press was installed on time and started operating in October 1961. The expansion of alumina producing facilities at Muri is progressing satisfactorily and a portion of the new facilities has been brought into operation in December last, again ahead of schedule by approximately four months. The integrated expansion programme undertaken by the company during 1959 is expected to be completed in

a few weeks' time. The company has received licences for the expansion of ingot capacity at Alupuram by 5,730 tonnes and for the establishment of a foil mill in Maharashtra State with an annual capacity of 2,500 tonnes of aluminium foil. It is expected that the construction work on these projects will start in the near future. These projects when completed and in working are expected to result in a foreign exchange saving to the extent of Rs 80 lakhs per annum.

Buckingham & Carnatic

The Buckingham and Carnatic Company Limited has achieved a record sales in 1961 for the fourth year in succession. Significant progress has been made during the year in its export drive. During 1961 the company's export sales increased by 2½ per cent to approximately Rs 2.02 crores. In pursuance of its policy of deeming reequipment, modernisation and rehabilitation of mill a continuous process and an essential one, the company has drawn up a programme for the next three years involving heavy capital expenditure. It is however hoped that this expenditure will be met from the company's own resources.

IISCO Output

Both production and despatches have declined in April as compared with the previous month. Production: Pig Iron 109,726 tonnes (113,176 tonnes); Steel ingots 83,396 tonnes (88,241 tonnes); Saleable Steel 47,646 tonnes (86,294 tonnes). Despatches: 47,603 tonnes (93,213 tonnes). (The figures in brackets represent relevant figures for March 1962).

Shri Ambica Mills

Sri Jaykrishna Harivallabhdas, Chairman of the Shri Ambica Mills told the annual general meeting of the company held last week that the company had on hand quite a huge programme of expansion, replacement and modernisation for its three textile units. Permission has been received for the installation of additional 9,600 spindles and additional 150 automatic looms as well as for the replacement of 400 old automatic looms. A bag capital expenditure programme is under contemplation as regards its new subsidiary, Bombay Steel Tubes Limited.

The chairman however has pointed out that the impact of the new budget proposals will be heavy on the cotton textile industry, and the Shri Ambica Mills alone will be required to pay about Rs 48 to Rs 50 lakhs by way of additional excise duty on cloth. The company will also have to shoulder an additional burden of Rs 7 lakhs as a result of 5 per cent increase in Corporate taxation.

Philips

Philips India Limited propose to maintain dividend at 12 per cent subject to tax, for the year ended 31 December 1961.

BALANCE-SHEET BRIEFS

The working of the Savamalai Estates Limited during the year ended 30 November 1961 has resulted in a net profit of Rs 1.24 lakhs as against Rs 1.11 lakhs in the previous year. Provision or taxation and depreciation are higher at Rs 1.12 lakhs and Rs 26,608 respectively. Dividend for the year is 16 per cent as against 14 per cent, less tax.

The profit of the All-India General Insurance Company Limited for 1961 is higher at Rs 13,000 as compared with the previous year. The company has provided an additional reserve of Rs 1 lakh this year for unexpired risks. The net premium income (written in all departments amounted to Rs 22.02 lakhs.

The working of the Jayabharat Insurance Company Limited during the year ended December 1961 has resulted in a profit of Rs 10.30 lakhs against Rs 7.44 lakhs in the previous year. A dividend of Rs 25 per share has been proposed. Net premium amounted to Rs 72.68 lakhs.

The net profit of Rajalakshmi Mills for the year ended December 1961 after providing for depreciation (5,66,373) amounted to Rs 21,68,257. The increase in the net profit is partly due to a change in the basis of charging depreciation. Dividend is higher at 20 per cent, the previous year's figure being 12 per cent.

★

STOCK EXCHANGES

Cheerful Sentiment

Watch-Dog Writes:

CONDITIONS in the stock markets have continued to be cheerful during the week under review. Although some aspects of the new taxation proposals are not quite conducive to a broadening of investment, the general belief seems to be that with their expansion programmes and the rising trend of demand generally, the corporate sector may not find the taxes crippling. Good corporate news and the announcement of bonus issues by some prominent companies together with the expectation of an early announcement of steel retention prices further aided the bullish fervour.

But for some hesitation to extend commitments and a tendency to book profits in earlier dealings, the Calcutta Stock Exchange has generally ruled steady to firm with several good features appearing all along the list.

The improvement in sentiment in Bombay Stock Exchange stems from the belief that the excise duty on cloth and yarn may be revised favourably. However, the week's trading was marked by imposition of margin both on bears and bulls. Toward close, sentiment looked somewhat disturbed presumably due to renewed apprehensions that earlier hopes of tax concessions may not materialise.

Steady conditions prevailed in the Madras Stock Exchange. While

higher advices from Lyons Rare and Dalal Street were a potent factor, the strength derived by shares from the cut in export duty and the indication of a refund of portion of the excise duty on tea exports contributed in a large measure to the general improvement in sentiment.

CALCUTTA

Calcutta, Friday Evening.

In active trading, equities have considerably firm up during the past week. Despite analyses of the taxation proposals leading to the conclusion that the Central Budget is not as good from the point of view of the investor as appeared at first both investors and operators have vied with one another in extending their commitments at daily rising price levels. The optimism seems to have stemmed from a number of bullish factors. The first is the even conceding that the new tax will have a heavy impact, the corporate sector what with its rapid expansion and the severe import restrictions resulting in good demand for indigenous manufactures, may not find the additional taxes to be burdensome. The second factor favouring bulls is the indication given recently by the Union Minister for Mines and Fuel, Mr K D Malaviya that Government may not be averse to an upward revision of coal price provided production showed the expected increase. The easy condition in the money market is another encouraging influence and the expectation that the announcement of retention prices for steel is imminent has been a powerful contributory factor in pushing up prices of shares in the forward list. Towards close of the week, however, sentiment has tended to be subdued following the release of figures showing its performance during April by Indian Iron and Steel Company, Limited. IISCO production and despatches during last month were considerably lower as compared with the previous month. Renewed anxiety over further deterioration of Sino-Indian relations and Kashmir seemed to have arrested somewhat the upward march of equities on Friday.

Government securities ruled steady. Although interest was not widespread, in later dealings a number of State Loans were marked. 3 per cent 1986 was done between Rs 71.50 and Rs 71. Steady conditions prevailed in the Banks section. United Bank (Rs 10 paid) was done upto Rs 7.12. United Commercial was steady at Rs 93. Coal shares met with good request on hopes of early increase in the price of commodity following indications given by Union Minister Mr K D Malaviya in this regard. East Indian was a steady counter and closed at Rs 43.75 on Tuesday. Central India met with good support around Rs 13.25, while Amalgamated was well maintained at Rs 22.87. Bengal was quoted at Rs 381. Among other shares which received sustained enquires were New Manbhoom, Searsole and South Karanpura. Western Bengal which was steady in earlier dealings turned somewhat quiet towards close.

Selected jute shares were in demand at increased price levels. It would appear that with the clarification of certain obscure points in regard to the incidence of the excise levy on jute goods, sentiment has somewhat rallied. Among shares that were in good request were Gourepore which improved to Rs 503 from Rs 500 quoted earlier. Budge Budge was wanted upto Rs 146. Cheviot met with good enquiry and moved upto Rs 23.75. Champdany was a bright spot at Rs 147, as was Barnagore at Rs 181.25. New Central was active and closed on Thursday at Rs 17.56.

Tea shares were generally steady although business passing has not shown much improvement during the week under review. No doubt there is an improvement in sentiment consequent to the reduction in the export duty and the drawback of excise duty allowed on exports. But interest has been concentrated mainly on shares which have good exports as it is feared that gardens which produce tea mainly for internal consumption may not be benefited much. Tezapore improved to Rs 17.56 from Rs 17.12. Hantapara moved upto Rs 128 from Rs 125 earlier in the week. Hattikhira was well maintained at Rs 12.44. Bishnauth was done at Rs 19.81.

In the Engineering section, prices improved on sustained buying interest. On rumours of early announcement of steel retention price Indian Iron was pushed up in later dealings. The scrip, however, encountered profit-taking now and then. Elsewhere in the section, Braithwaite was a steady counter and was done upto Rs 60. Indian Standard Wagon gained on buying interest to close ten points higher on balance on Thursday at Rs 180. Jessop was well maintained at Rs 25.68. Burn steaded to Rs 700.

Cotton textile shares made a better showing on hopes of cut in the excise duty on cloth and yarn. Bharat Commerce was a prominent feature improving to Rs 29.87 from its opening level of Rs 28.31 following release of an excellent report by the company. Jayshree was better on balance at Rs 16.75.

There were several bright features in the Miscellaneous section as will be evident from the following table.

	Week's Opening	Week's Closing
Orient Paper	43.80	43.75

MADRAS

Madras, Wednesday.

THERE was profit-taking in the plantation shares in which Coffee and Tea commanded better outlook than the rest. Banks were almost unimpaired. Public utilities were bought as usual. Sugars were steady with buyings in Deccan, E.I.D. and Travancore. There was small change in textiles. There were sellers in Travancore Rayon, Maduras and Rajalakshmi Cement shares were well fancied while chemicals commanded good inquiry.

Banks: There was no change in this counter. Indian Bank was marked at Rs 175.75, Indian Overseas at Rs 167.50, Pandyan at Rs 26.00 and Punjab National at Rs 21.25.

Electrics: These shares were bought at the listed prices. Cochin remained at Rs 12.25, Karaikkal was at Rs 22.00, Kumbakonam was at Rs 11.83, Negapatnam was quoted at Rs 12.10, Salem-Erode was quoted at Rs 15.00, South Madras remained unchanged at Rs 10.15 and Vellore at Rs 15.25.

Sugars & Breweries: Deccan was bought at Rs 9.82, E.I.D. was acquired at Rs 40.12, Travancore was at Rs 7.15 and United Breweries was at Rs 82.25.

Plantings: Blue Mountain improved to Rs 2.59. Chembra went down to Rs 3.62. Cochin Malabar was higher at Rs 7.05. Coffee Lands was sold at Rs 15.50. Consolidated Coffee was the same at Rs 19.40. Coorg was unchanged at Rs 4.95. Highland was at Rs 13.75. Kailas was the same at Rs 5.00. Lucky Valley went down to Rs 10.62. Mysore Coffee was marked at Rs 6.00. Nilgiri improved to Rs 8.90. Oucherlony was sold at Rs 4.05. Parkside gained twentythree nP per share at Rs 23.25. Panchura was at Rs 3.70. Penakaramalai was quoted three nP less at Rs 3.57. Talayar was seven nP better at Rs 1.92. Thirumbadi was quoted at Rs 1.57. Woodland was available at Rs 7.85.

Textiles: Anglo-French quoted the same at Rs 148.00. Bangalore Woollen was at Rs 250.60 and Buckingham was quoted at Rs 271.60. Coimbatore Cotton was done at Rs 193.80, while Coimbatore Spinning changed hands at Rs 82.00. Lakshmi was lower at Rs 165.00. Madura was quoted at Rs 38.50. Rajalakshmi was at Rs 113.00. Rayalaseema was at Rs 123.37. South India Viscose was lower at Rs 191.50. Travancore Rayon was sold at Rs 43.50. With 10% dividend Virudhunagar was at Rs 62.00.

Miscellaneous: Aluminium Industries was at Rs 24.10. Ashok Leyland was at Rs 9.12. Dalmia Cement was priced at Rs 14.55. Enfield was at Rs 12.10. Forest Industries was at Rs 2.30. F.A.C.T.s was quoted at Rs 8.10. India Cement improved to Rs 6.20. Kirloskar Elec. was thirteen nP higher today at Rs 23.25. Madras Aluminium added ten nP to its value at Rs 21.00. Madras Rubber was five nP lower at Rs 22.05. National Rubber Mfrs. was lower at Rs 11.92. Mettur Chemicals was sold at Rs 14.00. Parrys Confectionery gained

eight nP over last closing to be quoted at Rs 4.45. Premier Fertilizer was at Rs 7.80. Rane was fractionally higher at Rs 7.12. Seshasayee Industries was at Rs 10.10 and Seshasayee Paper was at Rs 5.00. Textool remained at Rs 183.50. Travancore Chemical Mfg. Was higher at Rs 21.50.

Snippets

ECONOMICS OF LOW TEMPERATURE CARBONISATION INDUSTRY IN INDIA

Pilot plant investigations on production and market studies on the use of semicoke as a domestic fuel at the Regional Research Laboratory, Hyderabad, have shown that low temperature carbonisation can be established as an economic industry in India.

The primary aim of low temperature carbonisation of coal is to produce a soft coke for domestic use. To be economic, however, it is necessary to ensure proper utilisation of the principal byproducts obtained in the process. Low temperature tar can be further processed to valuable products like road tar, creosote oil, timber creosote, illuminants and tar acids. Investigations conducted during the past eight years at the Hyderabad Laboratory with a prototype pilot plant of the Lurgi-Spielgas type (25 tons coal throughout per day) have proved that all the products can be profitably marketed and low temperature carbonisation can be established as an economic industry in India.

NEW THEORY OF ANAESTHETIC ACTION

A new theory to explain unconsciousness and the mechanism of action of an anaesthetic has been advanced at the California Institute of Technology, US. In this theory the action of anaesthetics is linked with the formation of compounds in which molecules of one substance are trapped in a network of molecules of another substance, such as water. Those unusual compounds are called clathrate compounds. Water forms traps that look somewhat like the cells in a honeycomb except that they are five-sided instead of six-sided. The molecules of anaesthetics fit into the holes of water lattice structures containing 20, 24 or 28 molecules of water. The clathrate compounds thus formed are very small crystals that cause unconsciousness they occur in the brain fluid.

The theory assumes that consciousness requires a constant interchange of electrical energy in the brain. The presence of micro-crystals in the brain interferes with the passage of electric currents from one brain cell to another causing unconsciousness. This new approach to the understanding of unconsciousness should shed light on many mental problems. It may lead to the development of methods of restoring consciousness to persons subject to prolonged periods of unconsciousness.

local market at a price of Rs of Rs 150-200 per ton depending upon seasonal fluctuations; in Bombay the price of charcoal is much higher.

EXPERIMENTS ON MALARIA IMMUNITY CONCLUDED

Experiments on the duration for which immunity lasts after an infection with malaria have been concluded at the Malaria Institute of India, Delhi. White rats infected with malaria parasite and given a radical treatment after the infection had run its course, were tested after varying periods up to 12 months. The immunity as determined by the resistance of the rats to another similar infection was detected to be present up to 3-4 months; it gradually declined thereafter.

The experiments to see if the immunity acquired to malaria can be inherited by the offsprings through generations have also been concluded. It was observed that in the sixth generation of mice obtained by selective breeding of animals infected and cured at every generation, about 20 per cent of the mice were refractory animals. It was found that in these animals the malaria parasite took a longer time to develop and the duration of the patent infection was limited to short periods as compared to those in normal animals. It appeared that there was a certain degree of inheritance of immunity to malaria infection from generation to generation.

Company Reports

Arvind Mills Maintain Dividend

THANKS to favourable trading conditions, the Arvind Mills Limited, Ahmedabad, has nearly maintained its earnings for 1961. Sales are higher at Rs 3.82 crores against Rs 3.74 crores, while the net profit, after providing for Depreciation and Taxation, is only slightly higher at Rs 43.09 lakhs as against Rs 42.44 lakhs for the preceding year, mainly due to the rise in manufacturing costs following higher prices of cotton, store materials, spare parts, chemicals and dyes.

In respect of allocations, the Depreciation amount is raised to Rs 24.82 lakhs from Rs 8.36 lakhs and Development Rebate reserve to Rs 22.50 lakhs from Rs 4.00 lakhs. The provision for Taxation is lower at Rs 30 lakhs against Rs 38 lakhs. After transferring a sum of Rs 12.08 lakhs from General Reserve, a sum of Rs 5.25 lakhs is provided for Capital Redemption Reserve. In the previous year, a sum of Rs 11 lakhs was set apart for General Reserve. The directors have proposed to maintain the total dividend on ordinary shares at Rs 45 per share, subject to tax.

Excellent Results of

Shri Ambica Mills

Shri Ambica Mills Limited has produced excellent working results for 1961, reflecting a marked rise in sales from Rs 5.40 crores to Rs 5.73 crores. The net profit after providing for Depreciation and Taxation, amounts to as much as Rs 70.00 lakhs as against Rs 60.46 lakhs for the preceding year.

Except the provision for Depreciation which is lower at Rs 14.50 lakhs against Rs 14.08 lakhs, all other allocations have been raised: Taxation to Rs 65.20 lakhs from Rs 56 lakhs, General Reserve to as much as Rs 53 lakhs from only Rs 15 lakhs; Investment Reserve to Rs 10 lakhs from Rs 5.00 lakhs and Development Rebate Reserve to Rs 2.70 lakhs from Rs 2.50 lakhs.

The directors have not proposed any dividend on the Ordinary shares as against Rs 50 per share, taxable paid for 1960. In this connection, it may be added that the directors have proposed that a sum of Rs 21,25,300 be capitalised from General Reserve and issued as bonus shares to the registered shareholders of the existing 63,759 ordinary shares of the company. In view of the proposed capitalisation and issue of bonus shares, the directors recommended the distribution of any dividend to the ordinary shareholders of the company.

Shreeniwas Cotton Pays More

The Shreeniwas Cotton Mills Limited, Bombay, has maintained its sales at Rs 3.86 crores for the year 1961. The net profit, before providing for Depreciation and Taxation, amounts to Rs 76.59 lakhs as against Rs 59.43 lakhs for the preceding year.

In respect of allocations, a sum of Rs 15.39 lakhs (Rs 14.14 lakhs) is set apart for Depreciation; Rs 21.75 lakhs (Rs 18.50 lakhs) for Taxation; Rs 11.00 lakhs (Rs 7.00 lakhs) for General Reserve and Rs 10 lakhs (Rs 5 lakhs) for Development Rebate Reserve. The directors have proposed a taxable dividend of 20 per cent, taxable, on the equity shares as against a taxable dividend of 18 per cent for 1960.

The Government of India has sanctioned additional 3 million spindles to the textile industry, to be allotted to the existing as well as new units. This company has applied for 20,000 extra new spindles for balancing purpose; but the Government has allowed only 4,000 additional spindles so far and, as such, the matter is being pursued further.

Further machinery erection programme of about Rs 30 lakhs is in hand for the current year. The company proposes to install further machinery in processing department for which the necessary import licence has already been received.

The working of Shree Madhusudan Mills Limited, a subsidiary of this company, is improving. The company has paid arrears of dividend for two years on its preference shares for the first time since becoming subsidiary of this company. It is understood that their Board will shortly sanction to pay a further interim dividend for two years and thus they will clear the arrears of dividend for four years.

Kohinoor Mills Earn More

Despite various handicaps, the Kohinoor Mills Company Limited has made a higher net profit, after providing for Depreciation and Taxation, of Rs 22.71 lakhs as against Rs 16.50 lakhs, sales amounting to Rs 6.20 crores against Rs 5.93 crores.

In respect of allocations, the Depreciation amount is raised to Rs 17.02 lakhs from Rs 10.92 lakhs and Taxation to Rs 15.68 lakhs from Rs 4.25 lakhs. The provision for Development Rebate Reserve is, however, lower at Rs 4.90 lakhs against Rs 7.07 lakhs. The directors have proposed a final dividend of Rs 12, making a total of Rs 18 per share, taxable, as against Rs 15 per share, taxable, previously.

As against a paid-up capital of Rs 1 crore, General Reserve stands at Rs 17 lakhs; Machinery Reserve at Rs 61.50 lakhs; Development Rebate Reserve at Rs 18.57 lakhs and Dividend Equalisation Reserve at Rs 10 lakhs. The gross block at Rs 4.49 crores is depreciated by Rs 3.18 crores, leaving a net block of Rs 1.31 crores.

ALTHOUGH the stock market ruled rather subdued most of the time in April the closing was on a steady note. For nearly three-quarters of the month, sentiment was plagued by a number of uncertainties. As the month progressed discussion was centred on the shape of things to come in the Central Budget. Speculation over, the composition of the Central Cabinet was the main preoccupation in the early part of the month and that fact accounted for the slightly reactionary tendency noticeable then. The forward scrips were, subdued following the indication given by the Indian Iron and Steel Company to the effect that there was no need for an immediate rights issue in connection with the setting up of its subsidiary company for the manufacture of pipes. The mood did not change even after the announcement of the personnel of the Central Cabinet which in composition was more or less the same as before. The lack of enthusiasm at the announcement which accorded with expectations is to be traced to a lurking apprehension that there might be a major reshuffle later on. The intervention of the Easter holidays and rumours about new taxation proposals relegated all other issues to the background. As anticipated by the market the Railway budget brought an increase in freight rates and this factor contributed to the general reluctance to extend commitments. It was generally apprehended that the increase in freight rates would result in putting up the prices of raw materials and consequently of manufactures as well. Although budget rumours this year were much smaller in number than in the previous years, what few rumours there were proved to be remarkably correct. For instance, a few days before the Budget day, market rumour had it that corporate tax might be stepped up from 45 per cent to 50 per cent.

In marked contrast to its mood during most part of the month, the stock market ruled remarkably steady during the pre-budget session. And sentiment brightened further during the budget session presumably due to the belief that in spite of direct taxation finding a place in it, the budget was not quite bad from the point of view of investors. What seemed to have touched off the bullish fervour is the fact that contrary to expectations the budget disclosed a much smaller revenue deficit to be covered. Most calculations put the figure at around Rs. 80 crores but actually it was no more than about Rs. 60 crores. The comparative smallness of the revenue deficit seemed to have reduced the shock administered by proposals such as a five per cent increase in corporate tax and the increased tax on capital gains. Even the increase in the income tax all along the line, as it were, did not deter bulls who evidently believed that the corporate sector would be able to absorb the new burdens in its stride what with its rapid development, extensive expansion programmes and the existence of a ready

Budget Cheers Equities: Firm Closing in April

market for all indigenous manufactures. The abolition of the Expenditure Tax hailed as a step in the right direction as was the proposal to reduce the surcharge on salary incomes. Another aspect of the budget proposals from which market men derived encouragement was the tax incentives given for export promotion although the incentive given fell far short of requirements of the situation and the recommendation of the Mudaliar Committee. The reduction of export duty on tea revived interest in tea shares. Perhaps the one point that impressed bulls most is the fact that with this year's taxation proposals, nearly threefourths of the total estimated tax effort for the Third Plan has been covered. A conclusion that is to be derived from this is that in the coming three years

of the current plan period, fresh taxation effort need not be as strenuous as heretofore.

Sectionwise, jute shares were a steady market during the first three weeks of the month as prospects for the industry were assessed to be quite good in the current year. It was noted that despite extension of the period of full working of mills by another month to the end of May, demand for ready and near delivery goods continued unabated. Optimism stemmed from the fact that with demand continuing to be quite good and with a plentiful supply of raw jute, the industry would be enabled to work on a profit. The outlook for smooth working of the industry in the current year had also improved by the establishment of the jute buffer stock association which had started purchases of raw jute in the current season itself and favourable weather conditions during the sowing period of the next jute crop. After Budget day, however, jute shares, after initial firmness developed a reactionary tendency having come under-selling pressure stemming from apprehensions that the excise duty imposed on jute goods may adversely affect profits of jute companies. While it may be possible for the jute companies to pass on the excise duty to consumers, in actual practice it may be found to be difficult to do so.

The coal section started the month on a subdued note following restatement of the difficulties facing the industry by prominent company chairmen. However, the sentiment improved in later dealings as indications became available that Delhi would favourably consider the question of an increase in the selling price of coal. Towards the close of the month the section considerably brightened up following reports that the Union Minister for Mines and Fuel, Mr K. D. Malaviya had told the industry that Government would be prepared to allow an increase in the selling price of the commodity provided the industry would undertake to raise production to a level that would be deemed necessary.

Like most other sections, the tea section too was rather subdued during the major part of the month as it was feared that output in gardens would be adversely affected by the continuance of the dry spell. However, with Budget day optimism returned and prices improved on the reduction of the export duty. Business passing continued to be small in volume as sellers were scarce.

The sugar section which had received selective demand earlier in the month, turned completely quiet toward the close of the month reflecting the disappointment over the absence of any cut in the excise duty on sugar in the Budget.

The miscellaneous section all along was selectively bright and soon after the Budget day more and more shares joined the upward movement, with some new issues making handsome gains on sustained buying.

(a) After transferring Rs 20,638 from General Reserve No. 1.
(b) After transferring Rs 200,000 from Development Reserve and Rs 65,000 from General Reserve No. 1.
(c) It is proposed to capitalise Rs 2,125,300 from General Reserve and issue Bonus shares.
(d) After transferring Rs 60,000 from General Reserve.
(e) After transferring Rs 70,000 from Development or Rehabilitation Reserve.
(f) After transferring Rs 80,100 from Dividend Equalisation Reserve.
(g) After transferring Rs 2,656,522 from General Reserve.
(h) After writing back Rs 360,718 being excess depreciation provided in 1958.
(i) After transferring Rs 1,008,546 from General Reserve No. 1.
(j) After transferring Rs 250,000 from Dividend Equalisation Reserve.
(k) After transferring Rs 1,230,000 from Dividend Equalisation Reserve.

(l) After transferring Rs 297,425 from excess depreciation.
(m) After transferring Rs 119,825 from Development Rebate Reserve.
(n) After transferring Rs 120,000 from Dividend Reserve.
(o) After transferring Rs 1,400,000 from Dividend Equalisation Reserve.
(p) After transferring Rs 5,27,512 from General Reserve.
(q) After transferring Rs 400,000 from General Reserve.
(r) After transferring Rs 250,000 from General Reserve.
(s) After transferring Rs 1,207,838 from General Reserve.
(t) After writing back Rs 289,747 being provisions made in previous year.
(u) After transferring Rs 200,000 from General Reserve.

(v) After transferring Rs 1,00,000 being Adhoc. reduction in Stock-in-trade provided last year.
(w) After transferring Rs 98,240 from Dividend Equalisation Reserve.
(x) After transferring Rs 890,580 from General Reserve.
(y) After transferring Rs 1,075,000 from General Reserve No. 1.
(z) After transferring Rs 100,000 from General Reserve and Rs 125,000 from Dividend Equalisation Reserve.
(aa) After transferring Rs 14,72,855 from General Reserve.
(ab) After transferring Rs 300,000 from General Reserve.
(ac) After transferring Rs 750,000 from General Reserve and Rs 45,088 from excess provision for Bonus.
(ad) After transferring Rs 371,942 from General Reserve.

12 May 1962 MILLS—Contd.

AFTER twelve years of distinguished service to the republic, themselves the crown and summit of a life of dedicated sacrifice, Dr Rajendra Prasad will be laying down office as President this week. Dr Prasad's tenure was not only the first years of the republic, but also its most difficult and momentous. Nations in the making are not always endowed with a leadership of the quality they most need and in this respect India's luck has been exceptional. Though there is much in our political life we deplore, conscientious patriotism at the highest level has never been in question. The memory of a common struggle under a leader who set his sights high, and a life-time of training under him had given persons with diverse backgrounds and temperaments an ability to work together and a higher loyalty. The forging of the right kinds of conventions and the working of the Constitution in the spirit in which it was conceived are not always easy and many another nation which has begun hopefully on the democratic path has lapsed into authoritarianisms of various kinds. Written constitutions are not always a guarantee of permanent definition of powers and are only too easily subverted. It speaks volumes to the political maturity and dedicated patriotism of those who have been working our Constitution that nothing remotely like danger to the essential principles of our Constitution has arisen in the last twelve years. The Constitution has been amended often enough and not always for defensible reasons, but it would be a travesty of truth to say that they have in any way subverted the basic principles enshrined in the original charter of the Republic. The credit for this goes almost entirely to Dr Prasad.

It is necessary to emphasise this fact on this occasion because of the controversy that was set afoot last year following certain observations made by Dr Rajendra Prasad on an academic occasion about the need for thinking about the extent of the Presidential powers under the Constitution. Indeed, even in the present Parliament, Mr Bhupesh Gupta brought up the question and wanted a clearer definition of the relations between the President and the rest of the executive wing of the Constitution. As far as Dr Prasad is concerned, he had expressed his conviction on the subject long ago. On that occasion, he clearly indicated that he considered the Presidential office as nearer that of the British Monarch than that of the American President. And throughout the twelve years in which he was President, nothing took place to make us think that he has changed his mind since. This, of course, is not to say that the President did not express his views on the various policies pursued by his government or that there were no differences. But on all such occasions the necessary give and take must have taken place and the yielding need not have been always on the part of the President. On all such occasions, the informality and personal intimacy that have characterised the relationship between the President and the Prime Minister must have played a part in ironing out differences.

In his speech replying to the farewell good wishes by members of Parliament last Tuesday, Dr Rajendra Prasad touched on some important aspects of national life that have troubled him as they have others. Some people have been quick to fasten on this speech all kinds of political significance. This is wholly unnecessary and unwarranted. There was nothing in the sentiments that he expressed that we did not know were his, though there was a certain uncomfortable topicality about some of his reflections that indicated recent thinking. He was distressed by the sectional, regional and linguistic squabbles that have bedevilled our national life. He deplored the pathetic dependence on government for everything and the absence of collective non-official initiative in large areas of our life. And he also referred to murmurs of "things which should not have happened, which should not have been allowed to happen" during the elections. In particular, he drew attention to the "cost of election". This is an aspect of the question that appears to have troubled him a great deal for he spoke of it at some length. The subject got an airing in the Parliament also last week. There can be no doubt that Dr Prasad's misgivings about the political and moral implications of this phenomenon are well-founded. It is unlikely and unthinkable that government will not take the initiative in doing some serious thinking on the subject and evolve some kind of code in the matter.

Dr Prasad has announced this intention of retiring to his Ashram in Patna for the present. The whole nation wishes him a retirement as fruitful and as filled with felicity as his active years of service to the country have been. But, as he is fond of saying, he takes opportunities for service as they come. We have no doubt that such opportunities will be thrust on him. The present leadership will continue to draw on his wisdom wherever he is for the bond between him and the Prime Minister is strong and intimate.

Dr Radhakrishnan, who has been just elected our new President will admirably maintain the continuity of the traditions of the office so well set by Dr Rajendra Prasad. Like Dr Prasad, Dr Radhakrishnan is universally respected. His philosophic calm hides a profound humanity that others who wear their hearts on their sleeves are often incapable of. And his wide experience and grasp of fundamentals will bring to the tasks of governing a depth and larger reference. With Dr Radhakrishnan as President it is unlikely that planners will forget that they are not dealing with figures but men and women. Fears, not always honest, have sometimes been pressed about the drift of the present leadership towards foreign ideologies not suited to the soil. Dr Radhakrishnan would have been the last choice of anyone inclined that way. With him as President, our policies are sure to be firmly rooted in the traditions of the country without in any way being obscurantist or backward-looking.

THE INDIAN BANK LTD.,

(Established in 1907)

REGD. OFFICE: INDIAN CHAMBER BUILDINGS, ESPLANADE, MADRAS-1.

Offers complete Banking service of
every description, backed by more
than 54 years of sound experience.

Subsidiaries Emulate the Parent

A study of the balance-sheets of the eight subsidiary banks of the State Bank is a useful exercise in that it shows, in common with the parent institution itself, generally a tendency to keep the credit ratio down and the investments portfolio high. Secondly, the resources commanded by the subsidiary banks in the aggregate amount to a significantly large sum, and it would appear that as Deposit growth continues to be experienced, the eight subsidiary banks will lay equal importance on support of Government's borrowing programme and on the extension of credit to trade and industry.

Deposit resources of the eight banks amount to Rs 127.23 crores, and the State Bank of Hyderabad tops the list in this regard with Rs 24.29 crores though ranking only second in the number of offices. Even the smallest—the State Bank of Indore—commands Deposits exceeding the Rs 10 crore mark at Rs 1086 crores. Deposit growth of the eight subsidiaries during 1961 just slightly fell short of Rs 24 crores. Only two of the banks report Advances exceeding Rs 10 crores, Hyderabad and Mysore. Nevertheless by reason of adequate Deposits the credit ratio in both cases is not far higher than the average for the eight of 53.5 per cent. Only one bank, Bikaner, has a credit ratio exceeding 60 per cent at 62.1 per cent. There are, it is interesting to note, two institutions—Patiala and Travancore—whose Advances/Deposits ratios are rather lower than 50 per cent. In the case of Patiala, in fact, it is at an incredible 34.7 per cent. The total Advances of the eight subsidiaries are placed at Rs 68.03 crores.

As already noted the investments (which include holdings other than securities, but only nominally so) are rather higher than the ratios obtaining for the Scheduled Banks taken together. Aggregate investments are placed at Rs 50.01 crores, accounting for 39.3 per cent of Deposits. As was to be expected the highest investments/Deposits ratio—62.0 per cent—is reported by Patiala, while the lowest at 28.2 per cent is claimed by Indore.

Outstanding profits have been earned by Mysore at Rs 20.67 lakhs, and a not very close second is Hyderabad with Rs 12.19 lakhs. What makes the Mysore achievement even more remarkable is that the subsidy it has received from the State Bank, as a proportion of total profits is lowest at 6.0 per cent as compared with the average of 13.5 per cent for the eight banks. The profit of the eight banks taken together comes to Rs 71.09 lakhs.

In terms of the relevant act each of the banks has received subsidies from the State Bank. The largest amount went to Travancore at Rs 2.19 lakhs and Patiala is at the other end with Rs 0.59 lakh. The total received as subsidy by the eight banks is placed at Rs 9.58 lakhs.

The subsidy expressed as a ratio of the profit is highest in the case of Jaipur at 29.5 per cent, and close behind is Travancore's ratio of 26.2 per cent; one other bank, Bikaner, also has a ratio exceeding 20 per cent in being placed at 21.3 per cent. The lowest, as already noted, is Mysore with 6.0 per cent. Another single-figure is Indore whose subsidy worked out to 7.3 per cent of its profit. Only three of the banks—Mysore, Saurashtra and Travancore—have paid-up capital

placed at Rs 1 crore, and the aggregate paid-up capital of the eight banks is Rs 4.95 crores. None of the eight has reserves equivalent to the paid-up capital. The largest reserves are carried by Mysore with Rs 60 lakhs and Saurashtra just slightly lower at Rs 57.50 lakhs. The aggregate reserves of the subsidiaries total Rs 2.40 crores.

During the year Travancore took over the Travancore Forward Bank Ltd, the Kottayam Orient Bank Ltd and the Bank of New India Ltd under Section 45(7) of the Banking Companies Act of 1949. All the subsidiaries save Travancore transacted Government business as agents of the State Bank, the exception being due to some delay in the handing over of Government Business by the Kerala Government. Forty-eight new branches were opened in 1961 by the eight subsidiaries, and one was closed. With the amalgamation referred to there was an acquisition of 112 branches of the merged banks, of which 49 were closed. Thus, as at the end of 1961, the subsidiaries had a total of 443 branches (a rise of 110 over the year)

Productivity: Wanted A New Approach

THE recent conference of Local Productivity Councils inaugurated by the Minister for Industry in New Delhi on May 4, provided a suitable opportunity to evaluate progress achieved and to identify difficulties encountered at different levels. Mr Kanungo's presidential address has described in detail the expansion of the organisational network, which now covers all the industrial centres, and the wide range of activities of the productivity councils. But as Dr Lokanathan pointed out in his welcome speech, the number of productivity councils set up or statistics of training programmes, trainees and study teams sent on tours cannot be regarded as adequate criteria for assessment of the actual achievement. The productivity drive could claim success only when industrial establishments not only send their employees for training at the productivity councils, but also take steps to implement the programmes for increased productivity.

Dr Lokanathan said that difficulties were being encountered at two levels—from the workers and from top management. The resistance from the workers was to be expected. But Labour's suspicions about these being efforts to retrench the working force will get dispelled when the objectives are clearly understood. Some of the Local Productivity Councils have already been successful in enlisting the cooperation of workers with the help of their training programmes

and 47 pay offices (or one less than as at the end of 1960).

The role envisaged for the subsidiaries and the progress achieved so far in this regard can be gathered from the following extract from the Report of the Central Board of Directors of the State Bank for 1961: "The subsidiary banks made further progress in the financing of small scale industries and co-operative institutions. As at the end of December 1961, the number of small scale units assisted, the credit limits sanctioned and the amount outstanding were 463, Rs 339.7 lakhs and Rs 145.9 lakhs as compared to 384, Rs 266.7 lakhs and Rs 113.6 lakhs respectively as at the end of December 1960. Similarly, the total limits sanctioned to co-operative institutions as well as the relative outstandings rose from Rs 345.0 lakhs to Rs 381.5 lakhs and from Rs 139.5 lakhs to Rs 162.3 lakhs respectively. Limits sanctioned against warehouse receipts increased from Rs 79.3 lakhs in December 1960 to Rs 272.9 lakhs in December 1961, outstandings going up from Rs 43.1 lakhs to Rs 103.3 lakhs."

in the regional languages.

But the indifference of top management is more surprising. It cannot be because of lack of awareness of the advantages of increased productivity. The fact that the local Productivity Councils have been set up with the participation of industrial units who contribute the best part of the subscriptions, and send their staff for training is evidence enough that there is no obscurantist opposition. But if this expensive training is not extensively or intensively utilised at the plant level, the reason, perhaps, is that the economic and other implications of adopting the new techniques catch the management on the horns of a dilemma.

Productivity is a comprehensive concept, with philosophical overtones, as any one can find out by going through the literature put out by the NPC. But, in practice, the programmes in India have so far been mainly concerned with increasing the productivity of Labour. The consequences of adopting a programme of increased labour productivity, as pointed out by Mr P. L. Tandon of Hindustan Lever among others—at the last year's Productivity Conference, will be redundancy, unless the industrial units concerned are able to expand the markets for their products. Not all concerns can absorb redundant labour in other establishments under the same organisation, and even if there is an expanding market the rest of the economy, dogged by shortages cannot do it either. As retrenchment is ruled out, there is, on the balance, no advantage from the management's point of view in adopting productivity techniques.

The productivity movement originated in the advanced industrialised countries of the West where Labour is scarce and Capital is comparatively plentiful. In India the condi-

tions are entirely different. Here we are faced with the problem of surplus of Labour and shortage of Capital. It, therefore, appears that the productivity movement will not be able to make an impact on production until there is a shift of emphasis from Productivity of Labour to Productivity of Capital, especially Working Capital. The programmes should be devised to achieve economies through improvements in the allocation of raw materials, transport of materials and finished articles, costing and quality control, sales promotion etc. In short, the Productivity Councils should prepare to equip themselves to function as "Operation Research Councils".

"Operational Research" came into existence to meet the requirements of military operations during the Second World War. But, during the last decade, it has found increasing application in Industry, Operational Research involves application of statistical and scientific methods and will require the services of persons trained in a variety of academic disciplines. Since the NPC is finding difficulty in securing the services of Industrial Engineers for the Local Productivity Councils, the problem of securing suitably qualified staff to undertake Operational Research may appear to be an insuperable obstacle. But if the need is clearly recognised, other steps will follow. The National Productivity Council has a programme to set up a cadre of Industrial Engineers. It is proposed to recruit young engineers who will be trained in Industrial Engineering on appointment in LPC's. While this can be regarded as the first step in equipping the productivity movement to play an effective role, the NPC might also make arrangements to enable suitable candidates, engineers as well as others, to specialise in Operational Research.

Community Development

Started nearly 10 years ago, the community development programme has now come to cover all aspects of rural life from the economic to the social and educational. The main objective of the movement is to raise rural living standards, through schemes of village development involving creation of community assets, with the accent being on agricultural development. Because of the inherent limitations in resources, particularly in trained and technical personnel, progress in the early years had been unsteady and halting. The gravest criticism in the early period, spotlighted by the Balwantrai Mehta Committee, was that the movement tended to lose sight of its main direction in arousing the enthusiasm of the rural people for village development programme. The Committee recommended an entirely new approach based on decentralisation of village and district administration. Out of these recommendations has grown the movement towards Panchayati Raj with its 'three-tier' system of administration—the village panchayat, the panchayat samiti and the zilla parishad—which is now in force in eight States covering nearly 65 per cent of the total rural population. The community development scheme and the Panchayat Raj thus form the two sides of a movement which is expected to bring about a gradual but sure transformation of the rural and village life.

Evaluation of achievement has to contend against lack of basic data and the diffusive character of the movement. The overlapping effects flowing from schemes taken at Central and State levels also introduce complications. Case studies and sample surveys are yet to be undertaken in the scale and manner to give a clear picture of the benefits for the country as a whole. Meantime the programme can be judged only by the pro-

gress it has made in respect of coverage, the expenditure incurred under various heads of development, and the extent of the physical performance. On these matters, the report of the Ministry of Community Development and Cooperation for 1961-62 furnish fairly extensive data, the study of which indicates that the movement has been making steady progress not only in the coverage but also in the expansion of activities. At present nearly 83 per cent of all the villages is estimated to be covered by Stage 1 and Stage 11 blocks. Complete coverage is also in sight and the deadline for this has now been provisionally fixed at October 1963. Progress State-wise has been uniform with the exception of West Bengal and Assam where the number of Stage 1 and Stage 11 blocks allotted forms a lower proportion of the total number of blocks than in the other States.

Government expenditure incurred under various sectors of the programme and people's contribution also provide important indicators of progress. Under the First Plan total Government expenditure including expenditure incurred under Central schemes amounted to Rs 46.18 crores. There was a substantial expansion of such expenditure under the Second Plan which in all, stood at Rs 188.89 crores. Irrigation and Reclamation accounted for the larger share of expenditure than other items, and there was nearly a four-fold increase in expenditure under this head. What is even more noteworthy is the nearly eight fold increase in expenditure under housing from Rs 1.73 crores to Rs 10.62 crores. People's con-

It is regretted that owing to failure of supply of gas the linotype machines have been unable to compose toward the end of the week. Hence the publication of this issue of Indian Finance has been delayed to Monday morning.

tribution during the Second Plan formed a lower percentage of Government's expenditure than during the First Plan. While people's contribution increased only three-fold from Rs 25.13 crores to Rs 77.11 crores, the expansion in government expenditure was four-fold viz from Rs 46.18 crores to Rs 188.89 crores. A further substantial expansion in expenditure is envisaged during the Third Plan since the total outlay for the CD programmes has been fixed at Rs 288 crores exclusive of an allocation of Rs 6 crores for the various Central schemes and another outlay of Rs 25 crores for Panchayati Raj schemes.

The physical performance in such fields as distribution of improved seeds, fertilisers implements also indicates good progress being made by the community development blocks. For instance improved seeds distributed amounted to 82,64,000 maunds during 1959-60 and 72,58,000 maunds during 1960-61. The figures for chemical fertilisers and improved implements for these two years are 1,46,82,000 maunds and 2,01,48,000 maunds, and 3,32,600 and 3,86,000 respectively. The CD movement in other fields such as development of small and village industries, social education, etc also shows some progress. The dominance of agricultural programmes in the activities of the community development blocks have tended to make them less effective in other spheres. This is a drawback which is inevitable to some extent in view of the existing orientation of the movement. A more serious failure is the limited amount of benefits that have seeped to the weaker sections of the village community. The Ministry's report hopes to set this situation right by means like the stipulation that the funds under Grants and Loans in the Community Development Budget should be devoted only to schemes involving community participation, specially benefiting the weaker sections. The Panchayat Raj institutions will assume responsibility for preparing and executing schemes designed to secure (a) greater employment opportunities to the weaker sections and (b) the minimum requirements of essential amenities like drinking water supply.

Capital Losses

Under the Finance Bill now before Parliament, Losses arising in respect of short-term capital assets can be set off against the capital gains relating to short-term capital assets as well as other capital assets and any such loss as is not fully so set off can be carried forward to the succeeding assessment year or years to be set off against the capital gains relating to short-term capital assets for those years. The carry-forward will be restricted to eight assessment years.

The losses arising in respect of capital assets other than short-term capital assets can be set off only against capital gains relating to any other similar capital assets. The net losses, if any, relating to capital assets other than short-term capital assets are not to be carried forward to any subsequent year.

In regard to losses under the head "Capital gains" which had arisen for the assessment year 1961-62 or any earlier assessment year and have not been fully set off and are available for being carried forward within the limit of eight assessment years, only such portion of the losses as relates to short-term capital assets is to be carried forward to the assessment year 1962-63 or any subsequent assessment year.

In their sum, these provisions work against the genuine investor who suffers a loss on change of investment and places him in a worse position vis-a-vis the speculator or speculative investor. Denial of set off and carry forward rights to long term capital loss, (while allowing both to short term capital loss) is to place in an advantageous position the man who is an active dealer in shares vis-a-vis the genuine investor. Finally, the denial of carry-forward rights to capital loss suffered before 1962-63 is indefensible and could probably be assailed in courts.

Individual well-being is linked with national prosperity and only planned efforts can ensure both in the shortest possible time. And planning, for its success, largely depends on savings, individual as well as national. Saving in the form of Bank Deposits provides resources for the National Plan.

World of Finance

BANKERS

What Happened at Bombay

AS expected the Finance Minister, Mr Morarji Desai, in his talks with bankers in Bombay last week chastised the banks for their indifferent support of Government's borrowing programme; and it may well be that he might have threatened suitably to amend the Banking Companies Act, if the banks in this regard did not soon mend their ways. But Government would prefer convention to compulsion, as was proved by the line of action it adopted in advising banks to improve their capital ratio as swiftly as possible to 6 per cent.

We may be sure that when the time came for the bankers to make known their own views they would have asked for the categorical repeal of the three-tier bank rate. It is manifestly absurd that banks while earning 3½ per cent to 4 per cent on their investments in gilt-edged should sometimes be compelled to pay 6 per cent on borrowings thereagainst. In any event, as we had remarked last week, the current state of the money market makes a mockery of the three-tier system, and it is entirely possible that the Reserve Bank should soon announce its repeal.

This, however, may not be enough. We hope that the bankers will have sufficiently impressed upon the Finance Minister the need for a short-dated security in which they could invest their spare of surplus resources. In all equity and justice the banks deserve, say, a 3½ per cent 1967 loan this year.

Mr Desai must also have urged upon the banks to reduce the quantum of accommodation they extended to industry which was being put to medium-term use. In fact at a meeting with industrialists later on the same day Mr Desai called upon them to reduce their reliance on banking finance and instead in more fitting proportion to raise equity capital. The implication of this piece of advice, if heeded both by banks and by industry, will be that banks will be left with a larger surplus which they would be in a position to invest in Government securities. But then to the extent that the Advances portfolio is made smaller and the gilt-edged larger, banks' earnings will suffer because of the higher proportion of lower-earning assets. Hence as a pre-requisite it would become necessary to remove the Damoclean sword represented by the three-tier bank rate. Secondly and later it would be imperative for Deposit rates and/or Advance rates so to be revised as to ensure a reasonable margin of profit for the banks, that is to say, a satisfactory spread between the two. If banks cannot persuade themselves that a downward revision is necessary, or if the inter-bank agreement on Deposit rates gets abandoned, it would, we suggest, be high time for the Reserve Bank itself to act.

There was, however, it is gathered, no discussion of interest rates as such at the bankers' meeting, though Mr Desai is reported

to have expressed his opposition to an increase in the rate of interest payable on Government securities. But in other respects the occasion was fruitful in discussion and in assurances. The Finance Minister saw no reason why the banking industry stood in need of nationalisation; and he is said to have made clear Government's determination to strengthen small banks, which it is now admitted have a role to play in the economy. Not unnaturally the Finance Minister wanted the banks to open more branches in the mofussil since a recent study of the Reserve Bank disclosed that Deposit growth in the out-lying districts is larger proportionately than in industrialised areas. Here of course the banks demur because of the loss that is experienced at any such new branch. The State Bank and its subsidiaries do have some means of providing for such losses in exploration; if the other banks were to be given some concession they would perhaps be more eager to embark upon a branch expansion programme.

The bankers' meet will have served a really useful purpose, we may state, if it will have persuaded the monetary authorities that the banks need a short-term security in order that they may heed Mr Morarji Desai's injunction on them that they should invest more in gilt-edged.

BUSY SEASON

Growing Deposits Finance Expansion

The 1961-62 busy season has drawn to its notional end, and a comparison of pertinent figures with those for the two previous busy seasons offers an interesting, and in some respects a significant, study. The most important point to note is that it has been a "busier" season than either of its two predecessors, with the expansion in Advances, of the State Bank as well as of other Scheduled Banks, exceeding for the first time the Rs 200 crore mark. While credit expansion in the case of State Bank is lower at Rs 55.32 crores (against Rs 59.37 crores and Rs 56.39 crores in the 1960-61 and 1959-60 busy seasons respectively), the reverse is true of other Scheduled Banks, whose Advances have risen from Rs 131.96 crores in the 1959-60 busy season to Rs 147.04 crores in the latest period after having receded slightly to Rs 129.97 crores in the 1960-61 busy season.

The record credit expansion withal, the pressure upon the banking system as a whole has been less. While borrowings of the State Bank are higher but nominally in each of the three busy seasons, rise in indebtedness of other Scheduled Banks to the Reserve Bank has fallen successively from Rs 28.66 crores to Rs 21.59 crores, and yet again to Rs 6.01 crores. This of course was possible because of the "breakthrough" in the acquisition of fresh Deposit resources. Here, again, the trend in the Deposits of the State Bank is not material, in that the rise in the 1959-60 busy season is exaggerated by accretion of

PL 480 funds and the fall in the next season is distorted because of repayment of the counterpart funds. However, in the latest period there is a very satisfactory increase of Rs 43.75 crores in the Deposits of the State Bank—and it was no fortuitous windfall that accounted for the improvement. Other Scheduled Banks had a most heartening experience with Deposit resources rising by Rs 111.58 crores (against rises of Rs 72.17 crores and Rs 48.08 crores in the 1959-60 and 1960-61 busy seasons respectively).

Disinvestment in gilt-edged during a busy season is a natural enough phenomenon. In this context, too, changes in the State Bank's figures are distorted by PL 480 transactions, but the other Scheduled Banks have been able steadily to reduce the quantum of sales of gilt-edged for busy season financing. Moreover a fair increase has been registered in cash balances of other Scheduled Banks in the 1961-62 busy season. Nevertheless the magnitude of increase in Advances, accompanied though it was by massive improvement in Deposits, is responsible for the credit ratio, at the end of the busy season, being placed only slightly lower at 74.0 per cent against 75.0 per cent last year.

It needs to be made clear that one of the reasons why Deposits of banks rose so bountifully this year is constituted by the heavy disbursements of Government toward the end of the fiscal year. Enlarged business activity generally is suggested by the record expansion in Active Notes by Rs 240.79 crores in the 1961-62 busy season as compared with increases of Rs 197.39 crores and Rs 188.25 crores in the 1959-60 and 1960-61 busy seasons. On the other hand outflow of Rupee Coin was in slightly smaller amount in the latest period, though higher than in the 1959-60 busy season.

Thus the conclusion is that growth of Deposits enabled banks to finance a record expansion in Advances with rather less recourse to borrowings from the Reserve Bank.

BANK RETURNS

Deposits Cross Rs 200 crore Mark

The tail-end of busy season pressures and the demand occasioned by beginning of the month disbursements have both made their impact felt upon the latest banking returns.

According to the returns of the Reserve Bank for 4 May, Active Note Circulation has risen fairly sharply by Rs 22.10 crores to Rs 2,145.14 crores and there has been outflow of Rupee Coin in the considerable sum of Rs 2.92 crores. For buttressing Balances Held Abroad there has been a transfer of Rs 0.88 crore from Foreign Securities, which are now placed at Rs 105.00 crores, and this has been offset by a counter-vailing transfer from Investments to Rupee Securities, now a shade higher at Rs 1,820.87 crores. The result is that the Reserve Bank's cash in the till has been drawn down by Rs 25.08 crores to Rs 14.84 crores.

The Central Government's Deposits are lower by Rs 2.27 crores at Rs 51.36 crores, and there is no indication of deficit financing in that the rise of Rs 8.65 crores to Rs 181.32 crores in Investments is traceable to sales of securities by the State Bank in the relevant

week. Balances of State Governments are slightly better by Rs 1.78 crores at Rs 16.06 crores, but this is at the cost of adding to ways and means borrowings from the Reserve Bank by Rs 3.38 crores to Rs 113.64 crores. That the banking system was subject to some strain is suggested by the fall of Rs 6.17 crores to Rs 78.97 crores in their Reserve Balances and by the rise of Rs 1.75 crores to Rs 129.57 crores in the Other Loans and Advances of the Reserve Bank; however, advances against usance bills are lower by Rs 1.94 crores at Rs 7.86 crores. A rise of Rs 4 crores to Rs 52.10 crores in Treasury Bills purchased and discounted by the Reserve Bank may be linked with States' attempts to replenish their scant balances.

Lastly Balances Held Abroad are lower by Rs 0.56 crore at Rs 5.99 crores despite the transfer of Rs 0.86 crore from the Issue Department. The implication is that the import gap that had to be met from foreign

COMPARISON OF BUSY SEASON (In Rs Crores)				
Reserve Bank:	1959-60	1960-61	1961-62	
Active Notes	+ 197.39	+ 188.25	+ 240.79	
Rupee Coin	— 7.16	— 8.36	— 7.92	
Bank's Deposits	+ 24.20	— 22.40	— 1.22	
Other Loans and Advances	+ 22.06	+ 9.60	— 1.71	
State Bank:				
Deposits	+ 58.98	— 33.47	+ 43.75	
Borrowings	+ 1.34	— 0.06	+ 1.16	
Cash Balances	+ 12.57	+ 1.78	— 6.81	
Giltedged	— 6.00	— 97.91	— 12.28	
Advances	+ 56.39	+ 59.37	+ 55.32	
—As %age of Deposits	(34.6)	(50.1)	(51.2)	
Other Scheduled Banks:				
Net Deposits	+ 72.17	+ 48.03	+ 111.58	
Borrowings from RBI	+ 28.66	+ 21.59	+ 6.01	
Cash Balances	+ 12.65	— 11.42	+ 12.22	
Giltedged	— 46.52	— 28.65	— 12.09	
Net Advances	+ 131.96	+ 129.97	+ 147.04	
—As %age of net Deposits	(70.1)	(75.0)	(74.0)	

assets held by the Reserve Bank—now barely above the Rs 110 crore mark—amounted nearly to Rs 1½ crores in the week under review.

The total of Advances of the State Bank, as shown in the institution's return for 4 May, is seen to have inched up nearer the Rs 300 crore mark, but, in rising by Rs 2.03 crores to Rs 296.19 crores is still below that level. In as much as the busy season has now notionally reached its end it is doubtful if that mark will be crossed before 1963. There is a fractional decline of Rs 0.21 crore to Rs 574.63 crores in Deposits and an even smaller rise of Rs 0.10 crore to Rs 1.42 crores in borrowings. Disinvestment in giltedged for Rs 7.40 crores to Rs 246.66 crores may be said to be connected with the increase of Rs 7 crores to Rs 28.88 crores in Other Assets—presumably a transaction relating to inter-office adjustments or the like. Consequently cash balances, including money at call and short notice, are lower by Rs 1.92 crores at Rs 24.21 crores.

A further prominent increase in Deposit resources is reported by the Scheduled Banks in their statutory return for 27 April. Net Demand Deposits are higher by Rs 1.47

crores at Rs 903.84 crores and net Time Deposits by Rs 8.00 crores at Rs 1,203.28 crores. Thus net Deposits of Scheduled Banks have crossed the Rs 2,100 crore mark. In as much as the State Bank in that week experienced a slight fall in Deposits the increase in the case of other Scheduled Banks is seen to have exceeded Rs 10 crores. Meantime the fact that the busy season is tapering off has meant that the rise in the total of Advances is a nominal one of Rs 0.43 crore to Rs 1,433.03 crores; however the increase in net Advances is very nearly Rs 2 crores since the amount due from banks, in the week under review, has declined by Rs 1.42 crores. Borrowings from the State Bank are practically unchanged at Rs 20.65 crores against Rs 20.93 crores, while indebtedness to the Reserve Bank has been reduced by Rs 2.35 crores to Rs 12.65 crores; in the corresponding week last year borrowings from the central banking institution had, it may be recalled, been placed at Rs 38.16 crores. The rise of about Rs 10½ crores to Rs 600.56 crores in the giltedged portfolio of Scheduled Banks is attributable to the State Bank. The end result is a fall of Rs 3.85 crores to Rs 199.35 crores in cash balances including money at call and short notice.

Sterling in the Common Market

By Paul Einzig

THERE has been a great deal of speculation about the way in which sterling would be affected if Britain joined the Common Market. Those endowed with plenty of imagination envisage the creation of a single currency, to be issued presumably by a Common Market Central Bank through its branches, the former Central Banks of the member countries. We need not carry speculation to such lengths. A question of much greater immediate interest is whether the Government envisages the possibility of devaluing sterling when Britain joins the Common Market in view of the perennial adverse balance of payments of Britain and in view of the perennial favourable balance of payments of the continental member countries. It is tempting to argue that since sterling appears to be overvalued in relation to the D mark, the franc and the lira, the way to prevent a heavy influx of continental imports once the tariff is reduced would be through a devaluation.

There is no reason whatsoever to suppose that this is what the Government has in

mind. On the contrary it seems certain that no change would be made at the moment of Britain's accession to the Common Market and for some time after. In other words, it is not the Government's present intention to devalue simultaneously with joining the Common Market. What will happen if in the course of time a disequilibrium persisted and if as a result Britain's balance of payments should be heavily adverse in relation to the continental participants, is of course another question. What we are concerned with here is that there will be no devaluation immediately Britain has joined the Common Market. Britain's attitude is based on the Government's desire to encourage competition. It is felt in official circles that the reason why British employers yield so easily to excessive wage demands is that the domestic market is adequately protected even if the level of costs should rise above those of the continental rivals. The Government feels so strongly about it that it would be even prepared to make unilateral reductions in the British tariff in order to encourage foreign competition. It would be unreasonable if at the same time as encouraging competition by joining the Common Market the Government would devalue sterling in order to discourage that competition.

In any case, changes of parities are at present not fashionable. Governments only resort to it if and when they are forced to do so through pressure which they are unable to resist. Mussolini's old slogan to defend the national currency 'with the last drop of our blood' is coming into its own again, after having been forgotten for some thirty years. Actually the only way in which it is possible to defend a currency if the defenders are prepared, and appear to be prepared, to defend it with the last drop of their blood. The moment the impression gets abroad that a mild pressure is sufficient to induce a Government to devalue or revalue such pressure would be forthcoming and would soon cease to be mild. It is necessary to make the public realise that the Government has every intention of defending the currency even at the cost of heavy sacrifices. Once this is realised there will be much less inducement to attack the currency concerned. Although under the Bretton Woods system the defence of currencies is supposed to be incomparably more rigid than under the system of floating exchanges in the 'thirties, it is not as rigid as it was under the Gold Standard before the first World War. The main reason for the stable conditions during the 19th Century was that everybody believed in the stability. The Government's task is now to restore that faith.

Notes

DEVELOPMENT FINANCE Criteria of Credit Worthiness

Dependence by new enterprises on loans from specialised financial agencies like the ICICI and IFC is becoming a common feature of industrial finance of the recent past. Often complaints are heard of the difficulties in obtaining such finance. For their part, these agencies, cannot be indiscriminately distributing, as it were largesse to every hopeful applicant wishing to get easy money for dubious propositions. Some criteria of credit-worthiness must obviously govern loans by such institutions. In a lucid analysis of the problem, Mr D. R. Madhok, General Manager, Industrial Finance Corporation (reprinted in the Chartered Accountant May 1962,) has discussed some of these.

In many ways, there is not much difference between a bank's assessment of credit-worthiness of a party and that of a special agency making medium or long term advance. Thus, the most important points for consideration in credit-worthiness are the capital structure, reserves position, the position of current assets vis-a-vis current liabilities. The main index

of strength in the capital structure is the ratio of equity to total borrowings, the equity capital being defined to include free and untied reserves, irredeemable preference shares and redeemable preference shares with twelve or more years to run. An equity debt ratio of 1:2 is considered to be a sound pattern. Further there are questions of overcapitalisation and under-capitalisation neither of which would indicate a satisfactory state of affairs. It is particularly emphasised that where an issue of capital has been made for consideration other than acquisition of assets, the said portion of capital cannot be taken into account as the real resources of the concern.

The General Reserves also are an important element in indicating financial strength of an industrial concern. These reserves are intended as a safeguard against unforeseen contingencies and canons of sound financial practice require a reasonable proportion of profits to be set aside for general reserves. Contingent liability is also important, for contingent liabilities indicate either arrears of dividend on Cumulative Preference shares of a company or guarantees given by it to other parties or additional liabilities under contracts and liabilities on claims pending. Contingent liability in respect of the arrears of preference dividend would be indicative of inadequate profits of a company and the corresponding inability to meet the contracted dividend liability. Another important requirement of credit-worthiness is an adequate surplus of current assets over current liabilities which is necessary to take care of the working capital requirements of the concern from time to time and the margin providable to banks for loans against stocks etc. Apart from these major indicators there are also other points which are relevant to consideration of credit-worthiness. Attention has been drawn to the credit facilities arranged with the company's bankers to meet working capital requirements, the adequacy of the provision made for taxation, depreciation, the sources from which the acquisition of fixed assets is financed i.e., whether from capital, borrowings, internal resources like surplus or depreciation fund etc.

Besides these, of course there are a number of intangibles which enter or should enter in the decision-making. The entrepreneur's real calibre of the applicant, for example, would obviously

weigh with institutions created for fostering the spirit of enterprise. Risk-taking cannot be evaluated too conservatively by the nature of the duties of these institutions. Technical assessment is important—the recent seminar in Bombay insisted on this and indicated the general paucity of experts for such purposes—but even more important is a certain flair for spotting a sound, though seemingly daring and even risky, proposition.

★

LICENSING POLICY

Practical Difficulties

In a communication sent to the Ministry of Commerce and Industry, the Federation of Indian Chambers of Commerce and Industry has drawn attention to the many anomalies and inconsistencies that are contained in the amendments to the Registrations and Licensing of Industrial Undertakings Rules that are being proposed by government. In particular they point to the difficulties that will arise when they apply to the licensing of concerns to be set up with foreign collaboration. The Federation, has suggested a fresh and thorough examination of the question of amendment of the rules.

At present licences are granted subject to fulfilment of conditions such as the terms of foreign collaboration being settled to the satisfaction of the Government and the grant of import licences for capital equipment etc being screened by the concerned authorities. However, provisional licences or in some cases letters of intent are issued which enable the parties to proceed further by way of taking effective steps to settle the other particulars on which information is required to be furnished under the draft rules. The changes now proposed by the Government are in three important directions viz. change in the definition of effective steps, time taken for grant of licences and the conditions proposed to be imposed in this regard and requirement on parties to furnish in certain cases detailed particulars regarding the exact cost of project, the manner of financing it, particulars of persons holding more than 5 per cent shares as also the role of the foreign collaborator. The main burden of the Federation's communication is that far from expediting the disposal of cases relating to grant of necessary sanctions the proposed changes will only result in further delays in the grant of licences by the Government.

The Federation has drawn special attention to the significance of the change in the definition of "effective steps". Under the existing definition, "Effective steps" mean one or more of these condi-

tions viz, that 60 per cent or more of the capital issued for an industrial undertaking which is a public company within the meaning of Indian Companies Act, has been paid up; that a substantial part of the factory building has been constructed; and that a firm order has been placed for a substantial part of the plant and machinery required for the undertaking. The new definition however drops the reference to the construction of factory building and makes it incumbent on licence holders to place a firm order for a substantial part of the plant and machinery for the industrial undertaking. This as the Federation has pointed out, is an absolutely inconsistent condition, since the placement of firm order for plant and machinery is, where it has to be procured from abroad, contingent on the foreign exchange being sanctioned by the Government. Even where indigenous sources could be found for plant and machinery the time limit fixed by the Government for the taking of effective steps at six months is inadequate since a great deal of planning etc is called for before firm orders could be placed.

The condition to have 60 per cent of capital paid up within the prescribed period is also stringent and according to the Federation impossible to fulfil. In this matter, difficulties arise in getting sanction from the Controller of Capital Issues, finalisation of negotiations with the collaborator and obtaining final sanction from the Government. The Federation has therefore sought the following modification to the change: (a) the time limit should run from the date the foreign exchange licence becomes available for the

import of machinery and (b) for raising a minimum proportion of the share capital, the limit of 60 per cent should be substituted by raising 50 per cent of the share capital required for the proposed undertaking or arranging such capital from other sources. Alternatively it should be deemed to be sufficient of the registration of the company has been done within the specified period.

The Federation has also taken exception to the changes that seek to impose conditions on matters such as the location of the undertaking, the capacity, provision of housing and other amenities, minimum standards in respect of quality and export to other countries or sale within the country of such part of the production as the Government may from time to time specify. Power to impose these conditions, the Federation apprehends will lead to needless enlargement of control of industrial undertakings and obstruct their healthy growth.

On the subject of the additional information that are required to be furnished under the new changes proposed, the Federation's view is that either they are redundant or that they are of such a nature that the applicants will be in a position to furnish at the time of making the applications. In this connection, the Federation draws attention to the fact that foreign collaborators are not even willing to negotiate for setting up of industrial projects until the Indian party has obtained an industrial licence. Other questions like nature of interest in the undertaking such as that of a promoter, managing agent, major shareholder etc, are matters subject to negotiations and not capable of being furnished in advance. For all these reasons the Federation has suggested a reexamination of the rules so that arrangements could be evolved to assist quicker disposal of applications and cut out delays at the stage of licensing and subsequently.

★

BANKING PRACTICE

Credit Transfer Scheme

The growing awareness of the banking institutions to stimulate the banking consciousness of the public has of late become an established fact. The closure of the Palai Central and the moratorium declared on a few institutions sometime ago had shaken the confidence of the public in banks and a host of measures like deposit insurance scheme, the amalgamation of smaller banks etc were introduced to restore the public confidence. At the same time several banks were vying with each other to attract more and more depositors and thereby enhance their deposit resources. Instances of the establishment of an efficient advertisement machinery

aided by relaxation of savings banks regulations allowing larger and frequent withdrawals and the introduction of personal loans and the intensification of the drive for branch expansions are only too familiar to require special mention. The introduction of the special credit transfer system from 1 January 1962 by the State Bank of India is yet another move in the right direction. Stimulated by similar schemes in the UK, the idea has caught on. The State Bank of Hyderabad, the Bank of India, the Canara Bank, the Canara

Industrial and Banking Syndicate, the Dena Bank and the Bank of Baroda and most recently the State Bank of Jaipur, have lost no time to emulate this example for the benefit of both the public and the banks.

The scheme consists in a simple facility of cash tendency at one office being given credit for in another branch without the formality of a draft or telegraphic transfer or even a cheque. Though the fundamental features of all these schemes are apparently similar there are notable variations

pertaining to eligibility conditions, maximum amount of remittance allowed per day and the like. For instance, the State Bank of India provides facilities for a customer to remit from any of its branches in the country an amount not exceeding Rs 1,000 per day to the credit of one's account with any other office. It should be noted that only personal accounts fall under the purview of this scheme and current accounts and savings banks accounts, fixed deposits and accounts of other sorts are totally excluded. The Bank of India's

scheme, though similar in several ways to that of the State Bank, is fairly flexible in operation and wider in scope. There is no demarcation between personal and business account holders and free remittance facility is provided to both. The maximum ceiling fixed for the remittance is Rs 10,000 in lieu of Rs 1,000 allowed by the State Bank. Moreover the transfer is not restricted to the accounts of the same person and any customer can remit funds to the credit of other customers. In particular cases, the agent of the remitting bank has the option to extend the facility to fixed, short and call deposit account holders.

The scheme introduced by the Bank of Baroda, though akin to the State Bank pattern, makes a differentiation between major and minor offices. As such the limit of remittance in respect of major branches is placed at Rs 10,000 while it is marked down to a mere Rs 2,000 in case of small offices. Besides, a non-customer can also avail himself of the arrangement for free remittance to the account of a customer at any branch of the Bank in India.

The Dena Bank offers a slightly different sort of service; which enables the account holders to collect cheques drawn on any branch of the bank gratis and no limit has been prescribed on the sum to collected.

These schemes are at present in an experimental stage and no one can predict with certainty the actual reactions of the customers which will be manifest only by the lapse of time. Undoubtedly they hold potentialities to spur up the actual volume of business in remittances and collections especially of those who are benefited most by such arrangements. The banks will no doubt effect suitable alterations in the arrangements, if deemed essential, to suit the convenience of the people.

PLANNING

Mr Birla's Weighty Voice

To the growing criticism of the country's planning in the last decade, Mr G. D. Birla has lately been adding his weighty voice. In his address to the Commerce Graduates Association on "General Economic conditions" in the country, Mr Birla gave vehement expression to his disenchantment with the ways of Indian planning. In this which was probably the most critical speech ever delivered by Mr Birla, he characterised the Government's fiscal policy as "anti-production, anti-consumption, and anti-saving" or in short as "anti-progress". With much of what Mr Birla said there will be substantial agreement. For there is indubitable evidence of investment not being properly oriented which has led to bottlenecks in strategic sectors. The chronic inadequacy of power transport facilities and coal of which there is now belated recognition by the Government can be generally put down to bad planning. The poor returns from the public sector undertakings provide striking evidence of the inefficiency of administration in the public sector undertakings. Judged from the effects in raising agricultural production or mitigating the unemployment problem, also the results of planning can hardly be considered remarkable. Increase in agricultural production registered in the course of the last 10 years has been mainly the result of extension in the area brought under crop and very little owing to improvement in per acre yield. This was a weakness of Indian planning to which pointed attention was drawn in the latest report of the ECAFE committee on planning in the south and south east Asian countries.

The assessment of the effects, however should take credit for the striking progress witnessed in some restricted fields like generation of electricity, cement, diesel engines etc. However these do not redeem in any substantial manner, the failures in other areas. The most deplorable feature of the effects of planning in the course of the last ten years has been the negligible impact on the quality of lives of the common people. The rise in the per capita income registered after ten years of planning has been of a modest order being only about 17 per cent is from Rs 250 in 1951 to Rs 292 in 1962. A rise of this order as Mr Birla has stated, could by no stretch of the imagination be described as a "great performance". It is inconceivable how a new buoyancy can be imparted for more rapid growth of the country's economy without the Government shedding its fascination for doctrinaire and somewhat antiquated ideas of planning.

THE PILOTS

Paralysed Port

For the second time in the course of a month, a crisis has been precipitated in the working of the Calcutta Port by the decision of the Hooghly pilots to go on a strike. Though the strike is now nearly a week old, neither side ie, the striking pilots and the Port Commission Administration, has shown any anxiety to reach an amicable settlement. On the other hand, with the refusal of the Port Commission Administration to accept negotiations, and the obduracy of the other side to yield their ground, it is a virtual impasse that now prevails. As a result, congestion in the port, of which there were no grave symptoms in the early stages, has now assumed alarming dimensions.

The main issue involved in the dispute is the demand of the pilots to maintain the differentials in remuneration vis-a-vis other categories of employees, as allegedly promised by the Chair- the Port Commission in 1943 when the services of pilots were transferred from the Central Government to the authority of the Port Commission Administration. Though there is seeming justice in the claim of the pilots for increment in remuneration in view of the assurance given at the time of the transfer, various committees which went into the question have opposed the claim to increases in salary on this ground. As the situation now stands, the Pilots seem to be holding out for reversion to the Central Government service.

In this dispute forced by the pilot's strike, the Government faces an obvious dilemma. For, it is certain that any measure that may be taken to redress the grievances of the pilots may spark off demands from the other quarters. Already the Assistant Harbour Masters and the representatives of the Calcutta Port Commission's Class 11 marine engineers have represented to the Government the inadequacy of the present pay scales and the need for improvement. There is in this situation, a threat of a chain of strikes which will be ruinous and disastrous to the country.

The unresolved strike reflects little credit either on the Hooghly pilots or on the port administration for the manner of their handling it. The most regrettable feature of the strike, is that now it has been reduced to a prestige fight on both sides. As far as the pilots are concerned, it has been learnt that the latest sub-committee has submitted a report recognising the need for parity in remuneration with the assistant harbour masters. When the report is being studied by the Government it was certainly precipitate and thoughtless on the part of the pilots to have forced the issue, by refusal to work. The reason advanced by the pilots is the alleged failure of the port administration to implement the directive of the minister of shipping given some time during April to remove the pilots sense of injury, whatever it may mean.

The Port Commission Administration on its part has also not shown any willingness for negotiations on the basis of prior conditions imposed by the pilots. This seems understandable since the report of the special committee is pending study by the Government. However, it is absolutely beyond comprehension why the port authorities had not taken firmer action before allowing the dispute to get into a deadlock. For, under the Essential Services Ordinance, strikes in essential services of which ports are undisputedly a part, are prohibited. The present stage of the dispute

may point to the inevitability of Central intervention in resolving it. It has been prolonged too long with considerable adverse consequences to movement of ships and the flow of the import and export trade of the country.

BURMAH-SHELL

More Intimately Indian

Last week's announcement by Burmah-Shell outlining its proposals for the reorganisation of its operations in India will be welcomed by a large number of people in this country who have come to equate Burmah-Shell with a high degree of excellence of petroleum products as well as efficient service to customers. The proposals, if they go through, will bring this premier organisation nearer to the people of this country than has been the case hitherto in the sense that the people will have a chance to participate in the capital of the company.

As at present constituted, Burmah-Shell along with other foreign oil companies, is in a much favoured position as compared with other foreign entrepreneurs who are participating in the industrial progress of the country. This special status has accrued to them from the refinery agreement concluded between the oil companies and the Government of India over a decade ago under which the refineries enjoy several concessions and guarantees such as a 25 year immunity from nationalisation.

The special privileges that they have thus obtained from the Government of India under vastly different conditions from what are now prevailing have not been an unmixed blessing. As is to be expected, Government has left them in no doubt that the refineries can get little encouragement for expansion so long as they want to operate under the existing agreement. Relations were also strained over recent contre-temps about prices.

Burmah-Shell has taken the initiative in negotiations for changing the present stalemate. It has decided to participate more intimately in the economic expansion of the country through active Indian participation in the ownership of its business. It has decided to invite substantial and widespread Indian partnership in its capital. The Burmah Shell Refineries Limited is already a rupee company since its formation in 1952. It is now planned to put the marketing activities in India in the hands of a rupee company. It proposes to discuss with the Government immediate termination of the current Refinery agreement and the basis of operation in future under an industrial licence similar to that for other industries subject to an

understanding on certain basic points.

While comments have to await fuller details of the proposals, it is gratifying to note that by agreeing to scrap what has become an unpopular agreement, and to invite Indian participation in its capital, Burmah-Shell has endowed its own claim of "India's life and part of it" with fuller meaning.

LABOUR INDEBTEDNESS Chronic and Corrosive

A survey conducted by the Bihar Government into the conditions of industrial labour in the State has brought to light the existence of chronic indebtedness among the industrial workers in the State. The Survey covered only important industrial centres like Jamshedpur, Sindri, Dalmianagar and Katihar and besides included about thirteen industrial units in the iron and steel general engineering, chemical and jute industries. For the purpose of the survey the workmen were classified into five groups (1) Those getting up to Rs 100 (2) those getting between 101 and Rs 150 (3) those getting between Rs 151 and Rs 200 (4) those getting between Rs 201 and Rs 250 and (5) those getting between Rs 250 and Rs 400. The survey has revealed that indebtedness was common in all these wage groups with nearly 75.78 per cent of the sampled workers being found to be in debt. The percentage of indebted families according to centres were: Jamshedpur 786.61 per cent, Sindri 76.91 per cent, Dalmianagar 71.92 per cent and Katihar 72.00 per cent. The average income per family was Rs 128.80 whereas the average debt per family was about Rs 613.49.

The most depressing aspect of this indebtedness among industrial workers is the substantial share constituted by unproductive debt in the total indebtedness. It has been stated that as high as 74.95 per cent of the total debt was incurred for unproductive purposes like social ceremonies, religious occasions etc. The volume of debt incurred for productive purposes constituted only about 21.97 per cent. The continuing dominance of the professional money-lender in the industrial centres is another unhappy feature in the situation. Cooperatives are only just coming up and are popular only in Jamshedpur. For gradual liquidation of the indebtedness of the industrial workers the Survey has made some important recommendations. These include (1) sympathetic approach on the part of the employers to the welfare of workers, transfer of the deposits of the Labour Welfare Fund created in several industrial units to the Debt Redemption Fund, diversion to this fund of the

balance of undisbursed wages and the employers' share of provident fund contributions forfeited by the workers.

CALCUTTA

The Hazards on the Road

The hazards on the roads in Calcutta are on the increase. Despite the stringent measures adopted by the traffic authorities the total number of road casualties has mounted upto 4,944 from 4,689 in the previous year. The number of persons injured has also moved forward by 269 to 4,669 and the instances of gross violation of traffic signals and parking laws have jumped upto 125,000. The only relieving feature of the record is the modest decline in the number of deaths on roads to 275 in the year under review from 289 in the previous year.

The factors that accounted for the dismal picture are many and varied. The congestion in the city, haphazard maintenance of roads, inadequate lighting arrangements, the rash and reckless driving and the menace of stray cattle are among the major aggravating factors. Though the road consciousness of the people has shown signs of improvement, cases of utter negligence to the clattering, smoke-belching mechanical horrors have more often than not landed many a pedestrian in some accident or the other. Serious cases of injury in the year under review have, however, dwindled to 11 from 22 in 1960. Fall in the death of pedestrians is indicative of better road-sense on their part and the number of children killed and injured also slipped down to some extent.

The official data reveal that the Traffic Department is obviously suffering from non-availability of adequate forces to keep track of the offenders and the rather strict requirements of proof of guilt have on more occasion than one put the department to genuine strain. Besides some of the rules were found defective or ineffective rendering their enforcement rather difficult.

There is no gainsaying that the situation in Calcutta has reached a stage when the indifference to prominent aspects like availability and maintenance of roads and foot-paths the increase in vehicular traffic, the upkeep of vehicles and the standard of driving and the like is assuming menacing proportions and really poses danger to safety on the roads. And the estimate that with the increase in the city population and vehicular traffic the mortality on roads is bound to leap by 10 per cent annually is a possibility that cannot be viewed without alarm. Better road planning, strict measures to enforce the observance of road regulations and an adequate ma-

chinery for their enforcement coupled with the cooperation of the public and the Government alone can help reduce road accidents in future.

US

A Study on Relative Growth

A prominent American speaker started his audience last week with the prediction that in 50 years "communism—as a moving philosophy—will have dissolved away into the oblivion of history."

The speaker was Clarence B. Randall, former business executive who has served as a foreign economic adviser to both President Kennedy and President Eisenhower, addressing the 50th annual convention in this city of the US Chamber of Commerce, the largest organization of businessmen in the United States.

In support of this thesis, he noted that in the interest of economic efficiency the Soviet Union has been turning away from Marxism through such devices as charging interest rates and amending the wage-incentive systems. He also pointed to a "new demand for individualism" that seems to be sweeping the USSR.

The extent to which Mr Randall's forecast will be borne out is a matter for time and future developments to determine. It is interesting to note, however, that there has been some recent re-examination of this entire question of communist versus free world economic strength. The most comprehensive and noteworthy of the recent studies is a book by Professor G. Warren Nutter of the University of Virginia. It has been published by the Princeton University Press for the National Bureau of Economic Research, a leading private, non-profit organization. Titled "The Growth of Industrial Production in the Soviet Union," it is one of a series on the subject begun in 1954.

Dr Nutter, long a student of this subject, concludes that while the Soviet Union's record of industrial growth has been impressive, it is neither inexplicable nor unprecedented. It has been matched by the United States under comparable conditions, and right now is being exceeded by such free countries as Japan, Greece, Tiwan and several West European lands.

Moreover, as Dr Nutter points out, the cost of expansion has been tremendous in the Soviet Union, in terms of the physical and human resources expended. Even now, the Soviet Union budgets some 40 per cent of its industrial capacity for essentially non-constructive military purposes, while the similar ratio for US defence output is 10 per cent.

In this new work, Dr Nutter returns to a theme which he has ably propounded in the past. It

B. L. SETHI,
General Manager.

is that the total production gap in favour of the United States, as compared with the Soviet Union, has continued to widen, even though the Soviet percentage growth rate appears to have been higher.

Thus, in 1913, before the communist take-over in Russia, the difference was some \$30,000 million in favour of the United States. The difference was \$56,000 million in 1928, a decade after the Soviet take-over, and \$115,000 million in 1955. In 1961, according to Dr Nutter's analysis, Soviet indus-

trial output was less than 30 per cent that of the United States, instead of the 60 per cent claimed by Soviet economists.

Whereas Soviet leaders boast of exceeding US industrial output by 1970, Dr Nutter concludes that the Soviets would not be able to match the US output before 1985, given even the most favourable assumptions about their rate of expansion as compared to that of the United States. On the basis of less favourable and more realistic assumption—the Soviet growth rate clearly appears to be

slowing down—the Soviets never would overtake the US lead.

In his analysis, Dr Nutter takes particular note of the lagging productivity rate in the Soviet Union. As measured by output per man-hour, it is only a fraction of that in US industry, and it seems to be declining relatively all the time. Production per man-hour has doubled since the communist take-over in Russia some 45 years ago, but it has tripled in the United States during the same period.

What may well be the most

telling point in all this, however, is the fact that, far from collapsing according to Marxist-Leninist doctrine, the economic system of the United States and other free nations have been advancing to new highs of prosperity. But then, the communists habitually have seemed unable to distinguish between the old and outmoded capitalism of a century or more ago, and the modern forms of private and public enterprise that are contributing to the growing well-being of the United States and other industrial countries.

Clive Street Gossip

"I must have liberty
Withal, as large a charter as the wind
To blow on whom I please"

—As You Like It.

BERTRAND RUSSELL'S decision to offer "Satyagraha" against American nuclear tests will strike a sympathetic chord in this country. He himself paid the country that had perfected the weapon the tribute of exhorting its government to a similar gesture of protest. Mr Nehru sympathised but could hardly oblige. Satyagraha is an individual's weapon even when it is organised on a mass scale and in any event it is not possible for governments to use it. Rajaji's comparison of the idea with our sending of troops to the Congo—a gesture, incidentally, I was not happy about—is surely misleading. It would hold water only if the request for the symbolic act came from the UN. But I have nothing but admiration for his unwearied protest against the big powers' nuclear immorality. Particularly sickening is the cynical hypocrisy with which the two powers denounce each other. Here is Tass on the American tests: "Wrath is welling up throughout the world. There is not a place where indignation is not being voiced these days at the new crime of the American atom-mongers—the resumption of nuclear testing in the Pacific. Everywhere, the common people stigmatise those who have ordered nuclear testing on Christmas Island to please the merchants of death..." Coming as it does from the mouthpiece of a nation that has been in the same deadly business and indeed has had the run of the market all to itself for some time, the brazenness of this piece of humbug is breath-taking. Still, if it be true, as it probably is, that the voice of protest is louder now than last year when the explosion of a hundred megaton bomb drowned neutral voices in Belgrade, can we not draw the appropriate morals? One of them surely is that Satyagraha, for its success, depends as much on the person practising it as on the person it is directed against. I do not pretend that I understand what is going on at Geneva. But if the Observer is anywhere near the truth when it asserts that "there is no technical reason whatsoever why a ban on atmospheric tests should not be agreed now on the basis of detection by national instruments with a kind of international verification", then America's persistence in the tests is quite indefensible except on the ground that it wants to find out what Russia has already

found out. But that is to perpetuate and not to break the vicious circle.

An article by an American correspondent in the latest issue of the Economist describes a Gilbertian situation of rare vintage. The facts he has gathered were mostly brought out in a suit in the Federal Court at Tennessee and reveal the extensive and hitherto secret capitalistic activities of the United Mine Workers of America, a trade union under the leadership of John L. Lewis. Coal has long been fighting a losing battle with other sources of energy in the US and its mining has to mechanise itself merely to survive. The suit is stated by the correspondent to have established, first, that the UMW agreed secretly with the larger companies to speed up mechanisation. Secondly, and again secretly, it acquired "what amounted to a controlling interest in one of the ten largest coal-mining operations and lent 35 million dollars to one wealthy industrialist involved in coal and allied business activities." This has resulted, according to the correspondent, in the permanent loss of employment of thousands of workers in small mines and the closure of scores of small mining companies. Thirdly, Mr John L. Lewis is now Chairman of the association that speaks for the coal industry as a whole. Imagine that Mr Vasavada gets suddenly elected as the President of the FICCI and you get a measure of the topsy-turvydom this involves.

Nor is this all. The Union has two funds: one, "the welfare and retirement fund" built from the "royalties" at the current rate of 40 cents a ton of coal mined that the companies have, in consequence of earlier agreements with the Union, to pay. The other is the more conventional one built with membership subscriptions. Both funds, running into millions of dollars, have been wisely invested. One such investment is in the "oldest and third largest bank in Washington DC, the National Bank of Washington, which is controlled by the Union." Through the bank, the Union has entered the field of industrial financing and has "acquired holdings in coal mines, water and rail transport facilities and electricity undertakings and is in a position to influence, if not to set, their

policies." The latest scheme financed thus is a giant mechanical mining operation which, while it has rendered sundry miners superfluous, has nevertheless swelled faster the Welfare Fund, for royalty is payable whether coal is raised by men or machine.

I am sure that there are several morals to be drawn from this, though the most important one may well be the trite one: "Even such is life." Sundry myths get exploded with a bang too. The bloated capitalist who grinds the face of the poor hapless workers, and the trade union leader of Galsworthian and earlier vintage are now blood-brothers to the unicorn. Today, a trade Union leader can walk into the executive suite and no questions will be asked. The traditional suspicion of automation that Labour is credited with and which is playing such havoc with modest attempts at modernising our jute and cotton mills is certainly not true of the US. Even so, when Professor Galbraith erected his model of American Capitalism some years ago, I do not think that he anticipated that the mutual countervailing of opposing forces will take quite this extreme form. Say's self-corrective competitive paradise as well as Marx's warring classes clasped in a deadly combat are no doubt not true of contemporary America. Even so, if memory serves me right, the extent of the distortion of the traditional pattern Professor Galbraith expected was the phenomenon of a worker being also a share-holder in his company, a circumstance that will cramp his class-war style more than somewhat. But what the Economist correspondent is reporting is not countervailing but coalescing. Indeed, John Birch Society may even consider this a communist conspiracy but then it considers even school lunches Communism. Even genuine socialists may welcome this as socialism without tears. But I cannot help feeling uncomfortable at such going on. In their countervailing fury, the oligopolies and the trade unions grind the small man and the small mine out of existence. Moreover, in Galbraith's model, the contending powers were identifiable. But here, as in the last scene of Orwell's Animal Farm, it is becoming difficult to tell the men from the pigs.

Standards of speech-making in Parliament will have to improve a lot if we are to stop regretting the wholesale disappearance from the scene of many a stalwart of the last Lok Sabha. Maharani Gayatri Devi is entitled, for various reasons, to some indulgence, but she will have to do a

lot better before we cease to deplore Mr Masani's absence in the Lok Sabha. She has some obvious advantages which she is throwing away by faux pas like her maladroit comparison between privy purse for ex-rulers and pensions for retired employees. The Maharani is a much-travelled person, but I don't suppose she has ever been around the AG's office in the first week of the month. She would then have seen Kafkaeque figures waiting for their measly dole that buys less and less as days go by. Agitational politics has not much use for their dull despair, whose most active manifestation is a quiet desperation. The Swatantra Party which wishes to speak for the little man and rescue him from gigantisms of various sort will have to teach a lot to the Maharani if it wants to fix this image in the public mind. Mr Gopalan's was a predictable performance, in which he asked for nationalisation of this and that. Coming as his demand did after Mr Morarji Desai's categorical refusal to consider the idea of nationalising the banking system, it is legitimate to wonder about the practical contributions of the opposition. Some interesting (though not widely reported) facts about election expenditure came to light, thanks to the diligence of the opposing parties in exposing each other. We certainly have a problem of menacing proportions here.

In the Rajya Sabha, Mr A. D. Mani revived the idea of public participation in public sector undertakings. I have canvassed the idea often enough in these columns, though when last heard of, Government was stated to have shelved the idea. There is nothing new in the suggestion and indeed it has been a commonplace in socialist thinking for some years now. It was once blessed by Mr Gaitskell in the Socialist Commentary. (He however suggested a minority participation by government). No doubt there are obvious question marks, one of them being the readiness of the public to buy shares in undertakings that have so far not yielded much profit, disposable or of any other kind. I think fear on this score is somewhat exaggerated. Surely if growth prospects can influence decision in buying shares of companies in the private sector, there is no reason why they shouldn't in the public sector companies. Perhaps the creation of a unit trust for the public sector undertakings will be a worth-while idea, in order to overcome any reluctance to take shares in any particular government company. The idea, though widely canvassed, has not yet caught on even in the private sector, but that is because its advantages to the small investor have not been adequately explained. Anyway, it is an idea worth examining even for the public sector. EAVESDROPPER.

WAY

Niagara Falls — one of the world's most spectacular natural attractions in the U.S.A.

Pan Am now introduces a unique low-cost way to visit any one or all of 32 major U.S. cities.

Have you always wanted to see the U.S.A. but thought it far too expensive? If so, Pan Am's \$15-a-day-way is your way to the U.S.A.

Here's how: You may spend 3 days and 2 nights in any of 32 major U.S. cities and pay only \$15 for your hotel room with bath and, in most cities, a full sight-seeing tour. Average cost for each full 24 hour stay—only \$7.50!

Food? You'll be free to dine where you like, at your own expense.

However, Pan American has surveyed every one of the 32 places included in this plan and can assure you that 3 substantial meals at popular restaurants need not cost more than \$7.50 per day through the entire U.S.A.

Result? \$15 a day for room with bath, meals and sightseeing in any or all of 32 fabulous U.S. cities.

Fares? No extra charge on a Pan Am "round-the-world trip for many of these U.S. cities. Only Rs. 6092 economy class from Calcutta for Europe and the Pacific, and North America as well!

Fuel Industrial Service

Detailed arrangements for establishment of a Fuel Industrial Service are under consideration of the Ministry of Commerce and Industry in consultation with the Chairman of the Development Councils and the industries concerned. The proposal was made in a report submitted in October, 1961, by two experts of the UK. National Industrial Fuel Efficiency Service. The services of the experts, Mr S. A. J. Plummer and Mr B. R. Addicot, were made available to the Government of India under the Colombo Plan for assessing the extent to which fuel is used efficiently by industrial consumers in India (other than Railways, Steel Works and Thermal Plants) and to make concrete recommendations for the conservation of fuel and establishment of a Fuel efficiency service on the lines of the UK model. The Minister for Industry who gave this information in Lok Sabha last Monday also summarised the main findings and suggestions of the experts' report as under:

- It is possible to effect economies in fuel consumption in industries like chemicals, textiles, rubber goods, rayon, paper, pottery, dyestuffs, distillation products, cement, glass, refractories, leather goods and iron castings, ranging from 15 per cent to 50 per cent of the coal consumed, depending on the nature of the industry, with an all India average at 25 per cent.
- Savings up to 10 per cent can be effected by "first aid measures" such as proper lagging and thermal insulation, recovery of condensate heat, prevention of steam leakage, economical loading of heat consuming plants and the use of steam at proper pressures, calling for little in the way of capital expenditure.
- Further savings can be effected through proper instrumentation for the control of combustion, steam raising and thermal processes, wider use of boiler feed water economisers and mechanical stokers and proper training and instruction of boiler personnel like those engaged in the stoking of boilers and furnaces.

With a view to achieving the above cited objectives, it is necessary to build up an organisation in this country dedicated to the provision of a fuel effi-

ciency service to industry to start with, on the elementary first aid measures, and, later on, culminating in a higher instrumented service.

- Fuel efficiency equipment like feed water economisers, mechanical stokers, heat exchangers and industrial indicating and recording instruments should be supplied to industry, preferably through local manufacturing.
- The fuel efficiency service to be so organised in the country should have the most active cooperation of the industrial consumers of fuel and the Ministry of Commerce and Industry.

The report has been considered in a preliminary way and it is now proposed to circulate the detailed report of the experts to the various Chairmen of the Development Councils for industries with a view to eliciting their considered comments in consultation with the industries concerned on the detailed arrangements to be made for establishment of the Fuel Industrial Service Organisation to promote efficient use of fuel on a continuous basis.

FICCI on Industrial Licensing Rules

THE need for thorough re-examination of the proposed amendments to the Rules regarding Registration and Licensing of Industrial Undertakings is stressed by the Committee of the Federation of Indian Chambers of Commerce and Industry in a communication to the Union Ministry of Commerce and Industry. The main objective of the amendments is to eliminate the delays in the processing and disposal of applications for industrial licences. The new Draft Rules, the Committee apprehends, are not in the desired direction.

After examining the major changes proposed, which relate to the definition of "effective steps", conditions for grant of licences and additional detailed information which parties are required to furnish along with their applications, the Committee points out that the revision of the rules as proposed will fundamentally alter the present system and, instead of expediting disposal of applications, will result in further delays. Moreover, parties are not in a position to submit required details, at the time of making applications, regarding the cost, mode of financing, foreign collaboration etc. The Committee con-

siders that, in the present scheme of things, it is virtually impossible to comply with any of the conditions of the proposed new definition of "effective steps" which reads: "Effective steps means in relation to an industrial undertaking that a firm order has been placed for a substantial part of the plant and machinery for the industrial undertaking and where the industrial undertaking is a public company within the meaning of the Companies Act 1956, also that not less than 60 per cent of the share capital has been paid-up".

If effective steps as defined above are not taken by the licensee within the stipulated period—six months or one year as the case may be the licence may be revoked. This is intended to prevent parties continuing to hold licences indefinitely, without any positive intention of implementing their schemes expeditiously, and thus preventing issue of licences to other parties. Compliance with the proposed conditions is dependent on many factors beyond the control of the entrepreneur, such as foreign exchange sanction for import of machinery grant of import licence, sanctions from the Controller of Capital Issues etc. The Committee has, therefore, suggested that the conditions proposed to be laid down for complying with the definition of "effective steps" within the stipulated period should be modified as follows:

- The time limit should run from the date the foreign exchange licence becomes available for the import of machinery;
- For raising a minimum proportion of the share capital, the limit of 60 per cent should be substituted by raising 50 per cent of the share capital required for the proposed undertaking or arranging such capital from other sources. Alternatively it should be deemed to be sufficient if the registration of the company has been done within the specified period.

The Draft Rule 4, regarding grant of licence, extends the period for disposal of applications from the existing three months to four months and also imposes conditions on several matters including: (a) location of the undertaking; (b) capacity; (c) provision of housing and other amenities to workers; (d) minimum standards in respect of quality and (e) export to other countries or the sale within the country of such part of the production as the Government may, from time to time, specify. The Committee considers that there is no justification for extending the period for disposal of applications to four months. It is also pointed out that the conferment of power on the executive to place certain conditions will tantamount to enlargement of control on industrial undertakings. It is apprehended that unreasonable restrictions about the location of units in particular States or areas may be imposed which may upset the calculations of the entrepreneur completely. Failure to comply with the proposed conditions would attract under the proposed Draft Rule 7, the penalty provisions of the Act which include punishment with imprison-

ment up to six months. It is pointed out in this connection that conditions such as those relating to export obligations etc. cannot always be fulfilled because of factors beyond the control of the licence-holder.

Draft Rules 8 and 9 require the furnishing of detailed particulars regarding, among other things, the exact cost of the project, the manner of financing it, particulars of persons holding more than 5 per cent shares as also the role of the foreign collaborator. The additional information required to be furnished is either redundant or is of such a nature that the applicants are not in a position to furnish the same at the time of making the applications. Foreign collaborators, for instance, are not even willing to negotiate for setting up of industrial projects until the Indian party has obtained an industrial licence and it is, therefore, impossible to give details in regard to foreign collaboration at the time of making applications. Similarly, the other details regarding shareholdings are settled only when the company enters the market for raising capital. As regards cost, the applicant can at best give an approximate estimate in overall terms. As for information regarding the manner of financing the project cost, the parties can hardly even furnish the information at the time of making the application. The Committee also points out that it would result in unnecessary and unproductive labour to ask for details of licences held by the applicant, the progress of implementation of these licences etc.

In conclusion the Committee has suggested that a small informal group comprising representatives of the concerned Ministries and of the Federation be set up to examine the procedures of industrial and import licensing and to suggest simplifications thereto.

Industrial Processes

Prematurely hydrated portland cement which at present has no commercial value and is usually discarded as waste can be profitably utilized according to a process described in a recent issue of the *Journal of Scientific and Industrial Research*.

Portland cement, due to improper storage, absorbs moisture from the air and gets hydrated prematurely as a result of which it becomes lumpy and loses its chemical activity. According to the method reported, such cement can be chemically re-activated by crushing (grinding if necessary) and screening, until it is reduced to approximately its former size, mixing with water and subjecting the resulting paste to high pressure.

Mortars and concretes made from the cements thus produced, when moulded under pressure, show high compressive strengths, high impermeability properties and low shrinkage. By increasing the moulding pressure the quantity of reactivated Portland cement required in the preparation of mortar and concrete can be reduced.

12 May 1962

The Kohinoor Mills Company Limited

1961, A Successful Year

Mr A. N. Haksar, Chairman, on Exports in a Competitive Market

Presiding at the 67th Annual General Meeting of the Shareholders of The Kohinoor Mills Company, Limited held in Bombay on 4th May 1962 the Chairman, Mr. A. N. Haksar, said:—

Ladies & Gentlemen,

It gives me great pleasure in welcoming you to this Sixty-seventh Annual General Meeting of the Company.

As the working results of the year, which are already with you, show, the year 1961 has been a successful one for the Company. Whereas there has been a modest rise in the gross turnover by about Rs. 46 lacs as compared with the previous year, the net profit after depreciation, development rebate and taxation has increased by over Rs. 10 lacs, i.e. an increase of about 130 per cent over the previous year. Those of you here, who might have been present at the last Annual General Meeting, will perhaps recollect the indulgence I had sought from you in permitting the management just two years more to restore the Company to the same position of prosperity it had previously enjoyed, and you will perhaps agree with me that the working results of the year have justified the forecast made last year.

The principal reasons for the increase in profits are overall increased efficiencies, fuller utilisation of machine capacity run on a rationalised basis, and the change in the pattern of production to suit consumer demand. With regard to the last factor, the Company is earnestly endeavouring to put on the market newer and better varieties of cloth in order to meet with the ever changing pattern of consumer demand and has recently introduced in the market Terylene Suitings, Terylene Shirtings, Full voile Shirtings and Ladies' Blouse material known as "Rubaiyat" all of which have become very popular.

A comprehensive programme of rehabilitation and modernisation as undertaken in the last year was further implemented during the year. Machinery to the value of Rs. 33,21,647 was erected during the year. Machinery worth about Rs. 43 lacs was on order as at the close of the year. By installing the various machines on order it is anticipated that the Company will be able to effect further rationalisation and also further improvement in the quality of its products.

Side by side with the programme of rehabilitation and modernisation, your Company has taken further steps towards rationalisation and fuller utilisation of machine capacity by working the Spinning Section of No. 2 Mill all three shifts on a rationalised basis. Cloth production has also been stepped up by running a section of the weaving shed in No. 2 and No. 3 Mill for the third shift on a 4-ooms-to-a-weaver basis.

The cotton position was easier during the early part of 1961 and almost all varieties were available at or below the statutory ceiling prices but the position was completely reversed during the latter part of the year.

The cotton season 1961/62 started with a carry over of about 22 lacs bales and the position was then considered to be comfortable in view of the anticipated production of 53 lacs bales. Unfortunately these expectations were not fulfilled because of adverse weather conditions in the cotton growing centres and the estimate has now been reduced to not more than 40 lacs bales. In order to improve upon the cotton supply position, the Government of India has been negotiating with several cotton producing countries and has also requested the U.S.A. Government to render some assistance under PL 480. Although vigorous efforts are being made in this direction, the prospects of obtaining the industry's full requirements of cotton appear to be bleak in view of the country's tight foreign exchange position.

To rectify the imbalance between the supply and demand position of cotton, the Textile Commissioner devised an elaborate system of quality and quantity controls to ensure equitable allotment of available supplies of cotton at ceiling prices. These measures, however, fell short of achieving their desired effect, with the result that cotton prices have shot up, and it is difficult to obtain the requisite cotton within the limits of ceiling prices. It appears that a section of the community has suggested a de-control of cotton prices. It will be very difficult to foresee the effect of decontrol of cotton on the prices of cloth and yarn, both for the local and for the export market. In order to ensure adequate supplies of cotton to maintain the present level of production and also to meet rising demand, I am of the view that it is imperative to increase the cotton

yield per acre substantially and also to raise the statutory ceiling prices so that the prices of local cotton are more in parity with prices prevailing in other cotton growing countries.

As already mentioned in the Directors' Report, cloth stocks during the first half of the year were higher than usual on account of the confusion created by the price stamping scheme and the increased incidence of excise duty on all fabrics. As the year progressed, the movement of cloth stocks improved and at the close of the year, stocks were lower than in the previous year.

The stocks of yarn were also higher during the early part of the year. The budget for the financial year 1961/62 for the first time introduced an excise duty on cotton yarn excepting certain counts in hank form. The levy and its assessment at first created some difficulty and also met with some resistance from the consumers. Matters, however, smoothed out later, and the yarn started moving gradually. At the close of the year, yarn stocks were also lower as compared with the previous year.

In its endeavour to earn as much foreign exchange as possible for the country as well as to secure the maximum benefits for the Company by way of import of long staple cotton, terylene, dyes, chemicals, machinery etc., your Company has spared no efforts towards trying to push its goods in the world markets. Our own deliveries for export of cloth were higher by 24.93% as compared to 1960. This increase in exports is all the more creditable as far as your Company is concerned in view of total Indian cloth exports having come down from 692 million yards to about 600 million yards a drop of 10.5 per cent on last year's performance. The principal reason for this fall in Indian exports has been increased demand for processed cloth, the Indian Mills' inability to meet the world demand at competitive prices, the setting up of textile Mills in the under developed countries in East and West Africa, Ethiopia, Burma, South Viet Nam and the intensive competition from Hongkong, China, Japan and Pakistan. Your Company hopes to continue and if possible to increase its exports during the current year also.

You will have observed from the Profit and Loss Account that the value of stores consumption

has increased by about 6.53 per cent over 1960. The principal reasons for this increase have been the non-availability of caustic Soda at the prices fixed by the Government of India in view of the limited indigenous production and the inadequate supply of hydrosulphite of Soda, both of which are consumed in large quantities. These chemicals are mainly imported by the State Trading Corporation, and had the imports of these chemicals been regulated by a consistent rather than a haphazard policy, periodic shortages would have been much obviated. There was also an upward revision of import duties on other chemicals, dyes and machinery spare parts.

Electric power and fuel charges were also higher than last year. This was principally due to more machinery having been worked during the year as also the inevitable conversion of boilers from coal to oil firing on account of the stringent and uncertain coal supply position.

As already mentioned in the Directors' Report, Nahalchand Laloochand Private Ltd., and V. S. Apte and Son, the Company's Yarn and Cloth Selling Agents respectively, relinquished their selling agencies on terms mutually agreeable to themselves and the Board of Directors of the Company. They have been of great assistance to the Company especially in tiding over difficult times, and I am sure you will join with me in placing on record our appreciation for their long and faithful services to the Company for over 58 and 50 years respectively.

In accordance with the Central Wage Board's recommendations, a wage increase of Rs. 8 per worker per month and the merger of 75 per cent D.A. with the basic pay were also implemented during the year. A further increase of Rs 2 per month per worker is being paid from 1st January 1962 and this will cost your Company about Rs 2½ lakhs more each year.

With regard to bonus for the years 1959, 1960 and 1961, negotiations between the Millowners' Association, Bombay and the Rashtriya Mill Mazdoor Sangh having failed, the Sangh has filed its demand for the year 1959 with the Industrial Court, Maharashtra before whom the matter is pending.

In order to achieve peaceful working conditions for the Industry, the Government of India have

appointed a Bonus Commission to go into this vexed problem of the concept of bonus, the limits of the minimum and maximum amounts payable and the mode of payment and to make suitable recommendations to Government. Whatever their recommendations may be, I feel that bonus should essentially be linked with productivity.

During the year 166 employees were retrenched by paying them retrenchment compensation and gratuity amounting to Rs 5,62,000. While retrenching, advantage was also taken of the natural separation of workers wherever possible.

In this regard I would like to state that before effecting retrenchment, your Company made all possible efforts to absorb displaced labour consequent upon introduction of rationalised processes by starting additional shifts and only those workers who were unwilling to accept alternative employment were paid compensation as required by law. I must mention that the introduction of rationalized processes could not have been possible but for the excellent co-operation extended by the R.M.M.S.

During the year Mill workers gladly responded to the call of the Chief Minister of Maharashtra, Shri Y. B. Chavan, for voluntary donations in order to give relief to the flood affected people in the city of Poona and other parts of the State of Maharashtra. About 90 per cent of our employees worked on 20th August, 1961, although it was a holiday, and the total contribution from their earnings was Rs 39,914 which was the second highest contribution amongst all the Textile Mills in Bombay.

You will observe from the Profit and Loss Account that your Company donated a sum of Rs. 45,470. The principal donations were for the relief of people affected by Cyclone in Ratnagiri District and by the floods in Poona and Bihar.

What does the future hold for us? We had every hope that, other things being equal, the current year would prove to be even better than the year 1961, as the results of the first three months have shown a definite improvement over the corresponding period of 1961. However, as you

know, only a few days ago the budget has been announced, and once again the powers that be have thought fit further to increase the imposts levied on your Industry. Although as stated, it is the intention of the Government to recover Rs. 12.1 crores from the Textile Industry which in itself is a very high figure—in actual fact on a very conservative estimate it is felt by the industry that the recovery which will be made by Government by these imposts will not be less than Rs 25 crores and may even be as high as Rs. 30 crores. This latest burden, together with the scarcity of cotton this season and the difficulty of making up this short fall by imports from other cotton growing areas not to mention the overall rising costs, are all bound to make a serious inroad into the profits of your industry. Furthermore, as far as the shareholder is concerned, although the Finance Act 1960 had given the corporate sector relief in Income Tax and Super Tax by a reduction from 51.5 per cent to 45 per cent, this tax, levy has again been increased by 5 per cent (making it 50 per cent) and this will mean that your Com-

pany's tax liability for the year 1961 will be increased by about Rs. 1,75,000. Strong representations are being made by the Industry to try and persuade Government to reduce these imposts, particularly the excise duties. I sincerely hope that something substantial will come out of these representations.

As far as your Company is concerned, your management will make every effort to try and neutralise the extra expenditure to which I have referred above, by further economies and improvement in efficiency. I started by saying that we had hoped the current year would be much better than the last. I am afraid the original hopes may not, in view of what I have said before, be fulfilled but I think I can say with reasonable confidence that comparatively speaking your Mill will do equally well again if not better this year.

N.B. This does not purport to be the proceedings of the General Meeting which are sent separately to the shareholders.

of the current crop to be accounted for. Mr Mazoomdar said that the entire quantity would be lifted by the JBSA. The assurance should go a long way toward restoring confidence in the Government's policy. Uncertainty as to the purchase programme of the JBSA will also be reduced by the further assurance that buffer stock purchases henceforward would be made in adequate quantities every seven or 10 days.

Although some indication of Government policy in regard to

import of Pakistani cuttings was available from last week's JBSA press note which said that the Association thought that the time was not yet for thinking about imports, the position has been made quite unambiguous now. No imports are to be made at this stage and if and when imports are made, there would not be any repercussion on prices of Indian jute. Mills have been told that no import licenses would be issued as long as supplies were plentiful. Furthermore, future entitlement

to imported cuttings would be dependent on their purchases of low grade jute between April 15 and 31 May.

Mr Mazoomdar estimates the next crop at 7 million bales with a reduction in acreage by 20 per cent. He expects an increase in yield. Estimated consumption during the next jute year is placed at 7.3 million bales. If the crop however turns out to be much bigger, the JBSA is there to absorb the excess. The Jute Commissioner has made it clear that under no circumstances the price of raw jute will again be allowed to fall to uneconomic levels.

It would appear that Government has decided to resume exports of raw jute as a supplementary measure to maintain raw jute prices. The Jute Commissioner indicated that about 100,000 bales of lower grade jute were likely to be released for export this year. It is said that some East European countries were eager over the past few months to purchase jute from India. The last time some quantity had been released for export was in 1959-60. Since then export has been discontinued as jute availability proved to be much lower than domestic demand.

TEA Outlook for New Season

THE export tea sales of the new season will commence from 14 May and the first sale will consist of leaf teas of all districts. The outlook for the coming export sales, it would appear, will depend largely on the quality of the teas offered. It is generally believed that the demand for quality teas will be quite good with the consequent possibility of an upward improvement in prices in the auctions. The fact that the carryover from the last season is not much is a favourable point and the rising trend of tea consumption in certain regions may be expected to keep demand at a fairly satisfactory level.

At this week's internal sale in Calcutta 28,508 packages were on offer. There was a good demand with Medium CTC dusts while good CTCs came to an easier market with prices declining by 40 nP and more at times. An irregular trend was noticeable in Plain orthodox dusts with the Assam varieties particularly easy although a few good liquoring teas among them sold well. Both Legg cut dusts and clean teas ruled firm. There were 223 packages of leaf on offer and they displayed an irregular trend.

At this week's Tea auction in Colombo 8,255,092 lbs. were on offer. Both best liquoring Broken and those below best were easier with the decline extending upto 40 cents per pound at times. Only a few coloured Medium Broken Orange Pekoe were firm while all others and Uvas were easier by to 30 cents.

An improved tone was noticeable both in Tippy low grown and other Leafy sorts but small leaf sorts were lower.

COTTON Futures Trading Resumed

After the lapse of over a month, the cotton futures market in Bombay has resumed trading when the Jarilla Mrach Contract, 1963, came on the board on Wednesday 9 May. The new contract, the first of its kind in 1962-63, was off to a flying start and a sizable quantum was transacted. Operators, however, preferred to adopt a bullish view of the immediate future obviously due to the scarcity of cotton and the bleak scope for large scale imports to skip over the present crises.

The Jarilla March, which opened at Rs 730.25 for three quintals, edged forward by approximately five points and finally closed at Rs 733.00.

The contract will be traded in two different sessions, i.e. between 9.5 AM to 11.30 AM and 2.30 PM to 4.30 PM. Under the amended by-laws of the East India Cotton Association special care has been taken to avert the intervention of the Forward Markets Commission. If the hedge contract price goes below Rs 755.00 at the time of fixing the tendering differences, the differences between the contract rate and the spot rate of the variety for which the basis is fixed will be adjusted by 15 per cent. On occasions when price is between Rs 755.00 and Rs 775.00 only 7½ per cent difference is adjusted and if the price rules above Rs 775.00 no adjustment is permitted.

The announcement of the price policy for the ensuing season was received with mixed feelings by the cotton trade. The Government of India's decision to continue the cotton control has disappointed the trade as it had been vigorously pleading for a decontrol with a view to stepping up the cotton production to a considerable extent in the coming years. The Government's disregard for the trade's suggestion for constituting an expert committee to conduct a thorough probe into the entire question of prices and other interlinked problems has been another source for embarrassment. The trade circles have also voiced their disapproval of the policy of making an upward revision at pretty long intervals, the recent increase in the ceiling is the first of its kind during the past eleven years, as such a step will not serve the purpose of substantially increasing the indigenous cotton output. Though these demands were shelved for the time being, the assurance given by Mr Manubhai Shah in the Lok Sabha to provide all assistance to the farmers by ensuring adequate supply of fertilisers and other aids does not provide any room for nursing any suspicion of the Government's attitude towards the entire problem. However, the announcement of cotton policy for 1962-63 has been timely as sowings have already com-

menced in several parts of the country particularly in Punjab. The raising of the ceiling by Rs 125 per candy is expected to serve as an incentive to the cotton cultivators to grow more cotton during the coming season.

Hopes of getting cotton from the United States have been once again revived as the Government has requested the US to supply cotton worth 100 million dollars under the United States Agricultural Trade Development Programme. The request for 600,000 bales of cotton from that destination was made by Mr B. K. Nehru, the Indian Ambassador, and by Mr C. S. Moorthy, Economic Minister at the Embassy, when they met Mr Orville Freeman, the United States's Secretary of Agriculture. Mr Freeman, it is understood, has assured that the plea will be accorded serious consideration. (The trade circles are, however, sceptical about India securing such a large quantum of cotton from America.) Though the news generated an optimistic atmosphere, the absence of any official announcement to that effect will leave the trade circles in a speculative mood. Besides, despite the repeated assurances given by the Government on several occasions to import cotton from sources like the USSR, Egypt and East African countries, against special rupee payment arrangement or under barter deals no concrete step has been taken to help ease the stringent supply position in the country. This has landed the spinners and trade in a dilemma.

In the spot market at Sewri moderate activity was visible with spinner interest being focussed on Vijay, Digvijay, Surti, Kalyan, Laxmi, L 147, Kalagin, Wagad and 197/3. The prices of these varieties, however, ruled firm.

In the export section stray business was transacted in Bengal Deshi. The export quota for 70,000 bales of this growth is reported to have been exhausted and the shippers are likely to approach the authorities for releasing further quota for export for maintaining continuity in business. They are optimistic of an announcement to this effect in the immediate future.

On the import front, regular business was done in Sudanese growth. Business on a restricted scale was also transacted in Mwanza and BP 52 cottons.

The stock of both imported and domestic cotton with the Indian mills by the end of February last were placed at 3 lakh bales and 10.84 lakh bales respectively in contrast to 3.02 lakh bales and 10.78 lakh bales held a month ago.

The consumption of cotton by the mills during the first half of the current season totalled 23.17 lakh bales of indigenous cotton and 5.48 lakh bales of imported cotton as against 10.85 lakh bales and 6.19 lakh bales respectively in the corresponding period in the previous season.

Mr Raja Bahadur Singh, the Chairman of the Madhya Pradesh Millowners' Association, has drawn pointed attention to the need for improving the per acre yield of cotton in the interest of both the textile mills and the cotton cultivators in India. Reviewing the present position of cotton scarcity in the country Mr Singh observed that cotton production in India has lagged behind the target of 70 lakh bales for the current Plan period. The shortage of cotton during the current season was nearly 14 lakh bales compared with last year.

SUGAR

The sugar markets have further steadied up during the past week due mostly to increased demand from a number of centres. The rising trend in prices could not be arrested even after the release of a special quota of 50,000 tonnes for open sale. It would appear that calculations of improved export prospects had also entered the picture. With stockists holding on to their stocks in expectation of a further increase in prices offer-

THE BENGAL FLOUR MILLS CO. LTD.

NOTICE is hereby given to the members of the above-named Company that the Annual General Meeting (being the one hundred and twenty-eighth Ordinary General Meeting of the Company) will be held at the Registered Office of the Company, 21, Netaji Subhas Road, Calcutta, on Thursday, 31st May, 1962, at noon, to consider the Accounts of the Company for the year ended 31st December, 1961, and to transact other ordinary business and the undernoted special business.

SPECIAL BUSINESS.

NOTICE is also hereby given of the following Resolution, which will be proposed as an Ordinary Resolution, of which Special Notice dated 23rd April, 1962, as required by Section 281 of the Companies Act, 1956, has been received:

That pursuant to the provisions of Section 281 of the Companies Act, 1956, it is hereby declared that the age limit imposed by Section 280 of that Act shall not apply to Mr. S. C. Law, a Director of the Company, who has attained the age of 69 years, and who retires in rotation and, being eligible, offers himself for re-appointment. And that the said Mr. S. C. Law be and is hereby re-appointed a Director of the Company."

NOTICE is also hereby given that the Transfer Books and Register of Members of the Company will be closed from 17th May, 1962 to 31st May, 1962, both days inclusive.

By Order of the Board,
BALMER LAWRIE & CO. LTD.
D. MANSON
Managing Director,
Managing Agents.

23, Netaji Subhas Road,
Calcutta, 24th April, 1962.

Note:—A member entitled to attend and vote at this meeting is entitled to appoint a proxy to attend and vote in his stead. Such proxy need not be a member of the Company. An Explanatory Statement pursuant to Section 173 of the Companies Act, 1956, has been forwarded to the members of the Company.

ings were inadequate to meet the demand in full.

It is expected that the sugar situation may show some improvement during the current year. It may be recalled that in order to reduce the pressure somewhat of mounting stocks of sugar with the industry Government had imposed a cut of 10 per cent on production. From the figures available now it would appear that there has been a sizable reduction in production. Production for 1961-62 is estimated at 27,84,000 tons as against 29,81,000 tons produced in the last season.

FOODGRAINS

The Hapur Foodgrains market developed an easy trend last week due largely to increased arrivals of rabi crop. Reports from growing areas indicate that threshing operations were making good progress and that further increase in arrivals was in the offing. New Wheat prices showed a declining tendency. Early in the week average quality wheat was quoted between Rs 37.51 to Rs 38.85 as compared with Rs. 40.20 at previous week's closing. Better farm new produce was quoted between Rs. 41.53 and Rs. 42.87 as against Rs. 42.88 a week ago. Indications are that with the reported bumper wheat crop in almost all producing regions, wheat prices would further

decline in coming weeks. Quietly steady conditions continued to prevail in the rice market as consumers showed sustained buying interest. Prices of gram were steady although arrivals were higher. In other markets too gram prices were higher due to poor stock position. In the Hapur Market, peas were easier due to heavy arrivals and mounting stocks. Prices of arhar were well maintained thanks to meagre stocks. However, new crop arhar has started coming from producing areas like Rampur in small quantities.

BANGALORE SILK

Prices of filature raw silk of 20/22 Dr. in Bangalore Silk Market maintained a steady trend during the week ended 4-5-1962 and continued to rule firm, being quoted between Rs. 84.89 and Rs. 85.99 per kgm. Rates of charka raw silk increased moderately to vary between Rs. 58.80 and Rs. 77.16 per kgm. Cottage basin raw silk ranged from Rs. 78.26 to Rs. 83.77 per kgm. Spun silk yarn of 2/210's was quoted at Rs. 81.40 per kgm.

Bhagalpur Silk Market

Tasar silk market prices remained steady during the week ended 4-5-1962. Prices of tasar raw silk ranged from Rs. 66.14 to Rs. 105.82 and that of silk waste and spun silk yarn varied between Rs. 22.04 and Rs.

26.46 and between Rs. 30.86 and Rs. 48.50 per kgm. respectively. Price of reeling cocoons showed an upward trend when those for Daba Bogai and Serihan were quoted between Rs. 117.00 and Rs. 122.00 Rs 110.00 and Rs. 118.00 and between Rs. 50.00 and Rs. 60.00 per kahar respectively. Generally tasar transactions between the stockists and the weavers commence in June when the prices indicate a gradual rise.

COMPANY NOTICE

INDIAN COPPER CORPORATION LIMITED.

(Incorporated in England)

DIVIDEND NO. 36.

NOTICE IS HEREBY GIVEN that at the Thirtyeighth Annual General Meeting to be held in Committee Room No. 2 (2nd Floor) of the Bengal Chamber of Commerce and Industry, Royal Exchange, Calcutta, on Wednesday, the 8th August, 1962 at 11-30 A.M. the Directors will recommend payment of a Dividend (No. 36) for the year ended 31st December, 1961 of 27% (6.48 pence i.e. 36 Naye Paise per unit of stock) subject to deduction of Tax in respect of the Issued Capital of £1,371,300. Subject to confirmation of members, the dividend will be paid on the 31st August, 1962 to all members registered in the books of the Company at the close of business on the 8th June, 1962.

The Registers of Members will be closed from the 9th June, 1962 to the 1st July, 1962, both days inclusive.

The profit for the year ended 31st December, 1961 was £1,222,163 (against £1,307,982 for previous year), out of which have been provided £165,000 for depreciation (£175,000 last year), £4,125 for gratuities last year nil, £68,465 for decretal amount under Kyanite Suit last year nil, £504,512 for Taxation (against £500,477), £56,250 for Development Rebate Reserve (against £50,625) and £100,000 for General Reserve (against £200,000), leaving a nett profit of £323,811 (against £381,880). With £118,750 brought in from 1960, the balance available is £442,561 (against £489,001) and after providing £370,251 for the abovementioned proposed Dividend of 27% subject to deduction of Tax (Dividend No. 35 of 27% subject to deduction of Tax last year—£370,251) the balance carried forward is £72,310 (against £118,750 brought in from previous year).

By Order of the Board,
G. A. CARVER.

Secretary.

Gillander House,
Netaji Subhas Road,
Calcutta-1.

Dated the 9th May, 1962.

Trend of silk prices in Japan.

Landed cost of Japanese raw silk of 20/22 Dr. was reported as Rs. 91.90 per kgm. as on 14th April, 1962. There has been a perceptible rise in prices since December, 1961.

BULLION

Silver prices hardened last week on sustained upcountry interest in the spot markets. With stocks at most centres at a low ebb the continuous buying support resulted in prices being pushed up. Top levels however could not be sustained for long and prices later in the week were below the best but nevertheless much higher on balance. Bulls who were dominant even at the beginning of the week were able to tighten their grip further deriving fresh strength from the good offtake in the spot market. Silver futures also firmed up.

The factors that were at work in the silver market were also influencing gold prices. In earlier dealings price moved up steadily following steady offtake. At times the demand far outstripped supplies and this factor accounted for the high levels prevailing around midweek. In later dealings however the undertone turned quiet due partly to the fact that arrivals tended to be larger than demand. Gold futures ruled firm most of the time but toward the close turned easy on lack of buying interest.

OILS & OILSEEDS

Steady to quiet conditions prevailed in the Bombay Oils and Oilseeds market. Groundnut developed a quiet tendency as a result of heavy arrivals and keen offerings by stockists. Offerings particularly increased from Saurashtra and UP interests and it would appear that sellers' anxiety to unload stems from the fact that the monsoon was not far off. Even so the undertone continues to be steady as expectations are that even with the good crop reported from Andhra and other growing regions supply would not far outstrip demand. Another factor that is helping bullish sentiment is the expectation that active measure would be initiated by Government for stepping up export of groundnut oil. Yet another argument advanced by bulls is that in view of the higher ceiling price for cotton the next groundnut crop may turn to be smaller than this year's as there will be a tendency on the part of cultivators to increase their cotton acreage to the detriment of the groundnut crop.

Although castor seed futures ruled somewhat steady in sympathy with groundnut section, activity in this market continued to be on a low ebb. With the news that a large quantity (3 million lbs.) of US stock pile stock had been released and exports prospects rated rather low, sentiment in the section continued to be subdued.

In contrast to the firm tendency displayed by it last week, the linseed section this week ruled irregular, with prices moving both ways according as the advices from the North Indian markets were cheerful or depressed.

Weakness prevailed in the Madras groundnut oil and seeds

market due partly to good arrivals of seeds both locally and in Southern centres and to the tactics adopted by Bombay forward market dealers and unloading by Sourashtra bulls. Crop harvest was reported to be excellent in Sourashtra and market in Bombay has been depressed. In Calcutta also the prices of groundnut oil and kernels are quoted low.

Arrivals of groundnut in local market is in the neighbourhood of 125 tons daily and most of these continue to be summer crop peanuts. Arrivals in the southern North and South Arcot districts average around 400 tons daily. All the seeds are being readily absorbed by crushers.

In groundnut oil Calcutta which bought fairly sizeable quantities last week, refrained from doing so this week. Ready goods were not absorbed as quickly as of last week or the week before. Even nearby commitments are not met with by traders who bestowed their attention elsewhere.

Steady and continuous movement of summer crop is reported in the districts of South and North Arcot. Further down in Tanjore also the season is in full swing. Crushers here are taking up these quantities at a slightly increased rate than here.

Groundnut oil last Wednesday began with the quotation of Rs. 182.20,

There was a slight increase on Friday to Rs. 183.60 and the price registered another forty nP per quintal by week-end. However following depressed trend in Bombay the oil price went down to Rs. 182.60.

Forward quotations remained stable without much transactions. June was at Rs. 187.50 by Wednesday last, improved to Rs. 190. for awhile, and again came down to Rs. 187.00 by weekend.

Superior kernels was quoted at Rs 72.50 per 80 kgs by last week beginning. It gained only 50 nP more and remains at this level. Bold was quoted at Rs. 70 and improved to Rs. 71 per 80 kgs. Peanut crop also gained a couple of rupees by instalments from Rs. 66 obtaining in last Wednesday.

Depression of groundnut oil prices was reflected in the districts also. Guntur's rate was Rs. 423 per 500 lbs, Vridhdachalam quoted Rs. 410. Nandyal was at Rs. 415, Villipuram's rate stood at Rs. 411, Cuddappah quoted Rs. 415, Pollachi was selling at Rs. 412.50, Tanjore sold at Rs. 415 and Salem at Rs. 415.

Groundnut kernels in these centers was quoted around Rs. 71/74 per 80 kgs.

HIDES & SKINS

With improved arrivals of tanned cowhides into the market, inquiries

activity. Semi-premium and premium marks commanded better inquiries from United Kingdom. On the basis of 73d 60d, 68d for run, fourth and fifth good business was transacted with UK on 5/5½ lbs. Several cases of better offer over these rates were also reported. As for the market quality of tanned cowhides, still there is a feeling that prices are dearen and UK buyers are closely watching the trend. Madras still quotes higher rates which the foreign buyers are now reluctant to offer.

Tanned cow calf skin is still dearer in Madras market. Sales are reported in this commodity of 2/2½ lb at 103d for run for premium. In the lower category, the price for the same weight was 95d, 75d for run and fourths.

There is continuous demand for tanned buff calf, but prices quoted are stiff. There was also fair demand in market quality of this commodity for 1½/2 lbs. Business for thirds was on the basis of 54d in 1½/2 lb.

As for tanned goatskins there was some business on prime class at the rate of 17/9d, 17/3d and 14/3d for run third/fourth and fifths. The price for 8/9 lb was the same as of last week. In the 11/12 lb the quoted price was 17/6d for run and 14/6d to 14/9d for fifths. Firm conditions prevailed in the middle class goatskins.

Company Reports

Buckingham—Record Sales

The Buckingham & Carnatic Company Limited has reported a new record in sales for 1961. Sales at over Rs 12.35 crores have been reached for the fourth time in succession. Exports totalling about Rs 2.02 crores were also higher and again secured for the company valuable benefits under the export promotion scheme.

The net profit, before providing for Depreciation and Taxation, amounts to Rs 1.52 crores as against Rs 1.39 crores for the previous year. Except for Development Rebate Reserve which is reduced to Rs 6.52 lakhs from Rs 8.00 lakhs and General Reserve to Rs 12.80 lakhs from Rs 17.85 lakhs, all other allocations have been increased.—Depreciation from Rs 41.88 lakhs to Rs 45.14 lakhs; Taxation from Rs 39.25 lakhs to Rs 46.60 lakhs and Debenture Redemption Reserve from Rs 5.00 lakhs to Rs 6.50 lakhs. The dividend on the Ordinary shares is raised from 10 to 18 per cent, subject to tax.

Against a paid-up capital of Rs 1,99,78,000. Reserves and surplus are shown at a substantially higher figure of Rs 3.85 crores. The gross block at Rs 9.30 crores is depreciated by Rs 5.55 crores, leaving a net block of Rs 3.74 crores.

Bangalore Woollen Pays More

The Bangalore Woollen, Cotton & Silk Mills Company Limited has also produced excellent working results for the same year. The demand for the company's products exceeded output and the closing stock of finished goods represented considerably less than one month's production.

Sales for the year have risen to Rs 6.19 crores from Rs 5.73 crores, while the net profit, before providing for Depreciation and Taxation, amounts to Rs 66.79 lakhs against Rs 59.10 lakhs.

In respect of allocations, a sum of Rs 15.80 lakhs (Rs 15.80 lakhs) is set aside for Depreciation; Rs 27 lakhs (Rs 19.80 lakhs) for Taxation; and Rs 1.90 lakhs (Rs 3.37 lakhs) for Development Rebate Reserve. No provision is made for General Reserve against Rs 2.50 lakhs. The directors have proposed a final dividend of Rs 12, making a total of Rs 18 per share, taxable, for the year as against a taxable dividend of Rs 10 per share paid previously.

The issued and subscribed capital is Rs 1,27,50,000, divided into 1,21,500 ordinary shares and Rs 6,000-6 per cent Cumulative preference shares, both of Rs 100 each. Against this, reserves and surplus amount to as much as Rs 1.69 crores. The gross block amounts to Rs 4.16 crores, total depreciation to Rs 3.35 crores and the net block to Rs 80.39 lakhs.

CAWTEX FARES WELL

The working of the Cawnpore Textiles Limited has been satisfactory and a further improvement, both in total production and efficiency, has been achieved. With a view to maintain the high standard of efficient working and to keep abreast of modern production techniques, capital expenditure to the extent of Rs 25 lakhs has been sanctioned for the next five years.

Sales have reached a new record figure of Rs 1.62 crores against Rs 1.46 crores, while the net profit remains almost unchanged at Rs 22.80 lakhs as against Rs 22.75 lakhs. The provision for Depreciation is higher at Rs 3.79 lakhs against Rs 3.05 lakhs; Taxation at Rs 9.00 lakhs against Rs 6.70 lakhs and Development Rebate Reserve at Rs 1.61 lakhs against Rs 98,800. The provision for General Reserve is, however, slightly lower at Rs 5.50 lakhs against Rs 6.00 lakhs. The directors have proposed to raise the dividend from 36 nP to 50 nP per share, subject to tax.

The directors state that the export prospects for the current year are not promising on account of licensing of textiles having been transferred to India and keen competition from Japan, Hong Kong, Pakistan and some European countries.

Higher Profits for Trichinopoly Mills

The rise in sales from Rs 41.35 lakhs to Rs 45.74 lakhs is reflected in the working results of the Trichinopoly Mills Limited. The net profit is higher at Rs 7.65 lakhs as against Rs 5.26 lakhs for the preceding year.

Apart from providing a sum of Rs 1.06 lakh for Dividend Equalisation Reserve, the Depreciation amount is raised to Rs 96,430 from Rs 85,281 and Taxation to Rs 3.00 lakhs from Rs 1.95 lakhs. The provision for Development Rebate Reserve is lowered to Rs 400 from Rs 55,000. The directors have proposed a taxable dividend of 15 per cent as against 13½ per cent, taxable, for 1960.

Dividend Reduced by Kothari Textiles

Despite a rise in the sales from Rs 1.78 crores to Rs 1.90 crores, Kothari Textiles Limited has been able to report a net profit of only Rs 4.13 lakhs as against as much as Rs 5.76 lakhs for the preceding year.

In respect of allocations, a sum of Rs 15.96 lakhs (Rs 16.30 lakhs) is set apart for Depreciation; Rs 7.20 lakhs (Rs 1.10 lakhs) for Taxation and Rs 2.13 lakhs (Rs 4.05 lakhs) for Development Rebate Reserve. After transferring a sum of Rs 2.50 lakhs from General Reserve, the directors have recommended a dividend of 8 per cent, taxable, on the Ordinary shares. This compares with a taxable dividend of 10 per cent paid previously.

During the year, the Whitins Combing machinery was brought into production. The additional Cone Winding machine was also received and commissioned. Out of the 30 additional Cards ordered earlier, 15 Cards were commissioned by the end of the year.

An order for a 234-Spindle Barber Colman Spooler and one High-Speed Barber Colman Warper was placed during the year and the machinery is at present under erection at the mills.

For the Investor

INVESTMENT GOSSIP

Revival of Confidence

The revival of speculative interest in the stock market since Thursday appears to have stemmed mainly from renewed hopes of tax concessions. Bulls seemed to be quite confident that the Union Finance Minister would announce the concessions before long. But so far the expectations have not materialised even though Mr Morarji Desai has completed his replies to the Budget debates both in the Rajya Sabha and the Lok Sabha. The optimists however are not to be discouraged. They argue that there is still plenty of time for the Finance Minister to make the eagerly awaited announcements. The reason for the delay, they aver, is that the detailed examination of the points raised in criticism of the budget proposals has not been completed. For has not the Finance Minister in the course of his speech in reply to the budget debate in Parliament on Thursday said that he would announce Government's decision on the various representations he had received on his tax proposals when he moves for consideration of the Finance Bill?

The criticism made in Parliament to the effect that the Budget was not in tune with the socialistic ideal of Government has somewhat disturbed market sentiment, but there had been no inclination to give it more than passing attention. Mr Morarji Desai's answer to the criticism that companies continue to make huge profits has been particularly welcome to the market. Mr Desai has made it clear that incentives are necessary for any enterprise whether it is in the public or private sector. He has pointed out that it will be wrong to consider all profits unreasonable or unjustified because without reasonable incentives neither the public sector nor the private sector could function efficiently and grow.

Operators have been encouraged to extend their commitments in Indian Iron from about the middle of the week following strong rumours that the announcement of the steel retention prices could not be delayed long as it was reported that the Tariff Commission's recommendation had already been submitted to Government. Easy money conditions were another bullish influence. The fact that investors have been rather reluctant to sell out their holdings even when there are what are described as adverse factors

in the investment situation has been responsible for thwarting speculative designs. From the sustained interest noticeable in growth scrip and shares of companies with promise of expansion, it is evident that investment support will continue to be forthcoming in sizable measure.

Simco Meters

The subscription list of Simco Meters Ltd opens on 17 May. The issued capital of the company consists of 30,000 preference shares of Rs 10 each and 3,20,000 ordinary shares of Rs 10 each. Out of the issued preference capital of Rs 30,00,000 Rs 1.50 lakhs are being issued to the public. Of the equity share capital, the public is being offered Rs 13,88,000. The entire public issue of preference and equity shares is underwritten. Dennis Ferranti Meters Ltd., of UK will collaborate with Simco to set up a large plant for the manufacturing of single-phase and polyphase electric meters. The Commonwealth Development Finance Company Ltd. of London will participate in the financing of Simco Meters Ltd and provide the requisite foreign exchange by subscribing to the equity shares of the company of the total value of Rs 6,66,670 (£50,000) and giving a long term loan of Rs 18,33,330 repayable after the expiry of ten years. The Plant which will be set up at Tiruchirapalli in Madras State is expected to go into trial production by January 1963 and into commercial production by March 1963.

BONUS ISSUE NOTES

New India Industries

New India Industries Limited, Baroda, having a paid-up capital of Rs 51.35 lakhs. has been granted consent to issue 3,635 bonus shares of Rs 100 each on capitalisation of its reserves.

Braithwaite & Company, Limited, Calcutta, has been granted consent to the issue of 40,000 cumulative redeemable preference shares of Rs 100 each, for cash at par carrying dividend at 9 per cent free of company's tax, but subject to deduction of tax at source at the prescribed rates. The capital is required for the implementation of the company's scheme for the manufacture of Cranes and heavy structurals.

INVESTMENT NOTES

Indian Copper

The Indian Copper Corporation Limited has proposed to maintain the ordinary dividend for the year ended December 61 at 27 per cent (36 nP) subject to deduction of tax. The profit for the year was lower at £1,222,163 against £1,307,982 for the previous year.

General Tyres

The Directors of General Tyres Ltd. have made the first call of Rs 2.50 per Equity Share and Rs 25 per Preference Share payable on or before 16 June 1962, to the company's bankers, National and Grindlays' Bank Ltd., Lloyds Branch, 29 Netaji Subhas Road Calcutta. Issue of requisite call letters has commenced.

TISCO Production

Messrs Tata Industries Private Limited, Managing Agents for the Tata Iron and Steel Company Limited, report that the approximate production of iron and steel at the Steel Works at Jamshedpur during the month of April 1962

In Metric Tons		
was:		
Iron	..	144,400
Steel Ingots		143,600
Saleable Steel:		
Semi-finished	34,300	
Finished	75,700	110,000

Associated Bearing

The Associated Bearing Company Limited, a new Tata firm, is expected to enter the capital market by the end of this month. The offer

will be to the tune of 80,000 shares of Rs. 100 each and it is expected that the shareholders of the Investment Corporation of India will be offered shares of the new company on the basis of roughly 10 per cent of the number of shares held by them in the corporation. No shareholder will be allotted more than 100 shares.

Lynx Machinery

The company's new factory is expected to be completed in the current year. According to the Chairman of the company Mr C. C. Desai the implementation of the new manufacturing lines would take time because of the complexity of the manufacturing programmes and the problems relating to planning and technical collaboration. The company proposes to manufacture cranes in its new factory.

Madras Rubber

The erection of the tyre factory of the Madras Rubber Factory Limited is proceeding according to schedule and the entire building of the factory is complete and the major part of the machinery has already arrived. According to Mr K. M. Cherian, the chairman of the company, it is hoped that the entire plant for the manufacture of Mansfield car and truck tyres can be commissioned within three months. The plan of the building of the factory and the erection of the machinery are so made that future expansion can be embarked upon without interfering in the working of the factory. The company has already applied for permission for expansion.

BALANCE-SHEET BRIEFS

The net profit of the Mumardhuli Engineering Works Limited for the year ended November 61 amounted to Rs 1,400,034 against Rs 1,191,280 in the previous year. Provision for taxation is at Rs 385,000 against Rs 264,000. The company has proposed a higher dividend at 35 nP per share against 30 nP declared last year.

The Lucky Valley Tea Company Limited has made a net profit before providing for taxation and depreciation of Rs 113,621 for the year ended December 61 as against Rs. 204,985 for the previous year. against Rs. 18,687. The dividend Taxation absorbs Rs. 45,000 as against Rs. 87,000 while Depreciation is higher at Rs. 17,136 as is maintained at 10 per cent.

Mohini Sugar Mills Limited has incurred a loss (before providing for taxation and depreciation) of Rs 405,965 for the year ended November 61 as against a profit of Rs 143,306 in the previous year.

The working of Aspinwall and Company (Travancore) Limited for the year ended December 61 has resulted in a loss of Rs 42,032 (before providing for taxation and depreciation). In the previous year the company made a net profit of Rs 130,989. The company however has maintained the dividend at 4 per cent.

Delta Jute Mills Company Limited has reported a loss of Rs 360,941 for the year ended November 61. The company made a net profit before providing for taxation and depreciation of Rs 756,256 for the previous year and paid an ordinary dividend of 7½ per cent. For the year ended November 61 no dividend has been proposed.

Cheviot Mills Co., Limited has incurred a loss of Rs 913,858 for the year ended November 61. The company had reported a net profit before providing for taxation and depreciation of Rs 415,285 in the previous year. The company proposes to pay a dividend of 5 per cent against nil last year.

Bowreah Cotton Mills Co., Ltd has made a net profit before depreciation and taxation for the year ended December 61 of Rs 4,272,582 against Rs 2,565,396 in the previous year. The gross dividend has been doubled to 20 per cent against 10 cent paid for the previous year.

STOCK EXCHANGES

Improved Sentiment

Watch-Dog Writes:

STOCK markets displayed an irregular pattern during last week's trading. After a steady opening equities relapsed into a subdued mood only to meet with renewed support in later dealings. Settlement considerations were responsible partly for the stagnant conditions noticeable in the first half of the week in some of the centres. Tired bull liquidation on discouraging indications about tax concessions was an important adverse influence.

The Calcutta Stock Exchange opened on a subdued note and values especially in the speculative counters lost ground in later dealings partly because of speculative selling and partly because of the intervention of a holiday on Tuesday. Settlement considerations again kept sentiment subdued on Wednesday but later on the undertone improved with the more speculative counters meeting with renewed interest.

The Bombay stock exchange commenced the week's trading on a steady note with equities receiving allround support and sustained buying interest at increasing price levels. The mood proved shortlived as in subsequent trading values dipped for lack of support at higher levels on adverse rumours. The reactionary trend too however yielded place after midweek to steadiness on reemergence of keen speculative support for selected shares.

The Madras Stock Exchange commenced the week on a subdued note with select plantings and textiles however meeting with some support. Sentiment improved in later dealings with interest centred on sugar and select plantation shares. Textiles displayed a mixed trend.

CALCUTTA

Calcutta, Friday Evening.

The stock market began the week on a subdued note and did not show much improvement till midweek. Sentiment however brightened up in later dealings with the more speculatives leading the way. Trading began on a dull note and values were barely maintained around previous closing only due to higher advices from Bombay which seemed to be optimistic about obtaining some concessions in taxation, especially with regard to excise duty on cloth and yarn. Tuesday was a holiday for the Calcutta market on account of Rabindra Jayanti. In the meantime Dalal Street was rather subdued on receding hopes of tax concession. The pessimism stemmed from the fact that the Union Finance Minister had given no indication of any concession in his reply to the Rajya Sabha. His reply on Thursday to the debate in the Lok Sabha again failed to give a clue as to his intentions. However, operators seemed to have regained confidence from the tone of his speech. Steel shares were once again in demand presumably due to renewed hopes of an early announcement of the steel retention price.

Government securities continued to rule generally unchanged in the absence of fresh support. Some selective interest was however noticeable.

The coal section received a fair measure of support from investors as the outlook for the industry is taken to have improved following recent indications from Government as regards an increase in the selling price of coal as well as a larger share in production during the Third Plan period for the private sector collieries. Bengal was a prominent feature and was done up to Rs 375 on Thursday as against the week's opening rate of Rs 370. East Indian received special attention and improved by nearly two points to be placed at Rs 47.50 on favourable corporate news. Central India was fancied up to Rs 13 with Equitable improving to Rs 28.44 and Western Bengal to Rs 10.06.

Textile shares were initially steady but in later dealings turned subdued presumably on receding hopes about concessions in the excise duty on cloth and yarn. Bharat Commerce was a bright spot in earlier dealings reflecting satisfaction on the company's excellent report, but subsequently interest cooled off with the rate declining to Rs 29.19 by close on Thursday. Cawnpore was easier at Rs 8.50 as was Elgin at Rs 21.60. Trading in the jute section initially reflected the reluctance of operators to extend commitments in view of the confusion caused by the excise duty levy. Towards close of the week interest revived presumably on the calculation that since concerted measures are to be taken by Government to foster exports, the outlook for the industry has further brightened. Anglo India gained 15 points between Monday and Thursday to close on the latter day at Rs 245.

Activity in the tea section continued to be restricted in view of the uncertain prospects for new season tea the export auctions of which will begin next week. While the fact that

there is not much carryover from last season is considered a helpful point, it is apprehended that companies having not much good teas to offer will be at a disadvantage as demand is largely confined to quality teas only. It is not surprising that only shares of companies which have known to have a predominance of quality teas to offer were fancied. Dhelakhat was in demand and improved on Thursday to Rs 22.12 from Rs 21.94 earlier in the week. Hasimara was a steady feature at Rs 30.25. Tezpire was market at Rs 17.25.

Paper shares were taken up at steadily rising price levels, presumably due to the hope that selling price of paper may be favourably revised.

Ballarpore was an active counter and moved up briskly to Rs 19.62 from Rs 18.69 at the beginning of the week. India Pulp on sustained buying hardened to Rs 22 as did Titagur to Rs 42.12. Straw Products met with buying interest around its opening level to close on Thursday at Rs 10.81. Seshasayee was done at Rs 8.50.

In the Engineering section Indian Irons were active and although the scrip was marked down around midweek on settlement considerations and due to general lack of support, it once again improved in Thursday's trading on renewed rumours about the early announcement of the steel retention price. Among other Engineering shares, Braithwaite was in good request as were Burn, Jessop and Jay Engineering. Texmaco which was rather quiet in earlier dealings firmed up in Thursday's trading presumably on interest buying.

The Miscellaneous section again provided a number of bright spots. Some new issues received sustained support. Hindustan Aluminium came in for good enquiry and gained some further ground during the week's trading. Indian Aluminium was another share which was much fancied on good corporate news.

Snippets

CLEANING AND DRYING OF SEEDS IN SINGLE OPERATION

Seeds have to be cleaned and dried to make them safe for storage. The drying may have to be varied in degree to make them fit for storage or even for transit in tropical conditions. Usually the two forms of treatment are applied separately. A device developed in UK combines the two operations into one.

The apparatus, which can be fitted to any existing cleaning machinery, consists of a hopper in which the seeds are pre-heated and a set of cleaning screens on which the seeds are dried while the screens are being agitated to remove foreign matter and to allow them to pass through. The hopper is made of fibre-glass frames with galvanised mesh panels. It has a central chamber into which a fan draws warmed air from an electrical heater unit at the top. The seeds are fed into an 8 in. gap between

the inner and outer cylinders and are drawn off at the bottom for serving to the screens.

The screens are heated by a low-voltage current and their temperature can be raised to 77°C. The moisture extraction rate varies with different seeds; one ton of seed wheat with an initial moisture content of 19 per cent can be dried to a moisture content of 14 per cent an hour. Other normal throughput rates include 9 cwt. an hour for grasses and 14 cwt. and hour for mustard. The cost of the new apparatus is a little more than half the cost of a separate unit of similar capacity.

NEW APPROACH TO MAKING FLAME-PROOF RUBBER

Many attempts have been made to render natural rubber flame-resistant by compounding with some combustion retarding materials such as chlorinated hydrocarbons, ammonium salts, borates and metallic oxides. The high loadings of these materials which are which are usually required, however, may have a markedly adverse effect on the elastic properties of the products and may also cause processing difficulties in latex applications.

A new approach to this problem, developed at the laboratories of the Natural Rubber Producers' Research Association of Malaya, involves the chemical modification of natural rubber so that flame resistance is 'built into' the rubber molecule. This also eliminates the possibility of the loss of combustion-retarding components by leaching or other physical means. The modification required is achieved by reacting rubber in the latex form with the polyhalogenated trichlorobromomethane (20 per cent).

The loss in tensile strengths by this process may be partly made up by a technique similar to masterbatching, in which a more highly modified latex is blended with sufficient natural latex to reduce the chlorobromomethane content to the required level (e.g. 12 per cent).

One suggested application for these flame-resistant rubbers is in the bonding of hair pads for upholstery and packaging purposes. Another possible application of the latex is in the production of foam rubber.

NEW VEGETABLE-CHROME-VEGETABLE COMBINATION TANNAGE

Though most village tanneries employ bag tanning, sometimes, when the hides are badly cured it is not possible to stitch them into bags. In such cases a vegetable-chrome-vegetable combination tannage process developed at the Central Leather Research Institute, Madras, is advantageous. In this method, bag tanning pits are not necessary and the process can be carried out in a small pit or vat even in the open.

JUTE GOODS Effect of Excise Duty

Assuming Indian mill production at or around the present level and a short-term lag in home demand due to consumer resistance, the current rate of sacking exports cannot prevent some increase in the jute industry's stocks taking place in the next few months according to the Jute Bulletin of the Indian Central Jute Committee.

The announcement of the excise levy on jute manufactures, the bulletin said, had thrown the gunny market in a confusion.

It added: "How all the interrelated factors bearing upon demand and supply of jute goods will shape in the specific context of the duty now imposed will certainly take many more weeks to clarify; but the initial response of the market has been, to say the least, jittery.

"Prices, especially for heavy goods—the sector most seriously affected by the impost, have responded with a modest decline. Some amount of selling pressure has already developed.

"As yet this may only be a precautionary move by bulls to bring their commitments down to a manageable level in view of the mood of uncertainty that has gripped the market. It is common knowledge that the trade is overbought in gunnies. The liquidation, small though it is at the moment and resorted to, admittedly, as a corrective, is nevertheless symptomatic of a fear complex."

Whether the present unease over individual long positions, said the bulletin, would used to mature into a psychology of panic would be decided by how the foreign demand for heavy goods developed in the near term. Until that was clear, domestic buyers of jute goods could hardly be expected to make a move one way or the other.

Continuing the Jute Bulletin said that some very heavy buying of sacking goods had been done on home account since November-December last year. In fact, the breakup of sacking despatches showed the rate of offtake for purposes of internal consumption as nearly catching up with that for export. As they had built up sizable stocks, Indian gunny consumers would hereafter be able to deal with the market from a position of strength. Their bargaining power would, however, be considerably whittled down in case the outgo of sacking goods on foreign account in the coming months maintained even the very modest pick-up recorded in March-April.

"This is rather an optimistic assumption not quiet justified by the volume of overseas enquiries being received in Calcutta lately."

"Another factor to have depressed sentiment is the report that the Pakistan mills, with the big bulk of habi-jabi and cuttings at their command, have commenced making heavy forward sales for July-December, traditionally the peak period of foreign buying."

The ruling high prices of goods in Calcutta, the Jute Bulletin said,

were a reflection of the release of a big pent-up demand following on a large improvement in the availability position as a result of the past year's jute crop. Once this demand spent its force with the normal replenishment of inventories, a process which had already been carried to a certain stage, a larger proportion of mill production would go to month-end stock.

"In the light of this more or less certain development, the assumption behind the imposition of the excise duty that by restricting domestic consumption it will make more goods available for export may not hold good for long. The squeeze on ready goods for shipment, a purely temporary phase, has already begun to ease and after May as well be a question of supply running ahead of demand. This would be so without the duty and with it the process may at best be quickened provided the jute industry maintains its present full-time working.

"Again, consumer resistance under Indian conditions cannot but be shortlived for there is no other substitute to jute packaging. With the economy expanding as fast as it is under the impetus of planned efforts it is unthinkable that the rate of measurable extent. The only fear entertained by the trade is of a dislocation in the short run, coming in the wake of a buying pause simultaneously with bull unloading which may give rise to a condition of over-supply in the spot goods market.

"The apparent inelasticity of the home demand does not, however, warrant the conclusion that the mills will be able to pass the whole burden of the excise duty on to consumers because there is yet no evidence forthcoming, despite the current boom, that the world demand for jute goods is on the way up. Even if it is, the world output of jute goods is relatively on a far higher rung still, thanks to the steadily increasing additions to Pakistan's manufacturing capacity.

"On the present showing of the market, the opposite conclusion—that existing prices for jute goods are too high and may level off much sooner than later—would appear more realistic. The greater weight of the burden for the payment of the excise duty will, in that event, fall on the mills' profit margin."

Licensing Under Industries Act

The Union Ministry of Commerce and Industry has announced a revised list of 178 industries in respect of which applications for licences under the Industries (Development and Regulation) Act, 1961 will ordinarily be rejected without reference to the Licensing Committee.

Simultaneously, another list of 19 industries, in respect of which licences under the Industries Act will ordinarily be granted without reference to the Licensing Committee has also been published.

Both lists will be in force till 30 September, 1962.

The list of industries, where applications may be ordinarily rejected, consists of 74 engineering and 104 non-engineering items. The engineering industries are: Agricultural Implements; Agricultural Tractors; Aluminium sheets, circles, extruded rods, sections foils; Antimony; Automobile leaf-springs; Barbed wire; Bare copper conductors; Bare copper strips; Bicycles and Bicycle parts except steel balls; Bifurcated rivets; Bolts and copper, extruded pipes, tubes rods, sections, sheets and circles; Calculating machines; Car lifts; C. I. spun pipes, Chaff cutter blades; Circles, sheets, rods and utensils of stainless steel; Collapsible tubes and rigid containers; Commercial vehicles; Conduit pipes; Virgin-Copper and wire for non-electrical purposes; Cotton and hair belting; Crawler tractors; Domestic refrigerators; Domestic utensils; Drums and barrels and tin containers excepting those for manufacturers' own requirements; Dry batteries; Electric fans; Electric lamps—Photoflash bulbs; Expanded metal; Ferro-manganese; Flash light and Torch containers; Fluorescent tubes; Hurricane lanterns; Jeeps and station wagons; Kerbside petrol pumps; virgin Lead; Mercury vapour and other gaseous discharge lamps; Meters—Single and Polyphase; Miniature lamps (excluding auto head lamps and sealed beam lamps); Motor cycles, scooters Non-ferrous Alloys; Paper capacitors—(a) for fans, fractional horse-power motors and lighting fittings and (b) for power factor correction; Paper insulated power cables; Paper making plants—large and small scale, including wire-cloth for paper machinery; Passenger cars; Power driven pumps; Radio receivers and P.A. equipments (except components); Razor blades; Refrigeration plants for industrial use; Railway mechanical signalling equipment; Rolling shutters; Room air-conditioners; Rubber ply transmission belting; Solvent extraction plant; Spark plugs; Saws of all types; Steel pipes and tubes; Steel doors and windows; Storage batteries; Stranded wire; Sugar machinery (except milling plant and centrifugals); Tea processing machinery; Tungsten carbide tips and inter-mediatories thereof; Valves—Tyres and tube; V.I.R. and P.V.C. Cables; Washing machines; Water coolers; Welded wire mesh; Wire nails; Wire ropes; Wood screws; Zinc; Zinc sheets and stripes:

The non-engineering industries are: Abrasive grains; Acetic Acid; Activated bleaching earth; Alcohol—Power and Industrial; Asbestos cement sheets and pipes; Azo dyes; Basic dyes; Beer; Beta-Naphthylamine; B. H. C.; Bichromates; Bottles and vials; Camphor; Calcium carbide except for captive use; Calcium Carbonate (Precipitated and activated); Carbon Black; Caustic soda except for captive use; Carboxy Methyl Cellulose; Cashew kernels; Cellulose film (Cellophane); Chlorine; Chip board; Citric Acid; Copper Sulphate; Cotton mesh fabrics; D.D.T.; Detonators; Dextrose powder; Drug and Pharmaceuticals, viz.: Antibiotics—Penicillin, streptomycin and Tetracycline; Bismuth salts, Chloral Hydrate, Cough Syrup, Derivatives of 8-Hydroxy Quinoline, Empty Hard Celatine capsules, P.A.S. Acid and

Salts, Salicylic Acid—Sodium Salicylate, Acetyle, Salicylic Acid, Sulpha drugs, Surgical Adhesive Tapes, Synthetic Hormones, Vitamin A and Vitamin C; East Indian Tanned (semi tanned), Kips and Skins; Fast colour baees; Fibre beard/hard Board; Fire-works and Paper caps; Formaldehyde; Gelatine; Glass, Mineral Wool and allied products; Glass Tubes (Hand-made), sheet-glass, wires/figured other than rolled glass; Glazed Tiles; Graphite electrodes; Hollow Ware (semi-automatic) (Glass); Hydrogen Peroxide; Liquid Glucose Liquefied fractions by processing gas; Match; Menthol; Methanol; Myrobolan Extract; Naphthols; Newsprint; Nitric Acid Nitro Compounds; Organic pigments; Paper and Paper Board (applications from small units will be considered on merits); Pesticidal formulations; P.E. Moulding powder; Phenol; Photographic raw film and paper; Phthalic Anhydride; Polystyrene; Polythelene; Polyvinyl acetate; Potassium chlorate; P.V.C. resins composition; Pulp including rayon grade pulp; Rayon Staple fibre; Rayon tyre cord; Reclaimed rubber; Rolled figured wired glass; Safety fuse; Sanitary-ware; Security paper; Shoddy yarn (woollen); Silicon carbide Soap Sulphuric Acid; Sulphur black; Sulphur dioxide; Sulphur dyes others; Super phosphate; Synthetic resins; Synthetic rubber (SBR Type); Table Pressed ware (Glass); Titanium Dioxide; Tyres and Tubes—Automobile; U.F. Moulding power; U.F. Resin adhesives; Vat dyes Vegetable oil other than Cotton Seed Oil Vanaspati; Vacuum flask; Zinc Oxide; Woollen yarn; Worsteds yarn; Woollen worsted cloth; Wool tops; Soda Ash; Sodium Thiosulphate; Sodium Aluminate; Textiles made of art silk; Calcium brake hoses; Water proof hoses and Wide hessian gunny bags and webbing.

INDUSTRIES TO BE LICENSED

The second list, in respect of which licences may ordinarily be granted, includes 14 engineering and 5 non-engineering industries. Only letters of intent, and not actual licences, would be issued in those cases requiring foreign exchange in excess of Rs 10 lakhs.

The engineering industries listed are: Boilers; Boats and crafts (fishing); Brazing Tips; Conveyors E.O.T. and Wharf Cranes; Fabricated Structures—Heavy; Gear Industry; Hand tools and Small tools excluding twist drills, steel files and forged tools but including precision tools like plug-gauges, angle plates, etc.; Machine tools—all types; Structural ropeways; Sluice gates and gearings; Water meters; Winches; and Industrial machinery (not otherwise specified).

The non-engineering industries are: Cotton Seed Oil; Crockery (not requiring foreign exchange) Finished Leather, Stoneware Pipes (not requiring foreign exchange) and Solvent extraction of oil cakes and rice bran.

Heavy Electricals Plant

Shri C. Subramaniam, Union Minister for Steel and Heavy Industries, told the Rajya Sabha on 10 May 1962, that the Heavy Elec-

tricals Plant at Bhopal would ultimately produce heavy electrical equipment, such as hydraulic and thermal turbines, transformers, switch-gear and industrial controlgear, generators and motors (including traction motors for electric locomotives), and capacitors.

In a statement laid on the Table of the House, in a written reply to a question by Shri V. M. Chordia, the Minister indicated that the works connected with the Rs 25 crores output programme of the plant was likely to be completed by 1963-64; and the capacity of the plant was expected to reach the targetted output of Rs 25 crores before the end of the Third Plan. The expansion of the factory for an annual output of about Rs 52 crores, to be achieved by 1960-70, was under consideration.

The statement also indicated that the total expenditure incurred on the factory up to March 31, 1962, was Rs 26 crores (appropriately). The estimated production to be achieved by March 31, March 31, 1962, was Rs 3.5 crores. As against this target, the actual production for this period was likely to be just over Rs 2 crores.

Construction work was progressing generally according to schedule. The fall in production compared to the estimate was mainly attributable to delays in obtaining raw materials and components from UK for the first year's production; and labour troubles.

SCHEDULE OF WORKS

Earlier, the Minister stated that the original estimated cost of the Heavy Electricals Plant at Bhopal, as envisaged in the Project Report, submitted by Associated Electrical Industries Ltd., UK, the Technical Consultants to the Project, in 1956, was about 35 crores, exclusive of working capital, for achieving an annual output of Rs 12.5 crores in single shift or Rs 22 crores by working in two full shifts.

The project report contained a schedule showing the dates by which different construction works were to be completed.

According to the schedule, production work in the switchgear and certain other departments was to commence on July 1, 1960. The Factory actually started production on this date.

The statement further indicated that due to overall shortage of country's foreign exchange resources and general financial stringency, it was decided, in 1957, to divide the project into three phases, and to take up the implementation of phase I of the programme for an estimated annual production of Rs 6.25 crores at a cost of about Rs 20 crores, immediately.

In 1958, it was decided to proceed with the construction of the factory in its entirety for an annual output of Rs 12.5 crores with double shift working; subsequently, in 1960, it was decided to expand the output of the plant to Rs 25 crores per annum. As it was found necessary to, simultaneously, increase the sizes of individual units of transformers and water turbines along with the proposed expansion, to suit indigenous requirements an upward revision in the machine tools and equipment was rendered necessary. The revised project estimate for the expanded annual output of Rs 25 crores was of the order of Rs 40 crores (approximately), on the basis of which the construction of the project was now proceeding.

This estimate did not include the cost of development of township and working capital requirements. Government had also under consideration a supplementary project report prepared by the Consultants of the factory as to how the plant could be expanded for an annual output of about Rs 52 crores per annum by addition of civil works and installation of machine tools and equipment.

Agreement with E.N.I.

Details of agreement entered into between the Government of India and the ENI of Italy were given by Shri K. D. Malaviya, Union Minister for Mines and Fuel, in reply to a question in the Lok Sabha.

The agreement was signed on 29 August 1961, and provides for a 100 million dollar credit being given by ENI for public sector petroleum projects in two categories; the first category includes projects for which the general provision has already been made in the Third Five-Year Plan, such as transport pipelines for petroleum products from Barauni to Delhi and Barauni to Calcutta, gas fractionation plant, liquid petroleum gas bottling plant and distribution facilities, lubricating oil plant, supply of crude oil production equipment and also distribution equipment.

Among the list of projects is also included contract drilling for any areas specified by the Oil and Natural Gas Commission. In the second category come additional projects like petrochemicals and some others for which the Planning Commission and other Ministries have further to be consulted for concurrence and for which consultations have also to be made with ENI in due course.

Time schedule for projects under first category is such as to enable them to be executed within the Third Plan period.

The estimated costs of the projects will be known after the project studies have been completed."

burn?**

Oxygen of course! Any schoolboy knows that. But before Lavoisier, who gave it the name, had studied the gas, it was one of the most puzzling questions.

Since then the properties of this gas have been studied by scientists enabling them to put it into use in various fields — welding and cutting of metals, blasting of huge rocks, relief to suffering patients etc. Its greatest use, however, has been in Industry in the shape of welding and cutting.

Storm Signals

INDO-AMERICAN relations are once again entering one of those periodic troughs of depression and it is necessary to put up the storm signals. For our part, we deplore not only the impending squall, but also its proximate cause. If quarrel we must, we wish, for the sake of our self respect, that we had a less self-regarding reason than the 25 per cent cut in aid just voted by the Senate Foreign Relations Committee. Coincidental, but capable of correlation in the larger context, is the current Indian negotiation for purchase of Russian jet air-craft for neutralising the F-104 G jets that the US has supplied Pakistan as part of its military aid. The prevarication over aid to Bokaro Steel Plant by what is widely regarded in this country as a wholly needless fresh survey by Americans is another source of irritation. The two nations have in the past negotiated sticky patches with greater or lesser skill and they should be able to do so once again. This is not difficult at the official level, where, especially at the moment, there is greater rapport than before. But even so, the causes of friction have to be removed by mutual appreciation of the sources of the acts that exacerbate.

On the question of aid, it is incumbent on us to be particularly circumspect about our reactions. It would be best for us to let the democratic processes in the United States to deal with the question. The Kennedy Administration can be trusted not to allow the matter to rest and to take it to the Senate where the Committee's decision may well be reversed. But the important thing is that even if the decision is not reversed, we should recognise the right of the Committee to vote as it pleased. It is, of course, open to us to wish that the senators who voted for the cut were better informed and even better mannered (The things that Senator Russell is reported to have said about Mr Nehru showed him up to be not only prejudiced but boorish.) Senator Symington is reported to have given as his reasons for voting as he did, "India's military build-up, its failure to settle its dispute with Pakistan on Kashmir and its military action in Goa." The last two reasons would appear to imply that the Senator considers economic aid as a kind of good conduct prize—an impression that Mr Kennedy has consistently tried to erase out of American minds, with not much success, as it now appears. But the first reason is more serious and needs rebutting. It repeats by implication Pakistan's now familiar argument that economic aid to India subsidises her military build-up by releasing domestic resources for the latter purpose. The answer to this charge is that apart from the recent threats from China, Indian military strength had to be built up only as defence against Pakistan's openly avowed intention to use American arms supplied for other purposes against India. Even India's negotiations for Russian aircraft is something that has been forced on India not only because of the need to counteract accession to Pakistan's strength but because India was not able to obtain the same kind of air-craft from the US or the UK at a reasonable price. We are well aware

of the overtones of the cold-war that the projected purchases—which, by the way, are not concluded—assume, but the situation is one that has been forced on India solely by the US arms supply to Pakistan. It is not much use the US protesting that the air-craft it has supplied is not meant for use against India: Weapons that are selective in their targets have not yet been discovered and Pakistan has not only made it plain that it does not consider itself bound by any such restriction, but that it considers India as its chief danger. What is even worse, it is actually openly flirting with one of the powers against which these accretion to military strength of Pakistan is supposed to be directed. Indeed, Pakistan's President has been making vague threats—characterised as "silly" by Mr James Reston of the New York Times—of looking for assistance from precisely these quarters. It is not altogether irrelevant that these are also quarters most unfriendly to India at the moment.

Indeed, there is a certain amount of irony in Senator Symington's holding against India its reluctant increase in military build-up, which has been necessitated by the kind of threat that the US is supposing to be arming Pakistan against. The irony is heightened by the fact that not only is Pakistan not likely to use these arms for such a purpose but is only too likely to use it against a power that is up against aggressive designs of the very power against which Pakistan is supposed to be protecting itself with US help. We have no desire to give cold war undertones to our disputes with China—indeed our purchase of Russian air-craft may well be defended on the ground that it constitutes military and political warning to communist China that the one friend it can look up to does not probably approve of this particular predatoriness—but surely American understanding of India's military predicament at this juncture should have been more readily forthcoming. Officially this has been the case, as is evidenced by the fact of Mr Dean Rusk's testimony before the Committee in which he is reported to have said that "given the situation out there, he could not suppose that Mr Nehru would substantially reduce his military establishment on economic grounds." It will be evident to anyone who cares to consult Indian opinion that the increasing military expenditure is a heartbreak that it is acquiescing in with the greatest reluctance. Meantime, the US can render India a great service by the simple expedient of stopping supply of arms and aircraft to Pakistan. Indeed, this act would automatically release resources now being used for being prepared against Pakistan to an extent that may even reduce the quantum of aid to India. It would also obviate India's looking for matching weapons that so upsets the US. And it would be saving the amount spent by it on the supply of arms to Pakistan. Though we are doubtful whether such a policy with multiple blessings will readily commend itself to the US at the moment, we would strongly urge it for dispassionate consideration.

The Economics of Disarmament

"THE diversion to peaceful purposes of the resources now in military use could be accomplished to the benefit of all countries and lead to the improvement of world economic and social conditions". This is the conclusion that has been unanimously reached by a UN committee of experts consisting of representatives of Britain, Czechoslovakia, France, India, Pakistan, Poland, Sudan, the US, and Venezuela, which made a study of the economic benefits that will flow from world disarmament. Arguments in favour of world disarmament have so far mainly rested on the political dangers and moral regression implicit in the mad race toward armaments. The economic arguments however are no less compelling and weighty, but it is a pity that there should be considerable misunderstanding on this aspect of world disarmament. Even in enlightened circles consideration of the economic benefits of disarmament has been befogged by fears of the widespread economic dislocation that may ensue. Such fears as the UN study has served to point out, can be shown as without foundation by an assessment of the economic implications of disarmament. There is also a certain benumbed acquiescence in the heavy economic and social burdens which increasing military expenditures impose on national governments. It has been estimated that nearly \$120,000,000,000, which is nearly one-half of the total gross capital formation throughout the world, or two-thirds of the entire national income of all the under-developed countries of the world is now being annually spent on military accounts. What measure of sacrifice in terms of slower economic development and loss of consumer comforts that expenditure of this stupendous order involves should be obvious.

In its report the UN Committee has dealt with all the problems of adjustment in the transitional period from the switch from military to civilian production. While not minimising their magnitude, it considers them as capable of being successfully solved without causing widespread dislocation of economic life. As the report says, the problems of adjustment are somewhat more difficult for the more developed countries than for the underdeveloped countries for the very simple reason that while in the industrialised countries, armaments production have an indigenous base, the developing countries obtain their armaments requirements by imports from abroad. In these latter countries the resources devoted to military purposes consist essentially of manpower and foreign exchange so that far from there being any dislocation there will be a substantial gain in the savings of foreign exchange that now go to import the military needs. In contrast, the industrialised countries where a substantial part of national resources is geared to military production, have to devote attention to the impact on over-all economic activity and employment along with the specific problems of adapting manpower and productive capacity to productive and peaceful needs. Such problems have been faced and solved in the immediate postwar period and as the UN report observes, the conversion that total disarmament would require at present is much smaller and could be tackled more quickly than the post-war conversion.

Adaption of military production to civilian needs without involving dislocation to production, is clearly a question of finding out-

lets for the resources released by disarmament and also of maintaining effective demand at the previous level. The problem of finding outlets for absorbing resources released by disarmament is far from difficult. As the UN report states there are so many competing claims for employment of resources rendered surplus by disarmament that the real problem is to establish a scale of priorities. The report states that increased personal consumption might well absorb a large share of the released resources. "A substantial portion of them, however, would be used for expansion of productive capacities because only such expansion can provide a firm basis for further increases in consumption." Social investment is another alternative, its claim partly resting upon the fact that "growth of industrial and agricultural productivity is dependent upon developments in education, housing, health and other fields."

Maintenance of effective demand in the wake of disarmament also should raise no insuperable problems. While a decline in military expenditure is inevitable, the resulting shortfall in effective demand could be offset by monetary and fiscal policy. Maintenance of effective demand would be simply a matter of the efficiency of planning technique, and the principal problem of conversion would concern the physical adaptation of plants producing armaments to the production of goods for civilian use.

The structural problems of conversion should also hold no terrors and shifts within industries and plants can make the process of adaptation smooth and successful. A phased process of disarmament can circumvent many difficulties that are inherent in a switch from military to civilian production. One special problem to which particular attention has to be given is that of fitting the demobilised military personnel for work in civilian production. The report has emphasised the need for special assistance to encourage adaptation of skills to new jobs.

Disarmament has also implications for international economic relations on this plane, the most important gain would be relaxation of international tensions which is bound to lead to closer co-operation in economic matters. The political detente will particularly ensure greater flow of trade between the centrally planned economies and the rest of the world and trade between free economies will also gain by elimination of trade barriers and modification of existing trade agreements and practices. Accelerated economic growth will stimulate growth of demand for primary products and the impact on trade of under developed countries is likely to be favourable. Some harm may be caused to countries depending on exports for which the major outlet is provided by military purchases. Referring to such instances, the report says that consideration should be given to special aid for the countries concerned in the same way as for particular industries or areas within the principal disarming countries.

For the developing countries, disarmament should prove a special blessing. The saving in foreign exchange now being spent on import of foreign armaments, and availability of additional resources are advantages the importance of which cannot be exaggerated. The gains from a share of the greater flow of international trade should also be substantial. Over and above all these, some store can also be set for benefits from the greater scope for aid for economic or development which disarmament may permit. Referring to this, the report points out that national efforts and international co-operation in the development of the underdeveloped countries have so far

not brought about the desired acceleration of economic growth. It takes into account the existence of competing claims within the developed countries themselves which could absorb the resources rendered surplus by disarmament, but at the same time points out that a much larger volume of resources could be allocated to investment in productive development in these countries if only a fraction of the resources devoted to military purposes were used in this way. It has taken cognisance of the burdens which will be imposed on the aid receiving countries by increased commitments for servicing of a larger volume of external debt and to mitigate this burden underlines the need for granting as large a proportion of economic aid as possible in the form of grants or "soft" loans.

The long-term beneficial effects of disarmament would thus far-outweigh the temporary dislocation that may follow in the transitional periods. "In the long run, disarmament would allow each country to raise the rate of investment and to adapt productive capacity more adequately to the needs of the population and to the requirements of economic growth, both in the private enterprise and the centrally planned economies." Apart from these economic effects, disarmament would also confer important social benefits. "The psychological, moral and material evils of compulsory military service and of stationing troops away from their homes would be avoided; so would the danger that security considerations and the armed forces might play an excessive role in forming the values of the community. Scientific co-operation and the arts would benefit from an extension of international exchanges."

Individual well-being is linked with national prosperity and only planned efforts can ensure both in the shortest possible time. And planning, for its success, largely depends on savings, individual as well as national. Saving in the form of Bank Deposits provides resources for the National Plan.

NEW LOANS

When?—And on What Terms?

What will the timing of the new loan be? If maturities were any guide, as we had asserted on former occasions in this column, then it appeared likely that we would have this year two tranches of the new loan, each coinciding with a maturing loan. The prospect was that the first tranche would make its bow in mid-July when the 3½ per cent 1962 fell due for repayment, and the second in November when the 2½ per cent 1962 matured. This timing had the further advantage that it would allow for sufficient return of funds to the banking system, in as much as 2½ month of the slack season would have elapsed before the first tranche. But the trouble is that the deferment of the Centre's new loans would create problems for the State Governments. Hence we must seriously consider the possibility of the Centre coming on the market rather earlier than the middle of July—perhaps the second week in June would appear to the monetary authorities to be more propitious. Early August would then become available for the States, and still leave enough time for a second effort by the Centre later in the year.

It is however unlikely that the first tranche will be a pure conversion affair, as was the case last year. For one thing the banks by that time will have generated enough of a surplus for putting in new cash in the new loans; for another non-bank investors in gilt-edged are not likely to be able to wait for the tail-end of the slack season for their own investment needs. Hence almost certainly we may presume that the first tranche will be a cash-cum-conversion new loan.

The second point to note is that we may not follow the pattern of earlier years in being offered a "three-tier" loan. If bankers' pleas to the Finance Minister two weeks ago should prevail one of the new loans should be a short-term one with a maturity of about five years. We repeat that the loan directed at the banks should, in our view, be a 3.4 per cent 1967. The monetary authorities may with profit dispense with a ten-year loan, since the State Governments follow such a practice. Instead the second loan should be a 15-year or 20-year issue, with the interest coupon ranging from 3.75 per cent to 4 per cent. The Life Insurance Corporation, Provident Funds and other institutional investors may well prefer a 4 per cent 1982 to a 3.75 per cent 1977. Incidentally we would press here for adopting decimals in respect of interest rates. We could with profit do away with the quarters and three-quarters.

The third point is that, naturally, conversion facilities for the 2½ per cent 1962 are likely to be offered in advance, that is, at the time of the first tranche of the new loan. To the extent that holders of the 2½ per cent 1962 opt to convert, at the time of the first tranche, the problem of refinancing late in the year will greatly diminish.

The State Governments for their part may want to stick to their tried and tested formula of eleven-year loans at 4.25 per cent issued almost (but not quite) without exception at a discount. Unfortunately for them the 4½ per cent 1972 series are all quoting well below par. It would be difficult this year to change to a 10-year loan; equally unthinkable is to enlarge the size of the discount. We suspect consequently that the States may either have to be less ambitious in their targets of borrowings or have to offer a slightly higher interest coupon. Mr Morarji Desai, the Finance Minister, is reported at the bankers' meet to have opposed in present circumstances and increase in the interest rate on Government borrowings. So it is just remotely possible that the States will be advised, as they were in 1957, to avoid recourse to the open market this year—or at least until gilt-edged prices show signs of improvement.

On the other hand it needs to be noted that the implication of the Finance Minister's exhortation to the banks that they should show restraint in their industrial advances will have the effect in due course of enlarging the investible surplus with the banking system. So, abstinence on the part of the State Governments may conceivably improve the cash receipts of the Centre; and for the current year as a reward for abstinence the Centre may help out the States.

The alternative is, as we have seen, an upward pressure upon the rate of borrowing of Governments—an alternative that quite obviously we cannot adopt.

BANK OF RAJASTHAN

The Role of Regional Banks

True to its name, the Bank of Rajasthan Limited is essentially a regional bank though, no doubt, there would be intentions to open up branches in some of the main cities of India; and for the bank 1961 has been a satisfactory year of working. Deposit resources improved by 16.3 per cent from Rs 5.36 crores to Rs 6.24 crores, but, owing to the late start of the busy season Advances are a shade lower at Rs 2.60 crores (representing 41.2 per cent of Deposits) against Rs 2.63 crores (or a credit ratio of 49.1 per cent) in the 1960 balance-sheet. Some small addition has been made to the gilt-edged portfolio from Rs 1.96 crores to Rs 2.10 crores. Cash balances (including money at call and short notice) have improved substantially from Rs 1.16 crores to Rs 1.97 crores.

The profit and loss account of the bank shows an increase of Rs 4.65 lakhs to Rs 36.74 lakhs in the gross income, and almost the whole of the rise, or Rs 4.32 lakhs, has been obtained from an enlarged contribution of interest and discount. However, the bulk of the increased income had to be spent in interest paid (higher by nearly Rs 3 lakhs at Rs 17.80 lakhs) and in salaries and allowances (Rs 1.46 lakhs more at Rs 9.77 lakhs). As a result the balance of profit subject to tax is only frac-

tionally better at Rs 3.50 lakhs against Rs 3.36 lakhs. It is to be noted that the Bank of Rajasthan's performance has to be judged in the light of relinquishment of Government Treasury work at six more branches during the year. Thus it is reasonable to infer that the "commercial" activity of the Bank of Rajasthan has sizably increased during 1961.

The transfer to Reserve Fund has been stepped up to Rs 1.23 lakhs from Rs 0.91 lakh, but the provision for tax is slightly lower at Rs 0.87 lakhs as against Rs 1.10 lakhs. Bonus to staff absorbs Rs 0.49 lakh as compared to Rs 0.41 lakh. The dividend has been maintained at 10 per cent and leaves a small carry forward.

The speech delivered by Mr Hari Singh, the Chairman, at the annual general meeting is a very able exposition of the role of the small (or regional) banks. Mr Hari Singh points out that there are about 1,400 townships which do not today possess any banking facilities, and naturally if branches are opened in areas which are already "banked" it will tantamount to waste of resources; but the Third Plan will need considerable mobilisation of funds, and not least by the banking system. Therefore, says Mr Hari Singh,

in order to get the maximum benefit, the branch expansion should be done in a planned way. After discussions with the banks, including the co-operative banks individually, the Reserve Bank should allot to each bank running on sound lines some specified untapped places in its area of operation for opening branches within 5 years as convenient to it. Further, in the branches established at small places, there is generally a large number of accounts with small balances. The ratio of establishment and other expenses at such places is always high. Therefore, to encourage the banks to open branches at places in rural and semi-rural areas where there is no bank, such branches should be exempted from the provisions of all labour laws and Bank Award and no other Bank should be allowed to open a branch for at least 5 years.

Thus for the time being the Bank of Rajasthan will continue to stress its role as a regional bank, though an opening of a branch at Delhi is in the offing. Mr Hari Singh in this regard suggests that banks can be put into two categories: (1) all India banks; and (2) regional banks. He has also given expression to the view that, "where a weak or sub-standard bank is desired to be merged after moratorium or otherwise, with another bank, regional affinity should be given preference, that is, if there is another well managed, sound and viable bank in the same region it should be merged in that bank and not in an all India bank."

We extend our support generally to Mr Hari Singh's views on the how of branch expansion and we also endorse his plea for strengthening regional banks by giving preference to "regional affinity" whenever a weak or sub-standard bank is to lose its identity.

BANK RETURNS

Impact of Month-early Disbursements

Spillover of month-early disbursements into the week ended 11 May has made it

appear that the 1961-62 busy season has not ended, for Active Note Circulation has further expanded by Rs 16.15 crores to Rs 2,161.30 crores and there has also been outflow of Rupee Coin in the considerable amount of Rs 1.74 crores. And it is further more true that banks have apparently been subjected to some strain since they have had to borrow more from the Reserve Bank. But the fact remains that notionally at least the 1962 slack season must be depend to have commenced from the last week in April.

Currency has been expanded against Rupee Securities for Rs 30 crores, raising the relevant figure to Rs 1,850.87 crores mostly by transfer from the Banking Department. There may be a small element of deficit financing in order that the Centre could make some payments to the State Governments. A small decline in foreign assets nevertheless did not necessitate a transfer from Foreign Securities, which continue to be placed at Rs 105.00 crores.

A fall of Rs 26 crores to Rs 155.25 crores in Investments of course reflects the transfer to the Issue Department. But, moreover, the State Bank is known to have disinvested in gilt-edged for about Rs 8 crores in the week under review. Hence the inference of small-scale recourse to created money on the part of the Centre, whose balances, however, are lower by Rs 2.31 crores at Rs 49.05 crores. Payment to the States is suggested by the rise of Rs 2.72 crores to Rs 18.78 crores in their balance on top of a decline of Rs 3.78 crores to Rs 109.55 crores in their ways and means borrowings. Additionally the States may have discounted Treasury Bills for Rs 18 crores, in as much as an increase of this magnitude has been registered in the Reserve Bank's portfolio of Treasury Bills purchased and discounted.

A rise of Rs 9.41 crores to Rs 138.97 crores in the Other Loans and Advances of the Reserve Bank would betoken considerable strain being experienced by the banking system. But at the same time there has been a rise of Rs 10.06 crores to Rs 89.04 crores in their Reserve Balances. So it would appear that the additional borrowings have gone merely to swell Reserve Balances.

Lastly, Balances Held Abroad are lower by Rs 1.19 crores at Rs 4.80 crores—that is, assets held by the Reserve Bank have just fallen below the Rs 110 crore mark.

The State Bank's return for 11 May shows that the total of Advances has almost, but not quite, touched the Rs 300 crore mark with a rise of Rs 2.54 crores to Rs 298.73 crores. Deposits are lower by Rs 0.96 crore at Rs 573.67 crores—both clearly due to spillover of month early disbursements. Disinvestment in gilt-edged for Rs 8 crores is matched by a rise of Rs 11 crores to Rs 40.51 crores in Other Assets—an unusually high level. State Bank

repurchase of gilt-edged from the Reserve Bank is surely in the offing. The net result is a rise of Rs 2.50 crores to Rs 26.71 crores in cash balances, including money at call and short notice, and borrowings are also, it may be noted, lower by Rs 0.38 crore at Rs 1.04 crores.

+

A switch-over from Demand to Time Deposits is the noteworthy feature of the return of scheduled Banks for 4 May. Net Demand Deposits are lower by Rs 5.29 crores at Rs 898.55 crores, whereas net Time Deposits have risen by Rs 6.49 crores to Rs 1,209.77 crores. There is thus a net gain of Rs 1.40 crores in Deposits. But the pressure of month-early disbursements has caused an expansion of Rs 5.46 crores to Rs 1,438.53 crores in the total of Advances. So despite a reduction of Rs 0.80 crore to Rs 19.85 crores in indebtedness to the State Bank, borrowings from the Reserve Bank are higher by Rs 1.49 crores at Rs 14.15 crores. A fall of about Rs 8 crores to Rs 592.77 crores in gilt-edged investments is largely on account of the State Bank. The net result is a small rise of Rs 1.04 crores to Rs 200.39 crores in cash balances, including money at call and short notice.

The Weakness of Wall Street

By Paul Einzig

The persistent weakness of Wall Street has given rise to some apprehension that we are on the eve of a repetition of "1929 and all that." There is absolutely no justification for such fears. The basic situation is totally different from that of thirty odd years ago. The main cause of the Wall Street slump was over-production and inadequacy of consumer purchasing power. Today, even though the scarcity of supplies of the early post-War years is a matter of the past, there is no sign of over-production. As far as agriculture is concerned world-wide demand keeps pace with world-wide supply. Consumer purchasing power is expanding, so that markets are on the whole able to absorb the increased output of manufacture. Financially too, conditions remain incomparably sounder than they were thirty years ago. Economies are much more liquid. Indeed it is arguable that if anything they are too liquid. It is true until last year there was a persistent rise in Wall Street and other stock exchanges, but much of that rise has already been liquidated. In any case, there is no trace of that colossal speculative position which existed on the eve of the Wall Street slump of 1929.

The only reason why there is a possibility of a setback is because the Governments cannot allow the trees of inflation to grow up to the skies. A halt has to be called some time and somewhere even at the cost of a serious setback. The danger today is still not deflation but inflation, but the latter is liable to give rise to the former. Unless the trade unions can be brought to their senses they might well create a situation in which deliberately engineered deflation comes to be regarded the smaller of the two evils. That stage has not yet been reached in many countries, but it is coming dangerously near to being reached in some countries.

What matters is that public opinion should not talk itself into a depression through unwarranted pessimism about the outlook. The basic fact of the situation is that today Governments are in an incomparably better position to reverse a depression than they were in the 'thirties. It is much easier to engineer an increase in consumer demand through an increase in public spending or a reduction in taxation than it was in the days of President Roosevelt. Should a stage be reached, or even approached, at which deflation came to be looked upon as a graver danger than inflation, it would require little more than a stroke of the pen to reverse the trend. The world economy has distinct inflationary bias since the War and that basic trend could easily be made to prevail if there should be a danger of a return to the lean 'thirties. The knowledge of this should in itself be sufficient to dispose of any unwarranted pessimism about the prospects.

On the other hand, unwarranted complacency is equally dangerous because the resulting wage inflation might force Government to practise brinkmanship in the spare of monetary policy. In the certain knowledge that they are able to reverse a disinflationary trend at will, monetary authorities might ever be inclined to go too far in that direction in order to break a stubborn inflationary trend. Even though such a policy would not risk a return to the bad 'thirties it is bound to be costly in every way. Yet unless trade unions can be brought to their senses the alternative to it would be non-stop inflation at an ever-increasing pace.

Treasury Bills

Tenders for Rs. 2,00,00,000 of 91 days' Government of India Treasury Bills were opened on Monday 14 May, 1962. Total amount offered was Rs 2,00,00,000. Tenders at Rs 99.35 per cent and above were accepted in full. Total amount was Rs 2,00,00,000, the average rate of accepted tenders being Rs 2.590 per cent net annum.

Tenders for Rs 2,00,00,000 of 91 days' Government of India Treasury Bills will be received at Bangalore, Bombay, Calcutta, Kanpur, Madras, Nagpur and New Delhi up to the close of business on Monday, 21 May 1962. Successful tenderers should make payment of Friday, 25 May 1962 at all centres. Other conditions are as usual.

During the week ended 11 May 1962 Government of India Treasury Bills for Rs 26,08,00,000 were sold in favour of Reserve Bank of India.

91 days' Intermediate Treasury Bills will be sold from 15 to 19 May 1962 at Rs 99.35 per cent. Sales can be stopped at any time without notice. If Government think it necessary.

91 days' Intermediate Treasury Bills sold from 9 to 12 May 1962 amounted to Rs 16,75,000

sent. This will help to reduce the pressure on Railways for movement of coal to these areas. The Third Plan target for coal movement by river transport has tentatively been fixed at 3.5 million tons. Attainment of this target is dependent not only upon the number of power tugs barges etc. but also the number of trucks that could be pressed into service to carry the coal from the producing points to the river loading stations. It has been stated that a large fleet of 10 ton trucks may be made available with the co-operation of the Defence Ministry. Possibility of truck-trailers capable of carrying as much as 90 tons has also been held out. The feasibility of the new modes of transport indicated by Mr Malaviya is not to be doubted, but their significance for improving the transport position in the immediate years ahead appears very little. As far as the Bengal Bihar area is concerned, it has been stated that the movement of coal by Railways will be pegged at the present Third Plan level and that increased movement by rail will be possible only in the outlying fields. While this underlines the need for maximising production in the outlying fields which had a poor record in the Second Plan, additional transport needs arising from further upward revision of the coal target in the Bengal Bihar area have also to be considered. The setting up of a transport division in the Department of Coal is to be welcomed as a step in the right direction. This will ensure proper attention being paid to the transport needs of the coal industry in time to forestall future bottlenecks. Another welcome decision announced by Mr Malaviya relates to the question of subsidy for movement of coal by trucks in the West Bengal State. The inequity of the higher freight which the industries in West Bengal have been called upon to bear consequent on the diversion of coal movement by road, has long been brought to the notice of the Centre.

★

COAL West Bengal Wins

At last a decision seems to have been reached by Mr K. D. Malaviya, Union Minister for Coal, Mines and Fuel and Dr B. C. Roy West Bengal Chief Minister on the question of the West Bengal Government's claim to allow it to develop coal mines on lands in its possession. Reports aver that the substance of the West Bengal Government's claim has now been conceded by the Union Minister. The dispute has been hanging fire for fairly long and the settlement that is now reported is to be welcomed. It is more than a year

since the West Bengal Government first put up its claim to develop coal mines in the State on its own and this claim, as the West Bengal Government has explained, was grounded on its right of ownership of land acquired by the Government after the abolition of the Zamindari system of land tenure. The arguments of the Centre in objection to this claim was partly constitutional and partly pragmatic. Moreover, in view of the existence of the National Coal Development Corporation to develop coal mines in the public sector, the entry of a new agency in the public sector would have served only to hinder coordinated and integrated development of coal production in the public sector. Such arguments were met by Dr B. C. Roy who took his stand as an owner of property and argued that it was incongruous to allow the private sector to expand production while denying the same right to the State Government. At the Conference of the Eastern States interested in the mining industry, Dr B. C. Roy mobilised the support of Government spokesmen of neighbouring States in support of his State's claim. The particular constitutional dispute was also referred to the Supreme Court before which it is still pending.

The implications of the new settlement are however not yet clear. Even the specific details of the scheme which would allow the West Bengal Government to develop mining on its own remain yet to be worked out. When fuller details are available we shall be able to see how the seemingly insuperable constitutional and other obstacles have been overcome. It is probable that some ad hoc arrangement has been agreed upon. Such a solution would hardly be a satisfactory way out of the difficulty. For the West Bengal claim is symptomatic of the pressure in a federal set-up in which the constituent units feel the need for greater financial and other forms of local power and patronage. It is quite likely that in the wake of West Bengal's success in having its own way may induce other State Governments to press their particular claims, for industrial development in strategic sectors independent of the Centre. There is, for example, the dispute between the Assam Government and the Centre on the question of the royalty rates to be paid for oil produced in Assam. Though the two disputes differ in details, the fundamental principles involved are more or less the same. Unfortunately, the Constitution is not very clear regarding State rights in such matters. The Industrial Policy Resolution has also not helped to clarify the position. It is therefore important that a firm first principles are enunciated and no ad hoc solution that wins temporary respite is accepted as sufficient unto the day.

KOYNA

More Power to Maharashtra

With the inauguration of the first turbo-generator of the Rs 42 crore Koyna project by Mr Y. B. Chavan, the Chief Minister of Maharashtra, on Wednesday 16 May, the State has taken another stride toward self-sufficiency in power generation. The project, which is on any manner reckoning a prelude to prosperity to the State, holds potentialities for bringing an economic and industrial upheaval to the State when the power that will be available from it will be diverted to serve the needs of the existing industrial undertakings and for those that are to crop up in the future and also for exploiting the agricultural resources of the State.

The Koyna project which was launched as early as 1954 was programmed to be completed in three distinct stages. It is the first of these stages that has been commissioned by Mr Y. B. Chavan. This stage comprises the construction of a reservoir by damming the river in the Deshmukhwadi gorge with a view to storing the water which will subsequently be diverted to the power station situated under ground. The storing capacity of the reservoir is 36,000 mc ft of water and four generators with an aggregate capacity of 240 mw will be installed for the generation of electricity. The three other generators are scheduled to be commissioned at regular intervals of six months so that the targeted capacity can be achieved before the expiry of 1963.

The subterranean existence of the power station, a unique feature in itself, is pregnant with both economic and technical advantages. For instance the station is completely safe from any depreciation from the air or ground and the total cost of construction has been drastically reduced by over Rs 1.5 crores.

That the power generated from this project will cater to the industrial and lighting requirements of the people of Western Maharashtra will not be disputed. Besides, as stated by the Chief Minister at the time of inauguration, it would be a new tool which would assist fulfil the long-cherished ambitions of the Maharashtrians and should help drive away the forces of darkness, ignorance and poverty. Though in the initial stages the power will be supplied to Greater Bombay, the rural areas will be served within a short span of nearly seven weeks. According to the present estimates with the commissioning of the remaining phases of the Koyna project and the completion of the Tarapore atomic power plant, the power needs of the State will be almost fulfilled, and when these

projects are finally completed Maharashtra will be transformed into a bee-hive of industrial activity. The quantum of aid received from the World Bank and the US Government under the Technical Co-operation Mission Programme has been helpful to an immeasurable extent for transforming this dream into a reality. The World Bank has so far released \$19 million to cover the expenses of stage one and two of civil works and electrical and mechanical works including Koyna-Sholapur transmission scheme undertaken by the Maharashtra Electricity Board. Rupee expenditure has been financed through loans from the Centre to the tune of Rs 11.5 crores.

The project is an impressive feat of engineering dexterity of which both the State and the nation can be legitimately proud. The complicated and massive tunnel system and other delicate technical works bear eloquent testimony to the engineering skill of the team engineers who has completed this gigantic and awe-inspiring of structure.

PUBLIC SECTOR

Industrial Front in 1961-62

The report of the Ministry of Commerce and Industry detailing its activities in 1961-62 provides a lengthy and analytical study of the progress registered by the various public sector enterprises in the country. The task of accelerating the tempo of industrial development and the building up of the base of the industrial structure in India was shouldered by the Government of India ever since the enactment of the Industrial Policy Resolution of 1956. Consequently the Government undertook the establishment of a host of key and capital-intensive industrial ventures for the production of heavy electrical goods, heavy engineering goods, cables, machine tools, fertilisers, newsprint and the like in public sector. The public sector undertakings under the administrative control of the Ministry of Commerce and Industry are in the shape of companies, the shares of which are held by the President or his nominees and under the management of Boards of Directors comprising both official and non-officials. The decision to constitute a Joint Committee of Parliament on State undertakings, on the recommendations of the Krishna Menon Committee and the result of other similar studies, was particularly aimed at securing an effective control by Parliament over such projects and enterprises consistent with their autonomy. Other major decisions relate to the composition of the Board of Directors of Government Companies and Corporations, increasing their powers to create and fill up vacancies and to sanction expenditure on capital works. The chief executive officers of Government companies were empowered to exercise, in exigencies, discretionary

review. Three more cooperative factories went into full production during the current season. The total output of sugar by the co-operatives totalled 4.42 lakh tons, increasing their contribution to the all-India production from 11.5 per cent to 14.7 per cent. The report also states that over and above the 378 cooperative processing units aided under the Second Plan about 109 additional units will have been constructed in 1961-62.

The pilot projects on cooperative farming were launched in 64 selected districts and five societies per pilot projects are expected to take shape in the first year itself. By the end of February last 224 societies were established with an aggregate membership of 3,848 and an area of over 28,600 acres. Farming societies registered in the non-pilot areas by the end of the same month were 380 the membership and acres of land being 8,523 and 51,506 respectively. The value of

agricultural produce marketed by the cooperatives as on 30 June 1960 approximated Rs 153 crores. Incentives provided to organisations of other sorts such as labour and construction societies, rickshaw puller societies and cooperative printing presses have added new vigour and improved their efficiency.

Other important developments are the special studies undertaken on the different sectors of the movement in order to revitalise the cooperative movement. Enhancement of the amount of Central assistance to the States in the Eastern region for stimulating the development of this movement and the additional allocation of funds by the Reserve Bank of India for sanctioning loans to these Governments also require special mention.

The decision to entrust the task of cooperative training and education on the movement at the national and State levels is of far reaching consequence and the sub-

stitution of the Central Committee for Co-operative Training by a special committee of the National Co-operative Union of India will ensure the efficient imparting of such training. The proposal to establish a central institute for advanced study and research, when implemented, will add to the stature of the movement in the country.

SMALL INDUSTRIES Adverse Impact of New Excise

In a communication sent to the Union Ministry of Finance, the Executive Committee of the Federation of Association of Small Industries of India has drawn the attention of the Ministry to the adverse effects spelt on the development of the decentralised sector by the budget proposals for increasing the excise duty on certain items. The

Committee has expressed particular concern over the proposed increase in the rate of excise duty on fine and superfine cloth produced by units 5 to 49 looms. In view of the disadvantages suffered by the powerloom sector vis-a-vis the composite mill sector, it has been stated that the increase in duty will have disastrous effects on the powerloom industry. For example, it has been pointed out that while the spindle point cost of ten lbs of superfine yarn of 60s, inclusive of a reasonable margin of profit spun by a composite mill is about Rs 45, the price at which a powerloom factory has to purchase it is round about Rs 65. The relative superiority of yarn produced in the mill sector, and the freedom from the need to purchase yarn as in the case of the powerloom industry are other factors which confer comparative advantages on the composite mill industry vis-a-vis the powerloom sector. In view of the disparity in relative efficiency of production in the two sectors, the Committee has urged the Government to maintain a "minimum difference" in the rate of excise duty leviable on the production of composite mills. In the absence of such concessions, a gradual wiping out of the entire invested capital of factories having more than four powerlooms is considered inescapable. There is already a tendency for units with five to nine powerlooms to seal their looms in excess of four and get exemption from the proposed excise duty.

The Committee has also been critical of the proposals for reducing the limit for exemption for rebate for the non-ferrous metals industry from 40 per cent to 13 per cent and the raising of the excise duty from Rs 225 per ton to Rs 260 per ton. The Committee has pointed out that as the guiding principle in this case ought to be the waste resulting from the cutting of uncut circles which in its opinion is about 40 per cent the excise duty on uncut circles should not be more than Rs 180 per ton. Further it has been suggested that stocks of copper, copper alloys, ingots, billets and pellets that small manufacturers had in their possession just prior to the release of the budget on April 23, should be exempted from such levy and also that excise duty on circles and sheets manufactured from such ingots should be levied only at the rate of Rs 200 per ton.

The Committee has also made a case for complete exemption of small units engaged in the manufacture of insulators, electric wires and cables on grounds of their disorganised structure and inability to comply with the formalities required under the excise duty such as maintenance of a godown for storing their finished goods for want of adequate of financial resources. It has also prayed for the maintenance of the former exemption limit at 200 tons in the non-power soap industry which has been lowered to 100 tons in excise levy.

19 May 1962

BEYPORE NCAER Traffic Survey

The case for the development of an all-weather deep water port at Beypore (a sub-port six miles south of Calicut) in Kerala, has been considerably strengthened by the Traffic Survey of the port conducted by NCAER. Though, on present indications, further steps in that direction must await the results of the hydro-dynamic studies of the river and the estuary, the NCAER survey reopens the question which was summarily disposed of by the West Coast Major Ports Development Committee in 1948. The Committee had reported that, none of the ports south of Mangalore namely Cannanore, Tellicherry and Calicut, were suitable for conversion into all weather ports. As regards Beypore they had referred to the possibility of developing it for small coasters. Since the Committee reported, the industrialisation of the country has introduced a new factor which has to be taken into consideration in planning for the expansion of port facilities and in assessing the traffic potential of individual ports. During 1950-59, traffic at Calicut had increased by 44.42 per cent and the port had an annual tonnage and attained by any of the minor ports on the West Coast including Mangalore. The Intermediate Ports Development Committee, set up by the Government of India, reporting in 1960, estimated that traffic at Calicut-Beypore would reach 4,75,000 tons by 1967-68. But they did not recommend conversion to an all weather port because of certain adverse factors such as limited hinterland, exposure of the river and estuary to the South West Monsoon and the low depth of the river upstream. However the Committee had suggested that hydro-dynamic studies should be undertaken to ascertain the feasibility of setting up an all weather port in future.

The NCAER Survey estimates that potential traffic would rise to 4,71,000 tons by 1965-66 and may increase further to 5,33,000 tons if deep water port facilities are provided. The survey draws the conclusion that the traffic justification for a deep water port at Calicut-Beypore might come up eventually and suggests that a further review should be undertaken at the end of the Third Plan. A number of measures, including construction of a long Jetty, improvement of handling facilities etc., are also recommended to be taken up in the immediate future. The report also draws attention to one important advantage of Calicut, namely, spare transport capacity in the road, rail and river communications of the area which would enable the port to handle considerable increases in traffic.

COMPANIES South in the First Quarter

The review of the working of the Companies Act 1956, in the southern region shows that during the quarter ended 31 March 1962, 85 companies with an authorised capital of Rs. 464.27 lakhs were registered in the region comprising Madras, Andhra Pradesh, Mysore and Kerala. 14 of the new companies were public companies floated with a total authorised capital of Rs. 327.20 lakhs while 68 were private companies with an authorised capital of Rs. 137.07 lakhs, and three were associations not for profit. State-wise distribution of the new registrations reveals the preponderant share of Madras in the total number of new companies floated.

While the number of new companies registered during the quarter in the Madras State was 60, comparable figures for Andhra, Mysore and Kerala were 7, 10 and 8 respectively. Industry-wise, the dominance of the transport sector continues, nearly 32 of the new registrations being accounted for by this sector. Commerce accounted for a total of 20, while the next large group was processing and manufacture (Metals and chemicals and products thereof) in which there were 17 new registrations.

The average size, on the basis of authorised capital, of the public companies newly floated during the quarter was greater than that of the private companies. Of the newly floated companies, three represented giant floatations with an authorised capital of Rs. 50 lakhs each. These were (1) the Coimbatore Pioneer Fertilisers and Chemicals, in the State of Madras

Company Limited, for manufacturing, buying, selling, importing exporting and dealing in all types of equipments lined with glass rubber, etc, and (3) the Hoisting Equipment Company Limited to carry on the business of manufacturing, buying, selling, importing exporting and dealing in all types of electric hoists, chain pulley blocks, etc.

During the quarter under review, 30 companies with an authorised capital of Rs 5.49 lakhs were struck off the register of companies as defunct while 21 companies with a total paid up capital of Rs11.52 lakhs went into liquidation. It is also shown that 105 prosecutions were launched during the period against certain companies and their officers for reasons such as failure to hold the annual general meeting and non-filing of the annual returns and balance-sheets as required by law

Whether you own a Motor Scooter, a Car, a Tractor, a Truck or whether you control a fleet of giant Earth-moving units; there is a Firestone tyre to suit your

needs. Every single one bears "The Mark of Quality" — the long-established Firestone symbol of Extra Safety and Dependability.

- Specify Firestone and you get—**
- ★ **SAFETY** The exclusive Firestone tread design and tyre construction will give you MAXIMUM STOPPING POWER and resistance to road hazards.
 - ★ **ECONOMY** The longest-wearing tread specially compounded by Firestone for Indian service conditions ensures MORE KILOMETRES PER RUPEE from the original tread.
 - ★ **RETREADABILITY** Look after your Firestone tyres—don't overload them or otherwise maltreat them—and they will remain suitable for RETREADING OVER AND OVER AGAIN.

Firestone BEST TODAY—STILL BETTER TOMORROW

KOHINOOR MILLS Modernisation Pays Dividends

The past year has been quite a successful year for the Kohinoor Mills Company Limited with a rise of Rs 10 lakhs in its net profit after providing for depreciation, levelment, rebate and taxation. The improved results were the result of a combination of favourable factors such as an overall improvement in efficiency, fuller utilisation of machine capacity and the innovations made in the production pattern to better cater to the fast changing tastes of consumers. It is to be noted however that all these

innovation and improvements have been rendered possible largely because the mills underwent during 1961 an extensive rehabilitation and modernisation programme. And the process which is a continuing one, will assist further notable improvement in the quality of the company's products. The company's performance on the export front is also impressive.

But according to Mr. A. N. Haksar, chairman of the company the hope that the current year for the company would prove to be even better than 1961 is somewhat clouded now in view of the heavy tax burden imposed on the industry as a whole by the 1962-63 Central Budget. It is estimated that the textile industry will have

to bear an additional burden of about Rs. 30 crores as a result of the increase of the excise duty on cloth and yarn even though the budget estimate of additional revenue in this regard is put at Rs 12.1 crores. This together with the other handicaps such as the scarcity of cotton this season and the rising cost of production will substantially reduce profits. The increase in corporation tax from 45 per cent to 50 per cent will further reduce the profit available for distribution. If however Government agrees to reduce the imposts especially the excise duty as asked for by the industry in its representations, the outlook for the industry may once again improve.

the attention of editorial writers who warn against watering down the essential provisions. The expectation thus still is that the bill will be recommended for adoption by the House, and that it will be in a form acceptable to the administration as well as to a majority of the House membership.

An equally concentrated drive has been mounted by the administration in favour of national health insurance for the aged. But here the outlook is still uncertain. This bill, too, is in committee. The administration and its supporters are working hard to garner support. President Kennedy last week invited leaders of the sternly opposed American Medical Association for a chat which apparently left the doctors unconvinced of the merits of public (rather than private) insurance, but left the President evidently as optimistic as before.

Not to be forgotten in this context is another administration policy not before Congress but nonetheless of enormous public concern. Ever since Mr. Kennedy succeeded in having the steel industry retract its price increase, the question has been what he would do about wage increases. The answer is clear from several recent presidential statements. In a nutshell, the administration is opposed to direct price and wage controls; to entering into such questions in any specific form; to changing the present pattern of free collective bargaining; and opposed also to interfering in such bargaining or in strikes.

There are two important exceptions: The administration is firm that the government should act as the guardian of the public interest, and it insists on the necessity to avoid inflationary wage or price developments. To that end, it is trying to set down "effective guidelines" and will operate by persuasion which—as the steel price case proves—can be forceful. The other exception involves "great national-based industries" such as steel. In such cases the government has the right and evidently also the intent, to act if the need arrives.

Of course, arguments still can arise about what constitutes an inflationary labour contract. There still exists the possibility of federal mediation under existing law. Also, the Secretary of Labour can offer his good services as he has done diligently in past weeks. But the administration's policy to maintain price stability as a necessary part of the President's total domestic and foreign economic programme can now be as little in question as is Mr. Kennedy's intent to see that it is carried out.

Clive Street Gossip

"I must have liberty
Withal, as large a charter as the wind
To blow on whom I please"
—As You Like It.

THE general level of performance in Parliament may not measure up to the highest standards of the past, but the younger ministers are out to prove their mettle. Both Mr Malaviya and Mr Subramaniam showed their paces the other day in their replies to the debate on the demands of their respective ministries. But there is an interesting difference in style. Mr Subramaniam is more collected, less flamboyant and perfectly at home in his responsibility. He is sure of his facts, adroit, and—this last showing his natural assumption of seniority—a trifle sententious. His handling of the rather prickly problem of American aid to Bokaro showed finesse and his steering of the "small car" showed a firm parliamentary grip. There you have a minister whom you cannot easily rattle. Mr Malaviya, on the other hand, gives the feeling of a person anxious to impress, and there is an air of the eager beaver about him. Mr Subramaniam would never have rushed to the Lok Sabha with a sample of Cambay oil. (Sardar Hukum Singh's quip about Mr Malaviya's casuistry that he never referred to Cambay as an oil field but only as an oil well was effective. He said that at the time when Mr Malaviya brought the good news, people couldn't distinguish between an oil well and oil field. "Now," he added with gentle irony, "they can.") The difference, I believe is partly temperamental but something is also due to the difference in the administrative and legislative background of the two ministers. Mr Subramaniam's savoir faire springs from his having been very much on his own, whereas Mr Malaviya won his spurs at the Centre where he was overshadowed by his seniors, not all of them his betters. Therefore, though he has shown himself adept at dealing with difficult assignments like oil, he was under some psychological pressure of having to make the grade. If this guess is correct, then it supports a theory of mine that from the point of view of personal ambition, the best training ground (and spring-board) is the State Cabinet and that it is better not to come to the Centre too early.

Professional privilege is tricky business and that of a journalist is less well-defined than that of, say, a doctor or a lawyer. Some time ago, the Speaker of the last Lok Sabha wondered with every show of annoyance at the propriety of journalistic scoops. Mr Krishna Menon was recently reported to have lost his temper with journalists who tried to pump him about Indian purchase of jet aircraft from the Soviet Union. He accused them of caring more for their headlines than for national interests. This is an old feud that is no nearer amicable settlement today than in early nineteenth century. It was then that the right of the journalist to print news without too nice a regard to the awkwardnesses that they may cause Authority was asserted for the first time. Its most memorable expression was in one of the earliest editorials of the Times when Barnes was its Editor and Walter the Second its proprietor. "We cannot," it said, "admit that its (the press') purpose is to share the labours of Satesmanship or that it is bound by the same du-

ties and same liabilities of the ministers of the crown. The purpose and duties of the two powers are constantly separate, generally independent and sometimes diametrically opposite.... The first duty of the press is to obtain the earliest and most correct intelligence of the events of the time and instantly by disclosing them to make them the common property of the nation.... The press lives by disclosure. Whatever passes into its keeping becomes a part of the knowledge of our times." I don't suppose that many papers to-day would be quite so strident any more than they would make public everything that passes into their keeping.

A related problem is that of the privilege of secrecy of the sources of information. There are perfectly legitimate reasons based on practicality and journalistic ethics why a journalist should enjoy this immunity from compulsion to disclose sources. The code of ethics the UNESCO drafted years ago was therefore perfectly justified in insisting that "professional secrecy should be observed in matters revealed in confidence and this privilege may always be invoked to the furthest limits of the law." These limits vary from country to country as has now been revealed by a survey carried out by the International Press Institute (currently in session in Paris.) Complete legal immunity is available only in Austria, with the Philippines and some 12 States of the US coming very close to providing it. Sweden, Norway, Switzerland and West Germany give some recognition to this privilege. In certain other countries like India and Britain, there is no legal sanction for the privilege, though the convention is strongly entrenched against compelling revelation of sources. The legal position is the same in Pakistan too, though the recent tendency in that country is to interpret it illiberally. Thus, the survey reports that the correct legal position in Pakistan has been officially spelt out in these terms: "No privilege attaches to the profession of the press as distinguished from the members of the public." In a strictly technical sense, this is true of India and Great Britain also, but both officially and professionally the tendency has been to proceed on the assumption that in practice the immunity will be available in all proper cases and the courts have in suitable cases upheld the right. Thus, the Economist quotes an Australian case in which the court upheld the rather obviously technical plea that the paper being a "corporate body" (as it was in that particular case) could "no more disclose information than drive a motor car." If the paper had been

asked to produce documents, "it would have been a different matter." This seems rather a thin distinction that might backfire later, but it is typical of Anglo-Saxon jurisprudence which makes no more than the law needed for a particular case. In any event, a conscientious journalist has one ultimate weapon even where he has no legal protection and that is to brave the contempt proceedings and refuse to disclose. Of course, the case for complete immunity is not as self-evident as journalists are apt to assume. For instance, it is quite possible to conceive of cases—criminal cases for example—where it would be anti-social to let a journalist take shelter under such privileges. On the whole, it seems sensible to let the matter be governed by good conscience rather than by law.

A recent decision of the Supreme Court has administered a timely deflatory jab at a certain kind of judicial self-importance that was becoming a problem. Like some of our Parliamentarians, some of our judges are quick to take umbrage. The Law of Contempt is such a vague enormity that one does not know when one is likely to be hauled up for infringing it. Judges with a wise recognition of the thin line that divides the sublime from the ridiculous have always been loath to invoke it and when they do they have always managed to administer it with sufficient judicial detachment. A case in Madras some years ago indicated the perils of a judge who takes offence easily. A sense of proportion and even of humour will not come amiss in a judge who can afford to ignore even ill-natured slurs. A rather anxious concern with the dignity of the office may well argue personal inadequacies vis-a-vis the office itself. In the case that went to the Supreme Court, the High Court had taken exception to a sentence in a public statement by the appellant which read: "Suffice it to say that some lawyers who did not make any mark in their profession nor had any visible practice have found their way to the Bench." The impugned sentence was held to be "fair comment" on a question of public importance and the Supreme Court added that the sentence "merely emphasised what any intelligent citizen had a right to do, that those charged with the solemn duty of making appointments to the highest courts in the land should not be deflected in the discharge of their function by extraneous considerations and that appointments should be made entirely on merits". Apart from the legal aspect of the decision, it was a wise and even generous example to set for the lower courts. This, rather than a fussy sensitiveness of about one's dignity, will shame the public into greater circumspection in its comments on the judiciary.

EAVESDROPPER.

STATE BANK OF INDIA'S

RUPEE TRAVELLERS

CHEQUES FOR CARE-FREE TRAVEL

You can travel anywhere in India and outside without having to carry a large amount of cash, without being in fear of theft or of running short of money.

The State Bank's travellers cheques, issued in denominations of Rs. 100/- and Rs. 50/-, represent the ideal travel funds. They are as safe as a bank draft and are encashable anywhere, anytime.

This is one of the many services the Bank provides to its clients and the general public. For complete information, please ask for a copy of our illustrated booklet from the branch nearest to you, or consult your travel agent.

THIS IS ONLY AN ANNOUNCEMENT AND NOT A PROSPECTUS AND NO INVITATION IS HEREBY MADE FOR SUBSCRIPTION OF ANY SHARES IN THE COMPANY

Consent of the Central Government has been obtained to this issue by two orders, copies of which are open to public inspection at the Registered Office of the Company. It must be clearly understood that in giving these consents the Government of India do not take any responsibility for the financial soundness of any scheme nor for the correctness of any of the statements made or opinions expressed with regard to them.

Licences have been obtained from the Central Government for the establishment of this new industrial undertaking, copies of which are open to public inspection at the Registered Office of the Company. It must be clearly understood that in granting these licences the Government expressed in regard to them.

As required by Section 60 of the Companies Act, 1956, a copy of the Prospectus, having attached thereto the documents mentioned therein, has been delivered to the Registrar of Companies, Maharashtra, for registration.

Application will be made in due course to the Bombay Stock Exchange for permission to deal in and for official quotations for the share of the Company.

The subscription list will open at the commencement of Banking Hours on 28th May, 1962, and will close at the close of Banking Hours on 30th May, 1962.

ASSOCIATED BEARING COMPANY LIMITED

SHARE CAPITAL

	Rupees	Rupees
AUTHORISED CAPITAL		7,50,00,000
SUBSCRIBED AND PAID-UP CAPITAL:		
A. 6,000 Equity Shares of Rs. 100/- each, fully paid-up by Aktiebolaget Svenska Kullagerfabriken Gothenburg, and The Skefko Ball Bearing Co., Ltd., Luton	6,00,000	
B. 4,000 Equity Shares of Rs. 100/- each, fully paid-up by The Investment Corporation of India, Ltd., its Associates, Directors and their Friends	4,00,000	10,00,000
PRESENT ISSUE		
3,90,000 Equity Shares of Rs. 100/- each at par		3,90,00,000

OUT OF THE PRESENT ISSUE

(a) 2,34,000 Equity Shares of Rs. 100/- each have been agreed to be subscribed by Aktiebolaget Svenska Kullagerfabriken, Gothenburg, The Skefko Ball Bearing Co., Ltd., Luton, and one of the subsidiaries of Aktiebolaget Svenska Kullagerfabriken, Gothenburg	2,34,00,000
(b) 76,000 Equity Shares of Rs. 100/- each have been agreed to be subscribed by the Investment Corporation of India, Ltd., its Associates, Directors and their Friends	76,00,000
(c) OFFERED TO THE PUBLIC AT PAR FOR SUBSCRIPTION IN CASH— 80,000 Equity Shares of Rs. 100/- each	80,00,000
	3,90,00,000

The Investment Corporation of India, Limited, has undertaken to subscribe for and/or cause to be subscribed on the same terms as offered to the public those shares not taken up by the public. In the opinion of the Directors, the resources of The Investment Corporation of India, Limited, are sufficient to discharge obligations to subscribe and/or cause to be subscribed such remaining shares.

No underwriting commission has been paid on the capital already issued or will be paid on the present issue.

MADRAS.

Messrs. KOTHARI & SONS, Oriental Buildings, Armenian Street, Madras.

OBJECTS.

The Company was incorporated on 12th April, 1961, in Maharashtra with the objects set out fully in its Memorandum of Association, but particularly to carry on the business of manufacturers of and dealers in ball and roller bearings, and components in respect thereof, and also the business of cradles, and bearing units for top rollers, being components of textile machinery, and other components of textile machinery and accessories in respect thereof.

MANUFACTURING AND IMPORT LICENCES.

The following three Manufacturing Licences have been granted by the Government:—

- Licence No. L/8/C-1/1/60 dated 13-5-1960 for the manufacture of certain types of Tapered Roller Bearings and certain types of single Row Deep Grooved Ball Bearings.
- Licence No. L/8/A-1/25/61 MEI dated 16-8-1961 for the manufacture of certain types of pendulum weighting arms complete with bearing units for top rollers and cradles.
- Licence No. L/8/A-1/31/62 MEI dated 9-3-1962 for the manufacture of centring sleeve inserts and tape tension pulleys.

ASSOCIATED BEARING COMPANY LIMITED—(Announcement Contd.)

The following Import Licences have been granted by the Government:—

- Licence No. 621750, dated 4-10-1961 for Rs. 9.78 lacs for components for pendulum arms.
- Licence No. 991487, dated 22-12-1961 for Rs. 64,786 for machinery to assemble components for pendulum arms.
- Licence No. 991268, dated 30-1-1962 for Rs. 1,52,51,720 for machinery to manufacture the bearings.

PROMOTION AND COLLABORATION.

The establishment of the Company is the result of collaboration between Aktiebolaget Svenska Kullagerfabriken of Gothenburg, Sweden, (hereinafter called "SKF GOthenburg") and The Skefko Ball Bearing Company, Limited of Luton, England, (hereinafter called "SKEFKO") on the one hand and the Investment Corporation of India, Limited, on the other, upon the terms contained in (a) Heads of Agreement, dated 11th April, 1961, and (b) Supplemental Agreement, dated 7th April, 1962, between them.

FACTORY SITE AND POWER SUPPLY.

The factory is to be established in approximately 100 acres of land near the railway station at Chinchwad, about 9 miles from Poona in the State of Maharashtra. The land is being acquired by the Government for the Company under the Land Acquisition Act, 1854, under two Agreements dated 22nd September, 1961, and 28th December, 1961, entered into with the Governor of Maharashtra. The Company has paid the amount of Rs. 2,40,000/- to the Collector of Poona as initial deposits against the said costs. Under a recent judgment of the Supreme Court of India, acquisition of lands for Companies under the Act, is not valid, but it is expected that the Central Government will be taking early steps to bring in amending Legislation for the purpose of validly acquiring lands for Companies.

The factory buildings are expected to be completed during the early part of 1964 but completion by this time depends, among other things, on the satisfactory completion of the land acquisition, and timely supply of structural steel, cement and other materials. It is hoped that electric power for the Company's factory will be available from the Koyana Valley Project by about the middle of 1962.

PLANT AND MACHINERY

SKF Gothenburg will supply or cause to be supplied the machinery and equipment required by the Company to be imported for manufacturing purposes. The cost of this machinery and equipment is at present estimated at approximately Rs. 2,40,00,000 (Rupees two crores and forty lacs). This figure is subject to future fluctuations in market prices. About 50 per cent of this machinery and equipment will be designed, constructed and delivered by SKF Gothenburg and its subsidiaries. SKF Gothenburg has guaranteed that the prices charged for such machinery and equipment will not be less favourable to the Company than the average current market prices charged for similar machinery and equipment supplied by it or any of its subsidiaries to its other manufacturing subsidiaries or an other customer.

SKF Gothenburg intends to supply the necessary machinery by the time the factory has been completed.

Foreign currency to cover the purchase of the plant and machinery will be provided from cash, which has been or will be deposited in banks in Europe being the subscription moneys payable by SKF Gothenburg, Skefko, and one of the subsidiaries of SKF Gothenburg for shares which have been or are to be issued to them.

RAW MATERIALS

The basic raw materials are not at present available from indigenous sources and until they are available in India they will have to be imported. It is proposed to obtain these materials as far as possible from the steel mills of SKF Gothenburg.

KNOW-HOW CAPITAL PROPERTY.

(A) SKF Gothenburg has executed an Assignment in favour of the Company, whereby it has transferred to the Company valuable secret processes, manufacturing know-how and methods at a price of Rs. 2,40,000/- and upon the terms therein contained, to enable the Company to produce bearings per year to the extent licensed by the Government.

(B) SKF Kugellagerfabriken G.m.b.H., Germany (hereinafter called "SKF SCHWEINFURT"), a subsidiary of SKF Gothenburg, has executed two Assignments in favour of the Company, whereby it has transferred to the Company valuable secret processes, manufacturing know-how and methods at a total price of Rs. 1,75,000/- and upon the terms therein contained to enable the Company to produce certain textile parts to the extent licensed by the Government.

TECHNICAL ASSISTANCE AND RESEARCH.

(A) SKF Gothenburg has agreed to act as Technical Consultant to the Company in respect of manufacture of bearings upon the terms and conditions contained in an Agreement, dated 29th September, 1961, entered into by it with the Company for a consideration of Rs. 5,60,000/-, without any deduction whatsoever, and in consideration of the technical assistance and collaboration to be given to the Company, it has agreed to pay to SKF Gothenburg, a Research and Development fee of an amount equal to 2½ per cent of the net annual turnover of the Company as therein defined.

(B) SKF Schweinfurt has agreed to act as Technical Consultant to the Company in respect of the assembling and manufacture of textile parts upon the terms and conditions contained in two Agreements, dated 29th September, 1961, and 24th April, 1962, entered into by it with the Company for a total consideration of Rs. 1,25,000/-, without any deduction whatsoever, and in consideration of the technical assistance and collaboration to be given to the Company, it has agreed to pay to SKF Schweinfurt a Research and Development Fee of an amount equal to 2½ per cent of the net annual turnover of the Company as defined in the Agreements.

PATENTS AND TRADE MARKS.

SKF Gothenburg has agreed that, during the currency of the said Heads of Agreement, the Company shall be entitled, free of all costs and fees, to the exclusive right to manufacture under and a non-exclusive right otherwise to use (a) Indian Patents belonging to it and SKEFKO in respect of the said bearings or parts thereof and to SKF Schweinfurt in respect of the textile parts, and (b) the Trade Mark "SKF" belonging to SKF Gothenburg.

SELLING AGENCY.

The SKF Ball Bearing Company (Private), Limited, of Bombay, an Indian Subsidiary of SKF Gothenburg, is appointed sole Selling Agent in India of

the products assembled and manufactured by the Company for a period of five years from 9th May, 1962, at a del credere commission of 10 per cent of the net selling prices of the products of the Company and upon the terms and conditions contained in that Agreement.

BUSINESS PROSPECTS.

The demand for ball bearing and the licensed textile parts exceeds the existing productive capacity in the country and tapered roller bearings are not at present manufactured in substantial quantities in India.

With the rapid industrial and agricultural development in the country, increasing production and use of motor vehicles and with the growing development of the textile industry, the demand for all these products is likely to increase substantially. The Directors do not expect any difficulty in disposing of the planned output.

The Directors expect that losses will be incurred for some years. After the workers have been trained and a satisfactory level of efficient production reached, then, given also the necessary customs protection, foreign exchange and import licences to acquire sufficient raw materials, the Directors expect profitable working to be achieved.

Profits will first be used to extinguish accrued losses and to build up sufficient reserves. Thereafter they are expected to be sufficient to permit a reasonable distribution to the shareholders.

TAX BENEFITS.

According to present law the Directors consider that—

- The Company will be entitled to special benefits in respect of Development Rebate under the Income-tax Act, 1961, and may also enjoy the benefit under Section 84 of the Income-tax Act, 1961.
- The Shareholders of the Company will be exempt from tax on such dividend paid from the Company's profit exempted from tax under Section 84 of the Income-tax Act, 1961, and
- The Shareholders would also have been exempt from Wealth-tax on their holdings under Clause XX of Sub-section (1) of Section 5 of the Wealth-tax Act, but under the Finance Bill No. II, 1962, recently introduced by the Hon'ble Finance Minister in the Lok Sabha, this exemption is proposed to be withdrawn.

MINIMUM SUBSCRIPTION, CAPITAL OUTLAY AND SOURCES OF FINANCE.

The minimum subscription in respect of the present issue on which the Directors will proceed to allotment is Rs. 80,00,000 (Rupees eighty lacs) being the whole share capital now offered for subscription by the public.

The capital outlay required for this project will be as follows:

Land and Building	Rs. 1,65,00,000
Machinery, Installations and Equipment	Rs. 2,85,00,000
Preliminary Expenses, Brokerage and expenses of this issue	Rs. 6,50,000
Price of Know-How Capital Property	Rs. 4,15,000
Technical Assistance Fees	Rs. 6,85,000
Working Capital	Rs. 1,13,50,000
Allowance for price increases, contingencies, etc.	Rs. 19,00,000
	Rs. 6,00,00,000

SOURCES OF FINANCE:

The above amount of Rs. 6,00,00,000 (six crores) will be provided as under:—

(a) Out of existing issued capital	Rs. 10,00,000
(b) Out of present issue	Rs. 3,90,00,000
	4,00,00,000
(c) Loans from Banks	Rs. 2,00,00,000
	Rs. 6,00,00,000

EXPENSES OF THE ISSUE.

The expenses of the issue other than brokerage are estimated to be Rs. 4,00,000 (Rupees four lacs) and will be payable by the Company.

BROKERAGE.

Brokerage at Rupee one per share will be paid to the Brokers to the Issue and Banks.

DIRECTORS.

Under the Articles of the Company, each Director shall be paid Rs. 200/- for each meeting attended by him and a fair compensation for his expenses and loss of time in connection with attending Board Meetings and also such special remuneration for extra services as may be arranged by the Board.

MANAGING DIRECTOR.

Under an Agreement, dated 13th April, 1961, sanctioned by the Government, Mr. P. T. Grufman is appointed Managing Director for five years, the Company paying him a monthly salary of Rs. 9,250/-, rent free flat and car and entertainment expenses, and upon the terms mentioned therein, and by a Board Resolution, dated 7th May, 1962, such appointment has been continued and confirmed.

INTEREST OF DIRECTORS AND PROMOTERS.

The Directors are interested to the extent of any Shares subscribed by and allotted to them respectively in the capital of the Company. They are also interested to the extent of the fees which they may receive for attending Board Meetings:

- Mr. A. D. Shroff is Managing Director of the Investment Corporation of India Ltd., Bombay, to which consideration is payable for acting as the Company's Registrars and Share Transfer Agents. He is also the Chairman of the Bank of India Ltd., one of the Bankers of the Company.
- Mr. J. Higham is Managing Director of SKF Ball Bearing Co. (Private), Ltd., Bombay, the sole Selling Agents of the Company, to which commission is payable under the Selling Agency Agreements.
- Mr. N. M. Wagle is a Director of the Central Bank of India Limited, one of the Bankers of the Company.

ASSOCIATED BEARING COMPANY LIMITED—(Announcement Contd.)

(4) Mr. N. A. Palkhivala is a Director of the Central Bank of India Limited, one of the Bankers of the Company.

(5) Mr. P. T. Gruffman is Managing Director of the Company and as such is interested in the remuneration and perquisites due to him under the Agreement with him. He is also a Director of SKF Ball Bearing Co. (Private), Ltd., the sole Selling Agent of the Company, to which Commission is payable under the Selling Agency Agreements.

(6) Mr. N. K. Suntook is the Partner of Mulla and Mulla and Craigie Blunt and Caroe, the Solicitors of the Company.

INSPECTION.

A printed copy of the Memorandum and Articles of Association of the Company, the Consent Orders of the Controller of Capital Issues, import Licences for plant and machinery, Letters of Consent from Registrars and Share Transfer Agents, Bankers, Solicitors, Auditors and Brokers of the Company, Balance Sheet of the Company, the Industrial Licences issued by the Central Government and copies and/or drafts of the material contracts and documents referred to in the Prospectus, the Report of the Auditors of the Company, the Consent of the Central Government to the appointment of Mr. P. T. Gruffman as the Managing Director of the Company, and the Consent of the Ministry of Commerce and Industry (Central Government) to the arrangements with the above foreign collaborators, can be inspected on working days during office hours at the Registered Office of the Company for a period of 14 days from the Date of publication of the Prospectus or until the Subscription Lists are closed, whichever is earlier.

TERMS OF PAYMENT OF SHARES.

On application ... Rs. 100/- per share

APPLICATION FOR SHARES.

Each application must be for a minimum of 5 shares or multiples of 5 shares. All application forms duly completed must be lodged together with the amount of Rs. 100/- per share in respect of Equity Shares, with:

The Bank of India Limited, Bombay, or its branch offices at Calcutta, New Delhi, Madras and Ahmedabad.

The Central Bank of India Limited, Bombay, or its branch offices at Calcutta, New Delhi, Madras and Ahmedabad.

First National City Bank, Bombay, or its branch office at Calcutta.

National and Grindlays Bank Limited, Bombay, or its branch offices at Calcutta, New Delhi and Madras.

The remittance should be made by cash, cheque or draft. All cheques or drafts should be drawn on a Bank in the aforesaid towns only and deposited with the above banks, at their above branches. Cheques or bank drafts drawn on banks elsewhere will not be accepted.

The Directors reserve full right to reject or accept any application.

PROSPECTUS AND APPLICATION FORMS.

Prospectus and application forms can be obtained from the Company's Bankers or Brokers to the issue or from the Company or the Investment Corporation of India Ltd., at their respective Registered Offices.

vant to note that an attempt has been made in the study to derive alternative projections based upon different sets of assumptions regarding the factors determining demand and supply over the projected period. Four sets of demand projections were made based on different assumptions with respect to the increase in national income, growth of population, rise in per capita income, and changes in income elasticities of demand. Similarly, in the case of supply, three projections were made based on alternative assumptions with respect to estimated availabilities of inputs namely, irrigation, fertilisers, and the response coefficients to the different inputs. And, finally, a comparison of the order of magnitudes of demand and supply was made to indicate the most probable order of import needs or export surplus for each of the commodities over the next 15 years.

Foodgrain production is expected to catch up with demand by the end of the Third Plan. But the need for imports for stocks will continue. By 1970-71 the country is likely to have a surplus of 3 million tons which may, under favourable conditions, increase to 6 million tons by 1975-76, that is the end of the Fifth Plan. The bulk of the surplus or deficit in food grains is on account of rice and wheat. Supplies of other cereals are expected to be just sufficient to meet the requirements. Per capita consumption of all food grains will increase from 16 oz in 1960-61 to 18 oz in 1975-76 when the total output will be 133 million tons.

LONG-TERM SUPPLY AND DEMAND PROJECTIONS FOR SELECTED AGRICULTURAL COMMODITIES*

Commodity and Unit	1965-66		1975-76	
	De-mand	Supply	De-mand	Supply
			Deficit (-) or surplus (+)	Deficit (-) or surplus (+)
Foodgrains (Mil. tons)	95.4	95.7	+0.3	133.4
Oilseeds (Mil. tons)	7.8	7.7	+0.1	12.9
Cotton (Mil. bales)	6.6	6.1	-0.5	10.0
Tobacco (thousand tons)	335	382	+4	493

*Relate to internal demand and supply only.

The projections for oilseeds indicate that supply and demand will be more or less balanced, though a surplus of one million tons may emerge by 1975-76 depending on the rate of growth of the vanaspati industry. The projections suggest that per capita consumption of edible oils will increase from 5.7 lbs in 1960-61 to 8.7 lbs in 1975-76. The study does not rate the prospects of increasing the supply of oilseeds very high, because some of the oil seeds crops are not as profitable to the farmer as other cash crops to which a shift is likely, following extension of irrigation. Moreover, the response of output to various inputs is relatively low in the case of oilseeds as compared to same cereals.

The supply and demand for cotton, it is estimated, will increase from the level of 4.7 and 5.4 million bales in 1960-61 to 10.5 and 10 million bales respectively by 1975-76. The estimates assume an increase in the per capita consumption of cloth from 18 yds to 23 yards over the 15-year period. The present pattern of import of finer varieties and export of short staple cotton is likely to continue.

The export surplus of tobacco according to the projections, a supply and demand will increase from 28,000 tons in 1960-61 to 43,000 tons in 1975-76. Nevertheless, imports of superior varieties to meet the requirements of the cigarette industry will continue over the projected period. The projections of the Supply and Demand of the different commodities are shown in the table given below.

9 May 1962

Coal Loading on Sundays

The alleged failure of industries to make best use of available transport capacity by their failure to load coal on Sundays and holidays as been frequently highlighted by spokesmen of the Railways. The Railway Minister had referred to this in his speech at the last meeting of the National Railway Users' Consultative Council held on March 28 and 29 while the Chairman of the Railway Board had referred to this matter at the last meeting of the Central Advisory

Council of Industries. Since the representatives of the industries concerned did not reply to the charges, it was generally assumed that they were justified. The matter was referred by the Federation to its constituent members with a view to obtaining a correct appraisal of the position. And now the Federation has written to the Chairman of the Railway Board rebutting the charge with facts and figures. A statement setting out the details of daily loadings, on the Eastern Railways during March 1962, shows that average daily loading on both Sundays during the month was

4990 wagons. Against this, 5082 wagons were actually loaded on March 4, the first Sunday of the month; 5194.5 wagons on the 11th; 4553 wagons on the 18th; and 5157 wagons on 25th. The number of wagons loaded on April 1 was 4791 while the average for the first week of the month was 4661 wagons only. The statement shows that from March at any rate, industries have been extending the fullest co-operation and that loading on Sundays compares favourably with the figure for week days.

The communication also draws attention to the serious difficulties

and limitations in loading coal on Sundays and other holidays. For instance, essential statutory maintenance and inspections and repair jobs normally carried out at collieries on Sundays rest days would not be possible and this would result in breakdowns involving loss of output. There is a physical limitation to the loading capacity due to limited siding capacity and pilot operation. At some collieries, Labour would not just work on Sundays. And where they are prepared to work, workers have to be paid extra by about 75 p.p. to Re 1 per ton for working on Sundays and holidays.

ernment to ensure that the JBSA continues to purchase all available raw jute with the cultivators and trade.

Prices in the jute goods market moved both ways during the past week with the undertone mainly determined by speculative manipulations in the absence of much overseas interest. The anxiety as regards accumulation of stocks in the hands of shippers and traders as a result of the continued pilots' strike at the Calcutta port kept bullish fervour in check. Even so speculative interest was noticeable intermittently while some business too was reported done for distant deliveries. The delay in the publication of the stock figures as at the end of April was another uncertain factor in the situation in earlier dealings. The stock figures were published on 16th May. Explaining the delay the IJMA in a press note has said that the introduction of the excise duty on jute manufactures from the 24th April inevitably resulted in delays in the clearance of goods from the mills at the busy end-month shipment

period. The actual stocks of goods with the mills at the close of the month were therefore much larger than they would otherwise have been, and as the figures give a distorted picture and would be misleading, they have not been published in the usual way. The figures published have been calculated from additional data received from the mills, in an endeavour to give as close an estimate as possible of what the stock position would have been had clearances from the mills been normal. The figures thus worked out show the total stocks at 60,300 tonnes comprising 18,600 tonnes of hessian, 25,800 tonnes of sacking and 15,900 tonnes of other manufactures. As the stock at the end of the previous month was 61,000 tonnes, total stocks at end of April were lower by 1,100 tonnes. Hessian stocks were higher by 2,400 tonnes while both sacking and other goods were lower by 3,300 tonnes and 200 tonnes respectively. Sentiment in the market improved on Wednesday presumably as a consequence of the announcement of a decline in total stocks. All sections were steady with sacking particularly in good request at rising price levels.

**TEA
First Export
Auction: Irregular
Trend**

Export auctions for new season tea commenced this week in Calcutta with the first sale taking place on Monday the 14th instant. The result of the auction were generally in line with earlier expectation. Leaf offerings in the bale amounted to 24,627 packages with the bulk of them coming from the Darjeeling District. These however encountered an irregular market except for the few flavoury lines. Prices obtainable were well below valuations and that fact resulted in heavy withdrawals, some of them even without bids. Fair support was forthcoming for orthodox teas from Cachar, Dooars and Terai though only at irregular prices and the few bright liquoring sorts fetched satisfactory prices.

**JUTE
Purchases by
JB SA**

Speaking at a press conference last Saturday, Mr. C. L. Bajoria, Chairman of the Indian Jute Mills Association, who is also the President of the Jute Buffer Stock Association pointed out that the minimum price of Rs. 30 per maund of raw jute was no longer realistic. The minimum was fixed in consultation with the IJMA at a time when it was thought that the 1961-62 jute crop would be much less than the current estimate which placed the crop over 8 million bales. With such a bumper crop to dispose of the growers and traders have naturally been anxious to sell the balance of their stock as quickly as possible. The fact that the mill industry had already lifted 7.7 million bales failed to arrest the declining trend largely because indications are that the next crop will also turn out to be quite large thanks to favourable weather conditions so far and the concerted measures taken not only by Government but also by bodies like the IJMA to promote jute production. He further said that other contributory factors for the weakness of the raw jute market were the declining price in Pakistan and Thailand and the depressing effect of the delay in the shipment of jute goods on account of the imposition of the excise duty on jute manufactures and the pilots' strike in the Calcutta Port.

Referring to the purchase programme of the JB SA he seemed to indicate that, while the Association had already purchased and allocated to the mills 125,000 bales in two instalments and had begun its third allocation of 50,000 bales, it would be rather difficult to assume that the JB SA would be able to lift all surplus jute that

was offered for sale for the simple reason that the mills already were hard put to it to arrange for storage space for their own stock and the purchases made on behalf of the JB SA. The difficult situation faced by mills is indicated by the fact that some mills are obliged to stack jute in the open for want of covered accommodation thereby running the risk of incurring considerable loss due to damage of jute from rain.

But only the other day the Jute Commissioner announced in unmistakable terms that the JB SA would be taking up all the surplus jute estimated by him to be about 600,000 bales. An official spokesman in New Delhi has since reiterated the determination of Gov-

*Nominal.

Only a limited amount of CTC teas were on offer but here again prices showed an irregular trend. In many cases PFs and Fannings were neglected and sometimes withdrawn without bids. An irregular trend was noticeable in egg cut teas but prices were generally nearer brokers' valuations. Good support at satisfactory price levels was in evidence in regard to a few of the brighter liquoring kinds.

An irregular trend was noticeable at this week's export auctions in Cochin. The quantity of leaf tea offered amounted to 5,67,000 kilograms. Low medium and medium broken were irregularly steady following some odd general demand. Similar fannings were however came to a dearer market gaining up to 20 nP. in their rates. While good mediums were easier, highgrown broken were rated according to quality. Good support was noticeable for fannings but orthodox types came to an easier market.

Best liquoring teas met with a strong and steady market at Monday's sale in London. The opening tone was easy with valuations showing lower rates than in the previous sales but demand picked up later in the day with quality teas getting a good deal of attention and support. However teas with poor leaf appearance and poor liquoring kinds lost ground and quoted cheaper than previous levels.

COTTON Jarilla Suffers Early Setback

The Jarilla March 1963 contract after a good start suffered a severe setback during the past couple of days and on Monday lost about 10 points. The ruling contract, however, met with stout resistance at lower levels which aided the contract to recover on a moderate scale. Business transacted was at a low ebb and aggregated about 20,000 bales. The undertone remained steady and some selling pressure was reported from up-country dealers.

According to present calculations the futures trading is expected to continue unobstructed throughout the current season. There are bound to be fluctuations, but only in narrow groove, as the contract is for a long period and the next year's crop as well as import performance is anybody's guess. Only when a clear picture emerges in these two spheres the activity in futures section will look up to an encouraging level.

The question of cotton imports is expected to be taken up by the Cotton Textile Consultative Body which is scheduled to meet in Bombay on 15th May, with Mr. Manubhai Shah presiding. Though the Government has of late permitted the import of 43,000 bales of cotton

from the United States in exchange for the export of sugar to that destination and announced the import of about 1 lakh bales of staple fibre from the East European countries, while taking into account the tight supply position in the country and the mounting demand, these arrangements will shrivel into inanities. Meanwhile the trade and industry are anticipating an immediate announcement from Washington for the release of cotton either under PL 480 or under the United States Agri-

cultural Trade Development Programme.

Business transactions in the spot market at Sewri were rather restricted. Mill interest focussed on growths like Vijay, Digvijay, Kalvan L 147, CO 2 and Laxmi.

In the import section spinner interest was pronounced in higher grades of Sudanese cotton as there is a lurking fear that this variety will become scarce toward the end of this season. BP 52 and Mwanza cotton also met with some enquiry.

There was a slackening of activity in the export section. Export registrations for the countries behind the iron curtain were reported to have been stopped from 4th May onwards. The ship are awaiting an immediate release of 75,000 bales of Bengal Deshi export.

At an informal meeting with cotton delegation from Sudan spokesmen of the trade are reported to have pressed for the late offtake of Indian Cotton textile that country. The delegation

ing its short stay in the country will undertake a study and assess the actual requirements of domestic cotton mills of Sudan cotton and after another round of talks with the representatives of the trade will forward its report to the home Government.

The Government of India and the US Government entered into an agreement on Thursday providing for the sale, for rupees, of 180,000 bales of long staple American cotton to India valued approximately at Rs 13.4 crores

under the US PL 480. The present agreement forms a supplement to the sixth US PL 480 treaty concluded between the two countries on 1 May 1962. The cotton that will be available under this agreement will provide some relief from the scarcity confronted during the current season.

PIECEGOODS

The Bombay cotton piecegoods market during the past week was in the doldrums and owing to the

absence of any clear mention about a revision of the excise levies, majority of the traders adopted an holiday mood and were reluctant to enter into any commitment.

The domestic sector was worst affected. The powerloom section was stagnant. Clearing of the processed goods from the factories and the arrival of goods for processing were totally absent. The Government's intention to exempt the powerloom textiles manufactured before 23rd April failed to enthuse

the trade. On the contrary, some of the small powerloom producers were reported to have resorted to distress selling.

Transactions in the mill sector were few and far between and even the restricted trade was strictly confined to goods manufactured by the popular mills. The purchasers of these goods took delivery of those goods after paying the new levies obviously due to the apprehension of losing their quota. Up-country demand trickled into some varieties though the supply

Pan Am now introduces a unique low-cost way to visit any one or all of 32 major U.S. cities.

Have you always wanted to see the USA, but thought it far too expensive for your means? If so, Pan Am's \$15-a-day-way is your way to the USA!

Here's how the plan works: you may spend 3 days and 2 nights in any of the 32 places listed below, and pay only \$15 for your hotel room with bath and, in most cities, a full sightseeing tour! Average cost for each full 24 hour stay: only \$7.50.

But what about food? You're where you like and when you like at your own expense. However surveyed every one of the 32 in this plan, and can assure substantial meals at popular prices not cost more than \$7.50 per day out through the entire U.S.

Result: \$15 a day for meals and sightseeing in any fabulous attractions shown here.

ATLANTA, BOSTON, CHICAGO, DALLAS, HONOLULU, HOUSTON, KANSAS CITY, LOS ANGELES, MIAMI BEACH, MINNEAPOLIS

NEW ORLEANS, NEW YORK, NIAGARA FALLS, OKLAHOMA CITY, PHILADELPHIA, PHOENIX, PITTSBURGH, PORTLAND, SALT LAKE CITY, SAN DIEGO, SAN FRANCISCO, ST. LOUIS, SEATTLE, TAMPA, TORONTO, TUSCON, VANCOUVER, WASHINGTON D.C.

And transportation cost? Many of these places may be visited without extra charge on a Pan Am 'round-the-world' trip, costing as little as Rs. 6092, economy class from Calcutta. See Europe and the Pacific as well as North America, and pay no more in air fares!

If you prefer, take advantage of the unbelievably low price of the Pan Am-Greyhound plan: 99 days of luxury coach

travel throughout the USA for \$99. That's \$1 a day for as many miles as you like!

These and many other excursions are part of Pan Am's "More For Your Money" way to the USA. Ask your travel agent or Pan Am today for details of how inexpensive and how wonderful a trip to the USA can be!

position was far from the requirements.

The export front depicted a slightly livelier picture. Business with the United Kingdom, was, however, pretty meagre. The continued apathy of the traders from that destination is attributed to the severe competition from countries like Pakistan and the accumulation of stocks with the trade.

After a long spell of sluggishness demand for Sudan cotton has showed signs of picking up. Im-

porters evinced interest in sheetings and longcloth for ready shipment. The visit of the Sudanese cotton delegation has also generated great interest to the trade. With that the prospects for exporting larger quantum of Indian textiles to that destination against cotton from Sudan for indigenous mills have also brightened.

East Africa accounted for a moderate quantity of drills and sheetings. The revival of demand from that country was ascribed to

the possibility of some relaxation in the import policy. Enquiries from other countries were not all together discouraging but the actual transaction of business was unsatisfactory.

Increase in Output of Pulses

Prices in the Hapur foodgrains market displayed a steadier trend last week as expectations of heavy accumulation of stocks through increased arrivals of the new crop wheat did not materialise. Although it is reported that threshing and winnowing operations are progressing well, arrivals continue to be small. As a consequence prices hardened with average quality wheat quoted above Rs. 40. Better farm wheat gained more than Rs. 2. Rice prices too showed a rising trend on sustained consumer demand. Price of gram continue to rule steady as arrivals still did not show much improvement. Most pulses displayed a steady trend on improved demand. Peas developed a hardening price trend on sustained demand from the southern States while new arhar too remained steady following poor arrivals.

According to the all-India Final Estimate released by the Food and Agriculture Ministry, production of kharif pulses other than tur during 1961-62 is estimated to be 72,000 tons more than the output of last year. The current year's production is estimated at 1,532,000 tons as against 1,460,000 tons, for 1960-61—an increase of 4.9 per cent. The acreage under these pulses, which was 14,835,000 acres last year is estimated at 15,417,000 acres this year. Kharif pulses included in this estimate cover roughly about 60 per cent of the total area under all pulses other than gram and tur. Some of the pulses namely, urad, mung, kulthi and peas included in this estimate are also grown during the rabi season in some States. The increase in area during the current year is accounted for mainly by Rajasthan, Gujarat and Punjab States and has been attributed generally to favourable seasonal conditions at the time of sowing. The increase has however been offset to some extent by decrease in area registered mainly in Maharashtra and Uttar Pradesh States.

SUGAR

Sugar prices continued to rule steady due mainly to sustained demand. The release of a further quantity of 50,000 tons of sugar for export and the general trade expectation that concerted steps would be taken to increase exports to a number of countries besides U.S. are keeping the rising trend. In the Hapur Market the improved tone stemmed from brisk demand from a number of States. In U.P. the crushing season has almost come to an end although it is reported from Bihar that a sizable

quantity of sugarcane still remains to be crushed. The present steady trend in sugar markets seems to be the result of the general expectation on the part of stockists that demand will further show an improvement. It is however to be noted that in view of the heavy stocks of sugar in the country any unreasonable increase in sugar prices will be untenable as Government is bound to take quick corrective steps to arrest the rising trend in sugar prices. Already authority has reduced the validity period for sugar release by mills by 15 days to one month as against 45 days allowed previously.

GUR

Gur prices hardened in most markets due to poor arrivals and good buying interest. In the Hapur market however the trend was quiet due to poor demand. There was no trading in gur futures as the Forward Markets Commission has not yet sanctioned trading in the new gur Fagun contract.

SILK

Prices of raw silk in Bangalore Silk Market presented a steady trend during the week ended 11-5-1962. Prices of filature raw silk of 20/22 Dr. continued to rule firm, being quoted between Rs. 84.89 and Rs. 85.99 per kgm. Rates of cotton basin silk declined slightly to vary from Rs. 77.16 to Rs. 82.67 and that of charka raw silk varied from Rs. 50.70 to Rs. 77.16 per kgm.

Spun silk yarn of 2/210's was quoted at Rs. 81.40 per kgm.

Prices of reeling cocoons in Sidlaghatta and Mugur areas increased slightly to vary between Rs. 4.25 and Rs. 5.25 and Rs. 4.50 and Rs. 5.50 per kgm. respectively, and those in Channapattana area ruled between Rs. 4.50 and Rs. 4.90 per kgm. Prices of foreign race seed cocoons ranged between Rs. 9.00 and Rs. 10.00 per thousand. Mysore race seed cocoon prices increased slightly to rule between Rs. 4.50 and Rs. 6.00 per thousand.

Tasar silk market prices remained steady during the previous week, when the prices of tasar raw silk ranged from Rs. 68.14 to Rs. 105.82 and that of silk waste and spun silk yarn ruled between Rs. 22.04 and Rs. 26.46 and between Rs. 30.86 and Rs. 48.50 per kgm. respectively. Prices of reeling cocoons presented a steady trend when those for Daba Bogai and Serihan were quoted between Rs. 117.00 and Rs. 122.00, Rs. 110.00 and Rs. 118.00 and between Rs. 50.00 and Rs. 60.00 per kahan respectively.

Landed cost of Japanese raw silk of 20/22 Dr. was reported as Rs. 91.90 per kgm, as on 14th April, 1962. There has been a perceptible rise in prices since December, 1961.

GOLD & SILVER

A mixed trend prevailed in the bullion market. After ruling quiet

19 May 1962

most of the time, silver rallied in later dealings, while gold remained steady throughout. The earlier quiet tendency in silver was brought by increased arrivals and declining demand. However the undertone improved towards close on revival of speculative interest in the metal. The forward section moved mainly in sympathy with the ready market where off-take showed considerable improvement after midweek with demand particularly good in the closing stages. Although gold prices tended to be somewhat lower at the start revival of demand resulted in rates first rallying and moving upward in subsequent trading. Toward close the upward movement in the forward section was aided by higher spot prices brought about improved off-take.

PEPPER

Pepper prices in Cochin continued to rule quiet in the absence of buying interest. Earlier hopes of a revival of overseas buying failing to materialise, selling pressure increased last week resulting in prices being marked down both in the spot and forward sections of the market. While indications appear to be unfavourable to a revival of overseas buying interest as there is some disparity between the local and overseas prices, holders seem to be still confident of obtaining a favourable price together with revival of buying support in the near future.

NON-FERROUS METALS

In the Bombay non-ferrous metals market, buying interest was confined to lead and copper. Somewhat unexpectedly lead was brought up to the limelight after remaining neglected for a long time due to revival of interest. The improved sentiment in copper appears to be largely due to the poor stock position of the metal rather than any increase in demand. The rise in price seemed to be the result of the reluctance of sellers to part with their stocks. Both Zinc and Tin ruled easy, the former due to sudden augmentation of stocks partly from heavy arrivals and partly from selling pressure from quarters having excess supplies, the latter for much the same reasons with the added adverse influence of falling price levels in world markets.

OILS & OILSEEDS

Easy conditions prevailed in the Bombay Groundnut market due to weeklong selling pressure. Bear pressure coupled with bull unloading resulted in prices being marked down from day to day. The declining trend stemmed from continuous and heavy selling from upcountry operators and expectations of good crops in almost all groundnut producing areas in the country. In the spot section, in Bombay, prices took a downward plunge due to heavy arrivals as a consequence of disposal of stocks

by holders in view of the proximity of the monsoon coupled with the steady inundation of the market by low quality supplies from Kanpur. With arrivals daily mounting up and buying interests such as crushers and vanaspathi manufacturers reluctant to make purchases in the expectation of further fall in prices, there was nothing to arrest the downward movement of rates. In earlier dealings, sentiment tended to rally for a short while on expectations of a sizable demand for groundnut oil on STC

account. But the enthusiasm soon evaporated following the calculation that in any event Indian groundnut oil could not make much headway in foreign markets on account of the wide disparity between Indian groundnut oil prices and the prices currently in world markets.

A steady undertone however prevailed in the castorseed section following expectations of better export prospects. It is generally expected in the trade that with proper incentives exports of

castor seed would show considerable improvement, especially since there are indications that foreign demand will be quite good. In later dealings the sharp decline in groundnut prices induced a slight reactionary tendency in this section.

The Linseed section also suffered a setback largely in sympathy with groundnut. Since demand for the seed as well as oil continued to be rather slack, the section was easily influenced by the trends in other sections.

PHILIPS INDIA LIMITED

Notice of Annual General Meeting

The thirty-second Annual General Meeting of the Members of Philips India Limited will be held on Thursday, June 14, 1962 at 11 a.m. at the premises of the Bengal Chamber of Commerce & Industry, Room No. 2, 6 Netaji Subhas Road, Calcutta-1, to transact the following business:

1. To receive the Directors' and Auditors' Reports and pass the Accounts for the year ended December 31, 1961.
2. To declare a Dividend.
3. To appoint Directors in place of those retiring.
4. To appoint Auditors and fix their remuneration.
5. To transact any other ordinary business of an Annual General Meeting.

AS SPECIAL BUSINESS

To consider and if thought fit, to pass, with or without modification, the following resolutions:

6. As an Ordinary Resolution. "That with effect from January 1, 1962 Mr. W.A.C.H. Bosschaart, the Managing Director of the Company, shall be entitled to receive from the Company remuneration for his services in accordance with the terms set out in an Agreement dated May 2, 1962, made between the Company of the one part and Mr. W. A. C. H. Bosschaart of the other part."

7. As a Special Resolution. "That, in view of the proposal contained in the next succeeding resolution, consent be and is hereby accorded for increasing the number of the Directors of the Company from five to six."

8. As an Ordinary Resolution. "That due notice in writing signifying the intention of a member to propose Mr. Deba Priya Mukherjee as a Director having been left at the Registered Office of the Company pursuant to Section 257 of the Companies Act, 1956, Mr. Deba Priya Mukherjee be and is hereby appointed, subject to the approval of the Central Government under Section 269 of the

said Act, as a Director of the Company."

9. As a Special Resolution.

"That this Meeting hereby accords its consent under Section 314 of the Companies Act, 1956 to Mr. Deba Priya Mukherjee holding and continuing to hold an office or place of profit under the Company as its Chief Adviser, Personnel & Industrial Relations, and being entitled to receive from the Company, subject to the approval of the Central Government; the remuneration as set out in the resolution of the Board of Directors passed on May 2, 1962, a copy of which was laid on the table and signed by the Chairman for the purpose of identification."

The Register of Members of the Company will be closed from May 24, 1962 to June 14, 1962, both days inclusive. The Dividend, if approved, will be payable on or after July 2, 1962 to those shareholders whose names are on the Register of Members on June 14, 1962 or to their mandatees.

By Order of the Board

W.A.C.H. BOSSCHAART

Chairman and Managing Director
May 9, 1962

7, Justice Chandra Madhab Road
Calcutta 20

Notes:

1. A member entitled to attend and vote at the Meeting is entitled to appoint a proxy to attend and, on a poll, to vote instead of himself; such proxy need not be a member of the Company. Proxies in order to be effective must be received by the Company not less than 48 hours before the Meeting.
2. Shareholders are requested to notify the Company immediately of any change in address.
3. An Explanatory Statement as required under Section 173(2) of the Companies Act, 1956, in respect of the aforesaid Special Business is annexed to the Convening Notice sent to members.

AIR-INDIA
IN ASSOCIATION WITH B.O.A.C. AND QANTAS

THE INDIAN STANDARD WAGON COMPANY LIMITED

Registered Office: 12, MISSION ROW, CALCUTTA-1

NOTICE IS HEREBY GIVEN that an Extraordinary General Meeting of the above-named Company will be held at the Registered Office of the Company, 12, Mission Row, Calcutta-1, on Friday the 29th day of June 1962 immediately following the conclusion of the Annual General Meeting of the Company to be convened for 11 a.m. on that date for the purpose of considering and, if thought fit, passing the following Resolutions, whereof those Nos. 1, 4, 6 and 8 will be proposed as Special Resolutions:

AS SPECIAL RESOLUTION:

1. That the authorised share capital of the Company be increased from Rs. 60,00,000 to Rs. 1,00,00,000 by the creation of 1,51,880 new Ordinary Shares of Rs. 25 each and 20,300 new Ordinary Shares of Rs. 10 each.

AS ORDINARY RESOLUTION:

2. That it is desirable to capitalise the sum of Rs. 38,98,500 out of the amount standing to the credit of the Plant Replacement Reserve in the books of the Company and accordingly that such sum be set free for distribution amongst the Holders of the Ordinary Shares of the Company on the Register of Members at the 29th day of June 1962 (joint holders being considered as one person for this purpose) in the proportions in which they hold such Shares respectively on that day and on the footing that they become entitled thereto as capital and on condition that the same be not paid in cash but be applied in paying up in whole at par 1,55,940 new Ordinary Shares of Rs. 25 each to be allotted and distributed credited as fully paid up Bonus Shares to and amongst the said Holders of Ordinary Shares in the proportions aforesaid, that is to say, at the rate of one of such new Ordinary Bonus Shares for every one Ordinary Share held by the Members respectively according to the Register of Members at this the 29th day of June 1962.

AS ORDINARY RESOLUTION:

3. That the draft of the Agreement providing for allotment of the said new Ordinary Shares in satisfaction of the said capital bonus submitted to this Meeting and signed in the margin by the Chairman by way of identification be and the same is hereby approved and the engrossment of the same be executed by the Chairman of this Meeting on behalf of the Holders of the existing Ordinary Shares of the Company as on this the 29th day of June 1962 and by Mr. H. A. Fowler, a Director, and the Managing Agents on behalf of the Company under its Common Seal.

AS SPECIAL RESOLUTION:

4. That the said 1,55,940 new Ordinary Shares of Rs. 25 each be

and they are hereby allotted as Bonus Shares to the Holders of Ordinary Shares whose names appear on the Register of Members on this the 29th day of June 1962 credited as fully paid in pursuance of and subject to the provisions of the above mentioned Agreement in the proportion of one such new Ordinary Bonus Share held by them respectively.

AS ORDINARY RESOLUTION:

5. That every two Ordinary Shares of Rs. 25 each in the capital of the Company as increased by the capitalisation and distribution already resolved upon be consolidated into one Ordinary Share of Rs. 50.

AS SPECIAL RESOLUTION:

6. That the Ordinary Shares of Rs. 50 each in the capital of the Company resulting from the consolidation last resolved upon be sub-divided into five Shares of Rs. 10 each.

AS ORDINARY RESOLUTION:

7. That shareholders shall deliver up for cancellation the Certificates relating to the Ordinary Shares of the denomination hitherto subsidising as a condition of entitlement to the issue of new Certificates of the new denomination in exchange therefor, or in the case of lost Certificates such evidence and indemnity as the Directors might have required on an application for the issue of duplicates.

AS SPECIAL RESOLUTION:

8. That the Articles of Association of the Company be altered by deleting from the beginning of Article 4 the following words namely "The capital of the Company is Rs. 60,00,000 divided into 1,60,000 Ordinary Shares of Rs. 25 each and 20,000 Preference Shares of Rs. 100 each" and substituting therefor the following words namely "The capital of the Company is Rs. 1,00,00,000 divided into 8,00,000 Ordinary Shares of Rs. 10 each and 20,000 Preference Shares of Rs. 100 each."

The Registers of Members and the Transfer Books of the Company for Ordinary Shares will remain closed from the 5th June 1962 to the 29th June 1962, both days inclusive.

A Member entitled to attend and vote at the meeting is entitled to appoint a proxy to attend and, on a poll, to vote in his stead and a proxy need not be a Member.

By Order of the Board,
MARTIN BURN LTD.
F. G. LIVERSEDGE
Managing Director
Managing Agents

14th May 1962

An Explanatory Statement as required under the Companies Act 1956, has been forwarded to the members of the Company.

HERCULES INSURANCE COMPANY LIMITED

(Incorporated in India)

NOTICE IS HEREBY GIVEN that the TWENTY SEVENTH ANNUAL GENERAL MEETING of the Hercules Insurance Company Limited will be held at the Registered Office, 16, Hare Street, Calcutta on Wednesday the 6th June 1962 at 3 P.M. for the purpose of:

1. Considering the Accounts, Balance Sheet and the Reports of the Board of Directors and Auditors for the year ended 31st December, 1961.
2. Declaring a Dividend.
3. Appointing Directors in the place of those retiring. And, in this connection notice is hereby given that Special Notice as defined in Sec. 190 of the Companies Act, 1956, has been received by the Company under, Sec. 281 of that Act to move the following resolution at the meeting.
That Sir Badridas Goenka, the Chairman of the Company, who has attained the age of 78 years and is retiring at this meeting, be and he is hereby re-appointed a Director of the Company and the age limit prescribed by Sec. 280 of the Companies Act, 1956, shall not apply to him".
4. Appointing Auditors and fixing their remuneration.

AS SPECIAL BUSINESS

5. To consider and, if thought fit to pass with or without modifications the following resolution which will be proposed as an Ordinary Resolution:

"That subject to the approval of the Central Government this meeting approves the payment of remuneration to Mr. E. K. Srinivasan as the Managing Director of the Company with effect from the 16th July, 1962 on the terms set out in the Agreement dated the 9th May, 1962 and made between the Company of the one part and Mr. E. K. Srinivasan of the other part (a copy of which was produced to the meeting and signed by the Chairman hereof for purpose of identification) or on such other terms as may be agreed between the Central Government and Mr. E. K. Srinivasan and the Board of Directors of the Company."

6. To consider and, if thought fit to pass with or without modifications the following resolution which will be proposed as an Ordinary Resolution:

"That subject to the approval of the Central Government and with effect from the 1st January, 1961, the Chairman and the Deputy Chairman of the Board of Directors of the Company shall each be entitled to receive out of the funds of the Company for their services in attending meetings of the Board or a Committee of the Board a fee of Rs. 300/- per meeting of the Board or a Committee of the Board attended by them or such fee not exceeding Rs. 300/- as may be agreed between the Central Government and the Board and each of the other Directors of the Company shall be entitled to receive out of the funds of the Company for his services in attending meetings of the Board or a Committee of the Board a fee of Rs. 250/- per meeting of the Board or a Committee of the Board attended by him or such fee not exceeding Rs. 250/- as may be agreed between the Central Government and the Board."

7. To consider and, if thought fit, to pass with or without modifications the following resolution which will be proposed as a Special Resolution namely:

"That the Regulations contained in the printed document submitted to this Meeting and for the purpose of identification signed by the Chairman thereof be and the same are hereby approved and adopted as the Articles of Association of the Company in substitution for and to the exclusion of all existing Articles thereof."

The Share Transfer Books will be closed from the 30th May 1962, to the 6th June 1962, inclusive.

By Order of the Board
E. K. SRINIVASAN
Managing Director.

Calcutta, 9th May, 1962.

Note—

1. A member entitled to attend and vote is entitled to appoint a proxy to attend vote instead of himself and a proxy need not be a member.
2. The dividend when declared will be paid only to those shareholders whose names appear on the Company's Register as on the 6th June 1962.

Explanatory statement as required by Sec. 173 of the Companies Act, 1956 has been forwarded to the members of the Company.

19 May 1962

For the Investor

INVESTMENT GOSSIP Irregular Trend

Bullish enthusiasm has received a setback this week as operators have been worried over a number of new adverse developments. Even so, there has been no selling pressure and what is more, selected shares all along the line have found sustained support. It would appear that investors are in no mood to dispose of their holdings presumably on the belief that the long term outlook for equities in general and especially in respect of some of the new companies, is good.

The more speculative counters have also been supported in earlier dealings with Indian Irons continuing to be in the lead as the belief is that the announcement of the steel retention price would soon be made. But support for scrip in the forward list has tended to fall off in later dealings following the report that the US Senate Foreign Relations Committee has decided on a cut of 25 per cent in aid to India. Although the news did not much disturb the market probably because it was quickly followed by reports that efforts would be made by the Kennedy Administration to restore the cut, there has continued to be an under-current of anxiety regarding the quantum of aid that would become available for the Third Plan.

The reported protest of the US against India's move to buy jet fighter planes from Russia is not seen to be conducive to continued favourable consideration of our requests for adequate foreign exchange. In this connection it is apprehended that the meeting of the coming Aid India Club may not prove as fruitful as expected.

INVESTMENT SPECIAL ABC

The subscription list of Associated Bearing Company Limited will open on 28 May and close on 30 May. The company is offering to the public at par for subscription in cash 80,000 equity shares of Rs 100 each (fuller details will be found elsewhere in this issue). The authorised capital of the company is Rs 7.50 crores with the subscribed and paid-up capital at Rs 10,00,000. The present issue consists of 3,90,000 equity shares of Rs 100 each at par totalling Rs 3,90,00,000. Out of this, the foreign collaborators of the company have agreed to subscribe to 2,34,000 equity shares to the value of Rs 2,34,00,000 while 76,000 equity shares have been agreed to be

subscribed by the Investment Corporation of India Limited, its associates, directors and their friends. The company will manufacture ball and roller bearings and also assemble pendulum weighting arms cradles and bearing units for top rollers used in textile machinery. The company's factory is to be established near Poona and buildings are expected to be completed during the early part of 1964. The basic raw materials have to be imported until such time as they are available from indigenous sources. The company's collaborators are Aktiebolaget Svenska Kullagerfabriken of Gothenburg, Sweden and the Skefko Ball Bearing Company Limited of Luton, England. The two foreign

collaborators have agreed to act as technical consultants of the company which has also purchased valuable secret processes, manufacturing know-how and methods from one of its collaborators and its subsidiary. The prospects of the company are good in view of the increasing production and use of motor vehicles and the growing development of the textile industry.

BONUS ISSUE NOTES

Simulbarie Tea

Simulbarie Tea Company Private Limited Calcutta has been authorised to issue 2,000 equity shares of Rs. 100 each as fully paid up bonus shares on capitalisation of reserves. The existing capital of the company is Rs. 1 lakh.

The East India Distilleries and Sugar Factories Limited, Madras, has been granted consent to issue capital of £27,700 (nominal) consisting of 27,700 new ordinary shares of £1 each at a premium of 12sh. 6d per share. The new issue will be offered to M/s Doulton and Company Limited, London and the proceeds will be used for expanding the manufacturing capacity of East India Distilleries and Sugar Factories. The company whose capital is borne both on the London register and the Indian register. The present issue is intended for raising sterling capital.

BALANCE-SHEET BRIEFS

The working of the National Machinery Manufacturers for the year ended December 1961 shows a net profit before taxation and depreciation of Rs. 6,128,992 against Rs. 3,122,210 in the previous year. Provision of depreciation has been brought up to date, by setting apart Rs. 1,514,060 for 1961 and Rs. 1,882,049 for arrears upto 1961. Provision for taxation is again nil. Last year's deficit of Rs. 396,687 has been wiped off and a dividend of Rs. 6 per share (6%) has been recommended against nil last year.

Dunbar Mills Limited has made a net profit of before depreciation and taxation of Rs. 4,897,648 for the year ended December 1961 as against Rs. 3,445,887 for the pre-

vious year. Depreciation absorbs Rs. 886,350 as against Rs. 993,393 provided in 1960 while taxation is higher at Rs. 2,075,000 against 160,000. Dividend on the increased capital is maintained at 20 per cent (Rs. 2 per share).

Seebpore Coal Company Limited has reported a net profit before providing for depreciation and taxation of Rs. 569,563 for the year ended December 1961 as compared with Rs. 436,301 in 1960. The provision for depreciation is Rs. 56,416 as against Rs. 51,479 while taxation would absorb Rs. 248,000 as compared with Rs. 183,000 in the previous year. Dividend is proposed to be maintained at Rs. 3 per share (42 6/7 per cent).

The Bengal Flour Mills company Limited has earned a net profit of Rs. 850,912 before providing for taxation and depreciation for the year ended December 1961. The company's net profit for the previous year was higher at Rs. 1,536,570. The company proposes to reduce dividend to 20 per cent from 40 per cent paid for last year.

Steel Containers Limited has earned a net profit before providing for taxation and depreciation of Rs. 1,260,116 for the year ended December 1961 as against Rs. 720,807 for the previous year. The proposed dividend is lower at 20 per cent as against 30 per cent paid last year.

Industrial Containers Limited has earned a net profit for the year ended December 1961 before taxation and depreciation of Rs. 705,411 as compared with Rs. 55,078 last year. A dividend of 10 per cent against nil last year is proposed.

Hopes Metal Windows India Limited has reported for the year ended December 1961 before depreciation and taxation a loss of Rs. 44,842 against a loss of Rs. 22,730 in the previous year. No dividend is proposed.

STOCK EXCHANGES

Some Firm Spots

Watch-Dog Writes:

Stock markets have been displaying an irregular trend this week as a consequence of the emergence of a number of new influences. Perhaps the most powerful of these is the receding hope of getting any tax concessions. Though it was earlier believed that the speech of the Union Finance Minister in Parliament contained sufficient indication that he had fairly substantial concessions to announce at the time of the moving of the Finance Bill, rumours have it now that barring minor adjustments mainly in regard to some excise duties, no substantial relief can be anticipated. The cut of 25 per cent in aid to India voted by the Senate

Foreign Relations Committee, deterioration in world political situation, renewed anxiety over Kashmir and sino-Indian relations kept new interest as well as speculative fervour rather hesitant. The fact that a number of new issues are either already on the market or are to come very soon also accounted for the falling in off interest in the list. However selected shares all along the list have been in the limelight, some with impressive gains, on corporate news and on hopes of growth prospects.

After a steady opening the Calcutta stock Exchange developed a halting trend, especially around the more speculative counters. Prospects of cut in US Aid to India coupled with renewed anxiety over national and international political situation restricted trading. Contrary to earlier hopes of tax concession, the latest indications did not encourage the belief that much relief all, would be obtained.

Conditions in Dalal Street were rather irregular, price movement having been determined by day-to-day rumours. In earlier dealings sentiment was quite steady around steel shares on hopes of an early announcement of the steel retention price. Around mid-week trading was adversely affected by the report of a cut in American Aid. Receding hopes of expected concessions in cloth excise duty was also partly responsible for the lack of support.

The Madras Stock Exchange ruled steady but dull. The prevailing uncertainty about American aid curbed fresh interest in the more speculative counters. However investment support, especially in some of the new issues helped maintain prices.

CALCUTTA

Calcutta, Friday Evening.

Price movements in the Calcutta Stock Exchange last week showed an irregular pattern with the more speculative counters generally displaying a subdued tendency. The cut of 25 per cent in the aid to India by the US Senate Foreign Relations Committee did not encourage bulls to extend commitments. The fact that US reaction to India's proposal to buy jet fighters from Russia has not been favourable has given rise to speculation about the outcome of the coming meeting, at the end of the month, of the Aid India Club. With prospects of foreign aid thus again clouded, operators have thought it prudent to move cautiously. Another setback to bullish fervour has been the persistent rumour that the expected tax concessions would not materialise. However, the behaviour of the speculative counters has not affected most sections of the market in an adverse manner. There have been several bright spots in the

miscellaneous section and section wise coals have been very active with a number of shares in request at increasing price levels.

Coal shares have been very active during the week. The revival of interest in the section has stemmed mainly from confident expectation of a price increase as well as an improvement in coal transport. Bengal moved up from Rs. 375 on Monday to Rs. 383 on Thursday. Central advanced to Rs. 13.06 from Rs. 12.87. East Indian moved up from Rs. 49 to Rs. 51.

Steady conditions prevailed in the jute section on indication of improved prospects for the industry. With raw jute expected to be in plentiful supply next season also and with production continuing at a high level, investors have been encouraged to take increased interest in the section. Anglo India was steady at Rs. 248 on Thursday as were Barnagore at Rs. 180, Bally at Rs.309, Gourepore at Rs. 495, Ft. William in good request and improved to Rs. 27.44. Ganges was done at Rs. 15.31.

In the textile section, receding hopes of excise duty concession was responsible for the subdued trading. Bharat Commerce was fractionally lower on Thursday at Rs. 29.75. Dunbar was wanted up to Rs. 34.62. Jayshree was not much altered over the week's trading at Rs. 16.75. New Victoria receded to Rs. 1.84.

The Tea section was a neglected market and where marked prices were lower on balance. The lack of interest in the section stemmed from the disappointing results of the first export sales held in Calcutta early in the week of the new season tea. Hasimara was quiet at Rs. 30.87 as was East India at Rs. 10.94 and Tezpur at Rs. 17.12.

The Engineering section ruled fully steady with selected shares making impressive gains. Indian Iron moved both ways. Texmaco was in good request. Jessop was well maintained and closed at Rs. 24.75 on Thursday. Burn and Co. was taken up to Rs. 721.

Several bright features were noticeable in the miscellaneous section. Indian Aluminium was in the limelight as was Hindustan Aluminium which gained more than two points in the course of the week. Among chemical shares Alkali Chemical was a prominent counter. In the paper group, India Pulp was steady at Rs. 22.19. Straw products was marked at Rs. 10.81 and Titagar at Rs. 42.62. Bharat Ball Bearing was an active counter and was done up to Rs. 17. General Tyres was taken up to Rs. 7. India carbon met with support and was placed at Rs. 24.62. Elsewhere, Universal Electric, Sirsilk, National Insulated Cable, Indian Tack and Nail and Aluminium Corporation were active counters. Goodyear was quoted on Thursday at Rs. 48.12.

Company Reports

Union Carbide Earns More

THE Union Carbide India Limited has reported increased profits for the year 1961. There is a good demand for the increasingly wide range of products manufactured by the company and significant increases have been achieved in the production and sales of dry batteries, flashlights and zinc products, all of which have contributed to the improved operating results for the year.

Sales are shown higher at Rs 9.50 crores against Rs 8.23 crores, while the net profit, before providing for Depreciation and Taxation, works out to Rs 1.84 crores against Rs 1.69 crores for the preceding year. Apart from providing Rs 15.54 lakhs for Special Reserve, the Depreciation amount is raised to Rs 34.94 lakhs from Rs 21.03 lakhs and to Rs 2.30 lakhs. The provision for Taxation is, however, lower at Rs 21.78 lakhs against Rs 61.38 lakhs, while General Reserve received Rs 30 lakhs in the preceding year. The dividend is maintained at 18 per cent, subject to deduction of tax.

Against a paid-up capital of Rs 2.80 crores. General Reserve stands at Rs 80 lakhs; Special Reserve at Rs 15.54 lakhs; Capital Reserve at Rs 15.16 lakhs and Development Rebate Reserve at Rs 80 lakhs. The gross block at Rs 7.18 crores is depreciated by Rs 1.50 crores, leaving a net block of Rs 5.68 crores.

In January 1961, the company was licensed to substantially expand its industrial chemicals and polyethylene capacities at Trombay. Preliminary design work has been carried out by the engineers of Union Carbide Corporation, USA, and the company's proposals for financing the foreign exchange and rupee expenditure for this expansion are presently under consideration by the Government.

Vive the Inter-bank Agreement

THE inter-bank agreement on Deposit rates has been saved without loss of face to any of the entities concerned. According to the Indian Banks' Association banks will fall under four categories: Large banks, with Deposits exceeding Rs 50 crores; medium banks with Deposit resources ranging from Rs 25 crores to Rs 50 crores; small banks with Deposits in the range of Rs 10 crores to Rs 25 crores; and banks smaller yet than that. The large banks will be allowed to continue paying the currently existing rates on Deposits, but will yield a differential of one-eighth of one per cent to the medium banks, which are thus enabled to "compete" more strongly with the large institutions; the medium banks, in turn, will face competition from the small banks who, as now, would be paying one-fourth of one per cent more than the large banks; and the remnant category can unashamedly offer whatever rate of interest they choose. The new agreement, which becomes effective from 1 June 1962, will be in force until 31 March 1964, and any member who wants to opt out of it has to give six months' notice. The implication is relative stability in the sphere of banking interest rates for nearly two years.

It needs to be recognised that such concessions as have been given have been yielded by the small banks, who forego one half of the differential that they had heretofore enjoyed vis-a-vis the rest of the banking system. In fact the large banks have hardly budged from the attitude they had taken up: the definition of the medium bank is a narrow one, and it is even possible that 1962 balance-sheets will disclose that two, or perhaps three, of the medium banks will "graduate" to the status of large banks; but of course this would be offset by the entry of one or two small banks into the category of medium banks. It is obvious that the quantum of interest payable by the banking system as a whole will be increased to the extent of the additional one-eighth of one per cent that the medium banks are now being allowed to pay.

Will the differential wrested from the large banks appreciably or quickly contribute to a new growth of Deposits with the medium banks? Our answer to the question is that there may be some marginal luring away of Deposits from large banks, but the impact of the differential will be small. It is the well-managed bank, which has a care for the services and facilities it offers to clients and constituents and which has as its attributes promptness and efficiency, that will continue to record a swifter Deposit growth. We would regretfully draw the attention of medium banks to the fact that the rate of interest paid on Deposits is only one, and a minor one at that, of factors that lead to Deposit growth. The whole of this exercise, on the part of the medium banks, to secure greater competitive capacity by insisting on an interest rate differential will have served little use, except perhaps temporarily to put up the operating costs (that is, interest paid) of the medium banks. The additional payment on Deposits could instead with more profit have been deployed in meeting probable losses in the opening of new branches—which, however, it has now been proved almost invariably are successful in mobilising

Deposits; and it would appear that what the medium banks want is precisely a quicker growth in the balance-sheet totals.

It may be conceded that the differential of one-eighth of one per cent for the medium banks as now proposed will not greatly add to the burden of expenditure of this category of banks; and as we have pointed out in any case such a higher level of operating costs is certain to prove no more than temporary. But we wish this opportunity had been taken advantage of to set standards for banks' earnings as well. We had hoped at one time that the Reserve Bank would be taking action to prescribe maxima for Deposit rates, and in the contingency of the inter-bank agreement being abandoned the Reserve Bank, we are sure, would have stepped in. Now, however, the monetary authorities can once again assert that they prefer convention to compulsion. So the impetus and drive for improving banks' earning potential has to come from the banks themselves.

The last year's working results have been such that banks have been able to get off to an auspicious start in respect of strengthening the "capital" ratios. But with increases in the cost of bank labour imminent, and with the rise in the rate of corporate taxation, the surplus that banks may be able to generate may not be enough to maintain both dividends and transfers to reserves. It consequently becomes essential for the Indian Banks' Association to address itself to the task of enlarging the margin between earnings and expenditure. As Mr. Tulsidas Kilambhand hinted at the recently held annual meeting of the Indian Banks' Association, a review and revision of charges for various services that banks extend are long overdue. The intransigence of some of the bigger banks was cited as reason why no progress had thus far been achieved in this regard. It may well be that the medium banks in this context also will have to seize the initiative.

While therefore it is a great gain to stability in banking that the inter-bank agreement on Deposit rates has not been allowed to be abandoned, success here, we hope, will embolden Indian bankers now to take up the more constructive task of how best banking earnings can be enlarged, so that banks can be strengthened to deal with the varied problems of financing that they will increasingly encounter as the Third Plan gets implemented.

The crisis of confidence, with which banks were faced in mid 1960, has now fortunately been banished firstly with the introduction of the scheme for the insurance of bank Deposits and thereafter with the vigorous efforts of the Reserve Bank to strengthen banking. With the Reserve Bank stipulation of a minimum for Advances undoubtedly banks' earnings have improved. But in order that the capital ratio may be raised to a desirably high level and also so that banks will be possessed of the inner reserves to meet the losses they may experience in the new tasks that they are being asked to undertake, it is more than ever before necessary that the margin between earnings and expenditure is made to wider somewhat more; and this is the matter to which the IBA should pay immediate heed and attention.

Pattern of Gilt-Edged Holding

THE April issue of the Reserve Bank of India Bulletin analyses with extensive data, the trend and pattern of public borrowings in the country. Under the impact of planning, public borrowing has assumed considerable significance as an instrument for mobilisation of resources and extensive recourse had been had to it during the Second Plan period. The Third Plan has also laid store by a substantial share of resources to be raised through public borrowing. The Reserve Bank study discusses the subject in terms of the composition of the debt, the maturity pattern, its distribution between types of holders and changes in such distribution that took place during 1960 as compared with the previous year. A study of public borrowings in these aspects should yield important guidelines for future policy.

The total volume of rupee debt of the Central and State Governments at the end of March 1961 has been estimated at Rs 2,784 crores composed of Central Government debt at Rs 2,256 crores and State Government debt at Rs 528 crores. During 1960 there was a rise in total debt by Rs 203 crores as compared with debt at the end of 1959, accounted for by increase in Central debt of Rs 118 crores and in State Government debt by about Rs 86 crores. Of the total of Rs 2,784 crores, the Reserve Bank alone on its account held Rs 707 crores or nearly 25.4 per cent of the total debt outstanding. This large share of the Reserve Bank is an important feature being the result of the increasing reliance on Reserve Bank for the success of public borrowing programme by absorbing considerable portion of the initial issue to be later let to the public through tap sales. It is important to emphasise that it is Central debt that bulks large in the Reserve Bank's holding of Government Securities, its share in total State Government securities being almost negligible.

Next to the Reserve Bank, it is the commercial banks and co-operative banks that account for the greater part of the total debt than the other entities. The total of such debt held by the commercial banks and co-operative banks at the end of 1960 amounted to Rs 601 crores and constituted 21.6 per cent of the total debt. Insurance companies held Government securities to the tune of Rs 386 crores or 13.9 per cent and provident funds held Rs 217 crores representing 7.8 per cent of the total debt. Governments also held securities valued at Rs 268 crores working out to 9.6 per cent. The "Residual" group had holdings of the value of Rs 527 crores (19 per cent) of which Rs 181 crores was held on account of Trusts, Rs 76 crores on account of Individuals, Rs 61 crores on account of local authorities and Rs 36 crores on account of Joint Stock Companies.

As compared with 1959, there were important shifts in the holdings of securities as between the Reserve Bank and Commercial and Cooperative Banks. There was a pronounced rise of the order of Rs 240 crores in the holdings of the Reserve Bank which resulted in an increase in its proportion from 18.1 per cent to 25.4 per cent. In contrast the holdings of the commercial and cooperative banks went down by Rs 133 crores. Considering that there was a rise in holdings of Cooperative Banks by Rs 4 crores, the decline in the holdings of the scheduled banks

works out to Rs 137 crores. Rs 50 crores rise in the Reserve Bank's holdings is shown to be accounted for by the funding operation in January involving an amount of Rs 50 crores. The fall in the holdings by the commercial banks reflects in the main the effect of the new procedure for the transfer of the P.L. 480 Deposits from the State Bank to the Reserve Bank and also the pressure of demand for scheduled bank credit which occasioned considerable sales of securities by the scheduled banks to the Reserve Bank. Barring this shift in the holdings of the Reserve Bank and the Scheduled Banks, there was no significant change in the pattern of ownership, in spite of substantial additions made by the other entities. The holdings by the provident funds increased from 6.7 per cent to 7.8 per cent while that of the Insurance group increased from 12.9 per cent to 13.9 per cent. The "Residual" group showed a small decline of Rs 3.3 crores to Rs 526.9 crores, the proportion registering a fall from 20.6 per cent to 18.9 per cent.

There are also significant variations in the proportions of debt of the Central and State Governments of the various maturity patterns held by various categories. The proportions held by scheduled and cooperative banks in total Central Government and State Government securities were 33.7 per cent and 31.8 per cent respectively. For the Insurance group State Government securities accounted for the larger proportion of their holdings of securities at 25.1 per cent against 20 per cent of Central Government securities. The holdings of the Provident Funds were almost exclusively in Central Government securities, while for the Residual group, the share of State Government securities at 40 per cent was considerably larger than holdings of Central Government securities which constituted only 25.2 per cent.

There were important changes in the relative holdings of the various groups in the total of Central and State Government securities. Most importantly there was a pronounced decline in the scheduled bank holdings of Central Government securities while there was a small rise in their total holdings of State Government securities. The Insurance Group raised their holdings of both Central and State Government securities. The holdings of the "Residual" group showed a decline Rs 31 crores under Central Government securities, while their holdings of State Government securities showed a rise of Rs 28 crores.

The maturity pattern of the total debt shows the preponderance of the medium-

dated as compared with the medium-longs. Nearly 34 per cent of the total debt was in the maturity group within five years, while another 36 per cent was in the maturity group within 5-10 years. The combined proportion of the two maturity groups works out to 70 per cent of the total debt. Loans in the maturity range of 10-15 years accounted for 10 per cent, loans over 15 years for 11 per cent, and non-terminable loans for 9 per cent. The holdings of the various groups in the different maturity patterns also show significant features. The holdings of the Governments, Reserve Bank and commercial banks were mostly in the 10 year range, the actual proportion of such securities in this range being of the order of 76 per cent, 77 per cent and 88 per cent of their respective total holdings. On the other hand, the holdings of the Insurance group were distributed in the proportion of 57 per cent and 43 per cent as between securities maturing within 10 years and securities maturing after 10 years. Over 63 per cent of the holdings of the provident funds had a maturity of over 10 years. During the year 1960 there was a shift in the maturity pattern from medium-longs to medium-dated loans, which came as a sequel to the shifting of the 3 per cent 1970-75 loans, with an outstanding amount of Rs 115 crores and the 1970 State loans with an outstanding amount of Rs 57.9 crores from the former maturity group to the latter. The maturity patterns of the Central Government securities do not show significant difference from the maturity patterns of the State Government Debts. In the case of Central Government debt, nearly 71 per cent of the total fell under the maturity pattern within ten years, while the relevant proportion in the case of the State Government debts was 66 per cent. Among the various investor categories, there was a marked preference for loans maturing within 10 years by Governments, Banks and Insurance Group. Nearly three-fourths of the Central Government debt and four-fifths of the State Government debt held by the Governments were due to mature within ten years. In the case of commercial and cooperative banks, over 90 per cent of their holdings in Central Government securities fell due within 10 years, the corresponding percentage in respect of State debt being 70. In the case of Insurance group, its holdings of Central loans maturing within 10 years formed 52 per cent and of State loans maturing within 10 years as much as 68 per cent.

There were also important variations in the holdings in the two maturity patterns by the various categories of holders. While there was an increase in Reserve Bank holdings

under all categories, there was a decline in scheduled bank holdings in almost every maturity group. There was a notable drop in the share of Residual category in the maturity group over 15 years from 44 per cent to 32 per cent while the proportion of holdings by Insurance group in mediums and longs went up by 3 points each.

One significant feature disclosed by figures for public borrowings during 1960 is the substantial disinvestment of Government securities by the public which contrasts with the increase in public absorption of the order of Rs 143 crores witnessed in 1959. For the Second Five Year Plan as a whole the net

absorption of Government securities by the public aggregated Rs 458 crores. The Reserve Bank article explains the substantial difference in public absorption of Government securities in 1960 to have been caused by the new procedure for transfer of P.L. 480 Deposits from the State Bank to the Reserve Bank. "The net absorption for the four years 1956-57 to 1959-60 was overstated because of the investments of P.L. 480 funds by the State Bank of India and the net disinvestment for 1960-61 understand the degree of net absorption by the public in consequence of the change in the arrangements in regard to P.L. 480 funds in May 1960".

Sino-Soviet Bloc Aid: Myths & Facts

By FRANK M. COFFIN
Deputy Administrator For Program Agency
For International Development.

THE Sino-Soviet Bloc aid program is now in its seventh year. It was in 1955 that the Soviet Union, its satellites and Communist China started extending long-term credits and grants to the newly developing countries of the free world. The past seven years have seen a sizeable growth in the size and scope of the Bloc aid program. They have also seen a sizeable growth in the number of myths, misconceptions and misimpressions that surround the program's operations. Much has been spoken and written on the subject, but for some reason most of what has been said has tended to centre around two opposite poles of comment. On the one hand, the Bloc gets virtually nothing but gold stars for aid efficiency, performance and impact. This line of comment has no room for the "Ugly Russian". Bloc technicians are portrayed as multilingual; they know the country they work in and mix in perfect harmony with the local population. On the other hand, the Bloc aid program gets nothing but brickbats. This line holds that Bloc aid is long on promises but short on follow through. Commitment values are inflated, Bloc goods are shoddy, the aid goes mostly for showpiece projects of little intrinsic economic worth. The program is limited to a handful of countries; it made a big initial splash but is petering out, and so forth.

After seven years, we now have a better awareness of the Bloc operations to put their aid program in correct perspective. I should like to devote the discussion today to dispelling some of the myths, both good and bad, that have arisen around the Bloc program so that we can all have a more realistic picture of what we have to deal with.

Myth: The Bloc program started off with a big splash of publicity and many promises of large-scale aid, but the initial impact has worn away and the program has fallen off in the last few years.

Fact: Bloc aid commitments have risen steadily since 1955. Communist Bloc aid to non-bloc countries in the less developed areas reached an estimated total of some \$6.5 billion by the end of 1961—about \$4.5 billion in economic credits and grants and about \$2.0 billion in military aid. Economic aid commitments alone have averaged about \$1.0 billion annually for the past three years. The Soviet Union is the largest supplier, providing over 70 per cent of the total. The European satellites account for about 20 per cent and Communist China for less than 10 per cent.

Myth: Bloc aid goes to only a handful of countries and is really overplayed in terms of its worldwide effect.

Fact: It is true that some seven countries account for about 80 per cent of total Bloc economic and military aid. Those seven are Afghanistan, Cuba, Egypt, Indonesia, India, Iraq and Syria. However, substantial amounts of aid are going to many other countries. Some 28 nations are now listed as Bloc aid recipients, and the list is constantly growing. Last year four new countries were added; Cyprus, Mali, the Somali Republic and Sudan. The Bloc is expanding its program in Africa

and in recent months has been pushing harder in the Latin American republics. In all probability, we shall see the Bloc aid list continue to lengthen.

Myth: The whole Bloc aid program is overvalued. Commitments are converted into dollars at unrealistic official rates. The true worth of the program is only a fraction of the \$6.5 billion figure.

Fact: Most Bloc agreements spell out the fixed gold content of the currency in which the aid is valued, whether it be rubles, pounds, rupees, dinars, or rupiah, so that there is no question of inflated official rates. In many cases, the value of the aid agreements is denominated directly in dollars. The figures \$4.5 billion in economic aid and \$2.0 in military aid are fairly realistic valuations of the Bloc commitments to date, but it should be noted that there is room for overpricing in the bilateral negotiations on particular projects and technical services. In general, it appears that the prices for machinery and construction conform to those prevailing in the free world, although there have been notable instances—in Afghanistan, Indonesia and Iraq for example—where countries have complained about overpricing and price-hiking after terms had been agreed upon. Recently, Ghana complained strongly that the Soviets were charging far too much in maintenance and salary costs for their aid technicians.

Myth: The Bloc gives easy credits on terms much more favourable than the U.S.

Fact: It is true that Bloc interest rates tend to be generally lower than those of the U.S. However, there are a number of significant offsetting factors that should be taken into account. US loans usually carry longer amortization periods than Bloc loans. Thus, annual payments on U.S. loans tend to be lower and can be met with less strain than payments on Bloc credits. Moreover, the longer repayment schedules for US loans mean that the recipient country will have more time to expand its productive capacity and to improve its ability to pay before fully discharging its debt. Finally, low Bloc interest rates must be considered in the context of the negotiated price arrangements that apply to the assistance agreements. There is sufficient flexibility in the terms of those agreements to make it possible for the Bloc to compensate for its low interest rate.

Myth: Most Bloc aid goes for showpieces which make a visual impact but are of little real economic worth to the recipient country. Projects are papier-mache, nice to look at but without substance.

Fact: More than half the value of the \$3 billion worth of Bloc projects thus far identified is for expansion of the industrial sector of the recipient countries' economies. Projects in this sector include not only such heavy construction as the Bhilai steel mill in India, but a whole variety of industrial installations, large and small: cement plants, textile mills, sugar refineries, assembly plants, machine-tool factories of all types, farm-tool factories, bicycle and tire plants, fruit canneries, electric bulb and pharmaceutical factories and even small nuclear reactors.

About 15 percent of the \$3 billion of agreed-on projects goes for transportation and communications; highways, ports, airfields, bridges and railroad projects. Twelve per cent goes for multi-purpose hydroelectric power projects such as the Aswan Dam in Egypt and smaller power plants; eleven percent for mineral exploitation, especially petroleum development in Afghanistan, India and Pakistan. Less than three percent of Bloc economic aid goes for the type of "show-piece" projects represented by the hotel in Burma, or the

Asian games stadium in Indonesia, or the various gift hospitals that are a part of so many Bloc offers.

Myth: The Soviets execute their programs with jet-like speed, making the U.S. programs seem snail-like by comparison.

Fact: Perhaps the best way to put this claim in correct perspective is to note that out of the \$4.5 billion in economic aid commitments to date, only about \$1.0 billion or less than 25 percent has so far been expended. Bloc expenditures were at a peak in 1961, totalling some \$300 million, but at the rate of \$300 million a year it would take another 10 years to exhaust the present unexpended balance, even if no new commitments were made. However, I think we can expect the rate of expenditure to speed up considerably as surveys are completed and more and more projects move into the implementation stage.

It is true that in several cases, especially where the political stakes were high, the Soviets have moved ahead rapidly to carry out their program. We saw this in Afghanistan in the road-paving, bakery and silo projects. But in the overall picture, it seems that the Soviets have run into the same difficulties in performance that we have: transportation problems, material shortages of local currency and similar impediments. In some countries, Bloc implementation has moved at a creditable rate—in Afghanistan and Yemen for example, where roads, airfields, ports, and several factories have been completed. In India, the USSR-built Bhilai mill at Madhya Pradesh is now producing at the rate of 1 million tons of steel annually; the plan is to expand output to 2.5 million tons a year. Czechoslovakia has completed a number of cement and sugar plants at Assam and Madras. In other countries, however, the programs have barely gotten off the ground despite the age of the commitment. This is true in Ethiopia, in Indonesia and in Iraq. There are many countries where long-standing umbrella credits have not yet been obligated because of the inability of the Bloc and the recipient country negotiators to reach agreement on specific projects.

Myth: The Bloc gets rid of its obsolescent equipment through its aid program. Military aid equipment in particular is outmoded and of no further use to the Soviet Union.

Fact: In general, Bloc equipment and construction materials, while in most cases below western standards of quality, tolerances and finish, appear adequate to do the job for which they are intended. There have been many instances, however, where Bloc equipment has caused considerable difficulty and significantly delayed progress on individual projects.

The story on Bloc military aid is similar—generally satisfactory but with several exceptions. While it is true that many of the items delivered may be obsolescent by advanced Soviet standards, it is nonetheless a fact that those items are a desired and welcome addition to the military establishments of the recipients. Even so, not all of the equipment is outmoded, by any standards. Russian aid includes late model T-54 tanks, TU-16 jet bombers, MIG-19 and even MIG 21 jet fighters. Some short-range tactical missiles are also reportedly being delivered.

Here, too, there have been quite a few instances of defective equipment being received. Bloc naval vessels sent to Indonesia were not designed to operate in hot climates and have broken down frequently. Compressors have gone bad because of overheating. Spare parts have been unavailable, so that many ships have been rendered inoperable for long periods.

All in all, however, it appears that such deficiencies have not been major obstacles to the Bloc aid program as a whole. Recipient countries complain, argue, bargain and adjust, but desirous, and in some cases desperate, for more aid, they continue to move ahead with the Bloc on project agreements and new aid commitments.

Myth: Countries are not over-run by large numbers of Bloc aid personnel. There are no "Ugly Russians" among Bloc technicians working abroad. Bloc technicians mix well, cause little friction and stay out of trouble.

Fact: Actually there are probably more Bloc aid technicians in their 28 aid-recipient countries to which we give aid. A major reason that the Bloc aid program is more heavily project-oriented than is our own program at present, so that more people are needed to survey, plan, supervise, and construct. Of course, this comparison does not take into account the technicians of private U.S. companies abroad or those of other western nations.

It is estimated that about 8500 Bloc economic technicians were working in the less developed countries during the last half of 1961. This was a 30 percent rise over the number in 1960. There were nearly 200 technicians in Afghanistan, over 700 in Egypt, over 500 in India and large numbers in Guinea, Yemen, Iraq, Syria and Indonesia. While in general Soviet personnel appear businesslike and competent, although too narrowly specialized, there have been a number of instances where the Russians have gotten out of line.

From all evidence, Soviet technicians do not mix well. They keep pretty much to themselves, living in self-contained enclaves, keeping their own schools, and shying away from social invitations. They do like to shop in the bazaars and market places, however, and they are known bargainers.

Myth: Russian technicians speak the local languages fluently and are thus able to get along better with the people of the country they are working in.

Fact: Bloc aid personnel usually have not had language training, but propaganda has exploited exceptional instances in order to create an impression that Bloc countries have available large numbers of language-trained technicians. There are some reports of Bloc technicians speaking fluently such languages as Hindi, Persian, Pushtu, and Farsi, but proficiency in foreign languages is the exception rather than the rule as far as Bloc aid personnel are concerned. By contrast, it appears that Bloc diplomatic personnel are generally well trained in the language and culture of the country to which they are assigned. Diplomatic officers reportedly receive a bonus of 10 per cent of their base salaries for competence in European languages and 20 per cent for exotic languages.

Reports indicate that Bloc technicians occasionally attempt to learn the language of the area of their assignment, but that usually they are content to depend upon their own and foreign translators. Interpreters are an integral part of the Soviet technician team. A few Bloc technicians may be competent in the second language of an area, such as English in India, but in general it appears, on the basis of available evidence, that Bloc aid personnel probably encounter greater difficulty than American personnel in overcoming language barriers. In Burma, for example, it has been reported that American personnel are at an advantage because of the prevalence of the English language, whereas most Bloc personnel have to be accompanied by interpreters. In Iraq, the Russians have en-

countered great difficulty with Arabic, and they are short of interpreters.

Myth: The USSR cannot afford to continue an aid program of over a billion dollars a year to the free world, especially since it is also giving substantial amounts of aid within the Bloc to the satellites and to North Korea and North Vietnam.

Fact: Despite heavy demands at home for military spending, the space effort and domestic investment, the Soviet leadership apparently feels strongly that it is in its national self-interest to carry the added burden of foreign aid commitments, both within and outside the Bloc. Soviet aid to other Bloc countries is estimated at some \$6 billion since 1955. Air commitments to the newly developing non-Bloc countries have recently been about a billion dollars a year. Together, Soviet aid to the Bloc and non-Bloc countries represents on the order of one percent of Soviet gross national product, about the same proportion as our own but from a smaller base. It should be noted, however, that although commitments are substantial, actual deliveries are spread over a period of years so that the real drain on Soviet resources is somewhat reduced at present. Undoubtedly requirements of the Soviet aid programs have caused short-run strains in certain sectors of Russian industry, especially in the case of capital equipment. Shipments of complete plants, such as sugar and oil refineries or cement mills appear to have caused some difficulties but not major ones. Similarly, requirements for such major projects as the Bhilai steel mill, the Aswan Dam and the oil refinery in Iraq have sometimes conflicted with Bloc internal needs, but these conflicts are not judged to be of a serious nature.

Individual well-being is linked with national prosperity and only planned efforts can assure both in the shortest possible time. And planning, for its success, largely depends on savings, individual as well as national.

Saving in the form of Bank Deposits provides resources for the National Plan.

26 May 1962

World of Finance

SLACK SEASON

Easy Conditions in the Offing?

What will the 1962 slack season prove to be like? Its intensity (or otherwise) is important from the money market point of view, and it would be helpful if we could in this regard essay some sort of estimate. At the outset let us make clear the fact that there will be a slack season, in the sense of seasonal funds returning. What in the past has happened now and then is that such return of funds has been obscured because it has been offset by increase in a distinctly different kind of bank accommodation—Industrial Advances. The slack season gets to be pronounced for one of two reasons: if the outflow of seasonal finance is on the high side by the same token the inflow is also in large amount; again, if there should be some element of stagnation in industrial production, or a deceleration in the rate of growth, the slack season contraction in bank credit tends to be accentuated.

Thus, the first fact with which we may start assessing the prospects of the 1962 slack season concerns the quantum of busy season expansion in bank Advances. As we noted a few weeks ago a new record has been touched this year with increase during the notional busy season exceeding Rs 200 crores. It stands to reason, consequently, that the return of seasonal finance should also be correspondingly high.

The second fact is one of scarcity of foreign exchange resources. Maintenance imports, we are afraid, may quite conceivably suffer; and that will surely tend to affect production. Hence the growth of industrial financing during the 1962 slack season may be somewhat low.

Therefore, for the two reasons we have indicated, bank Advances should contract; and the Finance Minister's injunction to bankers recently in Bombay, that they should exercise more restraint in Advances to industry, should be one more reason why industrial Advances should be slow to expand.

On the other or positive side, there is no reason why the trend of steady increase in Deposits should not continue. What with restored confidence in banking, and implementation of branch expansion schemes, the mobilisation of new resources by the banking system can be taken for granted.

Furthermore, with borrowings from the Reserve Bank already at a low level, the pressure upon the banking system, at the very start of the slack season, is already small: and prospects of the pressure being reduced to nothing are very bright indeed. However, if the monetary authorities should frame a new loan specifically for banks, all available surplus resources of the banking system would find their way into such a loan, and we may—though temporarily—have some element of pressure.

But, to sum it up, it is quite clear that for a variety of reasons the 1962 slack season should produce really easy money conditions.

An embarras de richesse is quite on the cards. It would be all to the good if such surplus of resources were to compel the banking system to revise its views as to what should constitute the maxima for rates of interest paid on Deposits; but that of course would be to hope for far too much. A pronounced busy season (such as 1961-62 was) followed by an accentuated slack season (which we believe 1962 will be) should assure that banks will have less of a problem in financing the 1962-63 busy season: they will in every way be better prepared for it.

UNITED INDUSTRIAL

Slow Growth in Deposits

The difficulties experienced by a small bank are underlined in the accounts of the United Industrial Bank Ltd for 1961. Growth in Deposit resources has been slow, with the total rising by Rs 11.67 lakhs to Rs 1.58 crores. While Fixed Deposits are slightly lower at Rs 45.15 lakhs against Rs 46.70 lakhs, the two other categories show increases: Savings Bank Deposits have improved from Rs 41.94 lakhs to Rs 48.16 lakhs and Current Accounts from Rs 57.47 lakhs to Rs 64.47 lakhs.

The bank has nevertheless adopted a very cautious attitude toward Advances, which are actually lower by Rs 1.89 lakhs at Rs 98.32 lakhs. The gilt-edged portfolio has been substantially added to, in being shown Rs 18.09 lakhs higher at Rs 58.35 lakhs. The result is that cash balances, including money at call and short notice, have declined from Rs 26.00 lakhs to Rs 19.03 lakhs. The loss carried forward has increased from Rs 0.89 lakh to Rs 1.86 lakhs by virtue of the deficit shown in the latest year.

According to the profit and loss account the gross income has gone "up" by a little under half a lakh of rupees to Rs 9.24 lakhs; but this of course includes the loss for the year of Rs 0.97 lakh. In fact the income by interest and discount fell by Rs 0.41 lakh to Rs 6.46 lakhs, though this was partly offset by an improvement of Rs 0.14 lakh to Rs 1.69 lakhs in the income by way of commission, exchange and brokerage.

Interest paid absorbed rather more at Rs 3.33 lakhs against Rs 3.06 lakhs, and salaries and allowances cost Rs 0.16 lakh more at Rs 4.45 lakhs. The net result of decline in income and increase in expenditure is to transform the profit of Rs 1.878 in 1960 to, as we have already noted, a loss of Rs 0.97 lakh.

The Directors' Report points out that the loss for the year has arisen because the Board do not consider it "prudent" to charge interest on "some of its suit-filed and decreed debts in accordance with the terms of the relative decrees". The Report adds: "The unrealised interest to which the Bank was entitled in law during the year 1961 was to the tune of Rs 2.00 lakhs excluding the interest which accrued in previous years." In as much as the Advances are, according to the Directors' Report, "secured by valuable urban properties", the bank may be said to

have reasonable hope of collecting both the principal and the accrued interest. However, it is necessary to add here that the Auditors' Report to shareholders remarks that "Advances include an amount of Rs 2,86,000 approximately which, in our opinion, is doubtful of recovery and which has not been provided for in the accounts." Lastly we may point out that there is a liability of shareholders on uncalled capital to the tune of over Rs 9 lakhs—that is, more than enough to meet both the bad debt to which the Auditors have made reference and the carry forward of loss in the balance-sheet of the bank.

BANK RETURNS

Beginning of the Slack Season?

Signs of the 1962 slack season setting in are clearly evident in the returns of the Reserve Bank for the week ended 18 May. Active Note circulation has receded by Rs 14.64 crores to Rs 2,146.66 crores, though there has also been outflow of Rupee Coin in the nominal amount of Rs 0.24 crore. With a view to buttressing Balances Held Abroad, in the Banking Department, it has been necessary to transfer Rs 3.50 crores from Foreign Securities in the Issue Department, the relative figure moving down to Rs 101.50 crores. Currency has also been contracted for Rs 2½ crores against Rupee Securities by transfer to Investments in the Banking Department. Thus, the Reserve Bank's cash in the till has moved down by Rs 10.60 crores to Rs 16.34 crores. It may also be noted here that the foreign assets held by the Reserve Bank in both Departments have fallen to Rs 197.73 crores; moreover the import gap not covered by foreign assistance worked out to Rs 2.07 crores during the week.

The Central Government has been the beneficiary in this the third week of the month, with the State Governments apparently making repayment of loans and advances. The Centre's balances are higher by Rs 3.69 crores, and there is no evidence of deficit financing. On the other hand, balances of State Governments have been run down by Rs 6.43 crores to Rs 12.35 crores, despite an increase of Rs 7.53 crores to Rs 117.38 crores in their ways and means borrowings from the Reserve Bank. With the Reserve Bank's portfolio of Government of India Treasury Bills purchased and discounted practically unchanged at Rs 70.22 crores it would appear that the States did not try to replenish their balances by rediscount of such ad hoc as they might have had.

Investments in the Banking Department are Rs 25½ crores higher at Rs 180.97 crores. Of this a sum of Rs 2½ crores is traceable to transfer from the Issue Department. The balance of Rs 4 crores relates to sale of gilt-edged by the State Bank during the week.

Easing of pressure upon the banking system is indicated by the fall of Rs 9.84 crores to Rs 129.14 crores in the Other Loans and Advances of the Reserve Bank; and that such reduction in debt should be largely on account of Scheduled Banks is suggested by the decline of Rs 4.29 crores to Rs 6.92 crores in the Reserve Bank's advances against usance bills. However, Reserve Balances of member banks stand reduced by Rs 1.74 crores at Rs 87.30 crores notwithstanding an increase of nearly Rs 3 crores in the State Bank's cash in hand and with Reserve Bank. So it would appear that member banks have partly utilised their Reserve Balances to repay central banking debt.

Lastly, as already noted, Balances Held Abroad are higher only by Rs 1.43 crores at Rs 6.23 crores despite a transfer of Rs 3.50 crores from the Issue Department. Foreign assets in the holding of the Reserve Bank are falling to grievously low levels, and it is therefore most heartening news that India has secured assistance from the United Kingdom in the amount of Rs 10 crores to help the general balance of payments problem. It needs nevertheless to be stressed that the outlook is not too hopeful, since the slack season for exports has just started. Each succeeding week may witness an import gap of very nearly Rs 5 crores, and unless further drawings are made upon the International Monetary Fund, or unless we are vouchsafed rather more by way of untied loans, we may find our foreign exchange reserves dwindling by the end of September, in a most disquieting manner and to a most disturbingly low level. It is therefore likely that India should approach the IMF for the purchase of currencies for another \$150 million in the course of the next month or so.

The return of the State Bank for 18 May is featureless except in that it records what probably is a slack season fall in its total of Advances without, it may further be remarked, the Rs 300 crore mark being touched. Deposit resources have staged a modest rise of Rs 0.71 crore to Rs 574.34 crores and a fractional fall of Rs 0.13 crore to Rs 0.91 crore in borrowings has also been recorded. Strangely there is a further drop of Rs 4 crores to Rs 224.65 crores in the gilt-edged portfolio, whereas Other Assets have risen again by Rs 2.60 crores to the unusually high figure of Rs 43.12 crores. Consequently we deem it possible that the State Bank should in the next week or so figure as a prominent purchaser of gilt-edged from the Reserve Bank—unless the intention is to conserve resources in order that the State Bank's subscriptions to the new loan should be hefty. The total of Advances has shrunk by Rs 1.82 crores to Rs 296.91 crores. The end result is an improvement of Rs 3.28 crores to Rs 29.99 crores in the State Bank's cash balances, including money at call and short notice.

Spillover of beginning of the month disbursements has had a manifold impact upon the return of Scheduled Banks for 11 May. Deposits are lower, suggesting that constituents had felt the need to draw upon their balances; the total of Advances has further risen, indicating greater recourse to bank credit; consequently the banking system has had in turn to borrow more from the central banking institution.

Also, a switch-over from Demand to Time Deposits is taking place and this may reflect constituents' awareness of the end of the busy season. Demand Deposits (excluding borrow-

ings from banks) are considerably lower by Rs 12.76 crores at Rs 885.79 crores; and the switch-over is only partly reflected in the rise of Rs 5.69 crores to Rs 1,215.46 crores in net Time Deposits.

The total of Advances has marched further ahead by Rs 3.18 crores to Rs 1,441.72 crores, but the bulk of the increase is traceable to the State Bank. Even so the drop of Rs 18 crores to Rs 574.77 crores in banks' holdings of gilt-edged is wholly on account of the State Bank. The resulting strain upon the banking system stands reflected in a small rise of Rs 0.50 crore to Rs 20.35 crores in borrowings from the State Bank and in a rather larger rise of Rs 7.81 crores to Rs 21.96 crores in indebtedness to the Reserve Bank. Cash balances including money at call and short notice are practically unchanged at Rs 203.59 crores as compared with Rs 203.39 crores in the previous week's return.

The returns of the Reserve Bank for 18 May have already disclosed a considerable easing of pressure upon the banking system. For indebtedness of the central banking institution has probably been halved to about Rs 10 crores. Partly it is certain that cash balances were run down for this purpose. Partly also it is possible that the total of Advances should have contracted; and we believe that thirdly there may have been some element of improvement in Deposits. The fact that borrowings of Scheduled Banks (as at 18 May) are just around Rs 10 crores, with the added prospect that they may be reduced to practically nothing by the fourth Friday in the month, may both conceivably mean that the Central Government will be emboldened to advance the rate set for the first tranche of its borrowing effort in the current fiscal year. When will the announcement be made? And when will the subscription lists be opened? Some clues may become available in the next week or two, depending on whether or no, and also how, the Reserve Bank sets about grooming the gilt-edged market.

The Common Market Talks

By Paul Einzig

IT now seems highly probable that the negotiations over Britain's entry into the Common Market will reach their decisive phase within the next month or two. In spite of this it is impossible to form a clear opinion about the approximate terms on which agreement could be reached. The outlook changes from day to day. On even days President de Gaulle

or Dr Adenauer come out with some highly uncompromising statements which make the conclusion of an agreement appear extremely unlikely. On odd days there is a burst of optimistic statements and they make it seem as if it was all over bar the shouting. In Britain itself the picture presented by the Press about the attitude of public opinion towards joining the Common Market is full of contradictions. The Government and the Conservative Party are making an effort to popularise the idea, but it seems that only a small though vocal section of British public opinion is really in favour.

The main reason why the Government itself is so anxious to join the Common Market is that it hopes to enforce a healthier spirit in British industry as a result of increased Continental competition. Some such improvement is indeed badly needed not only as far as the trade unions are concerned but also in regard to the attitude of employers. Under the threat of a national strike the employers of wages combined with a costly cut in working hours, in defiance of the Government's policy of wage restraint. While in this instance it would have made little difference if Britain had joined the Common Market, in the case of industries exposed to continental competition it would make quite an appreciable difference.

The recent experience with the German motor industry gives some indication of the way in which inflation could be kept down as a result of joining the Common Market. The German motor manufacturers disregarded Dr Erhard's exhortations to cancel their recently announced price increases. Thereupon it was decided to reduce import duties on cars from other Common Market countries. The resulting additional competition from France and Italy is bound to teach a lesson which will be remembered by motor manufacturers and other West German industrial employers. The mere fact that such cuts are possible greatly facilitate the Government's task in imposing its policy on industrialists.

It is true, such gestures could be made even without joining the Common Market. In fact an agreement has just been reached in Geneva, providing for a 20 per cent cut in British import duties on a very wide range of goods imported from the Common Market. It seems probable, however, that tariff cuts would encounter less political resistance if effected within the framework of the Common Market. Once the additional 10 per cent cut in the tariff between Common Market countries is carried out, on 1 July, Britain would have to cut her tariff by another 30 per cent in relation to Common Market countries, making a total cut of 50 per cent. This gives an idea of the extent to which British employers would have to keep down their costs in order to be able to compete.

In spite of this, it seems probable that pessimistic anticipations of wholesale bankruptcies as a result of joining the Common Market are grossly exaggerated. In spite of the handicap of preferential duties within the Common Market, British exports to the Common Market have been increasing. The experience of France too, should go some way towards restoring confidence. Widespread expectations that French industries would not be able to stand up to German competition have proved to be largely unfounded. The fittest industries survived in both countries, and it seems, probable that the same will be the position in Britain if she were to join the Common Market. The weak spots would be eliminated and the better spirit in industry would strengthen the strong spots.

—(Copyright).

Notes

CORPORATE FINANCE

A Reserve Bank Study

An interesting study of the company finances in representative selection of industries is contained in the Reserve Bank of India Bulletin April 1962. The industries included are engineering, shipping, sugar, cotton, paper and chemicals and the total number of units covered by the study is 118. The article gives figures for combined income, expenditure and appropriations, the combined balance-sheets, assets formation and the sources of financing for the 118 public limited companies. The relevant data given relate to 1959 and 1960* which enables a comparative study of the finances of these companies.

The combined income, expenditure and appropriations account shows sales main income to have risen from Rs 248.1 crores to Rs 266.9 crores in 1960 which represents an increase of about 7.6 per cent. On the expenditure side, raw materials consumed and other manufacturing expenses registered an increase of Rs 24.4 crores or 15 per cent from Rs 144.2 crores in

* i.e. Accounting years ended during the quarter April-June 1960 and April-June 1961 respectively.

1959 to Rs 166.6 crores in 1960. There was an increase in wages and salaries of the order of Rs 4.0 crores the total wages and salaries bill having gone up from Rs 38.47 crores to Rs 42.42 crores. It is noteworthy that total excise duty paid by the companies under review shows a slight fall from Rs 19.05 crores to Rs 18.96 crores. Also noteworthy is the slight fall in the total of managing agents' remuneration from Rs 169 lakhs to Rs 167 lakhs. Tax provision had increased by about Rs 1.8 crores and hence in spite of the increase of Rs 2.4 crores (13 per cent) in profits before taxes, profits after tax show only a fractional rise of Rs 67 lakhs. Profitability in these representative selection of industries has been maintained and gross profits as percentage of gross sales and gross profits as percentage of total capital employed were somewhat higher at 10.4 per cent and 9.2 per cent in 1960. The combined account may however give a misleading picture of the state of profitability in the individual industries. Particularly in the older industries like cotton textiles, sugar, shipping etc, earnings in the last few years have been considerably depressed by rise in cost which has remained unneutralised by rise in price or freight.

The total liabilities/assets of the 118 companies during 1960 increased by Rs 33.6 crores (12.5 per cent) from Rs 269.3 crores to Rs 302.8 crores in 1960. On the liabilities side, the increase was mainly in respect of borrowings which went up by Rs 11.9 crores, free reserves and surplus which rose by Rs 7.5 crores and trade dues and other current liabilities. On the assets side, the important feature was the rise in inventories to the tune of Rs 24.9 crores mostly accounted for by accumulation of sugar stocks. The gross fixed assets recorded an increase of Rs 12.9 crores from Rs 190.9 crores in 1959 to Rs 203.4 crores in 1960. A major part of the increase at Rs 9.3 crores was accounted for by fixed assets like machinery and plant.

The rates of capital formation (rate of increase in fixed assets and inventories) gross and net increased to 13.7 per cent and 14.9 per cent respectively during 1960 the comparable figures for the previous year being 8.6 per cent and 8.0 per cent. The total assets formation in the companies covered by the review during 1960 was of the order of Rs 42.07 crores of which inventories accounted for the largest share of 59 per cent, while gross fixed assets rose by

about Rs 12.5 crores or by 30 per cent. Industrywise the gross fixed assets formation was highest in the engineering industry the relevant figure being Rs 3.3 crores while sugar industry accounted for Rs 2.6 crores followed by shipping at Rs 1.5 crores and cotton textiles at Rs 1.0 crores. The higher figure for engineering industries reflects the strident progress the engineering industry has been making in the last few years in the direction of expansion and diversification of production.

The figures in respect of sources of funds show external sources accounting for the greater part of funds, the relevant figure being Rs 22.2 crores and constituting 53 per cent of the total funds. Borrowings at Rs 11.9 crores constituted the major part of external sources. On the internal side depreciation reserves and free reserves and surplus contributed Rs 8.5 crores and Rs 7.9 crores respectively.

COAL

The Wind of Change?

In his speeches in the Lok Sabha and at other places since his assumption of office as the Minister for Coal, Mines and Fuel, Mr K. D. Malaviya, has given indications of a new policy towards coal and particularly the private sector engaged in the coal industry. Obviously, the new tone in official policy set by Mr Malaviya springs from the concern for reaching the Third Plan target for coal production. For with the continuing difficulties being experienced by the coal industry in respect of transport, power and capital funds to finance the Third Plan expansion schemes, it has been becoming apparent that the industry will be hard put to it to attain the level of production envisaged in the Third Plan. With the shortfall in production in the first year of the Third Plan and the likelihood of the Third Plan target being further revised upward, the problem will become all the more difficult for the coal industry. Mr Malaviya, has laid the greatest emphasis on maximising production without reference to any target and in this light has promised every kind of assistance i.e. financial and technical to help the industry. Fears of nationalisation have been put at rest by firm assurances and the private sector has been promised an increase in price, the first step he has taken to create the favourable climate under which production could be stepped up. Earlier hopes of generous concessions in price have however been belied and it has been clarified that the price increase will be only marginal and further confined to the superior grades only. While the ostensible reason for confining the price increase to superior grades is to encourage their production at

the expense of the inferior grades, it takes no account of the recent trend in production of coal which shows increase mainly in respect of the lower grades. In a total rise of 3.92 million tons which occurred during last year, increase of the order of 3.76 million tons was accounted for by Grade 1, while the selected grades actually showed a decline of 1.5 million tons. A recent memorandum submitted by the Eastern Mining Associations has underlined the point that an increase in basic price of less than Rs 5.43 per ton will not be sufficient to meet the needs of industry to neutralise the rise in costs and to take care of capital needs etc. It has further been pointed out that an increase of this order will have no serious impact on general cost of production. On the basis of average cost inclusive of freight, it has been stated that the rise in cost will be no more than 1.81 per cent in 29 manufacturing industries studied by the Association. The Coal Consumers' Association has also expressed itself as not being opposed to rise in price if coal of the right quality could be supplied at the right time. Having regard to all these facts, further consideration of the claims of the coal industry seems warranted.

Mr Malaviya has also suggested new solutions for the transport difficulties that now hamstring production. Integration of river traffic with intensified road movement is the core of the new remedy that Mr Malaviya suggests for overcoming transport obstacles. River transport is proposed to be utilised for movement of coal in UP and Bihar to up-country mofussil areas for consumers having the lowest priority at pre-

The Third Five Year Plan
Bird-Heilgers' part in it...

FOURTEEN MILLION NEW JOBS

Employment. A word that translates into a meaningful future for millions of people without jobs. India's Five Year Plans are aimed at the concept of full employment. The intensified drives of the Third Plan are estimated to create 14,000,000 new job opportunities—more jobs for more people than ever before in the economy's history! To achieve the employment target calls for a single-minded national effort. It must be co-ordinated, dedicated, complete...

75,000 jobs—and more in the offing Bird-Heilgers is convinced that the quickening tempo of industrial activity must be accelerated if unemployment is to be checked and full employment brought about. Wedded to this concept, the group provides well-paid employment for approximately 75,000 people. They are concerned with iron ore and insurance policies, bridges and writing paper, gunny sacks and laboratory tests—a complex of goods and services which involves the group heavily in the industrial resurgence of India.

Towards a self-generating economy...

A phrase on everyone's lips. A phrase

that finds concrete expression in the urgent activity of an economy on the move. Bird-Heilgers reflects the nation's striving. The group delivers millions of tons of basic materials to the new blast furnaces. It produces jute goods, paper and board, air compressors and springs, and engineering and water treatment equipment. A project for the manufacture of coal washeries was the first in India. Planned diversification finds the group engaged in shipping, insurance, exporting and importing. Its agency department handles everything from heavy capital equipment to light consumer goods.

...and an exciting, promising future The Five Year Plans are a challenge: existing industries must expand, new industries open up, per capita income increase. India needs more goods and services than ever before. Bird-Heilgers is alive to the problems of a growing economy. The group deploys the full potential of a century's resources, technical knowledge and executive skill to increase and broaden its activities...provide employment for many more thousands...join the national drive to economic independence.

BIRD & CO., (PRIVATE) LTD., F. W. HEILGERS & CO., (PRIVATE) LTD.,
Chartered Bank Buildings, Calcutta-1

sent. This will help to reduce the pressure on Railways for movement of coal to these areas. The Third Plan target for coal movement by river transport has tentatively been fixed at 3.5 million tons. Attainment of this target is dependent not only upon the number of power tugs barges etc. but also the number of trucks that could be pressed into service to carry the coal from the producing points to the river loading stations. It has been stated that a large fleet of 10 ton trucks may be made available with the co-operation of the Defence Ministry. Possibility of truck-trailers capable of carrying as much as 90 tons has also been held out. The feasibility of the new modes of transport indicated by Mr Malaviya is not to be doubted, but their significance for improving the transport position in the immediate years ahead appears very little. As far as the Bengal Bihar area is concerned, it has been stated that the movement of coal by Railways will be pegged at the present Third Plan level and that increased movement by rail will be possible only in the outlying fields. While this underlines the need for maximising production in the outlying fields which had a poor record in the Second Plan, additional transport needs arising from further upward revision of the coal target in the Bengal Bihar area have also to be considered. The setting up of a transport division in the Department of Coal is to be welcomed as a step in the right direction. This will ensure proper attention being paid to the transport needs of the coal industry in time to forestall future bottlenecks. Another welcome decision announced by Mr Malaviya relates to the question of subsidy for movement of coal by trucks in the West Bengal State. The inequity of the higher freight which the industries in West Bengal have been called upon to bear consequent on the diversion of coal movement by road, has long been brought to the notice of the Centre.

COAL West Bengal Wins

At last a decision seems to have been reached by Mr K. D. Malaviya, Union Minister for Coal, Mines and Fuel and Dr B. C. Roy West Bengal Chief Minister on the question of the West Bengal Government's claim to allow it to develop coal mines on lands in its possession. Reports aver that the substance of the West Bengal Government's claim has now been conceded by the Union Minister. The dispute has been hanging fire for fairly long and the settlement that is now reported is to be welcomed. It is more than a year

since the West Bengal Government first put up its claim to develop coal mines in the State on its own and this claim, as the West Bengal Government has explained, was grounded on its right of ownership of land acquired by the Government after the abolition of the Zamindari system of land tenure. The arguments of the Centre in objection to this claim was partly constitutional and partly pragmatic. Moreover, in view of the existence of the National Coal Development Corporation to develop coal mines in the public sector, the entry of a new agency in the public sector would have served only to hinder coordinated and integrated development of coal production in the public sector. Such arguments were met by Dr B. C. Roy who took his stand as an owner of property and argued that it was incongruous to allow the private sector to expand production while denying the same right to the State Government. At the Conference of the Eastern States interested in the mining industry, Dr B. C. Roy mobilised the support of Government spokesmen of neighbouring States in support of his State's claim. The particular constitutional dispute was also referred to the Supreme Court before which it is still pending.

The implications of the new settlement are however not yet clear. Even the specific details of the scheme which would allow the West Bengal Government to develop mining on its own remain yet to be worked out. When fuller details are available we shall be able to see how the seemingly insuperable constitutional and other obstacles have been overcome. It is probable that some ad hoc arrangement has been agreed upon. Such a solution would hardly be a satisfactory way out of the difficulty. For the West Bengal claim is symptomatic of the pressure in a federal set-up in which the constituent units feel the need for greater financial and other forms of local power and patronage. It is quite likely that in the wake of West Bengal's success in having its own way may induce other State Governments to press their particular claims, for industrial development in strategic sectors independent of the Centre.

There is, for example, the dispute between the Assam Government and the Centre on the question of the royalty rates to be paid for oil produced in Assam. Though the two disputes differ in details, the fundamental principles involved are more or less the same. Unfortunately, the Constitution is not very clear regarding State rights in such matters. The Industrial Policy Resolution has also not helped to clarify the position. It is therefore important that a firm first principles are enunciated and no ad hoc solution that wins temporary respite is accepted as sufficient unto the day.

KOYNA

More Power to Maharashtra

With the inauguration of the first turbo-generator of the Rs 42 crore Koyna project by Mr Y. B. Chavan, the Chief Minister of Maharashtra, on Wednesday 16 May, the State has taken another stride toward self-sufficiency in power generation. The project, which is on any manner of reckoning a prelude to prosperity to the State, holds potentialities for bringing an economic and industrial upheaval to the State when the power that will be available from it will be diverted to serve the needs of the existing industrial undertakings and for those that are to crop up in the future and also for exploiting the agricultural resources of the State.

The Koyna project which was launched as early as 1954 was programmed to be completed in three distinct stages. It is the first of these stages that has been commissioned by Mr Y. B. Chavan. This stage comprises the construction of a reservoir by damming the river in the Deshmukhwadi gorge with a view to storing the water which will subsequently be diverted to the power station situated under ground. The storing capacity of the reservoir is 36,000 mc ft of water and four generators with an aggregate capacity of 240 mw will be installed for the generation of electricity. The three other generators are scheduled to be commissioned at regular intervals of six months so that the targeted capacity can be achieved before the expiry of 1963.

The subterranean existence of the power station, a unique feature in itself, is pregnant with both economic and technical advantages. For instance the station is completely safe from any depreciation from the air or ground and the total cost of construction has been drastically reduced by over Rs 1.5 crores.

That the power generated from this project will cater to the industrial and lighting requirements of the people of Western Maharashtra will not be disputed. Besides, as stated by the Chief Minister at the time of inauguration, it would be a new tool which would assist fulfil the long-cherished ambitions of the Maharashtrians and should help drive away the forces of darkness, ignorance and poverty. Though in the initial stages the power will be supplied to Greater Bombay, the rural areas will be served within a short span of nearly seven weeks. According to the present estimates with the commissioning of the remaining phases of the Koyna project and the completion of the Tarapore atomic power plant, the power needs of the State will be almost fulfilled, and when these

projects are finally completed Maharashtra will be transformed into a bee-hive of industrial activity. The quantum of aid received from the World Bank and the US Government under the Technical Co-operation Mission Programme has been helpful to an immeasurable extent for transforming this dream into a reality. The World Bank has so far released \$19 million to cover the expenses of stage one and two of civil works and electrical and mechanical works including Koyna-Sholapur transmission scheme undertaken by the Maharashtra Electricity Board. Rupee expenditure has been financed through loans from the Centre to the tune of Rs 11.5 crores.

The project is an impressive feat of engineering dexterity of which both the State and the nation can be legitimately proud. The complicated and massive tunnel system and other delicate technical works bear eloquent testimony to the engineering skill of the team engineers who has completed this gigantic and awe-inspiring of structure.

PUBLIC SECTOR Industrial Front in 1961-62

The report of the Ministry of Commerce and Industry detailing its activities in 1961-62 provides a lengthy and analytical study of the progress registered by the various public sector enterprises in the country. The task of accelerating the tempo of industrial development and the building up of the base of the industrial structure in India was shouldered by the Government of India ever since the enactment of the Industrial Policy Resolution of 1956. Consequently the Government undertook the establishment of a host of key and capital-intensive industrial ventures for the production of heavy electrical goods, heavy engineering goods, cables, machine tools, fertilisers, newsprint and the like in public sector. The public sector undertakings under the administrative control of the Ministry of Commerce and Industry are in the shape of companies, the shares of which are held by the President or his nominees and under the management of Boards of Directors comprising both official and non-officials. The decision to constitute a Joint Committee of Parliament on State undertakings, on the recommendations of the Krishna Menon Committee and the result of other similar studies, was particularly aimed at securing an effective control by Parliament over such projects and enterprises consistent with their autonomy. Other major decisions relate to the composition of the Board of Directors of Government Companies and Corporations, increasing their powers to create and fill up vacancies and to sanction expenditure on capital works. The chief executive officers of Government companies were empowered to exercise, in exigencies, discretionary

AVB's newest assignment: to supply high pressure boilers for the Delhi 'C' Power Station of the local Electric Supply undertaking.

These modern steam generating units, designed to deliver 960° F-steam at a pressure of 1300 lb. per sq. in., will drive two turbogenerators with a total capacity of 125,000 kw. There will be provision for increase to 187,500 kw. in the near future. Low grade coal, the primary source of energy for the power plant, will be processed in the latest Babcock Type 'E' Pulverisers and burned under the surveillance of automatic combustion control equipment.

The Delhi installation is the latest in a distinguished series of contracts entrusted to AVB in Maharashtra, Madhya Pradesh, Uttar Pradesh and other parts of India.

In providing much-needed thermal power for Delhi, AVB will make yet another contribution to the development of Indian industry...the all-round progress of the nation.

...a powerful partnership for progress

An outstanding example of international collaboration, AVB brings to India the varied and extensive knowledge of three leaders in industry—India's Associated Cement Companies Ltd., Britain's Vickers Ltd. and Babcock & Wilcox Ltd. These famous enterprises have joined together in establishing at Durgapur a large and modern heavy engineering works to 'tailor-make' cement-making machinery, high pressure boiler plants and heavy equipment for mining and other industries.

ACC-VICKERS-BABCOCK LIMITED

powers and act without any prior consultation with the Board of Directors.

The State undertakings can be grouped into three broad categories: (i) industrial projects which are either in the construction stage or in production; (ii) development corporations whose primary objective is to promote industrial development and (iii) corporations for trade promotions. Under the first category is listed the Heavy Engineering Corporation, Heavy Electricals Ltd., Hindustan Machine Tools Ltd., Praga Tools Corporations Ltd., Hindustan Cables Ltd., Nahan Foundry Ltd., National Instruments Ltd., Fertiliser Corporation of India, Hindustan Antibiotics Ltd., Hindustan Insecticides Ltd., Hindustan Drugs and Pharmaceuticals Ltd., Hindustan Organic Chemicals Ltd., the National Newspaper and Paper Mills Ltd., Hindustan Salt Company Ltd. and Hindustan Photo Film Manufacturing Company. Under the second group falls National Industrial Development Corporation Ltd., National Small Industries Corporation Ltd., Indian Handicrafts Development Corporation Ltd. and Rehabilitation Industries Corporation Ltd. and under the last State Trading Corporation of India Ltd., and Export Risks Insurance Corporation Ltd.

It is evident from the report that most of the public sector enterprises fully commissioned registered an improvement in the production during the year under report. The Heavy Electricals Ltd., Bhopal was well set for achieving the target production worth Rs 3.5 crores per annum by March 1962. The Hindustan Machine Tools Ltd., has produced a record number of 1,067 machines in 1961. The Nangal Unit of the Fertiliser Corporation went into production during the year. The Watch Factory has released to the market the first low-cost quality watches assembled in the country. The work of construction and installation of the several new heavy electrical and heavy engineering projects was being consolidated at a rapid speed. The Hindustan Organic Chemicals Ltd., the Indian Drugs and Pharmaceuticals Ltd., are among the chemical projects that were forging ahead according to schedule. Negotiations for setting up a heavy plate and vessels project, a heavy structural project, a precision instruments project, an aluminium project and a bio-gas fertiliser pilot plant were already in progress.

There is one aspect of the working of the public sector industries on which the report could have given more particulars and that is the financial aspect. The question of the return on investment in the public sector has had extensive discussion in Parliament and elsewhere recently, but nothing like firm a reliable data has emerged. The question is impressionistically debated. Thus, from misleading data in the explanatory memorandum accompanying the Budget papers, the conclusion that there was a return of 0.3 per cent on investment has been widely published. But in this calculation of percentage, the results of all the undertakings have not been taken into ac-

count, though their capital figures in the denominator. Therefore, the real position may be better or worse. Another computation of the performance of some 15 public sector companies has put total profit for 1960-61 at about Rs 15 crores on a capital investment of about Rs 470 crores and loan capital (from Government) of Rs 370 crores. On the face of it, there are some errors in this calculation and so it cannot be taken as accurate. In any event, it will be a great help to the public, if the financial performance of the public sector undertakings is authoritatively assessed and made officially public.

COMPANIES

In the Northern Region

The review of the working of the Companies' Act 1956 shows that a total of 95 companies with an authorised capital of Rs 638.42 lakhs were formed in the Northern region comprising the States of Delhi, Uttar Pradesh, Rajasthan, the Punjab and Himachal Pradesh during the quarter ended 31 March 1962. 85 of the new floatations were private companies, 5 public limited companies while another five were associations not for profit. Statewise, the majority of the floatations was in Delhi which accounted for a total of 67 new companies, of which 61 were private companies. The number of new registrations in the Punjab and Himachal Pradesh combined was 15 of which 13 were private companies. New registrations in the UP and Rajasthan were 7 and 6 respectively. It is remarkable that the authorised capital of the 4 public companies registered in Delhi at Rs 310 lakhs exceeded the total authorised capital of the 61 private companies at Rs 231.12 lakhs.

During the period under review, 17 companies with a paid up capital of Rs 8.75 lakhs went into liquidation while names of 21 companies with a paid-up capital of Rs 3.85 lakhs were struck off the register of companies under Section 560 of the Companies Act 1956. In Delhi five companies with a paid-up capital of Rs 2.35 lakhs went into liquidation while 12 companies with a paid-up capital of Rs 2.06 lakhs were struck off the register of companies. In the UP 7 companies with a paid-up capital of Rs 4.99 lakhs went into liquidation and names of 7 companies with a paid-up capital of Rs 1.48 lakhs were struck off the register of companies.

At the end of March 1962, 861 public, and 3,312 private limited companies were functioning, with an authorised capital and paid-up capital of Rs 251.5 crores, Rs 344.07 crores and Rs 67.95 crores and Rs 65.57 crores respectively. The number of foreign companies amounted to 562.

US

The Economics of Disarmament

The United States is engaged in a determined effort, as is evident in the negotiations now under way at Geneva, to achieve a general disarmament under effective international control. This goal completely overshadows any economic calculations of gain or loss connected with the reduction of defence expenditures. Moreover, it is generally conceded that the United States can maintain whatever level of defence spending its security may require.

At the same time, it is clear that a basic change in present defence programmes would have an inevitable and distinct effect on the national economy. With this in mind, both government and private economists have been turning their attention to the impact disarmament might have on the economy, the problems that would be entailed, and the measures that could best contribute to the constructive reallocation of resources to civilian use.

The latest of these studies to be published is titled, fittingly enough, "Economic and Social Consequences of Disarmament." It derives special significance from the fact that it is an official government document, one that was submitted to the United Nations a few months ago and has just now been made public.

As this report makes clear, if the world should be fortunate enough to rid itself of the burden of national defence efforts, resources would be released which could be devoted to the production of those goods and services which advance man's material, cultural, and spiritual well-being. This, in essence, is the basic US interest in disarmament. For it is well recognised that the use of resources for purely defence purposes yields relatively little, and that only in an incidental way, to the enrichment of individual lives or real growth of the economy.

The report is quite comprehensive—perhaps the most comprehensive of its kind yet completed. It is in no sense definitive, however, as there is as yet no indication of the timing, phasing and duration of the disarmament programme that may eventually emerge from the international negotiations. Still, it does much to clarify the essential factors involved in a US disarmament effort.

For one, defence outlays are not of such magnitude that the economy is in any way dependent on them. The current US defence programme accounts for less than one-tenth of the Gross National Product (GNP)—total output of goods and services—of about \$50,000 million. By the most inclusive measurements, it employs an even smaller percentage of the nation's total working force—some six million persons, including about 2.5 million in the armed forces.

In addition, the economy has a praiseworthy record of resiliency, an ability to make whatever adjustments may be required of it. And the success of these adjustments can be facilitated, as they have been in

the past, by timely and intelligent action on the part of the public and private sectors of the economy.

Highly instructive in this regard is the post-World War II adjustment, when the economy successfully withstood a far larger and more rapid reduction in defence spending than would be involved in any disarmament programme starting of the present defence level. During World War II, defence expenditures accounted for 40 p.c. of the GNP. In the one year between 1945 and 1946, these outlays fell by 80 per cent, from \$145,000 million to \$28,000 million (in 1960 dollars). Moreover, in that year more than nine million men were released on the civilian labour market from the armed forces—more than three times the present level of US military personnel.

Yet, despite the size and pace of the post-war demobilization, unemployment in the immediate post-war years remained below four per cent of the labour force. And while defence spending was dropping sharply, gross business investment in 1945-46 rose from \$21,000 million to \$51,000 million, personal consumption from \$189,000 million to \$212,000 million, non-defence government expenditures from \$19,000 million to \$27,000 million, and net exports of goods and services from a deficit of \$5,000 million to a surplus of \$5,000 million.

MARKET RESEARCH

A Clarion Call to Better Selling

The Clarion Advertising Services have brought out a useful publication entitled "Market Rating Indices Towns of India" which seeks to assess the relative scope for sales promotion of branded goods in the towns of the country. Only towns with a population of 100,000 have been taken and market indices have been constructed on the basis of three factors namely (1) 1961 population (2) per capita consumption expenditure in urban areas and (3) growth of population in individual towns over the decade 1951-61. The four major cities Bombay, Calcutta, Delhi and Madras have obviously the highest ratings. Greater Bombay with a population of 41.48 million tops the list with an index of 152.97. Calcutta has an index figure of only 100, but its population is also proportionately less. The market index for Delhi is estimated at 91.73 while for Madras it is put at 53.22. Apart from these four cities only 10 other towns have a market index in excess of 10. In view of the differences in per capita expenditure, the market indices are not the same for towns with more or less the same population. Gauhati in Assam which has a population of slightly more than 1 million is shown to have a market index of 3.15, while Mirzapur in UP which has a population of 1 million has a market index of only 1.98. Similarly Indore in Madhya

Pradesh which has a population of 3.95 million has been assigned an index of 9.52, while Allahabad in UP which has a population of 4.31 million has only an index of 4.58.

Messrs J. Walter Thompson & Company brought out a similar publication more than a year ago in which consumer index numbers were calculated on the basis of a variety of factors to indicate potentiality of urban markets. The method used by the Clarion Advertising Services differs from that used by the Walter Thompson. The Clarion survey confines itself to three factors to calculate index numbers namely, total population in 1960, per capita consumer expenditure, and the changes in population between 1950 and 1960.

Valuable as the study is, it has certain limitations, and these have been recognised by the authors themselves. In the first place markets for branded products cannot be wholly inferred from per capita consumer expenditure alone. The pattern of such expenditure is also relevant. The relevance of the index numbers calculated in the publication has further limitations arising from the lack of per capita consumer expenditure for each town. The per capita consumer expenditure used for calculating index numbers is based on the data of such expenditure estimated by the National Sample Survey for urban areas in particular States instead of individual towns. All the same, the value of

the study of market strength as indicated by market index is not to be doubted particularly for the reason that there is presently very meagre data to assess size of urban markets.

ESSO

To Become A Rupee Company

Close on the heels of the announcement of the Burma-Shell, the Esso-Standard Eastern has come out with a similar offer to amalgamate its refining and marketing operations in India in one company and to operate that

under an industrial licence. A press note released in this connection states that the company "foresees a period of expansion and development of the Indian oil industry" and firmly believes that it can play a vital role in "this development"—contributing substantially to the expansion of the nation's economy. The note also adds that the concurrence it seeks from the Government of India for the contemplated move will not merely adapt the Esso interest to an altered situation in the country but also foster mutually beneficial relations between the company, the Government and the people of India. The readiness to consider the issue of shares to the Indian public reflects the company's intention to associate itself with India in a more convincing and effective manner than it had been hitherto. Esso has conveyed to the Government its willingness to scrap the prevailing agreement and to form a concurrent reorganisation of the Esso Corporate Structure in India.

The strained relation between the three foreign owned oil companies in India and the Government has at last been showing heartening signs of easing and the intention of the two companies for the future have been made clear. Caltex is yet to emulate the example set by its sister concerns in this soil.

WATER-SUPPLY

Need for High Transport Priority

The low priority accorded to movement of mild steel pipes and tube-well equipment, is a serious anomaly in the existing schedule of railway transport. In view of the importance and urgency of implementing social welfare schemes, this relegation of steel pipes etc to the low priority list is hardly defensible. The Congress election manifesto has declared that there should be no town or village without water supply facilities by the end of the Third Five Year Plan. The Third Plan envisages substantial expansion of protected water supply and other schemes of public health and sanitation welfare and arising from this, the demand for steel pipes and other equipments is bound to rise considerably. Regular supply and prompt distribution of such steel pipes etc are of vital importance for rapid progress being achieved in the implementation of these social welfare schemes. Presently only military traffic, foodgrains, salt etc, figure in the priority list of the Railways for movement by rail. While the treatment of these for priority movement is understandable in view of their basic importance, the case for according similar treatment for steel pipes etc, is no less strong.

Clive Street Gossip

"I must have liberty
Withal, as large a charter as the wind
To blow on whom I please"
—As You Like It.

Mr KHRUSHCHEV is reported to be rubbing his hands in glee at the all too evident dissensions among the NATO allies as well he might. The past two weeks have shown up more cracks in the Western wall than at any time since Suez. Behind a facade of formal unity, they are all at cross purposes and no two powers are firmly united on all issues. Thus the US is opposed, for economic reasons, to too easy a right of admittance to the EEC to Britain. But for political reasons, it is anxious that Britain should be in the EEC. French comment—M. Raymond Aron's, for example—implies that France does not want Britain in the EEC for much the same political reasons that US wants it in. The West German Chancellor Dr. Adenauer, who was earlier reported as favouring Britain's admission to the EEC, was reported the week before last to have changed his mind. This was later denied but the Chancellor is temporarily out of love with the US because of its attempt to play the Berlin dispute off its own bat. That has thrown him, as it were, into the lap of President de Gaulle, whose own view of the Americans is, not to put too fine a point on it, that they are not Europeans. And Britain is vicariously visited with the displeasure of the continentals with the US. The reported West German volte-face on the eve of Britain's getting down to serious negotiation with the Six at Brussels has intensified British suspicions of remote pressure for concession or moderation of demands for concessions. Added to genuine misgiving about the political and economic implications of Britain's membership of the EEC, this has brought Anglo-European relations to a head and Mr Macmillan is meeting President de Gaulle early next month.

Mr Macmillan has his work cut out for him. President de Gaulle's views on Europe—which he explained in terms of studied ambiguity at a Press Conference last Tuesday, though that fact did not prevent his MRP ministers resigning—makes Britain a trans-atlantic rather than an European power. He ridiculed the idea of a supra-national Europe—an idea with which Britain is not in much sympathy, any way. But his Europe, supra or sub-national, does not apparently include England. Even his illustrations give

him away. A supra-national Europe is as absurd as Goethe, Chateaubriand or Dante writing in Esperanto. As the New Statesman complained, apparently, Shakespeare is no European to de Gaulle.

But French (or rather de Gaulle's, objection to Britain in Europe is not solely because of its "Anglo-saxon" affiliations across the sea—though God knows, that the "cousins" are not exactly falling over each other. France also resents their nuclear exclusiveness and refusal to share with it the nuclear monopoly. French craving for nuclear status is partly motivated by notions of big-power prestige, but there is a wild kind of logic behind de Gaulle's desire of an independent deterrent of his own, quite unrelated to NATO thinking on the subject. In a characteristically lucid despatch from Europe to the new York Herald Tribune, Mr Walter Lippmann has analysed the French thinking on the subject. First, the French think that the nuclear stalemate between the two big powers is complete enough for them not to be too greatly worried about a possible nuclear war over Berlin. This makes the French (and the West Germans) less anxious about a settlement of the issue. Secondly, the deterrent power of the French atomic striking force is explained as arising in its ability to prevent attempts at involving France in distant wars in Asia. What is even more important, it is a deterrent against direct acts of aggression against France. No doubt this striking power would invite a retaliation from the Soviet Union that might wipe out France: but this is the crucial point—such a contingency would automatically involve the Americans who would bring swift retribution by unleashing their own nuclear power. In other words, the French nuclear power is the modern equivalent of that increasingly obsolete figure—the American soldier stationed in Europe. It is a sort of "trip wire", tumbling across which would land one in trouble with the US. President de Gaulle's design is thus to secure American involvement in Europe without in any way harbouring them in Europe itself, directly, or indirectly by letting their British cousins in the European comity. Small wonder the Americans do not exactly love the French President.

From the point of view of the uninvolved onlooker, the cynicism behind this logic is shocking not so much because of the cold-blooded entanglement of the US without paying the price that the US asks for it but for the ease with which atomic weapons are demoted to the minor status of a conventional weapon. In the fifties, instant nuclear retaliation was the umbrella under which the conventional weapons were to fight the little wars and yet leave the world comparatively intact. Then, almost imperceptibly, the range of these "homely" killers was enlarged to include weapons more refined in their deadlines. Thus, Kissinger and others argued that tactical nuclear weapons must be part of the conventional armoury in Europe. From that it was but a step to persuade yourself that a full-fledged atomic striking power (with an ability to kill 20 million people as the French force is expected to have by 1963) is but a "trip wire," the equivalent of a foot-soldier. These things probably make military sense, though I doubt it. But drug addicts, alcoholics and nymphomaniacs are normal healthy men compared to those who vainly try to stimulate themselves with the thought of larger and larger number of carcasses. What is worse, they are more dangerous, for the former kill only themselves.

Surely the oddest thing about the episode of the projected Indian purchase of Soviet jet fighters was the reported assertion of Mr Krishna Menon at Indore that he knew nothing about it except from newspaper reports. Clearly Mr Menon was protesting too much: none would quarrel with his thesis that we are free to buy what we like from whom we please. And that is precisely the reason why there is no need for all this hole and corner tactics and sweeping disavowals as though we are engaged in something very disreputable. (Of course, if Mr Menon didn't in fact know about it, it would be even odder, for of all the persons in the country he, as the Defence Minister, is the one man who ought to have been the first to know.) Of the fact of the negotiations, in however tentative a form, there appears to be no doubt whatever. Reports from Delhi indicate that Soviet sources in the capital were only too ready to oblige correspondents who wished to be briefed on the deal. The "concern" officially expressed by the UK and reported from London and the flurry that it caused in American circles were both too substantial as news to be wholly manufactured out of cloth. Far-fetched guesses about deliberation in the timing of the leak and its

repercussion on the aid debate are too clever by half. Such ploys, if seriously made, may backfire with disastrous consequences. Now that time has been gained by postponing decision on the subject—persistent rumour has it that the deferment, ostensibly till the Prime Minister's return to the capital from his holiday, has no implication of a decision soon thereafter—all the ramifications of the intended purchase should be studied. It is also necessary to discuss the question with both Great Britain and the US with absolute frankness and apprise them of the compulsions behind the Indian action. There is reason to believe that the US Administration is better aware of them now than ever before. This should facilitate a more sympathetic understanding.

Thursdays' Statesman carried on its front page a photograph of a procession of grinning girls. If I hadn't read the legend beneath, I should have thought that they were college students out on a picnic. Actually, it would seem that they were mourning Electras or indignant Amazons—in other words, medical students marching to a protest meeting to express their horror at Tuesday's police action against their comrades. Now, I like smiling girls as much as the next man, if not more, but considering that they subsequently expressed their souls seared by the brutal excesses of the police earlier in the week, I found their cheerfulness somewhat odd. One simple explanation may be the knowledge of the postponement of the examination announced earlier. As far as I have been able to ascertain, the medical students wanted their examinations postponed because they were not prepared. That certainly would be a singular reason to postpone an examination. But then, I am told, this is not just ordinary unpreparedness. It seems the "portions" set have not been completed by the professors. I don't want to sound harsh, but for grown men and women who are taking a professional examination that leads to a degree, this is an infantile reason to offer. I don't have to invoke Oxford and Cambridge to show that at that stage the student is expected to help himself much more than at a school where the syllabus is religiously covered. It was certainly my experience while at college and I dare say it is that of most others, that we were left to fend for ourselves for the most part. Professors had a way of lingering over their favourite—unkind people, who suspected them of laziness, said "familiar"—patch, leaving us with a perfunctory reading list for the rest. We did, in our time, think up reasons for staying away from class and skipping exams: but we would have considered it an affront to our self-respect to offer so puerile a reason as the one that the Calcutta medicos have done.

EAVESDROPPER

—THEY FLY NOTHING BUT THE BEST

You may not recognise all the planes in the PIA fleet. Some of them are used for the local air-bus services that make flying in Pakistan almost as cheap and simple as hopping on a bus. They were chosen because they were exactly right for just that kind of job. In the same way, only the great Boeings are sufficiently big, fast and comfortable for PIA's New York run. And PIA extend this thinking far beyond just choosing their planes. They maintain and fly them with loving care, and land them strictly on schedule. (PIA hold an unbroken record for punctuality.) This is what makes people say nice things about PIA. It brought the airline 63% more passengers last year, and 1% higher profits than ever before. The figures wouldn't go up if they weren't great people to fly with.

HOUSING Socio-Economic Problems

Of the many complex problems of the transition from an agricultural to an industrial economy, the problem of housing is among the most intricate. Planners in Asia, as in India, have to reckon with huge population increases in the coming decades calling for vastly increased outlays on housing, especially in urban areas. A short-term training course on "Sociological and Economic Problems in the field of Housing" started in New Delhi last Monday. The training course, organised by the National Buildings Organisation which is also the Regional Housing Centre for the Hot and Arid Zone of ECAFE, in collaboration with the School of Planning and Architecture, will last for about eight weeks. The programme of 75 lectures drawn up for the eight weeks' course, covers a wide range of subjects from the Evolution of Housing to Housing Administration and includes topics like Demographic Aspects of Housing; Housing Statistics; Urban and Rural Sociology; Housing Economics and Housing Finance; Com-

munity Planning; Housing Research, Policy, Programming and Administration.

Dr A. N. Khosla, Member of the Planning Commission, who inaugurated the Course said that the problem of housing was not the problem of urban housing alone. It was also the problem of rural housing in the predominantly rural economies of Asia. At the same time he pointed out that the intensity of urbanisation in Asia was greater than elsewhere and this posed grave problems. Apart from the growth of population, the steady drift of population from rural areas to the cities aggravated the housing problem in urban areas. Dispersal of industry in rural areas might help to prevent the migration to urban areas. But such dispersal of industry would not be possible unless the infra structure—electricity, water supply, roads transport etc. is first provided. In view of the extremely limited resources available with the developing countries, the maximum stress, he suggested, must be on economy in construction consistent with functional needs and structural stability, both in rural and urban housing. This, Dr Khosla said, could be achieved without conflict with environmental and sociological factors or aesthetics.

In India, despite outlays on an increasing scale during two Plan periods, arrears of housing have doubled during the last decade. Shortage of housing in 1961 is estimated at 5 million houses against 2.5 million in 1951. An indication of the acute shortage of housing in the Capital was given by the Minister for Works, Housing and Supply when he met the Informal Consultative Committee of Parliament last week. He is understood to have told the Committee that, while the Government needed 90,000 residential units for its employees, only 30,000 had been constructed so far.

The Third Plan has provided Rs 142 crores for Housing and Urban Development Programmes. In addition the Life Insurance Corporation is expected to provide about Rs 60 crores for house construction. Mr Mehr Chand Khanna is understood to have told the Consultative Committee that so far the Life Insurance Corporation had advanced about Rs 14 crores to the State Governments under the Middle Income Group Housing Scheme which was introduced early in 1959. A further amount of Rs 53 lakhs under this scheme had been utilised by the Administrations of Delhi, Tripura and Pondicherry. Under this scheme, the Life Insurance Corporation provided the funds for the house construction loans sanctioned by the State Governments to persons within the income range Rs 6,001 to Rs 15,000 either directly or through Co-operative Societies. Reviewing the progress of the scheme, the Minister is understood to have said that State Governments had sanctioned over 6,400 houses for construction out of

which 1,770 houses had been completed. Under the various housing schemes, the Union Government provided the funds (the LIC : the case of Middle Income Group Scheme) while the execution the responsibility of the State Governments. Officers of the Union Ministry, he said, will be going round the States to speed up the implementation of the different housing programmes.

New Boiler Regulation

The advance of Boiler Technology has been so rapid in recent years that, in order to keep abreast of developments, almost continuous revision of Boiler Regulations has become necessary. The Regulations framed by the Central Boiler Board in 1950 have been amended ten times so far. For this purpose the Board meets twice a year. The 32nd meeting of the Board is being held this week in Shillong from May 21 to May 26.

The latest amendment—The Indian Boiler (Tenth Amendment) Regulations, 1962—has been notified in the Gazette of India Extraordinary dated May 3, 1962. This amendment adds a new Chapter XIII to the Indian Boiler Regulations, 1950, and deals with the Qualification Tests for Welders engaged in welding boilers and steam pipes. Under the new regulations, no welder shall be engaged on welding of boilers or steam pipes under construction, erection or fabrication at site, unless he has been awarded, after undergoing the prescribed tests a certificate by the competent authority. The tests include theoretical examinations in various subjects as well as a number of practical tests. The certificates will be valid for a period of 24 months from the date of issue, and may be revalidated for a further period not exceeding 24 months at a time on completion of a re-qualification test. The regulations also prescribe in detail the manner in which examination of the test specimens shall be carried out. A penalty of fine extending up to Rs 100 is also prescribed for whoever employs a person in welding a boiler or steam pipe in contravention of the regulations.

Meticulous attention to standards to this aspect of boiler fabrication has become necessary because the programme for the manufacture of boilers, includes building of high capacity boilers of latest design using increased steam pressures and temperatures. These could be a source of danger to the operators and others unless correct standards are adhered to. The manufacturing programme has also brought up the need for strengthening the Boiler Inspectorate. The country at present lacks the expertise for inspection of boilers of welded design. It is, therefore, proposed, as Mr T. Sivasankar, Chairman, Central Boilers Board, announced at the

meeting of the Board at Shillong, to set up a Central Inspectorate, with a corps of foreign experts, to provide inspection facilities to industries in the initial stages of development, as well as to train the existing Inspectorates in the advanced techniques of inspection during construction. The Central Inspectorate is not intended to supplant the existing State Inspectorates. The State Inspectorates would continue to function as inspecting authorities for boilers of riveted construction. The inspection by the experts of the central body would be confined to boilers of welded construction. The central body would also help in the organisation of the internal inspection departments of various manufacturing units on the pattern adopted in advanced countries. The experts might also be called upon to develop standards to form the basis for determining the quality of production of these boilers.

World Food Prospects

The Joint Session of the FAO Committee on Commodity Problems and the U. N. Commission on International Commodity Trade, which met in Rome on May 14, it is learnt, has reported that the prospects for the current decade, if present trends and policies are maintained, would be one of continuing agricultural surpluses side by side with continuing food shortages and malnutrition. According to the projections studied by the Joint Session, the levels and stability of export earnings for the main agricultural exports of most of the low income developing countries would fall far short of the foreign exchange resources required for their programmes of economic development. The report noted that accumulation of surpluses was also likely to create many difficulties particularly in relation to the prospects of commercial trade. Moreover, prospects for terms of trade for agricultural products, the report noted, did not appear favourable unless action was taken to modify the existing production and trade policies. Inaugurating the conference, Dr B. R. Sen, Director-General of FAO, had urged that foreign aid should be part of any plan to safeguard the exchange earnings of developing countries.

Iron Ore Exports

A delegation of the STC, led by the Chairman, Mr C. M. Poonacha, has concluded a contract for export of 6.5 lakhs tons of iron ore to Czechoslovakia in the current year. The ore to be supplied will be homogeneous 68/63 grade and the price accordingly is proportionately higher as compared with Japanese prices. The delegation, it is learnt, has also received firm offers for sup-

ply of one lakh tons of iron ore to Hungary. Offers received by the delegation from Czechoslovakia and Yugoslavia to buy sizable quantities of manganese ore, it is stated, are now under consideration. Apart from export of ores, the delegation had also fruitful talks regarding export of coffee, cotton textiles, woollen textiles, spices, tea and tobacco and the details are under examination.

Export Cess

The proposal for levying a cess on the internal sales of industries with export potentiality has been under examination both by Government and business organisations ever since the idea of compulsory exports was mooted about two years ago. While criticising the suggestions made in regard to compulsory exports, the Federation, in its memorandum to the Export and Import Policy Committee, had admitted the need to think in terms of organised efforts. To start with, it was suggested, certain industries on a selective basis might be asked to export a certain percentage of their production and that these industries and their accredited associations should be encouraged

to organise their exports in some agreed manner.

The idea vaguely indicated in the FICCI Memorandum was clearly spelt out in the Mudaliar Committee's report. It was suggested that instead of taking in hand the lash of compulsion, the better course would be to induce the leaders of industry and trade to levy a small voluntary cess on the domestic consumption of their products for purposes of export promotion and cited in this context the example of the Bicycle Industry.

This suggestion was made by the Mudaliar Committee in addition to the major recommendations regarding tax and other incentives. It would not, therefore, be correct to regard export cess as a substitute for tax incentives or that it has been brought up because of the reluctance of the Ministry of Finance to accept the Mudaliar Committee's recommendations regarding tax relief. One cannot be regarded as a substitute for the other. Even if it is agreed to levy the export cess, the need for tax relief will continue and will have to be pressed. While tax reliefs can give direct encouragement to the

expansion of exports, the cess can, at the most, serve to spread the losses that might be incurred on exports.

From all points of view it would be helpful if the scheme of levying a cess could be operated by the accredited associations of industry and trade on a voluntary basis, as recommended by the Mudaliar Committee. Legislation will be necessary only if the organisations of industry and trade are not able to operate the scheme on a voluntary basis. The need for legislation and its implications will be thoroughly examined when the newly constituted Board of Trade holds its first meeting early next month.

A cess levied through legislation may limit the purposes for which the proceeds might be utilised without going against the provisions of the GATT. And a special cess of 2 per cent does not appear to be necessary to enable the Export Promotion Councils to carry on the sort of activities in which they are engaged at present. The problem of export is not so much publicity for Indian products abroad as the prices at which they could be sold in foreign markets.

THE CENTRAL BANK OF INDIA LTD.

DEVKARAN NANJEE BANKING CO. LTD.
REGISTERED OFFICE:
DEVKARAN NANJEE BLDGS., HORNIMAN CIRCLE, FORT, BOMBAY 1

THE UNITED INDUSTRIAL BANK LIMITED

Registered Office :- 7, Wellesley Place, Calcutta - 1

GENTLEMEN,

The Directors beg to submit to the Shareholders the Balance Sheet as at the 31st December, 1961, and the Profit and Loss Account for the year ended the 31st December, 1961. The Auditors' Report is also annexed.

2. It is regretted that the Bank incurred a loss of Rs. 96,957.16 in its working during the year. This amount together with the balance of loss standing at Rs. 38,877.82 n.p. as per last Account makes up a total loss of Rs. 1,35,834.98 n.p. to be carried forward.

The loss incurred this year arises mainly out of the fact that the Directors of the Bank do not consider it prudent to charge interest for the time being on some of its suit-filed and decreed debts in accordance with the terms of the relative decrees for the purpose of its Profit and Loss account till the decreed claims of the Bank are first recovered in full so as to provide reasonable and firm grounds for belief that the post-decreed interest will also be recovered without difficulty. The advances concerned are secured by

TWENTY SECOND REPORT

Directors' Report for the year ended 31st December, 1961

valuable urban properties of the Judgement-debtors, which have since appreciated considerably in value. Some of these properties relating to a major portion of the suit-filed and decreed debts are expected to be soon sold by Courts in auction and the Bank will be in possession of the otherwise blocked funds for advance and investment purposes yielding immediate income. The unrealised loss to the tune of Rs. 2.00 lakhs excluding the interest which accrued in previous years.

The Directors feel that during the 3rd Five-Year plan, when more money will be circulating, the Bank's deposits will register further increase which together with the released blocked advances will improve the working results of the Bank in an appreciable manner.

3. Shri Priya Nath Roy, Director, who has attained the age 82 years, retires under the Articles, but offers himself for re-election.
4. Shri J. C. De, Retired Managing Director, Rehabilitation Industries Corporation Ltd., was appointed in November, 1961, as Shri Gajraj Sarangi, Merchant, was re-appointed in January, 1961.
5. The Shareholders are requested to appoint Auditors for ensuing year and fix their remunerations.
6. Shri Priya Nath Roy and Dr. Satya Churn Law, Director could not sign the Balance Sheet, as the former was indisposed the latter was out of Calcutta.

For and on behalf of
Board of Directors,
JADU NATH ROY,
Chairman

Calcutta,
The 9th April, 1962.

THIS IS AN ANNOUNCEMENT AND NOT A PROSPECTUS

Consent of the Central Government has been obtained to this issue by an order of which a complete copy is open to public inspection at the Registered Office of the Company. It must be distinctly understood that in giving this consent the Government of India do not take any responsibility for the financial soundness of any scheme or for the correctness of any of the statements made or opinions expressed with regard to them.

(The Central Government have granted necessary licences and/or approvals for the manufacturing programme of the Company. Copies of the relevant licences and/or letters are open to public inspection at the Registered Office of the Company. It must be distinctly understood that in granting these licences the Government of India do not take any responsibility for the financial soundness of these undertakings or for the correctness of any of the statements made or opinions expressed in regard to them.)

A copy of this Prospectus having attached thereto the documents mentioned hereinafter has been delivered to the Registrar of Companies, West Bengal, for registration as required by Section 60 of the Companies Act, 1956.

Applications have been made to the Calcutta, Bombay and Madras Stock Exchanges for permission to deal in and for an official quotation of the Shares of the Company.

The Subscription List will open at the commencement of banking hours on Thursday, the 31st May, 1962 and will remain open until the close of banking hours on Saturday, the 9th June, 1962, unless closed earlier or later at the discretion of the Directors, but not before Monday, the 4th June, 1962.

ASIATIC OXYGEN LIMITED

(Incorporated on the 12th April, 1961, under the Companies Act, 1956)

SHARE CAPITAL

Authorised:

17,50,000 Equity Shares of Rs. 10/- each	Rs. 1,75,00,000
25,000 Redeemable 9.3% (subject to tax) Cumulative Preference Shares of Rs. 100/- each	Rs. 25,00,000
	Rs. 2,00,00,000

Issued, Subscribed and Paid-up:

7 Equity Shares of Rs. 10/- each fully paid, payment having been made in cash by the subscribers to the Memorandum and Articles of Association	Rs. 70
--	--------

Present Issue:

15,99,993 Equity Shares of Rs. 10/- each at par	Rs. 1,59,99,930
---	-----------------

Out of the Present Issue:

(i) The Directors, their associates and their friends have agreed to take up and will be allotted 4,13,993 Equity Shares of Rs. 10/- each for cash at par	Rs. 41,39,930
(ii) Air Products & Chemicals Inc. of the United States of America have agreed to take up and will be allotted 2,50,000 Equity Shares of Rs. 10/- each for cash at par	Rs. 25,00,000
(iii) Shareholders of the Asiatic Oxygen & Acetylene Co. Ltd., will be allotted 2,66,000 Equity Shares credited at par as fully paid up in exchange for Ordinary Shares in the company. Should any of these shares not be allotted as fully paid, the same will be available for cash subscription as set forth hereinafter	Rs. 26,60,000

Now offered at par for Public Subscription:

6,70,000 Equity Shares of Rs. 10/- each	Rs. 67,00,000
---	---------------

Applications for Equity Shares by members of the public must be for a minimum of 50 Shares or multiples of 50 Shares.

TERMS OF PAYMENT FOR THE SHARES OF THE ABOVE ISSUE

On application	Rs. 2.50 per share
On allotment	Rs. 2.50 per share

The balance of Rs. 5/- per Equity Share is payable on call or calls but not earlier than three months after the date of allotment of the shares.

The above terms of payment are also applicable to shares to be subscribed for cash by and to be allotted to Directors, associates and friends and to Air Products & Chemicals Inc. and/or their nominees.

RAJ PAUL CHADHA & CO., New Delhi	Rs. 2 lakhs

In the opinion of the Directors, the resources of the Underwriters are sufficient to discharge their underwriting obligations.

CONSENTS.

Consents in writing of the abovenamed Directors, Bankers, Auditors, Solicitors, Underwriters and Brokers to act in their respective capacities have been obtained and filed with the Registrar of Companies, West Bengal and have not been withdrawn. Messrs. S. B. Dandekar & Co. and Messrs. Singhi & Co., the Auditors of the Company, have given and not withdrawn their written consents to their Report being included herein in the form and context in which it appears. Messrs. S. B. Dandekar & Co. have also given and not withdrawn their written consent to their Report on Asiatic Oxygen & Acetylene Co. Limited being included herein in the form and context in which it appears.

MAIN OBJECTS OF THE COMPANY.

The Company was incorporated on the 12th April 1961, as a public Company in the State of West Bengal with objects as stated in its Memorandum of Association and obtained a Certificate of Commencement of Business from the Registrar of Companies, West Bengal, on the 18th November, 1961. The Company has as its main objects the manufacture and sale of industrial and medical gases including oxygen, dissolved acetylene, argon, hydrogen, nitrogen, nitrous oxide, etc., electrodes, welding and cutting equipment, welding transformers and generators and other equipment, apparatus and appliances relating to the foregoing or ancillary thereto.

PROMOTION OF THE COMPANY.

This Company has been promoted by the Asiatic Oxygen & Acetylene Co. Ltd., of Calcutta, which itself is engaged in the industrial gas business. In view of the industrial development taking place in India, the Government of India is encouraging the setting up of units throughout the country for the manufacture of industrial and medical gases, welding equipment and accessories, etc.

There has been a steep rise in the demand for industrial gases since 1956 due to industrial development under the Five-Year Plans, particularly the increase in production of steel and the rapid growth of engineering industries. According to the Third Five-Year Plan the indigenous production of steel would reach a target of 6.8 million tons of saleable steel and correspondingly the demand for oxygen is estimated to increase to 1,650 million cubic feet by 1965-66. To take advantage of this opportunity, the Promoters have secured collaboration of Air Products and Chemicals Inc., which is one of the established and progressive manufacturers of industrial and medical gases in the United States of America. Air Products and Chemicals Inc. have also agreed to participate in the Share Capital of the Company to the extent of Rs. 25,00,000. Technical collaboration arrangements have been concluded with K. S. M. Equipment Company and Metal & Thermit Corporation of the U.S.A. Similar arrangements have been negotiated with Westinghouse Electric International Company of the U.S.A.

An arrangement (approved by the Government of India) has been reached with a majority of the shareholders of the Asiatic Oxygen & Acetylene Co., Ltd., whereby their shareholdings in that company are being transferred to the Company in exchange for Equity Shares in the Company of equivalent nominal value at a rate stated hereinafter.

PRODUCTION PLANS AND BUSINESS PROSPECTS.

A. Manufacture of Industrial and Medical Gases.

The Company proposes to establish manufacturing units at Bombay, Madras, Rourkela, Durgapur, Patna, Gauhati and/or other important industrial centres. In view of modern plant and equipment being acquired by the Company, not more than 30 persons will need be employed in any of the factories and, accordingly, the Company is not required to obtain licences under the Industries (Development and Regulation) Act, 1951, which position has been confirmed by the Central Government by its letter No. 19(14)(38) 1A(IV)/58 dated the 5th June, 1958.

Initially, the Company aims at reaching a total production of 176.4 million cubic feet of oxygen and 45.6 million cubic feet of dissolved acetylene per annum. The production is expected to commence within one year.

B. Manufacture of Welding Electrodes

The demand for welding electrodes in India is estimated at 500 million feet per annum which is expected to reach 900 million feet by 1965-66. There is sufficient demand for these products to enable the Company to dispose of its entire production satisfactorily. The promoters have obtained Licence No. L/1A(7)/N-248/61 dated the 5th August, 1961, under the Industries (Development and Regulation) Act in favour of the Company for the manufacture of coated and uncoated electrodes with an installed capacity of 36 million feet per annum on single shift basis. The Company has further been permitted by the Government of India, vide their letter No. L.E.(B)-17(258)56, dated the 7th April, 1962, to work double shift. It is intended to reach initially a capacity of 65 million feet per annum. The Company will set up its factory at Calcutta which is a highly developed industrial area with all facilities available for an industrial undertaking of this nature.

C. Manufacture of Welding and Cutting Equipment and Arc-Welding Transformers.

The Company proposes to establish its factory for the manufacture of these products in Calcutta along with its industrial undertaking for the manufacture of electrodes.

The Central Government had granted a licence No. L/9/N-38/59, dated the 12th October, 1959, to the promoters for the manufacture of 9,000 units of regulators, 7,500 units of torches and 150 units of oxy-cutting machines per annum. This has been now transferred in favour of the Company. The import of welding and cutting equipment over the last few years has been restricted due to the shortage of foreign exchange and the demand within the country has not been fully met by indigenous manufacture.

The Government has also granted a licence No. L/5(1)/N-86/61, dated the 23rd August, 1961, under the Industries (Development and Regulation) Act in favour of the Company for the manufacture of welding transformer sets and motor generators with an installed capacity of 2,400 and 240 units respectively per annum.

LAND, POWER, WATER, ETC.

The promoters have agreed to acquire for the Company a plot of land measuring 5 acres near Durgapur situated on the Grand Trunk Road in Mouza Gopinathpur in the District of Burdwan on 80 years' lease, with two options to further renew the lease for 30 years each, from the Durgapur Projects Limited, and a payment of Rs. 30,250/- has already been made to the Lessors on the 9th November, 1961, which will be reimbursed by the Company. The formal lease documents are being finalised. The agreed terms of the proposed lease are considered to be fair and reasonable. Negotiations have been taken in hand to acquire factory sites at other centres. The Directors are satisfied that suitable sites with adequate power and water supply, transport facilities, etc., can be acquired.

PROFITABILITY.

On the basis of the existing price of the products which the Company proposes to manufacture, the Directors are of the opinion that, in the absence of any unforeseen circumstances, there will be a fair and reasonable return on the capital of the Company.

FOREIGN TECHNICAL COLLABORATION.

The promoters have negotiated and concluded agreements with Air Products and Chemicals, Inc. and K. S. M. Equipment Company, a Division of Air Products, of the U.S.A., for technical collaboration in the manufacture of industrial gases and oxy-acetylene welding and cutting equipment and with Metal & Thermit Corporation of the U.S.A. for the manufacture of electrodes. All these agreements have been approved by the Government of India. Technical collaboration arrangements for manufacture of arc welding transformers have also been negotiated with Westinghouse Electric International Company of the U.S.A., and an application for its approval has been made to the Government of India.

ASIATIC OXYGEN LIMITED—(Announcement Contd.)

The main features of the technical collaboration arrangements, the terms of payment under which are set out in the respective agreements, are summarised below:

A. Collaboration with Air Products and Chemicals Inc., of U.S.A.

The agreement covers industrial and medical gases, oxygen, nitrogen, hydrogen, dissolved acetylene, argon and medical oxygen, including liquid oxygen and liquid nitrogen. Air Products will furnish the Company for a period of ten years with technical know-how acquired or developed by it for the manufacture, distribution and sale of the said gases. They will also make available training facilities for the Company's personnel in their factories and the services in India of a top management executive and technicians.

B. Collaboration with K G M Equipment Company of U.S.A.

The Agreement with K G M Equipment Co., which is for a period of ten years, gives the Company the exclusive right to manufacture, use and sell in India the oxy-acetylene welding and cutting equipment specified in the Agreement in respect of which they will furnish technical know-how and other assistance in the setting up of the factory, the purchase of plant and machinery from abroad, training of the personnel and operation of the factory. Selected technical personnel of the Company will be sent to their factory in the U.S.A. for training. K G M Equipment Co. gives the Company a non-exclusive licence to freely export the equipment to be manufactured by the Company to the neighbouring countries such as Burma, Pakistan, Afghanistan, Ceylon, Indonesia, etc.

C. Collaboration with Metal and Thermit Corporation of U.S.A.

The Agreement with Metal & Thermit Corporation, New York, which is also for a period of ten years, provides for the furnishing of know-how and technical services to the Company to manufacture, use and sell electrodes specified in the Agreement. These services include preparation of plant layouts, detailed drawings and engineering assistance and specifications and assistance for procurement of the manufacturing equipment. They will also provide training facilities to the Company's personnel in the U.S.A. and also the services in India of their technical personnel.

D. Collaboration with Westinghouse Electric International Co. of U.S.A.

A technical collaboration agreement has been negotiated with Westinghouse Electric International Company of the U.S.A., for a period of ten years, for the manufacture of arc welding transformers. Westinghouse will make available to the Company's personnel training facilities in their plants and provide the services of their personnel in India. The agreement has been submitted to the Government of India for approval.

PLANT AND MACHINERY.

Imports of plant and machinery to the value of Rs. 86.69 lakhs have been authorised by the Ministry of Commerce and Industry (vide letter No. 1(56)FE/61, dated the 22nd March, 1961, of the Deputy Economic Adviser to the Government of India), out of which Rs. 61.69 lakhs is covered by the U.S. Development Loan Fund Loan No. 157 to the Government of India. Agreement had been concluded with Air Products for the purchase of plant and machinery for the manufacture of oxygen and dissolved acetylene valued at Rs. 56.69 lakhs. The Company has obtained the Import Licence No. 990940/DLF157/61, dated the 29th March, 1962, for their import. Formalities concerning the finalisation of the purchase of the plants in accordance with the terms and conditions of the licence are being completed. Arrangements are being made for the purchase from the U.S.A. of plant and machinery for the manufacture of electrodes, oxy-acetylene welding and cutting equipment and arc welding transformers. The remaining machinery and equipment is available in India. The promoters have obtained an import licence for the value of Rs. 48,14,727/- out of which Rs. 2,63,803/- has been utilised by them. Orders had been placed for the gas cylinders covered by the unutilised amount of this licence and necessary Letters of Credit have been established. The promoters have agreed to transfer these cylinders to the Company at cost. An application has been made to the Government of India to allow the transfer. Meanwhile, shipments of the value of Rs. 3,80,822/- have already arrived and further shipments are likely to arrive in the coming weeks.

RAW MATERIALS.

The principal raw materials which are required are mostly obtainable from indigenous sources although certain items may be required to be imported for some time. The Directors anticipate that the Company will have no difficulty in obtaining supplies of the raw materials.

TAX BENEFITS.

The Company will be entitled to Development Rebate under the Income Tax Act, 1961. As a "new industrial undertaking" the Company will get the benefit of exemption from income-tax under Section 84 of the Act on its profits up to 6% on the capital employed in the "new industrial undertaking" for the first five years of the Company's operations. The shareholders are entitled to exemption from tax on dividends paid to them from the Company's exempted portion of the profits.

ACQUISITION OF THE ORDINARY SHARES OF THE ASIATIC OXYGEN AND ACETYLENE CO., LTD.

The Asiatic Oxygen and Acetylene Co., Ltd., has been carrying on business of the manufacture of industrial gases since 1942. It has a factory at Calcutta for the manufacture of oxygen and dissolved acetylene gases to which has recently been added a new single unit with a capacity of 7,000 cu ft per hour of oxygen and corresponding acetylene capacity. It has another factory at Bhilai for the manufacture of dissolved acetylene gas to which it is proposed to add an oxygen unit.

It is now also engaged in certain engineering and construction work. It undertook the sub-contract for the Indian portion of the work relating to the Judda Coal Washery in Bihar for Hindustan Steel Ltd., the erection of which has since been completed. It has also entered into a similar sub-contract for another coal washery being set up at Patherdih for Hindustan Steel Limited.

The well-known firm of Surveyors, Talbot & Co. of Calcutta, made a valuation of the assets of the Asiatic Oxygen & Acetylene Co., Ltd. Based on their Report and on the accounts of that company for the preceding three financial years, Singhi & Co., Chartered Accountants, made a valuation of the shares of that company. A majority of the shareholders agreed to exchange their shares at the rate of 33 shares of this Company for 10 shares of the Asiatic Oxygen & Acetylene Co., Ltd., which rate was approved by the Company Law Administration Department, Government of India, vide

their letter No. 8(29)-CL.VI/61, dated the 16th September, 1961. The Asiatic Oxygen and Acetylene Co., Ltd., paid a dividend of 40 per cent subject to tax in the last financial year, that is 1960-61. This did not reflect the results of the working of the new plant which increased the capacity of the company to produce oxygen by more than 100 per cent and the installation of which was completed towards the end of that year. Should some or all of the other shareholders be unwilling to transfer their shares in the Asiatic Oxygen & Acetylene Co., Ltd., the shares of a value representing the difference between Rs. 26,60,000 being the value of the entire 70,000 shares at the above rate of exchange and the value of shares in the Asiatic Oxygen & Acetylene Co., Ltd., acquired by the Company, may be subscribed for cash by all or some of the aforesaid shareholders who have agreed to the exchange or their relatives or their friends or such shares will be allotted to other applicants.

MANAGING AGENTS.

It is proposed to appoint Soorajmull Nagarmull as the Managing Agents of the Company for a period of ten years from the date of their appointment. Necessary approval of the Government has been obtained, vide their letter No. 9(164)-C.III/61, dated 10th January, 1962. The remuneration to be paid to them in respect of their services as Managing Agents for each financial year or part thereof of the Company is based on the net profits of the Company determined in accordance with the provisions of the Companies Act, 1956, and is as follows:—

- (i) 10 per cent on the first Rs. 10 lakhs net profits or fraction thereof;
- (ii) 9 per cent on the next Rs. 10 lakhs net profits or fraction thereof;
- (iii) 8 per cent on the next Rs. 10 lakhs net profits or fraction thereof;
- (iv) 7 per cent on the next Rs. 10 lakhs net profits or fraction thereof;
- (v) 6 per cent on the next Rs. 10 lakhs net profits or fraction thereof;
- (vi) 5½ per cent on the next Rs. 25 lakhs net profits or fraction thereof;
- (vii) 5 per cent on the next Rs. 25 lakhs net profits or fraction thereof; &
- (viii) 4 per cent on any sum over one crore of rupees net profits.

The Managing Agents are entitled to be reimbursed by the Company the expenses incurred by them on behalf of the Company as may be determined by the Board of Directors of the Company subject to the provisions of the Companies Act, 1956. In the event of the Managing Agents being entitled to compensation for loss of office, the limit of such compensation will be governed by Section 366 of the Companies Act, 1956. Other terms and conditions are set out in the proposed Managing Agency Agreement.

Soorajmull Nagarmull have been acting as Managing Agents of the Asiatic Oxygen & Acetylene Co., Ltd., since February 19, 1942, and have thereby acquired considerable experience in the business of industrial gases and ancillary equipment. In view of their proposed appointment as managing agents of the Company they will resign from the managing agency of the Asiatic Oxygen & Acetylene Co., Ltd.

MINIMUM SUBSCRIPTION, CAPITAL OUTLAY AND SOURCES OF FINANCE.

The minimum subscription in respect of the public issue under this Prospectus on which the Directors will proceed to allot shares is Rs. 67,00,000 being the whole of the Equity Share Capital now offered for subscription by the public.

The capital required for the purpose of implementing the Company's planned production is Rs. 3,74,10,000/- made up as follows:—

1. Cost of land and buildings	Rs. 44,00,000
2. Cost of plant, machinery and equipment	Rs. 2,07,75,000
3. Development expenses including training and engineering fees	Rs. 17,75,000
4. Preliminary expenses including expenses of incorporation and of this issue, including brokerage and underwriting commission	Rs. 5,62,500
5. Other Promotion Expenses	Rs. 2,37,500
6. Acquisition of shares in the Asiatic Oxygen & Acetylene Co., Ltd.	Rs. 26,60,000
7. Working capital	Rs. 70,00,000
Total	Rs. 3,74,10,000

The above capital requirements will be financed as follows:—

1. (i) Share Capital from Subscribers to the Memorandum of Association, the Directors, their associates and friends, and the Foreign Collaborators	Rs. 66,40,000
(ii) Par value of the shares of this issue to be allotted in exchange for shares in the Asiatic Oxygen & Acetylene Co., Ltd.	Rs. 26,60,000
2. Share subscription from the public in terms of this Prospectus	Rs. 67,00,000
3. Loans from the Industrial Finance Corporation of India and other sources	Rs. 1,64,10,000
4. Bank borrowings for a part of the working capital as and when required in the usual course of business	Rs. 50,00,000
Total	Rs. 3,74,10,000

LOAN CAPITAL.

The Industrial Finance Corporation of India has sanctioned a loan of Rs. 1,50,00,000/-, such loan to be secured by a mortgage of the fixed assets of the Company including the plant and machinery which is to be acquired by the Company, and of the assets of the Asiatic Oxygen & Acetylene Co., Ltd. The mortgage will be subject to such terms and conditions as may be agreed upon. The balance of Rs. 14,10,000/- will be obtained by means of borrowings from banks or will be arranged by the Promoters, Directors and/or Managing Agents as and when necessary.

PRELIMINARY AND PROMOTION EXPENSES

The preliminary expenses, including expenses of incorporation, payable by the Company, are estimated to be Rs. 1,53,000, which have been incurred

26 May 1962

ASIATIC OXYGEN LIMITED—(Announcement Contd.)

by the Asiatic Oxygen & Acetylene Co., Ltd., in connection with the promotion of the Company. This amount is to be reimbursed to the Asiatic Oxygen & Acetylene Co., Ltd. Save as mentioned herein before, no other consideration has been paid or is payable by the Company to the promoters. Other promotion expenses are estimated to be Rs. 2,37,500 payable by the Company.

EXPENSES OF THE ISSUE.

The expenses of this issue, including underwriting commission and brokerage, are estimated at Rs. 4,09,500 and will be paid by the Company.

UNDERWRITING COMMISSION.

The underwriters will be paid an underwriting commission not exceeding 2½% of the face value of shares underwritten by them, respectively. The total amount of underwriting commission payable by the Company is estimated at Rs. 1,67,500/-.

BROKERAGE

Brokerage will be paid by the Company to members of recognised Stock Exchanges and to banks at the rate of one per cent on the nominal value of the Equity Shares to be allotted to the public in respect of application bearing their stamps.

Brokers on the same basis will be payable to the underwriters in respect of applications made or procured by them provided that the relative forms of application bear their respective stamps and in such case no brokerage will be payable to any other party.

APPLICATION AND ALLOTMENT

Applications for shares, which must be for 50 shares or multiples of 50 shares, must be made on the accompanying official form and will be refused if not so made. The application form together with a remittance for the full amount payable on application must be sent to a branch of the Company's Bankers, namely, State Bank of India, United Bank of India Ltd., First National City Bank or Bank of Tokyo Ltd., at Calcutta, Bombay, Delhi, Madras, Hyderabad, Indore, Kanpur, Bangalore, Ahmedabad, Baroda or Surat.

Payments may be made by cash, bankers draft or cheque. If payment is made by cheque or draft it must be drawn on a Scheduled Bank situated in the town at which the application form is submitted.

Cheques or drafts must be made payable to State Bank of India, A/C Asiatic Oxygen Ltd., Equity Issue, or United Bank of India Ltd., A/C Asiatic Oxygen Ltd., Equity Issue, or First National City Bank A/C Asiatic Oxygen Ltd., Equity Issue, or Bank of Tokyo Ltd., A/C Asiatic Oxygen Ltd., Equity Issue, as the case may be, and should, for the applicant's own protection, be crossed "A/C Payee Only". A separate cheque or draft must accompany each application.

Allotment will be notified by the despatch of an Allotment Letter. The Directors reserve the full right of accepting or rejecting any application in whole or in part. If no allotment is made, the application money in full and where the number of shares allotted is less than the number applied for, the balance of the application money, less the money payable on allotment on the shares allotted, will be refunded to the applicant within two months of the close of the subscription list and in such case the bank's commission, if any, will be payable by the applicant.

No interest will be paid by the Company on application money deposited. Failure to pay any amount due on the shares allotted when due will render the shares and previous payments made thereon liable to forfeiture. No allotment will be made in the names of partnership firms, minors or Trusts. The shares will, when issued, be subject to the provision of the Memorandum and Articles of Association of the Company as in force and as may be amended from time to time.

The Company shall have a first and paramount lien upon such shares as are not fully paid up for any moneys called or payable at a fixed time in respect of such shares and such lien shall extend to all dividends declared in respect of such shares.

ISSUE OF SHARE CERTIFICATES

The Share Certificates will be issued in exchange for Letters of Allotment within three months of allotment.

PROSPECTUS & FORMS OF APPLICATION

Copies of this Prospectus and of Forms of Application may be obtained from the brokers named above or from the Company's bankers.

Dated Calcutta,
the 17th day of May, 1962.

Enquiries were reported to have been received for hessian from East European countries while enquiries on behalf of UK interests for substantial quantity for distant positions had also been reported. Support was also forthcoming from US. As far as hessian is concerned interest by and large continued to be centred on ready and near delivery goods. The trend in sacking was towards narrowing of the gap between ready and forward positions. By close of		PRODUCTION OF JUTE GOODS: APRIL 1962. (000 metric tons and tons)

JUTE Firm Trend

ONE of the important preoccupations of Authority during the past few months has been the need to ensure an adequate return for the jute cultivator so that he does not relax his efforts in the next season. The bumper crop harvested in the current season has brought down prices of jute to reasonable levels but with the continued pressure from offerings prices tended to reach uneconomic levels for the cultivator. Since sowings next season depend on how the cultivator views his prospects now, it is essential to ensure that jute prices do not decline to uneconomic levels at sowing time. But even after the fixation of the minimum price at Rs 30 the price decline has not been completely arrested. Many deals have been concluded two or three rupees below the minimum level and recently the Chairman of the Jute Buffer Stock Association has revealed that the Association itself had purchased sizable quantity at Rs 27 per maund. Government, however, has taken further steps to remedy the situation. It was announced last week that jute exports had been resumed with issuing licence to one lakh bales, with the stipulation that only low quality jute is to be allowed to be so exported. The Jute Commissioner has since announced that another one lakh bale is to be licensed for export. It is pointed out that following the

recent announcement of the resumption of exports of raw jute to East European countries, enquiries for Indian jute are also being received from other areas such as Western Europe, US, and Japan. The Government of India have decided to permit exports of the lower grades of jute to all countries, and have raised the quantity allowed to be exported from one lakh to two lakh bales. However, exports will be confined to old (1961-62) crop jute and mesta and shipments must be effected by 31st July 1962 at the latest.

In the meantime indications are that jute acreage in India may record some reduction. Till the first week of May sowings had been running 15 to 20 per cent behind last year. Of the jute growing States, only Orissa is expected to maintain acreage at last year's level. According to the Director of Agriculture, West Bengal, it has been decided to restrict the cultivation of jute and mesta to a combined total of 1 million acres as against 1.5 million acres. The State however hopes to make good the loss in production by taking steps to raise the average acre yield to 3.5 bales from last year's level of about 2.5 bales per acre.

*

Hessian was a firm market in the latter half of the past week following local buying as well as reports of revival of overseas buying especially in the forward positions.

the week the spread had been reduced to Rs 1.25.

In the raw jute market conditions tended to be firm following the announcement of doubling of export quota of raw jute to 2 lakh bales and the indication that the next season's jute acreage would be smaller than last year's. However, low quality jutes continue to meet a quiet market with prices quoted below the minimum.

Jute Trade has a 'Big Future'

Jute was reasserting itself as the least expensive of commercial fibres now that shortages at the source of supply in Bengal were being overcome, the president of the United Kingdom Jute Goods Association, Mr William Lowe, said at the association's annual conference at Brighton on 16 May, 1962.

"Even in the packaging field, where competition has been fierce in past months, jute is still the cheapest material, taking re-use and re-sale value into account.

"The total usage of jute goods in this country, in terms of volume, far exceeds most of the man-made textiles which have become household words".

Mr Lowe said that the revival of jute, after recent price setbacks, was very important for Britain and the Commonwealth, and there was a big future ahead.—(BIS).

TEA

Outlook for Exports

Although the new season's first tea sales in Calcutta have not commenced on an encouraging note, it is expected that the trend in subsequent sales will become healthier. The optimism is based on the strength of a number of favourable factors, such as the high level of world consumption, the moderate carry over from last season, the cut in the export duty on tea announced in the recent Central Budget, etc. It is to be noted that with increasing world production and stiffening competition in overseas markets, it is going to be difficult for Indian tea to make headway. But it is hoped that given concerted measures exports can be substantially increased. In this connection it is emphasised that active steps should be taken to popularise Indian tea overseas. An Indian

delegation headed by the Chairman of the Tea Board, Mr A. S. Bam, has just returned after visiting the US and Canada. Mr Bam has pointed out that there is no prejudice against Indian tea in these countries, although traders there seem to think that our prices are rather on the high side. Even so last year Indian tea exports to the US were placed at 23 million lbs, an increase of five million lbs over the previous year's record. An encouraging point noted by Mr Bam is that in these countries, tea is making steady headway while coffee consumption seems to have reached a saturation point. The apprehension that there will be overproduction of tea in the world appears to be exaggerated as Mr Bam has pointed out that the entire world production of 1,460 million lbs last year has more or less been consumed.

If the desired results are to be achieved, the task of popularising our tea should be taken as a continuing process covering all the regions where our tea is sold and new regions as well. There appears to be great scope for this programme in Europe. At present very little of our tea (about 1 per cent of our tea exports), is going to the EEC countries. Tea propaganda in these countries may pay handsome dividends in the shape of increased imports.

A fair general demand was noticed at this week's internal sale in Calcutta where offerings totalled 28,316 packages. While clean leaf CTC Dusts were well supported, fibrous types came to an easier market. An irregular but generally lower trend prevailed in Plain Orthodox varieties while Assams were at times lower by 50 nP. Good support was forthcoming for Clean Legg Cut Dusts, but here also the plainer fibrous types ruled irregularly easier. The following are the rates inclusive of excise duty: Plain Orthodox Dust Rs 3.00 to Rs 3.20; Medium Assam Dust Rs 3.50 to Rs 3.80; Legg Cut Dust Rs 3.90 to Rs 4.10; Medium Assam CTC Dust Rs 5.60 to Rs 5.80; Good Assam CTC Dust Rs 6.10 to Rs 6.40.

A mixed trend was noticeable at this week's auction at Cochin where the offerings amounted to 793,000 kg. for exports. While low medium and medium broken were easier, similar fannings were firm. Good mediums were easier as were high grown broken, and unorthodox types. Fannings however were firm.

ASSOCIATED BEARING COMPANY LIMITED

CORRIGENDUM

In the announcement published in this paper on the 19th instant, it was by oversight omitted to mention that brokerage will also be paid to members of any Recognised Stock Exchange at Rupee one per share allotted in respect of applications bearing their stamp.

COTTON

Agreement with the US

THE announcement of the deal with the United States for the import of 2.20 lakh bales of American cotton was gratefully greeted by the cotton textile industry and the trade. The agreement was most timely as the threatened reduction in the production of mills during the current season can be well averted.

The official announcement of the details pertaining to the staple length and the time of shipment of the cotton available under the agreement is expected shortly. But unofficially it has been learnt that cotton will be of staple about 1-1/16" and shipments from that destination will commence in about a month and will be over within a couple of months. Unofficial transactions in the American cotton arriving under the pact has started in Bombay on Sunday, 20 May and business for approximately 15,000 aables of cotton has already been put through for the August-September shipment, subject to import licences.

Meanwhile the scope for securing long staple cotton from other countries like Pakistan, the USSR, and Sudan has also brightened. The possibility of importing more cotton from Pakistan is rated high and a decision will be taken, at the meeting of the trade delegation at New Delhi. Negotiations for the purchase of at least three lakh bales of cotton from USSR on a barter basis are well under way. The bumper crop in Sudan during this season may also facilitate a similar arrangement for importing cotton from that country.

Another notable development during the week under review was the Government of India's acceptance of the recommendations made by the meeting of the Cotton Consultative Board convened early in the week. While suggesting the release of balance cotton quota to the domestic mills, the Board has made it conditional on the export performance of each individual mill and it recommended that the export obligation on each mill should be 12.5 per cent of its total turnover of cloth and 3 per cent of the aggregate turnover of yarn. As a result the Textile Commissioner has passed orders to provide quota to the mills subject to a deduction of 6 1/2 per cent which would be issued to the respective mills on the execution of a performance guarantee.

The cotton futures market during the week received a severe jolt and the ruling contract lost nearly Rs 20. The announcement of the release of the last instalment of domestic cotton quota, however, cried a halt to this bearish trend. The bearish trend was largely due to the treaty signed for the import of US cotton and the contract touched a low of Rs 718.75 on Wednesday and on Friday it slipped further to Rs 712.50. At lower levels the contract met with some support thanks to the improved activity in the spot market obviously due to the release of the last instalment of quota for indigenous cotton and on Tuesday last looked upto Rs 718.50.

The turnover was pretty infinitesimal and speculative selling was conspicuously absent as the daily trading amounted hardly to about 15,000 bales. Bull buying also failed to materialise.

In the spot market at Sewri, restricted mill interest was visible in Vijay, Digvijay, Kalyan, Surti, and CO2 growths. A slackening in the export sales of Bengal Deshi was also noticeable.

Consumption of cotton by the Indian cotton textile mills from 1 September to 31 January totalled 2,416,476 bales of 180 kilograms against 2,204,311 bales in the corresponding period in 1960-61.

PIECEGOODS

The activity in the export section of the Bombay cotton piecegoods market was meagre save to the East African ports where the usual book- ing was maintained.

On account of the rumours of the possibility of increasing the import duty by East African Government the bookings for cotton piecegoods have been well maintained, though most of them were confined to shipments on the streamer AMRA. Grey sheetings, drill, coating and gadilapat were in good demand.

Australia and Ceylon accounted for a small quantum of the usual varieties. The Burmese Government is reported to have issued import licences for the import of cotton textile from the country and the local exporters are optimistic of an improved business for that destination. Other countries were on the whole quiet.

Demand from upcountry centres was far from satisfactory. Stray enquiries were reported from North Indian Centres like Delhi, but they were not followed up subsequently. Demand was chiefly cribbed to san- forised and mercidised goods available under old excise duties.

FOODGRAINS

Steady to firm trend was witnessed in the Hapur foodgrain prices during the past week as arrivals of new rabi grains were far below normal. This was accounted partly due to the cultivator's reluctance to part with his produce and partly because of hoarding tendency amongst traders. Winnowing and threshing operations were nearing completion. Wheat prices improved by over Rs 1 per quintal to be quoted on Monday at Rs 38.86 per quintal for dara quality and upto Rs 45.56 for better farm produce. Daily arrivals of wheat were slightly better than pre-

THE INDO-BURMA PETROLEUM COMPANY LIMITED

Registered Office:

Gilander House, Netaji Subhas Road, Calcutta 1

NOTICE is hereby given that the Fifty-fourth Annual General Meeting of the Members will be held at the Registered Office of the Company on Friday the 22nd June 1962 at 11 a.m. to transact the following business:—

- (1) To receive and adopt the Directors' Report and the Audited Balance Sheet and Profit and Loss Account for the year ended 31st December 1961.
- (2) To sanction the declaration of a dividend.
- (3) To appoint a Director in place of Mr P. W. G. Adair who retires by rotation and, being eligible, offers himself for reappointment.
- (4) To appoint Auditors including Branch Auditors for the year ending 31st December 1962 and to fix their remuneration.

NOTICE is hereby given that the Ordinary Register of Members of the Company will be closed from the 28th May 1962 to 22nd June 1962, both days inclusive.

By Order of the Board
STEEL BROTHERS & COMPANY LIMITED
Managing Agents.

Gilander House,
Netaji Subhas Road
Calcutta.

7th May 1962.

NOTE:—A member entitled to attend and vote at this meeting is entitled to appoint a proxy to attend and, on a poll, to vote in his stead. Such proxy need not be a member.

vjous week at an average of 1,500 mands, but were still far below normal at this time of the year. Major part of the arrivals was being lifted by consumers building up reserve. Local stock with trade was around 1,100 maunds.

Rice prices also recorded modest gains during the week on good consumers demand in the face of small arrivals and stock with trade was also poor around 11,000 maunds. Gram prices registered sharp gains on continued firm advices from Punjab. Arrivals of gram were at an average of 1000 maunds a day mostly from Punjab. South is attracting large quantities of gram from Punjab. Gram now quoted at Rs 40.20 per quintal for better firm produce, while inferior local produce was being lifted at Rs 38.18 per quintal. Barley prices also sought higher levels at Rs 28.14 per quintal and bejhar at Rs 27.78 to Rs 30.46 according to quality. Arrivals of these grains locally were at an average of 200 maunds daily each, besides barley also is reaching here in small quantity from Punjab. New methi was much in request from Calcutta side and as arrivals were small at an average of 100 to 150 maunds daily, prices improved to Rs 64.37 per quintal. Juwar and guwar continued to attract good demand for seed purposes and prices stayed steady at Juwar Rs 38.34 to Rs 39.52 and guwar Rs 38.85 to Rs 41.53 per quintal. Maize had lost all seasonal demand and stock too were almost nominal. Bajra however was in request for seem purposes at Rs 37.51 per quintal.

In pulses new peas arrivals were at an average of 2000 to 2500 maunds daily but thanks to good demand from Madras, oftake aggregating ten wagon loads to that destination during the week and stockists support prices improved fractionally. Local stock has mounted to 66,000 maunds. New arhar arrivals mostly from Rampur side were still poor and as crop prospects were also bleak prices recorded hardening trend. Urd prices also improved on good demand in face of poor stock and prices in other sections were steadier in sympathy.

SUGAR

After ruling firm in earlier dealings on continued brisk buying support, sugar prices in Hapur eased later due to increased release of 2.5 lakh metric tons quota for open sale, with validity period of sale and despatch reduced from 44 days to 30 days. Mills were anxious sellers and prices drifted lower consequently. Most of the factories in West U.P. had already closed their sugar production season and rest would do so by week-end. Factories in East U.P. however were still getting enough cane and their crushing season would continue for another fortnight. Sugar production by April 30 in the country was 3,53,000 metric tons as against 4,19,000 metric tons during the corresponding period last season and stock with factories on that date was 23,92,000 metric tons as against 22,17,000 metric tons on the same date last season.

Sugar prices suffered a sharp setback in the course of the last few

days following increased release for sale in the Muzaffarnagar market and mills were eager sellers and outside demand was slack. Prices eased 6 nP to 37 nP per maund. Business for forward delivery was almost nil as buyers anticipated further fall in prices. Decline was more marked in inferior grains as compared to bold crystal.

Khandsari prices improved fractionally following revival of demand from Punjab, Rajasthan and adjoining areas. Inferior quality was quoted at Rs 30.50 to 32.50 per maund while dry superior around Rs 33.25 to Rs 36.25 and crystal at Rs 34.25 to Rs 36.50 a maund.

GUR

Gur prices were steadier during the week on brisk buying support mostly from Gujarat. Week's off-take was around seven wagon loads and local stock ran down to 16,000 maunds. Shakker was in request from Rajasthan and prices were steadier. Lack of buying interest however accounted for depressed

trend in prices in gur at Maffafarnagar during the week. Prices eased by 25 nP to Re 1 per maund.

Trading in gur futures remain suspended as due to delivery period, trading in gur baisakh came to standstill and trading in gur fagun was sanctioned by FMC only last week-end. Fagun delivery transactions have commenced in other recognised markets but here they have been delayed due to some technical error in amendments of rules. Trading however would soon commence.

NON-FERROUS METALS

In the non-ferrous market, excepting copper which ruled firm, others, zinc, lead and tin were rather subdued. The firmness in copper was largely due to shortage of supplies. For, the limited offerings there were a large number of buyers. The weakness in zinc whose price declined rather sharply last week was due to selling pressure from large arrivals while demand did not expand. The nervousness had been

NEW INDIA INVESTMENT CORPORATION LTD.

Notice is hereby given that the twentyfifth Ordinary General Meeting of the shareholders of New India Investment Corpn. Ltd. will be held at the registered office of the Company at 9, Brabourne Road, Calcutta, on Friday the 29th June, 1962, at 4.30 P.M. to transact the following business:—

- (1) To receive and adopt the Directors' report and audited Profit & Loss Accounts & Balance sheet for the year ended 31.12.61.
- (2) To declare dividends as recommended by the Directors.
- (3) (a) To appoint a Director in place of Mr. D. C. B. Pilkington, as an alternate Director to Sir Walter Michelmore, who retires by rotation and being eligible offers himself for re-election.

(b) To appoint a Director in place of Sir Badridas Goenka, who has attained the age of 78 years and who retires by rotation and is an associate of Messrs. Ramdutt Ramkissendass, Secretaries & Treasurers of the Company, his appointment needs a special resolution u/s. 261 read with Section 379 of Companies Act, 1956 and for which special notice has been received from a shareholder also declaring that age limit prescribed u/s. 280 of the Companies Act, 1956, shall not apply to Sir Badridas Goenka.

In this connection to consider and if thought fit to pass the following special resolution of which special notice as required u/s. 190 and Section 261 read with Section 379 of the Companies Act,

1956, as well as under Section 280(2) of the said Act has been received from a shareholder intimating his intention to propose the name of Sir Badridas Goenka by special resolution to be re-elected as a Director of the Company. The said notice also contains explanatory statement required under Section 173 of the said Act.

- (4) To appoint Auditors & fix their remuneration.
- (5) To transact any other ordinary business.

The share transfer register of the Company will be closed from 22nd to 29th June, 1962 both days inclusive.

By Order of the Board
RAMDUTT RAMKISSENDASS
Secretaries & Treasurers.
Calcutta, 18.5.62.

Note:—

- (a) A member entitled to attend and vote is entitled to appoint a proxy to attend & vote instead of himself and a proxy need not be a member.
- (b) The dividends will be paid on or after 15.7.62. to those shareholders whose names appear on Company's books on 29.6.62. or to their mandatees. No application for warrants will be necessary.

Explanatory statement u/s. 173.

In the special notice given to Company of the resolution under item 3(b) of the above it has been stated that Sir Badridas Goenka has been associated since the inception of the Company and has most intimate knowledge of the Company affairs, and it is very desirable that the Company should continue to avail of his valuable advices and experience guidance as a member of the Board.

brought about by the persistent rumour that the **STC** would step up its sales of the metal. Tin prices were adversely affected by lower overseas advices, while lead showed little change.

★

SILK

Prices of raw silk in Bangalore Silk Market presented and overall steady trend during the week ended 18-5-1962. Prices of flature raw silk of 20/22 Dr. continued to rule firm, being quoted between Rs 84.89 and Rs 85.99 per kgm. Rates of cottage basin silk varied from Rs 77.16 to Rs 82.67 and that of charka raw silk ruled between Rs 50.70 and Rs 77.16 per kgm. Spun silk yarn of 2/21's was quoted at Rs 81.40 per kgm.

Prices of reeling cocoons in Sidlaghatta area ranged between Rs 4.25 and Rs 5.25 while those in Channappatna and Mugur areas ruled between Rs 3.50 and Rs 5.00 and between Rs 3.50 and Rs 4.50 per kgm. respectively. Prices of foreign race seed cocoons ranged between Rs 8.00 and Rs 10.00 per thousand. Mysore race seed cocoon prices increased slightly to rule between Rs 5.00 and Rs 8.00 per thousand.

THE INDIAN STANDARD WAGON COMPANY LIMITED

The dividends when declared will be paid to Shareholders whose names appear on the Registers of Members of the Company on the 29th June, 1962.

By Order of the Board,
MARTIN BURN LIMITED,
A. G. GIDLEY,
Secretary,
Managing Agents.
Registered Office:
12, Mission Row,
Calcutta 1,
The 22nd May, 1962.

ORISSA CEMENT LIMITED RAJGANGPUR

The Twelfth Annual General Meeting of the Shareholder of the Company will be held at Rajgangpur, the Registered Office of the Company on 18th June, 1962 at 11.30 A.M. Notices of the meeting setting out the agenda and explanatory Statement on the special business to be transacted thereat have been sent by post.

By Order of the Board;
S. C. AGGARWAL
Secretary.

Dated: 22nd May, 1962.

Tasar silk market prices maintained a steady trend during the week ended 18-5-1962 when the prices of tasar raw silk ruled between Rs 66.14 and Rs 105.82 and that of silk waste and spun silk yarn ranged from Rs 22.04 to Rs 26.46 and from Rs 30.86 to Rs 43.50 per kgm. respectively. Prices of reeling cocoons presented a steady trend. The prices for Daba, Bogai and Serihan were quoted between Rs 117.00 and Rs 122.00, Rs 110.00 and Rs 118.00 and between Rs 50.00 and Rs 60.00 per kahan respectively.

Landed cost of Japanese raw silk of 20/22 Dr. was reported as Rs 191.90 per kgm. as on 14th April, 1962. There has been a perceptible rise in prices since December, 1961

★

GOLD & SILVER

A firm trend prevailed in the bullion market. The improvement in sentiment stemmed from sustained demand especially from the southern interests in the ready market from the States of Madras and Andhra Pradesh and Rajasthan. As the outgo was far in excess of the inflow, rates hardened throughout last week. With the prices in the ready section firm, the futures market also followed suit aided by nervous bear-covering. Although interest was mainly centred in Gold, the silver section too profited in sympathy with gold. The price rise has also been partly due to speculative activity and the heavy demand encountered in the spot section where the rate was more than three points higher than in the forward section.

★

OILS & OILSEEDS

Conditions in the Bombay Oils and Oilseeds market became steady in later dealings last week. During the first half of the week, groundnut ruled rather easy despite the release of a further quota of 20,000 tons of HPS for export during 1962. It would appear that the continued heavy arrivals and lower advices from other centres had an unnerving influence on market sentiment in Bombay. It was pointed out at that time that prospects of an early rise in price levels could not be rated bright in view of the indication that overseas buying would not pick-up especially since the general impression was supplies would be available

BRITISH INDIA ELECTRIC CONSTRUCTION CO. LTD.

The Board of Directors of the Company has decided to recommend to the forthcoming Annual General Meeting, the payment of a Dividend of 20 per cent for the year ended 31st December, 1961.

BALMER LAWRIE & CO. LTD.

D. MANSON,
Managing Director,
Managing Agents.
21, Netaji Subhas Road,
Calcutta,
22nd May, 1962.

in plenty what with the reports of bumper crops in almost all growing areas in the country. The bearish trend had been accentuated by the onset of monsoon in the west coast and the fall of beneficial rain in Madras. Meanwhile the Bombay market was flooded with supplies of low quality seeds from Kanpur while considerable quantities were reported to be moving into the market from the south and Saurashtra regions. However, sentiment improved after mid-week and by Monday, the undertone could be even described as being cheerful. The buying interest evinced by the State Trading Corporation is perhaps one of the main reasons for the recovery but a number of other factor also seem to have contributed to the improvement in sentiment. One is that arrivals have tended to fall off somewhat contrary to earlier expectations. Evidently, holders are in no hurry to dispose of their stocks as they seem to anticipate better prices soon.

The sizable increase in the export of groundnut oil so far in this calendar year has been a stabilising influence. A steady tone prevailed in the castor seed market although fresh interest was not much in evidence. Some moderate buying by UK had been reported, but generally export prospects are not rated high following the US decision to release stock pile castor oil. A similar trend was noticeable in linseed too, where sentiment has been aided by up-country buying during the week. Cottonseed prices reacted to lack of buying support.

The decline in the prices of groundnut and groundnut oil in Madras continued this week also. This was ascribed to the panicky conditions created in Bombay. Even the so called strong holders came to unload quantities to minimise losses. But there was complete lack of support from the buyers. The undertone however improved in late clearings on higher advices from Bombay.

Arrivals in groundnut in local market had declined to 80 tons daily as also in South and North Arcot districts to about 250 tons. Local crushers absorbed the supply in small quantities for immediate needs. As for groundnut oil only superior oil attracted buyers. But most of the buyers preferred to keep away because of the declining price trend.

In the forward positions no steady note was possible. Here also the sentiment moved along with the line of Bombay and to some extent also Adoni markets. The forward positions were none better. Last Wednesday June was available for Rs 175.00. July was quoted at Rs 177/178. There was an increase of Rs 2 per quintal the next for June rate at Rs 177 while July was a rupee higher than the previous day quotation. On Friday the June quotation increased to Rs 179 and July went to Rs 181.50 nominally. On Saturday the decline was by a rupee for June rate at Rs 178 and July at Rs 180 per quintal.

In the upcountry markets only very small business is reported.

Though this is summer, the southern districts unusually experienced around rains retarding the arrivals of kernels into the market.

Gingelly seed position improved due to arrivals of new crop in Rajampet and other centers. The price level of gingelly seed registered an appreciable decline in sympathy with the groundnut price, gingelly prices were also on the downgrade.

Due to shortcovering in the May vaida, price of coconut oil, forward deliveries, has improved slightly in the West Coast markets. But there was no change in the spot goods.

Groundnut oil price in foreign market declined in anticipation of larger flow of soyabean oil from America. Steady buying interest is being evinced by East European countries in our groundnut cake purchases.

Groundnut oil in the upcountry markets did not change. Guntur/Vijayawada price of groundnut oil was Rs 415 per candy of 500 lbs. Vridhdhachalam quoted Rs 398, Nandyal Rs 400, Villipuram Rs 398, Cuddappah Rs 400, Pollachi and Salem also Rs 400 per candy. Kernels were scarce in several places and in Vridhdhachalam it was Rs 70 per 80 kgs. Villupuram quoted at Rs 68 Tanjore Rs 72 and Salem Rs 71 per 80 kgs.

★

HIDES & SKINS

Still there is a feeling of high prices prevailing in the skins and hides market from the overseas buyers. Arrivals of tanned cowhide were fair but absorption was not as much as was in the previous weeks. There was also lack of overseas inquiries. Therefore market quality cowhides declined in price by an extent of a penny per lb. The quotation for cheaper variety was 55d, 55d and 50d for 5/5½ lb run, fourths and fifths. For inferior fifths 5/5½ lb the quotation was 44d and 44½d.

As for premium marks in this commodity the quotations were for 5/5½ lb Rs 72/74 d for run, 62/64 for fourths and for fifths 58/59d. The price for 8/8½ lb the quoted prices were 58d, 52d and 45d.

A firm market prevailed for tanned cow calf both for premium and semipremium. For the 1½/2 lb the prices were 88d and 70d for run and fourths.

For premium marks of the buff calf there was good demand from UK and the price was 94d and 81d for run and semipremium respectively. There was a decline in the prices of tanned sheep and goat skins.

The prices was as follows per lb:
Tanned cow prime 5/5½ lb Rs 2.81 to Rs 2.87; 6/6½ lb Rs 2.56 to Rs 2.62 7/7½ lb Rs 2.37 to Rs 2.40; 8/8½ lb Rs 2.22 to Rs 2.25 10/12 lb Rs 2 to Rs 2.06; Inferior fifths 5/5½ lb Rs 2.34 to Rs 2.37; 8/8½ lb Rs 1.97 to Rs 2: 10/12 lb Rs 1.81 to Rs 1.84; Buffalo 12/13 lb Rs 1.87 to Rs 1.94; 5/5½ lb Rs 2.37 to Rs 2.40; Buff calf 1½/2 lb Rs 3.12 to Rs 3.19; Cow calf 1½/2 lb Rs 3.69 to Rs 3.81.

For the Investor

INVESTMENT GOSSIP Inhibiting Factors

THE stock markets have been ruling rather subdued this week. In earlier dealings the trend was irregular with the more speculative counters encountering selling pressure. Steel shares were particularly subjected to pressure presumably due to the disappointment over the continued delay in the announcement of the steel retention price. As recent support for these shares had been mainly based on the expectation of an early announcement of an increased retention price, the fact that no news in this regard was received even this week accounted for the reactionary trend noticed in earlier dealings. The improvement in sentiment after mid-week in Calcutta is to be attributed partly to the fact that the carry-forward charges in this week's settlement did not show much variation either way and partly to the news that the US Senate Foreign Relations Committee has partially restored its earlier cut in the US Aid to India.

But a broadening of interest at rising price levels has been made difficult by a fresh set of adverse factors. In the first place, even though there has been a reassuring restoration of the cut in US aid, it is apprehended that the halting character of the US aid sanctions will have a damaging effect on the attitude of the other members of the Aid India Club, a crucial meeting of which to decide the quantum of aid to India is to be held next week. Market-men seem to be once again worried over the possibility of the former Finance Minister joining the Central Cabinet. Rumour had it from last week-end that Mr T. T. Krishnamachari would be back in the Central Cabinet as soon as the Prime Minister returns to headquarters after his holiday in Kashmir.

While the more speculative counters have become rather heavy due to inhibiting influences, investors too have received little encouragement this week. For instance coal shares which were in good demand following official indications of an increase in the selling price of the commodity,

have not been able to make much headway. This is because investors have come to realise that the proposed price increase may after all not come to much. Moreover, a number of new issues have come to attract the attention of the investor. The general experience of new issues has been quite good and it is only natural for the investor to want to subscribe to them in view of their growth prospects.

Asiatic Oxygen

Asiatic Oxygen Limited is offering at par for public subscription 6,70,000 equity shares of Rs 10 each. Application must be for a minimum of 50 shares or multiples of 50 shares and the terms of payment for the shares are on application Rs 2.50 per share and on allotment Rs 2.50 per share. The balance of Rs 5 per equity share is payable on call or calls but not earlier than three months after the date of allotment of the shares. The company's authorised capital is Rs 2 crores comprising 17,50,000 equity shares of Rs 10 each and 25,000 redeemable 9.3 per cent (subject to tax) cumulative preference shares of Rs 100 each. The present issue is for 15,99,993 equity shares of Rs 10 each totalling Rs 1,59,99,930 out of which all but 6,70,000 shares which are offered to the public have been taken up by the direc-

tors, their associates, and their friends, Air Products and Chemicals Inc. USA, one of the foreign collaborators of the company, and shareholder of the Asiatic Oxygen and Acetylene Co., Ltd. The company proposes to establish manufacturing units at Bombay, Madras, Rourkela, Durgapur, Patna, Gauhati and other important industrial centres. The company's units will have modern plant and equipment so that not more than 50 persons will be required in any of the factories. The company aims at reaching initially a total production of 176.4 million cubic feet of oxygen and 45.6 million cubic feet of dissolved acetylene per annum and production is expected to commence within one year. The company will also manufacture welding electrodes at its factory to be set up in Calcutta with an initial rated capacity of 65 million feet per annum. The company has entered into technical collaboration arrangements with four US concerns which are foremost in that country in the manufacture of industrial gases and welding and gas cutting equipment. There will be no difficulty in regard to raw materials as the principal raw materials required by the industry are mostly obtainable from indigenous sources. With the rapid progress of industrialisation in the country the demand for industrial gases and welding

equipment is daily increasing and there will be a ready market for the company's products.

Oriental Power Cables

Oriental Power Cables Limited is offering for public subscription 53,000 equity shares of Rs 100 each and 27,000 9 1/2 per cent (free of company's tax but subject to deduction of tax at source) preference shares of Rs 100 each. The company has a technical collaboration arrangement with Sumitomo Electric Industries Limited, Japan, one the leading cable producers in the world. The company will initially manufacture Paper Insulated Power Cables. Production in the normal course is expected to commence by December 1963.

Prabhat Udyog

Prabhat Udyog Limited is offering at par for public subscription 29,400 equity shares of Rs 100 each out of an issued capital of Rs 60 lakhs. The authorised capital of the company is Rs 3 crores. The company will take over the entire business and undertaking carried on by M/s Prabhat (Stove and Lamp) Products Co., Private Limited, as manufacturers of Stove, Pressure Stoves and other articles. As there is a complete ban on the imports of stove, lamp and gas mantles, the company's products will have good demand in the country.

NEW ISSUE NOTES Mastic Products

Mastic Products of India Limited, a new company proposed to be incorporated in Maharashtra, has been granted consent to the issue of capital of Rs 80 lakhs divided into equity shares of the value of Rs 65 lakhs and preference shares of the value of Rs 15 lakhs. Out of the equity issue the company will issue shares worth Rs 23.80 lakhs to Ruberoid Company of New York USA for consideration other than cash being the value of plant and machinery to be supplied by them. The company has obtained a licence for the manufacture of various types of tiles for which a factory will be established in the Maharashtra State.

Industrial Tools

Industrial Tools Private Limited, Calcutta is to issue 25,000 equity shares of Rs 100 each for the manufacture of House Service Meters for which a licence has been obtained by the company. The company will convert itself into a public limited company and offer shares for public subscription.

Bimetal Bearings

Bimetal Bearings Limited, Madras, is raising equity capital

Rs 10 lakhs already issued) for cash at par. The proceeds of the issue will be utilized for the manufacture of Shell-back Bearings. Bushings for automobiles etc. in collaboration with Clevite Corporation, Cleveland, Ohio, USA and Repco Limited, Melbourne, Australia.

Union Bank

The Union Bank of India Limited, Bombay, will issue further capital of Rs 40 lakhs (nominal) divided into 800,000 equity shares of Rs 5 each fully paid-up for cash at a premium of Re 0.50 nP per share. The proceeds will be utilized for strengthening the bank's capital base. The present paid-up capital is Rs 60 lakhs.

IDC, Orissa

The Industrial Development Corporation of Orissa Limited is to issue capital of Rs 50 lakhs in equity shares of Rs 100 each for cash at par to the State Government of Orissa. The proceeds will be utilized for the establishment of a cement and a cable factory.

KWTC

Kerala Water Transport Corporation Limited, Allepey, is raising capital of Rs 7,64,450 divided into 10,000 equity and 66,445 six per cent (free of company's tax but subject to deduction of all taxes at source at the prescribed rates) preference shares of Rs 10 each to be issued to employees and owners of Water Transport Agencies.

BALANCE SHEET REVIEWS Philips India Limited

Considerable increase in production and sales despite stringent restrictions on imports has been recorded by Philips India Limited during 1961. Sales have increased to 6.82 crores from Rs 5.55 crores in 1960. After making a provision of Rs 3 lakhs for gratuity and Rs 1.5 lakhs for contingencies and before providing for taxation and depreciation, the net profit is higher by Rs 3.64 lakhs at Rs 8,564,072 as against Rs 8,199,933 in 1960. Expenses incurred on accelerating the process of integration and commencing manufacture in the light factory and heavy interest charges paid on larger borrowings and the influence of excise duty are attributed as the causes for profit being lower as compared to sales. Provision for taxation absorbs Rs 36 lakhs against Rs 33.50 lakhs in the previous year while depreciation is slightly higher at Rs 1,944,210 against Rs 1,903,525. Reserve for development rebate gets Rs 3 lakhs against Rs 2.9 lakhs. Dividend is maintained at last year's level of 12 per cent subject to tax. The carry forward is higher at Rs 143,484 as against Rs 63,622 brought in.

Binani Metal Works Limited

The working of the Binani Metal Works Limited during the year ended December 1961 has resulted in a net profit before providing for taxation and depreciation of Rs 1,363,467 against Rs 421,441 for the previous year. Sales are higher at Rs 1.76 crores as against Rs 1.41 crores and the improvement is due to the adoption of better production methods. Provision for taxation is Rs 600,000 as against Rs 130,000 in the previous year while depreciation gets Rs 125,856 against Rs 98,062. Allocation to development rebate reserve is Rs

Steps taken in the past to intensify local manufacture and to develop indigenous sources of supplies have yielded satisfactory results. The company continues to lay emphasis on its programmes to expand manufacturing activities and arrangements have been concluded by the company with its associates abroad for foreign loans to cover imports of capital equipment needed for implementing the first stages of its expansion schemes. Besides steps to increase production, the company is actively exploring the possibilities for exporting its products and certain initial steps have already been taken in this regard during last year. The company's light factory has started production of lamps of standard quality and steps are being taken to increase progressively the rate of production. The factories at Loni and Calcutta have made satisfactory progress and the indigenous content of a radio set has risen from 49 per cent in 1958 to 70 per cent in 1961.

Jeewanlal (1929) Limited

Though sales have been maintained at the previous year's level of Rs 2.24 crores, the net profit of Jeewanlal (1929), Limited, before taxation and depreciation, for the year ended December 1961, is lower at Rs 1,574,368 as against Rs 1,859,785 for the previous year. Provision for taxation is Rs 635,702 against Rs 740,660 while depreciation received Rs 152,893 against Rs 155,776. Development Rebate Reserve gets Rs 6,731 against Rs 58,591. The Reserve Fund is allotted nothing while the allocation in this regard in the previous year was Rs 576,000. The dividend is increased to 10.5 per cent from 4.5 per cent paid in 1960. The carry forward is higher at Rs 32,965 against Rs 9,923 brought in. As the difficulties of foreign exchange have been smoothened out lately, progress in the setting up rolling mills is being accelerated. Steps are being taken for the issuance of fresh capital of Rs 54 lakhs consent for which has already been received.

Orissa Cement Limited

Sales have been higher by over Rs 1 crore at Rs 52,792,523 for the year ended December, 1961 against Rs 42,695,204 in 1960. The net profit for 1961 before providing for taxation and depreciation is higher at Rs 15,110,009 against Rs 10,894,658 in the previous year. Provision for taxation is also higher at Rs 44 lakhs against Rs 28.50 lakhs while depreciation is slightly lower at Rs 3,681,542 against Rs 3,864,821. Development rebate receives Rs 291,000 against Rs 342,000. After setting aside a sum of Rs 30 lakhs against Rs 10 lakhs in the previous year to general reserve and Rs 69,841 against nil to Rehabilitation and Development Reserve, it is proposed to pay a dividend of 15 per cent on ordinary shares, the same as in 1960. The carry forward is more than double the amount brought in at Rs 110,784. Allround improvement has been achieved by the company in production, and despatches in the refractories division and in the production of both clinker and cement. The expansion plans have not progressed as expected as the import licences for the requisite equipment for expansion of the basic refractory section were issued only by the end of November 1961. It is, however, hoped that the new unit and the first stage of the Chemically Bonded Bricks project will be completed early in 1963.

STOCK EXCHANGES Late Rally in Equities

Watch-Dog Writes:

STOCK markets have been displaying an irregular trend this week, sentiment having been swayed both ways. Toward the close the undercurrents have steadied and the more speculative counters have regained their earlier losses. Although the partial restoration of its earlier cut by the US Senate Foreign Relations Committee has revived confidence somewhat, there is still no tendency to take the receipt of adequate foreign exchange for granted. The result of the meeting of the Aid India Club scheduled at the end of the month is eagerly awaited. While the belief that adequate relief from excise duty on cloth and yarn will be forthcoming is tending to aid sentiment, renewed rumours of a reshuffle of the Central Cabinet with the possible inclusion of the former Finance Minister in it is keeping speculative interest at the side lines. One of the main reasons for the lack of sustained interest in the list seems to be that with the subscription lists of so many new issues opening in the course of the next few days, investors' attention is temporarily turned

The Calcutta Stock Exchange opened on a quiet note and continued in that mood upto midweek but after settlement day sentiment improved considerably with Indian Iron again in favour. However, throughout the week selected shares all along the list continued to be in request at steadily rising price levels.

Bouts of buying and selling characterised trading in the Bombay Stock Exchange. The market opened the week on a steady note with selected shares gaining ground on buying support but on the subsequent sessions values drifted lower in later dealings on selling pressure inspired by lower advices from Calcutta. The reactionary trend however yielded place to a firm undertone in the afternoon on Wednesday when lower levels attracted bear covering and fresh buying interest. Although there were few steady spots on Thursday, the undertone was once again generally subdued.

Conditions in the Madras Stock Exchange were generally rather subdued though prices showed little variation either way. Both speculative transactions and investment support showed marked diminution as marketmen appeared to be pre-occupied with the several new issues that were on the market.

CALCUTTA

Calcutta, Friday Evening.

Although trading in the Calcutta Stock Exchange commenced on an uninspiring note with sentiment deteriorating further in subsequent two sessions, the undertone improved after midweek with even the speculatives gaining their lost ground completely by Thursday. The week's opening was on a subdued note with the more speculative counters losing ground. The next two days witnessed further declines in the forward scrip with Indian Iron leading the downtrend. With settlement out of the way, sentiment improved all along the line. Indian Iron is supported on the expectation that a higher retention price for steel will be announced soon. While the fact that the US Senate Foreign Relations Committee has partially restored its earlier cut in US aid to India has arrested the reactionary trend, bull support continues to be halting in view of the continued uncertainty as to the outcome of the next week's meeting of the Aid India Club. The large number of new issues that are on the market is keeping investor interest in the existing list rather selective. During the week's trading a number of miscellaneous shares have been in good request at daily rising price levels. On Friday, the undertone was rather subdued.

Sectionwise, coal shares have continued to attract support. Although enthusiasm in the section has been somewhat chilled by the indication that the proposed increase in coal prices will be only marginal, investors are still optimistic about the prospects for the industry as they think private collieries will be given a bigger share in the coal

target. During the week's trading selected shares have made further headway on sustained buying. Burrakur which opened the week at Rs 20.87 was subdued by close on Thursday at Rs 20.81 after moving both ways during the intervening days. Bengal improved from Rs 400 to Rs 402. East Indian was done upto Rs 53.12, as was Equitable at Rs 30.25. Western Bengal after having been higher at Rs 11.81 closed somewhat lower on Thursday at Rs 11.12.

Jute shares were subdued with a number of shares losing ground on lack of sustained interest. Anglo-India moved within narrow groove to be placed slightly higher at Rs 254. Cheviot was placed at close on Thursday at Rs 25.56 as against its opening rate of Rs 25.25. Fort William was slightly better at Rs 28.69. Ganges was fairly active and was placed at Rs 14.94. Kamarhatti improved by 8 points to be placed at Rs 198. New Central did not show much change at Rs 16.25. After being lower in earlier dealings Birla closed on Thursday at Rs 35.89 as against its opening quotation on Monday at Rs 35.31.

Selective interest was noticeable in the cotton textile section where expansion of trading is checked by the continued uncertainty about relief in excise duty on cloth and yarn. Rumour has it that only marginal adjustments would be forthcoming. Bharat Commerce was well supported in earlier dealings with the price improving to Rs 30, but in later dealings interest dried up.

Tea shares continued to lack support following the irregular trend in the first auction of the new season's tea. Indications are that quality teas only will fetch good price. Transactions in the section during the week were few and prices were marked showed little or no change. Hasimara was slightly better closing on Thursday at Rs 31.44 as against its opening quotation of Rs 31. Huldibari was subdued at Rs 30.25 having opened the week at Rs 30.33. Brooke Bond was placed at Rs 15.19 while Tezpor changed hands at Rs 16.62.

In the Engineering section, Indian Iron which opened the week at Rs 26.44 was soon hammered down on selling pressure. After mid-week, however, the scrip regained lost ground to close at Rs 26.48 on Thursday. Texmaco also moved both ways to close at Rs 25.70 as against its opening rate of Rs 25.50. Among other engineering shares, Indian Standard Wagon met with good support on encouraging news from the company to gain nearly ten points during the week's trading to be placed at Rs 181 from Rs 180. Binani metal reacted to Rs 12.81 from Rs 12.94, while Burn was well maintained at Rs 122. Benithwaite was marked at Rs 56 with Bharat Ball Bearing done at Rs 16.25.

In the Miscellaneous section the trend was mixed. However, a large number of shares continue to attract attention at increasing price levels. Indian Aluminium was an outstanding counter and gained more than one rupee. Renewed support was also noticeable in Indian Cable.

Paper shares were generally in good request. Shree Gopal Paper was steady as were Bengal, India Paper Pulp and Straw Products. Dunlop Rubber was a steady feature on right issue rumours. Alkali Chemical encountered profit-taking and reacted.

Expansion of Soap Production

The consumption of soap in India is expected to go up by about 1,30,000 tons during the Third Plan period, from 3,70,000 tons in 1960-61 to about 5,00,000 tons in 1965-66.

There are now in the country 91 organised units manufacturing soaps, besides a large number of smaller and cottage units. Nearly a third of the organised units are in Maharashtra with West Bengal a close second with 21 units. The three States of Rajasthan, Orissa and Assam have no organised soap factory. All the remaining States have a few soap factories each. The total installed capacity of all these factories in the country is 2,55,117 tons.

Broadly four categories of soaps are manufactured in the organised sector: laundry soap, toilet soap, medicated soap and other kinds of soaps. During the Second Plan period, the production of these varieties of soaps by the organised factories rose from 99,000 tons in 1955 to 1,40,515 tons in 1960. The lion's share of this production is accounted for by laundry soap.

UNORGANISED SECTOR

The soaps manufactured by the numerous scattered unorganised units are generally believed to be not as high in cleansing properties as those turned out by the organised factories. There are also difficulties in estimating accurately their total production. (There are two estimates of this during the Second Plan period—one by the Development Wing of the Commerce and Industry Ministry and the other by a private soap manufacturing company, which put this figure, respectively, at 2,30,000 tons and 3,30,000 tons. However, taking the former figure for official purposes of planning, the output of 2,30,000 tons would be equivalent to about 1,60,000 tons of soap of the average strength produced in the organised sector.

Thus, the total production of soap in the country on the eve of the Third Five Year Plan can be put at about 3,70,000 tons. Imports of soap, except in the case of certain soaps of germicidal value, are virtually banned. Even these special soaps are proposed to be manufactured in the country shortly.

The additional production of 1,30,000 tons of soap, envisaged during the Third Plan period, has been tentatively allocated between the organised and unorganised units at 80,000 and 50,000 tons. Since the installed capacity of the existing factories is 2,55,000 tons, a production target of 2,30,000 tons need not entail the establishment of any additional capacity during the Third Plan period.

The principal raw materials that go into the production of soap are

vegetable oils and tallow (including resin), caustic soda, sodium silicate and perfumery. The requirement of oils and fats to reach a production target of 5,00,000 tons of soap by the end of the Third Five Year Plan have been placed at about 2,30,000 tons. This oil content is generally secured from coconut oil, palm oil, groundnut oil, hydrogenated vegetable oil and Mohwa oil.

Radio Receivers

Production of radio receivers more than trebled during the Second Plan period and is expected to increase three-fold again during the Third Plan.

Production rose from about one lakh receivers in 1955-56 to 3.2 lakhs in 1960-61. During the Third Plan period production is expected to reach the figure of nine lakh receivers. Out of this, eight lakh receiver sets will be produced in the organized, large-scale sector and one lakh in the small-scale sector.

At the beginning of the Second Plan there were 15 manufacturing concerns with an aggregate installed capacity of 211,800 receivers. In 1960-61 there were 20 such concerns having an installed capacity of 279,180 receiving sets. Seven of these factories are located in Maharashtra, five in West Bengal, three in Punjab, two in Madras and one each in Bihar, Delhi and Mysore.

Besides, in the small-scale sector there are about 200 small assembling units with installed capacity of 65,000 receiving sets per annum. In 1960-61 these small units produced about 40,000 receivers in all.

Of late a substantial demand has been cropping up for transistor radio sets. This demand is being met by some of the existing manufacturing units taking up the production of transistor radios in addition to their normal production programme.

CHEAP RADIO SETS

A recent development of interest in the radio production programme is the production of cheap radio receivers priced at or below Rs 125 per set. These low-priced sets enjoy a special half-rate concession in the payment of fees for radio receiver licences. The production of such cheap sets is about 50,000 per annum at present.

During the Second Plan, substantial progress was registered in the manufacture of components and parts of radio receivers. Indigenous production of radio receiver valves has been recently undertaken under the public sector. The Bharat Electronics Ltd., which is producing radio valves is expected to produce about 1.3 million valves annually from 1962-63 onwards.

Import of complete radio sets and been prohibited for the past several years. The present import programme is confined to only those components and parts which are not being produced yet within the country.

The export of radio sets abroad, mainly to West Asian countries, still however, remains modest. In 1960-61 radio receivers of the value of about Rs 1 lakh were marketed abroad.

Foreign Aid Uncertainties

The Washington meeting of the Aid-India Club has been adjourned for "several weeks" to allow the consortium more time to reach final decisions". It is officially stated that there were indications that certain other countries might wish to join the club. These are valid enough reasons as far as they go. "Unreadiness" of members need not necessarily mean unwillingness and the waiting for new members to join has relevance in the context of the non-US members having to "match" the US assistance. It will be recalled that in June 1961 meeting of the consortium, it was indicated that was conditional on "the prospects of additional aid commitments by other countries which are already members—or might subsequently become members—of the consortium in amounts which would raise the total contributions of these countries in that year to a level comparable with the proposed US contribution." The firm commitments then made by the other countries fell short of the requirement by 220 million dollars for the entire aid to go through. It was then anticipated that this shortfall will be made good in time by the members themselves increasing their assistance and by new members coming in with offer of aid. For a variety of reasons it has so far been found impossible for the existing members of the club to increase their contributions to the level demanded by the US. Hence the necessity to give them time to have second thoughts and, if they should still find it difficult to match the US contribution, to make good the shortfall by contributions by the new members who are likely to join.

The probable reasons why the other members of the consortium have found it difficult to increase their contributions fall into three broad categories. The first, which is getting wide topical canvassing, is that certain actions of India and certain aspects of Indian policies have made these countries considerably cooler in their desire to help. The second is the emergence of the hard core of resistance to economic aid to under-developed countries which has had some influential backing in recent time. And lastly—and this is a point generally ignored by aid-receiving countries in their self-absorption—some of these countries are having economic embarrassments of their own which make enlargement of aid commitments somewhat difficult.

As regards the first, much inchoate anti-Indian feeling remotely derived from Indian neutrality in the cold war has fastened itself on Indian action in Goa, the Kashmir dispute assiduously kept alive by Pakistan and more recently by the reported Indian exploratory talks for purchase of Russian jet fighters. As much was said by American senators when some of them voted for a cut in American aid to India for the year, now partially restored. One may deplore, as the Washington Post did recently, the fact that these and other irrelevances like the personality of Mr Krishna Menon, should rear their heads in discussing the worth-whileness of economic aid. But they do and have to be combated or at least allowed for in our calculations.

The second reason is that lately influential voices have been added to the support of a

natural desire of tax-payers all over the world not to pay for what they consider is a kind of remote philanthropy. It is difficult to convince them that such assistance is neither philanthropy, nor is it remote from their own economic preoccupations and even well-being. And when authoritative voices,—like that of the Statist of London, for example—are raised against foreign aid, the task of explaining the fundamental economic importance of foreign aid becomes even more difficult.

Lastly, the economic limitations of the aid-giving nations in extending further assistance is something that ought to be recognised. Great Britain, for example, had serious balance of payments difficulties last year and it was then considered expedient that British overseas investments should be drastically reduced and attempts should be made to have British capital abroad repatriated home. The United States has had to put up with a tremendous pressure on the dollar, not so much because of deficit in balance of trade but because of deficit in balance of payments resulting from vast expenditure on military and other aid to other countries. The economy of West Germany, which seemed to be booming till last year, is undergoing stresses and strains of various sorts at the moment. It is therefore only to be expected that these nations, however favourably disposed to us, will be reluctant to extend their commitments too far, especially, when popular feelings can for political purposes be plausibly worked up against such action.

It may be urged that the Aid-India Club will ultimately be persuaded to find the order of assistance indicated last June. It is also likely that over the entire plan period, the temporary aberrations caused by passing events will cease to have any significant effect on the order of aid. Thirdly, it is also true that the pace of utilisation of aid already vouchsafed is not such as to make us immediately worry about the absence of further aid at the moment. Even after making allowances for all these, it still appears to us that there is an urgent need for a complete rethinking about the targets and priorities of the Plan. The Third Plan, as is widely recognised, is more vulnerable on the foreign exchange front than the Second, with its substantial foreign balance cushion. It is therefore unfortunate that there should be uncertainties about the extent of foreign resources likely to be available for the immediate future. The misfortune is further underlined by the fact that recent estimates have shown that the earlier estimates that put the requirements of the total external assistance were gross under-estimates.

Though one does not wish to sound alarmist, something like the revision that was forced on us in the second year of the Second Plan seems inevitable in the second year of the Third Plan. In such a context it is indeed ironical that certain official pronouncements should talk of enlarged investments in public sector projects (like the increasing the capacity of Bokaro Steel plant). Such pronouncements make us wonder whether there is any kind of correlation attempted between desires and possibilities.

Indian Finance

Export Prospects

Export Promotion is admittedly one of the most burning problems facing the country. Throughout the Second Plan period, the country experienced chronic and persistent deficits in the balance of payments position which reached a peak in the final year of the Plan. The Third Plan assumes import requirements of considerably greater magnitude which will inevitably mean further aggravation of pressures on the payments position unless anticipated rise in imports could be matched by corresponding increase in exports. On the basis of annual requirements at Rs 1,270 crores for imports during the Third Plan period, exports will have to rise to about Rs 1,300 crores or double their present levels. A rise of this order poses formidable problems in promotional efforts which have necessarily to concern with all the commodities currently exported from the country. What are the prospects for stepping up exports? The World Trade Department of the Indian Chamber of Commerce has in a study entitled "A Survey of India's Export Trade", examined the problem with reference to the markets offered by the different countries with which India has trade relations and also from the point of view of scope for stimulating exports of the different commodities. Special attention has been drawn to the scope for increasing exports to the traditional markets while the importance of new markets in the neighbouring countries and of West Asia particularly for the manufactured items has also been emphasised. Altogether it is an encouraging picture of prospects that emerges from the study made by the Chamber.

A major source of stagnancy in exports has been the dependence on a few conventional and traditional commodities for the greater part of export earnings. Tea, jute textiles and cotton textiles between themselves account for a little less than 50 per cent of the total exports from the country. While in these circumstances, diversification should point the way to greater earnings from exports, it cannot be agreed that the scope for stepping up exports of the conventional and traditional items has been exhausted. The Third Plan itself has taken credit for increased earnings from the traditional commodities. But the problems involved in this effort do not seem to have been sufficiently appreciated. Most importantly there is increasing competition in the international markets for these goods arising from the efforts of other countries to step up their exports and the entry of new countries. The competition of Ceylon and East Africa in tea, of Pakistan in jute and of Japan and Mainland China in cotton textiles are factors to be reckoned with in assessment of prospects for increased exports of these commodities. Against this there is the redeeming feature of the scope for meeting such competition on the basis of reduced cost of production at home. The study by the Indian Chamber has drawn attention to the fact that India's yield per acre has not been improving at the same rate as in other countries. In respect of jute goods also the possibility of stepping up exports significantly by ensuring adequate and regular supply of raw jute and expediting the modernisation and rehabilitation of machinery is accepted. The cotton textile industry also suffers from handicaps of outmoded and worn out machinery and fluctuating supplies of raw materials. Export promotion with reference to these commodities has perforce to pay special attention to solving these particular problems of these industries. On the basis of country-wise scope for

increasing exports of these commodities, the most prospective markets are offered by the US and the countries of Western Europe. India has lost ground to Ceylon in America in the export of tea in recent years. From Rs 6.29 crores in 1958-59 Indian exports of tea to the US declined to Rs 6.15 crores in 1959-60 and further to Rs 5.27 crores in 1960-61. The concessions in export duty and the drawback in excise duty announced in the last budget should go some way in enabling Indian tea in making greater headway in foreign markets.

The other important traditional items which figure in the country's list of exports and for which scope for further increase has to be sought, are manganese ore, iron ore, spices, mica, lac, vegetable oils, leather, tobacco etc. In respect of manganese and mica the main disadvantage for India is development of sources of supply in close proximity to the US which has offered the largest market for these goods. In respect of manganese ore, Brazil is a formidable rival to India and enjoys relative advantages of proximity to the

US, superior quality of the ore, cheaper freight and long-term contract with the American buyers. How far the channelling of the manganese export trade through the State Trading Corporation has benefited the country is a matter on which there will be sharp differences of opinion. However there has been greater appreciation by the Government of the difficulties encountered by the industry in increasing exports and as a result substantial concessions in freight rates have been sanctioned. The striking feature of the country's exports of these less important traditional goods has been their relative stagnancy which however only confirms the possibility for increasing their exports by special measures taken to stimulate their exports. In this light attention has to be directed to eliminate the fluctuations that have characterised the price trends for lac, reducing the price of vegetable oils and of pepper, improving the per acre

yield of tobacco and also of their quality. There is stated to be potentially rich market for Indian tobacco and vegetable oil in the Western Europe. Regarding the demand for vegetable oils, an official study recently observed that in spite of an increase in the production of groundnut oil in the overseas territories of France and Belgium and the uncertainty arising from the formation of the European Common Market, West Europe can be expected to provide an expanding market for the Indian product which is known for its quality.

One promising development in the field of exports has been the successful debut made by the country in the export of manufactured goods particularly of light engineering items. The export of machinery and transport equipment which amounted to only Rs 2.5 crores in 1958-59 has risen sharply to about Rs 10 crores in 1959-60. This indicates scope for further substantial increase through diversification. The market for the light engineering goods originally confined to neighbouring countries has widened considerably with the interest evinced even by the US and the West European countries. The Indian Chamber study states that there is extensive markets for castings, diesel engines etc even in the USA. The Third Plan has taken note of such prospects and has fixed a target of Rs 30 crores for export earnings from engineering goods. Perhaps the only limiting factor is the restrictions on production placed by raw material shortage which have become chronic.

The study of the scope for stepping up exports with reference to countries, seems the more appropriate approach to the problem of tackling the adverse balance of payment position. While India has adverse balance of trade with most of the countries including the neighbouring ones of Burma, Ceylon, Malaya etc, the greatest gap in trade is with the US and West European countries. With West Germany for example the adverse trade was as much as Rs 105.1 crores in 1960-61. India has also been having persistent trade deficit with France, (Rs 12.3 crores in 1960-61), Italy (Rs 16.3 crores in 1960-61) and Belgium-Luxembourg (Rs 10.1 crores). The trade deficit was greatest with the US being of the order of Rs 190.3 crores in 1960-61. Necessarily export promotion should have special significance with reference to these countries. By drawing attention to the relatively low position occupied by Indian exports in the total imports of these countries, the study by the Indian Chamber underlines the scope for substantially adding to our export performance. India's exports to West Germany in 1960-61 were valued at only Rs 19.0 crores, while total imports of West Germany during 1960 were valued at more than about 10 billion US dollars (more than Rs 4,000 crores). Similarly US imports during 1960-61 were valued at about Rs 7,000 crores and Indian exports at Rs 100.2 crores constituted just above 1 per cent of the total. With the notable exception of the UK, with which we have special trade relations under the Commonwealth trade framework, the same is true of the other major West European countries. Even with the Rupee payment countries, the trade with which were originally expected to be self-balancing, serious gaps have developed in recent years. Only with the USSR among the rupee payment countries is India's trade in a favourable balance.

Necessarily, an all-out effort is needed for stepping up exports to the extent required by Third Plan imports. There is some uncertainty in present

the European Common Market and particularly of Britain's entry. Whether and to what extent exports from India will be unfavourably affected by the formation of the ECM cannot be known at present. However there is realisation among these countries of the importance of special protection against harmful effects to these countries. Apart from the final shape of the ECM structure, much also depends on the Government's policies. In this regard, there are heartening signs of change. The constitution of the Board of International Trade by Mr Manubhai Shah and the concessions in corporation and income tax announced in the last budget for earnings from exports are substantial concessions the significance of which for success of export promotion cannot be exaggerated.

KERALA

Industrial Vistas

CLOSE on the heels of the techno-economic survey conducted by the National Council for Applied Economic Research, the All India Manufacturers' Organisation has undertaken a survey of industrial potentialities of Kerala and has published its findings in a 50-page report. The AIMO study confirms the conclusions reached by the NCAER and dispels the notions about the relatively little scope for industrialisation offered by the Kerala State. Compared with the techno-economic survey by the NCAER, the study made by the AIMO is relatively narrow in scope, for while the NCAER covered all aspects of the economy giving equal emphasis on agricultural and industrial development, the AIMO study deals only with the prospects for industrial growth and touches on agriculture only in so far as it serves as the basis for industrial development.

But in its own restricted field, the AIMO has made exhaustive study for industrial growth. The report takes note of the relatively slower progress made by the Kerala State in industrial development as compared with other States. "The investment on industries made in Kerala in the shape of a subsidiary unit, namely the DDT factory, is only Rs 0.79 crore which is hardly 0.1 per cent of total investment of Rs 657.9 crores made by the Government of India in the Central sector of industries". On an assessment of the resources potential offered by the State, the AIMO has made a number of specific proposals for industrial schemes which are capable of being consummated in the short-run and which can give a new direction and dynamism to the industrial growth of the State. The proposals fall mainly under four categories, namely, agricultural based industries, industries based on forest resources, marine based industries and industries based on mineral resources of the State.

The State is rich in agricultural resources which as the AIMO report points out, can serve as the basis for a number of new industrial schemes. Coconut, cashewnut, rubber, tapioca, lemongrass etc are among the more important of these resources. Progress so far has been confined only to the development of the coir industry which processes the coir husk, giving employment to nearly 6 lakhs of workers. The signs of instability shown by the industry in recent years have been a source of concern, and the industry is in urgent need of modernisation. The AIMO study therefore recommends the adoption of modern methods for processing of fibre into finished products and suggests that a factory or two for making rubberised coconut fibres be set up one at

Calicut and the other at Trivandrum areas involving about Rs 5 to 10 lakhs investment each. A coir machinery industry is also recommended to be set up in Trichur to meet the needs of the coir industries. The report also stresses the importance of proper utilisation of the coconut shell for production of activated carbon to feed electrical and electrochemical industries.

In respect of cashewnuts, the report urges further extension of cultivation to provide the basis for further intensive and diversified growth. The report states that the two by-products of cashewnuts, the cashewnut apple and the cashewnut shell are not being fully utilised. The report recommends setting up of a big sized cashewnut shell oil plant for producing cashew nut shell oil and also providing various resins based on it to be set up in the Quilon area.

The other proposals made by the AIMO for establishing industrial units to process agricultural resources are (1) a medium-sized factory for manufacture of wrapping paper and kraft paper based on the utilisation of arecanut waste (2) a plant for fermenting tapioca starch to yield butanol, acetone, hydro-gen (3) another plant based on tapioca starch for making starch and glucose (4) a factory or two for making inones, ginger oil, engero! etc from Lemongrass which is widely grown in the State. Another important suggestion made in the report is the need for further extension of sea-island cotton, which will lead to substantial savings in foreign exchange and also raise the employment potential in the handloom sector.

Kerala has fairly extensive forest area nearly 30.0 per cent of the State area being under forests. The scope for forest based industries is therefore substantial. Candidate industries in this field are those making paper, rayon, matches, rubber, resin gum turpentine, essential oil, ratan canes, tanning etc. Among the proposals made by the AIMO are wood seasoning and wood joinery plants at Ballapatam and at other suitable places, veneering plants at the plywood factories, chipboard factories making use of the waste products of the present forest based industries. Prospects are also indicated for manufacture of perfumeries such as citral, ionone, etc used in soap manufacture from various kinds of essential oil yielding plants like lemongrass, citromella grass, cinnamon plants etc.

In its techno-economic survey of Kerala, the NCAER, had not paid sufficient attention to the prospects for development of marine-based industries in the State. The AIMO however indicates scope for substantial development of marine based industries. While there are some projects in operation in the State launched under the auspices of the United Nations for development of marine resources, the AIMO report stresses the need for further development by additions to the quick freezing and cold storage plants and canning plants. It states that there is considerable scope for a few large scale industries that could be set up in the State based on fish and fish oil.

Fairly good prospects are also indicated for industries based on mineral resources of which the State has considerable deposits. Monazite, ilmenite, rutile, silliminite, cerium, garnets are some of the important minerals. "The minerals happen to be typical ones in the whole country and have opened up vast field of exploitation for the economic development of the State in particular". China clay, ball clay and grey clay are other minerals which provide potential basis

for new industries. In view of the paucity of data on the mineral resources of the State, the report recommends further intensive survey to be undertaken by the State Government without depending entirely on the Central Government.

In making its recommendations, the AIMO team has taken note of some natural advantages enjoyed by Kerala for industrial development. These include a fairly well-developed system of road transport comparatively cheaper sources of power and an educated labour force which has a comparatively higher productivity than in most other States. The absence of heavy minerals and metallic ores, seems a drag industrial development of the State. The NCAER has suggested special consideration being shown by the Centre for the development of engineering industries even on the basis of procurement of the essential raw materials from the other States. The AIMO report does not however seem to consider the absence of heavy minerals and metallic ores a serious handicap and states this lack could be made up by the availability of low cost hydro-electric power producing potential. And according to it "the low cost hydro-electric power availability can be converted into ideal sites for industries requiring large quantities of water and electricity." Apart from power intensive industries, the report states that there is vast scope for starting a number of electrical goods item of manufacture.

The report also makes a number of other recommendations for development of railways, roads, inland water transport etc. The cheap transport provided by the navigable rivers and canals is a favourable factor for industrial growth. Port development also would open up new vistas of progress. Kerala has about 13 intermediate and minor ports apart from the major port of Cochin. In view of the communication and transport facilities provided by these ports, the report states that it should be possible to set up at Cochin-Ennnakulam or at suitable ports like Calicut or Quilon factories for building small power launches, and barges and marine engine manufacture. The importance of dry docking and ship repairing facilities at the Cochin Shipyard is also emphasised.

One major problem in industrial development of the State is to interest both native businessmen and outside entrepreneurs in the State's industrial development. Local entrepreneurs according to the report have been apathetic because of unsatisfactory climate for industrial development. To encourage local investment, it has been suggested that the Government should offer some of their shareholding in prosperous government controlled industries to local investors and invest the monies thus released in starting new industries. Provision of adequate funds by the Government for financing of small and medium industries and other facilities by the State Department of industries has also been suggested.

Jute: Problems of Co-operative Marketing

THE difficulties that hamper the growth of the co-operative sector in the marketing of Jute in West Bengal are clearly indicated in the report of the Study Team, set up by the National Co-operative Development and Ware-

housing Board, which has also suggested measures that may be taken to create conditions for growth of co-operative marketing. The Third Plan has indicated the programme for development of cooperative marketing only in very general terms for this is a field in which it is not practicable to fix targets in advance. It is, however, emphasised that "efforts will be directed towards handling by cooperatives of a steadily increasing proportion of the marketable surplus of food grains and commercial crops." But marketing of jute, it was recognised, required special study. Accordingly the National Cooperative Development and Warehousing Board, at a meeting held on 20-6-1961, appointed a Study Team to investigate the cooperative marketing of Jute in West Bengal, Wheat in Rajasthan and Paddy in Andhra Pradesh.

The principal aims of cooperative marketing are the orderly marketing of agricultural produce, reduction of the price-spread between the price obtained by the cultivator and that paid by the ultimate consumer, and sale of agricultural products on terms favourable to the producer. Since 95 per cent of the jute production constitutes the marketable surplus, orderly marketing can make valuable contribution to strengthening of the rural economy of West Bengal. The trade in jute, as it has developed, is highly speculative and subject to very wide price fluctuations, with the result that the cultivator is usually at a great disadvantage. His position is further weakened by dependence on the trader for seasonal advances to cover the costs of cultivation. But it is not the cultivator alone who suffers on account of the chaotic state of the marketing of jute. The fluctuating prices have their immediate impact on production which also shows wide variations from year to year. The prices ruling during the sowing season determine the area under the crop for the next season. Depressed prices in one season caused by a glut in the market, or, more often, by activities of speculators, is inevitably followed by a shortage in the next season causing great difficulties to the manufacturing industry. Orderly marketing is, therefore, of fundamental importance in ensuring stable supplies of the raw material for one of India's most important industries.

Lack of adequate incentive for growers is also regarded as one of the main reasons for the failure to reach the Second Plan target of Jute production. Against the target of 55 lakh bales, the actual production in 1960-61 was only 40.8 lakh bales. There is a considerable price spread between the final prices in the Calcutta market and that obtained by the cultivators. It has been estimated that the cultivator hardly gets 77 per cent of the final price. The cultivator also stands to lose on account of underestimation of the grade the sale is effected before grading and the grower receives the bottom grade price for the unsorted lots. Another source of loss is the underweighting of the produce, which is facilitated by the diversity of weights in use in different village markets. Co-operative marketing, if successfully established, could go far to prevent these mal-practices.

The sharp fluctuations in the prices of this commodity, which could be corrected by a strong cooperative marketing organisation, is itself the main reason for the almost insignificant progress made by cooperative marketing societies in this field. The quantity of jute handled by marketing societies in West Bengal during 1960-61 was hardly 35,000 maunds against the total marketable surplus of 93 lakh maunds. In fact, a few years ago, the marketing societies were directed by the

State Government to leave jute severely alone because of the great risk of incurring losses.

Growth of cooperative marketing is intimately related to the development of Cooperation in other fields and, particularly, of Cooperative Credit. For it has been found that, unless the cultivator is able to get an advance from the cooperative credit society, he will usually be unable to take his produce to the marketing society to be sold on his behalf and would prefer to sell to a trader who is prepared to extend the necessary financial accommodation. This is particularly the case in respect of jute. The report points out that the development of cooperative marketing in West Bengal will continue to be largely inhibited until a strong cooperative credit structure is built up. In the year ending March 1961, cooperatives in West Bengal handled hardly 0.38 per cent of the marketable surplus of jute. The experience of co-operative societies is, therefore, hardly likely to be helpful in drawing up a programme for the development of cooperative marketing in future.

In view of the difficulties indicated above, the Study Team has not found it possible to make categorical recommendations for immediate implementation throughout the State. There is need for gaining more experience before arriving at firm conclusions in regard to the programme of development in this field. This experience, the Report suggests, should be gained by working a few pilot projects located in areas where Cooperative Credit is relatively better developed or has potentiality for development in the near future. The Team has suggested that eight pilot projects may be established in suitable localities in the districts of 24 Parganas, Hooghly, Nadia, Murshidabad and Burdwan.

Like other marketing societies, these societies included in the pilot project scheme, would also handle other commodities. The Study Team does not consider that, at the present stage of development, it would be desirable to organise separate jute marketing societies. Marketing societies usually function only as agents of the grower for the sale of his produce. They collect the produce and arrange for their disposal on behalf of their members. In some cases they may also arrange for grading and processing. In the case of jute, however, it is recognised that it may be necessary to modify these practices, for the jute grower has been accustomed for generations to sell his jute on the spot for cash payment. While the long-term objective of the programme for cooperative marketing should be the adoption of standard practices, the report recognises that, for the present, cooperative societies would have to function on the basis of outright purchases. Such a policy would involve a considerable degree of risk which may be reduced to some extent, if purchases are made only against firm orders from mills. The Report has also suggested the creation of a Price Fluctuation Fund to cover the risk, to which contributions may be made both by the Central Government and the State Government. The size of the fund to be administered by the Apex Society may be Rs 5 lakhs, and it would be obligatory on the marketing societies to contribute to this fund about 10 per cent of their net profits every year. Apart from enlarging the membership, both of individuals and village credit societies, for which there is large scope, increased contribution by Government to the Share Capital has been suggested, in order to strengthen the financial position of the societies. It has also been suggested that the State Bank might agree to

sanction clean accommodation to the societies on a consolidated basis against a single guarantee of the State Government.

The Report has drawn pointed attention to the paramount importance of a proper pricing policy for the effective functioning of cooperative marketing societies. Referring to the Buffer Stock Scheme, the Report has recommended that the Buffer Stock Agency should operate through the cooperatives to the extent possible.

Company Registrations in 1961-62

A PRELIMINARY survey of new company registrations in 1961-62 shows trends some of which are apparently contrary to those in evidence since 1956. There was a marked fall in new registrations in 1956-57 which was attributed to the apprehensions entertained by entrepreneurs regarding the rigours of the new company legislation which came into force in that year. But it was not long before these fears were found to be exaggerated and company registrations steadily increased from 848 in 1956-1957 to 1683 in 1960-61. The number of new companies registered in 1961-62 was lower at 1614, a fall of 69 as compared with the previous year. But this marginal fall cannot be regarded as an indication of any definite trend. For one thing, except for the previous year, the total registrations during 1961-62 was the highest during the last decade. It was also higher than the annual average of the number of new companies registered during the five year periods ending 1955-56 and 1960-61 by 204 and 406 respectively, and the annual average for the decade as a whole by 304. Again the total authorised capital of the new companies registered in 1961-62 was larger than in any year in the last decade including the previous year when a larger number of new companies were registered. The 1614 companies registered in 1961-62 had a total authorised capital of Rs 324.9 crores as against Rs 287.1 crores of the 1683 companies registered in 1960-61. The figures of paid-up capital, no doubt, would be a more relevant index of the climate for corporate enterprise. But full information regarding paid up capital would be available only in the annual returns and there will be a time-lag of over a year before firm figures for 1961-62 are available. But, in any case, the small decline in the number of new company registrations cannot be regarded as an indication of any slackening in the tempo of new company formation.

It has also been noted that, immediately after the new Act came into force, there was a sharp drop in the number of new public companies registered; and this continued even after the total number of registrations increased in subsequent years. In 1958-59 only 58 new public companies were registered as compared with 1037 private companies. The number of public companies increased to 87 and 153 respectively in 1959-60 and 1960-61, while the number of private companies increased to 1365 and 1530 respectively. In the year under review we find, for the first time, a decline in the number of new private companies registered along with an increase in the number of registrations of public companies. The number of new public and private

2 June 1962

companies registered during the period 1953-54 to 1961-62 are given in the following table.

Year	Public Cos.	Private Cos.
1953-54	204	989
1954-55	211	992
1955-56	186	1262
1956-57	84	764
1957-58	65	896
1958-59	58	1037
1959-60	87	1365
1960-61	153	1530
1961-62	199	1415

The increase in the proportion of private companies in the years subsequent to 1956 has been explained as the result of the new company legislation whose provisions were less onerous as far as private companies are concerned. But this advantage has been reduced by subsequent tightening up of the law and the adoption of criteria other than the number of shareholders to determine whether a company should be entitled to concessions as a private company. This change has probably weakened the preference for private companies.

An examination of the size pattern of the new companies shows that the majority are companies with authorised capital less than Rs 10 lakhs. There were 1241 such companies registered in the year under review, which accounted for 77 per cent of the new registrations. The corresponding percentage for 1960-61, 1959-60 and 1958-59 were 78, 85 and 88 respectively. At the other end, 74 companies with authorised capital of over Rs one crore were registered in 1961-62 as compared with 89, 31, and 22 such companies floated in 1960-61, 1959-60 and 1958-59 respectively.

The number of new Government companies registered during the year was 18 and these had an aggregate capital of Rs 122.7 crores. Of these seven were giant-sized companies with capital of over Rs one crore. Four of these accounted for an amount of Rs 110 crores. The share of the Government companies to the total authorised capital of all companies was 38 per cent in 1961-62, 11 per cent in 1960-61, 19 per cent in 1959-60, 35 per cent in 1958-59, 8 per cent in 1957-58 and 57 per cent in 1956-57. Taking all companies into consideration, the average authorised capital per new company in 1961-62 worked out to Rs 20.5 lakhs as against the average of Rs 17.1 lakhs in 1960-61, Rs 11.1 lakhs in 1959-60, Rs 26.0 lakhs in 1958-59, Rs 10.7 lakhs in 1957-58 and Rs 24.8 lakhs in 1956-57.

As regards the forms of management, 1065 of the 1614 new companies registered in 1961-62 were to be managed by Board of Directors and 515 by Managing Directors, 29 by Managing Agents, three by Secretaries and Treasurers and four by Managers. The share of the last three types of management continues to be small while a perceptible shift towards Managing Directors has been noticed since 1959-60.

The Department of Company Law Administration continued its efforts to weed out moribund companies with the result that, as compared with 1960-61, the total number of companies in the country declined by 1352 in 1961-62 as compared with the previous year. As on March 31, 1962, there were 24,756 companies with total paid up capital of Rs 21,79.3 crores. Of these, 5,999 were public companies with a paid up capital of Rs 933.6 crores and 18,757 were private companies with total paid up capital of Rs 12,45.7 crores. A study of the region-wise distribution shows that the new registrations were evenly distributed over all the four regions. The number of companies registered in the diffe-

rent regions during 1956-57, to 1961-62 are given below.

Year	Eastern region	Western region	Northern region	Southern region	Total
1956-57	334	175	192	147	848
1957-58	420	198	191	152	961
1958-59	424	254	211	206	1095
1959-60	459	318	242	433	1452
1960-61	477	431	323	452	1683
1961-62	428	414	381	391	1614

The figures of regional distribution show a trend towards greater regional balance, but this does not apply to the registrations in the different States. The four States in the lead, West Bengal, Maharashtra, Madras and the Union territory of Delhi, accounted for 77 per cent of the new registrations and 56 per cent of the authorised capital of these companies in 1961-62. West Bengal led with 392 new registrations. Maharashtra came second with 318 registrations followed by Madras (284) and the Union territory of Delhi (254). The order in the previous year was West Bengal, Madras, Maharashtra and Delhi with 431, 343, 335, and 197 new registrations respectively. During the last six years the number of registrations in the State of Madras has increased from 91 in 1956-57 to 343 in 1960-61, while in 1961-62, the number fell to 284. Most of the States show a rising trend of company registrations during 1956-57 to 1960-61. The number of new registrations in 1961-62 has increased only in Assam and Tripura, Kerala, Punjab and Himachal Pradesh, Rajasthan and Union territory of Delhi as compared with the previous year.

Textile Exports to Britain

NOTHING illustrates more glaringly the contradiction between British profession and action than the attempt by Lancashire interests to have fresh restrictions imposed on the import of cotton textiles from developing countries. The while Britain is seeking to combat the ECM's protectionist (vis-a-vis non-members) attitude and indeed ask for special treatment for commonwealth exports, an important sector of its own industry is asking its government to act in a restrictionist way. Indeed, it is being widely reported that the UK has been pleading specific assurances from the ECM countries for removal of tariff and quota restriction for commonwealth textiles imports into the ECM as part of its price for joining the ECM. The decisions of the Geneva Conference early this year on cotton textiles as also the general consensus on trade with developing countries are clearly against the attempt made by Lancashire interests to restrict the quantum of exports from India, Pakistan and Hongkong. Committee III of the GATT programme for the expansion of international trade has just concluded a meeting in which plans for reducing trade barriers facing developing countries were studied. In the communique issued at the end of the meeting, the UK was specially complemented for reducing the fiscal element in its customs tariff on coa and coffee. It is therefore ironical that restrictionist steps should be advocated by a section of its industry.

Almost the only commodity which is subject to restriction within the commonwealth preferential scheme is textiles. This was not the case until some three years ago. At that time, Lancashire interests approached India

and other textile producing countries to agree to a scheme of voluntary restriction of their exports to the UK as a temporary measure to allow three years time for the Lancashire Mills to modernise themselves. This was agreed to and the agreement is to expire at the end of this year. These countries would be perfectly justified in asking the UK to allow unrestricted entry of their textiles into that country now that the three year, period agreed to for modernisation is over. Instead of this happening, Lancashire interests have approached their Prime Minister and Board of Trade with a request to negotiate new agreements which will fix the quota for the coming years at the level of the first quarter of 1962. As it happens, the first quarter of this year has been particularly lean for exports of cotton textiles for these countries. Against the agreed annual ceiling under the old agreement of 195 millions square yards from India, the exports for the quarter of 1962 is only about 45 million square yards which works out to an annual figure of 180 million square yards. The same is true of Hong Kong and Pakistan's plight is even worse.

It is not known what attitude the Government of the UK will take to this restrictionist request at a time when it is doing its utmost to prove its free trade bonafides to the ECM and trying to convince the fellow members of the commonwealth that it is mindful of the importance of the economic and other ties of the Commonwealth. It should however be pointed out to the British government that India and other countries whose economy is closely tied with exports of cotton textiles and who, as a friendly and co-operative gesture agreed voluntarily to accommodate British industry at a difficult period should not be treated in a cavalier fashion.

Individual well-being is linked with national prosperity and only planned efforts can ensure both in the shortest possible time. And planning, for its success, largely depends on savings, individual as well as national. Saving in the form of Bank Deposits provides resources for the National Plan.

World of Finance

DEPOSIT RESOURCES

No Stark Inadequacy Ahead

"UNLIKE the first two Plan periods," said Mr Ramnath Goenka at the recently held annual general meeting of the Punjab National Bank Ltd, "the Third might well find the Deposit resources of the banks lagging far behind the demand for Advances." In fact the early part of the Second Plan did constitute a period when Deposit resources were practically stagnant the while the expansion in Advances assumed record proportions. Hence the considerable over-extension of the banking system in 1956-1957. Thereafter for a variety of reasons the situation improved, though from time to time there were periods when banks were compelled to rely heavily upon borrowings from the central banking institution in order to meet the legitimate, industrial demand for bank finance.

And now, again there is an element of something different introduced. We refer to Mr Morarji Desai's exhortation to industrialists that they should, except for the strictly short-term type of accommodation that banks have traditionally been in a position to offer, rely upon the equity market for their capital needs. So Mr Goenka may not be altogether right in his expectation of a stark inadequacy of resources on the part of the banks.

Nevertheless it is imperative that banks should take all steps to mobilise resources. The problem, as Mr Goenka put it is one of increasing "the Deposits not of this bank or that, but of the banking system as a whole." It follows that the PNB Chairman should consider differentials in interest rates to be in this context unavailing. Mr Goenka instead calls upon the banks to agree "not only to pay the same rate of interest on similar Deposits but also agree upon a minimum rate." Now of course we have the fail accompli of a differential in favour of the newly classified medium banks: but that is no reason why we should not now proceed with the second half of Mr Goenka's suggestion, namely, an agreement about a floor for rates.

The strengthening of the banking system is of paramount importance: while with Mr Desai's directive financing of large industrial units might in proportion to total financial needs decline, it is certain that the banking system will be increasingly expected to help the establishment and running of small industries. Here the risk potential is greater. To that extent inner reserves have to be augmented. As it is, the considerable growth of resources during the Second Plan has meant that the capital ratio of banks has fallen to too low a level; and the Reserve Bank has quite correctly desired the banks, by convention rather than by compulsion, to transfer to reserves and/or raise fresh equity capital so that, as soon as may be possible, a capital ratio of 6 per cent is achieved.

So, both in order to improve the capital ratio and to guard against loss experienced in the new kind of services that banks will be called upon to offer, it is necessary that banks are assured of a good earning margin. And that means that maxima for Deposits are not enough; nor, for that matter, is it sufficient that minima are fixed for rates of Advances. (It may be noted that, with the Reserve Bank directive of autumn 1960 there is already in force some kind of floor for Advance rates—what now needs to be done is to raise the floor a bit).

More than these we need a rationalisation of banking charges which, as Mr Tulsidas Kilachand recently pointed out, have changed but little in the last two, three decades. If banks are to be expected to go in for a vigorous programme of branch expansion, they have automatically to be ready for some losses being experienced. And so, there is now a variety of banking services available free and gratis, for which properly the constituent should henceforth be required to pay.

We may touch one more point raised by Mr Goenka: he seems to suggest that an increase in the general structure of interest rates is inevitable; and the Government's own borrowing rate would not escape unscathed. "Nothing is gained," says Mr Goenka, "by closing one's eyes to this problem." But is an increase in the general structure, and in particular in Government's borrowing rate, any gain at all? Gilt-edged prices will plummet down, and a higher interest coupon, far from encouraging fresh investment in Government securities, will actually serve to provoke consumer-resistance. We have for some time been of the view, and it bears repeating in this context, that for India and in current Indian conditions an increase in bank rate solves nothing at all—we may merely have fresh problems to contend with.

PNB

A Superb Year

The Punjab National Bank Limited has had an exceedingly satisfactory year in 1961 as witness the latest accounts. Deposit resources have risen considerably by Rs 11.20 crores to Rs 150.68 crores. But the bank has preferred to adopt a cautious policy in regard to Advances, choosing instead to improve liquidity. In fact, the total of Advances is nominally lower at Rs 93.22 crores against Rs 93.53 crores in the 1960 balance-sheet. Accordingly the credit ratio has come down to 61.0 per cent from 63.5 per cent. But borrowings, which were at Rs 4.74 crores in the 1960 balance-sheet, stand reduced at Rs 0.33 crore; and cash balances, including money at call and short notice, have nearly doubled from Rs 12.75 crores to Rs 23.69 crores. Investments in gilt-edged have, besides, slightly risen from Rs 40.74 crores to Rs 41.56 crores.

Whereas Other Receipts had contributed Rs 8.49 lakhs to the 1960 gross income of Rs 8.71 crores, the latest profit and loss account

shows increases in the main heads of revenue so that the gross income has risen to Rs 9.16 crores. Commission, exchange and brokerage have brought in about Rs 15 lakhs more at Rs 1.63 crores. The figures relating to income by interest and discount are not strictly comparable in as much as the 1961 figure of Rs 7.32 crores has presumably been arrived at after providing for taxes, whereas the corresponding amount in 1960 of Rs 6.97 crores was not net of tax.

Expenditure has been kept well in check. Interest paid is higher only by Rs 20 lakhs at Rs 3.71 crores, and salaries and allowances have absorbed about Rs 22 lakhs more at Rs 3.27 crores. The result is that the balance of profit net of tax for 1961 has jumped up sharply to Rs 1.18 crores from Rs 65 lakhs (after tax provision of Rs 53 lakhs) in 1960.

The appropriation account is noteworthy for the spectacular transfer of Rs 45 lakhs to Reserve as against Rs 11 lakhs from 1960 profits. Bonus to staff absorbs Rs 10½ lakhs more at Rs 37.50 lakhs. The provision for charity is unchanged at Rs 1 lakh; and the dividend is maintained at 20 per cent, there being a pro rata distribution on the rights shares issued during 1961. All in all, last year has been a superb one for Punjab National.

INTEREST DIFFERENTIAL

Formula for the Subsidiaries

Following the discussions between the State Bank and the commercial banks, agreement is reported to have been reached on the question of differential interest to be allowed to the eight subsidiaries of the State Bank. According to the formula that has been agreed to, the State Bank subsidiaries will be classified as medium banks, but have been allowed the discretion to pay interest rates equivalent to those payable by the small banks in a situation of declining deposits. Thus in a stable situation, the subsidiaries will pay one-eighth of one per cent more than the standard rates of interest on term deposits, and in a situation of declining deposits, an additional one-eighth per cent. Since the standard rates under the existing and the proposed agreement are the same, the State bank subsidiaries will pay one-eighth of one per cent more than they do now in a stable situation.

BANK RETURNS

Slack Season Gets into Stride

Further signs of the slack season are available in the returns of the Reserve Bank for 25 May. Active Note circulation has again contracted by Rs 24.82 crores to Rs 2,121.85 crores, and there has also been inflow of Rupee Coin for Rs 0.48 crore. While there has been a transfer of Rs 5 crores from Foreign Securities—reducing the relevant figure to below the Rs 100 crores mark at Rs 96.50 crores—this is offset by a counter-vailing transfer of Rs 5 crores from Investments in the Banking Department to Rupee Securities, raising the relevant figure to Rs

2 June 1962

1,834.37 crores. The net result is a substantial addition of Rs 25.30 crores to Rs 41.64 crores in the Reserve Bank's cash in the till.

The import gap during the week has exceeded Rs 5 crores, since Balances Held Abroad, as shown in the return of the Banking Department, are nominally lower by Rs 3 lakhs at Rs 6.15 crores despite a transfer of Rs 5 crores from Foreign Securities. In the light of the discouraging end to the meeting of the Aid-India Club, the latest week's decline must be deemed disheartening.

The Centre has obviously made considerable payment to the States, and, it is quite likely that there has been recourse to deficit financing. Balances of the Centre are down by Rs 3.74 crores at Rs 49.01 crores, while Deposits of State Governments are better by Rs 3.54 crores at Rs 15.89 crores on top of a reduction of Rs 13.21 crores to Rs 104.17 crores in their ways and means borrowings from the Reserve Bank.

The slack season's onset is also reflected in the figures of the banking system vis-à-vis the Reserve Bank. Reserve Balances of member banks are higher by Rs 1.82 crores at Rs 89.12 crores. Secondly, the Other Loans and Advances of the Reserve Bank have again declined by Rs 7.40 crores to Rs 121.74 crores. The inference is that Scheduled Banks' indebtedness to the Reserve Bank has now fallen below the Rs 5 crore mark.

The return of the State Bank for 25 May provides further confirmation of the onset of the slack season. The total of Advances has contracted by Rs 2.64 crores to Rs 294.27 crores, and there has also been an accretion of Rs 1.28 crores to Rs 575.62 crores to Deposit resources. Borrowings have accordingly been reduced by Rs 0.62 crore to Rs 0.29 crore. The easy conditions have enabled the State Bank to add Rs 13 crores to the gilt-edged portfolio which moves upto Rs 237.68 crores. (The implication of this fact is that deficit financing instituted by the Central Government amounted to about Rs 20 crores). As a result, Other Assets are lower by Rs 6 crores at Rs 36.92 crores, and cash balances, including money at call and short notice, have also been run down by Rs 2.36 crores to Rs 27.63 crores.

As anticipated in this column last week, a two-fold improvement in the resources of the banking system has, according to the return of Scheduled Banks for 18 May enabled a considerable reduction in indebtedness to the Reserve Bank. Net Demand Deposits—that is, excluding borrowings from banks—have risen by Rs 2.86 crores to Rs 888.65 crores, while net Time Deposits have been marked up by Rs 4.62 crores to Rs 1,22.08 crores. At the same time net Advances, for the first time since the notional start of the 1962 slack season, have contracted by Rs 3.68 crores to Rs 1,432.49 crores. While the growth in Deposits is a continuation of the uptrend in this regard, the decline in Advances may be held to be a sign of progressively easier conditions. Borrowings from the Reserve Bank have been sharply pruned by Rs 9.48 crores to Rs 12.48 crores, and besides indebtedness to the State Bank has been cut by nearly Rs 1 crore to Rs 19.29 crores from Rs 20.25 crores. Disinvestment in gilt-edged for something over Rs 4 crores is of course on account of the State Bank. Finally the improving resources position of Scheduled Banks is reflected in a rise of Rs 4.15 crores to Rs 207.73 crores in cash balances including money at call and short notice.

Treasury Bills

Tenders for Rs. 2,00,00,000 of 91 days' Government of India Treasury Bills were opened on Tuesday 29 May, 1962. Total amount offered was Rs 2,00,00,000. Tenders at Rs 99.365 per cent and above were accepted in full. Total amount accepted was Rs 2,00,00,000, the average rate of accepted tenders being Rs 2.540 per cent per annum.

Tenders for Rs 2,00,00,000 of 91 days' Government of India Treasury Bills will be received at Bangalore, Bombay, Calcutta, Kanpur, Madras, Nagpur and New Delhi up to the close of business on Monday, 4 June 1962. Successful tenderers should make payment on Friday, 8 June 1962 at all centres. Other conditions are as usual.

During the week ended 25 May 1962 Government of India Treasury Bills for Rs 29,62,50,000 were sold in favour of Reserve Bank of India.

91 days' Intermediate Treasury Bills will be sold from 30 May to 2 June 1962 at Rs 99.381 per cent. Sales can be stopped at any time without notice if Government think it necessary.

91 days' Intermediate Treasury Bills sold from 23 to 26 May 1962 amounted to Rs 11,00,000.

Weakness of Equities

By Paul Einzi

THE decline of equities on the stock exchanges of London, New York, Frankfurt, Paris, Milan, Zurich, Tokyo etc., continues unabated. The immediate cause for this weakness, as far as London is concerned, was a crop of unfavourable company results, combined with the threat made recently by Mr Selwyn Lloyd that unless his wage restraint policy is respected he might have to revert to restrictive measures. But the basic cause is that inflation and deflation are running concurrently and that we seem to be getting the worst of both the worlds. The inflation of wages continues and shows signs of becoming accentuated. Public opinion is being mobilised in favour of pay claims of white-collar unions who are in a much worse bargaining position than physical labourers. But if, under the pressure of public opinion, their claims are conceded, the reduction of the differential would only give rise to further claims by the more powerful unions. Prices of consumer goods and especially of services have accentuated their upward trend under

the effect of recent wage settlements. If that is not inflation, something must be wrong with the accepted definition of that term.

On the other hand, profit margins have declined sharply and recent annual reports by leading companies show a sharp contraction of profits. In some instances profits have been replaced by losses. Industry is not employed to capacity and investment expenditure shows no signs of revival. To that extent deflation is proceeding, simultaneously with the inflation of wages and prices. The explanation of this paradoxical situation is that business firms no longer feel certain as they did until recently that any wage increase could be passed on to the ultimate buyer as a matter of course. Governments in Britain, the United States, West Germany and other countries show an increased determination to resist wage inflation even at the cost of discouraging expansion of production. Thus, while consumer demand is on the increase, producers are holding back because they are afraid that this trend might become reversed at any moment as a result of disinflationary policies.

The rise in equities during recent years was largely based on the widely accepted assumption that, temporary setbacks apart, the expansionary trend was bound to continue, so that profits and dividends were bound to increase. The recent setbacks in profits made many investors wonder whether this will necessarily be the case. The present prices of equities have discounted further progress and even in the absence of actual setbacks the absence of further increases of profits would in itself justify a downward readjustment of Stock Exchange prices.

The question is whether the recently developed pessimism about profit prospects would prove to be justified. Quite conceivably inflation will win in its struggle against disinflationary policies and the relentless pressure of consumer demand will override all other influences. There is no reason to suppose that a larger proportion of the higher wages will be saved even though the extent to which their recipients discount the future by means of hire-purchase transactions may not increase in proportion to the increase of consumer incomes, if at all. Alternatively if the Government should succeed in enforcing wage restraint profit margins would stand a chance of widening which again would encourage investment expenditure by industries. That again should cause a recovery on the stock exchanges. But it would be fatal to holders of equities if the struggle between governments and trade unions were to continue indefinitely without any decisive result either way. That would be the one certain way to get really the worst of every possible world.

Notes

IRRIGATION & POWER Shortfalls in Implementation

Development of irrigation and power has been the linchpin of progress in the agricultural and industrial spheres. Both under the First and Second Plans, substantial resources were deployed for development in these two sectors. The report of the Ministry of Irrigation and Power for 1961 records the progress the country has made in these two fields under the two Five Year Plans. In respect of irrigation, it is stated that an additional area of about 3 million acres was brought under irrigation during the First Five Year Plan through major and medium projects. The additional area brought under irrigation during the Second Plan has been estimated at about 6.9 million acres (gross), though originally the Plan proposed additional irrigation for an area of about 12 million acres. In the field of power development, the installed generating capacity increased from 3.4 million kw at the beginning of the Second Plan to 5.7 million kw consisting of 1.93 million kw of hydro-plant and

3.77 million kw of thermal plant. But as the recent discussions in the Lok Sabha on the demands of the Irrigation and Power Ministry had revealed, there had been grave shortfalls in implementation of irrigation and power development programmes. The shortfalls in the sphere of irrigation are reflected in the wide disparity between the potential at channel outlets and the gross area irrigated. On the basis of the figures given in the annual report of the Irrigation and Power Ministry, the difference averaged to more than 3 million acres throughout the Second Plan period. At the end of 1955-56 the potential at channel outlets was 6.5 million acres while the gross area irrigated was 3.1 million acres. At the end of 1960-61, the last year of the Second Plan, the respective figures for potential at channel outlets and gross area irrigated were 13 and 10 million acres respectively. In absolute terms there has not been much of an improvement in utilisation of irrigation facilities, but in percentage terms utilisation has improved from about 48 per cent in 1955-56 to 76 per cent (estimated) at the end of 1960-61. While answering the demands of the Ministry, the Union Minister explained that some amount of time lag in utilisation of irrigation potential was inevitable. The entire 25 per cent of unutilised potential cannot however be explained by such reasonings. But, how much of the unutilised potential can be ascribed to non-provision of ancillary facilities which has been a chronic shortcoming of irrigation planning in the past cannot be known. It is mainly the irrigation potential created by major projects that remains unutilised. For this reason, greater emphasis on minor irrigation may ensure timely utilisation of potential. Third Plan has laid considerable emphasis on further substantial additions to irrigation. A target of about 29 million acres of land to be irrigated at the end of the Third Plan has been laid down. Greater coordination in planning and execution of the various stages of major projects is also essential for timely utilisation of irrigation benefits.

In respect of power development also, the Second Plan performance reveals shortfalls of about 1.3 million kw, which is attributable to shortage of foreign exchange for import of plant and equipment during the early years of the Second Plan and the delay that occurred in the execution of some

of the large projects like Bakhra-Nangal, Koyna, Rihand, and Hirakud. Apart from shortfalls in implementation the quantum of likely demand also does not seem to have been sufficiently assessed when the programmes for power development were chalked out. These two factors have led to chronic shortage of power in the country from which there seems to be no escape in the next two years. In West Bengal and Bihar particularly, power shortage had become acute. The Lok Sabha discussions on power development in the Third Plan revealed that the Government had already taken adequate steps against shortfalls creeping in the implementation of the power programmes. Foreign exchange shortage which dogged the power programmes in the Second Plan will, it is expected, no more hinder power programmes in the Third Plan, since most of the important projects have been tied with foreign aid. It has been disclosed that the Government has already secured the equivalent of Rs 280 crores of foreign exchange out of the total Plan requirements of Rs 330 crores for power projects.

The power target has been stepped up from the original figure of 11.9 million kw to 12.7 million kw. Referring to the demand for power in the country, the Union Minister stated in the Lok Sabha that even if all the power projects of the Third Plan are successfully executed, there will still be a shortage of half a million kw by 1965-66. This necessarily raises questions of the importance of timely implementation and also of the place of private sector in power generation. The major share in power development in the Third Plan has been assigned to the public sector, the total outlay for which at Rs 1,039 crores contrasts with the meagre outlay at Rs 50 crores envisaged for the private sector. The Government has recently taken some decisions in favour of allowing major industrial undertakings to instal their own power generating units. This would hardly help in alleviating the power shortage materially. It would be worthwhile if the private sector in the power generating industry is called upon to play a more notable role in power development.

STEEL Delays and Shortfalls

Though the Third Plan has envisaged total steel production target of 10 million tons to be reached by the end of 1965-66, with the uncertainty about Bokaro and the delays in the production programmes at Durgapur and Rourkela, prospects for the attainment of the Steel target have become very dim. Even the

official assessment by the Steel Ministry has had to accept the possibility of a shortfall in availability during the Third Plan period against original estimates. While the Third Plan assumed total availability of the order of 24.5 million tons during the Plan period, the official assessment scaled down the figure to something like 21.9 million tons. The latest assessment of the position by the Industry and Minerals Division of the Planning Commission makes even more disturbing reading. On a study of the progress of the public sector and private sector projects, it has been found that there will be considerable shortfall in production at the end of the Plan period and that additional production might well spill over largely into the Fourth Plan. Even the official estimate of imports during the five year period by the Steel Ministry at about 5.8 million tons have been found to be some what on the low side. The total import bill during the five year period has been estimated at about Rs 615 crores which compares with Rs 218.2 crores being the original estimate made by the Planning Commission and included under the total maintenance imports of Rs 3,650 crores. Adding a further sum of Rs 100 crores under imports of special alloy and tool steel, the total import bill will be Rs 715 crores. Present state of progress in the field of special steel production precludes scope for any saving in imports on their account. It has been stated that neither the HSI, plant at Durgapur nor the projects of the Defence Ministry projects is likely to yield any output in the Third Plan. The progress of

the private sector projects is also far from satisfactory. The Industry Division is of the view that a total import bill of Rs 715 crores for mild steel and special steel is impossible to manage without a major diversion of external aid from projects to commodity imports.

Planning with reference to steel has obviously lacked a firm basis. Apart from difficulties of aid for the projected fourth steel plant at Bokaro, the delays in attainment of full production capacity in the three public sector projects have also cast uncertainty. In the last quarter of 1961-62, production at the Bhilai plant has been running at the rate of 85 per cent, while at Durgapur it has been 53 per cent. Performance at Rourkela plant which has been described as the "sick child," has been most depressing and production has been going on at as low a rate as 35 per cent of capacity. While the Division concedes that given effective steps it should be possible for all the three plants to attain capacity output during the second half of 1962-63, a somewhat pessimistic view has been taken about the expansion programmes for the three steel plants. Considerable delay has already occurred in the ordering of plants and equipments for these plants. It has been revealed that orders for the Bhilai plant were placed about 11 months behind schedule. Further the placing of orders for the Durgapur and Rourkela plants are expected to be completed only by the end of 1962 and by March 1963 respectively. Referring to these delays it has been stated that this alone will be likely to cause part of the construction programme to spill over into the Fourth Plan. The Division has therefore stressed special attention being paid to step up expansion plans by expeditious placement of orders.

COASTAL SHIPPING Increase in Freight

An increase of 15 per cent in the coastal freight on all cargoes except coal has been announced by the Union Minister for Shipping last week. In the case of coal the increase will be 10 per cent from Calcutta to Cochin and 15 per cent beyond Cochin. The increase in the coastal freight has been announced on the recommendations of the Coastal Freight Rate Committee and in response to the persistent plea of the coastal shipping industry for upward revision of freight rates. For consequent on the upward pressure on costs of operation, the existing structure of freight rates had been rendered absolutely inadequate to permit profitable operation while expansion on a

sustained basis which is one of the objectives of the Third Plan would have also become difficult to achieve. While the latest announcement of increase shows Government's appreciation of the problems facing the coastal shipping industry, the extent of increase granted has fallen far short of the industry's expectations. The industry's own estimate of increase in freight needed for putting coastal shipping on a profitable working basis is 40 per cent. The industry's claim for an increase of this order is not unreasonable considering the extent of increase witnessed in various elements of cost. For instance, wages have increased by Rs 7.50 per seaman, while light dues per net registered ton have gone up from 37 nP to 50 nP. Further the Calcutta Dock labour levy on gross wages has risen by 40 per cent while the similar levy in Bombay has gone up from 25 nP to 30 nP per man-shift. There have also been other factors contributing to increased cost of operations though the extent of their impact, is not amenable to precise calculation. Included in these are the longer turn round of colliers and draft restrictions on the Hooghly.

With the provision for movement of about 2½ million tons of coal by the sea route to the Southern and Western States, the need to step up expansion of coastal shipping has assumed considerable urgency. Even now there is shortfall in total tonnage required to move the coal from Calcutta to the Southern and Western States. To what extent the entry of the Government shipping corporations will make up the present position is hardly encouraging since it has been estimated that total traffic of the order about 4.25 million tons including nearly 2.5 million tons of coal will have to be carried by the coastal traffic in a few years. Total tonnage required to accommodate this volume of traffic is placed at 345,000 GRT, while the current tonnage is estimated at 250,000 GRT. It is indispensable that the freight structure should include the vital important elements of incentives for expansion such as provision for debt charges, replacement if aging vessels and reasonable rate of dividend. On this consideration, the increase now announced by the Union Ministry will be found to be inadequate.

COTTON TEXTILES Problems Galore

The woes of the domestic cotton textile industry have been aired so often by the different spokesmen of the industry in the recent past and the Finance Minister's decision to enhance the levy on cloth and yarn has let loose adverse criticism from all the interested quarters. Mr T. P. Chakrabarty's

presidential address to Bengal Millowners' Association held in Calcutta last week is yet another voice of protest. Naturally enough, the adverse impact of the additional impost on cloth and yarn was the pivotal point which Mr Chakrabarty devoted much of his time. Admittedly it has become the fashion of Finance Ministers to levy fresh duty on cloth and yarn, almost disregarding its serious repercussion on the industry. Over and above the several levies charged on cloth and yarn, the decision to place those units with 50 or more powerlooms on the same footing as composite mills is equally fraught with disastrous consequences. The increase in levies on the one hand will not only pose a serious impediment to the healthy growth of the textile industry but will leave little resources with the mills to implement their modernisation and rehabilitation programmes and force them to lower their production and even to stick lower their standards of quality. The harm has already been brought and nearly 600 looms of a few big units in West Bengal have been closed down; not to mention similar closure in other parts of the country thus throwing thousands of employees out of employment. According to an estimate the latest impost on the cotton textile mills would yield to the Exchequer approximately Rs 90 crores per annum representing roughly about 18 per cent of the total excise duty from a single industry. This, as stated by Mr Chakrabarty is "undeniably unfair and unjust". He has, therefore, entered a strong plea for the reduction of duty on cloth and yarn to relieve the strain on all sections of the industry. Furthermore, the decision to consider those units with 50 or more powerlooms on a par with composite mills with constrain them to limit their number of spindles well below the "danger zone" thus placing an obstacle on the road to expansion.

Other irksome problems touched by Mr Chakrabarty were the scarcity of cotton, the difficulties experiencing in securing coal for the industry, the impact on the finance of the mills due to the increase effected in the emoluments of the employees consequent on the Tribunal Award of 1958 and the subsequent recommendations of the Central Wage Board for the Cotton Textile Industry. "The grave crisis in the matter of supply of cotton" on account of the shortfall in indigenous production which has been vexatious to the trade is being slowly overcome with the agreement entered with the US for the import of 2.2 lakh bales of American cotton and the reported negotiations with other cotton growing countries for securing cotton on barter deal particularly with Pakistan offer scope for improved supply position.

Referring to the 'serious difficulties confronting the mills in the

eastern zone in the matter of securing adequate supplies of coal due to wagon shortage" Mr Chakrabarty has observed that the additional expenditure incurred on road transport have completely wiped out the advantage of those mills which are in proximity with the coal fields. Subsidization of coal transport on roads would eliminate the extra expenditure to these mills.

MAHARASHTRA Potentialities of Small Industries

The seven surveys conducted by the Small Industries Organisation to assess the industrial potential in the mofussil areas of Maharashtra reveal the abundant potentialities for rapid industrialisation. The areas covered by the surveys were Karveer-Panhala, Amravati-Morsi-Daryapur, Koyna project, Nagpur-Bhandara districts, Ratnagiri district, Nanded district and Ahmednagar district. The findings of the surveys have been published by the Deputy Director (Economic Investigations), Small Industries Service Institute in the Industrial Bulletin published by the State Government.

The potential for 23 lakh tons of metal in Kolhapur, building stones on a large scale in Karveer-Panhala, ochre pigment pockets in Wagh Darwaja and the hills of Panhala block, deposit of special clay in Kodoli, bauxite ore deposits in Radhanagar are among the important materials that await profitably exploitation. The surveys have also pointed out the bright prospects for setting one unit for the manufacture of bolt and nuts, and one unit to take up the assembly of bicycles of the order of 5,000 per annum. Scope also is stated to exist for the setting up of a number of cottage industries—for four small undertakings for manufacturing washing soaps, cement unit, one fruit preservation plant, one bone meal production unit, new unit for processing manganese ore, one unit for producing surgical cotton, wood seasoning and joining mills, builders' hardware, hard board, and rice bran oil in the small scale sector.

The findings have also highlighted the scope for expanding cashew nut processing, fish meal, and manure manufacturing, etc. It has also been stated that new industries such as fruit and fish canning, caustic soda, calcium carbide, country craft building, mangalore roofing tiles, dehydration of mango pulp and the like can be started in the mofussil areas.

The Nanded district holds potentialities for developing a large-scale and a few small undertakings like one sugar factory, one

cottonseed oil crushing mill, one spinning mill, three or four jobbing foundries with finishing workshops, one steel rolling mill and other sort. Similarly Ahmedabad offers opportunities for establishing large scale industrial units for the production of newsprints from magasse, insulation boards and particle boards, industrial alcohol, diesel fuel, injection equipment, machine shop for manufacturing sugar plant and diesel pumps and steel castings. In the Koyna project area, citric acid, organic solvents, and power alcohol, solvent extraction plant, tannery and leather footwear, small machine shops for manufacturing spare parts of textile sugar and oil mills, paper and card board electrical accessories, fertilisers, fruit canning, caustic soda, calcium carbide paper and pulp, extraction plant (rice bran) rope making and rayon and staple fibre are the major units that can be undertaken.

Techno-Economic Surveys of potentialities are fashionable today. Many of these lack rigour and make large drafts on hope and desire rather than assess realistically, especially in terms of the finance required, the immediate prospects. The potentialities, however, are nevertheless worth plotting, for future guidance and allocation of resources within larger general allotment. The private entrepreneur looking for fresh fields can profitably study these reports.

RESEARCH Record of National Laboratories

Advantages of scientific research are not always obvious or immediately available. Fundamental research is often removed from immediate preoccupations so much so that Faraday was asked by Gladstone what use 'electricity was' when he demonstrated the principle for the first time. Faraday replied in the only language that Gladstone could understand, "why sir you will one day be able to tax it!" As indeed, he and other Finance Ministers have only too readily done since. Impatience combined with faint contempt, has characterised the popular attitude to our national laboratories, many of which are considered a white elephant. Reports of internecine jealousy and quarrel, of thwarted junior scientific ambition by entrenched seniors, of bureaucratic stifling of impulses for original work and frustration—vividly brought home by the suicide of Dr Joseph—in the lower ranks do not always make the common man accept these institutions as vital to national interest. That they can admit of no doubt and while trying to improve their working and removing obs-

tacles, one should consider them as essential to the nation's progress.

The Report of the Council of Scientific and Industrial Research does not deal with the Atomic Energy Commission's activity, because it is not under it. The AEC has done outstanding work in the utilisation of atomic energy for industrial and other peaceful purposes other laboratories under CSIR have also done well in 1961-62. The National Physical Laboratory's contribution for the adoption of metric weights and measures, for the production of accurate balances, for fostering the development of radio components and specifications for the manufacture of low cost radio receivers is despite its somewhat pedestrian nature, important. The low shaft furnace pilot plant processed at the National Metallurgical Laboratory at Jamshedpur, where studies were conducted on the manufacture of foundry grades of pig iron from raw materials available in India, was a major project undertaken in the period under report. An investigation undertaken at the Regional Laboratory at Hyderabad has proved that semi coke (kolsit) produced by the low temperature carbonisation of coal at the laboratory can be applied for the manufacture of pig iron in the low shaft furnace pilot plant. Studies conducted for the manufacture of smokeless coke for domestic purposes at the Central Fuel Research Institute, Jaalgora, by briquetting and low temperature carbonisation of weekly or non-coking slack coals available in Raniganj and Argada areas have so far been successful. The development of surgical plaster from gypsum and salt pans by the Central Salt and Chemicals Research Institute at Bhavnagar is yet another notable achievement. The Central Road Research Institute at New Delhi has evolved a process for constructing all weather cheap roads for light traffic which is bound to be of all India importance. The National Chemical Laboratory at Poona has to its credit immense research done on rare earths, oils, resins, plastics, clay and rubber which will serve many of the industrial purposes. The Glass and Ceramic Research Institute, Calcutta, has established an optical glass plant with a capacity for catering to the optical requirements of the country. The fruits of the researches conducted at the Building Research Institute at Roorkee, the Leather Institute at Madras can be immediately put into industrial practices.

A significant organisational innovation, of the year was the initiative taken for the promotion of more co-operative research associations and the schemes for the formation of similar societies in industries like tea and automobile are in the offing. During the year under report as many as 66 processes were leased to the industries of which 15 were ripe for commercial exploitation. 80 research projects financed by the Government departments and industries were closely observed in 11 laboratories and about 100 centres were engaged in the processing of about 453 research schemes.

Apart from the activities of the national laboratories, sponsored re-

search on a large scale is being done at various private centres and universities. But a proper machinery for the translation of these results into the field is yet to emerge though efforts in this direction are not entirely lacking. The sooner this lacuna is bridged the better for the country.

US Alternatives to Armaments

In considering the effects of a general disarmament on the American economy, it is obvious that careful planning will be required to achieve two basic objectives. One is to sustain total economic activity, and thus take up any slack that might result from the cutbacks in government defence outlays. The other is to assure that human and material resources will be reallocated to civilian uses with a minimum of hardship and waste.

The two problems are interrelated, as are the solutions. Fortunately they are well understood, as is seen in the success of demobilization at the end of World War II in 1945 and the termination of the Korean hostilities in 1953. With sensible planning at all levels of government and on the part of business and labour, it should be possible to master the difficulties satisfactorily again.

Government policy, in particular, will have a vital role to play in facilitating the necessary adjustments. Several powerful tools are available to the federal government, and to a more limited extent to state and local governments, for this purpose. These tools are carefully analyzed in the US government's recently published study, "the economic and social consequences of disarmament."

One important instrument for translating civilian needs into economic demand is tax reduction, which would be a prime stimulant to the private sectors of the economy. It would make more funds available to individuals and businessmen, with some going into consumption and some into investment—both essential to the expansion of over-all economic activity.

Another step is the expansion of public civilian expenditures. In addition to stimulating economic activity, this would enable the nation to institute programmes that would more fully meet the growing requirements of a growing population. Some of these programmes have been reduced or deferred in the past because of the need to finance the defence effort.

Such fields as resource development and conservation, civil aviation, roads, education, public health, housing, recreation and urban development, to say nothing of space exploration and peacetime uses of atomic energy, afford numerous opportunities for expanded governmental activity. A number of these traditionally are fields of major state and local, rather than federal,

attention under the US governmental system. But state and local units could be assisted through loans or grants from the federal government, which also could institute loan programmes to aid individuals and business firms.

Aid to less-developed countries would afford another meaningful opportunity for the expansion of federal civilian expenditures—one that in the process would benefit directly the cause of international social and economic progress.

In addition, there could be expanded transfer payments by the federal government in such forms as unemployment compensation, various types of retirement benefits, mustering-out pay to military personnel, education and training grants and similar programmes.

These payments would help support income levels, and thus tend to sustain total demand for goods and services. Some of them have long been an integral part of the American scene and would take effect automatically, reinforcing the resiliency of the American economy.

In all this, one cannot overlook the tool of monetary policy. Measures to lower interest rates and expand the money supply, could, if necessary, act as a further stimulant to the economy, particularly in such fields as housing and industrial investment.

At every step, of course, there will be the need to make choices regarding the policies to be pursued. Determining the appropriate combination of measures could be an exacting and complex process, one that would have to take into account such structural programmes as regional or local concentration of defence activities and industry and manpower specialization.

Underlying these policies will be several incalculable advantages, springing from the very nature of American Society. One is the historic adaptability displayed by American business and labour.

The problems likely to be raised by a sharp reduction of defence outlays do not figure to be very much different basically from those which are continually emerging in the changing and growing US economy. With its highly skilled and mobile labour force and its enterprising businessmen, the United States has demonstrated over the years a remarkable ability to achieve an expanding prosperity amid the constant development of new industrial technology and shifts in civilian demand.

Another important element is what the disarmament study calls the "dynamic optimism" of the American people, who would welcome and would respond favourably and positively to the opportunity of accelerating their social and economic progress under and international rule of law and order.

The historic strength of the socio-economic system they have developed not only affords but in fact inspires growing opportunities for the exercise of inventive genius and economic initiative on a large scale.

Clive Street Gossip

"I must have liberty
Withal, as large a charter as the wind
To blow on whom I please"
—As You Like It.

THE Pundits, I have no doubt, will be telling you the whys and wherefores of Monday's crash in Wall Street and the equally sensational recovery the day after. But comparisons with 1929 that the papers have been free with would seem to be entirely misleading. 1929 was a watershed in history and nothing like the shattering beyond repair of a whole world of economic values is likely to occur again. It was only in 1929 that the predatory businessman, the "robber baron" as he used to be called, came to final and irrevocable grief. Veblen wrote in 1921, "There is nothing in the situation that should reasonably flutter the sensibilities of the Guardians or of that massive body of well-to-do citizens who make the rank and file of absentee owners, just yet." About that time, John J. Raskob, Chairman of the Democratic Party wrote an article entitled "Everybody ought to be Rich", in which he argued that if a man saved 15 dollars a week and invested it in good common stocks, at the end of twenty years, he will have at least 80,000 dollars and an income from investments of about 400 dollars a month. This, which merely took into account the dividends is arithmetically an underestimate. The phrase "capital appreciation" that is on everybody's lips these days was not taken into account. If this hypothetical individual did consume all his dividend, he would still have had, according to one calculation, 16,000 dollars in 1928 and 21,000 dollars in May 1929 but in November 1929, next to nothing. The "money maker" as distinguished from the "goods maker" of Veblen's terminology, is still very much part of the economic landscape in the US and elsewhere, but he is a far different being from his predecessor of the first decades of the century who met his Waterloo in 1929. Since then, we have learnt a trick or two about how to combat landslides of this sort and the fact that several post-war recessions have blown over leaving the economy comparatively intact shows that nothing like 1929 is ever likely to repeat itself. Speculative orgy was certainly part of the explanation of Monday's goings on, which was also partly a painful readjustment of values which had little relation to their earning capacity. Indian stock markets, which, thanks to exchange control and other disabilities, have no

direct links with foreign bourses, escaped unhurt, though it had its own bearish assaults to withstand. One oblique lesson for us may well be that it is possible to over-estimate the attractions of gongxi scrips to the detriment of those with a steady yield.

I don't think that it should be held against "China Today" the official weekly of the Chinese Embassy in New Delhi that it does not say a word about the refugee hordes that are creating new civic and other problems for Hongkong. It has other fish to fry—to beat, for example, the Government of India to it in letting us all know about Chinese protest notes full of rude remarks about this country. Apart from this, Embassy journals are there, if not exactly to lie abroad for the sake of their countries, at least not to advertise failures at home. (I may indicate in parenthesis my suspicion that these glossy journals are put out with no great hopes of their being read: they certainly aren't by me. The reason why I looked into "China Today" was because of its recent notoriety and I was driven to it by much the same impulse that makes us want to read dirty books.) But getting back to the refugees, all reports agree that unlike in the past, Chinese guards at the frontier did nothing whatever (until recently) to stop the steady flow to Hongkong. All accounts also agree that the Hongkong administration has shown exemplary understanding and sympathy. But the current water shortage—aggravated by the Chinese who, themselves bothered by shortage, reduced the supply of water to Hongkong from their reservoirs—has compelled them to turn back the endless stream of men and women that poured in. It seems undeniable that conditions in parts of China have sharply deteriorated in the last three years resulting in acute rural misery leading to the inevitable trek. The Chinese authorities may not officially admit this, but their action in letting the fleeing peasants get past barbed wires without any attempt at stopping them tells its own story. The refugee is a symbol of our times and we in India who have had to grapple with the agonising choices forced by mass misery that we simply cannot cope and therefore have often had to seem callous, can sympathise with the predicament of the Hongkong adminis-

tration. One solution is diversion of the food surpluses abroad—in the US in particular—to China. Face may stand in the way of putting through so desirable and so easy a solution, but it should be possible to save it. And who knows, this may well mark the beginning of a new chapter in China's relation with the rest of the world.

The Statesman has reprinted a delightful article from the Times by Alan Thomas commemorating the 10,000th crossword to appear in it. As a compulsive addict of the same as reprinted in The Statesman, I join the cheering. In a world where major evils are elbowing out minor vices, the crossword is the only self-indulgence that is grudgingly allowed one. And for this kindness, much thanks. Not that there isn't a price to pay for this felicity. It has often led to near-nevolt in my normally law-abiding family: gluttons for knowledge of what goes on around them, they find my cornering the paper for doing the crossword grossly unfair. But it is one of my few rights as paterfamilias that I have not yet surrendered. The other cross I have to bear is the fatuous question of some folks who interrupt me with, "Have you ever won a prize?" If they were referring to those book tokens offered for the first correct solution opened, I could have forgiven them. But no. In their abysmal ignorance they are thinking that I am at one of those puzzles meant for the mentally retarded that some papers used, until the law stepped in to stop them, to print with offers of fabulous prizes for solutions nearest the compiler's. When controlling my fury I tell them that there is no prize, they are even more puzzled and asked me perplexedly why on earth do I do it then. That is when I give up and get back to my clues. But these annoyances fade away in the joy of completing the crossword, which, I am sorry to say, happens less frequently than I would wish. I have, let me confess, cheated a bit some times by looking up the dictionary, but only when I was so near completion that it would be pedantically honest not to do so. Alas, the dictionary hasn't always helped, and I am sure that some moral that Samuel Smiles would like to draw is embedded here. However, since I have discovered that setters cheat too, my withers are unwrung. And then again there are crosswords and crosswords. The Guardian's, which The Statesman prints on Sundays used to be much easier, which is odd, considering that we have a whole day to do it in. Which is probably the reason why it has now switched over to those exasperating cross clues like "what 1 across said to 4 down when 20 across 5 down happened to him." The solution is a four-lettered word, but printable, at least

some times). The snag about this sort of thing is that if you don't break through at the first, you never get anywhere. A crossword to be really enjoyable should be neither too easy nor too difficult and that is why I find the tortuous and horribly complicated puzzles in the Listener, the BBC weekly, a bore and a kill-joy. The Listener seems to think that the thrills of crosswords are those of riddles, conundrums and ciphers. They are not. Its joys are those of recognition of familiar literary and cultural landmarks, of double entendre, the scouring of etymological and semantic ragbag. Its delights are verbal and not intellectual, words rather than ideas being its preoccupation. Dr Bronowski, I find, has imported "the two-cultures" cold war into the world of crosswords. He thinks that it is time that the principles of science got into the Times crossword. I daresay he is right, though today, to the best of my recollection the Times has not ventured beyond troglodyte and amoeba and these have got in more because of their anagrammatic than cultural possibilities. Seriously the day when the second law of thermodynamics does become part of our mental dustbin, (for it is that repository that we search when we sit down to do our crossword) Dr Bronowski wish will come true. Meantime, here is three cheers to "crossword, the last infirmity of a noble mind."

I must protest against the off-hand way the railway administration is treating the public request for a companion to the Howrah Madras Mail. The question has been raised time and again, in the daily press, in private communications and formal petitions to the authorities, without their making the slightest impression. A rather persevering friend told me how he had different reasons given by different authorities for the railways not being able to put the additional train on. One pleaded inadequate line capacity, while the other talked about shortage of coaches. The fact that neither gave both reasons showed that neither had examined all the problems involved and had merely contended himself with a handy excuse. My friend tells me that he had written to the Railway Board about the these two different versions of the difficulty and is waiting to be told what the Railway Board has to say about it all. Meantime, it is a heart-breaking sight at the booking counters where people are queuing overnight to get a ticket. There is a wide spread impression of a fair-sized racket in tickets, which is not dispelled by being told at the tenth minute of the opening of booking for a particular day that you can at best have a place in the waiting list. It is silly, of course, to argue, as I have heard it done, that such a difference on the part of the railways is a deliberate snub of the South. But the logic of such remonstrance will hardly carry conviction with a man who finds that getting a ticket for travel home is such a chancy and bothersome business that it is hardly worth the attempt.

EAVESDROPPER

Olympus

Fertilisers—Targets and Requirements

STARTING from May 17, the Planning Commission has been holding a series of discussions with representatives of different Ministries of the Union Government to consider measure and policies for timely implementation of the Third Plan programmes. The Commission has yet to finalise the progress report of the Second Five Year Plan. While the draft was under consideration, it was felt that it would be advantageous to include a supplementary chapter on the progress of Plan programmes during the first year of the Third Plan also. A preliminary survey that was undertaken for the purpose of preparing the supplementary report disclosed shortfalls in different sectors which called for remedial action on a coordinated basis. And the series of discussions have been undertaken with that end in view. So far the Commission has held discussions with the Ministries of Works, Housing and Supply, Education, Irrigation and Power, Railways, Steel and Heavy

Industries, Commerce and Industry and is scheduled to meet the Ministry of Health on May 31. Further discussions with the Ministry of Steel will also be held in a fortnight's time, as the discussions held on May 26 were perforce of a preliminary nature owing to the absence of the Secretary of the Ministry.

Among the discussion so far, the meeting with the Ministry of Steel and Heavy Industries has evoked the greatest measure of interest, for the occasion has served to focus attention on the likely shortfalls in achievement of basic targets which will have serious repercussions on development programmes in other sectors. Pointed attention has been drawn in this context to the tardy progress of the programmes for steel, heavy machinery and fertilisers and the inadequate targets for Cement, Machine Tools and Heavy Electricals. The shortfalls in respect of Steel and Fertilisers, it is further pointed out, will call for an upward revision of the import programme at heavy cost in foreign exchange.

The difficulties in which the steel programme has got bogged are too well known to need any detailed commentary in this context. Rourkela and Durgapur have yet to

reach their Second Plan targets of output, while at the present rate of progress Bokaro will not be able to make any contribution to steel production during the Third Plan.

As regards Fertilisers, it is apprehended that production might fall short of target by 1.5 lakh tons in downs of Nitrogen, necessitating imports of the order of 3.5 lakh tons against the 2 lakh tons envisaged in the Plan in order to ensure a supply of 1.2 million tons (N) in the last year of the Plan. The Ministry, on the other hand, appears to be confident that the Public Sector plants would deliver the goods on Schedule and, further, that any failure on the part of licences in the Private Sector to go ahead with their schemes would be taken care of by reallocation of licences or by the State itself, stepping into the breach.

Whatever may be the position regarding the supply of steel, there appears to be little justification for taking an alarmist view of any likely shortfall in Fertiliser output. If we take into account the actual experience in respect of the offtake of Fertilisers in different parts of the country, there is, on the other hand, room for doubt whether it would be a practicable proposition to push up the offtake of Fertiliser to the level of 1.2 million tons of Nitrogen during the Third Plan. An examination of the progress so far achieved in the utilisation of Fertilisers and other relevant factors suggests that the bases on which the Fertiliser targets have been set up are far from realistic.

The response of the cultivators which is the decisive factor in estimating the demand, is not likely to be materially different during the next four years from what it has been in the recent past. Paddy accounts for nearly half the total estimated requirements of Fertiliser. Therefore, it will be worthwhile to examine the position regarding the use of Fertilisers by paddy cultivators in some detail.

The Ministry of Food and Agriculture has estimated the requirements of nitrogenous fertilisers at about 1.2 million tons in terms of nitrogen. This estimate is based on the assumption that, during the Third Plan period, use of fertiliser would spread to 80 per cent of the area under paddy, both irrigated and rain-fed, and the dosage would be 20 lb Nitrogen per acre which would be equivalent to the application of 100 lbs of Ammonium Sulphate per acre. On this basis the requirement of fertiliser for paddy alone works out to 6 lakh tons of Nitrogen. The remainder is made up of the estimated requirements of other irrigated food crops; commercial crops like sugar cane, cotton, tobacco, jute, potato and plantation crops.

The experience of the last several years, regarding utilisation of fertilisers in areas, where a considerable measure of preparatory work has already been done, suggests that, both in respect of the area likely to use fertilisers and the dosage—the two bases on which the Ministry has erected its target—the estimates are from realistic.

The Tanjore District in Madras, for instance, is a region where one could expect to find the highest practicable rate of utilisation of fertiliser. Chemical fertilisers have been in use for nearly five decades and offtake has been gradually built up to the present level. The optimum conditions for making effective use of fertiliser, such as assured irrigation, an established system of co-operative credit and an alert population of cultivators, are present in this district which has therefore been chosen for inauguration of the "package programme", which has been in operation for two years.

The district has 1.4 million acres (gross) under paddy. On the basis of fertiliser consumption assumed by the F & A Ministry, offtake of ammonium sulphate should be about 63,000 tons a year to provide a dosage of 100 lbs ammonium sulphate (20 lb nitrogen) per acre. On the other hand, the actual offtake in 1958-59, before the introduction of the package programme was only about 20,000 tons and the offtake has remained stationary at about the same level in spite of two years of working of the intensive programme.

The package programme covered 2.5 lakh acres in the first year and was extended to 3.5 lakh acres in the second. The offtake in the first year and 6,100 tons ammonium sulphate in the second year for all crops, including commercial crops like sugar cane which take a much higher dosage of fertiliser than paddy. The offtake for the two years work out to 50 lbs per acre of ammonium sulphate, (11 lb nitrogen) in the first year and 40 lbs per acre

(8 lbs nitrogen) in the second. The per acre average for the District as a whole is about 30 lbs of ammonium sulphate (6 lbs nitrogen). Attention may be drawn to two points in this context. The per acre offtake has decreased in the second year as compared with the first. The failure to reach the level of consumption aimed at by the Ministry cannot be attributed to shortage of supplies. The total quantity of ammonium sulphate made available for the package area was 15,000 tons, whereas the offtake was hardly 6,100 tons.

The significance of these figures lies in the fact that they indicate the maximum limits to which it would be possible to push up the offtake of fertilisers in areas where the conditions are most favourable and all measures necessary for the purpose are carried out as part of an intensive developmental effort. If, in a district which has been chosen for the package programme, and where fertiliser has been in use for fifty years, offtake has been apparently stabilised at about 30 lbs of ammonium sulphate per acre, where is the justification for assuming that offtake in the country as a whole, including both irrigated and rain-fed areas under paddy, will reach the level of 100 lbs per acre of ammonium sulphate?

Tanjore has indicated the practicable limit for irrigated areas. Orissa is typical of rice growing regions in the North which are largely dependent on the rainfall. The area under rice in this State is of the order of 10 million acres of which 2 million acres are irrigated. Including the irrigated area, the total offtake has been of the order of 20,000 tons of which only about 7,000 tons are used for paddy, the rest being used for commercial crops. On the bases adopted by the Ministry of Food and Agriculture, consumption would have to be increased by over fifty fold—during the Third Plan. Those who know what this involves in terms of organisational effort, distribution arrangements, provision of credit, technical guidance, etc.—do not consider it a practical proposition.

In the foregoing, no account has been taken of the advantages and disadvantages of using chemical fertilisers. These have a direct bearing on the cultivators' response. In rain-fed areas, according to the experts, the advantages of using chemical fertiliser are not so evident as in the case of irrigated areas. The different stages of the growth of the varieties of paddy mostly cultivated in rain-fed areas in the North Eastern region are determined by the procession of the seasons. Flowering starts just after the autumnal equinox, when the nights begin to get longer. This is also the time, when the paddy plants require the maximum amount of moisture. As the monsoon usually extends up to the end of September, ordinarily, there will be enough moisture in the soil to meet normal requirements. The effect of nitrogenous fertiliser on plants is to accelerate the vegetative growth. When the vegetative growth is more luxuriant, the rate of transpiration is also correspondingly increased and the moisture in the soil is sucked out at a more rapid

rate. If, as frequently happens, the monsoon ends by mid-September, the plants in fields to which fertiliser has been applied would suck up moisture so fast that they are likely to be short of water during the critical flowering period, and the result may be disastrous. The field where no fertiliser has been applied will actually show better results as it would have been able to retain the moisture for a longer period. The same difficulties of rapid vegetative growth aggravating water shortage are met with in the case of other rain-fed crops also, such as cotton, sugarcane etc.

As far as rain-fed areas are concerned, it is not reasonable to expect that fertilisers would be used on 80 per cent of the total acreage. Fertilisers could be used with advantage only in lowlying areas where soil moisture persists for comparatively longer periods. Such areas may constitute about one-third of the total area under paddy in the rain-fed areas. If allowance is made for these factors, the estimate of requirements of fertiliser for paddy will have to be slashed to a third of the figure assumed by the F & A Ministry in preparing their estimates. The requirements of other crops, except perhaps plantations crops, will also have to be scaled downwards. Experiments in Shajehanpur district have shown that use of nitrogenous fertiliser for sugarcane at the rates found beneficial for irrigated tropical soils is positively detrimental to the crop in North India. As the bulk of the sugarcane area is in Northern India, the actual offtake will be only a fraction of the estimated requirements. In case of most of the dry crops, before fertiliser could be applied with beneficial results, it will be necessary to take measures to conserve soil moisture by building up the soil with organic nutrients. The pre-occupation with chemical fertiliser has resulted in neglect of this vital aspect of the programmes for increased food production.

On the most liberal assumptions, the total offtake of fertiliser is hardly likely to exceed 6.5 lakh tons in terms of nitrogen and this, too, will be possible only if other supporting measures are also taken, such as provision of adequate credit to the cultivators, proper arrangements for distribution which will ensure that fertiliser is available at the proper time, technical guidance etc. As there is little evidence to show that any substantial progress has been made on these lines, the actual offtake may be even lower than the estimate of 6.5 lakh tons. The target of production which, according to the Planning Commission, is likely to be reached—the Ministry is more optimistic—should be more than sufficient to take care of the actual demand for fertiliser that is likely to develop by the end of the Third Plan. On the other hand, a higher level of production may cause serious embarrassment. Export of fertiliser will be even more difficult than export of sugar! There is clearly need for re-examination of the estimates of fertiliser requirements on which the target for fertilisers has been based.

The emphasis on an unrealistic fertiliser target is also likely to

divert attention from the other essential measures that have to be taken to achieve the target on food production and at the same time provides the Food and Agriculture Ministry with a convenient excuse to cover up all failures. If foodgrains production fails to reach the target, as is quite likely, they can always turn round and say that the fault is on the Ministry of Heavy Industry who have not been able to achieve the targeted production of fertiliser.

Cooperative Farming

Seven co-operative farming wings set up in different States in 1961-62 have been providing training facilities to official and non official workers and will continue to function during the current year. In addition seven more co-operative farming wings, are to be established during the current year at the rate of one per State in the States of Andhra Pradesh, Madras, Madhya Pradesh, Maharashtra, Mysore, Rajasthan and West Bengal. The training wing for Madras State has already started functioning. The Deputy Minister of Community Development and Co-operation who gave this information in Lok Sabha on May 26 also indicated the programme for popularising co-operative farming. Besides dealing with the backlog of 244 societies in the pilot projects started in 1961-62, pilot projects were launched in 64 districts and 255 societies were set up in that year, new pilot projects will be started in 89 districts during the current year and 542 societies will be organised. In addition to the societies in pilot areas, 1015 societies are to be started in non-pilot areas. Decentralising of financial procedures, mobilisation of Panchayats for forwarding the programme, study tours, Village Camps, Radio forums, and publication of 'success stories' are the other measures proposed for enabling Co-operative Farming to gain a foot-hold in the countryside.

Export of Shoes to Russia

A Trade Delegation of the STC, it is learnt, has finalised a contract for the supply of 2,30,000 pairs of shoes valued at about Rs 66 lakhs to the USSR. The shipment will have to be completed before the end of 1962. The delegation, which was led by Mr P. D. Commar, Additional Divisional Manager of the STC, has also concluded contracts for the supply of handicrafts worth about Rs 13 lakhs. The items for export include brassware, scarves, zari bags, knitted ware etc. The delegation was also able to secure orders for export of woollen textiles which are now being examined by the STC in consultation with the various manufacturers in India before entering to a definite commitment regarding the supply.

Coasters for Coal Traffic

The Planning Commission's Working Group on Coal Production and

Transport recently recommended that the Shipping Corporation should enter the coastal coal traffic with owned vessels in order to facilitate the planned movement of coal by sea to destinations in the South and the West of India. The National Shipping Board has also made a similar recommendation. It is learnt that the Corporation has recently applied for permission to build some new coastal vessels specially designed to suit the draft restrictions of the Hooghly river, and that the proposal is under consideration in consultation with the Planning Commission.

The Shipping Corporation has at present a fleet of 21 vessels of 1,54,415 GRT including two coastal tankers and two passenger vessels. Under the expansion programme already approved it is proposed to acquire 10 dry cargo ships of 92,000 GRT, one overseas tanker of 20,000 tons GRT and one new passenger vessel for Tuticorin-Colombo services of 590 tons GRT, aggregating 1,12,500 GRT. When the expansion programme is completed, the Shipping Corporation will have 33 vessels of 2,66,915 GRT.

BALMER LAWRIE & CO. LTD.

The Board of Directors of the Company has decided to recommend to the forthcoming Annual General Meeting, the payment of a Final Dividend of 18 per cent for the year ended 31st December, 1961.

BALMER LAWRIE & CO. LTD.

D. MANSON
Managing Director.

21, Netaji Subhas Road,
Calcutta.

JUTE

Outlook for Jute

ALTHOUGH the undertone in the raw jute market during the past two days has been somewhat quiet, there is no mistaking the general improvement in sentiment. While there is no sizable reduction in the quantity on offer there has been no undue anxiety to dispose of stocks at rates far below the minima. It would appear that the several steps taken and announced so far by Government have helped revive confidence in the ability of authorities to ensure a reasonable price for raw jute. The Informal Consultative Committee of the Ministry of Food and Agriculture was told last week that Government was keeping a close watch on the prices of raw jute. Interest in an equitable return to the jute cultivator has also been evinced by influential bodies and it is clear that Authority is determined to ensure that jute prices are maintained at levels remunerative for the farmer. Mr S. K. Patil, Minister of Food and Agriculture, has also stressed the need for safeguarding the farmers' interests. The jute cultivator has put in strenuous efforts to raise the production of jute from a very low level to the present bumper crop. Jute production has gone up from 16 lakh bales in 1947-48 to 62.9 lakh bales

in 1961-62. It is to be noted that the Third Plan target has been reached even in the first year. Mr Patil has therefore pointed that the farmer should not be penalised for his great service. Government is now engaged in studying the cost of production of jute with a view to arriving at a fair price for raw jute. It is expected that Government will be shortly in a position to decide upon further steps necessary in this regard. If Government is thinking in terms of fixing a minimum price, it will have to make the announcement quite early in the new season.

In the meantime, steps have been taken to step up offtake from the market. While the LJMA is continuing to issue its weekly minimum jute quota to its members, the Jute Buffer Stock Association has decided to increase its offtake further. The total purchases of buffer stock jute to date against the allocations issued by the JBSA to its member mills amount to over 7½ lakh maunds valued at nearly Rs 2 crores. At a meeting of the Committee of the Association last Friday it was decided to take up another 2½ lakh maunds of buffer stock, the cost of which will exceed Rs 60 lakhs.

It is essential that jute production is maintained at a high level atleast for the next few years. The jute industry has so many problems to grapple with that it

should be spared all avoidable worry in regard to raw jute. Thanks to favourable weather conditions last year's crop had turned out to be a bumper one. It is now generally accepted that two or three more such crops would be necessary in order to bring the industry back to normal. Although jute acreage will definitely be somewhat lower in the next season, the favourable weather conditions during the sowing season has engendered the confidence that next crop also will be quite large. One should also expect the yield to be sizably higher as active steps have been taken during the past few years to popularise the use of improved seeds and better farming methods.

The jute goods market ruled steady with attention mainly centred on hessian for which there were a number of enquiries. Bear covering in ready and near delivery goods coupled with a fair overseas enquiry helped hessian firm up. Besides the sustained interest shown by the US and indications of substantial buying support from Argentina, the firmness of hessian also stems from the fact that in spite of the full working of mills supply of hessian is still inadequate to meet demand in full. Hessian 40" x 10 Oz. May has improved over the week to be placed higher at Rs 57.25. During the same period, however, B Twills May has lost ground by several points to be placed at Rs 122.75 due to lack of interest.

MINIMUM PRICE FOR JUTE

Referring to recent reports in the Press that a minimum price for jute of Rs 30 per maund has been fixed by the Government of India for next season, the Indian Jute Mills Association in a press note issued on Thursday says that the Association had previously arranged to discuss the question of raw jute prices with Government in the month of June, and it feels sure that no such decision could have been taken without prior consultation with the industry. From their experience of the sugar industry, Government are obviously fully aware of the danger of fixing raw material prices at a level which adversely affects the export trade in the finished product.

If far-reaching decisions of the kind reported are taken without serious thought being given to the vital issues at stake, then the future of the Indian jute industry will be gravely jeopardised. In view of the importance of the jute industry as India's leading earner of foreign exchange, to the tune of Rs 145 crores per annum, and the fact that the export trade in jute manufactures is severely competitive, the price which the industry has to pay for its raw material is a major consideration. As compared with the present Indian price of about Rs 30 per maund, the ruling price in Pakistan is substantially lower for the same quality of jute, and, moreover, the Pakistan jute mills industry has the advantage of the export bonus scheme operating in

that country. After taking other factors into account, the difference in the costs of the two jute industries works out at over Rs 300 a ton in Pakistan's favour. The Indian Jute Mills Association trusts that important considerations such as these will not be overlooked in the context of promoting India's export trade.

The Association wholeheartedly supports Government's objective of ensuring an economic price to the jute cultivators but there are other means of achieving this which will not permanently damage the export trade in jute goods.

TEA Maximising Tea Exports

DEMAND continued to be limited at this week's tea export auctions (Export Sale No. 2) in Calcutta presumably due to lack of variety. The offer consisted of 28,468 packages made up mainly of Darjeeling teas, though there was a more representative selection from other districts as compared with Sale No. 1. The enquiry for Darjeelings was limited to the few flavoury lines which however realised prices well below valuation. The bulk of these teas met with little response resulting in heavy withdrawals. Other orthodox categories met with moderate support but even so prices were easier. However satisfactory prices were realised for bright liquoring sorts particularly, BOPs and Fannings. CTC teas with bright liquoring and clean leaf appearance generally sold well, broken being more attractive than fannings grades.

Although the first two auctions have not been quite encouraging, the outlook for this season's tea is generally assessed bright. In their annual report, Messrs J. Thomas and Co. Private, Limited, Calcutta have pointed out that "from the Indian producer's point of view, the steadily expanding internal market should serve to provide an outlet for a substantial proportion of the crop, while it is also beyond doubt that quality teas of both orthodox and CTC manufacture will be in good demand." Referring to the reduction of export duty on tea, the report says that the question whether or not any benefit would accrue to the industry from this concession does not admit of a ready answer. For, in the last season overseas demand did not pick up in spite of the fact that prices were low. The need of the hour is stimulation of our exports and concerted measures have to be taken to achieve this end keeping always in view that world production is increasing. The report says that a favourable climate has now been created for the expansion of exports as Government has now fully realised the importance of propaganda. The Tea Board is already engaged in an intensified campaign to popu-

larise tea in the UK but there is need for extending this programme to other consuming countries and especially to those countries which have been taking less of Indian tea in recent years. If however India is to increase sizably its tea exports, there is strenuous work before it. Although from the results of last season it would appear that the increase in world production is well matched by an increase in world consumption it is not improbable that consumption may lag behind production thereby increasing competition in world markets. In this connection it may be noted that the Food and Agricultural Organisation has concluded from a recent survey of the trends in world tea production and consumption that by 1965 there will be surplus of about 100 million lbs of tea in the world.

Production in India is steadily going up. Output totalled 700 million lbs in 1960 and it reached 768.4 million lbs. last year. It is expected that the current season also will record a proportionate rise in production. The Third Plan tea production target is set at 900 million lbs. It is clear therefore that active steps have to be taken to step up our tea exports. It is true that it was because of the strong internal demand that the tea industry was able to dispose of its large production last year without much difficulty. Approximately one-third of the Indian tea production is consumed internally and this represents an increase during the last decade of 67 per cent. Even so the stage is not yet wherein we can rely on internal consumption to take care of the tea economy whatever happens to our exports. Moreover in the present context of the acute shortage of foreign exchange, the objective should be to earn as much foreign exchange as possible from all sources. Tea is still one of the largest foreign exchange earners and if quick results are to be achieved special attention is to be bestowed on our traditional exports such as tea, jute goods etc. Tea exports are losing ground during the past few years while Indian tea's rivals are steadily increasing their share in the increased offtake by overseas consumers. In the course of the last ten years Indian tea exports as a percentage of production has been showing a declining trend. The period between 1952 and 1957 showed a mixed trend, one year up and the next year down. But in the last four years the percentage has come down from 69.8 to 56.9 in 1961.

The need for vigilance is also emphasised by the possibility of Britain entering the EEC. This is a matter of great importance to India because Britain is by far the most important buyer of Indian tea. It is also not improbable that Britain's becoming a member of the European Common Market brings indirect bene-

fits to the commonwealth countries. Be that as it may, there is no reason why India should not go on exploring the possibilities of expanding her tea exports to all possible regions. There appears to be excellent scope for promoting tea consumption in several European countries. Very little of Indian tea is finding its way now into the EEC countries, being 1 per cent only of the total production. Given effective propaganda it should be possible to increase substantially offtake of Indian tea by these countries it would however appear that it will be of no practical use if our tea propaganda is aimed at merely popularising tea in general terms. It should bear some relation to the type of tea that India can offer for sale. In this regard Messrs J. Thomas & Co have given some valuable hints. Tea producers in Northern India have been steadily changing over to the more lucrative CTC process

with the result that Indian tea production is progressively showing a predominance of CTC teas. This is a development that has to be taken firm note of in all our tea propaganda overseas.

This week's internal tea sale in Calcutta started off with a good demand but towards the close interest considerably diminished. 29,755 packages were on offer. Although CTC dusts opened well, prices declined in later deals. Although prices were irregular, plain orthodox varieties met with better enquiry. Among Assam dusts except the bright liquoring teas which were often firm, others came to an easier market. Rates for Legg cuts were irregular and generally lower. Satisfactory prices were obtained for the clean teas. Quotations inclusive of excise duty are: Plain Orthodox Dust Rs 2.90 to 3.10; Medium Assam Dust Rs 3.30 to 3.60; Legg Cut Dust Rs 3.70 to 4.00 (nominal); Medium Assam CTC Dust Rs 5.40

to 5.70;; Good Assam CTC Dust Rs 6.10 to 6.30.

At this week's export auction in Cochin a total of 728,000 kg of leaf tea were on offer and the trend turned quiet as the auction progressed. Earlier a fair demand was noticeable but toward close rates showed an easier trend. Low Medium and medium broken and similar fannings were easier upto 30 nP a kilo. Good mediums were in demand but prices did not make much headway. Highgrown teas came to an easier market while unorthodox found few buyers.

COTTON Futures Recede

The details regarding the import of American cotton under PL 480 have been announced by the Textile Commissioner last week. Out of the 220,000 bales, 110,000 will be in staple 1-1/16" and above

ZEERUT BRIDGE over Tolly's Nullah, CALCUTTA. Originally built in 1854, re-built in 1904

building bridges for over a century

In the recently completed Ganga Bridge our contribution was about 5,000 tons of fabricated steelwork including well curbs and strakes.

*Nominal.

but below 1-3/16" and the balance will be in staple 1" and below but less than 13/16". A press note released in this connection states that the American Up land cotton will be allowed for shipment upto 31 July, 1962. The allocation of the American Cotton will be as follows. Cotton stapling 1-1/16" and above but below 1-3/16" will be allotted to the mills on the basis of their consumption of cotton of similar stapling in 1960. Cotton stapling 1" and below will be allotted to the mills to meet their requirements of medium and long staple varieties. It is also clear that while working out the quotas to the mills the authorities will resort to an ad hoc reduction for allowing for the foreign B cotton received by them after 1 September, 1962, details about which have not yet been received from all the mills.

It should be noted that the Purchase Authorisation No. 39-68 under PL 480 is subject to the condition that the whole quantum is shipped from the US by 31 July, 1962. Accordingly the mills are instructed to inform their acceptance of the allocation within ten days of the date of the allocation letter which would be issued shortly, failing which the allocation will be cancelled and the quantity reallocated to their mills.

The procedure to be followed for the import of the US cotton has outlined in a statement of the Joint Chief Controller of Imports and Exports. The sub-authorisation will be granted and governed by the conditions laid down by the Government of India. Application for import licences within the value mentioned by the Textile Commissioner in the allotment letters issued to the mills should be duly filled and forwarded to the Joint Chief Controller of Imports and Exports by registered post with acknowledgement due. It has also been stated that the issue of sub-authorisation will be stopped soon the monetary ceiling fixed for this purpose is reached. And on no account will the value of cotton imported should be permitted to exceed the dollar value of sub-authorisation. The procedure will come into immediate effect.

Meanwhile the possibility of securing one lakh bales of Pakistan long staple cotton valued approximately at Rs 5 crores against export of coal has been rated high. The issue will be taken up during the trade talks between the Pakistan trade delegation and the representatives of the Government of India and a trade agreement to that effect is expected to be concluded shortly. The cotton supply position in Pakistan is also conducive for such an agreement. Business for nearly 5,000 bales of Pakistan cotton has already been put through during the last week by Indian spinners, subject to the availability of import licences.

Trading in the Bombay cotton futures market during the past week was a featureless affair. The Jarilla March 1963 suffered another setback owing to speculative selling and the absence of support even at lower levels. The contract fluctu-

ated within a narrow groove. The total turnover was very limited.

In the spot market at Sewri, Surti Kalyan, Laxmi, L 147 and Co 2 met with good mill support. The requisition drive for Digvijay and Vijay came as a shock to the market.

In the export section the current export quota for Bengal Deshi moved at a snail's pace. Only 51,244 out of 66,500 bales for shippers were registered so far with the Joint Chief Controller of Imports and Exports. The silence of shippers from Japan was the chief factor for the none too happy activity. It is learnt that the Japanese importers are confronted with a variety of difficulties mostly on the financial side. The textile industry in that country is at present steeped in a crisis and the seething competition from synthetic fibres has constrained it to reduce production. In the light of these factors there is no possibility of demand from Japan improving in the immediate future unless these hurdles are skipped over rapidly.

WORLD STOCK

A possible decline in the world stocks of cotton during the current season is apprehended by the International Cotton Advisory Committee in Washington. In a statement at the end of the ten day conference the Committee stated that the overall statistical situation in cotton remains strong with acreage and consumption riding at peak levels. There was also a reasonable degree of price stability in the world cotton markets and most of the countries would probably dispose of the bulk of their exportable surplus. Demand is likely to outstrip production during the season.

The predominant causes attributed to the overall reduction in the stocks were the partial crop failures in some of the countries, and that which normal yields in those countries, the supply-demand relationship would have been well reversed. The International Cotton Advisory Committee, it should be remembered, is an organisation of 38 Governments concerned with the production consumption imports and exports of cotton.

The cotton production in Colombia during 1961-62 is estimated at about 350,000 bales of 500 lbs gross each, which is nearly a 14 per cent increase over the previous season's 307,000 bales. That country has made tremendous progress in the growth of cotton within a short period. It was the direct result of a combination of factors like the increased acreage and the congenial climatic conditions and partly due to the extension of irrigation facilities to the cotton growing areas to reduce the dependency of the crop on rains. More than 400,000 acres of land are under cotton cultivation and the acreage will be increased in the current year. Exports during the first five months of the current amounted to 50,000 bales. The leading customers were the UK and West Germany. Total consumption is estimated to amount to 230,000 bales.

FOODGRAINS

A steady trend continued in food-grain prices in Hapur during the past week also as arrivals of "rabi" grains were still much lower than usual for this time of the year. As threshing and winnowing operations were nearly complete, the continued lower arrivals were mainly due to reluctance on the part of the cultivators to part with his produce. Government circles were of the opinion that arrivals would soon increase and prices would fall. Therefore Government has set up a machinery to purchase wheat on Government account if prices fall below Rs 12 to Rs 14 a maund according to quality. The Union Food Minister has described the food situation in the country as far better than in previous years and there would be no necessity for food imports after the termination of agreement with USA in 1964 and imports now were only for building up reserves.

Wheat prices improved slightly during the week to be quoted on Monday at Rs 39.52 per quintal for average and upto Rs 46.56 for better farm produce. Arrivals of wheat were poor at an average of 1500 to 2000 maunds daily. A major portions of arrivals was lifted by stockists and stocks with the trade consequently increased to 30,000 maunds. Coarse quality rice prices also recorded gains during the week on better consumers seasonal demand in face of poor arrivals and rice stocks here were also small around 10,000 maunds.

Gram prices registered sharp gains during the week at Rs 42.22 per quintal for Punjab variety on firm advices from Punjab. South is attracting heavy quantities of gram from Punjab and as arhar crop has been very poor, gram is attracting demand for dal purposes. Arrivals of gram here were poor around 1000 maunds daily average and gram stock with trade was around 20,000 maunds. Barley prices were steadier. Arrivals of coarse grains were around 200 maunds each daily and stocks with trade were negligible. Bajra, jowar and guwaj were in demand for seed purposes and prices stayed steady. Methi prices, however improved on good demand from Bengal, while maize was listless.

In pulses virtual failure of arhar crop this time in this part of the country accounted for steady trend in prices of all pulses. Peas arrivals were around 2000 maunds daily average and these were being lifted mostly by stockists and local peas stock has swelled to 64000 maunds, but prices were steadier. Arrivals of arhar were small from east UP and prices continued bullish at side and stocks with trade were nominal. Urd prices were steadier thanks to good consumers demand and other sections stayed steady in sympathy barring masoor and its dal prices which were quoted lower on slack demand in face of better new crop arrivals.

SUGAR

Quiet to depressed conditions were witnessed in sugar prices in

Hapur during the past week on slack demand. Heavy release of 2.5 lakh metric tons for open sale by the Government resulted in easy supply position and mills were eager sellers. Release of further quota of one lakh tons for exports failed to cheer the market. Almost all the factories in west UP have stopped their crushing season. In eastern UP where still sufficient cane was available, a number of factories closed the season due to sharp fall in sugar recovery. Spot delivery prices here eased by about Rs 1 per quintal and mill delivery prices from 12 to 14 nP per maund.

Sugar prices were also depressed during the week in the Muzaffarnagar markets as bulk enquiries were absent. Small business was reported to Gujarat, Rajasthan, Saurashtra, Punjab and M.P. Kandhari prices eased slightly during the week as demand was low levels. Stocks were slowly running down.

GUR

Gur prices were steadier on good buying support from Gujarat. Off-take was seven wagon loads but loading was restricted for last three days. Local stock is reduced to 14,000 maunds, corresponding figure last year being heavy around 50,000 maunds. Cane standing crop had suffered due to pest in its early stage but full prospects would depend mostly on monsoons. Gur prices were steadier in the Muzaffarnagar market during the week thanks to good buying support from Gujarat. Gur rusket was in demand from Rajasthan side. Gur future fagun delivery transactions commenced from May 23 under regulated new rules under directive of FMC.

SILK

Prices of raw silk in Bangalore Silk Market maintained an overall steady trend during the previous week. Of flature raw silk of 20/22 Dr. continued to be quoted between Rs 84.89 and Rs 85.99 per kgm. Rates of cottage basin silk ruled between Rs 77.18 and Rs 82.67 per kgm. Prices of charka raw silk ranged between Rs 50.70 and Rs 77.18 per kgm.

Spun silk yarn of 2/210's was quoted at Rs 81.40 per kgm.

Prices of reeling cocoons in Siddhaghatta area varied from Rs 4.00 to Rs 5.50 while those in Channapattana area ruled between Rs 3.50 and Rs 5.00 per kgm. Prices of reeling cocoons in Mugur area decreased slightly to a level between Rs 2.25 and Rs 3.00 per kgm. Prices of foreign race seed cocoons varied from Rs 8.00 to Rs 11.00 per thousand. Mysore race seed cocoon prices ruled between Rs 5.00 and Rs 7.00 per thousand.

Tasar silk market prices remained steady during the week ended 25-5-1962. Prices of tasar raw silk ranged between Rs 66.00 and Rs 105.82 and that of silk waste and spun silk yarn varied from Rs 22.00 to Rs 26.00 and from Rs 30.00 to Rs 47.00 per kgm respectively. Prices of reeling cocoons showed an upward

2 June 1962

trend during the last week. The prices for Daba, Bogal, and Serihan were quoted between Rs 115.00 and Rs 130.00, Rs 110.00 and Rs 118.00 and between Rs 50.00 and Rs 60.00 per kahan respectively.

The FOB price and landed cost of Japanese raw silk of 20/22 Dr was reported as Rs 60.87 and Rs 93.95 per kgm. respectively as on 4th May, 1962. There has been a perceptible rise in the FOB prices of Japanese silk since December, 1961. The FOB price for Japanese raw silk in December, 1961 was Rs 51.35 per kgm.

BULLION

In the Bombay bullion market, silver and gold displayed contrary trends most of the time but towards the close the general tendency was toward lower levels. Ready gold was in good demand in earlier dealings but in later dealings interest became subdued with the price level also reaching lower levels. The concentration of demand in ready section was demonstrated by the spread between price levels in the two sections. At one time earlier in the week, the difference between ready and forward positions was more than Rs 4 with the advantage going to the spot rate. However higher levels became untenable as demand diminished towards the close of the week. Unlike Gold, Silver was all along rather subdued with the rate moving irregularly narrowly most of the time. Although it made an attempt at moving up, it proved abortive.

NON-FERROUS METALS

An irregular trend prevailed in non-ferrous metals market. Copper was firm with the rates tending to touch further new levels. The firmness in copper is attributed to acute shortage brought about by continued high demand and the delay in the release of imported supplies by the STC. The trend in Tin was toward lower levels, due to selling pressure induced by lower advices from overseas. Zinc and Lead ruled unchanged.

OILS & OILSEEDS

The Bombay Oilseeds market displayed an easy trend during the past week. Linseed however was steady following indications of a fall in output. The improvement in sentiment noticed last week-end in Groundnut proved to be temporary as the commodity encountered selling pressure once again. Apprehensions of a large carryover into the next season together with the belief that very large quantities of the seed would be due for delivery in respect of the September contract depressed sentiment with the result bears were able to establish their stronghold. Since it is generally expected that there would be available quite a large supply,

profit taking interfered frequently in the futures market with every tendency toward an improvement in the price. Bull operators seemed to be much concerned with the supply position that favourable factors such as the report about the establishment of another State Trading Corporation specially for the promotion of the export of oilseeds and vegetable oil and the covering in oil by the STC failed to enthuse them.

The undertone in castor seed too was easy in the absence of fresh interest. Overseas buying support showed little expansion during the past week and the general lack of support was reflected in the trend of prices in the forward section where prices moved downward throughout the week. Although prices remained more or less steady in the spot market, the general tone of the market continued to remain easy partly in sympathy with the trend in groundnut.

Cotton seed was under pressure in late dealings and lost ground in the absence of interest. In contrast to the other sections of the market, linseed ruled steady partly due to speculative support and partly due to the indication that the crop outturn might turn out to be smaller than in the previous year.

Prices of both groundnut kernels and oil in Madras are continuing to go down. It is partly ascribed by trade here to the forward market forcing prices at Bombay. Early rains this year has raised hopes of a good groundnut harvest in the coming season. As such buyers do not want to go in for bulk purchases. The slow movement of vanaspathi also had discouraged the vanaspathi interests to buy additional quantities of groundnut oil for their factories. Prices continue to be nominal with hesitant buyers.

Arrivals of summer crop in South and North districts are reported good being about 500 to 550 tons daily. In the City itself the quantity received is about 125 tons daily. Kernels are, however, being readily absorbed, but only at lower quotations. Calcutta interests are also not eager to buy groundnut oil in the city. In sympathy with groundnut oil, gingelly oil and seeds prices had gone down. Only groundnut cake had gone up by a rupee and odd for bag.

Groundnut oil forward positions remained without any feature and no business was transacted at all after the beginning of this week. The quotations remained nominal.

The following are the closing price in the Seeds and Oils Exchange on Tuesday.

Groundnut oil per quintal ex-Madras godown expeller Ready 5% FFA: Rs 173. (There was no buyer even at this low rate): June Rs 174 (nominal): July Rs 175 (nominal): Groundnut kernels: per 80 kgs: Superior: No stock: Summer peanut

crop Rs 65: Castor oil was steady at Rs 149.90: Coconut oil was also steady at Rs 43.75 to Rs 44 per tin. Gingelly oil Rs 26 to Rs 26.25 per maund. Gingelly seed Rs 85/86. Groundnut cake Rs 28 to Rs 28.50 per bag of 160 lbs.

The groundnut oil ready price remained stationary at Rs 177 per quintal from last Wednesday. The next day there was also no change. On Bombay reports spot oil price was depressed by a rupee to Rs 176 quintal on Friday last. The next day a further decline of a rupee per quintal was noticed and the price quoted was Rs 175.

When market opened this week for transaction, the apathy in groundnut oil trade was marked when the opening rate was Rs 173 per quintal. There were no buyers even at this rate and the market closed at this.

As for forward contracts the June position was at Rs 179.50 per quintal last Wednesday. There was progressive decline and the quotation on Thursday was Rs 178.00 per quintal. The quotation on Saturday was Rs 177 nad when the market opened today it was Rs 174, the same as on Monday. In July position the last Wednesday rate of Rs 182.50 declined to Rs 176 when market open Monday. It declined today by a rupee further.

Superior kernels was quoted at Rs 71 per 80 kgs last week. It declined to 68 by the week-end and was available at Rs 65. The Summer crop was quoted at Rs 66 last Wednesday per 80 kgs. In sympathy with the superior variety whose arrival almost ceased, the price quoted was Rs 63.50 per 80 kgs.

The price of groundnut kernels in North and South Market centers was at Rs 66 per 80 kgs.

HIDES & SKINS

There was a weak undertone in the tanned cowhides market. Arrivals were not as regular as in previous weeks. The price also weakened by about half a penny per lb. With UK from whom enquiries continue to be slack business in tanned cowhides was reported on the basis of 64/65d for run, 54/55d and 52/53d for fourth and fifth respectively. For semipremium and premium marks good transactions were made at 74d, 64d and 54d for semipremium marks of 5/5 1/2 lb for run, fourths and fifths. A few of the East European countries made enquiries for these varieties.

There was no change in the tanned cow calf skins. Prices continued to be the same as of last week. The same was also the case with tanned buff calf skin.

Easier trend prevailed in tanned goat skins the prime class goatskins being negotiated at (for 5 1/2 lb) 17/3d for run, 19/9d for thirds and 13/9d to 14 for fourths.

Prices declined in tanned sheepskins.

The following were the prices for tanned skins and hides per lb:

Tanned cow prime 5/5 1/2 lb Rs 2.94 to Rs 3.00: 6/6 1/2 lb Rs 2.63 to Rs 2.69: 7/7 1/2 lb Rs 2.44 to Rs 2.50: 8/8 1/2 lb Rs 2.38 to Rs 2.41: 10/12 lb Rs 2 to Rs 2.06: Tanned cow inferior fifths 5/5 1/2 lb Rs 2.44 to Rs 2.47: 8/8 1/2 lb Rs 2.03 to Rs 2.06: 10/12 lb Rs 1.85 to Rs 1.88: Tanned buffalo 11/13 lb Rs 1.94 to Rs 2: Tanned buff 5/5 1/2 lb Rs 2.40 to Rs 2.44. Tanned buffalo calf 1 1/2 lb Rs 3.13 to Rs 3.19: Tanned cow calf: 1 1/2 lb Rs 3.60 to Rs 3.88.

SHAW WALLACE & COMPANY LIMITED

NOTICE is hereby given that the Sixteenth Annual General Meeting of the Members will be held at the Registered Office of the Company, 4, Bankshall Street, Calcutta, on the 29th June, 1962, at 3 p.m. for the following purposes:—

- (1) To consider the Profit & Loss Account for the year ended 31st December, 1961, the Balance Sheet as at that date and the Reports of the Directors and the Auditors.
- (2) To declare a Dividend on the Ordinary Shares.
- (3) To appoint Auditors and to fix their remuneration.
- (4) To elect Directors in the places of three Directors retiring.
- (5) AS SPECIAL BUSINESS to consider and, if thought fit, to pass, with or without modification the following Resolution:—

As an Ordinary Resolution—
"That approval be and is hereby accorded to the undernoted investments—

- (a) 25 Ordinary Shares of Rs 100 each in Matheson, Bosanquet & Co. Ltd. at a cost of Rs. 14,513.
- (b) 247 Ordinary Shares of Rs. 10 each in Wallwood Plantations & Agency Co. Ltd. at a cost of Rs. 3,568."

An Explanatory Statement pursuant to Section 173 of the Companies Act, 1956 has been forwarded to the Members of the Company.

The Share Transfer Register of the Company's Ordinary Shares will be closed from 20th June to 29th June, 1962, both days inclusive.

N.B. A Member entitled to attend and vote at the Meeting is entitled to appoint a proxy to attend and vote instead of himself and the Proxy need not be a Member of the Company.

By Order of the Board,
D. A. HOUGHTON,
Calcutta Director & Secretary.
4, Bankshall Street,
Calcutta.
Dated, 17th May, 1962.

Higher Profit for Caltex

The net profit of Caltex Oil Refining (India) Ltd for the year ended December 1961 before providing for taxation and depreciation is Rs. 24,196,962 as against Rs. 22,211,684. After setting aside a sum of Rs. 90,73,635 as against Rs. 8,993,939 for depreciation, a sum of Rs. 4,040,080 being the estimated tax liability for the year under report has been provided. A sum of Rs. 5,287,098 was allocated to Tax Equalisation Reserve last year; and the directors think that no further addition is necessary. Development Rebate Reserve receives Rs. 96,722 as against Rs. 784,063. The balance of Rs. 11,019,731 left over, after the aforesaid provisions, is to be carried forward, the dividend being passed again. The total carry forward is Rs. 42,280,612 including Rs. 31,260,881 brought in. The Government of India restricted the import of crude oil in the latter half of 1961 and have decided to restrict the allocation of crude licence for the future, to the 1960 level. This decision of the Government of India, if unchanged, will, the directors think, result in depleted earnings for the year 1962.

No Dividend Again from Kanknarrah

The working of Kanknarrah Company. Limited during the year ended December 1961 has resulted in a loss of Rs. 988,517 before providing for taxation and depreciation as against a net profit of Rs. 613,682 in the previous year. The provision for depreciation is Rs. 613,226 against Rs. 688,353. Development Rebate received nothing while a sum of Rs. 35,272 had been provided last year. A debit balance of Rs. 3,080,212 is carried forward while the debit balance brought in was Rs. 1,478,469. Dividend on preference and ordinary shares are again passed. Last year's setback in the company's working was brought about mainly by an acute shortage of raw material which persisted almost for three-quarters of the year under review. The heavy losses incurred in the middle of the year imposed a severe strain on the company's financial position. The result was that the company could not complete the modernization of the preparing and spinning departments of the mill. However with the return of more stable working conditions since the last quarter of 1961 the matter is again receiving the company's consideration.

Improved Earnings by Ajit Mills

The earnings of Ajit Mills during 1961 show an increase in spite of a rise in prices of stores materials, spare parts, chemicals, dyes

and other miscellaneous items. Sales are higher at Rs. 17,327,139 as against Rs. 13,982,414 in 1960. The net profit, before taxation and depreciation is also higher at Rs. 2,091,183 against Rs. 1,698,246 in the previous year. After providing Rs. 6.70 lakhs as against Rs. 6.80 lakhs for taxation, Rs. 513,809 against Rs. 422,680 for depreciation and Rs. 171,506 against Rs. 121,272 for Development Rebate Reserve, it is proposed to set aside Rs. 2.5 lakhs to general reserve, an increase of Rs. 50,000 over the previous year, Rs. 57,168 against Rs. 40,422 towards Development and Rehabilitation Reserve and Rs. 2 lakhs towards Dividend Equalisation Reserve which received nothing last year. After paying the dividend on the preference shares, a dividend of 17 per cent on the ordinary shares is recommended as against 16 per cent paid last year. The ordinary dividend will absorb Rs. 194,504 including Rs. 7,504 being the dividend on 5,284 new ordinary shares at Rs. 1.42 per share. The carry forward is Rs. 38,878 against Rs. 39,871 brought in. The programme of modernising the mills is being pursued. The company has been granted licence to instal 2400 additional spindles for which orders have been placed.

For the Investor

INVESTMENT GOSSIP Aid Uncertainty Affects Sentiment

The stock market has gone through rather violent ups and downs this week. These wide fluctuations have been brought about mainly by external factors. There was a steep fall in equity values especially those in the forward list around midweek but this was quickly followed by a fairly rapid recovery. However, before the upward movement could gather strength, sentiment has once again been upset by apprehensions about the shape of future Government policy with the result Indian Iron which moved up to Rs. 26.36 from its week's low of Rs. 25.50 was back at Rs. 26.10 by Friday afternoon.

The week witnessed one of the most extraordinary spectacles in the history of world stock exchanges. For no apparent reason Wall Street was in the grip of panic on Monday resulting in the loss of several billion dollars in equity values. A chain reaction was set in motion with the London Stock exchange following suit recording heavy wide-spread losses, closely followed by other continental stock exchanges. Surprisingly, however, Wall Street reversed its trend within the next 48 hours and equity values raced up as rapidly as they fell. And what is more, some shares are now quoting far above their level before Monday's selling avalanche hit the market. The quick recovery has been made possible by the massive support given to the market by banks and institutional investors who promptly gave a boost to market morale with buying orders for cash. It is generally believed both in the US and elsewhere that there is no justification whatever for Monday's panicky selling in Wall Street because the American economy is expanding at the expected rate.

Initially however, Indian Stock Exchanges seemed to have taken little notice of the Wall Street crash and rightly so. But a selling wave did after all hit them belatedly, probably because operators thought that in case the Wall Street debacle was due to an economic slump in US, Indian development plans would receive a severe setback in the shape of greatly reduced grants and aid. But with the recovery in Wall Street and London, stock market sentiment in India too improved. The renewed weakness noticeable in later dealings on Friday appears to have stemmed from press reports of impending Cabinet changes with the inclusion of the former Union Finance Minister. The fact that the Aid India Club has not been able to come to any decision as to the quantum of aid at its meeting early this week has not been conducive to an expansion of activity in the stock

market because it is feared that any delay in the receipt of aid would seriously upset development projects of the Third Plan. Though it is confidently expected that with new members joining the Club, the needed quantum of foreign aid would be forthcoming in time, stock market tendency is to await further developments in this regard before extending further commitments.

INVESTMENT NOTES Announcement of Capital Issues

Many companies offering shares or debentures to the public have been publishing in newspapers and other publications announcements of the issue of capital to the public with a note such as "This is only an announcement and not a prospectus," etc. However, these announcements are usually found to contain copious extracts from the relevant prospectuses filed by the companies with the Registrar of Companies concerned. Government have been advised that announcements of this nature would be tantamount to publication of prospectuses in an abridged form, and such practice is not in conformity with the provisions of section 56 of the Companies Act, 1956 which provides that every prospectus issued by a company shall state the matters and the reports set out and specified in Schedule II to the Act. Any default in this respect would render the persons concerned liable to the penalties under the law and also to pay compensation to every person who subscribed for any shares or debentures on the faith of the abridged prospectus.

Company promoters and company managements are therefore enjoined to take all possible care to ensure strict compliance with the provisions of law relating to the issue of prospectuses and their failure to do so would not hereafter be condoned by Government. If for any reason a company should find it not possible to publish its prospectus in full in newspapers and other publications it would be well advised to publish only a mere announcement of its intention to issue capital, indicating the names and addresses of the brokers, etc from whom copies of applications along with copy of the prospectus can be had, without giving extracts from the proposed prospectus. In this connection, Government have devised a proforma for making announcements of the issue of capital by companies which may not consider it possible to publish the full prospectus in newspapers and

other publications. A copy of the proforma has been circulated to all the Chambers of Commerce and Stock Exchanges for the information of their constituents and can be had by those interested in the office of the Registrar of Companies in each State. Though the adoption of the said proforma for making the announcement of a new issue in the press is not mandatory, if any company chooses to make the announcement in any other form it would do so at its own risk.

Provision for Depreciation

It has been brought to the notice of the Central Government that some company managements have been declaring and paying dividends without providing for depreciation on their immovable properties in the manner specified in section 205 read with section 350 of the Companies Act, 1956, on the ground that the immovable properties of the company from which a substantial portion of its profits is derived, are held as its capital investment and are not used for the purpose of the business carried on by it and that the Income-tax Law does not make any allowance by way of depreciation of those assets for calculating its total income.

In this connection, Government would like to draw the attention of all concerned to the fact that the provisions of section 205 of the Companies Act, 1956 under which no dividend shall be declared or paid without providing for depreciation in the manner specified therein, are mandatory in nature and must be strictly complied with by every company before declaring any dividend.

For the purpose of complying with the aforesaid requirement under the Company Law, it is immaterial as to whether depreciation in respect of any assets is actually admissible under the Income-tax Law. The only provision of the Income-tax Law that is relevant for the above purpose is the provision specifying the rates of percentage as contained in the Indian Income-tax Rules for the purpose of determining the depreciation of various assets referred to therein. Provisions of the Income-tax Law relating to admissibility of depreciation allowance for the purpose of calculating the total income of the assessee company are not relevant for the purpose of section 205 read with section 350 of the Companies Act.

The Chambers of Commerce and Trade Associations have been advised of the above position and the Government hope that all company managements would take steps to ensure compliance with the requirement of the provisions of section 205 of the Companies Act. If any company declares or pays dividends in respect of any

financial year without providing for the requisite amount of depreciation, it would do so at its own risk. In this connection, the attention of all concerned is invited to the penal provisions of section 629A of the Companies Act.

NEW ISSUE NOTES

Hindusthan Sugar Mills

Hindusthan Sugar Mills Limited, Bombay has been granted consent to the issue of Rs. 60 lakhs bonus capital divided into equity shares of Rs. 100/- each. This is to be allotted in the ratio of one bonus share for every equity share held.

Special Steels Limited, Bombay, is to issue capital of Rs 20 lakhs in equity shares of Rs 100/- each for cash at par. The proceeds of the issue would be utilised for repayment of loans.

Digvijay Cement

Digvijay Cement Company Limited, Jamnagar, is raising further share capital of Rs 13.50 lakhs in equity shares of Rs 100/- each at a premium of Rs 50/- per share for cash. The shares will be offered to M/s Johns Manville International Corporation of USA, who will collaborate with the Indian Company in the manufacture of asbestos cement.

National Steel

National Steel Works Limited, Bombay, is to issue 4259 equity shares of Rs 10/- each to be issued as bonus shares on capitalisation of the company's reserves to a like extent.

Multimetals

Multimetals Limited, a new company proposed to be incorporated in Calcutta, has been granted consent to the issue of 7,50,000 shares of Rs 10/- each for cash at par. Out of the capital of Rs 75 lakhs consented, shares of the value of Rs 25 lakhs may be issued to Revere Copper and Brass Inc. of New York who are the collaborators. The company will establish a plant at Kotah for the manufacture of copper/brass rods, tubes etc for which a licence has been obtained. The total cost of the scheme is Rs 150 lakhs.

Brakes India

Brakes India Private Limited, Madras, is raising equity capital of Rs 1,50,00,000/- for cash at par. The proceeds of the issue will be utilised for the manufacture of complete brake equipments for automotive and non-automotive units in collaboration with M/s Joseph Lucas (Industries) Limited, U.K. or their subsidiary M/s Girling Ltd, U.K.

Structural Engineering Works

Structural Engineering Works Limited, Bombay, is to issue capital of Rs 45 lakhs divided into 45,000 equity shares of Rs 100/- each for cash at a premium of Rs 5/- per share, to be made to the existing shareholders in the ratio of one new share for one old share held.

Trichy Steel Rolling

Trichy Steel Rolling Mills Limited, Madurai, will issue equity capital of Rs 40 lakhs for cash at par. The proceeds of the issue will be utilised for the establishment of a re-rolling mill.

Hindusthan Gum & Chemicals

Hindusthan Gum and Chemical Limited, a new company, has been granted consent to the issue of capital of Rs 30 lakhs in 3 lakh equity shares of Rs 10/- each. The company is establishing a factory in Hissar District for the manufacture of guar gum. Collaboration with a USA firm has been arranged who will invest 50 per cent of the capital, the remaining 50 per cent capital will be subscribed privately.

STOCK EXCHANGES

Sharp Fluctuations

Stock markets experienced a severe jolt around midweek but part of the losses was regained in later dealings. Conditions were not propitious for constructive trading even at the beginning of the week in view of the uncertainty shrouding the prospects of foreign aid for the Third Plan, and when the Aid India Club adjourned inconclusively marketmen found it hard to take an optimistic view of the outlook for equities. It was generally believed that the failure of the latest meeting of the Club to make firm commitments as to the quantum of aid would adversely affect development programmes of the Third Plan. That there is, however, no cause for undue pessimism in this regard is indicated by the possibility that new members will join the Club thereby enabling India to get adequate amount of foreign exchange for the timely implementation of the Third Plan projects. While the stock market was already troubled by the uncertainty about foreign aid, there were other developments which compelled even though they had no direct impact on the Indian Stock Exchanges. The crash in Wall Street on Monday closely followed by sharp price recessions in London and the continent set off a sympathetic reaction in the India Stock markets as well with the more speculative counters losing sizable ground. With the smart recovery in Wall Street within the next 48 hours sentiment in Indian stock Exchanges too improved in later dealings though the

2 June 1962

recovery has been comparatively slow.

The Calcutta Stock exchange opened the week on a subdued note with the more speculative counters encountering selling pressure. On Wednesday the speculative shares declined sharply in sympathy with the trend in Wall Street and London but sentiment considerably improved on Thursday partly in response to the spectacular recovery in Wall Street. Even so earlier losses were not fully recovered.

Dalal Street too opened the week's transactions in a cheerless mood as sentiment had been adversely affected by anxiety regarding the receipt of foreign aid in time for the implementation of the Third Plan projects. Tuesday found the market still in an uncertain mood though with no further sizable losses. Wednesday witnessed heavy selling pressure induced by the debacle in Wall Street and Continental stock markets. Sentiment however recovered during subsequent sessions, with most shares regaining a large proportion of their earlier losses.

Conditions in the Madras Stock Exchange were dull in the beginning with sentiment markedly deteriorating around midweek as a sequel to the crash in Wall Street and elsewhere as well as in sympathy with Calcutta and Bombay. Prices have however partially recovered in later dealings but business passing continued to be at a meagre level as investor interest had been diverted to the several new issues the lists of which opened for subscription during the week.

CALCUTTA

Calcutta, Friday Evening.

The Calcutta Stock Exchange started the week on a weak note in the absence of fresh interest. The more speculative shares generally tended to be lower. Conditions continued to be subdued in early dealings on Tuesday consequent on the adjournment of the Aid India Club meeting for several weeks but in later dealings the speculative counters staged a partial recovery on the belief that adequate foreign aid would be forthcoming in time in view of the indications that other countries might join the consortium in the near future. The sharp downward break in Wall Street, London and other Continental Stock markets on Monday had a belated adverse effect on sentiment in India and in Wednesday's trading prices in Calcutta took a downward plunge headed by Indian Iron which was at one time during the day was quoted as low as Rs. 25.50. Though prices made some recovery by close of the day, the undertone continued to be easy. The next day however found the market in a somewhat constructive spirit presumably encouraged by the smart recovery in Wall Street and the forward list showed by close of the day sizable improvement. Indian Iron gained further ground on Friday while the undertone continued steady elsewhere in the market.

Cotton textile shares ruled generally listless as investors seemed to veer round to the view that prospects were not quite bright for the industry what with the growing

shortage of cotton, increasing cost of production and no indication of relief from excise duty on cloth and yarn. Jayshree was however steady at Rs. 16.67. Bharat Commerce was marked down as was Elgin.

No fresh interest was noticeable in jute shares partly in sympathy with the trend elsewhere in the market and partly in view of the apprehension that with an unrealistic statutory minimum price for jute, the industry would not be able to compete successfully with Pakistan in world markets. Kamarhaty met with selling and reacted to Rs. 196. Barnagore was unchanged at Rs. 188 while Cheviot was quoted at Rs. 25.12. Ganges however was a steady counter improving to Rs. 15.12.

A mixed trend noticeable in the coal section as interest was selective. The delay in the eagerly anticipated increase in coal prices and the indication that higher price would be only marginal were not conducive to an expansion of activity in the section.

Although the outlook for new season's tea is assessed to be good, the fact that the first two export auctions have proved to be rather disappointing seemed to have kept

The following table shows the extent of decline of scrip in the forward list and the subsequent recovery.

	Last	31	Week's
	Closing	May	Low
	Rs	Rs	Rs
Birla Jute	36.00	35.75	34.94

Shree Gopal Paper	28.37	28.00	27.31
TEXMACO	25.80	26.00	25.00

interest in the tea section at a low ebb. Tezpur was done at Rs. 16.56. Bishnauth marked at Rs. 19.12. Brooke Bond came to business at Rs. 15.08 and Jabirpara at Rs. 13.50. Engineering shares were generally subdued with a few shares meeting with support at steady levels. Indian Standard Wagon was a bright feature on good corporate news and improved further to Rs. 205 from Rs. 195. Burn was another steady counter at Rs. 735. Jessop was done at Rs. 24.12 on Thursday.

The miscellaneous section was generally quiet in sympathy with the general trend of the market. Alkali and Chemical declined to Rs. 46.25 from Rs. 48.50. Hindustan Aluminium was marked down in midweek to be quoted below Rs. 18 but later on recovered to be placed at Rs. 18.06. On Thursday at Rs. 18.06. On balance Aluminium Corporation, BIC, India Carbon, Martin Burn, Philips and India Steam were lower at Rs. 19.12, Rs. 9.62, Rs. 21.25, Rs. 29, Rs. 35.75 and Rs. 7.37 respectively. Angelo Bros. was steady at Rs. 23.37 while British Paints was marked at Rs. 25.25.

JAGATJIT COTTON TEXTILE MILLS LIMITED

NOTICE:

NOTICE is hereby given that the next Annual General Meeting of the shareholders of the Company will be held at the Registered Office of the Company at 'Thapar House', 25, Brabourne Road, Calcutta, on Thursday, the 28th June, 1962 at 3-00 P.M.

AGENDA:

- To receive and adopt the Directors' Report and the audited Accounts of the Company for the year ended the 31st January, 1962.
- To declare dividends. The directors have recommended dividends at the following rates:
 - 6.5% plus 2% per annum subject to tax on Preference shares;
 - 15% per annum subject to tax on Equity shares.
- To elect directors in place of those who retire:
 - Shri Bhag Ram Handa, director of the Company being longest in office, is due to retire and being eligible, offers himself for re-election;
 - Dewan Anand Kumar is also due to retire by rotation and being over 65 years of age, a notice has been received from a shareholder of the Company proposing his re-election. A special notice is hereby given for passing the following resolution with or without modification as an ordinary resolution:

RESOLVED:

"That Dewan Anand Kumar, who is above 65 years of age, be and is hereby re-elected as a director of the Company and that the age limit specified under section 280 of the Companies Act, 1956, shall not apply to him."

4. Special Business:

- To pass the following resolutions with or without modification, under section 360 of the Companies Act, 1956, as Special Resolutions:

RESOLVED:

"That the supply of finance to the Company by its Managing Agents, Messrs. Karam Chand Thapar & Bros. Private Limited, from time to time hitherto, under the current account maintained by the Company with them, for the purposes of carrying out day-to-day activities of the Company and/or for meeting expansion and/or other capital or financial commitments of

the Company, be and is hereby approved, ratified and confirmed."

FURTHER RESOLVED:

"That the approval of the Company is hereby accorded to the supply of finance from time to time, upto a maximum of Rs 15 lacs outstanding at any one time, on interest upto a maximum of 7½% per annum, to the Company by its Managing Agents, Messrs. Karam Chand Thapar & Bros. Private Limited, under the current account maintained by the Company with them, for the purposes of carrying out day-to-day activities of the Company and/or for meeting expansion and/or other capital or financial commitments of the Company."

"That an application be made to the Central Government seeking their approval to the aforesaid supply of finance as provided in section 360(1)(ii) of the Companies Act, 1956."

- To pass the following resolution under section 261 of the Companies Act, 1956, as a Special Resolution, with or without modification:

RESOLVED:

"That pursuant to section 261 of the Companies Act, 1956 Shri L. M. Thapar, an Associate of the Managing Agents of the Company, be and is hereby appointed as a director of the Company."

- To transact any other business which may be brought forward with the permission of the Chairman.

By Order of the Board,
KARAM CHAND THAPAR & BROS. PRIVATE LTD.
Managing Agents.

Registered Office:

'Thapar House',
25-Brabourne Road,
Calcutta-1.
The 1st June, 1962.

NOTE:

- The Share Transfer Books of the Company will be closed from the 20th June, 1962 to the 28th June, 1962 both days inclusive.
- A member entitled to attend and vote at the meeting is entitled to appoint a proxy who need not be a member to attend and vote instead of himself.
- Explanatory Note pursuant to—section 173 of the Companies Act, 1956 in respect of the above resolutions, has been sent to all the shareholders along with the notices.

PIA FIRST AGAIN-

**FILMS WHILE YOU FLY,
WHATEVER YOU
PAY FOR YOUR TICKET**

New planes of PIA's intercontinental Boeing fleet are showing the world's best new films on their Karachi-New York-Kanashi routes. Only PIA offer this new kind of jet-flight relaxation to all passengers, first and economy class.

And films don't interfere with PIA's cabin service, still as good as any in the world. Whatever you pay for your ticket, you get jet speed and comfort, record-breaking punctuality... and now the world's best new films to help you relax.

No wonder pilots and more experienced jet travellers are saying PIA are great people to fly with...

Great people to fly with

PAKISTAN
INTERNATIONAL
AIRLINES

EARLIER steadiness was not maintained by stock markets in May as several unsettling influences came to affect sentiment in later dealings. The Calcutta stock exchange commenced the month on a cheerful note despite the fact that some aspects of the new taxation proposals in the 1962-63 Budget were not quite conducive to a broadening of investment, the general belief was that with their expansion programmes and the rising trend of industrial production, the corporate sector might not find the taxes crippling. The announcement of bonus issues by some more companies and the expectation that the Steel retention price would be announced at an early date kept sentiment cheerful. Another bullish factor was the indication given by the Union Minister for Mines and Fuel, Mr K. D. Malaviya, that Government might not be reluctant to revise coal prices upward provided production was maintained at a high level.

After a few days of quiet trading when prices especially in the speculative counters reacted following news of disappointing performance of the steel companies during the previous month and renewed anxiety over Kashmir and Sino-Indian relations, equities once again resumed their uptrend during the second week of the month under review under the leadership of the more speculative counters. The revival of speculative interest could be attributed to the renewed hopes of tax concessions. Even though as generally expected the Finance Minister did not make any announcement regarding tax concession in the course of his replies to the Budget Debate both in the Rajya Sabha and Lok Sabha, market men found a hint of concessions to come when he told the Lok Sabha that he would announce Government's decision on the various representations he had received on his taxation proposals when he moved for consideration of the Finance Bill. Encouragement was also derived from Mr Morarji Desai's answer to the charge that the corporate sector was allowed to make huge profits. The Union Finance Minister had said that profits were necessary for any enterprise whether it was in the private or public sector. Speculative sentiment was also aided by the persistent rumour that the announcement of the steel retention price was not far off as Government was reported to have received the recommendations of the Tariff Commission in this regard.

The second half of the month however witnessed irregular price movements with the undertone

Heavy Fluctuations in May

the month equities were subjected to heavy selling pressure following a sharp break in values in Wall Street, London and other continental stock exchanges. Although by close of the month the market rallied with prices regaining most of their lost ground operators were found to be reluctant to extend commitments. From early in the second half bullish enthusiasm received a setback though selected shares continued

to receive support. The more speculative counters declined mainly due to the disappointment over the delay in the announcement of the steel retention price. Perhaps the main depressant was the news that the US Senate Foreign Relations Committee had decided on a cut of 25 per cent in the US aid to India for its Third Plan. Considering the acute shortage of foreign exchange the cut would seriously upset the

schedule of development programmes which depended on an adequate receipt of foreign exchange for their successful implementation. The assurance that quickly followed the news that the Kennedy Administration would try to restore the cut however helped revive confidence somewhat but there was no inclination on the part of operators to extend commitments. The hesitant mood continued to characterise trading even after the US Senate Foreign Relations Committee had partially restored its earlier cut. By this time marketmen began to be worried about the outcome of the Aid India Club meeting scheduled to be held at the end of the month. It was feared that the halting nature of US aid sanctions would have an adverse effect on the attitude of the other members of the Club. They were not far wrong as the eagerly awaited Aid India Club Meeting adjourned to meet several weeks later without reaching a conclusion as to the quantum of aid that would be made available to India. There was however no tendency to treat the adjournment of the Club meeting as something disastrous because indications were that new members would join the consortium and make up the deficit in the matching aid so that India would get the required quantum of foreign aid. But market men were reluctant to extend their commitments while uncertainty in this regard persisted. It was reported that the consortium members were \$220 million short of the \$500 million required to match the American commitment for the second year of the Third Plan.

Even as the stock market was trying to recover from the shock of the unfavourable outcome of the Aid India Club meeting, sentiment received a rude jolt from the big slump in Wall Street where values fell steeply following panicky selling pressure which developed all of a sudden two days earlier. Although the Indian stock markets were generally unaffected what time Wall Street and London stock exchanges were hit by an avalanche of selling, a selling wave did after all hit them belatedly with the result the more speculative counters lost considerable ground within a few hours. With the remarkable recovery in Wall Street within forty eight hours of the debacle, market sentiment in Indian stock exchanges too improved with most scrip regaining a major portion of their earlier losses. But the recovery movement was retarded by renewed apprehensions about a possible change in Government policy consequent on the persistent report that the former Union Finance Minister would be invited to join the Central Cabinet.

Caught in the Crisis

THE foreign exchange crisis which has been further aggravated by the unexpected delay in the authorisation of consortium aid for the second year of the Plan, has led to consideration of drastic and, one might say, desperate remedies to tide over the immediate emergency. While the parallel with 1958 when a similar crisis hit the country during the Second Plan is obvious, there is also a basic difference. In 1958 there was scope for effecting substantial economies of foreign exchange by curtailing imports. But, in succeeding years, import policy has become more and more restrictive so that very little by way of savings can be expected from further import cuts and what little can be saved will be at the cost of industrial production and of the capacity to export. Tightening of restrictions on travel abroad and stricter screening of students who go abroad for higher studies are among the measures that are understood to be under examination. But what can be saved by these means cannot be more than a trickle.

A reappraisal of the Plan, involving dropping of some projects and stretching out of the others, is being freely talked about in this context. Implementation of the full Plan programme is obviously contingent on the availability of foreign assistance. Any delay or shortfall in the availability of external aid will obviously call for a re-ordering of Plan priorities and dropping of projects for which it has not been possible to secure foreign assistance. Though there certainly is a need for a drastic pruning of the frills and fancy projects—like Television, to quote the first example that occurs to us—such surgery may not greatly help in overcoming the acute shortage of foreign exchange necessary to pay for maintenance imports which is at the root of the crisis. Practically the entire amount of free foreign exchange, consisting of export earnings and the small quantity of 'united' credits is utilised to pay for current maintenance imports. None of it is used for developmental expenditure. On the other hand, most of the foreign aid for the Plan is tied to particular projects and will not be available to provide balance of payment support. Slowing down on Plan projects will not, therefore, help in the present crisis. On the contrary, expeditious execution of the projects for which aid is already committed is of the greatest importance. This is particularly the case in respect of power projects and of the transport schemes financed by the IDA. As regards the latter, it is understood, that further assistance is contingent on the completion of the schemes within the time limit indicated in the loan agreement between IDA and the Government of India. Moreover the rupee expenditure on the schemes financed by the IDA is reimbursed in foreign exchange.

These points, it is learnt, have been brought out in the discussions between the Planning Commission and the Chief Ministers who were in the Capital for the AICC meeting. It has also been made clear that Plan schemes for which it has not been possible to secure external aid may have to be dropped even though provision has been made in the cur-

rent year's budgets of the Central and State Governments. In such circumstances it goes without saying that there can be no question of taking up schemes outside the Plan which involve expenditure in foreign currencies. The meeting has also considered the measures that might be taken by State Governments to increase export earnings. Attention has been drawn in this context to increased production of exportable agricultural commodities like oilseeds, cotton etc.

Depressing as the foreign exchange outlook is, the outlook for internal resources is not very cheerful either. The original agenda for the meeting with the State Chief Ministers was to discuss the mobilisation of internal resources for the Plan. But the immediate problems of foreign exchange elbowed it out in Monday's discussion. Detailed consideration of the problem of mobilising internal resources for the Third Plan is expected to be undertaken in a series of discussions with representatives of State Governments which will also provide the opportunity for a reassessment of the States' contribution to Plan resources, especially through additional taxation. While the State Plans were being finalised, the State Governments had estimated their capacity to raise taxes at a much higher level than that indicated in the Draft Outline. The contribution from additional taxes was estimated at Rs 10 crores in the final Plan report. But the actual tax effort put in by the State Governments during the First Plan year, has been hardly adequate when set against the hefty target. During the first year of the Plan, which was also the pre-election year, the State Governments, for understandable reasons, were inclined to go slow with proposals for additional taxation. The main brunt of meeting expenditure on Plan programmes has been borne by the Centre, where the Finance Minister was not inhibited by the General Election in prospect. The total budgetary provision for Plan programmes of the Centre and States during 1961-62 amounted to Rs 1,221 crores, of which Rs 634 crores, were on Central Government schemes and Rs 587 crores on State programmes. To the expenditure of Rs 587 crores on State Plans, the amount raised by the States through additional taxation amounted to only Rs 20 crores. The total of State resources under different heads was about Rs 192 crores. In addition to financing its own programme of Rs 634 crores, the Centre provided Rs 353 crores for State programmes. The meeting of the Planning Commission and the State Chief Ministers has apparently agreed on the need for a more intensive tax effort on the part of the State Governments. Against the amount of Rs 587 crores on Plan programmes during the first year, the provision for the second year exceeds Rs 700 crores. But as already indicated, postponement of certain projects for which provision has been made may become unavoidable as the requisite external aid is not forthcoming. To that extent the need for raising additional resources may be reduced. Moreover, in levying additional taxes, the impact on the cost of production of exportable commodities will have to be kept constantly in view.

The Atomic Energy Establishment Trombay

LIGHTING BY PHILIPS A vitally important industrial research complex, the Atomic Energy Establishment at Trombay is another outstanding example where Philips have solved an entirely new and complicated lighting problem.

From APSARA, the first Indian designed and built Reactor, ZERLINA, India's third Nuclear Reactor, Philips have been actively associated with the Project Authorities. Their expert advice and pre-planned, scientific lighting techniques have contributed to success of this gigantic installation.

Philips' scientifically designed equipment is the result of experience research and development aimed to meet the evergrowing demands for better lighting. And hand-in-hand with Philips' unrivalled quality goes the invisible plus of Philips' international experience and know-how.

Britain, India and the EEC

NEGOTIATIONS between the UK and the Six of the Common Market have moved into a crucial stage. As one of the important trading partners with the UK, India has rightly been concerned with the negotiations of the UK with the Six and with the kind of proposals that have been put forward to protect her exports. The UK provides the largest market for major items of Indian exports like tea, cotton textiles, tobacco, hides and skins etc. Throughout the protracted and tortuous negotiations, the UK is reported to have sought to drive hard bargaining points with the six to protect Commonwealth trade. The original British proposal for progressive application of the common external tariff to the 400 items of Commonwealth export is reported to have been turned down by the Six. A solution on the basis of complete duty-free entry has also proved unacceptable. Subsequently, the UK was reported to have suggested a package deal with a mixed bag of solutions involving scaling down of the common external tariff on some items and common external tariff on some items and duty-free entry to about 27 items belonging to the raw material and semi-manufactured groups under arrangements similar to those set out in the Rome Treaty's protocol on France's trade with Morocco and Tunisia permitting continuance of the preferential system for these two countries.

The latest British proposals contained in the paper prepared by the UK to serve as the basis of negotiations at the next ministerial session to start on 28 June have alarming significance for Indian exports. Most importantly it proposes that the common external tariff on the enlarged Community should be applied by Britain in three stages—the first step of 30 per cent move towards the common tariff would be taken on Britain's entry and a second step of 30 per cent would follow if examination of statistics covering a period of 12 months following the first move showed that the trade had not been damaged. The final step—the application of the full common tariff—would be taken when the full tariff was applied by member-countries generally, provided that the volume of trade continued to be satisfactory. Along with this, Britain has also proposed nil tariff for some other manufactures like East India kips, articles of special interest to India, but not produced on any scale in the Six. It has also asked for a nil tariff for tea and a number of other items, and certain duty free quotas for manufactures other than textiles. The proposal to apply the full common tariff on cotton textile manufactures has adverse implications to Indian exports. By raising duty on hitherto duty-free Indian textile entering Britain, it will nullify the effect of the proposals for nil tariff on other items. UK is the largest market for cotton textile exports from India and nearly 1 per cent of India's export earnings is derived from this. Somewhere along the line of negotiation, the earlier concern shown by Britain for protecting Indian and Pakistan exports has disappeared. The British proposal doubt provides for review of the effects of the imposition of the tariff in the first instance and also for suspension in part or in whole of the application of the common external tariff under circumstances of fall in exports. However, remedial action will be taken only after the adverse effects become evident and a gap in trade develops in the balance of payments position. As Mr K. B. Lall, head of the Indian Mission to the European Economic Com-

munity has pointed out, it would be preferable to continue India's freedom of access to Britain to lower tariff barriers in Europe and then to find out whether Europe has had difficulties than to apply a common tariff and thereafter wait and see whether India suffers. For as Mr Lall has pointed out, Europe has greater economic resilience than India, which with its parlous foreign exchange position, cannot afford to suffer even marginal difficulties.

For her part, India has submitted a memorandum to the Common Market's Council of Ministers setting out its proposals for consideration at the next meeting of the Council. These proposals are as follows: (1) zero as common tariff for primary products, semi-processed and some processed goods, like tea, cotton, textiles, jute manufactures etc, which enjoy the right of free and duty-free entry into the UK; (2) Indian products for which zero tariff is not acceptable to the West must be protected under article 239 of the Rome Treaty which provides preferential markets for overseas associates like Morocco and Tunisia in France; (3) deep cuts in common tariff on items of special interest to India must be considered in accordance with Para 5 (a) of Article XXIV GATT which lays down that a customs union is not expected to adopt a common tariff "which is higher or more restrictive" in its effects than tariffs previously enforced in member states and (4) the period of transition should be sufficiently long to permit the development of mutual trade.

It should be remembered in this connection that the Rome Treaty itself provides several escape routes for members who, for one reason or the other, are not able to accept the common external tariff for a particular commodity. Britain will presumably be entitled to the same rights as the founder-members. It is therefore disingenuous to argue that Britain's request for special treatment for specific commodities is a grievous outrage on the principles of the Rome Treaty. It is probably not known widely enough that in one form or the other, there are as many as 381 items which are either exempted from a common external tariff fixed on principles of averages of existing national tariffs or whose common external tariff were left for future negotiation at the time the treaty was signed. Therefore, there is no reason why, for example, cotton textiles from India and Pakistan, should not be added to list B (items on which common external tariff should not exceed 3 per cent), or to list F (items for which specific duties, in most cases nil or low rates, were fixed in order to avoid future disputes). In a sense, the current commodity-wise negotiations for low tariff and duty-free quotas for specific commodities is an attempt to fit in commodities of interest to Great Britain in some such classification. There is no reason why the same give and take that went before the original classification should not be available now.

It is by no means a foregone conclusion that the "package deal" presented by Britain will find an automatic acceptance by the Six or that they will consider the concessions on other manufactures and tea a price worth paying for the raising of a tariff wall against Indian textiles. Mr Heath is reported to have indicated that he would have no objection to the Six accepting the Indian proposals in preference to his. In the light of his readiness to harmonise British tariff against Indian textiles with the Common Market's, the chances of this happening are rather dim. But the Indian case as presented by Mr Lall deserves the closest study by the Six, who ought, for the nonce, get out of their protectionist obsession.

Indian Finance

Expansion of India's exports both to the UK and the Common Market is of paramount importance to pay for the import requirements of the Third Plan. With the UK India's trade ranges between Rs 170 crores and Rs 200 crores annually a great part of which is constituted by tea, textiles and jute. While with the UK, the current trade deficit is somewhat small, with the present six members of the Common Market it is large and substantial. Unless special arrangements in accordance with the Indian proposals are made, India will be hard put to it to expand exports to the Common Market. The West has appreciated India's developmental efforts to accelerate development and raise living standards and has supported it with generous economic aid. In such circumstances, it will be an inversion of economic principles if scope for expansion of trade which is conceded to be more effective than aid, were to be closed by tariff barriers.

The central importance to Britain of Commonwealth ties has been repeatedly avowed, most recently and memorably by Mr Duncan Sandys, who is coming to India to take counsel with our government on British proposals. Opinion in the Commonwealth is fairly unanimous, as was recently demonstrated by the proceedings of the 21st Congress of the Federation of the British and Commonwealth Chambers of Commerce in London. Governments as well as trade in all the Commonwealth countries are united in their opposition to the concessions that Britain is apparently ready to make and grave concern of the future of the Commonwealth has been expressed. Britain must seriously consider whether entry in the EEC is worth the political and economic price it is apparently willing to pay, mostly at its friends' expense.

Individual well-being is linked with national prosperity and only planned efforts can ensure both in the shortest possible time. And planning, for its success, largely depends on savings. Individual as well as national. Saving in the form of Bank Deposits provides resources for the National life.

WALL STREET

Crash in Confidence

FOR quite some time Wall Street had been steadily developing a bear position, but it still came as a distinct and considerable shock, when, last week, there occurred a veritable landslide in values that bore comparison only with the selling wave in 1929 which was the harbinger of the great depression. Of course the cause and effect are not the same. It was overtrading on slender margins with a view to quick profits which brought on the 1929 fiasco, a time when elevator operators no less than movie Moguls were playing the market. Inevitably such overtrading when the bubble burst produced a fall-out financially speaking that is as lethal as the aftermath of an atomic explosion. In recent years the interest in Wall Street shown even by the small investor can be traced to the belief that equities offer the best hedge against inflation. Hence yield has not been the primary consideration, but rather prospect or potential for growth. This phenomenon has by no means been restricted to America, though perhaps for a slightly different reason we have had here in India an abandonment of yield as a criterion for investment in favour of growth. In this country it is the low taxation of capital gains as against the high rates on ordinary income which has led the investor gradually to choose the former.

In America itself there is a tendency to pin the blame on President Kennedy for the crisis in confidence. His massive assault upon the steel companies, to rescind the price increases they had notified, is argued to have wreaked psychological havoc. But this explanation does not hold water. As Walter Lippmann has pointed out, this is partisan mythology in as much as "the bear market began on March 16 and it was only on April 11—some 26 days later—that the President had his collision with Mr Blough" (of US steel). Mr Theodore Anderson, an American economist with the University of California at Los Angeles, has thrown further light on the crash: "Kennedy's criticism of steel triggered the market decline, but the gun had to be loaded—poor yields, better returns elsewhere, the lack of a need of a hedge against inflation."

It has been estimated that at their peaks the blue-chips in the growth category were selling at prices that varied from 80 to 100 times earnings. This is a measure of the over-trading that was indulged in—also a measure of the inflation-phobia that the American investor has been suffering from. Undoubtedly huge book profits were made—and some of the profits must have been realised. But by and large when the rate of increase in the price level slowed down, so risky a hedge against inflation began to appear silly. The long aftermath of the war, when world production was unequal to demand, came to an end in the 1950's with the resurgence of the economies of Western Europe, and the consequent transformation of a sellers' market into one for buyers gradually spelt doom of the inflationary make-it-rich school of thought. In 1961 prices in the USA—that

is, the cost of living index—rose only by one per cent. Thereafter, competition for money picked up. Banks were permitted to pay higher rates of interest for attracting Deposits—and often these rates were higher than yields on equities. Inevitably there was a gradual erosion of confidence in the equity as hedge against inflation. Inevitably prices on Wall Street started their downward trend. Inevitably the bull market in the USA, which had held sway for more than a decade, was doomed.

It does not, therefore, matter what the immediate provocation was. A long overdue corrective to the price-earnings ratio had finally made its appearance. The implication is that the investor will, in the wake of the 1962 Wall Street Bubble, emerge the wiser for it. He will be a more educated and sophisticated student of share values. A more canny assessment of growth potential is to be expected. And more attention than has hitherto been paid will be focussed upon improvement in earnings or earning capacity. What we have had therefore is a form of consolidation which, though it appeared to do immediate harm to stock exchange sentiment, will in the long run make possible an orderly and less speculative attitude and activity in the American stock exchanges.

The lesson for India is self-evident. The preoccupation with capital gains has already provoked Government, in the Budget for 1962-63, to siphon off short-term speculative gains. The taxation of longer-term gains is still favourable, but there may soon come a time when Government will seek to participate or share in the windfall profits therein available. No doubt, one of the considerations for investment is growth potential. But the Indian investor would do well and wisely to remember that a nice balance has to be struck between the yield or immediate return and capital gains or the slightful doubtful promise of tomorrow.

TREASURY BILLS

The Slack Season—Another Symptom

Within the space of a bare week a revolutionary change is noticeable in the response, presumably of the banking system, at the Government of India Treasury Bill auctions. In the week ended 29 May the tenders at Rs 2 crores were just equal to the amount on offer, and the average rate worked out to 2.540 per cent. Intermediate bills sold during that week amounted to a mere Rs 11 lakhs. So swift has been the progress of the 1962 slack season, that as at the week ended 25 May borrowings of Scheduled Banks from the Reserve Bank had fallen below the Rs 5 crore mark. Consequently it would appear that there has been an even larger accretion of free resources with the banking system: at any rate such is the implication of the Treas-

Snippets

The money supply with the public as at the end of March 1962 has been estimated at Rs 3,079.63 lakhs composed of Rs 2,121.19 lakhs of currency and Rs 958.44 lakhs of Deposits. Comparable figures for March 1961 are Rs 2,910.89 lakhs composed of Rs 2,027.04 lakhs of currency and Rs 883.85 of Deposits.

Figures for receipts under small savings during February 1962 have shown a decline to Rs 24.71 lakhs in February 1962 from Rs 46.05 lakhs in March 1961. Outstandings of small savings, however, show an increase from Rs 770.80 lakhs to Rs 826.80 lakhs in February 1962.

The advances of the Reserve Bank of India to State Co-operative Banks during March 1962 amounted to Rs 16.33 lakhs while outstandings are placed at Rs 122.80 lakhs. As compared with figures for March 1961, this shows an increase of Rs 240 lakhs and Rs 33.40 lakhs respectively.

At the end of 30 March 1962, the scheduled banks in the country had excess reserves with the Reserve Bank to the extent of Rs 6.07 lakhs. The excess reserves of the Indian scheduled banks amounted to Rs 4.41 lakhs, and of the Foreign banks Rs 1.66 lakhs. The State Co-operative Banks had also excess Reserves with the Reserve Bank to the extent of Rs 98 lakhs.

During 1961-62, there has occurred substantial decline in the index number of variable dividend industrial securities in Agriculture and Allied Activities. The group index for this shows a decline from 175.4 at the end of March, 1961 to 161.8 at the end of March, 1962. Coffee plantations have registered the greatest decline from 195.6 to 154.7. In contrast, there was a notable increase in the index for processing and manufacturing which shows a rise from 198.7 as at the end of March, 1961 to 223.6 at the end of March, 1962. Cotton textiles and silk and woollen recorded substantial gains from 162.2 and 166.2 to 200.7 and 1254.8 respectively. Cement and paper also showed increases from 146.2 and 218.5 to 165.5 and 227.9. The index number for the sugar industry showed decline from 178.1 to 143.3. Transport equipment and Basic industrial chemicals were the other two notable cases showing a fall in the index number of variable industrial securities. The Index for all industries shows an increase from 182.6 in March 1961 to 192.7 at the end of March 1962.

sury Bill auction results for the week ended 5 June.

While the amount on offer was unchanged at Rs 2 crores, the tenders doubled to Rs 4 crores. Whereas in the previous week tenders at Rs 99.365 per cent were accepted in full, in the week under review there was partial allotment of 67 per cent in respect of tenders at Rs 99.375 per cent, lower tenders being rejected. The average rate has meantime declined sizeably from 2.540 per cent to 2.507 per cent. Moreover intermediate bills have been absorbed in the considerable amount of Rs 4 crores. Despite the keen demand at the auctions on 5 June, the amount on offer on 12 June remains unchanged at Rs 2 crores—but there is the distinct possibility of competitive bidding further pushing down the Treasury Bill rate. Again, the rate at which intermediate bills are to be made available

has been stepped up from Rs 99.381 per cent to Rs 99.391 per cent.

In view of the likely imminence of the Centre's loan announcement, there is now no need to introduce innovations in the Treasury Bill market. But it is time to revive our suggestion of 182 day Treasury Bills being offered during the rest of the slack season, so that banks could with profit and with correct judgment so invest their accruing surpluses that, when the next busy season is in full swing, they will be assured of a week-by-week improvement in resources for meeting that emerging demand.

+

Tenders for Rs. 2,00,00,000 of 91 days' Government of India Treasury Bills were opened on Tuesday 5 June 1962. Total amount offered was Rs 4,00,00,000. Tenders at Rs 99.375 per cent were allotted approximately 87 per cent. Lower tenders were rejected. Total amount accepted was Rs 2,00,00,000, the average rate of accepted tenders being Rs 2.500 per cent per annum.

Tenders for Rs 2,00,00,000 of 91 days' Government of India Treasury Bills will be received at Bangalore, Bombay, Calcutta, Kanpur, Madras, Nagpur and New Delhi up to the close of business on Monday, 11 June 1962. Successful tenderers should make payment on Friday, 15 June 1962 at all centres. Other conditions are as usual.

During the week ended 1 June 1962 Government of India Treasury Bills for Rs 30,28,50,000 were sold in favour of Reserve Bank of India.

91 days' Intermediate Treasury Bills will be sold from 6 to 9 June 1962 at Rs 99.391 per cent. Sales can be stopped at any time without notice if Government think it necessary.

91 days' Intermediate Treasury Bills sold from 30 May to 2 June 1962 amounted to Rs 4,00,00,000.

+

BANK RETURNS

Active Notes Decline

Despite beginning of the month disbursements, Active Note Circulation has declined by Rs 9.23 crores to Rs 2,112.61 crores in the week ended 1 June, but there has been outflow of Rupee Coin in the amount of Rs 0.81 crore. There is a transfer of Rs 3.82 crores from Foreign Securities—reducing the relevant figure to Rs 92.68 crores—to Balances held Abroad as shown in the return for the Banking Department. Currency has been contracted for Rs 11 crores odd against Rupee Securities—now down to Rs 1,823.19 crores—

by transfer to the Banking Department. Consequently the Reserve Bank's cash in the till is lower by Rs 6.58 crores at Rs 35.06 crores.

The return for the Banking Department is largely featureless. The rise of Rs 12.35 crores to Rs 192.66 crores in Investments is mainly on account of transfer from the Issue Department. Even so, Balances Held Abroad are higher by Rs 2.67 crores at Rs 8.82 crores—and hence foreign assets held by the Reserve Bank have not yet fallen below the Rs 100 crore mark. The foreign exchange loss during the week has just about exceeded Rs 1 crore.

Beginning of the month payments have reduced balances of State Governments by Rs 2.82 crores to Rs 13.07 crores, though it may be noted that their indebtedness to the Reserve Bank is slightly lower by Rs 0.38 crore at Rs 103.79 crores. The Centre's balances have in fact improved by Rs 1.94 crores to Rs 50.95 crores.

Banks are comfortably situated: Reserve Balances are up fractionally by Rs 0.26 crore at Rs 13.07 crores, and no worthwhile increase in indebtedness is likely in that the Other Loans and Advances of the Reserve Bank are just Rs 0.45 crore higher at Rs 103.79 crores.

+

The return of the State Bank for 1 June is also featureless: Deposits are slightly lower at Rs 575.39 crores against Rs 575.62 crores: the total of Advances is a shade higher at Rs 294.51 crores against Rs 294.27 crores. Thus the impact of month-early disbursements on the State Bank has been minimal. The gilt-edged portfolio has receded by nearly Rs 3 crores. Also lower are Other Assets by Rs 1.30 crores at Rs 35.82 crores. The net result is an increase of Rs 4.15 crores to Rs 31.78 crores in cash balances including money at call.

+

The slack season in full stride stands revealed in the return of the Scheduled Banks for 25 May; the implication may be an early announcement of the first tranche of Government's borrowing effort in 1962-63. Net deposit resources have recorded a sharp improvement of Rs 13.09 crores to Rs 2,121.82 crores, of which Rs 5.57 crores is in respect of net Demand Deposits (up now to Rs 894.23 crores) and Rs 7.52 crores in net Time Deposits (now risen to Rs 1,227.60 crores). At the same time there has been a drop of Rs 4.78 crores to Rs 1,427.72 crores in the total of net Advances. This two-fold improvement in resources has enabled the Scheduled Banks to cut their debt to the Reserve Bank sharply by Rs 7.78 crores to the nominal figure of Rs 4.70 crores; and borrowings from the State Bank have also been reduced by Rs 1.89 crores to Rs 17.40 crores. The increase of about Rs 13 crores to Rs 583.31 crores in the gilt-edged investments of Scheduled Banks is wholly

on account of the State Bank. The net result is a small increase of Rs 3.85 crores to Rs 211.9 crores in cash balances, including money at call and short notice.

Wall Street Drop and After

By Paul Einzig

The Black Monday on Wall Street should go some way towards shaking us up from the complacent attitude under which one was inclined to take it for granted that such a thing could not happen in our post-war world. It is true, the slump was a one-day wonder, and the immediate reversal of the downward movement gave rise to a new wave of complacency. Thus the Ford workers in Britain who were frightened by the slump into soft-peddalling their strike threat and into willingness to discuss an improvement of labour-management relationship, became as blustering and bullying after the recovery in Wall Street as they had been before slump. Yet it stands to reason that such a slump is bound to recur if excessive wage demands continue to squeeze profit margins as it is doing at present. The reason why investors accept absurdly low yields on their equities while expecting to get 6 to 7 per cent on their Government Loans is because they discount future increases of dividends. But recent experience has shown that dividends can be changed in a downward as well as in upward direction. This made many investors reconsider the wisdom of discounting future increases to such an extent as they are discounted in the prices of many equities. Hence the Wall Street slump, and hence the reaction of the London Stock Exchange and of other Stock Exchanges to that slump.

For the moment the optimists have scored a victory. Even so they surely cannot be as complacent in their heart of hearts as they were before the slump. It is true, this time they have got away with it. Those who have refused to lose their nerves under the influence of the sharp fall on Black Monday have proved to be right for the moment. But if the annual reports of companies continue to be as unsatisfactory as many of them were recently, sooner or later the majority of equity holders will reach the conclusion that the present price is grossly exaggerated not only from the point of view of present yield but also from the point of view of future prospects.

It is true, there is no sign of business recession. Employment is increasing in the United States, and the balance of payments position in Britain is improving. From these point of view there is ground for optimism. But it is important to realise that a major Stock Exchange slump resulting from narrow profit margins is liable to reverse even the basic economic trend. It is liable to affect the volume of consumer demand, not only because investors suffering dividend cuts and capital depreciation are liable to curtail their purchases, but also because through the operation of the multiplier such cuts are liable to lead to other curtailments of income and other cuts. Moreover, depreciation of equities will discourage capital expenditure which is already far from adequate. For this reason the trade unions would be even more than usually short-sighted if they felt they could shrug off the contraction of profit margins and their effect on Stock Exchange trends.

Notes

ECM

The Commonwealth at Bay

After protracted bargaining with the Six, the UK is reported to have reached a formal agreement on one of the most ticklish problems posed by the UK's entry into the Common Market, namely treatment of the manufactured goods exported from Canada, Australia and New Zealand. The agreement now arrived at provides for the application of the common external tariff to these exports in three stages—30 per cent of the common external tariff will be applied on the day Britain enters the Common Market; another 30 per cent will be applied after a period of about 18 months and the full tariff will be applied in the last stage when the other member countries will have also taken steps to enforce the full tariff.

The agreement, it is stated, will relate to the whole range of manufactured goods with the exception of foodstuffs and will apply to 400 items. No agreement has been reached in respect of Jute textiles and also newsprint. In respect of newsprint, while Britain wants a solution on the basis of the List "G" protocol on woodpulp, the Six have pointed out that Britain

would only be entitled to duty quotas under Article 25 Section 1, of the Treaty of Rome.

The agreement, it has been stated, is a compromise between proposals originally submitted by Britain and counterproposals put forward by the Six. It is the same pattern that has been suggested for export of cotton textiles from India and Pakistan. The agreement provides for precautionary measures to be taken to avoid adverse effects on the exporting Commonwealth countries. It has been provided that there will be consultation with the Commonwealth countries concerned in the years prior to the application of the second and final steps and further it also recognises the need for "Appropriate steps" to be taken should the occasion arise. It can be easily seen that the precautionary measures that have been suggested will be ineffective in preventing fall in exports in the period following the imposition of the first instalment of the common tariff, since adverse effects have first to be proved for the remedial action to follow.

The total items that will be affected by the agreement is about 400 and the value of their imports into the UK has been estimated at about £100 million. The greater part of these imports of manufactured items into the UK comes from Canada. Consequent on the imposition of the full scale external tariff on these, it is to be expected that Canada will face keen competition from the US in the UK and continental markets. It is therefore possible that she may lose some markets in the UK with the withdrawal of preferential entry. The full effect on Canada however will be evident only with the arrangements that would be made for the export of industrial raw materials and also newsprint. Canada exports a substantial quantity of newsprint to UK, and also industrial raw materials like aluminium, copper, lead and zinc.

STEEL

In the Backyard?

In an article in the Eastern Metals Review, Mr G. R. Bashforth, a UNESCO expert, has expressed the view that India could usefully pursue the policy of setting a chain of small-scale steel plants which he says have considerable potentials for increasing availability of steel and also expansion of employment opportunities. Mr Bashforth's conclusions in this regard are based on the experi-

ments he conducted with pilot plants to produce pig iron and steel at the Banaras Hindu University.

Mr Bashforth's ideas of the small steel plants that would be suitable to India are that they will have to be less mechanised, that the hearth blast-furnaces will be hand charged and that side-blown converters will be used to refine pig iron into steel. The model of the small plants that he considers feasible bears no resemblance to the "backyard steel plant" that was once the rage in China and which has been found to be crude, but takes after the pattern familiar in Staffordshire in England where till recently, such furnaces were employed to produce high quality steel.

According to Mr Bashforth small steel plants will be able to produce an estimated 140,000 tons of pig iron annually which can therefore usefully supplement the country's steel production. The main advantages of having small steel plants are that they will make relatively less demand on high grade raw materials, enable considerable saving in foreign exchange, and provide employment and training to a larger number of technicians, engineers and metallurgists. Further, reduction in mechanisation will cut down capital costs. The total cost of setting up the small steel plants have been estimated to be about 60 per cent lower than the cost of the conventional steel plant.

Certainly small scale steel plants by virtue of their advantages in terms of lower investment etc, should be an attractive proposition. It may be recalled that an official team which visited China some two or three years ago also recommended setting up of small scale steel plants. However the most important condition for the success of the small plants will be the cost of production vis-a-vis costs in the conventional plant. On this question no conclusive evidence about the competitive character of production in the small plants has so far been available. However experiments being conducted in the National Metallurgical Laboratory on smelting of iron ore with low grade coal should prove valuable in indicating feasibility of small steel plants. The projected steel plant in Madras using lignite of Neiveli may also provide some valuable points for working of small steel plants.

SURATGARH

Fair Progress

Equipped with Russian aid, the Central mechanised farm at Suratgarh, Rajasthan was conceived as a show-piece as impressive as Bhilai Steel Plant in its different way. Suratgarh's farming operations are mechanised on a scale

unknown elsewhere in India. It has 100 tractors 60 harvester combines, and other miscellaneous type of agriculture machinery, and special equipment for winnowing, grading and loading. The earth-moving equipment and planting machines are also among the most modern in farm machinery. During the busy season the tractors and the machines work round the clock. The farm covers the area of 30,000 acres of which 19,000 acres were under rabi crop this year. During the sowing period, work was continuous the fields being prepared during the night and sowing done during the day. An average of 2,500 acres was covered in preparatory tasks and wheat was sown on an average of 500 acres a day. About 11,000 acres grew wheat and the rest other crops. The farm is a multipurpose having besides wheat and other cereals, cotton, (on a small scale), in which new varieties of sugar cane and orchard fruit trees are grown. During 1961 kharif seasons the farm is reported to have produced over a lakh maunds of sugar cane and thousand maunds of cotton 22,000 maunds of paddy in addition to pulses and groundnut and green manure crops. One of the aims of the farm is to produce good seeds for distribution to various states for improving the strain of the crop grown there. It is reported that nearly a 100,000 maunds of wheat have been offered to various States this year. In its effort to grow fruit crops, the farm has planted mangoes, peach, plum and grape-vines. A number of new fruit varieties like guava, grape fruits etc., are also been attempted in the orchard area of 500 acres.

However, from the report of the activities of the Ministry of Food and Agriculture, it appears that there were considerable difficulties to be faced because of lack of perennial supply of water and the Nali floods. Originally it was expected that the Bhakra Irrigation System will provide perennial supply for this farm. This could not be done because of the delay in the completion of the Bhakra project. It was expected that perennial supply from Bhakra Canal would be available by the end of 1961. This has not happened and the farm has had to rely on the water from the Ganga Canal released by the Rajasthan Government on ad hoc basis. This supply is enough to irrigate annually only 3,000 out of the nearly 30,000 acres of the farm. During this year, rainfall in this area having been unsatisfactory and there having been heavy attack of frost, the activities of the farm were considerably handicapped.

In its 131st report the Estimate Committee made a number of valuable suggestions on the working of the farm. Their fate is not ascertainable from the two paragraphs of the Ministry's report. The Committee pointed out that considering the amount of capital invested in this enterprise, the initial period of lease (15 years) was too short. It is therefore necessary that when Government exercises its option to renew the lease at the end of the 15-year period, it should try to obtain a long period of lease. The lease terms regarding rent etc, were not settled at the time of report. This is an unsatisfactory state of affairs. The Committee also pointed out that the administration appeared to be too heavy. Nearly 25 per cent of the expenditure in 1959-60 was spent on establishment. It was suggested by the Committee that the scope for economy and alternative uses for staff nominally allotted to a particular job should be explored. The Committee also found that the original estimate for the outlay on the farm was a gross underestimate—nearly Rs 1,20 lakhs against an actual of Rs 1,50 lakhs. The farm made a substantial loss of over Rs 1,26,000 in 57-58, but made a spectacular recovery with a profit of over Rs 5,47,000 in 58-59. In 1959-60 the profit went down to a mere Rs 42,000. Such variations in return on investment has been attributed to the failure of monsoon, erratic water supply and damage due to flood. The last accounted for loss of over 4,80,000 in 1959-60. The recommendation of the Estimates Committee was that a permanent solution for the flood problem should be expeditiously found and meantime, short-term measures such as regulating the discharge of excess water, widening railways bridges close to the farm should be considered. The Estimates Committee also ad-

visedly commented on the unrealistic estimates of probable production and the poor yield per acre. It suggested that the reasons for the poor performance should be gone into by technically competent authority.

Despite all this, the performance of this Central farm has given valuable experience and Government has plans of setting up similar mechanised farms in other parts of the country. From the reports of Ministry of Food and Agriculture, it appears that plans for

	Acreage	Production		Cost of production	Income per acre
		Mds.	Rs. (Value)		
1956-57	2,293	2,790	4,27,527	4,19,926	183.1
1957-58	4,347	18,085	4,52,084	5,77,735	132.9
1958-59	14,154	1,47,084	26,12,929	20,64,995	145.8
1959-60	26,480	2,04,726	30,00,000	32,22,290	121.6

ROURKELA

The Sick Child

Mr Wanchoo who headed a recent delegation abroad to discuss problems of the public sector steel gave recently an account of his trip. He spoke of Rourkela in particular. The slow progress of the Rourkela Steel Plant production in which has been running at only 35 per cent of the installed capacity has been a matter for grave concern for some time now. Frequent break-downs of the plant and machinery have pinpointed the existence of serious defects in the working of the steel works here. In the recent debate in the Lok Sabha, Mr C. Subramaniam, the Minister for Heavy Industries, admitted the existence of serious gaps in the working of the steel plant and assured that the Government was impressed with the urgent need for taking early and prompt measures to restore the plant to full working conditions. The report of the West German Government with which the Indian delegation was confronted at Bonn would seem to indicate that the rehabilitation work of which Rourkela is in need for attainment of full production capacity, is of a substantial magnitude. In view of the reason that the rehabilitation work has to take precedence over the expansion project, it would appear that the Third Plan expansion scheme for the plant will be considerably delayed.

The report of the West German Government seems obviously to be based on the recommendations of the Solveen mission, an independent team of six German experts who were in India some time back to make an on the spot study of the working of the Rourkela steel works and diagnose the defects which have prevented smooth working of the project. In its report, the Solveen mission has been highly critical of the management of the Rourkela steel plant by the Hindustan Steel Limited. The main findings of the experts are that the

another farm in the Rajasthan Canal Area is now ready and operational details are being worked out. But proposals for farms in other parts of the country have not made much headway, except for a farm in Cutch and another in Madhya Pradesh. It may be necessary to expedite further proposals and to establish these farms so that the example of the success achieved in these farms may give a fillip to further agricultural endeavour in the rest of the country.

	Production statistics	Cost of production	Cost of production per acre	Income per acre
1956-57	2,790	4,27,527	183.1	186.6
1957-58	18,085	4,52,084	132.9	103.0
1958-59	1,47,084	26,12,929	145.8	184.6
1959-60	2,04,726	30,00,000	121.6	113.3

maintenance of the plant has been below par and that full production could not be achieved in a number of sections because of either lack of adequately qualified technical personnel or deterioration in the quality of raw materials used. The mission found only the open-hearth steelmelting shop, the rolling mills, the pipe mill and the power house working satisfactorily. Against this, two of the three blast-furnaces were found to be in bad shape. It has been stated that furnace No 1 suffered damage because of iron breaking out from the tap hole on a number of occasions. A more serious problem is the fissures that have developed in the No 3 furnace due allegedly to insufficient care taken to prevent rain water into the carbon hearths. Chaotic traffic facilities have been considered to be another source of difficulty in the proper working of the steel plant.

The HSL has been criticised for failure to maintain sound procedures and inadequate technical control which, according to the experts, have led to serious deficiencies in maintenance and housekeeping. Inadequacy of spare parts has also held up progress. It has been stated that a good many of the limited number of trained personnel are drifting away from the plant for better salaries. Unfamiliarity of the Indian operators with the LD process and the fluctuations in the quality of the hot metal supplied from the blast furnaces are the other points highlighted by the expert mission.

The total investment required for full rehabilitation of the Rourkela has now been estimated at about Rs 10 crores, Rs 3 crores being required for spare parts, and another Rs 3 crores for rehabilitation of the furnace department. The expert mission had also emphasised the need for obtaining about 410 wagons from West Germany which may entail a cost of about Rs 2.5 crores. The West German Government has indicated that the cost of rehabilitation will

be the first charge on future credits made available by them to India.

FUTURES

Elimination of Malpractices

Futures trading has become an integral part of the mechanism of marketing with reference to agricultural commodities and most importantly for the cash crops and performs, under proper regulations, useful functions like insuring agricultural producers against adverse impact of inventory depreciation resulting from frequent price variations and also maintenance of a steady stream of goods both in the internal as well as external markets. A large number of associations with varying sizes and stature has grown up in the field of forward trading and in the light of the growing demand for agricultural commodities and the relative scarcity conditions still prevailing in respect of some of these, it is of great importance that these markets should function in a healthy manner and help steer the nation's economy safely between the "spectre of inflation and the distresses of depression". In his speech inaugurating the third conference of the Presidents and nominated directors of recognised forward markets convened by the Forward Markets Commission in Bombay last week, Mr Manubhai Shah, Union Minister for International Trade, made the frank statement that the public were not satisfied with the functioning of the forward markets in the country and added that "they will have to become more socially conscious and careful to retain the unimpaired utility of the apparatus" of forward trading. It is not that there is anything like serious abuse of powers by the recognised associations, but there are undesirable features in the working of these associations and also a lack of proper understanding of the various provisions of Forward Contracts (Registration) Act 1952. Mr R. Doraiswamy, Chairman of the Forward Markets Commission, in his address to the convention, testified to the persistence of bad practices like kerb trading and option trading which while they constituted transgression of the provisions of the Forward Contracts (Registration) Act, seems to flourish owing to the lackadaisical attitude of the Board of directors. Such unhealthy practices should be put down by drastic measures. It is gratifying to learn that the Commission has set up a directorate of enforcement with a senior police officer in charge for taking steps to eliminate illegal trading. Speculation indulged in by non-members with the connivance of members of the recognised associations is also a serious problem calling for prompt and effective measures for tackling it.

Apart from these flagrant malpractices, there are also other aspects in the functioning of the forward markets which need to be improved. The FMC has been experimenting with newer methods of control during the last year such as imposition of limit on the open position of individual members in the market, restriction of fluctuations in prices, either on a daily or weekly basis and withholding for temporary periods profits at the weekly clearings. Limitations on the outstanding trading position of individual operators are warranted by the need to foster healthy and competitive marketing and to eliminate the distortions of price by a few operators who are allowed unlimited activity. Such unlimited operation has no sanction even in the advanced countries like the US. Limit on fluctuations of price has been applied to cotton, groundnut, mustard, pepper and gur markets and avoids the adverse effects flowing from undue restrictions and unfettered freedom, while guaranteeing a measure of stability in prices over a period. Mr Manubhai Shah said, that the small operator is the real backbone of the market. "It is he who gives it its breath, its liquidity, and its viability". For enlarging the role of the small operators, it is necessary that the system of special margin should be less relied on by the FMC as an instrument of control, for it has merely tended to make the market narrow and open to control by the bigger operators with large financial means. There are also organisational shortcomings to which attention has been drawn by Mr Shah. For example, the panel-wise election of directors enjoined by the Forward Contract (Registration) Act has not been acted upon by many markets, the defaulters being mainly the bigger and older markets.

DEVELOPING ECONOMIES

An Insurance Fund

Development plans of underdeveloped countries are often upset by the fluctuations, sometimes wide, in their export earnings. Although the dependence on foreign aid is invariably heavy, the need for self-help can be ignored by these countries only at great risk to their future prosperity. The problem of stabilisation of export earnings of the less developed countries has been rendered difficult by the fact that all of them are still predominantly agricultural countries having surplus primary commodities for export. The result is intense competition amongst themselves. This is the natural outcome of the desire on the part of these countries to maximise their export earnings. But what actually happens is that with the establishment of a buyer's

market as a result of a glut of primary products offered for sale by competing primary producers, the earnings of all the exporting countries suffer. It would be of great help to these countries in drawing up their development plans if the uncertainty regarding their export earnings can be reduced to the minimum. The United Nations Commission on International Commodity Trade has just completed a study of the ways of offsetting the effects of fluctuations in the export earnings of primary producing countries. The Commission will submit its recommendations on the question to the UN Economic and Social Council for consideration at its forthcoming session in July.

In studying the problem of fluctuations the Commission had before it two studies by the UN Secretariat relating to the possibility of some type of "development insurance funds." They are reported to have explored the question raised last year when the Commission examined proposals for such a fund as submitted by an expert group. One of the Secretariat reports considers the overall problem of "Stabilization of Export Proceeds through a Development Insurance Fund." The other deals specifically with "A Development Insurance Fund for Single Commodities."

The first of the UN Secretariat report is stated to have analysed fluctuations in trade that occurred during the 1950's and shows the direction and magnitude of the transfers of foreign exchange in which a hypothetical "development insurance fund" would have had to engage if it had operated in a compensatory manner of offsetting—under various postulated conditions—the recorded shortfalls. The report has also examined the practical consequence of the suggestions made by a group of experts who have made a number of proposals for redistributing—by means of a system of insurance—the losses and gains caused by fluctuations. The Second UN Secretariat report sets out a number of illustrative examples of the way in which single commodity stabilization schemes, incorporating the principles recommended by the experts might have operated in the 1950's.

Apart from studying the problem in the light of these reports, the Commission has reviewed the situation relating to international trade in primary commodities in the light of several reports including the UN Commodities Survey 1961 and the Food and Agriculture Organization's Commodity Review 1962.

The full texts of the two reports are not available and therefore it is difficult to say how far these reports will further the cause of such an insurance fund. It was widely reported sometime ago that the World Bank was cold to the idea because of the technical and

practical problems involved. Some national governments have successfully worked such insurances of exports. The World Bank which has shown admirable initiative in devising new and ingenious solutions for international monetary problems should not shy at this problem. It will be interesting to look out for the decisions of the UN Economic and Social Council on the problem in the July meeting.

TRADE BARRIERS

GATT

Ineffective?

A committee of the GATT which recently concluded a meeting to study the progress in the removal of trade barriers in the way of less developed countries has noted that in a number of cases contracting parties were able to show that they had introduced liberalization measures since the ministerial meeting on the subject in November 1961. They have announced plans or programmes for the removal of remaining restrictions which affected the exports of less developed countries. The committee has also noted that there are advances and indications for the future were encouraging, certain problems and hindrances still remained. Among products examined by the Committee a number of them which are of great importance to less developed countries still face import restrictions maintained by industrialized countries. The industrialised countries however have reaffirmed their intention to demonstrate in practical terms their adherence to the conclusions of the ministerial meeting. The committee has noted that in the field of customs tariffs, several countries had recently taken action to reduce tariffs on products of importance to the export trade of less developed countries. Recent instances of such customs tariff reductions are the action taken by the United Kingdom to eliminate the fiscal element in its customs tariff on coffee and cocoa and the proposed legislation in Italy providing for the present Italian consumption tax on cocoa and cocoa products to be reduced by 50 per cent. Contracting parties were generally urged to consider the possibility of reducing any such taxes on products of less-developed countries, and to take steps to ensure that benefits deriving from such reductions are passed on to consumers and the exporting countries.

While the GATT is thus engaged in removing trade barriers and emphasising the special difficulties of underdeveloped regions, the outlook for such liberalisation is obscured by the external tariffs that the EEC, a most important area, for some (especially Asian)

nations, is likely to erect. Commonwealth textiles is an instance, which has also to contend with protectionist manoeuvres in Britain. But the GATT is apparently powerless and has largely been rendered otiose by powerful regional groups.

CHEMICALS

Importers as Internal Distributors

In his address to the annual general meeting of the Indian Chemical Merchants' Association, Mr D. P. Kajoria, President of the Association called for a revision of the import policy of the Government to allow for a larger role for the established importers. Under the impact of the encroachment made by the State Trading Corporation in many items of import trade, and the policy of Government in issuing actual users' licences, the field of the established importers has been considerably curtailed in recent years. Drastic restrictions imposed on import of chemicals during 1961 have further added to the problems of the chemical trade. Imports which were of the order of Rs 41 crores in 1959 recorded a sharp decline to Rs 35.77 crores in 1961. While there had been fairly substantial improvement in the indigenous production of various chemicals like caustic soda, soda ash, ammonium sulphate, calcium carbide bleaching powder etc, there were considerable shortfalls in internal availability which naturally contributed to upward pressure on the prices of chemicals. Further rise in price has according to Mr Kajoria been caused by the intervention of the State Trading Corporation in the import trade in chemicals. Mr Kajoria has pleaded for associating the established importers even in the import trade with countries with which it has entered into rupee payment agreements. "The trade discharges a vital economic and social function as an indispensable link between the producer, importer and consumer." As such the case for enlarging the scope of its operation in the import trade is strong. Mr Kajoria has suggested that additional supplementary licences should be given to established importers on the condition that they export non-traditional items in a reasonable measure to earn the requisite foreign exchange towards the cost of such imports. Besides restoring a greater share to the trade, this may also help in relieving shortage in internal availability of some of the chemicals. Utilisation of the services of established importers for purposes of internal distribution may also contribute to mitigate the hardships now being suffered by the trade.

Employment Objectives in Economic Development

[An expert team was set up by the I.L.O. in accordance with the decisions of the Governing Body of the International Labour Office at its 142nd Session to make a thorough analysis of the problems of employment creation in the context of economic development in the newly industrialising countries, and to suggest appropriate measures for the expansion of employment opportunities. The salient features of the Report and the important conclusions arrived at by the Committee given below will be of interest to our readers. A short editorial note on the report appeared in the issue of Indian Finance dated 24 February 1962.

Editor.]

The Strategy of Employment Policy—The employment of more labour will increase total output, and that, given appropriate measures to raise the level and improve the pattern of investment more employment can also lead to a higher rate of economic growth. A higher rate of growth, if achieved, will in turn facilitate the absorption of more labour at higher levels of productivity. Thus not only is an expansion of employment compatible with economic growth but the two can reinforce each other. An increase of employment is, in any case, an urgent need in itself. It gives more people at least a minimum income, it satisfies the human need for useful and creative activity and it provides more people with the opportunity for acquiring skills and the habit of work.

The nature of the employment problem in the less developed countries and of the place of employment objectives in current plans and programmes, makes it evident that employment targets must be raised. The basic policy requirements are to raise the level of investment and, with due regard to the need to achieve high rates of growth, to explore all opportunities for raising the level of employment associated with a given level of investment by changing the composition and the techniques of production.

With the framework of policies aiming at a high level and an appropriate pattern of investment, there is scope and need for local and national initiatives to ensure fuller utilisation of underemployed labour. The productivity of existing scarce resources should be raised so as to increase the supply of investment and consumer goods needed to support a higher level of employment. Measures are needed to provide adequate occupational mobility and, in particular, to overcome bottlenecks in the supply of certain types of skill and knowledge by means of training programmes, and to provide a geographically balanced growth of employment through a policy of regional location of industry. Finally, if an expansion of employment is not to be checked by balance-of-payments difficulties, measures are needed to expand export earnings, to abate excessive fluctuations in them, and to economise foreign exchange, as well as to increase the inflow of foreign capital. There are certainly possibilities of conflict between the objectives of more employment and of more rapid economic growth. But the conflicts are not always or everywhere operative. Moreover, where they exist, they can often be eased by appropriate policies and

can eventually be eliminated once the level of investment becomes adequate for the maintenance of full employment.

The disappointing performance of many developed countries in respect of both employment and development objectives is caused in part by the realisation and fear of the possibilities of conflict between the two. There are opportunities for exploiting more energetically the possibilities of a mutually reinforcing increase of both employment and the rate of economic growth. Because of the scarcity of capital and other productive resources complementary to labour, limitations on the choice of products and techniques, the immobility of resources, investment time-lags and the need to seek a balanced regional development, in many countries full employment cannot be achieved immediately, or perhaps even quickly. In these countries, the immediate, and continuing aim should be at least the creation of enough new employment opportunities to keep pace with the increase in the work force, and to provide for unemployed and underemployed workers in the worst distress, it will be necessary to provide direct relief. The achievement of full employment in many countries must take some time but no less ambitious objective can be acceptable in the long run. Conclusions on the problems of employment policy are given below:—

THE EMPLOYMENT PROBLEMS IN LESS DEVELOPED COUNTRIES

The Nature of the Problem—A major objective in economic development is to provide work for currently underemployed and unemployed workers and for those who will be seeking new jobs in the course of economic development as a result of demographic, economic, technical and social changes.

Underemployment—Underemployment is the dominant feature of underdeveloped countries affecting particularly owners or cultivators of small farms and landless agricultural labourers. It is caused mainly by the smallness of most farms and by seasonal fluctuations of activity. While at times much of the work force may not be needed, most of the surplus labour cannot be removed unless methods of work and institutional arrangements are changed. Underemployment is also prevalent in handicrafts and cottage and small-scale industries. Many of the underemployed seek jobs in towns where openings for productive employment are limited. It has been recommended (a) to encourage governments to collect information as to the extent and causes of under-

employment; and (b) to analyse data for each country as a basis for the formulation of practicable policy measures.

Unemployment—Unemployment is widespread in Asia, the Middle East, the Caribbean region and in some of the less developed countries of Europe, but is less serious in many parts of Africa and South America.

Growth of Demand for New Jobs—The growth of demand for new jobs will be substantial as more and better jobs become available, as technical innovations are introduced, and as traditional innovations are introduced, and as traditional social values are modified. This is particularly so since the projected rate of growth of population and still more of the population of working age, is high in the less developed regions.

The Genesis of the Employment Problem—Less developed economies are characterised by a dualistic structure, with a lagging traditional sector and a modern sector commonly expanding too slowly even to absorb the growth of population, let alone replace the traditional sector. The modern sector has been developed in many cases by enterprises, sometimes of foreign origin, which, for various reasons, have provided only a limited stimulus to growth in other sectors. The traditional sector, with little capital accumulation and limited opportunities for productive investment, is organised through households which permit increasingly labour-intensive adaptations in the organisation of work and a steady rise of underemployment. More investment, particularly in the modern sector but also in the traditional one, is the greatest need, not only for development but also for employment creation.

Employment Objectives in Development Policies—Some current plans, programmes and policies for economic development lay considerable stress on the employment objective but in most it is regarded rather as a by-product of development.

Employment Targets—Employment targets should be based on estimates of current underemployment and unemployment, of the natural increase of the work force and of the net growth in the demand for jobs expected to arise in the course of development. The aim should be to provide full employment within a reasonably short time.

Many of the plans and programmes that have been published aim only at absorbing most or all of the natural increase in the working population and appear to be concerned with raising productivity rather than employment.

The Level of Investment—The level of investment envisaged is limited by a reluctance to squeeze consumption or to redistribute it. Much of the investment is expected to go into fairly capital-intensive projects.

The Structure of Production—The structure of production which will emerge in the course of development will comprise a declining number of workers in agriculture, but the plans and programmes make inadequate provision for expansion of employment elsewhere. Modern manufacturing industries

are expected to absorb only a limited number of workers. More employment opportunities are expected to be created in small-scale industries for which, however, there is little provision in investment programmes. In view of the expected slow increase in commercial agriculture, in manufacture and in consumers' incomes, the number of productive jobs that will be created in service industries appears to have been over-estimated. Much construction expenditure is in housing and social services which are not directly productive or employment supporting. There is little stress on the deliberate enlargement of the direct labour component in construction.

Training—Training of personnel at various levels of skill is essential but most plans provide neither a careful estimate of the needs nor resources to establish training facilities.

Availability of Foreign Capital—The availability of foreign capital is crucial for developing countries with a low capacity to import and to save, if investment is to reach a satisfactory level and if they are to be able to import the capital goods they need for their development.

The Need For High Levels Of Investment—Some additional employment opportunities can be created with a minimum complement of scarce resources, but to satisfy fully the employment objective will require large additional amounts of capital.

Estimating Capital Requirements—Each country should make a careful estimate of the investment required to meet the employment target. Requirements will vary according to the country's circumstances. Countries now in process of development are likely to need higher investment rates—probably of the order of 20 per cent. or more of national income—and higher rates of increase of national product than did countries which developed in the eighteenth and nineteenth centuries.

Restraining Consumer's Demand—Measures to restrain consumer's demand will be needed if a substantial proportion of increasing output is to be reserved for investment, and if the extra consumption of newly employed workers, which must sometimes be expected to exceed their additional production if many new jobs are created quickly, is to be provided without reducing investment. Bold and effective fiscal and administrative measures and an appropriate wage policy will be needed to bring about such a redistribution of consumption. They will encounter political and administrative difficulties but will be eased by the fact that those who previously supported the unemployed will now have fewer dependents, so that it will be possible for them to consume a smaller proportion of their incomes without reducing their own consumption. Much of the redistribution, indeed, will take place within households. In the absence of measures to redistribute consumption, either development will not be achieved, or the necessary redistrib-

ution will be brought about by inflation which is likely, however, to make for less effective and less rapid development and may, in fact, generate economic distortions and social conflicts which will inhibit development. The instruments of development policy should be designed to reduce non-essential spending. They may include tariffs and import control, high corporate and personal income taxes, high indirect taxes, and possibly a general expenditure tax. Tax concessions can be designed to encourage appropriate investments.

Wage and Price Policies—Wage and price policies will be needed to ensure that wages in the modern sector rise no faster than is consistent with a satisfactory rate of increase of employment. Excessive wage increases would encourage capital-intensity and an increase of consumption; would reduce the amount of employment created by any given expenditure on public works; would tend to impair competitiveness with overseas producers; and perhaps induce an excessively rapid exodus from the traditional sector. Wage increases can be moderated only if prices are kept reasonably stable and if high incomes from profits, rents interest and salaries are restrained. Wage incomes can, on the other hand, contribute to capital formation to the extent that they are saved through contributory social insurance schemes or encouragement of voluntary savings by tax concessions. Public savings may be increased directly through taxation on personal incomes or indirectly through a reduction of subsidies to public services or utilities. Governments should seek the support of employers' organisations and of trade unions for wage and price policies designed to achieve higher levels of employment.

The Supply of Consumer's Goods—The supply of consumer's goods is crucial as more fully employed workers will consume more, particularly of agricultural products; accordingly it will be essential to raise food production so as to save foreign exchange. Houses will be easier to provide to the extent that they can be built by labour-intensive techniques and without scarce materials.

The Pattern of Investment—Changing the pattern of investment by choosing labour-intensive products and techniques can make some, but not a major, contribution to the solution of employment problems. The composition of output and the choice of techniques cannot be determined solely by the employment criterion. The adoption of more labour-intensive patterns of investment is likely to be hampered by the fact that, in the less developed countries, credit, exchange and wage policies are often pursued that tend to make labour dearer and capital cheaper than is warranted by their relative scarcities. Data on the productivity of, and the relative amounts of capital, labour and intermediate goods required for different techniques are inadequate. There is a strong case in general for seeking more labour-intensive patterns of investments.

The Composition of Output—The composition of output (the "product-mix") in developing countries has to be determined by export prospects, by the size of the national market, by the pattern of domestic demand, and by the need to produce capital and intermediate goods and to encourage industries with strategic 'linkage' effects in order to sustain and accelerate development. As a result, much production will need to be capital-intensive. Most countries urgently need more houses, which can often be produced by labour-intensive techniques, but their construction does not create employment opportunities in the future. Other construction especially for factories and offices which are employment-supporting, is more capital-intensive particularly in respect of materials used. Capital-intensive investments required for the production of luxury and non-essential goods should on the other hand be discouraged unless they offer export prospects or incentives to domestic producers strong enough to offset their absorption of scarce materials and capital.

The Choice of Techniques—The choice of techniques must, where capital is the limiting factor, be designed to maximise output per unit of capital. In some industries—notably agriculture, construction and industries where small-scale production is appropriate—these techniques are likely also to be highly labour-intensive and will, therefore, directly promote both the employment and the development objectives.

In many manufacturing industries, once demand begins to expand, the most capital-saving techniques are often large-scale methods using little labour. Often, however, these techniques will permit a greater production of capital and intermediate goods which will support an expansion of employment opportunities elsewhere. The case for adopting such techniques is stronger where they serve new and growing markets than where they serve existing markets and so displace workers and cause rapid capital obsolescence in traditional small-scale industries. The argument that labour-intensive techniques yield smaller non-labour incomes and, therefore, a smaller investible surplus is weakened to the extent that fiscal and administrative measures can secure adequate savings out of labour-incomes. In any case, the consumption of unemployed workers would reduce the investible surplus from less labour-intensive techniques.

Policy Measures Affecting the Pattern of Investment—Policy measures affecting the pattern of investment include the direct allocation of resources by governments in their development plans or within their public investment budgets. To influence private investment decisions, lower interest rates, lower tariff rates, tax deductions and more rapid depreciation might be allowed for approved investments where desirable labour-intensive techniques are used; and employers might be allowed to add a stipulated amount per worker to their pay-rolls when

calculating production costs for tax purposes. The payment of a substantial proportion of labour income in the form of cash social service benefits financed from general revenue will reduce the direct cost of labour to entrepreneurs. Luxury and non-essential consumption of capital-intensive products should be especially discouraged by tax policies. Some traditional industries should be protected by tax policies, and should be assisted to improve their competitiveness. The possibilities of importing secondhand machinery should be explored as a means of saving scarce capital and foreign exchange. The development of capital-saving innovations should be encouraged by government action.

The Fuller Utilisation of Underemployed Labour—The fuller utilisation of underemployed labour can promote both growth and employment objectives provided the additional consumer demand generated by the larger volume of employment can be met without reducing investment.

Rural Areas—In rural areas where much of the underemployed labour is found, an increase of agricultural production will facilitate the expansion of non-agricultural employment and investment. Useful labour-intensive activities might be promoted through local construction works (more labour-intensive methods of cultivation); the development of small industries in villages and towns to meet growing demands for simple equipment and for consumer goods; other productive activities might be promoted through local construction works; more labour-intensive methods of cultivation; the development of small industries in villages and towns to meet growing demands for simple equipment and for consumer goods; other productive activities such as animal husbandry, afforestation, orchards, fishery and water foods rural handicrafts and quarrying; and the provision of social services on a self-help basis. Success here depends on adequate organisation of the unemployed labour and other available resources which may be

OF GREAT INTEREST TO INDIAN ECONOMISTS AND STUDENTS

This publication is the product of the rich experience of successful planning in the USSR, planning that has ensured the economic and cultural advance at a pace unprecedented in history.

The author deals with the main questions of organisation of planning in the Soviet Union, the tasks and functions of planning agencies, the general principles of drafting plans and the system of their target.

The book also describes the methods of drafting plans and analysing and controlling their fulfilment, using as an illustration chiefly the central section of the national economic plan and industry.

Valuable handbook on the principles of planning!

undertaken sometimes with help from the central government through community development programmes, voluntary labour contribution schemes and the promotion of small industrial units. What finance needed should so far as possible be provided by mobilising small savings from local inhabitants which otherwise remain idle or not be used at all. Much will depend on reorganisation of the agrarian structure to provide incentives for rural initiative and to enable available labour to be fully and effectively utilised.

Urban Areas—In urban areas, there will be more dependence on measures and activities organised outside the group of underemployed workers. Existing capacity of industrial plants should be used more fully. Control of the installation of new equipment, the introduction of multiple shifts, subsidies for employment of more labour, improved housing and transport for workers, restraints on monopoly, appropriate pricing policies to ease the load carried by highly capital-intensive plants like power stations and rail services, may all, in appropriate circumstances, help to make fuller use of existing capacity. Again as in rural areas, useful labour-intensive activities can be promoted through the development of handicrafts, cottage and small-scale feeder industries to produce export and for domestic consumption, and to take over some of the processes needed by large manufacturing industries; through local construction works undertaken in coordination with major investment projects; through suburban agricultural activities particularly to meet expanding demand for meat, vegetables and fruit; and through local service activities in the fields of health, education and training, particularly where these can be extended by using the educated unemployed.

Raising the Productivity of Existing Scarce Resources—Many possibilities exist for raising the productivity of existing resources by methods which require little additional investment, especially of scarce resources, enabling the production of more consumer goods for and hence employment openings, and more consumption goods for the newly employed.

Agriculture—In agriculture, research and extension services can greatly increase urgently needed supplies of foods and materials, for instance by seed selection, crop rotation, improvements in farm management, soil protection and employment, use of local manures, insecticides and simple improvements of equipment and work methods. To ensure rapid development and spreading of these measures, agrarian reforms may be needed.

Handicrafts and Small-Scale Industry—In handicrafts and small-scale industry, improvements are needed in credit facilities, arrangements for steady flow of reasonably priced materials of reliable quality, marketing arrangements, and production techniques, especially the provision of simple tools and improvements in organisation of work. These can

raise production without adding to investment. Traditional industries will need to establish a complementary relationship with modern industry, for instance through subcontracting and developing new outlets for the products of modern industry.

The Modern Sector—In the modern sector, more effective use should be made of existing plant and equipment, for instance through better organisation of the flow of work and materials, fewer machine stoppages, better training and supervision of workers, improvement of methods and conditions of work, application of incentives to increase output and reduce labour turnover, and reduction of waste of materials and fuel.

The Social Environment—The social environment can be made more favourable to higher productivity by agrarian reform, by reduction of the dominance of middlemen and money-lenders, by changes in the institution of family ownership, by the reduction of the social gulf between employers and manual workers and by promotion of an interest in long-term growth rather than a quick turnover. Wage and price policy should ensure that workers share the benefits of higher productivity. Age-old fatalism must give way to a belief in and desire for economic and social progress.

Labour Mobility, Regional Planning And Training—A growing economy experiences structural change and needs a high mobility of productive resources.

Horizontal Mobility—"Horizontal" labour mobility is, however, often excessive with more people wanting to move from the traditional sector than can be absorbed into the modern sector. This may be discouraged by policy designed to create adequate employment opportunities in rural areas and to restrain the gap in living standards between the two sectors. In some countries, however, and especially to man construction works in remote areas measures to improve condition of work, pay and housing and to replace traditional social security institutions, will be needed to attract workers.

The Regional Location of Industry—The regional location of industry is vital since most countries have lagging regions in which public expenditures must anyhow be undertaken, but where they cannot be effectively used, nor adequate employment opportunities be created, unless industry is developed on the basis of processing local mineral and agricultural products and serving the nation-wide market. The creation of one or more "growing points" in such regions may require special government initiatives. The greater regional dispersion of industry may however, economise on private and public investment otherwise needed to alleviate congestion and expand facilities in existing overcrowded industrial centres. It will also diffuse industrial knowledge, skills and techniques and a sense of progress among a larger number of the population.

Vertical Mobility—"Vertical" mobility to higher levels of skill and responsibility is retarded mainly by

the lack of educational and training facilities for all levels of skill. International Labour Organisation activities in these fields are particularly valuable and should be greatly expanded. Priorities in training should be established to meet the needs of the particular country's general development programmes, based on an assessment of specific manpower requirements at various levels of skill for each development project. The training of teachers and instructors deserves specially high priority.

Social and Institutional Barriers to Mobility—Social and institutional barriers to mobility can be reduced through government example and legislation concerning various types of discrimination, undesirable recruitment practices and forms of employment, and the development of public employment services. The achievement of higher levels of employment will itself contribute significantly to a reduction of these barriers.

International Aspects of Employment Creation of International Trade Factors—Countries seeking a more rapid rate of growth of output and employment must expect a rapid increase in the demand for imported capital intermediate and consumer goods. Measures are, therefore, needed to stabilise and to raise export earnings, to economise the use of foreign exchange and to increase the inflow of foreign capital. Unstable and inadequate export earnings reduce a country's capacity to maintain a high and stable level of investment and to create employment opportunities. The exports of developing countries have been hampered during the fifties by a worsening of their terms of trade and in some cases by the inflationary effects of development policies and by taxation of exports to finance development. Developing countries may tend to under-rate the longer-term economic advantages of the export sector and shift resources into less efficient sectors, so reducing employment opportunities and stimulating inflationary pressures. Measures to expand export earnings include an increase of export production by raising productivity and employment therein. Measures to economise the use of foreign exchange include import controls which can reserve an increasing proportion of foreign exchange for capital and intermediate goods without reducing the aggregate volume of international trade. Expanding agricultural production can reduce food imports. Instability of export earnings can be mitigated and offset by economic stability in the developed countries, by international commodity agreements and by individual and collective action by the developing countries supported by short-term financial assistance from international institutions. For example, compensatory financial assistance from international agencies might be provided to offset the retarding effect of sharp fluctuations in exchange earnings of primary producers on the implementation of development programmes. Export prospects could improve by reduction in the level of agricul-

tural production in developed countries, in their revenue duties on primary products, and in their quantitative restrictions on imported mineral products, and by the avoidance of any special measures to encourage the development of synthetic substitutes. Developed countries can benefit their own consumers and producers, as well as the less developed countries, by facilitating the adaptation of their own production to increased imports, of manufactured as well as of primary products, from developing low-income countries. Trade agreements at various levels can encourage developing countries to establish efficient specialised production for export.

The International Flow of Capital—Capital imports help to create employment opportunities by raising the level of investment that can be achieved. They should be greatly expanded, in association with technical assistance to increase the absorptive capacity of developing countries. All existing channels of international capital flow, and some new ones, should be exploited intensively, with special stress being laid on loans and grants which will raise employment, in allocating new loans or grants, special consideration might be given to countries that have specially difficult employment problems or are making special efforts to overcome them. Foreign investors should be encouraged to employ and train local staff including management personnel, and to subcontract to local producers. In view of the special importance of the supply of consumer goods, including food, to employment programmes, an international effort to make surplus food available to countries undertaking such programmes would be of the greatest value. There is room also for a "surplus equipment programme" of a counter-cyclical nature, under which developed countries might produce and store standard types of equipment for purchase as required by developing countries.

Technical Assistance—In the field of technical assistance, programmes for improving training at all levels are of great importance. They should include, besides vocational training for workers, training for instructors, supervisors and technicians, and the development of managerial knowledge and skills, with special attention to productivity improvement and labour-management relations. Wage policy, manpower surveys and the development of labour-intensive techniques and capital-saving innovations are other matters in respect of which technical assistance may be of vital importance for employment policy. Appropriate international agencies can also assist the achievement of employment targets by adequate investigation of the nature of the employment problem by analysing the manpower requirements of development programmes, by helping to stabilise primary export earnings, by studying the factors which bring about reductions in birth rates and by developing methods of family planning suitable to the conditions and values of individual developing countries.

Clive Street Gossip

"I must have liberty
Withal, as large a charter as the wind
To blow on whom I please"
—As You Like It.

I DON'T know whether I am technically or otherwise qualified to congratulate the Indian team that just failed to get atop the Everest being beaten by adverse weather conditions in the last lap. I come from a part of the country where there are no mountains to speak of. (In her recent book, Monica Felton quotes Rajaji as saying that two boys from my district were actually frightened when they saw the hillocks near Madras, none of which was above two thousand feet above sea level. These two would probably have been frightened even of mice, but one sees the geographical point.) However, the mountains I have seen in my time, including the Himalayas, have inspired diverse emotions in my breast but a desire to climb them has never been one of them. This is not to say that my reactions to them have been trivial: indeed quite the reverse is the truth. I have found their awesome beauty immaculate and inviolable and the celebrated answer "because it is there" to the question why one should want to climb the Everest is non sequitur as far as I am concerned. I don't want to be taken for a sybarite incapable of valuing the qualities of endurance, grit and courage that mountaineering, especially Himalayan mountaineering, involves. But the mountain as a challenge is beyond my probably lazy ken. though its awesome beauty is most certainly not. It does not inspire my fighting instincts. On the contrary, the nearest description is of my feeling for a mountain is the theologian's "numinousness", a sense of one's comparative insignificance. I daresay all this smacks of the Pathetic Fallacy, the tendency to invest natural phenomena with human attributes, but so does the concept of the mountain as a challenger. Particularly odious do I find some of the terminology of mountaineering, which talks of conquest and assault, which latter word when used in connection with peaks with feminine names has unfortunate associations. In a sense, I am even glad that the Indian team went as near the top as they did but had to turn back. It showed a proper respect for the man-power requirements of development programmes, by helping to stabilise primary export earnings, by studying the factors which bring about reductions in birth rates and by developing methods of family planning suitable to the conditions and values of individual developing countries.

quer him only if he wishes to. Otherwise, he sends his blizzards to drive you back.

It is getting so that no one will be able to open his mouth these days without stirring a hornet's nest. I have read the full text of Mr B. K. Nehru's much-maligned television interview and I cannot see that he has said anything that others have not. At least part of the objection seems to be the audience to which it was addressed. There are certain things that one tells one's wife that one doesn't tell one's neighbour. This is a rather naive objection even in domestic contexts these days, considering how thin the wall is that separates our flat from our neighbour's. In international contexts it is even less tenable. The two "offending" passages in Mr Nehru's interview related to India's military strength and American reflexes—most of them, conditioned—to the name of Mr Krishna Menon. Neither of them is, in their broad essentials, a secret. As regards the first, as Mr Krishna Menon himself pointed out during the defence debate, being equipped is a relative concept and in one sense no army in the world is really equipped for its tasks, for in that case they would not be re-equipping themselves constantly. And in the context in which Mr Nehru spoke of it, he was trying to justify India's desire to purchase arms from whatever quarter it could. Even more unfair is the criticism of Mr Nehru on his alleged remarks on Mr Menon. He was asked whether he would comment on the views of some Senators who related the aid-cut to Mr Menon's personality. Mr Nehru replied in effect that Mr Krishna Menon's personality was irrelevant to the issue. What was relevant was Indian policy and he complained that the Americans who were obsessed with Krishna Menon's manner in the United Nations could not put their finger on precisely what they objected to in the policy that he expounded. In his preliminary clearing of the ground to make this point, Mr Nehru referred to Mr Menon's American reputation. It has been unfairly assumed that Mr Nehru shared the American view of Mr Menon. It is not at all so. It was merely an argumentative ploy in which he pointed out the illogicality of the rather elementary reaction

to a person rather than to a policy. It is ironical that Mr Nehru's performance which was considered by the interviewers a triumph of parrying of leading questions should be considered in India a monumental diplomatic gaffe and worse.

The last shred of pretence has been dropped. Communist China has indicated in its latest note that it has never accepted unreservedly Indian claims of sovereignty over Kashmir. I really cannot be sure at this distance, but I seem to remember that around 1956 Chou was quoted as saying that the people of Kashmir had already expressed themselves to whom they would rather belong or words to that effect. But that perhaps is neither here nor there for those were days when Hindi and Chini Bhais were slapping each others' backs. In politics, especially when you are dealing with the Chinese, it is what they now say they then said that counts. Of course, the stand the note takes is implicit in the very fact of negotiation with Pakistan over the demarcation of boundaries in parts of Kashmir in the illegal occupation of Pakistan. Even so, as a formal avowal the note is important. The note adds virtuously that Pakistan and China have agreed that any arrangement they may come to is provisional and contingent on acceptance by the country that may ultimately be declared the "owner" of Kashmir. It is difficult to see the urgency for a settlement that is admittedly not final. Considering that China protests its neutrality over the question of "ownership", and therefore does not think that Kashmir is part of Pakistan, it is not clear what legal basis there is for the negotiation. Even the dictum of possession, being nine points of the law is not applicable in this case, for possession in the strict legal sense is certainly not a correct description of Pakistan's status in occupied Kashmir, which is at best that of a trespasser. But these are legalistic irrelevances since China's sole purpose in resorting to this new tack is to embarrass India and foul up the already muddy relations between India and Pakistan. And Pakistan for reasons only too obvious is playing up. Only it does not realise that it may be playing into Chinese hands. For a nation that has treaty obligations to contain Communism, Pakistan's flirtatious ventures with Communism is certainly an odd spectacle but then Pakistan will gladly risk any indiscretion to spite India. With monstrous brass, China accuses India of trying to play Pakistan against China and even more mischievously of having

big power designs on her neighbours knowing that this particular falsehood has some receptive ears in Nepal. But there is something even more important than all these. I do not know what Kremlinologists will make of the latest Chinese note. But it does seem an odd commentary on the expert view canvassed most recently that some kind of Sino-Russian rapprochement is under way. Here is China openly avowing an international stand completely at variance with that of the Soviet Union. It is impossible to dismiss this difference as peripheral. Apart from ideology, Russia has traditional strategic interests in the region in dispute and compounding with Pakistan is the last thing that Russia (which has not forgotten Pakistani embroilment in the U-2 flight) is likely to forgive. That being so, the latest Chinese note is as much a shot in the exchanges with Russia.

A welcome piece of news from the Soviet Union is the recognition for the first time of authors' and artists' copyright in their works provided in the new Soviet Civil Code. A Tass report says that the protection will be available to both Soviet and foreign authors. Receipt of royalties on one's literary property in circulation in the Soviet Union has been till now a chancy business. Some managed to collect them while others were scandalously balked of their legitimate dues. The expropriation was particularly odious because it was the State that was guilty of it. Some three years ago, Adrian Conan Doyle, Sir Arthur's son, even took the matter to court in the Soviet Union, though I can't recall with what outcome. The most outrageous instance was the treatment of the American musical "My Fair Lady" based on Shaw's Pygmalion. Its co-authors, Alan Lerner and Frederick Loewe got a letter from the intending Soviet producer informing them that the script had already been translated but he was handicapped by the lack of the orchestral score: would they be kind and let him have it? Of course, if they wouldn't, he would be obliged to reconstruct the score from the recording he had of the New York production. Lest the American authors should have any funny ideas of going to court, he was good enough to inform them that he was "afraid that they will not be able to benefit from the copyrights, as no agreement has been concluded on this subject between the United States and the USSR". Such brazenness may infuriate you, but that was certainly the correct legal position for the Soviet Union was not a party to either the Berne or the Universal Copyright Convention of 1955. The new law apparently changes all this which is a splendid thing.

(From Our New Delhi Correspondent)

Economy in Plan Projects

THE need for the utmost economy in the implementation of Plan projects, was stressed when the Planning Commission met the State Chief Ministers last Monday. In this connection it is learnt that a Committee for Reduction of Construction Costs is being set up in the Planning Commission, under the Chairmanship of Dr A. N. Khosla. The Committee, which will include the heads of the principal construction organisations, will be assisted by a special unit for Cost Reduction Studies which it is proposed to set up attached to the Committee on Plan Projects. The Planning Commission has suggested to the State Governments that each State should have a Committee for Reduction of Costs which will keep in touch with the action taken by the various agencies in implementing proposals for economies in construction, and will also review from time to time further action that may be required. State Governments have also been asked to report on action taken by September next as well as to arrange for progress reports at intervals of six months.

It has been estimated that, if it were possible to reduce costs of construction by 10 per cent over a wide range of constructions during the Third Plan, the resulting economy will be of the order of Rs 360 crores. The establishment of special cost reduction committees in the Planning Commission and in the States, it is felt, has become necessary to follow up the action taken on recommendations for achieving economies in construction. Suggestions in this regard were made as early as October 1959 in a Planning Commission circular to State Governments. Recently the subject has been further examined by a Group under the Chairmanship of Dr A. N.

MARTIN BURN LIMITED

NOTICE.

LOST—Allotment Letter No. 0/8289 for 10 ordinary shares in the Company issued in the name of Mr. Lalchand Sarangi (now deceased) has been reported as lost. An application for the issue of the relative Certificate for the said 10 ordinary shares Nos. 171281/290 in the name of the Allottee without production of the Allotment Letter has been received from the legal representative of the deceased shareholder. Notice is hereby given that the issue of the relative Certificate for the shares will be considered unless valid objection is received by the Company within one month from date.

12, Mission Row, A. G. GIDLEY,
Calcutta. Secretary.
Dated 1st June, 1962.

Khosla, and a memorandum on their findings has also been circulated among Central Ministries and State Governments. The memorandum points out that there is scope for economies in almost every project and at each stage of construction. The measures recommended relate to restriction of construction to inescapable items of the programme, standardisation of austerity designs, with simple inexpensive architectural treatment, maximum utilisation of designed space, economy of land utilisation in large towns by resorting to multi-storeyed construction and continuous improvisation for economy consistent with structural efficiency and functional needs.

Delay in Steel Programmes

Mr N. N. Wanchoo, Secretary of the Ministry of Steel, gave an indication at a press conference last week of the changes in the timetable for expansion of steel output. He admitted that there was likely to be a set-back of about a year as compared with the original schedule. Judging by past experience, it usually takes two and a half to three years from the date of placing of orders to bringing the expanded unit into production. In the case of Bhilai, the agreement on the expansion scheme was signed in last February and work is now in progress. For Durgapur Steel project expansion, as well as for Alloy Steel Plant, tenders were invited in April. Allowing three months for receipt of quotations and another five months for processing, it took up to eight months from the date on which tenders are invited before orders are placed on suppliers.

As regards Rourkela, Mr Wanchoo said that tenders have been invited and quotations have also been received. He hoped that it would be possible to place orders in the next few months. It now appears that placing of orders and start of work on the expansion scheme are likely to be held up for a longer period than indicated by Mr Wanchoo, if the West German Government defers commitment of assistance for the expansion scheme till after the Rourkela plant achieves its present installed capacity of one million tons a year.

Mr Wanchoo stated at his press conference that it was hoped that Rourkela would achieve "a reasonable level of production before the end of this year, as a result of the remedial actions that were proposed to be taken. One of the main objects of the Indian Delegation led by Mr Wanchoo, which recently visited Bonn, was to discuss with the West German Government the measures necessary for bringing Rourkela into full produc-

tion in the light of the advice given by the German experts who had visited Rourkela as part of the Delegation led by Mr Solveen of the German Economic Ministry. By and large, there was agreement on the measures to be taken, although details of these measures and the estimates of cost have to be worked out further. Among the main measures recommended are the building up of adequate stocks of spare parts so as to improve maintenance, some additions to the workshop equipments and in the transport facilities, and the recruitment of an extra number of technical personnel from abroad, about 40 or 50, in addition to what Hindustan Steel has already decided upon: (The Minister for Steel and Heavy Industries last week gave Lok Sabha the figures of foreign technicians employed in the three steel plants which is of interest in this context. In Bhilai there are 152 foreign technicians all from the USSR. In Durgapur there are 141, of whom 140 are from the U.K. and one is from Australia. The figure for Rourkela was 174, consisting of 155 Germans, 3 Italians, one Austrian and 15 Americans. Already Rourkela has the largest contingent of foreign technicians. As the result of the measures agreed upon to put the works in order, the number may increase to 224).

The German experts had found that the maintenance of the plant had been below par and that full production could not be achieved in a number of sections because of either lack of adequately qualified technical personnel or some deterioration in the quality of the raw materials used. The deficiencies in the transportation system within the plant have also been stressed. There is also recognition in the report that some part of the equipment supplied by the German firms had not performed fully to expectations. Mr Wanchoo added that it was for Hindustan Steel to pursue this matter with the suppliers in the normal way.

A rough estimate of the cost of the remedial action proposed to be taken is about 50 million DM or Rs 6 crores, of which approximately three-fourths will be for building up of spare parts and wages of personnel to be employed, neither of which said Mr Wanchoo, is of a capital nature. Other equipment to be purchased does not amount to a very large sum.

Regarding Bokaro Mr Wanchoo said that the total time for completion of the techno-economic survey by the U.S. team, which was expected to arrive on June 21, was not likely to exceed seven months. The actual decision on financial aid for the project will be taken after the study team has submitted its report. Mr Wanchoo also declared that the Ministry of Steel was proceeding on the assumption that the requisite aid for the project would be forthcoming and that Dastur and Co. who have been appointed Consultants to the Government of India, have been asked to go ahead with the preparation of the detailed project report. Regarding the question of American equity participation in the Bokaro project, Mr Wanchoo said that it had been made clear

in the course of the recent discussions he had in Washington that "present" there is no such proposal for any equity participation. The scope of the techno-economic survey would be confined to appraisal of the suitability of Bokaro as a go-site. The team will examine the processes that have been recommended for Bokaro, the availability of raw materials and transport and the general economics of the project.

Work Load of Railway

Attention was drawn during question hour in Lok Sabha on 25 May to the increased work-load of the railways. From the statement placed on the table of the House in answer to a question by Mr H. C. Mathur, it is evident that the work-load has increased on an average by about 37 per cent as compared with 1954. The indices of work-load were calculated by the Efficiency Bureau in their studies of 1954 and 1961. The figures are as under:

Railways	Index of work-load 1954	1961
Central	128	180
Eastern	213	150
and South-Eastern	...	136
Northern	128	175
North-Eastern	114	85
and North-East Frontier	...	60
Southern	132	180
Western	105	160

It is pointed out that none of the indices shows wide departure from the ex-E.I. Railway index of 164 which was accepted by the 1954 study as being reasonable.

Regarding the effect of increased work-load on operational efficiency, the Statement says that the composite operating-cum efficiency indices based on the generally accepted statistics of operational performance, with 1938-39 as base (100), has shown a persistent improving trend and reached the record figure of 115 in 1960-61. This, the Statement points out, is an indication that the increasing work-load is being discharged effectively by means of various organisational and operational improvements.

Since the commencement of the Second Plan, the strain involved in the execution of works, has been considerably reduced by the setting up of separate, and almost parallel, construction and project (civil engineering) organisations on most of the Railways. There has been considerable strengthening at all levels in other departments also, including the provision of a second Deputy General Manager in addition to the Senior Deputy Manager for the General Managers for the larger Railways, the provision of an additional Deputy Chief Operating Superintendent on each of the larger Railways for Planning, and of an additional Deputy Chief Commercial Superintendent 'Development' also for most of the Railways. This along with the setting up of the divisional organisations on the larger Railways and the increasing delegation of authority to lower levels, has helped to ease the work-load on Railways. Modernisation of

9 June 1962

signalling, traction and other equipment, and improved operational measures generally have also helped the Railways in the effective handling of the increased traffic.

Regarding the basis governing the matter of administrative organisation of railways into zonal systems, the Statement quotes the observations made by the then Railway Minister during the reply to the Budget debate of 1960-61 in the Rajya Sabha. "The creating of a new zone", the Minister said, "depends upon the operational needs of the Railways and where the Railways feel that, in the interests of the railways, the creating of a new zone in certain areas is necessary, that matter will be considered."

It was on the aforesaid considerations that, after the initial regrouping in 1951-52, the former Eastern Railway was bifurcated into the present Eastern and South-Eastern Railways from 1 August, 1955, having regard to the work-load expected to devolve on these Railways in these areas in the Second Plan period. Similarly the former North-Eastern Railway was bifurcated early in 1958 into the present Frontier Eastern and North-East Frontier Railways.

West Coast Road

The West Coast Road linking Panvel in Maharashtra to Chailiseri in Kerala is expected to be completed by the end of the Third Plan. The road when completed will provide all-weather road communication from Bombay to all important towns on the West Coast. The West Coast Road will pass through the States of Maharashtra, Mysore and Kerala and will have a total length of 723 miles. [The road from Bombay to Panvel in Maharashtra is part of National Highway No. 4 and is already fully developed. Bombay is connected to Panjim in Goa via Panvel-Ageri (Sawantwadi)-Dodamarg. The portion from Panvel to Akeri has also been constructed and improved as part of the West Coast Road Project. The project is estimated to cost Rs 11.64 crores. Though the development of the Road was primarily the responsibility of the States through which it passes, the Government of India in 1955 decided to meet the development expenditure from central funds as the State Governments were unable to develop the road. An expenditure of Rs 374 lakhs had been incurred till the end of the Second Plan and the balance will be spent during the Third Plan. The estimates of all important bridges have been sanctioned by the Government of India and the work on the construction of new mileage, improvement of existing mileage and construction of bridges is in progress.

Fall in Small Savings

Small savings which amounted to Rs 104 crores in 1960-61 declined to Rs 90 crores in 1961-62. Referring to this fall in the net total of small savings, in the course of his address to the joint meeting of the National Savings Central Advisory Board and Chairmen of the State Boards, the Finance Minister expressed the hope

that this would be the last such experience for the Savings Movement. Mr Desai said that our development depended on our own strength and our own effort. Small savings, he emphasised, were an indication of how much effort the people put in and wanted to put in.

The steady progress of the Pay Roll Savings scheme was referred to by Mrs Tarkeshwari Sinha, Deputy Minister for Finance, who is also Chairman of the Central Advisory Board, in her speech to the meeting. The scheme, started barely three years ago, had been established in

7,657 establishments and the number of regular savers had increased to over 220,000 with total monthly subscriptions of Rs 12.5 lakhs.

The Deputy Minister also announced that Government had decided, effective from 1 June, 1962, to increase the rate of commission on 10-Year Treasury Savings Deposit Certificates and 15-Year Annuity Certificates from $\frac{1}{2}$ per cent to 1 per cent. The rate of commission on the deposits made in the Cumulative Time Deposit Accounts through the Pay Roll Savings Scheme is also being simultaneously increased to

one per cent. This would mean that, except in regard to collections for the Post Office Savings Bank, the rest of the investment secured through the Pay Roll Savings Scheme will be eligible to a commission at a uniform rate of one per cent.

The broad outline of the new prize bond scheme under which, the bonds to be issued in two denominations of Rs 100 and Rs 10, would in addition to prizes also carry a small premium, was also announced at the meeting by the Deputy Minister.

The Third Five Year Plan
Bird-Heilgers' part in it

Rs. 1900 CRORES FOREIGN EXCHANGE BILL FOR THE THIRD PLAN

The foreign exchange bill for the Third Plan is the highest ever—more than Rs. 1900 crores. Clearly, the economy's pressing need is to find means of earning and saving more foreign currency. To bring this about, the Third Plan is implementing a clear-cut policy: stepping-up exports, cutting down imports. To stimulate exports, controls on most products have been relaxed, export duties abolished or reduced, promotion councils set up and trade agreements concluded with 25 countries.

Export—a priority with Bird-Heilgers

Among export commodities, jute is high on the list of the Plan's priorities—and tops the list of Bird-Heilgers exporting activities. Between 1957 and 1961 the group's exports of jute earned well over Rs. 94 crores—a significant addition to India's foreign exchange earnings. During the Third Plan, the group hopes to better this effort by intensifying and widening the scope of its export drive.

Towards a self-generating economy...

A phrase on everyone's lips. A phrase

that finds concrete expression in the urgent activity of an economy on the move. Bird-Heilgers reflects the nation's striving. The group delivers millions of tons of basic materials to the new blast furnaces. It produces jute goods, paper and board, air compressors and springs, and engineering and water treatment equipment. A project for the manufacture of coal washeries was the first in India. Planned diversification finds the group engaged in shipping, insurance, exporting and importing. Its agency department handles everything from heavy capital equipment to light consumer goods.

...and an exciting, promising future

The Five Year Plans are a challenge. Existing industries must expand, new industries open up, per capita income increase. India needs more goods and services than ever before. Bird-Heilgers is alive to the problems of a growing economy. The group deploys the full potential of a century's resources, technical knowledge and executive skill to increase and broaden its activities...earn and conserve foreign exchange...join the national drive to economic independence.

Markets

JUTE Firm Trend in Hessian

Steady conditions have continued to prevail in the jute goods market during the week ended Wednesday, especially in respect of hessian. Although no fresh overseas enquiries were reported it would appear that business already concluded would require much more hessian than is likely to be available from month to month as current stocks with mills are quite meagre and the scope of sizable increase in the production of this category of goods too is limited by the fact that maximum spinning capacity of mills has already been reached. If absence of fresh enquiries has not affected sentiment it is because sizable business has been concluded in recent weeks with deliveries extending up to the next six months and more. Apart from the actual business that had passed, the market is anticipating further sizable enquiries not only from the US but also from Argentina which is expected to enter the market in the near future for its pent-up requirements. Bullish fervour has been further strengthened by the fact that even while Indian hessian's regular customers were placing their orders, there were indications that several continental consumers were interested in this category of jute goods. It would however appear that this state of affairs may not last long in view of the growing competition from Pakistan. The Pakistani industry has now several advantages over the Indian Mills. In the first place mills in Pakistan get their raw jute supplies at a much cheaper price apart from the fact that the quality of the fibre is superior. It has been pointed out by the IJMA that compared with the present minimum price of Rs 30 per maund the ruling price in Pakistan is substantially lower for the same quality of jute. Moreover the Pakistani jute industry has the added advantage of an export bonus scheme. It is estimated that the difference in the costs of raw material works out over Rs 300 a ton in Pakistan's favour.

The jute goods market opened the week on a steady note with interest mainly confined to ready and near delivery hessian which is in short supply. Although mills sold June hessian, the undertone continued to be steady. In earlier dealings on Monday prices appeared to react but the phase proved to be a temporary one as by close bear covering imparted fresh strength to the market. Hessian firmed up further on Tuesday mainly due to short covering in ready and near delivery positions. At close on that day Hessian 40"x10 oz June improved to Rs 58.25. In this sector the demand is still mainly concentrated on ready and near delivery goods as will be evident from the wide spread between near and distant deliveries. While Hessian 40"x10 oz June and July/September were quoted on Tuesday at Rs 58.25 and Rs 54.24 respectively, the quotation for October/December delivery was placed at Rs 51.50.

Sackings were however a dull market in the absence of sustained buying support. Although here too there are hopes of increased buying from Australia and Cuba, the competition from Pakistan in overseas markets is acting as an effective break on any uptrend in prices. The imposition of excise duty is a deterrent on expansion of internal consumption. However B Twills June has gained but this improvement is mainly in sympathy with hessian. The spread between near and distant deliveries for B Twills has narrowed down to less than a rupee. While B Twills June was quoted on Tuesday at Rs 124.50, B Twills Oct.-Dec. was placed at Rs 123.75. The raw jute market continued to rule steady although business passing was on a moderate scale. The outlook for the next jute crop is assessed to be quite bright as the early onset of the monsoon will be beneficial to the new crop. Although the acreage will be sizably reduced, the total outturn next season is expected to be quite large in view of the improvements that had been effected in the cultivation of jute by the use of improved varieties of seeds, extensive use of fertilizers and the adoption of more efficient agricultural practices. Even now prices are somewhat below the minima but there does not appear to be any tendency on the part of traders to dispose of stocks at greatly discounted rates. There is a belief in certain quarters that there will be a much bigger surplus than has been officially estimated at the end of the current season. This together with the bright prospects for next crop would have depressed prices. If prices have been well maintained since last week it is to be attributed to the revival of confidence among traders that Government will ensure that raw jute prices are kept at around the minimum price level of Rs 30 per maund basis Assam Bottoms.

The jute goods market opened the week on a steady note with interest mainly confined to ready and near delivery hessian which is in short supply. Although mills sold June hessian, the undertone continued to be steady. In earlier dealings on Monday prices appeared to react but the phase proved to be a temporary one as by close bear covering imparted fresh strength to the market. Hessian firmed up further on Tuesday mainly due to short covering in ready and near delivery positions. At close on that day Hessian 40"x10 oz June improved to Rs 58.25. In this sector the demand is still mainly concentrated on ready and near delivery goods as will be evident from the wide spread between near and distant deliveries. While Hessian 40"x10 oz June and July/September were quoted on Tuesday at Rs 58.25 and Rs 54.24 respectively, the quotation for October/December delivery was placed at Rs 51.50.

"ACHIEVEMENT AUDIT" OF JUTE DEVELOPMENT EFFORTS

A study in the nature of an 'achievement audit' of the jute development efforts in India under the First and the Second Plan has been undertaken by the Economic Research Directorate of the Indian Central Jute Committee. Initiated by the Planning Commission, the study will probe the jute development measures which have succeeded and assess their specific contribution towards increased production and will also find out why certain other measures have failed with a view to deducing constructive lessons for future guidance. The success or failure of the measures adopted in the two Plan periods will be investigated in relation to fertilizers, seeds, cultural practices, plant protection measures, retting facilities, etc.

The survey will not only measure the gap between availability and requirements but will also focus attention on the problems of supply, pointing out misallocation of resources, if any—certain areas getting too much, others too little and too late. In course of investigation of the causes of high and low yield rates it is proposed to go into all relevant aspects of geography and economics such as the influence of soil and climate as also of transport and marketing problems on particular production and yield patterns. This will entail an analysis of the price level, price policy and its impact on production.

The total requirement, both qualitative and quantitative, of raw jute and mesta by the jute industry at the end of the Third, Fourth and Fifth Plan will also be estimated having due regard to the rate of growth of demand for export purposes and that for internal consumption, the extent of competition from Pakistan and other substitute fibres, and the industry's minimum import requirement. The study will include a review of the research work done in India during the past two Plan periods and its actual field application in respect of fertilizer trials, breeding, interculture, pesticides, weedicides and fungicides, and retting. The long-term objective of studies of this kind is to determine the optimum production potential of the different jute growing States and of different regions within the same State through a more efficient utilization of land and other resources and on that basis to draw up a programme of the appropriate developmental and administrative measures that will be needed in future in respect of the main factors of production.

★ IMPROVED JUTE SEED

Irrespective of the contribution of other factors of production, use of improved jute seeds alone, it has been definitely established, will yield

an additional two maunds of dry fibre per acre.

Of the two improved White varieties, one is claimed to be ideally suited for the double-cropped low lands in early rainfall areas. It is early maturing and high yielding and can be harvested well in advances of the transplanting of aman paddy. The second White variety, which excels in fibre quality, is recommended for the medium and high-land areas.

The improved Tossa variety, to be sown after mid-April in lands of an types above flood level, has been found to give the heaviest yield.

TEZPORE TEA COMPANY, LIMITED.

Notice is hereby given that the Forty-fourth Annual General Meeting of the Members will be held at the Registered Office of the Company, No. 4, Bankshall Street, Calcutta, on Friday, the 29th June, 1962, at 3-30 P.M., for the following purposes:—

- (1) To receive and adopt the Directors' Report and the Audited Accounts for the year ended 31st December, 1961.
- (2) To declare Dividends.
- (3) To elect a Director.
- (4) To appoint Auditors and to fix their remuneration.

The Transfer Register will be closed from the 22nd June, 1962 to 29th June, 1962, both days inclusive.

N.B.—A Member entitled to attend and vote at the Meeting is entitled to appoint a Proxy to attend and vote instead of himself and the Proxy need not be a Member of the Company.

By Order of the Board,
SHAW WALLACE & COMPANY
LIMITED.
Managing Agents,
Calcutta, 23rd May, 1962.

STATE BANK OF INDIA

NOTICE IS HEREBY GIVEN that a Local Meeting of the Shareholders of the State Bank of India on the Branch Register of Shareholders kept at the Calcutta Local Head Office of the Bank will be held at the Calcutta Local Head Office, No. 3, Strand Road, Calcutta, on Wednesday, the 11th day of July 1962, at 4 P.M. Standard Time for the purpose of electing a person to be a member of the Local Board, in pursuance of Regulation 50(1)(a) of the State Bank of India General Regulations 1955, to fill the vacancy caused by the resignation of Shri K. K. Birla.

B. VENKATAPPAH
Chairman.
Bombay, 30th May 1962.

TEA

Good Demand for Dusts

At this week's internal sale in Calcutta there was good demand for Dust teas although prices realised were mostly easier. There were approximately 29,700 packages on offer which met with a good general demand. Orthodox Dusts were irregularly easier as were the limited quantity of Legg Cuts. Clean CTC were in good demand though prices realised were easier. Fibrous sorts continued to be once again much easier. Although Good CTC types came to a ready market, rates were easier than previous valuation. Quotations inclusive of excise duty were as follows: Plain Orthodox Dust Rs 2.80 to 3.00; Medium Assam Dust Rs 3.10 to 3.40; Medium Assam CTC Dust Rs 5.20 to 5.50.

THE INDIAN STANDARD WAGON COMPANY LTD.

NOTICE

NOTICE is hereby given that the Annual General Meeting being the fortythird Ordinary General Meeting of the Company will be held at the Registered Office, 12, Mission Row, Calcutta, at 11 a.m. on Friday the 29th June, 1962, for the following purposes:

1. To receive and adopt the Audited Accounts for the year ended 31st March, 1962 and the Directors' and Auditors' Reports thereon.
 2. To declare dividends.
 3. To appoint Directors in place of those retiring.
 4. To appoint Auditors and fix their remuneration.
- The Registers of Members and Transfer Books of the Company for both Ordinary and Preference Shares will be closed on Tuesday the 5th June, 1962, Friday the 29th June, 1962, and the following days inclusive.

A member entitled to attend and vote at the meeting is entitled to appoint a proxy to attend and vote on a poll instead of himself and a proxy need not be a member.

By Order of the Board
MARTIN BURN LIMITED
ROMEN MOOKERJEE
Director
Managing Agents

Registered Office:
Mission Row,
Calcutta, 2nd June, 1962

5. The Dividends if sanctioned, will be paid on or after 2nd July, 1962, to those shareholders so entitled whose names appear in the Company's Registers of Members on 29th June, 1962, or to their mandatees.

At this week's export sale in Cochin 7,23,00 kg of leaf tea were offered for export. There was a general fair demand but the quality on offer was inferior. Low Mediums and Mediums came to an active market but were irregularly lower up to 25 nP a kilo. Good Mediums however ruled barely steady. An easier trend prevailed in high grown Broken while similar Fannings encountered an easy market. Demand was poor in the case of unorthodox descriptions.

COTTON
Heavy
Fluctuations in
Futures

The cotton futures market fluctuated rather heavily last week. In earlier dealings sentiment became bullish on the belief that in view of the stringent foreign exchange position, further imports of cotton would become increasingly difficult. The bull operators were encouraged by the adjournment of the Aid India Club as they seemed to interpret the event as an indication of further delay in the receipt of foreign aid for the Third Plan. But by mid-week however the bullish enthusiasm received a set back in the shape of the finalisation of the trade agreements with Pakistan. According to the trade agreements finalized in New Delhi last Saturday, India will import 100,000 bales of cotton worth Rs 5 crores from Pakistan and will supply in return to Pakistan 130,000 tons of coal per month. India has increased the import of cotton from Pakistan from Rs 1.5 crores last year to Rs 2.1 under the limited payments arrangements. This arrangement enables India to pay for imports in rupees. The news of the finalisation of the Indo-Pakistani agreement for import of 100,000 bales of cotton as is to be expected, depressed sentiment in the futures market. Jarilla March which after touching a high of Rs 716.25 earlier in the week came back to Rs 713 by Saturday, lost further ground on Monday to be finally placed at Rs 710.25. The trend however was reversed the very next day and the bullish trend stemmed from the delay in the onset of the monsoon in the cotton growing areas and the rather small allotment of the advance quota of Pakistan cotton. In earlier dealings the rate moved up sharply to reach almost the high of the previous week. However the higher levels attracted profit taking with the result most of the earlier gains was erased. A steady trend however prevailed in the spot market with interest mainly centred on quality cotton.

SUGAR & GUR

Slack demand from outstations and selling pressure by mills accounted for easy trend in prices of sugar in Hapur during the past week and mill delivery prices of D-29 and E-29 quality—mostly inferior—eased by about 50 nP per maund, but prices were still higher than former controlled ones, by about Rs 2 a maund. Inquiries for forward dealers were also poor due to uncertainties in price trend. Spot delivery prices eased by about 75 nP per quintal.

Buyers' resistance for any substantial deals and mills being eager sellers accounted for easy trend in Muzaffarnagar market also during the week. Several mills were still holding quotas of even last month's release. Practically all the factories were reported to have closed their production season in this part of the country while in east UP production would continue to the end of the month thanks to good cane supplies although sugar recovery percentage has gone down much.

Khandsari prices, however, stayed steady thanks to demand from Punjab and Rajasthan and besides seasonal local demand was also on the increase. Prices, however, did not show any appreciable change.

Gur prices ruled quiet and due to revival of loading facilities, offtake in weekend was six wagon loads. To Gujarat side and local stock is now poor around 10,000 maunds, corresponding stocks last year being heavy around 40,000 maunds. Shaker stocks with trade were now poor and prices stayed steady thanks to good demand.

Gur prices were depressed in the Muzaffarnagar market as demand was slack. Total gur and shaker arrivals there during current season were around 14.40 lakh maunds as against 13.67 lakh maunds, during full season last year and stocks now were put at 1.15 lakh maunds.

Gur futures declined sharply. Cane crop prospects were still uncertain as crop had been adversely affected by pest, but prospects would now depend on the monsoon.

FOODGRAINS

Wheat prices in Hapur were lower than last week but the expected decline in rates did not take place presumably because arrivals had continued to be poor. It would appear that cultivators were reluctant to dispose of their stocks expecting an improvement in prices. But the general expectation is that in view of the excellent rabi crop prospects, arrivals would improve attended with a sizable decline in prices. Elsewhere the trend was irregular with prices showing an upward movement where stocks were at a low ebb and showing a declining tendency where supplies were adequate. Rice prices were steady in Hapur on good consumer demand. In other important markets too rice prices were steady to firm on good buying interest.

An easier tendency was noticeable in Gram prices in Hapur as

the market was having good stock with daily arrivals averaging 10 maunds. Of the coarse, grain barley was easier on rising stock. Jowar was steady on continuing demand from cultivators for seed purposes. Pulses were general steady with peas gaining ground on good demand. A firm trend was noticeable in arhar as arrivals were rather low.

BULLION

Divergent trends prevailed in the bullion market. While gold ruled firm throughout, silver was quiet. Gold gained fresh impetus last week from continued demand from a number of centres. Seller were reluctant to part with their stocks in expectation of further higher levels as reports indicate that supplies were much depleted owing to a sharp fall in smuggled gold. With the spot market very firm, the forward section too ruled fully steady. Conditions in the silver market however were far different from those in the gold section. In contrast to the gold market, arrivals in the silver market were far in excess of demand and that factor mainly accounted for the price decline in the section. The quiet trend in silver resulted in considerably narrowing the spread between spot and forward positions.

NON-FERROUS METALS

In the nonferrous metals market copper continued to rule firm throughout the week following sustained buying interest while supplies were inadequate to meet the demand in full. In later dealings the trend was fully firm despite the fact that buyers were reluctant to follow up the rise in rates. The international trend was not fully reflected in tin as this metal somewhat steadied up on an improvement in local buying interest. While zinc met with some demand without however much change in the price level, lead was generally stagnant.

OILS & OILSEEDS

In the Bombay Oilseeds and Oils market, irregular conditions con-

tinued to characterise trading. While groundnut showed an improvement, as also linseed, castor was easy and cottonseed was neglected. In earlier dealings groundnut continued to meet with selling pressure stemming from fears of heavy accumulation of stocks and the flooding of the market by cheap varieties. The severe disturbance caused to stock markets all over the world by the sudden crash in Wall Street early last week had its repercussion on the commodity markets also and the oilseeds market in Bombay came under renewed selling pressure for some time. But thanks to revival of interest consequent on the buying support from the State Trading Corporation, prices recovered in the futures section of the groundnut market. Besides buying of groundnut oil by the STC on export account, reports about the fixing of a higher export target for groundnut oil imparted strength to the market with the result Groundnut July showed sizable gains at one time during the week. However higher levels attracted profit taking and the rates lost some ground by close on Monday. Spot groundnut too steadied up but the possibility of sizable increase in available stocks in coming weeks on account of the nearness of the monsoon.

Linseed was another sector which developed a steady trend in later dealings mainly on account of STC buying to the tune of 1000 tons of linseed oil. The indication that concerted efforts would be made by Government to increase sizably the export of linseed oil coupled with the fact that the crop would be smaller than last year aided the uptrend in the price. Both castor and cotton seed were easy in the absence of fresh interest. Cottonseed prices reacted following heavy selling pressure from traders who were anxious to dispose of their stocks in view of the approaching monsoon.

An easier trend was observable in this week's seeds and oils market. Business was at a low ebb in groundnut oil last week after a weaker sentiment prevailing in the market. Offtake of this commodity is still poor in view of the factories preferring to be content with hand-to-mouth existence. There was also no potential offering strength in oil probably induced by an unexplained fear that the weaker sentiment would help depress prices further down. To a small extent the Wall Street collapse last week helped to weaken commodities, prices also and there were doubtless sellers at lower levels that week.

In groundnuts arrivals into the local market continues at about 50 tons daily while both North and South Arcot district centers get about 300 tons daily. The absorption of summer crop at a lower rate is fair. No old winter crop is now being offered in the local market.

In forward positions no large scale activities could be seen. July vaida remained mostly nominal.

In the upcountry markets arrivals of the summer groundnut crop were fairly steady. Due to unexpected rains this week beginning, the arrivals had a setback and from the usual 500/500 tons quantity of arrivals had gone down to 300 tons daily. But the offtake was quick. There was also no decline in price levels of groundnut in these areas. With the standing crops in Coimbatore and Pollachi are reported to be in good condition, the prospects of a good harvest may have some effects on the price of ready stock. Calcutta interests are still keeping aloof.

Only summer crop came to be offered at the market in groundnuts and they were all absorbed at Rs 65 by the middle of last week. There was an improved sentiment and at Rs 66 per 80 kgs, there were offtakes, but there was no substantial gain in the price today anti-

cipating better crops this coming season.

Groundnut oil price in the Southern centers were the same more or less with a tendency to further weakening. Groundnut oil per candy of 500 lbs was quoted at Rs 405 at Guntur Vijayawada, Rs 390 in Vridhdhachalam, Rs 395 in Nandyal, Rs 392 at Villipuram, Rs 395 at Cuddappah, Rs 390 at Pollachi, Rs 390 and Rs 395 at Tanjore and Salem respectively. Kernels per 80 kgs at Vridhdhachalam was quoted at Rs 71 Rs 69 at Cuddappah and Rs 73 at both Tanjore and Salem.

HIDES & SKINS

There was lack of demand for tanned cowhides whose arrivals were moderate in the local market. Prices were not changed and were around 65/55/50d and 47/45/43d for 5/5 lb and 8/8 lb. run, fourths and fifths respectively. The semi-premium 8/8 lb was sold at 58d,

and 44d for run fourths and fifths respectively.

In tanned cow calf market there were good demands from certain European countries like Germany and prices ruled firm. No change is reportable in the buffalo calf market.

There seemed to be good stocks in tanned goat skins and there were some price reductions. There were good American demand for 11/12 lb heavy skins. For tanned sheep skin there were moderate U.K. demand and the market was quiet.

The following were the prices of tanned skins and hides per lb:

Tanned cow prime 5/5 lb Rs 2.81 to Rs 2.87; 6/6 lb Rs 2.53 to Rs 2.59; 7/7 lb Rs 2.28 to Rs 2.34; 8/8 lb Rs 2.19 to Rs 2.22; 10/12 lb Rs 1.94 to Rs 2; Tanned cow inferior fifths 5/5 lb Rs 2.25 to Rs 2.28; 8/8 lb Rs 1.90 to Rs 1.94; 10/12 lb Rs 1.75 to Rs 1.78; Tanned buffalo 12/13 lb Rs 1.87 to Rs 1.94; 5/5 lb Rs 2.37 to Rs 2.40; Tanned buffalo calf 1 1/2 lb Rs 3.12 to Rs 3.19; Tanned cow calf 1 1/2 lb Rs 3.69 to Rs 81.

INVESTMENT GOSSIP Cautious Optimism

THERE has been a smart recovery in equity values after midweek. Even so, earlier losses have not been fully recovered. The undertone on Friday is steady in marked contrast to the weakness that characterised trading throughout the first half of the past week. It is not surprising that the downturn in earlier dealings could not be arrested as fresh uncertainties began to assail sentiment. Despite the confidence expressed in high quarters that the requisite foreign aid will be made available on time notwithstanding the inconclusive adjournment of the last meeting of the Aid India Club, the apprehension persists that maintenance imports would be adversely affected thereby leading to curtailment of production in a large number of enterprises. The erratic behaviour of Wall Street has been interpreted to mean that a recession in US is inevitable. It has therefore been argued that in case the US were to grapple with a recession, aid from that country may not be as liberal as hitherto. In the meantime, operators had been obliged to take note of the persistent rumour that the former Finance Minister would be back in the Central Government. In any event, an upward movement of prices was highly improbable for more than one reason. In the first place, investment interest was diverted to the several new issues in the market while stringent money conditions had considerably reduced funds coming into the stock market.

Surprisingly enough, the announcement of the appointment of Mr T. T. Krishnamachari as a cabinet Minister has been greeted with an improvement in sentiment. This is probably because contrary to expectations there has been no major reshuffle of the Central Cabinet. The fact that Mr Krishnamachari has not been assigned any portfolio seems to have revived confidence. However, a broadening of interest with a further improvement in equity values cannot be taken for granted because investment support may not readily be forthcoming for quite some time. There are still more new issues in the offing. There will not be much support to the stock market from the LIC as that institution will be soon preparing to subscribe to the Government loans. It is also not improbable that investors become more dis-

criminating in their support to equities, placing more emphasis on yield than on growth.

NEW ISSUE NOTES

Orissa Mining Corpn.

Orissa Mining Corporation Ltd., Bhubaneswar, a State-owned enterprise, has been granted consent to the issue of 6½% debentures of the value of Rs 1 crore to be issued for cash at par privately. INVESTMENT NOTES

Zenith Lamps

Zenith Lamps and Electricals Limited is offering for public subscription 100,000 equity shares of Rs 10 each and 50,000 preference shares of Rs 10 each. The company has been formed with an authorised capital of Rs 1 crore made up of 800,000 equity shares of Rs 10 each and 200,000 preference shares (9.286 per cent cumulative Redeemable) of Rs 10 each. The company has secured the necessary manufacturing licence and will have the technical know-how from Messrs United Incandescent Lamp Electrical Co., Ltd., of Budapest, Hungary, the reputed manufacturers of lamps, television tubes and electronic valves under the trade name of "Tung-sram". The new company will be set up near Madras and will have an initial capacity on single shift basis of 650/700 fluorescent tubes per hour. As it is estimated that the annual requirements of the country of fluorescent tubes at the end of the Third Five Year Plan will be over 6 million, the company's production can be marketed profitably.

Prestolite of India Ltd.

A public company styled Prestolite of India Limited has been registered in New Delhi in collaboration with the Electric Autolite Company of USA, said to be one of the world's largest independent manufacturers of automotive electrical equipment. The New Company proposes to manufacture Automotive Electrical Components of latest design for original equipment and for replacement. The factory, will be located near Delhi. The Electric Autolite Company will subscribe to Equity Shares in Prestolite of India Limited to the extent of 44 per cent of the Issued Capital. Their investment will cover the entire requirements of foreign exchange for the imported Plant and Machinery for the Project.

Prestolite of India Ltd. will have an authorised capital of Rs 1 crore divided into 7,50,000 Equity Shares of Rs 10 each and 25,000 Preference Shares of Rs 100 each. The present issue will be for 4 lacs Equity Shares of a total value of Rs 40 lacs. Out of this the Electric Autolite Company will subscribe shares of the value of Rs 17.5 lacs.

TISCO Production

Messrs Tata Industries (Private), Limited, Managing Agents for the Tata Iron and Steel Company, Limited, report that the approximate

production of iron and steel at the Steel Works at Jamshedpur during the month of May 1962 was:

	In Metric Tons
Ingots	146,400
Steel Ingots	145,000
Saleable Steel:	
Semi-finished	37,000
Finished	78,600
	115,600

IISCO Output

Production of iron and steel by the Indian Iron and Steel Company at its Burnpur works recorded an all round improvement during May, as compared with the previous month. Despatches during the month also looked up from the level of April. Approximate production of saleable steel during May amounted to 68,574 tonnes against 47,646 tonnes in April. Pig iron output was 112,269 tonnes compared to 109,726 tonnes while steel ingots production improved to 85,155 tonnes from 83,396 tonnes. Despatches were 51,033 tonnes as compared to 47,603 tonnes in April.

India Reinsurance Corporation

The Gross Premium Income of the Corporation in all departments during the year ended 31st December, 1961 was Rs 5,05,88,043 as against Rs 3,79,89,945 in the preceding year. After processing this premium and after fulfilling our statutory and other retrocession obligations to companies, the Corporation wrote a total net premium of Rs 2,58,85,719 as against Rs 1,90,37,565. The total net claims paid and outstanding amounted to Rs 1,21,42,254 as against Rs 96,16,554 in the previous year.

In the Fire Department, the gross premium amounted to Rs 3,02,21,183. The net premium written in this department was Rs 1,14,00,873 as against Rs 83,20,689. Net claims paid and outstanding amounted to Rs 48,90,675 as against Rs 37,67,821 in the previous year. The reserves increased by Rs 1540,092 to Rs 57,00,437.

In the Marine Department, the gross premium amounted to Rs 1,10,51,383. The net premium in this department was Rs 59,68,182 as against Rs 41,57,665 in the previous year. Net claims paid and outstanding amounted to Rs 38,90,262 as against Rs 30,77,131 in the previous year. The reserves increased by Rs 18,10,517 to Rs 59,68,182.

In the Miscellaneous Department, the gross premium amounted to Rs 93,15,477. The net premium in this department was Rs 85,16,664 as against Rs 65,59,168 in the previous year. Net claims paid and outstanding amounted to Rs 33,61,317 as against Rs 27,71,602 in the previous year. The reserves increased by Rs 9,78,748 to Rs 42,58,332.

The total departmental reserves in respect of Fire, Marine and Miscellaneous business totalled Rs 1,59,26,951 as against Rs 1,15,97,594 in the previous year, showing an increase of Rs 43,29,357.

The year's trading resulted in a net profit of Rs 9,79,654 as against Rs 6,54,485 in the previous year. The Directors have stepped up the dividend this year from Rs 30/- per share to Rs 40/- per share, being 8 per cent on the paid-up value of the shares, as against 6 per cent in the previous year. This dividend would absorb Rs 8,00,000, leaving a balance of Rs 2,58,024 to be carried forward.

Production of Machine Tools

Indian Machine Tool Manufacturers' Association report that the total approximate production of various machine tools by their 19 leading member-firms during the month of April, 1962, was as under:

Description of Machine Tools Manufactured	Quantity No.	Value Rs.
Lathes	206	24,89,853
Milling Machines	28	10,23,000
Radial Drilling Machines	11	4,64,000
Grinding Machines	573	3,85,736
Drilling Machines	953	3,49,075
Shaping Machines	25	1,92,520
Press Brakes	2	92,850
Eccentric Presses	5	88,350
Boring Machines	1	75,000
Pneumatic Power Hammer	1	51,465
Sanding Machines	176	46,012
Hacksaw Machines	10	46,620
Blowdowns	70	17,280
Snagging Grinder	1	8,700
Blacksmith Forge	1	1,750
Lathe Chucks	557	1,66,060
Drill Chucks	756	22,352
Plain Lathe Centres	237	4,740
Regulators	1,460	2,30,475
Blow Pipes	675	1,44,500
Total	5,748	59,10,338

*

BALANCE-SHEET REVIEWS

Higher Profit for Radha Krishna Mills

Thanks to favourable trading conditions coupled with encouraging yarn and cloth prices, the Radha Krishna Mills Limited has been able to report better profits for the year ended December 1961. Sales in 1961 were higher at Rs. 19,474,118 against Rs. 17,146,815 in 1960. The net profit before depreciation is Rs 2,540,123 against Rs. 2,473,088. After providing Rs. 538,122 against Rs. 553,898 for depreciation and setting aside Rs 61,172 against Rs. 72,879 for development rebate reserve, a sum of Rs. 1,151,698 against Rs. 1,090,000 is transferred to contingencies reserve. A dividend of 12½ per cent subject to tax is recommended against 12 per cent last year.

The carryforward is Rs. 3497 against Rs. 2429 brought in. The combining machinery costing approximately Rs. 3,40,000 which was in the process of erection during the past year has since been commissioned. The company has been able to complete a certain amount of export business as in the previous year.

Baroda Spg. and Wvg. Pays More

Baroda Spinning and Weaving Company Limited has recorded increased sales in 1961 at Rs. 15,681,112 against Rs. 14,892,574. The net profit before depreciation is Rs. 1,526,989 against Rs. 1,180,142 for the previous year. Provision for depreciation is lower at Rs. 359,575 against Rs. 439,304. The Reserve Fund gets a higher provision at Rs. 10 lakhs against Rs. 6 lakhs. Development Rebate Reserve is Rs. 49,863 against Rs. 22,141. The ordinary dividend is proposed at 9 per cent, subject to tax, against 8 per cent last year. The carry forward is Rs. 37,580 against Rs. 63,074 brought in. A number of new machinery have been installed and are now working and few more are to be installed.

Lower Profit for Runglee Rungliot

The earnings of Runglee Rungliot Tea Company Limited for the year 1961 have been reduced mainly because the average sale price has declined to Rs. 6.02 per Kg as against an average sale price of Rs 7 per Kg. realised in the previous year. The crop output in 1961 was 105,192 kg against 106,900 kg in the previous year. Consequently the net profit was lower at Rs 75,670 as compared with Rs. 165,028. Provision for taxation is lower at Rs. 31,538 against Rs. 72,191 but depreciation gets a slightly higher amount at Rs. 14,215 against Rs. 12,721. After transferring Rs. 1.80 lakhs from Building and Machinery Reserve and setting aside Rs. 1.90 lakhs to Revenue Reserve against Rs. 40,000, dividend has been reduced to 20 per cent subject to tax from 35 per cent subject to tax paid in 1960. The carry forward is lower at Rs. 12,618 against Rs. 20,701 brought in.

Dividend Reduced by Choonabhutti

Both crop and average price have been lower for Choonabhutti Tea Company Limited during the year ended December 1961. A crop of 5142 quintals of tea was obtained by the company during the year as compared with 5,333 quintals in the previous year. The average price realised for tea is considerably lower at Rs. 4.45 per kg as compared with the average price of Rs. 5.15. The net profit

before providing for taxation and depreciation was lower at Rs. 356,077 against Rs. 710,072 for the previous year. Provision for taxation is lower at Rs. 80,000 against 242,000 and that for depreciation is higher at Rs. 132,455 against Rs. 102,494. Development Rebate Reserve gets Rs. 2371 against Rs. 10,945. The General Reserve gets nothing while it received Rs. 50,000 in 1960. After writing back Rs. 45,000 from provision of taxation in the previous year, the directors propose a dividend of 20 per cent subject to tax as against a dividend of 32½ per cent paid in 1960. The carry forward is Rs. 87,572 against Rs. 96,041 brought in.

New Doors Cuts Dividend by 15%

A sizable decline both in the crop output at 7847 quintals of tea against 8,122 quintals in the previous year and in the average price realised to Rs. 4.31 per kg from Rs. 5.28 per kg have mainly accounted for the steep fall in the net profit for the year ended 1961 of New Doors Tea Company Limited to Rs. 626,577 compared with Rs. 1,129,550 for the previous year. Provision for taxation is lower at Rs. 1.63 lakhs as against Rs. 4.10 lakhs and depreciation is higher at Rs. 173,339 against Rs. 154,049. Development Rebate Reserve receives Rs. 143 against Rs. 3025. General Reserve gets nothing, while the provision under this

BRIDGE & ROOF CO. (INDIA) LIMITED.

NOTICE is hereby given to the members of the above-named Company that the Annual General Meeting (being the seventy-eighth Ordinary General Meeting of the Company) will be held at the Registered Office of the Company, 21, Netaji Subhas Road, Calcutta, on Friday, 29th June, 1962, at noon, to consider the Accounts of the Company for the year ended 31st December, 1961, to transact other ordinary business.

NOTICE is also hereby given that the Transfer Books and Register of Members of the Company will be closed from 15th June, 1962 to 29th June, 1962, both days inclusive.

head last year was as much as Rs. 50,000. Dividend on ordinary shares is recommended at 20 per cent, a cut of 15 per cent as compared with 1960 when the distribution was 35 per cent. The carry forward is Rs. 55,177 against Rs. 59,842 brought in.

STOCK EXCHANGES Irregular Pattern

Watch-Dog Writes:

AN irregular trend characterised trading on the stock exchange last week with equity prices marked down under selling pressure in earlier dealings and sentiment rallying after mid-week. The depressed sentiment was partly due to the uncertain trend in Wall Street where prices after last week's dramatic recovery were under renewed selling pressure. Though values have once again recovered in Wall Street, market men in India continue to labour under the apprehension that a recession in US may sooner or later overtake that country's economy. Meanwhile conditions in India have not been quite conducive to a broadening of activity. The fact that the Aid India Club at its last meeting had not been able to finalise aid arrangements for the Second year of the Third Plan has engendered a feeling of pessimism as regards import of essential raw materials for industry. Stringency of money coupled with renewed apprehension about policy changes consequent on the inclusion of Mr. T. T. Krishnamachari, former Finance Minister, in the Central Cabinet has kept bullish fervour at a low ebb.

In the Calcutta Stock Exchange the more speculative scrips have been marked down on fresh offerings while the volume of business has considerably shrunk. Buying interest has been conspicuous by its absence and speculators have become extremely cautious in view of the adverse developments in the investment situation. The forward scrips have been the worst sufferers though after settlement day they have regained part of their earlier losses.

Dalal Street has also been easy on balance, but at times there have been abortive attempts at a rally. Cotton textile shares were easy as the industry is beset with a rising cost of production while prospects for an increase in cloth prices not very bright. As it is felt that with the recent rise in the excise duty on cloth and yarn many companies would not be able to record satisfactory profits in the current year, buyers in cotton mill shares have become hesitant.

The Madras Stock Exchange has remained subdued in sympathy with Bombay and Calcutta Stock Exchanges. While speculative fervour has been kept in check by uncertainties as regards foreign aid, the cash section has suffered from lack of support as investment interest has been diverted to new issues.

CALCUTTA

Calcutta, Friday Evening.

A REACTIONARY trend prevailed on the Calcutta Stock Exchange most of the time last week. Sentiment

has however revived a little after settlement day with the more speculative counters recovering a major portion of their earlier loss. The market commenced the week on a weak note and in the absence of support values dipped. The easier trend gathered momentum in subsequent sessions as market sentiment had become extremely cautious in view of the many adverse developments. The continued uncertainty as regards quantum of foreign aid for the Third Plan has given rise to the apprehension that adequate raw materials could not be imported. Continued shortage of transport and power does not also augur well for progressive increase in industrial production. Operators seem to be particularly concerned about declining trend of profits and it is believed that with the inclusion of the former Finance Minister in the Central Cabinet the outlook for equities could not be assessed quite rightly. The reported decision of Government to cut imports by 20 per cent was another bear factor. Although in Thursday's trading sentiment considerably improved reflecting the relief felt over the removal of the uncertainty regarding Cabinet changes, the recovery was rather halting as operators continued to be hesitant to extend commitments in view of the many uncertainties in the investment situation affecting near-term outlook for equities in general.

Cotton Textile shares attracted little attention as investors did not seem to rate prospects for the industry high in view of the numerous difficulties facing it. While the increase in the excise duty is expected to reduce profits, manufacturing costs are showing an upward trend with spiralling wages and rising raw material cost due to shortage of cotton. The foreign exchange stringency is expected to keep cotton imports at a minimum. Moreover prospects for exports of cotton textiles are not bright what with the demand for reduction in Indian textile imports into the UK and that country's entry into E.E.C. Jayshree moved within narrow limits and closed slightly higher at Rs. 15.87 on Thursday. Bharat Commerce was slightly better at Rs. 26.00. Elgin was marked at Rs. 20.50 while Dunbar came to business at Rs. 32.37.

Coal shares were subdued in view of the uncertain outlook for the industry. Earlier optimism about increase in selling price of the commodity seems to have yielded place to a feeling that the price increase, if any, may not increase profits much. What is perhaps why Mr. K. D. Malaviya's indication in his talks with the representatives of the private sector collieries that the private sector was welcome to increase the Third Plan target of 97 million tons, failed to impress investors. Burrakur after moving down sizably recovered most of the lost ground. Other shares where marked were generally lower on balance. East Indian came down to Rs. 53 on Thursday from Rs. 56 earlier in the week. New Beerboom receded from Rs. 24.31 to Rs. 23.25. Bengal lost Rs. 3.59 to be placed at Rs. 384.50. Western Bengal came down to Rs. 10.37 from Rs. 10.87.

Interest in jute shares continued to be meagre presumably in view of the obscure outlook for the industry. While current offtake of goods is quite satisfactory, some concern is felt for future prospects because of the reported decision of the Government of India to fix minimum prices for the next years crop at around prevailing minima. It has been pointed out that this will place the Indian industry at a great disadvantage as compared with its main competitor, Pakistan, whose jute mill industry is already getting its raw material at a much cheaper rate. Howrah moved down to Rs. 21.50 earlier in the week but staged a recovery in later dealings as did Birla which was at one time came down to Rs. 34. Anglo India was done at Rs. 236. Ganges moved within narrow limits to close on Thursday at Rs. 14.75. Nuddea was quiet at Rs. 62 as was Delta at Rs. 189. Kamarhaty changed hands at Rs. 188. Reliance receded to Rs. 8.

Engineering shares were subdued following the general trend of the market. Indian Iron came under selling pressure and reacted from its opening rate of Rs. 26.16 to Rs. 25.44 before moving up again to regain most of its lost ground. (Texmaco followed a similar course. Jessop opened steady at Rs. 24.25 but closed lower on Thursday at Rs. 24. Braithwaite did not show much change on balance at Rs. 36.25. Indian Standard Wagon continued to be in request and closed on Thursday at Rs. 203.

Paper shares moved within narrow limits in the absence of fresh interest as it is generally believed that without an increase in the selling price of paper the profitability of the industry may not improve. Ballarpur moved both ways to close at Rs. 18.12 on Thursday. Bengal eased to Rs. 35.94 on balance as did Mitaghur at Rs. 42. Orient was lower on balance on Thursday but Shree Gopal was slightly better.

Sugar shares lacked interest in the absence of fresh incentives. Dyer Meakin continued to be in request and was marked at Rs. 57.87. Ramnugger was done at Rs. 29.37 with SKG quiet at Rs. 8.62.

Interest in tea shares continued to be at a low ebb presumably in view of the disappointing results of the first two export auctions in Calcutta. Hattikhira was marked at Rs. 11.37. Gohpur met with some enquiry but closed lower on balance on Thursday at Rs. 13.56. Tezpur came to business at Rs. 16.50 with Brooke Bond done at Rs. 15.06.

Miscellaneous industrials were generally lower on balance reflecting the main trend of the market. Aluminium Corporation closed on Thursday at Rs. 18.31 against Rs. 18.69 on Monday. BIC was almost unchanged at Rs. 9.56. Hindustan Aluminium came back to Rs. 17.31 from Rs. 17.81. Indian Aluminium was down at Rs. 40.50 but later recovered most of its lost ground. A similar pattern was noticeable in Indian Copper, Indian Cable, Hindustan Motors and Orissa Minerals. Assam Siliminite was an active counter and was done at Rs. 10.87.

Control of the Planning Apparatus

MR T. T. KRISHNAMACHARI is joining the Union Cabinet at a time when the fortunes of the Third Plan are at a low ebb. The last two months have brought into sharp focus many difficulties—some of them inherent in the scheme of the Plan and others unexpected and extraneous—that were only vaguely apprehended earlier. The political preoccupations of the elections have also been responsible for these difficulties not being faced with the necessary candour: now that the elections are over, the country had better look these difficulties squarely in the face.

Most obvious among the difficulties is the crucial failures in key sectors of the economy like transport and power, the increasing foreign exchange difficulties, the formidable problem of earning enough to pay for essential imports and a general sense of lack of direction in our economic endeavours. Transport last year has not been able to cope with the increased demands that a developing economy made on it. The near-chaotic conditions that prevailed in transporting coal was, one of the crucial factors in the falling of the rate of increase of industrial production. The Power famine of last year was equally frustrating and as revealed recently in the Lok Sabha, it does not look as though there is any early prospect of our being able adequately to meet all the demands of the power-hungry industrial complex created by the Plan itself. The Steel Plan has already gone awry in several respects: the targets of production have not been reached in the existing steel

in the trade pattern likely to be wrought by Britain's joining the EEC. Already we have some intimation of things to come in the British proposals to the EEC agreeing to the raising of a tariff wall against Indian Textiles which have other protectionist interests in Britain itself to contend with.

Thus in the second year of the Third Plan, the country is faced with an array of problems, daunting in their apparently intractable complexity and in sum offering the most crucial challenge to our resourcefulness. Added to these specific economic challenges, are the political uncertainties about our northern frontiers and the threats posed by unfriendly neighbours who have not been slow to add to our difficulties. International misunderstanding of our motive and acts have added to these by no means inconsiderable sources of worry.

What then are we to do? In the large context, the first requisite is not to lose our nerve. There is some evidence of some people wishing, wittingly or unwittingly, to stampede the country into a psychology of crisis. This would be most unfortunate. The morale of the nation needs to be sustained and strengthened by every possible means. The second task, is to examine the Third Plan anew in all its ramifications and arrive at redefinition of the possibilities and needs in the next four years. It is obvious that many of the targets written into the Third Five Year Plan last May are already out of the window.

What then are we to do? In the large context, the first requisite is not to lose our nerve. There is some evidence of some people wishing, wittingly or unwittingly, to stampede the country into a psychology of crisis. This would be most unfortunate. The morale of the nation needs to be sustained and strengthened by every possible means. The second task, is to examine the Third Plan anew in all its ramifications and arrive at redefinition of the possibilities and needs in the next four years. It is obvious that many of the targets written into the Third Five Year Plan last May are already out of the window.

These readjustments will no doubt cause pain in various quarters, including some which will squeal the loudest and in the most organised manner. No doubt many who have profited by the large area of "no plan" inside a loose over-all plan will find the new effort at coordination a threat to their unexpected and undeserved prosperity. But such pain may be disregarded, if once again we gain a sense of not only direction but control over the apparatus of planning.

OF GREAT INTEREST TO INDIAN ECONOMISTS AND STUDENTS

BY I. A. YEVENKO

This publication is the product of the rich experience of successful planning in the USSR, planning that has ensured the economic and cultural advance at a pace unprecedented in history.

The author deals with the main questions of organisation of planning in the Soviet Union, the tasks and functions of planning agencies, the general principles of drafting plans and the system of their target.

The book also describes the methods of drafting plans and analysing and controlling their fulfilment, using as an illustration chiefly the central section of the national economic plan and industry.

Valuable handbook on the principles of planning!

Exports and Exhibitions

THE decisions taken at the inaugural meeting of the Board Trade have focussed attention on some of the major problems of export promotion. In view of the current shortage of foreign exchange, which has forced a fifty per cent cut in import quotas for established importers, the Board was naturally concerned with the immediate steps that might be taken to achieve better balance in India's external trade within the short term. But the magnitude of the export effort required to carry through the programme of planned development also makes it necessary to pay attention to the long-term measures designed to provide an expanding base for Indian exports. One of the measures that have been successfully employed by other countries for developing export outlets is participation in International Fairs and Exhibitions. As the Mudaliar Committee had pointed out, the Fairs in Europe, USA and elsewhere are "forums of big business" which attract the world's foremost suppliers and biggest buyers. At the important Fairs business worth millions of dollars is transacted. India is a new entrant to the world of international Fairs; but, during the past decade, India has been participating to an increasing extent in foreign exhibitions under Governmental auspices.

The Ministry of Commerce and Industry has been organising exhibition of Indian goods abroad and arranging for India's participation in Trade Fairs. The allocation for this purpose in 1961-62 was of the order of Rs 26 lakhs. But the actual return, in the form of spot sales, not to speak of repeat orders, in relation to the expenditure incurred, has not been significant. To take one instance out of goods valued at Rs 87,692 sent from India to the Buenos Aires Exhibition of 1959, sales to the local people amounted to just Rs 204. Another Rs 2,871 worth of the exhibits were unloaded on the Embassy staff at a discount. Part of the reason may be wrong choice of the goods sent for display or the wrong timing. According to the Audit report, the Indian Embassy had pointed out that the economic situation in the country was very fluid and that austerity measures with an extremely restricted import policy had been introduced in January 1959. Nevertheless, the decision to hold the exhibition was taken and heavy expenditure incurred in addition to the cost of the exhibits.

While special circumstances may explain the poor result of this particular exhibition, there are also built-in factors in the arrangements for organising exhibitions, which prevent the country from deriving the expected benefit. The Mudaliar Committee had pointed out that Indian Pavilions at International Fairs "are in the nature of grand Exhibitions". Indian merchants conversant with the intricacies of their business and competent to sell and look after the follow-up problems are conspicuous by their absence." It should not be surprising, therefore, if the returns are hardly commensurate with the expense and trouble involved. According to the Audit Report, during the period 1951 to 1958, exhibits worth Rs 18.79 lakhs had been purchased for despatch abroad. Out of these, exhibits worth Rs 3.22 lakhs were returned to India and those costing Rs 10.73 lakhs were held by the various Missions abroad.

As most of the exhibits remain unsold, they raise problems of storage. The Audit Report has noted that most of the goods had

not been stored properly according to classifications. Costly shawls and brocades and delicate handicrafts were placed along with things like blocks of ores and minerals, wooden articles or brassware, with the result that the delicate and costly stuff were rendered unfit for display in future. In this connexion it is interesting to note that the Federation of Indian Chambers of Commerce and Industry had made a suggestion that it would be useful to organise warehouses of exhibits in some central places in Europe, Africa and Asia where exhibits could be stored to be despatched to different exhibitions. These warehouses could also receive back the left-overs from the exhibitions. The adoption of this suggestion may ensure effective storage and also save freight on transport of the goods all the way from India and back.

The Mudaliar Committee report had emphasised the need for reorientation of policy in regard to participation in exhibitions. The findings of the Audit Report for 1962, which draws attention to some serious drawbacks inherent in the present arrangements, underline the need for implementing the recommendations of the Mudaliar Committee. For instance, cases of Exhibits arriving 'a day after the Fair' are too frequent to be dissolved in ribald laughter.

The Audit Report has noted four instances of exhibits being received too late for display. Out of the packages exhibits despatched for the Lyons Fair, held from 4th April to 14th April 1959, 26 packages reached the place only on the 3rd April and 4 packages were received after the Fair was over. In the 1959 International Fair held in Tokyo from the 5th May to 22nd May, 34 packages were received on the 14th May, 11 packages on the 20th May and 19 packages still later. Again in the Canadian National Exhibition in Toronto held from 26th August to 12th September 1959, 10 packages of exhibits reached the place only on the 17th August and were returned unopened to India. In the Izmir International Fair 1960, held from 20th August to 20th September 1960, the bulk of the goods were received after the Fair was over. It may be noted in this connexion that the comments of the Auditor General relate only to 15 out of the 45 Exhibition and Fairs in which India participated during the three years 1958-1960, and which came under local audit during the course of inspection of the Indian Missions abroad.

It is only fair to add that the delays in all cases cannot be put down to the negligence or incompetence of the executive authorities responsible for making arrangements for exhibitions, such as the collection and despatch of the exhibits. Their hands, in most cases, are tied by Red Tape. The executive authorities cannot move until the expenditure is sanctioned by the financial wing. The latter, working under the ever-present shadow of Audit, move at their own deliberate pace, anxious only to make sure that Audit will not be able to uncover any procedural flaw in their sanctions. For the same reason, many Government pavilions at the last Industries Fair in New Delhi were in different stages of construction on the opening day, and it took from a week to a fortnight before they were ready to receive visitors.

For ensuring effective and purposeful participation in Fairs and Exhibitions abroad, the Mudaliar Committee had recommended that the entire work should be entrusted to an independent body largely representative of the chief exporting interests and with a distinguished member of the mercantile community as Chairman. Participation in Exhibi-

tion and Fairs, it appears, did not figure on the agenda of the last meeting of the Board of Trade. But in view of its importance, it is to be hoped that the Board of Trade and the Ministry of International Trade will take early action to streamline organisation and procedures for ensuring positive results from India's participation in Fairs abroad.

The participation of the mercantile and producing interests in the international exhibitions and fairs was held to be of prime importance by the Mudaliar Committee. In its report, the Committee has expressed the view that the Government "need hardly participate in any international fair if an adequate number of the right type of Indian exporters/merchants/producers do not come forward to partake of the advantage." The mercantile community, according to the Committee are in the best position to judge what to send abroad for display and how to promote business. To enlist the participation of the mercantile community the Committee has recommended special inducements to be offered by the Government like assistance toward rent of pavilion, incidental expenses and cost of management publicity, freight of exhibits to and from the destination and also toward travel of the Indian participants. This kind of assistance according to the Committee would constitute "a substantial help and inducement to the Indian interests to go out to these fairs and at the same time be an earnest of Government's desire to encourage the real exporters to develop overseas market." Subsidisation of merchants participation in overseas fairs is practised even by developed countries like Germany. There is therefore no reason why Indian Government also should not try special incentives to make participation in overseas fairs more effective.

Individual well-being is linked with national prosperity and only planned efforts can ensure both in the shortest possible time. And planning, for its success, largely depends on savings, individual as well as national. Saving in the form of Bank Deposits provides resources for the National Plan.

FOREIGN BALANCES

No Panic Slash in Imports

ALL of a sudden the critical nature of our foreign exchange reserves seems to have come within the ken of the monetary authorities. That our reserves were low, that we were just about to begin the slack season for exports, did not cause much anxiety three months ago when the import policy for the fiscal year 1962-63 was announced. Are we to understand that there has been so rapid a deterioration that crisis measures are now called for? The only explanation that we can think of is that Government anticipated the aid-India Club meeting of last month to provide us bountifully with untied loans. In the event the Washington meeting apparently failed to satisfy, and the result is a grievous, unkind cut in what are categorised maintenance imports.

Let us not be thought as suggesting that foreign exchange meant for capital imports should be diverted. The simple fact of the matter is that our foreign exchange means are so low that already great caution is being exercised in allocations for capital imports. And as it is private sector projects can get Government's green signal only when the import cost of plant and equipment has been arranged for, while public sector projects are similarly tied to foreign assistance. We now come to the brutal fact which is that in the process of industrialisation during the Second Plan our requirements of maintenance imports have increased.

The trouble is that there has not been a corresponding rate of growth in export earnings. Our difficulties have been compounded by maturing liabilities in respect of foreign assistance secured during the first decade of planned endeavours. By and large there has not been appreciable or insurmountable difficulty in arranging for credit for the capital projects of the Third Plan and these have exercised no pressure on reserves. But the enlarged bill for maintenance imports, the too slow rise in export earnings and repayments of foreign loans falling due have combined to aggravate the pressure on reserves.

In the long run, there is no alternative to an expansion in export earnings to provide ourselves with the wherewithal to pay for maintenance imports and to repay our loans. In due course, with the progress of our programmes for industrialisation, such an achievement should be within our grasp, but that is still a long way off. But what is necessary now are measures to cover the gap that we are faced with today.

One short-term solution that is being tried is the panic slash in imports. We cannot for long afford such deprivation for two reasons. Firstly, in any case, the foreign exchange so saved will not materially solve our payments problem. Secondly, the cut-back in maintenance imports will severely affect production.

A second short-term solution is to approach the International Monetary Fund. This, again, is a somewhat irksome alternative. Moreover, the advantages to be secured from IMF will prove purely ephemeral. For the IMF has been known to make stipulations regarding monetary policy whenever a borrowing member seeks more than 25 per cent of its quota; and in our case we have already used up nearly half—\$250 million against our quota of \$600 million. It is difficult to convince the IMF authorities that its solutions for specific economic imbalances as obtaining in industrialised countries have but little relevance to India and current economic conditions. If an increase in the Reserve Bank of India rate is postulated as a pre-requisite for the IMF giving us the facility of purchasing say another \$150 million of currencies, we must surely decide to do without the IMF's kind offices. But we hope that India will be able

Tax Concessions

In the Lok Sabha this week, Mr Morarji Desai, Union Finance Minister, has announced some important tax concessions. Except for allowing future losses in respect of long-term capital assets to be carried forward for a short period of four years and certain clarificatory changes, the concessions are mainly in respect of indirect taxes. It is the textile industry which has benefited mostly from the new concessions. Apart from exemption from excise duty for all single cotton yarns upto 40 counts, the rate of duty has been reduced for mercerising and water-proofing cloth from 25 nP to 10 nP per sq metre for fabrics on average count of below 26s. Various concessions have also been extended to the handloom and power loom sectors. An important concession is the reduction of the duty on indigenous newsprint from 22 nP to 5 nP per kg. The chemical industry has also gained important concessions. Duty for drugs like penicillin streptomycin, quinine etc has been reduced to 2½ per cent ad valorem.

to persuade the IMF that new and other solutions must be looked for; and while we are about it we see no reason why we should not ask, mainly on our terms, for more massive assistance from the IMF. After all the IMF has a keen interest in the orderly assistance of economies in South East Asia; IMF assistance was widely available to the countries of Western Europe when they sought to reconstruct after World War II. A case can surely be made out for asserting India's need for foreign exchange of the untied variety that is available from the IMF.

While it is to be expected that India's need of foreign assistance will gradually diminish we must face the fact that this reliance of ours will last another two decades. From this point of view, the longer-term solution lies in persuading our foreign friends to be more

generous in providing us with the foreign exchange for the financing of maintenance imports—which as we have said are as basic to the success of planned endeavours as are capital imports.

By far the most satisfying development in this regard would be an expansion in exports. Should we legislate for reserving part of the total industrial production for export—and sell such goods abroad even if at a loss? Should we think in terms of earning rather more primary goods like iron ore? Will we need to create export subsidies? These questions require urgently to be answered, but we must be realistic enough to realise that not all of our efforts at an export drive can succeed in earning all the foreign exchange we need for maintenance imports.

And lest we forget it, what about the vast gold hoards in this country? Can't we activate them? Is a scheme for gold bearer bonds so difficult to work out or implement? For a start all that may need to be done is to secure the gold bullion that our temples through offerings are so rich with. There is so much gold that lies in this country so much presently useless wealth.

A Higher Liquidity Ratio in the Offing?

Reports from New Delhi indicate that the Reserve Bank of India is thinking in terms of compulsion to make the banking system keep a larger proportion of its Deposits in liquid assets in the form of statutory balances and investments in Government securities. The liquidity ratios it is understood will be linked with aggregate Deposits the proposal being to fix the liquidity at 29 per cent of aggregate Deposits made up of 25 per cent as investments in Government securities and a flat 4 per cent as statutory reserves. At present, the banking system keeps nearly 3.8 per cent of its Deposits as statutory reserves made up of 5 per cent of Demand Liabilities and 2 per cent of Time Liabilities. While the dual ratio will go under the new proposal of the Reserve Bank, the increase in the ratio from 3.8 per cent to 4 per cent is not likely to put any severe strain on the resources of the banking system.

In respect of investments of the banking system in the Government securities, the proportion which is at present about 18 per cent of the aggregate Deposits will be raised to 25 per cent. This is certainly a steep increase and is presumably motivated by desire to ensure greater support of the Banking system to the Government's loan programme. The Authorities have been somewhat exercised about the relative apathy of the banking system to the Government's loan programme, attributable to a variety of factors the most important of which has been the lack of a new issue with direct appeal to the banking system. In his talks with the bankers last month, Mr Morarji Desai, Union Finance Minister had sought to persuade the bankers to show more interest in Government securities. But at that time hints of compulsion to make the banking system keep larger proportion of their Deposits in Government securities were discounted.

BANK RETURNS

Impact of Month-Early Transactions

The returns of the Reserve Bank for 8 June show the impact of the spillover of beginning of the month disbursements. Active Note Circulation has expanded sharply by Rs 28.69 crores to Rs 2,141.30 crores and there has also been outflow of Rupee coin for Rs 2.26 crores. Currency has been expanded for Rs 15 crores against Rupee Securities by transfer from the Banking Department; and Rupee Securities have now moved up to Rs 1,839.19 crores. A welcome fact about the latest returns is that there has been no need to effect a transfer from Foreign Securities—unchanged at Rs 92.68 crores—to bolster Balances Held Abroad in the Banking Department; in fact, foreign assets held by the Reserve Bank are up by Rs 1.13 crores, with Balances Held Abroad rising by that amount to Rs 9.95 crores. The net result is a fall of Rs 15.95 crores at Rs 19.11 crores in cash in the till.

Some strain has been felt by the banking system, whose Reserve Balances have dwindled by Rs 4.32 crores to Rs 85.06 crores; and increase in indebtedness is implicit in the rise of Rs 7.47 crores to Rs 129.66 crores in the Reserve Bank's Other Loans and Advances. The fall of Rs 18.30 crores to Rs 174.36 crores in Investments is mainly due to transfer to the Issue Department.

The effect of month-early disbursements is seen in the fall of Rs 4.76 crores to Rs 8.31 crores in the balances of State Governments, whose ways and means borrowings from the Reserve Bank have also risen by Rs 7.53 crores to Rs 111.32 crores. On the other hand, however, Deposits of the Central Government have improved slightly by Rs 1.75 crores to Rs 52.70 crores.

Evidence of the pressure of the spillover of month-early demand for funds in the State Bank return is provided by the decline in Deposits by Rs 4.16 crores from Rs 575.32 crores to Rs 571.23 crores in the week under review. There has also been a fair-sized decline in the cash in hand including money at call by Rs 4.95 crores to Rs 26.83 crores. However, the total of Advances show no change being placed at Rs 294.99 crores against Rs 294.50 crores for 1 June. Presumably constituents seem to have preferred running down their Deposits to meet the month early demand. Investments have been marked down from Rs 234.97 crores to Rs 228.31 crores that is, a fall of Rs 6.66 crores.

The return of the Scheduled Banks for 1 June, while bearing testimony to the demand occasioned by beginning of the month disbursements, has also further evidence of the progress of the 1962 slack season. Once again Deposit resources have risen, a fall of Rs 2.17 crores to Rs 892.05 crores in net Demand Deposits being more than offset by the increase of Rs 4.31 crores to Rs 1,231.91 crores in net Time Deposits. But the month-early demand for money stands reflected in an expansion of Rs 5.60 crores to Rs 1,433.32 crores in the total of net Advances. There was thus little need to have recourse to enlarged borrowings. Indebtedness to the Reserve Bank is nominally higher by Rs 0.15 crore at Rs 4.85 crores while borrowings from the State Bank are higher by Rs 1.37 crores at Rs 18.78 crores. The slack season accretion to resources has compelled an augmentation to the gilt-edged portfolio which marks a rise of Rs 3.60 crores to Rs 586.91 crores; of this above half is traceable to the State Bank while the balance may relate to purchase of intermediate Treasury Bills by other Scheduled Banks. As a result cash balances, including money at call and short notice, have had to be run down by Rs 6.66 crores to Rs 205.03 crores. It is almost certain that there has been spillover of month-early disbursements into the second week, and hence banks might have experienced some little strain and pressure. But it is hardly to be doubted that by the end of the current month when Government's new loan is expected to be announced, the two-fold accretion to resources will have placed banks in a particularly good position to support the new loan. The question, however, remains whether the new loan is so being drawn up as will ensure banks' substantial participation. Unless there is a short-term which is offered—and we are in favour of a 3.4 per cent 1967—the monetary authorities may find that, for all that money market conditions are easy, the new loan for 1962 turns out to be not half the success that it should be.

Treasury Bills

Tenders for Rs. 2,00,00,000 of 91 days' Government of India Treasury Bills were opened on Tuesday, 12 June, 1962. Total amount offered was Rs 3,25,00,000. Tenders at Rs 99,370 per cent and above were accepted in full. Lower tenders were rejected. Total amount accepted was Rs 2,00,00,000, the average rate of accepted tenders being Rs 2,510 per cent per annum.

Tenders for Rs 2,00,00,000 of 91 days' Government of India Treasury Bills will be received at Bangalore, Bombay, Calcutta, Kanpur, Madras, Nagpur and New Delhi up to the close of business on Monday, 18 June, 1962. Successful tenderers should make payment on Friday, 22 June, 1962 at all centres. Other conditions are as usual.

During the week ended 8 June, 1962 Government of India Treasury Bills for Rs 23,93,75,000 were sold in favour of Reserve Bank of India.

91 days' Intermediate Treasury Bills will be sold from 13 to 16 June, 1962 at Rs 99,39 per cent. Sales can be stopped at any time without notice if Government think it necessary.

91 days' Intermediate Treasury Bills sold from 6 to 9 June, 1962 amounted to Rs 1,30,25,000

Rockets V. Butter

By Paul Einzig

HITLER's much-quoted slogan of choosing between guns and butter has been adopted by Mr. Khrushchev. When announcing the recent drastic increase in the price of meat and butter, he said this was necessary because the threat of aggression on the Soviet Union makes it necessary to spend on defence. Because the Soviet Government, in face of a purely invented menace of attack by Western countries, spends an unduly high proportion of the national resources on rockets, there is not enough butter available, and consumers have to be rationed by the purse. The butter is there—Poland has been dumping large quantities on the British market—but it is exported in preference to being consumed, in order to be able to import machine tools and raw materials needed for producing rockets. In addition to its gigantic military expenditure, the Soviet Government is also spending vast amounts on space rockets. It is because of this power policy and policy of prestige that the Russian consumer has to cut down his butter consumption owing to the steep increase of its price.

History repeats itself. Under the Tsarist regime Russian peasants and workers were kept on starvation level in order to be able to export sufficient wheat to meet the interest service of the foreign debt contracted in pursuit of an aggressive foreign policy. They were the helpless victims of this power policy, and so are the masses of consumers in the Soviet Union today. They have to live in overcrowded conditions, because the resources are diverted from housing requirements to the high expenditure on space research. In Communist China, too, the maintenance of a large and expensive army in pursuit of aggressive foreign policy is probably the main cause of deteriorated living conditions.

The fact that Communist East Germany had to build a wall in order to prevent the mass escape of its citizens to West Germany, and that there is an exodus of Chinese people to Hong Kong shows that economic conditions behind the Iron Curtain are far from satisfactory. We have our own trouble, and our own economic situation leaves much to be desired. But the Communists have no cause for being triumphant over our setback as indicated by the recent Wall Street fall and by the slowing down of our economic expansion. Judging by the rise in prices in Russia, inflation is not confined to the free world. But their difficulties should not breed complacency in non-Communist countries. It is essential that we should find a solution for the problem of expansion without inflation. The disinflationary measures taken to resist inflation have caused an all-round setback which must be overcome before it proceeds too far.

FICCI

Memorandum on Import Policy

In a memorandum submitted to the Ministry of Commerce and Industry, the Committee of Federation of Indian Chambers of Commerce and Industry has outlined a policy of import substitution for consideration by the Government in the interest of saving foreign exchange. It is the view of the Committee that the present pattern and composition of imports will allow of substantial scope for such import substitution if it is supported by a simultaneous programme of development of capital goods making industry. In this light, the Committee has examined the present composition of imports and has put forward a number of suggestions to help implement a policy of vigorous import substitution.

Imports during the past few years have been roughly of the order of Rs 1,000 crores per year. In 1960-61 imports amounted to Rs 1,070 crores made up of import of capital goods valued at Rs 326.70 crores, of intermediate goods worth Rs 503.30 crores, consumers goods valued at Rs 200.09 crores and unclassified items accounted for Rs 40.07 crores.

W. H. JACKSON
Manager.

The Committee has indicated scope for import substitution under all these categories of imports including capital goods imports. In respect of the capital goods imports, the Committee states that though the total imports were valued at Rs 326.70 crores, import of what may really be termed as capital goods was only of the order of Rs 153.24 crores, the balance being accounted for by imports of spare parts and components. The Committee says that though imports of capital goods are unavoidable since the country may not for many years to come be in a position to manufacture all the capital goods needed, Government policy should encourage the manufacture of such capital goods as we can manufacture. However, referring to the import of spare parts and components, the Committee says that it will be extremely wasteful to indefinitely continue the importation of components. On the other hand, it calculates that if half of the amount of Rs 750 crores that will be spent on import of spare parts and components in the next five years, were to be devoted to import of capital goods and machine tools to manufacture components, not only substantial foreign exchange will be saved over a measurable period of time, but also indigenous capacity will be augmented, more employment will be provided and generally a stimulus will be given to industrialisation. Toward elimination of component imports it is also suggested that components which are imported for producing machines should not normally be allowed to be imported for more than three years for a particular industry and also that a strict time limit of about three years be set for import of components for industries that are newly started.

In respect of intermediate goods, while imports of non-ferrous metals except perhaps aluminium are considered to be unavoidable, considerable scope for import substitution is indicated in respect of iron and steel, artificial silk, dyeing, tanning and colouring materials, paper boards, chemical elements and compounds, on the basis of programmes for creating indigenous capacity for their manufacture. Similarly imports of cotton which are presently of the order of about Rs 80 crores annually, according to the Committee, could also be substantially reduced by vigorous pursuit of self-sufficiency and initiating programmes for production of synthetic fibres. The Committee is

also critical of the oil policy pursued by the Government and states that this has resulted in a setback to oil exploration and setting up of refineries. It has stressed the need for a liberal policy to enable the private industry also to participate in the oil industry and has pleaded for allowing the existing refineries to utilise their spare capacity.

The Committee has also urged the need for exploring scope for reducing import of consumer goods. Though it is foodgrains which bulk large in the import of consumer goods and though their import does not involve a direct strain on foreign exchange resources by virtue of the fact that their import is financed from PL 480 funds, it is imperative that the country should aim at self-sufficiency in foodgrains.

On the basis of the study of the present pattern of imports, the Committee has expressed the view that "we can easily programme to manufacture at least goods worth Rs 500 crores, which is nearly 50 per cent of our total imports." It pleads for revision of the import policy to facilitate a smooth transition from reduction and elimination of imports to a phased programme of indigenous production. Import policy according to the Committee should be conceived of in two parts. One must take care of the immediate requirements of industry and the other of the import of capital goods and machine tools to progressively reduce the import of current items under part one. Other important points made by the Committee in this connection are: (1) High priority should be given to the establishment of import-saving industries, (2) liberal imports of machine tools and capital goods will enable the country to develop the machine building potential (3) the industrial licensing policy must be so implemented as to encourage entrepreneurs to undertake manufacture of and processing of goods from the primary stage so that only basic raw materials are imported in preference to finished or semi-finished products (4) ideological considerations should not stand in the way of granting industrial licences to entrepreneurs who can implement schemes expeditiously.

COMPANIES

Malpractices

With the enactment of the Companies Act 1956, company law administration in the country had become rigorous. The Act aimed at protecting shareholders' and public's interest by ensuring healthy practices in the working of corporate enterprises. While with this end in view the law sought to plug loopholes in the company law, on the other, it vested more

powers in the Department of the Company Law Administration. The Department has succeeded in discovering a number of malpractices by corporate bodies which though not unknown to those familiar with the corporate scene, were but dimly realised as present by the lay public. The Department of Company Law Administration has recently revealed that during the year 1960-61, the Department succeeded in discovering a dozen unsound practices the continuance of which according to it "is likely to mar the future image of fast developing Corporate Sector in the country".

One of the more serious malpractices detected during the year was the ingenious ways resorted to by companies for diverting company funds to purposes not connected with the business of the companies through use of trusts as a transmission agency. Another practice detected was the curious way of paying propaganda commission sales to associates of the managing agents, which is not permissible under provisions of Section 356(1) of the Companies Act. Another unsound practice relates to the attempt to continue the managing agency by converting a company into a private body and then appointing the managing director on a higher rate of remuneration than what would have otherwise been allowed by the Government on the basis of the sliding scale of remuneration of managing agents. Appointment of uneducated men and women as directors constituted another instance of malpractice that has been found out by the Company Law Administration. The instance of a director of a company with a predominant controlling interest

in it attempting to dispose of the only undertaking of the company to a person in whom the director was interested at a price unfavourable to the company and favourable to the buyer represented malpractice in the disposal of assets of companies unfavourable to a company.

The Department also draws attention to the trend noticed in the growth of Chit funds and chain letter schemes in the Northern region where attempts have been made to float companies with the avowed object of promoting what are called "chain letters schemes". Chain letter schemes provide for collection of small sums of money by the sponsoring companies concerned at every stage of the chain

transaction and hence there is risk of undesirable persons exploiting the gullible public and defrauding large number of individuals of relatively small sums of money. The Department claims that it has attempted to discourage the formation of such companies.

Apart from such unsound practices, a number of accounting lapses committed by the companies have also been brought to light by the Registrars of companies. Instances of such lapses are maintenance of current account by a company with a partnership firm without proper warrant, and maintenance of current account by a company with another company in which the directors were associated. Another serious lapse re-

lated to the change in evaluation of stock from "average cost" method to "first-in-first-out" method with the net result that there was short debit to revenue of the order of Rs 2 lakhs while the net profits of the company for the year amounted to approximately Rs 1.85 lakhs. There is also an instance of a promoter who in connection with promotional activities incurred expenditure by way of present of sarees and other gifts worth Rs 12,000 appointed persons drawing an average of Rs 5,000 for a period of more than three years in connection with the project, incurred large sum of travelling expenditure and made contributions to one Swamiji. In another case it has been found that

two sets of balance-sheets in respect of the same period had been circulated by a company.

While the above instances bear out continuance of malpractices, the fact that they are being discovered should be matter for gratification and testifies to the increasing vigilance and care that is being applied in the implementation of the Companies Act. The experience of the Department of Company Law Administration in detecting these instances should help it in further intensifying efforts to find out other instances of unfair practices that may still remain outside its knowledge.

★

FURNACE OIL High Price Retards Use

The Federation of Indian Chambers of Commerce and Industry has, in a communication sent to the Ministry of Finance, urged the need for reducing the excise duty on furnace oil to bring the price of furnace oil on a par with the price of coal to industries in the Western and Southern region. This is necessary since there is an acute shortage of coal for industries in the southern and western region and only furnace oil can provide an alternative fuel. With a view to inducing the industries in the Western region to use furnace oil in place of coal, the Finance Minister announced a 50 per cent rebate in railway freight charges subject to the net minimum charge in force. It has been estimated by the Federation that this concession will not substantially reduce the present difference between the prices of coal and furnace oil. The average price of furnace oil in an inland centre inclusive of sales tax, octroi duty etc exclusive of freight rebate has been estimated at Rs 170 per ton. Against this the price of two tons of coal which are considered necessary to generate as much energy as furnace oil, works out to Rs 120 per tonne. Even after taking into account the freight rebate that will be allowed, it has been estimated that the difference will work out to as much as Rs 36.40 nP per tonne. In this circumstance, use of furnace oil, it will be admitted, can only be encouraged by price reduction for which the only basis exists in reducing the excise duty on furnace oil.

The problem for the industries of the Western and Southern regions is not only one of price of furnace oil but also of its regular supply. It has been stated by the Federation that there is spare capacity in the existing refineries of the private sector which could be utilised for increasing indigenous production. This obviously may call for a change in the present attitude of the Government

16 JUNE 1962

in respect of refinery expansion in the private sector. Even increased supply on the basis of utilisation of spare internal capacity will not be enough to take full care of the industrial needs and imports cannot be dispensed with.

Provision of equipment for conversion of existing boilers from coal to oil firing has also to be ensured for a smooth switch-over to furnace oil, and in view of the lack of indigenous capacity for their production, they have to be imported. Expeditious consideration of the applications for foreign exchange that have already been placed with the Government has been urged by the Federation. The Federation has, however, pointed out that once the Government decides to give encouragement to the idea of greater use of furnace oil, manufacturing capacity to produce the necessary equipment for the conversion of existing boilers to oil firing will be established in the country itself obviating in the near future, the necessity of importing the equipment from abroad.

★

STATE BUDGETS Maharashtra— Taxes Galore

A host of new taxes has been proposed in the "Additional Budget" of Maharashtra that was presented last week by the State's Finance Minister Mr S. G. Barve. Principally, the new proposals including new levies and enhancement of rates apply to motor spirit, sales tax, stamp duty, entertainment duty, Motor vehicles tax, electricity tariff. The new levies announced include, a sales tax levy on handmade biddies and gur, a levy of 3 per cent on road transport of goods and an education cess of 2 per cent on the annual ratable value of urban immovable property and in the rural sector a cash levy per acre principally from irrigated land on which sugarcane, bananas, oranges, cotton etc is grown. The net yield of the new taxes is estimated at Rs 5.71 crores in the current year and Rs 8.61 crores in a full year.

Considering the erstwhile reluctance of the State Government to resort to taxation to raise resources for Plan schemes, the taxation measures announced by the Maharashtra Finance Minister seem bold, but they were not entirely unexpected. For, the interim budget presented two months ago had left a substantial gap in the extent of Rs 1.95 crores. Though the new taxation proposals will fetch in the current year a sum of Rs 5.71 crores, in view of the fact that out of this a sum of Rs 61 lakhs has been earmarked for being transferred to the Road

Fund, only Rs 5.10 crores will be available for covering the revenue gap. In this light the full deficit will not be covered by the taxation proposals and there will be left a small deficit of Rs 0.35 crores.

Justifying the taxation proposals, Mr Barve has remarked that they were obligatory for discharging the State's responsibility in the matter of carrying out an ambitious Plan, and added that "any hesitation at this stage to adopt measures for marshalling our resources to the fullest extent in support of the Plan would have the disastrous result of incapacitating us from fulfilling it". It may in this connection be mentioned that the outlay on Third Plan schemes for the current year has been fixed at Rs 66.76 crores which is slightly in excess of the development programme drawn up in consultation with the Planning Commission.

The total Third Plan outlay, for the State is at Rs 390 crores, and the total tax effort necessary to reach this target is fixed at Rs 50 crores. And in the effort to raise fresh taxation, Mr Barve has cast his taxation net wide reaching almost every section of the people. Even the poorer sections will be affected by the new levies on biddies and gur and also on raw cotton and cotton yarn. One commendable feature of the new proposals is the new levy on rural sector which is intended to raise funds for education. But considering that the taxation at present weighs comparatively lightly on the rural sectors, further levies on the rural sector are justified.

★

JAMMU & KASHMIR More Taxes

The final budget of the State of Jammu and Kashmir shows a revenue deficit of Rs 2.86 crores and with capital account also showing deficit of Rs 2.98 crores, overall deficit amounts to Rs 5.86 crores. Receipts on all accounts have been estimated at Rs 34.93 crores and expenditure of all categories at Rs 40.77 crores. Total revenue receipts including from Plan schemes of current year have been estimated at Rs 2,371.48 lakhs and expenditure charged to revenue on Plan and non-Plan accounts at Rs 2,657.04 lakhs. Receipts on capital accounts including public debt have been placed at Rs 1,121.56 lakhs and expenditure under capital at Rs 1,419.93 lakhs. With a view to reducing the deficit, the State's Finance Minister Mr G. L. Dogra, has announced a series of new taxation proposals which will yield a total revenue of Rs 1.16 crores. Apart from fresh taxation, withdrawal of Rs 20 lakhs from the opening cash balance is also proposed to reduce the deficit.

The new taxes proposed in the budget are property tax on consumer commercial establishments at 10 per cent of annual rental value above Rs 1,200; show tax at the rate of Rs 15 per show; agricultural income-tax above an annual income of Rs 3,000 at the same rate as that under Income-tax Act; sales tax on component parts of motor vehicles at 7 per cent; sales tax on Indian made foreign liquors at 7 per cent; raising of the prices of country liquors sold departmentally by 25 nP; increase in sales tax on cigarettes, pipe tobacco and cigars by 2 per cent; enhancement of the taxes on sales made in hotels and restaurants, and increase in the sales tax on bullion and also in the tax of motor vehicles of various categories.

In his budget speech Mr Dogra referred to the inevitability of new taxation in the context of the development plans that are being launched and which for successful implementation call for raising of additional resources from internal sources. He also assured that everything possible is being done to reduce unnecessary expenditure. Mr Dogra was also critical of the treatment meted out by the Third Finance Commission and urged the imperative need for the Centre to correct what he has described as the inequity with which the Commission has treated them.

★

US Autos Booming

NOW that the securities markets have quietened down after their gyrations of the past week, and the earlier losses have more than been recovered on average, it is possible to concentrate once again on other aspects of US economic life—aspects that may be more indicative of basic business conditions than are the emotion-ridden stock exchanges, and promise to be more lasting and more significant in their impact. Foremost among these are the developments in the important automobile industry, which are being greeted by manufacturers and dealers alike with a kind of happy amazement.

So strong has been the demand for new automobiles, that sales are running close to the record pace of 1955, when the industry delivered no fewer than 7.1 million passenger cars, including imported and domestically produced vehicles. At the present sales pace, another seven-million car year is in prospect. Indeed, with each passing day the possibility of a new record this year comes closer to reality, although few experts are making such an outspoken prediction at this moment.

Record or no, this year's automobile sales are running well ahead of last year's and are out-

stripping even the more optimistic of the 1962 forecasts. To keep up with the soaring demand, which only now is entering what is normally its most buoyant season, production schedules also have been on the upswing during the year. The most recent weekly report, for instance, showed automobile output running more than 40 per cent ahead of the same week of 1961.

What is more, experts who have taken a close look at this year's automobile market find it far healthier than it was in 1955. The 1955 buying splurge, they recall, was followed by a noticeable 1956 drop-off in sales. Today, however, they see every indication that 1963 automobile sales will approximate, and may even exceed, the 1962 performance.

Much of their reasoning relates to the soundness of 1962 credit conditions. Back in 1955, automobile instalment—or time payment—loans ran nearly \$3,500 million ahead of repayments. This represented something of a strain on consumer finances then, and had a deleterious effect on automobile loan demand in 1956.

In 1962, however, automobile credit is running barely \$1,000 million ahead of repayments—and this after a year in which repayments actually exceeded new loans. Consumer incomes and savings, moreover, clearly are well ahead of 1955.

In addition, production schedules are running much more smoothly this year, and more in keeping with the actual level of demand. Production capacity is much larger today than it was seven years ago, and through the use of modern computers automobile makers have been able to accumulate more reliable data more quickly on inventory levels and the actual state of consumer trends and markets.

As a matter of fact, some companies have been keeping their production so closely geared to demand that they have been encountering shortages in some popular models. One notable example is the case of a manufacturer whose sales have been booming far ahead of any previous year, and who conceivably could run out of 1962 stock, the way things are going, before new 1963 models reach dealers' showrooms.

Another source of market strength is the growing number of multi-car families. Some 22 per cent of all families in the United States now own two cars, up from eight per cent less than a decade ago. And there is even a noticeable rise in the number of families owning more than two cars.

One thing that most automobile manufacturers and dealers have observed is the selectivity of today's customer. This is reflected in the variety of models being offered this year, from the small and compact cars to the large and

a pretty realistic picture...

NOT that trains run on rails laid on our palms. But next time you look at a railway train, remember that many of the high grade steel parts for locomotives, carriages, wagons are from our precision and quality castings; and have, in fact, a lot to do with the safe and efficient running of India's railways.

BHARTIAS ARE VERY CLOSE TO INDIA'S RAILWAYS

BHARTIA ELECTRIC STEEL CO., LTD.
CALCUTTA

luxurious vehicles. This has complicated marketing problems somewhat, and stiffened competition, but it also has helped broaden the base of car ownership by offering an automobile to suit nearly every taste and every need—and for all practical purposes in today's US economy, nearly every pocketbook as well.

★ DISARMAMENT Impact on Development Assistance

A sizeable cutback in defence spending at home and abroad such as would result from an effective disarmament agreement, would inevitably involve the international as well as the domestic programmes of the United States. The general belief, as reflected in the US government's recent publication "The Economic And Social Consequences Of Disarmament," is that such a development would exert a healthy long-term influence on the movement of US trade and capital and on the allocation of economic assistance to other countries.

It is well to remember that the US government has not waited

for disarmament to undertake economic aid programmes on a scale never equalled in human history. The roots of American external aid are found in the many private efforts, beginning in the nineteenth century, to improve living conditions and advance human welfare throughout the world.

The US government entered this field under the impact of World War II, to help meet defence and civilian needs in areas where military aggression was threatening the freedom of nations. During the war years 1941-45, the US government devoted more than \$50,000 million to aid other countries.

Since World War II, the United States has made available well over \$60,000 million in loans and grants to aid economic advancement in every continent of the globe. More than \$1,000 million has been contributed to the United Nations and other international organizations. In addition, some \$30,000 million has taken the form of military aid to help other countries defend their security and integrity.

All this demonstrates the persistent readiness and ability of the United States to help in the building of a peaceful and prosperous world despite a number of difficulties, such as an international balance of payments

deficit and burgeoning foreign competition for world markets resulting from the heavy US investment in reconstruction and development assistance to all parts of the world.

On numerous occasions the US Government has called attention to the further impetus disarmament could provide for economic development. The savings resulting from the curtailment of defence outlays would permit an enlargement of aid efforts by the United States and other industrial countries, although it is not possible at this time to anticipate the exact timing or magnitude of such efforts. Furthermore, the progressive reduction of US expenditures for defence purposes would provide a more favourable balance of payments framework for enlarged economic aid.

Also, disarmament would release from defence production and research in the United States valuable human and material resources which could provide less-developed lands with needed skills and facilities.

American capital goods industries could readily shift some of the production facilities now devoted to defence requirements, to production for economic development in other countries. And the improved international climate resulting from disarmament should encourage private development

capital to move in greater volume to the less-developed areas.

It is too much to expect, of course, that disarmament automatically would solve all difficulties; economic development is a many sided problem requiring a broad range of approaches.

As President Kennedy has noted on more than one occasion, US and other external aid can be effective only as it goes hand in hand with other measures. Among these are measures to improve international co-operation, to create in the recipient countries the most favourable conditions for the effective use of external aid, to promote constantly expanding and healthy international trade and investment. Measures such as these would enable the world better to cope with, and even to turn to advantage, the temporary changes in import and export patterns that may accompany a large-scale shift from defence to civilian production.

It is not that the nations of the world should wait for disarmament to enlarge both the participation in and the volume of aid for development. Right now, every country by its own action can help make the 1960's in President Kennedy's words, a decade of development. But disarmament, when and as it is achieved, will open up new challenges and new opportunities for enhancing the welfare of mankind.

Indian Finance

TERM LOANS

Principles of Appraisal

[The following summary of the report will be found to be of interest to our readers. —Editor]

The Reserve Bank of India set up some time ago a Working Group to study and report on the general principles followed by financial institutions extending term loans. The Group which had as its Chairman Shri K. N. R. Ramanujam of the Reserve Bank, consisted of representatives of scheduled banks and other financial institutions. Its Report has now been published by the Bank.

The Report discusses the four broad aspects of a term loan appraisal—technical feasibility, economic feasibility, financial or commercial feasibility and managerial competence. The question of security against term loans is considered as also the modifications in approach which lending institutions should adopt in catering to the special requirements of small scale industries.

The planned acceleration of industrial growth in India has brought to the fore the importance of the provision of long and medium-term finance to industry. In the years since Independence, several special financial institutions such as the Industrial Finance Corporation of India, State Financial Corporations and the Industrial Credit and Investment Corporation have been set up and they have extended a growing volume of medium and long-term credit to industry. In the context of the future requirements of industrial growth, the scale of operations of the various special institutions will continue to expand and grow in importance. Some of the commercial banks have also, of late, been taking interest in extending formal medium-term loans to industry, assisted partly through facilities available from the Refinance Corporation for Industry. Considering the demand for and supply of term credit to industry, banks will be called upon to supplement to an increasing extent the facilities provided by other financial institutions. The increasing importance of term loans emphasizes the need for improving as well as the need for disseminating more widely, techniques of appraisal of term loan applications.

BANKS AND TERM LOANS

While several special financial institutions have been established in recent years for the provision of medium and long-term credit for industry, there is still need for a further broadening of the institutional set-up. Banks hitherto have shown caution in extending their term loan commitments as they consider such loans non-liquid and hence risky. The

traditional concepts of liquidity are, however, not applicable to term loans. The liquidity of such loans depends on the 'anticipated income' of the borrowers as they are intended to be repaid over a period of years out of the enhanced profits arising from the utilisation of the loans.

It is well known that Indian banks "roll over" a substantial portion of their short term credit. This amounts, in effect, to medium term lending and it has not adversely affected the liquidity position of the banks. Actually, the absence of a continuing obligation for full repayment during the tenure of the loan, the liquidity that comes from regular amortisation and the discipline that this imposes on both the banker and the borrower are points in favour of formal term loans as against rolled-over credit. The adoption of formal term lending by at least the larger banks would introduce a certain flexibility in the operations of the Indian banking system.

The present conditions in India are especially favourable to the adoption to a limited extent of the practice of formal term lending by banks. Several measures such as the setting up of the Deposit Insurance Corporation have been introduced to add to the strength and stability of the banking system. At the same time, certain limitations concerning the ability of the Indian banking system to extend the scope of banks' activities in this field should also be noted. Already the credit-deposit ratio of banks is high resulting in pressure on their liquidity ratio. There is also the fact that term lending is a specialised business which only banks with a certain minimum of resources, personnel and organisation can undertake. Even in the case of an individual bank equipped for the purpose, the amount of term lending that can be undertaken is limited by its overall financial position which is determined, among other things, by the structure of the bank's deposits (i.e. the size of its term deposits), its capital funds and the general level of its advances-deposits ratio.

ASPECTS OF APPRAISAL

In the assessment of risks involved in loans of longer duration, the criteria used for judging the 'soundness' of short term loans are often unreliable and inadequate. While a static analysis of the balance sheet position would suffice for a short-term loan, appraisal of term loans requires a dynamic approach, involving, as it does, among others, a projection of future trends of output and sales and estimates of costs, re-

turns and flow of funds. In fact, the standards to be adopted and the methods of analysis required for the appraisal of term loans are more appropriate to investment decisions than short term lending. However, there can be no standardised approach to appraisal. Even the criterion of profitability that would be normally adopted by financial institutions cannot be applicable in all cases. In the context of capital scarcity in an underdeveloped economy, it may have to be partly tempered by the wider objectives of development.

There are four broad aspects of an appraisal: technical feasibility, economic feasibility, financial or commercial feasibility and managerial competence. It would be neither possible nor necessary to attach equal importance to all these aspects, even when a comprehensive enquiry seems necessary. Each situation should be viewed separately and as a whole. The strong points revealed by one aspect of appraisal may more than offset weaknesses in others. The scope of appraisal and the emphasis placed on each aspect would hence depend on the circumstances of each case.

The examination of technical feasibility consists of an assessment of the various requirements of the actual process with a careful enquiry into the availability, accessibility and quality of the goods and services needed.

The economic feasibility aspect has reference to the earning capacity of the project. The immediate sale prospects of an increase in output should be assessed but it is necessary to go beyond this. On the supply side, the competitive position of the unit concerned should be examined and on the side of demand, the projection of future trends worked out. This is a complicated matter since the influence on demand of the different factors varies depending on the nature of the goods produced—consumer, intermediate or capital. Moreover as there are estimates they have to be used with due caution. Nonetheless, it should be possible to determine approximately the range over which the demand for any product will move over a given period.

The appraisal of managerial competence is of importance because in a dynamic economic environment the ability of an enterprise to forge ahead of others depends upon the quality of its management. The repayment prospects of a loan thus vitally depend upon the competence and integrity of the management.

FINANCIAL APPRAISAL

The most important aspect of term loan appraisal is the financial aspect. No term lending institution can afford to ignore a comprehensive financial appraisal, except at its own risk. Any temptation to appraise term loans

adopting criteria suitable for short term accommodation must be scrupulously avoided. The term-lending institutions have to ensure that the projects to be handled by them meet the following minimum financial criteria: (i) The estimated cost of the project is reasonable and complete and has a fair chance of materialising. (ii) The financial arrangement is comprehensive without leaving any gaps and ensures availability of cash as and when needed; (iii) The estimates of earnings and operating costs are as realistic as circumstances permit; and (iv) The borrower's repaying ability as judged from the project operations is demonstrable with a reasonable margin of safety.

The basic data required for financial analysis can be grouped under 4 broad heads.

(1) **Cost of the Project:** The capital cost estimates of the project should be comprehensive and require to be reviewed critically. Comparisons of such estimates may be made with those of similar projects entertained earlier by the lending institution. In the estimation of costs, besides the principal items such as land, buildings, machinery etc., allowance should vary from industry to industry. It is also necessary to ascertain the means of financing the project that is the extent of reliance on share capital, internal resources such as reserves and surplus, long term borrowings, deferred payments for import requirements etc. The cost of the project and the means of financing it have to be related to the phasing of the project and arrangements made to secure funds as the need arises. The schedule of disbursement of the loan will have to be drawn up so as to synchronise with the different payments to be effected by the borrowing unit.

(2) **Cost of production and profitability:** To avoid an under-estimation of the cost of production, care should be taken to see that no element of cost is overlooked. It will be necessary to work out the stage at which the project will break even and start yielding profit. Estimates of earnings will also have to be made up to the time the unit is expected to establish itself in the market and reach a satisfactory level of production at normal costs i.e. till the special tax benefits expire in order to assess the normal profitability. Further, it is necessary to work out the extent of price fall that can be sustained by the project without incurring loss.

(3) **Cash flow estimate:** To ensure sound financial planning and reasonable assurance of cash availability, the lending institution has to ascertain the schedule of financial requirements of the project. The cash flow estimates of a project would show the various sources of funds including those arising out of profits and depreciation and the application

THE BIG HURRY IN THE WORLD OF NUCLEAR PHYSICS

The hurry is to find a compact source of energy that will be as prodigious as the sun and will not exhaust though the world live a million years. ■ Closest to the ideal is Uranium 235, a scant one milligram of which, when fissioned or 'exploded', releases more energy than that obtained by burning millions of tons of coal. This great world of power will keep all of us going, and going well, when the present natural sources such as coal give out. Already atomic power stations are an actuality in many countries including India. ■ Shaping the giant pressure vessels enclosing the reactor cores demands a very specialised knowledge of welding. ■ It is this specialised knowledge and application of industrial gases that Indian Oxygen affords Indian industry.

INDIAN OXYGEN LIMITED

of the funds for different purposes. A study of the figures would indicate the adequacy or otherwise of financial arrangements made by the borrowing unit. The data would also enable the computation of debt-service coverage which, in its turn serves as an invaluable guide to the lender for determining the repayment terms of the loan, and the restrictive covenants where so warranted. The figures of cash-flow estimates provide the link between the balance sheet of one year with the next.

(4) **Proforma Balance Sheets:**—There is a difference in the financial appraisal of projects of new concerns and expansions of existing concerns. In the case of the latter, the first step should be the study of their balance sheets and profit and loss accounts for the past 5 years or so. The second step should be the preparation of estimates of cash flows for the next 4 or 5 years followed by estimates of balance sheets for the same period. For a new project, all the necessary figures must come from the cash flow estimates, on the basis of which the proforma balance sheets are compiled.

The preparation of various statements would, no doubt, involve both time and effort and the borrower may require a step by step guidance in furnishing all the relevant data. Although the information called for from the borrower may be rather detailed and the job of furnishing it somewhat exasperating, the borrower would sooner or later realise that the object of the enquiry is to establish the financial feasibility of the scheme and to see whether there is scope for its modification for the mutual benefit of the parties concerned.

The Report has also dealt with the significance of 'Ratio Studies' as broad indicators of the financial trends of a company. A scrutiny of the financial statements (balance sheet and profit and loss accounts) over a period of years reveals the trends or patterns in financial structure and inter-relationships between financial facts. The relevance of various ratios for an appraisal is briefly discussed. In this connection, the

Working Group has emphasized the role of the debt-equity ratio and observes that from a lender's point of view, the financial structure of a project should reveal a satisfactory balance of 'owned funds' i.e. equity and 'borrowed funds', i.e. debt.

It would be prudent for the lending institution to depute an officer to inspect the borrowing concern to verify and supplement the information supplied by them. The pre-sanction inspection and a follow-up of loan proposals in order to keep a watch on the progress of the project are of considerable importance. These are, in essence, an extension of financial appraisal and form automatically a part of the work of lending institutions.

On the basis of a thorough financial appraisal, the terms and conditions of the loan are settled. In drawing up the terms of the loan, the principal consideration should be that they should not impose any strain on the concern and provide a reasonable measure of certainty for financial viability while, at the same time, allowing a margin of safety to the lending institution.

An important matter for determination is the rate of interest and the periodicity of its application. Some of our term lending institutions charge a uniform basic rate of interest on all loans; the Working Group has expressed the hope that in course of time the rates of interest will be varied according to the degree of risk involved.

The Working Group points out the lack of financial data in respect of specific industries and suggests the publication of data relating to companies grouped by size for each industry. The Group also stresses the importance of adequate training in industrial financing to staff employed in financial institutions specialising in term-lending.

Security against Term Loans:—Security considerations which are of prime importance in short term lending are significant for term lending also especially in India where information on credit worthiness of borrowers is not readily available and much groundwork has yet to be done in the establishment of credit information bureaux. However, security cover of the loan should not be regarded as a substitute for a scientific financial assessment. Loan proposals should be examined from the point of view of both commercial profitability and the nature of security offered.

The security generally accepted by Indian term lending institutions comprise existing industrial assets, assets to be acquired from the loans and non-industrial areas as supplemental security. Agricultural land, however, is generally not accepted. Personal guarantees of the directors/managing agents are also obtained as a measure of abundant caution. The nature of charge for industrial

loans is usually a mortgage on the fixed assets. The creation of a legal mortgage involves heavy expenses by way of stamp duty and registration charges and if the loan is required for a relatively short period of five years or so, taking of equitable mortgages would be economical from the borrower's point of view and not so risky from the point of view of the lending institution. However, equitable mortgages are not suitable for long-term loans and it will be safer and desirable to insist on legal mortgages so that in case it becomes necessary, the mortgage could be enforced without intervention of the Court.

For the purpose of assessing the value of security, the assets may be valued on the basis of their book value, current market value or replacement value. In valuing them, it would be expedient to combine one or more of the above methods depending on the type of the asset so that the valuation finally adopted might safeguard the interests of the lending institution and also be equitable to the borrower. A proper valuation of security requires the assistance of technical and legal experts.

Where the total accommodation required by a concern is too large for a single institution to provide, assistance from another institution is difficult to obtain mainly because fixed assets are already charged and a second charge is generally not favoured. Some form of participation arrangement on the part of different financial institutions would be necessary. Such arrangements can also serve other purposes such as underwriting of shares, issuing guarantees etc.

The Working Group feels that periodical exchange of views and experiences of the various term lending institutions would be useful. It is suggested that the annual Conferences of State Financial Corporations should be enlarged so as to cover commercial banks which are prominent in extending medium-term loans.

Term Loans to Small Scale Industries:—The Working Group has emphasised the special place of a preferred sector like small scale industries and has discussed the somewhat different approach which banks and other lending institutions should adopt in catering to their requirements and in appraising their creditworthiness. The comprehensive criteria applied to term loan applications from medium and large-scale industries cannot be always used in respect of small scale industries. These industries, because of certain features inherent in their structure, experience difficulty even in obtaining working capital; they deserve special treatment because of their relatively high employment potential. The small scale industrial sector has grown rapidly under the impetus of the promotional measures undertaken by

Government. The provision of adequate finance to the sector is hence of great importance.

Although there are different categories of small industries, this sector as a whole faces certain peculiar problems which will have to be borne in mind in evolving measures to cater to its financial requirements. For instance, most small scale units are unable to offer adequate security against loans. It is also difficult for them to specialise and produce goods of standard quality and they are frequently unable to import the requisite raw materials on the specialised type of machinery or secure deferred payment facilities. These industries are also unable to supply the complicated information required by lending institutions or offer security acceptable to them. The institutions which normally respond to a certain extent to the needs of small industries are smaller banks. However, the resources of these banks are limited and if the bigger banks with large resources and branch organisation do not adopt promotional view and extend assistance to small industries, they would be forced to borrow from non-institutional lenders. Both lending institutions and borrowing units have to adjust their attitudes in various ways if institutional credit to this sector is to play a vital role.

The attitude of lending institutions should be practical and flexible rather than strictly legal. They may liberalise their security requirements and adjust the interest rate and period of repayment with reference to the earning capacity of the unit. To enable financial institutions to liberalise their lending criteria, the Government of India has introduced the Credit Guarantee Scheme which is operated by the Reserve Bank and the institutions can avail themselves of the facilities in order to cover a part of their risk. The small-scale industries, on their part, should improve their methods of operations and make their proposals acceptable to the lending institutions. Lack of finance is often not the cause but the result of difficulties in other spheres and it is common knowledge that small-scale industries need non-financial assistance in the form of marketing, technical guidance, and training in management etc. Several measures have been taken by Government in this regard but still more has to be done. Above all, there is a need for greater co-ordination at all levels between the financial institutions and non-financial institutions and agencies engaged in promoting small industries.

The Appendices to the Report include a Check-List designed to facilitate the task of project appraisal, and also an illustrative example of a loan appraisal which attempt to high light some important aspects of financial assessment.

Clive Street Gossip

"I must have liberty
Withal, as large a charter as the wind
To blow on whom I please"
—As You Like It.

PRECISELY when did TTK acquire the bogey reputation that sends the stock markets into convulsive fits at the mention of his name? It certainly was not always the case. Indeed the opposite was nearer the popular image in the earlier years of his political life. His entry into politics was that of a successful businessman who developed interests wider than those of merely making money. As Commerce and even Finance Minister he was considered by "leftists" as far too friendly to "capitalists". (Which provides a pointer to the problem of dating: the back files of Blitz should help since at some point its tone in referring to him distinctly changed). Something must be attributed to the 1957 budget in which he quite simply carried out the dictates of the Second Plan. It is a curious fact that successive Finance Ministers from Dr Mathai onwards (Mr Desai, I must admit, does not easily fit into this pattern) have suddenly become unduly socialist in the eyes of a certain section of the public. And yet to date TTK's baptism into socialism with the 1957 budget, on the strength of the array of direct taxes he then produced is to be quite on the wrong track. Kaldor, whose proposals in a much mangled form, he gave effect to in that famous budget was one of Mr Deshmukh's rather than TTK's enthusiasms. No doubt from time to time Mr Krishnamachari has talked caustically about glaring inequalities of wealth and the inequity of a tax-dodging, expense-account-fed fraternity getting away with it. I would hardly consider such righteous anger misdirected. No doubt sometimes his language was a trifle colourful as on the occasion he referred to the "prowling man-eaters" of the economic scene. This particular and somewhat uncharacteristic lapse into the language of the sportsman was as unfortunate as the late Mr Bevan's little excursion into bacteriology in which he referred to some conservative gentlemen as "vermin". But none in his senses took the metaphor as involving anything more serious than the pressing demands of rhetoric. TTK, as far as I can see, is less burdened with ideology than any man I know. His strength and his weaknesses stem from his being a technocrat, a member of the new race of techno-

economic arrangers of human welfare. They are all over the world, in Russia, in France, in Scandinavia and even in Britain where they man the NED. These, often grim and determined men would make you happy despite yourself and have no patience with feckless men. As coordinator of our Plan efforts which are pulling in different directions at the moment, TTK has an assignment that should fit in with his vocation.

I think the Congress is ill-advised in shirking political decisions of a personal nature and muddle along with ad hoc solutions which are no better than plain evasions. There is no need to treat ambitions of leadership within the party in the manner in which Victorian matrons treated articles of underwear. The unmentionables have unquestionable legitimacy and in any event don't cease to exist for being ignored. If it is the general public that it is sparing the sickening details, it is wasting its concern. The general public is quite unscrupulously lapping it all up with great eagerness—with greater eagerness, in fact, than it does the platitudinous resolutions on every subject from Pancha Sheel to Panchayati Raj. People in politics are in the power game and it is quite in accordance with the rule book to beat your rival to it both within and without the party. None is therefore scandalised by the spectacle of rivals flexing their muscles or going for each other. There is nothing fundamentally disreputable in a contest for the Deputy Leadership of the Congress Parliamentary party and the sensible thing to do would be to let the rivals fight it out and accept sportingly the result. Of course, some suggestion of succession to the PM's gadi was rightly or wrongly attached to this office: but in stripping it of this particular glamour, Mr Nehru has tended to make it a niche for a super. Ever since last year's failure to secure a successor to Mr Pant in this office, there have been snide references to its unimportance. At his Press Conference the other day, Mr Nehru reduced the office to as near a piece of futility as is decently possible. A deputy leader is to preside over the party meeting in the leader's absence. He is not automatically Mr Nehru's deputy in the Lok

if professions were less highfalutin and practice not so obviously cynical.

Among the bright ideas put on the agenda of the recent meeting of the Board of Trade was the conferring of titles as an incentive to export more. The idea is that a man who does superlatively well by himself and by his country in the matter of exports should be honoured with the honorific of "Vanijya Nipuna", which has variously been rendered as "export trader" or more equivocally as "clever traders". Assuming that some young man in the Ministry of Foreign Trade was not having a private joke of his own in putting this idea on the agenda paper, the expectation seems to be that the prospect of the honour would so lure a merchant that he would willingly forego the profits to be reaped in a sheltered market and rush to the nearest port to export whatever he has to sell. And yet the joke may well be on us who think that all this is pretty naive. The Constitution abolished the titles but within a matter of years they came back in even larger numbers. If "Krishi Pandits" for boosting agricultural production why not "Vanijya Nipuna" to boost exports? There is something in the national temperament that craves for long and high-sounding honours. Whether it is the Pandits of old calling themselves "Samrat" of this or "Sarvabhoutma" of that, or princelings of more recent times who would go to any lengths to propitiate the political agent for a new honour from the Emperor or whether it is the Rai Saheb who never failed to present himself when the Governor was about, they were all suckers for a title. Our Republicanism and our contempt of empty symbols and honorifics are not very deep. And yet I doubt whether Vanijya Nipunas are going to rake in even a fraction of the foreign exchange we need.

Filling the Gap

THE Finance Minister's statement, last Friday, on the different aspects of the foreign exchange situation facing the country and the steps that are proposed to be taken to conserve foreign currency, generally confirms the earlier forecasts. The measures proposed include further concentration on export promotion, more import cuts and action to rectify the unfavourable trend in invisibles. The Finance Minister had stated that, though import policy had been tightened on a number of occasions, further tightening was both "feasible and desirable". This should mean that, in his view, imports could be further restricted without adverse effects on the level of indigenous production. But his colleague, the Minister for Commerce and Industry, was a shade more cautious when he replied to the debate on demands on grants for his Ministry last Monday. Some of the imports which had been reduced, such as spares, he thought, would be made good by indigenous production. And he hoped that the cuts effected because of the exceptional situation would not affect industrial production. He estimated that the cuts in the imports by established importers would result in a saving of Rs 12 crores in a half-year. For actual users the cut would be of the order of 15 per cent, but he added the assurance that the cuts would be applied in a judicious way having regard to national priorities.

The prospects of an early relaxation of the new restrictions, depend, apart from anything that may be achieved by the Ministry of International Trade and its appendage the Board of Trade, on (1) the success of the measures to stop the leakage of foreign exchange and (2) availability of 'untied' credits from friendly countries. It is hoped that the UK would make an advance credit of about Rs 12 crores against the aid promised for the Third Plan and the position may be clarified in the course of talks with Mr Duncan Sandys next week. The prospects of further assistance required to fill gap in the loans promised by the consortium members will be explored by the Finance Minister when he goes abroad early next month. Mr Desai will be leaving for Geneva on July 9, to attend the meeting of the United Nations Social and Economic Commission. He will also take advantage of the opportunity to visit Bonn, London and Paris and discuss India's trade with an expanded EEC including Great Britain and the effect that a restrictive trade policy by the European Community is likely to have in neutralising the aid extended by Western countries for India's economic development. The import cuts which India has been forced to impose will also figure in the talks next week with Mr Sandys, and give point to India's case for a revision of the basis on which Britain will negotiate with the EEC.

While urging the need for social

discipline for conserving foreign exchange, the Finance Minister has also emphasised that there is no cause for feeling that the Plan has been, or should be, slowed down. On the contrary, if anything, he said, there is greater need now for speed. The economy will gain in strength if the projects for which foreign exchange is assured are completed as quickly as possible. In respect of the remaining projects also, he declared, we should go ahead with all the preparatory work, so that they could be speedily executed as soon as the foreign exchange has been arranged.

Approach to EEC

India's approach to the problems arising out of Britain's negotiations for entry into the Common Market, which would be discussed with Mr Duncan Sandys, was outlined by Mr Manubhai Shah in the course of a statement in Lok Sabha last Tuesday. He also placed on the table of the House a copy of the memorandum presented to the EEC by Mr K. B. Lal, our Ambassador to the European Economic Community.

The basic fact that has to be faced is that, while India in 1950 had a surplus of about Rs 5 crores in its trade with the six Common Market countries, in 1960 there was a deficit amounting to about Rs 135 crores. India's exports to the Common Market hardly amount to a quarter of the imports from these countries. The surplus of imports is mostly financed by deferred payment arrangements for purchase of capital goods adopted during the Second Plan as well as by credits, mostly short-term, advanced by these countries for India's development plan. But this position cannot continue indefinitely and the balance has to be rectified by affording Indian exports greater access to the European market which would enable India, in course of time, to repay the development loans. The alternative is for India to cut down imports from these sources to the level corresponding to what they take of India's exports, and to re-adjust our plans accordingly.

The entry of the UK into the EEC, without adequate safeguards for India's trade, would further aggravate the imbalance. Mr Manubhai Shah has drawn attention to the fact that our trade with the UK has been built over a long period of years on the basis of freedom from tariffs and quotas as well as certain guaranteed margins of preferences. And according to his estimate, our trade will suffer great damage if our long-established rights under the Indo-UK Trade agreement are replaced by a restricted regime.

The approach set out in the memorandum to the EEC is based on the right of free entry together with the preferences which we have enjoyed in the UK market and of our rights under the GATT. The Minister for International Trade declared that we expect the UK and the Six to respect these rights and to strengthen our mutual trade and economic relations with the Common Market countries by a larger and increasing volume of ex-

ports from India to the enlarged European Economic Community.

... And T.T.K.

But the maintenance of the timetable for the completion of plan projects according to the original schedule, not to speak of speeding up, seems to depend more than anything else on what the Minister without Portfolio is able to make of the onerous task assigned to him. Though there has been no formal announcement, it is generally understood that Mr T. T. Krishnamachari is expected to coordinate the development programmes of Steel, Coal, Transport and Power. His table talk, which is freely reported in some papers, gives an indication of his ideas and general approach. And there is no denying that the return of T. T. K. has introduced an element of drama in the discussions of drab economic problems. While the optimists are few who expect the transport bottleneck to yield to his magic touch, there are others who hope that something will come out of that bottle. Talking to friends a few days ago, he is reported to have remarked that his job would probably, keep him "more in the scullery than in the drawing room". But T. T. K. as Cinderella hardly cuts a convincing figure. Soon after appointment as member of the Cabinet, Mr Krishnamachari has also been appointed member of the Planning Commission. He has already been named a member of the important Cabinet Sub-Committee on Economic Affairs and is likely to be nominated to several others. The Committee on Economic Affairs, by the way, is so important, that it has not met for a quite a long time. T. T. K. is expected to breathe the magic words that will make it come alive.

Fair Commercial Practices

While outlining the steps proposed to be taken to deal with the foreign exchange shortage, the Finance Minister had assigned the foremost place to increased exports and had referred in this connection to his colleague, the Minister for International Trade and his efforts to create a vigorous export climate. In his address to the first meeting of the Board of Trade of which he is president, Mr Manubhai Shah said that the achievement of the immediate objective of increasing our exports by Rs 40 to Rs 50 crores should not be considered an impossible task, notwithstanding the difficulties in the way. One of the major topics discussed by the Board was the framing of a Code of Fair Commercial Practices. The Board has decided that an operational programme should be taken up. A Committee under the Chairmanship of Mr Shriyans Prasad Jain, President of the Federation of Indian Chambers of Commerce and Industry, has been appointed to draw up, after further study, a draft code for commercial practices.

Closely connected with enforcement of fair commercial practices is the question of Quality Control. The Board has approved the Establish-

16 June 1962

ment of a Quality Control and Inspection Council which, when constituted, would place before the Board the operational programme of quality control and pre-shipment inspection. The Board has also emphasised that pre-shipment inspection should be given immediate priority because this would be the most vital and urgent phase of the entire programme.

The Ad hoc Committee on Quality Control and Pre-shipment Inspection had recommended that the entire range of exports should be brought under quality control, but that control should be of the type specifically suited to each field. The Committee had suggested the following types of controls:

- (1) Prohibition of the export of articles intended for human consumption or application, as well as those affecting the health and safety of persons, unless they conform to rigid quality standards.
- (2) When certain specifications have been stipulated by the overseas buyer, export to be allowed only when certified by an inspection agency as conforming to these specifications.
- (3) In respect of items considered important for exports markets and for which standard specifications have been or could be laid down, it should be required that they be inspected and certified before export.
- (4) In respect of commodities not considered important enough, prohibition of export (on account of non-conformity to some standard specifications) need not be considered until a definite need arises in the form of serious complaints and other circumstances.
- (5) In regard to certain commodities provision may be made for factual inspection of goods before export so that the inspections report apprises the overseas buyer of the actual quality of the goods.
- (6) Lastly, the Enrolment Scheme for Exporters should be applied over the entire export field, so that even if a specific consignment is not subjected to any inspection or tests, the fact that the goods are being exported by an exporter who, in registering himself as an Enrolled Exporter, has put himself under a code of discipline, will itself be a guarantee of quality of the export product.

In this connection it may be noted that the Mudaliar Committee has shown preference for the trade developing their own organisations for quality control and pre-shipment inspection. While the two Committees agree on the need for maintenance of standards of quality, they differ in regard to the details, particularly in respect of the agency which should apply the control and the manner of doing so. The Import Export Policy Committee has advocated a self-imposed discipline by the trade, whereas the Quality Control Committee has suggested different types of remedies to suit different commodities, e.g. compulsory control has been prescribed for

drugs and food articles, while greater care in the matter of selection and enrolment has been advocated in the case of engineering, chemicals and other allied products.

It appears from the decisions that have been published that the Board of Trade was not able to reach agreed conclusions on the mechanism for enforcement of quality control and that it has been left to the Quality Control and Inspection Council to work out the details.

While the Government may establish control houses and testing laboratories for some of the important items of export trade at various industrial associations to promote the movement of quality control by establishing control houses and testing laboratories. The quality control movement, it was felt, would have to be generated over a period of time so as to cover a large number of products and a large portion of the country.

THE UNITED COMMERCIAL BANK LIMITED

Registered Office : 2, India Exchange Place, Calcutta—1

NOTICE

NOTICE IS HEREBY GIVEN that a GENERAL MEETING of the Members of The UNITED COMMERCIAL BANK LIMITED, will be held at the Registered Office of the Bank at 2, India Exchange Place, Calcutta, on Wednesday, the 11th day of July, 1962, at 4 P.M. to consider and, if thought fit, to pass, with or without modification, the following resolution which will be proposed as an ordinary resolution:

"Resolved that

(a) 200,000 new ordinary shares of Rs. 100 each in the authorised capital of the Company be issued at a premium of Rs. 25 per share on the footing that such new ordinary shares shall rank in all respects *pari passu* with the existing ordinary shares in the Company save and except that in respect of the financial year of the Company ending on 31st December, 1962 they shall be entitled to such rate of dividend as may be determined in proportion to the amount of capital for the time being paid thereon and to the period commencing from the date on or before which the amount payable with the acceptance of the offer in respect thereof is required to be paid to the Company under sub-clause (b) following:

(b) the said 200,000 new ordinary shares be offered in the first instance, subject to the approval of the Reserve Bank of India wherever necessary, for subscription for cash to those members of the Company whose names shall appear on the Company's share register on the 18th day of August, 1962 in the proportion of one new ordinary share for every two existing ordinary shares then held by such members and so that a sum of Rs. 12.50 nP. per new ordinary share taken up together with the sum of Rs. 25 for premium in respect of each new ordinary share shall be paid to the Company in cash with the acceptance of the offer, and, on allotment, a further sum of Rs. 37.50 nP. per new share shall be payable to the Company on or before 31st January, 1963;

(c) such offer be made by notice as hereinafter mentioned and that any member receiving such offer

shall be entitled either to take up by paying therefor all or any of the new ordinary shares so offered to him or to renounce (upon signing a renunciation in such form as shall be prescribed by the Board of Directors) his right to all or any such new ordinary shares in favour of a nominee or nominees; Provided that such nominee or nominees shall be a member or members of the Company or be approved of by the Board of Directors and that such nominee or nominees shall sign an acceptance of the shares so renounced in such form as shall be prescribed by the Board of Directors and that any such renunciation by a member and acceptance of such nominee or nominees shall be effective only if made upon forms to be supplied by the Company and lodged duly completed with the Company within the time specified together with the sum of Rs 37.50 nP. per share in cash (being the proportionate payment of Rs. 12.50 nP. per share plus the premium of Rs. 25 per share);

(d) subject to the approval of the Reserve Bank of India wherever necessary, the said offer be made to the said members by notice specifying the number of shares to which they are entitled and providing that the offer if not accepted within 30 days from the date of offer, or within such extended time as may be allowed by the Directors, shall be deemed to have been declined and specifying that the payment for such shares at the rate of Rs. 37.50 nP. for each new ordinary share so offered shall be made in full with the acceptance of this offer and before allotment;

(e) any new ordinary shares not taken up by the said members in response to the above offer shall be available for subscription by the members of the Company who take up their rights in full and who desire to apply for additional shares but so that the right to apply for additional shares shall not be renounceable in favour of any other person and the allotment of any such additional shares shall be subject to any condition which may be imposed by the Controller

Manufacture of Watches

The Lok Sabha was informed last Monday during question hour that schemes of seven firms have been approved for manufacture of watches in the small scale sector. There is no foreign investment involved in any of these schemes. Of the seven firms whose schemes have been approved, four are in the Punjab, and one each in Delhi, Himachal Pradesh and Bombay.

of Capital Issues and, in the case of a non-resident member, further subject to the approval of the Reserve Bank of India;

(f) the Certificates in respect of the new ordinary shares shall be completed and kept ready for delivery within six months after allotment thereof."

NOTE:

1. A MEMBER ENTITLED TO ATTEND AND VOTE AT THE MEETING IS ENTITLED TO APPOINT A PROXY TO ATTEND AND VOTE INSTEAD OF HIMSELF AND THE PROXY NEED NOT BE A MEMBER.

2. The transfer books of the Bank will be closed from Monday, 13th August, 1962 to Saturday, the 18th August, 1962, both days inclusive.

EXPLANATORY STATEMENT REQUIRED BY SECTION 173 OF THE COMPANIES ACT, 1956.

With a view to further strengthen the capital resources of the Company and in order to increase the ratio of paid-up capital and reserves to total deposits, the Directors propose to raise the subscribed capital of the Company by the issue of 200,000 new ordinary shares of Rs. 100 each in the manner set out in the resolution, for which sanction of the Controller of Capital Issues has been obtained.

The meeting of the members has been called to consider and pass the above ordinary resolution for the issue of new shares.

The new shares shall rank in all respects *pari passu* with the existing ordinary shares in the Company except that in respect of the Company's financial year ending 31st December, 1962, the new shares shall confer on the holders the right to such rate of dividend as may be determined in proportion to the amount of capital paid-up thereon and period of payment as specified above.

None of the Directors is interested in the aforesaid resolution, except as shareholders of the Company. The General Manager is not in any way interested in the said resolution.

By Order of the Board,
S. T. SADASIVAN
General Manager.

60,000 Equity Shares of Rs. 10/- each at par to M/s. Vereinigte Grossalmeroder Thonwerke, Grossalmerode, West Germany, for Technical Collaboration	Rs. 6,00,000

RESERVED FOR EXISTING SHAREHOLDERS: 60,000 Equity Shares of Rs. 10/- each at par being A RIGHTS issue of shares to existing shareholders allotted for cash (without underwriting commission or brokerage)	Rs. 6,00,000
---	--------------

RESERVED FOR LIFE INSURANCE CORPORATION OF INDIA: (in satisfaction of underwriting agreement as mentioned in detail in the prospectus)	
50,000 Equity Shares of Rs. 10/- each at par	Rs. 5,00,000

NOW OFFERED FOR PUBLIC SUBSCRIPTION: 2,40,000 Equity Shares of Rs. 10/- each at par	Rs. 24,00,000
	Rs. 1,00,00,000

Markets

JUTE Firm Trend in Gunnies

STEADY to firm conditions prevailed in the jute goods market last week as both principal categories of goods met with buying support, partly speculative and partly based on reports of fresh enquiries. Sacking too made good progress and after some interval the spread between near delivery and distant delivery positions has widened. From about the middle of the week sacking began to firm up on persistent rumours of enquiries from Cuba and West Africa. Till last week fresh enquiries were mainly confined to hessian which again continued to be in good request on the entry of Argentina into the market for its requirements.

In earlier dealings the trend was somewhat quiet following the publication of jute goods stock figures for May. Stocks were placed at 83,900 tonnes, an increase of 23,800 tonnes as compared with the previous month. The IJMA has however made it clear that the figure does not give a true picture of the stock position and is in no way comparable with that of the previous month as clearance of goods from mills during the month has been severely hampered by the Hooghly Pilots' strike. The position has been since further clarified. In a press note issued on Tuesday it is made clear that off-take during May has been well

maintained and that the end-May stocks were inflated due to delays in the despatch of goods from the mills owing to complications over the excise regulations and specially to an acute shortage of boats resulting from the Hooghly Pilots' strike. The IJMA has therefore decided that the present maximum level of production in the mills should be continued for a further period of one month from the end of June to the end of July 1962.

That despatches during the past month should have been on a quite satisfactory level is also evident from the continued demand for ready delivery positions. Up to last week the demand for ready and near delivery goods was more or less confined to hessian. But this week sacking also has come to receive this kind of attention. Although all positions have been fairly active, it is the near delivery that is in greater demand. On Tuesday Hessian June commanded a premium of Rs. 10 at Rs. 60 over the distant position of January March which was quoted at Rs. 50. B Twills June was done at Rs. 127.25 as against Rs. 124.50 for the January March delivery.

Production of jute goods in May was higher as compared with the previous month. The increase in output is to be attributed to the increase in working hours from 200 in the previous month to 208 in May. Total output in May was 99,700 tonnes made up of 37,300 tonnes hessian, 47,000 tonnes sacking and 15,400 tonnes other goods.

This compares with the April total production of 97,000 tonnes comprising 37,000 tonnes hessian, 45,000 tonnes sacking and 15,000 tonnes other varieties of goods.

Sentiment in the goods market, especially in the forward section, was cheerful most of the time last week presumably on the belief that foreign buyers, who seemed to have reconciled to the fact that any sizable decline in prices would be unlikely in view of the India Government's determination to ensure an equitable price for raw jute, would not hesitate too long to come to the Calcutta market for their requirements. In this regard the revival of interest of Argentina which is reported to have already issued licences for the import of a sizable quantity of hessian from India and this week's reported enquiries from Cuba and other buyers for sacking have engendered a feeling of optimism at least as far as the near term outlook is concerned.

The raw jute market ruled steady throughout the week with the spread between the ruling prices and the minimum prescribed levels barely visible. The fact that the IJMA mills have decided to continue the present maximum level of production for another month up to the end of July has provided further strength to holders. Meanwhile, the Forward Markets Commission has given its concurrence to the proposals of the East India Jute and Hessian Exchange Ltd., to permit trading in raw jute in transferable specific delivery contracts for deliveries beyond June 1962 up to September and also to commence trading in hedge contracts for raw jute for September delivery. These contracts will all be subject to minimum prices based on a price of Rs. 30 per maund for Assam Bottoms at Calcutta.

STOCKS OF JUTE GOODS AT END OF MAY, 1962.

	31 May 1962	30 April 1962	Variance
Hessian Cloth & Bag	27.1 (26.6)	18.1 (17.8)	+ 9.0 (+ 8.8)
Sacking Cloth & Bag	37.1 (36.5)	26.0 (25.7)	+ 11.1 (+ 10.8)
Others	19.7 (19.4)	16.0 (15.7)	+ 3.7 (+ 3.7)
Grand Total	83.9 (82.5)	60.1 (59.2)	+ 23.8 (+ 23.3)

*Increase over (+) or decrease from (—) last month.

While the figures given in the attached statement show the actual stocks of jute goods held by the mills at the end of May 1962, they do not give a true picture of the stock position.

Owing to the detention of boats resulting from the stoppage of work by the Hooghly pilots earlier in the month, there was still an acute shortage of boats at the end of May and the clearance of jute goods from the mills was seriously delayed. In consequence, the stocks of goods held by the mills at the end of May were much larger than they would normally have been and the end-May figures given in the attached statement are therefore in no way comparable with the figures of previous months.

TEA Plea for Renewal of Tea Agreement

A PLEA for the renewal of the International Tea agreement has been entered by the Chairman of the Consolidated Tea and Lands Company Limited. In his opinion the present situation in the tea trade calls for such an agreement as it will provide an effective safety measure to be applied in times of crisis. The year 1961 has been a satisfactory year for the industry only with regard to production and consumption but financially it has not proved to be quite unsatisfactory as the average price realised during the year in the auctions was lower than obtained in the previous year. World production of tea in 1961 was placed at 1481 million lbs. which was 108 million lbs. higher than in 1960. Of the increase in production India alone accounted for 71 million lbs. But there has been a remarkable increase in consumption of tea as would be evident from the comparatively low stocks in London. The Chairman of the Consolidated Tea and Lands however has pointed out that while the rising trend of consumption is encouraging, the fact remains that the industry could not face a lower scale of prices in view of rising cost of production.

There were indications of a pick up of demand at this week's export auction in Calcutta although the prevailing tendency is to lend support only to quality teas. There were 25,437 packages at the auction with the offering comprising predominantly Darjeelings. There was however a more representative selection from other districts. There was a fairly good but selective demand. The trend in Darjeelings was weak with again numerous withdrawals even without bids. Prices realised were well below valuations. Good demand was seen for the brighter liquoring orthodox teas from other districts and those with clean black leaf but an easier hand prevailed in others. Better CTC met with good enquiry and sold well but lesser sorts were easier. Non-

with Legg cut teas met with fair competition and sold well. While the cheaper varieties were firm, the higher priced sorts were often easier. Quotations inclusive of excise duty: Clean Plain Pekoe Rs 4.30 to 4.50; Plain BP Rs 4.00 to 4.20; Plain Fannings Rs 4.00 to 4.30; Medium Assam CTC BP Rs 5.60 to 5.80; Medium Assam CTC Fannings Rs 5.50 to 5.70; Best Assam CTC BP Rs 6.40 to 6.80; Best Assam CTC Fannings Rs 6.00 to 6.40.

At last week's tea sales in London, where offerings totalled 67,300 packages, there was a good demand with prices realised however showing an irregular pattern. North Indian teas were irregular for all descriptions with prices tending to be easier towards the close, while South Indian varieties ruled generally steady. African teas came to a strong market. Ceylon teas which showed a falling off in quality were selectively better but prices were generally lower following quality.

COTTON

Wide Fluctuations in Cotton Futures

The cotton futures market in Bombay ruled very steady last week with Jarilla March 1963 done as high as Rs 721 before coming back to close on Tuesday at Rs 715.50. The late reaction was largely due to profit-taking following reports of rainfall in several cotton growing regions. The earlier firm trend was attributed to the growing belief that in view of the delay in the progress of the monsoon the crop would be late coupled with the assumption that due to acute shortage of foreign exchange import of foreign cotton would be drastically restricted in coming months. Another contributory factor for the bullish trend was the decision of the authorities to requisition Kalyan and Laxmi

varieties of cotton, the trade had been disturbed by the decision of the Maharashtra Government to increase the sales tax on cotton by one per cent. The firm trend continued unabated on Monday with the rate hardening following short covering and the clear weather conditions. The fact that mills too covered their purchases in the futures market indicated that they were anxious to contract for their requirements as Government was expected to take abiding interest in maximising cotton textile exports. With the receipt of news of rainfall in growing areas on Tuesday however the trend was promptly reversed with the quotation dropping by more than three points although lower levels attracted some support.

The spot cotton market continued to rule firm with brisk activity noticeable in all varieties. The strength of the spot market has partly stemmed from the fact that a large number of mills have yet to be issued their quota for inde-

genous cotton. The export section was rather dull and only straggling covering by shippers was noticeable. So far in this season export quotas issued for Bengal Deshi totalled 2.70 lakh bales over and above the quantity released for export to Yugoslavia against rupee payment. In the import section, American and Pakistani cotton continued to be in good demand.

The cotton piecegoods market in Bombay ruled dull with demand tapering off presumably due to the end of the marriage season and the general belief that some reduction in the excise duty on cloth would be announced. Although conditions continued to be rather dull on the export front, the expectations are that business would pick up sooner or later now that mills are to be allotted a minimum quota.

SUGAR & GUR

An easy trend prevailed in the Sugar market at Hapur due to selling pressure from mills. With the supply position easy, spot delivery prices declined. Although production of sugar has virtually come to an end in UP some mills in east UP are still continuing crushing as they are able to get enough cane to keep them working. Despite depletion of stocks with traders Khandsari prices were rather quiet. A similar trend was noticeable in gur also. Gur futures were very much depressed in earlier dealings reflecting the cumulative effect of several adverse factors affecting the trade. But in later dealings sentiment smartly improved presumably due to the expectations that gur production would be adversely affected in view of reported damage to the cane crop by locusts and other pests.

FOODGRAINS

With arrivals showing sizable increase, the foodgrains market at Hapur developed an easier trend. Demand also was poor presumably influenced by the heavy arrivals. Apart from the actual improvement in the supply position in the market, official estimates of the crop were very encouraging. It has been announced that the 1961-62 crop was likely to be a record one and hence trade circles expect that foodgrains prices should show further decline in coming weeks. It is however noted that the authorities would not allow the prices to fall to uneconomic levels. However the decline in the prices of wheat is as yet fractional although stocks in the market have increased sizably during the past week. Rice prices continued to be steady as a result of good consumer demand and due to a fall in arrivals. Gram too was somewhat steady due to fall in arrivals while demand was quite fair. Both barley

Indian Finance

16 June 1962

and bejhar were slightly easier as stocks were adequate to meet current demand. With fresh arrivals arhar turned quiet.

NON-FERROUS METALS

The non-ferrous metals market considerably firmed up in late dealings last week following the announcement of a drastic cut in imports. Even zinc and tin which were easier in dealings recorded smart gains while copper which was already steady gained further strength. The firm trend in copper had stemmed from sustained consumer enquiry as well as enquiries from upcountry interests. The main reason for the uptrend in prices was that available stocks of copper were not being replenished as a result of delay in the issue of import licences. With the announcement a further drastic cut in imports the tendency had been to accelerate demand on the assumption that incoming of copper would be further retarded.

Tin prices continued their easy trend in earlier dealings due to lack of buying interest coupled with lower advices from Singapore. But later on sentiment considerably improved as it was apprehended that with the further cut in imports the supply position would become tight. Prices made handsome gains. A sharp increase in prices was also noticeable in the zinc section where rates developed a sagging tendency in earlier dealings as a result of selling pressure from dealers. Lead however was unchanged throughout the week.

SILK

Prices of raw silk in Bangalore Silk Market remained steady during the week ended 1-6-1962. Prices of filature raw silk of 20/22 Dr. continued to be quoted between Rs 48.89 and Rs 85.99 per kgm. Rates of cottage basin silk increased to rule between Rs 78.26 and Rs 83.77 per kgm. Prices of charka raw silk varied from Rs 55.12 to Rs 72.75 per kgm.

Spun silk yarn of 2/210's was quoted at Rs 74.96 per kgm.

Prices of reeling cocoons in Sidlaghatta area ranged from Rs 3.20 to Rs 5.50 while those in Channapattana and Mugur areas increased to rule between Rs 3.75 and Rs 5.25 and Rs 3.20 and Rs 5.50 per kgm. Prices of foreign race seed cocoons increased moderately to vary from Rs 8.00 to Rs 15.00 per thousand. Mysore race seed cocoon prices ruled between Rs 5.60 and Rs 8.50 per thousand.

Tasar silk market prices remained steady during the previous week. Prices of tasar raw silk ruled between Rs 66.00 and Rs 105.02 and that of silk waste and

spun silk yarn ranged from Rs 22.00 to Rs 26.00 and from Rs 30.00 to Rs 47.00 per kgm. respectively. Prices of reeling cocoons showed an upward trend during the last week. The prices for Daba, Bogai and Serihan were quoted between Rs 120.00 and Rs 130.00, Rs 115.00 and Rs 120.00 and between Rs 50.00 and Rs 60.00 per kahan respectively.

The F.O.B. price and landed cost of Japanese raw silk of 20/22 Dr. was reported as Rs 60.87 and Rs 93.95 per kgm. respectively as on 4th May, 1962. There has been a perceptible rise in the f.o.b. prices of Japanese silk since Dec. '61. The f.o.b. price for Japanese raw silk in December '61 was Rs 51.35 per kgm.

BULLION

The bullion market continued to display divergent trends: gold

ruled steady and silver showing a reactionary trend. A feature of trading last week was that in the forward section bulls lent support to gold at every setback resulting in moderate bear covering. This process of profit-taking at higher levels and bull support at lower levels continued throughout the week and contributed to the general steady tenor of the market. The main encouragement for the bulls came from the firmness in the spot section where supplies were inadequate while demand continued to be good. Even the imposition of a margin of Rs 20 on bulls in Jeth delivery failed to arrest the bullish fervour. Trading in new Bhadrabad delivery commenced from 4 June. Offtake and arrivals were about the same level and hence the continued firmness in the spot where stock is estimated around 30,000 tolas. In the silver section the undertone was easy because supplies far outstripped demand. Apart from

the fairly high level of stocks, arrivals were far in excess of demand. The report that the Reserve Bank would be releasing silver for the jari industry at international prices had a disturbing effect on market sentiment.

OILS & OILSEEDS

In the Bombay Oilseeds market, groundnut ruled steady most of the time last week although higher levels could not be maintained till the close. The earlier improvement in sentiment was due to revival of buying interest following reports of a substantial business in groundnut oil concluded by the State Trading Corporation. Shippers and stockists were sustained buyers while erstwhile selling interests too came out as buyers. In the general uptrend bears were forced to cover thereby further accelerating the bullish

Your average executive spends more than half his waking hours away from home. He is away working for his employer, helping you make a success of your enterprise. You value the diligence of these men and you endeavour to reward them accordingly. The LIC can show you a new tax-light way to do so. It is through the Group & Superannuation Schemes. These Schemes possess three unique advantages:

- 1 Your executives can receive a part of their emoluments tax-free to build up retirement benefits and maximum family security
- 2 This may not involve any extra cost to the employer
- 3 The employer gets tax-relief on what he pays towards the Scheme

Life Insurance Corporation of India

trend, In later dealings however the market encountered selling pressure and bull liquidation, with the result that most of earlier gains was wiped out. It would appear that the weakness had been brought about by the timely onset of monsoon. The spot market in Groundnut continued to rule steady throughout the week largely because of poor arrivals. While stocks tended to be low demand continued to be good. That accounted for the steadiness in the ready market while the forward section ruled irregularly, starting on a steady note and later on developing a reactionary tendency at the outlook for the crop became brighter with the onset of the monsoon.

The trend in castor seed was generally determined by that in groundnut. The earlier firmness in the section was partly due to shortage of supplies. Linseed futures was steady in earlier dealings but developed a quiet trend

later on in sympathy with groundnut. Narrow price movements characterised trading in cottonseed.

From a week undertone prevailing throughout last fortnight the groundnut oil and seed market in Madras emerged better from the beginning of this week with continued local demand and Bombay also buying. The situation may stabilise itself here with a chance of the prices going up in both the commodities. July delivery of groundnut oil was almost over. August position opened last week but no transactions took place. Calcutta took a good deal of interest in nearby deliveries of groundnut oil. Fair quantities of oil absorption are also taking place including by vanaspathy factories which were living from hand to mouth so far. Groundnut arrivals locally is between 90 to hundred tons while in South Arcot markets the arrivals stand at about 400 to 450 tons daily.

Fairly decent quantities of groundnut oil were taken by Calcutta

during last week when local interests also showed quite an interest. Due to improvement in spot goods forwards positions too improved appreciably. The difference in the quoted prices of the June and July vaidas narrowed considerably.

Arrivals in Southern side markets which were small last week gathered volume later on. There is continued good demand for oil in the southern side. Due to coromandel variety groundnut harvesting being under progress in certain parts of the South greater arrivals are expected this week. The recent rains have been beneficial to the Pollachi standing crop.

The price of gingelly oil and seed moved down in sympathy with groundnut oil. Also gingelly crop is expected to be good in the Southern side, particularly, Salem.

There was almost a listless tone in the groundnut oil market last week. But on Thursday last it steadied up from Rs. 175 of the pre-

vious closing to Rs. 177.20. It gained another rupee the next day and closed at Rs. 178.50 by the week. June position was at Rs. 177 in the middle of last week and closed at Rs. 179 per quintal after touching Rs. 180 per quintal. July was at Rs. 181 in the middle of last week and closed at Rs. 181 by the weekend. Groundnut (summer peanut variety) was available at Rs. 67 per 80 kgs. It gained only a rupee by the weekend.

In the south where the metric system is yet to be adopted, groundnut oil was quoted between Rs. 395 to Rs. 415 per candy. Pollachi market offered oil at Rs. 395 per candy of 500 lbs. The rate was Rs. 400 per candy at Virdhachalam, Nandyal, Cuddappah, Tanjore and Salem. Guntur quoted Rs. 415 per candy, while Villipuram's price was Rs. 399.

As for groundnut kernels the price prevailing in the districts per 80 kgs bag was Rs. 70 to Rs. 74. At Cuddappah the price was Rs. 70, Villipuram offered it for Rs. 73, Virdhachalam at Rs. 74 and Salem at Rs. 74. The trend at present is for an upward rise in both groundnut oil and seed.

★

HIDES & SKINS

Tanned cowhides were quoted higher and with poor arrivals the local prices were higher this week. Enquiries from overseas were not much. Only in semi-premium marks business was transacted in 5½ lb at 75d, 65d, 58d in run, fourths and fifths respectively and in 8½ lb the price quoted was 57½d, 52 d, and 44 d for run, fourths and fifths.

In tanned cow calf skin there was good overseas demand on which the rates firmed up. The 2½ lbs was negotiated at Rs. 77/79d for fourths and in market quality the turnover continued to be moderate.

The prices of tanned buffalo calf did not change this week.

Prime class tanned goatskins continued to be quiet. Therewere a small decline o prices by about 3d. But in 5½/8 lb the price quoted was 17sh. for run, 16/6d for fourths and 13/9d for fifths.

In the tanned semiprime sheepskins, there was easy undertone with continued demand from United States and contintal countries.

The following were the prices of tanned skins and hides per lb: Tanned cow prime (5½ lb) Rs 2.75 to Rs 2.81; 6/8 lb Rs 2.43 to Rs. 2.50; 7/7½ lb Rs. 2.25 to Rs. 2.28; 8/8½ lb Rs. 2.15 to Rs. 2.19; 10/12 lb Rs. 1.94 to Rs.1.97; inferior fifths 5½ lb Rs. 2.15 to Rs. 2.22; (8/8½ lb) Rs. 1.81 to Rs. 1.87; 10/12 lb Rs. 1.75 to Rs. 1.78; buffalo 12/13 lbs Rs. 1.81 to Rs. 1.87; buff calf 1½/2 lbs Rs. 3.12 to Rs. 3.19; Cow calf 1½/2 lbs Rs. 3.69 to Rs. 3.81.

Company Reports

Elphinstone Pays More

The working of Elphinstone Spinning and Weaving Mills Company Limited during 1961 has yielded satisfactory results inspite of dull trading conditions and continued rise in manufacturing costs due to higher prices of cotton and enhanced labour charges. Sales were higher by Rs 62.86 lakhs at Rs 28,956,850 against Rs 22,670,538 in 1960. The net profit before providing for taxation and depreciation has increased by Rs 5.95 lakhs to Rs 4,175,566 from Rs 3,580,681 for the previous year. Taxation, depreciation and Reserve Fund receive increased allocations as compared with the previous year: Taxation Rs 16 lakhs against Rs 7 lakhs; depreciation Rs 808,325 against Rs 630,089 and Resserve Funds Rs 6 lakhs against Rs 2 lakhs. Development Rebate is however slightly lower at Rs 226,294 against Rs 238,823 as is Development Reserve at Rs 75,421 against Rs 79,607. As against an allocation of Rs 9.35 lakhs in the previous year, Replacement Reserve gets nil in the accounting year. The ordinary dividend is Rs 11 per share or 22 per cent against dividend of 18 per cent paid last year. A sum of Rs 136,630 is proposed to be carried forward against Rs 106,104 brought in.

A large number of new machines were installed and put into commission during the year, including a mercerising range. The company was able to get its cotton requirements at normal prices during the major part of the year, but towards the end of the year the prices touched abnormally high levels. The directors have pointed out that the decision of the Government of India to increase the ceiling prices of cotton crop of the 1962-63 season will have disastrous effects on the earning capacity of the company especially in the absence of any corresponding upward revision of prices of cloth under the price regulation scheme. The question of cloth prices is being examined by the Tariff commission. It is apprehended that the proposed increase in excise duty on processed cloth will also adversely affect the earning capacity of the company.

Higher Profit for Bengal Paper

In spite of difficulty in securing adequate supplies of raw materials and chemicals and transportation of raw materials and finished goods, due to unsatisfactory supply of wagons, Bengal Paper Mills Company Limited has been able to record satisfactory results thanks to increase in production to 19,627 tonnes from the previous years production of 18,395 tonnes and efficient working. Sales during 1961 were Rs 34,259,507 against Rs 31,678,005 in 1960. The net profit before taxation and depreciation is Rs 5,514,970 as against Rs 5,093,093. Provision for taxation is Rs 1,930,000 against Rs 1,816,663 and depreciation is Rs 1,361,885 against Rs 1,004,687 and allocation to General Reserve is Rs 122,856 against Rs 4 lakhs. Development Rebate Reserve is Rs 436,013 against Rs 268,803. The ordinary dividend on the increased capital by issue of bonus shares to the tune of Rs 9 lakhs is to be paid at 27½% against 32% paid last year. The carry forward is Rs 140,204 against Rs 140,831 brought in. The directors have pointed out that the expansion and modernisation scheme is making satisfactory progress. Orders for the purchase of equipment from USA and UK have been placed and shipment is expected to commence from August 1962. It is hoped that the expansion scheme would be completed in the second half of next year. The cost of production of the company has increased as a result of increase in prices of raw materials and chemicals due to enhancement of railway freight and excise duties on various chemicals. The paper industry has asked for a revision of the selling prices of its products and Government's decision in this regard is awaited.

Dividend Maintained by Bhartia

In spite of a drastic cut in electricity in the early months of 1961 and the consequent setback to production, the sales of Bhartia Electric Steel Company Limited have been higher by Rs. 30.57 lakhs in 1961 at Rs. 10,530,855 as against sales amounting to Rs. 7,473,728 in the previous year. The net profit before providing for taxation and depreciation is Rs. 1,700,806 as against Rs. 594,401 for the previous year. Provision for taxation is Rs. 4.65 lakhs while there was no provision under this head last year. Depreciation is higher at Rs. 560,302 as against Rs. 349,384 for the previous year. Development Rebate gets Rs. 2.74 lakhs against Rs. 2.05 lakhs last year. After writing back Rs. 145,000 from Development Rebate of 1960, the ordinary dividend at 10 per cent subject to tax is maintained. Last year also a sum of Rs. 1 lakh was transferred from General Reserve and added to the profit. The carryforward is higher at Rs. 47,000, the amount brought in being Rs. 496. Machinery worth Rs. 6.5 lakhs were added

Look what you get with HONEYWELL Instrumentation

Far more than just instruments, you get a complete control system, custom designed for your specific needs, by men who know your processes. You get expert, interested assistance every step of the way, with your initial planning and long after your instruments are installed. Blue Star assume full responsibility for the engineering, installation and start-up of your system. You get training for your instrument technicians in the most up-to-date

maintenance methods at the tuition-free Blue Star-Honeywell Instrumentation Education Centre at Bombay. You get prompt, competent service from your nearest Blue Star office and immediate replacement of emergency repair parts.

These are but some of the plus-values that comprise instrumentation by Honeywell...and they apply regardless of whether you buy a single instrument, a replacement part or a complete control system.

Sold and serviced in India exclusively by

BLUE STAR

Standard Motors Pays Less

Sales during 1961 of Standard Motors Products of India Limited show a decline of Rs 41 lakhs from Rs 38,975,318 to Rs 34,894,787. The net profit before taxation and depreciation is Rs 2,907,968 against Rs 2,853,863 in 1960. The lower profit is attributed to increased price of components and overheads and the fixation of prices of cars by Government. Provision for taxation and depreciation is higher than last year, taxation being Rs 8.25 lakhs against Rs 6.60 lakhs and depreciation Rs 1,108,576 against Rs 950,329. Allocation to Development Rebate is Rs 2 lakhs against Rs 3.75 lakhs. The dividend on ordinary shares is lower at 7 per cent from 9 per cent paid in the previous year. The carry forward is Rs 1,937 against Rs 2,974 brought in. The Directors have pointed out that while the end price of the company's product is fixed by Government, production costs are continually increasing due to increased cost of indigenous component and overheads resulting in diminishing profits and lower dividend. During the year under review the company introduced Standard Herald which is popular. A 4-door Herald is indicated but its production is delayed due to delay in receipt of capital goods and this model is expected in 1964.

Lower Dividend from Indo-Burma

The earnings of Indo-Burma Petroleum Company Limited in 1961 have increased, sales being Rs 18,935,471 against Rs 17,733,526 in the previous year. The net profit before taxation and depreciation is Rs 6,762,254 against Rs 10,324,215 which however included Rs 3,441,592 representing the surplus proceeds of investments sold. Provision for taxation is lower at Rs 3,132,573 against Rs 4,326,173 while that of depreciation is higher at Rs 525,387 against Rs 450,913. Development Rebate Reserve receives Rs 58,073 against Rs 85,105. General Reserve which received Rs 22.50 lakhs in 1960 is allocated only Rs 2 lakhs in 1961. Dividend Equalisation Reserve which received Rs 5 lakhs now gets nothing. In the previous accounting year Capital Reserve received Rs 7,185,760 being surplus on revaluation of investments. The ordinary dividend is reduced to 25 per cent from 30 per cent paid in 1960. The carry forward is Rs 500,220 against Rs 464,807 brought in. The Directors have noted that although the trend of increased sales in all branch territories has continued during the year, generally lower margins have persisted. It is further pointed out that lower margins are likely to continue.

Hindustan Aluminium

The working of Hindustan Aluminium Corporation Limited for the year 1961 has resulted in a deficit of Rs 1,88,216 after transferring a sum of Rs 39,80,036 to the "Expenditure during construction" account, but before making any provision for depreciation and taxation. This deficit has been set off against last year's surplus of Rs 2,11,555 brought in. This leaves a net surplus of Rs 23,339 which is carried forward to the next year's account.

The Directors have reported that the construction of the integrated aluminium plant has made excellent progress. The construction of all the factory and residential buildings and the erection of the major portion of the plant have been completed in the record time of less than 18 months. Power from the Rihand is now available and a section of the reduction plant is already under trial. The alumina section is expected to be ready by about the third quarter of this year, by which time, the directors hope, the entire plant should be ready and tuned for regular production. The company has applied for expansion of its capacity from 20,000 tonnes to 50,000 tonnes of aluminium ingots per year.

For the Investor

INVESTMENT GOSSIP

Depressed Sentiment

The stock market has developed a reactionary trend this week with equity prices recording sizable losses over the week's trading. Although in earlier dealings the downtrend was mainly confined to the more speculative counters, soon the depression enveloped the market as a whole. Even at the end of the week the cash shares despite their lower quotation do not seem to have come under any heavy selling pressure. However, there is no denying the general anxiety among investors that what with the gloomy prospects for foreign aid and the drastic cut in imports, the outlook for industries atleast in the short term is not very bright. It is feared that despite the official assurance that it would be ensured that the import cut does not seriously hamper industrial production, many an industry would be obliged to keep a sizable portion of its

capacity idle for want of sufficient raw materials as the import cut is drastic.

Though it is not yet clear how far the shortage of foreign exchange will retard the expansion of power projects, it is not considered improbable that industry would be faced with a serious power shortage before long. The same applies to transport and coal. The coal industry is depressed because Government has not accepted its suggestions in connection with the increase in the price of coal. The jute industry is no doubt doing quite well at the moment thanks to a plentiful supply of raw jute and continued overseas enquiries. But it is also worried about the growing strength of the Pakistani industry which enjoys a number of advantages such as cheaper raw material and export incentives. The expectations of the cotton textile industry have been belied now that Mr Morarji Desai has given only marginal relief. Despite the claim of the Finance Minister that his concession to the industry will come to about Rs 8 crores it is pointed out that the

burden on the industry will still continue to be heavy. Spokesmen of the industry have pointed out that with the heavy burden of taxation and rising cost of production, profit margin would be further reduced.

Apart from the uncertainty as regards foreign aid investors have been confused by the reversal of trend once again on Wall Street. Though there has been a rally again, the impression has strengthened that the US economy is not as buoyant as it has been made out to be. One of the implications of a recession in US will be a reduction in aid to underdeveloped countries. As the need for foreign exchange for India is urgent, any delay in the receipt of foreign aid will have serious repercussion on the country's economy as a whole.

INVESTMENT SPECIAL Assam Sillimanite

Assam Sillimanite Limited is offering for public subscription 2,40,000 equity shares of Rs 10 each at par. The company was incorporated on 6 August, 1951 and was originally concerned mainly with the mining of natural Khasi Sillimanite in the Khasi and Jaintia Hills, Assam. The company is marketing sillimanite throughout the world either in the form of crushings or

blocks, sawn in the company's Calcutta factory. Bonded bricks and shapes are manufactured in the company's plant at Ramgarh in Bihar. With the rapid industrialisation of the country the demand for refractories has increased and it is estimated that during the Third Plan period the requirements of all types of refractories would be approximately 1.60 million tons per annum. Assam Sillimanite has decided on a substantial expansion of its activities and production and it has been issued a licence for a new plant to be built at Ramgarh. As it is believed that even with the implementation of all schemes for the production of refractories licensed so far by the Government there will be a sizable gap between production capacity and demand, the prospects for the refractory industry should be assessed to be good. Assam Sillimanite has entered into technical collaboration agreement with a well-known West German firm with several years of experience in production and marketing of refractories to various industries in Europe and other countries. The new refractory plant of the company will be located near Ranchi Road Railway Station, (Ramgarh) Hazaribagh District, Bihar. The project will be implemented in two stages, the second stage commencing after the first stage has gone into production. Production in the first stage is expected to commence by the end of 1963.

NEW ISSUE NOTES Herdilla Chemicals

Herdilla Chemicals Limited, Bombay, a new company, has been granted consent to issue capital of Rs 4.4 crores divided into 4,400,000 equity shares of Rs 10 each at par consisting of Rs 3,97,10,000 for cash and the remaining Rs 42,90,000 for consideration other than cash against know-how. Out of this, shares of the value of Rs 180 lakhs including Rs 42.90 lakhs for other than cash will be issued to three non-resident companies. The proceeds of the issue will be utilised for the manufacture of heavy organic chemicals.

Hukumchand Mills

Hukumchand Mills Limited, Indore, is raising capital of Rs 30,22,500 in equity shares of Rs 100 each to be issued for cash to the existing shareholders of the company at a premium of Rs 10 per share. The proceeds will be utilized in paying off unsecured loans and for working capital.

SIB

The South Indian Bank Limited, Trichur, is to issue further capital of Rs 9 lakhs in equity shares of Rs 100 each for cash at par. The proceeds will be utilized for strengthening of the Bank's capital base.

Glass Lined Equipment

Glass Lined Equipment Company, Limited, Hyderabad, is issuing capital of Rs 12 lakhs in 100,000 equity and 20,000 9.5 per cent (subject to tax) preference shares of Rs 10 each for cash at par. Out of this shares worth Rs 2 lakhs (one lakh for cash and one lakh for other than cash against technical know-how) will be offered to the foreign collaborators M/s Dante Fogeat S. A. Lyon.

THE INDIAN IRON & STEEL COMPANY, LIMITED.

NOTICE

The Ordinary Share Register and Transfer Books of the Company will be closed from Monday, the 23rd July 1962 to Monday, the 13th August 1962, both days inclusive, for the purpose of payment in due course of dividend on Ordinary Shares in the Company for the year ended 31st March 1962. The dividend when declared will be paid to those Shareholders whose names appear on the Company's Register of Members for Ordinary Shares on the 13th August, 1962, or to their mandatees.

By Order of the Board,
MARTIN BURN LIMITED,
F. G. LIVERSEDE
Managing Director,
Managing Agents.

Registered Office:
12 Mission Row,
CALCUTTA-1.

France. The proceeds will be utilized in the manufacture of glass-lined equipment.

Shalimar Rope

Shalimar Rope Works Limited, Calcutta, is issuing 4,125 bonus shares of Rs 100 each on capitalization of reserve. The existing capital of the company is Rs 8,25,000.

STOCK EXCHANGES Quiet Trend

Watch-Dog Writes:

A quiet trend has characterised trading on the stock markets last week. Sentiment has been adversely affected first by the announcement of a drastic cut in imports and later on by the disappointment caused by the meagre concession announced by the Union Finance Minister. The fact that there had been yet another recession in Wall Street, though comparatively milder than the abrupt sharp fall on a Monday some two weeks ago, has revived pessimism as regards aid from the US. The continued uncertainty as regards assistance from the Aid India Club for the Third Plan as a whole and for its second year in particular has reduced bullish enthusiasm to a low ebb. Over and above all this, operators have been reluctant to extend commitments in view of the general belief that with Mr T. T. Krishnamachari back in the Cabinet, Government policy may become increasingly unfavourable to private enterprise.

The Calcutta Stock Exchange commenced the week on a dull note and except for selective interest in the jute section, equities in general turned quiet on lower advices from Bombay. Conditions continued to be extremely dull on Tuesday with the volume of business passing small. Reopening on Thursday after Wednesday's holiday, the market developed an easier tendency with the more speculative counters encountering renewed selling pressure. The market ruled stagnant on Friday.

Trading was featureless on Dalal Street on Monday as sentiment was cautious in view of the heavy import cuts and the additional taxation proposed in the Maharashtra Budget. In subsequent days equities turned easy on lack of support and nervous bull unloading inspired by the disappointment over the marginal relief in taxation announced by the Union Finance Minister. Trading was also adversely affected by the Maharashtra Government's decision to increase stamp duty.

Prices declined on a wide front on the Madras stock market with a marked decline in turnover. Although there had not been much selling pressure, prices were nevertheless marked down all along the list due to lack of support. The reactionary tendency was partly in sympathy with Calcutta and Bombay markets and partly due to the general anxiety over the drastic import cuts and the fact that the tax

relief announced by the Union Finance Minister did not come up to expectations.

CALCUTTA

Calcutta, Friday Evening

The Calcutta stock exchange developed a quiet trend during the week in the absence of buying support. In earlier dealings the trend was comparatively steadier but later on sentiment deteriorated partly due to lack of interest and partly due to lower advices from Dalal Street. There has been a marked contraction in business and although there has been no heavy selling pressure, sentiment continued to be weak. Anxiety about receipt of timely assistance for the Third Plan and repercussions on industrial production as a result of the drastic cut in imports resulted in lack of interest. Operators also seem to be having second thoughts on the appointment of Mr T. T. Krishnamachari as a Cabinet Minister. The immediate reaction was one of relief and was reflected in a steady trend of equities. It was even thought that since he would be entrusted with the task of co-ordinating the work of the various ministries, the outlook for industries would improve. But this week earlier doubts about a stiffening of Government's attitude toward private enterprise seem to have revived. The reactionary tendency has been accentuated by the renewed weakness of Wall Street.

Cotton textile shares were easy following the disappointment caused by the meagre relief in excise duty announced by the Finance Minister. Even after Mr Morarji Desai's clarification that the concessions he had announced in respect of cotton textiles would benefit the industry to the extent of Rs. 7 to 8 crores per year sentiment continued to be depressed. With the additional levies kept at a high level, it is feared that the cotton textile industry would not be able to make much profit. Bharat Commerce was done at Rs. 25.94 with Elgin at Rs. 20. Bowreah came to business at Rs. 29.62 with Dunbar marked at Rs. 32.62.

A subdued trend prevailed in the coal section. Sentiment had been adversely affected by Government's decision to fix ceiling prices for coal. The new prices came into force with effect from 13 June inspite of representation to Government by the industry. As against Government's contention that selective increase in prices has been found necessary in order to step up the production of superior grades the industry's plea is that cost of production for all grades of coal is the same. East Indian Coal was a steady counter following the announcement of a right issue by the company. The share was done up to Rs. 51.25 in earlier dealings though it was quoted slightly lower on Thursday at Rs 49.25. Central India at Rs. 12.12 was almost unchanged on balance. Western Bengal was quiet at Rs. 10.06.

Selected Jute shares were in demand in earlier dealings but the

section too developed a quiet trend in later dealings. While the outlook for the industry appears to be good what with the continued good offtake of goods and the decision of the IJMA to continue the working of the mills at current maximum output level for another month up to the end of July, some doubt has come to be expressed as regards the profitability of mills in view of the determination of the Government of India to maintain a high minimum price for raw jute. It is pointed out that Indian jute goods will be at a great disadvantage as compared with jute goods from Pakistan where raw jute is available to the jute mills at a much reduced price than in India and where the industry is having an export bonus scheme. Anglo India was done at Rs. 247 on Monday but later declined to Rs. 242. Budge Budge was done at Rs 162. Ganges was almost unchanged at Rs 14.75. Delta receded from Rs 210 to Rs 203. New Central was quiet at Rs 16.37.

Paper shares were somewhat steady in earlier dealings presumably on the belief that Government would soon announce an increase in the price of the commodity. But with most sections in the market developing a quiet trend in later

SHAW WALLACE & COMPANY LIMITED DIVIDEND ON PREFERENCE SHARES.

The Directors have declared a First Interim Dividend of Rs. 2.4975 per share (i.e. Rs. 3.00 per share increased in accordance with the provisions of the Preference Shares (Regulation of Dividends) Act, 1960 less Income Tax at the Company's rate of 25% in accordance with the proposals contained in The Finance (No. 2) Bill, 1962) subject to deduction of tax under Section 194 of the Income Tax Act 1961 on the Company's Preference Shares in respect of the year ending on the 31st December, 1962, payable to Members whose names appear in the Preference Shares Register of the Company on the 16th July, 1962. Warrants will be posted on or after the aforementioned date to the addresses or in accordance with the instructions recorded in the Company's books.

The Transfer Register of the Preference Shares will be closed from the 9th to the 16th July, 1962 both days inclusive.

In the event of a reduction in the proposed Company's rate of tax for the current financial year on enactment of the Finance Bill, the excess tax deducted will be refunded.

By Order of the Board
D. A. HOGHTON
Calcutta Director & Secretary.
Registered Office:
4, Bankshall Street,
Calcutta—1.
11th June 1962.

dealings, this section too turned easy with shares where marked losing ground. Bengal came back to Rs. 35.12 from Rs 35.75. Sirpur attracted some attention on Tuesday with the quotation taken up to Rs 13.25 but receded on Thursday to Rs. 13.15. Titahgur was done at Rs. 42.65. Straw Products was quiet at Rs 10.19.

In the Sugar section transactions were few and far between as investors were inclined to assess prospects of the industry as rather gloomy. Dyer Meakin however continued to be a steady counter at Rs. 58.25. SKG was done at Rs. 8.75. Although there was some improvement in demand in Export Sale 3 at Calcutta, prices realised were still low. As a consequence tea shares continued to be neglected. Dhelakhat was done at Rs. 21.06 with Banarhat at Rs 273 cd. Betjan changed hands at Rs 35.12 and Eastern Cachar at Rs 3.50.

In the Engineering section, Jessop was a steady counter at Rs 23.69. Dalmia Iron reacted to Rs 11.81 from Rs 11.94. Binani Metal receded to Rs 12.31 from 12.62. Indian Standard Wagon was done at Rs 19.5. Indian Steel Wire was an active counter in earlier dealings and was done at Rs 56.63. Bharat Ball Bearing reacted to Rs 14.75 from Rs 15.25.

Miscellaneous shares were generally lower on balance in sympathy with the rest of the market. Alkali and Chemical was further lower at Rs 45.19. Assam Hardboard was easy at Rs 5.69 as was BIC at Rs 9.44. Hindustan Aluminium moved down on Thursday to Rs 17.06.

Progress of Jute Buffer Stock

At their meeting on 13 June 1962 the Committee of the Jute Buffer Stock Association reviewed the progress of the buffer stock in respect of which purchase quotas have already been issued for 11,25,000 maunds of jute worth over Rs 2.8 crores. In view of the jute purchases now being made by the mills on their own account and the resultant strength of the raw jute market, the Committee agreed that circumstances do not justify any further purchase allocations at the present time but the situation will be kept constantly under review and buffer stock purchases will be resumed as

soon as conditions warrant them.

The building up of this buffer stock has been accomplished in the face of many difficulties. The Association was required to begin buffer stock operations not only before it was itself properly organised to do so, but also before the necessary arrangements for financing the purchases had been made. The buffer stock is being financed by advances from the State Bank of India; but the procedure is extremely complicated, involving a great deal of documentation, and against purchases already made to the value of over Rs 2.8 crores a sum of only Rs 16,00,000 has so far been paid. Even in respect of the first instalment of buffer stock purchases, made as long ago as mid-April, payments are still outstanding. The jute sellers, and in some cases the mills, have thus been waiting up to two months for their money, and the Association is most grateful to them for providing jute for the buffer stock on credit in this way.

Another difficulty with which the Association has had to contend is that of storage accommodation. In addition to the 11,25,000 maunds of buffer stock jute, the mills are also holding the equivalent of more than 5 months' consumption of jute on their own account. For lack of godown space some of this jute has been stored out-of-doors in the mill compounds; and with the arrival of the monsoon the storage problem has been greatly accentuated.

Despite all these problems of storage accommodation and finance, the buffer stock is being accumulated as planned and jute prices in India are being maintained at levels far above those prevailing in Pakistan, where new crop jute (basis Bottoms) is now being quoted at only Rs 19 per maund. That the buffer stock scheme should be operating successfully in such circumstances is a considerable achievement, and credit is due to all the mills and other parties concerned for their co-operation in making the scheme a success.

With plentiful supplies of raw material and with overseas demand for jute manufactures buoyant, both the production and export of jute goods are continuing at a high level. Notwithstanding a prolonged strike in one of the larger mills, the output of jute manufacture in May totalled 97,800 tons—the highest production in any month since January 1958—and the industry is operating at such high pressure that there is now a shortage of workers. During the first 5 months of 1962 production amounted to 475,600 tons, which was the highest production in the first five months of any year since 1956 while exports totalled 350,000 tons, the highest export in the first five months of any year since 1955.

Tea Exports

The Tea Association of India, Calcutta, has, in the course of a communication to Shri Manubhai Shah, Union Minister for International Trade, pointed out that the industry is faced with several handicaps in its efforts to increase tea exports. The handicaps are

heavy taxation on tea by the Centre and the States, high transport charges to bring tea from the producing area to the port; heavy selling expenses due to increased cost of warehousing and sampling; high cost of production of tea; low productivity of labour, etc. Further, a major portion of exportable Indian teas are sold through the London Market and thereby the Indian teas have to bear heavy handling charges such as brokerage, commission, warehousing etc. whereas teas of other countries are sold direct to the blenders and packers of the consuming countries. The Indian Tea Industry is not allowed to import freely some of its essential machines, etc. and as a result, it is not able to produce quality teas which will fetch good prices in foreign countries. In this connection, the Association has stated that textile and other industries are allowed a certain percentage of foreign exchange earned by them for importing essential items like dyestuffs, chemicals, machinery parts, etc.

The Association has further stated that the cost of production of tea in India is very high due to various reasons. The price charged for Sulphate of Ammonia from the Tea Industry is Rs 401.30 nP per tonne whereas the Indian farmers get at Rs 360. Due to inadequate power supply to teagardens, the gardens have to run their factories with diesel engines. The running cost of these diesel engines is very high. Due to heavy deforestation, rainfall in the areas has considerably decreased. The State Government have so far not given serious thought to the irrigation problem in the areas. If proper irrigation facilities are made available, the crop and the quality of tea will improve and thereby the cost of production will come down to a great extent.

The Association has, therefore, requested the Minister to assist the Tea Industry by removing the aforesaid handicaps so that the Industry can increase the exports of tea and thus bring home a larger amount of foreign exchange.

Freight Reduction for Furnace Oil

The Government of India has announced concessional freight for furnace oil in order to facilitate the use of furnace oil by industries located at some distance from the ports.

With effect from July 1, 1962 consignments of furnace oil in wagon loads booked by rail from the ports of Bombay, Okha, Kandla, Marmagao, Cochin, Madras, Vishakapatnam and Calcutta will be charged only half the freight in force at the time of booking, subject, however, to a net minimum charge of Rs 5.99 per tonne approximately which is the charge for the minimum distance of 40 kilometres.

Coal Prices

The Government of India have decided to increase the prices of various grades of coal with immediate effect. The decision has been

notified in an extraordinary issue of the gazette of India, dated June 13. According to the notification, the prices of non-coking coal of grade selected A and grades A, B and C of coking coal have been increased by Rs 1.50 per ton.

The prices in case of selected P of non-coking and D and E grades of coking coal have been raised by Re 1/- per ton.

Grade 1 of non-coking and grade F, G and H of coking coal have been given a price increase of Re 0.75 per ton.

Prices of Grades H, J, K and L of coking and Grade 11 of non-coking coal have been raised by Re 0.38 per ton.

FOREIGN TRAVEL RBI Directive

Under the provisions of the Foreign Exchange Regulation Act, the Reserve Bank of India has issued a directive on the 8th June 1962 to all Steamship/Airline Companies and Travel Agents that they should not henceforth book passages abroad by air or sea for persons resident in India unless the traveller has been granted exchange by the Reserve Bank of India to undertake the journey or has been specifically granted permission to book his passage. This restriction does not however apply to—

(a) Booking of passages of foreign nationals temporarily resident in India who are proceeding outside India on leave or retirement;

(b) Transit passengers, provided the cost of their ticket from India is paid out of rupees laid down by sale of sterling or any other foreign currency; and

(c) Members of Airline/Steamer Crew.

Note:—The above restriction does not also apply to booking of Deck passages between India, Burma, Ceylon, Malaya and Singapore.

In the case of persons who have made advance bookings for their travel abroad but who have not obtained an exchange permit from the Reserve Bank, Steamer/Airline Companies/Agents may issue tickets to them provided the journey is to commence on or before the 30th June 1962 and the booking was made before the 8th June 1962. If the journey is to commence after the 30th June 1962, the passenger should be asked to produce either the approval of the Reserve Bank of India for the travel or the foreign exchange permit issued to him for travel abroad. If he does not do so, the passage should be cancelled.

Applications, where necessary should be made to the Reserve Bank in duplicate at least one month in advance of the date of departure of the passenger concerned. Copies of application forms could be obtained from Travel Agents.

The Delhi Parleys

Not surprisingly, the joint communique issued at the end of the four-day Indo-British parleys on the impact on India's foreign trade of Britain's joining the EEC was not very communicative. Mr Morarji Desai is scheduled to make a statement in Parliament on Thursday but it is exceedingly unlikely that he will be able to report any particular joint line to be taken in future discussions with the Six. Apart from the exigencies of negotiations which make any inflexible public positions inexpedient, never has a decision been predicated on so many imponderables as Britain's to join the EEC. Even if the politics of the decision, which is by no means out of the way, is not taken into account, the purely commercial and economic aspects of the decision are in varying stages of hypothetical and tentative discussion. So no finality attaches to any proposal at this stage.

The Delhi discussions were largely devoted to identifying differences in the approach and to see how far the interests of India are capable of protection under the tentative British proposals already submitted and the readiness of the Six to consider an over-all pact at a future date. The discussion must have brought home to the British team the fallacy in the major premise of their proposals, viz, that the problems likely to be created for India by her decision to join the EEC are transitional and capable of mitigation, if not solution, by suitable phasing of the impact of the common external tariff. Even on this premise, Britain optimistically provides for too short a period of transitional protection before the full blast of protective tariff is let loose. The Indian view, ably presented in the Lall Memorandum, is that though the transitional problems are serious enough, it is the eventual wall of tariff itself that we object to as likely to lead to stagnation and even shrinkage of our foreign trade. And secondly, even on the British assumption, the period of transition is too short. The British proposals, which are more in accordance with the known wishes of the Six and with their own practice inter se provides broadly for: (a) duty-free entry for a few items of Indian exports, tea being notably among them (b) the rest (cotton textiles notably among them) should be subject, but gradually, to the common external tariff to be negotiated both on general principles for all commodities and specially to be fixed ad hoc under list F with possibly provisions of duty-free quotas. At the end of three years from Britain's joining the EEC, the whole position should be reviewed and the enlarged Community will enter into comprehensive negotiations with India for settling the future pattern of trade between them. The Indian case is that (a) if a comprehensive trading arrangement is to be negotiated at a future date, it is better to let the present pattern continue till such time instead of disrupting India's precariously poised trade advantages, by erecting new tariff walls where none exist now; (b) in any case, the transition for realisation is too short and should be at least about ten years; (c) until then the common

manufactures should be nil. (The British proposals' notable omission from this list of products is cheap cotton textiles, an omission explicable, in terms of domestic pressures for discrimination on entry even into Britain.) (d) If the EEC is unwilling to consider such a common external tariff, the right of entry into Great Britain of these commodities on terms analogous to those now granted to French associates overseas should be granted.

The British position is probably that there is little likelihood of the EEC accepting a position in which special duty-free entry into Britain will be allowed because this goes against the concept of a common market and might raise technical questions of country of origin and so forth inter se. The example of the relationship between France and its overseas associates is not strictly comparable because of the relative volume of trade involved; and in any case the whole question of concessions to African associates is in the melting pot with some members of the Six grudging special trade positions and preferring compensation in aid to these countries. (The question will come up shortly for decision.)

Mr Duncan Sandys has taken with him a fuller picture of India's case which he will presumably pass on to Mr Heath. But how far will Britain be able or even willing to argue our brief is doubtful. Though our particular predicament naturally looms large before us, Britain has other special interests to accommodate and concessions to wrest for others besides us. There are the older members of the Commonwealth on whose behalf severe and somewhat synthetically manufactured political pressure is being exercised at home. British agriculture and the fellow members of EFTA have to be taken care of. It is therefore necessary that we should make our direct approach to the Six. Mr Desai will presumably do this during his forthcoming visit to Europe, and Britain is willing to fall in with any agreement we may arrive at with the Six.

In presenting the case to the Six, it will be necessary for us to steer clear of too narrow a frame of reference to which the Six may try to confine the discussions. This would be done on the plausible ground that the context itself is narrow and India comes into the picture only indirectly. The time has come to indicate less apologetically the essentially restrictive nature of the external tariff structure of the community and how remote appears the ideal of a multi-lateral free-trade in the present time-table of the EEC which provides for harmonisation of external tariff among members at a leisurely pace. The Six have in the past quibbled in GATT sessions about the precise scope of Article XXIV of the GATT which speaks of the obligation of a customs union not to impose duties which are "on the whole" higher or more restrictive than the "general incidence" of the duties applicable in the constituent territories prior to the formation of the union. The words within quotes are no doubt deliberately vague but the general tenor of the article and of the whole GATT is not. The Six should also be asked to make

COMPANIES

Pattern of Ownership

The May issue of the Reserve Bank of India Bulletin, contains a very interesting study of the pattern of share ownership in joint stock companies in the country. Prepared by the Division of the Monetary Economics of the Economic Department the survey throws useful light on one of the relatively unknown aspects of corporate working. It reveals, apart from the pattern of savings among various categories, the investment habits which obviously are a function of saving. The Government's industrial policy lays considerable emphasis on encouraging investment habits among the people. In this light the extent to which there is public participation in the share capital of joint stock companies and also the extent of concentration in share holdings are matters of significance. The Reserve Bank survey covers only about 70 companies all of them public limited while there were about 27,000 non-Government joint stock companies in the country of which 7,000 were public limited companies. For this reason the study by the Reserve Bank cannot be considered in any way definitive. However considering that the total ordinary share capital of the 70 companies selected by the Reserve Bank at Rs 212 crores constituted nearly 50 per cent of the total ordinary paid-up capital of the 985 rupee companies whose shares were quoted on the Bombay, Calcutta and Madras Stock Exchanges in March 1960, the survey seems fairly representative and the reliability and validity of conclusions reached on the basis of this study cannot be open to serious question. It is also stated that the survey is subject to other limitations arising from the exclusion of companies with paid-up capital of less than Rs 1 crore since the pattern of share ownership in the small undertaking will almost invariably be different from the pattern for big ones. The manner of arriving at unduplicated number of shareholders in the individual category through what is termed as the "Alpha Segment Sampling" also leaves some margin for possible errors. With all these limitations, it is a very instructive study of one of the most important aspects of corporate working. The survey covers such aspects as the categories of ownerships by size of holdings, industry-wise pattern of ownerships, and also the pattern of ownerships in the newly established and old established companies.

It is shown that the total paid-up capital of Rs 212.42 crores of the 70 companies was owned by 4,92,066 shareholders (accounts) and individual share holders (account) at 4,86,519 constituted the largest group, accounting for nearly 98.9 per cent of the total number of shareholders.

PATTERN OF OWNERSHIP BY TYPE OF OWNER

Type of Owner	No of Accounts	Value Rs lakhs
Individuals (including joint holdings)	4,86,519 (98.97)	110.55 (52.05)
Institutions	4,461 (0.91)	84.16 (39.62)
(a) Joint Stock Companies	814 (0.17)	2.68 (1.26)
(b) Trusts and Charitable institutions	213 (0.04)	12.35 (5.81)
(c) Other Institutions (including LIC)	59 (0.01)	2.68 (1.26)
Others	4,92,066 (100.0)	212.42 (100.0)

In terms of value the holdings of individuals amounted only to 52.05 per cent of the total holdings. Between themselves, Individuals and Joint Stock Companies held nearly 92 per cent of the aggregate holdings. The results of this survey by the Reserve Bank are in line with the patterns disclosed by similar surveys conducted in the UK and the USA. The study for the UK by C.H. Feinstein and J.R.S. Revell covering the year 1957 showed that 55 per cent of the ordinary share capital was held by individuals, 8 per cent by insurance companies and 32 per cent by other institutions and 5 per cent by non-residents. For the USA, the proportion of shares held by Individuals according to the Census of Share Owners conducted in 1956 was about 57 per cent of the total number of ordinary shares.

On the basis of size of holdings, the survey reveals a fairly high degree of concentration at the higher sizes of Rs 50,001 and above. Shareholders in this group accounted for only 0.5 per cent of the total number of shareholders but they held as much as 56.5 per cent of the total paid-up value of ordinary shareholdings. On the other hand shareholders in the size-group Rs 1-1,000 accounted for 64.2 per cent of the total number of shareholders but held only 7.3 per cent of the total paid-up value of ordinary shareholdings.

PATTERN OF OWNERSHIP BY SIZE OF HOLDING

Size of holding Rs	No of Accounts	Percentage to total	Value Rs lakhs	Percentage to total
1—1,000	3,15,789	64.17	15.46	7.28
1,001—5,000	1,37,057	27.85	32.60	15.35
5,001—10,000	22,065	4.48	15.81	7.44
10,001—25,000	11,564	2.35	17.94	8.45
25,001—50,000	3,076	0.63	10.68	5.03
50,001—and above	2,515	0.51	119.92	56.45

The industry-wise pattern of ownership shows that according to types of holders, the holdings of individuals were high in cement (76.5 per cent) electricity (72.1 per cent) shipping (69.2 per cent) and iron and steel (67.5 per cent) while Individuals' holdings were relatively low in tobacco (9.4 per cent) rubber (26.1 per cent) sugar (27.5 per cent). In contrast, the holdings of the joint stock companies were high in tobacco (89.5 per cent) rubber (61.6 per cent) and engineering (54.4 per cent). Interesting variations are also shown in regard to the relative strength of share owners by size of holdings in the various industries. Thus according to size holdings, the number of share owners in the lowest group (Rs 1—1,000) formed only 42 per cent in the case of iron and steel and coal, while it was as high as 81 per cent for chemicals and engineering. Further holdings of over Rs 50,000 formed 94 per cent for tobacco, 77 per cent for sugar and 73 per cent for rubber as against only 33 per cent for electricity and 37 per cent for shipping.

The Reserve Bank study also shows that the proportion of capital held by Individuals was larger at 57.4 per cent in the 10 largest companies with paid-up capital of over Rs 4 crores each than in the other 60 companies in which the proportion was of the order of 45.4 per cent. On the other hand, the holdings of joint stock companies were smaller in the large companies at 34.8 per cent as compared to 45.7 per cent in other companies.

On the basis of size of holdings, it is shown that the proportion of ordinary capital held in sizes of over Rs 50,000 was somewhat lower at 52.8 per cent in the larger companies

as compared to 61.0 per cent in the other companies.

The study also draws attention to the differences in the pattern of ownership in the 14 new companies included in the Survey and that of the other 56 old established companies. The comparative study shows only one common feature namely the predominance of Individuals as the most important shareholding group. Against this there are marked differences in the relative proportions of the value of paid-up capital held by different categories of owners in the new and old industries. Thus, while in the new companies, individuals held only 22.9 per cent of the ordinary paid-up capital in the old companies they had as much as 55 per cent. The major portion of the paid-up capital in the new companies at 75.1 per cent was held by joint stock companies while their share in the old companies amounted only to 36 per cent.

Shareholding in the old and new companies by size of holdings also shows substantial differences. While in the new companies 80 per cent of the paid-up value of ordinary capital was held in the size group Rs 50,001 and above, in the old companies, the largest size group accounted for only 54 per cent of the total. These differences between the new and old companies in respect of the proportion of share capital owned by different categories of owners and by size of holdings are attributed to the relatively narrow scope for public participation provided by the new companies by virtue of their being set up with foreign collaboration and the consequent necessity to allot a substantial part of the issued capital to the foreign participants.

On the basis of analysis of shareholdings by various categories of owners, it is shown that for Individuals, there was a relative concentration at the lowest group (upto Rs 1,000) which accounted for 64.6 per cent of the total number of individual shareholders. Of the total value of ordinary capital held by Individuals 29.1 per cent was held in the group Rs 1,000—5,000 while the size group Rs 50,001 and above accounted for nearly 20 per cent. For Joint Stock Companies a high degree of concentration is shown in the largest group (Rs 50,000 and above). Nearly 96 per cent of the total holdings of the Joint Stock Companies is shown to fall in this category. The share of Joint Stock Companies of holdings above Rs 50,001 and above constituted nearly 67.5 per cent of the total holdings of all the different categories of owners in this group.

The pattern of ownership according to denominations of shares also shows important features. Of the 70 companies covered in the Survey 32 issued shares of Rs 100 denomination, 29 issued shares of Rs 10 denomination, while the shares of the other companies were of denominations ranging from Rs 15/- to Rs 1,000/-. The pattern of ownership in respect of companies with Rs 10/- denomination and Rs 100/- denomination shows interesting variations. Whereas individuals accounted for as much as 54.2 per cent in companies with Rs 100/- shares, the proportion was only 40.5 per cent in the capital of companies with shares of Rs 10 denomination. On the basis of size of holdings, the size group "50,001 and above" held as much as 67.5 per cent of the total value of ordinary share capital in companies with shares with denomination of Rs 10/- while the corresponding percentage in the case of companies having shares with denominations of Rs 100/- was lower at 52.8.

Though it is not exactly a pioneer study, since there have been previous studies on similar lines by both the Reserve Bank and

private parties, the latest survey provides probably the most reliable data with better coverage. The fact that the results of the survey relate only to the end of December 1959 definitely points to the need for further studies which could give more up-to-date data.

Targets for the Development Decade

[LAST December, the UN General Assembly passed a resolution in which it was resolved that the nineteen-sixties should go down in history as the decade of development. The Acting Secretary-General of the UN, U Thant has produced an interesting report on the concrete steps that should be taken to give substance to this resolution. This is to be placed before the Economic and Social Council of the UN which is due to meet in early July. The Secretary-General's report takes a comprehensive view of the problems of development of the less developed countries. Obviously, in a general report of this nature he has not gone into too great a detail, and a good deal of what he has to say has been discussed before. This is, however, not to say that the report does not make specific suggestions. On the contrary, U Thant has specific measures and targets to give effect to the General Assembly's demand for "intensive action by the United Nations system" in order to create conditions in which the national incomes of the less developed countries will be increasing by 5 per cent yearly by 1970, with continued annual expansion thereafter. If this can be done, and if the population of the developing countries continues to rise at its present rate of 2 to 2½ per cent yearly, personal living standards can be doubled within 25 to 30 years. The following summary of U Thant's proposals will be of interest to our readers.—Editor]

The best estimate of present national income growth in all underdeveloped countries, taken together, is about 3½ per cent a year. The immediate task, therefore, will be to raise this growth rate during the coming few years by perhaps 1½ per cent to at least 5 per cent and to increase this rate by a further 1½ per cent to over 6 per cent per annum at the end of the decade. As for the amount of capital necessary to achieve this goal, the net flow of capital from some of the wealthier to some of the poorer countries now approaches or even exceeds 1 per cent. The General Assembly urged all developed countries to aim at the 1 per cent per annum target. If that target were achieved and effectively used, this alone should raise the growth rate of aggregate incomes of developing countries at least halfway from the present 3½ per cent to the initial target of 5 per cent each year. And with national incomes of the advanced countries expected to expand at a yearly rate of 4 to 5 per cent, the total flow of capital should more than double between now and 1970 and would add about \$4-5 billion yearly to the net flow. Whether this amount would be sufficient or more than sufficient to attain the objectives of the Development Decade would depend, on what happens in the field of trade and on the degree of success of the developing countries in mobilising internal resources.

Among his proposals for financing development projects during the decade, U Thant stresses the importance of increasing the re-

sources of the International Development Association (IDA), an affiliate of the International Bank. The Acting Secretary-General also proposes that additional funds be made available to the UN Expanded Program of Technical Assistance and the Special Fund.

Apart from the immediate target figure set by the General Assembly of \$150 million annually for the latter two programs of the United Nations, U Thant proposes an increase in their resources of at least \$25 million yearly. This, he says, would give the United Nations, at the end of the decade, resources of about \$300 million annually, equal to about one-fifth of the total preinvestment expenditures which have been estimated to be the minimum necessary to provide a foundation for the success of the Development Decade.

An increase in the IDA resources is regarded by the Acting Secretary-General as "one of the primary requirements for the success of the Development Decade." IDA, he notes, not only has the greatest possible freedom to design its financing terms to meet the circumstances of actual cases, but it also has great latitude in selecting projects for financing. "As the technical assistance and preinvestment activity of the UN system accelerates, the volume of sound and well-prepared priority projects coming before IDA will increase and the projects can be expected to be broader in scope."

On evidence, it is both untrue and unjust to say that the advanced countries are indifferent to the problem of development of underdeveloped countries. The basic problem of the present situation is to find ways in which the express desire of the advanced countries are translated into effective action. New methods of technical co-operation, added to those already well-tried, will have to be found to take full advantage of the new economic and technological possibilities which have emerged in recent years. The UN system during the past decade not only has gained greatly in understanding the development process and what it requires, but also achieved much. Such "instruments of effective action" are the International Bank for Reconstruction and Development, the International Monetary Fund, the International Development Association, the International Finance Corporation, the UN Special Fund, the Expanded Program of Technical Assistance of the UN and the specialized agencies. Special programs such as the World Food Program and the (UNICEF) and the regular programs of the various UN agencies and the United Nations itself.

U Thant lists the six basic objectives of the Development Decade, as follows:—

The more systematic survey, development and utilization of physical and human resources in underdeveloped countries;

The formulation of true development plans providing for maximum mobilization of domestic resources and the effective utilization of external assistance;

An improvement in the machinery of administration, in institutions and in production incentives in order to meet the new and increased demands arising from these development plans;

A redirection of science and technology to increase the attention given to specific problems of low-income countries;

An increase, and subsequent more vigorous growth, of the export earnings of underdeveloped countries;

An increased and more assured flow of capital on suitable terms to the underdeveloped countries.

U Thant's report comments in detail on specific actions which he considers necessary to realize the objectives of the Development Decade.

Among other points made by him are:

High priority should be given by the United Nations system to the working out of development plans, and assistance in carrying them out by the mobilization of an underdeveloped country's own resources and by securing external assistance and co-operation.

Emphasis on the mobilization of human resources must include better utilization of the labour force by creating higher levels of productive employment; improving the quality of the labor force by vocational education and training; and enlisting popular support for the tasks of national development, and the participation of broad social groups in them. Particular attention must also be given to the problems and needs of children and young people.

A major task will be to meet the food requirements of an increasing population and, at the same time, provide for moderately improved nutrition. The adoption of modern agricultural practices will be necessary in order to meet the requisite annual increase in food supplies of between 3.8 and 4.3 per cent annually.

To meet the expected large increase in requests for projects to develop natural resources, it will be necessary to expand cartographic services; intensify surveys of water needs and resources; prepare the groundwork for integrated development of international river basins; intensify work on rapid mineral exploration and promote co-operation between neighbouring countries in this field; survey energy needs and resources; and develop small power units in rural areas.

Manufacturing output in the developing countries will have to increase by no less than 130 per cent if the goal of an increase of 5 per cent per year in aggregate incomes of the underdeveloped countries is to be met. Besides a strengthening of the UN Industrial Development Centre at Headquarters, the Acting Secretary-General proposes greater support of industrial planning and projects programming; extension of industrial advisory services; promotion of small industries, with emphasis on the establishment of industrial estates; and industrial training.

U Thant refers also to the poor trade record of the developing countries which is due in part to obstacles hindering the entry of their products into industrial markets, and in part to the fact that production of many primary commodities has grown more rapidly than the demand for them. The high income countries, he adds, should be able to alleviate any hardships in this respect without shifting the burden of adjustment to the developing countries by restricting the latter's export markets. A related problem is that of stabilizing the international commodity markets on which the developing countries depend so heavily. The particular vulnerability of the developing countries depending mostly upon primary commodities for their foreign trade has been repeatedly seen in the last few years. The terms of trade of these countries often turn disadvantageous to them owing to vagaries of production and demand from advanced countries. Expanded trade and stabilised commodity prices can make an enormous difference to the steady and uninterrupted development of these countries. If the unfavourable trend in the trade of

these countries could be reversed and their terms of trade improved by 10 per cent over present levels, much of the additional resources required for the initial acceleration of growth would be provided. In this connection U Thant refers to the activities of the UN Commission on International Commodity Trade in considering the establishment of a machinery to offset the effects on balance of payments of large fluctuations in commodity prices. The idea of a "Development Insurance Fund" wherefrom to compensate countries for declining export proceeds and to provide greater continuity in foreign exchange is also full of possibilities.

Even more exciting are the opportunities for international co-operation to be provided by the UN Conference on The Application of Science and Technology for the Benefit of Less Developed Nations scheduled in 1963. Technical assistance under UN auspices after pooling the willingly offered services of the world's best scientists and technologists is likely to prove as decisive as flow of capital to developing countries.

Productivity for Exports

The anxious discussions that have been going on about the impact on India's exports of Britain's entry into the EEC highlight the precarious state of our export earnings. The different proposals that have been advanced with a view to break the fall remind us of the extent to which the volume of our export trade depends on free access to the British Market. Efforts are naturally directed to ensure that, as far as possible, similar conditions in regard to major export items will continue even after Britain joins the European Common Market. While one hopes that these efforts will be successful, it is even more essential to initiate and pursue measures in India which will help to improve the competitive capacity of Indian exports so that they could without difficulty jump the tariff walls obstructing their way. It is as well to realise that safeguards for a temporary period of transition, such as phased programme for the application of the full external tariff of the Common Market, or even 'nil tariffs' for certain commodities if they could be negotiated, will not automatically lead to the expansion for economic development. While these measures may help in the short period, development of exports in a sustained manner will call for more fundamental measures designed to reduce cost per unit through increase of efficiency and productivity.

The question of reduction of costs of principal export commodities engaged the attention of the Board of Trade at its last meeting. It is felt that, generally speaking, few enterprises have planned for cost reduction and that incentives for bringing down costs has been lacking, perhaps as a result of the heavy demand within the domestic market. But, when the maintenance of production for the domestic market depends on a level of exports adequate to pay for essential imports, a change in this attitude is surely overdue. In this connexion the Board of Trade is understood to have taken note of the contribution that could be made by the Productivity Movement.

The National Productivity Council has now been in existence for over four years. The latest annual report contains, in addition to the usual account of the working of the in-

stitution during the previous year, a broad review of its activities since its inception. During these four years, the National Productivity Council has apparently succeeded, in large measure, in making the country productivity conscious and in generating among industrialists an attitude of receptivity to the adoption of new techniques. The report speaks of "an urge in the industry to know more about productivity techniques, together with the recognition of the inescapability of the need of adopting productivity techniques for meeting internal competition, strengthening competitive ability and for enlarging the exports". The NPC, whose main function is the stimulating of interest in Productivity, can regard this as an indication of the success of its efforts. During this period the National Productivity Council has also set up a far-flung organisation to carry the message of productivity to the factories and has also organised numerous training programmes designed to provide industry with trained personnel at different levels competent to introduce new productivity techniques.

A wide network of Local Productivity Councils spread out all over the country has been set up. There is now a local council at all important centres of industry in the country. There were at the end of the year under report 44 Local Productivity Councils in existence with an aggregate membership of 4500. A fifty per cent increase in membership, as compared with the previous year, reflects the growing interest in the productivity movement. Up to the end of 1961-62, the National Productivity Council had also organised 429 training courses in which 8652 persons drawn from various industries have taken training in subjects such as Work Study, Method Study, Production Engineering and Tool Design, Production Planning and Control, Statistical Quality Control, Supervisory Training, Management Development, Cost & Budgetary Control, Time Study, Wage Incentives, Personnel Management and Marketing. The NPC has sponsored 75 In-Country Productivity Teams, and 360 persons have so far been sponsored abroad in productivity teams for making studies in specific subjects.

Three new programmes started during the year under report are calculated to bring the activities of the NPC to the point at which it may be expected to yield concrete results which could be appreciated even by those who are not themselves productivity experts. These are the programmes for the Training of Trainers, A Basic Course in Industrial Engineering and Productivity Training for Small Scale Industries Personnel. Productivity programmes will not carry far unless they are tailored to suit the needs of individual industrial units. Industries for their part are now aware of the need to organise training programmes themselves at the plant level. For this purpose they will require persons who could plan and organise training programmes for various levels of industrial personnel. The programme for Training of Trainers has been launched to meet this need. The Industrial Training Course has been started in response to the demand from industry to equip young engineers in the techniques of industrial engineering so that they could take up position as Industrial Engineers, Method Engineers, Work Study Engineers, Planning Engineers etc. The most promising of the new programmes is the one specially designed for Small Scale Industries. It has been found that, though Small Industries require assistance in regard to a wide range of management functions including maintenance of accounts, they are also more adventurous and ready to adopt the productivity techniques

recommended by the NPC experts than big organisations which are usually reluctant to disturb their established procedures and patterns of work.

Encouraging as is the record of the NPC and full of promise, the general public will naturally be more interested in tangible evidence of its fulfilment. Ultimately the success of the productivity movement will be judged, not by the number of Local Productivity Councils set up or statistics of training programmes or of speeches made at Seminars, but by the impact of the movement on the general level of production and manufacturing costs. The construction of Index Numbers of Productivity, which has been undertaken by the Council, should provide the basic data for measurement of increases in productivity.

It is in the export industries that the productivity techniques can show striking results. For one thing, in these industries it should be possible to overcome any resistances to the adoption of new methods and techniques; and for another, increased exports should afford convincing evidence of the successful results that could be achieved by adopting these techniques. The Council has already set up special study groups to identify the problems of productivity in a selected group of industries such as Cement, Jute, Rayon, Bicycles, Electric Motors and Transformers, which have considerable export potential. It is, however, essential that the programme should be extended to cover other important export industries and export commodities also such as Sugar, Cotton Textiles, Vegetable Oil and Oil Cakes, Raw Cotton, Coir and Coir Manufactures, Pig Iron etc, so that immediate gains could be reflected in the country's export earnings.

Individual well-being is linked with national prosperity and only planned efforts can ensure both in the shortest possible time. And planning, for its success, largely depends on savings, individual as well as national.

Saving in the form of Bank Deposits provides resources for the National Plan.

NEW LOANS

Round the Corner?

THE rise in the call money rate during the first half of the month has of course been due to the pressure of demand for money occasioned by month-early disbursements; and the interruption of the slack season in that wise need not have caused any alteration in the time-schedule of the Centre's borrowing programme. We may take it that the new loan announcement will be made before the end of the month, and possibly as early as in the coming week. The opening of subscription lists will, however, presumably coincide with the date of maturity of the loan that falls due for repayment in the middle of next month. In fact that the market is already in process of being groomed is suggested by the Reserve Bank stopping its operations. Moreover the capacity of banks to support the new loan is indicated in the quick reduction in indebtedness to the Reserve Bank and further more in the decline in the call money rate. All, therefore, is ready for the Centre's proclamation in this behalf.

In is confidently expected that conversion facilities will be available in respect of both loans maturing this year—the 2½ per cent 1962 and the 3½ per cent 1962—though one of them falls due for repayment only in November. Additionally naturally new cash will be sought. But it remains problematical whether the target of net borrowings of Government for the year will be achieved through the first tranche of the new loan alone. Our own view is that conversion applications will predominate in July; but that; should the monetary authorities have been persuaded to frame one of the new loans with particular reference to the needs and likings of the banking system, support from this sector will not be inconsiderable.

There may not be a three-tier borrowing programme this year. The medium-term range of loans may be reserved for the State Governments. A short-term and a "long" will, we hope, be decided upon by Government. In the case of the "long" the maturity is in recent years could probably be 20 years; the interest coupon is unlikely to exceed 4 per cent; but the discount at which the 4 per cent 1982 is issued may be larger.

In the case of the short-term, no clue can be got from a study of the pattern of maturities. In the next 7 years—and nothing over—years can conceivably qualify as a "short"—maturities are consistently heavy. But no ancient or imaginary problem of refinancing should be allowed to deter Government from issuing a short-term. For the banking system greatly in want of "shorts" for balancing investment portfolios which, in the last two-three years, have been wholly starved of any new loan that matures in less than 10 years. What the banks would like best is a 5-year loan; and what the banks like best will undoubtedly bring in the maximum of new cash or Government. Again what the banks would refer to is an interest coupon of 3½ per cent. But we believe that rate to be unconscionably

high for a 5-year loan and would therefore plump in favour of a 3.4 per cent 1967—thereby also introducing the innovation of the decimal system in borrowings—after all, metrically speaking, fractions are archaic—or should the operative word be vulgar?

As a result of the first tranche of the new loan, and particularly if the Life Insurance Corporation come out with substantial cash support, some money market stringency is to be anticipated in the second half of July. But the two-fold accretion of resources with the banking system should continue. Thus by the beginning of August the world of Finance should be ready for the States' borrowing effort; and late October, we would suggest, would be a very apposite and propitious time for the Centre to mop up some more money through a second tranche of the new loan for 1962-63. What form that second tranche will take naturally will depend on the nature of the source of the demand for gilt-edged.

FOREIGN AID

Fresh US Commitments

US credits for the Third Plan already negotiated and committed in principle have been partially allocated to specific projects and purposes in terms of four agreements signed in New Delhi recently. These agreements provide for a total utilisation of credit of 285.2 million dollars. Of particular significance is the largest of the four loans amounting to 200 million dollars since it is to finance maintenance imports of an essential nature. The timeliness of the agreement at the present moment is obvious enough. The commodities covered are industrial raw materials like non-ferrous metals, steel, lubricants, synthetic rubber, chemicals, automobile parts, machine tools, rollers for steel plants, newsprint and fertiliser.

The second loan is in the sum of 43 million dollars meant for the purchase of 158 diesel locomotives to be used to move freight in broad and metre gauges. Some of the locomotives are meant for use for movement of iron ore while others are for moving coal to the steel plants. The loan also makes provision for supply of spare parts and training of Indian technicians.

The third loan of 38 million dollars is to be utilised for the foreign exchange cost of the 300,000 kilowatt Bandel Thermal Power Station. The fourth loan of 4.2 million dollars will take care of the foreign exchange cost of the coal washery plant at Patherdih. The washery is to process the 1.8 million tons of raw coal per year leaving washed coal of 1.3 million tons for use by Hindustan Steel.

One of the important features of the loans is the comparative easy terms on which they have been granted. Apart from the nominal charge of ½ per cent there is no interest burden. Repayment of the capital begins only after ten years and the period of repayment has been spread over 30 years thereafter.

Snippets

The Advances of the Reserve Bank to the State Co-operative Banks in April 1962 were lower at Rs 12,76 lakhs against Rs 16,33 lakhs in the previous month, while the corresponding figure for Advances in April 1961 was Rs 14,13 lakhs. Outstandings of Advances to the State Co-operative Banks in April 1962 were placed at Rs 114,82 lakhs which compares with Rs 85,94 lakhs in April 1961.

The money supply with the Public rose to Rs 3,140,90 lakhs in April 1962 from Rs 3,078,88 lakhs in the previous month. Currency with the public stood at Rs 2,174,32 lakhs in April as compared with Rs 2,120,56 lakhs in March while Deposit money was placed at Rs 966,57 lakhs in April against Rs 958,32 lakhs in March.

The Bazaar Bill rate has remained remarkably stable at 12.00, 12.50 and 13.92 in the Bombay, Calcutta and Madras markets respectively since August 1961.

The foreign exchange reserves of the Reserve Bank of India have shown a steady decline since December 1962. From Rs 316,74 lakhs in December 1961, the reserves declined to Rs 304,02 lakhs in January 1962, Rs 302,35 lakhs in February, Rs 297,31 lakhs in March and further to Rs 274,21 lakhs in April 1962.

Receipts under small savings have been estimated at Rs 48,83 lakhs in March 1962 and shows an improvement by Rs 24,12 lakhs as compared with the previous month. Outstandings under small savings are placed at Rs 850,12 lakhs in March against Rs 826,80 lakhs in the previous month.

As on 27 April 1962, the scheduled banks including foreign banks had excess reserves with the Reserve Bank to the tune of Rs 11,10 lakhs, while for the same date, the excess reserves of the State Co-operative Banks amounted to Rs 55 lakhs.

The savings Deposits of the scheduled banks in the country including foreign banks increased by Rs 7,29 lakhs to Rs 340,99 lakhs in April 1962 from Rs 333,70 lakhs in March. The savings deposits of the Indian scheduled banks amounted to Rs 309,20 lakhs while that of the foreign banks stood at Rs 31,79 lakhs in April. This compares with Rs 259,95 lakhs and Rs 25,83 lakhs being their respective shares in April 1961.

The number of offices of the banking companies operating in India as at the end of April 1962 has been estimated at 5,158. This is made up of 4,466 scheduled banks and 692 non-scheduled banks. Of the scheduled banks the number foreign banks was 79, while the State Bank accounted for 963 banking companies being its subsidiaries and branches.

BANK RETURNS

Slack Season fully Reflected

With the disappearance of the pressure of monthly disbursements in the first and second weeks of the month, the return of slack season conditions stands fully reflected in the returns of the Reserve Bank for 15 June 1962. Active Note Circulation has declined by Rs 10.26 crores to Rs 2,131.04 crores from Rs 2,141.30 crores on 8 June 1962, and Rupee Coin has returned from circulation in the small amount of Rs 0.63 crore. Foreign Securities are unchanged at Rs 92.69 crores while the rise in Rupee Securities in the Issue Department to Rs 1,838.22 crores from Rs 1,838.19 crores is negligible. In the net result, cash in the till has improved by Rs 10.92 crores to Rs 30.03 crores.

The improvement in the position of the schedule banks reflected in the Reserve Bank returns further bears testimony to the return of the slack season conditions. Deposits of the Banks have improved from Rs 85.06 crores to Rs 87.14 crores, ie an increase of Rs 2.08 crores. At the same time the Other Loans and Advances of the Reserve Bank have fallen by Rs 5.16 crores to Rs 124.51 crores. That this is accounted for by the other scheduled banks is testified by the fact that the advances of the Reserve Bank against Usance Bills have gone down in the week under review to Rs 3.64 crores from Rs 5.51 crores. State Governments have made payments to the Centre since their Deposits are lower by Rs 3.14 crores at Rs 5.16 crores. In addition they have increased their ways and means borrowing from the Reserve Bank to Rs 118.67 crores from Rs 111.32 crores marking an increase of Rs 7.35 crores. Centre's balances are higher by Rs 4.73 crores ie by less than the total of the loss in State Governments' Balances and the increase in their indebtedness. Investments are lower by Rs 2.44 crores at Rs 171.92 crores against Rs 174.36 crores and moreover the State Bank in this week is known to have disinvested in giltedged to the tune of Rs 7.0 crores. Hence it is a plausible surmise that the Centre might have instituted reverse ad hoc for something like Rs 6 to 7 crores. In the alternative it is possible that the fall in the State Bank's holding of securities might relate to maturing of the Treasury Bills.

In the return of the State Bank for 15 June 1962, the return of slack season conditions is reflected mainly by the fall in Advances, by about Rs 2.08 crores to Rs 292.91 crores. Against this Deposits show a small decline of Rs 2.47 crores at Rs 568.76 crores against Rs

572.23 crores. However cash balances including money at call are slightly better at Rs 27.57 crores against Rs 26.83 crores. Giltedged again like last week shows a decline of nearly Rs 7.00 crores and there is a sizable increase in the other Assets of the State Bank to Rs 49.73 crores from Rs 43.17.

The spill-over of month-early disbursements in the second week of the month is reflected in the return of the scheduled banks for 8 June 1962. Most significantly, the Advances of the scheduled banks in the week under review have gone up by Rs 4.21 crores to Rs 1,437.53 crores and in the relevant week, the Advances of the State Bank have remained practically unchanged. Secondly there has been a net decline in Deposits since the increase in net Time Deposits by Rs 13.33 crores at Rs 1,245.24 crores was more than neutralised by the decline of Rs 16.93 crores to Rs 875.12 crores in net Demand Deposits. It is however relevant to note that in this week, the State Bank experienced a decline of more than Rs 4.0 crores in its Deposits and consequently, the position of the other Scheduled Banks would have remained unchanged. The pressure of demand for funds has evidently forced the banks to increase their borrowings from the Reserve Bank substantially, such borrowings in the week under review being marked higher by Rs 7.86 crores at Rs 12.71 crores against Rs 4.85 crores. Cash balances including money at call are also lower by Rs 4.91 crores at Rs 200.22 crores, but this is entirely on account of the State Bank which has reported a fall in cash balances including money at call by something more than Rs 4.0 crores in this week. Finally there has been disinvestments in giltedged by the banks to the extent of Rs 15.47 crores of which Rs 6 crores is attributable to the State Bank.

Treasury Bills

Tenders for Rs. 2,00,00,000 of 91 days' Government of India Treasury Bills were opened on Tuesday, 19 June, 1962. Total amount offered was Rs 2,00,00,000. Tenders at Rs 99.370 per cent and above were accepted in full. Total amount accepted was Rs 2,00,00,000, the average rate of accepted tenders being Rs 2,510 per cent per annum.

Tenders for Rs 2,00,00,000 of 91 days' Government of India Treasury Bills will be received at Bangalore, Bombay, Calcutta, Kanpur, Madras, Nagpur and New Delhi up to the close of business on Monday, 25 June, 1962. Successful tenderers should make payment on Friday, 29 June, 1962 at all centres. Other conditions are as usual.

During the week ended 15 June, 1962, Government of India Treasury Bills for

Rs 1,40,64,50,000 were sold in favour of Reserve Bank of India.

91 days' Intermediate Treasury Bills will be sold from 20 to 23 June, 1962 at Rs 99.391 per cent. Sales can be stopped at any time without notice if Government think it necessary.

91 days' Intermediate Treasury Bills sold from 13 to 16 June, 1962 amounted to Rs 48,00,000.

The Paradox of 1962

By Paul Einzig

MOST experts are baffled by the paradoxical situation that exists to-day in the economies of Britain and other industrial countries. Week after week many millions are added to the pay packets as a result of wage increases. Yet consumer demand does not seem to increase, and in the absence of such increase producing capacity is under-employed. Consequently new capital expenditure plans are revised in a downward direction and the demand for capital goods is on the decline. Even though wage inflation continues and prices of many consumer goods and of services continue to rise, the atmosphere has become distinctly deflationary. The cuts in dividends and the replacement of capital gains by capital losses on Stock Exchange transactions resulted in a noteworthy decline in the demand for luxuries, and this again is beginning to affect those whose prosperity depends directly or indirectly on the demand for luxuries.

It seems that on the basis of this change there is a growing distrust in the ever-lasting character of post-war prosperity. Although wage demands are gathering momentum, there is a growing feeling that a sharp reaction must be a matter of time. Industrial firms are no longer in a position to add the whole of their increased costs to their prices as a matter of course, and profit margins have declined, without any compensating increase in the turnover. The workers themselves are beginning to doubt whether full employment would go on for ever. For this reason, but also because the stiffening attitude of employers foreshadows strikes, they are anxious to save some of their earnings for rainy days. In addition, the millions of pensioners and other recipients of fixed incomes, had, hit by the rise in the cost of living, have to curtail their purchases.

Needless to say, the trade unions claim that the remedy is higher wages, because it would increase consumer demand. But in an atmosphere of uncertainty a large part of the additional wages tends to be saved and a further contraction of profit margins would further discourage investment in capital expenditure. The solution would lie in an increase of the purchasing power of pensioners. An increase of old age pensions is long overdue and the main reason for the delay has been that the trade unions have grabbed a far too large slice of the cake, so that there is not enough available for the depressed classes. The position could and should be reversed by a reinforced pay pause and by an increase of pensions, to be financed largely through an increase in the employees' contributions. The net result of such a measure would be a revival of consumer demand which would not be accompanied by a corresponding cost inflation, and which would lead to an increase of demand for capital goods.

23 June 1962

Notes

EXPORT INCENTIVES

Japanese Example

Japan in the post-war period, has provided an outstanding instance of a country which had reconstructed its economy through a purposive policy of providing incentives for growth to all sectors. A notable part in the economic recovery of the country has been played by export promotion which was helped by the Government in a variety of ways. Few other countries have achieved such remarkable results as Japan did in the post-war years by export promotion measures. In the immediate post-war years, Japanese exports had touched very low levels, consequent mainly on the loss of mainland China and the traditional markets. But intent on accelerating the pace of economic reconstruction, the Japanese Government adopted a number of measures to stimulate exports. Such has been the effectiveness of the steps taken by the Government, that Japanese trade has now surpassed the pre-war levels and exports have in recent years been increasing at an average of about 16 per cent per annum. It would, therefore, be well if our Government also which is anxious to promote exports at all costs, takes a few lessons from the example provided

by Japan. The Engineering Export Promotion Council has in a small publication entitled "Export Incentives—a Study of Japanese Methods" highlighted the important features of the policy that was adopted by Japan in the post-war years to secure rapid expansion of Japanese exports to other countries.

The chief ingredients of the policy adopted in post-war Japan were setting up of a central trade organisation, constitution of export houses and export associations, and provision of the common facilities and incentives such as short-term and long-term finance at relatively low rates of interest, rebate in income tax and excise duties, and provision of other essential services such as export credit and institutions for insuring risks attendant on export business. The Japan External Trade Organisation (JETRO) plays a central role in the promotion of Japanese exports. Responsible mainly for co-ordinating and effectively carrying out enterprises concerning the promotion of the foreign trade of the country, the JETRO undertakes such important activities as research on matters of foreign trade including industrial designs facilitation of trade transactions, distribution of various publications on foreign trade, holding of exhibitions, trade fairs, etc. It is remarkable that the activities of the JETRO is subsidised to the extent of nearly 50 per cent by the Japanese Government.

A key role is also played by the Ministry of International Trade and Industry (MITI). It supervises the activities of the various trade promotion organisations, chambers of commerce and trade associations and also intervenes on crucial matters such as prices etc. The Government has enacted the Export & Import Trading Law the main objectives of which are prevention of unfair competition and trading practices among the exporters and protection of exporters against the Anti-Trust law. Further, export houses and exporters' associations have sprung up in large numbers. The aims of the exporters' associations are mainly prevention of unfair export trading by the members and formulation of rules which the members shall observe in export trading and conclusion of collective contracts with producers or suppliers of export goods. Unitary purchase agencies to prevent exporters from buying producers' goods at low prices

among the more important facilities enjoyed by Japanese exporters.

Others services and facilities essential to exports such as shipping and finance and insurance of export risk have been also provided in adequate measure. Export risk insurance covers not only goods sent on consignment by exporters but also the entire export contracts under a comprehensive policy. Export risk insurance also covers advertisement and publicity overseas, overseas investments approved under the Foreign Exchange Control Ordinance.

The fiscal and financial incentives provided to the exporters are also an important element of the export promotion measures adopted by the Japanese Government. The trading companies have been allowed to deduct from their taxable income 1 per cent of the proceeds from their export contracts, while manufacturing companies are allowed 3 per cent of the proceeds from their sales contracts for exported goods manufactured by them and delivered to the trading company. The facility of accelerated depreciation depending on the increase registered in respect of exports is another important incentive enjoyed by Japanese exporters. The Export-Import Bank of Japan provides finance for supply of technical services, for overseas investments, for development projects for foreign government, imports etc at relatively low rates of interest. Extreme vigilance and care is taken to maintain quality of export goods and toward this a system of export inspection has been in vogue under which export inspections are conducted on the major export goods.

These measures taken by the Japanese Government to stimulate exports have been in no small measure responsible for the recovery of the country's economy. What is remarkable about the Japanese policy which has paid such high dividends is the relatively large role allotted to the private trade and its encouragement through a system of incentives. Through these measures, the Government has erected a well-designed apparatus for export promotion found in few other countries.

INSURANCE

Gratifying Gains in 1960

Though, by normal standards of official expedition, the Insurance Year Book 1961 is not too tardy in arriving, it is a little disconcerting that we have to wait for a year and a half to get data on insurance in 1960. Obviously these conclusions may well be out of date as pointers to policy.

Both general insurance business as well as life insurance business have registered gratifying gains during 1960 according to the Insurance Yearbook 1961 which was released last week. The estimate of gross premium written direct in India during 1960 is placed at Rs 38.28 crores of which the share of the Indian insurers amounted to Rs 27.24 crores. This compress with Rs 33.31 crores and Rs 23.01 crores being total gross premium written direct and share of Indian insurers respectively in the previous year. The total gross premium written direct including business transacted outside India of the Indian insurers is estimated at Rs 35.85 crores during 1960 which compares with Rs 30.05 crores in the previous year. The gains in net premium income in India is also of a comparable order, and amounted to Rs 26.58 crores for both Indian and non-Indian insurers in 1960 of which the share of the Indian insurers was of the order of Rs 18.58 crores. The relevant figures for 1959 were Rs 22.46 crores and Rs 15.01 crores respectively. The net premium income of Indian insurers alone on business done both in India and outside India amounted to Rs 33.03 crores in 1960 which compares with Rs 28.34 crores in the previous year.

In comparison with the business done by Indian insurers, the business done by the non-Indian insurers shows only very meagre gains. The gross premium written direct in India by non-Indian insurers during 1960 amounted to Rs 11.04 1959 while the net premium income in India shows only a nominal rise from Rs 7.45 crores to Rs 7.99 crores in 1960. The net premium

income of the non-Indian insurers during 1960 discloses a slight fall in respect of fire insurance from Rs 3.19 crores in 1959 to Rs 3.18 crores in 1960, while income from marine insurance and miscellaneous show increases to Rs 2.05 crores and Rs 2.77 crores respectively in 1960 from Rs 1.81 crores and Rs 2.45 crores, in 1959. So far as the Indian insurers are concerned, the net premium income in India has registered gains from all sources. The net premium income from fire insurance rose from Rs 5.14 crores in 1959 to Rs 5.97 crores in 1960, from marine insurance from 2.62 crores to Rs 3.11 crores and from miscellaneous from Rs 7.26 crores to Rs 9.50 crores. Over a five year period, the net premium income of the insurers both Indian and non-Indian increased to Rs 26.59 crores in 1960 from Rs 14.41 crores in 1955. While income from fire insurance rose from 5.62 crores to Rs 9.15 crores, that from marine insurance increased from Rs 3.40 crores to Rs 5.16 crores and that from miscellaneous from Rs 5.38 crores to Rs 12.27 crores.

The total income of Indian insurers from general insurance in 1960 has been placed at Rs 33.48 crores while the outgo has been estimated at Rs 29.68 crores. The profit transferred to Profit and loss account at Rs 1.05 crores is lower than the figure for 1959 at Rs 1.33 crores.

The total assets of the general insurance business of the Indian insurers amounted to Rs 64.94 crores at the end of 1960, which compares with Rs 57.04 crores and Rs 51.93 crores for 1959 and 1958 respectively. Over the period 1958 to 1960, the assets of the Indian general insurers invested in Central Government securities declined from 12 per cent to 9 per cent of the total assets while investment in ordinary shares of Indian companies rose from 17 per cent to 19 per cent. It is also noteworthy that over the period 1954 to 1960 the assets of the Indian general insurers invested in Central Government securities steadily declined from 20 per cent to 9 per cent while the investments in ordinary shares of Indian companies rose from 10 per cent to 19 per cent.

In respect of life insurance business of the Life Insurance Corporation also, there has been increase both in the number of policies and sums insured in 1960. The number of policies (New Effectuated) in 1960 has been placed at 12,58,526 against 11,56,627 in the previous year, while sums insured and annuities per annum rose from Rs 4.28 crores in 1959 to Rs 4.98 crores in 1960. Over a five year period, that is, 1955-60, the increase in the sums assured worked out to 87.4 per cent which compares with an increase of 83.9 per cent during 1950-55. However the increase in the number of policies in 1960 over those

in 1955 at 41.6 per cent was smaller than the corresponding increase in 1955 over those in 1950 at 59.2 per cent. But the smaller increase in the number of policies has been compensated by the greater increase (32 per cent) in the average sum assured per policy in 1960 over that in 1955 compared with the corresponding increase (16 per cent) in 1955 over that in 1950.

SHEET GLASS Case for Protection

Enquiries into the question of continuance of protective tariff have of late tended to be of the same pattern. There are discrepancies in the figures of capacity of existing units, actual production and demand as supplied by the Development Wing and as claimed by the producers; there are the complaints about cost of production, non-availability of raw material increasing freights and transport difficulties; there is the circumstance that renders protective tariff something of an irrelevance because of stringent import restriction. And finally there is the consumer-reaction to both the quality and the price of the indigenous products. However, since these questions arise in the case of "infant industries", the claim for protection is more or less readily conceded.

The tariff commission is going into the question of the continuance of protection to the sheet glass industry beyond 31 December 1960. Protection was granted to this industry for the first time in 1950 when the revenue duty of 45% ad valorem was converted into an equivalent protective duty. In 1954, Government accepted the recommendation of the Tariff Commission for the continuance of protection for a further period of three years the duty on imports being increased to 70% ad valorem. Two further enquiries in 1957 and 1960 led to the continuance of protection on the same footing till 31 December 1962.

The present enquiry is intended to go into the question of further continuance and also settling right certain apparent tariff anomalies to which attention has been drawn by trade interests.

At the time of the last enquiry there were four units engaged in the manufacture of sheet glass of ordinary quality. These were Hindustan Pilkington Glass Works Ltd, Indo-Asahi Glass Company, Seraikella Glass Works and the U.P. Glass Works. Two further units namely, Madras Sheet Glass Works (Private) Ltd, and Indo-Belgium Glass Works (Private) Ltd, both situated in Madras were licensed but have not commenced production, the former

owing to delay in the grant of import licence for some equipment and the latter owing to difficulties with their foreign collaborators. Three other units two in Gujarat and one in Calcutta are in the offing but only one of them is likely to commence production in the near future.

Though the present producers are the same as those in 1960, the installed capacity has gone up to 13.101 million square metres as against 10.573 million square metres at the time of the last enquiry. (These figures adopted by the Tariff Commission differs from the capacities registered with the Development Wing which comes only to 11.234 million square metres.) With the addition of five new units capacity will increase to 20.48 million square metres in 1964.

According to the manufacturers, net production has increased from 8.346 million square metres in 1960 to 8.282 million square metres in 1961. These figures vary from the figures of production given by the Development Wing which seems to indicate an actual decline in production from 7.542 million square metres in 1960 to 6.961 million square metres in 1961. Here obviously is a glaring discrepancy which the Commission will have to go into. On the face of it, it seems surprising that there should be such large variation.

Domestic demands for sheet glass is estimated to increase at the rate of 1.934 million square metres during the next three years over the 9.29 million square metres in 1960. The Development Wing's estimate of demand is more modest than that of the producers putting the demand at the end of the Third Plan at 16.257 million square metres.

The principal raw materials for the manufacture of sheet glass are sand, soda-ash, lime-stone and sodium-sulphate. Except soda-ash and to some extent sodium-sulphate, the rest of the chemicals are available indigenously. As with other industries complaints about the availability of coal, difficulties of transport and mounting prices of raw materials have also been made. Inconsistency in the quality of raw material has led to poor quality of the finished products. Steps have however been taken by some producers to have washeries and grading plants to obviate this.

It is gratifying that the Commission has noted that consumer consensus has been to the effect that the quality of indigenous production has improved though complaints have not been lacking. It is rather surprising that no manufacturer has yet participated in the Indian Standards Institution's marking scheme. Acceptance of the indigenous produ-

cer's claim for protection will be more easily forthcoming if they had done so. Imports being cut to the bone, the conditions for the growth for domestic industry are already present fortuitously. The industry has enjoyed protection for 12 years. It has made rapid strides and both capacity and range of products have increased. Though the present performance in export is negligible, the Chemical and Allied Products Export Promotion Council has indicated that there are export potentialities for sheet glass in the Middle East. Protection may therefore be made more readily available to this industry for a further period. But both from the point of view of consumer satisfactions inside the country and competitiveness abroad, the industry will have to drastically reduce its cost of production and, consequently, price. It is said that the Tariff Commission has received complaints that the prices charged by the indigenous manufactures are considerably higher than those of imported glass, even after a protective duty has been borne by the latter. Though as a nascent industry the economies available to their counterparts in advanced nations are not readily available to the indigenous producers, they should try to win consumer sympathy for a further period of protection by lowering their costs.

CPMO A New Beginning

Agreement has been reached on a new rupee company to operate the mines owned by the British-owned Central Provinces Manganese Ore Co Ltd (CPMO). This is to be welcomed since the activities of the CPMO in respect of some of its mines have been in a state of suspension following the refusal of the Government to renew the mining leases for the CPMO last year. With the company filing writ petitions before the high courts challenging the decision of the Government, a legal battle was shaping up much to the detriment of manganese production in the CPMO's mines. The new agreement should put matters right and facilitate continuous operation of the manganese mines, some of them containing richest deposits, of the CPMO.

Under the agreement which was signed on 8 June, the CPMO will have not more than 49 per cent of the equity capital, while the balance of 51 per cent will be shared equally by the Central, Maharashtra and the Madhya Pradesh Governments. The agreement also provides for 9 per cent of the equity capital being taken up by Indian private parties provided that a suitable matching subscription of additional shares is made by the three Governments

51 per cent majority for the public sector could be maintained.

The agreement does not provide for compensation to the CPMO for development expenditure or for unexpired portion of some of its leases. The CPMO will be compensated only in respect of the written down value, calculated under the income-tax method, of its fixed assets and for consumable stores that the new company will take over. Even this compensation, in terms of the agreement, is to be paid to the CPMO in shares in the new company, in equity and preference shares in the proportion of two to one.

The new company will be a public limited company under the Companies Act and will have its headquarters at Nagpur. The management will be through a board of directors in which the nominees of the Governments together will at all times have a majority. Initially, there will be 11 directors of whom the chairman and another will be nominees of the Central Government. The Madhya Pradesh and the Maharashtra Governments have authority to recommend two directors each and the CPMO will have five directors to represent it.

The CPMO will sell for an initial period of four years, on behalf of the new company, to such customers as it can secure abroad the ore produced by the new

company if the price and other terms are acceptable to the latter. The CPMO is to be paid some commission in accordance with normal commercial practice for this service. Within India, the new company will be free to make its own sales.

With the signing of the agreement, the writ petitions filed by the CPMO before the high courts will be automatically withdrawn and also the leases in respect of all the mines with the exception of one mine namely Balapur-Hamesha, will be surrendered, to be replaced by new leases to be granted to the new company.

US A Letter from Washington

Latest reports attest to a continued brightening of the U.S. trade and balance of payments pictures. Just last week, the Commerce Department noted that US commercial exports—shipments of civilian goods—came to \$1,795 million in April, a jump of 10 per cent from March and eight per cent above the April 1961 total. This brought exports for the first four months of this year to an annual rate, after adjustment for normal seasonal movements of

\$20,800 million, about three per cent higher than annual rate for the corresponding period of 1961. At this pace US commercial exports this year promise to establish another new all-time high, outstripping last year's record total of \$20,100 million. The level of foreign demand for US goods suggests a firmness of economic activity abroad. It also appears to substantiate the view that US goods, by and large, are able to hold their own in today's competitive world market places.

If the US export figures denote strength in foreign economic activity, then the US import figures indicate a continuing—indeed, a rising—economic vitality in the United States. For the first four months of this year, US merchandise imports ran at a record annual rate, seasonally adjusted, of \$16,033 million, no less than 16 per cent above the rate of the January-April 1961 period. The fact that imports during the early part of 1961 were affected adversely by the recession which was just then reaching its bottom, cannot obscure the buoyancy of the subsequent rebound, as the US economy has surged to record levels of activity.

Indicative of the import trend is the way foreign-made cars are benefitting from the sharp rise in the US automobile market this year, which has seen total sales of

new cars—domestic and foreign—reach an annual rate of better than seven million. In the first four months of 1962, some 133,000 new cars were imported into the United States, compared with 87,000 a year earlier. Even though total exports have been running at a record rate this year, the surge in imports has tended to cut somewhat into the US trade surplus—a margin of earnings which partly offsets total US outlays abroad for aid, investment tourism and other purposes. The persistent over-all deficit in the US balance of payments arising from these outlays adds to the dollar holding of foreign governments, which then can use them in whole or in part to acquire US gold. Nevertheless, the all-important trade surplus is still substantial, maintaining a near-record annual rate of \$4,800 million during the first four months of this year, compared with \$5,300 million for all of 1961.

Meanwhile, improvement in other aspects of US international accounts—such as the transfer of short-term funds—has contributed to a further significant reduction of the over-all balance of payments deficit. So far this year, the deficit appears to be running at an annual rate of about \$1,500 million. This compares with last year's total of \$2,500 million, and the \$4,000 million that characterized the three preceding years.

US government officials, as Treasury Secretary Douglas Dillon has repeatedly emphasized, intend to keep working vigorously towards the entire elimination of the payments deficit—a result they hope to achieve by the end of next year. The continued improvement in the US balance of payments is underscored by preliminary indications suggesting that May was the best month for US position since January, when payments were in approximate balance.

Along with this promising trend there seems to be a growing international confidence in the US dollar. Significantly, despite some signs of nervousness in foreign exchange markets, and despite the possibly related and well-publicized gyrations in US securities prices last month, it appears that very little foreign money released from American stock markets actually has been repatriated. Moreover, US gold reserves have remained virtually unchanged now for several weeks—a sign that foreigners are by no means rushing to convert their dollars into gold. Underlying all this is a marked stability in the price of gold in international markets. This is a far cry from the fluctuations of late 1960, and is itself a clear sign of firm and continuing international confidence in the value of the US dollar.

STEEL
World Trends

World steel industry has in the course of the last decade witnessed a phenomenal expansion in production. In Western Europe, almost all the countries including the UK, in the countries behind the iron curtain, the Soviet Union, the USA and Canada in America, and Japan and China in Asia have all taken great strides in steel production. Over a period of twelve years i.e., 1949 to 1960, increase in production has worked out to more than 100 per cent. The greatest progress was made by some of the Western European countries like Italy, West Germany and Belgium and also the Soviet Union. In Italy output of steel was four times greater in 1960 than in 1949 and as a result, it has emerged as the third largest producer of steel in the Western Europe replacing Belgium. Next to Italy, West Germany has registered greatest expansion in steel production since 1949. But compared with the average of 1937-39, the increase in steel production in 1960 in West Germany was relatively of a lesser order than in the UK, Belgium and France. It has been estimated that French steel production increased by more than two and half times as compared with production before the Second World War.

Production of steel in the important producing countries in

1960 was at a far higher level than the average for 1949-54. The relevant figures for 1949-54 and 1960 are 16.7 million tons and 25.8 million tons for the UK, 16.1 million tons and 33.8 million tons for West Germany, 9.7 million tons and 17.0 million tons for France 3.0 million tons and 8.4 million tons for Italy, 4.5 million tons and 8.0 million tons for Belgium, 35.3 million tons and 132.7 million tons for the USA and 6.7 million tons and 18.2 million tons for Japan. Among the Asian countries, Japan has showed the most remarkable results the 1960 output being nearly seven times greater than the output in 1949. But compared with pre-war production the increase was only a little more than four times greater.

The expansion of steel production in the United States was no less remarkable than in other countries. But three spells of recession in 1952, 1954 and 1957-58 interfered with the strident course of production in the US. It is noteworthy that while output everywhere has continued to expand, in the US the peak production was attained in 1955 since when consequent on a combination of factors like economic recession, labour strikes, and reduced level of consumption owing to competition from substitutes like aluminium, plastics etc, there has been a stagnation of output at levels below the record of 1955.

In the communist group of countries, the Soviet Union has accounted for the greatest share of steel production, and the rate of expansion in recent years in this country has been on a par with the rates in other important countries outside the Communist group. In 1960, output of steel in the Soviet Union was more than two and a half times greater than production in 1949 while compared with prewar levels, Soviet output in 1960 showed a more than four-fold increase. While production in all the important producing countries has increased substantially a remarkable fact about world steel production in recent years has been the steady headway being made by the smaller producing countries. As a result, the proportion of steel production of these countries to total steel production has increased from 3 per cent in 1935-37 to 6 per cent in 1955 and further to 12 per cent in 1960. India provides a good example among the smaller steel producing countries which have substantially increased steel production.

Side by side with steel production, production of pig iron has also expanded continuously in the last ten years attaining a record level in 1960 at 254 million tons, being more than twice the 1949 total and a little under three times the average for 1935-37. There has necessarily to be high

degree of correlationship between the production of steel and that of pig iron since the great bulk of pig iron is made for conversion into steel in the producing countries.

Total world exports of finished iron and steel has also considerably expanded and amounted to 34.2 million tons in 1960, the rate of expansion for steel being more than 100 per cent between 1953 and 1960. The peak in exports of pig iron and ferro-alloys was reached in 1957, but there was a remarkable recovery in exports in 1960 when exports rose by about 29 per cent as compared with the previous year. A record level was also reached in respect of exports of scrap at 11 million tons.

Per capita consumption of steel shows wide disparities for the important steel producing countries. USA with 1,196 lbs shows the largest per capita consumption for all the countries and is followed by Sweden with 904 lbs, West Germany 900 lbs, Czechoslovakia with 825 lbs, Canada 792 lbs and the United Kingdom with 788 lbs. The Soviet Union takes only the ninth place with a per capita consumption of 545 lbs. The per capita consumption for India at 19 lbs is pitifully low. There has been a remarkable expansion in per capita consumption in West Germany, Sweden, Switzerland and Japan in the post-war years, while consumption in the US has remained at stagnant levels. The UK and Australia also show notable increase in per capita consumption.

PER CAPITA STEEL CONSUMPTION		Average 1939-54	Average 1955-59

MINERALS
7 per cent Increase in 1961

The mineral production in India during 1961 was of the value of Rs 1,743 million as compared with Rs

1,632 million for the previous year, recording an increase of Rs 111 million or 7 per cent, according to the provisional estimates made by the Indian Bureau of Mines. The value, however, does not include petroleum and minerals declared as prescribed substances under the Atomic Energy Act, 1948.

The increase was mainly due to the higher output of coal, iron ore, bauxite, dolomite and limestone and higher prices of gold bullion and salt.

Coal, with an output of 56.1 million metric tons, was the leading commodity and was valued at Rs 1,172 million which was about 67 per cent of the total value of mineral production,

The production of metallic minerals accounted for Rs 179 million which was almost the same as in 1960 and the non-ferrous group of minerals for Rs 103 million as compared with Rs 106 million in 1960.

Among the metallic minerals there was a record output of iron ore and bauxite. The production of iron ore reached the peak figure of 12.3 million metric tons. This marked increase in output of about 13 per cent was due to larger internal and external demand.

The despatches of iron ore for consumption in iron and steel plants rose to 8.3 million metric tons, an increase of 15 per cent over 1960.

The output of bauxite reached the peak figure at 476,000 metric tons in 1961 representing an increase of 23 per cent over the output in 1960.

Though the output of manganese ore in 1961 recorded an increase of about 15,000 metric tons over the level of 1960, the value of output in 1961 showed a considerable fall of Rs 9 million. This was due to the larger volume of low grade ores (30-35 per cent Mn.) mined in Orissa, Andhra Pradesh and Madhya Pradesh and the slower production of high grade ores in Mysore, Maharashtra and Gujarat.

The total value of non-metallic minerals produced in 1961 was Rs 288 million as compared to Rs 258 million in 1960. Out of the increase of Rs 30 million, the share of limestone was Rs 11 million, salt Rs 9 million, dolomite Rs 2 million and kyanite Rs 1 million.

Output of feldspar, gypsum, mica (crude), ochre, sillimanite and steatite, however, registered a slight fall.

State-wise analysis of mineral production indicates that Bihar continued to be the leading State and produced minerals valued at Rs 622 million which was 36 per cent of the total value of mineral production in India in 1961.

West Bengal and Madhya Pradesh followed with their shares in the total value of mineral production at 21 per cent and 12 per cent respectively.

Next in the order of value were Orissa (6 per cent), Andhra Pradesh and Mysore (5 per cent each), Maharashtra and Rajasthan (4 per cent each) and Gujarat (3 per cent).

Clive Street Gossip

"I must have liberty
Withal, as large a charter as the wind
To blow on whom I please"
—As You Like It.

As was to be expected, Rajaji's was the most convincing—at any rate the most convincing Indian—performance at the Anti-Nuclear Arms Convention of the Gandhi Peace Foundation in New Delhi last week. He also made the one practical suggestion startling in its simplicity though whether we shall ever get round to putting it through is exceedingly doubtful. To expel the poisoners of the air from the UN is no more scandalous than to backball a member of a club who behaves indecently on the club premises. To say that this will knock the UN to bits is to shirk the basic issue whether an UN which permits this enormity is worth having at all. It may be argued that the UN's comparative minor successes are worth the price of this hypocrisy but that is because we have never sufficiently realised personally and with immediacy what these tests really do to the health of world's present and future population. This, in its turn, is because we are being told by some scientists that atmospheric radiation has not reached the point of danger to human life. Acceptance of such a position in the light of contrary and equally expert scientific opinion is the sheerest folly. Especially when the former view is understandably more interested than the latter. Moreover, what Rajaji probably wants is quite simply a gesture: the mere fact of introduction of such a resolution for expulsion would stir the conscience of the world body and the rest of the world. Isn't there a nation in the world which has nothing to gain from either bloc or which doesn't want to get caught in the cross-fire that could sponsor the resolution? Though Rajaji implied that India could do it, for obvious reasons it could not. Indeed the sad truth is that probably there isn't any such nation at all. Rajaji, to judge by reports, quite sensibly confined himself to the immediate problem of tests and thus was able to focus attention on the basic enormity of a fouled atmosphere rather than the threats of a nuclear war. Too many of the delegates got bogged in the labyrinths of disarmament, whereas the present and completed misdeamour didn't get the attention it deserved. Dr Rajendra Prasad, for example, talked about unilateral disarmament and went so far as to suggest that India

should set an example. Apart from the fact that it comes rather oddly from one who was the supreme commander of the Indian armed forces until a month ago, the suggestion takes one so far away from the urgencies of the situation as to justify Rajaji's earlier misgivings about the usefulness of the Convention. Disarmament, remote from nuclear disarmament, is even more distant from the tests on which the convention could usefully have concentrated. Eut to travel from disarmament, unilateral or multilateral, of the big powers to the unilateral disarmament of India is to have pre-occupations farthest removed from those of people like Rajaji and Bertrand Russell and which should properly have been of the Delhi Convention.

The OAS has thrown in the towel and has broadcast its intention of accepting the FLN offer of reconciliation "in honour and dignity". This followed secret negotiations between the two, even as senseless violence was being perpetrated by the OAS commandos, allegedly, but probably incorrectly, directed from gaol by Salan. Dr. Mostefai, the Chief FLN Representative on the Algerian Provisional Executive had earlier made the generous offer—considering continuous provocation in recent months, the FLN has shown exemplary patience and political sagacity—of a "slate wiped clean of memories of the past". Much vigorous erasing will have to be done for obtaining such a tabula rasa, considering how blood-stained the memories are. Particularly brutal has been the latter-day desperate criminality of the OAS, which chose the old and the infirm, and patients in hospitals as its particular victims. Compared to it, the slapdash hit-and-run violence of the earlier period was an almost amiable aberration. Latterly, the OAS violence had acquired the desperation of the scuttlers, the blasting of town halls, and—this latter barely an hour before the announcement of accord—civil aviation offices. The commandos were reported to have even had plans, now happily abandoned, for attacks on Oil installations in the Sahara and Hydro-electric stations in Algeria. Moreover, since the OAS broadcast speaks of only "preliminary accord" and mentions further

"elaboration" to follow, we may be counting our blessings too soon. On the very day of the accord there were incidents and the day after saw as many as fifteen hold-ups, though it was otherwise uneventful. But impressive examples of quickly forgotten earlier bitterness are not lacking—Indo-British relations occurring readily—and the FLN and the OAS may yet make Algeria a decent place to live and work in for both Europeans and Muslims. Paradoxically, the fleeing Europeans may help, as did the vastly more harrowing and in human terms more expensive exchange of population that followed partition of India. For only such as are willing to feel that Algeria is the common home of both will remain. And except for those to whom tragedy came personally and inconsolably, the last few months may well be a nightmarish memory, to be recalled without too great immediate discomfort, a year from now. All in all, no heart but rejoices at this turn of events, though many, in and out of France, bothered with the problem of containing de Gaulle, may make their minor reservations.

Ministerial eccentricities in Punjab have long ceased to surprise us. Even so, a recent news item gives details of particularly odious behaviour on the part of a minister and I cannot forbear from venting my feelings. I must admit, however, that I am reluctant to lose my temper, partly because the

incident is over seven months ago and more importantly because the Punjab Government has since made decent amends. Indeed it is the report of the handsomely behaved that has put the wide public in possession of the original outrage. The facts, as reported are meagre but are shocking enough. A sub-divisional magistrate was made to "stand for ninety minutes at a meeting of the Rohtak District Co-ordinating Committee on 31 October last because the minister was not satisfied with the disposal of public complaints in the sub-division." The preposterous order was obeyed by the officer, who apparently had greater sense of propriety than the school-masterish minister, who one fears, would have ordered the officer to "stand up on the bench had one been around. The report does not give any details of how justified the minister's dissatisfaction with the official's efficiency was: but however justified, the are rules for dealing with such contingencies. What makes it particularly offensive is the fact that the officer, to judge by his designation, has some judicial duties. Public humiliation in such circumstances is hardly calculated to inspire respect for law and order a sentiment, at no time abundant in that State. Many may think that I am making rather heavy weather of an incident which is insignificant compared to certain other happenings of the same genre in the State. But if public servants are to be treated in fashion that is considered barbarous even in schools where it was once considered permissible, may as well give up any pretensions to being a modern State.

DELHI PARLEYS Inconclusive

Mr Duncan Sandys, British Secretary of State for Commonwealth Relations, left last Tuesday after a round of formal and informal meetings with the Prime Minister and the Finance Minister. The manner in which these meetings were played up in the press had roused expectations to such a pitch that the bland official communique issued on Tuesday came as an anti-climax. But considering the purpose of the visit and the type of topics discussed, it was not reasonable to expect any clear cut decisions to emerge out of these talks. The talks with the Prime Minister ranged over a wide field including purchase of fighter aircraft. Regarding the last, the terse statement issued at the news conference addressed by Mr Sandys underlined the obvious fact that Governments did not make public statements about discussions on matters relating to supply of arms until those discussions were completed. It is, however, legitimate to infer that the discussions are still continuing and that India is in no hurry to conclude a deal with Moscow.

As regards the talks with the Finance Minister, the purpose of the visit of Mr Sandys was to acquaint the Government of India with the progress of negotiations in Brussels and, in the light of these, to ascertain the reactions of the Government of India as well as the particular points which they would desire to be emphasised during the further negotiations. The Ministerial level meetings were accompanied by meetings of officials on both sides, in the course of which the possible effects of Britain's entry into the EEC on the terms indicated in the British proposals were examined and the items to which India attached importance were indicated. Mr Sandys is taking with him a note setting out the Government of India's views which, he said, would be considered at the forthcoming meeting of the ECM Ministers along with the British proposals. It had been suggested in the course of the talks that the Finance Minister should make it convenient to visit European Capitals to express India's point of view to the Ministers concerned, before the start of the ECM Ministerial meeting, on June 27, which is expected to finalise conditions for Britain's admission as a member of the Common Market. Originally, Mr Desai was scheduled to leave for Geneva on June 9. Though the date of his departure has been advanced, it may not be practicable for him to leave in time for the Brussels meet-

ing. It now appears that he will leave for London on July 1, after the Brussels meeting has concluded. And, in the light of discussions with the British Ministers, he will decide whether it will be useful for him to undertake a tour to meet European Ministers. The decision will obviously depend on the indications available at the Brussels meeting of the extent to which the Six would be prepared to accommodate India's point of view. Though the advisability of an independent approach to the ECM has been vigorously canvassed, apparently, it has now been settled that India's brief will be held by the British delegation. Mr Sandys gave the assurance that Britain would try and secure the best possible safeguards for India's trading interests during the forthcoming negotiations. It is gathered that India had indicated an order of priorities in regard to the items for which it is desired that ECM should fix the common external tariff at zero. This should help to narrow the differences between the Indian and British proposals which, according to Mr Sandys, were not radically different. While in London, Mr Desai will also take the opportunity of discussing with Mr Selwyn Lloyd

Name of Scheme.	Estimated Expenditure
(a) Improvement of the G. T. Road from Calcutta to Topchani near Shanbad ...	Rs 6.20 crores
(b) Improvement of 247 miles of feeder roads outside Ranigunj and Jharla coalfields ...	Rs 4.30 crores
(c) Improvement of 150 miles of road within various coalfields ...	Rs 3.75 crores
(d) Improvement of about 110 miles of National Highway No. 32 to Jamshedpur ...	Rs 2.60 crores
	Rs 16.85 crores

(The Working Group, it is learnt, has recommended that the first item above, i.e., improvement of G. T. Road, should be undertaken by the Transport Department on an urgent basis and that improvement of the National Highway No. 32 to Jamshedpur should also be undertaken by the Department to the extent necessary. Improvement of feeder roads and roads within coal mines is the responsibility of the States concerned. In regard to these, it has been suggested that the Central Government should offer a grant to meet 50 per cent of the cost of a programme of improvement, to the State Governments as an incentive. The Planning Commission, it is understood, has accepted the recommendations of the Working Group in principle and has desired the Department of Transport to work out the details of the scheme in consultation with the State Governments. The Governments of West Bengal and Bihar have been appraised of the scheme and requested to forward their views. Two senior officers of

the question of external assistance for the Third Plan.

Coal by Road

A Rs 16.85 crores scheme for improvement of a section of the G. T. Road and feeder roads in the Coalfields, to enable larger movement of coal to the Calcutta industrial area has been drawn up by the Roads Wing of the Department of Transport. The scheme is now under consideration of the Planning Commission along with the recommendations thereon of the Working Group set up by the Commission to draw up a co-ordinated programme for the production of coal and its transport. Out of the five million tons currently required by the Calcutta Industrial area, four million tons move by rail and one million tons by road. The Working Group felt that there was immediately no possibility of any larger movement by road in that region because of the limited capacity of the G. T. Road which was heavily congested. It was recommended that it would be useful to develop the capacity of this road within the next two or three years with a view to enabling movement of larger quantities of coal to Calcutta and its suburbs. This it is expected would not only relieve the pressure on Railways, but also ensure regular supplies to industries which get a comparatively low priority in the allotment of wagons and were, therefore, not sure of getting their full requirements in time.

The Working Group has accepted the following programme for improvement of roads suggested by the Department of Transport.

The Road Wing have also recently visited Calcutta and Patna for discussions with the officers of the State Governments.

—In the meantime, it is learnt, that the Informal Consultative Committee of Parliament was also told of Government's decision that free movement of coal by road should be permitted. All the State Governments have been requested to take steps to improve the condition of roads in the coal mining areas so as to permit the operation of heavy vehicles, truck-trailers combinations etc. and to liberalise their licensing policy in regard to public carriers used for coal transport.

Agricultural Targets

Measures for achieving the agricultural targets of the Third Plan, it is learnt, were discussed at a high level meeting of the Planning Commission and the Ministry of Agriculture last Tuesday. The discussions were particularly concerned with the targets for cotton and oil seeds as

shortfalls in respect of these commodities aggravate the shortage of foreign exchange. The question of production and consumption of chemical fertilisers apparently loomed large in the discussions. Fixation on fertilisers is not particularly helpful in devising practicable measures to increase agricultural output. This is particularly so in respect of crops like cotton and oil seeds. The quantity of cotton or oil seeds grown on irrigated lands is very limited. The bulk of the crops are raised in dry tracts with limited rainfall. The main problem here is the adoption of measures to conserve soil moisture and to provide facilities of irrigation to make up for deficiencies of rainfall. Until this is done, it will not be possible to make even a beginning with the use of chemical fertilisers. The meeting, however, it is learnt, decided that State Governments should be permitted to exceed the target set for minor irrigation works provided the expenditure could be met out of their own resources.

Technology of Destruction

DR B. N. Ganguli's paper on Nuclear Arms, presented to the Anti-Nuclear Convention which concluded its three day session in New Delhi last Monday, draws attention to the far-reaching significance of the partnership between defence and private industry in the field of military research and development in the United States. Private industry, as Dr Ganguli has noted, contributes 76 per cent of the research and development effort represented by the U S Government's total expenditure under this head. In 1959, the total spending on research and development was \$7232.7 millions of which the Defence Department allocation was \$5,581.2 millions, the allocation of the Atomic Energy Commission was \$773.4 millions and the allocation of the National Aeronautic and Space Administration was \$302.8 millions—in the aggregate 92 per cent of the total. The bulk of the expenditure (77 per cent) on research and development goes to the aircraft and electrical equipment industries; and in these industries the contractors are the bigger firms. Elaborating the serious socio-economic effects of this concentration of contracts in large firms, Dr Ganguli says: "the private firms do not specialise in the production of only military goods. Military goods have their peacetime counterparts. Firms participating in military research and development work use the results of research in making civilian goods. The by-products of research are therefore a source of private profit. Accumulation of scientific capital is the most important element of capital formation in a dynamic economy in which innovations set the pace of progress. There is no doubt that scientific capital in large corporations in defence-related industries is accumulating at the expense of the community. Defence related industries are bound to be particularly remunerative from this point of view, and the element of subsidisation

23 June 1962

tends to create an undesirable vested interest in the advancement of the technology of destruction."

Isotopes in Agricultural Research

It is a relief to turn from the technology of destruction and its gruesome effects which were fully elaborated in the speeches made at the Anti-nuclear Convention, to the peaceful uses of Atomic Research. Considerable progress has been made in this field in India. The new

developments in agricultural research involving the use of radio-isotopes were indicated in a written answer to a question in Rajya Sabha last Monday. The experiments are being conducted at the Indian Agricultural Research Institute, New Delhi, Biological Division of the Atomic Energy Commission at Trombay (Bombay) Bose Research Institute, Calcutta, Indian Institute of Technology, Kharagpur and Vivekananda Laboratory, Almora.

Two new varieties of wheat which are high yielding and disease resistant as also a possibly Jassid resis-

tant variety of cotton, have been produced with the aid of radio active isotopes. The bearded varieties of wheat (NP 836 and NP 509), which have shown resistance to rusts and have given high yields are under multiplication and the Jassid resistant variety of cotton is under trial and will be available to farmers after the field trials are successful.

Other developments include a quick soil test for phosphorous and a high anti-fungal anti-biotic yielding strain of bacterium evolved through gamma ray irradiation. The data obtained at Trombay indicates that

treatment with low doses of gamma radiation appreciably extends the storage life of mango, apple, banana, guava, sapota, onions, tomatoes, both at room temperature and at cold storage temperatures considerably higher than are usually required for untreated controls. Considerable work has also been carried out in the Trombay establishment on radiation disinfection of stored grain. By the use of gamma irradiation, it is now possible to get 100 per cent control of insect pests at all stages of development which is almost impossible by conventional methods.

Durgapur Steel Project: Over 1,50,000 tonnes of ACC Cement have been used on this project

FOR INDIA'S INDUSTRIAL PROGRESS... The most significant development in India since Independence has been the rapid industrialisation of the country. Whole communities have moved in and new townships have sprung up around new industrial undertakings. New homes, schools, hospitals, roads, bridges, dams... huge quantities of cement have been used in the surge of construction all over India. And we are only at the beginning of this era of development and growth. In order that more cement may be available for India's industrial expansion and for the private consumer the Third Plan has set the cement industry a target of 15 million tonnes of cement a year by 1966. And the increasing output of ACC and India Cements factories will help to achieve this.

JUTE Irregular Pattern

AN irregular trend was noticeable in the jute goods market during the past week in the absence of fresh business. Foreign enquiries however continued to be received but only few of these resulted in actual business. The sacking section reacted rather markedly to the lack of buying support while hessian after initial weakness rallied in later dealings. The jute goods market opened the week on Thursday on a quiet note following reports of mill selling of ready and near delivery goods. In the next two days the undertone improved especially in hessian on reports of satisfactory burlap consumption in US in May coupled with bear covering. At 73 million yards in May burlap consumption is to be deemed quite good. It is 3 million yards higher than the previous month and 16 million yards higher than the corresponding month of last year. Burlap consumption in US is running higher than last year as total consumption for the first five months of the current year is 384 million yards and this compares with 332 million yards consumed during the corresponding period of last year. Burlap stocks at the end of May 1962 are placed at 234 million yards as compared with 250 million yards in the previous month. Though there was

no report of any fresh business, the undertone during the rest of the week in hessian continued to be steady with the quotations steadily moving up. The higher levels are sustained by speculative support which is evidently not discouraged by the indication that overseas buyers are rather reluctant to extend commitments at the present high prices. In this regard it is significant to note that Argentina has suspended further purchases against the import quota issued recently by it.

An easier trend prevailed in heavy goods which encountered pressure most of the time. The reactionary trend is presumably due to the apprehension that with production of this category of goods running at the present high level (output of sacking was higher at 47,000 tonnes in May as compared with 45,000 tonnes in April) and demand showing a declining tendency, the higher price levels would be untenable. Around midweek there was selling pressure in the futures section and that contributed to the weakness of the ready market where June B Twills declined by Rs 2.75 over the week. The irregular pattern of demand in heavy goods is shown by the fact that July/September was quoted higher than the June position.

In the futures section Hessian 40"x10 oz August was done up to Rs 53.94 but at one time it was as low as Rs 52.82. The weakness

however, proved temporary as the quotation recovered and almost the entire ground lost was regained with the rate placed at Rs 53.58 by close on Wednesday. The recovery is to be attributed to the revival of confidence following the news of a rise in US burlap consumption in May and the belief that demand for hessian would continue to be good despite the high price in view of the continued shortage of this category of goods. The trend in B Twills August too was of a similar pattern but the recovery was feeble. B Twills August after having been done up to Rs 126.95 receded to Rs 121.90. The recovery from this low level however has been very slow as by close on Wednesday the rate was placed no higher than Rs 123.16 showing a step decline on balance.

The raw jute market turned quiet after ruling steady in earlier dealings. The Jute Buffer Stock Association's indication that no further purchases of jute would be made at least for the time being in view of the stability achieved in raw jute had a depressing effect on sentiment. The undertone however improved after a very short interval on reports of damage to the jute crop on account of the floods in Assam and some other jute growing areas. In earlier dealings the trend became firm with rates quoted up to half point above the minimum prices. Evidently this calculation had been that with the crop reduced by flood damage and with consumption running at current high levels, demand would continue to be good. The firm trend however soon yielded place to a quiet phase as mills were reluctant to buy at the higher levels. With buying continuing at a low ebb the premium over the minimum levels disappeared completely and the quotation for the rest of the week was placed at the minimum level. The reversal of the trend is evidently due to the reports that there has been negligible damage to the jute crop by the floods and that with favourable weather conditions the crop is progressing quite satisfactorily. The change in sentiment was reflected in the futures section where Assam Bottoms September which was done as high as Rs 33.44 at one time during the week, receded to Rs 31.61 by week-end.

TEA Outlook not Happy

IT would be recalled that the Government of India had already fixed a production target of 900 million pounds for the Tea industry under the Third Five-Year Plan. The industry, however, doubts whether the target can be achieved. It fears that, if India increases her output rapidly at the same time as her competitors, it will no longer be possible to sell the commodity at a profit, since no spectacular upsurge in world demand is in sight. In the event of a price war, it is argued that the local industry will be among the worst sufferers. It is also pointed out that crops cannot be increased so quickly, since new tea bushes reach full maturity only after ten years. Moreover, there is an acute shortage of fertilizers. Again, the investment required for increasing production cannot be easily raised since profits in recent years have been unattractive.

The industry, therefore, feels that the Government must reduce the burden of taxes on the commodity. Any increase in wages has to be restricted. Again, efforts to expand the home market must continue since this provides a valuable cushion against adversities abroad. Finally, Government help is necessary for more vigorous promotional campaigns in export markets, particularly to a preference for Indian tea.

Meanwhile, production of tea in North-East India has increased to 36.86 million pounds in May from 17.31 million pounds in the previous month. In May last year, the output was 31.12 million pounds. With shipments of 6.44 million pounds in May, total exports of North-East tea, for the eleven months ended May 1962, amounted to 355.19 million pounds as against 340.51 million pounds in the corresponding period of the previous year.

According to the figures released from Djakarta, production in Indonesia was slightly lower at 8.4 million pounds in January as against 8.5 million pounds in January last year. The production in Portuguese East Africa was lower at 3.5 million pounds in March as against 3.8 million pounds in March last year. Total production, during the first quarter of the current year, has, however, risen to 11.1 million pounds from 10.2 million pounds in the corresponding period of last year.

23 June 1962

In the Cochin market, 438,000 pounds of Dusts were offered for internal consumption. Against good demand, prices were irregularly lower than last week's rates. Good Mediums were easier by 10 nP to 15 nP per kilo, while high-growns were steady. Unorthodox types were also easy.

In the Colombo market, offerings were 8,382,319 pounds. Overall quality showed little change. At the opening, high-grown teas from western districts were lower with lighter sorts declining by 10 to 20 cents per pound and others by about 10 cents. Better mediums were also about 10 cents per pound lower; but plainer sorts and Uva Teas were irregular.

Low-growns, suitable for the Middle East, were fully firm, while small leaf BOPs were slightly dearer. Black Leaf BOPF advanced by 5 to 10 cents. Liqueuring Fannings continued strong; but plainer sorts were lower.

The opening tea auctions at Chittagong are likely to witness more than ordinary keen competition, which will continue until reassuring news of the crop is available. On the assumption that the crop in the current season will be of the order of 59 million pounds, the same as in the last season, the export allotment for the current season has been fixed at 10 million pounds. Thus, about 49 million pounds will be available for home consumption as against 46.5 million pounds last season. In the meanwhile, the Pakistani Finance Minister has announced a reduction of export duty from 25 paise per pound to 15 paise.

In London auction, offerings were 27,208 packages including 6,749 packages from North India. After the whitsun recess, the sale opened with a strong demand for all grades. The small amount of Indian tea, on offer, consisted of end-of-the-season invoices. Although there was a falling way in quality, last prices were maintained.

Tea stocks in London, as on 30 April 1962, declined to 72.33 million kg from 80.64 million kg at the close of April 1961. Spot stocks fell from 73.49 million kg 67.09 million kg, as did "afloat" stocks from 7.15 million kg to 5.24 million kg.

COTTON Two-Sided Movements in Futures

THE Bombay Cotton futures market showed two-sided movements during the week under review. Prices fluctuated on alternate bouts of buying and selling. After opening steady, prices declined in mid-week on reports of rain in parts of Dho raji, Porbandar and Jamnagar.

Towards the close, however, the Jharilla contract recovered on dry weather reports.

The cotton-growing regions of Maharashtra and Gujarat have yet to receive the vigorous monsoon conditions that are necessary in the early part of the season. The pre-monsoon showers have not been followed by continuous rains.

Sowing of Bengal Deshi and 320F in the Punjab, Uttar Pradesh and Sriganganagar circle of Rajasthan are reported to have been completed. The trend has been more in favour of 320F in view of the poor Kapas prices for Deshi realised in the current season. Deshi sowings are reported to be 25 per cent than those of last year.

Arrivals have been poorer this season. Up to 14 June 1962, only 592,266 bales had seen received, representing a fall of 9 per cent over the corresponding period of last season. The sharpest fall in arrivals was from the State itself. Varieties such as virmar, Jharilla, etc., and Gaorani stood reduced to about a fifth. Arrivals of important varieties from Gujarat were also lower.

Compared with the previous season, arrivals of Surti were slightly more than a half. Arrivals of Kalyan variety were down by about 8 per cent. The effect of these lower arrivals was reduced, to a certain extent, by the improved arrivals from the Punjab, Rajasthan and Uttar Pradesh. According to the figures released by the East India Cotton Association, arrivals from the Punjab were almost double.

Meanwhile, the trade is worried that the cotton business in Bombay will suffer a setback if the sales tax is raised to 2 per cent by the Maharashtra Government. The EICA has, therefore, urged the State Government to exempt all cotton transactions from the rise in sales tax till the mills make purchase. In other words, the Association has suggested that the levy should be at the consumption point. The trade has also suggested that cotton jobbers and brokers should be exempted from the payment of additional stamp duty.

In the Spot section, turnover continued to be limited; but mill interest was well maintained in popular varieties like Laxmi, Surti, Kalyan, Jaydhar, Wagad and C02. Prices remained generally firm. As several mills have not received the balance quota of indigenous cotton for the current season, the turnover has contracted.

In the Import section, some business was reported done in American and Pakistani cotton, as the quotas for the long-staple variety were almost complete. There was, however, some business still to be done in short-staple cotton. Small deals were reported in superior varieties of Sudan and in African Mwanza.

Following were imports of foreign cotton into the chief Ports of India from 1 September 1961 to 2 June

1962 (Figures in bales of 180 kilograms):—			
Destination	1961-62	1960-61	
American	277,594	568,656	
Sudan	119,549	49,746	
Egyptian	76,485	60,010	
East African	136,516	96,953	
Pakistan	50,295	2,624	
Other sorts	21,218	36,194	
Total	681,657	807,283	

On the export front, stray business was reported in Bengal Deshi. Business for the balance of about 13,000 bales out of the shippers' quota of 66,500 bales still remains to be put through Demand from Japan has not still picked up.

Following were the exports of Indian cotton to foreign countries for the same period mentioned above:—			
UK	Continent	Hongkong	China
3,816	22,023	20,239	67
2,811	15,139	13,749	193,830
153,085	18,495	4,547	308
218,227	230,181		

There has been a steady decline in the export of cotton waste during the past many years. Overseas consumers have been covering their requirements from elsewhere on account of the fact that Indian waste is no longer competitive. Pakistan also encourages export of cotton waste by giving shippers import licences of the f.o.b. value of the goods exported. The licences are used for the import of a great variety of goods, including machinery for clearing and preparing cotton waste for export. In the context of the renewed efforts made by the Government of India to promote exports, it is felt that the authorities can bring about a rise in cotton waste exports by abolishing the export duty.

Despite the tax reliefs announced recently by the Union Finance Minister by the Union Finance Minister continued to rule quiet. The demand from upcountry centres was negligible, while merchants were busy getting refund of the excise duty concessions. Most of the mills were reported to have entered into forward business up to August in seasonal goods.

On the export front, moderate business was done with the Sudan in grey shirtings and bleached muslins. Small bookings were reported for Ceylon in printed voiles. Canada accounted for a small quantity of towels and grey shirtings. Other destinations were quiet.

Natural Versus Synthetic Rubber

THERE is no leading commodity market more immediately affected by the present controversy over the US strategic stockpile than Rubber. Even at the present rate of release,

as estimates for 1962 from International Rubber Study Group show, there will be about 70,000 tons of surplus rubber coming on to the market. But for this, supply and demand will be virtually in balance.

Within the last three weeks, Russians are reported to have reduced their orders and, with no other buyers coming forward, prices for the commodity have been drifting downwards. As a result, the underlying uncertainties concerning the stockpile have reasserted themselves. There is once again talk of the market making, once for all, a readjustment to meet synthetic challenge.

Reports are current that Firestone-Kilachand synthetic venture is expanding its capacity. The Duncan-Philips proposal is likely to take shape and two new companies, Goodyear and ESSO are interested in putting up new synthetic plants in India. Even at the prevailing c.i.f. quotations for synthetic rubber, the cost to Indian manufacturers including the 50 per cent import duty is reported to be less than the current statutory price of natural rubber.

Manufacturers are, therefore, drawing pointed attention to the above disparity in prices. As a matter of fact, synthetic rubber consumption is expected to be 2,075,000 long tons this year as against 1,870,000 long tons in the previous year. Natural rubber, consumption is, however, expected to drop from 2,050,000 tons to 2,040,000 tons in 1962. Total consumption is estimated to rise from 3,920,000 tons to 4,115,000 tons. It is generally believed that more synthetic than natural rubber will be absorbed.

COFFEE

When the new Coffee Board meets at the end of this month, it will have a more cheerful report on export prices that what could have been foreseen a year ago. The drop in the crop harvested this season is so substantial that the increase in export prices cannot wholly cover the loss in volume.

The total quantity of the 1961/62 coffee crop, sold for export up to 23 May, amounted to 6,721 tonnes. A quantity of 1,692 tonnes of coffee has been put up for the export open auction, to be held at Mysore on 20 June. Up to the end of May 1962 receipts into the 1961/62 Pool amounted to 44,046 tonnes as against 64,768 tonnes in the corresponding period of the previous year.

During May 1962, 3,254 tonnes were released in the internal market, bringing the total releases, for the five months of the year, to 13,427 tonnes against 13,341 tonnes in the corresponding period of last year.

The Uganda Government's decision to slash the price paid to the country's Robusta coffee growers by 20 per cent will not affect the price at which it sells coffee to overseas buyers. The price to growers will fall by 12 cents a pound for un-hulled coffee. The official announcement at Kampala says that the reduction is a policy decision.

The reduced price is equivalent to the current world price and in line

with the policies carried out by the other coffee-producing countries. The new price will not be subsidised by the Coffee Price Assistance Fund.

SUGAR

After an early setback due to slack outside demand, Sugar prices recovered modestly in the Muzaffarnagar market following the support from the Punjab and Rajasthan. The underlying sentiment, however, remained depressed. Stray business was put through for Gujarat and Saurashtra. Following mill-delivery prices (per maund) were quoted:—Daurala Rs 41.38; Iqbalpur Rs 41.35; Rohana Rs 41.10 and Rampur Rs 40.87.

India's total export sales of sugar so far this year, after the Government of India adopted their sugar export policy in February, amounted to 205,663 metric tons. Out of this, 100,780 metric tons have been shipped. This brings the total shipments so far this year to 146,720 tons, which includes 42,000 tons to the United States sold at the end of last year. Foreign exchange earnings out of this quantity of 146,720 tons are placed at about Rs 6.56 crores.

In the above connection, it may be stated that it is not fully clear as to what will be the real picture of quota allocations as far as India is concerned as the Sugar Act has been extended for five years. Even if India gets a total allotment for the rest of this year of 130,000

tons—one lakh on the basis of individual formal quotas and 30,000 tons out of the temporary quotas—it is not very satisfying, because it falls short of the expectations of the Indian industry.

FOODGRAINS

The Delhi Foodgrains market presented a mixed appearance. Wheat remained practically unchanged. Following reports that the Government of India was considering exports of rice, Basmati rice prices advanced sharply by Rs 3 to Rs 5 per quintal. The demand from the consuming centres was also encouraging. Guwar was in good request from the starch factories of Gujarat

Indian Finance

and the Punjab. Urad, however, declined by about Rs 5 while Moong eased in sympathy.

Reports, that the Government of India has been considering a proposal to allow exports of a limited quantity of Indian rice, have evoked a good deal of interest among grain dealers. The consensus of opinion is, that the country can spare one or two lakh tons without inviting any serious disturbance in the domestic markets considering the fact that the all-India crop amounts to more than 30 million tons. Some traders, however, feel that it will be quite some time before the Government is able to make up its mind—it is believed that certain fine varieties, such as Basmati and Kolam may find a ready market in the UK and Africa. Countries of West Asia, which have a long Indian population, are likely to offer opportunities for the export of boiled varieties.

CHEMICALS & DYES

—Active trading conditions were noticed in the Bombay market for Chemicals and Dyes. There was an overall increase of 10 to 15 per cent in the prices. As the supply position was expected to be extremely tight in view of the import cut, stockists were unwilling to part with their holdings even at the current high levels.

Among Chemicals, Bleaching Powder was in the limelight with a shortage of goods and hectic buying. The small packing spurred from Rs 79 to Rs 88 and the big packing from Rs 74 to Rs 78. Ultramarine Blue was also in good demand. The Belgian quality was quoted up to Rs 305 from Rs 235 per 50 kgs.

In the Dyes section, Naphthols registered an appreciable improvement in the prices with As-LB quoting around Rs 57. Among direct colours, Turquoise Blue forged ahead to Rs 17 from Rs 17.50 for the Japanese and Italian qualities.

SILK

In the Bangalore Silk market, prices of flature raw silk of 20/22 Dr. continued to rule firm, being quoted between Rs 84.89 and Rs 85.99 per kgm during the week ended 8 June, 1962. Rates of charka raw silk increased to rule between Rs 53.46 and Rs 77.16 per kgm. The prices of cottage basin silk were quoted between Rs 77.16 to Rs 22.62 per kgm.

Prices of reeling cocoons showed a rising trend during the previous week. Prices in Sidlaghatta and Channarayana areas varied from Rs 4.25 to Rs 5.75 and from Rs 4.25 to Rs 5.00 per kgm respectively, and those in Mugur area ruled between Rs 4.00 and Rs 4.50 per kgm. Prices of foreign race seed cocoons declined slightly to range between Rs 5.00 and Rs 12.00 per thousand. Mysore race seed cocoon prices varied from Rs 6.00 to Rs 7.50 per thousand.

In the Bhagalpur Silk market, Tasar silk prices maintained a steady trend during the week ended 8 June, 1962. Prices of tasar raw silk varied from Rs 66.00 to Rs

105.02. Rates of silk waste and spun silk yarn ruled between Rs 22.00 and Rs 26.00 and between Rs 30.00 and Rs 47.00 per kgm respectively. Reeling cocoon prices presented a steady trend. Prices for Daba, Bogai and Serihan were quoted between Rs 120.00 and Rs 130.00, Rs 115.00 and Rs 120.00 and between Rs 50.00 and Rs 60.00 per kahan respectively.

The F.O.B. price and landed cost of Japanese raw silk of 20/22 Dr. was reported as Rs 61.60 and Rs 94.95 per kgm respectively as on 19 May, 1962. There has been a perceptible rise in the f.o.b. prices of Japanese silk since December 1961. The f.o.b. price for Japanese raw silk in December 1961 was Rs 51.3 per kgm.

GOLD & SILVER

After initial weakness, prices on the Bombay Bullion Exchange displayed a small recovery, thanks to buying by upcountry centres like Jodhpur and Indore.

The initial weakness in Silver was mainly due to reports of heavy arrivals, which amounted to 98 lars as against an offtake of only 50 bars. A prominent operator bought about 500 bars towards the close of the week and the while metal, therefore, recovered a part of the early losses. Silver Jeth delivery moved between Rs 215 and Rs 215.30 and Bhadon delivery between Rs 215.05 and Rs 215.30. Ready (below 396) changed hands at Rs 214.80 to Rs 215.10.

Gold also recorded low level earlier before recovering at the close. Arrivals amounted to 12,000 tolas; but the offtake was poor at 6,000 tolas. Ready changed hands at Rs 125.20 to Rs 125.40 with Sovereign quoting around Rs 98. Jeth delivery moved between Rs 124.90 and Rs 125.40 and Bhadon between Rs 122.95 and Rs 123.20.

OILS & OILSEEDS

Conditions on the Bombay Oilseeds Exchange remained generally quiet with prices developing an easier tendency due to favourable weather reports from Saurashtra and apprehensions of increased arrivals of groundnut and other seeds from Rajkot and other producing centres.

Imminent start of the monsoon in Gujarat and Saurashtra affected sentiment in the Groundnut section. Saurashtra was carrying a large stock of the old crop, also induced caution. Groundnut ready bold quality was quoted at Rs 45.50 and Groundnut Oil at Rs 18.50.

The Castorseed section, reflected a depressed sentiment, as the export trade in castor oil continued to be poor, with the UK making only occasional purchases of small quantities. The reports, that Brazil was a keen seller even in the new crop positions, were also a contributory factor. Ready was quoted at Rs 31.50 and Castor Oil, commercial quality, at Rs 11.90.

Comparatively speaking, the Linseed section, ruled steady, thanks to the tight stock position on account

of inadequate arrivals. Also, reports of efforts being made by the STC to export linseed oil encouraged some buying. Ready was quoted at Rs 39 and Linseed Oil at Rs 15.40.

Though the Madras market for oils and seeds turned out to be slightly better last week-end, it however, showed signs of easing up with no buying force. There is lack of absorption despite the ready selling pressure seen in both the oils and seeds sections. Buyers are also not quite eager in view of what they call possibility of still lower prices because of the steady arrivals of groundnut kernels in the market.

Because some vanaspathi interests bought some groundnut oil last week, this lent some support, and as it has now stopped groundnut oil prices had weakened. There were favourable rains all over the groundnut growing areas in the South. Groundnut arrivals too in the City averaged 80 tons daily while in the South and North Arcot District centers the daily arrivals averaged 400/450 tons. All these quantities are being slowly and steadily absorbed.

Calcutta interests kept off from the groundnut oil market.

In the forward positions of groundnut oil also there was not much of oil movement. June remained at the ready stock quotation, while both July and August valdas of groundnut oil remained lower. The groundnut price in the Southern markets were at Rs 71/72 per bag of 80 kgs.

The price of both castor oil and gingelly oil continued to be better. The latter, however, firmed up. Coconut oil price went up in view of the prohibited import of coconut oil. West Coast coconut oil operators put up prices considerably at all their centers.

Summer peanut crop arrivals in southern market have been good.

Castor oil per quintal Rs 147.50; Coconut oil per tin Rs 46.25 to Rs 46.50; Gingelly oil per maund Rs 24.75; Gingelly seed per bag Rs 84/85; Groundnut cake Rs 28.25 per bag of 160 bags. There was no demand from the South.

Groundnut oil Ready was quoted at Rs 178 last Wednesday. It declined by forty nP the next day per kilo. Another ten nP per kilo was lost the following Friday. On Saturday a rupee was still cut off from the previous price and the quoted price was Rs 176.50 per quintal. On Monday this week the price remained at Rs 176. The June position of groundnut oil remained bright only on Friday when its price was at Rs 180.50, but it was temporary. There was a setback when the price of June position came level with that of the Ready stock. July valda was quoted at Rs 182 last week and progressively it declined to Rs 181.50 and to Rs 178. August valda was nominal with a rupee difference with the July quotation.

There was no change in peanut price which consistently remained at Rs 68/69 per bag of 80 kgs.

The upcountry price of groundnut oil was also lower. Guntur quoted at Rs 412 per candy of 500 lbs. Vridhachalam at Rs 396, Nandyal Rs 400, Villipuram Rs 396, Cuddapah, Pollachi and Tanjore Rs 393

and Salem Rs 400 all per candy of 500 lbs.

The price of kernels per 80 kgs at these centers remained between Rs 72 to 74. Cuddappah alone quoted Rs 70 per 80 kgs.

HIDES & SKINS

Due to Moharrum holidays there was only subdued trading in the skins and hides markets in Madras. Outside enquiries for tanned cow-hides continued to be off and on. UK business turned out for 5½ lb run and fourths at 64/66d, and 54/56d respectively. Firm prices ruled for semipremiums. The rates remained on the basis of 75/76d, 65/66d and 58/59d for 5½ lb run, fourths and fifths. In the inferior fifths the prices were easier.

Good support for tanned cowcalf from British buyers was seen particularly for the 2½ lb stock. Other varieties in this section continued to get the same support as previously.

As for tanned buff hides, there was a tendency towards lower levels. There were meagre supplies of tanned buff calf and some negotiations took place at 95d for premium mark in the 1½/2 lb weight.

Tanned goat skins did not move up fast in view of the overseas expectation of still further lowering of prices. In the 5½/6 lb the price quoted was 16/9d, 13/6d and 10/3d for run, fifths and inferior fifths.

For 8/9 lbs the prices were 16/9d, 14/3d and 11/9d for runs, fifths and inferior fifths. In 11/12 lbs at 17sh, 14sh and 11/9d for run, fifths and inferior fifths.

The following were the prices per lb of tanned skins and hides. Cow prime 5½/6 lb Rs 2.75 to Rs 2.81. 6½/6 lb Rs 2.43 to Rs 2.50; 7/7½ lb Rs 1.81 to Rs 1.87; 10/12 lb Rs 1.94 to Rs 1.97; inferior fifths 5½/6 lbs Rs 2.15 to Rs 2.22; 8/8½ lb Rs 1.81 to Rs 1.87; 10/12 lbs Rs 1.75 to Rs 1.78; buffalo 12/13 lb Rs 1.81 to Rs 1.87; buff calf 1½/2 lb Rs 3.12 to Rs 3.19; cow calf 1½/2 lb Rs 3.89 to Rs 3.81.

WHOLESALE PRICES

Slight Advance

The official wholesale price index (with the year ended March 1953 as 100) advanced by 0.2 per cent to 127.3 during the week ended June 2, 1962 as compared with 127.0 for the earlier week. The index was higher by 1.8 and 1.1 per cent respectively when compared with the corresponding week of the previous month and that of a year ago.

Higher prices of Rice at Haikandi and Nagpur (+7% each) at Tirunelveli (+6%), Fish and Gur (+6% each), Wheat at Chandausi (+5%), Mung and Masur (+3% each), Arhar and Oranges (+2% each) and Jowar, Urad, Potatoes, Ghee, Eggs, Chillies and Cardamoms (1% each) raised the index for Food Articles by 0.5% to 126.0. The prices of Wheat at Moga (—6%) and at Sagar (—5%), Rice at Dumka (—5%), Cashewnuts and Gingelly oil (—3% each), Gram and Onions (—2% each) and Barley, Maize, Milk, Groundnut oil, Coconut oil and Black Pepper (—1% each), however, moved down.

The index for 'Tobacco' remained stationary at its earlier week's level of 98.7.

The index for the 'Fuel, Power, Light, Lubricants' group worked out to 122.2 as against 122.3 for the previous week. The prices of Castor oil (—2%) showed a fall during the week under review.

The prices of Bamboos (+10%), Lac (+6%) and raw Jute and Linseed (+2% each) were marked up while those of Tanning Materials (—3%), raw wool and Gingelly seed (—2% each) and raw Silk, Rapeseed and Copra (—1% each) showed a decline and the index for 'Industrial Raw Materials' stood at 135.1 as against 14.9 (revised) for the previous week.

The index for 'Intermediate Products' advanced by 0.2 per cent to 138.6 as a result of a rise in the prices of Rayon Yarn and Zinc (+2% each) and Linseed oil (+1%) although the prices of Tin (—2%) and Coir Yarn (—1%) showed declines.

The index for 'Finished Products' stood at 126.1 as against 126.2 for the earlier week; the price of Jute manufactures (—1%) moved down during the week under review.

BURN AND COMPANY LIMITED

NOTICE IS HEREBY GIVEN that a General Meeting of the Company will be held at its Registered Office, 12, Mission Row, Calcutta, on Friday, the 20th July, 1962 at 11 a.m. for the purpose of considering and, if thought fit, passing the following resolution:—

"That subject to such approval of the Central Government as is required by Section 372 of the Companies Act, 1956 being duly obtained, this general meeting having taken under consideration the scheme of collaboration between the Company and A. Reyrolle and Company Limited do sanction the investment by the Company which is thereby contemplated in the purchase or acquisition of shares in the proposed Company to be known as Reyrolle Burn Limited notwithstanding that such investment will exceed ten per cent of the subscribed capital of that Company."

A Member entitled to attend and vote at the meeting is entitled to appoint a proxy (who need not be a member of the Company) to attend and, on a poll, to vote in his stead.

By Order of the Board,
MARTIN BURN LIMITED
Romen Mookerjee
Director
Managing Agents

Registered Office
12, Mission Row,
Calcutta-1.
20th June, 1962

An Explanatory Statement as required under the Companies Act, 1956 has been forwarded to the members of the Company.

—THEY FLY NOTHING BUT THE BEST

You may not recognise all the 'planes in the PIA fleet. Some of them are used for the local air-bus services that make flying in Pakistan almost as cheap and simple as hopping on a bus. They were chosen because they were exactly right for just that kind of job. In the same way, only the great Boeings are sufficiently big, fast and comfortable for PIA's New York run. And PIA extend this thinking far beyond just choosing their 'planes. They maintain and fly them with loving care, and land them strictly on schedule. (PIA hold an unbroken record for punctuality.) This is what makes people say nice things about PIA. It brought the airline 63% more passengers last year, and 41% higher profits than ever before. The figures wouldn't go up if they weren't great people to fly with.

issue will be made to the existing shareholders. The capital is required for expansion.

Biermans Paper

Biermans Paper Coating Mills Limited, Delhi, has been granted consent to the issue of share capital of Rs 30 lakhs in equity shares of Rs 100 each for cash at par. Out of this, shares not exceeding 49 per cent would be offered to M/s. Leonard and Bierman S. A. of Belgium. The proceeds will be used for the manufacture of coated art paper and board of all kinds.

Kirloskar Brothers

Kirloskar Brothers Limited, Bombay, has been granted consent to the issue of capital of Rs 25 lakhs in 40,000 equity shares of Rs 25 each to be issued for cash, at a premium of Rs 12 per share and 60,000, 9 per cent (subject to tax) preference shares of Rs 25 each for cash at par. The proceeds will be utilised for augmenting the company's liquid resources. The present paid-up capital of Rs 55,00,000 is in equity shares.

Swamiji Mills

Swamiji Mills Limited, Madras, has been granted consent to issue capital of Rs 20 lakhs in the form of equity shares of Rs 100 each for cash, at par. The proceeds will be utilised for the establishment of a spinning mill in Madras.

Hoisting Equipment

Hoisting Equipment Company Limited, Hyderabad, has been granted consent to the issue of capital of Rs 15 lakhs in 1,25,000 equity and 25,000 preference shares of Rs 10 each carrying a dividend of 9.3 per cent free of company's tax but subject to deduction of all taxes at the prescribed rates for cash at par. Out of this 15,000 equity shares will be issued to the foreign collaborators M/s Ateliers D'orleans, France, for other than cash in lieu of technical know-how. The proceeds will be utilised for the manufacture of electric hoists.

Amaravati Paper

Amravathi Sri Venkatesa Paper Mills Limited, Udumalpet, (Madras State) has been granted consent to issue further equity capital of Rs 6,74,600 for cash at par. The proceeds of the issue will be used to meet the cost of the machinery required for the establishment of a paper mill.

Karur Vysya Bank

The Karur Vysya Bank Limited, Karur, has been granted consent to the issue of further capital of Rs 2.50 lakhs (nominal) divided into 10,000 equity shares of Rs 25 each to be fully paid-up, for cash at a premium of Rs 2.50 nP per share. The proceeds will be utilised for strengthening the bank's capital base. The present paid-up capital is Rs 10 lakhs.

Neiveli Ceramics

The list for public subscription to the equity issue of Neiveli Ceramics and Refractories Limited will open on 2 July and close on 9 July, but not before 4 July 1962. The company will have an issued capital of Rs 45 lakhs, divided into 4,20,000 equity shares and 30,000—9 per cent cumulative preference shares, both of Rs 10 each. The entire preference capital has already been subscribed by some of the general insurance companies. Of the equity capital, the directors, managing agents and their associates will take up Rs 8.23 lakhs and the German collaborators Rs 3.77 lakhs and the LIC has agreed to underwrite and subscribe for Rs 5 lakhs. The balance of Rs 25 lakhs will be offered to the public. The entire public issue has been underwritten. The factory will be located at Vadalur, near Neiveli, where a large supply of China clay is available from the lignite mines. The company has secured the technical and financial collaboration of a West German firm. The company expects to go into commercial production in 1963. The project has been sponsored by Seshasayee Brothers (Private), Limited.

Union Bank of India

The Union Bank of India Limited has proposed to issue 8,00,000 equity shares of Rs 5 each, at a premium of 50 nP per share, to the existing shareholders as on 20 July, 1962 in the proportion of two such shares for every three shares held. The new shares shall rank pari passu with the existing shares of the company in all respects except that they shall not participate in any dividend that may be declared in respect of any period before 30 September, 1962. In other words, they shall participate only in dividend for the quarter ended 31 December, 1962.

INVESTMENT NOTES

Eastern Investments

The new equity shares issued by Eastern Investments Limited will rank in all respects *pari passu* with the existing shares except that they shall not participate in any dividend which may be declared in respect of any period ending before 31 December, 1961.

Lansdowne Jute

The directors of the Lansdowne Jute Company Limited have proposed to reorganise the business of the company. They have come to a conclusion that it will be in the best interests of the company to cease to manufacture jute products at its mill, which will be closed down for that purpose, to sell its loom-hours, to hire out its modern machinery to other companies within the same organisation by arrangement and to dispose of by sale the remaining machinery and to plan for the utilisation of the valuable land and buildings owned by the company. The company will, therefore, continue in business or commercial assets as indicated by manufacturing jute

products at the place or places where such assets may be located by or under arrangement with the hirers thereof. The directors have also decided to reduce the indebtedness of the company to its bankers as soon as possible. In the above respect, a general meeting has been convened on 14 July.

Sendra-Churulia Merger

It would be recalled that, on 10 January, 1962, the Calcutta High Court passed an order approving the scheme of arrangement between the Sendra Coal Company and the Churulia Coal Company for the purpose of merger of the latter with Sendra Coal with effect from 1 January, 1962. By the order, all the assets, liabilities and duties of the Churulia Coal Company were transferred to and vested in the Sendra Coal Company with effect from the above date and the Churulia Coal Company was dissolved without a winding-up. Ordinary shares numbering 48,400 of Rs 10 each in the Sendra Coal Company, credited as fully paid-up, have, under the scheme, to be issued to the members of the former Churulia Coal Company, so that each will receive one ordinary share of Rs 10 in this company for every three ordinary shares of Rs 4 each held in the former Churulia Coal Company. Since this company cannot issue a fraction of a share, whole shares will be issued to trustees for such of the members as may be entitled to fractions to be sold and the proceeds of sale will be distributed among such members.

J. K. Rayon

The report, released by J. K. Cotton Spinning & Weaving Mills Company Limited—popularly known as J. K. Rayons—for 1961 makes a satisfactory reading and gives an idea that the company is expending fast. Barring the teething troubles which are common to every growing industry, it is expected to show excellent results. Gross sales for the year have reached a new high at Rs 517 lakhs compared with Rs 463 lakhs. The addition of the rayon unit to the textile unit has given a fillip to the sale, which has increased from Rs 258 lakhs in the year 1958 to Rs 517 lakhs—a cent per cent rise and a singular achievement. The profits have, however, not kept pace with the sales on account of certain adverse factors. Gross profit amounts to only Rs 73.39 lakhs against Rs 91.90 lakhs. The dividend is, however, maintained at 12½ per cent, subject to tax. In the Textile unit, modernisation has been in full force and special plants have already been installed. In respect of the Rayon unit, expansion schemes, including doubling of the present plant, are being negotiated with the Government for clearance of import licence formalities.

Aluminium Corporation

It would be recalled that the new plant of the Aluminium Corporation of India Limited was recently commissioned to treble the present production. This is the first company

to produce Aluminium from India Bauxite. The company's plant is the only example of completely integrated facilities in the world starting with bauxite processed to finished semi-fabricated aluminium products in one compound. The next phase of expansion in hand, to be completed soon, will enable the company to produce Foils, Extrusions and AC/SR cables.

STOCK EXCHANGES

A Halt to Selling Wave

Watch-Dog Writes:

The selling wave, which was noticed till the end of last week, has not only subsided but paved the way for short-covering and scattered replacement buying. Apart from the absence of any bearish development, encouraging corporate news has revived buying confidence in the market.

On the Calcutta Stock Exchange there was marked revival of buying interest. Almost all the shares recorded a sharp recovery under the lead of speculative issues. Dealings in Paper shares were prominent.

The new account on the Bombay Stock Exchange started on a steady note and prices advanced on short-covering and replacement buying.

The Madras Stock Exchange was fairly active. The firmness in a few selected shares was attributed to the process of correction in the technical position.

Dull conditions, however, prevailed on the London Stock Exchange where prices in most sections drifted lower in the absence of any support.

CALCUTTA

Friday, Evening. THE local stock market presented a better appearance during the week under report, thanks to some bear-covering and replacement buying. The main factor contributing to the sudden turn in market sentiment was the absence of further selling pressure in the face of encouraging corporate news such as, the slight increase in dividend for Hindustan Motor, the maintenance of the distribution on the increased capital by Kesoram Industries and talks of an increase in the selling price of paper.

There was, however, a tendency on the part of operators to book profits at the higher levels due to a feeling of uncertainty and pessimism. When the Government decision to cut imports further to conserve foreign exchange had already created a great deal of concern, it was feared that the working of the existing industries might be hampered by the shortage of raw materials and spare parts and the profit-earning capacity, as a result, might be greatly affected. But for the lower levels which attracted some buying support, the market might not have improved.

The gilt-edged section, showed a measure of steadiness, while the short

and medium-dated issues continued to be in demand from banks, the long-dated loans had sellers around the quoted rates. The decision of the Reserve Bank to suspend selling gilt-edged securities gave rise to a feeling that the Government of India might soon float its loans. Meanwhile, 3 per cent 1986 Conversion Loan hovered narrowly around Rs 71.10.

Bank shares remained practically unchanged with Punjab National changing hands at Rs 20.25 to Rs 20.71. United Commercial remained static at Rs 87.

Jute shares were a steady feature in view of the demand for gunnies running at a satisfactory level. Birlas were taken up to Rs 34.56 from Rs 33.81; Ganges up to Rs 14.81 from Rs 14.19; Howrah up to Rs 22.25 from Rs 22; New Central up to Rs 15.94 from Rs 15.75 and Reliance up to Rs 7.94 from Rs 7.69. The news of the decision made by the directors to reorganise the business of the company caused some enquiry in Lansdowne up to Rs 143 from Rs 141.

The Coal section, however, failed to create much interest as the price increase sanctioned recently by the Government, fell short of the requirement placed for consideration by the industry. The only three exceptions were Burrakur having speculative support up to Rs 19.09 from Rs 18.50; East Indian up to Rs 49.62 from Rs 49 on prospects of expansion and New Beerbhoom up to Rs 23.06 from Rs 22.25. South Karanpura and Western Bengal were narrow markets around Rs 9.50 and Rs 10.62 respectively.

Tea shares gave a poor performance. Prices drifted lower due to the auction reports not being very encouraging. Only the shares of the Assam gardens, which have declared satisfactory dividends for last year, came in for some buying support. Betjan were supported up to Rs 35.37; Brooke Bond up to Rs 15.06; Dauracherra up to Rs 7.50; East India up to Rs 19 and Telolijan up to Rs 28. Except for some enquiry in Dyer Meakins up to Rs 56.75 from Rs 55.12 from influential quarters, sugar shares were practically neglected. SKG were quoted around Rs 8.81.

In the Engineering section, however, sentiment was well maintained due to two factors. First was the expectation of an early announcement with regard to the steel re-mention price. The second factor was the hope that the Indian Iron & Steel Company Limited might declare its dividend for the year ended 31 March 1962 in the immediate future in view of the announcement already made with regard to book closing from 23 July to 13 August 1962.

After starting steady at Rs 25.32, Indian Irons were gradually pushed up to Rs 25.90 before finishing the week at Rs 25.74. TEXMACO, in sympathy, were taken at one time up to Rs 25.60 from Rs 24.85; Guest, Keen, Williams up to Rs 40.50 from Rs 39.82; and Jessop up to Rs 23.75 from Rs 23.50, to close finally at Rs 24.90; Rs 40.06 and Rs 23.62 respectively. Britannia were nearly

steady at Rs 12.19; J. K. Steel at Rs 18.62 and Dalmia Iron at Rs 11.87.

Miscellaneous issues moved up in sympathy with the general trend of the market, although higher levels attracted some profit-taking towards the close. Hindustan Motor were at one time enquired up to Rs 20.06 from Rs 19.06 on the account of a higher dividend of Rs 1.25 against Rs 1.20 per share, to finish at Rs 19.69. Kesoram Industries were marked up to Rs 30.44 from Rs 29.25 following the maintenance of the dividend at 12 per cent on the increased capital, to close finally at Rs 29.12xd. Metal Box scored full five points to quote Rs 66 on rumours of the possibility of a bonus issue. Hindustan Aluminium improved to Rs 17.62 from Rs 16.69; J. K. Synthetics to Rs 14.81 from Rs 15.62 and Aluminium Corporation to Rs 18.44 from Rs 17.69.

Paper shares came into limelight following talks of an increase in the selling price of the commodity. Bengal were in demand up to Rs 33.37 from Rs 34.50; Orient Paper up to Rs 43.90 from Rs 42 (Rs 43.30); Sirpur Paper up to Rs 13.56 from Rs 12.82 (Rs 13.31); and Shree Gopal up to Rs 28.25 from Rs 26.50 (Rs 27.44).

Among other scrips, Dunlop Rubber changed hands at Rs 40.81 to Rs 42.50 (Rs 41.69); Indian Cable at Rs 36.50 to Rs 37.12 (Rs 36.75); Indian Aluminium at Rs 39.12 to Rs 49.19 (Rs 39.62); Indian Copper at Rs 4.90 to Rs 5.03 (Rs 5.00); Orissa Cement at Rs 19 to Rs 19.19xd (Rs 18.81xd); Jaipur Udyog at Rs 13.31 to Rs 13.75 (Rs 13.50) and Rohtas at Rs 15.69 (Rs 16.37 (Rs 16.12) Figures shown within brackets were the closing rates for the week.

MADRAS

AN improved tone was noticeable in the Madras Stock Exchange last week. Banks and public utilities did not exhibit any change. Sugars remained steady. In the textiles counter Madras proved better as well as South India Viscose. Paper shares in the Miscellaneous shares were in demand. Chemicals and cements also got their share of inquiries but not much business was done.

No change was noted in the Government securities all of them being in the listed rates. Government of Madras 4½% 1972 loan was available at Rs 98.10, Mysore Government's 1972 4½% Loan was quoted at Rs 98.25. Kerala Government's 4½% 1972 Loan was at Rs 98.00 and Andhra Government's same loan was at Rs 98.05.

BALANCE-SHEET BRIEFS

Hindustan Motor Limited has reported a net profit, after providing for depreciation, development rebate and taxation and taking into consideration Rs 2.76 lakhs being the balance brought forward, of Rs 1,52,45,366 for the year ended 31 March, 1962 as against Rs 1,39,84,344 for the preceding year. Out of the

year's profit, a sum of Rs 50 lakhs is transferred to General Reserve. The provision for taxation amounts to Rs 1.52 crores. The directors have proposed a taxable dividend of Rs 1.25 per equity share as against Rs 1.20 per share, taxable, for the preceding year. The equity dividend is not available to those shareholders, who have converted their holding of preference shares into equity shares after 1 April, 1962.

Andamans Timber Com. Ltd. has made a net profit of Rs 1.26 lakhs for 1961 as against Rs 74,518 for 1960. Even after increased allocations, the directors have found it possible to declare a maiden dividend of 3 per cent, subject to deduction on of tax.

Company Reports

Macneill & Barry Pay 8 per cent

Macneill & Barry Limited became a subsidiary company of Inchcape and Company Limited, London, on 22 December 1961 and, consequently, it has been considered necessary to change the financial year of the company from 31 March to 31 December in order to facilitate the preparation of Inchcape and Company Limited's consolidated group accounts. Accordingly, to bring this change into effect, the present accounts of the company have been drawn up for a period of nine months only.

It should, therefore, be noted that, while the results covered by the accounts under review are in respect of a nine-month period, the comparative figures are for the full year ended 31 March 1961. Sales amount to Rs 28 lakhs against Rs 99.72 lakhs and the net profit to Rs 20.61 lakhs against Rs 29.11 lakhs. In respect of allocations, a sum of Rs 2.31 lacs (Rs 3.37 lakhs) is provided for Depreciation; Rs 14.50 lakhs (Rs 20.70 lakhs) for Taxation; Rs 4.00 lakhs (Rs 7.00 lakhs) for General Reserve and Rs 7,800 (Rs 13,600) for Development Rebate Reserve. The directors have proposed a taxable dividend of 8 per cent on the ordinary shares as against a taxable dividend of 10½ per cent for the preceding year.

Dividend income on the company's investments has shown an improvement from Rs 2.27 lakhs to Rs 32.40 lakhs, increases being recorded in income from Jute, Coal and Tea areas and from the company's wholly-owned subsidiary, Kilburn and Company Limited. The company's development programme continued to be implemented, two manufacturing companies being registered, while other objects were also progressed.

Shaw Wallace Repeats Despite Lower Profits

Rising costs, high transportation charges, plant break-down at the Calcutta Glue factory, prolonged labour trouble at the flour mill and initial losses of the new Yeast venture—all these factors are reflected in the working results of Shaw Wallace & Company Limited for 1961. Although sales have risen from Rs 7.59 crores to Rs 9.08 crores, the net profit, after providing for Depreciation and Taxation, amounts to only Rs 25.28 lakhs as against Rs 30.37 lakhs.

In respect of allocations, the amount written off Investments is maintained at Rs 5.00 lakhs, while the provision for Development Rebate Reserve is higher at Rs 1.20 lakhs against Rs 1.08 lakhs. The Depreciation amount is, however, reduced to Rs 12.02 lakhs from Rs 12.36 lakhs and Taxation to Rs 22.50 lakhs from 25.76 lakhs. No provision is made for General Reserve against Rs 10.50 lakhs. The dividend on the Ordinary shares is maintained at 15 per cent, subject to deduction of tax.

The directors state that the intensified drive to sell more fertilizers continued and a very satisfactory increase in tonnage handled was achieved. The Superphosphate factory worked to capacity. The Coal companies continue to play their part in the country's coal production although difficulties are still experienced with regard to the supply of wagons.

Kettlewell Bullen Pays Less

Despite the reduction in sales from Rs 1.93 lakhs to Rs 1.23 lakhs, Kettlewell Bullen & Company Limited has reported a slight rise in the net profit from Rs 8.00 lakhs to Rs 9.37 lakhs for 1961.

The Depreciation amount is raised to Rs 35,631 from Rs 28,550, while no provision is made for Development Rebate Reserve against Rs 15,000 previously. The provision for Taxation is reduced to Rs 5.50 lakhs from Rs 5.62 lakhs and General Reserve from as much as Rs 12.49 lakhs to Rs 3.50 lakhs. The directors have recommended a taxable dividend of Rs 10 on the Ordinary shares as against a taxable dividend of Rs 11 per share previously.

BIEC to Raise Further Capital

The development of the British India Electric Construction Company Limited has now reached the stage when, in the opinion of the directors, a further issue of share capital is desirable. Resolutions will, therefore, be proposed at the annual general meeting, to be held on the 29 June, for the purpose of authorising an increase of Rs 10 lakhs by the issue of 1,00,000 shares of Rs 10 each. These shares will be issued in the proportion of two new shares for every three shares held.

Both sales and the net profit of the company for the year 1961 are higher at Rs 1.01 crores and Rs 6.48 lakhs as against Rs 88.12 lakhs and Rs 5.87 lakhs respectively for 1960. In respect of allocations, the Depreciation amount is raised to Rs 1.80 lakhs from Rs 1.77 lakhs; Taxation to Rs 5.54 lakhs from Rs 5.09 lakhs and Development Rebate Reserve to Rs 36,243 from Rs 29,386. The provision for General Reserve is slightly lower at Rs 3.00 lakhs against Rs 3.25 lakhs. The directors have proposed to pay a taxable dividend of 20 per cent on the capital increased by three times as against a taxable dividend of 45 per cent paid on the old capital.

TEXMACO Produces Excellent Results

DESPITE various difficulties experienced by the company, the Textile Machinery Corporation Limited has produced excellent working results for the year 31 December 1961. The main difficulties of go-slow tactics and sporadic strikes by labour and shortage of certain types of raw materials continued during the year; but they were controlled, to a large extent, by the end of the year.

The production in all branches of the Textile division has increased. Ring Frames and Carding Engines have shown substantial improvements; and Drawing Frames

Hooghly Docking Skips

The exceptional losses sustained on the ship-construction side are reflected in the working results of the Hooghly Docking and Engineering Company Limited for the year ended 31 December 1961. A further contributory factor to the adverse position was that, at the time when tenders were submitted to the shipyards in the country, they were not fully occupied and, in view of the competition, very keen prices had to be quoted by the company in order to secure its share of the work.

Despite the rise in sales from Rs 48.76 lakhs to Rs 1.32 crores, the accounts, after providing for Depreciation, reveal a loss of Rs 20.18 lakhs as against a net profit of Rs 77,101 for the preceding year. The Depreciation amount is only slightly higher at Rs 92,674 against Rs 91,018. The dividend is passed over again for the year.

The directors have, in their report, stated that the company has secured other orders for ship building work on much better terms and the trend of profits for the current and future years will not be unsatisfactory.

Dividend Maintained by Virudhunagar Textiles

The earnings of the Virudhunagar Text Mills Limited for the year 1961 have improved largely because the company has been able to procure yarn at prices lower than prevailed in the previous year and also due to the fact that cloth prices also increased slightly. Sales increased by Rs 6.33 lakhs to Rs 5,807.9 against Rs 5,174,343 for 1960. The net profit before taxation and depreciation is higher Rs 1.85 lakhs at Rs 696,933 against Rs 511.5 for the previous year. Allocation to taxation is higher at Rs 2.74 lakhs against Rs 1.1 lakhs, while depreciation is less at Rs 93.0 against Rs 104,429. Provision for Development Rebate is Rs 4,441 against Rs 7,550. The ordinary dividend is to be maintained at per cent subject to tax. A debit balance Rs 8,551 is carried forward, against a debit Rs 195,756 brought in. Referring to the outlook for the company, the Directors have pointed out that the additional excise duty will constitute an unbearable burden as it levies amounts to Rs 6 lakhs a year which 300 per cent of the present payment in this regard.

The Third Five Year Plan
Bird-Heilgers' part in it...

MADE IN INDIA

**A SIMPLE PHRASE ...
...VITALLY IMPORTANT !**

"...special emphasis is being placed on... steel and machine-building and the manufacture of producer goods". The Third Plan very rightly stresses the need for rapid industrial development. Every new project for domestic production creates employment, saves foreign exchange, adds to the national striving for economic independence. The expansion of indigenous manufacture is critically important, and Bird-Heilgers is deeply committed to this decisive aspect of the Plan.

Steel for a solid industrial base

Steel is the very life-blood of an economy. Industries, utilities, homes, all depend on steel. Steady steel production depends, in turn, on the uninterrupted supply of minerals to the nation's blast furnaces. Bird-Heilgers supplies these minerals. Between 1957 and 1961, the group's output of minerals—dolomite, iron and manganese ore and limestone—shot up almost 100% to well over 6,000,000 tons. The group will continue to help meet demand...to feed the blast furnaces with the minerals they must have.

"Made in India"—by Bird-Heilgers

A vast range of products, hitherto imported, are now manufactured in India by

Bird-Heilgers. The group produces jute goods, paper and board, water treatment equipment, air compressors and springs, castings and fabricated steel. The refractory manufacturing plant is the largest single unit in the East. A factory for the production of coal washeries was the first in India.

The group's engineering units are extremely flexible. They contribute, with equal facility, to projects as far removed as blast furnaces and ceramic plants. Planned diversification finds the group engaged in shipping, insurance, exporting and importing. The agency department handles everything from heavy capital equipment to light consumer goods.

Towards a self-generating economy

A phrase on everyone's lips. A phrase that finds concrete expression in the urgent activity of an economy on the move. Bird-Heilgers reflects the nation's striving. The group is alive to the problems of a growing economy. It deploys the full potential of a century's resources, technical knowledge and executive skill to broaden its activities...increase domestic production...join in the national drive to economic independence.

For the Investor	

THE most impressive fact about the devel-
opment of the major plantation industries is
the rapid growth of internal consumption. This
development indicates a trend which has reper-
cussions on the country's balance of payments.
It is customary to consider the "plantation
industries" in the context of the country's
export trade. Tea has been, and continues
to be, the principal foreign exchange earner,
with exports accounting for nearly two-thirds
of the total output. Indian Coffee contribu-
tes only a marginal addition to world supplies,
but the foreign exchange earnings at over Rs
9 crores last year are not negligible and
there is prospect of further increase. Rubber,
originally was grown entirely for export, but
with the establishment of rubber manufactures
in the thirties, the position has been reversed;
at present, almost half the domestic demand
is met by imports. Consumption of tea has
been increasing at the rate of 15 million lbs.
per annum in recent years. Estimates for the
current year place internal consumption at
300 million lbs. Consumption of Coffee has
increased from 24,000 tonnes in 1956-57 to
34,000 tonnes in 1961-62. Consumption of
rubber, both indigenous and imported, has
increased from 29,000 tonnes to 48,000 tonnes
during the six years ending 1961.

The increase in the levels of internal con-
sumption of plantation products, welcome
though it is as evidence of improved standards
of living or of the growth of industrial activi-
ty, has to be viewed against the imperative
need to maximise export earnings as well as
to reduce the import bill. In this respect the
position is not equally satisfactory. Tea ex-
ports have yet to recover the ground lost
since 1958 when they reached a peak of 505
million lbs valued at over Rs 136 crores.
Though exports increased from 430 million lbs
in 1960 to 452 million lbs in 1962, the increase
is not fully reflected in the value which
shows an increase of only about Rs 3.5 crores
from Rs 121.05 crores to Rs 124.63 crores. As
regards coffee, exports have nearly doubled,
from 16,561 tonnes in 1960-61 to 31,951 tonnes
in 1961-62, but the value of exports has only
increased from Rs 669.75 lakhs to Rs 952.43
lakhs. In the case of both tea and coffee,
export earnings have been adversely affected
by the impact of increased supplies on world
prices. As regards rubber, while production
has only increased from 23,819 tonnes in 1956
to 26,992 tonnes in 1961, imports during the
same period have increased from 6,566 tonnes
to 21,693 tonnes.

The measures that have been initiated as
part of the programme for enabling the tea
industry to achieve Third Plan targets of pro-
duction and exports, have been indicated in
the course of the discussions at the recent
meeting of the Informal Consultative Com-
mittee of Parliament of the Ministry of Com-
merce & Industry. These include supply of
machinery on hire purchase, loans to margi-
nal gardens in Cachar, Tripura, Kangra and
Mandi for replacement and renovation of tea
machinery, financial assistance for replantation
out of a revolving fund of Rs 5 crores admi-
nistered by the Tea Board, and adequate

arrangements for supply of fertiliser. Availa-
bility of fertiliser has not been satisfactory in
the past. Apart from the fact that the total
quantity was inadequate, part of the supply
was in the form of double salt or urea
which tea plantations do not find suitable. It
may, however, be noted with satisfaction that
Government have decided to supply the entire
requirements of the North East India tea
gardens estimated at 1,17,785 metric tons
in the form of ammonium sulphate which is
considered the most suitable nitrogenous fer-
tiliser for tea plantations. The reduction in
the pool price of ammonium sulphate, effec-
ted at the beginning of the year, has also been
extended to tea plantations.

Side by side with the implementation of
the schemes, there is also need for evaluation
of the progress achieved, and not merely in
terms of expenditure incurred or loans sanc-
tioned. The progress of the subsidised replan-
tation scheme for Rubber has not been up to
expectations. The scheme, which is being im-
plemented by the Rubber Board from 1957,
provided for payment of a subsidy of Rs 250
to Rs 400 per acre depending on the size of
the holding. Against the target of 70,000
acres to be replanted in the years, an area of
19,089 acres has been replanted under the
subsidy scheme. In order to step up the tempo
of replantation, the amount of subsidy has
been increased to Rs 1000 per acre from
October 1960. Up to the end of April last,
the Rubber Board has granted a subsidy of
Rs 60,11,097 under the replantation scheme.
The Board also operates an extension service
to give technical advice to growers as well
as a loan scheme to help small growers
to increase the acreage so as to make their
holdings economic units. Since the rubber
plant takes about 7 to 8 years to reach
the tapping state, additional production from
the replantation scheme, or of the schemes to
extend the acreage under rubber by establi-
shing plantations in the Andamans and Nico-
bar group, will not be available till the
Fourth Plan. Expectations of bridging the gap
between supply and demand are therefore,
based on the two projects for manufacture of
synthetic rubber, one in Bareilly and the
other in Assam. The Bareilly project which
will have a capacity of 30,000 tons per annum
of general purpose synthetic rubber is ex-
pected to go into production by the end of
the current year. The Assam plant which will
manufacture a new type of rubber, (Cis-1-4
Polybutadiene) with a capacity of 20,000
tons is expected to take a longer time to
reach the state of production. There are also
proposals under consideration to manufacture
15,000 tons per year of reclaimed rubber.

From the point of view of foreign exchange
earning, Tea is our most important plantation
industry. One hopeful fact in the other-
wise bleak picture of Britain's current nego-
tiations with ECM is the proposal to include
Tea in the nil tariff list. If the Six see their
way to accepting it, India's export prospects
will become considerably brighter than what
seems possible at the moment.

We have commenced production of SPEEDOMETER CABLES & CASINGS

INNER SHAFT: 3.2 to 6 m.m.
OUTER CASING: 6.3 to 13.5 m.m.

The Cables are manufactured by a special
annealing process and torque-tested. All outer
casings are P.V.C. coated by a special extrusion
process which makes them very durable. Strict
quality control measures ensure a uniform high
standard.

African Trade Trends

FOR the first time, a review of the economic conditions of Africa has been published by the United Nations Economic Commission for Africa. This makes a significant addition to the continental surveys of economic conditions on an annual basis that are being done by the various Economic Commissions set up by the UN. The review of the African economic conditions follows the pattern familiar in similar studies for other regions like Europe, West Asia, Asia and the Far East, Latin America etc, but in point of coverage of time and period, is relatively backward, the review relating to conditions only in 1959 though there are occasional references to events in the early part of 1960. The major part of the survey is taken up with the study of the recent trends in African foreign trade and this subject has been dealt with in a comprehensive and exhaustive manner. The survey is prefaced with a brief discussion of the current world economic conditions which enables the African situation to be sized up in its proper perspective. A survey of recent developments in African exports and imports is followed by a more detailed analysis of the commodities which figure prominently in the Continent's major exports.

The most distinguishing feature of African trade is the predominance of agricultural products in the Continent's exports and of manufactured items and basic materials in imports. Agricultural products account for nearly two-thirds of the total exports from the Continent, while minerals including metals and metallic ores other than gold form about 20 per cent of the total exports. In the agricultural group, beverages and tobacco constitute the largest group with a share of nearly 40 per cent, while agricultural raw materials forming about 30 per cent are the next largest subgroup within agricultural products. For the continent as a whole, minerals do not constitute a significant share of total exports, but for individual countries like the Congo, the Federation of Rhodesia and Nyasaland and the Union of South Africa they play a decisive role in exports. It is significant to note that no African country with the exception of South Africa, produces machinery and transport equipment and in consequence these bulk large in the imports of almost all the countries. An interesting feature of African imports is the substantial imports of certain foodstuffs like wheat, flour, rice, tea, sugar etc. Particularly for countries of North Africa like, Morocco, Tunisia, Lybia, Sudan etc. food, beverages and tobacco form a high proportion of their total imports.

Taken as whole, the Continent's overall trade shows a huge deficit which was as high as 1,830 million US dollars in 1957. Exports and imports in that year were estimated at \$5,700 million and \$7,530 million respectively. Sub-regionwise, the trade is in better balance for West Africa and South and East Africa than for the other sub-region namely North Africa. During 1959, the adverse trade balance for West Africa was only of the order of \$134 million and for South and East Africa at \$167 million while for North Africa it was at a high level of \$1,070 million. West Africa, however contributes only a lower proportion to total African exports. Its share in total African exports during 1959 was \$1,387 million which compares with \$1,558 million for North Africa and \$2,865 million for South and East Africa.

The dominance of Western Europe in the total trade of Africa is a significant feature. However, within Western Europe a trend has been discernible of late for the six countries of the Common Market to gain at the expense of the United Kingdom. Trade with the United State and Canada is at comparatively lower levels than trade with the Sterling and Franc Zone, and no significant change has occurred in the volume of trade with these two countries. Trade with the Communist countries of Eastern Europe is currently at an insignificant level, but following the Suez canal events, the United Arab Republic has signed a number of barter agreements with the USSR and this has substantially reduced the volume of trade with the UK. The re-entry of Japan in textile exports to the African countries is also worthy of mention and there are indications that Japan is seeking further diversification of its exports by including items of machinery and capital equipments. Intra-African trade is also not of a substantial order excepting for a few countries like South Africa and Federation of Rhodesia and Nyasaland.

During 1959, the overall trade position showed a substantial improvement and the adverse balance which went up to \$1,950 million in 1958 from \$1,830 million in 1957 was brought down to \$1,480 million, reflecting not only the expansion in exports but also a simultaneous fall in imports. Along with primary exporting countries, African exports also benefited greatly from the revival of demand for primary commodities and the rise in the quantum of exports amounted to nearly 10 per cent as compared with the previous year. Total exports at \$5,810 million in 1959 were 84 per cent higher than pre-war levels and 50 per cent higher than in the early fifties. But, in terms of value the gain in exports was not substantial and a 5 per cent decline that occurred in prices of exports wiped out a considerable portion of the gains from increased quantum of exports.

Region-wise, it was South and East Africa which contributed to the bulk of the increase in exports in 1959, its exports showing a rise from \$2,565 million in 1958 to \$2,865 million in 1959. Exports from West Africa showed only a negligible rise to \$1,387 million from \$1,348 million while exports from North Africa showed a decline to \$1,558 million from \$1,657 million. Country-wise, the most spectacular rise in the value of exports was registered by Sudan and the increase in ex-

ports has been estimated at about 53.8 per cent as compared with 1958. Mostly the expansion in exports reflected a favourable cotton crop which was readily absorbed by overseas markets. In contrast Egypt in North Africa showed a fall in value of total exports by nearly 5.8 per cent which is attributed to a poor rice crop which was not offset by the small increase in the value of cotton exports. The worst decline in total value of exports however occurred in Algeria. Apart from drop in exports of most agricultural exports, the steep fall in the prices of wine was mainly responsible for the poor export performance of Algeria. The drop in the prices of wine had also its repercussions on the value of exports from Tunisia which showed a fall amounting to nearly 7.1 per cent in value terms.

Among countries of West Africa, Ghana, Nigeria and Liberia recorded substantial gains in the value of exports in 1959 over 1958. The expansion in Ghanaian exports estimated at 8.7 per cent was the second largest in her history, the 1959 level being surpassed only in 1954. Nigerian exports benefited greatly from higher demand for raw materials like groundnut, rubber, palm kernel and there was a record increase in export of cocoa by 43 per cent in value. Guinea and Togo of the French Community also witnessed exceptionally high increases in export. The Guinean gains in exports amounted to nearly 33 per cent. Apart from a 28 per cent increase in value terms in exports of coffee, there was also a substantial increase in exports of diamonds which reflected mainly a sharp drop in the traditional clandestine exports to neighbouring markets.

The commodities that figure prominently in the exports from South and East Africa are agricultural products, like raw cotton sisal, hides and skins. Exports from countries of this subregion showed divergent trends. The Federation of Rhodesia, and Nyasaland achieved the second biggest expansion in exports estimated at 37.7 per cent in value terms. The Congo also recorded increase in exports due to improved position of minerals and copper and the gains in exports during 1959 were estimated at 22.1 per cent. The Union of South Africa also showed a rise in exports by 10 per cent. Modest increase at 9.0 per cent and 4 per cent were also achieved by Ethiopia and British East Africa, the former mainly through

a 22 per cent expansion in coffee exports, and the latter through moderate increases in exports of sisal and hides and skins. In contrast, the Malagasy Republic and Angola witnessed declines of 7.9 per cent and 5.0 per cent respectively in their exports.

The trends in the shares of individual African countries in the continent's total exports also shows some marked changes. On the basis of average for 1953-55, Algeria, UAR, the Congo and Rhodesia and Nyasaland accounted for 8 per cent each of the total African exports. This share has declined to 6 per cent and 7 per cent respectively in 1959 in the case of Algeria and UAR. On the other hand, Rhodesia and Nyasaland have improved their share to 9 per cent in 1959. Other countries to show improvement of their relative shares are Nigeria, (from 7 per cent to 8 per cent.) and Kenya, Uganda and Tanganyika (from 5 to 6 per cent.) The relative proportion of exports of Ghana and Congo has remained stable at 5 per cent and 8 per cent respectively.

In respect of imports, there has been a steady uptrend for most of the African countries since the beginning of fifties. Between 1950 and 1958, the increase worked out to nearly one-half both in terms of quantity and value. But individual countries show widely divergent trends. In Morocco for example, a steady decline in imports has set in since 1959 and imports in 1959 reached the lowest level. While imports of machinery and transport equipment and other capital goods etc. showed a fall, imports of food, beverages and tobacco were at higher levels. A common feature of the structure of imports of the North African countries is the relatively high share of food, beverages and tobacco in their total imports. Tunisian imports were also at lower levels in 1959 than in the previous year. Recent trends reveal the declining shares of both machinery and transport equipment and of basic materials and mineral fuels in that country's total imports. Imports into both Sudan and the UAR showed declines of 4.0 per cent and 5.8 per cent respectively. There has occurred a steady increase in the share of food items in the imports of these two countries since 1956. Imports of food, beverages and tobacco constituted as much as 25 per cent of Sudanese imports in 1959. The most remarkable feature of UAR's trade is the shift in the geographical pattern of imports. There has been a substantial expansion of imports from East European countries from 6.5 per cent in 1955 to 25 per cent in 1959, while imports from the UK had been reduced to 7.5 per cent in 1959 from 12 per cent in 1955.

Among the West African countries, Ghana recorded a substantial increase in imports in 1959 being the effect of the increasing Government expenditure and the substantial reserves of overseas balances. The increase in imports in 1959 was of the order of 34 per cent. The main items of Ghanaian imports were textiles, food, beverages and tobacco, machinery and transport equipment and other manufactures. Increasing Government expenditure also contributed to a steady uptrend in the Nigerian imports and the commodity pattern showed the same tendencies as in Ghana. Guinea recorded a negligible rise of 0.3 per cent in its value of imports in 1959. An important feature of Guinean imports is the considerable shift that has occurred in the geographical distribution pattern of its imports, showing the increasing share of the USA in the country's total imports.

Among countries of South and East Africa, the Republic of Congo has been experiencing a steady decline in imports both in value and volume. The Federation of Rhodesia and Nyasaland also shows a similar trend. Congo re-

corded a fall in imports in 1959 of the order of 14.4 per cent while the fall in the latter country was moderate at 4.7 per cent. The bulk of imports into the Federation of Rhodesia and Nyasaland is constituted by machinery and transport equipment, while food, beverages and tobacco account for 10 per cent of imports. South African imports fell sharply in 1959 mainly on account of reduced imports for the public sector. Expansion in domestic production of food beverages and tobacco has enabled imports of these items to be substantially reduced and in consequence they have declined in relative importance in the total imports.

For many of the countries, the improvement in the balance of payments position brought about by rise in exports was further assisted by fall in imports. Belonging to this group are the Sudan, the Federation of Rhodesia and Nyasaland, and Congo. Only three countries, namely Nigeria, former French Equatorial Africa, and Ethiopia, achieved an improvement in the balance of trade position at higher levels of both exports and imports. In the UAR a decline in exports of the order of 5.8 per cent was more than neutralised by a greater fall in imports. For countries like Ghana and Ivory Coast, the gain in exports was outweighed by substantial rise in imports. The Malagasy Republic and Algeria were the two notable instances of countries which suffered both on account of decline in exports and rise in imports.

The patterns of imports of the various countries are stated to be undergoing significant changes. Development plans of many African countries place great emphasis on industrialisation and when these scheme materialise, import substitution of a substantial order must be witnessed.

Individual well-being is linked with national prosperity and only planned efforts can ensure both in the shortest possible time. And planning, for its success, largely depends on savings, individual as well as national. Saving in the form of Bank Deposits provides resources for the National Plan.

NEW LOANS

Conditions Propitious

Conditions are most propitious for the new loan announcement. The response to the Treasury Bills auctions this week has been most gratifying, with the interest further declining to 2.4 per cent; and large sales of intermediate Treasury Bills have also been effected. The call money market is quoting in the environs of 1½ per cent with lenders over. The seasonal return of funds has been considerable, though it is mopping up operations through consumer goods sales (and deposit with banks thereafter) rather than contraction in Advances which has so far contributed to removing the last vestige of stringency. Most significant of all it would appear that banks other than the State Bank have lately added to their giltedged portfolios by purchase from the Rserve Bank tap.

Thus, in the light of gathering free resources with banks and in view of the high cost of new Deposits, the banking system is being faced with a situation that is precisely comparable with the 1957 slack season. Banks have funds that they do not know what to do with; and in order to hedge the cost of Deposits they are willy-nilly being compelled to earn somewhat through new investments in giltedged.

Banks therefore should be eager and willing to support the new loan. But as we have repeatedly pointed out in recent weeks the magnitude of their purchases will depend upon whether or no the monetary authorities, in framing the new loan, draw up the terms and conditions in such a way that they have particular appeal for the banking system.

We favour a 3.4 per cent 1967 at a small discount, despite the fact that maturing liabilities in that year are already quite large; for if a five-year loan is made available to banks, the refinancing of such holdings with banks will present little or no difficulty. It is the fact that a short-term has not in recent years been issued, which has made banks reluctant to convert their maturing holdings into the medium-terms which were offered.

In any case it is to be anticipated that banks will heed the Finance Minister's "instruction" to them two or three months ago, that they should reduce industrial Advances and at the same time to increase their investments in giltedged. From other quarters, too, some element of support (on the scale of the last few years) can be taken for granted. The result will be that, in the two weeks following the opening of subscription lists, some monetary stringency is to be apprehended; but that tightness should be temporary. The outlook is thus for easy money conditions (with brief interruptions) to last until the beginning of the 1962-63 busy season.

BANK RETURNS

Steep Contraction in Currency

There has, according to the returns of the Reserve Bank for 22 June, been steep currency contraction. Active Note Circulation is marked lower by Rs 34.01 crores at Rs 2,097.04 crores, and there has been inflow of Rupee Coin for Rs 2.03 crores. Currency has been contracted against Rupee Securities for Rs 25 crores by transfer to the Banking Department, and as a result the relevant item in the Issue Department is shown lower at Rs 1,813.23 crores. Foreign Securities are unchanged at Rs 92.63 crores, so that the Reserve Bank's cash in the till has moved up by Rs 11.04 crores to Rs 41.07 crores.

Balances Held Abroad have moved up fractionally by Rs 0.64 crore to Rs 9.66 crores, and thus the foreign assets held by the Reserve Bank continue to be just above the Rs 100 crore mark. The Centre has apparently been in receipt of some payments from the States in as much as its balances have improved by Rs 12.34 crores to Rs 69.73 crores; and on the other hand the Deposits of State Governments have deteriorated by Rs 0.46 crore to Rs 4.71 crores on top of an increase of Rs 5.84 crores to Rs 124.51 crores in their ways and means borrowings from the Reserve Bank.

The Scheduled Banks would appear to be exceedingly comfortably placed: Reserve

Balances of member banks have shot up by Rs 11.49 crores, and this rise is in no way traceable to the State Bank. At the same time the indebtedness of the banking system to the Reserve Bank has declined, as witness the fall of Rs 2.38 crores in the latter's portfolios of Other Loans and Advances.

By dint of the transfer from the Issue Department, Investments are higher by about Rs 22 crores at Rs 194.03 crores, and therefore it appears that some banks have bought through Reserve Bank tap.

The Deposits of the State Bank, as at 22 June, have once again declined by Rs 2.47 crores to Rs 566.29 crores. However, this has been accompanied by a contraction of Rs 3.31 crores to Rs 289.61 crores in the total of Advances. Other Assets, which have in recent weeks been steadily rising, are now at the extraordinarily high figure of Rs 51.65 crores, and this may mirror the State Bank's preparedness to support the new loan programme of the Centre. There is a small rise of Rs 0.62 crore to Rs 221.92 crores in giltedged holdings; and hence the inference is permissible that the intermediate Treasury Bills sold in the course of the last week have been purchased mainly by other Scheduled Banks. The consequence is that the State Bank's cash in hand and with Reserve Bank has moved down slightly by Rs 1.21 crores to Rs 26.36 crores.

Another extremely satisfying increase in Deposit resources is recorded in the return of Scheduled Banks for 15 June. Net Demand Deposits are only fractionally higher by Rs 0.14 crore at Rs 875.29 crores, but net Time Deposits are higher by the worthwhile amount of Rs 9.03 crores at Rs 1,254.27 crores. This, it would appear, has caused an embarras de richesse: for, besides the total of Advances has contracted by Rs 5.99 crores to Rs 1,437.29 crores. So, in the first place, borrowings from the Reserve Bank have been reduced by Rs 4.59 crores to Rs 8.12 crores. In the second place, open market purchases would appear to have been made, on top of investment in intermediate Treasury Bills: the giltedged portfolio has gone up by Rs 3.57 crores to Rs 575.02 crores; and the rise has been even more pronounced in the case of the other Scheduled Banks in as much as the State Bank, in the relevant week, showed a drop of Rs 7 crores in the portfolio. In the third place, cash balances have been considerably added to in being placed Rs 11.68 crores higher at Rs 211.80 crores. Further slack season release of resources is to be expected in the next return of Scheduled Banks: the latest figures of the Reserve Bank already indicate (a) another reduction in the indebtedness of Scheduled Banks; (b) a sharp rise in Reserve Balances of member banks; and (c) probable addition to the giltedged portfolio.

Treasury Bills

Tenders for Rs. 2,00,00,000 of 91 days' Government of India Treasury Bills were opened on Tuesday, 26 June, 1962. Total amount offered was Rs 4,25,00,000. Tenders at Rs 99,400 per cent and above were accepted in full. Lower tenders were rejected. Total amount accepted was Rs 2,00,00,000, the average rate of accepted tenders being Rs 2,400 per cent per annum.

During the week ended 22 June, 1962. Government of India Treasury Bills for Rs 69,92,75,000 were sold in favour of Reserve Bank of India.

Notes

AIMO

Importance of Cost Consciousness

The two-day conference of the All India Manufacturers' Organisation held in Bombay last week, has highlighted the many problems that confront the economy and which have adverse significance for the successful implementation of the Third Plan development schemes. Both Mr G. V. Puranik, Chairman of the AIMO and Mr Y. A. Fazalbhoy, Chairman of the Reception Committee drew pointed attention to the difficulties to industries constituted by deficiencies in supply of power and transport and the crucial problem posed by export promotion. It was not a one-sided picture of difficulties alone that was presented. Achievements of the Government in important matters of economic progress were given due credit. Instances are the measure of stability achieved in wholesale prices and also in the working class cost of living. While these achievements were not belittled the point that was sought to be made was that problems that have emerged during last year are of a serious character and will lead to further

set back in industrial production if measures are not taken to tackle them. Already adverse effects have become visible bearing evidence of the strain being experienced by the country at many points. The setback received by industrial production during 1961 when the rate of increase showed a fall from 12.1 per cent to 7.6 per cent reflected the basic deficiencies in respect of power and transport, which were further aggravated by the shortage of foreign exchange precluding imports of essential spare parts. The consequence has been the widening of the gap between industrial production capacity and actual production. It is encouraging that the Government has relaxed its earlier inflexible attitude in respect of power generation by the private sector to allow for the installation of own generating sets for self-consumption by entrepreneurs. This however will not go far in giving filip to industrial production in the private sector. Toward this Mr Puranik suggests action to make available to industries and particularly engineering industries the required grades of pig iron, coal, coke M. S. sheets and wires, alloy steel tools, etc to raise the plan targets of basic industries like steel and cement, encourage the entrepreneurs in the private sector of the coal industry to expand further and making available all necessary facilities to them.

Mr Puranik also stressed the role of industrial management and trade unions in increasing industrial productivity in the country, and toward this has urged measures to create cost consciousness at all levels of management, to have a continuous and integrated cost reduction plan in every one of the industrial units, improving quality of industrial products by setting up research facilities etc. Special emphasis was laid on measures to secure a reduction in the prices of industrial raw materials which have increased considerably in relation to prices of food articles and manufactured items.

Dealing with the problem of export promotion, Mr Puranik explained the significance of measures recommended by the Ramaswami Mudaliar Committee. In this connection he drew attention to the ineffectiveness of the incentive provided by the facility for importing certain percentage of raw materials. As he has explained, the benefit of this measure will not be available to all exporting units in a uniform measure for the reason that in certain industries, imported raw materials

constitute only a small fraction of the cost of finished goods exported. While the Ramaswami Mudaliar Committee recommended a number of fiscal incentives for export promotion, the Government has been chary of giving effect to them. The tax relief announced in the latest budget is very meagre in the benefit it would offer exporters and for that reason cannot be expected to go far in stimulating exports. Mr Puranik has appealed to the business community not to depend on the Government but also to institute measures on their own which will improve prospects for exports. These are (1) fixing a limited market for exploitation instead of dissipating energies on a wider areas, (2) issue of a prestige publication for publicity purposes (3) production of documentary films (4) publicity through the medium of broadcasting (5) adoption of sound cost accounting practices and proper pricing of product (6) product development and design. (7) adoption of fair trade practices and (8) popularisation of Indian brand names.

Mr Puranik also dealt with other important aspects of economic policy such as transport development, development of small scale industries and balanced regional development.

ROAD TRANSPORT Neglect Proves Expensive

Transport shortage has almost become chronic and it is apprehended that the Third Plan will be adversely affected if urgent steps are not taken sizably to increase transport facilities. The recent coal crisis the aftermath of which is still felt all over the country has shown that if coal supply is to be adequate for industries, transport other than railways too has to be pressed into service. What applies to coal applies in a greater or lesser measure to other commodities and goods as well. This unsatisfactory state of affairs could have greatly been improved had there been concerted attention on the development of forms of transport other than the railways. This is not to say that the outlay on railways should have been less. It is only in the fitness of things that transport development should have bestowed considerable attention on the expansion of railways which had already a well-knit nucleus. The defect in transport planning is however in the comparative neglect of the development of road transport. Given the attention that is its due to road transport from the very commencement of the planning era, the chronic shortage of transport facilities would not have come about.

The Chairman of the Motor Industries Association has pointed

out in his speech at the annual meeting of the Association last week in Calcutta that an efficient road transport system will go a long way toward quickening the movement of goods. Even with the many handicaps to which it is subjected at present, road transport has made considerable progress in recent years. The freight traffic in terms of ton miles carried by road transport is estimated to have increased threefold in the past decade whereas railway goods movement increased only two-fold. There is still great scope for increasing road traffic even on existing roads as it is estimated that their utilization in our country is only one-seventh of what it is in developed countries.

By increasing the utilisation of existing roads quick results can be obtained. In this regard it is significant to note that the Indian Productivity Team on Road Transport has pointed out that movement costs on roads can be reduced by the increased use of semi-trailers and articulated trailers. That is what obtains in many Western countries. Semi-trailers and trailers are extensively used in the UK and USA usually to carry 17 to 21 tons of consignments. The Team has calculated that by using such combinations in India operating cost can be considerably reduced.

In one of its studies the National Council of Applied Research has shown that the contribution of road transport to the public exchequer is substantial. And since road transport in India may be said to be still in its infancy as compared with the developed countries, it should be a sound proposition even from the point of

STEEL

In Perspective

Undaunted by shortfalls in second Plan steel production and uncertainties in the Third, the Planning Commission has started advance preparation for the steel schemes for the Fourth Plan that are yet four years off. There is implicit in this a recognition of the complexities of the tasks involved in creating new steel capacity and also the great time-lag inherent in it. A note prepared by the Perspective Planning Division has spelt out the outlines of what should constitute the Fourth Plan steel schemes. The most important points of the note are (1) raising the capacity of the private sector plants at Jamshedpur to 3 million tons and at Burnpur to 2 million tons by 1970, expanding capacity at Bhilai to 3 million tons and at Durgapur and Rourkela to 2.5 million tons each and starting the Bokaro steel plant with an initial capacity of 3 million tons.

The PPD study anticipates a demand of the order of 18 to 20 million tons by the end of 1970. The study indicates a likely deficit of about 6 million tons on the basis of capacity assured to exist at the end of the Third Plan. The largest deficit at 2.2 million tons is anticipated in respect of flat products, and a deficit of 1.7 million tons is forecast for merchant bars and sections. For structurals and railway materials and others the deficits anticipated are of the order of 0.7 million tons and 1.4 million tons. The annual value of imports to meet these deficit items has been estimated at Rs 500 crores.

The note underlines the importance of self sufficiency being achieved in steel production and also takes note of the possibilities for exports in view of special advantages enjoyed by the country in respect of steel production. It draws attention to the enormous costs incurred by Japan in importing iron ore and coking coal at nearly four times the raw materials costs incurred in the Indian steel plants and having this example in mind, pleads for a vigorous and bold programme for steel manufacture. Export possibilities are indicated for flat products and structurals in respect of both of which surplus production to the tune of 180,000 tons and 50,000 are anticipated on the assumption that the expansion plans it has chalked out for the Fourth Plan are successfully implemented.

In respect of production of special steel also a substantial gap is anticipated with total demand being estimated to go up to 410,000 tons in 1970 from 215,000

tons in 1965. The note highlights the poor progress in production in the private sector and the delays in the execution of the Durgapur project. Special emphasis is therefore laid for expanding capacity for manufacture of special steel within the country. Underlining the inadvisability of unquestioned reliance on foreign know-how and design, the note pleads for more encouragement to be given to Indian consultants who should be more familiar with local conditions and therefore in a position to eliminate the serious failures brought about by dependence on foreign consultants.

MICA

A Divided Industry

Mica is among our more important foreign exchange earners and the value of earnings has averaged about Rs 10 crores in recent years. India has a near monopoly in world export of this important item accounting for about 80 per cent of total world exports. In his address to the extraordinary general meeting of the Mica Export Promotion Council, Mr Manubhai Shah Minister for International Trade called upon mica exporters to step up the export promotion programme so that an increase of at least Rs 2 crores could be achieved. Mr Shah has suggested that individual exporters should attempt to step up their exports by 25 per cent. For his part, Mr Shah assured the exporters that Government would try to provide every facility to achieve increased exports. Exporters have been asked to prepare their individual lists of requirements of machinery and equipment and submit a consolidated list to the Government.

There has been some diversification in the geographical pattern of mica exports in recent years and particularly the Soviet Union has accounted for some sizable purchases. Recent research has revealed new industrial outlets for mica and it is significant that it finds use even in the manufacture of space ships. In this context, there should be further scope for improving exports of mica from the country. But Indian exporters have shown some signs of instability which is not intruding considering the lack of a common organisation for exporters within the country. Consequently, the bargaining powers of individual exporters are very low and at the other end, the buyers are in a position to dictate the prices to be paid to exporters. Such is the dominant position of the buyers that it has been disclosed that even after supplying the goods the exporters could not be sure whether the supplies would be accepted in toto by the foreign buyers. The root cause for this state of

affairs lies in the disunity of the exporters. Though the Mica Export Promotion Council has taken on itself the responsibility of bringing the exporters under its organisation, lack of legal sanction for the Council, has rendered its code of conduct for individual members ineffective. Mr S. K. Sen, Chairman of the Mica Promotion Council has stated in his address to the meeting of the Council that in the absence of any statutory power behind the Council, its code of conduct could not be enforced properly as anybody might violate such rules and cease to be a member of the Council and could export it as an outsider. Statutory powers for the Council would in the circumstances meet the situation and bring a semblance of order within exporters' organisation. The proposal for fixation of prices by the Council of items purchased by various countries against their own fixed standards and for exporters to accept an obligation to get their invoices certified by the Council after prices have been so fixed should also go a long way in realising better prices for Indian exporters who are now at the mercy of foreign buyers.

OIL-INDIA

Past Transitional Difficulties

The setting up of the Oil India Limited, was a momentous event in the development of the Oil industry in the country. A joint venture between the Government of India and the Burmah Oil Company, it is intended to develop the oil resources of the Assam State and to supply crude oil to the two public sector refineries at Nummati and Barauni. On its formation, the company took up the oil production work at Naharkatiya and Moran in Assam and has made conspicuous progress in its exploration programme and its other project to construct the 720 mile long pipeline to supply crude from Naharkatiya to Barauni. From the speech of Mr Khandubhai K. Desai Chairman of the Oil at the third annual general meeting of the Company, it is evident that the new company has got over the transitional difficulties brought about by the change in organisation, without much friction. It has also improved its financial position and the latest financial report discloses a net surplus of 1.15 crores after providing for depreciation, taxation and development rebate. For a company that is still in the development stage this marks a satisfactory performance.

Mr Desai has placed the Oil India's reserves at about 45 million tons of oil and at 720,000 million cu ft of gas at present. For utilising the gas the Assam Government has set up a committee which is expected to go into questions

regarding market availability of gas, the demands from consumers and the capital costs involved in storage equipment and the price at which the gas is to be sold etc. All these as Mr Desai has explained pose difficult problems in planning. Production of oil also poses equally difficult problems and the stalemate of the royalty issue has led to curtailment of oil exploration programmes for the Oil India, since the Assam Government has refused the licence for oil exploration programmes for the OIL. This is to be regretted considering that the estimated production of oil at the end of the Third Plan will fall substantially short of demand. Referring to the demand for oil, Mr Desai stated that in a developing economy like India, consumption of petroleum products is bound to grow at a faster rate than what has been estimated in the past. Presently the country is spending an average of about Rs 80 crores on imports of crude and other products and in this background, it is important that exploration programmes should be considerably intensified. Present estimates indicate a probable production of the order of 3½ million tons by the Oil and Natural Gas Commission at the end of the Plan period for which it has been allotted an outlay of Rs 200 crores for its exploration and production programmes and another 3 million tons to be produced by the Oil India Limited in its oilfields in the Assam region. The OIL, it has been stated has a substantial exploration programme on its hands, but that it is being delayed by the controversy over the royalty issue that has been raised by the Assam Government. Considering that Oil India's prospecting programmes do not entail any expenditure of foreign exchange as this is underwritten by the Burmah Oil Company, it is imperative that both the Assam Government and the Centre should seek an early solution on a mutually satisfactory basis.

RESEARCH

Sulphur from Gypsum

A process for the microbial production of sulphur from gypsum which is abundantly available in the country and sewage sludge has been developed at the National Chemical Laboratory, Poona. Details of the process are given in the May 1962 issue of the Journal of Scientific and Industrial Research.

The process consists in reducing gypsum to hydrogen sulphide by the microorganisms present in sewage sludge and then converting the hydrogen sulphide produced into free sulphur or sulphuric acid by known chemical methods.

A mixture of the raw digested sewage sludge and gypsum is inoculated

30 June 1962

with an active culture of the microorganisms (occurring in the sludge itself) and then incubated. In laboratory scale batch experiments, quantities of hydrogen sulphide which can yield four grammes of sulphur from every litre of sludge employed could be produced after 3-4 days fermentation. In semi-continuous fermentations, in which the hydrogen sulphide formed is continuously swept out, the amount of sulphur which can be obtained per day is 1.35, 1.60 per cent on the volume of sludge.

The method suffers from the drawback that the cost of sulphur produced is more than that of sulphur produced from pyrites. However, it is of potential value in times of emergency, particularly in view of the fact that India depends entirely on imports for her requirement of sulphur and will continue to do so until the Amjor pyrites deposits in Bihar are commercially exploited.

US

A Letter from Washington

US industry can hold its own in world markets. It can do this even in the face of the intensified international competition resulting from the surging growth of the European Economic Community (EEC)—or Common Market, as that dynamic six-nation complex is more popularly known.

This is the theme of a penetrating special report just issued by the Chase Manhattan Bank, of New York City. In fact, the report, prepared by the bank's economic research department, points out that continuation of recent wage and productivity trends actually could tip the competitive balance in favour of American industry.

In this connection, the report points to a factor which is sometimes overlooked in analyses of this kind. It is that comparative wage costs are relatively less important than productivity gains in assessing the competitive outlook.

Admittedly, Europe holds a decided advantage over the United States in the way of lower wage costs, with actual hourly wages which average roughly one-third of comparable U.S. levels. This includes not only wage payments but also fringe benefits—such as retirement and pension rights, hospitalization and medical insurance.

But this simple relationship between U.S. and European wage rates is only one element in the over-all equation. For one thing, there is the question of how long it may take Common Market and other European wages to "catch up" with American rates. And even this is less important than the question of how completely wage increases are offset by increases in productivity—a deter-

Indo-US Tariff Agreement

India has signed an agreement with the United States for import duty concessions under the General Agreement on Tariffs and Trade (GATT). The Agreement, which was concluded at the Tariff Conference in Geneva, provides for reductions in the US Tariff on some of India's important export products. As a result of the Agreement, 28 main Indian export products will pay substantially lower rates of duty in the USA. Among these are cashewnuts, sandalwood oil, opium, jute webbing, jute bagging, jute carpets, colic mating, buffalo hides and leather and bells of brass.

The Agreement also provides for concessions on the part of India in regard to import duty on some American products. While agreeing to these concessions, the revenue and developmental needs of the country had been kept in mind. In the case of 17 out of a total of 25 items, the concessions are in the form of a guarantee not to raise duties above the present levels. Most of these are products, which are required in the country, such as, metal working machinery, specialised textile machinery, earth shifting machinery, component parts of machinery, chemical raw materials, milo and sorghums and dried skimmed powder. In addition, in the case of refined stockholm tar, polyethylene moulding powder, wood rosin, diatomaceous earth, artificial wood, rubber hoses, electric typewriter and slate pencils small reductions in the present standard rate of duty have been given. All these materials are required by Indian industries and the duty reduction in these cases should assist production.

The United States Administration is expected to take action to effect the cuts in the US Tariff from July 1, 1962 but the details of the Tariff concessions exchanged between the USA and India are published in advance. The practice in India is, however, to announce changes in tariffs simultaneously with their publication and steps have been taken to give effect to the changes in the Indian customs tariff resulting from the Agreement immediately.

The Agreement was negotiated at the Tariff Conference which began in Geneva in September 1960. Thirty-nine countries took part in the negotiations at the Conference.

mining factor in whether unit labor costs move up or down, or remain the same.

During most of the 1950's wage increases in the United States exceeded gains in productivity, or output per man-hour. From 1953 to 1958 average hourly earnings of manufacturing workers rose by just under four per cent a year, while productivity rose in the neighbourhood of two to two and a half per cent a year.

Since 1958, however, U.S. wages and productivity have risen at about the same rate, while European wages have outstripped productivity gains. A reflection of this may be the U.S. strength in world market places, as exports in recent years have soared to record levels. Last year, for instance, American farms and factories exported more than \$20,000 million worth of merchandise, to chalk up a trade surplus of better than \$5,000 million.

Nevertheless, the U.S. share of world trade has declined, from 32 per cent in 1950 to 27 per cent in 1960. This steady decline has been behind many of the expressed fears about the U.S. ability to meet the growing international competition—a competition likely to intensify further with lower trade barriers. Much of the U.S. decline, however, is attributable to Western Europe's postwar recovery of traditional markets as its economy, helped by early infusions of large-scale U.S. aid, has soared to new peaks of activity.

President Kennedy's trade expansion bill, now before Congress, in effect recognizes the nature of the new trading situation, with emphasis on the prospective competition from the Common Market in particular. It authorizes new and deep tariff-cutting authority for the President, and envisages mutual tariff reductions by the United States and the Common Market from which other free world trading partners also would benefit.

The Chase Manhattan report concludes that American companies probably have more to gain than to lose from this freer trade. Not all products would fare the same, of course, and a competitive advantage in any one could change quickly with the introduction of new ideas or technology.

U.S. concentration and greater outlays on research and development constitute an advantage in this regard, as the report observes. Historically, American producers compete best in industries where innovation, engineering and design are most important. One might note that activities such as these contribute importantly to continued gains in productivity.

How successfully the American economy as a whole is to compete in the 1960's also will depend in large measure on continued U.S. success in holding the general price line and keeping wage increases in line with productivity

gains. This has been a significant consideration behind the Kennedy administration's wage-price policies.

What has been achieved in this regard, as is witnessed by the continuing business expansion in an essentially non-inflationary atmosphere, is a prime source of international confidence in the U.S. economic situation. Furthermore, it puts the U.S. government in good position to follow whatever expansionary economic policies may be deemed desirable at home, without an overly inhibiting concern about precipitating serious or undue international repercussions.

STATE BUDGETS

Andhra to Revise Upward Land Revenue

Faced with the task of mobilising Rs 105 crores in four years, Mr K. Brahmananda Reddi, Finance Minister of Andhra Pradesh, could not possibly allow himself the luxury of tax-less budget for 1962-63. For obvious reasons 1961-62 had to be let off without new taxation but that has only made the task in the subsequent years harder for a target for taxation for the Third Plan period had been set. Even otherwise too there is need for increasing revenue as the revised estimate for 1961-62 reveal, despite an increase in revenue of Rs 6.5 crores as a result of the recommendations of the Third Finance Commission, a revenue deficit of Rs 5.77 crores as against Rs 2.5 crores contemplated in the original estimates, the revised revenue receipts being Rs 87.54 crores and expenditure Rs 93.31 crores.

A plan of Rs 50 crores has been drawn up for 1962-63 and the State's share of financial resources to implement it comes to Rs 17 crores. It is proposed to mobilise this amount in the following manner: Rs 10 crores from public loan, Rs 2 crores expected to be found by collection of arrears of land revenue, excise, sales tax and taccavi loans and the balance of Rs. 5 crores from fresh taxation. The budget estimates for 1962-63 envisage a total revenue of Rs 115.47 crores and expenditure of Rs 113.72 crores, showing a surplus of Rs 1.75 crores. The increased revenue includes additional revenue of Rs 5 crores from fresh taxation. Mr Reddi however has not made it clear how he is going to raise the extra Rs 5 crores but has indicated that the additional revenue would be obtained by an upward revision of land revenue, rationalisation of the rate structure of Sales Tax and introduction of uniform rates of Motor Vehicle Taxes in the State.

The State's Third Plan envisages an outlay of Rs 305 crores of which the State has to find Rs 105 crores and the Centre will contribute Rs 200 crores. The State proposes to raise its share from open market loans and revenue surpluses (Rs 60 crores) and additional taxation (Rs 45 crores). The plan outlay for the first year of the Third Plan amounted to Rs 48 crores and this together with the proposed outlay of Rs 53 crores for the second year of the plan, makes a total of only Rs 98 crores. This will mean that the balance of Rs 207 crores has to be expended in the last three years of the plan. It is evident therefore that the entire outlay of Rs 305 crores is to be utilised, the rate of spending has got to be markedly accelerated during the remainder of the Third Plan period. Mr Reddi himself has noted that at the rate of spending so far achieved it will be difficult to fulfil the plan target and has pointed out that it is imperative to spend at least Rs 55 crores in 1962-63. In order however to persuade the Planning Commission to agree to the expanded plan, the State should undertake to raise additional resources of Rs 2 to 2.5 crores.

That the State has an uphill task in the last three years of the current plan will be clear from the fact that it has to raise during that period Rs 40 crores from additional taxes. The question of spending the large amount of Rs 207 crores during the same period is also bound to present difficulties because of power shortage in the State. The schemes of power generation are lagging behind due mainly to difficulties in the sanction and timely release of foreign exchange required for importing machinery. The Central Government has now agreed to sanction foreign exchange for the purchase of two 11 megawatts gas turbo-generators. This may go some way toward meeting power shortage in the State. Even so it would appear that until the State is able to obtain adequate power supply, industrial progress will continue to be slow.

Large Uncovered Deficit

Even after introducing taxation measures, the Finance Minister of Madhya Pradesh, Mr Mishra Gangwal has not been able to cover fully the over-all deficit of Rs 894.58 lakhs. As he has pointed out in his budget speech concerted steps to increase revenue substantially has become inevitable because the State has drawn an ambitious Third Plan with an outlay of Rs 300 crores. The revenue receipts for the year 1962-63 are estimated at Rs 8,468.01 lakhs and expenditure is expected to be Rs 8,754.74 lakhs resulting in a revenue deficit of Rs 286.73 lakhs. With the deficit in the Capital budget, the overall deficit is placed at Rs 894.58 crores.

Mr Gangwal's new taxation measures, however, are expected to net only Rs 5 crores and there thus is an uncovered deficit of Rs 394.58 lakhs. The new taxation measures include the raising of the general rate of tax on the sale of certain goods from 4 per cent to 5 per cent, raising of stamps duty, rationalisation of land revenue, increase in the rate of tax on passenger fare and surcharge on goods freight. Necessary legislation is to be introduced in the present session of the legislature.

Although originally a sum of Rs 43.75 crores was provided for the State's Third Plan schemes in the year 1961-62, the revised estimate of expenditure during the year is shown at Rs 42.32 crores. The provision for 1962-63 is Rs 55.78 crores which includes Rs 4.90 crores as supplementary outlay for some specific items only such as power and irrigation. The current year's targets include an additional food production of 2.79 lakh tons, extension of irrigation facilities to over one lakh crores, increasing installed power generating capacity from 225 megawatts to 246.5 megawatts, and construction of 433 miles of all weather roads.

Like most other states, Madhya Pradesh too has so far been slow in implementing Third Plan schemes. As against a total outlay of Rs 300 crores envisaged for the Third Plan period the State would have spent only about Rs 98.10 crores the first two years. The bulk of the outlay has to be spent during the last three years. That is going to be quite a problem unless steps are taken expeditiously to create conditions conducive to a rapid growth of industries. Madhya Pradesh has a special reason for making haste with its development programmes because it is one of the economically backward regions in the country and as such the leeway to be made up is much larger than some other States. But although it is realised that the tempo of development in the State is to be accelerated, there does not seem to be commensurate effort at mobilising the large resources necessary to implement successfully a plan of Rs 300 crores. While some States have boldly undertaken the certainly unpleasant task of finding additional revenue to the extent of converting the deficits into a surplus, Madhya Pradesh has left a substantial portion of the deficit uncovered. The reluctance to face the problem squarely is not going to make the task any the easier in the remaining three years of the Third Plan period as the successful implementation of the Plan will depend on the ability of the State to raise its share of resources.

SELECTED SATGRAM Satisfactory Results

Satisfactory results have been reported by the Selected Satgram Collieries Limited for the year ended December 1961. Had it not been for some unforeseen mining difficulties, the working of the company would have shown far better results. During the last accounting year, New Satgram Colliery, the company's

biggest unit had to be shut down completely for 5½ working days and partially for 2½ working days owing to the sudden detection of gas in the mines. Another unit, South Joyramdanga Colliery was also adversely affected by flooding during the monsoon. Despite these difficulties raisings and despatches during the year were 85,576 tonnes and 85,112 tonnes higher than last year. The profit before taxation is also higher at Rs 6,49,524 than last year, when profit before taxation was placed at Rs 5,17,915.

In his address to the annual general meeting of the company on Friday in Calcutta, the Chairman, Mr S. D. Sethia has pointed out that steps are being taken to increase output at all the units. He hopes that provided no serious difficulties crop up, a monthly production of 50,000 tonnes will be attained. Development work at the company's Dishergharh Seam is proposed to be taken up after the receipt of reports from the two foreign consultants.

The coal industry has an important role to play in the industrial development of the country as coal is a basic material. If industrial progress is to proceed apace more and more coal is to be raised and despatched expeditiously to the innumerable points of consumption. This will be only practicable if the coal industry is enabled to expand rapidly. As has been pointed out by Mr Sethia, development work needs large finance. But with an unremunerative selling price for their production, the collieries are unable to plough back any worthwhile funds toward expansion and rehabilitation from their profits. For the same reason it is difficult to attract fresh funds as investors do not derive much encouragement as to their profitability from the working results of the coal companies. The coal industry was hopeful that the Government of India would be able to agree to a reasonable increase in the selling price coal. But the decision announced recently has come as a great disappointment as Government has completely ignored the plea that whatever the quality of the coal raised, cost of production is the same for all grades.

★ ELPHINSTONE SPG & WVG Satisfactory Year

Despite difficult working caused by a number of unfavourable circumstances such as an acute shortage of cotton, increased labour charges, increased cost of stores etc., the Elphinstone Spinning and Weaving Mills Company Limited has been able to record satisfactory results for the year 1961. The company's gross trading profit increased to Rs 43,78,086 from Rs 36,92,770 for the previous year and taxable dividend on ordinary shares has been raised to 22 per cent from 18 per cent. This happy position has been rendered possible by the far-sighted policies followed by the company. The company has been continuously modernising rehabilitating its machinery in the mills as well as in the Leather Cloth Division. Ex-

pansion has been going on apace and the purchase of the block of Moon Mills was completed during the last year. This unit is to be fully modernised by the installation of the latest types of spinning and other required machinery. A scheme in this regard has been submitted to the National Industrial Development Corporation for the purpose of a loan.

Speaking at the annual general meeting of the company, Mr N. K. Jalan, Chairman, has pointed out that the capacity of the cotton textile industry to plough back profits is being continuously impaired by the ever rising cost of production arising from increased price of cotton, rising wages and dearness allowance, increased contribution to provident fund and Employees State Insurance etc. Free funds available for expansion and rehabilitation have been further reduced by the reduction in development rebate from 25 per cent to 20 per cent, and the increase in the corporation tax to 50 per cent from 49 per cent. Earnings have also been adversely affected by the enhanced rates of excise levies on cloth and yarn. While the industry is asked to bear more and more additional levies, it is not free to increase the selling price of cloth. The matter is however under examination by the Tariff Commission.

Thanks to the present acute shortage of foreign exchange, export promotion has come to receive special attention from the Government. Cotton textiles are an important foreign exchange earner but unfortunately their contribution has been declining during the past few years. Part of the setback is of course due to the growing competition in world markets but it is generally accepted that if Indian cotton textiles are priced competitively in comparison with goods from other producing countries, their share of foreign exchange earning can be sizably increased. It is true that there is an export incentive scheme in operation but from the continued decline export, earnings it would appear that much more is to be done if Indian cotton textiles are to become popular in world markets.

Clive Street Gossip

"I must have liberty
Withal, as large a charter as the wind
To blow on whom I please"

—As You Like It.

THE Calcutta High Court will be celebrating its centenary next week. Bombay has already done it and Madras will follow soon. I don't know whether the Old Post Office Street has found its Dickens, though I have, on the few occasions I have got lost in the labyrinths of some of the solicitors' offices there, come upon unexpectedly persons who could have walked into the firm of Spenslow and Jorkins and no questions asked. The High Court building itself, a Gothic pile dwarfed by the more pretentious sky-scrapers around, is redolent with history, a good deal of it creditable alike to the men who sat on the bench, the men who constituted the bar and sometimes the men who stood at the bar. The early struggle between the Supreme Court and the Governor General is part of the sketchy history we learnt at school, though the slow evolution of what can fairly be called Anglo-Saxon jurisprudence in India has never had any systematic exposition beyond professional circles. British judges grappling manfully with Hindu Law were another fascinating facet of history. Professional friends tell me that many early mistakes arising from ignorance of Sanskrit have become part of our law. The Courts, and especially the High Courts, were in the old days the ultimate, and often the sole, repository of the rulers' conscience and many a crucial battle in the prolonged struggle for independence was won there. In this we were rather like the early Americans, alert to possibilities of constitutional litigation. Surendranath Banerjee, C. R. Das and others far too numerous to mention have pressed into service the High Court in their efforts to bring the day of independence nearer. The Constitution has adopted as its own the traditions of Indo-British jurisprudence, itself probably the most precious gift of Britain to India. Macaulay may be an insufferable prig, but the codifications he was responsible for and the legal philosophy behind them are by and large unexceptionable. These are a hundred years old and deserve grateful recalling today.

A century is a century whether it is of runs scored in league cricket or of the number of times the Soviet Union has used the Veto. The US Delegation to the UN may therefore be said to have shown a

proper sense of what is due to history in going out of the way to commemorate it. I am afraid I share the suspicion of the Soviet member on the Security Council, that Mr Stevenson has spent time, if not exactly rehearsing the part, at least polishing the phrases. There was about as much spontaneity in his performance as in the tearful obituaries of VIPs in newspapers. I don't suppose that there are many who don't know that these pieces are written at leisure well in advance of the melancholy events. I have even heard it said (by, let me add in strict truth, a friend under the influence) that in one particular newspaper office, at the beginning of the year, along with the centenarians and other occasions for special articles they mark off the calendar, a list of probable candidates for posthumous tribute is prepared. Happily, many such tributes have remained unused, though the temptation to take steps because the obituary was too good to be thrown away must some times have been strong. The theory is attractive that Mr Stevenson might have found himself in this unenviable predicament: Having prepared his little speech—his researchers have served him well and dug up all the details—about the hundredth use of the Veto by the Soviet Union, he probably didn't want to be cheated of the chance of delivering it. For it appears to me that in the later stages, Pakistan was anxious to settle for a far less controversial resolution. For it is reasonable to think that Pakistan would much rather that it had an effective resolution with Soviet acquiescence than an ineffective one that nevertheless offered an opportunity for blaming Russia. But the compulsions of saluting a century were probably too insistent to be denied, though it left Pakistan high and dry. A resolution urging talks between the two countries,—which was after all the only operative part of even the vetoed resolution—without references to alleged earlier commitments, would quite probably have been accepted by India. For everybody is agreed that the only way to solve the Kashmir problem is to let the two countries do it. I, for one, am quite certain that a solution that legalises the present factual position in Kashmir will, despite Mr Nehru's assertion that his earlier offer to do so has lap-

sed, is the only sensible solution of the problem.

Cambridge undergraduates were literally playing with fire in the way they demonstrated their enthusiasm for Milton recently. Members of the Milton Society of Christ's College, ceremonially burnt a copy of T. S. Eliot's poems on the steps of a church, collected the ashes in an urn and marched chanting "Paradise Regained." This was their way of condemning the "dangerous and damnable" heresies of Eliot, who, as you would have guessed, if you did not already know, thought rather poorly of Milton. Nearer home, the Cambridge gesture would probably evoke nothing worse than a "nil mirari" shrug. Pyromaniacal protests are common enough in our country for us not to be impressed by English examples. If it is not a Bombay crowd burning a newspaper it disapproves of, it is Mr Ramaswami Naicker setting the match to the Ramayana or the Indian Constitution as the whim of the moment takes him. Even so, the dangers of such incendiary criticism are obvious enough. What is to keep members of the Eliot Society from burning a copy of "Paradise Lost" to the tune of "Vacant shuttles weave the wind?" Imagination boggles at the prospect of rival camps of Snow and Leavis trying to keep their fires burning in this wise. And yet all this proves that books can after all give, if not light, at least heat. Among Dr Johnson's more intriguing epigrams is one which says that "books that you may carry to the fire and hold readily in your hand are the most useful after all". What on earth did he mean? Was it that he considered books most handy when trying to keep warm in a winter aggravated by coal shortage? If so, it would accord with the cynical wisdom of many a folk-tale: its Indian version is of the Pandit who complimented his wife on the well-cooked dinner she had contrived despite shortage of fuel. Not to be outdone in courtesy, she replied that it was after all to his wonderful palm leave manuscripts that she owed the even heat that made it possible. And how beautifully they crackled, she enthused. It is also said that when Alexandria was sacked by Calif Omar in 642, A.D., the Arabs found enough number of books that had survived the disastrous fire of 391 A.D. to heat the baths of the city for six months. The moral may then well be: some books are to be tasted, other to be swallowed, some few to be chewed and digested and a few others—though I would hardly put Eliot's poems among them—to be burnt.

EAVESDROPPER

The car ahead was all the time getting in our way. It was being driven by a charming young person who obviously hadn't obtained her licence the hard way. Chivalry stifled the unprintable words though not the unkind thoughts of my companion. By way of cheering him up, I quoted a recent Delhi survey which hazarded sundry inferences flattering to the fair sex from the fact that far fewer women had been booked for traffic offences than men. This merely made him growl that unless the figures had been cooked by a susceptible statistician, it merely proved that the Delhi policeman was a gentleman rather than an observant cop. Besides, hell hath no fury etc, like a woman accused of a traffic offence and policemen all over the world have been taught the relative merits of discretion and valour when it comes to dealing with the female of the species. I was prepared for this reaction and so unleashed the next finding of the survey that women have been found poor at backing and parking. Things, he said in reply, must have changed since the early days of the horseless carriage: for didn't I know about Mrs Hamilton Fish, one of the earliest possessors of an automobile? I didn't and was rewarded with what he claimed was the oldest automobile joke. She drove down Third Avenue in Manhattan and ran over a pedestrian: backed her car, tried and again laid him flat. For the third time she sallied forth only to find the obstinate man getting under her wheel. It was then that they both decided to call it a day and walk, she to her hotel and he to the hospital. No bones, you see, were broken when Mrs Fish backed, which proves the survey all wrong. Finding the man hard to please, I gave him the next finding which I thought would appeal to his misogynist nature: women tend to panic when there is a traffic jam and often stall their cars and cannot start again. To this his grumpy answer was that the panic part of it was all wrong and in any case that is not how the joke renders the sex. He then quoted the hoary one about the woman, who is holding up traffic trying to start a car that gets stuck. After a while, noticing the impatient hooting from behind, she calmly walks up to the car next behind and suavely offers to keep on conking the horn the while the gentlemen gets her car started. Having shot may bolt as far as the survey was concerned, I let the matter rest. It was then that he relented. Of course, he said, he would much rather that a woman was in the car in front than in his own when he was driving. I could sympathise with this having experienced the dizziest back-seat driving in my life in a journey from Shillong to Chirapunji where a kindly host was driving me. His wife was incessantly telling him that his negotiation of the hairpin bends was all wrong. All the time I was expecting him to ditch the car at the next bend not so much in exasperation—for he didn't seem to mind the steady flow of advice from the rear—but by simply doing what she wanted.

COTTON TEXTILES

Obligatory Exports Scheme

THE scheme of Obligatory Exports of Cloth and Yarn, which will come into force from July 1, was explained by Mr Bharat Ram, Chairman, Indian Cotton Mills' Federation, at a press conference here last Monday. The cotton textile industry, through its representative organisation, had agreed that Mills should export to the extent of 12.5 per cent of their turnover in cotton cloth and 3 per cent of the turnover in cotton yarn and staple fibre yarn. The export obligation for the second half of the current year, when the scheme will be in operation, will be 6.25 per cent of the year's turnover in cloth and corresponding proportion of the turnover in yarn. Mr Bharat Ram estimated that exports under the scheme would be stepped to Rs 32 crores during this half year. Including exports during the first half of the year, estimated at about Rs 25 crores, total exports during 1962 would be about Rs 57 crores, as compared with the provisional estimate of exports of cloth and yarn for 1961 valued at Rs 49.6 crores. Exports under the scheme for a full year, during which it is in force, will be about Rs 64 crores. Mr Bharat Ram added that the actual exports could be more than Rs 64 crores which is the estimated value of exports under the obligatory scheme, as some Mills are already exporting more than 12.5 per cent of their turnover. Moreover, exports under this scheme are in addition to the export obligation undertaken by Mills in connection with the setting up of automatic looms.

With the implementation of the scheme, it should be possible, Mr Bharat Ram said, to reach the export target of 800 million yards of cotton cloth set under the Third Plan. Mr Bharat Ram did not think that the domestic prices of cotton textiles would go up as a result of exports under the scheme. He felt that the cotton textile industry, as the premier industry in the country, had the obligation to help earn foreign exchange by stepping up of exports even at a sacrifice. Mr Bharat Ram was confident that all Mills would extend their fullest co-operation in implementing this voluntary scheme.

All cotton textile mills may not be able, because of the pattern of their production, to fulfil their quota of obligatory exports. Such Mills will have to come to some arrangement with other Mills which were in a position to export more than their stipulated share. It was possible, he conceded, that a few units may be obliged to export at prices

below their cost of production. But the loss on export of 12.5 per cent of the turnover, he said, would be amply covered by the incentives and the sale of the remaining 87.5 per cent in the domestic market. The procedures regarding incentives have been relaxed, and now the Cotton Textile Promotion Export Promotion Council could, if the situation warranted it, increase the incentives up to 25 per cent with the consent of the Textile Commissioner.

Under the scheme, every Mill in the country is expected to fulfil its obligation by doing one or other of the following in that order of priority: (1) exporting its own products to the value of its obligation; (2) to the extent that it cannot do the above, arranging with other mills to supplement its own effort and thus completing its export quota; (3) in the last resort, contributing to the export promotion fund of the Federation to the extent of 12.5 per cent of the shortfall in performance.

Exports under the obligatory scheme, as mentioned above, are in addition to the export obligation undertaken by Mills on account of the installation of automatic looms. Taking this into account, the total export obligation in respect of cloth will be about Rs 65 crores and of cloth and yarn together round about Rs 70 crores. In terms of quantity, this will be equivalent to 800 million yards of cloth and 18 million lbs of yarn. In recent years cloth exports have declined from 810 million yards in 1959 to 575 million yards which is the provisional estimate for 1961. Mr Bharat Ram drew attention to the sharp fall in exports to the USA from 30 million yards in 1960 to 6 million yards in 1961, which indicated, indirectly, the scope for increasing exports to the US market. There was also scope for exports to countries like Italy where very little effort has been made to push the sale of Indian textiles. The high level of profits that could be earned by selling in the internal market, Mr Bharat Ram pointed out, stood in the way of expansion of exports and had made special arrangements necessary to push exports to the required level. The scheme that has been adopted is a voluntary one, but the Federation will have no objection to legislation if it becomes necessary to induce recalcitrant units to fall in line. Mr Bharat Ram, however, did not envisage that it would be necessary to enact legislation, as almost all the manufacturing units had given their consent to the scheme.

The obligatory export scheme is based on the recommendations made by the Cotton Textile Consultative Board at its meeting held on May 15, 1962, on the export obligations of the industry. These recommendations were considered by the Committee of the Federation early in June.

After a detailed assessment of the issues involved in the scheme of obligatory exports, the Committee felt that, in the present foreign exchange situation in the country, it was the duty of the industry to earn foreign exchange on the stipulated scale, even if it had to make a sacrifice. The Committee, therefore, decided that everything should be done to implement the recommendations of the Consultative Board. The obligation for the current year has to be fulfilled by actual shipments in the period July 1, to December 31, 1962. The obligation is in terms of F.O.B. value of exports regardless of whether it is cloth or yarn, and can be fulfilled by exporting either cloth or yarn or both in any proportions.

Regulation of the cotton quota will provide the sanction for enforcing the scheme. The Government of India have accepted the recommendation of the Consultative Board that the annual quotas of Indian and foreign cotton for each Mill should be reduced by 12.5 per cent. The quantity thus reduced will be allocated to the Mill on its executing an appropriate export performance guarantee. For the remaining half of this year the quotas will be withheld to the extent of 6.25 per cent as announced in the Textile Commissioner's Press Note of May 17. Mills will be issued their withheld quotas by the Textile Commissioner, on receipt of advice from the Federation that they had executed written guarantees in the prescribed form.

It has been emphasised that the export obligation applies to all Mills regardless of whether they supply the guarantee letter to the Federation or not. Mills which do not supply the guarantee letter and forgo 6.25 per cent of their cotton quota will still carry their export obligation and will have to pay a contribution equal to one eighth of the value by which their export performance falls short of their export obligations.

The Chairman of the Federation has appealed to the managements of all Mills to fulfil their obligations through their own efforts, by producing and exporting quality goods of a high standard which will maintain and enhance India's prestige in foreign markets and make it easier to sustain the tempo in the years to come. Mr Bharat Ram said that we could not go on depending on foreign aid for our economic development and he hoped that the example set by the Cotton Textile Industry would prove infectious and that other industries also would undertake similar schemes of obligatory exports.

STEEL Supplies & Production Programmes

The supply position of different categories of steel, and the programmes of manufacture, were comprehensively reviewed when the Minister for Steel and Heavy Industries met the members of the Informal Consultative Committee of Parliament attached to his Ministry, last week. Outstanding orders on pro-

ducers as on December 1, 1962 it is learnt, were of the order of four million tons. As production during 1962-63 is also estimated at about four million tons, this may be considered fairly satisfactory, were it not for the fact that the load of demand is not evenly distributed over all categories. In respect of certain categories there is a large gap to be filled between demand and indigenous production. This is particularly so in respect of restricted categories such as sheets, (black and galvanised, plain or corrugated), tinplate and billets for re-rollers. Though the quota system has been lifted in respect of other categories for which the supply position is generally easier, difficulties arise in respect of certain critical sections such as tested iron plate for boilers, plate of ship-building quality etc. Even by 1965-66, shortages are likely to persist in respect of rounds and flats, sheets and tin plate. On the other hand, the position is comfortable in regard to Heavy Structural including rails. Supplies of lighter sections of angles are also expected to become easier as five merchant mills will be in operation during this year.

With regard to the programmes for manufacture the Minister is understood to have indicated that there was scope for further licensing of special types of steel wire, ferrochrome ingots and billets for re-rollers and alloy and stainless steels.

About a third of the Third Plan target of 1.5 million tons of pig iron is expected to come from small plants and the remainder of one million tons from the integrated plants. Capacity of 241,000 tons of pig iron, (including two medium-sized plants of 100,000 tons each, has already been licensed. The Licensing Committee, it is learnt, has also approved the setting up of additional capacity of 300,000 tons of pig iron and 100,000 tons of sponge iron. Regarding steel wires, it is felt that the existing capacity and projected capacity of 200,000 tons per annum, along with the plants likely to come up in the small scale sector, should be adequate to meet the demand estimated at 400,000 tons. Nevertheless there may be scope for setting up additional capacity for special wires.

A recent review of the steel re-rolling capacity in the country showed that it should be possible to license about 100,000 to 150,000 tons in small units to meet local demand. Capacity of 128,000 tons, has been sanctioned for setting up re-rolling mills in Assam, Andhra Pradesh, Bihar, Gujarat, Kerala, Madras, Madhya Pradesh, Maharashtra and Jammu and Kashmir. Further capacity of 15,000 tons each, in Mysore and Orissa, is also being sanctioned. As for supplies of Ingots and Billets to re-rollers, electric furnaces already sanctioned have capacity to make available 200,000 tons a year. The question of sanctioning further capacity, it is learnt, may be considered on recommendations of the Scrap Investigation Board.

At it takes three to four years before an alloy steel plant reaches the level of full production, capacity for alloy and stainless steel, is being sanctioned with the Fourth Plan

Indian Finance

30 June 1962

target in view, and all applications are being considered by the Inter-ministerial committee for selecting units for licensing. The present capacity for spring steels and alloy steel castings is placed at 24,000 tons, though some of the units commissioned recently have yet to reach rated capacity. During last year, 15 new units with total capacity of 241,000 tons have been sanctioned. Taking all these into account, as well as the Durgapur plant, the capacity expected to be set up for different categories is as under:

	Tons
Free cutting spring steels	138,000
Tool Steels	44,700
Other high grades alloy steels	4,000
Constructional steels	98,400
Alloy steel castings	39,100
Electrical sheets	74,000
Stainless sheets	37,000

It is estimated that there is still scope for sanctioning 90,000 tons of constructional steels against the Fourth Plan target.

There is no existing capacity for manufacture of stainless steel. Requirements are estimated at 50,000 tons by end of Third Plan, growing to 70,000 tons by end of the Fourth Plan. The Durgapur Plant in the initial stage will have capacity of 17,000 tons increasing to 34,000 tons after completion of its expansion scheme. Tatas have been licensed for 20,000 tons. It is estimated that there is scope for licensing 16,000 to 18,000 tons to meet the Fourth Plan requirements.

Against the tinplate target of 300/350,000 tons, capacity of 220,000 tons has been planned, including 50,000 tons from Rourkela, of hot dip plate and 100,000 tons of electric plate.

Against targeted capacity of 200,000 tons of ferromanganese, 258 to 262,000 tons have been licensed of which capacity for 158,000 tons has been installed. No significant increase is contemplated in regard to ferro-manganese. Similarly in regard to ferro-silicon, capacity of 49,000, including 17,000 recently approved is considered adequate, against demand of 35,000 tons, capacity licensed is 26,000 tons. Further units may also be licensed.

Agricultural Development Finance Corpn.

A proposal to set up an Agricultural Development Finance Corporation, for financing agricultural development by issue of medium and long term loans is under the consideration of the Government of India. The Corporation when set up will be able to provide assistance for cultivation of plantation crops such as coconut on the same lines as the Reserve Bank is now providing assistance for rubber plantations. The Deputy Minister of Community Development, Panchayati Raj and Cooperation, who gave this information in Lok Sabha last week in a written answer, also stated that the Government of Kerala had approached the Reserve Bank of India and the Government of India for providing assistance to

the Cooperative Land Mortgage Bank for issuing special long-term loans to cultivators for the cultivation of plantation crops including coconuts.

Annual Review of PL 480 Agreement

The second annual review of the working of the PL 480 agreement under which India is purchasing 16 million tons of wheat and one million tons of rice from the United States over a period of four years, is due to be held early next month. The agreement provides for a flexible schedule of imports by India each year, so that the Government of India could regulate the purchases with reference to annual requirements, transportation, storage accommodation available and other relevant factors. Purchase authorisations for each year are based on these annual reviews which are one of the salient features of the agreement. There is also another condition involved in the agreement. Although

India's imports of wheat are mainly from the United States under the PL 480 agreement, payment being made in rupees, we have to import annually about 4 lakh tons of wheat commercially before drawing on PL 480 supplies. Mr V. Shankar, Union Food Secretary, who is going to the United States for the annual review of the agreement, will spend a few days in London, where he will discuss with representatives of the Australian Wheat Board in the United Kingdom the question of commercial purchases by India of Australian wheat for the period July to December 1962. In London he will also have talks with the Baltic Exchange Shipping Chartering Committee. During last year ten ships flying the Indian flag it is learnt, were engaged in carrying foodgrains and earned Rs 14.7 lakhs.

Drug Prices

The question of high prices of Indian drugs and its various factors

are now being studied by a Technical Sub-Committee of the Development Council for Drugs and Pharmaceuticals, particularly in view of the fact that several additional drugs will be manufactured in the country during the Third Plan period. The Minister for Industry who gave this information in Lok Sabha last Friday in answer to questions stated that the Government of India were aware of the statement made by the Kefauver Committee of USA that in drugs generally India ranks among the highest priced nations in the world. He added that no survey of the international sale prices of drugs had been made, but the prices of some drugs manufactured in India were high compared to the c.i.f prices of drugs if imported. It is, however, unrealistic, he said, to draw any conclusions from the observations of the Kefauver Committee as there can be no comparison between the young and small-sized industries of this country and the giant, old and established drugs manufacturing firms of nations like the USA.

BEST TODAY—STILL BETTER TOMORROW

The Elphinstone Spinning & Weaving Mills Company Limited

Mounting Cost of Production

Satisfactory Progress Despite Heavy Odds

Mr N. K. Jalan's Review

The following is the address of Mr. N. K. Jalan, Chairman, delivered at the Annual General Meeting of the shareholders of The Elphinstone Spinning and Weaving Mills Company Limited, held on June 20, 1962.

Gentlemen,

It gives me great pleasure to welcome you all to this Forty-third Annual General Meeting of the Company, and with your permission I shall take the Report and Accounts for the year 1961 which

SHRI N. K. JALAN

have been in your hands for some time now, as read.

In the year under review, the gross trading profit was Rs. 48,72,086/- as against a profit of Rs. 36,92,770/- for the year ended 31st December, 1960. I hope you will consider the working results of the year to be very satisfactory especially in the face of a number of unfavourable circumstances in the working caused by the very difficult availability of cotton and the consequent high prices that had to be paid towards the end of the year, increased labour charges, and the increased cost of stores etc.

Taxable dividend on Ordinary shares has been raised to 22% from 18% paid for 1960 and 14% for 1959, commensurate with the profits made in the respective years.

MODERNISATION

The management has continued its programme of modernisation of the mills during the year under review. The Spinning Section is

being modernised with the installation of High Drafting Equipments of the latest type, conversion of existing Ring Frames to longer lift of spindles, application of Pneumafil and installation of of Overhead Travelling Cleaners. For balancing purposes we had applied for 5200 spindles but I am sorry that we have been allotted only 3200 spindles though spindles are being given to new comers. Orders have been placed for 10 New Warp Ring Frames comprising 4480 spindles incorporating such of the latest improvements as the indigenous manufacturers could offer. 3 new High Speed Draw Frames are under installation at present and further 2 are due to be delivered shortly.

It may be mentioned in this connection that in other parts of the world modernisation is taking place with bigger lift frames of 10" to 12" and one process working. In Japan, the cotton mills have perfected the continuous process in which cotton is put in the Blow Room and yarn is automatically obtained at the delivery point. If we are to compete in the world markets it is imperative that we should operate on the basis of the latest technological and scientific developments taking place throughout the world.

Since it seems difficult for the Indian Textile Industry to have complete modernisation and automation with the machinery presently available from indigenous sources, the Government should allow importation of latest machinery introduced in the world markets today at least until such time as our Indian Manufacturers are in a position to produce machineries of the latest designs, so that the cotton textile industry, which is one of the largest earners of foreign exchange for the country, may prevail in the overseas markets. As mentioned by me in last year's report, the Government should take more effective steps to arrange for manufacture within the country machineries of the latest type, design and modifications.

One set of Barber Colman Spooler and Wrapper has now been installed. 48 Automatic Crankless looms of latest type in replacement of plain ones and one Mercerising Plant have been put in commission. The erection of a Screen Printing Plant is also nearing completion.

Order has been placed for one High Speed Sizing Machine and

an Automatic Warp Tying Machine is due to be received. Application for import licence for a Singeing Machine has been made and putting up of a continuous Bleaching Plant is under consideration.

EXPANSION

The purchase of the Block of Moon Mills was completed during the year under review. The Scheme of rehabilitation of this unit with the latest types of spinning and other required machinery has been submitted to the National Industrial Development Corporation for the purpose of a loan from them. The application is now being processed.

LEATHER CLOTH DIVISION

The working of this Division remained satisfactory during the year under review and production and sales registered a 50% rise over the preceding year.

During the current year, however, there has been a set-back in the production and sales of this Division. On account of the further restrictive policy of the Government for issuing import licences for the required chemicals used in the production of leather cloth, the locally manufactured chemicals have to be purchased at prohibitive prices. Besides, the recent raising of excise levy on leather cloth has tremendously affected the off-take of this product and this levy, it is feared, will make the working of this Division even more difficult.

EXPORTS

In spite of the best efforts your mills could export cloth only to the extent of about 14% of the production of the year against 27% in the preceding year.

India could export only about 575 million yards worth Rs. 46 crores of cloth in 1961 as compared to 692 million yards worth Rs. 54 crores in 1960 and 810 million yards valued at Rs. 55 crores in 1959.

The Cotton Textiles Consultative Board, at its meeting held on 15th May, 1962, recommended that the export obligation of every mill should be 12½% of its turnover of cloth and 3% of the turnover of yarn with reference to the balance sheet of any year which ends on a date between 30th June, 1961 and 29th June, 1962. In view of our increased cost of production and the emergence of the

European Common Market, feasibility of realising this export target seems difficult.

In order to encourage more exports of cloth it is necessary that the Export Incentive Scheme liberalised further. Besides, an export drive should be backed by a planned programme of intensive research which is hitherto being done only in a very general way.

Fortunately, the special problems of export organisation are now being specially studied with a definite eye to the special needs of the country. The Minister International Trade, Shri Manbhai Shah, has worked out some very useful ideas in this direction. The substitution of the present Foreign Trade Board, a pure official body, by a Board of Trade similar to the one in the United Kingdom is an orientation in the Export Promotion Organisation capable of producing significant results. Similarly, the proposal of the Government to convert the State Trading Corporation into the principal instrument of export promotion is a move in the right direction. It is hoped that these innovations will help the question of export promotion to be put on a sound and really competitive basis.

COTTON

As you already know, a serious crisis developed in the availability and prices of cotton beginning from the end of the year under review on account of adverse climatic conditions and the consequent very low cotton crop of the season 1961-1962.

Raw cotton, the principal raw material of the cotton mill industry and forming a large element in the cost of production of cloth has unfortunately remained a constant problem with the industry. Any shortfall in the availability and any increase in the cost of this item will be a highly embarrassing prospect for the industry. It is high time, therefore, that decisive steps are taken to ensure adequate increase in the total output of indigenous cotton.

Although the area under cotton cultivation in this country at present is one crore and ninety lacs of acres which is the highest in the world, the average yield of last five years of lint cotton per acre is only 93 lbs., which is the lowest as compared with Pakistan's 185 lbs., America's 460 lbs. and Egypt's

550 lbs. And although production of cotton did increase during the first and second plan periods, the increase has not kept pace with the demand. The increase has been only about 50% while the demand has gone up by approximately double. To ensure intensive cultivation with improved seeds and fertilisers is, therefore, the most essential step towards increased crop. What is needed most at this stage is to make vigorous efforts to increase the yield per acre. It goes without saying that there is much scope for increase in the yield per acre and we have got to achieve it. Unless the yield per acre improves appreciably, the cultivator will not get reasonable price for his crop and naturally will lose all incentives for growing cotton, a position which should not be allowed to develop. The Government should, therefore, arrange for distribution of improved seeds and fertilisers and also introduce scientific methods of cultivation.

In order to avert the continuous drain on the country's valuable foreign exchange resources used up in the import of long staple cotton it is also necessary that steps be taken to increase the cultivation of this type of cotton in the country.

Besides, the creation of a buffer stock of cotton as wisely advocated by the Union Minister Shri S. K. Patil is an obvious necessity. The operation of a buffer stock agency can go a long way in preventing prices from falling to levels which are unremunerative to the growers and at the same time provide a reserve stock to cushion the industry against any future shortage of cotton.

It is also necessary to think of possible substitutes for cotton as one more step towards easing the too frequent difficult cotton supply position. Import of staple fibre in

larger quantities would be cheaper and more beneficial. Lately, consumer preference in India and other countries has turned in the direction of mixed blends in cloth to render the process of substitution even easier.

By way of an incentive to cultivators and as a partial acceptance of the plea of the trade, ceiling prices of cotton have been decided by the Government to be raised for the crop of the next season. It is doubtful whether this is a step in the right direction. It appears to be a serious error to disturb the stability of cotton prices by pushing them up. The increase in the prices will only accentuate the inflationary pressures in the country which are otherwise being brought under control after a long period of time and it will defeat the very purpose which the higher prices aim to achieve through its inevitable effect on cloth and yarn prices. Even the export of cloth and yarn may be affected further on account of the likely rise in prices of the finished products.

TARIFF COMMISSION

The question of cloth and yarn prices has been referred by the Government of India to the Tariff Commission. It is to be hoped that the Tariff Commission will make a pragmatic approach to the needs of the industry to make larger profits to enable it to plough back substantial portions thereof into its Scheme of rehabilitation, modernisation and expansion.

Again the depreciation allowances granted to the industry are inadequate taking into account the fact that these rates of the depreciation allowance were fixed a long time ago. The Tariff Commission therefore, while examining the cost structure of the industry, should take into consideration this factor seriously and fix the rates of depreciation allowances in such

a manner as may enable the industry to finance the scheme of rehabilitation and modernisation speedily.

The real solution for the problem, however, is for the Government to create suitable conditions for increasing production which unfortunately is on the decline during the past few months and promoting healthy competition.

BONUS

An ad-hoc provision has been made in the accounts of the year for Rs. 6 lacs towards bonus payable to workers and staff.

Bonus has been paid so far for the year upto 1958 and all negotiations for a settlement by the Association with the representative union of workers having failed, the cases for bonus for the years 1959 and 1960 are pending before the Industrial Court.

Government of India has appointed a Bonus Commission to study and make recommendation on the question of bonus as applicable to all industries. It is strongly urged, however, that bonus should be directly related to productivity.

PROSPECTS FOR THE CURRENT AND FUTURE YEARS

In the past from this very platform I have referred to the highly rigid cost structure of the cotton textile industry and the greatest disability of the inflated cost which this industry has been suffering from for long. Although the prices of yarn and cloth have not been permitted to be revised upwards, prices payable for cotton have gone up considerably. Apart from the increase of Rs. 2/- in the basic wages of workers effected from January, 1962 in addition to the increase of Rs. 8/- given in the basic wages from January, 1960 in implementation of the recommendation of the Central Wage Board, the Dearness Allowance payable to

the workers and staff has been continuously on the upward march. Merging of Dearness Allowance wage, and consequential increase in Provident Fund Contribution has also increased the cost of production. The employer's contribution to the Employees' State Insurance Scheme has been doubled from 1½% of the wages to 2½% with effect from April, 1962. The Power Supply Company has proposed to levy surcharge of 10.5% on their existing tariffs with effect from July 1962. Prices of mill stores have also gone up.

The capacity to plough back profits has been further affected by the reduction in the rate of Development Rebate from 25% to 20% with effect from 1st April 1961 and the proposal in the Budget for increase in the Corporation tax by 5% from 45% to 50%.

The enhanced rates of excise levies on cloth and yarn in the Budget are calculated to act very much adversely on the industry.

It will, however, be appreciated that in spite of all these heavy odds confronting us, your Company has been continuously modernising and rehabilitating machinery in the mills as well in the Leather Cloth Division as I hope that these improvements will help the Company to part set off the incidence of higher cost of production.

In conclusion, I have to sincerely thank my colleagues on the Board and to express my appreciation to the executives, staff and workers of the Company for the valued co-operation extended to them during the year.

NOTE: This does not purport to be a record of the proceedings of the General Meeting.

THE METAL BOX COMPANY OF INDIA LIMITED

REVIEW BY THE CHAIRMAN, Mr K. C. MAHINDRA

The Twentieth Annual General Meeting of the Metal Box Company of India Limited will be held on Wednesday, the 18th July 1962 at 59/C, Chowringhee, Calcutta.

The following is a copy of the Review by the Chairman, Mr K. C. Mahindra, which has already been circulated to members.

SALES

Your Company's sales have grown steadily over the past year, from Rs 970 lakhs in 1960/61 to Rs 1050 lakhs in the year under review. This increase of 8¼% as compared with 11% last year was not quite as high as expected. However, I see no reason for discouragement or alarm. I would rather interpret the relative shortfalls as a useful reminder of how closely our fortunes are linked with those of our customers. Our sales figures are a remarkably

accurate barometer of the affairs of the consumer-goods industries. In 1961/62, the high prices of groundnut oil made vanaspati too expensive for some people who had become accustomed to buying it; less toilet powder was bought after an excise duty was imposed in March 1961; in many instances our customers' output was limited by shortages of raw materials and, as a result, some of those who buy industrial components from us took less than we had expected. Besides, there were rises in costs,

particularly affecting raw material. I shall refer to them later. Our customers' problems which adversely affected our sales volume, our greater effort in export fields and rising costs have caused profit margins to narrow. The solution, insofar as it is within our own control, rests in increased efficiency and increased productivity. I believe that Metal Box, measured by any standards, is an efficient manufacturing organisation and that our pursuit of greater efficiency is relentless. There is, however, a limiting factor, the volume of production. Technological progress demands the application of the latest processes and methods to an increasing volume if we are to remain a low cost producer. But in the case of tin containers our productive capacity

is not being increased. Government's policy over the licensing of any expansion of existing units, the formation of new ones continues to favour the man who produces both the goods and the packages for them. I cannot believe that Government can continue to turn a blind eye to the obvious long term consequences of uneconomic fragmentation of the industry, stagnation in technical development and, above all, high-cost containers for the mass of the people. All around us industrialists are appealing to be allowed to produce more in order to meet their ever increasing costs. How can the price-line be held long as Government deliberately fosters the emergence and growth of uneconomic methods?

I do not wish to be misunderstood; there is no plea whatsoever that large units be allowed to expand at the expense of the small. In Metal Box we have done and are doing everything we can to foster the growth of small scale industry. We buy materials from it, we provide it with know-how and we sell machinery to it. My point is that if the targets in the Third Plan for the production of consumer goods—milk products, to take only one example—are to be achieved, I just do not see where the containers in the numbers, at the price and in the quality which all these new manufacturers are demanding from the start, are going to come from. We shall have to wait and watch the prices rise, whereas we ought to be getting on with the basic job.

EXPORTS

In other fields, I am glad to be able to say that we are, indeed, getting on with the job. To conserve foreign exchange, for example, we have extended the manufacture in Calcutta of industrial components and machinery required for can-making and closing, which had to be imported hitherto, and we have made a successful effort to step up our direct exports of packages, machinery, hardware and publicity media. Since we first entered markets of South East Asia, competition, notably from Japan, has intensified. Despite this, our exports were 36% higher than last year and their value during the year was over Rs 25 lakhs. We are now one of the first five exporters of engineering goods. The growth in our direct exports, made possible only by constant touring and by offering very low prices, has had its effect on our profits. Nevertheless, we are resolved to maintain a steady growth and hope to achieve a substantial increase in our exports in the current year.

Our largest contribution in the export field is an indirect one: supplying packaging materials, to international standards of quality, for goods packaged and exported by Indian manufacturers. It is our conviction that every well-packaged Indian product is a potential earner of foreign exchange. This belief is substantiated by the export from India last year in Metal Box packages of goods worth over Rs 4 crores to more than fifty countries spread all over the globe. Many of these packages were designed to meet the specific needs and tastes of highly competitive overseas markets. My report last year highlighted the part your Company was playing in India's prawn exports. Amongst the other exports, the success of which has been assisted by the high quality standard of our containers, are cashew nuts, vanaspati, vegetable oils, fruit, toiletries, confectionery and biscuits. Here is an important area of achievement at a time when the diversi-

fication of India's export pattern is a matter of great urgency.

To those who participate in the closed economy of India, marketing consumer goods abroad may well be an unfamiliar and novel experience. It has not taken long for the fact to be brought home that, when exporting, quality packaging designed to meet the customer's requirements in a particular market is not an expensive frill but a business necessity.

RAW MATERIALS

An important feature in the year's trading was the increased cost of tinplate. Supplies from the Tinplate Company and Rourkela have often had to be despatched by road rather than by rail at greater expense. Most imported supplies now arrive under D. L. F. from America. In earlier years, tinplate came more cheaply from Japan and the U. K. We have also had to resort to Russian supplies in non-standard sizes at prices even higher than the American. Supplies, albeit at a price, have been reasonably available throughout 1961/62.

Stocks at the commencement of the new financial year, though slightly less than the previous year, can be considered satisfactory. But the outlook for the current year is clouded by the uncertainty of production at Rourkela which is struggling with the problems involved in starting up a major steel enterprise. In areas where we can make a contribution we are co-operating closely with this new source of supply and it is gratifying to note that the quality of our first consignment of Rourkela tinplate was promising. Quantitative difficulties, however, may take long to overcome and, having regard to the length of time taken to plan imports, it is important that D.L.F. or other imports should continue to be made available on the same scale as last year.

Deep-drawing mild steel sheet was in satisfactory supply throughout the year. The production of our industrial components is assured for the present orders on hand; but beyond that, production will depend on the availability of imported sheet steel of the special quality required for this type of work.

The Company's consumption of aluminium sheet and slugs, whilst showing a small increase over the previous year, continued to be limited by the availability of Indian-made supplies and by their high price. With the completion of the Indian Aluminium Company's expansion programme, and the commencement of production by Hindustan Aluminium during this year, it is hoped that consumers of this valuable packaging material will benefit from additional supplies at a lower price.

The increased excise on foil, now Rs 600 per tonne, is a discouraging

levy on a material which we use exclusively for the tamperproof sealing of tinplate containers and for the development of new laminates for heat-sealed consumer-packages intended for the mass markets.

RESEARCH, DESIGN AND DEVELOPMENT

The year under review has seen continued success in the efforts by our Research Division to develop high-quality ancillary materials of indigenous manufacture. Recent successes in collaboration with our suppliers include a range of process resistant decorative materials for collapsible tubes and, on an experimental basis, for processed food cans; an enlarged range of high-gloss flexographic inks which enables us to produce Diethylene bags to a quality comparable with any polyethylene printing anywhere in the world; and improved light-resistant inks for use in packages and advertising media liable to continuous exposure to daylight. The Canning Advisory Service offered by Research Division to food canners has continued to expand. Considerable development work has been carried out on complex aspects of plastics production and technology.

Normal product design work continued successfully throughout the year and a number of new products within the scope of our existing machinery were added. The Technical Development Section has made further contributions over the year in the design of new packages, industrial components and machinery. Package development work is primarily directed towards improved pilfer-proof containers capable of being manufactured and, as far as possible, closed at high speeds. An outstanding development introduced during the year under review was the aluminium 'No-pilfer Diaphragm' designed primarily to seal confectionery containers and make them tamper-proof. The use of this development eliminates the need for imported tagger tinplate. We have also developed prototype machinery for addition to our range of sealing equipment for customers, re-designed some of our existing plant, and designed new machinery to accelerate production speeds.

As an important development aimed at providing greater facilities to prawn exporters, we opened in December, 1961 our Kerala Service Installation in Cochin which includes a reforming unit. At Calcutta No. 1 a high speed Open Top can making line of the latest design has been installed to replace obsolete equipment. In the Plastics Works at Calcutta No. 2, machinery for the manufacture of heat-sealing laminates, extrusion-coated products and moulded bottles is being

installed. Manufacturing trials are currently in progress and we expect to go into regular production shortly.

Also at Calcutta No. 2 steady progress has been maintained in machinery building; currently we are making a range of twenty-five different machines. The fact that some 10% of our output of these machines was exported is an indication of the high standards achieved.

Your Company has recently received permission from the Government of India to manufacture treated and laminated papers and boards and containers made therefrom. Our entry into this field will enable us, using Indian raw materials, to offer precision-made cartons finished to that high standard of quality which is essential for export markets. It will also enable us to develop packaging systems involving the use of tamperproof functional cartons capable of holding semi-solids and possibly liquids, and providing an air-tight seal. This product diversification is a result of the Company's sustained efforts to provide its customers with a complete packing service. In this, as with all our endeavours, both old and new, we owe much to our associates in the United Kingdom. The new line of laminated papers and boards and containers made therefrom will be substantially assisted by the valuable contribution which our associates can make, and your Company will materially benefit from their long experience in what to us will be a new field of activity.

In Bombay, with the completion of an additional floor on the administrative block, our present site in Worli is now fully developed. We have, therefore, purchased some twelve acres of land at Deonar 9 miles from Worli. Here, Bombay No. 2 Factory will be built in order to relieve congestion, make room for carton manufacture and improve working conditions at Worli. Preliminary planning has been completed and construction should commence shortly.

EMPLOYEE RELATIONS

Good relations between management and employees have continued except for occasional signs of restlessness in Calcutta and Faridabad. The past year was marked by the establishment of representative committees of employees to strengthen bipartite negotiations in all units. To facilitate understanding at all levels management has widely circulated an unequivocal statement of the Company's personnel policy.

I am glad to report that after three years of unsatisfactory relations in Madras, this last year has seen a marked improvement. The terms and conditions of union recognition have been settled and

a five year agreement resolving differences has been signed. The second three year agreement on Prosperity Bonus with employees ended with the payment of last year's bonus. Fresh negotiations were started late in 1961 and they have now been concluded in a new three year agreement.

We have continued to put emphasis on the training of staff and progress has been made in integrating outside courses available both in India and abroad with facilities within the Company. Two of our Indian officers were given special technical training by our associates in the U.S.A., the Continental Can Company Inc. Sixteen Indian officers were sent

for training with Metal Box in the U.K. Seventy-four managers have already undergone the Company's residential course in management and one hundred and fifty-four foremen and supervisors have attended non-residential full-time courses organised by the Company. In time, every member of the Company's management cadre will have participated in a programme of formal training. Our in-company courses have benefited from a visit of the head of Metal Box's Education and Training Division in the U.K., Mr. D. G. Sanders. You will be interested to learn that following his visit, our associated companies in neighbouring lands have decided

to send their managers to India to participate in our courses.

Aside from formal schemes of training, we have charged management in all our units with the important responsibility of on-the-job training and we have generally improved the planning of the career development of our more promising employees. There is, as a result of this training activity, a perceptibly increasing awareness of sound management practice at all levels.

I thank the employees of the Company for their co-operation and for the fine sense of responsibility which they have contributed over the past year to our

progress in the face of some formidable difficulties.

RETIREMENT

Sir Robert Barlow, who has been a Director of the Company since its formation in 1933, has retired from the Board. I am sure you would wish me to place on record our deep appreciation of the invaluable services rendered by Sir Robert Barlow in the last thirty years. It was his genius that spear-headed the development of the packaging industry in India and if it had not been for his inspiration and foresight this Company could never have aspired to its present position in the Indian economy.

Selected Satgram Collieries Limited

Coal Price, Main Obstacle

Mr. S. D. Shethia, the Chairman, on the Progress and Development

The following is an extract from the speech of Shri S. D. Shethia, Chairman, delivered at the 17th Annual General Meeting of the Company, held at their Registered Office, in Calcutta, on the 29th June, 1962.

"In welcoming you all to the Seventeenth Annual General Meeting of the Company I take great pleasure. May I have your permission in taking as read the Audited Statement of Accounts and the Directors' Report for the year ended 31st December, 1961 which are in your hands for quite some time.

"At the very outset, I am very happy in welcoming to your Board, Sri Mathuradas M. Parekh, Chairman of the Mangaldas Group of Textile Mills and a well-known Industrialist of Ahmedabad, and Sri B. N. Banerjee, a reputed Industrialist of Calcutta, who is associated with some of the leading West Bengal Government's Companies. I am sure, the Board will have the benefit of their wise counsel and mature guidance."

PRODUCTION AND TRADING

Raisings and despatches during the year under review were 3,69,427 tonnes and 3,49,043 tonnes respectively. Thus raisings were up by 85,576 tonnes and despatches by 85,112 tonnes in spite of many difficulties. Paucity of waggons especially owing to removal of Wagon Yard resulted in delling of Wagon Yard which were 16,105 higher stocks which were 16,105 tonnes as on 31st December, 1961.

The profit before taxation has been Rs. 6,49,524 against Rs. 5,17,915 of last year. After providing Rs. 2,38,000 for taxation and transferring Rs. 1,11,000 to reserves, your Directors recommended a final dividend of Rs. 6/- per Share on 19,500 Equity Shares and pro-rata Rs. 1.16 nP. per Share on 20,500 newly issued

Equity Shares. The rate of dividend thus is Rs. 14 per cent gross and Rs. 9.80 per cent nett on doubled capital.

MINING DIFFICULTIES

Owing to sudden detection of Cassyness, New Satgram Colliery, the biggest of our units, was compelled to close down the mining operations completely in the Satgram Seam for about 5½ working days; and partially for 25½ working days by the Department of Mines. This put heavy strain on our resources—of brain, brawn and bullion.

In South Joyramdanga Colliery, we had water trouble during the monsoon, resulting in imposition of restriction by the Department of Mines. Necessary steps have been taken to remedy this to avoid, if possible, recurrence in future.

Reconstruction and repair work had to be undertaken at Majri Colliery which has been under Raising Contract from October, 1961 until such time as the owners get permission from the Government to transfer the Mine to us.

All our collieries except New Jamuria are raising coal by 'Development' where we have been going farther in the mine which requires a continuous dose of additional capital.

DIFFICULTY OF LAND ACQUISITION

The proposal of the company for doing depillaring work has been thwarted by the recent judgment of the Supreme Court on land acquisition by the State for the purpose of public utility

work of an undertaking, simply because it makes profit. This has been pointed out to the Government by all mining associations and even by Federation of Indian Chamber of Commerce and Industry, who have amply stressed the urgency of removing this obstacle. Let us hope Government pays immediate attention to this problem and solve it for Industrial expansion of the country. This problem for the mining industry and particularly the coal industry assumes greatest magnitude for obvious reasons. It would be advisable for the Government to tackle this without slightest delay.

AMENITIES AND INCENTIVE

"We have always effectively wished to be up-to-date in our approach to this problem of the staff and the labour. The amenities about which I had mentioned last year, Ladies & Gentlemen, have all been provided at our New Satgram Colliery. We intend extending them to our other units also.

"Your Company is concentrating upon working an up-to-date production incentive scheme for encouraging better zeal and efficiency amongst workers. Once this method has been introduced scientifically, I have great hopes that it would be better for labour, management and you, the owners of the Company."

SILVER LINING

Hunger of Industrial India for coal could not be easily satiated and hence the revision of the target of production of Third Five Year Plan from 97 m tonnes to 110 m tonnes. The Industry has on its part spontaneously responded to the Governments' call

for increased production. There are, however, number of difficulties faced by the Industry.

The most important of all the obstacles is the present coal price, which does not allow to plough back adequate reserves from the profits for further expansion. It does not even permit declaration of dividend at a level that would attract the general public to invest in this industry, where demand by far exceeds the supply.

The Industry has of late, however, had a sympathetic hearing from Hon'ble Sri K. D. Malaviya, the Union Minister for Mines & Fuel, who assured reasonably substantial increase in price against Industry's demand for a flat rise of Rs 5.43 nP. The reaction of the investing public has been indicated by upward movement of coal Share prices. Let us hope that this rise in price is granted soon irrespective of the quality of coal produced for the simple reason that the cost of production has very little bearing on the grade of coal.

The other conditions precedent to fulfilment of our cherished dream of meeting country's huge demand for coal are stepping up of our present coal haulage capacity and making available increased amount of electricity, explosives, and essential stores. The Government, I understand, has been considering all these points seriously.

OUR PROGRESS

"Despite all these heavy odds, in 1961 monthly output of New Satgram was 19,550 tonnes. South Joyramdanga 8,163, New Jamuria 1,908 and Majri 4,658 tonnes. By the end of this year we hope, subject of course to the difficulties which have been repeatedly poin-

ted out by our Industry to do a monthly output of about 50,000 tonnes.

Development work of Dishergarh Seam requires large capital. With a view to see that development of Dishergarh Seam would give us adequate return on Capital, your Directors have decided to give the work of preparing a Preliminary Project Report to Messrs. Cekop—Poland and Messrs. Sofremines—France, Messrs. Cekop have been engaged for deep mining by the N.C.D.C., a Government of India Undertaking, and Messrs. Sofremines is a firm of French Consultant employed by the World Bank to investigate the working and efficiency of Japanese Coal Industry. Upon receipt of these Preliminary Project Reports, Company's experts would then decide which one of the two is better and practicable.

Regarding transfer of Majri Colliery, I am glad to report that Government of Maharashtra whose attitude has been very realistic to the Coal situation, have strongly recommended to the Central Government and requested their approval. Although the coal mined from the present seam is Grade III priced at Rs 22.08 nP. and Rs 21.09 nP. per tonne for Steam and Slack Coal respectively; Seam sample has been found to be of a higher quality and your Company has since applied to the Coal Board for regrading this coal. With upward regradation, we expect this coal to fetch us 59 nP. and Rs 1.32 nP. per tonne per one higher grade respectively. The coal reserves of this Colliery are approximately 9.3 m tonnes and we can reasonably produce about 15,000 to 25,000 tonnes monthly in about two years' time. The prospect of this Colliery appears to be exceptionally bright.

Your Directors have decided to establish an Engineering Works with a smaller capital outlay in view of certain legal hindrances mentioned by me last year. We are negotiating with a quite few foreign manufacturers of repute. I trust, in years to come, this line will also develop.

A substantial increase of capital was made during the year under review. I am happy once again that you have shown your confidence in the management. We hope to express our gratitude by rising up to it.

A couple of Senior capable and first-class Mining Managers and Mechanical Engineers have been added to our technical staff. The zeal and earnestness shown by the staff both at Collieries headed by Sri J. Singh, General Manager of the Collieries and at the registered Office, to cope up with the contingencies was most commendable. I hope you will join me in placing on record our sincere appreciation to them.

It is my duty to mention the remarkable role played by the

Managing Agents of your Company during their heavy strain not only in arranging for higher finances at reasonably lower rate of interest but also in providing from time to time advances from their own resources and foregoing customary brokerage for the year 1961, which we had approved of by Special resolution. They have even persuaded their associates to do the same. I am sure you all will join your Board of Directors in recording hearty thanks to them.

In conclusion, on your behalf and mine, I express my sincere gratitude to Members of the Board of Directors who have always given their very able and mature guidance.

With your permission, I now propose that the Report of Directors and the Audited Statement of Accounts for the year ended 31st December, 1961 be hereby approved and adopted.

While these words were under print, the Government of India

Manufacture of Foam Glass

India will be shortly producing foam glass developed by the Central Glass and Ceramic Research Institute of Calcutta. This will save the country of valuable foreign exchange to the tune of Rs 50 lakh per year.

In a bid to make the country independent of essential imported raw materials needed for the industry the Institute undertook the research on foam glass and ultimately succeeded in producing the material which is of great potential value in tropical countries.

Foam glass is light thermal insulating material approaching cork in its permormance. It has the added advantage of being non-combustible and unaffected by the action of moisture and moth. The process of production has so far been a closely guarded secret of the very few countries now producing it.

At present India imports cork-slabs (mainly from Portugal) to the tune of Rs 50 lakh annually for cork in this respect and can be extensively used in building, air-conditioning and cold storage industries. Foam glass is an excellent substitute for cork in this respect and can be used as well as for insulating hot and cold pipes and tanks.

The process of manufacturing foam glass covered under patent has now been assigned to an Indian firm and a factory near Bombay will soon go into production. The country hereafter will not have to depend on imports for this material from Portugal.

Following the success of the Central Glass Research Institute in developing foam glass a request was received from the Glass Research Institute of Czechoslovakia for the exchange of the technical know-how relating to the production of the material. The Council of Scientific and Industrial Research has agreed to exchange the technical information.

have by special notification in the Extraordinary Gazette increased the prices of coal ranging from Rs. 1.50 nP. on the Selected, Grade to Re. 0.38 nP. on Grade No. II. The last mentioned price is the recent conversion into ceiling price. This has disappointed the Coal Industry in its expectation, and also the investing public, as reflected in the Coal Share Prices.

LET US HOPE, THOUGH THE CHANCES DO NOT APPEAR TO BE VERY BRIGHT THAT THE TARGET PRODUCTION OF THE THIRD FIVE YEAR PLAN IS REALISED.

NOTE: The aforesaid note does not purport to be a record of the proceedings of the Annual General Meeting. It is merely an abstract from the Chairman's speech. The detailed speech is available at the Company's Registered Office.

Copper Plating and Copper-Chromium Alloys

The results of studies on the use of a new electrolytic bath—the sulphamate bath—for the plating of copper, carried out at the Central Electrochemical Research Institute, Karaikudi are presented in an article published in the Journal of Scientific and Industrial Research, May, 1962. Sulphamate bath has been found satisfactory for the plating of copper and has the advantage over the conventional cyanide baths of being non-poisonous. The efficiencies of deposition achieved with the sulphamate bath are close to 100 per cent. The sulphamate bath is comparable to the sulphate and fluoborate baths which have recently been commercially adopted, except for its somewhat lower throwing power.

The feasibility of preparing copper-chromium alloys by the powder

NOTICE
LOST—Certificate for 5 Ordinary Shares Nos. 1049571/575 in the above named Company registered in the name of Shri Jag Mohandas Parekh has been reported as lost. An application for the issue of a Duplicate Certificate in respect of the said shares in the name of the registered share holder has been received by the Company. Notice is hereby given that the issue of the duplicate certificate for the shares will be considered unless valid objection is received by the Company within one month from date.

A. G. GIDLAY
Secretary.
Dated 22nd June, 1962.

metallurgical technique—compacting mixtures of copper and chromium powders under pressure and sintering the compacts at high temperatures—has been established as a result of recent studies carried out at the Indian Institute of Science, Bangalore. The alloys obtained have been found to possess tensile strength comparable to that of the fully annealed electrolytic tough pitch copper. Detailed results of these studies are presented in another article appearing in the same issue of the Journal.

THE METAL BOX COMPANY OF INDIA LIMITED

NOTICE OF ANNUAL GENERAL MEETING

NOTICE is hereby given that the Twentyninth Annual General Meeting of the Company will be held at the Registered Office, 59C Chowringhee Road, Calcutta, on Wednesday, the 18th day of July 1962, at 12.30 p.m. for the following purposes:

- To receive and consider the Statement of Accounts for the year ended 31st March 1962 and the Reports of the Directors and Auditors thereon.
- To declare a Dividend.
- To elect Directors.
- To fix the remuneration of the Auditors.
- To transact any other ordinary business of the Company.

Special Business
The consideration of the following Resolution which will be proposed as a Special Resolution:

“That the consent of the Company be accorded by this Special Resolution with effect from 1st November 1961 to the holding by Mr T. M. Rama Aiyangar, an Alternate Director, of an office or place of profit under the Company as General Manager, Delhi.”

Explanatory Statement and Note
The consent of the Company by Special Resolution is requisite to the holding of his office or place of profit by an Alternate Director of the Company.

A member entitled to attend and vote is entitled to appoint a proxy to attend and vote instead of himself and a proxy need not be a member. Proxies, in order to be effective, must be received by the Company not less than 48 hours before the Meeting.

NOTICE is hereby given that the Ordinary Share Register of the Company will be closed from 2nd July to 18th July 1962, both days inclusive.

By Order of the Board
F. P. GILBERT
Secretary
59C Chowringhee Road,
Calcutta,
23rd June 1962.

Markets

JUTE

Pent-up Demand

THE present firm trend in the jute goods market has stemmed from the sudden spurt in overseas demand for near delivery goods. As stocks with the industry are by no means heavy, there has been a scramble for the available quantity resulting in a sharp rise in prices. It would appear that most foreign buyers who have been so far following a hand to mouth policy in the belief that prices are bound to decline sooner or later are perhaps beginning to doubt if there would be any price decline at all. For, the hope that with the increasing pressure from crop arrivals, raw jute prices would become quite cheap, has not materialised for the simple reason that the Government of India has insisted on maintaining a minimum price for raw jute. Thanks to the operations of the Buffer Stock association and the ready cooperation of the industry, the threat to stability of the market from a glut of raw jute has been minimised. The position now is that during the past one or two weeks, raw jute prices have often been quoted above minimum prices. The fact that Pakistan too is taking steps to ensure an equitable return to its cultivators must have also influenced overseas buyers. Pakistan has already announced an increase in the export price of raw jute for the next season. A buffer stock scheme is also expected to start operation very shortly.

The magnitude of the pent-up demand for jute goods can be gauged from the continuously high offtake during the past few months. The jute goods industry is also working up to its full capacity. But even so the supply of goods has proved to be rather inadequate. It is evident that overseas buyers have reached a stage wherein they are finding it difficult to manage without substantial purchases.

Prospects of hessian seem to be quite good atleast in the near term. In the first place US consumption of burlap is running at a satisfactory level and indications are that the present trend will continue. The Argentine entered the market recently after a long interval but last week it was reported that, that country decided to suspend purchases for June position in view of the steep rise in prices. It was reported on Tuesday that Argentine purchases had resumed. Presumably it has been realised that rising trend of prices may also be due to heavy demand. Apart from the demand for standard hessian, the demand for wide hessian for carpet backing has recorded sizable increase to such an extent that the supply is lagging behind. In order to meet the new demand the IJMA is steadily increasing its broad loom

capacity. Another favourable factor is the agreement on tariff concessions between the US and India. According to the agreement 28 main Indian products and 25 American products will get preferential tariff. One of the items on which duty reduction has been made is jute manufactures. As a result of this duty reduction it may be expected that jute goods exports to US will go up.

The jute goods market opened the week on Thursday on a firm note following rumours of substantial business in B Twills for July-August delivery with Ghana. With sentiment improving in the futures section, prices especially of heavy goods gained sizable ground. Hessian was also steady in sympathy. Prices made further headway on Friday with buying interest developing in ready and near delivery positions. The continued firmness of the futures section gave further impetus to the up trend. Although there were no reports of actual business, rumours of enquiries from a number of countries, especially for sacking, imparted fresh strength to the market on Monday. Rumour had it that enquiries for substantial quantities of near delivery sacking had been received in the market both from Burma and Cuba. Tuesday brought another crop of rumours of business in cornsacks with Russia and in hessian with Argentina and prices firmed further during the day's trading.

★

The raw jute market opened the week on a steady note with mills showing some interest in the market at around minimum levels. New crop was quoted at a premium of one rupee. With the improvement in sentiment in the goods section, the undertone of the raw jute market also firmed up with sellers becoming rather reserved. Although quoted prices showed no substantial change from previous closing, indications for new crop prices were half point higher. There was little change in rates on Saturday but on Monday raw jute basis Assam Bottoms was quoted half a point higher than the minimum while new crop commanded a premium of Rs 1.50. The firmness was largely in sympathy with the goods section. There was some further improvement in the undertone on Tuesday again mainly in sympathy with the goods section where prices made further headway. Price indications for raw jute basis Assam Bottoms were at times Rs 1.50 above minimum level although new crop was rather subdued with the premium coming down to one Rupee. It would appear that the improvement in sentiment in the raw jute market is mainly in sympathy with the goods section. For, reports from growing regions continued to indicate good progress of the new crop.

TEA Improvement in Auction Prices

AT the Export Sale held in Calcutta this week, offerings amounted to 29,743 packages. There was a good general demand and prices showed an improvement over the last levels, thanks to the bigger interest shown by foreign countries. The support for superior grades was, however, more prominent than for the inferior ones, which were difficult to sell. In this respect, Darjeelings were a

weak feature of the sale although a few good invoices were sold well. The brighter liquoring orthodox Assams and Doors were keenly sought after, while Tippy BOPs realised satisfactory prices. Whole Leaf grades met with good enquiry with plain teas being sold at or a little below valuations. Keen competition was forthcoming for the better CTC teas, which were sold well; but the plainer liquoring sorts often failed to realise brokers' expectations. Once again, in the medium categories, Brokena attracted more competition than Fannings grades. An idea of the extent of the rise in prices will be clear from the following table (prices per kg):—

	Week-ended 26 June Rs	Week-ended 11 June Rs
Export:		
Clean Plain Pekoe ...	4.30 to 4.60	4.30 to 4.50
Plain Broken Pekoe ...	4.00 to 4.20	4.00 to 4.20
Plain Fannings ...	4.00 to 4.30	4.00 to 4.30
Medium Assam CTC BP ...	5.60 to 5.90	5.60 to 5.80
Medium Assam CTC Fgs ...	5.40 to 5.70	5.50 to 5.70
Best Assam CTC BP ...	6.40 to 6.80	6.40 to 6.80
Best Assam CTC Fgs ...	6.60 to 7.20	6.00 to 6.40

It is clear that attention should be concentrated on the production of quality teas, which will not be difficult to sell, especially when the world production has so far been higher than in the previous year.

Production in North India has improved from 50.3 million pounds to 54.2 million pounds. As the weather is reported to be favourable, the output is likely to be well maintained. The production in Ceylon has also increased to 49.2 million pounds in April from 44.5 million pounds in the previous month; but was lower than the outturn of 54.9

million pounds in April last year. Total output, for the first four months of the current year, amount to 160.35 million pounds as compared to 160.30 million pounds in the similar 1961 period.

Production in East Africa has risen to 5.14 million pounds in March from 2.93 million pounds in the corresponding month of last year. This raises the total output of East African tea, in the first quarter of this year, to 17.02 million pounds from 9.17 million pounds in the similar 1961 period.

Thus, the world output is, so far, higher at 335.5 million pounds as against 321.2 million for the corresponding period in 1961. As there will be sufficient supplies during the current year, producers in India will be forced to rely on the domestic market for selling their teas. But as the Indian output consists of poor teas which are not wanted by foreign countries, they have to be sold here. Unless internal consumption is stepped up during the current Plan period a glut in world production will upset the equilibrium in the external market.

Meanwhile, tea stocks in London, as on 15 June, 1962, were slightly lower at 123.62 million pounds as against 125.98 millions in the previous week. Deliveries during the week totalled 8,204,718 pounds and landings 5,848,762 pounds. Total afloat was 17.69 million pounds, including from Calcutta 2.68 million pounds; from Chittagong nil; from Ceylon 801,880 pounds; from Ceylon 12.51 million pounds and from other Ports 1.70 million pounds.

COTTON Prices Forge Ahead

THANKS to conflicting weather reports, prices in the Bombay Cotton futures market displayed a firmer tendency due to sustained support and bear-covering. Following the news of the continued lack of rains in most of the cotton-growing areas, the market not only consolidated its recent gains, but forged ahead to a new high. After touching a high of Rs 723.75, Jharilla March contract finished at Rs 718.

Sowings are expected to begin in Nagpur and Akola areas in a couple of days although the monsoon has

not yet set in in full swing. It is learnt that the Government may appoint some exports who will be charged with the responsibility of raising the country's cotton production to the desired extent.

In the Spot section, trading remained more or less dull owing to the fact that the leading mills had almost covered the entire quantity of indigenous cotton against the quotas allotted to them so far and this left only the weaker mills in the market.

Trade circles have made a representation to the Textile Commissioner to release a quota in Cambodia A and B varieties. About one lakh bales of Cambodia variety has remained unsold for want of sufficient quotas with the mills. A section of the trade feels that this may lead to sowings of short-staple cotton by cultivators.

In the meanwhile, spinners have expressed grave concern over the recent circular issued by the Government. According to this circular, the Textile Commissioner may direct the mills to sell such quantity of cotton as may be in excess of the quantity which would reasonably be required by the mills for manufacturing yarn in the following three months at such prices or on such conditions as may be specified. This means, that the mills might not hold stocks in excess of those required for not more than three months, consumption as against the previous practice of holding stocks for six months' consumption.

Receipts of cotton by rail and sea, for the period from 1st September 1961 to 18 June 1962, amounted to 1,168,789 bales as against 1,308,168 bales for the corresponding period of the previous year.

On the import front, the announcement of the details of Pakistani im-

port quota of 42,000 bales has been welcomed. As a result, enquiries for Pakistani cotton have broadened. According to trade sources, India has been the biggest buyer of cotton from Pakistan during the current season. Total cotton shipments from Pakistan, during the period from 1st September 1961 to 31 March 1962, were 176,150 bales. Out of these, India accounted for 59,503 bales; Japan for 43,862 bales; Hong Kong for 24,045 bales; China for 12,799 bales and USA for 10,248 bales.

According to the official figures released from Bombay, exports of mill-made cotton textiles from the Bombay Port increased to 38.83 million yards in May 1962 from 30.02 million yards in the previous month. Exports of grey cotton cloth increased from 16.05 million yards to 21.67 million yards as did shipments of white and coloured cotton piecegoods from 6.07 million and 7.9 million to 6.21 million and 10.95 million yards respectively.

In May last year, exports totalled 36.25 million yards comprising 20.76 million yards of grey cloth; 6.96 million yards of white cloth and 8.53 million yards of coloured cloth. Besides cotton piecegoods, apparel and other textiles were exported in May 1962 fetching foreign exchange worth Rs 68.8 lakhs as compared to Rs 50.3 lakhs in the previous month and Rs 69 lakhs in May last year.

Trend of Sugar Prices

SUGAR prices have been drifting lower owing to the easy supply position in the wake of the monthly release for open sale. In the Hapur market, mill-delivery prices have eased by 6 nP to 19 nP a maund and sport delivery rates by 25 nP a quintal.

On the London market, too, the price of sugar, which continued steady around £24 per ton, has declined by 10 sh in the past fortnight following the sale of second-hand Brazilian raw sugar at a price lower than expected. In the white sugar market also, the position continued to be easy with East European and Turkish whites being freely available around £20 to £21 per metric ton f.o.b. basis.

Marketmen in London are now doubtful about an appreciable improvement in prices during the remaining period of the current year. It is, however, felt that, with the overall world statistics for the next year being somewhat tight with only a manageable Cuban crop and prospects of a lower output from Europe, the trend will be basically for better prices, at least in the beginning of the next year.

In the light of the recent move by the Government of India to link sugarcane prices with recovery, it is feared that the mechanism, if retained after the proposed link-up, will hamper domestic consumption. The Government has released, during the current season, 1,475,000 tons inclusive of the 200,000 tons released

a few days ago. On an average, 200,000 tons per month have been released. This means that India's domestic consumption will be restricted to 2,400,000 tons per annum.

In the context of a crisis of surplus, the accent should be on raising the consumption level. Total production, in the current season, is expected to reach 2,700,000 tons. After allowing for an internal consumption of 2,400,000 tons, the industry will still be called upon to carry a stock of 1,440,000 tons. Considering the slow progress of shipments so far, it will be only reasonable to place India's exports, during the current season, at 250,000 tons. Even then, there will be a surplus stock of 1,200,000 tons at the end of the season.

According to the figures released by the Indian Sugar Mills Association, sugar production in May 1962 was 159,730 metric tons as against 208,000 tons in May last year. This brings the total production, for the 1961-62 season up to the end of May 1962, to 2,669,000 tons as against 2,954,000 tons for the corresponding period of last year. Total despatches, during the same period, amounted to 1,527,000 tons as against 1,262,000 tons. The closing stock, as on 21 May, 1962, was 2,287,000 tons as against 2,239,000 tons on the corresponding date of last year.

FOODGRAINS

In the Hapur market, Foodgrains prices have been ruling steady following the decrease in the arrivals of "Rabi" crop. Wheat prices have improved to Rs 38.18 per quintal for the average quality and to Rs 46.22 for the superior farm produce. Rice prices of coarse quality have also improved further following good demand in the face of poor arrivals. The market for Gram has recorded modest gains on firmer Punjab advices. In the Pulses section, Peas prices have advanced due to brisk buying support from Madras which accounted for good offtake. Arhar prices are steady in sympathy; but Urad is quoted lower.

In the Bombay market, prices of almost all popular qualities of Wheat have moved up by about Rs 2 a quintal and this is attributed to tight supply position. The receipt from the Punjab is also small on continued difficulty in securing adequate railway booking. With the arrivals remaining meagre, stockholders are reported to be cautious in their sales policy. Trading in Rice reflects a steady undertone due to firmer advices from Madhya Pradesh. In the Coarse grains section, Bajra has registered an improvement of about Rs 2 a quintal on end-of-the-season shortage. Among Pulses, Masoor has gained Rs 2 a quintal on reports that the STC has entered into export commitments.

NON-FERROUS METALS

With the exception of Lead, all Non-Ferrous metals in the Bombay market have declined after the hectic advance noticed in the preceding fortnight. Apart from the tendency to book profits at the high levels, some bearish news is also received during the week. First, advices from

London, Singapore and other Continental markets are discouraging. The possibility of a gradual release of tin from the US stockpile has also increased. Secondly, under the new agreements signed, last week, between India and the US for a loan of \$285.2 million, India will be able to import essential commodities including non-ferrous metals to the extent of \$200 million. It is felt that this will ease the supply position. Buyers have, therefore, withdrawn from the market at the higher levels.

On the other hand, Lead remains firm due to persistent buying from upcountry dealers, not to speak of the fact that offerings have dried up. Tin, copper, zinc and scraps have reacted from their high points and finished the week with sizable losses.

According to reports released from London, the shortfall in world tin production in 1962 is expected to reach a level comparable with the 22,000 and 23,000 tons of the two previous years. Suggestions by some authorities, that it will be nearer 10,000 tons, are based on assumption which are open to doubt. One is that there will be an increase in Indonesian production. Another assumption is, that there will be a net export of tin from the Sino-Soviet bloc of about 5,000 tons.

Whatever the amount, metal dealers in London state that, during the next twelve months, relief will be required from the American stockpile. The question is, at what price level that relief will be forthcoming.

YARN

In the Bombay market, Yarn prices have declined moderately owing to reports of measures contemplated by the Government to check a rise in prices. The fall in prices is steep when compared with high levels reached last week. The easiness is also attributed to the report of the issue of export promotion licences and that the indigenous spinners had agreed to expedite the supplies to the quota holders.

It is also learnt that there is a move on the part of the Government to impose a cess on the production of rayon yarn and staple-fibre in a bid to subsidise the exports of rayon fabrics, which are now being made at a loss. It is proposed to levy a cess of 25 nP per pound on rayon yarn and 10 nP per pound on staple-fibre yarn. The rayon spinning industry, which was exhorted to play a greater role for the promotion of rayon cloth exports, is also given an alternative scheme if the cess proposal is not acceptable to it. The spinning units will be required to obtain their requirements of pulp under licences issued to exports of rayon cloth. They will be given actual user licences for this purpose if they are not able to get their full requirements under the export promotion scheme.

GOLD & SILVER

Prices on the Bombay Bullion Exchange moved within a narrow range. The arrivals of Silver were heavy; but the bears refrained from pressing sales in view of firm overseas ad-

vices. They amounted to 75 bars as against an offtake of only 15 bars. Bhadon delivery moved between Rs 215.45 and Rs 215.75, while the ready rate for silver (below .996) changed hands at Rs 214.60 to Rs 214.90.

The arrivals of Gold were comparatively small and the spot continued to be quoted a premium over the Bhadrabad settlement. The spot houses, in the circumstances, were not inclined to sell in the forward market. The buying interest was also small owing to end-of-the-season considerations. Arrivals amounted to 6,000 tolas as compared with an offtake of 5,500 tolas. Bhadon delivery moved between Rs 123.30 and Rs 123.55, while ready changed hands at Rs 124.90 to Rs 125.15. Sovereigns quiet at Rs 98.

SILK

In the Bangalore Silk market, prices of flature raw silk of 20/22 Dr. remained steady between Rs 84.89 and Rs 85.99 per kgm during the week ended 22 June, 1962. Charka raw silk reported little fluctuations and was marked between Rs 49.60 and Rs 74.96 per kgm. Cottage basin silk ruled between Rs 76.06 and Rs 82.67 per kgm.

Spun silk yarn of 2/210's was quoted at Rs 74.96 per kgm.

Prices of reeling cocoons in Sidlaghatta and Mugur areas declined slightly to range from Rs 3.30 to Rs 4.62 and from Rs 3.75 to Rs 4.75 per kgm respectively and those in Channapattana area fluctuated between Rs 3.25 and Rs 5.75 per kgm. Foreign and Mysore race seed cocoons were quoted between Rs 7.00 and Rs 12.00 and between Rs 4.25 and Rs 6.50 per thousand respectively.

In the Bhagalpur market, prices remained steady during the previous week. Prices of tasar raw silk varied from Rs 66.00 to Rs 105.02 per kgm. Rates of silk waste and spun silk yarn ruled between Rs 22.00 and Rs 26.00 and Rs 30.00 and Rs 47.00 per kgm respectively. Reeling cocoon prices showed a distinct downward trend during the week under review. Prices for Daba, Bogal and Serihan were quoted between Rs 85.00 and Rs 90.00, Rs 80.00 and Rs 90.00 and between Rs 50.00 and Rs 60.00 per kahan respectively. Eri cocoons and yarn prices remained unchanged between Rs 6.45 and Rs 8.06 and Rs 22.00 and Rs 32.25 per kgm respectively.

In the Malda Silk market, prices continued to remain firm. Charka and cottage basin raw silk prices ruled easier between Rs 71.00 and Rs 75.00 and between Rs 58.00 and Rs 72.00 per kgm. Matka yarn was quoted between Rs 25.72 and Rs 40.75 per kgm. Reeling cocoons and silk-waste were quoted between Rs 2.62 and Rs 3.19 and at Rs 2.14 per kgm respectively.

The f.o.b. price and landed cost of Japanese raw silk of 20/22 Dr. was reported as Rs 61.60 and Rs 94.95 per kgm respectively as on 19 May, 1962. There has been a perceptible rise in the f.o.b. prices of Japanese silk since December, 1961. The f.o.b. price for Japanese raw silk in December, 1961 was Rs 51.35 per kgm.

OILS & OILSEEDS

Erratic movements in prices characterised trading on the Bombay Oilseeds Exchange. The tendency for prices was, however, upward.

In the Groundnut section, trading reflected a bullish sentiment. The absence of rains and the optimism in connection with groundnut oil exports were the contributory factors. On the export front, the State Trading Corporation was stated to have sold 5,000 to 6,000 tons of groundnut oil to Spain and Canada at prices varying from £97 to £101 per ton. Advices from upcountry centres were also encouraging as the inflow of supplies remained small on account of the tendency on the part of the growers to await higher prices. The railway booking position in Saurashtra was also reported to be tight, while the inflow from other areas was meagre. Groundnut ready Bold was quoted at Rs 45.50 and Groundnut Oil at Rs 18.55.

In the Castorseed section, trading was featured by an advance in prices in mid-week inspired by a sharp reduction in freight rate for shipments of castor oil to the USA. There was, however, little support at higher levels, as Indian prices were found to be higher than the US parity despite the cut in the freight rates. There was no business either with the UK or the Communist countries. Castor ready was quoted at Rs 31 and Castor Oil, commercial quality, at Rs 11.75.

In the Linseed section, prices moved in sympathy with the trend in other sections. Ready was quoted at Rs 39.62 and Linseed Oil at Rs 15.35.

The groundnut and groundnut oil market in Madras showed a steadier tendency since the opening of trading this week. There is a tendency of absorbing a good bit of the stocks coming into the market. Arrivals of kernels locally had declined to about 65 tons daily while in North and South Arcot districts the quantity daily received at the clearing market-centers was around 450 tons. All these are being taken in by bazaar interests locally. Shortage of groundnut oil stock in Calcutta also im-

parted a bullish tendency to the price of this commodity here. Calcutta operators began a steady buying since the middle of last week. Because of the limited offerings by other centres, the locally and even showed steadied up locally and even showed a slightly upward trend. Nearby deliveries of the oil showed good activity.

In Southern centres the arrivals of kernels continued to be good and along with the summer peanut variety coromandel quality of seeds are also being received. Cuddalore, Panruti, Vriddhachalam and Tindivanam centers in the South Arcot showed good activity in groundnut kernel trading. The kernel prices in these areas ruled at Rs 73 per 80 kgs.

Peanut variety of groundnut was quoted at Rs 69 last week. It fluctuated between Rs 68 and Rs 69, the whole of the week. On Monday there was a firmness around Rs 69 per 80 kgs. Today there was a gain of a rupee for peanut being quoted at Rs 70. Groundnut cake continued at Rs 28 per 72.06 kgs.

In the southern centres, groundnut oil prices declined considerably. At Guntur the price per candy of 500 lbs was Rs 406; in Vriddhachalam it was Rs 400; in Nandyal it was only Rs 395; in Villipuram it was Rs 398; in Cuddappah it was Rs 390; in Pollachi it was Rs 390; in Tanjore it was Rs 395 and in Salem it was Rs 400 per candy of 500 lbs.

The groundnut kernel rate per 90 kgs in Vriddhachalam was Rs 73 and at Villipuram it was Rs 71. Cuddappah's rate was one rupee lower than this. [Tanjore price was Rs 73 and Salem Rs 74 per 80 kgs.

More or less steady conditions prevailed in gingelly oil and seed. The general undertone can be termed to be slightly easier. In the background was the expectation of getting larger arrivals of gingelly seed from Salem and other areas after a few days. Southern side crushers are taking the present arrivals of about 100 bags daily.

In the foreign markets the price of groundnut oil has marked further

gains due to demand from Continental interests, mainly from Spain. Groundnut cake also recovered slightly from the recent declines.

* HIDES & SKINS

Unlike other weeks clearance of tanned cow hides was better with better stock position. As for business with outside countries, particularly with the United Kingdom, inquiries for runs and fourths and also fourth of the semi premium marks were good. Due to the reluctance of the shippers against buyers' preferring only those items without market

quality varieties also, a few negotiations on the 5/5 lb run, fourth and fifth were reported on the basis of 65d, 55d and 52d. In the semi-premium marks for 5/5 lb the reported quotations were 75d. and 65d for run and fourth respectively.

Improved demand for tanned cow calf bettered the present quotations to the already firm prices in this section. The prices fetched for marks of 2/2 lb were on the basis of 79d to 80d for fourths. Sellers are, however, looking for still higher rates. Premium marks in this counter were sold at 79/80d.

The 1½ lb run was made available at 90d.

Tanned buffalo calf was also scarce and the quoted price for 1½ lb was 95d for premium run marks. The 2/2 lb was sold at 74 lbs for run.

There were plenty of tanned goatskins with the sellers exhibiting eagerness to dispose of the accumulation. For prime class goatskins run, quotations were made on the basis of 16/3d, thirds and fourths at 15/9d and fifths at 13/3d. For prime class goatskins of 8/9 lb run the price was at 15/9d to 16/3d. The 11/13 lb run was at 16/9d.

In tanned sheepskins the 6/7 and 7/8 lbs run, fifth inferior f were sold on the basis of 11/9d and 7/9d to 8.

The following were the prices tanned skins and hides per lb:

Tanned cow prime 5/5½ lb Rs 2 to Rs 2.87; 6/6½ lb Rs 2.50 to 2.53; 7/7½ lbs Rs 2.25 to Rs 2.3; 8/8½ lbs Rs 2.12 to Rs 2.15; 10/ lbs Rs 1.94 to Rs 1.97; Tanned inferior fifths 5/5½ lbs Rs 2.19 to 2.22; 8/8½ lbs Rs 1.84 to Rs 1.8; 10/12 lbs Rs 1.69 to Rs 1.72; Tann buff calf 1½/2 lbs Rs 3 to Rs 3.1 (Tanned cow calf 1½/2 lb Rs 3.50 Rs 3.69.

Company Reports

Encouraging Prospects for Selected Satgram Collieries

The Selected Satgram Collieries Limited has given a good performance during the year 1961, thanks to the rise in raisings from 283,851 tonnes to 369,427 tonnes and in despatches from 263,931 tonnes to 349,043 tonnes. As transport posed a big problem, stocks, at the end of the year, were higher at 16,105 tonnes against 9,911 tonnes in the last year.

The net profit, before providing for Depreciation and Taxation, is higher at Rs 9.83 lakhs as against Rs 7.30 lakhs for the preceding year. Except for Development Rebate Reserve the provision which is lower at Rs 91,000 against Rs 98,000, all other allocations have been raised. Depreciation to Rs 3.33 lakhs from Rs 2.12 lakhs Taxation to Rs 2.38 lakhs from Rs 1.89 lakhs and Reserves to Rs 20,000 from Rs 5,000. The directors have proposed a taxable dividend of Rs 14 per share on the capital increased by the issue of 20,500 equity shares as against Rs 16 per share, taxable, paid on the old capital. A dividend of Rs 1.16 per share was recommended on the new equity shares on the pro rata basis.

Licence for substantial expansion of collieries has been received by the company. In view of the good market, it has been decided to expand the present activities of the existing workshop on large scale and register it in the name of New Satgram Engineering Works.

The Company has also entered into agreements with Messrs Cekop of Poland and Sofremines of Paris for the exploitation of the Dishergarh Seam. The directors say that, barring unforeseen events, the future of the company is bright.

Shree Digvijay Cement Pays More

SHREE Digvijay Cement Company Limited has reported encouraging working results for 1961. Despite a decline in sales from Rs 3.26 crores to Rs 3.18 crores, the net profit, before providing for Depreciation and Taxation, amounts to as much as Rs 61.57 lakhs as against Rs 42.30 lakhs for the preceding year.

Apart from providing Rs 77,150 for Rehabilitation Research and Development Reserve, all other allocations have been raised:—Depreciation to Rs 18.86 lakhs from Rs 18.08 lakhs; Taxation to Rs 14.50 lakhs from Rs 10.25 lakhs and Development Rebate Reserve to Rs 6.24 lakhs from 1.22 lakhs. Even after these increased allocations, the directors have found it possible to raise the Ordinary dividend from Rs 9 to Rs 10 per share, subject to tax.

The Asbestos Cement Pipes and Sheet making plant is being established near Ahmedabad in the Gujarat State and will have, in the initial stages, an output of 32,000 tons per year. Almost the entire plant and machinery has already arrived at the site and the construction of the factory and other buildings is making good progress. The company had finalised negotiations with the American firm for both technical and financial collaboration.

The working the subsidiary company, the West Coast Paper Mills Limited, has not been quite satisfactory due to continuous rise in the cost of manufacturing paper.

Alembic Chemical Repeats

Despite slightly lower profits, the Alembic Chemical Works Company Limited has maintained the Ordinary dividend at 14 per cent, subject to deduction of tax, for 1961. Sales are shown higher at Rs 2.84 crores against Rs 2.61 crores; but the net profit, before providing for Depreciation and Taxation, amounts to Rs 40.27 lakhs as against Rs 43.62 lakhs. In this connection, the directors state that, though the production of the various departments was satisfactory, the smooth working of the Antibiotics division was disturbed in the last quarter of the year by the defects noticed in the vials-filling process. After a thorough checking, vials-filling was resumed before end of the year.

In respect of allocations, the Depreciation amount is raised to Rs 18.05 lakhs from Rs 12.52 lakhs; but taxation provision is lower at Rs 8.25 lakhs against Rs 10.20 lakhs and Development Rebate Reserve at Rs 4.58 lakhs against Rs 7.19 lakhs. Though the profits for the year are not sufficient to maintain the dividend on the Ordinary shares, the directors feel that the temporary setback does not justify any reduction of the dividend; especially when the working results for the current year are expected to be good.

San Francisco's Golden Gate Bridge, one of the world's great bridges, has a central span of 4,200 ft.

Pan Am now introduces a unique low-cost way to visit any one or all of 32 major U.S. cities.

Have you always wanted to see the USA but thought it far too expensive? If so, Pan Am's \$15-a-day-way is your way to the USA.

Here's how: You may spend 3 days and 2 nights in any of 32 major U.S. cities and pay only \$15 for your hotel room with bath and, in most cities, a full sightseeing tour. Average cost for each full 24 hour stay—only \$7.50!

Food! You'll be free to dine where you like, at your own expense. However,

Pan American has surveyed every one of the 32 places included in this plan and can assure you that 3 substantial meals at popular restaurants need not cost more than \$7.50 per day through the entire USA.

Result: \$15 a day for room with bath, meals and sightseeing in any or all of 32 fabulous U.S. cities.

Fares? No extra charge on a Pan Am 'round-the-world trip for many of these U.S. cities. Only Rs. 6092 economy class from Calcutta for Europe and the Pacific, and North America as well!

Godfrey Phillips, India, Fares Well

The higher level of manufacture and sale is reflected in the working results of Godfrey Phillips, India, Limited for 1961. While sales have risen from Rs 4.14 crores to Rs 4.57 crores, the net profit amounts to as much as Rs 51.57 lakhs as against Rs 45.48 lakhs for the previous year.

All allocations have been increased:—Depreciation from Rs 5.41 lakhs to Rs 5.75 lakhs and Taxation from Rs 19.10 lakhs to Rs 24.50 lakhs. The provision for Development Rebate Reserve is slightly lower at Rs 14,000 against Rs 35,000. The dividend on the Ordinary shares is repeated at 40 per cent, less tax.

In regard to the future, the directors state that the increased duties will have serious effects on the company's profits, both for 1962 and for future years.

Sharp Decline in National Tobacco's Profit

The National Tobacco Company of India Limited has reported a sharp decline in earnings for 1961, reflecting the company's ability to sell its products only at a marginal profit in view of competition. While sales have declined to Rs 8.74 crores from Rs 9.64 crores, the net profit, before providing for Depreciation and Taxation, works out to only Rs 28.40 lakhs as against as much as Rs 64.97 lakhs for 1960.

In respect of allocations, a sum of Rs 6.96 lakhs (Rs 5.91 lakhs) is set apart for Depreciation; Rs 7.45 lakhs (Rs 25.38 lakhs) for Taxation and Rs 3.55 lakhs (Rs 3.00 lakhs) for Development Rebate Reserve. No provision is possible for General Reserve against Rs 2.83 lakhs. Naturally, the dividend on the Ordinary shares is substantially reduced from 16 to 7 per cent, subject to tax.

The directors state that the recent budget announcements have increased the burden of taxation on the cigarette industry. They add that it is too early to estimate the profit-earning position for the current year.

Improved Overall Profit for Balmer Lawrie

Balmer Lawrie & Company Limited has reported a net profit of Rs 43.39 lakhs for 1961 as against Rs 42.92 lakhs for the preceding year. Apart from maintaining General Reserve at Rs 7.00 lakhs, the provision for Depreciation is raised to Rs 2.12 lakhs from Rs 1.85 lakhs; Taxation to Rs 14.08 lakhs from Rs 13.04 lakhs and Development Rebate Reserve to Rs 44,747 from Rs 42,335. The directors have recommended a final dividend of 18 per cent, making a total of 25 per cent, subject tax, the same as in the previous year.

The directors state that certain difficulties in arranging for the loan capital required by Assam Pulp Mills Limited could not be resolved and it was decided to abandon the project and to take steps to wind up that company. (This decision will involve the company in the loss of its investment in Assam Pulp Mills Limited and the major portion of the preliminary expenses incurred in connection with the project. These losses have, therefore, been written off in the accounts. But, due to the improved overall profit in trading and after credit has been taken for the balance of provision for Contingencies to the extent it is no longer required, the final results for the year are similar to those of 1960.

Board of Directors.	1961 Rs.	1960 Rs.	1959 Rs.

Record Earnings for Kumardhubi Fireclay

A record output of 102,425 tonnes was achieved by the Kumardhubi Fireclay and Silica Works Limited for 1961. Due to the high volume of sales, principally to the Steel industry, it was possible to keep the moulding and pressing capacity booked to the maximum extent. The gross profit made by the company for the year is the highest on record so far.

While sales have risen to Rs 2.11 crores from Rs 1.77 crores, the net profit is substantially higher at Rs 33.73 lakhs against Rs 27.10 lakhs for 1960. Apart from maintaining Redemption Reserve Fund at Rs 1.00 lakh, the Depreciation amount is raised to Rs 7.56 lakhs from Rs 6.72 lakhs; Taxation to Rs 13 lakhs from Rs 8.96 lakhs; General Reserve to Rs 2.35 lakhs from Rs 1.25 lakhs and Plant Renovation Reserve to Rs 8.35 lakhs from Rs 2.50 lakhs. The provision for Statutory Development Rebate Reserve is slightly lower at Rs 87,500 against Rs 1.15 lakhs. Following the increased allocations, the directors have found it possible to only maintain the dividend on the Ordinary shares at 1.80 per share, less tax.

The expansion and modernisation scheme has progressed according to the schedule and the new Tunnel Kiln is expected to be in operation by August this year. Reconstruction of the Old Tunnel Kiln built in 1946 has been deferred until a decision has been reached on the development of new lines being actively explored. The company intends to diversify as the demand for special refractories for specific uses is now beginning to make itself felt on an increasing scale.

10 per share in the proportion of one share for every two shares held, is to finance the company's current liabilities. The proposed issue will increase the paid-up capital of the company to Rs 59.67 lakhs.

Hind Mills

The management of Hind Mills Limited, Bombay, which has been taken over by Messrs C. Parakh & Company, will shortly offer 35 per cent of the equity capital and 50 per cent of the preference capital of the company to the public, subject to the permission of the Bombay Stock Exchange. Out of the equity shares, 51 per cent will be taken up by the Ahmedabad Jupiter Spinning, Weaving and Manufacturing Company Limited and 14 per cent will be retained by the directors and their friends. The balance of 175,000 shares is being offered for sale to the public at Rs 23.25 per share. Out of the preference capital, 10,000 shares will be taken up by institutional investors and the balance of 10,000 shares of Rs 100 each will be sold to the public, at par.

Madras Aluminium

The Madras Aluminium Company Limited has made the first call of Rs 25 per equity share, which is payable by 31 July 1962.

Indian Oxygen

Indian Oxygen Limited, Calcutta, has been granted consent to the issue of 10,40,000 equity shares of Rs 10/- each as fully paid-up bonus shares on capitalisation of the company's free reserves including the share premium account. The bonus shares will be issued in the ratio of two bonus shares for every five shares held.

Century Flour

Century Flour Mills Limited, Madras, has been granted consent to issue bonus shares worth Rs 4 lakhs in proportion of one bonus share for every three equity shares held by the existing shareholders.

Seshasayee Wire

Seshasayee Wire Ropes Limited, Ernakulam, has been granted consent to the issue of capital of Rs 50 lakhs in equity shares of Rs 10/- each for cash, at par. Out of this, shares worth Rs 6.7 lakhs will be issued equally to the two foreign collaborator firms of Japan, namely, M/s Ataka & Company Limited, and Kokoku Iron & Steel Wire Manufacturing Company Limited. Of the remaining shares to be subscribed by Indian Nationals, such number of shares as would enable shares to be listed on or recognised Stock Exchanges, would be offered to the public by prospectus. The proceeds will be utilised for the manufacture of steel wire rope.

Unichem

Unichem Laboratories Limited, Maharashtra (Proposed), has been granted consent to the issue of capital of Rs 45 lakhs in equity shares of

Rs 100 each, at par. Out of this 22,500 shares shall be issued for consideration other than cash to the proprietor in consideration of transfer of the net assets of the proprietary concern "Unichem Laboratories" as a going concern, and the balance shares will be issued to the public by a prospectus for cash.

Associated Pulp

Associated Pulp & Paper Mills Limited, Ahmedabad, has been granted consent to the issue of capital of Rs 35 lakhs, in equity shares of Rs 100 each, for cash, at par. Out of this, shares to the extent of about Rs 8 lakhs will be issued to four Indians at present resident in Aden. The proceeds will be utilised for the manufacture of paper and pulp.

Harnarain Gopinath General Foods

Harnarain Gopinath General Foods Limited, Delhi, has been accorded consent to issue Rs 50 lakhs capital—Rs 40 lakhs equity and Rs 10 lakhs preference—for cash at par, out of which Rs 10 lakhs in preference and Rs 20 lakhs in equity will be offered to the public prospectus. The proceeds of the issue will be utilised in setting up a food preservation plant at Shahibabad (UP).

Jehlum Spinning

The Jehlum Spinning & Weaving Mills Limited, a public company incorporated in the State of Jammu and Kashmir, has been given a fresh consent (in supersession of the earlier one dated February 27, 1962) to the issue of Rs 40 lakhs divided into 3,00,000 equity shares of Rs 10 each, and 10,000 cumulative redeemable preference shares of Rs 100 each, carrying dividend at 9.3 per cent (gross), for cash at par. The consent order will lapse on February 27, 1963.

INVESTMENT NOTES

Permanent Magnets

The management of Permanent Magnets Limited has announced that the erection of the main factory will start by next week and will be completed by the end of July. All the imported and indigenous machineries have arrived and are being fitted. The complete installation is expected by the fourth week of July.

Lodna Colliery

It is understood that the directors of Lodna Colliery have decided to return the application money received against the recent issue of equity shares at a premium.

Mysore Paper

The decision of the Mysore Paper Mills Company Limited to maintain the dividend at 15 per cent, taxable, for the year ended 31 March 1962 has been welcomed by the market. The company is busy implementing the big expansion programme. The net earnings for the accounting

period, after depreciation, was more or less unchanged at Rs 12.35 lakhs as against Rs 12.60 lakhs.

IN BRIEFS

Lakshmi Mills Limited, Coimbatore, has proposed a taxable dividend of 25 per cent for the year ended 31 March 1962 as against a taxable dividend of 20 per cent (including a silver jubilee dividend of 10 per cent) paid for the previous year.

East India Distilleries & Sugar Factories Limited has proposed an interim dividend of 7 1/7 per cent, taxable, for the year ended 30 September 1962.

Rajagiri Rubber has declared an interim dividend of 10 per cent, taxable, for the year ended 30 June 1962.

Brunton & Company Limited has passed over the dividend for the year ended 31 December 1961.

BALANCE-SHEET BRIEFS

Despite the decline in the net profit from Rs 64.74 lakhs to Rs 57.02 lakhs, the Metal Box Company of India Limited has maintained the total dividend at Rs 2.50 per share, taxable, for the year ended 31 March 1962.

In McLeod group, the Bormah Jan Tea Company has shown a lower net profit of Rs 1.52 lakhs for 1961 as against Rs 2.48 lakhs for the preceding year. The ordinary dividend is, however, maintained at 15 per cent, less tax. The Dibrugarh Tea Company has also maintained the dividend at 40 per cent, taxable, in spite of the decline in the net profit from Rs 3.13 lakhs to Rs 3.04 lakhs. The Telojian Tea Company has reported a net profit of only Rs 1.44 lakhs against Rs 2.27 lakhs. The dividend is maintained at 25 per cent, taxable.

STOCK EXCHANGES

Top Gains Not Held

Watch-Dog Writes:

ALTHOUGH confidence is by no means restored, conditions in stock markets have generally improved with equity prices picking up on a selective basis. There is not a good deal of activity and the atmosphere, on the whole, is considerably calmer.

Apart from some activity in Indian Irons on rumours with regard to an early announcement of steel retention prices and the firmer tendency in jute shares, the Calcutta Stock Exchange showed little change.

On the Bombay Stock Exchange, prices moved irregularly on alternate bouts of buying and selling. Activity was concentrated on selected shares.

Though activity was better spread on the Madras Stock Exchange, the price trend continued to be subdued due to general lack of support.

The London Stock Exchange had rather a brighter week, thanks to a

slackening in the recent selling than a return of buying demand.

A mild rally was noticed on Wall Street, although the close was irregularly lower with losses ranging mostly to one dollar or so.

CALCUTTA

Calcutta, Friday Evening.

THE local stock market started the week on a quietly steady note and activity continued to reflect a cautious attitude of the operators. Apart from the renewed speculative support lent to Indian Irons following the revival of the rumours in regard to the early announcement of the steel retention price and the jute shares forging ahead on stronger advices from the gunny market, conditions elsewhere remained practically unchanged.

Leading operators were not inclined to enter the market, as they felt that the current improvement in prices was due more to technical forces than any change in the basic economic or political factors. The tying-up of large sums in a number of new issues was also a contributory factor, while the unsatisfactory progress on the industrial front was causing a good deal of concern. There was, therefore, a general apathy to buy. Moreover, the subsequent reports, that the steel retention price announcement would not be made at an early date led to a subdued feeling, especially towards the close of the week when prices displayed a slightly easier tendency on scattered liquidation.

The Giltedged section was, on the whole, steady. Short-dated Loans met with some enquiry, while long-dated issues were on offer around quoted rates. 3 per cent 1986 Conversion Loan changed hands at Rs 71.05 to Rs 71.40.

Bank shares remained quiet with prices moving within a narrow range. Punjab National was done at Rs 20.50 to Rs 20.69 and United Commercial at Rs 85.50 to Rs 86.50.

Although jute shares displayed a firmer tendency on higher advices from the gunny market, higher levels could not be retained till the close due to profit-taking following the uncertainty with regard to the price of raw jute during the coming season. It was also thought that the present minimum price competitive position was not to be imperilled. Birlas changed hands at Rs 34.37 to Rs 34.75 (Rs 34.62); Howrah at Rs 22.12 to Rs 22.75 (Rs 22.62); Ganges at Rs 14.62 to Rs 14.94 (Rs 14.75); New Central at Rs 15.69 to Rs 16.12 (Rs 16.06) and India at Rs 17 to Rs 17.56 (Rs 17.31). Kankannarah, however, scored Rs 5 at Rs 122, while Kamarahaty remained very steady at Rs 187.

Coal shares failed to evoke interest. Except East Indian which forged ahead to Rs 51.37 from Rs 49.62 due to expansion prospects, prices of other shares tended to ease slightly from last levels. Burrakur were on offer at Rs 18.31 against Rs 18.75, while Western Bengal changed hands at Rs 10.69 to Rs 11.06 and Central India at Rs 11.69 to Rs 11.87.

Tea shares, too, made indifferent performance and values drifted lower due to the auction reports not being very encouraging. Eas tCachar were quoted at Rs 3.56; Bormah Jan at Rs 16.12; Telojian at Rs 27.75 and Tezporé at Rs 18.31.

Textile shares displayed an easier tendency on the fear that the profits of the mills for the current year might be lower than in 1961 in view of the difficult conditions facing the industry and the lower advices from the piecegoods market. Elgins were on offer at Rs 20.25 to Rs 20.31 against Rs 20.37; Cawtex at Rs 7.69 against Rs 7.75; J. K. Rayon at Rs 19.62 against Rs 20 and Bowreah at Rs 27.50 against Rs 27.75.

Except for some enquiry in Cawnpore up to Rs 13.31 and SKG upto Rs 8.75, Sugar shares were practically neglected on reports of a proposal by the Government to link sugarcane prices to recovery percentage for the coming crushing season.

After displaying a firmer tendency under the lead of Indian Irons, Engineering shares were subjected to sizable profit-taking towards the close following the reports of the possible delay in the announcement of steel retention prices. After starting steady at Rs 25.80 and advancing to Rs 26.16, Indian Irons receded at one time to Rs 25.90 before finishing the week at Rs 25.92. In sympathy, TEXMACO moved upto Rs 25.05 from Rs 24.65; Guest, Keen, Williams to Rs 40.19 from Rs 39.81 and Jessop to Rs 23.87 from Rs 23.69, to recede towards the close to Rs 24.65; Rs 39.69 and Rs 23.62 respectively. J. K. Steel met with business at Rs 18.50 to Rs 18.81; Jay Engineering at Rs 27.87 to Rs 28.37 and Braithwaite at Rs 35.50 to Rs 35.75.

In the Miscellaneous section, there was a good deal of activity in Paper shares early in the week on expectation of an increase in the price of paper. But, when the actual announcement was made, there was a reaction on the feeling that the increase in the selling price, sanctioned by the Government, was below expectations. Prices in other counters moved in sympathy with the general trend of the market. Figures shown within brackets were the closing rates for the week.

Following were the price trends of a few selected shares:

	Week's High	Week's Low	Week's Closing
Paper Shares			
Rs			
Orient	43.70	42.60	42.65

MADRAS

DULL conditions prevailed on the Madras Stock Exchange with more sellers than buyers. Banks remained colorless while there were no notable transactions in electrical shares. Thin dealings were seen in plantings and an easier tone prevailed in textiles. Small buyings were reported in Indian Aluminium and other chemical shares in the miscellaneous section.

Banks: A few shares were sold in Indian Bank at Rs 176.00. Indian Overseas was at Rs 164.50. Pandyan Bank was at Rs 25.00, and the Punjab National was quoted at Rs 20.25.

Electrics: Cochin State went down to Rs 11.80. Ellore was at Rs 2.90. Karaikkal was quoted at Rs 9.50. Kumbakonam was at Rs 11.85. Salem Erode was at Rs 14.90. Tinnevely-Tuticorin was quoted at Rs 13.25.

Sugars: Andhra was at Rs 21.00. Cauvery improved to Rs 702.00. Deccan was bought at Rs 9.95. Mysore was at Rs 53.40 and Travancore was at Rs 7.35.

Plantings: Blue Mountain remained at Rs 2.40. Cochin Malabar was available at Rs 7.00. Consolidated Coffee was sold at Rs 18.45. Haileyburia was at Rs 13.12. Coorg was at Rs 4.95. Kalasa was quoted at Rs 3.52. Peermade was at Rs 20.30. United Nilgiri was at Rs 20.37. Kailas Rubber was at Rs 5.00. Malankar was quoted at Rs 16.90. Nilambur was at Rs 14.50. Rajagiri was available at Rs 22.00. Travancore was at Rs 11.41. Oucherlony was at Rs 3.65. Periakaramalai was at Rs 3.26.

Kalpetta was at Rs 11.90. T. R. & Tea was marked at Rs 10.95. Tropical was at Rs 18.75. Kil Kotagiri was available at Rs 4.92. Nilgiri was at Rs 9.10. Waterfall was at Rs 2.20.

In the Coffee shares Coffee Lands was marked at Rs 15.25. Rajendra was quoted at Rs 11.12. Sangameshwar was at Rs 1.53. Savamalai was at Rs 3.20. Swinton was at Rs 2.82 and Wartyhully at Rs 2.73.

Textiles: Buckingham declined by a rupee and sold at Rs 265. Bangalore Woollen was at Rs 245.00.

Coimbatore Cotton was at Rs 186.00. Lakshmi was at Rs 157 and Madura at Rs 36.00. Mettur was quoted at Rs 400.00. Rajalakshmi was at Rs 93.00. Ranga Vilas was at Rs 50.00. South India Viscos was at Rs 170.50. Travancore Rayons was quoted at Rs 38.50. Vasanta was at Rs 168.60. Vijayeswari was at Rs 124.00.

Miscellaneous: In Cements, Andhra was quoted at Rs 9.70; Madras was at Rs 89.00; Travancore was at Rs 8.56. In the Engineering section, Indian Steel Rolling was at Rs 12.20. Southern Structural was quoted at Rs 11.25. Aluminium Industries was at Rs 24.00. Ashok Leyland was quoted at Rs 8.45. India Cement was at Rs 6.20. Mettur Chemicals was at Rs 13.05. FACTs was quoted at Rs 8.20. Travancore Chemicals was available at Rs 24.50. Seshasayee Paper was at Rs 8.05. Standard Motor was quoted at Rs 16.62. Madras Parrys Confectionery was at Rs 5.16. Seshasayee Industries was at Rs 10.10. Spencer was quoted at Rs 23.25. Rallis was at Rs 141.50. W. I. Plywoods was at Rs 197.00.

Mineral Production During February

General Increase Recorded.

The value of mineral production in India during February, 1962 was Rs 144.8 million, indicating an increase of Rs 0.5 million over the previous month, according to the statistical summary of mineral production released by the Indian Bureau of Mines.

Coal, which is the leading commodity, accounted for Rs 102 million or 71 per cent of the total value of mineral production during the month. Next in the order of value were iron ore (Rs 9.5 million), limestone (Rs 7.1 million), manganese ore (Rs 5.7 million), gold (Rs 5.4 million), salt (Rs 5.2 million) and mica (Rs 2.3 million).

METALLIC MINERALS

The share of metallic minerals in the total value of mineral production was Rs 24.5 million or 17 per cent. Of this the ferrous group of mineral contributed 11 per cent and the non-ferrous group 6 per cent.

Among the metallic minerals the output of iron ore, gold and lead and zinc concentrates was substantially higher.

The output of iron ore was 1,225,000 metric tons which was higher by 58,000 metric tons compared to the output in the preceding month. This was also the highest monthly output recorded to far.

The production of manganese ore was 99,000 metric tons during the month. A total of 41,000 metric tons of manganese ore was despatched for domestic consumption while the despatches for export totalled 36,000 metric tons.

Among the non-ferrous group of minerals, the output of copper ore during the month was 35,637 metric tons and that of bauxite 43,806 metric tons. Production of lead and zinc concentrates registered a substantial increase as a result of higher metal content of the ore.

There was also an increase in the output of gold from 419 kilograms in January to 442 kilograms in February, 1962. The output of silver during the month under review was 384 kilograms.

Non-metallic minerals accounted for Rs 18 million or 13 per cent of the total value of mineral output during the month. This was higher, by Rs 8 million than the value of output in the preceding month.

The output of dolomite at 70,000 metric tons exceeded the previous month's output by 7,000 metric tons. There was also a substantial increase in the production of gypsum from 78,000 metric tons in January to 90,000 metric tons in February, 1962.

The output of salt recorded a steep rise from 85,000 metric tons in January to 177,000 metric tons in February. Among the other non-metallic minerals there was increased production of apatite, barytes, chinaclay and feldspar during the month under review.

A solvent extraction device to speed production methods for the preparation of purified uranium for advanced types of nuclear reactors, has been designed by a chemical engineer at the Bradford Institute of Technology, Northern England.

Dr Carl Hanson, senior lecturer in chemical engineering, says that his device known as a "mixer-settler", could have important applications not only in nuclear power programmes but also in metallurgy and in the field of anti-biotics manufacture, where solvent extraction processes are used.

The device, like a goldfish tank, accommodates 100 times greater production capacity than conventional types of geometrically-limited uranium purifiers. It circulates the fluids by an arrangement of baffles, pumps, and settling chambers which ensure that the critical depth of about 2 in. is never exceeded during the process. A purity of 99.9 per cent should be possible, and this is comparable to that of existing plant.

STATE BANK OF INDIA

NOTICE

In pursuance of Regulation 40(1) of the State Bank of India General Regulations, 1955, it is hereby notified that Shri Vinod Vrajilal Parekh of 29, Park Mansions, Park Street, Calcutta 16, being the only person validly nominated for election shall be deemed to be elected as a Member of the Calcutta Local Board of the State Bank of India on the 11th July 1962, with effect on and from the 12th July 1962, and that the Local Meeting of shareholders which was to be held on Wednesday, the 11th July 1962, in terms of the Bank's Notice of the 30th May 1962, solely for the purpose of the aforesaid election, stands cancelled.

B. K. KACKER

Secretary,

Calcutta Local Board,
Calcutta, 27th June 1962.

The wise motorist says

"Don't use the clutch as a foot-rest"

After changing gear remove your foot completely from the clutch. The lazy driver is a wasteful driver. Constant pressure on the clutch means more strain on the engine, more petrol consumed. It wears out the clutch plate and shoots up motoring costs.

For further details on how to increase your fuel economy, ask your nearest Burmah-Shell dealer for our leaflet "For more kilometres per litre"

1962-63 BUDGET

Supplement

Rugged hands on the plough of steel—steel biting the earth in furrows straight and deep—steel is preparing the land for the seed. Primitive? Primitive his method may be, but it has the new touch of steel—Steel which has replaced the old wooden plough and is helping him to get a better yield for a little less labour. Soon, he will have the surging power of tractor to work for him; soon his land will be yielding a harvest, more abundant than ever before. Soon all this will be his and ours, as there is a little more steel for each of us. Towards this end, IISCO is working—for more steel to help you and you and you—in serving you we help the Nation and that is our privilege.

Budget and Plan Objectives

Defending in advance his fresh taxation proposals, Mr Morarji Desai said 'Taxation policy no longer serves the sole objective of raising resources for the exchequer. In a planned economy, it must also serve the wider objective of augmenting savings, promoting exports, of bringing about a better balance between supply and demand of individual commodities and indeed of social justice in distributing the rewards and sacrifices implicit in planned progress'. These principles have been commonplaces of public finance for so long now that they are part of the fiscal orthodoxy of our time. They provide the frame of reference by which to judge his proposals.

RESOURCES FOR THE PUBLIC SECTOR

First about the budget's success in raising the resources for the exchequer. It will be generally agreed that the budget has succeeded even beyond the legitimate limits in this admittedly not sole objective. Mr Morarji Desai himself stated that with the fresh taxation proposals for the budget year together with the fresh taxes levied last year, roughly 75 per cent of the fresh tax effort for the Third Plan would have been completed. Many consider this an underestimate and say that the whole of Rs 1,100 crores that the Centre has to find for the Third Plan by fresh taxes would be found and there is no need for further taxes in the coming years. This may well be so. The notorious underestimate of revenue that has been the feature of the budgeting of the past decade has in effect extorted from the people more than what they were conditioned to yielding up. It has been computed that for the decade of 1950-60, there has been roughly an annual underestimate of about Rs 50 crores. For 1960-61 for which accounts are available, the surplus on revenue account is put at Rs 51.25 crores as against the budgeted deficit of Rs 60.70 crores. The revised estimates for 1961-62 put the results of the revenue account a surplus of Rs 34 crores as against the deficit of Rs 6 crores originally budgeted for.

WIDE VARIATIONS

These wide variations have been found very convenient because of the inexorable pressure of non-developmental expenditure. In its 92nd report, the Estimates Committee of Parliament computed that Rs 604 crores of additional revenue raised has been absorbed by increases over the plan estimates of non-plan expenditure. This comes to roughly 40 per cent of revenue raised by taxation for the Second Plan, and if correct, would imply a shocking percentage of illegitimate diversion. The estimates of expenditure contained for the two years of the Third Plan in the budget papers show that the non-developmental expenditure is increasing apace. Net defence expenditure has grown from Rs 171 crores in 1951-52 to Rs 248 crores in 1960-61 and is estimated to go upto Rs 343 crores in 1962-63. In other words, it has doubled itself in slightly over a decade. There are reasons for this increase with which we cannot legitimately quarrel, but it is clear that where at least a part of the taxes raised in the name of Plan

goes. Administrative expenditure has gone up from Rs 24 crores in 1951-52 to Rs 58 crores in 1960-61 and is expected to go upto Rs 70 crores 1962-63. Included herein is a head described as general administration whose cost has gone up from Rs 8 crores in 1951-52 to Rs 14 crores in 1960-61 and is expected to go upto Rs 18 crores in 1962-63. Some inevitable increases in these expenditures are attributable to the Plan but it is clear that there should be a closer examination of these items for possible economies.

It is interesting to note that the expenditure on plan projects from revenue accounts is put at Rs 191 crores only and this amount includes certain grant-in-aid to the States. Of course, there are other items in the total revenue of Rs 1,382 crores that directly or indirectly go to finance the Plan—the diversion of States' share of taxes in terms of the Finance Commission's recommendations, for instance, not to mention the debt servicing charges,—but the above figure gives a measure of the exiguous trickle that directly reaches the Plan.

POOR PERFORMANCE OF STATES

As table IV on page two will show, quite a substantial part of the taxes raised is transferred to the States not all of which percolate to the Plan. Total resources to be transferred to the States amount to Rs 904 crores (of which Rs 420 crores are from revenue account) for the budget year 1962-63. This is to be compared with the total resources transferred to States in 1956-57 of Rs 373 crores of which Rs 147 crores were from revenue account. The increasing dependence of the States on the Centre is only too painfully obvious, though the share of taxes and duties amounting in the budget year to Rs 208 crores may be considered by the States as belonging to them as of right. But as Mr Morarji Desai pointed out in his budget speech, the States are not doing enough to raise the resources that they are under commitment to raise under the Plan. Out of the total of Rs 610 crores that the States have to find by way of additional taxation, they have not probably found not more than Rs 100 crores for the whole of the Plan period. The strain that this imposes on the Centre on which the ultimate burden is thrust by a variety of cajolery and blackmail may well be unbearable. If Central taxation is to become bearable, the States will have to get down to the task of taxing the largely untaxed rural areas.

PROMOTING SAVINGS

The second guiding principle the Finance Minister formulated for himself in framing the budget proposals is the promotion of savings. Obviously, he has the whole economy in view and is thinking both of voluntary and involuntary savings. Involuntary savings are taken care of by taxes and their augmentation has already been partly discussed. As regards voluntary savings, for use by the public sector in the form of market loans and small savings, the Finance Minister's expectations seem to be very modest indeed.

equity capital makes economic power more "wide-based." It is inconsistent with this profession to seek to place long term capital losses at a more disadvantageous position compared to short term capital losses. One of the most powerful arguments in favour of a capital gains tax is that it provides a fiscal disincentive to persons who wish to make quick money by exchange of capital assets at frequent intervals and who "play" the market. And that is the reason why short term capital gains are taxed more heavily than long term capital gains in most countries and the custom of "maturing the stock" is practised to reduce the tax burden. That being the position, the placing at a disadvantage of losses on a transfer of long term capital asset, (which by its nature is more likely to be one held as investment than as a speculative purchase) is particularly inconsistent with the rest of the scheme of capital gains taxation.

The same remarks apply to the carry forward provisions. Carry-forward right is denied to long term capital loss while being allowed to short term capital loss. Here again, a stray change of long term investment resulting in a loss will not get the right of carry forward (nor of set off in the same year) whereas more frequent changes of investments resulting in a loss will get the benefit of set off against short term capital gains of a subsequent year. This is to encourage the speculator. Finally, the denial of carry forward rights to capital losses already incurred except to the extent they are losses on transfer of short term capital assets is inequitable and completely indefensible. Denial of rights that have accrued under existing enactments by subsequent legislation is odious legislative practice and it is quite probable that this particular provision will be successfully assailed in courts.

Railway Budget

SARDAR SWARAN SINGH'S proposals to augment Railways' resources could not have come as a surprise after the interim Railway Budget presented to Parliament last month by his predecessor, Mr Jagjivan Ram. The tentative estimates showed a net surplus of Rs 13.16 crores for credit to the Railway Development Fund while the expenditure on works chargeable to the Fund in 1962-63 amounted to as much as Rs 23 crores, with the result that a temporary loan of Rs 9.88 crores from the General Revenues became unavoidable. The position has since changed for the estimate of the working expenses for the budget year has increased by Rs 12.20 crores as a consequence of the recent decision of the Government to enhance the dearness allowance for lower-paid Central Government employees with retrospective effect from 1 November 1961. The increase in expenditure will almost wipe out the anticipated surplus in the interim budget and ways and means have to be devised to find about Rs 23 crores to replenish the Railway Development Fund.

The new proposals for increasing revenue envisage enhancement of freights and fares. There will be an increase in the basic freight rate for all goods traffic, excepting railway materials, postal, military and export manganese ore traffic, by 50 nP per tonne carried up to 40 kilometres and by one rupee per tonne beyond 80 kilometres with suitable adjustments for intervening distances. There will be an increase in passenger fares in the first class by approximately 15 per cent and in the second and third class by a little below 10 per

RAILWAY BUDGET AT A GLANCE

(b) In lieu of passenger fare tax	...	12.50	12.50	12.50
Net Surplus	32.01	16.48	13.16	23.22

†As presented in March, 1962.

‡As now anticipated.

*The increased gross traffic receipts from 1961-62 onwards include the element of passenger fare tax merged in railway fares from 1 April, 1961 against which a payment of Rs. 12.50 crores is to be made by the Railways annually to the General Exchequer, during the quinquennium 1961-66, for transfer to the States.

cent. In the case of foodgrains the increase in freight of one rupee per tonne will apply only beyond 160 kilometres. The increase in freight is in addition to the existing supplementary charge of five per cent. Sardar Swaran Singh has pointed out in his speech that the proposed increase in freight would in no case exceed 105 nP per tonne whatever the commodity and the distance.

The proposed increase in goods freight rates and passenger fares are expected to yield an additional revenue of Rs 21.26 crores during the Budget year. The estimated gross traffic receipts are thus now placed at Rs 545.36 crores. The estimated ordinary working expense including payment on account of increased dearness allowance is put at Rs 356.94 crores. Miscellaneous expenditure and appropriation to Depreciation Reserve Fund from Revenue will absorb Rs 16.35 crores and Rs 67 crores respectively. There will thus be left a net railway revenue of Rs 105.07 crores. Out of this payment to General revenue has to be provided for dividend on Railway capital at charge of Rs 69.35 crores and Rs 12.50 crores in lieu of passenger fare tax. The surplus available amount to Rs 23.22 crores as against Rs 13.16 crores estimated by the interim budget. The estimated surplus will thus be able to take care of the expenditure of Rs 23 crores on works chargeable to the Development Fund.

With a mounting deficit the Railway Minister had no real alternative to an increase in rates. In extenuation, he can rely on two factors. The first is that both the freight and passenger fares have not risen commensurate with the increase in the cost of working of the Railways, during the past several years. As far as freight is concerned, the previous increase was in 1958 and a surcharge of five per cent was levied from April 1960. Passenger fares as such have not been increased since April 1951, though a passenger fares tax was imposed in September 1957 and this was subsequently merged with the fares since April 1961. The merger of the passenger tax with fares has not made any material difference to the Railways' earnings since an annual sum of Rs 12.5 crores is to be transferred to General Revenues for payment to the States in lieu of tax all through the Third Five Year Plan period. Secondly, he can also

draw support from the Railway Freight Structure Enquiry Committee which had recommended that Railways should raise additional revenue through increased freight rates to meet their growing expenditure. Sardar Swaran Singh has shown that between 1957 and 1962 (including the increases now proposed by him) the total increase is well below the level of 12.9 per cent of the earnings recommended by the Committee.

While one sympathises with the Railway Minister's dilemma, it is not easy to acquiesce wholly in the manner in which he has set about raising the additional revenue. Sardar Swaran Singh himself admits that "the passenger fare tax levied since September 1957 and merged in the Railway fares on 1 April 1961 though not accruing to the Railways, nevertheless has had the effect of increasing the incidence of burden to the railway passengers on the average by about 10 per cent".

In the light of this, the statement that passenger fares have remained frozen since April 1951 is true only in a special sense. Such accounting quibbles may save the Railway Minister's conscience, but the passengers who have to pay more within five years of the latest increase are not amused.

The reasoning of the Railway Minister in respect of the increase of 4 per cent in freight rate, is, however, more convincing. As already stated, the cumulative effect of the increase so far effected including the proposed increase will be well below the rate that had been recommended by the Railway Freight Structure Enquiry Committee. The flat rate increase which will now spread over almost all commodities is said to be the first step towards narrowing down the existing gap between the lowest and highest freights. This would suggest that further such steps may be taken in coming years. The stiffer increase on short distance traffic may encourage road traffic and reduce the pressure on railways. One drawback, however, in the flat rate increase is that low-rated goods will feel the pinch more than other goods traffic. In the context of the need for furthering export promotion, freight concessions for other commodities besides manganese ore intended for export would have been an appropriate gesture.

External Resources, a Major Limiting Factor

Importance of Small Savings Movement

Need For Increasing Export Earnings

Part "A" of Mr Morarji Desai's Budget Speech

Sir,

A little over a month ago, I had presented in the last Session of the Second Lok Sabha the statement of the estimated receipts and expenditure of the Government of India for the year 1962-63 and obtained a vote on account. Today I rise to request this House to consider and approve these estimates, with a few small variations which I shall explain later, for the year as a whole.

2. When presenting the interim Budget I had reviewed the economic conditions in the year 1961-62. I had referred to the sizable increases in production, both industrial and agricultural, the restoration of a measure of stability in the price level, the favourable trends in external aid for the fulfilment of our plan as well as the seriousness of our foreign exchange situation. It is not my intention to cover the same ground again as there is relatively little that is new which I can add to what I said in my Budget Speech last month and to what has been stated more fully in the Economic Survey, both of which are being circulated with the budget papers today.

3. For more than a decade now, economic policy in the country has been geared to the implementation of successive Five-Year Plans of development. In retrospect, the First Five-Year Plan seems to have been a modest affair, but it laid the foundation of further effort. We launched on a bigger and bolder programme in our Second Plan with its emphasis on the development of basic and heavy industries. Though we faced many difficulties—particularly foreign exchange difficulties—in its implementation, there is no doubt that the Indian economy has emerged greatly strengthened by it. Indeed, the success of our efforts seems to have led to a world-wide recognition of the value of planning as an instrument for the uplift of the less-developed countries.

4. Our Third Plan, which was launched a year ago, aims at raising our national income in real terms by some 30 per cent over the five years. It also has to take us appreciably closer to the objective of a self-generating economy

which can continue to develop at a satisfactory rate without external aid. The Plan envisages an outlay of Rs 7500 crores in the public sector. This figure is about two-thirds higher than the corresponding one for the Second Plan. The total investment of Rs 10,400 crores that we seek to achieve during the Third Plan equals the actual investment undertaken during the first two Plan periods put together. Even with this increase in the size of our Plan, we are unable to accommodate all the legitimate aspirations of our people for more schools and roads, for more power and drinking water, for more transport and employment opportunities. Many worthwhile and desirable projects, both public and private, cannot be taken up because we could not make provision for them in our Plan for lack of resources. It is, therefore, of the greatest importance that we should do everything possible to mobilise and harness the resources which will help us to reach the goals that we, as a nation, have set for ourselves.

5. The most critical shortage which we face and which operates as a major limiting factor in everything that we do is of external resources. The Economic Survey has dwelt at length on our difficult foreign exchange position during the first year of the Third Plan. Despite the availability of substantial external assistance and the assurance of aid to cover a large part of our project requirements, the ways and means position in regard to foreign exchange remains acutely difficult. Our foreign exchange reserves have declined to very low levels and the need for conserving foreign exchange by the strictest watch on imports and by limiting our demands within the resources in sight is greater than ever today. Beyond a point, however, economy in imports of essential requirements becomes self-defeating in that it inhibits domestic production, raises prices, and in consequence, leads to a fall in exports. Further, shortages in the key sectors cannot but weaken and slow down our plan.

6. The assistance which we receive from friendly countries and

institutions is therefore of critical importance. At the same time, without belittling in any way the value of this assistance, we must recognise that ultimately it is only through increasing our exports that we can find the external resources for our development and for repaying the loans and credits which we receive. I shall later outline some of the fiscal measures which I propose to adopt to help our exports.

7. It is important to remember that increased exports and economy in imports which are necessary in view of our foreign exchange situation must mean a restraint in domestic consumption is implicit in our effort to step up investment to substantially higher levels than we have achieved in the past. In

the ultimate analysis, it is not money, but men and materials which pay for a Plan. The resources we need may be measured and expressed in terms of money, but they represent in reality the extent to which we can employ current production for increasing our productive capacity in the future rather than for meeting the needs of current consumption.

8. Thus, our effort to provide resources for the Plan, the exports to earn the foreign exchange and the saving to provide the investment, inevitably lead to a measure of restraint in current consumption. We can achieve it somewhat painlessly through voluntary savings. We can do it with a certain sense of social obligation through taxes. Or we can bring

BOMBAY, DELHI, MADRAS, KANPUR, KOTTAYAM.

it about through an inflationary rise in prices which hurts the common man and benefits only the speculators and profiteers.

9. All savings strengthen our Plan, whether they are large or small, whether they are put in banks, or in insurance policies, or in Government securities, or in our Small Savings Schemes, or in Provident Funds. If the volume of savings is adequate, the task of ensuring that they are allocated between different sectors and fields of development according to the priorities in our Plan should not be too difficult. By controlling non-Plan investment, as well as through proper fiscal and other policies, we can channel the flow of savings into the public sector

and the private sector, into industry and agriculture, into transport and power, into education and health, according to the priorities and allocations in the Plan. The important thing, however, is to raise the level of savings in the country to an adequate level.

10. The banking system has an important role to play in this. A couple of years ago, there had been signs of a lack of confidence, particularly in some of the smaller banks. I am happy to say that as a result of various measures which we have taken, including the scheme of deposit insurance which came into force at the beginning of this year, our banking system stands greatly strengthened. The

Governor of the Reserve Bank, with whom I recently discussed the matter, mentioned with special satisfaction the fact that the smaller banks will, in his judgment, continue to play a useful and important role in our economy. The State Bank has been opening branches in semi-urban and rural areas. The Reserve Bank is making special efforts to facilitate the availability of credit at low rates of interest to agriculture.

11. Although considerable progress has been made in all these directions and bank deposits are steadily on the increase, the banking system does not find it too easy to meet all the demands for funds which are generated by out-

growing industries and rising levels of production. It seems to me desirable that industry in the private sector should exercise a greater measure of restraint in relying on bank finance. I say this not because I want to slow down the development of the private sector which is as much a part of our Plan as the public sector, but because private industry has available to it another source of finance which has, in the recent past, become exceedingly important. I refer to finance in the shape of equity capital. There was a time when it was difficult to get a new issue subscribed and only big commercial houses could afford to set up major enterprises. This situation is fast changing. The public at large, even people with modest incomes, are now investing in shares. This is a healthy sign which we must encourage. Government have, therefore been encouraging existing companies, which wish to branch into new lines of production, to start new companies. Further, in the floatation of new companies, there should be the maximum opportunity for public participation. It seems also desirable that new companies should aim at raising a larger proportion of the capital they need through equity shares, rather than by loans, as they did in the past. The pursuit of these policies will mean that the ownership of private industry will become more widebased and the concentration of economic power will be reduced.

12. The banking system also provides finance to the public sector. Apart from the investments which it makes in Government securities public sector undertakings draw upon the banks to meet their requirements of working capital. Life insurance like banking is yet another source of finance for our development. The Life Insurance Corporation is a major investor in Government securities. It also contributes to the development in the private sector. It is making special efforts to popularise insurance in the rural areas through its Janata Scheme and is using Panchayats and Co-operative Societies in order to spread insurance in the villages.

13. In the effort to mobilise savings for the public sector, I attach the greatest importance to the Small Savings movement. During the Second Plan period, the net collections from small savings, including Prize Bonds, amounted to nearly Rs. 415 crores, which was roughly 9 per cent of the total outlay in the public sector in the Second Plan. The Third Plan target for net collections from small savings is Rs 600 crores. We had, accordingly, budgeted last year for a net collection of Rs. 105 crores from small savings. But judging from the progress of collections during the year, the revised estimates presented last month...

Rs 95 crores and I would not rule out the possibility of actuals being even lower. Clearly, we shall have to redouble our efforts to make the Small Savings Scheme a success, particularly in the rural areas. I would invite the co-operation of every Member of this House in this great task.

14. The Government must, of course, for its part, do a great deal too. We have to improve our selling arrangements as well as service to the small saver. We must devise new schemes to suit his needs. This is engaging my urgent attention at the moment. I can make one announcement straightaway. At present, contributions to Provident Fund and to life insurance policies are, within certain limits, eligible for a rebate in income-tax. However, for those who are not salaried workers or wage-earners, there is no scheme of Provident Fund. The opportunity for life insurance is also subject to medical checks. To make available some kind of an arrangement analogous to a Provident Fund for people who are self-employed and not salaried workers, I propose to extend and modify the Cumulative Time Deposit Scheme run by the Post Offices. At present monthly deposits can be made under the scheme for a period of 5 or 10 years. We shall now introduce, in addition, a 15-year account with a maximum monthly deposit limit of Rs. 300. The existing limit of a maximum monthly deposit in a 10-year account will also be raised from Rs. 100 to Rs. 200 per month. At the same time, the contributions made to the 10 and 15 years accounts will be allowed to earn a rebate of income-tax as in the case of life insurance premia and contributions to recognised Provident Funds and subject to the same limits.

15. The Third Five-Year Plan lays considerable emphasis on realising adequate surpluses from public enterprises and envisages a contribution of Rs. 450 crores from this source in addition to the sum of Rs. 100 crores to be raised by the Railways. We must get an adequate return on the vast amount of capital we are investing in our railways, power plants, irrigation works, fertiliser plants, steel plants and the like. By making past investments pay for future investments, the rate of economic growth can be accelerated. This is the experience of all countries irrespective of whether they rely mainly on the public or the private sector for development. The private sector in India is already relying to a considerable extent, on the ploughing back of the profits and savings in the corporate sector for its expansion. The public sector must do the same if it is to play an increasing role in the development of our economy. This means not only efficient and economical operation of

policy of charging a proper fee or price for the services and products supplied by the public sector. Betterment levies, water rates, electricity charges, railway freights and the like cannot be determined on the philosophy of 'no profit and no loss', but on the consideration that all these services and facilities need to be enlarged and their users must pay more for these things today in order that there may be plenty of them tomorrow and the day after. Our price policy must ensure that investment in key and basic industries earns a good enough return to make higher investment possible. Situations may, of course, arise in which a certain industry or a service needs to be subsidised. But even subsidies can only be given out of surpluses arising somewhere else. Whenever we accept the need for a subsidy at any one place, we should remember that it will call for bigger surpluses elsewhere.

16. I should now like to give an account of the budget estimates for 1962-63.

17. In the budget presented on 14th March, 1962, the revenue receipts were estimated at Rs 1305.87 crores and expenditure at Rs 1369.33 crores, leaving a deficit on revenue account of Rs 63.46 crores. As a result of the changes that have since been made, the revenue deficit, on the basis of existing taxation, is now estimated to go down to Rs 60.78 crores.

18. I should now like to explain briefly some of the important variations.

19. Apart from the changes which are really a regrouping of certain Demands for grants following the recent reorganisation of certain Ministries and which have been referred to in the Explanatory Memorandum, there are five items which account for an increase in the estimates of reve-

nue expenditure. The largest of these is on account of the increase in dearness allowance. The last Pay Commission had recommended that whenever the working class consumer price index remained, on an average, 10 points above 115 for a period of 12 months, Government should review the question of increasing the dearness allowance. As this condition was satisfied during the period November 1960 to October 1961, it has been decided to increase the dearness allowance of employees drawing basic pay below Rs 400 per month. The increase will range between Rs 5 and Rs 10 with suitable marginal adjustments and will be given with retrospective effect from 1st November 1961. As this decision was taken only a few days ago, it has not been possible to work out the additional requirements under each Demand. Accordingly, a lump provision of Rs 7.38 crores has been included as a miscella-

**Scindia's
Fast
Cargo Service**

In recent years we have expanded our cargo service to cover the major ports of the world. We are thus enabled to offer importers and exporters throughout the world a fast and frequent service which is backed by a world-wide organization.

COMPLETE SHIP REPAIRS

FOR OVER HALF A CENTURY

The site of Garden Reach Workshops covers an area of 64 acres with half a mile of river frontage, slipway and dry-dock facilities suitable for inland water craft up to 2,000 tons and building berths for shallow-draft vessels up to 1,200 tons launching weight.

SHIPREPAIRS:

Garden Reach Workshops have provided complete ship repair facilities at Calcutta for over fifty years and during the year ended 31-3-1961 handled a daily average of 30 Ocean-going vessels.

SHIPBUILDING:

Garden Reach Workshops have a wide range of Shipbuilding activities and specialise in the Designing and Construction of shallow-draft vessels including Harbour Tugs, Light Naval Craft, River Steamers, Flats, Water Boats, Barges, Pontoons and Whalers etc.

ENGINEERING:

The Company manufactures—among other things—Wharf Cranes, Light/Heavy E.O.T. Cranes, Industrial Furnaces, Colliery Haulages, Turbine Pumps, Electric Motors, Stators and Rotors, Switches, Vitreous-Enamelled Products, Car Hoists, Ferrous and Non-Ferrous Foundry Products. Where necessary the Company collaborates with renowned foreign firms in the U.K., W. Germany, U.S.A. and Japan.

FACILITIES:

Other established activities include complete Electrical,

Air-Conditioning and Refrigeration Contracting, Testing of Chains, Blocks and Wire Ropes, Saw-Mill and Timber processing, Steel, Lead and Copper Sheet Fabrication. All types of Joinery and Carpentry work is also undertaken.

FOREIGN EXCHANGE EARNED AND CONSERVED:

Total Foreign Exchange earned and saved in the year ended 31-3-1961 was over Rs. 2½ crores. Earnings on repairs to Foreign-owned ships totalled Rs. 55 lakhs. Savings on repairs to Indian owned ships and on other engineering activities totalled over Rs. 2 crores.

neous item in a single Demand which will be surrendered at the end of the year and the Ministries will be expected to go in for supplementary grants, to the extent necessary, during the course of the year.

20. I have already referred to the importance of increasing our export earnings. The promotion of sales abroad is a costly business. Apart from the expenditure on staff which Government employ, both at home and abroad, for this purpose and the money which they spend on participation in fairs and exhibitions abroad, industry itself must spend a great deal more for this purpose, and be prepared occasionally to incur a loss. In deserving cases it may be necessary for Government to provide financial assistance to industries when they are in no posi-

tion to carry the whole burden of promotion themselves. It may also be necessary to make grants to organisations set up by Government or industry for promoting exports. I am, therefore, providing a sum of Rs. 1 crore for export promotion and development.

21. The Government of India have been examining for some time now the difficulties experienced by industries located at great distances from the coal fields—more particularly industries in the southern and western regions—in obtaining adequate supplies of coal. In addition to the measures already taken for stepping up the movement of coal by sea to these regions, we have now decided to make available additional import of furnace oil, to the extent possible, with our limited foreign exchange resources. To facili-

tate the use of furnace oil by industries located at some distance from the ports, we propose to make a reduction in the cost of transport of the furnace oil from the ports to the points of consumption. The arrangement briefly will be that in accepting consignments of furnace oil from various ports, the railways will recover from the consignor or the consignee, as the case may be, only half the freight charges which are leviable in accordance with the normal tariff rates in force at the time of booking, subject, however, to the net minimum charge in force at present. The difference between the amount recovered from the consignor or the consignee and the full freight applicable will be made good to the railways by a subsidy. A provision of Rs 25 lakhs is being made for this purpose.

22. An additional provision of Rs. 99 lakhs has been made to accommodate the proposals approved after the earlier estimates were framed mainly for the purchase of stores and equipment required by the Survey of India.

23. Lastly, the estimates of Defence Services show an increase of Rs. 2.7 crores on account of the decision to revise the pay scales of Services Officers with retrospective effect from 1st April, 1960.

24. As against this increase in estimates of revenue expenditure, I propose to transfer Rs. 15 crores from the profits on coinage operations outstanding under suspense. Prior to 1956-57, the net profit on coins put into circulation, representing the difference between their face value and the cost of their metallic content, was kept under a suspense head, the transfer to revenue being limited to the net expenditure in the year on the running of Mints plus a stabilised credit of Rs. 45 lakhs. This arrangement was revised in consultation with the Comptroller and Auditor-General and with effect from 1956-57, the actual profits on coinage and loss on destruction of uncurrent coins are adjusted directly as revenue or expenditure. The amount outstanding under the suspense head was intended to be utilised as a deficit neutralisation reserve and accordingly, a sum of Rs. 10 crores was transferred to revenue in each of the years 1959-60 and 1960-61. The balance at credit under the suspense head at present is a little over Rs. 47 crores and I feel it would be reasonable to transfer Rs. 15 crores from the suspense head to revenue receipts. After taking this transfer into account, the revenue deficit will go down by Rs. 2.68 crores.

25. On Capital account, the estimates presented last month provided for an expenditure of Rs. 1188 crores for Capital expenditure, including loans to State Governments and other parties. The loan requirements of Hindustan Aircraft Limited have since been reduced from Rs. 2.5 crores to Rs. 1 crore, but this saving will be offset by an increase of Rs. 1.5 crores in the Defence Capital Outlay. In addition, a sum of Rs. 95 lakhs is required for the purchase of bonds of the value of 2 million dollars to be floated by the United Nations Organisation. The original estimates had provided for a loan of Rs. 9.88 crores to the Railway Development Fund from the General Revenues which the Railways would not now be requiring. After taking into account the effect of the transfer of profits on coinage, the Capital budget will show a deterioration of Rs. 6.07 crores which will be counterbalanced to the extent of Rs 2.68 crores by the improvement in the Revenue budget. In the net, the overall deficit will increase from Rs. 147 crores estimated last month to Rs 150 crores.

Wider Objectives of Taxation Policy

Increase In Level of Corporation Tax

Expenditure Tax Abolished: Wealth Tax Increased

Part "B" of Mr Morarji Desai's Budget Speech

26. I come now to my taxation proposals. Before I refer to them, may I repeat what I have stressed from time to time that taxation policy no longer serves the sole objective of raising resources for the exchequer. In a planned economy, it must also serve the wider objectives of augmenting savings, promoting exports, of bringing about a better balance between the supply and demand for individual commodities and indeed of social justice in distributing the rewards and sacrifices implicit in planned progress. Further, all these objectives have to be reconciled with an eye not only to the immediate future, but also to the long-term perspective we have kept before ourselves. No less important a consideration is that the administration of the tax laws should cause the minimum of vexation both to the tax payer and to the tax collector and one thing that should not be taxed is people's patience.

CORPORATION AND INCOME TAXES

27. I shall begin with the direct taxes. I propose to increase the rate of tax on Indian companies from 45 per cent to 50 per cent while the rate of tax on foreign companies will continue at 63 per cent generally. For this purpose, the rate of income-tax applicable to all companies is being raised from 20 per cent to 25 per cent, the rates of super-tax being suitably adjusted. This will mean that the State will now get half the profits of joint stock companies as against 45 per cent in the recent past. I, however propose to exclude earnings from exports from this increase. This is necessary because profit margins on exports are relatively low and we want to give every inducement to trade and industry to sell abroad.

28. It will be necessary, with the increase in the level of corporation tax, to make some reduction in inter-corporate taxation because when one company pays a dividend to another, the same profit is liable to corporation tax twice. In the case of Indian companies, the rate including super-tax applicable to dividends received from Indian subsidiary companies registered before 1.4.1961 will continue at 30 per cent, while that on dividends received from all other Indian companies

will be reduced to 35 per cent. Indian companies in which the public are substantially interested and whose income does not exceed Rs. 25000 will continue to get a further concession of 5 per cent. In the case of foreign companies which have not made the prescribed arrangements for the declaration and payment of dividends within India, the rate applicable to dividends received from Indian subsidiary companies registered before 1.4.1961 will continue at 30 per cent; on dividends received from a non-subsidiary Indian company registered before 1.4.1959, it will be reduced from 63 per cent to 50 per cent while on dividends received from other Indian companies, it will be reduced from 40 per cent to 35 per cent. As a result of these changes, corporation tax will yield an additional revenue of Rs 10.25 crores.

29. I also propose to tighten the schedule of admissible entertainment expenses introduced last year. Though this will not bring any appreciable additional revenue I expect it to restrain conspicuous entertainment at company expense.

30. I have taken the opportunity of reviewing personal taxation of all kinds. I have come to the conclusion that while the richer sections of the community must pay more, there is room for some simplification and relief at particular points. Accordingly, it is proposed to revise the schedule of rates of income-tax and super-tax on individuals, Hindu undivided families and unregistered firms. The income-tax pavers form a relatively well to do section of the society. In a population of 443 millions, they are under a million and thus are a microscopic group. It is only natural that they should bear a share of the tax burden in keeping with this privileged position. In this context, rates of income-taxes on corresponding incomes in different countries are often compared. This is, however, not meaningful as conditions differ widely. In any case, proper comparison can only be of the incidence of total tax burden on different groups with the same relative position in each society.

31. In the revised rate structure of income and super-tax the rate at the highest slab will be 72.5 per cent exclusive of the surcharges while the rate in incomes

below Rs 5000 will remain unchanged. The intermediate slabs have been suitably adjusted to secure an even increase in rate. Honourable members will recall that various studies have stressed the fact that an intermediate and lower levels of income, our tax rates are comparatively low but in view of the limited span of income spread, they rise steeply. While this is to an extent inevitable in our circumstances, the changes I have proposed will bring about an improvement over the present position.

32. I am conscious that income-tax weighs a little more heavily on salaried classes than on others. I, therefore, propose to reduce the surcharge on income-tax on salaries, which also include pensions, from 5 per cent to 2.5 per cent leaving other surcharges unchanged. The rate at the highest slab inclusive of surcharges will be 87 per cent. It is proposed to raise the exemption limit for Provident Fund contributions and insurance premia to Rs. 10000. As I have mentioned earlier, it is also proposed to liberalise and widen Cumulative Time Deposit Scheme with the benefit of income-tax exemption which can be taken advantage of by self-employed and uninsured persons. These measures will give some relief to individuals without reducing the resources available for development.

33. It is also proposed to revise the structure of rates of tax on registered firms by reducing the limit for exemption, revising the number of slabs and the rates of tax and having higher rates for firms with five or more partners.

34. All these measures taken together are expected to yield annual revenue of a little over Rs. 15 crores.

CAPITAL GAINS.

35. Capital gains are already taxable under our Income-tax Act. The incidence is, however, restricted in the case of non-company assesses to income-tax only, calculated in the prescribed manner. In an equitable system of taxation, capital gains realised during a short period and those not so realised require to be treated differently. It is necessary to secure broad equity in the treatment of different categories of tax payers. In a number of cases, it is not possible to establish certain

incomes as arising out of business but they are nonetheless of a similar nature. Gains realised through purchase and sale of capital asset within a short period fall in this category. I have proposed the gains which result from disposal of capital assets within a period of one year from the date of acquisition shall be made subject to income-tax and super-tax like other ordinary incomes. Capital gains for assesses other than companies from assets held over a period longer than one year will be subject to income-tax at the rate of 25 per cent or at the rate applicable as if they were short term gains, whichever is less. Long term capital gains of companies will continue to be taxed at the rate of 30 per cent. This will yield a revenue of Rs 50 lakhs, half of which is expected to be realised from companies.

EXPENDITURE TAX

36. I propose to abolish the five year old Expenditure Tax with effect from the current year. When it was introduced in 1957 it was realised that it had no backing of historical experience. It was, however, hoped that the tax would be a potent instrument for restraining ostentatious expenditure and for promoting savings. While these are very desirable objectives, experience has shown that the existence of the Expenditure Tax has contributed little to them. The revenue from this source has remained conspicuously small. It has been argued that the incorporation of an Expenditure Tax in the tax structure would make the administration of income-tax a great deal more effective and would enable the rate of income-tax to be lowered suitably. Experience has no shown this to be the case. If the working of this tax had shown some promising results, it would have been worth while to continue and even extend it; but with the present experience, it is considered best not to continue a measure which, as a source of economic restraint, has been ineffective and as a source of revenue, unattractive. The basic objectives of the tax have to be achieved in other ways. This will mean a reduction in revenue of the order of Rs 70 lakhs during 1962-63.

WEALTH TAX

37. It is proposed to increase the Wealth Tax rates by .25 per

In different fields of Industry - Paper & Board, Cement, Chemicals, Fertilisers, Plywood, Asbestos-cement, Vulcanised Fibre, Sugar, Vanaspathi, Jute Fibre, Paper-making Machinery, Coal, Cycles, Railways, News-papers & Publications - Sahu Jains continue their pioneering efforts towards industrial development.

cent and .5 per cent on the two highest slabs and to revise the slab structure a little. It is also proposed to discontinue the exemption on shares held in new companies during the first five years allowed at present under the Wealth Tax Act. This is expected to yield an additional revenue of Rs 2 crores per annum.

38. The net effect of all the changes in direct taxes in a full year will be an increase of Rs 27.2 crores in our revenue.

UNION EXCISE DUTIES

39. Turning to indirect taxes, it is only natural that a major share should come from the Union Excise duties. I propose to revise the rates of excise duty on unmanufactured tobacco and cigarette price slabs.

40. I also propose to revise the general structure of duty on cotton cloth and yarn. The present rates of duty on yarn are 10 and 15 naye paise per kilogram. The incidence of this duty per metre of cloth is less on superfine cloth as compared to coarse cloth. This is not an equitable position. It is proposed to revise the yarn rates in such a way as to achieve a slight progression in the incidence of tax according to the quality of cloth, maintaining the present duty on coarse yarn at 10 naye paise. The differential of 10 naye paise per kilogram in favour of yarn issued in hanks will continue. It is also proposed to step up the duty on processing of cloth, keeping in view the improvement in quality and price of cloth as a result of processing. Operations like mercerising, shrink proofing and organdie processing substantially enhance the quality as compared to bleaching, dyeing and printing and should attract relatively higher rates of duty. With these two aspects in view and to secure that the common man has not to make anything more than a marginal adjustment in his cloth bill on coarse and medium cloth which he normally uses, it is proposed to reduce the duty on grey unbleached cotton fabrics. It is also proposed to place units with 50 or more powerlooms on the same footing as composite mills. Rates of compounded levy on powerloom units with looms from 5 to 49 are also proposed to be increased so as to graduate the increase in benefit with the reduction in size and to reduce the incentive for splitting of units. Units employing 4 looms or less will be exempt. As a result of these changes, the annual revenue from cotton cloth and yarn will increase by Rs 12.1 crores.

41. It has been found by experience that match boxes of 50 sticks are being sold at 6 naye paise a box. As local taxes and conditions vary a little, the actual price to a retail dealer so works out that in several areas he cannot sell at 5 naye paise a box without incurring a loss, whereas

at 6 naye paise a box he makes an excessive profit. In view of this, it is proposed to revise the duty fixed by notification so as to wipe out this unintended margin, the statutory rates remaining unchanged. This will yield a revenue of Rs 1.99 crores per annum.

42. It is proposed to convert the duty on unprocessed woollen, rayon and art silk fabrics to a duty on yarn and processing, so as to release the powerlooms from excise control. The loss in revenue will be made good partly by an increase in duty on yarn and partly by a duty on processed fabrics. As a result of these changes, only a small number of units will need excise control in future. As a fair quantity of yarn is imported, these changes will result in a loss of Rs 50 lakhs in the revenue from excise duty but there will be a net increase in revenue of Rs 1.16 crores on account of increased countervailing duty on yarn.

43. The present definition of patent and proprietary medicines which followed the Drugs Act definition while suitable for medical purposes excludes from the scope of patent and proprietary medicines quite a few preparations which are sold under proprietary names and marks and are priced accordingly. I have, therefore, proposed a more suitable definition. With this widening of the definition I propose to reduce the incidence of tax from 10 to 7.5 per cent by a notification and also to exempt totally certain highly essential drugs.

44. It is also proposed to alter the tariff item of asphalt and bitumen so as to include coal-tar, which is used for similar purposes. Coal-tar burnt in furnaces of plants producing it will be exempted by notification. It is also proposed to revise some of the exemptions which have either outlived their utility or have been found to be open to abuse. It is proposed to simplify the procedure for duty on copper and other alloys for convenience of smaller manufacturers. It is also proposed to increase the duty on aluminium foil by Rs 100 per tonne in order to discourage its internal consumption which creates a demand for the import of ingots. In order to encourage export of tea, it is proposed to increase the duty on loose tea by 5 to 10 naye paise per kilogram on its export.

45. These changes in the existing excise duties will give a revenue of Rs 20.74 crores in a full year.

46. I also propose to levy excise duty on some new items. It is proposed to levy a duty on jute manufactures in order to restrict their internal consumption and to encourage their exports. This will yield a revenue of Rs 3.12 crores. It is also proposed to levy an ad valorem duty of 5 to 7.5

per cent on certain iron and steel products but to exempt wastages arising in the manufacture of these products from raw iron or steel. Net revenue as a result of this will be Rs 6 crores. It is proposed to levy a duty of 5 to 15 per cent on electric cables and wires which will yield a revenue of Rs 2.1 crores. It is proposed to impose a duty on specific acids and gases which will together yield a revenue of Rs 1.64 crores. Other items on which I propose to levy an excise duty are plywood at the rate of 10 to 15 per cent, asbestos cement products at the rate of 10 per cent, tread rubber and latex foam sponge at the rate of 20 per cent, gramophones, gramophone parts and accessories and gramophone records at rates varying from 15 to 30 per cent. These items will yield a revenue of Rs 2.39 crores. In the mineral oil section, I propose to add a levy at 5 per cent on mineral oils and mineral oil products not otherwise specified. On the present production this will bring in a revenue of Rs 26 lakhs. The total revenue from the fresh levies will be Rs 15.42 crores in a full year.

CUSTOMS DUTIES

47. The changes in the rates of excise duties and the imposition of fresh duties I have just described will yield a revenue of Rs 7.25 crores on the Customs side from countervailing duties.

48. I propose to increase import duties on certain iron and steel items and on art silk yarn by 5 per cent. This will yield a revenue of Rs 2.16 crores. The main items affected by the increase under iron and steel are structures, fittings for pipes and tubes, tin plates, steel ingots and manufactures not otherwise specified. In the case of tin plates, the increase will, however, be only 2 per cent. I also propose to impose an import duty of 25 per cent on stainless steel plates and sheets and rods and bars. This will yield a revenue of Rs 80 lakhs. Copra is subject to an import duty of 40 per cent standard and 30 per cent preferential but by a notification they have been reduced to 15 per cent standard and 5 per cent preferential. It is proposed to increase the notified rates to 25 per cent and 15 per cent which will still be well within the ceilings. It is found that as compared to Indian copra, there is a substantial price advantage in imported copra. It is also proposed to increase the duty on certain types of tools, excluding machine tools and agricultural implements, from 35 per cent to 50 per cent. This is in line with certain increases made last year. These two items will yield a revenue of Rs 1.89 crores in a full year. It is also proposed to rationalise duties on a few items which will yield a small revenue of Rs 7 lakhs only.

49. It is proposed to raise the rate of import duty on cars from

100 to 150 per cent. The specific duty of Rs 6000 is, however, being done away with so as not to discourage import of small or used cars in genuine cases. Though there are no regular imports of cars, some cars continue to come into the country, on Customs clearance permits. As their number is small, their outside value is high and when they are sold, there are very large profits. The proposed increase in duty will reduce these profits and will make import of cars a little less attractive. The revenue from this will be about Rs 25 lakhs.

50. Having spoken so far about increases, I now refer to a substantial reduction. I propose to reduce the export duty on tea from 44 naye paise to 25 naye paise per kilogram. This will mean a loss of revenue of Rs 4.1 crores. Taken with the proposed refund of excise duty of 15 naye paise per kilogram, this should provide a substantial incentive for export of tea.

51. These proposals on indirect taxes side will bring in a revenue of Rs 44.5 crores in a full year. During 1962-63, their effect will, however, be for 342 days that is to the extent 93.7 per cent.

NET EFFECT OF THE PROPOSALS

52. These changes in direct and indirect taxation taken together will bring in a revenue of Rs 71.7 crores in a full year, of which Rs 44.5 crores will be from indirect taxation and Rs 27.2 crores from direct taxation. Both direct and indirect taxation thus play a part in my proposals. This question of the respective roles of direct and indirect taxation is being raised on a number of occasions. There seems to be a feeling in some quarters that whereas direct taxes are progressive indirect taxes are regressive in the sense that their incidence falls more heavily on the poor than on the rich. I am afraid this view that indirect taxes are regressive is not correct in our conditions. Whether indirect taxes hit the poor more than the rich or vice versa depends upon the kind of commodities that are subjected to indirect taxes and the rates at which they are taxed. No one would contend that excise duties on automobiles, refrigerators and air-conditioners, for example, hit the poor. Quite a number of items in our range of indirect taxes are such that they impinge more heavily on the upper middle and middle classes. We had this whole question analysed last year and our study shows that indirect taxes in India have been progressive in their incidence. That is to say, the higher the total expenditure of a family on an average, the higher the proportion of the total expenditure it pays in indirect taxes. Not only that, but the degree of progression also was

shown to have increased as more and more articles not entering appreciably in common man's consumption were subjected to excise duty.

53. Hon'ble Members would also appreciate that in a country like India, the income-tax cannot be a mass tax. That would be administratively impossible and indeed irksome to the vast majority of the poorer people. At the same time, we have to tax at least to some extent even those who are not covered by income-tax, for it would be equally impossible to meet all our requirements for both plan and non-plan expenditures without mobilising a part of the incomes that accrue to the poorer sections of the community. Undoubtedly, the richer sections must carry an increasingly larger share of taxation and poorer sections must benefit progressively more through development. That is part of our concept of a socialist state.

54. I am aware of the widespread desire in this House and outside that the imposition and enhancement of excise duties should not lead to a general increase in consumer prices. In some cases, duties are imposed as there is a large margin of profit and it is considered desirable to reduce that margin. In others, for example, as in the case of matches this year, the duty is meant to take away the unintended margins of middlemen. In these cases, there should be no increase in the price to the consumer. On the other hand in a case like that of patent and proprietary medicines, where it is proposed to reduce the duty, there should be a reduction in prices. In the case of cloth, a part of the increase in the rates of duty on yarn and the rates of fabrics can as well be processed by the industry. The absorbed by the industry. The fabrics has been particularly so adjusted that there should be no increase in the price of such cloth.

55. As regards the impact of these duties on exports, I should like to mention that it is proposed to give a consolidated refund of excise duties paid on the materials and intermediates used in the process of manufacture. There is, therefore no reason why excise duties should impinge on export costs.

56. The taxation proposals outlined above would yield a total revenue of Rs 68.88 crores during 1962-63. Of this, a sum of Rs 60.80 crores will accrue to the Centre and the balance of Rs 8.08 crores to the States as their share as a result of the recommendations of the Finance Commission accepted by Government. This share will go on increasing from year to year. The manner in which these gains to the States should be adjusted in keeping with the overall requirements of the Centre and the States for fulfilling their plans is

under consideration. The Planning Commission intends to review shortly the financial position of the States during the current year in consultation with them.

CONCLUSION

57. As a result of the tax proposals I have placed before this House, there will be a net accretion of Rs 60.80 crores to the Centre during 1962-63. This would completely wipe out the revenue deficit. The over-all deficit will consequently be reduced from Rs 150 crores to Rs 89 crores and will be met by the expansion of Treasury Bills.

58. I cannot say that I am happy with the gap which still remains. It is my hope that as in the past with increased incomes and production and with a tighter check on tax evasion our taxes will bring in more than we are able to foresee at present. In this context, I would emphasise that we can no longer go along with out-moded concept of taxation being limited to what is needed to cover the revenue component of the budget. In the context of the major development programmes on which the public sector is engaged and having regard to the possibilities and limitations of borrowing from the market it is essential that the revenue budget should provide a sizable surplus to sustain a part of the capital budget. In fact during the Second Five-Year Plan we achieved a revenue surplus of the order of Rs 220 crores without which the upward pull on the price level would have been far greater. In putting forward my tax proposals, therefore, I have paid greater heed to the over-all target of taxation for the Third Plan which as the House is aware is Rs 1100 crores. The additional taxation levied at the Centre last year should yield a total of about Rs 450 crores over the Five-Year period. The taxes which I have proposed today will take us yet closer to our goal of raising adequate resources for our Plan. It is a matter of concern to me that progress in regard to additional taxation by the States has been slow and in 1961-62 the State Budgets provided for additional taxation with a five-year yield of about Rs 100 crores only as against the target of Rs 610 crores set in the Plan. I would earnestly request all State Governments to ensure that this short fall is made up with speed and vigour.

59. Higher levels of taxation no doubt impose a burden of sacrifice on our people. The point to remember is that there are only two alternatives to such taxation—inflation or stagnation. Without the requisite tax effort we would have to face either an upsurge of prices which would impose a much bigger and much less equitable burden on the community, or a prolongation of our poverty due to a slowing down of our develop-

ment. It is against this background that I would ask the House to consider and support my budget proposals.

SUMMARY OF FINAL ESTIMATES

REVENUE	(In lakhs of Rupees)		
	Budget 1961-62	Revised 1961-62	Budget 1962-63

The Finance (No. 2) Bill, 1962

(AS INTRODUCED IN LOK SABHA)

A BILL

to give effect to the financial proposals of the Central Government for the financial year 1962-63.

Be it enacted by Parliament in the Thirteenth Year of the Republic of India as follows:—

Short title and commencement.

1. (1) This Act may be called the Finance (No. 2) Act, 1962.

(2) Save as otherwise provided in this Act, sections 3 to 14 inclusive shall be deemed to have come into force on the 1st day of April, 1962 and sub-section (1) of section 16 and section 18 shall be deemed to have come into force on the 23rd day of April, 1962.

Income-tax and super-tax.

2. (1) Subject to the provisions of sub-sections (2), (3), (4) and (5), for the assessment year commencing on the 1st day of April, 1962,—

(a) income-tax shall be charged at rates specified in Part I of the First Schedule, and, in the cases to which Paragraphs A, B and C of that Part apply, shall be increased by a surcharge for purposes of the Union and a special surcharge, calculated in either case in the manner provided therein; and

(b) super-tax shall, for the purposes of section 95 of the Income-tax Act, 1961 (hereinafter referred to as the Income-tax Act), be charged at the rates specified in Part II of the First Schedule, and, in the cases to which Paragraphs A, B and C of that Part apply, shall be increased by a surcharge for purposes of the Union and a special surcharge, calculated in either case in the manner provided therein.

(2) In making any assessment for the assessment year commencing on the 1st day of April, 1962,—

(a) where the total income of an assessee, not being a company, includes any income chargeable under the head "Salaries", the income-tax payable by the assessee on that part of his total income which consists of such inclusion shall be an amount bearing to the total amount of income-tax payable according to the rates applicable under the operation of the Finance Act, 1961, on his total income the same proportion as the amount of such inclusion bears to his total income;

(b) where the total income of an assessee, not being a company, includes any income chargeable under the head "Salaries" on which super-tax has been or might have been deducted under the provisions of sub-section (2) of section 18 of the Indian Income-tax Act, 1922, the super-tax payable by the assessee on that portion of his total income which consists of such inclusion shall be an amount bearing to the total amount of super-tax payable according to the rates applicable under the operation of the Finance Act 1961,

on his total income the same proportion as the amount of such inclusion bears to his total income.

(3) In making any assessment for the assessment year commencing on the 1st day of April, 1962, where the total income of a company, other than the Life Insurance Corporation of India established under the Life Insurance Corporation Act, 1956, includes any profits and gains from life insurance business, the super-tax payable by it shall be the aggregate of the tax calculated—

(i) on the amount of profits and gains from life insurance business so included, at the rate applicable to the Life Insurance Corporation of India in accordance with Paragraph E of Part II of the First Schedule; and

(ii) on the remaining part of its total income, at the rate applicable to the company on its total income.

(4) In cases to which Chapter XII of the Income-tax Act applies, the tax chargeable shall be determined as provided in that Chapter, and with reference to the rates imposed by sub-section (1) or the rates specified in that Chapter, as the case may be.

(5) (i) An assessee being an Indian company or any other company which has made the prescribed arrangements for the declaration and payment of dividends within India or an assessee other than a company, whose total income includes any profits and gains derived from the export of any goods or merchandise out of India, shall be entitled to a deduction, from the amount of income-tax and super-tax with which he is chargeable for the assessment year commencing on the 1st day of April, 1962, of an amount equal to the income-tax and super-tax calculated respectively at one-tenth of the average rate of income-tax and of the average rate of super-tax on the amount of such profits and gains included in the total income.

(ii) The Central Board of Revenue may make rules for computing the amount of such profits and gains.

(6) In cases in which tax has to be deducted under sub-section (2) of section 192 and sections 193 to 195 of the Income-tax Act at the rates in force, the deduction shall be made at the rates specified in Part III of the First Schedule.

(7) For the purposes of this section, and of the rates of tax imposed thereby—

(i) the expressions "assessment year", "average rate of income-tax", "average rate of super-tax" and "partner" have the meanings respectively assigned to them in clauses (9), (10), (11) and (23) of section 2 of the Income-tax Act;

(ii) the expression "total income" means total income as determined

for the purposes of income-tax or super-tax, as the case may be, in accordance with the provisions of the said Act; and

(iii) the expression "earned income" means any income of an assessee who is an individual, Hindu undivided family, unregistered firm or other association of persons or body of individuals, whether incorporated or not, not being a company, a local authority, a registered firm or a firm assessed under clause (b) of section 183 of the said Act—

(a) which is chargeable under the head "Salaries"; or

(b) which is chargeable under the head "Profits and gains of business or profession" where the business or profession is carried on by the assessee or, in the case of a firm, where the assessee is a partner actively engaged in the conduct of the business or profession; or

(c) which is chargeable under the head "Income from other sources" if it is immediately derived from personal exertion or represents a pension or superannuation or other allowance given to the assessee in respect of the past services of any deceased person; and

includes any such income which, though it is the income of another person, is included in the assessee's income under the provisions of the Income-tax Act, 1961, but does not include any such income on which tax is not payable under clause (iii) or clause (iv) or clause (v) of section 86 or clause (i) or clause (ii) of sub-section (1) of section 99 of that Act or which is exempted from tax under a notification issued under section 60 of the Indian Income-tax Act, 1922, as continued in force by clause (1) of sub-section 2 of 297 of the Income-tax Act, 1961.

Amendment of section 2

3. In section 2 of the Income-tax Act, after clause (42), the following clause shall be inserted, namely:—

"(42A) 'short-term capital asset' means a capital asset held by an assessee for not more than twelve months immediately preceding the date of its transfer.

Explanation—(i) In determining the period for which any capital asset is held by the assessee—

(a) in the case of share held in a company in liquidation, there shall be excluded the period subsequent to the date on which the company goes into liquidation;

(b) in the case of a capital asset which becomes the property of the assessee in the circumstances mentioned in clauses (i) to (iv) of section 49, there shall be included the period for which the asset was held by the previous owner referred to in the said section.

(ii) In respect of capital assets other than those mentioned in clause (i), the period for which any capital asset is held by the assessee shall be determined subject to any rules which the Board may make in his behalf.

Amendment of section 37

4. In section 37 of the Income-tax Act, in sub-section (2), for the figures and notations "3%" and "4%", the figures and notations "1%" and "1%", shall, respectively, be substituted.

Substitution of new sections for sections 70 and 71.

Set off of loss from one source against income from another source under the same head of income

5. For sections 70 and 71 of the Income-tax Act, the following sections shall be substituted, namely:—

"70. (1) Save as otherwise provided in this Act, where the net result for any assessment year in respect of any source falling under any head of income other than 'Capital gains' is a loss, the assessee shall be entitled to have the amount of such loss set off against his income from any other source under the same head.

(2) (i) Where the result of the computation made for any assessment year under section 48 to 55 in respect of any short term capital asset is a loss, the assessee shall be entitled to have the amount of such loss set off against the income, if any, as arrived at under a similar computation made for the assessment year in respect of any other capital asset.

(ii) Where the result of the computation made for any assessment year under section 48 to 55 in respect of any capital asset other than a short-term capital asset is a loss, the assessee shall be entitled to have the amount of such loss set off against the income if any, as arrived at under a similar computation made for the assessment year in respect of any other capital asset not being a short term capital asset.

Set off of loss from one head against income from another.

71. (1) Where in respect of any assessment year the net result of the computation under any head of income other than 'Capital gains' is a loss and the assessee has no income under the head 'Capital gains', he shall, subject to the provisions of this Chapter, be entitled to have the amount of such loss set off against his income, if any, assessable for that assessment year under any other head.

(2) Where in respect of any assessment year the net result of the computation under any head

A wide range of Gloster Cables and flexibles are now in use throughout India, carrying electric power safely and economically for various industrial and domestic purposes. All the sizes of cables in V.I.R., T.R.S. and weather proof types and flexibles in single, twin, three and four cores in T.R.S. twisted twin or workshop types are manufactured by us strictly according to I.S. No. 434 and B.S. No. 7. We are soon taking up the manufacture of Control Cables, Signalling Cables and Trailing Cables for mines.

Gloster Cables are manufactured in technical collaboration with British Insulated Callender's Cables Limited, London. Gloster Cables are on D.G.S. & D., Rate Contract and are approved by all Electricity Boards and Government Departments.

THE BIG HURRY IN THE WORLD OF NUCLEAR PHYSICS

The hurry is to find a compact source of energy that will be as prodigious as the sun and will not exhaust though the world live a million years. ■ Closest to the ideal is Uranium 235, a scant one milligram of which, when fissioned or 'exploded', releases more energy than that obtained by burning millions of tons of coal. This great world of power will keep all of us going, and going well, when the present natural sources such as coal give out. Already atomic power stations are an actuality in many countries including India. ■ Shaping the giant pressure vessels enclosing the reactor cores demands a very specialised knowledge of welding. ■ It is this specialised knowledge and application of industrial gases that Indian Oxygen affords Indian industry.

INDIAN OXYGEN LIMITED

of income other than 'Capital gains' is a loss and the assessee has income assessable under the head 'Capital gains', such loss may, subject to the provision of this Chapter, be set off against the income, if any, of the assessee assessable for that assessment year under any other head including income from capital gains relating to short-term capital assets as well as other capital assets or, if the assessee so desires, shall be set off only against his income, if any, assessable under any head of income other than 'Capital gains'."

Amendment of section 72.

6. In section 72 of the Income-tax Act, for sub-section (1), the following sub-section shall be substituted, namely:—

"(1) Where for any assessment year, the net result of the computation under the head 'Profits and gains of business or profession' is a loss to the assessee, not being a loss sustained in a speculation business, and such loss cannot be wholly set off against income under any head of income other than 'Capital gains' or, in accordance with the option exercised by the assessee under sub-section (2) of section 71, is not set off against income under the head 'Capital gains', so much of the loss as has not been so set off shall, subject to the other provisions of this Chapter, be carried forward to the following assessment year, and—

(i) it shall be set off against the profits and gains, if any, of any business or profession carried on by him and assessable for that assessment year.

Provided that the business or profession for which the loss was originally computed continued to be carried on by him in the previous year relevant for that assessment year; and

(ii) if the loss cannot be wholly so set off, the amount of loss not so set off shall be carried forward to the following assessment year and so on."

Substitution of new section for section 74.

Losses under the head "Capital gains".

7. For section 74 of the Income-tax Act, the following section shall be substituted, namely:—

"74. (1) Where in respect of any assessment year, the net result of the computation under the head 'Capital gains' is a loss, such loss shall, subject to the other provisions of this Chapter, be dealt with as follows:—

(i) such portion of the net loss as relates to capital assets other than short-term capital assets shall not be carried forward to any subsequent assessment year;

(ii) such portion of the net

loss as relates to short-term capital assets shall be carried forward to the following assessment year and set off against the capital gains, if any, relating to short-term capital assets assessable for that assessment year and, if it cannot be so set off, the amount thereof not so set off shall be carried forward to the following assessment year and so on.

(2) No loss shall be carried forward under this section for more than eight assessment years immediately succeeding the assessment year for which the loss was first computed.

(3) Notwithstanding anything contained in the Indian Income-tax Act, 1922, any loss computed under the head 'Capital gains' in respect of the assessment year commencing on the 1st day of April, 1961 or any earlier assessment year which was carried forward under sub-section (2B) of section 24 of the said Act, shall be dealt with in the assessment year commencing on the 1st day of April, 1962 or any subsequent assessment year, as follows:—

(i) in so far as it relates to capital assets other than short-term capital assets, it shall be ignored and shall not be allowed to be carried forward; and

(ii) in so far as it relates to short-term capital assets, it shall be carried forward and set off in accordance with the provisions of clause (ii) of sub-section (1) and sub-section (2)."

Amendment of Section 87

8. In section 87 of the Income-tax Act,—

(i) in sub-section (1), after clause (e), the following clause shall be inserted, namely:—

"(f) where the assessee is an individual, any sums deposited, in the previous year by the assessee out of his income chargeable to tax, in a ten-year account or a fifteen-year account under the Post Office Savings Bank (Cumulative Time Deposits) Rules, 1959, as amended from time to time."

(ii) in sub-section (3),—

(a) in clause (ii), for the words "eight thousand rupees", the words "ten thousand rupees" shall be substituted;

(b) in clause (iii), for the words "sixteen thousand rupees", the words "twenty thousand rupees" shall be substituted.

Amendment of section 88.

9. In section 88 of the Income-tax Act, to sub-section (3), the following proviso shall be added, namely:—

"Provided that in respect of any such sums paid during any

previous year relevant to the assessment year commencing on the 1st day of April, 1963 or any subsequent assessment year, this sub-section shall have effect as if for the words 'seven and a half per cent' and the words 'one hundred and fifty thousand rupees', the words 'ten per cent' and 'two hundred thousand rupees' had been, respectively, substituted."

Amendment of section 109.

10. In section 109 of the Income-tax Act, in clause (iii), for the figures and notations "50%" and "65%", wherever they occur, the figures and notations "45%" and "80%" shall, respectively, be substituted

Substitution of new sections for sections 144 and 115.

11. For sections 114 and 115 of the Income-tax Act, the following sections shall be substituted, namely:—

Tax on capital gains in cases of assessee other than companies

"114. Where the total income of an assessee, not being a company, includes any income chargeable under the head 'Capital gains', the tax payable by him on his total income shall be—

(a) the amount of income-tax and super-tax payable on the total income as reduced by the amount of such inclusion and by the amount of compensation or other payment, if any, referred to in clause (ii) of section 28, had the total income so reduced been his total income; plus

(b) (i) the amount of income-tax and super-tax calculated on the amount of the net capital gains relating to short-term capital assets, if any, included in the total income at the average rate of income-tax and the average rate of super-tax respectively, which would have been applicable to the total income if the amount of the net capital gains, if any, relating to capital assets other than short-term capital assets and the amount of compensation or other payment aforesaid, if any, had not formed part of it; plus

(ii) the amount of income-tax and super-tax calculated on the amount of the net capital gains, if any, relating to capital assets other than short-term capital assets, at the average rate of income-tax and the average rate of super-tax respectively, which would have been applicable to the total income, if the net capital gains, if any, relating to short-term capital assets and the amount of compensation or other payment aforesaid, if any, had not formed part of it; or the amount of income-tax calculated

at the rate of 25 per cent on the amount of the net capital gains relating to capital assets other than short-term capital assets included in the total income, whichever is less:

Provided that—

(i) where the total income does not exceed the sum of ten thousand rupees, the amount payable under sub-clause (ii) of clause (b) shall be nil; and

(ii) in no case shall the amount payable under sub-clause (ii) of clause (b) exceed one-half of the amount, if any, by which the amount of capital gains relating to capital assets other than short-term capital assets exceeds the sum of five thousands rupees; plus

(c) the tax on such compensation or other payment aforesaid, if any, computed in accordance with the provisions of clause (iii) of section 112.

Tax on capital gains in case of companies.

115. Where the total income of a company includes any income chargeable under the head 'Capital gains' (whether such gains relate to short-term capital assets or to other capital assets), the tax payable by it shall be—

(a) the amount of income-tax with which it is chargeable on its total income;

(b) the amount of super-tax equal to the aggregate of the amount of super-tax calculated at the rate of five per cent on the amount of the capital gains relating to capital assets other than short-term capital assets included in the total income and the amount of super-tax with which it would be chargeable had its total income been reduced by the amount of such aforesaid capital gains."

Amendment of Act 27 of 1957.

12. In the Wealth-tax Act, 1957,—

(1) clause (xx) of sub-section (1) of section 5 shall be omitted;

(2) in the Schedule, for Part I, the following Part shall be substituted, namely:—

"Part I

Rate of tax

(a) In the case of every individual:—

(i) on the first rupees two lakhs of net wealth, Nil; (ii) on the next rupees eight lakhs of net wealth, 1%; (iii) on the next rupees ten lakhs of net wealth, 1.75%; (iv) on the balance of net wealth, 2.5%.

(b) In the case of every Hindu undivided family:—

(i) on the first rupees four lakhs of net wealth, Nil; (ii) on the next rupees seven lakhs of net wealth, 1%; (iii) on the next rupees ten lakhs of net wealth, 1.75%; (iv)

on the balance of net wealth, 2.5%."

Expenditure-tax not to be levied from 1st April, 1962.

13. Notwithstanding anything contained in the Expenditure-tax Act, 1957, expenditure-tax shall not be charged for any financial year commencing on or after the first day of April, 1962, in respect of the expenditure incurred by any individual or Hindu undivided family.

Amendment of the First Schedule to Act 14 of 1961.

14. In the Finance Act, 1961, in the First Schedule, in Part II, in Paragraph D, in clause (ii) of the first proviso, for the words "any Indian company which satisfies", the words "any company which satisfies" shall be substituted and shall be deemed always to have been substituted.

Amendment of Act 32 of 1934.

15. The Indian Tariff Act, 1934 (hereinafter referred to as the Tariff Act), shall be amended in the manner specified in the Second Schedule.

Amendment of Act I of 1944.

16. In the Central Excises and Salt Act, 1944—

(1) in section 2, in clause (f), in sub-clause (i), the word "and" shall be omitted and after sub-clause (ii), the following sub-clause shall be inserted namely:—

"(iii) in relation to patent or proprietary medicines as defined in Item No. 14E of the First Schedule and in relation to cosmetics and toilet preparations as defined in Item No. 14F of that Schedule, includes the conversion of powder into tablets or capsules, the labelling or re-labelling of containers intended for consumers and re-packing from bulk packs to retail packs or the adoption of any other treatment to render the product marketable to the consumers."

(2) in the First Schedule,—

(a) in Item No. 4,—

(1) under "I. Unmanufactured tobacco"—

(i) for the entries in the third column against sub-items (1), (2), (3), (4), (5) and (6), the entries "Two rupees and sixty naye paise", "Sixteen rupees and ninety naye paise", "Two rupees and twenty-five naye paise", "Two rupees and five naye paise", "One rupee and twenty naye paise" and "Two rupees and twenty-five naye paise" shall, respectively, be substituted;

(ii) sub-item (5) (iii) shall be omitted;

(2) under "II. Manufactured tobacco"—

for sub-item (2), the following sub-item shall be substituted, namely:—

Per thousand

"(2) Cigarettes of which the value:

(i) exceeds Rs 35 a thousand, Twenty-five rupees and thirty naye paise.

(ii) exceeds Rs 25 a thousand, but does not exceed Rs 35 a thousand.

Twelve rupees and ninety-five naye paise.

(iii) exceeds Rs 15 a thousand, but does not exceed Rs 25 a thousand Six rupees and sixty-five naye paise.

(iv) exceeds Rs 7.50 a thousand, but does not exceed Rs 15 a thousand.

Two rupees and ninety naye paise.

(v) does not exceed Rs 7.50 a thousand.

One rupee and thirty naye paise."

(b) for Item No 11, the following Item shall be substituted, namely:—

"11. Asphalt, Bitumen and Tar—

(1) Asphalt and Bitumen (including cut-back bitumen and asphalt) natural or produced from petroleum or shale.

Twenty-seven per cent, ad valorem.

(2) Tar distilled from coal or lignite, and other mineral tars including partially distilled tars and blends of pitch with creosote oils or with other coal tar distillation products.

Twenty-seven per cent, ad valorem.

(c) after Item No 11, under the heading "Mineral fuels, lubricants and related materials", the following Item shall be inserted namely:

"11A. All products derived from refining of crude petroleum or shale (whether gaseous, liquid, semi-solid or solid in form), not otherwise specified including refinery gases, lubricating oil and greases, waxes and coke—

Five per cent ad valorem."

(d) in Item No. 14, for sub-item III, the following sub-item shall be substituted, namely:—

"III. Cellulose lacquers—

(i) Nitrocellulose lacquers, clear and pigmented and nitrocellulose ancillaries in liquid form.

One rupee and forty naye paise per litre.

(ii) Nitrocellulose ancillaries in semi-solid and pasty forms

Fifty naye paise per kilogram.

(iii) Cellulose lacquers, not otherwise specified

One rupee and forty naye paise per litre."

(e) for Item No. 14D, the following Item shall be substituted, namely:—

"14D. Synthetic organic dyestuffs (including pigment dyestuffs).

Fifteen per cent ad valorem

(f) for Item No. 14E, the following Item shall be substituted, namely:—

"14E. Patent or proprietary medicines not containing alcohol, opium, Indian hemp or other narcotic drugs or other narcotics other than those medicines which are exclusively ayurvedic, unani, sidha or homoeopathic.

Ten per cent. ad valorem."

Explanation.—'Patent or Proprietary medicines' means any drug or medicinal preparation, in what ever form, for use in the internal or external treatment of or for the prevention of ailments in, human beings or animals, which bears either on itself or on its container or both, a name which is not specified in a monograph in a Pharmacopoeia, Formulary or other publications notified in this behalf by the Central Government in the Official Gazette, or which is a brand name, that is, a name or a registered trade mark under the Trade and Merchandise Marks Act, 1958 (43 of 1958), or any other mark such as a symbol, monogram, label, signature or invented words or any writing which is used in relation to that medicine for the purpose of indicating or so as to indicate a connection in the course of trade between the medicine and some person having the right either as proprietor or otherwise to use the name or mark with or without any indication of the identity of that person.

(g) after Item No. 14F, the following Items shall be inserted, namely:—

"14G. Nitric, Hydrochloric and Sulphuric acids (including Fuming acids and Anhydrides Thereof), All sorts.

Ten per cent. ad valorem.

14H. Compressed, liquefied or solidified gases, the following, namely:—

(i) Oxygen—Ten per cent. ad valorem.

(ii) Chlorine—Ten per cent. ad valorem.

(iii) Ammonia—Ten per cent. ad valorem.

(iv) Carbonic acid—Fifty per cent. ad valorem (Carbon dioxide).

(v) Refrigerant gases, not otherwise specified, such as sulphur dioxide and freon.

Twenty per cent. ad valorem."

(h) for Item No. 15A, the following Item shall be substituted, namely:—

"15A. Plastics, all sorts—

Twenty per cent. ad valorem."

(i) Moulding powders, granules and flakes (thermosetting and thermoplastic).

(ii) Polyethylene films, layflat tubings and P. V. C. sheets (that is to say, Polyvinyl Chloride sheets).

(iii) Not otherwise specified;

(i) after Item No. 16, the following Items shall be inserted, namely:—

"16A. Rubber products, the following, namely:—

(i) Latex foam sponge—

Twenty per cent. ad valorem.

(ii) Plates, sheets and strips unhardened, whether vulcanized or not, and whether combined with any textile material or otherwise—

Twenty per cent. ad valorem.

16B. Plywood, blockboard, laminboard, batten board hard or soft wall boards or insulating board and veneered panels, whether or not containing any material other than wood; cellular wood panels; building boards of wood pulp or of vegetable fibre, whether or not bonded with natural or artificial resins or with similar binders; and artificial or reconstituted wood being wood shavings, wood chips, saw dust, wood flour or other ligneous waste agglomerated with natural or artificial resins or other organic binding substances, in sheets, blocks, boards or the like—

(i) Plywood for Tea-chests when cut to size in vanels or shooks and packed in sets.

—Ten per cent. ad valorem."

(ii) All others

—Fifteen per cent. ad valorem."

(j) in Item No. 18—

(i) for the entry in the third column, the entry "Four rupees and fifty naye paise per kilogram" shall be substituted;

(ii) the following Explanation shall be added, namely:—

"Explanation.—Rayon and synthetic fibres and yarn shall be deemed to include man-made fibres and yarn made out of man-made fibres."

(k) in Item No. 18A, for the entries in the third column against sub-items (1) and (2), the entries "Thirty naye paise per kilogram" and "Fifteen naye paise per kilogram" shall, respectively, be substituted;

(l) in Item No. 18B, for the entries in the third column against sub-items (1) and (2), the entries "Fifteen per cent. ad valorem" and "Seven and a half per cent. ad valorem" shall respectively, be substituted;

(m) in Item No. 19,—

in the second column,—

(a) in clause (b), the word "or" shall be inserted at the end; and

(b) in clause (c), the word "or" and clause (d) shall be omitted;

(ii) for the entries in the third column against sub-items (1), (2), (3), (4) and (5), the entries "Sixty naye paise per square metre", "Sixty naye paise per square metre", "Forty naye paise per square metre" and "Sixty naye paise per square metre" shall, respectively, be substituted;

(n) in Item No. 21, in the second column, the words "but do not include any such fabric if

manufactured on a handloom" shall be omitted;

(o) in Item No. 22,—

(i) in the second column, in clause (iii), the word "or" shall be inserted at the end; and

(ii) in clause (iv), the word "or" and clause (v) shall be omitted;

(p) after Item No. 22, the following Item shall be inserted, namely:—

"22A Jute manufactures (including manufactures of bimlipatam jute or of mesta fibre), all sorts—

(i) Hessians

—Two hundred and fifty rupees per metric tonne.

(ii) All other descriptions of jute manufactures not otherwise specified (including cloth, bags, twist, yarn, rope and twine).

—One hundred and twenty-five rupees per metric tonne."

(q) after Item No. 23B, the following Item shall be inserted, namely:—

"23C. Asbestos-cement products, all sorts, including flat and corrugated sheets, pipes and tubes and tiles.

—Ten per cent ad valorem."

(r) in Item No. 26A, for sub-items (1) and (2), the following sub-items shall be substituted, namely:—

"(1) In any crude form including ingots, bars, blocks, slabs, billets, shots and pellets.

—One hundred rupees per metric tonne.

(2) Manufactures, the following, namely, plates, sheets, circles, strips and foils in any form or size.

—Three hundred rupees per metric tonne.

(3) Pipes and tubes

—Ten per cent ad valorem."

(s) after Item No. 26A, the following Item shall be inserted, namely:—

"26AA. Iron or steel products, the following Item namely:—

(i) Bars, rods, coils, wires, joints girders, angles, channels, tees, flats, beams, zeds, trough piling, and all other rolled, forged or extruded shapes and sections, not otherwise specified.

Five per cent ad valorem plus the excise duty for the time being leviable on pig iron or steel ingots, as the case may be.

(ii) Plates and sheets, other than plates and sheets intended for tinning, and hoops and strips, all sorts, including galvanised or corrugated plates and sheets.

Seven and a half per cent ad valorem plus the excise duty for the time being leviable on pig iron or steel ingots, as the case may be.

(iii) Uncoated plates and sheets intended for tinning.

Seven and a half per cent ad valorem plus the excise duty for the time being leviable on pig iron or steel ingots, as the case may be.

(iv) Pipes and tubes (including blanks therefor) all sorts, whether rolled, forged, spun, cast, drawn, annealed, welded or extruded.

Five per cent ad valorem plus the excise duty for the time being leviable on pig iron or steel ingots, as the case may be.

(v) All other steel castings, not otherwise specified.

Five per cent ad valorem plus the excise duty for the time being leviable on steel ingots."

(t) in Item No. 27,—

(1) for sub-item (b), the following sub-items shall be substituted, namely:—

"(b) Manufactures, the following, namely, plates, sheets, circles and strips in any form or size.

Five hundred rupees per metric tonne.

(bb) Foils, that is a product of thickness (excluding any backing) not exceeding 0.15 millimetres.

Six hundred rupees per metric tonne."

(u) for Item No. 29A, the following Item shall be substituted, namely:—

"29A. Refrigerating and air-conditioning appliances and machinery, all sorts, and parts thereof—

(1) Refrigerators and other refrigerating appliances, which are ordinarily sold or offered for sale as ready assembled units, such as ice makers, bottle coolers, display cabinets and water coolers.

Twenty per cent ad valorem.

(2) Air-conditioners and other air-conditioning appliances, which are ordinarily sold or offered for sale as ready assembled units, including package type air-conditioners and evaporative type of coolers.

Twenty per cent ad valorem.

(3) Parts of refrigerating and air-conditioning appliances and machinery, all sorts.

Thirty per cent ad valorem."

(v) to Item No. 30, the following Explanation shall be added, namely:—

"Explanation.—This Item does not include motors specially designed for use in gramophones or

record players and all parts of such motors".

(w) after Item No. 33A, the following Item shall be inserted, namely:—

"33B. Electric wires and cables, all sorts, not otherwise specified—

(i) Insulated wires and cables, whether sheathed or unsheathed, when designed for use in circuits of less than 10 amperes and at a pressure not exceeding 250 volts.

Fifteen per cent ad valorem.

(ii) All others.

Five per cent ad valorem."

(x) in Item No. 34, for the entries under the third column against sub-items (1) and (2), the entries "One hundred and seventy-five rupees each or seven and a half per cent ad valorem, whichever is higher" and "One thousand rupees each or ten per cent, ad valorem, whichever is higher" shall, respectively, be substituted;

(y) after Item No. 37, the following Item shall be inserted, namely:—

"37A. Gramophones, including record players, whether mechanically or electrically driven, and with acoustic, electronic, or transistorised systems of reproduction or amplification, and parts and accessories therefore, and gramophone records, all sorts—

(i) Gramophones or record players, including radiograms.

Twenty per cent ad valorem.

(ii) Parts and accessories of gramophones or record players, all sorts.

Thirty per cent ad valorem.

(iii) Gramophone records, all sorts, other than matrices.

Fifteen per cent ad valorem.

(iv) Matrices for records, impressed.

Thirty per cent ad valorem.

(v) Gramophone needles or styli—

(a) wholly made of steel

Twenty per cent ad valorem.

(b) others

Twenty-five per cent ad valorem."

(z) Item No. 40 shall be omitted.

Amendment of Act 58 of 1957.

17. In the First Schedule to the Additional Duties of Excise (Goods of Special Importance) Act, 1957, in Item No. 4—

(a) under "I. Unmanufactured tobacco—" sub-item (5) (iii) shall be omitted;

(b) under "II. Manufactured tobacco—" for sub-item (2), the following sub-item shall be substituted, namely:—

"(2) Cigarettes of which the value Per thousand—

Per thousand.

(i) exceeds Rs 35 a thousand.

Seven rupees and seventy naye paise.

(ii) exceeds Rs 25 a thousand, but does not exceed Rs 35 a thousand.

Four rupees.

(iii) exceeds Rs 15 a thousand, but does not exceed Rs 25 a thousand.

Two rupees and twenty naye paise.

(iv) exceeds Rs 7.50 a thousand, but does not exceed Rs 15 a thousand.

Seventy naye paise.

(v) does not exceed Rs 7.50 a thousand.

Forty naye paise."

Amendment of Act 16 of 1955.

18. In the Schedule to the Medicinal and Toilet Preparations (Excise Duties) Act, 1955, for Explanation 1, the following Explanation shall be substituted, namely:—

Explanation 1.—'Patent or proprietary medicines' means any medicinal preparation which bears either on itself or on its container or both a name which is not specified in a monograph in a Pharmacopoeia, Formulary or other publications notified in this behalf by the Central Government in the Official Gazette, or which is a brand name, that is, a name or a registered trade mark under the Trade and Merchandise Marks Act, 1958 (43 of 1958), or any other mark such as a symbol, monogram, label, signature or invented words or any writing which is used in relation to that medicinal preparation for the purpose of indicating or so as to indicate a connection in the course of trade between the preparation and some person having the right either as proprietor or otherwise to use the name or mark with or without any indication of the identity of that person."

19. Section 2 of the Finance Act, 1962 is hereby repealed and shall be deemed never to have been enacted.

Declaration under the Provisional Collection of Taxes Act, 1931.

It is hereby declared that it is expedient in the public interest that the provisions of clauses 15, 16(2) and 17 of this Bill shall have immediate effect under the Provisional Collection of Taxes Act, 1931.

THE FIRST SCHEDULE

(See section 2)

Part I

Income-tax and surcharges on income-tax

Paragraph A

(i) In the case of every individual who is married and every Hindu undivided family whose total income does not exceed Rs 20,000 in either case—

Rates of Income-tax				
	Where the individual has no child wholly or mainly dependent on him or where the Hindu undivided family has no minor coparcener.	Where the individual has one child wholly or mainly dependent on him or where the Hindu undivided family has one minor coparcener.	Where the individual has more than one child wholly or mainly dependent on him or where the Hindu undivided family has more than one minor coparcener.	
	Rs.	Rs.	Rs.	Nil
(1) On the first 3,000 of total income.	3,000	3,300	3,600	Nil
(2) On the next 2,000 ..	2,000	1,700	1,400	3%
(3) On the next 2,500 ..	2,500	2,500	2,500	7%
(4) On the next 2,500 ..	2,500	2,500	2,500	10%
(5) On the next 2,500 ..	2,500	2,500	2,500	12%
(6) On the next 2,500 ..	2,500	2,500	2,500	15%
(7) On the next 2,500 ..	2,500	2,500	2,500	20%
(8) On the next 2,500 ..	2,500	2,500	2,500	23%

(ii) In the case of every individual who is not married and every individual or Hindu undivided family whose total income in either case exceeds Rs 20,000 and in the case of every unregistered firm or other association of persons or body of individuals, whether incorporated or not, or every artificial juridical person referred to on sub-clause (vii) of clause (31) of section 2 of the Income-tax Act, not being a case to which any other Paragraph of this Part applies:—

	Rs.	Total Income
(1) On the first 1,000	Nil	Nil
(2) On the next 2,500	3%	3%
(3) On the next 2,500	7%	7%
(4) On the next 2,500	10%	10%
(5) On the next 2,500	12%	12%
(6) On the next 2,500	15%	15%
(7) On the next 2,500	20%	20%
(8) On the next 2,500	23%	23%
(9) On the balance of total income	25%	25%

Provided that for the purposes of this Paragraph—

(i) no income-tax shall be payable on a total income which does not exceed the limit specified below;

(ii) the income-tax payable shall in no case exceed half the amount by which the total income exceeds the said limit;

(iii) the income-tax payable by an individual who is married or a Hindu undivided family whose total income exceeds in either case Rs 20,000 shall not exceed the aggregate of—

(a) the income-tax which would have been payable if the total income had been Rs 20,000;

(b) half the amount by which the total income exceeds Rs 20,000;

The limit aforesaid shall be—

(i) Rs 6,000 in the case of every Hindu undivided family which as at the end of the previous year satisfies either of the following conditions, namely:—

(a) that it has at least two members entitled to claim partition who are not less than eighteen years of age; or

(b) that it has at least two members entitled to claim partition who are not lineally descended one from the other and who are not lineally descended from any other living member of the family;

(ii) Rs 3,000 in every other case.

Surcharges on income-tax
The amount of income-tax computed at the rates hereinbefore specified shall be increased by the aggregate of the surcharges calculated as under:—

(a) A surcharge for purposes of the Union equal to the sum of—

(i) two and a half per cent of the amount of income-tax calculated at the average rate of income-tax on the income under the head "Salaries" included in the total income;

(ii) five per cent of the amount of income-tax calculated at the average rate of income-tax on the total income as reduced by the income under the head "Salaries" included therein; and

(iii) where the earned income included in the total income exceeds Rs 1,00,000, ten per cent of the difference between the amount of income-tax which would have been payable on the whole of the earned income included in the total income if such earned income had been the total income and the amount of income-tax payable on a total income of Rs 1,00,000;

(b) A special surcharge at fifteen per cent of the difference between the amount of income-tax on the total income and the amount of income-tax on the whole of the earned income, if any, included in the total income if such earned income had been the total income.

Provided that—
(i) no surcharge for purposes of the Union shall be payable where the total income does not exceed the limit specified below;

(ii) no special surcharge shall be payable in the case of an assessee whose total income does not include any income from dividend on ordinary shares if his total income does not exceed the limit specified below, and where the total income includes any dividends on ordinary shares, such limit shall be increased by Rs 1,500 or the amount of the said dividends, whichever is less:

Provided further that—

(a) where the total income includes any dividends on ordinary shares, the surcharges for purposes of the Union and the special surcharge shall not in each case exceed half the amount by which the total income exceeds the respective limits applicable in either case;

(b) the surcharge for purposes of the Union and the special surcharge, both together, shall not exceed half the amount by which the total income exceeds the limit specified below:

Paragraph B
In the case of every local authority,—
Rate of income-tax
On the whole of the total income 30%

Surcharge on income-tax
The amount of income-tax computed at the rate hereinbefore specified shall be increased by a surcharge for purposes of the Union of 5 per cent. of the amount of income-tax.

Paragraph C
In every case in which under the provisions of the Income-tax Act, income-tax is to be charged at the maximum rate,—

Rate of income-tax
On the whole of the total income 25%
Surcharges on income-tax
The amount of income-tax computed at the rate hereinbefore specified shall be increased by the aggregate of the surcharges calculated as under:—

(a) a surcharge for purposes of the Union of five per cent. of the amount of income-tax; and
(b) a special surcharge of fifteen per cent. of the amount of income-tax.

Paragraph D
In the case of every company,—

Rate of income-tax
On the whole of the total income 25%

Paragraph E
In the case of every registered firm,—

Rate of income-tax
On the whole of the total income 25%

Where the firm has four or less partners
Where the firm has five or more partners

Rate of income-tax	Where the firm has four or less partners	Where the firm has five or more partners
(1) On the first Rs. 25,000 of total income	Nil	Nil
(1) On the next Rs. 15,000 of total income	5%	7%
(1) On the next Rs. 20,000 of total income	6%	8%
(1) On the next Rs. 40,000 of total income	7%	9%
(1) On the next Rs. 50,000 of total income	8%	10%
(6) On the balance of total income	10%	12%

Part II

Super-tax and surcharges on super-tax

Paragraph A

In the case of every individual, Hindu undivided family, unregistered firm or other association of persons or body of individuals, whether incorporated or not, or every artificial juridical person referred to in sub-clause (vii) of clause (31) of section 2 of the Income-tax Act, not being a case to which any other Paragraph of this Part applies,—

Rates of super-tax

	Nil	8%	18%	22%	32%	40%	45%	47.5%
(1) On the first Rs. 20,000 of total income	Nil							
(2) On the next Rs. 5,000 of total income		8%						
(3) On the next Rs. 5,000 of total income			18%					
(4) On the next Rs. 10,000 of total income				22%				
(5) On the next Rs. 10,000 of total income					32%			
(6) On the next Rs. 10,000 of total income						40%		
(7) On the next Rs. 10,000 of total income							45%	
(8) On the balance of total income								47.5%

Surcharges on super-tax

The amount of super-tax computed at the rates hereinbefore specified shall be increased by the aggregate of the surcharges calculated as under:

(a) A surcharge for purposes of the Union equal to the sum of—

(i) two and a half per cent. of the amount of super-tax calculated at the average rate of super-tax on the income under the head "Salaries" included in the total income;

(ii) five per cent. of the amount of super-tax calculated at the average rate of super-tax on the total income as reduced by the income under the head "Salaries" included therein; and

(iii) where the earned income included in the total income exceeds Rs. 1,00,000, ten per cent. of the difference between the amount of super-tax which would have been payable on the earned income included in the total income, if such earned income had been the total income, and the amount of super-tax payable on a total income of Rs 1,00,000;

(b) A special surcharge at fifteen per cent. of the difference between the amount of super-tax on the total income and the amount of super-tax on the whole of the earned income, if any, included in the total income, if such earned income, had been the total income.

Paragraph B

In the case of every local authority,—

Rate of super-tax

On the whole of the total income 16%

Surcharge on super-tax

The amount of super-tax computed at the rate herebefore specified shall be increased by a surcharge for purposes of the Union of 12½ per cent. of the amount of super-tax.

Paragraph C

In the case of every association of persons being a co-operative society as defined in clause (19) of section 2 of the Income-tax Act,—

Rates of super-tax

(1) On the first Rs. 25,000 of total income Nil
(2) On the balance of total income 16%

Surcharge on super-tax

The amount of super-tax computed at the rates herebefore specified shall be increased by a surcharge for purposes of the Union of 12½ per cent. of the amount of super-tax.

Paragraph D

In the case of every company, other than the Life Insurance Corporation of India established under the Life Insurance Corporation Act, 1956,—

Rates of super-tax

On the whole of the total income 55%

Provided that—

(i) a rebate at the rate of 50 per cent. on so much of the total income as consists of dividends from any Indian company; and at the rate of 35 per cent. on the balance of the total income shall be allowed in the case of any company which—

(a) in respect of its profits liable to tax under the Income-tax Act for the assessment year commencing on the 1st day of April, 1962, has made the prescribed arrangements for the declaration and payment within India of the dividends payable out of such profits in accordance with the provisions of section 194 of that Act; and

(b) is such a company as is referred to in section 108 of the Income-tax Act with a total income not exceeding Rs. 25,000;

(ii) a rebate at the rate of 50 per cent. on so much of the total income as consists of dividends from a subsidiary Indian company formed and registered before the 1st day of April, 1961; at the rate of 45 per cent. on so much of the total income as consists of dividends from any other Indian company; and at the rate of 30 per cent. on the balance of the total income shall be allowed in the case of any company which satisfies condition (a) but not condition (b) of the preceding clause;

(iii) a rebate at the rate of 50 per cent. on so much of the total income as consists of dividends from a subsidiary Indian company formed and registered before the 1st day of April, 1961; at the rate of 30 per cent. on so much of the total income as consists of dividends from an Indian company, not being a subsidiary company, formed and registered before the 1st day of April, 1959; at the rate of 45 per cent. on so much of the total income as consists of dividends from any other Indian company formed and registered on or after the 1st day of April, 1959; at the rate of 30 per cent. on so much of the total income as consists of royalties received from an Indian concern in pursuance of an agreement made by it with the Indian concern on or after the 1st day of April, 1961 and which has been approved by the Central Government; and at the rate of 17 per cent. on the balance of the total income shall be allowed in the case of any company not entitled to a rebate under either of the preceding clauses.

Provided further that—

(i) the amount of the rebate under clause (i) or clause (ii) of the preceding proviso shall be reduced by the sum, if any, equal to the amount or the aggregate of the amounts, as the case may be computed as hereunder:—

(a) on the aggregate of the sums computed in the manner provided in clause (i) of the second proviso to Paragraph D of Part II of the First Schedule to the Finance Act, 1961 as reduced by the amount, if any, which is deemed to have been taken into account, in accordance with clause (ii) of the said proviso, for the purpose of reducing the rebate mentioned in clause (i) of the said proviso at the rate of 100%.

(b) on the amount representing the face value of any bonus

shares or the amount of any bonus issued to its shareholders during the previous year with a view to increasing the paid-up capital;

at the rate of 12½%.

(ii) where the sum arrived at in accordance with clause (i) of this proviso exceeds the amount of the rebate arrived at in accordance with clause (i) or clause (ii), as the case may be, of the preceding proviso, only so much of the amounts of reduction mentioned in sub-clauses (a) and (b) of clause (i) of this proviso as is sufficient, in that order, to reduce the rebate to nil shall be deemed to have been taken into account for the purpose:

Provided further that the super-tax payable by a company, the total income of which exceeds rupees twenty-five thousand, shall not exceed the aggregate of—

(a) the super-tax which would have been payable by the company if its total income had been rupees twenty-five thousand; and

(b) half the amount by which its total income exceeds rupees twenty-five thousand.

Explanation I.—For the purposes of this Paragraph, where any portion of the profits and gains of a company is not included in its total income by reason of such

portion being agricultural income the amount representing the face value of any bonus shares and the amount of any bonus issued to its shareholders shall each be deemed to be such proportion thereof as the average of the total income of the company in the five previous years in which the company has been in receipt of taxable income immediately preceding the relevant previous year bears to the average of its total profits and gains (excluding capital receipts for the preceding five years aforesaid, reduced by such allowance as may be admissible under the Income-tax Act which have not been taken into account by the company in its profit and loss accounts for the preceding five years aforesaid.

Explanation II.—For the purposes of this Paragraph, a company shall be deemed to be a subsidiary of another company if that other company holds more than half the nominal value of the equity share capital of the first mentioned company.

Paragraph E

In the case of the Life Insurance Corporation of India established under the Life Insurance Corporation Act, 1956,—

Rate of super-tax

On the whole of its profits and gains from life insurance business 22.5

Part III

Rates for deduction of tax at source in certain cases

In every case in which under the provisions of sub-section (2) of section 192 and sections 193 to 195 of the Income-tax Act, tax is to be deducted at the rates force, deduction shall be made from the income subject to deduction at the following rates:—

Income-tax	Rates of surcharges		Super-tax	Rates of surcharge
	Rate of income-tax	Surcharge for purposes of the Union		
1. In the case of a person other than a company—				
(a) in every case, on the whole income (excluding interest payable on any security of the Central Government issued or declared to be income-tax free and interest payable on any security of a State Government issued income-tax free, the income-tax whereon is payable by the State Government, and	25%	1.25%	3.75%	

2. In the case of a company—

(a) in every case, on the whole income (excluding interest payable on any security of the Central Government issued or declared to be income-tax free and interest payable on any security of a State Government issued income-tax free, the income-tax whereon is payable by the State Government, and

(b) in addition, where the person is non-resident in India, on the whole income.

Super-tax and charges on super-tax in accordance with the provisions of clause (b) of section 113 of the Income-tax Act.

	Rate of income-tax	Rate of super-tax
2. In the case of a company—		
(a) in every case—		
(i) on the whole income (excluding interest payable on any security of the Central Government issued or declared to be income-tax free and interest payable on any security of a State Government issued income-tax free, the income-tax whereon is payable by the State Government); and	25%	
(ii) on the whole income (excluding dividends payable by an Indian company referred to in clause (iv) of sub-section (1) of section 99 of the Income-tax Act); and		5%
(b) in addition, where the company is neither an Indian company nor a company which has made the prescribed arrangements for the declaration and payment of dividends within India,—		
(i) on the income from dividends (excluding dividends payable by an Indian company referred to in clause (iv) of sub-section (1) of section 99 of the Income-tax Act)—		
(1) on dividends payable by any of its subsidiary Indian companies formed and registered before the 1st day of April, 1961		Nil
(2) on dividends payable by an Indian company not being a subsidiary company, formed and registered before the 1st day of April, 1959		20%
(3) on dividends payable by any other Indian company formed and registered on or after the 1st day of April, 1959		5%
(ii) on the income from royalties payable by an Indian concern in pursuance of an agreement which is made by it with the Indian concern on or after the 1st day of April, 1961 and which has been approved by the Central Government		20%
(iii) on any other income, not being income from dividends		33%

THE SECOND SCHEDULE (See Section 15)

Part I

In the First Schedule to the Tariff Act,—

(i) in Item No. 22(4)(b),—

(1 for the entry in the fourth column against sub-item (i), the following entry shall be substituted, namely:—

"Rs 60.00 per litre or 170 per cent ad valorem, whichever is higher, plus Rs 5.00 per litre."

(2) in the entry in the fourth column against sub-item (ii), for the figures "44.00", the figures "45.00" shall be substituted;

(ii) in Item No. 28A,—

(1) in the entry in the second column, for the word, brackets and letter "clause(d)", the word, brackets and letter "clause(h)", shall be substituted;

(2) in each of the entries in the fourth, fifth and sixth columns, the words "plus the excise duty for the time being leviable on like articles if produced on manufactured in India, and where such duty is leviable at different rates, the highest duty" shall be omitted;

(iii) in Item No. 47(2), in the entry in the fourth column, for the words and figures "Rs 6.60 per kilogram or 50 per cent ad valorem", the words and figures "Rs 7.50 per kilogram or 55 per cent ad valorem" shall be substituted;

(iv) in Items Nos. 63, 63(1), 63(4), 63(5), 63(11), 63(13), 63(23), 63(26) and 63(35), for the figures and words "20 per cent ad valorem" in the entry against

each of them in the fourth column, the figures and words "25 per cent ad valorem" shall be substituted;

(v) in Item No. 63(6),—

(1) for the entry in the fourth column against sub-item (i), the following entry shall be substituted, namely:—

"15 per cent ad valorem."

(2) for the entry in the fourth column against sub-item (ii), the following entry shall be substituted, namely:—

"Rs 74.00 per tonne plus 5 per cent ad valorem:—

(vi) in Item No. 63(8), for the entry in the fourth column, the entry "Rs 5.00 per tonne or 20 per cent ad valorem, whichever is higher, plus 5 per cent ad valorem" shall be substituted;

(vii) in Item No. 63(9), for the entry in the fourth column, the entry "Rs 60.00 per tonne plus 5 per cent ad valorem" shall be substituted;

(viii) in Item No. 63(10),—

(1) for the words and figures "Rs 59.10 per tonne" in the fourth column against sub-item (i), the words and figures "Rs 80.00 per tonne" shall be substituted;

(2) for the words and figures "Rs 79.70 per tonne" in the fourth column against sub-item (ii), the words and figures "Rs 100.00 per tonne" shall be substituted;

(ix) in Items Nos. 63(12), 63(15), 63(28), 63(29)(a), 63(29)(b) and 63(33)(b), for the entry against each of them in the fourth column, the entry "55 per cent ad valorem" shall be substituted;

Familiar as you are with this symbol as the mark that identifies the finest products in tyres, tubes and automotive accessories, it now gains added significance as Goodyear India's giant factory goes into production on a 70-acre site at Ballabgarh, 21 miles from New Delhi.

Representing a capital investment of Rs. 6 crores this factory houses the most modern tyre-making machinery including the revolutionary, exclusive 3-T Process developed by Goodyear India's American associates after 5 years of research and an expenditure of 5 million dollars.

The Indian factory is the 59th Goodyear plant in the world...the latest manufacturing unit to help further Goodyear's programme of serving people everywhere, in all walks of life. This factory will have full access to the experience, know-how and technical resources of the vast Goodyear international organisation, which is continually engaged in developing new products and improved processes.

At Ballabgarh, Goodyear India has not merely laid the foundation of a factory but also of an ideal—the ideal of serving India's expanding economy and at the same time, building an international edifice of progress and goodwill.

GOODYEAR

WORLD'S LARGEST TYRE COMPANY

SWTG 4901 R (A)

(1) for the entry in the fourth column against sub-item (i), the following entry shall be substituted, namely:—

"Rs 32.00 per tonne or 10 per cent ad valorem, whichever is higher, plus 5 per cent ad valorem."

(2) for the entry in the fourth column against sub-item (ii), the following entry shall be substituted, namely:—
"Rs 55.00 per tonne plus 5 per cent ad valorem."

(xi) in Items Nos. 63(18)(b) and 63(33)(a), for the entry against each of them in the fourth column, the entry "40 per cent ad valorem" shall be substituted;

(xii) in Item No. 63(19), in the entry in the second column, after the words "cast iron plates", the words "and stainless steel plates" shall be added;

(xiii) in Item No. 63(20), in the second column, after the words "high silicon electrical steel sheets" the words "and stainless steel sheets" shall be added;

(xiv) in Item No. 63(24), for the entries in the fourth and fifth columns, the entries "55 per cent ad valorem" and "45 per cent ad valorem", shall respectively, be substituted;

(xv) in Item No. 63(25), in the second column, the words "and iron or steel wire nails" shall be omitted;

(xvi) in Item No. 63(27), (1) for the entry in the fourth column against sub-item (i), the entry "Rs 15.00 per tonne or 15 per cent ad valorem, whichever is higher, plus 5 per cent ad valorem" shall be substituted;

(2) for the entry in the fourth column against sub-item (ii), the entry "Rs 42.00 per tonne or 25 per cent ad valorem, whichever is higher, plus 5 per cent ad valorem" shall be substituted;

(xvii) in Item No. 71(a), for the entry "35 per cent ad valorem" in the fourth column, the entry "50 per cent ad valorem" shall be substituted; and

(xviii) in Item No. 75(1), for the entry in the fourth column, the entry "150 per cent ad valorem" shall be substituted.

Notes on Clauses

Clause 2 prescribes the rates of income-tax and super-tax for the assessment year 1962-63 and for deduction of tax at source from salaries, interest on securities, dividends, etc during the same year. In the cases of individuals, Hindu undivided families, unregistered firms, etc the existing slab of Rs 15,001—20,000 has been substituted by two slabs of Rs 15,001—17,500 and Rs 17,501—20,000 and the rates for the various slabs above Rs 5,000 have been slightly increased as compared to the existing rates. The basic surcharge for purposes of the Union has been fixed at 2½% in the case of incomes from salaries in place of the existing rate of 55%.

In the case of registered firms, the rate schedule has been recast. The slabs of income have been revised and the rates of tax have been slightly increased, different rates being prescribed for firms with 4 or less partners and for firms with 5 or more partners.

In the case of companies—
(i) the rate of income-tax has been fixed at 25% as compared to the existing rate of 20%;

(ii) the effective rate of super-tax applicable to incomes, other than dividends received from Indian companies and certain royalties, of companies which have made the prescribed arrangements for the declaration and payment of dividends within India, is fixed at 20% if their income does not exceed Rs 25,000 and the public are substantially interested therein; and at 25% in other cases;

(iii) the effective rate of super-tax applicable to incomes, other than dividends received from Indian companies and certain royalties, of foreign companies which have not made the prescribed arrangements for the declaration and payment of dividends within India has been fixed at 38% so that the effective rate of income-tax and super tax on such income continues in their case at 63%;

(iv) the effective rate of super-tax on dividends received from an Indian company by a company which has made the prescribed arrangements for the declaration and payment of dividends within India is fixed at 5% if its total income does not exceed Rs 25,000 and the public are substantially interested therein. In the case of other companies which have made the prescribed arrangements aforesaid, the super-tax rate has been fixed at 5% for dividends received from an Indian subsidiary company formed and registered before 1st April, 1961, and at 10% for dividends received from any other Indian company. In the case of foreign companies which have not made the prescribed arrangements aforesaid, the effective rate of super-tax has been fixed at 5% for dividends received from an Indian subsidiary company formed and registered before 1st April, 1961; and at 10% for dividends received from any other Indian company, not being a subsidiary company, formed and registered before 1st April, 1959; and at 10% for dividends received from any other Indian company formed and registered on or after 1st April, 1959.

The effective rates for deduction of tax at source have been slightly adjusted as a sequel to the changes in the rates of income-tax and super-tax mentioned in the preceding paragraph. It is also provided that no income-tax shall be deducted at source from interest on any income-tax free securities of the Central or a State Government.

A rebate of one-tenth of the income-tax and super-tax attributable to income from exports out of India is proposed to be allowed in the case of all assesseees other than foreign companies which have not made the prescribed arrangements for the declaration and payment of dividends within India.

Clause 3 defines 'short-term capital asset'.

Clause 4 amends sub-section (2) of section 37 of the Income-tax Act. The rates at which the entertainment expenses are deductible in computing total income of companies have slightly been reduced. The total amount admissible has been reduced from Rs 1,00,000 to Rs 60,000.

Clause 5 substitutes new sections 70 and 71 of the Income-tax Act. The main changes resulting from the substitution are as follows:—

(i) losses arising on transfer of any short-term capital asset can be set off against income arising from the transfer of any other capital asset, short-term or otherwise; and
(ii) losses arising on transfer of a capital asset other than a short-term capital asset can be set off against income arising on transfer of a similar capital asset.

Clause 6 substitutes a new sub-section for sub-section (1) of section 72 of the Income-tax Act. This is consequential to the recasting of sections 70 and 71 of that Act.

Clause 7 substitutes a new section for the existing section 74 of the Income-tax Act. The main changes resulting from the substitution are as follows:—

(i) the net loss arising on transfer of capital assets other than short-term capital assets will not be carried forward to any subsequent assessment year;

(ii) the net loss arising on transfer of short-term capital assets in subsequent assessment years, the period of carry forward being restricted to 8 assessment years; and

	(1) Refrigerators and other refrigerating appliances, which are ordinarily sold or offered for sale as ready assembled units such as ice makers, bottle coolers, display cabinets and water coolers.					
	(2) Air-conditioners and other air-conditioning appliances, which are ordinarily sold or offered for sale as ready assembled units, including package type air-conditioners and evaporative type of coolers.					
	(3) Parts of refrigerating and air-conditioning appliances and machinery, all sorts.					

(iii) losses under the head "Capital gains" pertaining to the assessment year 1961-62 and earlier assessment years will be carried forward only to the extent that they relate to short-term capital assets.

Clause 8.—Sub-clause (i) introduces a new clause (f) in sub-section (1) of section 87 of the Income-tax Act. This will enable the deposits made in 10-year or 15-year accounts under the Post Office Savings Bank (Cumulative Time Deposits) Rules, 1959, to be treated for the purpose of rebate of income-tax in the same manner as contributions to recognised provident funds, etc. Sub-clause (ii) amends sub-section (3) of section 87 of that Act with a view to enhancing the maximum limit for which income-tax rebate will be available on contributions to provident fund, etc to Rs 10,000 in the case of individuals and Rs 20,000 in the case of Hindu undivided families.

Clause 9 amends sub-section (3) of section 88 of the Income-tax Act so as to enhance the maximum limits upto which exemption in respect of donations for charitable purposes will be available to 10% of the total income (as reduced by portion thereof which is exempt from tax) or Rs 2,00,000 whichever is less. The amendment is to apply to donations made during the previous years relevant to the assessment year 1963-64 and subsequent assessment years.

Clause 10 reduces the statutory percentages fixing the minimum amounts to be distributed as dividends by companies in which the public are not substantially interested to 45 and 60 in place of the existing percentages of 50 and 65 respectively.

Clause 11 substitutes two new sections for the existing sections 114 and 115 of the Income-tax Act. The main changes resulting from the substitution are as follows:—

(i) capital gains arising on transfer of short-term capital assets will be taxed in the same manner as income other than capital gains;

(ii) capital gains arising on transfer of capital assets other than short-term capital assets will be taxed at a flat rate of 25% or as if they were gains arising on transfer of short-term capital assets, whichever is more favourable to the assessee. The basic tax free limit of Rs 5,000 will continue only in the case of capital gains arising on transfer of capital assets other than short-term capital assets; and

(iii) in the case of companies capital gains arising on transfer of capital assets other than short-term capital assets will be subjected to a super-tax of 5% and on capital gains arising on transfer of short-term capital

assets super-tax will be calculated as if they were an income other than capital gains.

Clause 12.—Sub-clause (i) deletes section 5(1)(xx) of the Wealth-tax Act relating to exemption of shares in new industrial companies. Sub-clause (ii) amends Part I of the Schedule to the Wealth-tax Act slightly revising the slabs and enhancing the rate of tax on the two highest slabs to 1.75% and 2.5% respectively.

Clause 13 suspends the operation of the Expenditure-tax Act for the assessment year 1962-63 onwards.

Clause 14 makes a clarificatory amendment in clause (ii) of the first proviso to Paragraph D of Part II of the First Schedule to the Finance Act, 1961.

Clause 15, read with the Second Schedule, seeks to increase the import duties on certain items. The changes are:—

(i) on a number of articles on which Central Excise duties have been imposed, including various articles of iron and steel, provision is being made for the levy of a countervailing import duty. This is necessary in order that the indigeneous producer or manufacturer of these articles is not placed at a disadvantage in comparison with the importer;

(ii) there are some articles of iron and steel on which countervailing duty will not be leviable in the absence of excise duty thereon. In order that these may not get an undue advantage over other articles on which countervailing duties will now be attracted, the duties on these articles are being increased by 5%. The main items thus affected are structures, fittings for pipes and tubes, steel ingots and iron and steel manufactures not otherwise specified. The duty on tinplates, which are already subject to countervailing duty, is also being increased by about 2%. In addition, a new item is being created for stainless steel plates and sheets, with a duty of 25%;

(iii) the duty on certain types of tools excluding machine tools and agricultural implements is proposed to be raised from 35% to 50%;

(iv) the duty on motor cars including taxicabs is at present 100% or Rs 6,000 per car or cab, whichever is higher, plus countervailing duty. It is proposed to raise the ad valorem rate to 150% but to do away with the alternative specific rate of duty. The countervailing duty will continue to be applicable;

(v) the statutory rate of duty on artificial silk yarn and thread is being increased by 5%; and

(vi) a few other minor changes have been proposed with the object of removing certain anomalies in the tariff.

PART II—(Contd.)

Item	Name of Article	Nature of duty	Standard rate of duty	Preferential rate of duty if the article is the produce or manufacture of		Duration of protective rates of duty
				The United Kingdom	A British Colony	
1	2	3	4	5	6	7
(xiii) in Section XVI, after Item No. 73(23), the following shall be inserted, namely:—						
"73(24)	Electric wires and cables, all sorts, not falling under Item 63(36).	Revenue.	The excise duty for the time being leviable on like articles if produced or manufactured in India, and where such duty is leviable at different rates, the highest duty; and the duty so leviable shall be in addition to the duty which would have been levied if this entry had not been inserted.	...	...	...
(xiv) in Section XVIII, after Item No. 79, the following Item shall be inserted, namely:—						
"79(1)	Gramophones, including record players, whether mechanically or electrically driven, and with acoustic, electronic or transistorised systems or reproduction or amplification, and parts and accessories thereof, and gramophone records, all sorts—	Revenue.	The excise duty for the time being leviable on like articles if produced or manufactured in India, and where such duty is leviable at different rates, the highest duty; and the duty so leviable shall be in addition to the duty which would have been levied if this entry had not been inserted.	...	...	...
	(i) Gramophones or record players, including radiograms.					
	(ii) Parts and accessories of gramophones or record players, all sorts.					
	(iii) Gramophone records, all sorts, other than matrices.					
	(iv) Matrices for records, impressed.					
	(v) Gramophone needles or styli—					
	(a) wholly made of steel.					
	(b) others.					
(xv) for Item No. 82(6)(A), the following Item shall be substituted, namely:—						
"82(6)(A)	Plastics, all sorts—	Revenue.	The excise duty for the time being leviable on like articles if produced or manufactured in India, and where such duty is leviable at different rates, the highest duty; and the duty so leviable shall be in addition to the duty which would have been levied if this entry had not been inserted.	...	...	...
	(i) Moulding powders, granules and flakes (thermosetting and thermoplastic).					
	(ii) Polyethylene films, lay-flat tubings and P.V.C. sheets (that is to say, Polyvinyl Chloride sheets).					
	(iii) All others.					

STATEMENT OF OBJECT AND REASONS

The object of this Bill is to give effect to the financial proposals of the Central Government for the financial year 1962/63 and to provide for certain connected matters. The Notes on Clauses explain the various provisions contained in the Bill.

NEW DELHI;
The 23rd April, 1962.

MORARJI DESAI

Clause 16.—Sub-clause (1) seeks to amend the definition of 'manufacture'.

Sub-clause (2) (a) (1) seeks to increase the rates of duty on unmanufactured tobacco, other than stalks and also proposes to delete sub-item (5) (iii) relating to granule of tobacco ('rawa').

Sub-clause (2) (a) (2) proposes to re-classify the existing eight groups of cigarette tariff into five and also to revise the rates of duty.

Sub-clause (2) (b) seeks to introduce a new sub-item, namely, 'Tar' under the existing item relating to 'Asphalt and Bitumen.'

Sub-clause (2) (c) proposes to levy an excise duty on "all products derived from refining of crude petroleum or shale" which are not being taxed at present.

Sub-clause (2) (d) seeks to introduce for purposes of clarification of a sub-clause (iii) under sub-item III of Item No. 14 relating to 'Paints and Varnishes.'

Sub-clause (2) (e) seeks to redefine the 'coal tar dyes'.

Sub-clause (2) (f) seeks to redefine the scope of the existing item relating to 'Patent or proprietary medicines'.

Sub-clause (2) (g) proposes to levy an excise duty on certain 'Acids' and 'Gases.'

Sub-clause (2) (h) seeks to insert a new sub-item (iii) under the existing Item 15A relating to 'Plastics' to make it more comprehensive.

Sub-clause (2) (i) proposes to levy an excise duty on certain 'Rubber products' and 'Plywood.'

Sub-clause (2) (j) proposes an

increase in the rate of duty on 'Rayon and Synthetic fibres and Yarn', and adds a clarificatory Explanation thereto.

Sub-clause (2) (k) seeks to raise the rates of excise duty on 'Cotton Yarn.'

Sub-clause (2) (l) proposes to increase the rates of excise duty on 'Woollen Yarn.'

Sub-clause (2) (m) seeks to delete the provision relating to Cotton Fabrics manufactured on handlooms and proposes to increase the rates of excise duty on 'Cotton Fabrics'.

Sub-clause (2) (n) seeks to delete the provision relating to Woollen Fabrics manufactured on handlooms.

Sub-clause (2) (o) seeks to delete the provision relating to

Art Silk Fabrics manufactured on handlooms.

Sub-clause (2) (p) proposes to levy an excise duty on 'Jute Manufactures'.

Sub-clause (2) (q) proposes to levy an excise duty on 'Asbestos-Cement Products'.

Sub-clause (2) (r) proposes to levy an excise duty on 'Copper in any crude form.'

Sub-clause (2) (s) seeks to levy an excise duty on certain 'Iron or Steel Products'.

Sub-clause (2) (t) seeks to raise the existing rate of duty on 'Aluminium Foils.'

Sub-clause (2) (u) proposes to combine into one item the present tariff items 29A and 40 relating to 'Air-conditioning Machinery' and 'Refrigerators' respectively as well as to make it more comprehensive.

Sub-clause (2) (v) seeks to exclude 'Electric Motors' specially designed for use in Gramophones from the scope of Item No. 30.

Sub-clause (2) (w) proposes to levy an excise duty on 'Electric Wires and Cables'.

Sub-clause (2) (x) seeks to revise the present specific rates on

'Auto-Cycles, Three-Wheelers and Medium-sized Cars' into specific-cum-ad valorem rates.

Sub-clause (2) (y) proposes to levy an excise duty on 'Gramophones and parts and accessories of gramophones, and gramophone records'.

Sub-clause (2) (z) which is consequential to sub-clause (2) (u) seeks to delete the existing Item No. 40 relating to 'Refrigerators and parts thereof'.

Clause 17.—Sub-clause (a) seeks to delete sub-item I (5) (iii) of item 4 relating to granule of tobacco ('rawa').

Sub-clause (b) seeks to make certain changes in the rates of additional excise duty on 'Cigarettes'.

Clause 18 seeks to amend the Schedule to the Medicinal and Toilet Preparations (Excise Duties) Act with a view to bring the definition of Patent or proprietary medicines in that Act into line with the revised definition of the same expression in the Central Excises and Salt Act, 1944 [vide clause 16(2)(f)].

FINANCIAL MEMORANDUM Central Excise

The Bill seeks to levy new excise duties on—

1. All petroleum Refinery products other than those which are already under excise.
2. Acids (Nitric, Hydrochloric and Sulphuric).
3. Gases (Oxygen, chlorine, ammonia, carbon dioxide and refrigerant gases).
4. Certain rubber products.
5. Plywood and allied products.
6. Jute manufactures.
7. Asbestos cement products.
8. Certain iron and steel products.
9. Electric wires and cables.
10. Gramophones including parts and accessories, and gramophone records.

and accessories, and gramophone records. Coal Tar is also proposed to be brought under excise by altering the present Item of Asphalt and Bitumen.

These levies will necessitate the employment of some additional staff. The increase in staff together with incidental expenses of administration is estimated to cost Rs. 24.43 lakhs per annum.

I. Volume of work: There are about 600 units which are now to be brought under excise control.

II. Requirement of personnel and finance:

For the field organisation			
	No.	Annual emoluments	Cost
		Rs.	Rs.
A. Officers—			
Deputy Collectors	2	2×15,000	30,000
Assistant Collectors	8	8×8,880	71,040
Superintendents—			
Class I	8	8×8,880	71,040

Stenotypists	20	20×2,044	40,880
C. Incidental expenses including Class IV, contingencies, etc.			3,00,000
TOTAL			23,46,140 or Rs. 23.46 lakhs.

For Statistics and Intelligence Branch (Central Excise)			
	No.	Annual emoluments	Cost
		Rs.	Rs.
A. Officers—			
Statistician	1	1×8,000	8,000
B. Staff—			
Statistical Investigator	1	1×5,000	5,000
Head Clerk	1	1×3,746	3,746
Upper Division Clerks	2	2×2,548	5,096
Lower Division Clerks	3	3×1,804	5,412
C. Incidental expenses			3,000
TOTAL			30,254 or Rs. 30,000
For the Office of the Central Board of Revenue			
A. Officers—			
Deputy Secretary	1	1×21,000	21,000
Section Officer	1	1×7,800	7,800
B. Staff—			
Assistants	5	5×3,864	19,320
Stenographer	1	1×3,864	3,864
Upper Division Clerk	1	1×2,548	2,548
Lower Division Clerks	4	4×1,804	7,216
C. Incidental expenses including Class IV staff, contingencies, etc.			5,000
TOTAL			66,748 or Rs. 67,000 Rs. 24.43 lakhs.

CUSTOMS

The Bill also seeks to levy countervailing duties on all articles on which Central Excise duties are newly imposed. These duties will have to be assessed and collected in addition to the basic duties levied at present. In addition, in view of the adjustments in tea export duties, some extra work will be thrown on the Custom Houses in

granting refunds to exporters and making book adjustments with the Central Excise Department.

These changes will necessitate the employment of some additional staff on the Customs side as well. The increase in staff together with incidental expenses of administration, is estimated to cost Rs. 2.75 lakhs per annum.

Requirement of personnel and finance: For the field organisation			
Assistant Collector	1	1×8,880	8,880
Principal Appraisers	2	2×9,648	19,296

LOK SABHA

A

BILL

to give effect to the financial proposals of the Central Government for the financial year 1962-63.

The President has, in pursuance of clauses (1) and (3) of article 117 and clause (1) of article 274 of the Constitution of India, recommended to the Lok Sabha, the introduction and consideration of the Bill.

M. N. KAUL,
Secretary.
(Shri Morarji Desai,
Minister of Finance.)

Steady Progress in Railways' Operating Efficiency

Additional Commitments Call For Increased Revenue

Massive Programme of Construction & Expansion

Sardar Swaran Singh's Speech

MR. SPEAKER,

Sir, I rise to place before the House the Railway estimates for the year 1962-63.

2. My predecessor, Shri Jagjivan Ram, when presenting the tentative estimate for the full year 1962-63 so as to facilitate, as far as possible, the grant of proportionate supplies for the first three months of the year, made it clear that the estimate was "on existing rates and fares and on the present costs." He indicated, on this basis, a surplus for the year of about Rs. 13.16 crores, for credit to the Development Fund; he added that, as this would fall very much short of the expenditure that will have to be incurred in 1962-63 on works chargeable to the Development Fund, a temporary loan from General Revenues was unavoidable unless the Railway resources were augmented. The amount of this loan, according to the foregoing estimate, was shown in the Explanatory Memorandum on the Budget as Rs. 9.88 crores. Since then, there has been a substantial increase in the working expenses of the Railways as a result of the recent decision of the Government enhancing the dearness allowance payable to lower paid Central Government employees. The payment, covering the period from 1st November 1961 from which date the enhancement of the dearness allowance is to take effect, will amount to Rs. 12.20 crores; this increased expenditure, with the earnings on present rates and fares, will virtually wipe out the surplus of Rs. 13.16 crores anticipated in the tentative estimates for 1962-63 and thus increase the temporary loan from General Revenues. To finance the Railway Development Fund, to over Rs. 22 crores. As explained in the White Paper on the Railway Budget, loans similar in purpose but for smaller amounts were taken during the last three years of the Second Plan period, by availing of the provision in the "Railway Convention" of 1954, which permit recourse to such loans when necessary. But these loans were liquidated in a special manner, as suggested by the Railway Convention Committee, 1960, with the object of starting the Third Plan period with a clean slate. It is obviously neither desirable, nor practical, to take such loans year after year, as will inevitably be necessary if the Railway resources are not augmented. Shri Jagjivan Ram, even in his Budget Speech of February 1961, had drawn attention to the fact that there had been no

increases in passenger fares in the recent years and that increases in freight rates had also not kept pace with the increases in cost of transport. It has to be remembered that the Railways, on the one hand, are required as a Commercial Department to pay all levies such as Customs Duty, Cess charges and Excise Duty on coal, Sales Tax, municipal tax on buildings, etc. (totalling about Rs. 15 crores a year at present), over and above the annual payment of dividend to the General Revenues at 4.25 per cent on increasing capital-at-charge and Rs. 12.5 crores in lieu of passenger fares tax; the Railways are also required, on the other hand, to make large indirect contributions to the national economy in their role as a public utility service.

3. It may be recalled in this connection that the Railway Freight Structure Enquiry Committee, in their report of April 1957, had concluded, after taking into consideration the cost trends, that it was essential to revise the then existing scale of freight rates in an upward direction if the Railways were to play the part expected of them in a period of planned development and if their financial stability was to be ensured. The Committee went on to the question of efficiency of Railways, to see if increased efficiency would reduce the cost of transport and thereby secure sufficient funds for the Railways, and concluded that Railways were making a sustained effort for improvement but that should have additional revenue by an increase in freight rates to meet their expanding needs. The Committee observed in this connection that "any loss that the railways may suffer has to be made good, if not through increases in freight, by general taxation, and this will probably affect more adversely the prospects of industrialisation and further expansion of trade." The "Review," which is being circulated with the Budget papers, indicates in some detail how the improved operational efficiency of the railways, in handling the increased traffic load, has obviated the need for increasing the freights and fares in strict proportion to the increase in the cost of staff and of coal and other materials. After considering all relevant aspects, the Railway Freight Structure Enquiry Committee made proposals for increased freight rates which represented additional revenue yield averaging about 12.9 per cent of the goods earnings at the then existing rates. In the absence of any indication, at that stage, of the cost of

implementing the Pay Commission recommendations, the Government confined the increases in freight rates—effective from 1st October 1958—to a level sufficient to yield additional goods earnings of about four per cent only. Subsequently, a surcharge of five per cent was levied on freight rates, from the 1st April, 1960, just covering the cost of implementing the Pay Commission's main recommendations, while the more recent minor adjustments in coal rates, etc., that have been made since 1st July 1961, have secured very little additional revenue (only about Rs. 1.75 crores per year).

4. With the increase in dearness allowance and the need even otherwise to maintain a satisfactory return on the heavy additional capital outlay which the Railways will have to incur, at present day high costs, for executing the Plan programmes, the Railways should reasonably now effect a further increase in the freight rates. It must not be overlooked that the Railway Freight Structure Enquiry Committee's recommendations of April 1957 could not have taken account of the large financial effect of the subsequent two increases in dearness allowance (one from 1st July 1957 and again now) and of implementation of the Pay Commission's main recommendations from 1st July 1959. The other recommendation of the Railway Freight Structure Enquiry Committee in regard to Indian Railways—assuming the full liability of a 'common carrier', instead of only the responsibility of a bailee as previously, has been implemented from 1st January 1962. This measure is expected to cost the railway revenues about rupees two crores a year, even though every effort will continue to be made to prevent claims by tightening up the arrangements for security and the marking and packing of consignments. With all these additional commitments, an increase in railway freight rates is urgently called for.

5. The proposal is to enhance, as from 1st July 1962, the basic rate charged for goods traffic by 50 n.p. per tonne, for traffic, including coal, carried up to 40 kilometres, and one rupee per tonne in the case of traffic carried beyond 40 kilometres, marginal adjustments being made over distances 41–80 kilometres. In the case of foodgrains, however, the increase of one rupee per tonne would apply only to movement in excess of 160 kilometres, with marginal adjust-

ment between 41 kilometres and 160 kilometres. The existing supplementary charge of five per cent would be levied, in addition, as hitherto. These increases will not apply to railway materials, postal traffic, military traffic, and export manganese ore traffic. In the case of livestock and sugarcane, which are charged on wagon basis, the incidence of the increase will be somewhat less. The increase in freight rates will in no case exceed 105 naye paise per tonne, whatever the commodity or the distance over which it is transported. The estimated additional yield from goods traffic is approximately four per cent over the existing goods earnings of a whole year. The increase will thus be a modest one, spread over almost all commodities and so designed that no commodity will suffer a large burden. The resulting rate structure will be slightly more telescopic than at present. This, in fact, is justified, since several items of cost which have increased, are not affected by the lengths of haul. A flat increase as proposed will minimise the incidence of increase in high rated commodities, and will be a first step towards narrowing down the existing difference between the lowest and highest freights, as envisaged by the Committee on Transport Policy and Co-ordination. Further, the proposal, resulting as it will, in a somewhat larger percentage increase for short distance rail traffic, would tend to encourage its off-loading to road as is desirable.

6. As regards passenger fares, it is noteworthy that, except for the imposition from September 1957 of the Passenger Fares Tax, the proceeds of which go to the General Exchequer, for distribution to the States, and not to the Railways—there has been practically no change in the basic passenger fares of other than the air-conditioned class since 1st April 1951 (1st January 1948 in the case of season tickets). The adjustments in fares made on 1st April 1955, apart from increases in the fares of air-conditioned class—were quite small and merely provided appropriate relief for long distance passengers, etc., by way of rationalisation. The levy of Railway Passenger Fares Tax indirectly had the effect of limiting the scope for increase in passenger fares, even though the fares have been too low to cover the costs since 1957-58 when, on account of the interim addition to the dearness allowance to lower paid staff, the Railways' annual wage bill increased by about

rupees six crores. Even after the tax was merged in passenger fares on 1st April, 1961,—which incidentally has secured simplicity of account—the position has not changed materially, as the Railways still have to pay to the General Revenues, for transfer to the States, a fixed sum of Rs 12.5 crores annually, during the quinquennial period 1961-66, in lieu of Passenger Fares Tax. Passenger fares, from the point of view of revenue to the Railways, have thus been virtually frozen since 1st April, 1951, with no increases to reflect even partially the increase in the Railways' working costs. Within the limitations of resources, the Railways have endeavoured in various ways to improve the amenities for passengers in trains and in stations, and to ease over-crowding to the extent possible. Although the Second Plan estimated, and initially provided for, an increase of 15 per cent only in the passenger traffic during the Plan period, the Railways were able to provide 26.4 per cent increase in

carriages and 23 per cent increase in seating capacity, thus substantially meeting the requirements of the additional passenger traffic. It is true that the passenger fares tax levied since September 1957 and merged in railway fares on 1st April, 1961, though not accruing to the Railways, nevertheless has had the effect of increasing the incidence of burden to the railway passengers on the average by about 10 per cent. But the fact remains that the position in respect of the total charge to passengers has not altered since 1957.

7. After careful consideration, it felt that an increase in passenger fares, so as to yield in a full year an additional revenue to approximately 10 per cent of the passenger earnings at the existing level of fares, would be fully justified and, in fact, would be a conservative measure.

8. The bases of the proposed fares, class-wise, are shown in the

Supplement to the Explanatory Memorandum on the Budget which is being circulated with the Budget papers. The percentage increase proposed in first class fares averages to about 15 per cent, while that for second and third class fares would be a little under 10 per cent. For air-conditioned third class in de luxe trains, the present surcharge over third class fares correspondingly increased, but keeping the fares for this class of travel still below the proposed second class mail fares. The fares for the air-conditioned class were put up in 1955; some further increases will now be made in these fares, while maintaining a reasonable relationship with the fares for corresponding journeys by air.

In notifying the proposed increases in the passenger fares of different classes, opportunity will be taken to remove certain anomalies, such as not affording the relief, through telescopic charges, for long distance passengers, which crept

into the fare structure when the passenger fares tax—chargeable at varying percentages for different distances—was merged in the passenger fares on 1st April 1961 without making any other adjustments.

It is proposed to limit the increase in the case of season tickets to five per cent, having regard to the desirability of keeping down, as far as possible, the incidence of burden on a large number of office and industrial workers. The charge for season tickets has remained unchanged since 1st January 1948, as even the passenger fares tax imposed in 1957 did not apply to season tickets. The charge at present corresponds, in the case of most third class monthly suburban tickets in Bombay, Calcutta and Madras, to the value of between 8 and 15 single journeys only, as against 50 to 60 such journeys ordinarily performed in a month on such tickets. It would not be possible to avoid an increase altogether in the season ticket charges, nor would it be justified. Wage-earners, who largely use these tickets and who no doubt have received substantial increase in wages since 1948, have hitherto been protected from any increase in this one item alone of their living costs; even under the proposed charge they will have to make only a small additional monthly payment towards the increased cost of transport. The average third class suburban season ticket holder travels only about 17 kilometres a day each way on the average. Even for 30 kilometres each way the increase proposed will add to the cost of travel only about 40 nP. in a whole month. The average third class suburban season ticket holder will have to spend barely one naya palsa extra per day.

9. Having regard to the proposals for adjustments in fares and freights which are expected to yield additional revenue of Rs 21.26 crores in 1962-63, the estimate of Gross Traffic Receipts for the Budget year 1962-63 is now placed at Rs 545.36 crores. The estimate of ordinary working expenses is now placed at Rs 356.80 crores, or an increase of Rs 11.20 crores over the earlier estimates, the increase representing payments on account of increased dearness allowance offset to a small extent by other variations. In the result, the surplus for 1962-63, which had been shown in the earlier estimates, as Rs 13.16 crores, is now estimated as Rs 23.22 crores; this will be credited to the Development Fund. This surplus of Rs 23.22 crores will just cover the estimated expenditure (Rs 23 crores) on works chargeable to the Development Fund in 1962-63, and will therefore obviate the need for a loan from the General Revenues to finance the Fund. (These and a few other minor changes in the earlier tentative estimates for the year 1962-63 are brought out in the Supplement to the Explanatory Memorandum on the Budget and in the Explanatory notes in the Demand Book.

10. (Turning now to the transport performance of the Railways in

1961-62, the first year of the Third Plan, there is little to add to what was explained by Shri Jagjivan Ram in his Budget Speech of last month; it may be mentioned, however, that the offerings of sugarcane were substantially below the previous season (1960-61).

In the matter of coal transport Railways have been meeting the full demands of the steel plants and washeries. Further, the demand for wagons from the outlying coalfields were also met in full. As regards the movement of coal for consumers other than steel plants from the Bengal and Bihar Coalfields, Railways moved, during 1961-62, an additional 182 wagons per day, which represents an achievement of about one sixth of the planned increase over the Third Plan period from these Coalfields. The rate of increase will be progressively more in the remaining years of the Plan as the development works are executed and the rolling stock holdings are increased. In the Bengal and Bihar coalfields, while occasional wagon shortages were felt for inescapable reasons, total coal loading during 1961-62 averaged 319 wagons per day more than in the previous year, representing an increase of about 7.1 per cent. Although the supply of wagons for the transport of general goods of lower priorities was subject to some delays, the transport position, on the whole, was better in 1961-62 than in the previous year, in that the pending indents for wagons were less.

11. As regards movements planned during 1962-63, it is programmed to meet in full the demands of the Steel plants and Washeries, and to provide initially for a daily movement of not less than 3,846 wagons for other consumers from the Bengal and Bihar fields, as compared to 3,580 wagons in 1961-62 and 3,398 wagons in 1960-61. In the later part of the year it would be possible to improve on this figure. No difficulties are anticipated in meeting the requirements of the outlying fields in full. Government's objective in the Third Plan is to step up production from these fields. In the result, consumers of coal in general may expect, and will receive, more supplies than during the last year.

The Railways' estimate of traffic in 1962-63 is an additional 15 million tons, as indicated by my predecessor in his Budget Speech; of this, half will be of coal and goods traffic for steel plants and the other half for others, over and above the traffic carried in 1961-62. With a view to achieve the large increase that has to be planned for coal movements in the Third Plan, an appreciable proportion of the increased traffic will be carried in heavy train loads of the new type of BOX wagons, which are being put into commission in increasing numbers.

12. As regards other aspects of railway working, such as improvement in the service and amenities for railway users, public cooperation through Consultative Committees, Staff Welfare and Labour Relations,

technical progress and research, etc., the White Paper on the Railway Budget (1962-63) has referred to these in some detail. I shall content myself with a brief mention of the massive programme of construction and expansion which the Railways have undertaken in order to develop the capacity required for handling the very large increase in traffic anticipated during the Third Plan period. During the year 1961-62 (first year of the Third Plan), the electrification of 528 route kilometres was completed; a further 350 route kilometres are expected to be electrified in 1962-63. Doubling of track of about 600 kilometres was completed in 1961-62; it is programmed to complete 800 kilometres more of doubling in the current year. The fleet of locomotives was augmented by the addition of 41 metre gauge diesel locomotives in 1961-62; it is expected that 112 Broad Gauge and 19 Metre Gauge diesel locomotives will be received in the current year. The Chittaranjan Locomotive Works have begun turning out electric loco-

motives, of which 21 are expected to be delivered before the end of 1962-63, including three such locomotives already turned out, while at the same time fully maintaining the output of steam locomotives as in the past. The output in the Integral Coach Factory has been steadily increasing, and is also being diversified to cover various types of coaching stock; during the last year the factory turned out 598 coach shells, and 644 coaches are expected to be turned out during the current year. Wagon production has suffered difficulties owing to shortage of materials, but these are being steadily overcome. During 1961-62, as many as 19,100 wagons, in terms of four-wheelers, were manufactured, compared with 11,984 in the previous year. The present rate of production exceeds 2,250 per month; this rate will be improved upon in the coming years. Most of the major line capacity works needed to cope with the anticipated rise in traffic during the Third Plan period and which take time for execution, have either been sanctioned already or else are ready to

be taken up during the current year. The Works, Machinery and Rolling Stock programme for the year 1962-63 has been placed at Rs. 295 crores, which is the highest in recent years. The details of the works of new line constructions are given in the White Paper and the Budget documents.

13. May I assure the House, Sir, in conclusion that it will be my constant endeavour to maintain the good relationship established with employees on the Railways and the steady progress achieved in the operating efficiency of Railways as well as in the standard of service rendered by them. I have no doubt that railwaymen of all grades, with their long record of achievement and devotion to duty, will rise to still greater heights in a common endeavour to fulfil the difficult task set before the Railways. I am equally confident that I can count on the support and encouragement of the Parliament and of the members of the public outside, to enable me to discharge the heavy responsibilities entrusted to me.

To carry coal from the mines, ore from the quarries, steel, concrete and oil to and from Projects—to carry 243 million tons of goods round-the-clock, the Railways need more and more wagons.

Diversifying its activities further afield, Britannia has set up an additional Unit at Mokameh, Bihar, which is currently engaged in the manufacture, among other items, of Wagons for the Railways, the most vital links of transport.

McLeod & Co. Ltd. 3, Netaji Subhas Road, Calcutta-1

On the firm foundations of the First and Second Five Year plans, the task of successfully executing the Third Five Year Plan has begun. Development work is taking place in every village. There is activity in every farm and factory and in every small cottage industry. From Rs. 72 crore and Rs. 155 crore spent respectively during the First and Second Plans, there is a significant rise in the Third Plan provision of Rs. 293.15 crore for West Bengal. Aiming at all-round progress, the Third Plan provides Rs. 53.60 crore for Agriculture, Rs. 63.86 for Irrigation & Power, Rs. 81.32 for Social Services, Rs. 26.50 for Transport & Communications, Rs. 17.43 for Co-operative and Community Development, Rs. 12.14 for Industry & Mining and Rs. 38.30 crore for other development works.

WITH PEOPLE'S PARTICIPATION ON THE ROAD TO PROGRESS AND PROSPERITY

In the past ten years food production increased from 39.7 to 54.5 lakh metric tonne; Irrigation: 24.4 to 31.6 lakh acres; Schools: 16,317 to 31,310; Students: 20.5 to 34.2 lakh; Hospitals & Dispensaries: 1,284 to 1,912; Doctors: 18,336 to 20,834; Hospital Beds: 18,329 to 27,611; Nurses: 2,988 to 5,001; Handloom Cloth: 10 to 19 crore yds.; Road (Surfaced): 1352.9 to 5,888 miles; Electricity: 1046.7 to 1803.7 million K. W. H.; Jute: 13.5 to 18.0 million bales; Factories: 2,530 to 3,943; and Co-op. Societies: 15,583 to 27,715.

GOVERNMENT OF WEST BENGAL

Memorandum Explaining the Provisions in the Finance Bill, 1962

(Clause referred to are clauses in the Bill)

INCOME-TAX AND SUPER-TAX

I. Rates of tax for the assessment year 1962-63 on income other than capital gains.

1. Assessee other than companies.
(a) Individuals Hindu undivided families, unregistered firms, etc. In the rate schedule applicable to individuals, Hindu undivided families, unregistered firms, etc., the existing slab of Rs. 15,001-20,000 has been substituted by two slabs, namely, Rs. 15,001-17,500 and Rs. 17,501-20,000. For all the slabs

above Rs. 5,000, the rates have been slightly increased as compared to the existing rates. The basic surcharge for purposes of the Union has been fixed at 2½ per cent for incomes from Salaries. In other respects, the existing surcharges are to continue.

The following table sets forth the total tax (income-tax, super-tax and surcharges) payable by a married individual with two children at certain levels of income at the rates applicable for the assessment year 1961-62 and the rates proposed for the assessment year 1962-63:—

Income	Income-tax (including super-tax and surcharges) payable by a married individual with two children.		Wholly earned income other than Salaries		Wholly unearned income	
	1961-62	1962-63	1961-62	1962-63	1961-62	1962-63
5,000	42	42	42	42	42	42
10,000	438	479	438	490	500	560
15,000	1,094	1,171	1,094	1,199	1,250	1,370
20,000	2,039	2,272	2,039	2,328	2,330	2,680
25,000	3,696	4,044	3,696	4,142	4,224	4,734
40,000	10,521	11,085	10,521	11,334	12,024	12,954
70,000	29,421	30,745	29,421	31,495	33,624	35,994
1,00,000	51,471	53,039	51,471	54,332	58,824	62,094
1,50,000	91,721	93,820	91,721	96,020	1,00,824	1,05,594
2,00,000	1,31,971	1,34,601	1,31,971	1,37,707	1,42,824	1,49,094

(b) Registered firms. The existing tax-free slab of Rs. 1-40,000 is replaced by a tax-free slab of Rs. 1-25,000 and the slab of Rs. 25,001-40,000. The revised slabs and the rates applicable which depend upon the number of partners in the firm, are set forth in the following table:—

Rates of income-tax in the case of registered firms.			
Where the firm has 4 or less partners		Where the firm has 5 or more partners	
(1) On the first Rs. 25,000 of total income	Nil	(1) On the first Rs. 25,000 of total income	Nil
(2) On the next Rs. 15,000 of total income	5%	(2) On the next Rs. 15,000 of total income	7%
(3) On the next Rs. 20,000 of total income	6%	(3) On the next Rs. 20,000 of total income	8%
(4) On the next Rs. 40,000 of total income	7%	(4) On the next Rs. 40,000 of total income	10%
(5) On the next Rs. 50,000 of total income	8%	(5) On the next Rs. 50,000 of total income	10%
(6) On the balance of total income	10%	(6) On the balance of total income	12%

2. Companies.
(a) The rate of income-tax applicable to all companies is proposed to be raised from 20 per cent to 25 per cent.
(b) The effective rates of super-tax payable by various types of companies on incomes other than capital gains and royalties of the type mentioned at (c) below are set forth in the following table:—

Rates of super-tax payable by companies			
Income.	Companies in which public are substantially interested and whose total income does not exceed Rs. 25,000/-		Rates applicable to companies which have not made the said prescribed arrangements.
	(1)	(2)	
(1) Dividend received from: Indian company formed and registered before 1-4-1961	5	5	5
(ii) An Indian company, not being a subsidiary, formed and registered before 1-4-1959	5	10	25
(iii) Any other Indian company formed and registered on or after 1-4-1959	5	10	10
(2) Other income Post 1961 D.	20	25	38

(c) The effective rate of tax on royalties received by a foreign company (which has not made the prescribed arrangements for the declaration and payment of dividends within India) from an Indian concern in pursuance of an agreement made with the Indian concern on or after 1-4-1961 and which has been approved by the Central Government, is proposed to be continued at 50 per cent.

(d) The effective rate of super-tax payable with reference to bonus shares issued is proposed to be continued at the existing rate of 12½ per cent.

3. Export incentive.
An incentive for export promotion has been provided for all assessee other than foreign companies (which have not made the prescribed

arrangements for the declaration and payment of dividends within India). A rebate of one-tenth of the income-tax and super-tax attributable to income from exports out of India will be allowed in such cases. The Central Board of Revenue will make rules for the computation of such income.

[Clause 2, Parts I and II of First Schedule]

II. Rates for deduction of tax (including super-tax) at source from interest on securities, etc.

In the case of assessee other than companies, the rates for deduction of tax at source from interest on securities, dividends, etc., remain unchanged. In the case of companies, the rates at which tax is proposed to be deducted at source are set forth in the following table:—

Rates for deduction of tax (including super-tax) at source in the case of companies.			
Income.	Rates applicable to companies which have made the prescribed arrangement for the declaration and payment of dividends within India.		Rates applicable to companies which have not made the said prescribed arrangements.
	(1)	(2)	
1. (i) Interest on any income-tax free security of the Central or a State Government	5	38	
(ii) Interest on other securities	30	63	
2. (i) Dividends received from an Indian company referred to in section 99(1)(iv) of the Income-tax	25	25	
(ii) Dividends received from any other Indian company:			
(a) which is a subsidiary company formed and registered before 1-4-1961	30	30	
(b) which is not a subsidiary company and is formed and registered before 1-4-1959	30	50	
(c) which is any other company formed and registered on or after 1-4-1959	30	35	
3. Royalties payable by an Indian company in pursuance of an agreement which is made on or after 1/4/1951 and which is approved by the Central Government	—	50	
4. Any other income	—	63	

[Clause 2, Part III of First Schedule]

111. Amendments to the Income-tax Act, 1961.

1. Taxation of capital gains.

(a) Assessee other than companies. For the purpose of levying tax on capital gains, it is proposed to divide them into two categories, namely, gains arising on transfer of short-term capital assets and gains arising on transfer of other capital assets.

The gains relating to the short-term capital assets are proposed to be taxed at the rate applicable to the amount of such capital gains and all other income except capital gains. The gains relating to capital assets other than short-term capital assets are to be taxed either at a flat rate

of 25 per cent or at a rate applicable to a total income comprised of the amount of such gains and all other incomes except capital gains, whichever is less.

The losses arising in respect of short-term capital assets can be set off against the capital gains relating to short-term capital assets as well as other capital assets and any such loss as is not fully so set off can be carried forward to the succeeding assessment year or years to be set off against the capital gains relating to short-term capital assets for these years. The carry-forward will be restricted to eight assessment years.

The losses arising in respect of capital assets other than short-term

capital assets can be set off only against capital gains relating to any other similar capital asset. The net losses, if any, relating to capital assets other than short-term capital assets are not to be carried forward to any subsequent year.

In regard to losses under the head "Capital gains" which had arisen for the assessment year 1961-62 or any earlier assessment year and have not been fully set off and are available for being carried forward within the limit of eight assessment years, only such portion of the losses as relates to short-term capital assets is to be carried forward to the assessment year 1962-63 or any subsequent assessment year.

A short-term capital asset is defined as a capital asset which is held by an assessee for not more than twelve months immediately preceding the date of its transfer.

(b) Companies. In the case of companies also, capital gains are to be considered in two parts—those relating to short-term capital assets and those relating to other capital assets. Capital gains relating to assets other than short-term assets are to be taxed at the rate of 30 per cent (25 per cent being income-tax and 5 per cent being super-tax). Capital gains relating to short-term capital assets are to be aggregated with all other incomes (except capital gains relating to assets other than short-term assets) and taxed accordingly. As regards set off and carry forward of losses, the position is to be the same as in the case of assessee other than companies.

[Clauses 3, 5, 6, 7 and 11]

2. Exemption of donations for charitable purposes.

The maximum limit upto which exemption is available in respect of donations for charitable purposes is proposed to be increased to 10 per cent of the total income (as reduced by any portion thereof which is exempt from tax) or Rs 2,00,000, whichever is less. The enhanced limits will apply to donations made during the previous years relevant to the assessment year 1963-64 or any subsequent assessment year.

[Clause 9]

3. Income-tax rebate on Cumulative Time Deposits.

An amendment proposed to be made to Section 87 of the Income-tax Act provides that deposits made in a 10-year account or a 15-year account under the Post Office Savings Bank (Cumulative Time Deposits) Rules, 1959, as amended from time to time, will be entitled to a rebate of income-tax in the same manner as contributions to recognised provident funds or premia paid for life insurance.

[Clause 8, sub-clause (i)]

4. Higher limits for life insurance premia, etc.

Another amendment to Section 87 of the Income-tax Act seeks to enhance the maximum limit upto which income-tax rebate is available in respect of life insurance premia, contributions to provident funds, etc., to Rs 10,000 in the case of individuals and Rs 20,000 in the case of Hindu undivided families.

[Clause 8, sub-clause (ii)]

WEALTH TAX

It is proposed to abolish the exemption available in respect of shares held in new industrial companies.

Part I of the Schedule to the Wealth Tax Act is proposed to be revised. The slabs have been recast and the rates of tax on the two highest slabs are proposed to be raised to 1.75 per cent and 2.5 per cent respectively.

[Clause 12]

EXPENDITURE TAX

It is proposed to suspend the operation of the Expenditure-tax Act for the financial year 1962-63 and the subsequent financial years.

[Clause 13]

CUSTOMS

The proposals in the Bill include: (a) the imposition of countervailing duty equal to the Central excise duty, consequent on the imposition of Central excise duties on certain articles, so that the indigenous producers may not be placed at a disadvantage in

comparison with the importers and

(b) increases in the rates of duty partly in line with the imposition of countervailing duty and partly as a revenue measure on certain articles indicated in the Bill.

Details of the proposals which are expected to yield an additional revenue of Rs 5 lakhs or over as a result of these changes are given in the Tables I and II.

2. The total additional revenue in a full year as a result of all the increases in the Customs duty proposed in the Finance Bill including the countervailing duties, is estimated at Rs 12.42 crores. As against this, there will be a loss of revenue from export duty on tea, which is being reduced from 44 nP to 25 nP per kg with immediate effect. The loss is expected to be Rs 4.1 crores in a full year. The net additional Customs duty in a full year would therefore, be Rs 8.32 crores, or Rs 7.80 crores on a proportionate basis from the 24th April, 1962 to the 31st March, 1963.

TABLE I
Details of proposals for changes in basic Customs duties:

S. No.	Reference in the schedule to the Bill (Pt. and sub-item No.)	Item(s) in the tariff schedule.	Brief description of the articles.	Present rate of duty. Standard rate of duty. CENTRAL EXCISES.

I. Changes proposed in the Bill
(a) Tobacco

1. Unmanufactured tobacco

Tariff item No.	Unit	Existing rate	Proposed rate	Estimated additional revenue
41(1)	Kg.	Rs. 2.50	Rs. 2.60	229.0
(2)	Kg.	Rs. 16.50	Rs. 16.90	
(3)	Kg.	Rs. 2.20	Rs. 2.25	
(4)	Kg.	Rs. 2.00	Rs. 2.05	
(5)	Kg.	Rs. 1.14	Rs. 1.20	
(6)	Kg.	Rs. 2.20	Rs. 2.25	

It is proposed to raise the duty on all unmanufactured tobacco, except lks, essentially as a revenue measure. Simultaneously, and for the same reason, granules of tobacco (rawa) will be assessable under sub-item (6) at a higher rate instead of as at present, at the lower rate under sub-item (5). This is also designed to prevent abuse.

[Clause 16(2) (a) (1)].

Manufactured tobacco

CIGARETTES—

EXISTING PATTERN.

Rates of duty				
Cigarettes of which the value per 1000	Exceeds	Does not exceed	Under the Central Excise Act	Under Additional Duties of Excise (Goods of Special Importance) Act
Rs.	Rs.	Rs.	Rs. per 1000	Rs. per 1000
35	—	—	23.75	7.70
30	35	—	12.75	4.20
25	30	—	11.50	3.80
20	25	—	6.50	2.60
15	20	—	5.50	2.20
10	15	—	3.15	1.10
7.50	10	—	2.00	0.60
—	7.50	—	1.20	0.40

PROPOSED PATTERN.

Rates of duty				
Cigarettes of which the value per 1000	Exceeds	Does not exceed	Under the Central Excise Act	Under Additional Duties of Excise (Goods of Special Importance) Act
Rs.	Rs.	Rs.	Rs. per 1000	Rs. per 1000
35	—	—	25.30	7.70
25	35	—	12.95	4.00
15	25	—	6.65	2.20
10	15	—	2.90	0.70
7.50	10	—	1.30	0.40

Estimated additional revenue: Rs. 299 lakhs.

The proposal is to regroup cigarettes for the purpose of assessment to into five groups as against the present eight groups.

[Clause 16(2)(a)(2) and 17(b)].

(b) Asphalt, Bitumen and Tar.

The scope of the existing item is being enlarged by adding a new sub-item to cover coal tar and pitch as well. Any coal tar used as fuel in the

same factory in which it is produced, would be exempt from this duty. The additional revenue estimated from this proposal is Rs. 50.00 lakhs.

[Clause 16(2)(b)].

(c) All products derived from refining of Crude Petroleum or Shale not otherwise specified

Proposed rate of duty

5 per cent ad valorem

Estimated revenue

Rs. lakhs

26

Motor Spirit, Diesel Oil, Kerosene, etc. are already paying Central Excise duty. It is now proposed to levy a small duty on the various other Refinery products also e.g. lubricating oils, waxes, coke and refinery gas.

[Clause 16(2)(c)].

(d) Cellulose lacquers.

A fresh sub-item "Cellulose lacquers, not otherwise specified" is proposed to be inserted to remove certain administrative difficulties experienced in the classification of certain non-nitrocellulose lacquers, under the existing tariff. The proposed change has no revenue implication.

[Clause 16(2)(d)].

(e) Synthetic Organic Dyestuffs.

This change is also being proposed to bring the existing definition of dyes in line with the international practice and has no revenue significance.

[Clause 16(2)(e)].

(f) Patent or Proprietary medicines.

The definition has been recast so as to make it independent of the Drugs Act, 1940 and in the process it is proposed to bring within its scope all branded medicines even when marketed as official preparations.

With this widening of coverage, the effective rate of duty is being lowered by notification, to 7½ per cent ad valorem from the existing 10 per cent ad valorem. Sera and Vaccines are being completely exempted.

The proposal is estimated to yield an additional revenue of Rs. 100 lakhs in a full year.

[Clause 16(2)(f)].

(g) (i) Nitric, Hydrochloric and Sulphuric Acids, and their anhydrides, all sorts. These are new excises.

(ii) The following compressed gases, namely

(i) Oxygen

(ii) Chlorine

(iii) Ammonia

(iv) Carbonic Acid

(v) Refrigerant gases not otherwise specified.

Proposed rate of duty

10 per cent ad valorem

Estimated revenue

Rs. lakhs

79

Proposed rate of duty

10 per cent ad valorem

Estimated revenue

Rs. lakhs

85

This is a new levy being proposed as a revenue measure.

(h) Plastics, all sorts.

[Clause 16(2)(g)].

This is only a clarificatory amendment having no financial implication.

(i) (i) Rubber Products.

[Clause 16(2)(h)].

(i) Latex foam sponge)

(ii) Plates, sheets, strips)

Under sub-item (ii) it is proposed to confine its scope, by notification, to "tread rubber" used in the resoling or retreading of pneumatic tyres.

(ii) Plywood.

(a) Plywood for tea-chests

(b) All others

This is also a new excise.

By a notification an alternative specific rate is being fixed for plywood for tea-chests at 30 nP per square metre.

[Clause 16(2)(i)].

(s) Iron or steel products

Proposed rate of duty

Net estimated revenue

Rs. lakhs

(1) Plates and sheets, hoops and strips, all sorts

7½ per cent ad valorem plus the excise duty leviable on steel ingot/pig iron

(2) other products, e.g. bars, rods, and castings etc.

5 per cent ad valorem plus the excise duty leviable on steel ingot/pig iron

600

This too is a new levy and is a revenue measure.

Steel ingots produced out of old iron or duty paid scrap will be exempted from duty. Similarly manufacturers who convert one duty paid form into another are being given certain allowances to prevent multiple taxation as far as practicable. The loss on account of these relief measures is estimated at Rs. 300 lakhs per annum.

[Clause 16(2)(s)].

(t) Aluminium

Unit

Existing rate

Proposed rate

Estimated revenue

Rs. lakhs

Foil

tonne

Rs. 500.00

Rs. 600.00

3

It is proposed to increase the duty on this item by 20 per cent.

[Clause 16(2)(t)].

(u) Refrigerating and Air-conditioning Appliances and Machinery and their parts.

Last year a duty was levied on refrigerators and air-conditioning machinery which were included in the tariff as two separate items. It is now proposed to revise these two definitions and amalgamate them into one which will cover both these items. Certain difficulties which arose in their administration would also, as a result, be removed.

[Clause 16(2)(u)].

(v) This is a consequential amendment and is designed to exclude electric motors for use in gramophones from the purview of this item. These motors would henceforth be assessed instead as parts of gramophones which are now proposed to be brought under excise.

[Clause 16(2)(v)].

(w) Electric wires and cables

Proposed rate of duty

Estimated revenue

Rs. lakhs

(i) Insulated wires and cables conforming to certain specifications

15 per cent ad valorem

(ii) All others

5 per cent ad valorem

210

This is a new levy proposed as a revenue measure.

[Clause 16(2)(w)].

22-7956

[Clause 16(2)(r)].

(x) Motor vehicles	Existing rate	Proposed rate	Estimated revenue Rs. lakhs
(1) Autocycles, motor cycles, autorickshaws and any other three-wheeled motor vehicles.	Rs. 175.00 each	Rs. 175.00 each or 7½ per cent ad valorem, whichever is higher.	Negligible
(2) Motor vehicles of not more than 16 H.P. by R.A.C. rating.	Rs. 1000.00 each	Rs. 1000.00 each or 10 per cent ad valorem, whichever is higher.	

It is proposed to specify ad valorem-cum-specific rates for these two kinds of motor vehicles to make the incidence more equitable, and to bring these in line with the rest of the tariff for motor vehicles. [Clause 16(2)(x)].

(y) Gramophones and record players	Existing rate	Proposed rate	Estimated revenue Rs. lakhs
(1) Gramophones and record players	20 per cent ad valorem		29
(2) Part and accessories of gramophone and record players	30 per cent ad valorem		
(3) Gramophone records	15 per cent ad valorem		
(4) Matrices for record, impressed	30 per cent ad valorem		
(5) Gramophone needles	20 per cent and 25 per cent ad valorem		

This is also a new levy. Last year wireless receiving sets were brought under excise and now gramophones and gramophone records are also proposed to be added to the list of ex-cisable items. [Clause 16(2)(y)].

(z) Refrigerators and parts
Since a revised item covering both air-conditioning machinery and refrigerators has been introduced, it has become necessary to omit this item. [Clause 16(2)(z)].

11. Changes made by notification

(aa) Tea
As a measure of export promotion, it is proposed to
(i) reduce the export duty on tea by 19 nP per kg.
(ii) increase the rates of excise duty by 5 to 10 nP per kg. as indicated below, and
(iii) allow rebate of excise duty at a flat rate of 15 nP per kg. on all tea exported.

Existing			Proposed		
Zone	Unit	Rate of duty	Zone	Unit	Rate of duty
I	Kg.	10 nP	I	Kg.	15 nP
II	"	15 nP	II	"	25 nP
IIIA (Darjeeling)	"	25 nP	III	"	30 nP
(Others)	"	25 nP	IV	"	35 nP
IIIB	"	35 nP	V	"	45 nP

The net effect of changes (ii) and (iii) above is a loss of Rs. 19 lakhs in the yield from excise revenue on this item on present levels of consumption.

(bb) V. N. E. oils.
With a view to granting relief to the smaller producers of vegetable non-essential oil, manufacturers with 4 ghanies, etc. of Bengal types and 2 of other types have been exempted from this duty. Simultaneously it is proposed to increase by 15 per cent, the compounded rates payable on equipments, used for the extraction of groundnut oil and castor oil in consonance with the higher recovery of oil effected from these seeds. It is also proposed to step up the licence fees for those manufacturers of vegetable non-essential oils who would now be totally exempt.

The net effect of all these changes on the revenue is expected to be negligible.

(cc) It is proposed either to withdraw completely or to modify certain exemption granted to certain commodities, as detailed below:

Tariff Item	Commodity	Existing	Proposed
6. Motor spirit known as Benzene, Benzol, Toluene etc. if intended for certain industrial purposes.		Nil rate	5 per cent ad valorem
3. Vegetable	Product—First 30,000 quintals cleared in a year.	Concessional rates	Standard rate
5. Soap—manufactured:			
(i) with the aid of power			
(a) household and laundry	127 tonnes free		50 tonnes free
(b) toilet	51 tonnes free		25 tonnes free
(ii) without the aid of power	(i) 204 tonnes free		(i) 100 tonnes free
	(ii) next 204 tonnes at concessional rates		(ii) next 200 tonnes at concessional rates

7. Paper—
(i) Pulpboard not otherwise specified, including grey board and mill board.
First 3048 tonnes at different concessional rates if produced in a factory whose production of such boards in a year does not exceed 5080 tonnes
First 3000 tonnes at different concessional rates if produced in a factory whose production of all paper and paper-boards in a year does not exceed 5000 tonnes

Tariff Item	Commodity	Existing	Proposed
(ii) paper containing mechanical wood pulp amounting to not less than 50 per cent of fibre content		Nil rate	Standard rate
31. Electric Batteries and parts	Plates produced in a factory employing not more than 5 workmen.	Nil rate	Preferential rate (10 per cent ad valorem)
32. Electric lighting bulbs of the types known commercially as miniature lamps		Nil rate	Rates varying from 2 nP to 10 nP each

The net effect of all these changes is estimated to be Rs. 96 lakhs.

(dd) Matches—	Unit	Existing maximum effective rate (by notification)	Proposed maximum effective rate (by notification)
Boxes of 50 sticks	Gross boxes	Rs. 4.10	Rs. 4.60

Concessional rates applicable to the smaller units producing matches will also continue although at correspondingly higher figures. The relative preference enjoyed by these smaller units has, however, not been affected. The estimated revenue expected to accrue as a result of this step is Rs. 199 lakhs.

Sl. No.	Commodity	Estimated additional revenue for a full year (Rs. in lakhs)
I—EXISTING ITEMS		
1. Tea		
(a) By enhancement of excise duty		3.03

General Manager—S. T. SADASIVAN

Any time of the day or night, along India's highways and byways, you'll come across signs and messages gaily painted on the backs of T-M-B truck tail-boards. This one cheerfully says:

...phir milenge

"We'll meet again..."

Ahead of this driver lies an arduous journey over rough roads, steep gradients and marshy ground, but his reliable T-M-B overcomes these hazards without a protest! Soon he will be back again with his speedy, economical STAR to haul yet another load of fortune.

To the recognised power and performance of Tata-Mercedes-Benz trucks are now added new improvements to bring you greater benefits.

TATA MERCEDES-BENZ
TATA ENGINEERING & LOCOMOTIVE COMPANY LIMITED

THE STAR THAT HAULS A FORTUNE

The Third Five Year Plan
Bird-Heilgers' part in it...

FOURTEEN MILLION NEW JOBS

Employment. A word that translates into a meaningful future for millions of people without jobs. India's Five Year Plans are aimed at the concept of full employment. The intensified drives of the Third Plan are estimated to create 14,000,000 new job opportunities—more jobs for more people than ever before in the economy's history! To achieve the employment target calls for a single-minded national effort. It must be co-ordinated, dedicated, complete...

75,000 jobs—and more in the offing

Bird-Heilgers is convinced that the quickening tempo of industrial activity must be accelerated if unemployment is to be checked and full employment brought about. Wedded to this concept, the group provides well-paid employment for approximately 75,000 people. They are concerned with iron ore and insurance policies, bridges and writing paper, gunny sacks and laboratory tests—a complex of goods and services which involves the group heavily in the industrial resurgence of India.

Towards a self-generating economy...

A phrase on everyone's lips. A phrase

that finds concrete expression in the urgent activity of an economy on the move. Bird-Heilgers reflects the nation's striving. The group delivers millions of tons of basic materials to the new blast furnaces. It produces jute goods, paper and board, air compressors and springs, and engineering and water treatment equipment. A project for the manufacture of coal washeries was the first in India. Planned diversification finds the group engaged in shipping, insurance, exporting and importing. Its agency department handles everything from heavy capital equipment to light consumer goods.

...and an exciting, promising future

The Five Year Plans are a challenge: existing industries must expand, new industries open up, per capita income increase. India needs more goods and services than ever before. Bird-Heilgers is alive to the problems of a growing economy. The group deploys the full potential of a century's resources, technical knowledge and executive skill to increase and broaden its activities...provide employment for many more thousands...join the national drive to economic independence.
