

Late Rally in December

2862

CONDITIONS in the stock market were easy most of the time during December although sentiment became steady toward its close. Prices were marked down sharply in the first week on adverse political news. The more speculative counters were the worst sufferers as a result of bull unloading and bear hammering. In the second half of the month the undertone steadily improved following the occupation of Goa by Indian Army. Toward the close of the month bulls were in control of the market and equity prices completely regained their lost ground.

Stock market sentiment had been subdued from early in the month following indications of military preparations on the part of the Government of India on the Goa border. But it would appear that it was the disclosure in Parliament that China had threatened to send its troops across the Indian border if our military activities in the Himalayan region continued that unnerved the operators. The news created panic in the market and bulls started unloading. Bears were not slow to take advantage of the situation and they continued to hammer down prices relentlessly. Much damage to sentiment was done in a matter of few hours and it was not before equity prices slumped to very low levels. The stock exchange authorities thought of initiating measures to arrest the downtrend in prices. In a bid to stop selling pressure, the Calcutta Stock Exchange authorities imposed margins on sales of all scrip in the forward list and later announced that the scheme of automatic margins would come into effect from 8 December. It was also announced by the Bombay Stock Exchange authorities that the scheme would be brought into force from 11 December.

Even so improvement was very slow in coming. It was because the shakeout earlier in the week was so severe that there was a lurking apprehension that there would be widespread payment difficulties. The widespread payment difficulties in the heavy loss sustained by bulls in the first week of the month made them extremely cautious in entering into fresh commitments. Moreover, political news continued to exercise a restrictive influence on prospective buyers. However, toward the end of the second week sentiment slowly improved following some favourable developments. There were renewed expectations of a favourable increase in steel retention price on indications that Hindustan Steel was hopeful of an encouraging recommendation from the Tariff Commission in this regard. At that juncture the LIC made some purchases and it was believed that more support would be forthcoming from the largest single investor in equities. There were indications that considerable funds were seeking investment in the stock market. A new issue that was placed on the market at that time evoked tremendous response. The earlier apprehension that the automatic margin

scheme would turn out to be a hindrance to activity was belied when it actually came into operation.

The recovery movement, however, received a setback when immediately after the speedy occupation of Goa by the Indian Army, the relief over the end of a longstanding problem

the end of the second week of the month unexpectedly did not make any mention of further curb measures, marketmen continued to be reluctant to extend commitments. Contributing to the lack of general interest was the knowledge that during the last week of the month the working days of the principal

an under current of pessimism about the outlook for equities in view of the continued Chinese threat on the northern border and the fast approaching General Election.

Even so, a firm undertone developed in the stock market toward the close of the month following an indication that the earlier fear of a cut in foreign aid because of the Goa episode was unfounded. It was stated by the US State Department a few days after the occupation of Goa by the Indian Army that the US aid policy toward India remained unchanged. The fact that an American entrepreneur who had previously agreed to collaborate with an Industrialist group announced the cancellation of the agreement as he did not approve the Indian action in Goa was not taken as reflecting the main stream of US reaction. With corporate news continuing to be encouraging investors were showing increased interest in equities. Indian Iron, the leader of the market was in good demand following the announcement of a World Bank Loan for the company's expansion schemes. The \$19.5 million World Bank Loan to the Indian Iron Steel Company is intended to meet the foreign exchange expenditure on its \$40.2 million project for opening up new coal mines, expanding the existing ones and transporting coal by aerial ropeway to its steel works at Burnpur.

Sectionwise, activity increased in jutes where selected shares met with demand at improved rates toward the close of the month. With raw jute in plentiful supply and indications of revival of overseas enquiry it was expected that jute mills would be enabled to show improved working result in succeeding months.

Coal shares were a dull market throughout the month despite news about some progress with regard to the World Bank Loan to the collieries. It would appear that with the transport situation continuing to be uncertain with inadequate wagons supply to move coal to the points where it is required, the outlook for the profitable working of the industry is not considered to be very bright. Although some selective enquiry was noticeable in teas in later dealings following higher prices realised in the auctions, no sustained buying interest developed presumably because investors are worried by the indication that there would be severe competition in international market from other producing countries. Sellers continued to dominate the sugar section and it was evident that market men were expecting a further decline in the price of the commodity due to heavy stocks. Textile shares were neglected as it would appear that investors were apprehensive of a reduction in production due to shortage of cotton. Moreover, the news from the export front was also not very encouraging. Bank shares were an active market.

(a) After transferring Rs 20,638 from General Reserve No. 1.

(b) After transferring Rs 200,000 from Development Reserve and Rs 65,000 from General Reserve No. 1.

(c) After transferring Rs 250,000 from Machinery Reserve and Rs 300,000 from Dividend Equalisation Reserve.

(d) After transferring Rs 50,000 from General Reserve.

(e) After transferring Rs 70,000 from Development and Rehabilitation Reserve.

(f) After transferring Rs 284,998 from General Reserve.

(g) After transferring Rs 2,656,522 from General Reserve.

(h) After writing back Rs 300,718 being excess depreciation provided in 1958.

(i) After transferring Rs 1,098,546 from General Reserve No. 1.

(j) After transferring Rs 250,000 from Dividend Equalisation Reserve.

(k) After transferring Rs 1,230,000 from Dividend Equalisation Reserve.

(l) After transferring Rs 297,425 from excess depreciation.

(m) After transferring Rs 119,825 from Development Reserve.

(n) After transferring Rs 120,000 from Dividend Reserve.

(o) After transferring Rs 1,400,000 from Dividend Equalisation Reserve.

(p) After transferring Rs 5,27,512 from General Reserve.

(q) After transferring Rs 400,000 from General Reserve.

(r) Includes Rs 100,230 being provisions made in previous years written back.

(s) After transferring Rs 8,22,899 from General Reserve and Rs 75,000 from Depreciation Reserve.

(t) After transferring Rs 9,50,000 from General Reserve.

(u) After transferring Rs 200,000 from General Reserve.

(v) After transferring Rs 1,000,000 being Adhoc. reduction in Stock-in-trade provided last year.

(w) After transferring Rs 99,240 from Dividend Equalisation Reserve.

(x) After transferring Rs 390,580 from General Reserve.

(y) After transferring Rs 285,000 from General Reserve.

(z) After transferring Rs 525,000 from General Reserve.

(a1) After transferring Rs 1,075,000 from General Reserve No. 1.

(a2) After transferring Rs 100,000 from General Reserve and Rs 125,000 from Dividend Equalisation Reserve.

(a3) After transferring Rs 14,72,865 from General Reserve.

(a4) After transferring Rs 300,000 from General Reserve.

(a5) After transferring Rs 4 lakhs from Reserve for fall in price.

(a6) After transferring Rs 109,648 from General Reserve.

(a7) After transferring Rs 750,000 from General Reserve and Rs 45,088 from excess provision for Bonus.

(a8) After transferring Rs 271,942 from General Reserve.

NOSTALGIA is unlikely to be the dominant
motif of the conventional exercise in retros-
pection on the year that has just bowed its
way out. The looking back is more likely to
be in anger and sorrow than in longing.
Such an assessment will not be entirely true
of the fortunes of India, whose own perfor-
mance during the year we shall defer for
consideration to the Republic Day, due later
in the month. But in the larger world con-
text, homo sapiens has, on balance, little
cause for gratulation, unless it were on the
fact that its habitat is still all in one piece.
It is a measure of the desperateness of our
predicament that this should constitute matter
for gratification.

And yet, 1961 was the year in which man's
unconquerable mind reached out farther into
space than ever before and this in a sense
that is not merely metaphorical. But this
ideal Einsteinian stance for watching our
planet from a point outside itself cannot be
said to have conferred on man the ability to
see life steadily and see it whole. For, this
was also the year in which Mr Khrushchev
fouled the air with his hundred megaton
bombs and the US sent out its 350 million
copper needles into space—both acts done in
disregard of the wishes of the majority of
mankind. The record of the UN, the political
Custodian of the world, was patchy. It had
to face some crucial challenges and has not
come out unscathed. Mr Khrushchev con-
tinued his feud with it well into the middle
of the year. Meantime, in the Congo, the tragic
farce of "independence" working itself out in
bloody patricide, took other tolls even grimmer:
the life of Mr Hammarskjöld and the repu-
tation of some nations. Other parts of Africa,
like Angola and South Africa had tidings to
match and in Algeria, they are still seeking
the elusive peace. Violence in some form or
the other characterised for the most part the
African scene, though more countries were
nearer being masters in their houses than
before. Tanganyika and Sierra Leone
became free and so did Mr Jomo Kenyatta.
Mr Roy Welensky was carrying the white
man's burden in spite of him for most of the
time, but latterly, with his active assistance.
But the fact that they remembered Mr Luthli
at Oslo, and that even Dr Verwoerd per-
mitted him to leave the country to receive
the prize, probably shows that the conscience
of the world is still ticking.

In Europe, Mr Khrushchev kept alive a
grim war of nerves for the greater part of the
year by threatening to conclude a separate
treaty with the East German regime and go
home. His obvious purpose was to embarrass
the West and force it to sort out the resulting
complications with a regime that it did not,
with a grand imperviousness to facts, deign to
recognise. Anxious months with alarms and
excursions around Berlin were somewhat
eased by Mr Khrushchev unbending so far as
to announce that his deadline of 31 December
1961 was not after all as irrevocably drawn
as feared at first. But the wall that rose in
Berlin sundered more than two areas and two
ideologies. It constituted a grim monument

to the fact that private lives were continually
visited with personal tragedies in this age of
public postures. Probing for probable lines
of negotiation with the Russians required
antennae of extraordinary sensitivity, but the
West was not being helped any in this quest
by the West German and French belief that
when it comes to dealing with the Russians it
is better to withdraw your feelers into the
shell.

Mr Khrushchev himself was feeling less
assured at home than in the outside world.
The Twenty-second Congress was as much an
attempt to boost his power as his morale. He
had his ex-colleagues to scotch and his ex-
master to exorcise, which he did by a process
that made many queasy. He had even greater
difficulty in containing the challenge from the
East to his personal and ideological ascendancy
in the communist world. So far, he has been
able only to singe the cat's paw, the active
instigator still being watched with growing
uneasiness. For the rest, the common man in
Russia was served up largely with present
technological thrills and visions of untold
felicities in about twenty years' time.

Great Britain had a poorly year with recur-
rent crises over its economy. Its attitude
to joining the European Common Market
resembled nothing so much as that of the cat
in the adage of which Lady Macbeth spoke
with such fine scorn. (For the EEC itself, the
year ended with a terrible blow to its prestige,
because of its inability to move on to its
second stage consequent on the member
nations deadlocking over Agricultural policy.)
Britain's new Immigration Act, no less than
its covert affiliations in the Congolese war,
brought to the surface certain unlovely aspects
of her political attitude.

Communist China had her hands full with
strains in its economy no less than in its
ideology. Famines made headlines during the
year and the pretence of Sino-Soviet ideolo-
gical solidarity was wearing thinner and
thinner as the year progressed and all that
now remains to be done is a formal avowal
of the schism. But neither circumstance
prevented the People's Republic from further
aggression against India. India was admittedly
less successful in dealing with this recent
aggression of China than with the "continuing
aggression" of the Portuguese in Goa. This
latter success brought on her head much
sanctimonious denunciation whose shrillness
has left many in this country bewildered.

Elsewhere in the world too, cheerful news
was hard to come by. Nasser had his bitter
pills to swallow over the Syrian (and later
Yemenish) defection. So had the others, the
US, for instance, over Cuba. The young
State of Israel won a Pyrrhic victory by its
getting Adolf Eichmann convicted thus giving
a handle to those who have historically
accused Hebraism of being probably just but
certainly not forgiving. Whichever way you
look at it, nineteen hundred and sixty one
years after the year of our Lord, it still is a
largely unregenerate world.

Foreign Trade in 1960

A comprehensive review of the foreign trade of the country during 1960 adds to the general interest of the annual report of the Import and Export Trade Control Organisation for 1960-61. The basic imbalance in trade characteristic of the last few years continued and the adverse balance of trade was aggravated during the year under review. The trade deficit during 1960 was Rs 442 crores as compared with Rs 325 crores in 1959. The deficit in the balance of payments increased from Rs 171.7 crores in 1959 to Rs 322.1 crores in 1960. Sterling balances at the end of 1960 stood at Rs 151.73 crores as compared with Rs 213.14 crores at the end of the previous year. Against this background it is not surprising that there was little scope for liberalisation of import policy which, apart from simplification of procedures, was even more restrictive than in the previous year. The year ended on a note of anxiety about the growing gap between imports and exports.

The review, however, draws attention to certain favourable trends within the basic pattern. Exports during 1960 at Rs 634 crores show a small increase of Rs 13 crores over the previous year, and are the highest on record for the Second Five Year Plan. Another favourable feature is the increase in the exports of articles wholly or mainly manufactured, which increased from Rs 264 crores in 1959 to Rs 280 crores in 1960. The following table gives the break-up of exports under different categories for 1959 and 1960.

	1959		1960	
	Value in Rs lakhs	% to total	Value in Rs lakhs	% to total
Food, Drink & Tobacco ..	18,741	30.5	19,213	30.9
Raw materials and products and materials mainly unmanufactured	15,948	25.9	14,746	23.7
Articles wholly or mainly manufactured	26,432	43.1	28,049	45.2
Living animals, postal articles returned goods etc. ..	291	0.5	144	0.2
Total ..	61,412	100	62,152	100
Re-exports ..	694	..	1,225	..
Grand Total ..	62,106	..	63,377	..

While the increase in exports is gratifying so far as it goes, it is not clear how it will be correct to attribute this increase to the export promotion measures. For one thing,

some of our traditional exports like tea, cotton piecegoods and raw cotton show a fall as compared to the previous year. Exports of oil seeds, cake, meal, leather and leather manufactures, wool and other animal hair, fish and fish preparations, hides and skins and cement have also declined as compared with the previous year. Among the items which show a rise in exports, jute manufactures and pepper contribute to the bulk of the increase amounting to Rs 22 crores. And in the case of these two items the increase is the result of a sharp rise in prices rather than of an increase in the quantum of exports. Exports of jute manufactures have actually decreased from 849,000 tons in 1959 to 800,000 tons in 1960. In the case of pepper, while 303,000 cwt. in 1959 fetched Rs 426 lakhs export of a slightly larger quantity of 367,000 cwt. in 1960 brought in Rs 1,006 lakhs. Export promotion measures may have something to do with the increase in the exports of engineering goods like electric fans sewing machines etc. But the total increase is less than half a crore of rupees; and even in this category the number of bicycles exported has fallen from 7573 in 1959 to 3929 in 1960. The facts set out above support the view of commercial organisations that the promotional measures so far have not been adequate to give the necessary stimulus to exports.

While exports show a marginal increase, imports have increased much faster. Total imports in 1960 amounted to Rs 1076 crores as compared with Rs 950 crores in 1959. An analysis of imports shows a decline in the proportion of capital goods imports to the total, and this has been interpreted as showing increasing use of machinery and capital goods of indigenous manufacture. While the percentage of imports of this category of goods has gone down from 13.81 per cent in 1959 to 13.20 per cent in 1960, the value of capital goods imported in 1960 was Rs 137.53 crores as against Rs 126.06 crores in 1959.

The main factor responsible for the decrease in the import of capital goods appears to be, not so much increased use of indigenous products, as shortage of foreign exchange which has compelled Government to adopt "a rigid and austere policy" of licensing imports of Capital Goods, Heavy Electrical Equipment and Machine tools. Licences for these items were granted only in cases where the imports were shown to be: (a) export earning or (b) imports saving or (c) required for balancing industrial undertakings or (d) financed by foreign aid, loans or long-term overseas investment or financed out of funds available under special arrangements such as the DLF, Export Import Bank loan of the USA, or other trade and payment arrangements negotiated with other countries by the Government of India.

As against the decrease in the proportion of capital goods, the increase in imports of "industrial goods" from Rs 545.18 crores

(59.75%) in 1959 to Rs 644.97 crores (61.93%) in 1960 is evidence of greater attention to maintenance imports. Imports of consumer goods in 1960 constituted a smaller percentage of a larger total as compared with the previous year. In absolute terms, the imports of consumer goods other than food grains remain at more or less the same level as in the previous year, while there is an increase of Rs 19 crores in the import of food grains. The break-up of imports of different categories of goods is shown below:

	1959		1960	
	Value in Rs lakhs	% to total	Value in Rs lakhs	% to total
Capital Goods	12,608	13.81	13,753	13.20
Industrial Goods	54,518	59.75	64,497	61.93
Consumer Goods	14,641	16.05	16,567	15.91
Food grains	9,477	10.39	9,330	8.96

An examination of the direction of trade shows little change in the pattern. The United States, United Kingdom and West Germany, accounted for over 56 per cent of the imports during the year. As regards exports, UK and USA accounted for 43.55 per cent as against 42.98 per cent in 1959. While the share of the dollar area of both exports and imports has increased, there is a decline in exports to other currency areas from 81.4 per cent to 80.1 per cent. The review shows that our trade with ECM and EFTA countries continues to be heavily out of balance. The overall deficit with these countries in 1960 was of the order of Rs 197.74 crores. Trade with East European countries accounts for less than 6 per cent of our total foreign trade, but there was a favourable balance of Rs 12.50 crores with this group of countries.

Individual well-being is linked with national prosperity and only planned efforts can ensure both in the shortest possible time. And planning, for its success, largely depends on savings, individual as well as national.

Saving in the form of Bank Deposits provides resources for the National Plan.

BANKS

Inner Reserves are Important, Too

IN the quest for the strengthening of banks, initiative first lay with the Reserve Bank of India; and the proposals originally mooted were found to be rather more than the banks could be expected to do or achieve. Granted that the rise in Deposit resources over the past decade had been so substantial, and transfers to reserves during the period not nearly of sufficient proportions, that the "capital" (that is, paid up capital plus published reserves) of banks worked out to an unsatisfyingly low percentage of Deposits, the fact remains that the Reserve Bank's suggestion of a target of 7½ per cent as the capital ratio was pitched too high. For, even as reserves might be added to, there would surely be further increase in Deposit resources, and at best the gap between the existing capital ratio and the objective of 7½ per cent might be narrowed—that, too, over a period of years. The "opinion" of the Indian Banks' Association (and that of the Exchange Banks' Association, Bombay) was soon forthcoming. The banks' view may be summed up as follows: firstly, the ratio should be fixed at 6 per cent; secondly, transfers to reserve should be from published profits and as a ratio thereof; and thirdly, there should be no statutory requirement in this respect, banks instead being requested to opt for the adoption of such a convention.

The initiative now back with the Reserve Bank, Mr H. V. R. Iengar, the Governor, has last week indicated that he is in large agreement with the viewpoint of the banks. The target of capital plus reserves is now set at 6 per cent of Deposits; published profits are to yield the 20 per cent transfer to published reserves; and convention rather than compulsion is to be the method. For transfers to reserve, Mr Iengar's suggestions are:

(i) where the published reserves are equivalent to or more than their paid-up capital, irrespective of Sections 11 and 17 of the Banking Companies Act, banks should transfer at least 20 per cent of their declared profits (that is to say, profits after making usual and necessary provisions) to their published reserves until capital plus reserves amount to at least 6 per cent of Deposits;

(ii) where the reserves are at a level lower than paid-up capital, banks should continue to transfer at least 20 per cent of published profits until, firstly, parity with paid-up capital is reached and, secondly, a capital plus reserves ratio of 6 per cent of Deposits is achieved.

We welcome the reduction of the ratio to a realistic 6 per cent; we welcome the idea of the growth of conventions, and at this stage would suggest that rates of interest paid on Deposits may also by convention be linked with bank Rate, instead of being governed by an inter-bank agreement. But we cannot help feeling that there is insufficient understanding of the need to add to inner reserves in preference to strengthening of published reserves. The strengthening of

banks, let it be recognised, is now considered necessary because, in the developing India, a larger element of bank financing of industry may hold a greater risk potential than heretofore. (It is worth remarking that the Finance Minister recently called upon the banks to begin to lend more liberally on the basis of the creditworthiness of would-be borrowers rather than against security, in order that development assisted by banks may be fostered). If there should be losses—and there will be—they can be written off inner reserves, not published reserves; if, again, there arises the need for a raising of bank Rate, it is inner reserves—not published reserves—which will have to cover the depreciation in the worth of gilt-edged holdings.

However, there is no gainsaying the need for improvement of the capital ratio. Hence we would suggest that as finally adopted and implemented by the banks, the scheme for imbuing the banking system with additional strength should be manifold:

- The target ratio is to be six per cent; no time limit specified.
- The emphasis should be equally upon transfers to inner and published reserves.
- So, to achieve the targetted ratio, banks will rely as much upon raising additional capital from rights issues as upon transfers to published reserve.
- The Reserve Bank will be satisfied if the transfer to inner reserves and/or published reserve works out to 20 per cent of disclosed profit, with the individual bank determining which reserve is in greater need of the transfer.
- In order that the net profit of banks is large enough (i) to maintain dividends to shareholders, so that rights issues will be attractive; (ii) to maintain the rate of bonus payment to staff, so that bank employees work contentedly; (iii) to make substantial allocations to inner reserve; and (iv) to transfer to published reserve so that parity with paid-up capital can be reached, banks will undertake:

- to augment their earnings, by levying charges for various facilities that are now available gratis; and
- to reduce their expenditure, by providing for a convention whereby a disparity is maintained between the rate of interest paid on Deposits and bank Rate.

- Some form of tax concession will be given to such banks as add to inner reserves in excess of the prescribed transfer of 20 per cent of declared profit to reserve.

It would be unrealistic to expect that, by merely prescribing the convention or suggesting the methodology, banks will in due course be strengthened. For, without other steps being taken, the implication is that current bank earnings are already sufficient for payment of attractive dividend and of bonus to staff and for transfer of adequate sums to published and inner reserves. What is important is that the profitability of banks be improved; for that, a check on expenses and an increase in earnings are quite obviously both necessary.

BANK RETURNS

Year-end Adjustments

Currency contracted in the week ended 22 December as disclosed in the returns of the Reserve Bank for that date. Active note circulation fell by Rs 8.21 crores to Rs 1,939.56 crores, and there was inflow of Rupee Coin for Rs 0.74 crore. Foreign Securities in the Issue Department were unchanged at Rs 116.86 crores, and Rupee Securities also unaltered at Rs 1,603.81 crores. So, the currency contraction was reflected wholly in a rise of Rs 8.95 crores to Rs 21.61 crores in the Reserve Bank's cash in the till.

The Central Government received large repayment of debt from the States, whose balances were down by Rs 11.61 crores to Rs 15.71 crores on top of an increase of Rs 4.98 crores to Rs 69.63 crores in their ways and means borrowings from the Reserve Bank. In addition there would appear to have been deficit financing for Rs 10 crores, since the Reserve Bank's holdings of Treasury Bills purchased and discounted have fallen by Rs 5 crores to Rs 25.41 crores—and Investments are unchanged at Rs 209.82 crores; but the State Bank is known to have sold securities for Rs 4½ crores in that week, and so the inference can be made that deficit financing in such amount was in such wise concealed. As a result the Centre's balances are higher by Rs 24.61 crores at Rs 75.92 crores. However, it needs to be pointed out that in the relevant week tax receipts of the Centre would have been considerable, and these, too, would have made their impact upon the Central Government's cash position.

The fourth Friday in December offered no serious challenge to the banking system; Reserve Balances of member banks were up by Rs 1.98 crores to Rs 79.41 crores, though borrowings from the central banking institution also apparently rose, as implied in the increase of Rs 2.03 crores to Rs 137.34 crores in the Reserve Bank's Other Loans and Advances. Indeed, advances against usance bills were higher by Rs 4.50 crores at Rs 6.31 crores.

Very satisfyingly Balances Held Abroad improved by Rs 4.38 crores to be placed at Rs 35.96 crores, with the result that the Rs 150 crore mark, of foreign assets held by the Reserve Bank, was exceeded.

In the last returns for 1961, the Reserve Bank figures indicate the use made of central banking facilities for the year-end window-dressing of the banking system.

According to the returns of the Reserve Bank for 29 December, Active Note Circulation rose slightly by Rs 4.10 crores to Rs 1,943.66 crores, though there was return of Rupee Coin from circulation for Rs 0.29 crores. With both Rupee Securities and Foreign Securities unchanged, the Reserve Bank's cash in the till fell by Rs 3.81 crores to Rs 17.80 crores.

The Central Government would appear to have made over to the States their share of tax collections received in the earlier week: the Centre's balances are down by Rs 26.17 crores to Rs 49.76 crores, and Deposits of State Governments up by Rs 16.88 crores at Rs 32.59 crores; besides, ways and means indebtedness of the States to the Reserve Bank is down by Rs 9.15 crores to Rs 60.49 crores.

Member banks have greatly added to their Reserve Balances, which are up by Rs 25.76 crores to Rs 105.16 crores; the share of the State Bank in this might be just higher than Rs 18 crores. For this purpose there has probably been disinvestment in gilt-edged as

Statement showing imports, Exports and balance of trade during 1951 to 1960 (Value in lakhs of Rs.)

Year	Imports	Less transit trade	Net Imports	Exports	Less transit trade	Net exports	Balance of trade

*Excludes imports under reference. Figures are provisional and subject to revision.

well as increased recourse to central banking credit. Investments in the Banking Department have increased by Rs 15 crores or so to Rs 224.54 crores, and Treasury Bills purchased and discounted by the Reserve Bank are higher by roughly Rs 10 crores at Rs 35.20 crores. So, it is inferable that disinvestment of banks in the week amounted to Rs 25 crores, of which Rs 20 crores are traceable to the State Bank. The Other Loans and Advances of the Reserve Bank have increased by Rs 10.87 crores to Rs 148.21 crores, and that the bulk of the rise was on account of Scheduled Banks is confirmed by the fact that advances of the Reserve Bank against usance bills are up by about Rs 8½ crores at Rs 14.75 crores.

Balances Held Abroad have fallen by Rs 2.50 crores to Rs 33.47 crores, but foreign assets shown in the Reserve Bank's returns continue to be just over the Rs 150 crore mark.

The return of the State Bank for 22 December disclosed a fall of Rs 4.24 crores in Deposits, an equivalent disinvestment in gilt-edged for Rs 4½ crores, a small rise of Rs 0.30 crore in borrowings and of Rs 0.54 crore in cash balances. The total of Advances rose by Rs 1.09 crores to Rs 249.23 crores.

The return of the State Bank for 29 December shows the "year-end" changes. Gilt-edged has been sold for Rs 20 crores, so that the cash balances have climbed by Rs 17.79 crores to Rs 45.99 crores. Deposits have been marked up by Rs 6.31 crores to Rs 527.83 crores, and the total of Advances has also risen by Rs 5.98 crores to Rs 255.21 crores.

The return of Scheduled Banks for 15 December revealed that net Deposits were practically unchanged, with the fall of Rs 1.47 crores to Rs 821.42 crores in net Demand Deposits largely offset by the rise of Rs 1.38 crores to Rs 1,135.08 crores in net Time Deposits. But the total of Advances rose briskly by Rs 8.60 crores—onset of busy season pressure?—to Rs 1,252.66 crores. Disinvestment in gilt-edged for Rs 5 crores was on account of the State Bank. Borrowings from the State Bank fell by Rs 1.06 crores, but those from the Reserve Bank rose by Rs 1.63 crores. Cash balances were Rs 1.11 crores higher.

Impact of tax payments is revealed in the return of Scheduled Banks for 22 December, where in the total of Advances has expanded by Rs 10.38 crores to Rs 1,263.04 crores. Borrowings from the Reserve Bank accordingly rose by Rs 4.93 crores to Rs 10.57 crores. Deposit resources are again mostly unchanged with switch-over from Demand to Time Deposits.

BANK PROFIT UBI's Profit Sharply Higher

Subject to audit the net profit of United Bank of India Ltd., Calcutta for the year 1961, after payment of Bonus to staff and providing for tax-

tion, amounts to Rs 20.50 lacs compared to Rs 14.63 lacs in 1960. The Directors have decided to recommend a dividend of 6 per cent (subject to tax, for the year 1961 as against 4.30 per cent (subject to tax) for the previous year. Dividend will absorb Rs 16.08 lacs and Rs 4.10 lacs will be allocated to Statutory Reserve, the balance together with the sum brought down from previous year's account will amount to Rs 2.40 lacs which will be carried forward to next year's account. Deposits of the Bank have increased by Rs 6.72 crores to Rs 58.45 crores.

Increase of IMF Facilities

By Paul Einzig

THE decision to increase the resources of the IMF available for supporting currencies of member countries seems to be a gratifying solution of the controversy on the subject. It may not satisfy those who would have preferred some more elaborate and more sophisticated way of dealing with the problem of inadequate international liquidity. But from a practical point of view the possibility of supporting exchanges under pressure to the extent of an additional \$6,000 million is an improvement which must be welcomed. It is true the French point of view, according to which the use of the additional resources should be subject to approval by the Governments which are to contribute them, is looked upon with disfavour in many quarters. It means that the additional support cannot be relied upon absolutely. Until now it was sufficient to obtain the approval of the International Monetary Fund itself. Now in addition to that, the application will have to be submitted also to the Government whose currency will be drawn upon. The innovation is more apparent than real, however. Until recently, most of the drawing rights were granted in dollars and the United States Treasury was invariably consulted when large amounts were involved. Now that drawing facilities are granted in other hard currencies it is reasonable that the Governments concerned should be consulted.

It may be objected that since any transaction under the new arrangement will have to be subject to two scrutinies instead of one the possibility of obtaining support is not likely to produce the same deterrent effect on speculators as under the old arrangement. There may be some slight difference in degree but it should not be overrated. Speculators who base their operations on the assumption that the additional facilities would be made available would do so at their peril. When the forward discount of the currency which they attack widens considerably the risk involved is liable to go beyond the extent justified by the prospects of forcing the Govern-

ments concerned into devaluation as a result of a refusal of the hard-currency country to agree to the use of its currency.

At the same time the decision whether to authorise a transaction or not will not be an easy one. The French Government is right in disliking the idea of using francs for bolstering up sterling or the dollar in face of a chronic balance of payments deficit. On the other hand, it is seldom easy to decide definitely whether pressure on a currency is justified by some such basic difficulty or whether it is purely or largely speculative. But provided that the additional support is used for a strictly limited period it can be helpful in defeating speculative attacks without enabling the Governments concerned to abstain from taking the necessary measures to correct the fundamental position.

U. K. Ltd.

On the eve of the Christmas holidays the City and the wider public was startled by the bombshell of the announcement that the Imperial Chemical Industries made a takeover bid for Courtaulds. There is room for two opinions about the advantages and disadvantages of an amalgamation between two industrial giants, and as far as it is possible to ascertain British opinion is fairly evenly divided about it. Beyond doubt the merger will make for increased efficiency especially through the pooling of research facilities. It should go some way towards enabling the combine to face competition if Britain should join the Common Market. But the Chairman of I.C.I. has already made it plain that there would not be dismissals through redundancy. This either means that the amalgamation would not be justified by the extent to which overlapping services could be eliminated, or that those employees who would become redundant would not be dismissed but hoarded and featherbedded.

This would be in keeping with the prevailing trend which is largely responsible for the scarcity of labour with all its inflationary consequences. It is wrong of I.C.I. not to be prepared to stand up to trade union pressure and release the redundant labour so as to make it available wherever it is needed. In existing conditions of employment the extent of hardship involved would be negligible and could be met with adequate compensation to those dismissed at a cost that would in the long run be a mere fraction of the cost of unnecessarily retaining them.

Nor is this the only point of criticism that can be raised against the I.C.I. proposal. Many people are worried about the monopolistic position the new combine would occupy in the production of manmade fibres and in other spheres. Indeed, with some exaggeration it has been suggested that after the absorption of Courtaulds I.C.I. should change its name to U.K. Ltd. since it would control quite a large proportion of the resources of the United Kingdom.

The response of Courtaulds to the announcement of the bid was distinctly less than enthusiastic. They resented the premature publicity given to the proposal. In disinterested quarters, too, it is felt that the two firms should have come to terms, or at any rate their negotiations should have reached a stage at which they definitely agreed to disagree, before the Chairman of I.C.I. announced unilaterally the proposal to the world without consulting Courtaulds. Such premature announcements may be justified by the mysterious leak that occurred. Even so, Courtaulds ought to have been notified.

Notes

NEW YEAR GIFTS

I—Good News on the Industrial Front

According to statistics officially released on the New Year's day, the overall output during the first seven months of 1961 was higher by 9 per cent compared to the output in the corresponding period of the previous year. Iron and Steel production went up by 29 per cent while output of sugar was up by 24 per cent. Production of automobiles was higher by 19 per cent. Other items which recorded sizeable increases were electricity, tea, cigarettes and coal. Moderate increases were recorded by cotton yarn, tyres and soap. Two major industries however recorded decline in production. Production of cotton textiles was lower by 2 per cent while the decline in the case of jute textiles was sizeable at 13 per cent. The setback in the case of the last two was mainly due to shortage of raw material as a result of poor domestic crops.

Among public sector enterprises, perhaps the most spectacular increase has been recorded by Hindustan Machine Tools. HMT produced 1067 machine tools in the first 11 months of 1961 as compared to 842 in the corres-

ponding period of the previous year. An idea of the successful working of HMT can be got from the fact that last year it has built another factory out of its own profits. Production of antibiotics was also considerably stepped up at Hindustan Antibiotics, another public sector enterprise.

The objective of diversification of industrial production is being gradually realised as more and more new products are manufactured within the country. That the industrial climate in the country had been quite favourable for private enterprise is evident from the large number of applications made for the setting up of new ventures. Approved applications numbered 1244 and during the first 9 months of the year as many as 1252 new companies were formed. That Government encouragement had been available in abundant measure to enterprising private industrialists in the country is borne out by the fact that more than 400 collaboration deals with foreign industrialists were officially approved during last year.

While the fact that industrial production in India has gone up by 8.3 per cent during 1961 is happy news, it is not something that calls for throwing up the hat. For, it was early last year that the Second Five Year Plan came to an end signifying that most if not all the development projects included in it have reached fruition. Also during last year, some big industrial projects in both sectors have gone on stream. If, therefore, industrial production has not recorded a sizeable rise at the end of 1961, it will only mean that there has been something seriously wrong with our planning.

It is clear that the tempo of production last year would have been higher than it has been had it not been for the shortages of transport, power and coal. In certain cases, shortage of some essential raw materials on account of the drastic cut in imports has made it impossible for to be maintained upto installed capacity. There has been serious power shortage in some of the principal industrial regions thereby slowing down the tempo of production. It is generally believed now that unless concerted measures are taken to increase power production expeditiously, power shortage is likely to be with us throughout the Third Plan period. Industries situated away from the coal fields have been hard put to it last year to find adequate coal supply, mainly, due to transport difficulties. Since demand for these basic industrial materials and facilities is bound to be on the increase

during the Third Plan which is already nine months old, it looks as though some drastic steps have to be taken to bring about improvements in transport and power supply if the pace of industrial production is not to slowed down considerably in the current year.

II—A Refinery in Assam

The commissioning of the country's first public sector oil refinery in Nunmati, near Gauhati, on the New Year day by the Prime Minister, which incidentally came as a New Year gift to the nation, constitutes an important landmark in our march towards self-sufficiency in petroleum products. The refinery, built at a cost of about Rs 13 crores in collaboration with Rumania, whose contribution was of the order of Rs 5.5 crores worth of equipment and technical know-how, will process 0.75 million tons of crude from Moran and Nahorkatiya oil fields. The present refining capacity is, however, restricted only to 1,000 tons a day on account of the non-completion of the 260 mile-long pipeline between Nahorkatiya and Nunmati.

The main contribution of the Nunmati refinery will be in the field of kerosene and diesel oils, popularly known as middle distillates, for which the domestic demand is mounting up day by day quite in unison with the accelerated tempo of industrial development. When fully commissioned the refinery is expected to produce 163,700 metric tons of kerosene, 183,500 tons of diesel oils, 160,200 tons of gasoline, 113,200 metric tons of furnace oil and 129,400 metric tons of products like coke aromex.

A distinct feature of the refinery lies in that it has been designed in such a manner as to allow for further increase of ten per cent processing capacity without any extra cost. To this can be added another one-third capacity with a nominal cost of about ten per cent and, as claimed by the Rumanian experts, it can be doubled with an additional expenditure of about 50 per cent of the present outlay. The crude distillation unit and the kerosene unit are the two significant units of the refinery. The total tank capacity of the refinery amounts to 143,000 cubic metres divided into 52 tanks, 44 meant for finished products and 8 for crude oil.

An industrial undertaking of immense national import, the refinery has, in its wake, ushered in a new lease of life to the comparatively underdeveloped regions of Assam, and is bound to generate a spurt of industrial activity in and around that region. Apart from providing immediate employment for both skilled and unskilled labourers, the notable contribution of refinery will be the reduction of imports of petroleum products. With the construction at the other two refineries in

Barauni and Ankleshwar, the country is making a big leap forward in self-sufficiency in petroleum products.

III—A Tank Factory at Avadi

The tank factory at Avadi is no longer a paper scheme as the Defence Ministry has gone ahead. The technical aid given by Vickers for making armoured vehicles with trucks is another stage in the familiar export of British skill to the Commonwealth. The creation of a Cantonment beyond the existing Panchayat area will impose some strain on water supply. But the training of technicians will be taken in hand from the outset and the skilled, disciplined labour will be treated as a resource that needs to be developed. Existing industries at Ambattur and Avadi will probably expand according to programme and the Cantonment, if it is set up, will probably draw away armed personnel from Fort St. George which will become a historic place, not a military centre.

The Ordnance branch after the war has expanded and dispersal is carried further by the location of the plant at Avadi. The State Government has indicated its close interest in the advent of heavy industries that demands skill while the Avadi base itself will be concerned in future with production, not maintenance, of military stores. The opening of a separate line to connect with Sullurpet is a precaution taken to avoid transport delays on the broad gauge. But if industry in the vicinity of Madras expands, electrification of the broad gauge will become unavoidable. The hope of electri-

fication up to Arkonam will be quickened by the inception of the tank factory.

The reservation of armaments manufacture for public enterprise is made explicit though explosives manufacture in Bihar now entails foreign private participation. The manufacture of armourplate at Jamshedpur will be revived and speeded up and it is possible that engines or heavy trucks may be brought for the Army from the private manufacturers to whom the Avadi plant represents a new opportunity. The Defence Minister, by indicating the Government's aim in full protection for long, exposed frontiers, has made it clear that industry must be made to support defence policy. This is perhaps more important for the future of heavy engineering than has been supposed. Of course, light engineering has developed, but Avadi provides new outlets for battery-makers and even tyre manufacturers. Specialised manufacture of components like plugs may deve-

lop. But it may be asked whether internal combustion engines and components made for the Defence forces will be subject to excise and whether the civilian suppliers will be called upon to charge sales tax on supplies made to Government. The position may be clarified when production starts, but Madras has received a New Year present in the assurance that the Centre means to create new enterprises to enlarge employment of technically-qualified personnel.

IMPORTS Subserve Industrialisation

The annual report of the Trade Control Organisation for 1960-61, released recently, is heartening in that there was a slight but significant reduction in the percentage share of imported machinery and capital goods to the total imports registered in 1960 in contrast to

that of the previous year. The import of capital goods showed a definite downtrend and in 1960 was marked lower at 13.20 per cent against 15.45 per cent in 1958 and 13.81 per cent in 1959. This trend is indicative of the progressive utilisation of domestic fabricated machinery and capital goods within the country. Nevertheless, in absolute terms, the imports of capital goods were higher at Rs 137.53 crores in 1960 as compared with Rs 126.06 crores in the previous year. The import bill of industrial goods also rose by Rs 2.18 crores to Rs 61.93 crores. The efforts on the part of the Government of India to curtail imports of consumer goods, excluding food-grains, started bearing fruit and were at a low of 8.96 per cent of the aggregate imports of 1960 as against 10.39 per cent in 1959.

The report also reveals that while exports looked up to Rs 634 crores from Rs 621 crores, imports also exhibited an uptrend obviously due to the impact of the accelerated pace of industrialisa-

tion. Imports were placed at Rs 1076 crores (Rs 946 crores in 1959) leaving a trade deficit of a higher order of Rs 442 crores against Rs 325 crores in the preceding year.

As regards the balance of payment position, the deficit of current account increased in 1960 to Rs 322.1 crores from Rs 171.7 crores in 1959. In the end the sterling balances held by the Reserve Bank declined steeply to Rs 151.73 crores from Rs 213.14 crores.

The number of applications received by the Organisation for import licences during 1960-61, though considerably restricted by the introduction of the annual licensing scheme, aggregated 3.97 lakhs, the highest on record. The speedy manner in which the applications were disposed is indeed creditable, though the carry-over at the close of the year was only 0.6 per cent of the intake. And all the applications received for export licences were disposed before the expiry of the licensing period.

In pursuance to the Government's policy to restrict imports to the bare minimum, the import policy during the financial year 1960-61 was made restrictive than ever. Though the share of the established importers in the import trade dwindled further, the Government resorted to adequate measures with a view to ensuring the requisite raw materials, spares and components to the actual users in both large and small scale sectors. The net result was that the industrial production rose to 11.2 per cent per cent during the financial year under review from 8.1 per cent of the relevant period in the previous year.

Performance on the export front was also on the expected lines. The Government's policy of progressive relaxation of controls over exports and increased attention paid on organised export promotion programmes brought in rich rewards and the level of exports improved by Rs 13 crores to Rs 634 crores in the calendar year 1960. During this period as many as 91 items were decontrolled and certain items which were neither permitted for export nor allowed on a quota basis were included in the free licensing list. The notable items with improved exports were cashew kernels (Rs 2 crores), pepper (Rs 6 crores), other spices (Rs 2 crores), iron ore (Rs 3 crores), Jute manufactures (Rs 16 crores) and castor oil (Rs 3 crores). Electrical fans (Rs 35 lakhs), diesel engines (Rs 8 lakhs) and sewing machines (Rs 3 lakhs) registered increased exports among the non-traditional items. Among the items whose exports declined figure tea (Rs 6 crores), raw cotton (Rs 3 crores) cotton piecegoods (Rs 3 crores) leather and leather manufactures (Rs 3 crores), fish and fish products (Rs 2 crores) and linseed oil (Rs 2 crores).

The UK, the USA and West Germany figured, as usual, as the

Indian Finance

6 January 1962

leading suppliers, accounting for about 56 per cent of the total imports. Imports from countries like Australia, Egypt, Pakistan, Burma, Kenya, Belgium, Singapore and Switzerland were also on the increase.

The direction of exports too remained, more or less, unaltered, the UK and USA accounting for nearly 44 per cent of the total exports. Exports to Australia, Egypt, Canada, Italy, Pakistan, Saudi Arabia, Iran, Iraq and Switzerland also registered slight increases.

Our trade with the countries of European Common Market was adversely against us and the deficit was placed at Rs 142.14 crores. Trade with the EFTA countries was also unfavourable to the tune of Rs 55.60 crores. Trade deficit with dollar area amounted to Rs 170.89 crores whereas that with non-dollar area was of a higher order of Rs 270.93 crores. The only silver line in the otherwise dark horizon was trade with East European countries: exports amounting to Rs 49.35 crores against an import bill of Rs 36.85 crores, resulting in a favourable balance of trade of Rs 12.50 crores.

TEXTILES

Trends in 1961

The textile, bulletin rather than the millowners' annual statements, must now be relied upon to indicate progress in cotton textiles. The increase in Indian cotton stocks compared with 1960 helps to raise output of yarn and cloth. The preponderance of medium cloth in the total production of 3,145 million metres from January to August 1961 is due to the limit set to foreign supplies. Increase in bleached, dyed and printed cloth follows the original trend and a decline in saris and dhoties is not so significant as the larger deliveries for export or the reduction in cloth stocks. Increase in third shift working is not pronounced because the power supply is not stable or large. The main factor in increased supply is the increased spindleage now over 13.6 millions. There has been no increase in loomage and the export plan may require extra loomage in new special units among mills.

The increase in stable fibre yarn output and in viscose yarn output supplements the cloth supply. Rayon goods output is also rising. The increase in handloom goods output is due to improved yarn supply at fixed prices and the output in mill was about one-third of mill output of cloth. This, like the recovery in yarn exports noted after June, is a factor in the mill industry's revival. The export trade in cloth has fallen away since March 1961. This is a disquieting symptom, though the Geneva talks were meant to stabilise ex-

ports. The UK was the main buyer but the USA was the chief buyer of Indian cotton as before. The export figures also show that grey cloth is the major export item and handloom exports were not considerable as compared with mill cloth in exports. The trade with Burma has gone down, but Afghanistan, like Australia, was a regular buyer. The fact that Madras mills produce less for export than the UP mills or that comparatively speaking Pondicherry produces more cloth for export (to go by the figures for August 1961) deserves mention, because investors are latterly conscious of the better prospects available only for mills doing export business.

The surplus of capacity in mills making hosiery in Madras is indicated. The 16 mills produce more vests than the mills in the UP but of all States, West Bengal is ahead in hosiery today. The elimination of juvenile labour is complete except perhaps in Mysore. The composite mills provide more employment and that is why so many mills want to get extra looms. The figures may suggest that India is far ahead of Lancashire and does export business on a bigger scale though the regular purchase of US cotton is unavoidable. The textile industry's growth can be measured not in the number of mills but in the higher output of cloth though total loomage has not risen much, because the composite mills have risen only from 268 to 286 between 1948 and 1961. The increase in looms using rayon yarn is a feature of this year because of the rise in rayon production. The output of textile machinery is below capacity and only if mills can renovate as desired can the machinery-makers benefit substantially.

GOA

Economic Consequences

The affairs of Goa have been taken in hand by the extension of Indian laws. Supplies of food entail price control, temporary and local. There is no ban on Indian exports to former possessions of Portugal and the currency and exchange regulations now applied bring Goa into line with Bombay. Whether the escudos taken in return for rupees can be exchanged for sterling depends on the UK Treasury's views. The seizure of bank assets and available cash from the Treasury can be easily explained by reference to the collapse of the colonial administration. The fact that silver coins from Goa may supplement supplies in Bombay may help to reduce bullion prices in the future. To that extent, the police action may be welcomed in India where prices have gone up after the US

Treasury let silver prices take their own course.

The end of smuggling of luxury goods will help to prevent depreciation of the rupee abroad. One more loophole has been closed and the gain will be wholly India's because the rupee will go up in value in Colombo and Singapore and prevent unofficial business in exchange. The restoration of civil authority cannot take place very quickly. How India will fare in regard to import of African cashewnuts for processing (for export mainly) has not been so far mentioned. The internment of Indians must end before any trade can be re-established. The export of jute fabrics to Mozambique for transport to Rhodesia or the South African Protectorates is also bound to suffer and economic consequences of Goa are now found in a rise in cashewnut prices as well as clove prices in India. The future export of ore from Goa is dependent on payment by foreign buyers who may argue that old contracts should be fully respected. The legal position may be termed obscure as war was not declared and there is no custodian of enemy property to acquire assets and annual contracts summarily. Relations with Japan or Germany must be taken into due account before counting losses or gains in or on Goa. It may be also said the Goans who have invested regularly in India or Indians who have developed Goa in recent years cannot be disregarded easily.

NPC

A Consultant Service

The National Productivity Council has hopes of creating a consultant service to raise efficiency and reduce costs in Indian industry. At the conference arranged in Madras, Dr P. S. Lokanathan called attention to the employers' interest in improving methods, avoiding retrenchment, and educating workers. It may be noted in passing that, earlier, some private concerns had embarked on the introduction of higher productivity linked with higher wages. The importance of stable industrial relations for higher productivity was stressed, but some may wonder whether the public sector has so far made use of productivity techniques in order to speed up work in Government establishments. The Chairman of the Madras Productivity Council indicated that employers had a close interest in the use of technically qualified personnel for whom opportunities should increase. Dr Lokanathan in his review of achievements and objects mentioned the need to raise technicians to the level of top management because of their own actual experience of working conditions. He also stressed the importance of high wages for maintaining

efficiency and reducing costs. The effect of high wages lies in higher productivity though this is an old axiom born of US experience.

Mr K. C. Reddi stated that constant adaptability to changing conditions is the whole object of the productivity desire which also seeks to maximise the use of machinery and skills. It was recalled that in the USA, because of scientific management at every stage, there is no need for productivity propaganda. Whether industry should have a pool for consultants who are paid for advice on productivity depends on the earnings of industry. Trade unions have been asked to help, because low wages are the cause and effect of low productivity. The expansion of technical education, according to Mr K. C. Reddi, is the chief means to enlarge the scope for productivity-techniques in future. The interest of local employers explains the three-day Seminar at Madras. It is known from the second annual report that trade unions too are interested and the experiment carried out in the Sembiam plant of India Pistons is meant to bring home the value of new and better technique. The fact that Madras is showing more interest in productivity than other States deserves mention in view of the plea for accelerated acceptance of a new attitude to work and wages alike.

BANKING PRACTICE An Example by UBI

The offer made by the Calcutta University to candidates for its examinations to pay fees through the United Bank of India is a welcome departure. The trouble of going to the Treasury or to the Reserve Bank is avoided by arrangements made by the United Bank. Other Universities may well copy the example of Calcutta. Helpful hints have been given by the United Bank of India to intending examinees. The system of payment of fees, taxes, etc through banks can be extended with great advantage by all public bodies that must study the convenience of the public. It is known that waiting in a queue at the RBI is a really arduous experience and the universities hereafter should rely on banks other than the Reserve Bank and the State Bank.

The State Governments rely on filling of forms and payment of cash by contractors and others without considering whether payment through a clearing bank will not facilitate speedy payment in their own interest. The RBI which is truly giving advice to banks should also undertake to encourage the banking habit. A small commission may be paid by the candidates or contractors because they are spared the trouble

of going to the Treasury. In the case of car licences or bus permits, the Police should rely on payments through banks by clients and the overcrowding and impatience leading to payment of extras for quick service can be ended. The Calcutta University which is often blamed for many lapses can be congratulated for being helpful, and not to the United Bank of India alone. In any case, a breach has been made in the banking monopoly and the gain really is that of examinees.

EGYPT

An Excess of Socialism

An excess of socialism in Egypt is driving Greeks away from Alexandria. It may be presumed that Col. Nasser has no use for Greek middlemen in the cotton trade already nationalised or in

other lines of business. That the Greek community was affluent and is now forced to leave Alexandria (the place-name is Greek) for Greece may be one reason for holding that Greece will benefit greatly. The relationship between Turks and Greeks in Cyprus may not suffer but it is evident that confiscation of Greek assets for French or other mis-deeds does not raise in the world's esteem. The rich Greeks scattered abroad may be inclined to think less favourably of Egypt and more favourably of the economic needs of Greece which has a thriving shipping industry to support optimism about the small country's chances in the ECM. The elimination of the Greeks may render Alexandria quotations for Sakel cotton useless. Egypt will have to rely on barter business and lose more custom to the USA which can sell cotton in return for local currencies. The levelling down may be in line with Col. Nasser's declaration against all vested in-

terests in Egypt, the promise of land for the tiller and the exclusion of all foreign influence. But the tourist trade may suffer and rich Americans may give Egypt a miss and turn away to Greece which offers more sights for the money spent or to Cyprus which means to promote tourism for its own sake.

MERGERS

Recent Trends

The Restrictive Practices Court in examining the tobacco manufacturing industry gave a clean bill to Imperial Tobacco and suggested that its control of cigarette machinery was dictated by the presence of American Machine and Foundry Co. Only the bonus scheme offered to retailers was described as objectionable in the report released last year. The connection with British American Tobacco, now concentrating on export, is due to historical factors

and Imperial Tobacco by attending to tobacco culture in the tropics has played a part as an agency of economic development. The report is in its way a history of Imperial Tobacco whose best memorial is probably Bristol University. The objections to monopoly or oligopoly are still being examined but the contribution to UK excise revenue will not be disregarded.

The coming merger of ICI with Courtaulds is a departure in rationalisation dictated by the falling off in the rayon industry. Nothing was said against the merger of British Celanese with Courtaulds which has interests now in plastics and paints like ICI. The metal interests of ICI have not been deprecated so far and the recent acquisition of British Enka from Dutch interests was an indication that rayon manufacture was getting concentrated like cotton where the big combines alone manage to hold their ground. The ICI with its known views on export trade and greater capacity to compete in Europe is prepared for merger which will meet with shareholders' approval because ICI is better placed than Courtaulds to meet German and Italian competition. That Courtaulds is already associated with ICI is one reason; another is the profit-sharing scheme by which workers can become regular shareholders in both the big companies. The inherent advantages for resisting moves for nationalisation may be in the background but the postwar trend towards bigger and composite units in major industries is one argument for a merger.

It is clear that in India too the chemical industry must move gradually towards concentration by mergers and it is the big firm that can start research on its own, look for export trade, and can pay adequate wages. The vertical integration that has been observed already in the cotton industry may soon extend to rayon and the natural advantages of mergers will be appreciated by those who have backed rayon shares last year with growing confidence.

PERSONAL

Mr W. A. C. H. Bosschaart took over on 1 January 1962 from Mr P. C. Vink as the Chairman and Managing Director of Philips India Ltd.

Mr P. C. Vink, the outgoing Managing Director is shortly leaving for Europe prior to his taking over as the Managing Director of the Philips organisation in Australia.

After twenty-seven years in India, Mr John Luckham, Managing Director, Dunlop, India, left Calcutta on 31 December, 1961, by the S. S. "Santhia" for Singapore.

Clive Street Gossip

"I must have liberty
Withal, as large a charter as the wind
To blow on whom I please"
—As You Like It.

I CANNOT recall whether there is any precedent for cricket figuring in these columns otherwise than as a metaphor for fair-play. But if there isn't, there is no better occasion than this for creating it. Even those who grumbled to me on Wednesday about the sudden increase in absenteeism in their offices will join me in hailing the Indian victory at Calcutta. Thursday was a trying day for those whose conscientiousness kept them at their work. I overheard a normally phlegmatic colleague mutter darkly about the appalling working conditions of an office that did not provide the elementary amenity of a transistor set. The telephone, of course, worked overtime and shortly after three, I was informed, quite unnecessarily, that India had won. After the seemingly endless series of drawn games, a match that produced a clear-cut decision was an answer to a prayer. But it would be hypocritical to pretend that the fact that our side won did not add considerably to the feeling of elation. Later in the evening, I heard a youngster telling me excitedly that if only we drew the fifth Test at Madras, the Rubber would be ours. It would be, he explained, the first time we would have defeated the MCC in a Test series. I was suitably impressed, but the scales fell from his eyes when he learnt that I hadn't been anywhere near Eden Gardens this last week. Alas, it is only too true that while my feeling for the game is not positively hostile as that of Shaw and his ilk, my enthusiasm for it is only moderate. I don't understand and certainly cannot emulate the shivering men whom a friend saw queuing in front of the booking windows in Eden Gardens on Wednesday night. And I also keep wondering about not only the sanity but the sources of income of those who buy a forty rupee ticket for a hundred rupees. (The psychology—and the source of income—of the man who sells it is an open book, of course.) Again, on the rare occasions I do watch a match, I seem to be dogged by rather perverse luck. It will turn out to be the day when they play what the sports-writers are fond of calling dour cricket. Even if it weren't so, I have a different kind of bad luck. I keep watching intently through-

out a dull match and just at the moment I get bored and give up and look away elsewhere, I hear a thunderous cheer go up: once again, I have missed a deathless moment. For the rest, the finer points of the game, which every child above five spouts these days with a knowledgeability that intimidates me, are a closed book to me. But though I cannot recall the next season what happened during this, while the match is in actual progress, I am interested enough to inform myself of the score within a margin of error of about fifty runs. Also, when our side wins, I am human enough to feel a vicarious thrill. And so, once again, three cheers.

The "posh weeklies" that irritated Jimmy Porter so much have a weakness for parlour games and I rather suspect that in between one leading article and another the staff writers play charades. Christmas in particular brings out vividly this streak in them when the New Statesman and the rest of them let themselves go and fill their pages with highbrow puzzles that make the most crusty among us squirm with inferiority complex. The Economist, however, has been kinder to the reader's amour propre this time. It has come out with only a rather sedate joke at its own expense. It has compiled a rhyming alphabet—only it is in prose and it doesn't rhyme—giving a number of useful tips for a journalist in a hurry. A, for example, is for Alice, a book to quote from when in doubt. Not a very original piece of advice this, even to writers on economics, for the Cambridge Hand-Books that taught me such economics as I remember also taught me to rifle Alice shamelessly when journalistically hard-pressed. Skipping the next three letters, we get to E. We should have thought that E would have been for the Economist, but it is not quite. Instead, it is for Europe, first and only secondly for "the Economist also." The entry adds that this "about sums up the relationship between them." This is both modest and accurate for the Economist has been trying very hard to make good Europeans of rather unwilling Britons. (It is also significant that the Economist considers Commonwealth, spelt Cwth, as an "ex-favourite for C. the current favourite being "crunch.") F is for the "First Paragraph" of every

leading article, which, however, should be written last. I consider it rather unprofessional of the Economist to have given away this trade secret (as also the complementary one of writing the last sentence of the leading article first.) F is also for facts, a rather inconvenient entity for the man with a brief to argue like, for example, the Economist itself on Goa. (Incidentally, a tip on "slur words" can be had from the Economist's description of the Indian march into Goa as "an annexation.") K is for K (the surviving partner of the B and K circus) and, in plural, is for JFK too. And remembering its vocation, it adds "K is also for Keynesian." (Freud may have to be invoked for explaining why K is not for Katanga.) N is for No and not for Nehru, who is at the moment Non-U. And Q is for quotations, both from literature ("to make the readers feel that they are getting their money's worth") and from the stock exchanges. There is no truth, I may add, in the suggestion that a man interested in the first kind is not interested in the second. T is inevitably for Taxation, for, as Sam Weller (Sr) philosophised, nothing is certain in this world except death and taxes. U is for U Thant for the UN, both very U indeed. W for Walter Bagehot and it is no use complaining that the Economist always talks as if it owned him. For it does, in a sense, though we in India remember him more often for his brilliant variations on the theme of the English Constitution. But a proper pride in the English Constitution as in Bagehot comes naturally to the Economist, which is in its equally elusive way as quintessentially English.

What is behind the sudden Western forebodings about the future of the UN? They are all talking as though they are assisting at a funeral or, more accurately, at a death-bed scene. Mr Adlai Stevenson, for whom I have great admiration, suddenly affects the manner of a priest administering the extreme unction: the tone is nasal and the style lapidary: "We are," he said, "witnessing the first act of a drama which could end with the UN's death." Lord Home, taking in this, as in much else, his cue from the American Administration, said some silly things at a party meeting at Berwick-on-Tweed. How flattering to be told that we could put to death an UN that has survived the Suez and the Cuban adventures, not to mention Mr Khrushchev's constant nagging and President de Gaulle's unceasing contempt! Even if you assume that India has done something she oughtn't, has her act been

of such enormity as to kill the UN? What was the degree of effectiveness of the UN before the voting on the Goan issue and what is the extent of its present impairment? How respected were the UN wishes in the Congo till about the middle of last month? In what way—and I am posing this question without anger or irony—has the UN style in Congo been cramped by these new developments, whatever they are?

Some clue to the real reasons behind the dolefulness is to be had from the fact that the attempt to take the Goan issue to the General Assembly was abandoned on the ground that the chances of getting India censured there were slim. This, if you like, is a calamitous development. In other words, a possible endorsement of an act of a member-state by the General Assembly is the beginning of the end. We might, in our simple-mindedness, think that what the General Assembly is likely to approve of is prima facie acceptable behaviour among the nations. But it is not so, for the US and some of her friends in Europe do not like it. How Gilbertian can we get!

But, why is the West panicking so easily? Why is it being assumed that the voting in the UN in the future will be against it and there will be an automatic ganging up of the Afro-Asians with the Soviet Bloc? On evidence, the assumption that Russia will from now on get what she wants from the UN is wholly unwarranted. Mr Khrushchev's Troika, for example, was immobilised, only because the Afro-Asians joined the West in refusing to take a seat in that vehicle.

Mr Stevenson tried to strike terror in everybody's heart by invoking the ghost of the League of Nations. He feared, he said, that the "UN might die as ignoble a death as did the League of Nations." He said so when speaking on the Goan question, but he spoke better than he knew. I don't know whether he saw Low's recent cartoon in the Guardian. It shows a memorial tablet with the legend: "Here lies United Nations: Died of a let-down when bringing order to Congo 1961."

Busy hands laying down rail tracks of steel, steel lines penetrating into the heart of the wilderness, steel bringing civilization to the doorsteps of isolated villages and homes without number.

In this land with its 410 million people and vast distances, there is need for swifter and more efficient transport, be it by road or rail. And transport needs steel—from bicycle to aeroplane every modern vehicle is shaped from STEEL. Soon, even the remotest outpost on this great subcontinent will be a part of the national network of transport. Soon all these benefits will be ours, as there is a little more steel for us.

Towards this end, IISCO is working for more steel to help you and you—in serving you we help the Nation and that is our privilege.

AT THE FAIR Window on Andhra Pradesh

A sense of vast untapped resources waiting to be developed is the abiding impression left by a visit to the Andhra Pradesh pavilion at the Indian Industries Fair. The Exhibits in the form of models, charts and specimens of the products of nature and of industry make an effective display of the varied economic potential of the State. To say this is not, however, to minimise the many-sided development that has already been achieved and of which the pavilion presents an integrated picture. But the future prospects in the form of abundant power and raw materials, both agricultural and mineral, throw into the shade the development that has already taken place. Entrepreneurs on the lookout for new prospects should not miss the opportunity of visiting the Andhra Pradesh pavilion in the few days that the Fair will continue to remain open.

We know of Andhra, or rather the coastal districts of the State, as the coastal districts of the State, as the rice bowl of India. Andhra Pradesh is a major agricultural region contributing over 10 per cent of India's total cereal production, 20 per cent of oil seeds and 40 per cent of tobacco. Practically the entire output of Virginia tobacco is grown in Andhra. Tobacco grown in the State contributes over Rs 15 crores every year in foreign exchange and Rs 54 crores towards Central Excise duty. The State is also responsible for 6.5 per cent of the total sugar production in the country.

The level of agricultural development already attained may suggest that there is not much scope for further increase in production. But so far only two-thirds (about 28 million acres) of the total arable area in the State has been brought under

cultivation. It is estimated that an additional area of 14.9 million acres can be made available for agriculture. In this respect Andhra Pradesh is better placed than the rest of the country. In India as a whole three-fourths of the arable land is already under cultivation. Andhra is also very advantageously placed as regards irrigation resources and facilities. Though the proportion of irrigated area to total land under cultivation is highest in the State, so far only quarter of the cultivated land has the benefit of irrigation. When the vast irrigation potential of the two great river systems is fully developed—plans costing a total of Rs 650 crores have been drawn up for the purpose—an additional 14.1 million acres could be provided with irrigation facilities.

Irrigation projects have been accorded the highest priority in the first two Plans. The total expenditures on irrigation projects in the First Plan was Rs 42.93 crores. In the Second Plan a provision of Rs 32.23 crores was made for the multipurpose Nagarjunasagar project and Rs 18.34 crores for other major and medium projects, besides Rs 6.63 crores under minor irrigation schemes. The Nagarjunasagar alone, when completed in all its phases, will provide irrigation to 3.2 million acres. The allocation for irrigation under the Third Plan, including schemes carried over from the Second Plan, amounts to Rs 76.23 crores. The various major and medium irrigation projects excluding Nagarjunasagar are expected to irrigate an area of about 5.21 lakh acres. It is proposed to implement seven major irrigation schemes, 45 medium irrigation schemes and 26 minor irrigation schemes. The Third Plan provision for the Nagarjunasagar project, which is a continuing scheme, is Rs 45 crores of which Rs 9 crores will be spent in 1961-62. The Nagarjunasagar will be the biggest man-made reservoir in the country. The 450 ft. high dam will be the biggest masonry dam in the world.

Apart from its agricultural wealth, the State is lavishly endowed with rich and varied mineral resources. Extensive deposits of iron ore, manganese, asbestos, quartz, limestone, mica and barytes provide the base for a wide range of mineral-based industries. The asbestos deposits in the State are the only source of the chrysotile variety (spinning grade) of this product in India. For the last 23 years all the barytes produced in India have come from Andhra Pradesh. The apatite from the deposits of Vishakhapatnam district has phosphorus (calcium triphosphate) content well above the international specifications for this mineral. These deposits will provide the material for the ammonium phos-

phate plant to be set up at Vishakhapatnam.

Industrialisation had a comparatively late start in this richly endowed region. Development so far has been confined to industries processing agricultural products, such as fruit preservation, oil and rice milling, ginning and pressing factories and sugar mills. The State is one of the leading fruit growing regions with over 3 lakh acres under orchards. Fruit preservation factories producing fruit juices, beverages, pickles etc have made good progress. The quantity of preserved fruits is valued at Rs 10 lakhs per annum. There is scope for ancillary industries such as essential oils, aromatics and citric acid. There are indications that the State is making up for lost time. The facilities afforded by the State for development of industries have been recognised by the Central Government's decision to locate two of their big projects, the Synthetic Drugs Project and the Heavy Electricals Project in Andhra Pradesh. The establishment of these industries should hasten the process of the diversification of the industrial structure. Among the new industries already established or coming up may be mentioned sulphuric acid and super-phosphate factories, two major fertiliser factories, chip board factories, units for the manufacture of acetic acid and acetic anhydride, caustic soda and chlorine, cellulose acetate and polystyrene and other plastics, G. I. spun pipe factory, a leaf springs manufacturing unit, a kerosene engine manufacturing unit, and an integrated glass factory. During the Second Plan period outstanding progress was achieved in the field of small scale and handicraft industries. The wide range of products manufactured by the traditional handicrafts for which the State is famous, such as bidri ware, himroo, nirmal artware, silver filigree carpets and decorative textiles etc as well as scientific instruments, machines and gadgets from the new industrial estates, are effectively displayed in the Andhra Pradesh pavilion.

The planned effort to diversify the industrial structure and to provide the necessary technically trained personnel is carried forward in the State's Third Plan for industry. Among the measures taken by the State Government for the purpose may be mentioned the establishment of three development corporations: (a) Andhra Pradesh Industrial Development Corporation for Major Industries; (b) Andhra Pradesh Small Scale Industrial Development Corporation; (c) Andhra Pradesh Mineral Development Corporation. Another step taken by the State Government to speed up industrialisation is the offer of special incentives and facilities to new industries such as supply of power and water at concessional rates to selected categories of industries, and proposal for grant of certain reliefs in the levy of sales tax and octroi duties. It is also proposed to establish three "Industrial Development Areas" in the three principal regions of the State.

Regarding the State's power potential, it is estimated at 3 million K.W. of which installed generating capacity

at end of the Second Plan was only 2,28,470 K.W. The installed capacity is to be increased over three-fold to 6,89,470 K.W. during the Third Plan. Provision for power development during the Third Plan period amounts to Rs 65 crores out of the total outlay of Rs 305 crores. The per capita consumption of electricity is expected to increase from the present level of 15 units to 40 units. The major projects comprising the programme are: (i) Upper Sileru Hydro-Electric Scheme, 1,20,000 K.W., (ii) Tungabhadra stations along with Nellore Thermal station 58,800 KW (iii) Kothagudem Thermal station 1,20,000KW (iv) Ramagundam extensions 60,000 KW (v) Srisaillam Hydro-electric scheme in conjunction with Nagarjunasagar power station 1,00,000 KW. A grid covering the entire State is in formation. The grid comprising 14,700 miles of transmission and distribution lines inter-links the major Hydrostations like Machkund, Tungabhadra dam and Hampi, Nizam-Sagar and thermal stations like Hussainnagar, Ramagundam, Nellore, Vishakhapatnam and Vijayawada, having a total generating capacity of 2,22,450 KW. The new power stations to be set out during the Third Plan will feed this grid bringing an additional generating capacity of 4,61,000 KW. Considering the chronic shortages of power suffered by other more industrialised regions, the State Government has shown a proper sense of priorities in making a substantial allocation for power development in the Third Plan. An assured supply of power is an essential condition for effective development of the industrial potential of Andhra Pradesh.

THE BANK OF INDIA LIMITED

Registered Office:
70-80, Mahatma Gandhi Road,
BOMBAY-1.

ISSUE OF CAPITAL

The Directors of The Bank of India Limited announce that the consent of the Central Government under the Capital Issues (Control) Act, 1947, has been obtained by the Bank to an issue of capital to the value of Rs. 2,00,00,000 as follows:—

2,00,000 ordinary shares of Rs. 100/- each,

Rs. 50 per share paid up, for cash at a premium of Rs. 20 per share.

The Directors intend to recommend the requisite proposals to the shareholders in general meeting.

It is intended that the 2,00,000 ordinary shares to be issued shall be offered to the shareholders on the Register on a date to be decided upon in the proportion of one new share for every three shares, whether ordinary (partly-paid) or "A" ordinary (fully paid), held by such shareholders on such date.

T. D. KANSARA,
General Manager,
Bombay, 22nd December, 1961.

Indian Finance

6 January 1962

Annual Reviews

Calcutta Stock Exchange A Gainful Year for new Issues & Growth Stocks

EXCEPT for somewhat shaky and erratic conditions that were noticed after July, the year just ended was generally a gainful one for professional operators as well as investors in equities. Jute and Sugar shares provided the major exceptions to the general trend.

It was true that the trend was interrupted with intermittent spells of reaction; but they appeared to be more in the nature of a corrective profit-taking than of a bearish phase. In fact, these respite only provided fresh strength to the bulls and the upward trend re-asserted itself with renewed vigour, suggesting that the bulls had retained their mastery over the market.

Although many industries had a hard time on account of raw material shortage, delay in getting import licences and a drastic cut in power supply, the basic sentiment was not materially affected, reflecting the market's optimism that these difficulties might prove to be temporary. The market, therefore, took a favourable view of the long-range outlook for the economy as a whole and leapt forward. Indeed, peak levels were touched by most of the shares in the closing month of the first half-year.

The main factors which sustained the bullish phase were: (1) inflationary psychology generated by the development plans; (2) the growing space of industrial output since 1959—though lately the growth has been retarded by the paucity of raw materials and shortage of coal and power; (3) growth prospects of industries under the continued impact of import curbs; (4) various incentive schemes for export promotion; (5) scarcity of stocks created by large investment buying, particularly by the LIC which appeared never to sell shares it had once bought; and (6) proposals by various companies to issue right or bonus shares in order to raise their capital.

In the circumstances, investors found it comparatively cheap to invest their funds in several new issues. But the earlier runaway enthusiasm for the new issues later gave place to a realistic assessment of the prospects of each issue. This was indicated by the fact that the new issues of industrial ventures with well-known foreign collaboration, financial and technical, had a good response. But latterly, the steady rise in values in a number of shares had taken them to such dizzy heights that scope for any further advance was extremely restricted. While the professional operators were inclined to book their profits, investors were completely out of the market as they seemed to be busy effecting the necessary adjustments in their holdings in order to find the required additional resources for making payments in respect of calls from new

companies and subscribing to issues of right shares by established companies. Thus, with the bulls inclined to lighten their burden and the bears tending to be somewhat aggressive, there was a steady drift in share values.

Although the opening month of the year witnessed a sizable decline in values in the absence of any inspiration for marketmen, sentiment showed a distinct improvement from the middle of January. The rise in values was more striking during the post-Budget period, reflecting the market's satisfaction over the Budget proposals. It also indicated the general feeling that the overall burden of taxation, though higher than anticipated, being by and large indirect, could be passed on to the consumers in the present context of a seller's market.

From the beginning of the second quarter, prices were generally on the downsling though, at every bottom, desperate attempts were made to reverse the trend. Thanks to industrial production being maintained at a very encouraging level and the news that the Aid-India Club, comprising six nations and the World Bank, having agreed to give India a \$2,000 million for launching its Third Five-Year Plan, the market presented a cheerful outlook from the third week of May, when the bulls became more and more aggressive and succeeded in pushing up prices in most of the counters.

The market, however, became unsettled at the beginning of the third

quarter when operators were unable to take a view of the immediate future due to various unfavourable factors, such as, fears about Government action to curb excessive speculation, continued adverse balance of payments position despite attempts being made to boost up exports, the contemplated entry of the UK into the ECM and the reports of widespread floods in different parts of the country. Even the news of the increased dividend by the IISCO produced only a temporary effect on sentiment, as the impact of selling was so severe as to make operators wonder if that was the indication of a coming slump. The none-too-rosy picture of the outlook for the TISCO and the IISCO, painted by the Chairmen in their statements, strengthened the hands of the bears to hammer down the market.

It was felt that, while steel—the leading industry of the country—was facing many difficulties, other industries, too, were joining the sick brigade. Thus, the nervousness and hesitancy gave way to definite panic in August when prices rolled down helplessly. Even the action taken by the stock exchange authorities to impose margins on bear sales of four principal speculative issues did not yield the desired result, as speculators shifted their attention to other centres where there were no margins. But, the market staged a mild recovery towards the end of September following the news of the non-interference policy adopted by the Finance Minister in regard to the stock exchange reform and the deci-

Following were the price trends of a few selected shares:

	Year opening	Highest	Lowest	Year closing

sion by the Dunlop Rubber Company to issue bonus shares.

It should rather be said that, except for a state of turmoil in the middle of December, the market had the best time during the final quarter of the year. An important factor contributing to the happy atmosphere in the market was the absence of any selling pressure. Three main factors contributing to the sudden change in sentiment were the optimism expressed over the discussions at the Business International Conference at New Delhi, the news of the impression created in the USA by Mr Nehru's visit and the news of the Central Budget being delayed due to the general election.

Although a corrective reaction to the boomlet was generally expected, the bout of liquidation, which was noticed in the middle of December, took many by surprise. This was mainly due to the apprehensions about the political situation in Goa. Even the imposition of margins on blank sales of all the clearing shares did not bring about the desired effect. There was, however, a turn of the tide towards the close of the year, thanks to the news of the surrender of the Portuguese troops, the removal of the special margins referred to above and the reports of the IISCO having obtained a loan of \$19.5 million for increasing coal production.

Section-wise, Engineering shares came in for a good deal of attention on the belief that the scope for the engineering industry, during the next few years was good as development in the Third Plan would take place mainly in this sector of the economy. But, the shortage of raw materials and transport difficulties induced some caution and this was reflected in the relatively small gain in steel shares in view of the discouraging statements made by the Chairmen of the two main steel producers. After a steady rise in the first four months of the year, Jute shares fell headlong, touching the year's low in August as a result of the acute shortage of raw jute leading to the sealing of looms and reduction in working hours. However, the steady improvement in the raw jute supply position and the consequent restoration of the cut in working hours and the reopening of the sealed looms induced a mild recovery towards the closing week of the year.

If there was one section which did not show much reaction at any stage that was Coal. The shortage of transport as well as power to carry on production and the reports of many collieries facing difficulties in obtaining necessary finance kept the coal shares somewhat in abeyance.

Except for the consistent support lent to the shares of those companies having bonus possibilities and diversification of activities, there was little doing in the tea section. Concern was expressed about how the industry would fare during the year under review in view of the substantial rise in production that tended to lower values realised for this commodity in auctions.

Sugar shares were subjected to frequent selling pressure. Operators did not view the prospects of the

sugar companies with optimism in view of the surplus production of the commodity and the bleak prospects for exports following the breakdown of the International Sugar Agreement.

Although Textile shares were initially subdued due to the announcement of an increase in the export duty on yarn, sentiment turned brighter, resulting in an actual boom from the beginning of the second quarter. This was inspired partly by large-scale modernisation and diversification activities undertaken by many units and partly by the hope that the working results for the year might be exceedingly good. During the closing month of the year, the undertone was rather quiet in view of the reports of the difficulties experienced in exporting piecegoods due to increased competition in foreign markets.

The announcement of bonus or right issues by certain companies, the flow of encouraging corporate results, the sanction of an increase in the ex-factory price of cement, hopes of an early increase being sanctioned in paper prices—all these factors kept up sentiment in the Miscellaneous section during the major part of the year.

Bank shares showed a remarkable improvement in prices, presumably due to a hope that many leading banks might consider the possibility of increasing their resources by issuing fresh shares or making further calls on their partly-paid shares in order to correct the imbalance between the share capital and deposit liabilities.

Contrary to the general trend of the market, gilt-edged securities remained featureless and colourless in the absence of sustained support from institutional investors.

Bombay Stock Exchange Unprecedented Boom

THANKS to an improvement in the domestic economy and increasing opportunities for investment as a sequel to the mammoth economic development of the country, the Bombay Stock Exchange continued to be as resilient as ever in 1961. The buoyancy was further reflected in the activity of the new issues market, which continued to remain as active as ever with a good response to a number of new floatations and oversubscriptions in a number of cases.

Incidentally, the year under review corresponds with the first year of the Third Plan and thus marks the commencement of a phase of development towards attaining self-sustained growth. Significantly enough, there has been a change in the complexion of the investing public which again reflects the increasing need for a channel of investment for the savings of the community.

Section-wise, barring Shipping and Sugar shares which had to swim against the current throughout the year, all other sections disclosed a notable improvement over last year. The easy trend, witnessed at the close of the previous year, persisted until mid-January. Subsequently, a

Following were the price trends of a few selected shares:

steadier trend, however, developed following an improvement in sentiment which was influenced by the impending Central Budget. The initial easiness was largely the result of stringent money conditions and uncertainties over the outcome of the Congress session at Bhavnagar. Rumours of an imminent increase in the retention prices for Steel provided some cheer to the market.

The recovery continued during February and became more pronounced on the eve of the Budget, reflecting mainly the optimism of the market with regard to the budget proposals. Despite a heavy dose of indirect taxation in the budget, the market refused to be adversely affected, as it was generally thought that most of the levies could be passed on to the consumers, being a seller's market. On the other hand, the sentiment was bullish influenced by the reduction in the tax on bonus shares and on royalties received for foreign companies from Indian enterprises and the absence of any increase in corporation taxes.

The market continued to maintain the cheer till mid-April. Later, however, prices receded largely due to profit-taking, while technical corrections also warranted a correction. Sentiment received a rude shock following the recommendations of the Estimates Committee of Parliament to the effect that the entire investible funds of the LIC should be taken over by the Government as an unfunded debt.

The setback in prices was halted in May following the renewed optimism regarding substantial foreign aid for the Third Plan and the encouraging corporate news. The recovery in prices lasted for another month. Meanwhile, renewed fears of a blanket control on stock exchanges to check the speculative activity coupled with the deterioration in the Indo-Pak relations cast a gloom on the market and prices fell rather sharply on a wide front.

However, by mid-September, prices staged a recovery, being influenced by the Finance Minister's statement clarifying the Government's policy regarding the regulation of stock markets in the country. The upward trend in prices gathered further momentum after Dhaval and reached the peak of the year during the week ended 18 November. The optimism was largely based on hopes of satisfactory working of the textile industry during the current year and excellent corporate news generally.

The closing month of the year, however, proved the worst for the market operators. The uncertain

political situation, the threatened invasion of the border by the Chinese and the movement of troops to the Portuguese enclaves of Goa. Also, there were growing doubts about the ability to sustain the pace of industrial production recorded in the previous year. Shortages in the supply of electric power and transport to carry coal and raw materials led to curtailment of production in many sectors. Added to this, there was the continued shortage of imported raw materials which cut back production and perhaps profits. Thus, the rising cost of production led to understandable fears that India might become a comparatively high cost producer in manufactured products entering the overseas markets with serious adverse effects on the export earnings of the country.

Thank to the ultimate liberation of the Portuguese enclaves in the third week of December, normalcy was restored and prices rallied to a moderate level.

Shipping shares continued to be under a cloud following the reports that the operating results may not be encouraging as a result of higher costs and depression in the world freight market. But, it is confidently expected the carriage of two million tons of coal on the coast, which the industry wants on a permanent basis and attractive freights on foodgrains cargo from the USA will infuse new life into the Indian shipping industry.

In regard to the steel companies, the general complaint was about the inadequacy of the steel retention prices so far granted. Reflecting the opinion of the steel industry, Mr J. R. D. Tata has stated that, if an all-embracing system of control over production, distribution and prices is to remain in force, prices should at least be fixed on the basis of broad principles and assumptions with reasonable margins built into them.

Madras Stock Exchange The Year in Retrospect

HECTIC activity in the speculative counters and a subdued interest in the new issues characterised trading on the Madras Stock Exchange during the year 1961. In January and February, the market was generally faced by the conjectures as to what might be in store in the Central Budget. But, when the budget proposals were announced, they conformed to market expectations.

Though the cut in the development rebate came as a painful surprise to company managements, who viewed

Annual Reviews

this rebate as an element of internal capital formation, investors were jubilant over the sharp reduction in the bonus tax. Bullish enthusiasm prevailed and shares of many companies having good reserves attracted attention on bonus issues prospect.

After the flush of post-budget buoyance, the market became rather quiet. The volume of funds available for stock market activity, was getting deflected due to the large new and right issues. The reports of the Estimates Committee of Parliament recommending that the LIC fund might be taken over by the Government caused mild panic and bear were quick to utilise this opportunity. In this connection, it should be mentioned with particular satisfaction that the LIC was a consistent buyer of many shares throughout the year and that such purchases on several occasions helped to keep the morale of the market.

By the middle of the year, there was a sizable recovery. Reports that a large quantum of foreign aid by the Aid-India Club under the leadership of America would be forthcoming for the Third Plan operated as a major bull factor for the recovery. A mild boom was on and investors were avidly taking up low-priced and near-par shares that have a potential in the hope of capital appreciation.

Then followed a reactionary trend and the market was adversely affected by conditions in Bombay. The most important factor was the threat of Government intervention in regard to forward business. Investors were also of the view that the rise in prices after the budget was rather steep and that a corrective shake-out was necessary. Another factor was Britain's desire to joint the ECM and the possible repercussions on India's export trade. As a result of these factors, values were marked down and business became thin.

It was not until the fourth quarter of the year that a recovery was possible and the bull wave continued till the middle of December. Later, the news from Goa and border trouble with China coupled with the confused international political situation adversely affected sentiment. Nervous conditions, therefore, prevailed, as the market was exposed to the winds that blew from Bombay and Calcutta where near-panic conditions prevailed. The system of automatic margins imposed by the stock exchange authorities, had also its effect although it was particularly helpful in arresting the rot. The closing tendency was not, however, one free from anxiety.

Section-wise, Planting shares were active right throughout the year though the majority of the shares was inactive and quoted nominal. Popular Rubber shares accounted for the usual turnover on the view of the assured price policy and the hope of dividends being maintained. Shares of the high-grown Tea estates received active support, though investors were aware of the increased estate costs

Annual Reviews

and the inroads which it would make on the dividend-paying capacity. Coffee shares were under a cloud with the industry faced with the problem of over-production.

Textile shares met with enthusiastic support.

Banks shares were a steady feature and the buoyancy of the section was helped by higher profit figures.

Jute The End of The Crisis

IRREGULAR trends in prices characterised the past year's trading in the Jute Goods market. After touching the highest levels in February and the lowest in August, the market wound up the year on a steady note. Prices of Raw Jute displayed a downward trend from March upto almost the end of November, though a slightly steadier tendency was noticed towards the end of the year.

In general, the raw jute shortage which was followed by larger supplies, ups and downs in the foreign demand, growing competition from Pakistan and the frequent official intervention—these factors greatly affected this major industry. Confronted with a physical shortage of the raw material early in the year, the alternatives open to the industry were a general scramble for the available stocks which would have disrupted the entire industry, and the regulation of consumption on an industrywide scale.

In this connection, it was encouraging to note that the series of measures

Sugar shares were moderately active. The industry was faced with the problem of over-production, while the feeling was gaining ground that sugar was being priced out of the reach of the consumer.

Miscellaneous issues recorded handsome gains, enjoying widespread support. Prices of Cement shares held on to steady levels despite the travails of the industry. The hope was entertained that production would improve with the increase in the retention price of the commodity.

Following were the price trends of a few selected shares:

	Year opening Rs.	Highest Rs.	Lowest Rs.	Year closing Rs.

favoured the block closure of the mills for only a specific period to overcoming the shortage of jute, the Government thought it too early to contemplate any such move due to its possible impact on labour. There was even a tendency in the market to take rather an alarmist view, as the decline in prices had been rapid. As a matter of fact, till the middle of June, the market was almost dead.

Thanks to the resumption of forward trading on 15 June, the jute trade saw the turning point in its fortunes and the price slide, which threatened to develop into a total collapse of the market, had been halted. The steadiness of the market was also influenced by the reports of the decision made by the IJMA to close the mill's for a week each in June and July and the voluntary sealing of looms during August in order to tide over the acute scarcity of fibre.

The situation, however, changed radically in September with the arrival of the new crop in the market. The mills were called upon to raise production by restoring voluntary cuts and increasing the number of working hours to 45 a week from 42½ by the end of January. Again, in the middle of October, the working time was increased further to 48 hours.

It should be said that the month of October rightly marked the end of the raw jute crisis and the beginning of a new phase in the industry which ventured on its second production increase within the period of less than a month. But, the subsequent announcement for unsealing 2½ per cent of the looms with effect from 13 November came as a surprise to the operators, as it was generally expected that steps would be taken only progressively to raise the output. The market, therefore, developed a reactionary tendency from the beginning of November.

Moreover, the downward trend of raw jute prices due to the pressure of arrivals was a positive disincentive to foreign buyers, who clung to the view that it would be a matter of weeks before falling prices and heavy arrivals made their influence felt on the prices of manufactured

goods, not to speak of the fact that consumers were loath to add to the inventories due to the year-end considerations.

Although the middle of December witnessed a sudden firmness in price due to a scramble for obtaining raw goods, the decision made again by the IJMA to unseal another 2½ per cent looms in January caused a slightly reactionary tendency towards the close of the year.

RAW JUTE

Prices of Raw Jute displayed generally a firmer tendency till the end of the first half-year. The only action to the announcement on March of the promulgation of Jute Licensing and Control Order was, that prices settled down to a controlled rate of Rs 62 a maund for Assam Bottoms. But, prices developed a reactionary tendency from the third week of May following maximum price fixed by the IJMA being revised from 22 May. The price was revised to Rs 56 from 62 a maund. Even the lowering of the maximum price did not appear to have evoked much interest from the mills.

Thus, the continued reluctance of the part of the mills to purchase their eagerness to curtail production due to lack of overseas demand created nervousness in the market with prices developing a steady fall till the end of November when the price was quoted at as low as Rs 29 a maund. At this critical juncture, FMC fixed the minimum price at 30 a maund on the basis of Assam Bottoms in order to prevent growth on any speculative pressure tending to depress the prices to duly law levels.

Again, in view of the undertaking given to the Government regarding the maintenance of jute prices, IJMA was concerned at the sagging tendency in the market and, for reason, the Association increased steadily the quotas of jute to be purchased by the mills from the beginning of December, the quotas being designed to being about stability in the market due to the increased arrivals. For obvious reasons, market displayed a slightly steady tendency at the far-end of the year.

Tea

Steady Fall in Prices
Due to higher Crop

CONDITIONS, during the year just ended, had been so favourable that the North Indian Tea crop showed an increase of 12 million pounds or 33 million kilograms over the previous year. In other words, up to the end of November, 1961, total crop amounted to 588.4 million pounds as against 515.8 million pounds in the corresponding period of 1960.

Total arrivals into the Calcutta Port, during the eight months ended November, 1961, were higher at 3,57,777 chests as compared to 3,203,692 chests in the corresponding period of 1960. Naturally, stocks in Calcutta warehouses, as at the end of November, rose substantially to 1,044,777 chests from 929,168 chests at the close of October. These compared with only 875,025 chests at the end of November of last year.

In addition, there was an appreciable increase in the crops from Ceylon and Pakistan. Ceylon enhanced her crop by 10 million pounds to 341 million pounds at the end of September. Production in Pakistan also went up from 25 million to 41 million pounds. The total output in South India was also slightly higher at 160.1 million pounds in the eleven months ended November 1961 as against 159.4 million pounds in the corresponding period of the preceding year. East Africa (both British and Portuguese) remained static at 69 million pounds to the end of August, while Indonesia registered a nominal gain of one million pounds at 57.6 million pounds to the end of July. This extra crop depressed prices on the Calcutta market to the extent of 66 nP per kilogram as compared to a year ago. As a matter of fact, many teas were being sold at prices near or below the cost of production.

Early in the new season, it became clear that the crop would be substantially heavier than that of the previous year. The Tea Traders Association, therefore, considered it necessary to increase the weekly offerings to 75,000 chests in the export and to 25,000 chests in the dust catalogues. This decision was arrived at after a careful study and consideration of the quantities available in Calcutta, the capacity of the market to absorb more tea, the desirability of maintaining a fairly uniform level of offerings through the season and of ensuring that the disposal of the large 1961 crop was not unduly delayed. Diversion of offerings would not have helped producers and

would probably have diverted export enquiries to other centres to the detriment of the Calcutta market.

The auction trends till the end of February indicated that teas without standing quality were in good demand on the general view that prices might not slip back in the near future in view of the strong support from the domestic buyers. It was also thought that, as exports had been maintained at a high level, there might not be enough tea for the domestic market. As a result, exporters operated strongly, while the internal buyers continued to support the lower-priced tea.

But the ebullience, which was noticed after the announcement of the export duty, abated on second thoughts. The increase in the excise duty counteracted the favourable effect of the cut in export duty, because all teas in the gardens had to pay the excise duty which was not refunded even when tea was exported. Nevertheless, the final export sale for the 1960-61 season finished on a stronger note than it had done for many years.

Although bidding at the first export auction, held on 15 May, for the new season's tea was not so encouraging as was expected earlier, there was strong support for plain Assam and Dooars teas, presumably due to keen buying of internal dealers who were short of the commodity. Moreover, the overall statistical position, as at the end of June, indicated that there was little surplus of tea in the world. This led to a feeling that the possibility of shortage could not be ruled out, especially when consumption in India was expanding. Even the tea trade had the view that India should raise her production as rapidly as possible, as otherwise, with internal consumption forging ahead and prices tending to rise, there would be less and less for export.

At the beginning of the third quarter, the strong general demand continued to be in evidence and prices realised for quality teas were very satisfactory although the poorer sorts were at times difficult of sale. But, with the quality of the offerings from all districts past their peak and a larger crop being produced, prices of all sorts developed a progressive decline from August to the end of November due to bigger offerings. Even the little support, which had been forthcoming, was more discriminating in view of the uncertain outlook for the marketing of the commodity. As a matter of fact, the running sale average fell by 23 nP per kilo in November, while, in September and October, the monthly

drops were 37 nP and 18 nP respectively.

Thanks to the emergence of demand from external as well as internal buyers, prices displayed some recovery during the closing month of the year in spite of the usual deterioration in quality. This sudden turn in market sentiment was influenced by the belief that, as most of the gardens had stopped plucking due to the early advent of winter, production in December was likely to be small and the foreign customers might take as much of their requirements as possible in the near future.

From a study of developments in the market during the year, two lessons may be learnt. First, an increase in production must be offset by an increase in consumption. Second, it has again been shown that quality is still the important factor as supplies are in excess of demand. The country is now approaching a period when production may outstrip consumption with the inevitable disastrous effects on prices and the many ills that will consequently follow. According to the latest forecast made by the FAO that, by 1956, the annual surplus of world production over consumption is expected to reach the level of 40 to 50 million kilogrammes. India should, therefore, in consultation with other producing countries, keep in readiness some international machinery to regulate production. There are only three ways by which the present threat can be met—promotion campaign to step up exports, regulation of production and increasing internal consumption.

*

Coffee
Marketing Problems

WITH the rising production and the internal offtake showing signs of stagnation, the Coffee market faced the problem of mounting surplus stocks last year. The export market not only showed a weaker trend as it did elsewhere in the world, but also lost the high premium it formerly enjoyed over the domestic price level to the extent of incurring actually a heavy discount at present.

The growers, who were complaining that the minimum release price fixed by the Coffee Board was not sufficient to meet their production cost, were compensated through a share in the export premium. This formula could not work in a situation in which such a premium had been a thing of the past. The consumer in India, who was aware of the trend in the world market, on his turn, demanded a reduction in the price of coffee he drank. The problem of marketing was thus getting complicated more and more.

Early in the year, coffee stocks in the producing countries were estimated at 40 million bags towards the end of 1960. That was a pretty large stock capable of clouding the prospects for the ensuing year. But, the understanding between the producing countries regarding regulation of exports minimised, to a certain extent, the dangers of a heavy sur-

Annual Reviews

plus. It was argued that the International Coffee Agreement had succeeded in importing to the coffee market a "rocket-like stability" and the expectation of a section of the producers and the trade was that this stability would be of lasting duration. On the other hand, another section of the trade held the view that the International Coffee Agreement offered no absolute price stability.

Thus, coffee was subjected to supply and demand influences as well as outside factors such as financial, economic, political and other conditions. This was amply demonstrated when prices fell sharply on the New York and London markets following the rumour that Brazil had done a "behind-the-door" transaction with American roasters involving well over one million bags. The stock build-up in Brazil was such that the 1961-62 crop, beginning in July, would leave that producer with enough retained stocks to meet the entire world demand for coffee for two years. It was even feared that, unless production restraints were enforced, a collapse of the world coffee market was inevitable. The forecast on coffee trends, made by the FAO, was also quite emphatic that production was far outstripping the increase in demand and would continue to be so for years to come.

When the new crop arrivals crossed the 50,000-ton mark, the India Coffee Board faced a big problem of storage and marketing. To minimise the pressure on storage facilities and the chances of deterioration, the Board tried to expand exports, although export prices continued to be easy. As a matter of fact, export prices, in the middle of the year, for the top quality Plantation grade went down to Rs 165 (per 50 kilos) or to one-third of the price realised for this grade five to six years ago. Planters, therefore, drew forceful attention to the need for a change in the methods of marketing by the Board and for an entirely different system of exporting. They were also demanding that the running of the industry should be placed strictly on commercial lines.

Following the release of the Central Budget, the announcement of the increase in excise duty on coffee was also considered to be an unfortunate one. For, the fall in the world's market, just when bumper crops were being produced, raised the question of adequate return to the growers. Some fall in the price was offset by the increase in the yield per acre, which reduced costs. Very few expected Rs 2 per point being made to growers on their 1960-61 crop. Figures for the previous two years showed that the return on the 1959-60 crop was the lowest in eleven years and the 1960-61 return would be sharply lower.

The present regulated system of marketing was introduced when coffee production in India was barely sufficient to meet the home demand. Matters have now been changed.

Annual Reviews

Production has increased from 20,000 to 67,000 tonnes; but the domestic market has failed to keep pace with this leap. The result is, the country is faced with a rapidly increasing exportable surplus.

The Coffee Board, therefore, decided in the first week of October, to introduce open auctions for exports with effect from 1 January, 1962. The Board thought that open auctions would attract more buyers, both from India and abroad, besides securing better prices for coffees of a high quality. In this connection, a two-member delegation of the Coffee Board had been to the UK and the Continent in October to explore ways and means of stepping up exports in the overseas markets and to know whether the present methods of marketing adopted by the Board needed alterations. The delegation apprised the trade in the countries they visited of the system of open auctions, replacing the present system of closed tenders. The delegation found that India had made a very good impression in the Continental markets and that the prospects of increased demand were bright.

The Chairman of the Coffee Board also expressed the view that increased exports of Arabica could be made to France. About 1,000 tonnes had so far been exported and there exists a potential market for the high quality Robusta also once the present import restrictions are relaxed. An important point to be noted from the Chairman's impressions is that the trade in all the countries, excepting the UK, were against the releases of coffee through open auctions, while others were in favour of India following the same system as the other major producers in the world—of making available coffee to them through registered exporters in India at the prevailing international prices of the growths of similar quality.

*

Rubber
Growing Shortage

THE shortage of Rubber continued to be felt last year when the rubber estates were facing serious difficulties in raising the output. It was estimated that there was a gap of 25,000 tonnes annually and it was found necessary to permit large imports of both natural and synthetic rubber. With the rising trend of consumption, it was feared that even with the coming into operation of the synthetic rubber plant at Bareilly, there would be a shortage and there might be a need for stepping up the output of synthetic rubber by setting up new units in other parts of the country.

It was clear that the rubber estates were finding it difficult to reconcile the conflict between the short-term and long-term objectives and that they were unable to embark on a large replanting programme without adequate incentives. The selling

prices, fixed by the Central Government, did not also give a satisfactory margin of profit.

In the circumstances the Central Government decided, in the third week of February, to raise the cess of rubber to 30 nP per pound from one anna, effective from the beginning of April. It was pointed out that, except for Sole Crepe, the cess would be collected from the manufacturers of rubber goods and that the estate-owners would get the present selling price less the cess at the above rate. In other words, the growers continued to get the same price for their produce at Rs 149.50 per 100 pounds, although the cess was doubled from the present rate of Rs 6.25 per 100 pounds. The cess was raised to finance the replanting scheme for which the Rubber Board had offered a subsidy of Rs 1,000 per acre.

Manufacturers felt that the levy was unjustified, because the cess collected during the past eight years for the purpose of rehabilitation of rubber estates remained largely unutilised. They stated that the progress of subsidized replanting during the past five years had been very slow, the actual replanting being limited to a maximum of 20 per cent of the target laid. There was another Rs 75 collected from the manufacturers by way of difference between the indigenous price and imported price of rubber remaining idle with the Government. The manufacturers pointed out that the Government should have utilised these amounts first and then think in terms of collecting more money by way of cess.

Meanwhile, the planting interests and the Kerala Government were upset over the reports that the Planning Commission was thinking in terms of dropping the replanting subsidy. It was only towards the end of January that the announcement came from the Central Government and the Rubber Board that, in order to create sufficient enthusiasm among the rubber growers in favour of large-scale replacement of their worn-out rubber trees with high yielding strains, the subsidy would be raised from Rs 400 to Rs 1,000 per acre. Much hope was aroused among the growers by this announcement. They were preparing for a major replantation scheme. They as well as the Kerala State Government, therefore, tried to persuade the Planning Commission to withdraw its opposition towards the subsidy. However, subsequent reports revealed that the Planning Commission was coming around and appreciated the plea for a subsidized replanting scheme.

The Rubber Board has now finalised a five-year plan for the expansion of rubber cultivation in Kerala. In the 1962-63 budget, a provision of Rs 38 lakhs for grant-in-aid to replantation has been made by the Board. In this connection, the Board has warned that, unless rubber growers take effective measures to reduce the cost of production and increase the yield per acre, natural rubber will be priced out of the world markets by synthetic rubber. The

Board has also pointed out that a new replantation scheme has been drafted to help the rubber plantation industry to increase the yield per acre. The Board has also set a target of 8,000 acres to be replanted this year.

The Rubber Board says that the increase in yield per acre to be achieved should at the level achieved in countries like Malaya, where the annual yield per acre is about 1,300 lbs against the average yield of about 300 lbs in India. The Board feels that similar results can be achieved if worn-out and low-yielding plants are replaced with high-yielding plants.

The fact that the industry has made considerable progress in the last few years is evident from the increased production noticed between 1954 and 1960. Against 27,700 tonnes in 1954, production has steadily improved to reach 57,000 tonnes in 1960. It is estimated that India will be in a position to produce 20,000 tonnes of synthetic rubber in the next few years. The present consumption is placed around 7,000 tons. The following table shows the trend of production, consumption, stocks with the manufacturers and stocks with the estates and dealers (figures in metric tonnes):—

1961	Production	Consumption	Stocks with manufacturers	Stocks with dealers and estates
Sept.	2,698	4,409	5,620	4,124
July	2,010	4,316	5,292	2,961
June	1,300	3,997	5,961	2,501
May	1,943	3,631	6,844	2,872
April	2,100	3,812	6,708	2,988
March	1,625	4,419	7,545	2,330
Feb.	1,241	4,051	7,075	4,110
Jan.	2,527	4,084	6,806	6,230
Dec. '60	3,100	4,976	6,855	6,108

In a comprehensive assessment of the prospects of the rubber industry, the Estimates Committee has pointed out that between 1955 and 1960, production has gone up by only 10 per cent and, if the Third Plan target is to be achieved, the plantations will have to show a rise of 80 per cent in the coming five years, which is not considered to be very realistic in the existing conditions. The Committee has, however, indicated that if a concerted drive is made to improve the methods of production, the industry can achieve the target or even exceed it.

Considering the tight foreign exchange position and the increasingly heavy expenditure on the import of rubber, the Estimates Committee has urged that stricter control should be exercised on the issue of rubber for the manufacturers of non-essential goods. Considering that it takes seven or eight years for a rubber plant to turn productive and the supply outlook threatens to turn from bad to worse, there is a strong case for swift measures designed to place the rubber industry on a sound footing.

Pepper
Lack of Foreign Demand

EXCEPT for the livelier conditions noticed during the third quarter of the year, the Pepper market experienced a period of dullness in 1961 for want of foreign enquiries. The only relief to the generally depressed situation was the occasional price recovery which, from time to time, halted the downward slide.

The firmness in prices in the beginning of the year was mainly due to the fact that, though the USA was keeping away from the market in view of its ability to get supplies at lower prices from Singapore, the Indian stockists were not in a mood to reduce their price ideas as they expected Singapore supplies to dry up soon and the foreign buyers to turn to India ultimately.

There was, however, a growing feeling in certain trade circles that the consumption of black pepper would go down if the price of the white variety did not move up. It was thought that the difference in the prices of these two varieties was so narrow that countries other than the USA would prefer white pepper to black. Moreover, the world supply position in the coming months was also expected to be better.

In addition to the supplies from India, the international market was expected to receive about 7,000 tons of black pepper from Sarawak in May-June as against 3,000 tons in the previous year. Lampong was also reported to be nursing a large stock of this variety, which was to reach the market in July-August. In the circumstances, prices suffered a steady setback till the end of May due to steady liquidation by the stockists.

There was, however, a turn of the tide at the beginning of June when prices displayed a hardening tendency, thanks to the prospects of exports being brightened with the narrowing disparity between Indian and Singapore prices. There were also reports that the Indonesian Government had decided to export the commodity directly to the USA, Russia and other consuming countries instead of selling via Singapore. It was, therefore, hoped that the USA might revise her buying ideas in view of the rise in the Singapore rates. Advances from the primary markets were also encouraging in view of a steady fall in arrivals following the incessant rains in many parts of Malabar.

But the steady and sharp recovery in prices, noticed till the middle of July, proved to be short-lived. Even the reports of extensive damage to the crop in Kerala due to the unprecedented floods failed to enthuse the market. As a matter of fact, the predominant mood in the market was one of caution with both buyers and sellers awaiting further reports about the damage to the pepper vines.

Meanwhile, it was stated that Brazil was a seller in the US market in the new crop for August-September shipment at a price as low as 42 cents per pound. This had a bearish

Export Sale:	Year opening Rs.	Highest Rs.	Lowest Rs.	Year closing Rs.

influence on the local price trend, especially when reports from Singapore indicated that prices there also had declined. Moreover, Indonesian pepper dealers were negotiating with Russia for the sale of 3,000 tons of Lampung black pepper. It was said that the Indonesian firm had turned to Russia, because the USA could not meet the price for the commodity. This led to a great deal of speculation that Indonesia would sell about 7,000 tons in the Singapore market at whatever prices it would fetch. Trade circles in Singapore, therefore, pointed out that, if the sale would materialise, it would upset the balance between supply and demand and thus worsen the situation.

In the circumstances, the downward trend in prices was carried, both in India and Singapore, till the end of the year when stockists in India were bidding lower to attract business. The Indonesian Trading Agency was reported to be negotiating with Russia and other East European countries. It was even feared that, if the efforts by the Indonesian Trading Agency succeeded, there would be a stiff competition between Indonesia and India in selling to Russia and the East European countries.

Foreign importers have, of late, been showing a tendency to look elsewhere for their pepper requirements. The Communist countries, who were hitherto depending upon Indian pepper, have turned their attention to Indonesia. With sufficient stock to take them through this season, the US importers are merely watching the situation and they are not showing any interest in the Indian market just now.

Thus, the gradual shrinking of foreign markets for Indian pepper has contributed to the sharp fall in prices. Exports of this commodity have naturally been hit this year and the position is feared to be the worst in five years. Market circles say that forward sales in Malabar black pepper are really inadequate to cushion off the impact of the new arrivals, which have already started. The present position is none too encouraging and the outlook for exports remains obscure.

Following were the highest and lowest prices touched during the year:

	(PRICES PER QUINTAL)	
	High	Low
	Rs. nP	Rs. nP
January	433	381

September	410	383
October	394	330
November	364	330
December	334	317.50

Sugar

Discouraging Outlook

CONDITIONS in the Sugar market remained generally depressed during the major portion of the year just

ended. Unwieldy sugar stocks became a drag in the market. From the beginning of the year itself, there was a growing feeling that the problem of plenty confronting the industry would become serious in the months to come, especially when the factories were crisscrossing cane at a high speed with consequent higher production. It was feared that, as a result of the steady increase in stocks, the industry's resources would be greatly strained, if stocks increased to around 1,000,000 tons. In order to help the factories to tide over the difficulty the restrictions on bank advances against the commodity were removed. The Government of India also permitted the mills to defer paying the excise duty for some time. But, these measures could give only marginal reliefs to the industry temporarily.

The export outlook for the commodity also continued to be uncertain. The industry was anxious to sell sugar abroad; but it was not prepared to bear all the costs. There was also a general feeling that India could not sell the commodity in foreign markets except at substantial losses, when the commodity was already in surplus in world markets and there was keen competition. The worry was the greater considering that cane prospects were very good during the next season. But for the decision of the USA to import 225,000 tons of sugar and the efforts taken by India to become a member of the International Sugar Council, the situation at the end of first half-year would have become extremely dangerous to the industry and the farmers alike. Again, the excessive world sugar production was the main threat in the way of India's exports. This created a long queue of sugar producers for the US quota.

According to the US Department of Agriculture, Washington, the world production of centrifugal sugar reached a new high of 60,937,000 short tons in the 1960-61 season, representing a phenomenal increase of 7.3 million tons. Non-centrifugal sugar production rose slightly over the previous season, principally because of an increase in India's production. The US sugar production itself increased substantially over 1959-60.

It may not be out of place to add here that 1961 was the first year under the US quota system in which the US was obtaining its requirements entirely from countries other than Cuba. There was ample evidence that many countries increased their production in the hope of being given an opportunity to sell some sugar to the US for the first time or to increase their quotas. It was, therefore, evident that their offerings far exceeded the US requirements.

To make matters worse, the news came to the effect that Cuba was preparing a four-year plan for sugar exports, mainly directed to Asia and the Communist countries in Europe. The Government of India was naturally perturbed by this news as it thought that its programme was bound to clash with its own export drive. The fear, that Cuba might upset India's export arrangements, was particularly felt because of the

initial experience in Pakistan and in the West Asia, when India's efforts to capture the markets received a setback due to the cut-price offers.

At such a critical juncture came also the announcement with regard to the reduction of 50,000 short tons in the sugar that would be purchased by the USA from India in 1961. This cut came when all the 225,000 short tons of sugar allotted to India for export for 1961 were already sold to the American buyers and the bulk of it had already been shipped. The Government was naturally disappointed as there were expectations that the USA might allot a supplementary export quota to India during the year.

It was therefore, thought that, unless India was able to export more sugar, there was a danger that production might have to be curtailed. The representatives of the trade and industry also pointed out that the withdrawal of restrictions on inter-State movement would go a long way in not only stabilising prices, but also in stepping up internal consumption. Again, the irksome curbs on distribution had an inhibiting effect on the efforts of the sugar trade in seeking new markets.

It was, therefore, gratifying to note that the Government had at last recognised the need to abandon the control on the movement, distribution and prices with effect from 7 October. At the same, the tax concession scheme, that was granted to the industry by way of a 50 per cent rebate in excise duty on excess production was also removed. Apart from these, the Government decided to restrict sugar production for the 1961-62 season by imposing a cut of 10 per cent in the output of every factory.

But, the mill interests were greatly perturbed over the falling sugar prices, when the commodity was decontrolled. While they resented the cut in production, the Bihar mills particularly represented to the Government against the decision and sought modification of which the proposed cut was to be effected. They suggested that the cut should be on the basis of the average production over the period of five years or so and not on the last year's. But the Government of India stated that they would regulate sugar releases in such a manner as not to precipitate a further fall in prices, which were to be maintained around the previous ex-factory controlled rate of Rs 37.85 a maund.

Meanwhile, the US decision to restore the import cut of 50,000 tons was welcomed by the traders as they felt that it would give the necessary fillip to arresting the falling trend in prices. The announcement was considered most opportune in the context of the industry's request to the authorities to put a check on the downward trend of prices by releasing limited quotas for internal consumption.

The overall outlook for the commodity is, however, not likely to undergo any radical change in view of the large carryover stock from the previous season and the prospects of sizable production. A disturbing

factor is that even with a smaller output during the current season, it is not sure whether the excess of supplies will be reduced enough. The manner in which sugar is being sold in the country gives little hope that consumption will improve much.

Annual Reviews

factor is that even with a smaller output during the current season, it is not sure whether the excess of supplies will be reduced enough. The manner in which sugar is being sold in the country gives little hope that consumption will improve much.

As far as exports are concerned, the outlook is equally bleak. Now, the International Sugar Agreement has come to a breaking point due to the recalcitrant attitude of Cuba in accepting a smaller export quota. It is expected that a price-war may start in world markets. Even on exports to the USA, India cannot make a profit.

Cotton

Scarcity in 1961

ALL hopes of a comfortable cotton supply position in 1961 had been belied and there had been an actual scarcity of that snow-white soft commodity. The devastation caused to the cotton crop particularly in Gujarat, Saurashtra and Berar due to a host of reasons led to the downward revision of the season's crop estimates to about 48 lakh bales as against the original estimate of 54 lakh bales. However, as stated by Mr Madan Mohan Raut, the President of the East India Cotton Association, "the situation in cotton is not so alarming as it is made out." Though the prices of certain varieties of cotton rose above the ceiling levels during the past year it was mainly due to the delayed movement of the crop this season and the apprehension that the imports from the United States would not be upto the expected level. Consequently the cotton futures wound up the year 1961 on a buoyant note.

A comparative study of the price trend during 1960 and 1961 would clearly indicate that the past year closed on a better tone, registering an improvement of about 70 points over the previous year. As stated already the downward revision of cotton crop was the main contributing factor for the spurt in prices and the Government of India had to adopt a liberal import policy to meet the requirements of the domestic cotton textile industry.

The consumption of Indian cotton by the mills during the year under review was marked slightly higher. Total consumption during January-August aggregated 29.80 lakh bales and in the remaining four months it is more than like'y that consumption will have been exceeded 14 lakh bales. This figure stands in comparison with the 41.22 lakh bales consumed in the previous year. Consumption of imported cotton also showed an uptrend and is placed approximately at 10.18 lakh bales as against 9.85 lakh bales in 1960. Actual arrivals of foreign growth during 1960-61 totalled 10.02 lakh bales, the bulk of which (of the order of 6.42 lakh bales) had been imported from the US. Export of indigenous growths so far in this

Annual Reviews

season amounted to 2.70 laks bales in contrast to 2.89 bales in the previous season.

Despite the fact that the 1961 season commenced with a comfortable carry-over of over 21 lakh bales comprising 17.28 lakh bales of Indian cotton and 3.97 lakh bales of imported cotton, the tone in the raw cotton market was buoyant consequent on the drastic reduction in the estimate of domestic cotton crop. It may be remembered that at the end of August the Government of India announced the cotton policy which was widely acclaimed as it incorporated most of the suggestions advanced by the various trade organisations, agricultural associations and organs representing the cotton textile industry as well as the State Governments. The main features of the policy were the continuation of quota system to the mills, the abolition of compulsory survey of cotton, fixation of maximum prices for exportable varieties for the first time and the increase in floor prices of all growths, the price of MG fine Moglai Jari'la 25/32 being raised to Rs 168.57 from Rs 139.00 per three quintals. However, in the closing stages of the year the market depicted a distinct spurt in prices, thanks to the increased tempo of consumption by the textile mills and the downward revision of the crop estimate. In order to cry halt to the runaway prices Government had to re-introduce the system of compulsory survey and impose special margins which were generally disregarded by the trade.

During 1961 trading was cabined to three contracts: the Jarilla April 1961; the Jarilla August 1961 and Jarilla March 1962. Out of these the Jarilla April and Jarilla August went off the board while the Jarilla March 1962 was running through at close.

The Jarilla April contract which started its career on 18 October opened at Rs 567.25 and after fluctuating up and down for some period advanced stridently to Rs 614 by the end of December 1960. But thereafter the contract slipped down mainly induced by a bumper crop this season and the contract touched the lowest rate of Rs 554 on 14 February. At this low level the contract met with stubborn resistance and rallied back to Rs 595.50 on 20 March 1961. Again the contract rated to Rs 556.50 on 21 April mainly on account of the bearish nature of the contract itself. The contract went off the board officially on 25 April at a spectacular rate of Rs 678 in spite of the fact that there was neither any trading lately nor any tenders against the contract on the maturing day.

The Jarilla August contract, the second and last futures contract during 1960-61 season, commenced its career on 27 February on an optimistic note. After a promising start the contract gradually looked up to Rs 604.50 on 20 March, reflecting the market's favourable reaction to the

concessions for one to ten counts yarns from the excise duty under the last Union Budget. The decision of the Government to import 3 lakh bales of short staple American cotton let to the downtrend in the contract. During the subsequent period the contract see-sawed between Rs 561.25 and Rs 589 before closing at Rs 586. And finally the contract went off the board on Wednesday 23 August at a cut rate of Rs 645 per three quintals.

The Jarilla March 1962 contract "came in" on 13 July on a promising note at Rs 604.25 influenced by the bullish nature of the contract. The contract, thereafter, slipped down to a low of Rs 585.50. Nevertheless, with the announcement of the cotton policy for the season the contract staged a remarkable recovery. The reported damage to the crop also fanned the enthusiasm and the contract touched a new peak of Rs 684.75.

Following were the price trends of each contract during 1961.

Jarilla	Open	High	Low	Close
April '61	567.25	678.00	554.00	678.00
August '61	588.00	645.00	561.25	645.00
March '62	604.25	684.75	585.50	670.00

Bullion

Maintained A Firm Front

THE Bullion market maintained a firm front throughout last year. While higher levels induced profit-taking, support was forthcoming at every small decline. The market commenced the year on a firm note, being influenced by the increased demand in the face of small supplies and the reported confiscation of smuggled gold valued at about Rs 50 lakhs.

Due to the prevailing buoyancy in the trade, the Bullion Association had to order special clearings. During mid-February, there was heavy liquidation in both the metals due to fears of stern action by the FMC to check undue speculation and the increased inflow of both the metals due to the prevailing higher rates.

The easy trend in prices continued to be in evidence in March. There were reports that the Government would release about 100 tons of silver for sales in the open market, while arrivals from the interior also increased. In April, both the metals ruled easy. In May, however, price trends showed a mixed trend. The Bullion Exchange scrapped the monthly contracts and, to effect a check on speculation, introduced four quarterly contracts, viz., Mangsar, Phagun, Jeth and Bhadrabad. Delivery in all these contracts were compulsory if buyers demanded it. These changes produced a bearish effect.

But the month of June witnessed a firm trend and prices registered higher levels in July and this improvement was carried to August and September when new high levels were recorded. The steady rise in prices was attributed to the reports of political disturbances on the China

border and sustained demand in the ready section.

From October onwards, both the metals registered divergent trends. Gold began to lose ground, while silver steadily rose to a new peak. It moved up to Rs 208.45 from the September low of Rs 202.40; but gold declined to Rs 124.80 from the peak level of Rs 126.40 registered in the previous month. This decline in the yellow metal was due to the mounting stocks in the market and increased speculative pressure in futures by spot dealers as a hedge against their actuals.

In November, silver shot up by nearly Rs 3 following the stoppage of sales of silver by the US, while gold moved between Rs 122 and Rs 124.95. In December, however, the white metal moved up to register the year's peak of Rs 213.90 following the massing of Indian military troops on the Goa border. Gold however, eased further in view of the increased offerings due to fears that gold from Goa would add to the already very heavy floating stocks in the market. For obvious reasons, the yellow metal declined to as low as Rs 118.15. At the close of the year, silver stood at Rs 213.30 as against its previous year's rate of Rs 195.50. Gold ended the year at Rs 120.90 as against Rs 115.30. Thus, silver showed an improvement of Rs 17.80 over the year, while gold gained Rs 5.60.

Following were the highest and the lowest prices touched by gold and silver during the year:

	Silver		Gold	
	High	Low	High	Low
	Rs.	Rs.	Rs.	Rs.
Jan.	209.30	195.15	120.65	114.80
Feb.	208.90	204.90	122.75	119.80
March	208.45	197.50	124.50	119.45
April	203.90	195.80	121.40	118.10
May	201.35	194.95	120.30	117.05
June	204.55	198.90	121.25	118.20

Oils & Oilseeds

Buoyant Despite FMC Intervention

DESPITE the fact that trading on the Bombay Oilseeds Exchange was functioned under severe restrictions and constant supervision by the FMC, the prices of oils and oilseeds was more pronounced than in the previous year. The lead to the general rise in the price levels was mainly given by Groundnut from the beginning of the year due to the receipt of the commodity falling short of demand. Crushers and vanaspati manufacturers emerged as consistent buyers.

Also, the Government decision to release for export 20,000 tons of HPS groundnut oilcake of the ex-

porter variety had a bullish effect on sentiment. Above all, the proposal by the Maharashtra Government to raise sales-tax on groundnut by 1 to 2 per cent induced a general feeling that this increase would raise the price of groundnut oil by about Rs 5 per ton. Even the rise in the excise duty on vanaspati seemed to have no effect on the market due to the general fears in the country about the shortage of edible oils during the year.

In July, however, prices developed a slightly reactionary following the reports of Britain joining the European Common market. In August, too, the trend was easy following favourable weather reports, not to speak of the fact that the crop was estimated higher at 30 lakh tons as against 22 lakh tons in the previous season. The easier trend in prices was carried to September, when all the other seeds registered the bottom levels of the season in view of the expectation of a bumper crop.

During the closing months of the year, however, prices staged a smart recovery due to speculative buying followed by higher advices from the North Indian markets. With a view to checking the rise in prices, the Forward Markets Commission had to intervene and impose penal margins. In the case of groundnut, the ceiling of Rs 215 was fixed.

Although the sustained strength in groundnut had a favourable effect on prices, the market for Castorseed lacked strength of its own. There were also no developments on the export front except the news that Brazil's crop was expected to be unusually high during the current season. The US bought its requirements from Brazil. Castor futures commenced the year at Rs 177.25 and improved at one time to Rs 178.37 on reports of business with the UK. Later, however, the contract came down under the pressure of increased arrivals. In March, the rate moved again up to Rs 181; but it receded on selling by export houses and increased receipts. After recovering again to Rs 181.62 in May, the rate dropped down to Rs 156.25 in September. Towards the close of the year, the market improved again, quoting Rs 165.

The Linseed section, however, presented a listless appearance throughout the year and the price movements were mostly shaped by North Indian operators and upcountry advices regarding rapeseed. In the beginning of the year, the rate was quoted Rs 36, but the rate advanced steadily to Rs 40.68 on reports of shortage of stock. Towards the close of the year, the market displayed a reactionary tendency and the rate was quoted at Rs 38.

Following were the highest, lowest and the closing prices for the year, the figures shown within brackets being the rates quoted at the previous year-end: Groundnut (Rs 217.50), Rs 220, Rs 195.37, Rs 215; Castor (Rs 176.25) Rs 184, Rs 156, Rs 171.75; and Linseed (Rs 35.91) Rs 41, Rs 33.91, and Rs 38.94.

6 January 1962

Kolhapur Sugar Mills Limited

Need for Finding More Outlets for Sugar

Chairman Seth Ramniwas Ramnarain Rula's Review

The following is the speech delivered by the Chairman, Seth Ramniwas Ramnarain Rula, at the 28th Annual General Meeting of The Kolhapur Sugar Mills Limited, Kolhapur held on Friday, 22nd December, 1961:—

Gentlemen, It gives me great pleasure to welcome you at the 28th Annual General Meeting of the Kolhapur Sugar Mills.

Before commencing the proceedings of the Meeting, I desire to mention a very happy recent achievement of our country, evidently inspired by the vision, foresight, patience and courage of our beloved Prime Minister—I refer to the liquidation of the colonial rule in Goa, for long, a Portuguese Pocket. The feudal yoke of colonial rule of the Portuguese, for the last four hundred years and more, has now ended and by the liberation of our brethren, India, for the first time in modern history, has become one entity. This is a very great achievement. Thanks to our Army Navy & Airforces who have done a wonderful job in clearing this pocket of foreign rule. It is a great national event and we all rejoice about it. I am sure, I am expressing your feelings and that you will join me in paying our humble tribute to our beloved Prime Minister and homage to our Mother land in honour of this event. Pray God that Panditji is given long years of health to guide our young nation, in its career of progress, assuring him at the same time that we shall do our utmost, in whatever walk of life we are placed, in achieving the same.

The Accounts for the period ended 30th June, 1961, along with the Report of the Directors have been in your hands already for the statutory period and with your permission I shall take them as read.

I shall, however, mention a few salient features of the working of the year.

Considering the capacity of our new Plant, we could have crushed a much larger quantity and achieved a much larger production, since supplies of sugar-cane were available in plenty. But due to mechanical trouble, particularly of the Centrifugals, we were much handicapped. We crushed 2,61,850 Metric Tonnes of cane and produced 3,16,777 bags of sugar. Although the performance is gratifying and although we top the list of sugar mills in Maharashtra, I have a feeling that we could not take full advantage

of the capacity of our Plant. The average Recovery was 12.57%. The results of our Estate have been the highest, since the inception of the Factory and the average yield was 46.9 M.Tns. per Acre.

The Mills have been doing considerable development work on their own Estate and for their cultivator—suppliers for all these years. Our Cane Development Department is recently well organised and is manned by a qualified staff. The Company has given financial assistance, in cash and kind, to the tune of Twenty lacs, or more to its cultivator-suppliers. The Food Minister very aptly pointed out that the real progress of the Sugar Industry in India will have to be largely in the fields, and achievement of more tonnage per acre and of quality cane—more sugar per acre—is quite necessary for any progress in the Industry.

Gentlemen, as you are aware, the acreage under sugar-cane has gone up by leaps and bounds, in the last few years, partly due to high prices of Gur in the Kolhapur District, because Gur is regarded as the 'Gold' of Kolhapur and prized much, and partly due to the availability of irrigation facility. On observing this trend, your Directors decided to launch upon the project of expansion of the Mills to a suitable higher tonnage. I am happy to note that the expansion was absolutely well-timed. Not only has it enabled the Company to keep its manufacturing cost within limits but has also helped numerous cultivators when the price of Gur, during the last couple of years, has gone down. You will be glad to note that with the Cane Development policy of the Company and the assured price of cane, more and more cultivators are wanting to contract with the Company for giving their cane.

The overall position of sugar today in India is of a large surplus. In order to meet the situation and to discourage diversion of land under food-crops towards sugarcane, Government have recently enacted a cut of 10% in the production of Sugar by factories. This measure, I am afraid, will not achieve the desired effect unless there is a planned policy of restricting acreage under sugar-cane and at the same time by intensive cultivation, the tonnage and quality of sugar-cane per acre are improved. At the same time by giving incentive to higher consumption as per Capita consumption of sugar in India is comparatively very low.

Along with the expansion of the Factory plant, you are aware, the project of the expansion of the Distillery was undertaken simultaneously. I am happy to report that the expansion has been satisfactorily completed and the plant is capable of producing 6,000 Gallons per day. You will be pleased to know that the Government of Maharashtra having closed their Nasik Distillery, we are the only Distillery in Maharashtra producing Absolute Alcohol and supplying it to Chemical and Pharmaceutical Industries and Educational Laboratories. Our Distillery is likewise looked upon as the Central Distillery for the Kolhapur region and the expansion of our Distillery has given a much-needed outlet for the waste molasses of neighbouring factories. The Distillery will be producing about 2 Million Gallons per year. The production of such a large quantity of Alcohol has necessitated our undertaking of Alcohol-based Chemical Industries.

You are already aware that the Company has been given a Licence for the manufacture of Acetic Acid, Butyl Alcohol and Butyl Acetate. Orders regarding the plant were placed with M/s Chematur of Sweden and the plant and machinery will begin arriving early in 1962.

In this context, I may add that I visualise a net-work of Alcohol-based chemical industries, attached to our Mills, in the future, if the Company maintains its present pace of progress, which I am hopeful, it will.

Though I have been mentioning to you some of the salient and happy features of the year of the report, I am afraid, the coming year bristles with difficulties.

The country has entered the happy position of surplus production of sugar, from that of deficit. Unfortunately higher domestic consumption has not been achieved along with. In fact, it has remained static at 21 lacs of Tons during the last few years, which may, possibly, be due to control on sugar distribution by Government. Recently, these controls have been largely relaxed. But the previous carry-overs and the surplus production have glutted the market and the fair price for sugar fixed by Government, on the basis of the Tariff Board Report, is not being realised. The Market in sugar has become unstable regarding prices and the selling pressure is rather acute.

Along with the falling prices of sugar, the industry has been asked

to implement the Wage Board Recommendations, which we have gladly done in entirety.

With the increased cost on Labour and in Stores and Spares and also due to the large carry-over of stocks, interest and insurance charges on the large quantity, I am afraid, the Company will not be able to show the same financial results next year.

A solution of the surplus position of sugar may lie in the Export Market. But the export of Sugar, under the International agreements, committed long ago when we were not even members, do not hold out this possibility of exporting all our surplus.

Thanks to the efforts of our Government and its dynamic Food Minister, India could get an export allocation to the States, in the free market. An outlet for about 6 Lac tons of sugar in the Export Market would enable the industry to function satisfactorily with its present installed capacity. Along with it, ways and means have to be found to increase internal consumption by cheapening sugar by a substantial reduction in the Basic Excise Duty.

Other outlets for the consumption of sugar have to be encouraged, such as Fruit canning etc., by supplying cheap sugar, as is being done in other sugar-producing countries.

Any restriction on the productive capacity of a Factory, not only hits the Industry but also the cultivator-supplier who is the major partner in this Industry. Though I am perfectly aware of the complex nature of the problem from the national point of view, the present cut of 10% in the production, under the Sugar Regulation Act, should, if at all, remain only a temporary feature and other long-term solutions appear to be necessary. In this context, the general criticism of the high cost-price of sugar, being a barrier to our exports seems to be ill-founded. Many of the sugar exporting countries are exporting sugar under Government subsidies. All industrial products based upon Agriculture need some subsidy from the Government, in advance countries too. With our backward agriculture, particularly so, relating to sugar-cane and with the disproportionate wages in comparison with efficiency it will be unwise to expect India to produce sugar at competitive rates. To me it appears that India must heed enter the Export Market on an extensive scale to sustain Agricultural economy and to earn foreign exchange by supporting it

with the necessary subsidy, for a long time to come. I am happy to note that our Government has realised this position.

The present cut of 10% would ultimately result in realising a 4% over-all cut only. This amounts to only about a lac of tons of sugar and the cut would be effective on certain units. A cut of one lac tons on a few units would result in great hardship on them and the cultivator-suppliers of those Units would suffer the greatest hardship. Realising this the Governments of Madras, Bihar, and U.P. have already approached the Centre to revoke the Act, in their States, in the interest of the cultivators and I take this opportunity to request the Government of Maharashtra to use its good offices to persuade the Central Government likewise.

In the case of the Kolhapur District, the sugar-cane grower has been already hard hit by the unprecedented floods. If his sugar-cane is declined by the Mills, he would be further hit in the falling Gur Market.

You will be happy to know that the Mills have donated total contribution to the tune of Rs. 68,000/- during the year, of which Rs. 50,000/- paid to the Maharashtra Congress Election Fund and Rs. 5,000/- to the Chief Minister's Konkani Relief Fund deserve prominent mention.

In the context of the Floods, Crop Insurance, will be a very provident and a necessary protection and our Government should take it up, as some of the State Governments have already done.

I take this opportunity to thank my colleagues on the Board of Directors who have all along given me their guidance, advice and support. I am equally thankful to you all for your keen interest in the affairs of the Company.

As Chairman of the Company, I desire to express my feelings of thankfulness to the cultivator-suppliers and contractors with whom our relations have always been very cordial, and of whose invaluable co-operation I am very sensible.

Finally, I desire to record our warm appreciation of the very efficient and devoted work of our General Manager, the loyal and earnest co-operation of his colleague officers and for the never failing and hearty co-operation of the staff and workers in the discharge of their duties. Mentioning names will be invidious.

Gentlemen, it has been my very great pleasure to be in your midst this evening and for having had this opportunity of placing some of my thoughts about the industry and the progress of our Mills before you.

Thank you.

JAI HIND.

NOTE: This does not purport to be a record of the proceedings of the Annual General Meeting.

Markets

JUTE

Earlier Firmness not Maintained

THE jute goods market ruled steady most of the time last week although toward the close the undertone is rather quiet. The earlier improvement in sentiment was brought about mainly by increased enquiries especially for hessian. The US had purchased quite a good quantity in recent weeks and there were also some orders from the Argentine. It would appear that US buyers who had been taking only their immediate requirements for a number of months in the hope of satisfying their larger needs at cheap prices were at long last convinced that it would be futile to wait for any further decline in rates in view of the price support given by the Government of India to raw jute. As regards sacking except for scattered enquiries overseas orders continued to be meagre. Even so, this category of goods ruled steady in sympathy with hessian. A reactionary trend has developed in the market during the past two or three days and prices all along the line have declined. Hessian Jan. declined to Rs 54 by close on Thursday with B Twills Jan. at Rs 128.75. Although ready

TEA

Strong Demand

IN the first Export sale held in the New Year, offerings were 74,947 packages. There was a strong and general demand. The main feature of the sale was the demand for 'tea for price', which ruled dearer. Clean plain descriptions were generally fully firm to dearer. Better liquoring and Medium Assam orthodox descriptions met with a useful enquiry. BOPs were irregular and sometimes easier; but the remaining grades were firm to dearer, particularly the better liquoring Fannings grades.

There was a keen demand for CTC types which were firm to dearer, particularly bright liquoring medium and off-grade descriptions. Legg-cut teas were fully firm to dearer. Darjeeling teas were sold readily and prices were dearer with quality. Tippy sorts were sold at higher rates. Whole Leaf grades were generally firm to dearer with strong competition for the cheaper varieties. Following rates were quoted:—Clean Plain Pekoe Rs 4.00 to Rs 4.20; Plain BP Rs 3.50 to Rs 3.65; Plain Fannings Rs 3.50 to Rs 3.70; Medium Assam CTC BP Rs 4.80 to Rs 5.20; Medium Assam CTC Fannings Rs 4.80 to Rs 5.30; Best Assam CTC BP Rs 5.40 to Rs 5.80 and Best Assam CTC Fannings Rs 5.50 to Rs 6.00.

In the Internal sale, offerings were 26,854 packages of dusts and 347 packages of leaf grades. There was a general and strong demand for dusts. Clean medium CTC descriptions were generally dearer, particularly those with bright liquors. The few good CTCs, on offer, were sold well. Secondary and fibrous descriptions met with very useful demand and were sold considerably above last rates. Orthodox varieties were irregularly dearer, while medium Assam teas with bright liquors were keenly sought after and sold at much enhanced rates. Legg-cuts also were well supported and both the clean and fibrous kinds were dearer. Following rates were quoted: Plain Orthodox Dust Rs 380 to Rs 4.40; Medium Assam Dust Rs 4.20 to Rs 5.10; Legg-cut Dust Rs 4.40 to Rs 5.00. Medium Assam CTC Dust Rs 3.80 to Rs 6.30 and Good Assam CTC Dust Rs 6.40 to Rs 7.00. Leaf grades met with a good demand were sold at dearer rates.

In the Cochín market, offerings were 700,000 kg of Leaf tea for export. Against strong general demand, prices advanced by 20 nP to 30 nP a kilo for plain and low medium descriptions. Medium and good medium teas were 30 nP to 40 nP a kilo dearer, while highgrown were irregular following quality of teas offered. Whole Leaf grades were very strong and much dearer. Unorthodox dusts were both stronger and dearer.

In the Colombo market, offerings were 7,833,138 packages. These met with strong and active demand. Dimbula/Dickoya Broken were regular, but slightly dearer. Brighter liquoring Uva teas were substantially dearer. Medium teas were in strong demand with prices generally about 5 to 10 cents per pound dearer. There was an active demand for low-grown teas, which advanced by about 10 to 20 cents.

For the Investor

INVESTMENT GOSSIP

Outlook for 1962

The stock market which commenced the New Year on a confident note is somewhat quiet at the time of writing (Friday) following profit taking at the higher levels. With the uncertainty that dogged the steps of the stock market and plunged it into deep gloom during the early part of last month, such as the anxiety about Goa, now removed, bull operators have been encouraged to extend their commitments. This was evident even during the second half of December. The revival of support has mainly stemmed from the indication that the Goa episode is not likely to diminish the interest so far evinced by friendly foreign countries in our development programmes as embodied in the Third Five Year Plan. The expectation of a favourable retention price for steel coupled with improved production in TISCO and the announcement that the Indian Iron and Steel company has been granted a loan by the World Bank to the tune of \$19.5 million for increasing its coal production has been responsible for the sustained support for steel shares particularly for Indian Iron. It would appear that the fact that there will not be any Central Budget at the end of the next month on account of the intervention of the General Election has been taken as an encouraging sign. There does not appear to be any undue anxiety about the fast approaching General Election and the repercussions of its results on the stock market. Evidently, marketmen are of the view that the same party which is in power now will continue to be at the helm of affairs of the nation for the next five years also. With no immediate threat like the Central Budget to undermine investors confidence bulls have succeeded in emphasising the bright prospects of industry during the Third Plan which envisages large outlay on development projects. While it may not be wrong to take the view that in coming months the outlook for equities will generally be satisfactory, it will be too early to assume that equity prices will experience boom conditions. For, if not in February, the Central Budget will come in the not distant future and when it comes it may not be entirely without surprises for the stock market, what with the need to raise large funds for the Third Plan. Moreover, when assessing the outlook for equities, investors would do well to keep in mind the fact that industrial production is likely to be adversely affected if the present situation as regards supply of transport power and essential raw materials that have to be imported remains as unsatisfactory as at present.

NEW ISSUE NOTES

Universal Electrics

Universal Electric Limited has proposed to issue 3,30,000 ordinary shares of Rs 10 each and 8,100 cumulative non-redeemable preference shares of Rs 100 each for subscription, at par. The preference shares carry interest at 6½ per cent, free of company tax but subject to the usual tax deduction at source. These shares will be allotted to the foreign collaborator. The directors and their friends have agreed to subscribe for 8,000 ordinary shares. The remaining 2,50,000 ordinary shares are being offered to the public. The entire public issue has been underwritten. The LIC has agreed to take up 50,000 ordinary shares. It will be given a firm allotment of these shares. The company will establish its factory near Calcutta to manufacture house service meters. The cost of the project is estimated at Rs 71.25 lakhs to which the Refinance Corporation may contribute Rs 25 lakhs in the form of a loan. The subscription list will open on 10 January and close on 16 January or earlier, but not before 12 January.

Sirpur Paper

The Sirpur Paper Mills Limited will soon call an extraordinary general meeting to obtain the approval of the shareholders for the issue of 10,92,762 equity shares of Rs 10 each. Out of this, it is proposed to offer 5,46,381 shares to Kimberley Clark Corporation and the balance of 5,46,381 shares to the existing shareholders at such time and on such terms as the Board may decide.

Star Paper

To implement its programme of expanding production, the Star Paper Mills Limited has increased its capital by issuing *inter alia* 5,00,000 equity shares of Rs 10 each, at par. The existing shareholders took up 2,22,117 shares and the balance of 2,77,883 shares are to be now offered, at par, for public subscription. The subscription list will open shortly.

Electro-Equipment

The Electro-Equipment Corporation Limited (incorporated originally as a private company in 1958) will enter the market on 10 January to make its first equity issue. The authorised capital of the company is Rs 1 crore, divided into 10,00,000 equity shares of Rs 10 each. The issued capital will be Rs 35 lakhs, divided into 3,50,000 equity shares of Rs 10 each. Out of the present issue, the present shareholders have already subscribed 1,00,020 shares. The promoters,

directors and their associates have agreed to subscribe 78,480 shares. The directors have offered the balance of 1,71,500 shares for public subscription. The entire issue for public subscription has been underwritten by leading sharebrokers of the country. The company proposes to manufacture electric house service meters in collaboration with Messrs Cekop, Warszawa, Poland.

Oriental Power

A new company, known as Oriental Power Cables Limited, has been formed to undertake the manufacture of paper insulated power cables. The company's plant, which will have annual capacity of 600 miles of cables, will be located at Kotah in Rajasthan. The capital outlay on the project is estimated at Rs 250 lakhs and a public issue is expected to be made in the next few months. The authorised capital of the company is Rs 2 crores consisting of Rs 1 crore of equity shares; Rs 50 lakhs of 9½ per cent taxable redeemable cumulative shares and Rs 50 lakhs of unclassified shares. It is proposed to issue, in the first stage, equity shares worth Rs 75 lakhs and preference shares of the value of Rs 30 lakhs. The directors and their friends have agreed to subscribe for equity shares of the value of Rs 20 lakhs. It is reported that negotiations with a Japanese firm for securing technical collaboration are in progress.

Modella Woollens

Modella Woollens Limited has offered, at par, for public subscription 3,05,000 equity shares of Rs 10 each. The entire public issue has been underwritten. The company has agreed to a firm allotment of 50,000 shares to the LIC against the underwriting arrangement with the Corporation. The subscription list will open on 12 January, and close on 20 January, 1962 or earlier at the discretion of the directors, but not before 15 January. A sum of Rs 2.50 per share is payable on application and Rs 2.50 on allotment. The balance of Rs 5 per share is payable in two calls of Rs 2.50 each. The company has entered into a financial and technical collaboration arrangement with a British firm. The company was formed in July, 1961 with the main object of setting up a shoddy plant for the manufacture of shoddy yarn at Thana and a wool combing plant for the combing of wool and manufacture of wool tops at Chandigarh.

Escorts

The right issue of 5.60 lakh shares by Escorts Limited, New Delhi, has been over-subscribed. The issue was made at a premium of Rs 4 per share in the ratio of one for one held. The response has been good and about a lakh of additional shares have been applied for. The proceeds of the new issue will be utilised to finance the company's manufacturing programme. The allotment procedure is likely to be finalised in about a fortnight's time.

INVESTMENT NOTES

TISCO

The Tata Iron & Steel Company, Limited has reported an all-round increase in production in December 1961 as compared to the previous month. The output of Pig Iron is higher at 142,100 metric tons against 125,500 metric tons and steel Ingots at 148,400 metric tons against 128,800 metric tons. The output of Saleable Steel is shown at 117,600 metric tons against 101,800 metric tons.

TISCO

According to the figures released by the Indian Iron & Steel Company, Limited for December 1961, production has shown a mixed trend. While the output of Pig Iron is slightly lower at 103,038 metric tonnes against 103,064 tonnes in November, that of Steel Ingots has risen to 83,171 tonnes from 81,209 tonnes and saleable steel to 65,031 tonnes from 62,119 tonnes. Despatches have shown a substantial rise to 67,203 tonnes from 60,837 tonnes. In this connection, the directors have stated that 7,500 tonnes of finished material could not be despatched due to shortage of suitable types of railway wagons.

Marsden Electrical

A new company, known as Marsden Electrical India Limited, with an authorised capital of Rs 1 crore will be floated shortly to manufacture horse power electrical motors. Negotiations for collaboration with a British firm for technical know-how are in progress and will be finalised soon. The factory will be located near Ahmedabad. The Government has granted a licence for manufacturing 50,000 electric motors per annum. The factory will go into production in 1963.

IN BRIEFS

The Alkali & Chemical Corporation of India Limited has raised the dividend from 12 to 15 per cent, subject to tax, for 1960-61.

Aluminium Limited, Canada, has declared a quarterly dividend of 15 cents per share (US) funds on the no par value shares of the company, payable on or after 5 December, 1961 to shareholders who are registered as on 6 November, 1961.

BALANCE-SHEET BRIEFS

The Dalmia Iron & Steel Limited has reported a substantial rise in the net profit, after providing for depreciation but before taxation, to Rs 22.61 lakhs for the year ended 30 September, 1961 from Rs 11.77 lakhs for the preceding year. The directors have proposed a dividend of Re 1 per share, taxable, on a capital of Rs 80 lakhs as against Re 1 per share, taxable, paid on a capital of Rs 40 lakhs.

The net profit of the Scindia Steam Navigation Company, Limited has gone down to Rs 4.59 lakhs for the year ended 30 June, 1961 from as much as Rs 81.26 lakhs for the preceding year. The dividend is, however, maintained at 60 nP per share, less tax.

Sir PHEROZESHAH MEHTA

CENTRAL COMPLETES 50 YEARS

Sir SORABJI POCHKHANAWALA

in the service of the people

We have travelled a long way since we set out on our journey fifty years ago. During this eventful period, we have striven hard—and achieved something. Our present position as INDIA'S LARGEST JOINT-STOCK BANK in the Private Sector is due to the unfailing support of our vast clientele. We owe them a deep debt of gratitude for their trust and confidence.

We can repay this debt in the only way open to us—by rededicating ourselves, on this, our Fiftieth Anniversary, to the service of the people. With their co-operation, we hope to continue to play our part in the economic development of the far-flung territories in which we operate.

Half a Century of Progress

Productivity in Agriculture

THOUGH the primacy of agriculture in an economy such as ours is avowed unctuously in formal contexts, it is difficult to resist the impression that the nation as a whole is far more responsive to the more obvious charms of technological advancement than to the stern calls of agricultural duties. Such a reading may seem harsh in the light of published figures of agricultural production in recent years. But these increases in production have no long-term significance since they are not the result of any structural changes in our agricultural economy or technology. It would be complacent, if not hypocritical, to use these figures to disprove empirical impressions of our agricultural situation that are not so flattering as the figures. Two diagnosticians of unexceptionable authority—Mr S. K. Patil and Dr V. K. R. V. Rao—have recently lent their weighty support to this view. Mr Patil's "pessimism and despondency" is particularly remarkable because it is totally uncharacteristic and comes from the highest official quarters.

Dr Rao's presidential address to the twenty-first annual conference of the Indian Society of Agricultural Economics dealt with the problem from the point of view of productivity. Productivity, which is certainly a much better measure of achievement than production consists, in the agricultural context, quite simply in the Voltairean criterion of a worthwhile life—the growing of two ears of corn where only one grew before. Production, on the other hand, is a gross measure, with no reference either to cost or efficiency. Dr Rao's thesis, supported by detailed statistical analysis of available data, is that the gains in production in the last ten years were largely the result of adventitious and progressively inoperative factors. As Dr Rao has pointed out, half of the 36 per cent increase in production during this period is due to extension of the area under cultivation. This is a factor which is likely to be progressively less and less significant, since almost all the virgin land has been brought under the plough. Performance in agriculture will increasingly be related to human rather than physical factors, to science, technology and organisational sophistication than to nature. The extent to which these factors have entered in the first two Plans is insignificant.

The most obvious unit of productivity is the yield per acre. From this point of view, Indian agriculture is notoriously inefficient and the two Plans have done practically nothing to improve the situation. It is well-known that the crop pattern in India is weighted in favour of crops with a low yield per acre, which have, however, no compensating advantage in high nutritional or commercial value per unit. This lop-sided pattern has now been further distorted by the acreage of such crops having increased by about 9 million acres during the Second Plan period. Secondly, though production increased by over 36 per cent in the last ten years, the average yield per acre increased only by 16.3 per cent. Even here, the increase has not been uniform. Indeed, in the case of some commodities, oil seeds, for example, there has been actual decline or low increases in yield and these are incidentally

commodities important as export earners. Thirdly, comparisons with increases in yield in other countries, most of which have the statistical disadvantage of having to better already excellent records, make our performance look even more pitiful. Even undeveloped countries like Burma and Taiwan have shown better results in particular crops. In the circumstances, it is rather cold comfort to be told that Pakistan's record is worse than ours.

Dr Rao has attempted a statistical analysis of the performance of the various states of India from the point of view of increase in yield per acre. There are statistical and other hazards in this comparison of which Dr Rao is fully aware, but the conclusions yielded by the figures conform broadly with empirical impressions. Taking agriculture as a whole, the highest place in terms of yield per acre is occupied by Madras for 5 crops out of the 7 for which it is listed and for the other two items, it stands second. Punjab occupies the highest place for 4 out of the seven crops for which it is listed and stands second in the rest of the items. (The total items listed are 12 in number. Notable omission is Jute, presumably because it is not an item of all-India significance.) Secondly, States with high agricultural productivity (Madras, Punjab and Kerala) account only for 11.4 per cent of the total area under cultivation, while States with large areas under cultivation give a rather poor account of themselves. In terms of particular crops too, the largest cultivation of a particular crop often happens to be in an area of low productivity for that crop. The notorious example is that of sugarcane the bulk of which is grown in the UP where, the yield is lowest. (UP's yield per acre is 2541 lbs against Maharashtra's 6534 lbs per acre, which is the highest. UP's sugarcane acreage accounts for 60 per cent of the total acreage of the crop in the country.) More than half the difficulties of the sugar industry stems from this circumstance.

What are the policy implications of the general low productivity and the regional disparity in productivity? First, success on the agricultural front is less dependent on the quantum of investment than on human factors like greater responsiveness to improved agricultural practices and systematic employment of the fruits of agricultural research. Above all, the peasant must be made to take naturally to scientific agriculture as the only way to improve his lot and his country's wealth. Better seeds, better fertilisers, better use of the results of soil science and farm technology should be accepted as facts of everyday life and not exotic importations from the city to be discarded the next season. The Community Project programmes and extension services were designed to initiate this necessary mental revolution, but their effectiveness is widely doubted. From the point of view of regional disparities, the ideal of increased production and productivity need not be at cross purposes with redressing regional imbalances. In agriculture, far more than in industry, the fruits of science and technology are applicable almost everywhere.

EDUCATION

The Human Factor in Economic Growth

"Education is the most important single factor in achieving rapid economic development and technological progress and in creating a social order founded on values of freedom, social justice and equal opportunity."

—Third Five Year Plan.

THE interdependence of education and economic development is clearly recognised in India's Five Year Plans. The country entered on independence in 1947 with a heavy backlog of educational achievement. The deficiencies were most glaring in the field of primary education and these were further aggravated by stagnation and wastage, the unequal development in different parts of the country and the very low attendance of girls in educational institutions. Total enrolment of boys and girls in the primary classes was only 35 per cent of the total population in the age group six to eleven. The two major tasks that confronted the country were: (1) to expand the existing system of education sufficiently to provide free and compulsory education for all children up to the age of 14 and to provide the necessary expansion of the secondary and university stages and (2) to reduce some of the glaring evils of the educational system and make it a worthy instrument of social and economic reconstruction. The responsibility for fulfilment of the programmes drawn up for the achievement of the twin goals is spread over numerous authorities—State Governments, Administrators of Union territories, local bodies and voluntary organisations,—with the Centre providing direction, advice and a measure of financial assistance. A significant development of recent years is the evolution of a working partnership between the Centre and the States in furthering educational progress. The trend toward assumption of larger responsibilities by the Centre is evident in the educational sphere as in other fields of national development and this trend has grown stronger with successive five year plans. Programmes of expansion and improvement in all sectors of education have been developed by the Union Government.

The division of responsibility for implementation of the common programmes over numerous authorities has stood in the way of an appraisal of the progress achieved in the nation as a whole. The relevant facts had to be pieced together from numerous administration reports relating to different periods and collated with considerable difficulty. The recent publication by the National Council of Educational Research and Training of the first Year Book* of Education, which is devoted to a comprehensive review of educational developments since 1947 provides the essential factual material for evaluation of the educational progress so far achieved as well as of the adequacy of the programmes for the future. Under a scheme drawn up by the Union Ministry of Education which has been taken over by the National Council, it has been decided to bring out an annual volume devoted to some important aspect of education. The first publication of the series

covers the period up to the end of the Second Plan and contains a wealth of material which should be of great interest to the Commonwealth Education Conference currently in session in New Delhi.

The Year Book, as Mr Prem Kibral, Director of the National Council of Educational Research and Training, has stated in the foreword, is objective enough to invite attention not only to the great and significant achievements of the last 14 years in almost every sector of education, but also to the gaps that remain to be bridged. The most serious is the delay in providing free and compulsory education for all children up to the age of fourteen years. While the time limit of ten years set by the Directive Principles of the Constitution has already expired, educational authorities estimate that it will take another 15 years to reach the goal. The requirements of a developing economy, for different categories of trained personnel, bring to light new deficiencies in the educational system as well as in the content of the education that is available at various levels. Nevertheless, the progress achieved during the last fourteen years is impressive by any standard. Enrolment at the primary stage, in classes I-V, has increased from 141 lakhs in 1946-47 to 343.4 lakhs in 1960-61. The percentage of enrolment in these classes to the total population in the age group six to eleven has increased from 35 to 61.1. In the middle stage enrolment has increased from 20.4 lakhs to 62.9 lakhs or from nine per cent of the population in the age group eleven to fourteen, to 22.8 per cent. The expansion has been more rapid in higher education. The number of children in the age group 14-17 attending higher secondary schools has increased from 8,70,000 to 2,910,000 or from 3.8 per cent of the children in the relevant age group to 11.5 per cent. The number of Universities has increased from 19 in 1946-47 to 46 in 1960-61, while enrolment in arts and science colleges has increased from 212,000 to 840,000. Over the same period, enrolment in technical colleges and technical institutions has increased from 44,000 to 275,000.

Only those who are blind to the magnitude of the task of providing educational facilities to more than 100 million students, at different levels, would be inclined to belittle the actual achievement. The progress of education is inextricably linked with the general economic advancement of society. The two form the opposing sectors of a vicious circle. Resources for expansion of education to the extent desirable will not be forthcoming until economic development gathers momentum. At the same time, as is now being increasingly recognised, the rate of economic growth cannot be sustained at an adequate level unless investment in machines is balanced by investment in men. The story of substantial progress that is unfolding in the Year Book inspires the feeling that the efforts of the last

Indian Finance

fourteen years have succeeded in breaking the vicious circle and we can now confidently look forward to educational progress accelerating economic growth, instead of deficiencies in the one retarding progress in the other.

The progress of the development programmes of the Union Ministry of Education and of the Ministry of Scientific Research & Cultural Affairs, the details of educational expansion achieved in different States and the provision of educational opportunities to the handicapped, are set out in 18 chapters and summed up in the concluding chapter which also indicates the significant trends and problems that have arisen in the last fourteen years. Not the least valuable part of the publication comprises the detailed statistical tables extending over 105 pages.

The Review claims that expansion in numbers of students and of educational institutions has been accompanied by considerable improvement in the quality of education. This is a claim that those who have devoted some attention to the matter will not be prepared to accept without reserve, though there is no denying the sustained efforts that have been made to improve the qualifications of the teachers and their conditions of service. The impression of falling standards of educational attainment is too widespread to be dismissed as a figment of the imagination. Public Service Commission reports, as well as those responsible for recruiting staff for large commercial and industrial undertakings, have repeatedly drawn attention to the fall in the calibre of candidates appearing for examinations or interviews. Public service commission examinations may not be conclusive evidence, but the performance of candidates appearing for these examinations provides objective data for comparison of educational standards at different periods. The position might have improved in recent years as claimed by the survey. But the claim itself suggests that the standards were low in the not distant past. The outlook for the future is complicated by the fact that persons who are now being recruited as teachers went through the educational mill when standards were deplorably low.

Conflicting ideas regarding the language of instruction have created chaos in the field of higher education. Those responsible for framing courses of studies at the Secondary level have reacted to criticism of falling standards by overloading the curriculum by adding to the number of subjects taught. The result is that it has become practically impossible for schools to lay a sound foundation in the basic subjects like language and mathematics. Examinations have ceased to be even a test of memory and have become more of a game of chance than at any time in the past. The result is that those who go to the colleges are selected by pot luck and are not in many cases able to benefit by the

(Provisions in each Plan for education, as in other fields, are in addition to the resources provided for "maintaining" institutions established upto the end of the preceding Plan as well as to contributions from non-

Government sources. Over the past decade the contribution from non-Government sources has increased from about Rs 50 crores to about Rs 90 crores per year.)

13 January 1962

opportunity of higher education. Another powerful force which frustrates all efforts to improve standards is the prevailing indiscipline in educational institutions. The Year Book makes a brief reference to this problem in the concluding chapter.

The expenditure on education has increased from Rs 577 million in 1947 to about 3200 million by 1961 and it is envisaged that it would rise to 13600 million by 1976, which will work out to 4 per cent of the national income projected for that year. This level of investment cannot be considered too high when countries like the USA and the USSR spend as much as 7 or 8 per cent of national income on education. But if India is to derive value for the vastly increased expenditure that is envisaged, the causes responsible for the deterioration of standards should be identified and eliminated without delay and there should be no let up in the effort to maintain standards at adequate levels.

Outlook for Joint Ventures

THE announcement by the Indian Investment Centre on New Year's Day, about the enquiries received by it from entrepreneurs in finding technical and financial partnership with firms in the USA and Western Europe, affords an indication of the growing interest in joint ventures. The enquiries from Indian firms involve a total outlay of Rs 30 crores. Of the requests received 19 have been forwarded to the USA, ten to the UK, six to West Germany and one each to Canada and Japan. A large number of enquiries have also been received by the Centre from firms in the West seeking suitable partners in India for new industries including manufacture of explosives, electronic instruments, electric tools, pipes by spiral process, industrial pumps, hospital equipment and sensitive paper.

Though the general policy regarding foreign investment was outlined as early as 1949 in a statement by the Prime Minister in the Constituent Assembly on April 6, it is only in recent years that mental reservations on either side have been overcome and joint enterprises have been established to any significant extent. Only 17 cases involving foreign investment were approved in 1956 and 24 in the succeeding year. The number rose to 109 in 1958, to 172 in 1959 and 390 in 1960. The total number of cases involving foreign collaboration approved in 1961 was 400. The Third Plan programme for industries in the private sector lays special stress on foreign investment as the preferred source of external finance. Foreign collaboration is considered desirable and necessary both for providing the know-how of modern technical processes as well as to supplement indigenous capital. Shortage of foreign exchange has led to the adoption of a policy under which new undertakings involving expenditure of foreign exchange for purchase of machinery and equipment, or components and raw materials, are sanctioned only if the sponsors are able to secure foreign collaboration.

The aim of Government policy is to attract foreign capital for the developments of fields of manufacture which will help the attainment of plan targets in the specific fields as well as the achievement of the broad plan objectives. The policy adopted is, therefore, necessarily selective and determined by the programmes of development envisaged in the Plan. An illustrative list of the industries in which foreign investment will

be welcomed as well as of fields in which foreign capital was not needed was issued by the Government a few months ago. It was stated that foreign capital was not needed in Banking, Insurance, Trading and Commercial activity and Plantations. Proposals of foreign investment are also not entertained for manufacture of consumer goods whose production is already well established in the country. The list of industries in which foreign partnership is readily approved is also subject to changes according to the assessments made from time to time of the capacity required for attainment of plan targets.

The emphasis in the Plan on engineering, machine-building and chemical industries is reflected in the proposals that have so far been approved. Out of about 300 proposals approved in the first nine months of 1961, nearly two-thirds relate to engineering and metal working industries. Industry-wise classification of the 1016 proposals approved from 1956 up to the end of September 1961 is given below:

Automobile ancillary industries	97
Electrical engineering industries	218
Other Engineering industries	322
Chemical industries	136
Sugar Machinery industry	6
Non-ferrous metal industry	6
Cement industry	7
Paper industry	21
Textile industry	38
Glass industry	14
Shipping industry	3
Good-Processing industries	9
Others	139
Total	1,016

The conditions for foreign collaboration and the role of foreign capital were among the principal topics discussed at the session of the Business International held in Delhi in October last year, which was also addressed by Government spokesmen including the Prime Minister and the Finance Minister. One of the topics discussed related to the permissible quantum of foreign investment in the equity of joint ventures. While majority holding by Indian nationals is insisted upon as a general rule, a number of cases involving majority participation by foreign investors have also been approved. The Minister for Industry stated in the Lok Sabha on December 6, 1961, in answer to a question, that during the first nine months of 1961, majority participation in share capital by foreign collaborators was allowed in twelve industries such as coal washeries, paper machinery, auto-electric equipment, ball bearings, automatic lathes, fungicides and pesticides. Foreign investment has also been permitted in special cases, in the industries reserved to the public sector under the Industrial Policy Resolution of 1956. Since the resolution was adopted, investment of foreign private capital has been permitted in three units covered by schedule A of the Industrial Policy Resolution, namely, Metal Corporation of India for establishment of a Zinc Smelter, Oil India Limited for prospecting, refining and transport of Oil and the Stanvac refinery. There are also some other cases where small quantities of items falling under Schedule A have been allowed to be included along with the main product which could be licensed to the private sector under the Industrial Policy Resolution. In sanctioning cases of majority foreign participation, the amount of foreign exchange required and the technical contribution in a field of manufacture having high priority under the Plan appear to be the main considerations that are taken into

account. Another consideration is whether the arrangements involve royalty payments for the know-how in addition to equity participation. As regards the capital structure, a ratio of 2:1 of debt to share capital is usually required.

One of the topics discussed at the International Business Meet was the utilisation of Cooley Funds. The Government view is that borrowing from this source should not displace normal sources of raising internal capital, and that borrowings from Cooley Funds should not exceed the amount of foreign capital being invested in the project. This condition appears to be one of the reasons for the slow rate of utilisation of Cooley Funds. Under agreements between India and the United States, a sum of Rs 77.6 crores has been reserved for loans under the Cooley amendment out of which disbursements amount to only Rs 12.31 crores. A similar difficulty in approving arrangements involving foreign collaboration is experienced when foreign collaborators propose to meet the bulk of dollar expenditure out of loans from the Exim Bank. When the Indian investment centre was formed early last year, the outlook for foreign collaboration was very encouraging. The activities of the organisation, which acts as a clearing house for information, processes applications and helps in streamlining procedures, should lead in normal circumstances to the establishment of a large number of joint ventures in fields of vital importance to the industrial development of the country. But the Centre is entering on its activities at a time when the prospects for foreign investment are clouded by adverse reactions in the USA and in Western European countries to the liberation of Goa and the Investment Centre has its task cut out in clearing the fog of misunderstanding.

Individual well-being is linked with national prosperity and only planned efforts can ensure both in the shortest possible time. And planning, for its success, largely depends on savings, individual as well as national. Saving in the form of Bank Deposits provides resources for the National Plan.

World of Finance

ANKS' tellar Results for 1961

ANKS' earnings in respect of their working in 1961 appear to have increased bountifully, judge by such results as have so far been published; and almost without exception an increase both in the rate of dividend and in the size of the transfer to reserve has been announced. A number of factors were clearly responsible for such improved working, and these may be summarised.

Most important of the factors was that, for the twelve-month period, banks enjoyed the benefit derived from the Reserve Bank directive of autumn 1960. By that directive banks were enjoined, it may be recalled, to raise the rates charged for Advances to a minimum of 5 per cent and at the same time to effect an increase of 0.5 per cent on all the existing rates. Since the total of Advances never fell below the Rs 1,200 crore mark in 1961, the effective increase in gross earnings of banks in this account alone can be seen to have been not less than Rs 6 crores.

In fact, the rise in earnings attributable to the Reserve Bank directive must have been sizeably larger than the figure we have just suggested. On the one hand, we have not had regard for the increased earnings consequent upon the fixation of a floor rate for Advances; on the other, it needs to be borne in mind that, in not a few cases, not a few banks saw fit to advise their constituents that, in terms of the Reserve Bank directive, Advance rates would be increased by 1 per cent. This particular strategem was employed by banks in the view that protesting constituents would thereby at least confirm that a rise of 0.5 per cent was in order. But, the money market being generally tight, protestations were the exception rather than the rule, and it is reasonably safe to suggest a figure of Rs 10 crores as the quantum of additional earnings of banks consequent upon the Reserve Bank directive of autumn in 1960.

The second factor is constituted by the record expansion in Advances during the 1960-61 busy season. A good agricultural year meant that the magnitude of seasonal financing necessarily rose; and the stagnation in industrial production, which was witnessed from the last quarter of 1960 into the first month or so of 1961, soon thereafter ended, so that the industrial demand for bank finance also tended to be heavy. Thus, while the seasonal return of funds during the 1961 slack season can be presumed to have corresponded to the heavy outgo during the earlier busy season, the extent of contraction in Advances was rather smaller because of the rise in the industrial use of bank finance.

Thirdly, there is the fact that the outgo of banks, on account of interest paid on Deposits and borrowings, is unlikely to have risen much. As early as by the end of March 1961 banks were able substantially to reduce indebtedness to the Reserve Bank, and while it is true that most banks and for varying

periods could get central bank credit only at the penal rate of 6 per cent, the weekly average for 1961 of Scheduled Banks' borrowings worked out to a level when perhaps not even the 5 per cent rate was applicable. The additional cost to banks of the three-tier bank Rate would therefore have been marginal, negligible. Even so, though banks' Deposits rose satisfactorily in the year, thereby implying an increase in the charge of interest paid, such additional expenditure was undoubtedly offset by the fact of improved income from money at call and short notice—the inter-bank call money rate was almost consistently high in 1961.

There is a lesson patently to be learnt. Without coercion, but with just the suggestion that Reserve Bank action to strengthen banks' capital structure was in the offing, banks have themselves made transfers to reserves which (again in respect of results so far published), generally exceed the minimum of 20 per cent of declared profits that was suggested by Mr H. V. R. Iengar, Governor of the Reserve Bank. The implication is that banks are now in a position where they earn enough to ensure: (a) payment of dividend at a rate which will enable successful rights issues; (b) payment of bonus to staff in an amount sufficient to keep bank labour happy; (c) transfer to reserve in an amount adequate to fulfil the minimum requirement of 20 per cent of published profit and also to work to the target of 6 per cent as the ratio of capital plus reserves to Deposits; and (d) transfer (presumably) to inner reserves to take care of any banking losses that may arise.

But the prospect is that in 1962 bank labour will cost more. It is also to be taken for granted that Deposits will continue to grow. So the ratio of 6 per cent may become a receding objective, unless banks' earnings so increase that 20 per cent of declared profits (for transfer to reserve) adds up to a substantial sum. We therefore would enter here a reinforced plea for further strengthening banks' potential for earning. We confess that we are being repetitive, but it seems to us that, while banks should increase the facilities that they offer to constituents, they should at the same time seek to charge for services which most certainly should not be available free and gratis; and secondly that there is no reason for the rate of interest paid on Deposits being fixed so high in relation to bank Rate.

BANK RETURNS

Deposits, Advances Rise Sharply

Sharp currency expansion, inter-governmental transactions and probable deficit financing for Rs 15 crores are the noteworthy features of the returns of the Reserve Bank for 5 January 1962.

The two-fold impact of beginning of the month disbursements and busy season pressures stands reflected in an increase of Rs 26.24 crores to Rs 1,989.90 crores in Active

Note Circulation; and Rupee Coin has moved out into circulation in the large amount of Rs 1.75 crores. For the first time in years, currency has been expanded against Foreign Securities by transfer of Rs 10 crores from Balances Held Abroad in the Banking Department, raising the relevant portfolio in the Issue Department to Rs 128.86 crores; and there has also been expansion for Rs 15 crores against Rupee Securities, now placed at Rs 1,618.81 crores. Cash in the till has accordingly moved down by Rs 3.03 crores to Rs 14.77 crores.

The States appear to have repaid loans and advances to the Centre in fairly large amount, their balances are lower by Rs 20.78 crores at Rs 11.81 crores, and indebtedness to the Reserve Bank is also higher by Rs 1.25 crores at Rs 61.73 crores. Deposits of the Central Government have been marked up by Rs 11.45 crores to Rs 61.21 crores, thus suggesting that there may have been some reverse ad hoc. But Investments in the Banking Department are lower only by Rs 14 crores at Rs 210.62 crores, and this decrease is accounted for by transfer to the Issue Department; and besides the State Bank is known to have purchased securities for Rs 15 crores. Hence, it may be that the Centre's net disbursements were heavy during the week, so much so that, despite receipt of repayment of loans from the States, recourse had to be had to deficit financing for Rs 15 crores.

With the year having ended, and window-dressing done with, member banks have been quick to draw down on their Reserve Balances by Rs 26.31 crores to Rs 78.85 crores, the bulk of which, however, is presumably attributable to the State Bank. As a consequence indebtedness to the central banking institution has also been reduced, the Other Loans and Advances of the Reserve Bank being shown lower by Rs 4.38 crores at Rs 143.83 crores. Indeed, repayment of debt by Scheduled Banks may be even larger, since the Reserve Banks' advances against usance bills have declined by Rs 7.81 crores to Rs 6.93 crores.

Lastly as concerns the Reserve Bank returns, Balances Held Abroad have dropped by Rs 16.87 crores to Rs 16.59 crores, of which only Rs 10 crores are accountable as having been transferred to the Issue Department. The bleak implication is that the import gap was unusually large during the week and entailed a drain of nearly Rs 7 crores in our foreign exchange reserves.

The State Bank's return for 5 January 1962 suggests that the profit for the year may conceivably be smaller than the relative figure for 1960. For, in the first return for 1961, Other Liabilities (under which head the profit normally accrues) had fallen by some Rs 6.70 crores; in the first return for 1962, the size of the decline is smaller at Rs 6.02 crores. It may be that the repayment of counterpart funds (in an amount of Rs 72 crores in 1961) affected the State Bank's earnings from interest on its contra holdings of gilt-edged. But surely the high level of Advances would have ensured maintenance of earnings. The foregoing is pure hypothesis, and the next few days should reveal whether or no our "guess" is correct.

Deposits of the State Bank fell by Rs 1.16 crores to Rs 526.63 crores. Window-dressing completed, the State Bank has purchased securities for Rs 15 crores, raising the portfolio to Rs 238.60 crores. Beginning of the month disbursements and the demands of the busy season are both reflected in a rise of Rs 6 crores to Rs 261.21 crores in Advances.

Accordingly, cash balances, including money at call, are sharply reduced by Rs 20.19 crores to Rs 25.80 crores.

There has been a "window-dressing" increase of Rs 23.17 crores in the net Deposits of Scheduled Banks as shown in their return for 29 December 1961—of this some Rs 8½ crores represent a rise in Demand Deposits from banks and another Rs 6.31 crores are accounted for by the State Bank. Net Demand Deposits have been marked up steeply by Rs 18.28 crores to Rs 835.83 crores, and net Time Deposits by Rs 4.89 crores to Rs 1,143.11 crores. The State Bank sold securities for Rs 20 crores, and this is reflected in a drop of a little over that amount to Rs 579.94 crores in the investments of Scheduled Banks. The total of Advances has expanded smartly by Rs 22.23 crores to Rs 1,285.28 crores, about Rs 6 crores of the increase being ascribable to the State Bank. This entailed an increase of Rs 8.17 crores to Rs 18.74 crores in borrowings from the Reserve Bank. As an end result, cash balances including money at call have swollen by Rs 31.86 crores to Rs 218.05 crores—but as much as Rs 17.79 crores of the rise are due to the State Bank.

BANK PROFITS

UCO Bank

The net profit of the United Commercial Bank Limited for the year ended 31st December 1961, after taxes, subject to audit, including the sum of Rs 1,46,870-98 brought forward from the previous account amounted to Rs 74,07,428-02. The Directors have transferred Rs 30,00,000 to the Reserve Fund, raising it to Rs 2,35,00,000, allocated Rs 4,00,000 to the Gratuity Trust Fund, and provided Rs 14,00,000 for bonus to staff. In respect of the balance amount the Directors propose to recommend to the shareholders at the next annual general meeting the payment of a dividend of 12 per cent (i.e. Rs 6 per share) less tax at 30 per cent, which will absorb Rs 24,00,000 and to carry forward to the next account the balance of Rs 2,07,428-02.

Bank of India

The Profit of the Bank of India Limited for the year ended 31st December, 1961, after providing for Income-tax and Super-tax and making the usual provisions for contingencies and subject to audit, including the sum of Rs 12,84,842-08 brought forward amounts to Rs 1,23,16,350-83. A sum of Rs 15,00,000-00 is transferred to the Reserve Fund. Interim Dividend at the rate of 8.00% subject to deduction of tax at the prescribed rates for the half-year ended 30th June, 1961 absorbed Rs 24,00,000-00. The balance available for Rs 84,16,350-83. The Directors distribution is Rs 84,16,350-83. The rate proposed to pay a final Dividend at the rate of 12.00% subject to deduction of tax at the prescribed rates making 20% for the year Rs 36,00,000-00, and to Carry Forward, subject to the payment of a bonus to the Staff Rs 48,16,350-83.

Dena Bank

The net profit of Devkaran Nanjee Banking Co. Ltd. for the year ended 31st December 1961, after prov

to staff and including Rs 7,86,033.43 brought forward from last year's account, amounts, subject to audit, to Rs 34,01,096.09. Out of this, the Directors have made the following appropriations:

To Ad-interim dividend paid for the half-year ended 30th June 1961 at the rate of Rs 2.00 per share, Rs 2,00,000.00; To Reserve Fund, Rs 15,00,000.00; and propose to appropriate the balance as under: To Pay a final Dividend for the half-year ended 31st December 1961 at the rate of Rs 3.50 per share (making in all 11 per cent (Eleven) per annum, subject to deduction of tax), Rs 3,50,000.00; and To Carry Forward, Rs 13,51,096.09.

PNB

Subject to audit, the net profit of the Punjab National Bank Ltd. after providing for Tax and payment to the Gratuity Fund Trust and making necessary provisions amounts to Rs 118.54 lacs as against Rs 118.04 lacs subject to Tax for 1960.

The amount brought forward from the previous year's account is Rs 4.23 lacs thus making a total of Rs 122.77 lacs available for appropriation, out of which a sum of Rs 45 lacs is transferred to Reserve Fund against Rs 11 lacs transferred last year. A sum of Rs 37.50 lacs is provided for bonus to staff against Rs 27 lacs provided last year. Rs 1 lac is transferred to Charity Account. A sum of Rs 12.50 lacs has already been utilized for the payment of an interim dividend at the rate of Re 1/- per share subject to Tax. The Directors have recommended a final dividend @ Re 1/- per share on Old shares making a total distribution at 20 per cent for the year subject to Tax and Re -/50 nP per share on New Shares being 20 per cent subject to Tax for the proportionate period absorbing Rs 16.25 lacs thus making a total dividend for the year of Rs 28.75 lacs. This proposed dividend of 20 per cent subject to Tax is the same as was declared last year. Balance of Rs 10.52 lacs is proposed to be carried forward to the next year.

Treasury Bills

Tenders for Rs. 2,00,00,000 of 91 days' Government of India Treasury Bills were opened on Tuesday 9 January 1962. Total amount offered was Rs 2,03,00,000. Tenders at Rs 99.375 per cent were accepted in full and those at Rs 99.370 per cent were allotted approximately 99 per cent. Total amount accepted was Rs 2,00,00,000, the average rate of accepted tenders being Rs 2.520 per cent per annum.

Sterling's Prospects in 1962

By Paul Einzig

AFTER the ups and downs experienced during 1961 sterling appears to have reached a state of uneasy equilibrium by the end of the year. Following the arrangement made with the International Monetary Fund a great deal of hot money which left London during the first half of the year returned there. There does not appear to be, however, an amount comparable to that of twelve months ago when, largely as a result of the dollar scare of 1960, an abnormal amount was transferred into sterling. Nevertheless, there is enough for sterling to become once more a sensitive exchange, exposed to influences such as the recent rumours about the revaluation of the lira. The decline in the gold reserve in addition to the loss due to the annual payment on the US and Canadian Loans, was largely due to the transfer of hot money from London to Milan to take advantage of such a revaluation.

In spite of its decline during December, the gold reserve, together with the standby credits arranged with the International Monetary Fund, appears to be sufficient to safeguard sterling against speculative attacks during 1962. It will be possible to resist the effect of transfers of hot money through revaluation rumours about various Continental currencies which are likely to arise. Much will depend on the extent of the balance of payment deficit. Even in 1961 it was very heavy and the chances are that it will continue during 1962. There have been, however, substantial wage increases in France and Germany during the past year, so that, if the British wage pause should be maintained even to a moderate extent, Britain's competitive capacity might improve. Moreover, Mr Selwyn Lloyd foreshadowed austerity measures in his next Budget; together with the decline in profit margins and dividend cuts they may tend to curtail domestic consumption.

Taking everything into consideration, there is no need to view the prospects of sterling in 1962 with pessimism. In any case, apart altogether from its intrinsic strength, sterling stands to benefit by adverse pressure on the dollar which is likely to arise during the course of the year owing to excessive expenditure by the United States at home and abroad. Much will depend of course on whether resistance to the wage pause in Britain will not lead to major strikes which would affect the output and exports. In the absence of such disturbing strikes it is reasonable to expect sterling to have a better year than in 1961.

Notes

GOA The Aftermath and—

The Indians interned in Portuguese, East Africa will get only small satisfaction from the declaration that the Government of India will not repatriate Portuguese soldiers, until the Indians held abroad were released. The fact that some have got off to Kenya by paying heavily while others have lost big sums by loss of running business shows that Goa is not as painless an operation as claimed. Whether Indians who have suffered because they hold Indian passports are entitled to compensation is a new issue that may be settled only by a writ petition. As no war was openly declared, the Government cannot disavow responsibility and yet money seized in Goa may provide the funds needed for paying compensation to Indians detained in Macao or Mozambique. The problem is not financial alone. If Indians who have lost money in Tibet are going to get compensation from what is secured from the Bank of China, surely the Indians who have suffered in East Africa are entitled to put forward claims for the assets lost. The balancing of claims may be difficult, but it is also clear that Indians who strayed from Central African

federation into Mozambique were not wholly unaware of the risks.

How far cashewnut imports would be afforded by the internment of Indians in East Africa is, of course, the main issue for the business world. The factories that have expanded in the hope of bigger exports will have less material to process, if raw nuts cannot be got as usual. Export income will certainly suffer and there may be labour trouble again for the cashew factories of Quilon, if seasonal closures take place. Whether the Government took this point into calculation may be widely doubted, but the obvious chances of buying nuts from Mozambique through British East Africa may be investigated promptly in order to give reality to the new ideal of Afro-Asian economic co-operation. The payment for cargoes afloat may be arranged, but nut supplies in future might be limited and just like almonds, even cashewnuts may go up in price. That will be the price paid by the consumer for the quick recovery of Goa.

The Sorting out

The export of ore from Goa will probably help to pay for imports and the Chamber of Commerce has asked for licence and, foreign exchange to discharge current liabilities. The stoppage of all imports from Portugal will not lead to any fall in imports which, of course, were high because of the smuggling that flourished. How an import policy can be framed for Goa before duties are fixed is a conundrum that the local administration cannot solve. The level of duties must be acceptable to the Goans who may jib at fantastic duties on spices or chemicals. The extension of Central excise must perhaps regulate the level of import duties on cloth or tyres in Goa. The fiscal problems cannot be settled by the Reserve Bank which has not appointed a liquidator for the Portuguese National Bank. There is no custodian of enemy property and the quota for imports must be fixed by reference to the stocks held or afloat.

The more important consideration is that exchange allocated must be in relation to the standard of living, not mere numbers because of the European influence in Goa dominant for over four centuries and the absence of a colour bar. The issue of bus permits, petrol licences, etc. to outsiders may provoke complaints and the practice in Dadra may not be applied to Goa readily. The elections will hold up economic

integration of Goa but the Western India Portuguese Railway is working again and the old connection between Marmagao and Masulipatam by metre gauge is a fact. The most important circumstance for the railway is the resumption of running of trains. But supplies of food from India are vital, if iron ore shipments to West Germany on a large scale are to be revived promptly. The STC will perhaps move in, if royalty agreements are cancelled, but Japanese or other machinery in use must be paid for, in the event of nationalisation. The confusion will perhaps continue till a new Parliament defines India's policy and purpose in Goa. But distress can be avoided if rupee remittances are allowed and escudos are converted. But the escudos must also be converted and the IMF may have objections to changing money acquired "irregularly." Shipping the money to Tangier which is again a free port, only means that the work must be done through a British exchange bank.

CENTRAL BANK Success Story

After Bombay and Delhi, Calcutta celebrated last week, the Central Bank's Golden Jubilee with Dr B. C. Roy as the Chief Guest. This provides an occasion for a retrospect of the Bank's working during the last fifty year period and of its contribution to Indian banking in particular. Started modestly with a paid-up capital of Rs 10 lakhs, the bank has gone from strength to strength and after fifty years has achieved the distinction of being the foremost among Indian scheduled banks. In this fifty year period, the Central went through various vicissitudes of fortunes and had to face many a financial storm.

The intentions of the founding members to nourish it as a purely Indian owned and Indian managed institution had ensured adequate public response and it is recorded that the first issue of 40,000 shares of the total face value of Rs 20 lakhs was taken up in less than three months, half the amount being paid up. However, quite early in its growth the Bank had to face a trying time in 1913 when a banking crisis swept over the country in which many banks crashed and went into liquidation. Then came the First World War and the impact of this was reflected in the decline in deposits. This was followed by a period of steady rise in deposits and opening of branches at Karachi, Lahore and Calcutta and other important centres.

The year 1923 brought about a sudden accretion of new strength to the Central when the Union Bank of India was amalgamated with it. A more momentous development followed later in the year when the Tata Industrial

Bank was merged. With these two mergers, the Central grew greatly in strength and stature. The paid up capital of the Bank rose from Rs 50 lakhs in 1922 to Rs 1,68.13 lakhs in 1923 while its reserves moved up to Rs 1,00.00 lakhs from Rs 30.00 lakhs. The Great Depression which brought about unsettled conditions in the general banking and monetary sphere left the Central relatively unaffected and when in 1936 the Bank celebrated its silver jubilee, it had become the biggest of the Indian scheduled banks with a paid-up capital and reserves of Rs 2.5 crores and Rs 31 crores respectively.

The outbreak of the Second World War created conditions conducive to the further substantial expansion of banking business and the Central found its opportunities for consolidating its position. Deposits registered an improvement from Rs 30 crores to Rs 105 crores, and Advances moved up from Rs 15 crores to Rs 40 crores. There was a pronounced rise in profits of the order of Rs 91 lakhs. Further the issue of right shares in 1944 at a premium of Rs 25 took the Bank's paid up capital to Rs 2.51 lakhs from Rs 1.88 lakhs in 1939.

The partition of the country which was followed by internal upheavals wiped out a substantial share of the gains previously registered by the Bank. It is noteworthy that while in 1946, the Bank had as many as 362 branches, by 1949, this had been reduced to 286. The restoration of normal conditions after partition and more particularly the launching of the Five Year Plans changed the outlook for banking which became distinctly favour-

†Silver Jubilee Year.

able. The Central experienced a sustained and systematic development of its business. It is worth noting that its reserves have risen from Rs 3,98.31 lakhs in 1951 to Rs 4,02.77 lakhs in 1956 and further to Rs 4,16.84 lakhs in 1960. The Deposits have similarly increased from Rs 125.64 crores in 1951 to Rs 138.99 crores in 1956 and further to Rs 200.01 crores in 1960. Advances have moved up from Rs 61.29 crores to Rs 92.00 crores and further to Rs 150.80 crores.

ECONOMIC POWER Some Indices

A recent information broad sheet issued by the Company Law Administration Department gives the picture of the extent of domination in industrial groups by top corporate bodies in the country. The criterion adopted for determining the degree of concentration is to select the first three largest companies and industrial groups and to strike the proportion of capital invested, sales and net assets or employment represented by them. The following table summarises the concentration position of the first three corporate leaders measured in terms of paid up capital for the year 1959-60.

INDUSTRIAL GROUP.

Degree of concentration*	
98	1. Chemical Fertilisers
94	2. Kerosene and Petroleum Refineries
93	3. Iron and Steel (Basic Manufacture)
92	4. Cigarette Manufacture
91	5. Aluminium ware
88	6. Manganese Ore Mining
86	7. Cement
58	9. Motor Vehicles Manufacture
53	10. Electrical machinery manufacture
49	11. Mica Mining
48	12. Cycle manufacture
46	13. Electricity generation and supply
45	14. Paper mills
44	15. Edible hydro-generated oil
32	16. Chemical and Pharmaceutical preparations
31	17. Flour Mills
29	18. Manufacture of Metal Products
21	19. Miscellaneous machine manufacture

20. Coffee, Rubber and other Plantations ... 21
21. Sugar Mills ... 17
22. Real Estate and Land ... 16
23. Jute Mills ... 16
24. Tea ... 9
25. Cotton Mills ... 9
26. Wholesale trade in commodities other than food-stuffs ... 7

*Paid-up capital of the first 3 companies as percentage of all companies in the Industrial Group (approx).

The table brings out a high degree concentration that exists in industrial groups. In nearly 10 industrial groups, the degree of domination exceeds nearly 50 per cent of the total paid up capital while in the first six groups, it exceeds even 75 per cent. In 6 industrial groups namely, sugar mills, real estates jute mills, tea, cotton mills and wholesale trade in commodities other than foodstuffs, the degree of concentration is insignificant being less than 20 per cent. In the middle ranges, it varies between 30 and 50 per cent.

While the table gives some basic data in respect of one aspect of concentration of economic power, no firm or final inferences regarding the adverse effects of monopolistic hold in industries, can be drawn from them exclusively. The first five industrial groups in which the degree of domination by the giants exceeds 90 per cent are industries in which there is almost an inherent and inevitable trend to monopolistic organisation of business. Such a trend is noticeable everywhere in the world. The capital intensive structure of some of these industries makes monopolistic organisation the most economical and efficient system of organisation for these enterprises.

Similarly, the low degree of domination indicated for the last six groups of industries cannot reflect the clear picture in respect of concentration of economic power. The data furnished by the Company Law Administration relates only to the domination by corporate bodies within particular industries and not to the hold other industrial groups have in a particular industry. In other words a group can have diversified interests, vertically or horizontally or even haphazardly and yet hold in its hand vast power.

Without data in respect of the latter, the study of concentration of economic power in the economy will be incomplete.

COMPANY LAW

Sharp Practice?

The Company law 1956 had as one of its principal objectives reform of the existing company practices and correcting the abuses that had crept on account of loopholes in the then existing law. One such instance of gross abuse in company practices was the operation of private companies with large capital doing extensive business and controlling a number of public companies. This is made possible because funds of other companies, public and private are invested in such private companies. The control of the working of such private companies is an inherently difficult problem. For, on the one hand, there are genuine private companies which are nothing but glorified partnerships and on the other, there are private companies whose operations are far wider than those of many public companies. To get over this problem, the Cohen Committee in England created the category of exempted private companies. This has only served to complicate the company law. The provisions of the Company Act 1956 attempted to obviate some of the abuses by making private companies subject to greater statutory obligations. But these were not sufficient to prevent sharp practice by the unscrupulous. To withdraw the concessions and privileges enjoyed by private companies would have caused needless hardships to genuine private companies. At the same time, the activities of the private companies which functioned more in the manner of public companies had to be brought under proper control. Therefore, the amending Act of 1960 inserted a new section, 43-A which provided that a private company in which shares to the extent of 25 per cent or more of its paid-up capital are held by on or more corporate bodies should be treated as public companies. This was meant mainly as a deterrent to the conversion of

public companies into private ones and also to check the creation of pseudo-private companies where the shareholders are largely corporate bodies.

The incorporation of this provision has had a salutary effect. A recent broadsheet of information issued by the Company Law Administration Department points out that by virtue of Section 43-A nearly 479 companies have become public during the period from 28-12-1960 to 31-7-1961.

Region.	Total No. of Co's affected by Sec. 43-A.	Total.	Share of Corporate body/Bodies.
Northern	41	4.06	3.06
Eastern	129	36.16	25.71
Western	233	30.60	25.63
Southern	76	6.03	4.99
Total	479	76.85	59.39

It is noteworthy that it is in the Western region that the largest number of conversion has taken place following the enforcement of section 43-A. The industry-wise classification of these companies indicates that trading and finance with a total of 163 companies accounted for the largest number of companies declared public. This is followed by the Group comprising machinery and transport equipment. The number of companies in this group that have been declared public companies is placed at 65 with a paid-up capital of Rs 7.33 lakhs. Another 21 companies with a paid-up capital of Rs 3.38 lakhs in the group of pharmaceutical have also become public companies during the period under review.

Despite the new Section 43-A, a number of companies are still reported to be trying to evade the applicability of the section by two methods: one is increasing the share capital so as to reduce the percentage of shareholdings held by a body or bodies corporate below the statutory limit of 25 per cent and the other is the transferring of the shares held by the body/bodies corporate in the name of individuals. Such evasions are bound to arise as there is nothing in the present law which can check the two methods that are being utilised for evading Section 43-A. Action can only be taken when actual instances are brought to light and only experience of the working of the section may indicate possible lines of defence against such evasion.

HANDLOOMS

In A Dynamic Economy

Inaugurating the ninth All-India Handloom Week in Bombay Mr G. D. Somani, MP, emphasised the

importance of giving encouragement to the handloom industry. Such encouragement is accepted official policy and is being implemented through a variety of measures such as ceiling on production in the mill sector, levy of cess on mill made cloth rebate on sale of handloom cloth etc. Of a target of 9,300 million yards of cloth in the Third Plan, 3,500 million yards have been reserved for the non-mill sector, the share of handlooms and powerlooms being 2,800 million yards and 700 million yards respectively. The handloom sector is admittedly less efficient in production than the mill sector. But the benefits of employment and the fact of it being an established and traditional industry warrant special concessions and privileges for its sustained growth and working. Nearly 10 million people are directly and indirectly engaged in this industry. The number of looms in this sector is estimated at 28 lakhs while production is estimated at 1,900 million yards..

The handloom sector has survived great odds, but a new challenge to its further growth would seem to be posed by the small powerlooms. By virtue of the advantages of economical production as compared with the handloom sector, powerlooms have already made considerable inroads into the targets of the other sectors. The diffused nature of the handloom industry and the absence of mass production methods make for higher cost of production in the handloom sector as compared with the powerlooms. It was to eliminate this disadvantage that the Textile Enquiry Committee headed by Mr Nityanand Kanungo recommended the gradual introduction of powerlooms into the handloom sector. In view of possible adverse effects on employment, it has not been found possible to give effect to this recommendation. Consequently there has been mushroom growth in the powerloom sector and the number of powerlooms in existence is considerably higher than accounted for in official records. It is worthwhile to note that while the total number of authorised and unauthorised powerlooms in the country had been given as 24,478 and 18,712 respectively, in Maharashtra alone, over 50,000 powerlooms are reported to be operating. It is the excess production in this sector that stands in the way of greater headway being made by the handloom sector. In the interest of further growth of the handloom sector, it is essential that the working of the powerloom sector should be subjected to closer scrutiny and control. In the absence of such vigilance, measures to control production and prices in the mill sector alone will not avail in protecting the handloom industry. At the same time scope should also be explored for improving the efficiency of working of the hand-

loom sector. An orderly transition to power-loom production would meet the demands of human as well as efficiency aspects of a traditional industry trying to be viable in a dynamic economy.

SUGAR

Offtake Problems

Speaking at the annual general meeting of the Kolhapur Sugar Mills Limited, the Chairman Seth Ramniwas Ramnarain Ruia has pointed out that the company will not be able to show the same financial results next year, what with the falling prices of sugar, the implementation of the recommendations of the Wage Board, the increased cost on labour and in stores and spares and the large carry-over of stocks. This is the situation that is not peculiar to the Kolhapur Sugar Mills alone but is common to almost all units in the sugar industry. The difficulty is the direct result of production far outstripping offtake. For various reasons and particularly because of the high price of the commodity domestic consumption has remained more or less static over the past few years and the industry is greatly handicapped in disposing of large quantities overseas for much the same reason. The only immediate remedy is curtailment of production. The special permission obtained from the US for an export allocation to that country will go some way toward reducing the pressure of unsold stocks but much larger quantity is to be sold if the industry is not to be driven to devise and adopt more drastic measures to avoid piling up of stocks. According to Mr Ruia an outlet for about 600,000 tons of sugar in the export market would enable the industry to function satisfactorily with its present installed capacity. But the problem of selling such a large quantity with the price as high as what is obtaining at present in our country does not admit of an easy solution. One solution offered by Mr Ruia is to export sugar under government subsidy and he points out that all industrial products based upon agriculture need some subsidy even in advanced countries. There is also good scope for increasing offtake by stimulating domestic consumption by encouraging the fruit canning industry. But this too depends on the availability of sugar at cheap prices. Reduction in basic excise duty on sugar may be helpful in increasing domestic consumption. Government would do well to note that a proper remedy must be related to an increase in offtake as the ready remedy of cutting down production will bring in its wake far more serious problems like widespread unemployment among the cane cultivators and sugar factory workers.

ENGINEERING INDUSTRY Index of Progress

A notable aspect of the industrial development in recent years has been the progress made by the engineering and foundry industries. The engineering industries particularly have made remarkable strides in production during the Second Plan period. With diversification of production and expansion in existing items, the index of production in the engineering industries has increased from 280 in 1956 to 350 in 1960 and is currently reported to be running at about 400. The progress of the foundry industry though not on the same par has also been remarkable. The total number of iron and steel foundries now working in the country has been estimated at about 2,000 with installed capacity of about 14 lakh tons. The industry turns out a variety of items like cast iron pans, weights and measures, pipes and specials, municipal and conservancy requirements and component parts for industrial plant and machinery in addition to sleepers for the Railways. The Third Plan has laid considerable emphasis on the further development of these industries. In the engineering sector, there are a host of items which remain to be taken up. The field of electronics for instance has remained practically untouched.

The accent in the programmes for the foundry industry is on the production of heavy castings. The production target in the foundry field is 1.2 million tons of Grey iron castings and 200,000 tons each of steel castings and forgings. The heavy foundry forge plant at Ranchi which is scheduled to be completed by the end of the Third Plan, is expected to have 45,000 tons of steel castings, 38,000 tons of grey iron castings and about 70,000 tons of steel forgings.

The Third Plan programmes for these industries have crucial importance particularly in view of the scope for export promotion opened up by the products of these industries. The engineering industry has already established itself as one of the most promising among prospective foreign exchange earners. Export of engineering goods and especially of the light engineering goods has shown a remarkable rise in recent years. Export of foundry products during 1960 fetched foreign exchange to the tune of Rs 22.41 lakhs and during Jan-Sep. of 1961, has realised Rs 23.08 lakhs in foreign exchange. Both these industries however face problems of raw material shortage in increasing their production during the Third Plan period. These problems were spotlighted recently in Calcutta at the annual general meetings of the Engineering Association and the Foundry

Association. Shortage of pig iron and hard coke are problems common to both these industries. Though the Third Plan envisages production of pig iron to the tune of 1.5 million tons, the present supply amounts to no more than 25,000 tons though after Bhilai and Durgapur go into full production, another 600,000 tons would be added. With the inevitable delay in the commissioning of the Bokaro plant for pig iron production, the prospects for meeting the requirements of the foundry industry are not very encouraging. Similarly the supply position of hard coke has also not been very satisfactory. Transport difficulties have further aggravated the shortage of coal and hard coke for the engineering and foundry industries. The problem here is one of further increasing production, of railway wagons and equitable distribution among all the units in the public and private sectors.

Supply of steel in the requisite quality and quantity is also a problem for the engineering industries. The Plan envisages a progressive increase in the internal production of steel and by the end of the Plan period nearly 6.8 million tons of steel are expected to be available within the country. The realisation of this target is contingent on the scheduled completion of the steel works programmes in the public sector. Second Plan experience in respect of the progress of work in the public sector steel plants would hardly give any ground for optimism. Along with problems of raw material supply, the engineering industry has also to tackle the problem of increasing cost of production brought about by rise in cost of pig iron and steel, shortage in supply of fuel and power and rising wages without matching increase in productivity.

MANGANESE Sick Man of the Ore Industry

In his speech at the Maharashtra Mineral Industries Conference, Dr. P. R. Saraiya, reviewed the trends in respect of exports of manganese ore and also dwelt upon the causes that have brought about a decline in Indian exports of manganese ore in recent years. From an annual average of 1.19 million tons and 1.22 million tons respectively during the five year periods of 1950-54 and 1955-59 respectively, manganese ore exports dwindled to 318,000 tons during the first six months of 1961. In terms of foreign exchange earnings, the loss was even greater considering that the average export price per ton of manganese ore was only Rs 99 as compared with Rs 120 in 1960 and Rs 154 in the period 1955-59. While some inherent handicaps with which the industry has coped for several decades have no doubt contributed

13 January 1962

to the slump in manganese ore exports, the factors that have led to decline in exports are attributable mainly to Government policies. Among these are the levy of high and fluctuating export duties, Government control and direct intervention in the trade through the State Trading Corporation and the increases in railway freight and royalties. With a short break from 1954-56, export duties have been levied at various rates which at one stage amounted to Rs 30 per ton on high grade ore. Further, high royalty rates and railway freight have also tended to inflate the price of Indian manganese ore rendering it uncompetitive in international markets.

The control of the manganese exports by the Government has also proved inimical to the best interests of exports. Since 1956, the export of manganese ore has been controlled by a system of export quotas which has stood in the way of achieving an increase in exports. Particularly the entry of the State Trading Corporation into the business of manganese exports has been the signal for the decline in exports. The Report of the Economist Intelligence Unit (London) on the working of the State Trading Corporation offers the best commentary on the performance of the STC in the field of manganese ore exports. The yearly basis for the announcement of manganese ore export policies by the Government, had also tended to create considerable uncertainty and thereby affected the stability and volume of exports from the country. Finally the reported stoppage of barter deals for manganese ore export by the Government would seem to spell a further precipitous decline in the exports. Such barter arrangements had enabled manganese exports being maintained at fairly stable levels during 1959-60. Now the discontinuance of barter deals without equivalent reliefs in other direction would certainly lead to an acute crisis in the industry.

With such odds to face, the industry is in desperate need of relief measures. The need for such measures has been emphasised in two important reports, one issued by the World Trade Department of the Indian Chamber of Commerce and the other by the officially appointed "ad hoc" Committee of the Mineral Advisory Board (May 1961). While the Government has already announced 50 per cent reduction in railway freight, it is doubtful whether this alone could provide the stimulus to exports to recapture lost grounds.

PAPER

Vagaries of Official Policy

The paper industry has taken strides during the past decade and

its progress in the last Second Five Year Plan has been quite impressive. Production of paper and board reached a record figure of 350,209 tons during the year ended March 1961 and this compares with the production of 187,000 tons achieved at the end of the First Five Year Plan. The increase in production over the Second Five Year Plan period works out to 90 per cent. As compared with industrial production too, the performance of the paper industry is excellent. While the general index of industrial production had risen by 30.6 per cent between January 1956 and July 1961, the paper industry index had shown an increase of about 85 per cent during the same period. It is significant to note that about 80 per cent of the increase in production during the Second Plan period is accounted for by existing units in the industry.

The industry is expected to double its output during the current Plan period and this is as it should be. As demand is bound to rise sharply in coming years with the rapid progress of literacy, trade and commerce. Productive capacity of the paper industry has to be expanded at a much quicker pace. The per capita consumption of paper in India is far behind that in most developed countries. Japan, for instance, has a per capita paper consumption of 103.2 lbs while in the US it is as high as 431.6 lbs. In marked contrast to these countries, India has a per capita consumption of paper of 2.1 lbs. only.

It is true that Government has sanctioned the building up adequate capacity but spokesmen of the industry are not quite hopeful of the outcome. Apart from the fact that a sizable part of the new capacity has been allotted to small units, whose ability to work economically is yet to be tested, not much attention seems to have been bestowed on whether or not licences are utilised. Speaking at the annual general meeting of the Indian Paper Mills Association in Calcutta the other day Mr Umashanker Bajoria has pointed out that several mills have not been able to take effective steps regarding their licensed expansion due to non-allotment of foreign exchange in spite of their having obtained long-term deferred payment terms from suppliers of machinery. It is the contention of the industry that it is greatly handicapped in raising capital for its expansion by the low ceiling placed on selling price of paper and boards. Moreover, its tasks are rendered doubly difficult by the excise duties on essential raw materials used in the manufacture of paper, high freight, scarcity of transport and coal, and last but not least, by the unreasonable attitude of the authorities in granting import licences. The industry is still to depend on imports for some of its raw mate-

rials and components without some of which production may even come to a stop.

The difficulties of the industry are well-reflected in the long neglect of paper mill shares in the stock market. When other industrial group shares have been booming, paper mill shares have been sluggish. If therefore in the next five years the industry is to expand to the extent planned, it was time Government considered the problems of the industry seriously and devised suitable remedies so that it is enabled to go ahead with its expansion programme without any further delay. Government would do well to note that it is much better to look into the troubles of the indigenous industry now than to be forced of a late date to sanction the import of paper and boards that may be required to fill the gap between domestic production and demand.

RAILWAYS

As Common Carriers?

A legal change due to the amendment of the Indian Railways Act confers from the beginning of this year on the customers of the railways the new form of protection. The railways owned by the State are now liable to pay damages for negligence. Though conditions as to effective, proper packing can be imposed, the liability lost cannot be evaded by any plea of contributory negligence. The Common Law in England has at last made a dent on official thinking and the only thing that railway can get away with is unpunctuality. In case of disasters, the liability for parcels cannot be abolished, even if looting were to take place. That the change in law is due to Court decisions, arguing that the railway user must have some protection against the State monopoly in transport, is obvious. The strenuous competition for smalls from lorry transport may be another reason. The private carrier shows great care in handling and keeping goods. The public or common carrier must show equal care once the customer has paid the prescribed charges. Of course, an act of God may be a good defence against claims for damage to goods in transit but acts of God today are rare and India cannot cite now acts of the King's enemies. The limited liability of the railway as bailee only is now gone. The question whether priorities in railway transport can be applied after the railways are equated with common carriers is a moot point. On the other hand, precautions against pilferage must be tightened and the cost of police work must go up. However, a revision of rates or a surcharge may help the railways to meet all likely claims arising after 1 January 1962. There is also an obligation

to keep wagons in good condition. Obsolete or old wagons must be scrapped if damage to goods carried by rail is to be avoided. The old distinction between owner's risk and the railway's risk is certainly modified, and if some goods like fireworks are made ineligible for good reasons, the railways will have to set up an insurance fund from current revenues to meet new claims under the law. It may be presumed that the railway board will hereafter set up a special fund to discharge its new obligations and that may be fixed in relation to payments made in respect of claims accepted in the past. The better packing demanded may lead to a greater demand for cases and gunny bags before goods are delivered and something will be gained by both plywood manufacture and sellers of hessian cloth in the future. So something will be gained even if insurance of goods in transit is given up because of the assumption of responsibility by the railways for goods in transit.

DRUGS

Unpatented Medicines?

A plea by Dr B. Mukherjee that patents for medicine should be abrogated may excite surprise, if not dismay. The public sector in India is competing with private manufacturers who must enjoy a degree of legal protection for the results of research paid for by them. A visiting Swiss scientist has pointed out that sale prices for drugs and medicines must be related to the expenditure incurred on research by leading manufacturers. The cost of development of new drugs has to be recovered from the consumer. Of course the excise on chemicals and drugs has raised the price and alcohol is exposed to discriminatory taxation. The higher prices charged in 1961 may impel protests but manufacturers are entitled to point out that a lot of sales promotion work is required and in many cases foreign patentees have to be paid royalties. To cancel the provision of patent law, which permits monopoly on specified conditions for a term, would mean that foreigners would not permit the use of patents in India and many would cancel agreements made for local manufacture, which only means that the public would suffer.

The theory that patents raise costs and prices can and should be rejected, if only because of the cheapening of drug prices in recent years with many foreign firms embarking on local manufacture. To withdraw protection afforded by patents, the old exception to the law against monopolies, would mean that India would have to develop her own resources without any foreign aid and rely on medicines whose qua-

lity is often suspect. The formula of patent medicines is usually known and rivals or substitutes can be made. But the brand name due to the patent is the real protection for the average consumer and the cancellation of patents only lead to reckless competition whose consequences must be worse than the alleged profiteering in proprietary medicines. The idea of anti-trust legislation is attractive but Dr Mukherjee who must know as a research worker what drugs Government hospitals get and use should have refrained from pleading that patents raise prices charged for medicines. The only responsible critic in this case can be the medical profession and the Indian Medical Council can alone offer suggestions to manufacturers about the price paid for patents, a form of industrial property that has to be respected because of international conventions. Dr Mukherjee's views may be attributed to the safety of a Government job without experience of the hard conditions of professional or business life. That, of course, is no excuse for a plea that is as much a threat to investors as to the manufacturers who rely on the goodwill created by patents.

TARIFF PROTECTION The Beneficiaries

The results of tariff protection are examined at intervals by the enquiries relating to the continuance of protection for fixed term for particular commodities. Quota restrictions also assist industry and the rise in profits is a feature. Some industries into which capital flows regularly are beneficiaries of tariff protection. India is committed fully to protection and the second Fiscal Commission only confirmed the policy of protection without conditions. In the case of chemicals, progress has followed the tariff protection and only in the case of non-ferrous metals are the results below expectation. The fact that excise neutralises the customs duty on imports in the case of cane sugar, tyres, matches or paper is one reason why the consumer does not benefit from protection.

How far protected industries have gained from foreign collaboration is a separate issue. In the case of motor cars the contribution to progress made by the tariff can be measured also by the success in making components like pistons or spark plugs. The study of production and prices in the case of footwear or woollen textiles indicates only that tariff excludes imports and the home market is reserved for Indian manufacturers as the case of pencils or fountain pen ink as high revenue duties have replaced the former protective duties.

The enlargement of imports in the case of iron and steel shows that the tariff does not prevent Government from buying abroad.

Whether domestic production is costly must be determined by reference to actual output in relation to installed capacity. The performance of protected industries is hampered by certain conditions like fuel or transport shortage, difficulties over essential imports also raise cost of production. Deprotection of industries signifies little in the circumstances of planning conditioned by resources. What matters really is whether the 1952 programme of development has been assisted by the tariff in regard to electric lamps, fans or radios. If exports too have been facilitated, the results of protection may seem fully justified. The fall in customs revenue or the extensive recourse to Central excise are undeniably results of tariff policy and India has in recent years, been moving far away from the ideal of fewer and lower tariff barriers. But an undeveloped country with an import surplus cannot help restriction of imports especially when food imports are required to overcome shortage, incidental to the rise in population. The results of tariff policy are to be found not in the rise of the public sector devoted to locomotives as well as automobiles now but in the rise of plastics, glass and, of course, rayon during the last decade.

GENERAL INSURANCE Divergent Views

Mr Baliram Bhagat, Union Deputy Minister of Finance, may think that general insurance is doing very well but the fact remains that its growth is not commensurate with the sizable development that has taken place in many sectors of activity in the country during the past one decade or so. It is a common phenomenon elsewhere that general insurance keeps pace with the progress of industrialisation. In India however it has not made much headway during the past years during which period considerable progress has been achieved in industrialisation. The only criterion that Mr Bhagat thinks necessary to apply to determine the health of general insurance is the performance of some companies which have paid high dividends. In short, he seems to think that the spokesmen of general insurance are exaggerating their difficulties while doing nothing to put their house in order. It is evident that he traces whatever handicap that may be experienced to rebating which he describes as a cancer sapping the vitality of general insurance.

While it is not to be denied that unhealthy practices still continue to be met with in general insurance, it is oversimplifying the problem to say that these are the sole causes of the sluggishness of general insurance. For it is not as though general insurance is left free to develop. It is hemmed

in on all sides by controls and regulations, and lately it has come up against competition from government controlled units which, not satisfied with the lion's share of government business, are trying to get outside business also. Although at the time of nationalisation of life insurance it was indicated that general insurance sections of the nationalised life insurance companies would be returned to the private sector, these units have continued to remain part and parcel of LIC and what is more they have been accorded preferential treatment in that they are given 75 per cent of general insurance business placed by Government. According to Mr Bhagat such business accounts for only 5 per cent of the Indian Insurers' premium income, but the share of LIC subsidiaries is bound to go up considerably in coming years as it is the declared policy of Government to expand the public sector. Mr Bhagat has scotched all hopes of an increase in their share of government business for the private companies as he has categorically stated that the decision to give 75 per cent of government business to the LIC subsidiaries will not be revised. The freedom of general insurance is also being severely curtailed by the provision for compulsory ceding of a part of the risk to the Indian Guarantee, a Government concern and the Indian Reinsurance Corporation on the plea of conserving foreign exchange. Government does not think it necessary to assess the repercussions of this on the business of Indian insurers who have already satisfactory reciprocal arrangements with overseas underwriters. The fact that despite official assurance against nationalisation veiled threats of such a possibility for remedying alleged malpractices are intermittently held out, does not help allay apprehensions.

PROHIBITION A Receding Ideal

The States that are partially dry like Kerala ask for compensation just as Bengal puts in a claim for grants. The ideal of Prohibition has not been accepted fully, because the Central Government has not applied the policy in the territories it administers though Pondicherry has recently declared in favour of prohibition. The 'wet' States are not enthusiastic and the postponement of Prohibition in a part of Andhra Pradesh is due to regional difficulties. Full payment for excise revenue lost is a demand easy to press. The hope that India would be wholly dry in a few years has been foiled by the States' eagerness for revenue. In the case of Jammu and Kashmir the tourist trade would certainly suffer. And Prohibition, if easy to apply in the Andamans, can hardly be tried out in the Naga Hills. The Cen-

tral Prohibition Committee has been unable to convince the States. The election programme leaves out Prohibition and it is patent that India is now reconciled to a system of local option. Whether taverns should be run by Government and the drink trade fully nationalised may claim consideration in future. For it is patent that temperance can be soon put into effect only by Government excluding the supply of drink in clubs and hotels and by raising extra revenues through sales tax. The demands put forward by Orissa or Kerala may be due to a fear that the Finance Commission will not be as liberal as expected. But the centralisation of excise including that on liquor may be suggested by some, so that liquor like opium comes under the exclusive control of the Centre and only sales tax is applied by the States. But the question of country liquor or toddy must also be dealt with under Central excise and administrative difficulties may be enormous.

US The Pattern of Taxation

Throughout the US, about this time, wage earners are receiving little slips of paper called withholding statements, telling them how much they earned during the year and how much was withheld from their earnings for the payment of federal income taxes. They have until April 15 next to complete the final accounting of their tax bills, indicating how much more they still have to pay or how much the government must refund them because of overpayment.

Some 80 per cent of the federal tax dollars are raised by the federal income tax, which has been on the statute books since 1913. In the current (1962) fiscal year ending next June 30, an estimated \$67,000 million is being raised in this way, of which some \$45,000 million is coming from individuals and some \$22,000 million from corporations. The federal government has no property tax, its excise taxes are limited in scope and magnitude, and its customs receipts are relatively small.

Property and excise taxes, on the other hand, are the principal sources of revenue for state and local governments, many of which also levy some income taxes of their own. In all, Americans pay more than \$100,000 million in taxes every year to federal, state and local governments.

The income tax thus emerges as a mainstay of the federal financial structure in the United States. It also is a tax which directly affects virtually every American. Every year, the US Government receives about 60 million indi-

vidual income tax returns covering some 100 million adults, out of an adult population of 108 million.

It follows, therefore, that a primary goal of US fiscal policy must be that of maintaining the income tax in good working condition. Underlying this aim are two basic and related elements: Equity and economic growth.

It is no less than a matter of morality to say that the tax structure should treat each taxpayer with scrupulous fairness. In the United States, this concept is expressed through a graduated tax schedule, whereby not only the tax but also the tax rate goes up along with income.

At the same time, the standard of equity or fairness must be applied in the light of many individual variations which take into account the special circumstances affecting a tax-payer's financial status. These may include such factors as extraordinary medical expenses, charitable contributions, interest payments on loans, certain types of necessary business expenses, and tax claims of state and local governments.

It is this concern with equity and with the responsibility of every segment of the population to bear its full share of the tax load, no less than the concern with government revenues, that has prompted the administration of President Kennedy to recommend changes in the treatment of certain types of business and dividend income.

Another manifestation of equity is the matter of compliance. Clearly, in a democratic society the government has a responsibility to require full compliance with tax regulations, and to root out and discourage evidence of non-compliance.

The other major aspect of tax policy in the United States relates to the nation's over-all economic strength and the well-being of its people. These considerations require growing investments in education, health, transportation, urban redevelopment, and the many other public services and facilities that contribute to the enjoyment of higher living standards. Increased public outlays for these purposes, as well as for national security, obviously depend to a large degree on government tax income. They can be met more effectively, moreover, if the full potential of economic growth can be realized.

In a country that places great stress on economic growth, all institutions and policies must be scrutinized in relation to the tax objective. This includes the tax system, which should contribute to growth, and not retard it. The tax system should offer incentives for increasing the rate of capital formation and of industrial and agricultural progress so as to obtain the needed increases in productivity.

Thus, the Kennedy administration has proposed certain tax changes designed to promote increased business investment in machinery and equipment, to the end that the resulting modernization and expansion of the nation's productive capacity will help achieve a more vigorous economy.

Americans are more fortunate than some other peoples, perhaps, in that their tax system is fundamentally sound. The task they face is one of constant improvement of their tax structure, rather than its complete building or rebuilding. But even the reforms of improvement are not accomplished painlessly or overnight; they require patient and unremitting exploration of the issues and attention to the details of erecting the kind of tax structure needed to meet the nation's requirements.

The ultimate goal, in the United States and in all free countries everywhere, is a tax system that constantly and truly works in the national interest.

INDO-BRITISH TRADE Trends in 1961

Indo-British trade in the first ten months of 1961 showed a better showing than in the corresponding period of the earlier year. Exports from Britain to India were valued at £133 million in contrast to £126 million in the relevant period in 1960. Exports from India to Britain rose by £2 million to £116 million. Among the exports from Britain non-electric machinery figured as the biggest single item accounting for £36 million. Next in order comes ships and boats which earned for Britain £26 million. Exports of electric machinery was of a lesser order at £11 million compared with £12 million in the corresponding period of the previous year. The value of exports of iron and steel, at £10.8 million, recorded a fall of £1.2 million and that of vehicles and aircraft exports was marked down at £13 million from £18 million in 1960. Exports of chemicals remained stagnant at £11 million.

Among the exports from India to Britain, tea topped the list. Total earnings from tea export during the period under review looked up by £4 million to £46 million. In terms of value, tea accounted for fifty per cent of the aggregate tea imports into Britain from all sources. Exports of tobacco also increased to £9 million in 1961 from £8 million in the previous year. Exports of oil-seed cake and meal was a shade higher at about £9 million from £8 million. The value of exports of miscellaneous textile manufacturers declined by £1 million to £8 million. A fall in the earnings from exports of leather and leather goods was reported and leather placed at £9.5 million in 1961

in contrast to £10.9 million in 1960. A similar decline in the export of cotton yarns and woven fabrics was noticeable which was marked down by £1 million to £11 million. Collaboration agreements between British and Indian firms covering a wide range in heavy and light engineering industries have risen from 27 in 1957 to 251 for the period April 1959 to September 1961. A breakdown of figures for the period April 1949 to September 1961 shows that West German firms took second place to British firms with 151 collaboration schemes, followed by the USA (138) and Japan (67). Switzerland, Sweden, Italy, Belgium, Poland, Australia, Norway and Czechoslovakia shared, among them, 193 agreements.

INDO-POLISH TRADE Arbitration Machinery

An agreement between the Arbitration Tribunal of the Federation of Indian Chambers of Commerce and Industry and the Polish Chamber of Foreign Trade, Warsaw, provides a machinery for the amicable settlement of commercial disputes arising between parties in India and Poland. The arbitration clause to be included in contracts between Polish foreign trade organisations, on the one side, and the Indian parties, on the other, runs as follows:

"All disputes, controversies, or differences which may arise between the parties, out of or in relation to or in connection with this contract, or for the breach thereof, shall be referred to and settled by arbitration.

In case a Polish legal person is sued, the arbitration shall take place in Poland at the Arbitration Court at the Polish Chamber of Foreign Trade in Warsaw or—in application of the S 23 al. 2 of the Rules of the said Arbitration Court—in another town in Poland, always in accordance with the Rules of the said Court. In case an Indian national, firm or company is sued, the arbitration shall take place in New Delhi at the Tribunal of Arbitration of the Federation of Indian Chambers of Commerce and Industry in New Delhi or upon application by both parties in Bombay, Calcutta or Madras in India in accordance with the Rules of the Tribunal of Arbitration of the Federation of Indian Chambers of Commerce and Industry."

This agreement is the fifth in the field of international commercial arbitration entered into by the Federation with commercial organisations abroad. The first four agreements were signed with Japan, the United States, the German Democratic Republic and the Soviet Union.

NICKEL Steep Rise in Output

The nickel producing capacity in 1961 of the countries outside the Iron Curtain and Cuba, was estimated at the record figure of 625 million pounds annually. This was fifteen per cent or 95 million pounds above the 1960 capacity. This production capacity exceeded consumption of nickel in 1961 by about 125 million pounds. In addition, Cuban nickel was also available for sale in Europe. While US consumption was above that of 1960, Europe's consumption was somewhat lower than the 1960 record level but demand there appeared steadier at year end.

Countrywise break-up of this consumption is: US 44 per cent, UK—16 per cent; European Common Market countries—20 per cent; Japan—9 per cent; Sweden—4 per cent; Canada—2 per cent; and all others—5 per cent. The industry continued its research and marketing activities aimed at increasing the use of nickel in new and existing fields. A series of revolutionary new ultra high strength steels, containing 18 to 25 per cent nickel was announced. A significant part of the increase in free world production capacity in 1961 came from International Nickel's new fully integrated project at Thompson, Manitoba, which started commercial operation before mid-year. Its annual capacity of 75 million pounds brought the Company's total capacity from operation in Canada to over 385 million pounds. Estimated 1961 capacity of other major nickel products: Canadian producers—95 million pounds; Societe Le Nickel of France—over 50 million pounds; US producers—23 million pounds; Japanese producers, refining from importers—45 million pounds.

An extensive programme in the UK to promote consumer confidence in quality nickel plating had its second successful year. In France a competition aimed at promoting wide use of nickel stainless steel window frames was sponsored by a committee consisting of architectural, building and metal societies and nickel producers.

ALKALI CHEMICAL An Example to Emulate

The Alkali and Chemical Corporation of India Limited has concluded an Agreement with its Employees' Union which is a noteworthy example of labour management cooperation for negotiated settlement of matters regarding labour management relations. The Agreement which is to run for a period of five years beginning from 1 January 1961 has been

voluntarily accepted by both the parties and is aimed at giving permanent benefits to employees of the company by enhancing substantially the minimum and the maximum basic rates of pay for different grades. In terms of the agreement, the Company has also agreed to five months' bonus for the three years 1960-1961, 1961-1962 and 1962-1963. As a result of the agreement, the salary bill for the workers is expected to go up by 74 per cent as compared with 1956. The average earning per month of an employee of the Company in 1956 was Rs 132. In 1957 this had reached Rs 149, in 1960 it was Rs 200. The scale prescribed under the new Agreement will bring it to Rs 230 per month. The revised wage structure will benefit all categories of non-management workers. The rise in basic pay under the Agreement will vary from Rs 2.08 to Rs 6.24 per month for 500 process and maintenance workers and another 300 will receive increases varying from Rs 7.8 to Rs 16.32 per month with retrospective effect from 1 January 1961. The Agreement also provides for a special allowance of Rs 15/- per month for clerical staff in the plants who work for 48 hours a week and also for extension of overtime allowance to all categories of non-management staff.

ICICI

Biggest Underwriter

The Industrial Credit and Investment Corporation of India has just completed seven years of its very useful existence. This institution has been playing a vital role in capital formation and with the acute stringency in foreign exchange in the country in recent years it has come to the rescue of Indian entrepreneurs who found it not an easy task to convince New Delhi of the importance of their new ventures. Its operations during the past few years have steadily increased and by the end of 1961, the net assistance of all types i.e., loans, direct subscription and underwriting, sanctioned by the Corporation to private industry amounted to approximately Rs 42 crores of which Rs 19 crores was in foreign exchange and Rs 23 crores in rupees. That in rendering assistance, the ICICI has not been unduly conservative is borne out by the large number of enterprises which have received help. The number of companies to which financial assistance was sanctioned was 166 i.e. 91 for rupee assistance and 75 for foreign exchange loans. Of these, 33 companies were granted both rupee and foreign exchange. The ICICI has been enabled to grant foreign exchange loans as it has obtained three foreign exchange

loans from the World Bank, amounting in all to \$40 million. The DLF has granted a loan of \$5 million. These together with rupee borrowing from the Government of India amounting to Rs 17.5 crores brings the total capital and borrowed resources of the corporation to the equivalent of Rs 44 crores.

It is perhaps in the field of underwriting that the ICICI has come to occupy a major role. From 1 January 1956 to 30 June 1960, of the total amount of newly issued capital underwritten, viz Rs 35.2 crores, the share of ICICI was no less than Rs 6.92 crores, or roughly 19 per cent, making it the largest single underwriting institution in the country. The ICICI has earned a reputation for thorough scrutiny before accepting to underwrite an issue and investors have come to equate the fact that ICICI is underwriting an issue to its high quality. The corporation has been instrumental in arranging participation loans and other operations in which Indian or foreign financial institutions combine together to meet the requisite finances. It has also played a key role in introducing and familiarising new forms and concepts of term finance. With the great magnitude of industrial expansion envisaged during the Third Plan, there will be a long queue of new issues and consequently the ICICI will be called upon to play a much bigger role, than hitherto. The continued stringency of foreign exchange will bring more applicants to the ICICI for foreign loans but in this field its future role will be conditioned by the availability of foreign loans to itself as the available funds have already been committed. It is to be hoped that the ICICI will be able to arrange for further sizable foreign loans so that private enterprise will continue to have an alternate source.

NEWS IN BRIEF

The Government-owned Indian Oil Company will commence marketing petroleum products refined in India from Indian crude oil from 1 January. The IOC, which was only marketing oil products imported from the USSR will market the entire production from the Nunmati refinery.

The Oil India Limited has so far drilled 116 wells in Assam, 87 of which have already proved commercial producers. Drilling at both Nahorkatiya and Moran areas is progressing apace. The ratio of successful wells has been proved higher in the Nahorkatiya area than in Moran.

With a view to promoting small scale undertakings in the State, the UP Government has decided to grant a subsidy for power consumption to bonafide entrepre-

neurs. The subsidy, which would be admissible from 1 April 1960, would be of the order of 9 nP per unit for consumers who are not paying less than 16 nP per unit excluding metre rent and duty.

The MP Government has set up a Small Scale Industries Corporation with an authorised capital of Rs 20 lakhs for fostering the development of small scale industries in the State.

The first production unit of the Rs 14 lakhs clay washing plant of the Neyveli integrated project was opened by Mr K. C. Reddy, the Union Minister for Industries and Commerce, on 30 December 1961. The capacity of the project is one and quarter tons of washed clay per shift hour.

Three West German firms, the Demag Ag; Divsburg, AEG, Frankfurt and OFU, Dusseldorf, have entered into an agreement with the Mysore Iron and Steel Works, Bhadravati for providing the equipment and technical know-how for increasing the steel production of the factory.

India was the leading supplier of refined sugar to Malaya during the first six months of 1961 accounting for 46,600 tons valued at \$14.4 million. India's exports to that destination in 1960 amounted only to 3,550 tons valued at \$1.27 million.

Production of saleable steel by the Indian Iron and Steel Company in December last amounted approximately to 65,031 tonnes in contrast to 62,119 tonnes produced in November. Pig iron production during the month aggregated 103,038 tonnes as against 103,064 tonnes in the previous month. Despatches of saleable steel during the month under review totalled 87,203 tonnes against 80,837 tonnes in November. 7,500 tonnes of finished material were left undespached owing to the shortage of suitable types of railway wagons.

The value of all minerals produced in the US in 1961, according to the estimates of the Bureau of Mines, amounted to \$18,000 million. Preliminary figures compiled by the Bureau indicate that natural gas and petroleum were largely responsible for the small gain over the previous year. Increased output of these major fuels more than offset declines in metals. Gold production fell to its lowest peacetime level in 77 years; Silver production was a shade higher.

Sales of rubber from the Board of Trade stockpile in December last aggregated 1,000 tons for delivery as follows: December 1961 75 tons, January 1962, 565 and February 360 tons.

The West German Engineering industry produced machinery

valued at 28,000 million marks during the past year, showing an increase of about 15 per cent over the previous year's output. The exports also rose steadily and shipments reached 40 per cent of the output against 38.1 per cent in 1960. The value of exports amounted to 11,200 million marks.

According to the United States Agriculture Department, world tobacco production in 1961 was 807 million pounds, or about 50 per cent less than in the previous year.

Licence has been granted by the Government of India to Messrs Kothari and Sons for setting up a fertiliser factory at Tuticorin, Madras State, in collaboration with a US firm. The factory will cost Rs 28 crores and will produce 1 lakh tons annually in terms of nitrogen.

The Commissioners for the Port of Calcutta, with the approval of the Government of India, have issued 4½ per cent debenture loan 1961-71, which has been taken up by the Commissioners themselves for the investment of their various funds and for subsequent sale as and when necessary. The details are as under: Amount of the loan Rs 1.5 crores. Period of the loan — 10 years. Date of issue — 29 November '61. Date of repayment — 29 Nov. '71. Rate of interest — 4½ per cent. Issue price — Rs 98.75 per cent.

PERSONAL

Mr Pravinchandra V. Gandhi has been unanimously elected as the President of the Indian Merchants' Chamber for the year 1962. He was the Vice-President of the Chamber last year and has been a Member of the Committee of the Chamber for the last several years. He has represented the Chamber on several public bodies from time to time. He is also a Member of the Executive Committee of the Federation of Indian Chambers of Commerce & Industry, New Delhi.

Professor J. B. S. Haldane, lately Research Professor of Indian Statistical Institute, Calcutta, has been appointed Head of the Genetics and Biometry Research Unit at Barrackpore in West Bengal.

Mr Michael Kallivayalil, Mr K. V. Thomas and Mr Jacob Thomas from Kerala and Mr Muthiah from Madras were elected to the Indian Rubber Board from the larger growers' constituencies.

Mr Harish C. Jain, the Chairman and Managing Director of National Advertising Service Private Limited, was elected President of the Advertising Agencies Association of India at its sixteenth annual general body meeting held on 29

Clive Street Gossip

"I must have liberty
Withal, as large a charter as the wind
To blow on whom I please"

—As You Like It.

LAST week-end brought the Calcutta Corporation a windfall of Rs 19.99 lakhs for arrears of rates on properties belonging to the Defence Ministry in the city. If only the Corporation were an institution in which we can take a little decent civic pride, we might have thrown up our hats in joy at this unexpected piece of luck: or alternatively felt some honest anger at the cavalier way the Government treats the Corporation. As it is, with the breath of a new scandal about electric poles assailing our nostrils, many may feel that it is tempting Providence—putting such large sums in its hand. But some questions of larger relevance must be asked. It would appear from the rather scanty reports in the Press, that the payment was in respect of arrears from 1945. The Defence Ministry, the reports say, simply stopped paying about that time when they felt that the Corporation was being greedy. Then followed the usual correspondence and an "on account" payment was made in 1959 in the sum of Rs 12 lakhs. The present payment falls short of the Corporation's original claim by about Rs 2 lakhs. Moreover, this payment does not cover certain dues on property constructed after 1937 for which the Mayor is to make a pilgrimage to Delhi. Meantime, the civil departments of the Union Government go on owing rates for the last five years and such dues amount to Rs 8 lakhs. Now, which of us dare follow these examples from high places? How about, for a change, refusing to pay the quarterly rates when we think that the assessment is unjust, as it most probably is? Shall we find the Mayor waiting for fifteen years and making a trip to our place and make us see reason? Simple folks who are daily being threatened with distraint of their furniture for the measly sums they owe Authority, local and national, will wonder how the high and mighty get away with it. What prevented the Corporation—and the Government—from following the normal procedure of paying up under protest and then arguing? Is it that the Corporation felt that it cannot afford to antagonise so influential a rate payer, who puts up part of the money for tamashas like civic receptions for visiting celebrities? What is the point of spouting clichés about local bodies being the grass roots of democracy, when they are being treated in this fashion? Who will believe our professions of Equality before Law when the Government gets away with a default for which a humbler man will have his chattels attached? Which of us, for example,

dare delay payment of our telephone bills? And yet the Post and Telegraphs Department was moved some months ago to protest against arrears of telephone charges from Government departments. It would be a good idea if the Post Office took courage in both hands and cut off the erring department's connection. Why not? It thinks nothing of doing it to a private citizen. Commercial establishments have long become inured to the delay in payment from the Government and dare not protest for obvious reasons. Even less excusable is the kind of callousness that gets exposed by pathetic letters from research students whose monthly stipends are allowed to fall into arrears. Hereabouts bureaucracy's little eccentricities cease to be funny.

The Indian Institute of Public Opinion has come out with some interesting findings about the probable results of the coming general election. Based on a survey of an "effective" sample of 3000, it skims too thin a layer of public opinion. Even so, it is unlikely it will find itself in the position of Dr Gallup after Harry Truman got elected President for a second term. Congress, of course, is on velvet, though it appears there is a fair-sized (22 per cent) cat on the proverbial wall. What is worse from the Congress point of view, it is likely to jump on the Swatantra or Jan Sangh side of the fence. Between April 1959 and now, Congress is stated to have made substantial progress in Maharashtra and Gujarat—obviously in consequence of the bifurcation of the former Bombay State whose creation cost the Congress dearly in the last election. Punjab is reckoned as the great question mark. Both for the Lok Sabha and the State Assemblies, the affirmative votes were about 45 per cent for the Congress, the next position for the Lok Sabha being occupied by the Communists at 12.3 per cent and for the State Assembly by the PSP at 9.5 per cent. It is also not surprising that the Congress appeals most to the age-group 36-50 and that the Communists have the largest following among those between the ages of between 21 and 35. (I think it was Shaw who said that anyone below twenty-five who is not a communist is a knave and anyone above twenty-five who is one is a fool). Regionally, it is rather surprising to find that Andhra (59.3 per cent) is the biggest supporter of the Congress, though Rajasthan's rejection of Communists (where they could muster only 0.7 per cent) is not very

surprising. Detailed figures for the region-wise support for the Swatantra Party should make interesting reading, but my paper does not give it. In Delhi the Congress and the Jan Sangh share the popularity almost equally, a fact affirmed by the last bye-election there. In West Bengal, the tussle is between the Communists and the Congress in which the Congress has the edge (41.3 per cent against 32.6 per cent). The Communists have probably brother Mao to thank for this, though of all the State Units, West Bengal has been the most committed to the Eastern Church of Communism and all that goes with it. The local Party paper ostentatiously printed Stalin's photograph the day President Brezhnev arrived in Calcutta. Reports also say that it was with difficulty that the West Bengal Unit could be prevented from celebrating Stalin's birth day. All this is no doubt fun, but it is costing them votes. Whichever way you look at it, it looks as though the Congress is going to have another innings.

A subsidiary finding of the poll has been to the effect that Mr. Jaya Prakash Narayan is fancied as the most suitable successor to Mr. Nehru. It is not very clear whether Mr. Narayan's own wishes in the matter entered in the calculations of those who wanted him to guide India's destinies after Mr. Nehru. Mr. Narayan himself, with one of his feet in and the other out of politics may continue to keep people wondering. A finding more amenable to verification and nearer probability is the other names fancied for the guddi: Mr. Krishna Menon and Mr. Morarji Desai. Pundits may infer from the fact that both have about the same support (6.7 per cent and 6.6 per cent respectively against Mr. Narayan's 11.1 per cent) that the India of, say, 2000 A.D. is anybody's guess.

I am not surprised that the State Department in Washington has been obliged to dissociate itself from some of the home truths that Dr Kissinger delighted his audience with last week in Delhi. Pakistan's amour propre was ruffled by his rather tart remarks about its flirting with China to spite India and his remarks on Portugal and NATO must have given offence in certain other quarters. But what I found most interesting in Dr Kissinger's remarks was his assessment of the role of neutrals in international disputes in future. I must say I entirely agree with his advice that we should resist the temptation of acting as "judges or mediators" in disputes that don't concern us. I shall no doubt be told that the world has shrunk and peace is indivisible et al. and that the future of this planet is very much a question that we ought to take a hand in. But there are a

number of nations, Sweden for example, which manage to lose no sleep because of this circumstance. I don't see why we should care. Indeed, it is difficult to resist the impression that too often in the past, India had given the impression of being an international busybody rushing a trifle too eagerly to pour oil on troubled waters. Often enough. I agree, the dubious honour was thrust on us. The consequence has been, first, the kind of involvement in the Congo and secondly the kind of misunderstanding of our basic attitudes leading to sharp denunciation when we do something that is natural. The alleged double standards that we apply for judging international behaviour has its obverse in the rest of the world applying to us a standard of behaviour we have not, or should not have, staked any claim to. Assuming that the feeling references to 'Gandhi's India' in the Goan context is not a piece of interested humbug, it is clear that there is a basic misunderstanding here. Countering such misunderstanding would have been a simpler matter if we ourselves have not adopted, or at least smugly acquiesced in, the halo of righteousness. First, there is here a confusion about Gandhi's own attitude to violence. Mr. Kingsley Martin has shown in an article in the New Statesman how naive it is to assume that Gandhi would have frowned on the Goan March. He has cited the Kashmir analogy and pointed out that the military action in Kashmir had Gandhi's blessing. I find that Rajaji has distinguished the latter by saying that in Kashmir it was a case of honouring a pledge given to the ruler. I think this is characteristically legal quibble. In any event, it is dangerous to assume that Gandhi would have disapproved. Secondly leaving Gandhi out of the argument it is clear that modern Indian polity has none of the attributes of the Sarvodayan Society that Gandhi preached and it is hypocrisy and worse to perpetuate the myth that it has. Neither in our politics nor in our economics and sociology have we tried out any of the daring experiments that Gandhi envisaged. We have instead played safe: at a Seminar in Poona on Economic Growth last year,—there is a brilliant review of it in the December issue of the Encounter, to which I shall return on a future occasion—the non-Indian delegates showed a far greater appreciation of Gandhian polity than the Indians who attended it, who plumped for the kind of industrial society of the West. In the political context, India is no better and no worse than any other modern State striving to hold its own in an international community that keeps ticking because there is the ultimate sanction of force behind what it wants to do and what it can get away with. I for one am greatly relieved that the world has made the shocking discovery that we have feet of clay. We should complete this revelation about ourselves by conveying to our saddened friends the further intelligence that the rest of our anatomy, like theirs, is of the same material.

COMMONWEALTH Cooperation in Education

THE Commonwealth Education Conference currently holding its second session in New Delhi is a striking demonstration of the changing pattern of the ties that keep the Commonwealth as a going concern. While on the one hand apprehension is widespread that Britain's integration with the European Community would spell the disintegration of the Commonwealth, the imperatives of educational progress are keeping the member States, some of whom have only recently acquired that status, from drifting too far from old moorings. Language is the tool of learning, and, in English, countries of the Commonwealth have a highly efficient tool. Throughout the Commonwealth, English is either the medium of instruction or an important second language. The advanced countries of the Commonwealth can, therefore, give more effective assistance to the others trying to catch up with the modern world of science and technology than other equally advanced countries having a different language. So, while the links of trade may be loosened, English remains a powerful binding force.

The idea of Commonwealth cooperation in the educational field originated at the meeting of Commonwealth Finance Ministers held at Montreal in 1958, when the possibility of Britain joining the European Common Market was not much of a live issue. The Conference realised that the economic future of the developing countries was linked with their educational progress and suggested that the possibility of cooperation among Commonwealth countries in this connexion should be pursued. In response to this suggestion the first Commonwealth Education Conference was held in Oxford in July 1959.

The Oxford Conference, Dr V. S. Jha, Director of the Commonwealth Education Liaison Committee, told a press conference last week, indicated the broad areas of cooperation in educational matters. There were: formulation of a Commonwealth Scholarship and Fellowship scheme to assist developing countries lacking facilities for higher education; training of key personnel of education by provision of facilities to train staff for teachers' training colleges; provision of teachers for developing

countries; development of technical education through establishment of regional centres for training teachers in technical subjects.

The progress achieved in carrying out the decisions of the Oxford Conference will be reviewed at the present session. This session will also explore the scope for widening the area of cooperation and discuss other common problems, such as possibility of cooperation in the provision of text books, social education, educational problems of rural areas, and the financial problems of educational expansion. The Conference will also consider whether it will be worthwhile to hold conferences of experts on specific subjects, and in particular, on the following: School Building; Teaching of Science and Mathematics; Use of Audio Visual Aids including Television in Education.

The scheme of Scholarships and Fellowships, said Dr Jha, had worked extremely well. At the first conference itself, member countries had come forward with the offer of 1000 scholarships. India had offered 50 scholarships under the Commonwealth scheme. India had also instituted a scheme for award of teacher training bursaries under which 225 bursaries will be available over 3 years from 1961. Under the scheme for providing teachers, 53 teachers from India had taken up service in Nigeria.

So far the scholarships under the Commonwealth scheme are only available for post-graduate studies and are not, therefore, of help to small countries and territories which do not have institutions of education up to graduate level. The present session of the Commonwealth Education Conference will consider the possibility of awards for basic professional training and undergraduate study not available in the student's own country.

Britain has sent the largest delegation under the leadership of Sir David Eccles, Minister for Education, to the Conference which will be attended by over 180 delegates from 13 Commonwealth countries. The Indian delegation of 46 members is the second biggest, and is led by Dr Shrimani, Union Minister for Education.

Law Reform

A Bill for Amending the Law of Acquisition and Requisitioning Land, based on the 10th Report of

the Law Commission has been drafted and the Ministry of Food and Agriculture will take further action on it. A draft Bill has also been prepared to amend the Negotiable Instruments Act, 1881, which was discussed in the Law Commission's 11th Report, and has been forwarded to the Ministry of Finance for comments. The 12th Report on the Income Tax Act, 1922, has been implemented by the Income tax Act, 1961. Amendment of the Sale of Goods Act was suggested in the 8th Report. A Bill was passed by the Rajya Sabha and is now pending in the Lok Sabha. The report of the Commission on the Contract Act has been circulated to the State Governments and a tentative draft Bill is under preparation. The Commission has so far submitted 21 reports and the Central Government, it is stated, has taken action on almost all of these reports.

Deposit Insurance Corporation

The Deposit Insurance Corporation Act has been brought into force from 1 January, and a separate notification has been issued constituting the Corporation effective from the same date. The Corporation is an autonomous body with a paid up capital of Rs 1 crore wholly allotted to and subscribed by the Reserve Bank. The Act provides for a five member Board of Directors. The Governor of the Reserve Bank will be the Chairman of the Board. The other members are: Mr M. V. Rangachari, Deputy Governor of the Reserve Bank, Mr A. Bakshi, Joint-Secretary, Ministry of Finance, Department of Economic Affairs, Professor G. S. Dewan, Retired Professor of Actuarial Science at the Sydenham College of Commerce, Bombay and Mr S. N. Desai, President of the Institute of Chartered Accountants of India.

The Act requires that all commercial banks functioning normally should be registered by the Corporation as insured institutions within one month of the date on which it is brought into force. There are 293 Banks in the country eligible for registration, and it is anticipated that all of them, including the State Bank of India and its eight subsidiaries, will be registered within the prescribed time limit. In return for cover to the extent of Rs 1,500 in the case of each depositor, the insured banks will be required to pay at quarterly intervals a premium of 5 p per hundred rupees per annum on their deposits. The limit of the insurance may be increased at any later stage beyond the sum of 1,500 if this is considered necessary. With the establishment of the Corporation, it is expected that the commercial banking system will be improved and strengthened. It is estimated that 75 per cent of the total number of deposit accounts in commercial banks will be fully covered by the arrangements now being brought into force.

Development Council for Glass and Ceramics

The first meeting of the newly set up Glass and Ceramics Development Council was inaugurated by Mr Manubhai Shah, Minister for Industry, on 6 January. This Council, the fifteenth of its kind, has been set up to recommend measures for the development of the industry by ensuring maximum production, improved quality and reduced cost. The Council will suggest ways and means of securing fuller utilisation of installed capacity, promoting standardisation of products, for increasing exports and also for reducing dependence on imported ingredients. The Council will also concern itself with measures for increasing labour productivity and suggest measures for securing safety and better working conditions. The Council has set up three panels for Glass, Ceramics and Refractories.

The Minister of Industries, in his inaugural speech, stated that sufficient capacity had been licensed in the main field of ceramics, refractories, glass and glassware to cover the requirements expected to arise towards the close of the Third Five-Year Plan. He also expressed the hope that the Council would find ways and means to double the present level of exports of about Rs 25 lakhs within the current year. Many new items, he said, had been added to the field of production of Glass and Ceramic industries and several new ones like fibre glass, plate glass, crystal glass, wired and figured glass, glass insulators, special type of refractories and superior quality sanitary ware and laboratory glassware were expected to be produced in the near future. He was confident that all the major types of optical glass required in India would be produced by the Glass and Ceramics Research Institute, Calcutta, before the close of the current year. The Minister called upon the Industry to develop indigenous know-how and said that the work done by the National laboratories, particularly the Central Glass and Ceramics Research Institute should be fully utilised. He also added that a National Productivity Team on Glass and Opticals would shortly go to Germany, the UK and the USA to study the latest techniques of production so that these could be usefully adopted in India.

RALLIS INDIA LIMITED

Closure of Transfer Books

Notice is hereby given that the Transfer Books of the Company will be closed from 27th January, 1962 to 15th February 1962, both days inclusive.

By Order of the Board
KENNETH SHEPPARD
Secretary.

16, Hare Street, Calcutta.
3rd January, 1962.

Markets

JUTE Gunny Output to be Kept Up at High Level

The jute goods market has been displaying an irregular trend during the past few days, following the publication of the figures pertaining to stocks of jute goods at the end of December 1961. Total stocks are lower by 1,200 tonnes at 55,900 tonnes as compared to the previous month and they are lower by as much as 25,600 tonnes as compared to the corresponding date of last year. The stocks of the two principal categories have declined: hessian stocks at 16,100 tonnes by 1,600 tonnes and sacking stocks at 29,100 tonnes by 500 tonnes. Stocks of other goods at 10,700 tonnes however are higher by 900 tonnes. The reaction of the market to the publication of the stock figures is to mark down prices of sacking section. The reactionary trend is confined to heavy goods section while the hessian section is ruling steady, especially for ready delivery goods. The decline in sacking prices despite a fall in stocks is presumably due to the belief that in the context of increased production, demand for

this category of goods is not considered quite satisfactory.

It would appear that burlap consumers overseas are not at all pleased with the present trend in the primary market. Having waited in vain for long for prices to decline, they have been obliged to buy ready delivery goods. This has resulted in a squeeze in ready hessian with the inevitable result of a rise in price levels. This state of affairs is continuing for the past one or two months but it has been expected that with the increase in production since the middle of November the supply position in hessian would considerably ease. The expectation has not materialised as the demand has continued to be far in excess of supply. It is the continued squeeze in hessian that prompted the Indian Jute Mills Association to extend the period of increased production upto the end of the current month even though originally it was announced that mills would work with 7½ per cent looms sealed only up to the end of December 1961. In the light of the stock position at the end of December and the continued demand for hessian, the IJMA has again deemed it necessary, as a temporary measure to relieve the continuing shortage of ready goods, that mills should continue to be

allowed to operate, the additional 2½ per cent of the looms unsealed from 13 November, 1961 and also the further 2½ per cent unsealed since 1 January 1962 for a further period of two months until the end of March 1962. It is pointed out that despite the fact that mills will be working at a very high level of production with only 7 per cent of the looms sealed in the next 2½ months the IJMA has, as a further measure of relieving the shortage of ready goods, agreed that such mills as are in a position to operate more looms should be permitted to do so to the full extent of their ability from 15 January to the end of February 1962. Along with these steps to increase production of jute goods, the IJMA has taken action to ensure that raw jute prices are not unduly depressed. It has decided to issue a supplementary quota of approximately 3 lakh maunds of jute to be purchased by the mills during the current week ending 13 January 1962.

Jute goods production has already reached a high level. During December 1961 total output is placed at 97,600 tonnes as compared to 93,700 tonnes in the previous month. The hours worked in December are 208, the same as in the previous month. The rise in production is therefore solely due to the increase in the number of looms. 2½ per cent looms were unsealed only with effect from 13 November and so only in December the full effect of this unsealing has been felt. Of the December output of 97,600 tonnes, hessian accounts for 37,800 tonnes as compared with the output in November of 36,400 tonnes, sacking for 49,600 tonnes as compared with 47,200 tonnes and other varieties for 10,200 tonnes as against 10,100 tonnes.

With the unsealing of a further 2½ per cent looms with effect from 1 January, production will be up by another 3000 tonnes or so per month till the end of March. During part of this period output may even be higher as mills have been permitted to operate as many looms as possible between 15 January and the end of February.

Now that it has been made clear that the industry will continue to operate at a high level of production for the next three months the present squeeze in hessian and the resultant high prices may not last long.

IJMA's decision to issue a supplementary quota for mill purchase of raw jute is timely as the trend in raw jute has been rather disturbing. Sellers have been very keen to do business while pressure from arrivals has been steadily increasing. Indications were that now and then prices were quoted even at below the minimum levels.

TEA Prospects

The sharp fall in Tea prices, which had occurred in November, was partially arrested during December. With the beginning of the New Year, a much improved demand at higher prices is evident for the majority of the offerings. It appears that the bottom of the market has already been reached for clean black teas. But, with ample supplies to choose from at competitive prices, prices for staly and poorly-manufactured teas are expected to fall still further.

In this connection, the latest monthly bulletin, issued by Messrs J. Thomas & Company, states: "The North Indian crop up to the middle of December shows an increase of nearly 32 million kgs over the previous season and this factor will obviously prevent any marked improvement in prices from now till the final disposal of the crop. Usually, by the end of January, out-market buying slackness considerably, as their requirements get filled or diverted to other centres as the quality of the offerings is mainly "end-of-the-season," which does not appeal to the majority of the exporters. Thus, the market will be dependent on buying for internal consumption, which is becoming an increasingly important factor. It is anticipated that, at the present rate of weekly offerings, export sales will be completed late in April, while Dust sales will continue well into June".

In the Export Sale held in Calcutta this week, offerings were 75,151 packages. There was a strong demand and prices were generally firm to dearer. Plain Broken were sold readily at around last rates, similar Fannings were often a little dearer. "Tea for price" was keenly competed for and was also dearer.

Better liquoring and medium orthodox descriptions were well supported at fully firm to dearer rates; but BOPS in these categories were irregular. The demand for Fannings was again strong and, as a result of competition, these types were generally dearer. Better liquoring

CTC types were sold at dearer rates, while the medium and poorer kinds were fully firm to dearer and times much dearer. Legg-cut teas were fully firm.

Darjeeling teas were sold at higher prices, according to quality. Whole Leaf grades were firm to dearer. Tippy sorts were sold readily, but were irregular. Following rates were quoted:—Clean Plain Pekoe Rs 4.00 to Rs 4.20; Plain BP Rs 3.50 to Rs 3.65; Plain Fannings Rs 3.60 to Rs 3.85; Medium Assam: CTC BP Rs 4.90 to Rs 5.20; Medium Assam, CTC Fannings Rs 4.90 to Rs 5.30; Best Assam CTC BP Rs 5.50 to Rs 5.80 and Best Assam CTC Fannings Rs 5.60 to Rs 6.00.

In the Internal Sale, offerings consisted of 25,500 packages of Dusta and 375 packages of Leaf grades. After a somewhat hesitant start, the market strengthened. Clean medium CTC teas with bright liquors once again improved in values; but the plainlier varieties tended a little easier. Good CTC types were, however, irregular, while the smaller kinds were fully firm. Secondary and fibrous grades continued to sell well and realised improved prices.

Plain orthodox varieties opened about 10 nP easier; but demand strengthened towards the close and these were fully firm to dearer. Medium Assam teas were, however, irregular. Legg-cut descriptions met with good support and both the clean and fibrous types were sold at higher rates. Following rates were quoted: Plain Orthodox Dust Rs 3.80 to Rs 4.40; Medium Assam Dust Rs 4.20 to Rs 5.00; Legg-cut Dust Rs 4.60 to Rs 5.20; Medium Assam CTC Dust Rs 5.80 to Rs 6.30 and Good Assam: CTC Dust Rs 6.40 to Rs 7.00. There was a good demand for the Leaf grades.

In the Cochin market, 617,000 kilograms of Leaf tea were offered for export. Against strong demand particularly for improved quality, high-grown advanced considerably. Plain Low Medium and Medium and Medium Broken were 10 nP to 20 nP per kilo dearer.

In London auction, a total of 27,215 packages were offered. Demand was strong and general, particularly for low medium and plain descriptions. Prices for these types were fully firm to occasionally dearer. The market for better Assam was irregular, but prices generally showed little change as compared with those ruling last week.

According to advices from New York, total imports of tea into the USA, during the first ten months of 1961, were lower at 92.07 million pounds as against 99.24 million pounds in the corresponding period of the previous year.

COTTON

Futures Unsteady

After gaining fresh strength in the early part of the week largely due to short covering induced by sustained mill buying in the spot markets the cotton futures closed on a rather subdued note erasing part of the early gains. The Jarilla March contract, which opened the weak on

Wednesday at Rs 673, at one time rose to Rs 679 at which level confidence started waning and on Saturday eased down to Rs 674.50 for want of incentive. The contract, however, improved to Rs 679 on Tuesday last. The apprehension of the introduction of the variety-wise distribution of cotton to the mills resulted in the improvement in spinner interest in the initial stage of the trading.

The spot market at Sewri displayed lively conditions on account of the revival of mill interest in all the available lots. Prices, however, remained unaltered. In the export section, Bengal Deshi firmed up by about Rs 20 obviously thanks to the brisk demand from both spinners and shippers. In the import section Pakistan, Sudan, Syrian and American cotton met with good demand. Prices of East African cotton showed an uptrend presumably due to the reported damage to the Uganda crop and scarcity of offering from shippers.

The decision of the Textile Commissioner to introduce a scheme of variety-wise distribution of indigenous cotton to the cotton textile mills on the basis of their last season's consumption will be of immense benefit to the mills. The quantum of allotment of cotton has been enhanced to 80 per cent 50 per cent of the mills' total intake of domestic growth and imported cottons stapling 1" and above during the previous season. The new scheme has been introduced to provide the mills the available supplies on an equitable basis particularly when the estimates of current season's output has been brought down. The press note released by the Textile Commissioner has already adopted the preliminary step in specifying the maximum aggregate quantum of Vidarbha MP 197/3 and Khandesh Vimar 197/3 cottons to be purchased by the mills at 55 per cent of the actual consumption of these varieties during 1960-61 season. The press note also adds that this principal has been extended to all other growths, balancing the short output in a few varieties with the increased crop in others.

For the purpose of the new scheme Indian cottons have been divided into two broad groups. Under the head of medium and long staple cotton are listed Digvijay 'A' and 'B', Surti, Punjab American 320 F, and 216 FRG and SG, Karunganni, Buri American and Cambodia 'C', Gaorani 6 and 12, Jayadhar and Laxmi and Cambodia 'A' and 'B'. Under the second head, ie; short staple cottons, come Moglai Jarilla and Oomra, Vidarbha MP, 197-3, Khandesh Vimar 197/3 Westerns, Kalyan/Dholeras, Bengal Deshi, Pratap, Mathia and Mungari and other sorts.

The annual aggregate quota of short staple cottons will be 100 per cent of the total consumption of such growths during 1960-61 season whereas the quota for medium and long staple cottons will be of the order of 85 per cent of the overall intake of such varieties in the same season.

The Commissioner will in a separate circular, communicate to the mills the formulae for arriving at the eligible quotas in each category. The eligible mills are already permitted to make purchases during the current season a quantum equal to 50 per cent of their total consumption during the last season. But the mills are allowed only to purchase in such a way that the stocks on any day, including the outstanding purchases from which delivery is to be taken, shall not exceed the five months average consumption of that variety during the previous season. If on the day of the receipt of the allocation letter the mills' stocks are in excess of the aforesaid limit, they shall be precluded from making further delivery of that particular growth unless the position is rectified by further consumption.

Import Quota

The Union Government has decided to allow the import of 2 lakh bales of 400 lb each of raw cotton stapling 1-1/16" and above from any area. The quantity will be available for shipment only after 30 June 1962 but not later than 31 October 1962. The import licences, therefore, will be valid for shipment only between July and October.

Out of the total 70,000 bales will be allotted to the mills against their retention quotas under the export incentive scheme. The balance will be distributed to the consumers of imported cotton stapling 1-1/16" and above. 30,000 bales of stapling 1-1/16" and above but below 1-3/16" will be distributed to consumers of foreign cotton on the basis of their consumption of that particular type during the calendar year 1960. The remaining 1 lakh bales will be distributed to consumers of foreign cotton stapling 1-3/16" above on the basis of their consumption during the calendar year 1960. Those mills applying for licence to import cotton of 1-3/16" and above are required to pay a premium of Rs 200 per bale to the Indian Cotton Mills Federation, Bombay and the premium for those mills applying for licence for importing cotton of 1-1/16" and above but below 1-3/16" is fixed at Rs 150 per bale.

Piecegoods

Active conditions prevailed in the Bombay cotton piecegoods market during the past week and offtake improved to a large extent. Mills were reported to have done good sales of seasonal goods. Dhoties, saris, quality longcloth and markings were eagerly sought after and prices of some of these goods looked up nominally. The export section was devoid of any developments as most of the foreign markets were on a holiday mood. Even the traditional buyers from the United States, the UK and Persian Gulf were inactive. East Africa is reported to have accounted for a moderate quantity of coatings, bleached and grey chaddars and grey drills. Eritrea and Ethiopia focussed their attention on bleached dhoties.

These destinations were reported to have booked some business during the week review.

Increased Export of Sugar Likely

IT is learnt that the Government of India is expected to announce the export policy of sugar for 1962 shortly. Trade circles in Calcutta estimate that it will be possible to export at least 500,000 tons of sugar in the current year. Of this, 225,000 tons can be sold to the USA. In this respect, advices from New York indicate that the quota will be maintained this year. The balance of 275,000 tons is expected to be sold to the countries of West Asia and South-East Asia.

The Government and the industry are at present working out a new formula to export sugar without incurring loss. A suggestion under consideration is that the industry may be allowed to export sugar against the import of raw materials, which are in short supply in the country. The idea is, that the factories are to be allowed to make up the loss on export by earning a profit on the internal sale of imported items.

It is pointed out that in view of the fact the International Sugar Conference has not fixed any export quotas, there is now no ceiling on the quantity of sugar that a country may export. It is suggested that India may take advantage of this position and export as much sugar as possible, so that when the Conference meets in 1963 to negotiate a new international Sugar Agreement, India may be in a position to set up its claim for a higher export quota.

It is, no doubt, true that India can export sugar to any country outside the US without any quota restrictions imposed by the International Sugar Agreement. But by the same token, she has to take into account her ability to face competition in the free market and the preparedness of the Government as well as the Indian Sugar Mills Association to bear the losses involved in sugar exports in a falling world market. Therefore, in view of the serious competition likely to emerge from other countries, it is doubtful whether India can benefit to any considerable extent from the absence of quota restrictions.

Meanwhile, sugar markets have remained depressed to the absence of enquiry. In the Hapur market, inferior quality crystal sugar is quoted 20 nP per maund lower. Bold crystal sugar has, however, evoked good demand and prices are quoted up to Re 1 a maund higher than the former controlled rates. All factories in Uttar Pradesh are reported to be working to full capacity.

GUR

Despite brisk arrivals, the Hapur Gur market has presented a steady tone of late. This is mainly attributed to sizable offtake from the trade, while stray exports are also

13 January 1962

Though the general price tendency recently is for the steady conditions, the low-priced materials have recorded a slight improvement. Kolhapur best is quoted at Rs 40 for a long time, while the medium variety is almost quiet at Rs 30. Among Kopergaon varieties, the best is placed at Rs 30, medium at Rs 28 and the inferior at Rs 18.50. Trade circles close to the gur market believe that there are no prospects for any rise in the present price level.

FOODGRAINS

In the Hapur market, prices of Foodgrains had been displaying a steadier trend from the commencement of the year due to smaller arrivals in the face of good consumer demand. Wheat has improved by 25 nP a maund to quote Rs 17 for the dara quality and up to Rs 19 for the farm variety. As stocks at Fair Price shops which were selling imported wheat at Rs 15.25 a maund were exhausted, consumer demand is being met in the open market.

The market for Rice continues to rule quiet, thanks to new arrivals. Gram prices are steadier at Rs 15.75 a maund for the Punjab variety on good seasonal demand. Maize has sought higher levels at Rs 13 to Rs 13.75 on good offtake. Pulses have shown a better tendency. Peas prices have improved on Madras support, while Arhar has advanced on reports of crop damage. Other pulses are ruling steady in the face of poor supply position.

According to the latest US Department of Agriculture, Washington, world rice production in 1961-62 will be slightly below the record crop of the previous season. Recent forecasts place the output at 147.3 million tons as compared with 151 million tons in 1960-61 and suggest a corresponding decline in exports. The new rice crop will reach the market in February and, with Burma and Thailand both expecting a surplus of 1.5 million tons, little change in world trade is anticipated during the current year.

SHELLAC

The State Trading Corporation of India will shortly commence the stocking of Seedlac from the Katki crop at their godowns to four principal lac-producing centres - Gondia, Balrampur, Daltonganj and Ranchi. The centre at Gondia will start functioning in a few days, while at the other centres, the purchases will be organised shortly.

The stocks assembled at these mofussil centres will later be moved to Calcutta after suitable checking. The Corporation has secured facilities for storage there, pending sale to the shippers. The STC has also decided to open centres at suitable places to handle the Baisakhi crop in a similar manner. The organisation of these purchase centres has been undertaken in pursuance of a four-point programme announced in October 1961 for stabilising the purchase and export prices of lac.

The main features of the scheme were the fixation of minimum purchase prices; operation of a buffer

stock programme by the STC; levy of an export duty and the reduction of minimum export prices from Rs 70 to Rs 64 per maund for all quality seedlac with corresponding changes for other grades. The scheme had been drawn up with the twin objective of encouraging the overseas traders to purchase lac in preference to synthetic substitutes and also ensure their prices to the growers and the manufacturers.

BANGALORE SILK

In the Bangalore market, prices of flature raw silk of 20/22 Dr. continued to be quoted between Rs 84.89 and Rs 85.99 per kgm during the week ended 5 January, 1962. Rates of charka raw silk as well as cottage basin silk remained steady between Rs 46.30 and Rs 68.60 per kgm and Rs 71.65 and Rs 76.06 per kgm respectively. Spun silk yarn, 210/2s. from Government Spun Silk Mills, Channarayana was quoted at Rs 81.40 per kgm.

Prices of reeling cocoons from Sidlaghatta ruled between Rs 3.25 and Rs 4.50 per kgm, from Channarayana Rs 2.84 and Rs 3.62 and Mugur between Rs 3.00 and Rs 4.68 per kgm. There was a slight decline in the price of foreign race seed cocoons being quoted between Rs 4.00 to Rs 9.00 per thousand. Availability of local race seed cocoons was plenty—rates ruling between Rs 4 and Rs 4.75 per thousand.

In the Bhagalpur Silk market, prices of tasar raw silk fluctuated between Rs 66.14 and Rs 105 per kgm. Prices of reeling cocoons ruled between Rs 72.00 and Rs 170 per kahan and pierced cocoons between Rs 34 and Rs 160.00 per kahan (1280 cocoons). Silk waste was however steady between Rs 22.04 and Rs 26.46 and spun silk yarn between Rs 30.86 and Rs 48.50 per kgm.

Landed cost of Japanese raw silk of 20/22 Dr. was Rs 82.36 per kgm. as on 4 November, 1961.

COFFEE

According to the figures released by the Coffee Board, exports of Coffee have shown a marked increase in 1961 and the sales for exports, up to November 1961, totalled 29,658 metric tons as compared with only 18,542 tons up to the end of 1960. Out of the total export sales up to the end of November 1961, Plantation variety accounted for 17,921 tons; Arabica Cherry for 3,737 tons and Robusta for 8,000 tons.

Internal consumption has also shown some improvement, with the total release for the internal market in the first eleven months of 1961 accounting for 31,213 tons against 27,321 tons in the corresponding period of the previous year.

The receipts of coffee into the 1960-61 Pool, up to 15 November 1961, amounted to 67,565 tons against 49,199 tons in the corresponding period of 1960. Out of the total receipts of coffee, in the current season up to 15 November 1961, Plantation variety accounted for 28,968 tons; Arabica Cherry for

10,276 tons and Robusta for 28,321 tons against 25,187 tons, 6,679 tons and 17,333 tons respectively in the similar period ended 15 November 1960.

PEPPER

The Pepper market has presented a better sentiment in the new Year. In the Bombay market, the rate for the ready position has moved up to Rs 177 from Rs 175 per 50 kgs on account of improved demand. The Cochin market, too, has shown signs of revival of demand and the price

has risen by Rs 10 per quintal during the past fortnight.

The improvement in the conditions of the market is attributed to the encouraging advices from Singapore and the terminal markets. In Singapore, the rate has advanced by 15 dollars per picul due to heavy speculative activities of the stockists there on reports of short supply. Stocks are reported in the hands of strong holders who are not anxious to sell their goods on expectations of a further rise in prices.

Arrivals in the producing areas are estimated around 900 tons a

ASP/EPIC-10

week. The market, however, shows a better tendency, presumably on higher Singapore advices and some enquiries from the overseas buyers. Exporters feel that the USA and other countries, which are keeping away, are likely to return to the market sooner or later due to the paucity of supplies in those countries and higher rates quoted in Singapore. Some enquiries are reported to have been received from the Communist countries and these have aided the sentiment.

Exports of black pepper from India, during the past season, have recorded a fall of 2,465 kg at 17,263 kg. This fall is mainly attributed to lower offtake by the USA, the principal buyer. Nevertheless, the share of the USA continues to be the largest as compared with the offtake by other countries. The USA purchased only 5,404 kg during the period under review as against 8,700 kg in the corresponding period of the previous season. Russia came next with an offtake of 4,026 kg as against 3,280 kg in the previous season, while Italy took 1,497 kg against 1,299 kg.

GINGER

Exports of Indian dry Ginger, during the last season ending October 1961, were very encouraging. Shipments totalled 6,195 kg as compared with 4,032 kg in the preceding season. This increase is due to larger purchases made by the traditional buyers.

Destination-wise analysis of India's exports of dry ginger indicates that Aden was the largest importer, having absorbed 1,945 kg against 2,028 kg in the previous season. America, with an offtake of 651 kg against 284 kg, came next, Saudi Arabia accounted for 608 kg against 404 kg.

Out of the total exports of 6,195 kg, exports from Cochin accounted for 2,858 kg; from Bombay 1,828 kg; from Calcutta 1,240 kg and from Alleppey 272 kg.

CASHEW

In the official bulletin issued by the Cashew Export Promotion Council, it is stated that the import of Cashew kernels into Japan have been brought under the automatic approval system. Under this system, there is practically no restriction on the quantity or value of goods which can be imported into Japan. Simultaneously, the Japanese Government has also introduced a government import bond of 35 per cent value, payable in cash, upon application for licence. The total bond money will be forfeited by the Government if and when any shipment is not made and payment thereof is not settled within three months.

India's exports of cashew kernels, during the first eight months of 1961 (January to August) totalled 63,927,950 pounds (Rs 13.63 crores) as against 61,902,350 pounds (Rs 12.96 crores) in the corresponding period

of 1960. A total quantity of 42,45,849 kg of cashewnut shell liquid was exported during the same period as compared with 37,56,426 kg exported in January-August, 1960.

GOLD & SILVER

Prices on the Bombay Bullion Exchange displayed a mixed trend. The Silver section showed a marked irregularity, sentiment being adversely affected by the reports of increased arrivals and poor offtake. Even at setbacks, support was lacking and prices gave way consistently. Arrivals and offtake were estimated at 27 and 5 bars respectively. Silver (below .996) changed hands at Rs 210.30 to Rs 210.40.

The Gold section remained weak from the commencement of the year although a slight improvement in prices was noticed towards the close of the week due to emergence of spot demand. The initial weakness was attributed to lower advices from the upcountry centres. Reports of increased arrivals also provoked bull liquidation. Despite a little support from Uttar Pradesh and Madras in the initial stages, spot section gave way on selling pressure. But, an improved offtake caused a slight improvement in prices towards the close. Ready Gold changed hands at Rs 117 to Rs 117.25, while Sovereign is quoted around Rs 98.

OILS & OLSEEDS

The Bombay market for Oils and Oilseeds presented a steady appearance from the commencement of the year. The Government's eagerly-awaited announcement of an export quota of 20,000 tons of HPS groundnut was received with a feeling of relief as it would enable the shippers to fulfil the commitments in the past in anticipation of the export quota. Immediately after the announcement, offers for fresh supplies of the bold quality were rushed to the UK with most shippers quoting £90 to £92 per ton c.i.f. The bulk of the shipment was done at about £90 per ton c.i.f. for January-February delivery.

Foreign buyers are, however, inclined to wait for more settled conditions in view of the substantial release made by India. The Continental and the Communist buyers are studying the latest market conditions although there were several enquiries from shippers. Canada's response was also being awaited eagerly. It was hoped that business would develop gradually.

The Government of India has decided to permit industrial units in India, at present consuming groundnut oil, to export it with a view to earning foreign exchange and replacing it by equal quantity of less costly oils for their own consumption. Applications from the soap manufacturers and other units consuming groundnut oil will be received by the Chief Controller of Imports and Exports, New Delhi. Licences for the

export of groundnut oil will be issued on ad hoc basis. Meanwhile, Groundnut Bold ready was quoted at Rs 45.62 and Groundnut Oil at Rs 19.05.

In the Castorseed section, trading revealed a firm tone on account of the strength of the spot section. Arrivals of the new crop in Andhra area were stated to be relatively small, while advices from the up-country advices continued to be encouraging. Consequently, operators were inclined to support the market at every setback in prices. Castor ready was quoted at Rs 35.25 and Castor Oil, commercial quality, at Rs 25.70.

The Linseed section, shared the general trend of the market although higher levels attracted considerable profit-taking in view of the poor demand for linseed oil. Linseed ready was quoted at Rs 42.87 and Linseed Oil at Rs 19.30.

Usually this part of the year is noted for large supplies of groundnut kernel in the market with consequent low prices. But this year there seems to be considerable staying power with producers who do not want to unload. Whereas the markets in South and North Arcot districts would be inundated with over thousand tons of kernels daily if it is reported arrivals there have not reached even 500 tons per day. The city stock reimbursement daily is at 75 tons, which is considerably lower than the last several years' records. Calcutta interests are absorbing the stocks as quickly as they arrive. Even oil crushers are not ready to negotiate except for immediate commitments. One does not witness the pre-Pongal sales as used to be in former times proving the staying power of the ryots in the rural areas.

The price of bold and peanut varieties continued to be on the upward because of shrinking arrivals. Even in oils there is a tendency towards higher margins of price. From Rs 179.4 per quintal sold last week, groundnut oil jumped to Rs 180.75 by Friday, and recorded further rise. Last Friday it sold at Rs 181.20. The price continued to be the same for spot goods and for three weeks delivery the price was at Rs 182.50.

Continental inquiries have begun to emanate from last week, and about 246 tons were dispatched by the STC. The STC is also collecting nuts from the interior and it is likely they may contract for further shipment of groundnut oil. Among the trade circles it is believed the STC would be shipping a decent amount to the Continental ports in the next few weeks.

There is not much to report in the forward positions. No business could be put through in January 1962 valda.

There is a set back in kernels arrivals in southern markets and the price sold in these places is generally higher this week than last week.

The price of groundnut oil per candy of 50 lbs in the Southern centre has not gone down at all. In Guntur the price of oil per candy was at Rs 420 at Vridhachalam it was Rs 405, in Villipuram it was Rs 404. In Pollachi it was Rs 405. At Tanjore and Salem oil was sold at Rs 410 per candy.

Groundnut kernels in these centres did not go beyond Rs 72, and below Rs 71. The same prices are being maintained this week.

The following table shows the trend of groundnut and groundnut oil prices in 1959-60 and 1961-62:

	Groundnuts. (80 kgs.)	Groundnut oil (100 kgs.)
	1959-60	1961-62

HIDES & SKINS

This week the arrival of tanned cowhides was poor. Attempts at increased bidding of prices were not successful, and shippers in this commodity waited for a while. Stray business deals on c.i.f. section were reported. These transactions were also based on increased prices. But the tanners were not altogether devoid of hope of getting still higher prices from shippers in view of their getting high prices locally.

For tanned cow calf there were numerous inquiries from overseas. Stock arrivals have been irregular and not upto expectations. Prices of this stock remained quite firm. Buffalo calf tanned skin also was in normal demands. Price remained quite firm. Overseas, deals were reported on the basis of 88/98d for 1½ to 2 lb stocks.

Tanned goatskins proved dear and the European inquiries for 5½/6 lb in this 16/9d for run, 14/6d for fifths and 12/- for inferiors. Market quality goat skins remained firm and unchanged.

There were no worthwhile changes in tanned sheepskin trade. Prices did not change. Nor were there many inquiries. Enquiries from abroad too were not much.

The following were the prices of tanned skins and hides per lb:

Cow Prime 5/5½ lb	Rs 2.88 to
Rs 2.94; 6/6½ lb	Rs 2.62 to Rs 2.69;
7/7½ lb	Rs 2.31 to Rs 2.37; 8/8½ lb
Rs 2.19 to Rs 2.25; 10/12 lb	Rs 1.94 to Rs 2.00; inferior fifths 5/5½ lb
Rs 2.37 to Rs 2.44; 8/8½ lb	Rs 1.97 to Rs 2.06; 10/12 lb
Rs 1.88 to Rs 1.91; Buffalo 12/13 lb	Rs 1.88 to Rs 1.94; Buff calf 1½/2 lb
Rs 3.44 to Rs 3.62.

Company Reports

Excellent Results of Kelvin Jute

DESPITE the fact that the jute industry had to pass an extremely difficult time since the latter part of 1960 owing to the acute shortage of raw jute, the Kelvin Jute Company Limited has been able to report excellent working results for the year ended 31st July 1961, thanks to a substantial rise in sales from Rs 1.82 crores to Rs 2.34 crores. The net profit, after providing for Depreciation and Taxation, amounts to as much as Rs 12.05 lakhs against only Rs 7.86 lakhs for the preceding year.

All allocations have been raised:—Depreciation from Rs 4.59 lakhs to Rs 5.63 lakhs; Taxation from Rs 5.50 lakhs to Rs 8.80 lakhs; General Reserve from Rs 1.50 lakhs to Rs 4.00 lakhs and Development Rebate Reserve from Rs 1.46 lakhs to Rs 1.54 lakhs. In view of the increased allocations, the directors have found it possible to only maintain the dividend at 15 per cent, subject to tax.

The directors have, in their report, stated that further modernisation of the machinery in the Spinning section of the mills have been carried out to increase efficiency and other plans in this connection are at present under consideration.

Against a paid-up capital of Rs 38 lakhs, General Reserve stands at as much as Rs 51 lakhs; Machinery Renewals Reserve at Rs 2.50 lakhs and Development Rebate Reserve at Rs 3.96 lakhs.

Steady Progress Maintained by McKenzies

The result of the working of McKenzies Limited, during the year ended 31 July 1961, show steady pace and progress being maintained by the company against the severe odds like continuously rising costs and bottle-necks of raw materials. It is also encouraging to note that the production of wagons has been slowly on the increase and, with the expectations of envisaged sanction from the Government of India to increase the capacity, production may remain fairly steady at improved levels.

Lately, the company has made a start in the manufacturing of Hydraulic Floor Cranes and Truck Cranes in collaboration with an American firm in the line and has been able to finalise the marketing thereof through the well-established marketing organisation of Messrs Voltas Limited.

In the Civil Engineering side, the company could not remain busy to its fullest capacity owing to delays in decisions on number of Piling and other jobs tendered for by the company. A number of new competitors have entered the field and there has been a very serious competition. However, the company has added to its Piling machines and it is hopeful of getting its fair share of works in the Third Five-Year Plan during the ensuing years.

Meanwhile, the company has reported a net profit, after providing for Depreciation and Taxation, of Rs 1.85 lakhs as against Rs 1.91 lakhs for the previous year. In respect of allocations, the Depreciation is raised to Rs 2.18 lakhs from Rs 1.82 lakhs; Taxation to Rs 1.81 lakhs from Rs 1.50 lakhs and Development Rebate Reserve to Rs 14,211 from Rs 11,962. Even after these increased allocations, the directors have found it possible to raise the dividend on the Ordinary shares from 10 to 12 per cent, subject to deduction of tax.

The issued and subscribed capital is Rs 22 lakhs divided into 11,000 Ordinary shares; 5,500-5½ per cent. First Cumulative Preference shares and 5,500-5½ per cent Second Cumulative Preference shares, all of Rs 100 each. Against this, General Reserve stands at Rs 58,201; Share Premium Account at Rs 1.19 lakhs and Development Reserve at Rs 10,000.

Lower Profits for Bhopal Sugar

The Bhopal Sugar Industries Limited has suffered considerably on account of the lower recovery of sugar, loss sustained on exports and the need to value stocks at lower prices on account of a sharp decline in markets after the Central Government removed the controls over prices and distribution.

The net profit, before Depreciation and Taxation, amounts to only Rs 6.91 lakhs for the year ended 30 September 1961 as against Rs 18.47 lakhs for the previous year. The provision for Depreciation is Rs 2.48 lakhs (Rs 2.03 lakhs) and Taxation Rs 1.25 lakhs (Rs 4.50 lakhs). The transfer to Development Rebate Reserve is Rs 88,600 (nil). There were transfers to Reserves amounting to Rs 1.50 lakhs on the last occasion, while a sum of Rs 50,000 has been transferred from the Dividend Equalisation Reserve for enabling distribution of the latest dividend. The equity shareholders will get Rs 1.50 per share, taxable, as against Rs 2.25 per share, taxable, previously.

Although the quantity of cane crushed is higher at 95,695 tons against 72,608 tons, the output of sugar has not recorded a proportionate increase to 87,627 bags from 73,320 bags due to a lower recovery percentage.

Disappointing Results of Scindia Steam

The Scindia Steam Navigation Company Limited has reported disappointing results for the year ended 30 June 1961. The turnover has gone down by nearly Rs 1 crore, resulting in a sharp setback of Rs 63.31 lakhs in the gross profit to Rs 2.01 crores. The actual income from freight and passage accounts for Rs 17.91 crores as against Rs 18.77 crores, while the income from Investments has fallen to Rs 30.39 lakhs from Rs 36.18 lakhs. There is a similar drop in the Miscellaneous receipts and others. The company has, however, proposed to maintain the dividend at 60 nP per share, less tax.

After providing for normal Depreciation of Rs 196.45 lakhs (Rs 183.10 lakhs), the net profit has gone down to Rs 4.59 lakhs from Rs 81.26 lakhs. To this added Rs 30.42 lakhs being excess provision made in previous years, no longer required. This makes a total of Rs 35.02 lakhs from which Rs 23 lakhs being special Depreciation being provision for Statutory Development Rebate has been made, while Rs 39,943 has been provided for Investment Reserve.

For the Investor

INVESTMENT GOSSIP

Cautious Mood

THIS week the stock market has been in a rather subdued mood although toward the close there are indications of revival of interest at the lower levels. While nothing has happened as yet to alter the bright outlook of equities envisaged at the turn of the year in view of rising industrial production and the promise of speedy economic development during the next five years, there have been developments during the past few days which call for a cautious approach to the stock market. It is but natural that the address of the Congress President at the annual conference of the Party just concluded at Patna is scanned carefully for an indication of the Congress Party's future attitude to private enterprise and kindred matters. It cannot be maintained that market men have derived unalloyed satisfaction from the address. Some old apprehensions have been revived, especially about placing a ceiling on urban income, as Mr Sanjiva Reddy has emphasised the need for an equitable distribution of incomes. Of course, this has not brought about any marked disturbance to market sentiment. But it has nevertheless indicated what may be in store if not immediately, at least in the distant future. It would also appear that the next Central budget is already beginning to wield its influence on the market even though it is not coming this year at the usual time. The view that some direct taxation too will become inescapable considering the

large resources to be raised seems to be gaining strength.

Perhaps the main reason for the reluctance of bull operators to extend commitments is the renewed uncertainty over foreign aid consequent on our occupation of Goa. Our biggest benefactor, the US, has made it clear that its aid policy is not going to be altered because of Goa—the US State Department first announced this and it has been reiterated by no less a person than the US Secretary of State. But from indications available about the attitude of the other members of the Aid India Club and public opinion in US itself operators and investors would prefer to wait for the outcome of the meeting of the Aid India Club scheduled for the end of the current month. The general feeling in this country seems to be that the required amount of foreign exchange may not be made available. If foreign exchange does not become available in adequate measure for the Third Plan, there would be severe hold-ups in the setting up of new factories and consequently calculation of industrial production and the fruition of projects will be seriously upset.

Even if everything else turns favourable, industrial production may still be adversely affected as prospects of adequate supply of power and coal do not appear to be quite bright at present. Despite official assurance, coal supply to industry continues to be inadequate and indications are that the position is likely to deteriorate in coming months. If there is no early improvement in the supply of basic industrial materials and facilities, earlier optimistic assessment of the outlook for equities may have to be revised.

NEW ISSUE NOTES Antifriction Bearings

The Antifriction Bearings Corporation Limited, Bombay, will open its list for public subscription on 22 January 1962. The list will be closed on 27 January or earlier, but not earlier than 25 January. Of the equity capital of Rs 60 lakhs in shares of Rs 10 each, the promoters and their friends have agreed to subscribe Rs 22.50 lakhs; the foreign collaborators Rs 5 lakhs and the LIC Rs 5 lakhs. The balance of Rs 27.50 lakhs will be raised by the public issue. The company was incorporated on 30 May 1961 with the object of manufacturing ball, cylindrical, tapered roller bearings and steel balls for grinding media for the paint industry. The directors hope that a maiden dividend might be given in 1964. Half of the machinery, to be imported, is expected to be received by the end of the current year and the balance by the end of next year.

KFC Bonds

The Kerala Financial Corporation will issue bonds for Rs 50 lakhs, carrying interest at the rate of 4-4/3 per cent and redeemable in 12 years. The issue will be open for public subscription from 10 January to 20 January unless otherwise closed earlier. The issue will be made at par and applications should be for Rs 100 or multiples thereof.

Usha Mills

The details of allotment of shares of Usha Spinning and Weaving Mills Limited are now available. The allotment has been made as under: Applications up to 50 shares in full; 51 to 100 shares—50 shares each; for 101 to 500 shares—32 per cent; for 501 to 1000 shares—27 per cent; for 1001 to 5000 shares—20 per cent and for 5000 and over—12 per cent.

Industrial Machinery

Industrial Machinery (Inter-Continental) Ltd., Madras, has been granted consent to issue capital of Rs 1.50 crores in equity shares of the value of Rs 1.20 crores and preference shares of the value of Rs 30 lakhs. The capital will be used for the manufacture of pulp and paper-making machinery in Madras, in collaboration with Black-Clawson (overseas) Ltd. and Parsons and Whittemore-Lyddown organization of USA.

Kerala Premo Pipe

The Kerala Premo Pipe Factory Ltd., Trivandrum, is to issue capital of Rs 12.50 lakhs in equity shares of Rs 1,000 each at par. Out of this 500 shares will be issued for consideration other than cash and the balance of 750 shares for cash to the Government of Kerala. The proceeds will be utilized for acquiring and running the State-owned pipe factory.

New Assam Valley Tea

The New Assam Valley Tea Company Ltd., Calcutta, will issue 3,000

bonus shares of Rs 225 each on capitalization of the company's reserves to the extent of Rs 6,75,000. The bonus shares will be issued in the ratio of one bonus share for every share held.

Northern India Motor

Northern India Motor Owners' Insurance Company Ltd., Delhi, is to issue additional capital of Rs 2,82,500 divided into equity shares of Rs 100 each. The shares will be issued for cash at par and will be offered to the existing share-holders of the company. The proceeds will be utilized on company's programme for starting fire insurance.

Malabar Bank

The Malabar Bank Limited, Trichur, has been granted consent to issue capital of Rs 2,00,000 divided into 2,000 equity shares of Rs 100 each for cash at par. The proceeds of the issue would be utilized for financing the bank's activities. The bank has a paid-up capital of Rs 1 lakh.

Martandam Commercial Bank

The Martandam Commercial Bank Ltd., Trivandrum, is to issue capital of Rs 22,200 divided into 888 ordinary shares of Rs 25 each, fully paid-up to be issued for cash at par. This Bank has a subscribed and paid-up capital of Rs 2,06,007.

M. I. I. Corporation

The Madras Industrial Investment Corporation, Ltd., Madras, has been given consent for the issue of 4-3/4 per cent interest bearing bonds of the value of Rs 1 crore for cash, at par, with a currency period of ten or twelve years.

South India Steel

South India Steel and Sugars Ltd., Madras, formerly known as Madras Circle Registered Stockholders Association Ltd., has been granted consent to issue further capital of Rs 1,07,43,200 consisting of equity shares worth Rs 87,43,200 and 9 per cent preference shares of the value of Rs 20 lakhs. The proceeds will be used partly for the existing business of trading in controlled items of iron and steel and partly for the establishment of a sugar factory in the Madras State.

Elecon Engineering

Elecon Engineering Company Ltd., Bombay, is to issue capital of Rs 50 lakhs divided into 50,000 equity shares of Rs 100 each for cash, at par. Out of this shares of the value of £18,000 (Rs 2,40,000) will be offered for subscription to Alfred Wiseman & Co. Ltd., Birmingham, England.

13 January 1962

JMA Industries

J. M. A. Industries Private Ltd., Delhi, has been granted consent to the issue of capital of the value of Rs 14,99,200 divided into 14,992 equity shares of Rs 100 each for cash at par. Out of this shares of the value of Rs 6.46 lakhs will be subscribed by Westfälische Metall Industries K. G. Lippstadt, West Germany. The proceeds of issue will be used for the manufacture of motor parts.

THE INDIAN IRON AND STEEL COMPANY LIMITED

NOTICE is hereby given that a General Meeting of the Company will be held at the Royal Exchange Hall of the Bengal Chamber of Commerce and Industry at 6, Netaji Subhas Road, Calcutta—1 at 3 p.m. on Friday the 2nd February 1962, to consider and, if thought fit, to pass, with or without modification, the following resolution:—

"IT IS RESOLVED that for the purposes of Explanation 1 to Section 293(1)(d) of the Companies Act, 1956 the total amount up to which moneys may be borrowed by the Board of Directors in exercise of the authority conferred on them by Article 68 of the Company's Articles of Association and as confirmed by resolution passed in General Meeting on the 1st December 1956 shall be such sum as is computed to be equal to twice the amount of the paid-up capital of the Company (without taking into account any sum or sums borrowed after the 28th November 1952, and whether before or after the date of the confirmatory resolution aforesaid, from the International Bank for Reconstruction and Development or from the Central Government) provided that with effect as and from the 28th December 1960 the total amount outstanding at any one time in respect of borrowings by the Board from all sources whatsoever shall not exceed the sum of rupees fiftyfive crores."

A member entitled to attend and vote at the meeting is entitled to appoint a proxy (who need not be a member of the Company) to attend and, on a poll, to vote instead of himself.

By Order of the Board

combined tail-lamps, side flasher lamps, switches, head lamps and flasher units.

Chittaranjan Cotton

Chittaranjan Cotton Mills Ltd., Calcutta, is to issue capital of Rs 16 lakhs divided into one lakh equity shares of Rs 10 each and 6,000 cumulative redeemable preference shares of Rs 100 each. The capital is required for manufacturing cotton mill machinery. The Company's existing capital consists of equities of the value of Rs 23.96 lakhs.

Silonibara Tea

Silonibari Tea Company Ltd., Calcutta, is to issue 7,275 equity shares of Rs 100 each on capitalisation of the Company's reserves to the extent of Rs 7,25,700. The bonus shares will be issued in the ratio of one bonus share for every share held.

Indian Overseas Bank

The Indian Overseas Bank Limited, Madras, will issue further capital of Rs 25 lakhs in equity shares of Rs 100 each for cash at a premium of Rs 10 per share. The proceeds will be utilised for strengthening the banking company's capital base.

Modern Mills

The Modern Mills Limited, Bombay, has been granted consent to the issue of bonus shares of the value of Rs 15,49,117 in Ordinary shares of Rs 50 each on capitalisation of share premium of Rs 2,80,220 and general reserve to the extent of Rs 12,68,897.

Madras Circle Pipe

The Madras Circle Pipe Dealers Association Limited, Madras, is to issue bonus shares of the value of Rs 3,33,300 in the ratio of one bonus share for every three equity shares held by the existing shareholders.

Chrestien Mica

The Chrestien Mica Industries Limited, Calcutta, has been granted an extension of the date of redemption of the First Mortgage Debentures issued in 1946 from 31 December, 1961 to 31 December, 1971, subject to the condition that those debenture-holders who are not agreeable to the postponement should be paid in cash before 31 March, 1962.

INVESTMENT NOTES India Foils

Venesta Foils Limited is a Company incorporated in England and the manufacture of aluminium foils was one of their main objects. Its factory at Kamarhati in West Bengal was solely engaged in manufacturing aluminium foils. On account of reconstruction of Venesta Foils Ltd. in the United Kingdom it was decided to separate the foil business in India and operate it through a wholly owned sterling subsidiary of Venesta Foils Ltd. Accordingly the foil business in India has been transferred to India Foils Limited a wholly owned subsidiary sterling Company of Venesta Foils Ltd. Under

30th November 1961 India Foils Ltd. has acquired the assets and assumed responsibility for all the existing liabilities and contracts in India of Venesta Foils Ltd.

STOCK EXCHANGES New Year Starts on A Hopeful Note

Watch-Dog Writes:

STOCK markets have generally started the New Year on a fairly confident note as if to suggest that the operators are looking forward to another profitable year. There is, however, no disposition to enlarge commitments due to certain unfavourable factors. This is indicated in the booking of profits at bulges. It should, however, be

added that, but for the impact of fresh support at every setback in prices, the market would not have been in the good mood in the first two weeks of the New Year.

The Calcutta Stock Exchange presented a more or less cheerful appearance during the first fortnight of the New Year. Although price movements were rather irregular and the volume of business continued to be restricted, the undertone remained basically firm.

On the Bombay Stock Exchange, sentiment was favourably influenced by the good corporate news, the end of the political tension in Goa and heavy purchases made by the LIC early in the year.

The New Year opened with a steady undertone on the Madras Stock Exchange. Although activity was restricted, selected shares met with good absorption.

DALMIA IRON & STEEL LIMITED

RAJGANGPUR (ORISSA STATE)

NOTICE IS HEREBY GIVEN THAT THE SIXTH ANNUAL GENERAL MEETING OF THE COMPANY WILL BE HELD AT THE REGISTERED OFFICE OF THE COMPANY AT RAJGANGPUR (DIST.: SUNDERGARH, CRISIA STATE) on Thursday the 15th February, 1962 at 2.00 P.M. to transact the following business:—

1. To receive the Directors' Report and to consider the audited Statement of Accounts for the year ended 30th September 1961 and declare dividend.
2. To elect a Director in place of Shri Mohanlal Goenka who retires by rotation and is eligible for re-election.
3. To elect a Director in place of Shri N. C. Roy who retires by rotation and is eligible for re-election.
4. To appoint Auditors and to fix their remuneration.

Special Business

5. To approve the refund of Security Deposit to M/s. Fogla & Sons.
6. To approve the re-appointment of Managing Director.
7. To consider and if thought fit to pass the following resolution with or without modification:

"Resolved by way of special Resolution that pursuant to Sub Sections (4) and (7) of Section 309 of the Companies Act 1956 and subject to the approval of the Central Government, the Directors of the Company excluding the Managing Director be and are hereby authorised to receive in respect of each of the five finan-

cial years of the Company commencing from 1st October '61 to 30th September 1966 to divide equally amongst themselves a commission of one percent of the net profits of the Company computed in the manner provided in Section 349 & 350 of the said Act and subject to the provision of Section 198.

By Order of the Board of Directors
For DALMIA IRON & STEEL LIMITED,
G. KEJRIWAL
Managing Director.
28th December, 1961.

NOTES:—

(a) Every Shareholder entitled to attend and vote is entitled to appoint a proxy to attend and vote instead of him/her and such proxy need not be a shareholder. The proxies should, however, be deposited at the Registered Office of the Company not later than 48 hours before the commencement of the Meeting.

(b) The Register of Members of the Company, shall be deemed to remain closed for accepting Share Transfer Applications from 21st January to 15th February 1962, both days inclusive.

(c) The dividend when sanctioned will be paid to those Shareholders whose names would appear in the Register of Members on 15th February 1962. Dividend warrants are expected to be posted by 15th March 1962.

(d) Explanatory statement pursuant to Section 173 of the Companies Act 1956 for items 5, 6 and 7 of the Agenda is being forwarded to the members of the Company.

CALCUTTA

AS is usual at the beginning of a new year, operators were generally reluctant to enter into any major commitments until they could correctly draw up a balance sheet in regard to the transactions done in the year that just ended. It was, of course a happy augury that prices were well maintained during the first week of the New Year, thanks to the encouraging corporate news.

The appreciable improvement in industrial production during the past year inspired the hope that it would continue in 1962, provided concrete measures were taken to relieve the shortage of transport, electric power and raw materials. There was a general feeling that, as imports would be seriously curtailed in view of the tight foreign exchange position, it might become imperative to set up indigenous production vigorously. The consequent bullishness was supported by the encouraging production figures released by the TISCO and the IISCO for December as well as by the grant of a World Bank loan to the IISCO for increasing its coal production.

The second week of the year, however, witnessed a sudden and sharp set back in prices, being influenced by certain developments. First, the Congress President reiterated the importance of fixing a ceiling on urban incomes to reduce inequalities and to prevent the concentration of economic power. This caused some damper.

The second factor was the prospect of heavier taxation, following the possible increase in the defence budget in view of the vigorous operations on the Goa border.

Thirdly, operators were anxiously awaiting the meeting of the

Aid-India Club, to be held at the end of this month. They were entertaining the fears that the recent political developments might not make the Western countries to give further financial assistance.

Fourthly, the growing shortage of credit was felt. It was thought the flow of funds into the stock market was likely to shrink further, especially when the busy season in the money market was gathering momentum and there was a long queue of new issues which were likely to be floated soon and would siphon off a large portion of the available funds.

Lastly, the situation in regard to the availability of coal supplies was assuming alarming proportions. There were fears that industrial consumers in the southern and western parts of the country would not be able to maintain regular production. But for the emergence of support at the lower levels and better advices from Bombay, the market would not have witnessed a smart recovery towards the close of the period under review.

Section-wise, Gilt-edged securities remained dull throughout the period with business reduced to a small scale. Institutional support was lacking from the very start of the year and changes, where occurred, were against the holders.

Bank shares were, however, a firm feature. The encouraging results released by some of the banks, hopes of other banks following suit and prospects of rights issues by some, induced a good activity in this section.

Jute shares came in for selective support on the view that the demand for gunnies would improve in the coming weeks and the mills might be making good

profits on the production of hessians. Activity was prominent in the shares of those companies who had diversified their activities, especially Birlas, New Central, Fort William, Nuddea and Anglo-India.

Coal shares were, however, sluggish and price movements were confined to narrow limits.

The uncertain outlook for marketing the commodity and the increase in crops in all the producing areas were the main contributory factors for the quieter tendency in the Tea section. Towards the close of the period under review, however, selective enquiry was noticed, thanks to the improvement in the prices obtained at the export auctions.

The news of the US having maintained the quota at 225,000 tons for India's exports during the current year seemed to have little effect on sentiment in the Sugar section where Carew and Dyer Meakins were the two only scrips which met with some support.

Textile shares gave fairly a good performance on the hope of an improvement in the offtake of cloth. An outstanding feature in this section were J. K. Rayon, which touched a new peak level on the rumours of the possibility of the scrip being in the forward list at an early date. Also, Bowreah and Dunbar met with consistent support on the belief that these companies might have done well last year.

In the Engineering section, price movements were rather irregular due to the speculative activity in Indian Irons.

Miscellaneous issues moved with the general trend of the market. Following were the price trends of a few selected shares:

	As on 29 Decr. '61 Rs nP	High- est Rs nP	Low- est Rs nP	As on 12 Jany. '62 Rs nP

Kundah hydro-electric project, the Nilgiris.

Life-giving water, light and power to help transform our wastelands into smiling fields pour out from Bhakra-Nangal, Konar, Gandhisagar, Tungabhadra, Kundah and other projects. These great hydro-electric systems dramatise our progress and stress the fact that concrete is playing a vital part in our nation's growth and well-being.

The Third Plan has provided Rs. 1,712 crores for irrigation and power projects and huge quantities of cement will be required for their construction. In order that more cement may be available for the great projects and for the private consumer the Third Plan has set the cement industry a target of 15 million tonnes of cement a year by 1966. And the increasing output of ACC and India Cements factories will help to achieve this.

The Road to Rome

BY an amiable fiction extending the life of 1961 by fourteen days, the members of the EEC have been able to stick to the schedule prescribed in the Rome Treaty for the commencement of the second stage of transition towards the integration of Europe. This has won the EEC an immense psychological advantage. Any wishful thinking that may still be lingering about the eventual foundering of the EEC will now have to be given up. There can be no question that with the agreement at Brussels this week, the most momentous experiment in Europe in the last five centuries has crossed an important hurdle.

According to the Rome Treaty—an ingenious document into which has been written in advance elaborate devices against backsliding—the transition to the second stage should be by an unanimous vote, but once the transition is formally voted, subsequent decisions can be by majority vote. It was envisaged that by the time this stage was reached, certain crucial and controversial questions affecting the economy of the member countries would get settled. Chief among them was, agriculture. (The other two, viz, monopolies and social legislation were satisfactorily disposed of by the original deadline of 31 December 1961.) It is not surprising that Agriculture should have offered the greatest difficulty in the matter of evolving common policies. All over the world Agriculture is, for historical and human reasons, the most protected sphere of economic activity. It is also the most sensitive politically. Subsidies, tariff and quota restrictions are deeply rooted in the domestic socio-political traditions which are not easily amenable to adjustments in the interests of free trade. This has been so at least since the days of Corn Laws in England. That was why the EEC architects, perhaps the brainiest pragmatists in the world today, decided to allow the massive pressure of the other consequences of integration to wear down opposition to a similar harmonisation of agricultural policies. Psychologically, it was easy to ask and obtain acceptance for the slashing of tariff and quota in manufactures. And a three-year experience of a common market in industrial products was expected to effect subtle changes in favour of similar arrangements in agriculture. It was also expected that the comparative irreversibility of the steps taken in the first three years would exert its own pressure. Indeed, every conceivable aid to persuasion, ranging from considerations of saving the community's face to detailed arguments about the advantages of a common market for agriculture as for industry has been employed in the three years.

Despite all this, agreement was not easy, as was demonstrated by the necessity for extending the deadline and the marathon sessions that preceded the agreement. At the moment of writing, details of the decisions taken on agricultural policy itself are lacking though the announcement of the transition to the second stage is unequivocal enough. (This fact, again, makes subsequent recalcitrance about agricultural policy more difficult, proving once again that much williness is used by the architects of the EEC in a good cause.) Generally speaking, the broad strategy that the EEC has chosen to adopt in respect of

ironing out intra-regional conflicts of interest is to emphasise increase in agricultural productivity so that the "weaker" members of the community may be protected from the competitive fury of the more efficient. This way, the protective feather-bedding would in the long run be rendered irrelevant. In its proposals for a common agricultural policy published in 1959, the EEC Commission suggested an European Fund for Structural Improvement in Agriculture with contribution by member-states. The deadline for intra-community common market was fixed as 1965 for foodstuffs—for wine it was 1969—though external protection for the whole region is, as in the case of industrial products, to continue longer in some form or the other. Some form of price fixing and support and other protectionist paraphernalia are to be permitted during the transition. The whole operation is to be managed by European bureaux financed by import levies and contributions from producers and governments.

The resistance to agreement on some of these points came, generally speaking, from countries like West Germany, which felt obliged to protect its relatively inefficient agriculture from the competitive onslaught of the more efficient agriculture of other countries like France. Indeed, it was this consideration and its consequent political repercussions on the electoral fortunes of Chancellor Adenauer which led to the postponement of the whole question till after the West German elections. Unfortunately the results of the elections have not made it easier for West German Government to move into an agricultural Common Market as readily as it did into an industrial one. Specifically, West Germany would have liked a longer transition; a more easy access to the escape clause by retaining for the individual states the right to use it when it wants. (Under Article 226 of the Rome Treaty, obligations under the treaty may be waived during the transition period (1958-1970/73) in emergencies. But it is the Commission which on application from a member decides the type of measures to be employed to combat the emergency). The West German government appears also to have objected to the mode of financing the common funds referred to earlier. It would like the member-states to retain the purse strings by making allocations to the funds to come from national budgets rather than from levies made by the Commission. As yet, it is not clear how these differences have been resolved.

But the important thing, as stated earlier, is not the specific solutions agreed upon on problems relating to common agricultural marketing, but the declaration of the commencement of the second stage. This done, the eventual emergence of a fully integrated European Community within the next generation has been rendered a distinct possibility. Spokesmen of the EEC have not concealed the political implications of the economic policies they are now vigorously pursuing. In its essence, what is being attempted is nothing less than the recreation in the twentieth century context, the concept of Christendom that got disrupted with the emergence of the Nation States. With the agreement at Brussels, the road to Rome is clear.

Expenditure on Education

This is the Second of a series of articles on Education that will appear from time to time. The first was Published last week.

During the last 14 years the total annual expenditure on education has increased over five-fold—from Rs 57.66 crores in 1946-47 to Rs 320 crores estimated for 1960-61. Contribution from Government funds represents the largest part of the total expenditure. The remainder is made up of fees, District Board and Municipal funds and contributions from other sources, that is, private endowments, donations etc. The educational expenditure per head of the population has increased from Rs 2.89 in 1949-50 to Rs 7.31 in 1960-61. Expressed as a percentage of the per capita income, the expenditure per head on education has increased from 1.14 to 2.22.

The following table gives the contributions from different sources to the total expenditure on education in the years 1946-47 and 1958-59.

	1946-47	
	Amount Rs lakhs	Percentage to total
Government Funds	2,596	45.19
District Board Funds	519	8.78
Municipal Funds*	321	5.57
Fees	1,522	26.38
Other sources	808	14.08
Total	5,766	100

	1958-59	
	Amount Rs lakhs	Percentage to total
Government Funds	17,745	66.71
District Board Funds	854	3.21
Municipal Funds*	796	2.99
Fees	4,843	18.21
Other sources	2,362	8.88
Total	26,600	100

The assumption of responsibility by the Government for a larger share of the expenditure on education is reflected in the above table. While the contributions from all sources have increased in amount, the proportion of Government funds has increased from 45.19 per cent in 1946-47 to 66.71 per cent in 1958-59, while the proportions of funds from all other sources have decreased during this period. It is likely that the same trend will continue during the Third Plan period.

The total outlay on education was Rs 153 crores in the First Plan and Rs 256 crores in the Second. Third Plan programmes entail a total outlay of Rs 560 crores. The Plan provisions, it may be noted, are in addition to the funds provided by Government for maintaining institutions established up to the end of the preceding Plan. The expenditure under this head during the Third Plan period is estimated at about Rs 700 crores, so that, the total contribution from Government funds during the Third Plan will be about Rs 1260 crores. If contributions from different sources maintain the same proportion as in 1958-59, the total expenditure on education during the Third Plan may be of the order of Rs 2000 crores. But as the largest expansion is expected to take place in the field of primary education, and the aim is to provide free primary education, the income from fees will form a smaller proportion of the total. In the secondary stage, a fifty per cent increase in enrollment is envisaged and total income from fees may increase in the same proportion. On the other hand, with the transfer of responsibility for primary education to Panchayats

*Source: Review of Education in India (1947-61).

and local bodies, it is hoped that contributions from this source could be stepped up and may make up to some extent for the shortfall in fee income. The total expenditure on education in the final year of the Third Plan may thus reach about Rs 500. The population projected for that year, on the basis of provisional census returns, is 492 millions and estimated per capita national income Rs 385. The expenditure on education in the last year of the Third Plan will work out to about Rs 10 per head as compared to Rs 7.31 in 1960-61 and expenditure on education per head expressed as a percentage of per capita income will be about 2.6.

The increase in enrollment will provide a measure of the results achieved for the increased expenditure on education during the period since Independence. The relevant figures are given in the following table:

	1946-47	1960-61
Expenditure	Rs 58 crores	Rs 320 crores
Primary schools	141.1 lakhs	343.4 lakhs
Middle schools	20.4	62.9
Secondary schools*	10.83	29.1
Higher educational Institutions	2.56	10.15

(*The figure for Secondary schools is for the year 1949-50).

The largest increase has taken place at the higher levels and this is what may be expected from the proportionately larger increase in the expenditure devoted to the higher education. Out of the total expenditure, 'Indirect Expenditure', that is, expenditure on Direction and Inspection, Scholarships and Buildings etc. has increased from 17.4 per cent in 1946-47 to 23.6 per cent in 1958-59. Except for the first item, the bulk of the expenditure on the other items, it may be assumed, has been for higher education. Within this group, expenditure on buildings has increased from 4.9 per cent to 10.7 per cent and in amount from Rs 285 lakhs to Rs 2853 lakhs.

The direct expenditure on higher education, has increased from Rs 8.65 crores (15 per cent of total) to Rs 43.68 crores (16.4 per cent of total) in 1958-59. On the other hand, while the expenditure on secondary education has increased from Rs 1222 lakhs to Rs 5250 lakhs, the percentage to the total has decreased from 21.2 to 19.7. The decrease in the proportion devoted to primary education is even larger, from 32.1 per cent of the total expenditure to 23.9 per cent.

The educational programmes that have been followed in the past, which devoted more attention to the development of higher education than elementary education, resemble the industrial plan with its emphasis on heavy and basic industries and may be justified by similar considerations. The emphasis on heavy industry is justified on the ground that it will create the base for a more rapid growth of national income in future. Similarly, under the educational programme hitherto pursued, it has been possible to provide facilities for primary education to only about 60 per cent of the age group 6 to 11. But, at the same time, it has paid more attention to the training of teachers, so that the country now has the resources, in terms of educated personnel, necessary to push through a programme for universal primary education, as well as, largescale expansion at secondary and higher levels once a policy decision is taken to do so. If, on the other hand, available resources had been utilised for primary education, further advance would have been stopped short by lack of teachers and the country would have been forced to seek foreign assistance to fill the gap.

Still, the fact has to be faced that India is way behind other countries like Ceylon, Malaya and Ghana in the field of primary education. Malaya has already introduced free and compulsory education up to the age of 15, as the leader of the Malayan delegation stated at the Commonwealth Education Conference. The leader of the Ghana delegation stated that in his country primary and middle education is now free and compulsory. In Ceylon the enrollment at the level of free compulsory education is over 75 per cent of the age group 5 to 14.

The bias towards higher education will be corrected to some extent in the Third Plan. Half the total outlay will be on elementary education as compared with 41.9 per cent in the Second Plan. And if the cooperation of the local communities is fully mobilised, it should be possible to achieve much more than the targets set out in the Plan, without adding to the expenditure of Government funds.

Pattern of Bank Deposits

IN the December issue of its Bulletin the Reserve Bank has presented a study of bank deposits in the country which is interesting from many points of view. The study relates to the period 31 December 1955 to 28 April 1961 which more or less corresponds to the period covered by the Second Five Year Plan. It is fairly comprehensive and includes an analysis of deposit changes by types of deposits and also types of depositors leading to further sub-divisions and cross classifications. The three categories under types of deposits are demand deposits, time deposits and saving deposits, while under types of depositors there are three leading groups represented by business, personal and Government. Business deposits have further been classified into deposits of trading concerns, deposits of industrial concerns and deposits of financial concerns. There is a further analysis of business deposits by types of organisation which gives further sub-classifications like those of limited companies, state-owned companies, cooperative financial organisations and partnerships etc.. A third basis for analysis of deposits is according to size of banks which have been divided into four large groups, viz, banks with deposits of Rs 100 crores and above, banks with deposits of Rs 25 crores and above but less than Rs 100 crores, banks with deposits of Rs 5 crores and above but less than Rs 25 crores and finally banks with less than Rs 5 crores. Finally the Survey gives separate figures of changes in bank deposits for the last busy season (between October 1960 and April 1961) thus the study brings out significant changes in the pattern and ownerships of deposits during the five year period and also during the last busy season.

It will be seen that during the five year period covered by the study, there has been a spectacular expansion in deposits of the order of Rs 877 crores viz from Rs 993.66 crores to Rs 1,870.88 crores. Expansion of this order clearly reflects the impact of the expenditure incurred during the Second Plan period. Time deposits registered the largest rise of Rs 638 crores while demand and saving deposits increased by only Rs 117 crores and Rs 122 crores respectively. By virtue of this spectacular rise, time deposits have come to constitute the largest (52.0 per cent) share of total deposits, while the proportion

per cent to 33.6 per cent. Savings deposits as a percentage of total deposits have only slightly lost from 16.4 per cent to 15.2 per cent.

By types of depositors also there has been noticeable changes in the proportion constituted by deposits in each category to total deposits. At the end of 1955 personal deposits constituted 46 per cent of the total deposits, and by the end of April 1961, this has gone down to 43 per cent. The share of business deposits has also declined from 36 per cent to 30 per cent. With the share of Government and quasi-Government bodies remaining unchanged at about 7 per cent, the improvement was in other deposits, their share having gone up from 11 per cent to 20 per cent. In absolute terms, it was personal deposits which registered the largest increase during the five year period viz, from Rs 457.68 crores to Rs 809.44 crores. During the same period business deposits increased by Rs 211 crores while Government and quasi-Government deposits rose from Rs 76.03 crores to Rs 133.22 crores.

Within business deposits, deposits of trading concerns at Rs 230.0 crores constitute the major component (40.8 per cent). Deposits of industrial concerns at Rs 165.2 crores formed 29.3 per cent, while deposits of financial concerns amounted to Rs 149.6 crores or 26.5 per cent of business deposits. All the three components witnessed sharp increases during the five year period, but in relative terms, the rise was more pronounced in respect of deposits of industrial and financial concerns.

The study of business deposits according to types of organisation shows that limited companies account for the largest share (76.5 per cent) of the deposits of industrial concerns, while partnerships accounted for the major share (63.6 per cent) of deposits or trading concerns. In respect of deposits of Government and quasi-Government bodies, the predominant portion (amounting to Rs 76.6 crores (57.5 per cent) was held by local authorities such as Port Trusts, Municipal Corporations, Municipalities, District and Rural Boards, Panchayats. Deposits of Central and State Governments at Rs 49.4 crores constituted 42.5 per cent of total Government deposits.

Corresponding to the rise in total deposits during the five year period, there has also been a rise in the number of bank accounts from Rs 37.19 lakhs in 31 December 1955 to Rs 61.14 lakhs in 28 April 1961. The bulk of the increase in the number of accounts was in respect of savings accounts which have gone up from Rs 22.75 lakhs to Rs 37.95 lakhs. The average amount per account at the end of April 1961 was also higher at Rs 3,060 as compared with Rs 2,672 at the end of December 1955. The most pronounced increase occurred in respect of time deposit accounts, the average amount of which rose from Rs 7,861 to Rs 9,553. In contrast the average amount of demand deposit accounts declined from Rs 4,878 to Rs 4,722. The average size of savings deposit accounts remained somewhat stationary throughout the period.

The study of deposit changes during the last busy season shows less spectacular rise as compared with the 1959-60 busy season period. In the 1960-61 busy season period, deposits rose only by Rs 6.3 crores against the increase of Rs 131 crores recorded for the 1959-60 busy-season period. In comparing the two figures, however, account has to be taken of the changes in the arrangement for the keeping of PL 480 funds with the State Bank of India. Even making allowance for this the 1960-61 busy season was

one which witnessed rather slow accrual of deposits in view of the unprecedented demand for money. During the busy season, there was a sharp decline of Rs 41.2 crores in time deposits, but this was more than neutralised by increases of Rs 30.2 crores in demand deposits and Rs 17.4 crores in saving deposits. By types of ownership, the largest increase during the last busy season was registered by business deposits which rose from Rs 536.38 crores to Rs 564.09 crores. The increase in personal deposits at Rs 24.3 crores was of comparable magnitude. But Deposits of Government and quasi-Govern-

*Includes deposits of business concerns owned and/or managed by Government, separate figures of which are shown in brackets.

†Savings deposits are inclusive of unclassified accounts.

ment bodies showed an increase of only Rs 17.4 crores.

Study of deposits by size of banks shows banks with deposits of Rs 100 crores and above to have made the largest gains. While banks belonging to this group registered an increase of Rs 68.9 crores banks with deposits of Rs 25 crores and above but less than Rs 100 crores showed a decline of Rs 72.3 crores. Banks with deposits of Rs 5 crores and above but less than Rs 25 crores are shown to have increased their total by Rs 14.5 crores while the smaller banks had recorded a fall of Rs 4.8 crores.

Swadeshi and Standards

AT the end of the last year, the progress of the Indian Standards Institution was formally reviewed and flattering references to the work done or under way followed. The report for 1960-61 makes even more impres-

sive reading. It is abundantly evident that economic advance has made greater demands of late on the institution and the ISI, apart from keeping up foreign contacts or adaptation to the metric system, has now come to be accepted by consumers. The certification mark is a guarantee of quality and foreign buyers are apt to look for the mark. There is a plan to enlarge ISI activity in coming years; analysis of consumer products will figure in the programme of future work.

Governments too have come to rely on ISI mark on goods ordered by them. This too has led to increased appreciation of the ISI mark and the Centre has given standing instructions about the preference to be accorded to goods bearing the ISI certification mark. The increase in membership, subscriptions and publications constitute a tribute to the work of the institution which has now been empowered to give the ISI mark to steel made at the six works in the country. The ISI mark will end the old division between the tested and the untested and Indian steel with the ISI mark will find readier customers abroad. The service to manufacturers by the formulation of standards can be now measured by the rise in revenue during 1960-61. Foreign buyers of lac and mica, spices and condiments will also be grateful to the ISI association with the international organisation for standardisation.

The only way to meet competition is to raise and preserve quality and the ISI has attempted to produce standards for beedies as well as smoking mixtures so that manufacturers and consumers too will enjoy expert guidance. Advertising will thus be reinforced by veracity. Not only materials but machinery come within the scope of ISI experiments for performance and the ISI may help to induce the use of slag cement and concrete blocks for construction. A code of practice for preserving timber is being got ready and the ISI has described the methods of testing plywood which, of course, is not only used for teachests but is coming into the cabinet maker's range. Exceptional among official publications for accuracy and finish the ISI report is a guide to those who want to reach better standards of manufacture and in the safety of installations. This may well induce Indian insurers to extend active support.

What ISI does for new lines of manufacture like refrigerators or air-conditioners or fire extinguishers can be easily glimpsed in the report which indicates that minor but familiar articles like fountain pen ink must reach the prescribed standards. So far no ink has been described publicly as conforming to ISI standards and those who write will perhaps ask for the ISI mark rather than the brand name in future. The growing industries like cable-making need to follow the standards set and it may be argued that better goods, rather than lower prices, will command ready sale. The various divisions of ISI look to machinery as well as domestic appliances, carry out analysis, and elicit views after tests on metals and alloys. These are of real importance to new ventures undertaking the manufacture of bearings or castings. This more than licences secured or issued will determine the degree of success. For it is important that Swadeshi goods must also satisfy standards and the performance of machinery made in India will govern the acceptability of Indian textiles in overseas markets. How far official purchases by tender is facilitated by the ISI markings that render special inspection superfluous can be ascertained.

The Industries Departments in some of the States work in close concert with the ISI and

the fact that goods with the ISI mark were valued at Rs 40 crores in '60-61 proves that a good start has been made and Defence and other Ministries rely on the ISI. So do importers in foreign countries who look for more than a certificate of origin today. Whether the State Trading Corporation relies on the ISI or not, Indian manufacturers and exporters do and their eagerness to satisfy requirements has been met by sampling. The ISI also gave advice on packing and symbols to demote the familiar injunction, "To use no hooks or Stove away from boilers" were evolved. This kind of precaution may be as necessary as the quality of goods shipped and the ISI can claim to have fully earned the ad hoc grant of Rs 2.5 lakhs made by the Government of India. The association of ISI with organised industry is hopeful, promises more results, and ensures the continuity of policy that will help to enlarge the domestic market, whether it is for soap or leather goods. The mark is now given to Indian-made spaghetti, breakfast foods, and steel tubes made for the local bicycle industry. In a way, the ISI report indicates what is being gradually done to replace imports in many fields and that is the most comforting conclusion to be drawn from the report. It suggests not only that science is serving industry but that industry is guided by science and there is more than adequate return for fees paid by manufacturers along the right course. This may dispel prejudice or doubts about the inherent inferiority of Swadeshi articles. It may serve to create internal confidence in the goods and inspire faith in export possibilities.

From the point of view of the consumer, it is of utmost importance that the work of the ISI is not allowed to stay as an academic pursuit. Consumers and producers alike should make the standards a decisive instrument of progress—the former by insisting on and the latter by zealously approximating the prescribed level of perfection. A proper pride in the ISI mark is the first requisite of entrepreneurial ambition just as an insistence on such a mark a sign of consumer vigilance. The ISI is the starting point of a genuine consumer movement and the consumer ought to recognise in ISI his greatest ally.

Role of International Investment

MURARJI J. VAIDYA

INTERNATIONAL financing and investment institutions are instrumental in the advancement of underdeveloped economies and have become a feature of post-war life. Mr Eugene Black, President of the World Bank, stressed recently, loans to under-developed countries are to be made in the context of a new philosophy. The old dimensions have completely disappeared. There is need for a proper understanding in this context, between these institutions and the Governments of recipient countries on the basis of terms of loans. It must be realised that in almost all developing countries, there are governmental controls on all transactions involving foreign exchange. Therefore, governmental approval is necessary for securing loans from abroad. Consequently a basic agreement, on the general terms and conditions of the loans to be made by the international investment and financing organisation will greatly help a quicker materialisation of loans by such institutions to private enterprise in developing countries.

Governments of such developing countries are naturally unwilling, if not opposed to giving their approval to loans proposed to private enterprise in their countries, on onerous terms such as high rate of interest, quick repayment, stock options, share and repatriation of profits and guarantees of convertibility.

International Investment Insurance: Deferred payment terms are not very much liked now by governments of developing countries because they provide only short term or medium term finance. What the developing countries now require, in the light of their large and growing needs, are long-term loans. Therefore, apart from a more flexible and reasonable approach as to terms of loans, by international finance investment institutions, the possibility of developing the market for issuing of bonds and even of equity capital in the leading financial centres of the world like, New York, London, Berne and Frankfurt, should be explored. Such development of the international finance market could be accelerated if an international investment insurance scheme is also put into operation at an early date. To make this possible, more frequent and closer contacts between the lenders and borrowers are necessary. The International Finance Corporation is the proper organisation for providing such contacts. International guarantee has become significant because of the fear that bilateral agreements will not be enforceable against the governments concerned. Hence the need for insurance.

Private Investment: The need for strengthening international investments by such schemes must be studied from the background of the huge investments that may have to be made in future. Prof. Hoffman estimates that \$7 billion would be required annually to meet the needs of the underdeveloped countries. In recent years, the extent of foreign loan and investments had been of the order of about \$4 billion. Roughly, \$3 billion more are required. Out of existing flow, private investments have amounted to \$1.6 billion per annum. Of the additional \$3 billion required private investments will have to increase by as much as \$1 billion per annum.

Taxation: Taxation is one of the most important factors that influence the flow of private investment. Governments of developing countries need revenue from taxation on profits of companies and dividends received by individuals and companies. Therefore, foreign investors cannot be exempted or given relief to a greater extent than the nationals. However, many of the developing countries offer tax concessions to new investments in certain "scheduled" or specified industries.

In order to make the investor in capital exporting countries more enthusiastic, it is necessary that all systems of relief from double taxation should provide for similar concessions to such investments in both the countries—the investor country as well as the investee country.

International Investments must be based on considerations of profitable returns and capital appreciation. The economies of underdeveloped countries offer such opportunities in industries to a far greater extent than trade with these countries offered to the more venturesome ancestors of Western businessmen in the 18th and the 19th centuries. Much can be achieved in this field through the co-operation of all countries through the UN.

A system of international insurance will remove fears and hesitations which at present inhibit the flow of capital from the more prosperous nations to the less fortunate nations.

Investment Information centres, such as the one established in New Delhi, in all countries,

both investing and investment receiving countries, will help to encourage and expedite the decisions of investing countries to collaborate with private enterprise in investment—receiving countries. Lack of adequate and readily-available current information regarding the laws and regulations of investment receiving countries often prevent a proper consideration of projects of collaboration between nations.

Regional Taxation: With the emergence of economically well knit groups of nations like the Soviet Union and Communist China, Eastern European Bloc, the EEC (of the Common Market), the EFTA (of the Outer Seven), the USA and Canada, countries in this region which are mainly primary producers must immediately think and act towards greater co-operation of blocks and thus maintain, if not improve, their bargaining power. They have to strengthen their economies by being more complementary rather than competitive.

Europe did not have strong economies nor strong currencies nor even very balanced payments positions. But the European countries organised the OEEC to achieve greater regional co-operation. And today they enjoy unprecedented prosperity, stable and strong currencies. Regional co-operation must be achieved in concrete terms by the ECAFE countries. And as in Europe we must find bankers and funds to underwrite and provide the basic working capital for the economic and payments union.

Comparatively more advanced countries in the ECAFE region like Japan and India must organise more joint ventures, not merely between themselves but also on a multilateral basis between the ECAFE countries and also jointly with western countries.

Individual well-being is linked with national prosperity and only planned efforts can ensure both in the shortest possible time. And planning, for its success, largely depends on savings, individual as well as national. Saving in the form of Bank Deposits provides resources for the National Plan.

BANKS

Improvement in Deposits Likely?

CAN a sudden improvement in Deposit growth be expected this year? There are certain compelling reasons why, in fact, we may anticipate 1962 to be the beginning of a three-year cycle of relatively higher accretions to bank Deposits, a period that may be comparable to 1957-59. Indeed, a quicker rate of Deposit growth probably originated in 1956, but this was obscured in that year by the very large import surplus on private sector account, which had a contractionist impact on Deposits. With import controls turned stringent, drain on Deposits on this account ceased to operate on the scale and magnitude till then prevalent. Furthermore, the procedure for keeping counterpart funds arising from the Public Law 480 agreements served to exaggerate Deposit growth. Lastly, with some element of tightness in the economy, stocks with industry as also with the trade tended to be run down. All these factors contributed to an upsurge of bank Deposits in that triennium.

But the picture changed in 1960 with the disruption of confidence in banking by the failure of two institutions. The re-emergence of stringency in the money market in that year served to push up money higher, and it seemed possible that there were rival bidders for Deposit funds, which consequently were so diverted away from the banks. Also, the procedure for the banking of counterpart funds was changed, with the result that not only did the State Bank derive no benefit from the new PL 480 agreements but the institution was also required to repay a fairly large part of the accretions that had been kept with it. Thus, the last two years, and ending about the third quarter of last year, have witnessed some kind of stagnation in Bank Deposits.

It needs also to be mentioned that Central Government recourse to deficit finance has gradually been reduced during the Second Plan period. To the extent that created money contributed to the growth of Bank Deposits, it thus happened that, since the middle of 1957, Government "largesse" has been available in smaller measure for the banks.

Confidence in banking is now fully restored. Working results for 1961 are generally nothing short of spectacular, and the substantial transfers to reserve must also be found reassuring. There will, secondly, be the psychological impact of the introduction of insurance of bank Deposits. Thirdly, the more concerted campaign of Scheduled Banks for enticing savings bank Deposits can clearly be seen to be bearing fruit.

Then, though deficit financing in the Third Plan is to be minimal, Government disbursements on Plan enterprises will be running at a higher pitch. Automatically this should in due course get reflected in growth of bank Deposits. The first "fillip" to resources of banks in this regard should be in evidence

in the last two weeks of March this year, when fiscal considerations should provoke heavy governmental payments and almost corresponding improvement in Deposits of the banking system. Each of the last few years has been marked by this phenomenon of a sharp rise in Deposits in the second half of March, and the tempo has been steadily on the increase. It is more than likely, it is almost certain, that accretions in the relative period two months hence will set a new record.

A further fact to be taken into account is that in the course of this year, it is fairly certain, most enterprises begun in the Second Plan period will go into production. Some part of the financing, in the case of private sector industry, has undoubtedly been secured from banks. So, it is possible that, despite the growth of industrial production—or may be because of it—there should in the slack season of 1962 be some degree of contraction in the industrial Advances of banks, though such reduction would be partly offset by enterprises inaugurated in the last year or so. But what is more important, that production will have begun will mean that more goods will be available to mop up money, and that such money will find its way into banking in the form of Deposits.

BANK RETURNS

Advances Continue to Rise Briskly

There has been fresh currency expansion in the week ended 12 January, as shown in the returns for that date of the Reserve Bank, and this patently cannot be due to spillover of month-early disbursements. Rather may it be a sign of the emergence at last of the 1961-62 busy season.

Active Note Circulation has jumped from Rs 1,969.90 crores to Rs 1,991.41 crores, and this is accompanied by outflow of Rupee Coin for Rs 0.76 crore. Currency has been expanded for Rs 20 crores against Rupee Securities (which have now increased to Rs 1638.80 crores) by transfer from Investments in the Banking Department. Foreign Securities are unchanged at Rs 126.86 crores, and so the Reserve Bank's cash in the till has moved down slightly from Rs 14.77 crores to Rs 12.49 crores.

Busy season pressures are inferable from the drop of Rs 3.11 crores to Rs 75.44 crores in Reserve Balances of member banks as also from the rise of Rs 2.10 crores to Rs 145.93 crores in the Other Loans and Advances of the Reserve Bank. (Indeed, the State Bank, as will be seen presently, was compelled to disinvest in gilt-edged in order to meet the expanded demand for Advances). The rise of Rs 13 crores in Treasury Bills Purchased and Discounted by the Reserve Bank is very likely linked with disinvestment by the State Bank in the relevant week.

The Central Government's Deposits are shown Rs 7.57 crores lower at Rs 53.64 crores,

and this position of net disbursement may be on account of Plan disbursements being stepped up as the fiscal year-end approaches. For, there has not been (as far as can be made out) any cancellation of ad hoc Treasury Bills; nor have State Governments benefited from any payment made by the Centre. Balances of the States are but slightly higher at Rs 12.62 crores as compared with Rs 11.81 crores; and their indebtedness to the Reserve Bank for ways and means borrowings has risen by Rs 2.41 crores to Rs 64.14 crores.

Investments in the Banking Department are lower by about Rs 20 crores, and the fall is of course due to transfer, for currency expansion, to Rupee Securities in the Issue Department.

Balances Held Abroad have again fallen, by Rs 2.64 crores to Rs 13.95 crores. Foreign Assets as shown in the Reserve Bank returns continue to exceed the Rs 140 crore mark, but only just. With only about ten weeks remaining of the export "season", it now looks problematical whether the objective of the authorities, to augment foreign assets is likely of achievement.

For the second week in succession, as shown in the return of the State Bank for 12 January, the Advances of the institution have expanded by more than Rs 6 crores: while in the first week month-early demand for funds would have contributed to the increase in the credit extended by the State Bank, it would appear reasonable to conclude that the rise in the latest week has been caused by busy season pressures. Deposits have risen by Rs 3.05 crores to Rs 529.68 crores, and this rise will have mitigated the pressure of the expansion in Advances. Nevertheless, the bank has disinvested for Rs 10 crores, holdings of Government and other Trustee Securities falling by such an amount to Rs 228.63 crores. With the total of Advances rising by Rs 6.48 crores to Rs 267.69 crores, the State Bank's cash balances, including money at call and short notice, have improved by Rs 2.16 crores to Rs 27.96 crores. Borrowings are just a shade higher by Rs 0.22 crores at Rs 2.60 crores. It is almost certain that the Rs 300 crore mark in the State Bank's Advances will be pierced before the end of the current busy season.

The passing of the end of 1961 is reflected in "contra window-dressing" in the return of the Scheduled Banks for 5 January. Net Demand Deposits have moved down by Rs 4.62 crores to Rs 831.81 crores, and the whole of it is accountable by the decline of Rs 4.66 crores to Rs 51.10 crores under the head of Demand Deposits from banks. Net Time Deposits at Rs 1,143.07 crores show but a fractional change. About one-fourth of the total of fall in Deposit resources during the week is traceable to the State Bank. Beginning of the month disbursements (and perhaps demand on account of the busy season) are seen clearly reflected in another sharp rise of Rs 13.56 crores to Rs 1,298.84 crores in the total of Advances, though it is necessary to remark that inter-bank Advances account for Rs 7.54 crores of this aggregate. Nevertheless it is likely that the Rs 1,300 crore mark in net Advances will be crossed in the next return of Scheduled Banks; for, the State Bank in the week ended 12 January reported a rise of about Rs 6½ crores in Advances, and the other Scheduled Banks may quite certainly be expected to experience an expansion of around Rs 3 crores in Advances at the least. Cash balances (including money at call) have been steeply drawn down from Rs 218.05 crores to Rs 194.15 crores, with the State Bank accounting for Rs 20.19 crores of the aggregate fall of Rs 23.90 crores. Indebtedness to the Reserve Bank has been reduced

by Rs 3.29 crores to Rs 14.45 crores, while borrowings from the State Bank show little change at Rs 11.98 crores against Rs 12.31 crores. The disinvestment in gilt-edged for Rs 14 crores is wholly on account of the State Bank.

MONEY RATES

Pressure Eases After Year-end

The end of the year produced the usual scramble for money from banks anxious to improve the looks of their balance-sheets. As the relevant banking returns show, there was disinvestment in gilt-edged and large recourse to central banking credit. There has been besides a substantial increase in Demand Deposits from banks. Bidding in the inter-bank call money market was brisk, and the rate was daily pushed up during the last week in 1961. The first week in January was also productive of demand for funds, possibly occasioned by beginning of the month disbursements. For, since then, there has been a perceptible slackening of the pressure upon the money market; and it would appear that borrowings of banks in the last week of December have since been largely repaid.

The inference is that the 1961-62 season has not yet got off briskly into its stride. But it should be noted that the expansion in the Advances of Scheduled Banks in the first two months of the "busy season" has been large enough. What has happened is that banks have not been hard put to it to finance the busy season: there was much slack available, in the form of borrowing capacity from the Reserve Bank at the first tier of the three-tier bank rate; cash balances were adequate; and the growth in deposits in the last two months of 1961 has not been inconsiderable. The progress of the current busy season will again be followed from the next week with the resumption of publication of the special table.

Reinforcement of the IMF

By Paul Einzig

THE publication of the terms on which the additional \$6,000 million is to be granted to the International Monetary Fund discloses the fact that any participating Government is in a position to contract out if in its opinion its own balance of payments or reserve posi-

tion or prospects make it appear inexpedient to allow its currency to be used for supporting another currency. Although it had been understood that on the occasion of the Paris meeting of Finance Ministers last month the French point of view, insisting on an escape clause, was conceded, the exact character of the escape clause came as a surprise. It had been expected that the participating Governments would reserve the right to refuse to participate unless the money was required for a purpose which they approve. But it seems that under the final arrangement, refusal will be based, not on the conditions affecting the borrowing country but on the conditions affecting the lending country.

In all probability this formula was found preferable, because refusal to participate would not imply unfriendly criticism of the would-be borrower. It would not be pleasant to be told that aid is refused because it would only serve the purpose of avoiding the application of much-needed measures to put the threatened currency on a sound basis. Under the new formula the Government which holds that view is in a position to say that, even though its own balance of payments has a huge surplus and its own reserve is excessive, its prospects are none too good. Whether it would be true or not is immaterial. The agreement clearly states that the Government's own opinion decides the matter. The form of the refusal provided for in the agreement will save the face of the Government whose application is refused.

It is a pity that Governments who are tempted to apply for aid too freely instead of resorting to unpopular but necessary remedies will not thus be deterred from their fear that the use of the escape clause would draw attention to the unsoundness of their policies. From their own point of view it would have been helpful if they could defend unpopular measures on the ground that they have to be taken for the sake of obtaining IMF aid. Under the present formula participating Governments are, in theory, not supposed to refuse to participate even if it should be glaringly obvious that the aid is wanted for bolstering up an untenable position and postponing the inevitable day of reckoning. So the likelihood that the new resources will be used precisely for that purpose will be much greater. This is a pity, because as it is there is too much inclination on the part of some Governments to take the line of least resistance.

BANK PROFITS

Central Bank

The net profit of the Bank for the year ended 31 December, 1961, including the sum of Rs. 18,61,490.96 brought forward from the

Indian Finance

previous year's account and after providing for Taxation, amounts, subject to audit, to Rs. 2,01,36,733.88 which the Directors have disposed of as follows:—

	Rs.
An ad-interim dividend paid at the rate of Rs. 2.40 per share, subject to tax (i.e. Rs. 1.68 net) for the half-year ended 30 June 1961	30,24,000.00
Amount transferred to Reserve Fund	45,00,000.00
Amount transferred to Staff Gratuity Fund	10,00,000.00
Amount provided for Bonus to Staff	60,00,000.00

The balance of Rs. 56,12,733.88 the Directors propose to recommend to the Shareholders to dispose of as follows:—

	Rs.
To pay a Final Dividend for the half-year ended 31 December 1961 at the rate of Rs. 2.60 per share, subject to tax (i.e. Rs. 1.82 net), making in all 14% net for the whole year	32,76,000.00
To Carry Forward to next year's account	23,36,733.88

State Bank

Distribution of Profits—1961

	Rs.
Net Profits for the year	271,00,300
Brought forward from last year	56,20,700
	327,21,000

Dividend to Shareholders at the rate of Rs 23 per share, subject to deduction of tax (made up of Interim Dividend at the rate of Rs 10 per share Rs 56,25,000 and Final Dividend at the rate of Rs 13 per share Rs 73,12,500)	129,37,500
Transferred to Reserve Fund	75,00,000
Transferred to Pension Fund	742,200
Bonus to staff	45,00,000
Transferred to Staff Welfare Fund	10,00,000
Transferred to Staff Co-operative Housing Fund	10,00,000
Carried forward	50,41,300
	327,21,000

Treasury Bills

Tenders for Rs. 2,00,00,000 of 91 days' Government of India Treasury Bills were opened on Tuesday 16 January 1962. Total amount offered was Rs 2,03,00,000. Tenders at Rs 99.370 per cent were allotted in full. Amount accepted was Rs 2,00,00,000, the average rate of accepted tenders being Rs 2.520 per cent per annum.

Tenders for Rs 2,00,00,000 of 91 days' Government of India Treasury Bills will be received at all centres (Bangalore, Bombay, Calcutta, Kanpur, Madras, Nagpur and New Delhi) up to the close of business on Monday, 22 January 1962. Successful tenderers should make payment on Thursday 25 January 1962. Other conditions are as usual.

During the week ended 12 January 1962 Government of India Treasury Bills for Rs 167,41,50,000 were sold in favour of Reserve Bank of India.

91 days' Intermediate Treasury Bills sold from 10 to 13 January 1962 amounted to Rs. 10,00,000.

20 January 1962

Notes

NEW FRONTIERS

At Home and

President Kennedy's State of the Union Message embodies several important elements which have become characteristic of his administration. The most striking is the extraordinary attention paid to economic matters, which received far more attention in this than in most other State of the Union reports of recent memory. The nation's economic health was the first major topic taken up in the President's address. Another is the emphasis the President placed not merely on the gratifying economic record of the past year, but on the need for further improvement. At the very beginning of his address to Congress, Mr Kennedy spoke of starting anew "our joint and separate efforts to build the American future."

From this there flows what might well be viewed as the principal lesson in the President's message. It is the recognition that efforts to strengthen the American economy are fundamental to other and broader objectives. A United States that lives up to its related ideals of freedom and social and economic progress will be continuing inspiration for other nations, and will be in better position than ever to carry on the kind of enlightened

international programmes—as in the fields of trade and aid—that would help them achieve their own aspirations. The basic goal is a peaceful world community of free and independent states, in which people everywhere will be able to find growing opportunities to advance their prosperity and their welfare.

The US economic situation today is far different from what it was when President Kennedy took office a year ago. In his own words, "we began the year in the valley of recession—we completed it on the high road to recovery and growth." The end of 1961 found the US economy "racing to new records in consumer spending, labour income and industrial production."

To build on this base, to enhance the US potential, the President is urging upon Congress new measures that would further reinforce the economy's structure and expand its growth opportunities. Among these are special manpower and youth training programmes, incentives for business investment in machinery and equipment, presidential standby authority to adjust federal income-tax rates and accelerate federally supported capital improvement programmes when and if needed, and strengthening of the nation's unemployment insurance system.

In addition the President is proposing new and far-reaching programmes in such fields as urban development, agriculture, natural resource, civil rights, health and welfare, and education. Progress in these fields also is seen as spurring the nation's growth and fortifying its strength.

All this would be accomplished, moreover, within an essentially non-inflationary framework. As the President has pointed out, 1961 saw the best record of overall price stability of any comparable period of recovery since the end of World War II.

To help maintain this demonstrated and effective defense against inflation, the President is urging such steps as restraint by labour and management in their wage and price policies, certain types of federal tax reforms, and postal rate increases. Above all, he restated his intention to submit to Congress a balanced federal budget for the 1963 fiscal year that begins July 1.

In Mr Kennedy's words, "we mean to maintain both stability and growth in a climate of freedom."

This is in line with his belief, as stated in this State of the Union Message, that enactment of his programme, particularly that part

of it related to expanding job opportunities and shorting up remaining gaps in the nation's anti-recession protection, would demonstrate once and for all that "a free society is not only the most productive but the most stable form of organization yet fashioned by man."

—Abroad

President Kennedy's State of the Union message sets forth with clarity and vision the tasks before the American people in the coming year. The message gives a detailed programme to meet the global challenges of a "struggle we did not start in a world we did not make." In its political aspect, it pledges the US administration to further honourable efforts to find a mutually acceptable solution for the many problems that bedevil the world, particularly Berlin. In this effort, the American President probably is not being exactly helped by some of his allies, notably, France. But the really important part of the President's message relates to his proposals for liberalising world trade and to make the US meet the challenges of the ECM. He asks the American people through the Congress to whom he has sent the message to make good their professions of devotion to free trade. The President's is a bold and imaginative programme aiming at the gradual abolition within a period of five years of tariffs on all items in which the US and the ECM countries share 80 per cent of the world's trade. On all other goods there should be a gradual reduction by 50 per cent of the duties. And such reductions should be for whole groups of products rather than for single items, where the sacrifice may be minimal.

Though the President's and the Administration's commitment to freer world trade is well-known, here is a concrete programme of action which gains significance coming as it does coincidentally with the moving of the ECM into its second stage. Unless the US takes these steps, the chances are that the ECM's external tariff wall will be a formidable obstacle to world trade. Already the US has been finding it difficult to cope with the rising trend of imports from the Western countries and trading groups like the ECM. And the tariff barriers operating in the ECM are such as to wall off a greater volume of American exports to the continent to enable the US to secure equilibrium in its balance of payments with the European countries. The accession of the UK into the Common Market will make the threat of protectionism from the ECM a graver for the US to tackle.

With all this undertones of self-interest, the new proposals enunciated by the American President can only evoke warm approval from the rest of the world. It has already been hailed as a bold

new programme in Western Europe and also in other countries of the free world. In India it has been welcomed both in official and business circles. The Western reaction is that the proposals for breaking down tariff barriers between the US and the ECM are the most important step to the attainment of the ideal of a single western trading community which is at present pitted against the economic might of the Soviet Bloc. Even apart from its significance to the evolution of an Atlantic Community to which the US has long been wedded, the proposals have far-reaching implications for the growth of multilateralism and freer trade. The existence of high tariff walls in the ECM and the US has been a major obstacle to the increase of exports from the developing countries and the new proposals of President Kennedy have special significance to these countries. While the proposals are indicative of the new wind that is blowing in the American administration, there is a hard core of protectionist element in the Congress which may still succeed in keeping the doors shut to changes in foreign trade policies.

stantial measure, has formed an integral of the economic plans for development of these regions. The Colombo Plan put into operation in 1950, was an early instance of the united efforts of the advanced nations to coordinate and channelise assistance to the countries of South and South East Asia. For these countries the odds against a rapid break-through in development were heavy in view of paucity of internal capital and technical know-how. The fundamental aim of the Colombo Plan which brought countries like the UK, Australia, New Zealand and the USA together to render assistance to the developing countries of South East Asia was to supplement the efforts being made by these countries themselves and to fill the more serious gaps in resources like shortage of technical know-how. After 11 years of operation, the success of the Colombo Plan in imparting greater momentum to the developmental efforts in these countries has become an accepted fact. The latest annual report of the Commonwealth Consultative Committee for Cooperative Development in South and South East Asia, has collected a number of facts to show the tangible gains made by these countries after the Colombo Plan was put into operation. It is shown that the national income has grown almost continuously since the launching of the Plan. The substantial rise registered by agricultural production in these countries is another noteworthy aspect of the success of the Plan. The output of rice has gone up by about 40 per cent. The headway made in industrial production has been no less remarkable. The annual output of crude petroleum has increased from 10.8 million tons to 26.5 million tons. Total production has gone up from 35 million tons to over 54 million tons. Similarly steel production has risen from 1.3 million tons to over three million tons while cement output has advanced from six million tons to 10.8 million tons.

An equally important field of success of the Plan has been in respect of creating training facilities which are now admitted to be much greater now than it was in 1950. It is in this realm that the assistance provided by the advanced nations has proved to be most valuable. Such assistance has taken three principal forms—the provision of training facilities, the supply of the services of experts, and the grant of equipments. The growth of mutual assistance between countries of the region particularly in the field of technical training has been a distinctive feature of the gains reaped under the Colombo Plan. It is noteworthy that of the thirteen countries, which provided training facilities during 1960-61 to their Colombo Plan partners, India with 266 awards ranks fifth after the USA (2356), the UK (823), Australia (486) and Japan (306).

Since the inception of the Plan a total of over 10,000 million dollars have been received as foreign aid by the countries of the region. The US contribution at approximately 8.3 billion dollars has been the largest. The UK capital aid expenditure and technical assistance under the Plan since 1951, have totalled £182.78 million. Canada has made available a total of 331.7 million Canadian dollars for capital aid and technical assistance to the Colombo Plan countries. Japan, Australia, New Zealand and other agencies like the IBRD and private entities in the US have been other important sources of aid.

With all these gains that can be put down to the credit of the Colombo Plan, the latest annual report is rather modest in its assessment of the success of the Plan during the last 11 years. It is admitted that contrary to expectations of the Commonwealth experts, the task of breaking the vicious circle of poverty and economic progress in the countries of South and South East Asia has turned out to be quite formidable, and that the countries have still to continue to take resolute action to break the vicious circle and to raise living standards. The success in this effort is taken to depend mainly on the national efforts and determination and willingness of the people of the countries to seek the objective enthusiastically leaving aside prejudices, outworn customs and traditions. Such self-reliance on the part of the countries in this region has been in greater evidence in recent years than before.

EXPORTS

Cost Inhibitions

Addressing the half-yearly meeting of the All-India Exporters' Chamber, Mr Chinnobhai C. Javeri, President of the Chamber, put forward a suggestion for the constitution of a Committee to investigate and report on the cost structure of the country's major exportable commodities which have suffered a set back in the foreign markets owing to higher prices. In view of the importance of export promotion in the context of the Third Plan targets for foreign exchange earnings such a study cannot brook any delay. While exports have risen in the course of the last year, this rise has been more than neutralised by a greater rise in imports rendered inevitable by development and maintenance needs. Further the improvement in exports is only in patches since there has been setbacks in exports of some of the major items like cotton textiles, tea and jute. Whereas cotton textiles worth Rs 64.14 crores were exported during 1959-60, the exports in 1960-61 were only of the order of Rs 57.64 crores—a decline of Rs 7.0 crores. In tea exports also, there has been precipitous

declines during 1959 and 1960 from the high level of 1958. The fall in exports in respect of these commodities reflects the state of growing competition that the Indian exports are meeting with in the foreign markets, and particularly the unfavourable structure of prices of the Indian exports. The export price of cotton textiles is definitely higher than that offered by other countries like Japan, Hong Kong, China and Pakistan. Whether the higher prices of Indian exports are the result of higher cost of production is not quite so obvious but a major element in the final price is constituted by taxation. The price disadvantage is pronounced in the case of Indian tea which has to bear a variety of taxes while in comparison tea exported from East Africa is exempted from export duty. At the same time study of the actual cost of production should also reveal scope for bringing prices down. The trend noticeable during the past few years for the raw material prices to go up has added considerably to the cost structure of industries in general. Price increases have also occurred on account of rise in cost of power. Transport difficulties and general inflationary conditions have also further contributed to higher cost of production in many industries. The rise in cost of production arising from higher wage bill has also been substantial.

Apart from the traditional items of export, it would be also useful if such cost studies are conducted with reference to other commodities for which export prospects are at present limited due to higher cost of production. Export of sugar during the last year to countries other than the US, has for example, involved a loss of Rs 250 to Rs 300 per ton. Even in the case of steel of which India has been one of the cheapest producers, cost of production has gone up considerably owing to rise in raw material costs. In the engineering industries the ratio of input to output has gone up from 61.6 in 1956 to 67.5 in 1961 and this has been brought about by increasing costs of pig iron and steel, shortage in supply of fuel and power and rising wages.

A Novel Scheme

The Government of India has announced a new and novel scheme intended to give a boost to export performance in particular and selected industries. Under the scheme, import licences to actual users are to be reduced unless the units within the particular industry are able to register an increase in exports to a certain level. A similar cut in the allocation of foreign exchange for the import of material locally available is another feature of the scheme. This cut is also subject to restoration in case the industry records a rise in exports. The industries to which the new scheme will be

applied are confectionary paints and varnishes, cosmetics, fountain pens, glass and glassware, bicycles, pressure lamps, radio receivers, domestic refrigerators, storage batteries and electric motors.

The industries selected are those which operate purely in the domestic market despite considerable expansion in production. They have found the foreign markets far less attractive in view of the large profits fetched in by sales in the domestic market itself. A scheme to prod these industries to explore foreign markets is therefore to be welcomed. The industries selected are such that even a reduction in indigenous production resulting from cuts in foreign exchange allocation will not materially affect the tempo of industrial growth of the country or consumer requirements. However the scheme is so conceived as to offer strong incentive to achieve increase in exports, since otherwise even the existing level of earnings of units in the particular industry will be affected.

The working of the new scheme will be watched with interest and its success may warrant the extension of the scheme to other industries which have not been now brought under its scope. There are a host of such industries, particularly those which have prospered under the shelter of fiscal protection granted by the Government. Any rise that these industries could achieve in the realm of exports should, in fact, be the final test and justification of the protection that has been granted to these industries and which has involved considerable sacrifices to the consumers within the country on account of the higher price for the articles produced by the protected industry.

NUTRITION

Same Sorry Tale

The Indian Council of Medical Research has to narrate the same old sorry tale relating to the dietary habits of the Indians, perhaps the worst in the world. The ICMR's report based on the nutrition surveys conducted in 1959 discloses that the general pattern of consumption of different food-stuffs remains more or less unaltered with no appreciable shift worth reporting, though stray incidents in quantitative changes are spotted out in different seasons. The intake of protective foods like milk, fruits, flesh, leafy vegetables among the poor and middle class people, chiefly in the eastern and southern parts of the country, is conspicuously poor. Surveys conducted by the ICMR by routine and rapid methods reveal that the nutritional status of both adults and children in almost all the States is deplorably low and the number of diseases due to vitamin deficiency was legion. The general conclusion of the Council was that hypovitaminosis A and B

complex deficiencies are prevalent throughout the length and breadth of the country, exaggerated to some extent in the southern States. The Council undertook the surveys by both the raw food weight method and oral questionnaire on a large number of rural and urban people of different socio-economic status, including special groups like inmates of hospitals and jails.

But attempts to ameliorate this pathetic condition are not entirely wanting. Prominent among them is the distribution of UNICEF 'kim milk powder and minerals to vulnerable groups of the masses through hospitals, schools, maternity and child welfare centres and in some States through nutrition clinics under the public health departments. However, it is a matter of shame that more often than not these foodstuffs elude the ordinary masses. The notorious malpractice of earning a fortune by the sale of gift articles, particularly milk powder and their misappropriation on a large scale by the distribution authorities have deprived the poor and the needy most of the benefits. This is indeed a sad commentary on the consciousness of the people and the efficiency of the authorities.

GOVERNMENT

As a Hotelier

The satisfactory working results of the Asoka Hotels for the year ended March 1961 will go a long way toward overcoming earlier prejudices against this public sector enterprise. Its record in the first two or three years since its inception had engendered the belief that it would take many years to enterprise. Its record in the losses and to pay some return to its shareholders. Improved results were however obtained in 1959-60 when for the first time Asoka Hotels made a net profit of Rs 9.69 lakhs. During the latest accounting year 1960-61 the results have been quite satisfactory with the net profit at Rs 25.84 lakhs, after providing for depreciation, interest on loans, development rebate and meeting all other appropriations. Indications are that improved results will be maintained in the current year (1961-62) also. For, a profit of about Rs 21.75 lakhs is understood to have been made by the Asoka Hotels during the first 8 months. The position as at 31 March 1959 was that there was a loss amounting to Rs 55.76 lakhs. The net profit of the last two years together with the estimated net profit for the first 8 months of the current accounting year will more than offset this loss and it is quite on the cards that a maiden dividend will be announced on the current year's working.

The progressively improving results during the past three and half years or so show that intricacies of managing a hotel of the

size and type of Asoka have now been well learnt. More and more people are utilising the services of this most modern hotel in the nation's capital and what is more the demand for them has sometimes even exceeded supply. The average occupancy now is 346 persons per day and it compares with 88 persons some years ago. During the winter months last year, sometimes, the occupancy exceeded even the actual accommodation of 446 beds in the Hotel with the result that it became necessary to put in extra beds in the rooms and suites of the Hotel to accommodate the guests. Profits have consequently increased and in 1960-61 there were higher by Rs 15.47 lakhs than in the previous year. The increase in operating expenses has shown a rise of only

Margin Requirements Relaxed

With effect from 13 January 1962 the Reserve Bank of India has reduced to 40 per cent the minimum margin on bank advances against ordinary shares of joint stock companies, which it had fixed at 50 per cent according to its directive dated 11 March, 1960. This has been done in the light of developments which have taken place since March 1960. Bank credit against ordinary shares which had risen by 14 per cent in the twelve months prior to the regulation has since then remained pretty stable around Rs 80-83 crores despite a considerable increase in the volume of new capital issues on the market and some rise in share prices. Further, effective December 1961 onwards, a system of regulatory margins, uniform and automatic, has come into force on all the stock exchanges. A measure of self discipline has thus been introduced in the operation of the stock exchanges. The Bank's general credit control has also exercised on the whole a salutary influence on the credit situation.

3.5 per cent against the increase in income of 20.5 per cent. While income has gone up from 75.35 lakhs in 1959-60 to Rs 90.83 lakhs in 1960-61, operating expenses have increased only moderately from Rs 43.92 lakhs to Rs 45.79 lakhs. Another salient feature of its working results is that Asoka has reduced its loan liability by Rs 90.80 lakh over a period two years. Debt liability stood at Rs 185.30 lakhs and it is reduced to stand at Rs 87.50 lakhs on 31 March 1961.

As the directors' report says the results of 1960-61 no doubt strengthen the hope that in coming years the results would be even better. It will not be before long that the entire loan is paid off to

Government and Asoka Hotel comes in possession of surplus funds not only to pay a reasonable dividend but for further developmental work. There is scope for better financial control and this is admitted as a clear possibility by the directors' report itself. Although Asoka Hotels has taken considerable time to emerge into being a covetable asset of the nation, the fact that it has become self sustaining is a matter for gratulation.

FURNACE OIL

Excise the Excise

The power situation in Western India has turned somewhat critical and has been causing great anxiety to industrial circles for some time now. The inability of the Railways to move the requisite quantity of coal to Western India and the long haulage involved in the transport of coal to the region from the coal fields of Bengal and Bihar has led to acute shortage of coal for industries and in consequence industries particularly in Ahmedabad have been working considerably below capacity for the last one month. Though movement of an additional one million ton of coal by the sea route to the Southern and Western ports was intended to relieve coal shortage to these regions, the impact so far as the Western region is concerned has not been very significant and especially industries located in places distant from the receiving ports have not been benefited by the switchover to coal movement by sea. With a view to meeting the worsening power situation, the Central Committee of the All-India Manufacturers' Organisation, had in a special resolution last month urged the Central Government to make available to the industries furnace oil without raising the cost of the fuel to the industries. The matter has been taken up by the Governments of Gujarat and Rajasthan. There are two issues which stand in the way of an early and smooth switchover to furnace oil in place of coal by industries. First the regular supply of furnace oil will in the present circumstances call for more imports from foreign sources, since the public sector refineries are yet to be commissioned. A more important consideration is the present price for furnace oil which makes it highly uneconomic for industries to use in place of coal. It is to bring down the price of furnace oil that the plea has been put forward that the Government should do away with the duty at present levied on it. At the present price, furnace oil is estimated to be Rs 35 to 50 per ton of oil costlier at Ahmedabad than the factory price of coal. Reduction of excise duty which is at present levied at the rate of Rs 49.50 per ton may bring the price of furnace oil on a par with the price of coal. The case for such reduction is very

strong considering the low duties levied on coal. Further, as pointed out by the Central Committee of the All India Manufacturers' Organisation, consumer price of furnace oil should be fixed on a scientific basis so that the cost is correlated to the available calorific value. In any event, the solution of the problem of power shortage, owing to difficulties of coal transport, is urgent. But the pushing up of cost of production by substituting further oil for coal will have other repercussions, including adverse export prospects. Hence the need for reduction of duty on furnace oils.

MILK

A Grim Prospect

A lecture at Madras last week by Mr D. N. Khurody who deals with the Government dairy in Bombay referred grimly to the prospect of reduced future supply of milk. He called attention to the unchecked increase in human numbers and the high infantile mortality among cattle today. The latter is in part due to the extraction of all milk for sale to the detriment of calves. The majority of calves—especially males, are starved to death by design or accident. He envisaged, the rationing of milk after a decade of progress. This perhaps can be said to imply that no milk would be available for healthy adults. That means among other things, a fall in coffee and tea consumption. The plans to increase plantation output must now take note of the grim prospect of no milk for sweetmeats or for dilution of beverages like cocoa or coffee. Whether milk can be dispensed with or substitutes devised is a problem for the Central Institute. But a shortage of milk means a real setback for nutrition and the contrast with advanced countries (like the USA) which refuses to replace butter by margarine will be complete.

The fact that milk colonies and projects for the benefit of cities are given more importance than dairy farming in the villages or co-operative creameries to convert milk into curd or ghee is one reason for the set-back feared. The States must think of keeping good cattle in villages improving both their condition and the output of milk products, for even if the buffalo is the mainstay of milk supply, the better nutrition rests on supply of milk, though only of the buffaloes. It may be hard to think of honey soon, but milk is irreplaceable in the diet and there is no use training cowherds in the business, if there is to be no milk, except for a minority. The import of condensed or skimmed milk or foods cannot be contemplated with pleasure, and the solution may lie in developing areas for dairy farming, arranging fast transport, and, of course, a fair return to encourage output by

daily farmers. The care and feeding of milch cattle must be improved in line with better breeding. The salvage of dry cows must be certainly attended to if a crisis is to be avoided.

SODA ASH

Revised Price

That the soda ash industry in the country is bracing for a big leap forward is clear from the progress registered by the industry during the past decade of protection and the current trends of demand. Production of soda ash has risen to 1.8 lakh tonnes in 1961 from 84,233 tonnes in 1956 and the total output of the existing factories is expected to shoot upto 2.5 lakh tonnes by the end of the Third Plan. The country has already become self sufficient in light soda ash. The extension of tariff protection to the industry upto the end of 1964 also augurs well for making further progress.

The revised ceiling price for light soda at Rs 19 per 50 kg is inclusive of the selling commission but exclusive of transportation and other handling charges, ex-works, excise duty, local sales tax and the like. The present ceiling is against Rs 20 recommended by the Tariff Commission. The ceiling price for heavy soda ash sold at ex-works or ex-ports will be Rs 20 per 50 kg against Rs 21.50 per 50 kg recommended by the commission.

Those consumers who are situated away from the producing centres of soda ash will be able to get their requirements at export-town prices which will be the ceiling plus a freight of Rs 15 per tonne for west coast ports of Cochin and Bombay and Rs 25 per tonne for east coast ports of Madras, Calcutta and Vizagapatnam. For the bulk consumers whose consumption runs to 10 or more tonnes per month on a regular basis soda ash will be supplied at the ex-works selling price without charging any selling commission. More over the Government has announced that selling commission shall on no account exceed Rs 4 per 50 kg.

The revised ceiling prices are however considered to be inadequate by the four leading manufacturers of soda ash in the country. They have pointed out that the new ceiling prices will seriously jeopardise the future development of the industry and have entered a plea for the acceptance of the Tariff Commission's recommendations. The industry is also now expected to bear very heavy freight charges from its works to the various ports.

STATE PLANS

I—Rajasthan

After the recent discussions between the State Government and the Planning Commission the

annual plan for Rajasthan for 1962-63 has been finalised with a capital outlay of Rs 39.23 crores. Nearly half of the total outlay is provided for increasing irrigation facilities, stepping up power generation and initiating flood control schemes. Under the irrigation head, the main programme is the completion of the first fourteen miles of Rajasthan Canal's portion in the State. Besides the work on the Rawatstar Distributory and Suratgarh Branch which is likely to be finished within this year, the State Government contemplates the undertaking the work on Low Level Branch during 1962-63. Perennial irrigation from the Bhakra Nangal project, will be made available in 1961-62 for nearly 3.5 lakh acres and the target for 1962-63 has been fixed at 4.5 lakh acres. Irrigation from the Chambal project will also benefit 2.2 lakh acres in the same year.

The State plan also envisages the completion of works pertaining to bulk supply from Bhakra Nangal in 1962-63. The fourth unit of the Chambal hydel scheme, which will generate 11.5 MW of additional power, will also be commissioned in the same period. To meet the power requirements of different places in the State, power diesel sets with a total capacity of 3 MW will be established in 1962-63.

The target for additional food production has been fixed at 3.16 lakh tons. Higher targets for commercial crops are also fixed, oilseeds 17,000 tons, cotton 29,000 bales and sugar cane for producing 20,000 tons of gur.

An integrated development of fisheries is envisaged in order to exploit fully the potentialities for the development of fisheries. Besides carrying over the programmes so far implemented a couple of lakes will be established to raise sufficient quantity of fish seed in the State.

In the field of cooperation also much has been planned. During 1962-63 ten additional cooperative marketing societies, 1,500 new credit cooperative and 90 societies for cooperative farming are to be organised. These activities will, by the end of the year under review, cover 23,000 villages and 11.5 lakh families, thus bringing approximately 72 per cent of the State's villages and nearly 44 per cent of rural population under the fold of the cooperative movement.

Notable expansion in industrial field is contemplated. The pilot project at Diwana for the recovery of sodium sulphate, which was undertaken in the Second Plan, will be commissioned early in 1963. This plant will produce 20 tons of sodium sulphate per day. Preliminary work on drawing up the project report for open cast mining lignite at Palana and beneficiation of flourite at Mandokipal in Durgapur district will be started in 1962-63. Medium and small scale industries will also

derive a fillip. Three industrial areas will be set up at Jaipur, Jodhpur and Kotah in order to afford facilities for starting medium industries and five more industrial estates will be established to foster the growth of small units.

Adequate provisions have been embodied in the annual plan for national programmes for the eradication of contagious diseases like malaria and small pox. Family planning works will be extended to further regions of the State and some provision has been made for nutrition programmes too. A medical college at Udaipur and a training centre for male nurses and 20 new primary health centres will be opened during this year.

In the education field, the programmes for enrolling 1.90 lakh additional children in the primary classes, 15,000 children in the middle school classes and 13,000 students in the high school classes, the provision for introducing mid-day meals in a few schools, starting a new university at Jodhpur and increasing training facilities in polytechnics and engineering institutions deserve special mention.

II—Bihar

The annual plan of Bihar State for 1962-63, entails a capital outlay of Rs 63.5 crores. Rapid industrialisation, stepping up of food production, expansion of transport facilities, and expansion of educational and health schemes are the major aims of the programmes.

Nearly 48 per cent of the total outlay has been earmarked for irrigation, power and flood control programmes. In 1962-63 the units of the Barauni thermal stations will be commissioned and the Maithan-Sultanganj transmission system, covering a length of about 120 miles, will be completed. The Patratu thermal station with its extension scheme envisages the installation of seven additional units of 50 MW each. Under the railway electrification programme, the circuit line in Singhbhum district is scheduled to be completed and another circuit line from Pimpri to Sonenagar will be extended during the year under review.

Among the major projects that are slated for completion are listed the Kosi project, the Gandak project and the Soni project. The plan also envisages the construction of reservoir, an additional weir and the canal system at the Chandan reservoir project. When all these projects are completed the irrigation potential in the State will be stepped up by about 99,000 acres.

Much headway in the field of minor irrigation is also programmed. The extension of adequate financial assistance for the construction of new wells, tube wells and the maintenance of the al-

ready existing ones are the important policies outlined. The funds will be granted to the village panchayats and would operate on a revolving basis.

A target of 2.89 lakh tons has been fixed for additional food production for 1962-63. The tempo of work of cadastral survey and settlement operations will be accelerated and eight more districts will be covered in this period.

The State Industrial Development Corporation, constituted to foster growth of industries in the State, will spread its cast wider and take up the execution and operation of the superphosphate factory and the high tension insulator factory. Apart from advancing financial loans to private sector projects, the Corporation will set up industrial ventures of its own. The decision to establish a Development Authority to give a face-lift to regions near Ranchi, Barauni, Bokaro, Adityapur and Ramgarh-Patratu will be of great import. The corporation will also be entrusted with the task of the organised development of industrial areas.

The small scale sector is also covered. Four industrial estates will be set up in Patna, Ranchi, Biharsharif and Darbanga to promote small scale industries and to assist entrepreneurs in starting new ventures. A detailed programme for the development of road transport has been finalised to facilitate the quick movement of men and materials. Top priority has been attached to the development of roads in coalfield areas and other main roads which are utilised for the movement of coal. Adequate provision has been provided for the maintenance of roads particularly those seriously damaged by floods. The nationalisation programme of passenger transport, initiated earlier, will be extended to the remaining seven districts by the end of the Third Five Year Plan period.

III—Kerala

The annual plan of Kerala State for 1962-63, released recently, has an allocation Rs 30.3 crores. Notable progress in the spheres of power generation, irrigation facilities, agriculture and fisheries are envisaged. With an allocation of over 33 per cent of the aggregate total, power projects and irrigation works are to make greater strides. Works on two new schemes, the Idikki project and Kuttidiadi project, will be undertaken for the first time. The commissioning of the first unit of 15 MW at the Panniar project, the completion of the second unit, the installation of six units of 50 MW each of the Pambay Hydro-electric project and the continuation of the Malampuzha project are included in the next year's plan. In the field of irrigation, for which unfortunately details are lacking, the potential

is expected to be increased by 80,000 acres.

The target for additional food production is fixed at 83,000 lakh tons. This is to be achieved by adopting modern methods of agricultural practices and a vigorous drive will be initiated to educate the cultivators the need for utilising improved seeds. For this purpose 10 additional seed farms and 138 seed stores will be set up in different parts of the State. Higher targets for cash crops are fixed. During next year, production of oilseeds will be raised to 33,000 tons from 23,000 tons sugar cane to 50,000 tons from 42,000 tons, coconuts to 3,465 million nuts from 3,365 million, arecanut to 1,295,000 maunds from 1,286,000 and cashew-nut to 63,000 tons from 61,000 tons.

Kerala's allocation under fisheries has been the largest in the country, this is so because of Kerala's great potential in this directions. Work on this will be phased in the manner outlined by FAO experts' report. Two major schemes in the plan relate to fishing harbours and landing centres and mechanisation of fishing craft. The Indo-Norwegian project, started as early as 1953, seeks to improve the standard of living of the fisher folk by increasing the yield and introducing better marketing methods with a view to provide them fair returns for their labour. Two fishing villages were selected for this purpose where the fishing population will be offered better health and sanitary conditions. A factory for the hydrogenation of fish oil with a capacity of five tons per day will be set up and the products will be utilised for the manufacture of soap.

For fostering the growth of both large and medium scale industries in the State, two development centres will be organised, one near Ernakulam and the other near Trivandrum. Some of the prominent projects in the public sector are the second shipyard, expansion of FACT, phyto-chemical plant and the precision instruments factory. The State Government has also decided to open a rural institute in the public sector for higher education. Other important programmes are the intensification of anti-malaria and anti-small pox drive, family planning, preparation of master plans for Trivandrum and Ernakulam.

IV—Punjab

With an outlay of Rs 43.38 crores including an allocation of Rs 5 crores on special schemes for hill areas, the annual plan of Punjab for 1962-63 envisages the general progress of the different sectors of the State's economy. Like all those States whose plans for the same period have been made known, Punjab also accords top priority to irrigation, power and flood control schemes and a generous allocation of about 44 per cent has been made for these heads.

The programmes for the year under review include the commissioning of the three units in the left bank power houses at Bhakra, one unit at Kotla and another at Ganguwal power house, the installation of two diesel sets of 1,000 KW each, the continuance of work on the extension of Uhi river hydro-electric project and on the Bhakra right bank power houses, setting up of a 50 KW thermal power station in Delhi and a 15 MW station in Faridabad. When all these schemes are completed the supply of electricity will be extended to 800 rural areas.

To increase irrigation potential to 37.90 lakh acres, a number of projects are included in the plan for 1962-63. The Bhakra canal and the Nangal hydel channel which are almost nearing the final stages will be fully completed and work on remodelling some portions of the Sirhind Canal and the PEPSU channels will be undertaken in the same year. The completion of the Madhopur-Beas link, the remodelling of certain portions of the Western Jamuna canal and the construction of the two more bays at Harike headworks and the continuation of the lift irrigation scheme intended for irrigating the plateau situated to the north of Rewari are other important schemes that require special mention.

Stellar results on the small scale industrial front are expected to be produced during the year under review. It may be recalled that the small units are flourishing in the State and the plan envisages the promotion of such undertakings for the economic development of rural areas. For affording the requisite assistance to entrepreneurs, additional industrial estates (five urban and fifteen rural) will be established. Exploring the scope for developing the art metal industry at Jagadhri and "Punja" durries through womens' co-operatives are also scheduled to be completed.

The target for additional food production is of a higher order at 3.25 lakh tons against 2.87 lakh tons for 1960-61. 13,000 acres of additional areas in the plains and 700 acres of hilly regions will be brought under new orchards and two fruit preservation units, one in Kulu and the other in Simla, will be established.

The programmes for the next year also include the opening up of 400 credit societies, five marketing societies, eight land mortgage banks and the conversion of 1,800 credit societies into service societies. The extension of community development programme so as to cover 21,400 villages by the end of 1962-63, raising the number of blocks to 222, increasing the seats in the engineering colleges at Patiala and Ludhiana and in the polytechnic at Baijnath, establishment of two more polytechnics at Rohtak and Ludhiana and the opening up of the automobile engineering course in the Ambala polytechnic are other notable fields of expansion.

INDUSTRIAL INDIA

New India Industries' New Venture

New India Industries of Baroda (pioneers in the manufacture of healds and Reeds for Cotton Textile Industry and Jute Cambs etc., for the Jute Industry) have finalised their new programme in the manufacture of Sensitised Photographic Paper, in their new factory at Mulund a suburb of Bombay. The industrial development wing of the Government of India has given them a licence for the

... of such special lity paper in this new fa which will go into produ about June-July this year.

The capacity of this factory be to the tune of 1.2 millions metre. This venture has sec the cooperation and collabor of the famous West German Agfa, which requires no intro tion to this country. Besides ing it the benefit of its com technical know-how and exper Agfa is also participating i small way in the capital of New India Industries. It is pected that this arrangement enable New India Industries save royalty, while deriving fullest benefit of the Agfa m

DO I
REALLY
NEED A

BANK ACCOUNT ?

Of course you do. If kept in a bank, your savings will earn interest. Besides, they'll be safe from theft and misplacement. And a bank account might induce you to save more.

But what happens when I need money for an emergency?

You can easily withdraw—quickly and without notice. Savings are intended for use on a rainy day.

But you know, we don't have much money?

No matter! You can open a savings bank account with the State Bank of India with as little as Rs. 5/-.

Really?

Yes, the State Bank of India. With over 900 offices throughout the country, the State Bank of India is serving the nation. And what is more by lodging your savings with the State Bank, you will not only benefit personally, but will also play your part in the development of the national economy.

The State Bank of India?

Yes, the State Bank of India.

STATE BANK OF INDIA
INDIA'S LEADING BANK

Besides, the Company has been manufacturing and marketing the famous synchronised box camera of Agfa. It is understood that during the last year, the sale of these cameras has considerably increased. The company has therefore approached the Government of India for further licence not only to increase in the number but as well to manufacture of the New Model Cameras of Agfa W. Germany which are now in vogue in the world markets.

There is little doubt that this new venture is a welcome addition to joint collaboration with well-known foreign firms and will not only fill a gap in indigenous photographic industry, but also save scarce foreign exchange now spent on import of photographic goods.

NEWS IN BRIEF

DEPOSIT INSURANCE CORPORATION

The first Meeting of the Board of the Deposit Insurance Corporation, which commenced business on the 1st January 1962, was held today in the Reserve Bank. The Board consists of the Governor of the Reserve Bank who is the ex-officio Chairman of the Corporation, Mr G. S. Diwan, Retired Lecturer in Actuarial Science, Sydenham College, Bombay, Mr

S. N. Desai, President of the Institute of Chartered Accountants, Mr M. V. Rangachari, Deputy Governor, Reserve Bank of India and Mr A. Bakshi, Joint Secretary to the Government of India, Ministry of Finance, Department of Economic Affairs, New Delhi. Among other things, the Board fixed, with the approval of the Central Government, the premium payable by insured banks at five naye paise per year for every Rupee one hundred of its deposits (or 1/20th of 1 per cent per annum). It also decided to publish in English and the regional languages a brief pamphlet setting out in simple language the functions of the Corporation and the manner in which they are to be carried out.

The Government of India have appointed a Central Tripartite Wage Board for the iron and steel industry.

The seven-member Board consists of Mr G. K. Shinde (Chairman) Mr Akbar Ali Khan, M.P., and Professor M. L. Dantwala, (Independent members) Mr M. S. Rao and Mr Saradindu Gupta, (employers' representatives) and Mr Michael John, M.P., and Mr Gopeshwar (workers' representatives.)

The Union Government has granted a loan of Rs 69 lakhs to the Punjab Government as part of its aid for financing the works of the Bhakra-Nangal project in 1961-62. This loan makes the total loan so far sanctioned to Rs 196.36 crores.

Production of steel at the Bhilai Steel Works in 1961 registered a notable increase. The total output of steel ingots shot upto 670,252 tonnes against 327,499 tonnes in the previous year. Production of pig iron rose to 957,092 tonnes from 658,377 tonnes. Through output of blooms and billets amounted to 572,688 tonnes and 372,271 tonnes respectively as against 302,042 tonnes and 279,068 tonnes in 1960. Manufacture of finished structurals smartly looked up to 53,958 tonnes from 6,317 tonnes. Production of coke also improved sizably to 1,003,885 tonnes from 687,938 tonnes. The Steel Works during the year under review rolled out 88,302 tonnes of rails and the output of merchant products totalled to 113,481 tonnes.

The International Tin Council has announced its decision to raise the floor price in the International Tin Agreement to £790 from £730 per ton and the ceiling price to £965 from £880 a ton.

The Governing Council of the United Nations Special Fund has announced its decision to grant

₹2,025,000 for three projects in India—the National Institute for Training in Industrial Engineering Bombay; the Central Instructor Training Institute, Hyderabad and the Rajasthan Sheep and Wool Institute.

A sum of Rs 5 crores will be placed at the disposal of the Tea Board by the Government of India to enable it to grant long-term loans to tea estates for replanting, replacement and extension of tea areas.

The Government of India has approved Orissa Government's scheme for the installation of a five-lakh ton cement factory at Hirakud at a cost of about Rs 5 crores. The factory is expected to be commissioned early 1964.

Earnings from the exports of engineering goods during the first ten months of 1961 increased to Rs 8.36 crores from Rs 7.6 crores in the same period in 1960. Exports to all destinations, barring America and West Asia, showed an uptrend. An analysis of the commodity-wise break up reveals that the improvement was wholly due to the rise in the export of manufactured goods valued at Rs 4.1 crores against Rs 2.97 crores in 1960. Earnings from machinery and transport equipment remained unaltered at Rs 2.64 crores and those of miscellaneous manufactured items slipped down to Rs 1.63 crores from Rs 2.08 crores.

The United States agricultural exports during the year ended 30 June 1961 touched record levels. The volume of exports was seven per cent above the previous record in 1959-60 and the value of exports at \$4,946 million was five per cent above the prior record in 1956-57. The US continued to be the world's leading exporter of farm products.

A sugarcane research station at an approximate cost Rs 2.88 crores will be set up in Champaran District in Bihar during the current Plan period.

Bhilai Steel Plant produced 88,591 tonnes of pig iron and 67,250 tonnes of steel ingots in December last as against 83,577 and 69,880 tonnes respectively in November. Production of pig iron for sale improved to 33,250 tonnes from 29,869 tonnes. Output of saleable steel production aggregated 40,735 tonnes.

Durgapur Steel Plant's production of pig iron was slightly higher at 64,330 tonnes against 62,168 tonnes in November. Production of steel ingots declined to 42,015 tonnes from 42,470 tonnes.

Indian Finance

Production of saleable pig iron looked upto 24,087 tonnes from 20,614 tonnes. Production of saleable steel was lower by 248 tonnes at 30,387 tonnes.

Rourkela Steel Plant produced 44,530 tonnes of pig iron and 38,501 tonnes of steel ingots during the month under review in contrast to 37,959 and 32,924 tonnes respectively in the previous month. Production of saleable steel totalled 16,694 tonnes comprising 16,678 tonnes of finished steel and 16 tonnes of semis for sale.

The Bihar Government's Rs 60 lakhs super-phosphate factory at Sindri has been licensed to enhance its production by 100 tons of sulphuric acid and 200 tons of super-phosphate per day during the current Plan period.

Production from the Singareni group of collieries in December last totalled 280,052 tonnes against 268,445 tonnes in the previous month. Production upto the end of December 1961 aggregated 2,795,402 tonnes in contrast with 2,502,993 tonnes produced in 1960.

PERSONAL

Mr B. R. Gadre, Officer of the State Bank of India, has been appointed Custodian for taking over the administration of the branches of the Banco Nacional Ultramarino in the former Portuguese pockets.

Commodore B. S. Baswani, till recently Chief of material at Naval Headquarters in New Delhi, has taken over as the Managing Director of Mazagaon Dock at Bombay.

Mr T. S. Parasuraman, who was General Manager of Bombay Port Trust, assumed charge as the Administrative Officer of the Marmagaoon port.

Mr Pratap Bhogilal was re-elected Chairman of the Mill-owners' Association, Bombay, for the second term and will hold this office for the current year.

Mr D. K. Kunte has been appointed Chairman of the Maharashtra Housing Board by the State Government.

Mr Nathanael Vining Davis, President of Aluminium Limited of Canada is expected to arrive in New Delhi on January 21 on a short visit to India. During his visit Mr Davis will meet Government officials, leaders of industry and other important people and study first-hand the progress achieved by industry in India, particularly in the field of aluminium. He is expected to be in Calcutta on 31 January and 1 February.

Clive Street Gossip

"I must have liberty
Withal, as large a charter as the wind
To blow on whom I please"
—As You Like It.

DESPITE the width of my charter quoted above, I fear that it was a rash precedent to have set, letting cricket in these columns. Twice in three weeks, I find myself writing about it, while sterner "life-is-real, life-is-earnest-stuff" is clamouring in vain for attention. A colleague who is looking over my shoulder suggests that at this rate and with the Indian team sailing for the Caribbeans, I may as well learn the jargon and the tricks. But he forgets that this is rather a special occasion. History has been made. And I have no intention of being left on the shoals of history when it flows majestically on. I don't want to feel in my old age like the man in the famous recruiting poster whose children ask him what he did in the Great War and who finds that he has no decent answer for it. My scrap book shall be my witness that I did participate in these stirring times. My young friend who had predicted the Indian victory even before the match started in Madras was fairly drunk with joy on Monday evening and settled some old scores with gusto. This will teach the English, he said, to talk snottily about three-day-tests with India and Pakistan. He was also harbouring a grudge against Australian arrogance which had the nerve to suggest that India was not good enough to play with. I was outraged, of course. He then went into the details of the game which left me dizzy but happy in his happiness. I rather suspect that these last few have been days of tension for most of us and Monday's victory released a flood of relaxed happiness. I made some other odd discoveries too: at least one man I know regards the Indian victory as sweet revenge on British behaviour over Goa! When Aldous Huxley wrote scathingly in the thirties about football matches providing occasions for "gingoistic detumescence, I used to think he was exaggerating. I still think so, but I see his point. Anyway, if we can work off our emotions in such harmless ways, the world would be a much better place to live in.

And talking of cricket, the Russians want to play it. I think this is quite the most momentous piece of news we have had for some time. What on earth could have happened? American sources of the highest authority have been hinting this past week of

strange goings on behind the curtain. Can it be that Khrushchev is going over to the West leaving friend Mao the sole guardian of the well of communism undefiled? Is an application from Russia for membership of the Commonwealth imminent? For cricket, despite the mystique of Englishry that writers like Blunden and Basil de Selincourt invest it with, is the Commonwealth game par excellence. With the exception of South Africa, which is now out of the Commonwealth and which for this and other reasons must give it up, no non-Commonwealth country plays it. So Russia's sudden passion for cricket may well presage its becoming a member of the Commonwealth. Already pundits have been scanning the cracks in the monolithic structure of world communism and the emergence of Protestant Communism may well lead to new alignments. There has been speculations about India and Russia getting nearer each other and isolating China and in the fullness of time, the much talked-of Third Force may well consist of the British Commonwealth with Russia as a member. Anyway, fervent Europeans may see in Russian conversion to cricket a new threat to the Atlantic community, though it may not be safe to predict that Lord Beaverbrook will welcome this new ally to fight the ECM. The MCC is reported to be enthusiastic, but I wouldn't rule out a conservative back-bench revolt at the prospect of Russians at Lord's. Captain Waterhouse may feel that the Russians are incapable of playing cricket. Others may see in it the thin end of the wedge: from Lord's to the Lords is but a step and Khrushchev may not be as reluctant a peer as Mr Wedgewood Benn.

Or it may be quite simply that the Russians are fascinated by the game and want to play it, though I find from the papers that they had some difficulty in following it when they watched it in England last summer. Or it may be that it is the old Russian complaint: the itch to prove that anything the west can do, they can do better. If the Russian attitude to the Olympics is any indication, we may find the Russians setting about defeating Australians in about defeating Australians in 1964 in the same grim, determined way they eat about outclassing the West.

than in space gadgetry. Anyway, I expect the cartoonists to get busy, with the bumpers and the body-line, the spin and the googly, the late and the square cuts, the whole works, in fact. Meantime, it is one way of amusing oneself to think of a good Western eleven to put in field against Khrushchev's.

I hope for the sake of the reputation of our government that what I have read about the film on Gandhiji's life recently shot in Delhi by Mr Robson, a Hollywood producer is incorrect. But it seems a forlorn hope. Last Monday's Amrita Bazar Patrika reproduces a despatch from Delhi to the Daily Herald of London by its correspondent David Nathan. The details about the film and its making given therein made me sick. (Come to think of it, it is odd that there has yet been no film on Gandhiji. Since his death there has been reports of several attempts to make one but for some reason they seem to have petered out except the present one by Mr Robson. There is some unresolved mystery here.) Mr Robson, we are told, is being afforded all official assistance—among other things, the use of the Camel Corps, Gurkha Lancers, Presidential Guards and so on—to make this film. The script was submitted to Government, and the producer was obliged to make two alterations before he got his clearance. One of the official objections is reported to have arisen from the fact that "the original script brought our policy into contempt by making it appear that they (sic) acted on astrological advice that Gandhi was to be killed. Once this was changed, there was no reason to withhold facilities." In the light of this it seems fair enough to infer that the script as it now stands has official blessing.

Mr Robson seems to have got off sensibly enough. He decided against a straight biography and his film entitled tentatively *Nine Hours to Rama*, deals with only the last few hours of Gandhiji's life. Considering how charged with drama these hours were, it is a brilliant idea. But incredible as it may seem, having taken this decision, he seems to have felt that he must add a few fancy touches. Consequently, Godse has been provided with an "affair with a married woman" and a "relationship with a prostitute". Now we are used to this kind of thing from Hollywood producers and the fact that Mr Robson also produced the film Peyton Place goes further to explain his script.

have read the novel, which is about a New England town with a lot of turgid sex with incestuous and lesbian overtones thrown in.) But I am shocked and ashamed that the government passed this nauseating travesty in a film about Gandhiji.

Indeed, if Mr Nathan is correctly reporting the government official "who had arranged all the facilities for Mr Robson" and with whom he discussed the film, I am filled with disgust. "Smiling into his silky beard," Mr Nathan reports, this worthy delivered himself of the following: "Where it deals with Gandhiji, it is a true reflection of his spirit. And when it comes to Godse, it is utterly unreal and the usual Hollywood fiction and quite ridiculous." So it passes muster with this gentleman. Is it his view that while details of Gandhiji's life are sacred—which they certainly are—Godse's was fair game? What kind of historical honesty is this? Compared to this, the apocryphal obstinacy of Cecil B de Mille in insisting on having Moses in the Wars of the Roses is an endearing absurdity. Even an assassin is entitled to the decencies of history and when he is dead and beyond invoking the law of libel, the obligation to provide them is even greater. And here we find an official blandly admitting that the frills about Godse in the film are false and thinking that no harm has been done in letting them stay. And how does it enhance Gandhiji's stature to be shot by a mere lecher? How does it add to the drama of the situation or the complexity of the motivation to make Godse what he has been made in this film? Whatever he was, Godse was no common criminal: while I have no desire to make him a hero in the Miltonic sense, I see no point in making him a rake, when he was not one. And to think that the censors objected to Ashes and Diamonds on the alleged ground of its equivocation on marital morality! Can it be that Authority feels that the revulsion we feel for Godse for having shot Gandhiji would make us forswear the other revolting things he has been credited with? It would indeed be rich if it were so. It is true that the Government has reportedly reserved the right to suggest amendments to the film after it has been shot and before it is released. But it would be unfair to a producer to ask him to cut portions from a script that has been approved. Another curious thing about this business is that there are to be two versions of the film, one for exhibition in India and another abroad. Mr Nathan gives the reasons for this arrangement as "sexual rather than political." An ambiguous statement, but one sees his point. Altogether a most unsavoury affair.

Olympus

IMPORT CUTS For Export Promotion

REPORTS that Import quotas for Actual Users in a number of industries have been further reduced have revised anxiety regarding achievement of production targets. The anxiety has been heightened by a feeling that the new restrictions are in some way linked to a possible deterioration in the foreign exchange reserves or prospects of foreign aid, leading to renewed pressure on the Ministry of Commerce and Industry to take drastic measures to reduce imports. But such a feeling appears to be based on a total misapprehension. It is true that the foreign exchange position, as the Finance Minister has never missed an opportunity of reminding the country, is one of continuing anxiety. And it will remain so throughout the Third Plan. But there has been no development in the course of the last three months to suggest that the appraisal of foreign exchange availability, on the basis of which import policy for the current half year was announced on October 1, needs drastic revision. And it is difficult to see how, short of a grave foreign exchange crisis, the import policy already announced could be altered in the middle of a licensing period. Fortunately, there is nothing to indicate that a crisis of that type is in the offing.

The availability of foreign exchange is determined by (1) Export earnings and (2) Foreign aid allocations. As far as import policy is concerned, the first has greater relevance than the second. As regards the first item, exports for the eight months April-November 1961, at Rs 443 crores, show an increase of Rs 39 crores over the figure for the corresponding period of 1960. The adverse balance for this period is Rs 198.51 crores as compared with Rs 329.41 crores last year. There is no reason to doubt that the improvement in exports will continue during the rest of the busy season.

As regards foreign aid, it was announced after the meeting of the World Bank consortium last May that the amount of aid committed at that meeting, together with the aid available from other sources, would fully cover the requirement of foreign exchange for the year 1961-62. The communique also drew attention to the shortage in respect of the requirements

for 1962-63 and stated that the position would be further reviewed at the next meeting of the Consortium. Measures to fill this deficit, as well as further aid for the remaining years of the Third Plan, are expected to be considered at the meeting of the Consortium scheduled to be held on January 29. There is little reason to think that prospects of bridging the gap in the requirements of foreign exchange for next year are not at present as bright as they appeared even three months ago. Any apprehension, that the adverse reaction to Goa in the Western countries would result in a setback to the aid programme, has been promptly dispelled by the categorical statement on the subject by the US Secretary of State.

There is also no indication that utilisation of aid already committed may be held up by delays in finalising the terms of the bilateral agreements with donor countries. It is learnt that agreements have been concluded with all countries with the exception of an amount of \$30 million offered by France. On this negotiations are continuing regarding the period of repayment. Moreover, as far as import licensing is concerned, the relevant factor is not the total quantum of aid, but the amount of aid that is not tied to specific projects and so could be used to finance 'maintenance' imports. Part of the aid from West Germany, the United Kingdom and the USA is of this type. Agreements have been concluded with all these countries, and part of the allocations have already been utilised. The position regarding export earnings and foreign aid being what it is, there is no reason why the import policy already announced should be made more restrictive in the middle of the licensing period. If the gap in the requirements for the second year of the Plan remains unfilled even after the Consortium meeting, it may result in delay in starting some projects and entering into commitments for import of equipment for these projects, and if any further import restriction is considered necessary, it could be taken care of in the policy to be announced on April 1, 1962.

A closer look at the cuts in import licences that have been publicised will, however, show that there has, in fact, been no change in the basic import policy already announced and there is no justification for apprehension on that score. It may be recalled in this connexion that the press note of September 30, 1961 announcing the policy for the current licensing

period clearly stated that the new policy had been formulated "with the objective that the Import Trade Control must serve as an instrument of industrial development, as conservator of foreign exchange and as a vehicle of export promotion." The Import Control is now being operated with a view to achieving the last of the three objectives, namely export promotion.

When the import policy for April/September was announced on March 31, the spokesman of the Ministry had clearly stated that, in respect of a number of industries having export prospects, the extent to which AU licences would be issued against their full quota of requirements would depend on the export performance of individual units. This policy is being applied to a group of 29 export industries. While, for the purpose of earmarking foreign exchange, quotas have been indicated at the level of requirements as assessed by the Ministry, the licences are not issued, in the first instance, to the full extent of the quota, the understanding being that the cut would be restored to the extent the industrial unit concerned is able to export its products during the licensing period. In this way it is expected that pressure will be kept up for 'maintenance of exports' which has been assigned higher priority over 'maintenance of production.'

Institute of Economic Growth

The Institute of Economic Growth has organised a series of lectures and seminars by Professors of the MIT International Centre on a wide range of problems of economic development. The series started on January 10, with an illuminating lecture by Professor A. Harberger of the Chicago University on the Anatomy of Economic Growth. Other MIT professors participating in the series of lectures, which will continue through March 2, are Prof. R. Eckaus and Prof. Sevoldson.

The main theme of Prof. Harberger's lecture, which was endorsed by Dr V. K. R. V. Rao, Director of the Institute was that a large number of ingredients were involved in economic growth and it would not be correct to emphasise one item to the exclusion of the others. Analysis of the data available regarding the US economy, which covered a period of over a century, showed that the actual rate of increase in national income could not be explained in terms of the components considered relevant by traditional Economics, namely the marginal productivities of capital and labour. If these were the only two items involved, the sum of the marginal productivity of Capital and of Labour should equal the rate of growth of national income in any particular year. But actually the sum fell short of the actual increase by a significant figure, pointing to the existence of other factors. This unexplained residue, said Prof. Harberger, had been attributed to the Technological Factor, which again was too wide a term. Reallocation of labour from low to high productivity activities, improvements in the average quality of labour, managerial activities directed to achieve continuous reduction of costs, economics of scale—all these, besides technical advance properly so called, contributed to the increase in the rate of growth of national income represented by the residual factor. Prof. Harberger also said that there was no close relation between technical advance and capital investment. Some capital investment was, of course, necessary to put a new technique into operation. Even so, the adoption of new techniques may in the end result in capital saving. On the other hand, there was direct correlation between the increase in the rate of growth of national income and changes in the quality of the human agent brought about, for instance, by increase in the years devoted to education and training. Extending the result of the analysis of US data to the problems of underdeveloped countries, which are faced with the task of getting out of economic stagnation, Prof. Harberger deprecated the tendency to regard capital investment as the key to economic growth to the exclusion of other factors.

The Institute of Economic Growth was established in May 1958 by the Delhi School of Economics Society. Its establishment was facilitated by a five year grant from the Ford Foundation, which also enabled the Institute to undertake research activities in the field of Economic Growth. The Institute, which is an all India Centre, aims at undertaking basic analytical studies in the field of economic development. Some of the research projects currently under way in the different sections of the Institute are:

1. Socio-economic Survey of Greater Delhi.
2. Impact of Industrialisation on India's Balance of Payments.
3. Current pattern of Energy Utilisation and Assessment of Energy Requirements during the next decade in North West India.
4. A Study of Foreign Aid to India.
5. A Study of Farm production functions in some region of Central India.
6. Farm Supply Dynamics in the Punjab.
7. Location of food grain storage with reference to price stabilisation.
8. Distribution of Income in India.
9. Fertility and Family Planning in Selected Villages.
10. Trends in sex ratios of cities of 100,000 and more: 1901-1961.
11. Urban Fertility in India.

Indian Finance

Markets

JUTE Raw Jute Situation

THE jute markets have been ruling quiet during the past week with the reactionary trend well pronounced in the raw jute section. Despite substantial buying by mills, the undercurrents in the raw jute market continued to be easy following heavy arrivals. It has been reported that sales not governed by the regulations of minimum price are taking place at below minimum prices. In view of the assurance given by Government that the price level would be maintained at Rs 80 per maund basis Assam Bottoms, the expectation is that some sort of official action will be taken if the situation does not show improvement soon. In the meantime the Indian Jute Mills Association has taken further steps for strengthening the raw jute market. In a press note issued last Saturday, the IJMA refers to the fact that it has been taking steps to support the raw jute market since early December last when purchases of jute by the mills had been accelerated through the issue of minimum quotas each week despite the difficulties experienced over finance. In recent weeks the purchases have been accelerated still further. On 10 December a supplementary quota of 3 Lakh maunds in respect of the week ended 13 December was issued. For the week ending 20 December a substantial quota of 9 lakh maunds has been prescribed. It is reported that the IJMA has directed mills to purchase at least 50 per cent of the current week's quota on contract with a view to relieve the distress in the local market. According to the IJMA press note the fall in prices in the jute growing districts is due to the lack of adequate transport facilities. Representations have been made by the IJMA to the local railway authorities and to the Railway Board for the allotment of more wagons. However there is accumulation of large stocks of jute in North Bengal, North Bihar and Assam. To remedy the situation especially in North Bengal, the IJMA has asked the Railway Board to arrange for railway godowns at the despatching stations to be made available for storing the

jute which cannot be moved by rail. Similar representations have been made to the Government of Bihar for the provision of Government godowns which are available there.

It would appear that even after the announcement of the new measures there has not been any marked change in the market position. Throughout the current week, the raw jute market has been ruling easy with the quantity on offer daily on the increase. It is obvious that sellers are keen to dispose of their stocks as quickly as possible and it is not quite certain they will not be satisfied with a lower price provided they are able to reduce substantially their stocks. If however the raw jute situation shows no early improvement, a fresh attempt has to be made. The present idea of entrusting the entire responsibility to the IJMA may have to be revised because it may not be possible for the IJMA to go on asking member mills to increase their purchases week after week. Already mills are experiencing difficulties over finance and these will become more acute when they accumulate more and more stocks. Storage space may also present new difficulties.

TEA Rise in Exports in 1961

ACCORDING to the provisional figures, exports of tea from North-East India have increased to 368.51 million pounds last year from 343.02 million pounds in the preceding year although they are lower than the 385.15 million pounds exported in 1959. Supplies to the UK have risen to 226.71 million pounds from 220.05 million pounds and to the USSR and URA to 21.14 million and 30.01 million from 15.91 million and 29.72 million pounds respectively.

Among other important customers for North-East Indian tea, supplies to the USA have risen from 14.29 million to 16.34 million pounds. Exports to other destinations are as follows, figures shown within brackets being for 1960 (in million pounds):—Sudan 13.24 (7.02); Irish Republic 12.77 (13.31); Persian Gulf 9.41 (9.18); Turkey 9.4 (5.71); Canada 8.7 (9.43); Iran 8.06 (8.54); Continental Europe 7.5 (6.74) and all other countries 5.23 (3.12).

According to trade sources in Cochin, exports of Tea from South India, in the eight months of 1961 are, however, lower at 49.69 million pounds as compared to 51.72 million pounds in the similar 1960 period.

Meanwhile, in the Export Sale held in Calcutta this week, offerings consisted of 75,068 packages. With the quality of the offerings showing some improvement, a strong demand continued to prevail with prices generally firm to dearer. Plain Brokens were firm to dearer and their Fannings met with keen competition at dearer rates. Better liquoring and medium Assam orthodox descriptions were fully firm, buyers showing more interest in plainer and medium BOPs this week. Fannings were a strong feature.

CTC types were the strongest feature of the sale and often showed a considerable increase in price. Legg-cut teas shared in the good market. Darjeeling teas were irregular, those with quality being often dearer. There was a good demand for the Whole Leaf grades. Tippy teas ruled dearer. Following rates were quoted:—Clean Plain Pekoe Rs 4.00 to Rs 4.20; Plain BP Rs 3.55 to Rs 3.65; Plain Fannings Rs 3.80 to Rs 4.10; Medium Assam CTC BP Rs 5.10 to Rs 5.50; Medium Assam CTC Fannings Rs 5.10 to Rs 5.50; Best Assam CTC BP Rs 5.60 to Rs 5.90 and Best Assam CTC Fannings Rs 5.80 to Rs 6.20.

In the Internal Sale, offerings consisted of 26,424 packages of Dusts and 486 packages of Leaf grades. Although the Dusts sale was good and general, a slight weakening was apparent towards the close. Good CTC dusts were

keenly competed for and were generally dearer with quality, while the plainer types, though irregular, were often 10 nP to 15 nP easier. Fibrous grades continued to sell well. Orthodox dusts received good support at a drop of 10 nP although the small powdery types were generally dearer.

The strongest feature of the sale was the bright liquoring legg-cut dusts, which realised very useful prices. The plainer types were somewhat irregular, but generally firm to dearer. Following rates were quoted: Plain Orthodox Dust Rs 3.80 to Rs 4.40. Medium Assam Dust Rs 4.20 to Rs 5.00. Legg-cut Dust Rs 4.60 to Rs 5.20; Medium Assam CTC Dust Rs 5.70 to Rs 6.20 and Good Assam CTC Dust Rs 6.50 to Rs 7.10. Green teas were sold well.

Production of tea in North India has shown a sharp fall to 7.42 million pounds from 58.98 million pounds in the previous month and 13.91 millions in December 1960. Despite the sharp fall last month, however, the output in the nine months ended December 1961 was 66.07 million pounds higher at 595.07 million pounds as against 529.75 million pounds in April-December, 1960.

Also, production of tea in Portuguese East Africa is looking up. With an outturn of 600,000 pounds in October 1961, total output, in the seven months ended October 1961, increased to 18.9 million pounds from 16.9 million pounds in April-October, 1960.

In the Cochin market, a total of 617,000 kg of Leaf tea was offered for export. Quality, in general, showed a further seasonal improvement. There were a few attractive teas offered from the Nilgiri district. The market opened with a strong general demand, which continued throughout the sale. Buyers showed keen interest for high-grown particularly those with improved quality, which advanced considerably in price.

Plain, low medium and medium brokens were well competed for and these were sold at rates 10 nP to 20 nP a kilo above last week's rates. Similarly, Fannings, although sold readily, were only quoted firm to dearer. Whole Leaf grades were strong and dearer, while unorthodox descriptions were strongly supported and quoted irregularly 10 nP a kilo dearer. The following were the rates for 1962 and 1961:—Low Medium Rs 3.69 to Rs 3.95 (Rs 4.55 to Rs 4.75); Medium Rs 3.95 to Rs 4.50 (Rs 4.75 to Rs 4.90); Good Medium Rs 4.50 to Rs 4.60 (Rs 4.90 to Rs 5.50) and Nilgiri BOP Rs 5.60 to Rs 9.00.

Tea stocks in London, as on 5 January 1962, were 127.59 million pounds as against 123.99 million pounds in the previous week. Total afloat was 50.82 million pounds including from Calcutta 43.78 million pounds; from Chittagong nil; from Cochin 2.51 mil-

lion pounds; from Ceylon 2.36 million pounds and from other Ports 1.99 million pounds.

COTTON Buoyancy in Futures

THE trading pattern in the Bombay cotton futures market during the past week displayed a buoyant tone thanks mainly to the renewed bull support and short covering consequent on the announcement of Textile Commissioner to introduce the variety-wise distribution scheme. The sentiment was also fanned by the apprehension of a further setback in the cotton crop during the current season, which according to a section of the trade is likely to be placed lower than 46.5 lakh bales. The Jarilla March contract, which commenced the week at Rs 675 against the previous week-end closing of Rs 674.50 slipped down to Rs 674 in the early part of the week, but steadily looked up to reach a new peak of Rs 687 before finally closing at Rs 684. The undertone in the market remained firm throughout the week.

The Government of India's decision to allow the import of 2 lakh bales of cotton stapling 1-1/16" and above from any area was gratefully acknowledged by the trade. Besides the Government has also announced its decision to allow the import of Pakistan cotton worth Rs 1.5 crores which, however, was received with mixed feelings by the trade circles in view of the fact that at the prevailing prices the quantum available for import will amount only to 30,000 bales which is far below our requirements.

The Government has also released 75,000 bales of Bengal Deshi cotton for exports on the "first come first served" basis to all permissible destinations excluding Tibet. Out of the total quantity released for export, 3,750 bales will be reserved for the co-operative societies located in those areas which grow such cotton. The allotment letters will be issued on registration by exporters. Though the principle of first come first served will be observed the allotment will be subject to a maximum of 5 per cent per shipper of the quantity available for exports from all ports after deducting that portion earmarked for the co-operative societies. Application for registration will be accepted on each working day from 22 January onwards. Confirmed contracts signed by foreign buyers should be submitted to the Joint Chief Controller of Imports and Exports within a month of the date of allotment letters.

Licensing against allotment letters will be made on the production of shipping bills together with the other requisite documents. Shipping bills will be valid for shipment within 15 days from the date of their passing or 31 August, whichever date is earlier. The allotment letters will remain valid for shipment between 25

January and 31 August. The press note released in this connection also states that registration will be stopped the moment the ceiling is reached.

Earlier apprehension of a reduced United States cotton crop during the current season seems to have been shed and, according to figures available in New Delhi, the crop will be slightly higher at 14,304,000 bales against 14,272,000 bales produced in the previous year.

The spot market at Sewri depicted lively conditions and there has indeed been a buying spree during the week under review. Spinner interest was pronounced in almost all the available varieties of both old and new crop and their prices hardened on a wide front largely due to the reports of damage to cotton crop in certain areas.

Fairly good business was transacted, on the export front, in Bengal Deshi. The shipment of this particular growth for four months during the current season totalled 63,950 bales in striking contrast to 37,981 bales in the relevant period in the previous year.

Import sector also was active with spinner interest focussed on Sudan higher grades, ready Pakistan, American and African cottons.

Consumption of cotton by the indigenous mills from 1 September 1,960 to 31 August, 1961, aggregated 5,372,900 bales as against 5,105,085 bales in the corresponding period in the previous season.

Description	1959-60	1960-61
Indian	4,419,307	4,246,261
Pakistan	21,728	16,833
American	223,284	665,013
Egyptian	141,160	118,450
Sudan	125,372	120,805
East African	155,545	171,288
Others	18,689	34,250
Total	5,105,085	5,372,900

PIECEGOODS

Trading in the Bombay cotton piecegoods market during the week under review displayed a perceptible improvement. The domestic front was active thanks to the enquiries from the upcountry centres and the turn over was sizable. The export sector too was cheerful and a larger number of enquiries from the traditional markets was reported.

Dhoties, saris, bleached mulls and seasonal goods were in the lime light in the domestic sector. The prices of all these varieties showed a rising trend. Powerloom goods remained firm on account of the improvement in demand from upcountry centres. Some varieties like bleached longcloth and dhoties were in short supply. Grey mulmul commanded higher prices. Calcutta, Kanpur and Bihar figured as the leading upcountry buyers during the past week. Their interest was focussed on dhoties, saris and bleached mulls. Rajasthan and South Indian buyers were also active in the market. Fair enquiries from the buyers enabled

some of the mills to conclude transactions at ex-mill prices. Most of the business was for delivery at the end of February or at the commencement of March.

Export front was also active obviously due to the fair demand from most of the foreign buyers. Sudan's fancy centred on sheetings, mulls and volles. The United Kingdom accounted for a moderate quantum of the usual quality. East Africa purchased a moderate quantity of coatings, grey calendared takas, grey drills, bleached and grey chaddars. Ethiopia and Eritrea were interested in drill for prompt shipment. Ceylon and Burma directed their attention on bleached longcloth and furnishing fabrics.

Coffee— Overproduction in the Foreground

THE world's coffee producers have entered 1962 hopefully with the prospect of a new, long-term agreement in effect by the year's eve. The agreement can go a long way toward alleviating the traditional difficulties of the coffee market. But 1962 also begins with one of these difficulties—overproduction—very much in the foreground.

The latest estimates for the 1961-62 crop is 74,688,000 million bags—second only to the disastrously excessive crop of 1959-60, when 78,737,000 million bags were produced and the prices reached their lowest level. Larger crops are expected everywhere except in African and Asian nations and Costa Rica. Mexico has a far larger crop than ever before despite wind and rain damage, while Brazil is expected to have the second largest crop on record even though the long-range outlook is for decreasing production there. The Dominican Republic, Haiti, Puerto Rico, El Salvador, Guatemala, Colombia and Peru—all are expected to have larger crops than last year. The Venezuelan crop is estimated to be about the same as 1960.

The proposed five-year coffee agreement, which involves the participation of both producing and consuming countries, will provide means for effective policing of the quota system. If this is adopted, it will tend to level off prices through adjustment of production to consumption. Producers will commit themselves to limit crops to the amount required for domestic consumption, exports and reasonable stocks. Coffee experts, in Washington, are hopeful that negotiations, beginning in June, may lead to adoption of the agreement by the end of the present coffee year—next, October or by 1 January, 1963.

As far as the Indian coffee industry is concerned, the record crop of 1960-61 has presented serious difficulties in its marketing. With a glut of supplies in the international

markets, only plantation varieties can be exported without much difficulty and the prices fetched are considerably below those prevailing in the internal market. In the internal market, Plantation varieties can probably be sold in larger quantities and at slightly better prices. But, there is a shortage of these varieties, because the bulk of the output has to be exported. Robusta grades have, therefore, to be sold at very low prices for internal consumption.

Since out of the total crop of about 66,000 tons, about 34,000 tons have been earmarked for exports, the losses incurred on account of export sales by the industry as a whole should be somehow made good and the industry enabled to work on a reasonably profitable basis. There is no likelihood of an early improvement in the international markets, as there is a heavy accumulation of stocks and world production is in excess of demand. There is, therefore, a good case for a reduction in the excise duty on coffee as well as

agricultural income-tax. Then only the industry will be able to continue the good work done during the past decade.

SUGAR

Sugar markets have continued to remain depressed. With the release of 200,000 tons for sale, the supply position has become very comfortable. Inferior small crystal is not in request even at lower levels, while bold crystal is readily lifted even at higher prices. In the Hapur market, the rate is quoted at Rs 106.50 per bag.

In general, a further fall in wholesale prices has been recorded. The total fall, since sugar was decontrolled on 27 September last year, is of the order of Rs 1.25 to Rs 1.50 a maund. The cost of sugarcane, which accounts for 50 per cent of the price of sugar, continues to be statutorily controlled at Rs 1.60 a maund—the same as in the past two seasons. Excise duties and other

taxes claim as high a proportion of 34 per cent of the final price. The industry has, therefore, no elbow room to adjust to the downward trend in prices.

Out of the lower sales realisation since decontrol, the industry has to pay a average of 25 nP per maund as selling commission—a charge which it did not have to bear when sales were made to customers nominated by the Government. In addition, it has to provide for a higher wage bill in the current year on account of the increments it must give under the Wage Award.

It is learnt that the sugar industry has urged the Government of India to announce the policy in regard to sugar production during the 1962-63 season. The Government announced its decision to cut production during the 1961-62 season by 10 per cent as late as October, 1961. This, it is stated, placed sugar factories in a difficult position; because they had already entered into binding agree-

you owe THEM safety

FIT

Firestone

BE SAFER FOR LONGER

There is no economy in driving on worn-down tyres. There is only DANGER—from skids, from blow-outs and from the lack of braking control.

You and your family are no safer than the tyres on your car!

Buy Firestone and you get—

- The still exclusive Firestone Safety Tread with its thousands of non-skid angles to ensure the utmost in braking control.
- Long-service, wear-resistant Firestone rubber formulated to keep you safer—for longer.
- The same engineering skill in tyre construction that World Motor Racing Champions depend on for their lives.

BEST TODAY—STILL BETTER TOMORROW!

ments with private cultivators for the purchase of their cane.

Embarrassment is also caused to cultivators since they are left with large quantities of already planted cane and the same cannot be purchased by the factories for crushing as a result of the Government's restriction. The industry has, therefore, suggested that, to prevent recurrence of a similar situation and to avoid hardship to the factories and cultivators, the Government should announce the policy without delay.

FOODGRAINS

Firm conditions were witnessed in the Hapur Foodgrains market following the reports of damage to the standing "rabi" crops owing to frost and lack of winter rains. Wheat prices improved by about 75 p.p. a maund, dala quality being quoted at Rs 17.75. In order to check the rising trend in prices, the Uttar Pradesh Government has allowed more wheat sales through ration shops, while stockists are reluctant to sell in anticipation of better prices.

Rice prices have recorded modest gains in sympathy with other grains although the supply position is reported to be satisfactory. Gram has risen fractionally to Rs 16 a maund for the Punjab variety. Following good consumer demand, Barley has improved to Rs 12.25 and Bejhar to Rs 12.50 for the inferior quality. Bajra has attracted festival demand. With the result, prices have registered modest gains. In the Pulses section, Peas has hardened on buying support from Madras and depleting stocks. Arhar has evoked good demand for conversion into dal. New Moong has arrived from Rajasthan

and is lifted by the consumers at higher prices.

CHEMICALS & DYES

Fair activity was witnessed in the Bombay market for Dyes and Chemical. Demand was better and prices were firm. Inquiries from upcountry centres, especially from North India, and a slight improvement in the money market contributed to the active conditions.

The tone was better in the Dyes section with Vat violet and Megenta in the limelight. In violet RR, the Germany variety was in request up to Rs 66 and the Japanese up to Rs 60. Naphthols were better with ALB around Rs 55. Bases, however, displayed divergent conditions.

In the Chemicals section, Hydro-sulphate of Soda was better, thanks to demand from Delhi as well as local buyers. Rongalite was, however, slightly easy due to expected arrivals in the coming weeks. There was a landslide in Monthol prices and this was mainly caused by a selling spree touched off by the reports about settlement difficulties in the Calcutta market. It was stated that, owing to heavy pressure of arrivals and the subsequent fall in prices, some parties failed to meet their financial obligation in October-November deliveries in that market. This induced offerings from Calcutta to Bombay. The consumer demand, however, revived at the lower levels although sentiment continued to remain nervous as local stocks are expected to increase from 10,000 to 17,000 pounds.

YARN

The announcement regarding the indigenous Art Silk Yarn quota has been generally welcomed by the yarn trade and industry alike. The trade and the manufacturers are particularly happy over the inclusion of consumers of staple fibre yarn in the new quota allotment. Up till now, the staple fibre consumers were excluded from the quota list. The new quota allotment, on the other hand, includes all consumers of rayon including art silk yarn, staple fibre yarn and mixed yarn.

The powerloom manufacturers who were not hitherto allotted quota in art silk yarn if they consumed staple fibre yarn, are now given equal opportunity to use art silk yarn also under the new announcement. It is, however, felt that the offtake in staple fibre yarn will continue to expand owing to the comparatively cheaper price of staple fibre yarn.

SILK

In the Bangalore market, prices of flature raw silk of 20/22 Dr. continued to be quoted between Rs 84.89 and Rs 85.99 per kgm as in the last week. Prices of Cottage Basin silk, however, moved upwards by about a rupee per kgm, when quoted between Rs 72.75 and Rs 77.16 per

kgm. Similarly there was slightly upward trend in prices of charka raw silk of first three grades. Exceptionally there was a marked decline in the Superfine variety of charka raw silk. Rates were quoted between Rs 45.19 and Rs 62.83 per kgm and Rs 59.44 and Rs 62.83 per kgm respectively.

Spun silk yarn of 2/210's was quoted at Rs 81.40 per kgm.

Reeling cocoons were quoted between Rs 3.84 and Rs 4.50 per kgm. While Foreign race seed cocoons registered slightly wide fluctuations between Rs 3.00 and Rs 18.00 per thousand. Mysore race seed cocoons moved moderately between Rs 3.80 and Rs 4.50 per thousand.

The Bhagalpur silk market presented a steady trend in prices of tasar products during the week. Tasar raw silk fluctuated between Rs 66.14 and Rs 105.00 per kgm as in the last week. Rates of tasar reeling cocoons, silk waste as well as spun yarn maintained the last week end quotations between Rs 72.00 and Rs 170.00 per kahan, Rs 22.04 and Rs 26.46 and Rs 30.86 and Rs 48.50 per kgm respectively.

Landed cost of Japanese raw silk of 20/22 Dr. was reported at Rs 80.66 per kgm during December, 1961.

GOLD & SILVER

After initial steadiness, prices on the Bombay Bullion Exchange displayed a reactionary tendency towards the close. In the case of Gold, the floating stocks were reported to have increased considerably and the stock was placed at 3 lakh tolas—a record figure unseen in the last several decades. It is stated that, during the lag-end of the Portuguese regime, many people in Goa, Diu and Daman found prudence in converting their capital in the yellow metal. All these gold are said to have found passage to many centres in the country. Naturally, prices registered a precipitous fall which was aggravated by the insipid demand. Gold ready changed hands at Rs 116.50 to Rs 117, while Sovereign ruled steady at Rs 97.75.

Silver ruled initially firm due to rumours that the bulls in the metal would demand delivery against their long positions. Later, with increased arrivals and poor offtake, prices developed a reactionary tendency. Arrivals amounted to 43 bars as against an offtake of only 12 bars. Silver (below .996) changed hands at Rs 210.35 to Rs 210.90.

OILS & OILSEEDS

Although price variations were erratic, the undertone of the Bombay Oilseeds market revealed a visible improvement last week.

The Castorseed section reflected a marked buoyancy due to speculative support inspired by favourable news

from abroad. It was claimed that the Brazilian offerings of castor oil had tended to subside and that the USA had purchased a substantial quantity of the first pressure of oil at 15 cents per pound. There were also enquiries from the UK and the shippers were able to sell about 300 tons of commercial oil at £126 to £126½ per ton c.i.f. Besides, a substantial business was claimed with certain Communist countries. In the circumstances, prices followed an upward trend. Castor ready was quoted at Rs 35.75 and Castor Oil, commercial quality, at Rs 14.50.

With futures trading in Groundnut remained suspended, the overall tendency in the spot section was upward. Crushers and vanaspati interests continued to lend support at lower levels and the sentiment was also helped by strong reports that the ceiling on forward prices might be removed shortly.

The steady demand for HPS groundnut expeller cake and groundnut meal also tended to support the market. In the course of the last three to four weeks, the Communist countries are reported to have steadily accumulated stocks in groundnut extraction from India. Only in the last fortnight, it may be recalled that Poland bought about 8,000 tons and East Germany about 15,000 tons in extraction. The total purchases made by the Communist countries, in the course of the last four weeks, now amount to about 32,000 tons. In the circumstances, the demand for the Indian groundnut extraction has naturally picked up.

Export in groundnut expeller has been restricted by quota in India. The old quota is almost exhausted and no fresh quotas are expected to be released soon in view of the high prices in groundnuts. Hence, the overseas demand has been centred mainly in the Indian groundnut extraction. The ready price of extraction which had declined on Saturday last to Rs 343, has now shot up to Rs 355 in Bombay. Ready Bold Groundnut is quoted at Rs 44.75 and Groundnut Oil at Rs 18.15.

Linseed displayed speculative support with upcountry operators making purchases at declines, because of the marked strength in sarson in North Indian markets. The firmness in castorseed and groundnut also exercised a bullish effect on this section. Moreover, arrivals of the new crop were stated to be very meagre and hence spot price continued to command a heavy premium. Linseed ready is now quoted at Rs 42.25 and Linseed Oil at Rs 18.20.

In the Madras market, trading was dull due to Pongal holidays. Arrivals of seeds had gone down considerably. Therefore, the price both of oils and seeds is on the upward trend. According to the trade, there is no likelihood of the price of either coming down in the near future.

The groundnut growers are now enjoying a boom period. Due to the

20 January 1962

various credit facilities they now enjoy, they have considerable staying power so as to wait for propitious time to release their stock. The very fact of the arrivals in South and North Arcot districts shrinking to mere 300 tons from nearly 2 thousand tons previous to the Pongal week, proves the fact of the ryots' determination to wait and see. The local receipt of groundnut is estimated daily at a mere 30 to 35 tons. North and South Arcot market centres report of the arrivals at about 300 tons. Not much more is expected in the coming weeks. Therefore it is that the traders apprehend no reduction in price of both groundnut and groundnut oil. Rather they feel the quotations for both may go up.

With no free selling, the turnover continued to be small. Even crushers were disappointed at the turn of events in the market. They were not able to commit themselves to any quantity because they could not be sure of what they could get in the market and at what price.

Generally there was a tendency of cautiousness on both sides.

Calcutta buyers evinced moderate interests in the local bazar. Last week despite the holiday they bought some small quantities of oil. The price was around Rs 181 per quintal.

In forward positions, no transactions were possible due to price factor again.

The groundnut oil was quoted at Rs 182.50 per quintal last Wednesday. That price was stationary. The next day it went up by another 50 nP. There were resistance from buyers. When Calcutta and local bazar interests bought some candies, the price rose by another small margin and quoted at Rs 183.40.

On Monday the price of oil and groundnut went up considerably though there was no official transactions.

Both bold and superior groundnut went up in rates. Superior quoted at Rs 72 and bold at Rs 68 per 80 kgs last week. There was increase in quotation by Friday last.

Due to paucity of arrivals the price of bold nut went up by a rupee and superior also likewise was quoted at Rs 73.50 per 80 kgs.

The following are today's closing prices of oils and seeds:

Groundnut oil per kilo ex-Madras godown expeller ready 3 per cent FFA Rs 186.05. No transactions in forward positions.

Groundnut kernels superior 73.50 per 80 kgs.

Bold Rs 70.71 per 80 kgs.

Castor oil per kilo Rs 160.00.

Coconut oil per tin Rs 40.50.

Gingelly oil per maund Rs 25 to Rs 25.50.

Gingelly seed per bag Rs 90.

Groundnut cake Rs 26.50 per bag of 160 lbs.

There was no skins and hides market last week and it opens only

New Strain of Jute

A new strain of the Tossa (C. olitorious) variety of jute which can be sown as early as March simultaneously with the White (C. cap-sularis) variety has been successfully evolved by the Jute Agricultural Research Institute of the Indian Central Jute Committee.

This research achievement carries with it the promise of an early solution to the problem faced by jute growers in having to sow the existing cultivated varieties of Tossa between mid-May and the end of June.

Wholesale Prices

The official wholesale price index (with the year ended March 1953 as 100) worked out to 122.9 during the week ended December 23, 1961 as compared with 122.8 for the earlier week. The index was lower by 0.3 and 1.4 per cent

respectively when compared with the corresponding week of the previous month and that of a year ago.

Higher prices of Bajra at Agra (+8%), Milk and Meat (+4% each), Gingelly Oil (+3%), Maize, Gram, Gur and Chillies (+2% each) and Wheat, Jowar, Masur, Bananas and Egg (+1% each) raised the index for 'Food Articles' by 0.2 per cent to 117.9. The prices of Potatoes (—7%), Bajra at Erode (—6%), Black Pepper (—5%), Onions and Turmeric (—3 per cent each), Groundnut Oil, Coconut Oil, Cummin and Betelnuts (—2% each), and Rice, Ragi, Cashewnuts, Ghee, Tea and Cardamoms (—1 per cent each) however, moved down.

The index for 'Tobacco' advanced by 0.7 per cent to 91.8 due to a rise in the prices of raw Tobacco (+1%).

The index for the 'Fuel, Power, Light and Lubricants' group remained stationary at its earlier week's level of 122.4.

Lower prices of Groundnuts (—4%), Lac (—3%), Linseed, Gingellyseed, Rapeseed, Cottonseed and raw Hides (—2% each) and raw Cotton and Casterseed (—1% each) brought down the index for 'Industrial Raw Materials' by 1.4 per cent to 135.6 as compared with 137.5 (revised) for the previous week, although the prices of 'Tanning Materials' (+5%) showed a rise.

The prices of Rayon Yarn (+4%), Lead (+3%) and Aluminium (2%) showed advances, while those of Zinc and Tin (1% each) moved down and the index for 'Intermediate Products' rose by 0.4 per cent to 138.1 during the week under review.

An increase in the prices of Jute manufactures (+6%) was responsible for a rise in the index for 'Finished Products' by 0.7 per cent to 124.8 as against 123.9 (revised) for the previous week. The prices of Handloom Cloth (—1%), however, moved down.

HIGH SPEED PRODUCTION LATHES - Type H-22

INDIA BUILDS THE MOTHER MACHINES THAT BUILD ALL OTHER MACHINES

THIS IS NOT A PROSPECTUS BUT ONLY AN ANNOUNCEMENT

A Prospectus together with the documents specified herein has been duly filed with the Registrar of Companies, Madras.

The consent of the Central Government has been obtained to this issue by an order No. R.388—CCI/61 dated 14-11-1961 of which a complete copy is open to public inspection at the Head Office of the Company. It must be distinctly understood that in giving this consent the Central Government do not take any responsibility for the financial soundness of any scheme or for the correctness of any of the statements made or opinions expressed with regard to them.

An Industrial Licence L.34(6)21/60/L—IND, dated 30-8-1960 issued under the Industries (Development and Regulation) Act 1951 has been obtained from the Central Government for effecting a substantial expansion to this existing industrial undertaking at Serakuppam, P. O. Vadalur, District South Arcot, Madras State, of which a copy is open to public inspection at the Head Office of the Company. It must be distinctly understood that in granting this license, the Government of India do not take any responsibility for the financial soundness of this undertaking or for the correctness of any of the statements made or opinions expressed in regard to it.

The Company's shares are dealt in and are officially quoted by the Madras Stock Exchange Ltd. Application is being made to the Madras Stock Exchange Ltd., for permission to deal in the present issue of shares.

The Subscription lists will open at 11 A.M. on Wednesday, the 24th January 1962 and will close at 5 P.M. on Wednesday the 31st January 1962 or earlier as soon as the subscriptions approximating to the amounts issued hereunder to the public have been received but not earlier than 5 P.M. on Saturday 27th January 1962.

Seshasayee Industries Limited

(Incorporated under the Companies Act, 1956), Date of Incorporation 12th December, 1957.

SHARE CAPITAL

Authorised:

720,000 Equity Shares of Rs. 10/- each	Rs.	72,00,000
280,000—6½% Cumulative tax-free Preference shares of Rs. 10/- each	Rs.	28,00,000
Total	Rs.	1,00,00,000

Issued, subscribed and paid-up capital:

316,000 Equity shares of Rs. 10/- each	Rs.	31,60,000
84,000—6½% tax-free Cumulative Preference shares of Rs. 10/- each	Rs.	8,40,000
Total	Rs.	40,00,000

Present Issue and offer:

400,000 Equity shares of Rs. 10/- each	Rs.	40,00,000
--	-----	-----------

The said shares are offered for subscription in cash at par in terms of this Prospectus and the subscriptions for the said shares are payable as follows:—

On application	Rs. 5 per share.
On allotment	Nil.

and the balance will be payable in two calls of Rs. 2.50 n.p. each, the first call will be made three months after the date of allotment and the second call three months thereafter.

The Preference shares carry a fixed cumulative preferential dividend at the rate of 6½% on the capital paid up thereon from the date of allotment and free of any deduction for Indian Income-tax and to a right on a winding

up to be paid all arrears of preferential dividend whether earned declared or not down to the commencement of the winding up and the capital paid up thereon but to no other rights in the profits or assets of the company. The said dividend will be computed and paid in accordance with the Preference Shares (Regulation of Dividends) Act, 1960.

The shares now issued will rank for dividend and be in all respects *pari passu* with the existing equity shares of the company and will be entitled to participate equally with the existing equity shares in any dividend that may be declared after the date of their allotment irrespective of the date on which such allotment has been made.

The entire present issue of 400,000 equity shares has been underwritten. No shares are issued for consideration other than cash.

REGISTERED OFFICE

No. 1, Alexandra Road, Cantonment, Tiruchirappalli-1.

OBJECTS

The following are the main objects of the Company as contained in the Memorandum of Association:

1. To carry on the business of manufacturers, importers, and exporters of and dealers in ceramic products of all kinds including electrical insulators and other porcelain products and their parts and accessories.
2. To carry on the business of manufacturers, importers, exporters of and dealers in all kinds of transformers, switchgears, meters and their parts and accessories.

HISTORY OF THE COMPANY

Messrs. Seshasayee Brothers (Private) Ltd., Tiruchirappalli, obtained for the benefit of this Company two licences under the Industries (Development & Regulation) Act, dated 29th October 1956 and 7th October 1958 for the establishment of an industrial unit for the manufacture of porcelain High Tension and Low Tension insulators and associated cast iron and non-ferrous castings and malleable castings and mild steel forgings. The Company constructed a factory at Vadalur in South Arcot District and went into trial production early in 1960 and has now standardised the production of conventional transmission-line insulators and their associated metal parts.

Commercial production started early in 1961 and the company has effected deliveries of high tension and low tension insulators and hardware components to several State Electricity Boards and Private Undertakings against orders received and according to specifications required. The materials delivered have afforded full satisfaction to customers.

High Tension Insulators and porcelain accessories are being overwhelmingly imported into this country, as the small number of factories in India which are engaged in the manufacture of these products are able to meet only a fraction of the present demand. The Directors have carefully considered the demand for high tension insulators and are satisfied that a growing market exists for these goods. They believe, it would be of immense advantage to the Company to enlarge the plant and augment its installed capacity for production of insulators and malleable cast iron parts in order to meet the pressing demand that is in evidence from the various sectors of electrical industries. While the main consumers of high tension insulators are State Electricity Boards, electricity undertakings manufacturers of switchgear and transformers, the Indian Railways who have recently been enlarging the area of their electrification have started making their demands desirable but absolutely essential that the present capacity of the factory should be augmented with a view to meet both existing and anticipated demand.

The Company has now obtained a licence from the Government of India for expanding the present capacity from 1,200 tons to 3,000 tons of insulators per annum. The Directors expect that the entire output will be absorbed by current demands. The Company's Technical Consultant, Dr. Ing. habi Kurt Draeger, in consultation with the Company's engineers, has prepared a detailed scheme for the expansion of the factory and has recommended its immediate implementation. The more important items of plant and machinery required for this expansion will be supplied by Messrs. Franz Kirshfeld, Dusseldorf, West Germany. The Government of India have kindly allotted to this Company the foreign exchange required for the import of plant and machinery. Dr. Draeger has agreed to send technicians from Germany to India who will stay and work in both the Ceramic and Foundry Sections of the factory until such time as rated production capacity has been fully established. He will also be periodically coming over to India to advise on quality control and on the expansion of the range of the Company's products.

PLANT AND MACHINERY

The Company has obtained an Import Licence (No. 991677/TPWG/61/HQ-G-I dated 26-10-1961) for importing the necessary plant and machinery for this project and firm orders have been placed with the Company's suppliers, Messrs. Franz Kirshfeld, G.m.b.H., Dusseldorf, who have been able to negotiate and secure advantageous prices.

TECHNICAL COLLABORATION

The Company has entered into an agreement dated 1-7-1958 with Dr. Ing. K. Draeger of Honef, West Germany, in terms of which he has to render assistance to this Company, in the planning and supervision of the factory erection and in attaining rated capacity of 1,200 tons of porcelain insulators per annum.

In pursuance of the said agreement Dr. Draeger has been responsible for the design and lay out of the existing 1,200 ton plant. He has assisted in the purchase of plant and machinery for this project in Germany and India, provided personnel for erection of the plant, trained a team of the Company's engineers and technicians in one of his associated factories, namely, Rhein Westfälische Isolatern Werke at Siegburg in West Germany and two of his senior technicians are at present in the factory supervising production and training labour.

Dr. Draeger has agreed to give his assistance for the expansion scheme and the Company has agreed that the Company will seek the approval of the Government of India for payment of additional know-how fee and royalty and to pay him such amount as the Government may approve for the services to be rendered by him and his deputies in connexion with the expansion project.

Dr. Draeger has now completed the selection of the plant and machinery pertaining to the expansion project and has enabled us to place orders for the same. He is at present busy planning the lay out of the buildings and taking such further steps as are necessary to speedily implement the expansion programme. He has also agreed to send to India such technical personnel as his deputies and assistants as may be considered suitable for the purpose. He and his deputies will be entitled to such travelling and living allowances in India as may be in vogue from time to time in contracts for engaging foreign technicians.

MINIMUM SUBSCRIPTION

The minimum subscription on which the Directors will proceed to allot is equity shares of the face value of Rs. 15 lakhs.

The capital requirement for the proposed expansion is estimated as follows:—

(a) Buildings	Rs. 11.00 lakhs
(b) Imported machinery including import duty, freight and insurance	Rs. 40.00 "
(c) Power Plant, Indigenous machinery and erection charges and contingencies	Rs. 6.50 "
(d) Expenses of this issue	Rs. 2.50 "
Total	Rs. 60.00 "

It is proposed to provide for the above capital requirement as follows:—

By issue of fresh capital	Rs. 40 lakhs
By Borrowings	Rs. 20 "
Total	Rs. 60 "

The present issue of Rs. 40 lakhs has been fully underwritten.

ESTIMATED PROFITS

It is estimated that within a short period after the completion of the expansion, the expected profits would be sufficient after payment of dividends on Preference shares to provide a reasonable and attractive return to the Equity Shareholders.

MANAGING AGENTS

Seshasayee Brothers (Private), Ltd. were appointed as the Managing Agents of the Company with effect from 6-3-1958 for a period of fifteen years by the Articles and by an agreement dated 6-3-1958 on a remuneration of 10% of the net profits of the Company, subject to a minimum of Rs. 12,000 per year in the absence of or inadequacy of profits which minimum shall, however, be increased to Rs. 18,000 per year, if and when the paid up capital of the Company exceeds Rs. 20 lakhs.

PREFERENTIAL ALLOTMENTS

The Company has agreed to make the following preferential allotments, out of the present issue, namely, to the Life Insurance Corporation of India, shares of the face value of Rs. 10 lakhs in consideration of their having underwritten a like amount of share, and Rs. 2,50,000 face value shares to the Investment Corporation of India, Bombay, in consideration of their having agreed to subscribe for the said shares.

UNDERWRITING COMMISSION

An underwriting commission of 2½% of the face value of the shares will be paid to each of the underwriters in respect of the shares underwritten by them respectively.

BROKERAGE

A brokerage of 1% of the face value of the shares will be paid to the authorised brokers and bankers including the underwriters in respect of share applications bearing their rubber stamp.

All applications must be made on the form accompanying the Prospectus which can be had from the Registered office of the Company, the Company's underwriters, Bankers and Brokers.

Alliance Jute Skips Dividend

Despite a rise in sales from Rs 2.30 crores to Rs 3.08 crores, the Alliance Jute Mills Company Limited has reported a loss, after depreciation, of Rs 4.40 lakhs for the year ended 31 May 1961 as against a net profit of Rs 9.46 lakhs for the preceding year, mainly due to the sharp increase in the "Purchase" item from Rs 1.58 crores to Rs 2.31 crores.

In respect of allocations, the Depreciation amount is raised to Rs 3.55 lakhs from Rs 2.97 lakhs, while the provision for Development Rebate is lower at Rs 62,900 against Rs 2.65 lakhs. The dividends, both on the Ordinary and Preference shares, have been passed over. In the previous year, the dividend, paid on the Ordinary shares, was 6 per cent, subject to tax.

The directors state that further modernisation of the Preparing and Spinning sections has been carried out during the year, including the installation of 18 Sliver Spinning Frames on the fine side. The introduction of the new machinery has improved the efficiency.

Mysore Sugar Repeats

DESPITE a sharp decline in the net profit, the Mysore Sugar Company Limited has maintained the dividend at 30 per cent, taxable, for the year ended 30th June 1961. The quantity of sugarcane crushed was 3,95,963 tons and the quantity of sugar produced was 39,049 tons with an average recovery of 9.86 per cent. Sale of sugar from the factories did not keep pace with the production, because of the restricted releases made by the Central Government from individual factories. Consequently, there was a sharp fall in the sale proceeds to the tune of nearly Rs 119 lakhs, leaving a large stock of over 13,700 tons at the end of the year. This had an adverse effect on the position of the company's fluid resources.

The net profit for the year, before providing for Depreciation and Taxation, is lower at Rs 27.49 lakhs as against Rs 33.50 lakhs for the preceding year. A sum of Rs 8.42 lakhs (Rs 7.40 lakhs) is set apart for Depreciation; Rs 11.00 lakhs (Rs 13.50 lakhs) for Taxation; Rs 1.55 lakhs (Rs 36,326) for Development Rebate Reserve and Rs 50,000 (nil) for Stores Depreciation Reserve. In the previous year, a sum of Rs 5 lakhs was provided for Plant Rehabilitation Reserve.

Against the issued and subscribed capital of Rs 21.79 lakhs, Reserves are shown at as much as Rs 1.14 crores. The gross block at Rs 1.75 crores is depreciated by Rs 1.16 crores, leaving a net block of Rs 59.61 lakhs.

The directors state that the scheme for expansion of the distillery to produce 12,00,000 gallons of alcohol per annum has been completed and the distillery is working satisfactorily. The production of alcohol in the distillery, during the year, by consuming the entire output of molasses was 8,57,817 gallons in terms of absolute alcohol, which is more than the quantity produced in any previous year. The entire quantity of alcohol has been sold.

Auto Products Capital Issue

The Automobile Products of India Limited has applied to the Controller of Capital Issues for permission to issue further 2,50,000 equity shares of Rs 10 each to the existing shareholders to cover the capital requirements for the implementation of the existing programmes.

Meanwhile, the working of the company for the year ended 31 July 1961 has shown satisfactory improvement over the preceding year with the sales rising by as much as Rs 126 lakhs to Rs 439 lakhs. The stock has been reduced from Rs 35.25 lakhs to Rs 26.46 lakhs, which includes "works in Progress" at Rs 6.20 lakhs (Rs 10.03 lakhs).

The gross profit has moved up from Rs 16.38 lakhs to Rs 22.75 lakhs. After providing Rs 50,000 for managing agents' remuneration; Rs 11.75 lakhs for Depreciation (Rs 9.68 lakhs); Rs 3.62 lakhs for Development Rebate Reserve (nil), the net profit is Rs 6.88 lakhs as against Rs 6.23 lakhs in the previous year. To this is added Rs 13,640 being excess provision in previous years no longer required, which makes a total of Rs 7.02 lakhs. As against this, the company has a carryforward loss of Rs 9.18 lakhs and has decided to provide Rs 10.28 lakhs for Development Rebate Reserve and Depreciation of Rs 2.17 lakhs on fixed assets made during the year 1955-56 to 1959-60 which, in all, comes to Rs 21.63 lakhs. On balance, the company has to carry over a net debit of Rs 14.61 lakhs.

A sum of Rs 15 lakhs has been received from the Premier Automobiles Limited in connection with the cancellation of the company's licence to manufacture meadows engine and the amount has been taken to Capital Reserves. With this Rs 15 lakhs, a Development Rebate Reserve of Rs 13.90 lakhs and the amount brought forward, the reserves and surplus of the company now stand at Rs 30.03 lakhs.

The company has successfully negotiated an amendment to the existing agreement with Messrs Innocent S.G. under which the royalty payable has been substantially reduced. The company is also successful in reducing the royalty payable to Firestone Tyre and Rubber Company of the US on the manufacture of brake-linings under a licence from them.

The licence granted by Automotive Products Company Limited of the UK for the manufacture of Borg and Beck clutches and Lockheed brake equipment has been extended for a further period of five years.

For the Investor

INVESTMENT GOSSIP

Uncertain Trend

PRICES have been moving both ways on the stock market during the past few days and it appears that this state of affairs will continue for some time to come. If there are factors like the general election and the prospects of foreign aid which call for caution, there are influences such as rising industrial production and the rapid growth of industry under the impetus of the Third Plan to encourage investors to extend their commitments. But the most powerful factor influencing market men at the present moment appears to be the widely held apprehension that the conjunction of eight or so planets early next month will have far reaching adverse effect on our planet. However, this has so far not resulted in an excessive increase in selling pressure.

That most people think that it will be prudent to keep their portfolios light during the next few weeks is evident from the reaction to the announcement from the Reserve Bank that it has decided to reduce the margin on advances by banks against shares from 50 per cent to 40 per cent. Hereafter banks will be able to raise advance against ordinary shares to 60 per cent from the erstwhile rate of 50 per cent. It is significant to note that the Reserve Bank has stated in this connection "that bank credits against ordinary shares which had risen by 14 per cent in the 12 months prior to the regulation (11 March, 1960) has since then remained pretty stable around Rs 80 to Rs 83 crores despite a considerable increase in the volume of new capital issues on the market and some rise in the share prices". Presumably the belief that this relaxation in the context of the busy season will be of little practical benefit to operators has been responsible for the absence of enthusiasm over this announcement.

The news that five more shares have been included in the forward list engendered only temporary interest presumably because it had already been discounted. One important reason for the cautious approach of operators is the uncertainty over the continued availability of foreign aid in adequate measure. Interest is therefore centred on the meeting of the Aid India Club scheduled to meet at the end of the month. Rumour has it that efforts are being made in interested quarters to have the meeting postponed. As the developmental projects in the Third Plan will receive a setback if receipt of foreign aid proves to be inadequate, the general tendency is to await further developments before entering into fresh commitments.

NEW ISSUE NOTES

Seshasayee Industries

Seshasayee Industries Limited, which has obtained a licence for expanding its annual capacity from 1,200 tons to 3,000 tons of insulators, completed all arrangements in connection with its new issue of 400,000 equity shares of Rs 10 each to meet the requirements of the expansion project. The entire new issue has been fully underwritten. The subscription list will open on 24 January and will close on 31 January or earlier, but not before 27 January. A sum of Rs 5 per share is payable on application and the balance in two calls of Rs 2.50 per share.

The company is producing porcelain high-tension and low-tension insulators and various steel castings at its factory in Madras State. It proposes to expand the production capacity of insulators from 1,200 tons to 3,000 tons a year. A West German firm will be the technical collaborator. The expansion project is estimated to cost Rs 60 lakhs. The directors are confident about the prospects. A large proportion of high-tension insulators and porcelain accessories are at present imported. It is, therefore, hoped that the company will have little difficulty in selling its products.

Star Paper

Star Paper Mills Limited has entered the market for raising fresh capital to the extent of Rs 50 lakhs in equity shares of Rs 10 each, at par. These shares will be offered, in the first instance, to the existing shareholders of the company who have subscribed for 2,22,117 equity shares. The balance of 2,77,883 shares are now offered, at par to the public for subscription. The entire public issue has been underwritten. The subscription list will open on 29 January and close on 7 February or earlier at the discretion of the directors, but not before 31 January, 1962. A sum of Rs 5 per share is payable on application and the balance amount in one or two instalments. The first call will not be made earlier than two months from the date of allotment.

Speciality Papers

The Speciality Papers Limited will enter the market on 25 January with a public issue of Rs 10 lakhs in equity shares of Rs 10 each. The company proposes to manufacture all types of speciality papers like tracing papers, tissue paper, impregnated paper and aluminium papers for high explosives. This new venture marks a turning point in the

paper industry and is almost the only one of its kind in the country today, with considerable scope for export to the neighbouring countries. When the company's plant goes into production, this is expected to save foreign exchange to the extent of Rs 20 lakhs per annum. The factory will be situated between Vapi and Bulsar in Gujarat. The company has secured the technical collaboration with a West German firm.

The plant, when completed in stages, will have an installed capacity of 3,000 tons. Production is expected to commence this year. The factory will reach full production by 1964. The capital outlay is estimated at Rs 35 lakhs to Rs 40 lakhs. At present, the company will raise Rs 20 lakhs—Rs 10 lakhs by the present equity issue, Rs 5 lakhs by way of loan from the Gujarat State Financial Corporation and Rs 5 lakhs through banks. Of the proposed issue of Rs 10 lakhs, Rs 4.10 lakhs will be taken by the promoters and their friends. The entire public issue has been underwritten.

Jaipur Metals

Jaipur Metals and Electricals Limited proposes to issue 25,000 equity shares of Rs 100 each, at a premium of Rs 10 per share, subject to the consent of the Controller of Capital Issues. Ten per cent of the additional capital will be offered to the directors, members of the staff and workers and the balance will be issued to the existing holders of equity and preference shareholders. The proportion in which the rights issue will be offered has not yet been decided. In order to accommodate the additional capital issue, the authorised capital of the company is proposed to be raised from Rs 50 lakhs to Rs 1 crore.

Southern Industrial Corporation

The Southern Industrial Corporation Limited has made a final call of Rs 2.50 per share on the partly-paid equity shares, payable or on after 20 February, 1962.

R. R. Engineering

This newly-formed company, which has taken over R. R. Engineering Co., situated in the State of Uttar Pradesh, has streamlined its blue prints for the manufacture of Machine Tools, Sugar Mill Machinery, Steel Castings and Alloys and Steel Structures in technical collaboration with foreign manufacturers.

The authorised capital will be for Rs 40 lakhs and out of this the directors and promoters will subscribe to the value of Rs 9 lakhs. Out of the balance, shares to the value of Rs 16 lakhs will be offered to the public for subscription before the end of February, 1962. The UP Government has already consented to participate in the capital issue by way of underwriting of the shares.

Associated Bearing

Associated Bearing Company Limited, Bombay, have been accorded a consent to the issue of share capital of Rs 4 crores in equity shares of Rs 100 each for cash, at par. Out of this, 60 per cent will be subscribed by the foreign collaborators, A B Svenska Fullagerfabriken, Sweden and associates. The balance will be offered equally to the Investment Corporation of India or any company of the Tata group and the Indian public. The new company will manufacture SKF single row ball bearings, Tapered roller bearings, pendulum weighting arms etc.

India Cements

India Cements Limited, Madras, will issue further capital of Rs 1,25,55,250 consisting to equity shares of Rs 5 each for cash, at par, to the existing shareholders. The money will be utilised for the expansion of capacity of manufacturing cement.

W. S. Insulators

W S Insulators of India Limited, Madras, will issue capital of Rs 1 crore consisting of equity shares of the value of Rs 80 lakhs and 9½ per cent preference shares of Rs 20 lakhs. The proceeds will be utilised for the establishment of a factory in Madras for the manufacture of H T and L T insulators, Lighting Arrestors etc. in collaboration with Westinghouse Electric International Company of New York.

Struthers Wells

Struthers Wells India Ltd., Bombay, a new company, has been granted consent to issue capital of Rs 1 crore, divided into 10 lakhs equity shares of Rs 10 each, at par. Out of this, shares of the value of Rs 28 lakhs will be issued to Struthers Wells International Corporation of New York. The proceeds will be utilised for the manufacture of plants and equipments for fertilizer industries, petroleum refineries, sulphuric acid, caustic soda, soda ash industries, etc.

Antifriction Bearings

The Antifriction Bearings Corporation Ltd., Bombay, will issue capital of Rs 60 lakhs in equity shares of Rs 10 each, to be issued for cash, at par. Out of this, shares of the value of Rs 5 lakhs will be issued to the foreign collaborators Steyr-Daimler-Puch AG, Austria. The capital will be used for the manufacture of ball, roller and tape bearings.

C. I. C. M.

The Calcutta Industrial Chemicals and Minerals Company, Ltd., has been granted a consent to the issue of 1320 bonus shares of Rs 25 each on capitalisation of its Reserves to the extent of Rs 33,000. The company is engaged in business as manufacturers of chemicals and has a paid up capital of Rs 1,22,225.

Ganesh Flour

Ganesh Flour Mills Company Ltd., Delhi, is to issue additional capital of Rs 55 lakhs consisting of Rs 25 lakhs in equity shares of Rs 12.50 n.p. each at a premium of Re 1 per share and Rs 30 lakhs in debenture stock. The money will be used on the two new projects of the company and also on its existing units. The equity shares will be offered to the existing shareholders of the company for cash, at a premium of Re 1 per share.

Sardesai Brothers

Sardesai Brothers Ltd., Bombay, has been granted consent to issue capital of Rs 40 lakhs divided into 40,000 equity shares of Rs 100 each for cash at par. The proceeds of the issue will be utilised for financing the expansion of the capacity in the manufacture of Carboxy methyl cellulose and auxiliaries. The Company has a subscribed and paid up capital of Rs 10 lakhs, all in equity shares.

Film Finance

The Film Finance Corporation Ltd., Bombay, a Central Government-owned concern, will issue further capital of Rs 24 lakhs in equity shares of Rs 1,000 each, for cash, at par. All the shares will be taken up by the Central Government and the proceeds will be utilised for augmenting the resources of the Corporation. The Corporation has a paid up capital of Rs 20 lakhs.

Godrej

Godrej & Boyce Manufacturing Company Private Ltd., Bombay, is to issue bonus shares of the value of Rs 12 lakhs in equity shares of Rs 1,000 each on capitalisation of reserves to a like extent.

Rayalaseema Mills

The Rayalaseema Mills Ltd., Adoni, Andhra Pradesh, is to issue capital of Rs 7,44,600 in equity shares of Rs 100 each to be issued as bonus shares to the company's existing shareholders on capitalisation of reserves to a like extent.

Kashmir Ceramics

A new public limited company, Kashmir Ceramics Limited, a joint venture of the Kashmir Government and Messrs Amin Chand Payare Lal, has been formed at Kathua, Jammu and Kashmir State, with an authorised capital of Rs 1 crore. The company will undertake the manufacture of ceramic wares, sanitary wares and sanitary fittings, with an annual capacity of 2,100 tons. Porcelain and HT and LT insulators will also be produced to the extent of 400 tons a year. The company has secured technical assistance from Messrs Technoexport, Czechoslovakia and Invest Export of West Germany. The plant is already at site. The factory is expected to go into production in September.

Lepetit Ranbaxy

Lepetit Ranbaxy Laboratories (Private), Limited, Delhi, has been accorded consent (in supersession of one issued on 17 August, 1961), to issue capital of Rs 35 lakhs divided into equity shares of 100 each to be issued to the foreign collaborators and Indian nationals in the proportion of 50:50 for cash, at par. This Company was incorporated in June this year for the manufacture of chloramphenicol in collaboration with an Italian firm.

Globe Motors

Globe Motors Limited, Ned Delhi, has been authorised to issue further capital of Rs 25 lakhs in equity shares of Rs 100 each, for cash, at par. The proceeds of the issue will be utilised for undertaking manufacture of Laminated springs and Malleable steel castings. This Company has a paid-up capital of Rs 25 lakhs.

Khandelwal Udyog

Khandelwal Udyog, which will be shortly in the market to raise capital for the implementation of its new schemes, has entered into technical collaboration for its structural division with one of the world's leading steel construction companies in Paris. A high priority has been given by the Government to the steel fabrication industry and, with the help of this new collaboration with the French firm, the company can be expected to make very good progress in this field.

Hindustan Oxygen

The Hindustan Oxygen Gas Company, Limited, has announced the details of their public issue of Rs 30 lakhs in equity shares of Rs 100 each. The subscription list will open on 18 January and close on 27 January or earlier. Of the proposed issue, the directors and their friends have agreed to take 11,000 equity shares, while the actual offer to the public is 19,000 equity shares. The company hopes to be in a position to compete effectively with the established producers of oxygen gas in the country, as its cost of production will work out much cheaper. The company also hopes to be in a better position to meet the requirements speedily.

Kanoria Chemicals

The Kanoria Chemicals and Industries Limited, Calcutta, will issue capital of Rs 1 crore divided into 8,00,000 equity shares of Rs 10 each and 20,000 cumulative redeemable preference shares of Rs 100 each carrying dividend of 9.5 per cent, free of tax, but subject to deduction of tax at source at the prescribed rates. The capital is required for the establishment of a factory at Pipri, District Mirzapur, UP for the manufacture of caustic soda, chlorine and dicalcium phosphate at a capital cost of Rs 198 lakhs, which will be met by issue of capital and by loans from the Industrial Finance Corporation.

Shama Engine Valves

The Shama Engine Valves Limited has decided to close the subscription list for 60,000 equity shares of Rs 10 each. The list, which opened on 18 December, 1961, has been over-subscribed by more than 2½ times. Production is expected to commence towards the end of 1961 or early 1963.

Triveni Engineering

The Triveni Engineering Works Limited has completed the allotment of shares in respect of its recent issue of 1,04,125 equity shares of Rs 10 each and 87,000—9.3 per cent cumulative redeemable preference shares of Rs 10 each. It may be recalled that the subscription list opened on 30 October, 1961 and was closed on 5 November, 1961. The equity issue is stated to have been over-subscribed by over three times and the preference issue fully subscribed. The company has allotted shares to all applicants. Applicants for 50 shares will get 40 per cent of the shares applied for. The proportion for allotment decreases as the number of shares applied for increases with the applicant for 10,000 shares getting 1,490 shares. Letters of allotment have already been despatched.

Industrial & Engineering Apparatus

The Industrial & Engineering Apparatus Company (Private), Limited will be converted into a public limited company in the near future. A licence has been granted to the company to raise its production from 1,800 tons to 7,200 tons of scientific and industrial glasses a year. The expansion scheme will involve a capital outlay of Rs 1.25 crores. The company has entered into a technical collaboration agreement with Corning Glass Works of the USA, which is expected to participate in the new capital to the extent of Rs 75 lakhs. The present directors and their friends are likely to take up shares worth Rs 15 lakhs. The balance of Rs 35 lakhs will be offered for public subscription.

INVESTMENT NOTES

New Cleared Scrips

Speculation has been rife in the Calcutta stock markets during the past few days with regard to selection of shares, to be included in the forward list. It is learnt that the names of 53 shares were suggested by the members. According to the decision made on Tuesday this week by the Committee of the stock exchange, the following five shares have been included: Birla Jute, Kesoram Cotton, Orissa Cement, Jaipur Udyog and Guest, Keen, Williams. Pending some clarification, the decision with regard to the inclusion of the sixth scrip, J. K.

Rayon, will be announced shortly. The five shares, referred to above, will be traded on settlement basis on and from Clearing Account No. 356, which will start on 1 February, 1962.

Kirloskar Oil Engines

Kirloskar Oil Engines Limited has decided to undertake the manufacture of Cummins diesel engines up to 800 h.p. in Poona. Cummins Engine Company of the USA will be collaborating with Kirloskar Oil in this project, which will involve a capital outlay of Rs 1.5 crores. The American participants will take up 50 per cent of the issued capital of Rs 1.5 crores of the new company, Kirloskar Cummins Limited, which will be specially formed for this purpose. The authorised capital of the company will be Rs 3 crores. Of the balance of Rs 75 lakhs out of the issued capital, Kirloskar will be taking up 51 per cent, while 49 per cent will be offered to the public for subscription. The new unit is expected to commence production in about 18 months and when, in full operation, the new unit will have an annual output of Rs 5 crores.

IN BRIEFS

The Calcutta Electric Supply Corporation has decided to pay an interim dividend on the ordinary stock at the rate of 3½ per cent net (tax applicable at 15h 9d in £) for the year ended 31 March 1962, payable on or after 15 February 1962, to those shareholders whose names are registered as on 30 January 1962.

Calico Mills have maintained its interim dividend at Rs 14 per share, taxable, for the year ended 31 March 1962.

The Kadur Coffee Estates Limited will be sold to the Badra Coffee Estates Limited for a sum of Rs 2.75 lakhs. The earlier proposal for amalgamation has been dropped.

The Bombay Potteries Limited has announced a gross dividend of Rs 15 per Ordinary share for the year ended 30 September 1961 as against Rs 12.88. The net dividend works out at Rs 10.50 per share against Rs 9.00 per share. The dividend is payable on or after 12 April, 1962.

BALANCE-SHEET BRIEFS

The Indian Oxygen Limited has reported a higher net profit of Rs 71.30 lakhs for the year ended 30 September 1961 as against Rs 62.98 lakhs for the preceding year. The dividend is maintained at 15 per cent, subject to tax.

The Associated Battery Makers (Eastern) Limited has shown a lower profit of Rs 46 lakhs for the year ended 31 August 1961 as against Rs 52.07 lakhs for the previous year. The directors recommended a taxable dividend of 15 per cent on the issued capital of Rs 118 lakhs as against 25 per cent.

STOCK EXCHANGES Hesitancy to Extend Commitments

Watch-Dog Writes:

THE overall trading pattern in stock markets continues to remain cautious. With the near-term outlook remaining somewhat uncertain, operators are reluctant to go in for big commitments and have preferred to take short-term profits, resulting in an irregular trend of prices.

Except for those shares which were boosted up following the inclusion in the forward list, conditions on the Calcutta Stock Exchange remained generally dull.

The Bombay Stock Exchange gave a mixed performance with selected shares showing sharp differences from the previous week's levels.

With the professional operators still sitting on the side-lines and the genuine investors unable to take decisions, trading on the Madras Stock Exchange lacked lustre.

CALCUTTA

Friday Evening.

EXCEPT for a few selected shares which met with good support at every setback in prices due to special reasons, activity in other sections on the local stock exchange remained generally restricted in the absence of any incentive-bearing news. Prices remained vulnerable at places owing to a tendency to press offerings on the upturns.

Several uncertainties had, no doubt, discouraged the bull operators who, it appeared, were obliged to liquidate their holdings gradually. The smaller fry among the traders

STATE BANK OF INDIA

Distribution of Profits—1961

Net Profits for the year	271,00,300
Brought forward from last year	56,20,700
	327,21,000

Dividend to Shareholders at the rate of Rs. 23 per share, subject to deduction of tax (made up of Interim Dividend at the rate of Rs. 10 per share Rs. 56,25,000 and Final Dividend at the rate of Rs. 13 per share Rs. 73,12,500)	129,37,500
Transferred to Reserve Fund	75,00,000
Transferred to Pension Fund	7,42,200
Bonus to Staff	45,00,000
Transferred to Staff Welfare Fund	10,00,000
Transferred to Staff Co-operative Housing Fund	10,00,000
Carried Forward	50,41,300
	327,21,000

also kept on sidelines in view of the erratic course of prices. Although it was recognised that the industrial outlook had not changed in any way, they ignored it for the time being as other uncertainties were there.

Investors were, on their part, completely out of the market in view of their need to conserve their funds for the several attractive news issues which had made their appearance, not to speak of the fact that they were unable to make a proper assessment of the possible future trend of prices. Even the flow of encouraging corporate news seemed to have no effect on sentiment.

The approach of the general elections, apprehensions about the possible deterioration in Indo-Pak relations, the stringency in the money market and the much-feared planetary conjunction next month—all these factors induced the operators to part with their holdings. The only relieving feature of the week's trading were the few firm spots provided by the market, which was otherwise dull. The immediate cause to induce buying of these shares was the decision made by the

New Forward Scrips

At its emergent meeting held on Tuesday, the Committee of the Calcutta Stock Exchange decided to add six more scrips to its clearing list. They are Guest Keen Williams, Jaipur Udyog, Birla Jute, Kesoram Cotton, Orissa Cement and J. K. Rayon. Of these the first five will be traded on settlement basis on and from Clearing Account No 356 which will start from 1 February. The sixth one, namely J. K. Rayon, will not be included in the list so long as the name of the Company which is at present Juggilal Kamapat Cotton Spinning and Weaving Co. Ltd., is not changed to indicate that it is a rayon concern. These six scrips have been selected out of a list of 53 scrips named by the members of the exchange. The six scrips selected secured the maximum number of preferences.

stock exchange authorities to add five more shares—Kesoram, Birla Jute, Guest, Keen, Williams, Orissa Cement and Jaipur Udyog—to the forward list. The inclusion of the sixth scrip, J. K. Rayon, will be announced later, pending some clarification. Trading on settlement basis in the new five shares will start from 1 February.

The Giltedged section was once again dull and listless. The undertone of the market continued to be subdued due to lack of institutional support. 3 per cent 1968 Conversion Loan moved narrowly between Rs 71 and Rs 71.10.

Bank shares, however, continued to rule following the reports of higher earnings by most of the banks for last year. Punjab National changed hands at Rs 22.62 to Rs 22.75, while United Commercial were subject to slight profit-taking, resulting in the scrip being marked down to Rs 102.50 from Rs 104. United Bank were taken up to Rs 7.12 from Rs 6.94 following the increased dividend.

Jute shares came in for selective support on the belief that the industry was on the way to turning the corner. It was also thought that, with the increased working hours and the unsealing of more looms, the mills might show better results during the current year. Birlas were a special feature this week and touched a new peak level of Rs 31.69 from Rs 30.50 following the inclusion of the scrip in the forward list, to close finally at Rs 31.37 on profit-taking. Alliance met with business at Rs 93 o Rs 95; Ganges at Rs 12.75 to Rs 13.31; Howrah at Rs 20.37 to Rs 20.62; New Central at Rs 18.31 to Rs 17 and Nuddea at Rs 64 to Rs 65.75. Kelvin were a steady feature at Rs 176.

Coal shares were sluggish in the absence of any incentive. Reports of the continued shortage of wagons and the accumulation of stocks at various pit-heads were also a contributory factor. Central turned quiet at Rs 12.31 against Rs 12.87 with Western Bengal hovering idly around Rs 9.50. Burrakur fluctuated narrowly between Rs 17.69 and Rs 17.81.

Despite the steady improvement in the prices obtained at the export auctions, Tea shares met with little doing in view of the obscure outlook for marketing the commodity. Dealings were, therefore, few and far between. The only two bright spots were Huldibari having changed hands up to Rs 29.06 from Rs 27.50 and Jay Shree up to Rs 19.37 from Rs 18.75. Tezapore were quiet at Rs 15.87 against Rs 15.94 and so also Brooke Bond at Rs 15.37 against Rs 15.50. Hasimara showed a partial recovery to Rs 31 from the recent low of Rs 30.56.

Except Dyer Meakin which continued to remain firm at Rs 42.50 due to sustained hope of an early bonus issue, Sugar shares remained generally neglected in view of the obscure outlook for the industry. Raza-Buland were on offer at Rs 10.25 to Rs 10.37; Cawnpore at Rs 12.75 to Rs 12.87 and SKG at Rs 10.44.

Textile shares showed a mixed trend. A bright feature of the section were Kesoram which were pushed up to a fresh high level of Rs 32.56 from Rs 30.25 due to the inclusion of the scrip in the forward list, to close finally at Rs 32.50 on profit-taking. J. K. Rayon, which were boosted up to Rs 21.75 in the previous week on the hope of the scrip being in the forward list, were marked back to Rs 20.81 in view of the news of the postponement of the decision by the authorities for want of clarification. Elgins were a steady feature at Rs 22.87, while Cawnpore turned quiet at Rs 8.50 against Rs 8.69 and so also Dunbar at Rs 34.12 against Rs 34.62 due to lack of fresh support.

In the Engineering section, price movements were mostly influenced by the speculative activity in Indian Irons which, in turn, were subjected to settlement considerations till Wednesday. Against the previous week-end closing of Rs 24.88, Indian Irons opened better at Rs 25.06 and improved further to Rs 25.20. After reacting at one time to Rs 24.82 due to settlement adjustments, the scrip recovered again towards the close to

Rs 25.16 following the fixation of normal budia charges for the next settlement. The settlement rate was fixed at Rs 25.05 as against last settlement of Rs 25.50.

Among other engineering shares, TEXMACO touched a high of Rs 20.90 and a low of Rs 19.80 to finish better at Rs 20.45. Thanks to the inclusion of the scrip in the forward list, Guest, Keen, Williams were taken up to Rs 41.69 from Rs 40.50, while Jessop were better at Rs 20 against Rs 19.87. Britannia met with business at Rs 13.19 to Rs 13.50; Jay Engineering at Rs 27.31 to Rs 27.50 and UK Steel at Rs 19.37 to Rs 19.87. Dalmia Iron remained almost unchanged at Rs 11.00.

After ruling initially weak, Miscellaneous issues tried to emerge with minor gains on balance, as will be clear from the following price trends of a few selected shares:

	Week's High	Week's Low	Week's Closing
	Rs.	Rs.	Rs.

Bombay

18 January, 1962

Trading in the Bombay stock exchange remained somewhat cautious and several speculatives turned lower on liquidation induced by the year of the end account. Only selected textile shares like the Central India, Bombay Dyeing and Svadeshi registered some quick rise. While the market commenced on a heartening note, the closing tone was quietly steady, and the volume of business was fairly moderate.

Among steels, Tata Ordinary attracted offerings at their initial improved levels and remained unaltered at the close. Indian Iron finished steady after moving both ways on alternate bouts of buying and selling.

In textiles, Standard Mills drifted irregularly lower on bull liquidation to close on a depressed note. Century met with offerings even on modest upturns. Central India jumped up on account of rumours of capital reorganisation. Swan advanced further on fresh support and closed at Rs 15.00. Kohinoor was marked by steady undertone. Svadeshi moved up swiftly on support induced by unconfirmed reports of institutional buying but reacted partially on realising. Bombay Dyeing ruled firm on expectations of better results.

Among Cements, ACC met with lack of support. Orissa Cement were however firm on some fresh support. In Engineering Tata Loco started firm on some fresh support. In Engineering Tata Loco started firm on rumours of institutional support but reacted on offerings. Voltas were finally depressed on liquidation.

The comforts of life are spreading

Rising standards of living are finding their way into the remotest village and are coming within the reach of people with quite modest means. Consider Kerosine, for instance, which by bringing illumination to the humblest home is playing a part in this welcome development. By the end of the Third Plan, Burmah-Shell estimates that

demand for Kerosine will increase by 41.6%. There can be no question that the first priority should be the exploration and production of indigenous crude oil; the second priority must be to expand refining capacity in India. Oil is essential to economic growth and Burmah-Shell believes that

for tomorrow's needs we must act today

GOOD ENOUGH IS JUST NOT GOOD ENOUGH!

The work of standardization and certification is precise and exacting. Goods produced to standards qualify for carrying the ISI certification mark of the Indian Standards Institution.

Before, and even after, a licence for affixing the ISI mark on any product is granted, exacting tests and inspections are carried out at various stages of its manufacture. Certified goods are picked up from the manufacturers' works and sent to independent laboratories for testing. ISI inspectors constantly check whether the manufacturer is complying with required standards. Certified goods are also collected at random, from the distributor and the retailer, and tested for quality. Legal sanctions are available against abuse or unauthorised use of the ISI mark.

Nothing, therefore, is left to chance. With ISI "good enough" is just not good enough. For, the interest of the consumer as well as the good name of Indian industry have to be protected.

The State of The Republic

ON the eve of the twelfth anniversary of the birth of the Indian Republic, thoughts of most Indians are, for diverse reasons, fastened on the ultimate mechanism that makes it tick. Preoccupation with the coming election is all-exclusive to the politicians who have to win them. For others, it is no less important as the one tangible instrument of the power that the Constitution has reserved for them. It is a power that they sometimes tend to under-estimate because it is not exercisable as continually as certain other forms of power, but there is no gainsaying that it is, in the felicitous words of the Election Commissioner, a mighty atom. Most importantly, the General Election comes upper-most in the mind when one counts one's blessings on the Republic Day. When our other all too evident infirmities oppress us, we can take heart from this visible symbol of the health of our Republic. Apart from its being the largest General Election in the world—a circumstance otherwise embarrassing—its regularity, naturalness and acknowledged fairness give meaning and content to our democratic and republican professions. Of very few countries in the world can this be said with assurance.

Looking back, we see the twelfth year of the Republic as crowded with events, especially towards its end. It has been a climactic year in some ways. The most outstanding political event of the year, the liberation of Goa which took place in December, educated us and the rest of the world almost overnight. The complex motivation of India's political decisions in international contexts became apparent so blindingly as to cause much disenchantment. Some such outcome was inevitable since the earlier abomination or admiration of India stemmed from a misunderstanding of its policies. This was also evident earlier in the cross-fire in which India was caught at Belgrade. Experience in the Congo has also noticeably cooled India's ardour for international trouble-shooting. All these lessons, though painful at the moment, are salutary in the long run.

If Goa constituted success of a kind, the continued presence of the Chinese in our northern territories is our most outstanding failure. The year saw the dreary succession of efforts to make China see reason without their making the slightest impression on it. Extenuations can be made for the failure to deal with China as effectively as with Portugal, but they cannot take away the seriousness of the situation. Pakistan has been active lately in exacerbating feelings. One would have thought that the hint that Mr Nehru dropped of a readiness on his part to accept the realities of the present Kashmir situation as final would have been taken and pursued. But Pakistan, trying to catch at the flood the feelings against India in the West, would have none of that. The wearisome traversing of old grounds is thus rendered inevitable.

Domestic politics ran its uneven course. The Congress was for ever setting its house in order, though the exercise did not noticeably distract it from ruling the country. Other parties were doing their best to loosen the Con-

gress grip on power and the extent of their success will be evident soon enough. The Communists whom the recent death of Mr Ajoy Ghosh deprived of the guidance of the most resilient and tactically the most resourceful among their leaders, were throughout the year wandering in an ideological wilderness. The Swatantra Party, on the other hand, has become more articulate and its policy has crystallised as the most readily recognisable alternative to that of the Congress. But the general political health of the country could hardly be considered satisfactory in view of the linguistic riots at Assam early in the year and the communal ones in the UP later in the year. Both led to much high-minded worry about national integration, but nothing very definite has emerged. Casteism, denounced, probably quite sincerely, on formal occasions, made its appearance on every occasion a practical political decision of consequence was to be taken.

On the economic front, the year's first jolt was the findings of the census, which shattered many an easy hope. On the other hand, encouraging studies about the saving-potential in the country tended to restore partially the balance. The Third Plan's formal inauguration was, of course, the most important economic event of the year. The document made its formal bow somewhat belatedly in mid-August. It was a far maturer effort than the two earlier ones. It showed a less strident faith in the infallibility of its assumptions and its flexibility, shown by the two sets of targets, was welcome evidence of pragmatism. Certain crucial uncertainties were not shirked. One of them, viz. foreign exchange availability, was partially allayed by the friendly interest taken by the Aid-India club. But towards the end of the year, doubts reared their heads. These may yet prove unfounded.

The economy itself showed unmistakable signs of getting into stride. Crucial shortages of power and transport were partly at least the result of the growing pains, but they cannot be wholly explained thus. Industrial production has slackened as compared to the preceding year owing to extensive power and fuel shortage, and non-availability of raw materials and the inevitable axe on even essential maintenance imports in certain cases. Exports did nominally better, but its centrality is still in the realms of avowal. A complicating factor has been the uncertainty over Britain's entry in the EEC.

In the social and cultural spheres, the year was notable for a series of events. Queen Elizabeth was among the first of the endless stream of distinguished guests and the Paramount Ruler of Malaya almost the last. Quite the most important cultural event of the year was the Tagore Centenary which was celebrated with enthusiasm throughout the year. Motilal Nehru and Madan Mohan Malaviya were other distinguished sons, whom a grateful country remembered during the year. And last but not least, the end of the twelfth year of the Republic had joyous tidings for Indian Sport: Indian Cricket has come of age, having convincingly won a Test Rubber against England. In many ways this was a fitting finale for a momentous year.

Indo-Danish Trade

THE visit of Mr Viggo Kampmann, the Danish Premier, to India has served to highlight the very friendly relations that subsist between India and Denmark. This relationship has been marked by increasing trade between the two countries and greater participation of late by Denmark in India's economic development. It may be interesting to know that consequent on the steady expansion of foreign aid programmes and private industries participation in collaboration schemes overseas, Denmark has come to figure in recent years as the largest contributor to the UN Technical Assistance Programme on a per capita basis. The democratic traditions commonly shared by the two countries provide yet another and more enduring bond of unity between the two countries. Though the system of Government in Denmark is a constitutional monarchy with the country itself being known as the "kingdom of Denmark", democratic principles and practices are deeply rooted in the economic and political life of the country.

The economic life of Denmark offers distinctive features characteristic of a highly developed country. The population which is estimated at more than 4.5 million has a high standard of living with a per capita national income of D. Kr. 6,433 or Rs 4,475 in 1958. Agriculture is the dominant field of economic activity and Denmark is one of the world's biggest exporters of agricultural products. All the same, industrialisation has made strident headway in recent years and now is the source for nearly a third of the national income of the country. Industrial progress has received marked impetus in the postwar period and as a result industry's share of the total Danish export which in 1914 was only 10 per cent has exceeded that of agriculture in 1960.

The way Denmark has succeeded in industrialising its economy during the last forty years should offer many useful lessons to developing countries like India which are aspiring for the same goal now. Though a country with few natural resources and consequently having to depend on imports for mineral and other resources which are basic to industrial progress, Denmark has developed itself into one of the highly industrialised countries of Western Europe and now manufactures a wide variety of industrial products, the most important group from the point of view of exports being goods of the iron and metal industry. The highly developed systems of Danish farming and fishery have provided the basis for the growth of the machine industry in Denmark which now manufactures all the important processing, storing and transportation machines and equipments like, brewing machinery, refrigerating and cooling plants, slaughter-house machinery, meat and fish canning plants, fishing gear, oil separators etc. The growth of the machine industry in Denmark as a sort of adjunct to the dairy and fishing industries provides a significant illustration of the mutual dependence of development in the agricultural and industrial sectors. The ship-building industry in Denmark is also highly developed and the country operates a large commercial fleet. Electrical industry has made notable headway and Denmark is an important exporter of generators, dynamos, motors, elevators, high-tension insulators etc. The Danish industry has extended to other fields also like precision instruments, chemicals and plastics and industrial plants including those for cement industries.

The system of peasant farming, the schemes of social welfare, the success of co-operatives and of trade unions in the industrial field are other aspects of Denmark's economic life

which have a uniqueness of their own. There are few other countries which operate a system of social welfare guaranteeing equal economic opportunity, social justice and human welfare so efficiently as Denmark. In the field of industrial relations, the country had had greater success with its system of trade unions and machinery for settlement of industrial disputes than its neighbours and it is significant that Denmark has in the post-war years lost fewer man-days as a result of labour conflicts than any other country. The role played by co-operatives in Denmark is also well-known. Co-operatives embrace a wide field of processing and marketing activities including production of cement, dairy machines and equipment and import of fertilisers.

With its well-developed agriculture and industry, Denmark has also a high level of foreign. Total imports into Denmark from all sources during 1959 aggregated 11,013 million D.Kr or 1,573 million dollars. Exports in the same period amounted to 9,492 million D.Kr or 1,356 million dollars in the same year. The country has about the highest foreign trade per capita of any country in the World. Trade between India and Denmark has showed considerable increase in the last fifteen years. Trade between the two countries is not governed by any trade agreement and consequently there is free exchange of goods and services within the framework of the two countries' import and export regulations.

*January-June.

The figures of total imports of selected commodities into Denmark and India's share show the great scope that exists for further expanding India's exports to that country. A factor that should help such expansion of mutual trade is the increased direct contact that is being developed between Danish and Indian importers and exporters. The increasing collaboration between Indian and Danish enterprises may also open up opportunities for increasing trade between the two countries.

Economic and technical co-operation by Denmark in India's developmental efforts is one of the most vital links in the relations between the two countries. Such Danish participation dates back to more than ten years. One of the major forms assumed by Danish contribution is the provision of training courses in Denmark under the sponsorship of the UN agencies like the FAO, ILO, WHO and UNESCO. The Danish aid programme has also included assistance by Danish technical experts overseas and the training of foreign students in Denmark either under bilateral Danish assistance programme or programmes financed by third countries. Since 1950, a total of 155 students and trainees from India have studied in Denmark and 44 Danish experts have worked in India. The FAO's Regional Dairy Training Course established at Aarey Milk Colony in 1960 is a project which India owes to Danish assistance and co-operation. The project in Mysore for a non-governmental organisation "Mellam-folkeligt Samvirke" designed to offer assist-

It will be seen that during the last four years, Danish imports into India has recorded a sharp decline and this has been due to the severe import cuts enforced by the Government of India to save foreign exchange. In consequence the deficit balance of payments position with Denmark has been markedly reduced, but at the same time Indian exports have shown a fairly pronounced decline during 1960. The cuts imposed by the Government on Danish imports have mainly affected such consumer goods as foods including meat preserves, cheese and condensed milk and other milk products. Indian imports of Danish goods consist mainly of machinery including machines and equipments like marine diesel engines for the fishing fleet, machine tools and surgical and scientific instruments and other electrical instruments and equipments and chemical and pharmaceutical products. In contrast India's exports to Denmark consist chiefly of textile goods, the most important of which are jute goods. Tea, oil cakes, leather, raw tobacco are other items which find a place in Indian exports to Denmark.

INDO-DANISH TRADE (In lakhs of rupees)

Year	Export to Denmark	Imports from Denmark	Deficit or Surplus
1957	200.7	437.8	-237.1
1958	203.8	332.6	-128.8
1959	231.4	201.7	+29.7
1960	180.3	185.2	-4.9

balance and an effective international machinery for development of less developed areas. A closer study of the record of the Brettonwoods institutions, however, belies such a dismal conclusion. The International Bank, which now directs its operations primarily toward the development of less developed countries has a splendid record of service rendered in this behalf. The Bank's assistance has been given both directly and indirectly in recent years by encouraging groups of countries to be formed to lend considerable effective assistance to developing countries, most notably our own. Its associate organisations, the International Finance Corporation and the International Development Association attempt in two widely different spheres to stimulate the flow of private and governmental capital for the building up of the economies of less developed countries. Their operations, no doubt, are utterly inadequate and of the International Bank too, require to be multiplied severalfold and reinforced through a variety of lending forms. The problem is one of yet inadequate response by industrial countries to the needs of the situation, which the International Bank for its part has been doing its utmost to stimulate. On the whole, this part of the structure of international finance has proved its worth, especially with regard to effective internationalisation of long-term capital flows, by source and use, for public and private projects, including private capital (through subscription to the World Bank's bonds) for public projects and public capital for private projects, and for the core or basic facilities as well as for the content or substance of industrial and agricultural development.

THE RECORD OF THE IMF

It is with the record of the IMF, however, that current discussions are chiefly concerned. The record has notable achievements to the credit of this organisation, which forms, indeed, the central arch and apex of the international monetary framework. The Fund has been largely instrumental in promoting a multilateral and non-discriminatory international payments system, particularly among the advanced industrial countries which have now accepted the obligations of convertibility for their currencies. Thereby it has gone a long way toward fulfilment of one of its principal objectives in establishing the basis for more efficient deployment and utilisation of the resources of member countries. True enough, the persistence of trade barriers and blocs, partly nullifies the effect of freedom of payments and calls for equivalent progress in the sphere of reducing and rationalising trade restrictions. Besides, the majority of the Fund's members which are the less developed populous countries continue, and will perhaps continue for many years, to use exchange restrictions. But the less developed countries are a case apart.

A GENERAL COMPLAINT

A general complaint about the Fund system recently voiced has been that it is essentially a projection of the gold exchange standard, which remains inherently unstable owing to inadequate increase in fresh gold supplies. This provides insufficient base for expansion of the key currencies, dollar and sterling, which form the main means of payment under the system. This innate deficiency of insufficient liquidity or credit, it is thought, logically points to the need for establishment of a super-Central Bank with an international currency of some kind as the remedy for the basic ills and deficiencies of the present monetary mechanism. Perhaps one day the world will have qualified itself for these symbols of a unified human community. But a signal shortcoming of such a proposal in the present world context is that it assumes greater subordination of national economic and monetary policies to an international body or organ, more discipline in respect of fundamental matters like the exchange rate of a currency which to-day are

questions of national sovereignty, and more of a strait-jacket for member countries generally than even the despised international gold standard. Basically, a proposal of this far-reaching character assumes a number of other steps toward or insignia of a world community and world government. It involves effective co-ordination of internal policies and abnegation of economic and monetary autonomy and, indeed, merger of separate national identities to a degree that countries are just not prepared for.

In considering an approach to the problem of the international monetary mechanism in the months and years ahead, it is useful to consider it in terms of the imbalances that tend to, or are to develop, and how they might be corrected, offset or absorbed.

CHARACTER OF THE IMBALANCE

The type of imbalance that strikes the eye most and has in fact brought the question of reform of the international monetary system to the fore is the old phenomenon familiar in the inter-war period of hot money movements from one centre to another in search of profit from capital appreciation consequent upon changes in exchange rates or to a lesser extent from interest rate differentials. This highly unsettling recent trend in fact brings out a vital shortcoming of the Fund system with changes in exchange rates largely at a member's initiative as its kingpin, for such changes have to be effected in an atmosphere which is by no means conducive to calm deliberation. The charter of the problem of international imbalance has thus to be analysed and its treatment considered with particular reference to this phenomenon.

The problem of interest differentials is not very serious. The mechanism of the forward exchange market partly provides an automatic corrective to such differentials. The problem in its recent phase high-lights the conflict between internal and international considerations—a recession being accompanied, unlike in the classical text-book pattern, with a deficit on external account, as in USA recently, and a persistent boom co-existing with an embarrassing surplus and failing to produce the requisite adverse turn in the balance of payments, as in West Germany. This brings to the fore the necessity of finding a solution based on a compromise of internal and international considerations. On the whole, the problem can be reduced to manageable proportions with greater co-operation among monetary authorities of various countries, employing a requisite combination of monetary techniques.

The greater part of embarrassing capital movements has, as remarked, occurred in response to expected exchange rate changes. The real solution for these is to be sought in correction of the basic imbalance in a country's international account, which gives rise to such expectations, or in a change in the exchange rate itself, if it is necessary to absorb or work off the initial imbalance. There are types of situations, however, in which a change in exchange rate or correction of the basic imbalance through domestic measures might not offer an easy solution. Thus, a change in exchange rate may not be readily considered in the key currencies without throwing the entire pattern of exchange rates into a vortex. Or, again, a recessionary domestic situation might preclude immediate deflationary measures bringing about a more favourable turn in the balance of payments. In the circumstances, an enlargement of the resources of the international monetary mechanism to offset the exodus of funds, pending long-term equilibrating internal measures, becomes inescapable, if precipitate action in the key currency country entailing drastic immediate adjustments with deleterious international consequences, including curtailment of foreign aid for development of less developed countries, is to be avoided.

SHORTAGE OF RESERVES

It is not, however, a general increase in reserves or an increase in the ordinary resources of

the International Monetary Fund to meet current balance of payments deficits that is immediately called for. For there is no general shortage of international liquidity as such. It is a curious commentary on the plethoric discussion of the liquidity problem that the problem was hardly referred to in these terms when there was in fact a widespread shortage of liquidity or international reserves. This, was, however, dubbed as dollar shortage. It is now, when this shortage has disappeared that the international liquidity problem has come to the forefront of international discussion! However, it is only in a specialised sense that there exists to-day a shortage of liquidity. There certainly is a shortage of international reserves—and a chronic one at that—for the less developed economies: this, however, is largely a special problem of increasing the flow of international instrument. Then for the US and UK, the balance between foreign dollar or sterling liabilities and gold or gold and dollar reserves, has tilted heavily against these countries; this increases the possibility of recourse by these countries to the facilities of the Fund; and, indeed, the UK drew upon its quota recently to the hilt. But, again, in the IMF a relative shortage has developed of currencies of the principal European countries which have had considerable additions to their international reserves.

The international monetary system is still founded on gold. Gold is the most important constituent of international reserves. The currencies have an official international parity expressed in terms of gold. The exchange rate of one currency in terms of another is derived from the relationship of each currency to gold. But gold does not circulate as money within national frontiers or significantly enter into settlement of international payments. The most important international means of payment is the dollar; to a lesser extent, particularly among countries of the sterling area, sterling fulfils a similar role; their relative importance is indicated by the fact that as of mid-1961, short-term dollar balances of other countries amounted to \$21.75 billion, and the sterling holdings of other countries amounted to the equivalent of \$10.37 billion. No other currency figures to a significant extent as part of international reserves. The international reserves of most countries consist of gold, dollars and sterling; those of the UK are made up of gold and dollars; and those of the US are constituted entirely of gold. Most currencies are thus related in the international payments system to gold largely indirectly through the reserve or so-called key currencies, the proportion of direct gold cover being small.

The dollar is the pre-eminent reserve currency. When the IMF was founded the dollar was impregnably strong relatively to other currencies being the only convertible currency. The very fact that the dollar was the principal reserve currency was expected in some magical way to impart invincibility to it; and, indeed, the dollar remains a strong as well as the most important currency to-day. Though the structure of the Fund was conceived so to permit use of the Fund by all member countries, it seemed inconceivable at that time that the US should at all have to have recourse to the Fund's facilities. As it turns out, in the altering pattern of international payments, the complexion and distribution of international reserves has shifted. Largely as the outcome of a continuing movement of capital from the US to countries needing it, first in Europe and latterly also in less developed countries, as well as the economic resurgence of Europe with a continuing strong balance of payments, the current export surplus of the US is inadequate to meet the many obligations of a current and capital nature it has assumed; and there is the over-hanging possibility of short-term capital outflows during the interim that it takes measures to strengthen its current payments position. In these conditions a weakness in the structure of the IMF with its inadequate holdings of other currencies of advanced industrial countries which the US might require to draw upon has been brought into sharp focus.

Problems of International Monetary Policy

B. K. MADAN

[The following excerpts from the Presidential Address by Dr. B. K. Madan, the Executive Director of the Reserve Bank at the 44th session of All India Economic Conference held last month at Dharwar will be of interest to our readers. —Ed.]

It is sometimes said that the international monetary framework set up at Brettonwoods has failed to achieve its basic purposes, with regard both to establishing a mechanism for international

THE RIGHT BALANCE

The right balance for the Fund's portfolio of currency holdings is the obverse of that which the total of official and private reserves represent. At a time when these reserves were pitifully short of dollars, the Fund was comfortably stocked with dollar supplies. This enabled the Fund to perform a signal role in maintaining the balance of international payments. As many as 40 countries have drawn upon the Fund's dollar resources to the tune of nearly \$4 billion (gross). Now that official and private international reserves have a much larger component of dollars and the Fund's holdings of dollars are depleted with a corresponding increase in the US right to draw upon the Fund's resources, the essential concept of the Fund structure requires that the Fund should have the ability to meet the US demand at any time. The Fund, in accordance with its Articles, should, therefore, equip itself with ample stocks of currencies, which are in short supply internationally, if it is to perform its function of acting as an International Buffer Stock of currencies.

In a formal sense, currencies which are not in international use and do not figure in international reserves cannot be in short supply. But the currencies of the countries with a strong balance of payments, on current as well as capital account, are technically the most needed and most difficult to acquire—and it is these of which the Fund must have ample supplies.

THE BASIC FRAMEWORK: IS IT SOUND?

The basic framework of the Fund contains provisions to enable it to borrow currencies it might require. The foresight of the founding fathers in this respect is now rewarded with the opportunity and need to use these provisions. This is a vindication for the present of the broad adequacy of the Fund's structure to cope with its tasks, though the form of the borrowing arrangements that are being devised, which is not fully clear as yet, might detract to some extent from the truly international basis of the Fund's operations.

Will the structure prove able to withstand the strains and shocks of the years to come? In what directions does it require modification to perform its role adequately in relation to the international economy as well as national economies? In particular, is the reliance on key or reserve currencies in the present system basically sound? Is the system of fixed exchange rates likely to impose an intolerable strain at some points in the system and is there a suitable alternative to it? What is to remain the role of gold in the international monetary mechanism? Finally, what implications does the emerging international monetary framework have for national monetary policies in the developed as well as developing countries?

The reserve currency system is a natural growth from the complex fabric of technical and general financing facilities for the conduct of international trade which London and New York developed early to standards of excellence. The supply of these currencies has not been dependent, in the main, as has sometimes been represented, on deficits in the balances of trade or current payments: these countries have, over the decades while their currencies rose to a position of eminence, been on the whole earning current surpluses. The principal source out of which holdings of sterling and dollars have accrued may be said to be the long-term investment abroad by these countries. It is true that to the extent other countries build up reserves of these currencies they lend back to these countries on short-term what has been borrowed from them on long-term. However, the countries which receive long-term investment funds are not the same as those who hold short-term balances. And it is the volatility of short-term funds which forms a chief source of concern about the international monetary mechanism. Our examination has indicated that the problem of excessive short-term capital movements could be solved within the existing broad

international monetary framework, and that the system of reserve currencies could, with suitable adjustment, continue to work.

DIVERSIFICATION OF THE BASE

A line of approach to the international reserve problem, in consonance with the key or reserve currency system, indeed, seems to be to diversify the base by inclusion of some other currency or currencies as an element of international reserve. This may well be a direction of development, though its pace cannot be hastened and it would hinge upon further evolution of the monetary arrangements of the European Common Market.

FLUCTUATING EXCHANGE RATES

A suggestion which has often been canvassed to relieve the strain on the current and capital balance of payments, to deal more effectively with possible deficiency of international reserves and, correspondingly, to diminish the load of adjustment on domestic economic policies is to let exchange rates fluctuate, either without limit or within wide limits. Such an arrangement in respect of any important currency is, however, likely to stimulate rather than restrict movements of short-term speculative funds, while its supposed long-term effects on the current balance of payments are likely to be nullified by the extreme inconvenience to trade of variable exchange rates. On the other hand, adjustments in exchange rates from one fixed point to another after some international consultation, with all the shortcomings of this process, may remain unavoidable. If changes in exchange rates were to be ruled out as a means of adjustment of international imbalance, because they lead to expectations of further changes, an intolerable burden on the machinery of international credit would be the result. Acceptance of this assumption would make the international exchange system little different from the gold standard. On the other hand, co-ordination of monetary and economic policies in particular of industrially advanced countries is a major desideratum of a stable international monetary arrangement at present. In so far as changes in exchange rates are not found acceptable by important countries as a corrective to minor disturbances of equilibrium, since they are supposed to generate fresh distortions, a heavy onus rests on them to restore balance through necessary internal action.

Currency is, however, an important symbol of sovereignty; a separate currency involves the right to autonomous regulation of its value; if the value cannot be changed, and it comes to be accepted that it shall not be changed except in concert with the values of currencies of a number of other countries, the basis exists for a common currency among such countries. It appears that this basis will come to exist for groups of countries, ready to merge themselves into a common economy and community, before the idea of one international currency, which involves one world community, comes within reach of attainment.

PRICE OF GOLD

There is another issue of international monetary policy which continues to simmer and now and again to cause a flare-up in the international exchange markets. This concerns the price of gold. It is often confused with the value of the dollar. The two problems are, however, formally distinct. A change in the price of gold refers to a uniform change in the parity or expressed gold content of all currencies—and this can, in the nature of circumstances, only be a rise in the price of gold or equal devaluation of currencies—the relative values of currencies remaining unchanged.

Even if the initial change were a devaluation of the dollar, or increase in the price of gold in terms of the dollar, most other currencies are likely to follow suit and to be devalued similarly. The opportunity might, however, be availed of by some countries to devalue their currencies by more or less than the extent of devaluation

Indian Finance

in the dollar. On the other hand, it is not clear, if a major exchange upheaval like a change in the price of gold under the Fund Agreement were to occur, that some member-countries would not like to effect at the same time a change in the relative value of their currencies. In the US, too, opinion on the two issues has been shaped by similar considerations.

There has been no apparent weakening of the inveterate opposition in the US to considering the issue of a change in the price of gold. This attitude dates from a time when the US exercised an enormous pull on the world's gold reserves and continued to add to its official gold stocks year after year. Its firm rejection of a rise in price of gold was based on what it regarded as the utter futility of digging gold out of the bowels of the earth at one place and digging it in again in the vaults at Fort Knox. The US authorities appeared completely averse to offering a special incentive through a price rise to what it considered was largely an unproductive enterprise.

In recent years, the tide of gold has turned; the US has lost \$7 billion worth of gold, and has had occasion to use its reserves for meeting successive deficits in balance of payments. As the largest holder of gold reserves, the US would be a beneficiary of revaluation of gold. However, US opposition to a rise in the price of gold, and more so to a direct initiative to raise it in terms of the dollar (through devaluation), remains as strong as ever. Apart from existing stocks, much the most important producers of new gold are the USSR and the Union of South Africa, who would be the largest beneficiaries of the measure. Besides, there being no apparent general shortage of liquidity the measure would be inflationary. It would reward the hoarder of gold and lend a further stimulus to hoarding, by justifying lack of confidence in currencies. With the recent expansion in resources of the IMF (in the course of 1959) and the projected completion of borrowing arrangements including stand-by credits, a change in the price of gold is to be ruled out.

SOME DILEMMAS

The longer-term prospect, however, remains uncertain. And therein lie some dilemmas of international monetary policy. Gold has not been demonetised and still remains the basis of the international monetary system. The most important currencies of the world are convertible into gold, or into other currencies which are so convertible. Official gold reserves are rising very slowly. World output and trade are rising at a faster rate than in the past and much faster than gold output, particularly the part of it that finds its way into official reserves. In the past, development of the gold exchange standard and elasticity of the system enabled gold stocks to go much farther in doing their job. But what of the future? Can the supply of reserve currencies, dollars and sterling at present, continue to be adequately enlarged, and can the supply of gold in US and UK reserves keep pace with the growing supply of dollars and sterling? The two questions are inter-related, for unless both situations develop satisfactorily, the resulting instability and imbalance may threaten collapse of the system through a recurrence of crises. The answer to the first question is that the supply of reserve currencies can be indefinitely enlarged through larger investment abroad, if not through a deficit in trade or the current balance, provided confidence in reserve currencies is maintained and their additional supplies are not encashed into gold to any appreciable extent. If this condition is fulfilled, the answer to the second question also is in the affirmative in that the supply of gold need not keep pace, as it has not kept pace in the past, the proportion of gold in international reserves having declined progressively from about 90 per cent (pre-war) to about 67 per cent. The question then hinges to a crucial degree on how far the condition of sustained confidence in reserve currencies is met. Will confidence in the reserve currencies be

27 January 1962

maintained with their supplies pyramiding over a more or less static gold base? If part of the international supplies of these currencies being created (through trade (current) deficit or investment or capital outflow) is cashed, the gold base will actually be a contracting one, as has happened recently in the UK and US. In fact, both processes of creation of additional international supplies of reserve currencies (mainly through capital outflow) and their conversion into gold (the gold drain) have proceeded simultaneously, culminating in a potential crisis of reserve currencies. The holding operation of the IMF with enlargement of its special resources through borrowing is directed to bringing these processes to a halt and thus reinforcing the position of the reserve currencies. The long-term outcome will depend largely upon whether the basic balance of payments situation in these countries undergoes decisive improvement, for only thus can a steady basis of confidence be established. Economic policies in these countries are accordingly strongly oriented to effecting a definite and durable improvement in the balance of payments in conformity with their special role in the international monetary framework.

MALAISE OF UNDER-DEVELOPMENT

Low and deficient international reserves are a special malaise of the less developed economies. Their problem of international reserves is an important aspect of the general problem of international reserves. It is primarily related to promotion of an adequate flow of investment capital, governmental as well as private, to help development of their economies. But our analysis of the range of problems in the international economic and monetary field has revealed the signal weakness of the arrangements from the point of view of adequate provision for the short-term and medium-term as well as long-term needs for international capital of the less developed economies. This has an important bearing on the policies and operations of the Fund. The IMF being the one general purpose agency of financing (deficits) in contract to the bias of all other agencies for financing specific projects of development, it has to re-adapt its current approach toward demands for assistance in the light of recognition of a fundamental lacuna of the international monetary arrangements from this angle. The lacuna pertains to the sector of 'working capital' requirements for the economy as a whole, the capital needs of particular projects and aspects of the economy being provided for by other institutions; at least part of these 'working capital' requirements are of a medium-term character until the 'plougher-in profits' earned on the fruition of projects of development can replace these by the 'owned funds' of the developing economies. It appears, therefore, that a basic reorientation of the policies of the IMF is called for at this stage if the Fund is to go forward in the direction of developing progressively into an apex Central bank.

A MODEST MOVE

Though this might not be a practical objective in terms which have been considered in some recent proposals, a modest move toward this objective directed particularly to assisting less developed countries, would appear to be highly desirable. Over and above the borrowing arrangements finalised by the IMF as a result of current discussions, and apart from future increases in quotas, the IMF should initiate some decisive steps in the direction of internationalisation of gold reserves over and above what has been achieved through the subscriptions of member countries. As an act of faith in the future of an international payments system of which it is to be the central clearing house, the IMF should offer to receive deposits of gold from member countries, with a ceiling on individual deposit, and agree to pay a nominal rate of interest thereon. Member-countries in turn may well trust the IMF to act as their deposits banker with deposits of gold. The deposits would be withdrawable on demand, but interest might

accrue according to a schedule of rates increasing slightly with the period of time for which deposits are not actually withdrawn. A combination of the usual methods of payment of interest on current and fixed deposits could appropriately be devised for the purpose. The present gold subscription by members also gives them the right to purchase the currencies required. But the right to withdraw deposits made in gold would be enforceable in terms of a draft on the Fund's gold reserve itself. The Fund has suggested that members' drawing rights on the Fund might be treated as their reserves. Response to such extension of the concept of reserve may take time; as part of such response, within a further enlarged IMF, some continued use of the Fund's resources, as of a member's other reserves, will also be in order; and the Fund may well set to working out the broader implications of its suggestion. But gold deposits would be treated as part of members' reserves. In the process, the IMF would have set afoot the much desired internationalisation of reserves, which can be progressively carried forward.

If the above step can be the foundation of wider international monetary co-operation than has developed so far, extension of international credit to less developed economies, in certain situations, over and above their quotas, can be the coping stone of the edifice of international monetary co-operation under the Fund's framework: the two departures may be integrally related or co-ordinated in forms to be considered. The IMF can signify its recognition of the problem of development of less developed countries as the most urgent economic issue of the present decade, aptly described by President Kennedy as the decade of development, by extension of its facilities to less developed countries in more abundant measure. The example of its lending more than 100 per cent of the quota, recently in the case of Chile, sets a line of departure in policy, which it could well make the beginning of a more comprehensive and comprehending approach to the problems of the developing economies. The international monetary mechanism requires to be adapted to meeting the payments deficits of the less developed countries in a more adequate measure through resources within the system and through principles of operation and criteria of assessment of situations, which provide for this basic imbalance rather than circumvent it. Larger investment and credit for the less developed economies is the equilibrating action indicated for such a situation of imbalance which is endemic, rather than 'fundamental' in the Fund sense of the term. It does not admit of treatment through adjustment of the current balance of trade, but requires a change in the capital balance. This points to the need not only of reinforcement of part of the existing international monetary framework which relates to the promotion of long-term capital flow but has a direct bearing on the policies and procedures of the IMF with regard to the use of its resources for the medium-term: as well as short-term, and on terms which contain some specific alleviation in favour of less developed countries. In the process, the very meaning of 'temporary disequilibrium' may have to be adapted to the dynamic context of the developing economies.

NO UNDUE WEIGHT TO CREDITORS

Recognition of the full relevance of this most important of international economic issues to the Fund's policies and operations may well be reflected also in weight being suitably accorded to the situation of less developed countries in future revisions of quotas of members in the Fund. While it is important that the Fund's procedures and criteria of assessment of applications for assistance—appropriately revised in the above general context—are maintained in full operation in the interest of proper utilisation of credit by the less developed countries themselves, the overall importance of the objective of development and of evolution of a balanced and effective approach toward it in terms of its own operations dictates that the Fund structure should not

become unduly weighted in favour of creditor countries as such.

ENVIRONMENT FOR NATIONAL GOALS

A stable and effective international monetary framework provides the environment for pursuit of the goals of national economic and monetary policy—of high and stable levels of employment, output and real incomes, of ensuring an adequate rate of growth in an atmosphere of comparative price stability, and of lessening inequalities and promotion of greater economic equality. Steady and orderly progress, and continued improvement of the basis of productivity and efficiency of the economy require constant vigilance against the corruptive and corrosive influences of insidious inflation and monetary disorder. There can be no stability or balance in the international monetary framework with persistent instability in domestic economic conditions even as pursuit of ordered economic progress at home presumes a stable international monetary framework. Co-ordination of economic and monetary policies of countries, and synthesis of internal and international monetary objectives provide the indispensable basis for steady advance at home in a context of stable international monetary relations. In this sphere, merely mechanistic solutions seek to avoid, but cannot evade, the necessity of establishing a balance in external payments through steady and ceaseless pursuit by countries acting in concert of the objectives of stable national growth; withal, a continued expansion of international liquidity through the international framework of the IMF will be necessary to provide greater room for manoeuvre with regard to internal measures as well to match the growing volume of international transactions. For the less developed countries, the objective of economic development, tempered by stability, remains paramount and international economic policy and the monetary framework should be continuously adapted and attuned to its fulfilment.

Individual well-being is linked with national prosperity and only planned efforts can ensure both in the shortest possible time. And planning, for its success, largely depends on savings, individual as well as national. Saving in the form of Bank Deposits provides resources for the National Plan.

RESERVE BANK

Mr Iengar on Relations with Government

HIS last public speech as Governor of Reserve Bank delivered, Mr H. V. R. Iengar can justifiably take pride in the efforts he has taken during his tenure in office to educate students of the money market as to the role of a central bank; and his address early this week at a joint forum provided by the Democratic Group of the Indian Merchants' Chamber, the Commerce Graduates' Association and the Progressive Group not only falls into the pattern of his public utterances but is also in the nature of a fitting finale. For his topic he took up the relationship between a central bank and Government, and his analysis is important for drawing attention to the spheres in which inevitably conflicts occur and which therefore call for the exercise of mutual adjustments. Mr Iengar made it clear at the outset that he was not indulging in "personal reminiscences," though of course the views he expressed "would be coloured by my own experience of office."

In Canada last year so great was the conflict between Governor and Minister of Finance, that the latter called upon the former to resign; and which he did, but only after acrimonious public debate in Parliament and outside. In Sweden in 1957 there was another dramatic case of conflict, which however ended with the resignation of the Governor and the clarification that the Riksbank (the central bank) would consult Government before making any changes in bank rate. President Truman's anxiety to preserve "public confidence in Government's credit and in Government securities" triggered off yet one more publicised case of conflict between Treasury and central bank, with Mr Marriner Eccles (then Chairman of Federal Reserve) issuing a public statement contradicting the White House.

Why has it happened in recent years, and quite often at that, that there have been disagreements between Government and central bank? Mr Iengar furnishes what may be one of the main factors. The traditional function of a central bank "is to regulate the issue of currency and to control bank credit"; and the older central banks for this purpose enjoyed a virtual independence from Government. But today, it is now universally accepted, Mr Iengar points out, that "Government have a direct responsibility in the matter of maintaining full employment and keeping prices at a stable level". So, the newer central banks have begun clearly to recognise the ancillary function of catering to the welfare not only of the currency but also of the people: the preamble to the Bank of Canada Act enjoins on the Bank the responsibility.

for regulating credit and currency in the best interest of the economic life of the nation, to control and protect the external value of the national monetary unit and to mitigate by its influence fluctuations in the general level of production, trade and prices

so far as may be possible within the reach of monetary action and generally to promote the economic and financial welfare of the dominion.

Even so, the Reserve Bank of Australia has been set up to ensure that the monetary and banking policy of the Bank is directed to the greatest advantage of the people of Australia and that the powers of the Bank are exercised in such a manner as will best contribute to the stability of the currency of Australia, the maintenance of full employment in Australia and the economic prosperity and welfare of the people of Australia.

Thus, the "welfare state" acts to reduce the importance (that is to say, the independence) of a central bank; instead it requires that the central bank shall perform its duty but only within prescribed limitations tantamount in the economic policy or objective of Government. Mr Iengar in this regard quotes the Radcliffe Committee:

The central bank is one of the principal authorities concerned with the framing and operation of monetary policy. . . . It follows that this policy whatever form it may take from time to time must include the general planning of monetary policy and monetary operations and that the policies to be pursued by the central bank must be from first to last in harmony with those avowed and defended by Ministers of the Crown responsible to Parliament. . . . The true position, as we see it, is that the bank carries an equal measure of responsibility, to advise to the best of its ability and, having advised, to execute within the limits of the determined policy.

Mr Iengar lays down three prerequisites to a sound working arrangement between central bank and Government:

- Government must have confidence in the central bank and its Governor and in turn the central bank must be conscious that Government is directly answerable to the people and recognise the Government's ultimate responsibility.
- The establishment of cordial relationship should not be at the expense of the Governor's ability to be forthright in the expression of his views even to the point of being considered difficult. It would be fatally easy for a Governor to have the pleasantest relationship with the Treasury by just subordinating himself to Treasury views. As Montagu Norman said, "I look upon the bank as having the unique right to offer advice and to press such advice even to the point of nagging; but always, of course, subject to the supreme authority of the Government."
- The Treasury should not interfere with the operational or administrative responsibilities of the bank so long as the general policy pursued by the bank is in harmony with Government's economic policy.

The Reserve Bank Governor has emphasised that, so far "no directives have actually been issued by Government to the Reserve Bank."

Nevertheless, for various reasons, the extent of control of Government over the central bank is greater in India than, for example, in the United Kingdom. A planned and controlled economy is inevitable; so, "non-official members of statutory Boards taken from industry and commerce, however high their sense of duty, may possibly, on occasions, feel somewhat inhibited in expressing their views with complete frankness". Mr Iengar adds that the Reserve Bank's directors "have always shown notable candour" and his mention of the point is to emphasise the need for such independence to be "consciously nurtured and welcomed." Similarly, the anxiety on the part of a post-revolutionary Government to speed up progress will often come into conflict with the caution to be expected of a central bank. But here, too, Mr Iengar is in a position to state that, "so far as Government and the Reserve Bank are concerned, adjustments have taken place with a great deal of mutual understanding."

Mr Iengar then goes on to deal with four areas where adjustments are necessary; and we shall take these for study in next week's World of Finance. But an apposite conclusion to a study of the relationship between central bank and Government is constituted by a quotation from a speech made by the Finance Minister in the Rajya Sabha in 1957:

The Governor of the Reserve Bank is not an officer of the Government. The Reserve Bank happens to be the supreme autonomous body that is created. . . . He is a non-official. He is entitled to criticise the Government, to differ from Government. . . . we can, in matters where Government's policies are to be carried out, issue directives: but the Reserve Bank can hold a different opinion though they have to act according to the directives issued by the Government for good reasons. . . . He is bound to carry out the direction but in doing so he is entitled to tell me and also publish it in his report that the Government of India was advised in the matter. . . .

BANK RETURNS

Advances Cross Rs 1,300 Crore Mark

Currency has contracted during the week ended 19 January, but in the same week there would appear to have been some intensification of busy season pressures.

Active Note Circulation has declined from Rs 1,991.41 crores to Rs 1,985.59 crores, and there has been return of Rupee Coin from circulation for Rs 0.58 crore. Foreign Securities are unchanged at Rs 126.96 crores and Rupee Securities at Rs 1,638.80 crores, so that the Reserve Bank's cash in the till has improved from Rs 12.49 crores to Rs 18.89 crores.

It would appear that, at long last in the current year, the Centre has been compelled to have large recourse to deficit financing. Investments as shown in the return for the Banking Department are higher by more than Rs 53 crores at Rs 243.58 crores, and beside the State Bank is known to have purchased giltedged for Rs 4 crores. Hence the quantum of deficit financing may be as high as Rs 6 crores. This has been necessary for the Centre for two reasons: (a) large payments have been made to State Governments, whose balance have improved from Rs 12.62 crores to Rs 23.6 crores and whose indebtedness to the Reserve Bank for ways and means borrowings has

27 January 1962

been reduced from Rs 64.14 crores to Rs 52.92 crores; and (b) there was a liability of about Rs 17 crores in respect of Treasury Bills purchased and discounted by the Reserve Bank which matured during the week. In the result the Centre's Deposits show practically no substantial change, despite the vast recourse to deficit financing, at Rs 52.25 crores against Rs 53.64 crores.

Reserve Balances of member banks are somewhat better at Rs 82.46 crores against Rs 75.74 crores, though the bulk of this increase may be on account of the State Bank. But there has at the same time been an increase, though a small one, in borrowings of banks as suggested by the rise of Rs 1.68 crores to Rs 147.62 crores in the Other Loans and Advances of the Reserve Bank; and that such increase is mainly due to increased resort to central bank credit on the part of Scheduled Banks is confirmed by the rise of Rs 1.50 crores to Rs 9.51 crores in the Reserve Bank's advances against usance bills.

Other Deposits, it may be mentioned in passing, are shown higher by roughly Rs 6

PROGRESS OF BUSY SEASONS*			
	(In Rs Crores)		
	1959-60	1960-61	1961-62
Reserve Bank:			
Active Notes	+81.12	+120.69	+103.34
Rupee Coin	-4.66	-6.43	-6.18
Banks' Deposits	+4.92	+23.85	-3.91
Other Loans and Advances	+12.47	-22.50	+18.09
State Bank:			
Deposits	+22.76	-25.16	+13.16
Borrowings	+2.16	+1.60	+2.25
Cash Balances	+7.43	+6.18	-1.82
Giltedged	+2.38	-67.78	-33.53
Advances	+10.27	+31.90	+29.27
-As %age of Deposits	(28.9)	(44.4)	(49.3)
Other Scheduled Banks:			
Net Deposits	+25.02	-16.55	+20.41

Cash Balances	-5.95	-30.31	-4.70
Giltedged	-17.78	-16.30	-3.60
Net Advances	+49.47	+54.80	+47.96
-As %age of net Deposits	(66.1)	(73.0)	(71.7)

*As at the end of 12 weeks for Reserve Bank State Bank and as at the end of 11 weeks for Other Scheduled Banks.

NOTES:—Cash balances include money at call and short notice.

Figures in brackets are percentages.

crores at Rs 154.26 crores, and some transaction in regard to Public Law 480 agreement counterpart funds may be involved; and there is a more or less corresponding increase of just over Rs 5 crores to Rs 49.81 crores under the head of Other Liabilities.

The last change in the Reserve Bank returns that we have to take note of is the fall of a further Rs 2.55 crores to Rs 11.40 crores in Balances Head Abroad; Foreign assets held by the Reserve Bank are now below the Rs 140 crore mark once again. Either maintenance imports are costing us more, or export performance has fallen below expectations.

There is a sharp and totally unexpected rise of Rs 14.57 crores to Rs 544.25 crores in the Deposits of the State Bank as revealed in the institution's return for 19 January. However, patently not all of the rise is due to genuine increase in Deposits: Other Liabilities are shown to be Rs 10.59 crores lower at Rs 1.14 crores, and there has apparently been transfer to Deposits and other accounts. Nevertheless the improvement in resources is reflected in a rise of Rs 3.16 crores in cash balances including money at call and short notice. The total of Advances, which had risen stridently in the two earlier weeks, is marked up only by Rs 0.42 crore to Rs 268.11 crores. The giltedged portfolio, added to by some Rs 4 crores, is now

shown at Rs 232.82 crores. Borrowings show small change at Rs 2.42 crores against Rs 2.60 crores in the last statement. The transfer of Rs 75 lakhs to Reserve has been effected.

Deposit resources of Scheduled Banks fell during the week ended 12 January. Net Demand Deposits are lower by Rs 1.23 crores at Rs 830.58 crores, and net Time Deposits by Rs 1.85 crores at Rs 1,141.21 crores. But it is necessary to note that Demand Deposits from banks are lower by Rs 2.90 crores and Time Deposits from banks lower by Rs 2.47 crores. With the State Bank reporting an increase of about Rs 3 crores in Deposits in the relevant week, it is obvious that the loss to other banks has been greater. As anticipated in this column last week, the total of Advances has crossed the Rs 1,300 crore mark. The relative figure has been marked up by Rs 10.74 crores to Rs 1,309.58 crores, and the State Bank's share is roughly Rs 6½ crores. Disinvestment in giltedged for Rs 10 crores to Rs 583.66 crores is traceable to the State Bank. Borrowings from the Reserve Bank are about Rs 2 crores higher at Rs 16.40 crores, and indebtedness to the State Bank is also just a little marked up. In the result, cash balances have tumbled down by approximately Rs 10 crores to Rs 184.27 crores from Rs 194.15 crores; the State Bank had reported a rise of Rs 2 crores, and to that extent the decline in cash balances of other banks must be presumed to be larger.

Progress Towards European Integration

By Paul Einzig

THE Brussels Agreement of January 15 opened the way not only to the acceleration of the pace of economic integration within the European Economic Community but also for the acceleration of negotiations between Britain and the Common Market. It is to be expected that appreciable progress will be made towards agreement in the near future. This in spite of the growing uneasiness felt in many British quarters about the effect of Britain's adhesion to the Common Market on her economic and political relations with the Commonwealth. As far as it is possible to judge the number of those who feel strongly about this aspect of the problem is on the decline, while the number of those who are growing more and more enthusiastic about the European idea is on the increase. This is not surprising. Most Commonwealth countries have done absolutely nothing to support their friends in the United

Kingdom by providing them with arguments why it would be against Britain's interest to lose trade with the Commonwealth for the sake of gaining trade with Europe.

Commonwealth Governments, politicians and the Press never miss an opportunity to demand that Britain should abstain from joining the Common Market except on terms which would be obviously unacceptable to the Common Market. They fully expect Britain to make the utmost sacrifices for the sake of Commonwealth interests without making the least effort to offer the slightest compensation in the form of concessions tending to increase their imports from Britain. It is inevitable that industrialisation in Commonwealth countries should mean loss of markets for British exports. Admittedly, it is to the vital interests of Commonwealth countries to become industrialised, but it is equally vital for Britain to maintain and indeed increase her exports. If, as a result of industrialisation in the Commonwealth this should be impossible, it is of vital importance for Britain to find alternative markets.

There is evidently a conflict of vital interests in this respect between Britain and the Commonwealth. The answer may lie in a compromise by which Commonwealth countries would adjust their industrialisation plans to some extent to Britain's requirements to maintain her markets. This would involve some sacrifices. An alternative would be for Commonwealth countries to forgo some of the advantages of importing from industrial countries other than Britain. This too, would involve some sacrifices. But surely it is reasonable for Britain to expect some give-and-take if she is expected to sacrifice her chances of expanding her exports to the Commonwealth.

BANK PROFIT

Indian Overseas

The net profit of the Indian Overseas Bank Ltd., subject to audit, for the year ended 31st December, 1961, after providing for contingencies and expenses amounts to Rs. 45,72,933.24 including the sum of Rs. 1,92,434.52 brought forward from the previous year's account.

The allocations are as follows:—

	Rs
Provision for taxation	18,50,000.00
Transfer to Reserve Fund	9,00,000.00
Provision for Bonus to Staff	5,50,000.00
The Directors propose to recommend to the shareholders at the next General Meeting payment of dividend of 14 per cent subject to tax same as last year	10,50,000.00
Carry forward	2,22,933.24

Notes

MANPOWER

More Research

THE Third Plan includes provision for the establishment of an Institute of Applied Manpower Research to work in close collaboration with the Central and State Governments and with industrial and other organisations. The question was considered at a meeting presided over by the Deputy Chairman of the Planning Commission and the Ministry of Home Affairs was requested to formulate the necessary proposals. The Home Ministry has considered the matter and the institute, which will be a semi-autonomous body of 54 members is expected to start functioning early next month. The Council will include representatives of the concerned Union Ministries, all State Governments, the University Grants Commission, All India Medical Council, Institute of Engineers and other organisations as well as representatives of management and labour and public and private sector undertakings.

The Institute is expected to carry out systematic research into manpower problems and generally to secure the most effective utilisation of the country's human resources. One division of the Institute will deal with manpower statistics, studies of requirements and resources of manpower, and methods and techniques of manpower research and another division with problems relating to institutional preparation and training for employment, vocational guidance and improvement and utilisation of the existing work force, including managerial personnel.

The idea of setting up the Institute of Applied Manpower Research was a stroke of genius, for it has enabled the Planning Commission to get rid of its most troublesome headache, namely the problem of unemployment. The Planning Commission can now sit back and take its ease and any questioner can be directed to the Institute. If he proves refractory, he can be co-opted to the Council which is broad enough to accommodate all and sundry and asked to deal with the problem himself. The unemployed for their part can look forward to the future with confidence that their problems are being studied at the highest level by an army of statisticians and experts in the development of techniques of manpower assessment. If they still remain unemployed at the end of the Third Plan, it will not be for want of research on the utilisation of manpower resources.

POWER SHORTAGE

Another Probe

It is rather odd that the assessment of the power requirements of the Coal Mining industry in the Third Plan should be taken up by a team appointed for the purpose, as the first year of the Plan is nearing to its end. In the meantime the Planning Commission is reported to have taken decisions on the Sachdev Committee's report regarding expansion of capacity for power generation in the Eastern region. This Committee, it may be recalled, was set up to study the chronic shortage of power in West Bengal and Bihar, the region where the coal industry is mainly concentrated, and to assess the power situation in these States. Now that it has been found necessary to appoint a separate study team for collieries, it appears that their requirements were either not considered by the Committee or were overlooked by the Planning Commission in arriving at their decisions regarding expansion of generating capacity.

About 80 per cent of the power requirements of collieries in West Bengal and Bihar are supplied by the DVC power system. The balance of the requirements of the coal industry is met by thermal

private licensees and State Electricity Boards. The study team, it is stated, will review measures for matching power supply with the programme for raising in various coalfields in the country, and it has been asked to examine whether private licensees supplying power to collieries are utilising their full firm capacity and, if this is not being done, the reasons for it. The team has also been asked to assess requirements of power of the coal mines colliery-wise and year-wise, examine the present position in regard to power supply and suggest measures for augmenting it to meet future needs, year by year, in the Third Plan. The report is expected within one month and it is to be hoped that this will be followed up by prompt and purposive action.

FREIGHT

An Anomaly

The subject of freight discrimination practised by conference lines is now known to have been taken up by the Government of India with the lines in question. The existence of such discrimination covering a number of items like zinc oxide, bicycle rims, frozen fish, cashew shell liquid, groundnut, billets, steel structural and plates etc, has presented a glaring anomaly in the freight structure and a threat to the success of the export promotion measures launched by the Government. This is a problem that faces not only India but also the countries of the ECAFE region which have been somewhat perturbed by the recent increase in freight rates announced by the conference lines.

The more general method of discrimination practised by the conference lines is to charge higher freight rates for goods shipped to the same destination on the ground that the quantity involved is small though it may be seen that the higher freight rate may itself act as a disincentive to increased exports. Even in respect of traditional items of export, the question of freight revision is important since some of the items like jute goods, cotton textiles, coir products are already subject to freight disadvantage as compared with products exported by the European competitors. Increases in freight on imports which enter into the manufacture of goods exported from the country is another aspect of freight problem. The move now taken by the Government to eliminate anomalies in the freight structure is quite timely, since the consequences involved in the current discriminatory practices are highly detrimental to national interests. Reduction in shipping freight if it could be secured on the items which now bear higher freight, can provide considerable stimulus to their exports, while in other cases this may lead to substantial reduction in foreign exchange expenditure

BICYCLE

No Scope for Further Expansion

The Development Wing of the Union Government has after a study of the progress made by the bicycle industry come to the conclusion that there is not much scope for further expansion of the bicycle industry in the country for the next few years. According to official estimates, demand for bicycles is likely to be of the order of 16.5 lakhs in 1962 and 18.5 lakhs in 1963. Against this, the capacity licensed in the large scale sector and the small scale sector totals more than 21.5 lakhs. The capacity licensed in the large scale sector is 14.15 lakhs while the capacity in the small scale sector is 7.5 lakhs. Since the existing units are more than sufficient to meet the requirements in the near future, the Development Wing has taken the view that there is no room for a new entrant in the bicycle industry at present.

There is implied in the decision of the Development Council a tribute to the progress achieved by the industry in recent years. The banning of imports of complete bicycles since July 1957 had helped the industry considerably in achieving self-sufficiency in production. The industry has utilised the advantage also to develop export markets and it is noteworthy that in 1959 7,159 bicycles valued at Rs 9.87 lakhs were exported. Prospects for further increasing exports particularly to the neighbouring foreign markets such as Burma, Malaya and countries of West Asia are also very bright if cost of production could be brought

down to meet competition from other countries.

Against the licensed capacity in the large scale sector at 14.15 lakhs the actual installed capacity on single shift basis is only of the order of 12.96 lakhs cycles per annum. Production is much below installed capacity and was placed at 9.8 lakhs during 1959. The small scale sector is particularly lagging in the matter of utilisation of full capacity and production during 1959 was only 1.97 lakhs. The main problem before the industry is to improve quality and it is in the small scale sector that the greatest scope for improving quality exists. The inferior quality of cycles produced in the small scale sector has been put down to non-availability of important raw materials needed by the small scale sector. Though steel which is the principal raw material is available within the country itself, the small scale units are reported to be finding it difficult to obtain standard qualities of steel tubes, steel strips, free cutting bright drawn steel bars etc. Further, dependence on imports for other items of stores like chemicals for polishing, brazing electroplating and heat treatment has made it difficult for the small scale units to get their requirements of these materials in adequate quantity and quality.

US

The Dillon Round

The past few weeks have seen a spate of rumours and reports about the inclusion of tariff negotiations between the United States and the Common Market, or European Economic Community (EEC). Officially, nothing substantial on this matter has yet been published. The interest in it, however, is both incontestable and warranted. The negotiations may well mark a significant lowering of the EEC's common tariff wall against outsiders, with all this implies for a further expansion of international trade.

The US-EEC negotiations are really one element—albeit an important one—in the general pattern of multilateral tariff cutting talks that have been going on under the auspices of the General Agreement on Tariffs and Trade (GATT) for the past year and half, and now appears to be nearing their end.

All in all, this latest round of multilateral talks has found the United States negotiating new tariff reductions with 19 other countries, plus the EEC. This is sometimes referred to as the Dillon round because it was first proposed a few years ago by Douglas Dillon, who then was US Under Secretary of State and now is US Secretary of the Treasury.

In addition, the United States has been discussing the technical

readjustment of existing tariff schedules with 22 other countries. This total includes a number, like Japan, who also are among the 19 whom the United States has been negotiating new concessions.

Realistically, none of the results of these various trade talks in which the United States has been engaged can be announced officially until all are concluded. They are, after all, interrelated. Moreover, application by the United States and GATT participants of the most-favoured-nation principle means that a tariff concession

granted to one trading partner as a general rule is extended to others.

It has been an accepted procedure among the GATT countries furthermore, to guard against premature release of results and to coordinate their announcements of tariff cuts, which obviously could have a heavy impact on industries in all participating nations.

The remaining negotiations in the current series are expected to be wound up within the next few weeks. Thereafter, the GATT parties will be working out the

details of the agreements, which it is hoped will be ready for signature by the middle of February. Only then is it likely that all the facts concerning the items negotiated and the tariff changes effected will be known officially.

While it is not possible at this time to confirm the number, much less the identity, of the items being negotiated, it is safe to say that a wide range of products is involved. There is, of course, *quid pro quo* involved in reciprocal trade talks, and a participating nation must expect to give

as well as receive concessions. The United States is no exception to this rule.

There are concessions, additionally, which the United States probably wanted and did not receive because much of its existing tariff cutting authority is already used up and its bargaining power is limited under the present Trade Agreements Act which expires on 30 June. This is one important reason for the Kennedy administration's strong request for congressional approval of a new trade programme that would enlarge the President's authority to negotiate deep and broadly based tariff reductions.

Even so, the feeling here is that the negotiations have been generally favourable as far as the United States is concerned, and that the tariff reductions obtained will prove highly useful to US exporters. This is particularly the case with the Common Market, which reportedly is reducing its external tariffs by some 20 per cent as a result of the negotiations with the United States.

The tariff cuts will affect industrial products, by and large. As far as agricultural products are concerned, the EEC still has to work out many of the specifics of its agricultural policies in terms of concrete trade concessions. It appears, however, that specific agreements have been arranged with the EEC on a number of agricultural items, though it may

be necessary to arrange precise concessions on others at a later date.

It is believed that some officials here would like to see another general round of multilateral tariff cutting talks set up as soon as possible. The arrangements would take time, however, and they would have to be based on appropriate enabling legislation. This is being advanced as another reason for speedy congressional action on President Kennedy's proposals for a new and bold approach to US trade policies.

US BUDGET Long-Term Objectives

President Kennedy has last week, submitted to the Congress the biggest of all peacetime budgets in US history envisaging total expenditure at 92,500 million dollars, an increase of 3,400 million dollars over spending estimates in the previous fiscal year. Item-wise the spending programme shows substantial increases of 1,500 million dollars and 1,100 million dollars respectively under National Defence and space research and technology. It is significant that expenditure for national defence, international affairs and space programmes account for more than three fifths

of the total budget outlays and for more than three-quarters of the estimated increase.

The Budget has laid stress on longterm economic development and accordingly the President has asked the Congress for substantially increased funds to aid economic development in other countries. The spending programme in this field envisages an increase of 202 million dollars to 2,510 million dollars. To make the US aid to developing countries more effective, President Kennedy favours increasing emphasis to be placed on 'self-help measures and necessary reforms' in the developing countries.

With revenue receipts being estimated at 93,000 million dollars, the Budget presented by President Kennedy will produce a modest surplus of 500 million dollars. To plan for a deficit according to Mr Kennedy would have been unwise in the circumstances of increasing income and employment and prospects for further rises in the coming year in private expenditure, both consumption and investment. In the President's words, the new Budget met the national needs 'with a responsible fiscal framework' and provided for the 'prudent use of our resources to serve the national interest.'

The two important objectives of the budget proposals presented by Mr Kennedy are (1) to carry forward efficiently the activities of the Federal Government and (2)

to achieve a financial plan which will contribute to economic growth, high employment and price stability in the national economy.

A noteworthy feature of the budget is the cut of 500 million dollars it calls for in expenditure on agriculture. This is a measure that is likely to evoke considerable opposition in the Congress. Since the details of the cut have not been announced whether the farm support programme of the Federal Administration will be affected by the cut in expenditure cannot be said.

NEW HORIZONS South India Viscose

The inauguration of the Rs 10 crores South India Viscose Rayon Plant constructed with the financial and technical collaboration of Italviscosa Eastern Trading SPA, Italy, at Sirumughai near Mettupalayam, by Mr K. C. Reddy, the Union Minister for Commerce and Industry, heralds the advent of a new era for the textile industry in India. The first combined staple-fibre and rayon unit in the country, the new plant will produce not less than ten tons each of staple-fibre and viscose rayon yarn daily and it has been designed with a broad vision to allow for future expansion. Apart from the expansion programme, there is a proposal for installing a separate unit for manufacturing 25,000 tons of high grade rayon pulp annually to feed the viscose plant.

In his inaugural address Mr Reddy spoke in grateful terms of the assistance, both financial and technical, extended by friendly foreign countries for accelerating the pace of industrialisation in the country. There is no gain-saying that such fruitful collaborations have resulted in rapid industrialisation and the country is at present on the eve of an industrial revolution. Diverting to the scope for development of rayon and staple-fibre industries in India Mr Reddy struck an optimistic note. The Third Plan has fixed a target of 140 million lbs for filament yarn and 75 million lbs for staple fibre and the country is at present importing rayon yarn worth Rs 15 crores annually. Viewed in this light the prospects for expanding the existing capacity and setting up new ventures can be rated high. In this respect the contribution from the South India Viscose will to a great extent reduce our imports and thus save a considerable amount of foreign exchange. From the point of view of employment the new plant offers immense opportunities not only to those directly engaged but also to a wide range of allied industrial activities which will ultimately help improve such sectors of Indian economy. The plant has also added a new dimension to the industrial map of South India.

SCINDIA STEAM Difficult Freight Conditions

Addressing the 42nd annual general meeting of the Shareholders of the Scindia Steam Navigation Co Ltd, Mr Dharamsey Mulraj Khatau, Chairman of the Company, referred to the difficult freight conditions faced by shipping companies in the country. For the Company itself, the results for

the year have not been quite encouraging. The Company has made only a nominal profit of Rs 4.5 lakhs and has declared a dividend of 60 nP after drawing Rs 25 lakhs from the Dividend Equalisation Reserve.

The main cause for concern arises from the increasing costs of operations while freight rates particularly in the overseas liner trades had shown no improvement. The deterioration in coastal and adjacent trades has further added to the troubles and contributed to very disappointing results. The

basic problems facing coastal shipping according to Mr Khatau are "economic rates of freight, serious delays and detentions to ships and reduced cargoes due to the deteriorating Hooghly drafts." While there is thus a great deal to be done to make coastal shipping more profitable, the most important measure to which the shipping companies themselves attach the greatest importance is to increase the freight rates. Increase in freight rates on the overseas trade is to be ruled out at present in view of the difficult foreign

exchange situation, but in respect of the freight rates of the coastal trade, a study of the costs of operations by Mr R. G. Abbhi, the Government of India director on boards of Indian shipping companies, is now under way. Mr Khatau has expressed the hope that the Government would fix "a level of freight rates for the coast which would not only take care of increased costs but would also give a satisfactory return to the companies on the capital employed in the coastal trades." This concern for a reasonable freight rates

also coloured the assessment of the future prospects of the Company. It was observed that in view of the many imponderables in the shipping business it was not very easy to forecast the future with any degree of certainty. Much would depend on the level of freight rates to be fixed by the Government and Mr Khatau made it clear that "adjustment of freight rates can be the only answer to compensate for increased and increasing costs of operation and the maintaining of a modern fleet."

ACC Higher Production But Poorer Return

Despite higher production and despatches, the financial results of Associated Cement Companies Limited for the latest accounting year have been rather disappointing. In order to maintain the dividend at Rs 12 per share, subject to deduction of tax, the company had to withdraw as much as Rs 98 lakhs from reserves. As a matter of fact in the previous two years too there had been withdrawals from Reserves for the purpose of paying dividend. Speaking at the Twentyfifth Annual General Meeting of the Company, the Chairman, Mr Dharamsey M Khatau has however expressed the hope that better results will be recorded in the next few years in view of the recent increase in cement retention price.

There has been inordinate delay in announcing the increased retention price and the industry has had to bear heavy losses in the meantime. The position of the ACC which represents a large section of the industry as a whole has been rendered unenviable by the various regulations governing the production, distribution and sale of the commodity. The industry has been complaining ever since the price fixation about the inadequacy of the selling price and it was only after four months have elapsed after the expiry date of the previous price period that Government has been able to announce the new prices. Earlier demand for an interim relief had been rejected. But when the increase came it proved to be much less than what had been recommended by the Tariff Commission. The price increase recommended in the case of ACC was Rs 12.11 per tonne but what it got was Rs 1.25 per tonne less than this amount. Government has also made some other changes in the Tariff Board's recommendation. It is significant to note that the Commission's recommendation is that the new prices should come into operation from 1 July 1961 and remain in force till 30 June 1964. Government

has made the new prices effective 1 November 1961 with the expiry date at 31 March 1966. To peg the price of cement at a particular level for five years at a period when there is no guarantee that prices in general will be stable does not appear to be logical.

It is not the price factor alone that has been responsible for the unsatisfactory performance of the industry. Profits are adversely affected by the abnormal rise in the cost of coal, excise duty, railway freight and electric power supply. While Mr Khatau thinks that the Third Plan target of capacity and the estimated demand at 15.24 million tonnes and 13.2 million tonnes are realistic, he has made it clear that a great effort is necessary to achieve the targets. Under prevailing conditions in the industry he is of the view that production is likely to be about 10 per cent lower than demand. If the industry is to hit its Third Plan target of production it must be ensured reasonable foreign exchange facilities, adequate supplies of coal, power and transport.

INDIAN OXYGEN An Eventful Year

1961 was an eventful year for the Indian Oxygen Limited. The demand for company's products during this year showed a rising trend and the sales of its various products compare favourably with the previous year. The company's profits for the year under review, after providing Rs 4,495,981 for depreciation and Rs 3,625,000 for taxations, totalled Rs 7,130,284 in contrast with the net profit of Rs 6,298,449 bagged in the previous year. Sales of the company's products looked up by 17 per cent to over Rs 758 crores. Among the sales of various products, sales of argon gas, gas-user equipment and electrodes registered spectacular improvement. Nevertheless, it will be rash to deem that the company had a smooth run. The persistent paucity of power supply in various places of operations and other adverse factors inflated the cost of production. However, there is no room for despondency, for as stated by Sir John Douglas Keith Brown, the Chairman of the company, in his statement circulated along with the annual report, the profits are likely to show a moderate increase.

The Indian Oxygen can, with pardonable pride, look forward for better days ahead. The demand for its products, in unison with the accelerated tempo of industrialisation in the country, is to be further stepped up in the current Plan period. The demand for oxygen in the Jamshedpur area has been on the uptrend and the company's proposal to install three 400 M3 oxygen plants in Jamshedpur factory will augment the production of this gas. The first of these three plants has been set up and trial runs are sche-

duled to commence soon and the installation of the other two plants will be undertaken shortly. The production of dissolved acetylene and oxygen has already started in the Bangalore factory and the company's oxygen plant set up in the premises of Indian Refineries Limited will be transferred to the new site where it is expected to go on stream in February next.

The company has secured industrial licence for the establishment of a second 400 M3 oxygen plant in its Bombay factory and arrangements are underway for its installation to augment the oxygen supply in Bombay area. Programmes have also been finalised for stepping up production of electrodes at Khardah factory, near Calcutta. It is also worth reporting that the company has obtained another licence for establishing a wire mill within this factory. Apart from these, adequate measures have also been adopted for supplementing the machinery installed in the Equipment Factory at Beliaghata and the implementation of the expansion and modernisation of facilities at the Electrode Equipment factories is of great import for the production of larger quantities and wider range of output.

The company's effort for the progressive development of indigenous manufacture of items of equipment, hitherto imported, produced remarkable results. In this drive the company's main motive was, wherever possible and economical, to stimulate the growth of feeder industries by providing the requisite technical assistance and designs. Most prominent among last year's achievements were the manufacture of the "cub" machine, a tiny oxygen profile cutting machine and other items of medical equipment. Another significant success achieved in this sphere was the development of "Indarc" welding transformers which are at present marketed by the company itself.

The modest but significant attempt made to export company's products also deserves special mention. The company is at present exporting nitrous oxide and electrodes to South East Asian countries and it can be anticipated that with the reorganisation and modernisation of the electrode and equipment factories exports will look up to a great extent.

AOC Rs 5 crores Foreign Exchange Saved

The Assam Oil Company's refinery at Digboi helped India to save more than Rs 5 crores of foreign exchange last year. Its total throughput, processed from indigenous crude of Digboi and

Nathorkatiya oilfields, amounted to 536,855,385 litres in 1961.

During the previous 10 years the annual throughput of the refinery increased from 308,572,859 litres in 1950 to 415,719,927 litres in 1955 to 538,216,538 litres in 1960. Since 1954-55 the refinery is receiving a limited quantity of crude oil from Nahorkatiya oilfield.

The Digboi refinery produces an unusually large variety of products—motor spirit (petrol), mineral turpentine, vapourising oil, kerosene, diesel oil, various grades of lubricants, white oil, tea drier oil, jute batching oil, mineral jelly, paraffin wax of different melting points, floor polish, bitumen, earth oil, malarial (larvicide), and petroleum coke are some of over 100 products made specially to suit the country's requirement.

The two refineries of Assam, Digboi and the latest—the public-sector refinery at Gauhati, have four sources of indigenous petroleum in the State to keep them running.

The Digboi oilfield, discovered in 1889 and now with 998 wells, is still producing an average of 19,203,537 litres of oil per month from 447 wells. The Nahorkatiya and Moran oilfields discovered in 1953 and 1956 respectively, have nearly 100 successful wells at present to feed the refineries. The wells now being drilled at Sibsagar by Oil and Natural Gas Commission may further increase the supply of crude oil to the refineries.

The public-sector refinery, now being built at Barauni, Bihar, will also process crude oil from Nahorkatiya and Moran oilfields in due course. The two public-sector refineries, Gauhati and Barauni, will process 2.75 million tons of Upper Assam crude and they are so designed that their throughput could conveniently be increased to 4 million tons depending upon the production from oilfields in Assam.

Until the end of 1961 almost all the oil needs of Assam, Manipur and Tripura were met from Digboi and there was enough left over from the AOC refinery's throughput to supply a sizable part of other north-eastern regions of India. From this year as a result of commissioning of the Gauhati refinery petroleum products from the State will reach a wider area.

CORRIGENDUM

In the report of the Central Bank's growth which appeared in the Notes Column of this journal dated 13 January 1961, a factual inaccuracy had crept in. It was stated that the Union Bank of India was amalgamated with the Central Bank in 1923. This is not true and the Central Bank only took over the management of the Union Bank of India in 1923 and there was no merger or amalgamation.

27 January 1962

Clive Street Gossip

"I must have liberty
Withal, as large a charter as the wind
To blow on whom I please"
—As You Like It.

CELEBRATION of the birth centenary of Swami Vivekananda—he was born on 9 January 1862—has got off to an auspicious start all over the country. A remarkable man by any manner of reckoning, he burnt up his brief forty years in a ceaseless effort to rouse his countrymen from the moral and spiritual torpor into which they had fallen. He was a most unusual kind of ascetic. "I am going away," he said shortly after he had established the Ramakrishna Order, "and I shall never come back until I can burst on society like a bomb and make it follow me like a dog." And he was as good as his word. After six years of obscurity travelling all over the country under various names—the name Vivekananda was the last that he took in Madras shortly before his departure to the United States and it stuck—he did make the world sit up with his famous speech at the Parliament of Religions at Chicago. The story has often been told. The comparatively unknown "Hindoo Monk from India" whom no one took any particular notice of at first electrified the audience with the very first few words—viz. "Sisters and Brothers of America"—that he uttered. I have often wondered how this form of address—one that is spouted by every tub-thumper in India every day—could have had the effect it did have. I have heard it attributed to his saffron robe; and more plausibly, to his voice, "an admirable baritone, having the vibration of the Chinese gong." But even that is an incomplete and rather superficial explanation. It must quite simply have been the sense of the awe that the immediate proximity of genuine greatness engenders in one. Vivekananda's conception of Hinduism was not such as would commend itself readily to the orthodox, though there are passages in his writings that some may consider militantly Hindu: "Hinduism of the Rishis must become dynamic", "I cannot believe in a God or religion that cannot wipe the widow's tears or bring a piece of bread to the orphan's mouth". "Hands off, who cares for your Ramakrishna, who cares for your Bhakti and Mukti, who cares what the scriptures say? I will go into a thousand hells cheerfully, if I can rouse my countrymen to stand on their own feet and be men inspired with the spirit of Karma Yoga." Surely, this is not the language of one to

whom religion is an escape from reality nor of one who lived in a world of speculative calm. "Renunciation, that is the flag," he said once. It is characteristic that what many consider as signal for retreat is thought of by him as a battle-cry. It is said that some of his original associates in the Ramakrishna Mission had some qualms about the direction he was giving to their aims. But since then, the Ramakrishna Mission has become identified with many constructive efforts at social amelioration through education and public service to the afflicted. But Vivekananda was no mere do-gooder, the sort of man who makes a profession out of social service. Vivekananda was fond of referring to his teaching as practical Vedanta, the philosophy of right action based on renunciation. Of the myriad impulses that quickened India's intellectual and spiritual life in the second half of the nineteenth century, none was more modern and none more deeply rooted in Indian ethos than Vivekananda.

★

President Ayub Khan must be feeling rather vexed with himself (or, as is more likely, with his advisers) for the maladroit effort at embarrassing India recently made by bringing Kashmir up in the Security Council. It certainly was naive to have calculated that since feeling against India was running high because of Goa, the moment was opportune for impaling India. Apart from other things, the urgency of the debate was so patently unarguable that even Pakistan could only ask for a debate at as early a "date as convenient." It is absurd to suggest that a subject that hadn't been debated since 1957 has assumed a pressing urgency now and that there was an immediate threat to peace in that area. (And if there was, it was quite easily remedied by Pakistan, the officially declared aggressor quitting it. This is a fact that tends to get forgotten in the general ennu with the subject.) Pakistan was told by everyone whom it sounded that they were far from keen. India was far too busy with her General Election—a preoccupation that Pakistan may consider somewhat trivial—and there are precedents for not bothering such a country at such a time. Indeed, some unkind people have been suggesting that the US was most anxious to avoid a debate precisely because of the imminence of the Indian elections. These people would have it that the US is taking an extraordinary interest in the

North Bombay election. To give Mr Krishna Menon a chance now to go to the United Nations to argue the Indian case on Kashmir is as good as handing the North Bombay seat to him on a platter! This is to carry the Menon legend too far.

A far more likely explanation is that there is some kind of reappraisal in the West, especially the US, about Goa. The first heady flush of moral horror at India's delinquency has apparently given place to a hang-over. We in India were prepared for a certain amount of adverse reaction but its violence has been something of an eye-opener. It has been difficult to resist the impression that the principal Western emotion during that period was satisfaction rather than horror. This is apparently recognised now somewhat shame-facedly. There is certainly some evidence that the scathing references to the death of the UN is now being seen as slightly hysterical. More importantly, the logical consequences of India finding her action being enthusiastically supported by the Afro-Asians (with the conspicuous exception of Pakistan) and the Soviet bloc (including China) are being realised. We in India are not happy about this development either. It is certainly becoming difficult to answer the somewhat smug Afro-Asian "I-told-you-so" attitude, which says in effect: "When it comes to the sticking point, they' will gang up together." The US, with its own problems of popular psychology to grapple with, can see how difficult it is for anyone to combat propaganda that virtuously asks to infer, on the basis of voting at the United Nations, who India's real friends are. Even before India could declare herself on Pakistan's request for a debate on Kashmir, Russia indicated her intentions, much to the surprise of India herself. The significance of this could not have been lost on the US administration. It is a different thing if the US has "written India off". And if it had, it would be doing the one thing that their opponents most desire. Obviously, therefore, the US does not want to create a situation in which India, or rather the common people of India, who may not see the niceties of cold war logic, are irresistibly forced to the conclusion that the Soviet Union is her only friend.

As for Kashmir, latest indications are that President Kennedy would like the question settled by direct negotiation or by mediation. As usual, Pakistan has rushed with a reply that it is ready for mediation, because it knows that India is not. The more one thinks about it, the clearer it becomes that much the best solution of the Kashmir problem is the freezing of the present reality. This was a solution that has been rejected, sometimes by India and sometimes by Pakistan for reasons that have nothing to do

with the merits of the solution. Despite Mr Sanjeeva Reddy's somewhat unnecessary references to liberating occupied Kashmir, Mr Nehru's earlier offer to regularise the present situation in Kashmir is the only sensible solution. I am sure that it will be the solution that will get finally accepted.

★

You wouldn't have thought, would you, that of all the peoples of the world, the Japanese would have had to remind themselves about good manners? But the Osaka Police doesn't agree. Its Cultural Chief thinks that Japanese policemen "especially those that have received a democratic post-war education lack good manners and invite public misunderstanding." What a sad reflection on post-war democracy! But matters must have come to a pretty pass when a policeman starts shouting "Oi" or "Kora", at pedestrians, which, an article in the Japanese Times explains, are "haughty ways of accosting a person." But even worse is in store. It seems irate policemen shout at city people, "Bakayaro", which is Japanese for "you, fool!" (This last, by the way, is an useful word to know in non-Japanese contexts). We in India who have some acquaintance with the rather extensive and peculiar vocabulary of our own policemen may consider that the Cultural Chief is making rather heavy weather of what is an accurate description of a Jay-walker. Anyway, worried about the situation, he has come out with a book that might be called the policeman's Emily Post. It contains some interesting advice which the police of other countries might usefully heed. Indeed some of its general tips, like saying "thank you" to one's wife, deserve a more general audience. How realistic the advice is can be gauged by the fact that such behaviour is prescribed as necessary only "once in a while." Moving to more delicate ground, it says that "in dealing with a woman you should compliment her on her dress, or some quality, like, for instance, her eyes, nose, mouth or shape of her legs. It is all right to say nice things about the colour-tone of her dress." How discreet and how wonderfully Japanese! The line is drawn at the colour-tone of the dress. Some may think that complimenting a strange woman on the shape of her legs may be somewhat risky. But the most interesting bit of advice is on dating. At the restaurant, the book advises the young policeman to take charge. It is a man's privilege to order food and drink and—this a doubtful pleasure—to pay the bill. But lest you should get discouraged, the book says, "It is the etiquette for women to pay the money back later in such cases." What a thoughtful convention! Mind you, it is paying the whole of it, and not just their share. No going Dutch business. The rest of the world may be shocked at such an arrangement, but I doubt if at least the male part of it will not envy the luck of the Japanese policeman.

EAVESDROPPER.

Steps have also been taken to supplement the machinery installed in the Equipment Factory at Beliaghata and to extend the factory premises. The expansion and modernisation of facilities at the Electrode and Equipment Factories will allow the production not only of larger quantities but also a wider range of products.

The Company continued during the year to pursue actively the development of indigenous manufacture of items of equipment hitherto imported. As explained by me last year, wherever possible and economic, this is being done by encouraging the growth of feeder industries which are helped with technical assistance and designs. Notable among last year's achievements were the production of the 'Cub' machine, a small oxygen profile cutting machine, as well as items of medical equipment, for the production and assembly of which at the Equipment Factory at Beliaghata an industrial licence was received during the year. Another important step was the indigenous development of 'Indarc' welding transformers, which are now marketed by us.

From all that I have said on this subject of development and expansion you will appreciate that our efforts are not confined to increasing our sales of industrial oxygen and dissolved acetylene in cylinders, with which products we are probably principally associated in the public mind, but that we are making substantial progress on the engineering side of our business also. Those of you who have seen our pavilion at the Indian Industries Fair currently in progress at New Delhi may have been surprised at the range and diversity of our production, which has increased in both respects to a remarkable degree in recent years. Incidentally, we have been gratified by the many favourable comments which have come to our notice on our exhibit at this Fair, with its accent on progress, indigenous manufacture and diversification and it gives me great pleasure to commend those responsible for its organisation.

COMPETITION

In my statement last year, I referred to the policy of the Government of India, which envisaged a widening of the base of ownership in the industrial gases field through new entrants into the industry. In pursuance of this policy sixteen new industrial gas units have been licensed in the last year and a half. A significant increase has taken place in the total licensed capacity of our competitors in this field, and in the year under review these licensed capacities have about doubled in both oxygen and dissolved acetylene.

Perhaps the most important outcome of Government's policy in this regard was the development which took place during the

year in connection with the tonnage oxygen plant which our Company had agreed to install at Jamshedpur so as to make available to The Tata Iron & Steel Co. Ltd. its requirements of oxygen in the process of steel making. This projected arrangement was referred to by me in my address to members at the 26th Annual General Meeting held on the 14th February, 1961. Government's reaction to our application for a licence for substantial expansion at Jamshedpur to allow the installation of this plant has best been summed up by Mr. J.R.D. Tata in his statement as Chairman attached to the 54th Annual Report of The Tata Iron & Steel Co. Ltd., in the following words:—

"In this connection, I regret to have to report that the Government of India have refused to sanction a very satisfactory arrangement we had concluded with Indian Oxygen Co. whereby that Company was to put up, at its own cost, a tonnage oxygen plant at Jamshedpur from which the Steel Company was to purchase on favourable terms its greatly enlarged requirements of oxygen. On the ground that the Indian Oxygen Co. already has too large a share of the business, Government have decided that the plant should either be put up by another company in collaboration with a different foreign firm or that the Steel Company should put up the plant itself. As the first alternative would have resulted in delay and unnecessary complications through the presence of two oxygen suppliers at Jamshedpur, and in the loss of certain financial benefits which would have accrued from the proposal initiated with the Indian Oxygen Co., we had no alternative but to decide to put up a tonnage plant of our own and to shoulder the additional capital expenditure which will amount to over a crore of rupees."

Mr. Tata's statement gave rise to some comment at the time when it was published in August last. The burden of which was that this was a case where economic considerations appeared to be overlooked in favour of ideology. This brings me to the point that while the social objective of planning is not disputed, in my opinion the attainment of planned industrial development on an economic basis must receive equal consideration; and I feel that a compromise between the two is possible within the framework of the Government's policy. My suggestion is that on the basis of the estimated demand during the next five or ten years, an allocation of at least a portion of the considerable additional production capacity required may be made among the existing enterprises after taking into account their relative sizes and technical and financial resources. This will

enable them to proceed with perspective planning on a fairly firm basis and will ensure that at least a part of the additional capacity is made available in the most economic manner, in step with the increase in demand, without allowing a particular unit to grow too large. I fear that unless something like this is done not only the economies but indeed some of the products themselves of large scale organisation in this field will be denied to Indian industry.

EXPORTS

No one connected with industry in this country today can fail to be acutely conscious of the absolute necessity of increasing exports to enable the mounting demand for imports of essential raw materials and components to be met, and we in Indian Oxygen Ltd. are wholly in sympathy with the Government's aspirations in this regard. I must, however, point out the difficulties that are encountered by an industry such as ours since products like oxygen and acetylene are basically un-exportable. However, inasmuch as these products constitute the raw materials for industry in general and facilitate indigenous metal fabrication, their contribution to the solution of this problem lies in the saving of foreign exchange which takes place by the progressive elimination of imports of manufactured items and by incorporation in the manufactured products exported by the Indian engineering industry. Nevertheless, mindful of our responsibilities, we arranged during the year for one of our senior executives to visit the South-East Asian countries to assess the market for such of our products as can be exported. Your Company now exports nitrous oxide and electrodes to this region and we are hopeful that this flow will increase and widen in time with the reorganisation and modernisation of our Electrode and Equipment Factories.

MANAGEMENT AND PERSONNEL

Your Directors are keenly aware that the years that lie immediately ahead contain a challenge that in the final analysis must be met mainly by the competence and stature of the management. Following from this awareness, the top management structure of the Company was strengthened and reorganised during the year by the creation of functional divisions each headed by a Chief Executive. Considerable thought has also been given to training schemes within the Company, some of which were satisfactorily started during the year. A search for talent within the organisation was made and I am glad to say that four members of the staff were selected for intensive management training. You may be interested to know that as at the close of our financial year we employed in all 3763 men and women. Of these, 131

were in the officer grades of whom only six were non-Indians. I take this opportunity to extend once again to our Managing Director, Mr. A. K. Sen, and to his colleagues in the management and to all staff and workpeople our thanks for their part in producing the results which are before you.

In these days it is essential that an organisation should develop its own personality and this can be done no better than through an efficient system of communications within the organisation itself. Towards this end, and also with a view to projecting the personality of your Company to individuals and bodies outside, the publication of a House Journal called "Oxygen News" was commenced during the year. You will be glad to know that this publication has been well commended for its quality and presentation.

TECHNICAL COLLABORATION

Active technical assistance continued to be received during the year from our parent company, The British Oxygen Company Limited. Specialist personnel from the parent company visited our factories, studied our problems and gave us most valuable advice to enable us to improve our efficiency. A number of our personnel also visited the establishments of The British Oxygen Company Limited in Great Britain and have undoubtedly benefitted from the specialised guidance and training so readily offered them.

We were particularly glad to welcome a few weeks ago, Mr. T. E. Potts, Managing Director of The British Oxygen Company Limited Group. Mr. Potts stayed with us for about three weeks, visiting Calcutta, Jamshedpur, Burnpur, Madras, Bangalore, Bombay and Delhi in a strenuous and crowded programme. Your Directors look forward with interest to receiving shortly from The British Oxygen Company Limited their comments and advice on our future expansion plans, of which Mr. Potts made a particular study during his visit. Visits such as this are invaluable for the opportunities which they afford us to discuss our problems with those who are able to draw on a world-wide experience of our industry. I take the opportunity to record here our thanks not only to Mr. Potts but also to the Chairman and the other members of the Board of the parent company.

In June last The British Oxygen Company Limited celebrated the 75th anniversary of its incorporation and on the occasion held a conference of Chairman and Managing Directors of all its associated companies overseas. Your Managing Director, Mr. A. K. Sen, and I had the pleasure and the privilege to attend this conference, which gave us a welcome opportunity of meeting our counterparts in the other companies and discussing common problems. We also gained an insight into the

wide range of interests covered by the parent company and the scale of effort which is being devoted to research and development, in the benefits of which we in Indian Oxygen Limited will continue to share.

PROSPECTS

It is too early in the new financial year to give you any firm indication of the likely trend of profits this year. Sales so far compare favourably within the corresponding period in the pre-

vious year and having regard to the continuing development of the metal using industries, we would expect this progress to be maintained. At the same time, we found that in the second half of our last financial year, our activities were affected by power shortages, and I fear that this is a feature which will, unfortunately, recur for some years yet. We have also to bear in mind the increase in the cost of production to which I have referred earlier in this statement. Nevertheless,

we have no reason to fear that our profits will not be maintained and indeed, it would be reasonable to expect some modest increase. At the same time, I must again point out that the extent of our existing foreign exchange liabilities and the prospects of our having, within the next few years, to shoulder further loan liabilities, demand from shareholders the exercise of a degree of patience. Our prosperity is, I would repeat, tied up with the growth of important sectors of the country's expanding

industry and I am confident that, organised as we are on the basis of technical competence, service to our customers and personnel who have the welfare of the Company and its growth at heart, our performance in the years ahead will be found not wanting.

Calcutta,
23rd December, 1961.

Note: This does not purport to be a record of the proceedings of the Annual General meeting.

The Associated Cement Companies, Limited

Profits Diminish Against Tide of Rising Costs

Need To Remove Bottlenecks Impeding Production

Chairman Mr Dharamsey M. Khatau's Review

PRODUCTION AND PROFITS

Speaking at the 25th Annual General Meeting of the Associated Cement Companies Limited held in Bombay on Friday 19th January 1962, the Chairman, Shri Dharamsey M. Khatau said: "Although the year under review has been one of further progress for the Cement Industry in the country—in terms of increased production and despatches—rising costs of materials and services have more than offset the benefits accruing from this increase in production. Our financial results for the year are rather disappointing despite the fact that the effective installed capacity and actual production were higher. Profits have declined due to an abnormal rise in the cost of coal, stowing excise duty, railway freight and electric power-supply rates. The incidence of these increases was higher than the economies effected by continuous technical and other improvements. There was also loss of production at some Works mainly due to coal and power shortages, and loss of despatches due to paucity of railway wagons, which to some extent was aggravated by the strike of the Central Government employees in July 1960. The cumulative result of all these factors was that the ratio of production to capacity could not be maintained at the level of the previous year."

COAL SHORTAGE

Referring to the acute coal shortage in the country, the Chairman stated that the timely action by the Ministry of Commerce and Industry, following representations by the Company, had enabled its factories to tide over this coal famine. "I would however refer here", Shri Khatau con-

tinued, "to two factors which currently threaten to make matters difficult for the Cement Industry—viz. the deterioration in the quality of coal supplied and the new B.O.X. type wagon introduced by the Railways. While the quality of coal has been lowered as a matter of Government's general policy of conserving high grade coal, the new type wagons, which owing to their outside dimensions cannot be weighed on the existing weigh-bridges, have been responsible for considerable short loading of coal resulting in heavy losses to the consumer. Your Company is continuously taking such steps as are possible to meet the situation."

PACKING CHARGES

The Chairman mentioned another set-back suffered by the Company as a result of Government's arbitrary decision in fixing the packing charges for cement for the last quarter of 1960, at rates far below the rates recoverable from consumers. This decision caused heavy losses to the Company, though repeated and urgent representations by the Industry persuaded Government later to allow the Industry to pack a portion of its cement in sound reusable bags as from 1st January, 1961. "While the decision was in itself most welcome it was vitiated by the fact that a completely unrealistic low charge of Rs 13 per metric ton, which bore no relation to the prevailing market prices, was fixed as the average packing charge for new and used bags—taken together. This further added to your Company's losses on account of packing charges. Further repeated representations by the Industry finally led Government to adopt a realistic basis for fixing the average

cost of new and reusable packing materials. However, the heavy initial losses which your Company suffered on this account could not be recouped during the period under review."

DIVIDEND

"Blocked as we were by a fixed retention price, already too low, it was inevitable that, against the tide of rising costs of materials and services, the profits of the Company should steadily diminish over the past three years. During the year under review, the unexpected happenings to which I have referred above made further inroads into our profits. In the last three years the Company has had repeatedly to dip into its meagre reserves to be able to pay a modest dividend to shareholders. This year the withdrawal from Reserves has been as high as Rs. 98 lakhs.

"Despite the reduction in the net distributable profits as compared to last year, your Directors have decided to maintain the dividend at the same level, namely Rs 12 per share, subject to deduction of tax. Your Company has been emboldened to do this in the hope that the relief which has come—although belatedly—by way of a higher retention price, will yield better results in the next few years."

TARIFF COMMISSION

Reviewing the circumstances that led to the belated Tariff Commission enquiry into cement prices, after Government's refusal to grant interim relief despite Industry's numerous representations, the Chairman said: "It was hoped that the enquiry would be completed in time for Government to announce the revised price from 1st July 1961,—that is, imme-

diately after the expiry of the previous price-period. The revised price, however, came into effect only on 1st November 1961, thus putting the Industry and your Company to a further substantial loss of earnings."

"I think I must dispel the belief held in certain quarters that the price increase granted to the Industry by Government is generous. The increase awarded falls considerably short of what was expected to enable your Company even to earn a reasonable net return on capital employed, much less to recoup past loss of earnings or to energise it for a vigorous future."

The Chairman continued: "I should like to say that the general approach of the Tariff Commission to the question of revision of cement prices was, by and large, fair. It has shown a sympathetic awareness of the difficulties which the Industry has had to face. Stating that Cement ranks in importance next to Iron and Steel in the economic development of the country, it recommended certain steps to stimulate the Industry's growth on a high priority basis. The fact that its final recommendations, pruned still further by Government fell short of our expectations, does not take away the basic merit of its method of approach."

"After carefully investigating all the factors involved, the Tariff Commission recommended an effective increase of Rs 12.11 per tonne in the retention price allowed to your Company—which did not cover its full requirements. Unfortunately, Government has scaled down even this increase in price by Rs 1.25 per tonne. It is frustrating to note that the recommendations of an independent statutory body, made after a most

detailed and searching scrutiny of costs, should have been scaled down by Government."

"It is to be regretted that, once again, the Tariff Commission declined to consider the payment of bonus to employees and Managing Agents' remuneration as legitimate items of cost. It is also to be regretted that the Tariff Commission has not recommended automatic escalator clauses to cover subsequent increases in the price of fuel and power, railway freight rates, and increased dearth allowance linked to the cost of living index. The Commission has apparently left it to Government to vary the price in relation to these factors as circumstances may warrant. This is unfortunate because our past experience shows that redress in such matters by Government is, unhappily, too long delayed.

The Tariff Commission recommended that the new prices should come into operation from 1st July, 1961 and remain in force till 30th June, 1964, i.e. for three years. Government has, however, made the new prices operative only from 1st November 1961 and has extended the duration to 31st March, 1966. In an era of steadily rising costs a fixed price for a period of nearly five years is, in my opinion, bound to affect the industry adversely."

The Chairman added that all these matters will be taken up with Government through the Cement Manufacturers Association which was formed in February 1961 to protect the interests of the Cement Industry.

DEMAND FOR CEMENT

On the question of the current and future demand for cement, the Chairman mentioned that during the year under review there was a rise in the tempo of demand in all sectors, which available supplies were unable to keep pace with, due partly to shortages in production and partly to inadequacy of rail transport. To meet this transport gap at least partially, the Company had been developing the transport of cement by road where conditions are favourable and during the year, the Company was able to transport nearly 25 per cent of its despatches of cement by road. Mentioning the reimposition of control over distribution of cement by State Governments, the Chairman felt that the shortage of cement was likely to continue for some time.

THIRD FIVE-YEAR PLAN

"The Planning Commission has estimated the demand for cement at 13.2 million tonnes in 1965-66 and has fixed a target of 15.24 million tonnes of capacity to be achieved by the end of the Third Five-Year Plan period. This seems to be a realistic target both financially and technically."

Judging from the present trends, however, the Chairman felt that a

prodigious effort was necessary to achieve these targets. While welcoming the appointment by Government of the two important Panels for the Cement Industry—one to look into the problems facing it and to stimulate research and development, and the other to increase its productivity, he hoped that these Panels would see that bottlenecks impeding production and productivity are expeditiously removed.

Shri Khatau continued: "Judging from the performance of the industry under prevailing conditions, production is likely to be about 10 per cent lower than demand over the next few years, unless prompt action is taken to secure for the industry reasonable foreign exchange facilities, adequate supplies of coal, power and wagons for the movement of raw materials as well as the finished product. It is also necessary that the resources and 'know-how' of established manufacturers of cement should be utilised to the fullest extent possible."

EXPANSION AND REHABILITATION

Reviewing the Company's planned programme of expansion, rehabilitation and modernisation, Shri Khatau reported the completion of the second unit at Mancherial raising its rated capacity to 3.3 lakh tonnes and that of the Blast Furnace Slag Cement project at Chaibasa and the slag granulation plant at Jamshedpur. Though the manufacture of blast furnace slag cement had commenced soon after, owing to preliminary teething troubles the licensed capacity of 1.7 lakh tonnes of slag cement could not be fully achieved. The Chairman said, however, that the Company as well as TISCO were making every effort to increase the slag cement output. The work on the construction of administrative and residential buildings for the Company's new dry process cement plant at Jamul (formerly Durg) was progressing according to schedule and the bulk of the machinery for this plant was being manufactured at ACC workshops. The construction of factory structures for the extension to Dwarka Works which would raise its annual capacity from 2.46 lakh tonnes to 3.5 lakh tonnes had already commenced.

REFRACTORIES AND SILVICRETE

The extension to the Company's refractory plant at Katni raising its capacity from 17,640 tonnes to 30,000 tonnes a year, was also completed and the annular kiln was put into operation recently. Efforts in diversification in the manufacture of products like Accoset-50, Accocid, ceramic grinding media etc. were being intensified. The demand for the Company's Silvicrete white cement was steadily growing and that product has been well received. The construction

work on the foundations and structures of the new white cement plant at Kymore with an annual capacity of 25,000 tonnes had been completed.

NEW PRODUCTS

Shri Khatau also announced that the Company had commenced at its Shahabad Works the manufacture, for the first time in India, of a special cement known as Oil Well cement for the Oil and Natural Gas Commission, for use in oil wells in Assam and Gujarat. The demand for this product was at present small, but it is likely to increase with the development of the country's oil resources. The Chairman also reported that the Company had successfully manufactured a portland cement with water-repellent properties which would overcome in a large measure the storage and handling difficulties experienced at present by the cement consumer under highly humid and moist conditions. The new product will be marketed in the near future.

NEW ENGINEERING WORKS AT SHAHABAD

Continuing, the Chairman reported that the Company's new Engineering Works at Shahabad which was only in the planning stage last year had made considerable progress. The factory buildings and housing colony were coming up and most of the plant and machinery required for the project had been ordered from abroad and some had already arrived at site.

ACC-VICKERS-BABCOCK LIMITED

Referring to the completion of the AVB Heavy Engineering Works, the Chairman stated that the factory had commenced partial production and had already secured orders for the manufacture of boilers as well as cement machinery. The Chairman cautioned, however, that a capital-intensive project like the AVB would take a few years before it could materially add to the profits of ACC.

PAKISTAN

The Chairman also announced that negotiations for the sale of the Company's factories in Pakistan had now reached the final stage and the matter would be placed for the consideration of the shareholders at the meeting.

MANAGING AGENCY

The Chairman then referred to the Company's proposals for the extension of the duration of the Managing Agency Agreement from five to ten years and raising the Managing Agents' remuneration to 7½ per cent. The matter was under negotiation with Government and the Chairman expressed the hope that, in view of the time-consuming nature of the Company's development projects and the special responsibilities shouldered

and services rendered by the Managing Agents, Government will appreciate the Company's views and accede to its request.

LABOUR-MANAGEMENT RELATIONS

Reviewing labour-management relations Shri Khatau stated: "The labour situation at our Cement Works was fairly peaceful principally because in co-operation with our Unions, we had voluntarily implemented the Wage Board recommendations. A part of the credit for this satisfactory position must also go to the Chairman of the Wage Board whom the Government of India constituted as the Central Machinery to resolve differences of interpretation arising in the process of implementing these important recommendations."

"I am afraid our Collieries have a different story to tell because there were no less than five strikes during the year 1960-61, and similar interruptions in production have continued during the current year also for no valid reasons. The principal cause of this sorry state of affairs is the irresponsible attitude and behaviour of union leaders whose continued indulgence in factional fights has seriously interfered not only with the production of coal but also with the peace of the Kotma Colliery and its colony. The Code of Discipline which all the Central Organisations of Labour had accepted is not always being implemented. This is most unfortunate for, if it is to bring about any appreciable improvement at all, it must be continuously acted upon as an article of faith by all the contracting parties. In this joint endeavour, the role of the Government cannot be over-emphasised. There have been frequent complaints against the procedure adopted by the Machinery set up by the Central and the State Governments to implement the Code."

BONUS

In spite of lower net profit this year the Chairman said, the Directors had decided to maintain the rate of bonus to the employees at the same level as the previous year, solely with a view to preserve cordiality of labour-management relations. As a result, the large majority of employees, particularly those in the lower scales of pay would receive substantially higher amounts of bonus, in view of the increase in their basic wages, as recommended by the Cement Wage Board.

Shri Khatau concluded with an expression of warm appreciation of the hard work and unstinted co-operation of all the Company's employees.

Note:—This does not purport to be a report of the proceedings of the annual general meeting which will be sent separately to shareholders on request.

The Scindia Steam Navigation Co. Limited

Need For Adjustment of Freight Rates

Mr Dharamsey Mulraj Khatau, Chairman, on Problems of Shipping Industry

SUMMARY of the Address of Shri Dharamsey Mulraj Khatau, Chairman, The Scindia Steam Navigation Co. Ltd., delivered at the 42nd Annual General Meeting of the Shareholders, on Wednesday, the 24th January, 1962 at Scindia House, Ballard Estate, Bombay 1.

After welcoming the Shareholders the Chairman referred to the Audited Accounts and Directors' Report for the year ending 30th June, 1961 and stated that the results of the year could not be considered to be encouraging and that they reflected the situation faced by shipping companies all over the world and India in particular. Despite this adverse economic situation, the Company was fortunate in covering its costs, making a nominal profit of Rs 4.5 lakhs, and declaring a dividend of 60 p per share after drawing Rs 25 lakhs from the Dividend Equalisation Reserve.

The Chairman stated that the level of freight rates in Overseas Liner trades showed no improvement during the year whereas costs of operating ships showed signs of continued increase. However, as a result of rationalisation of services by all member lines of the India/UK-Continent Conference, the next year should show improved results.

Shri Dharamsey added:

"One significant event of this year has been the decision of the Shipping Corporation of India to join the Conference covering the India/Pakistan/UK-Continental trades as also in the USSR trade. I sincerely hope that their association with India Steamships and ourselves will be a source of strength and will enable the Indian Lines to cater more effectively and efficiently to the requirements of the trade because this co-operation between the Government Corporation and the Indian Lines will lead to the growth of mutual confidence. I say this because I believe that there is considerable scope for expansion of Indian Shipping in trades not yet served by Indian ships. It, therefore, is very necessary that this expansion should cover trades and routes not yet catered for and take place along strictly planned and rational lines."

He further stated that the Conference members were greatly concerned over increased expenditure to cover which an increase in

rates was the only answer. The Conference representatives have placed this position before the Ministers of Transport and Finance, who whilst appreciating the situation, felt that owing to the difficult foreign exchange position of the country, the problem of freight increase had become a little difficult of solution. It could, however, be expected that this situation would not continue for long and would soon right itself.

In regard to coastal and adjacent trades, the Chairman pointed out that there was further deterioration and hence the coastal results were very disappointing. The basic problems facing coastal shipping are uneconomic rates of freight, serious delays and detentions to ships and reduced cargoes due to the deteriorating Hooghly drafts. Unless these basic problems are tackled expeditiously and the much needed relief and assistance secured, the future of coastal shipping will continue to remain gloomy. The obvious answer, therefore, lies in permitting upward revision of freight rates as costs increase. In this context the Chairman said that Shri R. G. Abbhi, the Government director on boards of Indian Shipping Companies, had been specially asked by the Government to go into the costs of operations on the coast. It was a sincere hope that when Shri Abbhi had finished his examinations he would be able to recommend to Government to fix a level of freight rates for the coast which would not only take care of increased costs but would also give a satisfactory return to the companies on the capital employed in the coastal trade.

The Chairman mentioned that in addition to the delivery of m.v. 'Jalakirti', further orders were placed with the Hindustan Shipyard Ltd., and felt that in view of the size of the Company's business and fleet, it was very necessary to work out a steady programme of building new vessels every year. As ships were ready earners of foreign exchange he hoped that the requisite foreign exchange would be made available for this purpose.

As regards future prospects Shri Dharamsey stated:

"You naturally expect me to tell you something about our future. I know it will not satisfy you if I say that it is difficult to forecast the future with any degree of certainty. On the other hand, there are so many 'imponderables' in the shipping business and possibly the un-

controllable items of expenditure far exceed the controllable ones. The adjustment of freight rates can be the only answer to compensate for increased and increasing costs of operation and the maintaining of a modern fleet. I feel that in our developing economy, transportation has still to receive the priority it deserves in terms of planning and quick execution. If this important industry is to survive and if the confidence of the investing public is to be restored, it is very necessary that early steps should be taken to decide upon a suitable machinery that would enable the industry earn reasonable rates of freight having regard to the factors mentioned above. It would also create a feeling amongst the shareholders that theirs too is an industry whose problems receive the same consideration from Government as those pertaining to the other industries ashore. The National Shipping Board could play an important part in this context by advising Government as to how the shipping industry could maintain its proper place in our economy. However, I do not wish to place before you a gloomy and pessimistic outlook as to the future of this Company. As you are no doubt aware, the shipping industry the world over is one where lean periods by far exceed the boom periods; I would, therefore, venture to express the hope that the lean period is more or less over and that we should see signs of an improvement, even though gradual before long. mh

The Chairman referred to the Konkani Services and the report submitted to Government in 1960 by the Konkani Coastal Shipping Services Committee and added:

"We conveyed the acceptance of recommendations of the Committee early in January 1961. The decisions of the Government of India, on the report of the Committee were conveyed to us only in October 1961. These decisions, however, fell far short of the recommendations of the Committee. Due to this disturbing development, the B. S. N. Co. (1953) Ltd. had no alternative but to announce the closure of its services from 1st December, 1961. I am happy to say that both the Government of India and the Government of Maharashtra have shown due appreciation of the Company's posi-

tion and negotiations with the two Governments are still continuing. In the meanwhile, in the hope of a satisfactory settlement, the Company has agreed to maintain its services till the end of May, 1962. The situation will be reviewed before then."

After placing on record the long and valuable services rendered by Shri Dinshaw D. Romer, a director of the Company who retired due to ill health, Shri Dharamsey thanked the Minister of Transport and his colleagues in the Transport Ministry for the interest shown by them in furthering the cause of Indian shipping. He also appreciated the services rendered by the Company's agents abroad and in India and thanked the shippers and consignees for their continued support.

The Audited Statement of Accounts were placed before the Shareholders for their approval and adoption.

CORRIGENDUM

Regarding ANNOUNCEMENT of Public Issue By Seshasayee Industries LIMITED

It is regretted that an error has crept in under the heading. 'Preferential Allotment' in the above-mentioned announcement. The New India Assurance Company Limited and the Investment Corporation of India Limited have not been given any preferential allotment of shares as stated therein. The Investment Corporation of India Limited are the Underwriters only to the extent of Rs. five lakhs face value of equity shares offered for public subscription.

Markets

JUTE Continued Weakness of Raw Jute

CONDITIONS in the raw jute market have continued to be easy this week also due, largely, to the unceasing pressure of arrivals. The current daily rate of arrivals is reported to be in the region of one lakh maunds. Arrivals during December had been larger than in the previous month as the quantity reaching Calcutta and Mills stations during the month is placed at 896,300 bales compared with 837,870 bales in November 1961. December arrivals comprised 847,340 bales of jute of Indian origin and 48,960 bales of Pakistani jute. Arrivals so far this season, July 1961 to December 1961, totalled 3,443,040 bales and compare with 2,709,050 bales received during the corresponding period of last season. By far the largest portion of the total is made up of Indian origin jute amounting to 3,204,820 bales, the balance of 238,220 bales coming from Pakistan. As compared with the corresponding period of 1960, arrivals of Indian jute this season show a sharp increase while those of Pakistani Jute were lower as in the first six months of 1960-61

season arrivals of Indian jute and Pakistani jute were 2,438,740 bales and 270,310 bales respectively.

The weakness of the raw jute market should be causing concern to the authorities and it would appear that they are getting ready to initiate fresh measures that will ensure stability to the market. It is reported that the Buffer Stock Agency has now been registered. This will mean that the Agency will be able to commence operations whenever needed. It is not improbable that the demand that token exports be allowed may also be considered. In the meantime, the Indian Jute Mills Association is continuing its efforts at stabilising the market by its policy of issuing minimum purchase quotas to its members. The IJMA jute purchase quota scheme has been in operation for over seven weeks now. The main object of the scheme is to match the quota issues to the rate of jute imports. Up to the week ending 12 January, the total quotas allocated to the mills amounted to over 47 lakh maunds against which the purchases were actually over 60 lakh maunds or approximately 18 lakh maunds more than the total quota. The quota for the week ending 20 January was fixed at 9 lakh maunds. A quota of about 10 lakh maunds has been allocated for purchase during the current week.

INDIAN CHAMBER BUILDINGS, MADRAS.1

The jute goods market is comparatively steadier as demand for ready goods continue to be fairly good. During the past week the Government of India invited further tender for the supply of heavy goods with the result the undertone in the sacking section was somewhat better although price movements were confined to a narrow range. The fact that burlap consumption in US during December was higher than in the previous month was partly responsible for the improvement in sentiment. Consumption of burlap in the US during December 1961 was placed at 72 million yards as compared with 70 million yards in the previous month. At 237 million yards stock was also higher. It is however to be noted that for the whole year 1961 burlap consumption in US shows a sharp decline at 780 million yards while the figure for the previous year was placed at 856 million yards. It is obvious that the sharp fall in consumption is largely due to the high prices for hessian during last year. Although there has been some improvement in

burlap consumption in US recently the tendency of buyers from the country in the primary market is still hesitant. This is presumably due to the lingering belief that price would fall in the near future in view of the decision of the industry to continue a high level of production till the end of March and the continued weakness of the raw jute market. It is also noted that some mills have gone on full working which is to continue upto the end of next month. It is also possible that overseas buyers are encouraged in their policy by the argument that the present difficult situation in the raw jute market would ultimately result in a reduction of the minimum price for raw jute from the present level.

Although prices moved both ways in the jute goods market during the past week, the closing tone was steadier. Apart from the continued interest in ready delivery positions, hessian benefited in later dealings from reports of enquiries from US and Argentina. B Twills January opened fairly steady and after re-

27 January 1962

acting to Rs 122.75 on Saturday recovered to close on Monday at Rs 123.75. Hessian 40" x 10 oz January however ruled steady to close at Rs 54.50 on Monday.

In the raw jute section, conditions were mostly unchanged last Friday with only limited business passing. Sentiment was depressed due to heavy arrivals. The pressure of arrivals was so great that even the news of the registration of the Buffer Stock Agency had little effect on the market. There was no improvement in subsequent days as mill buying showed no appreciable expansion.

TEA Production and Prospects

FOR the first time in the history of the Indian tea industry, a record crop of over 760 million pounds was registered in the year just ended. It is noteworthy that almost the entire increase in production of about 70 million pounds, during the year, was contributed by the industry in North-East India, the share of Doars being about 11 million pounds.

The full effect of the increase in production will naturally be felt in the market during the current year, especially when India is not the only country which harvested a larger crop. Ceylon, Pakistan, Indonesia and East Africa are known to have improved upon their 1960 figures. Moreover, a number of smaller producers have augmented the world supply for tea. The only consoling factor against this is the possible increase in consumption, especially in countries like India where the market for this cheap beverage is fast growing.

In the Export Sale held in Calcutta this week, offerings were 40,177 packages. There was a good general demand. Plain Broken were sold readily around last rates, while similar Fannings were fully firm and sometimes dearer. "Tea for price" was dearer. Better liquoring Assam orthodox BOPs were sold well; but rates were sometimes a little below last rates. Medium BOPs were firm and offer dearer. Orthodox Fannings were a strong feature and were dearer.

CTC types were irregular, the best with autumnal quality being firm to dearer. The remainder in this category were up to 10 nP easier. Medium and secondary grade CTC were also irregular and generally a little easier on last. Legg-cut descriptions were irregular and often easier. Darjeeling teas were irregular in the face of less demand. The more stylish Whole Leaf grades were a little easier; but the cheaper varieties were fully firm to dearer. Tippy sorts were irregular. Following rates were quoted: Clean Plain Pekoe Rs 4.00 to Rs 4.20; Plain BP Rs 3.55 to Rs 3.65; Plain Fannings Rs 3.90 to Rs 4.20; Medium Assam CTC BP Rs 5.10 to Rs 5.40; Best Assam CTC BP Rs 5.60 to Rs 5.90 and Best Assam CTC Fannings Rs 5.80 to Rs 6.20.

In the Internal Sale, offerings were 25,361 packages of dusts. There was a strong enquiry for bright liquoring CTC dusts; but the plain types were somewhat irregular and generally easier. Fibrous descriptions continued to sell well. Orthodox teas met with good support at up to 10 nP below last rates with the small powdery types generally firm. Legg-cuts were once again keenly competed for and realised very useful prices. Following rates were quoted:—Plain Orthodox Dust Rs 3.80 to Rs 4.40; Medium Assam

ASSISTANCE FOR NEW PLANTING

The Government of India has decided to place a sum of Rs 5 crores at the disposal of the Tea Board to enable it to grant long-term loans to tea estates for replanting, replacement and extension of tea areas.

The broad terms and condition of the loan under the Plantation Finance Scheme would be as follows:

- The rate of loan to individual estate will be limited to Rs 7,400/- per hectare or Rs 3,000/- per acre to plains garden in four instalments; and Rs 9,900/- per hectare or Rs 4,000/- per acre to hill garden in five instalments.
- The loan will be repayable to the Board over a period of eight years commencing after the expiry of seven years from the disbursement of the first instalment.
- The rate of interest on the loan will be 7% per annum with a rebate of ½% for prompt payments of principal and interest on the due dates.
- The security should be primarily in the form of *pari passu* charge obtained through appropriate arrangement with Banks now financing short-term loan on the fixed assets of the estate.

The Estates willing to avail of the loan assistance may send their applications to the Tea Board in the prescribed form to be obtained from the Board's office in Calcutta, Cochin, Coonoor, Madras and Palampur (Kangra).

Dust Rs 4.20 to Rs 5.00; Legg-cut Dust Rs 4.60 to Rs 5.20; Medium Assam CTC Dust Rs 5.60 to Rs 6.10 and Good Assam CTC Dust Rs 6.50 to Rs 7.00. Also 410 packages of Leaf grades were offered for internal consumption. These were absorbed at irregular rates.

Meanwhile, stocks of tea in Calcutta warehouses, at the end of December 1961, were higher at 1,693,068 chests as against 1,044,777 chests at the close of 1960. While the stocks in public warehouses rose from 658,662 chests at the end of November 1961 to 708,627 chests at

the December-end, those in private warehouses fell from 368,115 chests to 384,441 chests. Besides, afloat stocks at the end of December were higher at 76,536 chests as against 16,677 chests at the close of the preceding month.

In the Cochin market, offerings were 337,000 kilogrammes of Dusts. Against good demand, the market opened quiet, but closed fully firm except for CTCs which were occasionally easier.

In London auction, offerings were 77,000 packages. A generally good tone prevailed. Useful coloury Assams were a particularly good market and under good buying interest. Prices for these advanced appreciably, while plain Indian descriptions were occasionally dearer with thin liquoring sorts being steady.

Some irregularity was discernible among teas from South India. However, any useful liquoring sorts from this area attracted good support and prices sometimes showed appreciable gains, while stalky, thin and undesirable types showed losses ranging to 2d per pound. African teas, too, met with varied fortunes. Although the best liquoring sorts were well maintained on previous rates, the plain descriptions showed some irregularity in the final stages of the sale.

Elsewhere, demand continued strong for Ceylon teas and prices were mostly higher throughout, especially for the better liquoring sorts, which frequently showed rises

of 1d to 3d per pound with Broken Orange Pekoe Fannings a prominent feature.

The stock in London, as on 12 January, were 132.84 million pounds as against 127.59 million pounds in the previous week. The total amount to be landed on the same date was 25.10 million pounds. Total afloat was 33.35 million pounds including from Calcutta 22.06 million pounds from Chittagong nil; from Cochin 4.96 million pounds; from Ceylon 3.34 million pounds and from other Ports 1.98 million pounds.

COTTON Futures to Touch Basic Ceiling?

TRADING in cotton futures during the past week almost reached a stalemate as the Jarilla March contract was well poised to touch the basic ceiling level of Rs 693.00. The announcement of the export quota for Bengal Deshi and the decision to allow import of extra long staple cotton by the Government of India coupled with encouraging advices from spot markets and piecegoods aided sentiment in the Bombay cotton futures market. Business transactions in forward cotton in the local markets were of a jobbing nature and the operators were found active to square up their outstanding transactions obviously due to the fact that the prices of March con-

THE BANK OF BARODA LTD.

(Estd: 1908) Head Office: Baroda

Branches: Over 135 branches in India and also in East Pakistan, London, British East Africa and Fiji Islands.

tract are nearing the ceiling level. The market ruled firm.

The Jarilla March contract, which commenced the week at Rs 685.00 against the previous week's closing of Rs 684.00 improved on nervous short covering and touched a new peak of Rs 690.00 toward the close of the week.

The spot market also ruled steady and spinner interest turned toward the available lots of L 147, CO 2, Khandesh, Vijay and other popular varieties.

In the import section price of BP 52 looked up by Rs 30 per candy due to the reports of a lower crop in Uganda. The sentiment was also fanned by the apprehension that US cotton would not be available before July next.

The Government of India's decision to release 75,000 bales of Bengal Dehi was widely acclaimed by the trade. That there is no grade restriction and the terms and conditions are simple is a matter of relief for the traders. Japan is expected to show keen interest in this growth and

the prospects for a small business with the US is not entirely ruled out. It is anticipated that the entire quantum allotted would be utilised in a short period. The announcement resulted in the increase in prices of Bengal Deshi by Rs 5-7 per candy. Choice qualities also recorded a net gain of Rs 15 to Rs 20 per candy.

Last week the Government announced its decision to allow the import of 33,300 bales of cotton of 1-3/16" and above in staple from any destination. The quantity would be made available for distribution to consumer mills of foreign cotton stapling of 1-3/16" and above on the basis of their consumption of such growth during the calendar year 1960. The shipment period has been fixed at 31 October, 1962 and, according to the trade notice issued by the Joint Chief Controller of Imports and Exports, in no case the period would be extended. The announcement failed to create any marked reaction on the market as the stipulated quantum is considered inadequate to ease the supply position.

Exports of cotton to foreign countries from India from 1 September to 30 December aggregated 63,950 bales against 37,981 bales in the corresponding period in 1960.

Countries	1960	1961
UK	100	1,021
Continent	187	6,074
Hongkong	4,250	6,990
Japan	33,242	41,725
USA	134	7,773
Other countries	68	367

Total ... 37,981 63,950

Imports of cotton from foreign countries during the same period totalled 397,974 bales against 353,120 bales in the relevant period in the previous year.

Description	1960	1961
American	208,032	256,644
Sudan	29,898	40,396
Egyptian	20,654	25,501
East African	73,584	64,522
Pakistan	2,245	2,610
Other sorts	18,707	8,301

Total ... 353,120 397,974

Indian Finance

PIECEGOODS

The Bombay cotton piecegoods market during the past week displayed quietly steady conditions. The anticipated demand from foreign countries failed to materialise and the tempo of business prevailed in the previous week was not maintained in the domestic sector in the week under review.

Demand from the upcountry centres in the domestic sector was far from satisfactory. Traders from Amritsar showed some interest in selected lots on a moderate scale. Business with Calcutta was insignificant. Punjab and the Uttar Pradesh accounted for a small quantum for their immediate requirements.

It has been reported that the stocks with the mills registered an increase and was a shade higher than the previous week's level. Quality goods were eagerly sought after, but they were reported to have been in short supply. The offtake in longcloth, saris and dhoties was at a low ebb.

However, prices displayed divergent trends during the past week. Mills were reluctant to offer their goods at reduced prices obviously on the anticipation that prices may look up in the immediate future. On the contrary prices of handloom goods were slightly easy mainly on account of the poor demand.

Trading on the export front failed to come up to the expectations. Compared to the previous week, business during the past week was very restricted. Demand from the UK failed to flow on the desired level though that destination showed interest for the usual varieties. Barring stray enquiries for fancy qualities like dyed voiles and printed poplin Sudan was on the whole quiet.

Eritrea and Ethiopia were satisfied with a small quantity of bleached mulls, grey chaddars and bleached dhoties. East Africa's interest focussed on coatings, grey calendared sheetings and grey drills. Moderate business was transacted with Australia in sheetings, grey canvas and bleached long cloth.

Global System of Sugar Quota

SHAKY feeling is evident in sugar trade circles around the new US sugar purchase policy disclosed in President Kennedy's budget message to Congress. The US will change its sugar quota from the present country system granted to offshore producers to a global system. This will save the 2½ per cent per pound premium at present paid for US sugar.

Under the new system, the difference between domestic and world prices currently received by foreign producers, will be retained by the US with an estimated increase in 1963 budget receipts of \$180 million. Legislation embodying the new proposals will be introduced, when the Sugar Act expires on 30 June, 1962.

Although the change will relieve the US State Department of the necessity of allocating quotas to

27 January 1962

foreign supply nations, it will not help countries such as India and Brazil, who are very much in need of the dollars they earn from sugar sales. There is also the possibility that the US may be buying sugar from the Eastern Block countries a global system.

The Indian exporters apprehend that further sales of sugar to the US will be adversely affected under the new policy as no shelter will be provided for Indian sugar, particularly when the 1962 quota is yet to be finally fixed. It is feared that India's earning from sugar export to the US will come down to 50 per cent of what she earned in 1961.

Meanwhile, the Chairman of the British Sugar Board has stated that the world sugar surplus for this year is estimated at only 1,500,000 to 2,000,000 metric tons. Consumption for the year will be about 50,000,000 metric tons.

According to the Indian Sugar Mills Association, total production in India, in December (the second month of the 1961-62 season) was 417,000 metric tons as against 486,000 metric tons during the corresponding month of last year. This brings the total production for the 1961-62 season up to 31 December to 590,000 metric tons as against 779,000 metric tons in the corresponding period of last season.

The offtake of sugar from the factories during the same month was 203,000 metric tons as against 169,000 metric tons. Total despatch, during the first two months of the 1961-62 season, was 405,000 metric tons as against 323,000 tons. The closing stock with the mills, as on 31 December, 1961, was 1,330,000 metric tons as against 1,007,000 metric tons on the corresponding date of last year.

In the Hapur market, the rate for the sweet commodity is quoted at Rs 106.50 per bag.

GUR

The Hapur Gur market ruled quiet in spite of poor arrivals averaging 4,000 maunds a day due to the severe cold wave. Absence of loading facilities to consuming areas of the South was the main depressing factor. Total arrivals, during the current season, were 335,000 maunds as against 365,000 maunds in the previous season. Gur Pansera quality was quoted at Rs 13.81 and Balti at Rs 13.75 to Rs 15 per maund, according to quality.

FOODGRAINS

Prices continued to display a steadier tendency in the Hapur Foodgrains market. Wheat remained almost unchanged with the average quality quoting Rs 17.50 and Rs 19.50 for the farm produce. Despite a comfortable supply position, Rice prices are ruling steady, as the new produce was yet to reach the market. Prices of Gram improved by 37 nP a maund to Rs 16.12 for the Punjab quality due to good demand. The standing gram crop is reported to be in need of winter rains. Barley prices were steadier at Rs 12.50,

while. Maize attracted good support for seasonal consumption.

Peas were steady at Rs 13 for the Dara quality, thanks to the support from South India; but despatches were hampered by loading difficulties. Arhar attracted good demand from mills and was quoted at Rs 15.

SILK

In the Bangalore Silk market, prices of raw silk maintained a steady trend during the week ended 20 January, 1962. Filature raw silk of 20/22 Dr. was quoted between Rs 84.89 and Rs 85.99 per kgm. Cottage basin silk ruled between Rs 72.75 and Rs 77.16 per kgm and charka raw silk between Rs 45.19 and Rs 68.60 per kgm.

Spun silk yarn of 2/200's was quoted at Rs 81.40 per kgm.

Rates of reeling cocoons ranged between Rs 3.40 and Rs 4.50 per kgm. Mysore seed cocoons fluctuated between Rs 3.50 and Rs 4.50 per thousand and foreign race seed

cocoons between Rs 4.00 and Rs 10.00 per thousand.

Except for tasar reeling cocoons which registered a moderate decline to a level between Rs 50.00 and Rs 160.00 per kahan, the Bhagalpur silk market remained steady in respect of prices of tasar silk, silk waste and spun silk yarn. Prices of tasar raw silk were quoted between Rs 66.14 and Rs 105.84 per kgm as in the last week.

Landed cost of Japanese raw silk of 20/22 Dr. was reported at Rs 80.66 per kgm during December 1961.

COFFEE

The Coffee Board is to hold its first open auction at Mangalore on 31 January to sell coffee for export, involving a quantity of 1,620 tonnes. Receipts up to 31 December, 1961 into the 1960-61 Pool amounted to 67,737 tonnes comprising of 28,984 tonnes of Plantation variety; 10,304 tonnes of Arabica Cherry and 28,449 tonnes of Robusta. Receipts of the 1961-62 crop into the Pool have

commenced, total receipts up to 12 December, 1961, amounting to 2,768 tonnes.

During the calendar year 1961, the Coffee Board released for internal requirements a quantity of 33,873 tonnes of coffee, representing an increase of 3,869 tonnes over the figure for the previous year. The Board has released up to 31 December, 1961, a quantity of 30,541 tonnes of coffee for export sale out of the 1960-61 crop.

According to the estimates made by the Commonwealth Economic Committee, London, production of coffee in the world, during the season ended 30 June, 1962, is placed higher at 84.5 million cwts as compared to 77.45 million cwts in the previous season. The increase is mainly accounted for by Brazil with a share of 42.62 million cwts in 1961-62 as against 35.36 million cwts in the previous season.

World trade in coffee, during the calendar year 1961, was estimated at 50.12 million cwts as against 49.05 million cwts in the previous year.

important beginnings

In December 1911, Bihar acquired the status of a separate province. This marked the dawn of a new phase in the history of this ancient state.

The birth of the new province synchronised with another epoch-making event. In December 1911, shattering the silence of the jungle hamlet of Sakchi, as Jamshedpur was then called, the newly-built Tata Iron and Steel Works roared into life and produced the first cast of pig iron. The commissioning of India's first iron and steel works helped to put Bihar on the industrial map of India and to set the country on the path to economic maturity.

In the course of fifty years, with the steel works as its nucleus, Jamshedpur has grown into a major industrial centre in India and the second largest city in the fast-developing State of Bihar...a city where industry is not merely a source of livelihood but a way of life.

A view of the

The Tata Iron and Steel Company Limited

THE DAY BREAKS BRIGHTER TOMORROW

TODAY'S ENERGY—today's ambition. Planning, executing, creating. Crease-worn, untiring into the night. Tomorrow...a little less of care, a little more of joy.

And for HINDUSTAN LEVER, too, tomorrow begins today. In the research laboratory, in the factory and office. Work, patience, care. To serve tomorrow's homes and the nation's needs with products that grow better and better.

TODAY AND TOMORROW...

HINDUSTAN LEVER SERVES THE HOME

WITH SOAPS, FOODS, TOILET PREPARATIONS

showing a nominal increase of 1.07 million cwts. The rise in exports from India was remarkable, the estimated figure for the first nine months of 1961 being 527,000 cwts against 200,000 cwts in the corresponding period of the previous year.

CHEMICALS & DYES

Listless conditions prevailed in the Bombay market for Chemicals and Dyes. Shortage of funds and the consequent absence of demand were the major restraining factors. Improvement in the supply position and the prospects of further arrivals through the State Trading Corporation also restricted the turnover.

In the Chemicals section, it is feared that the shortage of Caustic Soda will continue for the next three months or more unless the STC comes to the rescue by arranging diversion of incoming consignments from overseas to the Madras Port. Camphor remains unchanged at Rs 21 in the absence of buyers. Menthol has again suffered a setback due to the payment difficulties in Calcutta and liquidation in Bombay by the weak holders.

The Dyes section is comparatively lively with the emergence of upcountry demand for immediate requirements. Supplies of imported dyes are, however, expected to improve in the course of the next three or four months. The STC is reported to have formed a scheme under which fairly big quantities of dyes may be imported from the East European countries.

GOLD & SILVER

The Bombay Bullion Exchange recorded substantial gains in prices from the previous week's levels. The firmness was aided by the unconfirmed report that the authorities had confiscated a large volume of smug-

gled gold. The offtake in the ready section rose considerably as compared with small receipts.

The end of Makara Sankranti and the beginning of the Pongal festivities have augured well for spot gold. The pressure of arrivals has also abated. The floating stocks, which had gone above three lakh tolas a week ago, have declined to 2.50 lakh tolas in the market. For obvious reasons, there is a revival in consumer buying. Spot gold changed hands at Rs 118.10 to Rs 118.30, while Sovereign ruled steady at Rs 97.

In sympathy with gold, Silver moved up with the rate for (below .996) changing hands at Rs 212.10 to Rs 212.65.

OILS & OILSEEDS

A buoyant undertone was evident in the Bombay Oilseeds market with prices improving all-round due to consistent support inspired by the sustained tightness in the spot section.

Trading in the Castorseed section was highlighted by a brisk speculative activity. The rise in prices was mainly attributed to the favourable reports from abroad for exports in Indian castor oil. Reports from the US indicated that Brazilian offers in castor oil had declined considerably. Although the US stocks in oil were fairly satisfactory, the import price was raised to 15 cents per pound for ready as well as for March shipment. These reports led to sustained covering by prominent export houses.

Moreover, the keen interest displayed by the UK in immediate offers of commercial castor oil at £126½ per ton c.i.f. and persisting reports of enquiries from the Communist countries also imparted strength to the market. Ready Castor was quoted at Rs 37 and

Castor Oil, commercial quality, at Rs 15.15.

In the case of Groundnut, the recent release of 20,000 tons of export quotas in HPS variety and the extension of the shipment period in expeller variety by a month were interpreted bullishly. The excellent demand from the Communist countries as well as the British compounders in the cattlefields and the purchase by the STC in oil and seeds from Saurashtra were also contributory factors. Moreover, the offtake from vanaspathi oil manufacturers continued to increase despite the rise in prices. This was mainly due to the rising consumption of vanaspathi in the country and the consequent buying in groundnut and oil by the manufacturers. Groundnut Bold ready was quoted at Rs 47.62 and Groundnut Oil at Rs 19.85.

While the inflow of spot supplies continued to be very small in line with the usual experience towards the fag end of the season, the demand for both Linseed and Linseed Oil was well maintained. Reports of an advance in Rapeseed in North India also affected the market bullishly with upcountry interests providing a steady support. Linseed ready was quoted at Rs 43.25 and Linseed Oil at Rs 18.50.

In the Calcutta market, the price of Linseed hardened further to Rs 32.50 a maund for ready delivery. Although crushers were keen buyers, their requirements could not be satisfied due to the shortage. Arrivals from the upcountry centres also declined considerably and acute shortages were being felt.

The price of Linseed Oil also displayed a firmer tendency, partly due to the rise in the prices of other oils and partly due to the shortage of seed. Millers were not keen in doing business. The price of Oilcake improved due to the increased offtake in the face of small stocks. Foreign enquiries were, however, negligible as Indian prices were considered to be much higher than foreign ones.

Groundnut oil prices in Madras which touched high levels during the last week have since come down slightly. The easier trend may be a sign for another bounce to higher prices, according to trading sources who believe that the cautiousness of sellers should be taken note of. Arrivals of groundnut kernels into the market had not become better though there were reports of slightly higher receipts in certain centres. This has not certainly eased the situation because the local crushing interests seem to be eagerly buying the quantity offered.

In groundnut oil, Calcutta interests were very much concerned to buy up good quantities of the oil last week itself at the rate of 189.15 per quintal. This week, they seem to hold back. Nevertheless price of groundnut oil had gone up on Monday and on Tuesday it was, a shade easier.

The City market received an average of 75 tons of groundnut kernels. Calcutta buyers are more after the bold variety than the superiod one. In the Southern side kernel stock receipts are put at 300 to 400 tons daily. Though this can be said to be slightly better than last week,

it had not helped to ease the price factor. Still the producers seem to be not in a hurry to dispose of their holdings.

January-end deliveries were in demand and they were taken up at a higher level of Rs 190.50 per quintal. Otherwise the routine forward position was not traded much.

What is good of the City is equally good of the other district centres in regard to groundnut kernels arrival. But traders here feel rather disappointed at the expected stocks not turning up; because normal receipt of 1,000 tons is completely absent and in its stead the centres get only 400 tons average daily.

There was also not much offtake in respect of gingelly and coconut oil after the Pongal festival is over. Both these oils had registered a downward trend in prices, but they seem to be a temporary phase.

The price of groundnut oil began to increase step by step from last week. On Wednesday last week groundnut oil per kilo was quoted at Rs 186.50. The next day it registered improvement on Calcutta buying and was at Rs 189.15 per quintal. On Friday further addition to the price was seen at Rs 190 per quintal. The sellers were not keen to dispose of their stocks while buyers were inclined to pay up dearer rates. By the week-end there was another spurt of 45 nP per quintal, when the rate rose to Rs 190.45. On Monday, however, the price came down to Rs 189.15 as it was on last Thursday. Here again the Calcutta interests showed resilience and the trend was somewhat easier.

As for kernels the price of superior variety gained increase at the rate of a rupee per 80 kgs a day from Tuesday last, when the rate was Rs 74 per bag of 80 kgs. It did not go down and from 74, the higher rate of Rs 77 per 80 kgs was reached for superior variety. The bold quality was traded at Rs 70 last week. It gained two rupees more on Friday, and at week-end the price of this variety Calcutta is showing interest. The groundnut oil price in the districts maintained firm trend during the last week. Per candy of 500 lbs it was quoted at Rs 430 in Guntur or Bezvada. It was four rupees less in Vridhachalam. The Nandyal rate was Rs 425. Except in Cuddappah where the price of groundnut oil was Rs 430, it was Rs 425 in Pollachi, Tanjore and Salem.

HIDES & SKINS

Prices of tanned cowhides remained firm this week and there were also good overseas inquiries for certain classes, particularly for inferior fifts varieties. In view of home demand the rather unremunerative overseas prices did not also attract shippers. There was a migration of traders into South seeking this commodity and they offered attractive prices at which good sale was proceeded with. Premium marks were reported to have been dealt with at the rate of 78d, 68d and 58d for runs, fourths and fifts.

In tanned cow calf skins also prices continued to be the same with arrivals not very much.

Hindustan Machine

Hindustan Machine Tools Ltd., Bangalore, has been granted consent to the issue of further capital of Rs 1.00 crore, in equity shares of Rs 1000 each for cash, at par, to the Government of India entirely. The proceeds will be utilised for establishing a watch factory.

Hindustan Teleprinters

Hindustan Teleprinters Limited, Madras, a Central Government owned company, has been granted consent to issue additional capital of Rs 25,60,000 for cash, at par, privately to the Central Government. The proceeds will be used in the company's business of manufacturing teleprinters and ancillary equipment.

Almag Foundry

Almag Foundry Private Limited, Bombay, has a subscribed and paid-up capital of Rs 20 lakhs. It has

Indian Finance

27 January 1962

been granted consent to issue capital of Rs 31 lakhs, divided into 31,000 equity shares of Rs 100 each, for cash, at par. Out of this, 25,500 shares shall be offered to Wyman-Gordian Company of Worcester, USA. The proceeds of the issue will be utilised for financing the expansion of the forge plant upto 9,000 tons per annum.

Eastern Investments

Eastern Investments Ltd., Calcutta, has been granted a consent to the issue of capital of Rs 25.63 lakhs in 25,630 equity shares of Rs 100 each for cash, at a premium of Rs 10 per share. The shares will be issued to the existing shareholders in the ratio of one new share for every two shares now held. The company's existing capital is Rs 76.26 lakhs and its business consists of making investments in other companies' shares.

Bojaraj Textile

Bojaraj Textile Mills Limited, Madras, has been granted consent to equity capital of Rs 15 lakhs (including Rs 10 lakhs issued under Capital Issues Exemption Order). The proceeds will be utilised for the establishment of a textile mill at Madras.

Victor Gaskets

Victor Gaskets India Ltd., Bombay, has been granted consent to issue share capital of Rs 15 lakhs in equity shares of Rs 100 each to be subscribed as to Rs 9 lakhs by Victor Manufacturing and Gasket Company of USA and the balance of Rs 6 lakhs by Indian nationals. The new company will manufacture gaskets for automobiles.

Dimond Products

The Diamond Products Ltd., Calcutta, engaged in business as manufacturers of flexible packaging and conversion of paper, has been granted a consent to the issue of capital of Rs 13.05 lakhs in 2,61,000 shares of Rs 5 each, to be allotted to the holders of 6,000 shares of Rs 100 each in Kassipur Company Ltd., Calcutta, engaged in similar business in exchange for the assets and liabilities of the latter company. The consent is subject to approval of the Scheme of Amalgamation by the High Court.

Madhavnagar Cotton

The Madhavnagar Cotton Mills Private Ltd., Madhavnagar, District Sangli (Maharashtra State) having a paid-up capital of Rs 15.95 lakhs have been accorded consent to issue bonus shares of the total value of Rs 9,57,000 in the ratio of three new shares for every five shares held on capitalisation of the company's reserves to a like extent.

Saraswati Sugar

The Saraswati Sugar Syndicate Ltd., Yamuna Nagar, Ambala (Punjab), having a paid up capital of Rs

42,17,200, have been accorded consent to issue further capital of Rs 8,82,200, divided into 7,036 equity and 1,788 Cumulative Redeemable Preference shares of Rs 100 each, carrying a minimum dividend of 8 per cent, subject to tax, and a maximum dividend of 10 per cent, subject to tax. All the shares will be issued in terms of the scheme of arrangement of amalgamation approved by the Punjab High Court.

Dhiraj Pen

The Dhiraj Pen Manufacturing Company Private Ltd., Bombay, has been granted consent to issue bonus shares of the value of Rs 1,04,750, to be offered in the ratio of one bonus share for every four equity shares held.

Namburnadi Tea

Namburnadi Tea Company Ltd., Calcutta, has been granted a consent to the issue of 5,350 equity shares of Rs 10 each as fully paid-up bonus shares on capitalisation of its reserves to the extent of Rs 53,500. The ex-

isting paid-up capital of the company is Rs 5,35,000.

* INVESTMENT NOTES
Auto Instruments

The International Instruments (Private) Limited is reported to have made substantial progress with regard to the commissioning of its project for the manufacture of automobile dash board instruments and tachographs in collaboration with VDO Tachometer Works of West Germany. The construction of the factory at Bangalore has been completed and the machinery is under erection. The plant is expected to be commissioned in May this year.

South India Viscose

A 10-crore project for the production of rayon yarn and staple fibre has already been inaugurated at Sirmugai, six miles from Mettupalayam. The project has been set up by South India Viscose in collaboration with an Italian firm. The company has secured a licence to produce 8 million pounds of staple fibre yarn per an-

num and 60 tons of highgrade rayon pulp a day.

Structural Engineering

The Chairman of the Structural Engineering Works Limited has hinted the possibility of a rights issue being made by the company in the near future. He has told the shareholders that the company's new projects will involve a capital outlay ranging from Rs 1½ crores to Rs 2 crores. The financing of the expansion plans of the company is engaging the attention of the directors and a decision is expected to be taken in the next few weeks.

IN BRIEF

The Surat Electric Supply Company Limited has recommended an interim dividend of Rs 3 per share, less tax, for 1961-62 as against an interim dividend of Rs 2.50 per share, less tax, paid for the previous year.

Volta Limited has earned a higher profit of Rs 73.05 lakhs for the year ended 31 August 1961 as against Rs 61.89 lakhs for the preceding year. The dividend is raised from Rs 13 to Rs 14 per share, taxable.

For the Investor

INVESTMENT GOSSIP

Fresh Apprehensions

While business on the stock market has been severely restricted this week (the market remained closed two days on Lyons Range), the undertone too has continued to be hesitant as in the previous week. The fact that most of the uncertainties which caused last week's cautious mood still remain unresolved is perhaps the most important impediment in the way of an expansion of activity. Moreover, investors are not showing much interest in the existing list as they are preoccupied with the several new issues that have been placed on the market in recent weeks and are in the offing in coming weeks. With only a few days to go for the scheduled meeting of the Aid India Club there is still no indication that our expectations in regard to the quantum of aid would be fulfilled.

On the contrary, there are rumours that there is lack of enthusiasm among some of the important members of the Club as regards increasing their contribution. It is but natural for market men to be chary of extending their commitments until a clear picture about the quantum of foreign aid that will be available through the Aid India Club emerges as the smooth progress of some of the projects of the Third Plan depends to a large extent on the availability of an adequate amount of foreign exchange.

With much talk about the coming conjunction of a number of planets early next month, it is not surprising that most market men think it prudent to limit their commitments till the unfavourable period is safely crossed. A new worry has gripped the operators this week. Even when the news was received that Mr T. T. Krishnamachari, former Union Finance Minister, had filed his nomination papers for the Lok Sabha election, the market developed symptoms of nervousness. Dalal

Street was especially concerned over the news as would be evident from the sharp decline in equity prices. And now the news is that Mr Krishnamachari has been elected unopposed. This has deepened the depression as the general belief seems to be that he will be given an important place in the Central Cabinet if not the portfolio of finance straightaway. It is argued that the very fact that Mr Krishnamachari delayed the filing of his papers almost to the last minute indicated that only after he had got some assurance as to an important place in the Central Cabinet that he agreed to stand for election. Somehow market men seem to think that with Mr Krishnamachari elected to the Lok Sabha there would be hard times for the stock market.

* NEW ISSUE NOTES
India Carbon

The recent offer of 118,000 ordinary shares by India Carbon Limited has been over-subscribed to the extent of 116 times. Allotments have been made in consultation with the Vice-President of the Calcutta Stock Exchange Association. Those applicants, who applied for 25 to 1000 shares, will get 10 shares each and this will be done by drawing lots. The following allotments are made

Rebuilding this ancient land of ours

RAZA BULAND SUGAR CO. LTD.
Rampur (U.P.)

Where we make the finest quality white crystal sugar made anywhere in India.

ORISSA CEMENT LTD.
Raigangpur (Orissa)

Where the most up-to-date equipment and the latest production methods make possible a large output of highgrade refractories, to meet the needs of all types of furnaces in the Steel, Cement, Glass and large number of other industries.

DALMIA CEMENT (BHARAT) LTD.
Dalmiapuram (Madras State)

Where we are busy steadily producing increasing quantities of cement, one of the essential industrial products for all development projects, for helping build the brighter tomorrow of our dreams.

DALMIA CEMENTS ARE THE NATION'S SERVICE

STOCK EXCHANGES

Dismal
Appearance

Watch-Dog Writes:

FOR the time being, stock markets have been infected with the "Astagraha" fever. There is a considerable nervousness among a section of the operators due to the approach of the conjunction of the eight planets, resulting in a reluctance on their part to extend commitments either way. To make matters worse, the news of T.T.K.'s uncontested return to the Lok Sabha has given the markets a great jolt on the fear that he may be given the Finance portfolio.

With the near-term outlook remaining somewhat uncertain, operators on the Calcutta Stock Exchange preferred to lighten their commitments and take short-term profits.

Resuming on a depressed note, the Bombay Stock Exchange tried to pick up to a moderate extent on short-covering. The undertone, however, continued to be nervous.

Easy conditions prevailed on the Madras Stock Exchange. While

BENGAL JUTE MILL CO. LTD.

NOTICE

NOTICE is hereby given that the Register of Members and Share Transfer Register of the Company be closed from 7th February 1962 to 15th February 1962 both days inclusive on account of the 31st Annual General Meeting of the Company to be held on the 15th February 1962.

For and on behalf of

BENGAL JUTE MILL COMPANY LIMITED,

Managing Agents.

Calcutta-1

December 29, 1961.

STATE BANK OF INDIA

Calcutta, the 19th January 1962.
29th Paus. 1883 (Saka).

NOTICE

The Seventh Annual General Meeting of the Shareholders of the State Bank of India will be held at the Bank's Local Head Office at Apollo Street, Bombay, on Tuesday, the 27th February 1962, at 4 P.M. (Standard Time) for the transaction of the following business:—

To receive the Central Board's Report, the Balance Sheet and Profit and Loss Account of the Bank made up to the 31st December 1961 and the Auditors' Report on the Balance Sheet and Accounts.

P. C. BHATTACHARYYA,
Chairman.

Planting issues receded further in the absence of any support. Textile shares softened due to more selling.

CALCUTTA

Friday.

THE local stock market remained closed on Tuesday due to "Netaji's Birthday" and on Friday due to "Republic Day." During the period it remained open, activity was at a low ebb and the mood of caution was still in evidence. While the genuine support from the investors was restricted in the wake of several attractive new issues, professional operators were obliged to liquidate their holdings gradually in view of the various uncertainties looming large upon the horizon.

First, the much-feared planetary conjunction next month induced the operators to part with their holdings and also to go short. Secondly, with the election fever gathering momentum, there was an anxiety to await the final results of the successful candidates. Thirdly, the news, that Mr T. T. Krishnamachari had returned unopposed to the Lok Sabha, gave rise to a fear in certain circles that his return would herald in heavier and fresh tax burdens. Thus, it looked as if the bear operators had a full time to reap their harvest and prices, as a result, were depressed all-round. But for the scattered support lent to a few selected shares and some replacement buying at the lower levels, the market would have witnessed a veritable collapse during the week under report.

The Giltedged section was devoid of support. Whatever changes in prices had taken place, were against the holders. 3 per cent 1986 Conversion eased off further to Rs 70.90 from Rs 71.05 quoted in the previous week.

Lack of fresh support was reflected in the Banking section where dealings were few and far between. The only scrip, which came in for some business, was United Bank, changing hands at Rs 6.94 to Rs 7.00.

Jute shares continued to meet with selective support on the belief that the industry had turned the corner with the availability of raw jute at reasonable prices. It was also felt that the profitability of the industry might have improved a great deal of late. Higher levels could not, however, be retained till the close due to general profit-taking. Alliance were at one time taken up to Rs 93.50 (Rs 92.50); Ganges up to Rs 12.87 (Rs 12.56); Howrah up to Rs 20.50 (Rs 20.25); India up to Rs 15.25 (Rs 15.19); Birlas up to Rs 31.25 (Rs 30.12); New Central up to Rs 16.50 (Rs 16.37) and Nuddea up to Rs 64 (Rs 63.25). Figures shown within brackets were the closing rates for the week.

Trading in the Coal section proved to be a tame affair follow-

ing a continuous flow of reports about the shortage of wagons for lifting the commodity and explosives for working the mines. East Indian met with some enquiry up to Rs 33 from Rs 32.87, while Burrakur came in for offer at as low as Rs 17.56 against Rs 17.69; Western Bengal at Rs 9.31 against Rs 9.50 and Central India at Rs 12.25 against Rs 12.37.

Tea shares remained quiet in the absence of any fresh news of influence to alter the values. Betjan changed hands at Rs 28.37 to Rs 28.44; Brooke Bond at Rs 15.56 to Rs 15.69; Jay Shree at Rs 18.69 to Rs 18.87 and Huldibari at Rs 29 to Rs 29.25.

The weak spot of the market was the Sugar section where the only feature was UP ruling better at Rs 16 against Rs 15.50. Carew were, however, on offer at Rs 13.06 against Rs 13.19; and Raza/Buland at Rs 10.31 against Rs 10.59. SKG had some sellers at Rs 10.37 against Rs 10.50 following the reduction in the dividend from Rs 1.50 to Rs 1.00 per share, less tax, for last year.

Textile shares were no exception to the general trend and most of them were subjected to heavy profit-taking. Cawnpore and Elgin ruled comparatively steady at Rs 8.53 and Rs 22.81 respectively, while Kesoram were a firm feature having buyers up to Rs 32.00 from Rs 31.89. J. K. Rayon were done at Rs 20.50 against Rs 20.75 and Dunbar at Rs 33.87 against Rs 34.25.

Engineering shares showed a mixed trend. Activity in Jessop was prominent and the scrip was gradually pushed up to Rs 22.06 from Rs 20.12, thanks to persistent support from influential quarters. Indian Standard Wagon were enquired up to Rs 136.50 from Rs 127 on expectation of good report and an increased dividend. J. K. Steel were quiet at Rs 19.75 and so also Dalmia Iron at Rs 10.91 against Rs 11.00.

Among other engineering scrips, Indian Irons were subjected to some selling pressure on lower Bombay advices and the scrip, after being depressed to Rs 24.36 from a high of Rs 24.74, finished the week at Rs 24.40. In sympathy, TEXMACO moved down at one time to Rs 19.90 from Rs 20.20 and Guest, Keen, Williams to Rs 39.69 from Rs 40.62, to close finally at Rs 20.00 and Rs 40.50 respectively.

Miscellaneous issues moved in sympathy with the general trend of the market. The entire list emerged with minor losses on balance, as

will be clear from the following price trends of a few selected shares:

*
WHOLESALE PRICES
Steady at
Year-End

The official wholesale price index (with the year ended March 1953 as 100) receded by 0.2 per cent to 122.6 during the week ended December 30, 1961 as compared with 122.8 (revised) for the earlier week. The index was also lower by 0.4 and 1.3 per cent respectively, when compared with that of a month ago, and the corresponding week of the previous year. The monthly average for December, 1960, worked out to 122.8 as against 124.3 (revised) for November, 1961 and 124.6 for December 1960. The annual average for 1961 stood at 125.8 as compared with 122.9 (revised) for 1960.

The index for 'Food Articles' fell by 0.7 per cent to 117.1 due to a decline in the prices of onions (12%), rice at Kozhikode (-6%), potatoes and cardamoms (-4% each), masur, oranges, cashewnuts, milk, eggs and betelnuts (-3% each), mustard oil and gur (-2% each) and wheat, arhar, mung, urad, ghee, coconut oil, coffee and black pepper (-1% each), although the prices of rice at Jagdalpur (+8%) and Tihu (+5%3, cummin (+3%), bajra, barley, maize, groundnut oil and gingelly oil (+2% each) and jowar (+1%) showed advances.

The index for 'Tobacco' stood unchanged at its earlier week's level of 91.8.

The index for the 'Fuel, Power, Light and Lubricants' group also remained stationary at its previous week's level of 121.6.

STEEL

For India's Growing Economy

Durgapur Steelworks have begun to produce the 1,000,000 tons of ingot steel a year to provide materials for the expanding heavy engineering industries.

The contribution of Davy-United* to this completely integrated iron and steelworks is backed by over 100 years experience in building steelworks plant. Behind this engineering enterprise is an international organisation which has built many types of large industrial plants in India and other continents.

*As members of ISCON, Davy-United are responsible for the rolling mills, central engineering and maintenance shops, iron and steel foundry and the wheel and axle plant. Co-ordination of this part of the project has been undertaken by the construction division of Davy-United.

Industrial Priorities

THE speech of the Minister for Industry at the last meeting of the Standing Committee of the Central Advisory Council of Industries contains the clear warning that the coming year is going to be a difficult one as far as foreign exchange is concerned. He did not elaborate the reasons for this assessment. But it is obvious that the pace and the pattern of development have pushed up import requirements above the current availability of foreign exchange. This is the overriding consideration which determines Government policy and priorities in respect of import of equipment and materials in different fields of development, and these have been admirably elucidated in the address of Mr Manubhai Shah. The policy in short is directed to the achievement of maximum use of indigenous facilities and to the creation of facilities which will add to the growth potential by reducing the dependence on imports of either equipment or material. There will be general satisfaction that something is to be done to relieve the chronic power shortage. The Minister announced that higher priority has been attached to Power than to nearly all other fields, in the allocation of foreign exchange resources, though this may mean delay in getting some new industrial projects started.

This machine building industries have been given high priority with added emphasis on increasing the quantum of indigenous components. The aim, the Minister said, should be to have at least 90 per cent indigenous content by the third year of production. Though this may involve some delay in delivery dates, it would still be preferable to proceed on the basis of maximum utilisation of indigenous facilities. There is also the assurance that no well conceived programme of machinery manufacture and diversification will suffer for lack of foreign exchange for import of components, etc. Industries manufacturing the components of machinery are also assured of the highest priority in the allocation of foreign exchange. In regard to the automobile industry, it has been emphasised that the industry would do well to concentrate on increasing the indigenous content and that the expansion of the foundry and forge capacity should be given the highest priority by the main automobile manufacturers. It has also been suggested that they should aim to increase the output of trucks.

In the field of chemical industries, programmes for the establishment of capacity for manufacture of basic materials will have priority over expansion of capacity on basis of imported raw materials or intermediates. The need for modernisation and expansion of the cotton textile industry is recognised. But, in present circumstances, the rate of progress, it appears, will depend on the expansion of indigenous manufacture of textile machinery. This industry has made a good showing and is assured of top priority as regards import requirements which will be met in full. In the meantime, some amounts out of various credits may be made available to the textile industry to meet its pressing needs of modernisation and expansion. The cement machinery industry is also assured of its quota for

import of components for cement plants, and on a priority basis in view of the pressing need to step up the target of cement production. The Third Plan target of 15.2 million tons by 1965-66 was based on the assumption that the increase in domestic consumption would be of the order of ten per cent per annum. But the rapid increase in demand, which remains unsatisfied, shows that this target of capacity will be totally inadequate. The Council has been told that the cement target would be revised to about 18 million tons for the Third Plan, and additional capacity is being sponsored, preference being given to areas where shortage is most acute. The expansion of capacity for cement manufacture will be facilitated by the growth of the industry manufacturing cement machinery.

Those who have been urging priority for maintenance imports, over new expansion, have apparently won their point. The Government, the Minister said, could not expedite approvals for the import of equipment at the expense of supplies of raw materials and components needed to keep existing industry going. The applications, for capital goods, however, were not rejected outright. They were kept pending till suitable sources of financing could be found. And it has been suggested that it would help Government in giving early clearance if industrialists indicate alternative foreign sources of supply, in order of preference. In this connection attention may also be drawn to the fact that lists of industries in which Industrial Act licences will be automatically granted, and of those in which licences will not be granted for some time, are being revised and new lists will be issued very soon.

The Minister has called upon the Engineering Industries, in particular, to improve their export performance. This group of industries, as the Minister conceded, has set up a good record. But further progress will depend on factors which are not within the control of the industrial units themselves, or, we may add, the Ministry of Industry. The trade talks now on in Bangkok can help, but the future level of exports will depend largely on the ability of indigenous manufacturers to build up competitive strength both in regard to price and quality. Quality depends upon the materials available. Complaints are frequently heard that, while supplies of iron and steel have improved, the materials available do not satisfy the required specifications. Taxation is an important element in adding to the export costs. While there is a scheme for drawback of excise duty, there is none for refund of sales tax levied at various stages. At present only the final export transaction is exempt from sales tax. Again our manufacturers have to sell in foreign markets against the competition of foreign manufacturers who are in a position to extend long term credit to their customers. Indian exporters of engineering goods will have to be provided with credit facilities to enable them to extend similar credit to foreign importers. The Export Risks Insurance Corporation only covers the risk of default. This service should be supplemented by a suitable agency which will provide the credit to finance exports.

EXPORT PROMOTION

Role of Engineering Goods

By D. S. KUSHWAHA

THE problem of export promotion has been engaging the serious attention of the Government in the recent past. Despite efforts made by the Government in this regard exports have remained almost stagnant. According to the Federation of Indian Chambers of Commerce & Industry, the value of exports (including re-exports) was Rs 619.2 crores in 1956. It came down to Rs 618.8 crores in 1957 and Rs 570.3 crores in 1958. In 1959 and 1960 the value of exports stood at Rs 622.7 crores and Rs 635.7 crores respectively. On the other hand imports stood at Rs 821.5 crores in 1956 and Rs 1,000.4 crores in 1960. The relative sticky character—approximately Rs 615 crores per annum on an average—of export earnings is a cause for great concern in view of the expected foreign exchange requirements of Rs 3,650 crores in the Third Plan, and debt repayment of over Rs 500 crores during the same period.

The export trade of India can be classified broadly in two categories: (i) traditional exports and (ii) new exports. The main items of export under (i) are cotton textiles, jute and jute manufactures and tea. As a measure of export promotion we must do our best to increase their export. There are, however, certain features emerging in the international trade that compel us to think that we must realise the limitation of earning foreign exchange through traditional exports. In the case of cotton textiles competition in the international market has grown and many countries are establishing their own cotton textile mills. They will no longer constitute a market for the products of other countries. Thus the markets are narrowing down and competition is becoming more intense. Less developed countries of the world instead of serving as a market are emerging as competitors. Pakistan is an example. The advantage of new machinery and the consequent advantage in cost and quality places them in a superior position and the task for the Indian cotton textile industry with a large number of mills still working on old and worn-out machinery becomes difficult indeed. In the case of the Jute good industry the process of finding out substitutes has already succeeded in the case of packing material and efforts are well on their way in this and other directions. Besides, the demand for jute goods depends to a great extent on agricultural production inside and outside the country, for jute goods are mainly in demand as packing material for the movement of agricultural production. This lends uncertainty to its demand. The future of the export trade in jute goods is uncertain like the outcome of a race, which in this case is an unending race between the development of substitutes and discovery of new uses for jute and jute goods. It is difficult to say in whose favour the balance will be tipped. The chances are that the new substitutes are likely to gain an upper hand until and unless jute is amenable to new uses at a competitively low cost as compared with the substitutes. In respect of tea, we are already finding Ceylon and Africa as strong competitors even in a market like the UK which for a considerable time has been practically an Indian monopoly.

The future of traditional exports does not seem to be bright enough to solve the problem of foreign exchange by itself. It is not contended that export promotion measures

with respect to these industries should be given up. What is intended is to underline the limitations of achievements that can be expected from them now. At the annual general meeting (2 December 1961) of the Associated Chambers of Commerce, Mr N. Stenhouse correctly said that traditional goods should be enabled to maintain, if not increase, the level of their exports. A long-term policy for the export trade must take into account the change in the role of traditional exports. Besides in the world market three significant factors have emerged which must be kept in mind while formulating any scheme of export promotion. In the first place recessionary conditions in some of the industrialised countries have limited their capacity to buy from under-developed countries including India. Secondly, the adverse balance of payments position of the United States has tended to create difficulties for a very large number of countries. Thirdly, a number of those countries which are in the process of economic development are passing through foreign exchange difficulties and like our own country are obliged to restrict imports.

The third factor further narrows down the scope of traditional exports in respect of under-developed countries. A country which is following a restrictive import policy for purposes of economic development will not utilise its foreign exchange for purchasing finished goods like cloth and jute. It would be interested in goods which will help in establishing industries and building up industrial potential. Engineering goods are more acceptable to them on this account than traditional exports. Thus from the long-term point of view and keeping in mind the current situation in the international trade, it seems clear that engineering goods have to play a significant role in export promotion. It was rightly observed by Mr N. N. Wagle at the annual general meeting of the ACC that in case the engineering export industries had the raw materials, the spares and components for enlarging production, a reduction in export prices would result leading to increased exports. In the present context licences for the above should be given priority, if new export markets are to be built up.

Until a few years ago exports of engineering goods were about Rs 4 crores a year. In 1960 they rose to Rs 9.5 crores. In the same year exports of engineering goods to European countries amounted to nearly Rs 1.70 crores. In the total value of exports engineering goods have, thus, accounted for a very small increase of Rs 5 to Rs 6 crores. As a proportion this is insignificant. But that this is increasing and that this is the line which from the "long" point of view holds out prospects of export promotion cannot be denied. The small share, fortunately increasing recently, points to the intensity of efforts to be made to increase their share in the export trade. Another heartening feature is that besides increase in exports, the range of items and markets is widening. At present there are more than 100 items of export. Of these, the important ones are: metal artware (exports worth Rs 1.9 crores in 1960), electric fans (nearly Rs 90 lakhs), sewing machines (Rs 55 lakhs), transport equipment (Rs 53 lakhs), aluminium utensils (Rs 37 lakhs), steel trunks (Rs 28 lakhs), diesel engines (Rs 22 lakhs), apart from nearly Rs 1 crore worth of unmanufactured products.

The growing importance of engineering goods has been realised in the Third Plan. Industrial machinery worth Rs 300 crores will be manufactured in the country during the Third Plan Period. The provision of Rs 1,520 crores for organised industry and minerals, Rs 1,486 crores for transport and communi-

cation and Rs 1,012 crores for power will help the development of engineering industries by providing the necessary basic "raw materials" and by creating demand for its products. A number of projects have been earmarked for completion during the Third Plan Period, e.g., heavy machines building plant, the foundry forge, the coal mining machinery plant, heavy structural plant, heavy plate and vessel works, heavy machine tools factory, expansion of heavy electrical projects, two additional heavy electrical projects, and schemes for production of high pressure boilers and precision instruments. In the case of a large number of industries it is proposed to achieve self-sufficiency or near self-sufficiency by the end of the Third Plan. These industries are paper making machinery, cement machinery, sugar mill machinery, textile machinery, boilers, railway equipment, printing machinery, etc.

The composition of the export trade of engineering goods is a clear indication that the private sector must come forward with enthusiasm. The private sector has to meet the demand of cement, sugar and cotton textile mills inside the country besides the export demand for sewing machines, table fans, electric lamps, diesel engines, etc. The public sector will mainly concentrate on projects of heavy machinery and heavy machine building. In the near future these items are not likely to figure in the export trade of the country. It underlines another fact. New lines of export must be built up in the private sector. The engineering industry, which forms one such line, must receive encouragement from Government in respect of import of equipment and relief for the time being in respect of import of equipment and relief for the time being in respect of Central and State levies to expand its activities and establish itself in international markets. That this is the need of the hour, few will dispute.

Individual well-being is linked with national prosperity and only planned efforts can ensure both in the shortest possible time. And planning, for its success, largely depends on savings, individual as well as national.

Saving in the form of Bank Deposits provides resources for the National Plan.

RESERVE BANK—II

Mr Iengar on Interest Rates

THERE are, according to Mr H. V. R. Iengar, four areas in which there will arise the need for mutual adjustments between Government and Reserve Bank. These four areas are:

- (1) interest rate policy.
- (2) the volume of accommodation to be given to Government (deficit financing).
- (3) the manner of handling sub-standard banks.
- (4) policy in regard to accommodation to co-operative institutions.

As we see it, the difficulty in the matter of interest rates is that the Reserve Bank, in order to wage an anti-inflationary war, may sometimes be in favour of a tough money policy, whereas Government, both to keep the cost of borrowing low and to ensure the success of borrowing programmes, would greatly hesitate before agreeing to any change in the basic interest rate. Indeed, Mr Iengar has stated that "active use has not been made of the bank Rate instrument as such." We must remember that in the years that Mr Iengar has held office there have been two sets of measures initiated which de facto and de jure have caused the cost of borrowing to rise. In February 1957 the Reserve Bank announced that, though bank Rate at the time was 3½ per cent, banks would have to pay 4 per cent for any accommodation that they sought or obtained from the central banking institution. It was some three months later that de jure raising of bank Rate took place. The changes that occurred in February and May were not, it is interesting to note, by way of active use of bank Rate weapon. The great monetary stringency in the 1956-57 busy season produced chaos in the interest rate structure. Bank Rate was often exceeded by the rates of interest that banks were willing to pay in order to entice deposits or to take up call money for balancing their daily accounts. The February and May measures in regard to bank Rate were therefore in the nature of an upward adjustment in the primary rate, after increases in other constituents in the interest rate structure had made a farce of bank Rate.

On the other hand, the introduction in 1960 of the three-tier bank Rate was, in our view, a monetary measure. It was intended so to raise the cost of central bank credit that banks would be inhibited from borrowing more and hence from lending more. It has happened that the penal rates of 5 per cent and 6 per cent become applicable only during the busy season. But another Reserve Bank directive, whereby banks were called upon to raise their lending rates by a half per cent all round and in any case to a minimum of 5 per cent, enabled banks easily to afford the penal rates for short-term needs.

The next point that needs to be clarified relates to the question whether or no money is cheap in India. Certainly, the impression abroad of India's foreign friends is that the monetary authorities in this country have permitted money to be unduly cheap. Mr

Iengar has remarked that, "while the rates in the organised sector are relatively low, those in the unorganised sector are indeed high"; and he has added that "the unorganised sector finances a substantial part of internal trade and remains largely outside the purview of the Reserve Bank's control". With the Reserve Bank directive of autumn 1960, we believe that money ceased to be cheap even in the organised sector. The minimum rate on Advances, as stipulated by the Reserve Bank, is 5 per cent; and moreover this rate is available only to prime risks or most favoured customers. We have seen that, as happened in 1956-57, there is a tendency for the banking interest rates to be re-adjusted as a result of excessive demand for and inadequate supply of money. Mr Iengar has pointed out that, in the case of the private sector, a shift in the direction of higher interest rates has already taken place. But the general impression to be gathered from Iengar's views on interest rates is that, firstly, he considers cheap money might be dangerous and, secondly, he would have a constant process of adjustments between the Reserve Bank and Government.

There is also the fact that, for their own reasons, Governments like to keep interest rates low. Mr Iengar says: "This becomes an important consideration especially when the Government has a large borrowing programme over a period of years." We need at this juncture also to have regard for what President Truman considered the supreme importance of preserving "public confidence in Government's credit and in Government securities." In the sense that the Indian Government does have a large borrowing programme, it would seem that it would be greatly reluctant to permit an increase in bank Rate. From the Reserve Bank point of view, tough money policy is already introduced by the automatic application of the three-tier bank Rate, and it is consequently possible that India may be able to get away with a status quo in interest rates.

Nevertheless, it would be wise to recognise that there could be circumstances in which an increase in bank Rate is inescapable; 1957 offers a case in point. We believe that bank Rate in India does not set the pace for the structure of interest rates. It is demand for and supply of money that determines whether or not banking interest rates are pushed up. If it should happen that for a sustained period demand exceeds supply, then the disparity between banking interest rates and bank Rate has to be set right with a raising of the latter. From the monetary point of view, in any event, any increase in interest rates is not quite desirable. As it is we have seen that interest rates in the unmonetised sector are high enough; and we repeat that except for the prime risks money is not cheap even in the organised sector of the money market.

But that there is great disturbance in the money market at the moment there can be no doubt. A move is afoot, on the part of "medium" banks, to secure for themselves a "differential" in the rates of interest they may pay on Deposits. The large banks are reluctant to yield any such concession. It is even apprehended in certain quarters that the inter-bank agreement on interest rates may

be in its death-throes, in as much as the medium banks are willing, should no concession be forthcoming, to vote themselves out of the inter-bank agreement.

Though this is somewhat to digress from an analysis of Mr Iengar's speech, we would like to suggest here that it is not the lure of a higher interest rate that succeeds in mobilising fresh resources for banks. All higher interest rates are capable of contributing is an increase in operating costs. With the insurance of bank Deposits it is furthermore unnecessary and even self-defeating to move toward a further increase in Deposit rates. If the medium banks are to be accommodated—and their request is not altogether unreasonable—the differential must be found, we emphasise, in a reduction in the maxima applicable to major banks rather than in new higher limits being set for the medium banks. We fear that, as happened in 1956, we may be in sight of unbridled and unhealthy competition for wooing new Deposits; and that in turn will mean that, after a time-lag, bank Rate will willy-nilly be pushed up. The former is undesirable because it will mean a dissipation of the earning potential made possible by the Reserve Bank directive of autumn 1960, a directive that fosters the strengthening of banks; and the latter would greatly affect Government's borrowing programme, with the consequence of enlarged recourse to deficit financing. The fate of interest rates in the banking sphere will be known in another two week's time; and we hope that the decisions when taken will not be the death-blow of the inter-bank agreement on interest rates.

(Note: The concluding article in this series will be published next week).

+

BANK RETURNS

Sharp Rise in Deposits

Some relaxation of busy season pressure is to be seen in the returns of the Reserve Bank for 26 January, though from the standpoint of the banking system as such there continues to be some strain experienced.

Active Note Circulation has fallen by Rs 4.99 crores to Rs 1,980.60 crores, and there has been inflow of Rupee Coin for Rs 0.80 crore. Rupee Securities are practically unchanged at Rs 1,638.79 crores, while Foreign Securities are unaltered at Rs 126.86 crores. In the result the Reserve Bank's cash in the till has improved by Rs 5.79 crores to Rs 24.68 crores.

The State Governments would appear to have made some repayments to the Centre. Their balances are lower by Rs 5.08 crores at Rs 18.83 crores, and their ways and means borrowings from the Reserve Bank have increased by Rs 7.87 crores to Rs 60.80 crores. These receipts are reflected in a rise of Rs 16.52 crores to Rs 68.67 crores in the Deposits of the Central Government; and the rise in the resources of the Centre would also in part appear to be as a result of deficit financing for about Rs 15 crores. The Central Government had a maturing liability as to Rs 13 crores in respect of Government of India Treasury Bills purchased and discounted by the Reserve Bank; against this, the State Bank appears to have purchased securities for Rs 8 crores. Investments in the Banking Department are more or less unchanged at Rs 242.97 crores, the inference being that the magnitude of created money was, as we have stated, about Rs 15 crores.

Reserve Balances of member banks are down by Rs 2.44 crores at Rs 80.02 crores, and it

is possible that the bulk of the decrease is owing to the State Bank. The rise of Rs 1.42 crores to Rs 149.03 crores in the Other Loans and Advances of the Reserve Bank is likely to be on account of increased recourse to central banking credit by the banking system, and this hypothesis is partly confirmed by the increase of Rs 0.86 crore to Rs 10.37 crores in the Reserve Bank's advances against usance bills.

A PL 480 transaction is probably responsible for the fall of Rs 5½ crores to Rs 148.60 crores in Other Deposits.

Lastly as concerns the Reserve Bank returns, Balances Held Abroad have again been drawn on, by Rs 0.43 crore, to be placed at Rs 10.97 crores. Foreign assets held by the Reserve Bank are just under the Rs 138 crore mark.

PROGRESS OF BUSY SEASONS*				
(In Rs Crores)

*As at the end of 13 weeks for Reserve Bank State Bank and as at the end of 12 weeks for Other Scheduled Banks.

NOTES:—Cash balances include money at call and short notice.

Figures in brackets are percentages.

The return of the State Bank for 26 January shows another improvement in Deposit resources, which are up by Rs 2.77 crores to Rs 547.02 crores. This has more than covered the busy season rise of Rs 1.52 crores to Rs 269.63 crores in the total of Advances. The State Bank has utilised its relatively liquid position to add Rs 8 crores to the giltedged portfolio, which now stands at Rs 241.03 crores. In so doing, borrowings from the Reserve Bank are higher by about half a crore at Rs 2.94 crores, and cash balances, including money at call and short notice, have fallen by Rs 4.96 crores to Rs 26.16 crores.

There has been a spectacular improvement in the Deposits of the Scheduled Banks in the week ended 19 January, but the increase is

mainly in respect of the State Bank. Net Demand Deposits are higher by Rs 10.51 crores at Rs 841.09 crores, while net Time Deposits have improved by a further Rs 7.51 crores to Rs 1,148.72 crores. Of the total increase of Rs 18.02 crores in net Deposits, a sum of Rs 14.57 crores is attributable to the State Bank. The rise in Deposits has far outstripped the expansion in Advances, the total of which in the week under review has gone up by Rs 6.33 crores to Rs 1,315.91 crores. But, as we have noted, the increase in resources has mainly been on account of the State Bank. So, other Scheduled Banks have been put to some strain. Borrowings from the Reserve Bank have gone up by Rs 1.26 crores to Rs 17.66 crores; but the pressure was apparently not severe. For, firstly, cash balances have been added to by about Rs 5 crores to Rs 189.21 crores, the State Bank accounting for roughly Rs 3 crores of the rise; secondly, borrowings from the State Bank are lower by Rs 0.37 crore at Rs 11.92 crores; and thirdly, the giltedged portfolio is marked up by Rs 4.48 crores, of which may be half a crore is on account of other Scheduled Banks.

BANK PROFITS

"The Hongkong and Shanghai Banking Corporation Profit and Final Dividend for 1961.

The Directors of The Hongkong and Shanghai Banking Corporation have announced that subject to audit the profit of the bank for the year ended 31st December 1961, including dividends received from Mercantile Bank Ltd, The British Bank of the Middle East and other subsidiaries, amounted to £2,707,216 (HK \$43,315,459) after providing for taxation etc. It is proposed to pay a final dividend of 10 shillings per share making a total distribution of 15 shillings a share for the year which, on the new capital structure, is unchanged from that declared for 1960."

The working of the Canara Bank Limited for the year ended 31st December, 1961, has resulted in a net profit of Rs 21.24 lakhs (Subject to audit) after making the usual and necessary provisions and provision for taxation. This compares favourably with the profit of Rs 20.30 lakhs for 1960, arrived at before providing for taxation.

With the last year's carry forward of Rs 0.45 lakhs a sum of Rs 21.69 lakhs is available for distribution. The Directors of the Bank propose to set apart Rs 6.70 lakhs for Statutory Reserves, which, inclusive of Rs 6.30 lakhs under Share Premium account, now stand at Rs 63 lakhs; Rs 0.62 lakhs for payment of 5 per cent dividend to Preference Shareholders (Rs 0.62 lakhs last year); Rs 5.40 lakhs for payment of 15 per cent dividend to equity shareholders (Rs 5.40 lakhs last year); Rs 4.50 lakhs for contingencies (Rs 3.50 lakhs inner Reserves last year); and Rs 4.00

lakhs for bonus to staff (Rs 3.10 lakhs last year), thus leaving a balance of Rs 0.47 lakhs to be carried forward (Rs 0.45 lakhs last year).

Deposits of the Bank at Rs 37.56 crores show an increase of Rs 6.74 crores over last year's figure (21.9 per cent increase). Total advances at Rs 20.39 crores stand improved by Rs 3.76 crores (22.6 per cent increase). As usual, the liquidity has been well maintained, the ratio of total advances to deposits being at 54.3 per cent.

The ICI-Courtaulds Struggle

By Paul Einzig

THE determination of Imperial Chemical Industries to secure full control of the British man-made fibre industry through the acquisition of Courtaulds has led to an unprecedented fight between the two industrial giants. Neither side has been holding its punches, and the resulting spectacle, so utterly at variance with the dignified traditions of British high finance, is followed with the greatest possible interest by all sections of British opinion. Sympathies are almost entirely on the side of Courtaulds, partly because it is the subject of the "unprovoked aggression" of a take-over bid by a much more powerful firm, and partly because the weight of arguments is overwhelmingly against its absorption by ICI. When it was disclosed that the result of a merger would be the prevention of Courtaulds from buying cheaper raw material from a rival of ICI, the last vestige of economic justification for the take-over bid disappeared. Evidently, if the take-over bid should succeed the products of Courtaulds would become less competitive abroad and would be in a less favourable position to benefit by a British decision to join the Common Market. One of the objects of the bid is to bolster up the high-cost production of the ICI by tying down Courtaulds to the purchase of its expensive product which is not sound economics.

Most people agree that it is not in the public interest to establish a monopoly, or to encourage an unlimited growth of a single concern. A director of Fisons, Mr Wormald, in a letter to the Times, pointed out that the endeavour of ICI to grow bigger and bigger is simply due to its fear that someone even bigger—such as the big oil companies—might reach out its tentacles for ICI itself. Clearly the answer is to set a limit to such expansion by take-over bids, and the Government is not likely to be able to resist the pressure to adopt that course.

As far as the shareholders of Courtaulds are concerned, they are certain to sit tight and await developments rather than accept the latest offer of ICI. In the light of the recent figures issued by Courtaulds, that offer does not appear to be over-generous. In any case, having first offered three ICI for every four Courtaulds shares and then four ICI for every five Courtaulds shares Mr Paul Chambers is now expected by everybody to improve his offer sooner or later to one ICI share for each Courtaulds share. It has become a question of prestige not to be defeated, and ICI is generally expected to raise its bid until it becomes irresistible. A stage may be reached, however, at which a further watering up of ICI's share capital would defeat its object. Thus, even in the absence of Government intervention, the outcome of the struggle is still uncertain.

Notes

COAL

The Industry asks for More

Though coal production has been accorded very high priority in the Third Plan, the trends in production that have been evident in recent months have a very disturbing significance. Owing to continuance of transport shortage and other difficulties experienced by coal mines, production of coal has slowed down in many mines and this has caused shortage of coal in regions situated remote from the coalfields. Even major industries such as cement, etc, have been affected by the shortfall in coal supplies with the result that production in these has remained stagnant. It is an indication of the seriousness of the situation that the Government should now decide on importing cement to mitigate local shortages. For, it is now understood that the Government will import some quantity of coal from Pakistan. Though the quantity of coal to be so imported is not yet known, it has been made clear that there will not be any difficulty in importing coal from Pakistan and that this could be done under the Indo-Pakistani Trade Agreement.

The present decision of the Government to import coal is a belated

recognition of the adverse coal situation that has been developing for many months past. One of the major problems facing the coal mines continues to be shortage of railway wagons for coal movement, and the diversion of an additional one million tons of coal by the sea route to the Southern and Western regions has not brought about any substantial improvement to availability of coal in States situated far from the main coal-producing belts of Bengal and Bihar. The difficulties to industries arising from coal shortage have been particularly acute in the Western Indian States, and in Gujarat cotton textile mills have been faced with the prospect of considerably reduced working of their units for want of enough coal supply. The situation in Gujarat and particularly Ahmedabad has reached a stage where it is felt in industrial circles that it would not be useful to rely on coal supplies to run the industries and consequently there has been very serious thinking about a switchover to furnace oil.

Lack of finance for the coal mines in the private sector has also acted as a hindrance to expansion of coal production in the last few months. The delay in the disbursement of the World Bank loan to private sector collieries has come as a disillusionment to earlier hopes entertained by the collieries for scheduled starting of expansion plans for coal production. In a recent memorandum submitted to the Union Government, the coal mining associations of the Eastern region have represented to the Government the urgency of the need for granting a revision of coal prices, which are currently at unremunerative levels, to support expansion plans. The industry has asked for an increase in the coal price by Rs 2.22 per ton to offset the increase in operating costs that has come in the wake of rise in price of stores, plant and equipment, increase in electricity rates and railway freight, etc. The fall in production of coal and the resulting shortage in coal supplies to major industries are factors which lend urgency to an early decision regarding an increase in coal price. For, in the light of the growing demand for coal, imports of coal cannot be considered as offering a permanent solution to possible future shortages in coal. Increase in internal production can be the only answer, but this calls for more sympathetic attitude on the part of the Government to the problems which the industry is now facing.

—And the States Press their Claim

The serious differences that have developed between the Centre and the States over the question of States' right to exploit coal mines in their areas were brought into the open at the inter-State coal mining conference held in Calcutta last week. The question of States' right to a share in coal mining was first taken up by the West Bengal Government some months ago. It is Dr B. C. Roy, Chief Minister of West Bengal, who has again given strong expression at the coal mining conference to the legitimacy of the States' claim. "As is clear, Dr Roy's espousal of the States' rights arises from his concern for the industrial progress of West Bengal. For, coal is basic to the industrial advancement of the State, and State participation, according to Dr Roy, may mean more expeditious mining. As a corollary to the argument for State participation, Dr Roy has also asked for State representation of coal-producing States on the Coal Board and the Coal Council constituted under the 1952 Coal Conservation Act.

Dr Roy has supported his case for State participation with highly plausible arguments. He has observed that the States having acquired all the rights of intermediaries including underground rights at a heavy price, it was only logical that the Government should do all it can to exploit the wealth buried under the soil to increase its resources. Further, "it is curious that the Centre should permit Tata Steel and Indian Iron to sink new mines to achieve a substantial increase in their coal production, but refuse to allow the State Governments to undertake mining on their own."

The Industrial Policy Resolution of 1948 reserved the future development of coal mining to the public sector and as a sequel the National Coal Development Corporation was created in 1956 to look after coal mining in the public sector. With the NCDC already working it may seem superfluous to create more entities in the public sector which may probably only serve to hamper a uniform policy. Further, the implications of allowing States to participate in coal mining for the distribution of this strategic material to other States may also call for careful study. Coal deposits are heavily concentrated in the Bengal-Bihar area and the requirements of other States are mostly met from production in these States. The uneven distribution of coal deposits is an argument for centralisation of authority for coal production in the public sector which cannot be easily brushed aside. For it is not West Bengal alone, but all the other States which have pinned their hopes for future industrial progress on greater availability of coal.

SUGAR Improvement in Prospect

At the meeting of the Development Council for Sugar held in New Delhi early this week, the problems faced by the sugar industry came up for discussion. While the marketing problem of sugar for the next year seemed at one time to assume a grave aspect, there is now a more optimistic assessment of the prospects of the industry in tiding over the situation. For one thing, regulation of production that is being introduced will forestall excess production of the order that was witnessed in the last sugar season. Moreover, following the removal of controls on distribution and movement of sugar, there has already set in a tendency for sugar consumption to rise. It is now anticipated that at the present rate of consumption, consumption might touch a level of 2.5 million tons during 1961-62. In view of these, there is reasonable prospect of a balance being achieved between supply and demand in respect of sugar. The decision taken by the Government for the phased implementation of the expansion programme for the sugar industry in the Third Plan should also help the industry to stabilise its position. Already a brake has been put on licensing of further capacity in the sugar industry for the time being. Out of the 1.3 million tons of fresh capacity needed to reach the Third Plan target of 3.5 million tons, only about 450,000 tons have been approved so far. The additional capacity that is to be established,

WE ARE LIKED

because we fully understand our customers' needs and make sure that RIGHT FACILITIES are available to them.

according to the decision now taken, will be spread over a period of years so that the impact will not be felt until the end of the Third Plan or the beginning of the Fourth Plan.

On the vital question of the modernisation of sugar plants which are out-dated and worn-out, the Development Council has decided to set up a committee to examine in detail a programme for such purpose. However, there is great difference of opinion between the Indian Sugar Mills' Association and the Development Council in respect of the total outlay that is required to carry out a thorough modernisation programme for the Sugar industry. While the ISMA has estimated the total outlay required at Rs 78 crores, the Council has placed it at Rs 25 crores. In view of the disparity between the two estimates, it is now left to the new committee that will be set up to fix the outlay which will be acceptable to both the parties.

The question of linking cane prices to quality also figured in the discussions of the Development Council. Though the Council proposed a scheme for fixing a floor price for cane based on cost of production, transport and a reasonable profit and higher prices according to qualities, the proposal was not well received by the representatives of the ISMA. Further consideration of the scheme has been shelved till the next meeting of the Council which will take place in July.

—East UP's Problems

Accumulation of sugar, which has assumed unmanageable proportions this season, has had a varying impact upon sugar industry in different parts of the country. The worst hit was the sugar industry in East UP, where there is extreme congestion of sugar mills, with keen competition for sugarcane. A memorandum recently submitted to the Central and State Governments by the East UP groups of sugar factories has drawn attention to the crisis conditions arising from unprecedented accumulation of sugar that threatens the very survival of the sugar industry in the East UP. The sugar industry in East UP has been the weakest financially as compared with the industry in other parts. This fact has been admitted both by the Tariff Commission 1959 and the Sugar Wage Board. Extreme congestion of sugar factories combined with the need to sell its sugar to centres situated far away have made the industry in East UP the most vulnerable to any unhealthy development. The over-production of sugar in the current season has therefore, had the most adverse impact on the sugar industry in this area. It has been pointed out that consequent on the excess

production of sugar the price of sugar has come down below Rs 36/- against a sale price of Rs 38.96 adjusted to the Tariff Commission Schedule with no future sales in hand. This has not only wiped out the return on capital ensured by the Tariff Commission but also involved sale below cost of production by Re 1/- per maund. As a result, all the sugar factories in East UP are reported to have suffered huge losses, the marketing problem has remained unsolved, and they are burdened with huge carry-overs. While large monthly quotas are being released from current production, the previous quotas are lying unlifted with the sugar mills in East UP. Further complications as regards movement of sugar from East UP mills have been created by the quota restrictions imposed on the North Eastern Railway against movement of sugar to Assam and West Bengal and also the failure of the broad gauge railways at transshipment points to lift their full normal quota from NER.

The unsold surplus stocks of sugar have involved the sugar mills in a huge financial liability on account of the arrears of interest payable to banks, arrears of cane price and society commission and penal interest on unpaid sugarcane purchase tax, etc. The seriousness of the problem facing the sugar mills in East UP should be evident from the fact that they had threatened stoppage of further sugarcane crushing if no relief is provided by the Central and State Governments. The relief measures that have been asked for are regulation of releases of sugar by issuing no further quotas until the previous quotas have been sold out, withdrawal of the additional excise duty levied in 1958, waiving of interest due on the arrears of cane prices and society commission and implementing the assurance of not charging any interest or penal interest up to March 1962 on the arrears of sugarcane purchase held out to the industry in the last season which had encouraged the industry to prolong the crushing season beyond the normal duration.

EXPORTS

The Burden of Production Costs

It is increasingly being realised that our lasting economic advance will largely depend on our ability to earn more foreign exchange through maximising our exports. There is a limit to foreign aid and moreover such aid has to be repaid with interest sooner or later. The productive capacity that foreign aid will help to add will not doubt take care of part of the repayment of loans in the shape of increased exportable goods. But this expectation does not wholly hold good because it is in a buyer's market for almost all industrial goods that we have to sell our products. Even

in the case of our traditional exports like jute goods, cotton textiles and tea, the going has been extremely rough in recent years due to intense competition from other producers. While quality is an important factor influencing consumers, there is equal emphasis on price also. If all other things are equal, a consumer will naturally go in for the product which offers a price advantage over its competitors in the field. In order that our goods make headway in the world market, it is essential that the talk of maximising exports should be accompanied by the creation of conditions conducive to an easy flow of our goods overseas.

As Sir Biren Mookerjee Chairman of the Indian Iron and Steel Company Limited, has pointed out in the course of his inaugural speech at the Calcutta Industries Fair on Saturday, our industries are already fast becoming uncompetitive in the world market due to increased production costs. A decade or so ago, labour in India was perhaps quite cheap. This is no longer true, and even though the Indian worker is still not getting as much as his counterpart in western countries, he is today getting much more than what he was getting, say, ten or fifteen years ago. But if the rise in industrial wages in India is closely related to productivity as in the industrially advanced countries of the west, there will be no worry. According to Sir Biren the trouble in our country is that the increase in wages is not accompanied by an increase in productivity with the result that when we send our products to the world markets they are placed in a disadvantageous position as competitive products are offered at prices lower than ours. It is essential therefore that if the efforts that are now being strenuously made to maximise exports are to succeed, our products placed on the world markets are competitive in price to similar products in the field. Sir Biren has indicated some other directions in which improvements are to be effected in order to bring down the cost of production of our manufactures. It is to be noted that our products have to compete with those manufactured by industries which are continually taking advantage of technological improvements. Indian industry is not able to adopt a similar course for a number of reasons. One way of keeping abreast of technological developments in industry is to import the latest machine tools but this is rendered practically impossible by the present stringency in the foreign exchange position. Even so, Government would do well to consider the release of sufficient foreign exchange for the import of a machine tool or equipment whose addition to a plant will definitely result in sizably increasing its efficiency.

TEA

Record Production

The record tea production of 760 million lbs registered during 1961 will be hailed as a significant

achievement by the tea industry. When the production target for the tea industry was fixed at 900 million lbs in the Third Plan it evoked a lot of criticism against the Planning Commission for having fixed the target at what was considered to be an impossible level. However the performance of the tea industry during 1959 and 1960 when production registered steep declines was such as to engender pessimism about the industry's capacity to show improvement in production. Such fears have now been belied and it is remarkable that the increase in production by 70 million lbs has even exceeded the annual rate of increase of 35 million lbs. required to reach the Third Plan target of 900 million lbs. The entire increase in production of 70 million lbs has been contributed by the tea industry in the North East India, the share of the Doars alone amounting to 11 million lbs. The tea garden in the North and North East being older than in the South, prospects for increasing production were rated higher for the South Indian gardens than for the North East Indian gardens. With the gardens in the north itself far from having reached the limit of their growth, a substantial increase in production could be possible if the necessary facilities could be ensured for increasing production.

One of the most important requirements for increasing production relates to supply of fertilisers, shortage of which has been responsible for holding up production in 1959 and 1960. The Third Plan target of 900 million lbs has been fixed on the premise of increased availability of fertilisers. It is heartening that there is greater awareness by the Government of the industry's needs and larger supply of fertilisers has been indicated during 1961-62 and 1962-63 seasons. The Government is reported to have already released 65,000 tons of neat sulphate of ammonia to the tea industry in North East India during 1961-62 in addition to 1,560 tons of urea and 16,188 tons of ammonium sulphate nitrate. Current programmes of supply envisage meeting the complete requirements of nitrogenous fertilisers of the industry in the form of neat sulphate of ammonia and this should go a long way in helping the industry for increasing production substantially. Another matter of great consequence for helping increase in production is the reduction that has been effected in the price for fertilisers. On representation from the Tea Board, the Government has agreed to reduce the price of sulphate of ammonia and urea for the tea industry by about Rs 14.50 and Rs 14.10 per metric ton respectively. The price for ammonium sulphate is also to be reduced by about Rs 8.80 metric tonne. A number of other measures intended to help the industry to increase production is also being implemented. Fig-

3 February 1962

ing prominently among these are the decision to place a sum of Rs 5 crores at the disposal of the tea Board to enable it to grant loans to the tea estates for replanting, replacements and extensions of tea gardens and the decision of the Finance Ministry to postpone the June payment of the advance income tax payable by tea companies in North East India to September. These are measures the significance of which for achieving the Third Plan target of production cannot be overlooked.

Together with increased production export of tea has also revealed a commendable rise during 1961. From 400 million lbs valued at Rs 113 crores in 1960 exports had gone up to 425 million lbs valued at Rs 116 crores in 1961. While exports to all the countries had looked up, there was a pronounced rise in exports to UK. Upto the end of October 1961, exports to the UK were higher by about 13 million lbs. The industry has to further intensify its export promotion schemes if the Third Plan target of 600 million lbs for export is to be reached. This calls for further improving our position in the traditional markets and also for gaining grounds in new markets. The most important condition for the success of export promotion for tea is to maintain the competitiveness of Indian exports especially in the matter of prices.

FISHERIES

The Catch Falls

The latest report on fisheries brought out by the Directorate of Marketing and Inspection of the Ministry of Food and Agriculture surveys the development of fisheries in India since 1951 when the last report was issued. It records the relatively unknown fact that during 1958 and 1959 the total catch of sea fish in the country registered a sharp fall to 755,774 tons and 584,193 tons respectively from the high level of 875,420 tons recorded in 1957. The catch in 1959 was even lower than the annual average of 672,000 tons of sea fish for the period 1951-57. Average catch of both marine and fresh water fish for the period 1951-57 was about 852,000 tons, and the annual average of fresh-water fish has been placed at 180,000 tons. The catch had risen from 580,021 tons in 1950 to 875,420 tons in 1957.

The major part amounting to 84 per cent of the total catch of sea fish is shown to be accounted for by the western region, and in the Western coast, the States of Maharashtra and Gujarat accounted for 42 per cent of the landings of sea fish. In the production of freshwater fish, however, it is Bihar which is shown to lead the other States. Bihar with a percentage of total production at 21 per cent is followed by Andhra

Pradesh with 20.2 per cent, Madras with 17.4 per cent West Bengal with 15.9 per cent and Orissa with 12.8 per cent.

The report estimates the annual average per capita consumption in recent years at 4.97 lbs. Kerala State figures with the highest figure of 22.86 lbs per capita and is followed by Bombay with its figure of per capita consumption at 13.92 lbs. The per capita consumption in Calcutta city is placed at 12.7 lbs. It is significant that the inland States of Bihar, Punjab, etc, record comparatively lower per capita consumption of fish. The per capita consumption in Bihar, for example, is 2.07 lbs while for Punjab it is lower at 0.05 lbs. Nearly 47.9 per cent of total consumption consisted of fresh fish, 23.2 per cent of sundried and 20.5 per cent salted.

Though fish and fish products figure as items of import, the country has maintained a favourable position with exports of fish exceeding imports. It is worth nothing that while imports went up from Rs 2,08 lakhs to Rs 3,00 lakhs in 1959, exports had increased from Rs 5,86 lakhs to Rs 6,23 lakhs. The principal markets for exports of Indian fish and fish products are Ceylon and Burma.

The present catch-area covers only a relatively small part of the country's total coastline. Against the total coast line area of 110,000 square miles, only about 2,920 miles are being exploited for fishing. This indicates the extent to which the fish catch could be further substantially increased with more resources directed to that industry.

SHIPPING

Overseas Steams Ahead, Coastal Lags

The progress of Indian shipping in the first year of the Third Plan would appear to be satisfactory. For, according to the Indian National Steamship Owners' Association, as on 1 January 1962, the Indian merchant fleet comprised 174 vessels totalling 901,020 grt, compared with 172 vessels totalling 844,010 grt a year ago. The Third Plan provides for additional tonnage to be acquired in the Plan period of 374,500 grt. As out of this as much as 193,600 grt will be required for replacement of over-aged ships, the tonnage available for addition will be only 181,000 grt to bring the total tonnage at the end of the Third Plan to 1,100,000 grt. Of the new tonnage to be acquired, about 216,000 grt will be on account of the private sector and the remaining 159,000 grt of the public sector. During the calendar year 1961 new acquisitions have been on a fair level as 10 vessels totalling 84,426 grt were acquired. Eight vessels

totalling 42,028 grt were scrapped due to old age but due to alterations in the existing vessels and conversion of some of them into closed shelter dockers, etc, there was a net increase of 14,606 grt in the total tonnage.

Sixty-nine vessels totalling 533,986 grt are operating in the overseas trade of the country. During the Second Plan period the pattern of tonnage addition as between coastal and overseas shipping was quite different from what had been originally planned. Of the total of 900,000 grt the targets for overseas and coastal shipping were 490,000 grt and 410,000 grt respectively. But the actual achievement was an increase over the target in respect of overseas shipping and a substantial shortfall in respect of coastal shipping. The trades in which Indian overseas shipping is operating are the India-UK Continent, the India USA India-Black Sea trade, India-Japan/Far East trade, the India-Red Sea, India-West Africa, India-East Africa, India-South America, India-Malaya and India-Australia. The coastal fleet comprised 108 vessels totalling 347,551. About half of these are plying in the Calcutta-Kandla range and are mostly employed for the transport of coal. Several of the coastal vessels also participate in the trades with the adjacent countries. While a general agewise analysis of the Indian merchant fleet shows that over 57 per cent of the tonnage is under ten years of age or in shipping parlance "young", a detailed examination will disclose that there is wide disparity between the age of coastal and overseas shipping. The tonnage engaged in overseas trade is quite "young" as 76 per cent is under ten years of age. In marked contrast to overseas shipping, coastal shipping has a high percentage of vessels in the age group 10 to 20 years. Only 29 per cent of the coastal fleet is below ten years of age. About 28 per cent of the tonnage is in the 10-14 age group while about 13 per cent is 20 years old and over. Considering the fact that the progress of coastal shipping has been slow during the Second Plan period, coupled with the need for speedy replacement due to the "advanced" age of a large percentage of existing fleet, the pace of acquisition of additional tonnage has to be considerably quickened if coastal shipping is not to suffer serious diminution in strength during the current Plan period also.

ANNUAL PLAN

Mysore to Spend Rs 42 Crores

After detailed discussions by the State representatives with the representatives of the Planning Commission and the Central Ministries, the annual plan for 1962-63

for the Mysore State has been finalised with a capital outlay of Rs 42 crores. The plan lays special emphasis on stepping up electricity generation, increasing irrigation potential and vast industrial expansion.

In the industrial sphere the major developments programmed are the expansion of the Government electric factory, the expansion of the ferrosilicon plant, steel expansion schemes, sulphuric acid plant and the Government sponsored porcelain factory. The approved programme for the expansion of the electric factory envisages the doubling of the existing capacity for the production of motors, transformers, and switch-gears. A proposal for trebling the capacity of this factory is under consideration. The Government-owned porcelain factory, which manufactures components for the Heavy Electricals Plant in Bhopal is scheduled to undertake the production of special bushings also in 1962-63. The first unit of the ferro-silicon plant is ready for commission and the second unit will be completed within the course of a few months.

Greater strides will be made in the field of rural industrialisation. For this purpose ten rural artisan training institutes will be set up in different parts of the State. Besides, the Government is also considering the establishment of co-operative industrial estates in the same year.

Under the head of power development are listed the addition of 31.2 MW to the Bhadra Project, the construction of the second stage of the Sharavathy Hydro-electric Project, the completion of 105 miles of transmission line from Sharavathy to Birur and the continuation of the work on the Birur-Bangalore line. Provision for extending electricity supply to 100 additional villages is also embodied in the plan.

Notable expansion in the field of irrigation is contemplated. The completion of work on Tungabhadra and Bhadra projects, the second state of the Ghataprabha project and the Malaprabha schemes are the important ones included in the current Plan. These projects, when completed, will enhance the irrigation potential by about 950,000 acres and the target for 1962-63 is fixed at 410,000 acres. In addition to these, several minor irrigation programmes will be implemented. Construction of 1,000 open wells and the repairing and maintenance of the existing tanks are the main schemes under this head.

A target of 220,000 tons has been fixed for additional food production during 1962-63. This is to be achieved by adopting modern techniques of agriculture. The drive for the progressive utilisation of improved seeds will be intensified and with this end in view the Government proposes to establish six seed farms in the State. Higher targets are also

fixed for commercial crops. During the same year production of oil-seeds will be stepped up by 30,000 tons, sugarcane by 19,000 tons and cotton by 70,000 tons.

—Orissa's Allocation

Orissa's annual plan for 1962-63, with an allocation of Rs 29 crores, against the anticipated expenditure of Rs 26 in 1961-62, embodies elaborate programmes for further industrialisation of the State, enhancement of agricultural production, expansion of transport facilities and general improvement in citizens health. A generous allocation of 43 per cent of the total outlay has been provided for irrigation and power projects. The plan envisages the completion of all the five units of Hirakud Stage II, with an aggregate capacity of 142 MW, two at the dam power station and three at Chilima power Station. The transmission line from Hirakud to Rourkela, which is under construction, is scheduled to be completed before the end of the current year. A comprehensive report has been drawn by the Government for transmission and distribution schemes and the survey for the major lines is in hand. Of these the Balmela-Upper Sileru Scheme (State 11) is a new major scheme.

Among the prominent continuing schemes come the Delta Irrigation Project and the Salandi Project, while the Birgovindpur is the most important one among the new schemes. When all these schemes are completed the irrigation potential of the State is likely to increase steadily to 11.5 lakh acres from 7.4 lakh acres by the end of 1962-63.

The Government proposes to establish an Industrial Development Corporation to accelerate the pace of industrialisation in the State. Apart from providing assistance to projects in the private sector, the Corporation will also start industries of its own. This year will also see the establishment of four standard industrial estates and 20 rural industrial estates at panchayat samati level to accommodate industrial co-operatives of the small units started by the Small Scale Industries' Corporation. The Government has proposed to acquire approximately 4,000 acres of land across Brahmin River at Rourkela and develop it into a suitable site for the establishment of large scale and medium sized industries.

Under the roads programme in Orissa, Third Plan accords priority for the construction of bridges and culverts and other improvement works on State highways which link the district headquarters and major projects such as railway centres and steel plant. In 1962-63 improvement works on 136 miles of roads will be undertaken apart

from the completion of 20 out of 54 bridges commenced in 1961-62 and starting work on eight new bridges.

The target for additional food production during the year under review has been fixed at 4 lakh tons against the estimated production 2.77 lakh tons in 1961-62. Output of oil seeds will be stepped up to 1.62 lakhs from 1.26 lakhs, sugar cane to 1.39 lakh tons from 1.31 lakh tons and jute to 3.53 lakh bales from 3.16 lakh bales.

Notable increase in the field of minor irrigations is envisaged. The extension of lift irrigation scheme to other areas, construction and repairs of reservoirs and diversion of weirs for flow irrigation scheme and construction of tube wells in selected sites are the important items under this head.

Intensification of the anti-malaria and small-pox drive, the popularisation of family planning scheme and increasing of facilities for medical education are the important programmes embodied in the health programme.

RESEARCH

New Fuel

A new substitute fuel for High-Speed Diesel Oil has been developed by Standard-Vacuum Oil Company. The Company has turned over the formula and composition of this new fuel to the Indian Institute of Petroleum for further tests and application.

Whereas the components of high-speed diesel oil have to be imported, the components of the new fuel are available locally. What is more, these components are at present surplus to India's requirements. Yet another advantage is that the components that go to the making of the new fuel are cheaper than those now used for high-speed diesel oil. The performance of the new fuel is equivalent to that of high-speed diesel oil.

The Indian Institute of Petroleum is expected to conduct intensive fleet tests to determine its large-scale effectivity when used in transport services.

After initial studies in India, Stanvac engaged the services of Institute Francais Du Petrole, an independent petroleum research group in France to conduct intensive laboratory tests for determining the effects of the use of the new fuel in machinery. Using radio-active tracers, the Institute's finding confirms that the new fuel's performance is satisfactory.

Since the components are locally produced, the new fuel if introduced in India will save considerable amount of foreign exchange at present spent in importing high-speed diesel oil. It is anticipated that in 1962 India will import about 453,000 tons of high-speed diesel oil at Rs 147 per ton.

The total bill for this will work out to nearly Rs 6.7 crores in foreign exchange. Another factor in favour of the new fuel is that it will alleviate to a great extent the problem of imbalance which is confronting the oil industry today by using components at present surplus to India's requirements. Since the components are cheaper than high-speed diesel oil, the new fuel exclusive of taxes and freight is expected to cost less.

GRA

A Quarter-Century of Progress

If in a highly competitive field like radio and allied products, the General Radio and Appliances Limited has made a mark in the country, it is largely due to the fact that from its inception the company has taken the utmost care to ensure that the products it markets are of the highest possible quality and to provide excellent service through its many dealers all over the country. GRA as it is now popularly known had a humble beginning as an importer of radio and allied products, some twenty-five years ago. (GRA celebrated its Silver Jubilee on 21 December 1961). Started as a family enterprise, in course of time it became a private limited company and then a public limited company. The founder of the company was Mr Abdulla Fazal-bhoi, a pioneer in the business of radio and cinema equipment in India. The company is now engaged in the distribution of indigenously-made articles and is closely connected with the well known British company of E. K. Cole Ltd and its Indian collaborators National Ecko Radio and Engineering Company Limited, for whose National Ecko Radio, it is sole distributor. The transformation from an importer of quality radios and other appliances to the distributor of indigenously made radio and other appliances has not been quite easy for the simple reason that consumers in our country in the 'fifties were rather suspicious of the quality of locally made products. But, by dint of its high principles such as marketing only quality goods combined with an excellent service, GRA has been able to overcome the prejudice and has built up a vast clientele for the products it markets. It considers itself first and foremost a service organisation whose endeavour should be to bring the consumer and the producer as closely as possible in such a way that the interests of both are best served. In coming years, GRA will be able to extend its service as it has plans to embark on the manufacture of new products in its own factories to be established soon.

NEWS IN BRIEF

The Government of India has sanctioned a loan of Rs 3 crores to the Maharashtra Government for financing the expenditure on the second stage of the Koyna Hydro-electric Project during the current fiscal year. This loan takes the total sanctioned so far to Rs 31.37 crores.

The World Bank has loaned Australia the equivalent of \$100 million to assist in financing the \$900 million dollar Snowy Mountains hydro-electric scheme.

A new ball bearing producing unit known as Bharat Ball Bearing Company Limited will be set up in Ranchi at an estimated cost of approximately Rs 2 crores. The Industrial Finance Corporation has consented to grant a loan of Rs 60 lakhs to this company.

Production of cement in December 1961 reached a new high of 735,000 tonnes. The despatch of cement from the factories also registered a notable increase. Despatches in December last totalled 729,000 tonnes in contrast to 637,000 tonnes in July and 658,000 tonnes in October 1961.

According to Tass, industrial production in the USSR looked up by 9.2 per cent in 1961. Since the current Seven-Year Plan was started three years ago, Soviet industrial production has increased by 33 per cent as against the target figure of 27 per cent.

The production of rubber in South Vietnam for 1961, according to first estimates, exceeded 80,000 tons. Production in the large plantations amounted to more than 70,000 tons while the small plantations accounted for 10,000 tons.

India purchased by 20,643 long tons of Malayan rubber in the last year. The quantum of Malayan rubber bought in December last aggregated 862 tons.

The Government of India has consented to permit exports of stainless steel scrap during January-June this year. Exports of this commodity were banned during the second half of the previous year.

PERSONAL

Mr J. C. Finlay will succeed Mr M. J. Condon as the Managing Director of Oil India Limited and General Manager of the Burmah Oil Company.

Mr Jayantilal B. Jariwala and Mr Niranjanlal Hiralal have been elected President and Vice-President respectively of the Surat Chamber of Commerce for 1962.

Mr L. T. Satarwala of India has been elected first Vice-Chairman of the fifth session of the Economic Commission for Asia and the Far East Committee on trade which is in session in Bangkok.

Clive Street Gossip

"I must have liberty
Withal, as large a charter as the wind
To blow on whom I please"
—As You Like It.

Mr H. V. R. IENGAR will in another month be relinquishing his office as Governor of the Reserve Bank after completing his term of five years. What the future holds for him I have no manner of knowing, but it would be a serious loss for Government if his great talent is not made use of in some other way. The private sector of course can be relied upon to snap him up, and I am wondering if he is not destined to have a national role to play. His achievements over a period that broadly coincided with the Second Plan are by any manner of reckoning spectacular. It fell to him to formulate a policy for the Reserve Bank so that two often contradictory and conflicting purposes were served. Even as he assumed office the money market was in supportably stringent, and a way had to be found to replenish the resources of the banking system so that industrial progress was not allowed to suffer for lack of banking finance; in fact, within brief months after he took over, bank Rate was raised, not because anti-inflationary use of the bank Rate was intended (though the price situation at the time had somewhat got out of hand) but because the primary rate was sadly out of alignment with the general structure of interest rates. Almost simultaneously extensive and intensive recourse to measures of selective credit control was had, in an attempt to hold the price line. That, after an almost disastrous first year in the Second Plan when price behaviour was ominous, a heartening element of steadiness is since apparent is undoubtedly not a little owing to the monetary policy framed and measures implemented by the Reserve Bank.

The second set of achievements to Mr Iengar's credit is, in my view, comprised in his almost deliberate enunciation of the Reserve Bank's role, functions and responsibilities in an era of planned development. Industrial production had to be encouraged the while that finance had to be denied to speculative withholding of stocks or the like. Fiscal measures of Government might give an upward bias to prices, but the Reserve Bank had to offset this as best it could through monetary measures. Indeed at one time the Reserve Bank Governor

confessed (in Madras, I think it was) that the central banking institution for its part had done everything it could to hold the price line; and inferentially from his speech could be drawn the conclusion that fiscal measures would then be necessary. I hardly need say that such a statement would not exactly have been politically popular.

But it is precisely this independence (within certain limitations) of the Reserve Bank Governor that Mr Iengar has steadfastly sought to emphasise; his last public utterance in particular seeks to make this clear. The RBI Governor is not a Government official, as such; nor is he a "political" man. He and his expert staff have the responsibility to keep an ever-vigilant eye on the state of the economy; and where direct and immediate action by the central bank does not come into conflict with Government's policy, there is prompt implementation of the corrective measures. But where such conflict does arise, the Reserve Bank so advises Government and it is then Government's decision. So, in the final analysis, in a developing economy, Government is supreme; but that is not to belittle the Reserve Bank's role or functions. I may suggest here that it is in the national interest to preserve the relative independence of the Reserve Bank Governor, for otherwise, the Reserve Bank's status will gradually be eroded to one of a governmental department.

It is possible that there should come about a situation where the Reserve Bank Governor's status and independence get undermined, and that, as I have said, would be a great pity. In the event of such an unfortunate occurrence, Mr Iengar's clear and lucid assessment of the relationship between Government and central bank would have been unavailing, and the consequence would be that the history of the Indian money market will not record his efforts in this behalf as an achievement. But I nothing doubt that the third of the endeavours to which he gave his all will ensure that Mr Iengar has a place among the great Governors that the Reserve Bank has had. I refer to the solicitude he has had for the

sound health of the banking system and to the steps that he took so to strengthen Indian banks that they would be equipped to finance the expansion of industry and trade in the private sector.

On the surface early in 1960 there was nothing much wrong with the banking system. Profits it appeared were adequate, for there was a tendency for the dividends to be raised. But there were other, important, factors to be taken into account. Banks seemed almost without pause to be fully extended; at the busy season peaks the ratio of Advances to Deposits reached heights never touched before. Banks' Deposits, it is true, were rising, though inadequate wholly to cover the expansion in Advances. While naturally every possible care was taken to ensure the creditworthiness of new loans given, the inescapable need there certainly was to add to inner reserves for the contingency of banking losses. Then, though profits were rising, the magnitude of the increase in relation to the expansion in business was not quite satisfactory. Matters came to a head with the failure of Palai Central and one other Scheduled Bank.

What was to be done? Obviously banks' earning potential had to be improved. One method would be to reduce expenditure, by pushing down the maxima of interest rates that, under the inter-bank agreement on Deposit rates, banks could pay. But the attitude of most banks seemed to be that without the lure of a higher rate on Deposits new resources could be not enticed. We now come to the momentous autumn of 1960, when Mr Iengar decided that, if the banks were not willing to help themselves, the Reserve Bank would step in and issue a directive. Banks were advised to increase their rate on Advances to a minimum of 5 per cent, and by half a per cent on all existing rates. The fruits of that directive have ripened for all to see in 1961, and the spectacular profits that have been declared owe not a little to Mr Iengar's determination to strengthen Indian banking.

It was not enough that the earning capacity was bettered; care and action had to be taken to ensure that such additional earnings were not frittered away in dividends or even in bonus to staff. Hence the long investigation from about the middle of last year, when the Reserve Bank suggested that banks should set about adding to reserves and raising fresh

capital until a specified capital/reserves ratio to Deposits was achieved. Then, toward the end of the year, Mr Iengar made it known that he was not in favour of compulsion, but expected that by convention banks would transfer 20 per cent of the declared profit to reserve, and seek besides to raise capital from rights issues, until a ratio of 6 per cent of Deposits was reached. The appropriation announcements in respect of 1961 profits would, I am sure, have warmed the cockles of Mr Iengar's heart.

And shall we forget the implementation of the scheme for insurance of bank Deposits? or the vigorous manner in which the Refinance Corporation is setting about its business, so that banks' resources can be replenished? The office of Governor of the Reserve Bank these past five years has been a challenging one. Whether in regard to fostering industrial production or to preventing the availability of banking finance for speculative purposes: whether as concerns the Reserve Bank's role in a developing economy or the relationship that had to be built up with Government, whether in adding to banks' earning potential or in strengthening the banking system, the problems that Mr Iengar faced were out of the ordinary. He met them head-on, and the solutions he found have left the Indian economy and money market in apt and apposite condition for tackling the demands and meeting the challenges of the Third Plan.

Journalist or Industrialist? Mr C. R. Srinivasan himself I know, more fancied the former avocation, and while as Editor of The Swadesamitran his career was certainly distinguished; his real contribution to the country has been in the realm of industry. Known for his resourcefulness and high sense of duty, which he brought to bear on any the smallest task that he was asked to do, the post-war period provided him with rich opportunities for directing the destinies of a particular group of companies as also to participate in multifarious activities which included that of a Director of the Central Board of the Reserve Bank. That he spearheaded the industrial-mindedness of the South, and set an example which was quickly and efficiently emulated, are the achievements that he will be remembered by. He had a voracious appetite for reading, and in the forties, I recollect, every trip to Calcutta was a chance that he did not miss to buy a box-load of detective thrillers in paper-back editions, of which (the thrillers, I mean) he was inordinately fond. His passing away is thus a loss equally to Industry and Journalism.

EAVESDROPPER.

Olympus

Fertiliser Schedule

THE progress in the implementation of the programme for expansion of fertiliser output it is learnt, was among the major topics discussed at last week's meeting of the Standing Committee of the Central Advisory Council of Industries. Against the Third Plan fertiliser target of one million tons of nitrogen per annum, additional capacity already approved adds up to nearly 800,000 tons(N) of which 341,750 tons(N) is in the private sector. The balance of 450,000 tons in the public sector includes two Second Plan projects, Rourkela and Neyveli representing capacity of 190,000 tons, which have spilled over into the Third Plan. In addition three projects in West Bengal, Gujarat and Mysore, for total capacity of 224,000 tons of nitrogen, are under consideration. Out of the total additional capacity so far approved, capacity for 440,000 tons(N) in the public sector and 211,750 tons(N) in the private sector is expected to be set up before the end of the Third Plan. If the programme for expansion of fertiliser production is completed according to schedule, the availability of fertiliser should be much better than what it was during the Second Plan. But the need for imports will still continue as the Ministry of Food and Agriculture has fixed the consumption target at one million tons in terms of Nitrogen. The capacity at the end of the Second Plan was 234,470 tons, but actual production was only 97,150 tons(N) in 1960-61 against the target of 373,000 tons(N). The total availability in that year, including imports of 115,000 tons(N), was 212,650 tons. Estimates of consumption, internal production and

The proprietors of Indian Patent No. 51027 "Synthetic reactor for the hydrogenation of carbon monoxide in a liquid medium" desire to conduct negotiations for the grant of a manufacturing licence with respect to or for the disposal of the above numbered Patent.

Anyone interested should apply to:

Edward Evans & Co.
53/64, Chancery Lane,
Chancery House
London W.C.2

imports during the Third Plan are given below.
(Figures in 1000 tons N)

	Consumption	Internal Production	Import Requirement
1961-62	420	140	280
1962-63	580	200	380
1963-64	780	300	480
1964-65	920	500	420
1965-66	1000	750	250

As the availability of foreign exchange for annual imports on the scale indicated above is problematical, supplies of fertiliser will continue to be short of the requirements as estimated by the Ministry of Food & Agriculture, until the new projects are able to attain capacity production, unless special barter arrangements are made for imports.

The production programme of the new projects in the public and private sectors is summarised below.

Public Sector

The Rourkela plant is expected to go into production before the end of this year. This plant will have capacity to produce 600,000 tons of nitro-chalk per annum (120,000 tons N) using coke oven gas.

The Neyveli plant is expected to be completed in 1963. This plant will produce urea using lignite as feed-stock and have a capacity for 155,000 tons urea (70,000 tons N).

The Trombay project using Refinery Gas and liquid petroleum feed-stock will have capacity of 100,000 tons Urea and 225,000 tons Nitrophosphate, equivalent to 90,000 tons (N), and expected to go into production in 1964.

The Nahorkatiya plant using natural gas as feed-stock will have capacity for 50,000 tons urea and 100,000 tons Ammonium sulphate equivalent to 40,000 tons(N). This plant is expected to be completed by 1964-65.

The second and third stage expansion schemes of Fertilisers and Chemicals, Travancore, using Naphtha as feed-stock will have capacity of 165,000 tons Ammonium sulphate, 132,000 tons Ammonium phosphate and 24,500 tons Ammonium chloride equivalent to 40,000 tons (N). The second stage expansion scheme is expected to be completed in 1962 and the third stage, representing capacity of 30,000 tons (N), by 1965.

The Gorakhpur plant will have capacity of 180,000 tons urea (80,000 tons N). This plant, which will use Naphtha as feed-

stock, is expected to go into production in 1965.

In addition to the above, the steel plants will produce 50,000 tons ammonium sulphate (10,000 tons N) as byproduct, using coke oven gas.

Private Sector

Four of the private sector plants are expected to be completed by 1965-66, while Parry & Co's plant at Ennore, which will have capacity for 50,000 tons ammonium phosphate (8,250 tons N), is expected to go into production before the end of the current year. The plants at Kothagudem and Varanasi will use coal and coke respectively while those at Vishakapatnam and Tuticorin will be based on Naphtha. The capacities will be: Kothagudem-180,000 tons Urea (80,000 tons N); Vishakhapatnam-365,000 tons ammonium phosphate and 16,000 tons urea (50,000 tons N); Varanasi-40,000 tons ammonium chloride (10,000 tons N) and Tuticorin 200,000 tons ammonium phosphate (63,500 tons N) in two stages.

It is estimated that the total investment required for reaching the Third Plan targets will be of the order of Rs 250 crores with a foreign exchange component of Rs 65 crores. It is learnt that foreign exchange of Rs 65 crores has been arranged for the public sector projects at Rourkela, Trombay, Neyveli and the expansion of FACT. Foreign exchange requirements of projects in the private sector will be met by foreign collaborators. The expenditure of foreign exchange on fertiliser plants will be reduced with the establishment of capacity for manufacture of machinery and specialised equipment in the country. The Heavy Engineering Corporation at Ranchi will produce heavy compressors, pressure vessels and other specialised equipment required by fertiliser factories. At present about 50 per cent of the equipment required for fertiliser factories is being made in the country and the rest is imported.

Import Blue Book

In order to speed up the issue of import licences for import of capital goods, the Ministry of Commerce and Industry, it is learnt, have decided to publish an Import Policy Blue Book which will supplement the information contained in the Red Book. Entrepreneurs who have completed arrangements with their foreign collaborators for import of plant and equipment find, when they apply for the necessary import licence, that they are asked to delete certain items as these are manufactured in the country, and the entrepreneurs are asked to make arrangements to get these items from the Indian manufacturers. This frequently means considerable delay in the execution of the project and the foreign collaborators naturally do

not appreciate the last minute changes.

The Red Book, which is issued every six months, is not very helpful in this respect as it mainly deals with the overall import policy and the quotas for established importers. The classification of items is too broadbased and gives no clear indication of particular items which are currently being manufactured in the country or could be got manufactured and for which import licences are not issued.

The new Import Policy Blue Book which will be shortly published, on the other hand, will show the specific plants, machinery, etc., which are regularly manufactured in the country as well as those which, though not at present being manufactured, could be got manufactured in the country if the drawings are supplied by foreign collaborators. The Blue Book will also contain detailed nomenclature of various items of machinery, range of production and the names and addresses of manufacturers.

The Blue Book will enable the entrepreneur to decide, before applying for licence for importing plant and equipment, what items are available within the country and for what items he will have to arrange for imports and applications drawn up on this basis could be processed without delay to the advantage of all concerned. As special efforts are being made to expand machine building capacity in the country, revised editions of the Blue Book, or supplementary lists incorporating the latest changes, will have to be issued at frequent intervals if the publication is to serve the purpose for which it is intended.

Rural Works Programme

A conference of representatives of the Planning Commission, the Ministries of the Union Government and the State Governments concerned will be meeting in Calcutta toward the end of the week to consider the rural works programme for the Eastern region. It was indicated a few months ago that it was proposed to start 150 new projects in the coming lean season on the top of the 32 projects started last year. It was also stated that the Centre would provide the funds for the entire outlay, half as grant and half as loan. The regional conference which concluded in Delhi on 30 January after a two-day session, has approved 66 projects for the northern and central regions. Each project will run for a period of three years, subject to an expenditure limit of Rs 5 lakhs for each project. Of the 66 projects, there will be ten each in the States of Madhya Pradesh, Gujarat, Punjab and Rajasthan, 15 in Uttar Pradesh and six in Jammu and Kashmir and five in Himachal Pradesh.

Markets

JUTE

Irregular Trend

ALTHOUGH the jute markets are quiet for the past two or three days, earlier in the week, they ruled steady. While improved offtake helped sentiment in the raw jute market, reports of substantial business having been done with Argentina, US and Russia imparted a firm trend to gunnies. It is evident that one of the stabilising factors was the registration of the buffer Stock Agency. It was presumably assumed that once this body was registered purchase operations could be started at any required point of time. The very coming into being of the Agency no doubt gives an assurance to the jute cultivators that he will not be left to the mercy of the speculator. But its efficacy in the present context of the expectation of a bumper jute crop this year is yet to be proved. Earlier this jute season, indications were that though large, the 1961-62 jute crop would not be so big as to leave a surplus that would prove unmanageable especially since mills were expected to consume more raw jute on account of the stepping up of their output during the second half of the jute year. The prevailing belief now is that the crop will turn out to be a bumper one. The President of the Bharat Jute Dealers Association estimates the crop at 75 lakh bales. This makes the crop the highest in many years and will pose

a really difficult problem for the Government even with the Buffer Stock Agency going into operation. Perhaps further remedies have to be devised if the objective of ensuring that raw jute basis Assam Bottoms does not fall below the Rs 30 mark. Remedies already suggested include resumption of raw jute exports and further increase in the production of jute goods by mills. In the meantime, the Indian Jute Mills Association is continuing its policy of issuing minimum jute purchase quotas to the member mills in order to help to support jute prices. For the week ending 3 February a total quota of about 10 lakh maunds has been allocated, which is considerably in excess of the current rate of jute imports. Already a number of mills are working to their full capacity following the permission given by the IJMA but the period allowed expires at the end of the current month. Up to the end of March, however, all mills have been allowed to work with only 7½ per cent of their looms sealed. It is quite on the cards that the IJMA may extend this period further and the President of the Bharat Jute Dealers Association has suggested that it should be extended up to the end of June. But the decision to prolong the period of increased production will very much depend on the level of month-end stocks of jute goods with mills.

The jute goods market opened the week last Thursday on a steady note with the rates further firming up in

the subsequent two or three days. The improved tone followed reports of enquiries from Argentina, the US and Russia. It was reported that the Argentine order was for quite a substantial quantity. Toward the close, however, the undertone turned quiet in the absence of fresh buying interest. This is presumably partly due to the expectation of an increase in January-end stocks of jute goods with mills despite production having been adversely affected by the intervention of holidays, and partly due to the return of easier conditions to the raw jute market.

The news of the registration of the Buffer Stock Agency, imparted steadiness to the raw jute market in earlier dealings. The expectation that the Agency would siphon off the excess quantity of raw jute in the market coupled with the hope that active steps would be taken by Government to ensure that the minimum prices are maintained somehow made sellers rather reserved. The fact jute goods were in good request provided an added incentive. The strike by the porters in the Cossipore market lasting during most part of the week was a source of encouragement to bulls. But toward the close of the week sentiment weakened following the end of the porters' strike at Cossipore and the decline in mill interest.

TEA

Better Outlook

WITH prices well maintained since the beginning of December, both for domestic and export sales, the Tea industry now views its prospects for the current season with a degree of cautious confidence. Many types of North Indian tea are fetching up to a rupee more per kg than in the October-November period, when prices declined from sale to sale. The bottom: was touched at the end of November when 68,524 chests were sold at an average price of Rs 3.78 per kg as compared with Rs 5.11 for the corresponding sale in 1960-61 and Rs 5.20 in 1959-60.

In the latest export sale, the average price realised was Rs 4.39—61 nP above the November-end sale figure; but still 57 nP lower than the level prevailing at this time in 1960-61 and 46 nP below that of 1959-60. Taking the average of all exports sales up to last Monday's, it shows that sales' realisations this year are well below that of the previous two years. Against an average of Rs 5.49 during last season and of Rs 5.22 the year before, the figure for the current season is only Rs 4.75.

Meanwhile, in the Export sale held in Calcutta this week, offerings were 62,341 packages. There was a strong general demand, the strongest feature of the sale being the competition for clean black fannings. Plain broken were up to 15 nP dearer, while their fannings were often considerably dearer. "Tea for price" was about steady. Orthodox BOPs generally sold well except for a few poorer liquoring Assams, which were easier. Similar Fannings were dearer. Best CTC types showed some irregularity in price; but those with autumnal quality were sold well. Medium and

secondary descriptions were firm to dearer with more interest centred on BPs.

Legg-cut types were fully firm except for the more fibrous kinds, which were a little easier. Darjeeling types were sold well. Whole Leaf was firm around last rates. Tippy sorts were strong. Following rates were quoted:—Clean Plain Pekoe Rs 4.00 to Rs 4.20; Plain BP Rs 3.70 to Rs 3.90; Plain Fannings Rs 4.00 to Rs 4.50; Medium Assam CTC BP Rs 5.30 to Rs 5.50; Medium Assam CTC Fannings Rs 5.20 to Rs 5.50; Best Assam CTC BP Rs 5.70 to Rs 6.10 and Best Assam CTC Fannings Rs 5.80 to Rs 6.30.

In the Internal Sale, offerings were 26,601 packages of Dusts and 628 packages of Leaf grades. There was a good general demand for dusts. Bright liquoring CTC types were keenly competed for and were quoted fully firm, while the poorer types were irregular with the leafy teas generally lower by up to 20 nP per kilo. Fibrous kinds were once again sold well. Dusts of orthodox manufacture opened up to 10 nP easier, but strengthened considerably as the sale progressed. The strongest feature of the sale was the non-withdrawal of descriptions, which realised very useful prices. Following rates were quoted:—Plain Orthodox Dust Rs 3.90 to Rs 4.60; Medium Assam Dust Rs 4.30 to Rs 5.10; Legg-cut Dust Rs 4.60 to Rs 5.20; Medium Assam CTC Dust Rs 5.50 to Rs 6.10 and Good Assam CTC Dust Rs 6.50 to Rs 7.00. Leaf grades were sold at irregular rates.

According to trade sources, arrivals of tea in the Calcutta Port were lower at 643,152 chests in December 1961 as against 705,248 chests in the previous month and 736,466 chests in December 1960. Total arrivals, in the nine months ended December 1961, however, rose to 4,308,939 chests as compared to 3,945,158 chests in the similar 1960 period.

Arrivals by rail and road increased from 1,125,554 chests and 188,449 chests in April-December 1960 to 1,244,142 chests and 319,760 chests respectively in the period under review as did those by river from 2,500,171 chests to 2,621,761 chests. Arrivals by air, however, declined from 130,984 chests to 123,266 chests.

With an outturn of 12.8 million pounds in December 1961, total production of tea in South India last year increased to 172.6 million pounds from 170.3 million pounds in 1960. Last year's production was even larger than the outturn in 1959 by 18 million pounds.

In the Colombo market, offerings were 7,973,197 pounds. Quality from the Western districts was improved and demand was good. Dimbula/Dickoya Broken were generally dearer at the opening in line with quality. Plainest liquoring medium teas declined by about 5 to 8 cents per pound; but better sorts were about 5 cents dearer. Plain Uva teas were easier; but brighter sorts were fully firm to dearer. Demand for low-grown teas, suitable for the Middle East, was smaller and these grades declined by 10 to 15 cents. Small Leaf Broken were steady. Liquoring Fannings and leaf teas,

NOTE:—The rates for ready raw jute are nominally quoted at Rs 30 per maund for Assam Bottom; Rs 29.50 for Northern Bottom and Rs 32 for Daisee Bottom.

especially black leaf Orange Pekoes, were strong.

An export allotment of 12.5 million pounds of tea has been fixed by the Pakistan Government for the year ended 31 March, 1962. The export quota has been decided after consultation with the Pakistan Tea Board.

In London auction, the demand continued to be strong and active for the 18,342 packages of Ceylon teas offered this week. Plain sorts were fully firm, while the better liquoring BOPs and BOP Fannings were distinctly dearer. The few useful liquoring invoices among 7,300 packages of Southern Indian teas submitted were dearer; but the rest of the offerings were irregularly easier, especially inferior liquoring kinds.

* COTTON Futures Lack Support

The steady trend that was visible in the forward section of the cotton market in Bombay during the past few weeks has at last showed signs of petering off and has yielded place to some amount of easiness during the past week. There was not even a semblance of support to the futures as the prices ruled around the basic ceiling. This was not an altogether unexpected development for any further rise in prices would result in a compulsory and automatic cut at the ceiling level. The closure of some of the upcountry spot cotton markets as a protest against the vigorous enforcement of the requisition orders also affected the sentiment. Trading was whittled down to a great measure on account of the perplexities and uncertainties that shroud the several inter-related problems such as requisitioning, cancellation of delivery contracts, freezing of cotton, the rescinding of the penalty clause pertaining to non-delivery and the like and the market is eagerly awaiting the final outcome of the deliberation on many of these aspects that are going on in the capital.

The Jarilla March contract, which opened at the previous week's closing of Rs 890.00, improved to Rs 691.00 and after hovering in a narrow groove in the initial days slipped down to Rs 684.50, and then looked upto Rs 686.00 at the closing stage. On Tuesday last the contract closed a shade higher at Rs 688.00.

Business transaction during the week under review was restricted only to 3,500 bales as most of the traders were reluctant to make any fresh commitments on account of the various uncertainties.

Reports that emanated from Ahmedabad indicate that the Regional Survey Committee in that destination will comprise two panels of nine members each and cotton ginned in Ahmedabad and other places will be subject to surveys by the Committee in Ahmedabad. On account of the virtual deadlock created in some of the cotton marketing centres, it is expected that some relieving measures will be introduced by the authorities immediately.

A gradual slackness in mill activity was noticeable in the spot market at Sewri. This was obviously due to the fact that many of the mills had already covered a major portion of their quotas especially with reference to the variety-wise distribution of cotton. Trading was cribbed, cabined and confined to a few select varieties such as CO2, L147 and Digvijay cotton, the prices of which ruled firm.

In the import section Sudan, East African, Egyptian and some of the available lots of American growth met with good spinner interest. The first consignment of East African new crop was found inferior in quality and short in staple. Naturally the mills preferred not to extend their commitments in this growth.

On the export front there was no fresh development as demand was conspicuously absent. The ceiling for the export quota of 75,000 bales of Bengal Deshi has been reached. Japan is reported to have accounted for a sizable quantum of this growth for April-May shipment.

The total exports of all kinds of cotton from the United States in November 1961 aggregated 402,600 running bales. This figure was about one-third higher than the relevant figure in the previous month. However, in contrast to exports in the same month in the previous year the total was 44 per cent lower. Exports of US cotton in the first four months of the current season (Aug.-Nov.) at 1,669,000 bales was up by 14 per cent from those of the same period in 1960. According to present estimates, exports for the full 1961-62 season will be of the order of 5.5 million running bales as against 6.6 million bales of the preceding season. Registrations for exports under 1961-62 payment-in-kind programme amounted to 3,100,000 running bales as on 5 January against 4,745,000 bales on approximately the same date a year earlier.

PIECEGOODS

The sentiment in the Bombay piecegoods market, despite discouraging offtake, ruled firm during the past week. Quality goods were in short supply.

The demand from upcountry centres was far from encouraging in spite of the fact that the marriage season has already set in. The stringent monetary conditions and the concatenation of the planets were to a great extent, responsible to the poor offtake. According to the consensus demand is to pick up from the second week of February onwards. The close observation of the authorities on the prices of selected varieties was also attributed to the restricted turnover and some revision of prices in the near future is not entirely ruled out.

In striking contrast to the disappointing interest evoked by the seasonal goods, quality goods of a few prominent mills met with good enquiry and the prices of these varieties maintained high levels. Powerloom goods ruled steady though the demand failed to flow on the expected level. Good quality dhoties, saris and bleached longcloth commanded the attraction of the buyers.

Rajasthan showed keen interest in mulmul and Madhya Pradesh made inquiries for seasonal goods. Bihar, Kanpur and Calcutta are reported to have enquired for saris and dhoties for delivery late in February. In the foreign section the wide disparity in prices stood as a stumbling block in effecting good business. The UK was satisfied with a restricted offtake of grey and furnishing fabrics. Sudan's fancy was focussed on good quality voiles and printed poplins. Eritrea and Ethiopia accounted for a moderate quantum of bleached mulls, grey chaddars, sheetings and bleached dhoties. East Africa directed its attention toward coatings, shirtings, grey canvas, gad-lapat and longcloth and that destination transacted business on a normal scale.

* World Pepper Output

WORLD Pepper production is expected to show an extension of the decline in 1962 as a result of unfavourable weather conditions witnessed in the two major producing countries, viz, India and Indonesia. The damage to the crop, due to storms and floods in Kerala, where 95 per cent of India's pepper is being produced, will lead to a decline in pepper output during the current year.

According to the US Department of Agriculture, there will be a decline of 8 per cent in world pepper production in 1961 as compared to that in 1960. To some extent, the decline in production, mainly recorded in Asia, will be relieved by an expected increase in output in Africa and Latin America.

With India's crop estimate at 58.2 million pounds showing an 8 per cent decline from the 1960 harvest, the world pepper production during the calendar year 1961 will be 157.7 million pounds as against 170.3 million pounds in the previous year.

Indonesia's production is placed at 50.7 million pounds as against the revised 1960 estimate of 57.3 million pounds. As stated earlier, a further decrease in 1962 is expected in view of an extended dry period in South Sumatra.

Production in Sarawak declined to 13.5 million pounds with prospects of a smaller crop in 1962. The drop is attributed to replanting on poor soils, inadequate fertilisation and foot-rot disease.

Meanwhile, conditions in the Cochín pepper market remained weak as buyers showed distinct apathy, the rate being quoted at Rs 285.50 per quintal for the ready position. Lack of buying interest from the USA had a slightly upsetting effect on the market sentiment, which was further worsened by the absence of enquiry locally.

* RUBBER

According to the latest figures released by the Rubber Board, total supplies of natural rubber in India increased to 16,211 metric tons in November from 14,573 metric tons in

the previous month. These figures include 11,291 metric tons being the opening stock for the month under review, a production of 3,200 metric tons and imports of 1,720 metric tons. Consumption of natural rubber by the manufacturers also rose from 3,282 metric tons in October to 4,091 metric tons.

As the increase in rubber supplies during the month under review was more than the increase in the offtake, stocks of natural rubber with estates, dealers and manufacturers, at the end of November 1961, were higher at 12,120 metric tons as against 11,291 metric tons at the end of the previous month.

Besides, there were 2,317 metric tons of synthetic rubber in stock at the end of November as against 2,463 metric tons at the end of October.

In November 1960, supplies of natural rubber in the country totalled 15,008 metric tons, of which 4,266 metric tons were consumed by the manufacturers, leaving a stock of 10,742 metric tons at the end of the month. In addition, there was a stock of 2,474 metric tons of synthetic rubber at the end of November 1960.

* SHELLAC

The final estimates, released by the Indian Lac Committee, reveal a total of 392,000 maunds of katki crop for the current year. Preliminary estimates had expected a yield of 393,000 maunds. The normal production of the Katki crop, based on the average production for the last ten years, is 265,000 maunds.

The estimate for Madhya Pradesh has decreased from 151,000 maunds to 136,000 maunds, while the estimates for Uttar Pradesh, West Bengal and Bihar have increased from 5,000 maunds to 12,000 maunds; from 30,000 maunds to 35,000 maunds and from 154,000 maunds to 156,000 maunds respectively. Estimates for other States are the same as in the preliminary forecast.

The Aghani (Kusmi) crop is expected to yield 55,000 maunds this year as compared with 95,000 maunds last year and a normal yield of 75,000 maunds based on the last ten years' average production.

Conditions in the Calcutta shellac market remained unchanged with Pure TN variety quoting around Rs 112 per package of 74.40 kilos. Shipments during the current month until 22 January were 14,125 packages, comprising 7,777 packages of shellac; 4,588 packages of seedlac; 231 packages of buttonlac and 1,519 packages of other varieties.

* SUGAR

The mounting stocks of sugar lying with the industry seem to be causing worry to all concerned. The current season opened with a stock of 1,186,000 tons on 1 November 1961; and this went up to 1,348,000 tons on 1 January 1962. A year ago, stocks with the mills as on 30 November, were only 595,000 tons and, on 1 January, were only 1,037,000 tons. Such an accumulation of stocks is attributed to unstable prices with wholesale dealers reluctant to hold any appreciable quantities.

The offtake in December for home consumption was only 178,000 tons as against 190,000 tons in November and 220,000 tons in October. This declining trend reflects the running of inventories by the trade due to nervousness. The pressure upon price, natural in a season which started with stocks at double the level of the previous year, has been aggravated by unplanned release of sugar to the market by the Government of India when sugar prices have been decontrolled.

Again, nervousness over the industry's prospects this season has been aggravated by the US move that its future purchases shall be made on the basis of global tenders and not on the basis of countrywise quotas at higher than world prices. In effect, this means that the Indian industry will have to fight for exports to the hitherto sheltered US market with other producing countries against the background of a worldwide sugar surplus. With the world price already down to \$21.10sh and the fall in home prices of over Rs 1.50 a maund since last September, the industry may find it difficult to absorb export losses to the same extent as in the last season.

* NON-FERROUS METALS

Prices of Non-Ferrous Metals have exhibited an easier tendency in the Bombay market. Offerings have resulted from lower advices from the ready section, from the upcountry centres and also from abroad.

In the Copper section, the volume of business has been thin. Even though the spot section has experienced a semblance of demand, sentiment cannot be lifted to any measurable degree. Zinc has declined due to subdued enquiry, increased arrivals and larger offerings. Trading in the Lead section continues to remain dull and featureless.

Although the long-term outlook for Tin remains decidedly inclined toward the upward direction, the values have, at present, tended to move down due to the slackened pace of the offtake. Speculators have also been induced to unload their holdings gradually and some of them are even reported to have gone "short".

The Bolivian Government has unexpectedly indicated that it is willing to take part in the Tin Council meeting in London. Bolivia had earlier been pressing for the ceiling price for tin to be raised from £880 to £1,000 a ton; but the Council has increased it to only £965. Bolivia now says that it is prepared to accept the new figure as a compromise in order to have a basic line of defence if sales of tin are made from the American strategic stockpile.

The basis for the Tin Council's prices, the Bolivian Government has pointed out, is the price on the London Metal Exchange. The actual price of metal sold from the stockpile, will, therefore, have to be higher to take into account the freight costs from London to the US and other charges. The Bolivian statement, together with Bolivia's surprising assertion that the current tin deficit is smaller than every one thinks, has weakened tin prices on the London Metal Exchange.

Bolivia is the only one of the main producers in a position substantially to increase output; but this will not be economic at prices below £1,200 a ton. In this connection, reports from London state that "the world must accustom itself to a permanent shortage of tin".

* SILK

Prices of raw silk in the Bangalore Silk market maintained a steady trend during the week ended 26 January 1962. Filature raw silk of 20/22 Dr. was quoted between Rs 84.89 and Rs 85.99 per kgm. Cottage basin silk ruled between Rs 72.75 and Rs 77.15 per kgm. Rates of charka raw silk ranged between Rs 44.09 and Rs 69.44 per kgm.

Spun silk yarn of 2/210's was quoted at Rs 81.40 per kgm.

Rates of reeling cocoons ranged between Rs 3.75 and Rs 5.25 per kgm as against last week end's fluctuations between Rs 2.84 and Rs 4.50 per kgm. Mysore seed cocoons fluctuated between Rs 3.50 and Rs 4.50 per thousand and foreign race seed cocoons between Rs 3.00 and Rs 10.00 per thousand.

In the Bhagalpur Silk market, Tasar reeling cocoon has registered a decline to a level between Rs 30 and Rs 35 per kahan in Santhal District and Rs 80 and Rs 90 per kahan in Singhbhum District and other areas in Bihar State. Similar downward trend noticed in important market centres in Orissa and Madhya Pradesh also. The Bhagalpur silk market remained steady in respect of prices of tasar silk, silk-waste and spun silk yarn. Prices of tasar raw silk were quoted between Rs 66.14 and Rs 105.22 per kgm as in the last week. Tasar hand-spun silk yarn ruled between Rs 30.85 and Rs 48.50 per kgm. Tasar silk-waste fetched demand between Rs 22.04 and Rs 26.46 per kgm.

Landed cost of Japanese raw silk of 20/22 Dr. was reported at Rs 80.66 per kgm during December 1961.

* GOLD & SILVER

After initial firmness, prices on the Bombay Bullion Exchange displayed a slightly easier tendency toward the close. The initial firmness in the yellow metal was mainly influenced by the pressure of arrivals in smuggled gold having declined. Sentiment was further aided by the renewed support from the speculative interests in Akola, Agra and Calcutta. Towards the close, however, there was some selling pressure on the feeling that, after the buyers were satisfied, supplies would again exceed offtake and the floating stocks in the market would rise. Receipts totalled 6,000 tolas as against an offtake of 8,000 tolas. Ready changed hands at Rs 119.90 to Rs 120.20, while Sovereign ruled steady at Rs 97.

In Silver, the upcountry operators were quiet. Moreover, there was some selling pressure from Rajasthan. Arrivals amounted to 45 bars as against an offtake of only 15 bars. Ready silver (below 996) changed hands at Rs 212.90 to Rs 213.20.

* OILS & OLSEEDS

After an initial sharp rise, prices of oils and oilseeds drifted lower.

Activity was, however, mostly centred around Castor. The subsequent weakness of the market was attributed to the reports of favourable weather from Uttar Pradesh and liquidation by bulls.

The initial spurt in Castor was caused by the reports of damage to the standing crop in Gujarat owing to the cold wave and frostbite. It was calculated that the loss of the crop might be to the extent of 20 to 25 per cent. As a result, operators having short positions rushed to cover in order to avert possible losses.

But the unusually brisk arrivals of the new castor crop in Andhra Pradesh obscured the immediate outlook for castor. Receipts in this State were placed around 7,000 bags a day—largest in volume noticed in the last fifteen years. Marketing in Gujarat is also reported to have commenced and is likely to gather momentum soon. The pressure of arrivals is not confined to castor-seeds only. It is increasingly being felt in castor oil, too.

Till recently, the bulk of the castor oil receipts was finding its way in the adulteration of other edible oils. But now, the demand from that direction has tapered off. Consequently, castor-seed prices in Andhra Pradesh have moved down to Rs 85 and a further fall is expected to manifest itself if the present conditions continue longer.

Lack of buying at the present lower level in castor oil is mainly attributed to the discouraging advices from Brazil, where the rate is quoted at 14.40 cents per pound for March-April delivery, as against India's comparative rate of 15.75 cents for commercial quality and 16.50 cents for BSS quality. The UK is interested only in prompt shipments; but because of the non-availability of freights, the immediate prospects for exports to that destination are also bleak. In Bombay, ready castor is quoted at Rs 37 and Castor Oil, commercial quality, at Rs 15.00.

In the absence of official dealings, prices in the Groundnut section moved narrowly. Marketing at the primary markets did not show any improvement. Ready bold was quoted at Rs 47.50 and Groundnut Oil at Rs 19.65.

In the Linseed section, price movements were mostly influenced by advices from the mustard section. Linseed ready was quoted at Rs 43.50 and Linseed Oil at Rs 18.90.

In the Calcutta market, the price of linseed has become softer around Rs 32.25 a maund for the ready position. Arrivals from upcountry centres have increased; but buyers are cautious in anticipation of a further decline in the price.

Trading in the Linseed Oil section is also dull and small business is being transacted for ready delivery. The price of oilcake has also declined in the absence of enquiries from domestic and foreign buyers.

From an unsteady trend last week, the groundnut oil and seed market improved slightly today. Mostly the quotations looked up in a haphazard way with sellers suspicious still of the rates and buyers keen to finish off deals for immediate commitments. Calcutta and Bombay advices affect-

ed the market trend towards a lower level. Arrivals of kernels were not up to the mark. Local receipts of kernels were in the neighbourhood of 70/75 tons while in South and North district centres receipts daily amounted to 400 tons.

Last week the offtake by crushers locally was higher and so the price of oil did not fall. This week the enquiries for groundnut oil slackened with the result that there is a slight sliding down of the price.

The price of groundnut oil last week varied between Rs 430 and Rs 431 per candy of 500 lbs. This week the quotation was lower at Rs 427-428 per candy. The quintal rate ranged between Rs 188.25 and Rs 188.70.

There is no activity in the hedge contractors and only squaring up transactions were done in the market.

The market closed at the following prices of oils and seeds.

Groundnut oil per quintal ex-Madras godown expeller Ready 3 per cent F.F.A. Rs 188.25.

Kernels per 80 kgs. Superior Rs 77 bold Rs 75.

Castor oil per quintal Rs 159.60, Coconut oil per tin Rs 40.25 to Rs 40.50.

Gingelly oil Rs 224.65 per quintal. Gingelly seed Rs 89/90 per bag. Groundnut cake Rs 26.50 to Rs 26.75 per bag of 160 lbs.

Groundnut oil last week was quoted at Rs 189.60.

This continued till Saturday and even on Monday the recession was only very slightly visible.

The price of groundnut kernels for the bold quality was at Rs 76.50 and improved to Rs 77 last week. That is being maintained.

The bold variety was at Rs 74 on Tuesday last week. Later on it picked up one rupee and continued to be quoted at the same rate.

The price of groundnut oil in the upcountry centres was the same as last week. It was quoted at Rs 430 in Bezwa and Guntur. In Salem, too, it was the same. In other centres like Cuddappah, Salem, Villupuram and Vridhachalam, the oil price remained at Rs 425 per candy of 500 lbs.

As for groundnut kernels, the price did not vary very much, and in certain cases the previous high price of Rs 80 per 80 kgs. was maintained. At Cuddappah alone the kernel price was between Rs 70 and Rs 72 per 80 kgs.

* HIDES & SKINS

Tanned cowhides remained unchanged in price as of last week. In the c.i.f. section, due to high prices of raw skin, it was not possible to negotiate at the high quoted prices of tanned cow hides for shipping. Enquiries from overseas also were not much due to the high prices asked by local traders.

No material change was observed in either tanned cow calf and buffalo calf. In the former, there was a larger number of continental inquiries. In both tanned goat and sheep skins changes were not material.

Bhalgora Coal Skips Dividend

The decline in raisings from 39,215 tons to 17,008 tons as well as in despatches from 26,561 tons to 12,497 tons is reflected in the working results of the Bhalgora Coal Company Limited for the year ended 30 September 1960. The accounts reveal a loss of Rs 3.98 lakhs before providing a sum of Rs 76,971 for Depreciation as against a net profit of Rs 23,392 before providing Rs 56,741 for Depreciation.

Except for a sum of Rs 3,145 (nil) provided for Wealth Tax, no other provisions have been made during the year. The dividend is passed over as against 6 nP per share paid previously.

Excellent Results of Dalmia Iron & Steel

The Dalmia Iron and Steel Limited has produced excellent working results for the year ended 30 September 1961, thanks to a marked rise in sales. Sales of Grinding Media, Steel Castings and Spun Cast Iron Pipes and Fittings amount to as much as Rs 1.43 crores as against Rs 1.29 crores. Due to non-availability of wagons and booking restrictions, there has been a further accumulation of finished stocks as compared to the previous year.

The production figures for the year are given below as compared to those of the previous year (figures in tons):—

	30.9.1961	30.9.1960
Grinding Media	3,879	3,642
Steel Castings	927	815
Spun Pipe	15,207	13,755

The net profit for the year, after providing for Depreciation and Taxation, is substantially higher at Rs 21.11 lakhs as against Rs 11.77 lakhs for the previous year. In respect of allocations, Depreciation is raised to Rs 10.50 lakhs from Rs 8.10 lakhs, apart from providing a sum of Rs 1.50 lakhs for Taxation and as much as Rs 11.50 lakhs for the Development Rebate Reserve. The directors have proposed to maintain the dividend at Re 1 per share on the increased capital.

The directors state that, though the production of Steel Casting section increased as compared to the previous year, the monthly installed capacity could not be achieved. Two automatic moulding machines could be put in commission only in the month of November 1961. It is expected that it will be possible to achieve the installed capacity during the current year. The production of all the three plants were affected due to breakdown in the power house of the Calcutta Electric Supply Corporation. Moreover, the shortage of foundry-grade pig iron and suitable quality of coke continued during the year under review.

The company holds industrial licences to expand the present installed capacity of the Grinding Media Plant from 3,000 tons to 6,000 tons per annum and Steel Castings from 1,500 tons to 3,600 tons per annum. The directors state that it will be in the interest of the company to further mechanise the existing plant along with the extended capacity in order to reduce the cost of production and streamline the process. Therefore, the cost of expansion may have to be revised on higher side to that extent.

The total estimated expenditure on further mechanisation and expansion of Grinding Media and Steel Casting combined, will be about Rs 70 lakhs. The modernisation and expansion programme will be completed within twelve months after the receipt of the import licence for the machinery required for this expansion project.

In connection with the Spun Cast Iron Pipes, the directors state that the company had been negotiating for technical collaboration and financial participation with the leading spun pipe manufacturers to increase the production from 15,000 tons to 75,000 tons. Negotiations are proceeding in this respect.

Voltas Pay More

The directors of Voltas Limited have recommended a higher dividend of Rs 14 per share/less tax, for the year ended 31 August, 1961 as against Rs 13 paid in the previous year. The preliminary figures, released this week, disclose a satisfactory working with the net profit, after providing Rs 66.50 lakhs (Rs 60 lakhs) for Taxation, at Rs 73.05 lakhs as against Rs 61.89 lakhs for the preceding year.

With Rs 4.24 lakhs brought in and taking in Rs 525 being Development Rebate Reserve written back, the total available for distribution is Rs 77.30 lakhs. From this, the directors have provided Rs 25 lakhs (Rs 15 lakhs) for General Reserve; Rs 5 lakhs (Rs 5.59 lakhs) for Development Reserve; Rs 1.81 lakhs (Rs 1.69 lakhs) for Development Rebate Reserve; Rs 5 lakhs (same) for Retiring Gratuity and Rs 1 lakh (nil) for Staff Welfare Reserve. The total proceeds of sales and services for the year have risen from Rs 19.86 crores to Rs 25.73 crores.

Samastipur Central Sugar Incurs Loss

The results of the Samastipur Central Sugar Company Limited for the year ended 30 June, 1961 have been disappointing. The company has suffered a loss of Rs 3.22 lakhs, after providing Rs 65,077 for Depreciation, on top of a loss of Rs 2.53 lakhs in the previous year after setting aside Rs 1.03 lakhs for Depreciation.

By transferring Rs 85,000 from the General Reserve and taking account the refund of Rs 11,024 on export of sugar in respect of earlier years, the company reduced the previous year's loss to Rs 1.52 lakhs. After bringing in this deficit and taking into account the loss of Rs 77,461 on export of sugar in respect of the season 1959-60, the company has carried forward a debit balance of Rs 5.50 lakhs to the current year.

Consequent on the losses in two successive years, the dividend has been skipped. Barring a distribution of 2.5 per cent made in 1957-58, the company has not paid any dividend since 1953-54.

The company's crushing of cane has increased from 9.05 lakh quintals to 12.54 lakh quintals and the production of sugar from 81,151 quintals to 1,08,523 quintals. The company expects to crush about 30 lakh maunds of cane during the current season.

For the Investor

INVESTMENT GOSSIP

Hesitant Mood

Mounting anxiety over the coming conjunction of eight planets coupled with quite a few uncertainties in the investment situation has kept business on the stock markets at a low ebb this week. It is not surprising that operators have been keeping their commitments low as most astrologers are said to have predicted calamitous consequences of the planetary conjunction. Even without the 'Ashtagraha' to worry them, it is doubtful if the stock markets would have displayed firmness. For, one of the operators' important calculations seems to have gone awry following the unopposed election to the Lok Sabha of the former Finance Minister, Mr T. T. Krishnamachari. Ever since his unopposed election was announced, speculation has centred on the shape of the fiscal policies of the new Government. Somehow marketmen have gained the impression that TTK will come to have a hand in moulding these policies which as a consequence, it is assumed, will not be quite beneficial to the stock markets.

In the meantime, there is the continued uncertainty over the quantum of foreign aid that will be available for the Third Plan projects. No indication was available at the recent meeting of the Aid India Club although it is believed that sufficient foreign exchange will be forthcoming on time. It would, however, appear that the stock market will feel confident only when firm commitments are accepted by the members of the Club. Some uneasiness has been occasioned by the latest developments as regards Kashmir as they seem to indicate a not-too-favourable disposition of the US toward India. Other limiting influences have been the uncertainty over the retention price of steel. The indication that Government may fix differential retention prices for the steel companies has not been conducive to a broadening of activity in steel shares. One of the main reasons for the lack of sustained interest in the existing list is the fact that quite a sizable quantum of investible funds has been absorbed by new issues more of which are in the offing.

A redeeming feature, however, is that despite so many adverse factors there has been no undue selling pressure. As a matter of fact a few selected shares have been in sustained request. Although the event of the commencement of trading in the new five (the inclusion of J K Rayon in the forward list has been deferred) shares which have been included in the forward list has only brought about a mild flutter, activity in Lyons Range in coming weeks will show considerable improvement.

The outlook for equities in general continues to be quite good and it will perhaps be noted by marketmen when they are more composed than they seem to be at the moment that there is an important bull point in Mr Manubhai Shah's speech at the recent meeting of the Standing Committee of the Central Advisory Council for Industries, when he indicated that Government would accord priority for maintenance imports.

INVESTMENT SPECIAL

Bengal Paper

The Bengal Paper Mills Company Limited has proposed to sub-divide its Ordinary Shares of Rs 25 each into 5 shares of Rs 5 each. It is then proposed to capitalise Rs 9 lakhs and issue 1,80,000 ordinary bonus shares of Rs 5 each in the ratio of one for every five shares held to those shareholders whose names are registered as 26 February 1962. Then every two ordinary shares will be consolidated into one ordinary share of Rs 10 each.

The company is also issuing convertible loan stock for Rs 30 lakhs carrying interest 6½ per cent interest, subject to tax, and Ordinary shares for Rs 18 lakhs. The convertible loan stock is redeemable, at par, on 31 December, 1970 at the option of the holders to convert the same into ordinary shares within 1968. The loan stock will be in units of Rs 250 each and this will be offered, at par, to the existing shareholders in the ratio of one unit of Rs 250 for every 45 ordinary shares of Rs 10 each.

The ordinary rights shares of Rs 10 each will be offered to the existing holders for subscription, at a premium of Rs 12 per share, in the proportion of one new share for every three shares held, at an early date. The proceeds of these issues will be used for financing the company's expansion and modernisation scheme.

J K Rayon

It is understood that the Stock Exchange Directorate has objected to including a scrip in the forward list when a company has not completed a full three years' working. J K Cotton Spinning & Weaving (Rayon) Company Limited was established some time in 1959. In this connection, it may be added that the Committee of the Calcutta Stock Exchange announced its decision last Friday to include the scrip in the forward list. But, following the objection referred to above, the Committee held an emergency meeting on Wednesday this week. The resolution, passed by the Committee in its meeting on 25 January to include J K. Rayon

CALCUTTA

Friday Evening.

in the Clearing List from Clearing No 336, commencing from 1 February, is not to take effect until further notice. As a result, the share price has been pushed down to Rs 20.12 from the recent high of Rs 22.

INVESTMENT NOTES

J K Industries

J K Industries, Kanpur, has sought the Union Government's permission to set up an undertaking to manufacture 480,000 wrist watches a year with Japanese collaboration. While the company has left the question of location of the proposed plant to be decided by the Government, it has stated in its application that the Jammu and Kashmir Government has offered facilities for locating the plant in Jammu. The foreign collaborator will participate in the equity capital of the company and also provide loans to meet the foreign exchange cost of the scheme. It is estimated that the scheme will cost Rs 155 lakhs of which Rs 80 lakhs will have to be found in foreign exchange for the import of plant and machinery. After achieving full production, the company expects to be able to export 21,000 watches a year at Rs 35 each to find foreign exchange for repayment of its loans. In view of the export undertakings given by J K Industries in its application, the Government is likely to consider the scheme on its merits.

Tyre Factory

The Australian-American rubber manufacturing company, Semperit, which is expanding its activities overseas, is reported to be opening, in collaboration with Birla Brothers, a factory near Calcutta for the manufacture of lorry and motorcar tyres. The factory, which is expected to have a capacity of between 300,000 and 400,000 tyres a year, is planned to go into operation in 1964.

STOCK EXCHANGES

Cautious Attitude

THE absence of any stimulating news has again put a break on the progress of the stock markets. It is generally believed that, until the general elections are out of the way, there may not be any significant change in equity values. In certain quarters, however, there is a feeling that the market may return to normalcy soon after the "Ashtagraha" period is safely crossed over.

Conditions on the Calcutta Stock Exchange remained generally dull. A relieving feature of the week's trading was the firmness in the newly-enlisted forward shares.

After a quiet start, equities on the Bombay Stock Exchange scored modest gains on short-covering and replacement buying.

The Madras Stock Exchange continued to witness dull conditions and prices moved within narrow limits.

In brief, trading continued to remain very cautious and, in a market devoid of any support, even small offerings were found to be enough to depress the market. Even the present low level of prices did not attract the attention of investors. Most of the leading bull operators were also inclined to lighten their commitments, pending further developments.

Apart from the approach of the conjunction of the eight planets—Ashtagraha—which had cast a peculiar spell on the market fraternity, operators were getting somewhat nervous about the coming retention price of steel for Indian Iron. It was feared that the Government might fix different retention prices for different producers according to their individual costs of production.

Again, it was thought that the recent relaxation of credit curbs by the Reserve Bank was only a temporary measure to relieve the tightness of money supply arising out of the much flow of money into the new issues and there was every likelihood of the tightening of the credit curbs again.

Operators were also under the influence of other bearish factors, such as, the renewed uncertainties over foreign aid for the Third Plan, shortage of credit and the siphoning off of large funds by the new issues. Speculation was also rife about the outcome of the Tariff enquiry into textile prices and the likely action that the Government would take in regard to fixation of cloth prices. Thus, in a week of restricted trading, losses were fairly widespread.

The Giltedged section continued to remain dull. Support from institutional investors was still lacking and most changes, that were noted, were against the holders. State Loans also met with limited interest. 3 per cent 1986 Conversion Loan moved narrowly between Rs 70.75 and Rs 71.40, to close finally at Rs 71.00.

Bank shares displayed a steadier tendency. United Commercial were enquired up to Rs 105 from Rs 102.50, while Punjab National were rather quiet at Rs 22.56 against Rs 22.62. United Bank changed hands at Rs 6.87 to Rs 7.00.

Even Jute shares, which had been receiving consistent support during the past many weeks due to a growing belief that the industry had turned the corner, were subjected to heavy profit-taking at the higher levels. The only exceptional feature were Birlas which were taken up to Rs 30.44 from Rs 29.87, thanks to the resumption of trading in the scrip on the forward basis. Howrah met with business at Rs 20.25 to Rs 20.56;

NEW ISSUE NOTES

Oriental Spun Pipe

A new company under the name and style of the Oriental Spun Pipe Company Limited has been formed for the manufacture of cast iron spun pipes. The authorised capital is Rs 1 crore and the issued capital will be Rs 50 lakhs in the form of preference as well as equity shares. The necessary foreign exchange for the plant has already been arranged. The company has been able to secure the services of Swedish consultants and designers for the project. The company hopes to enter the market shortly.

TAK Machinery

A new public limited company under the name of TAK Machinery Limited with an authorised capital of Rs 1 crore has been formed in Maharashtra State to undertake the manufacture of a wide range of lifting and conveying equipment. The company has been licensed to produce electrical overhead travelling cranes, electrical hoists, portable floor cranes, chain pulley blocks and various other kinds of conveyors. In addition, the company will also undertake structural fabrication work and production of grey iron castings. The company has concluded a technical collaboration agreement with Fellows Brothers Limited, a company belonging to the John Folkes group of engineering industries in the UK. The issued capital of the company will be Rs 50 lakhs, half of which will be subscribed by the promoters and directors. The balance will be offered for public subscription.

Escorts

The issue of additional capital by Escorts Limited for Rs 56 lakhs in equity shares at a premium of Rs 4 per share has been over-subscribed. The existing shareholders have applied also for one lakh additional shares. The proceeds of the new issue will be utilised in implementing the company's manufacturing schemes which are progressing satisfactorily. The allotment against the right issue will be finalised in respect of additional shares in terms of the consent of the Controller of Capital Issues on an equitable basis with reference to the shares already held by the existing shareholders.

Gourepore at Rs 423 to Rs 428; Ganges at Rs 12.69 to Rs 12.94; Nuddea at Rs 64 to Rs 66 and New Central at Rs 15.87 to Rs 16.37.

The continuous flow of reports about the shortage of wagons for lifting coal as also shortage of power and explosives for working the mines were reflected in the Coal section. Transactions were limited and prices displayed generally an easier tendency. Amalgamated were on offer at as low as Rs 22 against Rs 23 with Central India moving narrowly between Rs 12.31 and Rs 12.37. Burrakun hovered idly around Rs 17.54.

Bharat Ball Bearing

A new company named Bharat Ball Bearing Company Limited, belonging to the Shri Ram group of industries, has been formed for the manufacture of ball bearings at a factory to be established at Ranchi. This will be the third factory of its kind in India. The company has arranged for technical collaboration with an American firm. The issued capital of company will be Rs 75 lakhs. The IFC will be giving the company a loan. The required plant and machinery is proposed to be imported under a credit from the US Development Loan Fund. The factory expects to produce 2.5 million bearings a year.

Assam Hardboards

Assam Hardboards Limited is expected to enter the capital market some time in February with an offer of Rs 24.60 lakhs of equity capital and Rs 5 lakhs of preference capital for public subscription. Of the preference capital, the Government of Assam has agreed to take up Rs 5 lakhs. The promoters, directors and their friends have agreed to subscribe for 7,900 equity shares and the American collaborator will be allotted 10,000 equity shares against payment of cash. The balance of 24,600 equity shares and 5,000 preference shares will be offered for public subscription.

Indian Rayon Corporation

The Indian Rayon Corporation Limited has asked for a final call on both the ordinary and preference shares. Transfer Books will be closed from 17 to 19 February 1962.

Chemicot

Chemicot Limited has asked for a final call of Rs 25 to be paid by 15 February 1962.

Tensile Steel

Tensile Steel Limited has asked for a first call of Rs 25 to be paid by 29 February 1962.

Neyveli Lignite

Neyveli Lignite Corporation Ltd., Madras, a Central Government-owned corporation, engaged in the business of mining lignite, has been granted consent to issue further capital of Rs 10 crores.

Although trading was restricted, Tea shares came in for selective enquiry, thanks to the better prices obtained at the export auctions. Attention was, however, confined to the shares of those gardens producing quality teas on the belief that such gardens might have earned good profits in 1961. Hasimara had buyers up to Rs 32.31 from Rs 30.75 and Huldibari up to Rs 30.31 from Rs 29.75. Dhunseri were enquired up to Rs 15.19 from Rs 15 with Hattikhira ruling better at Rs 11.06 against Rs 10.75.

Sugar shares continued to remain depressed in view of the obscure out-

Food Specialities

Food Specialities Ltd., Moga, Punjab, have been granted consent to issue further capital of Rs 50 lakhs in equity shares of Rs 100 each, to be issued as to 75 per cent to the existing foreign collaborators and 25 per cent to the Indian nationals, for cash, at par. The proceeds will be utilised partly for carrying on the company's licensed milk food project and partly for undertaking the manufacture of soluble coffee. The company's paid-up capital is Rs 42,20,000, which is held by the foreign collaborators and the Indian nationals in the ratio of 90:10.

Upper India Sugar

Upper India Sugar Mills Ltd., Khatuli, having a paid-up capital of Rs 39,17,653 have been accorded consent to issue bonus shares of the total value of Rs 14,58,330.

Neiveli Ceramics

Neiveli Ceramics and Refractories Ltd., Madras, have been granted consent to issue equity capital of Rs 35 lakhs in addition to Rs 10 lakhs issued under Exemption Order. The proceeds will be utilised for the manufacture of sanitary wares in collaboration with Keramag G.m.b.h.

Jay Shree Textile

Jay Shree Textiles Ltd., Calcutta, has been granted a consent to the issue of 2,800 Second Mortgage debentures of Rs 1,000 each of the total value of Rs 28 lakhs, redeemable within 10 years and carrying interest at a rate not exceeding 7 per cent per annum. The capital is required for expansion of the existing unit and for installation of 15,200 spindles.

Hindusthan Pilkington

Hindusthan Pilkington Glass Works Ltd., Calcutta, has been granted a consent to the issue of 10,00,000 equity shares of Rs 10 each for cash, at a premium of Rs 4 per share. The capital is required for the establishment of a new plant for the manufacture of wired, cathedral and reeded glass at the company's existing factory at Asansol. Of this issue, 48.75 per cent will be made to the foreign collaborators, Pilkington

look for the industry, not to speak of the fears that the USA might not continue to buy Indian sugar on a quota basis. Balrampur came in for offer at Rs 2.44 against Rs 2.53 with SKG moving narrowly between Rs 10.37 and Rs 10.44. Raza/Buland were slightly better at Rs 10.50 against Rs 10.31.

Textile shares showed a mixed trend. Kesoram were boosted up to Rs 34.06 from Rs 32.12 following the start of trading on a forward basis. J. K. Rayon, after touching a high of Rs 21.31 from Rs 20.50, were pushed down to Rs 20.12 on reports of the scrip being eliminated from

Brothers Ltd., of UK and 51.25 per cent to the existing shareholders in the ratio of five new shares for every four shares held at present.

Nikhli Jute

Nikhli Jute Baling Company Ltd., Calcutta, has been granted a consent to the issue of 50,000 equity shares of Rs 10 each as fully paid up bonus shares on capitalisation of its reserves to the extent of Rs 5 lakhs. The company's existing paid-up share capital is Rs 10 lakhs. The company is engaged in business of manufacture, plantation, sale and export of tea.

Ardeshir

Ardeshir B. Cursetjee and Sons Private Ltd., Bombay, engaged in business as stevedors, has been granted a consent to the issue of 600 bonus shares of Rs 1000 each on capitalisation of the company's reserves to the extent of Rs 6 lakhs. The existing capital of the company is Rs 15 lakhs.

Panyam Cements

Panyam Cements and Mineral Industries Ltd., Panyam, Andhra Pradesh, has been granted consent to the issue of further capital of Rs 3,64,000 in 9.3 per cent (subject to deduction of tax) preference shares of Rs 100 each for cash, at par. The proceeds will be utilised for financing the expansion in the manufacture of portland cement. The present subscribed capital of Rs 53,34,000 is divided into 39,703 equity shares and 13,640 6 per cent (tax-free) preference shares of Rs 100 each.

African Trading

African Trading Company Private Ltd., Bombay, have been granted consent to the issue of Rs 65,000 bonus capital.

Mirzapur Electric

Mirzapur Electric Supply Company Ltd., Mirzapur, UP, having a paid-up capital of Rs 4,95,000, have been accorded consent to issue bonus shares of the total value of Rs 49,500 on capitalisation of the company's reserves to a like extent, in the ratio of one new share for every ten shares held.

the forward list, to close finally better at Rs 20.31 due to some replacement buying. The publication of excellent results and the increase in dividend from 11½ to 17½ per cent caused Elgins to spurt to Rs 24.31 from Rs 22.37. Cawnpore turned better at Rs 8.62 against Rs 8.53 with Dunbar ruling unchanged at Rs 34.37.

Engineering shares were subjected to alternate buying and selling due to speculative activity in Indian Irons. Till Wednesday, price movements in Indian Irons were influenced by settlement considerations. After opening steady at Rs 24.46, Indian Irons advanced steadily to

Rs 24.86 and receded again to Rs 24.46 due to selling pressure, before closing finally at Rs 24.68. TEXMACO touched a high of Rs 20.25 and a low of Rs 20 to finish at Rs 20.20. Guest, Keen, Williams were taken up to Rs 41.37 from Rs 39.81 following the inclusion of the scrip in the forward list, to finish the week at Rs 41.37. Indian Standard Wagon scored another nine points at Rs 153 due to sustained hope of a bonus issue at an early date. Jessop were pushed up to Rs 22.44 from Rs 21.50; Dalmia Iron to Rs 12.00 from Rs 11.50 and J. K. Steel to Rs 19.87 from Rs 19.50, closing finally at Rs 22.06; Rs 11.75 and Rs 19.75 respectively.

Miscellaneous issues lacked any interest and most of the issues showed minor losses on balance, as will be clear from the price trends of a few selected shares:

MADRAS

Transactions reported in the Madras Stock Exchange this week had been very thin. The market opened on a dull note. Government securities were sluggish. Banks proved steady. Public utilities had stray investment inquiries. Sugars were in the doldrums. Plantings continued dull with negligible turnover. Textiles remained uninvolved.

Sugars and Breweries:—Deccan sugars had gone down this week and the current price of Rs 10.00 considered lowest in recent times did not attract. E.I.D. was quoted at Rs 35.62. Andhra was at Rs 22.90. KCP was at 22.95. United Breweries Rs 84.00 with 25 per cent interim.

Plantings:—Dullness dominated this counter. Blue Mountain moved to Rs 2.61, Chembra remained at Rs 3.37. Cochin Malabar was unchanged at Rs 7.23. Coffee Lands was at Rs 16.50 and Consolidated Coffee was at Rs 3.33. Cowcoody slid to Rs 3.80. Kil Kotagiri was at Rs 4.30. Lucky Valley was offered at Rs 11.35. Mercara with 20% was at Rs 8.75. Mysore Plantation was also at Rs 1.95. Nelliampathy declined to Rs 2.42. Nelliathanam was the same at Rs 11.00. Nilgiri was at Rs 8.40. Ouchterlony lost 3 nP and was quoted at Rs 3.60. Periakaramalai went up to Rs 3.33. Sangameswar was listed at Rs 1.62. Tropical improved to Rs 19.00. United Nilgiri with an interim of 7½% was quoted at Rs 22.50. Waterfall moved up to Rs 2.35.

Textiles:—Anglo French lost a rupee and quoted at Rs 137. Coimbatore Spinning was at Rs 72.00.

Lakshmi was at Rs 164.75 and the Rupee 25 paid share was at Rs 81.50. Ranga Vilas was at Rs 53.75. South India Viscose was at Rs 185. Travancore remained at Rs 43.12. Tirumathi improved to Rs 143.00.

Miscellaneous:—Aluminium Industries which had declared a 9% in-

terim was at Rs 23.50. About Leyland was available at Rs 9. Dalmia Cement was at Rs 12.25. FACTS was quoted at Rs 8.10. India Cement was at Rs 5.75. Madras Rubber was sold at Rs 20.25. Mettur Chemicals was at Rs 8.65. Parry's Confectionery was at Rs 4.45.

(As a Special Resolution)—That the capital of the Company be increased from Rs. 1,00,00,000/- to Rs. 3,00,00,000/- by the creation of 12,60,000 Ordinary Shares of Rs. 10/- each ranking pari passu in all respects with the existing Ordinary Shares in the Capital of the Company and 74,000 unclassified Shares of Rs. 100/- each.

5. (As a Special Resolution)—That the Company do raise money by the creation and issue of unsecured Convertible Loan Stock of the nominal value of Rs. 30,00,000/- on the following terms and conditions, namely:—

- The Stock will carry interest at the rate of 6½% per annum (subject to tax);
- The Company will redeem the Stock at par on the 31st day of December 1970;
- The Stock will be in units of Rs. 250/- each and be offered in the first instance to the holders of the Ordinary (equity) Shares of the Company and to the extent the Stock is not subscribed by them be disposed of in such manner as the Board of Directors of the Company think most beneficial to the Company;
- each holder of the Stock shall be entitled by not less than one month's notice in writing to the Company given within the periods hereinafter mentioned to convert each unit of Rs. 250/- of the Stock held by him into:
 - 10 Ordinary (equity) Shares of Rs. 10/- each between the period of the 1st July 1963 and the 31st December, 1964;
 - 9 Ordinary (equity) Shares of Rs. 10/- each between the period of the 1st

Rallis was done at Rs 183.00. Seshasayee Industries was unchanged at Rs 10.10 while Seshasayee Paper was at Rs 8.65. Spencer was at Rs 23.66 with Textool at Rs 189.00. Travancore Cements at Rs 7.70, Tube Suppliers at Rs 10.00 and Western India Plywoods at Rs 210.00.

January 1965 and the 30th June 1966;

(c) 8 Ordinary (equity) Shares of Rs. 10/- each between the period of the 1st July 1966 and the 31st December, 1968;

provided that no such right of conversion shall be exercisable by any holder of the Stock after the 31st December, 1968;

(v) the Ordinary (equity) Shares into which the Stock will be converted as aforesaid will rank pari passu in all respects with the then existing Ordinary (equity) Shares of the Company except that the Ordinary (equity) Shares so converted will not be entitled to any dividend declared on the Ordinary (equity) Shares by the Company for the year during which the conversion has taken place but so nevertheless the holders of the Stock will receive the interest due on the Stock in respect of such year.

6. (As a Special Resolution)—That the Regulations contained in the printed document submitted to this meeting and for the purpose of identification subscribed by the Chairman hereof be approved and adopted as the Articles of Association of the Company in substitution for and to the exclusion of all existing Articles thereof.

By Order of the Board

H. P. DHANUKA
Director

Registered Office:
14, Netaji Subhas Road, Calcutta.
Dated this 25th day of January, 1962.

Note:—

- The Transfer Books and Register of members of the Company will be closed from the 20th February, 1962 to the 26th February 1962, both days inclusive.
- A member who is entitled to attend and vote at the meeting is entitled to appoint a proxy to attend and vote in his stead. A proxy need not be a member of the Company.
- An Explanatory Statement pursuant to Section 173 of the Companies Act, 1956 has been sent to the Shareholders.

THE RED ROAD AT CALCUTTA

LIGHTING BY PHILIPS

Calcutta's Red Road, wide and smooth and straight as an arrow was, nonetheless, long considered rather unsafe for pedestrians or fast-moving traffic at night when the shadows of the maidan seemed to envelope it in darkness. But now this famous road has lighting worthy of its importance and adequate for its traffic.

And Philips have supplied the lighting.

Philips' exclusive lighting consisting of lamps, fittings and accessories ensures ultimate economy through maximum illumination level at lowest running cost and gives longer, trouble-free performance. Philips' scientifically designed equipment is the result of experience, research and development to meet the ever-growing demands of better lighting. And hand-in-hand with Philips' unrivalled quality goes the invisible plus of Philips' international experience and know-how.

FREE: For planned lighting, designed economically to suit your specific need—whether it is industrial, commercial or any other specialised application—consult Philips Lighting Service Bureau.

PHILIPS quality lighting for ultimate economy

Indian Finance

INVESTOR'S SUPPLEMENT

Markets Depressed in January

Although stock markets started January on a steady note conditions remained quiet most of the month. Earlier improvement in sentiment was a continuation of the revival of support noticed toward close of December mainly stemming from the relief felt over the indication that the Goa episode was not likely to diminish the interest so far evinced by friendly foreign countries in India's development programmes as embodied in the Third Five Year Plan. It was generally felt that the favourable factors in the investment situation far outweighed the uncertainties. In the first place there was the belief that Government would be quite sympathetic toward the plea for an adequate increase in the retention price of steel. The improved production of the two private sector steel factories coupled with the fact that a loan to the tune of \$19.5 million had been granted by the World Bank to the Indian Iron and Steel Company Limited for increasing its coal production imparted renewed interest in steel shares. The proximity of the General Elections did not cause much disturbance to sentiment presumably because of the general feeling that the party in power would continue to be at the helm of affairs in the next five years also. Further, there was no Central Budget at the end of February to cramp the bulls' style. The good news that industrial production during 1961 had been satisfactory was a source of encouragement to buyers. According to official statistics, the overall industrial output during the first seven months of 1961 was higher by 9 per cent compared to the output in the corresponding period of the previous year.

But the enthusiasm engendered by the favourable factors, however, proved shortlived as fresh adverse influences came to be detected. With the approach of the scheduled date of the meeting of the Aid India Club meeting of the Aid India Club speculation was rife as to the quantum of aid that would be made available. Rumour had it that some of the members of the Club were not keen to increase their commitments. The initial enthusiasm yielded place to renewed anxiety about the possible effects on the economy of the continued threat to India from China and Pakistan. An increase in the country's defence budget was considered a certainty and that would mean more taxes. On second thoughts even the good news from the industrial front appeared to be not so good as there was continued anxiety over the supply of coal, transport and power. It is to be admitted that the tempo of industrial production last year would have been higher had it not been for the shortages of transport, power and coal. During part of last year there was serious power shortage in some of the principal industrial regions with the result the tempo of production was slowed

down. With the demand for these basic industrial requisites and transport facilities continually on the increase—during the Third Plan period such demand would be very much higher than hitherto—it is generally believed that unless concerted measures are taken to increase power production expeditiously, power shortage is likely to be experienced throughout the Third Plan period. The same applies to coal and transport.

By about the middle of the month trading had come to be adversely affected by the gloomy forebodings about the conjunction of some eight planets in the first week of February. Although it created no panic marketmen were chary of extending commitments at least as long as the period of the widely supposed evil effects of the conjunction was not safely crossed. In the meantime the stock markets had to contend with a new development. The news that

Mr T. T. Krishnamachari, the former Finance Minister, had filed his nomination for the Lok Sabha election was itself interpreted bearishly and when it became known that he had been elected upposed the depression further deepened and share values were marked down. The expectation seems to be that TTK will be back in the Cabinet with an important portfolio with the result the socialistic tendency of Government would become more pronounced than had been the case hitherto.

In the general hesitancy brought about by the fresh apprehensions about future Government policy and the ashtagraha, the Reserve Bank announcement as regards reduction of margin on advances by banks against shares did not produce much enthusiasm. The margin on advances by Banks was reduced from 50 per cent to 40 per cent. In making the announcement the Reserve bank had pointed out that "bank credit against ordinary shares which had risen by 14 per cent in the 12 months prior to the regulation (11 March 1960) has since then remained pretty stable around Rs 80 to Rs 83 crores despite a considerable increase in the volume of new capital issues on the market and some rise in the share prices." As a result of the relaxation banks were enabled to raise advance against ordinary shares to 60 per cent from 50 per cent. One of the reasons for the lack of much enthusiasm over the announcement was the belief that with the onset of the busy season the reduction of margin would be of little practical value to the operators.

At an emergent meeting held on 16 January, the Committee of the Calcutta Stock Exchange decided to add six more scrip to its clearing list. They are Guest Keen Williams, Jaipur Udyog, Birla Jute, Kesoram Cotton, Orissa Cement and J. K. Rayon. Of the above the first five were to be traded on settlement basis on and from Clearing Account No. 356 which would start from 1 February. The sixth, namely, J. K. Rayon was not to be included in the list so long as the name of the Company was not changed to indicate that it is a rayon concern. The six were selected out of a list of 53 scrip named by the members of the Exchange. The news however engendered only mild interest in the market probably because it had been long discounted. At an emergent meeting held on the last day of the month, however, the Committee of the Calcutta Stock Exchange decided that the resolution passed on 16 January to include J. K. Rayon in the Clearing list from 1 February 1962 was not to take effect until further notice.

Sectionwise, jute shares were generally steady while coals were easy lacking fresh incentives. Selected shares in textiles were fancied. Teas were an irregular market following reports of increased production in all tea growing areas.

PRICE TRENDS DURING JANUARY, 1962.

(a) After transferring Rs 20,638 from General Reserve No. 1.
 (b) After transferring Rs 200,000 from Development Reserve and Rs 65,000 from General Reserve No. 1.
 (c) After transferring Rs 250,000 from Machinery Reserve and Rs 300,000 from Dividend Equalisation Reserve.
 (d) After transferring Rs 50,000 from General Reserve.
 (e) After transferring Rs 70,000 from Development and Rehabilitation Reserve.
 (f) After transferring Rs 2,656,522 from General Reserve.
 (g) After writing back Rs 360,718 being excess depreciation provided in 1958.
 (h) After transferring Rs 1,088,546 from General Reserve No. 1.
 (i) After transferring Rs 250,000 from Dividend Equalisation Reserve.
 (j) After transferring Rs 1,230,000 from Dividend Equalisation Reserve.

(l) After transferring Rs 297,425 from excess depreciation.
 (m) After transferring Rs 119,825 from Development Rebate Reserve.
 (n) After transferring Rs 120,000 from Dividend Reserve.
 (o) After transferring Rs 1,400,000 from Dividend Equalisation Reserve.
 (p) After transferring Rs 5,27,512 from General Reserve.
 (q) After transferring Rs 400,000 from General Reserve.
 (r) Includes Rs 100,230 being provisions made in previous years written back.
 (u) After transferring Rs 200,000 from General Reserve.
 (v) After transferring Rs 1,00,000 being Adhoc. reduction in Stock-in-trade provided last year.
 (w) After transferring Rs 98,240 from Dividend Equalisation Reserve.

(x) After transferring Rs 890,580 from General Reserve.
 (z) After transferring Rs 525,000 from General Reserve.
 (a1) After transferring Rs 1,075,000 from General Reserve No. 1.
 (a2) After transferring Rs 100,000 from General Reserve and Rs 125,000 from Dividend Equalisation Reserve.
 (a3) After transferring Rs 14,72,855 from General Reserve.
 (a4) After transferring Rs 300,000 from General Reserve.
 (a7) After transferring Rs 780,000 from General Reserve and Rs 45,088 from excess provision for Bonus.
 (a8) After transferring Rs 371,942 from General Reserve.

Limited, a wholly-owned subsidiary
of The Chartered Bank, are estab-
lished in Iraq, Bahrain, in the
Persian Gulf at Qatar and Sharjah
Lebanon and Hadramaut and in
India, Pakistan, Ceylon, Aden,
Singapore and Malaya.

Calcutta Office:

4, Netaji Subhas Road.

Sub-Branch: I. G. THOMSON.

21, Chowringhee Road. Manager.

MAKE MONEY FASTER: EXPORT BY PAN AM JET

Jet Clipper Cargo delivery to Europe, the Far East and the U.S.A. lets you reinvest your money faster—and you save on insurance, crating, handling.

Businessmen who need a quick return on their investment—manufacturers of wearing apparel, leather goods, livestock and mica, for example—find Pan Am Jet Clipper Cargo the ideal way to ship to the U.S.A., the Far East and Europe.

In addition to savings on insurance, crating, and handling all along the line, you get the most impor-

tant saving of all—time. Your goods can be in your customers' hands less than 72 hours after they leave your establishment. Prompt payment means that your money is back working for you weeks sooner than it would be, had you shipped by surface transportation.

For a free estimate on what this advantage can mean to you, call your local Pan Am Clipper Cargo Expert:

Calcutta: 42 Chowringhee, Tel. 44-3251 (5 Lines)
New Delhi: Imperial Hotel, Tel. 48172, 48717
Bombay: Taj Mahal Hotel, Tel. 35063, 35064

Clipper, Trade-Mark, Reg. U.S. Pat. Off.

JET CLIPPER

CARGO FASTEST DELIVERY TO ALL THE WORLD

PAN AMERICAN WORLD AIRWAYS, INC.

JWTPAA 4934

IN THE SPACE OF 10 YEARS...

the resources of National and Grindlays Bank Limited, which now incorporate the Eastern Branches of Lloyds Bank Limited, have increased from £130 million to £250 million. Similarly the number of offices now operating in countries overseas total 140—100 more than existed ten years ago.

NATIONAL AND GRINDLAYS BANK LIMITED

Amalgamating
National Bank of India Ltd., Grindlays Bank Ltd.
and The Eastern Branches of Lloyds Bank Ltd.

The Stability of Members is limited

Head Office: 26 Bishopsgate, London, E.C.2

Report on Major Ports

THE administration reports of the ports of Bombay, Calcutta and Madras for 1960-61 suggest that there is not likely to be any serious shortfall in the volume of traffic handled by the major ports in the country as compared with Plan estimates. The Second Plan had provided for substantial increase in the capacity of the major ports and the total traffic handled in 1960-61 was estimated in the Third Plan at 33 million tons, an increase of 37.5 per cent over the total traffic of 24 million tons actually handled in the last year of the First Plan. Against this estimate of 33 million tons for 1960-61, the total dead weight tonnage of imports and exports passing through the three ports mentioned above amounted to 27.26 million tons. If the figures for Vishakhapatnam, Cochin and Kandla are also taken into account, the total will be near about the anticipated level.

The three ports for which details of work- ing are available report increase in the num- ber of vessels and traffic handled as well as improvement in financial results. All the three ports show larger surpluses of revenue over expenditure as compared with the previous year. The figures of revenue and expenditure for the three ports for 1960-61 and 1959-60 are given below:

		(Rs lakhs)		
		Revenue	Expenditure	Surplus
Bombay:	1960-61	1274	933	341
	1959-60	1175	922	253
Calcutta:	1960-61	1412	1362	50
	1959-60	1297	1271	26
Madras:	1960-61	300	191	109
	1959-60	228	168	60

The number of vessels (excluding sailing vessels) entering the ports during the year was 6254 with total tonnage of 37.52 millions, as compared with 6066 with total tonnage of 34.85 millions in the previous year. Bombay handled the largest number of vessels as well as the largest volume of imports and exports. The dead weight tonnage of imports and exports handled by Bombay, at 14,721,067 tons, constituted an all-time record. The details of number of vessels, gross tonnage and total traffic are given in the following table.

		Number of Gross tonnage Total Traffic		
		vessels	(million tons)	(million tons)
Bombay:	1960-61	3229	20.39	14.72
	1959-60	3051	18.34	13.36
Calcutta:	1960-61	1786	12.18	9.50
	1959-60	1820	12.03	9.78
Madras:	1960-61	1239	4.95	3.04
	1959-60	1195	4.48	2.76
Total:	1960-61	6254	37.52	27.26
	1959-60	6066	34.85	25.90

The figures given above do not include sailing vessels. During the year, 35,500 sail- ing vessels used the port of Bombay against 29842 in the previous year. But only six sailing vessels entered Madras port as against 11 in the previous year.

The break-up of the total traffic handled by the ports into exports and imports, reflects the pattern of the country's foreign trade with its preponderance of imports, and also shows significant variations among the ports themselves.

		Imports Exports	
Bombay:	1960-61	10,795,000	3,926,000
	1959-60	9,564,000	3,793,000
Calcutta:	1960-61	5,492,000	4,009,000
	1959-60	5,033,000	4,750,000
Madras:	1960-61	2,127,852	910,575
	1959-60	1,841,020	921,828
Total:	1960-61	18,414,852	8,845,575
	1959-60	16,438,020	9,464,828

While imports at all the three ports show an increase of about two million tons, total exports have declined by over six lakh tons. The decline of exports passing through Calcutta and Madras is not compensated by the increase in the exports through Bombay. Bombay is the most important port of entry for imports and this is not surprising in view of the fact that the bulk of imports of machi- nery and equipment comes from the Western countries. On the other hand, Calcutta con- tinues to be preeminently the outlet for the country's exports. The tonnage of exports handled by Calcutta is nearly equal to the total exports, passing through Bombay and Madras. As Calcutta handles the exports of the country's major foreign exchange earners like tea, jute manufactures, ores, iron and steel goods, scraps, etc the decline in the volume of exports passing through Calcutta deserves special attention and calls for re- medial measures.

The deterioration of the River Hooghly appears to be the principal reason for the fall of nearly 7 lakh tons in the volume of exports through Calcutta. The administration report of the port refers to the vigorous steps that were taken during the year to intensify dredging operations and river training works. The total number of hours of dredging was 5,333 and the quantity of spoil lifted was 10,586 million tons, which is a million tons more than the total volume of traffic handled by the port during the year. It is not, there- fore, surprising that the expenditure per ton of traffic handled is highest for the port of Calcutta. The higher port charges which this necessarily involves are reflected in higher export costs.

It is recognised that a permanent solution of the problem of Calcutta port is bound up with the construction of the Farakka Barrage and of the ancillary port at Haldia. But though both the projects are included in the Third Plan, neither of them it is feared, is likely to make much progress during the Third Plan. The way in which technical investigations are trailing along is calculated to raise the doubt whether the authorities are as much in earnest about these projects of vital importance as may appear from their published utterances.

AUSTRIA

Commercial Banking

By C. R. DARVALL

BANKING is one of Australia's oldest industries. From the establishment of the first commercial bank in 1817 the banking system has grown with the country and, at the same time, has helped the country to grow. It is now a highly developed and highly efficient industry, serving the needs of primary producers, secondary industry, commerce and the individual.

Most of the commercial banking is conducted by eight major banks. Seven of these are public companies with their origins dating back to the middle and early 19th century and the remaining one, established in 1911, is owned by the Government of the Commonwealth of Australia. All have Australia-wide net works of branches, offices in London and agents throughout the world. Competition amongst the banks for the growing volume of business is intense and has stimulated the banks to a very high degree of efficiency.

In addition to these major banks, there are three banks operated by State Governments, branches of three foreign banks and one small local bank.

The eight major banks hold deposits amounting to over £1,700 million, of which more than £500 million is lodged at interest for terms of up to 12 months. The remaining £1,200 million consists of current accounts on which the depositors draw cheques.

Lending by Australian banks is mostly by the overdraft system, under which customers arrange "limits" with their banks up to which they are free to draw as required. Normally interest is charged only on the actual amount drawn and is calculated daily.

The largest proportion of bank loans has traditionally gone to rural customers who, since they provide about 80 per cent of export income, constitute a very important sector of the economy. However, with the rapid expansion of secondary industries in recent years, the proportion going to these industries has risen substantially and now exceeds that in the rural category. The banks also lend large amounts to other businesses, Governmental authorities and to individuals, both for housing and for other purposes.

In general, the banks do not lend extensively on a long-term basis and business loans are mostly for the provision of working capital to meet current needs. Unlike banks in some other countries, they do not normally take up share capital in other businesses, nor directly deal on stock exchanges.

Australia is one of the world's leading trading nations and, in consequence, the banks handle a very large volume of overseas receipts and payments—generally amounting to at least £1,000 million in each direction annually. They provide finance for much of the exports and imports of the country and handle trade enquiries from all parts of the world.

Much of Australia's economic development in the last 15 years has been carried out with the aid of substantial investment from overseas countries. The commercial banks play an active part in seeking out prospective investors and assisting them in their Australian ventures.

By agreement with the Reserve Bank, the major commercial banks hold at least 16 per

cent of their deposits in liquid amounts and Government securities. Apart from cash on hand and working balances with the Reserve Bank, these comprise Treasury Bills and seasonal Treasury Notes (a Government issue with a term of three months) and other Government securities covering a wide range of maturity dates.

Each bank must also hold a stipulated percentage of its deposits in the form of a "Statutory Reserve Deposit" at the Reserve Bank. The proportion is varied from time to time according to the requirements of current monetary policy, but all banks must be treated alike.

Since February, 1959, banks have been able to place money at call or short notice with the newly-established authorised dealers in short-term Government paper.

The main source of commercial bank income is interest on loans, the total level of which generally ranges between 50 and 65 per cent of total bank deposits. Investments in Government securities and in associated companies also contribute to bank income. Foreign exchange transactions are important to the banks from the point of view of income, but charges for keeping accounts and for the provision of other banking services are extremely low.

Interest rates which affect the banks are strictly controlled by the Government and the Reserve Bank.

National credit policy has restricted the growth of bank finance and tended to diminish its role in the economy. In order to safeguard their position, the banks have been obliged to extend their activities. The first of these additional activities was the participation in consumer credit, in most cases by means of each acquiring an interest in a finance company. This has served to increase the stature of these companies and has placed at their disposal for agency purposes the vast network of bank branches. The income of the banks has benefited by these associations.

More recently, several of the commercial banks have formed savings banks to enable them to compete more effectively with the Government-owned banks which had hitherto enjoyed a monopoly in this field.

Another means of diversification by the banks has been the sponsorship of unit trusts and similar institutions, which gather in funds from small investors for the purchase of stock exchange securities of various kinds.

Vigorous competition among the banks has resulted in the public being offered a wide range of banking and related services at charges which are very low by world standards. Apart from normal banking activities, the banks are able to provide such specialised services as the handling of all internal and overseas travel arrangements, the publication of literature on Australian economic and business conditions, the provision of advice on financial and economic matters and nominee and registrar services which are particularly useful for overseas firms or residents investing in Australia.

In keeping with the trends in other countries, the banks have improved their accounting and office systems by the introduction of modern mechanised equipment. They are continually improving their procedures and are now preparing for further progress in centralised book-keeping where population concentrations make this practicable.

As the development of the country continues, the banks are extending their services to meet the needs of modern business in an ever-expanding economy.

Pattern of Savings

The National Council of Applied Economic Research has released further data regarding savings by urban households based on the recent study undertaken by the Council. The Study on Saving by Urban Households had stated that 85 per cent of urban households with income of less than Rs 3,000 did not 'on an average' show any saving. When this group is split up into 'Savers' and 'Dissavers,' it is found that nearly one-third saved as much as 13 per cent to 15 per cent of their incomes while the remaining 66 per cent dissaved from 21 to 71 per cent of their incomes. On the other hand, the top 15 per cent of the households, with incomes of more than Rs 3,000, on the whole saved as much as the entire urban saving after offsetting the dissaving of the lower income group. But in this group also there are dissavers. Nearly 29 per cent of this group dissaved from 9 per cent to 88 per cent of their income, while the remaining 71 per cent of this group saved as much as 17 to 60 per cent of their incomes. The saving income ratio varies more or less regularly according to income levels, ranging from 12.2 in the case of households with incomes of Rs 500 to 1,000 to 60 per cent in the case of households in the income range of over Rs 25,000. The latter group accounted for 87.9 per cent of the aggregate saving. As regards dissaving, there appears to be no relation between income levels and percentage of dissaving. Among the dissaving households, the highest income brackets, above Rs 25,000, also show the highest ratio of dissaving, namely 88.6 per cent. Next come the lowest income groups of households with incomes below Rs 500 who dissave as much as 71.1 per cent. The other income groups come in between the average for all classes being 25.5 per cent.

Individual well-being is linked with national prosperity and only planned efforts can ensure both in the shortest possible time. And planning, for its success, largely depends on savings, individual as well as national. Saving in the form of Bank Deposits provides resources for the National Plan.

World of Finance

BUSY SEASON

Progress at Half-Way Mark

THE 1961-62 busy season is nominally just past its mid-point, in the case of returns of the Reserve Bank and State Bank, and exactly at its half-way mark in respect of other Scheduled Banks. Its progress, in comparison to the last two busy seasons, may be charted here.

The expansion in note circulation is lower than in the corresponding period of the 1960-61 busy season, but a shade higher than the relative figure for 1959-60. Outflow of Rupee Coin is smallest in the three busy seasons. Running down of Reserve Balances mirrors the pattern set by note circulation, as also does the change in the Other Loans and Advances of the Reserve Bank.

In 1959-60 (until May 1960, in fact) accruing counterpart funds continued to be lodged with the State Bank, and perhaps partly with the aid of such adventitious accretions Deposits of the State Bank rose by Rs 18.97 crores at the end of 14 weeks of the busy season. In the following busy season repayment of counterpart funds (at the rate of Rs 12 crores a month) was reflected in a drop of about Rs 25 crores in Deposits. It is heartening to note that in the current busy season without benefit of fortuitous circumstances Deposits of the State Bank have risen appreciably by Rs 17.64 crores. Nevertheless borrowings have expanded more in the 1961-62 busy season than in the last one, though by only half as much as compared with the 1959-60 busy season. Cash balances are sharply run down, in contrast to a small increase on the last occasion and a small decline in the season previous to that. Disinvestment in gilt-edged was pronounced in the last season (the State Bank having to repay counterpart funds) and is smaller in the current season. The expansion in Advances is running slightly slower. But the Advances-Deposits ratio, possibly for the first time in the State Bank's history, has crossed the 50 per cent mark in being placed at 50.1 per cent.

In the case of other Scheduled Banks also the accretion to Deposits is substantial, though still somewhat less than in the 1959-60 busy season. Borrowings from the Reserve Bank have risen less on the present occasion than in the previous two busy seasons. So also cash balances have been fractionally added to (as happened in the 1959-60 busy season) as against a considerable drawing down in the last busy season. The disinvestment in gilt-edged is in the current busy season the smallest in the three busy seasons. Similarly, the expansion in Advances is running slightly behind the last two busy seasons. But the ratio of Deposits to Advances is rather higher at 72.0 per cent against 66.6 per cent in 1959-60, though slightly less than the 73.1 per cent which obtained in the corresponding week of last year.

BANK RETURNS

Advances Expand, Deposits Rise

THERE is perhaps a slight intensification of busy season pressures, or may be it is only the super-imposition of beginning of the month disbursements, which stand reflected in the latest banking returns.

Active Note Circulation has, according to the returns of the Reserve Bank for 2 February, gone up by Rs 13.07 crores to Rs 1,993.87 crores, and there has also been outflow of Rupee Coin in an amount of Rs 0.93 crore. Foreign Securities are unchanged at Rs 126.86 crores, and a small adjustment in Rupee Securities raises the relative figure from Rs 1,638.79 crores to Rs 1,639.20 crores. As a result the Reserve Bank's cash in the till has been drawn down by Rs 13.59 crores to Rs 11.09 crores.

The return for the Banking Department is noteworthy largely for the impact it shows of busy season pressure upon the banking system. Reserve Balances of member banks are lower by Rs 4.41 crores at Rs 75.81 crores, and the Other Loans and Advances of the Reserve Bank have risen fairly sharply by Rs 9.83 crores to Rs 158.86 crores. Half of the fall in banks' Deposits with the Reserve Bank may be on account of the State Bank. But the rise in Other Loans, which is confirmed as being attributable to the Scheduled Banks in the main by reason of the increase of about Rs 7 crores in the Reserve Bank's advances against usance bills, is indicative of enlarged recourse to central banking credit on the part of banks other than the State Bank.

Other changes in the Reserve Bank figures are of small significance. The Centre's balances have moved down slightly from Rs 68.67 crores to Rs 68.10 crores, while those of State Governments are similarly lower by Rs 1.54 crores at Rs 17.29 crores. Borrowings of the States for their ways and means are practically unaltered at Rs 60.76 crores against Rs 60.80 crores. Investments have been marked down by Rs 1.05 crores to Rs 241.92 crores and, lastly, Balances Held Abroad, after a steady decline, over recent weeks, have reversed the trend and are better slightly by Rs 0.19 crore at Rs 11.16 crores.

The return of the State Bank for 2 February shows that Deposits of the institution are continuing to grow, the latest week's accretion being one of Rs 1.71 crores to Rs 548.73 crores. However, this hardly covered the busy season rise of Rs 5.22 crores to Rs 274.85 crores in the total of Advances. As such borrowings have gone up somewhat from Rs 2.94 crores to Rs 3.28 crores, and cash balances have been drawn by Rs 2.42 crores to Rs 23.74 crores; though, it is necessary to add, gilt-edged is marked higher by about Rs 1 crore at Rs 242.03 crores.

A worth-while improvement in Deposit resources has been reported by the Scheduled

*As at the end of 14 weeks for Reserve Bank, State Bank and as at the end of 12 weeks for Other Scheduled Banks.

Notes:—Cash balances include money at call and short notice.

Figures in brackets are percentages.

Banks during the week ended 26 January. Net Demand Liabilities (excluding borrowings but inclusive of Deposits from banks) have gone up by Rs 2.06 crores to Rs 843.15 crores, while the increase in net Time Liabilities is a larger one of Rs 6.70 crores to Rs 1,155.43 crores. This accretion to Deposits has fully covered the expansion in Advances during the week, the relative total of which has gone up by Rs 6.72 crores to Rs 1,322.63 crores. Nevertheless, borrowings from the State Bank are up by Rs 1.24 crores to Rs 13.16 crores, and indebtedness to the Reserve Bank also higher by Rs 1.08 crores to Rs 18.75 crores. The gilt-edged portfolio, higher by roughly Rs 8 crores at Rs 596.01 crores, reflects State Bank purchase during that week. As an end result cash balances, including money at call and short notice, have moved down slightly by Rs 0.94 crore to Rs 186.27 crores.

RESERVE BANK

Mr Iengar on This and That

IT remains to consider the three other areas in which, according to Mr H. V. R. Iengar there will be need for adjustment as between Government and the Reserve Bank. The first of these is "the volume of accommodation to be given to Government"—deficit financing. It is of course Government which determines the extent of accommodation it will obtain from Reserve Bank. The overall deficit in the Budget is met by an expansion in Treasury Bills; and the Reserve Bank's role is in effect restricted to advising Government as to the safe limits of created money before a Budget is drafted. Where the Reserve Bank believe that inflationary pressures are already considerable, the advice must be that recourse to deficit financing be kept to a minimum. We may take it that the Third Plan's greatly reduced recourse to created money stems at least partly from Reserve Bank advice.

And yet, in our view, the adjustment to be made in regard to the quantum of deficit financing has also to include policy for governmental borrowing from the open market. The Government naturally always wishes to maximise revenues from taxes; but the measures instituted in the last few years leave little room for fresh imposts except in the realm of indirect taxes. In the meantime the expanding economy and increased prosperity both contribute to enlarged revenues even at the current rates of taxes. But the Plan's demand for resources is so great that overall deficits invariably occur, in the sense of a shortfall of resources comprising all avenues saving borrowings and deficit financing. If in Reserve Bank's opinion reliance on the latter needs to be reduced it becomes equally its responsibility to frame a policy for augmenting prospects of realisations from the former. Open market operations, grooming of the market for additional absorption of gilt-edged, assessment of market needs and suggesting the form that the new issue will take, together with determining the capacity of the market, thus become all intertwined with advice on deficit finance.

The Reserve Bank naturally would like expeditious decisions and action in respect of sub-standard banks; for "political" reasons Government may wish to defer action. It seems to us that with the introduction of Deposit insurance, unless of course a bank is worse than sub-standard, there could be reasonable chance of improvement; though there will be continuing necessity for amalgamations and mergers. Where we feel that action must be speedy is when a decision has been taken in respect of a particular bank. Moratoria should not be over extended periods, as they disrupt confidence.

Linked with treatment of sub-standard banks is inspection. In the past there have been stray complaints (not officially given expression to) that inspection has sometimes been frivolous. Secondly it has also happened that though inspection did reveal the necessity for action that action has been postponed: a case in point is Palai Central. Here, too, however, we may have a conflict between "political" Government and Reserve Bank. In retrospect it is possible to suggest that the long rope given to Palai Central may at least partly have been owing to political strings pulled. But we feel that Reserve Bank directives to sub-standard banks must be more authoritative and stern, and the Reserve Bank has also to exercise its role as guide and mentor to the banking system by ensuring that its edicts in this regard are scrupulously carried out. At the same time with no loss to the banking community some of the excessive zest now and then noticed in inspections could be given up.

We came lastly to help to be rendered to cooperative institutions. The pioneering work done by the Reserve Bank deserves

the highest approbation. Where there may be conflict in Government's desire for speed and in Reserve Bank's anxiety to "spend" the money where it will do most good. For our part we are fully satisfied with such progress as there has been in credit to cooperatives, and we also believe that it is in this area that there will be least need of adjustment between Government and Reserve Bank.

BANK PROFIT

Bank of Rajasthan

The net profits of the bank for the year ended 31-12-61 (subject to audit) have amounted to Rs. 3,50,301.62 nP. as against Rs. 3,36,202.91 nP for the year 1960. After adding Rs. 3,274.02 nP. being the balance of last year, the following appropriations have been made:—

To Reserve under Section 17 of Banking Companies Act	71,000.00
To General Reserve Fund	52,336.00
To provision for Incometax	87,000.00
To Bonus to Staff	49,345.00

The Directors have proposed to recommend to the Shareholders to declare a dividend of 10% (Subject to income-tax).

Leaving a Balance to be carried forward to next year. 1,484.64

Treasury Bills

Tenders for Rs. 2,00,00,000 of 91 days' Government of India Treasury Bills were opened on Tuesday, 6 February 1962. Total amount offered was Rs 2,00,00,000. Tenders at Rs 99.365 per cent were allotted in full. Amount accepted was Rs 2,00,00,000, the average rate of accepted tenders being Rs 2.540 per cent per annum.

Tenders for Rs 2,00,00,000 of 91 days' Government of India Treasury Bills will be received at all centres (Bangalore, Bombay, Calcutta, Kanpur, Madras, Nagpur and New Delhi) up to the close of business on Monday, 12 February, 1962. Successful tenderers should make payment on Friday, 16 February, 1962. Other conditions are as usual.

During the week ended 2 February, 1962 Government of India Treasury Bills for Rs 40,98,75,000 were sold in favour of Reserve Bank of India.

91 days' Intermediate Treasury Bills sold from 31 January to 3 February, 1962 amounted to Rs 12,75,000.

91 days' Intermediate Treasury Bills will be sold from 7 to 10 February, 1962 at Rs 99.381 per cent. Sales can be stopped at any time without notice if Government think it necessary.

The ICI—Courtaulds Fight

By Paul Einzig

Since the Government refused to intervene in order to prevent ICI from taking over Courtaulds, the outcome of the fight between the two industrial giants will be determined by the shareholders of Courtaulds. Will a sufficient number of them accept the offer of four ICI shares for each five Courtaulds shares to ensure for ICI effective control? They are aware that, should the offer fail, the price of their shares would decline. On the other hand, they have every reason to assume that the latest offer of ICI is not their last word. It is considered practically certain that before very long it would be improved to one ICI share for each Courtaulds share. That being so, very few holders of Courtaulds shares are likely to be foolish or timid enough to accept the present offer.

The Government is subject to much criticism from all sides for its unwillingness to step in to prevent the transaction which is considered to be against the public interest as well as against the interests of the shareholders of both companies. If ICI succeeded in acquiring Courtaulds then the latter would be forced to buy its raw material from the former, even though it can be bought incomparably cheaper elsewhere. The result would be a decline of Courtaulds' competitive capacity. This would reduce its profits, to the detriment of all shareholders—the ICI holding the controlling block, and the minority holders who had refused to sell.

Why, then, it may be asked, is ICI so keen on buying up Courtaulds? It is partly in order to secure a market for its raw materials. That end could and should be attained by increased efficiency. The transaction would merely obviate the necessity for an effort to reduce ICI's cost of production to competitive level. The other main reason for the determination of ICI to gain possession of Courtaulds is the desire to grow bigger, for fear that it might itself be taken over by someone even bigger. Conceivably the big oil companies may want to diversify their interests, so they might reach out their tentacles to grab ICI. To make this move difficult, ICI wants to be too big for anyone to be taken over.

Would it not be much simpler and more reasonable, if the Government stepped in to prevent such clash of giants? The existing legislation against monopolies is obviously inadequate. Pending its amendments—which is necessarily a major operation that would take time—it would be possible to rush through Parliament a short enabling Bill giving the Government power to intervene when the public interest is threatened.

Meanwhile shareholders of Courtaulds, if they are wise, will sit tight and await the next offer. Let the ICI pay the full price for its ruthless ambition. Since considerations of prestige are now at stake, the present offer is certain to be improved—unless shareholders of ICI should come to realise that it is they who will eventually pay the price of their fight between giants, and should assert themselves against their executive.

Notes

YARN

Britain Says No to India

That the two day talks between the British Cotton Boards's Delegation led by Sir Cuthbert Clegg and the representatives of the Indian Cotton Mills' Federation headed by Mr Bharat Ram in Bombay to explore the possibility of arriving at an inter-industry agreement on the exports of cotton yarn from India to Britain failed to find an agreeable solution does not appear to be an altogether unexpected development. The British Delegation's request for a voluntary restriction of yarn exports to that destination from this country is understandable at a time when the increasing imports of yarn have been creating serious anxiety to the industry in Britain. The total imports of yarn to Britain, which stood at 14.6 million lbs in 1958, were expected to have reached 45 million lbs in the last year. The British Delegation pointed out that an inter-industry agreement for voluntary ceiling on exports of Indian yarn would considerably assist the domestic industry in carrying through its programmes of reorganisation. The representatives of Indian industry, while showing full regard for the problems of British indus-

try, brought to sharp focus the country's adverse balance of trade with Britain and the need for augmenting its foreign exchange earnings by stepping up its exports of cotton textiles and yarn.

The representatives of the two countries fully discussed the several points emerging out of the positions of the two industries and felt that more thought will have to be given by the two sides in order to conclude a practicable agreement keeping in view the difficulties of the British industry on the one hand and the foreign exchange difficulties of India on the other. The Delegations, therefore, decided to adjourn the present talks and to resume them at a convenient date in the near future.

OIL

Assam Says No to OIL

The demand of the Assam Government for a higher royalty rate for oil produced in the State and the subsequent refusal to grant a licence to the Oil India Limited for oil exploration in the State have created an embarrassing problem for the Central Government. Attempts to reach a settlement have not so far yielded any satisfactory result mainly because of the inflexible attitude being taken by the Assam Government on the question of royalty rates. The view of the Assam Government is that it is entitled to a higher rate in view of the lower royalty rate that now rules as compared with the rates that obtained some years ago. This fall in the royalty rate has come in the wake of the revised pricing formula which the Government of India worked out with the Burma Oil Company. Since the royalty rate was linked with the price of crude oil, a fall in the rate followed automatically when the Government secured a reduction in the price of crude oil under the new formula.

The issue calls for early solution in view of the adverse consequences that are involved in any retardation or slowing down of the oil exploration programme. On considerations of national interests and the importance of expediting the oil exploration programme, the action of the Assam Government does not seem justified. Even on considerations of the revenue needs of the State, there was no need to precipitate a controversy on the issue of royalty rates. For, though the

royalty rate on oil has suffered a decline on account of the reduction in price for crude oil, total revenue accruing under royalty for oil would not have been affected in view of the considerable increase that has taken place in oil production. With further prospective increase in the quantity of oil that is to be produced in the State, the Assam Government will be able to realise even larger revenues from the lower level of royalty rates that now rules.

The action of the Assam Government in refusing to grant a licence to the Oil India Limited is a challenge to the Central Government, for the OIL is a joint undertaking of the Central Government and the Burmah Oil Company. It is learnt that consequent on the refusal of the Assam Government to grant a licence to the OIL, the latter had to cancel the contract it has made with an European firm for commencing work in the areas allotted to it. Furthermore, oil being a Central subject, it is a moot point whether the State Government could be tolerated in taking any action which has adverse significance for the development of the industry.

Tank Wagons for Ankleshwar Crude

The new tank wagon discharging facilities installed by the Burmah Shell Refineries for receiving the Ankleshwar crude oil were inaugurated last week by Mr P. R. Nayak, Managing Director of India Refineries Limited. With the commissioning of the new facilities, Burmah Shell Refineries will be able to receive a complete train of 45 tank wagons daily, or 900 tons of crude oil. The construction of these facilities was a difficult job since it involved laying of a 430-metre double line railway siding capable of carrying 45 tank wagons, installation of a new pump house and a long pipeline through which the crude oil will be pumped into storage tanks. The total cost incurred in the construction of all these facilities is estimated at Rs 13½ lakhs.

For some months past, Burmah Shell has been storing Ankleshwar crude oil and it has already received about 12,000 tons. Under the terms of the Refineries Agreement 1951, the foreign-owned private refineries have to give preference to crude oil indigenously produced for processing in their refineries. When the Ankleshwar oil-field started production, the problem arose of finding an outlet for the oil produced in the area until such time as the projected third refinery in the public sector to be set up in Gujarat with Russian assistance gets off to its start. It was in this circumstance that two private

sector refineries, Burmah Shell and Standard Vacuum Oil Company, were prevailed upon to take the crude oil being produced at Ankleshwar. As a result of the utilisation of Ankleshwar crude by the two refineries, a considerable saving in foreign exchange on import of crude is expected.

The Ankleshwar crude has a greater content of high motor spirit and its refining is expected to result in the production of motor spirit in excess of the actual requirements in the Western region. The surplus of motor spirit will further be substantially increased when the two public sector refineries at Nunmati and Barauni go into full production. It has been learnt that, at the Burma Shell refinery, the Ankleshwar crude will be mixed with the Iranian crude and facilities have been provided in the refinery for the continuous mixing of the two crudes simultaneously with their delivery to the distillation unit.

RAILWAYS

Link to the Konkan

The inauguration by Mr Jagjivan Ram, the Union Minister for Railways, of the construction of the 44 mile long Diva-Panvel-Uran-Apta rail line on the Central Railway linking the northern part of the Konkan area with Bombay city marks the consummation of the long cherished aspiration of the denizens of the Konkan region. Though several surveys were undertaken and investigations were made on previous occasions the extension of a railway

line to this region failed to materialise for one reason or another. The present project which entails a capital expenditure of about Rs 3.94 crores has at last set at rest all the uncertainties and apprehensions that lingered in the minds of the people and with its inauguration a new chapter has been added to the economic life of the State of Maharashtra in general and of the Konkan region in particular.

In his inaugural address, Mr Jagjivan Ram highlighted the significant role of the railways in the national reconstruction activities. No doubt, the new project forms part of the nationwide scheme launched by the Government of India a few years ago. That any extension of railway lines would accelerate the economic advancement of the nation admits no denial. But the resources with Government are by any manner of reckoning too scanty to permit the undertaking of this formidable task all on a sudden and many of the programmes will have to be shelved for the time being. This is presumably the chief reason that led to the delay in taking up the Konkan rail-link. It is a well known fact that the absence of adequate transport facilities hindered to a great measure the rapid industrial development of this region which is rich in minerals such as iron, manganese, bauxite, etc. Even the exploitation of agricultural wealth was lethargic. It is, however, gratifying that the work on the new line has been started which is bound to usher in a new era of industrial development. The Government of India's decision to set up a basic chemical and intermediate plant at an approximate cost of Rs 15 crores in the region also is a welcome augury. The speedy commercial exploitation of the vast industrial potentialities of the region will be rendered easy with the transport facilities that will be opened up by the new line. The completion of the line will moreover create conditions conducive to the establishment of a number of new industrial ventures in this area and it is quite reasonable to anticipate that the industrialisation of the region will gather greater momentum in the days to come.

ANNUAL PLAN J & K's Outlay to be Rs 16 Crores

Jammu and Kashmir's plan for 1962-63, approved by the Planning Commission, provides for the rapid industrialisation of the State, exploration and exploitation of mineral resources like coal, lime stone, lignite, bauxite and gypsum, etc, enhancement of irrigation facilities and intensive and extensive cultivation. The outlay for the plan is fixed at Rs 16 crores and

the allocation for various departments will be made after ascertaining the demands from each department which are expected to be submitted to the State Government by the end of February.

The spokesman of the State's Planning Department who made the announcement made it pretty clear that the major portion of the total capital allocation will be allotted for the speedy exploration of mines and the establishment of several heavy, medium and small scale industries in the State. It is a well known fact that despite vast industrial potential, the State is industrially backward and many of the resources lie untapped. The topography of the State, which makes easy communication extremely difficult, and the paucity of adequate electric power are the two prominent inhibiting factors that stand in the way of making much headway in this sphere. The former can be done away with by constructing well-planned roads and the extension of a railway line to important parts of the State so as to interlink the various regions of the State. It is gratifying that for the generation of electricity, for which resources are not wanting, a generous allocation will be provided during the year under review. The agreements entered into between the Government and some of the industrial houses of the country for setting up industries in the State augur well for its speedy industrialisation. That much progress has not been registered in the industrial realm during the past is an unfortunate fact and it is quite reasonable to anticipate that much of these lapses will be made good during the Third Plan.

It may also be recalled that the experts of the Planning Commission are making a thorough study of many of the power projects and those projects submitted by the State Government have already received sanction from the Central Water & Power Commission and they have instructed the Government to earmark a lion's share of the total allocations for this head on these approved schemes. The various schemes for increasing the irrigation potential were also accepted by the Planning Commission and they are bound to bring more land under the plough. With all these programmes on the anvil the rosy future of the State is well in sight and its all-round development will rest on the vigour and efficiency with which these schemes are implemented.

SMALL-POX Beginning of the End?

The Central Health Ministry has outlined a three-year programme for the complete eradication of small-pox in the country before the end of the Third Five

Year Plan. Toward this, the Planning Commission has agreed to the allocation of Rs 7 crores. The Soviet Government has given a gift of 250 million doses of freeze dried vaccine and this together with the internal production of 75 million doses of vaccine lymph per annum in the 13 vaccine institutes is considered enough to meet the requirements of the country-wide vaccination programme that is to be implemented in the course of the next three years. The State Governments have been given financial assistance for the purchase of equipment and provision of facilities for augmenting production in these institutes by another 25 million doses per annum so that the needs of the maintenance phase could be met after the vaccination programme is completed.

A small-pox eradication call, under a Deputy Director-General of Health Services for overall planning, coordination and technical advice, and an epidemiological cell have been set up at the Central Directorate of Health services. The epidemiological cell will provide specialised guidance on diagnosis, treatment and prevention of various diseases; and give orientation to the epidemiological approach in the study and solution of health problems.

The new scheme for eradication of small-pox has been welcomed by the Mudaliar Committee on Health Survey and Planning. The Committee in its report presented to the Government of India earlier this month had observed that, "apart from the preventable mortality and morbidity resulting from the disease, the continuance of small-pox in India adds little to our credit in the international field." The Committee had also suggested that every new-born child should be vaccinated within six months after birth.

Some of the States, notably Mysore, have already made a start with the implementation of the programme. In Madras State, the North Arcot district has been chosen for the implementation of the programme to begin with. The programme will be implemented in the light of the knowledge and experience gained in the working of the pilot projects in 1960-61. Out of a population of 14 million covered by these projects, 12 million have already been vaccinated. The report on the working of these projects has emphasised the need not only for modification of programmes in certain respects but also for a well-conceived educative programme for fighting superstition and prejudice against vaccination.

COMPANY LAW Report for Eastern Region

The review of the working of companies in the eastern region by the department of Company

Law Administration for the quarter ended December 1961 discloses that during this period 81 limited companies with a total authorised capital of Rs 8 crores have been registered. State-wise break-up of the new registrations shows a marked concentration in the West Bengal State which is shown to account for 70 of the new companies. In Bihar during the quarter under review, 4 companies with a total authorised capital of Rs 59 lakhs were registered, of which one was a public limited company having an authorised capital of Rs 2 lakhs. In Orissa also 4 new companies with a total authorised capital of Rs 1.65 lakhs were registered, three of them being public limited companies with an authorised capital of Rs 1.55 lakhs. In Assam three private companies with a total authorised capital of Rs 11 lakhs were incorporated.

Of the 70 new companies floated in West Bengal 15 were public limited companies having a total authorised capital of Rs 3.30 lakhs while the balance of 55 companies were private limited companies with a total authorised capital of Rs 2.29 lakhs.

During the period, 12 companies went into liquidation in the region. The number of companies that were liquidated in West Bengal was 8 and had a total paid-up capital of Rs 9.30 lakhs. In Bihar three companies with a total paid-up capital of Rs 8 lakhs went into liquidation, but Orissa had a good record with not a single case of either liquidation or dissolution. In Assam one guarantee company was put into liquidation. The number of companies that were dissolved during the period under review is 13 in West Bengal and 4 in Bihar. Further in the whole eastern region, 564 companies were shown to have been finally struck off under Section 560(5) of the Companies Act 1956. Of this 550 were in West Bengal, 12 in Bihar and 1 each in Orissa and Assam.

The review also states that during the period under review, prosecutions were launched in 460 cases against companies and management under the various provisions of the Companies Act for defaults in respect of annual returns, balance-sheets and failure to hold general meetings, etc. The number of prosecution cases was 20 in Bihar and 4 each in Assam and Orissa.

NEW HORIZONS UTMAL Near Rourkela

The Utkal Machinery Limited (UTMAL) set up at Kansbahal near Rourkela with the collaboration of three German firms and Larsen & Toubro of India is one of the notable projects for the manufacture of heavy machinery and plant in the country. The project which is estimated to have cost an outlay of Rs 4 crores is

10 February 1962

expected to be commissioned in a couple of months. The three participating German firms are Gutehoffnungshette Sterkrade AG, J.M. Voith GmbH, and Heinrich Koppers GmbH. While Larsen & Toubro will contribute Rs 40 lakhs to the capital of the company, the three German firms will contribute Rs 1.20 crores. The ICICI is also expected to participate in the equity capital of the company to the tune of Rs 20 lakhs.

The company will manufacture a wide range of heavy engineering plants, including blast furnaces, steel works plant, pig casting machines, sintering plant and ropeways, coke ovens and by-products recovery plant, low temperature carbonisation and gasification plant, chemical plant and equipment for fertiliser, refinery and petro-chemical installations and plant and equipment for production of pulp, paper and cardboard.

When the plant gets into full production, there will result a substantial saving in foreign exchange that is presently expended on imports of these items. The participating German firms are renowned for their long tradition in engineering and machinery manufacture. The Gutehoffnungshette is one of the largest steel and metal fabricating groups in the world, while J. M. Voith GmbH has been known in India

as one of the largest suppliers of equipment and machinery for the paper manufacturing industry. Heinrich Koppers GmbH has been a leading manufacturer of coke oven and by-product plants and heavy chemical plants. The association of these three companies with Larsen & Toubro represents an ideal combination for the manufacture of heavy machinery and plant. The pooling of resources, both capital and "know-how," of the three German firms together with the engineering skill and technical and manufacturing experience of Larsen & Toubro will enable UTMAL to contribute quality-wise to Indian industrialisation.

SFC

Speedier Loans in Vidarbha

The decision of the State Finance Corporation to offer more credit facilities for industries in the Vidarbha region will be widely acclaimed. Announcing this at a press conference held in Nagpur, Mr R. S. Pochkhanwala, the Managing Director of the Corporation, stated that the Corporation will endeavour to deal expeditiously with the loan applications so as to enable the industrialists to proceed with their programmes without inordinate delay.

Briefly tracing the activities of the Nagpur branch of the Corporation since its inception in April 1958, Mr Pochkhanwala disclosed that the branch had up to 15-1-62 received 162 applications from the region for a total of about Rs 1.15 crores out of which sixty applications for an aggregate of Rs 39,42,500 were sanctioned by the Corporation so far. While giving details of the applications sanctioned, the Managing Director revealed, in the course of the press conference that ten each were for the production of chemicals and chemical products and manufacture of metal products. Eight applications were from the food manufacturing industry, seven from printing, publishing and allied industries, six each from wood, cork and textile manufacturing firms, four each from miscellaneous manufacturing industries and basic industries, three from non-metallic mineral manufacturers and one each from manufacturers of machinery excluding electric machinery, paper and paper products.

Apart from these, forty applications are under the consideration of the Corporation. The Managing Director made it clear that certain delays in dealing with the applications were inevitable. To a large extent the delay is caused by the inadequacy of the information provided in the applications while in some cases it is partly due to their technical com-

plications and other departmental transactions. As the Corporation will have to scrutinise each application with the utmost care and will have to satisfy itself as to the soundness of the transaction, a certain amount of delay is but natural. The Corporation's eagerness to get these things done quickly is to be welcomed.

USA

Economic Report for 1961

The economic report President Kennedy sent to Congress last week presents a broad picture of the progress, problems and prospects of the US economy, backed by detailed and expert analyses prepared by his council of economic advisors.

Taken together, the two parts of the report constitute one of the most comprehensive economic documents yet produced by the executive branch of the US Government. That the report also is one of the most literate should come as no surprise in view of the gift for expression long demonstrated by Mr Kennedy and his advisors.

The underlying tone of the report is one of satisfaction with the 1961 economic performance and optimism over the 1962 prospects, tempered by the recogni-

tion that the economy's full potential is yet to be realised and a number of economic policy objectives are yet to be fully achieved.

In the realm of 1961 accomplishments, the report cites important gains in virtually every aspect of US economic activity. The gross national product (GNP), or total output of goods and services, attained an annual rate in the fourth quarter of the year of \$542,000 million. This represented a real rise, after allowance for minor price fluctuations, of 7.5 per cent over the rate during the first quarter, when the brief and mild 1960-61 recession hit bottom. Thus, while 1961 started out on a recessionary note, the sharp recovery brought the GNP for the year as a whole to a new all-time annual high of \$521,000 million.

Contributing to the advance was a 13 per cent rise in industrial output during the year. These gains brought into productive use nearly half the plant capacity that was idle at the beginning of the year.

In other noteworthy achievements unemployment dropped

from 6.8 to 6.1 per cent of the labour force, business earnings rose markedly, and new highs were set in the total personal income of all Americans, both before and after taxes. A significant unheralded milestone was when the per capita disposable income—after tax—crossed the \$2,000 mark for the first time in history.

With it all, inflation was notably absent from the economic scene during 1961. Consumer prices rose only about one half of one per cent, and wholesale prices actually were lower at the end of the year than at the beginning. In addition, the deficit in the nation's international balance of payments was reduced to less than \$2,500 million from 1960's \$3,900 million, and the gold outflow was cut in half.

It is clear, then, as the report observes, that the Kennedy administration was able to achieve every one of the major economic goals it set for itself when the year began. The economic downturn was reversed, production increased, employment improved, price stability maintained, and

international confidence in the dollar restored.

The record is undeniably good. But in the eyes of the President and his council of economic advisors, it still is not good enough. While the gap between actual and potential output was cut in half, it was not closed completely. While unemployment was reduced substantially, the goal of full employment has yet to be reached.

Thus, there is room for further improvement in the economy. And the very availability of manpower and industrial resources should help support a continued and sizeable economic expansion in the year ahead.

As seen by the President and his economic advisors, the 1962 prospect is for a GNP of \$570,000 million. This would put the nation's total output close to a \$585,000 million annual rate by the end of the year. Also, the belief is that the unemployment rate can be reduced to five per cent or less during the year, with an interim—though by no means a final—goal of four per cent in view for mid-1963. Both personal income and corporate earnings are

expected to continue their rise. The outlook appears excellent, moreover, for continued price stability—particularly if labour and management exercise a proper restraint in their wage and price policies.

These projections indicate that the GNP will be crossing the \$600,000 million mark during 1963. This implies an exceptionally vigorous economic expansion, somewhere in the neighbourhood of 20 per cent, from the recession low of early 1961.

This kind of a performance would bring the US economy close to its full employment and full production goal, and would go a long way in meeting the Kennedy administration's basic economic objectives. These can be summarized as achieving full recovery from the last recession; attaining a higher rate of long-term economic growth—such as 4.5 per cent a year or better compared with the average 3.5 per cent of recent years; further strengthening the nation's defences against future recessions; continued maintenance of price stability; and a continuing improvement in the balance of payments position.

Indian Finance

important beginnings

In December 1911, Bihar acquired the status of a separate province. This marked the dawn of a new phase in the history of this ancient state.

The birth of the new province synchronised with another epoch-making event. In December 1911, shattering the silence of the jungle hamlet of Sakchi, as Jamshedpur was then called, the newly-built Tata Iron and Steel Works roared into life and produced the first cast of pig iron. The commissioning of India's first iron and steel works helped to put Bihar on the industrial map of India and to set the country on the path to economic maturity.

In the course of fifty years, with the steel works as its nucleus, Jamshedpur has grown into a major industrial centre in India and the second largest city in the fast-developing State of Bihar... a city where industry is not merely a source of livelihood but a way of life.

A view of the Tata Steel Works in 1911

JAMSHEDPUR THE STEEL CITY

The Tata Iron and Steel Company Limited

IBRD

\$ 100 Million Bond Issue

An underwriting group of investment firms and commercial banks, headed jointly by The First Boston Corporation and Morgan Stanley and Co., offered on 24 January 1962, a new issue of \$100 million 4½ per cent Twenty-Year Bonds of International Bank for Reconstruction and Development. The Bonds will be due 1 January 1982. They will be priced at 100 per cent and accrued interest to yield 4½ per cent to maturity.

The Bonds will not be redeemable prior to 1 February 1972. From 1 February 1972 the Bonds will be subject to optional redemption at prices ranging from 102½ per cent to par. As a sinking fund, the Bank will retire \$5 million of the Bonds on or before 1 August in each of the years 1972 through 1981. The sinking fund is calculated to retire 50 per cent of the issue prior to maturity.

As in the case of other World Bank issues recently sold in the US, the Bank is offering certain institutional investors the privilege of taking delayed delivery of the Bonds on one or more quarterly dates from 1 May 1962 through 1 February 1964. A commitment fee at the rate of ½ per cent per annum from 8 February 1962 will be paid by the Bank under delayed delivery contracts.

The delayed delivery arrangement is expected to enable the Bank to co-ordinate a portion of its borrowing with loan disbursements and also to make it possible

10 February 1962

for the purchasers to arrange payments to suit individual preferences in the light of their own projected cash positions.

This is the twelfth issue of World Bank Bonds to be marketed in the United States on a negotiated basis by underwriting groups headed by The First Boston Corporation and Morgan Stanley & Co. The last previous issue was \$125 million of Twenty-five Year 5% Bonds in February 1960.

Giving effect to the present issue, and other adjustments for debt issues and retirements between 1 January and 15 February 1962, inclusive, the Bank's funded debt will be \$2,551,129,273 which includes \$1,924,742,000 payable in US dollars and the equivalent of \$626,387,273 payable in other currencies.

From its establishment to 31 December 1961, the Bank had entered into loan commitments in an aggregate principal amount equivalent to \$6,190,427,893 to finance programmes or projects in 59 countries. The loan commitments effective and held by the Bank as of 31 December 1961, totalled \$4,281,033, of which the undisbursed balance was \$1,265,852,826."

Loan to Australia

The World Bank has made a loan equivalent to \$100 million to the Commonwealth of Australia to assist in financing a part of the Snowy Mountains hydroelectric power scheme.

In a separate transaction the Commonwealth of Australia on 24 January issued \$30 million of 5½% Twenty-Year Bonds, due

15 January 1982. An underwriting group headed by Morgan Stanley & Co. is publicly offering the issue at 98½%. Proceeds of the new issue will be applied, together with other funds, to repayment of \$38 million of maturing Australian bonds on 1 February 1962.

The Snowy Mountains scheme is a large undertaking for the production of electric power and the provision of irrigation water in southeastern Australia. The Mountains constitute the highest portion of the Great Dividing Range and are the source of three rivers, the Snowy, the Murray and the Murrumbidgee. The Snowy River drains the Kosciusko Plateau on the eastern side of the Divide and flows southeast through the well-watered coastal belt of eastern Victoria running to waste in the nearby Tasman Sea. The Murray and Murrumbidgee Rivers drain the valleys and gorges on the inland side of the Divide and flow westward through hundreds of miles fertile alluvial plains before reaching the southern coast. Irrigation is already well established on the plains but more water is required if further expansion of agricultural production on a large scale is to be achieved.

The Snowy Mountains scheme provides for the waters of the Snowy River and its tributary, the Eucumbene, to be trapped before leaving the high elevations and to be diverted inland by long tunnels through the mountains to the western rivers. In travelling through the trans-mountain system of tunnels and shafts, the diverted waters will fall over 2,500 feet, generating power as they pass through the turbines of several large power stations. At higher

elevations, other power stations will generate power from the waters of the rapidly falling rivers before they reach the main diversion projects.

The scheme embraces an area of nearly 3,000 square miles and involves the construction of nine large dams and many smaller ones, approximately 100 miles of tunnels, 11 power stations and over 80 miles of aqueducts high in the ranges to catch the mountain streams which otherwise would miss the reservoirs and tunnels. When completed it will provide 2½ million kilowatts of power and approximately 2 million acre-feet of water a year for irrigation.

Construction work was started in 1950 and the scheme is scheduled for completion in 1975 at a total estimated cost of about \$900 million. One large section of it has been finished and includes the diversion of the Eucumbene River into the Murrumbidgee River, the construction of four large dams and the completion of three power plants with a combined capacity of 660,000 kilowatts. Construction of a new section of the scheme is now about to begin, and the Bank loan made today will assist in the financing of this new section.

The Bank project is known as the Murray No. 1 hydroelectric development. It will add 760,000 kilowatts of generating capacity to the scheme and is scheduled for completion in 1967. It involves the diversion of the Snowy River into the westward flowing Murray River. The works to be undertaken include the construction of three large dams, two long tunnels, a pressure tunnel and twin steel pressure pipelines to carry

water to the Murray No. 1 power plant in which eight 95,000-kilowatt generating units will be installed. The water available for irrigation on the western side of the mountain range will be increased by 440,000 acre-feet a year. The full benefits from this phase of the scheme will not be achieved, however, until the Murray No. 2, 440,000-kilowatt power station, is finished in 1970 when a further 360,000 acre-feet of water a year will become available.

The power plants of the Snowy Mountains scheme supply power to electric power systems in the States of New South Wales and Victoria and to the Australian Capital Territory. The demand for power in the two States is expected to increase by about 8% annually over the next ten years; to meet it the Electricity Commissions in the States will have to install a substantial amount of capacity themselves to supplement the power which they will obtain from the Snowy Mountains scheme.

The Snowy-Murray development will be constructed by the Snowy Mountains Authority, a statutory corporation established in 1949 to carry out the scheme with funds provided by the Commonwealth Government. The Government will relend the proceeds of the Bank loan to the Authority.

The total cost of the project is estimated at \$222 million. It is expected that the equivalent of \$189 million will be needed for local expenditure, and the remaining \$33 million will be required for imported equipment and services. Contracts for all major works and for the generating

World Bank Aid to Pakistan

The Consortium of Governments and Institutions interested in development assistance to Pakistan met in Washington on 24-25 January under the chairmanship of the President of the World Bank, Mr Eugene Black, to discuss further aid for Pakistan during 1961-62 and 1962-63, the second and third years of the Second Five Year Plan. The meeting was attended by representatives of the Governments of Canada, France, the Federal Republic of Germany, Japan, the United Kingdom, and the United States and by representatives of the World Bank and the International Development Association (IDA). The Government of Belgium and the International Monetary Fund sent observers.

Pakistan's Development Plan, which had been examined by the Bank and the other members of the Consortium, was accepted as a framework within which support could be given to Pakistan's own efforts to develop its economy and improve the life of its people. The Bank endorsed the Government of Pakistan's estimate of \$945 million as being the aid required from the members of Consortium during the two years.

Of this amount, \$320 million was made available to Pakistan as a result of a meeting of the Consortium in June 1961. At the meeting which has just concluded, the Consortium members indicated their willingness, subject as appropriate to legislative action or other necessary authorisation, to enter into additional commitments

sufficient to meet the full requirement of \$945 million.

	June 1961 Commitments	Additional Commitments (\$ million)	Total
Canada	18.0	20.0	38.0
France	10.0	15.0	25.0
Germany	25.0	55.0	80.0
Japan	20.0	25.0	45.0
United Kingdom	19.6	28.0	47.6
United States	150.0	350.0	500.0
World Bank and IDA	77.4	132.0	209.4
	320.0	625.0	945.0

A small part of this aid will be in grant form, and much of the remainder will be in the form of loans on easy terms of repayment. A substantial portion of the aid will not be tied to individual investment projects.

At the suggestion of several members of the Consortium, the Bank agreed to continue to seek to interest other nations in participating in the financing of Pakistan's development.

★

WHOLESALE PRICES

0.7 Percent Rise

The official wholesale price index (with the year ended March 1953 as 100) advanced by 0.7 per cent to 123.7 during the week ended January 20, 1962 as compared with 122.9 (revised) for the previous week. The index was higher by 0.7 per cent when compared with the corresponding week of the previous month but was lower by 1.7 per cent than that of a year ago.

The index for 'Food Articles' rose by 1.5 per cent to 119.4 as compared with 117.6 (revised) for the earlier week due to an advance in the prices of tea (+20%), bananas at Nagpur (+9%), jowar at Hyderabad (+9%) and at Jhalawar (+8%), potatoes at Kanpur and oranges (+8% each), fish (+6%), gram (+4%), Gingelly oil (+3%), mung, groundnut oil and coffee (+2% each) and rice, masur, urad, coconut oil and gur (+1% each), although the prices of onions (-14%), wheat at Moga (-9%), potatoes at Shillong (-7%), jowar at Mohal (-5%), black pepper (-3%), eggs (-2%) and milk and turmeric (-1% each) showed declines.

The index for 'Tobacco' worked out to 93.7 as against 93.6 for the earlier week.

The index for the 'Fuel, Power, Light and Lubricants' group stood unchanged at its previous week's level of 122.3, despite a rise in the prices of castor oil (+1%).

Higher prices of cotton seed (+4%), linseed and gingellyseed (+2% each) and groundnuts and copra (+1% each) raised the index for 'Industrial Raw Materials' by 0.3 per cent to 137.5. The prices of

lac (-3%) and raw jute and castor-seed (-1% each), however, move down.

The index for 'Intermediate Products' receded by 0.4 per cent to 137.4 due to a fall in the prices of lead (-5%), zinc (-3%), rayon yarn (-2%) and cotton yarn (-1%), although the prices of linseed oil (+1%) showed a rise.

The prices of jute manufactures (-5%) moved down, while those of silk and rayon manufactures and oil cakes (+1% each) showed an advance and the index for 'Finished Products' fell by 0.6 per cent to 123.7 as against 124.5 (revised for the previous week).

NEWS IN BRIEF

The manufacture of saleable steel by the Indian Iron and Steel Company at Burnpur works in January totalled approximately 74,121 tons against 65,031 tons in December 1961. Despatches during the month under review were marked higher at 72,029 tons compared with 67,203 tons in the previous month. The production of pig iron dropped to 86,754 tons from 103,038 tons in December. The output of steel ingots also declined from 83,171 tons to 78,574 tons.

The production of saleable steel by the Tata Iron and Steel Company rose to 119,000 metric tons in January from 117,600 metric tons in December. The manufacture of iron also looked up to 155,300 metric tons from 142,100 metric tons. The output of steel ingots was also up by 300 metric tons at 148,700 metric tons. TISCO's aggregate production during the first ten months of the current financial year totalled 1,351,800 metric tons, with steel ingots placed at 1,358,200 metric tons and saleable steel at 1,081,700 metric tons.

The manufacture of man-made fibre in Britain in 1961, according to the British Man-made Fibres Federation, totalled 569.57 million lbs compared with 561.99 million lbs in the previous year.

The raisings and despatches of coal in November 1961 in India amounted to 4,604,887 and 4,270,698 metric tons respectively. The corresponding figures for the previous month were 4,285,420 and 4,142,261 metric tons respectively.

The Government of India has decided to set up a panel to review the progress of the irrigation and flood control schemes included in the current Plan. A team comprising a member of the Planning Commission, Ministry of Irrigation and Power and the Central Water and Power Commission will visit the State capitals to hold discussions with the State Governments and project engineers on the progress of irrigation projects.

The Central Warehousing Corporation will shortly set up a cold storage at Calcutta with a capacity of

1,000 tons at an estimated cost of Rs 11 lakhs for the storage of potatoes, oranges, dry fruits, apples and the like.

A large coal deposit amounting to about 1,000 million tons has been found in Mirzapur district in UP. This deposit forms part of the Korba coalfield which covers the bordering areas of UP and MP.

The total production of steel ingots in Canada in 1961, according to the Dominion Bureau of Statistics, reached an all-time high of 6,355,985 tons as against 5,692,770 tons in 1960.

Two rayon plants with an aggregate capacity of over 6,000 tons of rayon per annum are being set up at Baroda and Udhana in Gujarat.

The Gujarat Government has announced its decision to provide 50 per cent subsidy on approved crops for production implements. The press note released in this connection states that an individual farmer or a panchayat or a cooperative society will be eligible for the subsidy.

The reserves of the International Bank for Reconstruction and Development during the second half of 1961 has risen by \$49.9 million to \$6,511.7 million. The IBRD during this period made 19 loans totalling \$339.9 million. These loans took the total number of loans to 311 in 59 countries and gross total of loans sanctioned since its inception to \$6,190.4 million. Repayments of principal received by the bank were placed at \$47.7 million. The outstanding funded debt of the bank as on 31 December, stood at \$2,425.6 million and gross increase in borrowings was to the tune of \$321.1 million.

The export earnings of India in 1961 at Rs 663 crores was up by Rs 40 crores from the previous years total. The adverse balance of trade of Rs 297 crores in the same year was the lowest on record in the past five years. Among the export items which have shown increase are jute manufactures (up by Rs 13.67 crores), tea (Rs 9.24 crores) coffee (Rs 2.87 crores), raw cotton and cotton waste (Rs 8.66 crores) and ferro-manganese (Rs 3.30 crores). Those items whose earnings declined are vegetable oils, hides and skins, gums, resins and lac, mica, manganese ore, petroleum products, leather and fibre manufactures, footwear and wool.

The Millowners' Association, Bombay, on behalf of the cotton mill industry in Greater Bombay, and the Rashtriya Mill Mazdoor Sangh, the Representative Union of the textile workers, have decided to refer the issue relating to the payment of bonus for 1959, 1960 and 1961 to a Board of Arbitrators. The Board will consist of two members whose names have been agreed to by the parties, but will be announced as soon as the consent of the persons concerned is obtained. For the first time in the history of the Bombay cotton mill industry, a major issue like bonus is sought to be settled through voluntary arbitration.

Clive Street Gossip

"I must have liberty
Withal, as large a charter as the wind
To blow on whom I please"
—As You Like It.

WITH pomp and circumstance the AVB plant at Durgapur was inaugurated this week by Dr B. C. Roy, Chief Minister of West Bengal; and it marks an important milestone in the industrial progress of the country. The project is, I think it is obvious, an outstanding example of Indo-British co-operation in the industrial development of India. For, the ACC-Vickers-Babcock Limited, which has sponsored and built up the project at Durgapur, is a partnership of three prestigious firms—one Indian and two English. The Indian "partner" is the Associated Cement Companies Ltd; and the two English firms which have collaborated are Vickers Ltd and Babcock & Wilcox Ltd. ACC's share of the paid-up capital is 49.8 per cent, while the two British companies each hold 24.9 per cent. The Company, with the name of ACC-Vickers-Babcock Limited, was registered in January 1959 in the State of Bombay with a nominal capital of Rs 10 crores. The project is the largest in the Indian private sector in which British companies are participating, and it is significant that Britain has also collaborated in the erection of one of the largest enterprises in the public sector, the steel plant at Durgapur.

I am somewhat awed by what AVB can claim to be: it represents one of the largest engineering units in the whole of Asia and is intended to manufacture cement making machinery, steam-raising plants, heat exchangers, pressure vessels, etc. The capacity for cement-making machinery will be approximately four to five plants a year each having an output of 600 tons per day. The AVB will also make a material contribution to the development of boiler and thermal power plants. In terms of modern power station boilers, the yearly manufacturing capacity is estimated at 500,000 kw per annum. The Third Plan has laid strong emphasis on the development of machinery making and also power development. The installed power generation capacity is proposed to be stepped up from 5.7 million kw to 13.4 million kw. A substantial proportion of this additional power is proposed to be obtained by installing thermal plants for which the Government has set a target of Rs 35 crores of equipment a year by 1956. Similarly, production of cement is also to be increased to 15 million tons a year by the end

of the Third Plan by setting up new units as well as expanding existing ones. The significance of the new venture for the realisation of the Third Plan objectives in the realm of machinery making and power development cannot, thus, be overemphasised.

The association of Vickers and Babcock-Wilcox has ensured the most modern standards and designs in the erection of the plant. Vickers have earned international renown as builders of ships, aircraft and heavy industrial and mining equipment, while Babcock & Wilcox are world-famous designers and manufacturers of steam-raising plant for industry and thermal power stations. The manufacture of AVB products will be carried out in four 700' long bays, two 400' long machine shops and a 200' long forge shop, all designed on the most modern lines. (Indeed, one of the big-wigs who came to Calcutta said that the AVB plant is probably the most modern in the world). Further, 13 electric overhead travelling cranes have also been built into the structure, the biggest one having a lifting capacity of 70 tons. The shops have been designed to allow for progressive expansion in the future so that it will be possible to lift single pieces weighing about 200 tons in the heavy fabrication bay without necessitating any structural alterations. The works comprise a structural plating shop, a tube shop, two vessel shops, an X-ray bay, a test room, a stores building and the works offices.

AVB has also taken a modern and enlightened attitude in regard to the welfare of the workers employed in the project, and has developed a housing colony for workers which is self-contained in all matters. The colony, comprising over 800 quarters, has the look of a miniature garden city and has its own dispensary, shops, parks and play-grounds. The location of the plant at Durgapur has been advantageous in as much as it is placed fairly favourably in regard to coal and rail transport to the Calcutta port, which is only about 100 miles away. However, in view of the rail transport difficulties that have arisen of late in this area, the completion of the express highway between Durgapur and the Calcutta port assumes considerable urgency. Mr Dharamsey M. Khatau, Chairman of AVB, in his speech at the inaugural ceremony, has stated

that it was on the assumption that this road would be available that the new plant was located at Durgapur. Transport is a question of vital importance in the smooth working of the AVB plant at Durgapur in view of the heavy nature of the items of manufacture.

I derive particular pleasure in the celebration of its 75th anniversary by the Bengal National Chamber of Commerce and Industry, for the first Eavesdropper, in the early years of Indian Finance, used intimately to be associated with that Chamber. Those were the days of course when there began to be a growing realisation that the struggle for Swarajya had to be in the economic sphere as well. As Mr K. N. Mookerjee, the Chamber's President, pointed out, "part of its energies in the past was utilised in their endeavour to secure rights for Indian businessmen from an alien Government." Today, in common with other associations of a similar nature, the Bengal National works for industrialisation fully in cooperation with Government. From time to time there naturally are complaints about taxes and the rest; but nobody these days takes these grouses seriously. There is an especial responsibility that Bengal National has. The trouble in West Bengal is that the "son of the soil" (and I don't mean an agriculturist here) is so little to be seen at the helm of industry or business. Dr B. C. Roy, who was the chief guest at a special function to celebrate the anniversary, suggested that all that the Bengali lacked was self-confi-

dence, and called upon the Chamber to help instil this attribute; and in this regard he congratulated the Chamber upon its Business Career Service Institute, which is helping young men to choose careers as businessmen in their own right. I had always thought it was better to have loved and lost than never to have loved at all; but concentrating as we are in building an industrial India, Dr Roy believed that it is better to have tried and failed than never to have tried at all. I should like to suggest, as gently as I may that too many failures can only lead to greater frustrations. The entrepreneur may have inborn skills and talents, but education is nevertheless necessary; you can't hope to learn only from mistakes.

The conjunction of planets has in the event wreaked an iota of the havoc the potential for which it was almost universally believed (by astrologers and such) to have. But this is precisely the point about astrology. The prediction takes the form of suggesting that the planets are propitious for such and such an happening and there is a sort of men who make capital, by advising propitiating acts in advance; and seers of this kind are never wrong. If prediction, after act of piety, borne out, then the poor devotee of astrology is told that the stars were too powerful and not enough by way of amends in advance was done; and if prediction, also after act of etc., fails to materialise, why the poor sucker did right in spending the money he did. But there is at least one aspect of the conjunction which even the non-believer can draw some satisfaction from: almost all astrologers maintain that, whether or no disasters shake the world, the world itself will be a different place; and in the light of conditions today, any change can only be for the better.

PLAN PROGRESS

Enforced Pause

THE picture of strident progress of industry generally, and of machine building industries in particular, that was projected by Mr Manubhai Shah at the last meeting of the Standing Committee of the Industries Council has apparently been drawn without making adequate allowance for shortfalls likely in certain basic sectors such as iron and steel, coal, oil and transport. In each of these sectors, the prospects instead of becoming clearer with the progress of the Plan are getting more clouded.

The Third Plan had fixed a capacity target for 10.2 million ton steel ingots and a production targets 9.2 million tons. The experience of the Second Plan was sufficient warning that there could be wide divergence between the setting up of capacity and achievement of full production. In extenuation of the shortfalls in production during the Second Plan it was argued that usually three to four years passed before a one-million ton steel plant reached its rated capacity. It is not therefore clear on what basis the planning authorities assumed that 90 per cent of planned capacity would be in full production in the last year of the Plan, that is to say, three years from now.

Apart from actual production, even the schedule for setting up additional capacity seems likely to be stretched out. Bokaro, which was expected to provide one million tons of the additional capacity during the Third Plan, is a doubtful starter. The assumption all along has been that the American steel industry could be persuaded, despite their allergy to the public sector, to provide the finance and equipment for the Bokaro project. It is gathered that the clarifications of the conditions of collaboration that were sought and given, at last year's session of the International Business Meet in New Delhi, were not particularly helpful in improving the prospects of American assistance. It was also expected that part of the equipment for Bokaro steel plant would be available from the Heavy Engineering Corporation. The latest report of the progress of the Heavy Machine Building Plant adds little to the information available in the report for 1959-60.

Apart from Bokaro the rest of the target of 9.2 million tons was to be achieved mainly through expansion of the three steel plants

in the public sector. It seems premature to think of expansion when two of the three plants have yet to reach targeted capacity. Of the three public sector plants only Bhilai had attained its targeted capacity by January, 1962. Plans for expansion have also made the greatest progress in Bhilai. An agreement for supply of equipment is expected to be finalised shortly, following rather prolonged negotiations between the representatives of the Ministry of Steel, Mines and Fuel and the Russian delegation. Global tenders have been invited for expansion of Rourkela, but officials are inclined to keep their fingers crossed if asked when a start is likely to be made with the expansion. The latest figures of the Durgapur expansion plan show an increase in cost of three million pounds over the original estimate of £20 million. Progress in finalising agreements regarding this project depends on Britain's willingness to provide the extra funds.

The shortfalls in the output of steel plants are likely to have repercussions over the entire range of industry; for, programmes in other sectors have been drawn up on the basis of the rather optimistic targets set for steel. The position will be further aggravated by the impact of steel shortage on the Railway programme for track expansion and wagon-building.

If the steel prospects are not particularly encouraging, the present position regarding coal is much worse. The shortfall in reaching the Second Plan targets is now an old story. But this failure was sought to be covered up by the claim that the Plan target related to the rate of production to be achieved before the end of the Second Plan. But it was only during the first three months of 1961, that it has been possible to maintain production at the annual rate of 60 million tons. Actual production fell by one million tons in April, 1961 and further to a new low of 4,180,000 tons in June and July. The coal industry has not yet recovered from this severe setback. The raisings during November, 1961 were only 4,604,887 tons as compared with 4,638,000 tons in November, 1960. At this rate, the total production during the first year of the Third Plan is hardly likely to exceed the figure for the last year of the Second.

Prospects of early improvement in the production of coal and oil are bedevilled by the controversy sparked by the claims staked by the State Governments regarding

mining rights and royalties. A conflict could have been avoided if the ministries at the Centre had not been inclined to take the States too much for granted. While the necessity for integrated development of mineral resources is obvious, the co-operation of the States is also necessary and cannot be ensured if their legitimate claims are totally ignored. A proposal for taking the States concerned into partnership by giving them a stake in public undertakings is understood to be now under consideration. A solution of the dispute has to be sought at the political level and any early initiative to resolve the deadlock cannot be expected before new Governments are formed and get down to their jobs after the election. For one thing, the Governments which have taken a definite stand in regard to States' rights cannot be expected to back out with an election round the corner.

A pause of one year for consolidation of the gains of the Second Plan was advocated in informed quarters while the Third Plan was being formulated, but met with scant consideration at the hands of the powers that be. Now it appears that implementation of the Plan may be held up by an enforced pause without any of the advantages of a deliberate period of stock-taking and consolidation.

On the Cultural Front

The eve of election lull which has led to slackening of the tempo of administration has not apparently affected activities on the cultural front. The Commonwealth Education Conference which concluded an impressive session in New Delhi on January 25 was followed by the UNESCO Regional Symposium on Overall Educational Planning in which delegations from 16 Asian countries are participating. The Symposium has decided to set up two Commissions. One of these will deal with problems connected with resources and priorities and the other with problems regarding the content and character of education, training of personnel and the planning process. The reports of the Commissions will be discussed and finalised at the plenary session of the Symposium on February 13. The UNESCO Regional Workshop on Production of Low-cost Visual Aids concluded in a six weeks' session on January 31. Representatives of 14 countries of South East Asia took part in the deliberations of the Workshop which was organised by the Ministry of Education in co-operation with UNESCO.

Government it has been announced have also initiated a scheme for sanctioning grants-in-aid to individual research workers for fundamental research in social sciences and cultural subjects. Under the scheme, financial assistance will also be given to scholars

to purchase equipment, apparatus, stores or other material needed for their research projects. The scheme does not include the study of subjects falling under Science, Technology, Education and Commerce. Individuals desirous of obtaining assistance have been directed to apply to the Union Ministry of Scientific and Cultural Affairs on prescribed forms.

The Central Co-ordination Committee on Vocational Guidance and Employment Counselling at a recent meeting recommended that occupational and employment information should be made a part of the school syllabus and imparted to high school students during their regular class periods. Other suggestions include organisation of "career evenings in schools to enable parents to discuss and plan suitable careers for their children and a "vocational guidance week" to be organised by employment officers, either separately or along with the Technical Training Week.

The significance of the activities in the educational field has been highlighted in a recent broadcast over the All India Radio by Professor Galbraith who observed: "A dollar or a rupee invested in the intellectual improvement of human beings will regularly bring a greater increase in national income than a dollar or a rupee devoted to railways, dams, machine tools or other tangible capital goods."

Among other activities on the cultural front can be mentioned the Conference of the Administrative Board of the International Association of Universities under the auspices of the India International Centre, which was inaugurated by Mr C. D. Deshmukh on Monday last. The Indian Council for Cultural Relations has arranged for a series of lectures by Sir Eugen Millington-Drake, K.C.M.G. Vice-President of the Royal India, Pakistan and Ceylon Society who is now on a goodwill tour of India, Pakistan, Ceylon and the Far East. His programme in India includes visits to Calcutta and other important cities.

The Indo-Soviet Joint Committee, set up under the Cultural Agreement between the two countries signed in February 1960, has approved programmes for the two years 1962 and 1963 with a formal exchange of letters between Mr Humayun Kabir, Union Minister for Scientific Research and Cultural Affairs and H. E. M. G. A. Zhukov, Chairman of the Committee of the Council of Ministers USSR for Cultural Relations with Foreign Countries. The joint committee was set up to review the working of the Agreement, to advise the two Governments on the detailed manner of carrying out the Agreement and generally to advise the Governments concerned as to the manner in which the working of the Agreement might be improved upon.

Markets

JUTE Need for Price Stability

CONDITIONS in the raw jute market have continued to be rather easy with spot raw jute reported done much below the minimum price. It is obvious that one of the main reasons for the depressed state of the raw jute market is the continued heavy arrival in Calcutta and mill stations. The selling pressure in the raw jute market should have considerably lessened as the Indian Jute Mills Association has been issuing substantial quotas from week to week under its minimum jute purchase scheme. The quota allotted this week is 7½ lakh maunds. In issuing quotas the IJMA has specified that 50 per cent of the quotas should be bought on contract for near delivery. The scheme has been in operation for eleven weeks now with the total quota allocated to member mills up to the week ended 10 February amounting to about 8.4 million maunds. It is claimed by the IJMA that actual purchases are much above the total quota. It is therefore surprising that raw jute prices continue to be easy. It is pointed out by raw jute sellers that the IJMA advice as regards the quantum of business to be concluded in the contract market is not being strictly followed thereby leading to mounting pressure in the spot market.

Be that as it may, what matters now is the maintenance of jute prices at the minimum prices Government has already made it clear that it will be its aim to ensure that raw jute price does not fall below the minimum level. The Jute Commissioner has categorically stated that Government is determined to maintain Calcutta prices of jute at the floor level of Rs 30 per maund (basis Assam Bottoms). It is evident that the authorities are hoping that the steps already taken will ensure that raw jute prices are not unduly depressed. But the real test will be the attitude of farmers to jute cultivation in the next season. One is not to wait long though as the sowing time is not far off. In a few weeks sowings will commence and it will then be clearly known how the farmer has assessed his relative chances between the cultivation of rice and jute. It invariably happens that the cultivator is influenced by the state of the jute market at the sowing time. It is feared in certain quarters that as currently the

ing, thanks to the IJMA minimum purchase quota, mills cannot be said to have accumulated unusually big stocks. As the Jute Bulletin has pointed out, mills stocks at the end of December were only 1.24 million bales while there had been times in the past, when mills held much heavier stocks. The plea of financial stingency cannot also be seriously advanced as it is understood that the State Bank of India has expressed its willingness to make more advances against raw jute on IJMA standing guarantee. But the plan of stabilising jute prices by matching mill purchases to arrivals will work only if mills are enabled to make atleast some profit on simultaneous business. The IJMA has made it clear that its price support policy is dependent on parity being maintained between jute goods prices and jute price. Much, therefore, will depend on the attitude of the foreign consumer to the present trend in jute goods prices.

The jute goods market ruled easier especially around heavy goods during the past week largely

NOTE:—The rates for ready raw jute are nominally quoted at Rs 30 per maund for Assam Bottom; Rs 29.50 for Northern Bottom and Rs 32 for Daisee Bottom.

due to apprehensions of an alround increase in the stocks of jute goods as at the end of January, 1962. The stocks of all the categories had gone up. Total jute goods stocks were placed at 60,200 tonnes as against 55,600 tonnes at the end of the previous month. All the three categories have contributed to the rise. Stocks of hessian are up by 500 tonnes at 16,600 tonnes while stocks of sacking are higher by 1,600 tonnes at 30,400 tonnes. Stocks of other goods were higher by 2,500 tonnes at 13,200 tonnes.

TEA Bumper Crop

NORTH Indian as well as South Indian Tea crop was higher in 1961 than in any year previously. Had North India been favoured with better weather toward the close of the season, the fall in December would have been avoided and a total of 775 million pounds would have been reached.

The North Indian Crop reached the record figure of 595.8 million pounds — 68 million pounds more than in 1960. South India has improved upon its 1960 record by 3.1 million pounds; but the estimate for small grower production may be revised upwards when the full figures are in. Pakistan's production improved by 17 million pounds and Ceylon's by 19 million pounds over last year's record output.

The increased crop is taking its toll on South Indian tea prices. Cochin has quoted considerably lower prices as compared with the January 1961 averages. Although South Indian production has increased, exports have not. They only maintain the 1960 level. Most of the increase has been absorbed by the domestic market. Price movements, however, indicate that the average realisation during the first four sales has fallen by 85 nP per kilo. The corresponding four export sales brought in 35 nP lower per kilo than they did in 1961.

Meanwhile, in the Export Sale held in Calcutta this week, offerings were 74,269 packages. There was a good but less general demand. Plain brokens were easier by up to 10 nP per kilo, while Fannings in this category were firm to dearer except for the poorest sorts, which were easier. "Tea for price" was easier. Buyers were more discriminating in respect of Doors and Assam BOPs and those with autumnal quality were firm to dearer. Poorer liquoring Assam BOPs were easier with some withdrawals. Fannings were again a strong feature.

CTC types were very irregular and the best were sometimes up to 20 nP easier; but mediums and secondary grades were usually firm. Legg-cut teas shared in the general decline with some withdrawals. Darjeeling teas were sold readily. Flavoured teas were generally dearer; but teas from lower elevations were irregular and tended easier. Tippy sorts were sold well.

Whole Leaf grades were fully firm to dearer, the cheaper varieties being generally dearer. Following rates were quoted:—Clean Plain Pekoe Rs 4.00 to Rs 4.20; Plain BP Rs 3.60 to Rs 3.90; Plain Fannings Rs 4.00 to Rs 4.50; Medium CTC BP Rs 5.30 to Rs 5.50; Medium Assam CTC Fannings Rs 5.20 to Rs 5.50; Best Assam CTC BP Rs 5.70 to Rs 6.10 and Best Assam CTC Fannings at Rs 5.80 to Rs 6.30.

In the internal sale, offerings were 27,130 packages of dusts and 690 packages of leaf grades. CTC types were irregular with the small and bright liquoring teas often firm and sometimes dearer. Orthodox descriptions opened up to 10 nP below last rates; but strengthened considerably towards the close of the sale. There was once again a strong enquiry for legg-cut varieties, particularly the bright liquoring types which were fully firm to dearer. Following rates were quoted: Plain Orthodox Dust Rs 4.00 to Rs 4.80; Orthodox Dust Rs 4.40 to Rs 5.30; Legg-cut Dust Rs 4.60 to Rs 5.30; Medium Assam CTC Dust Rs 5.50 to Rs 6.10 and Good Assam CTC Dust Rs 6.50 to Rs 7.00. Leaf grades were taken up at irregular rates.

In the Cochin market, offerings 448,000 kg. Against selective demand, low-medium, medium and good medium brokens were much easier, while similar fannings were irregular and easier. Best liquoring sorts had good enquiry and were generally higher. Unorthodox teas were much weaker and quoted lower.

In London auction, offerings were 52,917 packages including 41,484 packages from Northern India. Less demand for the best colour Assams made the market for teas above the 5sh 1d range very irregular; but the strength remains, however, for the good medium kinds which met with a fair demand. Teas from the Doors came in for strong support and prices ruled generally dearer. The rate for Plain Broken Pekoe was quoted at 2sh 11d per pound.

There was active demand for the 18,036 packages of Ceylon tea offered and prices were dearer for all types except the thin liquoring and plainer teas. Buuing was selective for the 10,042 packages of South Indian teas catalogued. The few useful invoices in leaf and colour were sold well at firm prices. The rest of the offerings were irregularly easier. The plainest types, especially poorly-made stalky types, were neglected.

Tea stocks in London, as on 26 January, were 142.47 million pounds as against 136.24 million pounds in the previous week. Total amount to be landed on the same date was 17.63 million pounds. Total afloat was 15.22 million pounds including from Calcutta 9.12 million pounds; from Chittagong nil; from Cochin 1.11 million pounds; from Ceylon 2.49 million pounds and from other ports 2.50 million pounds. The average price realised at auction during the week ended 26 January was 52.87 per pound as against 52.08d in the previous week.

COTTON Listless Conditions

THE Bombay cotton futures market during the last week was listless due to the apprehensions of the malefic consequences supposed to be forboded by the configuration of the planets. Speculation about the continuance of the regional survey committee was rife among the operators. All these in the end resulted in the restricted transactions in the cotton market. The market, however, ruled firm and prices in both forward and ready sections improved a bit.

The Jarilla March contract which opened the week on Tuesday last on a steady tone firmed up in the subsequent days thanks to the encouraging support from upcountry centres and closed the week at Rs 689.00. The contract, edged forward to Rs 689.50 on Tuesday last. All the doubts about the regional survey system seem to have been shed with the decision arrived at a meeting convened in the Textile Commissioner's office that the status quo would be maintained provided the surveys were conducted in a disinterested and just manner keeping the scarcity of cotton in view.

The long awaited issuance by the US Administration of a special allocation of about 300,000 bales of PL-480 cotton once again proved to be elusive. In fact it was the possibility of this allocation that led to the renewed buying in the second half of the week. Spinner interest was prominent in CO2 and L-147. Good business was also done in Vijay, Digvijay, Kalyan and Laxmi at terminal centres albeit the prices ruled high.

In the import section, low and high grades of Sudanese growth were in the limelight. This trend was evidently the result of the reported deterioration in quality in East African cotton and the suspense that is hanging around the availability of US cotton.

In the import section, Bengal Deshi was practically neglected. Some of the spot markets in the upcountry centres especially in Madhya Pradesh, which had remained closed to mark their protest on the tightening of the requisition drive resumed trading on 2 February.

The total consumption of cotton by the Indian mills from 1 September to 30 September amounted to 478,330 bales of 180 kgs against 425,572 bales of 400 lbs in the same period in 1960.

Description	1960	1961
Indian	314,206	364,245
Pakistan	3,902	50
American	67,467	56,957

Japan	54,621	56,707
USA	134	16,388
Other Countries	68	337
Total	63,323	87,734

PIECEGOODS

The cotton piecegoods market in Bombay was devoid of any fresh development and trading during the past week was restricted on account of the "ashtagraha" scare.

Demand, particularly from the upcountry centres, was at a low ebb despite the fact that socks with those centres were meagre. The turnover dwindled into a tiny trickle presumably due to the shortage of funds. Even those buyers who had taken delivery of the goods delayed payments to the stockists due to the planetary conjunction.

Prices of most of the varieties remained unaltered throughout the week. The powerloom goods ruled firm inspite of the slackening in demand. Calcutta, Bihar and Rajasthan showed some interest in saris, dhoties and mulmul. The buyers from upcountry centres evinced keen interest in forward deliveries while the Bombay merchants were adamant in transacting ready deliveries only.

The export front once again failed to show any enthusiasm obviously due to the wide disparity in prices and the teething competition in the international markets. The United Kingdom's fancy focussed on the usual qualities but the disparity in prices prevented transaction of business on an encouraging level. It seems that the validity period of the import licences for the UK was extended upto June next.

Business on a small scale was transacted with Burma in dyed and printed voiles. Singapore accounted for a moderate quantum of gadlapat, bleached longcloth and mull for its immediate requirements.

Eritria and Ethiopia directed their attention on bleached chaddars, dhoties and drills, but the offtake was far from encouraging.

Enquiries from Australia flowed on a fairly good level for the goods which were permitted to be exported to that destination. The United States was interested in single filled duck for utilising it for the manufacture of water-proof tarpaulin. Aden was after the usual qualities. Cotton rags in several assortment and sizes commanded fair attention.

Sugar Markets Depressed

IN the Hapur market, sugar mill delivery prices have drifted lower due to lack of buying support. Mounting stocks and small offtake were the main contributory factors. Stockists are reluctant to hold appreciable quantities in view of the unstable prices, which have recorded a bearish trend for some weeks now.

Above all, the industry has reason to get worried over the prospects for exports, especially when the present international price is much lower than the Indian rate; and Indian sugar cannot possibly be exported except at a substantial loss. Against this background, sentiment has weakened further on the news that the USA may abandon the present system of buying sugar on the basis of import quotas. The worry is the greater, because the international price is likely to decline further since the over-production of sugar may continue at least for a while. As the International Sugar Agreement has virtually collapsed, competition in world markets will be intensified.

Another piece of news from the USA, which will not please primary producing countries, is the announcement that new legislation is to be introduced to end purchases of sugar from overseas producers at premium prices. Countries to suffer most, if this piece of legislation goes through, are those in Latin America, who are the main beneficiaries from the scheme. The US makes some purchases at premium prices from India, so it will suffer as well though the size of the purchases is relatively small. The premium prices are likely to be replaced by variable import levies on top of the present tariff, so that the US sugar producers will continue to be protected from the low prices ruling in the outside world.

The full implications of the US intentions have not yet been assessed; but they can cause a good deal of disorder in the world market. The Soviet Bloc is now taking all the sugar which Cuba previously sold to the USA, though some of it appears on the world market by indirect routes and the rest of the Cuban crop, which is smaller this season, is already committed or sold elsewhere. If the US goes ahead with its new plans for sugar or steps up its stockpile sales, Russia may again try and make political capital out of the situation by offering to

buy raw materials from the countries so affected.

The Indian Sugar Mills Association has, therefore, urged the Government of India to take immediate and effective steps to restore fair and economic prices for sugar as well as steady market conditions in the interests of the industry, trade, cane-growers and consumers. It is reported that the situation has become worse with the steep fall in prices and the factories are finding it difficult to continue cane payments. It is even feared that some mills may be compelled to stop work.

Besides, the depressed condition of the market has adversely affected the total offtake of sugar from the mills in recent months. There are already indications that the consumption of Khandasari is increasing rapidly, as it is cheaper than mill-made sugar. Unless the price of the latter is reduced, consumption will be difficult to promote.

FOODGRAINS

Thanks to good crop prospects following heavy rains in the producing areas, Foodgrains prices in the Hapur market have developed a slightly easier tendency. Wheat is quoted at Rs 17 a maund for the dara quality and Rs 18.50 for the farm produce. The market for Rice is also ruling quiet following new arrivals of Manipur quality, not to speak of the fact that the seasonal demand is negligible. Gram prices have drifted lower to Rs 16 for the Punjab variety. Crop prospects for this grain are considered to be fairly good. Prices of Barley moved narrowly around Rs 13. In the Pulses section, the prospects for the Peas and Arhar crops are considered to be better. Some demand is reported for these grains for conversion into dal.

According to the Commonwealth Economic Committee, wheat output in 1962 is expected to be less than in the previous season. Output in the northern hemisphere was substantially reduced, largely as a result of drought in North America, and though the final estimate for

THE INDIAN IRON & STEEL CO. LTD.

NOTICE

LOST—Allotment Letter No. 0/10709 for 100 Ordinary Shares (Rights) in the abovenamed Company issued in the name of Shri Nitye Chand Auddy having been reported as lost, an application for the issue of the relative Certificate for the 100 ordinary shares Nos. 5429659/758 registered in his name with out production of the said Allotment Letter has been received from the shareholder. Notice is hereby given that the issue of the relative Certificate for the said shares will be considered unless valid objection is received by the Company within one month from date.

For The Indian Iron & Steel Co. Ltd.,
MARTIN BURN LTD.,

F. G. Liversedge,
Managing Director,
Managing Agents.

12, Mission Row,
Calcutta.
Dated, the 5th Feb. '62.

the USA of 33,072,000 tons shows a smaller decline than did the earlier figures, it is still 3.3 million tons below the 1960-61 crop. Canadian output dropped by nearly half to 7,009,000 tons. Western European output also fell by over 2 million tons, reflecting the smaller area sown to winter wheat.

World production of Barley is also expected to be significantly lower in 1961-62 than in the previous season. Most of the reduction occurred in the northern hemisphere, with the most marked falls in North America and North Africa. While the final estimate for the US crop of 8,430,000 tons shows a rather smaller decline than did the earlier figures, it is still 0.8 million tons below last year's outturn. Canadian production has fallen by 1.8 million tons to 2,639,000 tons.

PEPPER

The new Pepper season is reported to have had a bad start on the export front this season. Shipments, during the first month of the season—November—have totalled only 664,291 metric tons as against 977,057 metric tons in the corresponding month of the previous season. The main reason for the poor overseas offtake has been the total absence of Russian demand. Of late, there has been a diversion of Russian interest to Singapore where pepper stocks are reported to have accumulated to the extent of 6,000 tons. There is a consequent price advantage, too, in going in for Singapore pepper as compared to the Indian commodity.

Unlike India, Indonesia is said to have had a favourable start in regard to exports. Exports of black and white pepper from Sarawak during the months of October and November totalled 1,436,360 tonnes against only 917 tonnes during the same period in the previous year.

If foreign reports are any indication, pepper may still go down in the near future, as consumers in the USA and Europe remain convinced that there will be a surplus of the commodity in the world market during the coming year. As such, they are reducing their purchases to the minimum.

RUBBER

According to a report issued by a rubber company in Paris, fairly stable prices for natural and synthetic rubber are foreseen during this year. The report, however, states that the trend of natural rubber prices may be downwards owing to the steadily growing consumption of artificial rubber and the stagnation of overall rubber consumption in various West European countries. Secondary grades, in particular, should be lower in price this year unless a considerable reduction in the Indonesian production occurs.

In the Singapore market, the rubber price is quoted at Rs 125 per 100 pounds. Malaya expects a slight surplus of production over consumption of natural rubber in 1961. A Malayan trade mission is now on a

visit to the USA, UK and other countries for promoting the natural rubber trade.

India may conclude an agreement with Malaya for the import of rubber on rupee payment basis or increase its buying of rubber from Ceylon to balance Ceylon's trade deficit with India. At present, raw rubber stocks with the manufacturers in India are barely sufficient for two months' consumption.

SILK

Prices of raw silk in the Bangalore Silk market maintained a steady trend during the week ended 2 February, 1962. Filature raw silk of 20/22 Dr. was quoted between Rs 84.89 and Rs 85.99 per kgm. Cottage basin silk ruled between Rs 72.75 and Rs 77.16 per kgm. Rates of charka raw silk ranged between Rs 41.09 and Rs 69.44 per kgm.

Spun silk yarn of 2/210's was quoted at Rs 81.40 per kgm.

Rates of reeling cocoons ranged between Rs 3.25 and Rs 5.00 per kgm as against last week-end fluctuations between Rs 3.75 and Rs 5.25 per kgm. Mysore seed cocoons fluctuated between Rs 3.50 and Rs 4.50 per thousand and foreign race seed cocoons between Rs 5.00 and Rs 10.00 per thousand.

The Bhagalpur silk market remained steady in respect of prices of tasar silk waste and spun silk yarn. Prices of tasar raw silk were quoted between Rs 66.14 and Rs 105.82 per kgm as in the last week. Tasar hand spun silk yarn ruled between Rs 30.86 and Rs 48.50 per kgm. Tasar silk waste fetched demand between Rs 22.04 and Rs 26.46 per kgm. There is a definite downward trend in prices of tasar cocoons in Chaibasa, Chakulia and other important markets. Price range for Daba cocoons is Rs 75 to Rs 80 per kahan, while for serikan cocoons in Santhal Parganas the rates are from Rs 30 to Rs 40 per kahan.

Landed cost of Japanese raw silk of 20/22 Dr. was reported at Rs 83.39 per kgm during January 1962.

CHEMICALS & DYES

In the Bombay market for Dyes and Chemicals, trading was slack and price movements were mostly confined to narrow limits. The price of Bleaching Powder moved both ways, being influenced by heavy arrivals of fresh goods and good support at lower levels. Soda Ash, after a long period, improved to Rs 30 for the ICI variety due to the shortage of goods and a fair demand. The new ex-mill prices, which came into force with effect from 1 February, had no effect on the market as the ruling prices were higher. Camphor was quietly steady at Rs 21. Despite lack of support from Calcutta, Menthol remained steady at Rs 140 in the absence of selling pressure.

In the Dyes section, there was a little more activity, especially in vats and Naphthols though the prices were more or less unchanged. Base dyes were firm. In scarlet RC, the German quality was available

around Rs 9 and the Japanese around Rs 8.25.

GOLD & SILVER

Prices on the Bombay Bullion Exchange remained generally firm. The Gold section, which ruled weak in the previous week, steadied up on the emergence of speculative support, thanks to encouraging advices from the spot section. Receipts totalled 7,000 tolas against an offtake of 8,000 tolas. Ready changed hands at Rs 199.05 to Rs 120.05, to close finally at Rs 119.55.

Silver followed in the wake of gold and, despite higher offerings and more receipts in the ready section, prices finished around the highest levels for the week. Arrivals were estimated at 30 bars as against an offtake of 10 bars. Ready (below .996) hands at Rs 212.85 to Rs 212.95.

OILS & OILSEEDS

Prices on the Bombay Oilseeds Exchange showed a mixed trend. Trading in Castorseed revealed an easy undertone. While the export trade in castor oil was extremely subdued in the absence of demand from the UK, the prices in the spot section continued to ease with the inflow of the new crop in Andhra showing a steady improvement.

According to the latest report, the May/June shipment of Brazilian oil first pressure has been sold in the US market around 14.50 cents a pound. The Indian prices are, however, considered to be much higher as compared to Brazilian prices and, as a result, there are as yet no offerings from India to the USA. The British buyers are buying Indian castor oil on a piecemeal basis. Castor ready was quoted at Rs 35.25 and Castor Oil, commercial quality, at Rs 14.80.

In the Groundnut section, the overall tendency remained bearish on account of the subdued demand from crushers and vanaspati manufacturers. A section of the operators believed that the crop of groundnut is not likely to turn as optimistically as earlier estimated by some of the traders. The also feel that the bulk of the crop has been consumed and whatever has remained with the growers is not likely to enter the market at lower prices. This was probably be the reason that the conditions in the market were slightly better towards the close of the week. Bold ready was quoted at Rs 47 and Groundnut Oil at Rs 19.50.

Futures trading in groundnut commenced from Thursday last week. It was thought that, with the resumption of forward trading, prices would gradually come down. On the contrary, there was a tendency for prices to move up for reasons stated above.

Trading in the Linseed section conformed to the pattern set by castorseed. Upcountry operators figured as prominent sellers in view of the favourable weather reports from the major producing areas. Linseed ready was quoted at Rs 42.25 and Linseed Oil at Rs 19.00.

For the Investor

INVESTMENT GOSSIP

Revival of Interest

Sentiment on the stock market has considerably brightened this week, presumably due to the fact that the conjunction of eight planets has not brought about any of the dire consequences that had been predicted by some astrologers. It is, however, not correct to say that

the improvement in sentiment came only after the bad period was safely left behind. For, the stock market actually began to show gains all along the list from last Saturday itself, the very eve of the planetary conjunction. Marketmen who seemed to be very much worried over the Ashtagraha when it was some distance away, strangely showed themselves bold enough to extend their commitments at the commencement

of the three-day period when the evil effects were said to gain their maximum power. Either this was due to the growing belief at that time that the planetary conjunction would only have beneficial effect or that those who feared the Ashtagraha were never large in number.

The recovery noticed during the past few days is no doubt partly due to bear covering. It would appear that even the unopposed return of Mr T. T. Krishnamachari to the Lok Sabha—a factor which caused a good deal of disturbance to market sentiment last week—is no longer taken as a bear factor. It is pointed out that in view of his emphasis on tax collection rather than fresh taxation, earlier apprehensions about the coming Central Budget were exaggerated. Even the continued uncertainty over the quantum

of foreign aid for the Third Plan does not seem to be causing much worry presumably because of the belief that despite the rather critical attitude of some of the members of the Club toward India, the implementation of the Third Plan schemes would not be adversely affected for lack of foreign exchange. But it is perhaps the continued excellent corporate news that is engendering a feeling of optimism in regard to the outlook of equities.

It is however idle to expect the present steady phase to continue undisturbed in the coming weeks. Even though it is more or less certain that Congress will continue to be in power, it is too early to assume that there will not be any big change in policies when the new Government takes over. With the Third Plan requirements looming large, the Cen-

NEW ISSUE NOTES

Hindustan Lever

Hindustan Lever Limited will apply to the Controller of Capital Issues for consent to the capitalisation of certain reserves. The directors have considered it desirable that the issued capital of the company should be brought into closer relationship with the capital employed in business. They propose to issue bonus shares to the holders of the existing ordinary shares in the ratio of 12 new ordinary shares of Rs 10 each for every 25 shares held.

Larsen & Toubro

Larsen & Toubro Limited has been making substantial progress in the field of industrial development. Subject to the consent of the Controller of Capital Issues, the directors have decided to raise Rs 55 lakhs in equity shares, to be offered as rights to the existing shareholders in the ratio of one share for every two shares. The funds will be utilised to meet the cost of expansion.

Shama Engine

The company has announced the basis of allotment of its recent issue of Rs 6 lakhs of Ordinary shares and Rs 3.75 lakhs of Preference shares. The equity issue, which was over-subscribed three times, will be allotted as follows:—application up to 50 shares will get full allotment; between 50 and 100—a minimum of 50 shares; between 100 and 500 shares—25 per cent with a minimum of 90 shares; between 500 and 1,000 shares—20 per cent with a minimum of 125 shares; between 1,000 and 5,000 shares—10 per cent. The allotment is said to have been made in consultation with the Delhi Stock Exchange Association.

Tata Chemicals

Tata Chemicals Limited will be issuing new equity shares at a premium of 50 p per share in the proportion of one equity share for every five equity shares held. The company will also be issuing Debenture capital for Rs 50 lakhs, at par, carrying interest at 6½ per cent, taxable.

Mukund Iron

Mukund Iron & Steel Works Limited has decided to issue additional equity capital for Rs 10 lakhs. The existing share-holders will be asked to subscribe to the new shares in the proportion of one new share for every eight equity shares held.

Construction Boards

The manufacture of chipboards from sugarcane bagasse will be undertaken by a new company, Construction Boards Limited, recently registered in Maharashtra. The company will produce 9,000 tons of chipboards per annum. The plant will be located at Loni, nine miles from Delhi. The capital outlay is estimated at Rs 65 lakhs. The company has secured the technical collaboration of a West German firm, which will have capital participation to the tune of Rs 5 lakhs. Of the proposed issue of Rs 25 lakhs in shares of Rs 100 each, the promoters and their friends will take up Rs 10 lakhs and Rs 10 lakhs will be offered for public subscription. The promoters are expected to enter the capital market in May.

Chase Bright Steel

Chase Bright Steel has announced its decision to increase its capital by the issue of 1,00,000-9 2/7 per cent Redeemable Cumulative Preference Shares of Rs 10 each (taxable), at par, in the ratio of one preference share for every five equity shares held.

Speciality Papers

The public issue of 49,000 equity shares of Rs 16 each by Speciality Papers Limited has been over-subscribed by two times.

Khandelwal Udyog

tral Budget that will be presented in May cannot be omitted from any calculation of the future outlook for equities.

INVESTMENT NOTES

IISCO

As a result of one of the blast furnaces being out of commission for relining purposes, there was a sharp drop in the output of Pig Iron of the Indian Iron & Steel Company Limited in January to 86,754 metric tons from 103,038 metric tons in December 1961. There was also a drop in the production of Steel Ingots to 78,574 metric tons from 83,171 metric tons. The output of Saleable Steel, however, rose significantly to 74,121 metric tons from 65,031 metric tons. Despatches were also higher at 72,029 metric tons against 67,203 metric tons.

TISCO

The Tata Iron & Steel Company Limited has been able to report an increase in the output under various heads for January. Pig Iron production rose to 155,300 metric tons from 142,100 metric tons in December. Steel Ingots were only slightly higher at 148,700 metric tons against 148,400 metric tons, while the production of Saleable Steel rose to 119,000 metric tons from 117,600 metric tons. This performance should be considered quite satisfactory.

Maharashtra Cement

Maharashtra will soon have its first cement factory with a manufacturing capacity of 250,000 tons a year. A public limited company, under the name of Maharashtra Cement Company Limited, is to be floated within a few weeks with a capital of Rs 2 crores. The promoters are Tendulkar Industries Private Limited, the managing agents of the Bagalkot Cement Company. The Government of India has approved the scheme. According to present indications, the plant is expected to go into production in June 1962. The factory will be situated at Guguz, in Chanda district of Berar.

Shree Vallabh Glass

Shree Vallabh Glass Works Limited has received an import licence worth Rs 40.5 lakhs to import plant and machinery from West Germany to manufacture sheet and wired glass for its Rs 1.15 crore project. The order for machinery has been placed and its shipment will commence from the next month. The expansion programme, envisaging doubling the production of the company's Tutex glass plant at Andheri, is in full swing as the necessary machinery has already arrived in Bombay.

STOCK EXCHANGES

Cheerful Conditions

Watch-Dog Writers

THANKS to the quiet passing of the "Astragaha" period with no un-

presented a cheerful appearance during the week. With bears being obliged to cover their sales steadily and the bulls lending consistent support, prices in almost all the counters have tended to look up.

The Calcutta Stock Exchange took a distinctly definite turn for the better with prices recording a smart recovery from the recent low levels.

Activity on the Bombay Stock Exchange was fairly brisk. Lack of any selling pressure and the firmer tone in leading counters indicated that the market was likely to work higher.

With increased investment buying more equitably spread, trading on the Madras Stock Exchange underlined a better sentiment.

The London Stock Exchange was, however, somewhat quiet although a number of good features developed.

CALCUTTA

Friday Evening.

THE local stock exchange, which had been unnerved till the end of last week due to fears of ill effects of "Astragaha", put up a brave front on the eve of the actual conjunction of the eight planets. This was mainly due to a belief entertained by some of the operators that the planetary conjunction might also prove beneficial. As a matter of fact, the absence of any evil effects till the close on Monday caused a sigh of relief to the operators, resulting in their entry into the market with inspiration and the commencement of the week's trading on a bright note.

Sentiment was also influenced by the encouraging corporate news and the statement made by T. T. Krishnamachari in regard to corporate or personal taxation. The postponement of the debate in the Security Council on Kashmir issue was also a contributory factor to a further improvement in sentiment. Above all, genuine investment buying was also noticed, though on a moderate scale. Naturally, the absence of any selling pressure and with offerings remaining small, bears were forced to cover their open positions at rising levels. There was, however, a general disposition not to go too far ahead and book profits at bulges in view of the election uncertainties.

The Gilt-edged section was devoid of interest. Apart from some enquiry for the short-dated issues, other Loans remained neglected. 3 per cent 1986 Conversion Loan closed at Rs 71.03 after touching a high of Rs 71.25 and a low of Rs 70.80.

Bank shares displayed a firmer tendency with Punjab National changing hands up to Rs 22.25 from Rs 22.00 and United Commercial up to Rs 104.75 from Rs 104. Hindustan Mercantile met with some business up to Rs 17.50.

Jute shares fared better on news of good orders from abroad. The reports of only a small rise in stocks with the mills at the end of last month were also a contributory factor. Anglo-India were taken up to Rs 202 from Rs 192; Howrah up to Rs 21.06 from Rs 20.50; Ganges up

to Rs 15.62 from Rs 14.94; Fort Gloster up to Rs 391 from Rs 372; Fort William up to Rs 23.19 from Rs 22.87 and new Central up to Rs 17.00 from Rs 16.37. Nuddea were maintained at Rs 66.25. Birlas, after being pushed up to Rs 34 from Rs 32, suffered a mild setback to Rs 33.62 at the close following the news of the decision by the authorities to impose an automatic margin of Rs 1.94 per share in view of the steady and sharp rise in price during the past few days.

The growing shortage of transport, power and explosives was reflected in the Coal section, where dealings continued to be restricted. Burrakur fluctuated narrowly around Rs 17.62, while New Beerbhoom met with some enquiry up to Rs 21.06 from Rs 20.87. South Karanpura were on offer at Rs 7.87 following the passing over of the dividend with the passing over of the dividend with West Bengal and Central India neglected at Rs 9.50 and Rs 12.44 respectively.

Tea shares responded to selective support. Activity was more prominent in Huldibari, which forged ahead to Rs 31.31 from Rs 30.56. Dhunseri had some buyers up to Rs 15.25 from Rs 15.06 and so also

Thanks to the lead given by the speculative shares, the Miscellaneous section provided several firm features. The table given below shows the trend of prices of a few selected shares:

	As on High- Rs 3 Feb.	est Rs 8 Feb.	As on Rs 8 Feb.
Orient Paper ...	41.10	42.25	42.00

I. Copper ...	4.79	4.94	4.92
BIC ...	11.00	11.44	11.41

Hasimara up to Rs 32.87 from Rs 32.75. Brooke Bond remained quiet at Rs 15.62.

Sugar shares were practically neglected in the absence of any incentive. Balrampur and SKG were the only steady features at Rs 2.50 and Rs 10.50 respectively. Dyer Meakin were on offer at Rs 40.87 to Rs 41 in the absence of any news with regard to the bonus issue.

Textile shares presented a firm front. Activity was marked in the BIC group of companies. Elgins had good buyers at 24.31 to Rs 25.37 following the increased dividend, while Cavtex were enquired up to Rs 10.12 from Rs 8.94. J. K. Rayon were neglected around Rs 20.75 with Dunbar moving narrowly between Rs 34.50 and Rs 34.62. Jay Shree came

from Rs 14.69 following the reports of further expansion.

Engineering shares remained very active under the influence of Indian Irons. Against the previous week-end closing of Rs 24.90, Indian Irons opened higher at Rs 25.08 and advanced further to Rs 25.56 before finishing the week at Rs 25.44. In sympathy, TEXMACO moved up to Rs 20.75 from Rs 20.40 and Guest, Keen, Williams to Rs 41.75 from Rs 40.50, to close finally at Rs 20.70 and Rs 41.37 respectively. Jessop changed hands at Rs 22.87 to Rs 23.37 (Rs 23.06); Jay Engineering at Rs 27.50 to Rs 27.75 (Rs 27.56); Dalmia Iron at Rs 11.87 to Rs 12.12 (Rs 12.06) and J. K. Steel at Rs 19.50 to Rs 19.75 (Rs 19.56). Figures shown within brackets were the closing rates for the week.

Bombay

THE Bombay Stock Exchange presented a brighter appearance with activity fairly brisk. Besides the encouraging corporate news, sentiment seemed to have been aided by the statement of Mr T. T. Krishnamachari that he was opposed to raise corporate or personal taxation and the reports that the Government was considering to provide tax relief to export industries to step up the country's exports. Above all, operators were inclined to lend sustained support, being induced by the absence of any evil effects by the conjunction of the eight planets as was feared earlier. Higher levels were not, however, maintained till the close due to some profit-taking.

STEELS:

Steel shares looked up further on fresh support. Tata Steels began the new account at Rs 142 and, after receding at one time to Rs 141.50, Indian Iron changed hands at Rs 25.05 to Rs 25.50 with Mukund Iron closing firm at Rs 29.

TEXTILES:

This section presented generally a firm front. Though the rise in active shares like Bombay Dyeing, Century, Standard and Kohinoor was restricted, they showed fair resistance. Century, after starting at Rs 600, recorded a high of Rs 622 to close at Rs 618. Kohinoor moved up to Rs 321 from Rs 312.50; Bombay Dyeing up to Rs 69.40 from Rs 68.70 and Standard up to Rs 1175 from Rs 1158, to finish the week at Rs 318; Rs 69.30 and Rs 1169 respectively.

MISCELLANEOUS:

In the Miscellaneous group, Bombay Burmah were conspicuously active on renewed hopes of capital reconstruction scheme. After touching a high of Rs 664 from Rs 647, the scrip finished at Rs 662.50. Alcock rose to a new peak level of Rs 355 from Rs 333; Voltas to Rs 309.50 from Rs 302 and TELCO to Rs 364.50 from Rs 355; but the closing rates were only slightly lower than these levels. National Rayon were taken up to Rs 563.50 from Rs 545.

In the Cash section, favourite shares came in for good investment support. Colour-Chem moved up to Rs 475 on rumours of the possibility of the scrip being included in the forward list. Permanent Magnets firmed up to Rs 165 at which level

Company Reports

Excellent Results of Elgin Mills

RECORD sales and a higher standard of efficiency maintained by the company are reflected in the working results of the Elgin Mills Company Limited for the year ended 30 September, 1961. While sales have risen to Rs 5.82 crores from Rs 4 crores, the net profit, after providing for Depreciation and Taxation, amounts to Rs 47.29 lakhs as against Rs 28.07 lakhs for the preceding year.

In respect of allocations, a sum of Rs 20 lakhs is provided for General Reserve, while the Depreciation amount is raised to Rs 9.57 lakhs from Rs 5.65 lakhs; Taxation to Rs 31.75 lakhs from Rs 24.50 lakhs; and Development Rebate Reserve to Rs 4.93 lakhs from Rs 1.24 lakhs. The provision for Rehabilitation Reserve is, however, lower at Rs 10 lakhs against Rs 18 lakhs. The dividends, both on the Ordinary and Vendors shares, are raised from 1½ per cent to 17½ per cent, less tax.

In order to achieve a greater efficiency and a better trading position, a programme of renovation and modernisation of No. 1 and 2 mills has been planned and implemented in some respects. The total expenditure on buildings, plant and machinery, during the next five years, is estimated at Rs 1.35 crores. For this purpose a long-term credit with the company's bankers has been arranged.

The company has plans for setting up a new spinning unit and its application, made to the Central Government for allotment of additional capacity, has been supported by the Government of Uttar Pradesh with a recommendation for an allotment of 12,000 spindles. The company has also been recommended an allotment of 10,348 spindles for balancing purposes.

The authorised capital is Rs 1 crore and the subscribed capital Rs 78,20,000 divided into 4,80,000 Ordinary shares of Rs 10 each; 1,50,000 Vendors shares of Rs 10 each; 11,000 8 per cent Cumulative Preference shares of Rs 100 each and 42,000—5 per cent 'B' Cumulative Preference shares of Rs 10 each. The gross block at Rs 2.36 crores is depreciated by Rs 1.68 crores, leaving a net block of Rs 67.96 lakhs.

Rallis India Pays 8½% against 4%

Thanks to the contribution made by all the divisions, Rallis India Limited has reported encouraging working results for the year ended 31 August, 1961. Sales have risen to Rs 19.09 crores from Rs 18.08 crores and this increase of about Rs 1 crore is mainly in the trading and pharmaceutical divisions.

The net profit for the year, before providing for Depreciation and Taxation, is higher at Rs 58.44 lakhs as against Rs 51.22 lakhs for the preceding year.

The following allocations have been made:— Depreciation Rs 4.00 lakhs (Rs 4.02 lakhs); Taxation Rs 24.33 lakhs (Rs 7.11 lakhs); General Reserve Rs 5.00 lakhs (same); Contingency Reserve Rs 2.00 lakhs (nil) and Development Rebate Reserve Rs 13,500 (Rs 17,000). The dividend on the ordinary shares is raised from 4 per cent to 8½ per cent, less tax.

According to the directors' report, the construction of the factory for Ralli Chemicals was started during the year. The factory is expected to be completed and in production in the late Spring 1962. The activity of the associate company, Boehringer-Knoll, is increasing gradually and will rise more quickly when the factory, now under construction, goes into production towards the middle of 1962.

Lower Profits for Angelo Brothers

The disturbances of the normal trading pattern and a poorer volume of exports of lac are reflected in the working results of Angelo Brothers Limited for the year ended 31 August, 1961. In this connection, the directors state that the gap between internal prices and the minimum export selling rates, imposed by the Indian Lac Exporters Association, could not be effectively bridged by the Association's levies and buffer stock operations. Consequently, the minimum price scheme came under ever-growing strain which to some extent, inhibited buying interest in other major overseas trading centres. The Association's remedy was to introduce, early in August, a flexible price control; but the Government of India refused to permit its operation.

Meanwhile, sales for the year have declined to Rs 1.62 crores from Rs 2.01 crores. The net profit, after providing for Depreciation and Taxation, is lower at Rs 7.43 lakhs as against Rs 8.64 lakhs for the previous year. In respect of allocations, a sum of Rs 50,000 is set apart for General Reserve, while the depreciation amount is lower at Rs 98,921 against Rs 1.03 lakhs. Taxation provision is, however, raised to Rs 8.60 lakhs from Rs 7.20 lakhs and Development Rebate Reserve to Rs 31,034 from Rs 6,526. The dividend is reduced from 25 per cent to 22½ per cent, subject to deduction of tax.

Against a paid-up capital of Rs 30 lakhs, General Reserve is shown at Rs 26.33 lakhs; Plant Replacement Reserve at Rs 6.00 lakhs; Stock Reserve at Rs 5.00 lakhs and Development Rebate Reserve at Rs 51,511. The gross block at Rs 40.23 lakhs is depreciated by Rs 27.01 lakhs to show a net block value of Rs 13.22 lakhs.

6" spindle ram-type horizontal mill and boring machine

No. 14/36 combination turret lathe installed in the AVB light machine shop

... a Powerful Partnership for Progress

ACC-VICKERS-BABCOCK LTD.

16, Queen's Road Estate, Bombay 1

Calcutta Office: Race Point, 1 & 3 Esplanade Road, Calcutta 1

Works: P. O. Durgapur 1, Dist. Burdwan, West Bengal

The REAL POWER of AVB...

Vast Technical Resources...
Modern Workshops...

Immensely rich in experience and technical knowledge, with modern workshops equipped with some of the world's most up-to-date machine tools... here is the *real power* of AVB. The essential combination to generate *real industrial power*.

This real power and potential of AVB will give added impetus to the continued and large-scale expansion of industry... by providing the finest facilities for the manufacture of high pressure steam-raising plant and pressure vessels and heavy machinery for the cement-making and mining industries.

Among the modern machine tools in the AVB workshops are

1. 6" ram-type horizontal mill and boring machine: This machine has a vertical movement of 14' 6" and a horizontal movement of 20' and is the largest of its kind in India.
2. Numerous capstan and turret lathes: Upto 36" diameter swing and central lathes upto 42" diameter.
3. 28/60 vertical model hydrotel milling machine: With 360° profile milling equipment.

WHY
NOT
CHECK
WITH
THE
STATE
BANK ?

Do you think they could help me?

I'm sure they could. Call on the Agent of your local branch. You will always find a friend at the State Bank. He will give you prompt, courteous and efficient service.

What are the services they offer?

Besides the normal banking services, you get assistance in planning your investments, advice on your financial requirements, and help in developing new business connections in this country and abroad.

Really?

Yes, The State Bank of India is in the service of the nation with over 900 offices throughout the country. They also have offices in Burma, Pakistan, Ceylon and the U.K., and correspondents throughout the world.

The State Bank of India?

Yes, The State Bank of India.

FICCI on Transport Policy

THE principles that should guide transport policy in general and, particularly, the measures that may be adopted to secure coordination of rail and road transport are indicated in unambiguous terms in a comprehensive note embodying the views of the Federation of Indian Chambers of Commerce and Industry on the Preliminary Report of the Neogy Committee which was published early last year. By its terms of reference the Committee, which was set up in July 1959, was asked to recommend a long-term policy for the country, having regard to the various economic and other relevant factors; to define the role of the various means of transport in the next five to ten years against the background of the long term policy; and to suggest suitable mechanism for the coordination of the various means of transport. After eighteen months the Committee came to the conclusion that the data at its disposal was not adequate for framing recommendations on long-term policy and its preliminary report confined itself to the formulation of the main issues on it, sought the views of the public.

The Federation's note endorses the Committee's view that any rational scheme of co-ordination between road transport and Railways can be put forward only as part of a sound long-term policy and in relation to the role of different forms of transport in a developing economy. The governing principle, it is emphasised, should be that installed capacity in transport as in other fields must always be more than is necessary to meet the current demand and that, while the problem of the railways can well be conceived of in terms of a given capacity, the position of the road transport is one of potential and dynamic changes in capacity. The need to have and to promote a competitive atmosphere in the transport industry is also emphasised.

According to the Federation these two features—adequate capacity and competition have stronger sanction in the transport industry, for economic growth will be accelerated only if the development of transport precedes and does not follow the development in other fields. The Federation considers that there is no possibility of waste of resources through duplication of transport facilities.

With this general approach it is natural that the Federation should feel that the co-ordination of rail and road transport is not a problem of any great urgency. The question has been under consideration for nearly thirty years and all along the superior position of the Railways in the transport system has been used in diverse and devious ways to thwart the speedy development of the road system and road transport. While, on the one hand, the Railways have not been able to carry all the traffic that is offered, the growth of road transport has been severely hampered through a system of restrictive regulations and administrative procedures. In this situation the Federation believes that a freer road transport policy will result in road transport effectively supplementing transport availability for both passenger and goods traffic.

The Neogy Committee had posed three alternative ways of securing coordinated development of road and rail transport:

1. Allowing free and unrestricted competition between different forms of transport.
2. Achievement of necessary coordination through appropriate Government regulation.
3. Integration of road and rail services into one single unit.

Viewing the problem in the perspective of rapid economic growth, the Federation feels that the alternative could have been formulated in more realistic terms. The main consideration should be to ensure availability of the mode of transport best suited to the requirements of the users; competition is useful in so far as it ensures freedom of choice to the consumer. The note urges that regulatory methods have to be viewed with great caution and circumspection, for it is not advisable to boost one form of transport at the cost of another. The Neogy Committee had also pointed out that it could not be claimed that the second alternative of Government regulation had met with complete success in other countries and added: "To rely on regulatory measures, to be devised ad hoc, as and when any signs of unhealthy competition appear, will not, in our view, be the right answer to the question confronting us."

The third alternative of integration, the Federation has pointed out, is not a practical proposition, for it will lead to endless complications. The two organisations should be kept distinct and separate, for there are inherent advantages in the two forms of services which will be lost by integrating them into a single unit.

The comments made by the Federation may not add up to a comprehensive policy. But the two main points which emerge from the answers to the specific questions raised in the Neogy Committee's preliminary report should be the basis of any rational transport policy. The railway organisation can continue to function as at present without special measures to safeguard its privileged position. The argument that Railways cannot shoulder the burden of various statutory obligations, or provide facilities for carrying low-rated commodities like coal and other raw materials, unless road transport is controlled to suit their convenience, has only the volume of investment that has gone into the Railways to recommend it. The Railways as a nationalised undertaking and a public utility service, cannot function as a purely commercial undertaking. At the same time, the tax-payers whose money has gone into investment in the Railways have a direct interest in their efficient operation and financial results. The only effective way of maintaining railway efficiency is to allow a free head to road transport. Road transport should be allowed to develop to the maximum extent of its potential, by removing the oppressive restrictions that stifle it at present, and providing the essential facilities. There is no reason to apprehend, for a long time to come, that the growth of road transport will be achieved at the expense of the Railways, if the latter cut out waste and organise efficient and economic methods of transporting.

Operations Research Analysis

By
SRIPATI RANGANADHA

DECISIONS on business and commerce can hardly have the scientific precision of physical or biological sciences. Factors that enter in our decisions are mostly based on variables and "guesstimates" and it is hardly possible to pre-test our decision effectively before it is finalised. Most of them are hit or miss, and the result of trial and error and rule-of-thumb methods. It is no exaggeration to say that some of our decisions that have proved to be successful have been just accidental. On the other hand, it is needless to elaborate the drain on men and money caused because of faulty decisions.

Against this background, it is indeed imperative to devise a decision laboratory in which we can plan and formulate our policies and evaluate every important variable, probability and set of circumstances before they are released for execution. This method in business and industry it is hoped, and in fact has proved, to be of tremendous success.

Such a science of decision is termed Operations Research and the executive who is at the helm of this research is known as the management scientist. He will be assisted by the company planner and his electronic assistant, the computer. These three are the live wires of the decision laboratory.

The concept of operations research originated during the second world war and its application has been widely employed both in business and industry. The vital decision making research utilises the services of mathematicians, statisticians, economists, physicists, engineers, political scientists, psychologists and other specialists in different disciplines to analyse all the available and known materials and eventually to synthesize them into a effective business policy. The team of specialists, popularly known as, "operations researchers, organization analysts," "operations analysts" or simply "special assistants for planning" discuss, debate and thrash out problems and thereby choose the right decision among the alternatives. In fact, their arguments will be based on theories of probability, sampling, multivariate analysis, and actuarial analysis. The pre-tested decision can now confidently face the realities of life. The decision being fool-proof in all its contingencies, it will naturally withstand most of the possible hazards and exigencies in life.

It should be remembered, however, that the operations researchers only try to assist and advise the management scientist particularly in the matter of planning and controlling. It is the management scientist with his collaborator, the company planner and the computer who takes the real decision of the company. As they are important, it is necessary to say a word about management scientists, company planner, computer and their respective portfolios.

THE MANAGEMENT SCIENTIST

The Scientist initially sets up a required model to suit his operations. By model we mean a computing device usually measured in numerical values, to determine the conse-

quences of particular decisions in a certain environment. The prime constituent of this model construction is the important information of the environment in which the model operates. Environment can be taken to certain factors affect the operation of the model, but the model of the operation will be unaffected by those factors. In a word, the initial model will remain the same no matter what the factors of environment are. Effective utilisation of planning depends upon the details of future environment. That is why, the management scientist seeks the advice and collaboration of the company planner for constructing the model of the operation.

Public policies being subject to change, the management scientist should not overlook the transitional tariff, fiscal and other barriers of the future environment for his long-range plans. Again, he has to take into account for his model the company's objectives for which he works. Besides this, he should also comprehend the limitations in computers and those of forecasting.

THE COMPANY PLANNER

The function of the company planner is to formulate plans according to requirements and wishes of the management, such as checks on geographical distribution of plants, degree of product differentiation, rate of expansion and level of customer service. He is also responsible to explore the ways and means of securing and projecting the volume of business in terms of market, price and cost. As a part of planning demands, the planner is expected to study the "trends and developments, assessing their significance to his company, and estimating the probability, timing and magnitude of change."

THE COMPUTER

The electronic computer does all the calculations which a modern firm and industry demands with speed, precision and elegance. Further it supersedes certain calculations which the manual methods fail to accomplish. A large computer, for instance, can calculate more than 8,000 additions or subtractions in a second. Similarly it can solve more than 1,000 multiplication or 500 division problems in the same time. It can easily replace the work of hundreds of accountants, book-keepers and file clerks. Certain computers can even play chess or compose music if proper instructions are given. They can carry out instructions right away. Unlike the human brain, they seldom commit a mistake and never get tired. Though the "electronic brains" cannot think and replace men altogether, however, many wealthy firms prefer to own such a computer despite its exorbitant price. It is believed that a medium sized computer costs about a little less than a million dollars. Because of manifold capabilities of the computer, the company planner and management scientist can not only foresee the probable environment but also can explore the possible environment for which they are interested and consequently, they can form an opinion whether the environment under review will be beneficial to their company or not.

The tools and techniques of operations research being new and novel, it is indeed too much to expect that it will be a ready-made pill for all managerial ills. Enough progress has been made in the last decade and yet there is lot of scope to develop this research to pervade other spheres of industrial activity.

Managements have been so far utilising operations research in certain aspects of long-range planning such as changes in terms of

production requirements and distribution facilities, and also changes in allocation of company resources, in product research and diversification and in markets, both geographical and type of customer. Whereas certain other aspects of management planning such as labour relations, executive training and development, capital sources etc. seem to be beyond the scope of the present day operations research.

The present day operations research tends to guide decision-making by means of observations, experiments, analysis of data and applied mathematical or statistical know-how. In a way, it has pinned down decision making to a calculating machine so that it could yield results of accuracy. Little do we realise that the function of decision making comprises not only the attainment of units of physical output but also involves social values such as human considerations, emotions and aspirations. We can hardly accomplish the merits of social values under the present mathematical approach. It is needless to mention that the techniques of operations research require to be perfected. It is hoped that the Psychologists and other social scientists, will assert themselves and voice their opinions on social aspects of the decision making.

Despite the present limitations and the enormous expense, the need and necessity for this research on business and industry need not be over emphasised. The project will tend to minimise, in the long run, much time effort and capital and investment due to better decision making. Further, this scientific approach helps to formulate objective specific and known, minimises guess work, provides orderliness to operations and eventually makes it possible to meet dead lines with relative ease and effectiveness.

Individual well-being is linked with national prosperity and only planned efforts can ensure both in the shortest possible time. And planning, for its success, largely depends on savings, individual as well as national. Saving in the form of Bank Deposits provides resources for the National Plan.

BANKS

Deposits War in the Offing?

BY the time this issue of Indian Finance is in the press the decision will have been taken by the "medium" banks whether or no they will continue to conform to the inter-bank agreement on Deposit rates. It will be recalled that this category of banks had, some weeks ago, asked for an element of "differential" as between the rates paid by the big banks and by the "medium" units. We gather that the large banks have not acceded to the request; the prospect consequently is that at the meeting of the Indian Banks' Association (on 16 February) the medium banks will inform the IBA that they will opt out from the agreement as from 1 March. A Deposits' war is thus in the offing.

As it is the "small" banks are allowed a differential, in order that they may more effectively compete for Deposits. The point made by the "medium" banks is that strictly speaking there are three categories of banks, and that the medium banks find themselves hard put to it to compete with the large banks; and hence their plea for a differential for themselves. Their request to us seems reasonable, but what is surely not defensible is that such differential be found in a further increase in Deposit rates. Let us state here categorically that we do not believe that it is the lure of the interest rate which has been responsible for the spectacular increase in the Deposit resources of the banking system during the Second Plan. Indeed what the self-defeating decisions by banks to raise Deposit rates have done is to cause a switch-over from Demand to Time Deposits, with the result that interest paid, as a constituent of the expenditure of the banks, has risen enormously. Even if we were to concede that a certain quantum of money has been "enticed" by interest rates, let us remember that such Deposits are in the nature of hot money, analogous to the buttressing of foreign exchange reserve by England with an increase in bank Rate. Such marginal money will switch its affections and its sanctuary the moment some other "competitor" steps up the interest he is in a position to offer. By and large, just as investible funds earmarked for gilt-edged will not find its way into equity shares; just as the lure of a higher interest coupon will not succeed in diverting to gilt-edged one rupee of shareholder's money set apart for investment in equities; even so, whatever the rate of interest that may be available on Deposits, banks will continue to attract new resources of the enlarging community acquiring the banking habit. It may in fact be pointed out that a goodly proportion of so-called "Time Deposits" is in reality nothing more than current accounts which, because of categorisation and minor restrictions, are enabled to attract a higher rate of interest.

Such a Deposits war, with the prospect that it will or might start on 1 March, could not be

more untimely. The busy season, as the latest banking returns show, has now got well into its stride, and banks have used up their first "quota" of borrowings from the Reserve Bank. They have dug into the second at a cost of 5 per cent and are in sight of moving into the highest tier of 6 per cent. In such circumstances the inter-bank call money rate is climbing steadily, and it may well happen that the "medium" banks in competing for Deposits could be compelled to pay more than bank Rate.

One slender ray of hope lies in the possibility of the Reserve Bank taking action to prevent any such weakening of the banking system. On the positive side the Reserve Bank directives of autumn 1960 strengthened the banking system by stipulating a minimum for banks' lending rates and by calling upon banks to raise lending rates in any case by half a per cent on all Advances. At the time a peripheral sector of banking interest rates was sought to be controlled. However, the Indian measures did not quite duplicate the powers possessed and used by the Federal Reserve Board in America where, under Regulation Q, a ceiling is prescribed for Deposit rates and a floor for Advance rates. The Reserve Bank naturally prefers convention to compulsion, as was proved by Mr H. V. R. Iengar's letter to banks for strengthening of reserves. But where banks fail to abide by a convention, with the result that they act in ways that weaken and corrode, the Reserve Bank has obviously a duty to step in and intervene. It may even be that the introduction of Deposit insurance can be cited as reason why Deposit rates should not exceed stipulated limits, for such insurance offers safeguards and to that extent may be said to reduce banks' need for relying upon the interest rate to attract Deposits.

Indeed, such action is mandatory on the part of the Reserve Bank, if its other measures to strengthen the banking system are not to be unavailing. Earning potential of banks has, thanks to the Reserve Bank, greatly improved; as a result on the basis of performance in 1961 banks have been able generally to heed Mr Iengar's suggestions for adding to Reserves; but if there should be unbridled competition for Deposits there will be frittering away of the "new" earnings.

We would consequently suggest that the Reserve Bank should act before the expiry on 1 March of the inter-bank agreement, before, that is, the "medium" banks opt out of it. We would favour a Reserve Bank directive which links banking interest rates with bank Rate: the minimum rate for Advances will be, say, one per cent above bank Rate; and the maximum rate for Deposits should be, in our view, at least 1½ per cent below bank Rate.

It would seem that banks are thus being given a gift on a silver platter of this differential of 2½ per cent. But in view of the tasks and responsibilities that the banking system will increasingly have in the financing of private sector trade and industry, as the Third Plan gets under way, such additional earning potential will be necessary to cover potential loss experiences. We may add, finally, that in such directive a differential

could be provided for the small banks, on the one hand, and the medium banks, on the other, in relation to the large banks.

BANK RETURNS

Currency, Credit Expand Sharply

The very sharp currency expansion in the week ended 9 February is clearly as a result of busy season pressures super-imposed upon spill-over into the second week of beginning of the month disbursements.

Active Note Circulation has risen steeply by Rs 41.12 crores and, at Rs 2,034.79 crores, has crossed the Rs 2,000 crore mark. Outflow of Rupee Coin is also in exceedingly large amount, being placed at Rs 2.20 crores. Foreign Securities are unchanged at Rs 126.86 crores, and currency has been expanded for Rs 50 crores against Rupee Securities by transfer from Investments in the Banking Department, and rupee investments in the Issue Department have now risen to Rs 1,689.20 crores. Consequently, the Reserve Bank's cash in the till has improved by Rs 6.68 crores to Rs 17.77 crores.

The Centre's net disbursements have obviously been heavy, and it is a moot point whether end of fiscal year payments are being made somewhat earlier. For its balances have dropped by Rs 18.16 crores to below the traditional minimum of Rs 50 crores, in being placed at Rs 49.94 crores. Some small payment may have been made to the States, whose balances have improved by Rs 4.23 crores to Rs 21.52 crores on top of a reduction of Rs 2.58 crores to Rs 58.18 crores in their ways and means borrowings from the Reserve Bank. Investments, lower by Rs 45 crores odd at Rs 196.68 crores, reflect firstly the transfer of Rs 50 crores to the Issue Department and secondly the purchase of Rs 7 crores of securities from the State Bank. However, the rise of over Rs 10 crores to Rs 31.66 crores in Treasury Bills Purchased and Discounted by the Reserve Bank may mean that the Centre has had resort to deficit financing in such an amount.

Busy season and beginning of the month have combined to put considerable strain upon the banking system. Reserve Balances of member banks, it is true, are practically unchanged at Rs 75.53 crores, but recourse to central banking credit during the week has been heavy. The Other Loans and Advances of the Reserve Bank have risen by nearly Rs 10 crores from Rs 158.86 crores to Rs 168.64 crores, and that this increase is in the main on account of Scheduled Banks is confirmed by the rise of Rs 8 crores in the Reserve Bank's advances against usance bills, a form of credit extended only to the banking system.

Balances Held Abroad have fallen by Rs 1.57 crores to Rs 9.59 crores. Thus on the very day that an official communique gave the heartening news that export performance during 1961 has, saving the Korean boom year of 1951, been the best on record, the Reserve Bank returns disclose that our foreign exchange reserves continue to dwindle, even in the midst of the busy season for exports.

The return of the State Bank for 9 February equally shows the impact of busy season pressure and spillover into the second week of beginning of the month disbursements. The total of Advances has climbed by Rs 7.17

crores to Rs 282.01 crores, and constituents would also appear to have drawn down their Deposits, which are lower by Rs 4.92 crores at Rs 543.80 crores. The State Bank has disinvested in giltedged for Rs 7 crores, and the portfolio is lower accordingly at Rs 235.13 crores. However, borrowings have been slightly reduced by Rs 0.62 crore at Rs 2.66 crores and cash balances are drawn down slightly by Rs 0.40 crore to Rs 23.30 crores.

+

The return of Scheduled Banks for 2 February shows the strain that the banking system is feeling as a result of quickening of the busy season. The total of Advances has jumped up steeply by Rs 19.40 crores to Rs 1,342.03 crores, about Rs 14½ crores of this rise being

BANK PROFIT State Bank of Patiala

After providing for taxation and necessary provisions, the net profit of the State Bank of Patiala for the year 1961 amounts to Rs 5.31 lakhs as against Rs 2.92 lakhs for the nine months ended December, 31, 1960.

The income of the Bank is placed at Rs 58.75 lakhs as against Rs 37.57 lakhs for the nine months ended December, 31, 1960.

Together with a sum of Rs 50,820 brought forward from the previous year, the amount available for appropriation comes to Rs 5.82 lakhs. A sum of Rs 1.10 lakhs has been allocated to the Reserve fund and the provision to bonus to staff amounts to Rs 2.04 lakhs. The proposed dividend @ 6 per cent (subject to tax) will absorb Rs 2.10 lakhs leaving a sum of Rs 57,785 to be carried forward.

+

Treasury Bills

Tenders for Rs. 2,00,00,000 of 91 days' Government of India Treasury Bills were opened on Tuesday, 13 February 1962. Total amount offered was Rs 2,00,00,000. Tenders at Rs 99.360 per cent and above were allotted in full. Total amount accepted was Rs 2,00,00,000, the average rate of accepted tenders being Rs 2.545 per cent per annum.

Tenders for Rs 2,00,00,000 of 91 days' Government of India Treasury Bills will be received at all centres (Bangalore, Bombay, Calcutta, Kanpur, Madras, Nagpur and New Delhi) up to the close of business on Monday, 19 February, 1962. Successful tenderers should make payment on Friday, 23 February, 1962. Other conditions are as usual.

During the week ended 9 February, 1962 Government of India Treasury Bills for Rs 19,7275,000 were sold in favour of Reserve Bank of India.

91 days' Intermediate Treasury Bills sold from 7 to 10 February, 1962 amounted to Rs 15,00,000.

91 days' Intermediate Treasury Bills will be sold from 14 to 17 February, 1962 at Rs 99.381 per cent. Sales can be stopped at any time without notice if Government thinks it necessary.

+

Sterling's Prospects

By Paul Einzig

IN view of the possibility of a major strike and of the general unsatisfactory state of the balance of payments, the firmness of sterling since the beginning of February came as a surprise. It is attributed primarily to the political situation in Italy. The possibility of a Leftward swing through the advent of a Government controlled largely by Socialists and Communists reversed the speculative buying of lire in anticipation of its revaluation. The amounts of foreign short-term funds in Italy must be fairly substantial and their withdrawal during the next few weeks or months is likely to provide persistent support for sterling.

Incidentally, it is indeed remarkable that, although Italy has now become really prosperous for the first time since the 16th Century, the political trend is distinctly Leftward. It seems probable that this experience will strengthen argument in Western countries against making sacrifices to support underdeveloped countries, because the case in favour of such sacrifices has hitherto been largely based on the theory that a rise in the standard of living in those countries is the best insurance against Communism.

Sterling is also likely to benefit by domestic political troubles in France. The Algerian crisis seems to be growing worse and the increasingly grave disturbances are likely to stop Frenchmen from repatriating their foreign balances. In fact that movement, too, like the flow of funds to Italy, is liable to become reversed. Although Switzerland and Holland are likely to be the main beneficiaries from any withdrawal of balances from France, sterling and the dollar too, are likely to share in it.

Even though the threat of a crisis over Berlin has abated the D. mark now commands less confidence than it had until recently. Wage increases in West Germany are in full swing, and the Bundesbank's external reserves have declined materially lately. There is now virtually no more talk about a second revaluation of the D. mark, and some of the speculative funds at any rate are likely to be withdrawn.

As for the dollar, even in the absence of any acute scares the size of the chronic balance of payments deficit and of the Budgetary deficit, together with inexorable pressure by the trade unions for higher and still higher wages unwarranted by any increase of productivity, it is not likely to divert funds from London in the near future. It seems that the labour situation in the United States is fully as unsatisfactory as in Britain, so that from this point of view there is nothing to prevent sterling to continue to be steady to firm for the present. On the other hand, it would be little short of a miracle if we did not witness a revival of pressure on sterling by the late summer or early autumn or, in case of a major strike, even much earlier.

Notes

COMPANIES

The Giants and—

The Research and Statistics Division of the Company Law Administration has made a valuable and instructive study of corporate leadership in the country. For this purpose, the Division has selected and made a survey of about 100 big companies both in the public and private sectors. Rankings have been accorded on the basis of two criteria namely tangible assets net of depreciation for the accounting year (1959-60) and paid-up capital. Rankings obtained on the application of these measures separately do not exactly tally. But on both counts, the Hindustan Steel Limited figures as the nation's biggest corporate institution. The first ten places in the corporate sector including private and public sectors on the basis of tangible assets go to Hindustan Steel, (Rs 557.1 crores), TISCO (Rs 170.4 crores), IISCO (Rs 92.8 crores) Scindia Steam (Rs 45.1 crores) ACC (Rs 43.9 crores) NCDC (Rs 38.5 crores) Burmah-Shell Refineries (Rs 38.4 crores) Sindri (Rs 37.0 crores) Hindustan Aircraft (Rs 31.2 crores) and TELCO (Rs 31.2 crores). On the basis of paid-up capital, it is an entirely different list that is obtained. The ten biggest companies on this

basis are Hindustan Steel (Rs 306 crores) TISCO (Rs 38.9 crores) Neyveli Lignite (Rs 28.49 crores) ACC (Rs 19.05 crores) Sindri (Rs 17 crores) Hindustan Chemicals and Fertilisers (Rs 15.33 crores) Imperial Tobacco (Rs 15.16 crores) IISCO (Rs 15.4 crores) Hindustan Aircraft (Rs 14.80 crores) and NCDC (Rs 13.84 crores).

It is significant that Scindia Steam, Burmah-Shell Refineries and TELCO which find a place within the first ten on the basis of tangible assets do not figure among the first ten on the basis of paid-up capital. Similarly the Neyveli Lignite, the Hindustan Chemicals and Fertilisers and the Imperial Tobacco do not figure in the list of the big ten classified on the basis of tangible assets. Even in respect of the other companies which find a place in both the lists, the rankings are slightly displaced barring Hindustan Steel and TISCO. TISCO is the corporate leader in the private sector and is the second largest corporate undertaking in the whole corporate sector.

This study of corporate leadership though interesting has limitations arising from the out-dated data that has been made use of to determine rankings. It is the 1959-60 figures for tangible assets and paid-up capital that have been used by the Research Division of the Company Law Administration. As admitted by Research Division itself substantial changes have taken place since March 1960, which is the closing date of the present survey.

Variation in Erstwhile Pattern

New company formation has received a set-back in the third quarter of 1961-62 as compared to the previous two quarters. The figures of new company formations released by the Company Law administration show that while in the first and second quarters of 1961-62, a total of 427 and 424 new companies respectively were registered with an authorised capital of Rs 1,05.83 lakhs and Rs 76.20 lakhs, new company formation in the third quarter was only of the order of 387, the authorised capital being Rs 44.14 lakhs. The fall has affected the total picture for the first three quarters and figures show a decline in number of new registrations in the first three quarters of 1961-62 as compared with total registrations in the corresponding period of last year. Thus, while during the first three

quarters of 1961-62, 1,238 new companies were registered in the country, in the corresponding period of 1960-61 1,282 new companies were registered which shows fall in new company formation by 44. In terms of total authorised capital, however, no decline in corporate activity is indicated since the total authorised capital of the 1,238 companies registered in the first three quarters of 1961-62 is Rs 2,26.18 lakhs as against Rs 2,23.49 lakhs being the aggregate authorised capital of the 1,282 new companies floated during the first three quarters of 1960-61.

Of the 1,238 new companies registered during the first three quarters of 1961-62, 140 were public companies having an aggregate authorised capital of Rs 99.96 lakhs, while 1,098 were private companies with an aggregate authorised capital of Rs 126.22 lakhs. The number of public companies registered in the third quarter was 47 and the number of private companies 340. These compare with 49 public companies and 378 private companies floated in the first quarter and 44 public and 380 private companies formed in the second quarter. It is noteworthy that the total of 387 companies registered in the third quarter comprised 357 completely new companies while 26 were in existence as firms, the balance of 4 being cases of amalgamations.

Regional and State-wise break-up of new company floatations reveals a significant variation from the erstwhile pattern of concentration of new corporate activity in the eastern region. It is the western region that accounts for the largest number of registration during the third quarter of 1961-62 followed by the Southern and Northern regions while the Eastern region takes the last place. The respective shares of the Western, Southern, Northern and Eastern regions in new floatations in the third quarter are 115, 97, 95 and 80. State-wise also, West Bengal which has led the other States in new company floatations previously has lost its dominance and with 70 new registrations has been relegated to the third position. The largest number of registration in the third quarter has been in the Maharashtra State which has a total of 90 while Madras takes the second place with 75 new registrations. The number of new registrations in the Madras State in the third quarter shows a decline by 17 as compared with registrations in the second quarter, though it reflects a gain by 18 as compared with floatations in the first quarter.

The size pattern of the new registrations shows the largest registration viz 142 in the group with authorised capital of Rs 1 lakh and less than Rs 5 lakhs. There were 93 companies in the size group having authorised capital of less than Rs 1 lakh. There were 66 and 46 registrations in

the groups "Rs 5 lakhs and under Rs 10 lakhs" and "Rs 10 lakhs and under Rs 25 lakhs". There were 12 giant floatations with authorised capital of Rs 1 crore and above while there were 16 companies registered with authorised capital of Rs 50 lakhs and below Rs 1 crore. Companies registered in the group with authorised capital of Rs 25 lakhs and under Rs 50 lakhs numbered 12. It is noteworthy that the total authorised capital of the 12 giant companies registered during the quarter under review amounted to Rs 21 crores and constituted 48 per cent of the total authorised capital of all new registrations in the quarter.

BHILAI

Poised for Further Expansion

The Bhilai steel plant which has reached its rated capacity of 1 million tons of steel ingots per annum as envisaged in the first stage is on the road to further expansion. The agreement entered into by India and the Soviet Union last week provides for raising the annual capacity from 1 million to 2.5 million tons of steel ingots. Under this agreement the USSR will supply steel making equipment worth about Rs 54.2 crores as well as the necessary technical assistance for designing, constructing, erecting and commissioning the plant. Besides the Soviet Union has consented to train Indian technicians in its Metallurgical Works. Apart from these, the contract also covers the expansion of Rajhara iron ore

mines and the limestone quarries in Nandini. It should be noted that these two mines are the chief sources of supply of raw materials to the steel plant at Bhilai and as expansion of the plant poses additional requirements of raw materials these development plans are in order for the uninterrupted operation of the steel plant. The present agreement, it should be remembered, is in pursuance of the agreements reached by the two countries on 12 September 1959 and 12 February 1960 when the USSR has agreed to provide approximately Rs 180 crore credit to India for financing certain specified projects included in the current Plan.

During the protracted discussions which preceded the new deal the price factor of the equipment to be supplied by Russia threatened to be a serious obstacle for arriving at a mutually acceptable agreement. The two parties had to make slight concessions. The Soviet Union, for its part, offered reduced prices which India accepted considering the high prices of these complex equipment in the international markets. The new agreement provides for a phased programme of delivery which will be complete with the next two years.

ENGINEERING EXPORTS Latin American Vistas

A trade delegation sponsored by the Engineering Export Promotion Council has left last Saturday for the Latin American countries. The delegation consisting of six members is headed by Mr A. K. Bhattacharya, Chairman of the Engineering Export Promotion Council. The delegation is ostensibly on a mission to explore the market for engineering goods that may be offered by the Latin American countries, and will cover Brazil, Chile, Peru, Argentina and the USA. Most of these countries are economically backward and export agricultural produce in return for industrial machinery and other items. The market for industrial goods in these countries is dominated at present by the advanced countries. India has in recent years emerged as an exporter of light engineering goods even to the advanced countries like the USA and the UK. Light engineering goods have proved to be the most prospective items of industrial exports from India, and the country has already set up an expanding trade in these goods with the neighbouring countries in South and South East Asia and also some of the West Asian countries.

The present volume of exports of engineering goods to the Latin American countries from India is of an insignificant order and a proper study of the market offered

by these countries should point to the scope for expansion of our exports. The Engineering Export Promotion Council has made some pioneering studies of the market for export in other countries and this had led to expansion of exports to these countries. On the basis of the results that had attended the exploratory surveys made by the Council in other countries, the value of the present mission to the Latin American countries should also be obvious. On the basis of a preliminary study, the Council has already prepared a list of possible items of engineering goods which could be exported to the Latin American countries. These include agricultural implements, machinery, and equipment including pumps and diesel engines, railway track materials like rails, fish plates, gogspikes, bolts nuts, tea processing machinery, wire and cables, boot making machinery, electric motors, electric fittings, sugar making machinery, hand tools, and consumer items like sewing machines bicycles, and parts, hurricane lanterns, electric fans steel furniture etc.

India is already exporting most of these goods to neighbouring countries and there is no reason why exports could not be stepped up to the Latin American countries. The main competitors of India for the export of these items to the Latin American countries will be Japan and South Africa. The long distance and the consequent higher freight are obvious disadvantages to Indian exports. As against this, India has an advantage in cheap pig iron, which should raise the competitive standing of the Indian engineering goods. The delegation is expected to establish contacts with Stores Purchasing organisations in these countries and also study tariff regulations and import restrictions operating in these countries.

★

GHANA

The Volta Project

The Volta Project in Ghana has weathered the political storms let loose by the vagaries of President Nkrumah's brand of neutralism. The World Bank has announced a loan equivalent to \$47 million to the Volta River Authority, which will help finance construction by the Authority of a dam and hydroelectric power project on the Volta River at Akosombo, together with a transmission system to supply power to southern Ghana. The Bank's participation in the scheme was decided on in September 1961 and the loan announced in pursuance of that decision. It is part of an international scheme of financial participation in not only the construction of the dam and power station on the Volta River but also of an aluminium smelter which will be the largest

single consumer of the electric power produced. Additional international financing for the hydroelectric project will be provided by long-term loans from the United States through the Agency for International Development (AID) and the Export-Import Bank of Washington, which will provide \$27 million and \$10 million respectively, and from the United Kingdom through its Export Credits Guarantee Department, which will lend £5 million (about \$14 million). The Government of Ghana will itself provide up to £35 million (\$98 million) out of Ghana's own resources as equity investment in the power project.

In its scope and size, the Volta Scheme ranks with the largest undertakings of its kind so far developed anywhere. The main dam, of rockfill construction, will rise 244 feet above river level and 370 feet above its foundations, and will have a crest length of over 2,000 feet. It will create a reservoir, entirely within Ghana, about 300 miles long and with a surface area of 3,275 square miles.

The power station, located just below the dam, will have an initial capacity of 589,000 kilowatts, provided by four 147,200-kilowatt generating units, and an ultimate capacity of 883,000 kilowatts. This output compares with a total of about 70,000 kilowatts supplied by the thermal generating units which are at present the sole source of electric power in Ghana. Transmission lines will run from Akosombo to the seaport of Tema, 44 miles away, where the aluminium smelter is to be built, and thence for a further 18 miles to Accra, the capital of Ghana. A separate ring of transmission lines, approximately 400 miles long, will supply power to towns, villages and mines of southern Ghana.

Although the possibility of building a large hydroelectric station on the Volta River was first discussed nearly half a century ago, it has always been clear that the level of demand for electric power in Ghana would not be high enough, in the initial stages at least, to make economic use of the output of such a station unless a major industrial consumer could be found. The economic feasibility of the Volta hydroelectric scheme thus depends on construction of the aluminium smelter at Tema which will buy a large proportion of the power generated at Akosombo. This smelter is to be constructed and operated by the Volta Aluminium Company, Limited (VALCO), formed by two aluminium producers, Kaiser Aluminium and Chemical Corporation and Reynolds Metals Company. These companies will have a substantial equity interest in the project, and will also be assisted by loans and guarantees provided by the US Government. The smelter will cost well over \$100 million, and

will have an annual capacity of 100,000 to 150,000 tons.

RUBBER

New Source from Andamans

The Rubber Board's decision to commence rubber plantations in Andamans will be widely welcomed by the rubber industry as well as the citizens of that island. It is well-known that the rubber manufacturing in the country has registered considerable progress during the past but even so, domestic supply of rubber had not looked upto the desired level. The consumption of rubber by the industry in 1961-62, according to recent estimates, is to amount to 80,000 tons of which 62,000 tons will be natural, 12,000 tons synthetic and 6,000 tons reclaimed. As against this the indigenous supply would be in the vicinity of 27,000 tons and for the balance the industry is entirely depending on foreign countries. Viewed in this context, the projected scheme of rubber plantation in Andamans assumes special significance. The soil and climatic conditions of the island too are found to be very congenial for rubber cultivation and if properly managed Andaman rubber would be cheaper than the synthetic rubber.

Though the idea was mooted some eight years ago, the Government, unfortunately, did not show any interest in it. Though belated, the decision to send a panel of officers to Andamans for preparatory work to start a 2,000-acre rubber plantation can be considered happy augury. However, as indicated by Mr K. M. Philip, the President of the Indian Rubber Industries' Association, the entire programme will have to be handled realistically for reaping the maximum benefit and making good the time lost in the implementation of the scheme. At a press conference held in Bombay last week Mr Philip has entirely ruled out the scope of developing rubber cultivation in Andamans by small holders as in the case of Kerala. Even the Rubber Board, according to Mr Philip, is not the suitable body for this task as its knowledge of modern methods of rubber plantation and experience is comparatively inadequate.

Therefore only large and well experienced private parties will be able to implement the proposed scheme on a scientific basis by investing their know-how and money. The Government should do well to entrust this task to private enterprise and provide adequate financial assistance whenever the need is felt. Rubber plantation on a large scale in Andamans will be of vital economic importance to the nation by reducing the heavy drain on the country's foreign exchange resources and for raising the standard of living of the islanders.

17 February 1962

US

Trade Surplus Outstrips Forecasts

The surplus achieved by the United States in its trade with the rest of the world reached near-record proportions in 1961, outdistancing even the earlier optimistic forecasts. According to the latest US Commerce Department estimates, the US exported \$5,700 million more than it imported last year.

Credit is due chiefly to a record outpouring of exports, which rose 2.5 per cent over the 1960 level to a new annual high of \$20,100 million. Imports, meanwhile, declined slightly to \$14,400 million.

The export surplus is a matter of major interest. The dollars it brings in help offset the net outflow of US funds for economic aid, military spending abroad, tourism, private investment and other purposes. These outflows have tended, in the aggregate, to exceed the trade surplus, leaving the United States with a net deficit in its over-all balance of international payments. The fact that this reflects a continued "good creditor" approach on the part of the US may help explain but does not eliminate the problem.

Last year, largely because of the increased export surplus, the balance of payments deficit was cut substantially. No definitive data have yet been published on this score, but indications are that the deficit fell to about \$2,500 million from a 1960 level of about \$3,900 million. The extent of the 1961 improvement is underscored by the fact that the deficit also exceeded \$3,500 million yearly in both 1958 and 1959.

As a matter of fact, US Treasury Department officials say that three-quarters of 1961's estimated \$2,500 million deficit may have been due not so much to a basic imbalance in the US position, but rather to the outflow of short-term funds, largely in response to interest-rate advantages abroad.

Despite this movement of short-term funds, the Treasury sees evidence of a gain in confidence abroad in the US dollar. Robert V. Roosa, Under Secretary of Treasury for Monetary Affairs, makes four important points in this regard:

The outflow did not reflect a flight from the dollar, as the US gold loss shrank to one-half that of 1960, and foreign central banks added to their holdings of dollars; Much of the interest rated differential favouring the movement of short-term funds abroad was removed;

There was a sharp rise in loans for the financing of foreign trade;

Foreign commercial banks were active in attracting US deposits.

In the long run, government officials see the expansion of the US trade surplus as the chief means of defeating the balance of payments problem. Such an expansion may not take place this year; it is even conceivable that the surplus could shrink. This is because imports have been rising faster than exports in recent months, as the US economic upswing seems to have generated renewed heavy demand for foreign goods.

This only serves to emphasize the importance the government attaches to the expansion of exports as a means of building up the trade surplus. A number of direct, export-promoting steps have been taken, apart from such indirect steps as trying to make the US economy more efficient and more competitive.

The latest of the direct steps has just taken effect in the form of a new and comprehensive export credit insurance plan; it involves the setting up of a foreign credit insurance association—in effect, a partnership between the government and 57 private insurers—to issue commercial and political risk policies to US exporters.

The association was formed as part of a plan announced by President Kennedy last October to give US exporters as much backing for export loans as their foreign competitors have had for years. Eighteen countries, most of them in Western Europe, already have extensive export guarantee programmes.

The belief is that if US exports can be increased another 10 per cent over the next few years, the nation's basic balance of payments problems would be about solved.

Tariff-Cutting

The campaign to win public support and Congressional approval of President Kennedy's new trade programme has been under way for many weeks, ever since administration began to outline the general shape of this bold tariff-cutting plan. Now that the President has formally presented his proposed trade legislation to Congress in detailed and specific form, the effort is on in earnest.

One of the main problems facing proponents of liberal trade policies, apart from countering the normal and anticipated protectionist opposition, lies in making the programme's benefits clearly and simply understood. Economics is a difficult and distant subject for most people. Explaining the premises and advantages of a complex foreign trade programme, much of which appears on the surface to generate relatively little self-interest for the public at large, can be a particularly difficult undertaking.

It is not surprising, then, to find the administration trying to educate the American people as to

the benefits of the Kennedy trade expansion programme in terms they can the more readily appreciate. Finding this common denominator of understanding, so to speak, does not detract in the least from the points being made. This is especially the case in so far as people tend to look upon trade largely as a local issue, with reference primarily to its effect on them, their neighbours and their communities.

It may have been with these thoughts in mind that the US Department of Commerce has just released the results of comprehensive national survey which indicates the importance of US exports to the jobs American workers hold and the things American companies make and sell. The survey, based on 1960 data, discloses that approximately six million American workers are employed in manufacturing plants which produce goods for export, and that US exports of manufactured goods total some \$15,500 million a year.

Commenting on the survey, Secretary of Commerce Luther B. Hodges offered this cogent and pertinent comment: "This new survey reveals for the first time the specific stake each of our 50 states has in reaching rapidly expanding free world markets."

This is in line with the administration view that the benefits resulting from a significant scaling down of tariffs far outweigh the damages—actual, potential, or imaginary. And these benefits are probably most clearly understood in terms of jobs. In his trade message, the President observed that "several hundred times as many workers owe their jobs directly or indirectly to exports as are in the small group—estimated to be less than one half of one per cent of all workers—who might be adversely affected by a sharp increase in imports."

From this, it is evident that the President realistically sees trade expansion leading to increases in imports as well as exports. Nor is the President inclined to avoid or belittle this possibility. On the contrary, he sees it, too, as a forward step—one that not only will contribute to the earnings of other free nations, but also will help keep inflation in check through the impact of healthy competition.

But these arguments, like those having to do with overcoming the balance of payments deficit and reinforcing the strength and unity of the free world, may be most effective in the first instance with those who already have a relatively sophisticated interest in the economics of foreign trade to begin with. They are being made, of course, and will continue to be made, with the expectation that a general and popular understanding of the entire trade programme will grow and flourish.

DYESTUFFS

March to Self-Sufficiency

The laying of the foundation stone of the Sandoz Dyestuff Plant at Kolshet, Thana, in Maharashtra last week by Dr Arthur Lecher, a Managing Director of the firm, constitutes an important landmark in our march toward self-sufficiency in dyestuffs consumed on a large scale by the textile industry in the country. The new project, which will form an extension to the existing Sandoz factory in Kolshet, will undertake the manufacture of 540 tons of dyestuffs and intermediates annually. When fully commissioned the project will help save the country foreign exchange to the tune of Rs 80 lakhs a year by enabling to reduce imports of dyestuffs and intermediates to a considerable extent. The value of total consumption of dyestuffs in India is estimated approximately at Rs 15 crores for fifty per cent of which we are dependent on foreign countries.

An added attraction to the new plant is that it will operate on the basis of self-sufficiency in regard to payments for the import of requisite raw materials for the manufacture of 58 products by exporting a portion of its output worth about Rs 20 lakhs per annum. Another remarkable feature of the new plant lies in the fact that of the 58 items, 47 items will be produced within the country for the first time. The Dyestuff Plant will be the most modern in design in this field of engineering, prototypes of which have already been installed in the Sandoz's works in Brazil, France, Spain and Switzerland and the experience gained from the operation of these machines will be suitably incorporated in the erection of the plant at Kolshet. The selection of this site for the locale of plant is fitting by all counts as Bombay city is the centre of the textile industry in India.

The association of Sandoz, a Swiss firm of great renown specialising in dyestuffs and chemicals, with the Indian textile industry which can be traced back to the twenties of the present century has been fruitful in more ways than one. And the present endeavour of the firm, apart from saving a sizable quantum of foreign exchange, will prove to be of immense assistance in the advancement of the textile industry of the country.

★

Dr PAUL LOHMANN

Foundation Laid

Last Sunday was laid the foundation stone of a new joint venture, that of Dr Paul Lohmann (India) Ltd, in which West German and Indian entrepreneurs are collaborating. Dr Rudolph Lohmann, the distinguished West

German industrialist and President of the Chamber of Commerce in Berlin, West Germany was himself present to bless the new joint venture. The launching of the new enterprise on a joint basis is no more token of the growing interest of West German industrialists in the industrial progress of India. It is to be noted that West German assistance for India's industrial development has been available in substantial measure and has been given in various forms. The Rourkela steel plant being built up with West German assistance is the most notable instance of West German collaboration in the building up of a strategic and key industry.

The new venture has been organised under the auspices of Dr Paul Lachmann (India) Ltd a sister concern of the famous firm of Dr Paul Lohmann Chemische Fabrik in West Germany which is specialised in the manufacture of chemicals. The new factory which is to be set up in Jessore Road is intended to manufacture fine chemicals which are at present used in various industries including pharmaceuticals, food products and cosmetics. Nearly 10 varieties of such chemicals needed by these industries are envisaged to be produced in the new factory and to that extent imports will be obviated. That it was possible to obtain West German assistance for the project to manufacture chemicals is itself a good augury for the success of the project. West Germany is the acknowledged leader in the production of chemicals and has developed and perfected the processes of chemical manufacture in a manner no other country had done. Dr Paul Lohmann Chemische Fabrik which has offered to assist the project with technical know-how, is one of the leading specialist firms in West Germany which has a long-standing record in the production of chemicals.

The new factory when it goes into production will go some way into increasing the production of chemicals in the country. Under the First and Second Plans chemical production received much less emphasis than was accorded to many another industry and even in the Third Plan it is only production of fertilisers that has been given priority. Future industrialisation of the country should take adequate notice of the present gap in internal production and the heavy drain on foreign exchange being suffered on account of imports of chemicals. More and more factories to fill the production gap in the chemical industry are basic to larger strides being made in industrialisation.

PHARMACEUTICALS

Vitamins and—

Inaugurating the Rs 60-lakh Vitamin C plant of the Sarabhai Merck Limited in Baroda last

Sunday Mr G. L. Mehta, the Chairman of the Industrial Credit and Investment Corporation of India, highlighted the significance of encouraging research in the pharmaceutical industry and stepping up indigenous production not only for meeting the internal requirements but also earning sizable quantum of foreign exchange for the successful implementation of the various development schemes. Considering the supply of and demand for pharmaceuticals in the country along with the rather unimpressive performance of the industry on the export front, the points raised by Mr Mehta warrant special attention. The need for undertaking extensive research in the sphere of pharmaceuticals in the country to bring the industry on a par with its counterparts in the other leading nations where rapid changes and improvements are taking place hardly requires any mention.

In the field of production also much headway remains to be made. For, the internal consumption of pharmaceuticals and drugs amounts to about Rs 100 crores per annum while the domestic output is placed around Rs 70 crores. The expansion of the industry should be so geared as to result in the economies of larger output for not only bridging the gap between supply and demand but also for leaving a comfortable surplus for exports.

The new plant of the Sarabhai Merck in Baroda is a step in the right direction. The plant which possesses an annual production capacity of 60 tons is expected to help the country save foreign exchange to the tune of Rs 25 lakhs and to meet more than half the domestic requirements. Another noteworthy aspect of the plant is that the entire raw materials will be secured from indigenous sources. Its contribution for raising the nutrition standard of the people will be an added attraction.

Anti-biotics

The inauguration of the Lederle's ten-ton antibiotics fermentation plant for the basic production of aureomycin, achromycin and ledermycin at Atul, Bulsar, by Nawab Medhi Nawaz Jung, the Governor of Gujarat, on Tuesday marks the completion of the first stage of a two-phased expansion programme of the Lederle Laboratories (India) Limited for the manufacture of a wider range of chemicals and pharmaceuticals in India. The second stage envisages the installation of a 160-ton malathion plant at Bulsar which is expected to start production early next year.

The antibiotic plant at Bulsar constructed in collaboration with the Atul Products Limited would provide a complete source of producing antibiotics in the country and make the country indepen-

dent of imports of bulk materials and intermediates. At a press conference held earlier in Bombay Dr Robert C. Swain, the Vice-President of the American Cynamid Company, and the Director General of Cynamide International New York, while giving details of the expansion programme stated that with the completion of the two phases the investment of Lederle India will be doubled to \$6 million. The participation of Atul would be raised from 24 per cent to a higher ratio for which negotiation is under way. The new plant will be entirely manned by Indian technicians who got special training in the Lederle's Pearl River, New York Laboratories. Dr Swain also added that the American Cynamid, the parent company, and its associates manufactured about 6,000 pharmaceuticals and chemical products and the Lederle proposes to produce about a dozen in India in the near future. The total investment on the antibiotics plant amounts to about Rs 3 crores and the foreign exchange saving will be of the order of Rs 1.50 crores per annum. With the commissioning of the plant, India is one step nearer to the goal of self-sufficiency in antibiotics.

EAST ANGLIA PLASTICS A Vital Gap Filled

East Anglia Plastics (India) Ltd, which went into production only a few weeks ago, is one of the notable firms that have been recently set up in the country in the field of plastics production. The company was intended to fill a vital gap in the production of intermediate raw materials required in the plastics industry. It is the only factory of its kind which is equipped to produce cellulose acetate which is one of the most important thermoplastic materials. Noted for its versatility cellulose acetate has both domestic and industrial uses and is in great demand even in advanced countries. Production of cellulose acetate is the main interest of the East Anglia Plastics even though it started with permission to produce other things like polyvinyl chloride compounds, Polystyrene and Polyethylene etc.

The present installed capacity of the factory is about 1,800 tons per year and production from this factory will serve to meet the demand for finished moulding powders in the country which is estimated at 2,000 tons. Consequently when the factory gets into full production there will be foreign exchange saving of nearly Rs 25 lakhs. At present the factory operates on the basis of imported cellulose acetate flake which is processed into powder. However a large plant is envisaged to be set up in Andhra Pradesh for

the production of cellulose acetate flake and this integration when it is consummated will enable further foreign exchange saving.

The East Anglia Plastics factory situated in the Jessore Road in Dum Dum is well laid out and is furnished with modern machines. The company has secured the technical collaboration of East Anglia London and the technical aspect of production is therefore well looked after. One significant thing about the factory is the provision made for a miniature mill which serves as the testing place before final production on the giant machines of which there are two can be started.

Notwithstanding the commendable progress made by the plastics industry under the First and Second Plans, production of intermediate plastic materials still constitutes a weak link in the industry. Considering that it is the intermediate materials which provide the basis for the real growth of the plastic industry, the importance of the venture by East Anglia Plastics will become obvious. In other places the plastics industry has developed as a wing of the petrochemical industry and even in India, the ICI and some other companies make plastic products from petrol. But it is significant that it is cotton linters and sugar molasses, which provide the raw material for the cellulose acetate manufactured by the East Anglia Plastics in their factory.

BRITANNIA ENGINEERING Another Milestone

The Britannia Engineering Company is on the march. Started in 1917 in Titagar, West Bengal, the company has steadily grown and today its activities cover a wide range and varied field and has an impressive record of achievements in the production of capital goods such as the complete range of tea processing machinery, jute mill machinery, railway signalling and interlocking equipment, diesel and steam road rollers and the like.

The formal inauguration of the company's wagon building unit at Mokameh in Bihar by Mr Jagjivan Ram, the Union Minister for Railways, last week is another milestone in its career. Though production at this unit started in the second half of 1960 the inauguration was delayed for one reason or the other. Despite difficulties in obtaining raw materials and the like, the Mokameh project has completed the order placed by the Railway Board for 250 broad gauge covered four-wheeler wagons by the middle of last year. The company accepted a further order for 575 wagons of the same type and more than a third has been completed and delivered.

Clive Street Gossip

"I must have liberty
Withal, as large a charter as the wind
To blow on whom I please"
—As You Like It.

IN about a fortnight's time, we should know who our new rulers will be. The general impression is that they would be very much the old ones. Newspapers have worked overtime to let us all into the feel of the combat and as the fateful day approaches, there is a distinct smell of battle. Even as recently as a fortnight ago, this was not the case. And my impression is that there is panic in places where things were taken for granted. The Congress is sure of an overall victory, but is not free from particular worries about some prestigious fights. Other parties, on the other hand, concede in advance effective victory to the Congress but hope for special triumphs and fear stiff fights in places where they won last time. In the South for a short while last fortnight, I saw at fairly close quarters the electioneering there. I heard, by accident, Sanjeeva Reddi speak in an Andhra town and, by choice, some DMK and TNP stalwarts in Madras. If elections were decided as oratorical contests are, I would put the chances of the DMK and TNP pretty high. And I am afraid I played a trick on a candidate down there in not correcting early enough his impression that I had a potential vote for him. The conversation was very revealing. He had come with his colleague who was contesting the election for the Assembly and did most of the talking. After a while, he took me aside and said, "Look, I didn't want to say this in the presence of my colleague, I count on you. As one brahmin to another, you know." I was shocked enough by this tack to blurt out the fact that my vote was in Calcutta where this particular appeal was irrelevant. When I mentioned the incident to a friend, he thought me naive to have been shocked and that exactly the opposite argument was advanced by every non-brahmin whether of the Congress or any other party when he approached a non-brahmin with a vote to cast. And wherever one goes, two things are avidly discussed, apart from local prospects. One is the rather dramatic unopposed return of TTK, comment on which runs clearly on party lines. The other is the North Bombay contest between Kripalani and Menon, which has been invested with a national significance. Not surprisingly, the betting is very close.

I should like to draw attention to a recent decision of some public importance of the Supreme Court. It arose out of an appeal by the Rajasthan Government and throws some light on an obscure subject—the State's liability in Tort, especially in its capacity as an employer. The facts are simple. A driver of a government jeep knocked down a pedestrian who died in consequence of the injuries sustained. The trial judge decreed the suit for compensation by the widow against the driver but not against his employer, the government. On appeal, the High Court decreed the suit against the government also. On appeal by the government, the Supreme Court has affirmed the judgment of the High Court holding in effect that, in India, the State was not exempt from the vicarious liability that attaches to every employer for the tortious acts of his employee in the course and scope of his duties. The importance of this decision at a time when the State is fast becoming almost the only employer is obvious enough. But, as I shall show presently, it would be wrong to think that the decision has finally resolved all the uncertainties on the subject.

The State's liability in Tort has had a rather interesting history. Paradoxically, citizens in countries that are ostentatiously deferential to the concept of Equality before Law have historically been worse off in this matter than those in countries like France which have, apparently, one law for the citizen and another for the official. There is a good deal of uninformed democratic prejudice against the *Droit Administratif* as it obtains in France. But at least in tort by officials the Englishman is—or rather was until recently—worse off than the Frenchman. It is true that the French have, in effect, two sets of courts—one for dealing with disputes between citizens and another for dealing with disputes between the citizen and the official. But in the latter case, the State, seemingly protecting the official, takes the brunt of the attack. But in England, the doctrine that the King can do no wrong and that he cannot be tried in his own courts has had the effect of making the State hide behind the official. The theory is that the acts of officials are the acts of the Sovereign, being "delegations by the Crown

of its own authority to particular individuals." Thus, in an English case which has some resemblance to the Rajasthan case and which arose in 1906, the Post-Master General was held not liable for the negligence of a postal employee in carelessly laying electric wires. It is true that you can proceed against the employee personally in some cases, but this is often an illusory remedy.

Thus the position in England was unsatisfactory in every way. Public opinion on the subject asserted itself finally in the Crown Proceedings Act of 1947. For the first time, a statutory liability was firmly fastened on the Crown in respect of tortious acts in the course of duty by its servants. A rather odd consequence of this has been that the position in Tort is now even better than in Contract: for the right to sue in Tort is unqualified and available in all the courts, whereas for certain kinds of contractual breaches by the Crown, it is necessary to invoke the Petition of Rights, the remedy under which, at least in theory, is a matter of grace with the Sovereign.

In India, as pointed out by the Supreme Court, the extreme position of the immunity of the Crown never obtained. We had no constitutional mystique to accommodate for, under the Act of 1858, the Crown was the successor to the East India Company, a chartered corporation and succeeded to the liabilities of the predecessor. But the exact scope of the State's liability in Tort has been the subject of some conflicting judicial interpretation. Thus it has been held that the government would be liable if the wrong complained of was done in the course of transactions in which a private person might engage. (Vide P & O Steam Navigation Co. Vs. The Secretary of State.) But no suit would lie either against the Government or against its officers for acts done in exercise of "sovereign powers" or in the performance of duties imposed by Statutes. The distinction between "sovereign acts" and others has been considered somewhat illusory in some subsequent cases but the matter has not been finally settled authoritatively, even by the latest Supreme Court decision. For, in this case the Court has rejected the rather desperate argument that the driver of the jeep was performing some transcendental sovereign act. The position is therefore still nebulous and the Law Commission's recommendation of a statutory amplification of the law has not been rendered otiose. The Crown Proceedings Act of 1947 provided for two ob-

vious and reasonable exceptions: one was acts done by the judiciary and another acts done by and done to members of the armed forces while in actual combat. Apart from these, there is no particular need to protect the State for tortious acts. The protection afforded for acts done in the performance of statutory duties—an indemnification that has also been written specifically into many statutes—is also not very defensible. As it is, only, mala fide is a ground for attack. The argument that such provisions are necessary in order that people may not be scared away from government service is irrelevant in the context in which the liability in Tort is sought to be fastened on the State and not on the individual civil servant.

By an odd coincidence, only a few minutes before I read in the Statesman of Hugh Dalton's death I finished reading a review of the third and last instalment of his memoirs in the latest issue of the Economist. What was even weirder, with a pietism that one does not associate with his tribe, the Economist reviewer had wished "this remarkable character well in his struggle for life at the moment." In the event, the wish was unavailing. To us in India, Dalton was a rather remote figure. His affiliations were European rather than Commonwealth. We know him principally by his book on Public Finance, which, though not seminal like Tawney's, was our first real introduction to a tricky subject. And Dalton's advocacy of cheap money found a ready echo in many hearts here. A brief notoriety attached to him over his resignation as Chancellor in 1947 following his indiscretion in revealing budget papers to a journalist before they were presented to Parliament. Dalton would appear to have not quite recovered from this blow, which came close in the wake of anxious days over the convertibility crisis. More recently, he bobbed up into public consciousness by his sharp and often tart comments on his colleagues in the Labour movement that got quoted from his memoirs and for the controversies he stirred by his version of events. Obviously, as one of the key figures of the times, he was intimately familiar with the internecine struggle for power within the Labour Party. (At one time Dalton had ambitions of becoming the Foreign Secretary but was beaten to it by Bevin.) Dalton was, at a time when it was not so fashionable, a good European and worked for Britain identifying herself more wholeheartedly with Europe. He was also a shrewd judge of men as witnessed by his comment on Gaitskell quoted by the Economist: "Towards this most exceptional young man, I decided that I would do my best to deflect the leadership." This, in early fifties, was a pretty long but accurate shot to have taken.

PLAN ALLOCATIONS

Railways Ask for More

THE persistent shortages that hamper the progress of the Third Plan programmes even before they have got under way, if not the criticism of lack of balance between the programmes for industry on the one hand and those for transport and power on the other, have persuaded the Planning Commission of the need for reviewing the allocation for development in these sectors. Programmes for stepping up installed capacity for power generation in West Bengal and Bihar, in the light of the Sachdev Committee's report, were approved by the Planning Commission a month ago and Government's decisions were released last week. The Planning Commission is now engaged in processing the proposals sent up by the Railway Ministry for increasing the allocation for Railways by Rs 195 crores and a positive decision is expected shortly.

The Railways had originally drawn up programmes involving an outlay of Rs 1465 crores, on the basis that originating traffic would reach the figure of 255 million tons in the last year of the Plan. This was however considered on the high side by the Planning Commission. In the Draft Outline of the Third Plan, an allocation of Rs 1150 crores was considered adequate to carry 235 million tons which was the Planning Commission's estimate of originating traffic. This figure was subsequently raised to 245 million tons when the Third Plan was finalised and the allocation was increased to Rs 1325 crores. The increased allocation included provision of Rs 25 crores for three new lines in the South.

The failure of the Railways to provide wagon space for even essential materials for industry was highlighted at the last meeting of the Advisory Council for Industries in October 1961, when spokesmen of industry expressed grave concern at the inadequate supply of coal at the consuming centres in all parts of the country arising out of lack of transport facilities. The Chairman of the Railway Board, in an outspoken speech, maintained that the Railways had performed the task entrusted to them under the Plan, and if the carrying capacity was still inadequate, the fault was not theirs. And it was also clear that the transport bottleneck would continue to hamper implementation of the Plan programmes unless the Third Plan allocations were revised on the basis of realistic estimates of

the likely trend of traffic. The observations made by Mr T. N. Singh, Member of the Planning Commission for Industry and Transport, at the meeting of the Council, gave the impression that the Planning Commission was prepared to reconsider the position. In the meantime, a technical mission of the World Bank which came to this country to assess the Railways performance, it is understood, considered that the Railways' assessment of 255 million tons was a more realistic estimate of the traffic to be expected in 1965-66. These developments have prompted a re-examination of the Third Plan programmes.

It is learnt that Railway Ministry recently approached the Planning Commission for an additional amount of Rs 195 crores which will raise the total allocation for Railways to Rs 1520 crores. Out of this amount, Rs 75 crores will be for providing additional facilities which the Railways will have to create to handle extra ten million tons of goods. The remaining Rs 120 crores is required for augmenting rolling stock, traction equipment, as well as some permanent way works like doubling of track, etc. Additional equipment and was permanent works, over what was provided in the Plan, have become necessary because of the change in the pattern of coal movement that appears likely. The original Third Plan target of 97 million tons of coal envisaged extensive development of Central India Coalfields. Development of fields in this region according to the Plan would have enabled the Railways to supply consumers in Western and South India over comparatively shorter hauls. But according to present indications, the bulk of the supplies to these areas, as in the past, will have to go from Bengal and Bihar fields. The resulting longer lead movements will add to the strain on Railways' carrying capacity and have to be provided for.

The Railways also feel that the plan drawn up earlier and approved by the Planning Commission has become obsolete in relation to current requirements even before it has been taken up for implementation. In this context attention is drawn to the proposal, now said to be under examination, to raise the coal production target to about 110 million tons, in order to meet the growing demand for coal from industries. If the higher target is approved, Railways will be called upon to carry much more than the 99 million tons which is their present commitment under the Plan.

Although it is not known if the Planning Commission will be ready to accept all these contentions of the Railways in support of their demand for a larger allocation, the

feeling is gaining ground in appropriate quarters that planning for transport capacity in a growing economy must leave some cushion for periodical stresses and strains which are inevitable. The consequences of planning transport capacity with very narrow or no margin was, it will be recalled, forcibly pointed out by Mr K. C. Neogy, when the Draft Second Five-Year Plan was under consideration. His forebodings that the requirements of industry are likely to outstrip transport capacity during the Second Five Year Plan have been borne out by the events of the last two years.

The new power schemes that have been approved envisage an increase of 183 megawatts in installed capacity in the Eastern Region. These include an additional 75 megawatts unit in the Durgapur Coke Oven Power Station, an additional unit of 9 megawatts at the Jaladhaka project in North Bengal, stepping up of the capacity of the installation at Barauni (Bihar) from 30 to 100 megawatts and six 1.5 megawatts packaged generating sets to be installed in different centres in West Bengal. The Sachdev committee had also recommended that against the Third Plan scheme of extension of Pathratu thermal station in South Bihar by 5 units of 50 megawatts each, the possibility of installing three 100 megawatts units should be explored. The suggestion is being pursued with the Russian authorities who are to supply the plant for this power station. The possibility of augmenting the capacity of the expansion scheme of the CESC is also said to be under consideration.

AID TALKS

Bokaro in the Queue

Allocation to specific projects, of the aid committed by the World Bank, and by the United States Government, for the first two years of the Third Plan, was discussed during the week by visiting teams from the World Bank and the United States Agency for International Development (AID). The World Bank assistance of \$150 million for 1962-63 will be available for a number of irrigation projects, the Bombay Port Trust and to the P. & T. Department for improvement of communications. The details of the allocations were discussed by the Bank team, which includes three irrigation experts, with the officials of the Finance Ministry and other Ministries concerned.

The AID teams talks are also directed to select the projects for loan assistance, and the fact that, besides meeting Finance Ministry officials, the team also had talks with officials of the Ministry for Steel Mines and Fuel, has revived hope regarding an early decision on US participation in the Bokaro project. But it is not clear how discussions at the present stage could proceed beyond preliminary exchange of views and information on the general aspects of the project and the type of assistance that will be appropriate. The countries which have helped to set

up three steel plants in the public sector during the Second Plan are already committed to their expansion during the Third. The only likely source to which India could look for assistance for the fourth steel plant is the United States. The prospects of such assistance appeared brighter with the change in the Administration in Washington. But though American readiness to help has since been affirmed on several occasions, no firm proposal has yet emerged. This is not surprising for the last word in the matter rests neither with Government of India nor the US Administration, but with the US steel industry which has to provide the necessary equipment and technical assistance.

If, as appears from reports, the terms and conditions on which they are prepared to assist call for a change in Government's policy, regarding the public sector steel plants, it is difficult to see how a tangible scheme could be finalised in the course of talks with officers of the Ministry. A decision on this question will have to be taken at Ministerial or Cabinet level, and this cannot be expected until after the elections. What is of immediate interest is not the prospect of US aid for Bokaro but how much of the US offer of one billion dollars for the first two years will be in the form of free foreign exchange which could be drawn upon to finance maintenance imports. On this question the talks between the AID team and the Ministry of Commerce and Industry should give a helpful indication.

TOURISM

Wanted More Hotel

Beds

The crucial role of hotels in the development of tourism was highlighted by Mr R. W. Hemphill, a former President of the American Society of Travel Agents and head of one of the prominent Tour Operators in the USA. The advent of jet aircraft has not only speeded up travel, but has also effected a radical transformation in the economics of tourism. The present-day tourist, with the facility of rapid jet travel, spends nine out of 24 hours every day in a hotel. Accommodation, especially sleeping accommodation, is a primary consideration in the selection of places to visit. It is not the quality of service or food in the first class hotels that is at fault, but the grave deficiency of suitable accommodation. Mr Hemphill forecast a large increase in tourist traffic in the Pacific area, and if this country is to get its share, no time should be lost in putting up sufficient number of first class hotels. Already we are way behind Hongkong which is getting the bulk of the US tourists. According to Mr Hemphill, the tourist visitors to this country could increase from the present level of 100,000 to about a million a year over the next five years, if the essential facilities a tourist needs—hotel beds, airline space, decent and comfortable ground transportation—are made available.

Markets

JUTE

Steady Trend

THE jute markets have been ruling steady this week following sustained buying interest. Considerable encouragement has been derived from the figures for stocks of jute goods at the end of January. The rise in stocks has been much smaller than had been generally anticipated and the anxiety that the first two or three months of the year would be a lean period for jute goods offtake has yielded place to the optimism that foreign enquiries would be on a satisfactory level despite increased production. Last Thursday the IJMA announced that the period of higher output would be extended up to the end of March. In a Press Note the IJMA said that it had decided, as a temporary measure to relieve the continuing shortage of ready goods, that production should continue to be maintained at the maximum possible level until the end of March. This means that mills which are in a position to operate more looms over and above the additional 5 per cent already unsealed until the end of March, will be permitted to do so to the full extent of their ability for a further period of one month from the end

of February 1962. According to the Press Note, the additional power necessary for the higher production will be available during March.

It is evident that the continued higher offtake of jute goods in what is usually considered as offseason is due largely to the fact that overseas consumers have for many months now been buying only their immediate requirements. This policy has necessitated continuous buying on their part. In recent months the pace of purchases has been accelerated as prices have become much cheaper than a few months ago. Some buyers seem to be still nurturing the hope that prices will be further lower in coming months as the full pressure of the increased raw jute arrivals is felt. But most consumers must have realised that it is idle to hope for any substantial decline in prices in view of the fact that Authority in India is committed to maintaining raw jute prices at current minimum price levels.

Sentiment this week in the raw jute market seems to be much better than last week. Although mills are not free buyers of all varieties, sentiment has improved following the IJMA decision to permit mills to work to their maximum capacity up to the end of March. The fact that the IJMA continues to issue weekly

Raw Jute—March	...	30.84	31.36	31.24

NOTE:—The rates for ready raw jute are nominally quoted at Rs 30 per maund for Assam Bottom; Rs 29.50 for Northern Bottom and Rs 32 for Daisee Bottom.

quotas much in excess of arrivals will go a long way toward arresting any untoward decline in raw jute prices. It would appear that vague rumours that this season's jute crop would not after all turn out to be as big as originally expected coupled with the anxiety about the attitude of farmers to next season's crop in view of the prices they are getting for jute at present have also entered into calculations this week.

Sentiment has also been aided by the report that the Buffer Stock Agency will start purchases of raw jute from the beginning of next month. It is further reported that the IJMA has assured the Government that jute mills will step up their purchases of raw jute in the next two weeks.

Jute goods production has continued to be at a high level in January. Total output amounted to 96,700 tonnes. This compares with the output in December 1961 of 97,600 tonnes. Hours worked by mills in the two months were the same at 208. January's total production of 96,700 tonnes comprise 38,900 tonnes of hessian 47,000 tonnes of sacking and 10,800 tonnes of other goods. The emphasis is now on hessian, production of which was lower at 37,890 tonnes in December. Sacking on the other hand has recorded a lower output as in the previous month its production was placed at 49,600 tonnes.

PRODUCTION OF JUTE GOODS:

		January, 1962.

*Assuming Sundays as holidays the number of working hours is the same. But due to staggering of holidays some mills worked longer hours in December than in January

TEA

Better General Demand

IN the Export Sale held in Calcutta this week, offerings were 73,761 packages. There was a better general demand with buyers following quality closely. There were less enquiry for orthodox Fannings, which were the strong feature in recent weeks. Plain Broken were up to 19 nP per kilo easier with similar Fannings an irregular feature. Cleanly-sorted grades in this category were sold well; but the poor sorts were easier.

Medium BOPs received more support than last week and were dearer with quality. Good orthodox Assam Fannings were generally irregular and often easier by up to 20 nP

and sometimes more as the sale progressed. Best CTC broken were a strong feature and were generally dearer; but similar fannings were up to 15 nP easier except for a few selected autumnals, which were also dearer. Medium CTCs were 15 to 20 nP easier. Secondary grades were sold well at 10nP below last rates.

Legg-cut teas were well supported Darjeelings received a selective enquiry and there were a number of withdrawals. Whole Leaf was in demand, the cheaper varieties being firm to dearer. Tippy sorts were sold well. Following rates were quoted:—Clean Plain Pekoe Rs 4.10 to Rs 4.30; Plain BP Rs 3.60 to Rs 3.90; Plain Fannings Rs 3.90 to Rs 4.40; Medium Assam CTC BP Rs 5.20 to Rs 5.40; Medium Assam CTC Fannings Rs 5.10 to Rs 5.40 and Best Assam CTC Fannings Rs 5.70 to Rs 6.30.

In the Internal sale, offerings were 29,106 packages Dusts and 325 packages of Leaf grades. Demand was less general than of recent weeks. CTC dusts were very irregular, but generally easier except for a few bright liquoring teas which were firm and sometimes dearer. A

TATA FINLAY

Tata Sons (Private), Limited, and James Finlay & Company, Limited are promoting a new company to package and market tea in India. The Government of India has approved the proposal and the first tea packaging plant of the new company, known as Tata-Finlay, will be located in South India. The pre-eminent position of James Finlay as the largest producers of tea in India and in the world will be combined with the experience of the Tata organisation in marketing consumer goods.

limited quantity of small powdery and secondary fibrous descriptions, on offer, were sold well.

Orthodox dusts were absorbed at a drop of 20 nP and sometimes more with the powdery types again selling well. Legg-cuts were the strong feature of the sale and, although irregular, were generally firm with the bright lines selling well above the last rates. Following rates were quoted: Plain Orthodox Dust Rs 3.90 to Rs 4.60; Medium Assam Dust Rs 4.30 to Rs 5.10; Legg-cut Dust Rs 4.60 to Rs 5.30; Medium Assam CTC Dust Rs 5.50 to Rs 6.00 and Good Assam CTC Dust Rs 6.40 to Rs 7.00. Leaf grades met with an irregular market.

In the Colombo market, offerings were 6,181,547 pounds. There was very strong demand for useful liquoring teas at dearer rates with low-grown fairly firm. Dimbula/Dickoya broken orange pekoes and BOP Fannings were considerably dearer as were Uva teas. Better liquoring coloury medium broken advanced by 10 to 20 cents, while plainer sorts were 5 to 8 cents dearer.

In the Cochin market, offerings were 275,000 kilogrammes of Dusts. In spite of good demand, Plain and Low Medium teas were 10 nP to 20 nP a kilo easier. Medium, Good medium and best liquoring sorts

were steady. Unorthodox types were irregular.

According to the reports issued from Rawalpindi, the area under tea in Pakistan, during 1961-62, is placed at 79,000 acres as compared to 78,000 acres in the previous year. The production of tea is also estimated higher at 58.8 million pounds as against 42.25 million pounds. It may be mentioned here that the Pakistan tea outturn in 1960-61 was adversely affected by severe drought. The 1961-62 production by comparison, therefore, appears substantial.

Tea stocks in London, as on 2 February, amounted to 146.12 million pounds as against 142.47 million pounds in the previous week. The total amount to be landed on the same date was 12.90 million pounds. Total afloat was 11.40 million pounds including from Calcutta 7.46 million pounds; from Chittagong nil; from Cochin nil; from Ceylon 2.59 million pounds and from other Ports 1.36 million pounds. The average price realised was 52.39d per lb as compared to 52.87d in the previous week and 53.54d a year ago.

COTTON

Dull Trading

THE Bombay cotton futures market during the past week exhibited dormant conditions. The prices fluctuated within a narrow groove and the fresh business transacted was very poor. Even the prospects of imports of cotton failed to enthuse the market.

Reports that emanated from New Delhi indicated that the Government of India is making arrangements for importing at least five lakh bales of cotton. At the same time the authorities are striving to secure a fair quantity of cotton from America under the PL 480 programme. Despite these encouraging reports the traders were not slow to discount the scope of imports in the immediate future because most of the ministers were busy with the general election and as such a high level decision on this major policy is ruled out before the formation of the next ministry.

The Jarilla March contract, in the futures section, was placed around Rs 690 and even on Tuesday the same level was maintained. As only three weeks are left for the commencement of tenders against the March contract, bear operators appeared to be rather perplexed over the penalty to be paid for the failure to tender cotton. Therefore many of them were inclined to purchase back their sales.

In the spot market at Sewri too no fresh development was visible in the week under review. Mills were found active in purchasing all the popular growths. The price trend continued to be firm. The CO 2 variety met with renewed demand and the prices improved notably. In the import section Sudanese cotton commanded good support from up-country centres particularly Coimbatore and Ahmedabad.

The export section remained inactive. Bengal Deshi and other short staple varieties tended to be easy due to the absence of any fresh export business. It is reported that the Government is considering the issue of quota for the export of another 50,000 bales of Bengal Deshi soon. Japan is growing greater interest for this type of cotton and is reported to be willing to pay attractive prices.

According to the Food and Agricultural Organisation, the world consumption of cotton, wool and man-made fibres rose to approximately 15.4 million tons in 1961, 265,000 tons over that of the previous year. The consumption of cotton looked up by 9,000 tons.

Liverpool:

Listless conditions prevailed in the Liverpool market during the past week mainly due to lack of buying support. According to official sources, spot and shipment sales returns for the week-ended 5 February aggregated 15,128 bales in contrast with 18,424 bales in the previous week.

Karachi:

The cotton market in Karachi, after any easy start, fluctuated irregularly to close the week with gains of 35 paise in the futures. On the country, the spot values suffered losses ranging from 50 paise to one rupee. The easy trend in the initial stage was attributed to the large arrivals of unsold stock and low demand. The prominent development in the week under review was the widening gap in prices between average and superior quality cotton as the latter was in short supply. Weekly arrivals totalled 35,000 bales thus taking the city's stock to 350,000 bales since the start of the current season. Exports of cotton so far amounted to 157,358 bales.

Piecegoods:

The trading in the cotton piecegoods market in Bombay during the last week remained dull and featureless. The upcountry demand failed to follow on the expected level though a revival of demand is timely owing to the marriage season. The prices particularly of seasonal goods, ruled firm on the anticipation of keen demand in the following weeks. Mills too were reluctant to effect any change in the price schedule. The rising cost of production of cotton yarn kept prices of powerloom grey mills steady. During the week under review some varieties of powerloom goods were in short supply. The supply of dhoties and bleached longcloth too was far inadequate.

Assam, Bihar, Calcutta and Uttar Pradesh showed interest in seasonal goods like longcloth, dyed poplins, grey and bleached dhoties and saris. Local buyers were after printed superfine voiles, good quality longcloth and dyed poplins.

The export front was devoid of any fresh development and demand from overseas markets was at a low

ebb on account of the disparity in prices. Stray enquires from Britain in grey and furnishing fabrics were reported. Eritria and Ethiopia evinced some interest in bleached mulis and grey chaddars and those destinations accounted for a moderate quantum of these goods. Sudan showed interest in printed quality poplins and printed poplins. Burma's fancy turned toward the usual varieties. Africa is reported to have transacted small business in bleached longcloth and other coarse cloth. Indonesia and Aden enquired for grey markin.

Outlook for Sugar

SUGAR mill-delivery prices have recorded fresh lower levels in the Hapur market during the week under review. This is mainly due to selling pressure from the mills, as stocks of the last releases have not yet been lifted. It is gathered that, on the industry's representation, the Government will delay the coming release by a few days and the quantity may also be lessened, so that the previous stocks may be lifted. (At the time of going to press, it is learnt that the Government of India has released 185,000 metric tons for sale in the open market).

The Government has released 900,000 tons in the course of the last four months, October/January 1962. The aggregate release made by the authorities is far in excess of the actual requirements of the domestic consumers. Since decontrol, E grade sugar has come down to Rs 105.75 from Rs 112.50 D grade to Rs 105.50 to Rs 109 from Rs 113.06 and C grade to Rs 110 to Rs 113.50 from Rs 114.05.

The decline in price has not only put the industry in financial difficulties but it has also affected the confidence of the market. There is a general disposition among the traders not to hold the stock. They are more inclined to postpone purchases in a falling market. The traders have already suffered heavy losses and it is but natural that they are not willing to carry stocks, especially when prices are falling persistently.

With lower prices prevailing in the internal market, it has been represented that the Government has a definite obligation to make good the losses suffered by the industry as a result of a significant decline in realised prices over the erstwhile ex-factory prices. With high minimum prices for cane and a heavy excise duty, the margin of profit is so small that even a drop in the market rate by Rs 2 per bag has an upsetting effect on the industry's earnings.

It has, therefore, been suggested that there should be an immediate reduction in the excise duty on sugar or the industry should be compensated to the extent of the losses suffered by them over the ex-factory prices. Whatever may be the course adopted by the authorities, it has become quite clear that, without care-

ful releases and significant reduction in selling prices with a cut in the excise duty, the industry cannot be expected to dispose of the accumulated stocks within a short period and maintain also output at a satisfactory level.

According to the Indian Sugar Mills Association, the total sugar production in January 1962, the 3rd month of the season 1961-62, was 5,46,000 metric tons as against 5,40,000 metric tons produced last season during the corresponding period. This brings the total production, for the season 1961-62 upto 31 January 1962, to 11,38,000 metric tons (including 56,000 metric tons produced prior to November, 1961 for the current season) as against 13,21,000 metric tons during the corresponding period last season (including 55,000 metric tons produced to November, 1960). The off-take of sugar from factories during the month of January 1962 was 1,84,000 metric tons which included about 641 metric tons despatched for export as against 1,65,000 metric tons (including 16,000 metric tons despatched for exports) during the corresponding period last season. The total despatch, during first three months in 1961-62 season, was 5,90,000 metric tons (including 32,000 metric tons despatched for exports) as against 4,87,000 metric tons (including 37,000 metric tons despatched for exports) by the same period last season. The total closing stock of sugar with the factories, as on the 31 January 1962, was 16,90,000 metric tons on the same date last season.

Meanwhile, the sugar market in London has risen again, the rate for the commodity being quoted at £22.10sh against £20 a few weeks ago. Cuba's decision to withdraw from the market as a seller for the rest of this year has now been followed by the reports that the Cuban Government has drawn up a pact with the Soviet bloc to strengthen prices. The Soviet bloc has become the main buyer of Cuban sugar since the US stopped buying. But, in recent months, some of the sugar the Soviet bloc had bought has been resold on the world market. Poland is reported to be one of the chief culprits here. Now the Soviet bloc has said that it will cease operations for the time being. The sugar market has, therefore, fallen again, not to speak of the news of the cheap sale made by Brazil. However, it is felt that the sweet commodity is still in heavy surplus.

FOODGRAINS

After ruling quiet for the major part of the week, Foodgrains prices have recorded small grains in the Hapur market on reports that stocks were fast running down. It is still over two months for the new crop to reach the market. Crop prospects are, however, reported to be good.

Wheat average quality is quoted at Rs 17.50 per maund and at Rs 19 for the farm produce. The

17 February 1962

market for Rice continues to rule quiet, as new produce is flowing into the market and the seasonal support is lacking. Gram prices are steadier, quoting Rs 16.12 for the Punjab variety. Barley is maintained at Rs 13, while Maize prices have drifted lower as stockists are anxious sellers on the reports that demand will soon subside. In the Pulses section, prices are ruling steady as stocks with the trade are reported to be small. New Urad and Moong, reaching the market from outside the State, are fetching higher prices due to support from the consumers.

Latest reports indicate that the production of rice in Asia in 1961-62 may be greater than was predicted earlier despite the bad weather conditions experienced in some areas. In India, the Minister for Agriculture has predicted a record crop of 35,000,000 tons of rice (equivalent to some 51,000,000 tons of paddy). In Indonesia, despite the severe drought in Java, an increase of about 1,000,000 tons of paddy has been forecast. In Cambodia, good crops in the affected areas are expected to make up for much of the losses from the October floods.

PEPPER

Pepper prices have developed a slightly steadier tendency during the week. In the Cochin market, the rate is quoted at Rs 312.50 per quintal. In spite of continued arrivals of the new crop, sellers are reluctant to enter into business on the belief that the world production will fall short of the actual demand. Uncertainty in Indonesia, following trouble over West Irian, has also led to speculations that that country may not have much to export. This, in turn, has led to optimism among sellers, who do not show any anxiety to sell. As a matter of fact, they expect the prices to go up further. Stockists also entertain the hope that the Communist countries, which did not make purchases for a long time, will enter the market soon.

NON-FERROUS METALS

Prices on the Bombay Non-Ferrous Metal market have shown a mixed trend. Opening steady, Tin prices moved up on scattered support from the bulls as a sequel to encouraging advices from Singapore.

Speculative support from the "longs" coupled with nervous bear-covering pushed up Copper prices. Sellers withdrew and buyers predominated as the week progressed. Demand from the actual users was stated to have increased appreciably in the face of limited stocks. Also, the possibility of receiving the supplies from abroad through the STC in the near future was averted in view of the reports of delay in the transit of shipments.

Hardly any change was noticed in Zinc and Lead.

WOOL

According to a report issued by the International Wool Secretariat, New Delhi, a certain quietness prevails in the Indian wool market, which is

not unusual during the between-seasons period of the year. Yellow wool season is over and the white wools are expected soon into the markets. In the Bombay market, prices of Bikaner whites have advanced by 10 nP to 15 nP per pound, while other qualities have also tended to show a rise in prices. In the Delhi market, 1st white is quoted at Rs 3.00 to Rs 3.12; Tinged white at Rs 2.70 to Rs 2.90; Yellow at Rs 2.31 to Rs 2.44 and Greys at Rs 120 to Rs 135 (per maund).

With wool in Commonwealth and South African markets selling at the best price for about two months, and Japan again occupying her role of larger buyer in Australia, Yorkshire, importers have to pay more money if they are to acquire reasonable weights for shipment. As a result, in the Bradford market, top rates in all qualities have moved against the buyer this week. In general, top quotations for both Merino and Cross-bred qualities have increased by 1 d per pound as compared with a week ago, though some markers of superior tops have advanced their prices by 2 d per pound.

Tendency to reduce outstanding orders rather than place new ones still characterises many sections of the industry and the volume of current turnover in both tops and yarns is smaller than would be otherwise expected. This adds to the difficulties of wool-importing trades, who are conscious that some of the best wool of the season is now under the hammer. Regardless of the lack of encouragement received from customers, many are pursuing a steady wool importing policy, being confident that the material will be needed in due course.

SILK

Prices of raw silk in the Bangalore Silk market presented a steady trend during the week ended 9 February, 1962. Filature raw silk from Government Filatures at Kanakapura was quoted at Rs 85.99 per kgm as against Rs 84.89 per kgm quoted hitherto. Cottage basin silk ruled between Rs 72.75 and Rs 77.16 per kgm as in the last week. Rates of charka raw silk ranged between Rs 44.09 and Rs 69.44 per kgm.

Spun silk yarn of 2/210s was quoted at Rs 81.40 per kgm.

There was moderately declining trend in the prices of reeling cocoons. While reeling cocoons from Sidlaghatta fluctuated between Rs 3.25 and Rs 4.75 per kgm. Channapatna was mentioned between Rs 4.00 and Rs 4.80 per kgm.

Mysore race seed cocoons rose to a level between Rs. 5.50 and Rs 7 per thousand whereas foreign race seed cocoons were steady between Rs 4.00 and Rs 10.00 per thousand.

In the Bhagalpur Silk market, a distinct downward trend was noticed in the prices of reeling cocoons in tasar producing areas of Chaibasa, Chakulia etc. The present prices for daba cocoons in Chaibasa and other centres ranged from Rs. 80-90 per kahan whereas Serihan cocoons

in Amarpara and other centres in Santhal Parganas ranges from Rs 35-40 per kahan. Tasar reeling cocoons declined from Rs 160.00 per kahan as quoted last week to Rs 105.00 per kahan, in Bhagalpur market. Prices of tasar raw silk however remained steady between Rs 66.14 and Rs 105.82 per kgm tasar; silk waste between Rs 22.04 and Rs 26.46 per kgm and hand spun silk yarn between Rs 30.86 and Rs 58.50 per kgm.

Landed cost of Japanese raw silk of 20/22 Dr. was reported as Rs 83.39 per kgm during January, 1962.

GOLD & SILVER

Prices on the Bombay Bullion Exchange have continued to show a mixed trend. Following a report of confiscation of the smuggled yellow metal and as a result of poor arrivals in the face of an improved offtake caused a buoyant tendency in Gold prices during the week. Moreover, it was thought that the proposed amendment of the Sea Customs Act would make it increasingly difficult for smugglers to dispose of the contraband metal and eventually the market might have to fall back upon the existing stocks, which have already declined considerably during the past few weeks. Above all, higher advices from the spot section and lack of offerings were also contributory factors. Gold ready changed hands at Rs 120.95 to Rs 121.55 to finish at Rs 121.25. Sovereign is quoted at Rs 96.25. Arrivals were estimated at 5,000 tolas as against an offtake of 8,000 tolas.

The demand for Silver is, however, far from encouraging, not to speak of the fact that arrivals have continued to be heavy. Arrivals amount to 30 bars as against an offtake of 20 bars. Silver ready (below .996) changed hands at Rs 211.90 to Rs 212.30.

READY FOR SALE:

THE MADRAS STOCK EXCHANGE OFFICIAL YEAR BOOK 1960-61.

(Ninth Year of Publication)

(Revised and Brought up-to-date. Balance Sheets and other Particulars received upto 20th December, 1961 incorporated. Details of some important new issues made by Companies during the year 1961 included.)

OVER: 1140 Pages

Price Rs. 12.50 nP.

Packing & Postage Rs. 2.50 nP.

OILS & OILSEEDS

A sharp rise in Groundnut prices was the main feature of trading in the Oils and Oilseeds markets. Castor showed an erratic tendency on alternate bouts of buying and selling. Prices in the Linseed section showed a mild improvement.

Groundnut showed a steady rise due to sustained support from up-country interests, notably Saurashtra and Delhi. Spot houses resorted to buying in futures against their selling in actuals. The bullish fervour was strengthened further by the purchases by a prominent export house on reports of the release of an export quota to the tune of 18,500 tons of HPS variety. Shorts, unnerved by the rising prices, rushed to square up their outstanding sales. Groundnut ready bold was quoted at Rs 47.75 and Groundnut Oil at Rs 19.55.

Though conditions in the Castor seed section were bullish, higher levels were not retained till the close due to lack of follow-up support following the behaviour of the international market. The closing tone was, however, steady on reports of the decline in the Brazilian export supplies. It was thought that this decline was unlikely to be fully offset by larger availabilities of Indian castor oil and the supplies from India might not be adequate enough if the larger Indian shipments to the Soviet Union continued this year. Castor ready closed at Rs 35.25 and Castor Oil, commercial quality, at Rs 14.75.

In a restricted turnover, Linseed prices showed a rising tendency. Upcountry operators continued to support the market on the belief that the offerings against the March contract would be relatively small on account of the meagre inflow of the new crop. Linseed ready was quoted at Rs 44.12 and Linseed oil at Rs 19.25.

The Madras groundnut and groundnut oil market had quietened down after reaching a very high rate. The resumption of a steady tendency is mostly due to the reluctance of buyers, who could not adjust themselves to the daily jumping of rates. Last week there was a tendency of higher prices in both oil and kernels. In the interior markets arrivals of kernels were not appreciably better than before. As such there was buying fervour. This was continuing despite the absence of export and also large scale buying by vanaspathi interests. Evidently it was due to the small arrivals and the slow picking up of kernels at the producing points. The bullish sentiment was aided later on last

week by a fresh announcement of export quota of 18,500 tons of oil. Traders hope that the shipment of this exportable oil would not be possible at the prevailing Indian price of groundnut oil.

The average daily absorption of groundnut oil here was between 75 to 80 candies daily. It had slackened from the beginning of this week. On Monday when the week opened, the price of oil went down and the off-take also slackened to about 70 candies daily. But today due to the easier condition there were better inquiries and by the time the market closes the trading would have reached at least 100 candies.

Calcutta interests absorbed a fairly good quantity of groundnut oil daily

from Madras and around and this was only for a ten-day period delivery. Spot groundnut oil was taken up by local bazar people and those whose commitments had to be fulfilled immediately.

Groundnut arrivals had slackened down to about 80 tons daily while in Southern centers the kernels arrivals were not beyond 300 tons daily. This is lower than the volume usually received this time of the season.

The same conditions prevail in producing centers down the districts like North and South Arcot. Earlier last week, the arrival of groundnut stocks was slightly better, but that also fell down by the same quantity of the increased arrivals.

Groundnut oil last week was quoted at Rs 192.70. There was not much arrival of stock in the City last Wednesday, but when the demand, particularly from Calcutta grew better the rate went up to Rs 193.55 per quintal. On Friday last there were not much stock to meet with the demand and by the time market closed that day the rate went up to Rs 194.45 per quintal. The same rate was maintained even on Saturday, but the buying fervour was not seen. On Monday, when the market opened the groundnut oil rate was steady at Rs 194 and by the close of the market still further decline was noticeable and per quintal the groundnut oil rate was at Rs 193.80. When the market closed today the rate slid down to another rate of Rs 193.55.

As for May delivery the rate consistently maintained its level at Rs 201.50 upto Saturday. Then it went up to Rs 204.50. Monday and this also came down in sympathy with Ready oil quotation to Rs 202/203.

Superior Kernels was high at Rs 77 per 80 kgs last week beginning. It went on increasing its rate by 50 nP per 80 kgs, but on Friday afternoon when local millers preferred to buy bulk, the rate increased to Rs 78.50. The next day it registered another rupee increase to Rs 79.50. On Monday this week, the spot rate came down to 78 though by the close of Tuesday the old rate of Rs 79 was reached.

For the bold variety of groundnut the rate of Rs 75 per 80 kgs, was maintained till the end of last week when it rose by 50 nP. But Monday's rate was Rs 76 per 80 kgs.

In the upcountry markets groundnut oil prices maintained higher levels than this week. Being still quoted at candy rate (500 lbs), the price of groundnut oil at Guntur-Bezawada was at Rs 440, at Vridhachalam Rs 435, at Nandyal Rs 430, at Villipuram, Rs 435, at Cuddappah Rs 425, at Pollachi Rs 435, at Tanjore Rs 435 and at Salem Rs 435.

★

HIDES & SKINS

There was practically nothing to report in this section because the prices of tanned cowhides remained unchanged. Already it is thought the prices are very high. Arrivals were not much while local absorption is quick. In view of what is believed to be high rates by UK buyers, improvement in business with those importers was negligent this week.

In tanned cow calf arrivals were small and with improved UK inquiry prices were slightly higher this week. In tanned buff calf throughout last and this week good inquiries persist and prices also were dearer. Quotation for premium marks were at 87d and other marks were quoted between 84d to 86d for run average 1-3/4 to 2 lbs.

In tanned goatskins there were also better inquiries and particularly the 8/9 and 11/12 lb weights were in demand. In tanned sheepskins, arrivals were small. Raw skins were still dearer and therefore tanners continued to demand high prices for

Company Reports

Shree Sitaram Sugar Pays Less

The decline in sales from Rs 1.24 crores to Rs 1.05 crores is reflected in the working results of Shree Sitaram Sugar Company, Limited for the year ended 31 August, 1961. The net profit, after providing for Depreciation and Taxation, amounts to only Rs 1.42 lakhs as against Rs 3.21 lakhs for the previous year.

In respect of allocations, Depreciation is higher at Rs 1.28 lakhs against Rs 1.22 lakhs and Development Rebate Reserve at Rs 13,000 against Rs 10,724. Taxation provision is, however, lowered to Rs 2.05 lakhs from Rs 2.20 lakhs, while no allocation is made for General Reserve against Rs 1.50 lakhs. The dividend is reduced from Rs 1 to 75 nP per share, subject to tax.

The quantity of cane crushed is higher at 42,51,605 maunds against 34,41,794 maunds; but the percentage of recovery is lower at 9.25 against 9.46.

South Karanpura Coal Skips Dividend

THE South Karanpura Coal Company, Limited has produced disappointing results for the year ended 31 August, 1961, reflecting the difficult geological conditions underground, the extreme shortage of

explosives, irregular transport and power shortages. In addition, there were statutory increases in wages during the year under review and these were not compensated adequately by an increase in the selling price.

While sales are nearly maintained at Rs 37.77 lakhs against Rs 37.73 lakhs, the accounts reveal a net loss, after providing for depreciation, of Rs 1.74 lakhs as against a net profit of Rs 97.343 for the preceding year. Apart from raising the Depreciation amount to Rs 1.68 lakhs from Rs 1.34 lakhs, no provisions are made for Taxation and Statutory Development Rebate Reserve against Rs 56,000 and Rs 53,200 respectively. The dividend is passed against 2 1/2 per cent, taxable, paid previously.

Raisings are slightly higher at 192,666 tonnes against 192,482 tonnes, while despatches are lower at 187,082 tonnes against 191,226 tonnes.

Deoria Sugar Incurs Loss

The Deoria Sugar Mills Limited has reported a decline in sales from Rs 1.16 crores to Rs 87.35 lakhs. The accounts reveal a net loss of Rs 3.50 lakhs as against a net profit of Rs 35.351 for the preceding year.

The Depreciation amount is raised to Rs 1.71 lakhs from Rs 1.26 lakhs, while Development Rebate Reserve is lowered to Rs 10,590 from Rs 17,296. The dividend is again passed for the year. There is still a debit balance of Rs 3.93 lakhs, which is carried forward to next year.

The quantity of cane crushed is shown at 39,57,144 maunds against 31,69,980 maunds and the recovery percentage at 9.31 against 9.48.

Decline in SKG's Profit

Shree Krishna Gyanoday Sugar Limited has crushed a record quantity of cane during the year ended 31 July, 1961 in its two factories and also in the third unit which is being operated under a lease. The output of distillery has also shown a rise. This should have been even higher, but for the short supply and the low quality of cos used.

The net profit, before providing for Depreciation and Taxation, has declined sharply to Rs 13.5 lakhs from Rs 21.16 lakhs in 1959-60. Beside lower prices realised on sales, there was heavy accumulation of stocks. The implementation of the Wage Board's recommendations also resulted in higher working expenses.

In respect of allocations, the provision for Depreciation is Rs 5.21 lakhs (Rs 4.29 lakhs) and Taxation Rs 2.81 lakhs (Rs 7.70 lakhs). There is a transfer of Rs 2.25 lakhs to Development Rebate Reserve. In the previous year, the General Reserve got Rs 2 lakhs. The dividend on the ordinary shares has been reduced to Rs taxable from Rs 1.50 per share, taxable. The latest dividend is payable only with a transfer Rs 1 lakh from Reserves.

The Gurau sugar factory, which the company was holding on lease, has been sold to the State of Bihar in the course of the liquidation proceedings of Gaya Sugar Mills Limited. The share was to be handed over by 15 January, 1962. The present position of the sugar industry, it felt that the working of Gurau sugar factory would have been an additional burden on the company.

CHOICE OF 3 BUS 206", 190" and 142" w. b. CHASSIS

DODGE AND FARGO passenger vehicles

"2 DIESEL ENGINES TO CHOOSE
FROM AND NEW BEAUTIFUL
FRONT END"

Kumergode Estates have reduced the dividend from 20 per cent to 17½ per cent, taxable, for the year ended 31 October 1961.

★

BALANCE-SHEET BRIEFS

The Kirlampudi Sugar Mills Ltd. has reported a decline in the net profit from Rs 11.51 lakhs to Rs 5.08 lakhs for the year ended 30 June 1961.

The State Bank of Patiala has made a higher net profit of Rs 5.31 lakhs for 1961 as against Rs 2.92 lakhs. The directors have proposed a taxable dividend of 6 per cent.

The net profit of Hindustan Lever Limited is lower at Rs 225 for 1961 after providing Rs 193 lakhs for taxation as against a net profit of Rs 250 lakhs after providing Rs 208 lakhs for taxation in the preceding year.

STOCK EXCHANGES Firm Despite Realizing

Watch-Dog Writes:

THE week's performance of the stock markets has provided a distinct contrast to the pattern of the previous two weeks. The upward curve taken by equity prices is carried forward with such a vigorous force that the markets have depicted a buoyant behaviour. Had it not been for the tendency on the part of the operators to book profits towards the close, the performance would have seen still better.

After recording fresh higher levels, prices on the Calcutta Stock Exchange suffered a mild setback at the far-end of the week due to profit taking.

The tendency to book quick profits provided for the irregular pattern of trading on the Bombay Stock Exchange.

There was no material change in the pattern of trading or price behaviour on the Madras Stock Exchange.

★

CALCUTTA

Friday Evening.

THE local stock market started the week on a promising note and, under sustained bull support, most of the speculative shares recorded a further sharp recovery in prices from the recent low levels, while the contagion of replacement buying spread to other counters as well. At the close of the week, it looked as though the market was consolidating the gains so far recorded.

In general, there were signs of returning confidence among marketmen. While good corporate news and the reports of bonus or right shares continued to keep the market lively, the diversification of the investors, who were inclined to pick up stocks with sound statistical and fundamental background. With the

result, activity became brisk and widespread.

Some of the operators were, however, inclined to feel that it would be prudent to await the results of the elections, which have already started in certain States. Moreover, the statement by the Prime Minister at Rewa, that all the key industries had to be in the public sector, induced some caution in the minds of the operators, resulting in a mild setback in prices towards the close.

With buyers reserved, the Gilt-edged section ruled subdued and the volume of business was small. There were even some offerings in some of the medium and long-dated issues. 3 per cent 1986 Conversion Loan, after opening at Rs 71 and improving to Rs 71.05, eased off towards the close to Rs 70.90.

Bank shares were quiet on lack of support with Punjab National easing off to Rs 22.37 from Rs 22.50. United Commercial were nominally quoted at Rs 105.50.

100 each will be issued for cash at a premium of Rs 30 per share and the balance of 9,500 shares will be issued as bonus shares. The capital will be used for balancing its capital structure and paying off loans.

Caprihans

Caprihans (India), Private Limited will issue bonus shares of value of Rs 4,50,000 on capitalization of reserves to a like extent.

Hindustan Ideal Insurance

Hindustan Ideal Insurance Company, Limited has been granted consent to issue further capital of Rs 5,78,950 divided into shares of Rs 25 each at par to be allotted to the shareholders of Hyderabad United Insurance Co., Ltd., Hyderabad for the purpose of amalgamation of the latter with the former.

Tamilnad Cardboards

Tamilnad Cardboards & Paper Mills Limited is raising Rs 20 lakhs. The proceeds will be utilized for the manufacture of strawboards.

Catalyst

The Catalyst (Private), Limited has been granted consent to the issue of capital of Rs 20 lakhs in equity shares of Rs 100 each at par. Out of this, shares worth Rs 10 lakhs will be issued to Petrolcor Construction and Finance Corporation, Panama, for consideration other than cash against the cost of imported equipment.

R. R. Paper Mills

R R Paper Mills Limited will raise capital of Rs 30 lakhs, for cash at par, divided into 25,000 equity and 5,000—7½ per cent (free of company's income-tax, but subject to deduction of taxes at source at the prescribed rates) preference shares of Rs 100 each.

Alembic Chemical

Alembic Chemical Works Company, Limited will raise Rs 49.50 lakhs. Of this, 40,000 equity shares of Rs

Shamsher Sterling Cable

Shamsher Sterling Cable Corporation Limited is issuing capital of Rs 35 lakhs, for cash at par, in 50,000 equity and 10,000—9.5 per cent (taxable) preference shares of Rs 50 each. The money will be spent on the expansion of manufacture of household and industrial cables.

Kirloskar Oil

Kirloskar Oil Engines Limited will raise Rs 20 lakhs, in ordinary shares of Rs 10 each to be issued as bonus shares to the company's existing shareholders on capitalization of reserves to a like extent. Three hundred and eighty bonus shares will be issued to the existing non-resident shareholders.

East Anglia Plastics

The East Anglia Plastics (India), Limited will issue 8,50,000 equity shares of Rs 10 each at par out of which 1,00,000 will be issued to the company's foreign collaborators as free shares for technical services. The cash shares will be issued to the existing shareholders in the ratio of three new shares for every share held. The capital is required for establishing a factory in Andhra Pradesh for the manufacture of cellulose acetate flakes.

Hyderabad Allwyn

The Hyderabad Allwyn Metal Works Limited will raise capital amounting to Rs 86,06,550 in equity shares of Rs 10 each for cash at par. The proceeds will be utilized for financing the expansion of the manufacturing of household steel furniture and bus bodies.

In the week's dealings, the Jute section took the pride of place. The outlook for the industry was considered to be much brighter than for sometime past in view of the abundant supplies of the golden fibre. It was also believed that the mills might be making satisfactory profits on the manufacture of gunnies. Anglo-India were pushed further up to Rs 215 from Rs 206; Fort Gloster up to Rs 418 from Rs 402; Kamarhatty up to Rs 155 from Rs 144 and Kankannarrah up to Rs 94 from Rs 83. Nuddea were a very steady feature at Rs 67.75, while New Central were enquired at one time up to Rs 18.31 from Rs 16.75 (Rs 18.00) and Howrah up to Rs 21.12 from Rs 21.00 (Rs 20.87). Ganges and Chitavalsah were almost maintained at Rs 13.56 and Rs 12.87 respectively. Figures shown within brackets were the closing rates for the week.

Coal shares lacked any interest in the absence of any improvement in the supply of transport, power and explosives. Transactions were, therefore, few and far between. Burrakur fluctuated narrowly between Rs 17.50 and Rs 17.62, while East Indian came in for some enquiry up to Rs 34.25 from Rs 33.12. South Karanpura recorded a fresh low of Rs 7.31 from Rs 7.87 following the dividend being passed over with Western Bengal hovering idly around Rs 9.56.

Tea shares continued to receive selective support on the belief that those companies, producing quality teas, might be making better profits for last year. Huldibari met with sustained demand up to Rs 32.19 from Rs 31.44 following the news of the company's proposal to make a bonus issue, to close finally at Rs 32 on modest profit-taking. Baghmari had buyers at Rs 20.87 to Rs 20.94; Hasimara at Rs 32.75 to Rs 33.06 and Grob at Rs 9.81 to Rs 10.06.

Although Sugar shares continued to remain neglected in view of the obscure outlook for the industry, there was a mild improvement in prices in sympathy with the general trend of the market. Raza/Buland were enquired up to Rs 10.69 from Rs 10.12. Champarun up to Rs 18.06 from Rs 17.56 and Balrampore up to Rs 2.50 from Rs 2.37. SKG were, however, on offer at Rs 10xd following the reduced dividend for last year.

Textile shares were buoyant on the publication of some good reports

relating to the working during 1961. Higher levels were, however, not maintained till the close of the week due to general profit-taking. Elgins were at one time taken up to Rs 26.00 from Rs 25.62 (Rs 25.56); J. K. Rayon up to Rs 20.75 from Rs 20.50 (Rs 20.47); Bowreah up to Rs 40 from Rs 38.25 (Rs. 39.69); Dunbar upto Rs 35.81 from Rs 34.94 (Rs 35) and Jay Shree up to Rs 17.19 from Rs 16.50 (Rs 17.06).

Engineering shares showed a mixed trend. Activity in Indian Irons was rather restricted this week, partly due to technical considerations and partly due to the inordinate delay in the announcement of the steel retention prices. Against the previous week-end closing of Rs 25.24, Indian Irons opened better at Rs 25.30 and improved further to Rs 25.36. After reacting at one time to Rs 25.10, the scrip closed finally at Rs 25.24. TEXMACO moved narrowly between Rs 20.40 and Rs 20.65 with Guest, Keen, Williams having good demand up to Rs 44.19 from Rs 42 (Rs 42.50). Jay Engineering came in for some enquiry up to Rs 28.12 from Rs 27.75 with Marshall, Kumardhubi and J. K. Steel having support up to Rs 3.50; Rs 8.00 and Rs 19.69 respectively. After touching a high of Rs 13.25 from Rs 12.62, Britannia turned ex-right and changed hands at Rs 12.12 to Rs 12.37. Dalmia Iron had good buyers up to Rs 12.34 from Rs 12.19 c.d.

The Miscellaneous section provided several bright features on various considerations. Following were the price trends of a few selected shares.

★

MADRAS

Conditions were steady earlier in the week but sentiment turned subdued toward close. A few of the Madras Government Loans looked up while some declined. Banks remained steady. No offerings were made in public utilities which were quite firm. Sugars were depressed and weak. Scattered support was witnessed in the planting section. Textiles though colourless were steady. Chemical shares were as usual fancied.

Government Securities: The 4% 1964 went up to Rs 100 from Rs 99.75. The 4 per cent 1969 was quo-

ted eight nP lower at Rs 97.25. The 4½ per cent 1970 was made available at Rs 99.50. The 4 per cent 1971 was lower at Rs 97.69 and the 4½ per cent 1972 Loan was marked at Rs 98.08. The Mysore Government's and the Andhra and Kerala Government's Loans were marked at market prices.

Banks:—Indian Bank remained at Rs 180.00, Indian Overseas was at Rs 179.95. Punjab National was at Rs 22.00 and Pandyan was unchanged at Rs 26.00.

Electrics:—Cochin was at Rs 12, Ellore at Rs 22.00, Karaikkal at Rs 9.10, Kumbakonam was listed at Rs 11.10, Negapatnam was at Rs 11.10, Salem Erode was at Rs 15.25, South Madras was offered at Rs 10.12, Tinnevely-Tuticorin was at Rs 11.75, Vellore was at Rs 15.35 and West Coast went up to Rs 15.00.

Sugars & Breweries:—Deccan was offered lower at Rs 10.00. EID was easier at Rs 36.00. KCP was at Rs 22.95, Mysore was at Rs 55.50, Travancore at Rs 8.00 and United Breweries at Rs 82.25. Cauvery were done at Rs 107.00.

Plantings:—Amalgamated was at Rs 11.06. Blue Mountain was offered at Rs 2.67. Chandramalai was sold at Rs 2.64. Cochin Malabar improved to Rs 3.60 as did Coffee Lands to Rs 15.50. GOVERNMENT OF INDIA MINISTRY OF COMMERCE & INDUSTRY DEPARTMENT OF COMPANY LAW ADMINISTRATION, NEW DELHI.

It has come to the notice of the Government of India that a Society called the "All India Society of Corporate Accountants & Auditors" has been registered in Calcutta under the Societies Registration Act reportedly for training up students in the profession of accountancy. The Government would like to make it clear that the Institute of Chartered Accountants of India constituted under the Chartered Accountants' Act, 1949 is the only statutory body the Members of which, namely Chartered Accountants, are, along with the Restricted State Auditors, entitled to be appointed as auditors of companies under section 226 of the Companies Act, 1956. The Society referred to above is not recognised either by the Government of India or by the Institute of Chartered Accountants and its members are not eligible to be appointed as auditors of companies under the Companies Act or to undertake any other audit work required by law to be done only by chartered accountants. As this Society has no statutory backing and its members no recognised status in the eye of law, public are hereby informed that engaging any member of this Society for performing any work which is statutorily required to be performed by a Chartered Accountant would result in non-compliance with the relevant provisions of law with the penal consequences thereof.

(Inserted by the Institute of Chartered Accountants of India,
New Delhi)

NEW ISSUE NOTES

Titaghur Paper

The Titaghur Paper Mills Company Limited has applied to the Controller of Capital Issues for permission to issue bonus and rights shares. It is proposed to issue bonus shares in the proportion of one new share for every two shares held by capitalising Rs 56 lakhs. It is also proposed to issue ordinary rights shares in the ratio of two shares for every three shares held, at a premium of Rs 5 per share.

Navyug Dye-Chem

Navyug Dye-Chem. Industries Limited will enter the market shortly with a public issue of Rs 20 to Rs 25 lakhs for setting up a dyestuff factory at Durgapur or Calcutta with Japanese collaboration. The company has an authorised capital of Rs 1 crore, while the issued capital is Rs 50 lakhs. The promoters and their friends have agreed to take up shares worth Rs 25 lakhs. The plant will have a capacity to produce 100 to 150 tons of vat dyes and solubized dyes annually to begin with.

Rayalseema Mills

Rayalseema Mills Limited has obtained the necessary sanction from the Government for capitalising part of the reserves to issue 7,446 bonus shares to the existing equity shareholders in the proportion of one share for every three shares held. The company has maintained the dividend on the ordinary shares at 15 per cent, taxable, for the year ended 31 December, 1961.

Indian Rayon Corporation

The Indian Rayon Corporation Limited has made the sixth and final call of Rs 12.50 per share on the equity and preference shares, payable on or before 19 March, 1962.

Hicks Thermometers

The shareholders are requested to return the letter of allotment in respect of the equity shares allotted to them, duly endorsed so that the share certificates may be issued in lieu thereof. The company states that one share certificate will be issued free of charge in exchange for each letter of allotment. On request, more than one certificate will be issued on payment of Re 1 for each such additional share certificate provided the information is received by 25 February, 1962.

Huldibari Tea

The Huldibari Tea Association Limited is to issue 82,500 equity shares of Rs 10 each as fully paid-up bonus shares on capitalization of reserves to the extent of Rs 8,25,000. The bonus shares will be issued in the ratio of one bonus share for every share held.

Bukhial Tea

The Bukhial Tea Estates Limited has been granted consent to the issue of 83,200 equity shares of Rs 10 each as fully paid-up bonus shares on capitalization of Rs 8.32 lakhs.

Mahindra & Mahindra

Mahindra and Mahindra is to issue 6,60,000 equity shares of Rs 10 each for cash, at a premium of Rs 2.50 a share on a rights basis and 6-1/2 per cent first mortgage debentures of the value of Rs 50 lakhs to the Life Insurance Corporation. The capital will be used for financing the manufacture of jeeps.

Cannanore Spinning

The Cannanore Spinning and Weaving Mills Limited will raise capital totalling Rs 15,00,000 in equity shares of Rs 100 each, to be issued for cash at a premium of Rs 5 per share, on a rights basis. The money will be used for setting up a textile mill at Mahe.

More Scope for Textile Exports

THE draft agreement on international trade in cotton textiles is perhaps what it is described to be—the most widely acceptable compromise—though it makes yet another exception to the basic principles of the GATT and, that too, in favour of the most highly industrialised countries of the West. But it has been pointed out that the outcome could have been far less satisfactory for the Asian countries which hope to increase their export earnings by selling their textile manufactures in world markets. The principle of free access had hitherto been applied only to a limited extent. The members of the European Economic Community continue to maintain restrictions which are inconsistent with the provisions of the GATT. Among the major importing countries only the USA, Canada and the United Kingdom did not resort to quantitative restrictions. In regard to the UK, the textile industries of India, Hongkong and Pakistan entered into a voluntary agreement about three years ago with the textile industry of the United Kingdom, to limit their exports to the latter country within certain agreed ceiling figures. In respect of Japan several European countries reserved to themselves under Article 35 of the GATT, the right not to extend the full reciprocal rights of membership of GATT. But the USA, followed by Canada, was among the first countries to revoke restrictions under this provision. In recent years complaints against unrestricted imports from Asian countries causing market disruption have been growing in volume in Western countries and reached a crescendo early last year, and the Governments of these countries were under pressure to take action to limit such imports. It would have been difficult for the Governments concerned because of political reasons to impose restrictions on imports discriminating against particular countries. Such restrictions would also have been contrary to the provisions of the GATT.

On the initiative of President Kennedy, a conference of the interested countries who were members of GATT met in Geneva in July last year and drew up a short-term agreement. It also constituted a Committee to draw up long term arrangements to regulate the trade in textiles. The Committee which met in Geneva from January 29 to February 9, has drawn up a draft agreement which, when ratified by the Governments of the participating countries, will remain in force for a period of five years from October 1, 1962.

At one stage prior to the Geneva meetings, an attempt was made to seek ways of limiting imports of "cheap cotton manufactures," under which category were included cotton textiles produced in Japan, Hongkong, India and Pakistan and more recently Portugal and Spain. There is room for satisfaction that this proposal was dropped as a result of vigorous representations made by Asian countries. And at Geneva it was also recognised that any scheme of regulation should provide scope for expansion of their trade in cotton textiles under normal conditions of growth. In the agreement which has finally emerged,

the emphasis has been shifted from restrictions to orderly expansion, while at the same time including provisions designed to prevent disruptive effects in individual markets and individual lines of production. There is also room for satisfaction that this has been achieved without laying down a schedule of minimum exports to which the exporting countries could be asked to restrict their exports in case of disruption. Adoption of such a proposal would have seriously affected the exports of Asian countries which would have been pegged to the minimum prescribed.

On the other hand, countries which do not at present restrict exports to their markets such as the USA, Canada, would continue unrestricted access to their markets, and would seek limitation of exports only in the event of a sudden increase in export from a particular country or countries causing or threatening to cause disruption of the domestic industry. In such an event the importing country would request the exporting country or countries concerned to restrict exports for a period of twelve months, to the average export during the 12 months ending three months before the request for restraint is made. If the restrictions are to be continued beyond twelve months, the quota for the succeeding 12 months would be increased by 0 to 5 per cent and further increased by five per cent in the third year.

Important as these provisions are, others for expanded access to markets; on which the agreement focusses attention, are of greater interest to the exporting countries and, particularly, to countries like India which are not likely in the near future to cause disruption in foreign markets by sudden expansion of their exports. Under the agreement, the countries which still maintain import restrictions undertake to double the import quotas according to a phased programme over the five year period. The actual extent of the annual increase for each exporting country will be determined by bilateral negotiations within the limits of the increased total quota. The larger quota to the restricted markets is expected to relieve the pressure on the markets where there are not restrictions at present in force, so that there may arise no need for the latter to invoke the anti-disruption provisions of the agreement. It is a matter of considerable interest to India that the arrangement only applies to mill-made textiles and not to handloom fabrics. And in respect of mill textiles, exports from India are not likely to be hit by the permissive provisions of the agreement enabling an importing country to impose restrictions in case of disruption. Our exports to the USA are now of the order of only 25 million yards and until the volume increases fourfold there can be no question of disruption. On the other hand, the increase in the quotas by the European countries, which at present maintain quantitative restrictions, provide an opportunity and it is up to the Indian industry to step up exports to Europe to the full extent of the quotas that may be fixed through bilateral negotiations.

hamare bhai
ko le jao

It happened some years ago in the steel melting shops at the Jamshedpur works. A large ladle, carrying 75 tons of molten iron, suddenly crashed to the ground with a deafening noise from an overhead crane. The spattering sparks and red-hot metal seriously injured a number of brick-layers working at what seemed to be a safe distance. The air was rent with the frenzied shouts of the men and the hissing of steam.

The first ambulance could remove only five of the injured to the hospital. General Manager Keenan could take only three more in his car. He chose the three who had a better chance of survival than the rest. One of these men, a Hindu worker, however, re-

fused to go. "Do not take me away", he said. Disregarding his own agony, he feebly nodded towards a half-burnt Muslim colleague, and said: "Hamare bhai ko le jao." As Keenan recalls, "The Hindu who was in pain and danger of death remembered, not that the Mohammedan was of a different faith, but that he was his brother."

This feeling of comradeship, born of the common bond of labour, is the spirit that characterises Jamshedpur, where industry is not merely a source of livelihood but a way of life.

Leaders and Laggards

[The following is an adaptation from the authors' forthcoming publication entitled 'Corporate Dividend Trends during the period of industrial growth and planned economic development in India—1947-57.' In the instalment published this week, the performance of the "Leaders" is discussed. Next week's instalment will deal with the "Laggards."]

The views expressed in this paper are the personal views of the authors and the Department of Company Law Administration is in no manner committed to them. The responsibility for the accuracy of the data is also that of the authors.]

In this paper the authors have attempted to examine the dividend record of a representative group of 336 public companies belonging to nine principal manufacturing industries of the country, for the period 1947-57, with a view to spot lighting companies whose dividend performance was found to be not only above the average but happened to be the foremost among others in the respective industrial groups. Besides finding out the companies with excellent dividend records, the authors attempted to identify the companies which were at the tail-end in the matter of distribution of dividends. However, it need hardly be emphasised here that in the case of both these sets of companies i.e. the companies which showed the best and those showing disappointing returns to the investors, there must have been some extraordinary factors at work which led to the polarization of companies at the extreme positions compared with other companies which clustered around the average dividend line. Here one limitation of the study requires specific mention. The *inter se* dividend position relates to the sample companies only and it is possible some of the less important public companies might have a dividend record as good as that of the best ones listed here, while others may join the ranks of the listed laggards. But this limitation of the study, however, does not in any way diminish the value of the study as the group of companies studied in this paper is really those of which the ownership base is wide and as such they attract wide notice in the country. Table I shows the division of companies above and below the average dividend line during the last three years of the study viz., 1955, 1956 and 1957.

A study of the dividend record of companies vis-a-vis the average dividend line discloses that during the period 1955 to 1957 more than half the cotton textile companies covered in this study declared dividends less than the average in the years 1955 and 1956, whereas in 1957, a fairly large number of companies distributed dividends more than the average. In the sugar industry, a larger number of companies, i.e. 14 out of 20 companies, declared dividends less than the average in 1956 whereas 11 out of 23 companies declared dividends less than the average in 1956 whereas 11 out of 23 companies declared dividends less than the average rate in 1955. In 1957, however, the sugar

*Average Dividend Per cent.

[†]Average Dividend for companies in column (5).

companies split evenly around the average dividend line. In the case of plantation companies, the number of companies declaring dividends below the average was more than those distributing more than the average in 1955. In the subsequent years 1956 and 1957, a larger number of companies distributed dividends at rates lower than the average. In the paper group, three companies out of 9 companies declared dividends below the average rate in 1955 while in 1956 and 1957 the number of companies was almost evenly divided below and above the average dividend line. Among the other four remaining industries, in the case of jute and cement industries, a fairly large number of companies distributed dividends below the average during each of the three years 1955, 1956 and 1957. As compared to this, in the iron and steel (including engineering companies) industry, a large number of companies declared dividends below the average in 1955 whereas in the following two years the position was reversed for the good of the investors. The dividend record of the companies with reference to the average dividend line is arranged for the periods 1951-54 and 1947-50 in the two Tables II and III.

The distribution by cotton companies around the average for the two periods i.e. 1951-54 and 1947-50 shows that the majority of companies were above the average dividend line throughout the period 1947 to 1954 excepting years 1947 and 1950. As against this, the dividend performance of majority of coffee and rubber companies was below the average dividend performance during 1947 to 1953. In the year 1954 the majority fared better than the average. In the case of iron and steel industry, the number of companies below and above the average was almost the same in year 1947 but after 1947, the performance of the majority failed to come up to the average performance upto the end of this period viz 1948-1954. Similarly the performance of the majority of tea companies was no better than the average for the entire period excepting years 1950 and 1954. In the year 1954, the majority performance was above the average while in 1950 the tea companies split evenly around the average. In the cement industry, the distribution of companies above and below the average was almost the same for the first three years namely 1947, 1948 and 1949 but thereafter the majority of them recorded poorer dividend performance as compared with the average. Excepting the year 1948, the number of sugar companies above and below the average dividend line was almost the same. In the remaining three industries i.e. paper, jute and coal the dividend performance of the majority of companies vis-a-vis the average line did not reveal any uniform pattern.

It may be mentioned here that the average dividend line, being the arithmetic average, moves up or down depending on the better or the bad performance of the dividend leaders as compared with that of the rest. Consequently the majority's performance is below the average if the dividend leaders have declared much higher dividends as compared with other companies. If, however, the dividend record of the laggards fairs very badly as compared with the rest of the companies the majority of companies cluster around the point above the average.

The above-mentioned three tables present the distribution of companies vis-a-vis the average dividend rates for the industries as a whole. It is now proposed to pick out the companies which paid the best and the lowest average dividends under each industrial

group. For this purpose, the dividend performance of the companies has been averaged for three sets of years viz., 1947-50, 1951-54 and 1955-57.

DIVIDEND LEADERS

Under each of the three periods, 5 companies with the best dividend performance have been listed except in the cases of the industrial groups sugar, paper, iron and steel and cement where only three names have been listed.

COTTON TEXTILES INDUSTRY

In the cotton textile industry, the Arvind Mills distributed an average dividend of 35% during 1955-57. This company improved quite appreciably its performance during the period over the immediately preceding four year period 1951-54. The average dividend for 1951-54 worked out as 25% and during 1947-50, it came to less than 19½%. This company, did not figure among the first five best dividend payers during 1947-50. Like the Arvind Mills, the Swan Mills also showed a steady rise in the average dividend distribution and so did the Bangalore Woollen, Cotton and Silk Mills Ltd., the Ahmedabad Manufacturing Calico Printing Ltd., and the Century Spinning and Manufacturing Co. Ltd. (vide Table 1.)

SUGAR INDUSTRY

In the sugar industry, the Upper Ganges Sugar Mills distributed the highest average dividend of 43-1/3% during 1955-57 followed by the Belapur Sugar Co. (31%). The Upper Ganges Sugar Mills steadily raised its dividend rate from 18½% in 1947-50 to 23½% during 1951-54 and (43-1/3%) in 1955-57. Similarly, the Belapur Sugar Co. Ltd. stepped up its average dividend rate from 21% in 1947-50 to 31% during 1951-54.

The Walchandnagar Industries Ltd., was the new comer among the first three best dividend performers during 1955-57 in place of the Indian Sugars and Refineries Ltd., which held the second place during 1951-54 (vide Table 2.)

TEA PLANTATION INDUSTRY
